Since reciprocals and sociatives for obvious semantic reasons often require conjoined subjects or objects, morphosyntactic intricacies of nominal conjunction are relevant for the present study. The conjunction *-ra* follows every conjoined NP. As already mentioned in 2.1 above, if an NP followed by *-ra* is definite and has to bear case marking, its case is always ergative/oblique, but never absolutive, irrespective of syntactic position. When two or more NPs are conjoined in one syntactic position, they are cross-referenced by one agreement marker on the verb. If all the conjoined NPs are 3rd person, they are cross-referenced by a 3rd person plural agreement marker; if a 2nd person (singular or plural) NP is conjoined with 3rd person NP(s), the agreement marker is 2nd person plural; finally, if a 1st person (singular or plural) NP is conjoined with a 2nd and/or 3rd person NP, the agreement marker is 1st person plural, cf:

- (31) a. *murat-ra rasul-ra ma-žag-Ø.*
M.-CONJ R.-CONJ 3PL.ABS-play-PRES
'Murat and Rasul are playing.'
- b. *murat-ra ua-ra f-o-žag-Ø.*
M.-CONJ YOU-CONJ 2PL.ABS-DYN-play-PRES
'Murat and you are playing.'
- c. *ua-ra sa-ra d-o-žag-Ø.*
YOU-CONJ I-CONJ 1PL.ABS-DYN-play-PRES
'You and I are playing.'

2.5 The syntax of lexical reciprocals

Underived lexical reciprocals do not allow expression of two arguments by one (conjoined) NP. Normally one of the two agents is expressed by an absolutive NP, and the other by an oblique NP:

- (32) a. *sa ʔəʒə-m s-Ø-o-zawa-Ø.*
 I old.man-OBL 1SG.ABS-3SG.OBL-DYN-fight-PRES
 ‘I am fighting with the old man.’
- b. *ʔəʒə-r sa Ø-qy-z-o-zawa-Ø.*
 old.man-ABS I 3SG.ABS-DIR-1SG.OBL-DYN-fight-PRES
 ‘The old man is fighting with me.’
- c. **ʔəʒə-m-ra sa-ra d-Ø-o-zawa-Ø.*
 old.man-OBL-CONJ I-CONJ 1.PL.ABS-3SG.OBL-DYN-fight-PRES
 ‘The old man and I are fighting with each other.’

Sentence (32c) is entirely grammatical in the meaning ‘The old man and I are fighting with someone else’. But for the meaning in (32c) a reciprocal construction is required (cf. (35b)).

2.6 Word order

The SOV order is usually regarded as unmarked for Kabardian. However, SVO is also frequent, and VSO and OSV are possible. Within a NP head-final order is strongly preferred.

3. The reciprocal meaning

3.1 The general rule for reciprocal formation

The general rule for derivation of morphological-paradigmatic reciprocals is as follows:

(I) coreferential participants of a reciprocal action are always expressed by one NP (possibly, conjoined);

(II) omitted NP is always the one which occupies lower position on the hierarchy in (33):

- (33) DIRECT OBJECT > SUBJECT > INDIRECT OBJECT;

(III) the reciprocal marker is placed in the agreement slot of the NP which is deleted in the reciprocal construction (cf. (34), (35), (36));

(IV) the reciprocal marker is *-zarə-* when it fills the Ergative agreement slot (cf. (34)) and *-za-* otherwise (cf. (35)).

As (I) implies, the coreferential NPs of a reciprocal construction never differ in their syntactic position, therefore a discontinuous reciprocal construction similar to the Russian *Ivan celovalsja s Mariej* lit. ‘John kissed *with Mary*’, where two participants of a reciprocal action are expressed by two NPs with different syntactic roles, is impossible in Kabardian.

As (II) implies, in the case of reciprocals from two-place transitives the ergative NP (subject) is deleted (*a:ǰa-m* in (34a)) and absolutive NP (*a:ǰar* in (34b)) expresses the agent of the reciprocal action. In the case of reciprocals from bivalent intransitives the oblique NP (indirect object) is deleted (*s'a:la-m* of (35a)), and again the absolutive NP (*a:ǰar* in (35b)) expresses the agent.

The general rule holds for all the diathesis types of reciprocals which are discussed in the subsequent subsections.

3.2 Diathesis types

3.2.1 Subject-oriented diathesis types

3.2.1.1 “Canonical” reciprocals

3.2.1.1.1 From two-place transitives. Here the reciprocal marker is *-zarə-*. Since an ergative NP is deleted, the reciprocal marker is inserted in the ergative agreement slot. The verb becomes intransitive with the deletion of the ergative NP:

- (34) a. *a:ǰa-m ua u-a:[-o]-cəx-Ø.* (= (2))
 they-ERG you 2SG.ABS-3.PL.ERG-DYN-know-PRES
 ‘They know you.’
 b. *a:ǰa-r Ø-zar-o-cəx-Ø.*
 they-ABS 3PL.ABS-REC-DYN-know-PRES
 ‘They know each other.’

3.2.1.1.2 From two-place intransitives. The reciprocal marker for these verbs is *-za-*. Since an oblique NP (indirect object) is deleted, the reciprocal marker occupies its agreement slot:

- (35) a. *l'əžə-r s'a:la-m Ø-j-o-zawa-Ø.*
 old.man-ABS young.man-OBL 3SG.ABS-3SG.OBL-DYN-fight-PRES
 ‘The old man is fighting with the young man.’
 b. *a:ǰa-r Ø-z-o-zawa-Ø.*
 they-ABS 3SG.ABS-REC-DYN-fight-PRES
 ‘They are fighting.’

