3.1.1.1 *Derived from two-place transitives.* Reciprocal forms may be derived from any two-place transitive stem if it requires or allows an animate (almost exclusively human) object; e.g.:

- (16)
- | | |
|------------------------|--|
| <i>adula-maat-</i> | ‘to view each other attentively’ |
| <i>aj-maat-</i> | ‘to cure each other’ |
| <i>ajaw-maat-</i> | ‘to love each other’ |
| <i>alama-maat-</i> | ‘to mimic each other’ |
| <i>alat-maat-</i> | ‘to wait for each other’ |
| <i>ana-maat-</i> | ‘to push each other’ |
| <i>anuu-maat-</i> | ‘to push each other’ |
| <i>asakta-maat-</i> | ‘to chase each other’ |
| <i>baka-maat-</i> | ‘to find each other’ |
| <i>bolgi-maat-</i> | ‘to offend/tease each other’ |
| <i>čerkat-maat-</i> | ‘to abuse each other’ |
| <i>doldə-maat-</i> | ‘to hear each other’ |
| <i>eeri-meet-</i> | ‘to call each other’ |
| <i>garpāt-maat-</i> | ‘to shoot at each other’ (from a bow) |
| <i>guja-maat-</i> | ‘to butt each other’ |
| <i>heŋket-meet-</i> | ‘to abuse each other’ |
| <i>iče-meet-</i> | ‘to see each other’ |
| <i>ikte-meet-</i> | ‘to hit each other’ |
| <i>iktu-meet-</i> | ‘to hit each other’ |
| <i>iremee-meet-</i> | ‘to visit each other’ |
| <i>kolto-moot-</i> | ‘to hit each other with a fist’ |
| <i>kumle-meet-</i> | ‘to embrace each other’ |
| <i>legii-meet-</i> | ‘to abuse each other’ |
| <i>nimeg-meet-</i> | ‘to visit each other’ |
| <i>n’ukani-maat-</i> | ‘to kiss each other’ |
| <i>pektəru-meet-</i> | ‘to fire a gun at each other’ |
| <i>saa-maat-</i> | ‘to know each other’ |
| <i>seripče-meet-</i> | ‘to track each other down’ |
| <i>sipkit-meet-</i> | ‘to track each other down’ |
| <i>sogintu-maat-</i> | ‘to kick each other’ (of horses) |
| <i>sookat-maat-</i> | ‘to tease each other’, ‘to banter with each other’ |
| <i>tanče-maat-</i> | ‘to pull each other’ |
| <i>tokto-moot-</i> | ‘to chop/cut/hack each other’ (with a sword, knife, axe) |
| <i>tureet-meet-</i> | ‘to abuse each other’ |
| <i>təkunŋgit-meet-</i> | ‘to offend each other’ |
| <i>təl-meet-</i> | ‘to understand each other’ |
| <i>ulekki-meet-</i> | ‘to deceive each other’ |
| <i>waa-maat-</i> | ‘to kill each other’ |

- žarga-maat-* 'to abuse, offend each other'
žawa-maat- 'to take, seize each other', etc.

Sentential examples:

- (17) a. *Uučak oron-mo ije-l-di-wi kapu-ra-n.*
 saddle.deer reindeer-ACC horn-PL-INST-its break-NFUT-3SG
 lit. 'A saddle-deer broke (i.e. 'fought and defeated') a reindeer with his horns.'
- b. *Oro-r ije-l-di-wer kapu-maat-ta-Ø.*
 reindeer-PL horn-PL-INST-their break-REC-NFUT-3PL
 'The reindeer fought each other with their horns.'
- (18) a. *Muri-sa-kaku-r sogintu-maat-če-žere-Ø.* (EF. 67)
 horse-PL-MAGN-PL kick-REC-IPFV-PRES-3PL
 'The horses are kicking each other.'
- b. *Beje-l amutkan-ma bargimnak ŋinduka-r-di iktu-maat-čere-Ø.* (EF. 302)
 man-PL lake-ACC across pole-PL-INST hit-REC-PRES-3PL
 'The men are fighting with poles on the other shore of the lake.'
- c. *Garpat-maat-če-pki n'ur-il-di-i nekun-nen ...* (EF. 232)
 shoot-REC-IPFV-PART arrow-PL-INST-his younger.brother-COM
 'He and his younger brother were shooting arrows at each other.'
- d. *Buru-de-ne-l, bu žawa-ssa-maat-če-če-wun.* (K. 158)
 fall-IPFV-CONV-PL we grab-try-REC-IPFV-PAST-1PL
 'Falling, we tried to grab at each other.'

3.1.1.2 *Derived from two-place intransitives.* Following are some reciprocals of this type (the case in brackets refers to the object of the underlying verb):

- (19) *aksa-maat-* (ALL.2) 'to take offence at each other'
bele-meet- (DAT) 'to help each other'
ŋele-meet- (ABL.1) 'to be afraid of each other'
siwuta-maat- (ALL.2/COM) 'to whisper to each other'
tepke-meet- (ALL.2/COM) 'to shout at/to each other'
tureet-meet- (COM) 'to talk with each other'
təkun-maat- (ABL.2) 'to get angry with each other'
ulguče-meet- (COM) 'to talk with each other'; cf.:
- (20) a. *Nuŋartən girki-l-du-wer bele-re-Ø.*
 they friend-PL-DAT-their help-NFUT-3PL
 'They helped their friends.'
- b. *Nuŋartən bele-meet-te-Ø.*
 they help-REC-NFUT-3PL
 'They helped each other.'
- (21) a. *Nuŋartən girki-l-taki-wer təkul-la-Ø.*
 they friend-PL-ALL-their get.angry-INCH-NFUT-3PL
 'They got angry with their friends.'
- b. *Nuŋartən təkun-maat-ta-Ø.*
 they get.angry-REC-NFUT-3PL
 'They got angry with each other.'

3.1.1.3 *Derived from one-place intransitives; irreversible reciprocal constructions.* There is a semantic group of one-place intransitives which allow reciprocal derivation: it consists of base verbs denoting uttering of sounds by birds and animals. They imply an addressee (by the nature of things) which is practically never expressed, though it is possible with some base verbs. Therefore these derivatives can be regarded as irreversible reciprocals, because the reciprocal marker does not correspond to any constituent of the underlying construction.

- (22) a. *Čipiča čulli-žara-n.*
small.bird squeak-PRES-3SG
'The bird is squeaking.'
b. *Čipiča-l čulli-maat-čara-Ø.*
bird-PL squeak-REC-PRES-3PL
'The birds are squeaking to each other.'
- (23) a. *Murin keenari-žara-n.*
horse neigh-PRES-3SG
'The horse is neighing.'
b. *Muri-r keenari-maat-čara-Ø.*
horse-PL neigh-REC-PRES-3PL
'The horses are neighing to each other.'
- (24) a. *Žur ŋinaki-r gogo-žoro-Ø.*
two dog-PL bark-PRES-3PL
'Two dogs are barking.'
b. *Žur ŋinaki-r gogo-moot-čoro-Ø.*
two dog-PL bark-REC-PRES-3PL
'Two dogs are barking at each other.'

This group of reciprocals includes the following derivatives:

- | | |
|--|---|
| (25) <i>čerŋa-</i> 'to cheep' | → <i>čerŋa-maat-</i> 'to cheep to each other' |
| <i>čiŋeri-</i> 'to roar' | → <i>čiŋeri-meet-</i> 'to roar at each other' |
| <i>čiwi-</i> 'to cackle/cluck' | → <i>čiwi-maat-</i> 'to cackle/cluck to each other' |
| <i>čulli-</i> 'to squeak' | → <i>čulli-maat-</i> 'to squeak to each other' |
| <i>eŋte-</i> 'to produce sounds' (of deer and elk) | → <i>eŋte-meet-</i> 'to exchange sounds' |
| <i>er'e-</i> 'to produce sounds' (of deer) | → <i>er'e-meet-</i> 'to exchange sounds' |
| <i>gogo-</i> 'to bark' | → <i>gogo-moot-</i> 'to bark at each other' |
| <i>iit-</i> 'to growl' | → <i>iit-meet-</i> 'to growl at each other' |
| <i>keenari-</i> 'to neigh' | → <i>keenari-maat-</i> 'to neigh to each other' |
| <i>kuunii-</i> 'to whistle' (of birds) | → <i>kuunii-meet-</i> 'to whistle to each other' |
| <i>mere-</i> 'to moo' | → <i>mere-meet-</i> 'to moo to each other' |
| <i>wakwana-</i> 'to croak' | → <i>wakwana-maat-</i> 'to croak to each other.' |

3.1.1.4 *Two- and one-place intransitives of motion. Dialectal variation.* Below, two two-place and two one-place verbs of motion are considered. Reciprocals derived from these verbs denote meeting or movement towards each other. As for two-place verbs of motion (e.g. *eme-* 'to come', *ŋene-* 'to go'), only a few northern dialects (e.g. the Katanga dialect

spoken in the northern part of the Irkutsk region) allow reciprocal constructions such as the following:

- (26) a. *Tar beje nuŋan-dula-n eme-žere-n / ηene-žere-n.*
 that man he-ALL-3SG come-PRES-3SG / go-PRES-3SG
 ‘This man is coming / going to him.’
 b. *Beje-l eme-meet-čere-Ø.*
 man-PL come-REC-PRES-3PL
 ‘The men are coming to each other.’
 c. *Beje-l ηene-meet-čere-Ø.*
 man-PL go-REC-PRES-3PL
 ‘The men are going to each other.’

The only intransitive verb of motion that allows reciprocal derivation in all Evenki dialects is *nulgi-* ‘to nomadize, lead a nomadic life’. The verb of motion *il-* ‘to stand up’ allows reciprocal derivation only in some northern (e.g. Katanga) dialects. Compare:

- (27) a. *Nuŋartən agi-tki nulgi-žere-Ø.*
 they forest-ALL nomadize-PRES-3PL
 ‘They are nomadizing to the taiga forest.’
 b. *Nuŋartən nulgi-meet-čere-Ø.*
 they nomadize-REC-PRES-3PL
 i. ‘They nomadize in the direction of *each other’s* place.’
 ii. ‘They nomadize in parallel directions.’
 (28) a. *Nuŋartən il-la-Ø.*
 they stand-NFUT-3PL
 ‘They stood up.’
 b. *Nuŋartən il-maat-ta-Ø.*
 they stand-REC-NFUT-3PL
 ‘They stood up opposite each other.’

3.1.2 “Indirect” reciprocals

This type of reciprocal constructions involves reciprocal relations between the subject and underlying indirect object referents. Typical verbs yielding “indirect” reciprocals are those of giving and taking away, and also others taking an indirect (dative or ablative) object:

- (29) *ani-maat-* ‘to give presents to each other’
buu-meet- ‘to give sth to each other’
borit-maat- ‘to divide into parts and give parts to each other’
duku-maat- ‘to write sth to each other’
ga-maat- ‘to take, buy sth from each other’
tən-/təhi-/tasse-meet- ‘to pull, try to grab sth from each other’
žawa-maat- ‘to take, seize sth from each other’; cf.:
- (30) a. *Bejetken girki-du-wi dukuwun-me duku-žara-n.*
 boy friend-DAT-his letter-ACC write-PRES-3SG
 ‘The boy is writing a letter to his friend.’

- b. *Bejetke-r dukuwu-r-we duku-maat-čara-Ø.*
 boy-PL letter-PL-ACC write-REC-PRES-3PL
 ‘The boys are exchanging letters.’
- (31) a. *Kuŋaka-r ewike-r-we tässe-meet-čere-Ø.*
 child-PL toy-PL-ACC pull-REC-PRES-3PL
 ‘The children are trying to take toys from each other.’
- b. ... *žur ahatka-r inme-we tahi-meet-čere-Ø.* (EF. 78)
 two girl-PL needle-ACC pull-REC-PRES-3PL
 ‘... two girls are pulling a needle from each other.’

There are also reciprocals from three-place morphological causatives derived from two-place transitives:

- (31') a. *Tar beje žü-wa-n iče-re-n.*
 this man house-ACC-his.3SG see-NFUT-3SG
 ‘This man saw his [not his own] house.’
- b. *Nuŋan tar beje-du žü-wi iče-wken-e-n.*
 he this man-DAT house-his.OWN see-CAUS-NFUT-3SG
 ‘He showed his house to this man.’
- c. *Nuŋartən memegil-du-wer žü-l-war iče-wken-meet-te-Ø.*
 they each other-DAT-their house-PL-their see-CAUS-REC-NFUT-3PL
 ‘They showed each other their own houses.’

3.1.3 “Benefactive” reciprocals

Two-place transitives with an *optional* indirect object can form reciprocal constructions of the “indirect” type with the benefactive meaning. As the benefactive object is optional, i.e. it is not implied by the verbal meaning, this type of reciprocals may be included among adverbial reciprocals. These reciprocal constructions, like the types considered above, may optionally contain the dative form of the reciprocal pronoun *memegil-du-wer* ‘for each other’ (without this pronoun these reciprocals may also be interpreted as “possessive”, with the meaning ‘they built each other’s houses’; see 3.1.4); e.g.:

- (32) a. *Tar beje nuŋan-dun žü-wa oo-ra-n.*
 that man he-DAT house-ACC make-NFUT-3SG
 ‘That man built a house (put up a tent) for him.’
- b. *Nuŋartyn [memegil-du-wer] žü-l-war oo-maat-ta-Ø.*
 they each.other-DAT-their house-PL-their.OWN make-REC-NFUT-3PL
 ‘They built houses for each other.’

3.1.4 “Possessive” reciprocals

This type of reciprocals seems to be uncharacteristic of Evenki, and we could elicit a limited number of “possessive” reciprocals from the informants. Thus, for instance, most of the Yakut sentences of this type (see Nedjalkov & Nedjalkov, Ch. 26, §4.1.3) cannot be translated into Evenki by means of reciprocals. Examples at our disposal contain a direct object of inalienable possession, therefore it obligatorily contains the reflexive-possessive suffix *-wer*. In the reciprocal construction, the attribute of the direct object (izafet construction) is deleted, cf. *nuŋan dəlgan-ma-n* in (33a):

- (33) a. *Tar beje nuŋan dalgan-ma-n doldə-žara-n.*
 that man s/he voice-ACC-his/her hear-PRES-3SG
 ‘That man hears his/her voice.’
 b. *Nuŋartən dalg-a-r-war doldə-maat-čera-Ø.*
 they voice-PL-their hear-REC-PRES-3PL
 ‘They hear each other’s voices.’
- (34) a. *Nuŋartən dere-l-wer iče-meet-čere-Ø.*
 they face-PL-their see-REC-PRES-3PL
 ‘They see each other’s faces.’
 b. *Nuŋartən kuŋaka-r-war saa-maat-čere-Ø.*
 they child-PL-their know-REC-PRES-3PL
 ‘They know each other’s children.’
 c. *Nuŋartən ŋaale-l-wer (usike-r-di) uj-meet-te-Ø.*
 they arm-PL-their strap-PL-INST tie-REC-NFUT-3PL
 ‘They tied each other’s arms (with straps).’

3.1.5 Expression of reciprocal arguments. Dialectal variation

3.1.5.1 The simple reciprocal construction. In this sphere the state of things seems to be the same as in non-reciprocal constructions. The reciprocal arguments are expressed in two main ways, by a simple subject (most commonly), i.e. by a plural nominal (like *nuŋartən* ‘they’, *beje-l* ‘men’, *bejetke-r* ‘boys’, etc., cf. (36a)), and by a conjoined subject, i.e. by two nominals (cf. (36b)). In the latter case two variants are possible: (a) each nominal, the first one optionally, is marked by the conjunctive and clitic particle *-da* (see (35b) and (36b)); (b) only the second nominal is marked by the comitative suffix *-nun* (note that this suffix cannot be repeated like the particle *-da*; see (35c) and (36c)); it combines mostly with animate nouns. As mentioned, the same types of subject occur in non-reciprocal constructions as well.

- (35) a. *Nuŋartən tatkit-tula ŋene-žere-Ø.*
 they school-ALL.1 go-PRES-3PL
 ‘They are going to school.’
 b. *Eni[-da] hunad-in-da tatkit-tula ŋene-žere-Ø.*
 mother-and daughter-her-and school-ALL.1 go-PRES-3PL
 ‘Mother and her daughter are going to school.’
 c. *Eni hunat-nun-mi tatkit-tula ŋene-žere-Ø.*
 mother daughter-with-her school-ALL.1 go-PRES-3PL
 (same translation).
- (36) a. *Nuŋartən n’ukani-maat-čere-Ø.*
 they kiss-REC-PRES-3PL
 ‘They are kissing each other.’
 b. *Eni[-da] hunad-in-da n’ukani-maat-čere-Ø.*
 mother-and daughter-her-and kiss-REC-PRES-3PL
 ‘Mother and her daughter are kissing each other.’
 c. *Eni[*-nun] hunat-nun-mi n’ukani-maat-čere-Ø.*
 mother-with daughter-with-her kiss-REC-PRES-3PL
 (same translation).

In cases like (36b), the reciprocal verb must agree with both nouns. In cases like (36c) the reciprocal verb may agree with the first noun only (not only in the Southern dialects but also in the Northern dialects). If agreement with the first noun only is regarded as the property of the discontinuous construction, type (36d) can be considered as discontinuous, i.e. the second reciprocant is an object. Thus a *-nun-* form may encode two meanings, that of conjoining, as in (36c), and comitative, as in (36d). The same type of rather trivial homonymy (conjoining vs. comitative) is attested in a number of other languages, e.g. in Chinese (Hoa et al., Ch. 49, §5.2.2.1), Turkic languages (see Nedjalkov, Ch. 28 on Kirghiz, §8), Japanese (Alpatov & Nedjalkov, Ch. 25, §4.2), etc., but in the latter languages these meanings are determined by the position of the marker: if it is placed between the nominals it is conjoining, and if it is postposed to the second nominal (i.e. it functions as a conjunction or as a postposition) the meaning is *comitative*. In Evenki, the suffix *-nun* always takes the same position – on the second nominal, whatever the meaning, i.e. the feature of position is not employed and the only distinctive feature is that of agreement. Thus (36d) can be regarded as discontinuous with a comitative object: this construction topicalizes the first argument.

- d. *Eni hunat-nun-mi n'ukani-maat-čere-n.*
 mother daughter-with-her kiss-REC-PRES-3SG
 (same translation as (36c)).
 lit. 'Mother with her daughter is kissing each other.'

The contrast between (36c) and (36d) is neutralized if both nominals are plural (and one of them is not 1st or 2nd person): in this case it is not clear whether the verb agrees with the first plural nominal or with both. Thus the opposition of (a) the simple construction with a heterogeneous subject and (b) the discontinuous construction with a comitative object is (morphologically) neutralized in Evenki, and it is difficult to distinguish between them.

- e. *Nuŋartən hunat-nun-mer n'ukani-maat-čere-Ø.*
 they daughter-with/and-their kiss-REC-PRES-3PL
 i. 'They *and* their daughter are kissing each other.'
 ii. (same as (i)), lit. 'They *with* their daughter are kissing each other.'

3.1.5.2 *The discontinuous reciprocal construction. Dialectal variation.* Above, we have defined the conditions which may serve to distinguish the discontinuous construction. They pertain to those cases when the first argument is singular. If it is plural, the distinction is neutralized, because the agreement is no help (see above).

It is different in the Eastern dialects where the verb always agrees with the first argument only (i.e. (35c) is ungrammatical in other dialects), but distribution into simple and discontinuous constructions according to the feature discussed above produces the same result. The differences between the dialects may be shown as follows:

(37)			Agreement	
	Noun	Noun + <i>-nun</i>	(Southern and Northern dialects)	(Eastern dialects)
	PL	PL/SG	PL (simple or discontinuous)	PL (discontinuous)
	SG	PL/SG	SG (discont.) or PL (simple)	SG (discontinuous)

As in the Eastern dialects the verb agrees with the first argument only, and if it is singular it indicates the discontinuous construction, then even the cases with the plural first argument (formally, we cannot distinguish whether the predicate agrees with the first or with both arguments) can be regarded as discontinuous by analogy with the former case. The following two examples illustrate the difference between the dialects which is in evidence if the first argument is singular: in (38) plural agreement on the predicate is allowed and in (39) it is not. Adverbials like *umnet* ‘suddenly’, *esikeken* ‘now’ can be inserted between the first and second arguments, i.e. between *eni* and *hunat-nun-mi* in (39).

Southern and Northern dialects

- (38) *Eni hunat-nun-mi n'ukani-maat-čere-n / n'ukani-maat-čere-Ø.*
 mother daughter-and-her kiss-REC-PRES-3SG kiss-REC-PRES-3PL
 ‘Mother and her daughter are kissing each other.’

Eastern dialects (Amur)

- (39) *Eni hunat-nun-mi n'ukani-maat-čere-n / *n'ukani-maat-čere-Ø.*
 mother daughter-with-her kiss-REC-PRES-3SG kiss-REC-PRES-3PL
 (same translation).

Note that the co-participant in a non-reciprocal construction may also be expressed by forms with the suffixes *-nan* (only on kinship terms), *-gali*, *-tai*, and *-t/-di* (usually on inanimate nouns). But, we repeat, in constructions with morphological reciprocals the co-participant is almost exclusively expressed (if at all) by means of a *-nun* form. The *-nan* form which is very rare in reciprocal constructions (see, however, (18c)) is rejected by our informants, though in (40a) it appears as part of the subject. Compare (*asi* means ‘woman’ and ‘wife’, but with the suffix *-nan* its meaning is ‘wife’):

- (40) a. *Beje asi-nan žu-wa iče-re-Ø.*
 man wife-COM house-ACC see-NFUT-3PL
 ‘The man and his wife saw the house.’
 b. **Beje asi-nan iče-meet-te-Ø.*
 man wife-COM see-REC-NFUT-3PL
 (intended meaning:) ‘The man and his wife saw each other.’
 c. *Beje asi-nun iče-meet-te-Ø.*
 man woman-COM see-REC-NFUT-3PL
 ‘The man and the woman saw each other.’

3.1.6 Productivity and restrictions on reciprocal derivation

It seems that most of the base verbs whose meaning pragmatically allows reciprocity of action have reciprocal derivatives. Derived transitives with the productive causative suffix *-wkan/-pkan* (e.g. *eme-wken-* ‘to make/let/allow (to) come’, *suru-pken-* ‘to make/let/allow (to) go away’) can take the reciprocal suffix with ease (see 2.5.4), whereas reciprocals from those with the unproductive causative marker *-w* are rejected by the informants; cf.:

- (41) *eme-* ‘to come’ → *eme-w-* ‘to bring sth/sb, lead sb to’ → **eme-w-meet-*
ii- ‘to enter’ → *ii-w-* ‘to bring sth/sb into’ → **ii-w-meet-*
juu- ‘to go out’ → *juu-w-* ‘to take sth/sb out’ → **juu-w-meet-*
ηene- ‘to go’ → *ηene-w-* ‘to carry sb/sth’ → **ηene-w-meet-*
suru- ‘to go away’ → *suru-w-* ‘to take sth/sb, lead sb away’ → **suru-w-meet-*
tege- ‘to sit down’ → *tege-w-* ‘to seat sb, put sb/sth down’ → **tege-w-meet-*
ugi- ‘to mount (a horse/deer)’ → *ugi-w-* ‘to put sb on a horse/deer’ → **ugi-w-meet-*,

and so are a few other reciprocals from verbs of motion and some other semantic groups. The reason for this restriction possibly lies in the fact that these unproductive “old” causatives tend to occur with inanimate direct objects, whereas animate objects of causative situations usually involve productive (“younger”) causative forms with the suffix *-wkan/-pkan*. This may also be due to a certain unnaturalness of intended reciprocal situations.

3.2 Restrictions on causative derivation from reciprocals. Dialectal variation

Causative derivation from reciprocals is much more restricted in Evenki than in Even (cf. Malchukov, Ch. 39, §4.1.2). Thus, for instance, the informants are reluctant to accept (42b):

- (42) a. *Žur ηinaki-r kik-maat-ča-tən.*
 two dog-PL bite-REC-PAST-3PL
 ‘Two dogs were biting each other.’
 b. *Žur etərke-r ηinaki-r-ve kik-maači-wkan-ča-tən.*
 two old.man-PL dog-PL-ACC bite-REC-CAUS-PAST-3PL
 ‘Two old men provoked dogs to bite each other.’

Generally, causatives from reciprocals sound awkward in most cases. True, the dialects differ in this respect: the forms under (43) are accepted only by some informants for the Southern and Northern dialects and are absolutely rejected for the Eastern dialects:

- (43) *iče-meeči-wken-žere.* ‘they cause/permit some people to meet.’
ηorča-maači-wkan-žere. ‘they cause (e.g. us) to fight.’

It is surprising that in case of necessity, in order to express a meaning like (42b) and (43), e.g. of the object-oriented type ‘We send the children to meet each other’, some informants resort to forms with the reverse “illogical” morphemic sequence *-wkan-maat* instead of *-maači-wkan*, i.e. the sequence generally reserved for the subject-oriented diathesis types, namely, “canonical” of two-place morphological causatives (14b); cf. (104b) in Manchu) or “indirect” of three-place morphological causatives (31’). This may result in homonymy; cf.:

- (44) *Bu kuηaka-r-ve arča-wkan-maat-ta-p.*
 we child-PL-ACC meet-CAUS-REC-NFUT-1PL
 i. ‘We make *each other* meet the children.’ (subject-oriented) “indirect”
 ii. ‘We make the *children* meet *each other*.’ (object-oriented) embedded “canonical”

3.3 *Nomina actionis*

Names of action can be derived from all reciprocal verbs by means of the marker *-n* which derives nouns from verbs in general.

- (45) *ulgučen-* ‘to tell’ → *ulguče-meet-* ‘to converse’ → *ulguče-meeči-n* ‘conversation’
waa- ‘to kill’ → *waa-maat-* ‘kill each other’ → *waa-maači-n* ‘battle, killing each other.’

4. Reciprocals with the complex suffix *-ldə-maat*

These seem to be possible with all the verbs that allow reciprocal derivation with *-maat* (see, for instance, the verbs in (16), (19), (25), and (29)). No exceptions have been found so far. This suffix seems to be more emphatic with respect to the reciprocal meaning than *-maat*. Reciprocals in *-maat* are much more common in texts than those in *-ldə-maat* (note that the sequence *-maači-ldə* is ungrammatical, in contrast to the closely related Solon language). In discontinuous constructions, the co-participant with such derivatives is always expressed by the *-nun* form. In texts, the following derivatives with the suffix in question occur most commonly. Most of them are lexicalized or derived from lexical reciprocals. They are predominantly subject-oriented, and only one is object-oriented; cf.:

Subject-oriented reciprocals

- (46) a. Derived from two-place transitives
baka- ‘to find’ → *baka-ldə-maat-* ‘to meet each other’
žawa- ‘to seize’ → *žawa-ldə-maat-* ‘to seize each other (e.g. while wrestling).’
 b. Derived from two-place intransitives
gun- (ALL.2) ‘to say (sth) to sb’ → *gu-ldə-meet-* ‘to come to an agreement’
ηorča- (COM) ‘to fight with sb’ → *ηorča-ldə-maat-* ‘to fight with each other.’
 c. Derived from three-place transitives
borit- ‘to divide sth among sb’ → *bori-ldə-maat-* ‘divide sth among each other’
buu- ‘to give’ → *buu-ldə-meet-* ‘to give sth to each other’
žuket- ‘to change’ → *žuge-ldə-meet-* ‘to exchange sth with each other.’

Object-oriented reciprocals

- d. *uj-* ‘to tie sth to sth’ → *ui-ldə-meet-* ‘to tie sb/sth together (e.g. with a belt or rope).’

5. Sociatives and comitatives with the suffix *-ldə*

5.1 Subject-oriented sociatives

The sociative and the reciprocal meanings do not seem to combine in the same clause. Therefore it is but natural that sociatives do not co-occur with the reciprocal pronoun. But if the suffix *-ldə* is reciprocal in meaning, it may freely co-occur with the reciprocal

pronoun (see 6.2). There are only trivial semantic restrictions on sociative derivation with this suffix. Sociatives are derived from both intransitive and transitive verbs.

5.1.1 *Derived from intransitives*

The meaning of joint action can also be implicit in the verbal semantics. Thus, sentence (47a), as well as its English translation, commonly (but not obligatorily) describes a joint action; (47b) implies a joint action due to the suffix *-nun* in the expression of the co-participant, while (47c) and (47d) explicitly describe a joint action:

- (47) a. *Nuḡartən tatkit-tula ηene-re-Ø.*
 they school-ALL.1 go-NFUT=3PL
 ‘They went to school.’ (usually together, but may be separately)
- b. *Bu girki-l-nun-mer tatkit-tula ηene-re-w.*
 we friend-PL-COM-OUR school-ALL go-NFUT-1PL
 ‘We and (lit. with) our friends went to school.’ (together)
- c. *Bu girki-l-nun-mer tatkit-tula ηene-ldə-re-w.*
 we friend-PL-COM-OUR school-ALL go-SOC-NFUT-1PL
 ‘We and our friends went to school together.’
- d. *Nuḡartən tatkit-tula ηene-ldə-re-Ø.*
 they school-ALL go-SOC-NFUT-3PL
 ‘They went to school together.’

As a rule, sociatives presuppose animate subjects, though exceptions are possible:

- (48) a. *Usi-ke-r umnet etərge-re-Ø.*
 belt-DIM-PL suddenly tear-NFUT-3PL
 ‘The thin belts broke (got torn) suddenly.’
- b. *Usi-ke-r umnet etərge-ldə-re-Ø.*
 belt-DIM-PL suddenly tear-SOC-NFUT-3PL
 ‘The thin belts suddenly broke together.’

5.1.2 *Derived from transitives*

Subject-oriented sociatives can be derived from non-derived and formally derived causative transitives (from both two- and three-place verbs; cf. (12)).

5.2 Object-oriented sociatives. Referential ambiguity

Causative constructions seem to freely derive from subject-oriented sociatives. The subject may be either singular or plural and the object is necessarily plural; cf.:

- (49) a. *Kuḡaka-r suru-re-Ø.*
 child-PL go.away-NFUT-3PL
 ‘The children went away.’
- b. *Kuḡaka-r suru-ldə-re-Ø.*
 child-PL go.away-SOC-NFUT-3PL
 ‘The children went away together.’

- c. *Asi kuŋaka-r-we suru-ldə-wken-e-n.*
 woman child-PL-ACC go.away-SOC-CAUS-NFUT-3SG
 ‘The woman made/ordered to/let the children go away together.’

If the subject is plural, referential ambiguity is possible: the sociative meaning may refer both to the object referents (by way of “inheriting” this from the underlying construction; cf. (49b)), as in (49c), and to the subject referents:

- d. *Asa-l kuŋaka-r-we suru-ldə-wken-e-Ø.*
 woman-PL child-PL-ACC go.away-SOC-CAUS-NFUT-3PL
 i. ‘The women made the children go away together.’
 ii. ‘The women together made the children go away.’ (cf. also (55b))

5.3 The discontinuous construction. Comitative

By definition, sociative discontinuous constructions are interpreted as comitative, i.e. as constructions in which the subject referent takes part in the action of the object referent. As is shown in 3.1.5, it is difficult to determine the status of the comitative group in Evenki – as that of an object or part of the subject. It is only in one case that the situation is quite clear: it is when the subject names only one singular participant and the co-participant is not named. Compare:

- (50) *Eni ewike-r-we iče-wke-ldə-re-n.*
 mother toy-PL-ACC see-CAUS-SOC-NFUT-3SG
 ‘The mother showed [someone] the toys (with someone else, but not the toys together with sth, e.g. with books).’

A similar (comitative) interpretation is possible for plural subjects, if the context supports this reading and not the sociative. Reciprocal constructions, with omitted second co-participant, usually sound elliptical and are as a rule ungrammatical.

6. Residual reciprocals with the suffix *-ldə*

6.1 Introductory

These verbs are far from numerous (we have registered 25 items) but rather frequent in texts. Thus, for instance, about 90 per cent of *-ldə* forms found in two volumes of Evenki folklore (EF and IF) have a reciprocal, and not a sociative meaning. It is the frequency of verbs of this unproductive group that accounts for the preservation of the reciprocal function (probably the earliest meaning) of this suffix on these verbs. All these verbs, with two exceptions (see one-place intransitive *il-* ‘to stand up’ in (51b) and two-place intransitive *kusi-* ‘to fight sb’ in the text above (51a)), are derived from two- and three-place transitives.

6.2 Subject-oriented reciprocals. Transitive discontinuous constructions

Reciprocals with *-ldə* can also take the reciprocal suffix *-maat* instead of *-ldə* or together with it. Thus some verbs have reciprocal doublets and even triplets, if we take into consideration the above assertion that *-maat* may be replaced by the complex suffix *-ldə-maat* without any perceptible change of meaning (see section 4). Reciprocal doublet forms we have found in texts are listed in (51). Some of the bases are lexical reciprocals (see (51a)), and some are non-reciprocal verbs (51b). The most common are verbs denoting actions like fighting, agreeing, meeting, etc. With all the derivatives, the co-participant is named by a comitative form marked with *-nun*. If the base verb is an intransitive lexical reciprocal the result may be a four-member group of synonyms: *kusi-* ‘to fight’ (vi) → *kusi-ldə-/kusi-maat-/kusi-ldə-maat-* ‘to fight (with each other)’. In the following list, forms like *kusi-ldə-maat-* are omitted.

- (51) a. *arča-* ‘to meet’ (vt) → *arča-ldə-/arča-maat-* ‘to meet each other’
ηorča- ‘to fight’ (vi) → *ηorča-ldə-/ηorča-maat-* ‘to fight with each other’
turga- ‘to meet’ (vt) → *turga-ldə-/turga-maat-* ‘to come across/run into sb’
žugət- ‘to exchange’ (vb) → *žuge-ldə-/žuge-meet-* ‘to exchange sth between
oneselves’ (K. 159)
- b. *ana-* ‘to push’ (vt) → *ana-ldə-/ana-maat-* ‘to push each other’
baka- ‘to find’ (vt) → *baka-ldə-/baka-maat-* ‘to meet each other’
garpa- ‘to shoot (arrows)’ → *garpa-ldə-/garpa-maat-* ‘to shoot at each other’
gun- ‘to say to sb’ (vt) → *gu-ldə-/gu-meet-* ‘to come to an agreement’
iče- ‘to see’ (vt) → *iče-ldə-/iče-meet-* ‘to see/meet each other’
il- ‘to stand up’ (vi) → *ili-ldə-/il-maat-* ‘to stand opposite each other’
kik- ‘to bite’ (vt) → *kiki-ldə-/kik-meet-* ‘to bite each other’
taag- ‘to recognize’ (vt) → *taagi-ldə-/taagi-maat-* ‘recognize each other’ (K.159)
žawa- ‘to seize’ (vt) → *žawa-ldə-/žawa-maat-* ‘to seize each other.’

In most cases, we observe a standard semantic opposition (like *ana-* ‘to push sb’ → *ana-ldə-/ana-maat-* ‘to push each other’); in a few typologically expected cases, lexicalization occurs (cf. *gun-* ‘to say (sth) to sb’ → *gu-ldə-/gu-meet-* ‘to come to an agreement’ and *il-* ‘to stand up’ → *ili-ldə-/il-maat-* ‘to stand opposite each other’), and one derivative in *-ldə* is lexicalized while the *-maat* derivative (as one with a “younger” reciprocal marker) is semantically related to the base verb in a standard way.

- d. *waa-* ‘to kill’ → *waa-ldə-* ‘to fight with each other’, cf. *waa-maat-* ‘kill each other’.

Sentential examples:

- (52) a. *Žur ηinaki-r kiki-ldə-žere-Ø.*
two dog-PL bite-SOC-PRES-3PL
‘Two dogs are biting each other.’
- b. *Oro-r ana-ldə-žara-Ø.*
reindeer-PL push-SOC-PRES-3PL
‘Reindeer are pushing each other.’

- c. *Mit'e taagi-ldə-ža-p!* (K. 159)
 we recognize-SOC-FUT-1PL
 'Let's recognize each other!' (a game)

Two transitive verbs with the meaning 'to meet sb' (*baka-ldə-* and *turga-ldə-*) allow both the comitative form of co-participant with the suffix *-nun* (53b) and its accusative form thus retaining its direct object status (cf. (53a) and (53c), (54a) and (54b)):

- (53) a. *Bi etərken-me baka-ča-w.*
 I old.man-ACC meet-PAST-1SG
 'I met an/the old man.'
- b. *Bi etərken-nun baka-ldə-ča-w.*
 I old.man-COM meet-SOC-PAST-1PL
 'I and an/the old man met each other.'
- c. *Bi etərken-me baka-ldə-ča-w.*
 I old.man-ACC meet-SOC-PAST-1PL
 'I and an/the old man met each other.'
- (54) a. *Nuŋan beje-we turga-ra-n.*
 he man-ACC meet-NFUT-3SG
 'He met a man.'
- b. *ŋene-žene, ŋene-žene, turga-ldə-ra-n ulama muri-či beje-we.* (EF. 84)
 go-CONV go-CONV meet-SOC-NFUT-3SG red horse-COM man-ACC
 'When travelling, he met a man with a red horse.'

6.3 Object-oriented reciprocals. Verbs of joining together. Dialectal variation

In the Southern and Eastern dialects, derivatives in *-ldə* from transitives (both two- and three-place) which denote joining or fixing of two or more things together may have only the standard sociative or comitative meaning (55b.i), while in some Northern dialects (Ilimpeya and Erbogachon) this form may have two interpretations (due to referential ambiguity), not only (55b.i) but also object-oriented spatial reciprocal, i.e. (55b.ii). In this case the suffix *-ldə* sounds to a certain degree pleonastic. The form in *-ldə* has two meanings (like the English translations of (55b)).

- (55) a. *Nuŋan usi-l-we herke-če-n.*
 he belt-PL-ACC tie-PAST-3SG
 'He tied the belts.'
- b. *Nuŋan usi-l-we herke-ldə-če-n.*
 he belt-PL-ACC tie-SOC-PAST-3SG
 i. 'He [together with someone else] tied the belts.' (comitative action)
 ii. 'He tied the belts together.' (spatial reciprocal)

A verb with the suffix *-ldə* can be used in the passive voice only if it has a spatial reciprocal meaning (i.e. a meaning like (ii) in (55b)):

- c. *Usi-l herke-ldə-w-če-l bi-si-Ø.*
 belt-PL tie-SOC-PASS-PAST-PL be-PRES-3PL
 'The belts are tied together.'

Among verbs in *-ldə-meet*, in the Southern dialects there is only one object-oriented reciprocal, namely *ui-ldə-meet* ‘to tie sb/sth together’ (46d). There is also one similar object-oriented reciprocal with the suffix *-ldə*, namely *gilbe-ldə* ‘to tie reindeer together in a caravan’ (K. 159). In the Northern dialects, they are more numerous (about ten); *-ldə* seems to be pleonastic in most of the cases. The object referents (in both the base and derived construction) are expressed either (a) by a plural noun in the accusative or (b) by two nouns, accusative and allative 1 (see *moo-laa* in (57)). Like any other object, they may be ellipted and recovered from the context (see *oro-r* in (58)). Derivatives in *-ldə* emphasize plurality of the object referents. They differ from their base verbs in case frames: both the derivative and the base verb may take an accusative and an allative object, or a plural accusative object only (thus, if we omit *moo-laa* in (57) the sentence will acquire the meaning ‘The man fixed the sticks to each other’), but only the verbs in *-ldə* may also take a comitative object (a form in *-nun*) instead of the allative. The suffix *-maat* is not used in this meaning. Here is the list:

- | | | | |
|------|---|---|---------------------------------------|
| (56) | <i>dalbu-</i> ‘to glue sth to sth’ | → | <i>dalbu-ldə-</i> (same) |
| | <i>gilbe-</i> ‘to tie a reindeer to a reindeer’ | → | <i>gilbe-ldə-</i> (same) |
| | <i>herke-</i> ‘to tie sth to sth’ | → | <i>herke-ldə-</i> (same) |
| | <i>kiŋege-</i> ‘to screw sth into sth, attach’ | → | <i>kiŋege-ldə-</i> (same) |
| | <i>tule-</i> ‘to fix/attach sth to sth’ | → | <i>tule-ldə-</i> (same) |
| | <i>təpken-</i> ‘to fix, nail/pin sth to sth’ | → | <i>təpke-ldə-</i> (same) |
| | <i>təre-</i> ‘to press sth to sth’ | → | <i>təre-ldə-</i> (same) |
| | <i>uj-</i> ‘to tie sth to sth’ | → | <i>ui-ldə-</i> (same) |
| | <i>ulli-</i> ‘to sew sth’, ‘to sew sth to sth’ | → | <i>ulli-ldə-</i> ‘to sew sth to sth.’ |

Examples:

- (57) *Tar beje mooka-r-we moo-laa təpke-ldə-re-n.*
 that man stick-PL-ACC tree-ALL fix-SOC-NFUT-3SG
 ‘That man fixed the sticks to the tree.’
- (58) *Mullikan, alba-ra-n sapka-že-mi [oro-r] gilbe-ldə-kit-pe*
 unable cannot-NFUT-3SG master-IPFV-CONV reindeer-PL tie-SOC-NR-ACC
oro-r suča-wan-de-pki-l. (K. 166)
 reindeer-PL tear.away-ITER-IPFV-PART-PL
 ‘He was unable to learn how to tie reindeer into a caravan, the reindeer escape all the time.’

7. Constructions with the reciprocal pronoun *memegil-wer* ‘each other’

7.1 Introductory

The reciprocal pronoun *me-me-gi-l-wer* ‘each other’ has a number of case forms. It consists of five components (see 14.4) and zero accusative case marker (this is connected with the presence of the reflexive-possessive suffix *-wer*; see (5)). The case form of the reciprocal pronoun is determined by the governing properties of the base verb; it has no nominative case form (note in bypassing that Udehe has the nominative case form of the reciprocal

propoun *mene-mene*; see Nikolaeva, Ch. 23, §4.1); the following case forms occur in the examples cited here:

(59)	Accusative	<i>memegil-Ø-wer</i>	‘each other’
	Comitative	<i>memegil-nun-mer</i>	‘with each other’
	Dative	<i>memegil-du-wer</i>	‘to each other’
	Allative 1	<i>memegil-dule-wer</i>	‘to each other’
	Allative 2	<i>memegil-təke-wer</i>	‘to each other’
	Ablative	<i>memegil-duk-wer</i>	‘from each other’
	Prolative	<i>memegil-duli-wer</i>	‘about each other.’

We have no examples where the suffixed reciprocal marker is not interchangeable with the reciprocal pronoun. Moreover, some reciprocals may not allow the omission of the reciprocal pronoun. “Possessive” constructions with a reciprocal pronoun are not used.

7.2 Subject-oriented constructions

7.2.1 “Canonical” reciprocals

7.2.1.1 *With two-place transitives*. Examples:

- (60) *Aakni-l memegil-Ø-wer aw-ra-Ø.*
 elder.brother-PL each.other-ACC-REFL wash-NFUT-3PL
 ‘The brothers washed each other.’
- (61) *Nuḡartən memegil-Ø-wer waa-re-Ø.*
 they each.other-ACC-REFL kill-NFUT-3PL
 ‘They killed each other.’

(Henceforth the reflexive-possessive suffix *-wer* on the pronoun is not glossed.)

7.2.1.2 *With two-place transitives with a split object valency*. Here belong a few verbs from the group treated in 7.2.1.1. The difference lies in the fact that in this case the underlying construction contains an object denoting a body part, which makes the semantic object expressed twice, as a whole and as an affected body part; e.g.:

- (62) a. *Bi nuḡan-man ḡaale-l-duk-in žawa-Ø-m.*
 I s/he-ACC hand-PL-ABL-his/her take-NFUT-1SG
 ‘I took him/her by the hand.’
- b. *Bu etərken-nun memegil-Ø-wer ḡaale-l-duk-war žawa-ra-p.*
 we old.man-COM each.other-ACC hand-PL-ABL-OUR take-NFUT-1PL
 ‘The old man and I took each other by the hands.’

7.2.1.3 *With two-place intransitives*. The reciprocal pronoun acquires a dative, allative, ablative, prolative, or comitative case form (cf. 3.1.1.2); e.g.:

- (63) a. *Nuḡartən memegil-du-wer bele-re-Ø.*
 they each.other-DAT-their help-NFUT-3PL
 ‘They help each other.’

- b. *Nuḡartən memegil-təki-wer təkul-la-Ø*
 they each.other-ALL.2-their get.angry-NFUT-3PL
 ‘They got angry with each other.’

7.2.1.4 *With one-place intransitives.* One-place intransitive verbs denoting uttering of sounds by birds and animals, like *čerḡa-* ‘to cheep’, *čineri-* ‘to roar’, etc. can take a comitative or dative or allative form of the reciprocal pronoun (for a list of these verbs see 3.1.1.3); e.g.:

- (64) a. *Čipiča-l memegil-nun-mer čulli-žara-Ø.*
 bird-PL each.other-COM-their squeak-PRES-3PL
 ‘Birds are squeaking to/with each other.’
 b. *Muri-r memegil-təki-wer keenari-žara-Ø.*
 horse-PL each.other-ALL.2-their neigh-PRES-3PL
 ‘The horses are neighing to each other.’

7.2.2 “Indirect” reciprocals

In this type of construction, the reciprocal pronoun is mostly in the dative or allative or ablative case (cf. 3.1.2); e.g.:

- (65) a. *Beje-l memegil-du-wer oro-r-wor buu-če-tən.*
 man-PL each.other-DAT-their reindeer-PL-their give-PAST-3PL
 ‘The men gave their reindeer to each other.’
 b. *Etərke-r memegil-duk-wer oro-r-wor ga-ra-Ø.*
 old.man-PL each.other-ABL.1-their reindeer-PL-their take.away-NFUT-3PL
 ‘The old men took their reindeer from each other.’

7.2.3 “Benefactive” reciprocals

These are possible with two-place transitives, the reciprocal pronoun taking the place of an optional indirect object of beneficiary (cf. 3.1.3); e.g.:

- (66) *Beje-l žu-l-wa memegil-du-wer oo-ra-Ø.*
 man-PL house-PL-ACC each.other-DAT-REFL make-NFUT-3PL
 ‘The men built houses for each other.’

7.3 Object-oriented constructions; the reciprocal personal-possessive pronoun *memegil-me-tən* ‘each other-ACC-their’

Reciprocals with the reflexive-possessive pronoun *memegil-Ø-wer* cannot be used in object-oriented constructions. This pronoun must necessarily have the matrix subject as its antecedent both in non-embedded (67a) and embedded clauses (67b). As for object-oriented constructions, personal-possessive reciprocal pronouns (cf. (7) and (8)) are used here: the pronoun for the 1PL object is *memegil-wun/te*, for the 2PL object it is *memegil-sun*, and for the 3PL object *memegil-tən*. Thus, this pronoun agrees with the object in person and number (see (67c)).

- (67) a. *Tari-l ɲinaki-r memegil-Ø-wer kik-ča-tən.*
 this-PL dog-PL each.other-ACC-REFL bite-PAST-3PL
 ‘These dogs bit each other.’
- b. *Žur etərke-r ɲinaki-r-we memegil-dula-wer kiki-wkan-ča-tən.*
 two old.man-PL dog-PL-ACC each.other-ALL-REFL bite-CAUS-PAST-3PL
 ‘The two old men made the dogs bite each other (= the old men).’
- c. *Žur etərke-r ɲinaki-r-we memegil-we-tən kiki-wkan-ča-tən.*
 two old.man-PL dog-PL-ACC each.other-ACC-their bite-CAUS-PAST-3PL
 ‘The two old men made the dogs bite each other (= the dogs).’

7.4 Co-occurrence of the reciprocal pronoun with suffixed reciprocals

The reciprocal pronoun is generally optional if a suffixed reciprocal is used. Pleonastic use of two reciprocal markers is probably determined by the speaker’s desire to emphasize reciprocity. “Canonical” suffixed reciprocals (e.g. *waa-maat-* ‘to kill each other’, *uree-meet-* ‘to be alike/similar’) take the reciprocal form *memegil-Ø-wer* (2b), and “indirect” reciprocals (like *buu-meet-* ‘to give sth to each other’) take the dative case form *memegil-du-wer*. Sometimes, instead of the different case forms, its comitative form *memegil-nun-mer* can be used. Thus, for instance, it may occur with “benefactive” suffixed reciprocals: it adds the sociative meaning thus producing a “sociative-reciprocal” interpretation of the construction.

- (68) a. *Nuɲartən žu-l-war oo-maat-te-Ø.*
 they house-PL-their make-REC-NFUT-3PL
 ‘They built houses (put up tents) for each other.’
- b. *Nuɲartən žu-l-war memegil-nun-mer oo-maat-te-Ø.*
 they house-PL-their each.other-COM make-REC-NFUT-3PL
 ‘They built houses for each other with each other.’

7.5 *Nomina actionis*

Verbs with a reciprocal pronoun can be nominalized by means of the present participle marker *-žari*; cf.:

- (69) a. *Nuɲartən memegil-Ø-wer aw-žara-Ø.*
 they each.other-ACC-their wash-PRES-3PL
 ‘They wash each other.’
- b. *Bi nuɲartən memegil-Ø-wer aw-žari-wa-tən iče-če-w.*
 I they each.other-ACC-their wash-PART-ACC-their see-PAST-1SG
 lit. ‘I saw their washing each other.’ (cf. 3.3)

8. Reciprocals with the reflexive pronoun *mer-wer* ‘ourselves/ourselves/themselves’

This pronoun can be used in both the reflexive and the reciprocal meanings (in fact, the latter meaning is not registered in the texts at our disposal but it is confirmed by our

informants; it requires additional checking). It has the same case forms as the reciprocal pronoun *memegil-wer* (see 7.1):

(70)	Accusative with zero marking	<i>mer-Ø-wer</i>	‘themselves/each other’
	Dative	<i>mer-du-wer</i>	‘to themselves/each other’
	Allative 1	<i>mer-dule-wer</i>	‘to themselves/each other’
	Allative 2	<i>mer-təki-wer</i>	‘to themselves/each other’
	Ablative	<i>mer-duk-wer</i>	‘from themselves/each other’
	Prolative	<i>mer-duli-wer</i>	‘about themselves/each other’

Three main cases of its usage can be distinguished. Its reflexive or reciprocal meaning is determined by the lexical meaning of the verb base or, to be more precise, by pragmatic factors (needless to say, if this pronoun is singular it allows reflexive interpretation only).

1. The reciprocal meaning is actualized if the reflexive reading is pragmatically inappropriate:

- (71) *Nuḡartən mer-wer n'ukani-žara-Ø.*
 they themselves kiss-PRES-3PL
 i. ‘They are kissing *each other*.’
 ii. *‘They are kissing *themselves*.’

2. The reflexive reading is more appropriate pragmatically; in this case the reciprocal suffix is needed on the verb for the reciprocal meaning to be actualized:

- (72) a. *Nuḡartən mer-wer aw-žara-Ø.*
 they themselves wash-PRES-3PL
 i. ‘They wash *themselves*.’
 ii. ?‘They wash *each other*.’
 b. *Nuḡartən mer-wer aw-maat-čara-Ø.*
 they themselves wash-REC-PRES-3PL
 ‘They wash *each other*.’

3. Both the reciprocal and reflexive reading are more or less equally possible. In this case, for unambiguous reciprocal reading, the suffix *-maat* must also be used:

- (73) a. *Nuḡartən homootə-wa waa-re-Ø.*
 they bear-ACC kill-NFUT-3PL
 ‘They killed the bear.’
 b. *Nuḡartən mer-wer waa-re-Ø.*
 they themselves kill-NFUT-3PL
 i. ‘They killed *themselves*.’
 ii. ‘They killed *each other*.’
 c. *Nuḡartən mer-wer waa-maat-te-Ø.*
 they themselves kill-REC-NFUT-3PL
 ‘They killed *each other*.’

9. Simultaneity and succession of reciprocal subevents

As in a number of other languages, simultaneity or succession of reciprocal subevents is determined by the lexical meaning of the base verb and context. Thus (1b) generally has a simultaneous interpretation. Other verbs usually imply successive arrangement of the subevents, which may be explicated by the adverbs *amarultat* ‘one after another/the other’ and *geetäkin* ‘in turn’, ‘by turns’; cf.:

- (74) *Nuḡartən amarultat pektəru-meet-čere-Ø.*
 they one.after.another fire-REC-PRES-3PL
 ‘They fire at each other one after the other.’

Reciprocals with lexical meanings like ‘to exchange (letters)’ and ‘to visit each other’s places’ naturally imply subevents being performed at a different time; cf.:

- (75) a. *Asa-l dukuwu-r-we duku-maat-čara-Ø.*
 woman-PL letter-PL-ACC write-REC-PRES-3PL
 ‘The women write letters to each other.’
 b. *Beje-l ireme-meet-čere-Ø.*
 man-PL visit-REC-PRES-3PL
 ‘The men visit each other.’

10. Lexicalization

Lexicalization of suffixed reciprocals and sociatives seems to be very rare. Here are the four instances at our disposal:

- (76) *gun-* ‘to say (sth) to sb’ → *gu-meet-/gu-ldə-* ‘to come to an agreement’
waa- ‘to kill’ → *waa-ldə-* ‘to fight with each other’
žoki- ‘to fix/repair’ → *žoki-ldə-* ‘to come to an agreement’
žuge- ‘to change sth for sth’ → *žuge-ldə-* i. ‘to alternate with each other’
 ii. ‘to change (the course)’; cf.:

- (77) a. *Bu žuge-ldə-wet-čere-w.* (K. 166)
 we change-SOC-ITER-FUT-1PL
 ‘We shall take turns with each other.’
 b. *Bira neḡneni-täkin menḡi-vi žugu-vi žuge-ldə-žeče-n.* (B. 192)
 river spring-each its.own-its way-its change-SOC-IPFV-3PL
 ‘Each spring the river changed its course.’

11. Lexical reciprocals

By definition, lexical reciprocals do not have any non-reciprocal counterparts. The simple and the discontinuous (with the reversal of the arguments) construction with a lexical reciprocal are usually synonymous, which is their distinctive feature, i.e. (for subject-oriented reciprocals) ‘A converses with B’ = ‘B converses with A’ = ‘A and B converse [with

each other]’, and (for object-oriented reciprocals) ‘C links A to B’ = ‘C links B to A (given homogeneity of A and B) = ‘C links A and B’. Most of subject-oriented lexical reciprocals have meanings like ‘to fight’, ‘to quarrel’, ‘to meet’, ‘to converse’, ‘to come to an agreement’, ‘to copulate’, etc. All these verbs can take *-maat* (and some also take *-ldə*; cf. *ηorča-/ηorča-maat-/ηorča-ldə* ‘to fight’; see (51a)) which may emphasize the reciprocal meaning, the forms being synonymous (this does not concern the verbs under (76)).

1. *Subject-oriented lexical reciprocals*. Three valency groups are distinguished here.

(a) *Two-place intransitives*. The case frame is the same for all the verbs, both non-suffixed and suffixed: NOM + COM; NOM + NOM (= NOM.PL); cf.:

- (78) a. *Nuŋan girki-nun-mi upču-žara-n / upču-meet-čere-n.*
 he friend-COM-his quarrel-PRES-3SG quarrel-REC-PRES-3SG
 ‘He quarrels with his friend.’
 b. *Nuŋan girki-n-da upču-žara-Ø / upču-meet-čere-Ø.*
 he friend-his-and quarrel-PRES-3PL quarrel-REC-PRES-3PL
 ‘He and his friend quarrel.’

The following verbs can be used in type (78a) constructions:

- (79) *bulen-* ‘to fight’ *musse-* ‘to quarrel, argue’
gedə- ‘to come to an agreement’ *ηorča-* ‘to fight, wrestle’
girkile- ‘to be friends’ *sirun-* ‘to mate’ (of deer)
gookčan- ‘to compete, rival’ *sookan-* ‘to copulate’
gukčan- ‘to compete, rival’ *turet-* ‘to converse, talk’
kusi- ‘to fight’ *upču-* ‘to quarrel, squabble.’

(b) *Two-place transitives*. So far, we have only two verbs on our list which may have the case frames NOM + ACC; NOM + NOM (= NOM.PL); the verb *uree-* ‘to be alike, resemble’, ‘to coincide’ also has the case frame NOM + COM (80c); the other verb is *turga-* ‘to meet’ considered above among reciprocals in *-ldə* (54).

- (80) a. *Bejetken asatkan-me uree-žere-n / uree-meet-čere-n.*
 boy girl-ACC be.like-PRES-3SG / be.like-REC-PRES-3SG
 ‘The boy is like the girl in appearance.’
 b. *Bejetken asatkan-da uree-žere-Ø / uree-meet-čere-Ø.*
 boy girl-and be.like-PRES-3PL / be.like-REC-PRES-3PL
 ‘The boy and the girl are alike in appearance.’
 c. *Bejetken asatkan-nun uree-žere-Ø / uree-meet-čere-Ø.*
 boy girl-COM be.like-3PL / be.like-REC-PRES-3PL
 ‘The boy and the girl are alike in appearance.’

(c) *Three-place transitives*. Here belong *borit-* ‘to divide, distribute’ and *žuget-* ‘to exchange’; the case frame of the non-suffixed lexical reciprocals is NOM + ACC + COM and the reciprocal construction has “indirect” diathesis, but the meaning of the reciprocal is ‘among themselves’.

- (81) a. *Nuŋartən ulle-we mata-l-nun borit-ta-Ø.*
 they meat-ACC neighbour-PL-COM divide-NFUT-3PL
 i. ‘They divided meat *with* the neighbours.’
 ii. ‘They divided meat *among* the neighbours.’

- b. *Nuḡartən ulle-we bori-maat-ta-Ø.*
 they meat-ACC divide-REC-NFUT-3PL
 ‘They divided the meat among themselves.’

2. *Object-oriented lexical reciprocals.* Here belong non-suffixed verbs listed in (56). The reciprocal suffix is ungrammatical on these verbs (82b).

- (82) a. *Nuḡan mooka-r-we [moo-laa] tǝpke-re-n.*
 he stick-PL-ACC tree-ALL fix-NFUT-3SG
 i. ‘He fixed the sticks to the tree.’ (unless the bracketed word is omitted)
 ii. ‘He fixed the sticks to one another.’ (if the bracketed word is omitted; cf. (57))
- b. **Nuḡan mooka-r-we [moo-laa] tǝpke-meet-te-n.*
 he stick-PL-ACC tree-ALL fix-REC-NFUT-3SG
 (same intended meanings).

12. Reciprocal adverbs in *-lta/-lte/-lto* of the *daga-lta* ‘next to one another’ type

In Evenki, there are nominal stems whose case forms appear as adverbs or postpositions and denote converse relations (like (a) *A is behind B* which implies (b) *B is in front of A* and (c) *A and B are behind one another* on condition that A and B belong to the same class of objects) or reciprocal relations (like (a) *A is close to B* which implies (b) *B is close to A* and (c) *A and B are close to each other* on the same condition). Their base stems take the suffix *-lta* and thus become adverbs denoting either proper reciprocal relations (like ‘close to each other’; one adverb) or, mostly, distributive relations (like ‘behind one another’, ‘above one another’; six adverbs). Cincius (1946:95) claims: “... in Evenki and Even, a totality of objects situated in space in a given direction with respect to one another is described by derivatives from the stems of some adverbs and verbs by means of the suffix *-lta/-lte*”. We have found seven such adverbs in Cincius (1946), Vasilevich (1958:27, 768) and Konstantinova (1964:93) and another seven have been elicited from our informants.

A list of the reciprocal adverbs (and two adjectives, see *bargi-lta* and *daga-lta*) is given in (85). They are derived from nominal bases (one base is verbal, see *ulbu-*; the meaning of this lexical reciprocal corresponds to the meaning of the derived adverb) with various spatial meanings, e.g. *ojo* ‘upper part of (a mountain, building, tree, etc.)’, *bargi(da-)* ‘the other side of (the river)’, etc. From these nominal bases, spatial adverbs are formed by means of different locative case markers depending on position or direction of motion (*amar* ‘side, back’ → *amar-du* ‘(to be, stand) behind sth’ (see (83)), *amar-dula* ‘behind (motion towards)’, *amari-li* ‘behind (motion past, along)’, etc.) These adverbs can be used as postpositions which agree in person and number with the head noun (cf. *nuḡan amar-du-n* ‘behind him’, *bu amar-du-wun* ‘behind us’, *nuḡartən amar-du-tən* ‘behind them’, etc.; see (7a)). The derivatives can undergo substantivization while retaining the spatial meaning of the adverb; e.g. ‘the back’ → ‘behind (sth/sb)’ → ‘one behind another’ → ‘queue’; cf. also ‘(arithmetical) column’, ‘row’, ‘storey’. The reciprocal adverbs occur in texts much less frequently than the non-reciprocal adverbs and postpositions with the same stems. Semantically two-place reciprocal adverbs are relatable to two-place postpositions;

in other words, they are used in simple and discontinuous constructions respectively (cf. (83b) and (83c); the suffix *-t* in (84b) is a marker of instrumental case serving also as an adverbializer).

- (83) a. *Oron amar-du ilit-čara-n.*
 reindeer behind-DAT stand-PRES-3SG
 ‘The reindeer stands behind.’
- b. *Oro-r žuu amar-du-n ilit-čara-Ø.* (discontinuous)
 reindeer-PL house behind-DAT-its stand-PRES-3PL
 ‘The reindeer stand behind the house.’
- c. *Žu-l / oro-r amaru-lta ilit-čara-Ø.* (simple)
 house-PL reindeer-PL one.after.another stand-PRES-3PL
 ‘Houses/reindeer stand one after another.’
- (84) a. *Bejetken hergu-duk sekte-duk čowokolot-čo-n.*
 boy lower-ABL branch-ABL grasp-PAST-3SG
 ‘The boy grasped at the lower branch.’
- b. *Bejetke-r ture-r hergume-lte(t) duku-žara-Ø.*
 boy-PL word-PL one.under.other write-PRES-3PL
 ‘The boys are writing words in a column/one under another.’

The postpositions are given as bases of the derivatives in *-lta/-lte/-lto*. They are quoted mostly with the dative case marker and a possessive 3SG or 3PL marker (the case marker may be preceded by the component *-da* with a vague locative meaning).

- (85) a. *amar-du-n* ‘behind sth/sb’ → *amaru-lta* i. ‘(sth) situated one behind/after another’ ii. ‘queue’
čagi-da-du-n ‘farther on, behind sth/sb’ → *čagi-da-lta* ‘farther on one after another’
ojo-du-n ‘above/on sth/sb’ → *ojo-lto* i. ‘(sth) situated one above/over another’
 ii. ‘column’ (in writing), iii. ‘storey’
daga-du-n ‘near sth/sb’ → *daga-lta* i. ‘nearest, closest’
 ii. ‘(sth) situated next to one another’
 iii. ‘row’, iii. ‘crossroads’
dari-da-du-n ‘at the side next to sth/sb’ → *dari-lta* ‘at the side one behind another’
goro-du ‘far’ → *goro-lto* ‘far away one behind/next to another’
hergi-de-du-n ‘below/under sth/sb’ → *hergu-me-lte* i. ‘one below another’
 ii. ‘column’
mureli ‘around sth/sb’ → *mureli-lte* ‘around one after another’
oldon-du-n ‘at the side next to sth/sb’ → *oldoni-lta* ‘one upon another’
sigdale-du-tən ‘in between/among them’ → *sigdale-lte* ‘(sth) situated in between’
ugi-le-n ‘above sth/sb’ → *ugi-me-lte* i. ‘(sth) situated one above another’
 ii. ‘storey’
žüle-du-n ‘in front of sth/sb’ → *žüle-lte* lit. ‘one in front of another’
 = ‘one after another’
- b. *bargi-da-du-n* ‘opposite sth/sb’ → *bargi-lta* ‘opposite’ (adj.)
ulbu- ‘to walk single file’ → *ulbu-lte* i. ‘(in) single file’, ii. ‘queue’ (K. 93).

These postpositions which express all the main spatial relations can be grouped semantically in the following way:

- | | | |
|----|-------------------------|--|
| 1. | a. 'above/upon sth/sb' | <i>ojo-du-n, ugi-le-n,</i> |
| | b. 'below/under sth/sb' | <i>hergide-du-n</i> |
| 2. | a. 'behind sth/sb' | <i>amar-du-n, čagi-da-du-n, dari-gida-du-n</i> |
| | b. 'in front of sth/sb' | <i>bargi-da-du-n, žüile-de-du-n</i> |
| 3. | a. 'near sth/sb' | <i>daga-du-n</i> |
| | b. 'far from sth/sb' | <i>goro-du</i> |
| 4. | 'between/among sth/sb' | <i>sigdale-du-tən</i> |
| 5. | 'around sth/sb' | <i>mureli</i> |
| 6. | a. 'in/inside sth' | <i>doo-du-n</i> |
| | b. 'outside sth' | <i>tuli-du-n.</i> |

The latter two adverbial stems under 6 which form postpositions with various spatial meanings do not yield derivatives with the suffix *-lta*.

13. Reciprocals derived from nouns

Reciprocals can be formed only from four nouns three of which are derived by means of the reciprocal suffix, and one verb by means of the sociative suffix; cf. respectively:

- | | | | |
|---------|---------------------------------|---|---|
| (86) a. | <i>dəl</i> 'head' | → | <i>dəl-maat-</i> i. 'to fight/struggle pressing hands together', ii. 'to wrestle butting heads against each other' (of men)/ 'to pull each other by the hair' (of women) (only in the Ilimpeya and Erbogachon dialects) |
| | <i>mire</i> 'shoulder' | → | <i>mire-meet-</i> 'to marry' |
| | <i>turen</i> 'word', 'language' | → | <i>turet-meet-</i> 'to talk with each other' |
| b. | <i>ŋaale</i> 'arm' | → | <i>ŋaale-ldə-</i> 'to wrestle holding each other by the hands.' |

14. Notes on etymology. Genetic relations of reciprocal and sociative markers

In some instances the spelling differences between the compared entities may be due to the different graphic means employed in the sources we have used. Sometimes, we cite only one of the possible synharmonic variants of the suffixes instead of all.

14.1 The reciprocal suffix *-maat*

This suffix is attested in all Tungusic languages (except Manchu which uses mostly the suffix *-ndu* instead (see 15.1) and possibly Solon where it occurs with *-ldi* only). It is represented by the following forms (and their harmonic variants) across languages:

- | | | |
|------|---------------------|---|
| (87) | <i>-maat-/maaci</i> | Evenki, Even, Negidal (on Even see Malchukov, Ch.39, §3) |
| | <i>-maši-ldi</i> | Solon (Poppe 1931:120–1) |
| | <i>-maaci</i> | Nanai, Ulcha, Uilta, Oroch (on Nanai see Avrorin 1961:43) |
| | <i>-masi</i> | Udehe (Nikolaeva, Ch. 23, §3). |

The form *-maači* is probably the primary form: in the Northern group of Tungusic languages, /č/ before vowels changes into /t/ before consonants and in word-final position (the latter not in Even): Evenki *alač-i-nni* ‘(you.sg) wait/waited’ – *alat-te-n* ‘(he) waits/waited’ (Cincius 1949:198, 210–1). Originally, the suffix *-maači* seems to have consisted of two components, *-maa* and *-či*; the origin of the first component is less clear. The morpheme *-či* is productive in Tungusic languages and appears both independently and within other suffixes. In Evenki, this morpheme has allomorphs *-t* and *-či* and it denotes a durative or iterative action (as is known, iterativity is semantically related to reciprocity). Compare Evenki *doldə-* ‘to hear’ → *doldə-t-* ‘to listen to sb’, *waa-* ‘to kill’ → *waa-t-* ‘to kill repeatedly’. This suffix is retained in its original form *-či* in the Southern Tungusic languages; cf. Nanai *garpa-* ‘to shoot from a bow’ → *garpa-či-* ‘to shoot repeatedly’. The component *-či* is part of the complex suffix *-waači/-weeči*, *-paači/-peeči* (the latter allomorphs coincide with some of the allomorphs of the reciprocal suffix in Nanai, cf. *-maači/-meeči*, *-paači/-peeči*); cf. *xukču-* ‘to attack sb’ → *xukču-peeči-* ‘to attack repeatedly’ (see Avrorin 1961:42–6).

One may tentatively assume that the first component *-maa* of the reciprocal suffix is genetically related to the productive Evenki suffix *-maa/-mee/-moo* which expresses intensity and certainty; e.g.: *ičet-* ‘to look at’ → *ičet-mee-* ‘to look at sb intently’, *eme-* ‘to come’ → *eme-mee-* ‘to come without fail’ (cf. Lebedeva et al. 1985:90). For a different version of the etymology see Ramstedt (1952:180–1).

The suffix *-maat* is probably of relatively recent origin, at least it is “younger” than sociative *-ldə*: it is practically monosemous while *-ldə* has retained a reciprocal meaning. However, in other Tungusic languages *-maat* is registered in some non-reciprocal meanings, though very scarcely. Thus, in Even there is a very limited number of fossilized verbs with such meanings (cf. Malchukov, Ch. 39, §3.3). In Nanai and Udehe a few verbs with this suffix and sociative meaning are attested (cf. Nanai *saoli-mači-* ‘to feast together’, see Avrorin 1961:44; on Udehe see Nikolaeva, Ch. 23, §3.3.2). The assumption concerning the recent origin of *-maat* is supported by the fact that there is a sequence *-ldə-meet* and the suffix *-ldə* with the reciprocal meaning (see sections 4 and 6) but there is no sequence *-maači-ldə* in either Evenki or Even. This sequence is however attested in Solon (see Poppe 1931:121). But, judging by Poppe’s grammar and the appended glossary (which is rather short, pp. 37–84), there is no suffix *-maaši* in Solon, but only *-maaši-ldi* and *-ldi* both with the reciprocal meaning (in Poppe (1931) there is not a single Solon form with the sociative meaning):

- (88) *žanži-* ‘to speak, say’ → *žanži-maaši-ldi-* ‘to exchange words’
žawa- ‘to grasp’ → *žawa-maaši-ldi-/žawa-ldi-* ‘to grasp each other, wrestle’
 (Poppe 1931:82, 83; see also (90b)).

Note that there are a few isolated derivatives in which the meaning of the reciprocal suffix differs from the standard meaning (either lexicalization or an obsolete meaning): Nanai *gele-* ‘to ask’ → *gele-meeči-* ‘to look for’, *etu-* ‘guard’ → *etu-meeči-* ‘to show caution’ (Avrorin 1961:43). Materially similar to the reciprocal suffix is the modal (debitive) suffix

-maači(n)/-meeči(n); cf. Evenki *ulguče-* ‘to tell’ → *ulguče-meeči-* ‘to be obliged to tell’. But we do not see here any semantic connection with the reciprocal or any related meaning.¹

14.2 The sociative suffix *-ldə*

The component *-l-* of the suffix *-ldə* is probably genetically related to the plural marker on nouns and participles (cf. *sulaki-l* ‘foxes’); the origin of *-də* is unclear. It is highly probable that this suffix was previously reciprocal in meaning (cf. the reciprocal marker *-lda* in Mongolic languages which also has the sociative meaning ‘many and/or together’; see Nedjalkov et al., Ch. 29, §§4.1–4.1.2.1, 14); this meaning is preserved by *-ldə* in a limited group of verbs in Evenki (see section 6). It remains an open question whether this suffix is either of common Altaic origin or was borrowed by Tungusic languages from Mongolic languages (or *vice versa*). It should be taken into account that the Manchu reciprocal suffix *-ndu* is genetically related to the Evenki sociative *-ldə*. (Alternation /l/ > /n/ in certain phonetic contexts is characteristic of Manchu; it occurs not only in the reciprocal suffix; cf. Evenki *dōldi-* ‘to hear’ – Manchu *donži-* ‘to hear’; C. 214–5) Unlike *-ldə*, the Manchu *-ndu* (← *ldu*) (see Zakharov 1879: 170) mostly expresses the reciprocal meaning, like the genetically related suffix *-lda* in Solon (cf. (90b)).²

1. Similarly, we do not see any semantic connection with the reciprocal meaning in most of the following derivatives: this is either an accidental (partial) material coincidence or some intermediate links are lost. Probably the data of other languages may throw light on this relationship, therefore we cite these data, though we regard this suffix as a homonym of the reciprocal suffix *-maat* which we consider as monosemous. As a matter of fact, all Evenki dialects possess a homonymous suffix *-maat* with a number of evaluative (in the broad sense) meanings: restrictive ‘at least’, focal ‘even’, pejorative ‘carelessly’, of weakened process or action, etc. This suffix can also be attached to nouns and numerals to express the meanings ‘at least’, ‘if only’. However, this suffix differs morphologically from the reciprocal suffix: in positions where *-maači* appears, the suffix in question has a variant *-maatə*. The derivatives cited below are unproductive, some meanings being represented by a very limited number of verbs. Here are these meanings (the meaning of the underlying verb is included in that of the derivative): (1) the meaning ‘carelessly’: *oo-maat-* ‘to make, build sth badly, carelessly’, *bi-meet-* ‘to live badly, poorly’; (2) the meaning of weakened action (Katanga dialect only): *nii-meet-* ‘to open a little’, *aa-maat-* ‘to sleep a little’; (3) the restrictive meaning (four verbs of motion): *eme-meet-te-n* ‘at least he has come’; (4) low degree of certainty: *bu-meet-te-n* ‘probably he died’; (5) the iterative meaning: *som-maat-* ‘to close several times’ (see also (105)). In all these meanings, one may discern a general (rather vague) sense of deviation from the norm or expectation.

- (x) *N’ukani-maat-ča sot dəlača-kan dunne-we* (N. 9)
 kiss-ITER-PART very sun-DIM earth-ACC
 ‘The Sun was repeatedly kissing the Earth.’

2. It is not quite clear in what way the component *-ldə* of the complex suffix *-ldə-wun* is related to sociative *-ldə*. The suffix *-ldə-wun* is used in deverbal and denominal nouns with the meaning of instrument, animals, and some others; cf. *ikte* ‘tooth’ → *ikte-ldə-wun* ‘medicine for toothache’; *simki-* ‘to cough’ → *simki-ldə-wun* ‘medicine for coughing’, *ollomoo-* ‘to go fishing’ → *ollomoo-ldə-wun* ‘eagle-fisher’ (but *ollomoo-wun* ‘fishing gear’), *siŋerekeen* ‘mouse’ → *siŋeree-ldə-wun* ‘bird-mousecatcher’ (Konstantinova 1964: 159–60; Boldyrev 1979: 41; see also Benzing 1955: 121). The component *-wun* is also used singly in these meanings; cf.: *perii-* ‘to rotate around the axis’ → *perii-wun* ‘a drill’. The complex *-ldə-wun* is registered only in Evenki, Even and Negidal; the other Tungusic languages

suffix is genetically related to the materially similar (or identical) suffix which also involves plurality: it occurs in both Northern and Southern Tungusic languages in derivatives like Ulcha and Orok *ila* ‘three’ → *ila-lta* ‘(period of) three days’; in Udehe such derivatives render meanings like iterative ‘three times’, and in Negidal they have both meanings. In Evenki, the consonant /t/ of this suffix has undergone assimilation, cf. *ila-lla* ‘(period of) three days’. The component *-l* of this suffix is most likely genetically related to the plural suffix *-l* on nouns and participles; the component *-ta*, in Cincius’ opinion, is also related to the idea of plurality. The latter component appears in the distributive suffix *-ta-l*, with the opposite arrangement of the components, cf. Evenki *ila-tal* ‘in threes’ (in contexts like “They got three cups of rice each”). In other Tungusic languages, only *-ta* appears in this function, cf. Ulcha *ila-ta* with the same meaning. (The data are borrowed from Cincius 1946:98, 100, 112, 115, 1949:115, 198.)

14.4 The reciprocal pronoun *mee-mee-gi-l-wer* ‘each other’

This section concerns the morphological structure of this pronoun in different Tungusic languages. The table under (91a) shows its dialectal variants (with segmentation into functionally corresponding components). Alongside the dialectal variants of Evenki, the data of the Even and Negidal languages are included (we have no information on the other languages; the Even data are borrowed from Malchukov (Ch. 39, §4.2.1)). The variety of forms of the reciprocal pronoun is surprising, but the general morphological pattern is the same: (partial) reduplication of the reflexive pronoun and use of the reflexive-possessive suffix, the main difference being the plural markers. The Uchur and Urmi dialects have two variants of the reciprocal pronoun (cf. Vasilevich 1958:269–72; Cincius 1982:23). The forms cited are subject-oriented reciprocal pronouns; an object-oriented reciprocal pronoun is registered in Even and Evenki (cf. the subject-oriented pronoun *meen-meen-ur* where *-ur* is a reflexive-possessive marker (cf. (91a)) and object-oriented *meen-meen-ten* where *-ten* is a personal-possessive marker in agreement with the object; see Malchukov, Ch. 39, §4.2.2; cf. *memegil-wer* and *memegil-tan* in 7.3 above).

The ideal scheme of reciprocal pronouns in Tungusic languages has seven positions shown in (91a), but in reality forms with no more than six components, including a zero marker, are attested:

(a) the first and the third slots are taken up by the reduplicated first syllable *mee[n]* of the reflexive pronoun ‘oneself’: cf. ACC. *men-mi* translated as ‘myself/yourself/himself/herself/itself’, *me-r-wer* translated as ‘ourselves/yourselves/themselves’ depending on the person and number of the antecedent;

(b) the filling in of the second slot is attested only once: it is occupied by the plural affix *-r* in Uchur;

(c) the fourth slot is occupied only in two cases: by the unproductive Vanavara affix *-gi-* of unclear meaning, which is retained on a number of nouns derived from nominals (*anda* ‘friend’ → *anda-gi* ‘friend’), and the affix *-lii* in the form *mee-mee-lii-l-wer* cited in (91) which seems to be the result of the assimilation of *-gi-* by the following *-l*, because this plural marker is attested only in combination with *-gi* or *-lii*;

(d) the fifth slot is occupied by the plural suffix *-l-* or *-r-*;

(e) the sixth slot is taken up by a case marker. In (91a) it is occupied by the accusative case marker represented here by zero: reflexive-possessive forms of nouns and adjectives, i.e. forms ending in *-wi/-war/-wer/...*, always have zero accusative marking (for other case markers see (59));

(f) the seventh slot is occupied by a suffix of reflexive possession (cf. the reflexive pronoun *me-r-wer* ‘ourselves / yourselves / themselves’ (depending on the person of a plural antecedent) which can be used as a reciprocal pronoun ‘each other’, too (see (7c)).

The schema under (91a) is not applicable to all the Tungusic languages. The scheme under (91b) reflects the reciprocal pronouns that are not covered by (91a): they are heterogeneous and therefore the meanings of morphemes do not correspond to the meanings attributed to each slot in (91a). Only slot 7 is always filled in by a reflexive-possessive-plural morpheme in all the languages and dialects.

(91) a.	1	2	3	4	5	6	7	
	‘self’	PL	‘self’	?	PL	case	REFL-POSS.PL	Dialect/language
	<i>mee</i>	–	<i>-mee</i>	<i>-gi</i>	<i>-l</i>	∅	<i>-wer</i>	Vanavara
	<i>mee</i>	<i>-r</i>	<i>-mee</i>	–	<i>-r</i>	∅	<i>-wer</i>	Uchur
	<i>mee</i>	–	<i>-mee</i>	–	<i>-r</i>	∅	<i>-wer</i>	Uchur, Urmi, Chumikan
	<i>mee</i>	–	<i>-mee</i>	<i>-lii-</i>	<i>-l</i>	∅	<i>-wer</i>	Erbogachon, Nepa
	<i>meen</i>	–	<i>-meen</i>	–	–	∅	<i>-wer</i>	Sakhalin, Urmi
	<i>meen</i>	–	<i>-meen</i>	–	–	∅	<i>-ur</i>	Even (West. dial.)
	<i>maa</i>	–	<i>-maa</i>	–	<i>-r</i>	∅	<i>-wej</i>	Negidal
(91) b.	1	2	3	4	5	6	7	
	<i>me</i>	<i>-fei</i>	<i>-me</i>	–	–	–	<i>-fei</i>	Udehe (Ch. 23, §3.1)
	<i>meer</i>	–	<i>-tek</i>	–	–	∅	<i>-mur</i>	Even, East. dial. (Ch. 39;4.3.1)
	<i>dia</i>	–	<i>-dia</i>	–	–	∅	<i>-wari</i>	Nanai (Avrorin 1961:42–3)

Table (91b) needs some explanation. Thus, in Udehe the reciprocal pronoun has only two forms, the accusative *me-fei-me-fei* and the nominative *mene-mene* which is of very limited use; therefore slot 6 is marked with a dash instead of ∅. In this pronoun the repeated component *-fei* is a reflexive-possessive-plural marker. The pronoun *me-fei-me-fei* is in fact a reduplicated plural reflexive pronoun *me-fei* ‘(my/your/him/her)-self’ (Nikolaeva, Ch. 23, §4.1). We have no information on some of the languages of the Southern group, but we can assume that in these languages the reciprocal pronoun is similar to the forms listed above, i.e. reduplication and reflexive-possessive-plural suffixation are employed, since they also possess a reflexive pronoun similar to the one from which the reciprocal pronoun is derived. In Nanai, however, which has a reflexive pronoun *me-pi* (ACC.SG) and *me-peri* (ACC.PL), a respective reciprocal pronoun is not attested; the form *dia-dia-wari* ‘each other’ (< *dia* ‘comrade’) is used instead, usually with suffixed reciprocals (but more often the combination *mene dola* ‘between oneselves’ is used; Avrorin 1961:42–3). In the Even Eastern dialect the morpheme *-tek* (*-teken* in the oblique cases) is used instead of a reduplicated reflexive stem.

In Manchu there is no reciprocal pronoun. Instead, it has an invariable reciprocal adverb *ixunde* ‘mutually’ (see 15.3). As to the reflexive pronoun, it is descended from the

noun *beje* ‘man, person, body, appearance’ (cf. some Turkic and Mongolic languages; see Ch. 26 on Yakut, §2.6; Ch. 29 on Buryat, §8.1), and not from the root *men-* (see Cin-cius 1949:26, 262). Thus, in this respect Manchu differs markedly from other Tungusic languages.

15. Appendix: Reciprocals and sociatives in Written Manchu

15.1 Introductory

Written Manchu (preserved in the vast literature of the 17th–19th centuries) was the language of the Manchu élite who ruled a huge Chinese empire for about three centuries, and it was used in official documentation (cf. 1.1). It is interesting to note that since 1728 the language of the Russian correspondence sent to China was obligatorily Manchu (side by side with Russian) for 150 years (Zakharov 1875: xxix).

This brief survey is based on the data of Manchu registered in *A Complete Manchu-Russian Dictionary* by Zakharov (1875), his Manchu grammar (1879) and the grammars of Manchu by Avrorin (2000) and Orlov (1873). The main source is the dictionary by Zakharov (1875 = Z1) based on the data of the Manchu-Chinese dictionaries and also his thirty years of work involving the Manchu language. In this dictionary, about 3,500 verbs are registered and over 1,850 of them are root verbs (Avrorin 2000:152). It contains about 100 derivatives with reciprocal and sociative meanings (over half of them are sociative; if a verb is ascribed both meanings, it is counted twice; there are 6 such verbs; see (103)). On the basis of this limited number Avrorin (2000:184) draws a conclusion that these derivatives are petrified to a considerable degree.

We have transliterated the Manchu data from Cyrillic used in (Z1) by substituting Latin characters for Cyrillic (with slight corrections), therefore there may be phonetic errors from the viewpoint of later investigations, but this is irrelevant for our purposes. The translations in square brackets are ours: they are made by analogy with the translations of similar derivatives.

There are three main markers of reciprocity and sociativity: *-ndu*, *-nu* and *-ča/-če/-čo* (the variants are accounted for by vowel harmony; it concerns the vowels /a/, /e/ and /o/ and not /u/ and /i/). The derivatives with these suffixes comprise 92 items. These derivatives are the main material of this section. The remaining four peripheral suffixes *-ntu*, *-du*, *-ša/-še/-šo* and *-ta/-te/-to* occur on about 10 verbs (they are considered in 15.5).

There are no clear semantic distinctions between the suffixes *-ndu*, *-nu* and *-ča*, but there is a general tendency of prevalent reciprocal or sociative use of each. As (92) shows, the suffix *-ndu* is prevalent in the reciprocal meaning and *-ča* in the sociative meaning, while *-nu* is intermediate in this respect with a slight preference for the sociative meaning (we realize that it is risky to draw conclusions on the basis of such a limited amount of data, but the quantitative differences are indicative of the tendencies in their usage).

(92)	Derivatives with reciprocal meaning	Derivatives with sociative meaning	Total
- <i>ndu</i>	25	14	39
- <i>nu</i>	13	21	34
- <i>ča</i>	5	18	23
Total	43	53	96

Such distribution of these two meanings is not characteristic of the Even, Evenki and Udehe languages where a reciprocal and/or a sociative markers are sometimes registered in the meaning of the other but to a lesser degree than in Manchu. In this respect, typologically, Manchu is similar to Khalkha Mongol where the reciprocal suffix *-lda* and the sociative *-lca* are widely used instead of one another (see Nedjalkov et al., Ch. 29, §§4 and 7). One might possibly see the areal influence of Khalkha on Manchu in this similarity; it is noteworthy that the Manchus borrowed their alphabet from the Mongols at the end of the 16th century. Note also that, as just mentioned above, the Manchu reflexive pronoun *beje* coincides with the reflexive pronouns of the Mongolic languages and, lastly, Manchu lacks subject agreement like Khalkha and unlike other Tungusic languages. One might as well add that about one third of the vocabulary of Written Manchu are borrowings from Chinese.

On the whole, Manchu reciprocals seem to be much more lexicalized than in Evenki, which testifies to their considerable “aging”. This is probably interrelated with the loss of the clearcut meaning of each (reciprocal and sociative) suffix. It is significant in this respect that the sociative meaning ‘to sit down together’ on the verb *te-* ‘to sit down’ is marked by all the three main markers and their combinations: *te-če-/te-nu-/te-ndu-/te-če-nu-/te-če-ndu*.

15.2 Reciprocals

As shown in (92), the main reciprocal marker in Manchu is the suffix *-ndu* (see the list under (93a)). Less numerous are reciprocals in *-nu* (see (93b)). This suffix is probably genetically related to *-ndu* but it is hard to define the rules of the choice between them on the basis of our data. The variants *-nu*, *-du* (in two derivatives) and *-ntu* (in three derivatives) is due to the fact, according to Avrorin (2000: 183), that the written language borrowed respective derivatives from different dialects.

In the lists below, the meaning of the base verb is not always reflected in the translation of the derivatives in a straightforward way. The following types of semantic correspondences occur in the data:

(a) there is a standard semantic relationship between the base and the derivative, cf. *ajsila-* ‘to help’ → *ajsila-ndu-* ‘to help each other’, *wa-* ‘to kill’ → *wa-ndu-* ‘to kill each other’ and the like, including also chaining reciprocals like *daxa-* ‘to follow sb’ → *daxa-ndu-* ‘to follow one another’;

(b) along with the standard semantic relationship with the base, the meaning of a derivative may be slightly lexicalized in a typologically predictable way (thus it has two meanings); cf. *sa-* ‘to know, learn’ → *sa-ndu-* i. ‘to know each other’, ii. ‘to meet (see each

other), be friends', *žafa-* 'to grasp sb/sth' → *žafa-nu-* i. 'to grasp each other', ii. 'to wrestle', *gaj-* 'to take sth/sb' → *gaj-ndu-* 'to squabble', *jabu-* 'to walk' → *jabu-ndu-* lit. 'to go to each other', i.e. 'to visit each other', which generally implies the meaning 'to be acquainted';

(c) an individual though transparent change of meaning is possible, cf. *guja-* 'to rub against a tree before mating (of deer, etc.)' → *guja-ndu-* 'to play with each other before mating (of animals)', *sori-* 'to kick (of horses)' → *sori-ndu-* 'to push and trample each other in utter confusion', *žaža-* 'to carry on one's back' → *žaža-nu-* 'to crowd, push each other back to back';

(d) the meanings of the base and the derivative (more or less) coincide, if the base is a lexical reciprocal, cf. *xuwala-* ≈ *xuwala-ndu-* 'to be on good terms with each other' and *delxe-* ≈ *delxe-ndu-* 'to part from each other', *surte-* ≈ *surte-nu-* 'to race with each other', where the suffix seems to be used pleonastically;

(e) in two instances, a suffix seems to have the spatial meaning of joining: in one instance the suffix *-ndu* is used on an object-oriented reciprocal, probably pleonastically, the base verb being a lexical reciprocal, as in case (d) (*sire-* 'to spin threads together, tie ropes together' → *sire-ndu-* (same)), and in the other instance the suffix *-nu* occurs in a one-place verb of motion: *tokto-* 'to flow' → *tokto-nu-* 'to flow together (from different directions into one place, e.g. rivers into a lake)'; cf. 6.3;

(f) the base verb registered in the intransitive meaning(s) only which is not a lexical reciprocal (unlike (d)) in combination with a reciprocal suffix behaves as a transitive verb, cf. *somi-* 'to hide (oneself)' → *somi-ndu-* 'to cover, shield each other', *gajsila-* 'to be keen on sth' → *gajsila-ndu-* 'to allure each other', *jende-* 'to feel inspiration' → *jendu-nu-* 'to inspire each other'; cf also *algi-nda-* in (h) below. These instances are in a way analogous to passive formations from intransitives with the passive-causative suffix *-bu* like *inže-* 'to laugh' → *inže-bu-* 'to be laughed at' (and also 'to make sb laugh'; cf. (104b)).

There are a number of deviations from standard formal relations between bases and derivatives (they may be due to the insufficient material in the dictionary):

(g) the base verb is not registered in the dictionary (Z1) at all (cf. *dara-nu-* 'to treat each other to wine') or the stem occurs in a noun (e.g. *kimu-n* 'enmity, hatred' → *kimu-ndu-* 'to be mutual enemies'). The lexical reciprocals *karča-* 'to come together, to meet, to collide, to butt' (Z1. 213), *ača-* 'to gather, unite, meet' (Z1. 48) may also be included here if we find proof that their final component *-ča* is genetically related to the sociative-reciprocal *-ča*.

(h) There may be (i) a unique change of the reciprocal marker or (ii) slight changes of the base stem. The derivative *algi-nda-* 'to glorify, praise each other' (← *algi-* 'to be, become famous') (Z1. 36–7) belongs to the former case. This suffix is formally identical with a variant of the iterative-durative suffix *-nda/-nde/-ndo*; cf. *akža-* 'to thunder' → *akža-nda-* 'to thunder continuously' (A. 159–60). (For the variants *-ntu* and *-du* see 15.5.) With reservations, we may regard the derivative *žur-če-* 'to move one against another'(?), 'to oppose, resist' (← *žura-* 'to set out somewhere'; cf. *žura-nu-* in (97b) with the final vowel retained) as case (ii).

- (93) a. *afa-ndu-* 'to fight against each other' (Z2. 170)
ajsila-ndu- 'to help each other' (Z2. 170)

<i>ala-ndu-</i>	‘to say to each other’ (Z2. 179)
<i>bošo-ndu-</i>	‘to hurry each other’ (Z1. 514)
<i>daxa-ndu-</i>	‘to follow one another’ (Z1. 777)
<i>delxe-ndu-</i>	‘to part from each other’ (Z1. 806)
<i>gaj-ndu-</i>	‘to squabble’ (Z1. 299)
<i>gajsila-ndu-</i>	‘to allure each other’ (Z1. 299)
<i>guja-ndu-</i>	‘to play with each other before mating (about deer)’ (Z1. 347)
<i>jabu-ndu-</i>	‘to visit each other’ (Z1. 182)
<i>kimu-ndu-</i>	‘to be mutual enemies’ (Z1. 275)
<i>kundule-ndu-</i>	‘to show respect to each other’ (Z1. 288)
<i>leule-ndu-</i>	‘to converse with each other’ (A. 200)
<i>sa-ndu-</i>	‘to know each other, get acquainted, be friends’ (Z1. 555)
<i>sira-ndu-</i>	i. ‘to inherit from each other’, ii. ‘to be interrelated’ (Z1. 614–5)
<i>sire-ndu-</i>	‘to spin threads together’ (Z1. 617) (object-oriented)
<i>somi-ndu-</i>	‘to cover/shield each other’
<i>sori-ndu-</i>	‘to kick, trample each other in confusion’ (Z1. 629)
<i>ša-ndu-</i>	‘to meet, see each other’ (Z1. 664)
<i>temše-ndu-</i>	‘to argue with each other’ (O. 163)
<i>wa-ndu-</i>	‘to kill each other’ (O. 163)
<i>xuwal’a-ndu-</i>	[‘to be on good terms with each other’] (Z1. 445)
<i>xuweke-ndu-</i>	‘to encourage each other’ (Z2. 170)
<i>žabča-ndu-</i>	‘to accuse, reproach each other’ (A. 184)
<i>žoola-ndu-</i>	‘bow to each other with arms crossed on the chest’ (Z1.992)
b. <i>beču-nu-</i>	‘to enter into a fight with each other’ (Z1. 493)
<i>dara-nu-</i>	‘to treat each other to wine’ (Z1. 794)
<i>endu-nu-</i>	‘to inspire each other’ (O. 194)
<i>saj-nu-</i>	‘to bite each other’, ‘to fight’ (Z1. 554)
<i>sa-nu-</i>	‘to know each other’, ‘to get acquainted’ (Z1. 568)
<i>surte-nu-</i>	‘to race with each other’ (Z1. 649)
<i>ša-nu-</i>	‘to meet, see each other’ (Z1.665)
<i>tanta-nu-</i>	‘to hit each other’, ‘to start fighting’ (Z1. 696)
<i>tō-nu-</i>	‘to scold each other’ (Z1. 733)
<i>tokto-nu-</i>	‘flow together’ (from different directions into one place) (Z1. 737)
<i>wa-nu-</i>	[‘to kill each other’] (Z1. 1103)
<i>žafa-nu-</i>	‘to clutch each other’, ‘to wrestle’ (Z1. 973)
<i>žaza-nu-</i>	‘to crowd, push each other back to back’ (Z1. 970).

The set of verbs used with the suffix *-ča* (the main meaning is sociative) listed in (93c) does not seem accidental (we do not insist on including the derivative *žur-če-* here as it deviates from the pattern). The base verbs of the remaining four derivatives denote actions which, when performed together and simultaneously, normally involve reciprocal relations between the performers. Thus, if two or more persons share something together they share it between themselves; in other words, the situation described allows both a sociative and a reciprocal interpretation.

c. <i>dende-če-</i>	‘to share between oneself’ (Z1. 799)
<i>gisure-če-</i>	‘to talk between oneself, counsel’ (Z1. 332)
<i>ša-ča-</i>	‘to glance at each other’ (Z1. 665)

<i>žoola-ča-</i>	‘bow to each other with arms crossed on the chest’ (Z1. 992)
<i>žur-če-</i>	‘to oppose, resist each other’ (Z1. 1015).

Sentential examples:

- (94) a. *Morin de jalu-me leule-ndu-mbi.* (A. 200)
horse DAT ride-CONV converse-REC-PRES
‘(They) converse with each other riding (their) horses.’
- b. *Sa-nu-me gaj-su.* (Z1. 568)
know-REC-CONV take-IMP.2PL
lit. ‘Knowing each other, take!’
- c. ... *žur-če-nu-me xaxalža-mbi.* (Z1. 1015)
set.out-REC-REC-CONV mix.up-PRES
‘... (herds of horses, etc.) get mixed up.’
- d. ... *čuŋguša-me beču-nu-mbi.*
butt-CONV scold-REC-PRES
‘... (they) fight with foreheads, butt each other’ (rams and bulls) (Z1. 950).

Verbs in *-ndu* and *-nu* occur with the reciprocal meaning in the same contexts, which testifies to the absence of distinct differentiation of these suffixes:

- e. *Sikse suwe aj turgun de beču-nu-xa, aj žalin*
at.night you what reason DAT quarrel-REC-PAST what for
temše-ndu-xa. (O. 163)
argue-REC-PAST
‘In the evening, why did you quarrel, what did you argue about?’
- f. *Tejsu tejsu xuweke-ndu-me jendu-nu-me...* (O. 164)
each of the two be.keen.ON-REC-CONV feel.inspiration-REC-CONV
‘Both of them encouraging each other, inspiring each other ...’

15.3 The reciprocal adverb *isxunde* ‘mutually’

This adverb is descended from the word *is-xun* functioning as a noun, adjective and adverb in the meanings i. ‘turning one’s face to sth’, ii. ‘opposite, coming from the opposite direction’, iii. ‘face to face, facing each other’ (Z1. 101). The suffix *-xun* usually derives nouns from verbs; in *is-xun* the hypothetical verb stems may be *isa-* ‘to gather in one place’ or *ise-le-* ‘to oppose, resist, object, contradict, rival, compete’; cf. *wesi-* ‘to rise’ → *wesi-xun* ‘upper, top, upwards’. The suffix *-de* is the dative marker. The adverb *isxunde* has the following meanings: i. ‘opposite each other’, ii. ‘mutually’, iii. ‘between oneself’, iv. ‘in between’. It may be used singly as the only reciprocal marker and in combination with a reciprocal verb, cf. (95) and (96):

- (95) a. *Žuwe ergi isxunde sa-me gaj-kini.* (Z1. 568)
two side mutually know-CONV take-HORT.3SG
‘Knowing each other, take (it).’ (lit. ‘... let him take it’)
- b. ... *isxunde sa-nka goro aku.* (Z1. 101)
mutually stretch-PAST far NEG
‘... (they) are not far away from each other.’

- (96) a. *Isxunde kokira-me wa-ndu-me.* (O. 164)
mutually maim-CONV kill-REC-CONV
'By turns [they] exterminated each other.'
- b. *Muse isxunde kundule-ndu-mbi.* (A. 211)
we.INC mutually respect-REC-PRES
'We (you and I) respect each other.'
- c. *Guč se isxunde anaxunža-me leule-ndu-xe.* (A. 200)
friend PL mutually show.respect-CONV converse-REC-PAST
'The friends conversed with each other in a respectful manner.'

15.4 Sociatives; iteratives

The main sociative marker is the suffix *-ča/-če/-čo* (see (97a)). Less commonly sociative derivatives are attested with the suffixes *-ndu* and *-nu* (see (97b–c)) which, unlike *-ča*, are frequently used to mark reciprocity. With a few exceptions, all the attested derivatives involve intransitive bases. Sociatives are translated with the help of the adverb 'together' and the phrases 'at the same time', 'all', 'all the society', 'in a crowd', and thus they may contain an emotive colouring. The lexical meaning of some sociatives requires an inanimate subject, e.g. with the verbs meaning 'to dry up', 'to melt', 'to burst into blossom', etc. In comparison with the reciprocals, the semantic oppositions between the base verbs and sociative derivatives are more standard. Two derivatives are most likely object-oriented sociatives, with the meaning 'together' pertaining to the object, cf. *tučibu-nu-* and *ilere-če-* in (97b–c).

- (97) a. *baj-ndu-* 'to look for sth together' (Z1. 461)
da-ndu- 'to enter together' (A. 184)
fa-ndu- ['to dry up (of all) together'] (Z1. 1023)
gaj-ndu- 'to take sth in entirety together' (Z1. 299)
gajsila-ndu- 'to be keen on sth together' (Z1. 299)
inže-ndu- 'to laugh together' (A. 43)
kanna-ndu- 'to jump on sth together' (Z1. 251)
nime-ndu- 'to fall ill (of all) together' (Z1. 235)
jabu-ndu 'to walk together' (Z1. 182)
te-ndu- 'to sit down together' (Z1. 729)
ve-ndu- ['to melt together'] (Z1. 1117)
ža-ndu- ['to pray aloud together'] (Z1. 956)
že-ndu- 'to eat together'
žo-ndu- 'to cut straw together' (Z1. 992)
- b. *afa-nu-* 'to fight together against the enemy' (Z2. 168)
baj-nu- 'to look for sth together' (Z1. 461)
banža-nu- 'to live together (by necessity)' (Z1. 468)
bi-nu- i. 'to grow old together', ii. 'to live together'
bo-nu- 'to hollow, gouge sth together' (Z1. 511)
dosi-nu- '(of all) to enter together' (Z2. 168)
fue-nu- ['to bubble over together'] (Z1. 1068)
gene-nu- 'to set out together, at the same time' (Z1. 714)
inže-nu- 'to laugh together' (A. 43)

<i>kiče-nu-</i>	‘to try hard together’ (Z2. 168)
<i>saj-nu-</i>	‘to fall upon sb/sth together and gnaw’ (Z1. 554)
<i>sakda-nu-</i>	‘to grow old together’ (Z1. 558)
<i>te-nu-</i>	‘to sit down together’ (Z1. 729)
<i>tokto-nu-</i>	‘to stop together’ (Z1. 737)
<i>tuči-nu-</i>	‘to go out somewhere together’ (Z1. 761)
<i>tučibu-nu-</i>	‘to promote sb together with sb else’ (Z1.761)
<i>wene-nu-</i>	‘to melt together at the same time’ (Z1. 1116)
<i>žafa-nu-</i>	‘to catch, hold sth together’ (Z1. 972)
<i>že-nu-</i>	[‘to eat together’] (Z1. 974)
<i>žura-nu-</i>	‘to set out together’ (Z1. 1010)
<i>žuwe-nu-</i>	[‘to carry sth somewhere together’] (Z1. 1017)
c. <i>amga-ča-</i>	‘to sleep / fall asleep together’ (Z2. 168)
<i>dede-če-</i>	‘to lie together’ (Z1. 805)
<i>efi-če-</i>	‘to play together’ (Z1. 91)
<i>feku-če-</i>	‘to jump together’ (Z1. 1042)
<i>fifa-ča-</i>	‘(of all) to run away in fear in all directions’ (Z1. 1059)
<i>ila-ča-</i>	‘to burst into blossom together at the same time’ (Z1. 104)
<i>ile-če-</i>	‘to lick, skin sth together’ (Z1. 105)
<i>ilere-če-</i>	‘to tie (cattle) together to the same post’ (Z1. 105)
<i>ili-ča-</i>	‘to stop, stand together’ (Z1. 106)
<i>inže-če-</i>	‘(of all) to laugh together’ (Z1. 94)
<i>kanna-ča-</i>	‘to jump on sth together’ (Z1. 251)
<i>omi-ča-</i>	‘to drink together’ (Z1. 130)
<i>senjuve-če-</i>	‘to start (with fright) together’ (Z1. 578)
<i>soŋgo-čo-</i>	‘(of all) to cry together hugging each other’ (Z1. 624)
<i>ša-ča-</i>	‘to look at sth together’ (Z1. 665)
<i>te-če-</i>	‘to sit down together’ (Z1. 729)
<i>tuk’e-če-</i>	‘to lift sth together’ (Z1. 749)
<i>uka-ča-</i>	‘to run away together’ (Z1. 143).

The sociative suffix *-ča* may also mark an iterative or durative, sometimes an intensive sense, also attested on intransitive bases (see Z2. 166, 169; Avrorin (2000: 169) has counted that there are about 30 derivatives with the iterative meaning in Z1). In this particular case the iterative meaning is as prominent as the sociative, while in (100) the sociative and reciprocal derivatives in *-ta* and in *-ša* are occasional deviations from the main iterative meaning of these suffixes.

- (98) *baj-* ‘to look for sth’ → *bai-ča-* ‘to search for sb, interrogate’ (Z2. 166)
feku- ‘to jump (once)’ → *feku-če-* ‘to jump repeatedly’ (A. 169)
čžolxo- ‘to strain’ → *čžolxo-čo-* ‘to strain all the time (of horses)’ (Z2. 166)
šurge- ‘to tremble’ → *šurge-če-* ‘tremble intensely for a long time’ (A. 169).

15.5 Isolated derivatives with the suffixes *-ntu*, *-du*, *-ta*, and *-ša*

As mentioned above, only about ten derivatives with reciprocal or sociative meanings are registered with these four suffixes. The suffixes *-ntu* and *-du* (the former is registered in the reciprocal meaning and the latter in both) are genetically related to the suffix *-ndu*. The

B. Synonymy of the markers. Most of the bases are registered with one of the suffixes only. About 10 percent (12 items) of the bases occur in the same meaning with two suffixes alternately. Note that though the sociative derivatives are more numerous in our data, in (98) reciprocal derivatives are prevalent. (102) is a list of synonymous same stem derivatives already entered in the lists above. Both derivatives in *-du* have correlates with *-ndu*; out of four derivatives with *-ntu* three have correlates with *-ndu*; out of two derivative in *-ta/-te* one has a correlate in *-du*; as regards derivatives in *-nu* and *-ča*, they are very few here.

- (102) a. *delxe-ndu-/delxe-ntu-* ‘to part from each other’ (Z1. 806)
kimu-ndu-/kimu-ntu- ‘to be mutual enemies, be angry’ (Z1. 275)
sire-ndu-/sire-ntu- ‘to spin threads together’ ‘to weave a web, net’ (Z1. 617)
- b. *baj-ndu-/baj-nu-* ‘to look for sth together’ (Z1. 464, 461)
inže-ndu-/inže-nu- ‘to laugh together’ (A. 43)
wa-ndu-/wa-nu- ‘to kill each other’ (O. 163; Z1. 1103)
sa-ndu-/sa-nu- ‘to know each other, get acquainted’ (Z1. 665)
ša-ndu-/ša-nu- ‘to meet, see each other’ (Z. 170)
- c. *kanna-ndu-/kanna-ča-* ‘to jump on sth together’ (Z1. 251)
ša-ndu-/ša-ča- ‘to meet, see each other’ (Z. 170)
žoola-ndu-/žoola-ča- ‘to bow to each other with arms crossed on the chest’ (Z1.992)
- d. *baj-ndu-/baj-du-* ‘to look for sth together’ (Z1. 464, 461)
gaj-ndu-/gai-du- ‘to squabble’ (Z1. 299)
- e. *nime-ndu-/nime-te-* ‘(of all) to fall ill together’ (Z1. 235).

C. Derivatives with two reciprocal-sociative suffixes. Unlike derivatives with the reciprocal meaning, there are semantically sociative derivatives attested with two suffixes, the complex *-če-nu* being prevalent. In these combinations of suffixes the first one *-ča* is a marker with the prevalent sociative meaning and the second one is either predominantly reciprocal (cf. *-ndu*) or common enough as a reciprocal marker (cf. *-nu*). This combination of suffixes serves for stressing the sociative meaning (Zakharov 1879:170). Note that a similar arrangement of the suffixes (sociative + reciprocal) is observed in the Evenki combination *-lda-maat* which however expresses a reciprocal meaning (see Section 4 above).

- (103) e. *inže-če-nu-* ‘to chuckle/mock sb together’ (Z2. 170)
soŋgo-čo-nu- ‘(of many) to cry, bemoan sb together’ (Z1. 624; Z2. 170)
te-če-nu- ‘(of all, the entire crowd) to sit down together’ (Z1.729; Z2.170)
te-če-ndu- (same) (Z1. 729).

D. Causatives and passives derived from sociatives. It is probably accidental that there are only two causatives from reciprocals registered in our sources. In Manchu, the suffix *-bu* serves both as a causative and a passive marker, the syntactic structure indicating the meaning. Note that the passive may be derived not only from transitives, but also from intransitives by way of “sidestepping” their causativization (see translations (i) and (ii) in (104a); cf. also *wasi-* ‘to descend’ → *wasi-bu-* i. ‘to lower sth’ (causative), ii. ‘to be lowered’ (morphologically derived from *wasi-* but semantically relatable to *wasi-bu-* in its causative meaning)).

- (104) a. *te-* ‘to sit down’ → *te-če-* ‘to sit down together (of all)’ →
 → *te-če-bu-* i. ‘to seat all (the persons) together’
 ii. ‘to be seated together (of all) by sb’ (Z1. 729)
efi-če-bu- ‘to let everybody play’ (A. 185)
ili-ča-bu- ‘to make everybody stand up’ (A. 185)
songo-čo-bu- ‘to force everybody to cry’ (A. 185).

On causatives derived from sociatives in *-ča* the suffix *-bu* follows *-ča*, which is natural enough. But, curiously enough, on causatives from sociatives in *-nu*, as Zakharov (1879: 169) asserts, *-bu* may precede *-nu* (cf. the analogous situation with causatives from reciprocals in Evenki: see (44) and the text above it in 3.2).

- b. *dosi-* ‘to enter’ → *dosi-nu-* ‘to enter together’ →
 → *dosi-bu-nu-* ‘to order all (persons) to enter together’ (Z2. 169).

Thus these formations may coincide structurally with sociatives derived from causatives; cf. (104c) where the final derivative refers to a plurality of objects and thus is an object-oriented sociative, as in the preceding instances.

- c. *tuči-* ‘to appear, go out’
 → *tuči-bu-* ‘to promote sb’ (lit. ‘to make sb go out/ sth appear, take sb out’)
 → *tučibu-nu-* ‘to promote sb together with sb else’ (Z1.761).

In both registered causatives derived from reciprocals we observe the iconic arrangement of the suffixes:

- d. *beču-nu-bu-* ‘to make sb fight’ (O. 163)
žafu-nu-bu- ‘to make sb wrestle/fight with each other.’

A sentential example:

- (105) *Buku xuwaran i buku emgi žuru žuru i žafu-nu-bu!* (O. 164)
 wrestler court GEN wrestler together pair pair GEN wrestle-REC-CAUS
 ‘Let the wrestlers wrestle together with the court wrestlers in pairs.’

Acknowledgments

We express our gratitude to our Evenki informants who helped immensely with the data for this chapter: Julija Sverchkova, Ivan Udygir and Melidora Uvachan (northern dialects), and Ivan Torpushonok and Nadezhda Ajulchina (southern dialects). Our thanks to Andrej Malchukov and Irina Nikolaeva for their comments on the pre-final version of this chapter. All the errors and misinterpretations are ours, of course.

1. Introductory

1.1 General information on Even

Even, also known as Lamut, belongs (together with Evenki) to the northern branch of Tungusic languages. Even (as well as Tungusic languages in general) is morphologically an agglutinating language, making use exclusively of suffixation; syntactically it is a nominative-accusative language with the basic word order SOV.

According to the census of population in 2002 the total number of Evens is 19,071 of whom the majority currently reside in the Yakut (Saha) Republic (about nine thousand) and in the Magadan region (about four thousand). Two major dialect groups of Even are the eastern and middle-western dialects, the latter strongly influenced by Yakut, one of the Turkic languages of Siberia. On the other hand, the Oxotsk dialect (cited in this paper), of the eastern dialect group, reveals interference from Evenki, a closely related Tungusic language.

1.2 Overview

In Even the reciprocal and the sociative meanings can be expressed morphologically by verbal forms in *-mat* and *-lda* respectively, and by other morphosyntactic means. Thus, (1b) provides an example of a verbal suffixed reciprocal with the “canonical” diathesis:

- (1) a. *Atikan-Ø etike-m žarga-n.*
 old.woman-NOM old.man-ACC berate-NFUT.3SG
 ‘The old woman berates the old man.’
 b. *Atikan-Ø etike-n’un žarga-mat-ta.*
 old.woman-NOM old.man-COM berate-REC-NFUT.3PL
 ‘The old woman and the old man berate each other (i.e. quarrel).’

Notably, the verbal reciprocal in Even productively marks cross-coreferentiality of the subject not only with the underlying object (as in (1b)), but also with the possessor within an object noun phrase; the “possessive” diathesis is exemplified in (2b).

- (2) a. *Etiken-Ø nimek-i turki-wa-n ailta-n.*
 old.man-NOM neighbour-REFL sleigh-ACC-his mend-NFUT.3SG
 ‘The old man mended his neighbour’s sleigh.’
 b. *Nimeke-l-Ø meer turki-l-Ø-bur ailta-mat-ta.*
 neighbour-PL-NOM selves’ sleigh-PL-NOM-REFL.PL mend-REC-NFUT.3PL
 ‘The neighbours mended each other’s sleighs.’

Of special typological interest is the nominal reciprocal suffix *-takan* which in some dialects marks the head of the possessive phrase within verbal reciprocal constructions with the “possessive” diathesis (see Section 5).

While the reciprocal suffix is the main means, the reciprocal pronouns *meen meen-ur* and *meen meen-ter* ‘each other’ are additional means of expressing the reciprocal meaning. Pronominal reciprocals as in (3b) are mostly restricted to cases when the corresponding verbal reciprocal is unavailable. Note that the reciprocal forms do not derive from motion verbs, such as *tut-* in (3); see 3.2.

- (3) a. *Hurken-Ø nöö-duk-i tut-te-n.*
 youth-NOM brother-ABL-REFL run-NFUT-3SG
 ‘The youth runs from his (younger) brother.’
 b. *Aknil-Ø meen meen-duk-ur tut-te.*
 brothers-NOM each other-ABL-REFL.PL run-NFUT.3PL
 ‘The brothers run from each other.’

However, reciprocal pronouns, such as *meen meendukur* ‘from each other’ in (3b), can be used – pleonastically – with suffixed reciprocals (see 4.3.2).

Finally, the verbal morphological sociative in Even is not fully differentiated from the reciprocal: a number of lexicalized sociative forms convey the reciprocal meaning along with the sociative one; cf. (4b) and (4c):

- (4) a. *Orolčimŋa-Ø n’amiča-m žaw-ra-n.*
 herdsman-NOM doe-ACC catch-NFUT.3SG
 ‘The reindeer-breeder caught the (reindeer) doe.’

- b. *Orolčimŋa-l-Ø n'amiča-m žawa-lda-r.*
 herdsman-PL-NOM doe-ACC catch-SOC-NFUT.3PL
 'The reindeer-breeders caught together the (reindeer) doe.'
- c. *Orolčimŋa-l-Ø žawa-lda-r.*
 herdsman-PL-NOM catch-SOC-NFUT.3PL
 'The reindeer-breeders shook hands' or 'The reindeer-breeders fought.'

Reciprocals in Even differ from those in genetically closely related Evenki (Nedjalkov & Nedjalkov, Ch. 38) in the following features:

- (1) availability of two-diathesis reciprocals (see 3.1.1.3 below);
- (2) higher productivity of "possessive" reciprocals (as in (2b));
- (3) valency constraints restricting derivation of suffixed reciprocals (see 3.2);
- 4) the nature of the polysemy of the verbal reciprocal suffix (see 3.3);
- 5) the set of pronominal reciprocal markers is both more elaborate and more specialized (i.e. the reflexive plural pronoun *meer-bur* '(them)selves' cannot acquire the reciprocal reading 'each other').

The verbal sociative in Even, in contrast to Evenki, displays a different type of polysemy (see 8.4) and cannot mark (except for one case) the object-oriented diathesis attested in Evenki dialects.

1.3 Data sources

The present description of reciprocals and sociatives in Even is primarily based on my field research on the western Tompo dialect. The data on the eastern Oxotsk dialect and the eastern Magadan dialect have been supplemented by my informants – Darja and Xristina M. Osenina (currently residents in Tompo region of Yakutia) and Vera S. Elrika (lecturer of Even at the State Teacher-training University, St. Petersburg), respectively. Further data have been obtained from dictionaries and literature (in particular, from Cincius & Rishes (1957), Novikova (1980) and Robbek (1984)), as well as from the published folklore texts (see Sources).

2. Grammar¹

2.1 Morphology

The alternations of (open) vowels of suffixes (cf., e.g., the reciprocal suffix *-mat/-met*) are due to vowel harmony. Consonant alternations are determined by the assimilation processes. Thus, initial /r/ within a number of suffixes is fully assimilated by the preceding stem-final consonant (cf. the nonfuture tense marker in *žaw-ra-n* 'washed' in (4a) and *tut-te-n* 'runs' in (3a)). Stem-final /n/ mostly undergoes deletion when followed by a suffix with an initial consonant (cf. *göön-* 'to say' and *göö-met-* 'to talk' in (9)).

1. For more information on Even grammar see, for instance, Benzing (1955) and Malchukov (1995).

2.2 Nominal morphology: Case, number, possessivity

The order of nominal inflectional markers is: number – case – possession. The number markers are \emptyset for the singular and *-l/-r* for the plural (cf. (3b)). The case system comprises the following cases, among others: the nominative (marks the subject or the direct object when the latter takes a reflexive possessive suffix as in (1a)) – \emptyset ;² the accusative case in *-w/-u/-m/-bu/-wa/-ma* (cf. (2a)); the dative in *-du/-tu* (cf. (26a)); allative in *-tki/-taki/-teki* (cf. (28a)); the locative in *-la/-le/-dula/-dule* (cf. (24a)); the ablative in *-duk/-tuk* (cf. (3a)); the instrumental in *-č/-ži* (cf. (23a)); the comitative in *-n'un* (see 3.2.1); the benefactive in *-ga/-ge/-ka/-ke/-ŋa/-ŋe*, always followed by possessive endings (cf. (6b)).

The possessive construction is patterned according to the “Turkic izafet” type: the possessive relation is marked on the head noun by means of possessive suffixes indicating person and number of the Possessor noun, whereas the latter remains unmarked (cf. *nimek-i turki-wa-n* <‘neighbour-REFL sleigh-ACC-his’> ‘the neighbour’s sleigh’ in (2a)). Postpositional phrases are patterned as possessive, taking the postpositional noun as the formal head; cf. *hurken žuu-la-n* <‘youth house-LOC-his’> ‘in the youth’s house’ and *žuu doo-la-n* <‘house inside-LOC-his’> ‘inside the house’.

The possessive markers fall into personal and reflexive markers (see (5a) and (5b) respectively); the latter are used to mark coreferentiality of the possessor with the clausal subject (see (2a)).

(5)	SG		PL	
a.	<i>-w/-u/-m/-bu</i>	‘my’	<i>-t/-ti</i>	‘our’
	<i>-s/-si</i>	‘your (SG)’	<i>-san/-sen</i>	‘your (PL)’
	<i>-n/-ni</i>	‘his/her/its’	<i>-tan/-ten</i>	‘their’
b.	<i>-i/-j/-mi/-bi</i>	‘my, your, his/her’	<i>wur/-ur/-mur/-bur</i>	‘our, your, their’.

Notably, the reflexive possessive markers may be used (along with the accusative form) to mark the direct object, provided that the possessor within this group is identical to the subject (1a). Still another option for marking the direct object is the benefactive case which is always followed by possessive endings. Semantically, the benefactive case is peculiar in that, when marking the direct object, it simultaneously assigns the semantic role of Beneficiary to the Possessor within its phrase; cf. the semantic interpretation of the Possessor noun within the accusative-marked direct object in (6a) and within the benefactive-marked direct object in (6b):

(6) a.	<i>Etiken bej turki-wa-n ga-d-ni.</i>
	old.man man sleigh-ACC-his take-NFUT-3SG
	‘The old man took the man’s sleigh.’
b.	<i>Etiken bej turki-ga-n ga-d-ni.</i>
	old.man man sleigh-BEN-his take-NFUT-3SG
	‘The old man took the sleigh for the man.’

2. Henceforth, the zero markers are normally omitted in glosses.

2.3 Verbal morphology. Tense/aspect system. Agreement

In the examples the finite verb forms take the following tense markers: *-ra/-re/-da/-de/-ta/-te/-a/-e* or \emptyset for nonfuture (cf. the paradigm in (7) where the nonfuture tense marker is missing in the 2nd and 3rd person forms), which refers to the past on telic verbs (cf. (2a)), and to the present on atelic verbs (cf. (3a)); and *-ži/-či* for the future tense (cf. (68b)).

In the nonfuture (and future) tense the verb (e.g., *haa-* ‘to know’) takes the following agreement endings:

(7)		SG	PL
	1st p.	<i>haa-ra-m</i>	<i>haa-ra-p</i>
	2nd p.	<i>haa-\emptyset-nri</i>	<i>haa-\emptyset-s</i>
	3rd p.	<i>haa-\emptyset-n</i>	<i>haa-\emptyset-r</i>

2.4 Voices (valency changing categories)

In traditional Even grammars the following voices are distinguished: causative in *-wkan/-ukan/-mkan*, middle (anticausative) in *-b/-p*, (adversative) passive in *-w/-m*, reciprocal in *-mat/-met/-mač/-meč* (in some dialects with the long vowel: *-maat*, etc.) and sociative in *-lda*.

1. *Valency-increasing categories.* The main means of valency increase is the causative suffix (cf., however, type 3 below). When derived from an intransitive the causative verb takes the causee as its direct object, when derived from transitives – as its indirect object in the dative case (as in (8a)) or less often (restricted to factitive contexts) as its direct object (as in (8b)):

- (8) a. *Bi etiken-du hölnež-u arča-mkan-am.*
 I old.man-DAT guest-ACC meet-CAUS-NFUT.1SG
 ‘I let/made the old man meet the guest.’
- b. *Bi etike-m hölnež-u arča-mkan-am.*
 I old.man-ACC guest-ACC meet-CAUS-NFUT.1SG
 ‘I made the old man meet the guest.’

2. *Valency-decreasing categories. The reciprocal form.* The function of valency decrease is performed by (a) the anticausative (cf. *aaŋa-* ‘to open’ (vt) and *aaŋa-p-* ‘to be opened; open’ (vi), *beri-* ‘to lose’ – *beri-p-* ‘to get lost’) and (b) the reciprocal suffix:

- (9) *maa-* ‘to kill’ → *maa-mat-* ‘to kill each other’
göön- ‘to say, tell’ → *göö-met-* ‘to say/tell each other’
ani- ‘to present with’ → *ani-mat-* ‘to present each other with.’

3. *“Ambivalent” categories.* The adversative passive in Even is an “ambivalent” category, since it may mark both increase and decrease of verbal valency. Thus, on intransitives, as in (10), it increases the verbal valency, and on transitives, as in (11), it usually decreases it. In the latter case the underlying subject (*nugde* ‘bear’ in (11)), if overtly expressed, is in the dative case.

- (10) *Etiken mura-m höre-w-re-n.*
 old.man horse-ACC go-PASS-NFUT-3SG
 ‘The old man lost (let go) the horse.’
- (11) *Bej nugde-du maa-w-ra-n.*
 man bear-DAT kill-NFUT-3SG
 ‘The man got killed by the bear.’

Since the morphosyntactic characteristics (combinability with the reciprocal marker, etc.) of the adversative passive used in the former function are similar to those of the causative and, when used in the latter function, to those of the anticausative, they are not considered in the present paper (for more information on the adversative passive in Even see Malchukov 1993).

4. *The sociative form.* In contrast to other voice markers, the sociative suffix normally does not change verbal valency (except for lexicalised forms used in the reciprocal meaning, see Section 9.1.2):

- (12) *köke-* ‘to die’ → *köke-lda-* ‘to die together’
tut- ‘to run’ → *tute-lda-* ‘to run together’
hepken- ‘to catch’ → *hepke-lda-* ‘to catch together (with sb).’

5. *On derivational valency-changing markers.* Besides the voice categories considered above there exist about a dozen derivational (non-productive) valency-changing markers most of which are restricted to just a few items. The most important among them is the suffix *-u* which is historically related to the (adversative) passive marker and like the latter is “ambivalent”. When used on intransitive verbs of motion (28 items) it performs the causative function (cf. *nen-* ‘to go’ → *nen-u-* ‘to lead’), whereas on transitive verbs (15 items) it performs the anticausative function (cf. *gul-* ‘to kindle, set on fire’ → *gul-u-* ‘to flame up’). Of special interest are the causative/anticausative markers on the closed set of onomatopoeic verbs of destruction (including 84 items), which enter into the equipollent opposition. These markers constitute a four-member set conveying, along with the transitive/intransitive meaning, the perfective/imperfective value: *-m* is intransitive imperfective, *-r* intransitive perfective, *-k* transitive imperfective, *-l* transitive perfective (cf. *teke-m-*, *teke-r-* ‘to tear’ (vi), *teke-k-*, *teke-l-* ‘to tear’ (vt)).

2.5 Co-occurrence of voice markers

For the present discussion of reciprocal and sociative constructions the following information on the mutual co-occurrence of voice markers is relevant.

2.5.1 Co-occurrence of the reciprocal and the sociative marker

Combinability of the reciprocal marker *-mat* with the sociative marker *-lda* in Even (as in Evenki) is restricted to cases when the reciprocal form is derived from the sociative; in other words, the combination *-lda-mat* is possible, while the combination **-mača-lda* is not. This restriction can be accounted for either by a more recent origin of the reciprocal in *-mat* in the Tungus-Manchu languages (it is absent in Manchu) or by the fact that

it is more specialized in meaning as compared to the sociative (the latter combining the sociative meaning with the reciprocal). Reciprocal forms derived from (morphological) sociatives are synonymous to the corresponding reciprocal forms, except for the fact that they allow only the simultaneous reading (see Section 7); cf. (13c) and (13d):

- (13) a. *maa-* 'to kill'
 b. *maa-lda-* 'to kill sb together (of a group)'
 c. *maa-lda-mat-* 'to kill each other (simultaneously)'
 d. *maa-mat-* 'to kill each other.'

Reciprocal-sociative forms derived from lexicalized reciprocals (see Section 9.1.2) are synonymous to the latter; cf. (14b) and (14c):

- (14) a. *žaw-* 'to catch'
 b. *žawa-lda-* 'to catch each other; fight'
 c. *žawa-lda-mat-* 'to catch each other; fight.'

2.5.2 *Combinability of the reciprocal and the sociative with the causative marker*

The reciprocal and the causative markers may co-occur freely within one word form (naturally, provided that they are compatible semantically). Cf. the causative-reciprocal form in (15c) and the reciprocal-causative form in (15e) derived from the verb *haa-* 'to know sb/sth':

- (15) a. *haa-* 'to know'
 b. *haa-mat-* 'to know each other/ be acquainted with each other'
 c. *haa-mač-ukan-* 'to introduce (= make know) to each other'
 d. *haa-wkan-* 'to let know (about sth), give a message'
 e. *haa-wka-mat-* 'to let each other know (about sth).'

In a similar fashion, the sociative marker *-lda* may both precede and follow the causative marker; cf. the sociative-causative form in (16c) and the causative-sociative form in (16e), derived from the verb *hör-* 'to go':

- (16) a. *hör-* 'to go'
 b. *hör-uken-* 'to make leave; take away'
 c. *hör-uke-ldē-* 'to take sb away together (of many subject referents)'
 d. *höre-ldē-* 'to jointly go'
 e. *höre-ldē-wken-* 'to make sb (a group of persons) leave jointly.'

2.5.3 *Combinability of the reciprocal and the sociative with the anticausative marker*

The reciprocal and the sociative markers do not combine with the anticausative.

2.6 Non-comitative and comitative marking of subject plurality

If the subject is a single noun-phrase its semantic plurality, i.e. plurality of its referents, can be marked either (a) by the plural marker *-l/-r* or (b) by a numeral expression, including a numeral or a quantifier (cf. (17)). In the latter case the (modified) noun is either singular, as in (69b), or plural, as in (17). If the subject consists of two noun phrases it is expressed

either by a coordinative construction with both constituents or the second constituent taking the enclitic *-da/-de* (cf. (21)) or by a nominal comitative construction (see below).

The form in *-n'un* is the main means³ of marking the (animate) second reciprocal actant (cf., for instance, (1b)). Since this comitative form does not combine with other case markers, it is traditionally defined as the comitative case.

Within reciprocal (as well as non-reciprocal) constructions the nominal in the comitative case may either belong to the subject group (simple reciprocal construction; see (24b)) or else surface as a “comitative object” (discontinuous reciprocal construction; see (92a)). In the latter case it does not trigger the verbal (plural) agreement.

The marking of the subject for semantic plurality within a reciprocal construction with a one-NP subject modified by a numeral expression is restricted in that the noun (and hence the predicate) must take the plural form:

- (17) *Žör etike-r (*etiken) ukčēn-met-te.*
 two old.man-PL old man tell-REC-NFUT.3PL
 ‘The two old men talked.’

3. Reciprocals with the suffix *-mat*

3.1 Diathesis types of suffixed reciprocals

Among the two basic diathesis types of reciprocals, viz. subject-oriented and object-oriented, the latter are marginal since they are restricted to causative-reciprocal constructions.

3.1.1 *Subject-oriented diathesis*

Subject-oriented reciprocals, in their turn, fall into two major subgroups of (a) argument reciprocals with the “canonical” diathesis, as in (1b), or with the “indirect” diathesis and (b) “possessive” reciprocals, marking cross-coreferentiality between the subject and the possessor within the object NP, as in (2b).

Derivation of the argument reciprocal constructions, in contrast to “possessive” reciprocal constructions, involves reduction of verbal valency: the underlying (non-reciprocal) construction loses the object cross-coreferential with the subject.

3. Other comitative forms attested in Even dialects are forms in *-čil*, *-gli* and *-lkan*. The comitative-reflexive form in *-čil* primarily marks kinship terms. This form combines neither with case nor with possessive markers, being synonymous to the comitative case form with the reflexive-possessive endings; cf. *hurken nōö-čil = hurken nōö-n'u-mi* ‘the youth with his younger brother’. The form in *-gli*, typical of eastern dialects, is restricted to proper nouns: *en'mu Marija-gli* ‘my mother and Mary’. Finally, the form in *-lkan*, whose primary function is to express possession (cf. *oro-lkan bej* ‘man with (having) reindeer’) may be used in the Oxotsk dialect as a comitative marker; cf. *etike-lken atikan* ‘old woman with the old man’.

3.1.1.1 “Canonical” reciprocals

1. *Derived from two-place transitives.* This is the most common diathesis type; it is formed from all transitives taking an animate direct object; cf.:

- (18) a. *Hurken nöö-j čor-ča.*
youth brother-REFL hit-PART
‘The youth hit (with the fist) the (younger) brother.’
b. *Akanur čor-mača-l-ča-l.* (L.118)
brothers hit-REC-INCH-PART-PL
‘The brothers fought (with fists).’

Below follows a representative list of the most common lexical groups of “canonical” reciprocals derived from verbs denoting (a) a physical action upon the patient, as in (19); (b) social relations, as in (20); (c) feelings and their manifestations, or sense perception, as in (21); and (d) certain motion verbs, as in (22); the base verbs are not cited since their lexical meaning is part of the meaning of the reciprocal derivatives:

- (19) *hepke-met-* ‘to catch each other’
guže-met- ‘to kiss each other’
itme-met- ‘to bite each other’ (see (82))
guj-mat- ‘to butt each other’
maa-mat- ‘to kill each other’ (see (87b))
čor-mat- ‘to struggle (fist-fight)’ (see (18b)).
- (20) *žarga-mat-* ‘to scold each other’ (see (1b))
ha-mat- ‘to know each other’
neji-met- ‘to reproach each other’
hojit-mat- ‘to interfere with each other.’
- (21) *it-met-* ‘to see each other’
dolda-mat- ‘to hear each other’
alit-mat- ‘to hate each other’
akma-mat- ‘to love each other (of brothers).’
- (22) *ie-sči-met-* ‘to try to go ahead of each other (i.e. to compete)’
žuuma-mat- ‘to visit each other’
höru-met- ‘to drive each other away.’

2. *Derived from two-place intransitives.* “Canonical” reciprocals are also derived from two-place intransitives of two lexical-semantic groups.

1. Verbs of emotion (cf. *as-mat-*, *tiku-mat-* ‘to be angry with each other’, *girbe-met-* ‘to be shy of each other’, *ηel-met-* ‘to be afraid of each other’, *ol-mat-* ‘to be frightened of each other’) taking an object in the allative or instrumental case:

- (23) a. *Bej beji-č jami ol-di-n?*
man man-INST why be.frightened-FUT-3SG
‘Why (should) a man be frightened of (another man)?’

- b. *Beji-l ol-mat-ta.*
 man-PL be.frightened-REC-NFUT.3PL
 ‘The men are frightened of each other.’

2. Verbs of “visiting” (cf. *nimeg-met-* ‘to go to visit each other’, *bii-wet-met-* ‘to be (=visit) at each other(’s places)’, *hölne-met-* ‘to go and visit each other (to distant places)’ in (24b)) taking an object in the allative or locative case:

- (24) a. *Köleŋe etiken-dule hölne-n.*
 bear old.man-LOC go.to.visit-NFUT.3SG
 ‘The bear went to visit the old man.’
 b. *Köleŋe etike-n’un hölne-met-te.*
 bear old.man-COM go.to.visit-REC-NFUT.3PL
 ‘The bear and the old man went to visit each other.’

3. *Derived from three-place transitives.* Reciprocals derived from three-place transitives retain the indirect object which does not take part in the reciprocal derivation; cf. the indirect object denoting Addressee (of speech) in (25b):

- (25) a. *Bi etiken-teki nimek-u göön-e-m.*
 I old.man-ALL neighbour-ACC say-NFUT.1SG
 ‘I told the old man about the neighbour.’
 b. *Bi nimek-n’un etiken-teki göö-met-te-p.*
 I neighbour-COM old.man-ALL say-REC-NFUT-1PL
 ‘I and the neighbour told the old man about each other.’

3.1.1.2 “Indirect” reciprocals. This diathesis type is formed from three-place transitives of three lexical-semantic groups:

1. Verbs of giving (cf. *böö-met-* ‘to give to each other’, *ani-mat-* ‘to present to each other’, *borit-mat-* ‘to divide’ in (26b)) taking the indirect object in the dative case:

- (26) a. *Oroč tara-w oro-m nimek-tu borit-ti-n.*
 even that-ACC reindeer-ACC neighbour-DAT give.a.share-PAST-3SG
 ‘The even gave that reindeer to the neighbour as his share.’
 b. *(Oroči-l) tara-w oro-r-bu meer doo-li.*
 even-PL that-ACC reindeer-PL-ACC among themselves
borit-mat-ti-tan. (N. 136)
 give.a.share-REC-PAST-3PL
 ‘Evens divided those reindeer among themselves.’

2. Verbs of taking away (cf. *gaa-mat-* ‘to take sth from each other’, *žormi-mat-* ‘to steal sth from each other’, *tie-sči-met-* ‘to deprive each other of sth’ in (30b)) taking the indirect object in the ablative case.

3. Verbs of speech (cf. *göö-met-* ‘to say/tell sth to each other’, *ukčen-met-* ‘to tell each other sth, talk’, *ulgimi-mat-* ‘to ask each other about sth’, *humket-met-* ‘to whisper sth to each other’) taking the indirect object in the allative case; cf. (25a) and (27):

- (27) *Bi etike-n'un nimek-u göö-met-te-p.*
 I old.man-COM neighbour-ACC tell-REC-NFUT-1PL
 'I and the old man talked to each other about the neighbour.'

3.1.1.3 *On two-diathesis reciprocals.* Reciprocals derived from a number of three-place transitives are ambiguous in that they can mark cross-coreferentiality of the subject either with the direct or the indirect object. The two-diathesis reciprocals are derived, for example, from verbs of speech, such as *göö-met-* 'to tell each other/about each other' considered above, which has the "canonical" diathesis in (25b) marking cross-coreferentiality with the accusative Topic-of-speech object, and the "indirect" diathesis in (27) marking cross-coreferentiality with the Addressee-of-speech object in the allative case. Another example of two-diathesis reciprocals is *urli-mat-* 'to be jealous to each other/of each other' which has the "canonical" diathesis in (28b) and the "indirect" diathesis in (28c):

- (28) a. *Bi nöö-tki-j asiŋ-i urli-ra-m.*
 I brother-ALL-REFL wife-REFL be.jealous-NFUT-1SG
 'I am jealous of my wife towards my (younger) brother.'
- b. *Mut asiŋ-n'u-mi nöö-tki-j urli-mat-ta-p.*
 we wife-COM-REFL brother-ALL-REFL be.jealous-REC-NFUT-1PL
 lit. 'I and my wife are jealous of each other towards my (younger) brother.'
- c. *Mut nöö-nu-mi asiŋa-l-bur urli-mat-ta-p.*
 we brother-COM-REFL wife-PL-REFL PL be.jealous-REC-NFUT-1PL
 lit. 'I and my (younger) brother are jealous of our wives towards each other.'

Three-place causatives (from transitives) are structurally ambiguous in a similar fashion. Thus, causative construction (29a) has two corresponding reciprocal constructions – one with the "canonical" diathesis in (29b) with the subject cross-referenced to the underlying Patient, and one with the "indirect" diathesis in (29c) with the subject cross-coreferenced to the Causee:

- (29) a. *Bi hurken-du Ende-w arča-mkan-am.*
 I youth-DAT A.-ACC meet-CAUS-NFUT.1SG
 'I let/made the youth meet Andrew.'
- b. *Mut Ende-n'un hurken-du arča-mka-mač-čot-ta-p.*
 we A.-COM youth-DAT meet-CAUS-REC-ITER-NFUT-1PL
 'I and Andrew usually send the youth to meet each other.' (i.e., 'I send the youth to meet Andrew, and Andrew sends the youth to meet me.')
- c. *Mut hurke-n'un Ende-w arča-mka-mat-ta-p.*
 I youth-COM A.-ACC meet-CAUS-REC-NFUT-1PL
 'I and the youth are sending each other to meet Andrew (e.g., quarrelling who must meet Andrew).'

Note that reciprocal construction (29c) with the retained accusative case object can, in contrast to (29b), also be interpreted as "canonical", that is as 'I and the youth are sending Andrew to meet each other' (cf. the meaning of reciprocal construction (29b)). In this case, the retained object is interpreted not as the Patient, but as the Causee in the accusative case (cf. (8b)). Two-diathesis reciprocal-causative constructions such as (29c) can be disambiguated by the use of reciprocal pronouns (see Section 4.3.2).

It should be emphasized that any reading of reciprocal-causative forms as in (29b, c) is subject- but not object-oriented. As will be demonstrated below (see 3.1.2), the object-oriented diathesis is based on causative-reciprocal forms (causative forms derived from reciprocals) rather than on reciprocal-causative forms (reciprocals derived from causatives). The former display a reverse ordering of the reciprocal and the causative markers which iconically “mirrors” the different ordering of the cycles of syntactic derivation.⁴

3.1.1.4 “Possessive” reciprocals. In “possessive” reciprocal constructions, first attested in Even by Robbek (1984: 131), the subject is cross-coreferential with the Possessor within an object NP; cf. (2b). In a reciprocal construction the Possessor is replaced by the reflexive possessive plural pronoun *meer* expressing coreferentiality of Possessor with the (semantically) plural subject, while the head noun (the Possessed) takes the corresponding reflexive possessive plural ending *-wur/-bur*. Derivation of “possessive” reciprocal constructions does not involve any further morphosyntactic changes, and the verbal valency is retained. Note, for example, that the “possessive” reciprocal *ajilta-mat* in (2b) is transitive, just as its non-reciprocal counterpart *ajilta-* in (2a).

1. Derived from transitives. “Benefactive” reciprocal constructions. The reciprocal form marks cross-coreferentiality between the subject and the Possessor within the direct object NP, as in (2b) and (30b):

- (30) a. *Noŋan asi deetle-we-n tie-sči-riži dege-l-re-n.*
 (s)he woman wing-ACC-her take-CON-CONV fly-INCH-NFUT-3SG
 ‘She took away the woman’s wings and flew away.’
 b. *Asa-l deetle-wur tie-sči-met-niken dege-l-re. (D. 38)*
 woman-PL wing-REFL.PL take-CON-REC-CONV fly-INCH-NFUT.3PL
 ‘The women flew away trying to take away each other’s wings.’

A special case of constructions of this type are “benefactive” reciprocal constructions with the direct object marked for the benefactive case; cf. (6b) and (31):

- (31) *Etiken hurken-de meer turki-ga-wur ga-mat-ta.*
 old.man youth-and selves’ sleigh-BEN-REFL.PL take-REC-NFUT.3PL
 ‘The old man and the youth took the(ir) sleigh(s) for each other.’

This type of “possessive” reciprocal constructions is peculiar in that the possessor nominal invariably performs the role of Beneficiary within the proposition, obviously, due to the semantics of the benefactive case, which can simultaneously mark two different semantic roles (see 2.3.2). If the direct object in the reciprocal construction is marked with a reflexive-possessive ending (corresponding to an accusatively marked direct object in the corresponding non-reciprocal construction; cf. (30a)), the possessor nominal does not

4. An interesting violation of the iconic “mirror principle” in derivation of verbal forms in Tungus-Manchu languages is attested in Manchu, where the sociative-causative form with the sociative marker *-nu-* has the object-oriented meaning; cf. *dosi-bu-nu-* <enter-CAUS-SOC-> ‘make all enter’ (Zakharov 1879:169; see also Zakharov 1875).

have an invariant semantic role within the proposition and its interpretation is mainly determined by the verbal semantics. Thus, within reciprocal constructions formed by verbs of creation and favourable activities, the possessor nominal can be interpreted as Beneficiary (cf. ‘to mend each other’s sleighs’ = ‘to mend sleighs for each other’ in (2b)), whereas in reciprocal constructions formed by verbs of taking it has the Source reading (cf. ‘to take each other’s wings’ = ‘to take wings from each other’ in (30b)).

2. *Derived from two-place intransitives.* The reciprocal form marks cross-coreferentiality between the subject and the Possessor within the oblique object NP:

- (32) a. *Bi etiken žuu-la-n bii-wet-te-m.*
I old.man house-LOC-his be-ITER-NFUT-1SG
‘I (usually) stay in the old man’s house.’
- b. *Mut etike-n’un meer žuu-l-dula-wur bii-wet-met-te-p.*
we old.man-COM selves’ house-PL-LOC-REFL.PL be-ITER-REC-NFUT-1PL
‘I and the old man (usually) stay in each other’s houses.’

3.1.1.5 “*Postpositional possessive*” diathesis. In view of the fact that postpositional phrases are patterned as possessive phrases (see Section 2.2), the reciprocal form can mark cross-coreferentiality between the subject and possessor nominal within the postpositional phrase as well. This diathesis type obtains in the reciprocal construction under (33b) with subject cross-coreferential with the possessor *atikan* in the phrase headed by the postpositional noun *žugu-* ‘with regard to; about’ in the prolicative case:

- (33) a. *Atikan gia atikan žugu-li-n ukčen-re-n.*
old.woman other old.woman about-PROL-her tell-NFUT-3SG
‘One old woman talks about another.’
- b. *Atika-r meer žugu-li-wur ukčen-met-te.*
old.woman-PL selves’ about-PROL-REFL.PL tell-REC-NFUT.3PL
‘Old women talk about each other’ (lit. each other’s about).

Although the same meaning ‘to talk about each other’ may also be rendered by two-diathesis reciprocals derived from verbs of speech (see *göö-met-* ‘to tell each other/about each other’ cited in 3.1.1.3), (33) above represents not an argument, but the “possessive” diathesis. Note, in particular, that the anaphoric pronoun *meer* acquires here the reciprocal interpretation (‘about each other’ rather than ‘about themselves’), available only within the scope of the “possessive” reciprocal.

Since other postpositions (such as *daali-...-n* ‘(in the) vicinity (of); near’ considered in 9.2.1) are restricted to locative constructions they cannot combine with verbal reciprocals (see restrictions on formation of verbal reciprocals from locative predicates in 3.2).

3.1.2 *Object-oriented reciprocals*

In Even, object-oriented reciprocals are available only within causative-reciprocal constructions, where the reciprocal actants are expressed by the object NP denoting the Causee. Compare the subject-oriented “canonical” reciprocal construction in (34b) and the causative-reciprocal construction in (34c) derived from it:

- (34) a. *ŋin (gia-w) ŋin-u itmen-ni.*
 dog other-ACC dog-ACC bite-NFUT.3SG
 ‘The dog bit another dog.’
- b. *ŋina-l itme-met-te.*
 dog-PL bite-REC-NFUT.3PL
 ‘The dogs bite each other.’
- c. *Žör hurke-r ŋina-l-bu itme-meč-uken-Ø.*
 two youth-PL dog-PL-ACC bite-REC-CAUS-NFUT.3PL
 ‘Two youths make the dogs bite each other (=dogs).’

The diathesis type of an object-oriented reciprocal (causative-reciprocal) construction is determined by the diathesis type (argument vs. “possessive” diathesis) of the corresponding source reciprocal construction. The causative-reciprocal form derived from an argument (“canonical” and “indirect”) reciprocal marks cross-coreferentiality of the agentive object (the Causee) with another object (the direct object in (34b)). The causative-reciprocal form derived from a “possessive” reciprocal marks cross-coreferentiality of the agentive object with the possessor within another object (the direct object in (2b) repeated here as (35a)). Note that within the causative-reciprocal construction (35b), in contrast to reciprocal construction (35a), the reflexive possessive plural pronoun *meer* ‘(our/your/their) own, each other’s’ has an object-oriented (object-bound) rather than a subject-oriented reading. This is marked on the possessed nominal *turki(l)* which takes the personal possessive ending *-ten* in (35b) instead of the reflexive possessive ending *-bur* in (35a).

- (35) a. *Noŋartan meer turki-l-bur ailta-mat-ta.*
 they selves’ sleigh-PL-REFL.PL mend-REC-NFUT.3PL
 ‘They mended each other’s sleighs.’
- b. *Bi noŋar-bu-tan meer turki-l-bu-tan ailta-mač-ukan-am.*
 I they-ACC-their selves’ sleigh-PL-ACC-their mend-REC-CAUS-NFUT.1SG
 ‘I made them mend each other’s sleighs.’

3.2 Restrictions on derivation

There are two major restrictions on the derivation of verbal suffixed reciprocals in contrast to pronominal reciprocals. The first restriction is semantic, or perhaps, lexical in nature: (non-lexicalized; cf. 3.3) verbal reciprocals cannot be derived from verbs of motion (or static location); cf. *hör-* ‘to go’ and **hör-met-* (intended meaning: ‘to go from each other’), *em-* ‘to come’ and **em-met-* (intended meaning: ‘to come to each other’).

The second restriction is syntactic and it is related to the valency (argument vs. adjunct) status of the cross-coreferenced NPs. The verbal reciprocal can mark cross-coreferentiality of the subject with an argument but not with an adjunct. Thus the initial non-reciprocal construction with the benefactive argument in (16a) has a corresponding reciprocal (cf. (16b)), whereas the construction with the benefactive adjunct (36a) does not. Note that in reciprocal construction (36c) the subject is cross-coreferential with the Source argument of (36b) and not with the benefactive adjunct of (36a):

- (36) a. *Etiken nimek-ti olra-w ga-wat-ta-n.*
 old.man neighbour-DAT.REFL fish-ACC take-ITER-NFUT-3SG
 ‘The old man usually takes fish for his neighbour.’
- b. *Etiken nimek-tuk-i olra-w ga-wat-ta-n.*
 old.man neighbour-ABL-REFL fish-ACC take-ITER-NFUT-3SG
 ‘The old man usually takes fish from his neighbour.’
- c. *Nimeke-l olra-w ga-mač-čot-ta.*
 neighbour-PL fish-ACC take-REC-ITER-NFUT.3PL
 ‘The neighbours usually take fish from each other’ (not: ‘for each other.’)

If the intended meaning is ‘The neighbours usually take fish for each other’ a corresponding pronominal reciprocal construction (cf. (62)) should be used (or else a benefactive possessive reciprocal, such as (31)).

The valency restrictions on constructions with suffixed reciprocals hold for the “possessive” diathesis as well: a verbal reciprocal can mark cross-coreferentiality of the subject with the possessor within an object NP (cf. the locative object in (32a)), but not with the possessor within an adjunct NP (cf. the locative adjunct in (37a)):

- (37) a. *N’ooka etiken žuu-la-n köke-n.*
 Yakut old.man house-LOC-his die-NFUT.3SG
 ‘The Yakut died (staying) in the old man’s house.’
- b. **N’ooka etike-n’un meer žuu-l-dula-wur köke-met-te.*
 Yakut old.man-COM selves’ house-LOC-REFL.PL die-REC-NFUT.3PL
 (intended meaning:) ‘The Yakut and the old man died (staying) in each other’s houses.’

In other words, the reflexive-possessive pronoun *meer* acquires a reciprocal meaning only within the scope of a reciprocal predicate.

3.3 Multiplicative meaning of the suffix *-mat*

A small group of verbs with the reciprocal suffix (formal reciprocals), including about a dozen verbs of motion, conveys the multiplicative-dispersive meaning,⁵ denoting a reiterated motion of a person/an object in different directions or in different locations. It is conceivable that the suffix *-mat* retains here its original meaning which has later given rise to the reciprocal meaning. These verbs are similar to semantic reciprocals in that they also denote several (homogeneous) actions. Cf. textual examples ((38b) is adopted from Robbek (1984:129)):

- (38) a. *Noŋan öhömiken köte-met-te-n, niŋgi-mat-ta-n.* (L. 123)
 (s)he even curve-REC-NFUT-3SG sway-REC-NFUT-3SG
 ‘She (the shaman-woman) even bent, swayed from side to side.’
- b. *Toog haanin-ni teerin-teki hiru-met-te-n.*
 fire smoke-its side-ALL sway-REC-NFUT-3SG
 ‘The smoke fire swayed from side to side.’

5. For these terms see Xrakovskij (1997).

On morphological grounds (depending on the type of opposition with non-reciprocal verbs) three classes of formal reciprocals can be distinguished:

1. Formal reciprocals derived from non-reciprocals; cf. (40), (43), (44), (47) below.
2. Formal reciprocals that enter with non-reciprocals into an equipotent opposition, their stems intersecting; cf. (39), (41), (42), (45), (48) below.
3. Formal reciprocals lacking corresponding non-reciprocal verbs; cf. (46), (49) below.

On semantic grounds, two groups of formal reciprocals can be distinguished:

(a) Formal reciprocals denoting a reiterated motion (often in different directions) of a person/object:

- (39) *deri-met-* ‘to flee here and there from sb’; cf. *deriŋči-* ‘to flee from sb.’
 (40) *želŋe-met-* ‘to jump repeatedly.’
 (41) *kewu-met-* ‘to swim here and there (of animals)’; cf. *kewuŋči-* ‘swim (of animals).’
 (42) *melu-met-* ‘to leap over sth repeatedly; jump repeatedly’; cf. *meluŋči-* ‘to leap (once) over sth/out of sth.’
 (43) *tia(n)-* ‘to swim’ → *tia-mat-* ‘to swim here and there.’
 (44) *hiru(n)-* ‘to glide, sway’ → *hiru-met-* ‘to glide, sway repeatedly.’

(b) Formal reciprocals denoting a reiterated motion by a body part or the like:

- (45) *bagat-mat-* ‘to slap with wings’; cf. *bagak-* ‘to slap.’
 (46) *denme-met-* ‘to move (one’s) ears.’
 (47) *kiawa(n)-* ‘to curve’ → *kiawa-mat-* ‘to curve, sway from side to side.’
 (48) *köte-met-* ‘to twist/bend repeatedly’; cf. *köteŋči-* ‘to twist/wriggle (e.g. of a baby).’
 (49) *niŋgi-mat-* ‘to swing, sway from side to side.’

4. Constructions with reciprocal pronouns

Reciprocal pronouns, such as *meen meen-ur* ‘each other’ considered in 4.2, can be employed to express the reciprocal meaning either independently or with morphological reciprocals. In the latter case, however, their use is optional (cf. 4.3.2). Since reciprocal pronouns are related both formally (derivationally) and functionally (cf. a similar expression of subject-/object-orientation of anaphoric pronouns) to reflexive pronouns, the latter will be briefly considered in Section 4.1 below.

4.1 Reflexive pronouns

Depending on the syntactic position of the reflexive pronoun the following can be distinguished: (a) “argument” reflexive pronouns, substituting for an NP in an argument/adjunct position and (b) possessive reflexive pronouns, substituting for the Possessor within an NP; cf. (50) and (51) respectively:

- (50) *Kuŋa meen-i aw-ra-n.*
 child (him)self-REFL wash-NFUT-3SG
 ‘The child washed himself.’
- (51) *Hurken meen nöö-j aw-ra-n.*
 youth self’s brother-REFL wash-NFUT-3SG
 ‘The youth washed his (younger) brother.’

On the other hand, depending on the syntactic position of the antecedent, the argument reflexive pronouns can be further subdivided into groups of (a) subject-oriented (subject-bound) pronouns, as in the examples above, and (b) object-oriented (non-subject-bound) pronouns (see Section 4.1.2).

4.1.1 Subject-oriented pronouns *meen-i* and *meer-bur*

The subject-oriented reflexive pronouns *meen-i* ‘(my/your/ him/her)self’ and *meer-bur* ‘(our/your/them)selves’ are derived from the (stems of) possessive reflexive pronouns (cf. 4.1.3) and differ in the number of their antecedent; cf. (50) with the singular subject and (52) with the plural subject:

- (52) *Kuŋa-l meer-bur aw-ra.*
 child-PL (them)selves-REFL.PL wash-NFUT.3PL
 ‘The children washed themselves.’

The pronoun *meen-i* is derived from the reflexive-possessive pronoun in the singular *meen* which takes the corresponding reflexive-possessive singular ending *-i*; the pronoun *meer-bur* is derived from the reflexive-possessive plural pronoun *meer*, taking the corresponding reflexive plural ending *-bur* (see (5b)). Here is a fragment of the case paradigm of subject-oriented reflexive pronouns; note that subject-oriented reflexive pronouns, like other nouns with the reflexive-possessive endings, lack the accusative case: in the latter function the unmarked (nominative) case is used:

(53)	SG	PL
NOM	<i>meen-Ø-i</i>	<i>meer-Ø-bur</i>
DAT	<i>meen-d-i</i>	<i>meer-du-r</i>
LOC	<i>meen-dule-j</i>	<i>meer-dule-wur</i>
ABL	<i>meen-duk-i</i>	<i>meer-duk-ur</i>

4.1.2 Object-oriented pronouns *meen-ni*, *meen-ten*, etc.

The difference in use between the subject-oriented pronoun (such as *meen-i* ‘himself’ in (54a)) and the object-oriented pronoun (such as *meen-ni* ‘he himself’ in (54b)), may be illustrated by the causative construction (54), where the former marks coreferentiality with the (surface) subject, while the latter marks coreferentiality with the agentive phrase denoting the Causee:

- (54) a. *Hurken₁ nöö-i₂ meen-i₁ aw-ukan-ni.*
 youth brother-REFL himself(REFL) wash-CAUS-NFUT.3SG
 ‘The youth made the (younger) brother wash himself (=the youth).’

- b. *Hurken₁ nöö-i₂ meen-me-n₂ aw-ukan-ni.*
 youth brother-REFL himself(ACC-3SG) wash-CAUS-NFUT-3SG
 ‘The youth made the (younger) brother wash.’ (lit. ‘wash himself (=the brother)’)

The object-oriented reflexive pronouns are derived from the stem of the reflexive-possessive singular pronoun *meen* with the help of personal possessive endings (rather than reflexive-possessive endings, as in the case of subject-oriented pronouns).⁶ Thus, the object-oriented pronouns, in contrast to the subject-oriented ones, have six different forms marked for the person and number of their antecedents: *meen-mu* ‘(I) myself’, *meen-si* ‘(you) yourself’, *meen-ni* ‘(he) himself, (she) herself’, *meen-ti* ‘(we) ourselves’, *meen-sen* ‘(you) yourselves’, *meen-ten* ‘(they) themselves’. Here is a fragment of the case paradigm of the 3rd person object-oriented pronouns:

(55)	SG	PL
NOM	<i>meen-Ø-ni</i>	<i>meen-Ø-ten</i>
ACC	<i>meen-me-n</i>	<i>meen-me-ten</i>
DAT	<i>meen-du-n</i>	<i>meen-du-ten</i>
LOC	<i>meen-dule-n</i>	<i>meen-dule-ten</i>

4.1.3 Reflexive-possessive pronouns *meen* and *meer*

The reflexive-possessive pronouns *meen* lit. ‘(my/your/his/her) own’ and *meer* lit. ‘(our/your/ their) own’ differ in the number of the antecedent; cf. (51) with a singular subject and (56) with a plural subject:

- (56) *Hurke-r meer nöö-wur aw-ra.*
 youth-PL selves’ brother-REFL.PL wash-NFUT.3PL
 ‘The youths washed their (younger) brother.’

The syntactic subject or non-subject status of the antecedent of the reflexive-possessive pronouns is not expressed in its form, which remains unchanged, but in the form of the head noun of the possessive construction. If the head noun takes a reflexive-possessive ending (cf. the reflexive singular ending *-j* on *niri-j* ‘his own back’ in (57a)), the reflexive-possessive pronoun has a subject-oriented reading, and if it takes a personal-possessive ending (cf. the 3rd person singular suffix *-n* on *niri-wa-n* ‘his back’ in (57b)), it has an object-oriented reading. Consequently, the pronoun *meen*, used in the causative construction, has a subject-oriented interpretation in (57a) and an object-oriented interpretation in (57b):

- (57) a. *Hurken₁ nöö-i₂ meen₁ niri-j aw-ukan-ni.*
 youth brother-REFL self’s back-REFL wash-CAUS-NFUT-3SG
 ‘The youth made the (younger) brother wash his (=the elder one’s) back.’

6. Due to the influence of Yakut object-oriented pronouns in some western dialects are derived from the pronominalized noun *bej* ‘man’ (rather than *meen*) taking the corresponding personal possessive endings: *bej-u* ‘(I) myself’, *beje-s* ‘(you) yourself’, etc.; cf. Yakut: *beye-m* ‘(I) myself’, etc.

- b. *Hurken*₁ *nöö-i*₂ *meen*₂ *niri-wa-n* *aw-ukan-ni*.
 youth brother-REFL self's back-ACC-his wash-CAUS-NFUT-3SG
 'The youth made his (younger) brother wash his (=the younger one's) back.'

In a similar fashion the reflexive-possessive pronoun *meer* has a subject-oriented reading within a causative-reciprocal construction with the “possessive” diathesis in (35a), but an object-oriented reading in (35b). The anaphoric pronoun *meer* allows for the reciprocal interpretation ‘each other’s’ only when used with a suffixed reciprocal (cf. (2b), also examples in 3.1.1.4 above), otherwise only the reflexive interpretation ‘(our/your/their) own’ is possible (cf., for instance, (56)).

4.2 Derivation of reciprocal pronouns

In contrast to reflexive pronouns, specialised reciprocal pronouns represent the “argument” (non-“possessive”) type. Recall that the function of “possessive” reciprocals is performed by the semantically ambiguous anaphoric plural pronoun *meer* having both the reflexive (‘their/... own’) and the reciprocal (‘each other’s’) reading.

Depending on the syntactic position of their antecedent, the reciprocal pronouns, just as the “argument” reflexive pronouns, can be further divided into subject-oriented and object-oriented pronouns.

4.2.1 Subject-oriented pronoun *meen meen-ur*

The morphological structure of this class of pronouns varies in different Even dialects (on the dialect base of this study see Section 1.1 above). In most Eastern dialects reciprocal pronouns are derived from the subject-oriented reflexive pronoun *meer-bur* ‘(our/your/them) selves’ by “infixation” of the marker *-teken*.⁷ In the Middle-Western dialects the subject-oriented reciprocal pronouns are derived by reduplication of the reflexive-possessive singular pronoun *meen* ‘(my/your/him)self’, the second stem taking the reflexive-possessive plural ending. A fragment of the case paradigm of subject-oriented reciprocal pronouns in the Eastern (Oxotsk) and Western (Tompo) dialects is given below:

	Eastern dialects	Western dialects	
NOM	<i>meer-tek-Ø-mur</i>	<i>meen meen-Ø-ur</i>	‘each other’
DAT	<i>meer-teken-du-r</i>	<i>meen meen-du-r</i>	‘to each other’
LOC	<i>meer-teken-dule-wur</i>	<i>meen meen-dule-wur</i>	‘by/to each other’
ABL	<i>meer-teken-duk-ur</i>	<i>meen meen-duk-ur</i>	‘from each other’

This class of reciprocal pronouns has a defective case paradigm since it lacks the benefactive and the accusative case, just like the subject-oriented reflexive pronouns, where the corresponding nominative case form is used in the latter function. Compare, for instance, the use of *meen meen-ur* in the direct object position in reciprocal construction (58):

7. In the (eastern) Ola dialect, the marker *-teken-* appears in the (plural) form *-teker-* (cf. *meer-teker-dur* ‘to each other’ in (62)), whereas in the (eastern) Magadan dialect reciprocal pronouns appear to be lost (V.S. Elrika, p.c.).

- (58) *ɲina-l meen meen-Ø-ur itmen-Ø.*
 dog-PL each other-NOM-REFL.PL bite-NFUT.3PL
 ‘The dogs bit each other.’

4.2.2 Object-oriented pronoun *meen meen-ten*, etc.

Object-oriented reciprocal pronouns are derived in a way similar to subject-oriented reciprocal pronouns except for the fact that they take personal possessive (instead of reflexive-possessive) plural markers; cf. the analogous contrast between subject-oriented and object-oriented reflexive pronouns. Thus the single possessive form of subject-oriented reciprocal pronouns corresponds to three different forms of object-oriented reciprocal pronouns. Compare formation of object-oriented reciprocal pronouns in the Eastern and Western dialects (exemplified below by the accusative forms in *-me*):

- | | | | |
|------|------------------------|-------------------------|-------------------------------------|
| (59) | Eastern dialects | Western dialects | |
| | <i>meer-tek-me-t</i> | <i>meen meen-me-t</i> | ‘one another (of us)’ |
| | <i>meer-tek-me-sen</i> | <i>meen meen-me-hen</i> | ‘one another (of you)’ |
| | <i>meer-tek-me-ten</i> | <i>meen meen-me-ten</i> | ‘one another (of them)’ (see (60b)) |

4.2.3 Diathesis types of constructions with reciprocal pronouns

By definition, reciprocal constructions with subject-oriented reciprocal pronouns have the subject-oriented diathesis, while reciprocal constructions with object-oriented reciprocal pronouns have the object-oriented diathesis. For example, in a causative construction the subject-oriented reciprocal pronoun in (60a) indicates coreferentiality with the (surface) subject, while the object-oriented reciprocal pronoun in (60b) indicates coreferentiality with the Causee (cf. the parallel use of subject-oriented and object-oriented reflexive pronouns in causative construction (54)).

- (60) a. *Žör hurke-r₁ ɲina-l-bu₂ meen meen-ur₁ itme-mken-Ø.*
 two youth-PL dog-PL-ACC each other-REFL bite-CAUS-NFUT.3PL
 ‘The two youths caused the dogs to bite each other (=youths) (i.e. hounded each other with dogs).’
- b. *Žör hurke-r₁ ɲina-l-bu₂ meen meen-me-ten₂ itme-mken-Ø.*
 two youth-PL dog-PL-ACC each other-ACC-3PL bite-CAUS-NFUT.3PL
 ‘The two youths caused the dogs to bite each other (=dogs).’

As shown by (60), the formation of pronominal reciprocal constructions does not involve reduction of the verbal valency. Another difference between pronominal and suffixed reciprocals lies in the fact that the former can mark cross-coreferentiality of the subject not only with a verbal object (direct object in the “canonical” reciprocal construction in (58) and indirect object in the “indirect” reciprocal construction in (61)), but also with an adjunct; cf. (36a) and (62) from Novikova (1980:209):

- (61) *Amarla maa-ča-wur olra-w meer-teker-dur böö-wet-te.*
 later kill-PART-REFL.PL fish-ACC each.other-DAT-REFL.PL give-ITER-NFUT.3PL
 ‘Later they used to give the fish they (had) killed to each other.’

- (62) *Amarla maa-ča-wur olra-w meer-teker-dur ga-wat-ta.*
 later kill-PART-REFL.PL fish-ACC each.OTHER-DAT.REFL.PL take-ITER-NFUT.3PL
 ‘Later they used to take the fish they (had) killed for each other.’

4.3 Relationship between suffixed and pronominal reciprocals

4.3.1 *Differences between suffixed and pronominal reciprocals*

As already mentioned, the primary means of expressing the reciprocal meaning in Even is the suffixed morphological reciprocal. The pronominal reciprocals, as compared to the verbal, represent a “marked” pattern in that (a) they are formally more complex; (b) they are less frequent in use (and therefore have not been previously mentioned in descriptive grammars of Even); (c) their structure shows dialectal variation.

Syntactically, suffixed reciprocals differ from pronominal ones in the type of syntactic derivation, as derivation of the former involves valency decrease and that of the latter does not, and in restrictions on their derivation. On the one hand, pronominal reciprocals do not have the “possessive” diathesis. On the other hand, suffixed reciprocals do not form the adverbial diathesis; cf. the pronominal reciprocal construction (62) with the subject cross-coreferential with the Benefactive adjunct and the verbal reciprocal construction (36c) lacking the corresponding interpretation.

It appears that the additional valency restrictions on the derivation of suffixed reciprocals (that run counter to the “markedness” relation between pronominal and suffixed reciprocals) have a functional explanation and are related to the possibility of recovering the semantic role of the second reciprocal actant within these two types of reciprocal constructions (cf. Givón (1990:650–1) on “case recoverability” strategies in derivation of relative clauses). As demonstrated above, in suffixed reciprocal constructions the single morphological reciprocal marker *-mat* can signal cross-coreferentiality between NPs with different semantic-syntactic (=case) roles that may result in ambiguity of these forms (cf. 3.1.3.4 on two-diathesis reciprocals). Within minimal contexts, the case role of the second reciprocal actant can be recovered solely by relating the reciprocal construction structure to the argument structure of the verb: the subject is interpreted as cross-coreferential with that constituent of the underlying construction which is lacking in the reciprocal construction. Since only the verbal arguments (=actants), being obligatory constituents, can be identified as lacking, but not its potential adjuncts, the latter cannot participate in the reciprocal derivation.

In pronominal reciprocal constructions, by contrast, the semantic-syntactic role of the second reciprocal actant (and, consequently, the diathesis type of reciprocal construction) is explicitly marked by the (case) form of the reciprocal pronoun. Therefore, pronominal reciprocal constructions do not show ambiguity and consequently are not subject to valency constraints.

4.3.2 Pleonastic use of reciprocal pronouns

When used pleonastically with suffixed reciprocals, reciprocal pronouns (just as in the case of their independent use) retain the case form of the noun they substitute for (cf. (58) and (63a)); less frequently, they take the comitative case form (as in (63b)):

- (63) a. *Žör ŋina-l meen meen-ur itme-met-te.*
 two dog-PL each other-REFL.PL bite-REC-NFUT.3PL
 ‘The two dogs bite each other.’
- b. *Žör ŋina-l meen meen-n’u-mur itme-met-te.*
 two dog-PL each other-COM-REFL.PL bite-REC-NFUT.3PL
 ‘The two dogs bite (lit. with) each other.’

With suffixed reciprocals, both subject-oriented and object-oriented reciprocal pronouns can be used. The diathesis type of the reciprocal construction in this case is determined by the diathesis of the suffixed reciprocal (which is, of course, only natural, given the optional character of reciprocal pronouns), so that the use of object-oriented reciprocal pronouns is restricted to causative-reciprocal constructions.

1. *The use of subject-oriented reciprocal pronouns.* These pronouns can be used within verbal reciprocal constructions of different diathesis types. While their use with suffixed reciprocals is normally pleonastic, they may be used as a means of disambiguation in two-diathesis reciprocal-causative constructions. As demonstrated above (see 3.1.1.3), reciprocal-causative constructions are often ambiguous; cf. (64) (and also (29c)), which can be interpreted either as “canonical” (cf. the (i) reading) or “indirect” (cf. the (ii) reading):

- (64) *Hurke-r hólnež-u arča-mka-mat-ta.*
 youth-PL guest-ACC meet-CAUS-REC-NFUT.1PL
- i. ‘The youths are sending the guest to meet each other (i.e. youth_i is sending the guest to meet youth_j, and youth_j is sending the guest to meet youth_i).’
- ii. ‘The youths are sending each other to meet the guest (for example, quarrelling who is to go and meet the guest).’

The reciprocal pronouns help to disambiguate these constructions. Thus the (i) meaning (subject cross-coreferential with the underlying Patient) is unambiguously rendered by (65) with the reciprocal pronoun in the direct object position:

- (65) *Hurke-r hólnež-u meen meen-ur arča-mka-mat-ta.*
 youth-PL guest-ACC each.other-REFL.PL meet-CAUS-REC-NFUT.3PL
 ‘The youths are sending the guest to meet each other (= each of them).’

The (ii) meaning (subject cross-coreferential with the Causee), on the contrary, is explicitly expressed by (66) with the reciprocal pronoun in the indirect object position:

- (66) *Hurke-r meen meen-du-r hólnež-u arča-mka-mat-ta.*
 youth-PL each other-DAT-REFL.PL guest-ACC meet-CAUS-REC-NFUT.3PL
 ‘The youths are sending each other to meet the guest.’

Reciprocal construction (65) is disambiguated with the help of word order: since the indirect object normally precedes the direct object, the reciprocal pronoun in the preverbal

position is interpreted as the direct object and the reciprocal construction, consequently, as having the “canonical” diathesis. Reciprocal construction (66) is additionally disambiguated with the help of the case-marking on the reciprocal pronoun: it takes the dative case and is, consequently, interpreted as the indirect object.

2. *The use of object-oriented reciprocal pronouns.* These pronouns can be used in causative reciprocal constructions and pleonastically mark cross-coreferentiality of the underlying object (object of the base verb) with the Causee; cf. (34b) and (67):

- (67) *Žör hurke-r₁ ŋina-l-bu₂ meen meen-me-ten₂ itme-meč-uken-Ø.*
 two youth-PL dog-PL-ACC each other-ACC-3PL bite-REC-CAUS-NFUT.3PL
 ‘Two youths make the dogs bite one another (that is, set one dog on the other).’

5. Nominal possessive-reciprocal suffix *-takan* ‘each other’s’ (Oxotsk dialect)

In the Oxotsk dialect, cross-coreferentiality between the subject and the Possessor in “possessive” reciprocal constructions can be additionally marked on the head of the possessive phrase with the suffix *-takan* ‘each other’s’ (also used to derive argument reciprocal pronouns in this dialect, see Section 4.2.1).

- (68) a. *Bej hooni-wa-n irič haa-ži-m?*
 man strength-ACC-his how know-FUT-1PL
 ‘How can we try the man’s strength?’
 b. *Honi-l beji-l, hooni-tak-mar irič haa-mat-či-p? (O. 138)*
 strong-PL man-PL strength-takan-REFL.PL how know-REC-FUT-1PL
 ‘Strong men, how can we try each other’s strength?’

In the “possessive” reciprocal construction under (68b) the head noun of the possessive phrase in the direct object position takes the marker *-takan* and has the form *hooni-tak-mar* instead of *hooni-l-bur* (strength-PL-REFL.PL) available in other dialects.

The suffix *-takan* can be used in “possessive” reciprocal constructions on different objects; cf. its use on the oblique object in (69b) formed by a two-place intransitive lexical reciprocal cited in (97b):

- (69) a. *Ömen n’ur gia n’ur hur-le-n naa-d-ni.*
 one arrow another arrow head-LOC-its collide-NFUT-3SG
 ‘One arrow hit another arrow’s head.’
 b. *Žör n’ur meer hure-tek-le-wer naa-lda-r. (O. 116)*
 two arrow selves’ head-takan-LOC-REFL.PL collide-SOC-NFUT.3PL
 ‘Two arrows hit each other’s heads.’

The morphological marking of the possessed nominal in “possessive” reciprocal constructions in the Oxotsk dialect can be attributed, apparently, to the general tendency of Even to “head-marking” within a possessive NP. This tendency is already attested in the “izafet” patterning of the possessive construction and is particularly obvious in constructions with the benefactive case, where the case form on the possessed assigns a special semantic role (that of Beneficiary) to its possessor nominal (see 2.2).

6. Reciprocal specifier *meer dooli(-wur)*

The reciprocal specifier *meer dooli(-wur)* ‘among themselves; (to) each other’ is mostly used pleonastically in combination with suffixed reciprocals. Examples (26b) above and (70b) below illustrate its use in “indirect” and “canonical” reciprocal construction respectively:

- (70) a. *Heejek gia-w heejek-u maa-n.*
 Yukaghir other-ACC Yukaghir-ACC kill-NFUT.3PL
 ‘One Yukaghir killed the other.’
- b. *Heejeke-l hil-žinadur meer dooli maa-mač-čot-ta.* (N. 133)
 Yukaghir-PL suffer-CONV among themselves kill-REC-ITER-NFUT.3PL
 ‘The Yukaghirs killed each other in order not to suffer (not to be tortured).’

Less typical is the use of this specifier as a single reciprocal marker in combination with non-reciprocal predicates. Thus, in (71b) it forms a “canonical” reciprocal construction (note that the first predicate *bejči-gre-r* in (71b) is non-reciprocal):

- (71) a. *Heejeke-l oroči-l-bu bejči-gre-r.*
 Yukaghir-PL Even-PL-ACC hunt-ITER-NFUT.3PL
 ‘Yukaghirs used to “hunt” Evens.’
- b. *(Heejeke-l oroči-l-n’un) meer dooli bejči-gre-r,*
 Yukaghir-PL Even-PL-COM among themselves hunt-ITER-NFUT.3PL
maa-mat-kara-r. (N. 132)
 kill-REC-ITER-3PL
 ‘Yukaghirs and Evens used to “hunt” and kill each other.’

As is shown here, the reciprocal specifier *meer dooli(-wur)* is predominantly used in reciprocal constructions that do not imply strict cross-coreference between any two participants and normally take a subject denoting a group of persons; cf. (70b) and (71b).

Historically, *meer dooli(-wur)* is a combination of the reflexive possessive plural pronoun *meer* with the postpositional noun *do-* ‘inside of’ in the prolocative case (in *-li*) and optionally taking the reflexive-possessive plural ending *-wur*. The use of *meer dooli(-wur)* as a reciprocal marker apparently takes its origin in its use in constructions with suffixed reciprocals with the “postpositional possessive” diathesis (cf. 3.1.1.5), as evidenced by the fact that it is still predominantly used in combination with suffixed reciprocals. Later, however, this phrase has undergone lexicalization, which reveals itself, semantically, in the semantic shift (‘inside/among one’s own (people)’ > ‘among themselves’ > ‘(to) each other’), morphologically in the optional use of the reflexive-possessive ending *-wur* (rather than the reflexive-possessive pronoun *meer*), and syntactically in the loss of the corresponding non-reciprocal construction.

7. Simultaneity and succession of reciprocal subevents

Interpretation of the actions denoted by a reciprocal construction as simultaneous or successive depends partly on the formal type of reciprocal. Thus, lexical reciprocals, both non-derived (see 9.1.1) and those with the suffix *-lda* (see 9.1.2), allow only a simultaneous reading (which in the latter case is determined by the semantics of the sociative marker). Pronominal reciprocals, by contrast, allow both interpretations: thus, such examples as (60a, b) allow the use of lexical-syntactic markers of either simultaneity (such as *ömettu* ‘together’) or succession (such as *ömetelži* ‘one after another’) of verbal actions.

Finally, in a verbal reciprocal construction, the temporal (axis) relations between reciprocal subevents seem to be largely determined by the verbal lexical meaning. Thus, the suffixed reciprocals *guže-met-* ‘to kiss (each other)’ or *čor-mat-* ‘to hit each other, fist-fight’ imply simultaneity of actions, whereas *duk-mat-* ‘to write to each other’ or *hölne-met-* ‘to visit each other’ in (24b) imply their succession, and *ga-mat-* ‘to take from each other’ in (36c) or *ma-mat-* ‘to kill each other’ in (70b) allow both interpretations. In the latter case simultaneity of the subevents can be marked (apart from lexical-syntactic means) morphologically – by a combination of the reciprocal with the sociative marker, cf. *ma-lda-mat-* ‘to kill each other (simultaneously)’ in (13c). Succession of subevents can also be marked morphologically – by a combination of the reciprocal marker with the iterative marker. Notably the iterative suffix in such cases may precede (contrary to the general ordering of voice and aspect suffixes) the reciprocal marker: cf *bii-wet-met-* ‘to visit each other (successively)’ in (32b).

8. Sociative constructions (suffix *-lda*)

8.1 Sociative meaning

The morphological sociative in *-lda/-lde* denotes that the verbal action performed by the referents of the subject NP occurs (a) at the same time and/or (b) in the same place. The first meaning is realized by the sociative forms derived from telic verbs (denoting that the action performed by different participants simultaneously achieves its inherent limit):

- (72) *Oro-r buteke-duk (*ömetelži) köke-lde-r.*
 reindeer-PL hoof.disease-ABL one after another die-SOC-NFUT.3PL
 ‘The reindeer died together (=at once) from the hoof disease (*one after another).’

As demonstrated by (72), the morphological sociative derived from the telic verb *köke-* ‘to die’ cannot combine with the distributive adverb *ömetelži* ‘one after another’ denoting a successive participation of the referents of the subject NP in the verbal action.

The second meaning is realized by the sociative form of verbs of location and motion:

- (73) *Beji-l unijek-tu ilača-lda-r.*
 man-PL shop-DAT stand-SOC-NFUT.3PL
 ‘The men stand by the shop together’ (e.g., in a queue).

Note that a morphological sociative from a locative verb, such as *ilat-* ‘to stand’ in (73), cannot combine with the reciprocal adverb *gora-lta* ‘at a distance’ (see (107b)), denoting distant location of several objects.

Morphological sociatives derived from telic verbs of motion realize both basic meanings; cf. *tute-lde-* in (12) ‘to run together (⇒ at the same time and in the same place)’.

The meaning of the (subject-oriented) sociative can also be rendered by means of the sociative adverb *ömettu* ‘together’ or by collective numerals in *-rižur/-nižur* (such as *žö-rižur* ‘two in number’, *il-nižur* ‘three in number’, etc.).

8.2 Diathesis types of sociatives

As mentioned above, the morphological sociative in Even is subject-oriented, i.e. it denotes joint action of the subject referents. The use of object-oriented sociatives is restricted to causative-sociative constructions (cf. the parallel distribution of subject and object-oriented reciprocals).

8.2.1 Subject-oriented sociatives

Subject-oriented sociatives are derived from verbs of different valency classes taking an animate subject; cf. the subject-oriented sociatives derived from a one-place intransitive in (72), from a two-place intransitive in (73) and from a two-place transitive in (5b), repeated here as (74a):

- (74) a. *Orolčimŋa-l n’amiča-m žawa-lđa-r.*
 herdsman-PL doe-ACC catch-SOC-NFUT.3PL
 ‘The reindeer-breeders caught together the (reindeer-)doe.’
- b. **Orolčimŋa n’amiča-r-bu žawa-lđa-n.*
 herdsman doe-PL-ACC catch-SOC-NFUT.3SG
 ‘The reindeer-breeder caught the (reindeer-)does being together.’

As demonstrated by (74), the morphological sociative from a transitive verb indicates joint participation of the subject referents, as in (74a), but not of the object referents, as in the ungrammatical (74b).

8.2.2 Object-oriented sociatives (causatives only)

The causative-sociative form (see Section 2.5.2) marks joint participation of referents of the Causee object; cf. the sociative subject-oriented construction in (72) and the causative-sociative object-oriented construction in (75):

- (75) *Hi oro-r-bu buteke-duk köke-lde-wken-i-s.*
 you reindeer-PL-ACC hoof.disease-ABL die-SOC-CAUS-PAST-2SG
 ‘You (have) let the reindeer die together (at once) from the hoof disease.’

8.3 Restrictions on derivation

For semantic reasons the sociative in *-lda* cannot be derived from zero-valent verbs (like *imanna-* ‘to snow’, etc.), nor can it be derived from atelic verbs, except those denoting localization (see Section 8.1); e.g.:

- (76) *buten-* ‘to be ill’ → **butene-lda-*.
 (77) *hoŋan-* ‘to weep’ → **hoŋana-lda-*.

8.4 Competitive meaning of the *-lda* form

The competitive meaning (i.e. the meaning ‘to compete in doing V’) of the *-lda* form has been attested by V.A. Robbek (1984:139) for the eastern dialect of Berjozovka (it is not clear from the cited examples to which extent this meaning is dependent on the context); cf.:

- (78) a. *hiru(n)-* ‘to ski’ → *hiru-lda-* ‘to compete in skiing’
 b. *duk-* ‘to write’ → *duka-lda-* ‘to compete in writing (e.g. of schoolchildren)’

8.5 Suffix *-lda* with lexical reciprocals

The formal sociatives derived from lexical reciprocals considered in 9.1.1 are synonymous to the base verbs (and their reciprocal forms):

- (79) a. *bulen-* ‘to be hostile to each other’
 b. *bule-lda-* (same)
 c. *bulen-met-* (same)
 (80) a. *geji(n)-* ‘to compete’
 b. *geji-lda-* (same)
 c. *geji-met-* (same)
 (81) a. *kusi-* ‘to fight’
 b. *kusi-lda-* (same)
 c. *kusi-met-* (same)
 (82) a. *hamu-* ‘to unite’
 b. *hamu-lda-* (same)
 c. *hamu-mat-* (same).

9. Lexical reciprocals

In this section two distinct types of lexical reciprocals are treated: verbs and spatial adverbs.

9.1 Verbs

In Even two major groups of verbal lexical reciprocals can be distinguished: (a) *reciproca tantum* and (b) lexicalized sociative forms in *-lda*.

9.1.1 *Reciproca tantum*

This group includes two small subgroups:

1. Formal reciprocals derived from nouns:

- (83) *dil-mat-* ‘to struggle’; cf. *dil* ‘head.’
 (84) *hön-met-* ‘to be hostile to each other’; cf. *hön* ‘enemy.’

2. Formally non-derived reciprocals:

- (85) *bulen-* ‘to be hostile to each other’
 (86) *gejin-* ‘to compete’
 (87) *kusi-* ‘to struggle’
 (88) *hamu-* ‘to join each other, unite’
 (89) *ukčen-* ‘to talk.’

Like morphological reciprocals, lexical reciprocals may be used in simple and discontinuous constructions, with the second symmetric actant taking a comitative form.

- (90) *Žörmie-tel bej dilmač-ča, ew-gič-te, ča-gič-ta.* (L. 121)
 twenty-DISTR man struggle-PERF this.side-ELAT-CONJ that.side-ELAT-CONJ
 ‘Twenty men struggled (by turns) from both sides.’
 (91) (*Udugan nöö-n*)... *Ömčeni akağan hut-n’un-ni dilmači-l-ča.* (L.121)
 shaman-woman brother-her Ö. elder child-COM-his struggle-INCH-PERF
 ‘The shaman-woman’s (younger) brother ... started to struggle with Omcheny’s elder son.’

The lexical reciprocals in (87) and (88) can also form an idiosyncratic (lexically determined) discontinuous construction with the second actant taking a non-comitative object position. Thus, the reciprocal *kusi-* ‘to struggle’ may take the second reciprocal actant in the accusative case, while *hamu-* ‘to join’ may form a regular discontinuous construction with a comitative object, as in (92a), or it may take the second reciprocal actant in the locative case, as in (92b):

- (92) a. *Ömčeni, hi-n’en hamu-ži-ndi mut-n’un?*
 Ö. you-EMPH join-FUT-2SG we-COM
 ‘Ömcheni, will you join us?’
 b. *Ömčeni, hi-n’en hamu-ži-ndi mut-tule?* (L. 116)
 Ö. you-EMPH join-FUT-2SG we-LOC
 ‘Ömcheni, will you join us?’.

9.1.2 *With the suffix -lda-*

A small group of formal sociatives, including about a dozen items, may express the reciprocal meaning along with the sociative, the form being disambiguated by the (syntactic)

context. Thus, *iči-lda-* under (94b) has two meanings: i. ‘to see sth together’ (sociative); ii. ‘to meet’ (reciprocal). Realization of the reciprocal meaning involves a semantic shift; sociative forms (b) either lack the corresponding reciprocal form (c) (see (99)) or are not entirely synonymous to the latter.

1. *Subject-oriented lexical reciprocals:*

- | | | | |
|-------|----|-------------------|---|
| (93) | a. | <i>bak-</i> | ‘to find’ |
| | b. | <i>baka-lda-</i> | ‘to meet’ |
| | c. | <i>bak-mat-</i> | ‘to find each other.’ |
| (94) | a. | <i>it-</i> | ‘to see’ |
| | b. | <i>iči-lda-</i> | ‘to meet’ |
| | c. | <i>it-met-</i> | ‘to see each other.’ |
| (95) | a. | <i>göön-</i> | ‘to say, tell’ |
| | b. | <i>göö-lda-</i> | ‘to come to agreement’ |
| | c. | <i>göö-met-</i> | ‘to talk.’ |
| (96) | a. | <i>žaw-</i> | ‘to take, catch’ |
| | b. | <i>žawa-lda-</i> | ‘to struggle; greet, shake hands’ |
| | c. | <i>žaw-mat-</i> | ‘to catch each other.’ |
| (97) | a. | <i>na-</i> | ‘to collide’ |
| | b. | <i>na-lda-</i> | ‘to come into contact, meet (of two rivers); fight’ |
| | c. | <i>na-mat-</i> | ‘to collide with each other.’ |
| (98) | a. | <i>hepken-</i> | ‘to catch’ |
| | b. | <i>hepke-lda-</i> | ‘to struggle, fight’ |
| | c. | <i>hepke-met-</i> | ‘to catch each other.’ |
| (99) | a. | <i>huje-</i> | ‘to turn, go aside’ |
| | b. | <i>huje-lda-</i> | ‘to part, go in different directions’ |
| | c. | * <i>huj-met-</i> | |
| (100) | a. | <i>emen-</i> | ‘to leave’ |
| | b. | <i>eme-lda-</i> | ‘to part, go in different directions’ |
| | c. | <i>eme-met-</i> | ‘to leave each other.’ |

2. *Object-oriented reciprocals:*

- | | | | |
|-------|----|-----------------|-------------------------------|
| (101) | a. | <i>uju-</i> | ‘to tie sth’ |
| | b. | <i>uju-lda-</i> | ‘to tie sth and sth together’ |
| | c. | <i>uj-met-</i> | ‘to tie each other.’ |

Notably, these lexicalized forms in reciprocal use still partially retain the sociative meaning (see Section 8.1) in that they also denote events occurring at the same time and in one place.

9.1.3 *Diathesis types of -lda reciprocals*

Lexical reciprocals of this group form the same diathesis types of reciprocal constructions (argument and “possessive”) as morphological reciprocals (see 3.1). The only exception in this respect is the lexical reciprocal under (101b) which is object-oriented in non-causative constructions, differing in this respect from morphological reciprocals.

9.1.3.1 “Canonical” diathesis. “Canonical” diathesis is displayed by lexical reciprocals under (93b), (94b), (95b), (96b), (98b), (100b) derived from transitives; cf.:

- (102) a. *Hurken ariŋka-w hepken-ni.*
youth devil-ACC catch-NFUT.3SG
‘The youth caught the devil.’
b. *Hurken ariŋka-n’un hepke-lde-r.*
youth devil-COM catch-SOC-NFUT.3PL
‘The youth (began to) struggle with the devil.’

as well as by lexical reciprocals under (97b), (99b) derived from intransitives:

- (103) a. *Ömčeni huten ariŋka-duk huj-re-n.*
O. child devil-ABL turn aside-NFUT-3SG
‘Omčeni’s son turned aside from the devil.’
b. *Ömčeni huten ariŋka-n’un olukadu huje-lde-hne.* (L.122)
O. child devil-COM suddenly turn aside-SOC-MOM.NFUT.3PL
‘Omčeni’s son and the devil suddenly parted (went away from each other).’

9.1.3.2 “Possessive” diathesis. Although virtually all lexical reciprocals may be used in appropriate contexts with “possessive” diathesis (see, e.g., *hure-tek-lewur naa-lda-r* ‘to hit each other’s heads’ in (69)), this diathesis is particularly typical of lexical reciprocal (96b):

- (104) a. *Asi gia asi ŋal-du-n žaw-ra-n.*
woman other woman hand-DAT-her take-NFUT-3SG
‘The woman took the other woman’s hand.’
b. *Asa-l ŋal-du-r žawa-lda-r.*
woman-PL hand-DAT-REFL PL take-SOC-NFUT.3PL
‘The women took each other’s hands.’

9.1.3.3 Object-oriented diathesis. This diathesis type is displayed by the single lexical reciprocal *uji-lde-* marking cross-coreferentiality of the (initial) direct object with the oblique object in the locative case. As mentioned earlier, this case is unique for Even in that it does not employ the causative marker to express object-orientation:

- (105) a. *Etiken mukuči-w mukuči-le uj-re-n.*
old.man log-ACC log-LOC tie-NFUT-3SG
‘The old man tied one log to another.’
b. *Etiken mukuči-l-bu [*öme-m mukuči-w] uji-lde-n.*
old.man log-PL-ACC one-ACC log-ACC tie-SOC-NFUT-3SG
‘The old man tied the logs [*one log] together.’

9.1.3.4 Valency-retaining construction. As in the case of underived lexical reciprocals from 9.1.1, the lexical reciprocal *baka-lda-* ‘to meet’ may form both a regular comitative discontinuous construction, as in (106b), and an idiosyncratic discontinuous construction (as in (106c)), with the second reciprocal actant retained in the direct object position:

- (106) a. *Bi etike-m bak-ra-m.*
 I old.man-ACC find-NFUT-3SG
 ‘I found the old man.’
- b. *Bi etike-n’un baka-lda-ra-m.*
 I old.man-COM find-SOC-NFUT-3SG
 ‘I met with the old man.’
- c. *Bi etike-m baka-lda-ra-m.*
 I old.man-ACC find-SOC-NFUT-3SG
 ‘I met the old man.’

9.2 Spatial adverbs

9.2.1 Derivation

Reciprocal adverbs are derived by means of the suffix *-lta/-lte* from stems of a restricted number of locative adverbs/postpositions,⁸ except for (108d) which is formally underived. The base adverbs may be either reciprocal or converse predicates. When derived from the former (see (107)), reciprocal adverbs form a reciprocal construction, and when derived from the latter (see (108)), they form a “chain” construction denoting a number of objects/persons located or moving in a row; cf. (109b) and (110b) respectively:

- (107) a. *bargi-n* ‘(on) the other riverbank’ → *bargi-lta* ‘(on) opposite riverbanks; opposite each other’
- b. *gor* ‘far (away)’ → *gora-lta* ‘far (away) from each other’
- c. *daa-li* ‘near’ → *daa-lta* ‘near each other’
- d. *deepki* ‘opposite’ → *deepki-lte* ‘opposite each other.’
- (108) a. *amari-n* ‘behind’ → *ama-lta* ‘one after another’
- b. *öji-n* ‘over’ → *öji-lte* ‘one over another’
- c. *hergi-n* ‘under’ → *hergi-lte* ‘one under another’
- d. *ulbu-lte* ‘in file’ (cf. the verb *ulbuŋ-či-* ‘to go in file’).

9.3 Diathesis type

Reciprocal adverbs are used only in combination with verbs of motion and localization. Therefore they do not combine with suffixed reciprocals that cannot be derived from these semantic classes of verbs (see 3.2). Since the reciprocal adverbs within the reciprocal constructions under (b) mark cross-coreference between the subject and the Possessor nominal within a (locative) postpositional phrase of the base constructions under (a), this diathesis type may be termed “adverbial-possessive”:

- (109) a. *Ömen žuu gia žuu daali-la-n ilat-ta-n.*
 one house other house near-LOC-its stand-NFUT-3SG
 ‘One house stands near the other.’

8. Spatial nominals in Even are polysemous, being used both as “relative nouns” (cf. *hergi* ‘bottom’), adverbs (cf. *hergi-le* <under-LOC> ‘underneath’) and postpositions (cf. *žuu hergi-le-n* <house under-LOC-its> ‘under the house’).

- b. *Žuu-l daa-lta ilat-ta.*
house-PL near-REC.ADV stand-NFUT.3PL
'The houses stand near each other.'
- (110) a. *Urukčēn-duk ömen kuṇa gia kuṇa amar.da-du-n hiruṇči-ri-n.*
hill-ABL one child other child behind-DAT-his go.by.sleigh-PAST-3SG
'One child went down the hill with sleighs after the other.'
- b. *Urukčēn-duk ilan kuṇa ama-lta hiruṇči-ri-ten.*
hill-ABL three child behind-REC.ADV go.by.sleigh-PAST-3PL
'Three children went with sleighs down the hill one after another.'

One peculiarity of constructions with reciprocal adverbs is that they lack semantic restrictions on the subject position: this slot can be filled by animate (see (110b)) as well as inanimate (see (109b)) nominals.

1. Introduction

1.1 The Chukchi language

Chukchi is a Paleosiberian language of the Chukotko-Kamchatkan language family spoken by about 15 thousand people in the Chukotka peninsula and adjacent territories in the Far North-East of Siberia (Tishkov 1994:408). The Chukchi language has two di-

alects, western (of the tundra nomads) and eastern (of the settled population of the seashore); dialectal variation is very slight and does not hinder mutual understanding. Written Chukchi (which exists since 1932) is based on the eastern dialect. Newspapers and books (both original and translations) are published in Chukchi, it is also used in education, but Standard Chukchi is still in the process of formation (Volodin & Skorik 1997:23).

The immediate neighbours of the Chukchis are Eskimos (Yupik) in the north-east of the Chukotka peninsula, Koryaks in the south, Yakuts in the west and Evens in the west and south-west, and also Yukaghirs in the north-west. A group of Evens live within the Chukchi territory, to the west of Anadyr. The main population in the Chukchi territories is Russian (Kämpfe & Volodin 1995:1).

The three major languages within the Chukotko-Kamchatkan family, whose genetic relatedness to any other language families remains so far speculative, are Chukchi, Koryak and Itelmen. Chukchi and Koryak are very close to one another, the differences between them amounting to differences between dialects of one language (see Comrie 1981:240–52). Koryak is spoken in the north of Kamchatka by about a half of the population of 9,200 (according to the 1989 census). It comprises about 11 dialects one of which is Alyutor (about 3 thousand individuals, usually included among Koryaks; see Zhukova 1997:52). There is also Kerek which is sometimes considered as a dialect of Koryak. Kereks were a small tribe and they have been assimilated by the Chukchis (in 1991, only three persons spoke Kerek; see Volodin 1997:53). Alyutor and Kerek are sometimes regarded as languages in their own right (see, for instance, Zhukova 1968:294–309; Skorik 1968:310–33; Volodin 1997:53–60).

The Itelmen language spoken by less than 100 people (out of about 3,500; see Tishkov 1994:164), south of Koryak in Kamchatka, differs drastically from the other languages of the family, and even its affiliation to this group is subject to doubt (see Comrie (1980:109–20) on the one hand, and Volodin (1997:60), on the other; see also Volodin, Ch. 43, §2.1).

1.2 Overview

There are two main types of reciprocal constructions in Chukchi.

1. Constructions with the monosemous reciprocal suffix *-waly* on the predicate:

- (1) a. *Eqel̄-e at̄l̄əy-ən pen̄rə-nen.*
 enemy-INST father-ABS attack-AOR.3SG+3SG
 ‘The enemy attacked father.’
- b. *Eqel̄-ən ən̄k̄l̄am at̄l̄əy-ən pen̄rə-waly-ə-γ̄lat.*
 enemy-ABS and father-ABS attack-REC-AOR.3PL
 ‘The enemy and father attacked each other.’

2. Constructions with the monosemous pronoun-like adverb *əryičyu* ‘they-each-other’ or ‘they-mutually’ which is marked for person. When a transitive verb occurs with this adverb it undergoes antipassivization; cf.:

- c. *Eqelł-ən ətləy-etə penrə-tko-γlə.*
 enemy-ABS father-DAT attack-APASS-AOR.3SG
 (same translation as in (1a)).
- d. *Eqelł-ən ənkɪam ətləy-ən penrə-tko-γlat əryičyu.*
 enemy-ABS and father-ABS attack-APASS-AOR.3PL they.mutually
 ‘The enemy and father attacked each other.’

There are also the following peripheral means of rendering reciprocity:

3. Constructions with a polysemous suffix *-čit/-čet* on the predicate; this suffix can express the meanings of competition, reciprocity, and succession (‘one after another’); cf.:

- (2) a. *ənan ətlon wanw-o-nen.*
 s/he.INST s/he.ABS place-take-AOR.3SG:3SG
 ‘He forced him out.’
- b. *ətri wanw-o-čet-γlat.*
 they.ABS place-take-čet-AOR.3PL
 ‘They forced each other out.’

4. *Antipassivization* may result in the reciprocal meaning by default; this is a case of lexically dependent reciprocity; it is a process of low productivity.

- (3) a. *ənan ətlon wejpə-nin.*
 s/he.INST s/he.ABS scratch-AOR.3SG:3SG
 ‘S/he scratched her/him.’
- b. *ətri wejpə-tku-γlət.*
 they.ABS scratch-APASS-AOR.3PL
 ‘They scratched each other.’

5. There are also *lexical reciprocals* used with or without the above listed markers of reciprocity (reading (ii) in (4) is less likely).

- (4) *ətri maraw-ə-rk-ət.*
 they.ABS fight-PRES.PROGR-3PL
 i. ‘They are fighting (with each other)’; ii. ‘They are fighting (with someone else).’

The following example illustrates the use of these devices in an original text:

- (5) *Tejkewə-lł-ət mal-ɪataw penrə-tko-wəly-ə-myo-γlat, naqam*
 wrestle-PART-ABS.PL seems-in.vain attack-APASS-REC-begin-AOR.3PL but
tan-ranɪaw əryičyu nə-twa-qenat ... Waj-əm neme ətri
 quite-equally they.mutually IMPF-be-3PL and-then again they
piri-tku-čit-γlət, ɪaqa-njanrɪaw-ə, kənur ləyen kəltə-wəly-ə-γlat. (OČ. 27)
 grasp-APASS-čit-AOR.3PL impossible-part as.if simply tie-REC-AOR.3PL
 ‘The wrestlers kind of began attacking *each other*, but (in fact) they were standing just facing *each other*... But then they seized *each other* again so that one could not separate them, as if they were tied *together* (lit. ‘as if they had tied *each other*’).’

A peculiarity of the Chukchi reciprocal suffix is its combinability not only with verbs but also with nouns, pronouns and adverbs.

1.3 Database

Most of the examples for this paper have been obtained from original Chukchi texts and also from translations from the Russian by native speakers of Chukchi. Examples without attribution belong to my informants, P.I. Inenlikej and V.G. Raxtilin. Unfortunately, the informants were consulted to a limited degree.

2. Grammatical notes

2.1 Morphophonemics

Chukchi displays a great variety of phonological and morphological processes that can make allomorphs unrecognizable. The most relevant changes are:

1. Numerous assimilations and dissimilations of consonants and also diachronic changes; the verbal root may undergo changes when preceded by other morphemes, cf. *təm-* in (6a) and *-nm-* in (6b–c), also *wut-/wun-/qwot-* ‘to tie sth to sth’ (*wut-ə-rkə-nin* ‘he ties it’ – *wun-nin* ‘he tied it’ – *ya-qwot-ə-twa-len* ‘it was tied’).

2. Vowel harmony; the (so-called “recessive”) vowels /i/, /u/, /e/ change into /e/, /o/ and /a/ respectively, under the influence of the (so-called “dominant”) vowels /e/, /o/ and /a/; cf. *milute-t* ‘hares’ – *ya-melota-ma* (< **γα-milute-ma*) ‘with a hare/hares’; vowel harmony may be historically determined (cf. *akka-γtə* and *ekək* in (6a–b) and (6c) respectively).

3. Insertion processes; the supershort vowel /ə/ (schwa) is inserted to break up some types of clusters, e.g. *n-ily-ə-qin* (< **n-ily-qin*) ‘white’; at morpheme boundaries the epenthetic /ə/ is not glossed in the sentential examples (if it is singled out, which is not always the case since it is irrelevant for our purposes).

4. Deletion processes; most noun stems and some suffixes lose the final vowel in word-final position (below, such vowels are bracketed), e.g. *wapaq* ‘a fly-agaric’, cf. *wapaqa-t* ‘fly-agarics’; in addition, of two adjacent vowels one is usually omitted, cf. *γ-it-lin* (< **γe-it-lin*) ‘he was’. (For details see Bogoras 1922:648–81; Skorik 1961:15–76; Kämpfe & Volodin 1995:15–21.)

It may be noted in passing that derivational processes may involve omission and replacement of suffixes.

2.2 Ergative sentence structure. Word order. Incorporation

The word order is free. The transitive subject is in the instrumental-ergative case (glossed as INST), the meaning of the case form being determined by the lexical meaning of the noun. The intransitive subject and also the direct object are in the absolutive case. The absolutive singular has several markers, including the zero marker and reduplication. The indirect object (see (6a) and (6b)) is marked by the dative-allative case (glossed as DAT). There are many types of incorporation, i.e. inclusion of one word in the structure of an-

other. An incorporated word may undergo morphological changes. Incorporation of a direct object results in intransitivization; cf. (6a) and (6b):

- (6) a. *ətłəy-e [akka-ytə] qora-ŋə təm-nen.*
 father-INST SON-DAT deer-ABS kill-AOR.3SG:3SG
 ‘Father killed a deer [for his son].’
- b. *ətłəy-ən [akka-ytə] qaa-nm-at-yʔe.*
 father-NOM SON-DAT deer-kill-APASS-AOR.3SG:3SG
 (same as (a)).
- c. *ətłəy-e ekək-Ø qaa-nmə-nen.*
 father-INST SON-ABS deer-kill-AOR.3SG:3SG
 (same as (a)), lit. ‘Father deer-killed (his) son.’

The ergative marking of the transitive subject may be absent if a conjoined subject contains the conjunction *əttri* ‘and’ (in fact, it is the absolutive form of the 3PL pronoun *əttri* ‘they’); cf.:

- d. *Rayt-ən əttri Rint-ən qora-ŋə na-nmə-n.*
 R.-ABS they/and R.-ABS deer-ABS 3PL-kill-3SG
 ‘Ragtin and Rintin killed a deer.’ (cf. Nedjalkov 1979b:249)

Chukchi makes wide use of participles and converbs in sentence structure. There are both prepositions and postpositions as well.

2.3 Case system

The Chukchi noun has nine cases. Nouns and pronouns may have different endings for the same case. Thus, for instance, the ergative case endings are *-e* for nouns (see (1a)) and *-nan* for pronouns (see (2a)). The Chukchi noun is usually marked for case, and sometimes for person and number. The absolutive case has several markers in complementary distribution, viz. various suffixes, zero marker or root reduplication. On common nouns, the absolutive case alone is marked for number (the plural suffixes are *-t*, *-tti*, *-nti* in complementary distribution), the other case forms having both a singular and a plural reading. Proper names have some case markers distinct from those of common nouns. Some of the case markers are confixes. Here is the case paradigm of the noun ‘child’ (the case markers have numerous allomorphs, e.g. INST/ERG *-e/-a*, *-te/-ta*; DAT/ALL *-ytə/-etə*; ABL *-jpə/-ypə// -yapə*; Orientative *-yjit/-yjet*; ESS *-u/-o*, *-nu/-no*):

(7)	ABS	<i>nenen-ə</i> (SG), <i>nenene-t</i> (PL)	DAT/ALL	<i>nanana-ytə</i>
	INST/ERG	<i>nenene-te</i>	ABL	<i>nanana-jpə</i>
	COM.1	<i>ye-nenene-te</i>	OR	<i>nenene-yjit</i>
	COM.2	<i>ya-nanana-ma</i>	ESS	<i>nenene-nu</i>
	LOC	<i>nenene-k</i>		

The meaning of the essive case needs some explanation: it names in what property or role the subject or object referent appears in sentences with meanings like ‘In the fog the stone looked like a *jaranga*’, ‘He used the rope as a *belt*’).

(For details see Skorik 1961: 171–2; Kämpfe & Volodin 1995: 80–5).

Note that in sentential examples the absolutive case marker is often not glossed in obvious cases.

2.4 Classes of verbs and agreement

In the *Chukchi-Russian Dictionary* (MI.), there are over 2,000 verb entries. About 1,100 are one- or two-place verbs used as intransitives only (*wʹi-* ‘to die’, *jet-* ‘to come’, *ikwiči-* ‘to drink water’, etc.); about 150 entries are two- and, less commonly, three-place transitives only which are not formed from intransitives by means of the causative suffix (*ʹlu-* ‘to see’, *pəl-* ‘to drink’, *jəl-* ‘to give’, *juu-* ‘to bite’, etc.); about 300 of the entries are labile verbs, i.e. verbs used both transitively and intransitively, with a corresponding change of meaning (e.g., *məle-* i. ‘to break in two’ (vi), ii. ‘to break sth in two’ (vt); *ʹənrit-* i. ‘to be engaged in guarding’ (vi), ii. ‘to guard sth’ (vt); etc.). The remaining 450 verbs are derived transitives with the causative confix (e.g., *rə-wʹi-ŋet-* ‘to ruin, destroy, kill’ ← *wʹi-* ‘to die’, etc.; cf. 2.7.1.1) (for details see Inenlikej & Nedjalkov 1967:246–58).

Intransitive verbs agree with the subject (they have six agreement forms), and transitive verbs agree with the subject and direct object in number and person. The agreement system is highly complicated, it is different for different tense/aspect and mood forms; transitive verbs have as many as 28 agreement forms (in Koryak, they have 42 forms, due to the dual number). Here is a fragment of the agreement paradigm for the verbs *ʹlu-* ‘to see’ and *wiri-* ‘to descend’ in the aorist and imperfect respectively (the translations reflect the meaning of the agreement markers only; the imperfect marker is the prefix *n-*) and the full agreement paradigm in the same tense forms for the intransitive verb *wiri-* ‘to descend’:

(8) a.	<i>ʹlu-nin</i>	‘he ... him’	f.	<i>ne-ʹlu-ʹəm</i>	‘they ... me’
b.	<i>ine-ʹlu-ʹi</i>	‘you.SG ... me’	g.	<i>ʹlu-tkə</i>	‘you.PL ... him/them’
c.	<i>ʹlu-tku-ʹi</i>	‘you.SG ... us’	h.	<i>ine-ʹlu-tək</i>	‘you.PL ... me’
d.	<i>ʹlu-tku-tək</i>	‘you.PL ... us’	i.	<i>ʹlu-ninet</i>	‘he ... them’
e.	<i>ʹlu-ʹen</i>	‘you.SG ... him’	j.	<i>ne-ʹlu-net</i>	‘they ... them’, etc.;
(9) a.	<i>n-ine-ʹlu-qin</i>	‘he ... him’	f.	<i>nə-ʹlu-ʹjəm</i>	‘they ... me’
b.	<i>n-ine-ʹlu-ʹjət</i>	‘you.SG ... me’	g.	<i>n-ine-ʹlu-turi</i>	‘you.PL ... him/them’
c.	<i>nə-ʹlu-tku-ʹjət</i>	‘you.SG ... us’	h.	<i>n-ine-ʹlu-turi</i>	‘you.PL ... me’
d.	<i>nə-ʹlu-tku-turi</i>	‘you.PL ... us’	i.	<i>n-ine-ʹlu-qinet</i>	‘he ... them’
e.	<i>n-ine-ʹlu-ʹjət</i>	‘you.SG ... him’	j.	<i>nə-ʹlu-qinet</i>	‘they ... them’, etc.
(9’) a.	<i>tə-wiri-ʹlɛk</i>	‘I ...’	(9”) g.	<i>nə-wiri-ʹj əm</i>	‘I ...’
b.	<i>wiri-ʹi</i>	‘you .SG ...’	h.	<i>nə-wiri-ʹj ət</i>	‘you.SG ...’
c.	<i>wiri-ʹi</i>	‘s/he ...’	i.	<i>nə-wiri-qin</i>	‘s/he ...’
d.	<i>mət-wiri-mək</i>	‘we ...’	j.	<i>nə-wiri-muri</i>	‘we ...’
e.	<i>wiri-tək</i>	‘you.PL ...’	k.	<i>nə-wiri-turi</i>	‘you.PL ...’
f.	<i>wiri-ʹlɛt</i>	‘they ...’	m.	<i>nə-wiri-qinet</i>	‘they ...’

(For details (also for Section 2.2), see Comrie 1979:219–40, 1980b:61–74, 1985:85–95; Nedjalkov 1979b:241–62).

2.5 Tense/aspect/mood system. Periphrastic verb forms

The verb has three moods, the indicative (no special marker), the imperative (special markers for each of the three persons) and the conditional (marked by the prefix *-ʔ*). After the negation words *qəʀəm* and *čamʔam*, the imperative form alone can be used. Imperfective forms are marked by the suffix *-rk/-rkən/-rkəni*; if a verb contains no other marker, this form has the present progressive meaning. The aorist has no marker of its own and is identified by the agreement markers (cf. (8) and (6)). The future tense marker is the prefix *re-*; the imperfect is marked by the prefix *n-* (cf. (9)) and a special agreement system (on intransitive verbs it entirely coincides with the agreement of predicative adjectives), and it may refer both to the past and to the present. The perfect marker is the prefix *ye-/ya-* in complex with an agreement system partly similar to that of the imperfect. (For details see Nedjalkov 1994: 278–354.)

Basically, all tense/aspect forms may have parallel periphrastic forms comprised of the invariable converbal form in *-e/-a*, *-te/-ta* of the lexical verb and an auxiliary different for transitives and intransitives and marked for tense, mood, and agreement. These forms serve to emphasize the meaning of the verb; cf. *jet-γʔi* ‘he came’ and *jet-e it-γʔi* (same, with emphasis), *təm-nen* ‘he killed him’ and *təm-a rən-nin* (same, with emphasis; cf. (79a)). Some negative forms are also periphrastic, e.g. *luŋ-jet-e it-γʔi* ‘he did not come’ (cf. (61a)).

2.6 Participles, converbs and infinitive

There are two participles in Chukchi, the active participle with the suffix *-ʔl* and the passive participle inflected for person/number and case. The active participle of intransitive verbs is formed by means of the suffix *-ʔl* alone (cf. *rayt-* ‘to return home’ → *raytə-ʔl-ən* ‘returning home (ABS.3SG)’, *raytə-ʔl-eyəm* ‘returning home (ABS.1SG)’), while on transitives it requires simultaneous use of the antipassive marker (cf. *təm-* ‘to kill’ → *ena-nmə-ʔl-ən* ‘(the one who is) killing/(has) killed’, *penr-* ‘to fall on sb’ → *penr-ə-tko-ʔl-ən* ‘(the one who is) attacking/(has) attacked’). The direct object of a transitive verb is transformed into a dative or locative or instrumental object with the active participle (as with antipassives; see 2.7.2.3), unless it is deleted. The passive participle (non-negative) marker is the suffix *-jo* (cf. *təm-jo* ‘(what is) killed, the catch’ (cf. (31))).

The markers of converbs mostly coincide with case markers:

1. On converbs of simultaneity the confix [*γ(a)-*]...*-ma* coincides with the COM.2 marker, and *-γtə/-etə* with the DAT/ALL marker.

2. On converbs of prior action, the suffix *-(ə)k* coincides with the LOC marker and it also serves as an infinitive marker.

3. The marker of converbs of cause and/or manner of action *-jpə/-γəpə/-epə* coincides with the ABL marker, and the second component of [*em-/am-*]... *-e/-a*; *-te/-ta* coincides with the INST/ERG marker; etc. (for more on converbs see Skorik 1977: 139–66).

2.7 Means of valency change

These devices are treated in detail in Nedjalkov (1976: 181–211).

2.7.1 Valency-increasing means

Provisionally, I have included here the cases in which the direction of derivation is not formally marked, but most of them are semantically adjacent to valency increase.

2.7.1.1 Causatives. The causative prefix has two forms, *r-/rə-* in the initial position and *n-/-nə-* if preceded by another morpheme. As a rule, this prefix appears as part of the confix whose second part may be the suffixes *-w/-ew/-aw*, *-t/-et/-at* and *-net/-nat* in complementary distribution. Most commonly, this suffix has a causative meaning though it may render a number of other meanings; in all the cases the base verb is transitivity, while transitive base verbs increase their valency; cf.:

- (10) a. *eret-γ̣i* ‘he/it fell.’ → *r-eren-nin* ‘he dropped it.’
 b. *p̣ʔa-γ̣i* ‘it dried.’ → *rə-p̣ʔa-w-nen* ‘he dried it.’
 c. *ḷu-nin* ‘he saw it/him.’ → *rə-ḷu-ηen (<net)-nin* ‘he showed it to sb.’
 d. *tejkewə-rkən* ‘he is wrestling.’ → *rə-tejkew-et-ə-rk-ənin* ‘he is wrestling with him.’
 (for more on causatives see Inenlikej et al. 1969: 260–9).

2.7.1.2 Change of agreement (labile verbs). Causativization by means of the confix changes subject agreement into subject-object agreement. But change of agreement alone may involve transitivity and a consequent change of meaning (since the direction of derivation is not marked in this case, it may be regarded as a valency decreasing operation as well); cf.:

- (11) a. *atənwat-γ̣i* ‘he hurt himself’ → *atənwən-nen* ‘he hurt him’
 b. *ləwawə-rkən* ‘he cannot + vi’ → *ləwawə-rk-ənən* ‘he cannot + vt.’

2.7.1.3 Secondary transitivity. This provisional term is used here to refer to a three-member derivational chain with the transitive base (a) incorporating a direct object or (b) undergoing antipassivization with the prefix *ine-/ena-* (and thus becoming intransitive in both cases) and then being transitivity by a change of agreement; cf. (6a) → (6b) → (6c) (see Nedjalkov 1979a: 266–8).

2.7.2 Valency-decreasing means

2.7.2.1 Reciprocal. The reciprocal meaning is coded by the suffix *-wəly* which has no other meanings (see Bogoras 1922: 805; Skorik 1977: 216–7; cf. (1b)).

2.7.2.2 Anticausative. There are only a few formations of this kind, anticausative being one of the functions of the polysemous suffixes *-tku/-tko* (see (19d)) and *-t/-et/-at*; e.g.:

- (12) *pela-nen* ‘he left him.’ → *pela-t-γ̣i* ‘he stayed (behind).’

2.7.2.3 Antipassive. This derivational process involves substitution of an absolutive construction for an ergative one, the direct object becoming indirect (dative or locative or instrumental) or being deleted. The antipassive markers are the prefix *ine-/ena-* and the suffix *-tku/-tko*, seldom the suffix *-t/-et/-at* (these suffixes may be combined with incorporation; see (6b)).

- (13) a. *atləy-e ekək penrə-nen.*
 father-INST SON.ABS fall.ON-AOR.3SG+3SG
 ‘Father fell on his son.’
 b. *atləy-ən [akka-γtə] penrə-tko-γtə.*
 father-ABS SON-DAT fall.ON-APASS-AOR.3SG
 (same translation).

(For more on antipassive see Kozinsky et al. 1988:651–706.)

2.7.2.4 Incorporation. See Section 2.2 and example (6b).

2.7.2.5 Resultative. The marker is the suffix *-twa* descended from the verb *wa-/twa-* ‘to be, live, exist’; e.g.:

- (14) *jime-nen* ‘he hung it’ → *jime-twa-γtə* ‘it hang for a while.’

(For more on the resultative see Nedjalkov et al. 1988:153–66.)

2.7.2.6 Passive-perfect. This meaning is expressed by perfect forms of transitive verbs if the latter do not have the subject-agreement marker. This is due to the fact that many perfect forms of transitive verbs often coincide with forms of intransitive perfect. For instance:

- (15) a. *Tətəl γ-eret-lin.* ‘The door fell.’
 b. *Tətəl γ-ejpə-lin.* i. ‘The door is/was closed’; ii. ‘The door is/was closed by sb.’

(For more on passive-perfect see Nedjalkov et al. 1988:162–66).

2.7.3 Verbs of psychological state

In this case alternation of a periphrastic transitive and a suffixed intransitive verb with the same root takes place. A periphrastic verb is comprised of an invariable notional component, as a rule in the essive case, and an auxiliary *ləŋ-/ly-* ‘to consider, take ...’ or *rətč-/tč-* ‘to do’, the latter used with the inceptive meaning. There are over 50 such oppositions in Chukchi. (For details see Inenlikej & Nedjalkov 1973:175–203).

- (16) a. *atləy-e ekək əly-u ləŋ-ə-rk-ənen.*
 father-INST SON.ABS love-ESS AUX-PRES.PROGR-3SG+3SG
 ‘Father loves (his) son.’
 b. *atləy-ən əly-ə-čtat-ərkən.* (suffix *-čtat* is frozen here and carries no meaning)
 ‘Father loves.’

2.8 Expression of reflexivity

This meaning can be inherent in the lexical meaning; cf. *atənw-at-γʔe* ‘he hurt himself’ derived from *atən(w)* ‘wound’ by means of the suffix *-at* (cf. (11a)). Sometimes, this meaning can be rendered by the suffix *-tku/-tko* (see also (19d)). A universal means of expressing reflexivity is the noun *uwik* ‘body’ which may be preceded by the adjective *činit(-kin)* ‘one’s own’ (for all persons), sometimes spelt as *činituwik*.

- (17) *ətʎə-e činitkin uwik əly-u ləŋə-rk-ənən.*
 ‘Father loves himself’, lit. ‘... his own body.’ (cf. (16a))

2.9 Verbal derivation with valency retention (iterativity, intensity, etc.)

In Chukchi, there is a number of suffixes expressing all kinds of iterativity (including frequentativity, multiplicativity, distributivity, etc.), durativity and, more generally, intensity of action. It is sometimes difficult to determine the meaning of these suffixes even in a context. There are no suffixes with the specialized meaning of sociativity. But in certain contexts some of the suffixes listed here may render the meaning ‘many (subject or object referents)’ which is adjacent to the sociative meaning. Some of these suffixes are sensitive to transitivity/intransitivity; thus, for instance, the suffixes *-rʔu/-rʔo*, *-llet/-llet* are used mostly on intransitives; *-j(i)w* is used on transitives only; the suffixes *-tku/-tko* (see 2.10), *-čit/-čet* (for details see Section 5), *-ča* (its only meaning is ‘many (subject referents with intransitives and object referents with transitives)’), etc. are used on both classes of verbs (see Nedjalkov et al. 1997: 310–28). In this paper, these suffixes are not glossed, as a rule. Not infrequently, two or more of these suffixes are used together, mostly for emphasis. Most frequent are combinations with *-tku/-tko* as the first component, e.g. *-tku-jwə*, *-tku-llet*, *-tku-rʔu*, *-tku-čit*, etc.

- (18) a. *ətri wakʔo-rʔo-γʔat.*
 they.ABS sit.down-rʔo-AOR.3PL
 ‘They sat down in great numbers.’ (B. 811)
- b. *ətʎa-ta ekke-t nə-te-pleŋ-ŋe-llet-qinet.*
 mother-INST son-ABS.PL IMPF-make-boot-make-llet-3PL
 ‘The mothers made many boots for (their) sons.’ (B. 806)
- c. *[ənan ətri] təm-ə-tko-nenat.*
 ‘He killed many/all of them.’ (B. 809) (B. 806)
- d. *Taŋ-əməʎo təm-ə-tko-jw-ə-nenat γənnik-γiniw.* (BL. 140)
 quite-all.ABS kill-tko-jw-AOR.3SG+3PL animal-many.ABS
 ‘He killed all the animals in great numbers.’
- e. *Luʔur pəkət-ča-γʔat ʔaqaʎə-mk-iŋ-ən.* (BL. 201)
 suddenly arrive-many-AOR.3PL enemy-many-INTS-ABS.SG
 ‘Suddenly very many enemies arrived.’

2.10 Unique polysemy of the suffix *-tku/-tko*

This suffix deserves special consideration not only due to its specific position in the system of Chukchi grammar and its role in the expression of the reciprocal meaning but also due to its typologically distinctive polyfunctionality. It is used to derive the following:

1. Denominal verbs (see (19a)).
2. Nouns with the meaning ‘few, some (things)’ (a very approximate definition; see (19b)).
3. Antipassive forms (see (13b)), along with the prefix *ine-/ena-*.
4. Active participles from transitive verbs, along with prefix *ine-/ena-* (see 2.6).
5. Agreement forms of transitive verbs with the meanings ‘you.SG ... us’, ‘you.PL ... us’ (see (8c, d), (9c, d)).
6. Iterative forms from both transitive and intransitive verbs (see (19c)).
7. In the process of intransitivization of verbs, it allows a reflexive, or reciprocal, or anticausative, or absolutive reading by default; see (19d). Some of the forms are polysemous and allow two or more readings; cf. *juu-tku-* in (19b) and (19d). Semantic relatedness of some of these functions is obvious, while for some of the functions it is established in diachrony.

- (19) a. *milyer* ‘rifle’ → *milyera-tku-* ‘to shoot’
wəlpə ‘spade’/ *wəlpə-t* ‘spades’ → *wəlpə-tko-* ‘to dig with a spade’
- b. *ilir* ‘island’ → *eler-etə* ‘to the island(s)’ → *elera-tko-γtə* ‘to a group of islands’
wəkwə-lyən ‘stone’ → *wəkwə-t* ‘stones’ → *wəkwə-tko-t* ‘a group of stones’
- c. *juu-nin* ‘he bit him (once)’ → *juu-tku-nin* ‘he bit him (several times)’
winret-γʔi ‘he helped sb (once)’ → *winret-ə-tku-γʔi* ‘he helped sb (several times)’
- d. *tewla-nen* ‘he shook it off’ → *tewla-tko-γʔe* ‘he shook himself’ (REFL)
ommačajpə-nen ‘he hugged him’ → *ommačajpə-tko-γʔat* ‘they hugged each other’
ejpə-nin ‘he closed it’ → *ejpə-tku-γʔi* ‘it (e.g. eyes) closed’ (ACAUS)
juu-nin (cf. (19c)) → *ʔəttʔ-ən nə-jyu-tku-qin* ‘the dog bites’ (ABS).

3. Reciprocals with the suffix *-wəly*

3.1 Subject-oriented constructions

3.1.1 “Canonical” reciprocals

This is the principal type of reciprocals with the suffix in question; there seem to be no non-trivial restrictions on this type. There are practically no reliable examples of “indirect” and “possessive” suffixed reciprocals at my disposal.

3.1.1.1 *Derived from two-place transitives.* The suffix *-wəly* intransitivizes verbs by itself and therefore it makes an antipassive marker redundant, in contrast to constructions with *əryičyu* (see (1c–d)). The suffix *-tku/-tko* which occurs in pre-position to *-wəly* in a number of examples, is mostly iterative in meaning or does not render any percepti-

ble meaning. Another antipassive marker, viz. the monosemous *ine-/ena-*, co-occurs with *-wəly*, too. The following illustrates these cases.

1. Reciprocals contain (a) the suffix *-wəly* alone or (b) *-wəly* with *-tku* in postposition (see (20a) and (20b) respectively) which indicates that the latter is not used in its antipassive function (because, as is mentioned above, *-wəly* intransitivizes verbs). The following forms have occurred in my corpus (the meaning of the base verb is clear from the translation):

- | | | |
|---------|--------------------------|------------------------------|
| (20) a. | <i>čiček-wəly-</i> | ‘to understand each other’ |
| | <i>kəltə-wəly-</i> | ‘to tie, bandage each other’ |
| | <i>lɫu-wəly-</i> | ‘to see/meet each other’ |
| | <i>ommačajpə-wəly-</i> | ‘to embrace each other’ |
| | <i>palomtel-wəly-</i> | ‘to listen to each other’ |
| | <i>penrə-wəly-</i> | ‘to attack each other’ |
| | <i>pənlə-wəly-</i> | ‘to ask each other’ |
| b. | <i>čičew-wəly-ə-tku-</i> | ‘to understand each other’ |
| | <i>ejmit-wəly-ə-tku-</i> | ‘to grasp each other’ |
| | <i>yite-wəly-ə-tku-</i> | ‘to glance at each other’ |
| | <i>lɫu-wəly-ə-tku-</i> | ‘to see/meet each other.’ |

The following examples illustrate the use of both subgroups of reciprocals:

- | | |
|---------|---|
| (21) a. | <i>əməllo... mač-wanewan nə-čiček-wəly-ə-net.</i> (ST. 49) |
| | all.ABS almost-NEG IMP.3-understand-REC-3PL |
| | ‘All [the people] practically did not understand each other.’ |
| b. | <i>ətri rəpet kačɫarawa ommačajpə-wəly-ɣlat.</i> (RO. 98) |
| | they.ABS even joyfully embrace-REC-AOR.3PL |
| | ‘They even embraced each other joyfully.’ |
| c. | <i>Ləyen taŋ-awjetkanka nə-penrə-wəly-ə-qenat.</i> (JN. 21) |
| | simply quite-silently IMPF-attack-REC-3PL |
| | ‘They simply attacked each other, in silence.’ |
| d. | <i>əməllo q-ejmit-wəly-ə-tku-tək!</i> (RO. 60) |
| | all IMP.2-grab-REC-tku-2PL |
| | ‘Everybody, catch hold of each other!’ |

When added to the reciprocal suffix, *-tku/-tko* stresses repetition but it is not obligatory and can be omitted without any significant change in meaning. An illustration of this is (22), where a reciprocal in *-wəly* is used in an iterative context first with *-tku/-tko* and then without it:

- | | |
|------|---|
| (22) | <i>Təyrat ənkɫam Təaju empetle nə-lɫu-wəly-ə-tku-qinet ewene-ma... ɣənniŋəttəl-ət</i> |
| | T. and T. soon IMPF-see-REC-tku-3PL hunt-CONV hunter-ABS.PL |
| | <i>lənyərit nə-lɫu-wəly-ə-qinet ɣel-ə-tkən-ək ʔir-wətyər-ək.</i> (Rə. 30–1) |
| | usually IMPF-see-REC-3PL ice-surface-LOC cross-middle-LOC |
| | ‘Tagrat and Taju often saw each other when hunting... The hunters usually saw each other (= met) on an ice-floe in the strait.’ |

2. Reciprocals contain the suffix *-tku/-tko* in pre-position to *-wəly*. As mentioned above, its meaning is most likely iterative:

- (23) *ʕejɲew-tku-wəly-* ‘to call each other’
ɣite-tku-wəly- ‘to glance at each other’
lewəɫ-tko-wəly- ‘to call each other waving one’s hand’
ommačajpə-tko-wəly- ‘to embrace each other’
piri-tku-wəly- ‘to grasp each other’
rəɾəme-tko-wəly- ‘to replace/stand in for each other’; e.g.:
- (24) a. *Nute-lejwə-lɪ-ət* *ləlepə-tku-wəly-ɣɪet.* (RI. 53)
 earth-wander-PART-ABS.PL look-*tku*-REC-AOR.3PL
 ‘The travellers exchanged glances between themselves.’
 b. ... *kapčacetə n-ʕejɲew-ə-tku-wəly-ə-qinet.* (TN. 14)
 ‘... (birds) were calling to each other with alarm.’
 c. *Muri... mət-lewal-ə-tko-wəly-ə-mək.* (RO. 119)
 ‘We waved to each other.’

The suffix *-wəly* can be used between two derivational suffixes (see (25a)). I have also encountered a case of the suffix *-tku/-tko* used twice, both before and after the reciprocal suffix: it denotes both iterativity and plurality (‘many’) of subject referents (see (25b)).

- (25) a. *ənɲin ɣeta-jwə-wəly-ə-tko-ɣtə* *ətɾi awjetkənkə nə-twa-qenat.* (GP. 72)
 so look-INTS-REC-ITER-CONV they silently IMPF-be-3PL
 ‘They were silent glancing at each other.’
 b. *Qənwer, təm-ə-tko-wəly-ə-tko-ɣɪat.* (TM. 141)
 ‘At least (they) killed each other’ (of many, repeatedly).

3. Reciprocals contain the antipassive prefix *ine-*. Characteristically, in both examples the reciprocals are formed from morphological causatives (*rənyiiw-* ‘to meet with sb’ → *rə-rənyiiw-* ‘to meet sb’; *pirkəl-et-* ‘to choke’ → *rə-pirkəl-ew-* ‘to strangle’).

- (26) a. *ətɾi neme ine-n-rənyiiw-wəly-əɣɪet.* (RO. 38)
 ‘They met again.’ (cf. (28c) with a reciprocal formed from a two-place vi)
 b. *Utt-ət ine-n-pirkəl-ew-wəly-ərkə-t.* (MP. 86)
 ‘The trees strangle one another.’

3.1.1.2 *Derived from two-place intransitives.* In this group the base verbs take an object in the dative or in the comitative case. Two subtypes can be distinguished, with base lexical reciprocals on which the reciprocal suffix may generally be omitted, and with other verbs on which it cannot be omitted.

1. With lexical reciprocals:

- (27) *ittil-wəly-* ‘to bump against each other’
məɲ-ajmet-wəly- ‘to shake hands with each other’
rənyiiw-wəly- ‘to meet each other’
ukwet-wəly- ‘to kiss each other’
wetyak-wəly- ‘to talk with each other.’
- (28) a. *ətɾi məɲ-ajmet-wəly-ə-ɣɪat.* (RO. 99)
 they.ABS hand-press-REC-AOR.3PL
 ‘They shook hands [with each other].’

- b. *Qora-t nə-lejw-ə-qinet, n-ittil-wəly-ə-qinet ... rənn-a.* (ST. 79)
 deer-ABS.PL IMPF-go-3PL IMPF-hit-REC-3PL horn-INST
 ‘The deer went hitting each other with their horns.’
- c. *Wopqə atri qora-ηə ye-rənyiw-wəly-ə-linet.* (JL. 28)
 ‘The elk and the deer met.’

2. With other verbs:

- (29) *iw-wəly-* ‘to exchange words’
ləlep-wəly- ‘to look at each other’
pəkir-wəly- ‘to come to each other(’s place)’
wejmen-ə-č̣et-wəly- ‘to respect each other’
winret-wəly- ‘to help each other’
ʔəlyə-č̣et-wəly- ‘to love each other’; e.g.:
- (30) a. ... *ənəḳit tumy-ət wejmen-ə-č̣et-wəly-e, winret-wəly-e*
 if comrade-PL respect-č̣et-REC-CONV help-REC-CONV

 FUT-live-IPFV-3PL
 ‘... if friends will live respecting each other and helping each other...’
- b. *atri pəkir-wəly-ə-γ̣et jara-k.* (BL. 145)
 they arrive-REC-AOR.3PL house-LOC
 ‘They met at home.’
- c. “... *ənəḳit turi ʔəlyə-č̣et-wəly-e ra-twa-rkəne-tək ...*” (RI. 27)
 if you.ABS.PL love-č̣et-REC-CONV FUT-live-IPFV-2PL
 ‘... if you will live loving each other.’

3.1.2 “Indirect” reciprocals

The following example, with a derivative based on a lexical reciprocal, may give an idea of this type of construction. There seems to be a tendency to avoid a direct object with suffixed reciprocals, at least I have found no examples of this kind. In (31b) the recovered object should be in the instrumental case (this is probably the reason why the suffix *-tku* is used). Another way of avoiding the use of a direct object is its incorporation (cf. (32) where *-wəly* is supplemented by the suffix *-č̣it* which also conveys reciprocity in a number of cases; see Section 5).

- (31) a. *Mət-tejwəη-γ̣en təm-jo.*
 1PL-divide-AOR.3SG kill-PASS.PART
 ‘We divided the catch.’
- b. *Mət-tejwəη-wəly-ə-tku[-mək] [təm-jo-ta].* (ST. 40)
 1PL-divide-REC-*tku*-1PL kill-PASS.PART-INST
 ‘We shared the catch between ourselves.’
- (32) a. *ətləy-e akka-γ̣tə keli-kel təηiw-nin.*
 father-INST son-DAT letter.ABS send-AOR.3SG+3SG
 ‘Father sent a letter to his son.’
- b. [*ətri*] *nə-keli-ηηiw-wəly-ə-č̣it-qinet.* (SČ. 4)
 they.ABS IMPF-letter-send-REC-č̣it-3PL
 ‘They send letters to each other’ (cf. (59)).

3.1.3 “Possessive” reciprocals

Following is the only example at my disposal, with the underlying construction. The example is not quite convincing because *činit-kine-t uwiki-t* ‘ones’ own bodies’ expresses a reflexive meaning (cf. 2.8):

- (33) a. *yəmnan yənin uwik tə-nəmček-wʔen.*
I.INST your body 1SG-break-AOR.3SG
lit. ‘I broke your body from a bad habit.’
- b. *yənan yəmnin uwik rəmček-wʔen.*
you.INST my body break-AOR.2SG:3SG
lit. ‘You broke my body from a bad habit.’
- c. *Weler [moryənan] činit-kine-t uwiki-t mət-ə-nəmček-wəly-ə-net!* (TČ. 12)
at.least we.INST self-POSS-PL body-ABS.PL 1PL-break-REC-AOR-3PL
‘At least we have broken *each other’s* bodies from a bad habit!’

3.2 Object-oriented constructions

There are two types of object-oriented constructions: with causatives from suffixed reciprocals and causatives from lexical reciprocals.

1. *Causatives of suffixed reciprocals.* (36c) is the only example I have found (the first component in *yən-əy-ηeekək* ‘your.sg daughter’ is the locative form *yən-ək* ‘at you (= your place)’ derived from *yət* ‘you.sg.abs’; a locative form may be used as a kind of attribute, with possible alternation *k > y*; cf. also (87)):

- (34) a. *yəmnan yən-əy-ηeekək tə-lʔu-yʔen.*
I.INST you-LOC-daughter.ABS 1SG-see-AOR.3SG
‘I saw your daughter.’
- b. *yəm ənklam yən-əy-ηeekək mət-lʔu-wəly-ə-mək.*
I.ABS and you-LOC.daughter.ABS 1PL-see-REC-AOR.1PL
‘I and your daughter saw each other.’
- c. *Qol ine-nt-ə-yʔi ine-n-lʔu-wəly-et-yʔi yənan*
one 1SG-AUX-AOR.3SG 1SG-CAUS-see-REC-CAUS-AOR.3SG you.INST
yən-əy-ηaakka-ytə. (ŠL. 109)
you-LOC-daughter-DAT
‘Once you brought me and your daughter *together*’, lit. ‘... you made me see *each other* to your daughter.’

2. *Causatives of lexical reciprocals.* In this case the reciprocal suffix may be optional (cf. (35b) and (35c)).

- (35) a. ... *pəlwəntə-tʔol-ə-mk-ən n-eretə-lʔet-qinet ənklam*
iron-piece-many-ABS.SG IMPF-fall-lʔet-3PL and
n-ittil-ə-tku-rʔu-qinet. (GP.28)
IMPF-bump-ITER-rʔu-3PL
‘Many pieces of iron fell to the ground banging against each other.’
- b. *Ejəçyi-te yila-tʔul-ti n-ine-n-ittil-wəly-ə-qinet.* (GP. 88)
wave-ERG ice-piece-ABS.PL IMPF-CAUS-bump-REC-3PL
‘The waves made the ice-floes bang against each other.’

- c. *Ejačyā-te yilā-tūl-ti nā-n-ittil-ew-qinet.* (RO. 90)
 wave-INST ice-piece-ABS.PL IMPF-CAUS-bump-CAUS-3PL
 ‘The waves made the ice-floes bang against each other.’ (reciprocal by default)

3.3 Discontinuous constructions

In simple constructions with suffixed reciprocals, the subject is necessarily plural, at least semantically, i.e. it may be a collective noun in the singular (cf. (47) though it contains the reciprocal adverb and not a suffixed reciprocal). In the discontinuous construction it may be singular, if one of the participants is expressed by an object with a comitative case marker (viz. the confix *γ[e/a]-...-e/-a, -te/-ta*) or by an object in the locative case with the postposition *reen* ‘with’ (unfortunately, it remains unknown whether there are any restrictions on the use of suffixed reciprocals in the discontinuous construction); cf.:

- (36) a. *ətlon ənkʔam enaalʔ-ən neme luur ʔu-wāly-ə-γʔet.*
 he.ABS and neighbour-ABS again suddenly see-REC-AOR.3PL
 ‘He and the neighbour suddenly met again.’
 b. *ətlon neme luur ʔu-wāly-ə-γʔet γ-eneelʔ-e.*
 ‘He suddenly met with the neighbour again.’
 c. *ətlon neme luur ʔu-wāly-ə-γʔet eneelʔ-ək reen.*
 (same as (b)).

3.4 Successive subevents

As in other languages, the meaning of succession or simultaneity of reciprocal subevents is determined by the lexical meaning of the base. Succession of subevents in a reciprocal situation may be indicated by the adverb *emrənyūite* ‘by turns’; cf.:

- (37) *Naqam emrənyūite palomtel-wāly-a n-it-qinet: evər ənnen nā-wetgaw-qen,*
 well by.turns listen-REC-INST IMPF-AUX-3PL when one IMPF-tell-3SG
qol-əm nā-palomtel-qen. (BL. 27)
 other-EMPF IMPF-listen-3SG
 ‘Well, they listened to each other by turns: when one talked the other listened.’

3.5 The suffix *-wāly* in combination with nouns, pronouns and adverbs

The reciprocal forms in question denote spatial proximity or contiguity of two or more entities.

1. Reciprocal nouns

- (38) *ətʀi... ʔəl-ra-čəko wəjanlan-ma n-atčə-qenat, činit uwik-wāly-ək*
 they.ABS snow-house-inside storm-CONV IMPF-hide-3PL self body-REC-LOC
n-omaw-qenat. (RO. 67)
 IMPF-warm-3PL
 ‘During the snow-storm they were hiding in the igloo, warming up with their own (lit. ‘mutual’) bodies.’ (i.e. ‘A warms himself with B’s body and B warms himself with A’s body.’)

2. Reciprocal pronouns

- (39) a. *ətri nə-le-qinat čik-wəlt-e, qəmek ər-ək-wəly-e*
 they IMPF-walk-3PL almost-tight-ADV almost they-LOC-REC-INST
ačyətə. (SM. 55)
 next.to
 ‘They walked very closely packed, they were almost in one row with each other.’
- b. *ənkə ətri čəkeek-wīet ənkʔam ər-ək-wəly-u*
 here they realize-AOR.3PL and they-LOC-REC-ESS
yeta-čet-ə-myo-γīat. (SM. 57)
 look-čet-begin-AOR
 ‘At that moment they came to their senses and began looking round each other.’

3. *Reciprocal adverbs*. In the examples at my disposal the reciprocal suffix is used on a lexical reciprocal; cf.:

- (40) a. *ηirek əryin-et ηelwəlʔ-ət čimče-wəly-e nə-twa-qenat*. (OČ. 88)
 two their-PL herd-NOM.PL near-REC-ADV IMPF-be-3PL
 ‘Their two herds were near each other.’
- b. *ətri čimče-wəly-e nə-twetča-twa-qenat*. (OČ. 90)
 they.ABS near-REC-ADV IMPF-stop-RES-3PL
 ‘They stood near each other.’

3.6 *Nomina actionis*

Suffixed reciprocals can be nominalized like any other verbs, by means of the suffix *-γəry* and the derivatives function as common nouns; cf.:

- (41) a. *ətri lʔu-wəly-ə-γīet*.
 ‘They met.’
- b. *Tintin n-unətm-īew n-ʔatča-qen lʔo-wəly-ə-γəry-ətə*. (RI. 133)
 T. ADV-quiet-ADV IMPF-wait-3SG see-REC-NR-DAT
 ‘Tintin was quietly awaiting the meeting.’

A few more nouns of action have occurred in the texts:

- (42) *lʔo-wəly-ə-tko-γəry-ən* ‘meeting’ (← *lʔu-* ‘to see’)
penrə-wəly-ə-γəry-ən ‘duel’ (← *penrə-* ‘to attack’)
wetyak-wəly-ə-γəry-ən ‘conversation’ (← *wetyaw-* ‘to talk’).
- (43) *ηawʔan-penrə-wəly-ən* (TM. 141)
 woman-attack-REC-place (*-ən/-ənw* is a partial homonym of *-ən* in *ətləg-ən* (6b))
 lit. ‘the place where women attacked each other’ (the name of a mountain).

3.7 Lexicalization

So far, we have found only one instance of lexicalization of a reciprocal verb, which may be evidence of the recent origin of the suffix *-wəly*. Both lexicalized meanings are predictable: they have parallels in other languages of the area. This verb retains its standard reciprocal meaning as well:

- (44) *lʉu-* ‘to see, find’ → *lʉu-wəly-* i. ‘to see each other’ (standard meaning)
 ii. ‘to meet’ (slight lexicalization)
 iii. ‘to fight (in order to measure swords with sb)’ (MI. 75).

4. Reciprocal constructions with the pronominal adverb *əryičyu* ‘they mutually’

4.1 Introduction

The semantic distinctions between suffixed reciprocals and those with the adverb *əryičyu* ‘they mutually’ are hard to formulate. Both of these reciprocal markers are used on the same verbs and they can also be used together pleonastically. Due to its adverbial status, the adverb cannot occupy the direct object position (thus it differs from the English pronoun *each other* which is employed as its translation equivalent). Therefore, when used with this adverb two-place transitive verbs necessarily undergo antipassivization. So far, I have encountered only subject-oriented “canonical” and “indirect” constructions with this adverb. In “canonical” constructions, it refers to the intransitive subject in the absolutive case, and in “indirect” constructions to the transitive subject unless a direct object is incorporated. As well as the suffix, this adverb does not render the sociative meaning. It has three personal forms:

- (45) *muryi-čyu* ‘we mutually’ (cf. (64))
turyi-čyu ‘you mutually’ (cf. (46) where it is replaced by the 3rd p. form))
əryi-čyu ‘they mutually’.

The 1st and 2nd person forms are very rare, and there seems to be a tendency to use the 3rd person form instead of them (some of our informants did not understand the 1st and 2nd person forms, and some did not understand even the 3rd person form). Here is an example of such usage:

- (46) “*Toryə-nan yemo, mikə-ne ipe əryičyu* [instead of *turyičyu*]
 you-INST not.know who-LOC really mutually you.mutually
nə-nju-tku-turi, ʎorawetlʉa-t qora-k qača ewətləm qaa-t
 IMPF-pasture-APASS-2PL man-ABS.PL deer-LOC near or deer-ABS.PL
ʎorawetlʉa-k qača?” (Rə. 184)
 man-LOC near

‘Do you really not know where (lit. ‘by whom’) you pasture each other, people next to the deer or the deer next to the people?’ (the situation: a jocular question to the Chukchis who follow the herds of semi-domestic reindeer).

The reciprocal adverb may take any position in the sentence structure, even between the notional part of a periphrastic predicate and the auxiliary; cf.:

- (47) *Remk-ən taŋ-am-maraw-a əryičyu re-nʉel-ə.* (TN.7)
 people-ABS.SG very-only-fight-ADV mutually FUT-become-3SG
 ‘The people will begin fighting with each other.’

4.2 “Canonical” constructions

4.2.1 *With two-place transitives*

There are constructions with two types of antipassives. In most of the examples at my disposal, antipassives are formed by means of the suffix *-tku/-tko*, and in one instance by the prefix *ine-/ena-* (these markers are generally absent on intransitives).

1. Reciprocal constructions with antipassives in *-tku/-tko*.

- (48) a. *Ajwanal̄-a ətri nə-γite-qinet.*
Eskimo-INST they.ABS IMPF-look-3PL
‘The Eskimos looked at them.’
- b. *Ajwanal̄-ət payçen-etə nə-γite-tku-qinet əryičyu.* (Rə. 118)
Eskimo-ABS.PL CURIOUS-ADV IMPF-look-APASS-3PL mutually
‘The Eskimos looked with curiosity at each other.’

Here is a list of reciprocals of this type that I have collected:

- (49) *əryičyu ejpə-tku-* ‘to cover each other’
əryičyu yite-tku- ‘to look at each other’
əryičyu ləyi ləηə-tku- ‘to know each other’
əryičyu ommačajpə-tko- ‘to embrace each other’
əryičyu pəηəlo-tko- ‘to ask each other’
əryičyu ru-tku- ‘to devour each other’
əryičyu rəəme-tko- ‘to relieve each other’
əryičyu upə-tku- ‘to push each other’; cf.:
- (50) a. *ʔətt̄l-ət əryičyu nə-nu-tku-qinet.* (Rə. 212)
‘The dogs devoured each other.’
- b. *γənrəretə-l̄-ət nə-nrəme-tko-qenat əryičyu.* (Rə. 43)
‘The watchers relieve each other.’
- c. *əryičyu naqam telenjep ten-ləyi ye-t̄ç-ə-tku-linet.* (KK. 6)
mutually but long.ago very-know PERF-AUX-APASS-3PL
‘But they have known each other very well for a long time.’

2. Reciprocal constructions with antipassives in *ine-/ena-*. Following is the only example of this type at my disposal. Characteristically, as in the cases with *-wəly* (see (26)), this reciprocal is derived from a morphological causative:

- (51) a. *Təjkewə-l̄-e ətlon rə-ŋəl-ew-nin.*
wrestle-PART-INST he.ABS CAUS-ache-CAUS-AOR.3SG:3SG
‘The wrestler caused him pain.’
- b. *Təjkewə-l̄-ət čama qəram əryičyu*
wrestle-PART-ABS.PL besides NEG they.mutually
ine-n-ŋəl-ew-ə-l̄-ə-lqəl-ti. (OČ. 27)
APASS-CAUS-ache-CAUS-PART-MUST-ABS.PL
‘Besides, the wrestlers should not cause pain to each other.’

4.2.2 With two-place intransitives

In these cases the antipassive marker is usually redundant, though possible in one of its other functions, e.g. in the iterative function. This case also covers reciprocals from labile verbs (see 2.7.1.2).

1. Examples with lexical reciprocals. Here belong the following verbs:

- (52) *əryičy enaylat-* 'to be alike'
əryičy janrʔat- 'to part from each other'
əryičy maraw- 'to fight, quarrel'
əryičy rʔečumket- 'to get entwined'
əryičy wetyaw- 'to talk with each other'; cf.:
- (53) a. *ətrʔeč quneče ətləy-ən ənklam ekək əryičy ɣa-janrʔat-lenat.* (TN. 46)
 true once father and son mutually PERF-part-3PL
 'And only once did the father and son part from each other.'
- b. *ətri qarəmena-t marawə-l-ə-lqəl-te əryičy.* (RO. 7)
 they NEG-PL fight-PART-must-PL mutually
 'They must not fight with each other.'
- c. *əttʔ-ət əryičy nə-rʔečumket-qinet, nə-kʔola-qenat.* (ST. 50)
 'The dogs were entangled [in their harness], whined.'

2. With other verbs, such as the following (*teyinŋet-* 'to kill a person' is intransitive!):

- (54) *əryičy čičə-llet* 'to understand each other'
əryičy ejmew- 'to approach each other'
əryičy ʔeqeliŋet- 'to be afraid of each other'
əryičy ɣənrəret- 'to guard each other'
əryičy ləlep- 'to glance at each other'
əryičy teyinŋet- 'to kill each other'
əryičy teŋəčʔet- 'to love each other'; cf.:
- (55) ... *naqam nə-čičə-llet-qinet əryičy, ləyen qonpə əryičy*
 but IMPF-guess-llet-3PL mutually simply always mutually
nə-ɣənrəret-qinet. (RO. 33)
 IMPF-keep.guard-3PL
 '(they did not speak to each other)... but (they) guessed mutually and simply guarded each other.'
- (56) *ətri əryičy ləy-ejmek-wʔet.* (RI. 107)
 they mutually very-approach-AOR.3PL
 'They approached each other.'

4.3 "Indirect" constructions

Two cases can be distinguished here. In both cases the antipassive marker is generally absent (see, however, (59), where *-tku* can also be interpreted as iterative), because the reciprocal adverb substitutes for a non-direct object.

1. The direct object is retained and an indirect object is replaced by the reciprocal adverb, the ergative construction being preserved:

- (57) a. *atləy-e akka-γtə nena-twə-qen marak-wəry-ən.*
 father-INST son-DAT IMPF-tell-3SG war-NR-ABS.SG
 ‘Father told his son about the war.’
- b. *atləy-e ənkʌm ekke-te əryičyu nə-twə-qen*
 father-INST and son-ERG mutually PERF-tell-3SG(OBJ)
marak-wəry-ən. (TN. 62)
 war-NR-ABS.SG
 ‘Father and son told each other about the war.’
- (58) a. *əryə-nan əryičyu keli-t ne-n-lu-ηet-ə-net.*
 they-INST mutually book-ABS.PL 3PL-CAUS-see-CAUS-3PL
 ‘They show books to each other.’
- b. *əryə-nan əryičyu ne-jəl-ə-rkə-net qaa-t.*
 ‘They give deer to each other.’

2. In this case antipassivization can be achieved by incorporation, the ergative structure being replaced by nominative:

- (59) a. see (32)
- b. *ətri γe-keli-nηiw-ə-tku-linet əryičyu.*
 they.ABS PERF-letter-send-APASS-3PL mutually
 ‘They sent letters to each other.’

4.4 Pleonastic use of *əryičyu* with suffixed reciprocals

Pleonastic use of the reciprocal adverb is not determined by the lexical meaning of the base.

- (60) a. *ətri nə-mηəlo-wəly-ə-qenat əryičyu.* lit. ‘They asked each other mutually.’
 b. *ətri əryičyu n-ukwet-wəly-ə-qinet.* lit. ‘They kissed each other mutually.’
 c. *ətri lələpə-tku-wəly-ə-γʷet əryičyu.* (RI.107) lit. ‘They exchanged glances mutually.’
 d. *Tʷerʷew mət-lu-wəly-ə əryičyu.* (Rə.277) ‘We met several times.’
- (61) a. ... *ətrʷeč-əm činit əryičyu lun-čičew-wəly-e*
 but-INTS themselves mutually NEG-understand-REC-CONV
n-it-qinet. (MN. 4)
 IMPF-AUX-3PL
 ‘... but they themselves did not understand each other.’
- b. *əryičyu ətri nə-teη-čičew-qinet.* (MN. 4)
 mutually they.ABS IMPF-well-understand-3PL
 ‘They understood each other very well.’

4.5 The adverb *əryičyu* in combination with nouns and adverbs

I have examples of its occurrence with nouns and adverbs – two-place lexical reciprocals only (cf. ‘A is the enemy of B’, ‘A is not far from B’). Note that in Section 3.5 adverbs with the suffix *-wəly* are also represented by lexical reciprocals, and they are also spatial in meaning.

1. *With nouns*; e.g.:

- (62) ... *tite emnuηə-l̄-ət əryičyu ʔeɣel?-u nə-nʔel-qinet.* (RI. 33)
 when tundra-PART-PL mutually enemy-ESS IMPF-become-3PL
 ‘...when the tundra Chukchis become enemies to each other.’

2. *With adverbs*; e.g.:

- (63) *ətri nə-twetča-twa-qenat əryičyu mač-əjaa.* (BL. 50)
 they IMPF-stand.up-RES-3PL mutually not.quite-far
 ‘They stood not quite far from each other.’

4.6 *Nomina actionis*

Deverbal nouns are formed by means of the suffix *-γəry*. It is usually preceded by the antipassive *-tku/-tko*; e.g.:

- (64) a. *Muri muryičyu mat-ə-n-rənyiiwə-tku-mək.*
 we we.mutually 1PL-CAUS-meet-APASS-AOR.1PL
 ‘We met each other.’
 b. *ətləy-e ketʔo-ηηo-nen muryičyu*
 father-INST remember-begin-AOR.3SG:3SG we.mutually
rə-rənyewə-tko-γəry-ən. (ST. 31)
 CAUS-meet-APASS-NR-ABS.SG
 ‘Father began to recollect our meeting’, lit. ‘... meeting mutually.’

5. *Reciprocals with the suffix -čit/-čət*5.1 *Introductory*

This suffix is peripheral in expressing reciprocity but it is of typological interest because it is polysemous (unlike the above two means, namely the suffix *-wəly* and the adverb *əryičyu*) and concerns certain semantic domains of reciprocity. Its reciprocal meaning is context-dependent and it is of low productivity. Its other meanings, more or less closely related to the reciprocal, are:

- competitive (including playing and struggling),
- iterative (including successivity),
- intensive.

Sometimes, it has a pejorative connotation, i.e. a negative evaluation of the action. Not infrequently, one or the other meaning is difficult to identify even in a context. On a number of verbs, it is lexicalized; some verbs are not used without this suffix. It does not possess an intransitivizing function; therefore, when used reciprocally on transitives, it co-occurs with the antipassive marker *-tku/-tko*. I have not found any occurrence of the suffix *-wəly* after the suffix *-čit/-čət*, while the reverse sequence occurs sometimes (see (32b) and (74b)). Below, we shall briefly consider all the main meanings of this

suffix, as a background for the reciprocal meaning in order to show what meanings are contiguous to it.

5.2 Reciprocal meaning

The verbs in *-čit/-čet* with this meaning are of the “canonical” and “indirect” types only, with no “possessive” type. All of them are subject-oriented; it is likely that object-oriented constructions can be derived from them but we have not found any instances.

5.2.1 “Canonical” reciprocals

5.2.1.1 *Derived from two-place transitives.* As well as in the cases with *arjičyu*, in the examples we have encountered the suffix *-čit/-čet* requires prior antipassivization, viz. the use of *-tku/-tko*. The examples at my disposal describe struggling, competing, ousting. This type also includes verbs used transitively only (i.e. labile verbs do not belong here), i.e. verbs on which the suffix *-tku/-tko* is added, most likely, together with the suffix *-čit/-čet* (cf. the use of *-tku/-tko* on transitives in combination with *arjičyu*; see 4.2.1) while verbs which are regular enough with *-tku/-tko* and are therefore labile, are included in the type considered in 5.2.1.2. The reciprocals in (65) are derived from the transitives *rätel-nen* ‘he pressed him down’ and *ʔelemqute-nen* ‘he pushed him’.

- (65) a. *ʔorawetʔa-t ... rätelä-tko-čet-ä-rkä-t.* (GP. 107)
 ‘People jostle each other (while there is so much room on earth).’
 b. ... *ämälʔo ... təneret-ti ... ʔelemqute-tku-čit-γʔet.* (MP. 85)
 all plant-ABS.PL OUST-APASS-čit-AOR.3PL
 ‘... all the plants ousted each other.’

5.2.1.2 *Derived from two-place intransitives.* Some of the underlying verbs are underived labile (transitive/intransitive) verbs (see 2.7.1.2). Therefore, contrary to the verbs in 5.2.1.1, they do not require antipassivization, though they may occur with the suffix *-tku/-tko* due to a kind of “antipassive inertia” (this concerns the verb *ukwet-* i. ‘to kiss sb’, ii. ‘to kiss each other’). About half of the underlying verbs are lexical reciprocals. They fall into the following lexical groups: (a) verbs of hostile actions, (b) verbs denoting communication; (c) denominal verbs with the suffix *-u/-o* with a broad meaning of obtaining or consuming (‘to get, kill, obtain, eat, etc.’). The suffix *-čit/-čet* is particularly frequent on some of all these verbs. Group (c) contains derived labile verbs with the suffix *-tku/-tko* (see 2.10) which are semantically close to the verbs of groups (a) and (b). The meaning of the underlying verbs is clear from that of the derivatives, excepting those which have no underlying verbs.

- (66) a. *ʔeqe-čit-* ‘to quarrel’ (*ʔeqe-* is a bound stem, cf. *ʔeqe-tku-* ‘to abuse each other’)
ʔetjiv-čit- ‘to berate each other, quarrel’
lewlew-čet- ‘to jeer at each other’
maraw-čet- ‘to squabble, fight with each other’
mənep-čit- ‘to jeer at each other’ (cf. *mənep-et-* ‘same’; MI. 80)
rənpä-čet- ‘to quarrel’ (*ʔrənpä-*) (MI. 119)

‘Let them take the place away from each other.’
- h. ... *ukwet-ə-tku-čit-ə-rkə-t ηewəsqet-ti.* (ŠL. 16)
‘... the women kissed each other.’

Some of the verbs listed above render the reciprocal meaning only when both (or all) the participants are named (in a simple or discontinuous construction; cf. (83)). Derivatives from lexical reciprocals, as well as their base verbs, often occur with a singular subject and thus describe a situation with one participant only, with or without an implication of co-participant (in this respect they differ from reciprocals in *-wəly* and *əryičy* which always require expression of both participants); cf.:

- (68) a. *ətri wetyaw-[čēt]-ə-rk-ət.*
‘They are talking’ (most likely, with each other).
- b. *ətlon wetyaw-[čēt]-ə-rkən.*
‘He is talking’ (only one participant, though co-participants are possible).

A textual example:

- (69) *Maraw-čēt-ə-ηηo-γīe neme reqokalyəqaj.* (BL. 92)
 ‘The polar fox began cursing again.’

5.2.2 “Indirect” reciprocals

These reciprocals are derived from three-place verbs with the lexical meaning of taking sth away from sb. Therefore they imply struggling, resistance. Two cases can be distinguished here. Two synonymous verbs are considered here with a reversed marking of the object arguments (cf. *itke-* ‘to snatch sth (ABS) from sb (ABL)’, *enewna-* ‘to take sth (INST) away from sb (ABS)’).

1. In the first case, the underlying direct object and ergative construction are retained, an indirect human object undergoing deletion.

- (70) a. *ənan ənəka-jpə avtomat n-in-itke-qin.* (-in- < -ine-)
 he.INST he-ABL machine.gun.ABS IMPF-snatch-3SG
 ‘He snatched the machine gun from him.’
 → b. *əryə-nan n-itke-čīt-qin avtomat, ləlep-wəly-ə-čīt-e.* (SM. 15)
 they-INST IMPF-snatch-čīt-3SG machine.gun.ABS look-REC-čīt-CONV
 ‘They tried to snatch the machine-gun from each other, looking at each other.’
- (71) *ʔatt?-e nelyə-tūl n-itke-čīt-qin.* (ST. 33)
 dog-INST skin-piece IMPF-snatch-čīt-3SG (OBJ)
 ‘The dogs tried to snatch a piece of deer-skin from each other.’

2. In the second case, antipassivization results in direct object demotion, which entails substitution of the nominative construction for ergative. As in the first case, demotion concerns a human object from whom sth is taken away. The indirect object of the same verb may be in the instrumental (see (72)) or locative case (see (73b)) or it may be omitted (see (73a)).

- (72) a. *ənan ətlon qaa-ta enewna-nen.*
 he.INST he-ABS deer-INST take.away-AOR.3SG:3SG
 ‘He took the deer away from him.’
 b. *ətri enewna-tko-čēt-γīat qaa-ta.*
 they.ABS take.away-APASS-čīt-AOR.3PL deer-INST
 ‘They took the deer away from each other.’
- (73) a. *əməlʔo jīajaq-ət n-enewna-tko-čīt-qenat.* (Rə. 247)
 ‘All the sea gulls snatch (sth) from each other.’
 b. *ətri qepl-ək enewna-tko-čēt-a n-it-qinet.* (OČ. 97)
 they.ABS ball-LOC snatch-APASS-čīt-INST IMPF-AUX-3PL
 ‘They tried to snatch the ball from each other.’

5.3 Pleonastic use of -čīt/-čēt

There are cases of the suffix *-čīt/-čēt* co-occurring with *-wəly* or *əryičy* on the same verb.

- (74) a. ... *naqam ləye-kač̣aretə əryič̣y nə-tlep-č̣it-qinet*. (RI. 14)
 but very-joyfully mutually IMPF-look-č̣it-3PL
 ‘... but they looked at each other with joy.’
 b. ... *ləlep-waly-ə-č̣it-e*. (SM. 15) (cf. (70b))
 look-REC-č̣it-CONV
 ‘... looking at each other.’ (cf. also (32b))

5.4 Verbs of competition. Derivatives from nouns and adjectives

I will consider here all the verbs with the lexical meanings of competition and playing, including those which have no base verbs (see (75b)). The meaning of competition is lexically dependent and these verbs comprise a closed set, most of them being lexicalized reciprocals. In (75a) all the derivatives are formed from verbs, some of them synonymous to the derivatives. In (75b) derivations from adjectives are listed (there are other verbal derivatives from these adjectives, too; e.g. *erme-w-* ‘to become strong’; *γatte-w-* ‘to become sly’). (75c) which contains three denominal verbs points to the productivity of the suffix *-č̣it/-č̣et* in the meaning of playing what is expressed by the base nominal stem (incidentally, none of these denominal verbs is registered in the dictionaries).

- (75) a. *yala-č̣et-* ‘compete in driving deer- (dog)-sledges’ (MI. 30) ← *yala-* ‘to overtake’
yala-tko-č̣et- (same as *yala-č̣et-*) (MI. 30) ← *yala-[tko-]* ‘to overtake’
ʔiret-č̣it- i. (same as *yala-č̣et-*), ii. ‘to run fast’ ← *ʔire-* (same)
piŋku-č̣it- i. ‘to jump repeatedly’, ii. ‘to compete in jumping’ ← *piŋku-* ‘to jump’
tiŋu-č̣it- ‘to compete in pulling a rope’ (MI. 131) ← *tiŋu-* (vt) ‘to pull’
up-č̣it- ‘to compete in weight-lifting’ (MI. 140) ← *up-* (vt) ‘to push’;
 b. *erme-č̣it-* ‘to compete in strength’ (cf. *n-erme-qin* ‘he [is] strong’)
erme-yite-tku-č̣it- (same as *erme-č̣it-*); *yite-* ‘to see’
γatte-č̣it- ‘to outwit each other’ (MI. 36) (cf. *nə-γatte-qin* ‘he [is] sly’)
mətlo-č̣et- ‘to be in training (for competitions)’ (cf. *mətlo-l̄-ən* ‘agile’)
qr̄a-č̣et- ‘to compete’ (cf. *qraq-at-* (same); MI. 66);
 c. *atč̣ə-č̣et-* ‘to play hide and seek’ (MI. 15) (cf. *atč̣ə-* ‘to hide’)
ʔelul̄-ə-č̣it- ‘to lasso a doll imitating saving sth/sb’ (cf. *ʔelul̄ə* ‘doll’)
kelle-č̣it- ‘to play devils’ (cf. *kələ* ‘devil’)
maraw-ə-l̄-ə-č̣et- ‘to play soldiers, war’ (cf. *maraw-ə-l̄-ən* ‘fighter’); cf.:
- (76) a. *ətri n-ʔiret-č̣it-qinet, nə-yala-č̣ettko-qenat*. (KK. 89) (*-č̣ettko* < *-č̣et-tko*)
 ‘They (dog-sledges) rushed forward competing, leaving each other behind.’
 b. *Pətqə-taŋ-əŋ-əm č̣imyʔu-te erme-č̣it-ək*. (ŠL. 80)
 even-well-CMPR-EMPH wit-INST strong-č̣it-INF
 ‘It is even better to compete in wit.’
 c. ... *tite qlawəl-te ətr̄eč̣ erme-yite-tku-č̣it-e ənkə n-it-qinet*. (RI. 84)
 when man-ABS.PL only strong-look-tku-č̣it-CONV then IMPF-AUX-3PL
 ‘... when the men were busy only competing in strength.’
 d. *ətri jep ŋinqej-u wa-ma nə-myo-qenat mətlo-č̣et-ək rač̣wəŋəllat-ək*.
 they yet child-ESS be-CONV IMPF-begin-3PL train-č̣it-INF race-INF
 ‘Even as they were children they started training and competing in racing.’ (OČ. 15)

- e. “*Kitaqun-am mən-γatte-čün-mək, eryatak neme qə-jet-γi.* (TČ. 38)
 hey-EMPH IMP.1PL-sly-čit-1PL tomorrow again IMP.2-come-2SG
 ‘Hey, let us try to outwit each other, come again tomorrow.’
- f. ... *ewər ənkə ətri owečwan-ma maraw-ə-l-ə-čət-ə-ηo-γlat*
 at.once they play-CONV fight-PART-čit-begin-AOR.3PL
kino-mel. (Rə. 331)
 film-as
 ‘... at once while playing they began playing war, as in films.’
- g. “*Mən-kelle-čün-mək. γəm kel?e-nu m-it-γlek.*” (JN. 18)
 IMP.1PL-devil-čit-1PL I.ABS devil-ESS IMP.1SG-AUX-1SG
 ‘Let us play devils. I shall be the devil.’

The use of a derivative from the verb with the meaning ‘to look’ in (76c) for the expression of the competitive meaning is not accidental here. Typologically similar usage occurs in other languages as well (see (109) in Nedjalkov et al., Ch. 29 on Buryat and Khalkha-Mongol and (129) in Kuular, Ch. 27 on Tuvan, also Ch. 42 on Ainu).

5.5 Intensive meaning

This meaning is not clearcut and it is often related to competition with an implication of overcoming some difficulties or resistance, sometimes a chaotic reckless action. Most of the examples are from colloquial speech.

- (77) a. “... *remkən moo-rkən qor-o-čət-ək.*” (BL. 209)
 people begin-PRES.PROGR.3SG deer-get-čit-INF
 ‘... the people are on the point of taking their deer from the (common) herd.’

- f. ... *rəpet ətri γətγəjoča nə-ta-tko-čət-qenat.* (JL. 23)
 even they forward IMPF-pass.by-tko-čit-3PL
 ‘... even they passed forward (as if jostling each other).’

5.6 Unclear cases with the suffix *-čit/-čət*

To complete the picture, it may be useful to mention verbs on which the meaning of this suffix is not clear. The context of returning to the initial state, i.e. a kind of sinu-

soidal change, can be observed here: strong (people) > dying out > strong (people); strong (wind) > calming down > strong again. The last two examples under (78) seem to indicate a connection with the dispersive meaning ‘in many places’.

- (78) a. “... *rəpet əmə wʹi-tku-čit-ə-lʹ-ət warat-te arma-warat-o*
 even also die-ITER-čit-PART-ABS.PL people.ABS.PL strong-people-ESS

- d. *əryine-t wankət-te ... γa-čyat-čət-lenat.* (Rə. 116)
 their-PL fang-ABS.PL PERF-crack-čit-3PL
 ‘Their (old walruses’) fangs are covered with cracks.’

6. Reciprocals with the suffix *-tku/-tko*

As was mentioned in 2.10, this is the most polysemous suffix in Chukchi. In case of antipassivization, it intransitivizes transitive verbs. As mentioned above (see 4.2.1), the use of *əryičy* with transitives requires their antipassivization. In the case of antipassivization proper, the meaning of the verb does not change, what changes is its case frame (see 2.7.2.3). Sometimes, however, intransitivization involves a change of meaning (it entails changes in a variety of ways also registered in other languages (cf. (19d)), sometimes expressing the reciprocal meaning by default.

- (79) a. *Otčoj-kena-more lun-lʹu-tku-te mət-in-mək.* (MP. 101)
 long.time-POSS-we NEG-see-APASS-CONV 1PL-AUX-AOR.1PL
 ‘We haven’t seen each other for a long time.’
- b. *Ten-tumγ-ət ommačəjpə-tko-γʹat.* (ČG. 49)
 bosom.friend-ABS.PL embrace-APASS-AOR.3PL
 ‘The bosom friends embraced each other.’
- c. *ətri wejpə-tku-rk-ət.*
 they.ABS scratch-APASS-PRES.PROGR-3PL
 ‘They are scratching each other.’

Some of the lexical reciprocals (which can express reciprocity in the simple construction without additional marking) acquire *-tku* without any change of meaning, under a kind

of momentum or for highlighting reciprocity (cf. the analogous use of the suffix *-wəly* and the adverb *əryičy* in (27b), (21d) and (60), (61a) respectively).

- (80) a. ... *ətri qlawəl-mel ukwet-ə-tku-γʔet*. (SM. 89)
 ‘They kissed each other as men do.’ (situation: ‘they kissed once only.’)
 b. *ətləy-ən ənkʔam ekək nə-məŋ-ajmet-ə-tko-qenat*. (Rə. 118)
 father-ABS and son IMPF-hand-press-*tko*-3PL
 ‘Father and son shake hands.’

7. Lexical reciprocals

Above, many lexical reciprocals are considered along with other reciprocals. In this section, they will be listed with brief comments.

1. *Lists of lexical reciprocals.* They are grouped according to the word-classes: (a) verbs, (b) actional nouns (not derived from verbs; from some of these nouns, verbs can be derived), (c) personal nouns, (d) adverbs. Lexical reciprocals seem to be especially frequent with the reciprocal markers (this is probably due to the “mutual attraction” of implicit lexical and explicit reciprocity; on the other hand, this may be due to their greater frequency). The numbers in brackets refer to the examples and lists where these bases and their derivatives are mentioned.

- (81) a. *enaylat-* ‘to resemble’ (52)
ʔetjiw- ‘to bicker, argue’ (82)
ittil- ‘to bump, collide’ (28b), (35)
janrʔat- ‘to part’ (53a)
maraw- ‘to fight, quarrel’ (4), (53b), (66a)
məŋ-ajmet- ‘to shake hands’ (28a), (80b)
rʔečumket- ‘to get entwined’ (53c)
rənyiiw- ‘to meet’ (vi) (28c), (64a)
tejkew- ‘to wrestle’ (66a)
tumy-ə-lʔet- ‘to be friends’ (82), (85b)
ukwet- i. ‘to kiss’(vt), ii. ‘to kiss’(vi) (27), (60b), (66b), (67h), (80a), (84)
uwičwet- ‘to play’
wetyaw- ‘to talk’ (27), (42), (52), (67d), (68), (82), (83);
 b. *ʔetjiw* ‘argument, debate’
maraw ‘a fight, quarrel, war’
wetyaw ‘conversation’
 c. *enaalʔ-ən* ‘neighbour’
ʔekelʔ-in ‘enemy’ (62)
tumyə-tum ‘comrade’ (85c, d)
 d. *ačyətə* ‘side by side, next to’ (39a)
čəmče ‘nearby, close by’ (40)
ranʔaw ‘equally’ (5)
əjaa ‘far away’ (63).

As well as in other cases, incorporation of reciprocal verbs is possible here:

- (82) ... *qol n-it-qinet nə-tomy-ə-lʔat-wetyaw-qenat, qol n-it-qinet*
 another IMPF-AUX-3PL IMPF-comrade-lʔat-talk-3PL another IMPF-AUX-3PL
n-ʔetjiw-qinet. (ST. 251)
 IMPF-quarrel-3PL (*qol it-* ‘once’ is a verb)
 ‘Sometimes they talked like friends, sometimes they quarrelled.’

2. *Discontinuous constructions*. The verbs listed in (81a) are two-place intransitives; some of them are labile. The object of these verbs varies in case form; e.g., *enaylat-* takes a dative object, *ittil-* a locative object, *janrʔat-* an ablative object, etc. Of special interest is the group of verbs with an absolutive object which require the causative confix (applicative use; the overall meaning of the verb undergoes a slight change; this concerns *maraw-*, *tejkew-*, *uwičwet-*, *wetyaw-*); e.g.:

- (83) a. *ətləy-ən ənkʔam ekək wetyaw-ə-rk-ət*. (cf. (68a))
 ‘Father and son are talking.’ (most likely, with each other)
 b. *ətləy-ən ɣ-ekke-te wetyaw-ə-rk-ət*.
 father-ABS COM-SON-COM talk-PRES.PROGR-3PL
 ‘Father is talking with his son.’ (other co-participants are possible though unlikely)
 c. *ətləy-ən ekk-ək reen wetyaw-ə-rkən*.
 father-ABS SON-LOC with talk-PRES.PROGR.3SG
 ‘Father is talking with [his] son.’ (other co-participants are ruled out)
 d. *ətləy-e ekək rə-wetyaw-at-ə-rk-ənen*.
 father-INST SON-ABS CAUS-talk-CAUS-PRES.PROGR-3SG+3SG
 ‘Father is talking to his son.’ (the son may be answering); cf. 3.3.

3. *Synonymy*. So far, different derivatives from the same base verbs have been considered. There occur various combinations of reciprocal markers on the same verb. Particularly numerous are derivatives from lexical reciprocals. The following examples illustrating this may differ in subtle nuances but they are very hard to formulate:

- (84) a. *ənan ukwen-nin ətlon*. (RT. 110) ‘He kissed her.’
 → b. *ətri n-ukwet-qinet*. (ŠL.101) ‘They kissed each other.’
 c. *ətri ukwet-ə-tku-ɣʔet*. (SM. 89) (same as (b)).
 d. *ətri ukwet-čit-ɣʔet*. (same as (b)).
 e. *ətri ukwet-ə-tku-čit-ɣʔet*. (ŠL. 16) (same as (b)).
 f. *ətri ukwet-wəly-ə-ɣʔet*. (same as (b)).
 g. *ətri əryičyu ukwet-ə-tku-ɣʔet*. (same as (b)); etc.

4. *The noun tumyətum ‘comrade’ and its derivatives*. Nouns with this meaning and their derivatives are often used to express reciprocity across languages. In Chukchi, this phenomenon has not developed entirely but there are instances worth mentioning. In (85a), this noun alone is used to express reciprocity (nouns with a reduplicated stem, like *tumy-ə-tum*, lose the last component of the stem when inflected) and in (85b) its derivative is used (see also (82) where it is incorporated in the predicate). More peculiar is the attributive use of *tumy-ə-tum* with a possessive marker in (85c) and so-called “relative” marker in (85d) in pre-position to the direct object denoting something possessed by or related to the subject referent (semantically, these sentences describe situations rendered by “possessive” reciprocals in some other languages).

- (85) a. *atri tumy-u nʔel-γʔet.* (MP. 100)
 they comrade-ESS become-AOR.3PL
 ‘They got acquainted.’
- b. *atlon nə-re-tumyə-lʔen-ηə-qin ən-əy-reen.* (MN. 4)
 he.ABS IMPF-DES-friend-lʔet-DES-3SG he-LOC-with
 ‘He wanted to become friends with him.’
- c. *əyə-nan nə-tulʔet-qinet tumy-in mʔem-it.* (FM. 16)
 they-INST IMPF-steal-3PL comrade-POSS cartridge-ABS.PL
 ‘They were stealing cartridges from each other’, lit. ‘... comrade’s cartridges.’
- d. *Moryə-nan ʔatkewma ʔəyi mət-ə-ly-ə-rkən tumy-ə-tku-r-kin*
 we-INST badly know 1PL-AUX-PRES.PROGR comrade-tku-PL-ADJ
nəmətwayəy-ən. (Rə. 121)
 life-ABS.SG
 ‘We know poorly each other’s life’, lit. ‘comrades’ life.’ (on this use of *-tku* see (19b))

8. Etymology of the reciprocal markers

1. *The suffix -wəly.* Skorik (1960: 147–8) argues that this suffix is descended from the verb *wəly-* with a broad meaning ‘to collide, meet, join, cross together’ (incorporating other verbs). He quotes a number of examples illustrating the use of this verb:

- (86) a. *γətya-k ʔaaček-ət wəly-ə-γʔet qʔʔa-čət-ə-nwə.*
 autumn-LOC youth-ABS.PL meet-AOR.3PL competition-for
 ‘In autumn, the youths gathered together for competitions.’

He also illustrates the use of denominal formations with this verb:

- b. *Ivini-lʔ-ət enm-ək qača orw-ə-wəly-ə-γʔat.*
 hunt-PART-ABS.PL rock-LOC next.to sled-collide-AOR.3PL
 ‘Near the rock, the hunters’ sleds collided.’ (lit. ‘... the hunters sled-collided.’)
- c. *atri pojy-ə-wəly-ə-γʔat.*
 ‘They crossed their spears.’ (lit. ‘They spear-crossed.’)

In present-day dictionaries of Chukchi this verb is not registered, and most of the informants I have consulted do not know it.

2. *The adverbs muryičyu ‘we mutually’, turyičyu ‘you mutually’ and əryičyu ‘they mutually’.* These adverbs can be analyzed into four components: the first component is the stem of the plural personal pronouns (see (87b)), the second component is probably descended from a voiced locative ending (see (87d) and the text above (34a)); the possessive form in (87c) is derived from that in (87d) by means of the possessive suffix *-in*), the fourth component is most likely the ending *-u/-o* of the essive case (see the text beneath (7)). The most difficult for identification is the third component *-čy-*. Among the suffixes of Chukchi, it can be materially compared with the magnifying suffix *-čy/-čəη*; cf.: *kuke-ηə* ‘pot’ → *koka-čy-ən* ‘big pot’ (Skorik 1961: 305). Note that the component *č* is contained in the suffix *-ča* ‘many’ (see (18e)). In (87) the reciprocal adverbs and the pronouns with

the same stems are listed (note a certain likeness between the morphological structure of *ər-yi-čy-u* and *ər-ək-wəly-u* in (39b)):

(87) a.	b.	c.	d.
<i>mur-yi-čy-u</i> ‘we mutually’	<i>muri</i> ‘we’	<i>mur-γ-in</i> ‘our’	<i>mur-ək</i> ‘at our’s’
<i>tur-yi-čy-u</i> ‘you mutually’	<i>turi</i> ‘you’	<i>tur-γ-in</i> ‘your’	<i>tur-ək</i> ‘at yours’
<i>ər-yi-čy-u</i> ‘they mutually’	<i>ətri/ərri</i> ‘they’	<i>ər-γ-in</i> ‘their’	<i>ər-ək</i> ‘at theirs’.

3. *The prefix -čit/-čet.* This suffix is indivisible in modern Chukchi, but historically its component *-t* may be compared with the materially identical verbal suffix *-t* one of whose functions is derivation of verbs from nouns. It is also present in a number of other verbal suffixes, e.g. *-l-at/-l-et*, *-čl-at/-čl-et*, *-čy-at*, etc. The origin of the component *-či/-če* is not clear. Judging by the existence of formations with *-čit/-čet* whose respective form without this suffix does not exist, this suffix must be very old. Among formations with *-wəly*, there are no such cases.

9. Appendix: Reciprocals in Koryak

9.1 Reciprocal suffixes

The Koryak language does not seem to possess a reciprocal means corresponding to the Chukchi adverb *əryičy* ‘mutually’, but it has two markers, namely, the suffixes *-vəlŋ* (see (88)) and *-čit/-čet* genetically related to the respective Chukchi suffixes. The latter suffix also has a reciprocal function in Koryak (see (89a)). It may also render the competitive meaning (see (89b)) and it also derives denominal verbs with the meaning ‘to play’ (see (89c)) (Zhukova 1972:208).

(88) <i>lʁu-</i> ‘to see’	→ <i>lʁu-vəlŋ-</i> ‘to see each other, meet’
(89) a. <i>ommačajp-</i> ‘to embrace’	→ <i>ommačajp-čet-</i> ‘to embrace each other’
<i>ŋot-av-</i> ‘to be angry’	→ <i>ŋot-čet-</i> ‘to be angry with each other’
<i>uwwa-</i> ‘to kiss’	→ <i>uwwa-čit-</i> ‘to kiss each other’
b. <i>ləv-</i> ‘to win’	→ <i>ləv-čet-</i> ‘to compete’
<i>ʁje-</i> ‘to take part in races’	→ <i>ʁje-čit-</i> ‘to compete in racing’
c. <i>qoja-ŋa</i> ‘deer’	→ <i>qoja-čet-</i> ‘to play deer’
<i>ʁyγ-u</i> ‘wolves’	→ <i>ʁyγ-čit-</i> ‘to play wolves.’

9.2 Reflexive-reciprocal pronoun

A peculiarity of Koryak in comparison with Chukchi is the employment of the reflexive pronoun *uvik* ‘self’ (< *uvik* ‘body’, stem *uviki-/oveke-*; on the use of this noun in Chukchi see (33c) and on its reflexive use see (17)) for marking reciprocity, in which case it is used in the dual or plural form, cf. *uviki-t* ‘each other’ (of two) and *uviki-w* ‘each other’ (of more than two). Koryak differs from Chukchi in that it possesses the dual and plural number on nouns and also dual inflection of verbs. When used in the reflexive sense

proper, this pronoun is inflected for cases (cf. *uviki-te* ‘self-INST’, *oveke-η* ‘self-DAT’, etc.) when used reciprocally it is not inflected for cases (Zhukova 1972: 192–3).

- (90) a. *Uviki-t γ-ommačajpə-lenat.*
self-DU PERF-embrace-3DU
‘[They two] embraced each other.’ (cf. (33c))
- b. *Tit ηano qoja-ta uviki-w jənn-a a-tənpə-ka...* (Zh1. 193)
in.order.to this deer-INST self-PL horn-INST NEG-stab-NEG
‘So that the deer would not butt each other with horns...’

There occur instances of parallel use of *-čit/-čət* and *uvik-iw* on the same verb in adjacent sentences of the same text (unfortunately, we do not know if these forms are interchangeable in this context):

- (91) *To wača pojy-a ko-ηvo-la-η tən’po-čət-ək. ʒataw aməll’oka-w*
and sometimes spear-INST PRES-begin-PL-PRES stab-čət-INF but adroit-PL
aktəka uviki-w pəče ən-tən’po-naw. (Zh2. 15)
impossible self-PL at.once IMP-stab-3PL
‘And sometimes, they begin to stab each other with spears. But if (they are) adroit enough, they cannot stab each other at once.’

In the closely related Aliutor language, simultaneous use of the pronoun *uvik* with a suffixed reciprocal *ir* registered, and this reciprocal has subject-object agreement like a transitive verb (cf. (88) where this verb is intransitive):

- (92) *Alla tita uviki-w a-laɣu-vəŋ-ka mətə-ntə-na.* (M. 166)
NEG when self-PL NEG-see-REC-NEG 1PL-AUX-3
‘We never saw each other’; lit. ‘We never saw each other ourselves.’

1. Introduction

1.1 Nivkh

Nivkh (the native ethnonym *n'ivx*, lit. ‘person’), also known as Gilyak, is a language isolate with some interesting ethnolinguistic features (no genetic relations to other languages have been found). The language of Nivkhs is sharply different from the languages of the neighbouring peoples. It is the only surviving (historically attested) indigenous language of the Amur region and Sakhalin. Nivkh is currently spoken by a very small percentage of the 4,600 ethnic Nivkhs. It is on the verge of extinction, though there is a newspaper (*Nivx dif* ‘The Nivkh word’) published in Sakhalin (where many Amur Nivkhs have moved), and textbooks for elementary school are occasionally published. The tiny population of Nivkhs is scattered over huge territories (which have not changed considerably at least in the past three centuries) near the mouth of the River Amur and on Sakhalin Island in the Russian Far East. They differ anthropologically from the neighbouring peoples though for centuries they were in contact with the numerous Ainu and Tungusic tribes who pressed them from the south of Sakhalin and from the south and east of the Amur region respectively. Their social life has retained a number of traditional features as well; it may be interesting to mention that vestiges of group marriage existed until the beginning of the 20th century (Krejnovich 1973: 278–87), though most of Nivkhs lived in monogamy. There are two major dialects and about five subdialects. A major split is between the Amur dialect and the Eastern Sakhalin dialect which are mutually unintelligible. The Northern Sakhalin (Schmidt, after the name of the peninsula; see Krejnovich 1980: 133–44) and Western Sakhalin dialects occupy an intermediate position. The Eastern Sakhalin dialect is more archaic than the Amur (see Sternberg 1905; Taksami 1980: 196–210; Comrie 1981: 266–72, 276–7).

1.2 Overview

To mark reciprocity, Nivkh employs the prefix *v-/u-/o-* which combines with approximately 45 stems (verbs, nouns and postpositions) at the most, and thus it is an unproductive affix. Despite their limited number, Nivkh reciprocals describe many of the habitual reciprocal situations. They are rather homogeneous semantically, but they may also render a number of related meanings, as in some other languages with productive reciprocal

affixes. This marker is remarkable in that it is the only prefix in Nivkh, unless we count the reflexive morpheme $p'(i)$ - which enters into the system of personal pronouns (see Section 2.4 below) and occupies the same object position in the verb structure as the latter and the reciprocal prefix; cf. (on the use of the symbol “+” see 2.1; on the abbreviation “(T)” see 1.3):

- (1) a. *hə +n'ivx əndr i-γ-d'.¹*
 that person inadvertently him/her/it-kill-FIN
 ‘That man inadvertently killed him/her.’
 b. *hə +n'ivx əndr p'-ηafq +xu-d'.*
 that man inadvertently REFL-comrade kill-FIN
 ‘That man inadvertently killed his comrade.’
 c. *mer +ηafq-xu ərk sək u-x-kət-t'-γu. (T)*
 our comrade-PL already all REC-kill-ASP-FIN-PL
 ‘Our comrades have already killed one another.’

The common productive means of rendering the reciprocal sense is a reciprocal pronoun which has no other meanings. It is comprised of the reduplicated noun *ηafq* ‘comrade, friend’ and the prefixed reflexive marker p' -. It can replace the reciprocal prefix in practically all the cases; cf. (1d). It also expresses reciprocity with verbs that do not take the reciprocal prefix; cf. (2b) and (2c):

- d. *hə +n'ivx-gu ərk sək p'-ηafq-ηafq +xu-γət-t'-γu.*
 that person-PL already all REFL-comrade-comrade kill-ASP-FIN-PL
 ‘Those people have already killed one another.’
 (2) a. *Rum Not +ro-d'.*
 R. N. help-FIN
 ‘Rum helps Not.’
 b. *Rum-ge Not-ye p'-ηafq-ηafq +ro-d'-γu.*
 R.-COM.DU N.-COM.DU REFL-comrade-comrade help-FIN-PL
 ‘Rum and Not help each other.’
 c. **Rum-ge Not-ye u-ro-d'-γu.*
 (same intended meaning).

Henceforth, the reciprocal pronoun is glossed as REC only.

Prefixed reciprocals cannot take the reciprocal pronoun, because the latter and the reciprocal prefix occupy the position generally reserved for the direct object.

So far, Nivkh is one of the two languages in our list which have an unproductive reciprocal marker whose only meaning is reciprocal. The other language is Itelmen (about the reciprocal prefix *lu-/lo-* see Volodin 1976:210–11; also Volodin, Ch. 43). In another areally close language, viz. Ainu, the reciprocal marker (which is incidentally a prefix *u-*) is productive (see Shibatani 1990:47).

1. In the Nivkh examples, the letter *R* represents a voiced uvular fricative consonant, and χ a voiceless uvular fricative. The letter \check{c} is used instead of the more precise expression \check{c}' (as there is no non-aspirated counterpart).

1.3 Data sources

This chapter describes the Amur dialect of Nivkh which is the native language of the late Galina Otaina.² The examples in this paper are mostly from three sources:

- Most of them were compiled by G. Otaina; these examples are given without reference to a source.
- Many are taken from published texts or were collected by G. Otaina during her field trips; they are marked with (T).
- Some examples are borrowed from specialist literature and the *Nivkh-Russian Dictionary* (S): they are mostly attributed to the source.
- One example has been elicited from an informant.

2. Grammatical notes

2.1 Morphology

The most characteristic feature of Nivkh is initial consonant alternation analogous to mutations in the Celtic languages and Fula (see Jakobson 1958:273; Krejnovich 1937:26–86). In a group “direct object + transitive verb” with the components in contact position, the initial part of the transitive verb (unless it contains the sonants /n, n', ŋ, m, l/, rarely /v/ or other phonemes) has from two to four variants, depending on the final segment of the direct object (the latter forms a single phonetic word with the transitive verb; the vowel in transitives of the (3b) and (3g) type is generally much longer, sometimes twice as long as in (3c-f); see Bondarko & Zinder 1962:85). One of the variants is usually free (3a), i.e. intelligible to native speakers when used without an object; other variants (3b–d) are bound, i.e. they are unintelligible or misunderstood out of context; as a rule, one of the bound variants is materially identical with the free variant (cf. (3b) and (3e)). The subject does not require any alternation of the initial phoneme (3b); cf. also (3a) and (3c).

- (3) a. *ŋir təmz-d'* ‘The dish fell down’
 b. *ifrəmzu-d'* ‘He dropped sth’ (if there is no explicit DO, a 3sg object, like *if* ‘s/he, it/that’, is generally implied unless it is used as a citation form)
 c. *ifŋir+dəmzu-d'* ‘He dropped the dishes’
 d. *ifpaχ+təmzu-d'* ‘He dropped the stone’
 e. *iflep+rəmzu-d'* ‘He dropped the bread.’³

2. The authors began working on this paper in 1989, but for a number of reasons the work was discontinued. It was resumed in 1997 and completed after the untimely death of Galina Otaina (December 14, 1995). This accounts for possible omissions and shortcomings in the description of the Nivkh data.

3. In Proto-Nivkh, the 3sg pronoun had the form *i-* or *j-* before all transitive verbs if the latter occurred without a definite direct object. Verbs of a certain group have retained this form of the pronoun (see Group A in 2.3).

The same alternation rules apply to morpheme boundaries within a word, between nouns and postpositions and also to groups “attribute (= verbal stem or [pro]noun) + head noun” (cf. (3d) and (3f)); there are no adjectives in Nivkh: meanings like ‘big’, ‘thin’, etc. are rendered by qualitative verbs ‘to be big’, etc. Both types of word groups, namely “direct object + vt” and “attribute + noun”, are in fact phonetic words (Krejnovich (1958:21–33) interpretes them as incorporation); they are signalled by “+” between the components, for the reader’s convenience:

f. *ifpila +baχ +təmzu-d’*. ‘He dropped a big stone.’

When the subject or a direct object is emphasized it can be used with the free variant of a transitive verb; cf. (3c) and (3g):

g. *tə +ηir Rum rəmzu-d’?*
 this dish R. drop-FIN
 ‘Is it this dish that Rum dropped?’

Alongside alternations of the type illustrated in (3), there are also historically determined and individual alternations; cf.: *i-γ-/-k’u-/-xu-* ‘to kill’ (cf. (1)).

2.2 Sentence structure. Verb and noun morphology

Nivkh is a typically agglutinating suffixing language (with the exception of two prefixes, reciprocal and reflexive). The neutral word order is “subject (often dropped) – direct ob-

Verbs with initial sonants lost their pronominal marker. In other verbs (they began with plosives; there were no transitives with initial fricatives) the marker *i-* was also lost, but prior to this it had caused a change of the initial plosive into a voiced fricative of the free variant, i.e. the development followed the pattern (Jakobson 1958:255–81; Austerlitz 1977:18).

- (i) a. **t’osq-* i. ‘to break’ (vi); ii. ‘to break’ (vt)
 b. *t’osq-* ‘to break’ (vi) (preserved in current Nivkh)
 c. **i-t’osq-* ‘to break it’ (vt)
 → c’. **i-zosq-* (same)
 a. *zosq-* ‘to break it’ (in current Nivkh) /-t’osq-/-d’osq- (direct object +) ‘to break’.

Instances of the (i.c’) type are registered in specialist literature. G. Otaina considered such usages as unusual though she allowed their use in some dialects; cf.:

- (ii) *ki mrolv-γət-ηan n’əη i-vəkz-nə-d’*. (P.2. 70)
 footwear be.old-ASP-CONV we it-throw.away-FUT-FIN
 ‘When the shoes become old we shall throw them away.’

It should be noted that, judging by the dictionary data, sequences like *i-* + *fricative* + *vowel* (see (i.c’)) practically do not occur in Nivkh, except in some case forms of the pronoun *if* (see B2 in (110)) and a noun or two. A puzzling fact is that the possessive prefix *i-* is always followed by a plosive consonant and never by a fricative; in other words, it behaves like words ending in *-η*; cf.: *ki* ‘footwear’ → *n’-yi* ‘my footwear’, *n’əη-gi* ‘our footwear’, *i-gi* ‘his/her footwear’ (Krejnovich 1937:33, 39, 44). As it happens, this regularity is not observed in case forms of the pronoun *if*; cf. *i-ye* in (20b) and *i-yir* in (110e).

ject – predicate”; “attribute – head word”. A Nivkh sentence is ordinarily comprised of one finite verb form (marked mostly by the suffix *-d'*, or *-t'* after voiceless consonants; glossed as FIN) and any number of converbs (of which there are about 25 forms) (see Nedjalkov & Otaina 1987: 296–319). The verbal suffix *-d'/-t'* has three principal functions:

- It is the most common marker of the final predicate (cf. (1), etc.).
- It marks nominalized verbs, especially in embedded clauses; cf. *if j-uru-d' +sɣna-d'* ‘he does not like to read’.
- It also marks deverbal *nomina agentis*; cf. *j-uru-d'* i. ‘to read’, ii. ‘the one who reads’; see (56), (57), (58), (83).

The most widely used converbs agree with the subject and have two forms: in *-t* for 1SG and 1-3PL and in *-r* for 2SG and 3SG; this distribution has no pragmatic or semantic explanation (these suffixes can mark converbs by themselves or they may be a part of more complex markers); cf.:

- (4) a. *if oz-r* *vi-d'* b. *n'i oz-t* *vi-d'*
 he stand.up-CONV.3SG go-FIN I stand.up-CONV.1SG go-FIN
 ‘Having stood up, he went.’ ‘Having stood up, I went.’

The distribution of the verb coordinating suffixes *-ta* and *-ra* is the same as that of the converb markers *-t* and *-r* (see (26)).

There are only two tenses in Nivkh, non-future with zero marking (translated here mostly by the past tense) and future tense marked by the suffix *-nə-* (cf. (ii) in footnote 3). Desiderative is marked by the suffix *-inə-* (cf. (29)). Completeness, as well as distributivity and intensity, is marked by the suffix *-ɣət/-kət/-xət-*; cf.:

- (5) a. *veta-* ‘to get dressed’ → *if veta-ɣət-t'* ‘he finished getting dressed.’
 b. *vi-* ‘to leave’ → *imɣ vi-ɣət-t'* ‘everyone of them left.’

The noun is inflected for number (SG, PL), case (nine cases), comitative (dual comitative is marked by the suffix *-ke/-ye/-xe/-ge* and plural by *-kon/-yon/-xon/-gon*; see 3.2.1). The cases are:

1. Nominative with zero marking (it is the case of the subject and direct object and of a noun or pronoun used as an attribute).
2. Allative, with the ending *-roχ/-rχ/...*
3. Locative, with the ending *-uin/-in*.
4. Ablative (the ending *-ux/-x*).
5. Comparative (*-ək*).
6. Instrumental (*-ɣir/...*).
7. Terminative (*-t'əkə/...*).
8. Translative (*-uye/...*).
9. A specific feature of the Nivkh case system is the “causee” case – a special case for animate causees (and the noun *k'eŋ* ‘sun’) dependent on verbs with the causative suffix *-gu/-ku* (see *-aχ* in (12c, d), (19)).

Pronouns have the same system of case forms. The 3SG pronoun *if* cannot appear in direct object position, demonstrative pronouns (e.g. *had'* 'this', etc.) being used instead.

The suffix of plurality *-gu/-ku/-yu/-xu* (common for nouns and finite verbs) is optional; it is never used on predicates with the pronouns 'we' and 'you.PL' in subject position.

There are about 20 postpositions and no prepositions and conjunctions in Nivkh. (For details see Panfilov 1962).

2.3 Relations between intransitive and transitive verbs with the same stem

With a certain degree of simplification, all the Nivkh transitive verbs can be divided into three groups.

Verbs of Group A (at least 120 transitives) contain the pronominal 3SG object marker *j-*, *i-*, *e-*, or the locative noun *hur-* 'there, here' in their free form; as a rule, they do not have respective intransitive verbs with the same stem. The stems of the verbs with the marker *j-* (more than 80 items) are usually vowel-initial, and the stems of the verbs with the other two markers usually have an initial sonant or a voiced consonant; e.g.:

- | | |
|---|-------------------------------------|
| (6) <i>j-amχta-/amχta-</i> 'to praise' | <i>j-uru-/uru-</i> 'to read' |
| <i>e-zmu-/čmo-/smo-</i> 'to love' | <i>e-v-/vo-/bo-/po-</i> 'to take' |
| <i>i-γ-/k'u-/xu-</i> 'to kill' | <i>i-[n]də-/n'řə-</i> 'to see/find' |
| <i>hur-t'iv-/řiv-</i> 'to sit down on sth.' | |

For obscure reasons, only Group A transitives, though not all of them, take the reciprocal prefix. Thus, for instance, the following transitives (denoting emotional and mental states) whose meaning allows reciprocal use do not occur with the reciprocal prefix:

- | | |
|-----------------------------------|---------------------------------|
| (7) <i>j-auz-</i> 'to be jealous' | <i>j-an'u-</i> 'to hurt/offend' |
| <i>j-ax-</i> 'to trust' | <i>j-an'-</i> 'to envy', etc. |
| <i>j-azra-</i> 'to fear/avoid' | |

Verbs of Group B (80 transitives and 80 respective intransitives) do not contain any pronominal marker in their free form (a free form alone without an object implies a 3rd person object; see (3b)); these transitives enter into semantic causative oppositions with the respective intransitive verbs. Verbs in these pairs can formally be related in three ways:

1. By means of alternation of the fricative on a free transitive verb form with the initial plosive of the respective intransitive verb (see (8a)).

2. By means of the unproductive causative suffix *-u-* (on verbs with an initial sonant) (see (8b)).

3. By means of a combination of the first two means (see (8c)); this type is prevalent (about 45 transitive-intransitive pairs).

- | | | | |
|--------|---------------------------------|---|--|
| (8) a. | <i>t'osq-</i> 'to break' (vi) | ↔ | <i>zosq-/d'osq-/t'osq-</i> 'to break' (vt) |
| | <i>pəzk-</i> 'to get lost' (vi) | ↔ | <i>vəzk-/bəzk-/pəzk-</i> 'to lose' (vt) |
| | b. <i>ler-</i> 'to play' (vi) | → | <i>ler-u-</i> 'to amuse/entertain' (vt) |
| | <i>vaxt'-</i> 'to tear' (vi) | → | <i>vaxt'-u-</i> 'to tear (up)' (vt) |

- c. *pol-* ‘to fall’ (vi) → *vol-u-/bol-u-/pol-u-* ‘to knock down/make fall’ (vt)
t’oz- ‘to go out (of light)’ (vi) → *zoz-u-/d’oz-u-/t’oz-u* ‘to extinguish’ (vt)
 (see also Nedjalkov et al. 1995:60–80).

Verbs of Group C have free and bound variants of the Group B type, but they do not have non-causative intransitive counterparts, being in this respect similar to Group A verbs. Like many verbs of the above two groups they allow reflexive derivation (see (13a), (15), (17c) and (18)); e.g.:

- (9) a. *zu-/d’u-/t’u-* ‘to wash’ (vt) → b. *p’-su-* ‘to wash oneself’ (-s- < -z- after *p’-*).

Deverbal locative nouns are formed from free variants, e.g.:

- (10) a. *i-γ-* ‘to kill’ → *i-γ-f* ‘the place of killing’
 b. *i-də-/i-ndə-* ‘to see/find’ → *i-ndə-f* ‘the place where sth was found.’

If we disregard verbs with the initial sonants /n, n’, η, m, l/ and vowels, we may generalize that all intransitive verbs in Nivkh begin with plosives, and free variants of all transitives have initial fricatives (there are also a number of verbs, both intransitive and transitive, with the initial /v/). Nouns with initial voiceless plosives are related to intransitives with the same root in the same way as transitives; cf. *p’uf* ‘a saw’ vs. *fuf-* ‘to saw’ (Krejnovich 1937:65–6; Jakobson 1958:269). Concrete nouns derived from transitives change their initial fricative into a plosive; e.g.:

- (11) a. *vut’i-* ‘to sweep (the floor)’ → *put’i-s* ‘broom’ (the suffix -s derives instrumental nouns).

2.4 Means of valency change

By way of partially repeating ourselves, we shall name the principal means of valency change and show the place of the reciprocal marker among them. There are two means of valency increase:

1. The unproductive causative suffix *-u* which derives transitives with a direct object from intransitives; see (8b), (8c) and also (12b).

2. The highly productive causative suffix *-gu-/ku-* which derives causatives from both intransitives and transitives (including all kinds of derivatives); the causee is rendered by the causee case (marked by *-aχ*, as in (12c, d) and (19)) which is sometimes optional; see (12c)). But the noun denoting a causee does not form a single phonetic word (of the (3c–e) type) with a causative verb even if it is in the nominative case.

- (12) a. *ōla veta-d’.* ‘The child got dressed.’
 b. *əmək p’-ōla +veta-u-d’.* ‘Mother dressed her child.’
 c. *əmək p’-ōla[-aχ] veta-gu-d’.* ‘Mother told the child to get dressed.’
 d. *ətək əmək-aχ p’-ōla +veta-u-gu-d’.* ‘Father told mother to dress the child.’

(On causative derivation in Nivkh see Nedjalkov et al. 1995:60–81).

There are four means of valency decrease:

1. The reflexive prefix (about 140 derivatives; see Nedjalkov & Otaina 1981:185–220).
2. The reciprocal prefix (about 35 verbs).

3. The resultative suffix *-yəta-/kəta-/xəta-* (about 100 derivatives from transitives; derivatives from intransitives are not included here; see Nedjalkov & Otaina 1988: 135–51).

4. The anticausative suffix *-r-* (not more than two or three verbs); cf. respectively:

- | | | | | | |
|---------|--------------------|---------------------------|---|-------------------|-------------------------|
| (13) a. | <i>p'-ləv-</i> | 'to hide oneself' (vi) | ← | <i>ləv-</i> | 'to hide' (vt) |
| b. | <i>v-əz-</i> | 'to call each other' (vi) | ← | <i>j-əz-/əz-</i> | 'to call sb' (vt) |
| c. | <i>j-əlx-kəta-</i> | 'to be open' (vi) | ← | <i>j-əly-</i> | 'to open' (vt) |
| d. | <i>moq-r-</i> | 'to break in half' (vi) | ← | <i>e-mq-/moq-</i> | 'to break in half' (vt) |

2.5 Reflexive marker *p'i/p'* and pronominal object markers. Possessive relations

In the system of pronominal object markers, the 3SG marker is opposed to the remaining five forms as a citation form. In the plural form of transitive verbs, the object markers entirely coincide with the form of the respective pronouns used as subjects. The 1SG and 2SG markers coincide with the reduced form of the respective pronouns minus the vowel (excepting those cases when an object marker is followed by a cluster of two consonants). These cases are considered here as prefixation and therefore they are divided by a hyphen from the root. The 3rd person object marker is either zero or the pronominal prefix *j-/i-/e-* descended from the respective pronoun *if* 's/he' (see (6)). All the forms except (14c) are marked in a regular way. Here is a list of markers for all the six forms:

- | | | |
|---------|------------------------------|----------------------------|
| (14) a. | <i>if n'-ləv-d'</i> . | 'He hid me.' |
| b. | <i>n'i č-ləv-d'</i> . | 'I hid you (SG).' |
| c. | <i>či Ø-ləv-d'</i> . | 'You (SG) hid him/her/it.' |
| d. | <i>imŋ/ivŋ n'əŋ-ləv-d'</i> . | 'They hid us.' |
| e. | <i>n'əŋ čəŋ-ləv-d'</i> . | 'We hid you (PL).' |
| f. | <i>čəŋ imŋ-ləv-d'</i> . | 'You (PL) hid them.' |

In the Eastern Sakhalin dialect, the plural number is formed with the help of *-n* instead of *-ŋ*:

- | | | | | | |
|----|------------|------------|----|-----------------|------------|
| g. | <i>n'i</i> | 'I' | j. | <i>miŋn/min</i> | 'we' |
| h. | <i>či</i> | 'you (SG)' | k. | <i>čin</i> | 'you (PL)' |
| i. | <i>jaŋ</i> | 's/he' | l. | <i>iŋn/in</i> | 'they.' |

We will consider briefly constructions with the reflexive marker because, firstly, it is semantically close to the reciprocal and, secondly, it usually occupies the same position in the structure of a verb form as the reciprocal prefix, viz. the position of a direct object. The reflexive pronoun *p'i* may substitute for nouns and all personal pronouns; it may assume any case form, in which respect it is formally similar to the 1SG and 2SG pronouns in that it also drops the vowel when prefixed. Syntactically, this reflexive pronoun may be

- the subject (meaning 'self');
- an attribute (meaning 'my/your/his... / their own / for oneself');
- an object, in various case forms.

Let us consider these three principal usages.

Reflexive verbs are derived in a standard way by means of placing the reflexive marker in the position of a pronominal object marker; e.g.:

- (15) a. *if p^ʼ-ləv-dʼ.* 'He hid himself.'
 b. *nʼi p^ʼ-ləv-dʼ.* 'I hid myself', etc.

The same forms of both the personal pronouns and the reflexive marker are also used attributively and express possessive relations; the 3rd person marker has five variants: *v-* and *i-/e-* descended from *if* 's/he', and *vi-/ve-* which is possibly either pleonastic *v-* + *i-/e-* or a metathesis of *if*. The choice between *v-* and other variants is determined by the vowel or consonant initial of the noun it precedes, but this tendency is not always observed (cf. (16g)). The possessive marker forms a syllable not only in type (16d) and (16f) cases but also in prevocalic position, as in (16g):

- (16) a. *if nʼ-ōla +ləv-dʼ.* 'He hid my child.'
 b. *if p^ʼ-ōla +ləv-dʼ.* 'He_i hid his_i (own) child.'
 c. *if v-ōla +ləv-dʼ.* 'He_i hid his_k (not his own: someone else's) child.'
 d. *if i-bitɣə +ləv-dʼ.* 'He_i hid his_k books.'
 e. *if vi-nanak/i-nanak +ləv-dʼ.* 'He_i hid his_k elder sister.'
 f. *if e-qʼaχ +ləv-dʼ.* 'He_i hid his_k spear.'
 g. *if i-enʼ +ləv-dʼ.* 'He_i hid his_i skis.' (P.1. 158–60)

As has been mentioned above, out of approximately 400 transitive verbs at least 140 take the reflexive marker. Most of their meanings are to a greater or lesser degree connected with the reflexive meaning proper, though a number of verbs have deviated from it or undergone lexicalization:

- (17) a. *if p^ʼ-rəmk +ɣēsqo-dʼ.* 'He burnt his hand.'
 b. *?if p^ʼ-ŋafq +ɣēsqo-dʼ.* 'He burnt his friend.'
 c. *if p^ʼ-xēsqo-dʼ.* 'He burnt himself.'
 (18) a. *if nʼ-za-dʼ.* 'He struck me.' → *if p^ʼ-sa-dʼ.* 'He struck [against sth].'
 b. *if e-v-dʼ.* 'He took that.' → *if p^ʼ-ev-dʼ.* 'He disappeared.'

The reflexive pronoun *pʼi* is inflected for cases and it may serve as subject in a sentence.

- (19) *if nʼ-aχ kəɾ-gu-dʼ, pʼi toz-dʼ.*
 he I-CS leave-CAUS-FIN self.NOM CROSS-FIN
 'He left me, [and] himself rowed across [the river].'

3. Reciprocal constructions with the prefix *v-/u-/o-*

3.1 Introductory

The choice between the variants *v-* and *u-* is determined by the root-initial vowel or consonant, the former replacing the pronominal object marker *j-* and the latter the marker *i-*. The variant *o-* is accounted for, as some researchers suggest, by once existent vowel harmony (see Krejnovich 1937:87–102). It derives reciprocals from transitives with the

pronominal object marker *e-*. Formations with the reciprocal prefix are relics; no new items are formed with this prefix. Despite the limited number of preserved prefixed reciprocals, their semantic range as well as their semantic/syntactic combinability give a good idea of their functions in the period of their productivity. The reciprocal prefix can combine not only with verbs but also with nouns and postpositions.

3.2 Diathesis types of reciprocal constructions

3.2.1 *Expression of reciprocal arguments. Simple constructions only*

Reciprocal arguments are expressed in the same way as a plural subject in non-reciprocal constructions, viz., by a formally or semantically plural noun. As has been mentioned, expression of the plural number on nouns is optional in Nivkh, but there is a tendency to mark it in reciprocal constructions. In the case of separate expression of reciprocal arguments the following markers are used:

1. The particles *-hara...-hara*; in this case the arguments are represented as separate items; cf. (21a), (47).

2. The comitative suffixes *-ge...-ge* for two single participants and *-go[n]...-go[n]* for two plural participants, and their variants (*-xe/-ke/-ye* and *-xo[n]/-ko[n]/-yo[n]*); this marking shows that both argument referents act together; cf. (55), (57), (58c), (76c), (78)).

3. The comitative marker *-ge/-xe/-ke/-ye* on the second noun naming a single participant only (see (20b) and (21c, d)); the comitative marker *-go[n]/-xo[n]/-ko[n]/-yo[n]* on the second noun naming a plural participant (see (20a)).

In case 3 the comitative meaning ‘with’ is more emphasized than in the previous case, the first noun being more prominent pragmatically and the plural marker being optional on the verb (as is usual in other cases, too; cf. (20b), (25b), (28), (39d), (46)). In cases 1 and 2 the plural marker is (practically always) obligatory.

Contrary to (20a–b) where the comitative group functions as an object, a comitative group in a reciprocal construction is a part of the subject (see (21)):

- (20) a. *“namagur k’amlǝ-rot imŋ-gon va-ja!”* (T)
 well think-CONV they-COM.PL fight-IMP.2SG
 ‘Think well and then fight with them!’
- b. *“namagur k’amlǝ-rot i-ye va-ja!”*
 well think-CONV he-COM.DU fight-IMP.2SG
 ‘Think well and then fight with him!’
- (21) a. *ətək +hara əmək +hara v-ətŋu-d’-yu.*
 father and mother and REC-defend-FIN-PL
 ‘Both father and mother defend each other.’
- b. *ətək-xe əmək-xe v-ətŋu-d’-yu.*
 (same translation).
- c. *ətək əmək-xe v-ətŋu-d’-yu.*
 (same translation).
- d. *if p’-ōla-ge p’rǝ-d’.*
 s/he REFL-child-COM.DU come-FIN
 ‘He came with his son.’

3.2.2 “Canonical” reciprocals

As well as in other languages, this is the most numerous type of reciprocal constructions in Nivkh. The following is a complete list of attested “canonical” reciprocals (which are naturally intransitive) derived from transitive verbs with a human direct object, with sentential examples.

- (22) a. *v-yaya-* ‘to disturb each other’ ← *j-yaya-* ‘to disturb’
 b. *v-əz-* ‘to call to each other’ ← *j-əz-* ‘to call’
 c. *v-amχta-* ‘to praise each other’ ← *j-amχta-* ‘to praise’
 d. *v-ark-* ‘to argue’ (cf. (31b)) ← *j-ark-* ‘to contend (with)’
 e. *v-iz-* ‘to imitate each other’ ← *j-iz-/hiz-* ‘to imitate’
 f. *v-ələl-* ‘to tease each other’ ← *j-ələl-* ‘to tease’
 g. *v-ord-* ‘to meet each other’ ← *j-or-* ‘to meet sb’
 h. *v-alalt’u-* ‘to talk each other into sth’ ← *j-alalt’u-* ‘to talk sb into sth’
 i. *v-ətηu-* ‘to defend each other’ ← *j-ətηu-* ‘to defend sb’
 j. *v-əjm-* ‘to know each other’ ← *j-əim-/him-* ‘to know’
 k. *v-əv-* ‘to marry each other’ ← *j-əv-* ‘to marry sb’
 l. *v-əkr-* ‘to mistrust each other’ ← *j-əkr-* ‘to mistrust sb’
 m. *v-əskəm-* i. ‘to explain sth to each other’ ← *j-əskəm-* ‘to explain.’
 ii. ‘to have it out with each other’
- (23) *o-zmu-* ‘to love each other’ ← *e-zmu-/smo-/čmo-* i. ‘to love’, ii. ‘to rejoice.’
- (24) a. *u-γ-* ‘to kill each other’ ← *i-γ-/ku-/xu-* ‘to kill’
 b. *u-də-* ‘to see each other’ ← *i-[n]də-/n’řə-* ‘to see.’
- (25) a. *n’i t’əlgu +hemar +him-d’.*
 I fairytale old.man know-FIN
 ‘I know the old man narrator of fairytales.’
 b. *n’i t’əlgu +hemar-ke v-əjm-d’.*
 I fairytale old.man-COM.DU REC-know-FIN
 ‘The old man narrator of fairytales and I know each other.’
- (26) a. *hoRo-ηan ivη +ranř n’ivy +əv-ra ena +n’ivy +əv-ra.* (T)
 be.so-CONV they sister person marry-and.3SG other person marry-and.3SG
 ‘After that their sister married a man, married a stranger.’
 b. *hoRo-t v-if-ta ex-t vi-ta.* (T)
 be.so-CONV.3PL REC-marry-and.3PL go.home-CONV.3PL go-and.3PL
 ‘Then they got married and went home.’
 (both examples are from the Western Sakhalin dialect)
- (27) a. *mat’kilk ōla-gu +hiz-r teqteq-t’.*
 kiddy child-PL imitate-CONV.3SG jump.on.one.foot-FIN
 ‘The kid jumps on one foot imitating other children.’
 b. *ōla-gu v-iz-t teqteq-t’-yu.*
 child-PL REC-imitate-CONV.3PL jump.on.one.foot-FIN-PL
 ‘The children jump on one foot imitating each other.’
- (28) *n’əη p’-ηafq-xe taurla-t nan u-də-d’.*
 we REFL-comrade-COM.DU last-CONV.3PL only REC-see-FIN
 ‘My comrade and I met only after a rather long time.’

- (29) *ōla-gu zadača nə-inə-t v-əskəm-d'-yu.*
 child-PL sum do-DES-CONV.3PL REC-explain-FIN-PL
 'The children explain to each other how to do a sum.'

Locative nouns are derived in a regular way; cf.:

- (30) *j-or-* 'to meet sb' → *v-or-* 'to meet each other' → *v-or-f* '(usual) meeting place.'

3.2.3 "Indirect" reciprocals

Nivkh has preserved only two reciprocal verbs of this type:

- (31) a. *v-asqam-* 'to take away from each other' ← *j-asqam-* 'to take away'
 b. *v-ark-* 'to dispute over a possession of sth with each other' ← *j-ark-* 'to dispute the possession of sth' (cf. (22d), (32) and (33); see also P.2. 51).

Constructions with these verbs differ sharply from other constructions with a direct object. These reciprocals, like all other reciprocal verbs, are morphologically intransitive since the position of a direct object is occupied by the reciprocal prefix but despite this there is a direct object in the nominative case in these constructions which does not constitute a single phonetic word with the verb; cf. *t'aqo* 'knife' in (32a) and (32b):

- (32) a. *if p'-ŋafq-ux t'aqo +asqam-d'.*
 he REFL-comrade-ABL knife take.away-FIN
 'He took a knife away from his comrade.'
 b. *imŋ t'aqo v-asqam-d'-yu.*
 they knife REC-take.away-FIN-PL
 'They took a knife away from each other.'
 c. *joχ v-asqam-d'-yu.* (K.1. 298)
 '[They] were trying to take away the son's (younger brother's, etc.) wife from each other.'⁴
- (33) *imŋ mu v-ark-t'.* (S. 49)
 they boat REC-dispute.possession-FIN
 'They dispute the possession of the boat with each other.' (cf. (31b))

3.2.4 "Quasi-possessive" reciprocals

"Possessive" reciprocal verbs are not attested in Nivkh, but there are constructions semantically corresponding to "possessive" reciprocal constructions of some other languages. In these constructions the reciprocal suffix is attached to a noun in direct object position. Three nouns are registered that are used in this way, namely the words meaning 'hand', 'head' and 'armpit'. They assume a reduplicated form which is an iconic expression of (distributive) plurality. Compare:

- (34) *mat'kalk-xu u-dəmk +rəmk +zap-t ler-d'-yu.* (T)
 kiddy-PL REC-hand hand take.hand-CONV.3PL play-FIN-PL
 'Children play holding each other by the hand.'

4. Sentence (32c) describes a scene common in the traditional Nivkh society: the relatives of a married woman and the relatives of her husband try to take away from each other (by pulling) the woman who has run away from her husband who mistreated her (custom did not allow the Nivkhs to fight in this situation).

- (35) *həd³-γu u-lovr +lovr +čev-t haRa-t*
 this-PL REC-armpit armpit finger.poke-CONV.3PL laugh-CONV.3PL
qoju-d³-γu. (T)
 make.noise-FIN-PL
 ‘Those are laughing and making noise poking each other in the armpits.’
- (36) *imη čoxt-t u-d³oηr +t³oηr +mam-t va-d³-γu*
 they get.drunk-CONV.3PL REC-head head squeeze-CONV.3PL fight-FIN-PL
 ‘Being drunk, they fight pulling each other by the hair.’

3.3 Reciprocal prefix *v-/u-/o-* in combination with transitive lexical reciprocals denoting similarity

The following are the lists of verbs that belong here; the underlying verbs and their derivatives are synonymous but they are used in different constructions. It is interesting to note that there are verbs with the meaning ‘to be equal (with respect to one particular feature or another)’ but there is no verb with the general meaning ‘to be the same/equal’.

- (37) a. *u-ηali-* ‘to resemble/be like each other’ ← (*i-*)*ηali-* ‘to resemble/be like sb’
 b. *u-ηəzi-* ‘to be of the same size/height’ ← (*i-*)*ηəzi-* ‘be the same size as sb/sth’
 c. *u-ηəkə-* ‘to be of the same length’ ← (*i-*)*ηəkə-* ‘be the same length as sth’
 d. *u-ηətə-* ‘to be of the same age’ ← (*i-*)*ηətə-* ‘be of the same age as sb’
 e. *u-raRa-* ‘to be equally thick’ ← (*i-*)*raRa-* ‘be as thick as sb/sth.’

The verb under (37b) has a parallel compound with the same root containing *ut-* ‘body’ in the Western Sakhalin dialect:

- f. *ut +ηazi-* ‘to be of the same height’ (O. 116).

A special case is the following denominal derivative:

- g. *o-n³lami-* lit. ‘to be semi-alike’ ← *n³lami* ‘half’ (O. 123).
- (38) a. *v-əkə-* ‘to have the same tips/peaks’ ← *j-əkə-* ‘to have the same tip/peak as sth’
 b. *v-alkre-* ‘to be equal in volume’ ← *j-alkre-* ‘to be equal in volume to sth’
 c. *v-arū-* ‘to have the same quantity of sth as each other’ ← *j-arū-* ‘to have the same quantity of sth as sb’ (see Otaina 1978:30–1, 121).

The verbs that belong here may be used in discontinuous reciprocal constructions and if a nominal direct object is ellipted they take the object marker *i-* (five verbs of which four begin with *η-* and one with *r-*; cf. (39a) and (39b)) or *j-* (three verbs) but only the first five verbs are given in their citation form without an object marker (therefore *i-* is parenthesized in (37)). For this reason, the reciprocal prefix does not replace an object marker, as in 3.2.2 and 3.2.3, but is added to the root, as in 3.2.4. When used in the simple construction, all the lexical reciprocals require the reciprocal prefix and the plural suffix. As well as in other cases with lexical reciprocals, the underlying discontinuous construction and the derived simple one are synonymous; cf. (39c) and (39d), (40a) and (40b):

- (39) a. *əmək pandur-d³.*
 ‘Mother is beautiful.’

- b. *v-ōla i-ηali-dʹ*
his/her-child s/he-resemble-FIN
‘Her child resembles her.’
- c. *ōla pʹ-əmək +ηali-dʹ*
child REFL-mother resemble-FIN
‘The child resembles his mother.’
- d. *ōla pʹ-əmək-xe u-ηali-dʹ-yu*
child REFL-mother-COM.DU REC-resemble-FIN-PL
‘The child and his mother resemble each other.’

The reciprocal in (39e) differs from the above in the final vowel (*ηala-* instead of *ηali-*), which is probably accounted for by subdialectal features:

- e. *ōla-gu o-ηala+ηala-gut nə-dʹ-yu* (Kh.)
child-PL REC-be.alike+be.alike-CONV do-FIN-PL
‘The children imitate each other.’
- (40) a. *tə +menʹ əvnʹ +ηəkə-dʹ*
this rudder oar equal.in.length-FIN
‘This rudder equals the oar in length.’
- b. *tə +menʹ-yu u-ηəkə-dʹ-yu*
this rudder-PL REC-equal.in.length-FIN-PL
‘These rudders equal each other in length.’
- (41) *čuz +fitis-ku sək u-raRa-dʹ-yu*
‘All the new blankets are equally thick (equal each other in thickness).’
- (42) *tʹir-ku sək u-ηəzi-dʹ-yu*
‘All the logs are of the same size (equal each other in size).’
- (43) *nʹəη +als-ku v-arudʹ-yu*
lit. ‘Our berries are equal in quantity.’ (= ‘We have the same quantity of berries’).
- (44) *qʹaχ-ku v-əkə-dʹ-yu*
‘The spears have equal tips.’

There are two verbs of different origin with the initial *v-* which do not have any underlying transitive verbs, but they are semantically and syntactically similar to the verbs with the reciprocal prefix considered in this section; they occur in simple reciprocal constructions only and therefore they do not belong in this group, but it is expedient to cite them here as well because they may have obtained their meanings by analogy with the verbs mentioned. Here are these verbs:

- (45) a. *verke-* ‘to be of the same width’ ← *ver-* ‘to be wide’
b. *vulki-* ‘to be of the same height’ ← *ul-* ‘to be high.’

Compare the following sentences:

- (46) *haχtʹudʹ kəlmr-ke verke-dʹ*
little.table board-COM.DU be.same.width-FIN
‘The little table and the board are of the same width.’
- (47) *Vajr +bal +hara mer +bal +hara vulki-dʹ-yu*
V. hill and our hill and be.same.height-FIN-PL
‘The Vajr hill and our hill are of the same height.’

Comment 1. In connection with the verbs listed in (45) it may be expedient to point out that in the Northern Sakhalin dialect among the seven verbs that are semantically similar to those under (45) only one happens not to contain the initial *v*-:

- | | | | |
|---------|---|----|--|
| (48) a. | <i>vajnau</i> - ‘to be equal in strength’ | e. | <i>vašo</i> - ‘to be equal in quantity’ |
| b. | <i>vajer</i> - ‘to be unequal in strength’ | f. | <i>voťi</i> - ‘to be similar/alike’ |
| c. | <i>vaka</i> - ‘to be equal in the ends/peaks’ | g. | <i>rurŋu</i> - ‘to be the same in shape’ |
| d. | <i>vara</i> - ‘to be alike’ | | (K.I. 83, 471). |

Comment 2. There are another four transitive verbs that are lexical reciprocals: *j-or*- ‘to meet’; *j-əv*- i. ‘to marry’, ii. ‘to live with sb’; *j-ajyo*- ‘to sleep with sb’; and *i-yrə*- ‘to be with sb’. It is more convenient to discuss them in other sections (see 3.6.1).

3.4 Reciprocal prefix *v-/u-/o*- in combination with postpositions – mostly lexical reciprocals denoting spatial proximity

Postpositions descend from verbs or nouns. Out of about 20 postpositions eight are registered with the reciprocal prefix. The underlying postpositions derived from verbs govern a direct object. The postpositions derived from nouns are inflected for case. The reciprocal postpositions can appear in three formal variants relative to reduplication:

- without reduplication; see (49);
- with the reduplicated base only; see (50);
- with the entire reciprocal form reduplicated (see (51)):

- | | | | |
|---------|---|---|---|
| (49) a. | <i>u-laRa</i> ‘next to each other’ | ← | <i>-laRa</i> ‘nearby, next to’ |
| b. | <i>u-t’ara</i> ‘opposite each other’ | ← | <i>-řara/-t’ara</i> ‘opposite’ |
| c. | <i>u-laqv</i> ‘around each other’ | ← | <i>-laqv</i> ‘around’ |
| d. | <i>v-erq</i> ‘facing each other’ | ← | <i>-erq</i> ‘facing sth’ |
| e. | <i>v-osk-t</i> ‘[they] facing each other’ | ← | <i>j-osk-r</i> ‘[he] facing sb’ |
| f. | <i>v-or-doχ</i> ‘in the direction towards each other’ | ← | <i>j-or-doχ</i> ‘in his direction’ (cf. (22g)). |
- | | |
|---------|---|
| (50) a. | <i>u-t’ar+ t’ar</i> ‘pell-mell’, ‘mixed up’ |
| b. | <i>u-laχ+laχ</i> ‘for/about each other’ |
| c. | <i>u-laqv+laqv</i> ‘round each other.’ |
- | | | | |
|---------|---|---|----------------------------|
| (51) a. | <i>v-ink+v-ink</i> ‘preceding each other’, ‘(in) single file’ | ← | <i>ənk/ənki</i> ‘in front’ |
| b. | <i>v-əri+v-əri</i> ‘following each other’, ‘(in) single file’ | ← | <i>əri</i> ‘behind’ |
| c. | <i>v-erq+v-erq</i> ‘facing each other.’ | | |

The following sentences illustrate the use of the postpositions listed under (49):

- | | |
|---------|---|
| (52) a. | <i>if</i> <i>ətək</i> <i>+řara-in</i> <i>hur</i> <i>+t’iv-d’.</i> |
| | he father opposite-LOC there sit.down-FIN |
| | ‘He sat down opposite his father.’ |
| b. | <i>if</i> <i>ətək-xe</i> <i>u-t’ara-in</i> <i>hur</i> <i>+t’iv-d’-yu.</i> |
| | he father-COM.DU REC-opposite-LOC there sit.down-FIN-PL |
| | ‘He and [his] father sat down opposite each other.’ |

- (53) *ena +von-gu p'ra-t u-laRa +fi +t'ift'-yu +riv-d'. (T)*
 another villager-PL come-CONV.3PL REC-close.to be.situated chair-PL sit.down-FIN
 'The inhabitants of another village, having come, took seats on the chairs that stood next to each other.'
- (54) *hot nana pila +n'ivx-gu imη-aχ v-erq +xe-t hur +t'iv-gu-d'-yu. (T)*
 then only old person-PL they-CS REC-facing sit-CONV.3PL there sit-CAUS-FIN-PL
 'Then only the older people allowed them to sit facing each other.'

Reduplicated variants of the (50) type seem to be used mostly for emphasis, in the case of plural participants, etc.; e.g.:

- (55) *kinz n'ivx-gu +bo-r, utku-gon umgu-gon u-t'ar +t'ar*
 devil person-PL take-CONV.3SG man-COM.PL woman-COM.PL REC-opposite opposite
 +p'i-gu-d'. (T)
 be.situated-CAUS-FIN
 'The devil took the people (and) put men and women together anyhow.'
- (56) *vi-γət-t'-yon kər-γət-t'-yon u-laχ +laχ to-d'-yu.*
 go-ASP-t'-COM.PL stay-ASP-t'-COM.PL REC-about about cry-FIN-PL
 'Those who left and those who stayed cried for each other.'
- (57) *ōla-gon pilə-d'-yon u-laqv +laqv qama-d'-yu.*
 child-COM.PL be.adult-d'-COM.PL REC-round round run-FIN-PL
 'The children and adults ran round each other.'

The first two reciprocal postpositions under (51) descended from verbs (like some other postpositions) retain close semantic relations with the underlying verbs and can be used in constructions synonymous with a converb of the underlying verb (see Section 3.5). The base verbs are antonymous (cf. 'to precede' – 'to follow') and related as semantic converses (*I precede you = You follow me*), but these postpositions have become synonymous in the meaning '(in) single file', i.e. the antonymy of the underlying verbs is neutralized in them. These reciprocal postpositions function very much like adverbs and they denote situations with more than two participants (reduplication of the underlying postposition *əri* 'behind' also acquires the same meaning as the reciprocal form; see (58c)):

- (58) a. *ōla-gu pilə-d' +ənki vi-d'.*
 child-PL be.adult-d' be.in.front go-FIN
 'The children walk in front of the adults.'
- b. *ōla-gu pilə-d' +əri vi-d'.*
 child-PL be.adult-d' be.behind go-FIN
 'The children walk behind the adults.'
- c. *ōla-gon pilə-d'-yon v-ənki+v-ənki / v-əri+v-əri / əri+əri vi-d'-yu.*
 'The children and adults walk in single file.'
- (59) *hoRo-t v-erq +v-erq +p'i-t hur*
 be.so-CONV.3PL REC-opposite REC-opposite be.situated-CONV.3L there
 +t'iv-d'-yu. (P.2. 62)
 sit.down-FIN-PL
 'Then they sat down [being] opposite each other.'

3.5 Simultaneity vs. sequence of reciprocal actions

As well as in other languages, the temporal relationship between the acts within a reciprocal situation is determined by the lexical meaning of a verb. Nivkh has preserved two reciprocal verbs whose meaning presupposes non-simultaneity of the actions performed by the participants of a reciprocal situation (see (60b) and (61b)). In these verbs sequence pertains to the spatial position of the participants relative to each other, but it implies simultaneity of their motions, i.e. these verbs may be said to combine both simultaneity and sequential arrangement of acts. The fact of derivation of reciprocal verbs from the verbs meaning ‘to precede (when walking, running, etc.)’ is typologically interesting. It has been pointed out in specialist literature that this concept is not compatible with reciprocity (cf. English (?) *to precede each other*). Since a reciprocal action usually presupposes repetition, or iterativity, the reciprocal verbs in question are formally reduplicated items (cf. (58c) and the relevant text). The stems of reciprocals under (60b) and (61b) are used as adverbials meaning ‘(in) single file, one after another’ with verbs of motion (see also (58c)). Examples (on the pronominal component *j-* see Group A in 2.3):

- (60) a. *j-ənki-* ‘to leave him/her behind/overtake him/her’, ‘to precede’
 b. *v-ənki+v-ənki-* ‘to overtake each other’, lit. ‘to precede each other.’
- (61) a. *j-əri-* ‘to follow him/her’
 b. *v-əri-v-əri-* ‘to follow each other.’

Here also belongs the following reciprocal formed from a complex verb comprised of the components *j-əri-* ‘to follow’ and *o-řu-* ‘to pursue’:

- (62) a. *j-əri-řu-* ‘to catch up with him/her’
 b. *v-əri-řu-* ‘to catch up with each other’
 c. *v-əri+v-əri-řu-* ‘to catch up with each other.’

These reciprocals as well as their base verbs are most frequently used as converbs with verbs of motion; cf.:

- (63) a. *Rum Not +ənki-d’.*
 R. N. precede-FIN
 ‘Rum walked in front of Not.’
- b. *Rum j-ənki-r vi-d’.*
 R. him-precede-CONV.3SG go-FIN
 ‘Rum walked in front of him.’
- c. *Rum Not-ye v-ənki +v-ənki-t laq řu-d’-yu.*
 R. N.-COM.DU REC-precede REC-precede-CONV.3PL ski catch.up.with-FIN-PL
 ‘Rum and Not skied overtaking each other.’

3.6 Two isolated usages of the prefix *v-/u-/o-*

3.6.1 “Sociative”

A kind of sociative meaning can be discerned in the formal reciprocal under (64b), because eating from the same plate implies acting together. The reciprocal meaning of this form

would be ‘to eat each other’; the vestiges of this latter meaning are encountered in folklore in the noun under (64c). The prefix *u-* also occurs in the noun denoting dishes (from which people eat together):

- (64) a. *i-nʹ-* ‘to eat’
 b. *u-nʹ-* ‘to eat from the same plate’
 c. *u-nʹ-yr* ‘man-eater, ogre’
 d. *u-nʹ-s* ‘dish, plate’ (see also Panfilov 1965:50, 54).

We might as well include here three reciprocals derived from lexical comitatives (= discontinuous lexical reciprocals). They do not have a derived sociative meaning proper, because the meaning of joint action is inherent in the base verb and it is not marked by the reciprocal prefix, which is the case in (64b). In these verbs, the reciprocal prefix changes the underlying discontinuous lexical reciprocal construction into a simple lexical reciprocal construction.

- (65) a. *j-ajyo-* ‘to sleep with sb’
 b. *v-ajyo-* ‘to sleep together.’
 (66) a. *j-əv-* ‘to live with sb’
 b. *v-əv-* ‘to live together’ (in the meaning ‘to marry’ it is included in 3.2.2).
 (67) a. *i-yrə/-xrə/-kʹrə-* ‘to go/walk with sb’, ‘to be with/accompany sb’
 b. *u-yrə/-ū-rə-* ‘to go/walk together’, lit. ‘to be with/accompany each other’
 (the second form is a contraction of the first, with a compensatory long vowel).

Note that the adverb with the meaning ‘together’ is in fact a converbal form of the verb in (67b): *u-yrə-t* lit. ‘being with/accompanying each other’.

The following sentences illustrate the use of verbs (65) and (66):

- (68) a. *matʹkilk pʹ-əmək +ajyo-dʹ.*
 ‘The baby sleeps with his mother.’
 b. *v-əv +nʹivx-gu v-ajyo-dʹ-yu.*
 REC-marry person-PL REC-sleep.with-FIN-PL
 ‘Married people sleep together.’
 (69) a. *hə +vo-x nʹi pʹ-ηafq +əv-dʹ.*
 that village-ABL I REFL-comrade live.with-FIN
 ‘In that village I lived at my friend’s (place).’
 b. *hə +vo-x nʹəη pʹ-ηafq-xe v-əf-t hum-dʹ.*
 that village-ABL we REFL-comrade-COM.DU REC-live.with-CONV.1PL live-FIN
 ‘In that village I and my friend lived together.’

As a matter of fact, the first version the informant gave was *v-əv-dʹ-yu* but he corrected himself and replaced it by *v-əf-t hum-dʹ* explaining that the former would be more proper with the subject referring to a married couple (cf. (22k)).

3.6.2 Anticausative

The anticausative meaning is acquired by two derivatives from lexical reciprocals denoting conjoining (cross-linguistically, anticausatives with a reciprocal marker are most com-

monly derived from verbs with meanings like ‘to join’, ‘to collect/gather/assemble’). From (71b) in its turn a transitive verb is derived (by the causative suffix *-u-*) which is more or less close to (71a) in the meaning of joining some entities together; the respective member of derivational chain (70) is derived by means of the causative suffix *-gu-* (derivational chains of this type occur in other languages as well; see Nedjalkov & Nedjalkov, Ch. 26 on Yakut reciprocals, example (210)):

- (70) a. *j-opu-* ‘to collect/gather sth (seldom sb)’
 b. *v-opu-* ‘to come together, to gather/assemble’
 c. *v-opu-gu-* ‘to cause sb to come together/assemble.’
- (71) a. *j-ukr-* ‘to join sth with/to sth’
 b. *v-ukr-* ‘to be joined’ (O. 121)
 c. *v-ukr-u-* ‘to join together sth with/to sth’ (S. 58).
- (72) a. *if sobranie-roχ n’ivx-gu +opu-d’.*
 he meeting-ALL person-PL gather-FIN
 ‘He gathered the people for a meeting.’
 b. *n’ivx-gu klub-ux v-opu-d’-γu.*
 person-PL club-ABL REC-gather-FIN-PL
 ‘People gathered at the club.’

3.7 Lexicalization

In the case of lexicalization the standard semantic relationship between the base and the derived reciprocal is violated, though the derivative may have a reciprocal meaning as its only meaning or one of two or more (the reciprocal interpretation may be supported by the reciprocal pronoun, usually in the allative case; see (77)). So far, only three lexicalized reciprocals have been registered, and two of them contain the prefix *o-*, i.e. a variant of the reciprocal prefix which occurs in one more derivative only (see *o-zmu-* ‘to love each other’ in 3.2.2); cf.:

- (73) a. *e-ryop-/t’xop-/řxop-* ‘to annoy, bully’
 b. *o-ryop-* ‘to be enemies.’
- (74) a. *e-sqa-/q’ηa-/χηa-* ‘to reject/dislike’
 b. *o-sqa-* i. ‘to feel deeply offended’; ii. ‘be offended with each other.’
- (75) a. *j-aly-* ‘to reveal a secret, confide in sb’
 b. *v-aly-* ‘to sing love songs to each other’ (cf. *v-aly-lu* ‘love song’).

Compare the following examples:

- (76) a. *Not mangur e-ryop-t’.*
 N. very him/her-annoy-FIN
 ‘Not annoys him very much.’
 b. *Not Rum řxop-t’.*
 ‘Not annoys Rum.’
 c. *Not-γe Rum-ge o-ryop-t’.*
 N.-COM.DU R.-COM.DU REC-be.enemies-FIN
 ‘Not and Rum are enemies.’

- (77) *imŋ p'-ŋafq+ŋafq-doχ o-sqa-d'.*
 'They got offended with each other.'
- (78) *p'-at'ik-xon p'-nanak-xon e-zmu +bark*
 REFL-younger.brother-COM.PL REFL-elder.sister-COM.PL e-rejoice only
v-alχ-t hum-d'-yu. (P.2. 62)
 REC-reveal-CONV.3PL live-FIN-PL
 'The younger brother with his wife and the elder sister with her husband live only rejoicing and singing love songs to each other.'

3.8 Object-oriented reciprocal constructions

They are formed from reciprocals with the help of the causative suffix *-gu/-ku*; e.g.:

- (79) a. *if hə +n'ivy-gu +or-d'.*
 he this person-PL meet-FIN
 'He met these people.'
- b. *hə +n'ivy-gu v-or-d'-yu.*
 'These people met.'
- c. *if hə +n'ivy-gu-aχ v-or-gu-d'.*
 he this person-PL-CS REC-meet-CAUS-FIN
 'He arranged for these people to meet.'

4. Constructions with the reciprocal pronoun *p'-ŋafq+ŋafq* 'each other'

4.1 Introductory

While the prefix *v-/u-* always occupies the position of a direct object, the reciprocal pronoun may appear in any position a noun phrase can take, i.e. in the positions of verbal arguments and in the attributive position. But for pragmatic reasons it may not appear in all the case forms. The reciprocal pronoun is not attested in the form of the following cases: causee, comparative, instrumental and terminative. The reciprocal pronoun also combines with postpositions, like the reciprocal prefix.

- (80) a. *u-řara-in ...* 'opposite each other' (see (52b))
 b. *p'-ŋafq+ŋafq +t'ara-in ...* (same meaning).
- (81) a. *u-laRa +fi-t ...* 'being (situated) next to each other' (see (53))
 b. *p'-ŋafq+ŋafq +laRa +fi-t ...* (same meaning).

In specialist literature, forms with two reciprocal prefixes are also registered, namely *p'-ŋafq + p'-ŋafq*, and also the form *p'-ŋafq+ŋafq-xu* with a plural marker (see Panfilov 1965:63).

4.2 Diathesis types

The reciprocal pronoun may replace the prefix *v-/u-* in all the cases of its reciprocal use. This pronoun is an active productive means of expressing reciprocity and has no restrictions (apart from the most trivial ones) on its usage.

4.2.1 “Canonical” constructions

4.2.1.1 *With two-place transitives.* In this type of constructions, the reciprocal pronoun takes a direct object position. As has been mentioned above, it may be substituted for the reciprocal prefix, without any noticeable change of meaning, but they cannot co-occur because they fill the same slot (though it may sound strange, because one of them is a prefix and the other a pronoun); cf.:

- (82) a. *ōla-gu j-ayay-dʹ.*
 ‘The children annoy somebody (other than 1st or 2nd p.).’
 b. *ōla-gu pʹ-ətək +ayay-dʹ.*
 child-PL REFL-father annoy-FIN
 ‘Children annoy their father.’
 c. *ōla-gu v-ayay-dʹ-yu.*
 child-PL REC-annoy-FIN-PL
 ‘The children annoy each other.’
 d. *ōla-gu pʹ-ηafq+ηafq +ayay-dʹ-yu.*
 (same as (c)).

In (83), the comitative group with the suffix *-yon* is a component of the subject of the embedded clause, its first component being omitted to signal its generalized meaning:

- (83) *mrolf +nʹivx-gu pal-ux məy-ηan pʹovo təf +pʹi-dʹ-yon*
 ancient person-PL taiga-ABL descend-CONV at.once house be.situated-dʹ-COM.PL
pʹ-ηafq+ηafq +mot-tʹ uiy-gu-dʹ. (T)
 REC smell-FIN taboo-CAUS-FIN
 ‘Ancient Nivkhi considered (-*gu* = CAUS) it a sin to exchange kisses with those who had stayed at home, on immediate return from the taiga.’
 (84) *mlə-von-gu pʹ-ηafq+ηafq +bark +nʹřə-ta rolo*
 other.world-inhabitant-PL REC only see-and.3PL mutually
kʹespʹur-ta ha-dʹ-yu +pʹuru. (T)
 converse-and.3PL AUX-FIN-PL EVID
 ‘The inhabitants of the other world kind of see only each other and converse among themselves.’

4.2.1.2 *With two-place intransitives.* The following examples illustrate this type of reciprocals:

- (85) a. *if pʹ-ηafq-roχ um-dʹ.*
 he REFL-comrade-ALL be.angry-FIN
 ‘He is angry with his comrade.’

- b. *arti+arti p'-nafq+nafq-rox um-dox q'au-t pan'-d'-yu.* (T)
 always REC-ALL be.angry-ALL NEG-CONV.1PL grow-FIN-PL
 'We grew up without ever being angry with each other.'
- (86) *had'-yu u-t'ara-fi-t p'-nafq+nafq-rox vɔj +vɔj-d'-yu.*
 this-PL REC-opposite-be.situated-CONV.3PL REC-ALL smile smile-FIN-PL
 'Those, being opposite each other, smile at each other.'

4.2.2 "Indirect" constructions

Here are examples:

- (87) *imɨ p'-nafq+nafq-rox pityə +daju-d'-yu.*
 they REC-ALL letter write-FIN-PL
 'They write letters to each other.'
- (88) *ra +n'ivx-gu p'-nafq+nafq-uin čxa +ot'-t' muli-d'-yu.* (T)
 drink person-PL REC-LOC money ask-NR do.often-FIN-PL
 'Drinking people often ask each other for money.'

4.2.3 "Possessive" constructions

As well as in the case of verbs with the reciprocal prefix, the reciprocal pronoun is attached to a direct object denoting a body part. It functions as a syntactic attribute.

- (89) *p'-nafq+nafq +təmk +za-t čalrju-t haRa-t*
 REC hand clap-CONV.3PL make.noise-CONV.3PL laugh-CONV.3PL
e-zmu-d'-yu. (P.2. 63)
e-rejoice-FIN-PL
 lit. 'Clapping each other's hands, making noise, laughing, they rejoiced'; cf. 3.2.2.
- (90) *t'avda +mor p'-nafq+nafq +əng-yu +has-d'-yu.* (T)
 snake two REC mouth-PL bite-FIN-PL
 lit. 'Two snakes bit each other's mouths.'

5. Lexical reciprocals

Lexical reciprocals presuppose identical symmetrical actions of two or more agents/ patients. The following groups can be distinguished, partially overlapping with some material considered above (the lists are based on (S)).

1. *One-place intransitives.* These are the following verbs whose lexical meaning implies two or more identical or different entities expressed by the subject:

- (91) a. *vulki-* 'to be of the same height'
 b. *verke-* 'to be of the same width' (see also (45)–(48))
 c. *ena-* 'to be different/alien'
 d. *rurɨnu-* 'to be the same in shape' (O. 123); 'to look alike (of faces)' (S. 313).

2. *Two-place intransitives.* This group comprises verbs which imply two or more participants. They can be expressed either by a plural subject or by a subject and object, the latter in the allative or in the comitative case. These verbs denote communication, ag-

gressive actions, competition, etc. In the simple construction, they may combine with the reciprocal pronoun in the allative case or with reciprocal adverbs provided their lexical meaning allows it (see Section 6). Here is a list of these verbs:

- | | | |
|------|---|---|
| (92) | <i>čozju-</i> ‘to whisper to each other’ | <i>uymu-</i> ‘to fight/wrestle/compete’ |
| | <i>k’esp’ur-</i> ‘to converse’ | <i>va-</i> ‘to fight’ |
| | <i>ηe-</i> ‘to quarrel’ | <i>vayz+vayz-</i> ‘to divorce’ |
| | <i>orylau-</i> ‘to be enemies’ | <i>var-</i> ‘to compete in dog-sledge racing’ |
| | <i>osqe-</i> ‘to be enemies’ | <i>vukr+vukr-</i> ‘to be tied together (ropes, etc.)’ |
| | <i>p’al-</i> ‘to argue’ | <i>vamu-</i> ‘to consult/take counsel’ |
| | <i>rev-</i> ‘to copulate’ | <i>vask-</i> ‘to wrestle competing in strength’ |
| | <i>t’ox-t-</i> ‘to come to an agreement.’ | |
- (93) a. *atik amək-xe čozju-d’.* ‘Granny is whispering with mother.’
 b. *if p’-az-ge ηe-d’.* ‘He quarrelled with his boss.’

3. *Two-place transitives.* In the first place, here belong some of the verbs considered above when they are used in discontinuous constructions, i.e. when governing a direct object. Since they also occur in simple constructions, like other verbs that take the reciprocal prefix, they are dealt with in Section 3.3 under (37)–(38) and in footnote 3. They are included among lexical reciprocals because they can be used in the following diagnostic pair of synonymous constructions: (a) *atək amək +or-d’* ‘Father met mother’ = (b) *amək atək +or-d’* ‘Mother met father’. The following verbs also belong here:

- | | | |
|------|--|---|
| (94) | a. <i>j-op-/op-</i> | ‘to gather sth/sb’ |
| | b. <i>j-or-/or-</i> | ‘to meet sb’ |
| | c. <i>j-osk-/osk-</i> | ‘to meet sb face to face’ |
| | d. <i>lav-</i> | ‘to be beside/close to sth/sb’; cf.: |
| | e. <i>Väckən-ge Xevgun-ge laf-t nəη-d’-yu.</i> | ‘Vychkin and Xevgun walk side by side.’ |

4. *Three-place transitives.* This group covers three-place (object-oriented) transitive verbs denoting *joining* or *separating* of two or more entities. A number of these transitives have only one morphological variant and in some of them the initial *v-* alternates with other consonants; cf.:

- | | | |
|------|--------------------------------|------------------------------------|
| (95) | <i>loqrgu-</i> | ‘to join together’ |
| | <i>roz-/toz-/doz-</i> | ‘to distribute/divide’ |
| | <i>ulza-</i> | ‘to lay out/spread out/distribute’ |
| | <i>vayzu-/bayzu-/payzu-</i> | ‘to disconnect’ |
| | <i>varu-/baru-/paru-</i> | ‘to conjoin/connect’ |
| | <i>vazu-</i> | ‘to sew together/join/connect’ |
| | <i>vevu-</i> | ‘to separate’ |
| | <i>vorvor-/borvor-/porvor-</i> | ‘to alternate’ |
| | <i>valk-/balk-/palk-</i> | ‘to mix/stir together’ |
| | <i>vər-/bər-/pər-</i> | ‘to partition off’ |
| | <i>vəzy-/bəzy-/pəzy-</i> | ‘to mix/stir.’ |
- (96) a. *atək p’i i-x +čə uvu +uvu +lət-r vayzu-d’.*
 father REFL it-kill fish share share make-CONV.3SG divide-FIN
 ‘Father divided the fishes he had caught into shares.’

- b. *amək pos roj-gur torpas +pazu-dʹ.*
 mother material lack-CONV.3SG oversleeve sew.out.of.two.strips-FIN
 ‘Because she was short of material, mother made oversleeves out of two strips.’
- c. *if anʹv-ux tʹus + vevu-dʹ.* ‘He separated meat from the bones.’ (S. 50).
- d. *nʹi tʹir +moqs-ku loqrgu-dʹ.* ‘I joined together pieces of wood.’ (P.2. 16).

In sentences with verbs of conjoining, the postposition *tomsk/romsk* with the spatial reciprocal meaning ‘together’ may be added pleonastically; it seems to be used only in object-oriented constructions:

- (97) *i-tʹoŋr +ŋaur +po-ror, pʹ-ŋar-ke +romsk +vazy-dʹ.* (T)
 his-head brain take-CONV.3SG REFL-blood-COM.DU together mix-FIN
 ‘Taking the brain from his head, [he] mixed it together with his own blood.’

As we see, lexical reciprocals contain initial phonemes which are materially identical with the reciprocal prefix, and they do not occur without these phonemes (see also (48)). This may be due to the following reasons: (a) the underlying base verb has gone out of use (thus the complex base *-y-mu-* (see *uymu-* in (92)) composed of the verbs ‘to kill’ (see (1a)) and ‘to die’ is not used without the fossilized reciprocal prefix *u-*); (b) due to mutual semantic attraction the underlying lexical reciprocal began to be always used with the reciprocal prefix with the latter being desemantized, or, most likely, (c) accidental coincidence (thus, for instance, the verb *vaz-u-* ‘to sew two strips together (into a fishing net, etc.)’ is derived from the noun *pas* i. ‘fishing net strip’, ii. ‘long strip of material’ by means of the suffix *-u*; the latter noun is in its turn derived from the verb *va-* ‘to tie/bandage’; see Panfilov (1965:17).

6. Reciprocal adverbs *orχ+orχ* and *rolo* ‘mutually’

It has been claimed that the adverb *orχ+orχ* ‘mutually’ is comprised of two components, the allative case ending *-rχ* and the stem *o-* which is supposedly genetically related to the reciprocal prefix *u-/o-*. As well as in the case with *o-zmu-* ‘to love each other’, a shift analogous to *e-rχ < if +roχ* supposedly took place here (Panfilov 1965:63; see case 2 in Section 8 below). This adverb combines with two-place intransitives mostly denoting “negative” actions. In the list below, there are not only “negative” verbs but also some verbs with “positive” meanings; as the native speakers point out, the reciprocal adverb is most natural with verbs of negative actions. The expression of plurality is obligatory both on the subject and on the predicate; cf.:

- (98) a. *amək ətək-roχ tʹaxta-dʹ.*
 mother father-ALL get.angry-FIN
 ‘Mother got angry with Father.’
- b. *amək-xe ətək-xe orχ+orχ tʹaxta-dʹ-γu.*
 mother-COM.DU father-COM.DU mutually get.angry-FIN-PL
 ‘Mother and Father got angry with each other.’

The following list contains nearly all two-place intransitives that can take the reciprocal adverb. As we see, all of them denote emotional attitudes to persons. These verbs can also take the reciprocal pronoun (cf. (85b)):

- (99) *imη orχ+orχ bayr-d'-yu.* 'They are ashamed of each other.'
imη orχ+orχ t'axta-d'-yu. 'They got angry with each other.'
imη orχ+orχ kinnu-d'-yu. 'They are kind to each other.'
imη orχ+orχ k'evara-d'-yu. 'They are friendly with each other.'
imη orχ+orχ k'eγhaj-d'-yu. 'They feel shy before each other.'
imη orχ+orχ osqa-d'-yu. 'They are offended with each other.'
imη orχ+orχ qala-d'-yu. 'They hate each other.'
imη orχ+orχ san'-d'-yu. 'They are annoyed with each other.'
imη orχ+orχ um-d'-yu. 'They are angry with each other.'

Another adverb which is close in meaning to *orχ+orχ* is *rolo* 'mutually, among themselves'. It is similar to the former one in that it usually collocates with verbs denoting "negative" or at least neutral actions (see (84)), i.e. it does not occur with verbs meaning 'to be friendly' and the like. Neither of these adverbs can substitute for the reciprocal prefix or for the reciprocal pronoun in direct object position; cf.:

- (100) a. *imη rolo ηe-d'-yu / əuz-d'-yu.* (P. 1965:63)
 'They quarrel between themselves.'
 b. *imη rolo va-d'-yu.*
 'They fight with each other/between themselves.'
 c. *Rum-ge Not-ye rolo/p'-ηafq+ηafq-doχ osqa-d'-yu*
 'Rum and Not got mutually offended.'

7. Lexical means of expressing sociativity

Note that the words *orχ+orχ*, *rolo* and *tomsk/romsk* (see Section 6 and (97)) and the following three words with the sociative meaning, viz. *ron'*-, *ro-*, *ror-*, contain the syllable *ro-* or the vowel *-o-*. The first two of the latter are mostly used as converbs. The verb *ron'*- 'to do sth together' is used with three verbs which denote consuming: *i-n'*- 'to eat', *ra-/-ta-/-da-* 'to drink, to smoke', *tamx-ta-* 'to smoke' (a compound comprised of the noun *tamx-* 'tobacco' and the verb *ra-*); cf.:

- (101) *u-γrə-γət-t* *təvy-t* *ron'-t* *tamxta-ta*
 REC-accompany-ASP-CONV.3PL enter-CONV.3PL do.together-CONV.3PL smoke-and
k'esp'ur-ta. (T)
 converse-and
 'Having entered the house together, [they] smoked together and conversed.'
- (102) *p'-ōla-ke* *[ron'-t]* *čaj +ra-d'.*
 REFL-child-COM.DU do.together-CONV.3PL tea drink-FIN
 '[Somebody] with his/her child [together] drinks tea.'

The converbal form *ron*²-*t* emphasizes the comitative meaning in (102) which is also expressed by the comitative suffix *-ke*, therefore *ron*²-*t* can be easily omitted.

Another lexical means of expressing the sociative meaning is the verb *ro*-/*to*-/*do*- which otherwise renders the meaning ‘to help’: when used in converbal form it acquires the meaning ‘together’. In the literature this verb is treated as a postposition *ro-r/ro-t/...* ‘together with’. There is also a verb *ror*-/*tor*-/*dor*-: one of its meanings is ‘to invite for a joint action’. Cf.:

- (103) *megi mat'ka-ke ro-t ler-t pan*²-*d*. (T)
 we.DU be.little-COM.DU do.together-CONV.1PL play-CONV.1PL grow-FIN
 ‘You and I grew up since childhood playing together.’
- (104) *if p*²-*əkən +ro-r t*²*iyr +t*²*a-d*.
 he REFL-brother together-CONV.3SG firewood chop-FIN
 ‘He chops firewood together with his brother.’
- (105) *if p*²-*ηafq-xu dor-d*.
 ‘He invited his friends for some work together.’

8. The origin of the reciprocal markers

We have considered three reciprocal markers: the pronoun *p*²-*ηafq+ηafq*, the adverb *orχ+orχ* and the prefix *v*-/*u*-/*o*-. What follows is a tentative discussion of the possible origin of these markers.

1. The reciprocal pronoun *p*²-*ηafq+ηafq* ‘each other’. Its derivation corresponds to the common standard across languages: reduplication of a noun meaning ‘person’, ‘body’ or ‘body part’, or ‘comrade’ which is a lexical reciprocal. In Nivkh, reduplication is also employed to express the plural and also the distributive meaning. As is known, the latter meaning (‘each of a number considered separately’ as opposed to ‘all (members)’) can be subject-oriented (e.g. ‘each of them saw them’) and object-oriented (e.g. ‘they saw each of them’). The reciprocal pronoun may have developed according to the following pattern:

- (106) a. *urk* ‘night’ → *urk+urk* ‘each/every night’
 b. *n*²*in* ‘one’ → *n*²*in+n*²*in n*²*ivx* ‘each/every man’ (P.1. 25)
 c. *p*²*i* (NOM) ‘oneself’ → *p*²*i+fi* ‘each one (praises, etc.) his own self/himself’
 (K.2. 306)
 d. *en*² ‘skis’ → *p*²-*en*² ‘one’s own skis’ → *p*²-*en*²+*f-en*² ‘they (took, put on, etc.)
 their own skis each’ (P.1. 97)
 e. *ηafq* ‘comrade/friend’ → *p*²-*ηafq* ‘one’s own comrade’ → *p*²-*ηafq+ηafq*
 ‘each other.’

The prototypical reciprocal meaning is essentially “a sum” of reflexivity and a kind of subject- and object-oriented distributivity simultaneously: “*each agent_i sees each patient_k*”, and the reflexive *p*²- indicates coreferentiality of the agents and patients: “*each agent_i sees each patient_i*”.

2. The reciprocal adverb *orχ+orχ* ‘mutually’. The opinion that this adverb is composed of the reciprocal marker *o*- and the allative case marker *-toχ/-poχ/-doχ* (Panfilov 1965:63)

is not convincing, because prefixes, which do not function as separate words, are not likely to combine with suffixes. It is more likely that this adverb is related to the word *orχ/orq* ‘back, backwards’,⁵ probably not without the influence of the lexical reciprocal *j-or-* ‘to meet’. The possibility of a kind of contamination of these two words cannot be dismissed, it seems, because ‘to meet’ also includes the meaning of motion towards each other though in fact it is motion in opposite directions. It may be useful to list all the words with this root (the alternation *-q/-χ/-γ* is positional):

- (107) *orq-toχ* ‘back, backwards’
orχ-aχ ‘tide when the sea is ice-bound’, lit. ‘backward water’ (S. 247)
orq-ot- ‘to fall down from a tree/hill’ (i.e. in the direction opposite to the initial direction; *ot-* means ‘to move backwards’) (S. 246, 249)
ory-lau- ‘be enemies’, lit. ‘back[wards] + argue’; *lau+lau-* ‘to argue’ (S. 246)
orq ‘a bow used to shoot into the air at the “bear” celebration’ (S. 246) (if shot into the air, an arrow falls back on the ground)
orχ+orχ ‘mutually’ (lit. ‘backwards backwards’).

3. The reciprocal prefix *v-/u-/o-*. It is related to the pronominal direct object markers *j-/i-/e-* which are replaced by the three variants of the prefix respectively to express reciprocity (see 2.3 and (22)–(24), and also columns (a) and (b) under (108)). As has been mentioned, verbs without these object markers do not take the reciprocal prefix *v-/u-/o-*.

It has been claimed that the reciprocal prefix is descended from the pronoun *if* ‘s/he’ (in the nominative case; it is used to refer to humans only, including anthropomorphic use), since it is materially similar to the possessive marker *v-* (contained in *if*), as in *v-ətək* ‘his/her father’ (see Panfilov 1965:62). Let us consider this possibility. The pronoun *if* is composed of two components each occurring in two variants in various case forms (and subdialects?), *i-/j-* and *-f/-v*.⁶ The more archaic Eastern Sakhalin dialect uses the first component only (with one possible exception, see *avη* and *av-gun* below) which is followed by *-aη* in some of the case forms, e.g. in the nominative *j-aη* ‘s/he’. (The component *aη* has been preserved in the Amur dialect as a free interrogative pronoun meaning ‘who?’, ‘whom?’, ‘whose?’). The first component of these pronouns should be regarded as the most archaic in the function of the 3SG pronoun: it is preserved in the Northern Sakhalin di-

5. This reminds us of the fact that the term “reciprocal” is derived from the Latin *reciprocus* ‘reverse, back (motion), moving back and forth’.

6. The sounds in these pairs are similar enough and they are easily interchangeable in different positions. Thus [i] when followed by a vowel changes into the consonant [j] which, as instrumental investigations show, is sonorant to such a degree that it is practically indistinguishable from a vowel. The consonants [f] and [v] are labio-dental fricatives with weak dental articulation and therefore they produce an effect of bilabial fricatives, which makes [v] closer to the bilabial [w]. The alternant [u] of the reciprocal marker is phonetically close to the latter two consonants in that it is also pronounced without sharply protruding lips (Zinder & Matusevich 1937: 119, 123, 125; Rushchakov 1981:92, 115).

allect, as *i* 's/he'⁷ (it is also possible that the latter pronoun is a result of the loss of the second component).

A discussion of the origin of the reciprocal prefix requires taking into consideration the data of the following table which clearly shows, it seems, that this marker could not have developed from the 3SG pronoun *if* because in the Eastern Sakhalin dialect the second component of this pronoun does not occur in any of the forms of the 3SG pronoun. In the table below slashes indicate variants in complementary distribution, including tendencies (due to the position before the initial vowel or consonant, relics of vowel harmony, different case forms); semicolons divide free and/or subdialectal variants.

(108)	a. Reciprocal prefix	b. Direct object prefix	c. Pronominal root in case forms	d. Pronominal possessive suffix
Eastern Sakhalin dialect	<u>w-</u> / <u>u-</u> / <u>o-</u>	<i>j-</i> / <i>i-</i> / <i>e-</i>	<i>j-</i> / <i>j-aŋ-</i> / <i>e-</i>	<i>j-</i> / <i>ja-</i> ; <i>j-aŋ-</i>
Amur dialect	<u>v-</u> / <u>u-</u> / <u>o-</u>	<i>j-</i> / <i>i-</i> / <i>e-</i>	<i>j-</i> / <i>i-</i> / <i>e-</i> ; <u>if-</u> / <u>iv-</u>	<u>v-</u> / <i>i-</i> / <i>e-</i> ; <u>vi-</u> / <u>ve-</u>

Verbs illustrating columns (108a) and (108b) can be found under (6), (22)–(24). The Eastern Sakhalin dialect differs from the Amur in that the Eastern Sakhalin [w] corresponds to the Amur [v]. The Amur [v] is a merger of [v] and [w] (cf. the Amur *va*- i. 'to fight', ii. 'to bandage/bind' and the Eastern Sakhalin *wa*- 'to fight', *va*- 'to bandage/bind').⁸

Illustrations for the Amur dialect (108d) are given in (16).⁹ Here are illustrations for the Eastern Sakhalin (108d):

- (109) a. *j-af* 'his beard' (cf. Amur *v-əf* 'his beard')
 b. *ja-mu* 'his boat' (cf. Amur *i-mu* 'his boat')
 c. *ja-ruř* 'his meat' / *jaŋ-xəv+tuř* 'his bear meat' (cf. Amur *i-d'us* 'his meat').

(110) illustrates (108c). Column **A** contains a number of case forms for the Eastern Sakhalin dialect, and columns **B1** and **B2** contain the respective case forms from Amur subdialects. Column **B1** forms mostly coincide with those of column **A**, which most likely testifies to their being an older type. Column **B2** forms (unusual to G. Otaina) are a historically later type (like the 3SG possessive prefixes with the marker *v-*):

7. The addition of the morpheme *-aŋ* in the Western Sakhalin dialect and *-f-v* in the Amur dialect to the base marker **i* 's/he' is accounted for by "the unsuitability of the extremely short form for autonomous use" (Jakobson 1958: 271).

8. The shift [w > v] is facilitated by the phonetic proximity of the two sounds and by the isolated position of [w] in the system of phonemes: this is the only voiced consonant that has no voiceless counterpart.

9. There are two more forms of personal pronouns, with the same stems as the prefixes: the attributive form (suffix *-eo*) and the predicative form (suffix *-nə*); cf.:

- (i) a. *n'i* 'I' → *n'-eo* 'my', *n'i-nə* 'is mine'
 b. *if* 's/he' → *v-eo* 'his/her', *vi-nə/ i-nə* 'is his/hers.' (P.1. 258)

(110)		A	B1	B2
a.	Nominative	<i>j-aŋ</i>	<i>i-f</i>	<i>if</i>
b.	Causee	<i>j-aχ</i>	<i>j-aχ</i>	<i>iv-aχ</i>
c.	Ablative	<i>j-ux</i>	<i>j-ux</i>	<i>iv-ux</i>
d.	Allative	<i>e-rχ</i>	<i>e-rχ</i>	<i>if-toχ</i>
e.	Instrumental	<i>j-aŋ-gir</i>	<i>i-yir</i>	<i>if-kir</i> (S. 517–9).

These data seem to indicate, as we have just mentioned, that the reciprocal prefix is not descended from the (second component of the) pronoun *if* immediately nor from the possessive marker *v-* (despite its material identity with the latter). The data of the Eastern Sakhalin dialect support this conclusion: in this dialect the reciprocal suffix is identical with that of the Amur dialect and the component *v* occurs only in the honorific forms *avŋ* ‘s/he’ and *av-gun* ‘they’ (Krejnovich 1979: 305), but they could hardly be the source of the reciprocal prefix.

We propose the following solution which concerns, firstly, reconstruction of the reciprocal marker and, secondly, its possible semantic connections. It seems to follow that the reciprocal marker most likely evolved from a free (pronominal) base whose first component was most probably *u-* and the second component *-n*. The existence of this latter component is indicated by the character of the alternation of the consonant that follows the reciprocal prefix. Thus, the noun *təmk* ‘hand’ when preceded by an attribute with a final vowel must necessarily change its initial plosive into fricative *r*:

- (111) a. *təmk* ‘hand’
 b. *Batka+rəmk* ‘Batka’s hand’,

but when used with the reciprocal prefix (see (34)) this consonant alternates with the voiced plosive *d*, as in the cases with the preceding *n* or *ŋ* (in (111c) reduplication marks plural distributivity; alternation *təmk* > *rəmk* is determined by the preceding *k*):

- c. *u-dəmk+rəmk* ‘each other’s hands’ (← **un-dəmk+rəmk*)
 d. *imŋ+dəmk-xu* ‘their hands’.

This proves that once the reciprocal prefix contained the final *n* which was lost very much like *-aŋ* in the pronoun *jaŋ* (cf. (109), (111e), (6), and (7)). When followed by an initial vowel, the vowel *u-* changed into *w-* (and then into *v-* in the Amur dialect). It remains semantically unclear in what way historically the component *-f/-v* appeared in the pronoun *if* ‘s/he’ and how it came to be used as a possessive marker.

Note that the pronoun *if* ‘s/he’ when used attributively causes the same alternation as the reciprocal prefix, which indicates that this alternation developed when the pronoun had the same material form *jaŋ* ‘s/he’ as in the present-day Eastern Sakhalin dialect; cf.:

- e. *i-dəmk* ‘his hand’ (← **jaŋ-dəmk*).

The reciprocal prefix behaves in a similar manner when used with the postposition *t‘ara-/-žara-* ‘opposite’, viz. it retains the following plosive; cf.:

- (112) a. *t'ara-* 'opposite'
 b. *čolŋi+řara-in* 'opposite a deer' (-*in* is a locative case marker) (cf. (111b))
 c. *u-t'ara-in* 'opposite each other', cf. (111c); see also (49b), (50a), (52), (55)
 d. *imŋ+t'ara-in* 'opposite them', cf. (111d)
 e. *i-t'ara-in* 'opposite him', cf. (111e).

Above, in version 3 of Section 8, we have cited some arguments in favour of the reconstruction of the reciprocal pronoun which served as a source for the reciprocal prefix. The nature of the alternations allows to reconstruct two forms for this pronoun, **un* or **uŋ*. We prefer the first of these forms because it is this form that is materially identical with an affix whose meaning is close to the reciprocal.

There are grounds to assume that the root **un* was once related to the meaning of (collective) plurality: the component *-un* is a part of the plural suffix *-k-un* in the Eastern Sakhalin dialect (the marker *-n* serves as a plural marker in the personal pronouns in this dialect; see (14j-l)). The first component of this suffix, as *-k-/-g-/-γ-/-x-*, could function in this very meaning in the past (see Krejnovich 1979: 301) on its own and in all the dialects of present-day Nivkh it is a part of the suffixes of plurality and comitativity (cf. *-ke/-ge/-ye/-xe* for dual and *-kon/-gon/-yon/-xon* for plural comitativity; see (20) in 3.2.1). It occurs in numerous terms of kinship, e.g., *əmək* 'mother', *ətək* 'father', *atak/atk* 'grandfather', *ət'ik* 'grandmother', *at'ik* 'younger brother', *ninak* 'elder sister', etc. Its presence in these terms is accounted for by the fact that each of them denotes a class of individuals. Thus *əmək* (1) 'mother' also refers to (2) the wives of the father's brothers, (3) the sisters of the wives of the father's brothers, (4) the mother's sisters, and (5) the sisters of the father-in-law. Other kinship terms may possess analogous sets of meanings (material similarity of the marker of the kinship terms and the collective marker is also observed in a number of other languages). This suffix is also used in personal feminine names, e.g.: *Puzi-k* ← *puzi-* 'to bustle about'.

In the Amur dialect, the suffix of the plural number is *-ku/-gu/-yu/-xu*, while the Eastern Sakhalin dialect has preserved an older two-component form with the final *-n*: *-k-un/-g-un/-γ-un/-x-un* (cf. *təf* 'house' – *təf-ku* 'houses' and *taf* 'house' – *taf-kun* 'houses' respectively) as well as the suffix *-k, -kun/-gun/...* which is also used to derive personal names, but it forms masculine names (e.g.: *Pil-gun* ← *pil-* 'to be big'). Compounding of two or more semantically close affixes is common enough cross-linguistically. This final component was once present in the following two kinship terms derived from the nouns 'father' and 'mother' respectively (in (114b) *k > g* because of the preceding *-m-*):

- (113) a. *ə-t-ək* 'father, etc.'
 b. *u-t-k-u* 'man, husband, etc.'
 c. (< **u-t-k-un*)
- (114) a. *ə-m-ək* 'mother, etc.'
 b. *u-m-g-u* 'woman, wife, etc.'
 c. (< **u-m-g-un*).

The reconstructions under (113c) and (114c) are supported by the fact that (113b) and (114b), when used attributively, require the same alternation of initial consonants of the head noun as the reciprocal prefix *u-* (< **un-*) and nouns with the final *-n* or *-ŋ*; cf. (115) and (111b, c, d):

(115) *təm̩k* ‘hand’ → *utku +dəm̩k* ‘man’s hand’; *umgu +dəm̩k* ‘woman’s hand’.¹⁰

We see the above as arguments in favour of the hypothesis that (a) Proto-Nivkh possessed a reciprocal pronoun **un*, and (b) this word was genetically related to the marker of plurality.¹¹

Acknowledgments

We are grateful to Katja Gruzdeva for her valuable comments on the prefinal version of this paper which have helped to avoid some errors.

10. This is probably a solution to the problem posed by Krejnovich (1937:44) concerning the reasons why *umgu*, *utku* and also the initial *i-* (and, we may add, the reciprocal *u-*) require an initial plosive instead of the expected fricative in the head noun it precedes.

11. In this connection, note the above mentioned (see 1.2) material similarity (which may be accidental) of the reciprocal prefixes in three languages which might have been geographically contiguous in the past (in any case, there seem to have been no other languages that might separate them from each other): Nivkh *v-/u-/o-*, Ainu *u-*, and Itelmen *lu-/lo-*.

1. Introduction

1.1 The Ainu language

It is the language of the Ainu (the self-name meaning ‘person’), a people living on the island of Hokkaido in Northern Japan. The Ainu also occupied a considerable part of the island of Honshu (until the 19th century), the Kurile islands (until the beginning of the 20th century), the southern part of Sakhalin (until the middle of the 20th century), and the southern part of Kamchatka. Ainu was a spoken language until the 1960s. At present, there are only a few persons aged 80–90 on Hokkaido who remember their native language. The Ainu language is practically extinct now. All the Ainu speak Japanese. Attempts have been made to revive Ainu artificially (see Alpatov 1988: 29–30; Maher & Yashiro 1995: 103–24) but they have failed.

Once powerful and fearless warriors, the Ainu occupied a considerable part of the territory of the future Japan, but after long wars they were ousted from Honshu, and their numbers dwindled to a mere 16,000, but pure-blood Ainu probably number less than 1 percent of this figure (Shibatani 1990:3); the exact number of the Ainu is unknown because questions about nationality are not included in the Japanese censuses; there are other figures up to 35–40,000 (*Daily Yomiuri* 07.04.1985).

The Ainu, with their thick black beards, long heads with wide flat faces and other physical peculiarities, are sharply different from the neighbouring Mongoloid peoples. The mystery of their origin has been attracting the attention of anthropologists and lin-

guists for a long time. Some modern anthropologists regard the Ainu as descendants from the Neolithic Jomon people of Japan (some other scholars regard the Jomon people as one of the Austronesian peoples). The Ainu probably descend from the early stage of the Mongolian stock prior to its differentiation (Kozintsev 1993: 105).

The genetic relations of the Ainu language are not clear. It is unrelated to Japanese, and it is probably best described as a language isolate, although recently a relation with Altaic languages has been suggested. There are also some Ainu-Nivkh parallels including reciprocal prefixes: *v-/u-/o-* in Nivkh and *u-* in Ainu.

Many Ainu texts were written down by Japanese (Kyoosuke Kindaichi, Mashiho Chiri, Suzuko Tamura, Kyooko Murasaki, Hideo Kirikae, Tomomi Satoo, Hiroshi Nakagawa and others), English (J. Batchelor) and Russian (N.A. Nevskij, M.M. Dobrotvorskij, and B. Pilsudski, the latter one of Polish origin) and Polish (A. Majewicz) linguists. The Ainu folklore is extremely rich but Ainu was not a written language.

There were many dialects of Ainu with significant differences between them (at least 7 Sakhalin and 13 Hokkaido dialects), but the information about them is scanty. The main dialect groups are Southwestern Hokkaido (Saru, Horobetsu, Yakumo, Oshamambe dialects and others), Northeastern Hokkaido (Ishikari, Bihoro, Nayoro, Soya, Shizunai, etc.), Sakhalin (Raichishka dialect and others) and Kurile (see Majewicz 1984). There was also Epic Ainu with some peculiarities. In K. Murasaki's opinion, the distinctions between the Hokkaido and Sakhalin dialects are considerable. The differences between the dialectal groups concern mainly phonetics and lexicon but there are some grammatical ones. For instance, differentiation between inclusive and exclusive forms exists only in the dialects of Southern Hokkaido. There is no significant dialectal variation with regard to reciprocals (see 1.3).

The most exhaustive cross-dialectal comparison is to be found in Hattori (ed. 1964) and Asai (1974).

1.2 Overview

The reciprocal meaning is commonly expressed by the prefix *u-* (the glottal stop is obligatory in morpheme-initial vowels although it may disappear in intervocalic position; henceforth it is not marked). In most cases (except object-oriented and "indirect" reciprocals), reciprocal derivation involves intransitivization; cf.:

- | | | |
|-----|--|------|
| (1) | a'. <i>Kani anak huci ku-koyki</i> (OI.) | (vt) |
| | I TOP granny 1SG-bully | |
| | 'I bullied granny.' | |
| | a". <i>Huci [kani] en-koyki</i> (OI.) | (vt) |
| | granny me 1SG-bully | |
| | 'Granny bullied me.' | |
| → | b. <i>[Cokay] u-koyki-as</i> (OI.) | (vi) |
| | we.EXC REC-bully-1PL.EXC | |
| | 'We bullied each other.' | |

Sociative derivation does not involve any valency change (for a puzzling exception see 4.1.1.2). The sociative meaning has no specialized marker. It is commonly expressed by the reciprocal prefix *u-* in combination with the polysemous applicative prefix *ko-* both functioning as a single prefix. From a purely morphological viewpoint, sociatives are reciprocals derived from applicatives. It is tempting to treat generally all sociatives as reciprocals derived from comitative applicatives. (A kind of analogy to this phenomenon is the derivation of sociatives in Kabardian; see Kazenin, Ch. 17, §5). In nearly all cases, however, the combined prefix *uko-* (and less frequently *ue-*) functions, we repeat, as a single sociative morpheme, i.e. these derivations are semantically related immediately to the non-applicative base verb without the prefix *ko-* rather than to the formally intermediate applicative form in *ko-* (this latter form may be lacking). Thus, semantically, (2b) relates to (2a) rather than to (2c):

- | | | | | | |
|-----|-----|---------------|---|---|------|
| (2) | a. | <i>pakoat</i> | ‘to be accused of a crime’ (T4. 507; OI.) | (vi) | |
| | → | b. | <i>uko-pakoat</i> | ‘for everyone to be accused of crime together’ (T4. 760; OI.) | (vi) |
| | cf. | c. | <i>ko-pakoat</i> | ‘to get/become involved in sth’ (T4. 331) | (vt) |

The prefix *uko-* is also productive as a marker of object-oriented reciprocals (cf. *ninu* ‘to sew sth’ (T4. 419) → *uko-ninu* ‘to sew sth (two or more things) together’; T4. 759) (see 5.1.2).

Another means of expressing the sociative meaning is the reciprocal prefix in combination with the causative suffix, serving as a sociative marker; and in the Sakhalin dialects this combination also serves as a plural marker (see Section 7).

The reciprocal prefix combines with certain nouns as a marker of the dual number (cf. *u-tek* ‘both hands’; see Section 10). It is also used to denote family relations on both nouns and verbs (cf. *ona* ‘father’ → *u-ona-kor* ‘to be (related as) father and child’; see Section 11).

There are reciprocal forms from locative nouns and postpositions (cf. *sam* ‘proximity’ → *u-sam* ‘next to each other’, *tura* ‘with sb/sth’ → *u-tura* ‘with each other, together’; see Section 12).

There is an adverb *u-taspa* with the meaning ‘mutually, each other, by turns’ used with both prefixed and lexical reciprocal verbs (Section 13).

1.3 Database

This study is based on the data of various dialects, including the texts and dictionary of the Raichishka dialects published by Kyooko Murasaki (Mur) and the texts of one of the Southern Hokkaido dialects published by N.A. Nevskij (N.). We have included in this paper most of the verbs with the prefixes *u-* and *uko-* from the Ainu dictionary by Tamura (T4. 1996). The data from specialist literature are also used (see Sources), and they are from different dialects. The materials of the Saru dialect investigated by Tamura Suzuko are the best known (see P., D., T2). N.A. Nevskij described one of the Southern Hokkaido dialects similar to the Saru dialect. K. Refsing described the Shizunai dialect (this dialect is closer to the dialects of Northeastern Hokkaido, though territorially it is in the south

of Hokkaido). M. Shibatani used mostly Classical (folklore) Ainu texts. Most of the examples cited by A.A. Kholodovich (1979, 1993) are borrowed from Classical Ainu texts recorded by Kyoosuke Kindaichi. Most of the references to Dettmer (D.) also contain the name of the author of the primary source. We use all these materials because they do not differ with regard to reciprocal and sociative constructions. Some lexical and phonetic differences should be noted, however; thus, for instance, all the consonant stops in syllable final position of the Saru and other Hokkaido dialects are reflected as /h/ in Raichishka. The reference “not registered” means that the form in question is not found in any of the (eight to thirteen) Ainu dictionaries and is not accepted by our informant. But this does not of course mean that such a form was not possible in Ainu, though in most cases this description is not accidental. Explanations of the meanings of Ainu words in square brackets contain information missing in the Japanese translations, i.e. our own interpretation of the source. Round brackets are used as in the original.

Ito Oda (a pure blood 91 year old Ainu) who remembered her native language very well, was very helpful and provided invaluable information.¹

1.4 Note on abbreviations

In the lists of verbs below, the following syntactic characteristics are used: (a) the abbreviation *vi* signifies one-place (both underived and derived) intransitives, i.e. verbs with a subject valency and no direct object valency, a complement with a postposition being possible (this complement does not trigger agreement); (b) the abbreviation *vt* signifies a two-place transitive; (c) the abbreviation *vb* (bitransitive verb) refers to three-place transitive verbs.

2. Grammatical notes

2.1 Sentence structure. Case relations. Number. Possessivity

The basic word order is SOV (only a particle may be placed after the predicate). Attributes are prepositional. There is no case inflection in Ainu. The subject and direct object are distinguished by their position, the subject preceding the direct object. Other objects (and adverbials) may be marked by postpositions. Personal pronouns in object and subject position are often omitted. Note that most of the nouns cannot be used with a locative postposition only: in this case a locative noun (a special class of words) is added between the noun and postposition; cf. *cise or ta* ‘in the house’, *pet or ta* ‘in the river’ (T1. 40) where *or* means ‘place’ and *ta* ‘in’. Plural marking is optional and it is used only on human nouns

1. The late Ito Oda was born in 1908 in the village of Maoi, near Chitose (Hokkaido). Her native dialect was Chitose. They spoke Ainu in her family. She recorded all kinds of folk tales and stories in Ainu. Ito Oda and Nabe Sirasawa took part in a TV programme produced by NHK (Japanese Broadcasting Company) in 1991. In this programme, they spoke Ainu to each other. She died on 11 July 2000 at the age of 92.

and on the names of some animals; cf. *seta* ‘dog’, ‘dogs’ – *seta-utar* ‘dogs’. The attributive relation proper is expressed by simply placing the modifier (noun or nominalized verb or clause) before the head noun.

Possessive attributive relations are expressed by the *izafet* construction, the head noun being marked by the possessive suffix. Possessive inflection is the only category obligatorily marked on nouns. The majority of nouns have a neutral form (stem) and possessive forms marked for person and number of the possessor; there are combinations of the possessive suffix (consisting most commonly of the end-final vowel and epenthetic /h/ (e.g. *-he/-ha/-ho/...*) after a vowel or without /h/ after a consonant) and one of the prefixes marking person and number of the subject of transitive verbs (the 3rd person prefix is zero); cf.: *ona* ‘father’ – *Ø-ona-ha* ‘his/her/their father’, *ku-ona-ha* ‘my father’, *ku-ona-ha Ø-matapa-ha* ‘my father’s younger sister’. Some of the possessive markers coincide with personal verbal affixes; cf. *ku-itah* ‘I spoke’. Possessive-attributive relations can also be expressed by means of the verb *kor* ‘to have’ used as an attribute in pre-position to the head word; in this case this verb takes a personal verbal affix and the noun is left unmarked, e.g. *awunkur* ‘neighbour’, takes *kor* alone without the suffix *-he*, cf. *ku-kor awunkur* ‘my neighbour’, *ku-ona-ha kor awunkur* ‘my father’s neighbour’. A personal pronoun in object and subject position is often omitted, as in (1a”, b) (cf. (1a’) where the subject is retained). There are uninflected adverbs and particles.

Sentences usually contain a sentence-final marker; there are more than 10 such markers which have an evaluative force, e.g. assertive, evidential, interrogative, etc. In the examples below, the most common marker is the assertive sentence final *ruwe ne* of which the second component is a copula. Coordinated predicates are commonly linked by the conjunctions *wa* and *kor* with the meaning ‘and’; *kor* with the meaning ‘when/while’ is also used to conjoin clauses. The conjunction *wa* marks periphrastic aspectual forms.

2.2 Verbal system

The opposition of nouns and verbs is clear-cut (an exception are some forms of intransitive verbs which can also be interpreted as nouns; as a rule, intransitive stems can function as nouns without any change in the morphology; cf. *uwepeker* i. ‘to tell a folktale’ (T4. 808–9), ii. ‘folktale’ (T4. 808–9); *horipi* i. ‘to dance’ (T4. 201), ii. ‘dance’ (N. 116); *iku* i. ‘to drink alcohol’, ii. ‘a drinking party’ (Kir1. 63).

The verbal paradigm is complicated. Person and number are marked by prefixes and (more seldom) suffixes which vary depending on the dialect. Subject agreement prefixes always precede object agreement prefixes. The distinction between transitive and intransitive verbs is important for every dialect. They differ not only in their syntactic characteristics, but also morphologically. There are three main classes of person markers: one class of markers for the person and number of the subject of intransitive verbs (3), and two other classes of markers for the person and number of the subject (4a) and direct object (4b) of transitive verbs. But, besides, some Ainu dialects (Saru, Chitose) show several fusional markers in subject-object agreement of transitive verbs, and thus, in these particular cases, the agreement cannot be described as a simple sum of subject and ob-

ject markers. (See (5): 2SG+1SG *en-*, instead of **e-en-*; 2PL+1SG *un-*, instead of **e-un-*; 1SG+2SG / 1SG+2PL / 1PL+2SG / 1PL+2PL *eci-*, instead of **ku-e-/*ku-eci-/*ci-e-/*ci-eci-*).

The 3SG and 3PL of subject and object is always zero-marked; the 3PL of subject and object is either zero-marked. For the sake of convenience, we do not use here the symbol Ø- for the 3rd person but the zero-marking is implied.

The set of verbal agreement affixes (-*an* and *a(n)*- for the subject of vi and vt respectively and *i-* for an object) labelled as indefinite is attested in all Hokkaido dialects. Importantly, these affixes are used not only in their proper function to refer to a generalized subject or object, but also have a number of special usages in colloquial and folklore Ainu: 1PL inclusive, 2SG/PL honorific, 1SG/PL in quotation and 1SG/PL in folklore. The main difference between Southwestern and Northeastern Hokkaido dialects is that the latter lack the corresponding singular indefinite pronoun *asinuma* ‘one, someone’ (cf. (3) of the South Hokkaido Saru dialect); they use only the plural indefinite pronoun *a(n)oka(y)* ‘some people’ to refer to both singular and plural referent as well as the verbal stems in the plural.

The indefinite usage of these pronouns and agreement affixes labeled as “1SG in oral literature” is of great importance because it is very common in folktales of most genres: they are traditionally narrated from the protagonist’s point of view and an informant who recites a folktale uses the indefinite pronouns and affixes to refer to the protagonist-narrator within the story (whose real name or identity is usually revealed only in the very end of the story) and thus dissociate him/herself from the latter. It is customary to translate *asinuma* and the corresponding indefinite agreement affixes in the folktales by means of the 1SG pronoun, and we also follow this tradition, but we gloss the indefinite pronouns as INDEF and the indefinite agreement affixes as IND in the morphemic line of the examples, as it is accepted in Bugaeva (2004).

Here is a full paradigm of verbal agreement for an intransitive and transitive verbs in the Saru dialect.

Subject agreement of intransitive verbs in the Saru Dialect (T1. 10–11) (Personal pronouns are added from (T1. 19)):

(3) *mina* (vi) ‘to laugh.’

	SG		PL	
1st pers.	[<i>kani</i> ‘I’]	<i>ku-mina</i>	[<i>coka</i> ‘we’]	<i>mina-as</i> (EXC)
2nd pers.	[<i>eani</i> ‘you.sg’]	<i>e-mina</i>	[<i>ecioka</i> ‘you’]	<i>eci-mina</i>
3rd pers.	[<i>sinuma</i> ‘s/he’]	<i>mina</i>	[<i>oka</i> ‘they’]	<i>mina</i>
indef. pers.	[<i>asinuma</i>]	<i>mina-an</i>	[<i>aoka</i>]	<i>mina-an</i>

Subject agreement of transitive verbs in the Saru dialect (T1.14):

(4) a. *koyki* (vt) ‘to scold, bully sb’

	SG	PL
1st pers.	<i>ku-koyki</i>	<i>ci-koyki</i> (EXC)
2nd pers.	<i>e-koyki</i>	<i>eci-koyki</i>
3rd pers.	<i>koyki</i>	<i>koyki</i>
indef. pers.	<i>a-koyki</i>	<i>a-koyki</i>

There are also prefixes and suffixes to mark different types of actant relations (valency-changing means; see 2.3). Tenses are absent; the relation of a situation to the past, present or future is determined lexically or contextually (the examples are mostly translated by the past tense). The verb has an extensive aspect system represented by suffixes and auxiliaries which express meanings such as perfective, progressive, incipient, etc. (see Shibatani 1990:79–80). There are no adjectives in Ainu, adjectival meanings being rendered by intransitive verbs. There are auxiliary verbs; they may agree in person and number with the subject and object but cannot combine with valency-changing affixes. The suffix *-pa* signifies plural subject referents when used on intransitives and plural object referents (less commonly many subjects) on transitives (see (6b)). In the lists below, verbs are cited both with and without this prefix depending on the way they are entered in the dictionaries; cf. *resu* 'to raise sb (SG)' and *res-pa* 'to raise sb (PL)'. The suffix *-pa* ousts the final vowel on verbs.

There is a number of verbs that have different stems for the singular and plural. In the case of intransitives this concerns the number of the subject, e.g. *arpa* 'to go', *an* 'to exist', *a* 'to sit', *as* 'stand up' require a singular subject, and *paye* / *oman* (depending on the dialect) 'to go', *oka* / *okay* (depending on the dialect) 'to exist', *rok* 'to sit', *roski* 'stand up' take a plural subject (T2. 18–19). In the case of transitives, this concerns the object, cf. *anu* 'to put down', *uk* 'to take', *rayke* 'to kill' with a singular object and *ari* / *are* (depending on the dialect) 'to put down', *uina* 'to take', *ronnu* 'to kill' with a plural object (T2. 19).

2.3 Valency-changing means

2.3.1 Valency-increasing means

There are two means of valency increase. If a valency-increasing marker is added to an intransitive verb the latter changes its paradigm and becomes transitive morphologically (the intransitive personal affixes are replaced by their transitive counterparts); when added to a transitive verb a valency-increasing marker changes its valency but not the paradigm.

2.3.1.1 Causative. There is a productive causative suffix represented by the allomorphs *-re/-e/-te* whose choice is determined by the preceding phoneme; it transitivizes verbs, and, as a result, intransitive personal affixes are replaced by transitive personal affixes. Derivatives from some intransitives contain two causative suffixes (see (6a)). To mark an unspecified causee, the suffix *-(y)ar* is used (see (6b); Tamura 2000: 213–5). There are also unproductive causative suffixes *-ke* and *-ka* which occur in a limited number of derivatives (cf. (6c)). See Shibatani (1990: 44–5).

- | | | | |
|--------|-----------------------|--|------|
| (6) a. | <i>aš</i> ‘to stand’ | (vi) → <i>aš-te</i> ‘to set up’ → <i>aš-te-re</i> ‘cause to set up’ (P. 144) | (vt) |
| | <i>e</i> ‘to eat’ | (vt) → <i>e-re</i> ‘to feed’ (P. 143) | (vb) |
| | <i>kor</i> ‘to have’ | (vt) → <i>kor-e</i> ‘to give’ (R. 189) | (vb) |
| | <i>nu</i> ‘to listen’ | (vt) → <i>nu-re</i> ‘to tell’ (R. 189) | (vb) |
| b. | <i>kor</i> ‘to have’ | (vt) → <i>kor-pa</i> ‘to have <i>many</i> things (for two and more people / two and more things)’ (T4. 337) | (vt) |
| | | → <i>kor-pa-re</i> ‘to give sth/sb to sb (for <i>two</i> and more people/to two and <i>more</i> people/ <i>two and more</i> people, things)’ (T4. 337) | (vb) |
| | | → <i>kor-pa-yar</i> ‘to cause sb (unspecified) to have <i>many</i> things’ | (vb) |
| c. | <i>ray</i> ‘to die’ | (vi) → <i>ray-ke</i> ‘to kill [sb]’ (R. 188) | (vt) |
| | <i>ahuy</i> ‘to burn’ | (vi) → <i>ahuy-ka</i> ‘to burn [sth]’ (R. 188) | (vt) |

2.3.1.2 Applicative. Applicatives are derived by means of the prefixes *ko-*, *e-*, *o-*. The latter prefix has the meanings ‘from’, ‘in(to)’, ‘on’, ‘at’. It is characteristic of Classical (folklore) Ainu. These prefixes increase valency: they transitivize verbs by introducing a new object and add a variety of meanings excepting the causative sense. It is a so-called Non-Agent-addition which shows contrast with Agent-addition of the causatives (Ooshima 1982: 214). An applicative prefix on transitive verbs introduces a second object. There seems to be no clear-cut semantic difference between the applicative prefixes. Sometimes, they are interchangeable. The prefix *ko-* is often combined with the reciprocal prefix *u-*, and so is the prefix *e-*, though much less commonly, it seems (see 3.1.1.2, 3.1.2.2, 3.1.3.1.2, 3.1.3.2.2, 3.2.2). Some meanings of the applicative prefixes can be paraphrased by collocation with the postpositional particles (which denote case relations with the exception of subject and direct object) whose meaning is dative, locative, ablative, instrumental, comitative, etc. Thus the most common meanings of the suffix *ko-* are

- i. ‘towards sth/sb’;
- ii. ‘together with sb’;
- iii. ‘in’, ‘on’, ‘at’;
- iv. ‘from’, ‘out of’ (T4. 314).

And the most common meanings of the prefix *e-* are

- i. 'by', 'with (the help of sth)';
- ii. 'with respect to';
- iii. 'about';
- iv. 'for (sb)';
- v. 'accompanied (by)';
- vi. 'in', 'on', 'at';
- vii. 'to', 'towards' (T4. 70).

In (7a), the suffix *-an* marks IND on an intransitive verb, while in (7b) the prefix *a-* marks IND on a transitive verb.

- (7) a. *A-kor kotan ta sirepa-an.*
 IND-have village to arrive-IND
 'I arrived at my village.' (Sh. 65)
- b. *A-kor kotan a-e-sirepa.*
 IND-have village IND-APPL-arrive
 (same translation). (Sh. 65)

The applicative prefix may refer to a previous situation: in a way, it "sums up" what has been said previously, thus in (101d) it means 'because of this' on both last verbs and indicates a situation described by the beginning of the sentence.

Formation of reciprocals from vowel-initial verbs, in particular from applicative forms in *e-*, often involves insertion of the epenthetic intervocalic /w/, e.g. *e-rankarap* 'to greet sb' → *u-w-e-rankarap* 'to greet each other'. As this epenthetic consonant is not regularly inserted, it is usually omitted in the examples below, to make it reader-friendly.

There seem to be no applicatives (at least standard ones) from three-place transitives, otherwise we would have four-place transitives, and they are not registered in Ainu.

2.3.2 Valency-decreasing means

They are used on two-place transitive verbs to intransitivize them or on three-place transitives to change them into two-place transitives. There are five such devices. The reflexive and the generalized object markers occupy the same slot in the morphological structure of a verb; they delete the object of the underlying verb. These prefixes may co-occur on a verb, in which case they are usually separated by an applicative prefix, i.e. they replace different objects.

2.3.2.1 Reciprocal. See Section 1.2.

2.3.2.2 Reflexive. The prefix *yay-* renders the reflexive meaning proper (see (8a)) and also some other meanings usually, as in many other languages, combined with it: reflexive-possessive (see (8b)), autocausative (see (8c)), etc., and it also occurs in lexicalized reflexives (see (8d)). Less commonly reflexivity is expressed by the prefix *si-* (cf. (120)).

- (8) a. *ko-itah* 'to talk to' (Mur. 170) (vt) → *yay-ko-itah* 'talk to oneself' (Mur. 232) (vi)
nuyna 'to conceal' (Mur. 183) (vt) → *yay-nuyna* 'to conceal oneself' (Mur. 232) (vi)
- b. *ko-yupu* 'to fasten sth to sth/sb' → *yay-ko-yupu* 'to fasten sth to oneself' (O. 76) (vb bound stem) (T4. 858) (vt)
- c. *osura* 'to throw sth/sb' (T4. 490) (vt) → *yay-osura* 'to throw oneself' (N. 93, 95, 97) (vi)
- d. *nu* 'to listen to sth' (T4. 437–38) (vt) → *yay-nu* 'to think' (Sh. 47) (vi)
tura 'to join sb' (O. 150) (vt) → *yay-tura* 'to be single/alone' (R. 180) (vi)
okay 'to be, exist' (PL) (Mur. 185) → *yay-okay* 'to be languid' (Mur 232) (vi) (vi)
omap 'to show affection to sb' → *yay-omap* 'to feel disappointed' (T4. 861) (T4. 467) (vt) (vi)

2.3.2.3 Anticausative. The marker of anticausative derivation is the suffix *-ke* which is found on a limited number of verbs (see Refsing 1986:188). This suffix may be genetically related to the causative suffix in (6c). In the oppositions in question one may see non-directed derivation because of the suffix alternation (see Shibatani 1990:44; Tamura 1988:68). But, since the intransitive members are marked regularly by means of *ke-* we prefer to regard these cases as anticausatization (see also 3.2.2.3):

- (9) *kom-o* 'to bend sth' → *kom-ke* 'to be bent' (T4. 325)
mak-a 'to open sth' → *mak-ke* 'to be opened' (T4. 376)
noy-e 'to wind/twist sth' → *noy-ke* 'to be wound/twisted' (T4. 436)
per-e 'to break/split/shatter sth' → *per-ke* 'to be broken/torn/shattered' (T4. 523)
sos-o 'to tear/peel sth off' → *sos-ke* 'to be peeled off' (T4. 677).

2.3.2.4 Generalized object. Derivatives with the prefix *i-* denote engagement in an activity without reference to any particular object (10) (the so-called absolutive meaning), or the latter may be implied, especially in cases of (slight) lexicalization (11):

- (10) a. *Ya a-[oske].* b. *I-[oske]-an.*
net IND-knit ABS-knit-IND
'I knit a fishing net.' 'I do knitting' (Sh. 46)
- (11) a. *ku* 'to drink sth' (T2. 67) (vt) → *i-ku* 'to drink sake.' (T2. 67) (vi)
b. *ri* 'to tear off sth' (Kir1. 63) (vt) → *i-ri* 'to skin an animal.' (Kir1. 63) (vi)

Note that this prefix *i-* is materially identical with indefinite object marker (cf. (12a)) and a genetic relationship between them is rather transparent.

2.3.2.5 Passive. The passive prefix *a-* is descended from the indefinite subject marker for transitive verbs and takes the same position in the morphemic structure of a verb, i.e. a verb retains its morphological transitivity (cf. *e* 'to eat' → *a-e* 'to be eaten' (P. 147)), though the underlying subject is either absent or, much less commonly, marked with the postposition *orowa* 'from' (i.e. it behaves in the same way as in a regular passive construction). As the direct object marker is retained on the verb, the direct object is not promoted to subject position and thus this construction may be regarded as impersonal rather than

passive (see, however, a different opinion in Shibatani 1990: 58–9). Typologically, the Ainu impersonal passive is somewhat atypical as, in contrast with impersonal passives in some other languages, e.g. in Finnish, the overt agent can be expressed (Satoo 1995: 1).

- (12) a. *Tane anakne wen kamuy i-e etokus.*
 now TOP bad demon IND-eat soon.AUX
 ‘Soon the malicious demon will eat me up.’
- b. *Tane anakne wen kamuy orowa a-i-e etokus.* (N. 169)
 now TOP bad demon by PASS-IND-eat soon.AUX
 ‘Soon I will be eaten up by the malicious demon.’

Note that there is a kind of parallelism between the passive marker (the indefinite subject marker) and the marker of the generalized object which is a kind of antipassive (the indefinite object marker). In the former instance the subject is commonly omitted, and in the latter it is the object that is obligatorily omitted.

2.3.2.6 Noun incorporation. Incorporation is more typical of Classical (folklore) Ainu than of colloquial Ainu. In colloquial Ainu, a few apparently lexicalized expressions are frequently encountered (Shibatani 1990: 61). Incorporation most commonly involves direct objects of transitive verbs (see (13); see also 3.1.3.2), and much less commonly the subject of intransitive verbs (see (14)) (in the latter case the incorporated noun retains a possessive marker; cf. Shibatani 1990: 60–4). Incorporation of the subject of a transitive verb is extremely rare (see (15)). The incorporated subject is inanimate (Satoo 1992: 193–201). An oblique object (typically instrumental or locative) can be incorporated, too, and this always involves the use of the applicative marker (as applicatives are usually transitive, these cases can also be regarded as direct object incorporation; cf. Shibatani 1990: 62, 67–71). Moreover, adverbs and locative nouns can also undergo incorporation. If an intransitive subject is incorporated, the underlying verb retains its intransitivity; in the remaining two cases incorporation results in intransitivity.

- (13) a. *Asir cise ci-kar.* (Sh. 197)
 new house 1PL.EXC-make
 ‘We made a new house.’
- b. *Ney ta cise-kar-as.*
 there at house-make-1PL.EXC
 ‘We made a house there.’ (Ishikari)
- (14) a. *Ku-tek-e ka pase.* (S. 197)
 1SG-hand-poss also heavy
 ‘And my hands are heavy.’
- b. *[Kani] ku-tek-e-pase.* (S. 197)
 I 1SG-hand-poss-heavy
 ‘My hands are heavy (= weak),’ lit. ‘I am hand-heavy.’ (Chitose)
- (15) a. *Nis en-reye-re.* (S. 197)
 cloud 1SG-crawl-CAUS
 ‘The clouds carry me [slowly].’

- b. [*Kani*] *ku-nis-reye-re*. (S. 197)
 I 1SG-cloud-crawl-CAUS
 ‘I am [slowly] carried by clouds’, lit. ‘I am cloud-carried.’ (Chitose)
 (the passive is used in the translation to render the original word order).

Incorporation may occur simultaneously with reciprocal (see 3.1.3.2.3) derivation. Reciprocal transitives may also incorporate a direct object, in which case they become intransitive; cf.:

- (16) a. [*Aoka*] *tek a-u-e-kik*. (OI.; *a-* is IND.S for vt; cf. also (45a))
 INDEF hand IND-REC-APPL-hit
 ‘We clapped hands.’
 b. [*Aoka*] *tek-u-e-kik-an*. (OI.; *-an* is IND.S for vi)
 INDEF hand-REC-APPL-hit-IND
 ‘We applauded.’
 c. [*Asinuma*] *kane a-u-omare*. (*a-* is IND.S for vt; cf. also (40g))
 INDEF money IND-REC-pick up
 ‘I’ll pick up the money.’ (Satoo T., p.c.)
 d. [*Asinuma*] *kon-kane-u-omare-an*. (*-an* is IND.S for vi)
 INDEF golden-money-REC-pick up-IND
 ‘I’ll pick up the golden coins.’ (Satoo T., p.c.)

2.3.3 Combinability of valency-changing means

According to Tamura (Fukuda 1956: 50–1), there are six slots in the verb structure; affixes of different slots can co-occur but affixes taking the same slot cannot.

- Slot 1 is reserved for the applicative prefixes *e-*, *ko-*.
- Slot 2 is for the reciprocal prefix *u-* or reflexive *yay-* or generalized object *i-*.
- Slot 3 is also reserved for the same prefixes *e-*, *ko-* which can be repeated.
- Slot 4 is for the root.
- Slot 5 for the suffixes of singularity, plurality, transitivity, intransitivity.
- Slot 6 is for the causative suffixes (Saru dialect).

Combinations of *u-* with other verbal affixes in the Saru dialect are treated by Tamura (Fukuda) Suzuko: *u-* can combine with all the causative suffixes but not with the other (valency-decreasing) affixes, viz. with *i-* and reflexive *yay-* (Fukuda 1956: 51). The latter rule, however, is violated if *u-* and *i-* or *yay-* are separated by an applicative prefix (see (17f)) or if they are fossilized (cf. *u-yay-uk-te* ‘to marry for love’ (T4. 818) where *-uk-* means ‘to get/receive’ and *-te* is a causative suffix; cf. also Tamura’s example *yay-ko-si-ram-suye* ‘to think/consider’ (vi) (Fukuda 1956: 51) with two reflexive prefixes (*ram* ‘heart’, *suye* ‘to shake’)). (See also Shibatani 1990: 76–7.)

- (17) a. *ruska* 'to be angry *because of sth*' (T4. 591; OI.) (vt)
 b. *ko-ruska* 'to be angry *with sb* because of sth' (Nak. 420) (vb)
 c. *yay-ko-ruska* 'to be angry *with oneself* because of sth' (Nak. 420) (vt)
 d. *i-ruska* 'to be angry' (Nak. 420) (vi)
 e. *ko-i-ruska* 'to be angry *with sb*' (K. 135; T4. 356; OI.) (vt)
 f. *u-ko-i-ruska* 'to be angry *with one another*' (B. 526; OI.) (vi)
 e. **u-ruska* (OI.) (ungrammatical because (17a) has no personal object).
- (18) a. *puntek* (not registered)
 b. *ko-puntek* 'to rejoice *at sth*' (Nak. 190) (vt)
 c. *yay-ko-puntek* 'to rejoice' (Nak. 190; OI.) (vi)
 d. *e-yay-ko-puntek* 'to rejoice *at sth*' (Nak. 190) (vt)
 e. *uko-yay-ko-puntek* 'to rejoice *together*' (OI.) (vi)
 f. *ue-yay-ko-puntek* (same meaning) (OI.) (vi)
 g. *ue-puntek* (same meaning) (OI.) (vi)
 h. *e-uko-yay-ko-puntek* '(for more than two persons) to rejoice *at sth together*' (vt)
 (T4. 146)
 g. **u-puntek* (OI.) (not registered).

Note that the applicative form (18h) is derived from an intransitive sociative; applicatives can also be formed from a small number of reciprocals (cf. (19e)). (Incidentally, verbs of speech with the component 'together' and even without it but used in the plural form usually imply conversation of participants between themselves (cf. (19e) where 'together' = 'each other').

- (19) a. *pinu-pinu* 'to whisper' (T4. 529) (vi)
 b. *e-pinu-pinu* 'to whisper *about sth*' (T4. 109) (vt)
 c. *ko-pinu-pinu* 'to whisper *to sb*' (OI.) (vt)
 d. *u-ko-pinu-pinu* 'to whisper *to each other*' (T4. 761) (vi)
 e. *e-u-ko-pinu-pinu* 'to whisper *to each other about sth*' (T4. 145) (vt)

3. Reciprocals with the prefix *u-*

We shall consider derivations from non-applicative and applicative bases separately, in view of the particular productivity of applicatives in Ainu. The point is that the reciprocal prefix *u-* often co-occurs with the applicative prefix *ko-* which follows it (Shibatani 1990: 47). Their frequent co-occurrence has resulted in the development of the single prefix *uko-* in which the second component does not retain the applicative meaning, as has been mentioned above. This is particularly clear when this complex prefix functions as a sociative marker. If it expresses a reciprocal meaning such semantic fusion does not occur. The prefix *ko-* increases valency by introducing a new participant (see 2.3.1.2). The reciprocal prefix *u-* deletes this valency.

3.1 Subject-oriented constructions

3.1.1 “Canonical” reciprocals

A distinctive feature of this diathesis type is omission of the direct object co-referential with the subject. The subject of such constructions is always semantically plural.

3.1.1.1 Derived from two-place non-applicative transitives. Most of the examples at our disposal are of this type, as in (1). Morphological reciprocals can also be formed from lexical reciprocals as well, some of them with an inanimate subject and object (these verbs have meanings ‘sth comes into contact with sth’, ‘sth sticks to sth’, ‘sb parts from sb’, ‘sb marries sb’). Judging by (20b, c), reciprocals can be formed from morphological causatives (note that the simultaneous use of the reciprocal and causative affixes may render a sociative meaning; see Section 7).

- (20) a. *Oha aynu u-siru.* (Mur. 10)
only people REC-jostle
‘Only people jostle each other.’
- b. *Tutano can kamuy u-sinoh-te.* (Kh. 421)
other smaller god REC-entertain-CAUS
‘The other, smaller gods, entertained each other.’
- c. *U-iku-re wa u-ipe-re wa ...* (Itadori dialect)
REC-drink-CAUS and REC-eat-CAUS and
‘Making each other drink and making each other eat, and ...’ (Sh. 49)
- d. *Ekay taciro ekay makiri u-tasa-tasa.* (N. 90)
round dagger round knife REC-go.towards-go.towards
‘Round daggers and round knives cross [each other].’

Verbs of this type:

- | | |
|--|---|
| (21) <i>cotca</i> ‘to shoot sb’ | → <i>u-cotca</i> ‘to shoot at each other’ (OI.) |
| <i>e</i> ‘to eat sth/sb’ | → <i>u-e</i> ‘to devour each other’ (Kay. 88, OI.) |
| <i>ekanraye</i> ‘to go to meet sb’ | → <i>u-ekanraye</i> ‘to go to meet each other’ (Mur. 221) |
| <i>ekap</i> ‘to salute/greet sb’ | → <i>u-ekap</i> ‘to salute/greet one another’ (P. 146; OI.) |
| <i>ekatayrotke</i> ‘to be on good terms with sb’ | → <i>u-ekatayrotke</i> ‘to be on mutually good terms’ (T4. 806) |
| <i>ekohopi</i> ‘to part/separate from sb/sth’ | → <i>u-ekohopi</i> ‘(for a road, a river) to be forked/divided’; <i>u-ekohop-pa</i> ‘to separate from each other, go separate ways’ (T4. 806) |
| <i>ekupa</i> ‘to bite sb’ | → <i>u-ekupa</i> ‘to bite each other’ (OI.) |
| <i>erasasu</i> ‘to like, love’ | → <i>u-erasasu</i> ‘love each other, sleep together’ (T4. 809) |
| <i>eramiskari</i> ‘to not know/remember sth/sb’ | → <i>u-eramiskari</i> ‘to not know/remember each other’ (OI.) |
| <i>etaye</i> ‘to pull sth/sb’ | → <i>u-etay-pa</i> ‘to pull each other’ (N. 86; OI.) |
| <i>etunankar</i> ‘to run into sb’ | → <i>u-etunankar</i> ‘to run into each other’ (T4. 811) |
| <i>hekote</i> ‘to marry sb’ | → <i>u-hekote</i> ‘to be married/live together’ (T4. 749) |
| <i>henkotpa</i> ‘to nod to sb’ | → <i>u-henkotpa</i> ‘to nod to each other’ (OI.) |
| <i>hotanukar</i> ‘to go to visit sb’ | → <i>u-hotanukar</i> ‘to go to visit each other’ (OI.) |

<i>iku-re</i> ‘to make sb drink’	→ <i>u-iku-re</i> ‘to make each other drink’ (Sh. 49)
<i>ipe-re</i> ‘to make sb eat’	→ <i>u-ipe-re</i> ‘to make each other eat’ (Sh. 49)
<i>kere</i> ‘[for sth] to come into contact with sth’	→ <i>u-kere</i> ‘come into contact with each other (about clothes)’ (T4. 754)
<i>kipniwkes</i> ‘to save sb’s life’	→ <i>u-kipniwkes</i> ‘help save each other’s (lives)’ (T4. 754)
<i>komuy</i> ‘to pick lice off sb’	→ <i>u-komuy</i> ‘to pick lice off each other’ (T4. 759)
<i>kor</i> ‘to possess/have sb/sth’	→ <i>u-kor-pa</i> i. ‘have each other (couples, friends, etc.)’ ii. ‘to get married’ (T4. 762; cf. N. 98)
<i>koramkor</i> ‘to confer/consult with sb’	→ <i>u-koramkor</i> ‘to confer/consult with each other’ (T4. 762)
<i>kotuk</i> ‘to stick to sth/sb’	→ <i>u-kotuk</i> ‘to stick to each other’ (T4. 765)
<i>koyki</i> ‘to bully, scold’	→ <i>u-koyki</i> ‘bully each other, quarrel, fight’ (T4.767; N. 88; OI.)
<i>nukar</i> ‘to see, look at, meet sb’	→ <i>u-nukar</i> ‘to look at each other, meet’ (T4. 774)
<i>omap</i> ‘to show affection for sb’	→ <i>u-omap</i> ‘show affection for each other’ (K. 303)
<i>oramkote</i> ‘to love sb (of a different sex)’	→ <i>u-oramkote</i> ‘to love each other (of a man and a woman)’ (T4. 815–16)
<i>osikkote</i> ‘to fall in love with sb (of a different sex)’	→ <i>u-osikkote</i> ‘to love each other’ (T4. 817)
<i>osura</i> ‘to throw sth/sb’	→ <i>u-osura</i> ‘to throw each other, get divorced’ (OI.)
<i>pahekote-re</i> ‘to complain about sb’	→ <i>u-pahekote-re</i> ‘to mutually complain about each other, abuse each other’ (T4. 775)
<i>piyekar</i> ‘to hit sb/sth (with a rock)’	→ <i>u-piyekar</i> ‘throw a rock-like sth (snowballs) at each other’ (T4. 776)
<i>rapokkari</i> ‘to give in’	→ <i>u-rapokkari</i> ‘give in to each other’ (N. 122; K. 297)
<i>sinoh-te</i> ‘to entertain sb.’	→ <i>u-sinoh-te</i> ‘to entertain each other’ (Kh. 421)
<i>siru</i> ‘to rub sth/sb’	→ <i>u-siru</i> ‘to rub each other’ (T4. 789)
<i>tasa-[tasa]</i> ‘to go towards sth/sb’	→ <i>u-tasa-tasa</i> ‘cross [each other]’ (N. 90, 91, 107)
<i>tom-osma</i> ‘to bump into sth/sb’	→ <i>u-tom-osma</i> ‘to bump into e. o.’ (T4. 796; OI.)
<i>tumam</i> ‘to sleep hugging sb’	→ <i>u-tumam</i> ‘to sleep/lie hugging each other’ (T4. 797)
<i>wante</i> ‘to know’	→ <i>u-wante</i> ‘to know each other’ (Mur. 227).

3.1.1.2 *Derived from applicatives in ko- and e-*. Some of the underlying verbs in the triplets below can in principle combine with a postpositional complement (i.e. they are (potentially) two-place intransitives). This complement does not trigger the verb agreement, and the reciprocal prefix can occupy the slot of the agreement marker only. The middle verb in each of these triplets is transitive and therefore allows reciprocal derivation. With the applicative form, the complement appears as a personal direct object (which may alternate with an inanimate object on some applicatives), or the verb contains reference to the antecedent (cf. 2.3.1.2). In the list under (21) above, some verbs with applicative prefixes are also entered, but they have no underlying non-applicative form or their semantic relation to the underlying form is non-standard; thus they can be regarded as non-derived units synchronically.

Reciprocals derived from applicatives in *ko-* are more numerous than reciprocals from applicatives in *e-*, which seems to reflect the productivity of the respective applicatives. This also accounts for the absence of reciprocals from applicatives with the prefix *o-* in our verb list.

1. Reciprocals derived from applicatives in *ko-*

(22)	a.	<i>apkas</i>	'to go' (T4. 19)	(vi)
	→	<i>ko-apkas</i>	'to go on a visit to sb' (T4. 315)	(vt)
	→	<i>u-ko-apkas</i>	'to visit each other' (Kay. 102)	(vi)
	b.	<i>corawki</i>	'to go on attack' (T4. 65)	(vi)
	→	<i>ko-corawki</i>	'to go to attack sb' (T4. 316)	(vt)
	→	<i>u-ko-corawki[-pa]</i>	'to attack each other' (T4. 755; OI.)	(vi)
	c.	<i>eraratki</i>	'to make love' (cf. N. 135)	(vi)
	→	<i>ko-eraratki</i>	'to love sb (of grown-up men and women)' (T4. 317)	(vt)
	→	<i>u-ko-eraratki</i>	'to love each other (of a man and a woman)' (T4. 756)	(vi)
	d.	<i>he-pen-pen-u</i>	'to nod' (T4. 183)	(vi)
	→	<i>ko-he-pen-pen-u</i>	'to nod to sb' (T4. 318)	(vt)
	→	<i>u-ko-he-pen-pen-u</i>	'to nod to each other' (T4. 756)	(vi)
	e.	<i>honoyse</i>	'(of a dog, cat) to growl, snarl' (T4. 197)	(vi)
	→	<i>ko-honoyse</i>	'to growl at sb' (OI.)	(vt)
	→	<i>u-ko-honoyse</i>	'to growl, snarl at each other' (T4. 756; OI.)	(vi)
	f.	<i>irenka-kor</i>	'to demand (the impossible)' (O. 51)	(vi)
	→	<i>ko-irenka-kor</i>	'to demand (the impossible) from sb' (O. 66)	(vt)
	→	<i>u-ko-irenka-kor</i>	'to dispute with each other (in court)' (T4.767)	(vi)
	g.	<i>i-ruska</i>	'to be angry' (T4. 245)	(vi)
	→	<i>ko-i-ruska</i>	'to be angry with sb' (T4. 356; OI.)	(vt)
	→	<i>u-ko-i-ruska</i>	'to be angry with one another' (B. 526; OI.)	(vi)
	h.	<i>isoytak</i>	'to tell tales, stories' (Nak. 34; OI.)	(vi)
	→	<i>ko-isoytak</i>	'to tell tales, stories to sb' (Nak. 34; OI.)	(vt)
	→	<i>u-ko-isoytak</i>	'to tell tales, stories to each other' (Nak. 34; OI.)	(vi)
	i.	<i>itak</i>	'to talk/speak' (T4. 250)	(vi)
	→	<i>ko-itak</i>	'to talk to sb' (T4. 357)	(vt)
	→	<i>u-ko-itak</i>	'to talk to/with each other' (T4. 767; OI.)	(vi)
	j.	<i>ocis</i>	'to be vexing' (Mur. 183)	(vi)
	→	<i>ko-ocis</i>	'to hate sb' (H. 165)	(vt)
	→	<i>u-ko-ocis</i>	'to hate each other' (Mur. 222)	(vi)
	k.	<i>payoka</i>	'to come and go (of two and more people)' (T4. 518)	(vi)
	→	<i>ko-payoka</i>	'to come and go somewhere/to sb' (OI.)	(vt)
	→	<i>u-ko-payoka</i>	'visit each other, keep coming and going to each other' (T4. 761, OI.)	
	l.	<i>pinu-pinu</i>	'to whisper' (T4. 529)	(vi)
	→	<i>ko-pinu-pinu</i>	'to whisper to sb' (Kay. 244)	(vt)
	→	<i>u-ko-pinu-pinu</i>	'to whisper to each other' (T4. 761)	(vi)
	m.	<i>ram-nukar</i>	'to test/try; to see through' (K. 218), lit. 'heart-test'	(vi)
	→	<i>ko-ram-nukar</i>	'to try to look gently at her [woman's] heart' (Kay. 249)	(vt)
	→	<i>u-ko-ram-nukar</i>	'to compare courage with each other' (T4. 762)	(vi)
	n.	<i>ram-u-pirka</i>	'to be gentle/good-tempered' (Mur. 198)	(vi)
	→	<i>ko-ram-u-pirka</i>	'to be on good terms with sb' (OI.)	(vt)

→	<i>u-ko-ram-u-pirka</i>	‘to be on good terms [with each other]’ (Mur. 223; OI)	(vi)
	o. <i>sinewe</i>	‘to go on a visit’ (Nak. 217)	(vi)
→	<i>ko-sinewe</i>	‘to go on a visit to sb’ (Nak.217)	(vt)
→	<i>u-ko-sinewe</i>	‘to go on a visit to each other’ (OI.)	(vi)
	p. <i>tetterke</i>	‘to stagger’ (Kin. 152)	(vi)
→	<i>ko-tetterke</i>	‘to stagger towards sb’ (Kin. 152)	(vt)
→	<i>u-ko-tetterke</i>	‘to stagger towards each other’ (Kin. 152)	(vi)
	q. <i>tumi-kor</i>	‘to make war’ (Mur. 219; OI.)	(vi)
→	<i>ko-tumi-kor</i>	‘to war/fight a battle with sb’ (B. 276; OI.)	(vt)
→	<i>u-ko-tumi-kor</i>	‘to fight a battle with each other’ (Mur. 223)	(vi)
	r. <i>uepeker</i>	‘to tell stories’ (cf. (115))	(vi)
→	<i>ko-uepeker</i>	‘to tell stories to sb’ (OI.)	(vt)
→	<i>u-ko-uepeker</i>	‘to tell stories to each other’ (OI.)	(vi)
	s. <i>wen</i>	‘to be bad’ (O. 167)	(vi)
→	<i>ko-wen</i>	‘to be bad/show bad attitude towards sb’ (O. 74)	(vt)
→	<i>u-ko-wen</i>	‘be bad/show bad attitude towards each other’(O. 159)	(vi)
	t. <i>yayapapu</i>	‘to apologize’ (T4. 844)	(vi)
→	<i>ko-yayapapu</i>	‘to apologize to sb’ (T4. 350)	(vt)
→	<i>u-ko-yayapapu</i>	‘to apologize to each other, make peace’ (T4. 766)	(vi)

A sentential example:

- (23) *Kestoankonno u-ko-uepeker-an.* (R. 185)
 every.day REC-APPL-tell.stories-IND
 ‘Every day we tell stories to each other.’

2. *Reciprocals derived from applicatives in e-*. Combinations of *u-* with the applicative prefix *e-* are also possible but they are less numerous than those with *ko-* though there exist fusions of both prefixes, namely, the prefix *w-ee-* in the Sakhalin dialect which is a phonetic development via the intermediate stage *u-w-e-* with an epenthetic consonant. A number of such derivatives with the initial *w-ee-* in the reciprocal meaning have been retained, for instance, *wee-ciw(ka)* ‘to gather’ (Mur. 228; see also (108b)), *wee-punteh* ‘to be mutually pleased’ (Mur. 228). In the registered examples, applicative verbs do not occur in the comitative sense either.

- (24) a. *mik* ‘to bark’ (Nak. 373; OI.) (vi)
 → *e-mik* ‘to bark at sb’ (Nak. 373; OI.) (vt)
 → *u-e-mik* ‘to bark at each other’ (OI.) (vi)
 b. *newsar* ‘to chat’ (Nak. 307) (vi)
 → *e-newsar* ‘to chat with sb’ (Nak. 307) (vt)
 → *u-e-newsar* ‘to chat with each other’ (Nak. 307) (vi)
 c. *nupetne* ‘to rejoice’ (Kir2. 270) (vi)
 → *e-nupetne* ‘to rejoice at meeting sb after a long time’ (T4. 103) (vt)
 → *u-e-nupetne* ‘to be mutually rejoiced in meeting after a long time’ (vi)
 (T4. 807)
 d. *rankarap* ‘to greet’ (T4. 559–60) (vi)
 → *e-rankarap* ‘to greet sb’ (T4. 117) (vt)
 → *u-e-rankarap* ‘to greet each other’ (T4. 809; OI.) (vi)

A sentential example:

- (25) *Kunne an kor u-e-newsar-an kor.* (OI.)
 night come when REC-APPL-CONVERSE-IND and
 ‘When night fell we began conversing.’

3.1.2 “Indirect” reciprocals

The base verbs are three-place transitives: they take two objects, direct and indirect, both unmarked. The latter object is deleted in a reciprocal construction while the direct object is retained. The term “indirect” is used here as a label to refer to reciprocals derived from these verbs. Characteristically, excepting one verb (26a), all the base bitransitives are derived verbs either with a causative suffix or an applicative prefix.

3.1.2.1 *Derived from three-place non-applicative transitives.* We have no textual examples of this type. Our informant Oda Ito produced sentences (27b) and (28), though she prefers to express the respective situations by two clauses like (27a).

(a) Derived from non-causative verbs:

- (26) a. *erusa* ‘to lend sth to sb’ (T4. 121) (vb)
 → *u-erusa* ‘to lend sth to each other’ (T4. 810) (vt)

(b) Derived from causative verbs:

- b. *kor* ‘to have/possess sth/sb’ (T4. 333) (vt)
 → *kor-e* ‘to give sth to sb’ (T4. 335) (vb)
 u-kor-e [SG] ‘to give sth to each other’ (OI.) (vt)
 → *u-kor-pa-re* [PL] ‘to give sth to each other’ (OI.) (cf. (38c)) (vt)
 c. *nu* ‘to listen to sb’ (T4. 438) (vt)
 → *nu-re* ‘to tell sth to sb’ (T4. 445) (vb)
 → *u-nu-re* ‘to tell each other sth’ (T4. 774) (vt)
 d. *nukar* ‘to see, look at sth/sb’ (T4. 439) (vt)
 → *nukar-e* ‘to show sth to sb’ (T4. 439) (vb)
 → *u-nukar-e* ‘to show [sth] to each other’ (B. 534) (vt)

Sentential examples:

- (27) a. *Anna ninup en-kor-e wa kusu ku-ninup Anna ku-kor-e.* (OI.)
 A. sewing 1SG-have-CAUS and because my-sewing A. 1SG-have-CAUS
 ‘As Anna gave me her sewing, I gave Anna my sewing.’
 b. *A-kor ninup Anna kor ninup a-u-kor-pa-re.* (OI.)
 1SG-have sewing A. have sewing 1PL.INC-REC-have-PL-CAUS
 ‘Anna and I gave each other our sewings.’
 (28) a. *Utaspa mip-ih i u-erusa.* (OI.)
 mutually clothing-POSS REC-lend
 ‘[They] lend each other their clothes.’
 b. *Anna huci matanpusi u-nukar-e.* (OI.)
 A. granny headband REC-see-CAUS
 ‘Anna and granny showed each other their headbands.’

3.1.2.2 *Derived from three-place applicative transitives in ko- and e-*. As in 3.1.1.2, reciprocals from applicatives in *ko-* are more numerous.

1. *Reciprocals derived from applicatives in ko-*. This prefix turns two-place transitives into three-place verbs by introducing the indirect addressee/goal/source object.

(29)	a.	<i>ani</i>	‘to hold/cradle sth/sb in one’s hands/arms’	(vt)
	→	<i>ko-ani</i>	‘to take/bring sth/sb to sth/sb’ (T4. 314)	(vb)
	→	<i>u-ko-ani</i>	‘to take/bring sth to each other’ (OI.)	(vt)
	b.	<i>ehunara</i>	‘to grudge to give sth’ (Nak. 96)	(vt)
	→	<i>ko-ehunara</i>	‘to grudge to give sth to sb’ (OI.)	(vb)
	→	<i>u-ko-ehunara</i>	‘to dispute possession of sth, take away from each other’ (OI.; N. 54)	(vt)
	c.	<i>kor</i>	‘to have/possess sth/sb’ (T4. 333)	(vt)
	→	<i>ko-kor</i>	‘to take away, receive sth from sb’ (T4. 323)	(vb)
	→	<i>u-ko-kor</i>	‘to struggle for sth with each other’ (T4. 758)	(vt)
	d.	<i>osura</i>	‘to throw sth’ (T4. 490)	(vt)
	→	<i>ko-osura</i>	‘to throw sth towards sb/sth’ (K. 19)	(vb)
	→	<i>u-ko-osura</i>	‘to throw sth to each other’ (N. 54; OI.)	(vt)
	e.	<i>soso</i>	‘to tear off/take off sth (the bark of a tree, the skin of a fish; OI: clothes)’ (Nak. 238; OI.)	(vt)
	→	<i>ko-soso</i>	‘to tear off/take off sth from sb/sth’ (Nak. 238; OI.)	(vb)
	→	<i>u-ko-soso</i>	‘to tear off/take off sth (clothes) from each other’ (OI.)	(vt)
	f.	<i>uyna</i>	‘to take/receive/rob sth/sb (two or more)’ (T4. 751, 819)	(vt)
	→	<i>ko-uyna</i>	‘to rob sb (two or more) of sth’ (T4. 349)	(vb)
	→	<i>u-ko-uyna</i>	‘to rob each other of sth (two or more)’ (T4. 766)	(vt)

Sentential examples:

- (30) a. *Ussi-utar tar ci-tanne tar u-ko-ehunara tar ci-takne tar*
 servant-PL rope PREF-long rope REC-APPL-grudge rope PREF-short rope
u-ko-osura sap ruwe ne. (N. 54)
 REC-APPL-throw descend.to.sea.PL ASS.FIN COP
 ‘The servants go down to the sea taking away from each other long ropes and throwing short ropes to each other.’
- b. *Keraan pe u-ko-ani.* (OI.)
 delicious thing REC-APPL-bring
 ‘(They) brought delicious things to each other.’

2. *Reciprocals derived from applicatives in e-*. This prefix changes two-place transitives into three-place by introducing an inanimate object. The reciprocal prefix reduces the valency by eliminating the animate object.

(31)	a.	<i>pakasnu</i>	‘to teach sb’ (T4. 506)	(vt)
	→	<i>e-pakasnu</i>	‘to teach sb sth’ (T4. 106)	(vb)
	→	<i>u-e-pakasnu</i>	‘to teach each other sth’ (T4. 808)	(vt)
	b.	<i>tusmak</i>	‘to overtake sb’ (TA4. 742)	(vt)
	→	<i>e-tusmak</i>	‘to overtake sb in sth’ (Kir2. 203)	(vb)
	→	<i>u-e-tusmak</i>	‘to compete with each other in sth’ (Kir2. 347)	(vt).

3.1.2.3 “Indirect” reciprocals – applicatives from “canonical” reciprocals. A peculiarity of Ainu is derivation of “indirect” reciprocals from “canonical” reciprocals by means of the applicative prefix *e-*. One of such instances is cited above under (19e): *e-u-ko-pinu-pinu* (vt) ‘to whisper sth to each other’ (T4. 145). Here are another examples:

(32)	a.	<i>asurani</i>	‘to warn/alert (of frosts, fire, sb’s death)’ (T4. 31; OI.)	(vi)
		<i>ko-asurani</i>	‘to warn/alert sb’ (T4. 315)	(vt)
		<i>u-ko-asurani</i>	‘to warn/alert each other’ (T4. 767)	(vi)
		<i>e-u-ko-asurani</i>	‘to warn/alert each other of sth’ (T4. 146; OI.)	(vt)
		cf. <i>e-asurani</i>	‘to warn, alert of sth’ (T. 76, OI.)	(vt)
	b.	<i>itak</i>	‘to talk/speak’ (T4. 250)	(vi)
		<i>ko-itak</i>	‘to talk/speak to sb’ (T4. 357)	(vt)
		<i>u-ko-itak</i>	‘to talk/speak to each other’ (OI.)	(vi)
		<i>e-u-ko-itak</i>	‘to talk to each other about sth’ (T4. 146; OI.)	(vt)
		cf. <i>e-itak</i>	‘to talk about sth’ (K. 160)	(vt)
	c.	<i>koramkor</i>	‘to confer/consult with sb’ (T4. 334)	(vt)
		<i>u-koramkor</i>	‘to confer/consult with each other’ (T4. 762)	(vi)
		<i>e-u-koramkor</i>	‘confer/consult with each other about sth’ (T3. 1, 247)	(vt)
		cf. <i>e-koramkor</i>	‘to confer/consult about sth’ (T. 92)	(vt)

Sentential examples:

- d. *Aynu opuspe hene a-e-u-ko-isoytak.* (T3. 1, 247)
 Ainu story also IND-APPL-REC-APPL-tell.stories
 ‘We were telling each other stories concerning the Ainu [life].’
- e. *Okikurumi Samayunkur nep ne yak-ka e-u-ko-asurani wa*
 O. S. something COP if-even APPL-REC-APPL-warn and
e-u-ko-itak wa neun paye yak-ka u-tura wa paye. (OI.)
 APPL-REC-APPL-tell and wherever go even-if REC-accompany and go
 ‘Okikurumi (Ainu God) [and] Samayunkur (Ainu hero) warned each other of every-
 thing and told each other about [everything] and wherever [they] went, they went
 together (lit. ‘accompanying each other’).’

Applicatives are also formed from sociatives; see, for instance, (18h), 6.1.1.3 and (101d).

3.1.3 “Possessive” reciprocals

“Possessive” reciprocals proper seem to be non-existent in Ainu. We have in mind constructions of the type *We test each other’s strength*; see (33c) which is ungrammatical in Ainu. But there are constructions with an incorporated object provisionally termed “quasi-possessive” which semantically correspond to “possessive” reciprocal constructions proper.

3.1.3.1 “Possessive” reciprocals proper. There is no data so far.

3.1.3.2 “Quasi-possessive” reciprocals with an incorporated object

3.1.3.2.1 *Derived from two-place non-applicative transitives.* The examples cited here are more or less lexicalized. These forms seem to lack synonymous correlates with a non-

<i>u-tek-ruy-ruy-e</i>	‘to stroke each other’s hands’ (OI.)
<i>u-tek-anpa</i>	‘to link/hold hands’ (T4. 795)
<i>u-tek-kamu-re</i>	‘to bring (lit. cover) each others’s hands together’ (T4. 795).

Sentential examples (in the first two sentences, the reciprocal verbs are nominalized without any special marking and occur with the verb *ki* ‘to do’ which functions as an auxiliary of a periphrastic verb form):

- (35) a. *tap e-ki ciki u-kiror-nukar a-ki kusu ne na.* (Kir2. 138)
 thus 2SG-do if REC-strength-see 1PL.INC-do INTENT COP FIN.PRTL
 ‘Since you behave so, let’s measure each other’s strength!’
- b. *Sonno he tapne e-hawan ciki, u-sinrit-pita a-ki kusu ne na.* (Kir2. 99)
 really PRTL thus 2SG-speak if REC-ancestor-guess IND-do INTENT COP
 FIN.PRTL
 ‘Since you are speaking in earnest, let’s guess each other’s ancestors.’
- c. *Anna Ito u-tek-kik.* (OI.)
 A. I. REC-hand-hit
 ‘Anna and Ito clapped each other on the palms.’
- d. *Anna ona-ha u-tek-nimpa wa paye.* (OI.)
 A. father-POSS REC-hand-lead and walk.PL
 ‘Anna and her father walk hand in hand’, lit. ‘...lead each other by the hand.’
- e. *Emkota u-tura wa u-tek-ama wa hosip-pa yan!*
 hurry REC-accompany and REC-hand-hold and return.home-PL IMP.POL
 ‘Hurry up and go home together holding hands!’ (R. 150)

Among the reciprocals under (34a), four lexicalized formations are included, with the meaning of the base verb being changed:

- (36) a. *u-kes-kor* (B. 524; Kay. 102)
 REC-edge-have
 ‘to succeed to one another’s inheritance; to inherit.’ (*kes* ‘edge, end’)
- b. *u-setur-ka-rar-pa* (Kir2. 354)
 REC-back-surface-press-PL (*ka* is a locative noun; see 12.1)
 ‘next to each other’, lit. ‘to press the surface of each other’s back.’
- c. *u-sampe-tusmak* (Kin. 151)
 REC-inside-overtake
 ‘to tear each other’s insides.’

3.1.3.2.2 *Derived from two-place applicatives in ko- and e-*. No data so far.

3.1.3.2.3 *Reciprocals of the type u-V-pakte* ‘to compete in V’. To complete the picture, we shall name another morphological type of derivatives which express reciprocity but are not “quasi-possessive”, since their meaning cannot be rendered by two constructions of the (33a–b) type, if only for the reason that the verbal stem *pakte* is not used alone. It is considered by Tamura as a bound transitive stem meaning ‘to compare’, ‘to compete’ used in the pattern “*u-...pakte*” (T4. 508). Unlike derivatives discussed in 3.1.3.2.1, these instances seem to involve incorporation of verbal stems also. But, since Ainu verbal stems

are never incorporated into other verbal stems, we assume that all of the incorporated verbal stems in (37a–d) undergo formal nominalization first, and only then incorporation takes place. As we have already shown in 2.2, intransitive stems (and all of the incorporated stems in (37a–d) are base intransitives) can function as nouns without any change in morphology. The only problem is that none of the corresponding nouns for incorporated stems in (37a–d) are actually registered in the dictionaries. This is why we treat this phenomenon as formal nominalization.

Some of the derivatives of the type mentioned are semantically contiguous to the derivatives under consideration here (cf. *u-kiror-nukar* ‘to compete in strength’ and (37e)). This fact justifies their being considered next to each other.

(a) A nominalized verbal stem is incorporated:

- (37) a. *u-nitan-pakte* (*nitan* ‘to run.fast’ (T4. 426))
 ‘to run a foot race’ (T4. 773)
 b. *u-nupur-pakte* (*nupur* ‘to be clairvoyant’ (T4. 444))
 ‘to compare each other’s strength of clairvoyance’ (K. 295; OI.)
 c. *u-terke-pakte* (*terke* ‘to jump’ (T4. 713))
 ‘to compete in the long jump’ (T4. 795).
 d. *u-yapkir-pakte* (*yapkir* ‘to throw’ (T4. 839))
 ‘to compete against one another in a throwing contest’ (T4. 818).

(b) A nominal stem is incorporated:

- e. *u-kiror-pakte* (*kiror* ‘strength’ (T4. 309))
 ‘to compete in strength’ (T4. 755)
 f. *u-par-pakte* (*par* ‘mouth’ (T4. 509))
 ‘to debate’ (T4. 775).

3.2 Object-oriented constructions

Unlike subject-oriented constructions, these may have a singular subject, while the object is as a rule plural semantically or it refers to an entity composed of some parts involved in the action.

3.2.1 Causatives derived from subject-oriented reciprocals

It seems that if there are no pragmatic restrictions, any subject-oriented reciprocal can be causativized. The following derivations illustrate this type (in (38a) lexicalization takes place):

- | | | | | |
|------|----|-------------------|---|------|
| (38) | a. | <i>as-te</i> | ‘to let/make stand’ (T4. 30) (< <i>as</i> ‘to stand’ (vi) T4. 26) | (vt) |
| | | <i>u-as-te</i> | ‘to breed, reproduce’ (T4. 801–2) | (vi) |
| | | <i>u-as-te-re</i> | ‘to make produce children and grandchildren’ (T4. 802) | (vt) |
| | b. | <i>koyki</i> | ‘to scold/ bully/attack sb’ (T4. 354) | (vt) |
| | → | <i>u-koyki</i> | ‘to bully each other’, ‘to quarrel’ (T4. 767; OI.) | (vi) |
| | → | <i>u-koyki-re</i> | ‘to make sb quarrel/fight with each other’ (T4. 767; OI.) | (vt) |

c.	<i>kor</i>	‘to have sb’ (T4. 333)	(vt)
→	<i>u-kor</i>	‘to have each other’ (couples, friends); ‘get married’ (T4. 762)	(vi)
→	<i>u-kor-e</i>	‘to let or make sb marry’ (T4. 762–3)	(vt)
d.	<i>kotuk</i>	‘to stick to sth’ (T4. 347)	(vt)
→	<i>u-kotuk</i>	‘to stick to each other’ (T4. 765)	(vi)
→	<i>u-kotuk-ka</i>	‘to stick sth to each other(with glue)’ (T4. 765) (see (39b))	(vt)
e.	<i>tom-osma</i>	‘to bump/run into sth/sb’ (T4. 720; OI.)	(vt)
→	<i>u-tom-osma</i>	‘to bump into/ meet each other’ (T4. 796; OI.)	(vi)
→	<i>u-tom-osma-re</i>	‘to make sth/sb bump into each other’ (T4. 796)	(vt)

In lists (21), (38) and (40) the verbs may recur. (38) is a list of causatives derived from “canonical” subject-oriented reciprocals, and list (40) contains reciprocals of three-place causatives; both derivational chains differ only in the second member, the first and also the third members being identical; cf. (38f) and (38g) respectively:

f.	Two-place	One-place	Two-place
	<i>kotuk</i> ‘to stick to sth’	→ <i>u-kotuk</i> ‘stick together’	→ <i>u-kotuk-ka</i> ‘stick sth to each other’ (cf. (38d))
g.	Two-place	Three-place	Two-place
	<i>kotuk</i> ‘to stick to sth’	→ <i>kotuk-ka</i> ‘stick sth to sth’	→ <i>u-kotuk-ka</i> ‘to stick sth together’ (cf. (40f)).

Sentential examples:

- (39) a. ... *kiwakusu e-kor yup-i-utar u-koyki-re-pa hine* ... (N. 96)
 therefore 2SG-have elder.brother-POSS-PL REC-quarrel-CAUS-PL and
 ‘... therefore (she) made your elder brothers quarrel with each other, and then ...’
- b. *Ku-kor toke at-uhu sos-ke kor an k-u-kotuk-ka easirki*,
 my watch band-POSS take.off-ACAUS and exist 1SG-REC-stick-CAUS must
somo yakun nani tuy. (T4. 765)
 not if soon break
 ‘My watch band came off. I must *stick* (them) *together*. If not, (it) will break soon.’
- c. *Wen okkayo okay-po menoko-po-utar u-koyki-re.* (OI.)
 bad man man-DIM woman-DIM-PL REC-quarrel-CAUS
 ‘A bad man is making a young man and a young woman quarrel with each other.’

3.2.2 Reciprocals with the meaning of joining sth/sb together

The reciprocals belonging here denote joining, mixing, comparing two or more entities together and the like (cf. (44a)). The object is always semantically plural (see (41), (46)) or it is expressed by two coordinated nouns (with or without a conjunction; see (44a) and (44d) respectively), or it denotes an entity or substance parts of which change position relative to each other (see (44b, c)). There are about 20 object-oriented reciprocals in our corpus and all of them (with three exceptions) are derived either from causatives (see 3.2.2.1) or applicatives (see 3.2.2.2). The registered examples of object-oriented reciprocals are typical cross-linguistically with respect to their lexical meaning, their base verbs being three-place lexical reciprocals with the meaning of joining in the broad sense (for instance, in Japanese there are more than 80 of them).

Note that the term ‘together’ in the translations of object-oriented reciprocals has a meaning different from that in the translations of sociatives, as it denotes joining.

3.2.2.1 *Derived from three-place non-applicative transitives.* Example (40b) needs some explanation. This reciprocal is not derived by means of the applicative prefix *o-* (cf. (45b)) but from a transitive with the homonymous prefix *o-* < *ho-* ‘bottom, lower part, back’. In the (40a) example the component *ko-* is not distinguished in any of the dictionaries, the reciprocal contains partial reduplication.

(a) Derived from non-causative verbs:

- | | | | | |
|------|----|----------------------|--|------|
| (40) | a. | <i>kotaci-[taci]</i> | ‘to stick sth (for sth sticky) to sth/sb; to smear/daub sth/sb with sth’ (T4. 342; U3. 30) | (vb) |
| | → | <i>u-kotaci-taci</i> | ‘jumble/[mix] up everything and anything [together]’ (T4. 764) | (vt) |
| | b. | <i>o-usi</i> | ‘to stick in’ (B. 373) (< <i>usi</i> ‘to attach/stick sth to sth’ (vb); T4. 788) | (vt) |
| | → | <i>u-o-usi</i> | ‘link/join sth (e.g. tie two short ropes into a long one)’ (T4. 818) | (vt) |
| | c. | <i>korototo</i> | ‘to break/crush sth into pieces’ (T. 337) | (vt) |
| | | <i>u-korototo</i> | ‘to break/crush sth [together] into pieces’ (UR. 154) | (vt) |

(b) Derived from causative verbs:

- | | | | | |
|--|----|-------------------|--|------|
| | d. | <i>kamu</i> | ‘to cover sth/sb’ (Kir2. 226) | (vt) |
| | → | <i>kamu-re</i> | ‘to cover sth/sb with sth’ (T4. 270) | (vb) |
| | → | <i>u-kamu-re</i> | ‘to lay one on top of another’ (T4. 752) | (vt) |
| | e. | <i>kasma</i> | ‘to put sth aside in abundance; to live sth undone’ (Nak. 141) | (vt) |
| | → | <i>kasma-re</i> | ‘to make sb put sth aside; to make sb live sth undone’ (OI.) | (vb) |
| | → | <i>u-kasma-re</i> | ‘to put aside small portions of sth (food, etc.)’ (T4. 753) | (vt) |
| | f. | <i>kor</i> | ‘to have/possess sth/sb’ (T4. 333) | (vt) |
| | → | <i>kor-e</i> | ‘to give sth/sb to sb’ (T4. 335) | (vb) |
| | → | <i>u-kor-e</i> | ‘to make/let sb [and sb] marry’ (T4. 763) lit. ‘to give sb [bride and bridegroom] to each other’ | (vt) |
| | g. | <i>kotuk</i> | ‘to stick to sth’ (T4. 347) | (vt) |
| | → | <i>kotuk-ka</i> | ‘to stick sth to sth’ (T4. 347) | (vb) |
| | → | <i>u-kotuk-ka</i> | ‘to stick sth to each other’ (T4. 765) | (vt) |
| | h. | <i>oma</i> | i. ‘enter/get in, reach sth’, ii. ‘be present somewhere’ (T4. 467) | (vt) |
| | → | <i>oma-re</i> | ‘to put sth/sb (one thing, one person) somewhere’ (T4. 467) | (vb) |
| | → | <i>u-oma-re</i> | ‘to bring sth/sb together, gather sth/sb’ (T4. 815) | (vt) |

A sentential example:

- (41) *Pon kaykuma u-oma-re wa ek.* (T4. 815)
 small twig REC-pick.up.and.pile-CAUS and AUX
 ‘He picked up and piled small twigs together.’

Example (42) probably describes a traditional situation of betrothing children to each other (one child to another); this reciprocal occurs in (N.) two more times in this meaning (see pp. 144, 145).

- (42) *E-pon hi wano [ecioka] a-eci-u-kor-e kun-ih i a-ye*
 2SG-little NR from YOU.PL 1PL.INC-2PL-REC-have-CAUS going.to-CMPL IND-speak
kor oka-an ruwe ne. (N. 135)
 and be-IND ASS.FIN COP
 ‘Since your childhood we agreed to give (you) [as bride and bridegroom] to each other, and so we live.’

3.2.2.2 Derived from three-place applicative transitives in *ko-* and *e-*. The first and the third member of a derivational chain there may be related as synonyms (see, for instance, (43e)). There seems to be a tendency to formally mark object-oriented reciprocity.

1. Reciprocals derived from applicatives in *ko-*. The applicative prefix changes a two-place transitive into a three-place transitive. The reciprocal prefix changes a three-place transitive into a two-place transitive; cf. (in (43a) there is no standard semantic relation):

- (43) a. *hoppa* ‘to leave sb behind’ (T4. 198–99) (vt)
 → *ko-hoppa* ‘to leave sb at sb’s place’ (T4. 319) (vb)
 → *uko-hoppa* ‘leave sb’ (e.g. the children alone, gathered together) (T2. 68) (vt)
 b. *kari* ‘to turn/spin sth/sb’ (T4. 281) (vt bound stem)
 → *ko-kar-kari* ‘to wrap sth round sth/sb (e.g. swaddling clothes round a baby) (vb) (OI; U4. 65)
 → *u-ko-kar-kari* ‘to wrap, roll sth up’ (T4. 757), ‘to roll up into a bundle’ (B. 526), (vt)
 kari ‘to roll up sth crumpling it’ (OI.)
 c. *nukar* ‘to see, look at sth/sb’ (Kin. 150) (vt)
 → *ko-nukar* ‘to compare sth with sth’ (Kin. 150) (vb)
 → *u-ko-nukar* ‘to examine sth by joining together’ = ‘to compare (two things)’ (vt) (D. 553, Kin. 150)
 d. *pop-te* ‘to cook/boil up sth’ (T4. 544) (vt)
 → *ko-pop-te* ‘to boil up sth together with sth’ (T4. 332) (vb)
 → *u-ko-pop-te* ‘to boil up sth together’ (OI.) (vt)
 e. *poye* ‘to mix sth’ (T4. 546; Kin. 150) (vt)
 → *ko-poye* ‘to mix sth with sth’ (T4. 546; Kin. 150) (vb)
 → *u-ko-poye* ‘to mix everything together’ (Kin. 150) (vt)
 f. *resu* ‘to raise/bring up sb (a child, an animal)’ (T4. 576) (vt)
 → *ko-resu* ‘to raise sb (as bride or bridegroom) for sb’ (Nak. 425) (vb)
 → *u-ko-res-pa* ‘to raise sb for each other (as future spouses)’ (OI.) (cf. (42), (77c), (91b)) (vt)
 g. *sina* ‘to bind, tie sth’ (T4. 636–7) (vt)
 → *ko-sina* ‘to bind/tie sth/sb with/to sth/sb’ (T4. 339; OI.) (vb)
 → *u-ko-sina* ‘to gather/bundle sth together’ (T4. 763; OI.) (vt)
 h. *su-pa* ‘to boil/cook (up) sth (for two people and more/two things and more)’ (T4. 685) (vt)
 → *ko-su-pa* ‘to cook/boil sth together with sth’ (T5. 56–7) (vb)
 → *u-ko-su-pa* ‘to boil (up) sth [more than two things] together’ (U2. 20) (vt)
 i. *tama* ‘to add sth’ (Kir2. 331) (vt)
 → *ko-tama* ‘to add sth to sth/somewhere’ (Kir2. 248) (vb)
 → *u-ko-tama* ‘to add everything together, join sth together’ (K. 292) (vt)

j.	<i>tata</i>	‘to beat/chop sth (fish, meat)’ (T4. 703)	(vt)
→	<i>ko-tata</i>	‘to chop sth together with sth’ (Nak. 245)	(vb)
→	<i>u-ko-tata</i>	‘to chop everything together’ (OI.)	(vt)
k.	<i>yupu</i>	‘to fasten sth’ (T4. 876)	(vt)
→	<i>ko-yupu</i>	‘to fasten sth to sth’ (O. 76)	(vb bound stem)
→	<i>u-ko-yupu</i>	‘to fasten sth (e.g. a piece of luggage on packing it)’ (T4. 767)	(vt)
	<i>u-ko-yup-pa</i>	‘to fasten sth (two or more things together)’ (T4. 767)	(vt)

Sentential examples:

- (44) a. [*Pewre-utar*] *kamtaci newa amam u-ko-poye.* (suggested by Takahashi Y.)
 young-people malt and rice REC-APPL-mix
 ‘The young men mixed up malt and rice.’
- b. [*Asinuma*] [*tumunci*] *citatap ne a-u-ko-tata.* (O2. 193)
 INDEF water-sprite dish.of.pounded.fish as IND-REC-APPL-chop
 ‘[I] chopped [the water-sprite] into small bits as (if I was making) a dish of pounded fish.’
- c. *A-kor ya an-u-ko-kar-kari an-upsor-kuste.* (O3. 248–9)
 IND-have net IND-REC-APPL-wrap IND-bosom-put.in
 ‘[I] wrapped up my net [together] and put [it] into [my] bosom.’
- d. *Kamuy haru yuk haru an-u-ko-suye.* (O3. 382)
 bear food deer food IND.REC-APPL-cook
 ‘[I] cooked a bear and a deer together.’

2. *Reciprocals derived from applicatives in e-*. In (45b) the reciprocal is derived from a transitive with the prefix *o-* < *ho-* ‘bottom, lower part, back’ (not the applicative prefix *o-*; cf. (40b)); the form *o-e-roski* (vt) is registered in the meaning ‘to perch somewhere (of a bird)’ (T4. 454) unrelated lexically to the reciprocal derivative).

- (45) a. *kik* ‘to hit/beat sth/sb’ (T4. 302) (vt)
 → *e-kik* ‘to hit sth against sth’ (T4. 89; O. 20) (vb)
 → *u-e-kik-kik* ‘to hit/strike sth [and sth] together’ (T4. 806; OI.) (vt)
- b. *roski* ‘to stand [up] sth (two things and more)’ (PL) (T4. 584) (vt)
 → *e-roski* ‘to stand up sth somewhere’ (K. 53) (vb)
 → *u-o-e-roski* i. ‘to pile sth one upon the other’; ii. ‘to join sth (a number of shorter things) together (to make sth longer)’ (T4. 813) (vt)

A sentential example:

- (46) *Tek u-e-kik-kik wa onkami.* (T4. 806)
 hand REC-APPL-hit-hit and worship
 ‘Having clapped their hands, they pray.’ (a rite at the Sintoist temples; cf. also (101d))

3.2.2.3 *Anticausative derivation from object-oriented reciprocals.* From some object-oriented reciprocals, of the type discussed in 3.2.2.2 (and also from the respective underlying applicatives; see (47a)) and of the type discussed in 5.1.2 (see (47b, d)), anticausatives can be derived by means of the suffix *ke-* (see 2.3.2.3). We have also included here one example (48c) of an anticausative reciprocal which lacks a corresponding object-oriented recipro-

cal. Anticausative reciprocals derived from object-oriented reciprocals can be lexicalized, but those examples are not considered here (see (112d); cf. (61a)).

- (47) a. *poye* 'to mix sth' (Kin. 150) (vt); cf. (43e); → **poy-ke* (not registered)
ko-poye 'to mix sth with sth' (Kin. 150) (vb)
 → *ko-poy-ke* 'to be mixed with sth' (T4. 332) (vt)
u-ko-poye 'to mix everything together' (Kin. 150) (vt)
 → *u-ko-poy-ke* 'to be mixed (to become homogeneous)' (T4. 761) (vi)
 b. *komo* 'to bend sth' (T4. 325) (vt) → *kom-ke* 'to be bend' (vi)
 (T4. 325)
uko-kom-kom-pa 'to bend sth [together]several times [over sth]' (T4. 758) (vt)
 → *uko-kom-ke* 'to become round/bent, to be bent from both sides' (vi)
 (K. 291, OI.)
 c. *moy-moye* 'to move/touch sth/sb' (T4. 397) (vt)
 → *moy-moy-ke* 'to move' (T4. 397) (vi);
moyoy-ke 'to move as swarms of maggots in putrified fish or meat' (vi)
 (B. 305)
 → *uko-moyoy-ke* '(of fishes, worms) to move in disorder when mixed up' (vi)
 (U3. 70; OI.)
 d. *noye* 'to wind/twist sth (e.g. a thread)' (T4. 437); cf. (61h) (vt)
 → *noy-ke* 'to be wound, twisted' (T4. 436) (vi)
 → *ko-noy-ke* 'to be twisted/wound around sth' (Nak. 188) (vt)
uko-noye 'to twist sth together' (T4. 759) (vt)
 → *u-ko-noy-ke* 'to be twisted/intertwined' (T4. 760) (vi)

Sentential examples:

- (48) a. ... *pet or ta ne yak-ka cep poronno uko-moyoy-ke wa*
 river place in COP if-even fish in.abundance REC-SWARM-ACAUS and
oka yakaye. (U3. 26)
 be(PL) it.is.said.that
 'It is said that in the river the fish is swarming [being mixed in disorder] in abundance.'
 b. *ku-soyne wa ku-inkar akus harikane u-ko-noy-ke*
 1SG-go.outside and 1SG-look when electric.wire REC-APPL-be.intertwined-ACAUS
wa an. (T4. 760)
 and be
 'When (I) went outside and looked around – the electric wires were intertwined
 together.'
 c. *setur-u hu ka uko-kom-ke ikkew-ehe ka uko-kom-ke.* (OI.)
 back-POSS also REC-bend-ACAUS lower.back-POSS also REC-bend-ACAUS
 'His (upper) back is bent, and his lower back is also bent.'

3.3 Simultaneity and succession

Judging by the material at our disposal, Ainu reciprocals display the same features as those of other languages in this respect, i.e. the meaning of simultaneity or succession or chaining (cf. *u-kamu-re*) is determined by the lexical meaning of the root. Thus, the following verbs clearly describe successive subevents:

- (49) *kamu-re* ‘to cover.with’ → *u-kamure* ‘to lay one on top of another’ (T4. 752)
kasuy ‘to help’ → *u-kasuy* ‘to help each other’ (T4. 753)
kes-an-pa ‘to chase/pursue’ → *u-kes-an-pa* ‘to chase/pursue each other’ (T4. 754)
keske ‘to persecute’ → *u-keske* ‘to persecute one another’ (P. 146)
pas-te ‘to make run, chase’ → *u-pas-te* ‘to chase one another’ (P. 146).

A sentential example:

- (50) ... *u-kes-an-pa kor oka ruwe ne* ... (N. 97)
 REC-chase-PL and live ASS.FIN COP
 ‘... they lived chasing each other’, lit. ‘...they chased each other, thus living.’

3.4 Expression of reciprocal arguments

There are two main devices, non-comitative and comitative. In the latter case the postposition *tura* ‘with’ is used. It is widely used in the comitative meaning with non-reciprocal verbs (see (51a–b)); as a rule, applicative forms do not have a comitative meaning and meanings like ‘I ate *together with him*’ are rendered by means of the comitative postposition only).

- (51) a. *Henke tura ipe an-ee*. (Mur. 89)
 old.man with food IND-eat
 ‘I ate the food with the old man.’
 b. *Nea cep pone tura a-kuykuy*.
 that fish bone with IND-bite
 ‘I bit this fish with its bones.’ (Sh. 68)

This postposition is descended from a transitive verb with the meaning ‘to accompany sb’ and agrees with a direct object, like a transitive verb (i.e. the forms under (51) can also be translated as ‘accompanying me, you, him, etc.’); cf. (51c) with (4b) (examples from the Saru dialect):

- c. *en-tura* ‘with me’ *un-tura* ‘with us’
e-tura ‘with you (SG)’ *eci-tura* ‘with you (PL)’
 \emptyset -*tura* ‘with him/her/it’ \emptyset -*tura* ‘with them.’

3.4.1 Non-comitative expression of reciprocal arguments

The expression of reciprocal arguments in non-comitative constructions does not differ from the expression of plural subject in non-reciprocal constructions. For instance, if the subject referents are clear from the previous context the reciprocal arguments are usually omitted, as in other cases (see (1b)). The coordination may be unmarked, in which case the subjects are simply juxtaposed (cf. *hapo mici* ‘mother and father’; D. 192–4) or in some dialects (Northeastern Hokkaido and Sakhalin) the marker may be placed between the coordinated nouns or follow each of them (cf. *hapo newa mici*, *hapo newa mici newa*, *hapo tura mici*). In (52) *tura* is a coordinating conjunction ‘and’; it is materially identical with the postposition ‘with’ (cf. the meanings of the Japanese *to* ‘and’ and ‘with’).

- (52) [*Ito newa / tura Anna*] *u-etay-pa kor okay.* (OI.)
 I. and and A. REC-pull-PL and be.PL
 ‘Ito and Anna were pulling each other.’

3.4.2 Comitative expression of a reciprocal argument. Postposition *tura(no)* ‘with’

If the referents of the reciprocal arguments are not equal pragmatically, the reciprocal construction differs from its non-reciprocal counterpart in agreement. A non-reciprocal construction may have singular (see *ku-sinot* in (53)) as well as plural (see *sinot-as*) agreement when containing a comitative group with the comitative postposition *tura/turano* ‘with’; cf.:

- (53) [*Kani anak*] *Ito tura ku-sinot / sinot-as.* (OI.)
 I TOP I. with 1SG-play play-1PL.EXC
 ‘I play with Ito.’

As mentioned above, there are no explicit agreement markers for the 3SG and 3PL (see (3)–(5)). Therefore the opposition under (53) is morphologically neutralized in this case. This is why in order to establish the existence/non-existence of a discontinuous construction (i.e. whether we may interpret the comitative group as an object rather than as part of the subject) we need sentences with one of the subject participants being expressed by the 1SG or 2SG pronouns. The relevant sentences reveal that there are no discontinuous reciprocal constructions: the predicate is always plural and thus agrees with both arguments, i.e. the form *u-etay-pa-as* cannot be replaced by **k[u]-u-etaye* (the same holds for syntactically analogous sociative constructions).

- (54) [*Kani anak Anna ku-ne wa*] *Ito tura u-etay-pa-as kor okay-as.* (OI.)
 I TOP A. 1SG-COP and I. with REC-pull-PL-1PL.EXC and be.PL-1PL.EXC
 ‘I am Anna, Ito and I (lit. ‘[I] together with Ito’) are pulling each other.’

This difference does not manifest itself if both participants are named by nouns or 3rd person pronouns, because, as has been mentioned, in this case the verbal agreement is zero marked and it is not clear whether the predicate agrees with the first coordinated subject and is singular, or with both. Note that the comitative argument cannot be commonly omitted (at least, our informant does not accept such examples), while the non-comitative argument can as a rule be omitted if it is clear from the context (as in a non-reciprocal construction). This can be accounted for by the fact that unlike a non-comitative argument, the comitative argument cannot have an antecedent in the preceding context. Cf.:

- (55) [*Ito*] *Anna tura u-etay-pa kor okay.* (OI.)
 I. A. with REC-pull-PL and be.PL
 ‘Ito and Anna were pulling each other.’

3.5 Nominalization

Nominalization of verbal forms with the prefix *u-* is possible and, like nominalization of other verbal forms, may be either marked by the nominalizer *p* on transitives (56e) or it

may be unmarked on intransitives (57). The auxiliary noun *p* ‘thing’ may nominalize even the passive form of reciprocals (see (56e)); cf.:

- (56) a. *sina* ‘to bind, tie’ (T4. 636–7) (vt)
 b. *ko-sina* ‘to bind, tie with/to sth/sb’ (T4. 339) (vb)
 c. *u-ko-sina* ‘to gather, bundle sth together’ (T4. 763) (vt)
 d. *cep a-u-ko-sina*.
 fish IND/PASS-APPL-REC-bind
 i. ‘We/I tied the fishes together.’ (active)
 ii. ‘The fishes are tied by somebody.’ (passive)
 e. *cep a-u-ko-sina p* (T4. 763)
 ‘a bunch of fish.’
- (57) *kasuy* ‘to help sb, to help with sth’ (T4. 287) (vt)
 → *u-kasuy* *u-kasuy* i. ‘to help each other’; ii. ‘mutual help’ (T4. 753).

Instances with the auxiliary verb *ki* ‘to do’, like those in (35a, b), are not nominalizations proper: most likely they are periphrastic verb forms; cf. *cis-an* ‘I cry’ and *cis a-ki* ‘I cry’, lit. ‘I do crying’.

3.6 Restrictions

Reciprocals do not derive from two-place intransitives, i.e. from verbs taking a complement with a postposition (not to mention one-place intransitives, which goes without saying). In order to express reciprocity, a two-place intransitive verb should first be transitivized by means of an applicative prefix (cf. 3.1.1.2). There are also a number of transitives which at first glance can be reciprocalized but in reality they are not used reciprocally, e.g. **u-ruska* ‘with the intended meaning ‘to be angry because of each other’. The reason is, its base verb *ruska* can take an inanimate object only. In such instances, in order to form a needed reciprocal, a number of preliminary operations analogous to a certain degree to those performed on two-place intransitives, should be performed (see (17e)), cf. *nu* ‘to listen to sth/*sb’ (vt) (T. 437–8) [→ **u-nu* (intended meaning: ‘to listen to each other’ (not registered and rejected by Oda Ito)] → *i-nu* ‘to hear, listen’ (vi) (T. 236) → *ko-i-nu* ‘to listen to sb’ (vt) (T. 355) → *u-ko-i-nu* ‘to listen to each other’ (OI.; cf. *u-ko-i-ruska* in (17f)). It goes without saying that these are not restrictions proper. As reciprocals in Ainu are highly productive, restrictions on transitives are likely to be of trivial nature, e.g. the inanimate subject of the base verb.

4. Sociatives with the prefix *u-*

4.1 Derived from non-applicatives

There are only a few verbs with the prefix *u-* at our disposal that have the sociative meaning. This type of sociative derivation does not seem to be productive.

4.1.1 *Subject-oriented sociatives*4.1.1.1 *Derived from one-place intransitives.* The only example at our disposal:

- | | | | |
|------|------------------------------|--|------|
| (58) | <i>pirasa</i> | ‘to spread, widen, open sth’ (Kay. 386; OI) | (vt) |
| → | <i>si-pirasa/si-piras-pa</i> | ‘to widen, enlarge’ (T4. 644; OI.) | (vi) |
| → | <i>u-si-piras-pa</i> | ‘for all to be spread out’ (T4. 789) (cf. (59h)) | (vi) |

4.1.1.2 *Derived from two-place transitives.* This group of derivatives is semantically heterogeneous and its content seems to be accidental, as it comprises verbs of active action (e.g. ‘to cry’, ‘to gather’, ‘to cross a river’) as well as of spontaneous processes or states (e.g. ‘to be spread out’, ‘to grow up’, ‘to multiply’, ‘to alternate’). Derivation of this small unique group of sociatives involves intransitivization of the base verb, though generally sociative derivation does not change verbal valency. Another peculiarity of this group of sociatives is a larger or lesser degree of lexicalization; in fact, they might be entered among lexicalized *u-* verbs in 8.2. As a rule, intransitivization also accompanies standard derivation of *reciprocals* from two-place transitives but in this case the meaning of the base verb is included in the meaning of the derived reciprocal. This is not the case with the sociatives discussed here: we observe a kind of non-standard decausativization, with the exception of (59c). The latter sociative requires explanation as the situation it describes is denotationally close to a reciprocal one. For instance, it may be used in the contexts both involving tears: ‘at first meeting, the women take each other by the hands and express mutual liking by tears of joy’ (this is an explanation in T4; in Kir2. 347; as well as in the meaning given by our informant Oda Ito), tears are also mentioned, but they are bitter tears: ‘to cry together on sb’s death’.

- | | | | | |
|------|----|--------------------------|---|------|
| (59) | a. | <i>as-te</i> | ‘to make/let sb stand’ (T4. 30) (<i>as</i> ‘to stand’ (T4. 26) (vi)) | (vt) |
| | → | <i>u-as-te</i> | ‘to spread (of plants), multiply (of people)’ (T4. 802) | (vi) |
| | b. | <i>cip-e-kusa</i> | ‘to take sth/sb across a river by boat’ (T4. 56) (<i>cip</i> ‘boat’) | (vt) |
| | → | <i>u-cip-e-kusa</i> | ‘to cross a river/sea together in a boat’ (T4. 748) | (vi) |
| | c. | <i>ciskar</i> | ‘to cry about sb/sth’ (T4. 62) | (vt) |
| | → | <i>u-ciskar-pa</i> | ‘to cry together’ (T4. 748) | (vi) |
| | d. | <i>hayok-ko-tur-pa</i> | ‘to arm sb (with weapons)’ (‘arms-APPL-straighten sth’) (OI.) | (vt) |
| | → | <i>u-hayok-ko-tur-pa</i> | ‘for everyone to be armed’ (T4. 749; OI.) | (vi) |
| | e. | <i>kusis</i> | ‘to brew [sth]’ (Kay. 214) | (vt) |
| | → | <i>u-kusis</i> | ‘to ferment’ (Kay. 101) | (vi) |
| | f. | <i>oma</i> | ‘to position sth, enter/get in/on’ (T4. 467) | (vt) |
| | → | <i>u-oma</i> | ‘for a lot of people to gather together’ (T4. 814),
‘for a lot of things to be gathered together’ (U4. 89) | (vi) |
| | g. | <i>o-mina-usi-usi</i> | ‘to laugh/rejoice at sth’ (OI.) (‘back-laughter-attach’) | (vt) |
| | | <i>u-o-mina-usi-usi</i> | ‘for everyone to laugh loudly’ (T4. 815) | (vi) |
| | h. | <i>pirasa</i> | ‘to spread, widen, open sth’ (Kay. 386; OI) | (vt) |
| | → | <i>u-piras-pa</i> | ‘for all to be spread out, dispersed’ (T4. 789) | (vi) |
| | i. | <i>resu</i> | ‘to raise/bring up (a child, animal)’ (T4. 576) | (vt) |
| | → | <i>u-res-pa</i> | ‘to grow up together’ (T4. 783; OI) | (vi) |

j.	<i>ronnu</i> (PL)	‘to kill (two people/animals and more)’ (T4. 583)	(vt)
→	<i>u-ronnu</i>	i. ‘for a lot of people to be killed/die’ (cf. ii. ‘to kill each other’) (T4. 783–84)	(vi)

4.1.2 Object-oriented sociatives

There is no data so far.

4.2 Derived from applicatives in *ko-* and *e-*

No data.

5. Reciprocals with the complex prefixes *uko-* and *ue-*

This section concerns derivations with the prefixes *uko-* and *ue-* interpreted as single complex affixes because the corresponding applicative forms in *ko-* and *e-* are not registered (and/or rejected by our informant), or not related to them semantically.

5.1 Derivatives in *uko-*

5.1.1 Subject-oriented reciprocals

It should be stressed that unlike object-oriented ones, subject-oriented reciprocals almost never occur with the prefix *uko-*. We have no convincing examples of this type. The only two examples (see (60a) and (60b)) at our disposal can be included here with reservations. In both cases the direct object is incorporated (cf. also 6.1.1.1.2), which entails intransitivization. In (60a) there is no base form, i.e. the form **situ-kor* lit. ‘to have a ridge’ (as well as the applicative **ko-situ-kor*) is non-existent, and it occurs only with the prefix *uko-*. In other words, (60a) may be regarded as a reciprocal *tantum*, but it is convenient to consider it here.

- (60) a. *uko-situ-kor* ‘for two mountain ridges to come together’ (T4. 764) (vi)

A special place belongs to the derivation under (60b): it is characterized by the simultaneous use of two devices on the collocation *seta ne*, namely, incorporation of the direct object and prefixation of *uko-*. As in (60a), there is no base form (i.e. **seta-ne* with the same intended meaning as *seta ne*) with incorporation. In other words, this is the same type of derivation as in 3.1.3.2.1. Note that the Ainu copula *ne* ‘to be sth/sb’ is a transitive verb, which is obvious from the agreement marker on the predicate in the sentence *seta a-ne* (not **seta ne-an*) ‘I am a dog’ (it may be noted in passing that the copula *mu* ‘to be sth/sb’ is also transitive in Nivkh).

- b. *seta ne* ‘to be a dog’ (vt!)
uko-seta-ne lit. ‘to be dogs together/with each other’ (vi)

A sentential example (the predicate is used figuratively; see also (N. 58)):

- c. *E-kor riyap e-kor tures-i uko-seta-ne.* (N. 55)
 your-POSS bear.cub your-POSS younger.sister-POSS soc-dog-be
 ‘Your bear cub and your younger.sister behave like dogs.’ (=copulate, according to context)

5.1.2 Object-oriented reciprocals. Verbs of joining objects together

This group comprises at least 20 derivatives. The origin of this usage of the prefix *uko-* with the central sociative meaning can be accounted for by re-interpretation of the complex *u-ko-* as a single morpheme for marking object-oriented reciprocals (see 3.2.2.2 and example (43)). A certain affinity of object-oriented sociatives and object-oriented reciprocals might also have played a role (see (93) and the text above it). The base verbs are two-place transitives, and so are the derivatives. But their object is either semantically plural or consists of (uniform) parts or components involved in the action. In some cases, the base and the derivative are nearly synonymous in meaning, which makes the former a lexical object-oriented reciprocal, the prefix serving to stress this meaning (cf. (61f, m, p, q, s)). Semantically, these reciprocals are contiguous to those considered in 3.2.2. Their meanings are partly determined by the meaning of the base verbs: they denote making or putting or twisting several things together into one. The use of the sociative prefix *uko-* for the derivation of object-oriented reciprocals can probably be accounted for by the influence of object-oriented sociatives: in both cases the subject may be singular and the object is necessarily (semantically) plural (see also 6.1.2). Note that ‘together’ in the English translations below does not express a joint action of subject referents but a joining of two or more object referents. Some of the base forms have derivatives with the applicative prefix *ko-* but the latter are not related semantically in a standard way to the meaning of the object-oriented reciprocals, though at some time they might have been related (cf. *ko-cupu-cupu* ‘to roll up sth/sb into sth’ (O. 64), *ko-muye* ‘to give as a keepsake, a memento’ (T5. 133), *ko-tak-tak-u* ‘to ram, put sth into a heap, lean sth to sth’ (T3. 2–111), *ko-niki* ‘to fold sth together’ (B. 264)). Some of the applicatives in *ko-* have occurred with an incorporated object only (cf. *tek-ko-noye* ‘to twist sth with hands’ (O. 143)).

- (61) a. *cupu* i. ‘to fold sth’, ii. ‘to hide sth’, iii. ‘to shut sth (eg. eyes)’ (O. 15)
 → *uko-cupu* ‘to fold sth [together]’ (O. 156; cf. (112d))
 b. *epanu* ‘to wrap sth (e.g. a head band) around one’s head’ (T4. 107)
 → *uko-epanu* ‘to wrap sth (two head bands) together around one’s head’ (T4. 756)
 c. *kap-kapa* ‘to crush/flatten sth’ (T4. 279)
 → *uko-kap-kapa* ‘to squash sth flat with both hands’ (T4. 757; OI.)
 d. *kekke* ‘to break sth (eg. firewood)’ (T4. 292)
 → *uko-kekke-kekke* ‘to break/tear to pieces sth (eg. meat and fish together in order to cook them in one pot) together’ (U4. 21)
 e. *kisma* ‘to catch/grasp/get hold of sb/sth’ (T4. 312)
 → *uko-kisma* ‘to hold sth/sb together’ (T4. 758)
 f. *kom-komo*(SG); ‘to bend/bow sth’ (K. 137)
kom-pa(PL)
 → *uko-kom-kom-pa* ‘to bend sth [together] several times [over sth]’ (T4. 758)

g.	<i>muye</i>	‘to bunch/bundle sth’ (T4. 401)
→	<i>uko-muye</i>	‘to bunch/bundle sth together’ (T4. 759)
h.	<i>niko/niki</i>	‘to fold up sth’ (K. 170; B. 320)
→	<i>uko-nike</i>	‘to fold (up) sth (clothes)’ (T4. 759)
	<i>uko-niko</i>	‘to fold (up) sth’ (B. 527)
i.	<i>ninu</i>	‘to stitch [sew] sth’ (T4. 419)
→	<i>uko-ninu</i>	‘to sew sth [and sth] together’ (T4. 759)
j.	<i>noye</i>	‘to wind/twist sth (e.g. a thread)’ (T4. 436)
→	<i>uko-noye</i>	‘to twist sth together’ (T4. 759)
k.	<i>nuya-nuya</i>	‘to rub, rumple sth’ (HY. 43; OI.)
→	<i>uko-nuya-nuya</i>	‘to rub sth and sth together’ (OI.)
l.	<i>par-o-rar-pa</i>	‘to press in [<i>rar-</i>] sth (food) into [<i>o</i> -APPL] the mouth [<i>par</i>]’ (K. 201)
→	<i>uko-par-o-rar-pa</i>	‘to eat anything, to fill up mouth with anything and everything [all together]’ (T4. 760–61)
m.	<i>pete</i>	‘to boil and eat sth (e.g. green vegetables) without seasoning’ (T4. 524)
→	<i>uko-pete</i>	‘to boil and eat together (green vegetables)’ (T4. 761)
n.	<i>ray-pa</i>	‘to move (in some direction) sth/sb (two or more)’ (T4. 569)
→	<i>uko-ray-pa</i>	‘to gather, clutch/grab sth/sb’ (T4. 763)
o.	<i>se</i>	‘to carry sth on one’s back’ (O. 125)
→	<i>uko-se</i>	‘to carry sth on one’s back having put it together’ (O. 158)
p.	<i>suke</i>	‘to boil/cook sth’ (Mur. 213)
→	<i>uko-suke</i>	‘to boil/cook sth together with sth’ (Mur. 223)
q.	<i>suppa-kar</i>	‘to bundle sth together and then tie up’ (T4. 686)
→	<i>uko-suppa-kar</i>	‘to pack sth together with a rope or cord so as to carry on one’s back’ (T4. 764)
r.	<i>tak</i>	‘to call sb’ (T4. 692; T2. 68)
→	<i>uko-tak</i>	‘to call sb (two people and more) together’ (T4. 764; T2. 68)
s.	<i>tak-taku</i>	‘to make sth round, press sth into a round shape’ (T4. 692)
→	<i>uko-tak-taku</i>	‘to press/make sth into a round shape or lump with both hands’ (T4. 764)
t.	<i>teskao</i>	‘to knit sth’ (T4. 714)
→	<i>uko-teskao</i>	‘to knit sth together’ (T4. 765)
u.	<i>unu</i>	‘put/fix sth somewhere’ (e.g. an arrow on a bow-string)’ (Nak. 66)
→	<i>uko-unu</i>	‘to put/fix sth on sth together’ (e.g. an arrow on a bow-string) (OI.) (see also 5.2.2).

Sentential examples (in (62a) the words preceding *cip* are its attribute (a relative clause); *uko-se* in (62c) may also be interpreted as an object-oriented sociative):

- (62) a. *Ita a-uko-teskao wa a-kar cip.* (T4. 765)
 board PASS-REC-fasten and PASS-make boat
 ‘The boat made (by) fastening boards together.’
- b. *Unma tus horikasi racitke-re wa uko-noye kor an.* (T4. 759)
 horse rope from.above hang-CAUS and REC-twist and be
 ‘(He) hung the horse ropes from above and twisted them together.’

- c. *Yuk ne yak-ka kamuy ne yak-ka a-uko-se.* (OI.)
 deer COP if-even bear COP if-even IND-REC-carry.on.one's.back
 'I carried on my back a deer and a bear together.'

5.2 Derivatives in *ue-*

As in the above cases, the forms in *uko-* are more numerous than those in *ue-* (cf. 3.1.1.2 and 3.1.2.2).

5.2.1 Subject-oriented reciprocals

No data so far.

5.2.2 Object-oriented reciprocals

We have only two reciprocals of this type at our disposal. The first one implies two non-symmetrical objects (an arrow and a bow) though it denotes their joining (it is not unlikely that these objects were thought of by traditional Ainu as uniform; cf. (78b), (93)), therefore this example is not an ideal one:

- (63) a. *unu* 'to put/fix sth somewhere' (e.g. an arrow on a bow- (vb)
 string) (Nak. 66)
 → *ue-unu* 'to put/fix sth somewhere (all) together' (e.g. an arrow (vb)
 on a bow-string) (Kir2. 347)
 b. *nuya-nuya* 'to rub, rumple sth' (HY. 43; OI) (vt)
 → *ue-nuya-nuya* 'to rub sth and sth together' (OI.) (vt)

The base and the reciprocal verb do not differ significantly in meaning (cf. (64a) and (64b)). It is noteworthy that our informant does not know the verb *unu*; she claims that in (64b) only *ue-unu* can be used and not the form *unu* (she regards *ue-unu* and *uko-unu*, and also *ue-nuya-nuya* and *uko-nuya-nuya* as synonymous; cf. (61k, u)). Thus there seems to be a tendency for the reciprocal to oust the underlying form (in this respect the following fact may also be indicative: in 13 texts of Chiri Yukie (Kirikae 1989:347) the form *ue-unu* occurs 7 times while the form *unu* does not occur at all). As has been mentioned above, there is a general tendency to replace the unmarked object-oriented (lexical) reciprocals with their marked reciprocal counterparts (cf. 3.2.2.2, and 5.1.2).

- (64) a. *A-kor ciros a-etaye hine ku a-unu hine ...* (Nak. 66)
 IND-have arrow IND-pull.out and bow IND-put and
 '[I] pulled out my arrow and put it in the bow and ...'
 b. *Nesko pon ku nesko pon ay ue-unu.* (Kir2. 135–36)
 walnut little bow walnut little arrow REC-put
 '[He] put a small walnut arrow in a small walnut bow.'

A sentential example:

- (65) *A-kor hapo kampi pukuru ue-nuya-nuya / uko-nuya-nuya.* (OI.)
 IND-have mother paper bag REC-APPL-rub REC-APPL-rub
 'My mother rubbed paper against the bag', lit. '... rubbed paper and the bag together.'

6. Sociatives with the complex prefixes *uko-* and *ue-*

6.1 Derivatives in *uko-*

The sociative function of this prefix is distinguished in (T4), where it is mentioned as the second meaning alongside one of the manifestations of the reciprocal meaning: *uko-* i. ‘to face, go towards one another’; ii. ‘to cooperate with one another’ (T4. 755). Judging by the data of Sections 3 and 4, the prefix *u-* is used as a productive marker of reciprocity and it is only on a very small group of unproductive derivatives that it marks the sociative meaning. The data cited in Sections 5 and 6 show that the principal meaning of the prefix *uko-* is sociative, and it is productive only on a small number of bases as a marker of object-oriented reciprocity. We cannot cite any restrictions on the sociative use of *uko-* (true, our informant has refused to form a sociative from the verb *usi* ‘to attach sth to sth’ (T4. 788) (vb)). It is semantically natural that there are no sociative forms from reciprocals and vice versa, i.e. derivatives with the prefixes **uko-u-* and **u-uko-*. As it is highly productive, the dictionaries do not register all the sociatives with *uko-*: in texts there occur numerous sociative formations not registered in the dictionaries.

6.1.1 Subject-oriented sociatives

6.1.1.1 Derived from intransitives. The prefix *uko-* derives sociatives both from base intransitives and derived intransitives, including those with an incorporated direct object. Sociatives are formed from verbs of various lexical types, denoting both controlled (like ‘to eat’, ‘to work’, ‘to dance’, etc.) and unwilling or spontaneous (e.g. ‘to be small’, ‘to grow old’, ‘to suffer’, etc.) actions and processes, including those with an inanimate subject (cf. ‘to burst open’, ‘to become stiff’, ‘to crackle (of a fire)’). The features of the presence/absence of the respective applicative form and retention/change of the applicative meaning in the sociative derivative distinguish three subgroups. In subgroup (a) the comitative object is usually predictable: in (66b) it is the host at whose place one is staying the night and in (66a) it is one of the spouses; thus it is lexically determined. In the derivations below, the base forms are omitted because their meaning is clear from that of the derivatives.

(a) The meaning of the applicative is included in that of the sociative:

- | | | | | |
|------|-----|--------------------|--|------|
| (66) | a. | <i>uko-onne-pa</i> | ‘for everyone to grow old together’ (T4. 760) | (vi) |
| | cf. | <i>ko-onne-pa</i> | ‘to grow old together with sb’ (T5. 131) | (vt) |
| | b. | <i>uko-rewsi</i> | ‘to stay the night together’ (O. 157; OI.) | (vi) |
| | cf. | <i>ko-rewsi</i> | ‘to stay the night with sb’ (Nak. 424; O. 70; OI.) | (vt) |

(b) The meaning of the applicative is not included in that of the sociative:

- | | | | | |
|--|-----|-----------------------|---|------|
| | c. | <i>uko-hokus</i> | ‘to turn/fall together (of all)’ (OI.) | (vi) |
| | cf. | <i>ko-hokus</i> | ‘to fall, turn with sth/*with sb’ (Kir2. 242) | (vt) |
| | d. | <i>uko-kar-kar-se</i> | ‘to roll over together’ (O. 156) | (vi) |
| | cf. | <i>ko-kar-kar-se</i> | ‘to roll over with sth/*with sb’ (O. 67) | (vt) |
| | e. | <i>uko-horippa</i> | ‘to dance together’ (OI.) | (vi) |
| | cf. | <i>ko-horippa</i> | ‘to dance for sb/*with sb’ (OI.) | (vt) |

- | | | | |
|-----|----------------------|---|------|
| f. | <i>uko-nepki</i> | ‘to work together’ (OI.) | (vi) |
| cf. | <i>ko-nepki</i> | ‘to work for/instead of sb’ (OI.) | (vt) |
| g. | <i>uko-pakoat</i> | ‘for everyone to be accused of crime together’ (T4. 760) | (vi) |
| cf. | <i>ko-pakoat</i> | ‘to get/become involved in sth’ (T4. 331) | (vt) |
| h. | <i>uko-simusiska</i> | ‘to cough together [at the doorway in order to inform a host of one’s arrival]’ (O. 158) | (vi) |
| cf. | <i>ko-simusiska</i> | ‘to cough in the direction of sb (when visiting sb’s house; giving an answer, etc.’ (T4. 331) | (vt) |

(c) There is no underlying applicative (its absence may be accidental):

- | | | |
|----|---------------------------|--|
| i. | <i>uko-cipattankenere</i> | ‘(for the cooking, e.g. cooked chestnuts) to be (split) open; for all to burst open’ (T4. 755) |
| j. | <i>uko-etorotur-pa</i> | ‘to snore together’ (HY. 69) |
| k. | <i>uko-ipe</i> | ‘to eat together’ (OI.) |
| l. | <i>uko-kimatek</i> | ‘to be surprised together’ (T4. 758) |
| m. | <i>uko-kirirse-pa</i> | ‘to scream together’ (HY. 43) |
| n. | <i>uko-kisattarara</i> | ‘to listen attentively/ heed together’ (O. 156) |
| o. | <i>uko-maratto-kor</i> | ‘to hold a party together with everyone’ (T4. 759) |
| p. | <i>uko-nitne</i> | ‘for one’s both feet/legs to become stiff’ (T4. 759) |
| q. | <i>uko-nokan-pa</i> | ‘for all/both to be small/young’ (T4. 759) |
| r. | <i>uko-nucaktek</i> | ‘for everyone to play together happily’ (T4. 760) |
| s. | <i>uko-pakakse</i> | ‘to crackle all together (about fire sparks, roasted beans)’ (T4. 760) (OI: about guns) |
| t. | <i>uko-parapararak-ta</i> | ‘to cry together in loud weeping voices’ (T4. 760) |
| u. | <i>uko-sikaske</i> | ‘(for everyone) to say they don’t know’ (O. 158) |
| v. | <i>uko-sirkirap</i> | ‘to suffer an inconvenient lifestyle together’ (T4. 763–4) |
| w. | <i>uko-suke</i> | ‘to cook together’ (OI.) (vi) (cf. (61p)) |
| x. | <i>uko-tanas-tanas</i> | ‘to be uneven (to stick out here and there)’ (T4. 764) |
| y. | <i>uko-tasaske</i> | i. ‘to sting /smart all over’ (T4. 764),
ii. ‘(of everyone) to feel pain’ (OI.) |
| z. | <i>uko-yay-ko-puntek</i> | ‘to rejoice together’ (cf. (18e)). |

Sentential examples:

- (67) a. *Inne utar-i tura-no uko-ipe-an wa yak-un po keraan*
 be.many people-POSS together-ADV SOC-eat-IND and if-EMP more be.delicious
pe ne. (OI.)
 ASS.FIN
 ‘When we eat together with many (other) people the food is much more delicious.’
- b. *Katkemat-utar uko-suke kor po keraan.* (OI.)
 women-PL SOC-cook if more be.delicious
 ‘If women cook together [the food] turns out to be even more delicious.’
- c. *Ainu-utar uko-horip-pa.* (OI.)
 Ainu-PL SOC-dance.PL
 ‘The Ainu danced together.’

6.1.1.1.1 *The meaning of intensity?* The meanings of plurality/sociativity and intensity are close to one another. The five sentences below (by which we shall try to illustrate the mean-

ing of intensity; with the sociative *uko-* and *ue-* forms of the verb *hopuni* ‘to get up, fly, jump (up)’) are probably related to the sociative meaning. In these sentences *the subject is inanimate*. The sociative sense seems to be weakened. The use of the sociative prefix is conditioned by a kind of “semantic agreement”: according to our informant, the use of *uko-* in (68a) is determined by the fact that there are two parties of participants *quarrelling* with each other, which follows from the meaning of the subject NP *sakayo* ‘quarrel’. This factor does not seem to obligatorily result in the use of the sociative marker; cf. (68c). Note however that in (68c), unlike in (68a, b), the intensifying attribute *wen* ‘angry, cruel, severe’ is absent; its possible correlation with the intensifying *uko-* is supported by examples (68d) and (68e) with the same subject: the former contains both *wen* and *ue-* (with an intensifying meaning as well, it seems; cf. also (74g)), and the latter contains neither. Omission of *uko-* in (68a) is considered by our informant as less acceptable. We regard the subject in (68a) as unmarked for plurality which is a prerequisite for the sociative meaning. Note that *sakayo* ‘quarrel’ in (68a) is a lexical reciprocal and presupposes at least two participants. The sociative marker probably serves as an intensifier here. In (68b) the meaning ‘together’ is absent: the battles did not take place simultaneously. The reason for *uko-* may be the plural meaning. Note that the subject is a lexical reciprocal.

- (68) a. *Wen sakayo uko-hopuni.* (N. 87)
angry quarrel(SG/PL?) soc-begin
‘An angry quarrel began (between them).’
- b. *Tuwan rorumpe wen rorumpe uko-hopuni.* (Nak. 361)
many battle cruel battle soc-happen
‘There happened many battles, cruel battles.’
- c. *Omayse-ka ta u-uk-rorumpe hopuni.* (Sh. 69)
floor-top on REC-grapple-fight arise
‘Rough-and-tumble fights started on the floor.’
(*u-uk* ‘to grapple with each other’ (O. 166) (vi), lit. ‘to get each other’; it is an incorporated attribute of *rorumpe* ‘fight’).
- d. *Rera ruy kor upun-patce, wen upun-cise ue-hopuni pekor*
wind strong when snow-fly.in.disorder angry snow-spray soc-fly as.if
siriki. (T4. 803–4)
become
‘When the wind is strong the snow is flying in disorder, it becomes as if a severe snow spray is flying in a swirl.’
- e. *Upun-cise hopuni.* (T4. 778)
snow spray fly
‘The snow spray flies.’

6.1.1.1.2 Sociatives with an incorporated object. Two-place transitives with an incorporated direct object are naturally intransitive (see 2.3.2.6), therefore they are considered in this section. Intransitive sociative constructions with an incorporated direct object have parallel transitive sociative constructions with same-stem verbs (cf. (70a) and (70b)). Particularly frequent in these cases is the verb *kor* ‘to have’; cf. *sake-kor* ‘to have/acquire sake’, *mat-kor* ‘to have a wife’, *po-kor* ‘to give birth to a child; become a parent’, etc. (see T4. 599,

380, 538). Therefore this component, along with some others, e.g. *ne* ‘to be/become’, can be regarded as a verbalizer (see Shibatani 1990:45), i.e. a kind of semi-suffix.

- (69) a. *Iwan nispa kotan kor wa an.* (OI.) (vt)
 six lord village possess and be
 ‘Six elders were governing the village.’
 → b. *Iwan nispa kotan uko-kor wa an.* (OI.) (vt)
 six lord village soc-possess and be
 (same meaning as (70b)).
- (70) a. *Iwan nispa kotan-kor.* (cf. T4. 343) (vt)
 (the common way of expressing the same meaning).
 → b. *Iwan nispa uko-kotan-kor, or-o ta an-an.* (N. 140) (vi)
 six lord soc-village-possess place-POSS at be-IND
 ‘Six elders governed the village together, and there I lived.’

The following two derivations seem to be of this type as well, though with a slight deviation from the sociative meaning proper (from *re kor* ‘to have a name’ and *po sak* ‘to not have a child’ respectively).

- (71) [*Taan aynu-utar*] *re uko-kor* (vt) / *uko-re-kor.* (Ch2. 96) (vi)
 these person-PL name soc-have soc-name-have
 ‘These men have the same name.’
- (72) [*Taan aynu-utar*] *po uko-sak* (vt) / *uko-po-sak.* (Ch2. 96) (vi)
 this person-PL child soc-not.have REC-child-not.have
 ‘These men have no children.’

6.1.1.2 Derived from transitives. As in 6.1.1.1, two subgroups can be distinguished here according to the presence/absence of a respective applicative form in *ko-*. The prefix *uko-* can be added to applicatives in *e-* (cf. *uko-e-oripak* in (73b), *uko-e-rew-pa* in (73c)); while applicatives in *ko-* do not take it, probably for phonetic reasons (cf. *uko-ko-*). In most cases, the meaning of the base verb constitutes a part of that of the derived sociative, therefore the base verb is omitted.

1. The meaning of the applicative is not included in that of the sociative.

- (73) a. *uko-cotca* ‘to shoot at sb together’ (OI.) (vt)
 cf. *ko-cotca* ‘to shoot with sth’ (vb bound stem); registered with an incorporated object:
mun-ko-tata ‘to shoot with garbage (*mun-*) (using it instead of an arrow)’ (vt)
 (U3.15)
- b. *e-oripak* ‘to respect/honour acting discreetly’ (T4. 105) (vt) ← *oripak* (vi)
 ‘to be polite acting discreetly (in the presence of a superior person or a God)’ (T4. 481)
 → *uko-e-oripak* ‘for everyone to have profound respect for sb acting discreetly’ (vt)
 (T4. 756)
- cf. *ko-oripak* ‘to respect/honour sb acting discreetly’ (T4. 330) (vt)
 c. *e-rew[si]* ‘[to stay the night somewhere]’ (K. 81) (vt) ← *rew[si]* ‘to stay (vi)
 the night’ (Nak. 424)

→	<i>uko-e-rew[si]-pa</i>	‘to stay for a night together [somewhere]’ (N. 153)	(vt)
cf.	<i>ko-rewsi</i>	‘to stay the night with sb/somewhere’ (Nak. 424; OI.)	(vt)
d.	<i>uko-kik(-kik)</i>	‘to strike, beat sb together (repeatedly)’ (Nak. 59)	(vt)
cf.	<i>ko-kik(-kik)</i>	‘to strike/hit sb somewhere/[against sth]’ (O. 67)	(vb bound stem)
(all the examples with an incorporated object only)			
e.	<i>uko-kor</i>	‘to have sth/sb (e.g. a child) together (of a couple)’ (T4. 758)	(vt)
cf.	<i>ko-kor</i>	i. ‘to take sth away, receive from sb’, ii. ‘to have [feel] sth [e.g. anger] against sb’ (T4. 323), iii. ‘*to have sth together with sb’ (not registered)	(vb)
f.	<i>uko-nu</i>	‘to listen to sth/sb together (of all)’ (Kin. 150–51)	(vt)
cf.	<i>ko-nu</i>	i. ‘to hear sth from sb’, ii. ‘to ask sb about sth’ (T4. 328)	(vb)
g.	<i>uko-onkami</i>	‘to worship together’ (T. 760), also ‘to pray together’ (OI)	(vi)
cf.	<i>ko-onkami</i>	‘to worship (in a certain manner), greet sb in a proper way’ (T. 330)	(vt)
h.	<i>uko-peka-peka</i>	‘for everyone together to take care of sb’ (U2. 121; O. 157)	(vt)
cf.	<i>ko-peka-peka</i>	‘to take care of sb concerning sth’ (O. 69)	(vb)
i.	<i>uko-pun-pa</i>	‘for everyone together to raise, hold up, lift sth/sb’ (T4. 762)	(vt)
cf.	<i>ko-pun-pa</i>	‘to give/offer sth (food) to sb’ (Nak. 190)	(vb)
j.	<i>uko-sitoma</i>	‘for everyone to be afraid of sb/sth’ (T4. 764)	(vt)
cf.	<i>ko-sitoma</i>	‘to be afraid of sth from sb’ (T4. 340)	(vb)

2. There is no respective applicative.

k.	<i>uko-enucisiske</i>	‘for everyone together to stare/glare at sb/sth’ (T4. 756)
l.	<i>uko-eramiskari</i>	‘to not know sth/sb together’ (HY. 19)
m.	<i>uko-kisma</i>	‘catch/grasp/grab/get hold of sth/sb together’ (O. 156) (cf. (61e))
n.	<i>uko-omonnure</i>	‘to praise sth/sb together’ (T4. 760)
o.	<i>uko-roski</i>	‘to stand/make sth (e.g. a noise) together’ (T4. 763)
p.	<i>uko-san-ke</i>	‘to utter sth together’ (OI.)
q.	<i>uko-sawot</i>	‘for everyone to run away, flee from sb’ (T4. 763)
r.	<i>uko-sik-e-roski</i>	‘for everyone to see/look at sb/sth’ (T4. 763) (<i>sik</i> ‘eye’).

Sentential examples:

- (74) a. *A-unu-hu ka a-ona-ha ka po-ho uko-omap kor*
 IND-mother-POSS and IND-father-POSS and child-POSS soc-take.care and
okay. (OI.)
 be.PL
 ‘My mother and my father are taking care of their child together.’
- b. *Paskur soyene a soyene a ayne ne yuk wen yuk*
 crow go/come.out and go/come.out and after.that this deer bad deer
uko-tok-pa-tok-pa. (UR. 1998:106–7)
 soc-peck-PL-peck-PL
 ‘Crows flew out and flew out, and after that (they) pecked all together at this deer, bad deer.’
- c. *Mintuci uko-kik-kik hine rayke ruwe ene an hi ne.* (Nak.155)
 water-sprite soc-hit-hit then kill ASS.NR so be NR COP
 ‘[Once] it happened that all of them together beat the water-sprite to death.’

- d. *Nispa-utar wen kamuy uko-cotca.* (OI.)
 lord-PL bad bear soc-shoot
 ‘The lords shot the malicious bear all together.’
- e. *Sinrit uko-kor.* (Ch2. 95)
 ancestor soc-have
 ‘They have common ancestors.’
- f. *Ren ne wa uko-e-rew-pa.* (N. 153)
 three.people be and soc-APPL-sleep-PL
 ‘Three of them stayed the night there together.’
- g. *Menoko-po topa wen mina-haw wen sinot-haw uko-roski.* (N. 117)
 woman-DIM crowd loud laugh-voice loud make.merry-voice soc-raise.PL
 ‘The crowd of women (all together) raised loud laughter and loud merry-making.’

6.1.1.3 Transitive sociatives – applicatives of intransitive sociatives. Thus, for instance, the intransitive sociative form in *uko-* with the meaning ‘to protect, govern together’ (76) is not a derivative from the transitive applicative in *ko-* ‘to protect sb, govern sth’ because sociative derivation does not change valency. If the *uko-* form were derived from the *ko-* form its meaning would be ‘to protect sb/sth together’, but the form with this meaning is derived from a sociative form by means of the applicative prefix *e-* (for analogous examples see (18d, h) and (101d), and for transitivity of “canonical” reciprocals see 3.1.2.3).

- (75) a. *kimatek* ‘to be surprised, panic’ (T4. 304) (vi)
 → b. *uko-kimatek* ‘to be surprised, panic together’ (T4. 758) (vi)
 → c. *e-uko-kimatek* ‘to be surprised at sth/sb together, panic about sth together’ (vt)
 (T4. 144) (cf. (104c))

The following example is an object-oriented construction and illustrates the use of an applicative derivative (from a sociative) which appears as an attribute dependent on the head-word *kur* ‘man’:

- (76) *Ainu mosir kamuy mosir e-uko-punkine kur a-ne ruwe*
 human-being country god country APPL-SOC-govern man IND-COP ASS.FIN
ne ... (N. 150)
 COP
 ‘I was the man who governed the country of the people and (lit. together with) the country of the gods.’

6.1.2 Object-oriented sociatives

The following sociatives are derived with the help of the complex prefix *uko-*. In constructions with these sociatives the object is necessarily semantically plural, while the subject may be singular. Sociatives of list (a) below have parallel applicatives in *ko-*. This list shows that the meaning of the “morphologically underlying” applicative is not contained in the sociative derivative. For the sociatives of list (b) the dictionaries do not register parallel applicatives in *ko-* (but this does not mean that all of the latter do not really exist).

1. Sociatives and parallel applicatives in *ko-*.

- (77) a. *ani* 'to hold/cradle/carry sth/sb in one's hands' (T4. 12–3) (vt)
 → *uko-ani* 'to hold/carry sth [and sth] together in one's hands' (vt)
 (T4. 755)
ko-ani 'to take/bring sth to some place' (T4. 314) (vb)
 b. *hoppa* 'to leave sb/sth behind' (T4. 198–99) (vt)
 → *uko-hoppa* 'to leave sb (children at home alone) behind together' (vt)
 (T4. 756)
ko-hoppa 'to leave sb/sth to sb/at sb's place' (T4. 319) (vb)
 c. *resu* 'to raise/bring up sb (a child/ an animal)' (T4. 576) (vt)
 → *uko-res-pa* 'to raise/bring up sb (e.g. one's own children) together'
 (cf. (43f)) (T2. 68) (vt)
ko-resu 'to raise sb (as bride or bridegroom) for sb' (Nak. 425) (vb)

2. Sociatives without parallel applicatives in *ko-*.

- d. *kik-kik* 'to hit/strike/beat sth/sb repeatedly' (T4. 303) (vt)
 → *uko-kik-kik-[pa]* 'hit/strike/beat sb (for two and more/two or more) at once' (vt)
 (T4. 757–78; OI.)
 e. *koeramewnin* 'to not pay attention to sth/sb' (Nak. 180) (vt)
 → *uko-koeramewnin* 'not pay attention to [all/both people together]' (T4. 758) (vt)
 f. *otke* 'to prick/stab sb/sth' (T4. 493) (vt)
 → *uko-otke* 'to stab/pierce two or more objects at once' (N. 101) (vt)
 g. *piski* 'to count sth/sb' (T4. 533) (vt)
 → *uko-piski* 'to count sth (e.g. days) one by one [together]' (Kir2. 348) (vt)
 h. *ronnu* (PL) 'to kill sb (two or more)' (T4. 583)
 → *uko-ronnu* 'to kill two or more at once' (N. 56)
 i. *rura* 'to carry/take/send off sb/sth' (T4. 590)
 → *uko-rura* 'to carry sth (two or more things) together' (OI.).

Sentential examples:

- (78) a. *e-uko-hoppa p* ... (N. 55)
 2SG-SOC-leave NR
 'you(SG) (have) left [them] together ...'
 b. *Ku hem ay hem uko-an-pa wa* ... (N. 83)
 bow and arrow and SOC-carry-PL and
 'They carried both bows and arrows together and ...'
 c. *Kor tures-i ka-eka kusu kanit e-sir-otke iwan*
 his sister-POSS thread-spin in.order shuttle APPL-land-pierce six
pokna mosir uko-otke wa ... (N. 101)
 underground country soc-pierce and
 '...his sister in order to make a rope pierced the land with a shuttle [in so doing she]
 pierced through six underground countries together.'
 d. *Ito enumitanne nesko uko-rura*. (OI.)
 I. honeysuckle walnut soc-carry
 'Ito carried honeysuckle and walnut together.'

Sociative verbs can be used in the passive form:

- (79) a. *Anna Hisao a-uko-kik.* (OI.)
 A. H. PASS-SOC-beat
 ‘Anna and Hisao were beaten [by some people] together.’
- b. *Nisatta anak a-i-uko-ronnu ki ...* (N. 56)
 tomorrow TOP PASS-IND-SOC-kill do
 ‘Tomorrow we shall be killed (= they will kill us) together..’
 (the sociative form is nominalized without marking and is dependent on the verb *ki*).

6.2 Derivatives in *ue-*. Synonymy of *ue-* and *uko-*

6.2.1 Subject-oriented sociatives

Sociative derivatives marked by the prefix *ue-* are extremely rare. (80a, b, c) are the only sociatives of this type in our corpus; note that they have parallel derivations with the prefix *uko-*, but the opposite is not always true (thus, there is *uko-e* ‘to eat sth together’ but there is no *ue-e* with the same meaning; cf. also (87) and (104d)). As we see, the applicatives in *e-* are not semantically related to the sociatives. As in the other cases with the prefix *e-*, synonymy of *ue-* and *uko-* is observed (cf. 5.2.2).

- (80) a. *hopun-pa* ‘(for two and more) to get up, stand up, fly’ (T4. 199) (vi)
 → *ue-hopun-pa* ‘for everyone to stand up together’ (T4. 804) (vi)
 cf. *uko-hopun-pa* (same meaning; OI.) (vi)
 cf. *e-hopun-pa* ‘to grow, appear somewhere (e.g. of mould)’ (T4. 82) (vt)
 b. *kirirse* ‘to scream, let out a screech’ (T. 309) (vi)
 → *ue-kirirse* ‘to scream together’ (OI.) (vi)
 cf. *uko-kirirse-pa* (same meaning; HY. 43) (vi)
 c. *pirka* ‘to be rich/happy’ (T4. 530) (vi)
 → *ue-pirka* ‘to be rich/happy together’ (T4. 809) (vi)
 cf. *e-pirka* ‘to make a profit from sth/sb’ (T4. 109) (vt)
 cf. *uko-pirka* ‘to be rich/happy together’ (OI.) (vi)
 d. *sirkirap* ‘to be troubled’ (T4. 199); ‘having no relatives, to live alone in (vi)
 difficulties’ (T4. 655)
 → *ue-sirkirap* ‘to be troubled together’ (O. 154) (vi)
 cf. *uko-sirkirap* ‘to suffer an inconvenient lifestyle together’ (T4. 763–64) (vi)
 cf. *e-sirkirap* ‘to be troubled, inconvenienced by sth’ (O. 27; T4. 125) (vt)

6.2.2 Object-oriented sociatives

The only examples at our disposal:

- (81) a. *kik-kik* ‘to hit/beat/strike sth/sb repeatedly’ (T4. 303)
 → *ue-kik-kik* ‘to hit/strike sth/sb [and sth/sb] [repeatedly] together’
 (T4. 806; OI.)
- cf. *uko-kik-kik* (same meaning; cf. (74c) and (86)) (T4. 757; OI.)
- cf. *e-kik-kik* ‘to hit/strike [repeatedly] sth/sb on/against sth’ (O. 20)
- b. *omap* ‘to take care of sb, show affection’ (T. 467)
- ue-omap* i. ‘to take care of two or more persons’ (OI.) (object-oriented)
 ii. ‘to take care together of sb’ (OI.) (subject-oriented)

6.3 Referential ambiguity. Homonymy *u-ko-* vs. *uko-*

This concerns the dual interpretation of the same sociative form as both subject-oriented and object-oriented, and also cases of material coincidence of sociative and reciprocal forms.

1. *Referential ambiguity: subject- or object-oriented sociative?* If a sociative is intransitive there is no problem: naturally, it can be subject-oriented only:

- (82) a. *corawki* 'to go on attack' (T4. 65) (vi) (cf. (87–88))
 → b. *uko-corawki* 'to go on attacking together' (OI.) (vi)

The problem arises with many transitive sociatives under certain conditions. If the subject is explicitly singular a sociative can be object-oriented only; cf.:

- (83) ... *e-uko-hoppa*. (N. 55)
 2SG-SOC-leave
 '... you(SG) (have) left [your bear cub and your sister] together.'

If the object is singular (explicitly or contextually) the sociative can be subject-oriented only:

- (84) *Kamuy opitta esaman-kamuy] uko-kik-kik*. (N. 108)
 God all otter-god soc-beat-beat
 'All the gods together beat and beat the otter god.'

Ambiguity arises if both the subject and object are plural or absent. In this case the ambiguity can be resolved by the context. (85) is an illustration of this: reading (i) corresponds to the broad context and (ii) is possible in a different context (the sociative form is nominalized without marking and is dependent on the verb *ki*).

- (85) *Nisatta anak a-i-uko-ronnu ki* ... (N. 56)
 tomorrow TOP PASS-IND-SOC-kill do
 i. 'Tomorrow we shall be killed (= they will kill us) *together*...'
 ii. '*Together* they will kill us tomorrow.'

The reciprocal forms derived from same stem transitives do not coincide materially with the respective sociatives; cf. (the English translation as well as the Ainu original allows both readings, subject- and object-oriented):

- (86) *uko-hoppa* 'to leave sb together' (vt) and *u-hoppa* 'to leave each other' (vi)
uko-kik-kik 'to beat sb together' (vt) and *u-kik-kik* 'to beat each other' (vi)
uko-ronnu 'to kill sb together' (vt) and *u-ronnu* 'to kill each other' (vi)
 (these forms have been cited above, therefore the sources are not supplied her).

2. *Homonymy: Reciprocal u-ko- or sociative uko-?* Here belong reciprocal derivatives from applicatives only. Materially identical forms with the prefixes *uko-* and *u-ko-* differ in their origin. The following three cases of homonymy can be distinguished; each of the cases is a two-member chain for sociatives and a three-member chain for reciprocals.

(i) A subject-oriented intransitive sociative and a "canonical" reciprocal are homonymous:

- (87) a. *corawki* 'to go on attacking' (T4. 65) (vi)
 → b. *uko-corawki* 'to go on attacking together' (OI.) (cf. (82)) (vi)
 cf. c. **ue-corawki* (same intended meaning) (OI.)
- (88) a. *corawki* 'to go on attacking' (T4. 65) (vi)
 → b. *ko-corawki* 'to go on attacking sb' (T4. 316) (vt)
 → c. *u-ko-corawki* 'to go on attacking each other' (T4. 755, OI.) (vi)

(ii) A subject- or object-oriented sociative is homonymous with an “indirect” reciprocal:

- (89) a. *ani* 'to hold/take/carry sth in one's hands' (T4. 12–3) (vt)
 → b. *uko-ani* i. 'together [with sb] take/hold/carry sth' (OI.) (subject-oriented sociative)
 ii. 'to have/hold/carry sth [and sth] together' (T4. 755) (vt) (object-oriented sociative)
- (90) a. *ani* 'to hold/take/carry sth in one's hands' (T4. 12–3) (vt)
 → b. *ko-ani* 'to bring sth/sb to sth/sb' (T4. 314) (applicative vb)
 → c. *u-ko-ani* 'to bring sth to each other' (OI.; cf. (30b)) (“indirect” vt)

(iii) A subject- or object-oriented sociative and an object-oriented reciprocal are homonymous:

- (91) a. *resu* 'to raise/bring up sb (a child/an animal)' (T4. 576) (vt)
 → b. *uko-res-pa* 'to raise/bring up sb together' (OI.) (vt)
 = i. 'two or more subjects together raise sb' (one or more); (subject-oriented sociative)
 ii. 'one subject raises two or more objects together'; (object-oriented sociative)
- (92) a. *resu* 'to raise/bring up sb (a child, an animal)' (T4. 576) (vt)
 = b. *ko-resu* 'to raise sb (as bride or bridegroom) for sb' (Nak. 425) (vb)
 = c. *u-ko-res-pa* 'to raise sb for each other (as future spouses)' (OI.) (vt) (cf. (43d))

Object-oriented sociatives derived from some of the verbs may be very close to object-oriented reciprocals; thus the following example can be interpreted in two ways: the meaning is object-oriented sociative if the two things are held together, and the meaning is reciprocal if bringing together of the two things is implied:

- (93) *Konkani pon ku konkani pon ay ci-uko-ani.* (Kir2. 115)
 gold small bow gold small arrow 1PL.EXC-SOC-HOLD
 'I (a god) took into my hands a small gold bow together with a small gold arrow.'
 (cf. also *uko-hoppa* under (77b) and *uko-resu* in (77c)).

7. Sociatives with the reciprocal-causative confix *u...-re*. The plural meaning

Almost all of these sociatives are derived from intransitive bases. This combination of affixes (verbs which mean literally 'to make each other do sth'; cf. 3.2.1) may also be used in the meaning 'all (together) [do sth] at once' (see Nakagawa 1995:51). Chiri (1973:510) defines this meaning as follows: 'all/many (persons) do sth together'. (A typological paral-

lel to this meaning of the reciprocal-causative confix is observed in Kabardian). Since the prefix *u-* can occupy the object agreement slot, an intransitive verb has to be transitivized first, by means of the applicative prefix or causative suffix. In the latter case, it seems, the sociative meaning contains an emotive colouring. There seems to be no direct semantic connection between causative and sociative forms; the latter form is more likely derived immediately from the intransitive base by simultaneously applying the confix *u...-re/-te/-e* (less common is the causative suffix *-ka*). This marker derives sociatives most frequently from intransitives ((96c), (101c) and (104e) are the only transitive sociatives at our disposal). It may be not accidental that our informant does not accept some parallel forms with the sociative prefix *uko-*, e.g. *uko-mina* and *uko-kira* with the intended meanings ‘to laugh together’ and ‘to run together’ respectively parallel to *u-mina-re* in (95c), (101d) and *u-kira-re* in (94c), (101b) which are probably more customary (the two latter forms are registered in the dictionaries and occur in texts). In other cases the informant accepts both sociative forms as correct. A special place belongs to the form *u-e-kira* ‘to run away together’, lit. ‘... with each other’ (vi) (mostly used in the meaning ‘to elope’, i.e. about two lovers; OI.; cf. (94d) and (94c)) derived from the applicative with the comitative meaning (which is rare in Ainu) *e-kira* ‘to run with sb/holding sth’ (vt); cf. (N. 170, 173). As we see, *u-e-kira* is a rare instance in Ainu when the reciprocal and the sociative meanings practically coincide due to the general rule that a reciprocal derived from a comitative form acquires a sociative (or very similar) meaning.

- | | | | | | |
|------|----|---------------|---|--|------|
| (94) | a. | <i>kira</i> | ‘to run away, flee’ (T4. 308) | (vi) | |
| | = | b. | <i>kira-re</i> | ‘to cause to run away, to chase’ (T4. 308) | (vt) |
| | | c. | <i>u-kira-re</i> | ‘for all to run away together’ (D. 549, T4. 755) | (vi) |
| | | d. | <i>okkay-po menoko-po u-e-kira neun ka paye wa isam.</i> (OI.) | | |
| | | | man-DIM woman-DIM REC-APPL-run where even go.PL and disappear | | |
| | | | ‘A young man and a young woman ran away together somewhere and (they) were gone.’ | | |
| (95) | a. | <i>mina</i> | ‘to laugh’ (T4. 389) | (vi) | |
| | = | b. | <i>mina-re</i> | ‘to cause to laugh’ (Kay. 426) | (vt) |
| | | c. | <i>u-mina-re</i> | ‘to laugh together’ (Kir2. 349) | (vi) |
| (96) | a. | <i>nukar</i> | ‘to see sth/sb’ (T4. 439) | (vt) | |
| | = | b. | <i>nukar-e</i> | ‘to show sth to sb’ (T4. 439) | (vb) |
| | | c. | <i>u-nukar-e</i> | ‘to see sth/sb together’ (T4. 778) | (vt) |
| | | | (for the “dative” reciprocal meaning see (26d)) | | |
| (97) | a. | <i>pirasa</i> | ‘to spread, widen’ (T4. 530) | (vt) | |
| | | b. | <i>si-pirasa</i> | ‘to widen, enlarge’ (T4. 644) | (vi) |
| | | c. | <i>u-si-piras-pa-re</i> | ‘for all to be spread out’ (T4. 789) | (vi) |

The form in question is homonymous and certain verbs may have two meanings, depending on the context. Thus (98c) has two meanings, both sociative (related to the intransitive base) and reciprocal (related to the causative form):

- (98) a. *kimatek* 'to be surprised, to panic' (T4. 304) (vi)
 b. *kimatek-ka* 'to surprise sb, to scare sb' (T4. 304) (vt)
 c. *u-kimatek-ka* i. 'to be very agitated (of all together)' (Nak. 157) (vi)
 ii. 'to surprise/scare each other' (K. 290).

Here are a few more sociative forms also registered in the dictionary T4:

- (99) *u-hopun-pa-re* 'to get/stand up together (for two or more people)' (T4. 750) (vi)
u-nisuwamne-re 'for all, everyone to become healthy, strong' (T4. 772) (vi)
u-paka-ne-re 'for everyone to be disgusted, amazed' (T4. 775) (vi)

One of the sociatives with this confix is lexicalized, as it is not related in a standard way to the base verb:

- (100) a. *itakniwkes* 'to be unable to talk'
 b. *u-itakniwkes-te* (T4. 751)
 soc-talk.leave.behind-soc
 '(for everyone) to not listen to what the other said; to not come to terms; to have a quarrel and break off relations', lit. 'to be unable to talk together/with each other.'

Sentential examples:

- (101) a. *Ainu u-si-pirasa-re.*
 people soc-REFL-spread-soc
 ('Many children will be born') 'People [become many and they] will spread.' (T4. 789)
 b. *Seta-utar u-kira-re-pa hawe a-nu* (N. 76)
 dog-PL soc-run.away-soc-PL voice IND-hear
 'I heard the noise [made by] the dogs rushing by together.'
 lit. 'I heard that) the dogs had chased each other away.' (K. Refsing, p.c.)
 c. [*Poro-sirar aynu*] *ek ki wa a-u-sitoma-re* (N. 75)
 large-rock man come do and IND-soc-fear-soc
 'A man like a huge rock comes and we, *all of us*, are afraid of him.'

From the sociative forms in question as well as from sociatives in *uko-* one may derive applicative forms, i.e. they may undergo transitivity (cf. 6.1.1.3).

- d. *Kamuy-tono hene use-tono-utar hene tek u-e-kik wa*
 God-lord and servant-lord-PL and hand REC-APPL-hit and
e-u-nupetne-re e-u-mina-re. (Ch2. 95)
 APPL-soc-amuse.oneself-soc APPL-soc-laugh-soc
 'Both the lord and the servants clapped hands and [*all of them*] amused themselves because of (this) and [*all of them*] laughed because of (this).'
- e. *Kotan-u utar yuk cikoykip uk wa yuk kam u-e-re pe ne.* (OI.)
 village-poss people deer beast get and deer meat soc-eat-soc NR COP
 'The fact is that the village people got a deer and ate the deer's meat.'

M. Chiri (Ch1. 510) points out that in the Sakhalin (Karafuto) dialect reciprocal-causative forms function as markers of the plain plural number (see (72)–(73)).

- (102) a. *mokor* 'to sleep' (Mur. 173)
 b. *mokon-te* 'to cause to sleep' (cf. *mokor-e* 'to put [sb] to sleep' (Hokkaido) (B. 301))
 c. *utara u-mokon-te* 'The people slept.' (Ch1. 510)
- (103) a. *arki* (PL) 'to come (for two or more)' (T4. 22–3)
 b. *arki-re* 'to cause to come sb (two or more)' (T4. 23)
 c. *u-arki-re* 'They came.' (Ch1. 510)

Sometimes, the dictionaries point out synonymy between sociatives in *u-...-re* and sociatives with the prefix *uko-* (note that both markers contain the reciprocal prefix *u-* which, however, cannot render this meaning on its own, with a few exceptions).

1. Derived from intransitives:

- (104) a. *hoyup-pa* '(for two or more) to run' (PL) (T4. 206) (vi)
 → *u-hoyup-pa-re* 'to run together' (Kir2. 347; OI.) (vi)
uko-hoyup-pa (same meaning) (Nak. 129; OI.) (vi)
 b. *nupetne* 'to rejoice' (B. 338) (vi)
 → *u-nupetne-re* 'to rejoice together' (Ch2. 95) (vi)
uko-nupetne 'to rejoice together' (B. 527) (vi)
 c. *kimatek* 'to be surprised, to panic' (T4. 304) (vi)
 → *u-kimatek-ka* 'to be very agitated (of all together)' (Nak. 157) (vi)
uko-kimatek 'to be surprised together', 'to panic together' (T4. 758) (vi)
 cf. *ue-kimatek* (same meaning) (OI.) (vi)
 d. *paraparak* 'to cry loudly' (O. 104) (vi)
 → *u-paraparak-ka* 'to cry loudly together' (O. 161) (vi)
uko-paraparak 'to cry loudly together' (O. 157) (vi)
 cf. **ue-paraparak* (same intended meaning) (OI.).

2. Derived from transitives:

- e. *sitoma* 'to fear sb/sth' (T4. 665) (vt)
 → *u-sitoma-re* 'for all to be scared of sb/sth' (N. 75) (vt)
uko-sitoma 'for everyone to be afraid of sb/sth' (T4. 764) (vt)
 [Cf. also *sitoma-re* 'to make sb fear sth/sb' (OI.) (vb)
u-sitoma 'to be afraid of each other' (OI.) (vi)
e-u-sitoma 'to be afraid of sth from each other' (vt)
ko-sitoma 'to be afraid of sth from sb' (vb)]

In the following instances the respective forms in *uko-* seem to be absent (in (105c) there is a slight lexicalization). The puzzling use of the reciprocal marker in (105a) and (105b) which is not reflected in the translation is probably accounted for by the idea of the number in the lexical meaning of the base verb.

- (105) a. *inne* 'for there to be a lot of/many people' (T4. 235)
 → *u-inne-re* i. 'for there to be a lot of/many people'
 ii. 'to have many children' (T4. 751)
 b. *moyo* 'to be few/not many (of people, animals)' (T4. 397)
 → *u-moyo-re* i. 'for there to be few people'; ii. 'to have few children' (T4. 768–69)

- c. *niwen* 'to be severe/harsh' (T4. 428)
 → *u-niwen-te* 'to threaten together (about men who drive away evil spirits by scaring them with furious dancing)' (T4. 773).

8. Lexicalization of verbs in *u-*, *uko-*, *u...-re* and *ue-/wee-*

Lexicalized derivations display meanings characteristic of analogous derivations in a number of other languages. Typical meanings are 'to meet', 'to fight', 'to quarrel', 'to have sexual intercourse', also meanings peripheral to reciprocity, like 'to gather' (vi), the meaning of plurality and meanings even more distanced from the reciprocal, like 'to crumble', 'here and there', and a number of others. We consider them as lexicalizations because each of the meanings is represented by few verbs: if these meanings occurred in a great enough number of derivatives (with a prefix whose meaning is distinguishable in the semantics of the derivative), we might have grounds to postulate polysemy of the prefixes *u-* and *uko-* (it is likely that they show a possible way of the development of the polysemy of the reciprocal and sociative markers). The degree of lexicalization may vary. Note that there is a small group of verbs whose alleged bases are intransitive (see (108a), (110 c, d), (113a, c)). The existence of a large number of lexicalized verbs with the prefixes *u-* and *uko-* reveals their ancient origin.

8.1 Reciprocal lexicalized meaning

Practically all the base verbs are two-place transitives and the lexicalized derivatives are intransitive, and the derivations from three-place transitives (cf. (106c)) are transitive. Derivations belonging here fall into two groups.

1. Reciprocals essentially retaining their standard relation to the base meaning (see translations (i)) along with the lexicalized meaning; cf. translations (ii) and also (iii)–(vi) in (107f). In (106c) the derivative is an object-oriented reciprocal and the other cases are subject-oriented "canonical" reciprocals.

- | | | | | |
|-------|----|-------------------|---|------|
| (106) | a. | <i>ekanraye</i> | 'to go to meet sb' (Mur. 128) | (vt) |
| | → | <i>u-ekanraye</i> | i. 'to go to meet each other', ii. 'to have a date' (Mur. 221) | (vi) |
| | b. | <i>nukar</i> | 'to see/meet sb' (T4. 439) | (vt) |
| | → | <i>u-nukar</i> | i. 'to see each other', ii. 'to hold a meeting' (Sh. 47) | (vi) |
| | c. | <i>oma-re</i> | 'put sth/sb (one thing/person) somewhere' (< <i>oma</i> ; see (108e)) | (vb) |
| | → | <i>u-oma-re</i> | i. 'to bring sth together, gather sth' (T4. 816; cf. (40h)),
ii. 'put sth (things scattered around) in order' (T4. 815; OI.) | (vt) |
| | d. | <i>rayke</i> | 'to kill sb (one person/animal)' (T4. 568) | (vt) |
| | → | <i>u-rayke</i> | i. 'to kill each other' ii. 'to fight/have a duel' (T4. 779) | (vi) |

2. Reciprocals with a lexicalized meaning only. Absence of expected standard reciprocal meanings can probably be often accounted for by the fact that the lexicalized meanings have ousted them as more common and frequent pragmatically or (as in (110b)) due to the presence of another widely used derivative or lexical reciprocal.

- (107) a. *ekot* 'to die because of sth/sb' (T4. 93) (vt)
 → *u-ekot* '(of lovers) to commit suicide together' [lit. 'because of each other'] (Ch2. 47) (vi)
- b. *kik* 'to hit/beat sb/sth' (T4. 302)
 → *u-kik* 'to run into each other' (T4. 754) (vi)
- c. *pop-ke* 'to be warm' (T. 543) (vi)
 → *uko-pop-ke* 'to hug each other' (OI.; cf. (43d)) (vi)
- d. *tamani* 'to show off, display a sword' (O. 141) (vi)
 → *ko-tamani* 'to show off, display a sword to sb' (O. 72) (vt)
 → *u-ko-tamani* 'to fight with swords' (O. 158) (vi)
- e. *ye* i. 'to say to sb', ii. 'to say sth' (T4. 870) (vt)
 → *u-ye* 'to quarrel' (T4. 818–9) (vi)
- f. *tasa* i. 'to exchange for sth' (T4. 701–2) (vt)
 → *u-tasa-tasa* i. 'to cross (of roads, etc.)' (K. 300), ii. 'to blink', iii. 'to miss e.o.' (OI.) iv. 'to visit [each other]', v. 'to exchange/trade with each other' vi. 'to be mixed up' (K. 300) (vi)
- g. *ko-terke* i. 'to jump, pounce, leap on sb' (Kay. 242; Nak. 186) (vt)
 also 'to attack sb' (OI.) (< *terke* 'to jump' (T4. 713))
 ii. 'to leap to [some place]' (B. 274), iii. 'to jump with sth [holding sth]' (Nak. 186)
 → *u-ko-terke* 'to grapple/wrestle with each other' (Nak. 106) (vi)
- cf. h. *Cape seta ko-terke, seta tura-no u-ko-terke.* (OI.)
 cat dog APPL-pounce dog with-ADV REC-APPL-jump
 'The cat jumped at the dog, and (the cat) with dog started fighting.'

A few derivations render the reciprocal meaning of joining/coming together ('together' = 'from different directions (in)to one place') along with the sociative (cf. 'a lot' = 'many, at least several') meaning. The component *wee-* is a fusion of the reciprocal *u-* and the following *e-* via *u-w-e-* with an epenthetic *-w-*. (108d) is an object-oriented reciprocal (cf. 5.1.2), the other instances being contiguous to subject-oriented "canonical" reciprocals, excepting (108a) with the intransitive base. (In (108a), *-se* is a verbal suffix.)

- (108) a. [*cur-ur-se*] ['to fall down (rustling)'] is not registered in our sources (vi)
tur-se 'to fall with a thud' (T4. 741) (probably contains the same stem) (vi)
 → *ue-cur-ur-se* 'to come together; gather (rustling)' [the example in (T4) describes rice grains pouring into one's palm] (T4. 803) (vi)
- b. *hayta* 'to be lacking; to lack intelligence' (T. 177) (vi)
 → *e-hayta* 'to miss, be wrong about sth/sb; lose sth/sb' (T. 81–2) (vt)
 → *wee-hayta* 'to get divorced' (H. 46) (vi)
- c. *ko-ciw* 'to stick into/pierce sth/sb' (B. 259) (< *ciw* (same); T4. 63) (vt)
 → *u-ko-ciw* 'to have sexual intercourse' (Kay. 105), lit. 'pierce each other' (vi)
- d. *kut-kor* 'to girdle oneself' (< *kut* 'belt', *kor* 'to have') (vi)
 → *e-kut-kor* 'to use sth as a belt/sash; fasten with sth (a belt)' (T4. 95) (vt)
 → *ko-e-kut-kor* 'to put sth [clothes] on and then fasten with a belt' (T4. 755–6) (vi)
- e. *oma* 'to enter, get in, be in/present somewhere' (T4. 467) (vt)
 → *u-oma* 'for a lot of people to gather and be present [stay] together; to be all collected, compose a set [for things]' (T4. 814) (vi)

8.2 Sociative lexicalized meaning

In (109a), the verb *raye* ‘to move, gather, grasp sth’ is used: it acquires the meaning ‘to drink’ in combination with the prefix *uko-* and the classifier *pa* (for cups, glasses of drinks). A similar change of meaning takes place in (109b). (Regular transitive sociatives are considered in 6.1.1.2.)

- (109) a. *Otu pa re pa a-uko-raye kor...* (N. 106)
 two CW three CW IND-SOC-move(vt) and
 ‘We drank (lit. ‘moved’) together two or three times ...’
- b. *Sisak tonoto a-uko-mak-tek-ka.* (N. 108–9; OI.)
 unusual wine IND-SOC-open(vi)-ASP-CAUS
 ‘We drank (lit. ‘opened’) the unusual wine together.’
- Cf. *uko-mak-tek-ka* ‘for everyone to hold (a feast) together.’ (T4. 758).

8.3 Non-reciprocal and non-sociative lexicalized meanings

Sometimes the meaning of a lexicalized derivative is not reciprocal, though it may display some connection with it; thus, in (110a, c, f, h) this reveals itself in the meaning of plurality implied by the lexical meaning of the base. An adjacent meaning is that of repetition (= plurality of actions) (see (110b)). In (110g) the lexicalized meaning implies a response action of the object referent. Note that the prefix *u-* in (110c) is attached to an intransitive base, which is a very rare occurrence.

- (110) a. *as-te* ‘to make/let stand’ (T4. 30) (vt)
 → *u-as-te* ‘to breed, reproduce’ (T4. 801–2) (vi)
- b. *ciw-re* [‘to prick/stab sth/sb’] (T4. 64), [‘to overlap/pile sth’ in certain (vt) expressions only] (T4. 495)
 → *u-ciw-pa-re* ‘to repeat sth (a dance) over and over again’ (T4. 748) (vt)
- c. *hayta* i. ‘to be lacking’, ii. ‘to lack intelligence’ (T4. 177; OI.) (vi)
 → *u-hayta* i. ‘to be lacking/insufficient (for a number of sth that is expected to be)’ (T4. 749; T2. 67; OI.) (vi)
 ii. ‘to be dislocated’ (Mur. 222) (vi)
- d. *inkar* ‘to see/watch/look’ (T4. 234) (vi)
 → *ue-inkar* ‘to see through, foresee’ (T4. 804; Nak. 52)] (vi)
- e. *nukar* ‘to see, look at sth/sb, meet sb; test’ (T4. 439) (vt)
 → *u-nukar-e* ‘to peep at sb’ (T4. 774) (cf. (106b)) (vt)
- f. *oma* ‘to enter, get in, be in, present somewhere’ (T4. 467) (vt)
 → *u-oma* ‘to be in safety’ (K. 303; N. 149, 153); cf. (108d) (vi)
- g. *paskuma* ‘to tell, transmit stories about ancestors, human origins, history, traditions to sb’ (T4. 514) (vt)
 → *u-paskuma* ‘to transmit teachings, legends’ (T4. 776) (vi)
- h. *sak* ‘not to have sth, have lost sth’ (T4. 597) (vt)
 → *u-sak* ‘for sth/sb to be missing, not to be together with the other members of the group’ (T4. 785) (vi)

A sentential example:

- (111) a. *Urepec-i u-hayta.* (T4. 749)
toe-POSS REC-be.lacking
'Some toes are lacking on his foot.'
- b. *E-kotan-u u-oma kuni p samo tap-an na.* (N. 149, 153)
2SG-village-POSS REC-enter should NR not this-be FIN.PRTL
'Won't your village be in safety.'

In (112a, b, g) the meaning 'to crumble' involves diminishing in size and falling into parts which may be viewed as contiguous to the meaning of plurality as well (it is not accidental that in a number of languages verbs with this meaning are also reciprocal in form; cf. Nedjalkov, Ch. 28 on Kirghiz, §10.1.3). Below are examples with the prefixes *u-* and *uko-* respectively. In (112d, e) the meaning 'to wither' is denotatively related to the meaning 'to crumble'. The meaning 'to be wrinkled' of the derivative under (112f) is denotatively contiguous to the meaning 'to be broken' (if this is really the base verb, note that it is intransitive). The prefix *uko-* probably has an intensifying meaning which, as mentioned above, is contiguous to the sociative meaning. Note that all the underlying verbs below, as well as their derivatives, are intransitive. (In (112d) the base and the derivative contain partial reduplication of *cupu* + anticausative suffix. See 3.2.2.3.)

- (112) a. *munin* 'to rot' (Mur. 174; OI.) (vi)
→ *uko-munin* 'to rot and *crumble* into pieces/fall into tatters' (Mur. 222) (vi)
cf. *ko-munin* 'to rot together with sth' (Kir2. 79) (registered only with the incorporated object: *toy-ko-munin* 'to rot together with the soil' (*toy-* 'soil'); Tamura (T4) regards *toyko-* as a verbal prefix with the meaning 'badly, completely', but in this particular case she accepts both interpretations: 'to fall to the ground and rot; to rot completely' (T4. 729)) (vt bound stem)
- b. **tuwa-teh* (not registered)
kotuwa-tuwak 'mangy, thin, poor, soft' (B. 276) (probably the same stem) (vi)
→ *u-kotuwa-teh* 'to rot and *crumble* into pieces/fall into tatters' (Mur. 223) (vi)
(*-teh* is a verbal suffix)
- c. *yom-om-ke* 'to be *wrinkled*/scarred' (T4. 871) (vi)
→ *uko-yom-om-ke* 'to be *wrinkled*/scarred all over the surface' (T4. 767) (vi)
- d. *cup-up-ke* 'to become narrow, to taper' (T. 83) (< *cupu* 'to crum- (vi)
ple/fold/shut sth'; T4. 68)
→ *uko-cup-up-ke* '(of flowers) to close, *wither*' (T. 83) (cf. (61a)) (vi)
- e. *ci* i. 'to ripen', ii. 'to *wither*', 'to be cooked' (T4. 47) (vi)
→ *uko-ci* 'for everything to ripen, *wither*' (T4. 755) (vi)
- f. *kay* 'to be broken' (T4. 290) (vi)
→ *u-kay* 'to be *wrinkled*' (T4. 754, 290) (vi)
- g. *pene* 'to be watery, mushy; to become thin' (T4. 521) (vi)
→ *u-pene* 'to become pulpy, mushy, jelly [nearly *falling into pieces*]' (vi)
(U3. 17)

The meaning 'here and there, all around' is contained in the following derivatives. The alleged base verb for the reciprocal under (113c) is reduplicated. In (113a, c) the base

verbs are intransitive. In (113a) *ko-* is a verbal prefix with an unclear meaning, but it is definitely not an applicative one, since the verb itself is intransitive.

- | | | | | |
|-------|----|------------------------------|---|------|
| (113) | a. | <i>ko-sepepatki</i> | ‘to sound loudly’ (B. 442), ‘to sound/ring’ (T4. 339, (vi) 617) (< <i>sepepatki</i> (same meaning) (T4. 617)) | |
| | → | <i>u-ko-sepepatki</i> | ‘to sound all around (here and there)’ (OI.) | |
| | b. | <i>ciw</i> | ‘to sting/smart, stab/stick/pierce sth/sb’ (T4. 63) | (vt) |
| | → | <i>u-ciw-ciw/u-ciw-u-ciw</i> | ‘to move about here and there’ (T4. 748) | |
| | c. | <i>heuwe-uwe</i> | ‘to shudder/shiver/tremble’ (Ch. 553) | (vi) |
| | → | <i>u-hewe</i> | ‘to move/go up and down lightly’ (T4. 749) | |
| | d. | <i>tanas</i> | ‘to project, stick out’ (T4. 695) | |
| | | <i>uko-tanas-tanas</i> | ‘to project, stick out here and there’ (T4. 77) | (vi) |

Sentential examples:

- | | | | |
|-------|----|--|--|
| (114) | a. | <i>Kanna kamuy uko-sepepatki.</i> (OI.) | |
| | | upper god soc-sound.loudly | |
| | | ‘It is thundering on both sides (= here and there).’ | |
| | b. | <i>Rayoci uko-tewnin(-tewnin).</i> (OI.) | |
| | | rainbow soc-shine-shine | |
| | | ‘The rainbow is shining here and there.’ | |

The reciprocal prefix can appear twice in the same cluster of prefixes when the underlying reciprocal verb is lexicalized (Refsing 1986:282). In (115) the second reciprocal prefix follows the applicative prefix.

- | | | | |
|-------|--------------|--------------------------------|---|
| (115) | <i>peker</i> | ‘to be bright/light’ (T4. 520) | (vi) |
| | → | <i>e-peker</i> | (not registered) (vt) |
| | → | <i>u-e-peker</i> | ‘to tell a folktale’ (T4. 808) (vi) |
| | → | <i>ko-u-e-peker</i> | ‘to tell a folktale to sb’ (cf. B. 276: ‘to report to sb’) (OI.) (vt) |
| | → | <i>u-ko-u-e-peker</i> | ‘to tell stories[folktales] to each other’ (R. 185; OI.) (vi) |

8.4 Retention of meaning

A number of derivatives in *u-* and *uko-* are very close in meaning to their base verbs; some of them undergo valency decrease (see *u-paskuma* in (110g) where the direct object is deleted) or no valency change takes place (see (116a) and (116b)). It is not clear why the prefixes *u-* and *uko-* are used in these cases.

- | | | | | |
|-------|----|-------------------|--|------|
| (116) | a. | <i>pis-te</i> | ‘to arrange, put in order’ (Nak. 329) | (vt) |
| | → | <i>uko-pis-te</i> | ‘to arrange, put in order’ (Nak. 67) | (vt) |
| | b. | <i>isam</i> | ‘to be lacking, disappear, die’ (Mur. 155) | (vi) |
| | → | <i>uko-isam</i> | ‘to be gone, disappear’ (Mur. 222) | (vi) |

9. *Reciproca tantum*

9.1 *Reciproca tantum* proper

These are lexical reciprocals with the initial *u-* materially identical with the reciprocal prefix. Contrary to regular reciprocals, they have no counterparts without this initial phoneme. We can only surmise that the base form did exist once but has gone out of use. Here is a list of verbs (117a) and non-verbs (117b) that can be viewed as *reciproca tantum*:

1. Verbs (all of them except *usaraye* are intransitive):

(117) a.	<i>uepe</i>	‘to have close, friendly relations’ (Ch2. 79)
	<i>uesopki</i>	‘to sit facing one another’ (T4. 810–11; U1. 73)
	<i>uonnere</i>	‘to get acquainted’ (OI.)
	<i>uorun</i>	i. ‘to stand one upon another’ (OI.), ii. ‘to be placed one inside another’ (N. 112)
	<i>unankote</i>	‘to kiss (mouth to mouth)’ (Mur. 224)
	<i>unupure</i>	‘to copulate (of animals, insects, etc.)’ (T4. 774)
	<i>umu</i>	‘to hug each other’ (K. 293)
	<i>umurek</i>	‘to be husband and wife’ (T4. 769)
	<i>upaekoiki</i>	‘to quarrel’ (K. 295)
	<i>upaore</i>	‘to squabble’ (N. 140), ‘to dispute/argue/quarrel/scold’ (B. 536)
	<i>uramkarpare</i>	‘to sympathize with each other’ (T4. 779); cf. (138c)
	<i>uramtetukka</i>	‘to agree in opinion with each other’ (Nak. 69)
	<i>uranup</i>	‘to copulate (of animals, insects, etc.)’ (T4. 779)
	<i>usaraye</i>	‘to divide sth’ (R. 282) (cf. (142))
	<i>uymam</i>	‘to trade/exchange’ (T4. 819; OI.).

2. Nouns, adverbs, etc.:

b.	<i>umurek</i>	‘husband and wife’ (T4. 769)
	<i>umusa</i>	traditional way of greeting (in the case of mutual affection) (Kay. 117)
	<i>upaore</i>	‘quarrel’ (K. 295)
	<i>upipi</i>	‘one after another, in succession’ (Nak. 67)
	<i>upopo</i>	‘singing a round’ (T4. 777; U1. 73)
	<i>uren</i>	‘both’ (H. 268) (cf. <i>ren</i> ‘three persons’; T4. 572)
	<i>uturen</i>	‘both sides’ (H. 236) (cf. <i>tura</i> ‘with’ (T4. 738))
	<i>utur</i>	‘between’ (T4. 798)
	<i>utar</i>	‘relatives, people of the same tribe/village/group’ (T4. 792–3)
	<i>utar</i>	plural marker (T4. 792)
	<i>uymam</i>	‘trade’ (T4. 819; OI.).

9.2 The base form is a bound stem

With reservations, we shall name here the miscellaneous units with the initial *u-* whose “base form”, unlike those in 9.1, occurs without it, but in this case the position of *u-* has to be taken by another component – a derivational prefix or root, i.e. in these units *u-* combines with bound stems.

The verbs *kohopi* and *kopas* are not registered, but they occur with the applicative prefix as well as with *u-*; the two derivatives under (118a, b) are semantically related in a standard way; cf. (21), (22) and (24). Similarly, the form *-ok* does not occur separately – its reciprocal form has occurred in the texts as an incorporated component.

(118) a.	<i>-kohopi</i>	—	
	<i>e-kohopi</i>	‘to part/separate from sb/sth’ (T4. 91)	(vt)
	<i>u-kohopi</i>	‘to be divided/forked (of a road, river)’ (T4. 756)	(vi)
	<i>u-e-kohop-pa</i>	‘to separate from each other (of people)’ (T4. 806)	(vi)
b.	<i>-kopas</i>	—	
	<i>e-kopas</i>	‘to lean on/against sth/sb’ (T4. 91; OI.)	(vt)
	<i>e-kopas-te</i>	‘to lean sth/sb against sth/sb’ (Nak. 82)	(vb)
	<i>u-kopas-te</i>	‘to lean on each other’ (T4. 761)	(vi)
c.	<i>-ok</i>	—	
	<i>i-ok-te</i>	‘to hook in, to get with a hook sth/sb’ (T4. 261)	(vt)
	<i>e-ok-ok-te</i>	‘to get caught, hooked on sth’ (T4. 104)	(vt)
	<i>u-e-ok-ok-te</i>	i. ‘to get (en)tangled with each other, get tangled (about a thread)’	(vt)
		ii. ‘to be entangled in an affair [with each other] (about a man and a woman), get involved with another woman while being married’ (T4. 104)	
		(note that ii. is a reciprocal lexicalized meaning)	
	<i>u-ok-punkar</i>	‘intertwined lianas’ (N. 86)	
	<i>u-ok</i>	i. ‘to cling to each other, intertwine’, ii. ‘to fight/wrestle’ (H. 176) (note that ii. is a reciprocal lexicalized meaning).	(vi)

10. The prefix *u-* on body-part nouns: The *u-tek* ‘both hands’ type

When used on a body part noun, the prefix *u-* acquires the meaning ‘both’; the six examples at our disposal name twin objects (‘feet’, ‘eyes’, ‘hands’, etc.) M. Chiri (1974:34) claims that these cases are vestiges of the dual number (it is not fortuitous that the only numeral which contains the vowel /u/ is *tu* ‘two’). The idea of duality is also more or less implied in the derivations in Section 11. Most likely, it is not the dual number of the referents that is essential here but a symmetrical or converse relation between these two entities. In this usage, the prefix *uko-* does not occur in our corpus.

(119)	<i>kema</i> ‘foot’	→	<i>u-kema</i> ‘both feet’ (Ch2. 34)
	<i>kir</i> ‘leg’	→	<i>u-kir</i> ‘both legs’ (T4. 755)
	<i>kisar</i> ‘ear’	→	<i>u-kisar</i> ‘both ears’ (OI.)
	<i>sik</i> ‘eye’	→	<i>u-sik</i> ‘both eyes’ (Ch2. 34)
	<i>tap</i> ‘shoulder’	→	<i>u-tap</i> ‘both shoulders’ (N. 116)
	<i>tek</i> ‘hand’	→	<i>u-tek</i> ‘both hands’ (Ch2. 34).

As a rule, these derivatives do not occur as free units; they are usually incorporated in other words. In the following example illustrating this usage, the verb *horipi* ‘to dance’ is nominalized without any marker and takes the slot of a direct object, which is indicated by

the applicative prefix *e-* on the word that follows it, and the latter word in its turn is a direct object which is indicated by the applicative prefix *o-* on the word that follows it. But the formation with the reciprocal marker can also be interpreted as an element incorporated in the verb that follows it (i.e. *e-u-tap-kur-ka-o-si-kiru* is a formation with an incorporated component). An entire clause under (120) is nominalized and is subordinated to a verb ‘to see’. The verb in (120b) is lexicalized:

- (120) a. *Okay-po topa menoko-po topa niwen horipi*
 youth-DIM crowd girl-DIM crowd furious(vi) dance
e-u-tap-kurka o-si-kiru hi ... (N. 116)
 APPL-REC-shoulder-surface APPL-REFL-turn.to NR
 ‘(He saw) a crowd of youths and a crowd of girls who danced wildly (each) twisting and wriggling both shoulders ...’
- b. *u-kir-os-o-re* (T4. 755)
 REC-leg-behind-put-CAUS
 ‘to sit cross-legged (of men)’ (T4.755), lit. ‘cause both legs [to be] put behind.’

However, the meaning ‘both’ is more frequently expressed by *uturen*, *uren* than by *u-*; cf.:

- (121) *uren-tek* ‘both hands/arms’ (T4. 782)
uren-piskan ‘both sides of sth’ (T4. 781)
uturen-kisar ‘both ears’ (OI).

11. Derivatives from kinship terms

11.1 Verbs

11.1.1 *The u-ona-kor ‘to be related as father and child’ type*

Reciprocal markers are used to denote kinship relations in a number of languages. This is accounted for by converse (less commonly reciprocal) relations between the nouns denoting relatives (‘if you are my elder brother I am your younger brother’, ‘if you are my relative I am your relative’, etc.). The dictionaries register numerous verbs in *u-* formed from nouns by compounding with the verb *kor* ‘to have’ (cf. (26b)). This verb easily incorporates direct objects of various lexical types; and there seem to be no visible restrictions on syntactic collocations with the direct object of the *ona kor* ‘to have a father’ type (see 6.1.1.1.2; cf. also (60a)). But for the verbs in question there are no correlates without *u-* with an incorporated kinship term in the dictionaries; e.g. we find *u-ona-kor* and no *ona-kor*, and even if the latter form did exist it would not be semantically related to the reciprocal derivative in a standard way (cf. *X newa Y u-ona-kor* ‘X and Y are related as father and child’ and *X *ona-kor* ‘X has a father’ which does not render the converse meaning ‘Y has a child’). There are also no nouns like **u-ona* with this prefix. Thus the derivations in question may be regarded as formed according to a pattern similar to the one considered in 3.1.3.2.3. The kinship term is incorporated in the possessive form (hence *u-aki-kor* instead of *u-ak-kor*; cf. also *sut* ‘grandmother’ and *suc-i* ‘the grandmother of sb’) which sometimes coincides with the base form. Note that seemingly analogous derivatives

with other than kinship terms have correlates without the prefix *u-* (cf. a derivative with an incorporated lexical reciprocal: *tokuy/tokuy-e* (*-e* = POSS) ‘close, intimate friend’ → *tokuy-e-kor* ‘to be close to sb’ (T4. 719) (vt) → *u-tokuy-e-kor* ‘to become mutually close friends’; T4. 795–6) (vi).

(122) (a) ‘(Grand)child-(grand)parent relatedness’:

- a. *matnepo* ‘daughter’ (T4. 381) → *u-matnepo-kor* ‘to have a daughter-parent relationship (to be [related as] daughter and father, daughter and mother, daughter and both parents)’ (T4. 768)
- b. *po* ‘son, child’ (T4. 535) → *u-po-kor* ‘to have a son-parent relationship (son and father, son and mother, son and both parents)’ (T4. 776; KK. 67)
- c. *ona* ‘father’ (T4. 469) → *u-ona-kor* ‘to have a father-child relationship (father and children, father and son)’ (T4. 815)
- d. *unu* ‘mother’ (T4. 774) → *u-unu-kor* ‘to have a mother-child relationship (to be mother and children, mother and son, mother and daughter)’ (T4. 800)
- e. *sut* ‘grandmother or female relatives of similar age’ (T4. 687) → *u-suc-i-kor* ‘to have a grandmother – grandchild relationship’ (T4. 791; OI)
- f. *ekas* ‘grandfather or male relatives of similar age’ (T4. 87) → *u-ekas-i-kor* ‘to be related as grandfather and grandchild(ren)’ (OI.).

(b) ‘Sister-brother relatedness’:

- g. *yup* ‘older brother’ (T4. 874) → *u-yup-i-kor* ‘to have an older brother – younger brother or older brother – younger sister relationship’ (T4. 820)
- h. *sa* ‘older sister’ (T4. 597) → *u-sa-kor* ‘to have an older sister – younger sister or older sister – younger brother relationship’ (T4. 785–6)
- i. *ak* ‘younger brother’ (T4. 6) → *u-ak-i-kor* ‘to have a younger brother – older brother or younger brother – older sister relationship’ (T4. 801)
- j. *matak* ‘younger sister (for an older sister)’ (T4. 379) → *u-matak-i-kor* ‘to have a sister (younger sister – older sister) relationship’ (T4. 768)
- k. *matapa* ‘younger sister (for an older brother)’ (T4. 379) → *u-matapa-kor* ‘to have a younger sister – older brother relationship’ (T4. 768)
- l. *tures* ‘younger sister (for an older brother)’ (T4. 739) → *u-tures-kor* ‘to have a younger sister – older brother relationship’ (sometimes ‘a younger sister – older sister relationship’) (T4. 798)
- m. *irwak* ‘brothers and sisters, siblings (including cousins and other relatives of similar age)’ (T4. 246) → *u-irwak-i-kor* ‘to be brothers/sisters, brothers and sisters, siblings’ (T4. 751; OI.).

(c) Other types of relations:

- n. *utar-i(hi)* ‘of the same tribe/family/village, group’ (T4. 792–3) → *u-utar-i-kor* ‘to have relative relations [to be relatives]’ (T4. 800–1).

As a rule, these verbs occur as dependent predicates or in attributive constructions with *utar* ‘people’, *pe* ‘thing(s), person(s)’ (NR), due to the pragmatically trivial informative load.

- (123) a. *Tane u-ona-kor wa u-pakno oka.* (T4. 775)
 already REC-father.POSS-have and REC-same be(come).PL
 ‘Being father and son, they became practically the same (in height).’

- h. *-ir* 'one line; brothers and sisters' (bound noun stem) (T4. 241; K.105)
 → *u-ir* 'to be brothers and/or sisters, siblings' (T4. 751) (vi)

A sentential example (note: *anun-ne* 'to be (act as) strangers'; **u-anun-ne* (OI.)):

- (125) *U-ko-payeka p u-ir utar ne na. Itekke*
 REC-APPL-visit NR REC-be.brothers people COP FIN.PRTL NEG.IMP
u-anun-ne-re ... (O.)
 REC-stranger-COP-CAUS
 'People who visit each other are brothers. Don't behave as strangers!'

11.2 Nouns

The fossilized prefix *u-* is contained in the noun *irwak* < *ir-u-ak* 'elder and younger brothers' (K.105). The use of the reciprocal prefix on the noun *anun* 'stranger' which is not a kinship term is probably accounted for by the fact that this noun is semantically related as a kind of antonym to the kinship terms.

- (126) *anun* 'stranger' (T4. 15) → *u-anun* 'mutual strangers' (T4. 801)
irwak 'brother' (T4.246) → *u-irwak* 'both brothers' (Ch2. 34)
tokoy 'friend' (M. 470) → *u-tokoy* 'friend' (M. 507)
tus 'mistress' (T4. 740), → *u-tus-mat* 'mistress and wife' (T2. 67)
mat 'wife' (T4. 379)
utar-i 'people of the same tribe/family' (T4. 792–93) → *u-utari* 'the same tribe, family relations' (T4. 800).

In the noun *utokoy* 'friend' registered in the Sakhalin dialect the reciprocal prefix is attached to the lexical reciprocal noun *tokoy* with the same meaning 'friend', which may be explained by a mutual attraction of the grammatical and lexical meanings of reciprocity resulting in a kind of pleonasm.

12. Reciprocal locatives, postpositions and adverbs

The reciprocal prefix is used on words of these classes because they are two-place, e.g. 'something is the *top* of something', 'someone is acting *with* someone'. The base words of these reciprocals denote, most frequently, converse relations (which are very close to reciprocal relations); thus, for instance, 'top' associates with 'bottom', 'front' with 'back', 'different' with 'same', the space 'between' implies the space 'in the middle', etc. It is but natural that the derivatives may undergo a degree of lexicalization and modification of meaning. Some of the derivatives function as adverbs only, while others may also take the position of a direct object or locative complement (this is a cover term for locative objects and locative adverbials). The meaning of these reciprocals may be proper reciprocal ('with each other' – reciprocal from comitative), or chaining (spatial, as 'in front of each other',

or temporal, as ‘one after another’), or dispersive (‘here and there’), or distributive (‘each (a half of sth)’); see (128f).

12.1 Derived from locatives

The term “locative” (= “locative noun”, “locational noun”) is used here to refer to a group of nouns with locative meanings non-existent in European languages. All these locatives, like ordinary nouns, function as (direct) objects and adverbials. Some of these locatives may be used with possessive markers (127c) and may take an object agreement marker (127b). Most frequently, they are postposed to other nouns and denote direction of motion or position. Like ordinary nouns, they combine with postpositions (see *ta* in (127d) with a reciprocal locative) and may take a direct object (127c). Compare:

- (127) a. *tom* ‘the middle of a surface’ (T4. 719)
 b. *en-tom* ‘at/on me (e.g., as in ‘the sun light is falling on me’)’ (T4. 719) (cf. (4b))
 c. *Sutketusi tom-o tar usi.* (Nak. 289)
 chest.with.dowry middle-POSS rope tie(vb)
 ‘He tied the middle of the chest with the dowry with a rope.’
 d. *Ainu-utar menoko-utar u-tom ta terke kane u-kira-re.* (Ch2. 95)
 man-PL woman-PL REC-middle in jump and soc-run-soc
 ‘Men and women having mixed in disorder (lit. ‘in the middle of each other’) run all together in a hurry.’

About 20 locatives combine with the reciprocal prefix. Reciprocal locatives (though not all of them) may retain the characteristics of the underlying locatives. Almost all of the reciprocal locatives may function as adverbials in which respect they do not differ from adverbs. About half of them may appear as direct objects (cf. (128a, b), (129c)) and locative complements (cf. (127d), (129b)). They may be incorporated occupying the place of an incorporated direct object in the verb structure and intransitivizing it (see (128c, d, e), (129d, e)). One or two of them occur only as incorporated components on transitive verbs (cf. *u-kotca* in (128e)). Several of the derivatives are adverbs proper (cf. *u-atce-ta* in (130b)). With one or two exceptions (see (128b)), reciprocal locatives have no possessive form. The possessive form is found on the reciprocal locative *uko-utar* (see (128b)), i.e. the only derivative with *uko-* instead of *u-*. The difference between *utar* ‘distance/space/time between sth and sth’ (the initial *u-* is probably genetically related to the reciprocal prefix; see (117b)) and *uko-utar* seems to be minimal. The prefix *uko-* is probably used instead of *u-* for intensifying or due to the difficulty of distinguishing it in the sequence *u-utar*.

- (128) a. *A-ikkew-ehe kay ki wa u-oyak osma.* (N. 69)
 IND-small.of.the.back-POSS be.broken do and REC-other.side enter
 ‘The small of my back cracked and broke into two parts.’
 b. *Cise uko-utar-u kus.* (T4. 766)
 house REC-between-POSS pass.through (vt)
 ‘[He] passed between the houses.’

- c. *Otu san-tuka o-u-ka-uyru.* (N. 61)
many jut-hilt bottom.PRF-REC-top-lie (vt)
'Many jutting (sword) hilts lie there one upon another.'
- d. *u-or-unu* (T4. 816)
REC-place-put(.on)
'to wear sth (two layers of clothing) one upon another.'
- e. *U-kotca-e-sunke.* (T4. 765)
REC-before-APPL-lie(vi)
'[They] boast about their family.'
- f. *U-arke / u-emko a-e ro.* (T4. 806)
REC-half REC-half IND-eat IMP
'Let's eat half (of an apple/maize, etc.) each.'

The following examples with the locative *u-sam* 'place next to each other' illustrate various usages of reciprocal locatives (in (129c) the applicative *e-* indicates place of action).

- (129) a. [*Aoka*] *hotke-an.* (-*an* = 1PL.INC for vi) (OI.)
'We sleep.'
- b. [*Aoka*] *u-sam ta hotke-an.* (*ta* 'in/at' = postposition) (O. #2030501)
'We slept next to each other.'
- c. [*Aoka*] *u-sam a-e-hotke.* (OI.) (*a-* = 1PL.INC for vt) (OI.)
(same meaning).
- d. [*Aoka*] *u-sam-e-hotke-an.* (O3. 302.)
(same meaning).
- e. [*Ecioka*] *eci-u-sam-e-hotke.* (OI.) (*eci-* = 2PL for vi and vt)
'You slept next to each other.'

Here is a list of reciprocal locatives:

- (130) a. *arke* 'half, one part (of an apple, etc.), one side' (T4. 22)
→ *u-arke* 'half (of sth round, a lump) for each' (T4. 801)
- b. *atce* 'another person's house' (T4. 32)
→ *u-atce-ta* 'separately, (to live) in different houses' (Nak. 51)
- c. *eepak* 'next (place, matter, thing); edge, tip (of sth long)' (T4. 80)
→ *u-eepak-ta* 'gradually' (T4. 803) (cf. 'one after another')
- d. *emko* 'a half (of one thing, for a line, long things, time) (T4. 96)
→ *u-emko* 'half each (of sth long and thin)' (T4. 806; it can be incorporated);
u-emko-ani 'to carry half each' (OI.) (vi)
u-emko-uk 'to join in a song' (mainly with *upopo*; see (117b); *uk* 'receive'; OI.)
- e. *enka* 'upper part (without a contact); above' (T4. 100–1)
→ *u-enka* 'one above another' (T4. 807)
- f. *imak* 'the place opposite/behind/after sth/sb' (T4. 229)
→ *u-imak-ta* 'over many generation', ['one after another, successively'], 'from generation to generation' (T4. 750)
- g. *ka* 'top of sth (with a contact)', 'a visible side of sth' (T4. 267)
→ *u-ka* 'one on top of another' (T4. 758)
- h. *kotca* '(spatially) place before, in front of sth/sb moveless' (T4. 343)
→ *u-kotca* 'in front of each other' (T4. 765) (only incorporated)

i.	<i>mon-pok</i>	‘place nealy below (a place visible if one just looks down)’ (T4. 393)
→	<i>u-mon-pok</i>	‘each other’s bottom, mutually below’ (T4. 768)
j.	<i>noski</i>	‘the middle/centre of sth (for a line, surface, time)’ (T4. 433)
→	<i>u-pak-noski</i>	‘the exact middle (of [between] two places)’ (T4. 775; TS. 3–330) (<i>pak</i> ‘just, about’ (T4. 505))
k.	<i>or</i>	‘place’ (T4. 477)
→	<i>u-or</i>	‘each other’s/everyone’s place’ (O. 161)
l.	<i>oyak</i>	‘another, different place’ (T4. 499)
→	<i>u-oyak</i>	‘each in/at a different place’ (T4. 818)
m.	<i>piskan</i>	‘place around, in the area of’ (T4. 533)
→	<i>u-piskan</i>	‘here and there’ (T4. 776)
n.	<i>sam</i>	‘place in proximity, near’ (T4. 601)
→	<i>u-sam</i>	‘place next to each other’ (T4. 786)
o.	<i>soy</i>	‘the place outside/outdoors/near one’s house’ (T4. 679)
→	<i>u-soy</i>	‘just outside of each other’s houses (nearby)’ (O. 164)
p.	<i>tek-sam</i>	‘place at the side, next to’ (T4. 708–9)
→	<i>u-tek-sam</i>	‘next to each other’ (<i>tek</i> ‘hand’) (T4. 795)
q.	<i>tom</i>	‘the middle of a surface’ (T4. 719)
→	<i>u-tom-o</i>	‘in the direction of each other’ [lit. ‘in the middle of’]
r.	<i>tukari</i>	‘just in front of sth/sb’ (T4. 732)
→	<i>u-tukari</i>	‘just in front of each other’; ‘frequently, many times’ (T4. 797)
s.	<i>utur</i>	‘space between (for space, time)’ (T4. 798)
→	<i>uko-utur-(u)</i>	‘space between (two things/people/places)’ (T4. 766).

Some of the reciprocal locatives may undergo further change and become adverbs. As the adverbs contain to a lesser or greater degree fossilized postpositions (cf. *u-ka-un* ‘one after another, in succession’; T5. 135). The borderline between them and locative complements is not clearcut. The adverbs are more distinct in case of lexicalization or/and reduplication (cf. *u-sam-ta u-sam-ta* ‘next to each other’, *u-soy-ta u-soy-ta* ‘side by side’). Compare:

- (131) a. *U-tom-ta u-koramkor.* (T4. 796)
 REC-middle-in REC-discuss
 ‘They discuss sth directly with each other (without a mediator).’
- b. *Aynu ... u-imak-ta u-imak-ta u-as-te.* (TS. 3, 311)
 man REC-after-at REC-after-at REC-stand-CAUS
 ‘People will multiply from generation to generation.’

12.2 Derived from postpositions and verbs

The derivatives concerned function as adverbs. The adverb *u-tura* ‘together’ is particularly frequent in texts. Its base *tura* ‘with sb’ is comitative in meaning and the adverb acquires a sociative meaning as a result of derivation. This adverb co-occurs with both non-reciprocal and reciprocal verbs (see (132a) and (132b) respectively).

- (132) a. ... *ayne, oroepak-an hine, u-tura oka-an.* (R. 180)
 and.then.finally sleep.together-IND and REC-with be.PL-IND
 ‘... and then finally we slept together, and lived with each other.’

- b. *U-tura u-koyki-hci manu.* (Kh. 421) (the Sakhalin Dialect)
 REC-with REC-fight.with-PL it.is.said
 'It is said [that they] fought with each other.'

The adverb *u-tura* is related both to the postposition *tura* 'with sb' (T4. 738) and the transitive verb *tura* 'to go with sb, accompany sb; to take, bring sb together with oneself' (Nak. 282) (see 3.4 above). Other adverbs in question are related either to a postposition or to a verb, or to both. Here is a list of these adverbs (*-no* is an adverb-marking suffix, sometimes optional).

1. Reciprocal adverbs related to both a postposition and a transitive verb.

- (133) a. *ekohopi* i. 'separately from sth/sb'; ii. 'to part/separate from sth/sb' (T4. 91)
 → *u-ekohopi* 'separately from each other, in opposite directions'; ii. 'for a road, river to be forked, divided' (T4. 806)
- b. *hekote* i. 'towards sth/sb'; ii. 'to turn face towards sth/sb; marry sb' (T4. 179–80)
 → *u-hekote* 'mutually, facing each other', 'to be married, live together' (T4. 749)
- c. *kasu(no)* i. 'more than, over, above sth', ii. *kasu* 'to exceed sth/sb' (T4. 286)
 → *ue-kas-kasu-no* 'to stick out one after another' (T4. 805–6)
- d. *kattuyma(-no)* i. 'far from sth/sb'; ii. 'to be far from sth/sb' (vt) (T4. 288)
 → *u-kattuyma-no* 'far from each other; once in a while, for a long time' (T4. 753)
- e. *mosma* i. 'separately from sb' (O. 83); ii. 'to separate from sb' (O. 83)
 → *u-mosma(-no)* 'separately, each, individually' (T4. 768)
- g. *okari* i. 'instead of sth/sb, in place of sth/sb' (HAT. 306)
 ii. 'to take turns with sb, to do [work] instead of sb' (T4. 461)
 → *u-okar-pa* i. 'in turns', ii. 'to take turns with each other' (T4. 813)
- h. *sinna[-no]* i. 'different, differently' (Nak. 228), ii. 'to be different' (T4. 639–40)
 → *u-sinna[-no]* 'mutually different, each different' (T4. 789; OI.)
- i. *tasa* i. 'towards, against sth/sb', ii. 'to alternate with sb/sth', iii. 'in turn, by turns with sb' (T4. 701)
 → *u-tas(-pa)* 'mutually', 'in turn, by turns with each other' (T4. 794)
- j. *tura* i. 'together, with sb'; ii. 'to accompany sb' (T4. 738)
 → *u-tura* i. 'together, with each other, accompanying each other', ii. 'to be with each other, accompany each other' (T4. 798).

2. Related to postpositions only.

- k. *ekari* 'facing sth/sb' (T4. 86)
 → *u-ekari* 'from both [sides]' (T4. 805)
- l. *ehosi(no)* '[different from sth/sb], unlike sth/sb, deviating from sth[a position]' (T4. 83)
 → *u-ehosi(no)* 'mutually different/opposite' (T4. 804)
- m. *kokusisi* 'together with sb' (T4. 323–4)
 → *u-kokusisi(pa)* 'everyone together' (T4. 758)
- n. *os* 'after/following sth/sb, behind sth/sb' (T4. 484)
 → *u-os* 'continually/repeatedly, one after another' (T4. 817)
- o. *peka* 'along sth, following sth/sb, across sth/sb' (K. 290)
 → *u-peka* 'opposite each other' (K. 296).

3. Related to verbs only.

- p. *etunankar* i. 'to meet sb (come across sb)' (T4. 136–7)
 → *u-etunankar* i. 'from both directions, sides'; ii. 'to meet/come across each other' (T4. 811)
- q. *kari* 'to turn/spin sth' (T4. 281) (vt bound stem)
 → *u-kari-no* (adv) 'for everyone to take turns' (T4. 753)
- r. *u-oma* 'for a lot of people to gather and be present [stay] together, to be all collected/compose a set (for things)' (T4. 814) (< *oma*; see (110f))
 → *u-oma-no* 'all of them together, every single one' (T4. 814).

Sentential examples:

- (134) a. *Umurek ne korka u-ehosi-no hotke.* (T4. 804)
 spouses COP however REC-different-ADV sleep
 'They are spouses, however, sleep back to back.'
- b. *...amun-ihī tun ne hine u-etunankar kisma.* (T4. 811)
 arm-POSS two COP and REC-on.both.sides grasp
 '...the two of them grasped their hands on both sides.'
- c. *Iwan rametok u-peka rok wa oka.* (O4. 194)
 six brave.man REC-face sit(PL) and be.PL
 'Six brave men were sitting opposite each other.'
- d. *E-kor sa-po kor-pa kuni u-okar-pa ye-pa yakka*
 2SG-POSS sister-DIM have-PL CMPL REC-exchange.with.sb-PL say-PL but
e-kor sa-po kopan ruwe ne. (N. 164)
 2SG-have sister-DIM refuse ASS.FIN COP
 'They were saying by turns that would have your sister, but she refused.'

In the following instance the adverb is sociative in meaning, which is determined by the reciprocal prefix on a postposition with a comitative meaning, similar cases having occurred above as well. The stem *kusis* is not registered as a free word.

- e. *U-kokusis a-uko-kik-kik.* (HY. 43)
 REC-together.with IND-SOC-hit-hit
 'I have beaten all of them together.'

12.3 Derived from adverbs; residual cases

What follows are reciprocal adverbs (a) derived from adverbs, (b) residual diverse cases.

1. Derived from adverbs:

- (135) a. *eirpak* 'together with sb/sth'; 'at the same time as sth' (T4. 84)
 → *u-eirpak* '(for two people and more) together with each other (at the same time)' (T4. 804)
- b. *koraci* 'as, like sth/sb, just like sth/sb' (T4. 334)
 → *u-koraci* 'the same, equal' (H. 154), lit. 'the same with each other'
- c. *ne-no* 'alike, the same as sth/sb' (T4. 410)
 → *u-ne-no* '(for two and more) like each other' (T4. 772)
- d. *otutanu* 'after, next' (also attr. 'next, following') (T4. 495, 743–4)
 → *u-otutanu* 'in order, one by one' (T4. 817)

- e. *pak[-no]* 'until; roughly', 'as far as' (T4. 505, 507)
 → *u-pak[-no]* 'for all, both to be roughly the same' (T4. 775).

The following examples contain the base and the derived adverbs:

- (136) a. *A-epakasnu wa neno i-karkar kor okay ruwe ne.* (Nak. 308)
 PASS-teach and this.way ABS-embroider and be.PL ASS.FIN COP
 '(They) are embroidering in the way (they) were taught.'
 b. *Kutcama u-neno an.* (T4. 772)
 voice REC-same.as be
 '[Their] voices are alike.'

2. Residual diverse cases:

- (137) a. *-sa* 'front side' (bound stem) (T4. 597)
 → *u-sa-ta* 'from generation to generation' (T4. 786)
 b. *sim* 'the next day' (bound noun stem) (T4. 635, 789)
 → *u-sim-ne* 'from day to day' (T4. 789)
 c. *uko-oman* 'to go together' (< *oman* 'to go'; H. 64)
 → *uko-oman-no* 'one after another, successively without intervals' (T4. 760)
 d. *usa [usa]* 'various, each' (T4. 785)
 → *u-usa u-usa* (same translation) (T4. 800).

13. Constructions with the adverb *u-tas-pa* 'mutually, each other, by turns'

This adverb can be segmented into the reciprocal prefix *u-*, the stem of the verb *tasa* 'to change' and the plural marker *pa*. This adverb seems to be used optionally with reciprocal verbs only, probably to emphasize the reciprocal sense (cf. (138a, b)), and also less frequently with lexical reciprocals (cf. (138c)). When used with other verbs, the adverb *u-tas-pa* has the meaning 'by turns' (see (138d)).

- (138) a. *Tu okkayo u-tas-pa u-nukar hine ...* (HY.57)
 two man mutually REC-look and
 'Two men looked at each other and ...'
 b. *U-tas-pa u-ko-apkas-an wa ...* (Nak. 63)
 mutually REC-APPL-go-IND and
 'We visit each other and ...'
 c. *Uramkarkare itak u-tas-pa ye.* (T4. 794)
 sympathize.with.each.other word mutually speak
 'They express sympathy with each other.'
 d. *U-tas-pa suke-an.* (OI.)
 mutually cook-IND
 'We were cooking by turns.'

Our informant Oda Ito does not accept sentences with *utaspa* 'mutually' and non-reciprocal verbs.

14. Note on lexical reciprocals

Numerous lexical reciprocals have been mentioned in the body of this paper. Some of them yield reciprocal verbs like ordinary, non-reciprocal verbs. Thus, for instance, the verbs *hekote* ‘to marry sb’ take a reciprocal marker to form “canonical” subject-oriented reciprocals of the type discussed in 3.1.1.2, cf. *hekote* ‘to marry sb’ → *u-hekote* ‘to marry each other’ (incidentally, the Japanese verbs with the meanings ‘to marry’ and ‘to fight’ do not take a reciprocal marker). From a number of lexical reciprocals prefixed object-oriented reciprocals may be formed, in which case the reciprocal marker is sometimes pleonastic, cf. *niko* ‘to fold sth up’ (K. 170) → *uko-nike*, *uko-niko* (same translation) (T4. 759; B. 527). In the latter case, as well as in a number of other cases, the lexical reciprocal has a tendency to be used with an explicit marker of reciprocity.

Another instance of this tendency is the lexical reciprocal *tasa* with the meaning ‘to change/exchange for sth/[sth]’ whose marking may have parallels in other languages. Its reciprocal meaning manifests itself in the following: if two persons exchange an apple for a pear they at the same time exchange a pear for an apple. This non-derived verb *tasa* is used very rarely, though it is registered in the dictionaries; cf.:

- (139) *Nina kor mur tasa wa ...* (T4. 701)
 firewood have rice.bran exchange and
 ‘[He] exchanged rice-bran for firewood.’
 lit. ‘[He] had firewood, exchanged for rice-bran.’

Our informant does not understand this sentence and uses the causative form *tasa-re* or the reciprocal-causative from *u-tasa-re* instead. For instance:

- (140) *Anna katkemat tura-no Ito ninkari u-tasa-re wa ...* (OI.)
 A. mrs. with-ADV I. ear.ring REC-exchange-CAUS and
 ‘Mrs. Anna and Ito (lit. ‘Ito with Mrs. Anna’) exchanged their ear-rings.’

There is a difference between Ainu dialects in expressing the meaning of the verb *tasa* ‘to change/exchange for sth/[sth]’. Some of the dialects use one of the four forms only, others use as many as three. Hattori (1965:152) shows the distribution of these derivatives in eight dialects:

- (141) a. *tasa* – 0 c. *i-tasa-[pa]-re* – 5
 b. *u-tasa-[pa]-re* – 7 d. *uko-u-tasa-re* – 1.

Note that the unmarked form *tasa* is not registered in the *Ainu Dialect Dictionary* (H.), the prevalent form among them being the reciprocal-causative *u-tasa-re*. The form *i-tasa-re* (*i-* is a generalized object marker; cf. 2.3.2.4) is probably used without an object absolutely, in the sense of performing an exchange regardless of the things exchanged (most probably, it does not compete with the (b) form). Of special interest is the form *uko-u-tasa-re* in which the sociative prefix co-occurs with the reciprocal one; this seems to testify to the fact that the prefix *u-* is fossilized here and is not interpreted as a reciprocal marker. The fossilized reciprocal prefix can probably be distinguished in another more object-oriented reciprocal, viz. *usaraye* (**saraye*) ‘to share, divide sth’ entered in

Section 9.1 among *reciproca tantum*. There is an opinion, however, that this verb is segmentable into *usa + raye* lit. ‘separately + move’ (see T4. 786). For the same reason, in the opinion of Refsing (1986:282), the applicative form of this verb may take the “second” reciprocal marker:

- (142) *Taan cep an-u-ko-usaraye wa an-e.* (R. 184)
 this fish IND-REC-APPL-share and IND-eat
 ‘We share this fish with each other and eat.’

Acknowledgments

We are grateful to Alfred Majewicz and Masayoshi Shibatani for valuable consultations and for providing us with specialist literature on the Ainu language. We are also indebted to Heiko Narrog for the literature on Ainu. Thanks are also due to Kirstin Refsing for explanations on some points.

We owe a debt of gratitude to †Oda Ito for her invaluable information on Ainu.

1. Introduction

1.1 The Itelmen language

The Itelmens (Kamchadals) are aboriginals of the Kamchatka Peninsula. According to the latest census of 1989 they numbered about 2,500 (Tishkov 1994: 164, 167), but the real number is more likely to be 1,500 (Volodin 1995). At present, the Itelmen language is on the verge of extinction. But in the 1960s and 1970s there were some bilingual people who spoke Itelmen. The Itelmens' neighbours are Koryaks (in the north) and Evens (in the east), and they share their territories with Russians. In the past, the Itelmens occupied large territories on the Kamchatka and were divided into three territorial groups: western (the Oxotsk coast), eastern (the coast of the Bering Sea and the Pacific Ocean, the valley of the Kamchatka river), and southern; the latter group was in contact with the Ainus. At the beginning of the 18th century they numbered about 12–15 thousand, but a great many Itelmens (6 out of 7) died of pox in the middle of the 18th century (1768–1769); by the beginning of the 19th century their number was about 1,500–2,000 and it never increased. The southern and the eastern languages became extinct by the beginning of the 20th century, and the western Itelmen language alone has survived until our days (cf. Worth 1969): the texts at our disposal are written in this dialect and all grammatical descriptions are based on it.

The Itelmen language is traditionally ascribed to the Chukotko-Kamchatkan language family (Bogoras 1922; Skorik 1958: 534–46, 1979: 230–63); this opinion is shared by Comrie (1980: 109–20). In fact, the grammar and lexicon of the Itelmen language display a number of features that make it close to Chukchi and Koryak. But there is an alternative point of view which regards all the common features of these languages as a result of areal proximity rather than genetic relatedness, Itelmen borrowing from Chukchi-Koryak languages (Volodin 1979: 33–8; Georg & Volodin 1999: 237–9). The data of reciprocal constructions do not support the hypothesis of the genetic relatedness of Itelmen to Chukchi and Koryak.

1.2 Overview

In the Itelmen material at my disposal, there is only one means of reciprocal formation, viz. the monosemous prefix *lu-/lo-*. The alternation of the two allomorphs is grammatical: *lo-* occurs on non-finite verb forms and nominal derivatives, and *lu-* on finite forms (see Georg & Volodin 1999: 189). Compare (the forms given are infinitives in *-s*; on the suffix *-ka* used, with few exceptions, on intransitive verbs see section 3.1):

- | | | | |
|--------|---|---|--|
| (1) a. | <i>tnele-s</i> 'to push sb' | → | <i>lo-tneł-ka-s</i> 'to push each other' |
| b. | <i>pens-ka-s</i> 'to throw oneself at sb' | → | <i>lo-pens-ka-s</i> 'throw oneself at each other' |
| c. | <i>txzo-ka-s</i> 'to stand' | → | <i>lo-txzo-ka-s</i> 'to stand next to each other.' |

Note that the reciprocal and the causative prefixes (the latter within a confix) are the only derivational prefixes in Itelmen. The reciprocal prefix alone has no genetically related counterpart in Chukchi and Koryak.

1.3 Database

Reciprocals in *lu-/lo-* were first identified and described in Volodin (1976:210–11). Initially they were found in the texts collected by W. Jochelson (see Worth 1961:35, 38, 165, 166) where verbs with this prefix occur a number of times. During my field work in the 1960s on Kamchatka, my informants confirmed these reciprocal forms. In this paper, all the reciprocal verbs I have found so far are listed. This list is unlikely ever to be enlarged.

1.4 Transcription

The following needs clarification: the letter *l̥* stands for a voiceless /l/; the letter *f* stands for a voiceless /w/; the symbol /ʔ/ signifies glottal stop (as in /k, t, p, q, čʔ/), /ʲ/ denotes palatalization and /°/ signifies labialization of the entire word.

2. Grammatical notes

2.1 Similarities and differences in comparison with Chukchi and Koryak

1. Similarities: (a) verb agreement, (b) imperative prefixes, (c) locative case markers, (d) antipassive marking.

2. Differences: (a) absence of ergative sentence structure, (b) absence of incorporation, (c) the existence of the category of version; (d) phonetic differences, e.g. absence of vowel harmony, consonant density, e.g. possibility of clusters of seven consonants in word-initial position (e.g. *kstkʲlknan* ‘he jumped off’) and of four consonants in word-final position (e.g. *qtimplx* ‘bring this’), and labialization (see Asinovsky & Volodin 1987:362–4; Georg & Volodin 1999:38ff.).

2.2 Sentence structure

The word order in original texts is SOV (it is free in Chukchi and Koryak). The intransitive and transitive subject and direct object are zero marked. The predicate is inflected for persons. Cf.:

- | | | | |
|-----|----|-----------------------------|--------------------------------|
| (2) | a. | <i>Isx °k-ŋiksini-knen.</i> | ‘Father fell asleep.’ |
| | b. | <i>Isx pʲeč anʲčp-nen.</i> | ‘Father taught (his) son.’ |
| | c. | <i>Pʲeč isx anʲčp-nen.</i> | ‘The son taught (his) father.’ |

2.3 Case system

In Itelmen, twelve cases are distinguished (Volodin 1976:139ff.). The syntactic cases are the zero-marked absolutive, instrumental in *-l*, and locative in *-k*. The other case forms function as oblique objects and adverbials. The forms of personal pronouns with the marker *-°lwin* (the 3SG form is suppletive) once regarded as ergative case forms (see Bogoras 1922:720–1; Stebnickij 1934:92) are in fact emphatic-reflexive forms of the pronouns, cf. *kamma* ‘I – °*kmi-lwin* ‘I myself’, *anna* ‘he’ – °*fnewa* ‘he himself’, etc. These pronouns function like absolutive case forms and they have no other case forms.

2.4 Verb agreement

Intransitive verbs agree with the subject and transitive verbs agree with the subject and direct object. The subject agreement on an intransitive verb is marked with circumfixes in the 1st person and with suffixes in the 2nd and 3rd person:

- | | | | | |
|-----|---------------------|---------------|---------------------|---------------|
| (3) | <i>t-k'ol-kičen</i> | ‘I came’ | <i>n-k'ol-kičen</i> | ‘we came’ |
| | <i>k'ol-č</i> | ‘you.SG came’ | <i>k'ol-sx</i> | ‘you.PL came’ |
| | <i>k'ol-en</i> | ‘he came’ | <i>k'ol-eʔn</i> | ‘they came.’ |

The 1st person forms with a prefixed marker are a result of the Chukchi-Koryak influence.

The following illustrates a fragment of the agreement paradigm of a transitive verb:

- | | | | | |
|-----|----|------------------------|----|------------------------|
| (4) | a. | <i>t-anja-čen.</i> | c. | <i>n-anja-čen.</i> |
| | | 1SG.SBJ-praise-3SG.OBJ | | 1PL.SBJ-praise-3SG.OBJ |
| | | ‘I praised him.’ | | ‘we praised him.’ |
| | b. | <i>anja-miŋ-Ø.</i> | d. | <i>anja-miŋ-sx.</i> |
| | | praise-1SG.OBJ-2SG.SBJ | | praise-1SG.OBJ-2PL.SBJ |
| | | ‘you praised me.’ | | ‘you praised me.’ |
| | c. | <i>Ø-anja-wommen.</i> | e. | <i>n-anja-wommen.</i> |
| | | 3SG.SBJ-praise-1SG.OBJ | | 3PL.SBJ-praise-1PL.OBJ |
| | | ‘he praised me.’ | | ‘they praised me.’ |

2.5 The category of version

It expresses possessive and benefactive relations. It may also render direction of motion (see Volodin 1976:256–61); cf. sentences (a) and (b) containing the same verb without and with the marker of version (in bold type) in (5)–(9) respectively:

- | | | |
|-----|----|--|
| (5) | a. | <i>Xk'ič kəmman / kəmman-nk st'awaŋə-z-en.</i> |
| | | hand my at.me-LOC ache-PRES-3SG |
| | | ‘My hand aches.’ |
| | b. | <i>Xk'ič st'awaŋə-s-kinen.</i> |
| | | hand ache-PRES-at.him |
| | | ‘His hand aches.’ |

- (6) a. *ənnan kon' twajt-wen.*
his horse jump-3SG
'His horse jumped.'
- b. *Kon' twajt-kenan.*
horse jump-on.him
'His horse jumped.'
- (7) a. *i-s-en.*
go-PRES-3SG
'he goes.'
- b. *i-s-kineŋ / kipnen / kisxen.*
go-PRES-to.him to.them to.you
'he goes to him / to them / to you.'
- (8) a. *Q-la-s-sxik.*
IMP.2SG-tell-PRES-3SG.OBJ
'Tell this (immediately).'
- b. *Q-la-s-kenan / kipnen.*
IMP.2SG-PRES-to.him to.them
'Tell this to him /to them.'
- (9) a. *Tχaltχal əntxla-s-kičen.*
meat cart-PRES-3SG.OBJ
'He carries meat.'
- b. *Tχaltχal əntxla-s-kinen.*
meat cart-PRES-to.him
'He takes meat to him.'

2.6 Tense/aspect system

There are two aspects, imperfective with the suffix *-qzu* and its allomorphs and perfective which is zero marked. There are three tenses: zero-marked past, present (moment of utterance) with the suffix *-s/-z*, and future marked by the suffix *-al/-a*. Thus there are six tense/aspect forms all in all.

2.7 Means of valency change

2.7.1 Valency-increasing means

The main valency-increasing means is the causative confix with the initials *len-*, *ən-* and finals *-ŋ*, *-w* and *-Ø*; its principal meaning is causative, and it may also code a number of other meanings, including the applicative meaning (5c). A small group of verbs forms causative derivatives by means of the prefix *-t* (5d). Cf.:

- (10) a. *čefe-ka-s* 'to be in a hurry' → *ən-čefe-Ø-s* 'to make sb hurry'
b. *qetet-ka-s* 'to freeze' (vi) → *ən-qetet-we-s* 'to freeze' (vt)
c. *maja-ka-s* 'to tell lies' → *len-maja-ŋe-s* 'to deceive'
d. *nas-ka-s* 'to go down' → *t-nase-Ø-s* 'to lower'

2.7.2 Valency-decreasing means

There are antipassive forms, with the detransitivizing prefix *en-/an-* (a Chukchi-Koryak borrowing *ine-/ena-*) in combination with the the suffix *-ʔ* or alone:

- (11) a. *ənk'zo-s* 'to help sb' → *en-ənk'zo-ʔ-ka-s* 'to give help, be a helper'
 b. *pəle-s* 'to bite sb' → *am-pəle-ʔ-ka-s* 'to bite' (absolute)

2.8 Expression of reflexivity

Reflexivity is expressed either by underived intransitive verbs or by transitive verbs with the noun *uwik* 'self' (< 'body') in direct object position, i.e. in the same way as in Chukchi and Koryak; cf.:

- (12) a. *laχsχ kuma-z-en, tlazo-z-en.*
 mother wash-PRES-3SG comb-PRES-3SG
 'Mother washes and combs [herself].'
 b. *fnewa uwik k-ən-klā-l-ʔan.*
 he.himself self 1.INF.3SG+3SG-CAUS-drown-CAUS-1.INF.3SG+3SG
 'He drowned himself', lit. 'He-himself drowned-he-him himself'

2.9 Infinitives

In Itelmen, there are 6 so-called infinitives – this term is applied broadly to forms not used in predicate position. In this paper, when listed separately, the verbs are cited in the form of infinitive I (it is more similar to the infinitive of European languages than the other so-called infinitives). This form is marked with the suffix *-s* on all the verbs. All the intransitive verbs and 23 transitive verbs contain the suffix *-ka/-ki/-k/-e*. In some cases this suffix serves to distinguish verbal stems from nominal; cf. *maʔle-s* 'game, play' – *maʔl-ka-s* 'to play', *son'le-s* 'life' – *son'l-ka-s* 'to live'.

3. Reciprocals with the prefix *lu-/lo-*

3.1 Introductory

In the lists below the reciprocals are cited in the infinitive form. The suffix *-ke/-ka* preceding the infinitive marker *-s* indicates intransitivity, as a rule; an exception are 23 transitive verbs with this suffix. A specific feature of some reciprocal verbs derived from intransitives is the meaning 'next to'. As to other semantic oppositions of reciprocals with their base verbs, they commonly correlate with those of other languages. Only subject-oriented reciprocals have been registered. Characteristically, the number of reciprocals from one-place or (potentially) two-place intransitives exceeds that of reciprocals from transitives. In the lists below, reciprocals are subdivided according to the transitivity/intransitivity of the base verbs and also according to the character of the semantic opposition with the latter.

The allomorph *lu-* is used in finite forms and in infinitive III; cf.:

- (13) a. *lo-ʔəlfčə-ka-s* ‘to agree with each other’
 k-lu-ʔəlfčə-knan ‘they agreed with each other’ (3.INF)
 cf.: b. *mən-lu-ʔəlfčə-k.* ‘let’s agree.’

The following passage is from W. Jochelson’s collection of Itelmen texts (Worth 1961). It contains three reciprocals derived from two-place transitives and two reciprocals from two-place intransitives, and three lexical reciprocals with the initial component *l-* which may be related genetically to the reciprocal prefix:

- (14) “The battle of two Kutxs” (JW. 224)
- a. *K-sunʔ-qzu-knen* *anma-n* *Kutq,* *kaxa-n* *Kutq* *Kaxa-n*

q-lo-oč’zo-qzo-sx. (Jochelson 38)
 IMP.2-REC-call-IPFV-PL
 ‘Go to the cedar-wood tomorrow together with (your?) sister, call each other.’

3.2 Reciprocals derived from two-place transitives

Derivation of these reciprocals involves intransitivization. The marker of intransitivization is the suffix *-ka* which is not added to those transitives that already have it. In a number of cases, a reciprocal form also contains the intransitivizing prefix *an-/en-/in-/na-* (*an-* > *am-* before *-p*; cf. *lo-ʔam-pəl-sxena-ʔt-ka-s* in (19)). It remains unclear in these cases whether the reciprocal is formed immediately (a) from a transitive verb by means of the confix *an-...-ʔt*, or (b) from an intransitive which in its turn is derived from the base transitive. Here is a list of these reciprocals.

- (18) a. *lčko-s* ‘to see sb’ → *lo-lčko-ka-s* ‘to see each other’
lʔtate-s ‘to love sb’ → *lo-lʔtat-ka-s* ‘to love each other’
pilk’ate-s ‘to stroke sb’ → *lo-pilk’at-ka-s* ‘to stroke each other’
ʔtazo-s ‘to wash sb’ → *lo-ʔtazo-ka-s* ‘to wash each other’
tnete-s ‘to push sb’ → *lo-tnet-ka-s* ‘to push each other’
t’xle-s ‘to beat sb’ → *lo-t’lxe-ka-s* ‘to fight’
təllate-s ‘to touch with hands’ → *lo-təllat-ka-s* ‘to touch each other with hands’
təmzo-s ‘to lick sb/sth’ → *lo-təmzo-ka-s* ‘to lick each other’
- b. *aluptk’a-s* ‘to whisper sth’
 → *aluptk’a-ʔt-ka-s* ‘to whisper’ (vi)
 → *lo-aluptk’a-ʔt-ka-s* ‘to whisper to each other’
an’čpa-s ‘to teach sb’
 → *an-e-čpa-ʔt-ka-s* ‘to teach’ (vi)
 → *lo-ʔan-e-čpa-ʔt-ka-s* ‘to teach each other, learn from each other’
epsto-s ‘to splash at sb’
 → *epsto-ʔt-ka-s* ‘to splash water’ (vi)
 → *lo-ʔepsto-ʔt-ka-s* ‘to splash at each other’
oč’e-s ‘to call sb’
 → *oč-zo-s* ‘to call repeatedly’
 → *lo-ʔoč-zo-ka-s* ‘to call each other repeatedly’
owa-s ‘to kiss sb’
 → *owa-ʔt-ka-s* ‘to kiss’ (vi)
 → *lo-ʔowa-ʔt-ka-s* ‘to kiss each other’
ənč’ajə-s ‘to tease sb’
 → *na-nč’ajə-ʔt-ka-s* ‘to tease’ (vi)
 → *lo-na-nč’ajə-ʔt-ka-s* ‘to tease each other’
ənk’zo-s ‘to help sb’
 → *en-ənk’zo-ʔt-ka-s* ‘to give help’ (vi)
 → *lo-ʔen-ənk’zo-ʔt-ka-s* ‘to help each other.’

- (19) a. *čawa-ka-s* ‘to meet sb’ → *lo-čawa-ka-s* ‘to meet each other’
čel-ka-s ‘to choose sb’ → *lo-čel-ka-s* ‘to choose each other’
čke-ka-s ‘to find sb’ → *lo-čke-ka-s* ‘to find each other’
enf-ka-s ‘to meet sb by chance’ → *lo-wne-ka-s* ‘to meet each other by chance’
k’ze-ka-s ‘grasp by the back of the neck’ → *lo-k’ze-ka-s* ‘to grasp each other’
maja-ka-s ‘to deceive sb’ → *lo-maja-ka-s* ‘to deceive each other’
xeneka-s ‘to say’ → *lo-xeneka-s* ‘to say to each other’
xiq tel-ka-s ‘to recognize sb’ → *xiq lo-tel-ka-s* ‘to recognize each other’
- b. *pəl-ka-s* ‘to bite sb’
→ *pəl-sxen-ka-s* ‘to bite repeatedly’
→ *am-pəl-sxena-ʔl-ka-s* ‘to bite’ (vi)
→ *lo-ʔam-pəl-sxena-ʔl-ka-s* ‘to bite each other repeatedly’
tawol-ka-s ‘to embrace sb’
→ *tawola-ʔl-ka-s* ‘to embrace’ (vi)
→ *lo-tawola-ʔl-ka-s* ‘to embrace each other.’

3.3 Derived from one-place and (potentially) two-place intransitives

Here is a list of this type of derivatives.

- (20) *anse-ʔl-ka-s* ‘to learn, study’ → *lo-ʔanse-ʔl-ka-s* ‘to learn from each other’
čχmal-ka-s ‘to swear’ → *lo-čχmal-ka-s* ‘to swear at each other, squabble’
enmesen-ka-s ‘to disturb’ → *lo-ʔenmesen-ka-s* ‘to disturb each other’
estel-ka-s ‘to dance’ → *lo-estel-ka-s* ‘to dance with each other/together’
kele-ʔl-ka-s ‘to write’ → *lo-kele-ʔl-ka-s* ‘to correspond, exchange letters’
kel-ka-s ‘to shout’ → *lo-kel-ka-s* ‘to shout to each other’
krweʔxat-ka-s ‘to talk’ → *lo-krweʔxat-ka-s* ‘to talk to each other’
ksko-ʔl-ka-s ‘to be ashamed’ → *lo-ksko-ʔl-ka-s* ‘be ashamed of each other’
k’ule-ʔl-ka-s ‘to scratch’ → *lo-k’ule-ʔl-ka-s* ‘to scratch each other’
laxdet-ka-s ‘to look at sb’ → *lo-laxdet-ka-s* ‘look at each other, exchange glances’
tenk’ol-ka-s ‘to smile’ → *lo-tenk’ol-ka-s* ‘to smile at each other’
lete-ka-s ‘to fight’ → *lo-lete-ka-s* ‘to fight with each other’
ʔjeze-ka-s ‘to laugh’ → *lo-ʔjeze-ka-s* ‘to laugh at each other’
ʔqze-ka-s ‘to follow’ → *lo-ʔqze-ka-s* ‘to follow/spy on each other’
ma-ʔl-ka-s ‘to play’ → *lo-ma-ʔl-ka-s* ‘to play with each other’
melwe-ʔl-ka-s ‘to hope’ → *lo-melwe-ʔl-ka-s* ‘to rely on each other’
neske-ʔl-ka-s ‘smell/sniff at sth’ → *lo-neske-ʔl-ka-s* ‘to sniff at each other’
pens-ka-s ‘to fling oneself at sb’ → *lo-pens-ka-s* ‘fling oneself at each other’
qaʔm-ka-s ‘to take offence’ → *lo-qaʔm-ka-s* ‘to take offence at each other’
qelk’ele-ka-s ‘to complain’ → *lo-qelk’ele-ka-s* ‘to complain of each other’
qoneŋe-ka-s ‘to join’ (vi) → *lo-qoneŋe-ka-s* ‘to join each other’
rewat-ka-s ‘to rejoice’ → *lo-rewat-ka-s* ‘to rejoice at each other’
telxʔ-ka-s ‘to get scared’ → *lo-telxʔ-ka-s* ‘to get scared by/at each other’
tmalsa-ka-s ‘to approach’ → *lo-tmalsa-ka-s* ‘to approach each other’
tməlat-ka-s ‘press oneself to sth’ → *lo-tməlat-ka-s* ‘to huddle to each other’
twestew-ka-s ‘to watch, spy’ → *lo-twestew-ka-s* ‘to watch/spy on each other’
xaqanʔ-ka-s ‘to be angry, hate’ → *lo-xaqanʔ-ka-s* ‘to be angry at each other’

- xe?luče-?l-ka-s* 'to play dolls' → *lo-xe?luče-?l-ka-s* 'play dolls with each other'
əlfča-ka-s 'to consent, agree' → *lo-?əlfča-ka-s* 'to agree with each other'
əmč'k'ele-ka-s 'to bother, bore' → *lo-?əmč'k'ele-ka-s* 'to bother, bore each other.'

An indication of the productivity of this derivational pattern are reciprocal forms from Russian borrowings; cf.:

- (21) *torova-?l-ka-s* 'to greet sb' → *lo-torova-?l-ka-s* 'to greet each other'
zavidova-?l-ka-s 'to envy' → *lo-zavidova-?l-ka-s* 'to envy each other.'

3.4 Reciprocals denoting successive subevents

Five reciprocals with this meaning are attested and all of them are derived from intransitives. The same two subgroups can be distinguished here as above.

1. Derived from transitives:

- (22) a. *ən'čxča-s* 'to overcome sb'
 → *an-ən'čxča-?l-ka-s* 'to win' (vi)
 → *lo-?an-ən'čxča-?l-ka-s* 'to overcome each other (by turns)'
əmtxla-s 'to comb sb'
 → *əmtxla-ka-s* 'to comb oneself'
 → *lo-?əmtxla-ka-s* 'to comb each other'
ənkse-s 'to let sb out'
 → *lo-?ənkse-ka-s* 'to let each other out'
 b. *en'ł-ka-s* 'to pay sb' → *lo-?en'ł-ka-s* 'to pay each other'
ənk-ka-s 'to (try to) catch sb' → *lo-?ənk-ka-s* 'to (try to) catch each other.'

2. Derived from intransitives:

- (23) *etxel-ka-s* 'to be a guest' → *lo-?etxel-ka-s* 'to visit each other'
łale-ka-s 'to walk' → *lo-łale-ka-s* 'to go to each other.'

3.5 Reciprocals with the meaning 'next to each other'

All the reciprocals of this group are derived from verbs of motion or position.

- (24) *ełč-ka-s* 'to lie down' → *lo-?ełč-ka-s* 'to lie down next to each other'
°sol-ka-s 'to lie' → *°lo-sol-ka-s* 'to lie next to each other'
ła-ka-s 'to sit' → *lo-ła-ka-s* 'to sit next to each other'
tekej-ka-s 'to stand up' → *lo-tekej-ka-s* 'to stand up next to each other'
tχzo-ka-s 'to stand' → *lo-tχzo-ka-s* 'to stand in front of each other.'

3.6 Diversative

This case is represented by one derivative from an intransitive verb. It is not unlikely that this is a remnant of the past polysemy of the reciprocal prefix.

- (25) a. *seη-ka-s* 'to fly' → *lo-seη-et-ka-s* 'to fly from place to place.'

This verb describes a flock of birds (geese or ducks) flying over a lake in disorder, in all directions as if they were exchanging places – this latter implication is in fact a reciprocal meaning. Compare:

- b. *qs-əʔn lu-sijit-əz-əʔn.* (VX. 48)
 goose-PL REC-fly-PRES-3PL
 ‘The geese fly around from one place to another.’

1. Introduction

1.1 The Yukaghir languages

The Yukaghir languages are spoken in several little villages in the Yakut Republic, in the basin of the Kolyma river. These languages are considered either an isolated group or a sub-family of the Uralic-Yukaghir family. There are now approximately 150 native speakers of Tundra (Northern) Yukaghir, and less than 50 speakers of Kolyma (Southern) Yukaghir. Since the reciprocal constructions in Tundra Yukaghir have been described elsewhere (Krejnovich 1958: 120; Maslova 1989), the present paper is mainly concerned with the Kolyma Yukaghir data. However, all the significant differences between these languages are summarized in section 8, so as to give the whole picture of the Yukaghir reciprocals.

For the last several centuries the area of the Kolyma river basin has been characterized by extensive language contacts and almost obligatory polylingualism; now only the eldest generation of Yukaghir is polylingual (most of them speak Yukaghir, Even, Yakut, and Russian). The lingua franca was Yakut till the middle of the last century. Now it is Russian. Kolyma Yukaghir is presently not spoken by people under sixty, with only few exceptions. Spontaneous Yukaghir speech contains numerous instances of interference from Russian and Yakut and “code-switches”, some specific Yukaghir grammatical patterns being regu-

larly replaced by loan-translations from Russian, hence there are considerable difficulties in collecting reliable data.

The present study is based mainly on a collection of texts (Nikolaeva 1989) and on texts recorded by Nicholaj Vakhtin and myself on field trips in 1987 and 1992. Some additional data were provided by my informants in response to a questionnaire on reciprocals.¹

1.2 The reciprocal marker

The Yukaghir languages have a preverbal reciprocal marker *n'(e)-* (Tundra *n'i(η)-*). This marker is highly specialized, i.e., with a few exceptions (see 6.3, 6.4), it never expresses any non-reciprocal meanings. It occupies the same linear position within the verb form as the reflexive marker *met-*, so that these morphemes cannot be combined within one verb form. Thus, the reciprocal and reflexive meanings are treated by the Yukaghir grammar as opposed members of one category, but are not expressed by the same formal marker (which is a typologically frequent case), cf.:

- (1) a. *met tudel juö.*
 I he see.1SG.TR
 'I saw him.'
- b. *mit n'e-juö-ji:l'i.*
 we REC-see-1PL.INTR
 'We saw each other.'
- c. *tudel met-juö-j.*
 he REFL-see-3SG.INTR
 'He is looking at himself.'

Both the reciprocal and the reflexive decrease verb valency, which in the vast majority of cases results in formal shift from the transitive agreement pattern to the intransitive one (see 2.1).

This morpheme is the only means of expressing the reciprocal meaning in the Yukaghir languages; there are no pronominal expressions like *each other* or any other derivational or inflectional means. In some cases, however, this prefix is attached to postpositional stems, and the resulting words function as free syntactic reciprocal markers.

1. It is a pleasure to acknowledge my deepest debt to my informants from Nelemnoye (for Kolyma Yukaghir) and Andryshkino (for Tundra Yukaghir) for their help and patience in answering my questions. Particular thanks are due to a friend and colleague of mine, Nickolaj Vakhtin, whose help during the first field trip in my life (where most of the data for this paper comes from) is hardly possible to overestimate.

I am grateful to Vladimir Nedjalkov for his detailed and helpful comments and for his constant encouragement. Acknowledgements are made to all the participants of Symposium on Reflexives and Reciprocals in University of Colorado, Boulder for their comments on a version of this paper.

Table 1. Verb agreement markers

Subject person/number	Intransitive verbs		Transitive verbs	
	neutral	subject-focus	neutral	object-focus
1SG	-je	-l	-∅	-me
2SG	-jek	-l	-mek	-me
3SG	-j	-l	-m	-mele
1PL	-ji:l'i/-i:l'i	-l	-i	-l
2PL	-jemet	-l	-met	-met
3PL	-ŋi	-ŋil	-ŋa:	-ŋile

2. Grammatical notes

2.1 Syntax

Yukaghir is an SOXV language, yet the word order is rather flexible. “Pro-drop” and verb-deranking procedures are widely employed in text formation, so that a Yukaghir sentence generally looks like a chain of clauses, with only one finite verb in the end of the sentences, and often without explicit subjects and objects; non-final verb forms contain switch-reference indicators. The most extraordinary feature of the Yukaghir syntax is its focus-marking system, which involves both noun and verb inflection; in Kolyma Yukaghir only intransitive subjects and direct objects can receive grammatical focus marking (in Tundra Yukaghir, transitive subjects are involved in this system as well).

Verbs fall into two main classes, transitives and intransitives, which take different sets of agreement markers. The choice of an agreement marker is also involved in the focus marking system, as shown in Table 1.

The case marking is basically accusative, but with some important deviations from the “prototypical” accusative system: first, 3rd person direct objects have the basic (nominative) case form if the subject of the sentence is 1st or 2nd person (1st and 2nd person pronouns have a special accusative form which is employed for encoding direct objects only in clauses with 1st or 2nd person subject). Secondly, the focus case marker is assigned according to an ergative-like rule (to intransitive subjects and direct objects only). There are also dative, instrumental, comitative and a set of locative case forms; in addition, there is a set of postpositions employed mainly for marking locative relations.

2.2 Verb morphology

2.2.1 General notes

Yukaghir is a highly synthetic and essentially agglutinative language; suffixation prevails. The number of prefixes amounts to five (two prefixes of polarity, the reflexive and the reciprocal, and a prefix of irrealis); these morphemes are characterized by a looser connection with the stem than the suffixes, so that the boundary between a prefix and its stem may be described as internal open juncture. For example, clustering of vowels on

morpheme boundaries is prohibited within the postfixal part of a word, but possible on a “preverbal” boundary, cf. *n'e-aji-* ‘to shoot each other’. The prefixes thus may be viewed as a somewhat intermediate case between bound morphemes proper and free preverbs.

2.2.2 *Valence-changing means*

Yukaghir has the following valence-changing means:

1. Valence-increasing suffixes:

- a) several causative suffixes, cf. *a-* ‘to make’ → *a:-š-* ‘to cause sb to make’;
- b) a non-productive applicative suffix *-re-/ri-*, cf. *jaqte-* ‘to sing’ → *jaqte-ri-* ‘to sing about sth/sb’.

2. Valence-decreasing affixes:

- a) a productive object-oriented resultative suffix *-o:(l)*, cf. *ide-* ‘to sew’ → *id-o:(l)-* ‘to be sewn’;
- b) a few non-productive detransitive suffixes, cf. *juö-* “to see” (vt) → *juö-de-* ‘to look’ (vi).
- c) the reciprocal and the reflexive prefixes (see 1.2).

2.2.3 *Aspect and tense*

The tense/aspect system is characterized by domination of aspect. Yukaghir has an elaborate system of various aspect/aspectoidal suffixes (ingressive, continuative, a few iterative markers with slightly different meanings, semelfactive, etc.). As for grammatical tense, only future vs. non-future opposition is expressed morphologically (the interpretation of non-future forms depends on the aspectual meaning of the stem); past tense may be marked either by periphrastic forms or by means of an evidential marker *-l'el-* ‘V appears to have happened, or is said to have happened’.

3. Constructions with the preverbal reciprocal marker

3.1 “Canonical” reciprocal constructions

3.1.1 *Reciprocal constructions with underlying transitive verbs*²

3.1.1.1 *With underlying genuine transitives.* The main formal type of reciprocal constructions is illustrated by the following examples:

- (2) a. *tudel met-kele kigiji:-m.*
 he I-ACC jab-3SG.TR
 ‘He is jabbing me.’

2. The status of the preverbal reciprocal marker within Yukaghir morphosyntax seems controversial; to be more precise, it is not clear whether or not this morpheme should be considered as a part of verbal derivation. All the facts which could help to resolve this problem on a theory-specific basis are described in the present paper,

- b. *uöre-p-tie juöde-t n'e-kigiji:-ŋi.*
 child-PL-DIM play-SS REC-jab-3PL.INTR
 'Children are playing and jabbing each other.'
- (3) a. *tudel met-kele šešpedaŋil'-ge totčoš-um.*
 he I-ACC door-LOC press-3SG.TR
 'He pressed me to the door.'
- b. *mit n'e-totčoš-i:l'i šešpedaŋil'-ge.*
 we REC-press-1PL.INTR door-LOC
 'We pressed each other to the door.'

Here the reciprocal prefix marks cross-coreference between the subject and the direct object of a transitive verb. The verb gets an intransitive agreement marker (in most cases, plural, cf. 5.3). This type of reciprocal transformation is absolutely productive and regular, i.e., a reciprocal construction with a given verb is possible whenever the lexical meaning of this verb allows for a reasonable reciprocal interpretation.

3.1.1.2 *With underlying applicatives.* Reciprocal derivation from applicatives can be viewed as a way to combine the reciprocal meaning with an intransitive verb (cf. 3.1.2, 4.2.1): a verb is first transitivity by means of the applicative suffix *-re-/-ri-*, and then the reciprocal construction is derived according to the canonical model described in 3.1.1.1, cf. the following example:

- (4) a. *tudel jaqte-j.*
 he sing-3SG.INTR
 'He is singing.'
- b. *tudel met-kele jaqte-ri-m.*
 he I-ACC sing-APPL-3SG.TR
 'He is singing about me.'
- c. *tiŋ šoromo-pul n'e-jaqte-ri-ŋi.*
 this man-PL REC-sing-APPL-3PL.INTR
 'These men are singing about each other.'

The exact meaning of the applicative marker, i.e. the semantic role of the resulting direct object, is determined lexically, by the initial verb stem, cf. some other examples: *aja-* 'to be glad, rejoice' → *aja-re-* 'to be glad to see sb, rejoice at sb' → *n'e-aja-re-ji:l'i* 'we rejoice at each other, we are glad to see each other'; *kimdan'e-* 'to lie, tell lies' → *kimdan'e-ri-* 'to deceive sb' → *n'e-kimdan'e-ri-ŋi* 'they are deceiving each other'.

yet at the present stage of analysis it seems more important to highlight the somewhat "intermediate" status of the morpheme under discussion than to suggest one or another theory-dependent decision. That is why I have tried to avoid (whenever possible) the terms implying that the combination of a verb and the reciprocal preverb constitutes another (reciprocal) verb; terms like "underlying verb" (although theoretically not quite clear) are thus used in order to avoid terms like "basic verb", which would entail such interpretation, without any other theoretical connotations.

There exists one reciprocal verb containing the applicative suffix for which there is no basic applicative verb, i.e. the applicative functions just as a means for deriving the reciprocal, cf.:

- (5) *n'e-kebie-rej-nu-l'el-ŋi* *kin qaduonge modo-lo:l mieste-ge.*
 REC-leave-APPL-ITER-EVID-3PL [who where live-RES place-LOC]
 'They used to leave each other and go each to his own place.'

The initial intransitive is *keb(ej)-* 'to leave'; although the resulting reciprocal verb seems to have a dispersive meaning like 'to disperse, to part', it may be taken as a "canonical" reciprocal, on the assumption that the applicative suffix promotes the participant being left by the Actor to the direct object position (**kebie-re-* 'to leave sb' → *n'e-kebie-re-* 'to leave each other').³

The reciprocal constructions with underlying applicative verbs often contain an additional syntactic reciprocal marker (see 4.2.2 for examples and discussion).

3.1.2 Reciprocal constructions with underlying two-place intransitives

The reciprocal marker is easily compatible with intransitive verbs, but the resulting construction almost obligatorily involves a syntactic reciprocal marker derived from a postpositional stem; this construction type is discussed in Section 4. There is only one reliable example of the reciprocal construction derived from an intransitive verb without this additional marker,⁴ cf.:

- (6) *tamun-pe n'e-erd'i-t n'e-juö-din erd'i-t mon-nu-l'el-ŋi.*
 [this-PL REC-wish-ss] REC-see-INF wish-ss say-ITER-EVID-3PL.INTR
 'Since they wanted each other, wanted to see each other. . . they used to say:..'

The first clause contains a formally intransitive verb with the reciprocal marker, but no syntactic reciprocal marker, yet the reciprocal relation is further specified in the next clause by the use of the reciprocal infinitive *n'e-juö-din* 'to see each other' (← *juθ-* 'to see') as a complement of the same verb. This example seems to show that a syntactic reciprocal marker is not formally obligatory with reciprocals derived from intransitives: what seems to be essential is just an additional specification of the semantic relation that undergoes the reciprocal transformation. Another sort of evidence in favor of this claim is given by the fact that the reciprocal prefix easily combines with intransitive lexical reciprocals without any additional marking (see 6.1): it implies that the reciprocal constructions under discussion are not ruled out by the grammar, but rather avoided because of their ambiguity (see 4.2.1 for further discussion and examples).

3. Cf. a similar situation in West Greenlandic Eskimo (Fortescue, Ch. 19), where a semantically vague applicative suffix may be employed for reciprocal derivation from intransitives.

4. My informants sometimes say that such a sentence might be possible, but that it would be "better" to insert a syntactic marker.

3.1.3 Reciprocal constructions with underlying bitransitive verbs

The canonical reciprocal constructions derived from bitransitive verbs are almost absent from existing Yukaghir texts. However, this seems to be due simply to the fact that direct objects of such verbs are usually inanimate; thus, there are natural pragmatic restrictions on reciprocal referential situations, and, consequently, on reciprocal transformation. If, however, a speaker of Yukaghir is able to imagine a reciprocal situation, (s)he easily derives the corresponding reciprocal construction, which usually involves a slight shift in the lexical meaning of the verb. As demonstrated by the following set of examples with the verb *tadi-* ‘to give (sth to sb)’, a similar semantic shift occurs in the corresponding reflexive construction, cf.:

- (7) a. *met tud-in met legul tadi.*
 I he-DAT my food give-(1SG.TR)
 ‘I gave my food to him.’
- b. *jen šoromo-pul nuk-telle n’e-tad-ij-a:-nu-ni.*
 [other man-PL meet-SS.PFV] REC-give-MULT-INGR-ITER-3PL.INTR
 ‘When they meet other men, they usually begin to give each other (up), to betray each other.’
- c. *šukedie ta:t eskeri-l’ie-l’el-um tamun-ge oqill’a:*
 pike then attack-INGR-EVID-3SG.TR this-LOC perch
el-met-tadi-l’el.
 NEG-REFL-give-EVID(3SG.INTR)
 ‘Then the pike attacked. The perch did not give up.’

Another example of a referentially rare situation which makes the reciprocal interpretation of a bitransitive verb possible is given in (8); cf.:

- (8) *ataqlo:-t n’e-kes’i-ni.*
 be-two-SS REC-bring-3PL.INTR
 ‘The two of them brought each other (if, for example, one of them was blind and the other lame).’

These examples demonstrate that the restrictions on this diathesis type are semantic (or pragmatic), but not formal. Thus, the initial direct object may be involved in reciprocal transformation whenever the corresponding reciprocal situation can take place, independently of any other features of the valence pattern of the initial verb.

3.2 “Indirect” reciprocal constructions

The bitransitive verbs allow the reciprocal transformation involving subject and indirect object, as in the following example:

- (9) a. *tude legul-get met-in qarte-m.*
 his food-ABL I-DAT share-3SG.TR
 ‘He shared his food with me (= he gave me some of his food).’
- b. *legul-e n’e-qarte-ni-k.*
 food-INST REC-share-PL-IMP
 ‘Share your food with each other!’

In this construction type, the initial direct object retains its syntactic status, so that the resulting construction is syntactically transitive. As for the formal marking of (in)transitivity, i.e. the choice of an agreement marker, both variants proved to be possible, cf. the following examples:

- (10) a. *legul-ek n'e-kes'i-l.*
 food-FOC REC-bring-1PL.OF
 'We have brought food to each other.'
- b. *mit nier-pe n'e-kes'i-ji:l'i.*
 our clothes-PL REC-bring-1PL.INTR
 'We brought our clothes to each other.'

In (10a) the verb is marked for 1PL of the subject by means of the object-focus (hence transitive) suffix, while in (10b) the intransitive agreement marker is chosen. A tentative explanation of these variations may be as follows: the canonical reciprocal (see 3.1.1), representing the main and most productive diathesis type of the reciprocal constructions, does entail an obligatory shift from the transitive agreement paradigm to the intransitive one, and this general rule appears to be able to “override” the real syntactic transitivity in the more marginal construction type discussed here.

The transformation under discussion often involves causative verbs (with the indirect object representing the Causee), cf.:

- (11) a. *met tud-in los'il-ek čine-š-me.*
 I he-DAT firewood-FOC chop-CAUS-1SG.OF
 'I asked him to chop firewood, and he chopped firewood for me.'
- b. *mit los'il-ek n'e-čine-š-ul.*
 we firewood-FOC REC-chop-CAUS-1PL.OF
 'We chopped firewood for each other, according to each other's request.'

As illustrated by the translation of (11), a benefactive interpretation of the causative situation ('A asked B to do something' > 'B did something for A') usually prevails in the meaning of the corresponding reciprocal construction, so that my informants always preferred a translation like 'A and B did something for each other', rather than 'A and B did something according to each other's request/order.'

3.3 “Possessive” reciprocal constructions

3.3.1 *Reciprocal constructions with possessive pronouns*

There are only few examples which can be assigned to the possessive-reciprocal type in my data. These examples fall into two formally completely different groups. In one group of such sentences the transitive verb has the reciprocal marker, while the direct object is represented by an NP with a possessive pronoun coreferent with the subject, cf.:

5. Note that the 3rd person possessive pronouns *tude* 'his/her' and *titte* 'their' are employed only if the possessor is coreferential with the subject (otherwise the 3rd person possessor is expressed by means of a possessive suffix).

- (12) a. *tude nier čumu šašahat-um.*
 his clothes all tear-3SG.TR
 ‘He has torn all his clothes.’
 b. *titte nier n’e-šašahat-ŋile.*
 their clothes(FOC) REC-tear-3PL.OF
 ‘They have torn each other’s clothes.’⁵

The resulting sentences are transitive both syntactically and formally (cf. the transitive (object-focus) agreement markers in (12)).

3.3.2 Direct object included within the scope of the reciprocal marker

There are also two examples where the nominal stem representing the initial direct object is inserted between the reciprocal marker and the verbal stem, cf.:

- (13) *zooparke-ge ob’ez’ana-pul n’e-n’as’in modo-t n’e-pöme-aŋs’i-ŋi.*
 zoo-LOC monkey-PL REC-to.face sit-SS REC-louse-search-3PL.INTR
 ‘In the Zoo monkeys are sitting face to face and looking for each other’s lice.’
 (← *aŋs’i*:- ‘to search, to look for’ (vt))
- (14) *taŋ odu-pe taŋ kukujerd’i:-pe n’e-ažu-medi:-nunnu-l’el-ŋi*
 that Yukaghir-PL that Even-PL REC-word-perceive-HAB-EVID-3PL.INTR
n’e-ažu-medi:-t n’e-qamie-ŋi.
 REC-word-perceive-SS REC-help-3PL.INTR
 ‘Those Yukaghirs and those Evens understood each other’s language; since they understood each other’s language, they helped each other.’ (← *medi*:- ‘to hear, perceive, understand’ (vt))

It should be stressed that these sentences cannot be described as resulting from attaching the reciprocal suffix to the direct object, since the nominal stems involved lack the accusative marker (which is obligatory with a 3rd person subject, see 2.1), and the verbs get intransitive agreement markers. Thus, formally these examples represent an incorporation-like phenomenon (otherwise not characteristic of Yukaghir).

The compound form *n’e-pöme-aŋs’i-jejl’i* ‘we are looking for each other’s lice’ (← *aŋs’i*:- ‘to look for’) is found in the texts collected by Jochelson (1900: 47), but this is the only example of this type of his data. The correctness of this compound was confirmed by my informants in 1987 (cf. (13)). The second example is taken from a text written down by myself in 1992, but I have not managed to get any other instances of this phenomenon during my field work. It thus remains unclear whether there are strong lexical restrictions on this phenomenon, or it is a rare (perhaps marginal), but free (with respect to the lexical items involved) type of the possessive-reciprocal derivation.

4. Constructions with syntactic reciprocal markers

4.1 Syntactic reciprocal markers

Reciprocal constructions of more marginal and rare diathesis types are derived by means of what may be called syntactic reciprocal markers, which can be used either in combination with morphological reciprocal marking (see 4.2) or alone (see 4.3). These markers are derived from postpositional stems by means of the reciprocal prefix *n'e-*. The most frequent and most semantically neutral syntactic reciprocal marker is *n'e-molho-n* 'among themselves', cf.:

- (15) *ta:t n'e-molho-n mojie-d'e-t el-lejdi-ji:P'i id'i: kin qodimie omni:*
 SO REC-AMONG-PROL MIX-DETR-SS NEG-KNOW-1PL.INTR NOW [who which kin
o:gi.
 be-POSS]
 'Having merged with each other, we do not know now who comes from which kin.'

All the syntactic reciprocal markers with the initial postpositions are listed in (16):

- (16) *n'e-molho-n* (REC-among-PROL) 'among' ← *molho* 'among, between'
n'e-arqa (REC-near) 'near each other' ← *arqa* 'near'
n'e-lajji, n'e-lajjin (REC-DIR) 'to each other' ← *lajji, lajin* 'to'
n'e-n'as'-in (REC-face-DAT) 'to each other, at each other' ← *n'as'-in* 'to, at, opposite to' (← *n'as'e* 'face')
n'e-al'-in (REC-at-DAT) 'to each other, near each other' ← *al'a:* 'near, to, at, by'
n'e-jela: (REC-after) 'after each other, following each other' ← *jela:* 'after'
n'-ijer (REC-separately) 'separately' ← *ijer* 'separately from.'

Besides, there is one stem which is currently used only in combination with the reciprocal prefix and various locative postfixes: **malohu-* 'side' → *n'e-malohu-* 'both sides', cf.:

- (17) *taŋ jalhil-ge n'e-malohu-layden aŋs'i-t kewej-l'el-ŋi.*
 this lake-LOC REC-side-PROL search-SS go-EVID-3PL.INTR
 'They went to search (for him) on both sides of this lake.'

These compounds are also frequently used as syntactic reciprocal markers, cf.:

- (18) *n'e-malohu-de juö-de-ŋi.*
 REC-side-DIR look-DETR-3PL.INTR
 'They are looking at each other (in each other's direction).' (see also (22b), (23c))

4.2 Syntactic reciprocal markers combined with morphological reciprocals

4.2.1 Reciprocal constructions with underlying intransitives

As mentioned in 3.1.2, the reciprocal constructions with underlying intransitive verbs normally involve one of the syntactic reciprocal markers, cf.:

- (19) a. *tudel tude terike-ŋin mon-i ...*
 he his wife-DAT say-3SG.INTR
 ‘He said to his wife. . .’
 b. *tittel n’e-laŋi n’e-mon-ŋi ...*
 they REC-DIR REC-say-3PL.INTR
 ‘They said to each other. . .’
- (20) a. *met tet laŋin ejme-je.*
 I you DIR look-1SG.INTR
 ‘I am looking at you.’
 b. *n’e-n’as’in n’e-ejme-ŋi.*
 REC-to:face REC-look-3PL.INTR
 ‘They are looking at each other face to face.’
- (21) a. *tiŋ as’e met numö al’a: uldo:-j.*
 this deer my house to be.tied-3SG.INTR
 ‘This deer is tied to my house.’
 b. *n’-al’-in n’e-uldo:-ŋi.*
 REC-to-DAT REC-be.tied-3PL.INTR
 ‘They are tied to each other.’

As shown by these examples, it is not the case that one and the same postpositional stem must be employed in the initial non-reciprocal construction for marking the participant involved in the reciprocal transformation, on the one hand, and in the syntactic reciprocal marker, on the other: for example, the Addressee of the verb *moni-* ‘to say’ has the dative case form (see (19)), while the reciprocal construction makes use of the directional postposition *laŋi* (see (19), cf. also (20)). This transformation thus cannot be described formally as a simple replacement of an NP governed by a postposition with the reciprocal marker (indicating its cross-coreference relation with the subject), as the pair of examples in (21) might suggest. It seems that speakers are relatively free in their choice of the postpositional stem for the syntactic reciprocal marker, to the extent that this stem must specify the exact semantic relation between the reciprocal arguments, cf. the following pair of examples where this choice determines the semantic interpretation of the reciprocal constructions:

- (22) a. *mit jo:bi: n’e-jela: n’e-ewr-i:l’i.*
 we in.forest REC-after REC-go-1PL.INTR
 ‘We were walking around in the forest, following each other, in each other’s tracks.’
 b. *ediŋ pulut-pe n’e-ma:lohu-de n’e-ewre-ŋi.*
 this old.man-PL REC-side-to REC-go-3PL.INTR
 ‘These old men go to each other’s places, hither and thither.’

These examples show that this construction type can express reciprocal relations involving not only arguments of the verb, but adverbial NPs as well (cf., for example, (22b)). As a result, an intransitive verb itself does not specify the semantic relation that undergoes the reciprocal transformation, and an additional marker of this relation proves to be necessary. However, the use of this marker is by no means grammaticalized, cf. 3.1.2.

4.2.2 Reciprocal constructions with underlying applicatives

As described in 3.1.1.2, the reciprocal constructions are derived from applicative verbs according to the canonical model. Nevertheless, these constructions often contain syntactic reciprocal markers, exactly as the corresponding constructions with intransitives (see 4.2.1), cf.:

- (23) a. *met-ket irke-s*.
I-ABL be.frightened-3SG.INTR
'He was frightened by me.'
- b. *met-kele irkuo-re-m*.
I-ACC be.frightened-APPL-3SG.TR
'He was frightened by me (direct object).'
- c. *n'e-malogu-lanđe-t n'e-irkuo-r-i:l'i*.
REC-side-DIR-ABL REC-be.frightened-APPL-1PL.INTR
'We were frightened by each other.'
- (24) *tolow-pe n'e-n'as'in oho:-t n'e-ejme-ri-ŋi*.
deer-PL REC-to.face stand-SS REC-look-APPL-3PL.INTR
'The deer are standing opposite each other and looking at each other.'

Thus, the applicatives inherit some behavioral properties of the initial intransitives, although formally the constructions under discussion should be ascribed to the canonical type described in 3.1.1.

4.3 Syntactic reciprocal markers combined with non-reciprocal verbs

4.3.1 Oblique-reciprocal constructions with underlying transitives

The oblique-reciprocal meaning with transitives is expressed by means of the syntactic reciprocal marker *n'e-molho-de-gen* 'among themselves', derived from the postpositional stem *molho* 'among' (cf. *mit molho* "among us") in the prolicative case form, cf.:

- (25) a. *neme a:-lo:l-gele met-ket ahidi:-m*.
[what make-RES-ACC] I-ABL hide-3SG.TR
'He is hiding from me what he has done.'
- b. *n'e-molho-de-gen mit ahidi:-j neme a:-lo:l*.
REC-among-POSS-PROL we hide-1PL.TR [what make-RES]
'We are hiding from each other what we have done.'

Note that the verb in such a construction cannot take the reciprocal marker, since this would entail a "canonical" reciprocal meaning (cf. *n'e-ahidi:-* 'to hide each other'); the verb retains its transitive agreement markers.

4.3.2 Object-oriented reciprocal constructions

The Yukaghir reciprocal prefix cannot derive object-oriented reciprocal constructions; however, a symmetrical relation expressed by means of a syntactic reciprocal marker (i.e., by the reciprocal marker attached to a postpositional stem) may take place between two

(semantically and syntactically equal) objects, cf. the following examples with the verb *ulte-č-* ‘to tie (many objects)’:

- (26) a. *n'e-lajin ulte-č-ie-m.*
 REC-DIR tie-DISTR-INGR-3SG.TR
 ‘He began to tie (them) to each other.’
 b. *tude touke-pul n'-iŋer ulte-č-um.*
 his dog-PL REC-separately tie-DISTR-3SG.TR
 ‘He tied his dogs separately from each other.’

As shown by these examples, constructions of this type express a meaning like ‘to cause a symmetrical relation’ and usually involve lexical or morphological causatives. Note that the verb is not marked for the reciprocal meaning (see also 8.3 about causative reciprocal constructions in Tundra Yukaghir).

5. Means of expressing reciprocal arguments

5.1 Case marking

Reciprocal arguments may be expressed

1. by one NP marked for plurality (i.e. a noun or pronoun with the plural marker *-pe/-pul-*), cf. for example, (6)), (14), and (24), or a plural personal pronoun, cf. (11), (19); or
2. by two (or more) distinct NPs.

An NP representing both reciprocal arguments (type 1) may either have the basic (nominative) case form (see examples above), or be case-marked for focus, cf.:

- (27) *mit-ek n'e-kigiji:-l.*
 we-FOC REC-jab-SF
 ‘We are jabbing each other.’

If reciprocal arguments are expressed by a distinct NP each (type 2), then one of the NPs is in the nominative case form, the other one is usually marked by the comitative case marker *-n'e*, cf.:

- (28) *parna: qahiel-n'e ataqla:-t n'e-šörileš-ut modo-ŋi.* (N. Text 5)
 crow loon-COM be.two-SS REC-paint-SS sit-3PL.INTR
 ‘The crow and the loon, the two of them, were sitting and painting each other.’
 (29) *odu-pe kukujerd'i-pe-n'e n'e-nuk-telle n'e-lejtej-ŋi.*
 Yukaghir-PL even-PL-COM REC-meet-SS.PFV REC-learn-3PL.INTR
 ‘Yukaghirs and Evens met each other and got to know each other.’

Much less frequently, all NPs representing reciprocal arguments appear in the basic (nominative) form, cf. (14) and (30):

- (30) *ponžube momuša: šu:kedie n'e-es'keri:-lo:-pe-gi.* (N. Text 6)
 wood-grouse *momuša* pike REC-attack-RES-PL-POSS⁶
 'How a wood-grouse, a *momuša*⁷ and a pike attacked each other.'

In contrast with the cases when the both reciprocal arguments are expressed by a single NP, the second construction type is intended to keep the different (although semantically equal) arguments apart, so that the relations between the reciprocal arguments and the corresponding NPs may be schematically presented as follows:

- (31)

reciprocal arguments	A	B
NPs	NP ₁	NP ₂ (-n'e)

This is essential for the correct interpretation of sentences where one or both of these NPs are in the plural form (as in (14), (29)): such sentences express reciprocal relations either between two “collective” arguments (in these examples, between Yukaghirs and Evens as two peoples), or between single members of one group and single members of another group “in pairs”, but not within one group, so that formally one and the same noun form *odupe* ‘Yukaghirs’ names all the reciprocal arguments in a sentence like (32), but only one “collective” argument of a reciprocal relation in (14), (29).

5.2 Quantifiers

The distinction between prototypical reciprocal situations (with two reciprocal arguments) and “multiple” situations (with more than two participants involved in reciprocal relations “in pairs”) is regularly expressed by lexical means, namely, a reciprocal clause may contain either of two quantifiers: *ataqlo:t* ‘being two, two of them’ or *čumut* ‘all of them’, cf. (28) and the following example:

- (32) *odu-pe tuda: čumut n'e-lejdi:-nunnu-l'el-ŋi.*
 Yukaghir-PL that.time all REC-KNOW-HAB-EVID-3PL.INTR
 'At that time all Yukaghirs knew each other.'

Both quantifiers can be used anaphorically and thus function as the only means of lexical representation of the reciprocal arguments in a clause, cf.:

- (33) *ataqlo:-t n'e-šörileš-ŋi.* (N. Text 5)
 be.two-SS REC-paint-3PL.INTR
 'The two of them painted each other.'

6. The clause is nominalized, since it is the title of a fairy tale.

7. *momuša*: – a sort of fish; the word is translated (by Yukaghirs) into Russian as *katalka*, a word which probably belongs to a local dialect of Russian and which is absent from all Russian-English dictionaries which I was able to consult.

- (34) *kimd'i:-t čumut n'e-leŋ-ŋi.* (N. Text 45)
 fight-ss all REC-eat-3PL.INTR
 'In fighting, they all ate each other.'

5.3 Verb agreement

As mentioned above, the subjects are often dropped in Yukaghir, so the reciprocal arguments are represented only by the verb agreement markers (cf. (9), (12), (20)). The reciprocal verbs usually have plural agreement markers, independently of the type of lexical representation of the reciprocal arguments (cf. (28) and the (nominal) plural marker on the nominalized verb in (30)), i.e., the verb agrees with the NP expressing all the reciprocal arguments as a “unitary” object. Yet this is not obligatory when one of the reciprocal arguments is represented by a comitative NP:

- (35) *irkid'e ti: modo-je lige-je pulut-n'e n'e-nu:-l'el.* (N. Text 31)
 once [there live-ATR] [be.old-ATR] old.man-COM REC-find-EVID(3SG.INTR)
 'Once he met with a very old man living there.' (← *nu(g)*- 'to find, meet')

Here the NP representing one of the participants of the reciprocal situation is dropped anaphorically, and the other participant is represented by a comitative NP. The reciprocal verb form has a singular agreement marker, i.e. the agreement is controlled by the dropped NP alone, so that one of the reciprocal arguments is represented by the agreement marker, the other, by the comitative NP.

Finally, it should be mentioned that a reciprocal verb form may be used impersonally, hence without any agreement markers, cf. the following example, where the reciprocal verb is marked as an action nominal:

- (36) *olbut i:s'e-le n'e-kigiji:-l iŋl'i-s'.*
 [dead.tree sharp.edge-INST REC-jab-ANOM] be.terrible-3SG.INTR
 'It is terrible to jab each other with the sharp edges of a dead tree.'

5.4 Syntactic relations

5.4.1 *Alternative syntactic interpretations*

The subject of a reciprocal construction is easily identifiable when the reciprocal arguments are represented either by one NP or by a chain of NPs in the nominative form: both the case marking and the obligatorily plural verb agreement indicate that the reciprocal arguments are represented on the surface level by one subject constituent. This reciprocal diathesis may be schematically presented as follows:

- (37)

reciprocal arguments	A	B
NPs	S	

As for reciprocal constructions with comitative NPs, the evidence from verb agreement is controversial, since both the whole comitative complex NP+NP-COM (cf. (28)) and the nominative NP alone (cf. (35)) may control the verb agreement. The question is thus whether these constructions represent the same reciprocal diathesis (37), or another one,

with the subject expressed by the nominative NP alone, i.e. whether or not the comitative NP may be taken as an autonomous constituent (comitative object), as in the following scheme:

(38)	reciprocal arguments	A	B
	NPs	S	ComO

The list of subject properties which might give additional criteria for resolution of this question is as follows:

1. The subjects express the addressee phrase of imperatives (cf. Keenan 1976:321).
2. The subjects control switch-reference indicators within non-final verb forms (cf. Keenan 1976:315).
3. The subject is the only syntactic relation in an intransitive sentence that allows morphological focus-marking.

5.4.2 Evidence from imperative sentences

The first criterion gives a piece of evidence in favor of the solution presented in (38), i.e. there do exist imperative reciprocal sentences in which one of the reciprocal arguments functions as the addressee phrase, while the other is expressed by a comitative NP, cf.:

(39)	<i>n'e-lejtej-k</i>	<i>met</i>	<i>numö</i>	<i>šoromo-pul-n'e.</i>
	REC-learn-IMP.2SG	my	house	man-PL-COM
	‘Make the acquaintance of my family.’ (lit. ‘Make the acquaintance of each other with my family.’)			

Imperative sentences representing diathesis (37) exist as well, cf. (9) and (40):

(40)	<i>el-n'e-kudde-ŋi-le-k.</i>
	NEG-REC-kill-PL-PROH-IMP.2
	‘Do not kill each other.’

However, such examples do not contradict the non-subject interpretation of the comitative NP: since the addressee phrase is absent from the sentence, it can hardly be taken to be expressed by a comitative complex.

5.4.3 Evidence from the switch-reference procedure

This criterion is applicable to the problem under discussion only to a limited extent, since the Yukaghir switch-reference procedure allows both same-subject and different-subject marking in case of part-whole and set-element relations between the subjects of two clauses. It is exactly this type of relation that holds between the reciprocal arguments of one clause, on the one hand, and one of these arguments as the subject of another (non-reciprocal) clause, on the other, hence predictable variations in switch-reference marking.

However, there are some examples that seem to demonstrate that the reciprocal arguments may be treated by Yukaghir grammar as syntactically different constituents, cf.:

- (41) *n'e-nuk-lu-ge-ne met-in šar-ek kej-l'ie-nu-mle.*
 [REC-find-1PL-DS-COND] I-DAT something-FOC give-INGR-ITER-3SG.OF
 'If we meet each other, he starts to give me something.'

Here the subject (*he*) and the indirect object (*me*) of the main clause represent reciprocal arguments of the subordinate (reciprocal) clause; although the agreement marker within the subordinate verb form is 1PL, i.e. it expresses both reciprocal arguments (*I + he*), the switch-reference marker indicates that the subject of the reciprocal clause is not coreferent with the subject of the main clause.

The referential situation in the next example is apparently very similar: the reciprocal arguments of a subordinate clause are coreferent with the subject (= addressee of the imperative) and the object (*this man*) of the main clause. However, the switch-reference procedure treats this situation in the opposite way, cf.:

- (42) *tiŋ šoromo čobu-n örd'e laŋin n'e-kenmi:-t joqto-ŋi-k.*
 this man sea-ATR middle DIR REC-accompany-SS lead-PL-IMP
 'Lead this man to the middle of the sea, accompanying each other.'

An explanation of the different treatment of these cases by the switch-reference procedure can be based on the general empathy hierarchy SPEAKER > HEARER > THIRD PERSON. On the basis of this hierarchy, it may be assumed that the reciprocal arguments in (41) and (42), if not dropped, would have been expressed by comitative complexes like *met tude-n'e* 'I with him' and *tit tiŋ šoromo-n'e* 'you (PL) with this man' respectively (not **tudel met-n'e* 'he with me' and **tiŋ šoromo tit-n'e* 'this man with you'). If this reconstruction is accepted, the subject of the main clause appears to be coreferent with a comitative NP in (41), but with a nominative NP in (42), and it is this distinction that is reflected by switch-reference marking.

Due to the variations in switch-reference marking mentioned in the beginning of this subsection, this piece of evidence cannot be taken as a definitive argument in favor of the objecthood of comitative NPs representing a reciprocal argument (as suggested by the scheme in (38)). What seems to be clear, however, is that the switch-reference procedure distinguishes between what may be called the primary reciprocal argument (normally expressed by a nominative phrase) and the secondary reciprocal argument (normally expressed by a comitative phrase), so that it is the former one whose coreference with the subject of another clause is likely to be marked within a dependent verb form.

5.4.4 Evidence from focus-marking

The focus-marking procedure can be applied neither to the comitative complex, nor to the nominative NP within such a complex, so neither of the two candidates for subjecthood possesses this property (which is rather essential within the Yukaghir syntax). This criterion thus cannot be applied to the problem under discussion. However, this fact seems to be interesting in itself, insofar as it indicates that both candidates for subjecthood are far from what may be taken as the "prototypical" (intransitive) subject in Yukaghir. Note that an NP representing both reciprocal arguments does possess this property, cf. (27).

To sum up the discussion: reciprocal arguments are most frequently expressed by one (subject) constituent (see scheme (37)), which may be represented either by a single NP or by a complex containing several NPs. In some cases, however, a nominative NP and a comitative NP expressing reciprocal arguments are treated as autonomous constituents and play significantly different roles in the syntactic procedures. In order to explain these cases, the alternative diathesis (which ascribes the subject syntactic relation to the first reciprocal argument and the oblique object relation to the second one) may be suggested as one of the options for the reciprocal constructions (“discontinuous” reciprocal construction, as in (38)). Although the data presented above does not provide definitive arguments in favor of the oblique objecthood of the comitative NP, yet it clearly demonstrates that the choice of the first reciprocal argument may have syntactic consequences similar to those entailed by the choice of the subject.

6. Non-prototypical use of the morphological reciprocal marker

6.1 The reciprocal marker with lexical reciprocals

The morphological reciprocal marker can be attached to a verb expressing a symmetrical predicate, independently of its initial transitivity, cf.:

- (43) a. *čejlu*- ‘to be far’ → *n’e-čejlu*- ‘to be far from each other’
 b. *kimd’i*- ‘to fight’ → *n’e-kimd’i*- ‘to fight with each other’
 c. *titimie*- ‘to be the same as X/like X’ → *n’e-titimie*- ‘to be the same, like each other’
 d. *šaqal’e*- ‘to gather’ (vi) → *n’e-šaqal’e*- ‘to gather with each other.’

The following set of examples illustrate the use of the reciprocal marker with an intransitive lexical reciprocal, cf.:

- (44) a. *lebie-n pugil’-pe čumut šaqal’e-delle mon-ŋi* ... (N. Text 9)
 [earth-ATR lord-PL all gather-SS.PFV] say-3PL.INTR
 ‘All lords of the earth gathered and said: ...’
 b. *n’e-šaqal’e-delle n’ied’i-t ani-pe mol-l’el-Ni*.
 REC-gather-SS.PFV speak-SS fish-PL say-EVID-3PL.INTR
 ‘Having gathered with each other, in speaking, the fishes said: ...’
 c. *čumut n’e-šaqal’e-š-telle n’ied’i-nmu-l’el-ŋi*.
 all REC-gather-CAUS-SS.PFV speak-HAB-EVID-3PL
 ‘They used to gather and speak (with each other).’

Here the initial verb (*šaqal’e*- ‘to gather’), the formally reciprocal verb (*n’e-šaqal’e*- ‘to gather with each other’), and the reciprocal derived from the causative (*šaqal’e-š-* ‘to gather sb/sth’ → *n’e-šaqal’e-š-* ‘to gather each other’) are used in referentially identical situations, without any significant semantic shift. Note, however, that (44c) is a case of canonical reciprocal derivation from a transitive verb, while the simple reciprocal *n’e-šaqal’e-* is an instance of reciprocal derivation from an intransitive verb, which in the case of a non-symmetrical initial predicate should have been ‘supported’ by a syntactic

reciprocal marker (see 4.2.1). On the basis of this distinction, the occurrence of semantically “parallel” examples like in (44) may be explained as a result of the interaction of the following two factors:

1. The intention to highlight the reciprocal nature of a referential situation, which results in adding the morphological reciprocal marker to a lexical reciprocal.
2. The grammatical preference for the S+DO type of reciprocal transformation, which triggers the causative transformation in order to match the canonical pattern.

The syntactic reciprocal markers can be employed for highlighting reciprocity as well, cf.:

- (45) *n'e-molho-de-gen kimd'ie-l'ie-l'el-ŋi.*
 REC-among-POSS-PROL fight-INGR-EVID-3PL.INTR
 ‘They began to fight with each other, among themselves.’

6.2 The reciprocal marker with terms of kinship

The reciprocal prefix may be attached to some terms of kinship denoting relations within a generation, cf.:

- (46) a. *met emd'e-pul čumut amde-ŋi.* (N. Text 29)
 my younger.sibling-PL all die-3PL.INTR
 ‘All my younger brothers and sisters died.’
 b. *ja:n n'emd'e-die modo-l'el-ŋi.* (N. Text 21)
 three REC-sibling-DIM live-EVID-3PL.INTR
 ‘There lived three brothers.’

In (46a) the noun *emd'e* ‘younger sibling’ denotes a set of persons by naming their relation to another person (in this case, to the speaker); in (46b) the same noun expresses the relation which holds within the set of persons denoted by this noun, and the reciprocal prefix marks this situation (lit. ‘each other’s siblings’). Note that the semantic component ‘younger’ is neutralized in this context.

In my Kolyma Yukaghir corpus, the reciprocal prefix is found only in combination with the nominal stem *emd'e* ‘younger sibling’. In Tundra Yukaghir the following instances of this phenomenon are found: *n'ŋ-emd'e-jil'-pe* ‘(all) younger brothers’, *n'ŋ-aka-jil'-pe* ‘(all) elder brothers’, *n'ŋ-eki-jil'-pe* ‘(all) elder sisters’, *n'i-n'uge-jil'-pe* ‘(all) cousins’, *n'i-d'anmi-jil'-pe* ‘(all) elder brothers’ (all the examples and translations are taken from Krejnovich (1982:44)). The component *-jil'* in these forms is, according to Krejnovich (1982:43), an ancient plural marker (*-pe-* is the regular plural marker).

6.3 Non-reciprocal meanings of the reciprocal marker

The reciprocal marker in Yukagir is highly specialized, i.e. there are almost no instances of non-reciprocal use of this morpheme. However, there are some unique examples of this kind in my corpus, which are all listed below.

6.3.1 Referential chaining

The reciprocal from the intransitive verb *kebej-* ‘to leave’ signifies the chaining situation (‘A left after B, B left after C etc.’, cf. (Lichtenberk 1985; Kemmer 1993:100–1)); this interpretation is supported by the obligatory use of the syntactic reciprocal marker derived from the postposition *jela:* ‘after, behind’ in such clauses, cf.:

- (47) a. *tudel met jela: kewe-s’.*
 he I after leave-3SG.INTR
 ‘He left after me.’
 b. *n’e-jela: n’e-kewe-s’i:P’i.*
 REC-after REC-leave-1PL.INTR
 ‘We are leaving together, one after another.’

(Compare a similar example with another verb of motion in (22a).) Note that in order to derive the reciprocal proper from this verbal stem the reciprocal + applicative derivation is employed (cf. (5)).

6.3.2 The sociative (?) meaning

In the following example the reciprocal marker seemingly expresses a sociative meaning. This example involves the verb *im-ie-* ‘to put sth or sb into a boat or a sledge, or on deer- or horse-back’ which is derived from the verb *ima-* ‘to get into a boat or a sledge, or to mount a deer or a horse’ by means of the causative suffix *-ie-* which has an additional resultative meaning: it implies that the Causee is still in the state caused by the action in the time of reference, cf.:

- (48) a. *met tudel eks’il’-ge im-ie.*
 I he boat-LOC sit-CAUS(TR.1SG)
 ‘I have him in the boat with me.’
 b. *kin-pe-lek n’e-im-ie-ŋi-l eks’il’-ge.*
 WHO-PL-FOC REC-sit-CAUS-3PL-SF boat-LOC
 ‘Who (PL) are in the boat together?’

As shown by (48a), the sociative meaning is implied by the initial verb itself; the reciprocal presented in (48b) may thus be literally translated as ‘to put each other (in a boat, sledge, etc.), so that both are still there (together)’; then the reciprocal marker itself may be taken to have its basic meaning, while the sociative meaning is implied by its combination with the *-ie-* suffix.

6.3.3 The reflexive (?) meaning

There is a unique example of the possessive-reflexive meaning expressed by the reciprocal marker, cf.:

- (49) *met nojl pohoži juju:-ge tamun mided’e-le n’e-kigiji:-je.*
 my leg knee hurt-DS this needle-INST REC-jab-1SG.INTR
 ‘My knee was hurting, and I jabbed it with a needle.’

Note that the same verb normally has the reciprocal meaning, cf. (2), (27), (36), so this is hardly a case of (pure) lexicalization.

In the following example the reciprocal prefix marks a referential situation which is somewhat intermediate between the reflexive proper and the reciprocal proper, cf.:

- (50) *titte samuj n'e-n'u:-tie-nu-l'el-ŋi* *taŋ čomo:d'e-p-ki*
 their self REC-name-CAUS-ITER-EVID-3PL-INTR [this elder-PL-POSS
n'e-molho-de-gen n'ied'i-t taŋ titte omni:-n n'u:-gele
 REC-among-POSS-PROL speak-SS] this their clan-ATR name-ACC
n'u-tie-nu-l'el-ŋa.
 name-give-ITER-EVID-3PL.TR
 'They give names to each other (to themselves) themselves. The elders (of these clans),
 speaking among themselves (to each other), gave names to their clans.'

The pronoun *titte* 'their' in the first clause refers to several clans which used to live near each other; the situation expressed by the reciprocal in this clause is then described in more detail, so that it becomes clear that interpretations like 'they gave names to each other' and 'they gave names to themselves' are both possible: what is stressed in the first clause is that these names were not given by anyone outside the community; this is highlighted by the use of the reflexive particle *samuj* 'self' (which is a borrowing from Russian *sam* 'self').

6.4 Lexicalizations

There are only few clear instances of the lexicalized use of the reciprocal marker in my data, which are all listed in this subsection (about some less clear examples see 3.1.3, 3.1.1.2, and 6.2).

First, there are two cases of morphologically standard reciprocal derivation with an idiomatic meaning, cf. *n'e-mejnu-* 'to get married, to join' (lit. 'to take each other') ← *mejnu-* 'to take sth', and *n'e-lej-nu-l-ben* [REC-eat-ITER-ATR-SUBST] 'predator' (← *n'e-lej-nu-l* '(regularly) eating each other') ← *le(g)-* 'to eat'.

Secondly, one reciprocal verb is derived by the reciprocal prefix from a postpositional stem: *kije* 'before' → *n'e-kije-* 'to compete with each other, race with one another', cf.:

- (51) *adi-pe n'e-kije-din šubend'i-nnu-l'el-ŋi.*
 boy-PL REC-before-INF fun-HAB-EVID-3PL.INTR
 'The boys used to race with one another.'

Finally, if attached to the nominal stem *kie* 'span, interval', the reciprocal prefix derives the adverb *n'e-kie* 'alternately, turn and turn about.', cf.:

- (52) *tude mon-uol+možu-gele jaqte-le n'e-kie kič-um.*
 his say-RES+PRSP-ACC song-ACC REC-span learn-3SG.TR
 'He learnt (by heart) what he had to say, alternately with a song (by turn spoken and sung).'

7. Means of expressing related meanings

7.1 Comitative

7.1.1 *The comitative suffix*

Yukaghir has neither comitative nor sociative verb forms; the corresponding meanings are expressed either by the comitative case form or by a free comitative marker (see 7.1.2).

As shown in 5.1, the comitative case form is derived by means of the suffix *-n'e*; besides expressing one of the reciprocal arguments, the comitative case form has two basic functions:

1. It marks non-subject arguments of symmetrical predicates, cf.:

- (53) a. *titte es'ie-ŋin qamied'a:-nu-l'el-ŋi kereke-n'e kimd'i:-din.*
 their father-DAT help-ITER-EVID-3PL.INTR Koryak-COM fight-INF
 'They used to help their father fight with the Koryaks.' (N. Text 50)
- b. *ann'a:-l'el kind'e-n'e.*
 speak-INGR-EVID(3SG.INTR) moon-COM
 'She began to speak with the moon.' (N. Text 2)

2. It marks arguments of "sociative" situations (i.e. situations involving two participants playing equal roles), cf.:

- (54) a. *qristos lebie-gen tude šoromo-pul-n'e egužu-j.* (N. Text 9)
 Christ earth-PROL his man-PL-COM walk-3SG.INTR
 'Christ walked around the earth together with his men.'
- b. *amun-pe-n'e petr berbekin-gele pude peššej-m.* (N. Text 31)
 bone-PL-COM P. B.-ACC outside throw.out-3SG.TR
 'He threw out Petr Berbekin together with the bones.'

If a comitative NP denotes a 'collaborator' with the actor, the verb may agree both with the nominative NP alone and with the comitative complex as a unitary whole, exactly as described for the reciprocal constructions (see 5.3), cf. (54a) and:

- (55) *alandin tude šoromo-pul-n'e kel-ŋi.*
 A. his man-PL-COM come-3PL.INTR
 'Alandin with/and his men came.'

Thus, the comitative case appears if a situation involves two semantically equal participants, be it participants of a symmetrical or reciprocal situation, or participants of a "sociative" situation ('A and B together'), independently of whether or not the NPs denoting semantically equal participants are treated as one syntactic constituent.

7.1.2 *The free comitative marker*

The free comitative marker *n'aha*: 'together (with)' may function either as a postposition or as an adverb. As a postposition, it normally governs the comitative case, cf.:

- (56) [...] *as'e-gi kurčen-n'e n'aha: amdo:-t qodo:-pe-gi.*
 deer-POSS crane-COM together be.dead-ss lie-PL-POSS
 '...(that) his deer, together with the crane, lay dead.'

The comitative NP governed by this postposition may be dropped anaphorically, cf.:

- (57) *čarčaqan l'e-j n'aha: emd'e-p-ki l'e-ŋi.* (N. Text 29)
 C. be-3SG.INTR together younger.brother-PL-POSS be-3PL.INTR
 'There lived Charchaqan. Together with him lived his younger brothers.'

As an adverb, the free comitative marker occupies the preverbal position, cf.:

- (58) *n'aha: kebej-ŋi.*
 together leave-3PL.INTR
 'They left together.'

In some examples this marker has a meaning similar to the reciprocal one and may be used in a reciprocal construction with an intransitive verb in the function of syntactic reciprocal marker (see 4.2.1), cf.:

- (59) a. *n'aha: totto:-ŋi.*
 together stick-3PL.INTR
 'They stuck to each other, together.'
 b. *n'aha: n'e-juolod'a:-ŋi.*
 together REC-ask-3PL.INTR
 'They asked each other.'

To sum up, in the postnominal position, the word under discussion has the comitative meaning and can also occur with an NP denoting a non-subject reciprocal argument; as an adverb (in the preverbal position), it may mark both sociative and reciprocal situations.

7.2 Reflexive

The reflexive meaning is marked by the prefix *met-* (cf. (1c), (7c)), formally equal to 1SG pronoun 'I, my'. It may be assumed that this prefix has developed from a pronominal proclitic integrated into the verb morphology. This assumption is supported by the fact that in Tundra Yukaghir the reflexive marker (in the same morphological position) agrees with the subject in person in number, so that the reflexive meaning is expressed by the stem of a personal pronoun (coreferent with the subject) incorporated in the verb form, cf.:

- (60) a. *met me-met-qaiwes-t'eŋ.*
 I AFFRM-me-wound-1SG.INTR
 'I wounded myself.'
 b. *tet me-tet-qaiwes-t'ek.*
 you AFFRM-you-wound-2SG.INTR
 'You wounded yourself.'
 c. *tittel me-titte-qaiwes-ŋi.*
 they AFFRM-them-wound-3PL.INTR
 'They wounded themselves.'

As mentioned in 1.2, the reflexive and the reciprocal are opposed as the members of one morphological category, so that they cannot be combined within one verb form.

8. Notes on reciprocals in Tundra Yukaghir

8.1 General notes

In Tundra Yukaghir the reciprocal prefix has two phonological variants, *n'i-/n'iy-*; the latter occurs before vowels, cf.: *paj-* 'to knock' → *n'i-paj-* 'to knock each other', *ai-* 'to shoot' → *n'iy-ai-* 'to shoot each other'. The only significant syntactic difference between Kolyma and Tundra Yukaghir, as far as the reciprocals are concerned, has to do with reciprocal constructions with bitransitive verbs, in particular, with the relations between reciprocal and causative derivation.

8.2 Reciprocal constructions with underlying bitransitive causatives: "Indirect" or "canonical" reciprocals?

Tundra Yukaghir does not allow "indirect" reciprocal transformation (cf. 3.2), with the exception of reciprocal constructions with underlying bitransitive causatives, i.e., causatives derived from transitive verbs, cf.:

- (61) a. *tuj köde al'ha-le me-telies-um.*
 this man fish-ACC AFFRM-dry-3SG.TR
 'This man dried the fish.'
- b. *met tuj köde-ŋin al'ha me-telies-t'i-ŋ.*
 I this man-DAT fish AFFRM-dry-CAUS-(1SG.TR)
 'I asked this man to dry the fish, he dried the fish according to my request.'
- c. *mit me-n'i-telies-t'i-jel'i.*
 we AFFRM-REC-dry-CAUS-1PL.INTR
 'We asked each other to dry; we agreed to dry.'

In a causative construction (cf. (61b)) the initial direct object normally retains its syntactic position, the Causee occupies the indirect object slot (in the dative case form). The reciprocal marker in (61c) marks cross-coreference between the subject and the indirect object (Causer and Causee), while the initial direct object is not involved in the transformation (at least semantically). Yet the resulting construction is intransitive both syntactically and morphologically: no NP expressing direct object can be present in such a construction, and the verb can take only intransitive agreement markers, cf. another example of this type:

- (62) *mit me-n'i-t'ambi-se-jl'i.*
 we AFFRM-REC-help-CAUS-1PL.INTR
 'We asked each other (agreed) to help.'

Thus, reciprocal derivation from a bitransitive causative obligatorily entails detransitivization, although this is not implied by the semantics of this transformation.

An explanation for this phenomenon may be based on the following fact. When the initial direct object is not expressed in a causative sentence, the Causee can be encoded as direct object, cf.:

- (63) *met tuŋ köde me-telies-t'i-ŋ.*
 I this man AFFRM-dry-CAUS-(1SG.TR)
 'I asked this man to dry.'

It may thus be suggested that the reciprocal construction as in (61c) is derived not from a canonical causative construction as in (61b), but from a construction with an unspecified Patient and the Causee shifted to the direct object position, as in (63). If this hypothesis is accepted, the absence of the initial direct object should be viewed not as a formal implication of the reciprocal transformation, but as its obligatory condition. Then the reciprocal construction in (61c) belongs to the “canonical” diathesis type, and thus does not contradict the general rule which prohibits the “indirect” reciprocal transformation in Tundra Yukaghir.

8.3 Causative reciprocal constructions

Tundra Yukaghir, in contrast to Kolyma Yukaghir, has an object-oriented reciprocal construction. The subject of this construction denotes the Causer of reciprocal situation:

- (64) *met uör-pe me-n'i-t'ambi-se-ŋ.*
 I child-PL AFFRM-REC-help-CAUS(1SG.TR)
 'I made the children help each other.'

The reciprocal verb in such constructions must contain a causative suffix and takes a transitive agreement marker. The reciprocal arguments can be represented either by a single NP encoded as direct object (see 2.1) or by two distinct NPs, one of which is marked as direct object, and the other has the comitative case form, cf. (64) and the following example:

- (65) *tet met-ul met könme-n'e me-n'i-juö-se-mek.*
 you I-ACC my friend-COM AFFRM-REC-see-CAUS-2SG.TR
 'You showed me and my friend to each other, you helped us to see each other.'

This type of reciprocal construction can be described in terms of the causative transformation of a reciprocal construction, so that the sentence in (64) be taken as derived from (66); cf.:

- (66) *uör-pe me-n'i-t'ambi-ŋi.*
 child-PL AFFRM-REC-help-3PL.INTR
 'The children helped each other.'

Thus, Tundra Yukaghir can be assumed to have two options for combining reciprocal and causative meanings:

1. Reciprocal constructions with underlying causative verbs (Causer symmetrical with Causee), in which the subject-oriented reciprocal transformation is applied to a causative clause, cf. (61c), (62)), i.e. the causative marker is included within the scope of the reciprocal marker.

2. Causative (object-oriented) reciprocal constructions, in which causative transformation is applied to a canonical reciprocal clause, cf. (64), (65), and the reciprocal marker is within the scope of the causative marker.

It is interesting to note that in Even a similar distinction is reflected by the linear order of the reciprocal and causative suffixes within a verb form: V-CAUS-REC for the first construction type, and V-REC-CAUS for the second one (Malchukov, Ch. 39). In Yukaghir, this direct way of reflecting this distinction is not available because the reciprocal marker is preverbal, while the causative meaning is marked by suffixes. As a result, these construction types are morphologically opposed only by the choice of transitive vs. intransitive agreement markers, cf. (64) and (62).

8.4 Summary of distinctions between Tundra and Kolyma Yukaghir

The only significant distinction between the reciprocal constructions in Tundra and Kolyma Yukaghir may be formulated as follows: a transitive reciprocal in Kolyma Yukaghir can mark only cross-coreference between subject and indirect object (in particular, Causee in a causative construction), while in Tundra Yukaghir it can mark only cross-coreference between direct object and indirect object (Causee) in a causative construction. In other words, in both languages the opposition between transitive and intransitive agreement suffixes is employed to mark the distinction between “canonical” (intransitive) and “non-canonical” (transitive) reciprocal diathesis, but they have absolutely different types of non-canonical reciprocals (dative reciprocals in Kolyma Yukaghir and object-oriented reciprocals in Tundra-Yukaghir).

9. Etymological notes

As already shown, the comitative case marker in Kolyma Yukaghir has exactly the same phonological form as the reciprocal prefix. This coincidence is hardly accidental, given the obvious semantic similarity and the resulting regular co-occurrence of these morphemes within one clause (see 5.1). It might thus be assumed that both markers have developed from one morpheme that had been used to mark clauses denoting situations with two or more semantically equal arguments (i.e., both reciprocal and comitative/sociative situations), as the free comitative marker described in 7.1.2. Given the opposite linear positions of the morphemes under discussion with respect to the stem, this assumption seems to imply that the original comitative-reciprocal marker had been a free morpheme; this hypothesis is supported by the morphonological evidence in favor of the relatively recent integration of the reciprocal marker into the verb morphology (see 2.2.1). On the other hand, the clear pronominal origin of the reflexive prefix (see 7.2) demonstrates that the integration of a preverbal free morpheme into the verb form was once possible in Yukaghir.

This etymological hypothesis suggests that a structure like in (67) had been employed for both reciprocal ('A and B V each other') and sociative ('A and B together') situations, cf.:

(67) A B *n'e* V.

The next stage of development of this structure might have been a distinction between the postnominal (comitative) and preverbal (reciprocal) uses of *n'e*, cf.:

(68) (i) comitative: A B + *n'e* V
 (ii) reciprocal: A [B] *n'e* + V

(compare the similar behavior of the free comitative marker *n'aha*: (see 7.1.2)).

According to this hypothesis, the Yukaghir morphological reciprocal has developed from an analytical reciprocal form. It seems that this claim is supported by some synchronic features of reciprocals in Yukaghir, such as the extremely high degree of specialization, the small number of lexicalized reciprocals, absence (or minimum) of lexical restrictions. Some further evidence in favour of this claim is given by the free compatibility of the reciprocal marker with postpositional stems (see 4.1) and by the possibility of inserting a nominal stem between the reciprocal marker and the verbal stem (see 3.3.2).

In Tundra Yukaghir the reciprocal marker seems to be more deeply integrated into the verb morphology that in Kolyma Yukaghir: first, it has an additional morphological variant used to avoid clustering of vowels on the morpheme boundary, secondly, it can be included into the scope of a causative suffix.

1. Introduction

1.1 The Cashinahua language

Cashinahua belongs to the Panoan language family which nowadays numbers of nearly thirty languages, spoken by about 38,400 people (Erikson et al. 1994:4–5). They live in the Amazonian Lowlands on the Bolivian, Brazilian and Peruvian borders. Cashinahua is spoken by about 4,587 people (ISA 1996:viii) who live along the Brazilian-Peruvian border in the basin of the Jurua and Purus rivers. The first study of the Panoan family is dated 1888 (presented by Raoul de Grasserie (1988) at the 7th International Americanist Congress in Berlin).

Most of the Panoan tribes and the Cashinahua among them refer to themselves as *huni kuin* ‘man *kuin*’, with some phonetic variations. The name of the Cashinahua language is *hanca kuin*. The term *kuin* is part of the Cashinahua socio-cultural system of classification. Sometimes, it is translated as ‘real’ (*huni kuin* ‘real people’ or ‘real man’) according to Kensinger (1994:83–94), Erikson (1996:73–77), and Deshayes & Keifenheim (1994) and I disagree with this translation (Camargo 1991). In the anthropological literature Cashinahua is spelt in a variety of ways: Caxinaua, Kashinawa, Kaxinawa, Cachinawa, etc. I will use the English and Spanish spelling *Cashinahua*.

It seems that the Panoan languages are related to the Tacanan as discussed by Mary R. Key on the basis of the phonological data analysis. She suggested that Panoan language groups: Chacobo, Pacaguara, Karipuna, and Kasharari, be viewed as one Pano-Tacana family (Key 1979:84–106). Fabre (1998:820) claims that this classification is based on lexicological data and suggests that their lexical similarity could stem from areal contact rather than genetic affiliation. It is stated in IEL (Bright 1992b:123; see also Bright 1992a:153–4) with reference to Kensinger (1985:268) that “a genetic relationship between Tacanan and the Panoan family is now widely accepted”.

1.2 Overview

In Cashinahua, there is no word or word group meaning ‘each other’. The principal means of coding reciprocity are the suffixes *-nami* and *-nan/-nanan*. Only subject-oriented diathesis types of reciprocals with these suffixes are attested in my data. In most cases of reciprocalization, the object of the underlying construction is deleted and *intransitivization* takes place. In the reciprocal construction, the subject cannot be marked by the ergative case marker *-n* (note that in Cashinahua, the intransitive subject as well as a direct object are zero marked when expressed by nouns). In Cashinahua there is no personal agreement.

- (1) a. *na huni-n haidu bina-ai.*
 this man-ERG H. look.for-PROGR
 ‘This man is looking for Jairo.’
 b. *na huni-bu bina-nami-ai.*
 this man-PL look.for-REC-PROGR
 ‘These men are looking for each other.’

Type (1b) is a typical reciprocal construction common cross-linguistically. I will refer to it as *reciprocal proper*. A specific feature of Cashinahua which is of interest typologically is the construction which I have tentatively termed *response reciprocal*¹ (in fact, this is a specific type of construction where the same reciprocal verbs are used; for brevity, in this case they may be referred to as response-reciprocal constructions). A significant feature of the response-reciprocal construction is a potential temporal distance between the reciprocal subevents. In this construction the subject may be singular, which distinguishes it from the above type. As a rule, the second participant cannot be named in this construction (cf. (1c)) but it may be named in the broader context, and even in the same sentence although not by an object (see, however, (2b)). In other words, it is always implied. Compare:

- c. *na huni bina-nami-ai.*
 this man look.for-REC-PROGR
 lit. 'This man is looking for each other.'
 = 'This man is looking for someone (who *also* (i) is looking for this man, (ii) will look for this man, (iii) looked for this man).'

A significant addition to the above: (1c) can be interpreted only as a response reciprocal because the subject is singular, while in (1b) this interpretation is a possible one alongside the reciprocal proper, i.e. a construction with a plural subject also allows the interpretation 'These men are looking for someone else (who is also looking for them ...)'.²

In (2a) and (2b) *mia* is the direct object form of the pronoun *min* 'you.sg'. As a rule, constructions of type (2b) are rejected by the native speakers, but for unclear reasons they accept a few such reciprocal constructions, e.g. (2b) with *bina-nami*. Note that the valency is not changed unless we count the omission of the ergative marking of the subject in (2b).

- (2) a. *paku-n mia bina-ai.*
 P.-ERG YOU.ACC look.for-PROGR
 'Paco is looking for you.'
 b. *paku mia bina-nami-ai.*
 P. YOU.ACC look.for-REC-PROGR
 'Paco is looking for you (and you – in Paco's belief – *also* (i) are looking for Paco, (ii) will look for Paco, (iii) looked for Paco).'

In "indirect" and "possessive" reciprocal constructions the direct object may be retained, i.e. intransitivization does not apply, in contrast to (1b) and (1c), but transitivity is weakened, because the subject in these constructions, as well as in (1b) and (1c) and (2b) cannot be marked by the ergative case (see also 3.1.2 and 3.1.3).

Here is an example of an "indirect" reciprocal. In (3b) the benefactive marker is used because in constructions with three-place transitives the object of addressee is omitted.

1. The term *response reciprocal* is not quite precise; it is used because the action of the co-participant may be distanced from that of the first participant in time and usually it is a kind of response to the latter action, both actions being expressed by the same form. Response action in the proper sense can be illustrated by the Ancient Greek derivatives with the prefix *άντι-*: *άντιδιαβαλλω* 'to respond with slander to slander', *άντεπαινεω* 'to respond to a praise with praise', *άνταδικεω* 'to respond to an offence with offence', etc.

- (3) a. *na huni-bu-n paku piti inan-mis.*
 this man-PL-ERG P. food give-HAB
 ‘These men always give food to Paco.’
- b. *na huni-bu-n piti inan-şun-mis.*
 this man-PL-ERG food give-BEN-HAB
 ‘These men always give food to someone.’
- c. *na huni-bu piti inan-nami-mis.*
 this man-PL food give-REC-HAB
- i. ‘These men always give food to each other.’
- ii. ‘These men always give food to someone else (who gives food to these men when they need it ...).’

If we substitute the suffix *-nan/-nanan* for *-nami* the construction as a rule retains its reciprocal meaning proper or its response-reciprocal meaning, and it also undergoes analogous intransitivization or a weakening of transitivity (i.e. ergativity is always absent, even if there is a direct object). I have no convincing data on restrictions of this kind of interchangeability, and the semantic distinctions resulting from substitution are hard to capture. This also pertains to the interchangeability of *-nan* and *-nanan*. In my corpus there are numerous pairs of sentences with *-nami* and *-nan/-nanan* that are explained or translated (into Portuguese and Spanish) by the informants in the same way. An example of differences adduced from some of my informants may be the following: in (4b) they sometimes characterize the meaning of the reciprocal as simultaneous.

- (4) a. *paku-n haidu diti-ai.*
 P-ERG H. hit-PROGR
 ‘Paco is hitting Jairo.’
- b. *paku inun haidu diti-nanan-ai-bu.*
 P. and H. hit-REC-PROGR-PL
 ‘Paco and Jairo are hitting each other.’

On the other hand, the following examples can hardly differ with regard to simultaneity (this also concerns example (7b) with a postponed response action). The difference between (5b) and (5c) is explained by one of my informants as follows: supposedly, (5b) implies that the lovers are already living together, while (5c) means that they are still living separately.

- (5) a. *haidu-n madia bicipaimis-ki.* ‘Jairo loves Maria.’
- b. *haidu inun madia bicipainami-mis-ki.* ‘Jairo and Maria love each other.’
- c. *haidu inun madia bicipainanan-mis-ki.* ‘Jairo and Maria love each other.’

(6) is a sentence the author heard in a conversation. Note that the Cashinahua believe that if you think of someone this person feels it and thinks of you in response, even if you are far away from each other. In this sentence the object referent is someone from Paco’s family.

- (6) *paku şinan-nanan-mis-ki, manu-nami-i-dan.*
 P. think-REC-HAB-ASS miss-REC-i-dan
 ‘Paco thinks of him, he misses him’ (and he thinks of Paco and misses him).

The response action may be different from the reciprocated action. Thus, for instance, in (7b) the donation of the government may be reciprocated by the Cashinahua by such response actions as the proper voting at the elections, giving a proper reception to the government representative, treating him with game meat (which is a sign of particular respect), etc.

- (7) a. *gubernu-n* *donation inan-şina-ki.*
 government-ERG donation give-PAST-ASS
 ‘The government made a donation to someone.’
 b. *gubernu* *donation maı-tibi inan-nanan-şina-ki.*
 government donation village-each give-REC-PAST-ASS
 ‘The government made a donation to each village.’

In this paper I shall also consider the distributive suffix *-akiaki* which does not carry the reciprocal meaning but it codes a number of meanings some of which in a number of languages may be rendered by reciprocal markers. It expresses meanings like ‘each’, ‘by turns’, ‘one after another’, ‘here and there’, ‘next to each other’, ‘from side to side’, ‘everywhere’, etc., depending on the lexical meaning of the base and/or context. It does not affect the valency of the underlying verb. In (8) the zero anaphora of the direct object implies someone close to the subject referent (note that for the Cashinahua life is limited to their family or village).

- (8) *paku-n* *dıti-akiaki-mis-ki.*
 P.-ERG hit-DISTR-HAB-ASS
 ‘Paco hits (the villagers) one after another.’

1.3 Database

This study is based on the data collected in 1994–1997 and in 1999 in a Cashinahua village called Colombiana (on the Peruvian side of the Curanja river, a tributary of the upper Purus river) with about 60 inhabitants. The Cashinahua people from this area were contacted in the late 1940s and have already assimilated much of the western life-style, such as clothing, but their ways of subsistence are still their own. Within the Cashinahua territory, they speak their language exclusively. They are supposed to learn Spanish, on the Peruvian side, and Portuguese, on the Brazilian side, in bilingual schools. Although some of the adult men, mainly the political leaders and their siblings, are in regular contact with western society and are able to communicate in one of these languages, they cannot be considered genuine bilinguals. Practically all ordinary teenagers had at that time only a scant knowledge of either of these languages.

I verified the data collected at different dates with Marcelino Piñedo (aged 56), Eda Piñedo (aged 28), Paco Piñedo (20), Jairo Piñedo (21), Jorge Torres (40), Agustino Torres (25), Alicia Puricho (50). For all of them Cashinahua is their native language. Paco, Jorge and Agustino have a fair knowledge of Spanish. Marcelino speaks a kind of mixture of Portuguese and Spanish. The others are entirely monolingual. Therefore I wish to warn

the reader that considerable care should be taken with the data as it is not always reliable due to the problems of communicating with the informants.

I am very much obliged to my main native informants Marcelino and Jorge and also to Agustino, Alicia, Eda, Paco and Jairo. Montag (1981) was consulted when necessary.

The present study is of an entirely preliminary nature, and some of the claims may undergo changes in the course of further research. Documentation of Cashinahua is in progress since 2006 within the DoBeS (Dokumentation Bedrohter Sprachen) program.

2. Grammatical notes

As so many of the Amazonian Amerindian languages, Cashinahua is still in the initial stage of investigation. It is an agglutinative language; it uses almost exclusively suffixes and has no prefixes. It manifests ergative/absolutive, nominative/accusative and neutral syntactic alignments (see Camargo 2005:55–88), weak noun-verb opposition (cf. Camargo 2003:25–39) and a rich derivational system.

2.1 The phonological system

The data are transcribed according to the Cashinahua phonological system. Cashinahua has eighteen phonemes: (a) four vowels: /a/, /i/, /i/ (= schwa), /u/, and (b) fourteen consonants: /m/, /n/, /p/, /t/, /c/, /k/, /b/, /d/, /j/ (occlusive palatal, often regarded as an affricate /tʃ/), /s/, /ʃ/ (a fricative voiceless retroflex), /h/, /ts/, /w/. At morpheme boundaries, morphological alternations (e.g. *bi-* > *bia-*) may occur.

2.2 Sentence structure. Word order. Word classes. Case relations

The word order is verb-final. The basic sequence is SOV, cf. (1)-(3). The transitive subject noun is marked by the ergative suffix *-n* (or by its allomorphs *-an*, *-in* or *-in*), and the intransitive subject noun and the object of a transitive construction are zero-marked (see (9a) and (10b) respectively). Table 1 summarizes the marking of nominal arguments:

Table 1. Noun marking

	Transitive	Intransitive
Subject	<i>-n</i>	∅
Object	∅	–

As to the personal pronouns, as transitive and intransitive subjects they are marked in the same way, i.e. with the final *-n* (cf. *mi-n* in (9c, d) and (10b)), and in the object position they have a different form (cf. subject *i-n* in (10c) and object *ia-∅* in (9b, c)). This distribution of subject and object marking between nouns and pronouns looks like split ergativity: constructions with nouns in syntactic positions are ergative while those with pronouns are “accusative” (the component *-a* is not a case marker in *i-a* because *i-* does

not occur separately, nor does the component *i-* in *i-n* and *mi-* in *mi-n*). The split ergativity system in Cashinahua is characterized by ergative-absolutive case marking on nouns and nominative-accusative case marking on pronouns. Moreover, both systems may combine in two ways. Thus, the following four types of explicit marking of transitive subjects and direct objects on nouns and pronouns can be distinguished (note that, in contrast to nouns, the pronouns have the same form in the intransitive and transitive subject position, and, again in contrast to nouns, they have special forms for a direct object). The four types are illustrated below. Proper ergative marking is observed in case (9a) only; case (9b) is a combination of ergative subject marking and accusative marking of the object; cases (9c) and (9d) are non-ergative. The form *ia* is provisionally called here accusative and, unlike *haidu* in (9a) and (9d), is not zero-marked because it never appears in subject position. Historically, however, the subject forms like *in* are derived from object forms like *ia* (full forms like *ia-n* are now used in displaced positions; cf. (15c)).

(9)	Subject		Object	
a.	noun marked	–	noun unmarked:	<i>paku-n haidu-Ø diti-ai</i> 'Paco is hitting Jairo.'
b.	noun marked	–	pronoun marked:	<i>paku-n ia diti-ai</i> 'Paco is hitting me.'
c.	pronoun unmarked	–	pronoun marked:	<i>min ia diti-ai</i> 'You are hitting me.'
d.	pronoun unmarked	–	noun unmarked:	<i>min haidu-Ø diti-ai</i> 'You are hitting Jairo.'

If the subject is a conjoined noun group the ergative marker is attached to the second element:

- e. *paku inun haidu-n ia diti-ai-bu.*
'Paco and Jairo are hitting me.' (cf. (9b)).

Nouns as intransitive subjects are not marked, and the pronouns, as mentioned, have the same form as transitive subjects (cf. (9c) and (10b)):

- (10) a. *haidu-Ø uša-ai.* 'Jairo is sleeping.'
 b. *min uša-ai.* 'You are sleeping.'
 c. *in uša-ai.* 'I am sleeping.'

The case markers are:

–*Ø* = absolutive (as a rule, this symbol is not used in the examples); it marks direct and indirect (including benefactive) objects (cf. (9a, d)) and intransitive subject (cf. (10a)).

–*n* = ergative (glossed ERG): it marks nouns in transitive subject position (see (9a, b)); its other meanings are possessive-genitive (glossed POSS; see (16a)) and locative (glossed LOC; see (11b)); (see Camargo 1998: 147–9)).

Besides the marker *-n*, there are three more case markers for different locative relations: *-ki* (glossed LOC; see (16a)); *-anu* (glossed LOC; see (11a)); *-anua* ablative (ABL; see (11c)); among these, the marker *-ki* alone seems to be also used on personal names and pronouns in non-direct object position.

Comitative relations are marked by two affixes on the object, the difference between them being unclear; both can code either a part of the subject group or a non-direct object: *-bi* (COM; see (11e)); *-bitan* (COM; see (11d)).

The instrumental case suffix *-win* (INST; see (38)) also marks the possessive form of the 3SG pronoun (see Table 3).

- (11) a. *bai-anu, in ka-mis.*
garden-DIR I go-HAB
'I often go to the garden.'
- b. *mai-n mani şaka puta-wi.*
floor-LOC banana peel throw-IMP
'Throw the banana peel on the floor!'
- c. *balta-anua min hu-şu-ki.*
B.-ABL YOU-SG come-PFV.PAST-ASS
'You arrived from Balta.'
- d. *paku madia-bitan cuta-mis-ki.*
P. M.-COM copulate-HAB-ASS
'Paco copulates with Maria.'
- e. *huni mi-bi hanca-ai.*
'The man is talking with you.'

2.3 Topicalization. Dependent predication

Deviations from SOV involve topicalization of the object (cf. (12b)) or subject (cf. (12c)), or dependent predicate (cf. (6)), etc.; if the topicalized argument changes its position it acquires the topical marker *-dan* which takes the position of a case marker – either zero (cf. *nami-Ø* in (12a) and *nami-dan* in (12b)) or overt (cf. *paku-n* in (12a) and *paku-dan* in (12c)). In writing, the topicalized argument is separated by a comma, to signify a virtual or potential pause:

- (12) a. *paku-n nami-Ø pi-mis.*
P.-ERG meat-OBJ eat-HAB
'Paco always eats meat.'
- b. *nami-dan, paku-n pi-mis.*
meat-TOP P.-ERG eat-HAB
'The meat, Paco always eats it.'
- c. *nami-Ø pi-mis, paku-n-dan.*
meat-OBJ eat-HAB P.-ERG-dan
'He always eats meat, Paco', i.e. 'It is Paco who (always) eats the meat.'

Constructions with *-dan* are extremely common in speech. This marker is particularly characteristic of objects, which results in a simplification of the syntactic structure. It seems that the suffix *-dan* does not always function as a topic marker, and I do not know its precise function. As its interpretations are dependent on the context they are a manifestation of its vagueness rather than polysemy (in particular the forms in *-dan* may denote the goal or cause of the action, a prior or subsequent action; i.e. functions which in other

languages may be rendered by forms termed converbs or verbal adverbials). Therefore henceforth it is repeated as *-dan* in the morphemic line of the example sentences.

As often as not, this suffix co-occurs with the aspectual markers *-i* and *-a*. Usually a verb with *-i-dan* seems to denote a non-realized action and with *-a-dan* a realized action, but this requires further study (on *-i* and *-a* see also 2.7). A dependent predicate when preceding the main predicate may have no tense/aspect markers or it may be marked with *-i* or *-a* (see (6), (69a), (50c), (52b), etc.).

2.4 Personal pronouns

As has been pointed out above, the personal pronouns in the subject position of an intransitive as well as a transitive construction contain the marker *-n*. In the *object position*, all the persons, except the 3rd of singular, appear in their full form (*i-n* → *ia*, *mi-n* → *mia*, *nu-n* → *nuku*, *ma-n* → *matu*, *hatu-n* → *hatu*, *habu-n* → *habu*) and are marked by a zero-morpheme (cf. in Table 2). The pronouns in Table 2 are segmented in order to point out their shared and distinctive segments, but further on in the examples the segment *-n* on pronouns (excepting the 3PL) is not as a rule hyphenated, as the remaining part does not occur separately. For the same reason, the segments *-ku*, *-tu* and *-bu* on the pronouns are not hyphenated either.

Comment 1. The 3SG pronoun is not used in communication, but is very common in narrative contexts in the meaning ‘the one we are talking about’; cf.:

- (13) a. *mai-n ha misti hu-mis-ki*
 land-LOC he alone come-HAB-ASS
 ‘Somebody (who we are talking about) comes alone by land.’
 b. *ha-n tsidi paku uin-tan-şan-iki-ki*
 he-ERG also P. see-tan-PRSP-EVID-ASS
 ‘(It seems that) he (who we are talking about) also, he is going to see Paco (and coming back).’

The pronoun *ha* seems to be descended from the demonstrative pronoun *ha* and it still retains this status (cf. *ha inka* ‘this Inca’; *ha huni* ‘this man’ (we are talking about)). Note that a sentence comprised of the predicate alone, like *hu-mis-ki* ‘he/somebody comes’, in an isolated position is accepted by all the informants, while *ha hu-mis-ki* ‘he comes’ sounds incomplete and requires information about the antecedent of the pronoun *ha*.

Comment 2. The 3PL forms *ha-tu* and *ha-tu-n* are used by the speaker to refer to a group of people from his own village or his next of kin (henceforth Inclusive pronoun).

Table 2. Personal pronoun marking

	Subject pronouns		Object pronouns	
	SG	PL	SG	PL
1st p.	<i>i-n</i>	<i>nu-n</i>	<i>ia-Ø</i>	<i>nu-ku-Ø</i>
2nd p.	<i>mi-n</i>	<i>ma-n</i>	<i>mia-Ø</i>	<i>ma-tu-Ø</i>
3rd p.	<i>ha; ha-n</i>	<i>ha-tu-n ha-bu-n</i>	<i>Ø</i>	<i>ha-tu-Ø ha-bu-Ø</i>

The forms *ha-bu* and *ha-bu-n* are used to refer to other groups of people (henceforth Exclusive). Note that the plural number on this latter pronoun is marked by *-bu* also used on nouns. Only the pronoun *habu* receives the ergative case-marking; and both *habu* and *hatu* take absolutive case-marking.

Comment 3. There is no 3SG pronoun form for the object position, and 3PL pronouns are usually omitted in this position: $\emptyset \emptyset$ *uin-mis-ki* ‘he/sb sees him/sb/sth’; *i-n* \emptyset *uin-mis-ki* ‘I see him/sb/sth’; \emptyset *ia uin-mis-ki* ‘he/sb sees me’. The omission is also characteristic of reciprocals.

- (14) a. *in* \emptyset *binima-nanan-ai*.
 I him/them be.happy-REC-PROGR
 lit. ‘I am happy (about him/them, e.g. my sons, who are happy about me).’

With two-place intransitives, the 3SG appears in the object position and it is marked, for instance, by the locative form *-ki* (14b). Its omission results in two readings according to the context of communication (14c):

- b. *in ha-ki binima-ai*.
 I he.SG-LOC be.happy-PROGR
 ‘I am happy because of him/her’ (e.g. because he is next to me, etc.).
- c. *in* (\emptyset) *binima-ai*.
 I (him) be.happy-PROGR
 i. ‘I am happy.’
 ii. ‘I am happy because of him’ (someone who is known to everybody).

Comment 4. In a displaced position (and also in conjoined phrases?) the object forms of the pronouns are used instead of the intransitive subject forms (see (15a, b)) and the full form of a transitive subject if the verb is transitive (see (15c)).

- (15) a. *ia* (not *in*!) *inun in baki, nun manu-nami-ai*.
 me and my son we miss-REC-PROGR
 ‘I and my son, we miss each other.’
- b. *ia, in daja-mis-ki*.
 me I work-HAB-ASS
 ‘As for me, I work.’
- c. *ian, in nami pi-mis-ki*.
 I I meat eat-HAB-ASS
 ‘As for me, I eat meat.’

Comment 5. The non-direct case forms of the pronouns are formed by substitution of the given case marker for the final segment of the possessive pronouns *-n* (cf. Table 3); thus the locative forms in *-ki* are: SG *i-ki*, *mi-ki*, *ha-ki*; PL *nu-ku-ki*, *ma-tu-ki*, *ha-tu-ki*, *ha-bu-ki*.

2.5 Possessive. Attributes

In the possessive construction, only human nouns and the personal pronouns contain the suffix *-n*; cf. (17a) and (17b) respectively. The possessive pronoun forms coincide materi-

Table 3. Possessive pronouns

	Singular	Plural
1st p.	<i>i-n</i>	<i>nu-ku-n</i>
2nd p.	<i>mi-n</i>	<i>ma-tu-n</i>
3rd p.	<i>ha-win</i>	<i>ha-tu-n</i> <i>ha-bu-n</i>

ally with respective subject pronouns, except the 3SG which takes the instrumental marker. Above is a table of possessive pronouns.

- (16) a. *paku-n bakì / hiwì / tai.* b. *mi-n bakì / hiwì / tai.*
 P.-POSS child house foot 2SG-POSS child house foot
 ‘Paco’s child / house / foot.’ ‘your child / house / foot.’

For non-human animate and inanimate nouns, there is no overt marking:

- (17) a. *awa tai* b. *hi p̃i*
 tapir foot tree leaf (feather, wing)
 ‘tapir’s foot’, or ‘tapir’s foot-print.’ ‘tree leaf.’ (cf. also (22))

An adjective usually follows the head noun:

- (18) *huni şua* ‘a fat man’, lit. ‘man fat’
hiwì iwapa ‘a big house’, lit. ‘house big.’

2.6 Agreement. Number

There is no person agreement in Cashinahua. The verb may agree only in number, agreement in the singular being zero marked. There is no agreement in number with the predicate if the subject is the 1PL or 2PL pronoun, i.e. the pronouns *nun* ‘we’ and *man* ‘you’. There are three cases of marking the plural number.

1. The subject is human. In this case plurality may be marked either on the subject or on the predicate, or on both the subject and predicate, in which case the subject is topicalized. There are two plural markers on the verb, *-bu* for the indicative mood (cf. (19b, d), (4b) and (8)) and *-kan* for the other moods (see (20b, c)). The suffix *-bu* also marks the plural number on human nouns, in subject or object position. Unlike *-bu*, *-kan* is not used on nouns.

With regard to the use of *-bu* on both nouns and verbs, as shown in (19), note that in Cashinahua, the difference between verb and noun is not always marked: most of the lexemes can take both verbal and nominal inflections.

To stress the sense ‘both, two’, the suffix *-dabi* (descended from the materially identical numeral, see (21b)) can be added to the predicate, along with either plural marker. (Thus this dual marker does not enter into the same opposition as the plural markers.) On reciprocals, its use is very productive.

The 3PL pronoun in subject position may be omitted, as in (20c), in which case plurality of the subject is marked on the predicate only. In (19e) the plural marker on the

predicate is optional because the coordinated subject is overtly plural. (21) illustrates the use of *-bu* on a direct object:

- (19) a. *huni pi-ai* 'the man is eating'
 b. *huni pi-ai-bu* 'the men are eating'
 c. *huni-bu pi-ai* 'the men are eating'
 d. *huni-bu pi-ai-bu* 'the men, they are eating'
 e. *paku and haidu pi-ai* 'Paco and Jairo are eating'
 f. *paku and haidu pi-dabi-ai-bu* 'Paco and Jairo, both of them, are eating.'
- (20) a. *huni pi-iki-ki* '(it might be) the man eats (is eating)'
 b. *huni pi-kan-iki-ki* '(it might be) the men eat (are eating)'
 c. \emptyset *pi-kan-iki-ki* '(it might be) they eat (are eating).'
- (21) *paku-n huni-bu kuşa-ai*
 P.ERG man-PL hit-PROGR
 'Paco is hitting men.'

2. The subject is non-human animate. In this case plurality may be marked on the verb only, and on the subject it may be expressed by a quantifier (which can also be used with animate nouns):

- (22) a. *kaman-an baka şau pi-mis-bu.*
 dog-ERG fish bone eat-HAB-PL
 'The dogs eat fish bones.'
 b. *kaman dabi pi-mis-bu.*
 dog two eat-HAB-PL
 'The two/both dogs eat.'

3. The subject is inanimate. In this case plurality may be expressed by a quantifier only and cannot be marked on the predicate:

- (23) a. *şiki muinti bina-ki.*
 corn mill new-ASS
 'The corn mill is new.'
 b. **şiki muinti bina-bu-ki.*
 'The corn mills are new.'
 c. *şiki muinti dabi bina-ki.*
 corn mill two new-ASS
 'Both corn mills are new.'

2.7 Tense, aspect, mood. Non-valency changing verbal derivation

What follows is highly tentative information. Most of the markers mentioned here are not glossed in the morphemic line of the sentential examples and are repeated in bold type.

1. The indicative mood. Cashinahua displays, among others, the following aspect or tense/aspect forms:

- (a) *-ai* – progressive, cf. (1);
 (b) *-mis* – habitual, cf. (3); its meaning may be rendered as 'always'; it also seems to have a meaning like that of the English Present Indefinite tense;

(c) *-a* – perfect/stative, with the meaning of resultant state on terminative verbs and highlighting the meaning of state on aterminative verbs, cf. (52b);

(d) *-i* – seems to denote the Present or simultaneity with another action, cf. (6).

The following markers code past tenses:

(e) *-ni* – a kind of Past Indefinite, cf. (38c);

(f) *-pau-ni* – historical past, cf. (38c);

(g) *-şu* – perfective past, cf. (11c);

(h) *-şin-a* – past (before today), see (7), (44)).

A particular case is the suffix *-şin* denoting an action that takes place at night.

2. The imperative mood is marked with the suffix *-wi* (cf. (11b)).

3. The evidential mood is represented by two suffixes:

(a) *-iki* for the present, cf. (69b);

(b) *-kiaki* for the past, cf. (38c); (cf. Camargo 1996a:272–84).

4. The prospective mood marker is the suffix *-şan* (cf. (13b)).

5. The assertive mood. In the examples in this paper it is mostly marked by the final suffix *-ki* denoting strong assertion, and by \emptyset for weak assertion; cf. *haidu, in haibu- \emptyset* ‘Jairo is my friend’ and *haidu, in haibu-ki* ‘I assert that Jairo is my friend’ (cf. Camargo 1996b:1–21). The suffix *-ki* is one of a series of suffixes (*-bin, -ka, -kin, -kin*) marking different shades of assertion. For brevity, the assertive marker is usually not translated in the examples below. It does not co-occur with the progressive.

6. Spatial/directional meanings. Cashinahua possesses numerous verbal suffixes with various such meanings which are not always clear: *-kain, -bain, -bidan, -kidan, -baun, -kawan*. Some of them may combine together, e.g. *-ku-bidan, -kun-kain, -kun-bain*, etc. Their meanings are not indicated in the glosses, they are simply repeated in bold type.

2.8 Verb classes

In Cashinahua the same valency classes of verbs are attested as in other languages:

(a) one-place intransitives, e.g. *daja* ‘to work’, cf. (10);

(b) two-place intransitives, e.g. *huni mi-ki binima-ai* ‘The man is happy with you’, cf. also (11e);

(c) two-place transitives, e.g. *caci* ‘to stab sb’, cf. also (1a);

(d) three-place transitives, including bitransitives with an indirect object of addressee: cf. respectively: *puta* ‘to throw sth somewhere/at sb’; the locative argument is marked with one of the locative case markers (11b); and *inan* ‘to give sth to sb’ (3a). In the last case the object of addressee has no marker; cf. *paku* in (3a).

2.9 Valency-increasing means

There is no comitative verb form in Cashinahua. The comitative meaning is coded by the comitative case markers *-bi* and *-bitan* on nouns:

(24) *paku haidu-bi kuşa-mis-bu*. lit. ‘Paco with Jairo hit someone’.

2.9.1 Causative

The causative marker is the suffix *-ma* on the verb which increases the number of the arguments as shown in (25). It operates on both transitives and intransitives.

- (25) *pi* 'to eat' → *pi-ma* 'to feed sb'
naši 'to bathe' → *naši-ma* 'to bathe sb'
kinĩ 'to paint' → *kinĩ-ma* 'to cause sb to paint sb (the body)'
buma 'to send, bring' → *buma-ma* 'to cause sb to send/bring sth.'
- (26) *in binĩ-n ia carlos kadu wa-ma-šun-iki-ki.*
 my husband-ERG me C. log make-CAUS-BEN-EVID-ASS
 '(It seems that) My husband makes Carlos cut the log for me.'

In some cases the members of a semantic causative opposition do not differ in the direction of formal derivation; this is observed when they are periphrastic verbs (see 2.11). Compare the following:

- (27) a. *tin* 'to fall'
 b. *in tin i-š-u-ki.* 'I fell' (-šu = PFV.PAST)
 c. *in tin a-š-u-ki.* 'I dropped it/him.'

Some verbs form a causative opposition by syntactic change in the construction only; cf. (28) where the causative opposition is complicated by an additional semantic change:

- (28) a. *haidu mi-ki datĩ-mis-ki.* 'Jairo is afraid of you.'
 b. *paku-n haidu datĩ-mis-ki.* 'Paco awakened Jario by scaring him.'

2.9.2 Benefactive

The benefactive is marked by the valency increasing suffix *-šun* on the verb. It indicates a 3rd argument valency. The base verb in this case is used transitively. As well as the direct object, the beneficiary is not marked for case. If the beneficiary is named by a personal pronoun it may refer only to the relatives of the subject referent.

- (29) a. *na huni-n hiwi wa-mis.*
 this man-ERG house make-HAB
 'This man always builds houses.'
 b. *na huni-n [min] hiwi wa-šun-mis.*
 this man-ERG you.SG house make-BEN-HAB
 i. 'This man always builds houses [for someone].' (without *min*)
 ii. 'This man always builds houses for your relatives.' (with *min*)
 c. *na huni-n ha-win baki-bu hiwi wa-šun-mis.*
 this man-ERG 3SG-POSS child-PL house make-BEN-HAB
 'This man always builds houses for his sons.'

2.10 Valency-decreasing means

There is no passive in Cashinahua.

2.10.1 Reflexive

Reflexivity is marked by the suffix *-k-* (vowel harmony variants: *-ki-*, *-ki-* and *-ku-*). This suffix seems to have no other meanings except reflexive proper which intransitivizes the base verb whose meaning may include that of a body part, cf. lit. *bicu* ‘to face-wash sb’. The reflexive construction appears mainly with body actions:

- | | |
|--------------------------------------|--|
| (30) <i>bicu</i> ‘to wash sb’s face’ | → <i>bicu-ki</i> ‘to wash one’s face’ |
| <i>huşu</i> ‘to hurt a foot’ | → <i>huşu-ku</i> ‘to hurt one’s foot’ |
| <i>caci</i> ‘to pierce’ | → <i>caci-ki</i> ‘to pierce oneself’ |
| <i>daşpi</i> ‘to massage’ | → <i>daşpi-ki</i> ‘to massage oneself’ |
| <i>mişti</i> ‘to hurt a hand’ | → <i>mişti-ki</i> ‘to hurt one’s hand’, etc. |

2.10.2 Reciprocal

It is derived by means of the suffixes *-nami-* and *-nan-/nanan-* (cf. (1b), (4), (5), (6)). For unclear reasons, derivatives with these suffixes from some of the verbs obligatorily take the reflexive suffix and it is preposed to the reciprocal one. In the underlying form this suffix may be absent.

- | | |
|---------------------------------------|--|
| (31) <i>daki</i> ‘to be afraid of sb’ | → <i>daki-ki-nan</i> ‘to be afraid of one another’ |
| <i>iku</i> ‘to hug sb’ | → <i>iku-ku-nan</i> ‘to hug one another’ |
| <i>nuku</i> ‘to meet sb’ | → <i>nuku-ku-nan</i> ‘to meet one another.’ |

2.11 Substitute verbs. Periphrastic verbs

Cashinahua does not employ a repeated verb for the same action. It has verbal substitutes (*vs*), *ik-/ij-/i-* for intransitive and *ak-/aj-/a-* for transitive verbs, to indicate the verbal valency concerned.

- (32) *nami pi-ju-wi, a-wi.*
 meat eat-*ju*-IMP *vs*-IMP
 ‘Eat some meat right now! Eat it!’

It seems that in principle verbal substitutes can derive periphrastic two-component correlates from many verbs (cf. (33b)). In this case the notional verb does not change or acquire any marker and the verbal substitute is inflected for tense, mood, etc. In the process, an intransitive verb may be transitivized (cf. (27c)) and a transitive verb may be intransitivized (cf. (33c)). The same technique is used in negative verb forms, esp. in the past tense (see (34)), and also in the formation of denominal verbs (see (35)). There are also periphrastic verbs with the auxiliary *wa* ‘to make’ (see (36)).

- | | | |
|---------|-----------------------------------|---------------------------------|
| (33) a. | <i>paku-n madia hantsu-ai.</i> | ‘Paco is embracing Maria.’ |
| b. | <i>paku-n madia hantsu ak-ai.</i> | (same as (33a)) |
| c. | <i>paku hantsu ik-ai.</i> | ‘Paco is embracing [somebody].’ |

- (34) *in nami pi-ama a-šu-ki.* 'I did not eat meat.' (-ama- = NEG)
 (35) *himi* 'blood' → *himi ik* 'to bleed'; cf. *in himi i-mis-ki* 'I bleed.'
 (36) *pi* 'good' → *pi wa* 'to repair sth for sb.'

3. Reciprocals with the suffix *-nami-* 'each other'. Subject-oriented reciprocals only

3.1 The simple construction; reciprocal proper. Expression of reciprocal arguments

The term 'simple reciprocal construction' refers to constructions with both reciprocal arguments expressed by the subject. Note that constructions with a singular subject (including those with a plural subject denoting one group participant, the co-participant being absent; cf. (1c) and (3c); for details see 3.2.1).

As reciprocal constructions are intransitive, the subject marker *-n* never appears in these constructions. In simple reciprocal constructions the subject must be necessarily plural. Its expression does not seem to differ from that of a plural subject in non-reciprocal constructions. The following cases are attested in Cashinahua: (a) a plural noun or pronoun (see (1b)); (b) a coordinated noun group with the conjunction *inun* 'and' (see (4b)). Besides, the subject may be a comitative group with the comitative case marker *-bi* (type *paku haidu-bi* lit. 'Paco with Jairo'). Moreover, the reciprocal arguments may be represented by anaphoric zero (see (1c), (14d)).

In a reciprocal construction the plural marker on the subject is optional (although it is very common otherwise). The point is, the suffix *-nami-* indicates at least two participants. Therefore in most cases the reciprocal predicate is not marked by the plural suffix *-bu*. In a random selection of 50 reciprocal constructions with a plural subject the predicate contains the suffix *-bu* in only 5 instances.

In order to stress the fact that there are only two participants, the reciprocal may acquire the dual marker suffix *-dabi*. Note that the plural marker on the predicate is retained in this case. As pointed out above (cf. (19f) and the relevant text), the suffix *-dabi* may co-occur with both plural markers *-bu* and *-kan*; cf.:

- (37) *paku inun haidu diti-nami-dabi-mis-bu.*
 P. and H. hit-REC-DU-HAB-PL
 'Paco and Jairo, the two of them always hit each other.'

3.1.1 "Canonical" reciprocals

3.1.1.1 *Derived from two-place transitives.* Two-place transitives are verbs taking an object without any case marker. The reciprocal construction loses the ergative marker *-n* on the subject, and also the object and becomes intransitive (cf. (1b)). Here are a few more examples illustrating this type:

- (38) a. *paku inun haidu nupi-win caci-nami-mis-ki.*
 P. and H. knife-INST stab-REC-HAB-ASS
 'Paco and Jairo always stab each other with a knife.'

- b. *ida inun idiani kini-nami-mis-bu-ki, nani-win-dan.*
 I. and I. draw/paint-REC-HAB-PL-ASS genipa-INST-dan
 ‘Eda and Eliane always paint each other(’s body) with *genipa*’ (black vegetable pigment).

Sentence (38c) was used in a situation with the following connotations: in the first clause the informant is stating a fact that the Cashinahuas did not (and do not even today) like white people; the second clause describes what had happened before the speaker was born, namely, that in the distant past the white people and the Cashinahuas used to kill each other, and the Cashinahuas even used to kill traitors: Patris, a Cashinahua himself, was killed by the Cashinahuas for raping a Brazilian girl, which was not approved in the Cashinahua society (polygamy and taking lovers is approved of but not rape). Patris was killed because they did not consider him a Cashinahua any longer but a white man.

- c. *nawa inun huni kuin bicipai-nami-ama i-pauni-ki,*
 white.people and man Cashinahua like-REC-NEG VS-RPAST-ASS
tsaka-nami i-pauni-bu-kiaki, patris tsaka-ni-bu-kiaki.
 kill-REC VS-RPAST-PL-PAST.EVID P. kill-PAST-PL-PAST.EVID
 ‘White people and the Cashinahuas did not quite like each other and they killed each other, they killed Patris.’

Here is a list of “canonical” reciprocals derived from two-place transitives (extracted from sentences obtained from native speakers):

- | | |
|--------------------------------------|---|
| (39) <i>bina</i> ‘to look for’ | → <i>bina-nami</i> ‘to look for each other’ |
| <i>bici</i> ‘to meet’ | → <i>bici-nami</i> ‘to meet each other’ |
| <i>bicipai</i> ‘to like, love’ | → <i>bicipai-nami</i> ‘to like, love each other’ |
| <i>buma</i> ‘to send sth’ | → <i>buma-nami</i> ‘to send to each other’ |
| <i>buti</i> ‘send away from hammock’ | → <i>buti-nami</i> ‘send each other away from hammock’ |
| <i>diti</i> ‘to hit, beat, quarrel’ | → <i>diti-nami</i> ‘hit/beat each other, quarrel with each other’ |
| <i>caci</i> ‘to hurt/stab’ | → <i>caci-nami</i> ‘to hurt/stab each other’ |
| <i>cuşa</i> ‘to burn’ | → <i>cuşa-nami</i> ‘to burn each other’ |
| <i>cuta</i> ‘to have intercourse’ | → <i>cuta-nami</i> ‘to have intercourse with each other’ |
| <i>hantsu</i> ‘to embrace’ | → <i>hantsu-nami</i> ‘to embrace each other’ |
| <i>hini</i> ‘to leave’ | → <i>hini-nami</i> ‘to leave each other’ |
| <i>ikuku</i> ‘to hug’ | → <i>ikuku-nami</i> ‘to hug each other’ |
| <i>kaşi</i> ‘to mock’ | → <i>kaşi-nami</i> ‘to mock each other’ |
| <i>kini</i> ‘to paint’ | → <i>kini-nami</i> ‘to paint each other’ |
| <i>kiju</i> ‘to bite’ | → <i>kiju-nami</i> ‘to bite each other’ |
| <i>kuşa</i> ‘to hit’ | → <i>kuşa-nami</i> ‘to hit each other’ |
| <i>kuşi</i> ‘to hit with sticks’ | → <i>kuşi-nami</i> ‘to hit each other with sticks’ |
| <i>manu</i> ‘to miss’ | → <i>manu-nami</i> ‘to miss each other’ |
| <i>midabi</i> ‘to help’ | → <i>midabi wa-nami</i> ‘to give help to each other’ |
| <i>mitsun</i> ‘to greet’ | → <i>mitsun-nami</i> ‘to greet each other’ |
| <i>ninin</i> ‘to pull’ | → <i>ninin-nami</i> ‘to pull each other’ |
| <i>pima</i> ‘to feed’ | → <i>pima-nami</i> ‘to feed each other’ |
| <i>şiti</i> ‘to sniff’ | → <i>şiti-nami</i> ‘to sniff at each other’ |
| <i>şinan</i> ‘to think’ | → <i>şinan-nami</i> ‘to think of each other’ |

<i>tsaka</i> ‘to kill’	→ <i>tsaka-nami</i> ‘to kill each other’
<i>tuši</i> ‘to squeeze’	→ <i>tuši-nami</i> ‘to squeeze out each other’s pimples’
<i>uin</i> ‘to visit’	→ <i>uin-nami</i> ‘to visit each other’
<i>juí</i> ‘to meet’	→ <i>juí-nami</i> ‘to meet each other’
<i>jusin</i> ‘to teach’	→ <i>jusin-nami</i> ‘to teach each other.’

3.1.1.2 *Derived from two-place intransitives.* Here belong reciprocals derived from two-place verbs with the unmarked subject and an object marked for case. I have only verbs with the object in *-ki* (LOC) and with *-bi* (COM) at my disposal. The textual example below is followed by a list of this type of reciprocals most of which denote negative emotions (in brackets, the case markers used on the object are given):

- (40) *sinata-nami-i-dan, nun kunja i-dabi-ai.*
 angry-REC-*i-dan*, we talk.strongly VS-DU-PROGR
 ‘Angry with each other, both of us are talking strongly.’
- (41) *bínimai (-ki, -bi, -win)* ‘be happy with’ → *bínimai-nami* ‘be happy with each other’
bíja (-bi) ‘to be accustomed to’ → *bíja-nami* ‘to be accustomed to each other’
daki (-ki) ‘to be afraid of’ → *daki-ki-nami* ‘to be afraid of each other’
misi (-ki) ‘to be afraid of’ → *misi-nami* ‘to be afraid of each other’
pununuka (-ki) ‘to be sad’ → *pununuka-nami* ‘to be sad about each other’
sinata (-ki) ‘to be sad’ → *sinata-nami* ‘to be sad about each other.’

3.1.2 “Indirect” reciprocals

This term is a label used to refer to reciprocals formed from non-derived or derived three-place verbs. Both objects (denoting moveable and unmoveable referents) are unmarked. Although the “indirect” reciprocal construction (as well as the “possessive” reciprocal, see 3.1.3.1) retains the direct object, the degree of transitivity is somewhat weakened because the subject cannot be marked with the ergative suffix *-n*. In this diathesis type the object of addressee is deleted and thus the valency decreases. There are two groups of base verbs that can undergo “indirect” reciprocalization.

3.1.2.1 *Derived from bitransitives.* There is a tendency to simplify the syntactic construction by omitting the direct object or demoting it to a non-direct object (cf. *kíni* and *kíni-win* in (42)) or replacing it with the suffix *-dan* (cf. 2.3). As the semantic type of direct object is implied by the underlying verb, the object is easily omitted, and the reciprocal may be interpreted as “canonical” (cf. *buma* ‘to send a message’ in (43) and in (39)). The sentential example (see also (3)) is followed by a list of relevant reciprocals:

- (42) a. *pancu-n haidu [kíni / kíni-win] junu-mis.*
 P-ERG H. letter / letter-INST send.message-HAB
 ‘Pancho sends Jairo messages [by letter].’
- b. *ha huni-bu [kíni / kíni-win] junu-nami-mis.*
 this man-PL letter / letter-INST send.message-REC-HAB
 ‘These men send messages to each other [by letter].’

- | | |
|--------------------------------------|---|
| (43) <i>bi</i> ‘to take sth from sb’ | → <i>bia-nami</i> ‘to take sth from each other’ |
| <i>buma</i> ‘to send sb a message’ | → <i>buma-nami</i> ‘to send messages to each other’ |
| <i>inan</i> ‘to give sth to sb’ | → <i>inan-nami</i> ‘to give sth to each other’ |
| <i>pi wa</i> ‘to repair sth for sb’ | → <i>pi wa-nami</i> ‘to repair sth for each other’ |
| <i>junu</i> ‘to send sth to sb’ | → <i>junu-nami</i> ‘to send sth to each other’ |
| <i>juu</i> ‘to tell/say sth to sb’ | → <i>juu-nami</i> ‘to tell/say sth to each other.’ |

3.1.2.2 *Derived from benefactives.* Reciprocals derive from three-place benefactives with the suffix *-sun* (cf. 2.9.2). These benefactives are in their turn derived from two-place transitives. Characteristically, the reciprocal suffix on the derivative does not follow the benefactive one, as could be expected, but precedes it.²

- (44) a. *dini-n şaşu wa-şina.*
D.-ERG boat make-PAST
‘Rene has made a boat.’
- b. *dini-n ha-wın baki şaşu wa-şun-şina.*
D.-ERG 3SG-POSS child boat make-BEN-PAST
‘Rene has made a boat for his son.’
- c. *dini inun paku şaşu wa-nami-şun-şina-bu.*
D. and P. boat make-REC-BEN-PAST-PL
‘Rene and Paco have made boats for each other.’ (cf. also (3) in 1.2, and 2.8.2)

3.1.3 “Possessive” reciprocals

3.1.3.1 *“Possessive” reciprocals proper.* These reciprocals derive from two-place transitives. The underlying construction contains a direct object with a possessive attribute denoting relations of alienable or inalienable possession. Here belong also one or two three-place transitives one of whose object referents (namely, the one denoting a person losing the object referent) can surface as a possessive attribute with a slight change of meaning (cf. *to take money from someone – to take someone’s money*). In Cashinahua there is a common marker for alienable and inalienable possession, only a human possessor being marked (e.g. *haidu-n bu* ‘Jairo’s hair’ in (45a)). In the derived construction, no valency decrease takes place as the direct object is retained and syntactically this diathesis type may coincide with the “indirect” type although they differ semantically. As in the previous case, the subject of the reciprocal construction does not take the ergative case marker, i.e. the degree of transitivity is weakened in comparison with the underlying construction; cf.:

- (45) a. *paku-n haidu-n bu ia bi-mis.*
P.-ERG H.-POSS hair louse take-HAB
‘Paco takes Jairo’s hair louse off.’
- b. *huni-bu hatu-n bu ia bia-nami-mis-bu.*
man-PL they-POSS hair louse take-REC-HAB-PL
‘[These] men always pick off each other’s hair lice’; cf. also:
- (46) a. *ainbu-aibu hatu-n baki-bu bicipai-nami-mis-bu.*
woman-PL they-POSS child-PL like-REC-HAB-PL
‘[These] women like each other’s children.’

2. Compare the analogous phenomenon in Quechua: van de Kerke, Ch. 31, §4.3.1.2.2.

- b. *ainbu-aibu hatu-n bakĩ pi-ma-nami-mis-bu.*
 women-PL they-POSS child eat-CAUS-REC-HAB-PL
 '[These] women always feed each other's children.'

3.1.3.2 “*Quasi-possessive*” reciprocals. I include here constructions without a direct object which are semantically contiguous to the “possessive” proper.

3.1.3.2.1 *Non-direct object instead of the direct one.* Here belongs the type exemplified by (47b), when it contains *bu-wĩn* instead of *bu*. Syntactically this type can also be interpreted as “canonical”. Native speakers accept both variants, with *bu* as well as with *bu-wĩn*, the first being preferable:

- (47) a. *paku-n haidu-n bu / bu-wĩn nini-mis.*
 P-ERG H.-POSS hair / hair-INST pull-HAB
 ‘Paco pulls Jairo’s hair off.’
 b. *paku inun haidu hatu-n bu / bu-wĩn nini-nami-mis-bu.*
 P. and H. they-POSS hair / hair-INST pull-REC-HAB-PL
 ‘Paco and Jairo pull each others’ hair off.’ (cf. (42) in 3.1.2.1)

3.1.3.2.2 *Reciprocals derived from one-place intransitives.* This type of reciprocal constructions is semantically similar to proper “possessive” constructions, but they contain no direct object. The object is semantically included in the meaning of the transitive verb *bĩcu* ‘to wash face’, lit. ‘to face-wash sb’ (see (48a)). For unclear reasons, the reciprocal derived from this transitive is ungrammatical (see (48b)). The verb *bĩcu* has a reflexive form in *-ki*, thus becoming intransitive (see (48c)). It is from this reflexive form that a reciprocal is derived (see (48d)). Why the formation of the reciprocal requires reflexivization is not clear. This is probably the case illustrated by (31). (The sentences in (48) are grammatical but quite artificial, because only a child can have his face washed, and it can be done only by his mother.)

- (48) a. *paku-n haidu bĩcu-mis-ki.*
 P-ERG H. wash.face-HAB-ASS
 ‘Paco washes Jairo’s face.’
 b. **paku inun haidu bĩcu-nami-mis-bu-ki.*
 P. and H. wash.face-REC-HAB-PL-ASS
 (intended meaning:) ‘Paco and Jairo wash each other’s faces.’
 c. *bakĩ bĩcu-ki-mis-ki.*
 child wash.face-REFL-HAB-ASS
 ‘The child washes his face.’
 d. *paku inun haidu bĩcu-ki-nami-mis-bu-ki.*
 P. and H. wash.face-REFL-REC-HAB-PL-ASS
 ‘Paco and Jairo wash each other’s faces.’

3.1.3.2.3 “*Canonical*” reciprocals for “possessive” reciprocal situations. These are verbs which denote holding each other’s hands or putting each other’s hands on each other’s

shoulders when dancing. The meaning of the body parts ('hands' and 'shoulders') is part of the verbal meaning.

- (49) a. *huni t̃ikuku-nami-mis-bu-ki hantsa-nami-i-dan.*
 'The men hold each other's hands and talk to each other.'
 b. *ainbu puntsu-nami hanca-mis-bu-ki.*
 'The women put their right arms on each other's shoulders and talk (during the ritual).'

3.1.4 Non-reciprocal meanings?

Each of the meanings in question has occurred only twice in my data, namely on intransitive verbs. Of course, they cannot be regarded as special meanings of the reciprocal suffix *-nami*, they are more likely to be a result of individual semantic shift, probably lexicalization, but it may be expedient to point them out: they are of typological interest as *-nami* occurs exceptionally on one-place intransitives here, and as a possible way of a sudden change of the reciprocal meaning.

3.1.4.1 *Sociative?* This meaning has occurred twice. In the first instance where it can be perceived the derivative from the verb *işcu* 'to jump' is used. Its reciprocal form denotes a ritual of initiation when a youth jumps with a grown-up holding hands, i.e. a joint action. In (50c), during this ritual Paco and Jairo keep jumping. The youths cannot stop until they fall exhausted. Each adult takes care of two children who stand next to him and holds them by the hands and does not let them stop. A similar instance has occurred with *-nanan*.

- (50) a. *paku işcu-mis-ki.*
 P. jump-HAB-ASS
 'Paco always jumps.'
 b. *paku işcu-nami-mis-ki.*
 i. 'Paco jumps (with someone else who jumps with Paco)
 ii. 'Paco jumps together with someone else.'
 c. *paku inun haidu işcu-nami-mis-ki, nişpu pima-i-dan.*
 P. and H. jump-REC-HAB-ASS *nişpu pima-i-dan*
 'Paco and Jairo jump with each other during the *nişpu pima* ritual.'

The other isolated example with an intransitive verb is (51). Combinability with *-nami* is probably assisted by the presence of *dabi* 'two'.

- (51) a. *paku inun sofia daka-ai.*
 'Paco and Sofia are lying down.'
 b. *paku inun sofia daka-dabi-nami-ai.*
 'Paco and Sofia are lying down together' (one with the other).

3.1.4.2 *Assistive?* The following example describes a situation where both participants are sitting and they want to stand up, and first one helps the other to stand up by giving his hand, and then the other does the same; this situation is very common among the older people when they sit on a bench and help each other to stand up. It is the reciprocal suffix *-nami* that indicates that Marcelino helps Alicia who has difficulty standing up, and he

gives his hand to her so that she might lean on it and stand up. The reading is dictated by the extra-lingual context, but it is worthwhile noting:

- (52) a. *marselino bini-mis-ki.*
 ‘Marcelino stands up.’
 b. *marselino inun alicia bini-nami-mis-ki, mitsun-nami-a-dan*
 M. and A. stand.up-REC-HAB-ASS hold.hand-REC-a-dan
 ‘Marcelino helps Alicia to stand up holding her with his hands, and then Alicia helps him.’

In the following instance which is not quite clear either, the meaning of help is determined by the pragmatic situation and is not rendered by *-nami* itself, but this example is of sufficient interest; the base verb is also intransitive here. (53b) is not used by native speakers but it is grammatical and is cited here as an indication of a possible path of the development of the assistive meaning.

- (53) a. *paku-n haidu hucu-mis-ki.*
 ‘Paco washes Jairo’s feet.’
 b. *paku hucu-ki-mis-ki.*
 ‘Paco washes his (own) feet.’
 c. *paku inun haidu hucu-ki-nami-mis-ki.*
 i. ‘Paco and Jairo help someone to wash their feet.’
 ii. ‘Paco and Jairo wash other people’s feet who will wash their feet later.’

(Compare also (48)).

3.2 The discontinuous construction; response reciprocals

3.2.1 *Introductory*

The discontinuous construction in Cashinahua is highly specific. It differs significantly from the discontinuous constructions in the languages considered in this volume where the differences between the discontinuous and the simple construction are connected with the topicalization of the first participant, the second participant being always named. In some of the languages only some reciprocals (usually more or less lexicalized) can form discontinuous constructions (see, for instance, Wiemer & Nedjalkov, Ch. 10 on German, §4.7), while in other languages all reciprocals can in principle be used in the discontinuous construction (cf. §3.1.4 in Kuular, Ch. 27 on Tuvan). In all of these languages the co-participant is named by an object in the discontinuous construction, and the reciprocal predicate may or must agree with the subject in person and/or number. In Cashinahua, the difference concerns not only topicalization, but also semantics, namely, only one (single or collective) participant is named, and it is named by the subject, while the co-participant is not named at all. As a result, the action of the co-participant is not only defocused but it may be distanced from the action of the first participant in time and/or in space (see (55c) and the text beneath it). This action may be termed a response action, and the co-participant may be termed unspecified. A reciprocal verb with an unspecified co-participant is termed here a response reciprocal. As E. Maslova suggested (p.c.), “the

primary participant (= subject) assumes or expects the converse situation (B V-s A) to take place. It is a sort of “potential” reciprocal”.

As the subject is singular the construction in question is syntactically different from the simple reciprocal construction where the subject is always (at least semantically) plural. The plural subject in the discontinuous construction names one collective participant, the co-participant remaining unspecified. But on the surface level this construction is ambiguous and allows an alternative, reciprocal proper reading (see (55e)). Thus any reciprocal form used as a response reciprocal can also be interpreted as reciprocal proper if the subject is plural. In other words, it seems that any reciprocal verb form can be used either as reciprocal proper or as response reciprocal, depending on the number of the participants named: in the former instance both participants are named and in the latter only one, the other remaining unspecified, and the subject may be singular.

One might suggest that the possibility of an unspecified co-participant in reciprocal constructions may be connected with the fact that the Cashinahuas are a very small community, and their range of communication is very narrow, consisting of the family members, relatives and co-villagers. Therefore the co-participant not named in a reciprocal sentence is easily recoverable from the extra-lingual situation. But this factor, though necessary, is not the determining one – there are lots of similar small groups, whose languages have not developed this type of reciprocal usage.

Out of context, (55c) describes a strange, unnatural situation, both logically and temporally: how does the speaker know that someone hit Paco later? Is it possible to find a natural context comprised of a number of linked sentences, maybe in the past narrative tense where this or analogous sentence would be natural?

- (55) a. *paku-n haidu diti-mis-ki.*
 P.-ERG H. hit-HAB-ASS
 ‘Paco hits Jairo.’
 b. *paku-n Ø diti-mis-ki.*
 P.-ERG 3p hit-HAB-ASS
 ‘Paco hits someone.’

The possibility of constructions like (55c) is obviously related to the existence of type (55b) constructions (see also (14)–(15) and the relevant text).

- c. *paku diti-nami-mis.*
 P. hit-REC-HAB
 ‘Paco hits someone who always hits him (later).’

According to the explanation of the informants, Paco hits someone who (a) does not want to hit him right now but will do so later; (b) has already hit him at an earlier/another time (i.e. in this case the response action is performed by the first participant).

We have not encountered any constructions of the (55d) type with a reciprocal verb with the plural suffix *-bu*, and most likely they are not possible. This indicates that these constructions do not contain a 3rd person zero subject of the co-participant. The latter participant can be introduced in a conjoined construction if only the subject is displaced (see (55e)).

- d. [?]*paku diti-nami-mis-bu*.
 P. hit-REC-HAB-PL
 (same intended meaning)
- e. *paku inun ha-dan, diti-nami-mis-bu*.
 P. and he-dan hit-REC-HAB-PL
 lit. 'Paco and him, (i) they hit each other; (ii) they hit someone/him who ...'

Response reciprocal constructions are common enough in comparison with proper reciprocal constructions: in my sample of 80 examples with *-nami* (part of the data obtained during field work) 28 constructions are of this type.

3.2.2 The subject is singular; response reciprocal only

3.2.2.1 *The co-participant is unnamed (usually a relative or co-villager)*. Judging by the data at my disposal, this is the most common case among response reciprocal constructions.

I have already mentioned that any reciprocal verb that can be used in the simple construction as reciprocal proper can also be used in the discontinuous type as a response reciprocal. The following examples which amplify examples (1), (3c), (55e), etc., illustrate these two types of usage of the same reciprocal verb:

- (56) a. *baki-bu bicipai-nami-mis-bu*.
 child-PL like-REC-HAB-PL
 'The children, they like each other.'
- b. *baki išta-dan bicipai-nami-mis*.
 child small-dan like-REC-HAB
 'The little child likes someone/him (who also likes the little child).'

As mentioned above, the unspecified co-participant is usually a family member, relative, etc. Therefore, the Cashinahua people experience sadness, happiness, or miss someone only with regard to their closest family (sons, parents, brothers, sisters, husbands, wives). The examples further on in this section illustrate this usage.

- (57) a. *paku binima-nami-ai*.
 'Paco is happy (with his siblings, etc. who are happy with him).'
- b. *in manu-nami-ai*.
 'I am missing him (and he is missing me).'
- c. *paku midabi-nami-mis-ki*.
 'Paco helps other people (who in their turn help him).'
- d. *paku caci-nami-mis, pain-dan*.
 'Pako, drunk, pierces the people (who will revenge on him).'
- e. *Paku mi-nami-mis*.
 'Pako touches her/his wife (who touches him).'
- (the husband alone can touch his wife).

The translation of (58b) below does not convey the reciprocal meaning of the predicate: it is hard to render it in a natural way, and an explanation is needed: (58a) is a neutral statement of an observable event, without any indication of the relations between the participants, while (58b) has subtle implications, viz. Paco is going from his village by boat

and taking some people as a favour and they know that they owe him a favour, and when Paco wants to return to his village he can ask one of them to take him there. This reflects the fact that among the Cashinahua favours are not free: in their society barter is the law.

- (58) a. *paku-n huni-bu iwi-ai.* 'Paco is giving some people a lift.'
 b. *paku iwi-nami-ai.* 'Paco is giving (some people) a lift.'

(59) describes a different kind of specific situation. Until the middle of the 20th century, the Cashinahuas practiced endocannibalism, they used to poison their distant family members in order to eat them. Afterwards the nearest relatives of those killed could revenge on the killer or his relatives.

- (59) *paku tsaka-nami-pauni-ki.*
 P. kill-REC-RPAST-ASS
 'Paco (has) killed somebody (whose kinsmen will revenge on Paco or his relatives).'

Some reciprocal constructions are rather difficult to interpret. Example (60a) does not require any special explanation, but (60b) needs some: it makes reference to a man who got into the habit of talking on the radio when he was in the urban area. The informant said that this sentence implies here the general participation of all the people who listen to the radio and of the man who speaks on the radio.

- (60) a. *pancu kini-win junu-nami-mis.*
 P. letter-INST send-REC-HAB
 lit. 'Pancho is always sending messages to somebody' (and getting response).
 'Pancho sends him a message by letter (and he will receive a reply by letter).'
- b. *pancu hanca-win junu-nami-mis.*
 P. voice-INST send-REC-HAB
 'Pancho is always talking on the radio (with each other)' (and getting response or at least being heard) lit. 'Pancho is always sending the voice to each other.'
 (Pancho lives on the Brazilian side and used to send messages by radio to the Cashinahua living on the Peru side.)

3.2.2.2 *The co-participant is named by a non-argument.* In this case the co-participant is named in the nearest context, even in the same sentence by a detached component, mostly with the marker *-dan*; cf.:

- (61) a. *Balta-anu, paku bija-nami-mis-ki, haibu-ja-i-dan.*
 B.-LOC P. be.used-REC-HAB-ASS friend-ATR-i-dan
 'Paco is used to his friends at Balta (the main Cashinahua village) who are also used to Paco (who is studying and living in Balta).'
- b. *paku manu-nami-mis, ha-win baki şinan-i-dan.*
 P. miss-REC-HAB he-POSS son think-i-dan
 'Paco misses *him*, he thinks of *his son* (who also misses his father and thinks of him).'

3.2.2.3 *The co-participant is named by a direct object.* In exceptional cases, the co-participant is named by a direct object. As a rule, the informants reject such sentences, but for unclear reasons the native speakers accept the following sentences (see also (2b) above).

The valency in (62b) is retained unless we count the omission of the ergative marker on the subject.

- (62) a. *paku inun haidu hatu diti-nami-mis-ki.*
 P. and H. them hit-REC-HAB-ASS
 ‘Paco and Jairo hit them.’
- b. *in mia midabi-nami-mis-ki.*
 I YOU.SG help-REC-HAB-ASS
 ‘I help you (and you help me).’
- c. *paku ha-win takada jauši-nami-mis-ki.*
 P. he-INST rooster stingy-REC-HAB-ASS
 ‘Paco is jealous of his rooster, and the rooster is jealous of Paco.’
 (i.e. the rooster does not like it when anyone approaches Paco.)

3.2.3 *The subject is plural; possible ambiguity*

If the subject is plural two interpretations are possible: reciprocal proper and response reciprocal. In the latter case the plural subject is interpreted as one (collective) participant, the unspecified co-participant being implied in the same way as in constructions with a singular subject. The following examples were interpreted by the informants in two ways (cf. also (3c)):

- (63) *paku inun haidu junu-dabi-nami-kan-iki-ki.*
 P. and H. send.message-DUAL-REC-PL-PRES.EVID-ASS
 i. ‘Apparently, Paco and Jairo, both of them send messages *to each other*.’
 ii. ‘Apparently, Paco and Jairo, both of them send messages *to someone else* (who send messages to them).’

The choice of the interpretation is culturally bound or depends on the context. In (64), as the Cashinahuas do not kill one another any longer, they accept the reciprocal proper interpretation if only the action is meant as a game. The response reciprocal interpretation is acceptable if the co-participants are strangers. In this case the meaning is that if Pako and Jairo kill someone they are in danger of being revenged by the clansmen of the victim who will (try to) kill them, and this is regarded as a (reciprocal) event.

- (64) *Paku inun Haidu tsaka-nami-mis-bu.*
 Paku and Jairo kill-REC-HAB-PL
 i. ‘Pako and Jairo kill *each other* (as a joke).’
 ii. ‘Pako and Jairo kill *other people*’ (who may also kill them in revenge).

4. Reciprocals with the suffixes *-nan* and *-nanan* ‘each other’. Subject-oriented reciprocals only

4.1 Distribution and the meanings of the suffixes *-nan*, *-nanan*, and *-nami*

The distribution and difference in meaning between *-nan* and *-nanan* are not clear. Most probably, they are in overlapping (to a great degree) distribution. Therefore it is re-

sonable to treat them as (free?) variants, and henceforth they are considered together as *-nan/-nanan* and always glossed as REC. If any differences are ever found they are likely to be very subtle (on some of the possible differences concerning the number of the co-participant see 4.3.4). As well as *-nami*, both of them are used in reciprocal proper and response reciprocal constructions, and in the same diathesis types: “canonical”, “indirect”, “possessive”.

The difference between *-nan* and *-nanan* is hard to capture, and I am not approaching any solution of this problem. But I will risk mentioning some of the characteristics offered by the informants. I wish to stress that all the suggestions below are highly tentative because the informants contradict themselves to a greater degree than one might expect.

Three logically possible cases of distribution of the variants *-nan* and *-nanan* on stems can be distinguished:

(a) most of the stems may occur with either *-nan-* or *-nanan-*; this is probably the main case; cf. *mīdabi* ‘to help sb’ → *mīdabi-nan/mīdabi-nanan* ‘to help each other’;

(b) a few stems seem to take *-nan* alone: *bīisin* ‘to look sb in the face’ → *bīisin-nan* ‘to look each other in the face’, but **bīisin-nanan*; *hantsu* ‘to hug/embrace’ → *hantsu-nan* ‘to hug each other’, but **hantsu-nanan*;

(c) a few stems seem to take *-nanan* alone: *usin* ‘to smile’ → *usin-nanan* ‘to smile at each other’, but **usin-nan*.

As pointed out, the suffix *-nan/-nanan* functions in the same way as *-nami*, but its semantic range seems to be somewhat broader although I cannot show it explicitly. The informants sometimes ascribe the meaning of simultaneity of reciprocal subevents to reciprocals in *-nan/-nanan* (see (4b)). To a certain degree, this is supported by the fact that in my data the verb *ciban* ‘to follow’ which implies simultaneous actions (movement) of both participants is attested many times with *-nanan* and never with *-nami*. But there are many reciprocals with *-nanan* where the meaning of simultaneity is unlikely.

With regard to the distribution of *-nami* and *-nan/-nanan* on different verbal stems, three cases can be distinguished as well. The causes of the differences in distribution are not clear. They may be related to the lexical meaning of the stems; some instances are probably fixed units. They may also be related to the semantic differences between these suffixes. The general picture requires further investigation. What follows is a tentative illustration of these logically possible cases:

(a) Most of the stems seem to occur either with *-nami* or with *-nan/-nanan*; this is probably the main case; in some of the resultant pairs some difference in meaning may be discerned but I find it difficult to explicate it; cf.: *bi* ‘to give’ → *bia-nami / bia-nanan* ‘to give each other, exchange’, *dīti* ‘to hit’ → *dīti-nami / dīti-nanan* ‘to hit each other’ (see (65) below).

(b) A few stems combine with *-nami* exclusively: a. *bīcipai* ‘to like sb’ → *bīcipai-nami* ‘to like each other’, but **bīcipai-nanan*, *kuşa* ‘to hit sb’ → *kuşa-nami* ‘to hit each other’, but **kuşa-nanan*.

(c) A few stems take *-nan/-nanan-* exclusively: *padan* ‘to mislead sb’ → *padan-nanan* ‘to mislead each other’, but **padan-nami*; *şinan* ‘to think’ → *şinan-nanan* ‘to think about each other’, but **şinan-nami*.

As mentioned, the informants sometimes differ in their evaluation of the possible forms. Thus my main informant Marcelino does not accept *diti-nanan* (from *diti* ‘to fight, hit’) but Jorge, a younger man, accepts it.

Here are some derivatives with the suffixes *-nami* and *-nan/-nanan* from the same bases with identical translations, elicited from the informants. Illustrations of reciprocal proper and response reciprocal constructions are cited separately, and within these two types, first reciprocals with *-nami* and *-nan* and then with *-nami* and *-nanan* are cited.

1. Proper reciprocal constructions:

- (65) a. *paku inun haidu jui-nami-mis-ki.* ‘Paco and Jairo tell stories to each other.’
paku inun haidu jui-nan-mis-ki. ‘Paco and Jairo tell stories to each other.’
- b. *paku inun haidu jusin-nami-mis-ki.* ‘Paco and Jairo teach each other.’
paku inun haidu jusin-nan-mis-ki. ‘Paco and Jairo teach each other.’
- c. *paku inun madia midabi-nami-mis-ki* ‘Paco and Maria help each other’
paku inun madia midabi-nan-mis-ki,
hatu-n bai dida-kin-dan. ‘Paco and Maria help each other,
 they-POSS land clear-kin-dan clearing their land.’
- d. *aidu inun madia bicipai-nami-mis-ki.* ‘Jairo and Maria love each other.’
haidu inun madia bicipai-nanan-mis-ki. ‘Jairo and Maria love each other.’
- e. *paku inun haidu kini-nami-mis-ki.* ‘Paco and Jairo write to each other.’
paku inun haidu kini-nanan-mis-ki. ‘Paco and Jairo write to each other.’
- f. *paku inun haidu kuşa-nami-mis-ki.* ‘Paco and Jairo hit each other with sth.’
paku inun haidu kuşa-nanan-mis-ki. ‘Paco and Jairo hit each other with sth.’
- g. *paku inun haidu mitsun-nami-mis-ki.* ‘Paco and Jairo greet each other.’
paku inun haidu mitsun-nanan-mis-ki. ‘Paco and Jairo greet each other.’

2. Response reciprocal constructions:

- (66) a. *paku jui-nami-mis-ki.* ‘Paco tells stories to other people/someone.’
paku jui-nanan-mis-ki. ‘Paco tells stories to other people/someone.’
- b. *paku junu-nami-mis-ki.* ‘Paco sends (a letter or sth) to other people (his family)’
paku junu-nanan-mis-ki, ha-win nabu. ‘Paco sends a letter to his family who on receiving it reply at once.’
- c. *paku jusin-nami-mis-ki.* ‘Paco teaches someone who in his turn teaches Paco.’
paku inun haidu jusin-nanan-mis-ki. ‘P. and J. teach somebody’ (like teachers).

4.2 The simple construction. Reciprocals proper

After I have cited pairs of examples just above, one might think that instead of discussing the constructions with *-nan/-nanan* I might limit myself to one phrase: replace the suffix *-nami* in the examples of Section 3.1 with *-nan/-nanan*, and the translations and explanations will remain the same. But I have decided to repeat the description for *-nan/-nanan* by arranging the data at my disposal in the same way as for *-nami*, in the hope that someone may get interested and try to explain the material.

4.2.1 “Canonical” reciprocals

4.2.1.1 *Derived from two-place transitives.* Reciprocal constructions of this type are formed in the same way as those with *-nami*. The examples are followed by lists of derivatives first with *-nan* and next with *-nanan*:

1. Reciprocals with the suffix *-nan*:

- (67) a. *paku inun haidu biisin-nan-a-ki, uin-nan-a-ki.*
 P. and H. look.at-REC-PERF-ASS see-REC-PERF-ASS
 ‘Paco and Jairo looked at one another and saw one another.’
 b. *paku inun madia midabi-nan-mis-ki, hatu-n bai dida-kin-dan.*
 ‘Paco and Maria help each other, clearing their land.’
- (68) *biisin* ‘to look sb in the face’ → *biisin-nan* ‘to look one another in the face’
hantsu ‘to hug’ → *hantsu-nan* ‘to hug each other’
iku ‘to kiss sb’ → *iku-ku-nan* ‘to kiss one another’
ikuku ‘to hug, embrace’ → *ikuku-nan* ‘to hug, embrace each other’
jusin ‘to teach’ → *jusin-nan* ‘to teach each other’
midabi ‘to help’ → *midabi-nan* ‘to help each other’
nuku ‘to meet’ → *nuku-ku-nan* ‘to meet each other’
uin ‘to see’ → *uin-nan* ‘to see each other’
usin ‘to smile’ → *usin-nan* ‘to smile at each other.’

(b) Reciprocals with the suffix *-nanan*:

- (69) a. *idiani inun kin uin-nanan-mis-bu-ki, bauta-anua-dan.*
 I. and K. visit-REC-HAB-PL-ASS bauta-ABL-dan
 ‘Eliane and Ken visit each other in Balta.’
 b. *paku inun haidu juan-nanan-kan-iki-ki, huni bitsa-bi hanca-iki-ki*
 P. and H. talk-REC-PL-EVID-ASS man other-COM talk-EVID-ASS
juan-nanan-i-dan.
 talk-REC-ASP-i-dan
 ‘(It might be that) Paco and Jairo are talking about one another;
 (but) the man talks about someone else. It’s a criticism.’
- (70) *daun* ‘to poison, cure’ → *daun-nanan* ‘to poison, cure each other’
diti ‘to fight’ → *diti-nanan* ‘to fight each other’
hubun ‘to sleep with sb’ → *hubun-nanan* ‘to sleep with each other’
iku ‘to embrace, hug’ → *iku-ku-nanan* ‘to hug each other’
juan ‘to talk’ → *juan-nanan* ‘to talk about each other’
jusin ‘to teach’ → *jusin-nanan* ‘to teach each other’
manu ‘to miss sb’ → *manu-nanan* ‘to miss each other’
midabi ‘to help’ → *midabi-nanan* ‘to help each other’
padan ‘to be unfaithful to’ → *padan-nanan* ‘to be unfaithful to each other’
şinan ‘to think of, about’ → *şinan-nanan* ‘to think of each other’
uin ‘to see’ → *uin-nanan* ‘to see, visit each other’
unan ‘to know’ → *unan-nanan* ‘to know each other’
usin ‘to smile’ → *usin-nanan* ‘to smile at each other.’

4.2.1.2 *Derived from two-place intransitives.* The same verbs belong here as those listed in 3.1.1.2. Here is an example:

- (71) a. *paku haidu-ki daki-mis-ki.*
 P. H.-LOC be.afraid-HAB-ASS
 ‘Paco is afraid of Jairo.’
- b. *paku inun haidu daki-ki-nan-mis-ki.*
 P. and H. be.afraid-REFL-REC-HAB-ASS
 ‘Paco and Jairo are afraid of each other’ (= do not want to see each other).

4.2.2 “Indirect” reciprocals

The same verbs belong here as those listed in 3.1.2.1. I have derivatives with *-nanan* only at my disposal, and none with *-nan*, but this may be accidental. If one gets something from the giver and receives something straight away, *-nanan* seems to be preferable to *-nami*. In (72a), both participants send letters to one another. As they live in different villages, physical simultaneity of sending the letters is out of the question, but the implication is that when each gets a letter, he answers it right away in order to send it back with the same messenger.

- (72) a. *paku inun haidu kini / kini-win junu-nanan-mis-ki.* (cf. (42b))
 P. and H. letter / letter-INST send.message-REC-HAB-ASS
 ‘Paco and Jairo send letters to each other and reply at once on receiving them.’
- b. *mişu midan bisti mijui jui-nanan-mis-bu-ki.*
 dark inside only myth tell.mith-REC-HAB-PL-ASS
 ‘In the afternoons, they tell only myths to each other.’

4.2.3 “Possessive” reciprocals

As in 3.1.3 and 4.2.2, the reciprocal meaning ‘each other’s’ appears in a construction with a direct ‘object’. I have derivatives with *-nanan* only at my disposal, and none with *-nan*, but this may be accidental, as in 4.2.2. Here are examples ((74b) illustrates “quasi-possessive” reciprocals noted for *-nami* in 3.1.3.2.2).

- (73) a. *ia bia-nanan-kan-iki-ki, ainbu dabi-dan.*
 louse remove-REC-PL-EVID-ASS woman two-dan
 ‘Both women, they remove each other’s lice’ (i.e. ‘delouse each other’), cf. (45).
- b. *paku inun haidu hatu-n pia bi-nanan-mis-ki.*
 P. and H. they.tu-POSS arrow take-REC-HAB-ASS
 ‘Paco and Jairo exchange each other’s arrows.’
- (74) a. *paku-n haidu miştun-mis-ki.*
 P.-ERG H. hold.hand-HAB-ASS
 ‘Paco shakes Jairo’s hand.’
- b. *paku inun ia-dan, nun miştun-nanan-mis-ki.*
 P. and me-dan we hold.hands-REC-HAB-ASS
 ‘Paco and I, we shake each other’s hands.’

4.2.4 Sociative?

Two different cases can be distinguished here: (a) sociative in the indicative mood and (b) sociative in the imperative where *-nan* adds the hortative meaning. As is known, the latter is an appeal to perform a joint action, i.e. the meaning ‘together’.

4.2.4.1 *In the indicative mood.* This case is analogous to that in 3.1.4.1 where verbs in *-namî* are dealt with. Only one verb is observed in this usage and it is attested with the suffix *-nanan* (not *-nan*) only. This case is attested with the same base verb as with *-namî*, and for denoting the same situation; cf.:

- (75) a. *paku işcu-mis-ki.* ‘Paco jumps.’
 b. *marselinu inun paku işcu-nanan-mis-ki, bakî işta nişpu pima-i-dan.*
 ‘Marselino and Paco jump (together) during the ritual of initiation.’

4.2.4.2 *In the imperative with the hortative meaning.* The suffix *-nan* (reciprocal or its homonym) has a sociative meaning when used on verbs with the imperative marker *-wî*.³ In these constructions only the form in *-nan* is accepted (*-nanan* is not registered in this usage). Most of the examples contain intransitive verbs (see, though, (78d)); note that in this hortative form reciprocals with *-namî* and also transitives can be used, cf. (78c)). Another sociative marker in the hortative is the suffix *-nu* (coincidence of the initial sonorant with *-nan* is hardly accidental). Forms with *-nan* denote invitation to perform an action (which has not begun yet) together, while forms in *-nu* contain invitation to join the action the subject is engaged in (a kind of comitative meaning). This difference may be expanded to cover the degree of spatial proximity; cf. (76) and (77):

- (76) a. *pi-wî.* eat-IMP ‘Eat!’
 b. *pi-nan-wî.* eat-together-IMP ‘Let’s eat together!’
 (the speaker is not eating yet)
 c. *pi-nu-wî.* eat-together-IMP ‘Eat with me!’
 (the speaker is already eating)
- (77) a. *nawa-wî.* dance-IMP ‘Dance!’
 b. *nawa-nan-wî.* dance-together-IMP ‘Let’s dance together!’
 (in the village where we are)
 c. *nawa-nu-wî.* dance-together-IMP ‘Let’s dance!’
 (in the other village)
- (78) a. *cuta-nan-wî.* ‘Let’s have intercourse together.’
 b. *hanca-nan-wî.* ‘Let’s talk together!’ (euphemism: this phrase is used by a man who wants to have sex with a woman and invites her to make love)
 c. *mîşukidi diti-namî-nan-şan-wî.* tomorrow hit-REC-(REC)-PRSP-IMP ‘Let’s hit each other (= fight) tomorrow!’
 d. *habias cici-nan-wî.* this share-HORT-IMP ‘Let us share this one!’

3. This usage may be compared with the data from Kirghiz (see Nedjalkov, Ch. 28, §9.3): in Kirghiz the reciprocal suffix *-ş-* has lost its sociative meaning: it is retained only in folklore texts, and about half of the sociative uses of this marker are in the hortative form.

4.3 The discontinuous construction; response reciprocals

For brevity, I disregard the diathesis types of reciprocals in this section.

4.3.1 *Introductory*

The general picture here is the same as with respective response reciprocals in *-nami* (see 3.2). In comparison with proper reciprocals in *-nan* and *-nanan*, the meaning of the response action of these forms is sometimes weakened to a considerable degree and acquires a virtual character. Moreover, the informants sometimes see a difference between verbs in *-nan* and *-nanan* with regard to the number of the co-participants, one with *-nan* verbs and more than one with *-nanan* verbs (see 4.3.4). This requires special investigation, because sometimes even in sentences with *-nan* the informants see the co-participant as plural rather than singular.

The weakening of the response reciprocal meaning is in a natural way connected with the delay of the response action and even with the hypothetical possibility of its non-performance: the first participant may die before he gets the response, although in this case the relatives may substitute for him/her.

Needless to say, any reciprocal verb with a singular subject (see 4.3.2) can be used with a plural subject (see 4.3.3), and the other way round, and any construction with a plural subject interpreted by an informant as response-reciprocal can also be interpreted as reciprocal proper.

There seems to be a tendency for reciprocals in *-nanan* with a plural subject to be more frequent in response constructions than those in *-nan* with a plural subject (cf. 4.3.3).

4.3.2 *The subject is singular; response reciprocals only*

4.3.2.1 *The co-participant is unnamed (usually it is a relative or co-villager).* As well as among reciprocals proper (see 4.2.1.1, 4.2.2, 4.2.3), the number of sentences with *-nan* in my corpus is markedly less than that with *-nanan*, which is likely to reflect the general frequency of *-nan* and *-nanan*. Examples follow (for brevity, the response action, like ‘and vice versa’, is omitted).

- | | | | |
|------|----|--|-------------------------------------|
| (79) | a. | <i>paku biisin-nan-mis-ki.</i> | ‘Paco looks at someone.’ |
| | b. | <i>paku daki-ki-nan-mis-ki.</i> | ‘Paco is afraid of somebody.’ |
| | c. | <i>paku šinan-nannan-mis-ki, manu-nami-i-dan</i> | ‘Paco thinks of sb, he misses him.’ |
| | d. | <i>paku mi-nanan-mis-ki.</i> | ‘Paco touches people (as a joke).’ |

4.3.2.2 *The co-participant is named by a non-argument.* The verb *binu* ‘to win’ with the suffix *-nanan* is used in a specific way: (80a) makes it clear that there is only one winner, Paco, and the other men only participated in the situation of competition, but this is sufficient cause for the use of the suffix.⁴

4. The reciprocal form of verbs with the meaning ‘to win’ behaves in a peculiar way in a number of other languages as well; cf., for instance, Tuvan (Kuular, Ch. 27, §5.5.2) and also Bulgarian (Penchev, Ch. 13, §10).

- (80) a. *paku huni-bu-bi kuşi-ni-ki, binu-nanan-i-dan.*
 P. man-PL-COM run-PAST-ASS win-REC-*i-dan*
 ‘Paco ran together with other men and he won.’
- b. *paku inun haidu juan-nanan-mis-ki, nawa-dan.*
 P. and H. speak.ill-REC-HAB-ASS western.man-*dan*
 ‘Paco and Jairo speak ill of the Western men.’

4.3.2.3 *The co-participant is named by a direct object.* As with the reciprocals in *-nami* (cf. 3.2.2.3), the informants usually do not accept constructions with the direct object of co-participant but in exceptional cases, for unclear reasons such constructions are not rejected. It is even more puzzling why (81c) with the first participant named by a noun and the co-participant by the pronoun *ia* ‘me’ is accepted by some of the informants, whereas replacement of the subject noun by the pronoun *min* ‘you.SG’ makes the construction unacceptable although the syntactic structure remains unchanged (nevertheless, I have encountered an analogous construction with the second participant named by a noun, cf. *mai-tibi* ‘each village’ in (85b)).

- (81) a. *paku-n ia şinan-mis-ki.*
 P-ERG me think-HAB-ASS
 ‘Paco thinks of me.’
- b. *paku şinan-nanan-mis-ki.*
 P. think-REC-HAB-ASS
 ‘Paco thinks of him/his family/etc. (and vice versa).’
- c. *paku ia şinan-nanan-mis-ki, in cai hiwi-kindan.*
 P. me think-REC-HAB-ASS I far.away live-*kindan*
 ‘Paco thinks of me (and I think of him, but) I live far away.’
- d. **min ia şinan-nanan-mis-ki.*
 (intended meaning:) ‘You think of me (and I think of you).’

4.3.3 *The subject is plural; possible ambiguity*

It might seem that if the subject is plural the first interpretation to come to mind should be the reciprocal proper, but this is not always the case, but, as mentioned above, in this case a reciprocal form may be interpreted not only as reciprocal proper (the subject naming both participants) but also as a response reciprocal (the subject naming one collective participant, the co-participant being unnamed). The main reason of the choice of interpretation by a native speaker may be accidental. When asked a second time, the same informant sometimes produces the other interpretation or both. The following examples with *-nan* and *-nanan* illustrate this type (for brevity, the second part of translation ‘and vice versa’ is omitted here). The interpretation of the verb’s lexical meaning in (82e) is determined pragmatically.

- (82) a. *paku inun haidu bişin-nan-mis-ki.*
 i. ‘Paco and Jairo look at each other.’
 ii. ‘Paco and Jairo look at other people.’
- b. *paku inun joana ikuku-nan-kan-iki-ki.*
 i. ‘(It might be that) Paco and Joana hug each other.’
 ii. ‘(It might be that) Paco and Joana hug other people.’

- c. *paku inun madia midabi-nan-mis-bu-ki.*
 - i. 'Paco and Maria help each other.'
 - ii. 'Paco and Maria help someone else.'
- d. *paku inun haidu biisin-nanan-mis-ki.*
 - i. 'Paco and Jairo look at each other.'
 - ii. 'Paco and Jairo look at others.'
- e. *paku inun haidu daun-nanan-mis-bu-ki.*
 - i. 'Paco and Jairo cure each other.'
 - ii. 'Paco and Jairo poison people.'
- f. *paku haidu-bi şinan-nanan-mis-ki.*
 - i. 'Paco with Jairo think of each other.'
 - ii. 'Paco and Jairo think of their families.'

4.3.4 *The plural or distributive meaning?*

As mentioned above, the response reciprocals in *-nanan*, in the opinion of some informants, may imply a plural second participant in contrast to the reciprocals in *-nan*. This seems to create a difference in meaning between *-nan* and *-nanan*, like 'one person' vs 'some/many persons' denoted by the object. Thus, if the subject is singular there is no quantitative symmetry between the two participants. This case is represented in my corpus by several examples (which require checking):

- | | | |
|---------|---|--|
| (83) a. | <i>paku mabu inan-nan-mis-ki.</i>
<i>paku mabu inan-nanan-mis-ki.</i> | 'Paco gives some things (to one person).'
'P. gives some things (to many/some persons).' |
| b. | <i>paku midabi-nan-mis-ki.</i>
<i>paku midabi-nannan-mis-ki.</i> | 'Paco helps one person' (and ...)
'Paco helps many people (and ...)' |
| c. | <i>paku inun haidu şusin-nan-mis-ki.</i>
<i>paku inun haidu şusin-nanan-mis-ki.</i> | 'Paco and Jairo teach (somebody and ...)'
'Paco and Jairo teach (them, many persons).' |
| d. | <i>paku inun haidu nuku-ku-nan-mis-ki.</i>
<i>paku inun haidu nuku-nanan-mis-ki.</i> | 'Paco and Jairo meet him/one person ...'
'Paco and Jairo meet them (some/many) ...' |
| e. | <i>alicia-dan, pima-nan-ki, jauşı-ma-dan.</i>
<i>alicia pima-nanan-mis-ki.</i> | 'Alicia feeds him, she is not greedy.'
'Alicia feeds her community (and they will feed her when she needs it).' |

(83e) was uttered by Alicia's husband when she fed the people who were coming to eat at her place because her plantation had not suffered while the other plantations had been destroyed by rain, and her husband was angry at Alicia for feeding them because he had also worked hard on the plantation. But it is only close relatives that get the food, not people from other villages.

In the following case the meaning of plural co-participant seems to be contiguous to the distributive meaning. (84c) describes a situation where participant Jorge comes to Colombiana (a Cashinahua village of about 10 houses with 60 inhabitants). In this sentence, the object (the Colombiana people) is not and cannot be named, but the context indicates that Jorge visits almost every house to see the people. The suffix *-kindan* 'one by one' on the predicate is distributive in meaning, and thus it emphasizes the meaning of *-nanan* in this sentence. The response visit of (some of) the Colombiana inhabitants is

implied in (84c) but it is backgrounded. Response visits are culturally expected, but in (84a–b) this is not expressed at all while (84c) implies it.

- (84) a. *jorge-n ha-win nabu uin-mis-ki, kulunbiana-anu.*
 J. 3SG-POSS family visit-HAB-ASS K.-LOC
 ‘Jorge visits his family in Colombiana.’
- b. *jorge-n uin-mis-ki, kulunbiana-anu.*
 J. visit-HAB-ASS K.-LOC
 ‘Jorge visits (people) in Colombiana.’
- c. *jorge uin-nanan-kindan-mis-ki, kulunbiana-anu.*
 J. visit-REC-DISTR-HAB-ASS K.-LOC
 ‘Jorge visits (different people) in Colombiana.’

The response action is backgrounded to a still greater degree in (85b) where the distributive meaning seems to be prevalent, which is highlighted by the suffix *-tibi* ‘each’. The expected response action of the Cashinahua people is distanced in time from the action of the government and in this situation it is practically absent. Moreover, the “donation” of the Cashinahua may take form different from that of the government’s. It may seem that the distributive meaning of (85b) entirely outrules the reciprocal reading, because the Cashinahua are hardly able to give the government anything that the government may give the Cashinahua. But the situation is not as simple as that. It turns out that a reciprocal action in this case is not ruled out, but it is highly specific. If the government gives them donations (like butter, milk, boats, etc.) the Cashinahua will vote for the government or they will receive the representatives of the government with prestigious (game meat) food, etc. Note that the syntactic structure of (85a) and (85b) is identical, with the exception of the ergative subject marking in (85a). Besides, I should like to stress that (85b), i.e. a response reciprocal construction, contains a nominal direct object (*mai-tibi*) = possible second participant, which, as mentioned above, is a very rare and unclear phenomenon (in constructions with response reciprocals).

- (85) a. *gubernu-n donacion mai-tibi inan-şina-ki.*
 government-ERG donation village-each give-REC-PAST-ASS
 ‘The government made a donation to each village.’
- b. *gubernu donacion mai-tibi inan-nanan-şina-ki.*
 government donation village-each give-REC-PAST-ASS
 (same translation).

Beside the instances considered above, there occur the suffixes *-nan/-nanan* whose meaning is hard to interpret as reciprocal (or at all) even in broad context, and there are instances of the type dealt with above which are interpreted by the informants as non-reciprocal, in a meaning close to the distributive meaning of *-aki-aki* (cf. Section 8). In fact, this fact gives rise to doubt whether in all the above similar cases the only possible interpretation is given.

- (85') a. *mawa-i pican-şun pi-kin, mai wa-ama, habia pican-şun hatu die-i put.on.fire-ss eat-ASS earth do-NEG now put.on.fire-ss they pi-paki-ki. na habianu mai bici-ni-şun mai unan-nan-ni-bu, eat-paki-ASS here then earth find-PAST-SS earth understand-REC-PAST-PL ana tsua-n hatu pi-ama mai midan-s mani-kunbiban-a-bu-ki. again who-ERG they eat-NEG earth inside-s be.together-kunbiban-a-PL-ASS*
 'He dies and he is put on fire for eating, they don't dig a grave, and each time they put him on fire and ate without stopping. Now these days they found out about graves [as the missionaries introduced graves in the 1960s] and understood what they were for. Since then no one eats them (i.e. human flesh) and (each time) the body is put into the earth.'
- b. *huni dau-ja dau-nanan-mis-ki.*
 man medicine-ATR treat-REC-HAB-ASS
 'The doctor treats everybody.'
- c. *paku misi-nan-nami-mis-ki.*
 'Paco is afraid of everybody.'
- d. *huni daun-nanan-ai juinaka, pi-nun ik-a.*
 man poison-REC-PROGR game eat-nun speak-PAST
 'The man is poisoning the game to eat, he said.'

4.4 Co-occurrence of the suffix *-nami* with *-nan* and *-nanan*

Most likely, co-occurrence of these suffixes is to a certain degree pleonastic. Unfortunately, I have only 9 instances of their co-occurrence in my corpus. These derivatives are rather heterogeneous. Characteristically, there is one case of *-nami-nanan* and 8 cases of *-nan/-nanan-nami*. This is probably evidence of the fact that *-nan* and *-nanan* are likely to be more concrete in meaning than *-nami*. Note also that as a rule the informants reject derivatives with the combinations *-nami-nan/-nanan*. My data are too limited to draw any conclusions, therefore I will restrict myself to their citing; first, the derivative with *-nami-nanan* is presented and then the derivatives with *-nanan-nami* and *-nan-nami*. Four of the reciprocals below are derived from two-place transitives; four derive from (potentially) three-place transitives (cf. (43)) and one from a two-place intransitive (cf. (41)).

- (86) a. *paku inun haidu mijui jui-nami-nanan-mis-ki.*
 'Paco and Jairo tell these myths to other people.'
- b. *hadi ka-jama-wi, kaman kiju-nanan-nami-mis-ki.*
 there go-NEG-IMP dog bite-REC-REC-HAB-ASS
 'Don't go there, the dog bites', lit. '... the dogs bite each other' (and bite those who approach, and they can bite you).
- c. *paku-n ha-win ain bawa junu-mis-ki, (paku) junu-nanan-nami-mis-ki.*
 P-ERG he-POSS wife cook send-HAB-ASS P. send-REC-REC-HAB-ASS
 'Paco sends his wife to cook, (and he) sends her (to do sth else, e.g. to cut a log down), (and she sends him to do the same).'
- d. *paku inun haidu kini-nanan-nami-mis-ki.*
 'Paco and Jairo write to each other.'

- e. *paku inun haidu inan-nanan-nami-i, pi-ki.*
 P. and H. give-REC-REC-i good-ASS
 ‘Paco and Jairo exchange (things/whatever) with each other, that’s good.’
- f. *paku inun haidu biisin-nan-nami-mis-bu.*
 P. and H. look-REC-REC-HAB-PL
 ‘Paco and Jairo look at each other.’
- g. *paku inun haidu ha-win mabu-dan inan-nan-nami-i pi-ki.*
 P. and H. he-POSS thing-dan give-REC-REC-i good-ASS
 ‘Paco and Jairo exchange things with each other, that’s good.’
- h. *paku inun haidu šinan-nan-nami-i.*
 ‘Paco and Jairo think of each other.’
- i. *paku inun haidu misi-nan-nami-mis-ki.*
 ‘Paco and Jairo are afraid of each other.’

5. Restrictions on reciprocal derivation

Restrictions on derivation are of the common trivial nature, i.e. reciprocals do not derive from verbs with an inanimate object only, like ‘to cut (logs)’, ‘to cook’, ‘to chop’, etc. Just in case, the informants were offered one-place intransitive verbs, to check their possible combinability with the suffix *-nami* and it turned out that the verbs *ka* ‘to go’, *kaša* ‘to cry’, *kuši* ‘to run’, *ni* ‘to walk’, *nawa* ‘to sing, dance’, *hu* ‘to come, arrive’, *bijus* ‘to play’ and a number of others do not take this suffix, and also a two-place transitive *uin* ‘to see’. (The meaning ‘to play with each other’ may approximately be rendered by marking the object with a comitative case marker, cf.: *paku haidu-bi bijus-ai* ‘Paco plays with Jairo’ = *haidu paku-bi bijus-ai* ‘Jairo plays with Paco’.) A few examples on restrictions are cited in 4.1, but they need careful checking yet (for instance, it is pointed out there that *uin* ‘to see, visit’ takes only the suffix *-nan/-nanan* but not *-nami*).

Of interest are those cases when reciprocal constructions are grammatically correct (i.e. these are not restrictions proper) but generally not accepted by the Cashinahua: the actions described are culturally unacceptable and even inconceivable, but under certain conditions they become acceptable. Thus, (87a) is not accepted by the informants for the simple reason that the Cashinahuas today do not kill each other, but if the subject refers to white people or if the situation of game is described, the informants allow the reciprocal form:

- (87) a. **huni kuin tsaka-nami-mis-bu.*
 ‘The Cashinahua kill each other.’
- b. *nawa tsaka-nami-mis-bu.*
 ‘The foreigners (western people) kill each other.’

6. Lexicalizations

Lexicalization seems to be rare enough among reciprocals. So far, I can illustrate it with the following reciprocal in *-nami* whose non-lexicalized meaning is ‘to take sth from each other’ (see 3.1.3.1) which is used here in a slightly lexicalized meaning ‘to exchange’ (see (88a)) and also in the literal meaning ‘taking/holding each other’, for the meaning ‘to dance together’, the dancing being indicated by the name of the ritual.

- (88) a. *paku inun haidu bia-nami-mis, hatu-n ain-dan.*
 P. and H. take-REC-HAB they-POSS wife-dan
 ‘Paco and Jairo exchange (lit. ‘take from each other’) their wives.’
- b. *paku inun haidu bia-nami-mis-ki, kaca nawa-i-dan.*
 P. and H. take-REC-HAB-ASS kaca nawa-i-dan
 ‘Paco and Jairo dance together (one with the other, arms locked), during the ritual *kaca nawa*.’

The following instance of a lexicalized reciprocal in *-nanan* also refers to the situation of exchange or sale as a variant of exchange: note that selling and buying does not involve money: there is no money used in the Cashinahua territory, their system is based on barter. These meanings are very close to the proper reciprocal meaning ‘to give sth to each other’

- (89) a. *paku inun haidu hatu-n tiuti inan-nanan-mis-ki.*
 P. and H. they-POSS necklace give-REC-HAB-ASS
 ‘Paco and Jairo exchange (lit. give each other) their necklaces.’
- b. *nun inan-nanan-ai, dadio inun grabadoda.*
 ‘We are selling radios and tape-recorders.’

7. Lexical reciprocals

A few lexical reciprocals at my disposal form the simple reciprocal construction only when combined with a reciprocal suffix, like ordinary non-reciprocal verbs. The underlying reversed constructions refer to the same situation, which is a distinctive feature of lexical reciprocals.

- (90) a. *paku-n haidu haibu-ki.*
 P.-ERG H. be.friends-ASS
 ‘Paco is friends with Jairo.’
- = b. *haidu-n paku haibu-ki.*
 ‘Jairo is friends with Paco.’
- ≠ c. *paku inun haidu haibu-bu-ki.*
 ‘Paco and Jairo are friends with someone else’ [not ‘with each other.’]
- d. *paku inun haidu haibu-nami-mis-ki.*
 P. and H. be.friends-REC-HAB-ASS
 ‘Paco and Jairo are friends with each other.’
- e. *paku haibu-nami-mis-ki.*
 ‘Paco is friends with someone (who is also his friend).’

The verb *nuku* ‘to meet’ is similar to it in this respect. Although the reversed constructions denote the same situation, the simple construction does not have a reciprocal meaning: it also requires a reciprocal suffix.

- (91) a. *paku haidu-ki nuku-mis-ki.*
 ‘Paco meets Jairo.’
 = b. *haidu paku-ki nuku-mis-ki.*
 ‘Jairo meets Paco.’
 ≠ c. *paku inun haidu nuku-mis-ki.*
 ‘Paco and Jairo meet someone.’
 d. *paku inun haidu nuku-ku-nan-mis-ki*
 ‘Paco and Jairo meet each other.’
 e. *paku nuku-ku-nan-mis-ki.*
 ‘Paco meets someone (who meets him).’

Some verbs whose meaning seems to indicate they are lexical reciprocals are not in fact lexical reciprocals in Cashinahua. Thus, unlike the verb *haibu* ‘to be friends’, *diti* ‘to hit, quarrel’ does not denote the same situation when used in reversed constructions (i.e. (92a) ≠ (92b)), which may be due to its polysemy. But like *haibu*, its simple construction (92c) does not denote the same situation as (92a) or (92b). Formation of the simple construction which might sum up the meaning of (92a) and (92b) requires marking with *-nami*, i.e. reciprocals are derived from these verbs in the regular way (see (92d)). True, it seems that if the co-participant is a close relative of the first participant, the simple construction with this verb may be reciprocal in meaning without the suffix (see (92e)).

- (92) a. *paku-n haidu diti-mis-ki.*
 ‘Paco quarrels with Jairo.’
 ≠ b. *haidu-n paku diti-mis-ki.*
 ‘Jairo quarrels with Paco.’
 ≠ c. *paku inun haidu diti-mis-bu-ki.*
 ‘Paco and Jairo quarrel with someone else.’
 d. *paku inun haidu diti-nami-mis-bu-ki.*
 i. ‘Paco and Jairo quarrel with each other.’
 ii. ‘Paco and Jairo quarrel with somebody (who quarrels with them).’
 e. *paku inun ha-win baki diti-mis-bu-ki.*
 ‘Paku and his son quarrel with each other.’

The verb *ciban* ‘to follow sb’ is not a lexical reciprocal proper, but it forms a converse opposition which is contiguous to the reciprocal one (Paco following Jairo implies Jairo preceding him, and both participants are active – they are moving). Although it is one of the participants that follows the other and the other (or others) is moving in front of him, this situation is described by a reciprocal verb with the literal meaning ‘to follow each other’, like in many other languages. Note that in all the sentences at my disposal the suffix *-nanan* alone is used.

- (93) a. *paku ciban-nanan-mis-ki, puikaman bu-ai-bu-dan.*
 P. follow-REC-HAB-ASS herb GO.PL-PROGR-PL-dan
 ‘Paco follows others, they go [to look] for the *puikaman* herb.’

- b. *unan cibān-nānān-mis-ki, unān-dān, hi pii piū-bāin-i*
 ant follow-REC-HAB-ASS ant-dān tree leaf carry-bāin-i
cibān-nānān-mis-bu-ki hiwī wā-i-dān.
 follow-REC-HAB-PL-ASS house do-i-dān
 ‘The ant follows the others, the ants carry tree leaves on their heads, they follow one another to build their house.’

8. Distributives: Derivatives with the suffix *-akiaki*

8.1 Introductory

Derivatives in *-akiaki* have a very broad range of interpretations implying, as a rule, repetition of the action by different subjects, or by the same subject in different places, or upon different objects. In other words, this suffix encodes repetition of one and the same action, each action acquiring an additional characteristic: (a) a change of the subjects acting one after another, (b) a change of the objects which are different for each action, (c) a change of direction or place. The latter case is not distributive proper but it is often concomitant with this meaning; it is sometimes termed dispersive (Dressler (1968:72) describes it as ‘überall, hier und dort’). There is also a number of extended usages of these meanings.

In distributive constructions, this meaning may be related either to the plural subject and denote successive actions of a number of subject referents (replacing each other), or to a singular (or plural, the number being irrelevant in this case) subject who performs repeated actions upon different objects or motion in different directions. Other, more detailed characteristics of distributive actions are attested as well. All these readings are interrelated and constitute a kind of continuum, and they may be regarded as actualizations of a single general meaning. Their actualization is basically determined by the lexical meaning of the base verb.

Sometimes, one and the same derivative may allow several interpretations, depending on such factors as the singular or plural subject (cf. (94a) and (94bb)), or presence of the object dependent on the derivative or in a displaced position with the suffix *-dan* (cf. (95a) and (95b)), (or depending on which interpretation is the first to occur to the informant).

- (94) a. *paku iŕcu-akiaki-mis-ki.*
 ‘Paco jumps here and there.’
 b. *paku inun haidu iŕcu-akiaki-mis-ki, bijus-i-dan.*
 ‘Paco and Jairo jump one after another while playing.’
- (95) a. *paku inun haidu daĵa-akiaki-mis-ki.*
 ‘Paco and Jairo work here and there.’
 b. *dini inun ia-dan, nun daĵa-akiaki-ai, nuku-n bai-tibi-dan.*
 D. and me-dan we work-DISTR-PROGR we-POSS garden-every-dan
 ‘Rene and I, we take turns working in each other’s gardens.’

As has been mentioned above, the suffix *-akiaki* is of particular interest due to the fact that its basic meaning of temporal or locative sequence is attested as a peripheral mean-

ing in the reciprocal markers in a number of languages.⁵ Unlike *-nami* and *-nan/-nanan*, this suffix does not change valency. It can co-occur with *-nami-* and *-nanan* (for obscure reasons, not with *-nan*) on the same verb, always as a second component only. Thus, distributives from reciprocals are possible but *there are no reciprocals from distributives* (see 8.5).

First I shall consider the range of the readings of *-akiaki* derivatives from intransitives and then those from transitives, although some of the readings may be more or less similar.

8.2 Distributives derived from intransitive verbs

Two groups of meanings are distinguished here: (a) a change of the subject (see (8.2.1)); (b) a change of direction or place (see 8.2.2).

8.2.1 *Change of subject (non-spatial (temporal) sequence; plural subject is obligatory)*

The common translation is ‘one after another’. Intransitive derivatives cannot take a singular (at least semantically) subject (cf. (96c); see also (94b) and (95b)).

- (96) a. *paku bini-mis-ki.*
‘Paco gets up.’
b. *huni-bu bini-akiaki-mis-ki.*
man-PL get.up-DISTR-HAB-ASS
‘The men get up one after another.’
c. **paku bini-akiaki-mis-ki.*
lit. ‘*Paco gets up one after another.’
- (97) a. *mai bitsa-anua juda-bu mawa ninka-tan kaşa-akiaki-mis-bu-ki.*
village another-ABL body-PL die listen-tan cry-DISTR-HAB-PL-ASS
‘In different villages they learnt that someone had died, and (outside the village) they cry (in all the houses) one after another (they bemoan this death).’
b. *huni diti-nami-i mawa-akiaki-mis-bu-ki, nupi-win-dan.*
man kill-REC-i die-DISTR-HAB-PL-ASS knife-INST-dan
‘People killed each other with knives, they died one after another.’

8.2.2 *Change of direction or place (spatial sequence; singular and plural subject equally possible)*

Besides the distributive meanings ‘each’, ‘one after another’, etc., the suffix *-akiaki* has a number of other meanings that are characteristic of distributive markers cross-linguistically, cf. readings like ‘here and there’ (see (94a) and (95a)), ‘from side to side’, ‘zigzagging’, ‘rotation’, ‘from one side to the other’, ‘in different places, elsewhere’, ‘everywhere’, ‘in all the houses’, etc. Although the number of the subject is of no importance, in my data the singular subject is prevalent with these meanings. Compare:

5. It is not accidental that some meanings characteristic of *-akiaki* are coded by reciprocal markers in other languages; cf. German *aufeinander* ‘one after another’, *untereinander* ‘one under another’, *nacheinander* ‘one after another’, *beieinander/nebeneinander* ‘next to each other’, etc. (Wiemer & Nedjalkov, Ch. 10, §5.5 ff.).

- (98) a. *in uša dabi-akiaki-mis-ki.*
I sleep toss.and.turn-DISTR-HAB-ASS
'I sleep tossing and turning from side to side.'
- b. *ni midan, in hiki-akiaki-kain-ai.*
jungle inside I walk-DISTR-kain-PROGR
'I am going by zigzags into the jungle, from one side to another' (taking different ways).
- c. *paku tin i-akiaki-mis-ki.*
'Paco falls somersaulting (rolling over repeatedly).'
- d. *paku kuši-akiaki-mis-ki.*
'Paco runs around everywhere.'
- e. *paku inun haidu uša-akiaki-mis-ki.*
'Paco and Jairo sleep wherever night finds them, here and there.'
- f. *paku inun haidu hiwi-akiaki-mis-ki.*
'Paco and Jairo live they don't care where, here and there.'
- g. *paku ka-akiaki-mis-ki, bai-anu-dan.*
P. go-DISTR-HAB-ASS plantation-LOC-dan
'Paco goes from one plantation to another.'

8.3 Distributives derived from transitive verbs

The most common translation equivalents of *-akiaki* on transitives are 'one after another', 'any, each', 'everybody', 'different (varieties)' relative to the *object*. For this reason the number of the subject (singular or plural) is irrelevant here.

8.3.1 *The object is named*

The referent may be in unmarked direct object position or in a displaced position with the marker *-dan* or it may be case marked, e.g. INST, or it may be named in the prior context); cf.:

- (99) a. *paku inun haidu kini-win junu-akiaki-mis-ki mai-tibi.*
P. and H. letter-INST send.message-DISTR-HAB-ASS village-each
'Paco and Jairo send messages by letter one after another to each village.'
- b. *paku-n ina-akiaki-mis-ki, disi-tibi-dan.*
P. mount-DISTR-HAB-ASS hammock-each-dan
'Paco mounts them one after another, all the hammocks.'
- c. *paku-n hatu hini-akiaki-mis-ki ainbu-tibi-dan.*
P-ERG them separate-DISTR-HAB-ASS woman-each-dan
'Paco leaves them one after another, each wife.'
- d. *in badansia in mi-akiaki-mis-ki.*
my watermelon I touch-DISTR-HAB-ASS
'I touch one watermelon after the other (by striking them to see if they are ripe).'
- e. *paku inun haidu nicin-akiaki-mis-ki, mani bana-kindan.*
P. and H. put.inside-DISTR-HAB-ASS banana plant-kindan
'Paco and Jairo plant all kinds of banana cuttings one after the other.'

- f. *bai hini-akiaki-mis-bu-ki.*
 plantation abandon-DISTR-HAB-PL-ASS
 ‘They abandon each one of the plantations.’⁶

8.3.2 *The object is not named*

It is usually a personal object. Compare:

- (100) a. *paku-n buma-akiaki-mis-ki.*
 ‘Paco sends messages to these and those.’
 b. *paku inun madia manu-akiaki-mis-ki.*
 ‘Paco and Maria are distressed for each member of their family.’
 c. *paku-n diti-akiaki-mis-ki.*
 ‘Paco hits one after another (each villager).’
 d. *kaman-an siti-akiaki-mis-ki.*
 ‘The dog sniffs everywhere, here and there.’
 e. *huni-bu, tsaka-akiaki ka-mis-bu-ki.*
 man-PL hunt-DISTR go-HAB-PL-ASS
 ‘The men, they go hunting any kind of animals they see.’
 f. *paku-n unan-akiaki-mis-ki.*
 ‘Paco knows everyone, each of the persons.’

8.3.3 *Extended distributive usage*

The usages cited below differ in one way or another from those considered above, although the semantic relatedness between these two groups of meanings is transparent enough. These usages are determined by the lexical meaning of the base. First, I will consider intransitive verbs and then transitives.

1. *Intransitive verbs.* The first example contains a non-spatial characteristic of a repeated action, and the second describes position of the subject referents next to each other:

- (101) a. *paku nawa-akiaki-mis-ki: sanba-dan, manca-dan, şuti-dan.*
 ‘Paco dances to different rythms (different dances one after another): samba, marcha, khote.’
 b. *bini-baun-mis-ki, bini-baun hi punjan-tibi tsau-akiaki-mis-ki.*
 flock-baun-HAB-ASS, flock-baun tree arm-each.one sit-DISTR-HAB-ASS
 ‘The flock perches next to each other on each branch.’

2. *Transitive verbs.* Their usage is much more varied. The examples illustrate the following readings (as mentioned above, the listed meanings are coded by reciprocal markers in a number of languages):

(a) placing objects one upon another (i.e. spatial sequence with regard to the change of position of the objects; I have not encountered the verb *macin-* without the distributive suffix; see (102a, b));

(b) placing objects next to one another (see (102c, d));

(c) winding or circular motion of an object or its part(s) (see (102e);

6. A tradition among the Amazonian minority is that when the plantation soil becomes tired and old, all the garden owners abandon every one of their plantations to make new ones.

- (d) intertwining of one object with/around another (see 102f);
 (e) iterativity linked with counteraction of the object (see (102g);
 (f) reciprocity (see (102h, i, k)).

- (102) a. *kadu macin-akiaki-mis-ki.*
 firewood pile-DISTR-HAB-ASS
 ‘He piles up the firewood (one on top of another).’
- b. *kadu makişkuma-akiaki-mis-ki.*
 firewood pile.and.line.up-DISTR-HAB-ASS
 ‘He piles and lines up (one on top of the other) a heap of firewood.’
- c. *huni-n hiwi mai wa-akiaki-mis-ki.*
 man house village make-SUC-HAB-ASS
 ‘The man builds village houses one next to the other.’
- d. *kinti pišta-ki pican-şun nupi dibu-wın şuki-akiaki-kin a-şun.*
 pan little-LOC put.on.fire knife point-INST punch-DISTR-ASS VS-şun
 ‘He punches holes one next to another in the little pan before putting it on fire.’
- e. *in awa tai dispi-wın in nişi-akiaki-ai.*
 my tapir paw rope-INST I tie.up-DISTR-PROGR
 ‘I am tying up my tapir’s paws around with a rope.’
- f. *nişpudun-dan, hi iwapa miwişi-akiaki-a-ki, du-n biçipai*
 liana-dan tree big hold.branch-DISTR-a-ASS monkey-ERG like
haida-mis-ki.
 a.lot-HAB-ASS
 ‘The liana intertwines with big trees, the monkey likes it a lot.’
- g. *ha inka-n aci-akiaki-şun.*
 that Inca-ERG hold-DISTR-şun
 ‘That Inca holds (restricting) her movements.’

The latter example is borrowed from a narrative and it describes the following scene: a man (Inca) holds tightly a woman in his arms who resists and tries to get rid of him and he presses her arms against her body to prevent her from breaking away.

Sentence (102h) allows two interpretations, depending on the pragmatic context:

- h. *paku inun haidu bijun-akiaki-mis-bu-ki.*
 P. and H. swing-DISTR-HAB-PL-ASS
 i. ‘Paco and Jairo swing each other by turns / one after the other.’
 (first Paco swings Jairo, then it’s Jairo’s turn to swing Paco).
 ii. ‘Paco and Jairo swing together here and there [where they find a swing/hammock].’
- i. *mai bai-dan cici-akiaki-mis-bu-ki.*
 village plantation-dan divide-DISTR-HAB-PL-ASS
 ‘They divided the communal land among themselves.’
- k. *sunia, ida inun badabada hanca-akiaki-mis-bu-ki.*
 ‘Sonia, Ida and Barbara talk to one another.’

8.4 Derivatives in *-akiaki* from reciprocals in *-nami* and *-nanan*

These derivatives are formed from reciprocals in the same way as from non-reciprocals. In derivatives from reciprocals with *-nami* the suffix *-akiaki* occurs in the same meanings as

with non-reciprocal verbs; cf. (103). Note that reciprocals do not derive from distributive forms, i.e. forms like *mia-nami-akiaki* / *mia-nanan-akiaki* ‘to touch each other by turns’ are possible, but **mia-akiaki-nami* is ungrammatical, and it is not clear what meaning it might have.

- (103) a. *paku inun madia mia-nami-akiaki-mis-bu-ki.*
 ‘Paco and Maria are touching each other by turns.’
 b. *kaman kiju-nami-akiaki-mis-bu-ki.*
 ‘The dogs bite each other wherever they meet, here and there.’
 c. *paku inun haidu diti-nami-akiaki-mis-ki.*
 ‘Paco and Jairo fight wherever they pass each other and wherever they meet.’
 d. *paku inun haidu bia-nanan-akiaki-mis-ki.*
 ‘Paco and Jairo exchange things wherever they come and whenever they meet.’
 e. *paku inun haidu kini inan-nanan-akiaki-mis-ki.*
 ‘Paco and Jairo give letters to each other and others one after the other.’

9. On the etymology of the reciprocal markers

Investigation of the Panoan languages is in its initial stage yet, and there is no information on the etymology of the reciprocal markers in Cashinahua and other Panoan languages. There is no information on reciprocals in other Panoan languages at all, but the following tentative suggestions could be made. With regard to *-nan* and *-nanan*, it is likely that *-nan* is the diachronically primary suffix and *-nanan* is probably its reduplication. (Note that reciprocal markers have reduplicated structure in a number of other languages.) In Costa (1992: 177–9) on the Marubo language two reciprocal suffixes are mentioned, *-nā* and *-nānā* which are counterparts of the Cashinahua suffixes. Coincidence of the two initial phonemes in *-nan* and *-nami* is probably not accidental either.⁷ The suffix *-nami* distinguishes Cashinahua from other Panoan languages which have only one reciprocal suffix, namely the one corresponding to *-nan/-nanan*. The suffix *-nami* can tentatively be regarded as related to the numeral *-dabi* and the homophonous dual suffix *-dabi* (cf. (22b), (23c) and (37)) from which *-nami* differs only in the nasalization of /d/ and /b/, which may be due to the influence of the suffix *-nan/-nanan* (P. Valenzuela, p.c.).

Note that the reciprocal suffix *-na* in Bolivian Quechua (see van de Kerke, Ch. 31) which is regarded as genetically unrelated to Cashinahua is also materially identical with the two initial phonemes of the Cashinahua reciprocal suffixes (for another similarity see Note 2). Further research may show whether this coincidence is the outcome of the contact of both language families or purely accidental.

7. The suffix *-nan* is materially identical with one of the suffixes deriving *nomina agentis* from verbs; cf.: *jusin* ‘to teach’ → *jusin-nan* ‘teacher’, *unan* ‘to know’ → *unan-nan* ‘the one who knows’, *uin* ‘to see’ → *uin-nan* ‘the spy’, etc. But I find it difficult to find an immediate semantic relation between them.

Acknowledgments

I would like to express my gratitude to Vladimir Nedjalkov, Emma Geniušienė, Zlatka Guentchéva, Elena Maslova, Pilar Valenzuela and Catherine Paris whose precious comments and criticisms on this paper have been highly valuable.

Of course, I assume all responsibility for the possible errors and misinterpretations.

1. Introduction

1.1 The Bamana language; dialectology

Bamana (autolinguonym; Bambara is a xenonym rooted in French) is an isolating language with some agglutinative elements. It is the most widely spoken language of the Manding branch of the Western group of Mande languages (Niger-Congo macrofamily). “Local dialects” of Bamana in Mali form a linguistic continuum merging into the continua of Maninka and Mandinka dialects to the west (Guinea, Senegal, Gambia, Guinea-Bissau), Jula and Konya and Manyà to the south (Côte d’Ivoire, Southern Guinea, and Liberia); all these constitute one large “Manding linguistic continuum”. Linguistic distance between the extreme representatives of this continuum slightly exceeds the limit of mutual intelligibility (around 90 common words in Swadesh’s 100-word list). All varieties of this continuum are spoken natively by at least 10 million people; if those who speak them as second languages are added, this figure exceeds 20 million people (unfortunately, more precise statistics are non-existent).

Bamana, in its urban form (“Standard Bamana”, which is analyzed in this paper) is the main inter-ethnic language in Mali, very close to the “dioula véhiculaire” (Inter-ethnic

Jula) of Côte d’Ivoire and Burkina Faso; these two varieties combined are spoken by about 10 million people.

The total number of languages in the Mande family exceeds 60. Their degree of genetic affinity is comparable to that of Indo-European languages.

1.2 Overview

The main means for expressing the reciprocal meaning in Bamana is a syntactic construction with the specialized pronoun *ɲɔŋɔ* which can occupy the position of one of the complements of a predicate:

- (1) a. *Mūsà yé Fántà bùgɔ.*
 M. PFV F. strike
 ‘Musa struck Fanta.’
- b. *Fántà yé Mūsà bùgɔ.*
 F. PFV M. strike
 ‘Fanta struck Musa.’
- c. *Mūsà ní Fántà yé ɲɔŋɔ bùgɔ.*
 M. and F. PFV REC strike
 ‘Musa and Fanta struck each other.’

ɲɔŋɔ is a pronoun, i.e. an actant type reciprocal marker: it can combine with postpositions, i.e. fill the positions of indirect and oblique objects; it can function as the first component of a determinative phrase (i.e., a non-adjectival attribute) and as the possessor within a possessive syntgm.

The same marker is also used as a suffix of deverbal derivation with the reciprocal meaning.

The sociative construction is derived from the reciprocal one by adding the postposition *fě* (principal meanings: comitative and of agentive complement) to *ɲɔŋɔ*. In other words, we have a “standard” way of formation of sociative, through combination of the reciprocal and the comitative markers. Thus, the adverbial phrase *ɲɔŋɔ fě* expresses the meaning ‘together’ (see Section 6).

2. Grammatical information

2.1 Tonal system

Bamana has two underlying tones: high and rising (low); their surface realization is regulated by a set of rather complicated rules. In the phrase examples below, surface tonal realizations are marked (in a sequence of syllables with the same tone, a tone mark is being placed on the first syllable of the sequence only). Nouns are used most often with a tonal article (suffixed “floating” low tone – ` , glossed as ART) which immediately follows the noun or a postposed adjective. (For a description of the Bamana tonal system see Introduction to the *Manding-English Dictionary* (Vydrine 1999).)

2.2 Personal pronouns

Person	Singular		Plural	
	Simple	Emphatic	Simple	Emphatic
1	<i>ní</i>	<i>né`</i>	<i>án</i>	<i>ánw</i>
2	<i>í</i>	<i>é`</i>	<i>á</i>	<i>áw</i>
3	<i>à</i>	<i>àlé</i>	<i>ǔ</i>	<i>òlú</i>

The forms of personal pronouns are not dependent on syntactic position and function.

2.3 Sentence structure

Word order in Bamana is fixed: Subject – Direct Object – Verbal Predicate – Indirect/Oblique Object + postposition (unlike the Indirect Object, the Oblique Object with postposition can be moved to the position of Topic before the Subject). Case relations are expressed by the word order and postpositions.

The most common postpositions are: *cé* ‘between’, *fě* ‘by’ (locative, agentive), *kǎn* ‘on, upon’, *kósjn* ‘because of, for the sake of’, *kɔ* ‘behind’, *kɔnw* ‘in, within, inside’, *lá* (*ná* after a nasal) ‘at’ (a broad locative meaning), *mǎ* ‘to’ (addressee), *yé* ‘for’ (addressee).

The adjective follows noun and in most cases forms with it a tonecompact syntagm. In the determinative syntagm the word order is “determiner – determined”. There exists a distinction between two types of nominal groups usually qualified (not quite properly) as “alienable – unalienable possession”; the former is referred to as “possessive group” (it has the connective element *ká*):

- (2) a. *dònsoké` ká mùrú`.*
 hunter.ART POSS knife.ART
 ‘hunter’s knife.’

The latter is called here “determinative group”; it has no connective element, and typical semantic types of words used in this construction are body parts and kinship terms:

- b. *dònsoké` kùnkólo`.*
 hunter.ART head.ART
 ‘hunter’s head.’

Plural is formed by adding the suffix *-ù* (*-w* in the current orthography) to the noun or to the subsequent adjective. There is no nominal or verbal agreement in Bamana.

In Bamana there is a part of speech which I call “qualitative verbs” (the term “stative verbs” is also used by some authors). It is distinguished from the verb formally (special markers: *ká* for positive meaning, *mán* for negative), semantically (expresses a permanent quality: *à ká jé* ‘it is white’, *à mán jàn* ‘it is not long’) and derivationally; for more details see Vydrine (1990).

2.4 Verb classes

A verb without a direct object is obligatorily intransitive, and a verb with such an object is necessarily transitive. There is no formal difference between transitive and intransitive verbs; the same verb can very often be used both as transitive and intransitive (which is considered here as syntactic derivation). There are therefore no formal (morphological) classes of verbs in Bamana; however, verbs can be classified according to their ability to undergo syntactic derivation of one type or another. There are three main classes of verbs according to their derivational capacity (for more detail see Vydrine & Coulibaly (1994–5, Part 1, 48ff.)).

1. Basically intransitive verbs, which are subdivided into *intransitiva tantum* (*kóoro* ‘to bellow’) and productive intransitives (*sègén* ‘to get tired’ – ‘to tire sb’). From the latter, transitives can be derived.

2. Basically transitive verbs are used typically as transitive, and can undergo passive transformation (*méseku* ‘to slice sth’/‘to be sliced’).

3. Diffuse verbs are those for which it is difficult to establish priority of intransitive or transitive use; they are not very numerous in Bamana (*mùnú* ‘to be patient’ – ‘to tolerate sth’).

Within each of these classes, some verbs require an indirect object which is more or less obligatory for the manifestation of their semantics.

2.5 Valency-increasing means

Adding a direct object to an intransitive verb is equivalent to transitive (causative/factitive or “limitative”) derivation, which can be (depending on particular verbs) unmarked morphologically or marked (causative derivation) by *lá-* (*ná-* after a nasal) (Vydrine & Coulibaly 1994–5: Part 1, 60–5).

2.6 Valency-decreasing means

1. Omission of the direct object marks a passive transformation (with the exception of a small group of “diffuse” verbs, cf. 2.4.c).

2. The reflexive form of the verb is marked by introducing one of the non-emphatic personal pronouns into the position of direct object, with one exception: there is a special 3SG pronoun which competes in this function with the personal pronoun *à* (rarely, the reflexive *í* can also correspond to 3PL of subject, instead of *ù*). There is also a particle *yèré* whose function is “hearer’s expectancy correction” (cf.: Kibrik & Bogdanova 1995; Bergel’son 1988:98) and which is used to form a “heavy reflexive pronoun”. The meaning of the reflexive form varies from one verb to another; this form can express, depending on the syntactic-semantic characteristics of the basic (non-reflexive) verb, a whole range of meanings (for details see Vydrine & Coulibaly 1994–5, Part 2); here is an example of semantic reflexive:

(3)	<i>ní</i>	<i>békà</i>	<i>ní</i>	<i>màsiri.</i>	‘I adorn myself.’
	<i>í</i>	<i>bék’</i>	<i>í</i>	<i>màsiri.</i>	‘You (SG) adorn yourself.’
	<i>à</i>	<i>bék’</i>	<i>à/í</i>	<i>màsiri.</i>	‘(S)he adorns herself/himself.’
	<i>án</i>	<i>bék’</i>	<i>án</i>	<i>màsiri.</i>	‘We adorn ourselves.’
	<i>á</i>	<i>bék’</i>	<i>á</i>	<i>màsiri.</i>	‘You (PL) adorn yourselves.’
	<i>ù</i>	<i>bék’</i>	<i>ù/(í)</i>	<i>màsiri.</i>	‘They adorn themselves.’

3. The reciprocal marker does not serve as a valency-decreasing means. The reciprocal and the reflexive markers can co-occur, while reciprocal and sociative cannot (on both semantic and morphological grounds, the sociative construction being a combination of the reciprocal and the comitative auxiliaries).

2.7 Tense/aspect/mood markers

These are (with one exception) auxiliary words placed between subject and direct object or between subject and intransitive verb. They are (in brackets negative counterparts are given):

bé (*té*) – Imperfective (habitual/iterative action, continued action, future; *bé* and *té* also function as verbs of being in locative sentences; glossed as IMPF);

békà (*tékà*) – Actualis; *bénà* (*ténà*) – Future;

nà/ná (*ténà*) – Certain Future;

ká (*kàná*) – Injunctive (Prohibitive);

kà – Infinitive; *mána* – Conditional.

The markers of Perfective (“punctual action unmarked in its relation to the time of speech or any other reference point”) glossed as PFV are: *yé* for transitives and the suffix *-ra/-la/-na* for intransitives (choice of allomorph depends on the preceding syllable); the corresponding negative marker is *má* for both transitives and intransitives (for the semantics of Bamana aspect markers see Idiatov (2000)).

There are four participles which are formed by suffixes: *-len/-nen* – Accomplished; *-tɔ* – Unaccomplished; *-ta* – Debitative (action which should be performed); *-bali* – negative.

3. Diathesis types of constructions with the reciprocal pronoun *ɲóɲɲ* ‘each other’

These types are distinguished according to the argument replaced by the reciprocal marker.

Due to its syntactic character, the Bamana reciprocal has few restrictions on diathesis: all overt reciprocal diathesis types are possible. The meaning of all reciprocals is regular and easily predictable.

3.1.3 “Possessive” reciprocals

“Possessive” and “determinative” noun groups (i.e., those connected by means of the formant *ká* and those connected paratactically, cf. 2.3) do not manifest any considerable difference with respect to reciprocal constructions. In both cases, the reciprocal marker takes the position of the first (attributive) component of the noun group; the latter can take the position of any argument, except for the subject.

1. Derived from two-place transitives:

- (8) a. *Í kàná né` ká kìnì` dún.*
 you PROH my POSS rice.ART eat
 ‘Don’t eat my rice.’
 b. *án kàná jǔgɔn ká kìnì` dún.*
 we PROH REC POSS rice.ART eat
 ‘Let’s not eat each other’s rice.’

2. Derived from two-place transitives with a benefactive adjunct:

- (9) a. *Áwà yé jí` gòniyá Kàjatu dén` yé.*
 A. PFV water.ART heat.up K. child.ART for
 ‘Awa heated up water for Kajatu’s child.’
 b. *Áwà ní Kàjatu yé jí` gòniya jǔgɔn dén-w yé.*
 A. and K. PFV water.ART heat REC child-PL for
 ‘Awa and Kajatu heated up water for each other’s children.’

3. Derived from one-place intransitives used with a locative adverbial adjunct:

- (10) a. *Mùsà bé sùnɔɔ Bákari ká só` kónɔ.*
 Musa IMPF sleep Bakari POSS house.ART in
 ‘Musa sleeps in Bakari’s house.’
 b. *Mùsà ní Bákari bé sùnɔɔ jǔgɔn ká só` kónɔ.*
 M. and B. IMPF sleep REC POSS house.ART in
 ‘Musa and Bakari sleep in each other’s houses’ (sometimes, they both sleep in Musa’s house, and sometimes in Bakari’s; or – simultaneously, Musa sleeps in Bakari’s house and Bakari sleeps in Musa’s house).

3.1.4 “Adverbial” reciprocals

jǔgɔn is acceptable not only in the position of an argument: it can also function as an adverbial co-referential with the subject:

- (11) a. *Bákari bé màlò` sèné à mùsò` kósɔn.*
 B. IMPF rice.ART cultivate his wife.ART because
 ‘Bakari cultivates rice because of his wife.’
 b. *Bákari ní à mùsò` bé màlò` sène jǔgɔn kósɔn.*
 B. and his wife.ART IMPF rice.ART cultivate REC because
 ‘Bakari and his wife cultivate rice because of each other.’

3.2 Object-oriented diathesis types

3.2.1 Derived from three-place transitives

The following illustrates this type of derivation:

- (12) a. *Dùgu-tígi` y' á` dénke` jira dúnan` ná.*
 village-head.ART PFV his son.ART show guest.ART to
 ‘The head of the village showed (introduced) his son to the guest.’
 b. *Dùgu-tígi` y' á` dénke` ní dúnan` jira jógon ná.*
 village-head.ART PFV his son.ART and guest.ART show REC to
 ‘The head of the village showed (i.e. introduced) his son and the guest to each other.’

3.2.2 Derived from subject-oriented reciprocals by means of causativization

I consider in this section both morphological (marked by the prefix *lá-/ná-*) and non-morphological causatives.

3.2.2.1 Morphological causativization. Causatives derived from transitives in Bamana are a very rare phenomenon, and they do not manifest any interesting peculiarities in comparison with the causatives from intransitives. Therefore, they will not be considered specially.

- (13) a. *Mùsà jàrabi-ra Áwà lá.*
 M. fall.in.love-PFV A. with
 ‘Musa fell in love with Awa.’
 b. *Mùsà ní Áwà jàrabira jógon ná.*
 M. and A. fall.in.love REC with
 ‘Musa and Awa fell in love with each other.’
 c. *Mórike` yé Mùsà ní Áwà lá-jàrabi jógon ná.*
 muslim.cleric.ART PFV M. and A. CAUS-fall.in.love REC with
 ‘A Muslim cleric made Musa and Awa fall in love with each other.’
- (14) a. *Misî` dège-rá wùlú` lá.*
 cow.ART get.accustomed-PFV dog.ART to
 ‘The cow has become accustomed to the dog.’
 b. *Misî` ní wùlú` dège-ra jógon ná.*
 cow.ART and dog.ART get.accustomed-PFV REC to
 ‘The cow and the dog have become accustomed to each other.’
 c. *Fúlake` yé misî` ní wùlú` dège jógon ná.*
 Pullo.ART PFV cow.ART and dog.ART accustom REC to
 ‘A Pullo (sg for Fulbe) has accustomed the cow and the dog to each other.’
- (15) a. *Fílen` d́́ b́́ dígi d́́ kán.*
 calabash.ART one IMPF weigh one.ART on
 ‘One calabash presses upon another.’
 b. *Fílen fila b́́ dígi jógon kán.*
 calabash two IMPF press REC on
 ‘Two calabashes press one upon another.’

- c. *Npògotiginín` bé fílen fila dígi jógòn kàn.*
 girl.ART IMPF calabash two press REC on
 ‘A girl presses two calabashes against each other.’

3.2.2.2 *Reciprocal causative constructions derived from “possessive” reciprocals.* Here is an example:

- (16) a. *Fántà gírín-na à sìnámúso` dén` kàn.*
 F. rush-PFV her co-wife.ART child.ART at
 ‘Fanta rushed at her co-wife’s child.’
 b. *Sìnámuso-má-w gírín-na jógòn dén-w kàn.*
 co-wife-R-PL rush-PFV REC child-PL at
 ‘The co-wives rushed at each other’s children.’
 c. *Nááfigi` yé sìnámusomá-w lá-gírín jógòn dén-w kàn.*
 tell-tale.ART PFV co-wife.PL CAUS-rush REC child-PL on
 ‘The tell-tale made the co-wives rush at each other’s children.’

3.2.2.3 *Referential ambiguity.* This is impossible in object-oriented causative reciprocal constructions with animate causees: even if the subject-causer is plural, in Bamana the reciprocal pronoun is co-referential with the plural direct object. Therefore,

- (16) d. *Nááfigi-w yé sìnámusomá-w lá-gírín jógòn dén-w kàn.*
 tell-tale.PL PFV co-wife.PL CAUS-rush REC child-PL on

means only ‘The tell-tales made the co-wives rush at each other’s (co-wives’) children’, and not *‘... tell-tales’ children’.

The situation is different if the causees are inanimate, and with originally trivalent verbs. Here, when both subject and direct object are plural, *jógòn* can be co-referential with either. Thus,

- (12) c. *Dú-tigi-w yé ù mùsó-w jira jógòn ná.*
 family-head-PL PFV their wife-PL show REC to
 ‘Heads of the families introduced their wives to each other.’

has two readings: either ‘the head of one family introduced his wife (or wives) to the head of another family and *vice versa*’, or ‘one head of a family introduced his wife (wives) to the wife (wives) of the head of another family, and *vice versa*’.

- (15) d. *Npògotígi-w bé fílen-w dígi jógòn kàn.*
 girl-PL IMPF calabash-PL press REC against
 ‘Girls press calabashes against each other.’

can be interpreted either as ‘girl X presses her calabash against girl Y, and girl Y presses her calabash against girl X’, or as ‘girl X presses her calabash against the calabash of girl Y’.

3.3 Adjunct-oriented introvert type

It is represented by a coordinative construction “plural noun or pronoun + *ni* ‘and’ + *jógòn*” which always takes position of an adjunct with the postposition *cé* ‘between,

among'; the antecedent of the reciprocal pronoun *ɲɔŋɔn* is the first member of the coordinative group. The meaning of this construction is 'between/among them':

- (17) a. *Fàamuyá tòn té kòrɔ-ké` ní dɔŋɔ-ké` cé.*
 understanding PAST IMPF.NEG elder-man.ART and younger-man.ART between
 'There was no understanding between the elder and the younger brothers.'
- b. *Fàamuyá tòn té ù ní ɲɔŋɔn cé.*
 understanding PAST IMPF.NEG they and REC between
 'There was no understanding between them.'

(The same meaning can be expressed by the sole postposition *cé*: *Fàamuyá tòn té ù cé*);

- (18) a. *Û b' á` fě kà dɔ́ bɔ́ kě̀kě̀fě̀n-w dɪ̀lali` lá Írisilá ní*
 they be it with INF some remove weapon-PL making.ART from Russia and
Sínuwa cé.
 China between
 'They want production of armaments to be reduced in Russia and China (in relation to each other).'
- b. *Û b' á` fě kà dɔ́ bɔ́ kě̀kě̀fě̀n-w dɪ̀lali` lá jàmaná-w*
 they be it with INF some remove weapon-PL making.ART from country-PL
ní ɲɔŋɔn cé.
 and REC between
 'They want production of armaments to be reduced mutually in the countries'
 (i.e., that the countries should reduce production of armaments on mutual agreement, in concord).
- (19) a. *Sànbú y' á` bólo bálán filen` ní tása` cé.*
 S. PFV his hand.ART jam calabash and pan.ART between
 'Sambu jammed his hand between a calabash and a pan.'
- b. *Sànbú y' á` bólo` bálán mìnén-w ní ɲɔŋɔn cé.*
 S. PFV his hand.ART jam utensils-PL and REC between
 'Sambu jammed his hand between utensils.'

4. Extended use of reciprocals

In this section, reciprocal constructions are considered which are not prototypical in the sense illustrated by (1), i.e. sentences of types (1a) and (1b) are either absent or may be reconstructed by means of some special operations, or sentences like (1a) and (1b) do not result in a sentence denoting simultaneous actions of type (1c). The following cases may be distinguished.

4.1 Reciprocal constructions without antecedent

They are possible, but not with finite verbs. The most regular are infinitive constructions, e.g.:

- (20) *Kà jɔŋɔn kóniya, ò mán gèlen.*
 INF REC hate this QUAL.NEG difficult
 ‘To hate each other, it is not difficult.’

4.2 Reciprocals based on converse constructions

If A follows B and B follows A (constructions of types (1a) and (1b)) this does not result in a construction of type (1c), i.e. a construction ‘A and B follow each other’, because this sentence denotes that only one of the participants walks in front and the other behind him. In this case in the role of construction (1b) a converse verb is to be used: ‘A follows B’ and ‘B precedes A.’

- (21) *Sòlimadèn-w bé tɔgu jɔŋɔn kɔ.*
 newly.circumcised-PL IMPF follow REC behind
 ‘The newly circumcised follow one another.’
- (22) *Jùlá` yé finí-w sògolon jɔŋɔn kàn.*
 merchant.ART PFV cloth-PL pile REC upon
 ‘The merchant piled up clothes.’
- (23) *Mùsò` yé fílen misenmán-w ní bélebebeba-w bila jɔŋɔn kɔnɔ.*
 woman-ART PFV calabash small-PL and large-PL put REC in
 ‘A woman put large and small calabashes one into another.’

4.3 Type ‘Christians and Muslims killed each other’

In this case a large number of participants act either as agents or as patients each and thus they normally do not coincide (this meaning is incompatible with Punctive):

- (24) *Mànden-ká-w tòn bé jɔŋɔn mìné kà jɔŋɔn fèere.*
 Manding-people-PL PAST IMPF REC capture INF REC sell
 ‘(At that time) the inhabitants of Manding used to capture and to sell each other.’
- (25) *Fùla-w ní nùmú-w bé jɔŋɔn fúru sísàn, òká fɔlɔ nɛn tòn*
 Fulbe-PL and Numu-PL IMPF REC marry now but formerly this PAST
té ké.
 IMPF.NEG do
 ‘The Fulbe and the Numu (a caste of blacksmiths and wood carvers) intermarry now, but formerly this was impossible.’¹

4.4 Simultaneity and succession of actions

It seems that a reciprocal construction with *jɔŋɔn* does not add anything to the semantics of a verb with respect to simultaneity or succession of actions. Therefore, in the following sentences actions can be interpreted either as simultaneous or successive:

1. The verb *fúru* is not a lexical reciprocal; its precise meaning is ‘take as a wife’, therefore the subject and the direct object cannot interchange. This means that in the situation under consideration agents and patients cannot coincide referentially even in theory.

- (26) *Ū yé jógòn màfìlè.*
 they PFV REC look
 ‘They looked at each other’ (simultaneously or alternately).

Cf. also example (10b) in 3.1.3.

5. Means of expressing reciprocal arguments

The antecedent of the reciprocal pronoun can be either a single noun phrase or a two-noun phrase group; collective nouns (words like *jàmá* ‘people’, *síya* ‘ethnic group; race’, *dénbaya* ‘nuclear family’, *kèlebólo* ‘army’, *jèkúlu* ‘group’, *jàmakúlu* ‘team, association’, etc.) cannot normally be antecedent to a reciprocal (except some lexicalized cases, cf. (44b), where *jàmá* ‘crowd’ is such an antecedent). On reciprocal constructions without subject see 4.1.

5.1 A formally singular antecedent for reciprocals

It is possible when it is an inanimate noun. Two cases can be distinguished.

1. Formally singular collective nouns or nouns for objects composed of smaller objects can be antecedents of *jógòn* when used with verbs of conjunction and disjunction, cf. 7.

2. Names of twin (pair) body parts are often used in the singular with the dual meaning, especially in contexts where the semantic opposition “singular : dual” is neutralized. Such names, morphologically singular and semantically dual, can be used as antecedents of *jógòn* in object-oriented reciprocal constructions:

- (27) a. *À yé à bólo` dó jòosi dó lá.*
 he PFV his hand.ART one rub one with
 ‘He rubbed his hand against the other.’
 b. *À y’ á` bólo` jòosi jógòn ná.*
 he PFV his hand.ART rub REC with
 ‘He rubbed his hands together.’

This use seems forbidden in subject-oriented constructions:

- (28) a. *jíé-w té jógòn yé.*
 eye-PL IMPF.NEG REC see
 ‘Eyes don’t see each other’
 while b. **jíé` té jógòn yé.*
 eye.ART IMPF.NEG REC see
 (same intended meaning)

is ungrammatical.

5.2 Two-noun phrase subject

Only the coordinative link is possible in Bamana. The linking marker is the conjunction *ní* (the “heavy” form *àní* composed of 3SG *à* and *ní* is also possible) which is always placed between the members of a coordinative construction (cf. examples (21b), (33), etc.).

The second component of a coordinative construction cannot be moved to object position (or, for the object-oriented reciprocal – to the position of indirect/oblique object), and it cannot be linked to the first component by any other means but *ní/àní*.

5.3 One-noun phrase subject

The noun in subject position (or in the direct object position for object-oriented constructions) has the plural marker *-w* (phonemically *-ù*) (see (30), (34)...). The noun can be determined by a numeral; in this case, the plural marker is not added. It is also possible to add the determiner *bée* ‘all’. This determiner can combine with both previous expressions of the idea of plurality:

- (29) a. *Súругu-w / súругu fila / súругu filá` bée / súругu` bée / súругu-w bée*
 hyena-PL / hyena two / hyena two.ART all / hyena.ART all / hyena-PL all
dími-na jógon kórc.
 chafe-PFV REC under
 ‘Hyenas/two hyenas/both hyenas/all hyenas got angry with each other.’

(Some informants admit a semantic nuance distinguishing two latter examples: in the former, *súругu` bée*, all hyenas are meant, without any restriction; in the latter, *súругuw bée*, only a group of hyenas in question.)

If the antecedent of the reciprocal pronoun is a human collective noun with the determiner *bée*, the reciprocal action or relation holds among the members of this group (i.e., within the group), rather than between several groups (as one might expect, cf. Section 5):

- (30) *Dénbaya` bée bé jógon kànu.*
 family.ART all INC REC love
 ‘In the family, everybody loves one another’ (not: *All families love each other’).

5.4 Inanimate nouns as subjects

The ability of reciprocals to occur with inanimate nouns depends on their semantic compatibility:

- (31) a. *Bálansan` fàlen-na bànán` kèré` fê.*
 winter-thorn.ART sprout-PFV ceiba.ART side.ART by
 ‘A winter-thorn sprouted by a ceiba-tree.’
 b. *Bálansan` ní bànán` fàlen-na jógon kèré` fê.*
 winter-thorn.ART and ceiba.ART sprout-PFV REC side.ART by
 ‘A faidherbier and a ceiba sprouted side by side.’

There are also examples of inanimate collective and dual nouns as antecedents of reciprocal pronouns in Section 5.1.

6. The sociative adverbial phrase *ɲɔ́ɔn fɛ̀* ‘together’, lit. ‘with each other’

The sociative construction is derived from the reciprocal one through adding the postposition *fɛ̀* (with comitative meaning) to *ɲɔ́ɔn*.

6.1 Subject-oriented sociatives

Following is an example of this type of sociative:

- (32) a. *Fúla-w bé m̀sɪ́ ɡén ɲɔ́ɔn fɛ̀.*
 Fulbe-PL IMPF COW.ART drive REC COM
 ‘The Fulbe drive a cow together.’

6.2 Object-oriented sociatives

Compare:

- (32) b. *Fúla` bé m̀sɪ́-w ɡén ɲɔ́ɔn fɛ̀.*
 Pullo.ART IMPF COW-PL drive REC COM
 ‘A Pullo (sg of Fulbe) drives the cows together.’

6.3 Referential ambiguity

It occurs when both subject and direct object are plural nouns or pronouns:

- (33) *Fúla-w bé m̀sɪ́-w ɡén ɲɔ́ɔn fɛ̀.*
 ‘Fulbe, *being together*, drive cows’, or ‘Fulbe drive cows (keeping them) *together*’, or even
 ‘Fulbe, *being together*, drive cows *together*.’

Some informants, however, prefer the first of these readings – they seem to give preponderance to the actant which has the highest agentive characteristics.

When necessary, referential conflict can be resolved by introducing a phrase with the verb *tó* ‘to leave’:

- (34) *Pɔ́ɔsɪ́-w yé án ná-bɔ́ k' án tó ɲɔ́ɔn fɛ̀.*
 policeman-PL PFV US CAUS-turn.out INF US leave REC COM
 ‘Policemen turned us out (keeping us) together.’

Another means of avoiding referential ambiguity is moving the sociative group to the position immediately after the subject:

- (35) *Pòlɔsí-w jɔ́gɔn fɛ́ y' án ná-bɔ́.*
 policeman-PL REC COM PFV US CAUS-turn.out
 ‘Policemen (being) together turned us out.’

Placement in this position is impossible for either indirect or oblique objects. This is additional evidence that in Bamana the group *jɔ́gɔn fɛ́* is losing the status of an oblique object and functions as a lexicalized adverbial phrase.

There seem to be no particular restrictions on combinability of the sociative group with particular verbs, excepting trivial limitations related to semantics.

7. Verbs of conjunction and disjunction

The main peculiarity of these verbs in Bamana is their ability to combine with formally singular nouns with a collective meaning co-referential to the reciprocal pronoun. They can be:

1. Subject-oriented intransitive:

- (36) *Dùgukólo in té jɔ́gɔn mìnɛ.*
 soil this IMPF.NEG REC catch
 ‘This soil does not stick together.’

2. Object-oriented transitive:

- (37) *À yé kùrú` bɔ́ jɔ́gɔn ná.*
 he PFV knot.ART get.out REC from
 ‘He has untied a knot.’
- (38) *À yé bín` bɔ́ jɔ́gɔn ná.*
 he PFV grass.ART get.out REC from
 ‘He has moved grass apart.’

3. Adjunct-oriented introvert:

- (39) *Wò misennin cáman bé bɔ́gɔ-kuru misen` ní jɔ́gɔn cé.*
 hole small numerous IMPF clay-clod small.ART and REC between
 ‘There are many small chinks between small clods of clay’ (Dumestre 1981–92: 158).

See also Sections 8.1.1.3 and 8.2.

8. Lexical reciprocals

These are not numerous in Bamana; they form a distinct syntactic class and therefore deserve special consideration. They all can be used in reciprocal meaning both with or without *jɔ́gɔn*, these uses being more or less different in meaning.

8.1 Subject-oriented lexical reciprocals

8.1.1 “Canonical” reciprocals

8.1.1.1 *Two-place transitives*. I am aware of at least four verbs of this type: *kèlé* ‘to fight’, ‘to quarrel’, *bě́n* ‘to meet’, *bàró* ‘to converse’, and *kǔnbě́n* ‘to meet’. In fact, all these do not represent a pure case, the passage from non-reciprocal to reciprocal form involving semantic shifts. These verbs can be employed in the following ways.

1. As intransitives, with a plural subject, in the reciprocal sense:

- (40) a. *Kɔ́nɔ́-w ní sògò-w kèlé-la.*
bird-PL and animal-PL fight-PFV
‘The birds and the animals quarrelled/fought/started a war against each other.’
- (41) a. *Jùlá` ní nsòn` bèn-na.*
merchant.ART and thief.ART meet-PFV
‘The merchant and the thief met/got reconciled.’
- (42) a. *Fàamá` ní jèliké` bàro-la.*
ruler-ART and griot.ART converse-PFV
‘The ruler and the griot (casted bard) talked.’

2. As transitives, with a plural subject and *ɲɔ́gɔ́n* as a direct object (the meaning of a verb in (b) can be broader or narrower than in (a)):

- (40) b. *Kɔ́nɔ́-w ní sògò-w yé ɲɔ́gɔ́n kèlé.*
bird-PL and animal-PL PFV REC fight
‘The birds and the animals quarrelled.’
- (41) b. *Jùlá` ní nsòn` yé ɲɔ́gɔ́n bèn.*
merchant.ART and thief.ART PFV REC meet
‘The merchant and the thief met.’
- (42) b. *Fàamá` ní jèliké` yé ɲɔ́gɔ́n bàro.*
ruler.ART and griot.ART PFV REC talk
‘The ruler and the griot talked.’

3. As transitives, with the first argument in subject position and the second argument as a direct object. The participants are no more regarded as equal; one of them is demoted and assumes the semantic role of patient, this resulting in a modification of the semantic structure of the verb. For all the verbs under consideration, transformation “a → c” is associated with a more or less considerable semantic shift:

- (40) c. *Kɔ́nɔ́-w yé sògò-w kèlé.*
bird-PL PFV animal-PL fight
i. ‘The birds launched a war against the animals.’
ii. ‘The birds fought down the animals.’
- (41) c. *Jùlá` yé nsòn` bèn.*
merchant.ART PFV thief.ART meet
‘The merchant met (= blocked the road to) the thief.’

- (42) c. *Jèliké` bɛ fâamá` bàro.*
 griot.ART IMPF ruler.ART talk
 ‘The griot entertains the ruler with conversation’ (this use of *bàró* is considered by many speakers as lofty and rare, and some others contest it).

4. As intransitives with a passive meaning (in the case of plural subject, there is syntactic homonymy with (a)):

- (40) d. *Sògó-w kèlɛ-la.*
 animal-PL fight-PFV
 ‘The animals were fought down.’
- (41) d. *Nsòɲ-w bèn-na.*
 thief-PL meet-PFV
 ‘The thieves were met, the thieves’ road was blocked.’

From the intransitive reciprocal uses (type 1), causative derivation (with or without morphological marking, depending on the verb) is possible which transforms the form into the object-oriented variant of the “canonical” type:

- (40) a. *Kɔ̀nɔ̀-w ní sògó-w kèlɛ-la.*
 bird-PL and animal-PL fight-PFV
 ‘The birds and the animals fought/quarreled/started a war against each other.’
- e. *Ntálén` yé kɔ̀nɔ̀-w ní sògó-w lá-kèlɛ.*
 spider.ART PFV bird-PL and animal-PL CAUS-fight
 ‘The Spider sowed dissension between birds and animals, impelled them to quarrel.’

Close to this type of lexical reciprocals are formal reflexives expressing reciprocal meanings (see Section 11).

8.1.1.2 *Two-place intransitives.* Here belong *kúma* ‘to talk’, *bɔ́* ‘to resemble’, *jě* ‘to copulate’. They can express one and the same referential situation in the following ways:

1. S1 + S2 = Subject, no Indirect Object:

- (43) a. *Dònsoké` ní bilisî` kúma-na.*
 hunter.ART and devil.ART speak-PFV
 ‘The hunter and the devil had a chat.’

(the same meaning as in 2; however, the meaning of plural action is also possible: ‘The hunter and the devil spoke’ – e.g., before a crowd, etc.).

2. S1 + S2 = Subject, *ɲóɲɲ* = Indirect Object:

- b. *Dònsoké` ní bilisî` kúma-na ɲóɲɲ fɛ̃.*
 hunter.ART and devil.ART talk-PFV REC with
 ‘The hunter and the devil had a chat.’

3. S1 = Subject, S2 = Indirect Object:

- c. *Dònsoké` kúma-na bilisî` fɛ̃.*
 hunter.ART speak-PFV devil.ART with
 ‘The hunter spoke with the devil.’

Examples with other verbs:

- (44) a. *Nsònsán` ní fálí` bɔ́-len bé.*
hare.ART and donkey.ART resemble-PART be
'The hare and the donkey resemble each other.'

(Unlike analogous constructions with other verbs, this sentence cannot be understood as elliptic: *'The hare and the donkey resemble somebody'.)

- b. *Nsònsán` ní fálí` bɔ́-len bé jɔ́gn fɛ́.*
hare.ART and donkey.ART resemble-PART be REC with
(the same meaning as in (a)).
- c. *Nsònsán` bɔ́-len bé fálí` fɛ́, ñká à dén té.*
hare.ART similar-PART is donkey.ART to but its child not
'A hare resembles a donkey, but it is not its child.'
- (45) a. *Kámalen` ní jínɛ-den` jè-ra.*
youth.ART and spirit-child.ART copulate-PFV
'The youth and the wood-spirit girl copulated.'²
- b. *Kámalen` ní jínɛden` jè-ra jɔ́gn fɛ́.*
youth.ART and wood.spirit.girl.ART copulate-PFV REC with
'The youth and the wood-spirit girl copulated.'
- c. *Kámalen` jèra jínɛden` fɛ́.*
youth.ART copulate-PFV spirit.child.ART with
'The youth copulated with a wood-spirit girl.'³

8.1.1.3 Intransitives with a predicative complement (infinitive). Some verbs denoting junction and disjunction express their reciprocal meaning in two ways:

2. In its other meaning, this verb functions at the same time as a two-place transitive reciprocal and a two-place intransitive reciprocal:

- a. *Màraká-w jè-ra fúla-w fɛ́.*
Soninke-PL unite-PFV Fulbe-PL with
'Soninke united with Fulbe', 'Soninke joined Fulbe.'
- b. *Màraká-w ní fúla-w jè-ra jɔ́gn fɛ́.*
Soninke-PL and Fulbe-PL unite-PFV REC with
'Soninke and Fulbe united, formed a union.'
- c. *Màraká-w ní fúla-w jè-ra.*
Soninke-PL and Fulbe-PL unite-PFV
(the same meaning as in (b)).
- d. *Màraká-w ní fúla-w yé jɔ́gn jè.*
Soninke-PL and Fulbe-PL PFV REC unite
(the same meaning as in (b)).

3. Both uses (b) and (c) of this verb are rare. In both of these sentences, the postposition *fɛ́* constitutes an idiomatic construction with the verb, and in these cases *jɔ́gn fɛ́* does not mean 'together'.

1. In an intransitive one-place construction:

- (46) a. *Jámá` jénsen-na.*
 crowd.ART disperse-PFV
 ‘The crowd dispersed.’

2. In an intransitive construction complemented by the infinitive of verbs *bó jógɔn ná* ‘to separate from each other’ (for disjunction) and *fàra jógɔn kǎn* ‘to add to each other’ (for junction):

- b. *Jámá` jénsen-na kà bó jógɔn ná.*
 crowd.ART disperse-PFV INF exit REC from
 (the same meaning; *ù jénsenna jógɔn ná is ungrammatical).

8.1.2 Three-place subject-oriented “indirect” lexical reciprocal

I am aware of only one lexical reciprocal of this type:

- (47) a. *Jùlá` yé màrifá` fàlén dònsoké` mà.*
 merchant PFV gun.ART replace hunter.ART to
 ‘The merchant replaced the hunter’s gun,’ ‘... replaced a gun for the hunter.’
- b. *Jùlá` ní dònsoké` yé màrifá-w fàlén jógɔn mà.*
 merchant.ART and hunter.ART PFV gun-PL exchange REC to
 ‘The merchant and the hunter exchanged (their) guns’ (the merchant gave his gun to the hunter, and the hunter gave his gun to the merchant).
- c. *Jùlá` ní dònsoké` yé màrifá-w fàlén.*
 merchant.ART and hunter.ART PFV gun-PL exchange
 (the same meaning; non-reciprocal reading also possible: ‘The merchant and the hunter changed their guns,’ i.e. put away their old guns and bought new ones).

8.2 Object-oriented lexical reciprocals: Verbs of conjunction and disjunction

They may or may not have an indirect object – *jógɔn* with the postposition *lá/ná*. When this indirect object is absent, a non-reciprocal interpretation is also possible:

- (48) a. *Jí` yé sében-fura-w nórɔ̀ dènén` ná.*
 water.ART PFV paper-sheet-PL glue wall.ART to
 ‘Water glued the sheets of paper to the wall.’
- b. *Jí` yé sében-fura-w nórɔ̀.*
 water.ART PFV paper.sheet-PL glue
 i. ‘Water glued the sheets of paper together.’
 ii. ‘Water glued sheets of paper (to sth)’ (non-reciprocal meaning; in this case, the utterance can be considered as an elliptic variant of (57a)).
- c. *Jí` yé sében-fura-w nórɔ̀ jógɔn ná.*
 water.ART PFV paper.sheet-PL glue REC to
 ‘Water glued the sheets together.’
- (49) a. *Kèlédén` yé jǎn` bólo-w siri jírí` lá.*
 warrior.ART PFV slave.ART hand-PL tie tree.ART to
 ‘The warrior tied the slave’s hands to the tree.’

- b. *Kèledén` yé jǎn` bólo-w siri.*
 warrior.ART PFV slave.ART hand-PL tie
 i. ‘The warrior tied the slave’s hands together.’
 ii. ‘The warrior tied the slave’s hands (to something).’
 (non-reciprocal meaning, elliptical variant of (49a)).
- c. *Kèledén` yé jǎn` bólo-w siri jǎgɔn ná.*
 warrior.ART PFV slave.ART hand-PL tie REC to
 ‘The warrior tied the slave’s hands together.’

8.3 Expression of equality

In Bamana there is one reciprocal predicative adjective, *kán* ‘to be equal, identical’. Its subject is necessarily plural:

- (50) a. *Ū bée ká kán.*
 they all EQT equal
 ‘They all are the same.’

Most often, if the participants of a referential situation have the same agentive status, an indirect object is added to indicate in what equality manifests itself:

- b. *Ū ká kán bòlí` lá.*
 they EQT equal race.ART in
 ‘They are equal in race.’

Bòlí can be replaced by any other word or noun group indicating a quality or a type of activity: *kèlé* ‘warfare’, *sèné* ‘farming’, *kúlun dílanni* ‘manufacturing of pirogues’, *hákili-ntanya* ‘brainlessness’, *kèkuyá* ‘ruse’, *sèndunyá* ‘bow-leggedness’...

9. Substantivization of the reciprocal marker

jǎgɔn can be a component of substantivized complexes. The underlying verbal construction may have *jǎgɔn* as a direct or indirect object. Productivity of these types of substantivization is limited:

- (51) a. *kà jǎgɔn yé*
 INF REC see
 ‘to see each other.’
 b. *jǎgɔnye* ‘meeting; conversation, intercourse.’
- (52) a. *kà yéle jǎgɔn ná*
 INF mock REC at
 ‘to mock each other.’
 b. *yélejɔgɔnna* ‘mutual mockery.’
- (53) a. *kà fɔ́ jǎgɔn kɔ́*
 INF gainsay REC behind
 ‘to contradict each other.’
 b. *fɔ́jǎgɔnkɔ́* ‘contradictions; conflict.’

ɲɔŋɔn can be sometimes combined with the stems of lexical reciprocal verbs which normally do not accept it in the underlying verbal construction:

- (54) a. *Sě̀kù ní à mùsò` bé bèn.*
 S. and his wife.ART INC get.on.with.each.other
 ‘Seku and his wife live in peace/get on with each other.’

(Sentences (54b) or (54c) with the same intended meaning are ungrammatical.)

- (54) b. **Sě̀kù ní à mùsò` yé ɲɔŋɔn bèn*
 S. and his wife.ART PFV REC meet
 c. **Sě̀kù ní à mùsò` bèn-na ɲɔŋɔn kàn*
 S. and his wife.ART meet-RFV REC ON
 d. *bèn-ɲɔŋɔn-yá* <meet-REC-SUFF> ‘mutual understanding, (intimate) friendship.’

10. The reciprocal marker as a nominal derivational suffix

10.1 Suffix *-ɲɔŋɔn* in deverbal derivation

It regularly functions as a word-forming suffix when added to (intransitive) verbal stems or combinations “direct object + (transitive) verbal stem”. The meaning of the derivative is: “[somebody’s (explicit marking is necessary)] companion/partner in the activity in question”, or, necessarily with the plural marker, “[group of] companions in the activity in question”. There seem to be no restrictions on this type of derivation, except semantic compatibility:

- (55) a. *Ń bé sɨgí à fɛ̃.*
 I IMPF live he by
 ‘I live near him.’
 b. *à sɨgi-ɲɔŋɔn`* ‘his neighbour’
 c. *sɨgi-ɲɔŋɔn-w* ‘neighbours.’
- (56) a. *kà dɔ̀lɔ` mɨn*
 INF beer.ART drink
 ‘to drink beer’
 b. *í dɔ̀lɔ-min-ɲɔŋɔn`* ‘your carouse-mate, revel-mate’
 c. *dɔ̀lɔ-min-ɲɔŋɔn-w* ‘revel-mates, companions in carousing.’
- (57) a. *kà jě* ‘to unite, join together’
 b. *í jě-ɲɔŋɔn`* ‘your friend.’
- (58) a. *kà bɔ̀lí* ‘to run’
 b. *í bɔ̀li-ɲɔŋɔn`* ‘your companion in escape.’
- (59) a. *kà ɲɔ̀ sònyé*
 INF millet.ART steal
 ‘to steal millet’
 b. *í ɲɔ̀-sonye-ɲɔŋɔn`* ‘your companion in stealing millet.’

10.2 Suffix *-jɔgɔn* on nominal stems

There are also at least four examples of *-jɔgɔn* with noun stems; in two cases the derivatives designate members of traditional social groups:

- (60) a. *tɔn* ‘group, association of unmarried young men’ (new meaning: ‘political party’)
 b. *ni tɔn-jɔgɔn* ‘my companion in youth association.’

In the second case, the meaning of the base word and derivative is virtually the same:

- (61) a. *filanin* ‘member of the same age-group (in relation to sb – explicit marking is necessary), initiated simultaneously; (sb’s) age-mate’
 b. *a filannin-jɔgɔn* ‘his/her age-mate, companion by initiation’.

The third case is yet to be verified for the exact meaning and acceptability by other Bamana-speakers; it is as follows:

- (62) a. *i bá* ‘your mother’ (in classificatory meaning)
 b. *i bá-jɔgɔn* ‘your mother’s age-mate.’

11. Reflexive verbs with the reciprocal meaning

In specialist publications there is an opinion that among the meanings of the Bamana reflexive verbs, reciprocal is absent (see Koné 1984). In fact, it is not quite true: there are two cases of reflexives with the reciprocal meaning, *másala* ‘to chat’ and *kòbí* ‘to make love’ (a mild term). However, neither of them is indisputable:

- (63) a. *Jèliké` bé fàamá` másala.*
 griot.ART IMPF ruler.ART entertain.with.chat
 ‘The griot entertains the ruler with a chat.’
 a’. ^(?)*Fàamá` bé jèliké` másala.*
 ruler.ART IMPF griot.ART talk
 ‘The ruler entertains the griot with a chat.’
 b. *Jèliké` ní fàamá` b’ ù másala.*
 griot.ART and ruler.ART IMPF REFL chat
 ‘The griot and the ruler chat.’

Though grammatically correct, sentence (63a’) is hardly acceptable for pragmatic reasons: in Bamana society, a situation when a ruler entertains a griot with conversation is hardly imaginable; in the situation *X bé Y másala*, roles X and Y are normally fixed and not interchangeable (it should also be mentioned that the transitive use of *másala* is rare and confined to poetic style).

As for the verb *kòbí* ‘to make love’, interchangeability of participants of the underlying transitive construction is absolutely excluded: a noun for the man necessarily fills the role of subject, and that for the woman is the direct object, and not *vice versa*.

The reciprocal meaning of the construction can be confirmed by adding *jɔgɔn* as an indirect object:

- (64) *Áwà ní Fónbà y' ù kòbi [jǒḡn ná].*
 A. and F. PFV REFL make.love REC to
 'Awa (she) and Fomba (he) made love [to each other].'

Note that both of these verbs have the same reciprocal meaning when used as intransitives; i.e., they are lexical reciprocals in both intransitive and reflexive uses.

There are two or three similar cases of “formal reflexives – lexical reciprocals”: *kóḡḡn* ‘to quarrel’, *kómayèlemá* ‘to fall out with sb, separate in quarrel’, *kála* rare ‘to get reconciled’. They have the same meaning in intransitive and reflexive uses each, which can be considered as anticausative in relation to the transitive.

12. Terms of reciprocal relationship with the suffix *-ma*

There is a morphological procedure for expressing the ornative meaning within the nominal system, viz. the suffix *-ma*. It forms denominal adjectives with the meaning ‘supplied with the quality in question’, ‘equipped with the object in question’, ‘containing the object or the matter in question’:

- (65) a. *kǒḡḡ* ‘salt’
 b. *jéḡe kǒḡḡ-má* ‘salt fish.’
 (66) a. *ḡǒni* ‘thorn’
 b. *jíri ḡǒni-ma* ‘thorny plant.’

When added to “reciprocal” kinship terms and terms for mutual relation partners (such as *téri* ‘friend’), *-ma* has the reciprocal meaning and stresses the mutual character of the relationship (it is glossed as R). In fact, *-ma* is redundant, because the reciprocal meaning is contained in the semantics of all these nouns; it can be compared with an optional noun class marker:

- (67) a. *í báden`* ‘your brother’ (by the same mother)
 b. *í báden-ma`* (the same meaning).

Báden is composed of two words, *bá* ‘mother’ and *dén* ‘child’. There is a less current synonym of *báden*, *bákelen* (*bá* ‘mother’ + *kélen* ‘one’) which can also take the reciprocal *ma*: *í bákelen` => í bákelen-ma`*.

- (68) a. *né sànkún`* ‘my partner in joking relations’
 b. *né sànkun-má`* (the same meaning).

Just like derivatives with *-jǒḡn* (see 10.1), those with the reciprocal *-ma* are normally employed in the plural (referring to a pair/group of persons connected by the relation in question) or within a determinative phrase with a determinant designating the partner in relation:

- (69) a. *sìnamuso-má-w* ‘co-wives, wives of one man’ (in a polygamous family)
 b. *í bá` sìnamuso-má`* ‘your mother’s co-wife, the other wife of your father.’

Some of these derivatives seem to be employed in the plural only. Therefore, it is possible to say *sínji-maw* ‘relatives by mother’⁴ (in relation to each other), but not **ń sínji-ma* ‘my relative by mother’. On the other hand, the use of some other terms (analogous to the derivatives with *-jɔ̀gɔ̀n*) is also attested:

- (70) *À ní Bákari Kúlibali yé térima` yé.*
 he and B. K. EQT friend.ART like
 ‘He and Bakari Kulibali are friends.’

Derivation with the reciprocal *-ma* is lexicalized and no longer automatic. Some terms for partners in mutual relations cannot take it, e.g. *júgu* ‘enemy’ – **júgumaw* ‘enemies (to each other)’.

On the other hand, the reciprocal *-ma* can be added to any derivative with *-jɔ̀gɔ̀n* without any noticeable modification of its meaning:

- (71) a. *À ní Táraore bé shɔ̀` dún jɔ̀gɔ̀n fɛ.*
 he and T. IMPF haricot.ART eat REC with
 ‘He and Traore eat haricot together.’
 b. *shɔ̀-dun-jɔ̀gɔ̀n* ‘companion in eating haricot.’
 c. *shɔ̀-dun-jɔ̀gɔ̀n-má* ‘companion in eating haricot.’

A special case is the form *tɔ̀gɔ̀ma* ‘namesake’: it appears to be a lexicalized derivative from *tɔ̀gɔ̀* ‘noun’ with *-ma* in its ornative meaning: *í tɔ̀gɔ̀-ma* ‘the person with the same name as you’, ‘your namesake’. When designating a term of “symmetrical” relation, it takes on a second *-ma*, this time in its reciprocal meaning: *í tɔ̀gɔ̀-ma-ma* (the same meaning).

Further evolution of its meaning is demonstrated by Mandinka, where the suffix *-maa* has lost the reciprocal meaning; and it can be added, it seems, to any kinship term, cf.: *báamaa* (= *báa*) ‘mother’, *kótomaa* (= *kóto*) ‘elder sibling’, etc.

13. Etymology of the reciprocal marker. Its cognates in genetically related languages

There are no direct data on the etymology of this word. In Bamana it has however a quasi-homonym (with a different tone) *jɔ̀gɔ̀n* ‘similar, like’:

- (72) a. *Án má nín jɔ̀gɔ̀n yé fɛlɔ̀.*
 we PFV.NEG this like see yet
 ‘We have never seen anything like this.’

The relatedness of both meanings is obvious (in some languages these can be different meanings of one lexeme), however, evidence against the derivation of *jɔ̀gɔ̀n* from *jɔ̀gɔ̀n* can be found in the corresponding forms in the closely related Mandinka language: *jóo* ‘each other’ and *jòɲ* ‘similar, like’, where the final nasal element strengthens the divergence between the two words.

4. *Sínji* means ‘mother’s milk’, lit. ‘liquid of breast.’

It is noteworthy that in Guinean Maninka (a language closely related to Bamana) the reciprocal marker *ɲɔɲ* can be accompanied by a reflexive pronoun:

- (73) a. *Jàdá` ní sùluku` báda í ɲɔɲ` máfêle.*
 lion.ART and hyena.ART PFV REFL REC look
 ‘The lion and the hyena looked at each other.’

Outside the Manding branch, this marker is attested in Vai (*ɲɔɲ*), Jeri (*ɲɔɲ*), in one of Looma dialects (*ɲɔɲ*) and in Mende (*ɲɔɲɲɔ*); in both latter languages it seems to be borrowed from Manding.

1. Introduction

1.1 Vietnamese

Vietnamese (autonym *tiếng Việt*) is spoken in Vietnam (Socialist Republic of Vietnam) and Vietnamese communities in the USA, France, Laos, Cambodia, China and elsewhere. It is the mother tongue of at least 84 million people.

Vietnamese belongs to the Viet-Muong branch of the Mon-Khmer stock within the Austro-Asiatic family. It had ancient contacts with the Thai-Kadai family and with (genetically unrelated) Chinese. The great civilisation of China exerted a strong influence on Vietnam. Chinese (*Wényán*) served as a language of cultural elite for over a thousand years until the 20th century. As a result, Vietnamese vocabulary has a great number of Chinese loans.

Contemporary Vietnamese is a (mono)syllabic language, with one-to-one syllable – morpheme correspondences prevailing in system and usage. It is a typical isolating (strongly syntactic) language, which is to say there is no inflection, no morphology (excepting reduplication and compounding). Thus, *trộm cướp* may mean (i) ‘to steal and rob’, (ii) ‘stealing and robbery’, (iii) ‘thief/thieves and robber(s)’ (see, for instance, Nguyễn 1987:777–82; 1997:1–16).

1.2 Overview

The reciprocal meaning is expressed in Vietnamese by the pronoun *nhau* ‘each other’, ‘one another’ (in Nguyễn’s terminology ‘reciprocal substitute’; 1997:137). It has the syntactic functions of a noun: it may be an object (direct and indirect), an adverbial or an attribute. It cannot occur as subject. As an indirect (or oblique) object or adverbial, *nhau* may be combined with prepositions and adverbs. The reciprocal marker does not change verb

valency. It is a means of presenting two events in a more concise way, i.e. roughly speaking (1c) summarizes the denotative content of (1a) and (1b), by way of ignoring some pragmatic and subtle semantic differences (which in themselves deserve special attention).

- (1) a. *Lan yêu Hồng.* 'Lan loves Hong.'
 b. *Hồng yêu Lan.* 'Hong loves Lan.'
 c. *Lan và Hồng yêu nhau.* 'Lan and Hong love each other.'
- (2) a. *Lan khổ vì Hồng.*
 'Lan suffers because of Hong.'
 b. *Lan và Hồng khổ vì nhau.*
 'Lan and Hong suffer because of each other.'

Vietnamese has all the diathesis types of reciprocal constructions. There are no non-trivial restrictions on the use of the reciprocal marker. One can observe some interesting deviations from the reciprocal meaning proper. The discontinuous reciprocal construction occurs with lexical reciprocals only. The reciprocal marker does not express the sociative meaning if used alone. This meaning is expressed by a combination of the reciprocal marker *nhau* with the comitative preposition *với* 'with', viz. the phrase *với nhau* 'together', lit. 'with each other'. This type of sociative expression is typologically rather common.

2. Grammatical notes

2.1 Tonal system

Vietnamese has six tones which differ in relative height, contour of pitch and in glottal structure. Tone is a permanent characteristic of each syllable. A difference in toneme typically signals a difference in meaning; cf.: *ma* (tone ngang) 'ghost', *mà* (tone huyền) 'but', *má* (tone sắc) 'cheek', *mã* (tone ngã) 'horse', *mạ* (tone nặng) 'rice seedling', *mả* (tone hỏ i) 'tomb'.

2.2 Word structure

Traditionally, each syllable is regarded as a word in Vietnamese. In fact, a great number of Vietnamese words, especially in colloquial speech, are monosyllabic. This gives grounds to distinguish them as special basic units – syllabic words (word-morphemes) or syllabic morphemes, which may take part in grammatical processes, whatever their meaning or absence of any (Kasevich 1988: 171–8). But in literary Vietnamese, there are a great many polysyllabic (mostly disyllabic) units which are regarded as words or bound complexes of words, i.e. idioms. Thus words can be *simple* (monosyllabic and disyllabic reduplicative), *complex* (comprised of one or more bound morphemes and one free morpheme), and *compound* (comprised of two or more free morphemes) The formal characteristics of compounds are not quite clear, and it is not often easy to distinguish between a compound and a phrase (Thompson 1965: 116–21).

In the examples below, the morphemes comprising a compound or a complex word, are linked by the symbol “+”; to make it reader-friendly.

2.3 Word classes

Two major classes of “full” (notional) words are distinguished: nouns and predicatives. The latter include verbs and adjectives (also termed stative verbs and verbs of quality). The following classes of function (‘empty’) words are singled out according to syntactic criteria: numerals, locatives, determinatives, and particles. A peculiar feature of the Vietnamese lexicon is the class of word-substitutes (for nouns as well as for predicatives). The class of pronouns is undeveloped: in fact, terms of kinship are mostly used in place of personal pronouns, e.g. alongside *tôi* ‘I’ (also ‘servant’) used by adults over twenty the words *con* ‘I’ (a son about himself, and also ‘you’ when used by parents to address their son; also ‘child’), *em* ‘I’ (when a younger person addresses an older person or a wife addresses her husband; and also ‘you’ when an older person addresses a younger one or a husband addresses his wife; its proper meaning is ‘younger brother’ and ‘younger sister’) and some other terms are in use. Compare also *họ* meaning ‘they’ and ‘family’ (Thompson 1965:293–306, 248–53).

2.4 Sentence structure. Possessivity

Word order in Vietnamese is fixed: SVO. A direct object usually precedes an indirect object. An adverbial may take two basic positions: sentence-initial and sentence-final. Modifiers normally follow the head noun. A preposition is always preposed to the noun.

Possessivity is expressed by possessive modifiers in post-position to the head noun and by the preposition *của* lit. ‘thing, belongings’ preceding the modifier (cf. (22), (23)).

Coordination is expressed by conjunctives and by juxtaposition without a conjunctive (cf. (9), (10)).

2.5 Tense/aspect markers

In Vietnamese, tense mostly has no specific markers. A sentence without a tense marker refers to the basic time of the context. Tense/aspect markers indicate or emphasize a situation obtaining at a time different from this basic time. They are pre-posed to the verb.

The marker *đã* shows that an action or state began before the basic time of discourse and the results are to be seen at the time of discourse (cf. *Lan đã đi* ‘Lan went away/is going now’). This word also means ‘already’ (cf. *đã trưa* ‘(it is) already noon’) and ‘to finish, to end’. The marker *sẽ* ‘subsequent’ identifies an action or state as unrealized or subsequent to the basic time (cf. *Lan sẽ đi* ‘Lan will go’). The marker *đang* ‘during, while’ refers to an action or state to the basic time or the moment of utterance; etc.

2.6 Verb classes

According to their valency, verbs are divided into the following classes.

1. One-place intransitives, e.g. *chạy* ‘to run’, *ngủ* ‘to rest’, *bơi* ‘to swim’, *đi* ‘to go’, *cười* ‘to laugh’, etc.; cf.: *Lan khóc* ‘Lan cries’.

2. Two-place intransitives (with prepositionless locative nouns), e.g. *lên* ‘to rise’, *xuống* ‘to descend’, *ra* ‘to go out’, *vào* ‘to go into’, etc.; cf. *Lan vào phòng* ‘Lan goes into the room’.

3. Two-place intransitives (with prepositional objects), e.g. *đồng+y (với)* ‘to agree (with)’; cf.: *Lan đồng+y với An* ‘Lan agrees with An’.

4. Two-place transitives, e.g. *xây* ‘to build’, *đọc* ‘to read’, *nấu* ‘to cook’, *may* ‘to sew’, *ghét* ‘to hate’, etc.; cf. (1a).

5. Three-place transitives which fall at least into three subclasses:

(a) ditransitives like *cho* ‘to give’, *đút* ‘to give/shove’, *vay* ‘to borrow’, *mượn* ‘to lend’, etc.; cf.: *Lan gửi An tiền* ‘Lan sends An money’;

(b) lexical reciprocals like *nối* ‘to connect’, *kết+hợp* ‘to combine’, *so+sánh* ‘to compare’, *đôi+lập* ‘to contrast’, *phân+biệt* ‘to distinguish’, *trộn* ‘to mix’; cf.: *Lan trộn bột và / với đường* ‘Lan mixes meal and/with sugar’;

(c) verbs denoting moving an object to its goal or destination, e.g. *rưới* ‘to pour’, *pha* ‘to dissolve’, *thêm* ‘to add’; cf.: *Lan rưới nước vào gạo* ‘Lan pours water into rice’.

2.7 Ways of expressing the meanings: Reflexive, reciprocal, comitative, sociative, and benefactive

1. The *reflexive* meaning is expressed by the pronoun *minh* ‘self’, ‘oneself, myself, yourself, ...’ in object position; sometimes it may co-occur with the reflexive pronoun *tự* ‘self’, ‘oneself, myself, yourself ...’ (Chinese loan) pre-posed to the verb; cf.:

- (3) a. *Lan bảo+vệ Hồng.*
‘Lan defends Hong.’
b. *Lan tự bảo+vệ mình.*
Lan herself defend herself
‘Lan defends herself.’

2. As has already been mentioned, the *reciprocal* meaning is expressed by the pronoun *nhau* ‘each other’ in place of an object, or an adverbial, or an attribute (see (1) and (2)). Sometimes, the word *lẫn* i. ‘mutually’, ii. ‘together’ (descending from the verb *lẫn* ‘to mix’, ‘to confuse’), is added in pre-position to *nhau* to stress the meaning of reciprocity. Restrictions on combinability of *nhau* with *lẫn* are not quite clear. Thus, the phrases *đạy lẫn nhau* ‘to teach each other’ and *giúp+đỡ lẫn nhau* ‘to help each other’ are grammatical while *yêu lẫn nhau* ‘to love each other’ is not.

3. The *comitative* meaning is expressed by the preposition *với* ‘with’, ‘in company of’ or by the preposition *cùng* ‘together’, ‘in company of’ alone or with *với* ‘with’ (other meanings of *với* are ‘address’ and ‘instrument’):

- (4) *Lan đi+chơi với/cùng/cùng với An.* ‘Lan strolls with An.’

4. The *sociative* meaning is rendered by a combination of the above mentioned comitative markers with the reciprocal marker *nhau* ‘each other’:

- (5) *Lan và An đi+chơi với nhau/cùng nhau/cùng với nhau.*
 ‘Lan and An stroll together.’

5. The *benefactive* meaning is expressed by the preposition-verbs *cho* ‘for’, ‘to give’ and *hộ* ‘for’, ‘to help’ both post-posed to the predicate:

- (6) *Lan làm việc này cho Hồng.* ‘Lan does this work for Hong.’

2.8 Derived constructions with two predicates

Here belong causative and passive constructions.

1. Causative constructions are formed with the help of a causative verb pre-posed to the main verb:

- (7) a. *Lan nghỉ.* ‘Lan takes a rest.’
 b. *Hồng bắt Lan nghỉ.* ‘Hong compels Lan to take a rest.’

2. Passive constructions are formed with the help of the passive verbs *bị* and *phải* both meaning ‘to suffer, undergo’ (for negative actions), and *được* ‘to receive, get, obtain’ (for positive actions):

- (8) a. *Lan đánh Hồng.*
 ‘Lan beats Hong.’
 b. *Hồng bị Lan đánh.*
 Hong suffer Lan beat
 ‘Hong is beaten by Lan.’

(See also Nguyễn 1987: 782–96; Bystrov et al. 1975; Bystrov & Stankevich 1981: 103–14.)

3. Means of expressing reciprocal arguments

3.1 Simple reciprocal constructions

In this type of constructions, both reciprocal arguments are in subject position. The plural subject is expressed in the same ways as with non-reciprocal verbs. It can be expressed by one word (e.g. *họ* ‘they’), and by two or more words. In the latter case both arguments can be connected by juxtaposition or by the coordinative link *và* ‘and’:

- (9) *Lan Hồng (Lan và Hồng) đánh nhau.* ‘Lan and Hong fight’

and by the comitative links *với*, *cùng*, or *cùng với*, i.e. by the same means as a comitative object or adverbial (see (4)):

- (10) *Lan với /cùng/cùng với Hồng đánh nhau.* lit. ‘Lan together with Hong fight.’

3.2 Discontinuous reciprocal constructions

It is lexical reciprocals only that may occur in this type of constructions, which may serve as underlying constructions for those with the pronoun *nhau* (see Section 6). Depending on the verb valency, the second reciprocal argument can be expressed by a direct object:

- (11) a. *An và Hồng gặp nhau.* 'An and Hong met.'
 b. *An gặp Hồng.* 'An met Hong.'

or by a comitative object with the preposition *với* 'with' (less commonly by a prepositional non-comitative object); cf. (4) and the following:

- (12) a. *An và Hồng kết+hôn với nhau.* 'An and Hong got married.'
 b. *An kết+hôn với Hồng.* 'An got married to Hong.'

3.3 Constructions without an explicit reciprocal argument

Two cases should be distinguished here.

1. With a reciprocal verb, the subject has a singular referent and the second reciprocal argument is not expressed, in which case the interpretation is absolutive (the action is presented as a permanent feature of the subject referent); the range of reciprocals that allow this usage is to be established yet; cf.:

- (13) a. *Họ đánh nhau.*
 'They fight.'
 b. *Em không đùa+ngịch, không đánh nhau.*
 I not be.naughty not hit REC
 'I am not naughty and do not fight.'

2. In this case the reciprocal argument has no antecedent and the construction is subjectless, the reading being indefinite-personal: indefinite human agents are implied; in the following example it is people who are in the street:

- (14) *Ngoài đường đánh nhau.*
 outside street hit REC
 'There is fighting out there in the street.'

4. Diathesis types of constructions with the reciprocal pronoun *nhau*

4.1 Subject-oriented diathesis types

4.1.1 "Canonical" reciprocals

4.1.1.1 *Derived from two-place transitives.* This is the most common type of reciprocal constructions; see (1), (9), (11a).

4.1.1.2 *Derived from causative verbs.* In this case the reciprocal marker is also placed immediately after the verb (in (15b) *phải* = 'must'):

- (15) a. *An bắt Lan học.* 'An compels Lan to study.'
 b. *An, Lan bắt nhau phải học.* 'An and Lan compel each other to study.'

4.1.1.3 *Derived from two-place intransitives.* The underlying construction contains an object with the preposition *cho* 'for' or *với* 'with'. The reciprocal pronoun retains the preposition in the derived construction (see also (12)):

- (16) a. *An tha+thứ cho Lan.* 'An forgives (lit. for) Lan.'
 b. *An, Lan tha+thứ cho nhau.* 'An and Lan forgive each other.'
 (17) a. *An thông+cảm với Lan.* 'An feels sorry for (lit. with) Lan.'
 b. *An, Lan thông+cảm với nhau.* 'An and Lan feel sorry for each other.'

4.1.2 "Indirect" reciprocals

4.1.2.1 *Derived from ditransitives.* The class of ditransitives comprises the following verbs: *cho* 'to give', *đút* 'to give', *vay* 'to borrow', *muợn* 'to lend', *tặng* 'to give a present', *thưởng* 'to reward', *chuyển* 'to pass, to hand', *giao* 'to charge', 'to entrust', *giật* 'to snatch', *ăn+cắp* 'to steal', etc. These verbs may occur in two types of constructions differing in the order of the objects (and corresponding to the respective English constructions): if the human object denoting the addressee or source of the second object precedes the latter it functions as a direct object (it has no preposition), and if it follows the second object it acquires a preposition, e.g. *cho* 'for, to', *của* 'of'. Each of these two types of the underlying construction yields a respective reciprocal construction retaining the direct object.

1. The addressee or source is denoted by the direct object:

- (18) a. *Lan gửi An tiền.* 'Lan sends An money.'
 b. *Lan, An gửi nhau tiền.* 'Lan and An send each other money.'

A textual example:

- (19) *Các nước này tranh+giành nhau thị+trường.*
 PL country this contend.for REC commodity.market
 'These countries contend with each other for markets.'

2. The addressee or source is denoted by the indirect object:

- (20) a. *Lan gửi tiền cho An.* 'Lan sends money to An.'
 b. *Lan, An gửi tiền cho nhau.* 'Lan and An send money to each other.'

4.1.2.2 *Derived from benefactives.* This concerns two-place transitives used with an optional benefactive object (see (6) and the preceding text) which form constructions identical with (19); cf.:

- (21) a. *Lan xây nhà cho An.*
 Lan build house for An
 'Lan builds a house for An.'
 b. *Lan, An xây nhà cho nhau.*
 'Lan and An build houses for each other.'

4.1.3 “Possessive” reciprocals

This diathesis type of reciprocals is formed by the same verbs as the “canonical” type. The difference lies in that the direct object of the underlying construction has to have a possessive attribute. As well as in “indirect” reciprocals the direct object of the base construction is retained. The latter attribute may optionally be marked by the possessive marker *của* (see 2.4) or by the preposition *cho* ‘for’ (if the action is “positive”) which become obligatory in the reciprocal construction. The latter may be formally identical with the respective “indirect” reciprocal construction (compare (21b) and (22b)). Examples (22) and (23) illustrate inalienable and alienable possessive relations:

- (22) a. *An xoa+bóp bả+vai [của/cho] Lan.*
 An massage shoulder(s) of/for Lan
 ‘An massages Lan’s shoulders.’
 b. *An và Lan xoa+bóp bả+vai của/cho nhau.*
 ‘An and Lan massage each other’s shoulders.’
- (23) a. *An đốt nhà của Lan.*
 An burn house of Lan
 ‘An burns Lan’s house.’
 b. *Họ đốt nhà của nhau.*
 ‘They burn each other’s houses.’

4.1.4 “Adverbial” diathesis types

In this type the reciprocal marker substitutes for a non-argument of the underlying verb, namely, for an adverbial that is not commonly presupposed by the verbal meaning (see (2)). Benefactive reciprocal constructions may also be assigned to this type (see 4.1.2.2). It should be noted in this connection that in “possessive” reciprocal constructions the reciprocal marker does not replace an argument either (see 4.1.3).

4.2 Object-oriented diathesis types

4.2.1 Causatives derived from subject-oriented reciprocals

All the “canonical”, “indirect” and “possessive” reciprocals can be embedded in a causative construction; cf. (9) and the following:

- (24) *An bắt Lan và Hồng đánh nhau.*
 An compel Lan and Hong hit REC
 ‘An compels Lan and Hong to fight.’

4.2.2 The pronoun *nhau* with three-place lexical reciprocals. Pleonastic and non-pleonastic use

These are lexical reciprocals commonly denoting connection or disconnection of two or more objects. It seems that the obligatoriness of the reciprocal pronoun is determined by the type of syntactic construction. Thus the following construction may have two syntactic variants:

- (25) a. *Họ trộn đậu và/với gạo.*
they mix beans and/with rice
'They mix beans with rice.'

1. The reciprocal marker is optional if both objects follow the verb:

- b. *Họ trộn đậu và gạo [với nhau].*
they mix beans and rice with REC
lit. 'They mix beans and rice [together/with each other].'

2. The reciprocal marker seems to be obligatory if the object precedes the verb (inversion), in which case one of the auxiliaries (viz. *lấy* 'to take', *đem* and *đưa* 'to bring') is introduced:

- c. *Họ đem đậu và gạo trộn với nhau.*
they bring beans and rice mix with REC
'They mix beans and rice together/with each other.'

3. The reciprocal marker also seems to be obligatory if the two object referents differ in size or position, which involves the use of the verb-modifiers *lên* 'to rise', 'to go up', *vào* 'to go in, onto' in place of the preposition within the underlying construction. In the reciprocal construction, the pronoun *nhau* is placed after the modifiers:

- (26) a. *Họ dán một mảnh giấy lên mảnh giấy khác.*
they stick one piece paper rise piece paper another
'They stick one piece of paper onto another.'
- b. *Họ dán hai mảnh giấy lên nhau.*
they stick two piece paper rise REC
'They stick two pieces of paper one upon the other.'

4.2.3 *Passive constructions with object-oriented reciprocals*

Passive constructions may be derived in the regular way by means of the passive verbs *bị* and *được* (see 2.8). Compare (25c) and the following:

- (27) *Gạo, đậu bị họ đem trộn [với nhau].*
rice beans suffer they bring mix with REC
'Rice and beans are mixed [with each other] by them.'

5. Extension of the reciprocal meaning

The transitive verbs considered in this section may take the reciprocal pronoun in direct object position without acquiring the reciprocal meaning proper. The reciprocal arguments do not signify identical semantic roles of the referents. But in all the three cases both arguments perform an action or possess a property that implies the action or property of one of the arguments: the first argument referent performs the action (possesses the property) denoted by the underlying transitive verb, the other one performing the action (possessing the property) implied by the first action. Thus, (a) if A follows B it implies

that B moves in front of A; (b) if A carries B, it implies that B also moves, but unlike in case (a) B does not move independently; (c) if A surpasses B in some respect (e.g. is older, or bigger, etc.) it implies that B possesses this property in a lesser degree (e.g. is younger, or smaller, etc. The order of these three cases reflects the diminishing degree of activity of referent B.

5.1 Type *theo* ‘to follow’ verbs

Reciprocal constructions with these verbs may in fact refer to the same denotational situation as the underlying construction. They differ in that the underlying construction indicates the precise sequence of the actions of the argument referents in the situation described, while in the reciprocal construction their sequence is not indicated and may alternate and it may denote a situation with many participants. Here belong:

- (28) *theo* ‘to follow’ *tiễn* ‘to see off’
đuôi ‘to catch up with’ *nói+chân* ‘to go after’
vuốt ‘to overtake.’

and also “adjectives”:

- nói+đuôi* ‘(to follow) one after another’, lit. ‘joining by the tails’
hên+tiếp ‘(to pursue) close at heels.’
- (29) a. *Lan theo Hồng.* ‘Lan follows Hong.’
 b. *Hồng theo Lan.* ‘Hong follows Lan.’
 c. *Lan va Hồng theo nhau.* ‘Lan and Hong follow each other.’

The phrase *theo nhau* is often used as a kind of adverbial modifier of manner of the main action:

- (30) *Hai chiếc tàu chạy theo nhau.*
 two/both CLF train run follow REC
 lit. ‘Two trains run following each other (one after another).’

The other verbs of this group can be used in the same way, e.g.:

- (31) *Họ chạy vượt nhau.*
 they run overtake REC
 lit. ‘They run overtaking each other’, ‘They chase each other.’
- (32) *ô +tô nói+đuôi nhau qua cầu.*
 car join.tail REC pass bridge
 ‘Cars crossed the bridge one after another.’

5.2 Type *bé* ‘to carry’ verbs

These verbs are similar to the above type in that the reciprocal construction may refer to the same denotational situation as the underlying construction (cf. (34a) and (34c)), while inversion of the underlying arguments may result in an unnatural sentence. Here belong the following verbs:

- (33) *bé* ‘to carry in one’s arms’ *công* ‘to carry on one’s back’
đắt ‘to lead’ *nuôi* ‘to support, to bring up’
đèo ‘to give a ride on a bike’ *đạp* ‘to copulate’ (about animals).
- (34) a. *gà +trống đạp gà+mái.* ‘The rooster mates with a hen.’
 b. **gà+mái đạp gà+trống.* ‘The hen mates with the rooster.’
 c. *gà+trống và gà+mái đạp nhau.* ‘The rooster and the hen mate.’

The reciprocal causative verbs of motion usually occur as part of a predicate:

- (35) a. *Mẹ bé con đi dạo.*
 mother carry child go walk
 lit. ‘The mother carrying the child in her arms goes for a walk.’
 b. **Con bé mẹ đi dạo.*
 ‘The child carrying its mother in his arms goes for a walk.’
 c. *Mẹ con bé nhau đi dạo.*
 lit. ‘Mother and child carrying each other in their arms go for a walk’
 ‘The mother carrying the child in her arms goes for a walk.’
- (36) a. *Lan đèo An đi xe+đạp.*
 Lan carry An ride bike
 lit. ‘Lan carrying An on a bike rides the bike.’
 b. *An đèo Lan đi xe+đạp.*
 lit. ‘An carrying Lan on a bike rides the bike.’
 c. *Họ (Lan và An) đèo nhau đi xe+đạp.*
 lit. ‘They (Lan and An) carrying each other on a bike ride the bike.’
 ‘They ride the (same) bike together.’

5.3 Type *hơn* ‘to surpass’ verbs

There are four verbs that denote differing, mostly in age, i.e. “older” vs. “younger”:

- (37) *hơn* ‘to surpass, be greater’ *hơn+kém* ‘to differ’
kém ‘to be inferior’
thua ‘to be inferior.’

The reciprocal arguments may change places, but this results in a change of meaning which cannot be part of the reciprocal meaning (an exception is the verb *hơn+kém* ‘to differ’; cf. (39) where all the three sentences refer to the same denotational situation).

- (38) a. *Chị hơn em ba tuổi.*
 elder sister surpass younger sister three years
 lit. ‘The elder sister surpasses the younger sister by three years.’
 ‘The elder sister is three years older than the younger sister.’
 b. **Em hơn chị ba tuổi.*
 ‘The younger sister is three years older than the elder sister.’
 c. *Chị em hơn nhau ba tuổi.*
 lit. ‘The elder sister and the younger sister surpass each other by three years.’
 ‘The elder sister is three years older than the younger sister.’
 (i.e. the age difference between them is three years).

- (39) a. *Chị hon+kém em ba tuổ¹i.*
lit. 'The elder sister differs from the younger sister by three years.'
b. *Em hon+kém chị ba tuổ¹i.*
lit. 'The younger sister differs from the elder sister by three years.'
c. *Chị và em hon+kém nhau ba tuổ¹i.*
'The elder sister and the younger sister differ from each other by three years.'

The following sentence makes sense to the listener if only one of the names refers to an older sister/brother and the other to the younger one:

- (40) *Lan và Hồng thua nhau ba tuổ¹i.*
Lan and Hong be.inferior REC three year
lit. 'Lan and Hong are three years smaller than each other.'
'Lan is three years younger than Hong' (or the other way round).

6. Lexical reciprocals. Their use with the reciprocal marker

6.1 Introductory

As is known, lexical reciprocals are words with an inherent reciprocal meaning: their reciprocity is not coded by a reciprocal marker. A distinctive feature of lexical reciprocals is semantic equivalence of sentences with reversed arguments (we have in mind discontinuous reciprocal constructions; see 3.2):

- (41) a. *Lan gặp An.* 'Lan met An.'
= b. *An gặp Lan.* 'An met Lan.'

All lexical reciprocals that allow the discontinuous construction also occur in the simple reciprocal construction with an obligatory or optional reciprocal marker, which may depend on the particular lexical meaning of a reciprocal or the syntactic structure it occurs in (see (25)). It is obligatory in (41c), because otherwise it remains unclear whom Lan and An met (needless to say, *nhau* is impossible in (41a–b)):

- c. *Lan và An gặp nhau.* 'Lan and An met.'

There is however a small group of intransitives which are one-place verbs and therefore cannot occur in constructions like (41a–b) and which require a plural subject. They may be included among lexical reciprocals as a marginal group on the basis of their lexicographic definitions. They occur in simple constructions only (see 6.2.3)).

As well as in a number of other languages, the principal lexical domains of lexical reciprocals in Vietnamese are similarity – difference, spatial relations ('near', 'far', 'joining', 'parting', etc.), social and inter-personal relations (marriage, conversation, competition, etc.).

6.2 Subject-oriented lexical reciprocals. “Canonical” reciprocals only

The lexical reciprocals dealt with below are listed according to their syntactic properties and in the diminishing order of the number of units.

6.2.1 *Two-place intransitives*

This is certainly the most numerous group of lexical reciprocals in Vietnamese. Characteristically, nearly all of them are two-component units: complex or compound. In the following example which is analogous to (41) the reciprocal marker is however optional as well as in (43):

- (42) a. *An kết+duyên với Lan.*
 An marry with Lan
 ‘An married Lan.’
 = b. *Lan kết+duyên với An.*
 ‘Lan married An.’
 = c. *An và Lan kết+duyên [với nhau].*
 ‘An and Lan got married [to each other].’

As it happens, illogicality of the following sentence is an additional diagnostic feature of lexical reciprocals:

- d. **An kết+duyên với Lan, nhưng Lan không kết+duyên với An.*
 ‘An married Lan, but Lan did not marry An’ (see Bystrov 1966:243).
 (43) *Lan và An gây+gỗ [với nhau].*
 ‘Lan and An quarrel [with each other].’

In most cases, it seems, the reciprocal marker is preferable in simple constructions. Without it, a sentence may be perceived as elliptical. This is the case in the following examples, which distinguishes them from (42d) and (43):

- (44) *Lan và An đua+đòì với nhau.*
 ‘Lan and An compete with each other.’
 (45) *Lan và An ăn+ở với nhau.*
 ‘Lan and An cohabit.’

The lexical domain of these reciprocals covers the following typical meanings: quarrel – reconciliation, marriage – divorce, competition, rivalry – cooperation, friendship – hostility, agreement – disagreement, coincidence, conversation, , etc. Here belong at least forty verbs:

- | | |
|----------------------------------|---|
| (46) <i>ăn+ở</i> ‘to cohabit’ | <i>hực+hặc</i> ‘to be at odds’ |
| <i>cãi+vạ</i> ‘to quarrel’ | <i>hỗn+hộp</i> ‘to mix with’ |
| <i>cãi+cọ</i> ‘to quarrel’ | <i>kết+bạn</i> ‘to enter into marriage’ |
| <i>cãi+lộn</i> ‘to quarrel’ | <i>kết+hợp</i> ‘to unite’ |
| <i>câu+kết</i> ‘to be in clique’ | <i>kết+duyên</i> ‘to get married’ |
| <i>chuyện+trò</i> ‘to converse’ | <i>giao+hợp</i> ‘to copulate’ |
| <i>cạnh+tranh</i> ‘to compete’ | <i>giao+cấu</i> ‘to mate’ |

<i>chia+tay</i> ‘to part (with)’	<i>giao+tiếp</i> ‘to communicate’
<i>chia+vui</i> ‘to share a fortune, joy’	<i>lên+hệ</i> ‘to be connected with sb’
<i>chia+buồn</i> ‘to share misfortune’	<i>lên+lạc</i> ‘to be connected with sb’
<i>đánh+bạn</i> ‘to make friends’	<i>lên+kết</i> ‘to unite’
<i>đồng+cư</i> ‘to cohabit’	<i>ly+đi</i> ‘to divorce’
<i>đồng+ý</i> ‘to agree’	<i>mâu+thuẫn</i> ‘to contradict’
<i>đôi+địch</i> ‘to be opposed’	<i>phù+hợp</i> ‘to suit, match, correspond’
<i>đôi+đấu</i> ‘to be rivals’	<i>tình+tư</i> ‘to have a heart to heart talk’
<i>đua+đôi</i> ‘to compete’	<i>tiếp+xúc</i> ‘to have an affair with’
<i>đoạn+tuyệt</i> ‘to break with’	<i>tãng+tịu</i> ‘to have an affair with’
<i>đồng+cảm</i> ‘to sympathise with’	<i>tiếp+giáp</i> ‘to border’
<i>ganh+đua</i> ‘to rival’	<i>thân+thuộc</i> ‘to be relatives’
<i>gắn+bó</i> ‘to get connected firmly’	<i>hợp+tác</i> ‘to collaborate’
<i>giải+hỏa</i> ‘to make peace with’	<i>thỏa+hiệp</i> ‘to make peace with’
<i>giáp+giới</i> ‘to border on’	<i>trùng</i> ‘to coincide’
	<i>thích+hợp</i> ‘to match, correspond’
	<i>xô+xát</i> ‘to fight.’

Most of these verbs probably require the reciprocal marker when used in the simple construction.

It is likely that we should also include here the following three types of compound verbs each with the same initial component (a Chinese loan-word) which is reciprocal in meaning.

1. Verbs with the initial component *giao* (bound verbal lexical base in this meaning):

- | | |
|---|---|
| (47) <i>giao+cấu</i> ‘to copulate’ | <i>giao+du</i> ‘to associate with’ |
| <i>giao+hẹn</i> ‘to come to an agreement’ | <i>giao+hào</i> ‘to be on friendly terms’ |
| <i>giao+dịch</i> ‘to exchange’ | <i>giao+thiếp</i> ‘to be connected.’ |

Compare:

- | | |
|--|--|
| (48) <i>hai đường thẳng giao nhau.</i> | ‘Two straight lines cross each other.’ |
|--|--|

2. Verbs with the initial component *hợp* (also used alone as a one-place intransitive reciprocal (see 6.2.3):

- | | |
|---------------------|--|
| (49) <i>hợp+lực</i> | ‘to collaborate’ |
| <i>hợp+tác</i> | ‘to conduct talks’ |
| <i>hợp+lưu</i> | ‘to interflow, to flow together’ (about rivers). |

3. Verbs with the first component *hội* (bound verbal lexical base):

- | | |
|---------------------|-----------------------------------|
| (50) <i>hội+hợp</i> | ‘to meet’ |
| <i>hội+ý</i> | ‘to exchange opinions, to confer’ |
| <i>hội+kiến</i> | ‘to meet, to see each other’ |
| <i>hội+đàm</i> | ‘to confer, to converse.’ |

6.2.2 Two-place transitives

This is a group of predicatives that can take an object without a preposition, including predicatives that correspond to European adjectives and/or adverbs with respect to their lexical meaning.

6.2.2.1 *Transitives proper.* They seem to be very few in number:

- | | | |
|------|----------------------------|---|
| (51) | <i>đua</i> ‘to compete’ | <i>lấy</i> ‘to marry’ |
| | <i>ganh</i> ‘to be rivals’ | <i>ly+đị</i> ‘to divorce’ |
| | <i>giao</i> ‘to cross’ | <i>tự+biệt</i> ‘to leave’ |
| | <i>gặp</i> ‘to meet’ | <i>thi+đua</i> ‘to compete’ |
| | | <i>hợp+tính</i> ‘to be alike in character.’ |

In simple reciprocal constructions they seem to be mostly used with the reciprocal marker; cf.:

- | | |
|------|---|
| (52) | <i>Họ đạp đường đua nhau phóng xe.</i> |
| | they ride road compete REC rush bike |
| | ‘They competed in speed on their bikes along the road.’ |
| (53) | <i>Hai người hợp+tính nhau.</i> |
| | ‘Both men are alike in character.’ |

6.2.2.2 *Qualitative and spatial transitives (adjectives and adverbs).* This group comprises at least the following predicatives:

- | | | |
|------|----------------------------------|---|
| (54) | <i>xa</i> ‘(to be) far’ | <i>bằng</i> ‘(to be) equal, the same’ |
| | <i>gần</i> ‘(to be) near’ | <i>thân</i> ‘(to be) intimate with’ |
| | <i>giống</i> ‘(to be) similar’ | <i>đều</i> ‘(to be) equal, the same’ |
| | <i>chung</i> ‘(to be) common’ | <i>đồng+đều</i> ‘(to be) alike’ |
| | <i>bình+đẳng</i> ‘(to be) equal’ | <i>ngược</i> ‘(to be) contrary, in disagreement’ |
| | <i>cân</i> ‘(to be) balanced’ | <i>ngang</i> ‘(to be) equal in height’ |
| | <i>khác</i> ‘(to be) different’ | <i>tương+đường</i> ‘(to be) corresponding to each other.’ |

Some of the combinations of these words with *nhau* seem to have become fixed units, as they are given in some dictionaries as separate entries. All these fixed units denote similarity:

- | | | |
|------|-----------------|--------------------------------------|
| (55) | <i>như nhau</i> | ‘(to be) similar, the same’ |
| | <i>đều nhau</i> | ‘(to be) similar’ |
| | <i>cân nhau</i> | ‘(to be) symmetrical, proportional.’ |

In simple constructions with these verbs the reciprocal marker seems to be obligatory.

- | | | |
|------|-----------------------------------|--|
| (56) | a. <i>Tôi xa anh.</i> | ‘I am far from you.’ |
| | b. <i>Chúng ta xa nhau.</i> | ‘We are far from each other.’ |
| (57) | a. <i>Người khác vượn.</i> | ‘The man is different from the ape.’ |
| | b. <i>Người và khỉ khác nhau.</i> | ‘Man and monkey differ from each other.’ |

In the following reciprocal which has unique properties the reciprocal marker is optional. This reciprocal denotes sharing a thing by two or more persons or entities:

- (58) a. *Lan và An có một chiếc chăn chung [với nhau].*
 Lan and An have one blanket common with REC
 ‘Lan and An share one blanket.’
- b. *Lan và An chung [nhau] một chiếc chăn.*
 Lan and An common REC one blanket
 ‘Lan and An share one blanket.’

In (58a) *chung* functions as an attribute, while in (58b) it functions as a predicate. This reciprocal does not form constructions analogous to (56) and (57).

Another unique reciprocal different from all the other reciprocals of this group is *đều* ‘(to be) equal, the same’. This word does not form constructions of type (56a); it occurs in simple reciprocal constructions only:

- (59) *Hạt lúa đều [nhau] và chác.*
 grain rice equal REC and thick
 ‘The rice grains are equal in size [to one another] and thickness.’

6.2.3 One-place intransitives

This is a limited group of lexical reciprocals that do not form discontinuous constructions owing to their intransitivity. These verbs denote movement of two or more agents to one point from different points or movement against each other, and the like. Quite surprisingly, they can take the reciprocal marker:

- (60) a. *Các cháu xúm [nhau] lại.*
 PL grandchild gather REC MOD
 ‘The grandchildren gather here.’

If the predicate is followed by an adverbial the reciprocal marker, though possible, tends to be omitted:

- b. *Các cháu xúm [nhau] quanh bà.*
 ‘The grandchildren gather round (their) grandmother.’

Verbs of this type:

- (61) *xúm* ‘to gather’
hợp ‘to meet’
đoàn+tụ ‘to gather (about relatives)’
đoàn+kết ‘to be at one with’
chen ‘to jostle each other’, ‘to crowd’
tập+hợp ‘to come together (of many)’
tập+trung ‘to concentrate.’

This group also includes a number of compounds with the first component *hội* (bound lexical base; cf. (50)):

- (62) *hội+hợp* ‘to gather, come together’
hội+kiến ‘to meet, to see each other’
hội+tụ ‘to gather, to come together.’

6.3 Object-oriented reciprocals

6.3.1 Embedded subject-oriented reciprocals

The following example illustrates the embedding process of the subject-oriented reciprocal *bên+cạnh* ‘to be next to’ (belonging to 6.2.2). This reciprocal functions as an adverbial modifier and it does not appear as a single predicate in a sentence:

- (63) a. *Lan và An ngồi bên+cạnh nhau.*
 ‘Lan and An are sitting next to each other.’
 b. *Ông+chủ đề Lan và An ngồi bên+cạnh nhau.*
 host seat Lan and An sit next.to REC
 ‘The host seated Lan and An next to each other.’

The reciprocal *nhu nhau* ‘(to be) alike’ is a fixed combination where *nhu* is an auxiliary meaning ‘as’, ‘like’; cf.:

- (64) a. *Lan như ai.* ‘Lan is like everybody.’
 b. **Lan và An như.* *‘Lan and An are like.’
 c. *Lan và An như nhau.* ‘Lan and An are alike.’
 d. *Hồng đối+xử với Lan và An như nhau.*
 Hong regard với Lan and An alike
 ‘Hong regards Lan and An in the same way.’

6.3.2 Non-embedded object-oriented reciprocals (= lexical reciprocals)

Here we return to the issue discussed in 4.2.2, which involves some repetition. This group comprises about twenty reciprocals with two interacting object arguments (mostly inanimate), or with one plural argument. Their typical meanings are joining and mixing, and a few verbs denote separating, comparison, and introducing people.

- | | |
|---|---|
| (65) <i>buộc</i> ‘to tie together’ | <i>đối+lập</i> ‘to contrast’ |
| <i>cón</i> ‘to tie together’ | <i>đối+chiếu</i> ‘to compare’ |
| <i>chụm</i> ‘to put together’ | <i>lẫn+lộn</i> ‘to mix’ |
| <i>dán</i> ‘to glue together’ | <i>nối</i> ‘to tie together’ |
| <i>dùng+hòa</i> ‘to reconcile’ | <i>phân+biệt</i> ‘to distinguish’ |
| <i>dính</i> ‘to glue together’ | <i>pha</i> ‘to mix’ |
| <i>đính</i> ‘to attach, fasten’ | <i>so</i> ‘to compare’ |
| <i>gắn+ghép</i> ‘to attach, join’ | <i>so+sánh</i> ‘to compare’ |
| <i>gắn</i> ‘to join, fasten, glue’ | <i>tiếp</i> ‘to combine, join’ |
| <i>gắn+lại</i> ‘to join, fasten, glue’ | <i>gôm</i> ‘to collect, join’ |
| <i>ghép</i> ‘to cross (e.g. swords)’ | <i>trộn</i> ‘to mix’ |
| <i>giới+thiệu</i> ‘to introduce’ | <i>thống+nhất</i> ‘to unite’ |
| <i>kết+hợp</i> ‘to combine’ | <i>tách+biệt</i> ‘to separate, detach’ |
| <i>ly+gian</i> ‘to set sb against each other’ | <i>gộp</i> ‘to join into a single whole, unite’ |
| | <i>chia+ly</i> ‘to separate, divide’ |

(see Bystrov 1966: 281–2).

The verbs under consideration used in discontinuous constructions, i.e. with a direct and a non-direct prepositional object, do not occur with the reciprocal marker; cf.:

- (66) a. *Tôi so quyển+sách này với quyển+sách kia [*với nhau].*
 I compare book this with book that with REC
 lit. 'I compared this book with that book [*with each other].'

If used in the simple reciprocal construction, i.e. with a single object (homogeneous or heterogeneous), these verbs allow optional use of the reciprocal marker with the relevant preposition:

- b. *Tôi so hai quyển+sách này [với nhau].*
 I compare two book this with REC
 'I compared these two books [with each other].'

The direct object here may refer to a single entity on condition that it is divisible into parts:

- (67) *Tôi nối hai sợi+chỉ [với nhau].*
 I tied.up two thread with REC
 'I tied up the [two pieces of] thread [with each other].'

Most of the verbs of this group (excepting verbs like *so* 'to compare', *dùng+hòa* 'to reconcile', *phân+biệt* 'to distinguish', etc.) are also used in a different type of construction when they denote movement of an object towards a given point, in which case the reciprocal marker is impossible if two object referents are not the same, e.g. different in size; cf. (68a) and (68b):

- (68) a. *Nó dán hai tờ giấy [với nhau].*
 he stick two sheet paper with REC
 'He stuck two sheets of paper [with each other].'
 b. *Nó dán con+tem vào phong+bì [*với/vào nhau].*
 he stick stamp onto envelope with REC
 lit. 'He stuck a stamp onto the envelope.'

If the objects denote similar entities, constructions of types (68b) and (68c), i.e. constructions with spatial verb-prepositions, can also have variants with the reciprocal marker:

- c. *Họ dán một mảnh giấy lên mảnh giấy khác.*
 they stick one piece paper rise/onto piece paper another
 'They stuck one piece of paper on another.'
 a. *Họ dán hai mảnh giấy [lên nhau].*
 'They stuck two pieces of paper one upon another.'

The latter example of the relation between the reciprocal arguments is analogous to that described in Section 5.1.

6.4 Reciprocal nominal compounds denoting class membership

Many formations that belong here contain the bound lexical base *đồng* of Chinese origin, which determines its initial position in the compounds. These reciprocals satisfy the test for lexical reciprocals illustrated by (41) in 6.1 where all the three sentences are semantically equivalent and they have no non-reciprocal counterpart to which they might be

related in a standard way. The reciprocal marker (with *với* ‘with’ or *của* ‘of’) is optional, though it is sometimes used; cf.:

- (69) a. *Lan là đồng+huong với/của An.*
 Lan be fellow.village with/of An
 ‘Lan is An’s fellow-villager.’
 = b. *An là đồng+huong với/của Lan.*
 ‘An is Lan’s fellow-villager.’
 = c. *Lan và An là đồng+huong [với nhau].*
 ‘Lan and An are fellow-villagers.’

Here belong:

- (70) *đồng+chí* ‘comrade(s), like-minded person(s)’ (*chí* ‘thought, intention’)
đồng+bào ‘compatriot, blood relation’ (*bào* ‘womb’)
đồng+bọn ‘accomplice’ (*bọn* ‘clique’)
đồng+đội ‘brother-soldiers’ (*đội* ‘company’)
đồng+môn ‘fellow-student’ (*môn* ‘door, school, home, family’), etc.

1. Introduction

1.1 Ancient Chinese

Ancient Chinese (Old Chinese, Archaic Chinese) was the literary and colloquial language of China approximately since the 5th century BCE until the 2nd century CE (colloquial

Ancient Chinese is known only so far as it is reflected in the literature). The language of the earlier texts (“Early Archaic Chinese”, “pre-classical Ancient Chinese”), including grammar, differs markedly from the Ancient Chinese of the named period. The texts of the 5th–3rd cc. BCE vary in some grammatical features, reflecting to a certain degree the dialects of their authors. But by the middle of the 3rd century BCE a kind of compromise standard Chinese was created, and it was in use for a few subsequent centuries, though one can assume that spoken Chinese was gradually undergoing changes during that time. A number of texts written since the 3rd century partly reflect this changed colloquial language and its new grammatical norms, but the predominant written language is still that of ancient texts accepted by the writers as standard. In the China of the 2nd millennium two literary languages are in use, “wényán” (lit. “literary language”) based on Ancient Chinese though deviating from it in details, and “báihuà” based on spoken Chinese and reflecting its evolution.

Chinese employs ideographic writing, therefore we have no direct knowledge of Ancient Chinese phonetics. The examples below are transcribed in accordance with the modern standard reading of the characters which differs drastically from the actual Ancient Chinese pronunciation of the words. As a result, for instance, two words identical in their latinized form were not necessarily homonymous in those times.

Despite a rather long history of investigation, a number of essential aspects of Chinese grammar cause considerable difference of opinion among specialists. The theories this study is based on are not universally recognized in Chinese linguistics.

1.2 Overview

In Ancient Chinese, the marker of reciprocity is the auxiliary word *xiāng* preposed to the verb and filling its object valency.

- (1) a. *Fù jiàn zǐ.*
 father see son
 ‘Father sees his son.’
 b. *Fù zǐ xiāng jiàn.*
 father son REC see
 ‘Father and son see each other.’

The auxiliary *xiāng* may precede the preposition *yǔ* ‘with’ and, much less frequently, the preposition *wèi* ‘for’.

- (2) a. *Fù yǔ zǐ biàn.*
 father with son argue
 ‘Father argues with his son.’
 b. *Fù zǐ xiāng yǔ biàn.*
 father son REC with argue
 ‘Father and son argue with each other.’

A meaning close to the reciprocal is expressed by the adverb *jiāo* ‘mutually’, ‘between them’.

The relation between a reciprocal construction and its underlying construction can be seen from the following example:

- (3) *Shì sàng dào yǐ, dào sàng shì yǐ, shì yǔ dào jiāo xiāng sàng*
 world lose dao yi dao lose world yi world and dao mutually REC lose
yě. (Zhuang 16)

ye

‘The world lost dao (the natural order of things), dao lost the world, the world and dao lost each other.’

The same idea is expressed here several times, by two parallel constructions with reversed actants and a reciprocal construction with the obligatory auxiliary *xiāng* and, in addition, the adverb *jiāo*.

Reciprocals are formed from verbs which can take a prepositionless object more or less homogeneous with the subject semantically. As a rule (though not always), both subject and object are human.

2. Grammatical notes

Ancient Chinese is an isolating (mono)syllabic language. Nearly all simple words consist of one syllable. Combinations of monosyllables, if they are idiomatic, are more conveniently described as phraseological units rather than as compound words. Words are invariable; the exceptions (they concern pronouns, with paradigms similar to the English *I – me – my*) are very few. The function of a word in a sentence is determined by word order and/or auxiliary words.

2.1 Sentence structure

Word order in Ancient Chinese is fixed, being in most cases similar to English (the SVO type). An attribute is preposed to the head word, and between them the particle *zhī* can be placed. A verb modifier may be followed by the particle *ér*. Some auxiliary words (e.g. prepositions) may entail changes in the word order.

The number of prepositions in Ancient Chinese is limited. Those of interest to us are as follows: the marker of an indirect object with numerous meanings *yū*; the polysemous preposition *yǐ* (its principal meaning is instrumental ‘with’; about another use see 4.2); *yǔ* ‘with’ (comitative), and *wèi* ‘for’ (note the tonal difference between *yū* and *yǔ*: historically, they are unrelated). A prepositional phrase usually precedes the verb, but a phrase with *yū*, and sometimes with *yǐ*, is placed after the verb and object (if there is one). A noun phrase with preposed *yū* (or one transformable into it) is regarded here as an indirect object (see 2.3, 4.2); a direct object may sometimes acquire the preposition *yǐ* (see 4.2).

A verb may be preceded by auxiliary words marking voice, aspect and tense (one of these auxiliaries is the reciprocal marker *xiāng*), but they occur very seldom due to

their very narrow meanings. Number on nouns and personal pronouns is not expressed grammatically.

In the absence of formal markers (such as prepositions), we identify the function of a word by the adjacent words in a sentence. Thus, for instance, a noun preceding a verb is the subject and the one following it is an object; an adjective is an attribute when preceding a noun and a predicate when following it; a word preceded by an adverb is the predicate, etc.

The subject of a sentence is often absent or omitted; in particular, a 3rd person pronoun cannot appear as subject of an independent clause, and the absence of a subject indicates a 3rd p. agent. Sometimes, the problem of distinguishing between subject and topic arises (cf. (43)).

One and the same subject may be related to two or more predicates that follow immediately one after another and are not separated by any conjunctions or particles. In such cases it is often impossible to determine whether it is a case of conjoined (or subordinated?) verbs, or a compound sentence, or a chain of independent simple sentences with omitted subjects, excepting the first one; cf. (64), (65), (75), (86), (87).

A sentence may begin or end with particles which are not easy to translate into other languages. Thus, the initial particle *fú* indicates that the content of the sentence is a well known fact; the final particle *yě* in a sentence with a nominal predicate is a copula and with a verbal predicate it signifies that the statement is meant to be moralizing, that the speaker asks to remember or take into consideration what he says. The final particle *yǐ* is related to the expression of perfect; and *ěr* means ‘only, merely’.

2.2 Word classes

The problem of parts of speech in Ancient Chinese is far from settled. Traditionally, words are divided into “full” (or plerematic) and “empty” (or cenematic). The latter are auxiliary words, pronouns and semantically underived adverbs. Practically any “full” word can be used (without any changes in form) in almost any function. It involves a change of its grammatical meaning, but its lexical meaning is usually retained, which may be taken to mean that a word retains its identity.

The most widespread opinion in general linguistics is that Ancient Chinese has no parts of speech. But, for all I know, it turned out to be impossible to write a grammar of Ancient Chinese without resorting to such terms as “verb” or “noun”. According to another theory, a word in Ancient Chinese does not belong to any particular part of speech and appears in the role of one or another depending on context. A third theory propounds the view that each word in all its usages always belongs to one particular part of speech and its meaning in any function is deduced from its principal meaning according to regular rules.

Each of the latter two theories has merits and demerits. In this study, the third mentioned theory is accepted: each word is seen as belonging to a given class though it may be used in unusual functions, i.e. those characteristic of other parts of speech. A change of function involves a change of the grammatical though not lexical meaning of a word. The

principal meaning of a word is the most frequent one and/or the one from which all its other meanings can be logically deduced.

Classes of “full” words differ in their principal functions. The main classes are the substantive (or noun) and predicative; the class of predicatives subsumes verbs, adjectives and also numerals. Substantives are commonly used as subjects and objects, and predicatives as predicates; both can function as attributes to a noun. As a rule, a verb has or at least may have an object (in this chapter, a combination of a word with an object is referred to as transitive use of this word). But it should always be kept in mind that words of any class may appear in functions untypical of their class; cf.:

- (4) a. *biān* ‘a whip’ – b. *biān mǎ* ‘to whip a horse’ (transitive use of a noun).
 (5) a. *zhòng* ‘heavy’ – b. *fù zhòng* ‘to carry [sth] heavy’ (adjective as an object).

The meaning of a word in an unusual function is deducible from its main meaning according to a set of rules specific for each class, and sometimes for a relatively small subclass (it is possibly these rules rather than usual functions that are the distinctive features of classes). For instance, a noun used transitively acquires the meaning ‘to use a thing as an instrument in the way normal for it’. Not all nouns can be used in this meaning, but the list of nouns that allow such usage is not limited.

Although it is only the verb that has transitive use among its usual features, it is important for the description of reciprocals that words of other classes (adjectives, numerals, some nouns) may also, though rarely enough, allow an object and, as a result, they can acquire a reciprocal form.

2.3 Verb classes

What is said above about word classes is also applicable to verb classification with regard to transitivity. Most verbs can be used with an object as well as without one. Adding or omitting an object may or may not change the grammatical meaning of a verb.

The following types of objects distinguishable by their formal characteristics and/or relation to the verb are relevant for dividing verbs into classes: (a) an obligatory object whose omission makes a sentence ungrammatical or incomplete, or changes the active meaning of a verb into passive; (b) an object with the preposition *yū*; (c) a prepositionless object which can be omitted or replaced by an object with *yū* without any change of meaning or violating grammaticality of the sentence; (d) a nominal clause as object.

According to the type of object and ability to occur without an object, verbs can be divided into three principal classes: active, experiential and inactive.

Active verbs take an obligatory object; if omitted an object is recoverable from the context, or the verb acquires a passive meaning. The preposition *yū*, if added before an object, also makes an active verb passive, the object with *yū* denoting the agent; cf.:

- (6) a. *shā rén* ‘[he] killed a man.’ – b. *shā yū rén* ‘[he] was killed by a man.’

Active verbs mostly denote actions which cause a change in the state of the object referent. Verbs of this class cannot take an object expressed by a subordinate nominal clause.

Experiential verbs are distinguished by their ability to subordinate a nominal clause. They can also take a noun phrase as an object; with some verbs (like *zhī* ‘to know’) it is obligatory, but after most of them (like *wèi* ‘to be afraid’) it can be omitted or replaced by an object with *yū* without changing the meaning of the verb.

Active and experiential verbs together can be called transitive. However, semantically experiential verbs are closer to inactive verbs, since both do not imply any effect on the object referent. Needless to say, an object of an Ancient Chinese transitive verb does not necessarily correspond to an object in the accusative case in other languages.

Inactive (intransitive) verbs occur both without and with an object, and the latter may be preceded by the preposition *yū* which does not change the meaning of a collocation; cf.:

- (7) a. *rù shì* ‘entered the room.’ = b. *rù yū shì* ‘entered the room.’

Inactive verbs and some experiential verbs can acquire a causative meaning, in which case an object becomes obligatory; e.g.:

- (8) a. *chū* ‘went out’ – b. *chū wǒ* ‘let me out.’

- (9) a. *nù* ‘got angry’ – b. *nù wáng* ‘made the king angry.’

The relationship between a verb and its object in the cases of its common and causative use is different, cf. (8b) where the object denotes a patient and (10) with a locative object:

- (10) *chū mén* ‘went out of the gate.’

2.4 Valency changing means

As is mentioned above (see 2.3), the passive meaning of active verbs and causative meaning of inactive and some experiential verbs may be determined by the presence or absence of an object and, in part, by the nature of this object.

Alongside these means, Ancient Chinese has auxiliary words marking voice which are preposed to a verb and fill in its object valency: *zì* ‘oneself’, *xiāng* ‘each other’, *jiàn* (passive marker); cf.:

- (11) a. *zì shā* ‘killed himself’
 b. *xiāng shā* ‘killed each other’
 c. *jiàn shā* ‘was killed.’

The word *zì* is also used emphatically as in (12), in which case it is preposed to a verb retaining its meaning and object:

- (12) *zì shā zhī*. ‘[he] killed him himself.’

The other two voice markers are not used in this way, i.e. they cannot co-occur with an object (see, however, 4.2, 4.3).

Causative relations can also be expressed by a construction with the auxiliary word *shǐ* ‘to cause’, ‘to let’, with the components arranged in the following sequence: initiator – *shǐ* – agent – verb – object; cf.:

- (13) *Zhào shǐ Lǐ Mù gōng Yān.* (“Shǐ” 81)
 state.Zhao cause L. M. attack state.Yan
 ‘[The state of] Zhao ordered Li Mu to attack [the state of] Yan.’

The auxiliary *shǐ* ‘to cause’ differs drastically in its formal properties from the voice markers and does not belong to the same type of auxiliaries with them.

3. Grammatical status of the reciprocal marker

The marker *xiāng* ‘each other’ may be assigned, it seems, the status of a separate word. Though no “full” word can be inserted between *xiāng* and the verb, sequence “*xiāng* – preposition – verb” is quite possible (see Section 7). If this marker were regarded as a segment of a verb (a prefix), this sequence would be hard to explain.

In traditional Chinese linguistics, *xiāng* was viewed as an “empty” word (see 2.2). In Western linguistics, words of this class would be regarded as auxiliary words, pronouns or adverbs.

In the earliest modern grammars of Ancient Chinese written by Chinese linguists, *xiāng* was regarded as a pronoun. Its pronominal character is revealed, in particular, by its ability to occur with prepositions (see Section 7), and also by the nature of the semantic shift it underwent in the subsequent period (see Section 11). But Chinese pronouns are used in the same functions as nouns, and it is only sometimes that they occur as object in pre-position to the head word, whereas such usage is ungrammatical for nouns. For the marker *xiāng*, however, position before a verb or a preposition is the only possible one. On the other hand, it fills one of the verbal valencies, which is impossible for adverbs.

In this study, we regard *xiāng* as an auxiliary word, viz. a marker of the reciprocal voice. Its combination with a verb is assigned here the status of a complex voice form (the nature of its co-occurrence with prepositions remains vague). The word *xiāng* has two properties of auxiliary words: it has an abstract grammatical meaning and it is one of a small class of words (voice markers, see 2.4) characterized by a distinctive set of properties.

It should be borne in mind that, strictly speaking, *xiāng* combines with any word used transitively rather than with verbs only (see 2.2). When preceded by *xiāng*, any word acquires the derived grammatical meaning which it has in the function of a predicate governing an object (see 4.1.3).

4. Diathesis types of reciprocals constructions. Subject-oriented only

4.1 “Canonical” reciprocals

4.1.1 *Derived from two-place transitives*

Transitive verbs from which a reciprocal form can be derived have or may have a prepositionless object which is more or less homogeneous with the subject semantically. They

may be divided into a number of principal semantic groups. This division is more detailed than the classification by formal properties (see 2.3), but there are no clearcut borderlines between the groups, since they are based on meaning only.

A. Verbs denoting physical, usually aggressive actions which are immediately experienced by the patient, if it is animate, or can change the state of the latter. The following reciprocals are formed from verbs with this kind of meanings (this and the other lists are far from exhaustive):

- | | | |
|------|--------------------|---|
| (14) | <i>xiāng jī</i> | 'to beat each other' |
| | <i>xiāng shāng</i> | 'to wound each other' |
| | <i>xiāng hài</i> | 'to destroy each other' |
| | <i>xiāng cán</i> | 'to destroy each other' |
| | <i>xiāng gōng</i> | 'to attack/assault each other' |
| | <i>xiāng fá</i> | 'to assault each other', 'to campaign against each other' |
| | <i>xiāng hé</i> | 'to bite each other' |
| | <i>xiāng dì</i> | 'to kick each other' |
| | <i>xiāng shí</i> | 'to eat each other.' |

The following verbs are close to these:

- | | | |
|------|--------------------|----------------------------------|
| (15) | <i>xiāng yǎng</i> | 'to feed each other' |
| | <i>xiāng xiàng</i> | 'to stand a treat to each other' |
| | <i>xiāng fú</i> | 'to support each other' |
| | <i>xiāng shě</i> | 'to let go of each other.' |

B. Verbs denoting all kinds of relations between people which do not imply physical action upon each other.

- | | | |
|------|-------------------|---|
| (16) | <i>xiāng jiù</i> | 'to save each other' |
| | <i>xiāng bǎo</i> | 'to defend each other' |
| | <i>xiāng lì</i> | 'to be useful to each other' |
| | <i>xiāng zhù</i> | 'to help each other' |
| | <i>xiāng ràng</i> | 'to give in/yield to each other' |
| | <i>xiāng dāng</i> | 'to block each other's way', 'to stand against each other without yielding' |
| | <i>xiāng bào</i> | 'to revenge on each other' |
| | <i>xiāng wéi</i> | 'to avoid each other' |
| | <i>xiāng shī</i> | 'to lose each other' |
| | <i>xiāng hè</i> | 'to congratulate each other' |
| | <i>xiāng yī</i> | 'to greet each other by bowing with the hands joined in front' |
| | <i>xiāng hè</i> | 'to join each other in a song', 'to accompany each other on a musical instrument' |
| | <i>xiāng cháo</i> | 'to pay an official visit to each other', 'to appear in court of each other (of princes)' |
| | <i>xiāng xí</i> | 'to succeed each other', 'to continue each other's deeds.' |

C. Verbs denoting feelings and/or their manifestations, approval or disapproval, mental activities and those of the organs of sense (experiential verbs):

- (17) *xiāng hào* 'to love each other'
xiāng ài 'to hold each other dear'
xiāng wù 'to loathe each other'
xiāng zēng 'to hate each other'
xiāng wèi 'to be afraid of each other'
xiāng dù 'to envy each other', 'to be jealous of each other'
xiāng yuàn 'to bear a grudge against each other'
xiāng āi 'to grieve over each other'
xiāng yuè 'to be pleased with each other'
xiāng huān 'to rejoice in each other'
xiāng yù 'to forgive each other'
xiāng yù 'to praise each other'
xiāng zǐ 'to revile each other'
xiāng zé 'to reproach each other'
xiāng zhī 'to know each other/(sth) about each other'
xiāng shí 'to know/be acquainted with each other'
xiāng wàng 'to forget each other'
xiāng xìn 'to believe each other'
xiāng yí 'to distrust each other'
xiāng shì 'to look at each other'
xiāng jiàn 'to see each other'
xiāng kuī 'to peep at each other'
xiāng wén 'to hear each other.'

D. Two-place verbs of motion in space which almost obligatorily require a non-patient object:

- (18) *xiāng suí* 'to follow each other'
xiāng cóng 'to follow each other' (the verb *cóng* usually implies subordination to the person followed)
xiāng zhú 'to chase each other'
xiāng sòng 'to accompany each other'
xiāng shuài 'to follow each other.'

The actions expressed by these reciprocals cannot be performed by two agents simultaneously (see Section 6 below).

E. Verbs denoting abstract static relations between entities (stative verbs):

- (19) *xiāng fǎn* 'to be opposite to each other'
xiāng yīng 'to correspond to each other'
xiāng cān 'to supplement each other'
xiāng ruò 'to be alike', 'to resemble each other'
xiāng sì 'to resemble each other in appearance.'

The following verbs denoting a change of state should probably be added to this group as well:

- (20) *xiāng dài* 'to replace/substitute/stand in for each other'
xiāng sàng 'to lose/be deprived of each other.'

Besides, two more words, usually regarded as adjectives, belong in this group: *jìn* ‘nearby’ and *yuǎn* ‘far’ which may take an optional object denoting place (like inactive verbs):

- (21) *xiāng jìn* ‘to be close to/near each other’
xiāng yuǎn ‘to be far from each other’ (cf. (43)).

Group E is the only one in which verbs and their reciprocal derivations can freely combine with inanimate (including abstract) nouns.

The reciprocal forms listed above are all encountered in the literature but the meaning of all of them is clear enough: if we know the form we can easily think of a situation in which it can be used. It seems likely that in Ancient Chinese *xiāng* could be freely added to any verb in case of necessity, though some combinations may sound strange out of context, e.g.:

- (22) *xiāng mó* (Zhuang 9) ‘to rub each other’, ‘to rub against each other’
xiāng chuī (Zhuang 1) ‘to blow at each other’
xiāng qì (Meng 8.33) ‘to weep for/bemoan each other’
xiāng mài (“Guo ce” 1) ‘to sell each other’
xiāng wú (Zhuang 17) ‘to not have each other’
xiāng shēng (“Dao” 2) ‘to give birth to/engender each other.’

4.1.2 Derived from two-place intransitives

Inactive verbs can take an object (see 2.3), but as a rule it is not homogeneous with the subject semantically. Therefore reciprocal formation is limited to some verbs with individual patterns of object government.

Thus, the verb *qù* ‘to go away (from somewhere)’ is also used in the meaning ‘to be at a (specified) distance from ...’. In the latter case it always occurs with an object and can be used in the reciprocal form *xiāng qù* ‘to be at a (specified) distance from each other’:

- (23) *Xiāng qù sì shí lǐ* (“Shi” 7)
 [King Xiang’s camp and the lord of Pei’s camp] were 40 li (Chinese miles) away from each other.’

The verb *sǐ* ‘to die’, obviously inactive, may occasionally occur with an object meaning ‘for [the sake of] ...’, e.g.:

- (24) *sǐ míng* ‘died for [the sake of] glory’.

From this verb, a reciprocal *xiāng sǐ* ‘to die for each other’ can be formed:

- (25) *Qí huānxīn zú yǐ xiāng sǐ* (“Guo yu” 6)
 ‘Their joy [because they found themselves next to each other in the army] was enough [for them to be ready] to die for each other.’

Reciprocal forms can also be derived from inactive verbs used causatively (see 2.3):

- (26) *xiāng wáng* ‘to destroy each other’ (← *wáng* ‘to perish’).

4.1.3 Derived from words of other classes

Transitive use is an uncharacteristic though possible function of words of other classes (see 2.2), and in this case they may form reciprocals.

If an object is added to an adjective the latter acquires the meaning ‘to consider as ...’; cf. *měi* ‘beautiful’:

- (27) *měi* *zhī*.
 [consider.]beautiful he/she.ACC
 ‘[He] considered her beautiful; ‘She seemed beautiful [to him].’

The derived reciprocal retains the meaning ‘to consider as ...’:

- (28) *Yī wù guān zhī, zì guì ér xiāng*
 with thing(s) look.at he/they.ACC REFL [consider.]precious er REC
jiàn. (Zhuang 17)
 [consider.]worthless
 ‘[If one] looks at things from their [own viewpoint], [all of them] consider themselves precious and each other worthless.’

A numeral used transitively acquires the meaning ‘to exceed sth X times’, and the reciprocal form means ‘[they] exceed each other X times’; cf.:

- (29) *Ci gōng zhī suǒ yǐ xiāng wàn yě.* (Lü 24.6)
 this merit(s) *zhī* that because.of REC 10.000 is
 ‘This is the reason why merits may exceed each other 10,000 times’ (i.e. the results of one man’s labour sometimes exceed those of another 10,000 times).

As to nouns, the marker *xiāng* is extremely rare though possible with them; cf.:

- (30) *Wáng zhī gǒu, ... tóu zhī yī gǔ, qīng qǐ xiāng*
 king *zhī* dog(s) throw it/they.ACC one bone light(ly) rise REC
yá... (“Guo ce” 5)
 teeth
 ‘Your dogs, sir, ... if thrown a bone, [they] jump up at once and begin to bite each other...’

In this sentence the reciprocal is formed from the noun *yá* ‘teeth’, which acquires the general meaning ‘to use an instrument in the way it is meant for’ (see (4) in 2.2). The reciprocal form is derived in accordance with the general rule and it is not lexicalized.

4.2 “Indirect” reciprocals

Three-place verbs have two objects, inanimate (DO) and animate (IO). This is characteristic of verbs of giving and also those of conveying information, like *gào* ‘to tell’, *shì* ‘to show’, *jiào* ‘to teach’. With these verbs, the marker *xiāng* always corresponds to an indirect object, the direct object being retained.

When used actively, verbs with two objects may generate up to four constructions differing in diathesis or word order. In three of these constructions an indirect object is placed immediately after the verb. A direct object is preceded by the preposition *yǐ* and is placed either finally after the indirect object or before the verb (an object of two-place

verbs cannot take this preposition at all). If a direct object is postposed to the indirect object the preposition can be omitted, in which case the two objects follow one after another without being separated by a preposition. Note that a 3rd person pronoun as direct object can be placed only before the predicate (after the preposition *yǐ*); it can be omitted and thus the absence of a word between the preposition and predicate signifies the meaning of the 3rd person (see (34), (35)).

In a reciprocal form, the marker *xiāng* is placed immediately before the predicate (after a direct object if it is preposed); an indirect object is absent and a direct object occupies either of its possible positions.

In the fourth type of constructions, a direct object immediately follows the verb, and an indirect object takes the preposition *yū* and is placed after the direct object; this construction does not have a reciprocal counterpart.

In the following examples, the reciprocal form is used in three different constructions with three-place verbs: with a direct object with and without the preposition *yǐ*, and with a direct object omitted between the preposition and verb:

- (31) *Xiāng yù yǐ shì, xiāng shì yǐ qiāo.* (“Guo yu” 6)
 REC tell *yǐ* matter REC show *yǐ* skilful
 ‘[Artisans] tell each other about [their professional] affairs, show each other [their] skill.’
- (32) *Jūnzǐ xiāng sòng yǐ yán, xiǎ orén xiāng sòng yǐ cái.* (“Shì” 126)
 ‘Noble men give each other words (i.e. wise advice) as presents, mean men give each other riches (i.e. expensive things).’
- (33) *[Nán nyù] bù xiāng shòu qì.* (“Li” 12)
 ‘[Man and woman] do not pass each other things [from hand to hand].’
- (34) *yǐ xiāng fēn* (Mo 11) ‘share it with each other.’
- (35) *yǐ xiāng jiào* (Mo 11) ‘teach each other this.’

The verbs *fēn* ‘to share sth with sb’ and *shì* ‘to show’ can be viewed as causative derivatives from *fēn* ‘to divide’ and *shì* ‘to look at’. *Jiào* ‘to teach’ is possibly a two-place rather than a three-place verb (‘to teach sb’) with an optional second object.

The position of a direct object with three-place verbs can be taken by direct speech introduced by the word *yuē* ‘to say’; in Ancient Chinese this is the only verb that can be followed by direct speech; e.g.:

- (36) *Bǎixìng ... xiāng gào yuē: “Wú wáng ... hé shì wǒ zhì yū cǐ jí?”* (Meng 2.1)
 ‘[People of the] hundred surnames ... say to each other: “Our king ... why did [he] let us fall into such an extreme [state]?”’

The verb *gào* ‘to tell’ requires two objects, indirect and direct; *xiāng* corresponds to the indirect object, and direct speech to the direct object.

4.3 “Possessive” reciprocals

In very rare cases, *xiāng* does not refer to the object referent but to the person it belongs to; i.e. a reciprocal signals coreference of the agent of one action with the possessor of the

patient of another identical action. The reciprocal verb retains its object, and its expected attribute, to which *xiāng* corresponds semantically, is deleted:

- (37) *Zhūhóu ... xiāng gōng guó.* (Mo 14)
 prince(s) REC attack state(s)
 ‘Princes ... attack each other’s states.’

Compare a “canonical” reciprocal construction:

- (38) *Wǔ gōng zǐ ... xiāng gōng* (“Shi” 32)
 five prince son(s) REC attack
 ‘Five sons of the prince ... attacked each other.’

Here are a few more “possessive” reciprocals:

- (39) *Nán nǚ fēi yǒu xíng méi, bù xiāng zhī míng.* (“Li” 1)
 ‘A man and a woman, if there was no talk of marriage [between them], [must] not know each other’s names.’
- (40) *Dà chén ... xiāng wéi ěr mù, yǐ hòu zhǔ xī.* (H.F. 17)
 ‘High officials ... become the ears [and] eyes of each other, spotting the weaknesses of [their] lord.’

In the following examples *xiāng* also indicates coreference of the agents and the possessors of the object referents; the agents (possessors) are not named but they are recoverable from the context (the preceding sentence). Semantically, the predicate is related to the omitted agent, but the subject position is taken up by the name of the patients; the latter feature makes the constructions contiguous to passive.

- (41) (*Lín yì xiāng wàng*), *jī gǒu zhī yīn xiāng wén.* (Zhuang 10)
 neighbouring settlement(s) REC look.into.distance fowl dog *zhi* sound REC
 hear
 ‘(The neighbouring villages [were so close that] saw *each other* in the distance), the crowing of cocks and barking of dogs *of each other* could be heard (= they could hear the cocks and dogs *of each other*).’
- (42) (*Èr jūn xiāng dāng*), *liǎng qí xiāng wàng.* (H.F. 31)
 ‘(Two armies are positioned against each other), the banners of both (sides) are seen to each other.’

Formally, these sentences retain the structure of reciprocal constructions (the reciprocal verb has no object), but semantically the subject may be interpreted only as patient and not the agent of the action. “The banners” can be “seen” and they cannot “see” each other.

Passive-like constructions can be derived from sentences with “possessive” only and not “canonical” reciprocals. The passive meaning is added to a verb requiring an object if this latter object is omitted (see 2.3); the subject in this case acquires the meaning of patient. But in “canonical” reciprocals the absence of an object is determined by the nature of the form and the subject combines the meanings of agent and patient, therefore their passivization is virtually precluded. “Possessive” reciprocals, which retain their object, pose no obstacles to passivization.

In the following example, reciprocal relations hold between the unnamed possessors rather than between the referents of the subject in the reciprocal form; the feature named by the predicate can be related only to the possessor (“people”) and not to the formal subject:

- (43) *Xìng xiāng jìn yě, xī xiāng yuǎn yě.* (“Lun” 17.2)
 nature REC near ye habit(s) REC far ye
 ‘By nature, [men] are close to each other; by practice, they become wide apart from each other.’

But the grammatical analysis of this sentence is disputable (note the English translation).

5. Lexicalisation of reciprocals

In very rare cases a reciprocal form acquires an idiomatic meaning (undeducible from the meaning of the underlying verb). Thus, the reciprocal form *xiāng dé* of the verb *dé* ‘to find’ may have the expected meaning ‘to find each other’ but it is more commonly used in the meaning ‘to be on good terms with each other’. The reciprocal *xiāng chí* ‘to be arranged in a certain order’ is derived from the polysemous word *chǐ* with the meanings ‘front teeth (incisors)’, ‘age’, also ‘to stand next to’, ‘to belong to the same class’, etc. and its semantic relatedness to any of these meanings is not clear.

6. Simultaneity and succession

In typical cases, two reciprocally directed actions expressed by a reciprocal form occur simultaneously; e.g.:

- (44) *Jīn Qí Chǔ xiāng fá.* (“Guo ce” 4)
 ‘Now (the states of) Qi and Chu are attacking each other.’
- (45) *Liǎng zhě bù kěn xiāng shě.* (“Guo ce” 30)
 ‘These two (a snipe and a mussel) did not want to let each other go (and the fisherman got them both).’

Simultaneity is particularly natural in reciprocals which do not denote actions in the narrow sense; e.g. *xiāng wèi* ‘to be afraid of each other’, *xiāng shì* ‘to look at each other’. Relations expressed by the reciprocal form of stative verbs and similar words (see group E in 4.1.1) can be simultaneous only; cf.: *xiāng ruò* ‘to be alike, to resemble each other’, *xiāng yuǎn* ‘to be far from each other’.

Among reciprocal actions proper, many can be performed by two agents by turns only; e.g.:

- (46) *Gù yǒu wú xiāng shēng.* (“Dao” 2)
 therefore exist not.exist REC give.birth
 ‘Therefore existence and non-existence engender each other.’

- (47) *Sǐ shēng cún wáng ... rì yè xiāng dài hū qián.* (Zhuang 5)
 ‘Death and life, preservation and disappearance ... replace each other before [our eyes] day and night.’

If plural simultaneous or repeated actions are described, a reciprocal form usually implies that no two persons or entities named by the subject which encodes both agents and patients are related as reciprocal agent and patient of one and the same act; e.g.:

- (48) *Wǔ xíng xiāng shēng.*
 five element(s) REC give.birth
 ‘Five elements engender one another.’

(In traditional Chinese belief, one element engenders another and is engendered by a third; e.g. wood engenders fire, fire engenders earth, etc; but an element cannot engender the element it is engendered by, in other words, no single act is reciprocal in the proper sense of the term.)

- (49) *Sān dài bù xiāng xí.* (“Shi” 6)
 ‘The three dynasties did not follow each other’s way.’
- (50) *Shòu xiāng shí, qiē rén wù zhī.* (Meng 1.4)
 ‘Even when it is animals who devour each other, man feels an aversion to them.’
- (51) *Zhūhóu xiāng sòng bù chū jìng.* (“Shi” 32)
 ‘Princes, when escorting each other off (after an official visit), do not go beyond the borders [of their principalities].’ (In each case one prince escorts another off and the restriction concerns only him.)

Finally, there are isolated cases when of the two subject referents only one could perform the action named by a reciprocal verb:

- (52) *Yàn quē ... zǐ mǔ xiāng bǔ yē.* (“Lǚ” 13.7)
 ‘Swallows and sparrows ... children and mothers feed each other.’ (It is but natural that it is only mothers that feed their younglings.)
- (53) *(Cǐ èr rén xiāng yǔ, tiānxià zhì huān yě;) rán ér zú xiāng qín zhě, hé yě?* (“Shi” 92)
 ([When] these two men were together (with each other), [it was] a great joy for the world; why did they nevertheless finally catch each other?’ (In fact, one of them killed the other.)

7. Reciprocal marker with prepositions

Prepositions are similar to verbs in that they have an object valency, and *xiāng* may fill this valency on condition that the meaning of a preposition allows an object semantically homogeneous with the subject. In this respect *xiāng* is closer to the English phrases *each other* or *one another* than to morphological markers of reciprocity (e.g. in the Turkic languages).

The Ancient Chinese reciprocal marker combines with the prepositions *yǔ* ‘with’ and (seldom) *wèi* ‘for’ thus forming complexes *xiāng yǔ* ‘with each other’ and *xiāng wèi* ‘for each other’. Note that the second preposition combines with another voice marker, viz.

zì ‘oneself’ (*zì wèi* ‘for oneself’) as well. But the voice markers do not combine with prepositions that are postposed to a verb, whatever the meaning of the object.

The marker *xiāng* with a preposition can be positioned before a verb of any type, either transitive or intransitive; its presence does not affect the verb’s ability to take an object.

The combination *xiāng yǔ* can be separated from the verb by a modifier, though this is not a common occurrence; cf.:

- (54) *Zhū dà chén xiāng yǔ yīn móu.* (“Shi” 9)
 all big official(s) REC with secret(ly) plot
 ‘All the high dignitaries plotted with each other in secret.’

The combination *xiāng yǔ* is most common with verbs taking a valency with the meaning of second agent (co-agent), i.e. with verbs which more or less obligatorily require this prepositional phrase:

- | | |
|--------------------------|---|
| (55) <i>xiāng yǔ yuē</i> | ‘to come to an agreement with each other’ |
| <i>xiāng yǔ zhēng</i> | ‘to struggle with each other’ |
| <i>xiāng yǔ dòu</i> | ‘to fight/quarrel with each other’ |
| <i>xiāng yǔ zhàn</i> | ‘to be at war with each other’ |
| <i>xiāng yǔ biàn</i> | ‘to argue with each other’ |
| <i>xiāng yǔ sòng</i> | ‘to be at law with each other’ |
| <i>xiāng yǔ yù</i> | ‘to meet (with) each other’ |
| <i>xiāng yǔ hé</i> | ‘to unite with each other’ |
| <i>xiāng yǔ jiāo</i> | ‘to be friends with each other’ |
| <i>xiāng yǔ yì</i> | ‘to be different from each other’ |
| <i>xiāng yǔ lín</i> | ‘to be neighbours with each other.’ |

The following phrase probably belongs in this list, too:

- (56) *xiāng yǔ wéi yǒu* ‘to be friends with each other.’

In this sentence, the noun *yǒu* ‘friend(s)’ is a predicate with the copula *wéi* ‘to be’; this noun requires explicit expression of the co-agent.

The literary translation of these reciprocals into European languages does not as a rule contain any explicit expression of reciprocity or it may be omitted; in other words, *xiāng yǔ yuē* is likely to be translated as ‘(they) came to an agreement’ rather than ‘(they) came to an agreement with each other’, etc.

Some of the verbs of this type may have (usually or sometimes) an object in postposition, alongside an object naming the co-agent; e.g.:

- (57) *xiāng yǔ zhēng nián.* (H.F. 32)
 REC with struggle year(s)
 ‘squabbled with each other about age’ (i.e. ‘argued who was older’).
- (58) *xiāng yǔ hé bīng.* (“Lü” 9.4)
 REC with join troop
 ‘joined their armies.’

However, the combination *xiāng yǔ* can also occur with other verbs, both transitive and intransitive, if the same action can be performed by two or more agents together. In such

cases a verb retains its customary object. The phrase in question is usually translated as ‘together’:

- (59) *xiāng yǔ mù yáng* (Zhuang 8) ‘shepherded/tended the sheep together’
xiāng yǔ yīn jiǔ (“Lü” 26.2) ‘drank wine together’
xiāng yǔ gōng Yì (H.F. 35) ‘attacked Yi together’
xiāng yǔ xì ‘play with each other/together’
xiāng yǔ yóu ‘take a walk together’
xiāng yǔ huán ‘returned together’
xiāng yǔ lè zhī ‘All [of them] rejoice in it’
xiāng yǔ xiào zhī ‘All [of them] laugh at it’
xiāng yǔ gē zhī ‘All [of them] sing about it.’

With a number of verbs, both *xiāng* alone and *xiāng yǔ* can be used, but with a significant difference in meaning:

- (60) a. *xiāng shí* ‘eat each other’
 b. *xiāng yǔ shí* ‘eat together.’
- (61) a. *xiāng gōng* ‘attacked each other’
 b. *xiāng yǔ gōng zhī* ‘attacked him together.’
- (62) a. *xiāng yuàn* ‘nursed a grudge against each other’
 b. *xiāng yǔ yuàn zhī* ‘all [of them] together nursed a grudge against him.’

An object with the preposition *wèi* ‘for’ cannot be, it seems, obligatory with any verbs. Theoretically, the phrase *xiāng wèi* ‘for each other’ can be used (in pre-position) with any verb, on condition the meaning of the latter allows it.

- (63) *Dào bù tóng, bù xiāng wèi móu.* (“Lun” 15.40)
 ‘[Those whose] courses are different [cannot] lay plans for one another.’
- (64) ... *bù kěn xiāng jiù, ān zài qí xiāng wèi sǐ!* (“Shi” 89)
 ‘(You and I used to be friends, and now)... [we] do not want to save each other, not to mention die for each other!’ (the real meaning is: ‘You do not want to save me, though you swore you were ready to die for me!’ Cf. (102) in Section 11).
- (65) *Tiān shēng wàn wù, yù líng xiāng wèi yòng* ... (“Lun heng” 14.2)
 ‘[If] the Sky, having given birth to ten thousand creatures, wanted them to be used [as food] by (lit. ‘for’) each other...’

The verb *móu* ‘to plan’, ‘to plot’ can be preceded both by *xiāng yǔ* ‘with each other’ and *xiāng wèi* ‘for each other’, but the meaning of the phrase changes:

- (66) a. *xiāng yǔ móu* ‘to confer with each other’
 b. *xiāng wèi móu* ‘to give advice to each other.’

Neither of these prepositions is obligatory with this verb; it may be used without a prepositional phrase, but in this case it usually takes another verb in post-position to it:

- (67) *móu shā zhī* ‘[he] plans to kill him.’

The phrase *xiāng yǔ* ‘with each other’ is close to the main meaning of the sociative in the languages that possess this category. But in Ancient Chinese it is not a special voice as it is

only one of the possible combinations of voice markers with prepositions. The meaning of *xiāng wèi* can be described as assistive.

8. Agent in reciprocal constructions

Whatever can be said about the agent or subject in sentences with a reciprocal verb form, also applies to the agent or subject of a sentence with *xiāng* followed by a preposition. Therefore, in this section any sentence containing the component *xiāng* (whatever it precedes) is regarded as a reciprocal construction.

The agent, and consequently the patient (referents of the subject) of a reciprocal construction are usually human, sometimes collective bodies (e.g. states), or animals; with a number of verbs (see group E in 4.1.1) they may be things and abstract concepts.

- (68) *Guì chén xiāng dù.* (H.F. 14)
'High dignitaries envy each other.'
- (69) *Qí Jìn xiāng yǔ zhàn.* ("Lǚ" 19.1)
'[The states of] Qí and Jìn were at war with each other.'
- (70) *Fú mǎ ... nù ér ... xiāng dī.* (Zhuang 9)
'Here the horses... being angry... kick each other.'
- (71) *Shì yǔ dào jiāo xiāng sàng yě.* (Zhuang 16)
'The world and dao lost each other.' (see also (48), (65), (88)).

The names of abstract concepts may be nouns (as in (71)), or they may be nominalized words of other classes (see 2.2); e.g.:

- (72) *Gù yǒu wú xiāng shēng, nán yì xiāng chéng ...* ("Dao" 2)
'Therefore being and not-being engender each other, the hard and the easy create each other ...'

In the first clause, the subjects are the verbs *yǒu* 'to have', 'to exist' and *wú* 'to not have', 'to not exist', and in the second the adjectives *nán* 'hard, difficult' and *yì* 'easy'.

8.1 Simple reciprocal constructions

The subject of a simple reciprocal construction may be:

A. A single noun or pronoun. There is no category of number in Ancient Chinese, but such a subject is always translated by the plural number:

- (73) *Fú yīng'ér xiāng yú xì yē ...* (H.F. 32)
'Here children, playing with each other ...'
- (74) *Chén kǒng qí xiāng gōng.* ("Shuo yuan" 9)
'I am afraid they will attack each other.' (Cf. also (30), (32), (37), etc.)

The subject of a simple reciprocal construction can be a collective noun (which seems to be impossible in the European languages), e.g.:

- (75) *Wèi jūn dà luàn xiāng shī.* (“Shi” 65)
 state.of.Weì army great(ly) be.in.disorder REC lose
 ‘The army of [the state of] Wei was in terrible confusion, and [people] lost each other.’
- (76) *Wēilěi zhī mǐn xiāng yǔ yán ...* (Zhuang 23)
 ‘The people of Weilei talked to each other ...’

Here reciprocal relations hold between the members of the entirety referred to by the subject: ‘an army’, ‘a people’.

B. A combination with the auxiliary word *zhě* ‘the one who/those who’ used in the functions typical of nouns.

- (77) *Tóng yù zhě xiāng zēng, tóng yōu zhě xiāng qīn.* (“Guo ce” 33)
 ‘Those who have the same desire (i.e. those who want to get the same thing), hate each other, those who have the same sorrows show friendliness to each other’ (see also (45)).

C. A noun with a numeral, seldom a numeral alone:

- (78) *Sān rén xiāng shì ér xiào.* (Zhuang 6)
 ‘[These] three men looked at each other and laughed.’
- (79) *Fú liǎng bù xiāng shāng ...* (“Dao” 60)
 ‘Here two [sides] (i.e. ghosts and people, or the lord and people) do not harm each other ...’ (see also (38), (48), (49)).

D. Two or more nouns combined paratactically, without a conjunction: see (1b), (39), (44), (46), (72), etc.

It is not always easy (sometimes impossible) to establish the underlying construction for reciprocal constructions of groups A–C.

Two nouns can be adjoined paratactically (group D) if only they are related as converses or are homogeneous semantically, it seems; cf. *fù zǐ* ‘father and son’, *Qí Jīn* ‘[the states of] Qi and Jin’ (see (1b), (69)). Words like *shì* ‘world’ and *dào* ‘dao’ (see (71)) that are not converses and do not belong to the same semantic group must be joined by the auxiliary word *yǔ* (see 8.2). The latter is possible though not obligatory between semantically homogeneous words as well.

If the agents of a reciprocal construction are expressed by two different words each of them most commonly refers to a single person (sometimes, an uncountable notion incompatible with the idea of number), but this is not always the case; cf.:

- (80) a. *Fù zǐ bù xiāng jiàn.* (Meng 2.1)
 ‘Fathers and sons do not see (i.e. are parted from) each other.’ (in the text, people complain of their hard life).

8.2 Discontinuous reciprocal constructions

The names of two reciprocally acting agents can be joined by the auxiliary word *yǔ* ‘with, and’. With this word, two different constructions are possible; cf.:

- (81) a. *Fù yǔ zǐ bù xiāng jiàn.*
 father *yu* son not REC see
 ‘Father and son do not see each other.’
 b. *Fù bù yǔ zǐ xiāng jiàn.*
 father not *yu* son REC see
 ‘Father and son do not see each other’; ‘Father does not meet with his son.’

These two sentences are very similar in meaning. The formal difference between them is the position of the noun with *yǔ* relative to the negation *bù*.

In the construction illustrated by (81a), all the adverbials including negation follow the second noun preceded by the auxiliary *yǔ*; cf. also:

- (82) *Wǒ yǔ ruò bù néng xiāng zhī yě.* (Zhuang 2)
 ‘I and you cannot know this about each other.’

The word *yǔ* in such examples is regarded as a coordinating conjunction ‘and’, and the coordinated words as subjects.

In the construction under (81b), the noun with *yǔ* is placed between the predicate and the preceding words that are grammatically dependent on the predicate; cf. also:

- (83) *Pèi gōng ... wèi dé yǔ Xiàng Yú xiāng jiàn.* (“Shi” 7)
 ‘The lord of Pei ... could not yet meet with Xiang Yu.’
 (84) ... *ér rén bù yǔ guì xiāng shāng.* (H.F. 20)
 ‘... and then people and the souls of the dead do not harm each other.’

In this construction the word *yǔ* is viewed as a preposition ‘with’ and the noun it precedes is a comitative object denoting the co-agent; its semantic role is analogous to that of the subject, but formally it is marked as a subordinated participant.

If the predicate is not preceded by any adverbials both constructions are formally identical:

- (85) *Jì Xīn yǔ Yuán Qiān xiāng yuàn.* (H.F. 31)
 ‘Ji Xin and Yuan Qian nursed a grudge against each other.’ (cf. also (88)).

It is possible that the two meanings of *yǔ* (‘and’ and ‘with’) are imposed by translation, while for Ancient Chinese the difference between “second subject” and “comitative object” is immaterial.

A reciprocal construction can adjoin another verbal phrase in such a way that only one of the two agents of the verb preceded by *xiāng* or *xiāng yǔ* is the agent of the other verb as well; this shared agent is the syntactic subject of the sentence, the second agent of the reciprocal construction acquiring the status of a comitative object or being recoverable from another fragment of the sentence, or the interpretation of the second reciprocal agent (as second subject or comitative object) remains unclear; cf.:

- (86) *Jī Zhèng ... mí ér shī dào, yǔ gōng xiāng shī.* (H.F. 32)
 J. Z. confused *er* lose way with prince REC lose
 ‘Ji Zheng ..., confused, lost his way, and [he] and the prince lost each other.’

- (87) *Wèi wáng jiàn gōngzǐ, xiāng yǔ qì.* (“Shi” 77)
 ‘The king of Wei met the prince and [they] both (lit. ‘together’) wept.’
- (88) *Jīn yǔ huǒ xiāng shǒu zé liú.* (Zhuang 26)
 ‘[If] metal and fire are next to each other, [the metal] will flow (i.e. ‘will melt’); [If] metal is next to fire, [it] will flow.’

9. The imperative use of reciprocals

A reciprocal form can be used in the imperative sense; but the only cases I have encountered are sentences with the prohibiting negation *wú* ‘don’t’. The agent/patient role is ascribed to the speaker and the addressee, sometimes someone else. The sentences have the nature of promises, wishes, or oaths; cf.:

- (89) *Gǒu fū guì, wú xiāng wàng.* (“Shi” 48)
 ‘If [one of us becomes] rich and distinguished, don’t let us forget each other.’
- (90) *Bù jí huáng quán, wú xiāng jiàn yě.* (“Zuo” Yin 1)
 ‘Until we reach the yellow spring (i.e. ‘until we die’) let us never see each other [again].’
- (91) *Shì shì zǐ sūn, wú xiāng hài yě.* (“Zuo” Xi 26)
 ‘Let [your] sons and grandsons from generation to generation never harm each other.’

10. Notional words expressing reciprocity and similar meanings

Such a meaning is rendered by the word *jiāo* ‘between themselves’, ‘with each other’, ‘mutually’, which occurs much less frequently than *xiāng* ‘each other’. As a rule, it has the properties of an adverb and can be dropped without affecting the grammaticality of a sentence; e.g.:

- (92) *Shàng xià jiāo zhēng lì ér guó wēi yǐ.* (Meng 1.1)
 above below mutually strive profit er state be.endangered yi
 ‘Superiors and inferiors will fight between themselves [each] for [his own] profit, and the state will be endangered.’
- (93) *Qí Jīn yòu jiāo fù zhī.* (“Zuo” Zhao 20)
 Q. J. moreover mutually support he/they.ACC
 ‘Moreover, [the states of] Qi and Jin support them together.’

In both examples the verb preceded by *jiāo* has an object, i.e. this word does not affect the valency of the verb. Its meaning seems to be closer to the sociative (‘together’, ‘all [of them]’) rather than to the reciprocal.

There are however examples of *jiāo* taking the place of the reciprocal marker, i.e. filling an object valency; e.g.:

- (94) *Zhōu Zhèng jiāo wù.* (“Zuo” Yin 3)
 Z. Z. mutually loathe
 ‘[Since then the states of] Zhou and Zheng came to loathe each other.’

The verb *wù* ‘to loathe’, ‘to hate’ cannot be used without an object, therefore *jiāo* can be regarded as filling an object valency.

The adverb *jiāo* ‘mutually’ can precede a verb that has a reciprocal marker; cf. (3). Unlike the voice markers, this adverb does not combine with prepositions.

It should be noted that in rare cases the marker *xiāng* may, like *jiāo*, not fill a verbal valency. Compare, for instance, the combination *xiāng kuā* (H.F. 33) ‘to boast to each other’: an object of the verb *kuā* refers to the entity one boasts about, and the meaning of the reciprocal form (‘to each other’) is in no way related to it. Though the general meaning of the reciprocal form is quite clear, the second role of the subject referents is hard to define. In any case, it is not the role of patients.

11. Symmetric predicates

Here belong verbs and adjectives with the idea of reciprocity inherent in their lexical meaning. Two types can be distinguished.

A. A number of stative verbs (see group E in 4.1.1) and words similar to them, like *ruò* ‘(to be) alike’, *qù* ‘(to be) at a specified distance from ...’, *yuǎn* ‘far’. Reciprocals derived from these words do not formally differ from other combinations with *xiāng*. They are distinguished on the basis of the logical analysis of the concepts they express, and this may not be reflected in their actual use. Thus, it does not follow from the phrase under (95) that a bell is like a noble man or that a noble man and a bell are like each other.

(95) *Jūnzǐ ruò zhōng* (Mo 39) ‘A noble man is like a bell.’

B. Verbs with an obligatory comitative object valency expressed by a noun phrase with the preposition *yǔ* ‘with’ (see Section 9). This syntactic property is a distinctive feature of this group.

12. The later shift in the meaning of reciprocals

In the 3rd century CE a new period begins in the history of Chinese; its grammatical norms undergo significant changes.

During this period the reciprocal form acquires one more meaning alongside the earlier one; in dialogue it comes to denote an action of one communicant directed at the other: ‘I (verb) you’ or, somewhat less commonly, ‘you (verb) me’. In these cases *xiāng* also corresponds to an object (which is always omitted, while the subject is mostly present). The choice between two possible readings of the form (‘(verb) you’ or ‘(verb) me’) is determined by the subject though sometimes it has to be recovered from the context; cf.:

(96) *Zhèn xiāng shì ěr.* (“Sou” 2)
 we (the emperor) REC test only
 ‘We, the Emperor, just tested you.’

- (97) *Gōng yǒu xiāng shā yì.* (“Sou” 16)
 lord have REC kill intention
 ‘Sir, you intend to kill me.’
- (98) *Hòu sān rì, rì zhōng dāng xiāng qǔ yě.* (“Sou” 5)
 afterwards three day(s) day middle FUT REC take ye
 ‘In three days, at noon, [I] will take you away.’

Sometimes, in two subsequent replies of the same interlocutor the marker *xiāng* refers to the 1st and 2nd persons interchangeably, and its referent can be inferred only from the knowledge of the previous events and from the natural logic of the story; e.g.:

- (99) ... *chū wěi xiāng dù, ... dāng yǒu yǐ xiāng xiè*
 [make.]go.out reed REC [let.]cross.over ought have with REC thank
zhě. (“Sou” 5)
 something.that
 ‘... [you] unloaded the reeds and took me across [the river], ... [I] must somehow return your kindness’ (lit. ‘... [I] must have something to thank you with’).

As well as with regular reciprocals, *xiāng* with three-place verbs corresponds to an indirect object (in both of the following examples *xiāng* means ‘[I] ... to you’):

- (100) *Ruò shēng nán, dāng yì xiāng huán.* (“Sou” 16)
 ‘If [she] gives birth to a son, [I] will give him back to you.’
- (101) *Gǎn jūn jiàn zài, gù yǐ xiāng yù.* (“Sou” 4)
 ‘[I am] grateful to you, sir, [that you] gave me a lift, therefore [I] told you this.’

The use of reciprocal forms to refer to the participants of a speech act is characteristic of polite, but not servile speech. In the course of a conversation, the same speakers may use polite forms with *xiāng* and regular personal pronouns as objects interchangeably.

The morpheme *xiāng* in this usage does not acquire the status of a pronoun: it does not indicate grammatical person (always the first or always the second) and occupies a syntactic position with respect to the verb uncharacteristic of a pronoun in Chinese. A sentence does generally retain the formal features of a reciprocal construction (an object is always absent).

The passive marker *jiàn* also acquires a similar function in the same period, but it always denotes an action of a 2nd person agent with a 1st person patient (‘you ... me’ or ‘I ... by you’); cf. (101).

Single instances of the use of *xiāng* in the meaning of the 2nd person occur in literature long before the 3rd century CE. Let us consider an example from “Zhan guo ce” (end of the 3rd c. BCE), when the king sees his wife crying and asks her (literally): “Is there something worrying [judging] by this?”, which is followed by another question:

- (102) *Hé bù xiāng gào yě?* (“Guo ce” 25)
 lit. ‘Why not tell each other [about it]?’

The situation and the queen’s reply show that the king is asking “Why don’t you tell me about it?” But not a single personal pronoun is used either in the first or in the subsequent question. It is not quite clear in what way this example should be interpreted: whether the

question is formulated in a vague form out of politeness and tact, or whether it is an early case of the use of the reciprocal marker in the meaning ‘you (verb) me’.

Compare also (64): in this example, like in (102), the speaker uses this polite manner in order to express a reproach to a person close to him.

In báihuà *xiāng* is not used independently (though it is possible in bound collocations). In wényán it is retained as a regular reciprocal marker. Besides, in the genre of short stories (written in simplified wényán) it may have the “pronominal” use described above; moreover, its functions are expanded: it can be used not only in dialogue but also in narration, and it can replace any personal pronoun, including that of the 3rd person.

1. Introduction

1.1 The Chinese language and dialects

Chinese is one of the two branches of the Sino-Tibetan family of languages. The second branch is Tibeto-Burman numbering a few hundred languages, of which the largest are Burmese and Tibetan. The latter branch also includes Tangut (extinct), Limbu, Lahu, Kiranti, and other languages, Naga among them which in their turn are comprised of two groups of languages. Sometimes, the Karen language is distinguished as a third branch of the Sino-Tibetan family. Chinese is the language spoken by the most numerous people in the world, numbering 1,300,000,000. According to the specialist literature, it is represented by at least seven major groups of dialects. About 70% speak the Northern dialects *Guānhuà* (Mandarin). The official language *Pūtōnghuà* is based on these northern dialects (this language based on the written language *báihuà* ousted, in the first half of the 20th century, the literary Ancient Chinese *wényán* which was established in the 3rd–4th centuries BC; the new written language *báihuà* was formed by the 10th–13th centuries AD). The *Wú* group of dialects (one of them used in Shànghǎi) is spoken by about 80 million people, the *Yuè* (Guǎngdōng) dialects by about 47 million, the *Mǐn* dialects by over 40 million. Other groups of dialects are: *Hakka* (mostly in the Guǎngxī province; about 35 million), *Gàn* (the Jiāngxī province; about 23 million) and *Xiāng* (the Hùnnán province; about 46 million). The dialects are mutually unintelligible. The common factor is the official language and ideograms (see Bǎikē 1988: 140).

There are over 55 national minorities in China who had once occupied 60% of the present-day territory of China (the languages of these minorities belong to the Tibeto-

and (55)): if the underlying construction contains a *preposition* introducing an object it is omitted in the reciprocal construction (cf. (2a) and (2b); a number of certain other constituents are also omitted, if they are present in the underlying construction). In this respect *hùxiāng* is similar to Indo-European reflexive clitics which do not as a rule combine with prepositions either when used reciprocally and must be replaced by a reciprocal adverb if a preposition is necessary (cf. Penchev, Ch. 13, examples (1)–(2)). We need not mention reciprocal affixes which cannot combine with prepositions by definition. In Ancient Chinese the reciprocal marker did occur with those prepositions whose meaning was compatible with an object semantically, cf. *xiāng yǔ yuē* ‘to come to an agreement with each other’ (see Yakhontov, Ch. 48, Section 7).

The reciprocal adverb has a synonym *bǐcǐ* which is sometimes preferable. Thus, though *hùxiāng* is grammatical in (2b), a better choice in this particular case would be its synonym (cf. 5.2).

- (2) a. *Lǎo Zhāng duì Xiǎo Lǐ hěn kèqǐ.*
L. Z. to X. L. very polite
‘Lao Zhang is polite to Xiao Li.’
b. *Lǎo Zhāng hé Xiǎo Lǐ hùxiāng / bǐcǐ hěn kèqǐ.*
L. Z. and X. L. mutually mutually very polite
‘Lao Zhang and Xiao Li are polite to each other.’

The adverb *hùxiāng* can also be used if the subject is singular, on condition that the second participant is named by a comitative object (though some of the informants do not approve of this type of construction). In (2c) both reciprocal arguments are divided by the adverb *yòu* ‘again’ which indicates that the subject is the first noun phrase alone. Thus constructions with a comitative object behave as *simple* reciprocal constructions in Chinese, though obviously they are *discontinuous*: *hé* in (2c), unlike *hé* in (1b) and (1c), is usually interpreted as a preposition rather than as a conjunction:

- c. *Lǎo Zhāng yòu hé Xiǎo Lǐ hùxiāng / bǐcǐ hěn kèqǐ-le.*
L. Z. again with X. L. mutually mutually very polite-PERF
lit. ‘Lao Zhang is again mutually very polite with Xiao Li.’

The non-comitative marking of the alleged second reciprocal argument does not allow the use of *hùxiāng*; cf. (2a), (2b) and (2d):

- d. **Lǎo Zhāng duì Xiǎo Lǐ hùxiāng hěn kèqǐ.*
L. Z. to X. L. mutually very polite
lit. ‘Lao Zhang is mutually polite with Xiao Li.’

The adverb *hùxiāng* is used in all the diathesis types of *subject-oriented* reciprocal constructions (“canonical”, as in (1) and (2), and also “indirect” and “possessive”), and also in *object-oriented* ones (derived from three-place transitives, mostly with the meaning of joining or bringing two objects into contact). Reduplication of the verb in (3b) denotes weak actions of short duration. The cause may be rhythmic: the disyllabic *hùxiāng* tends to “prefer” disyllabic verbs (see 1.2.4 below). As in (2d), the non-comitative (in this case instrumental) marking of the second argument blocks the use of *hùxiāng* (see (3c)).

- (3) a'. *Nǐ yòng zuǒ shǒu bǎ yòu shǒu róu yī róu.*
 you.SG with left hand *ba* right hand massage one massage
 'Massage your right hand with your left hand.'
- a''. *Nǐ yòng yòu shǒu bǎ zuǒ shǒu róu yī róu.*
 you.SG with right hand *ba* left hand massage one massage
 'Massage your right hand with your left hand.'
- b. *Nǐ bǎ liǎng zhī shǒu [hùxiāng] róu-rou.*
 you.SG *ba* two CLF hand mutually massage-massage
 'Massage both your hands [with one another].'
- c. **Nǐ yòng zuǒ shǒu bǎ yòu shǒu hùxiāng róu yī róu.*
 you.SG with left hand *ba* right hand mutually massage one massage
 lit. 'Massage your right hand *with* your left hand mutually.'

It also serves, though rather seldom, to form constructions (henceforth termed *irreversible*) which have no underlying (standard) non-reciprocal constructions of type (1a') and (1a'') for (1b) (see 4.4); e.g. in (4) *hùxiāng* implies the meaning 'compare' (for details see 3.5.5.2). If *hùxiāng* is dropped in (4), the meaning is 'to weigh two fishes together' instead of 'one after another for comparison' (cf. also (65b)). This instance is close to object-oriented reciprocal constructions.

- (4) *Bǎ zhèi liǎng tiáo yú [hùxiāng] diān-dian.*
ba this two CLF fish mutually weigh
 'Weigh these two fishes [against one another].' (= 'to compare which one is heavier')

1.2.2 Lexical reciprocals

Roughly speaking, one may relate *lexical* reciprocals to *syntactic* and *morphological* reciprocals in the same way as *lexical* causatives are related to *analytical* (*periphrastic*) and *morphological* causatives semantically. Most of what is regarded as lexical reciprocals in this chapter, are included in the class of *symmetrical predicates*, or *inherent reciprocals*, in the literature. Despite the obvious difference between lexical and syntactic or morphological reciprocals their semantic similarity cannot be ignored.

1.2.2.1 General characteristics. In Chinese, there are numerous *lexical* (inherent) *reciprocals*. As well as reciprocals with *hùxiāng*, they require at least two identical participants. They may be monosyllabic and disyllabic (cf. (6a) and (6b–d) respectively). Due to the general tendency of replacing monosyllabic words by disyllabic (see 2.1), there are also numerous *compounds* among lexical reciprocals. Of typological interest are *compound lexical reciprocals*, both verbs and nouns, with the *recurrent initial components* (the *final* recurrent components seem to be less common in lexical reciprocals). This is a specific feature of the Chinese lexical reciprocals which makes them drastically different from the lexical reciprocals of all the languages considered in this monograph. Hence the particular attention and disproportionately large space devoted to them in this paper.

A distinctive feature of very many (majority?) of lexical reciprocals in Chinese is non-combinability with the reciprocal adverb *hùxiāng*; cf.:

- (5) a. *Tā-men tán-zhe huà ne.* b. **Tāmen hùxiāng tán-zhe huà ne.*
 s/he-PL talk-DUR words PRTL lit. 'They are talking mutually/with
 'They are talking.' each other.'

Note that the units which appear as the initial components (*hé₁* is one of them) in some compounds, may appear in final position in other compounds, including reciprocals; cf. (11) and (12). On the other hand, the final component may occur with different initial components in (quasi-)synonymous compounds. The verb *huàn* can also mean 'to change' in the sense 'replace (one thing by another)', in which meaning it may be used with a singular subject, while the other three verbs always require a semantically plural subject.

- (6) a. *huàn* 'to change, exchange sth'
 b. *hù-huàn* 'to exchange sth'; cf. *hù* in (9b) and (13a)
 c. *dù-huàn* (same as (b); *dù* 'to face, be opposite (to)')
 d. *jiāo-huàn* (same); cf. *jiāo* in (8a) and (10).

Compare:

- e. *Tāmen (*Tā) huàn-le / hù-huàn-le / dù-huàn-le / jiāo-huàn-le zhàopiān.*
 'They (*He) exchanged [their] photos.' (-le = PERF)

Some compounds differ in the arrangement of the components only (one of the variants may be more archaic); thus the meaning 'to unite' can be rendered by at least the following two compounds:

- (7) a. *jié-lián* 'to unite sth/sb', *jié* 'to tie, be/get tied'; cf. (12b); *lián*, cf. (12a)
 b. *lián-jié* arch. (same).

The semantic domains of collocations with *hùxiāng* and of lexical reciprocals differ to a significant degree. Among verbs collocating with *hùxiāng* those are prevalent that mostly take a human object and, consequently, a human (rarely animate) plural subject. Other verbs are rare enough among them. As regards lexical reciprocals, firstly, verbs with lexical meanings of active actions like 'to kill sb', 'to exterminate sb', 'to bomb sth/sb', etc. are not characteristic of them, and secondly, verbs with an inanimate subject are rather common among them.

1.2.2.2 Four groups of lexical reciprocals. We shall consider four groups of lexical reciprocals, though not in equal depth.

1. Group A comprises lexical reciprocals that are not compounds (cf. (8)) or they are compounds without a recurrent component (i.e. the initial component occurs in relatively few compounds, according to the dictionary data; see Section 5); cf. *lián* in (7b).

- (8) a. *Liǎng tiáo zhí xiàn jiāo yú yī diǎn.*
 two CLF straight line cross in one point
 'Two straight lines *intersect* at one point.' (example from *wényán*: no classifier, and preposition *yú* is used)

- b. *Tā shuōhuà bù qiè shíjì.*
 he words not correspond reality
 ‘His words do not *correspond* to facts.’

2. *Group B* is comprised of compounds with *hù-* (about 30 words) and *xiāng-* (about 100 words) of *adverbial* origin (neither is used as a free morpheme in Modern Chinese) as the recurrent components in the *initial* position, i.e. with the components of the reciprocal adverb *hùxiāng*. Therefore these compounds are considered here separately from those with other initial, mostly *verbal* components; see (6c, d) and (9), (10). The adverb *xiāng* ‘mutually, each other’ was the principal means of encoding reciprocity in Ancient Chinese (see Yakhontov, Ch. 48) and is retained in *wényán*, while in *báihuà* both *xiāng-* and *hù-* are preserved only in certain compounds registered in dictionaries; judging by the latter, the number of these compounds does not exceed 150 (see Section 6), compounds with *xiāng-* being several times more numerous than those with *hù-*. These components differ from those of *Group C* in that they are closer in meaning to *hùxiāng*. On the other hand, *xiāng* differs from *hùxiāng* in that in numerous compounds it does not change the meaning in any significant way; cf. *hǎo* ‘good’, ‘to be friends’ → *xiāng-hǎo* ‘to be friends.’ In the following example *xiāng* retains its reciprocal meaning: *ài* ‘to love’ → *xiāng-ài* ‘to love each other passionately’.

Only a few compounds with *hù-* (e.g. *hù-huàn* in (6b), *hù-zhù* in (13a)) are accepted by the informants. Curiously enough, in these compounds *hù-* cannot be replaced by *hùxiāng*, though for rhythmic rather than semantic reasons (see 1.2.4 below).

3. *Group C* comprises verbal and nominal compounds (about 220 and 115 units respectively) with the *initial* recurrent *verbal* (including adjectival) components that are lexical reciprocals. For description in this chapter, we have chosen those verbs that are, judging by the dictionaries, common enough as the initial constituents (therefore we have left out, for instance, the verb *qiè* illustrated in (8b)). All in all, we have chosen nine initial components (in the compounds their meanings may vary to a certain degree, and sometimes the meaning of a compound is not derivable from that of the constituents): *bǐ* ‘to compare, compete’, *duì* ‘to face, be opposite (to)’, *hé₁* ‘to connect, be connected, correspond’, *hé₂* ‘to be in concord, peaceful; to correspond, mix’ (*hé₁* and *hé₂* differ in origin and have different ideograms), *jiāo* ‘to intersect, cross, join, be friends’, *jiē* ‘to tie/be tied, join, come into contact’, *jié* ‘to tie up the ends, be tied; bind, meet; knit, weave’, *qīn* ‘relative, kin, close’ (adjective), *tóng* ‘same, alike’ (adjective). Some of them occur in 15 to 30 compounds, and *tóng* ‘same’ in about 80 compounds. The last two initial components differ sharply from the other ones in that they mostly form compound nouns with the meaning of class membership, e.g. *shì* ‘room’ → *tóng-shì* ‘roommate’ (‘you are *my* roommate’ = ‘I am *your* roommate’).

When these verbs (including adjectives) are used in reciprocal compounds, two main cases can be distinguished: (1) they *encode a reciprocal meaning* with non-reciprocal final components (see (9)); (2) they *do not significantly change the meaning* (and syntactic properties), in this case the final component is a lexical reciprocal, very often synonymous or nearly synonymous with the initial component (see (10)). Compare two analogous groups

with *xiāng* illustrated by *xiāng-hǎo* ‘to be friends’ and *xiāng-ài* ‘to love each other’ in case 2 above. Further on, we shall concentrate on these two cases.

- (9) a. *bài* ‘to bow to sb’ → *jiāo-bài* arch. ‘to bow to each other’
 b. *liú* ‘to flow’ → *jiāo-liú* ‘to flow together’
 c. *bǎo* ‘to vouch for sb’ → °*hé₁-bǎo* ‘to vouch for each other’
 d. *liú* ‘to flow’ → *hé₁-liú* ‘to flow together.’
- (10) a. *tán* ‘to converse’ → *jiāo-tán* ‘to converse’
 b. *chā* ‘to intersect, cross’ → *jiāo-chā* ‘to intersect, cross’
 c. °*dàng* ‘to correspond’ → °*hé₁-dàng* ‘to correspond.’

4. Group D consists of compounds with a *final* recurrent component; this type is less typical of reciprocal compounds and in this case, in a greater number of the compounds than in the first one, both components are lexical reciprocals. In our data, compounds with the meaning of joining are prevalent. The final constituent usually has a broader meaning than the initial one of the same compound and denotes a state resulting from the action named by the initial component (cf. (11a, b)) or it repeats parts of the meaning of the first component and in a way intensifies it (cf. (11a, b)).

- (11) a. *hàn* ‘to weld’ → *hàn-jiē* ‘to join by welding’
 b. *duàn* ‘to hammer (metal)’ → *duàn-jiē* ‘to join by hammering’
 c. *jiē* ‘to join’ → *jiē-hé₁* ‘to knit together’ (of bones)
 d. *hùn* ‘to mix, get mixed’ → *hùn-hé₁* ‘to mix, get mixed.’

The meaning of a compound in (a) approximates the meaning of resultative compounds (see (15)); here instead of the final component in some contexts the adverb *zài yīqǐ* ‘together’ can be used, and with some compounds this adverb may also be used pleonastically; cf. *féng* ‘to sew sth’ → *féng-hé₁* / *féng zài yīqǐ* / *féng-hé₁ zài yīqǐ* ‘to sew sth up together’.

1.2.3 Reciprocals with reduplicated or double auxiliary components

In these cases, the marker of reciprocity is combined with a repeated verb or two synonymous (usually monosyllabic) verbs. This marker can be: (a) repetition of the syllable *hù* on each verb, as in (12a); (b) the antonymous verbs of motion in opposite directions *lái* ‘come’ and *qù* ‘go’, as in (12b); (c) the personal pronouns *nǐ* ‘you.SG’ and *wǒ* ‘I’ (*nǐ V wǒ V*), as in (12c’) where both verbs mean ‘to catch up’, sometimes repeated in reversed order (*nǐ V wǒ, wǒ V nǐ*), as in (12c’):

- (12) a. *Tāmen jīngcháng hù-bāng-hù-zhù.* ‘They often help each other.’
 b. *Tāmen jīngcháng dā-lái-dā-qù.* ‘They often hit each other.’
 c’. *Tāmen nǐ zhuī wǒ gǎn.* ‘They overtake each other (in friendly emulation).’
 c’. *Tāmen nǐ kàn wǒ, wǒ kàn nǐ.* ‘They looked at each other.’

Types (12b) and (12c) are polysemous: the main meaning of (12b) is iterativity, durativity, motion to and fro, and (12c) may have the meanings ‘each’, ‘by turns’, etc. Type (12a) is of low productivity.

1.2.4 “Rhythmic agreement”

This metaphoric term refers to the tendency to use monosyllabic morphemes after monosyllabic words and disyllabic morphemes after disyllabic words.

A monosyllabic morpheme (word) requires a monosyllabic morpheme (word) after it, and a disyllabic word requires a disyllabic word after it.

Thus, the disyllabic adverb *hùxiāng* does not sound well with a monosyllabic verb (13c), but if the latter is replaced by a disyllabic synonym its combination with *hùxiāng* is possible (13e). The monosyllabic *hù-* does not sound well with the disyllabic *bāng-zhù* (13d) (both *zhù* and *bāng*, mostly used as bound morphemes, mean ‘to help’). However, a monosyllabic verb with *hù-* does not always result in a grammatical compound: thus *hù-zhù* (13a) is accepted by native speakers, while *hù-bāng* (13b) is rejected by most informants.

- (13) a. *Tāmen jīngcháng hù-zhù.* ‘They often help each other.’
 b. [?]*Tāmen jīngcháng hù-bāng.* (same)
 c. **Tāmen jīngcháng hùxiāng zhù.* (same intended meaning)
 d. **Tāmen jīngcháng hù-bāng-zhù.* (same intended meaning)
 e. *Tāmen jīngcháng hùxiāng bāng-zhù.* ‘They often help each other.’

A peculiarity of the component *hù-* is that it may, though rarely, be attached to verbs with the negation *bù* (but not with the negation *méi*), if *bù* is attached to a disyllabic verb. Note that without negation the same verbs with *hù-* are ungrammatical; cf. **hù-bāng-zhù* in (13d) and *hù-bù-bāng-zhù* in (13g).

- f. *Tāmen bù bāng-zhù tā.*
 they NEG help he
 ‘They do not help him,’
 but: g. *Tāmen hù-bù-bāng-zhù.*
 they REC-NEG-help
 ‘They do not help each other.’

The tendency provisionally termed “rhythmic agreement” finds expression in the following: if a monosyllabic predicate follows *hùxiāng*, i.e. a disyllabic word, there are several ways of adding another syllable to the predicate. It may be:

- (a) an object, e.g. *hùxiāng ràng wèizi* ‘to let each other take the place’;
 (b) an aspectual particle, e.g. *hùxiāng jiàn-guo* ‘to have seen each other’;
 (c) a count word, e.g. *hùxiāng jiàn yīxià* ‘to see each other briefly’;
 (d) a resultative marker, e.g. *hùxiāng ài-shang* ‘to fall in love with each other’;
 (e) reduplication of the predicate, e.g. *hùxiāng jiàn-jàn* ‘to see each other sometimes’.

1.3 Database. Symbols /²/ and /^o/

The illustrative material for this chapter has been obtained from dictionaries, specialist literature and from the informants.

In the sections on lexical reciprocals the lists of verbs are compiled almost entirely on the basis of the *Great Chinese-Russian Dictionary* (Oshanin 1983–4) which contains

250,000 entries from both *pǔtōnghuà* and *wényán*, and from diverse literary sources of diverse styles, and also on the basis of the *Chinese-Russian Dictionary* (Xia Zhong'yi (ed.), *Hàn E cídiǎn*. 1983; over 50,000 entries). The English translations of Chinese verbs and compounds are mostly based on these dictionaries. Sometimes, the data from *wényán* are also used for illustration. Besides, the *Modern Chinese Dictionary* (*Xiàndài Hànyǔ cídiǎn* 1996; more than 56,000 entries) and *The Great Russian-Chinese Dictionary* (*Hēi lóng jiāng dà xué é yǔ xì*, 1985; 157,000 entries) have been used (for the information on the dictionaries see Sources below). A number of compounds have been added from Tao Hongyin (1987: 344–82).

For evaluations and tests native speakers have been consulted; over ten informants have been questioned. Unfortunately, the entire material could not be checked with all the informants; only a part of the data has been checked by several of our informants; not infrequently, their judgments varied, from complete agreement to complete disagreement. The informants have also been asked to evaluate the data from the viewpoint of their usage in Modern Chinese. It was sometimes impossible to draw clearcut boundaries between various groups of verbs due to the informants' contradictory evaluations. Some decisions may be arbitrary. It remains to add that one of the authors of this chapter, Monique Hoa, also acted as an informant.

Each item of the dictionary data has been evaluated at least by one informant from the viewpoint of its usage in Modern Chinese. The informants' evaluations are designated as follows: the symbol /°/ marks reciprocals that are registered in the dictionaries but rejected by informants; /[?]/ in verb-lists shows that the form is evaluated as doubtful. These symbols are also sometimes used on the base verbs.

The symbol /*/ is used to mark ungrammatical compounds and sentences constructed by the authors of this paper. In doubtful cases /[?]/ is used.

The examples kindly supplied by Katia Chirkova and obtained by her from the Beijing colloquial speech (collected in the spring of 2000) are marked with five- to seven-digit numbers indicating their number in her corpus (now published in Chirkova 2003).

2. Grammatical notes

2.1 The word

Chinese is an isolating language with elements of agglutination. There are no inflections in Chinese and very little morphology (except compounding). Syntactic relations are signalled by word order and auxiliary words. Chinese is a tone language. Dialects differ with regard to the number of tones. Cantonese has the greatest number of tones, viz. nine. To a certain degree, tone serves to distinguish between words; e.g. in Běijīng Mandarin which has four tones: the syllable /ba/ means 'eight', 'scar', etc. if pronounced as *bā*, 'to pull out', 'epilogue', etc. if it is *bá*, 'to hold', 'target', etc. if it is *bǎ*, and 'to give up', 'monster', etc. if pronounced as *bà*. Note that in Chinese there are only a little more than 200 syllables

regardless of tones, and not more than 900 syllables if we count tones. To render them, 50 to 60 thousand ideograms are used.

The source language of the Modern Chinese dialects was monosyllabic, but by the 14th century Chinese phonological system had undergone a drastic simplification, e.g. the loss of the voiced vs. voiceless opposition, some tones, etc., which resulted in the development of massive homonymy among monosyllabic words, and this brought to life the tendency towards polysyllabicity. Polysyllabic words are mostly combinations of full words, and there are about ten derivational morphemes used to derive names of things, processes, persons (cf. *yuán* ‘basis, beginning’ → *yuán-zī* ‘atom’) and for adjectival derivation from verbs (cf. *chī* ‘to eat’ → *kě-chī* ‘edible’, *kāo* ‘to depend’ → *kě-kāo* ‘dependable’). But the number of derivatives with these morphemes is relatively small. Most words contain no indication of their belonging to any certain part of speech. In (ideogram) writing, words are not separated from one another.

2.2 Compounds

To quote Li & Thompson (1987: 816–8), “Roughly two-thirds of the basic everyday Beijing Mandarin vocabulary consist of polysyllabic (mostly disyllabic) words”, the remainder being monosyllabic. It is not always easy to understand (i.e. assign a meaning to) a monosyllabic Chinese word on hearing. Many words have two parallel forms, mono- and disyllabic (cf. (14)). Along with stable compounds, new coinages according to certain patterns are frequent in speech. Here are examples of types of compound words:

1. *Parallel verb compounds* consisting either of synonymous, or nearly synonymous or semantically similar words:

- | | | |
|-----------------------------|---|--|
| (14) <i>bāng</i> ‘to help’ | → | <i>bāng-zhù</i> (same) (<i>zhù</i> ‘to help’) |
| <i>huāng</i> ‘to worry’ | → | <i>fā-huāng</i> (same) (<i>fā</i> ‘to show’) |
| <i>dài</i> ‘to take, carry’ | → | <i>xié-dài</i> (same) (<i>xié</i> ‘to take, carry’) |
| <i>xīng</i> ‘to do, make’ | → | <i>shí-xīng</i> (same) (<i>xīng</i> ‘to do’). |

2. *Resultative verb compounds*; the second part signifies some result of an action or process conveyed by the first part:

- | | | |
|--|---|---|
| (15) <i>dǎ-pò</i> ‘to break by hitting’ | ← | <i>dǎ</i> ‘to hit’ + <i>pò</i> ‘to break’ |
| <i>tuī-kāi</i> ‘to push (the door, etc.) open’ | ← | <i>tuī</i> ‘to push’ + <i>kāi</i> ‘open.’ |

3. *Nominal compounds* consisting of two nouns:

- | | | |
|-----------------------------|---|--|
| (16) <i>dào-zéi</i> ‘thief’ | ← | <i>dào</i> ‘thief’ + <i>zéi</i> ‘thief’ |
| <i>fāng-dǐng</i> ‘roof’ | ← | <i>fāng</i> ‘house’ + <i>dǐng</i> ‘top’ |
| <i>fù-mǔ</i> ‘parents’ | ← | <i>fù</i> ‘father’ + <i>mǔ</i> ‘mother’. |

4. *Verb-noun compounds*:

- | | | |
|---|---|---|
| (17) <i>dìng-hūn</i> ‘to get betrothed’ | ← | <i>dìng</i> ‘to order’ + <i>hūn</i> ‘marriage’ |
| <i>xíng-lǐ</i> ‘salute’ | ← | <i>xíng</i> ‘to perform’ + <i>lǐ</i> ‘salutation’ |

As verbs and nouns are not differentiated formally and most monosyllabic words may function (or functioned) as both, it is often difficult to determine whether the final component of a compound is relatable to a verb or to a noun (as often as not, an additional difficulty is the choice of the underlying meaning if the base word is polysemous, and if the meaning of the compound has deviated from that of the base, i.e. not like in (18)). In principle, it may be relatable to both, as in (18) where the base monosyllabic word *yuē* which has gone out of use as a free unit has given rise to the compound *jié-yuē*. (Note that as a rule disyllabic verbal compounds (except resultatives, cf. (15)) easily undergo substantivization, cf. *jiāo-huàn* i. 'to exchange', ii. '(an) exchange', *jiāo-dài* i. 'to get acquainted', ii. 'acquaintance'):

- (18) *yuē* i. 'agreement', ii. 'to conclude an agreement'
 → *jié-yuē* 'to conclude an agreement.'

In the following case the underlying word is clearly a noun:

- (19) *xí* 'mat'
 → *tóng-xí* 'to be at the same table at a banquet.'

Some of the components are bound units and appear in compounds only, as, for instance, *fān* 'to oppose' which has practically gone out of use and is replaced by the compound *fān-duì* whose second component is synonymous with it and rarely used as a free verb.

The borderline between compounds and word combinations is not always clear; some compounds are divisible and words can be inserted between the components like infixes (which may be due to incomplete fusion, i.e. a compound may not be grammaticalized enough to be perceived as a single lexical unit), e.g. in the compounds *fēn-kāi* 'to become divided', *tán-huà* 'to talk', *dǎ-guān-sī* 'to be at law with sb'; cf.:

- (20) a. *Lǐlùn hé shíjiàn shì fēn-bù-kāi-de*
 theory and practice COP divide-NEG-open-ATR
 'Theory is inseparable from practice.'
 b. *Tāmen tán-guō-huà.* (= (5a))
 they converse-EXP-words
 'They talked to each other.'
 c. *Wǒ hé nǐ dǎ-le hěn jiǔ-de guānsi.*
 I and you beat-PERF very long-ATR legal.case
 'I and you have been at law with each other for a very long time.'

In this paper, the verbal compounds are segmented into morphemes, as a rule. This is meant in the first place to show the morphemic structure of disyllabic lexical reciprocals to which about half of this paper is devoted. It seemed also expedient to apply this to other disyllabic verbs in the examples.

2.3 Sentence structure

The basic word order is commonly SVO. A prepositionless object follows the predicate. With some formal types of predicates (reduplicated, with a post-verbal adverbial of re-

sult), and often with three-place transitives, the direct object precedes it and is marked by the preposition *bǎ* (cf. (3b), (4), (24b), (25)). In the case of verbs with two objects, if they are verbs of speech and giving, both objects may be postposed to the verb and have no preposition (see (24a)); an object corresponding to a direct one can be preposed to the verb and used with the preposition *bǎ*, in which case the second object follows the predicate. The subject precedes the predicate, except predicates of existence and appearance. An attribute precedes the head noun and is marked by the suffix *-de* (cf. *tā* 's/he' → *tā-de* 'his/her'; cf. (31), (52)–(54)). It may also mark adverbs (cf. *mànmàn-de pǎo* 'to run slowly'; cf. (27)). A form with this suffix may also function as a predicate with the copula *shì* 'to be' (cf. (20a)).

2.4 Word classes

In Chinese the same principal word classes can be distinguished as in other languages. Because of scanty morphology, most of the words cannot be identified as belonging to one or another word class. In dictionaries, the basic lexical meaning is usually indicated. Very many of the compounds can function both as nominals and verbs, adjectives and adverbs, etc.; cf.:

- (21) a. *bāng-zhù* i. 'to help', ii. 'help' (lit. 'to help + to help'; cf. (14a))
 b. *kě-néng* i. 'to be able', ii. 'possibility', iii. 'possible' (lit. *kě* 'can' + *néng* 'be able').

The particular functional meaning of a word – substantival, verbal or adjectival – is determined by the syntactic context and combination with auxiliary morphemes; e.g.:

- (22) a. *Wǒ kàn-jàn nín hěn gāo-xìng.*
 I see you.POL very joy
 'I saw you (and) rejoiced/was very glad', or 'It was nice to see you.'
 b. *Wǒ duì cǐ gǎn-dào gāo-xìng.*
 I to this feel joy
 'I feel joy because of this', 'I am happy about it.'

When used predicatively, adjectives do not require a copula. They are usually included in the same class as verbs, viz. the class of predicatives.

The noun is frequently preceded by a classifier that marks its class; cf., for instance, *zhī* in (3b), *tiáo* in (4), *běn* in (24a, b).

2.5 Tense-aspect markers

Most verbs in Chinese texts do not contain any tense-aspect markers, the temporal or aspectual meaning being inferred from the context. If necessary, the following suffixes (or auxiliary morphemes) can be used: *-le* for perfective past (see (20c)), *-guo* for experiential perfect (see (20b)), *-yǐ* in the meaning 'as soon as, immediately, just', *-zhe* as a marker of state or durative or resultative meaning (= the state resulting from a previous action; see (23b)), etc.

- (23) a. *Tā qù kāi mén.*
 he go open door
 'He will open the door now.'
- b. *Mén kāi-zhe.*
 door open-RES
 'The door is open.'

The morpheme *qilai* (lit. 'to stand up'; *qǐ* 'to rise', *lái* 'to come') on verbs denotes either a (gradual) beginning of an action (cf. *ná qilai* 'to begin taking') or achievement of a certain result (cf. *cáng qilai* 'to hide sth'; cf. (33), (104c, d)).

If a direct object with the preposition *bǎ* precedes the predicate the sentence is usually not ended by a single verb: the verb is followed by a resultative complement or it is reduplicated (*V + V* or *V + yī + V*), or it receives an aspectual marker or a count word (cf. *yīxià* lit. 'once' in (39), (48b)). Repetition of the verb (mono- or disyllabic) usually signifies a weakened action, like 'a little' (cf. *diān-dian* in (4)).

2.6 Verb classes

Verbs of different classes form constructions differing in the number, meaning and sequence of the obligatory components, and also in the auxiliaries used and in their transformational potential. The following main subclasses of verbs can be distinguished:

1. One-place intransitives: *pǎo* 'to run', *xiào* 'to laugh', *shuì-jìào* 'to sleep', *gōng-zuò* 'to work', etc.

2. Two-place intransitives; they take a prepositional object, in pre-position to some verbs and in post-position to other verbs; here belong *shī-wàng* 'to get disappointed in sth/sb', *kèqǐ* 'to be polite to sb' (with a preposed object with the preposition *duì* 'to, towards'; see (2a)).

3. Two-place transitives; they take a prepositionless object: *cán-shā* 'to kill sb (in a cruel manner)', *jiàn-zhù* 'to build sth', *zūn-zhòng* 'to respect sb', *wèn-hào* 'to greet sb', *biàn-wéi* 'to turn into sth', *ài-mù* 'to love sb', *jì-dù* 'to be jealous', etc. (see (1a)).

4. Three-place transitives, with the following subtypes:

4a. Verbs of speech and giving which can appear in constructions with two prepositionless objects, e.g.:

- (24) a. *Wǒ jiāo-gěi-le tā yī běn shū.*
 I give-PERF he one CLF book
 'I gave him a book.'
- b. *Wǒ bǎ yī běn shū jiāo-gěi-le tā.*
 I ba one CLF book give-PERF he
 (same translation).

4b. Verbs of naming sth/sb and turning sth into sth, like *jiào-zuò* 'to call, name', *biàn-wéi* 'to turn sth into sth' (25) with the first object always used with the preposition *bǎ* and preposed to the verb, and the second object in postposition;

- (25) *Tā bǎ wǒ kàn-chéng dírén.*
 he ba I consider enemy
 'He considers me (his) enemy.'

4c. Verbs with the meaning of joining two things where both objects are usually preposed to the verb, the first one introduced by *bǎ* and the other by a comitative preposition; cf. (33b).

4d. Causative verbs, e.g. *bāng-zhù* ‘to help sb to do sth’, *quàn* ‘to (try to) persuade sb to do sth’, *ràng* ‘to allow’, *gǔ-lì* ‘to instigate, encourage’, etc.; some of them may be used both as matrix verbs (that require a sentential argument; see (29)) and as two-place transitives, i.e. without an embedded clause. (For more information see Yakhontov 1957.)

2.7 Expression of reflexivity, reciprocity, passive voice, causativity, benefactivity, sociativity and comitativity

These meanings are encoded mainly by the following means.

1. *The reflexive meaning* is denoted by the pronoun *zìjǐ* ‘oneself, one’s own’ placed after the verb:

- (26) *Tā bú huì zhào-gu qīzi / zìjǐ.*
 he NEG able take.care wife / oneself
 ‘He is not able to take care of his wife / himself.’

2. *The reciprocal meaning*, as mentioned, is expressed by the adverb *hùxiāng* ‘mutually’ which is sometimes replaced by the adverb *bǐcǐ* (see 4.2, where two more rare reciprocal means are cited) or, less commonly, by *xiāng-hù* ‘mutually’ (for other means see 1.2.3). In colloquial speech *hùxiāng* is sometimes used with the attributive particle *-de*:

- (27) *(Tāmen) ... bǐcǐ hùxiāng-de tí yìjiàn.*
 they this.that mutually-de AUX criticism
 ‘(They) both criticize each other.’ (Chirkova 2003:06116)

3. *The passive* is expressed by a construction with the preposition *bèi* used with an agentive complement (the prepositions *ràng*, *jiào*, *gěi* may also be used); the preposition is added to the verb immediately. But most frequently the passive is not marked, the only indication being the patient in subject position:

- (28) a. *Dàjiā zūn-zhòng tā.* b. *Tā bèi dàjiā zūn-zhòng.*
 all respect he he PASS all respect
 ‘Everyone respects him.’ ‘He is respected by everyone.’

4. *The causative meaning* is rendered by notional causative verbs (see case 4d) in 2.6 and (29b)) or by the auxiliary verb *shǐ* ‘to cause/make’ (see (34b)):

- (29) a. *Wǒmen guǎn-lǐ guójiā* b. *Rénmín wěi-tuō wǒmen guǎn-lǐ guójiā.*
 we govern country people entrust we govern country
 ‘We govern the country.’ ‘The people entrusted us with governing the country.’

5. *The benefactive meaning* is denoted by the prepositions *gěi* ‘to, for’ (lit. ‘to give’), *wèi* ‘for’:

- (30) *Tā gěi wǒ dào-le chá.*
 he for I pour-PERF tea
 'He poured tea for me.'

6. *The comitative meaning* is signalled by the prepositions *hé*, *yú*, *gēn*, *tóng* 'with' which may function as conjunctions with the meaning 'and' as well (the components *hé* and *gēn* are usually interchangeable, but *gēn* is more colloquial than *hé*, and *yú* is used in written Chinese). Expression of the meanings 'and' and 'with' by the same word or affix is, as is well known, rather common cross-linguistically. Since these prepositions are used in reciprocal constructions, we shall touch upon their main usages. Three main cases can be distinguished, which are determined by the three valency verb types:

A. The comitative group can be omitted, because it is not determined by the lexical meaning of the verb and it is optional. This is particularly clear with one-place verbs: interpretation of this group as (a) part of the subject or (b) a verbal complement depends on the syntactic structure, and it may remain unclear. Thus, in (31a) interpretation (a) may be determined by the units *dōu* 'all' and *liǎng ge rén* 'the two/both of us/you/them, together' and interpretation (b) by the negation *bù* or by adverbs (e.g. *yòu* 'again', *zhèng* 'just', etc.) which disrupt the coordinative link. If the words in brackets are omitted, both readings (i) and (ii) in (31a) are possible (the examples and partially interpretations are borrowed from Shutova 1991:298–80, 260). Rearrangement of the constituents, even in the case of interpretation (ii), does not change the denotational content of the sentence (cf. 'I went out ... with P.Y.' vs. 'P.Y. went out ... with me').

- (31) a. *Wǒ (zhèng) hé P. Y. (liǎng ge rén) cóng yè-xiào chū-lái...*
 I just and/with P. Y. two CLF man from night.school go.out
 i. 'I and P.Y. (together) went out of the night school...'
 ii. 'I (just) went out of the night school with P.Y...'

In the other two cases the comitative group cannot be omitted, because it names an obligatory participant of the situation named.

B. The predicate is not a lexical reciprocal in (31b'–b''), therefore rearrangement of the nominal constituents changes the meaning and the comitative phrase cannot be a part of the subject (cf. 'they followed *me*' vs. 'I followed *them*'; 'I am angry *with him*' vs. 'He is angry *with me*'). Example (31b') is indicative as an illustration of two functions of the word *hé*, coordinating 'and' and subordinating 'with' (true, there is no comitative meaning in the second instance):

- (31) b'. *Fùqin hé mǔqin hé wǒ zhēngchǎo.*
 father and mother with I quarrel
 'Father and mother quarrelled with me.'
 b''. *Wǒ gēn tā shēng-qì.*
 I with s/he angry
 'I am angry with him.'

C. The predicate is a lexical reciprocal. The comitative group cannot be omitted but together with the first noun it may be replaced by a plural noun/pronoun, which is ruled out in case (31b'–b''). In case (1) it is possible, but the second participant is not part of

the lexical meaning of the predicate. If the bracketed words are absent, both readings are possible, though the informants usually prefer reading (i) which is monosemous if the adverb ‘again’ is used. If words like ‘both/two of us’ are used, reading (ii) is highlighted. As in (31a), rearrangement of the nominal constituents does not change the denotational content of the sentence (cf. ‘he argues *with me*’ vs. ‘I argue *with him*’).

- (31) c. *Tā (yòu) hé wǒ (liǎng ge rén) biàn-lùn.*
 he again and/with I two CLF man argue
 i. ‘He (again) argues with me.’
 ii. ‘He and I (both of us) argue.’

7. *The sociative meaning* is denoted by adverbs with the meaning ‘together’: *yīkuài*, *yīqǐ*, *yītóng* (the initial component *yī* means ‘one’). The second one may also have the non-sociative meaning of joining of two entities (see (115)), though more frequent in this meaning is the collocation *zài yīqǐ* (see (90c), (101), (104a, b)).

- (32) *Nǐmen bú yào yīqǐ shuō-huà.*
 you.PL not necessary all speak
 ‘You shouldn’t speak together.’

2.8 Valency changes. Transitive/intransitive correspondences

Many verbs may change their meaning and valency without undergoing any formal changes or by taking a copula; thus *fā-zhǎn* ‘to develop sth’ (vt/vi), when used with the copula *wéi* means ‘to develop into sth’ (vi), and it may take an object with the preposition *bǎ*, in which case it acquires the meaning ‘to develop/change sth into sth’; the verb *jiào-zuò* means both ‘be called sth/have the name of’ (vi) and ‘give the name (of) to sb’ (vt). Valency also changes in the process of resultative derivation from two- or three-place transitives (see (33)). In (33a) → (33b) the intransitive or transitive meaning is determined by the syntactic structure only, and in (34a) → (34b) by the causative auxiliary verb *shǐ* ‘to cause/make’:

- (33) a. *Shuǐ tóng jiǔ hùn-hé₁-le qilai.*
 water with wine mix-PERF qilai
 ‘Water got mixed with wine.’
 b. *Tā bǎ shuǐ tóng jiǔ hùn-hé₁-le qilai.*
 he ba water with wine mix-PERF qilai
 ‘He mixed water with wine.’
- (34) a. *Nán nǚ quánlì píng-děng-le.*
 man woman rights be.equal-PERF
 ‘The rights of men and women became equal.’
 b. *Zhènfǔ shǐ nán nǚ quánlì píng-děng-le.*
 government cause man woman rights be.equal-PERF
 ‘The government made the rights of men and women equal.’

To sum up, the following valency characteristics are relevant: (1) transitive-intransitive nature of verbs like *kāi* ‘to open’; (2) causativization by means of the auxiliary *shǐ*; (3)

valency reduction by means of passivization; (4) valency reduction by means of the adverb *hùxiāng* ‘mutually’ and also, sometimes, bound morphemes *hù* and *xiāng* (see Group B in 1.2.2.2); 5) valency reduction marked by the initial recurrent components listed above (see Group C in 1.2.2.2). In the latter two cases valency reduction is not obvious if the base verb is transitive-intransitive.

3. Diathesis types of reciprocal constructions with the adverb *hùxiāng*

3.1 Expression of reciprocal arguments

3.1.1 *Introductory*

The reciprocal arguments may take either the subject or object position, depending on the subject-object or object-object cross-coreference; see (1b), (2b) and (3b) respectively. As mentioned above, the respective constructions are termed here subject-oriented and object-oriented. The reciprocal arguments can be expressed either by a plural (at least semantically) noun phrase, as in (36), or by coordinated noun phrases, as in (1b), (2b), (3b), etc. These nouns may be preceded by numerals, as in (36d), (37b), or classifiers, as in (37a), or collective nouns with meanings like ‘group’, ‘class’, as in (36e). In Chinese there is no grammatical category of number but there is an optional marker of plurality: in the case of a plural subject, plurality can be encoded by the suffix *-men* on pronouns and animate nouns (see (36a) and (5)). Plurality mostly remains uncoded: the context usually makes it clear; in the case of reciprocals, it is implied by the adverb *hùxiāng* (see, for instance, (36b)).

If the subject of a construction with *hùxiāng* is a single proper name or a singular pronoun, the construction is ungrammatical (see (35a)). As the singular participant is coded explicitly, it cannot perform the same function as in (36b) where the noun can be interpreted either as singular or as plural.

- (35) a. **Tā hùxiāng qī-piàn* b. **Lǐ Sì hùxiāng qī-piàn*
 he mutually deceive L.S. mutually deceive
 lit. ‘He deceives each other.’ lit. ‘Li Si deceives each other.’

3.1.2 *Simple reciprocal constructions*

3.1.2.1 *Plural subject.* This section concerns constructions where the reciprocal arguments are expressed by a single constituent.

3.1.2.1.1 *Subject-oriented constructions.* The following examples illustrate this type of constructions. In (36a) the reciprocal arguments are named by the plural subject, and in (36b) and (36c) plurality of the participants is indicated by *hùxiāng*. In (36c) the latter is optional because the predicate is a lexical reciprocal (for details see 6.2.1).

- (36) a. *Zhànzhēng shíqī rén-men hùxiāng cán-shā.*
 war time man-PL mutually exterminate
 ‘In wartime people exterminate one another.’

- b. *Yěshòu hùxiāng cán-shí.*
beast mutually devour
'Wild beasts devour each other.'
- c. *Shānbǎn [hùxiāng] pèng-zhùang zhe.*
boat mutually collide DUR
'Boats collide with each other.'
- d. *Liǎng guó hùxiāng hōng-zhà.*
two country mutually bomb
'Two countries bomb each other.'
- e. *Yī qún shuǐshòu hùxiāng bāng-zhù.*
one group sailor mutually help
'A group of sailors helped each other.'

3.1.2.1.2 Object-oriented constructions. This construction is formed by three-place or two-place transitives with a plural object (mostly lexical reciprocals with the meaning of *joining* or *bringing two objects into contact*). As mentioned, the reciprocal arguments are usually denoted by a semantically plural object. Plurality may be expressed by a numeral or it may be implied by the verbal meaning or by *hùxiāng*. (37a) and (37b) contain lexical reciprocals, therefore *hùxiāng* which stresses the interaction of two entities can be optional (though this is not a general rule).

- (37) a. *Tā bā liǎng zhī gēbo [hùxiāng] jiāo-chā zhe.*
he *ba* two CLF arm mutually cross DUR
'He crossed his arms.'
- b. *Tā bā liǎng zhāng zhàopiān [hùxiāng] bǐ-jiāo*
he *ba* two sheet photo mutually compare
'He compares two photos.' (cf. also (3b) and (4)).

3.1.2.2 Coordinated subjects

3.1.2.2.1 Subject-oriented constructions. In this type of constructions the reciprocal arguments are two or more constituents which can be linked with or without a coordinating conjunction (unless at least one argument is denoted by a pronoun), usually *hé* 'and/with', less commonly *yú*, *gēn*, or *tóng* 'and/with' (see (32)).

- (38) a. *Tā hé wǒ hùxiāng qī-piàn.*
he and I mutually deceive
'He and I deceive each other'; cf. also (1b), (2b).
- b. *Mǔ-zǐ hùxiāng bāng-zhù-guo.*
mother-son mutually help-help-EXP
'Mother and son helped each other.'

3.1.2.2.2 Object-oriented constructions. Coordinated reciprocal arguments are rather rare in this construction, probably due to the requirement of two arguments belonging to the same class of entities. (39) is one of the few examples at our disposal (object-oriented constructions are more frequent with lexical reciprocals; cf. (33b), (34b)):

- (39) *Tā bǎ wǒ hé tā-de gēge hùxiāng jiè-shào-le yíxià.*
 he *ba* I and he-ATR elder.brother mutually introduce-PERF once
 ‘He introduced me and his elder brother to each other.’

3.1.3 *Discontinuous reciprocal constructions. Subject-oriented constructions only*

As a matter of fact, we have no proper discontinuous object-oriented constructions at our disposal. But constructions with the conjunctions and/or prepositions listed in 3.1.2.2.1 may also be interpreted as discontinuous with a comitative object. The nature of these constructions (simple or discontinuous?) often remains obscure. As mentioned in the text above (31), if the interpretation is comitative, these items are regarded as prepositions with the meaning ‘with’. Note that either interpretation does not essentially change the meaning of the sentence. A construction is obviously discontinuous if there is an adverb (e.g. with a meaning like ‘again’, ‘yesterday’, ‘just’, ‘probably’, etc.) or a verb (e.g. ‘to want’) between the first and the second arguments.

In Chinese the difference between simple and discontinuous constructions with certain verbs seems to be blurred to a certain degree. This is due to the fact that comitative prepositions can function as conjunctions and also because the noun phrase with this preposition precedes the predicate and thus outwardly these constructions do not differ. The English sentence given as translation (i) in (40) offered for translation to the informant is translated by sentence (40) which may be interpreted as simple, as reflected in translation (ii):

- (40) *Wǒ hé tā xiānghù nì-xíng.* (F. Li., p.c.)
 I and/with he mutually opposite-go
 i. ‘I am going in the opposite direction from *him*.’
 ii. ‘I and *he* are going in opposite directions *from each other*.’

If there is an intermediate word between the two arguments and the first one is singular, it would seem that *hùxiāng* cannot be used (see (41a), (41b); cf. also (2c)), but this is not so, and *hùxiāng* is possible, because its domain covers both the subject and the comitative object. Note, however, that some of our informants object to such constructions.

- (41) a. *Tā yóu hé wǒ hùxiāng qī-piàn.*
 he again with I mutually deceive
 ‘He and I again deceive each other’, lit. ‘He again with me deceives *each other*.’
 b. *Tā xiǎng hé wǒ hùxiāng bāng-zhù.*
 he want with I mutually help
 ‘We want to help *each other*’, lit. ‘He wants with me to help *each other*.’

The informants are more unanimous in their rejection of constructions with *hùxiāng* if the second argument has a non-comitative preposition, viz. a preposition used in the underlying non-reciprocal construction. Thus a non-comitative object is not covered by *hùxiāng* and type (42b) sentences sound as unacceptable as (35a) and (35b); cf. (42b) and (42c).

- (42) a. *Wǒ duì tā shī-wàng-le.*
 I to s/he be.disappointed-PERF
 'I got disappointed in him.'
- b. **Wǒ duì tā hùxiāng shī-wàng-le.*
 lit. 'I got disappointed *mutually* in him.' (see also (2d))
- c. *Wǒ hé / gēn / yú / tóng tā hùxiāng shī-wàng-le.*
 'I and he got disappointed *in each other*.'

3.2 Subject-oriented constructions

Four main diathesis types of subject-oriented constructions can be distinguished: “canonical”, “indirect”, “possessive”, and “adverbial”.

In the first two types, the subject is cross-referenced with an object argument, i.e. with a constituent required by the lexical meaning of the verb: in “canonical” constructions, it is the direct object (with two-place or three-place transitives) or the only non-direct object, and in “indirect” constructions formed from three-place transitives it is the indirect object that is cross-referenced with the subject, the direct object being retained (cf. (51)).

In the remaining two types, it is not an object argument that is cross-referenced with the subject but it is a possessive attribute of the direct or indirect object in a “possessive” construction, and in an “adverbial” construction, as is clear from the term, it is an adverbial, i.e. those constituents are cross-coreferenced with the subject that are not required by the verbal lexical meaning (we have also included here reciprocal constructions with verbs taking an optional benefactive object which is essentially an adverbial constituent though it is semantically close to the obligatory dative object).

In this section all the four main logical possibilities of the subject cross-reference with other sentence constituents are considered: with syntactic arguments (a direct and non-direct object) and with non-arguments (an attribute and an adverbial).

Moreover, there is a fifth irreversible type of reciprocal constructions where the marker *hùxiāng* does not have a counterpart in the base construction. This type may be both subject- and object-oriented.

3.2.1 “Canonical” reciprocals

Reciprocals of this type may be regarded as intransitive, i.e. they do not take a direct object, while the underlying construction may be either transitive or intransitive. There are grounds, it seems, to see a kind of intransitivization (or at least valency decrease, since the syntactic status of an adverb is lower than that of a noun object) in the transformation (1a') → (1b), where a direct object is replaced by the reciprocal adverb. It does not occupy the slot of the object it replaces in the sentence structure. Needless to say, this intransitive construction differs from a transitive one with a morphological reciprocal in some agglutinative languages, in which case the reciprocal construction does not contain any words that replace the cross-referenced constituents.

3.2.1.1 *With two-place transitives.* This is the most common type of reciprocals, which is only natural, since two-place transitives are the most numerous class of verbs.

- (43) a. *Tā jīngcháng pī-píng nǐ.*
 he often criticize you.sg
 'He often criticizes you.'
- b. *Nǐmen jīngcháng hùxiāng pī-píng*
 you.PL often mutually criticize
 'You often criticize *each other*.' (see also (1b), (36), (38), (41), etc.).

Here is a list of some of the verbs attested with *hùxiāng*; verbs of non-physical actions rather than verbs of physical actions are predominant among them; cf.:

- (44) *chéng-rèn* 'to recognize sb/sth' *liáo-jǐè* 'to know sb'
fěng-cì 'to be ironic about sb/sth' *qī-piàn* 'to deceive sb'
gǎn-xiè 'to thank sb' *zhào-gu* 'to take care of sb'
gǔ-lì 'to encourage sb' *zhī-chí* 'to support sb'
jū-dù 'to be jealous of sb' *zūn-zhòng* 'to respect sb'
mà 'to scold sb' *pī-píng* 'to criticize sb'.

3.2.1.2 *With two-place intransitives.* In the derivation of this type of reciprocal constructions, the following components are lost:

- the preposition introducing an object, see (42a), (45a);
- the words *nàr* 'there' and *zhèr* 'here' postposed to human nouns and denoting destination or goal of motion (46);
- a copula (*chéng, wéi, chéng-wéi, zuò*, etc.) which is used with verbs of turning into sth (47).

- (45) a. *Wǒ xiàng tā dào-qian-le.*
 I to he apologize-PERF
 'I apologized to him.'
- b. *Tāmen hùxiāng dào-qian-le.*
 they mutually apologize-PERF
 'They apologized *to each other*.'
- (46) a. *Wǒ jīngcháng dào tā nàr chuàn-ménr.*
 I often to he there go
 lit. 'I often go to his place on a visit.'
- b. *Wǒmen jīngcháng hùxiāng chuàn-ménr.*
 'We often visit *each other*.'
- (47) a. *Diànzǐ zhuǎn-huà chéng guāngzǐ.*
 electron change become photon
 'Electrons change into protons.'
- b. *Diànzǐ hé guāngzǐ hùxiāng zhuǎn-huà.*
 'Electrons and protons change into *each other*.'

Non-combinability of the reciprocal marker with prepositions can be compared with the non-combinability of reflexive reciprocals with prepositions in the Indo-European languages (cf., for instance, Penchev, Ch. 13, §1.2). In Ancient Chinese the reciprocal marker

did occur with those prepositions whose meaning was compatible with an object semantically, cf. *xiāng yǔ yuē* ‘to come to an agreement *with* each other’ (see Yakhontov, Ch. 48, §7).

3.2.1.3 *With three-place transitives.* The following three semantic groups of verbs are distinguished:

- a verb with the meaning ‘to introduce oneself to sb’ (in the reciprocal construction *two* objects are deleted);
- verbs of naming and changing into sth;
- notional causative verbs.

In fact, (50b) alone is a “canonical” reciprocal proper, because it alone does not contain a direct object. In (49b) one of the two direct objects is retained but it can be interpreted as part of a complex predicate (in (49a) the word *dírén* ‘enemy’ cannot be placed before the predicate and take the preposition *bǎ*). In the classification adopted in this volume, it seems convenient to place the reciprocals of the latter two types, i.e. (49) and (50), among “canonical” reciprocals. Compare the respective examples:

- (48) a. *Tā xiàng wǒ jiè-shào-le zìjǐ.*
 he to I introduce-PERF oneself
 ‘He introduced himself to me.’
 b. *Tā hé wǒ hùxiāng jiè-shào-le yíxià.*
 he and I mutually introduce-PERF once
 ‘He and I introduced ourselves to each other.’
- (49) a. *Tā bǎ wǒ kàn-chéng dírén.*
 he *ba* I consider enemy
 ‘He considers me an enemy.’
 b. *Tā hé wǒ hùxiāng kàn-chéng dírén.*
 ‘He and I consider *each other* enemies.’
- (50) a. *Wǒ gǔ-lì tā cān-jīa bǐsài.*
 I instigate he participate competition
 ‘I instigate him to take part in the competitions.’
 b. *Wǒmen hùxiāng gǔ-lì cān-jīa bǐsài.*
 ‘We instigate *each other* to take part in the competitions.’

3.2.2 “Indirect” reciprocals

Note that “indirect” here serves as a label, by analogy with other languages where some of the verbs like those listed below take a dative case. In the derived constructions in question the direct object is retained and the indirect object denoting goal in the broad sense (or, much less commonly, an object of source; see (52)) is eliminated. The preposition (and the marker *nàr*) is omitted in the same way as mentioned in 3.2.1.2, see (46). Three groups of verbs can be distinguished here:

1. Verbs of communicating information, giving/receiving an object, and the like (cf. *bào-gào* ‘to report/let know’, *zèng-gěi* ‘to give a present’, *sòng* ‘to send’, *jiāo-gěi* ‘to give/pass/pay in’, *dé-dào* ‘to receive’, *xún-wèn* ‘to ask’, *jiè* ‘to borrow’, etc.).

2. Verbs of moving an object (e.g. *chū-kǒu* ‘to export/take out’, *pài-qiǎn* ‘to send’, etc.):

- (51) a'. *Wǒ sòng gěi tā lǐwù.* + a'. *Tā sòng gěi wǒ lǐwù.*
 I send to/for he present he send to/for I present
 ‘I sent him a present.’ ‘He sent me a present.’
- b. *Wǒmen hùxiāng sòng lǐwù_{i+j}.*
 we mutually send present
 ‘We sent each other presents.’
- (52) a. *Wǒ gēn tā jiè qián.*
 I from he borrow money
 ‘I borrow money from him.’
- b. *Wǒmen hùxiāng jiè qián.*
 we mutually borrow money
 ‘We borrow money from each other.’

As a rule, *hùxiāng* does not collocate with monosyllabic verbs for rhythmic reasons, but in (51b) and (52b) this tendency is violated, because the verb is followed by a direct object which in a way “completes” the required rhythmic pattern: a disyllabic adverb and a disyllabic (or trisyllabic) combination verb + noun (on “rhythmic agreement” see 1.2.4 and 6.5.3).

In the following examples *hùxiāng* combines with disyllabic verbs according to the rule of “rhythmic agreement”.

- (53) a. *Yī guó xiàng líng yì guó pài-qiǎn jiàndié.*
 one country into/to another country send spy
 ‘One country sends agents into another country.’
- b. *Liǎng guó hùxiāng pài-qiǎn jiàndié.*
 ‘Two countries send agents into each other.’
- (54) *Tāmen bǎ zhè běn shū hùxiāng chuán-yuè yíxià.*
 they ba this CLF book mutually pass-read once
 ‘They passed this book to each other for reading [by turns].’

3.2.3 “Possessive” reciprocals

The base constructions of these reciprocals contain a possessive attribute preceding a direct or non-direct object which is omitted in the derived construction or replaced by the word *duìfāng-de* ‘partner’s’. Thus the syntactic structure is retained and a direct object is also retained as well as in “indirect” reciprocals, and in the case with *duìfāng* the syntactic structure is retained (cf. also 4.4). These reciprocals are derived from both two-place and three-place transitives (including those that are entered in the above types as well; cf. ‘to criticize each other’ as in (43b) in 3.2.1.1 and ‘to criticize each other’s mistakes’ as in 3.2.3.1). Denotationally, and also according to the feature +direct object, sentences with “possessive” reciprocals are close to those with “indirect” reciprocals.

3.2.3.1 *With two-place transitives.* A direct object may denote either an alienable or inalienable possession of the subject referent. In the reciprocal construction the attribute *duìfāng-de* ‘of the other party’ is possible and even preferable. If it is used, the syntactic

structure of both the underlying and derived constructions is the same. The lexical content of this type partially overlaps with that of “canonical” reciprocals; cf. *pī-píng* in (55b) and (43b).

- (55) a'. *Wǒ pī-píng tā-de cuòwu* + a". *Tā pī-píng wǒ-de cuòwu*
 I criticize he-ATR mistake he criticize I-ATR mistake
 'I criticized his/her mistakes.' 'He criticized my mistakes.'
- b. *Wǒmen hùxiāng pī-píng duìfāng-de cuòwu.*
 we mutually criticize partner-ATR mistake
 'We criticize each other's mistakes.'
- (56) a. *Wǒmen fāng-wèn tāmen-de shǒudū.*
 We visit their-ATR capital
 'We visit their capital.'
- b. *Wǒmen hùxiāng fāng-wèn [duìfāng-de] shǒudū.*
 we REC visit partner-ATR capital
 'We visit each other's capitals.'

3.2.3.2 *With three-place transitives.* Here is an example with a verb of putting an object somewhere; one of the objects is inalienable possession of the attribute referent:

- (57) a. *Wǒ wǎng tā-de liǎn-shang cuō fěn.* (*shang* = postposition)
 I on s/he-ATR face-on rub powder
 'I put powder on his/her face.'
- b. *Wǒmen hùxiāng wǎng liǎn-shang cuō fěn.*
 we mutually on face-on rub powder
 'We put powder on each other's faces.' (see also (65a) and (67a)).

3.2.4 *Adverbial reciprocals*

In this case, as mentioned above and as is seen from the heading, the subject is cross-referenced with a non-argument, i.e. with an optional constituent not required by the lexical meaning of the verb, at least not in the degree as in the other cases. This type covers two subtypes.

1. Constructions with two-place transitives taking an optional benefactive object. This type is adverbial, because a benefactive constituent is not presupposed by the verbal meaning but semantically these constructions are adjacent to “indirect” ones (cf. (51a)):

- (58) a. *Wǒ gěi tā dào chá.*
 I to/for he pour tea
 'I pour tea for him.'
- b. *Wǒmen hùxiāng dào chá.*
 'We pour tea for each other.'

2. Constructions with one-place intransitives where a non-subject constituent denotes a human referent not determined by the lexical meaning of the verb, but related to the subject referent by the expression of the emotion named. (59a) and (59b) differ to a certain degree in that (59b) “would imply that the participants intentionally shed tears to each other” (F. Li, p.c.):

- (59) a. *Tā duì wǒ diào-zhe yǎnlèi.*
s/he to I shed-DUR tear
'He is shedding tears before/in front of me.'
- b. *Tāmen hùxiāng diào-zhe yǎnlèi.*
they mutually shed-DUR tear
'They are shedding tears in front of/in the presence of each other.'
- (60) a. *Tā duì tāmen tàn-zhe-qì.*
he to they sigh-DUR-breath
'He is sighing in front of them.'
- b. *Tāmen zuò-zhe hùxiāng tàn-zhe-qì.*
they sit-DUR mutually sigh-DUR-breath
'They are sitting there sighing to each other.'

3.2.5 Embedded subject-oriented constructions

Embedding of a subject-oriented reciprocal construction does not affect its reciprocity. No referential conflict arises in (61c).

- (61) a. *Wǒ zhào-gu háizi.*
I take.care child
'I take care of the child.'
- b. *Wǒmén hùxiāng zhào-gu.*
'We take care of each other.'
- c. *L.X. hé W.Z. quàn wǒmén hùxiāng zhào-gu.*
L.X. and W.Z. ask we mutually take.care
'L.X. and W.Z. ask us_i to take care of each other_i.'

3.3 Object-oriented constructions; three-place transitives of joining

Here belong reciprocals derived from three-place verbs of connecting two things, bringing two entities into contact (both literally and figuratively) and the like (note that the subject can be singular here). The underlying construction contains one direct and one non-direct prepositional object denoting either an addressee or an instrument (cf. *yòng yí kuài mùtóu* in (62a)), or two prepositionless objects (see case 4 in 2.6). As a rule, the single object of the reciprocal construction is semantically plural and names both participants (the potentially heterogeneous objects of the base construction become homogeneous in the reciprocal construction). It is always preposed to the predicate and introduced by the preposition *bǎ*, and the adverb *hùxiāng* always follows the object that determines it (in the same way as in the subject-oriented construction *hùxiāng* always follows the subject). In other words, *hùxiāng* cannot be related to a direct object that follows the predicate (cf. 3.4.2). The object-oriented construction is characteristic of lexical reciprocals, and *hùxiāng* is often optional with them (cf. 5.3.2).

3.3.1 The underlying non-direct object denotes the addressee

The verb with the meaning 'to introduce sb to sb' is of this type, too (this verb may occur as a subject-oriented reciprocal in combination with *hùxiāng*; cf. (48b)). Reciprocals with

meanings like ‘sb sets dogs on each other’, ‘sb sends sb(PL) to each other’, etc., seem to be of this kind, too. For an example of this type see (39).

3.3.2 *The underlying non-direct object denotes an instrument*

As mentioned above (see (3) and the relevant text), the base construction (e.g. (62a)) is often less acceptable than the derived one (e.g. (62b)).

- (62) a. [?]*Tā yòng yí kuài mùtòu bǎ lìng yí kuài mùtòu qiāo-le qiāo.*
 he with one piece wood *ba* another one piece wood rub-PERF rub
 ‘He rubbed one piece of wood *with/against* another.’
- b. *Tā bǎ liǎng kuài mùtòu hùxiāng qiāo-le qiāo*
 he *ba* two piece wood mutually rub-PERF rub
 ‘He rubbed two pieces of wood against each other.’ (see also (66a), (67b))

3.3.3 *The underlying non-direct object denotes an attachable thing. Subject-oriented reciprocals (resultatives) derived from object-oriented reciprocals*

Here is an example:

- (63) a. *Tā bǎ dà tiě guǎnzǐ tào-zài xiǎo tiě guǎnzǐ shàng.*
 he *ba* big iron pipe put.on-PPS small iron pipe on
 ‘He put the big pipe onto the small one.’
- b. [?]*Tā bǎ liǎng gēn tiě guǎnzǐ hùxiāng tào qilái.*
 he *ba* two CLF iron pipe mutually put.on *qilai*
 ‘He inserted two iron pipes into one another.’
- c. *Tiě guǎnzǐ hùxiāng tào-zhe.*
 iron pipe REC insert-DUR
 ‘Iron pipes are inserted one into another.’

3.4 Two-diathesis types of reciprocal constructions

Collocations of *hùxiāng* with some of the verbs allow two readings. Such cases are attested only in transitive reciprocal constructions. In some instances (see 3.4.2) one or the other reading is determined by the position of *hùxiāng* before or after the direct object. Each interpretation is relatable to the underlying construction of its own.

3.4.1 *Within subject-oriented constructions: “Indirect” or “possessive”?*

Thus, for instance, (64) allows two readings, which are related to different base sentences.

- (64) *L.Z. hé X.L. hùxiāng kuājiǎng háizi.*
 L.Z. and X.L. mutually praise children
- i. ‘L.Z. and X.L. praise their own children to each other.’
- ii. ‘L.Z. and X.L. praise each other’s children.’

3.4.2 *Subject-oriented (“possessive”) or object-oriented?*

This case concerns collocations of *hùxiāng* with three-place transitives (one of the objects may be optional). A collocation of *hùxiāng* with the same verb can form two constructions. They differ in the position of *hùxiāng*: in the subject-oriented construction it

precedes the object (the subject is necessarily plural) and in the object-oriented one it follows the direct object (the subject may be singular). Below are examples: for subject-oriented (“possessive”) construction (65a) the base is (65b), and for object-oriented (66a) it is (66b). (67a) and (67b) are subject- and object-oriented respectively, cited without their base constructions.

- (65) a. *Nǐ-men hùxiāng bǎ liǎng zhī shǒu róu-rou.*
 you-PL mutually *ba* both CLF hand massage
 ‘Massage each other’s hands!’ (each massages the hands of the other)
- b. *Nǐ bǎ duìfāng-de shǒu róu-rou.*
 you.SG *ba* partner-POSS hand massage
 ‘Massage your partner’s hand!’
- (66) a. *Nǐ-men bǎ liǎng zhī shǒu hùxiāng róu-rou.*
 you-PL *ba* both CLF hand mutually massage
 ‘[Each of you,] massage one hand with the other [hand]!’
- b. *Nǐ bǎ zìjǐ-de shǒu róu-rou.*
 you.SG *ba* own-POSS hand massage
 ‘Massage your hand!’ (naturally, with your other hand)
- (67) a. *Nǐ-men hùxiāng bǎ liǎng zhī gēbo jiāo-chā qilai.*
 you-PL mutually *ba* two CLF arm cross *qilai*
 ‘You(PL) crossed each other’s arms.’
- b. *Nǐ bǎ liǎng zhī gēbo hùxiāng jiāo-chā qilai.*
 you.SG *ba* two CLF arm mutually cross *qilai*
 ‘You(SG) [each] cross your [own] arms.’ (F. Li, p.c.)

3.5 Irreversible reciprocal constructions (= without (standard) underlying constructions)

There are two types. In the first type the adverb *hùxiāng* does not replace any word. In the second type the adverbials that appear in the reciprocal construction sound unnatural in the base construction without appropriate context.

3.5.1 *The adverb hùxiāng does not replace any constituent*

(68a) is most likely lacking a respective base construction with an explicit addressee. If this is so, it may be regarded as (“indirect”) quasi-subject-oriented. In (68b) rejected by some of our informants even those who accept it prefer to omit *hùxiāng*. The point is, that, unlike (4) which is also irreversible, (68b) makes it clear that different pairs of shoes are to be tried on one after another (F. Li, p.c.). It contains a two-place transitive with both arguments explicit. As it implies a comparison of two objects, it is quasi-object-oriented. The analogous construction in (4) is more readily accepted by the informants (for the explanation see the text above example (4)).

- (68) a. *L.Z. hé X.L. hùxiāng jiān-chí zìjǐ-de yìjian.*
 L.Z. and X.L. mutually persist one’s.own-ATR opinion
 ‘L.Z. and X.L. each insists on his own opinion (against each other).’

- b. ²Nǐ bǎ zhè jǐ shuāng xié [hùxiāng] shì yíxià.
 you.SG ba this several pair shoe mutually try once
 lit. ‘Try on some of these pairs of shoes mutually (= compare them with each other in order to see which pair is better).’

3.5.2 Irreversible adverbials

There is a group of adverbs (e.g. *tóngshí* ‘at the same time’, *lúnliú* ‘alternately, by turns’, etc.) whose meaning presupposes two or more actions at the same time. They cannot be used in underlying constructions of the (69b) type without a suitable previous context like (a) ‘X.L. pointed his finger at L.Z. and L.Z. pointed his finger (at him) almost *at the same time*’, or (b) ‘L.Z. pointed his finger almost *at the same time as X.L. did*’, or (c) ‘Who else knows this?’ (and the reply may be ‘... *and at the same time* he pointed his finger at that man’), i.e. (69b) cannot be an opening statement, because the meaning ‘at the same time’ requires two actions. (69b) can be made complete if it is continued ‘... at the same time as X.L. did’.

- (69) a. L.Z. hé X.L. jīhū tóngshí hùxiāng zhī-le-zhī.
 L.Z. and X.L. almost at.the.same.time mutually show-PERF-show
 ‘L.Z. and X.L. pointed their fingers at each other almost *at the same time*.’
 b. L.Z. jīhū tóngshí zhī-le-zhī X.L. ...
 L.Z. almost at the same.time show-PERF-show X.L.
 ‘L.Z. pointed his finger almost *at the same time* ...’

3.6 Restrictions on *hùxiāng* and “violations” of these restrictions

Most likely, restrictions on the use of *hùxiāng* with non-reciprocal verbs are of trivial nature, e.g. it does not occur with one-place intransitives (cf. *shuì-jiao* ‘to sleep’) and two-place verbs with a non-human object (cf. *jiàn-zhù* ‘to build sth’). As to lexical reciprocals, there are restrictions determined by their lexical meaning: many of them do not combine with *hùxiāng*, as is shown in example (5b) (see also 5.3).

Non-reciprocal verbs, however, display curious restrictions on combinability with *hùxiāng* but these restrictions are not specific for *hùxiāng* as they are determined by the more common rhythmic tendency in Chinese to collocate monosyllabic words with monosyllabic ones, and disyllabic with disyllabic ones. Therefore, as a rule, the informants accept collocations like *hù-zhù* ‘to help each other’ and *hùxiāng bāng-zhù* ‘to help each other’ and reject outright collocations like **hùxiāng zhù* (same intended meaning); see also 1.2.4 and 6.5.3. This restriction is not observed, it seems, in colloquial speech, which is manifested by the following recordings of Beijing inhabitants:

- (70) a. Zhèi xiǎohár wèi zhe qiáng hùxiāng jǐ.
 this child around SUFF wall mutually press
 lit. ‘Those children press each other around the wall.’ (the speaker describes the children’s behaviour during breaks at school) (Chirkova 2003:0266682)

- b. *Xiànzài nǐ xiǎng Àdàlìyà Jiānádà hái hùxiāng dǎ ne.*
 now you.SG think A. C. still mutually beat PRTL
 ‘Now, think of it, Australia and Canada still fight with each other.’ (Chirkova 2003:02743)
- c. *Jiànmiào a jiào xiāng, jiù hùxiāng xiāng.*
 meet thus be.called bride-show namely mutually look.in.the.face
 ‘The meeting (of the bride and bridegroom) is called ‘xiang’, so they ‘xiang’ each other’ (the informant speaks about traditional Manchu wedding rituals). (Chirkova 2003:05261)

See also the text beneath example (54).

3.7 Nominalization

The adverb *hùxiāng* cannot be a part of a nominal compound, and thus it is not involved in the substantivization of the verb it depends on. In this respect collocations of verbs with *hùxiāng* (cf. (71b)) differ from compound verbs, including lexical reciprocals, which easily undergo nominalization. Nevertheless, collocations with *hùxiāng* may appear in argument positions dependent on other verbs; cf. (69c). In these cases *hùxiāng* can precede the predicate (see (72c); *chǎn-shēng* ‘to generate, produce’).

- (71) a. *L.Z. bāng-zhù X.L.* ‘L.Z. helps X.L.’
 b. *Tāmen hùxiāng bāng-zhù.* ‘They help each other.’
 c. *Tāmen xū-yào hùxiāng bāng-zhù.* ‘They need mutual help’, lit. ‘... mutually help.’
- (72) a. *L.Z. wù-huì X.L.* ‘L.Z. misunderstands X.L.’
 b. *Tāmen hùxiāng wù-huì X.L.* ‘L.Z. and X.L. misunderstand each other.’
 c. *Tāmen hùxiāng chǎn-shēng wù-huì.* ‘Misunderstanding sprang between them’, lit. ‘They mutually produced misunderstanding.’

4. Words used instead of *hùxiāng*

4.1 The adverb *xiānghù* ‘mutually’, ‘mutual’

This adverb differs from *hùxiāng* in the arrangement of the components and lesser frequency, though it does not differ from it in meaning. It is more common than *hùxiāng* as an attribute (in this usage both adverbs, and also *bǐcǐ*, bear the optional attributive marker *de*); e.g. *xiānghù tài* ‘reciprocal voice’; cf. also the title of the paper “*Xiānghù dòngcí jí xiānghù dòngcí jù*” [Reciprocal verbs and sentences with reciprocal verbs] by Tao Hongyin entered in References. It may also be used in predicative position marked with *de* (in certain cases, as in (73b), with *shì ... -de*). Compare (in (73a) the head words are substantivized verbal compounds):

- (73) a. *xiānghù zuò-yòng* ‘mutual action, interaction’ (< ‘to work’)
xiānghù jiāo-tì ‘alternation’ (< ‘to alternate’)
xiānghù liǎo-jǐě ‘mutual understanding’ (< ‘to understand’).

- b. *Zhīyuán shì shuāng-fāng-de, shì xiānghù-de.*
 support COP two-side-ATR COP mutual-ATR
 '[This] support is bilateral and mutual.'

Xiānghù and *hùxiāng* are mostly interchangeable, as in (74). However, there are some differences between them:

- *xiānghù* is characteristic of written style and therefore less common.
- *hùxiāng* is an adverb and therefore does combine with nouns; *xiānghù* behaves like an adverb or as a determiner of a noun.
- *xiānghù* is used mostly in statements with respect to behaviour, manners, and emotions.

- (74) a. *Wǒmen xiāng-hù / hù-xiāng liǎo-jiě.*
 we mutually mutually understand
 'We understand each other.'
- b. *Tāmen xiāng-hù / hù-xiāng bù xìnren.*
 they mutually mutually NEG confidence
 'They have no confidence in each other.'
- c. *Wǒmen yīnggāi kàndào tāmen de xiāng-hù / *hù-xiāng zuòyòng.*
 we must see they ATR mutually mutually action
 'We must see their interaction.'

4.2 The adverb *bǐcǐ* 'mutually'

This adverb is a combination of demonstrative pronouns *bǐ* 'that (one)' + *cǐ* 'this (one)'. In preverbal position this unit means i. 'both, that and this', ii. 'mutually, together'. Even in case (i) this adverb always implies relations between two parties. It can function as a nominal constituent.

- (75) a. *Bǐcǐ dōu zuò-de hěn duì.*
 both all correct-ATR very behave
 'Both of them behave correctly (in a situation which implies the attitude of one to another).'
- b. *Bǐcǐ bù xiāng-róng.*
 both NEG mutually-tolerate
 'Both cannot stand each other.'

The adverb *bǐcǐ* is synonymous to *hùxiāng*. The latter is grammatical as a substitute in any sentence where *bǐcǐ* is used. But *bǐcǐ* seems to be a much better choice with verbs denoting "attitudes" or "views".

- (76) a. *Tā bǎ wǒ kàn-chéng dírén.*
 he ba I consider enemy
 'He considers me an enemy.'
- b. *Wǒ hé tā hùxiāng / bǐcǐ kàn-chéng dírén.*
 I and he consider each other enemies.'

The following sentences have occurred with *bǐcǐ* (it may combine with reciprocal verbs containing *xiāng*- (examples (77c) and (77d)) or *hù*- (77e).

- (77) a. *Bàodào bǐcǐ máo-dùn.*
‘The reports contradict one another.’
- b. *Zhè liǎng jiàn shìqìng shì bǐcǐ fēn-bù-kāi-de.*
this two CLF affair COP mutually share-NEG-share-de
‘These two affairs are inseparable.’
- c. *Tāmen liǎng-ge rén bǐcǐ xiāng-liàn.*
‘They both are mutually interrelated.’
- d. *Tāmen liǎng-ge rén bǐcǐ xiāng-sì.*
‘They both are mutually alike.’
- e. *Tāmen bǐcǐ hù-zhù.*
‘They help each other’ (lit. ‘mutually’).
- f. *Zhè shìxiōng shīdì liǎng bǐcǐ jìdù-de liǎo-bù-dé.*
this older.pupil younger.pupil two mutually envy-de finish-NEG-de
lit. ‘These two pupils, the older and the younger one, envy each other very much.’

In the literature, separate use of the components *bǐ* and *cǐ* is registered as alternative in meaning, though in the reverse order (see He Zili 1990: 156):

- (78) *cǐ qǐ bǐ fú.*
this rise that fall
‘rise one after another.’

4.3 The postposition *zhījiān* ‘among’

This postposition (composed of *zhī* (= marker of attribute) and postposition *jiān* ‘among, between’) is possible, as a rule, with verbs of emotions (to be more precise, with nominalized verbs of emotions and attitudes, etc.) in constructions with meanings like ‘There is (exists, appeared, developed) mistrust (misunderstanding, sympathy, compassion) between them (*tāmen zhījiān*), or between us (*wǒmen zhījiān*), or between you (*nǐmen zhījiān*)’ (these combinations are not limited to personal pronouns); cf.:

- (79) a. *Wǒ duì tā fāshēng-le bù xìnren.*
I to he appear-PERF NEG trust
‘I began to feel mistrust towards him.’
- b. *Wǒmen zhījiān fāshēng-le bù xìnren.*
we among.ourselves appear-PERF NEG trust
‘There developed a mistrust between us.’
- (80) a. *Wǒ duì tā yǒu-le tóngqíng.*
I to he appear-PERF sympathy
‘I feel compassion towards him.’
- b. *Wǒmen zhījiān yǒu-le tóngqíng.*
we among.ourselves appear-PERF sympathy
‘There developed a sympathy between us.’

- c. *Wǒ hé Xiǎo Wang zhījiān yǒu-le tóngqíng.*
 I and X.W. among-ourselves appear-PERF sympathy
 ‘There developed a sympathy between me and X.W.’

To sum up, all the substitutes of *hùxiāng* under discussion can be used with verbs of emotions (in the broad sense), though (81b) seems to be less adequate than the other two:

- (81) a. *Tā duì wǒ fā-shēng-le wùhuì.*
 he to I appear-PERF misunderstanding
 ‘He developed a misunderstanding towards me.’
 b. *Tāmen hùxiāng / xiānghù fā-shēng-le wùhuì.*
 they mutually mutually appear-PERF misunderstanding
 ‘There developed a misunderstanding between them.’
 c. *Tāmen bǐcǐ fā-shēng-le wùhuì* (same meaning)
 d. *Tāmen zhījiān fā-shēng-le wùhuì* (same meaning)

In the next sentence (Beijing colloquial speech) this postposition is used with a different tone in the reciprocal meaning in a way different from the above (other informants reject this sentence):

- (82) *Rén yǔ rén zhījiān jiàn-dào jiù hùxiāng dǎ-zhāo-hu “Nín hǎo”.*
 man with man among meet then mutually greet “You good”
 ‘When people meet they greet each other saying “Hello”.’ (Chirkova 2003:05351)

The following should be noted with regard to the use of *xiānghù* (*zhī*)*jiān* and *bǐcǐ* (*zhī*)*jiān*: *zhījiān* ‘between’ may follow *xiānghù* and *bǐcǐ*; the first syllable *zhī* is often omitted. *Zhījiān* rather rarely occurs with *hùxiāng*, in which case *zhī* cannot be omitted.

4.4 The noun *duìfāng* ‘partner’

This noun (composed of *duì* ‘to face, be opposite’, ‘two (of people)’ (cf. (91)) and *fāng* ‘side’; cf. (73b)) with the literal meaning ‘opposite side’ is cited above in 3.2.3 on “possessive” reciprocals where it occurs in attributive position before an object. In the cases below it serves as the only reciprocal marker in (83a) (borrowed from Meng Yeh 1991:233) and in combination with *hùxiāng* in (83b) (borrowed from Jiang Ping 2000:42–3), but it is not an attribute. This usage of *duìfāng* is rather rare and requires further investigation.

- (83) a. *Tāmen jié-hūn shí nián le, réngrán shēn-ài-zhe duìfāng.*
 they marry ten year PERF still love-DUR partner
 ‘They have been married for ten years, and still deeply love each other.’
 b. *Xiǎo Wang hé Xiǎo Li rèn-wéi tā-liǎng hùxiāng xǐ-huan duìfāng.*
 X.W. and X.L. think they-both mutually like partner
 i. ‘Xiao Wang and Xiao Li think that they both like each other’ (i.e. ‘Each thinks that X.W. likes X.L. and she likes him.’)
 ii. ‘Xiao Wang thinks that he likes Xiao Li and Xiao Li thinks that she likes Xiao Wang.’

5. Lexical reciprocals. General characteristics. Co-occurrence with *hùxiāng*

5.1 Introductory

5.1.1 *Three notional groups of lexical reciprocals. Compound verbs*

In Chinese, there are numerous *lexical* (= inherent) *reciprocals*. This section serves as a kind of background for Sections 6 and 7 where lexical reciprocals with initial recurrent components are considered. And the discussion of the use of *hùxiāng* (see above) is continued here.

As well as in many other languages, Chinese lexical reciprocals are quite diverse and fall into three main notional classes with the meanings listed below (cf. Knjazev, Ch. 2, §3). Between these main groups the borderlines are not always clearcut. Some of the reciprocals may be included in two groups at the same time.

The meanings of all these groups might be reduced to one opposition viewed broadly: as *drawing together* or, less commonly, *apart*, literally or figuratively.

1. *Social relations* (= rivalry or collaboration, quarrelling or reconciliation, marriage or divorce, etc.).

2. *Spatial relations* (= proximity/remoteness, joining/separating, intersection, etc.).

3. *General relations* (= identity or difference, coincidence or contrast, and also correspondence, harmony, comparison, etc.).

The semantic domains of lexical reciprocals and verbs with *hùxiāng* differ to a significant degree, though sometimes they are contiguous, which is made obvious by their co-occurrence.

A lexical reciprocal can be a verb, an adjective or a noun. It may have one, or two, or three, or four syllables, or it may be a compound comprised of two, or three, or four components. The most common are disyllabic words; in compounds the first (less commonly second) component often appears in a larger number of words – from ten to a hundred and more. The great number of Chinese lexical reciprocals is partly due to their ability to combine with one another into compounds. Some of the components may take either the first or the second place in compounds thus forming hundreds of units. For instance, the meanings ‘to quarrel’, ‘to argue, debate’ may be rendered by at least seven compounds, five of the constituents also expressing roughly the same or similar meaning (see (84) where *zhēng* means ‘to quarrel’, *chǎo* ‘to shout, quarrel’, *zuǐ* ‘mouth’, *lùn* ‘to discuss’ and *biàn* ‘to debate’; the latter two are bound morphemes). The compounds may differ in the amount of energy put into the quarrel, or argument, or the like:

(84) *zhēng-chǎo* *zhēng-zuǐ* *zhēng-lùn* *biàn-lùn*
 ? *chǎo-zhēng* *chǎo-zuǐ* *zhēng-biàn*

5.1.2 *Synonymy/non-synonymy of the components: Two main groups of disyllabic lexical reciprocals*

Lexical reciprocals may be monosyllabic and disyllabic (cf. (92) and the right hand columns in (93)–(94) respectively). Due to the general tendency of replacing monosyllabic words by disyllabic ones (see 2.1), there are also numerous compounds among the latter.

Of typological interest are *compound lexical reciprocals*, both verbs and nouns, with the *recurrent initial components* (less productive are the *final* recurrent components). These compounds are extremely numerous, their numbers running into hundreds in the dictionaries. The range of lexical meanings of the initial recurrent components and their combinability need further investigation.

Type 1. As mentioned, lexical reciprocals are defined here as verbs which form reciprocal sentences that do not have any respective underlying non-reciprocal sentences at all or are not related to them in a more or less standard way semantically, as is illustrated in the relation between (1b) and (1a'–a"). Therefore both compounds in (85) cannot be regarded as reciprocal derivatives proper: both a disyllabic verb and its second (base) component are synonymous and do not differ syntactically; e.g. (*duì* 'to face, opposite to'):

- (85) °*děng* 'of equal value' → *duì-děng* (same)
jiē 'to join (sth) together' → *duì-jiē* (same).

As Semenas (1992:61) claims with reference to Xie Wenqing (1982:82–3), among synonyms in Chinese, the most numerous are units with the same shared component; these components may have the same typified meaning and often replace each other.

Type 2. Type (85) comprises one group of lexical reciprocals, and the other type exemplified by (86) and (87) are lexical reciprocals that may have respective base verbs which are not synonymous to them, i.e. constructions with the latter verbs are not reciprocal and may differ syntactically, i.e. valency decrease takes place, though in rare cases (cf. one-place *lì* 'to stand' in (86b)) valency increase takes place (this is an instance of typologically predictable lexicalization).

- (86) a. *mà* 'to scold' → *duì-mà* 'to scold each other'
 b. *lì* 'to stand' → *duì-lì* i. 'to be opposed to each other'
 ii. 'to oppose sth and sth to each other' (see (104d)).

When the reciprocal meaning is coded by an *initial* or *final* recurrent component (see (9)–(11) and (12) respectively) we observe two-component formations that do not meet the definition of lexical reciprocals, because there are corresponding non-reciprocal constructions. But, since these formations are *limited in number* they can hardly be regarded as grammaticalized units.

Many of this kind of verbal pairs have gone out of use but they probably indicate a (weak) *tendency to code reciprocity with the first component*. Cf. the compounds with the initial component *jié* 'to tie/be tied' and *jiāo* 'to intersect/cross':

- (87) *tuō* 'to rely on sb' → °*jié-tuō* 'to rely on each other'
hèn 'to hate sb' → *jié-hèn* 'to hate each other.'
 (88) *wù* 'to hate sb' → ?*jiāo-wù* 'to hate each other'
fú 'to trust sb' → *jiāo-fú* 'to trust each other.'

The initial component looks like a derivational marker of reciprocity: as in (86)–(88), it is reciprocal in meaning and thus forms a kind of morphologically reciprocal verb, and it semantically corresponds to reciprocal affixes of agglutinative languages. In other words,

we observe a kind of derivation as reciprocity is brought into a compound by the initial component (they might be tentatively termed *quasi-derived lexical reciprocals*), but it is convenient to consider such instances together with other lexical reciprocals because, as mentioned, these compounds, though numerous, are limited in number and registered in dictionaries, although in fact they are kind of intermediate between *reciprocals proper* and *lexical reciprocals*. Another reason is that the initial and particularly final components are attached to monosyllabic verbs that are lexical reciprocals themselves, without incurring any significant change of meaning (cf. (11d, e), (85)).

These compounds may sometimes undergo lexicalization and either remain reciprocal (cf. (86b)) or become non-reciprocal (cf. (88) and *jiāo-bàn* ‘to entrust with sth’, where *bàn* means ‘to do’). It should also be taken into account that some of the underlying monosyllabic verbs are of limited use or practically out of use as free words (cf. *zhù* ‘to help’ in (8), *biàn* ‘to argue’ and *lùn* ‘to discuss’ in (84)). As has been mentioned, such components are referred to as *recurrent initial reciprocal components* (*recurrent components* for brevity) to distinguish them from those first components which occur in reciprocal compounds only occasionally, or at least not so frequently (true, we believe that further investigation may find other recurrent components that have escaped our attention). Thus this term is used here loosely as a label.

5.1.3 Three distinctive features of lexical reciprocals

The distribution of three distinctive features in question produces a number of overlapping groups of lexical reciprocals: some groups may possess one of these distinctive features while others may have both or all three. (Thus, for instance, the first feature does not cover many verbs with the meaning of *joining* (see (96c)). Lexical reciprocals possess the following properties, though in a different degree (in specialist literature a number of other features of lexical reciprocals are also distinguished, but we shall not dwell on them). We have in mind the following features (which may serve for distinguishing prototypical lexical reciprocals; see also paragraph A.3 in 6.3.1.2):

1. *Non-combinability* with *hùxiāng* (cf. (5b); as a rule, this concerns simple constructions. Judging by the lists of lexical reciprocals cited in (55) in Yakhontov (Ch. 48) which do combine with the reciprocal marker *xiāng*, this feature seems to be lacking in Ancient Chinese.

2. *Synonymy of discontinuous constructions with reversed arguments*. A distinctive feature of a large group of lexical reciprocals is the synonymy of (1a’) and (1a’’) type constructions, with the reversed arrangement of the arguments: they denote the same extralingual situation, with a slight difference in pragmatics.

- (89) a. *Tā chángchang hé wǒ jìng-zhēng.*
 he all.the.time with I compete
 ‘He always competes with me.’
 = b. *Wǒ chángchang hé tā jìng-zhēng.*
 I all.the.time with he compete
 ‘I always compete with him.’

- (90) a. *Lǐlùn lián-xì shíjiàn.*
 theory be.connected practice
 ‘Theory is connected with practice.’
 = b. *Shíjiàn lián-xì lǐlùn.*
 ‘Practice is connected with theory.’

3. Possibility of expressing two semantic arguments by one syntactic argument, the subject (of two-place verbs) or object (of three-place verbs); cf. (89a–b) and (89c). Certain verbs of joining (mental or physical) require an obligatory adverbial like *zài yìqǐ* ‘together’ (see (90c)). Some of the informants allow the use of *hùxiāng* in these cases, i.e. there is a kind of semantic affinity between these two adverbs.

- (89) c. *Tāmen chángchang [hùxiāng] jìng-zhēng.*
 they all.the.time mutually compete
 ‘They always compete [with each other].’ (= (84a, b))
- (90) c. *Zhèxiē lǐlùn liánxì zài yìqǐ.*
 these theory be.connected together
 ‘These theories are connected together.’
 d. *Zhèxiē lǐlùn hùxiāng liánxì.*
 these theory mutually be.connected
 lit. ‘These theories are mutually connected.’

5.2 Lexical reciprocals without recurrent components

As has been pointed out above, we have included here non-compound verbs and also those compounds with components that occur in a single verb or in a smaller number of verbs than those considered in Sections 6–7.

Unlike constructions with *hùxiāng*, these constructions are syntactically varied. As well as in the previous case, the reciprocal arguments can be both in the subject position or in object position, depending on the type of construction (subject-oriented or object-oriented); cf. *quánlì* in (34a) and (34b).

5.2.1 Lists of monosyllabic and disyllabic reciprocals

In this paper, the lists are naturally incomplete but sufficient to give a general idea.

5.2.1.1 *Monosyllabic reciprocals.* Their number is highly restricted in comparison with disyllabic ones.

(91) and (92) are lists of some monosyllabic lexical reciprocals that occur in the illustrative material in the dictionaries and have been obtained from the informants ((92) may be enlarged if we take into account the base verbs of the compounds considered in 6.3.1.4, 7.2.1.2, 7.2.2.2). Some of the verbs (being both intransitive and transitive) may function both as subject-oriented and object-oriented reciprocals (therefore the distribution of verbs in this respect among the groups and their number needs further specification). For a number of reasons, the functioning of lexical reciprocals from (91) within compounds is selected for a more detailed analysis in Section 7.

number of such monosyllabic lexical reciprocals (both free and bound morphemes) function as recurrent components of reciprocal compounds, including those listed in (91): *tōng*, *huì*, *bìng*, *fēn*, etc. Besides, the bound morphemes *yuē* ‘to come to an agreement’, etc. and also those functioning as initial components in a figurative meaning, e.g. *dǎ* ‘to beat’, are also used as such and form mostly lexical reciprocals with the meanings ‘to play’, ‘to compete’, ‘to fight’: *dǎ-pái* ‘to play cards’ (*pái* ‘cards’), *dǎ-qiú* ‘to play ball’ (*qiú* ‘ball’), *dǎ-quán* ‘to box’ (*quán* ‘fist’), *dǎ-dǔ* ‘to bet’ (*dǔ* ‘bet’), *dǎ-jià* ‘to fight’ (*jià* ‘to parry’), *dǎ-zhàng* ‘to fight’ (*zhàng* ‘to be at war’), etc.; cf. also compounds with the initial components *dòu* ‘to fight’ and *bìng* ‘to unite’, ‘together’: *°dòu-yǒng* ‘to vie in courage’, *dòu-zú* ‘to squabble’, *dòu-zhēng* ‘to fight’, *dòu-zhì* ‘to vie in wit’, *dòu-fǎ* ‘to vie with the help of witchcraft’, etc.; *bìng-xíng* ‘to walk side by side’ (*xíng* ‘to walk’), *bìng-cún* ‘to co-exist’ (*cún* ‘to live’), *bìng-jǔ* ‘to use simultaneously’, *bìng-liè* ‘to be, stand next to’ (*liè* ‘to stand’), etc.

5.2.1.2 *Disyllabic reciprocals*. The number of these reciprocals is considerable and much greater than that of the monosyllabic reciprocals. They usually contain a less commonly used monosyllabic synonym. The initial components of this group not infrequently occur in several compounds rather than in single ones and do not form any large groups of compounds. The verbs *lián* ‘to join together’ and *shāng* ‘to discuss, consult, speak’ enter into chains of at least three or four compounds. A few more examples (see also (84)):

- | | | | |
|------|--|---|--|
| (93) | <i>hé</i> ₁ ‘to be connected’ | → | <i>lián-he</i> ₁ ‘to join’ |
| | <i>xì</i> ‘to tie’ | → | <i>lián-xì</i> ‘to tie/be tied’ |
| | <i>jié</i> ‘to tie, gather’ | → | <i>lián-jié</i> ‘to tie, gather’ |
| | <i>jiē</i> ‘to tie, join’ | → | <i>lián-jiē</i> ‘to join.’ |
| (94) | <i>°cuō</i> ‘to exchange views’ | → | <i>°shāng-cuō</i> ‘to exchange views’ |
| | <i>dìng</i> ‘to fasten, fix sth’ | → | <i>shāng-dìng</i> ‘to come to an agreement’ |
| | <i>liáng</i> ‘to measure’ | → | <i>shāng-liáng</i> ‘to confer, arrange things’ |
| | <i>tān</i> ‘to talk’ | → | <i>shāng-tán</i> ‘to exchange views’ |
| | <i>tǎo</i> ‘to discuss’ | → | <i>shāng-tǎo</i> ‘to discuss’ |
| | <i>tuō</i> ‘to be proper’ | → | <i>shāng-tuō</i> ‘come to an agreement after discussion’ |
| | <i>°xié</i> ‘to be in concord’ | → | <i>shāng-xié</i> ‘to talk things over’ |
| | <i>°yì</i> ‘to discuss’ | → | <i>shāng-yì</i> ‘to discuss, consult.’ |

Here are additional lists of disyllabic subject- and object-oriented lexical reciprocals:

a. Subject-oriented reciprocals

- | | | |
|------|---|--|
| (95) | <i>dǎ-zhàng</i> ‘to be at war’ | <i>lái-wǎng</i> ‘to associate’ |
| | <i>fēn-bié</i> ‘to part, separate’ | <i>lián-xì</i> ‘to be connected’ |
| | <i>fēn-lí</i> ‘to be separated’ | <i>lí-bié</i> ‘to part, separate’ |
| | <i>fēn-kāi</i> ‘to be separated’ | <i>lí-kāi</i> ‘to part, separate’ |
| | <i>guà-zhù</i> ‘to get coupled’ | <i>píng-děng</i> ‘equal’ |
| | <i>huì-wù</i> ‘to meet’ | <i>shuāng-fāng</i> ‘to become reconciled’ |
| | <i>hùn-hé</i> ₁ ‘to get mixed’ | <i>zhēng-lùn</i> ‘to argue’, etc. (see also (52) in 4) |
| | <i>jiāng-hé</i> ₂ ‘to become reconciled’ | <i>yù-jiàn</i> ‘to meet.’ |
| | <i>jìng-zhēng</i> ‘to compete’ | |

b. Object-oriented lexical reciprocals

- | | |
|---|---|
| (96) <i>duàn-jīē</i> 'to join by welding' | <i>tiáo-tíng</i> 'to reconcile' |
| <i>fēn-bíé</i> 'to separate sb/sth' | <i>tiáo-jíé</i> 'to reconcile' |
| <i>fēn-kāi</i> 'to separate sb/sth' | <i>tiáo-hé₂</i> 'to reconcile' |
| <i>fēn-lí</i> 'to separate sb/sth' | <i>xié-tiáo</i> 'to reconcile' |
| <i>guà-shàng</i> 'to couple sth' | <i>zá-jiāo</i> 'to crossbreed' |
| <i>hùn-hé₁</i> 'to mix sth up' | <i>zá-pèi</i> 'to crossbreed' |
| <i>lí-jiàn</i> 'to set on to fight' | <i>zhēng-chǎo</i> 'to make quarrel' |
| <i>qū-bíé</i> 'to separate' | <i>pèi-hé₁</i> 'to coordinate' |
| <i>qū-fēn</i> 'to distinguish' | |

Like monosyllabic reciprocals, some of these are transitive/intransitive; some of the object-oriented reciprocals can be formed from subject-oriented by means of the auxiliary causative verb *shǐ* 'to cause, make'; cf. *píng-děng* 'equal' → *shǐ ... píng-děng* 'to equalize' (see (34)).

5.2.2 *Expression of reciprocal arguments*

In this section we will illustrate the use of lexical reciprocals in different types of constructions. These reciprocals are grouped according to the means of expressing the arguments.

5.2.2.1 *Subject-oriented reciprocals.* In addition to (89a–b) and (90a–b), the following examples illustrate the discontinuous and the simple types of reciprocal constructions with both monosyllabic and disyllabic reciprocals.

5.2.2.1.1 *Discontinuous constructions.* This type of constructions is displayed most unambiguously with lexical reciprocals, especially those of equality, distance and connecting, because their second argument may follow the predicate (cf. (8b), (90a–b), (97), (98)). As mentioned above, transformation of this type with verbs that are not lexical reciprocals results in a sharp change of the denotational situation named, of the type 'The neighbour is afraid of him' and 'He is afraid of the neighbour' (cf. (31a–c) and the relevant text). The co-argument can be either a direct or, more commonly, a comitative object with a preposition *yú*, *gēn*, *tóng*, or *hé* 'with/and'; cf. (89a) and (89b), and (90a) and (90b) respectively):

- (97) a. [*Rénmín bì*] *shí yuán hé₁* *dūoshao lúbù?*
 Chinese.currency ten yuan correspond how.much rouble
 'How much are (lit. '... correspond') 10 Chinese yuan in roubles?'
 = b. ... *dūoshao lúbù hé₁* *shí yuán?*
 how.much rouble correspond ten yuan
 'How much roubles are (lit. '... correspond') 10 Chinese yuan?'
- (98) a. *Wǒmen-de chuānghu duì-zhe tāmen-de chuānghu*
 we-ATR window face-DUR they-ATR window
 'Our windows face their windows.'

- = b. *Tāmen-de chuānghu duì-zhe wǒmen-de chuānghu*
 they-ATR window face-DUR we-ATR window
 ‘Their windows face our windows.’

In (97)–(98), the second reciprocal argument is placed after the predicate, therefore they are unambiguously discontinuous, the second argument being a complement. But, we repeat, this is possible only with a certain group of lexical reciprocals. When the prepositional comitative phrase of a two-place predicate is preposed to it the difference between the simple and the discontinuous construction is neutralized on the surface, i.e. it is unclear whether the comitative noun-phrase is part of the subject or a comitative object (cf. the analogous situation in Ancient Chinese: Yakhontov, Ch. 48, §8.2). In other words, the picture is similar to that with *hùxiāng* constructions (cf. 3.1.3; see also case 6 in 2.7). This issue is discussed in the Chinese specialist literature with emphasis on the status of words like *hé* as conjunctions or prepositions in these sentences (for details see Zhang Yisheng 1996:330–8). Chinese examples like (99) are usually translated by native speakers as (i), and, on the other hand, English sentences like (i) and (ii) are both translated by native speakers into Chinese in the same way by sentences like (99).

- (99) a. *Wǒ hé tā yuē-hǎo-le.*
 I and/with he make.appointment-PERF
 i. ‘I made an appointment *with him*.’
 ii. ‘I *and he* made an appointment *with each other*.’
- b. *Tā hé wǒ biàn-lùn-le.*
 he and/with I argue-PERF
 i. ‘He argued *with me*.’
 ii. ‘He *and I* argued.’
- c. *Wǒ hé shūshu hěn qīn-jìn.*
 I and uncle very close
 i. ‘I am very close *to my uncle*.’
 ii. ‘I *and my uncle* are very close *to each other*.’

5.2.2.1.2 *Simple constructions.* Here both reciprocal arguments, as mentioned above, are coded in the same ways as in constructions with *hùxiāng*, i.e. by one syntactic argument (cf. (36), (38)). It may be reasonable to distinguish between *spatial* and *non-spatial* lexical reciprocals. In the simple construction with monosyllabic as well as with disyllabic reciprocals of joining there is a tendency to employ in the sentence-final position either (a) the adverbs *yìqǐ* ‘together’, *zài yìqǐ* ‘together’ (cf.90c), (101)); or (b) the auxiliary word *qílái* which in this case denotes causing a certain state of the object (see (33a), (67)); and even (c) use sometimes the adverb *hùxiāng* (see (73a), (90d)). A choice between (a), (b) or (c) may be possible (see (90c–d)). Additional constituents of types (a) and (c) are usually absent or even disallowed in the respective explicitly discontinuous constructions. The tendency to use them depends on (i) the meaning of the individual reciprocal and (ii) some peculiarities of the structure of a simple construction.

1. *Non-spatial reciprocals*

- (100) a. *Tā hé wǒ chángchang bǐ liqi.*
 he and I often compare strength
 ‘He and I compete in strength [with each other].’
 lit. ‘He and I compare our strength.’
- b. *Tāmen bùzhībùjué tán-le liǎng xiǎoshí.*
 they imperceptibly converse-PERF two hour
 ‘They have talked for two hours without noticing it.’
- c. *Tāmen liǎ bù hé₂.*
 they two NEG harmonious
 ‘They are not on good terms.’
- d. *Wǒ hé tā chángchang kàn₁fā bù tóng.*
 I and he often opinion not same
 ‘I and he often have different opinions.’

2. *Spatial reciprocals*

- (101) a. *Gè zhǒng yánsè de xiàn jiāo-zhī zài yīqǐ.*
 every kind colour ATR thread get.entangled together
 ‘Threads of all kinds of colour got entangled.’
- b. *Wǒmen-de xīn yǒngyuǎn lián zài yīqǐ.*
 we-ATR heart forever connect together
 ‘Our hearts are (linked) together forever.’

5.2.2.2 *Object-oriented reciprocals.* A distinctive feature of object-oriented lexical reciprocals is the obligatory plurality of the object denoting two or more things of the same class. The objects of a discontinuous construction are sometimes not of the same rank in the situation described and it is difficult to arrange them in an order analogous to that in (89). Cf. (102a) and (102b). See, however, (103a) and (103b) which are semantically more or less equal, unlike (102a) and (102b).

5.2.2.2.1 *Discontinuous constructions.* The meaning of exchange is close to that of equality which, as has been mentioned above, is characteristic of explicitly discontinuous constructions (cf. 5.2.2.1.1). There seem to be grounds to include (102c) here rather than among simple constructions.

- (102) a. *Tā_i yòng jiù bì huàn xīn bì.*
 he with old money exchange new money
 ‘He exchanged old money for new money.’
- = b. *Tā_j yòng xīn bì huàn jiù bì.*
 he with new money exchange old money
 ‘He exchanged new money for old money.’
- c. *Bù néng bǎ gōngzuò hé/gēn xúxí duì-lì qilai.*
 NEG can *ba* work and/with study oppose *qilai*
 ‘One cannot set work in opposition to study.’

5.2.2.2.2 *Simple constructions.* The reciprocal arguments are most commonly expressed by a (semantically) plural homogeneous object. The latter often precedes the predicate and takes the preposition *bǎ* or the verb-preposition *ná* ‘take’. Less commonly the object follows the predicate (see (103b)).

1. *Non-spatial reciprocals*

- (103) a. *Tā bǎ liǎng jiàn yīfu bǐ le bǐ.*
 he *ba* two CLF thing compare PERF comparison
 ‘He compared two pieces of clothes.’ (lit. ‘He compared ... one comparison.’)
- b. *Tā bù fēn shì fēi qū zhí.*
 s/he NEG distinguish right wrong crooked straight
 ‘S/he does not distinguish (between) truth (and) lies, straight (and) crooked.’

2. *Spatial reciprocals*

- (104) a. *Tā bǎ liǎng ge chēxiāng guà zài jīqǐ.*
 s/he *ba* two CLF carriage couple together
 ‘S/he coupled two carriages together.’
- b. *Tā bǎ liǎng kuài píng féng zài jīqǐ.*
 he *ba* two piece skin sew together
 ‘He sewed two pieces of skin together.’
- c. *Wǒ děi bǎ zhè liǎng gēn diànxiàn jiē qilai.*
 I must *ba* this two CLF wire bind *qilai*
 ‘I must bind these two electric wires.’
- d. *Zhè ge xiǎo gūniang ài jié húdiéjié.*
 this CLF little girl like tie butterfly.knot
 ‘This small girl likes to tie butterfly knots.’

5.2.2.3 *Constructions with a singular subject.* In the discontinuous construction the role of the second argument may be noticeably weakened. This is most common when a situation is described as being in progress, or negated (the role of one participant in a joint event is emphasized, while the other participant is backgrounded as in (105), though if someone does not associate with his neighbour it is clear that the neighbour does not associate with him either).

- (105) *Tā bù tóng línjū lái-wǎng.*
 s/he NEG with neighbour associate
 ‘S/he does not associate with his/her neighbours.’

The second argument may remain unnamed; in these cases the subject may be singular, though there is no second argument. Generally, as we mentioned, sentences with a singular subject (and no co-argument in non-subject position) are rejected by the informants, but in certain cases such elliptical sentences are accepted and they presuppose the knowledge of the situation preceding the one described. For (106a) this is the knowledge of the prior quarrel of two persons,

- (106) a. *Tā jù-jué hé₁-jiě.*
 he refuse be.reconciled
 ‘He refused to get reconciled (with sb).’

A sentence with a singular subject does not sound elliptical if the predicate implies a change in the social status of the subject referents participating in the prior event. Tao Hongyin (1987:363) claims that the second argument here is covert because we cannot add *zìjǐ* ‘by oneself, alone’, *dān dū*, *dúzì* ‘only alone’ (as we cannot add its translation in the English sentence *John married *alone*).

- b. *Tā dīng-hūn / jié-hūn / lí-hūn-le.*
 s/he betroth / marry / divorce-PERF
 ‘She/he is betrothed/married/divorced.’

5.2.2.4 *The adverb dōu ‘all’.* Sentences of the (107a) type with a plural subject are usually interpreted as non-elliptical, denoting actions with all the participants named. If we add the adverb *dōu* ‘all’ in (107b), the plural subject is unambiguously interpreted as a single collective participant and the construction is interpreted as discontinuous with an omitted second argument; every participant, on his part, performs this action (consequently, together with the other participant):

- (107) a. *L.Z. hé / gēn X.L. dǎ-jià-le.*
 L.Z. and X.L. fight-PERF
 i. ‘L.Z. and X.L. fought *with each other*.’
 ii. ‘*L.Z. and X.L. fought (*with someone else*).’
 b. *L.Z. hé / gēn X.L. dōu dǎ-jià-le.*
 L.Z. and/with X.L. all fight-PERF
 i. ‘*L.Z. and X.L. fought *with each other*.’
 ii. ‘L.Z. and/with X.L. both of them fought *with someone else*.’

The use of *dōu* in constructions with *hùxiāng* does not change the reading of the sentence, because, as mentioned, the domain of *hùxiāng* covers only the words that precede it.

- (108) *Tāmen hòuxiāng dōu qī-piàn-le.*
 they mutually all deceive
 i. ‘All of them deceive *each other*.’
 ii. ‘*All of them deceive *someone else*.’

5.3 Co-occurrence with *hùxiāng*. Pleonastic use?

The present section concerns lexical reciprocals that are considered below in Section 7 (note that compounds in Section 6 do not collocate with *hùxiāng*), because it also concerns the use of *hùxiāng*. Sometimes, the informants hesitate or their opinions differ significantly with regard to the acceptability of collocations with *hùxiāng*. The use of *hùxiāng* is either pleonastic or it stresses the reciprocal meaning, highlighting the presence of two participants or two parties.

Judging by example (55) in Ch. 48 on Ancient Chinese (Yakhontov), collocations of lexical reciprocals with *xiāng* were also possible in Ancient Chinese; a list of more than ten such collocations are cited there (all of them retain the comitative preposition of the base

verb). Of course, it is difficult to draw any conclusions concerning restrictions on these Ancient Chinese collocations.

5.3.1 Subject-oriented reciprocals

They fall into two groups with respect to combinability with *hùxiāng*: Group A that allows (usually optionally) combinability with *hùxiāng*, and Group B that does not allow it (in special contexts, however, exceptions are possible; see 5.3.3). The lists below are meant as illustrations and they are not exhaustive.

5.3.1.1 *Lexical reciprocals collocating with hùxiāng.* Most easily two subgroups of lexical reciprocals listed below collocate with *hùxiāng*. There seem to exist certain tendencies of collocability with *hùxiāng* depending on the meaning of one of the components and also its initial or final position in the compound; thus, the initial position of the verb *tán* ‘to talk’ blocks the use with *hùxiāng* (cf. (5b)), while its final position does not (cf. 110)). As for the verb *shāng* ‘to discuss, consult’ (cf. (94)) it does not prevent the use with *hùxiāng* in either case. Most of the compounds with the initial *tōng* can be modified by *hùxiāng* (cf. (110)).

1. Lexical reciprocals of *spatial relations* with the meaning of *joining* and *contact* (literal or mental); they are preferable with *hùxiāng*; this small group is semantically homogeneous:

- | | | |
|-------|--|------------------------------------|
| (109) | <i>hé₁-bìng</i> ‘to flow/join together’ | <i>jiāo-jié</i> ‘to border’ |
| | <i>hé₁-lǒng</i> ‘to put together’ | <i>jiāo-zhī</i> ‘to get entangled’ |
| | <i>jiāo-chā</i> ‘to collide, come upon each other’ | <i>lián-xì</i> ‘to be connected’ |
| | <i>jiāo-cuò</i> ‘to interweave’ | <i>pèng-zhùang</i> ‘to collide’. |
| | <i>jiāo-róng</i> ‘to get mixed’ | |

2. Lexical reciprocals of communication with a prominent semantic component of speech:

- | | | |
|-------|--|--|
| (110) | <i>biàn-lùn</i> ‘to argue, dispute’ | <i>tōng-huà</i> ‘to communicate by telephone’ |
| | <i>chǎo-zuī</i> ‘to quarrel’ | <i>tōng-qì</i> ‘to be in communication with’ |
| | <i>duì-huà</i> ‘to have a dialogue’ | <i>tōng-shāng</i> ‘to have trade relations’ |
| | <i>gào-bié</i> ‘to say goodbye, part’ | <i>tōng-xìn</i> ‘to communicate by letter’ |
| | <i>jiāo-tán</i> ‘to dispute with each other’ | <i>zhēng-chāo</i> ‘to quarrel with each other’ |
| | <i>jiāo-wǎng</i> ‘to be in contact with’ | <i>zhēng-biàn</i> ‘to quarrel’ |
| | <i>liáo-tiān</i> ‘to chatter with sb’ | <i>zhēng-lùn</i> ‘to argue’. |
| | <i>shāng-tán</i> ‘to exchange views’ | |

3. Other lexical reciprocals:

- | | | |
|-------|---|---|
| (111) | <i>bī-jìào</i> ‘to compete’ | <i>jiē-jìn</i> ‘to be near, become friends’ |
| | <i>dǎ-dù</i> ‘to make a bet’ | <i>jìng-zhēng</i> ‘to compete’ |
| | <i>hé₂-hǎo</i> ‘to get reconciled’ | <i>qīn-jìn</i> ‘to be intimately close’ |
| | <i>hé₂-qīn</i> ‘to become friends’ | <i>qīn-mì</i> ‘to be intimately close’ |
| | <i>hé₂-xié</i> ‘to be in harmony with’ | <i>wò-shǒu</i> ‘to shake hands’ |
| | <i>jiāo-wǎng</i> ‘to see each other, be friends’ | <i>yōng-bào</i> ‘to embrace’ |

jié-bài ‘to pledge brotherhood’ *yù-jiàn* ‘to meet’
dǎ-jià ‘to fight’

The following examples illustrate the use of *hùxiāng*:

- (112) a. *Liǎng liàng dāchē lùn hùxiāng guà-zhù-le.*
 two CLF vehicle wheel mutually entangle-PERF
 ‘The wheels of two carts got entangled.’
- b. *Lù hé hé hùxiāng jiāo-zhī-zhe.*
 road and river mutually get.entangled-DUR
 ‘The road and the river intersect.’
- c. *A hé [gēn, tóng] B [hùxiāng] jiāo-jiē.*
 A and *gen tong* B mutually border
 ‘A and B border on each other.’
- d. *Nǐmen bú yào [hùxiāng] zhēng-lùn.*
 you.PL NEG necessary mutually argue
 ‘You shouldn’t argue with each other.’
- e. *Tā tóng lín-jū [hùxiāng] bù lái-wǎng.*
 he with neighbour mutually NEG associate
 ‘He does not mix with his neighbours.’
- f. *Tāmen hùxiāng dǎ-dù-le.*
 ‘They made a bet with each other.’
- g. *L.W. hé L.Z. [hùxiāng] bù hé₂-xié.*
 L.W. and L.Z. mutually NEG in.harmony
 ‘L.W and L.Z. are not on good terms [with each other].’

It should be stressed that the verb *huàn* takes a special place among the reciprocals in question. In (113a) it functions as an object-oriented reciprocal, i.e. entity A is replaced by entity B, which means that entity B is replaced by entity A at the same time. In (113b) this situation of replacing entities by one another is retained, but it is further complicated by the change of the subject referents, i.e. the verb is simultaneously subject-oriented (cf. “indirect” reciprocals in 3.2.2). The adverb *hùxiāng* indicates and stresses subject-oriented reciprocity.

- (113) a. *Tā huàn-le zhùzhái.*
 he change-PERF flat
 ‘He changed his flat.’
- b. *Tāmen [hùxiāng] huàn-le zhùzhái.*
 they mutually change-PERF flat
 i. ‘They changed their flat.’ (without *hùxiāng*)
 ii. ‘They exchanged their flats.’ (both with and without *hùxiāng*)
- c. *Tāmen hùxiāng jiāo-huàn-le zhùzhái.*
 ‘They exchanged their flats [with each other].’

5.3.1.2 *Lexical reciprocals that disallow hùxiāng.* They seem to be in the majority. This restriction concerns only a certain group of lexical reciprocals. Firstly, *hùxiāng* does not occur with lexical reciprocals whose first component is *hù-* or *xiāng-*, i.e. a component contained in *hùxiāng* (on these reciprocals see Section 6), and *tóng* ‘equal’; its compounds

often have a sociative sense; cf. *tóng-jū* ‘to live together’, *tóng-chuáng* ‘to sleep in the same bed’. Note that compounds with *hé₁* combine with *hùxiāng* if *hé₁* denotes joining (see (158)) and, as a rule, they do not combine with it if their meaning is sociative, as in *hé₁-zuò* ‘to work together’, *hé₁-chàng* ‘to sing in chorus’ (see (155), etc.

- | | | |
|-------|---|--|
| (114) | <i>bàn-zuǐ</i> ‘to argue’ | <i>jié-hūn</i> ‘to get married’ |
| | <i>chǎo-zuǐ</i> ‘to argue, quarrel’ | <i>jié-wěn</i> ‘to kiss each other’ |
| | <i>dìng-hūn</i> ‘to get betrothed’ | <i>lái-wǎng</i> ‘to associate with each other’ |
| | <i>hé₂-jiě</i> ‘to get reconciled’ | <i>lí-hūn</i> ‘to get divorced’ |
| | <i>hé₂-hǎo</i> ‘to get reconciled’ | <i>nào-jiāng</i> ‘to get angry at each other’ |
| | <i>hé₁-pāi</i> ‘to be in harmony’ | <i>nào-biè-niú</i> ‘to be sulky with each other’ |
| | <i>hé₂-yuē</i> ‘to come to an agreement’ | <i>tán-huà</i> ‘to converse’ |
| | <i>jiàn-miàn</i> ‘to meet each other’ | <i>tán-pàn</i> ‘to carry on talks’ |
| | <i>jiāng-hé₂</i> ‘to get reconciled’ | <i>zá-jiāo</i> ‘to crossbreed.’ |
| | <i>jiāo-zhàn</i> ‘to fight’ | |

5.3.2 Object-oriented reciprocals

In this type of constructions with verbs of joining in the broad sense, including comparison (a kind of mental “joining”), the informants’ opinions have divided as follows: some assert that *hùxiāng* when used in (115), though optional, requires an adverb with the meaning ‘together’. A number of the informants, however, allow omission of the latter adverb even if *hùxiāng* is used, as in (116). Note that in these cases *hùxiāng* obligatorily follows the direct object: otherwise the latter does not fall under its scope.

- (115) a. *Tā bā liǎng zhāng zhǐ [hùxiāng] zhān zài yìqǐ.*
 he *ba* two sheet paper mutually paste to together
 ‘He pasted two sheets of paper together.’
- b. *Tā bā liǎng tiáo shéngzi [hùxiāng] jì-zài-le yìqǐ.*
 he *ba* two CLF rope mutually tie-PERF together
 ‘He tied two ropes together.’
- c. *Tā bā liǎng zhāng zhàopiān [hùxiāng] bǐ-jiào-le yíxià.*
 he *ba* two sheet photo mutually compare once
 ‘He compared two photos.’

5.3.3 Special cases

The use of *hùxiāng* may be determined by a change of the denotational situation: description of a less common situation instead of a more common one allows the use of this adverb.

1. Thus, the verb *jiàn-miàn* ‘to meet (each other)’ does not as a rule combine with *hùxiāng*; the only exception is when it is used to describe the first meeting of two young people when they get acquainted, with the purpose of subsequent marriage. *Hùxiāng* is meant to stress the special character of this meeting (cf. Hoa 1983:54).

2. The adverb *hùxiāng* is possible with the lexical reciprocal *jié-hūn* ‘to get married’ only in one rather rare instance, viz., when the subject names a number of brides and bridegrooms being married simultaneously.

6. Reciprocal compounds with the components *hù*- and *xiāng*-

6.1 Introductory

The components *hù*- and *xiāng*- both, as mentioned, with the meaning ‘mutually’ are not used as free units in Modern Chinese (*báihuà*), and they are retained as the initial components of some compounds only (see, for instance, Zograf 1979: 308). In the *Chinese-Russian dictionary* (Oshanin 1983–4) 31 compounds with *hù*- are registered and about 100 compounds with *xiāng*-. Most probably, the compounds registered in the dictionary form more or less closed lists which can hardly be enlarged: more likely, judging by the informants’ evaluations, their number should be considerably reduced. The compounds with these components do not collocate with *hùxiāng*, for the obvious reason that the components *hù*- and *xiāng*- are combined in *hùxiāng* and coincide with it in meaning (note that the adverb *bǐcǐ* is synonymous with *hùxiāng* and collocates with these compounds; see (138b), cf. 4.2). Due to their adverbial origin, *hù*- and *xiāng*- cannot appear in final position in compounds, which is natural for many verbal components (see, for instance, (7)). It is expedient to consider them apart from other lexical reciprocals.

As mentioned, the term *lexical reciprocals* is used here to cover the compounds that are registered in the dictionaries as separate entries, unlike combinations with the adverb *hùxiāng*. It is interesting to outline the semantic content that is retained and that is lost in the compounds with *hù*- and *xiāng*-, and also to compare them with reciprocals with *hùxiāng*. The latter have ousted the tendency of morphological coding of the reciprocal sense by means of compounding that seemed to be taking shape.

We have found no information about the component *hù*- in the specialist literature. As regards *xiāng*, it is usually mentioned in the grammars. According to some authors, there is no difference between *xiāng* and *hùxiāng*. For instance, Wang Liaoyi (1957: 58–9) claims in the section “The reciprocal pronoun” (in Chinese grammatical tradition these words are often called pronouns): “The only reciprocal pronoun in Chinese is the word *xiāng* ‘each other’. It expresses relations of reciprocity between two (or more) persons or things. [...] Sometimes, instead of *xiāng* the form *hùxiāng* is used in the same meaning”. Further on, however, this author claims that in modern colloquial speech the word *xiāng* is slowly going out of use. Wang Liaoyi (1957: 58) asserts that without being a pronoun, *xiāng* serves in some *wényán* sentences as a pronoun, though its principal meaning when used adverbially is ‘mutually’. He also claims that sometimes *xiāng* loses its meaning of a reciprocal pronoun and in a way it becomes similar to the inverted (i.e. preposed to the predicate) personal pronouns *tā* ‘s/he’, *nǐ* ‘you.sg’, *wǒ* ‘I’, or to the reflexive pronoun *zìjǐ* ‘oneself’. He notes that the pronoun *tā* can be used instead of *xiāng*, as in (116b), without any change in meaning. If in (116a) *xiāng* is translated by a 3rd p. pronoun according to the context, in (117a) it is translated as the 1st p. pronoun (this example is borrowed from Lü Shuxiang (1956: 162) who regards *xiāng* in this usage as a pronoun); these phrases are of the written style.

- (116) a. *Zhòng rén máng xiāng-quàn-wèi.*
 all man rush *xiang*-console
 ‘Everybody started consoling her.’
 b. *Máng quàn-wèi tā.*
 rush console s/he
 ‘(They started) consoling her.’
- (117) a. *Èrtóng xiāng-jàn bù xiāng-shí*
 boy *xiang*-see not *xiang*-recognize
 ‘The child glanced *at me* and did not recognize *me*.’
 b. *Èrtóng jiàn wǒ bù shí wǒ.*
 boy see I not recognize I
 (same translation).

On the use of *xiāng*- instead of personal pronouns see also Yakhontov (Ch. 48, §12): “During this period (in the 3rd century CE) the reciprocal form *xiāng*- acquires one more meaning alongside the earlier one; in dialogue it comes to denote an action of one communicant directed at the other: ‘*I* (verb) *you*’ or, somewhat less commonly, ‘*you* (verb) *me*’. In these cases *xiāng*- also corresponds to an object (which is always omitted, while the subject is mostly present). The choice between the two possible readings of the form ((verb) *you*’ or ‘(verb) *me*’) is determined by the subject though sometimes it has to be recovered from the context [...] In báihuà *xiāng*- is not used as a free unit (though it is possible in bound collocations). In wényán it is retained as a regular reciprocal marker. Besides, in the genre of short stories (written in simplified wényán) it may have the “pronominal” use described above; moreover, its functions are expanded: it can be used not only in dialogue but also in narration, and it can replace any personal pronoun, including that of the 3rd person” (see also Lü Shuxiang 1965:58).

As is pointed out by I.M. Oshanin in his notes in Lü Shuxiang (1965:77), *xiāng*- in Ancient Chinese had a reciprocal and also a *sociative* meaning:

- (118) a. *xiāng-shā* i. ‘to kill *each other*’
 ii. ‘(of *many*) to kill one’
 iii. ‘(of one) to kill *many*’
 b. *xiāng-shā-zhī* ‘to kill him/her *together/jointly*’.

As regards the component *hù*, it had at least two usages in Ancient Chinese, as an adverb with the meaning ‘each other’ and as a verb ‘to interlace, interweave’.

6.2 Reciprocals with the component *hù*-

As mentioned, our list contains 31 compounds with *hù*-, of which 25 units are verbs (23 subject-oriented and 2 object-oriented) and 6 are registered in dictionaries as nouns only (see 6.4). The following forms, which display slight traces of grammaticalization, have branched off from these compounds: (a) on verbs with the negation *bù*- the component *hù*- functions, though very rarely, as a reciprocal marker (cf. (13g)), and (b) reduplicated *hù*- has developed a degree of activity as a reciprocalizer (cf. (12a)).

6.2.1 *Subject-oriented reciprocals*

6.2.1.1 *Compounds with the reciprocal meaning coded by hù- only.* These compounds are slightly more numerous than those listed in (121) and, moreover, more than half of them are accepted by the informants, though some of them only marginally. Among the base verbs, transitives are prevalent, and among the compounds, intransitives prevail (the range of these base verbs overlaps with that of compounds with *xiāng-*; thus *bǎo*, *còng*, *mà*, *ràng*, *zhù* occur in both groups, most of the pairs being synonymous). Sentential examples and lists of these compounds follow; (120a) contains “canonical” reciprocals and (120b) “indirect” reciprocals; (about the latter type see 4.1.2, cf. also (113) and the text above it):

- (119) a. *Wǒ gěi tā ràng-le dào.*
I for he give.in-PERF way
'I made way for him.'
- b. *Wǒmen hù-ràng-guo dào.*
we REC-give.in-EXP way
'We made way for each other.'
- (120) a. *bǎo* 'to vouch for sb' → °*hù-bǎo* 'to vouch for each other'
cóng 'to follow sb' → °*hù-cóng* 'to follow each other'
lì 'to be beneficial/profitable' → *hù-lì* 'to be mutually beneficial'
mà 'to scold' → *hù-mà* 'to squabble'
miǎn 'to encourage' → °*hù-miǎn* 'to encourage each other'
nì 'to go in the opposite direction' → °*hù-nì* 'to go away from each other'
ràng 'to give in/concede' → *hù-ràng* 'to give in to each other'
zhèng 'to corroborate, verify' → °*hù-zhèng* 'to corroborate mutually'
zhù 'to help' → *hù-zhù* 'to help each other'
zhuàng 'to beat, push' → *hù-zhuàng* 'to collide'
- b. *pài* 'to send' → *hù-pài* 'to send sb to each other'
shì 'to send' → *hù-shì yǎnsè* 'to exchange glances'
tóu 'to throw sth' → *hù-tóu* 'to throw sth to each other'.

6.2.1.2 *Both components are reciprocal in meaning.* The translations of the base verbs and respective compounds either coincide or differ slightly; cf. sentential examples and a list of these compounds where (123a) contains “canonical” reciprocals and (123b) “indirect” reciprocals:

- (121) a. *Zhè ge guójiā huàn-le dàshǐ.*
this item country change-PERF ambassador
'This country changed its ambassador.'
- b. *Liǎng ge guójiā hù-huàn-le dàshǐ.*
both item country REC-change-PERF ambassador
'The two countries exchanged ambassadors.'
- (122) a. [?]*Tā tōng qíngbào.*
he convey/get information
'He conveys/gets information.'
- b. *Tāmen hù-tōng qíngbào.*
they REC-convey information
'They exchange information.'

- (123) a. *dìng* ‘to agree, confirm’ → °*hù-dìng* ‘to come to an agreement’
 °*guān* ‘tied’ → °*hù-guān* ‘to be connected with each other’
jiāo ‘to intersect’ → *hù-jiāo* ‘to intersect’
jiē ‘to join, come into contact’ → °*hù-jiē* ‘to be/get joined’
jié ‘to join, tie, be tied’ → °*hù-jié* ‘to join/get tied’
 °*shāng* ‘to confer/counsel’ → °*hù-shāng* ‘to confer/counsel’
shì ‘to trade’ (now only ‘market’) → °*hù-shì* ‘to trade’
- b. *huàn* ‘to change sth/sb’ → *hù-huàn* ‘to mutually exchange sth/sb’
tōng ‘to communicate, convey’ → *hù-tōng* ‘to mutually exchange information’
 °*yì* ‘to change sth’ → °*hù-yì* ‘to exchange sth’ (cf. also (113)).

6.2.2 Object-oriented reciprocals

This type of reciprocals that may be used with a singular subject is represented only by two synonymous compounds.

- (124) *cóng* ‘to follow sth’ → °*hù-cóng* ‘to explain ideograms by means of each other’
xùn ‘to explain sth’ → *hù-xùn* ‘to explain ideograms by means of one another.’

6.2.3 Reduplication of the components *hù-* and *xiāng-*

This component seems to have retained relative productivity on some disyllabic verbs, where it is repeated on each monosyllabic component. This is, for instance, the case with the verb *bāng-zhù* ‘to help’ composed of two synonyms and used instead of each, as a rule (see (125h)). This results in interesting correlations between different expressions of reciprocity. Thus the meaning ‘They often help each other’ is commonly rendered by the mode used in (125b) and considered in detail in Section 4. (Most of the examples in (125) occur in (13) above.)

- (125) a. *Tāmen chángchang bāng-zhù wǒ.*
 they often help-help I
 ‘They often help me.’
- b. *Tāmen chángchang hùxiāng bāng-zhù*
 they often mutually help-help
 ‘They often help each other.’

The use of *hù-* instead of *hùxiāng* in this case is rejected by the informants (see (125c)). On the other hand, the compound *hù-zhù* is accepted, unlike *hùxiāng zhù* (see (125d) and (125e) respectively). The point is, as mentioned above (see 1.2.4), the disyllabic adverb does not rhythmically “agree” with a monosyllabic verb. For the same reason the monosyllabic *hù* and *xiāng* do not “agree” with disyllabic verbs, and in order “to survive” both adverbs have combined into one. Moreover, the reciprocal *hù-zhù* does not have, curiously enough, a standard underlying counterpart due to the homophony of the form *zhù* which means ‘to help’, also ‘to live’, ‘to stop’, ‘to congratulate’, etc. (the word *yī-bì-zhī-lì* ‘the force of one hand’ = ‘help’, lit. ‘one-hand-PRTL-force’ (see (125g)) resolves ambiguity and makes the sentence correct); cf.:

- c. **Tāmen chángchang hù-bāng-zhù.* (intended meaning as in (125b))
 d. *Tāmen chángchang hù-zhù.* (same meaning as in (125b))
 e. **Tāmen chángchang hùxiāng zhù.* (intended meaning as in (125b))
 f. **Tāmen chángchang zhù wǒ.* ‘They often help me’ (cf. (125a))
 g. *Tāmen chángchang zhù wǒ yī-bì-zhī-lì.* ‘They often help me’ (cf. (125a))

If *hù-* is repeated on the verb from (125c), the resultant form (see (125h)) is correct and even more acceptable than (125d) which is accepted by most of the informants. Characteristically, substitution of *xiāng-* and *hùxiāng* for *hù-* in (125h) results in an ungrammatical sentence (though combinations with *xiāng-* are more productive than those with *hù-*, and *hùxiāng* has no obvious restrictions, except the rhythmical restrictions just mentioned, as a standard reciprocal marker); cf.:

- h. *Tāmen chángchang hù-bāng-hù-zhù* (same meaning as in (125b) and (125d))
 i. **Tāmen chángchang xiāng-bāng-xiāng-zhù* (intended meaning as in (125b))
 j. **Tāmen chángchang hùxiāng bāng hùxiāng zhù* (same intended meaning).

Chinese has retained a few stable combinations of the (125i) type in which some of the informants accept reduplicated *xiāng-*; cf.:

- (126) a. *Tāmen xiāng-fǔ-xiāng-chéng.*
 they mutually-support-mutually-become
 ‘They supplement each other.’
 b. *Tāmen xiāng-qīn-xiāng-ài.*
 they mutually-close-mutually-love
 ‘They love each other.’

Constructions of the (125h) type are subject to significant restrictions: they tend to be formed with verbs of a certain lexical group (for details see 9.1 where these constructions are also considered because reciprocity is expressed here by two markers, in this case by a repeated marker).

6.2.4 The component *hù-* with the negation *bù*

A peculiarity of the component *hù-* is that it may, though rarely, attach to verbs with the negation *bù* (but not with the negation *méi*) if *bù* is used on a disyllabic verb. It goes without saying that the formations in question are not lexical reciprocals, but they are considered here because of the identity of the markers. (We owe a large part of the data and comments in this section to Lu Dzu-Jyan.)

The item *bù* denotes negation of an imperfective action (cf. *méi* which negates a perfective action and does not form a complex marker with *hù-*; *méi* combines with *hùxiāng* in the same way as *bù*). In constructions with *bù*, the component *hù-* displays a number of peculiarities. Two cases of usage can be distinguished.

1. Negation on reciprocals of monosyllabic verbs registered with the component *hù-* is ungrammatical; cf.:

- (127) a. *Tāmen hù-zhù.* ‘They help each other.’
 b. **Tāmen hù-bù-zhù.* (intended meaning:) ‘They do not help each other.’

- (128) a. *Tāmen hù-ràng.* ‘They give in to each other.’
 b. **Tāmen hù-bù-ràng.* (intended meaning:) ‘They do not give in to each other.’

It should be noted that (127a) and (128a) do not sound natural. The verb requires some addition following it to make them natural. For instance, in (127a) it may be *hé-zuò*, the synonym ‘to help each other’, and in (128a) *liǎo-shì*; in this case the combination *hù-ràng liǎo-shì* means ‘to give in to each other in order to settle an affair’.

2. The base verb can take the reciprocal negation *hù-bù-* but it cannot take *hù-* alone, i.e. the relation between (129a) and (129b) is asymmetrical to (127a) and (127b). Two subcases are distinguished here.

2a. With common *disyllabic* verbs, e.g. *qī-piàn* ‘to deceive’, the component *hù-* cannot be used to code reciprocity (because of its monosyllabic structure), though the negative form with *hù-bù-* is retained (because of its disyllabic structure); cf.:

- (129) a. **Tāmen hù-qī-piàn.* (intended meaning:) ‘They deceive each other.’
 b. *Tāmen bù qī-piàn wǒ.* ‘They do not deceive me.’
 c. *Tāmen hù-bù-qī-piàn.* ‘They do not deceive each other.’
 (130) a. **Tāmen hù-bāng-zhù.* (intended meaning:) ‘They are helping each other.’
 b. *Tāmen bù bāng-zhù wǒ.* ‘They are not helping me.’
 c. *Tāmen hù-bù-bāng-zhù.* ‘They are not helping each other.’

The following examples with *hù-bù-* have no correlates with *hù-* alone. Note that *hù-bù-* occurs in all the diathesis types of reciprocal constructions: “canonical” (see (129b), (130b) and (131a)), “indirect” (see (131b)) and “possessive” (see (131c)); moreover, it also occurs on lexical reciprocals, viz. on those that do not collocate with *hùxiāng* (see (131d)).

- (131) a. *Tāmen hù-bù-pī-píng.* cf. (43b)
 they mutually-NEG-criticize
 ‘They don’t criticize each other.’
 b. *Wǒmen hù-bù-zèng-sòng lǐwù.* cf. (51b)
 we mutually-NEG-send present
 ‘We don’t send presents to each other.’
 c. *Liǎng guó hù-bù-qīn-fàn guójìng.* cf. (56b)
 two country mutually-NEG-invade country.border
 ‘The two countries do not invade each other’s borders.’
 d. *Tā hé línjū hù-bù-lái-wǎng.* cf. (114)
 he and neighbour mutually-NEG-associate
 ‘He and his neighbours do not mix with each other.’

Non-negative reciprocal forms of the verbs cited above with the marker *hù-bù-* are marked in a standard way by the adverb *hùxiāng* from which negative constructions can be formed in their turn with the negation *bù*; cf.:

- (132) a. *Tāmen gān-shè wǒmen-de nèizhèng.*
 they interfere we-ATR internal.affairs
 ‘They interfere in our internal affairs.’
 b. **Tāmen hù-gān-shè nèizhèng.*
 (intended meaning:) ‘They interfere in each other’s internal affairs.’

- c. *Tāmen hù-bù-gān-shè nèizhèng.*
 they mutually-NEG-interfere internal.affairs
 ‘They do not interfere in each other’s internal affairs.’
- d. *Tāmen hùxiāng gān-shè nèizhèng.*
 they mutually interfere internal.affairs
 ‘They interfere in each other’s internal affairs.’ (same as intended in (132b))
- e. *Tāmen hùxiāng bù gān-shè nèizhèng.*
 they mutually NEG interfere internal.affairs
 ‘They do not interfere in each other’s internal affairs.’

2b. The combination *hù-bù-* is common on *disyllabic* verbs with the initial component *xiāng-*. This case is particularly representative of *hù-* merging with *bù-* because the base verb does contain the reciprocal marker *xiāng-*. This usage is possibly accounted for by the rhythmic arrangement of the form, i.e. by the need for a four-syllable structure; cf. the analogous rhythmic pattern of *hù-bù-gān-shè* in (132c) and *hù-bù-xiāng-róng* in (133d). Thus the verb *róng* ‘to tolerate’, being a monosyllabic word, does not usually combine with *hùxiāng*. A respective negative reciprocal construction can be formed by means of *hù-bù-* from the reciprocal compound *xiāng-róng*; cf. (these verbs are used with negation only and they are usually rejected by native speakers when used without negation):

- (133) a. *Tā bù róng wǒ.*
 he NEG tolerate I
 ‘He does not tolerate me.’
- b. *²Tāmen xiāng-róng.*
 they mutually-tolerate
 ‘They tolerate each other.’
- c. *Shuǐ huǒ bù xiāng-róng.*
 water fire NEG mutually-tolerate
 ‘Water and fire are incompatible.’
- d. *Tāmen hù-bù-xiāng-róng.*
 they mutually-NEG-mutually-tolerate
 ‘They do not tolerate each other.’

6.3 Reciprocals with the component *xiāng-*

Prior to the discussion of reciprocals with this component, we should stress that there is a considerable number of words where the component *xiāng-* is not reciprocal in meaning, and the connection with the reciprocal meaning is not easy to trace; e.g.:

- (134) *fán* ‘to bore, pester’ → *xiāng-fán* ‘to hamper, bring sb trouble’
kàn ‘to look’ → *xiāng-kàn* i. ‘to look at sb’, ii. ‘look at each other’
mán ‘to conceal’ → *xiāng-mán* ‘to conceal from sb’
qǐng ‘to invite’ → °*xiāng-qǐng* ‘to invite’
quàn ‘to persuade’ → *xiāng-quàn* ‘to persuade’
xìn ‘to believe’ → *xiāng-xìn* ‘to believe’

zé 'to reproach'	→	xiāng-zé 'to reproach'
zhòng 'to catch sb's fancy'	→	xiāng-zhòng 'to choose sb', etc.
°zuò 'to accuse'	→	°xiāng-zuò 'to bring sb to trial instead of sb.'

6.3.1 Subject-oriented reciprocals

As in reciprocals with *hù-*, the second component is usually a monosyllabic verb, with a few exceptions.

6.3.1.1 Semantic characteristics of the base verbs. Before listing the reciprocals, we shall briefly characterize the base verbs. The characteristics also apply to the base verbs of the compounds with *hù-*. Distribution of *hù-* and *xiāng-* within compound verbs does not seem semantically motivated: some base verbs may occur with either of these components. In a number of cases, reciprocity involves other semantic shifts. All these compounds, with a few exceptions, are intransitive, the bases being two-place transitives (cf. (138)) or, more seldom, two-place intransitives. Two principal groups of base verbs are distinguished: Group 1 comprising non-reciprocal verbs (cf. 6.3.1.3) and Group 2 comprising lexical reciprocals (cf. 6.3.1.4). The reciprocal meaning coded by *hù-* and *xiāng-* generally corresponds to that of *hùxiāng* (and also of reciprocal affixes in other languages). The meaning of the compounds in question is not always compositional, at least not as clearly as in (138).

Group 1. Here, verbs are prevalent that denote the following:

1. A prior or co-occurrent action/state which is a kind of *response*, e.g. 'to answer' is a response to the action 'to ask'; cf. also 'to concede', 'to help', 'to agree', etc.; or
2. A provoking action, e.g. 'to attack' as provoking the action 'to defend'; cf. also 'to beat', 'to push', 'to scold', 'to persuade', 'to accuse', 'to call', etc.

Group 2. The base verbs of this group are characterized at the beginning of Section 6.1; these are lexical reciprocals with meanings like 'to compete with', 'to be alike', 'to correspond', 'to converse', 'to meet', 'to intersect', etc. Special note deserve reciprocals that have converse correlates, e.g. 'to be far from' – 'to be close to'; here belong some of the lexical reciprocals when used in the discontinuous construction of the type *A is far from B = B is far from A*. But in the simple construction the plural subject of this type of verbs without a reciprocal marker is understood as a single participant and the sentence is perceived as elliptical; cf. *A and B are far ... [from sth/sb]* and *A and B are far from each other* (cf. (139)).

Historically, in Group 1 verbs *xiāng-* was added to express reciprocity in simple constructions. As to Group 2, this component was probably added pleonastically and in accordance with the tendency to use disyllabic verbs instead of monosyllabic ones.

6.3.1.2 Simple and discontinuous constructions. What follows illustrates the use of the reciprocals under consideration. They are classified according to the type of constructions they are used in. This is most probably also valid for reciprocals with *hù-*, but we have too little data on constructions with the latter marker. Constructions with *xiāng-* are more varied than those with *hùxiāng* (in that there are cases with the reciprocal argument placed after the reciprocal predicate; cf. (136); this occurs mostly with verbs denoting equality

and distance), though they are also simple, as a rule, i.e. both reciprocal arguments are named by the subject. Below we consider first constructions with *xiāng* (see case A) and next their relations with the underlying verbs (see B).

6.3.1.2.1 *Constructions with compounds.* Theoretically, three main types of expression of the reciprocal arguments are logically possible here:

- A. Both arguments are denoted by one word (with a plural meaning semantically coded on a reciprocal compound; see (135a, b) or by dependent words, e.g. a numeral, see (135c)) or by two words in immediate contact, as in (135d, e).
- B. The arguments are separated by other words, e.g. by the predicate, a modal word, adverb, etc.; see (136).
- C. The arguments are joined by a preposition/conjunction; see (137).

Case A is illustrated, among others, by compounds whose base verbs are out of use.

A. *Both reciprocal arguments are coded by the subject.* As mentioned, reciprocals with *xiāng-* are mostly used in the simple construction. The examples under (135) are amplified by those cited further on in (138b), (139b), (141b). The general picture is analogous to that with *hùxiāng* in 3.1.2.1.1.

- (135) a. *Táiqiú xiāng-zhuàng-le.*
billiard.ball REC-collide-PERF
'The billiard balls collided.'
- b. *Yìjiàn xiāng-hé₁.*
'The opinions coincide.'
- c. *Wǔ xíng xiāng-shēng.*
five elements REC-engender
'Five elements engender one another.'
- d. *Fù-zǐ xiāng-bǎo.*
father-son REC-protect
'Father and son protect each other.'
- e. *Míng shí xiāng-fú.*
name essence REC-correspond
'Form and content correspond to each other.'

B. *The second reciprocal argument is not coded by the subject.* In this case the construction is discontinuous. In case B the subject may be singular, while in case A it is always (semantically) plural. This type can be unambiguously identified if the second argument is (a) placed after the predicate (see (136a); this seems to be characteristic of verbs denoting interrelations, equality, etc.; cf. 5.2.2.1.1) or (b) separated from the first argument by negation *bù*, a modal word or an adverbial (see (136b, c)):

- (136) a. *Xiànzài yì tiān xiāng-dāng yú guòqù èrshí nián.*
today one day REC-equal PREP past ten year
'One day today corresponds (lit. 'is equal') to ten years in the past.'
- b. *Tā bù néng hé nǐ xiāng-bǐ.*
he NEG be.able with you.SG REC-compare
'He is not your equal'. 'He can't compare with you.'

- c. *Shīyè bìrán tóng sīyǒuzhì jīngjì xiāng-lián-xì.*
 unemployment by.all.means with private.property economy REC-connect
 ‘Unemployment is necessarily interrelated with the economy of private property.’

C. *Simple or discontinuous?* If both reciprocal arguments precede the predicate and they are linked by the items *hé, gēn, yǔ*, or *tóng* ‘with/and’, it may be not obvious whether the second argument is a non-direct object or part of the subject (true, this difference in the interpretation may not be reflected in the translation, and does not change the meaning of the sentence significantly). In these instances for establishing the syntactic status of the second noun phrase a number of criteria can be used which, however, are not entirely convincing. We are faced with the same problem here that is discussed in 3.1.3, also in paragraph 6) of 2.7 and in the text above (99). The examples below seem to be of the discontinuous type because an adverbial can be inserted in pre-position to the comitative phrase (see also 5.1.3).

- (137) a. *Yìwén [dàgài] yǔ yuánwén hěn xiāng-jìn.*
 translation probably with original very REC-close
 ‘The translation is [probably] very close to the original text.’
- b. *Měi yǔ chǒu xiāng-duì.*
 beauty with ugliness REC-oppose
 ‘Beauty contrasts with ugliness.’
- c. *Wǒmen-de kànfā tóng tāmen qiàqià xiāng-fǎn.*
 we-ATR opinion with they just REC-opposite
 ‘Our opinions are just opposed.’
- d. *Xiǎo Wang hé/gēn/yǔ/tóng tā xiāng-ài.*
 X.W. and/with he REC-love
 i. ‘Little Wang loves him.’
 ii. ‘Little Wang and he love each other.’
- e. *Tā bù hé/gēn/yǔ/tóng wǒ xiāng-hǎo.*
 he NEG and/with I REC-be.friends
 i. ‘We are not friends with him.’
 ii. ‘He is not friends with me.’

6.3.1.2.2 *Constructions with the base verbs.* They may be of two main types (note that many of the verbs listed below (see (142) and (143)) are not used any more because they are monosyllabic and they are replaced by synonymous disyllabic verbs). Two subtypes are distinguished with regard to the valency change.

A. *Valency reduction.* The base construction contains two syntactic arguments (the second one is a prepositionless object); this is possible with two types of base verbs, non-reciprocal verbs and lexical reciprocals (cf. (138) and (139) respectively). In this case the valency reduction, including detransitivization (see (138b)), is easily identified.

- (138) a. *Tāmen bù róng tā.*
 they NEG tolerate he
 ‘They don’t tolerate him.’

- b. *Tāmen* [bǐcǐ] *bù xiāng-róng.*
 they mutually NEG REC-tolerate
 ‘They cannot stand each other.’
- (139) a. *Zhè cūn jù nà cūn bù yuǎn.*
 this village be.distant this village not far
 ‘This village is not far from that village.’
- b. *Liǎng cūn xiāng-jù bù yuǎn.*
 two village REC-be.distant NEG far
 ‘Two villages are not far from each other.’

B. No (obvious) valency reduction. Two subcases can be distinguished here.

B1. If both reciprocal arguments precede the predicate and they are linked by a preposition, it may be not quite obvious whether the second argument is a non-direct object or part of the subject; (cf. (137)); e.g.:

- (140) a. *Tā gēn wǒ hǎo.*
 he and/with I be.friends
 i. ‘He is friends with me.’
 ii. ‘He and I are friends.’
- b. *Tā [bù] gēn wǒ xiāng-hǎo.*
 he NEG and/with I REC-be.friends
 i. ‘He is [not] friends with me.’
 ii. ‘He and I are [not] friends.’

B2. The underlying construction contains one syntactic argument; needless to say, this is possible only with lexical reciprocals.

- (141) a. *Liǎng tiáo xiàn jiāo yú yī diǎn.*
 two CLF line cross at one point
 ‘Two lines cross at one point.’
- b. *Liǎng tiáo xiàn xiāng-jiāo yú yī diǎn.*
 two CLF line REC-cross at one point
 ‘Two lines cross at one point.’

6.3.1.3 Compounds with the reciprocal meaning coded by *xiāng-* only. There are 28 units with *xiāng-* (that follow below) in a list of 98 verbal compounds in our data. In most cases *xiāng-* is translated by the English reciprocal pronoun *each other*. A slight, though predictable change of meaning can be observed in pairs with translations like ‘to push – to collide’, ‘to beat – to fight’, ‘to see – to meet’, ‘to hold – to come to blows’, etc. But sometimes the meaning changes in an individual way (cf.: ‘to evade – to break up / separate’). This was probably an unrealized tendency in Chinese to create a reciprocal prefix.

The list of verbs is loosely divided into lexical groups for the reader’s convenience. As one can see from the number of compounds in Group A (with an obligatory human subject), on the one hand, and Groups B and C (where both a human and non-human subject is possible) on the other, compounds obligatorily taking a human subject are four times more numerous.

A. Social relations

a. Friendly and neutral relations

- (142) ài 'to love' → xiāng-ài 'to love each other'
 bāng 'to help' → °xiāng-bāng 'to help each other'
 bǎo 'to vouch for sb' → xiāng-bǎo 'to vouch for each other'
 jiàn 'to see' → xiāng-jiàn 'to meet (each other)'
 ràng 'to concede, give in' → xiāng-ràng 'to concede to each other'
 róng 'to tolerate' → xiāng-róng 'tolerate/combine with each other'
 shàn 'to be kind' → °xiāng-shàn 'to be friends'
 wěn 'to kiss sb' → xiāng-wěn 'to kiss each other'
 °yīn 'to support, lean on' → °xiāng-yīn 'to lean upon each other'
 zhù 'to help' → xiāng-zhù 'to help each other'

b. Hostile relations

- (143) bèi 'to turn one's back on/to' → xiāng-bèi 'to oppose/counteract each other'
 chí 'to hold' → xiāng-chí 'to come to blows'
 dǎ 'to beat' → °xiāng-dǎ 'to fight'
 jī 'to beat' → °xiāng-jī 'to fight/struggle'
 mà 'to scold' → xiāng-mà 'to squabble'
 pū 'to beat' → °xiāng-pū 'to come to blows/grapple'
 wéi 'to break' → °xiāng-wéi 'to break up/separate' (vi).

c. Communication

- (144) °guān 'to look' → °xiāng-guān 'to exchange glances'
 huàn 'to call' → °xiāng-huàn 'to call/shout to one another'
 kàn 'to look' → xiāng-kàn 'to look at each other'
 shì 'to look' → xiāng-shì 'to exchange glances.'

B. Spatial relations (contact)

- (145) pèng 'to push' → xiāng-pèng 'to collide'
 zhuàng 'to push, beat' → xiāng-zhuàng 'to collide'

C. Chaining relations

- (146) a. chéng 'to inherit, succeed' → °xiāng-chéng 'to succeed one another'
 cóng 'to follow' → °xiāng-cóng 'to follow each other'
 shēng 'to engender' → xiāng-shēng 'to engender one another.'

The verb °xiāng-chéng 'to succeed one another' may be used only in certain combinations; e.g.: fù 'to help' → xiāng-fù-xiāng-chéng 'to mutually complement one another', fǎn 'opposite' → xiāng-fǎn-xiāng-chéng 'to complement one another in counteraction'.

There are very few transitive reciprocals with xiāng-, and the "indirect" reciprocal xiāng-chuán in (146b) (cf. "indirect" reciprocals with hù in (120b) and (123b)), which may also denote a chaining action, is the only example at our disposal.

- b. chuán 'to pass (give) sth to sb' → xiāng-chuán i. 'to pass sth to one another'
 ii. 'to pass sth from generation to generation.'

6.3.1.4 *Both components are reciprocal in meaning.* There are over 60 reciprocals of this type in our material. The derived and base verbs have mostly identical or synonymous translations (semantically, most of the verbs of this group coincide with the Ancient Chinese verbs which could take *xiāng* with the preposition *yǔ* ‘with’). As in the previous case, the verbs are subdivided into lexical groups. Unlike in 6.3.1.3, there is one compound denoting hostile relations, three of communication and none of chaining here; instead, verbs of equality, comparison (in the meaning ‘to compare’ (vi), cf. (136b)) and spatial relations are quite numerous. In comparison with the data in 6.3.1.3, the split-up in Group A with an obligatory human subject on the one hand, and Groups B and C on the other, is noticeably different: instead of 4:1 we observe the approximate split-up 1:2.

A. *Social relations*

a. *Friendly and neutral relations*

- | | | |
|--|---|---|
| (147) <i>féng</i> ‘to come across, meet’ | → | <i>xiāng-féng</i> ‘to meet’ |
| <i>hǎo</i> ‘to be friends’ | → | <i>xiāng-hǎo</i> ‘to be friends’ |
| <i>hé₂</i> ‘to be in concord’ | → | ^o <i>xiāng-hé₂</i> ‘to be in harmony’ |
| <i>qīn</i> ‘to be close, related’ | → | <i>xiāng-qīn</i> ‘to be in close relations’ |
| <i>shú</i> ‘to be well acquainted’ | → | <i>xiāng-shú</i> ‘to be well acquainted’ |
| <i>yú</i> ‘to be together’ | → | <i>xiāng-yú</i> ‘to be at one/to be friends’ |
| <i>yù</i> ‘to meet’ | → | <i>xiāng-yù</i> ‘to meet’ |
| <i>yuē</i> ‘to come to an agreement’ | → | <i>xiāng-yuē</i> ‘to come to an agreement’ |
| <i>zhī</i> ‘to know’ | → | <i>xiāng-zhī</i> ‘to know each other well, be friends’ |

b. *Hostile relations*

- | | | |
|-----------------------------------|---|---|
| (148) <i>chǎo</i> ‘to make a row’ | → | ^o <i>xiāng-chǎo</i> ‘to wrangle’ |
|-----------------------------------|---|---|

c. *Communication*

- | | | |
|--|---|---|
| (149) <i>shāng</i> ‘to counsel/ask advice’ | → | <i>xiāng-shāng</i> ‘to counsel with each other’ |
| <i>tán</i> ‘to converse, talk’ | → | [?] <i>xiāng-tán</i> ‘to talk to each other’ |
| <i>tōng</i> ‘get into communication’ | → | <i>xiāng-tōng</i> ‘communicate’ (e.g. of vessels). |

B. *Spatial relations (contact and distance; also mental)*

- | | | |
|---|---|--|
| (150) <i>fǎn</i> ‘opposed’ | → | <i>xiāng-fǎn</i> ‘opposed’ |
| ^o <i>gān</i> ‘to bear a relation to sth’ | → | <i>xiāng-gān</i> ‘to adjoin each other’ |
| <i>gé</i> ‘to be at distance X from’ | → | <i>xiāng-gé</i> ‘be at distance X from each other’ |
| ^o <i>guān</i> ‘tied/connected’ | → | <i>xiāng-guān</i> ‘to be related to each other’ |
| <i>huì</i> ‘to gather’ | → | <i>xiāng-huì</i> ‘to gather’ |
| <i>jiāo</i> ‘to intersect/join together’ | → | <i>xiāng-jiāo</i> ‘to intersect/join together’ |
| <i>jiāo</i> ‘to be close’ | → | <i>xiāng-jiāo</i> ‘to be close/near to each other’ |
| <i>jiē</i> ‘to adjoin/coincide’ | → | <i>xiāng-jiē</i> ‘to adjoin’ |
| <i>jìn</i> ‘to be very close’ | → | <i>xiāng-jìn</i> ‘to be very close to each other’ |
| <i>jù</i> ‘to be distant from sth’ | → | <i>xiāng-jù</i> ‘to be apart from each other’ |
| <i>lián</i> ‘to join together’ | → | <i>xiāng-lián</i> ‘to join each other/together’ |
| ^o <i>lín</i> ‘to be by the side’ | → | <i>xiāng-lín</i> ‘to be neighbours’ |
| <i>qiè</i> ‘to draw together’ | → | ^o <i>xiāng-qiè</i> ‘to adjoin’ |
| <i>yuǎn</i> ‘to be far’ | → | ^o <i>xiāng-yuǎn</i> ‘to be far from each other’ |

C. Relations of equality (including non-equality) and comparison

(151) <i>bǐ</i> ‘to compare’	→	<i>xiāng-bǐ</i> ‘to compare’ (vi); cf. (136b)
<i>chèn</i> ‘to match, fit’	→	<i>xiāng-chèn</i> ‘to match, fit’
<i>chí</i> ‘to hold’	→	<i>xiāng-chí</i> ‘to be balanced’
<i>dāng</i> ‘to correspond’	→	<i>xiāng-dāng</i> ‘equal’
<i>děng</i> ‘alike/same’, ‘equal’	→	<i>xiāng-děng</i> ‘equal’
<i>duì</i> ‘to be opposite’	→	<i>xiāng-duì</i> ‘contrasting, to contrast’
<i>fān</i> ‘to be against/opposite’	→	<i>xiāng-fān</i> ‘contrasting, to contrast’
<i>fāng</i> ‘to imitate’	→	<i>xiāng-fāng</i> ‘to be like/similar’
<i>fú</i> ‘to coincide, correspond’	→	<i>xiāng-fú</i> ‘to coincide, correspond’
<i>hé₁</i> ‘to coincide, correspond’	→	^o <i>xiāng-hé₁</i> ‘to coincide, correspond’
<i>hū</i> ‘to correspond’	→	<i>xiāng-hū</i> ‘to correspond to sth, to agree’
<i>jiào</i> ‘to compare’	→	<i>xiāng-jiào</i> ‘to compare (vi), compete’
<i>peì</i> ‘to make up a pair’ (vi)	→	<i>xiāng-peì</i> ‘to suit each other’
<i>píng</i> ‘equal’	→	<i>xiāng-píng</i> ‘to compare’ (vi)
<i>qí</i> ‘equal’	→	<i>xiāng-qí</i> ‘to compare’ (vi)
<i>qì</i> ‘to correspond’	→	<i>xiāng-qì</i> ‘to correspond’
<i>rú</i> ‘to be alike’	→	^o <i>xiāng-rú</i> ‘to be similar/alike’
<i>ruò</i> ‘to be alike’	→	^o <i>xiāng-ruò</i> ‘to be alike/similar’
<i>sì</i> ‘to be alike’	→	<i>xiāng-sì</i> ‘to be alike’
<i>tóng</i> ‘(to be the) same’	→	<i>xiāng-tóng</i> ‘(to be the) same’
<i>xiàng</i> ‘to be alike’	→	<i>xiāng-xiàng</i> ‘to be alike, similar’
<i>yì</i> ‘to be different’	→	<i>xiāng-yì</i> ‘to be different’
<i>yíng</i> ‘to correspond’	→	<i>xiāng-yíng</i> ‘to correspond’

The dictionaries register a group of compounds with *xiāng* in combination with disyllabic verbs which are usually lexical reciprocals and more or less synonymous with the compounds, e.g. ^o*xiāng-hé₁-hé₂* ‘to be in harmony’, *xiāng-jié-hé₂* ‘to be in harmony’, *xiāng-hé₂-xié* ‘to be in harmony’, *xiāng-fú-hé₁* ‘to correspond’, *xiāng-yī-zhì* ‘to correspond’, *xiāng-máo-dùn* ‘to be contradictory’, *xiāng-dǐ-chù* ‘to be contradictory’, *xiāng-pǐ-dí* ‘equal’, *xiāng-lián-xì* ‘to be interrelated’.

6.3.1.5 Lexicalized compounds with a reciprocal meaning. We have included here compounds with non-compositional reciprocal meanings and one compound with the meaning ‘to oppose’ which is not reciprocal proper but it presupposes a counteraction. Pairs with non-standard semantic relations are mentioned above, but in (152) this is more obvious, the components entering into individual semantic relations. The base verbs are not reciprocal in meaning.

(152) <i>tóu</i> ‘to throw sth’	→	<i>xiāng-tóu</i> ‘to get on well with each other’
<i>zuǒ</i> ‘left’, ‘to go left’	→	<i>xiāng-zuǒ</i> ‘to oppose’
<i>qù</i> ‘to go away’	→	<i>xiāng-qù-wújǐ</i> ‘almost the same’, lit. ‘to move away from each other a little’ (<i>wújǐ</i> ‘a little’).

6.3.2 Object-oriented reciprocals

As mentioned above, there are very few transitive reciprocals with *xiāng* in our corpus. It is probably not accidental that the underlying transitive construction (see (153b)) of the passive (subject-oriented intransitive) sentence with *xiāng-lián* in (153a) registered in a dictionary is rejected by the informants.

- (153) a. *Liǎng tiáo hé zhījiān yòng yùnhé xiāng-lián.* (Xia Zhong'yi (ed.) 1983:992)
 two CLF river between by canal REC-join
 'Two rivers are connected by canals.'
- b. **Yùnhé bǎ liǎng tiáo hé xiāng-lián.*
 canal ba two CLF river REC-tie
 'The canal ties two rivers with each other/mutually.'

An object-oriented reciprocal may be derived from a subject-oriented reciprocal by means of a periphrastic phrase with the causative auxiliary verb *shǐ* 'to cause' (cf. (34)):

- (154) a. *Xīn jīnglǐ shǐ shōu-zhī xiāng-děng-le.*
 new director CAUS income-expenditure REC-equal-PERF
 'The new director has balanced the profit and expenditure.'
- b. *Tā shǐ táiqiú xiāng-zhuàng-le.*
 he CAUS billiard.ball REC-collide-PERF
 'He brought the billiard balls into collision.'

We have encountered in the dictionaries two object-oriented reciprocals, which happen to be synonymous. The second one composed of two compounds is of unclear derivation:

- c. *bǐ* 'to compare' → *xiāng-bǐ* 'to compare sth and sth'
tí 'to hold'; *bìng* 'join; together'; *lùn* 'discuss' → *xiāng-tí bìng-lùn* 'to discuss
 and interpret sth and sth in the same way.'

6.4 Nominal compounds

To complete the discussion of compounds with *hù*- and *xiāng*-, lists of nominal compounds with these components are given below. As mentioned above, practically any polysyllabic verb (including those that are entered in the numerous lists above) can be nominalized. It is but natural that most of the nominal compounds are in fact nominalizations of respective formally identical verbs (note that there are no compound nouns with *hùxiāng*; see Section 3.6). Therefore the lists are purely illustrative and incomplete. In (155) and (156) the lists under (a) contain deverbal compounds and those under (b) denominal ones. One of the compounds below functions as an adverb.

1. Compounds with *hù*-

- (155) a. *biàn* 'to change' (vi) → *hù-biàn* 'mutual transformation'
dǎo 'to lead' → *hù-dǎo* 'mutual conductivity'
huì 'favour/favourable' → *hù-huì* 'mutual favour'
lì 'to be profitable' → *hù-lì* 'mutual profit'
liàng 'to understand' → *hù-liàng* 'mutual understanding'
zhù 'to help' → *hù-zhù* 'mutual help'

<i>zhuàng</i> ‘to beat, push’	→	<i>hù-zhuàng</i> ‘collision (e.g. of trains)’
<i>zūn</i> ‘to respect’	→	° <i>hù-zūn</i> ‘mutual respect’
<i>xùn</i> ‘to explain’	→	<i>hù-xùn</i> ‘cross-explanation of ideograms by means of one another’
b. <i>wén</i> ‘language’	→	° <i>hù-wén</i> ‘paired phrases.’

2. Compounds with *xiāng*-

(156) a. <i>bǐ</i> ‘to compare’	→	<i>xiāng-bǐ</i> ‘comparison’
<i>fān</i> ‘opposed’	→	<i>xiāng-fān</i> ‘contrast’
<i>shí</i> ‘to know’	→	<i>xiāng-shí</i> ‘acquaintance’
b. <i>shēng</i> ‘voice’	→	<i>xiāng-shēng</i> ‘pair compère’
<i>shǒu</i> ‘hand’	→	? <i>xiāng-shǒu</i> ‘partner’
° <i>cì</i> ‘order, succession’	→	° <i>xiāng-cì</i> ‘in succession’ (< ‘follow one another’).

6.5 Some comments on relationship between *hù*-, *xiāng*- and *hùxiāng*

By way of partly repeating ourselves, we shall dwell on three points here.

6.5.1 Process of grammaticalization of *hù*- and *xiāng*-

The latter element, as is known, was the main reciprocal marker in Ancient Chinese. There are grounds (see Yakhontov, Ch. 48) to see some features of grammaticalization of *xiāng*- in this period which manifested itself in its functioning as an auxiliary. This tendency was cut short and *xiāng*- was retained in a limited, though large enough, number of compounds and disappeared as a free unit. The component *hù*- was also lost as a free unit and it is retained in a very small number of fossilized compounds. But combined together they gave rise to the adverb *hù-xiāng* or *xiāng-hù* which seems to have lost some auxiliary properties *xiāng*- used to display: it was retained as a complex due to the general tendency towards disyllabicity. The point is, the monosyllabic *hù*- and *xiāng*- violated the tendency towards “rhythmic agreement”, i.e. collocability of monosyllabic words with monosyllabic ones and disyllabic with disyllabic words (see 1.2.4). This is why *hù*- has survived by way of achieving a weak degree of grammaticalization when used, firstly, as a double reciprocal morpheme in *hù-V-hù-V* subject to rigid (semantically motivated) restrictions (see 6.2.3 and 9.1) and, secondly, as a marker (though rare) of reciprocity on predicates with the negation *bù* (see 6.2.4). As it seems, sufficiently frequent use of the complex *hù-bù-bāng-zhù* ‘do not help each other’, and in the absence of the form *hù-bāng-zhù* ‘to help each other’ could result in the reanalysis of the combination *hù-bù*- as a single complex.

6.5.2 Relations between compounds with *hù*- and *xiāng*-

One can see a kind of overlapping distribution in the combinability of these two morphemes with various verbs. As compounds with *xiāng*- are approximately three times as numerous as those with *hù*-, many verbs with *xiāng*- clearly do not have correlates with *hù*-. Nevertheless, there are compounds in *hù*- whose correlates with *xiāng*- are less commonly used or are not accepted by the informants. The following main types of these compounds should be specially noted.

1. Compounds with *hù-* that are preferred by native speakers or do not have correlates with *xiāng-* at all; e.g.:

- (157) *zhù* 'to help' → a. *hù-zhù* 'to help each other' b. ²*xiāng-zhù* (same)
huàn 'to (ex)change' → a. *hù-huàn* 'to exchange' b. ⁰*xiāng-huàn* (same)
miǎn 'to encourage' → a. ²*hù-miǎn* 'to encourage e.o.' b. ⁰*xiāng-miǎn* (same).

2. Compounds with *xiāng-* that are preferred by native speakers or do not have correlates with *hù-* at all, e.g.:

- (158) *zhuàng* 'to hit' → a. *xiāng-zhuàng* 'to collide' b. ²*hù-zhuàng* (same)
ràng 'to give in' → a. *xiāng-ràng* 'give in to e.o.' b. ²*hù-ràng* (same)
ài 'to love' → a. *xiāng-ài* 'to love e.o. passionately' b. ⁰*hù-ài* (same)
ràng 'to give in' → a. *xiāng-ràng* 'give in to e.o.' b. ²*hù-ràng* (same).

6.5.3 Relationship between *hù-*, *xiāng-*, and *hùxiāng*

This naturally concerns only those compounds with *hù-* and *xiāng-* that are accepted by native speakers. The following relationship is typical of the data: substitution of *hùxiāng* for *hù-* or *xiāng-* is determined by replacement of a monosyllabic verb by the synonymous disyllabic verb. Note that the middle derivatives in (159) and (160) are accepted by native speakers both with disyllabic verbs given in the third column but in other patterns listed in the final paragraph of 1.2.4.

- (159) ²*hù-miǎn* 'to encourage e.o.' – **hùxiāng miǎn* (same) – *hùxiāng miǎn-lì* (same)
hù-zhù 'to help each other' – **hùxiāng zhù* (same) – *hùxiāng bāng-zhù* (same)
hù-lì 'to be mutually beneficial' – **hùxiāng lì* (same) – *hùxiāng yóu-lì* (same).
(160) *xiāng-ài* 'love e.o. passionately' – ²*hùxiāng ài* (same) – *hùxiāng ài-liàn* (same)
xiāng-jiàn 'see each other' – ²*hùxiāng jiàn* (same) – *hùxiāng jiàn-miàn* (same)
xiāng-ràng 'give in to e.o.' – ²*hùxiāng ràng* (same) – *hùxiāng qiān-ràng* (same)
xiāng-zhuàng 'collide' – ²*hùxiāng zhuàng* (same) – *hùxiāng pèng-zhuàng* (same).

As a rule, the informants prefer disyllabic verbs with *hùxiāng* though the set compound *xiāng-zhuàng* 'to collide' is preferable to its disyllabic correlate *hùxiāng pèng-zhuàng*. True, there is a subtle semantic difference between them: the former usually implies an unintentional action and the latter lacks this implication (Fengxiang Li, p.c.).

7. Lexical reciprocals with recurrent components of verbal origin

7.1 Introductory

This section is concerned with compound lexical reciprocals whose initial components are in their turn lexical reciprocals as well (at least in one of their meanings). These components may combine with both lexical reciprocals and non-reciprocal verbs to which they add reciprocity (see 5.1.2). The choice of the nine components listed below is determined by their primary meanings and high enough productivity, as they form from 11 to 79 compounds. Out of 334 compounds considered here 220 are verbs and 114 are nouns (see

(161a)). Nominal compounds are given due space here. Note that *hùxiāng* does not collocate with nouns at all (unless they are nominalized verbs; cf. 3.3), and *hù-* and *xiāng-* are rather rare (cf., however, (155b) and (156)). Nominal compounds are derived mostly with the help of the initial adjectival components *qīn* and especially *tóng* (as mentioned, adjectives are traditionally viewed as a subclass of verbs). Valency correlations of verbal compounds with base verbs here are basically the same as those of compounds with *hù-* and *xiāng-*. The base valency is either retained (especially in the case of two-place intransitive bases; cf. (85)) or decreases (especially if the base is not a lexical reciprocal; cf. (87)–(88)). The use of these compounds in simple and discontinuous constructions is treated in 5.2.2 above. What we claim in 6.3.1 for compounds with *xiāng-* also applies to the material of this section. Therefore these characteristics are not considered here. They may sometimes differ slightly from those in Sections 5.2.2 and 6.3.1. There are some individual relations between the base and reciprocal constructions but we cannot dwell on them here. In compounds, there occur bound morphemes which do have a lexical meaning but have dropped out of use as free units.

Attention is centered on lexical groups of the compounds with both non-reciprocal and reciprocal base verbs (see 7.2.1.1 and 7.2.1.2) and also on the ratio of the initial components in these lexical groups. By way of repeating ourselves, we stress that the existence of disyllabic lexical reciprocal compounds is not specific to reciprocals, being a reflection of a more general tendency towards disyllabicity. Of special interest are the initial components that repeat with different verbs and make up compound patterns, and also the cases where reciprocity is marked by the initial component only.

The discussion of compound reciprocals in this section is of preliminary nature: their investigation requires more space and should be done within the framework of a broader investigation of compounds in general.

General characteristics (see 7.1.1–7.1.3) are followed by a discussion of

- Verbal compounds with verbal bases (7.2).
- Verbal compounds with nominal bases (7.3).
- Compound nouns (7.4).

The lexical groups of compounds in this section are basically the same as among the verbs in *xiāng-*. Sometimes, we observe a synonymy of compounds with the same base verb, cf. *hǎo* ‘to be friends’ → *xiāng-hǎo/jiāo-hǎo* ‘to be friends’; *mà* ‘to scold sb’ → *hù-mà/xiāng-mà/duì-mà* ‘to squabble, scold each other’, *wěn* ‘to kiss sb’ → *xiāng-wěn/jiē-wěn* ‘to kiss each other’. It is but natural that these formations, being compounds, like formations with *xiāng-*, do not allow any adverbs or other words between the components. Note that reciprocals with the adverb *hùxiāng* do allow even an object before the verb (see (65a) and (67a)).

7.1.1 *The list of the initial components and their productivity*

In Section 7 the meanings of compounds with nine initial recurrent components are chosen for analysis. Their brief description is followed by the number of reciprocal compounds registered in dictionaries with each of them; it is but natural that they do not re-

flect the real number of these compounds, because they are easily formed *ad hoc* in speech. It is important to show their relative productivity. Some of them form non-reciprocal compounds as well, but these are not taken into account though partly illustrated in 7.1.2.

(161a) is a list of the recurrent components which are also used as monosyllabic verbs with the meanings translated below. Note, again, that the figures are meant as an approximate reference-point in the highly complicated domain of the use of the initial components in different types of compounds. Three recurrent components (*jiē*, *jié*, *hé₁*) denote connecting, joining proper, one (*jiāo*) denotes intersecting, one (*duì*) position opposite some object in space, another (*bǐ*) signifies comparison, i.e. a kind of mental joining of things, or competition; three components (*hé₂*, *qīn*, *tóng*) denote spiritual, kinship and proximity relations and some other shared features. Roughly speaking, the meaning of connecting (literal locative or figurative mental) subsumes all these meanings. The meaning of these initial components may undergo modification in compounds. They are mostly used in intransitive compounds though most of them (except *jiē*, *qīn* and *tóng*) are also registered in transitive compounds as well; naturally, *bǐ* in the meaning ‘to compare sth with sth’ is used in transitive compounds only. Practically all of them are polysemous, but we mention only those meanings that are characteristic of them in reciprocal compounds.

In (161a) the recurrent are listed in the alphabetical order, and the figures (some are approximate) indicate the number of registered verbal and nominal compounds and the number of subject- and object-oriented reciprocals among verbal compounds. When listing the compounds in (163), (164) and further on, the compounds are arranged in the alphabetical order of the initial compounds, and within each group with the same initial component they are arranged in the alphabetical order of the base verbs. The numbers that follow the verbs in (161) indicate the examples where they are used as free units.

(161) a. Table 1. The number of initial components in verbal and nominal compounds

	Verbal compounds		Nominal compounds (see 7.4)	Total
	Sb-oriented (see 7.2 and 7.3)	Obj-oriented		
<i>bǐ</i> ‘to compare, compete’ (109a)	10	9	1	20
<i>duì</i> ‘to face’, ‘to be opposite’ (98)	29	8	9	46
<i>hé₁</i> ‘to connect/be connected, join’ (97)	30	6	5	41
<i>hé₂</i> ‘(to be) in concord, harmonious’ (100c)	20	5	4	29
<i>jiāo</i> ‘to intersect/cross, join’ (8), (141a)	48	3	1	52
<i>jiē</i> ‘to tie/be tied, come into contact’ (104c)	23	–	–	23
<i>jié</i> ‘to tie/get tied, bind’ (104e)	9	2	–	11
<i>qīn</i> ‘close, (blood) relation’ (99c)	11	–	22	33
<i>tóng</i> ‘alike, same’ (100d)	7	–	72	79
Total	187	33	114	334

The tables below show the approximate number of the compounds with the initial components listed in Table 1, firstly, used in subject and object-oriented constructions

(see Tables 2 and 3 respectively) and, secondly, the number of constructions where reciprocity is encoded by the initial component *only* (marked with the word “only” in the tables) or *both* are reciprocal in meaning (marked with “both”). The figures in the tables include compounds considered in the sections bracketed in the first column. The lexicalized compounds from Sections 7.2.1.3 and 7.2.2.3 (13 and 8 compounds respectively) are not reflected in Tables 2 and 3. To repeat, the term lexicalization is used here in the same sense as above, for those compounds whose meaning differs drastically from the sum of meanings of the components.

(161) b. **Table 2.** The number of compounds with verbal bases used in subject-oriented constructions

	<i>bǐ</i>	<i>duì</i>	<i>hé₁</i>	<i>hé₂</i>	<i>jiāo</i>	<i>jiē</i>	<i>jié</i>	<i>qīn</i>	<i>tōng</i>	Total
“only” (7.2.1.1)	–	14	11*	–	11	1	3	–	4*	44
“both” (7.2.1.2)	3	8	9	10	14	10	2	9	–	65
Total	3	22	20	10	25	11	5	9	4	109

* 5 compounds with *hé₁* and all the 3 with *tōng* are sociative in meaning.

(161) c. **Table 3.** The number of compounds with verbal bases used in object-oriented constructions

	<i>bǐ</i>	<i>duì</i>	<i>hé₁</i>	<i>hé₂</i>	<i>jiāo</i>	<i>jiē</i>	<i>jié</i>	<i>qīn</i>	<i>tōng</i>	Total
“only” (7.2.2.1)	–	–	2	1	–	–	–	–	–	3
“both” (7.2.2.2)	6	4	3	2	3	–	2	–	–	20
Total	6	4	5	3	3	–	2	–	–	23

(161) d. **Table 4.** The number of compounds with nominal bases used in subject-oriented constructions*

	<i>bǐ</i>	<i>duì</i>	<i>hé₁</i>	<i>hé₂</i>	<i>jiāo</i>	<i>jiē</i>	<i>jié</i>	<i>qīn</i>	<i>tōng</i>	Total
“only” (7.3.1.1)	4	3	7	2	12	7	1	1	2	39
“both” (7.3.1.2)	1	3	1	4	6	4	2	–	1	22
Total	5	6	8	6	18	11	3	1	3	61

* We have only two object-oriented compounds in our data; see 7.3.2.

An interesting point is the selectivity of the initial components and base verbs in different syntactic and semantic groups of compounds and the nature of lexicalization and its range of meanings. This pertains to both compounds attested in Modern Chinese and those that have gone out of use. In general, all this is typologically relevant and requires further investigation. As one can easily see, some of the initial components preferably occur in lines “only” or “both” and some occur in both with more or less equal regularity (cf. 7.5).

The elements that are used as initial components may also combine with one another and thus they can also function as base verbs. Here is a list of these compounds (they are also entered in the lists below, especially in 7.2.1.2 and 7.2.1.3): *duì-bǐ*, ^o*hé₁-bǐ*, ^o*hé₂-bǐ*, ^o*bǐ-duì*, *jié-hé₁*, *jiē-hé₁*, ^o*hé₂-hé₁*, ^o*qīn-hé₂*, ^o*hé₁-hé₂*; *jiāo-jié*, ^o*qīn-jiē*, *duì-jiē*; ^o*hé₁-qīn*, *hé₂-qīn*; ^o*hé₂-tóng*. There is formal overlapping of compounds with recurrent initial and recurrent final components (cf. Section 8).

7.1.2 Compounds with non-reciprocal meanings

As among compounds with *xiāng*- (see (134)), there are compounds with the initial component from the list above that are not reciprocal in meaning.

- (162) ^o*hé₁-lǐ* 'rationally' (*lǐ* 'norm')
^o*hé₁-yí* 'as necessary, as it should be' (*yí* 'necessary')
^o*hé₁-fǎ* 'lawful(ly)' (*fǎ* 'law')
^o*hé₁-bào* 'to clasp' (*bào* 'to take into one's hands, embrace')

7.1.3 Combinability with *hùxiāng*

Combinability of lexical reciprocals with this adverb has been considered in 5.3, where numerous compounds dealt with in Section 7 are also cited. Here, we suggest some tentative observations concerning the tendencies of combinability with *hùxiāng* and compounds with different initial components. So far, the semantic motivation of these tendencies remains rather unclear.

1. Compounds with the initial *duì* usually can be modified by *hùxiāng*; e.g. *duì-huà* 'to have a dialogue', *duì-lěi* 'to stand opposite *each other's* armies', *duì-děng* 'of equal value', *duì-zhào* 'to compare', etc.

2. Most of the compounds with the initial *jiāo* can be modified by *hùxiāng*, e.g. *jiāo-liú* 'to communicate', *jiāo-tán* 'to converse', *jiāo-wǎng* 'to associate with, be in contact with', *jiāo-huàn* 'to exchange', *jiāo-cuò* 'to entangle', *jiāo-chā* 'to collide'; an exception is *jiāo-zhàn* 'to be at war, fight each other'.

3. Some of the compounds with the initial *jiē*, e.g. *jiē-qià* 'to arrange with', take up a matter with', can be modified by *hùxiāng*; while some, e.g. *jiē-wěn* 'to kiss each other', cannot.

4. Most of the compounds with the initial *jié* can be modified by *hùxiāng*; e.g. *jié-bài* 'to become sworn brothers or sisters', *jié-bàn* 'to go with', *jié-hé* 'to combine, unite'; an exception is *jié-méng* 'to form an alliance'.

For some of the compounds, e.g. *jiē-wěn* 'to kiss each other', combinability with *hùxiāng* is not outruled but it is rare enough.

7.2 Verbal compounds with verbal bases

7.2.1 Subject-oriented reciprocals

7.2.1.1 *Compounds with the reciprocal meaning coded by a recurrent component only.* This type comprises more than 40 compounds. To make it more transparent and show the semantic domains covered by this type of reciprocals, we shall divide the verbs into lexical

groups. In some cases the distribution of compounds between the groups is arbitrary. A verb may have features of two groups and be intermediate between them. Three main groups can be distinguished according to the meaning of the compounds:

- A. Reciprocals denoting social relations.
- B. Spatial reciprocals of joining together.
- C. Relations of equality.

Adjacent to these are sociative compounds entered here to complete the picture though they are not properly reciprocal.

In these types, the first component of a compound functions as a kind of reciprocal marker, and the second component bears the lexical meaning, i.e. the function of the first component here is similar to that of such specialized markers as *hùxiāng*, *hù-*, *xiāng-* (cf. 6.2.1.1, 6.3.1.2), i.e. the recurrent component marks a more or less standard reciprocal opposition. It is not accidental that compounds of this group are mostly translated into English as ‘each other’ added to the translation of the second component when there is no respective lexical reciprocal in English. It is likely that the reciprocal use of the initial components is a result of the reanalysis of their meaning when they form compounds with synonymous components.

The bases are mostly two-place transitives or two-place intransitives. Compounds with one-place intransitives increase either their valency or the number of the participants (cf. *lì* ‘to stand’ in (164) and (166), *liú* ‘to flow’ in (166), *zuò* ‘to work’ in (168)). Some of the bases occur with several initial components, and the meanings of compounds with the same base may differ (cf. *duì-lì* and [?]*tóng-lì* in (164) and (166)) or, as mentioned above, they may be synonymous (cf. *hé₁-liú* and *jiāo-liú* in (166), ^o*duì-ràng* and ^o*jiāo-ràng* in (163)). The same bases may also occur with these components and with *hù-* and *xiāng-* in synonymous compounds (cf. the cited compounds from (163) and *hù-ràng* in (120) and *xiāng-ràng* in (142)). The semantic relationship within the compounds is not always purely compositional, if we take the initial component to mean ‘each other’ (cf. [?]*daò* ‘to speak’ → [?]*jiāo-daò* = ‘to associate’, not ‘to speak to each other’; this kind of semantic deviations occurs in reciprocals with standard reciprocal affixes in agglutinating languages). But as a rule the semantic association between the base and the compound is transparent enough.

Not all of the first components are equally productive in this group. Thus, for instance, the dictionaries register 27 reciprocal compounds with the component *jiē* but not one of them belongs to this group. With *hé₂*, 36 compounds are registered, but only one of this group. Without sociative compounds, 32 compounds with different initial components are registered, *duì* (13 units) and *jiāo* (10 units) being prevalent among them. Among sociative compounds *hé₁* is prevalent (7 units), and there are 4 units with *tóng* (verbal compounds with *tóng* are mostly verbalized nouns, *tóng* being used as an attribute).

With regard to the distribution of the initial components among different lexical groups of compounds, note that *duì* is registered in 5 lexical groups (note 8 compounds with *duì* with the meaning of hostile relations) and *jiāo* in 4 groups, which is the most uniformly distributed one among all the groups numerically.

A. *Social relations*a. *Friendly relations*

- (163) *ràng* 'to give in/concede' → °*duì-ràng* 'to give in to each other'
bǎo 'to guarantee' → °*hé₁-bǎo* 'to vouch for each other'
bài 'to bow to sb' → °*jiāo-bài* 'to bow to each other'
 °*fú* 'to trust sb' → °*jiāo-fú* 'to trust each other'
 °*gǎn* 'to feel' → °*jiāo-gǎn* 'to sympathize with each other'
ràng 'to concede/give in to sb' → °*jiāo-ràng* 'to give in to each other'
wěn 'to kiss' → °*jiē-wěn* 'to kiss each other'
 °*tuō* 'to rely on sb' → °*jié-tuō* 'to rely on each other'.

b. *Hostile and competitive relations*

- (164) *kàng* 'to resist' → °*duì-kàng* 'to be opposed'
lì 'to stand' → °*duì-lì* 'to oppose each other'
mà 'to scold' → °*duì-mà* 'to squabble with one another'
shè 'to fire, shoot' → °*duì-shè* 'to exchange shots'
shuō 'to speak, try to persuade' → °*duì-shuō* 'to compete in eloquence, argue'
 °*zhì* 'to rise above sth' → °*duì-zhì* 'to oppose each other'
yǎo 'to gnaw' → °*duì-yǎo* 'to fight' (of animals)
 °*wù* 'to hate' → °*jiāo-wù* 'to hate each other'
 °*zé* 'to reproach' → °*jiāo-zé* 'to squabble'
hèn 'to hate' → °*jié-hèn* 'to hate each other'
xiān 'to suspect' → °*jié-xiān* 'become suspicious of each other'.

c. *Communication*

- (165) *kàn* 'to look' → °*duì-kàn* 'to exchange glances'
shì 'to look' → °*duì-shì* 'to look at each other'
 °*dào* 'to speak' → °*jiāo-dào* 'to associate'
shè 'to mention' → °*jiāo-shè* 'to negotiate'.

B. *Spatial relations (joining, contact, etc.)*

- (166) °*kāi* 'to set out on a journey' → °*duì-kāi* 'to set out to meet each other'
lěi 'to build fortifications' → °*duì-lěi* 'stand opposite each other (of armies)'
chéng 'to turn into/become' → °*hé₁-chéng* 'to blend/merge together'
liú 'to flow' → °*hé₁-liú* 'to flow together'
liú 'to flow' → °*jiāo-liú* 'to flow together/interflow'
róng 'to melt' → °*jiāo-róng* 'to get mixed'
zhī 'to weave/spin' → °*jiāo-zhī* 'to interweave'.

C. *Relations of equality*

- (167) °*xiào* 'to sell, spend' → °*duì-xiào* 'to balance income and expenditure'
dá 'to answer' → °*hé₁-dá* 'to correspond'.

D. *Sociative compounds*

- (168) *bàn* 'to set up' → °*hé₁-bàn* 'to set up together' (of spouses)
jī 'to attack' → °*hé₁-jī* 'to attack sb together'

yǎn 'to perform' (of actors)	→	hé ₁ -yǎn 'to perform together'
°yíng 'to govern'	→	hé ₁ -yíng 'to govern together'
yì 'to discuss'	→	hé ₁ -yì 'to discuss jointly, negotiate'
zhù 'to live'	→	hé ₁ -zhù 'to live together'
zuò 'to work'	→	hé ₁ -zuò 'to work together'
°jū 'to live'	→	tóng-jū 'to live together'
lì 'to stand'	→	°tóng-lì 'stand next to each other/side by side'
shì 'to work, serve'	→	tóng-shì 'work, serve together', 'colleagues'
xíng 'to go/walk'	→	tóng-xíng 'to go/walk together'.

7.2.1.2 *Both components are reciprocal in meaning.* These components may be synonymous or non-synonymous but close enough in meaning. The lexical groups here are noticeably different from the above type discussed in 7.2.1.1. Moreover, this class is much more numerous (about 65 units). But not all the lexical groups have increased. While the group of verbs of hostile relations is slightly smaller in comparison with the analogous group in 7.2.1.1 (12 vs. 8), the lexical groups of denoting friendly relations and spatial relations have increased (7 to 34 and 7 to 12 respectively). No sociative compounds are registered in this class (which is only natural because non-derived sociatives are very rare). The number of synonymous compounds with meanings like 'to be harmonious', 'to be friends', 'to quarrel', 'to fight', 'to come to an agreement', 'to join', is really astonishing, especially in view of the fact that analogous meanings are also expressed by compounds with *hù* and *xiāng*, not to mention other compounds with non-recurrent initial components considered above in 5.2.

A. Social relations

a. Friendly and neutral relations

(169) °bì 'to draw together'	→	hé ₁ -bì 'to be at one'
hé ₂ 'to be harmonious'	→	°hé ₁ -hé ₂ 'to be harmonious'
qīn 'to be close relatives'	→	hé ₁ -qīn 'make peace by marriage' (of clans)
hǎo 'to be friends'	→	hé ₂ -hǎo 'to be friends', 'to get reconciled'
hé ₁ 'to correspond'	→	°hé ₂ -hé ₁ 'to be harmonious'
lì 'to get settled (of sth)'	→	hé ₂ -lì 'to live in peace'
mì 'close, tight'	→	°hé ₂ -mì 'to become close (friends)'
°mù 'to be at peace'	→	hé ₂ -mù 'to live in peace with each other'
qīn 'to be close relatives, friends'	→	hé ₂ -qīn 'to become relatives, friends'
tiáo 'to be in harmony'	→	°hé ₂ -tiáo 'to be in harmony'
tóng 'alike, similar'	→	°hé ₂ -tóng 'to harmonize with each other'
xié '(to be) in concord'	→	hé ₂ -xié '(to be) in concord'
°yuē 'to come to an agreement'	→	hé ₂ -yuē 'to come to an agreement'
°gòu 'to mate/couple'	→	jiāo-gòu 'to copulate'
hǎo 'to be friends'	→	jiāo-hǎo 'to become friends'
°jiù 'to draw together'	→	°jiāo-jìu 'to be friends'
°yǒu 'to associate'	→	jiāo-yǒu 'to be friends', 'to make friends'
hǎo 'to be friends'	→	°jiē-hǎo 'to be friends / get reconciled'
jiāo 'to be friends'	→	jiē-jiāo 'to make friends'
jìn 'close/nearby'	→	jiē-jìn 'to be near, become friends'

°qià 'to come to an agreement'	→	jiē-qià 'to negotiate for an agreement'
qīn 'close'	→	jiē-qīn 'to become relatives'
shí 'to be acquainted with sb'	→	jiē-shí 'to strike an acquaintance'
yuē 'to come to an agreement'	→	°jiē-yuē 'to come to an agreement'
yuē 'to come to an agreement'	→	°jié-yuē 'to come to an agreement'
°bì 'to draw together'	→	°qīn-bì 'to draw together/[be friends]'
hé ₂ 'to be harmonious'	→	qīn-hé ₂ 'to be friends'
jiē 'to join together'	→	°qīn-jiē 'to draw together.'
jìn 'close'	→	qīn-jìn 'to be intimately close'
°jiù 'to draw together'	→	°qīn-jiù 'to be friends'
mì 'close'	→	qīn-mì 'close'
nì 'close'	→	qīn-nì 'close'
°xí 'to become freinds'	→	°qīn-xí 'to become friends'
°xiá 'to be friends'	→	°qīn-xiá 'to get used/become close'.

b. Hostile and competitive relations

(170) sài 'to compete'	→	bǐ-sài 'to compete'
°dāng 'to stand face to face'	→	°duì-dāng 'to compete'
zhàng 'to fight'	→	°duì-zhàng 'to fight'
°zhàn 'to fight'	→	°hé ₁ -zhàn 'to fight'
hòng 'to quarrel'	→	°jiāo-hòng 'to quarrel'
°zhàn '(to be at)war'	→	jiāo-zhàn 'to be at war'
zhēng 'to quarrel/fight'	→	°jiāo-zhēng 'to enter into battle'.

c. Communication

(171) tōng 'to communicate'	→	°hé ₁ -tōng 'to enter into a relation'
°dài 'to associate' (vi)	→	°jiāo-dài 'to associate' (vi)
tán 'to converse, talk'	→	jiāo-tán 'to converse'
chù 'to contact'	→	jiē-chù 'to enter into contact'.

B. Spatial relations (joining, contact, etc.)

(172) lián 'to connect/get connected'	→	°bǐ-lián 'to border'
°zhào 'to be in contact'	→	duì-zhào 'to compare'
bìng 'to join together'	→	hé ₁ -bìng 'to join together'
huì 'to assemble/gather'	→	°hé ₁ -huì 'to meet', 'to assemble'
lǒng 'to join'	→	hé ₁ -lǒng 'to join, put together'
chā 'to intersect/cross'	→	jiāo-chā 'to intersect/cross'
°cuò 'to interlace'	→	jiāo-cuò 'to interlace/become entangled'
pèi 'to be a pair'	→	jiāo-pèi 'to crossbreed, to mate'
°róng 'to cross, get mixed'	→	jiāo-róng 'to merge, get mixed (together)'
zá 'to mix'	→	°jiāo-zá 'to interlace/be(come) entangled'
hé ₁ 'to join together'	→	°jiē-hé ₁ 'to join together'
hé ₁ 'to join together'	→	jié-hé ₁ 'to join together'.

C. Relations of equality (including non-equality)

(173) qí 'equal'	→	°bǐ-qí 'alike'
bǐ 'to compare'	→	duì-bǐ 'to contrast'

°děng ‘of equal value’	→	<i>duì-děng</i> ‘of equal value’
<i>píng</i> ‘equal’	→	° <i>duì-píng</i> ‘of equal value’
°yìng ‘to correspond to sth’	→	<i>duì-yìng</i> ‘to correspond to each other’
<i>zhào</i> ‘to illuminate’	→	<i>duì-zhào</i> ‘to contrast’
°dàng ‘to correspond’	→	° <i>hé₁-dàng</i> ‘to correspond’
<i>qì</i> ‘to be related/connected’, ‘spirit’	→	° <i>jiē-qì</i> ‘to coincide’.

7.2.1.3 *Lexicalized compounds with the reciprocal meaning.* Some compounds considered above display certain slight semantic changes of non-compositional nature, and here we have included compounds with a significant shift in meaning. With the exception of two or three units, the base verb is not a lexical reciprocal. All the compounds of this group denote friendly or hostile relations, or communication, i.e. they are close to Group A above.

a. Friendly and neutral relations

(174) <i>pāi</i> ‘press one’s palms together’	→	<i>hé₂-pāi</i> ‘to be in accord with each other’
<i>bǐ</i> ‘to compare’	→	° <i>hé₂-bǐ</i> ‘to live in peace’
<i>lí</i> ‘to move off’	→	° <i>hé₂-lí</i> ‘to get divorced by mutual consent’
<i>xī</i> ‘to breathe’	→	° <i>hé₂-xī</i> ‘to get reconciled with each other’
<i>jié</i> ‘to tie, be tied’	→	<i>jiāo-jié</i> ‘to be friends’
<i>wāng</i> ‘to go away/leave’	→	<i>jiāo-wāng</i> ‘to be in contact’
° <i>yóu</i> ‘to amuse oneself/travel’	→	<i>jiāo-yóu</i> ‘to have many connections’
<i>bài</i> ‘to bow’	→	<i>jié-bài</i> ‘to pledge brotherhood’
° <i>jiù</i> ‘to draw together’	→	° <i>qīn-jiù</i> ‘to become friends’.

b. Hostile and competitive relations

(175) ° <i>shì</i> ‘to check’	→	<i>bì-shì</i> ‘to compete’
<i>dǎ</i> ‘to beat’	→	<i>duì-dǎ</i> ‘to compete/rival’.

c. Communication

(176) <i>dài</i> ‘to treat sb’	→	<i>jiāo-dài</i> ‘to get acquainted’
<i>jié</i> ‘to tie (up)’	→	° <i>jiāo-jié</i> ‘to keep company’.

7.2.2 *Object-oriented reciprocals*

As well as in the cases with *hù-*, *xiāng-* and *hùxiāng* (see 6.2.2 and 6.3.2), the number of object-oriented reciprocals is much smaller (31 units) than that of subject-oriented reciprocals. Object-oriented reciprocals, being mostly two-place transitives with a plural object or three-place transitives, may be related to subject-oriented reciprocals in two ways: 1) the same compound can be used both transitively and intransitively, e.g. *hé₁-bìng* ‘to unite/join’ (vi/vt), *hùn-hé₁* ‘to mix, get mixed’ (vt/vi), as in the type illustrated by (33) and (104d); 2) they are embedded subject-oriented reciprocals, especially with the causative auxiliary *shǐ*, as in the type illustrated by (34). The remainder of object-oriented reciprocals do not have same-stem subject-oriented correspondences, cf. *féng* ‘to sew’ → °*hé₁-féng* / *féng-hé₁* ‘to sew sth together, join seams’. True, the verb ‘to sew’ denotes piecing together fabric, and in combination with the spatial adverb *zài yīqǐ* ‘together’ may denote joining together of two objects, i.e. it functions as an object-oriented reciprocal

(see (104b)). The function of this adverb in association with *féng* and the function of *hé₁* in the compound °*hé₁-féng* are similar (cf. (212)).

The expression of reciprocal arguments does not differ from that in 5.2.2.2. In the simple construction, *hùxiāng* or the adverb *yìqǐ* ‘together’ (or its synonym) is possible. The plural object usually has the preposition *bǎ* and precedes the predicate (cf. (104a–b), (115)).

In this type of constructions we find verbs with the components *bǐ-* (7 units), *duì-* (8 units), *hé₁-* (6 units), *hé₂-* (5) and *jiāo-* (3 units).

7.2.2.1 Compounds with the reciprocal meaning indicated by the recurrent component only.

There are only three reciprocals of this type in our database. They denote *joining* things together and causation of *friendly relations* (‘to reconcile sb and/with sb’).

- | | |
|-------------------------------------|--|
| (177) <i>féng</i> ‘to sew sth’ | → ° <i>hé₁-féng</i> ‘to sew sth together, join seams’ |
| <i>zàng</i> ‘to bury sb’ | → <i>hé₁-zàng</i> ‘to bury spouses together’ |
| <i>quàn</i> ‘to try to persuade sb’ | → ° <i>hé₂-quàn</i> ‘to reconcile sb and/with sb’. |

7.2.2.2 Both components are reciprocal in meaning. The main meanings in this group of 16 units are ‘to compare’, ‘to exchange’, ‘to join sth together’, ‘to mix sth’.

a. Friendly relations

- | | |
|---|--|
| (178) <i>tiáo</i> ‘be harmonious, in harmony’ | → <i>hé₂-tiáo</i> ‘bring sth into harmony’. |
|---|--|

b. Comparison

- | | |
|---|--|
| (179) <i>bìng</i> ‘to join sth and sth’ | → ° <i>bǐ-bìng</i> ‘to compare sth with sth’ |
| <i>duì</i> ‘to collate’ | → <i>bǐ-duì</i> ‘to collate sth with sth’ |
| <i>jiāo</i> ‘to join’ | → <i>bǐ-jiāo</i> ‘to compare sth with sth’ |
| <i>jiào</i> ‘to compare sth with sth’ | → <i>bǐ-jiào</i> ‘to compare sth with sth’ |
| ° <i>ní</i> ‘to compare sth with sth’ | → ° <i>bǐ-ní</i> ‘to compare sth with sth’ |
| ° <i>yù</i> ‘to compare sth with sth’ | → <i>bǐ-yù</i> ‘to compare sth with sth’ |
| <i>bǐ</i> ‘to compare sth with sth’ | → <i>duì-bǐ</i> ‘to compare sth with sth’ |
| <i>dài</i> ‘to take’ | → <i>duì-dài</i> ‘to take sb for sb’ |
| <i>duì</i> ‘to collate’ | → <i>hé₁-duì</i> ‘to collate sth with sth’. |

c. Exchange

- | | |
|-------------------------------|---|
| (180) <i>huàn</i> ‘to change’ | → <i>duì-huàn</i> ‘to exchange sth’ |
| <i>huàn</i> ‘to change’ | → <i>jiāo-huàn</i> ‘to exchange sth’ |
| <i>yì</i> ‘to change’ | → <i>jiāo-yì</i> ‘to change sth for sth’. |

d. Spatial relations

- | | |
|--|--|
| (181) <i>jiē</i> ‘to join sth and sth’ | → <i>duì-jiē</i> ‘to join sth and sth together’ |
| <i>bìng</i> ‘to join sth and sth’ | → <i>hé₁-bìng</i> ‘to join sth together’ |
| <i>lǒng</i> ‘to mix’ | → <i>hé₁-lǒng</i> ‘to join sth together’ |
| ° <i>wèi</i> ‘to have taste’ | → ° <i>hé₂-wèi</i> ‘to mix products when cooking’ |

<i>chā</i> ‘to intersect’	→	<i>jiāo-chā</i> ‘to put sth crosswise’
<i>hé₁</i> ‘to join’	→	<i>jié-hé₁</i> ‘to combine sth with sth’
<i>lián</i> ‘to join sth’	→	<i>jié-lián</i> ‘to join, fasten together’.

7.2.2.3 *Lexicalized compounds with the reciprocal meaning.* The same lexical groups are distinguished here as in 7.2.2.2. In these instances a sharp change of meaning takes place. With one or two exceptions, the base verbs are not reciprocal in meaning, and this meaning is signified by the first component.

a. Friendly relations

(182) ° <i>xī</i> ‘to stop, rest’	→	° <i>hé₂-xī</i> ‘to reconcile sb.’
-----------------------------------	---	---

b. Comparison

(183) <i>zuò</i> ‘to become’	→	<i>bǐ-zuò</i> ‘to liken’
<i>jǔ</i> ‘to raise’	→	° <i>duì-jǔ</i> ‘to compare’
<i>zhào</i> ‘to light’	→	<i>duì-zhào</i> ‘to compare’
<i>zhèng</i> ‘to confirm’	→	<i>duì-zhèng</i> ‘to compare/collate’
<i>pāi</i> ‘to clap/applaud’	→	<i>hé₁-pāi</i> ‘to co-ordinate’.

c. Exchange

(184) <i>diào</i> ‘to remove/move’	→	<i>duì-diào</i> ‘exchange places of two things’.
------------------------------------	---	--

d. Spatial relations

(185) <i>yún</i> ‘to even/smooth out’	→	° <i>hé₂-yún</i> ‘to mix sth well’.
---------------------------------------	---	--

7.3 Verbal compounds with nominal bases

In the formation of these compounds, the same initial components are used as above, and they make up the same lexical groups. 68 of these compounds are subject-oriented and only two are object-oriented. The main type of these compounds are “*verb + postposed object*” collocations (cf. (17)). This type of compounds formally coincides with syntactic constructions of the same structure, and the borderline between them is not rigid, which means that they comprise a kind of continuum. Nevertheless, this type is traditionally registered in the Chinese dictionaries and spelt as one word if they contain Latin transliterations along with ideograms. It is this feature that served as basis for selecting the data for this section. This type of compounds is characterized as follows in a standard reference Chinese grammar by Li & Thompson (1981:73):

There are several conditions under which a verb-object construction is classified as a compound in traditional Chinese grammar (see Chao Yuen Ren 1968:415). Any one of these properties will render a verb-object construction a compound:

1. One or both of the constituents being bound morphemes.
2. Idiomaticity of the meaning of the entire unit.
3. Inseparability or limited separability of the constituents.

In the material below the following bound morphemes occur: *bì* ‘arm’, *tí* ‘body’, *hūn* ‘marriage’, *wǔ* ‘martial art’, *wù* ‘thing’, *xí* ‘mat’, etc. (cf. the list of bound morphemes in Packard 2000:90–3). The degree of idiomaticity of compounds varies from weak (like *zuǐ* ‘mouth’ → *qīn-zuǐ* ‘to kiss each other’) to higher (cf. *tóu* ‘head’ → *jiē-tóu* ‘to come into contact, enter into negotiations’). The associative link between the meaning of the final constituent and that of the compound is usually clear enough. As regards the third property, complete fusion of the constituents is rare, and many compounds allow an aspectual marker between the constituents (cf. (5b)). As a rule, this property displays itself in the fact that the final constituent cannot be placed in the sentence-initial position as a topic (Li & Thompson 1981:73).

7.3.1 Subject-oriented reciprocals

7.3.1.1 Compounds with the reciprocal meaning rendered by the recurrent component only.

In the formation of this class of compounds the role of the initial components is particularly prominent. The most common initial component here is *jiāo* (12 units out of 39). Some of the initial components are synonymous and thus form synonymous compounds from semantically close nouns (cf. °*jiāo-chún* and *qīn-zǔi* in (186)) and even from the same bases (cf. °*hé₁-bīng* and *jiē-bīng*, °*hé₁-rèn* and *jiāo-rèn* in (187)).

A. Social relations

a. Friendly and neutral relations

(186)	<i>gǔ</i> ‘share’	→	<i>hé₁-gǔ</i> ‘to have shares in the same enterprise’
	° <i>hūn</i> ‘marriage/wedlock’	→	<i>hé₁-hūn</i> ‘to exchange horoscopes before marriage’
	<i>xīn</i> ‘heart’	→	<i>hé₂-xīn</i> ‘to be in concord’
	<i>chún</i> ‘lips’	→	° <i>jiāo-chún</i> ‘to kiss each other’
	<i>huān</i> ‘sympathy’	→	° <i>jiāo-huān</i> ‘to sympathize with each other’
	° <i>qíng</i> ‘feelings’	→	<i>jiāo-qíng</i> ‘to become friends’
	<i>yán</i> ‘words’	→	° <i>jié-yán</i> ‘to come to an agreement/understanding’
	<i>zuǐ</i> ‘mouth’	→	<i>qīn-zuǐ</i> ‘to kiss each other’.

b. Hostile and competitive relations

(187)	<i>quán</i> ‘fist’	→	<i>bī-quán</i> ‘to box’
	° <i>wǔ</i> ‘martial arts’	→	<i>bī-wú</i> ‘to compete in martial arts’
	<i>bīng</i> ‘weapon(s)’	→	° <i>hé₁-bīng</i> ‘to give battle’
	<i>qì</i> ‘anger, air’	→	° <i>hé₁-qì</i> ‘to quarrel’
	<i>rèn</i> ‘blade’	→	° <i>hé₁-rèn</i> ‘to cross swords’
	<i>zuǐ</i> ‘mouth, beak’	→	° <i>hé₁-zuǐ</i> ‘to quarrel’
	° <i>bì</i> ‘arm’	→	° <i>jiāo-bì</i> ‘to fight’
	<i>bīng</i> ‘weapon(s)’	→	<i>jiāo-bīng</i> ‘to cross swords’
	<i>huǒ</i> ‘fire’	→	<i>jiāo-huǒ</i> ‘to exchange fire’
	<i>fēng</i> ‘edge/point/spike’	→	<i>jiāo-fēng</i> ‘to cross swords’
	<i>rèn</i> ‘blade’	→	<i>jiāo-rèn</i> ‘to cross swords’
	<i>shǒu</i> ‘hand’	→	<i>jiāo-shǒu</i> ‘to fight’
	<i>bīng</i> ‘weapon(s)’	→	<i>jiē-bīng</i> ‘to join battle’
	<i>huǒ</i> ‘fire’	→	<i>jiē-huǒ</i> ‘to open an exchange of fire’.

c. Communication

- (188) *huà* 'words' → *duì-huà* 'to have a dialogue'
jiǔ 'alcohol' → *duì-jiǔ* 'to drink alcohol together (of two)'
°róng 'face' → *jiē-róng* 'to establish personal contact'
tóu 'head' → *jiē-tóu* 'to come into contact, enter into negotiations'
xiàn 'thread' → *jiē-xiàn* 'to get in touch by telephone'.

B. Spatial relations

- (189) *°zhōng* 'goblet/glass' → *duì-zhōng* 'to clink glasses'
yī 'one' → *hé₁-yī* 'to become one/merge together'
jǐng 'neck' → *jiāo-jǐng* 'interlace necks' (like ducks; of conjugal love)
suǒ 'lock' → *°jiāo-suǒ* 'to intersect/alternate'
tóu 'head' → *°jiāo-tóu* 'to touch with heads/bring heads together'
biān 'side' → *jiē-biān* 'adjacent, contiguous'
°xī 'knee' → *°jiē-xī* 'to bring knees into contact'
dì 'ground' → *°tóng-dì* 'live on the same territory' (lit. 'same ground')
°xí 'mat' → *tóng-xí* 'to sit at the same table at a banquet'.

C. Relations of equality

- (190) *jiān* 'shoulder' → *bǐ-jiān* 'be equal in height', lit. 'compare shoulders'
°tǐ 'body', 'position' → *°bǐ-tǐ* 'to be equal in status'
xiàn 'string' → *°hé₂-xiàn* 'to sound in unison'.

7.3.1.2 *Compounds with both reciprocal components.* The first component in these compounds (22 units in our list) is a kind of semantically more or less empty verbalizer, as in the patterns 'friend' → 'to be friends', 'chess' → 'to play chess'.

A. Social relations

a. Friendly relations

- (191) *luó* 'net, connection' → *°hé₂-luó* 'to combine with harmony'
qià 'harmony' → *hé₂-qià* 'to live in peace'
tiáo 'agreement' → *°hé₂-tiáo* 'to be in harmony'
°xiá 'harmony' → *hé₂-xiá* 'to live in peace with each other'
°péng 'friend' → *jiāo-péng* 'to be friends'
yì 'friendship' → *jiāo-yì* 'to be friends', 'friendship'
°yǒu 'friend' → *jiāo-yǒu* 'to make friends'
°hūn 'marriage/wedlock' → *jié-hūn* 'to enter into wedlock/marry'.

b. Hostile and competitive relations

- (192) *°chóu* 'enemy' → *°duì-chóu* 'to be enemies'
°chóu 'enemy' → *jiē-chóu* 'to be enemies'
zhàn 'battle' → *°jiē-zhàn* 'to battle'
°chóu 'enemy' → *jié-chóu* 'to be enemy'.
- (193) *jú* 'chess' → *duì-jú* 'to play a game of chess, ball, etc.'
yì 'chess, checkers' → *duì-yì* 'to play chess, checkers'.

c. *Communication*

- (194) *yuē* ‘agreement/contract’ → *hé₁-yuē* ‘to sign an agreement/contract’
 °*yì* ‘border, juncture’ → *jiāo-yì* ‘to associate’
 °*yán* ‘words’ → °*jiāo-yán* ‘to enter into conversation’.

B. *Spatial relations*

- (195) *jiè* ‘border/frontier’ → *jiāo-jiè* ‘to border’, ‘to associate’
 °*jìng* ‘border’ → *jiē-jìng* ‘to border’
 °*rǎng* ‘earth’ → *jiē-rǎng* ‘to be limitrophe, touch at’.

C. *Relations of equality*

- (196) °*kàng* ‘pair’ → °*bǐ-kàng* ‘to make up a pair’
 °*qì* ‘contract’ → °*tóng-qì* ‘to coincide’.

7.3.1.3 *Lexicalized compounds with the reciprocal meaning.* Verbs of this group are subject-oriented and they vary in meaning, though within the lexical boundaries as above, three verbs denoting *equality* and one being *sociative*:

- (197) *wù* ‘thing’ → °*bǐ-wù* ‘to be equal’
qì ‘credential, tally’ → °*hé₁-qì* ‘to relate/correspond to each other’
qí ‘chess’ → *hé₁-qí* ‘to make a draw’
 °*chì* ‘wing’ → °*jiē-chì* ‘to pass an exam together’.

7.3.2 *Object-oriented reciprocals*

There are only a few compounds with the reciprocal meaning rendered by the recurrent component only. As many other object-oriented reciprocals considered above, these compounds denote *comparison*:

- (198) *lèi* ‘type’ → *bǐ-lèi* ‘to compare sth and sth by type/classify’
xíng ‘form’ → *bǐ-xíng* ‘to compare sth and sth by form’.

7.4 Compound nouns

This group comprises about 112 items. Two groups of nouns can be distinguished here, one of them denoting non-persons and the one other persons. Compound nouns are formed with the same initial components as verbs, but the more productive among them are the components *tóng* and *qīn*. The base and the compound are often synonymous, though sometimes there is a sharp difference in meaning. For a number of reasons, the compounds below are not divided into the types “only” and “both”, as is done, for instance, in 7.2.1.1 and 7.2.1.2.

7.4.1 *Nouns denoting non-persons (actions, states, objects)*

This group is smaller (about 20 items) than that denoting persons and semantically it is highly heterogeneous, though the prevalent meanings are social relations between humans

and to a lesser degree relations between objects. Many of the bases are lexical reciprocals. The most common initial components are *tóng-*, *hé₂-* and *hé₁-*.

(199) <i>lì</i> ‘analogy, rule’	→	<i>bǐ-lì</i> ‘ratio, correlation’
° <i>ǒu</i> ‘pair’	→	<i>duì-ǒu</i> ‘pair’
<i>tái</i> ‘stage/boards’, <i>xì</i> ‘play’	→	<i>duì-tái-xì</i> ‘competition of two theatrical groups’
° <i>bì</i> ‘nephrite disk’	→	<i>hé₁-bì</i> ‘medley, jumble’, ‘pair’
<i>ǒu</i> ‘pair, spouses’	→	<i>hé₁-ǒu</i> ‘pair, wedlock’
° <i>zōng</i> ‘union’	→	<i>hé₁-zōng</i> ‘union of North and South (against Qin)’
<i>mǎi</i> ‘to buy’	→	<i>hé₂-mǎi</i> ‘transaction on agreement’
<i>qí</i> ‘chess’	→	<i>hé₂-qí</i> ‘a draw’
<i>yù</i> ‘harmony’	→	<i>hé₂-yù</i> ‘harmony, concord’
<i>xián</i> ‘string’	→	<i>hé₂-xián</i> ‘chord’
<i>wěi</i> ‘tail’	→	<i>jiāo-wěi</i> ‘coupling’
<i>jū</i> ‘to live’, <i>guān-xi</i> ‘liaison’	→	<i>tóng-jū-guān-xi</i> ‘cohabitation’
<i>kē</i> ‘category’	→	<i>tóng-kē</i> ‘of the same category’
° <i>pín</i> ‘category’	→	° <i>tóng-pín</i> ‘of the same category’
° <i>yì</i> ‘meaning’, <i>cí</i> ‘words’	→	<i>tóng-yì-cí</i> ‘synonyms’
<i>yīn</i> ‘sound’, <i>cí</i> ‘word’	→	<i>tóng-yīn-cí</i> ‘homonyms’
<i>zú</i> ‘family, kin’, <i>cí</i> ‘words’	→	<i>tóng-zú-cí</i> ‘related words’.

7.4.2 Nouns denoting persons (class membership)

Below, the compound nouns are loosely divided into 8 lexical subgroups combined into 3 larger groups, namely:

- Group A with typical meanings ‘relative’, ‘friend’, ‘enemy’.
- Group B meaning ‘neighbour’, ‘contemporary’, ‘namesake’.
- Group C meaning ‘co-religionist’, ‘colleague’.

Compounds with *qīn* commonly denote persons related by family ties, and those with *duì* and especially with *tóng* denote persons involved in all kinds of social relations or persons sharing some common feature. Some of the compounds may denote both persons and corresponding relations. The adjectives *qīn* and *tóng* function in these formations as a kind of attribute, and the total meaning of most of the compounds, though not all of them, is of compositional nature. The bases are mostly nouns and sometimes verbs. The semantic relations between the bases and respective compounds are rather varied, but generally transparent enough; not infrequently, the base noun is synonymous with the compound (cf. *shǔ* ‘to belong’, ‘class’ → *qīn-shǔ* ‘to belong’; cf. the type “both” above) or denotes the shared feature (cf. *zhǒng* ‘race’ → *tóng-zhǒng* ‘people of the same race’; cf. the type “only” above), etc. Sometimes, the semantic association between the base and the compound is rather whimsical (cf. *xué* ‘boots’ → *tóng-xué* ‘lovers of the same woman’, cf. lexicalized reciprocals above).

Needless to say, nouns with the meanings like those listed below are also formed with the initial components besides those contained in the compounds below; cf. °*pèi-shòu* ‘partner in a game’, *pèi-bàn* (same), *huǒ-bàn* ‘companion’, *bàn-lǚ* (same), °*tán-bàn* ‘interlocutor’, etc.

A. Personal relations

a. Family relations

(200) <i>běn</i> ‘root’, ‘partner’	→ ° <i>qīn-běn</i> ‘parents’ (in crossbreeding)
° <i>duàn</i> ‘kin, relatives’	→ ° <i>qīn-duàn</i> ‘kin, relatives’
<i>jiā</i> ‘family’	→ <i>qīn-jiā</i> ‘an in-law’
° <i>juàn</i> ‘family, kin’	→ <i>qīn-juàn</i> ‘family, kin’
° <i>qī</i> ‘relative’	→ <i>qīn-qī</i> ‘relative’
<i>rén</i> ‘man’	→ <i>qīn-rén</i> relative, kin’
<i>táng</i> ‘clan’	→ ° <i>qīn-táng</i> ‘nearest relations’
<i>yà</i> ‘son/brother-in-law’	→ ° <i>qīn-yà</i> ‘son/brother-in law’
<i>yīn</i> ‘in-laws’	→ <i>qīn-yīn</i> ‘in-laws’
<i>yìn</i> ‘in-laws’	→ ° <i>qīn-yìn</i> ‘in-laws’
<i>zhī</i> ‘to know’	→ <i>qīn-zhī</i> ‘relatives and acquaintances’
<i>zú</i> ‘family, tribe’	→ <i>qīn-zú</i> ‘relatives’
<i>gēn</i> ‘root’	→ <i>tóng-gēn</i> ‘(person) of the same root’
<i>mǔ</i> ‘mother’	→ <i>tóng-mǔ</i> ‘brothers and sisters born of one mother’
° <i>qīn</i> ‘blanket’, <i>gòng</i> ‘common’, <i>zhěn</i> ‘pillow’	→ <i>tóng-qīn gòng zhěn</i> ‘spouses’
<i>táng</i> ‘hall’, ‘tribe/family’	→ <i>tóng-táng</i> ‘classmate’, ‘cousins’
<i>xuè</i> ‘cave, grave’	→ ° <i>tóng-xuè</i> ‘devoted spouses’
<i>yuán</i> ‘source’	→ <i>tóng-yuán</i> ‘to be of the same origin’
<i>zú</i> family, kin’	→ <i>tóng-zú</i> ‘(persons) of the same family’
° <i>zōng</i> ‘ancestor’	→ <i>tóng-zōng</i> ‘(persons) of the same family/tribe’.

b. Friendly relations

(201) <i>gǔ ròu</i> ‘bones and muscles’	→ <i>qīn-gǔ ròu</i> ‘close friends, to be friends’
<i>jìn</i> ‘close (man/person)’	→ <i>qīn-jìn</i> ‘close (person)’
<i>jiù</i> ‘old’	→ ° <i>qīn-jiù</i> ‘old friends’
° <i>péng</i> ‘friend’	→ ° <i>qīn-péng</i> ‘friend’
° <i>xí</i> ‘to be on friendly terms’	→ ° <i>qīn-xí</i> ‘friend’
<i>xiá</i> ‘to be friends’, ‘friendship’	→ ° <i>qīn-xiá</i> ‘friend’, ‘friendship’
° <i>yǒu</i> ‘friend’	→ <i>qīn-yǒu</i> ‘friend’
<i>jūn</i> ‘army’	→ ° <i>tóng-jūn</i> ‘ally’
<i>méng</i> ‘union’	→ <i>tóng-méng-zhe</i> ‘ally’
° <i>zhì</i> ‘will’	→ <i>tóng-zhì</i> ‘comrade’.

c. Hostile and opposite relations

(202) ° <i>dí</i> ‘enemy’	→ <i>duì-dí</i> ‘enemy’
<i>fāng</i> ‘side, direction’	→ <i>duì-fāng</i> ‘opponent’
<i>shǒu</i> ‘hand’	→ <i>duì-shǒu</i> ‘rival’
<i>tóu</i> ‘head’	→ <i>duì-tóu</i> ‘rival’
° <i>zhí</i> ‘foot, sole’	→ ° <i>duì-zhí</i> ‘antipode’.

B. Persons sharing a feature that does not involve any kind of activity

a. Persons in spatial proximity or sharing a place

(203) ° <i>lín</i> ‘neighbour’	→ ° <i>duì-lín</i> ‘neighbour across the road’
<i>mén</i> ‘gate’	→ <i>duì-mén</i> ‘the neighbour across the road’

°lín 'neighbour'	→	qīn-lín 'close neighbour'
°bāo 'belly', 'cell'	→	tóng-bāo 'compatriot'
dì 'ground, soil'	→	tóng-dì 'fellow-countryman'
guó 'country'	→	°tóng-guó 'compatriot'
°jīng 'well'	→	°tóng-jīng 'neighbour'
shì 'room'	→	tóng-shì 'roommate'
xiāng 'village'	→	tóng-xiāng 'fellow-villager'

b. Persons of the same age

(204) dài 'epoch'	→	tóng-dài 'a contemporary'
°gēng 'age'	→	tóng-gēng '(person) of the same age'
jiǎ 'cyclic sign'	→	°tóng-jiǎ '(person) of the same age'
bèi 'generation'	→	tóng-bèi 'persons of the same generation'
°líng 'age'	→	tóng-líng '(persons) of the same age'
nián 'year', 'age'	→	tóng-nián '(persons) born in the same year'
sui 'year'	→	tóng-sui '(persons) born in the same year'

c. Persons with other shared features

(205) bān 'class, group, shift'	→	tóng-bān '(persons) of the same class, group, shift'
guāng 'shine'	→	?tóng-guāng '(persons) sharing fame/glory'
háng 'profession'	→	tóng-háng 'persons of the same profession'
jí 'rank'	→	tóng-jí '(persons) of the same rank'
mìng 'fate'	→	tóng-mìng '(persons) of the same fate'
míng 'name'	→	tóng-míng '(persons) bearing the same name'
°wèi 'position, place'	→	tóng-wèi '(persons) of the same status, equals'
xìng 'sex, character'	→	tóng-xìng '(persons) of the same sex, homogeneous'
xìng 'surname'	→	tóng-xìng '(persons) bearing the same surname'
xíng 'form, type'	→	tóng-xíng '(persons) of the same type'
zhǒng 'race'	→	tóng-zhǒng 'people of the same race'

C. Persons sharing a state of mind or an activity

a. Persons with a common spiritual feature

(206) °zhì 'will'	→	°hé ₁ -zhì 'like-minded persons', 'like-mindedness'
fāng 'side, direction'	→	?tóng-fāng 'like-minded persons'
diào 'melody'	→	tóng-diào 'like-minded persons'
hào 'to love'	→	tóng-hào '(persons) sharing the same tastes'
jiào 'faith'	→	tóng-jiào 'coreligionists, of the same faith'
qì 'spirit'	→	°tóng-qì 'like-minded persons'

b. Persons engaged in joint activity

(207) zhù 'to compose/create'	→	°hé ₁ -zhù 'co-author'
bǎng 'list of examinees'	→	tóng-bǎng 'persons on the same list of examinees'
°cān 'monastic group'	→	°tóng-cān 'disciples of the same tutor'
°chóu 'enemy'	→	tóng-chóu '[to have] the same enemy'
chuāng 'window'	→	tóng-chuāng 'schoolmate'
dǎng 'party'	→	tóng-dǎng 'persons in the same party'
àn 'table'	→	tóng-àn 'table-companions'

°bàn ‘companion’	→	tóng-bàn ‘companion’
°chái ‘colleagues’	→	°tóng-chái ‘colleagues’
°é ‘evil’	→	°tóng-é ‘accessory in a crime’
fàn ‘to break a law’	→	°tóng-fàn ‘accomplice’
guān ‘department’	→	°tóng-guān ‘colleague’
huǒ ‘colleague’	→	tóng-huǒ ‘companion’
°láo ‘sacrificial cattle’	→	°tóng-láo ‘table-companions’
°liáo ‘colleague, companions’	→	tóng-liáo ‘colleagues, companions’
liè ‘rank, row’	→	°tóng-liè ‘colleague’
lù ‘road’	→	tóng-lù ‘fellow-travellers’
mén ‘gate’	→	°tóng-mén ‘pupils of the same teacher’
móu ‘plan’	→	tóng-móu ‘accomplice’
rén ‘man’	→	tóng-rén ‘colleague, companion’
xiào ‘school’	→	tóng-xiào ‘schoolmate’
xué ‘to study’	→	tóng-xué ‘schoolmate’
xué ‘boots’	→	tóng-xué ‘lovers of the same woman’
yàn ‘inkstand’	→	tóng-yàn ‘school-fellow’
yè ‘affair/business’	→	°tóng-yè ‘colleague’
zuì ‘guilt’	→	tóng-zuì ‘accomplice’.

Sentences with these compounds in predicate position contain no copula, unless the components of these compounds are perceived as one unit; cf.:

- (208) a. Wǒ hé nǐ tóng-lù.
 I and you same-road
 ‘We are fellow travellers.’ (‘I take the same road as you.’)
- b. Wǒ hé tā tóng-xìng, bù tóng-zōng.
 I and he same-surname NEG same-ancestor
 ‘He and I have the same surname, but we are not relatives.’
- c. Wǒ hé tā tóng-suì.
 I and he same-age
 ‘He and I are of the same age.’

If a compound composed of *tóng* and a noun is perceived as one unit the copula *shì* is obligatory:

- d. Wǒ hé tā shì tóng-shì.
 ‘He and I are colleagues’, lit. ‘He and I are same service/work.’

Some nouns of this type have undergone verbalization, and in this case they are naturally entered elsewhere (there are also a number of verbal compounds with *tóng* derived with verbal bases, cf. *tóng-xíng* ‘to go, walk together’ in (168)). An example:

- (209) Wǒ hé tā tóng guo shì.
 I and he same EXP affair
 ‘We were colleagues’, lit. ‘I and he (shared) the same job.’

7.5 Quantitative characteristics of the initial components

As mentioned, the verbal compounds considered here came into being owing to the tendency towards disyllabicity. In this process that covers hundreds and hundreds of verbs and which is very active yet, a tendency is observed to create series of compounds with the same initial components, including reciprocal compounds. Most of these initial components have a concrete lexical meaning which is clearly distinguishable in the compounds and thus the choice of a given initial component is semantically motivated. Some of them reveal more complex relations with the bases – of non-compositional nature and their selectivity may be not obvious. The fact that at least 330 verbal and nominal compounds contain only 9 initial recurrent components shows that the main lexical load falls on the final component, the initial one naturally expressing a more general lexical meaning. This accounts for our attempt to look for the peculiarities (some trivial, some non-trivial) of the employment of the initial components.

For the reader's convenience, here again are the main meanings of all the 9 initial components (see also (91)) which are given in the subsequent description without translation: *bǐ* 'to compare', 'to compete'; *duì* 'to face', 'to oppose, be opposite', 'true'; *hé₁* 'to connect, be connected, join'; *hé₂* 'to be in concord, harmonious'; *jiāo* 'to intersect, interweave, join'; *jiē* 'to come into contact, tie, be tied'; *jié* 'to bind, tie, be tied'; *qīn* 'to be relatives', 'close'; *tóng* 'same, alike'. As we see, there is a kind of semantic overlapping between their meanings.

We realize the insufficiency of the data for a convincing quantitative analysis, but even provisional figures may be useful. By way of partly repeating the material of Section 7 introduced above, we shall consider the initial components from the viewpoint of the quantitative characteristics of their use in: (1) verbal and nominal compounds; (2) deverbal and denominal verbal compounds; (3) subject- and object-oriented compounds; (4) compounds of types "only" and "both" (see Table 2 in (161b) and the text above it); and also (5) "polysemy" of the initial components.

1. *Verbal and nominal compounds.* In our corpus, the verbal and nominal compounds number 223 and 113 units respectively. In the formation of reciprocal nouns (not nominalized verbal compounds), with a few exceptions, three initial components are used: *tóng*, *qīn* and *duì*. The component *qīn* forms nouns with positive connotations (kinship or friendly relations; see (200)–(201)), *duì* adds negative connotations (or it is neutral in the case of spatial meanings; cf. (202)–(203)), *tóng* does not have any of these connotations. The elements *tóng* and *qīn* are opposed to the other 7 components as these occur mostly in verbal compounds (see (161a), Table 1). There are 7 verbal and 72 nominal compounds with *tóng*, 11 and 22 respectively with *qīn*, and 37 and 9 with *duì*. Nominal compounds of this type seem to be preferable in the predicative function; cf. (208)–(209). This material is considered in Section 7.4.

2. *Deverbal and denominal verbal compounds.* The terms *deverbal* and *denominal* serve as shorthand labels for compounds with a final verbal or nominal component respectively (denominal compounds, i.e. the type illustrated by (19), are considered in Section 7.3; see also Table 4 in (161d)). The initial components differ in the number of compounds they serve to form. In Table 5 the initial components are listed in the diminishing order of the

predominance of the compounds with verbal bases over the compounds with nominal bases. The overall ratio of deverbal and denominal compounds including lexicalized ones in the data at our disposal is **2 to 1** (153 and 67). In reality, the ratio varies between **10 to 1** and **0.9 to 1**. Note the surprisingly high share of denominal compounds here. The vertical line divides the reciprocals into two groups: on the right hand the share of compounds with verbal bases is less than 2 to 1.

(210) a. **Table 5.** Distribution of compounds with verbal and nominal bases among compounds with the same initial components

	<i>qīn</i>	<i>duì</i>	<i>hé₂</i>	<i>hé₁</i>	<i>jié</i>	<i>jiāo</i>	<i>bǐ</i>	<i>tóng</i>	<i>jiē</i>	Total
verbal base	10	31	19	26	8	33	11	4	11	153
nominal base	1	6	6	10	3	18	8	3	12	67
Total	11	37	19	36	11	41	19	7	23	220

3. *Subject- and object-oriented compounds.* The relevant material is considered in Tables 2–3 under (161b–c) and also in Sections 7.2.1, 7.2.2, 7.3.1 and 7.3.2. The overall ratio of subject-oriented and object-oriented verbal compounds is **4.7 to 1** (the number of object-oriented compounds may be greater as many subject-oriented units may also be used as object-oriented, as in (33), but the ratio does give a general idea of their productivity). The vertical line divides the reciprocals into two groups: on the right hand the share of subject-oriented compounds is less than 4.7 to 1.

(210) b. **Table 6.** Distribution of compounds with verbal and nominal bases among subject- and object-oriented reciprocals

	<i>jiē</i>	<i>qīn</i>	<i>tóng</i>	<i>jiāo</i>	<i>hé₁</i>	<i>jié</i>	<i>hé₂</i>	<i>duì</i>	<i>bǐ</i>	Total
subj.-oriented	23	11	7	48	30	9	20	29	10	187
obj.-oriented	–	–	–	3	6	2	5	8	9	33
Total	23	11	7	51	36	11	25	37	19	220

4. *Compounds of types “only” and “both”.* Note that (a) the initial component may be the *only* constituent encoding reciprocity (type “only” in Tables 2–4, (161b–c–d), see also 7.2.1.1, 7.2.2.1, 7.3.1.1) or (b) both components are reciprocal in meaning, making a lexical reciprocal disyllabic (type “both” in the same tables, see also 7.2.1.2, 7.2.2.2, 7.3.1.2); and there are also a number of compounds that are termed lexicalized reciprocals above as their meaning is not elementally reducible to that of both components (see 7.2.1.3, 7.2.2.3 and 7.3.1.3; they are not included in Table 7). The overall ratio of types (a) and (b) is roughly **0.8 to 1** (85 and 114), but units with different initial components deviate from this ratio in the range of **6 to 1** and **0.1 to 1**. The vertical line divides the reciprocals into two groups: on the right hand the share of type “only” compounds is less than 6 to 1.

(210) c. Table 7. Distribution of compounds with verbal and nominal bases among subject- and object-oriented reciprocals

	<i>tóng</i>	<i>hé₁</i>	<i>duì</i>	<i>jiāo</i>	<i>jié</i>	<i>jiē</i>	<i>bǐ</i>	<i>hé₂</i>	<i>qīn</i>	Total
“only”	6	20	17	23	4	8	4	3	1	86
“both”	1	13	15	23	6	14	10	16	9	107
Total	7	33	32	46	10	22	14	19	10	193

5. “Polysemy” of the initial components. The term *polysemy* is used here to refer to the ability of the initial component to be used in different lexical groups of compounds. Note that 5 main lexical groups are distinguished above (below they are referred to by the first word if the name consists of two or more words): of “friendly relations”, “hostile relations”, “communication”, “spatial relations”, “relations of equality”, and also two additional groups for object-oriented compounds, viz. “comparison” and “exchange”, and one additional for subject-oriented, viz. sociative. Depending on their broader or narrower meaning, the initial components are used in a greater or smaller number of lexical groups of compounds. It goes without saying that the lexical meaning of the initial component determines its occurrence in certain lexical groups.

(210) d. Table 8. Distribution of the initial components among lexical groups of verbal compounds

	“friend-ly”	“host-ile”	“communi-cation”	“spatial”	“equal-ity”	“sociat-ive”	“compar-ison”	“ex-change”	Total
<i>bǐ</i>	–	4	–	1	5	–	9	–	19
<i>duì</i>	1	14	4	5	6	–	5	2	37
<i>hé₁</i>	6	5	2	10	4	7	2	–	36
<i>hé₂</i>	22	–	–	2	1	–	–	–	25
<i>jiāo</i>	17	11	8	13	–	–	–	2	51
<i>jiē</i>	8	4	4	5	1	1	–	–	23
<i>jié</i>	5	3	–	3	–	–	–	–	11
.....									
<i>qīn</i>	11	–	–	–	–	–	–	–	11
<i>tóng</i>	–	–	–	2	1	4	–	–	7
Total	70	41	18	41	18	12	16	4	220

The largest number of compounds contains the component *jiāo* with the main meaning of crossing and interweaving, i.e. the closest interaction of the participants. Other productive components are *duì* and *hé₁* with the main spatial meaning, too. Each of these three initial components is registered in at least five lexical groups.

To conclude, these reciprocal compounds should be investigated in detail on the basis of more exhaustive material, both in present-day usage and gone out of use, and in the context of the entire class of verbal and nominal compounds. This pertains to the types of semantic relations between the components within compounds.

8. Lexical reciprocals with a recurrent final component

This type of compounds with a final recurrent component is considered here in bypassing because it is much less common among reciprocals than compounds with the initial recurrent component. Both components seem to be lexical reciprocals (in particular more or less synonymous; cf. (14)) in a much greater number of the compounds than in the compounds considered in Section 7, and the final component adds reciprocity in only a few instances. In some cases, the meaning of a compound is retained if the components are reversed; in our data this is especially characteristic of the component *hé*₁ in compounds some of which have gone out of use; cf.: *hé*₁-*liú* / °*liú*-*hé*₁ ‘to flow together’, °*hé*₁-*féng* / *féng*-*hé*₁ ‘to sew together’, *hé*₁-*hù* / *hù*-*hé*₁ ‘to assemble, gather’, *hé*₁-*shì* / *shì*-*hé*₁ ‘to correspond’, °*hé*₁-*hé*₂ / °*hé*₂-*hé*₁ ‘to be harmonious’, °*hé*₂-*tiáo* / *tiáo*-*hé*₂ ‘to reconcile, get reconciled’.

Most of the reciprocal compounds with a recurrent final component in our corpus denote joining. This type is illustrated below by compounds (mostly) with those final components that appear as initial components in Section 7. When a final component is combined with a verb that may function as a recurrent initial component, i.e. in the formations just mentioned, the status of the modifying and the modified components is not always obvious.

Many of the compounds below function both as intransitive and transitive verbs; in the latter case the object usually precedes the predicate and has the preposition *bǎ*. First, we shall consider spatial compounds and next non-spatial ones.

8.1 Spatial compounds. Verbs and adverbs of joining

The following cases can be distinguished here: (a) the final recurrent component may denote the state resulting from the action named by the first component, (see (211a)); (b) it repeats (parts of) the meaning of the first component and, sometimes, in a way intensifies it (cf. (211b)). There is no clearcut borderline between these two cases. The latter type is contiguous to coordination of two synonymous verbs. Here are lists of compounds with *hé*₁ and *jiē* (with the main meanings of joining).

- | | | | |
|----------|-------------------------------------|---|--|
| (211) a. | <i>féng</i> ‘to sew, stitch’ | → | <i>féng</i> - <i>hé</i> ₁ ‘to join by sewing sth together’ |
| | <i>huà</i> ‘to turn into sth’ | → | <i>huà</i> - <i>hé</i> ₁ ‘to join, combine (chem.)’ |
| | <i>jiāo</i> ‘to glue’ | → | <i>jiāo</i> - <i>hé</i> ₁ ‘to join by glueing sth together’ |
| | <i>lián</i> ‘to tie together’ | → | <i>lián</i> - <i>hé</i> ₁ ‘to become joined/combined’ |
| | <i>zhǎng</i> ‘to grow’ | → | <i>zhǎng</i> - <i>hé</i> ₁ ‘to knit together (of bones)’ |
| | ° <i>chán</i> ‘to wind (sth) round’ | → | ° <i>chán</i> - <i>jiē</i> ‘to entangle’ |
| | <i>duàn</i> ‘to hammer (metal)’ | → | <i>duàn</i> - <i>jiē</i> ‘to join sth by hammering’ |
| | <i>hàn</i> ‘to weld’ | → | <i>hàn</i> - <i>jiē</i> ‘to join by welding’ |
| | <i>róng</i> ‘to weld’ | → | <i>róng</i> - <i>jiē</i> ‘to join by welding’ |
| | <i>tuán</i> ‘to lump’ | → | ° <i>tuán</i> - <i>jiē</i> ‘to press into a lump’. |
| b. | <i>huì</i> ‘to meet’ | → | <i>huì</i> - <i>hé</i> ₁ ‘to assemble’ |
| | <i>hùn</i> ‘to mix, get mixed’ | → | <i>hùn</i> - <i>hé</i> ₁ ‘to mix, get mixed’ |

<i>jí</i> 'to gather/assemble'	→	<i>jí-hé₁</i> 'to gather/assemble'
<i>jiē</i> 'to join'	→	<i>jiē-hé₁</i> 'to knit together' (of bones)
<i>jié</i> 'to tie, connect'	→	<i>jié-hé₁</i> 'to combine'
<i>hùn</i> 'to mix, get mixed'	→	<i>hùn-hé₁</i> 'to mix, get mixed'
<i>lián</i> 'to join (together)'	→	<i>lián-jiē</i> 'to fasten.'

In case (a) the meaning of compounds approximates the meaning of resultative compounds (see (15)). True, among more than 150 recurrent components of resultative compounds listed in Li Fengxiang (1993:53–4) the verbs *hé₁* and *jiē* are not mentioned (and in general this list contains only 17 verbs, the remainder being adjectives).

Functionally, the meaning of the final component in a compound can be expressed by the adverbs *zài yīqǐ* and *yīqǐ* with the spatial (non-sociative) meaning 'together' (we have cited examples with these adverbs co-occurrent with lexical reciprocals of joining; cf. (90c), (101), (104a–b), (115a–c)) and with some compounds they may be used pleonastically. These adverbs may denote joining together by themselves, being thus, in a way, used instead of the corresponding component, and they may also be used pleonastically with the latter, e.g.:

- (212) *hùn-hé₁* / *hùn zài yīqǐ* / *hùn-hé₁ zài yīqǐ* 'to mix, get mixed'
féng-hé₁ / *féng zài yīqǐ* / *féng-hé₁ zài yīqǐ* 'to sew together'
jié-hé₁ / *jié zài yīqǐ* / *jié-hé₁ zài yīqǐ* 'to combine, tie the ends of sth.'

8.2 Non-spatial compounds

This type is illustrated here by compounds with the component *hé₂* which usually means 'to be in concord, peace', etc. (see (213a)), sometimes mixing sth (cf. *jiǎo-hé₂* 'to stir, mix' ← *jiǎo* 'to whisk'). Among non-spatial compounds, units with a kind of resultative meaning are also possible, but we have no clear cases, unless (213a) is interpreted as achieving peace by talks. More commonly, *hé₂* combines with synonymous initial constituents (see (213b)).

- (213) a. *jiǎng* 'to speak, talk' → *jiǎng-hé₂* 'to make peace with, get reconciled'
yán 'words' → *yán-hé₂* 'to get reconciled'
- b. *tiáo* 'harmonious' → *tiáo-hé₂* 'to reconcile, get reconciled'
xié 'to be in concord' → *xié-hé₂* 'to be in concord'.

There are also other units that are attested as final recurrent components. One of them is the bound morpheme *bié* 'different', 'to differentiate', 'to part, separate' (in our material, it is registered both in the initial and final position; cf. *lí-bié* = *bié-lí* 'to separate'). It serves to form compounds with the general meaning 'to distinguish' (which is contiguous to the meaning 'to compare' very common among object-oriented reciprocals considered in Section 7) when combined with verbs with a close meaning (see (214a)) or by adding this meaning (see (214b)). With words denoting speech this component signifies the meaning 'to say goodbye' (see (214c)). Examples:

- | | | | |
|----------|--------------------------------|---|---|
| (214) a. | <i>chā</i> ‘to differ’ | → | <i>chā-bié</i> ‘to distinguish’ |
| | <i>fēn</i> ‘to divide’ | → | <i>fēn-bié</i> ‘to divide, distinguish’ |
| | <i>lí</i> ‘to part, separate’ | → | <i>lí-bié</i> ‘to distinguish’, ‘to part’ |
| | <i>qū</i> ‘to distinguish’ | → | <i>qū-bié</i> ‘to distinguish’, ‘to separate’ |
| | ° <i>biàn</i> ‘to distinguish’ | → | <i>biàn-bié</i> ‘to distinguish’ |
| b. | <i>shí</i> ‘to know’ | → | <i>shí-bié</i> ‘to distinguish’ |
| c. | ° <i>gào</i> ‘to speak’ | → | <i>gào-bié</i> ‘to say goodbye’ |
| | <i>huà</i> ‘words’ | → | <i>huà-bié</i> ‘to say goodbye’. |

9. Reciprocals with reduplicated or double auxiliary components

In this section, three types of reciprocal marking are considered. In the first type (215a), the reciprocal marker *hù* of adverbial origin is reduplicated; in the second type (215b) the lexical verb is repeated, first with the verb *lái* ‘to come’ and second with *qù* ‘to go’, i.e. verbs in antonymous relations (the main meaning of this pattern is that of iterativity and durativity; see beneath (222b)). In these two types the formation is a compound. The third type has two variants: the first one is (215c”) with the four-syllabic rhythmic pattern rather similar to (215a) and (215b). (215c’) is more complicated structurally: the personal pronouns *nǐ* ‘you.sg’ and *wǒ* ‘I’ are repeated in reversed order. The three cases cover all the logical variants of the position of two auxiliary components relative to the reduplicated verb; cf.:

- | | | |
|-----------|-------------------------------|--------------------------|
| (215) a’. | <i>hù-Verb-hù-Verb</i> | see (216b), (217) |
| a”. | <i>xiāng-Verb-xiāng-Verb</i> | see (126) |
| b. | <i>Verb-lái-Verb-qù</i> | see (218), (221), (223b) |
| c’. | <i>nǐ Verb wǒ Verb</i> | see (229), (230a) |
| c”. | <i>nǐ Verb wǒ, wǒ Verb nǐ</i> | see (226), (228) |

These three cases differ in the characteristics of the notional verbs used in these patterns: in pattern (215a) disyllabic verbs are used, and the reciprocal marker *hù* is preposed to each component of the verb; in pattern (215b) mostly monosyllabic verbs are used, and each component of the reciprocal marker *-lái ... -qù* follows the same repeated stem; (215c”) seems to have the weakest restrictions on the range of verbs used with regard to the mono- or disyllabic structure of the base verb (though monosyllabic verbs are prevalent); and synonymous or semantically close verbs can be used instead of a repeated verb. Besides, in (215c”) an adverbial can be inserted between the reciprocal markers (see (226b)).

In (215b) and (215c’) one may see a certain similarity in the use of deictic complementary (contrasting) words as the source of the reciprocal meaning; cf. *-lái – nǐ ... [wǒ]* on the one hand and *-qù – wǒ ... [nǐ]* on the other. This pattern is only one of many semantically diverse structures (usually containing the semantic component ‘each...’) formed by contrastive pairs not only as those listed above but also by *zuǒ-yòu* ‘left-right’, *dōng-xī* ‘east-west’, *héng-shù* ‘horizontal-vertical’, *sǐ-huó* ‘dead-live’, *zhè-nà* ‘this-that’, etc. (see He Zili 1990: 155–6, 161).

9.1 Types *hù-Verb-hù-Verb* and *xiāng-Verb-xiāng-Verb* lit. ‘mutually-Verb-mutually-Verb’

This section is meant to amplify 6.2.3. It concerns constructions of type (216b) derived from two-place transitives. Note, however, that reciprocals with *hùxiāng* (see (216c)) are more productive than this type and the other two types under consideration:

- (216) a. *Tāmen chángchang miǎn-lì wǒ.*
 they often encourage I
 ‘They often encourage me.’
 b. *Tāmen chángchang hù-miǎn-hù-lì.*
 ‘They often encourage each other.’
 c. *Tāmen chángchang hùxiāng miǎn-lì.*
 (same).

Here, we shall discuss type (215a’). Examples of type (215a’’) are given above (see (126a, b)).

There are significant restrictions on type (216b) constructions. Note, for instance, that out of a set of 13 sentences of type (216b) construction one informant (N. Zhang, p.c.) found acceptable only one sentence (with the verb *bāng-zhù* ‘to help’), another (Yang, p.c.) accepted two, with *bāng-zhù* ‘to help’ and *miǎn-lì* ‘to encourage’; another yet (M. Hoa) accepted three sentences, with the verbs *miǎn-lì* ‘to encourage’ and, with reservations, *pèng-zhuàng* ‘to collide’ and *qī-piàn* ‘to deceive’; a fourth one (Wang Huihui, p.c.) found acceptable four sentences (with the verbs *bāng-zhù* ‘to help’, *lái-wǎng* ‘to contact’, and, with reservations, *miǎn-lì* ‘to encourage’ and *pèng-zhuàng* ‘to collide’), two more (Ma Lin and Jinsheng Li, p.c.) accepted five sentences (with the verbs *bāng-zhù* ‘to help’ and, with reservations, *miǎn-lì* ‘to encourage’, *pèng-zhuàng* ‘to collide’, *fāng-wèn* ‘to visit’ and *zhēng-chǎo* ‘to quarrel’). And one of the informants (Fengxiang Li, p.c.) accepts as correct “though not preferred” *bāng-zhù* ‘to help’ and *miǎn-lì* ‘to encourage’, and with reservations *pèng-zhuàng* ‘to collide’, and all the other compounds (except those with the second nominal element, see the next paragraph) he considers acceptable “very marginally, only under special circumstances”. Despite the differences, certain verbs repeat in these lists.

Our informants reject the forms with *hù* of compound verbs if the second component is descended from a noun; e.g.: *tán-huà* ‘to talk’, lit. ‘to converse+words’, *chǎo-zuǐ* ‘to quarrel’, lit. ‘to shout+mouth’, *chuàn-ménr* ‘to go to sb’, lit. ‘to string+door’. Besides these three verbs, no one accepted the following ones, including those that were accepted as very marginal: *pī-píng* ‘to criticise’, *màn-mà* ‘to insult’, *biàn-lùn* ‘to argue’, *zhào-gu* ‘to take care of’.

In the opinion of Fengxiang Li (p.c.), “in natural conversation, one would definitely use *hùxiāng* followed by a compound verb”, and he considers the use of the “very marginal” reciprocals as possible “under special circumstances. For instance, if the context requires the use of this pattern to either achieve a special effect or a rhythmic pattern”.

Semantic motivation for this type of reciprocals is suggested by Lu Dzu-Jyan (p.c.) who claims that the underlying verbs should denote “positive” actions. He also acknowledges the verb *pèng-zhuàng* ‘to collide’ if it is used figuratively, for instance, to describe a

collision between family members (esp. children, brothers and sisters), rather than literally to describe a physical collision. He added here the verb *dǎ-nào* ‘to make noise, squabble’. He illustrates his claim with six reciprocals (three with the indication of the source) which he regards both acceptable and frequently used:

- (217) a. *hù-jìng-hù-ài* ‘to respect and love each other’ (*Xiàndài Hànyǔ cídiǎn, xiū dīngběn*, Shāngwù yīnshūguān. 1998. Peking, p. 534)
 b. *hù-jīào-hù-xué* ‘to teach each other and learn from each other’ (*Xīn Hàn-Dé cídiǎn*, Shāngwù yīnshūguān. 1996. Peking, p. 341)
 c. *hù-liàng-hù-ràng* ‘to show mutual understanding and courtesy’ (*Xīn Hàn-Dé cídiǎn*, Shāngwù yīnshūguān. 1996. Peking, p. 341)
 d. *hù-jìng-hù-zhòng* ‘to esteem and respect each other’
 e. *hù-zūn-hù-zhòng* ‘to value highly and respect each other’
 f. *hù-huì-hù-lì* ‘to be useful to each other’
 g. *hù-téng-hù-ài* ‘to love each other passionately (lit. painfully)’ (*téng* ‘be ill’).

Most likely, the semantic motivation in these verbs finds support: unlike the previous test with randomly chosen 13 reciprocals where the number of accepted units varied between 1 and 5, most of these 6 reciprocals were accepted. A native speaker (Xiaoxong Zhang, p.c.) accepted 4 reciprocals, and rejected (217d) and (217e); another native speaker (M. Hoa) accepts five (though (217d) with reservations) and does not accept (217e). This coincidence is meaningful, though the reason is not clear to us.

It would be interesting to establish if the reciprocal double morpheme *hù-...-hù-...* is a relic of a fully productive pattern or, on the contrary, a newly developing tendency.

9.2 Type *Verb-lái-Verb-qù* lit. ‘Verb-come-Verb-go’

The data in this section are almost entirely borrowed from Liu Meichun ((1999: 124–32); namely, examples (218), (219), (220), (223)) who considers this type of reciprocals quite productive. Previously, the reciprocal usage of this form was not mentioned in specialist literature, though its non-reciprocal (more common and productive) usages were. It differs from the previous type in that if a compound is used it is repeated entirely (see (222)). The omission of the direct object in (218c) and (218d) is probably not accidental and indicates the tendency to avoid this object if the base verb is three-place.

- (218) a. *Nǐmen dǎ-lái-dǎ-qù zuò-shénme?*
 you.PL hit-come-hit-go do-why
 ‘Why do you fight with each other?’, lit. ‘You fight with each other, what for?’
 b. *Lǎo-niú hé shīzi mà-lái-mà-qù, yǐnlái xǔduō dòngwù wéiguān.*
 old-bull and lion scold-come-scold-go attract many beast observer
 ‘The old bull and the lion called each other names, attracted many bystanders.’
 c. *Liǎng jú-zhǎng xiàng tī pīqiú yíyàng, tī-lái-tī-qù.*
 two office-chief alike hit ball how hit-come-hit-go
 ‘The two bureau directors threw (the problem) to each other as if kicking a ball.’

- d. *Sān ge dānwèi tuī-lái-tuī-qù. shuí dōu bù yuànyì chéngdān*
 three item organization push-come-push-go which all NEG want assume
zérèn.
 responsibility
 ‘The three offices pushed (the case) to each other, as no one wanted to assume the responsibility.’

Evidence of the productivity of this pattern is formation from nouns, even though from two nouns with the meanings ‘eye’ and ‘eyebrow’ only (see Liu Meichun 1999: 131):

- (219) *Tāmen méi-lái-yǎn-qù.*
 they eyebrow-come-eye-go
 ‘They looked seducingly at each other.’

This type of reciprocals may collocate with the adverb *hùxiāng / xiānghù*:

- (220) a. *Dàjiā xiāng-hù dèng-lái-dèng-qù (...)*
 people mutually stare-come-stare-go
 ‘People mutually stare at each other.’
 b. *Tiàowú-de rén hù-xiāng cǎi-lái-cǎi-qù.*
 dancer-ATR man mutually step-come-step-go
 ‘The dancers were stepping on each other’s feet.’

Some native speakers (L. Renzhi, p.c.) claim that there are restrictions on the use of the following two verbs in this pattern (is it accidental that both base verbs are lexical reciprocals and intransitive, though requiring more than one participant?; see also (228) where these very verbs in combination with *nǐ... wǒ* are also rejected by some native speakers):

- (221) a. **Tāmen tán-huà-lái-tán-huà-qù.*
 (intended meaning:) ‘They talk with each other.’
 b. **Tāmen lái-wǎng-lái-lái-wǎng-qù.*
 (intended meaning:) ‘They are in contact with each other.’

This restriction is hardly due to the disyllabic character of the verbs: as the following example obtained from an informant, disyllabic verbs can also be used in this pattern.

- (222) a. *Tāmen bāng-zhù-lái-bāng-zhù-qù háishì méi yǒu hǎo jiéguǒ.*
 they help-help-come-help-help-go but NEG have good result
 i. ‘They helped each other but they did not obtain good results.’
 ii. ‘They helped someone repeatedly and for a long time.’
 b. *Tāmen zhēng-biàn-lái-zhēng-biàn-qù.*
 ‘They argue with each other.’

As mentioned above, this pattern may also code non-reciprocal meanings. The most prominent is the iterative/durative meaning which is particularly distinct if the subject is singular (see (223a), cf. (218a) where the reading is reciprocal), but contextual manipulation may neutralize the most likely reciprocal meaning even if the subject is plural (see (223b) where the reciprocal meaning of the compound is blocked by the second part of the sentence; cf. (218b) where this very compound is reciprocal). Of course, the reciprocal reading is out of the question if the base verb is intransitive, as is shown in (223c) with

the meaning of repeated motion in opposite directions, which closely reflects the lexical meaning of the verbs *lái* ‘come’ and *qù* ‘go’. Iterativity or durativity is based, as Liu points out, on this latter meaning (see Liu Meichun 1999: 126, 129). Reciprocity is also outruled if the derived sentence retains the syntactic structure of the underlying one, cf. (224a) and (224b) where the object *duì wǒ* is retained; see also (224c) where the meaning is reciprocal. And, lastly, needless to say, the reciprocal meaning is outruled on two-place verbs with a non-human object (cf. (225)). In the latter case retention of the underlying structure in the derived one is only to be expected.

- (223) a. *Wǒ/nǐ/tā dǎ-lái-dǎ-qù, tā hái shì bù tīng.*
I/you/he hit-come-hit-go he still NEG listen
‘I/you/he fought several times (or for a while), but he still does not hear.’
- b. *Lǎoshī-men mà-lái-mà-qù, xuéshēng hái shì bù tīng.*
teacher-PL scold-come-scold-go students still NEG listen
‘The teachers kept scolding (the students), (but) the students were still not listening.’
- c. *Tā zài wūzi-lǐ zǒu-lái-zǒu-qù.*
he at room-inside walk-come-walk-go
‘He’s walking back and forth in the room.’
- (224) a. *Tāmen duì wǒ hěn zhùyì*
they to I very be.careful
‘They pay attention to me.’
- b. *Tāmen duì wǒ zhùyì-lái-zhùyì-qù, hái shì méi fāxiàn shénme.*
they to I be.careful-come-be.careful-go today NEG open something
‘They watch me in vain, they have not found out anything.’
- c. *Tāmen liǎng ge jīngcháng zhùyì-lái-zhùyì-qù.*
they two CLF often be.careful-come-be.careful-go
‘They two of them often take care of each other.’

On the basis of a corpus of about 200 textual usages, Liu Meichun (1999: 124, 127, 131) claims that monosyllabic verbs are prevalent in this pattern (he regards it as a phonological restriction) and he cites only such instances in his paper. It was pointed out above that collocations of monosyllabic verbs like *dèng* ‘to stare’ with *hùxiāng* are usually rejected by the informants (see 4.5.3). Therefore one may see a tendency towards complementary distribution of reciprocal markers here: monosyllabic verbs tend to occur in this pattern and disyllabic verbs – with *hùxiāng* (cf. **hùxiāng dǎ* ‘to hit each other’ – *dǎ-lái-dǎ-qù* ‘to hit each other’ in (218a)). However, this tendency does not seem to be rigid. Thus, according to our data elicited from the informants (Dzu Jyan Lu, p.c., among others) and cited above and below (see (222), (224b, c), (225)), disyllabic verbs can also be used freely in this pattern (both with a reciprocal and non-reciprocal reading, the latter being prevalent) and this possibility by no means contradicts the tendency.

- (225) *biān-jí-lái-biān-jí-qù* ‘to edit sth repeatedly’
[?]*biān-pái-lái-biān-pái-qù* ‘to arrange sth in order repeatedly’
[?]*biān-shěn-lái-biān-shěn-qù* ‘to edit and screen sth repeatedly’
biān-zào-lái-biān-zào-qù ‘to fabricate sth repeatedly’
[?]*biān-zhī-lái-biān-zhī-qù* ‘to knit sth repeatedly’
[?]*chuán-bō-lái-chuán-bō-qù* ‘to disseminate sth repeatedly’

9.3 Type *nǐ Verb wǒ* [, *wǒ*] Verb [*nǐ*], lit. ‘you Verb me[, I] Verb [you]’

This polysemous pattern is introduced above as two equivalent subtypes under (215c”) and (215c’). As it seems, this type of reciprocal marking differs from the patterns under (215a) and (215b) in greater rhythmic freedom, though phonetically pattern (215c”) may coincide with compounds of types (215a) and (215b). It is this type that is cited by Wang Liaoyi (1954:63) who claims that “In modern colloquial language (lit. ‘the man in the street’) the word *xiāng* slowly goes out of use, and common people usually express reciprocity by means of simultaneous parallel use of the personal pronouns *nǐ* ‘you.sg’ and *wǒ* ‘I’ rather than by the pronoun *xiāng* ‘mutually.’” He also asserts that though at first sight, the units *wǒ* and *nǐ* seem to be 1st and 2nd person pronouns, they in fact indicate the 3rd person. Note that in this pattern *wǒ* and *nǐ* each are repeated twice (ibid, p. 64). This case differs from the previous two types (discussed in 9.1 and 9.2) in that other units, e.g. adverbials, may be added to the verbs (cf. *qiǎo qiǎo* and *àn’ àn-di* in (226b)); besides, a direct object can be used with the verb, and also a noun instead of a verb, but in the material at our disposal the latter two instances have occurred when the reading is non-reciprocal; cf. (233)). In this pattern, usually synonymous or near-synonymous monosyllabic verbs are used instead of a repeated verb, as in the case with *lái-...-qù* (cf. (208a, b)), though the informants also accept a repeated disyllabic verb, as in (226d). Here are relevant examples ((226a, b) are borrowed from Wang Liaoyi (1957:59); most of other examples, viz. (226c) and (229)–(233), are borrowed from He Zili (1990:153–62)):

- (226) a. *Hòulái liǎnge zhēnshí nǐ téng wǒ, wǒ ài nǐ.*
 afterwards two really you.sg be.ill I I love you.sg
 ‘Then they both fell in love with *each other*.’
 lit. ‘Then they two really *you* love *me*, *I* love *you*.’
- b. *Zhòng zīmèi, dìxiōng nǐ qiǎo qiǎo chě wǒ yíxià. wǒ àn’ àn-di*
 all sisters brothers you on.the.sly pinch I once I surreptitiously
niē nǐ yì-bǎ.
 pinch you.sg once
 ‘The brothers and sisters on the sly gave a pinch to each other.’
 lit. ‘Brothers and sisters on the sly *you* pinch *me* once, *I* pinch *you* once.’
- c. *Tāmen nǐ kàn wǒ, wǒ kàn nǐ, méiyǒu shuōhuà.*
 they you look.at me I look.at you not speak
 ‘They looked at one another, didn’t say a word.’
- d. *Tāmen zǒngshì nǐ bāng-zhù wǒ, wǒ bāng-zhù nǐ.*
 they always you.sg help-help I I help-help you.sg
 ‘They always help each other.’

It is likely that this pattern is used predominantly with transitive verbs. At least for some informants (Li Renzhi, p.c., and M. Hoa) the use of this device with the verbs *tán-huà* ‘to talk’, *lái-wǎng* ‘to be in contact’ is unacceptable and they motivate it by their intransitivity, though these verbs do require at least two participants (cf. (221) where these very verbs in combination with *lái-qù* are also rejected).

- (227) a. **Tāmen nǐ tán-huà wǒ, wǒ tán-huà nǐ.*
 (intended meaning:) ‘They talk with each other.’

- b. **Tāmen nǐ lái-wǎng wǒ, wǒ lái-wǎng nǐ.*
(intended meaning:) ‘They are in contact with each other.’

As for the person of the subject, all the examples at our disposal contain either a (semantically) plural noun or the 3PL pronoun as subject. The use of the 2PL pronominal subject unexpectedly turned out to be unacceptable for one of our informants (L. Renzhi, p.c.); this restriction is not quite clear in view of the fact that this very informant does accept the same sentence with the 1PL and 3PL subject.

- (228) *Wǒmen/ Tāmen/ [²Nimen] chángcháng nǐ jiāo wǒ, wǒ jiāo nǐ.*
we they you.PL often you.SG advise I I advise you.SG
‘We/They/[You] often advise each other.’

As regards the 1PL pronominal subject, in a suitable discourse situation one can see an iconic reflection of a reciprocal situation; cf. ‘we advise each other’ = ‘I advise you, you advise me’. If the subject is the 3PL pronoun the words *nǐ* and *wǒ* naturally lose their referential meaning and serve to render other meanings, the reciprocal among them. The question is whether these pronouns can restore their proper meaning if the subject is the 1PL pronoun.

Type (215c’), i.e. pattern *nǐ Verb wǒ Verb*, is considered in detail in a special paper (He Zili 1990: 153–62). In this paper the number of examples of this type significantly prevails over the (215c”) pattern, which seems to be significant: it shows that the simpler pattern is much more productive than the more complicated variant illustrated by (226). Note that the verb *téng-ai* ‘to love’ is used in (229a) without the pronouns repeated in the reversed order (cf. (226a) which is a variant of (215c’’)).

- (229) a. *Fūqī nǐ téng wǒ ài.*
husband.wife you love I love
‘The couple loves each other.’
- b. *Yǒu hǎochù dàjiā nǐ zhēng wǒ qiǎng; yǒu kùnnán dàjiā wǒ tuī*
exist benefits all you contend I contend exist difficulties all I yield
nǐ ràng.
you yield
‘For benefits, one vies with another; when it comes to difficulties, one yields to another.’
- c. *nǐ qiǎng wǒ duó.*
you snatch I seize
‘vie with each other for sth.’
- d. *nǐ zhuī wǒ gǎn.*
you catch.up I catch.up
‘overtake each other (in friendly emulation).’

There is a stylistic difference between reciprocals with *hùxiāng* and the patterns with *nǐ Verb wǒ, wǒ Verb nǐ*. He Zili (1990: 159–60) claims that the sentences cited here as (230a) and (230b) are denotationally synonymous but the former is stylistically informal and more casual-sounding than the latter and therefore preferable in colloquial speech, when common everyday activities are talked about; cf.:

- (230) a. *Háizi-men zài lóudào li nǐ tuī wǒ sāng.*
 kids-PL in corridor inside you push I shove
 ‘The kids were pushing and shoving each other in the corridor.’
 b. *Háizi-men zài lóudào li hùxiāng tuī sāng.*
 kids-PL in corridor inside mutually push shove
 (same translation).

The expression with *hùxiāng* alone is appropriate in formal style, when abstract and serious matters are spoken about, *hùxiāng* collocating with bookish words (He Zili 1990: 160):

- (231) a. *hùxiāng yī-cún* ‘to be interdependent’ (*yī-cún* ‘to depend’)
 b. *hùxiāng pái-chì* ‘to be mutually exclusive’ (*pái-chì* ‘to exclude’).

Among other meanings of the patterns considered in He Zili (1990), there is a *distributive* and also an *alternative* meaning (see (232) and (233) respectively). The latter meaning is represented below by an example where a noun phrase with a numeral is used instead of a verb, the reciprocal pattern being used in an adverbial position.

- (232) *Háizi-men nǐ duǒ wǒ shǎn bùgǎn jiàn-rén.*
 kid-PL you dodge I dodge not.dare see-people
 ‘Every kid was hiding, afraid to be seen.’ (He Zili 1990: 153)
 (233) *Yī wǎn jiǔ sì gè rén nǐ yì kǒu wǒ yì kǒu-de hē.*
 one bowl wine four items guys you one sip I one sip-ATR drink
 ‘Four guys took turns sipping a bowl of wine.’

10. Etymology and genetic relations of the reciprocal markers

By way of partly repeating ourselves, we shall point out the following.

The adverb *hùxiāng* is composed of two synonymous components and its literal meaning is ‘mutually-mutually’. The component *hù* which seems to have once been productive in the meaning ‘each other’ also had the meaning ‘to intertwine’. Note that this latter meaning is one of the meanings of the Modern Chinese verb *jiāo* which has also retained the meaning ‘each other’ in some compounds. Note in this connection that in Ancient Chinese there was an adverb *jiāo* ‘between themselves, with each other, mutually, each other’, i.e. a unit with both a sociative and a reciprocal meaning. It was very close to the unit *xiāng* in its reciprocal meaning but it was much less commonly used than the latter (see Yakhontov, Ch. 48, §10). Without touching upon the proper etymology of *xiāng* we consider it expedient to mention the words *xiàng* ‘similar, alike’ (lexical reciprocal) and *xiǎng* ‘to resound’ (response action) because they are homophonous to *xiāng* (though they have other tones) and seem to be close in meaning to ‘each other’ and therefore may be genetically related to it.

Three markers of reciprocity are based on converse spatial-deictic relations:

- (a) *bǐcǐ*, where *bǐ* = ‘that (one)’ and *cǐ* = ‘this (one)’ (cf. 4.2);
 (b) *V-lái-V-qù*, where *lái* = ‘come’ and *qù* = ‘go’ (cf. 9.2);
 (c) *nǐ V wǒ V*, where *wǒ* = ‘I’ and *nǐ* = ‘you’ (SG).

In (b) we clearly observe the direction of semantic development of the reciprocal meaning from the meanings of repeated motion in opposite directions and iterative-durative meaning (a similar polysemy is observed in some other languages, e.g. Tongan (Churchward 1953:256).

Acknowledgments

The evaluations of the Chinese sentences and lists of verbs were obtained from Niina Ning Zhang, Yang, Wang Huihui, Ma Lin, Jinsheng Li, and Haixin Jiang, Irene Fong, Ge Quianjun, Zhao Haifeng, Lu Liquiang. Extensive explanations of some instances were offered by Fengxiang Li, Zhang Xiaohong and Lu Dzu-Jyan. We are grateful to all of them.

Special thanks are due to †Natalia Kozintseva, Elena Stadnik and Katia Chirkova for mediation in obtaining the data from the native speakers of Chinese. Many useful comments from Katia Chirkova have helped to avoid a number of pitfalls.

PART VIII

Another perspective on reciprocals

Further remarks on reciprocal constructions

Martin Haspelmath

In view of the breathtaking scope of the comparative research enterprise led by Vladimir P. Nedjalkov whose results are published in these volumes, I have no choice but to select and highlight a few topics that I find particularly interesting and worthy of further comment and further study. I will focus here on conceptual and terminological issues and on some phenomena that have been discussed in the literature but are not so well represented in this work. I will also try to summarize some of the major known generalizations about reciprocals, as discussed in this work and elsewhere, in the form of twenty-six Greenberg-style numbered universals.

1. Reciprocal, mutual, symmetric

Let us begin with a terminological discussion of the most basic term, **reciprocal**. In the present volumes, this term is used both for meanings (e.g. *reciprocal situation*, *reciprocal event*) and for forms (e.g. *reciprocal construction*, *reciprocal marker*, *reciprocal predicate*). In most cases, the context will disambiguate, but it seems to be a good idea to have two different terms for meanings and for forms, analogous to similar contrasts such as *proposition/sentence*, *question/interrogative*, *participant/argument*, *time/tense*, *multiple/plural*. Since all reciprocals express a situation with a mutual relation, I propose the term **mutual** for the semantic plane, reserving the term *reciprocal* for specialized expression patterns that code a mutual situation. A similar terminological distinction is made by König & Kokutani (2006) and Evans (2007), but these authors propose the term *symmetric* for meanings, reserving *reciprocal* for forms.

There are several problems with the term *symmetric* that make it less suitable, in my view, than the term *mutual*:

(i) The term *symmetric(al) predicate* has been widely used, following Lakoff & Peters (1969), for lexical reciprocals like *Pedro and Aisha are similar*; these would have to be renamed to “underived symmetric predicates”;

(ii) Dimitriadis (2007b) uses the term to differentiate between reciprocals of the type *Pedro and Aisha kissed* (=symmetric reciprocals) and *Pedro and Aisha kissed each other* (=non-symmetric reciprocals);

(iii) mutual situations are rarely fully symmetric (cf. Kemmer 1993:256, n. 65);¹

(iv) the term comes from the realm of logic and mathematics, and human language seems mostly to require concepts having to do with human actions and feelings rather than with mathematics.

A **mutual situation** can be defined as a situation with two or more participants (A, B, ...) in which for at least two of the participants A and B, the relation between A and B is the same as the relation between B and A. Thus, in (1) we have a non-mutual situation, because Aisha is the agent of an action affecting Pedro, and Pedro is the patient. By contrast, in (2a–b) Aisha is both agent and patient, and so is Pedro, so the situations qualify as mutual.

- (1) *Aisha pinched Pedro.*
 (2) a. *Aisha and Pedro pinched each other.*
 b. *Aisha pinched Pedro, and Pedro pinched Aisha.*

In (3), there are three participants, and a mutual relation exists only between two of them (Lisi and Aisha), but this is sufficient to make the examples qualify as mutual situations.

- (3) a. *Pedro told Aisha and Lisi a secret about each other.*
 b. *Pedro told Aisha a secret about Lisi, and he told Lisi a secret about Aisha.*

In reciprocal constructions expressing transitive events such as (2a), and also in more complex events such as (3a), both participants play two identical roles, but there are also mutual situations where there is just a single role: In *Aisha and Pedro are cousins*, both play the role ‘cousin of’ with respect to each other. In fact, in this example it seems better to speak about a **mutual configuration**. Mutual situations and events are then just special cases of mutual configurations. Mutual configurations can also be expressed by noun phrases, such as *Humboldt’s and Cuvier’s articles about each other*.

For the participants standing in a mutual relation to each other, I propose the neologism **mutuant**. (Nedjalkov and some other authors in this work use the term *reciprocant* for participants of a mutual situation, but given that we want to restrict the term *reciprocal* to the expression plane, we should not use *reciprocant* for the semantic plane.)

In general, the mutuant is expressed by the arguments of a reciprocal construction, but most languages also allow the expression of mutual situations in which only one of the mutuant is expressed overtly. In (4a), the second mutuant must be inferred from the context (it must be a definite null participant, e.g. ‘different from my previous proposal’), whereas in (4b) the second mutuant remains completely implicit (‘married to someone’).

- (4) a. *Your proposal is very different.*
 b. *My friend Pedro got married.*

1. For example, Huddleston & Pullum (2002:1500) distinguish between two different uses of *one... the other* in English: symmetric (e.g. *They were sitting one beside the other*) and asymmetric (e.g. *They were placed one on top of the other*).

2. Major ways of expressing mutual configurations

Mutual configurations can be expressed explicitly, as in all the examples seen so far, but they can also be left implicit, as in (5) and (6).

- (5) a. *Hector and Achilles fought obsessively.*
 b. *Lisi and Aisha are in love.*
- (6) To'aba'ita (Lichtenberk, Ch. 36, p. 1554)
Kero musu-a babali-daro'a.
 3DU.FACT kiss-3.OBJ cheek-3DU.POSS
 'The two of them kissed them/themselves/each other on the cheek.'
 (Lit. '...kissed their cheeks.')

These sentences have one interpretation on which they express mutual relations, but they also have a non-mutual interpretation. For example, in (5a) Hector might have fought against Menelaus and Achilles against Memnon, and in (5b), Lisi might be in love with Fatima and Aisha with Ram. In (6), the two could have kissed the cheeks of some other pair of people.

Implicit expression of mutual situations is apparently not common. Most mutual situations are expressed explicitly, either by free non-specialized and fully compositional combinations of clauses in discourse (as in 2b, 3b),² or by specialized patterns, called **reciprocal constructions**.

The boundary between free and specialized expressions of mutual situations mostly coincides with the boundary between multiclausal and monoclausal expression, but there are some intermediate cases. Multiclausal expressions may be abbreviated by omitting the verb in one of the clauses ("gapping"), so that we do not have full clauses anymore:

- (7) a. *Aisha pinched Pedro, and Pedro Aisha.*
 b. *Lisi is in love with Ram, and Ram with Lisi.*

Since the second parts of these examples are still very clause-like, one would not say that the examples are monoclausal. But (8) is fairly similar to (7):

- (8) *Aisha pinched Pedro, and vice versa.*

This construction is clearly specialized and is thus an instance of a reciprocal construction, although one could say that it is still biclausal, with *vice versa* as a kind of "pro-clause" (an anaphoric clause substitute).

Another multiclausal construction that can perhaps be said to express mutuality is the *back* construction seen in (9).

2. Another non-specialized way of expressing mutual situations is by means of universal quantifiers (cf. Maslova 2007:§3.2):

- (i) *Each participant knows all the others well.*
 (ii) *The participants each know the others well.*

Here, too, a mutual interpretation is only one possibility, though of course the most likely one.

(9) *Aisha pinched Pedro, and Pedro pinched her back.*

Here *back* apparently requires an identical response action. Constructions of this kind are considered “non-grammaticalized” by Nedjalkov (Ch. 3, §2.1), but since they are specialized and not fully compositional, they are included in the category “reciprocal constructions” here. However, most reciprocal constructions are monoclausal, and the remainder of this paper (just like 99.9% of this work) will be devoted to monoclausal reciprocals.

Figure 1 summarizes various ways in which languages can deal with mutual situations.

Most papers in this work deal only with monoclausal reciprocals, which can be divided into grammatical reciprocals and lexical reciprocals. **Grammatical reciprocals** have traditionally been at the center of syntacticians’ attention, and often lexical reciprocals are ignored completely in discussions of reciprocal constructions. This is normal: In a similar way, studies of causative constructions often ignore lexical causatives and concentrate entirely on grammatical causatives. But when one starts with the semantic side of the phenomena (as one must in typology), it is necessary to include lexical causatives (and analogously lexical reciprocals) as well.

Lexical reciprocals (also called *allelic predicates* in §7 below) can be defined as predicates that express a mutual configuration by themselves, without necessary grammatical marking. They consist of a semantically restricted set of predicates whose meanings generally fall into the class of social actions and relations (‘marry’, ‘quarrel’, ‘friend’), spatial relations (‘adjoin’, ‘next to’), and relations of (non-)identity (‘same as’, ‘different from’, ‘resemble’).

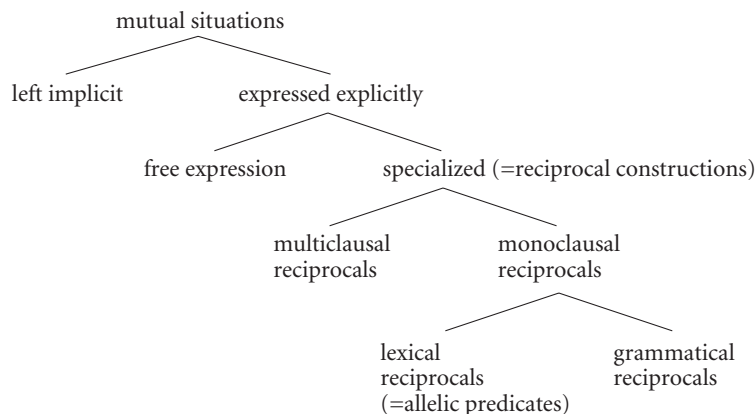

Figure 1. Ways of expressing mutual situations

3. Basic properties of monoclausal reciprocal constructions

Monoclausal reciprocals are quite diverse, and the pages of this work are filled with details of their cross-linguistic diversity. However, there are also some ways in which they are remarkably uniform. Somewhat trivially, we can start by making the following generalization:³

Universal 1:

In all languages, monoclausal reciprocal constructions are at least as complex formally as the corresponding non-reciprocal constructions denoting simple events.

More interestingly, languages show a strong tendency to express the set of mutuanes in a single argument.

Universal 2:

In all languages with reciprocal constructions, there are constructions in which the mutuanes are expressed in a single (nonsingular) argument of the predicate.

Such constructions are called **simple reciprocal constructions** by Nedjalkov (Ch. 1, §7), and they account for the overwhelming majority of reciprocals in this work. As Maslova (Ch. 6, p. 336) notes, “instead of encoding symmetry, languages encode role identity between the reciprocal participants”.

It seems that one of the main reasons for using reciprocal constructions is that one wants to present the mutual situation from the point of view of the entire set of mutuanes, not just from one mutuanes’s point of view. Moreover, one also wants to express the joint participation of the mutuanes in a single coherent situation (cf. Evans 2006). Thus, (10b) is the most usual reciprocal counterpart of the free mutuality expression in (10a).

(10) German (Wiemer & Nedjalkov, Ch. 10, p. 47)

- a. *Hans schlägt Paul, und Paul schlägt Hans.*
‘Hans hits Paul, and Paul hits Hans.’
- b. *Hans und Paul schlagen sich.*
‘Hans and Paul hit each other.’
- c. *Hans schlägt sich mit Paul.*
‘Hans and Paul hit each other.’ (Lit. ‘Hans hits each other with Paul.’)

However, some languages also allow reciprocals in which the mutuanes are expressed by two different arguments, as in (10c). Such constructions are called **discontinuous reciprocal constructions** by Nedjalkov (Ch. 1, §7) (see also Dimitriadis 2004). Crucially for

3. Interestingly, in some Western Austronesian languages there are reciprocal constructions which lack a verbal affix that is obligatorily present in the corresponding non-reciprocal construction: In Madurese (Davies 2000), ‘hit’ is *m-okol* (with the active-voice nasal prefix *m-* that makes the root-initial consonant of the root *pokol* ‘hit’ disappear), while ‘hit each other’ is *saleng pokol*, where there is no voice prefix. This construction is not a counterexample to Universal 1, however, because the reciprocal word *saleng* is obligatory in the construction.

Universal 2, all languages with discontinuous reciprocals also have simple reciprocals. Moreover, it seems that in discontinuous reciprocals, one of the arguments is always an oblique (most commonly a comitative) argument.

Universal 3:

No language has a reciprocal construction in which there are two mutuant-expressing arguments that are coded like the A (most agent-like argument) and the P (most patient-like argument) of a typical transitive clause.

Thus, we do not in general find reciprocals of the sort shown schematically in (11):

- (11) *The girl-NOM kissed-REC the boy-ACC.*
 ‘The girl and the boy kissed (each other).’

However, there are some exceptions to Universal 3. Most obviously, lexical reciprocals are sometimes transitive verbs (e.g. English *to marry*, *to resemble*, Nivkh *η̄zi* ‘be of the same size’, *η̄tə* ‘be of the same age’). And occasionally one finds transitive grammatical reciprocals such as (12) from Yakut:

- (12) Yakut (Nedjalkov & Nedjalkov, Ch. 26, p. 1130)
Kini bu kihi-ni bil-si-bet etc.
 he this man-ACC know-REC-NEG AUX.PAST
 ‘He and this man did not know each other.’
 (Lit. ‘He did not know-mutually this man.’)

In Yakut, this is a completely unproductive pattern, but reciprocals of the type (11) have been reported to be productive in the northern Australian language Iwaidja (Evans 2007). Here reciprocals are formed in a way that is reminiscent of the *vice versa* construction in (8), though Evans explicitly says that the construction is monoclausal.

- (13) *anb-uku-n lda wamin a-ngurnaj*
 3PL.A>3PL.P-give-NPST and 3PL.REC 3PL-name
 ‘They used to give each other their (clan) names.’
 (Lit. ‘They gave them, and mutually, their names.’)

What languages typically do instead is to express the set of mutuants as a single argument occupying one of the two syntactic positions in which the mutuants are in the corresponding non-reciprocal clause pair. This argument will be called the **reciprocator** here. The other syntactic position will be called the **reciprocee**.⁴ The reciprocee position is either unfilled or is filled by a **reciprocal anaphor**, i.e. a noun phrase whose reference is dependent on and derivative of a nearby referential expression. The (metaphorically speaking)

4. Normally, there is only one reciprocee position per clause, though clauses with two reciprocee positions are possible when there are two reciprocal constructions:

- (i) *The participants introduced each other to each other.*
 (ii) *They put each other’s spoons on each other’s plates.*

process of transforming an “underlying” non-reciprocal construction into a reciprocal construction, and in particular the change brought about in the reciprocatee position, is called **reciprocalization**.

We see both subtypes of reciprocal constructions in (14)–(15), where the (a) example shows the corresponding non-reciprocal clause pair, and the (b) example shows the reciprocal construction.

- (14) reciprocatee is unfilled: Cashinahua (Camargo, Ch. 45, p. 1869)
- a. *paku-n haidu diti-ai. haidu-n paku diti-ai.*
Paco-ERG Jairo hit-PROGR Jairo-ERG Paco hit-PROGR
‘Paco is hitting Jairo, Jairo is hitting Paco.’
- b. *paku inun haidu diti-nanan-ai-bu.*
Paco and Jairo hit-REC-PROGR-PL
‘Paco and Jairo are hitting each other.’
- (15) reciprocatee is filled by an anaphor: Vietnamese (Bystrov & Stankevich, Ch. 47, p. 1943)
- a. *Lan yêu Hồng. Hồng yêu Lan.*
Lan love Hong Hong love Lan
‘Lan loves Hong. Hong loves Lan.’
- b. *Lan và Hồng yêu nhau.*
Lan and Hong love each.other
‘Lan and Hong love each other.’

In (14b), the object argument is reciprocalized, which means that it is not overtly expressed. The verbal reciprocal marker indicates it. In (15b), again the object argument is the reciprocatee, and here this is marked by the presence of the reciprocal anaphor *nhau*.

The discontinuous reciprocal construction is exemplified by (16a–c).

- (16) a. Polish (Wiemer, Ch. 11, p. 526)
Widzisz się z babcią dwa razy w tygodniu.
see.2SG REC with grandma two times in week
‘You and grandma meet (‘see each other’) twice a week.’
- b. Yakut (Nedjalkov & Nedjalkov, Ch. 26, p. 1128)
Kini aya-tə-n kəttə kuust-uh-a tūs-t-e.
he father-his-ACC with hug-REC-CONV AUX-PAST-3SG
‘He and his father hugged (each other) quickly.’
- c. Venda (Bantu; Maslova, Ch. 6, p. 344)
musidzana u khou rw-an-a na mutukana
girl 3SG PRES.CONT hit-REC-FV with boy
‘The girl and the boy are hitting each other.’
(Lit. ‘The girl is hitting each other with the boy.’)

The use of such discontinuous reciprocals is usually quite restricted lexically. It is only possible with verb-marked reciprocals (as noted by Nedjalkov, Ch. 1, §7.1, Ch. 3, §3.2; Dimitriadis 2007a):

Universal 4:

Only verb-marked reciprocals allow a discontinuous reciprocal construction.

4. Reciprocal anaphors

4.1 Anaphoric reciprocal constructions

A large class of reciprocal constructions contains two arguments that both refer to the entire set of mutuanants. Typical examples are (17a–d).

- (17) a. English
The friends trust each other.
- b. Lezgian (Haspelmath 1993:415)
Cükwer-a-ni Sajran-a čp-i-čeb qužaxlamiš-na.
 Cükwer-ERG-and Sajran-ERG selves-ERG-selves(ABS) embrace-AOR
 ‘Cükwer and Sajran embraced each other.’
- c. Bamana (Vydrine, Ch. 46, p. 1917)
Mūsà ní Fántà yé njǵn bǵɔ.
 Musa and Fanta PFV each.other strike
 ‘Musa and Fanta struck each other.’
- d. Polish (Wiemer, Ch. 11, p. 515)
Janek i Franek pomaga-l-i sobie.
 Janek.NOM and Franek.NOM help-PAST-PL self.DAT
 ‘Janek and Franek helped each other.’

In these four cases, the reciprocator gives a description of the set of mutuanants (either a conjoined NP or a nonsingular NP), and the reciprocee is represented by an **anaphoric expression** (or short: an *anaphor*) that refers to the same set.⁵ The anaphoric expression can be a “bipartite quantifier” (as in English and many other European languages), a non-quantifier bipartite expression (as in Lezgian),⁶ a single-part element that looks like a noun (as in Bamana; cf. Evans’s 2007 category “reciprocal nominal”), or a single-part element that looks like a pronoun (as in Polish). What all these have in common is that the anaphoric expression refers to the same set of entities as the reciprocator, but compared to reflexive constructions (which express simple situations), the coreference in the parallel permuted situations expressed by reciprocals is more complicated: The coreference obtains not between the sets as wholes, but between the individual members of the sets (in (17a), member A of {the friends} trusts member B of {each other}, member B

5. Nedjalkov uses the older term “reciprocal pronoun” for all of these forms, including those that look more noun-like than pronoun-like (e.g. in that they have no person distinctions).

Note that I am not using the term *anaphor* in the generative sense (where it contrasts with “pronominals” in the context of the Binding Theory), but in a more general sense for all anaphoric expressions. (However, in the context of reciprocal anaphors this difference is irrelevant, because all anaphoric reciprocal expressions in my sense are also reciprocal anaphors in the generative sense, so there is no danger of misunderstanding.)

6. In the typologies of König & Kokutani (2006) and Evans (2007), there seems to be an implicit assumption that bipartite reciprocal anaphors are “quantificational” in some sense, while single-word items are not. But the Lezgian example shows that bipartite anaphors need not have anything to do with quantification (see also the chapters on Yakut, Even, Evenki and Udehe in this work), and anaphors with a quantificational sense need not be bipartite (e.g. Finnish *toinen*, see (24) below).

of {the friends} trusts member A of {each other}, etc.). For this constellation, Nedjalkov sometimes uses the felicitous term **cross-coreference**.

Reciprocal constructions that include a reciprocal anaphor which is cross-coreferential with its antecedent will be called **anaphoric reciprocal constructions** here.⁷ A first universal about them is:

Universal 5:

All reciprocal constructions with two arguments that both refer to the set of mutuants are anaphoric reciprocal constructions.

That is, reciprocal constructions where the noun phrase denoting the set of mutuants is simply repeated, as in (18), are excluded by this universal.⁸

(18) **Taro and Jiro phoned Taro and Jiro.*

In anaphoric reciprocal constructions, an important question is what restrictions there are on the syntactic positions of the antecedent and the anaphor. This issue is only partially dealt with in the contributions to this work, but it has received considerable attention in the generative literature. We can start with Universal 6:

Universal 6:

In all languages, there are prominence-related restrictions and locality-related restrictions on the relation between an antecedent and a reciprocal anaphor.

4.2 Prominence-related restrictions on antecedent-anaphor combinations

Let us first look at the prominence relations. In canonical reciprocals, the antecedent must be the (more prominent) subject and the anaphor must be the (less prominent) object:

- (19) a. English
 **Each other pinched Aisha and Pedro.*
 b. Basque (Hualde & Ortiz de Urbina 2003:608)
 **Elkarr-ek Epi eta Blas maite ditu.*
 each.other-ERG Epi and Blas love AUX
 ‘Each other love(s) Epi and Blas.’

More generally, we can formulate:

7. An alternative term is *argumental reciprocal constructions*, which is based on the fact that anaphors behave like arguments of the verb.

8. Universal 5 can be taken to follow from Chomsky’s (1981) Binding Theory (Principle C), which says that “r-expressions are free” (= not bound). However, this presupposes that the peculiar cross-coreferential semantic relation of mutual situations falls under “binding”, and defining this concept in such a way as to apply equally to coreference and to cross-coreference is not straightforward.

Universal 7:

The more clearly two arguments differ in prominence, the easier it is for the more prominent argument to antecede the anaphor. Less prominent arguments cannot antecede more prominent arguments.

What exactly counts as “prominence” is a difficult question, and languages differ in this regard. For instance, in some languages it appears that the anaphor can occur in the subject position. Shkarban & Rachkov (Ch. 22, p. 922) give the following example from Tagalog:

- (20) *Nag-pasalamat-an ang isa't isa.*
 AG.REC.PFV-thank-REC NOM one.and one
 ‘[They] thanked each other.’ (lit. ‘Each other was thanked by them.’)

In Tagalog, the “subject” relation is notoriously problematic in that the typical subject properties of European languages are split among two argument types, the (nominative) *ang*-argument and the actor *ng*-argument. As noted in Schachter (1976), the *ang*-argument tends to have the reference-related subject properties, and the actor *ng*-argument tends to have the role-related subject properties.⁹ In (20), it is the (omitted) actor argument that antecedes the anaphor, suggesting that anteceding a reciprocal anaphor is a role-related property.

This is confirmed by some facts from English: Note that it is typically the case that the passive agent cannot be a reciprocal anaphor, as seen in (21).

- (21) English
 ??*Aisha and Pedro were kissed by each other.*

This would suggest that prominence on a semantic-role hierarchy (e.g. agent > recipient > patient) is also relevant, not just prominence on a syntactic-function hierarchy (subject > object).

The situation is similar in ditransitive constructions. In many cases, the direct object is clearly more prominent than the indirect object, so that only the latter can be expressed anaphorically:

- (22) English
 a. *I introduced my colleagues to each other.*
 b. **I introduced each other to my colleagues.*
- (23) German
 a. *Ich zeigte die Kinder einander auf dem Foto.*
 ‘I showed the children (ACC) to each other (DAT) on the photo.’
 b. **Ich zeigte einander den Kindern auf dem Foto.*
 ‘I showed each other (ACC) to the children (DAT) on the photo.’

9. In this paper, I follow Nedjalkov’s practice of using the terms “subject”, “direct object”, and “indirect object” in a semantic sense: The subject is the S/A-argument, the direct object is the P-argument, and the indirect object is the R-argument (see Dryer 2007 for the definition of these semantic role-types).

(24) Finnish (Kaiser 2002:3)

- a. *Minä esittel-i-n Liisa-n ja Mari-n toisi-lle-en.*
 I introduce-PAST-1SG Liisa-ACC and Mari-ACC each.other-ALL-3
 'I introduced Liisa and Mari to each other.'
- b. **Minä esittel-i-n toise-nsa Liisa-lle ja Mari-lle.*
 I introduce-PAST-1SG each.other-3 Liisa-ALL and Mari-ALL
 '*I introduced each other to Liisa and Mari.'

But when the recipient is more topical than the theme and precedes it, the reciprocal construction becomes much worse:

(23) German

- c. **Ich zeigte einander die Kinder auf dem Foto.*
 'I showed to each other (dat) the children (acc) on the photo.'

(24) Finnish (Kaiser 2002:4)

- c. [?]*Minä esittel-i-n toisi-lle-en Liisa-n ja Mari-n.*
 I show-PAST-1SG each.other-ALL-3 Liisa-ACC and Mari-ACC
 'I showed to each other Liisa and Mari.'

4.3 Locality-related restrictions on antecedent-anaphor relations

Now let us take a brief look at locality relations. Again, so far we can formulate a universal only in very general terms:

Universal 8:

If the antecedent and the reciprocal anaphor are coarguments of the same predicate, all languages with reciprocal anaphors allow the construction (unless it is pre-empted by some even more grammaticalized construction). The less local the relationship between the antecedent and the recipient is, the less likely it is that it is acceptable.

The following implicational scale can be set up as a first attempt (see also Nedjalkov, Ch. 1, §12.4):

- (25) coargument > possessor of coargument > subject of complement clause > nonsubject of complement clause

The contrast between a coargument and a possessor can be illustrated by German, which does not allow its reciprocal anaphor *einander* to occur as a possessor, in contrast to English:

- (26) *Aischa und Pedro telefonierten mit-einander.*
 'Aisha and Pedro talked to each other on the phone.'
- (27) *Aischa und Pedro telefonierten mit {*einander's Müttern/ ??den Müttern von-einander}.*
 'Aisha and Pedro talked to each other's mothers on the phone.'

English at least marginally allows *each other* to occur as the subject of a complement clause, as in the following examples (see also Haas 2007:44–45):

- (28) a. *Miss C. and I are going to find out what each other are like.* (Jespersen 1924:224)
 b. *?The twins wanted to know what each other were/was doing.* (Quirk et al. 1985:365)
 d. *John and Mary haven't decided what each other should do.* (Everaert 1999:74)

In Japanese, not only a subject, but also an object of a complement clause can be in the appropriate domain (Nishigauchi 1992:159–160):

- (29) *John to Mary-ga [otagai-ga Bill-o seme-ta to] omot-ta (koto)*
 John and Mary-NOM each.other-NOM Bill-ACC accuse-PAST that think-PAST that
 'John and Mary thought that each other accused Bill.'
 (30) *John to Mary-ga [kono ziken-ga otagai-o kizutuke-ta to] omot-ta*
 John and Mary-NOM this incident each.other-ACC hurt-PAST that think-PAST
 (koto)
 that
 '*John and Mary thought that this incident would hurt each other.'

However, Nishigauchi notes that (30) is possible only because the subject is inanimate. The equivalent of **John and Mary thought that Bill accused each other* is impossible in Japanese as well.

Even in English, less local examples have occasionally been cited in the literature:

- (31) a. *They₁ think it bothered each other₁ that the pictures are hanging on the wall.* (Kuno 1987)
 b. *[Bush and Dukakis]₁ charged that General Noriega had secretly contributed to each other's₁ campaign.* (Pollard & Sag 1992)

When the subject of the complement clause is coreferential with a main-clause argument, a long-domain interpretation can be found even for languages that are otherwise much more restrictive:

- (32) a. Russian (Knjazev, Ch. 15, ex. 92)
Dmitrij i Ivan pokljalis' pogubit' odin drug-ogo.
 Dmitri and Ivan swore ruin one other-ACC
 '[Dmitri and Ivan]₁ swore to ruin each other₁.'
 b. German
Dmitrij und Iwan schworen, einander zu ruinieren.
 '[Dmitri and Ivan]₁ swore to ruin each other₁.'

Since it is unlikely that Dmitri and Ivan wanted to be ruined, these sentences are most naturally interpreted as 'Dmitri swore to ruin Ivan, and Ivan swore to ruin Dmitri'. This is possible not only with infinitival complement clauses, but also with finite ones:

- (33) a. English
John and Mary think they like each other. (Heim et al. 1991:65)
 'John thinks that he likes Mary, and Mary thinks that she likes John.'
 b. Hebrew (Siloni 2007, ex. 4b)
Dan ve-Ron ?amru ?e-hem nicxu ?ehad ?et ha-šeni b-a-gmar.
 Dan and-Ron said that-they defeated one ACC the-second in-the-finale
 'Dan and Ron said that they defeated each other in the finale.'

It seems that in general, less grammaticalized reciprocal anaphors have fewer locality constraints. Thus, as noted by Knjazev, in example (32) the Russian anaphor *odin drugogo* is used (rather than the more grammaticalized *drug druga*), and in Basque, only the anaphor *bata bestea* ‘one the other’ can be used outside the immediate clause of the antecedent, while the more grammaticalized *elkar* cannot:

- (34) Basque (Hualde & Ortiz de Urbina 2003:613)
*Epi-k eta Bert-ek ez dakite {*elkarr-ek/ bata bestea-k} zer egin duen.*
 Ernie-ERG and Bert-ERG not know each.other-ERG one other-ERG what do AUX.COMP
 ‘Ernie and Bert don’t know what each other will do.’

5. Verb-marked reciprocals

Verb-marked reciprocals have a verbal marker that is closely associated with the verb but is not a reciprocal anaphor, i.e. does not behave like an argument of the verb in any way. Two examples are given in (35) and (36).

- (35) Japanese (Alpatov & Nedjalkov, Ch. 25, p. 1032)
Taroo to Akiko wa aisi-at-te-iru.
 Taro and Akiko TOP love-REC-CONT-NPAST
 ‘Taro and Akiko love each other.’
- (36) Chukchi (Nedjalkov, Ch. 40, ex. (1b))
Eqelʔ-an ənkiʔam ətləy-an penrə-wəly-ə-γʔat.
 enemy-ABS and father-ABS attach-REC-AOR.3PL
 ‘The enemy and father attacked each other.’

Verbal markers of this type and reciprocal anaphors are the two most important kinds of **reciprocal markers** (for other types, see Nedjalkov, Ch. 3). Throughout this paper, reciprocal markers are highlighted by boldface in the examples.

Verb-marked reciprocals most commonly signal the reciprocalization of the direct object, as in example (14b) from Cashinahua above, and as in (35)–(36). But in addition to the direct object, also other arguments can be reciprocalized in verb-marked reciprocals. Nedjalkov talks about different **diathesis** types to describe the different positions of the reciprocatee. In addition to the “canonical” diathesis of (35)–(36), he distinguishes an “indirect” diathesis (the reciprocatee is indirect object), a “possessive” diathesis (the reciprocatee is possessor of an argument), and an “adverbial” diathesis.

- (37) Indirect reciprocal: Kolyma Yukaghir (Maslova, Ch. 44, p. 1843)
legul-ek n'e-kes'i-l
 food-FOC REC-bring-1PL.OF
 ‘We have brought each other food.’
- (38) Possessive reciprocal: Yakut (Nedjalkov & Nedjalkov, Ch. 26, p. 1118)
Kiniler oyo-loru-n bil-s-el-ler.
 they child-their-ACC know-REC-PRES-3PL
 ‘They know each other’s children.’

Since the reciprocee is generally not overt in verb-marked reciprocal constructions, it would be helpful if there were some other way of identifying it, e.g. by different reciprocal markers for different syntactic functions or semantic roles of the reciprocee. Surprisingly, this seems to be a rare phenomenon, if it ever happens at all.

Universal 9:

Different verbal reciprocal markers are never used for different diathesis types.

As is noted by Nedjalkov (Ch. 1, §12.1.1.2, p. 56), some languages (such as Ainu) with verb-marked reciprocals do not have reciprocals from intransitive bases, but all have verb-marked reciprocals from transitive bases:

Universal 10:

If a language has verb-marked reciprocals based on intransitive verbs, it also has verb-marked reciprocals based on transitive verbs.

What these four diathesis types share is that the reciprocator (i.e. the overtly expressed argument) is the subject. In Nedjalkov's terminology, they are all **subject-oriented**. There are no verbal reciprocals in which the subject is reciprocalized and a non-subject becomes the reciprocator. Thus, we do not find reciprocals like those shown schematically (39) in any language. In these schematic examples, first the two corresponding non-reciprocal sentences are given, then the (hypothetical, non-occurring) non-subject-oriented reciprocal, and then the corresponding (widely occurring) subject-oriented reciprocal. Here "Ø" stands for the reciprocee position that is unfilled.

- | | | |
|---------|-------------------------------------|--|
| (39) a. | I love you. You love me. | → *Ø Love-REC us.
(OK: We love-REC Ø.) |
| b. | I gave you it. You gave me it. | → *Ø Gave-REC us it.
(OK: We gave-REC Øit.) |
| c. | I hold your hand. You hold my hand. | → *Ø Hold-REC our hand.
(OK: We hold-REC Ø's hand.) |
| d. | I come to you. You come to me. | → *Ø Come-REC to us.
(OK: We come-REC Ø.) |

We can therefore formulate another universal (this relates only to reciprocals in which subject is involved, not to object-oriented reciprocals like (3a) above where the reciprocator is an object and the reciprocee is an oblique participant):

Universal 11:

In verbal reciprocals, the reciprocator is always the subject, and the reciprocee can only be the direct object, the indirect object, the possessor of a co-argument, or an adverbial.

In this respect, verb-marked reciprocals are quite similar to anaphoric reciprocals, where, as we saw, the antecedent has to be in a prominent syntactic position, and the anaphor must be in a less prominent position.

Verb-marked reciprocals also show very rigid locality constraints: they are completely impossible with a non-local reciprocee:

- (40) I think that you are wrong. You think that I am wrong.
 → *We think-REC that Ø be wrong.

For the four occurring diathesis types, Nedjalkov (Ch. 1, §12.4, p. 69) notes that they can be arranged on an implicational scale, from the most common to the least common type:

- (41) Scale of Verb-marked Diathesis Types
 “canonical” diathesis > “indirect” diathesis > “possessive” diathesis > “adverbial” diathesis

The associated implicational universal is:

Universal 12:

If a language has verb-marked reciprocals with one of the diatheses on the Scale of Verb-marked Diatheses Types, it also has all other types to the left.

This is analogous to the implicational scale in (25) above. But verb-marked reciprocals are stricter than anaphoric reciprocals in two further respects. First, object-oriented reciprocals are more rarely verb-marked than subject-oriented reciprocals:

Universal 13:

If a language has a verb-marked object-oriented reciprocal construction, it also has a verb-marked subject-oriented construction.

Most languages with verb-marked reciprocals that are described in this work seem to have only subject-oriented reciprocals. Ainu is an example of a language whose verbal marker (*u-*) can be used both for subject-oriented and for object-oriented reciprocals.

Second, verb-marked “possessive” reciprocals are quite restricted with respect to the position of the co-argument whose possessive modifier is reciprocalized:

Universal 14:

In verb-marked “possessive” reciprocals, the co-argument whose possessive modifier is the reciprocee must be the direct object.

That is, we find reciprocalizations such as (42), but not (43a–b), where the co-argument is a locative and an instrumental, respectively.¹⁰

- (42) I scratched your back. You scratched my back.
 → We scratched-REC Ø’s back.
- (43) a. I slept in your bed. You slept in my bed.
 → *We slept-REC in Ø’s bed.
- b. I cut it with your knife. You cut it with my knife.
 → *We cut-REC it with Ø’s knife.

10. An exception is the Even example cited by Nedjalkov in Ch. 1, p. 55.

6. Verb-marked vs. anaphoric reciprocals

The distinction between verb-marked and anaphoric reciprocals is not always completely straightforward. It is clearest when the reciprocal anaphor behaves like a noun phrase in all relevant respects (e.g. occurring with adpositions, inflecting for case, showing number distinctions), and when the verbal marker behaves like a valency-changing affix in all relevant respects (e.g. occurring between the stem and tense-aspect-mood affixes).

The distinction becomes more problematic when the reciprocal anaphor is a verbal affix, or when the verbal marker is not an affix and varies for person. The former case is illustrated by Adyghe, which has a reciprocal prefix *zə-* that occurs in the same slot as the object agreement marker:

- (44) Adyghe (Letuchiy, Ch. 18, ex. 20a–b)
- a. *tə pxəð-r Ø-tə-gbəstə.*
 we.OBL firewood-ABS 3SG.DO-1PL.A-burn
 ‘We burn firewood.’
- b. *zə-d-gbəstə.*
 REC-1PL.A-burn
 ‘We burn each other/ourselves.’

Here there are no strong reasons not to say that the reciprocal prefix is an anaphoric element,¹¹ but the case of Djaru (Ch. 21) is more problematic, because in this Australian language, the bound reciprocal marker that occurs in the slot of bound pronouns may co-occur with free non-reciprocal pronouns, as in (45):

- (45) Djaru (Tsunoda, Ch. 21, p. 861)
- ngali-ngku nga=li=nyunu ngali nyanya.*
 1DU.INC-ERG CARRIER=1DU.INC.SB=REC 1DU.INC(ABS) see.PAST
 ‘We saw each other.’

Here it is less clear whether =*nyunu* is in an argument position (and hence an anaphor rather than a verbal marker), because *ngali* is clearly an argument.

Verbal markers that are not affixes and that vary for person are found in Romance, Germanic and Slavonic languages, e.g. German *sich* (cf. Ch. 10), Polish *się* (cf. Ch. 11), and French *se* (cf. Ch. 12). Although these *se*-type elements are usually called “reflexive pronouns”, the view is widespread that combinations such as German *sich schlagen* ‘hit each other’, Polish *bronić się* ‘defend oneself/each other’, French *s’aimer* ‘love oneself/each other’ should be regarded as reciprocal verbs rather than as anaphoric reciprocal constructions.

Siloni (2007) claims that reciprocal pronouns always allow long-distance antecedence, as seen earlier in (33). Thus, the fact that (46a–b) from French and Czech are impossi-

11. Note that Nedjalkov (Ch. 1, §2.2.3, Ch. 3, §1.1) uses the term “anaphoric marker” even for elements that have no properties of noun phrases at all (e.g. verbal reciprocal markers such as Chukchi *-wəly* and Evenki *-meet*), as long as they only express reflexive and/or reciprocal meaning. It seems to me that restricting the term *anaphoric* to argument-like elements is more standard than Nedjalkov’s use (the idea behind this is that anaphoric elements are referential, and only argumeent-like elements can carry reference).

ble (or only have a contradictory reading with clause-bound antecedence) would show that French *se* and Czech *se* are not reciprocal pronouns, but rather verbal markers (“operators”).

- (46) a. French
 **Pierre et Jean ont dit qu'ils se sont vaincus à la finale.*
 ‘Pierre and Jean said that they defeated each other in the finale.’
 b. Czech
 **Dan a Petr říkali, že se porazili ve včerejší šachové partii.*
 ‘Dan and Petr said that they defeated each other in yesterday’s chess game.’

Another argument that is frequently made for French is that *se*-verbs are treated as intransitives in causative constructions with *faire* (e.g. Dimitriadis 2004; Siloni 2007). In causatives of intransitives, the causee becomes a direct object (*les* in 47a), while in causatives of transitives, the causee becomes an indirect object (*leur* in 47b). The reciprocal *se*-verb in (47c) behaves like the intransitive in (47a) in requiring a direct-object causee.

- (47) a. *Marie les fait courir.*
 ‘Marie makes them run.’
 b. *Marie les leur fait embrasser.*
 ‘Marie makes them kiss them.’
 c. *Marie les fait s’embrasser.*
 ‘Marie makes them kiss each other.’

For Serbo-Croatian, Zec (1985) argues that *se* is not an argument of the verb, citing its behaviour in comparative constructions (see also Dimitriadis 2004, who provides ex. 18b).

- (48) a. *Petar je branio sebe uspešnije nego Ana.*
 Peter AUX defended himself better than Ana.ACC
 ‘Peter defended himself better than (he defended) Ana.’
 b. **Lekari su se branili uspešnije nego Ana.*
 doctors AUX REC defended better than Ana.ACC
 ‘The doctors defended each other better than (they defended) Ana.’

Following Zec, Mchombo (1993) shows that in the Bantu language Chichewa, the reciprocal suffix *-án* does not behave as an argument with regard to this test, while the reflexive prefix *dzi-* does behave as an argument (which is not surprising, given that *-án* occurs in a position typical of valency-changing markers, while *dzi-* occurs in the object prefix slot). It would be interesting to know whether Adyghe *zə-* also behaves like an argument with regard to this test.

For German, the tests mentioned here are either not applicable or seem to point to an anaphoric status of *sich*. However, Gast & Haas (2007), who highlight the fact that *sich* cannot have reciprocal meaning when it occurs after prepositions, argue that *sich* is a clitic-like element after all (or more precisely, that there are two *sich* items, one clitic verbal marker and one argumental *sich*).

Before leaving the topic of verb-marked vs. anaphoric reciprocals, let us note one additional generalization that concerns a diachronic tendency (cf. Nedjalkov, Ch. 3, §3.2):

Universal 15:

Anaphoric reciprocal constructions show a much greater tendency of being replaced than verb-marked reciprocals. Thus, in almost all languages that have both an anaphoric and a verb-marked reciprocal, the former is younger and etymologically more transparent.

7. **Allelic predicates**

All languages seem to have a substantial number of simple words (verbs, adjectives and nouns) that denote mutual configurations by themselves, without occurring in a special grammatical (morphological or syntactic) construction. They fall into a small number of semantic classes:

- (49) a. verbs of competition: ‘fight’, ‘quarrel’, ‘negotiate’, ‘argue’
 b. verbs of joint action: ‘communicate’, ‘play chess’, ‘consult’
 c. verbs of connecting: ‘combine’, ‘unite’, ‘acquaint’, ‘compare’, ‘mix’
 d. verbs of dividing: ‘separate’, ‘distinguish’
 e. predicates of (non-)identity: ‘same’, ‘similar’, ‘different’, ‘match’
 f. relationship nouns: ‘friend’, ‘colleague’, ‘compatriot’, ‘cousin’.

Such non-derived lexemes denoting mutual configurations are called **allelic predicates** here.¹² Given the definition of *reciprocal* in §1, an allelic predicate is a special kind of reciprocal predicate, and consequently the term **lexical reciprocal**, which is generally used in this work for allelic predicates, is not inappropriate. However, it seems that for a number of reasons a special new non-compound term would be helpful:

(i) Allelic predicates of the type in (49) are more often discussed outside the context of reciprocals (e.g. Lakoff & Peters 1969; Gleitman et al. 1996) than in the context of reciprocals, so that they deserve a special term that is not derived from *reciprocal*.

(ii) The most commonly used term, *symmetric predicate*, is problematic because grammatical reciprocals also express symmetric (= mutual) situations. To address this point, one would have to resort to a clumsy term like *inherently symmetric predicate* (cf. Dixon’s (1991:59) term *inherently reciprocal verb*).

(iii) The term *lexical* is used in a number of different ways. In particular, it is often used for complex derived forms that are supposed to be nevertheless part of the “lexicon” (as opposed to the “syntax”). For instance, according to Reinhart & Sioni (2005), verb-marked reciprocals in Hebrew, Hungarian and Russian are formed in the lexicon (and could thus be described as “lexical reciprocals”).

In the Questionnaire (Nedjalkov & Geniušienė, Ch. 8, p. 413), there is a question “Are there any lexical reciprocals in the language under study?”, but as Knjazev (Ch. 2, p. 117) points out, it is very likely that Universal 16 is true (see also König & Kokutani 2006: 274):

12. Based on Greek *allēlo-* ‘each other, mutual’.

Universal 16:

All languages have allelic predicates (= lexical reciprocal predicates).

It also seems that universally, allelic predicates fall into the semantic classes given in (49) above, and that all languages have both subject-oriented and object-oriented lexical reciprocals (so that the two questions 66–67 in the Questionnaire, p. 414, are likewise redundant).

There is some question about how precisely allelic (=lexical reciprocal) predicates should be defined. According to Nedjalkov (Ch. 1, §2.3, p. 14), “these are words with an inherent reciprocal meaning”, but he includes not only cases of unanalyzable (“non-marked”) predicates (*to argue, to combine, next to, colleague*), but also reciprocal deponents (*reciproca tantum*), i.e. reciprocal predicates with a reciprocal marker whose base form does not occur without this marker (e.g. French *se bagarrer* ‘fight’; **bagarrer* does not exist on its own). This is problematic, because one could argue for such predicates that since the reciprocal marker is present, the root itself does not have a mutual meaning, so that *se bagarrer* would not count as “inherently reciprocal” in meaning. It appears that the term *lexical reciprocal*, as used in this work, should be defined as “a reciprocal predicate that cannot be derived in a regular way from a non-reciprocal base”. This would also take care of “lexicalized” reciprocals, for which a base exists, but where the semantic relationship between the base and the reciprocal is not regular.¹³

Allelic predicates can usually be used both in a simple construction, as in (50), where the set of mutuants is expressed by a single argument, and in a discontinuous construction, as in (51), where there are two arguments.

- (50) a. *Ram and Dolores quarreled.*
 b. *I compared Rubens and Rembrandt.*
 c. *Kurdish and Persian are similar.*
 d. *Lisi and Aisha are colleagues.*
- (51) a. *Ram quarreled with Dolores. (=Dolores quarreled with Ram.)*
 b. *I compared Rubens with Rembrandt. (=I compared Rembrandt with Rubens.)*
 c. *Kurdish is similar to Persian. (=Persian is similar to Kurdish.)*
 d. *Lisi is Aisha’s colleague. (=Aisha is Lisi’s colleague.)*

The members of the two sentence pairs are roughly synonymous, but of course not fully (cf. Gleitman et al. 1996 for some discussion from a psychological point of view). Since the oblique argument of a discontinuous construction is often optional (i.e. can be omitted with an indefinite or definite interpretation), simple constructions like (50) are often

13. Nedjalkov (Ch. 1, §2.3, (iv)) also considers subsuming unproductive (but regular) reciprocals like Russian *obnimat’sja* ‘embrace each other’ under lexical reciprocals. But to do that, one would have to broaden the definition even further, to “reciprocal predicates that cannot be derived productively from a non-reciprocal base”. Unproductive reciprocals are necessarily “lexical” in the sense that speakers must remember them and keep them in their mental lexicon. But speakers probably also have many productively formed reciprocals in their mental lexicon, and presumably nobody would want to define *lexical reciprocal* as “reciprocal predicate that (some? all?) speakers have in their mental lexicon”. So a definition based on unanalyzability or irregularity seems preferable.

ambiguous. Thus, (50a) can also mean ‘Ram and Dolores quarreled with someone else’, and (50c) can also mean ‘Kurdish and Persian are similar to some other contextually given entity’.¹⁴

There are also some allelic predicates that can only be used in the simple construction:

- (52) English (Nedjalkov, Ch. 1, p. 15, 99)
- a. *My father and the neighbor are alike.*
 - b. **My father is alike with the neighbour.*
- (53) German (Wiemer & Nedjalkov, Ch. 10, p. 499)
- a. *Der Rektor versammelte die Professoren und Dozenten.*
‘The rector gathered the professors and instructors.’
 - b. **Der Rektor versammelte die Professoren mit den Dozenten.*
(lit. ‘The rector gathered the professors with the instructors.’)

And some allelic predicates can only be used in the discontinuous construction:

- (54) English (cf. Nedjalkov, Ch. 1, §16.2.2, p. 100)
- a. *Kurdish resembles Persian.*
 - b. **Kurdish and Persian resemble.*

The verb *resemble* is also unusual in that it is transitive. It seems that many languages completely lack such transitive allelic predicates, and even English, where transitive verbs are used very widely, has only relatively few of them (*match*, *marry*, *meet* are further examples).

8. Uniplex vs. multiplex mutual events

Mutual configurations show the mutnants in multiple roles, and this may or may not involve several different sub-events. A clear case with multiple sub-events is (55):

- (55) *Ram and Dolores told each other a secret.*

Here there must be two telling events and two secrets involved, because secret-telling is not an action that can be carried out jointly and in a mutual way, so that a single event would result. By contrast, a clear case where there is just a single event is (56):

- (56) *Pedro and Aisha quarreled (with each other).*

14. This ambiguity is exploited in the joke cited by Evans (2007):

“Receptionist at hotel, as couple checks in: Are you married? Man: Yes. Woman: Me too.”

The receptionist had intended the simple construction, whereas the second answer shows that the discontinuous construction with an omitted argument was understood (‘married to someone (else)’).

This can be paraphrased as ‘Pedro quarreled with Aisha’ or as ‘Aisha quarreled with Pedro’ (depending on the perspective one wants to adopt), but the situation cannot be said to consist of these two sub-events. Example (56) describes just a single event.

The contrast between (55) and (56) can be described by saying that (55) denotes a **multiplex mutual event**, while (56) denotes a **uniplex mutual event** (for the term pair *uniplex/multiplex*, see Talmy 1988: 176).

Uniplex mutual events have been discussed under the heading of *naturally reciprocal events* by Kemmer (1993: §4.1.3), where it is observed that “Naturally reciprocal events are characterized by a low degree of distinguishability of the two events that constitute the relations between the participants” (p. 112). Kemmer notes that in pairs such as (57a–b), (58a–b), the (a) sentence can express two separate kissing actions, while in the (b) sentence there is “almost certainly only one kiss involved; the kissing actions of the two participants are simultaneous and virtually indistinguishable” (p. 111).

(57) English (Kemmer 1993: 111)

- a. *John and Mary kissed each other.*
- b. *John and Mary kissed.*

(58) Modern Greek (Dimitriadis 2004: §1)

- a. *O Jánis ke i María fili-s-an o énas ton alo.*
the Jannis and the Maria kiss-AOR-3PL the one the other
‘Jannis and Maria kissed each other.’
- b. *O Jánis ke i María filí-θik-an.*
the Jannis and the Maria kiss-REC.AOR-3PL
‘Jannis and Maria kissed.’

Dimitriadis (2004) uses the term *irreducibly symmetric event* for the second type, and characterizes it as “expressing a binary relationship whose participants have necessarily identical participation.”

Kemmer notes that the distinction between simultaneous and sequential actions is relevant here in that only multiplex mutual events can express sequential actions. This is shown by the contrast in (59).

(59) English (Kemmer 1993: 113)

- a. *John and Mary kissed each other, one after the other.*
- b. **John and Mary kissed, one after the other.*

Siloni (2002: 391) suggests a further way of showing more clearly how multiplex mutual events differ from uniplex mutual events. When a multiplicative adverbial (‘five times’) is added, it becomes clearer how many events are described:

(60) Hebrew

- a. *Dan ve-Ron nišku ?eħad ?et ha-šeni ħameš pešamim.*
Dan and-Ron kissed one ACC the-other five times
‘Dan and Ron kissed each other five times.’
(i.e. there were five or ten kissing events)

- b. *Dan ve-Ron hit-našku ħameš peʿamim.*
 Dan and-Ron REC-kissed five times
 ‘Dan and Ron kissed five times.’ (i.e. there were five kissing events)

The anaphoric reciprocal construction in (60a) can express a multiplex or a uniplex event, but (60b) can express only a uniplex event (see also Dimitriadis 2004; Siloni 2007).

The distinction between uniplex and multiplex events is also reflected in a reduplicative pattern in Madurese, as discussed by Davies (2000: 128–130). In this western Austronesian language, pre-reduplication of the verb’s final syllable expresses iterative events consisting of separate sub-events, as illustrated by (61) and (62).

- (61) *Ali ban Hasan ger~moger kabungkaan du jam ban nanəm obi.*
 Ali and Hasan ITER~AV.fell tree two hour and AV.plant obi
 ‘Ali and Hasan cut down trees for two hours and (in between) planted obi.’
- (62) *Ali ban Siti biq~nobiq kanaq jhuwa. Ali gik are sənən. Siti gik are*
 Ali and Siti ITER~AV.pinch child that Ali just day Monday Siti just day
səlasa.
 Tuesday
 ‘Ali and Siti pinched that guy (more than once). Ali did so on Monday and Siti did so on Tuesday.’

In (61), the second activity of obi-planting need not follow the entire activity of tree-felling, but the two can occur interleaved with each other, because *germoger kabungkaan* refers to a multiplex event.¹⁵ In (62), the last two sentences show that the multiple pinchings occurred quite separately from each other. Likewise, reduplicated reciprocals express multiplex events:

- (63) *Bambang biq Ita ghuk~teghuk-an tanang du jam ban nendang bal.*
 Bambang and Ita REC~take-REC hand two hour and AV.kick ball
 ‘Bambang and Ita held each other’s hand for two hours and kicked a ball.’
- (64) *Ali biq Hasan rem~kerem-an sorat. Ali ngerem are sənən. Hasan ngerem are*
 Ali and Hasan REC~send-REC letter Ali AV.send day Monday Hasan AV.send day
səlasa.
 Tuesday
 ‘Ali and Hasan sent each other letters. Ali sent his on Monday and Hasan sent his on Tuesday.’

That these are reciprocal is shown by the obligatory *-an* suffix and the lack of the actor-voice morphology on the verb (cf. footnote 3). Reduplicated reciprocals like (63)–(64) contrast with non-reduplicated reciprocals that express uniplex mutual events:

- (65) *Ali biq Hasan a-temo daq taman.*
 Ali and Hasan AV-meet in park
 ‘Ali and Hasan met in the park.’

15. As Davies shows, this contrasts with the durative suffix *-e* (*moger-e*), which expresses a single (uniplex) protracted event.

- (66) *Ita biq Bambang a-seom.*
 Ita and Bambang AV-kiss
 ‘Ita and Bambang kissed (each other).’

Verbs like ‘kiss’ can also reduplicated, and then we have a complex event again:

- (67) *Ita biq Bambang om~seom-an.*
 Ita and Bambang REC~kiss-REC
 ‘Ita and Bambang kissed (each other) (several times).’

Given the distinction between multiplex and uniplex mutual events, we can formulate another universal (cf. Dimitriadis 2004):

Universal 17:

In all languages, all allelic predicates express uniplex mutual events. Multiplex mutual events can only be expressed by grammatical reciprocals.

As Dimitriadis (2004:§3.3) points out, allelic predicates must express uniplex events even if they occur with reciprocal anaphors. In contrast to (60a) above, (68b) can only have a uniplex reading (‘There were a total of five meetings between John and Mary’), and it is synonymous with (68a).

- (68) a. *John and Mary met five times.*
 b. *John and Mary met each other five times.*

9. Reciprocal deponents

As noted by Kemmer (1993:106–107), reciprocal deponents always express “naturally reciprocal events” (see Nedjalkov, Ch. 1, §2.3, p. 14, for examples of reciprocal deponents):

Universal 18:

Reciprocal deponents (i.e. verbs with reciprocal marking and mutual meaning that lack a corresponding unmarked non-mutual base form) always express uniplex mutual events.

This is a special case of Universal 17 if reciprocal deponents are included in the class of allelic predicates, following the general practice of this work.

It is probably useful to distinguish further between **strong reciprocal deponents** and **weak reciprocal deponents**. The former are reciprocals like French *se bagarrer* ‘fight’, where the corresponding base form simply does not exist (**bagarrer*). Weak reciprocal deponents are reciprocals whose meaning cannot be derived in a straightforward way from the corresponding base form. Two examples are given in (69).

(69) weak reciprocal deponents

- a. Turkish *gör-üş-* ‘meet’ (‘see each other’) *gör-* ‘see’
(Haiman 1983:806)
- b. Norwegian *slå-ss* ‘fight’ (‘hit each other’) *slå* ‘hit’
(Kemmer 1993:111)

Weak reciprocal deponents are often called “lexicalized” (e.g. Kemmer 1993:111; Nedjalkov, Ch. 1, §2.3), which is apparently meant to indicate that their origin is still fairly transparent: They started out as regular derived reciprocals, but were used so frequently that some speakers stored them holistically in their mental lexicons. This was the precondition for the semantic shift that occurred, and as a result of the semantic shift, all speakers now need to have these reciprocals in their lexicons. Like strong deponents and other allelic predicates, they cannot express multiplex events:

Universal 19:

Weak reciprocal deponents (i.e. verbs with reciprocal marking and mutual meaning that diverge semantically from their (erstwhile) base form) always express uniplex mutual events.

Again, Universal 19 is a special case of Universal 17, but it is worth stating separately, because it is interesting to ask what the explanation is: Can reciprocals shift their meaning only if they denote uniplex events? Or can grammatical reciprocals become part of a speaker’s mental lexicon (thus fulfilling a precondition for meaning drift) only if they denote uniplex events? Or are only uniplex-event-denoting reciprocals frequent enough to become part of a speaker’s mental lexicon? I leave the issue unresolved here.

Another regularity concerns the reciprocal marker that is used in reciprocal deponents:

Universal 20:

In all languages, reciprocal deponents are verb-marked; anaphoric reciprocal constructions are never deponents.

One might object that markers like French *se*, Polish *się* and German *sich*, which sometimes occur in reciprocal deponents, are in fact reciprocal anaphors. But as we saw in §6, they are not very clear cases of anaphors, and some authors have argued that they are clitic (or even affixal, for French *se*) verbal markers. So if Universal 20 is weakened somewhat (“clear cases of anaphoric reciprocal constructions are never deponents”), it has an excellent chance of being correct.

10. Frequently mutual actions

Although I am not aware of any corpus studies, it is clear that some (expressions of)¹⁶ actions occur more often mutually than others (in terms of relative frequency, i.e. for some actions there is a greater proportion of mutual occurrences among all occurrences than for others). For instance, 'greet' is an action that is typically carried out in a mutual way, while 'poison' is an action that is normally carried out in a non-mutual way. Frequency asymmetries are typically mirrored by formal asymmetries in human languages (cf. Haspelmath 2007), so it is expected that frequently mutual actions will be expressed with less coding (and more cohesive coding) than rarely mutual actions:

Universal 21:

If a language has two reciprocal markers that differ in length, and if this language treats frequently mutual actions differently from rarely mutual actions with respect to these markers, then always the frequently mutual actions are expressed by the shorter marker, and the rarely mutual actions are expressed by the longer marker.

This generalization was originally observed by Haiman (1983:803–806) and highlighted again by Kemmer (1993:103–106). Kemmer's distinction between one-form languages (like many Bantu languages which use the verbal reciprocal marker *-an* for all verbs) and two-form languages (like Hungarian) is too simplistic, because many languages have more than two different reciprocal markers (as seen in many of the contributions to this work), but the basic observation and Haiman's explanation in terms of economic motivation seem to be correct.

However, we still know too little about the extent to which frequency differences correlate with grammatical differences, and since the contributions to this work do not give any frequency information, much further research is needed. However, it does seem to be clear that the Hungarian and Russian way of grammaticalizing frequency differences is not the only one possible. In these languages (and other European languages), the verb-marked reciprocals occur with a highly restricted class of verbs, but it is quite possible that in languages with many more verb-marked reciprocals, frequency differences still play a role.

Haiman and Kemmer are not careful to distinguish between necessarily mutual events (i.e. events expressed by allelic predicates) and frequently mutual events. Haiman talks about "symmetrical predicates" denoting "acts or states which are reciprocal, either necessarily (e.g. *be alike*) or very probably (e.g. *agree*, *meet*), and for which the expected case – that of reciprocity – need not be signaled overtly" (p. 803). But *agree* and *meet* are also allelic predicates, like *be alike*, because it is not possible to say **I met him, but he did not meet me*, or **I agree with her, but she does not agree with me*. Similarly, Kemmer introduces

16. When I talk about actions occurring frequently, this is a shorthand for expressions of actions occurring frequently in speech. It goes without saying that what kinds of actions occur in the world is irrelevant to language.

her “naturally reciprocal events” as “events that are either necessarily (e.g. ‘meet’) or else very frequently (e.g. ‘fight’, ‘kiss’) semantically reciprocal” (p. 102). Her term “naturally reciprocal” suggests that frequency is indeed the decisive criterion for identifying such reciprocals, because “natural” can only be understood as a synonym of “frequent” here. However, from the beginning of her discussion, Kemmer considers the natural reciprocals as an “event type” that is semantically defined, rather than in terms of frequency of use, and she ends up with a definition that is basically identical to my definition of uniplex mutual events (see §8 above).

There is very probably a strong correlation between frequently mutual events and uniplex mutual events, as formulated in Universal 23:

Universal 22:

In all languages, the overwhelming majority of all mutual event expressions denote uniplex mutual events.

However, the two concepts should still be kept separate, because frequently mutual verbs may still be used non-mutually, and this results in the contrast between the uniplex ‘meet’ and the non-uniplex (or not necessarily uniplex) ‘kiss’ that we saw in (57) and (68) above.

Frequency differences also lead to differences in preferred interpretation, as illustrated in (70).

- (70) a. *They talked for an hour.*
 b. *They played for an hour.*

In (70a), the preferred interpretation is that they talked to one another, because mutual talking is much more frequent than non-mutual talking (see also (5a–b) above). In (70b), the interpretation on which they played separately is much more readily available, because solitary playing is quite common as well.

With these verbs, the nonsubject arguments are generally optional, but there are also interesting cases of verbs whose direct object is normally obligatory, but that can omit it with a reciprocal interpretation. Such verbs can be called **zero-explicit** reciprocal verbs. The most widely cited language that has such verbs is English, and the most widely cited verb of this sort is *kiss*. Interestingly, English seems to have few other verbs that are like *kiss* (Levin (1993:201) mentions *court*, *embrace*, *hug*, *pet*). And I am not aware of many other languages that can express mutuality by the simple intransitive use of non-allelic transitive verbs. Kemmer (1993:103) mentions Twi, and Fortescue (Ch. 19, §3.1) says that West Greenlandic Eskimo has this option, though usually the reciprocal anaphor *immiC-* is added to the intransitive verb. Thus, zero-explicit coding of mutual situations seems to be very rare.

11. The Scale of Reciprocal Marker Independence

With some simplification, it is possible to arrange the main types of reciprocal markers on a one-dimensional scale that will allow us to formulate further generalizations:

(71) **Scale of Reciprocal Marker Independence** (“Independence Scale”)

separable bipartite anaphor > inseparable bipartite anaphor > single-part free anaphor > clitic anaphor > affixal anaphor > productive verbal marker > unproductive verbal marker > zero-explicit

A version of this scale was proposed by König & Kokutani (2006:282): “quantificational > pronominal > compound > synthetic”. My scale differs from theirs only in that I ignore the “compound” strategy (for reasons of space) and make further distinctions within their other three types. König & Kokutani note a number of generalizations, e.g. (somewhat trivially, because this is true throughout the language system), “an increase in morphological substance and complexity” as we move from right to left:

Universal 23:

The higher the reciprocal marker is on the Independence Scale, the longer it tends to be.

Moreover, Haiman’s and Kemmer’s discussion of economy-based contrasts between “light” and “heavy” reciprocal markers can probably be generalized to degrees of independence, so that not only Universal 21, but also Universal 24 is true:

Universal 24:

The more frequently a predicate is used mutually, the lower its marker will be on the Independence Scale.

Next, in moving from right to left on the scale, “we find fewer combinatorial restrictions as far as verbs and syntactic environments are concerned” (König & Kokutani 2006:282):

Universal 25:

The higher a reciprocal marker is on the Independence Scale, the fewer restrictions there are on its applicability.

Finally, Nedjalkov (Ch. 1, §3.1) points out a correlation between monosemy/polysemy and this scale: “Monosemous reciprocal markers are typically free morphemes/words (pronouns and adverbs), less frequently affixes... Polysemous reciprocal markers are mostly affixes and clitic pronouns.” Likewise, König & Kokutani note that “the range of possible meanings seems to increase as we move from left to right on the scale,” and they point out that this is just a special instance of a much larger Zipfian regularity. Nedjalkov notes exceptions to his generalization such as the monosemous reciprocal suffix *-wəly* in Chukchi, and the polysemous Polish reflexive-reciprocal free anaphor *siebie*, but the following universal should be true with very few exceptions:

Universal 26:

If a language has two different reciprocal markers that occupy different points on the Independence Scale, and they differ in the amount of polysemy, then the more independent marker will be less polysemous.

Clearly, a lot of empirical cross-linguistic work will have to be done in order to verify these universals. At present, quite a few of them are just more or less speculative claims, but it seems useful to make them explicit in order to instigate further cross-linguistic research.

Subject index

The general subject index consists of three parts: 1) terminological index; 2) semantic index (including 2a. notional and 2b. ontological indexes); 3) semantico-glossal index.

Three kinds of references are used: to the pages of Introduction (roman page numbers); to the pages of the main text (arabic numbers); to footnotes (thus, a reference like 1393n refers to a footnote on page 1393, etc.).

Indexes 1, 2a and 2b are organized according to nesting principles. The nest heading is marked bold. Its repetition in the initial position of the entry is indicated by the symbol ~. The symbol # denotes that the nest heading term fulfills a non-heading (subordinate) position in the corresponding NP, and that the term following # plays the heading role in the corresponding NP. The symbol * indicates repetition of the nest heading in a non-initial position in the NP.

For technical reasons, singular and plural forms of terms are not lemmatized as one unit; thus, they correspond to different entries.

In compiling these indexes, I used the STARLing software created by the late Prof. Sergej A. Starostin (Moscow) and I use this opportunity to express my deep gratitude to him.

Part 1. Terminological index

Part 1 contains only some selected intralinguistic terms proper. It does not include all the occurrences of the terms but only their significant occurrences.

All elements of “notional fields” and of “semantic ontology” are included in Part 2.

A	~ reciprocal 1651, 1664, 1671, 1673	~ preceding noun 1597
ablative xxv, 864, 937, 991, 1101, 1120, 1169, 1177, 1192, 1244, 1291, 1598, 1617, 1620, 1720	~ second 1671	adjective , agentive 735
absolutive xxv, 233, 572, 617, 642, 744, 865, 1173	actants # pragmatic ordering	~ agreement 566

Part 2. Semantic index

Part 2 consists of (2a) notional semantic index, and (2b) ontological semantic index.

Part 2a. Notional semantic index

Part 2a includes elements of notional fields. It contains words that describe meanings, functions, senses, values, readings, interpretations, etc. of language elements. Thus it is organized as a list of adjectival terms that occur before substantival terms like “function”, “interpretation”, “meaning”, “reading”, “sense”, “value”, etc. I treat such adjectives as semantic centers of the corresponding phrasal nests and, consequently, preserve the real word order of these NPs as they are used in the body of the text rather than use inverted order. The substantival terms like “meaning” in such NPs play the role of syntactic heads, rather than the role of “informationally kernel” components, therefore it is preferable to save the direct word order in the index as a more convenient way of arranging the components.

applicative functions 1841
 ~ meaning 1449, 1511, 1518, 1765,
 1789, 1827
 ~ senses 1517
argument function 962, 1480–1482,
 1507
arguments functions 1851
aspectual meaning 777, 1236, 1315,
 1468, 1638, 1839, 1999
 ~ value 127, 1493
 ~ values 1479, 1490, 1493, 1529
assertive meaning 1503
assistive interpretation 39, 1207

~ meaning 5, 33, 38–40, 42, 94, 209, 214, 227, 234, 237, 240, 277–281, 286n, 302, 322, 383, 442–443, 776, 797, 972, 1009, 1096, 1128, 1131–1132, 1139–1141, 1144–1145, 1164, 1201, 1206, 1208–1211, 1216, 1233, 1258–1259, 1309, 1311, 1316, 1324, 1326, 1887

~ reading 241, 797, 1098, 1166, 1207, 1210, 1258

assistive-reciprocal meaning 237n, 286

assistive/comitative interpretation 1393n

asymmetric meaning 130

attributive function 410, 614, 975, 999, 1508

autocausative interpretation 585

~ meaning 385, 443, 520, 523, 569, 783, 1289

~ readings 138

auxiliary meaning 1958

B

benefactive interpretation 1361, 1843

~ meaning 67, 68, 306, 455, 474, 514, 531, 1116, 1179, 1207, 1598, 1606, 1946, 2001

~ reading 473

~ sense 819, 831

benefactive, object-oriented meaning 1171

~ subject-oriented meaning 1171

benefactive-reciprocal interpretation 1046

~ meaning 286, 859, 869

~ reading 1043

benefactive-reflexive reading 539

C

causative function 85, 1649

~ meaning 85, 91, 273, 285, 286n, 292, 316, 317, 322, 713, 792, 798, 1055, 1142, 1174, 1224, 1261, 1270, 1407–1408, 1511–1512, 1518–1519, 1533, 1589, 1639, 1685, 1860–1861, 1966, 2001

~ sense 465, 570, 643, 1760

causative-reflexive meaning 232, 259

causativizing function 306

centrifugal meaning 1504

centripetal meaning 1504

chain interpretation 1395

classificatory meaning 1937

classifying meaning(s) 436, 914

coercive interpretation 1382

collective interpretations 828

~ meaning 1141, 1576, 1587, 1930

~ reading 527, 533, 537

~ sense 47, 1101

~ value 604

collective-simultaneous reading 556

comitative function 341, 343

~ interpretation 39, 246, 579, 1209, 1324, 1376

~ meaning 5, 27, 32, 37, 39–40, 93, 109, 209, 213, 232, 240, 251–253, 277, 280, 307, 309, 322, 397, 399, 449, 489, 495, 740, 742, 756–757, 796, 928, 934, 958–959, 972, 983, 1001, 1040, 1096, 1132, 1136, 1140, 1142, 1164, 1206–1208, 1233, 1285n, 1288, 1306–1307, 1309, 1311, 1316, 1324–1326, 1511, 1517, 1615, 1725, 1741, 1781, 1799, 1817, 1858, 1878, 1896, 1929, 1945, 1985, 2002

~ reading 240, 757, 1166, 1209

~ sense 97, 1207, 1769

comitative-causative meaning 286n

~ sense 819

comitative-reflexive meaning 227

comitative-sociative meaning 678

common sense 815

comparative value 1506

competitive interpretation 1046

~ meaning 21, 272–273, 276, 293, 299–300, 322, 324, 437, 441, 612, 970, 972, 976, 1000, 1006, 1025, 1045, 1046–1047, 1097, 1131, 1144, 1171, 1212, 1237, 1314, 1438, 1480, 1502, 1644, 1670, 1704, 1709

~ reading 300, 1002, 1046, 1047

~ sense 1006, 1042

complement function 573

compound functions 2055

concrete meaning 1259, 1498

conjunctional functions 816

conjunctive meanings 31

connecting meaning 549

contact-locative meaning 1096, 1143

converse meaning 319n, 446, 1096,

1142, 1259, 1309, 1333, 1335, 1809

converse-reciprocal meaning 325

coordinative function 31, 816, 945

coreferential reading 1417–1418

D

definite interpretation 2105

depatientive function 854, 1559, 1563, 1570n

detransitivizing function 291

diminutive meaning 314n

directional interpretation 1376

disconnecting meaning 549

discontinuous interpretation 1014

dispersive function 1567

~ meaning 282, 285, 956, 1512, 1532, 1705, 1841

dispersive-marking function 1569

distributional meaning 547

distributive function 410

~ meaning 46–48, 82, 250, 269, 281–282, 353, 369, 410, 424, 447, 592, 684, 948, 953, 1021, 1024, 1035, 1044, 1065–1066, 1075, 1192, 1327, 1332–1333, 1499, 1576, 1588, 1741, 1866, 1899–1900, 1906

~ reading 1069, 1075

~ sense 35, 689, 1076

distributive-reciprocal meaning 1072

diversative meaning 770, 1480, 1504, 1505, 1512, 1533

diversative/separative meaning 1480, 1505

dual interpretation 984, 1135, 1797

~ meaning 440, 1927

durative meaning 1529

E

elliptic interpretation 624

emphatic meaning 1351, 1361, 1364, 1364n, 1483n

exclusive reading 528

expression functions 950

extensive meaning 348, 1472

F

frequentative meaning 35, 285
functional meaning 1327, 1999

G

generalized function 741
 ~ meaning 492–494, 536, 653, 1736
 ~ sense 154
generic interpretation 1382
 ~ meaning 1493–1494
 ~ value 1493
genitive functions 816
global sense 553
group meaning 1867

H

habitual interpretation 1377n
 ~ meaning 297, 315, 346–347, 1512, 1532
 ~ sense 297
honorific sense 1345n
hortative meaning 1866, 1895, 1896

I

imitative meaning 1215
imperative sense 1981
imperfective meaning 944, 1102
inceptive meaning 222, 1686
inchoative meaning 296, 339, 634, 653, 657
inclusive meaning 1023, 1078
incorporative meanings 817
indefinite interpretation 2105
 ~ meaning 827
indefinite-personal meaning 624
indirect interpretation 24
initial meaning 90, 247, 1184
intensifying function 776
 ~ meaning 250, 410, 438, 1232, 1261, 1577, 1589, 1791, 1805
intensive interpretation 1502
 ~ meaning 77, 209, 220, 233, 249, 288, 291, 297, 313–315, 373, 1097, 1143, 1480, 1502–1504, 1576, 1586, 1678, 1704
 ~ sense 1523, 1637
intensive-durative meanings 291n
intensive-iterative meaning 182
intensive-stative meaning 315

intermediate meaning(s) 229, 291, 447
intransitive meaning 1142, 1633, 1649
intransitivizing function(s) 408, 713, 1699
iterative function 1697
 ~ meaning(s) 17–20, 180, 182, 231, 234, 235, 242, 247, 250, 281–283, 290–291, 314n, 315, 322, 348, 435, 446, 799, 1157, 1438, 1453, 1460, 1504, 1512, 1524, 1525, 1531, 1539, 1541, 1627n, 1637
 ~ sense 1455, 1457
iterative-durative meaning 283, 2082
iterative/durative meaning 2077

K

kinship-term function 1567

L

locational sense 824
locative function 861
 ~ meaning(s) 70n–71, 83, 105, 309, 358, 537, 796, 861, 1624, 1813, 1918
 ~ reading 496
 ~ semantics 414
 ~ values 56
locative/benefactive senses 832

M

mediating function 1395
middle meaning 186–187, 190, 192, 198, 1512, 1521, 1522
 ~ value 1494, 1519
middle-like function 1563
 ~ meanings 1563
modal meaning(s) 466, 521, 643, 778
modal-potential meaning 617
modal/adverbial meanings 1481
 ~ value(s) 1481, 1505
modifier function 948
multiplicative meaning(s) 684, 1643, 1658
mutual meaning 2083, 2105, 2109–2110

N

nominal function 1491
 ~ sense 1535
non-active meaning 1481, 1484
non-adversative meaning 1029
non-agentive reading 1423n
non-directional meanings 283
non-locative meanings 483, 794
non-mutual interpretation 2089
non-preconcerted meaning 1505
non-reciprocal functions 464, 513, 519
 ~ meaning(s) 20–21, 52, 118, 234, 321, 383, 384, 386, 400, 407, 424, 436, 442, 443, 492, 609, 617, 619–620, 664, 933, 940, 942, 954, 1009, 1011–1012, 1021, 1042, 1109, 1151, 1202, 1220, 1247, 1264, 1281, 1283, 1302, 1336–1337, 1343, 1456, 1481, 1512–1513, 1520, 1524, 1529, 1539, 1541, 1576, 1586, 1626, 1715, 1732, 1836–1837, 1854, 1866, 1886, 1934–1935, 1987, 2054, 2077
 ~ reading 1934, 2078
non-reflexive meanings 1368, 1380, 1382
non-sociative meanings 1282, 1319, 1326, 2003
non-spatial meaning 83, 212
 ~ meanings 209, 375, 424, 1148
non-volitional meaning 1504
numerative meaning 914

O

object function(s) 346, 1484
 ~ meaning 1970
object-oriented meaning(s) 266n, 455, 465, 513, 521, 609, 617, 1655n
 ~ reading 795, 1661, 1662
oblique meanings 870
oblique-reciprocal meaning 1847
oblique-reflexive meaning 859, 870
ornative meaning 1938, 1939

P

partitive meaning 1598
passive function 187, 190, 1294
 ~ meaning 106, 189, 232, 256n, 259, 286n, 465, 847, 1104, 1107, 1109–

1110, 1172, 1174, 1238, 1278, 1423n,
1932, 1965–1966, 1974
passive, agentless meaning 847
passive-like meanings 465, 521
pejorative meaning 1240
perceptible meaning 1688
perfective/imperfective value 1649
permissive-passive meaning 976
personal meaning 158
plural meaning 233, 236, 302, 309,
1040, 1253, 1303, 1344n, 1441, 1752,
1791, 1798, 2042
 ~ reading 1682
polarity value 1357
polyadic meaning 335, 339, 348
 ~ semantics 348
positive meaning 1739, 1918
possessive interpretation 1046
 ~ meaning 422, 792
possessive-benefactive-reflexive
 meaning 859, 869
possessive-marking function 1565
possessive-reciprocal meaning
 1044
possessive-reflexive meaning 639,
859, 868, 975, 1855
potential meaning 339, 788
 ~ sense 1580
potential-passive meaning 232,
259, 265, 298, 570
predicative function 961, 1482–
1483, 1506, 2069
prepositional function 1497, 1501
progressive meaning 1684
pronoun function 411
pseudo-reciprocal meaning 233,
236, 303
 ~ sense 304
punctual sense 1529

Q

quantificational meaning 348
 ~ meanings 338
 ~ sense 2094n
quasi-passive meaning 570
 ~ sense 570

R

reciprocal function 19, 88, 151, 166,
179, 184, 191–192, 236, 243, 261, 301,

317, 322, 438, 447, 479, 663, 854,
880, 1488, 1570, 1613, 1709
 ~ functions 265, 1562, 1958
 ~ interpretation 1046, 2112
 ~ meaning (passim) 37, 95, 279,
288, 302, 464, 880, 1351, 1360, 1678,
1700, 1987–1988, 2047, 2059, 2061,
2064
 ~ # encoding of * meaning 112, 147,
434, 672
 ~ **inherent** meaning 2105
reciprocal inherently meaning
 2105
 ~ response meaning 6
reciprocal-benefactive meaning
 67, 1068
reciprocal-causal meaning 68
reciprocal-marking function 1569
reciprocal-sociative meaning 1158
reciprocative meaning 285, 774,
796
 ~ meanings 796
referential meaning 2080
reflexive function 232, 267, 880,
948, 1570
 ~ meaning(s) 13, 17, 19–20, 91, 112,
149, 158–159, 162, 175, 177–178,
185–186, 189, 192, 234, 240, 243,
249, 261–263, 266n, 268, 270–271,
287–288, 291–292, 322–324, 339,
406, 410, 437–438, 444, 446, 469,
471, 481, 509, 528, 529, 533, 567,

760, 779, 781, 848–849, 851, 853,
859, 867, 880, 1045, 1107, 1155,
1158–1159, 1213, 1293, 1311, 1357, 1361,
1363, 1367, 1380, 1421, 1424n–1425,
1470, 1692, 1724, 1761, 1837, 1858,
1945, 2001
 ~ reading 162, 196, 263, 458, 473,
475, 552, 615, 618, 785, 790, 831,
876–878, 949, 1357, 1361, 1421, 1425,
1620
 ~ readings 860, 876–878
 ~ sense 26, 676, 815, 821, 823, 825,
1709–1710
 ~ proper meaning 783
reflexive-benefactive function 474
 ~ meaning(s) 464, 530, 569, 1351,
1361
reflexive-causative function 522

reflexive-distributive meaning
 1164, 1192
 ~ reading 1165, 1193
reflexive-like meaning 1363
reflexive-possessive meaning 253,
1107, 1159
reflexive-reciprocal meaning 268,
825
 ~ reading 260
reflexive-related meanings 291
relativizing function 325, 440
resultant meaning 821, 1495
 ~ meanings 651
resultative meaning 232, 271, 1499,
1518, 1855, 1999, 2073
 ~ sense 488
resultative/stative meaning 272n
reversive function 1569
 ~ meaning 81
rolo meaning 164

S

self-beneficial meaning 713
self-name meaning 1753
semi-reciprocal sense 1149
separative meaning 1480, 1504,
1505
simultaneous reading 1650, 1668
sociative function(s) 18–19, 41, 278,
289, 341, 439, 440, 442, 1045, 1789
 ~ meaning 5, 17–18, 20, 31, 33–37,
39–40, 42, 92–95, 107, 198, 211–212,

1482, 1486, 1501, 1503–1505, 1512,
1520–1522, 1524–1525, 1529, 1542,

- 1594, 1596, 1613, 1619, 1626–1628, 1631–1632, 1637–1639, 1644–1645, 1650, 1668, 1672, 1687, 1695, 1732–1733, 1740–1741, 1755, 1766, 1783, 1786, 1789, 1791–1792, 1799, 1805, 1815, 1855, 1896, 1943, 1946, 2003, 2035
 ~ reading 275, 278, 300, 346, 1194, 1256, 1424
 ~ sense 274, 300, 441, 636, 821, 823, 827, 839, 1001, 1202, 1206, 1293, 1791, 2032–2033
 ~ value 1480, 1481, 1501
sociative, object-oriented meaning 768
sociative-comitative meaning 93
sociative-reciprocal interpretation 1619
sociative/collective sense 837
spatial meaning 23, 51, 122, 222, 285, 296, 371, 372, 376, 424, 425, 488, 496, 684, 1079, 1623, 1633, 2071
 ~ meanings 14, 23, 71, 209, 216, 293, 296, 358, 372, 375, 437, 1148, 1623, 1625, 2069
 ~ value 56, 67
spatial-reciprocal meaning 407
spatial-resultative meaning 315
spatial/directional meanings 1878
spatial/locative meanings 1596
specific meaning 227, 351, 1071, 1504
spontaneous/non-preconcerted meaning 1481
static meaning 594
stative meaning 339
subject-oriented meanings 266n, 455, 464, 513, 520, 609, 617
 ~ reading 1657, 1661, 1662
substantive meaning 717n
successive meaning 1512, 1530
 ~ reading 325, 557, 1187
symmetrical meaning 130
syntactic value 120
- T**
temporal meanings 1441
terminative sense 1517
transitive function 1474
 ~ meaning 822, 1025, 2003
transitivity value 1354
transitivizing function 173
translative meaning 796
- U**
uniplex reading 2109
- V**
valence-decreasing function 345
valency-affecting functions 407
valency-increasing functions 782
verbal sense 366, 1534

Part 2b. Ontological semantic index

Part 2b includes elements of semantic ontology. It contains words that describe reality itself (actions, relations, states, events, etc.) rather than language elements.

- A**
across 223
achieve 1263, 1336
achievement 506
 ~ of an agreement 134
 ~ ~ mutual consent 692
achievement, reciprocal 553
achievements 553
achievements, repetitive 553
acquainted 649
acquainting 548
 ~ sb with sb else 546
acquiring some spatial position 424
acquisition 530
 ~ of a quality or feature 1205
act, single 1975
 ~ speech 1983
 ~ the same 1975
acting by turns 193
 ~ discreetly (in the presence of a superior person or a God) 1792
 ~ for for sb's benefit 1208
 ~ jointly 37
 ~ one after another 282
 ~ together 37
action 126, 202, 259, 753, 929, 1443, 1584, 1775, 1944, 2041
 ~ # agent of * 212, 243, 1535
 ~ ~ beginning of * 1171, 2000
 ~ ~ causativity 1584
 ~ ~ cause 1873
 ~ ~ characteristics of *, spatial 748
 ~ ~ completion 1584
 ~ ~ of * 1171
 ~ ~ continuation of * 1171
 ~ ~ distribution, subsequent, of * 46
 ~ ~ goal 1443, 1873
 ~ ~ initiator of * 37, 38, 143, 144
 ~ ~ intensity 769
 ~ ~ of * 767, 768
 ~ ~ internal structuring 684
 ~ ~ iteration of * 1157
 ~ ~ iterativity of * 245
 ~ ~ kind of * 94
 ~ ~ motive of * 97
 ~ ~ negation of * 2038
 ~ ~ nouns of * 168
 ~ ~ object 46
 ~ ~ part of * 1145
 ~ ~ participants 45
 ~ ~ of * 37, 39, 108, 305
 ~ ~ participation in * 34
 ~ ~ patient of * 212, 243, 681, 1535, 1968
 ~ ~ peculiarities of * 33

- ~ ~ performance of # variation 1471
 ~ ~ ~ ~ * 1471
 ~ ~ ~ ~ *, simultaneous 251
 ~ ~ performance, alternate 1036
 ~ ~ performer, main, of * 107
 ~ ~ permission 1584
 ~ ~ place 1443
 ~ ~ ~ of * 70n, 1814
 ~ ~ plurality of * 245
 ~ ~ protagonist of * 143
 ~ ~ quantity of * 446
 ~ ~ reciprocity of * 136
 ~ ~ repetition of * 298n
 ~ ~ ~ ~ the same 201
 ~ ~ result of * 1997, 2072
 ~ ~ role, attendant 214
 ~ ~ ~ main 214
 ~ ~ sociativity 769
 ~ ~ space 45
 ~ ~ state resulting from * 1994
 ~ ~ subject 46
 ~ ~ target of * 94
 ~ ~ time 45
 ~ as a characteristic feature of its
 subject 136
 ~ ~ ~ single process 33
 ~ ~ ~ ~ whole 684
 ~ ~ ~ sum of single actions of a
 multitude of persons 33
 ~ between the object referents 1226
 ~ confined to the subject referents
 165
 ~ in advance 94
 ~ ~ response 94, 225
 ~ ~ turn or in a series 1368, 1385,
 1395
 ~ ~ which two animate entities are
 involved 1370
 ~ ~ ~ ~ animates are involved 1387
 ~ inside some space 373
 ~ noun 170
 ~ of a 2nd person agent with a 1st
 person patient 1983
 ~ ~ ~ multiple agent 655
 ~ ~ ~ multitude of persons 33
 ~ ~ ~ single agent over two patients
 212
 ~ ~ body parts 78
 ~ ~ many participants 1315
 ~ ~ one communicant directed at the
 other 1982, 2035
 ~ ~ two (or more) participants 212
 ~ ~ ~ agents # simultaneity of * 526
 ~ on more than one object 818
 ~ ~ some surface 373
 ~ ~ the surface of a thing 425
 ~ over two objects 209, 215, 224,
 227
 ~ performed by two participants
 946
 ~ ~ in response to another implied
 action 1149
 ~ ~ upon each other 216
 ~ started earlier by another agent
 925
 ~ that a person can start or end
 before another does 121
 ~ ~ can be carried out jointly and in
 a mutual way 2106
 ~ ~ is normally carried out in a non-
 mutual way 2111
 ~ ~ ~ typically carried out in a
 mutual way 2111
 ~ under something 373
 ~ upon a multitude of objects 767
 ~ vs. permanent, stable, static
 situations 140
 ~ which cannot as a rule be
 performed collectively, in a
 group 1206
 ~ ~ expresses an emotional state
 753-754
 ~ with two or more participants 282
 ~ within some mass 373
action, a similar 26
 ~ accidental 888, 893, 918
 ~ active 1784
 ~ additional 223
 ~ affecting body parts 868
 ~ aggressive 95
 ~ aimless 282, 283, 290
 ~ analogous to the action in the
 preceding remark 152
 ~ another 365
 ~ ~ identical 212
 ~ assistive 107
 ~ attendant 212, 214, 223, 226, 273,
 280, 280n, 1282, 1289, 1309, 1311,
 1325, 1326
 ~ ~ upon another 1325
 ~ body care 680
 ~ carried out by a single subject
 referent on two (or more)
 object referents 229
 ~ ~ to its term 1517
 ~ caused by feeling 172
 ~ chaining 2045
 ~ co-occurrent 2041
 ~ collective 142, 211, 216, 408, 456,
 495, 1206, 1559, 1566, 1570, 1615
 ~ combined 289
 ~ comitative 1207
 ~ common 33
 ~ completed 653
 ~ concomitant 209, 214, 224
 ~ conjoined 1387, 1480-1481
 ~ contemporary 310
 ~ continued 1920
 ~ continuous 286
 ~ convergent 655
 ~ cooperative 1286
 ~ coordinated 1134
 ~ denoted by adverbials 126
 ~ directed to a specific person 32
 ~ disorderly 282
 ~ distributed 1396
 ~ done by two persons to each other
 26
 ~ ~ in two locations by one person
 26
 ~ durative 1626
 ~ dynamic 216
 ~ equal 215
 ~ first 1950
 ~ group 229, 1403, 1423, 1428, 1429
 ~ habitual 296, 625, 1377n
 ~ habitual/iterative 1920
 ~ hard to perform 1522
 ~ hostile 96, 179, 270, 441, 442, 447
 ~ identical 898, 1972
 ~ identical, collective 407
 ~ imperfective 2038
 ~ implied 1149, 1263
 ~ implying contact 95
 ~ indifferent 283
 ~ initiated by another party 37
 ~ initiator of * 38
 ~ intended 1375
 ~ intensive 36, 282, 313, 767-768,
 845, 847, 854, 1000, 1261, 1464
 ~ intensive, more 901
 ~ intentional 1058
 ~ inverse 754
 ~ involuntary 916
 ~ involving the subject referents 36
 ~ iterative 249, 625, 1444, 1455, 1626

- ~ joint 18, 33, 36, 37, 71, 107, 113,
 209–213, 216, 222, 223, 228, 229,
 279, 363, 446, 482, 495, 654, 983,
 1208, 1256, 1285n, 1286, 1314, 1324,
 1455, 1473, 1612, 1733, 1786, 1886,
 1895, 2104
 ~ joint, of the subject referents 1669
 ~ joint/sociative 1078
 ~ less concrete 542
 ~ ~ telic 1460
 ~ limited 1460
 ~ main 223, 280, 1292, 1318, 1951
 ~ momentary 653
 ~ more intensive 1261
 ~ ~ processual 1460
 ~ mutual 26, 902, 926
 ~ negative 297
 ~ non-accomplished xxix
 ~ non-preconcerted 1480, 1504
 ~ non-realized 1874
 ~ non-response 318
 ~ of each person 33
 ~ ~ the subject referent 94
 ~ ~ ~ suffering party 94
 ~ past 1518
 ~ perfective 2038
 ~ performed 33, 94
 ~ ~ alongside (together) with another
 1325
 ~ ~ by at least two equally involved
 participants together 957
 ~ ~ ~ different participants
 simultaneously 1668
 ~ ~ ~ many actors 1293
 ~ ~ ~ means of a specific instrument
 32
 ~ ~ ~ several participants alternately
 935
 ~ ~ ~ some members of the group
 on other members of the group
 1396
 ~ ~ ~ the co-agent alone 1140
 ~ ~ ~ ~ two participants separately
 760
 ~ ~ ~ ~ alternately 942
 ~ ~ for sb 1209
 ~ ~ ~ sb's benefit 1166
 ~ ~ ~ smb 1208
 ~ ~ in front of an object 765
 ~ ~ ~ obeyance of a command
 (order) of a third person who
 is endowed with the respective
 social power 549
 ~ ~ ~ ~ an order 549
 ~ ~ jointly and simultaneously by
 a group of people (at least two)
 named by the subject and engaged
 in the same activity 33
 ~ ~ on more than one referent 212
 ~ ~ ~ the surface of an object 438
 ~ ~ simultaneously and in co-
 operation with analogous equal
 action 226
 ~ ~ ~ with the main action 280
 ~ ~ under the influence of an outside
 causer 138
 ~ ~ with each other mutually 1344
 ~ ~ without concertation on one's
 own 1505
 ~ performed, at the same time 407
 ~ ~ in a group 407
 ~ physical 426, 428, 691, 1111, 1112,
 1652, 1968
 ~ plural 1932
 ~ preceding the main action 1292
 ~ presupposing a counteragent 215
 ~ ~ another action or reaction 1033
 ~ previous 140, 697n, 1012, 1999
 ~ prior 81, 201, 256n, 1168, 1684,
 1873, 2041
 ~ processual 1460
 ~ prolonged 1455
 ~ provoking 2041
 ~ punctual 1920
 ~ realized 1874
 ~ reciprocal 209, 212, 215, 216, 225,
 229, 310, 403, 450, 750, 751, 825,
 829, 1102, 1120, 1362, 1453, 1471,
 1577, 1732, 1900, 1925, 1928
 ~ reciprocal, multiple 555
 ~ reciprocated 1452, 1870
 ~ reciprocation of, done alternately
 or by turns 1417
 ~ reckless 1704
 ~ reflexive 244, 310, 760
 ~ repeated 289, 313, 826, 829, 830,
 1261, 1481, 1908
 ~ repetitive 830
 ~ requiring persistence 1522
 ~ response 92, 94, 100, 152, 223, 238,
 269, 302, 318, 319, 320, 419, 420,
 588, 1011, 1061, 1096, 1143, 1146,
 1263, 1804, 1868n, 1869, 1870, 1887,
 1888, 1897, 1900, 2081, 2090
 ~ ~ # expectation of * 94
 ~ reverse 312
 ~ reversed 765
 ~ rhythmic 1228
 ~ separated in time and/or in space
 45
 ~ simultaneous 1168, 1187
 ~ ~ with the main action 1292
 ~ single 33, 1134n
 ~ sociative 212, 222, 1121
 ~ spatial 355
 ~ subsequent 1873
 ~ taking place at night 1878
 ~ telic 1460
 ~ that establish a relation shared by
 two or more objects 83
 ~ ~ implies a prior action 81
 ~ the same 8, 38, 39, 298n
 ~ ~ ~ # repetition of * 298n
 ~ transitive 1377
 ~ uncompleted 299
 ~ underlying 223
 ~ undesired 1362
 ~ undirected 1480
 ~ unfriendly 680
 ~ unified 289, 1480–1481
 ~ unintentional 2050
 ~ upon a human object that may
 result in a change of the state of
 the latter 426
 ~ verbal 1467, 1668
 ~ violent 179, 1464
 ~ weakened 1627n, 2000
 ~ which may provoke a response
 action 100
action/state 852
action/state, co-occurrent 2041
actionality 145, 505, 552, 706
actions 167, 257, 299, 428, 663, 991,
 1027, 1228, 1448, 1614, 1926, 1988,
 2064, 2111
 ~ # direction of, opposite 201
 ~ ~ iterativity of * 201
 ~ ~ number of * 250
 ~ ~ plurality of * 19, 247, 249
 ~ ~ repetition of * 248
 ~ ~ sequence of * 152, 889
 ~ ~ sequence, precise 1951
 ~ ~ series of 1202

- ~ ~ simultaneity of* 200, 379, 813, 829, 1314, 1926, 1974
 ~ ~ succession of* 379, 813, 829, 1460, 1926
 ~ consisting of uniform acts 1228
 ~ implying an addressee 1115
 ~ in the narrow sense 1974
 ~ ~ which the subject referents alone take part 1089
 ~ of destroying 499
 ~ ~ different participants/agents 213
 ~ ~ dividing 499
 ~ ~ several agents 298n
 ~ ~ short duration 1990
 ~ ~ the counter-agent 1142
 ~ ~ ~ subject referent upon or with his body parts 257
 ~ on the object participants 34
 ~ performed by different participants simultaneously or by turns 213
 ~ ~ ~ people 132
 ~ ~ simultaneously 321
 ~ that are not simultaneous 1137
 ~ ~ can be regarded as visible manifestations of friendly or passionate feelings 679
 ~ ~ cannot be performed by two agents simultaneously 1969
 ~ ~ ~ ~ simultaneously upon each other 199
 ~ ~ involve joining of parts 1052
 ~ ~ ~ mixing of parts 1052
 ~ ~ lead to coming to an agreement 1146
 ~ ~ ~ ~ demolition, damaging or harmdoing 494
 ~ ~ take place subsequently 509
 ~ upon body parts 78, 231, 257
 ~ ~ parts of of one's own clothes 520
 ~ vs. states 824
 ~ which cannot as a rule be performed collectively 1206
 ~ ~ ~ ~ ~ ~ ~ collectively, in a group 1206
 ~ ~ cause a change in the state of the object 1965
 ~ ~ involve two or more participants 1523
 ~ with all the participants named 2030
 ~ ~ one plural object 1086
 ~ ~ two interacting object referents 1086
actions, accidental 893, 912, 918, 929
 ~ active 1992
 ~ adjacent temporally 8
 ~ aggressive 1051, 1189, 1264, 1737-1738, 1968
 ~ aggressive, physical 647
 ~ analogous 152
 ~ antagonistic 193, 680
 ~ associated collectively 47
 ~ body 1880
 ~ ~ care 680
 ~ collective 693
 ~ competitive 133, 1189, 1311
 ~ competitive-aggressive 1010
 ~ complicated 680
 ~ component 47
 ~ concerted 657
 ~ concrete 1208
 ~ confrontational 1313
 ~ constituent 1459
 ~ controlled 1132, 1789
 ~ desirable 1376
 ~ dimensional 33
 ~ directed 1974
 ~ ~ at each other 200
 ~ disorderly 1133
 ~ distributive 1905
 ~ diverse 1460
 ~ done without order or sloppily 494
 ~ dynamic 33
 ~ equal 212, 213, 226
 ~ far removed from sports 300
 ~ fast 1343
 ~ fixation 495
 ~ future 1170
 ~ generic 1170
 ~ habitual 686
 ~ homogeneous, several 1658
 ~ hostile 426, 978, 979, 989, 1010, 1111, 1145, 1219, 1262, 1264, 1295, 1700
 ~ human 135, 2088
 ~ identical 40, 212, 213, 298n, 456, 1132
 ~ ~ # simultaneous performance 212
 ~ identical, joint 492
 ~ implying another action 365
 ~ independent 213
 ~ indistinguishable 2107
 ~ involuntary 893
 ~ iterative 281, 282, 1228
 ~ joint 108, 213, 880, 1232, 1264, 1265
 ~ kissing 2107
 ~ leading to a disorderly state 487
 ~ live 33
 ~ motivated by emotions 308
 ~ multi-directional 1133
 ~ multidirectional 1228
 ~ multiple 799
 ~ mutual 929
 ~ ~ frequently 2111
 ~ ~ rarely 2111
 ~ negated 1170
 ~ negative 231, 257, 297, 1739, 1740, 1946
 ~ neutral 428, 1740
 ~ non-hostile 428, 979
 ~ non-negated 1170
 ~ non-physical 653, 2008
 ~ non-reciprocal referentially 1472
 ~ non-simultaneous 924, 1045
 ~ observed by the speaker 1170
 ~ of one or several persons 1460
 ~ ~ plural subject referents 245
 ~ one way 47
 ~ ongoing 521
 ~ performed at given intervals 1343
 ~ ~ ~ short intervals 1460
 ~ ~ between the subject referents 1225
 ~ ~ by many 1303
 ~ ~ ~ ~ actors 1314
 ~ ~ ~ only two participants 1520
 ~ ~ collectively 1303
 ~ ~ consecutively 1530
 ~ ~ in response to another action 365
 ~ ~ ~ succession 321
 ~ ~ manually 288
 ~ ~ on one's body part 1107
 ~ ~ simultaneously 245, 1634
 ~ ~ together 1634
 ~ ~ ~ or with respect to each other 215
 ~ physical 428, 1208, 1968, 2008
 ~ physical, aggressive 647
 ~ ~ concrete 654, 678, 1208
 ~ ~ manual 1143
 ~ positive 1946, 2075

- ~ purposeful, active 1000
 ~ reciprocal 116, 215, 318, 374, 508,
 647, 663, 888, 889, 918, 924, 1097,
 1471, 1585, 1974
 ~ ~ # non-simultaneity of * 889,
 924
 ~ ~ ~ simultaneity of * 889, 924
 ~ reciprocal, presupposing two
 participants only 671
 ~ reciprocated 71
 ~ repeated 1343, 1453, 1905, 1975
 ~ repeated, frequently 1343
 ~ repeating the same action by turns
 281
 ~ repetitive 706
 ~ resulting in the object becoming
 denser or thicker or wrinkled
 295
 ~ rhythmical 1228, 1343
 ~ separate 1134n, 2107
 ~ sequence of * 1715, 1732
 ~ sequential 269, 2107
 ~ several 1134
 ~ simultaneity of * 402, 1417
 ~ simultaneous 8, 198, 282, 1036,
 1045, 1585, 1892, 1926, 2107
 ~ social 2090
 ~ spontaneous 753, 1789
 ~ succession of * 402
 ~ successive 429, 830, 1036, 1044,
 1248, 1317, 1471, 1585, 1905, 1926
 ~ ~ # series of 1202
 ~ successive, within one situation
 1202
 ~ symmetrical 829, 1737
 ~ towards each other 912
 ~ two 19
 ~ uncompleted 630
 ~ uncontrolled 231, 257, 1205
 ~ uncoordinated 133
 ~ unequal 226
 ~ unfriendly 679
 ~ unlikely 1006
 ~ unordered 679, 681
 ~ unpleasant 427
 ~ unwilling 1789
 ~ verbal 1668
 ~ violent 426, 1313
 ~ volitional/deliberate 882
 ~ weak 1990
 ~ with different participants 281
actions/attitudes, pleasant 428
- active** 1966
activities 543
 ~ # kinds of * 630
 ~ of humans 1132
 ~ ~ the organs of sense 1968
activities, common 2080
 ~ common, the most 1194
 ~ everyday 1132, 1139, 2080
 ~ favourable 1656
 ~ friendly 733
 ~ homogeneous 506, 553
 ~ hostile 438, 716
 ~ household 970, 1008
 ~ human 1114, 1309
 ~ inimical 733
 ~ interleaved with each other 2108
 ~ mental 429, 430, 1968
 ~ most common 1194
 ~ neutral 733
 ~ other than sporting 631
 ~ perceptual, attentive 508
 ~ reciprocal 589, 733
 ~ reciprocal, simultaneous 553
 ~ sport 273
 ~ sporting 299, 300, 630, 970
 ~ symmetrical but successive 593
activity 31, 33, 284, 304, 370, 424,
 450, 503n, 506, 552n, 553, 555, 568,
 569, 630, 663, 700, 724, 911, 925,

outdoing 610, 629
 ~ somebody in working 630
overcoming 437, 1188
- P**
pair 582, 1927
 ~ of persons 1938
 ~ ~ situations 143

- pair**, converse 424
 ~ natural 361, 946
parallel 115, 128
part from 132
 ~ of the object 70n
 ~ ~ ~ whole 956
part, body 231, 257, 464, 473, 507,
 576, 665, 683, 787, 792, 868, 909,
 979, 1107, 1113, 1117, 1292, 1298,
 1428, 1600, 1659, 1773, 1808
 ~ body, affected by the action 868
 ~ ~ injured 1117
 ~ inalienable 1180
participant 94, 143, 912
 ~ of a converse pair 424
 ~ ~ ~ reciprocal relation 888, 913,
 914
participant, another 718
 ~ collective 325, 1898
 ~ first 1316
 ~ group 1881
 ~ main 217, 700
 ~ more than one 1539, 1541
 ~ plural 1725
 ~ plural, as a group 443
 ~ second 605, 695, 800, 934, 962,
 1208
 ~ single 19, 281, 1562, 1725
 ~ the second 962, 1299
participants 86, 142, 809, 1332,
 1487, 1520, 1556, 1983, 2088, 2107
 ~ # characteristics of * 1561
 ~ ~ generation, alternating 317
 ~ ~ joining of * 723
 ~ ~ pairs of *, two 683
 ~ ~ plurality of * 373, 1514, 1521, 1537
 ~ ~ possession of * 1462
 ~ ~ properties of * 1561
 ~ ~ relations between 2107
 ~ ~ roles of *, different 336
 ~ ~ separating of * 723
 ~ ~ sub-actions of * 1186
 ~ ~ sum of * 1499
 ~ acting en masse 37
 ~ exchanging roles 283
 ~ named 2030
 ~ of a reciprocal relation 919
 ~ ~ ~ ~ situation 1097, 1148
participants, both 601, 912, 1499,
 1585, 1898
 ~ both, each with a double role 10
 ~ equal semantically 1857
 ~ identical 1472
 ~ inactive 347
 ~ many 166, 670
 ~ more than two 555, 663, 1731
 ~ multiple 689
 ~ multiple, indefinitely 691
 ~ no more than two or four 1304
 ~ one or more 1525, 1537
 ~ reciprocal 336, 361-362, 2091
 ~ ~ # group of * 350
 ~ related by a close (family)
 association 361
 ~ ~ ~ an association 946
 ~ replacing one another 1472
 ~ retaining their autonomy 690
 ~ serving different roles 336
 ~ several 1501
 ~ situational 906
 ~ three 130
 ~ two 166, 200, 361, 424, 664, 670,
 681, 689, 914, 963, 1284, 1523, 1538,
 2107
 ~ ~ # actions of *, simultaneous
 1036
 ~ ~ ~ relationship between * 491
 ~ ~ or more 213, 1050
 ~ two, at least 1536
 ~ ~ only 671, 689
participation 213
 ~ of a number of participants in the
 same joint action 213
participation, identical necessarily
 2107
 ~ intentional 1058
 ~ joint 700, 760, 1669, 2091
 ~ successive 1668
parting 649, 1082
partner 1936
partners in an activity 1232
partnership in an activity 364, 1268
parts 76, 80, 81, 499, 546, 1225,
 1776, 1959
 ~ involved in the action. 1775
 ~ vs. whole 424
parts, body 78, 1927
 ~ constituent 125
passing sth to sb 1297
passive, agentless 854
past 818, 1599, 1648, 1684
patient 6, 287, 800, 899, 909, 1514,
 1515, 1526, 1527, 1535, 1560, 1561,
 1562, 1966, 1968, 1974, 2096
 ~ # action from 898
patient, animate 1968
 ~ backgrounded 1561
 ~ implied 681
 ~ reciprocal 1975
 ~ single 924
 ~ suppressed 1561
patients 899
 ~ and agents 1975
people # collection of * 1565
 ~ ~ group of 1874
 ~ ~ ~ ~ * 362
 ~ ~ groups of 1875
people, more than two 960
 ~ two, copulating with some other
 person 1551
 ~ white 1902
perception 508, 581, 786, 788, 893,
 1515, 1526
perception, sense 429, 430, 1112
performance on one's own body
 parts 520
performance, alternate 1036
 ~ simultaneous 251
performer, the main 40
permanence 1494
permanence, habitual 298n
permission 1584
person 1972
 ~ # feature of * 912, 1266
 ~ of subject 815
 ~ ~ the possessor 777
person, 1st 1983
 ~ 2nd 1983
 ~ 3rd 1972
 ~ addressed 1373
 ~ equal to another 912
 ~ first 1373
 ~ fourth 185
 ~ losing the object 1884
 ~ second 1373
 ~ similar to another 912
 ~ single 1979
 ~ thought of * 881
personal relations 364, 1267
persons 360, 991, 1445, 1956, 1988,
 2064, 2065
 ~ # a number of * 692
 ~ ~ group of * 1938
 ~ ~ groups of * 924
 ~ ~ number of * 1674
 ~ ~ pair of * 1938

- ~ ~ set of * 1854
 ~ in spatial proximity 364, 1232, 1269
 ~ involved in family relations 2065
 ~ ~ ~ social relations 2065
 ~ of the same age 1232, 1269
 ~ sharing a spiritual feature 1266
 ~ with similar features 1232, 1269
persons, adult 518
 ~ affecting each other 924
 ~ group of * 1667
 ~ male 518
 ~ many 1340
 ~ more than two 1472
 ~ sharing a spiritual or physical feature 364
 ~ ~ some common feature 2065
 ~ the other 2064
 ~ three 638
 ~ two 359, 663, 903, 904
 ~ ~ (or more) 1266, 2034
 ~ ~ or more 1285n
phases 552
phenomena, luminous 520
 ~ natural 1205
piecing together fabric 2059
pinchings, multiple 2108
place 800, 1443, 1970
place, one 95
 ~ the same 1672
placing one object on another 999
play-acting 193
playing 1703
 ~ a musical instrument 630
 ~ games 1206
 ~ of games 839
playing, solitary 2112
plural, collective 1158
plurality 19, 171, 248, 302, 361, 373, 756, 894, 944, 948, 1155, 1221, 1305, 1483, 1513, 1514, 1521, 1535, 1690, 1802, 1804, 1805
 ~ of agents 48
 ~ ~ entities 211
 ~ ~ objects 1640
 ~ ~ participants 1537
 ~ ~ subject referents 1157
 ~ ~ the object 954
 ~ ~ ~ subject 287, 954
plurality, collective 356, 424, 1745
 ~ implicit 1344n
 ~ nominal 1157
 ~ subject 1314
 ~ verbal 1157
point, given 1959
 ~ reference 793
poison 2111
portions 499
position 57, 422, 1056, 1308, 1813, 1832
 ~ # change of * 56, 57, 655, 1309
 ~ ~ identity of * 1506
 ~ between two or more entities 1183
 ~ of agent 569
 ~ ~ the counteragent 1036
 ~ opposite some object in space 2052
 ~ somewhere 70n
position, contiguous 651
 ~ identity of * 1506
 ~ relative 1150
 ~ ~ to each other 374, 1776
 ~ spatial 424
positions 1506
 ~ relative to each other 402
possessed 683, 1416, 1655
 ~ by 1707
possessee 103
possession 788, 1651n
possession, alienable 455, 473, 561, 577, 665, 859, 865, 909, 1117, 1180, 1409, 1579, 1884, 2010
 ~ inalienable 393, 455, 473, 561, 576, 859, 866, 909, 981, 1117, 1180, 1323, 1462, 1482, 1582, 1884, 2010
possessivity 474n, 973, 1448
possessor 665, 791-792, 865, 869, 874, 876, 877, 1210, 1324, 1416, 1655
 ~ # number of * 777
 ~ ~ person of * 777
possessor, personal 815
posture 67
 ~ # change of * 56, 257, 1309
posture, own 642
 ~ ~ # change of * 642
predicate, symmetrical 1853
predicates, collective 693
 ~ sociative 693
presence of a common feature 700
present 1057, 1599, 1684
pressing 494
 ~ objects together 82
 ~ together 211
 ~ ~ of a single entity 218
process 1481, 1481n, 1584
 ~ # causativity 1584
 ~ ~ completion 1584
 ~ ~ permission 1584
 ~ ~ result of * 1997
 ~ under way 1493
process, change-of-state 570
 ~ common 1501
 ~ identical 1501
 ~ non-preconcerted 1505
 ~ psychological 35
 ~ undirected 1504
processes 552, 553
 ~ that may last over some conceivable time interval, but require a constant physical or perceptual contact between two referents 506
processes, controlled 1789
 ~ inflicted, involuntarily 912
 ~ interior 1134
 ~ natural 35
 ~ non-reversible 1481
 ~ physiological 35, 1003
 ~ reversible 1481
 ~ simultaneous totally 508
 ~ spontaneous 1784, 1789
 ~ successive 1481
 ~ uncontrollable 890, 893
 ~ unwilled 1789
production sounds 35
production of signals by animate beings 61
 ~ ~ **sounds** by animate beings 61
project, clear 290
properties, "passive" 1134
property 553
 ~ # degree of * 348
 ~ vs. action 291
property, holding between two (or more) subjects 553
provoke a response action 100
proximity 115, 122, 125, 424, 2052
proximity, spatial 79, 122, 229, 315, 363, 364, 1232, 1269, 1275, 1693, 1715, 1730, 1896, 2066
 ~ spatio-temporal 229
 ~ temporal 1303
proximity/remoteness 2020
purpose 865, 1085
putting 1786
 ~ a number of objects 654

~ an an object together with another
312
~ ~ object together 769
~ each other's hands on each each
other's shoulders 1885
~ together 769, 1048
~ two objects of the same class
together 767

Q

qualities 121, 1027, 1443
qualities, permanent 121
~ stable 121
quality 1481, 1484, 1497, 1935, 1944
~ # acquisition of * 1205
~ ~ degree of *, high 447
quality, permanent 1918
~ predicated 1497
quantity of an action 446
quantity, great, of an action 446
quarrelling 544, 1082, 1335
quarrelling, verbal 651

R

reaction of disagreement to a prior
statement 419
reactions, natural 493
reason 800
receiver 61
receiving 1297
~ an object 2009
recent 1599
recipient 873, 2096
~ co-referential with the agent 683
reciprocity 742
reciprocalization 941, 952
reciprocalness 1547, 1551, 1553, 1569
reciprocant 301
reciprocants 8
reciprocants, both 101, 382
~ inanimate 194
~ two 325
reciprocating an action 225
reciprocation 223
reciprocator 2094
reciprocity 3, 7, 9, 11, 16, 18, 53, 108,
116, 117, 145, 161, 164, 165, 170, 171,
176, 177, 178, 180, 182, 191, 195, 225,
237, 247, 266, 278, 291, 379, 382,
386–388, 401, 447, 450, 457, 459,
472, 496, 537, 555, 563, 564, 581,

583–586, 594, 601, 603–605, 607,
622, 663, 665, 670, 675, 703, 705,
706, 775, 777, 786, 800, 803, 862,
877, 914, 993, 1014, 1099, 1149, 1167,

1331, 1332, 1405, 1464, 1481, 1497,
1501, 1512, 1536, 1680, 1699, 1705,
1707, 1717, 1736, 1742, 1774, 1783,
1945, 1961, 1981, 1993, 2034, 2041,
2070, 2079, 2111, 2115
~ # type of * 800
~ between the oblique subject and
oblique indirect object 802
~ ~ ~ subject and the direct object
786
~ proper 365, 485
~ vs. iterativity 1626
reciprocity, canonical 462
~ chaining 594
~ dual 888, 912
~ object-oriented 582, 600, 603
~ possessive 389
~ response 94
~ signaled overtly 2111
~ subject-oriented 590
~ unambiguous 158n
~ weak 1368, 1385
reference, future 1548n
~ non-future 1548n
referent # characteristic of * 1560
~ of the subject # characteristic of *
1560
referent, another 1263
~ attribute 1180
~ collective 495, 548
~ human 393, 2011
~ less active 1084
~ object 755, 1324, 1972
~ plural 602
~ subject 393, 642, 1879
referents # a couple of * 526
~ ~ alternation of * 537
~ ~ groups of * 1155
~ ~ roles, semantic, identical 1950
referents, coinciding 1246
~ moveable 1883
~ object 1613
~ object, interacting 1086
~ ~ plural 1759
~ ~ two or more 1786
~ placed opposite to one
another 537

~ subject 1121, 1225, 1786
~ ~ # plurality of * 1157
~ subject, plural 1759
~ two 526, 1003
~ unmoveable 1883
reflexivity 154, 176, 182, 742, 776,
862, 1481, 1687
related to 1707
relatedness 424
relatedness, spatial 693
relation # reciprocity of * 800
~ agent-patient 899
~ shared by two or more objects 83
~ to another person 1854
~ which holds within the set of
persons 1854
relation, asymmetrical 1498
~ causal 1508
~ chaining 562, 593, 1471, 1563, 2045
~ converse 601, 904
~ emotional, negative 164
~ identical 6
~ interpersonal 122
~ kinship 1565
~ kinship, symmetrical 1565
~ mutual 2087
~ possessive 568
~ possessive, inalienable 568
~ ~ quasi-inalienable 568
~ reciprocal 470, 477, 503, 600, 888,
903, 912, 914, 919, 951, 1487, 1565
~ reverse 6
~ sequential 1499
~ symmetric 123n
~ symmetric, between the subject
and non-direct object 719
~ symmetrical 1499, 1565
relations 1556, 2065
~ # configuration of * 1562
~ between entities 1969
~ ~ humans 428, 2064–2065
~ ~ ~ that do not necessarily involve
physical action 428
~ ~ people that do not necessarily
imply physical action 1112
~ ~ ~ which do not imply physical
action upon each other 1968
~ ~ relatives 353
~ ~ the joined objects 79
~ ~ ~ whole and its constituent
parts 125
~ of equality 2055, 2056, 2063, 2064

Part 3. Semantico-glossal index

Part 3 includes English lexemes that are used in the translation of original examples from the languages investigated in the monograph (they play a “glossing” role). Thus, it is not a purely lexical index, but rather a kind of semantic index. Hence the heading “semantico-glossal index”.

The index contains mostly translations of reciprocals, both lexical and derived (and their base words), related categories and related vocabulary. Derivatives are entered in two ways: 1) if a derivative and its base are not overfrequent in the body of the book they are usually entered as one item, with *each other* parenthesized; e.g. *recognize (each other)* [...]; 2) if a derivative and its base are very frequent they are entered separately.

The pronoun *each other* also stands for *one another*.

- A**
- abandon each other** 733, 734
- about (each other)** 533, 1114, 1172, 1330, 1562n, 1617, 1620, 1656, 1761
- abuse (each other)** 54, 118, 212, 239, 648, 652, 653, 667, 679, 680, 685, 688, 979, 984, 985 1602, 1700
- accompany (each other)** 37n, 214, 277n, 325, 365, 823, 1263, 1341, 1376, 1472, 1733, 1772, 1781, 1816, 1969
- accuse (each other)** 225, 1123, 1329, 1457, 1459
- acquaint** 500, 677, 986, 1119, 1184, 1302, 2104
- act against each other** 1314, 1339
- add (to each other)** 87, 601, 920, 1222, 1778, 1945
- advise each other** 2080
- act together** 1267
- address (sth to each other)** 356, 422, 1945
- adjoin** 127, 137, 543, 1153, 1275, 2046, 2090
- afraid (of/before each other)** 13, 55, 150, 429, 483, 786, 941, 893, 941, 949, 951, 1067, 1250, 1407, 1408, 1443, 1569, 1603, 1652, 1697, 1969, 1793, 1800–1801, 1883, 1966, 1974
- after (each other)** 46, 48, 280, 371, 483, 484, 486, 556, 574, 954, 1317, 1845, 1855
- agree (with each other)** 14, 96, 134, 318, 493, 597, 677, 823, 59, 1144, 1219, 1263, 1494, 1829, 1832, 1955, 2041, 2111
- alike** 355, 660, 1084, 1190, 1218, 1221, 1224, 1619, 1697, 1730, 1969, 1998, 2041, 2047, 2052, 2057, 2058, 2111
- all** 33, 35, 36, 288, 799, 957, 1000, 1001, 1314, 1333, 1360, 1636, 1928, 1986, 2002, 2030
- all (of them) together** 35, 36, 42, 308, 374, 957, 1000, 1202, 1314, 1628, 1798
- allure (each other)** 1633, 1634, 1638
- alone, by oneself** 621, 1208, 1421, 1425, 1505
- alternate (with each other)** 140, 420, 594, 597, 661, 670, 717, 822, 830, 1010, 1011, 1220, 1458, 1475, 1621, 1738, 1784, 2016
- alternately, by turns** 129, 650, 2015
- among (each other)** 456, 489, 496
- among/between (themselves)** 89, 166–167, 404, 933, 950, 951, 964, 1163, 1182, 1183, 1282, 1334, 1335, 1513, 1542, 1622, 1667, 1845, 1847
- and vice versa** 1897, 1898
- angry (at/with each other)** 55, 57, 180, 250, 269, 429, 432, 652, 799, 979, 994, 980, 1010, 1177, 1308, 1388, 1527, 1618, 1652, 1709, 1765, 1768, 1783, 1831, 1979
- angry together** 799
- another** 156, 266n, 418, 426, 555, 698, 1496
- answer (each other)** 290, 319n, 420, 822, 840, 1061, 1344, 1460, 1526, 2024, 2041, 2056
- apologize to each other** 57, 387, 2008
- appear alternately** 537

catch together 1637, 1638, 1649, 1793
catch up (with each other) 430, 555, 1039, 1067, 1147, 1225, 1263, 1732, 1739, 1951, 1994
cause (to) 96, 308, 313, 488, 679, 893, 917, 920, 1038, 1051, 1241, 1394, 1564, 1583, 1767, 1809, 1839, 1848, 1966, 1967, 1979, 2048
chain together 793
change (each other) 221, 547, 501, 639, 661, 723n, 1055, 1065, 1218, 1222, 1226, 1259, 1273, 1611, 1621, 1818, 1992, 2037, 2048, 2060
chase 70, 104, 177, 180, 288, 325, 368, 429, 430, 510, 593, 667, 705, 754, 878, 940, 977, 1042, 1067, 1187, 1222, 1240, 1265, 1319, 1455, 1460, 1472, 1488, 1521, 1523, 1533–1534, 1540, 1781
chase each other 70, 104, 177, 180, 242, 253, 288, 368, 407, 445, 705, 940, 1042, 1296, 1313, 1457, 1472, 1523, 1540, 1602, 1969
chase together 1042, 1319
chat (with each other) 596, 598, 1769, 1937
chatter (with each other) 431, 432, 1114, 1308, 2031
check (each other) 429, 1035, 1039, 1187, 1212, 1273, 1321, 1334, 2059
cheep (to each other) 61, 1345n, 1604, 1618
cheer (up each other) 428, 469
chop (together) 1779
chop/cut/hack (each other) 80, 134, 427, 676, 978, 1008, 1296, 1602, 1902
choose each other 572, 590
clap each other 1457, 1773
clasp each other 218, 428, 603, 655, 1176, 1451, 2054
class 25, 353, 363, 364, 375, 398, 912, 1267, 2004, 2066
classmate 25, 360, 364, 375, 424, 440, 912, 916, 1267, 2066
clean (together) 242, 312, 407, 430, 431, 464, 469, 1204, 1319
climb (together) 286n, 655
cling (to each other) 1456, 1808
- clink (against each other)** 132, 600, 978, 2063
close 80, 268, 293, 493, 723, 1079, 1126, 1293, 1377n, 1466, 1563, 1601, 2024, 2046, 2058, 2069
close shields together 224
close to each other 422, 918, 955, 1083, 1486, 1497, 1563, 1569, 1623, 1810, 1970, 2041, 2046
clothe (each other) 1539
clump together 493
clutch (at) (each other) 428, 1011, 1176, 1275, 1295, 1338, 1456, 1634
co-author 227, 700, 2067
co-defendant 227
co-editor 227
co-exist 222, 223, 2025
co-founder 227
co-governor 223
co-heir, co-parcener 1268
co-ordination 1063
co-participant 1267
co-religionist 1266, 2065
co-wives, wives of one man 1938
coagulate, cake together 228
coalesce/grow together 216, 217
coexist 597
cohabit 1954, 1955
coil (around each other) 92, 976, 1028, 1053, 1083, 1090, 1222, 1329
coincide 62, 123, 213, 216, 228, 551, 573, 701, 1082, 1217, 1219, 1220, 1224, 1338, 1339, 1344, 1452, 1622, 1955, 2047, 2059, 2064
collaborate, work (together) 214, 226, 597, 1268, 1955,
collate (together) 76, 80, 546, 1184, 1205, 1225, 2024, 2060
colleague 134, 601, 660, 700, 800, 1064, 1268, 2057, 2065, 2068, 2104, 2105
collect 127, 342, 677, 1734, 1958
collective (action, etc.) 408, 907, 910, 1218, 1267
collide (with each other) 179, 180, 181, 216, 224, 228, 269, 306, 355, 431, 652, 692, 900, 902, 1083, 1092, 1145, 1177, 1269, 1314, 1338, 1344, 1446, 1452, 1457, 1466, 1672, 2031, 2036, 2045, 2050, 2054, 2075
comb (each other) 191, 428, 520, 1484, 1492n, 1521, 1832

- combine** 14, 96, 127, 599, 701, 1059, 1088, 1151, 1184, 1338, 1945, 1958, 2054, 2061, 2063, 2073, 2104, 2105
- come** 19, 95, 107, 111, 169, 169n, 201, 204, 214, 247, 283, 303, 330, 433, 444, 493, 819, 925, 938, 954, 984, 1010, 1056, 1208, 1249, 1263, 1443, 1604, 1610, 1626, 1657, 1683, 1801, 1902, 1994, 2000, 2074, 2078, 2081, 2083
- come to each other** 1657
- come across (each other)** 95, 368, 1058, 1447, 1614, 2046
- come close (to each other)** 84, 901, 903, 904, 919
- come together/gather running** 23, 95, 107, 118, 123, 210, 213, 216, 224, 226, 431, 549, 551, 634, 636, 655, 711, 723, 724, 925, 1132, 1177, 1633, 1734, 1957
- come into (contact, conflict, etc.)** 124, 1083, 1271, 1336, 2062, 2063, 2069
- come to an agreement (with each other)** 96, 134, 199, 349, 365, 419, 543, 551, 553, 583, 627, 656, 657, 1010, 1012, 1058–1060, 1083, 1145, 1146, 1216, 1220, 1263, 1275, 1336, 1338, 1611, 1614, 1621, 1622, 1672, 1738, 1955, 1976, 1990, 2009, 2025, 2037, 2046, 2057, 2058, 2062
- come to mutual understanding** 1059
- come, arrive (together)** 211, 355, 492, 549, 661, 670, 915, 1304, 1307, 1540
- communicate (with each other)** 431, 498, 576, 596, 597, 634, 656, 657, 685, 686, 1033, 1059, 1241, 1955, 2024, 2031, 2037, 2046, 2054, 2058
- companion** 365, 371, 925, 1068, 1268, 1507, 1525, 1936, 1939, 2065, 2068
- compare** 21, 76, 77, 80, 85, 87, 90, 96, 103, 104, 119, 124, 169, 210, 222, 285, 355, 388, 430, 501, 546, 599, 986, 1050, 1047, 1051, 1054, 1055, 1088, 1184, 1270, 1273, 1768, 1774, 1775, 1778, 1945, 1958, 1959, 1991, 2024, 2046–2049, 2052, 2054, 2058–2061, 2063, 2064, 2069, 2073, 2104
- compatriot(s)** 215, 227, 914, 1055, 1061, 1062, 1218, 1267, 1269, 1474, 1960, 2067, 2104
- compensate (to each other)** 1054, 1061, 1062
- compete (in sth with each other)** 14, 21, 26, 66, 96, 134, 193, 210, 238, 273, 285, 290, 299, 300, 318, 337, 342, 355, 365, 390, 401, 419, 420, 422, 441, 448, 449, 597, 603, 629, 660, 670, 677, 711, 716, 726, 824, 826, 961, 977, 990, 1006–1009, 1011, 1047, 1051, 1058, 1060, 1082, 1144, 1145, 1148, 1153, 1185, 1190, 1212, 1216, 1217, 1219, 1220, 1260–1264, 1270, 1275, 1311, 1312, 1335–1337, 1343, 1344, 1447, 1456, 1670, 1671, 1703, 1709, 1738, 1752, 1771, 1773–1775, 1856, 1954–1956, 2024, 2025, 2031, 2041, 2056, 2058, 2059, 2062, 2069
- complain (about/of/to each other)** 427, 432, 553, 648, 1114, 1177, 1337, 1767, 1831
- complement each other** 1061
- compromise, concede to each other** 1059–1061
- comrade** 61, 245, 362, 363, 961, 1149, 1222, 1224, 1630, 1706, 1707, 1717, 1741, 1960, 2066
- conceal (from each other)** 1201, 1762
- conceal sth together** 1201
- concede (to each other)** 2041, 2045, 2056
- condemn (each other)** 427, 666, 679, 1112
- confer (with each other)** 14, 134, 677, 1447, 1767, 1772, 1955, 1977, 2025
- confide (in each other)** 431, 995, 1268
- congratulate (each other)** 429, 530n, 591, 1032, 1067, 1968, 2037
- connect (together)** 96, 127, 128, 140, 211, 218, 293, 431, 495, 500, 502, 599, 1154, 1270, 1447, 1449, 1738, 1945, 1994, 2024, 2052, 2054, 2058, 2069
- connect (with each other)** 734, 2037, 1955
- consider each other enemies** 2009
- consider equal to each other** 80
- consult (together)** 349, 583, 1059, 1092, 1267, 1738, 2104
- continually/repeatedly, one after another** 1816
- continue each other** 1458, 1468, 1968
- contradict (each other)** 124, 137, 216, 365, 419, 427, 667, 840, 1144–1146, 1149, 1338, 1452, 1459, 1935, 1955
- contrary to each other** 1062
- control each other** 524
- convene** 95
- converge** 213, 597
- conversation** 990, 1092, 1148, 1259, 1265, 1611, 1694, 1706
- converse** 99, 134, 135, 171, 225, 443, 598, 724, 731, 1029, 1145, 1153, 1265, 1297, 1447, 1611, 1622, 1634, 1738, 1931, 1954, 1994, 2024, 2033, 2041, 2054, 2058
- convey to each other** 479, 490
- cook (sth together)** 241, 287, 341, 431, 869, 892, 926, 1055, 1778, 1790, 1902, 1945
- cooperate (with each other)** 32, 399, 597, 1446, 1789
- coordinate** 80, 87, 545, 1055, 1239, 2026
- copulate (with each other)** 95, 419, 960, 1052, 1083, 1336, 1410, 1418, 1419, 1424, 1426, 1551, 1622, 1738, 1807, 1932, 1952, 1954, 1955, 2058
- coreligionists** 2067
- correct (each other)** 1294, 1459
- correspond (to/with to each other)** 124, 137, 213, 216, 285, 596, 666, 701, 1017, 1031, 1082, 1216, 1314, 1323, 1338, 1344, 1446, 1454, 1969, 1994, 2024, 2041, 2047, 2056, 2057, 2059, 2072
- corroborate (mutually)** 2036
- counsel (with) (each other)** 431, 467, 468, 497, 498, 541, 1259, 1338, 2046
- count (each other)** 80, 81, 316, 542, 1006, 1008, 1146, 1202, 1795
- count (sth together)** 316, 1006, 1202, 1205
- counterbalance (each other)** 215, 1059
- couple/fasten (together)** 545, 2026
- couple/mate** 1151, 1152, 1154
- court (each other)** 1153, 1300
- cover (with) (each other)** 79, 80, 84, 190, 219, 292, 316, 428, 465, 468, 851, 1060, 1201, 1410, 1633, 1634, 1696, 1777
- crackle (together)** 1789, 1790

- cramped (together)** 1275, 1452
crave for each other 1330
crawl (together) 191, 690, 1638
creak together 1134
create sth together 37, 76, 80, 93
criticize (each other) 427, 1032, 1394, 2008, 2010, 2075
croak (to each other) 61, 401, 1604
cross/intersect (of roads, etc.) 137, 139, 502, 651, 1803
cross (each other) 650, 1527, 1534, 1537, 1767
cross (a river/sea together) 276, 1784
cross one's arms 245n, 501, 502
cross (one another) 349, 987, 1342, 2062
cross, get mixed 2058
crossbreed 2026, 2033, 2058
crowd (together) 27, 398, 427, 655, 1153, 1308, 1309, 1339, 1927, 1633, 1634, 1957
crowd/huddle (together) 549, 634, 654, 1276
crowd/jostle (each other) 670, 1336, 1339
crowd/throng (together) 661
crumple, rumple, jumble together 1059, 1221, 1310, 1342
crush (together) 347, 716, 722
cry (for one another) 219, 276, 317, 879, 925, 1473, 1521, 1524, 1784, 1902, 1997
cry (together) 223, 249, 276, 879, 925, 1045, 1524, 1784, 1790, 1801
cry with each other 879, 1045
cry/weep (of several persons) 1203
cuddle up (to each other, together) 340, 348, 655
cultivate (together) 223, 340, 348, 903
cure each other 619, 1602
curse (at) (each other) 40, 168, 427, 648, 679, 716, 945, 990, 1036, 1037, 1112, 1176, 1321
cut (sth) (together) 20, 70, 70n, 81, 90, 91, 104, 128, 134, 244, 262, 268, 290, 293, 294, 406, 419, 445, 652, 699, 848, 853, 896, 1031, 1146, 1272, 1319, 1357, 1379, 1408, 1516, 1521, 1530, 1585, 1636, 1902
cut each other 20, 244, 262, 274, 294, 406, 665, 1585, 1009
- D**
- dance (with each other, together)** 449, 577, 907, 1007, 1298, 1309, 1757, 1789, 1808, 1831, 1903
debate (with each other) 135, 175, 1449, 1775, 2020
deceive (each other, together) 298, 427, 666, 988, 1032, 1104, 1112, 1176, 1205, 1240, 1484, 1602, 1827, 1831, 1840, 2008, 2039, 2075
decide together 224
declare (each other) that 530n, 576, 1459
defeat (each other) 650, 1187, 1216
defend (each other) 186, 190, 239, 263, 265, 428, 465, 524, 666, 1205, 1726, 1968, 2041, 2102
defend sth together 1205
delouse (each other) 292, 1895
demand (from each other) 430, 1147, 1179, 1768
depend on each other 428, 586, 1033, 1062, 1067, 1997, 2081
deprive (each other of) 427, 1265, 1653
desire (each other) 1296, 1515, 1522
destroy (each other, together, mutually) 39, 63, 64, 216, 225, 393, 427, 580, 1117, 1240, 1250, 1968, 1970
devour (each other) 296, 355, 358, 448, 564, 581, 1062, 1696, 1766
dialogue 1446
die 65, 420, 442, 767, 988, 1010, 1038, 1042, 1105, 1174, 1238, 1239, 1336, 1409, 1515, 1628, 1649, 1668, 1683, 1739, 1760, 1970, 1803
die for each other 1970
die one after another 283
die together 214, 223, 253, 275, 1042, 1628, 1649
differ (from each other) 92, 356, 365, 424, 598, 688, 1083, 1092, 1099, 1148, 1222, 1224, 1344, 1449, 1462, 1952, 2047, 2074
different (from each other) 123, 355, 420, 547, 913, 955, 1061, 1084, 1447, 1737, 1812, 1816, 1907, 1976, 2047, 2073, 2090, 2104
dip/plunge (several times) 1157
direct (to each other) 485, 1034, 1261
disagree (with each other) 123, 900, 1520, 1523
disappointed (in/with each other) 432, 980, 1114, 1185
disassemble 599
disciples of the same tutor 2067
discuss each other 341
discuss (with each other, together) 135, 170, 468, 497, 717, 960, 1012, 1056, 1060, 1135, 1338, 1449, 1459, 2020, 2022, 2025, 2031, 2048, 2057
dish up sth together 1055, 1058
disintegrate 723n
disjoin 990
dismantle into parts 70n
dispatch sth to each other 430, 472
disperse 23, 83, 89, 95, 104, 134, 547, 551, 1153, 1841, 2024
displeased with each other 1176
dispute (with each other) 14, 319, 419, 420, 660, 990, 1059, 1061, 1082, 1727, 1768, 1807, 2031
disseminate repeatedly 2078
distinguish 83, 92, 96, 118, 120, 124, 137, 497, 500, 501, 547, 599, 687, 688, 698, 1088, 1224, 1945, 1958, 1959, 2026, 2073, 2074, 2104
distressed (together with) 700
distribute (among each other, between oneselves) 92, 499, 536, 717, 720, 721, 770, 723, 1225, 1298, 1394, 1516, 1738
distrust each other 1969
disturb (each other) 427, 1112, 1726, 1831
dive (in turn, one after another, repeatedly) 284, 1343
diverge 598, 1446
divide (among/between each other, oneselves) 90, 96, 119, 127, 179, 283, 316, 499, 501, 599, 687, 691, 698, 1011, 1039, 1040, 1088, 1190, 1225, 1274, 1298, 1323, 1611, 1653, 1807, 1972, 1998, 2024, 2074
divide (from each other, into parts) 81, 431, 482, 1605

- divide sth together* 316, 420, 691,
990, 1040, 1045, 1268, 1274, 1298,
1322, 1323, 1622, 1808, 2074
- divorce (each other)* 598, 659, 661,
670, 1083, 1153, 1270, 1738, 1955,
1956
- do (harm, favours to each other)* 587,
588, 1352, 1364, 1365, 1968
- do sth all together to one another*
35, 1362
- do (sth together)* 12, 209, 226, 837,
1133, 1048, 1056, 1151, 1216, 1408,
1503, 1740
- done each in turn* 1500
- double/huddle oneself up* 1275
- dovetail/be interrelated* 542
- draw close together* 18
- draw sb/sth nearer (together)* 1316
- draw together* 210, 211, 1298, 2046,
2057–2059
- draw/pull (from each other)* 1007,
1053, 1298, 1313
- dress (sb together)* 62, 179, 189, 266,
428, 441, 640, 680, 848, 944, 1007,
1045
- dress one child many times* 179,
441, 944
- drink (together, to/with each other)*
32, 93, 104, 192, 210, 214, 275, 303,
306, 307n, 309, 346, 399, 439, 441,
470, 896, 957, 1045, 1206, 1315, 1318,
1361n, 1408, 1580, 1637, 1683, 1757,
1762, 1804, 1977, 2063
- drive (cattle) together* 217, 654, 1222
- drive (each other) away* 77, 83, 118,
428, 525, 546, 587, 690, 768, 1628,
1652
- drive together (into one place)* 118,
217, 224, 654
- drop (near each other)* 788
- drop one's eyes together* 1042
- dry up (of all) together* 428, 1636
- dual* 902, 912
- dust parts of an object in front of
each other* 766
- E**
- each* 7, 154, 156, 292, 426, 1333, 1499,
1870, 1898, 1900, 1906, 1994, 2074
- each respectively* 1044
- each two* 20
- each (a half of sth)* 1813
- each (of the subject referents) and
someone else (anonymous) to
each other* 1072
- each (of the subject referents)
separately* 1193
- each (of the subject referents) to
someone else* 1066
- each (separately)* 1065, 1192, 1332,
1333
- each N ... the other* 562, 592
- each about him/herself* 533
- each of the set of subject /object
referents* 1024
- each of the subject referents showed
his son to the other subject
referent* 24
- each of the subject referents showed
his son to the son of the other
subject referent* 24
- each on their own, by themselves* 410
- each one* 157, 269, 592, 922, 1741
- each one separately* 1327
- each one (...) the other* 592, 604
- each other* 10, 11, 14, 19, 26, 49, 50,
59, 63, 88, 89, 102, 135, passim, 215,

2075
- enemies (of/to/with each
other)* 118, 419, 756, 800, 1218,
1296, 1336, 1451, 1734, 1738, 1742,
1939, 2063

- enemy** 134, 717n, 792, 800, 1264, 1267, 1451, 1671, 1706, 1939, 2009, 2063, 2065, 2066, 2067
- engage (with each other)** 1263, 1394
- engage/betroth** 503
- engender (one another)** 1975, 2042, 2045
- ensure (each other)** 428, 472
- entangle** 79, 600, 1088, 1224, 1226, 1275, 1277, 2054, 2072
- enter** 130, 279, 320, 365, 990, 1146, 1156, 1216, 1263, 1294, 1304, 1314, 1318, 1336, 1420, 1422, 1423, 1581, 1610, 1640, 1803, 1804
- enter together** 279, 1294, 1304, 1318, 1636, 1640
- entering into an agreement with sb** 928
- entertain (each other)** 428, 468, 1459, 1767
- entice (each other)** 224, 53, 1086
- entwine (sth) (together)** 224, 1053, 1086, 1313, 1314, 1342
- envy (each other)** 176, 429, 432, 438, 1177, 1721, 1832, 1969
- equal (in sth)** 14, 119, 123, 222, 341, 420, 913, 991, 1027, 1061, 1083, 1084, 1216, 1218, 1220, 1221, 1269, 1339, 1638, 1728, 1730 1935, 2025, 2026, 2032, 2042, 2047, 2058, 2059, 2063, 2064
- to each other** 14, 341, 364, 429, 913, 1216, 1218, 1220, 1267, 1269, 1728, 1730, 2063
- equal one another** 341, 529, 1638
- equalize** 80, 96, 169, 1273, 1352, 1364, 1449, 2026
- establish differences** 83
- establish friendly relations with** 1149
- establish personal contact** 2063
- establish, found together/jointly** 224
- esteem, respect (each other)** 469, 2076
- estimate (sth together)** 93, 215, 1225, 1261
- everybody** 361, 922, 1907
- everyone (together)** 158, 592, 922, 1720, 1816
- everywhere** 283, 1870, 1906
- examine sth by comparing it with sth** 1048
- examine sth by joining together** 1778
- exceed (sth X times)** 1816, 1971
- exchange** 171, 191, 248, 329, 364, 401, 431, 466, 467, 500, 527, 547, 601, 645, 646, 657, 683, 685, 686, 911, 1012, 1116, 1148, 1176, 1189, 1263, 1295, 1321, 1322, 1336, 1446, 1447, 1457, 1614, 1621, 1622, 1803, 1903, 1955, 1998, 2024, 2032, 2050, 2054, 2060, 2062
- exchange glances (repeatedly)** 169, 176, 178, 388, 636, 656, 657, 684–686 1078, 1457, 2036, 2045, 2056
- exchange (with each other, between/among themselves)** 61, 911, 927, 1115, 1226, 1611
- exist in the same place at the same time** 1058
- exert themselves together** 821
- exist (together)** 974, 1045, 1058, 1759, 1978
- experience/go through sth together** 226
- explain (to each other)** 62, 134, 1034, 1726, 2037, 2049
- explain ideograms by means of each other** 2037
- express (sth to each other)** 176, 430, 470, 1179
- extend/stretch (of hills, etc.)** 556
- exterminate (each other)** 427, 1176, 1205, 1296, 1321, 1992
- exterminate together** 1205
- F**
- fabricate sth repeatedly** 2078
- face** 353, 357, 365, 367, 431, 1063, 1150, 1234, 1266, 1269, 1289, 1313, 1343, 1451, 1462, 1506, 1527, 1845, 2052, 2063, 2069
- face (each other)** 826, 1051, 1062, 1063, 1451, 1527, 1051, 1060, 1730, 1816
- face to face with each other** 126, 165, 592, 1064, 1182, 1635, 1064
- face, be opposite** 1992, 1994, 2019, 2021, 2024,
- fall** 123, 566, 944, 1010, 1473, 1524, 1722, 1879, 1997
- fall (of several people or objects)** 944
- fall down (together)** 493, 1524, 1742, 1803
- fall ill (of all) (together)** 213, 653, 1636
- fall in love (with each other)** 222, 429, 483, 657, 666, 917, 1063, 1147, 1185, 1216, 1255, 1767
- fall into (mutual) discord with each other** 915, 920, 921
- fall out with (each other)** 917, 1938
- fall to pieces** 373, 425, 487
- fall upon sb/sth (together)** 38, 431, 1002, 1637, 1638
- fall upon/attack each other** 995
- fall/go down (together)** 214, 1789
- family** 360, 364, 398, 976, 1127, 1148, 1149, 1944, 2065, 2066,
- far (away) (from each other)** 125, 371, 1447, 1586, 1624, 1674, 1706, 1853, 1953, 1970, 1982, 2046
- far from (each other)** 1083, 1625, 1816, 1853, 1970, 1974, 2041, 2046
- far, other, different, alien, foreign** 732
- farther on one after another** 1624
- farther on, behind sth/sb** 1624
- fast by, close to** 125
- fasten** 493, 1779, 2073
- fasten (together)** 127, 218, 313, 437, 1027, 1336, 1762, 1779, 2025
- father** 355, 356, 361, 364, 367, 375, 422, 904, 974, 1169, 1170, 1267, 1440, 1565, 1566, 1745, 1755, 1757, 1810, 1997
- father and child(ren)** 361, 374, 904, 1169, 1566
- father and son** 361, 841, 1979
- father of son-in-law** 1265
- father → person who has the same father** 424
- fawn upon (each other)** 96, 1123
- fear (each other)** 798, 799, 1721, 1801
- fear together** 93, 213, 798, 799, 1626
- feed (each other)** 428, 785, 988, 1518, 1580, 1760, 1879, 1882, 1968,
- feed sth (to each other)** 790
- feel envy (toward each other)** 916, 1126
- feel sorry (for each other)** 1585
- fellow V-er/ companion at V-ing** 841

- fellow N* 134, 214, 227, 364, 700, 1064, 1148, 1149, 1218, 1267, 1269, 1960, 2067, 2068
- fight* 14, 95, 117, 134, 166, 193, 318, 319, 319n, 355, 399, 419, 476, 497, 597, 604, 620, 639, 647, 651, 652, 670, 677, 715, 734, 776, 839, 978, 979, 989, 1010, 1012, 1029, 1058, 1059, 1111, 1144, 1145, 1146, 1190, 1218–1220, 1259, 1302, 1336, 1394, 1410, 1418, 1424, 1426, 1447, 1449, 1459, 1523, 1614, 1622, 1634, 1670, 1738, 1743, 1791, 1802, 1819, 1830, 1831, 1853, 1894, 1931, 1947, 1955, 2025, 2032, 2033, 2045, 2056–2058, 2062, 2104, 2105, 2109, 2110, 2112
- fight (of many)* 1336
- fight repeatedly* 1458
- fight (with/against) (each other)* 25, 196, 359, 483, 604, 640, 647, 723, 776, 902, 882, 900, 902, 941, 960, 1125, 1335, 1611, 1614, 1621, 1633, 1769, 1831, 1853, 1894
- fight a duel* 134, 239n
- fight together* 226, 1045, 1636, 1638
- fight jointly* 1265
- fight several times* 19, 247, 406
- fight, beat (each other)* 53, 476, 990, 647, 667, 1322, 1701
- fight/butt* 1153
- fight/hit (each other)* 270, 978, 979, 1314, 1893
- fight/participate in a war (battle)* 542
- fight/quarrel* 978, 979, 1008, 1252
- fight/scuffle (with each other)* 651, 1976
- fight/struggle (with each other)* 225, 648, 670, 979, 990, 1218, 1220, 1339, 1341, 1458, 1625, 2045
- fight/tear each other to pieces* 1177
- fill up, cover up with a pile/pile up with* 219, 1055
- filling each other* 1063
- find* 430, 666, 882, 900, 1147, 1190, 1240, 1263, 1293, 1410, 1419, 1427, 1430, 1499, 1611, 1614, 1672, 1974
- find each other* 358, 882, 1112, 1147, 1263, 1329, 1602, 1672, 1831, 1974
- find out (together)* 281, 1049, 1147, 1261, 1325
- find sth together* 1147
- fire (at each other)* 359, 427, 610, 625, 645, 685, 978, 1006, 1191, 1240, 1267, 1300, 1422n, 1602, 2062
- fire repeatedly* 1189
- first X, then Y* 36, 554, 829,
- first the one fought the other then the reverse* 829
- fish (here and there)* 290, 337, 1008, 1141, 1205, 1206
- fish together* 290, 337, 1141
- fit (into each other)* 593, 1048, 1953, 1055
- fit together* 492, 502
- fit, suit (each other)* 124, 493, 1082
- five each* 369, 1588
- five times* 2107
- flash (again and again, repeatedly)* 445, 1228, 1343, 1531
- flash/flare up/sparkle together* 1133
- flatten sth up (in great quantities)* 767
- flatter each other* 428, 1114
- flee* 1515, 1517, 1524, 1533, 1537, 1538, 1659
- flee from place to place* 1537, 1538
- flee here and there* 1659
- flee together* 1524, 1537, 1538
- flick each other on the forehead* 1111
- flicker (at each other)* 470, 1308, 1537
- fling oneself at each other* 95, 96, 1831
- fling words at each other* 1124
- flirt with each other* 961, 1147, 1178, 1263
- flock/crowd/mill together* 368, 1150
- flog/thrash each other* 647
- flow* 95, 169, 192, 217, 284, 388, 493, 1524, 1633, 1994, 2055, 2056
- flow hither and thither* 284
- flow out in different directions* 487
- flow (together) (into one place)* 95, 169, 192, 217, 224, 388, 431, 493, 1218, 1224, 1634, 1994, 2031, 2056, 2072
- flutter/fly repeatedly* 1344
- fly* 303, 442, 446, 655, 800, 1042, 1308, 1524, 1533, 1832
- fly at (each other)* 979, 980
- fly (away) together* 226, 275, 337, 1042, 1132, 1524
- fly from place to place* 1832
- fly (in all directions, repeatedly)* 290, 446, 1533
- follow* 46, 48, 227, 285, 289, 305n, 325, 355, 427, 429, 486, 593, 594, 878, 900, 1039, 1059, 1144, 1145, 1296, 1332, 1472, 1484, 1488, 1562, 1632, 1731, 1732, 1831, 1892, 1904, 1941, 1951, 2036, 2037, 2045
- follow behind* 593
- follow each other* 25, 47, 48, 289, 358, 372, 509, 555, 610, 626, 900, 921, 1218, 1296, 1329, 1472, 1525, 1632, 1634, 1730, 1732, 1904, 1969, 2036, 2045, 2049
- follow one after another* 355, 468n, 509, 1338
- fold sth (together)* 221, 228, 347, 492, 548, 1053, 1786, 1787, 1819
- follow/spy on each other* 1831
- fool about (together)* 427, 1045
- for one another* 346
- for superiority to each other* 734
- for two mountain ridges to come together* 1785
- for/about each other* 483, 1730
- force (each other)* 193, 429, 1147, 1640
- forge (together)* 691, 1146
- forget (of) (each other)* 40, 108, 295, 430, 788, 806, 988, 1112, 1136, 1250, 1300, 1387, 1969
- forget together* 108
- forgive (to) (each other)* 59, 318, 405, 428, 430, 789, 988, 1263, 1969
- form a crowd, flock (of birds, insects, children)* 1811
- form an alliance* 2054
- form (into a clot)* 1145, 1221
- form layers* 1222, 1224
- form together* 130
- fortify strongly or on all sides* 220
- four each* 1588
- fraternize* 14, 468, 542, 597, 660, 1013, 1266
- free* 428, 1518
- free/save/rescue each other* 1112
- freeze* 691, 1827
- freeze into a lump* 691
- frequently, many times* 1334, 1815
- friend* 61, 90, 155, 245, 245n, 353, 355, 357, 360, 362, 364, 365, 370, 426, 445, 660, 694, 695, 800, 824, 883, 961,

- 1148, 1149, 1169, 1218, 1265–1267, 1344, 1446, 1629, 1812, 1938, 2063, 2065, 2066, 2090, 2104
- friends** 97, 132, 169, 342, 353, 355, 357, 364, 365, 388, 445, 542, 658, 660, 670, 756, 961, 1216, 1218, 1222, 1341, 1446, 1449, 1622, 1706, 1904, 1994, 2024, 2045, 2046, 2051, 2057–2059, 2063, 2066
- friends (with each other)** 132, 353, 364, 365, 960, 1269, 1976
- frighten (each other)** 150, 446, 785, 798, 1407, 1408, 1443, 1569
- frightened of each other** 1652
- from both [sides]** 1816
- from both directions, sides** 1817
- from day to day** 1818
- from different directions towards each other** 456, 492, 1803
- from each other** 394, 1617, 1620, 1645, 1662
- from one place to another** 283
- from one point in different/all directions** 282
- from one side to the other** 1906
- from one to the other** 269
- from side to side** 1870, 1906
- from time to time** 496, 1541
- from/about each other** 483
- front** 1079, 1334, 1812
- fry (sth together)** 79, 1319
- fuck each other** 177
- fume before each other** 431, 995
- fuse, pour sth into one together** 90
- fuss (of many)** 1203
- G**
- gallop (together)** 1309, 1312
- gather** 92, 127, 217, 295, 495, 547, 977, 1015, 1017, 1054, 1056, 1152, 1153, 1159, 1237, 1270, 1273, 1339, 1484, 1769, 1784, 1802, 1853, 1957, 2046
- gather (from different directions)** 1145
- gather (together, in a group, into a pile, etc.)** 92, 210, 365, 407, 492, 499, 545, 670, 902, 1012, 1145, 1221, 1265, 1271, 1276, 1339, 1635, 492, 670, 1271, 1265, 1783, 1778, 1957
- gather (with) each other** 1853
- gather/crowd together** 368, 1150, 1276
- gegenseitig behaupten** 167
- gegenseitig kritisieren** 167
- get acquainted (with each other)** 443, 652, 677, 979, 991, 1102, 1112, 1121, 1128, 1136, 1288, 1293, 1302, 1320, 1322, 1451, 1634, 1807, 1998, 2059
- get along together** 1153, 1220
- get angry (at/with each other)** 164, 915, 916, 995, 1241, 1245, 1407, 1411, 1412, 1603, 1739, 1966, 2033
- get betrothed** 1997, 2033
- get centralized** 1265
- get clenched** 1015, 1151, 1153, 1154
- get connected** 1239, 1955
- get coupled** 2025
- get crumpled/ruffled** 1277, 1342
- get dense(r)** 296
- get disappointed (in each other)** 996, 2000
- get divorced (by mutual consent)** 661, 1083, 1803, 2033, 2059
- get each other** 1791
- get entangled/entwined** 92, 502, 1083, 1086, 1222–1224, 1226, 1237, 1266, 1270, 1310, 1342, 1697, 1706, 2031
- get glued together** 92, 1049, 1152, 1260, 1271, 1272, 2024
- get into communication** 2046
- get into conflicts** 927
- get irritated (together)** 1042
- get joined (together)** 1107
- get knotted (of thread)** 1220
- get linked, mixed** 294
- get married** 92, 903, 976, 1174–1175, 1767, 1776, 1856, 1954, 2033
- get married/marry each other** 661
- get matted/crumpled** 1261
- get mixed** 13, 281, 295, 418, 420, 443, 446, 467, 670, 1011, 1017, 1028, 1152, 1272, 1309, 1313, 1314, 1339, 1342, 1450, 2025, 2031, 2056
- get mixed up** 502, 1342
- get on well with sb** 2047
- get on/along with sb** 1263
- get pasted (together), stick to sth** 355, 1277, 1312
- get reconciled (with each other)** 677, 1148, 1153, 1154, 1263, 1265, 1938, 2031, 2033, 2057, 2059, 2073
- get scared by/at each other** 35, 639, 1003, 1831
- get separated** 975, 1014
- get settled (of sth)** 2057
- get smeared, soiled** 1104, 1310
- get spread out** 1310
- get stuck (to each other)** 74, 272n, 1016, 1342
- get stuck/glued (together)** 74, 295, 1152, 1153, 1342
- get taught (together)** 347

- stick sth together** 73, 74, 78, 295, 438, 441, 1776
- stick sth onto sth** 441
- stick to sth/sb** 14, 66, 73, 88, 289, 414, 431, 901, 1008, 1767, 1776, 1777
- stick to each other** 14, 66, 72, 88, 483, 1767, 1776
- stick together** 72, 73, 493, 1776
- stick, get glued (to one another)** 73, 289, 901
- stick, glue, paste (together)** 73, 84, 1153, 1452
- sting/smart all over** 1790
- stir, mix (together)** 266, 1088, 1213, 1600, 2073
- stitch/sew (sth together)** 1053, 1787
- stop (each other)** 299, 1010, 2037, 2061
- stop, stand together** 1637
- strain (all the time)** 1637
- stretch sth** 82, 104
- stretch in single file** 1239

stretch all around, in all directions 82
strike 319, 839, 1054, 1793, 2094
strike an acquaintance 2058
strike, beat sb (together) (repeatedly) 134, 1793
string, braid sth together 439, 556, 834, 1313, 2063, 2065
strive (together) 213, 214, 897, 1010, 1336
stroke (each other) 221, 428, 431, 1250, 1300, 1520, 1774, 1830
stroll (together) 310, 509, 700, 1946
struggle 14, 118, 134, 199, 215, 364, 420, 652, 660, 677, 990, 1051, 1059, 1061, 1145, 1148, 1149, 1220, 1652, 1671, 1672
struggle with each other 220, 658, 1339, 1771, 1976
struggle together 1523
stumble (over and over again) 290, 445, 1310, 1503
subscribe together with sb 226
subsequent 1944
substitute 1059
substitution 225
succeed 429, 593, 1063, 1144
succeed (to) (each other) 429, 593, 1063, 1144, 1773, 1774, 1968, 2045
mutually after each other 556
succession, inheritance 1091
suck 304, 1214
suck together 1045
suckle (each other) 304, 1013, 1214
suffer (together) 189, 210, 214, 224, 441, 701, 1000, 1045, 1147, 1789, 1790, 1796, 1946
suit (each other) 213, 228, 583, 1010, 2047
suit, be like sb, be suitable for 1051
suit, do (for), be good (for) 1009
suit, match, correspond 1050, 1092, 1220, 1955
sulky (with each other) 432, 979, 980, 995, 2033
sum up, add up 220, 1050
summarize 492
supplement each other 1969
supply (together) 530n, 1319
support (each other) 224, 242, 407, 428, 469, 554, 826, 1102, 1105, 1177, 1268, 1457, 1518, 1968, 2008, 2045

suppress, annihilate together or simultaneously 213
surpass (each other) 229, 299, 630, 714, 715n, 734, 1008, 1942, 1952
surprise/scare (each other) 531n, 1800
surprized (together) 1308, 1790, 1794, 1800, 1801
suspect (each other) 429, 438, 666, 1112, 1130, 2056
swaddle 76, 79
swarm/flock (together) 368, 655, 1150, 1309, 1339
swear 1831
swear (at/to each other) 23, 95, 193, 238, 432, 653, 716, 990, 1241, 1500, 1557, 1831
sweep (sth) together 228, 494, 921, 1227, 1325, 1722
swim (collectively) 20, 303, 928, 1007, 1659, 1945
swim here and there 20, 1659
swing (each other) (by turns) 283, 1214, 1227
swing together here and there 283

- wrinkle* 78, 295, 464, 987, 1018, 1219, 1220, 1270, 1275
- wrinkled/scarred all over the surface* 1805
- write* 191, 289, 298, 440, 494, 657, 675, 685, 692, 782, 831, 890, 894, 897, 903, 907, 925, 1008, 1028, 1102, 1109, 1204, 1237, 1238, 1241, 1315, 1322, 1441, 1458, 1670, 1831, 1893, 1901
- write (of many agents)* 1315
- write collectively* 440, 925
- write from time to time* 1315
- write much and often* 289, 446, 897, 903
- write (sth) to each other* 440, 905, 922, 924, 925, 1102, 1117, 1124, 1179, 1204, 1322, 1458, 1605, 1668
- write (sth) together* 922, 957, 1204, 1322
- write together with sb* 226
- writhe, twist* 1308, 1310
- wrong/guilty against one another* 1459

Y

- yell, snarl at each other* 468
- yoke, join* 714, 735
- you with each other* 983

Abbreviations and symbols

Note that some of the abbreviations have two usages; e.g. IND generally stands for (a) indicative but it means (b) indefinite agreement marker in Alpatov et al. (Ch. 42 on Ainu reciprocals), as is shown in the list below. Or, S generally symbolizes (a) intransitive subject and (b) absolutive agreement marker in Letuchiy (Ch. 18 on Adyghe). The broader application of an abbreviation is listed as (a), and in (b) the chapter where the same abbreviation is used for a different term is mentioned in parentheses.

In some papers special abbreviations are used: they are sometimes not entered in this list if they are explained in the paper.

#	ancestor form (in an extinct language or language stage)	AG	(a) agentive case; (b) agent marker (Ch. 22 on Tagalog)
#	possible (standard) ellipsis	Ag	agent
	morpheme boundary (in complex words)	AIM	purpose marker
↑, ↓	rising (topicalizing), falling sentence stress	AL	alienable possessive
§	section, subsection	ALL	allative
1	1st person	AN	animate
2	2nd person	ANA	anaphoric pronoun
3	3rd person	ANAPH	anaphoric
A	(a) transitive subject; (b) marker of agreement with agent (= oblique subject; Ch. 18 on Adyghe)	ANOM	action nominal
ABL	ablative	ANT	anterior
ABS	absolutive	AOR	aorist
ABSTR	abstract	APASS	antipassive
ACAUS	anticausative	APPL	applicative
ACC	accusative	ART	article
ACT	active	ASP	aspect
ADD	additive	ASRT	assertive
ADJ	adjective	ASS	assertion
ADV	adverb(ial)	ASS.NR	assertive nominalizer
ADVZ	adverbializer	ASST	assistive
AFFRM	affirmative	AT	aspect-tense
		ATR	attribute
		AUG	augment
		AV	Actor voice
		BEN	benefactive
		BIL	bilocal

CAUS	causative	DYN	dynamic (verb)
C	carrier morpheme	ELAT	elative
Ch.	Chapter	EMPH	(a) emphatic; (b) emphasizer (Ch. 37 on Mundari)
CHAIN	chaining	e. o.	each other
CISL	cislocative	EP	epethentic
CLF	classifier	EQT	equative
CMP	completive	ERG	ergative
CMPR	comparative (degree)	ESS	essive
COLL	collective	EUPH	euphonic
COM	comitative	EVID	evidential
COMP	complementizer	ex.	example
COMPL	completive	EXC	exclusive
COND	conditional	EXP	experiential
CONJ	conjunction	EYEW	eyewitness
CONN	connector	F	feminine
CONT	continuous	FACT	(a) factative; (b) factitive (Nêlêmwa Ch. 34)
CONTM	contemporative	fig.	figurative
CONTR	contrastive	FIN	final marker
CONV	converb	FIN.Q	final question marker
COP	copula	FOC	focus
CS	causee	FUT	future
CW	countword	FV	final vowel
DAT	dative	GEN	genitive
DECL	declarative	GNR	generic
DEF	definite (article)	HAB	habitual
DEICT	deictic	HORT	hortative
DEL	delimitative	i.	intransitive
DEM	demonstrative	IMM	immediative
DEPAT	depatientive	IMMFUT	immediate future
DES	desiderative	IMP	imperative
DEST	destinative	IMP.POL	imperative polite
DETR	detransitive	IMPF	imperfect
DIM	diminutive	IMPL	implorative
DIR	directional	IMPR	impersonal
DISPERS	dispersive	in	intransitive
DISTR	distributive	INAN	inanimate
DMP	discourse-marking particle	INC	inclusive
DO	(a) direct object; (b) marker of agreement with direct object (Ch. 18 on Adyghe)	INCH	inchoative (aspect)
DS	different subject	INCM	incompletive
DU	dual	INCT	incentive
DUR	durative	IND	indicative
DVRS	diversative		

IND	indefinite person agreement marker	MOD	(a) modal; (b) modifier (Ch. 47 on Vietnamese, Ch. 34 on Nêlêmwa)
INDEF	indefinite pronoun	MOM	momentative (aspect)
INDEP	independent pronoun	MP	masculine personal gender
INDF	indefinite person	MULT	multiplicative
INDR	indirect speech	N	neuter
INF	infinitive	NACC	non-accomplished action
INFR	inferred	N.COM	comitative for nouns
INJ	injunctive	NEG	negative, negator, negation
INTRV	introversive	NEG.VB	negative verb
INGR	ingressive	NF	non-feminine
INST	instrumental	N.FACT	non-factative
INT	interrogative	NFUT	non-future
INTENT	intentional mood	NMP	non-masculine personal gender
INTR	(a) intransitive; (b) intransitivizer (Ch. 20 on North Arawak languages and Ch. 30 on Tariana)	NOM	nominative
INTRV	introversive	NP	noun phrase
INTS	intensifier	NPAST	non-past
INTT	intentional	NPOSS	non-possessive
INVL	involutional	NR	nominalizer
INW	inward (motion)	NRPAST	non-recent past
IO	(a) indirect object; (b) marker of agreement with indirect object (Ch. 18 on Adyghe)	NVIS	non-visual
IPFV	imperfective	O	(direct) object
IPS	impersonal passive	O.BEN	object-oriented benefactive
ITER	iterative	OBJ	(a) object; (b) object case (Ch. 30 on Tariana)
KIN	kinship suffix	OBL	oblique
k.o.	kind of	OF	object focus
LAT	lative	ONM	onomatopoeic
LIM	limitative	OPT	optative
LINK	linking morpheme	OR	orientative
lit.	literally	PART	participle, participial
LNK	linker	PASS	passive
LOC	(a) locative; (b) localizer (Ch. 34 on Nêlêmwa)	PAT	patient
LOC.PRED	locative predicate	PAUS	pausal
M	masculine	PC	perfective converb
MALEF	maleficiary	PEJ	pejorative
MDF	modifier	PERF	perfect
MED	middle (medium)	PERS	personal pronoun
		PFV	perfective
		PL, pl.	plural
		POL	polite
		POSS	possessive

PP	past participle	S1	the first argument of a RC
PPS	postposition	S2	the second argument of a RC
PRED	(a) predicate marker; (b) predicator (Ch. 37 on Mundari)	SB	subject
PREF	prefix	sb	somebody
PREP	preposition	SBJ	subject (Ch. 40 on Chukchi and Ch. 45 on Cashinahua)
PRES	present	S.BEN	subject-oriented benefactive
PREV	preverb	SD	sudden discovery
PROGR	progressive	SEQ	(a) sequential; (b) sequential subordinator (Ch. 20 on North Arawak)
PROH	prohibitive	SF	subject focus
PROL	prolative	SG, sg.	singular
PRSP	prospective	SOC	sociative
PRTL	particle	SS	same subject
PRTV	partitive	STAT	stative
Pt	patient	sth	something
PUNC	punctive	SUBJ	subjunctive
PURP	purposive	SUBST	substantive
Q	question (marker)	SUC	successive aspect
QUAL	qualificative	SUFF	suffix
QUOT	quotation	SUP	superlative
R	reciprocal suffix	t.	transitive
RC	reciprocal construction	TH	thematic (affix)
RCPAST	recent past	TOP	(a) topic; (b) topicalizer (Ch. 37 on Mundari)
REC	reciprocal marker	TR	(a) transitive; (b) transitivizer
RECIP	recipient	tr.	transitive
RED	reduplication	TRNSL	translative
REFL	reflexive	v	verb
REL	(a) relative; (b) relator (Ch. 33 on Indonesian); (c) relative clause marker (Ch. 36 on To'aba'ita)	V.COM	verbal comitative
RELTR	relativizer	vb	bitransitive verb
REP	repetitive	vi	intransitive verb
RES	resultative	VIRT	virtual
REVERS	reversive	VOC	vocative
RM	reflexive (polysemous) pronoun (Ch. 11 on Polish)	VR	verbalizer
RMPAST	remote past	VS	verbal substitute
RPRT	reported	vt	transitive verb
s	(a) intransitive subject; (b) absolutive agreement marker (Ch. 18 on Adyghe)		

Note on transliteration of Abkhaz, Abaza, Adyghe, and Kabardian examples

In Nedjalkov (Chapters 1, 3, 5, and 7), Abkhaz, Abaza, Adyghe, and Kabardian examples are cited in Latin transliteration with the Cyrillic letters *ѵ*, *Ѷ*, *ѷ*, and letter *I* of the original alphabet retained. The Cyrillic letters *ш* and *ч* are transposed as *š* and *č* respectively. This mode of transliteration is also used in Letuchiy (Ch. 18 on Adyghe).

In Kazenin (Ch. 17 on Kabardian), phonological transcription is used.

Note on symbols /'/, /'/ and /'/

The symbol /'/' denotes aspiration in Nivkh examples, /'/' denotes palatization in Nivkh, Yakut, Evenki and Even, Itelmen and Yukaghir examples. In the examples of other languages the use of the three symbols follows that of the authors.

Typological Studies in Language

A complete list of titles in this series can be found on the publishers' website, www.benjamins.com

- 73 **ANSALDO, Umberto, Stephen MATTHEWS and Lisa LIM (eds.):** Deconstructing Creole. 2007. xii, 292 pp.
- 72 **NÆSS, Åshild:** Prototypical Transitivity. 2007. x, 240 pp.
- 71 **NEDJALKOV, Vladimir P. (ed.):** Reciprocal Constructions. With the assistance of Emma Š. Geniušienė and Zlatka Guentchéva. 2007. xxiii, 2219 pp. (5 vols.).
- 70 **ZÚÑIGA, Fernando:** Deixis and Alignment. Inverse systems in indigenous languages of the Americas. 2006. xii, 309 pp.
- 69 **ARANOVICH, Raúl (ed.):** Split Auxiliary Systems. A cross-linguistic perspective. 2007. vii, 277 pp.
- 68 **ABRAHAM, Werner and Larisa LEISIÖ (eds.):** Passivization and Typology. Form and function. 2006. x, 553 pp.
- 67 **VESELINOVA, Ljuba N.:** Suppletion in Verb Paradigms. Bits and pieces of the puzzle. 2006. xviii, 236 pp.
- 66 **HICKMANN, Maya and Stéphane ROBERT (eds.):** Space in Languages. Linguistic Systems and Cognitive Categories. 2006. x, 362 pp.
- 65 **TSUNODA, Tasaku and Taro KAGEYAMA (eds.):** Voice and Grammatical Relations. In Honor of Masayoshi Shibatani. 2006. xviii, 342 pp.
- 64 **VOELTZ, F. K. Erhard (ed.):** Studies in African Linguistic Typology. 2006. xiv, 426 pp.
- 63 **FILIMONOVA, Elena (ed.):** Clusivity. Typology and case studies of the inclusive–exclusive distinction. 2005. xii, 436 pp.
- 62 **COUPER-KUHLEN, Elizabeth and Cecilia E. FORD (eds.):** Sound Patterns in Interaction. Cross-linguistic studies from conversation. 2004. viii, 406 pp.
- 61 **BHASKARARAO, Peri and Karumuri Venkata SUBBARAO (eds.):** Non-nominative Subjects. Volume 2. 2004. xii, 319 pp.
- 60 **BHASKARARAO, Peri and Karumuri Venkata SUBBARAO (eds.):** Non-nominative Subjects. Volume 1. 2004. xii, 325 pp.
- 59 **FISCHER, Olga, Muriel NORDE and Harry PERRIDON (eds.):** Up and down the Cline – The Nature of Grammaticalization. 2004. viii, 406 pp.
- 58 **HASPELMATH, Martin (ed.):** Coordinating Constructions. 2004. xcv, 578 pp.
- 57 **MATTISSEN, Johanna:** Dependent-Head Synthesis in Nivkh. A contribution to a typology of polysynthesis. 2003. x, 350 pp.
- 56 **SHAY, Erin and Uwe SEIBERT (eds.):** Motion, Direction and Location in Languages. In honor of Zygmunt Frajzyngier. 2003. xvi, 305 pp.
- 55 **FRAJZYNGIER, Zygmunt and Erin SHAY:** Explaining Language Structure through Systems Interaction. 2003. xviii, 309 pp.
- 54 **AIKHENVALD, Alexandra Y. and R.M.W. DIXON (eds.):** Studies in Evidentiality. 2003. xiv, 349 pp.
- 53 **GIVÓN, T. and Bertram F. MALLE (eds.):** The Evolution of Language out of Pre-language. 2002. x, 394 pp.