3.2.1.1.3 From three-place transitives. The “canonical” type of reciprocals from bitransitives is formed in the same way as from two-place transitives: ergative NP is deleted and *-zarə-* is inserted in the ergative agreement slot. Naturally, this involves intransitivization of the verb:

- (36) a. *a:-bə a:-r (a:-bə) Ø-jə-rəj-t-a:-s'.*
 he-ERG he-ABS he-OBL 3SG.ABS-3SG.OBL-3SG.ERG-give-PAST-ASS
 ‘He gave this to him.’
 b. *a:ǰa-r a:-bə Ø-jə-zarə-t-a:-s'.* (Rogava & Kerasheva 1966:275)
 they-ABS he-OBL 3SG.ABS-3SG.OBL-REC-give-PAST-ASS
 ‘They gave each other to him.’

3.2.1.2 “Indirect” reciprocals

3.2.1.2.1 *From non-benefactive three-place transitives.* Here the indirect object is deleted (according to (II)), therefore the reciprocal marker is *-za-* inserted in its agreement slot (according to (III)). The verb retains its transitivity and the construction remains ergative:

- (37) a. *a:-bə ʃ'a:q^oa-r sabij-xa-m Ø-ja:-x-i-g^oa^s-a:-s'.*
 he-ERG bread-ABS child-PL-OBL 3SG.ABS-3PL.OBL-DIR-3SG.ERG-divide-PAST-ASS
 ‘(S)he divided the bread among the children.’
- b. *a:-bə-ʃa-m ʃ'a:q^oa-r Ø-za-x-i-g^oa^s-a:-s'.*
 he-ERG-PL-ERG bread-ABS 3SG.ABS-REC-DIR-3PL.ERG-divide-PAST-ASS
 ‘They divided the bread between each other.’

3.2.1.2.2 *From derived benefactives.* Here again the indirect object (beneficiary) is omitted, and the reciprocal marker is *-za-* inserted in its agreement slot:

- (38) a. *una-r Ø-p-ʃ^oa-z-o-ʃ'-Ø.*
 house-ABS 3SG.ABS-2SG.OBL-BEN-2SG.ERG-DYN-build-PRES
 ‘I am building this house for you.’
- b. *una-ʃa-r Ø-za-ʃ^o-f-o-ʃ'-Ø.*
 house-PL-ABS 3SG.ABS-REC-BEN-1PL.ERG-DYN-build-PRES
 ‘We are building houses for each other.’

3.2.1.3 *Expression of “possessive” reciprocity.* There is no “possessive” reciprocal proper in Kabardian. The idea of “possessive” reciprocity is expressed by a reciprocal of the “indirect” type derived from benefactive. Therefore, (38b) represents the only way of translating into Kabardian the two English sentences: *They are building houses for each other* and *They are building houses of each other*. The non-existence of “possessive” reciprocal may look surprising against the background of the high productivity of the other reciprocal types. However, it agrees with the general tendency observed in Kabardian to promote foregrounded NPs into argument positions. It is natural to assume that possessor is foregrounded when it is in reciprocal relation with another participant. Therefore such a possessor is obligatorily promoted into an argument position by means of benefactive.

3.2.2 Object-oriented reciprocals

3.2.2.1 Reciprocals and morphological causatives

3.2.2.1.1 *The standard case.* There is morphological evidence that in Kabardian causatives are derived from reciprocals in relevant cases, but not *vice versa*. Consider:

- (39) a. *mo ʃ'a:la-m mo xəʒabz-ər Ø-i-ʃ^o-a:-s'.*
 this young.man-ERG this girl-ABS 3SG.ABS-3SG.ERG-marry-PAST-ASS
 ‘This young man married this girl.’ (underived vt)
- b. *a:-bə mo ʃ'a:la-m mo xəʒabz-ər*
 he-ERG this young.man-OBL this girl-ABS
Ø-qə-Ø-ri-ya-ʃ^o-a:-s'.
 3SG.ABS-DIR-3SG.OBL-3SG.ERG-CAUS-marry-PAST-ASS
 ‘(S)he married this girl with this young man.’ (causative of vt)

- c. *a:-bə mo s'a:la-m-ra mo xəʒabz-əm-ra*
 he-ERG this young.man-OBL-AND this girl-OBL-AND
Ø-zar -i-ya-š^α-a:-s'
 3SG.ABS-REC-3SG.ERG-CAUS-marry-PAST-ASS
 '(S)he married this young man and this girl.' (reciprocal [putatively, of causative])

The reciprocal in (39c) entails coreference between the direct and indirect object of the causative, i.e. it is of object-oriented type. However, the reciprocal marker is *-zara-*, instead of *-za-* required elsewhere in object-oriented reciprocals. This is why the reciprocal in (39c) cannot be treated as derived from the causative in (39b). The analysis under which the appearance of *-zara-* in (39c) does not come as a surprise is the one that treats this marker as inherited from the corresponding reciprocal without a causative:

- (40) *mo š'a:la-m-ra mo xəʒabz-əm-ra Ø-zara-š^α-a:-s'*
 this young.man-OBL-CONJ this girl-OBL-CONJ 3SG.ABS-REC-marry-PAST-ASS
 'This young man and this girl married.'

3.2.2.1.2 *The sociative meaning of reciprocals from three-place causatives.* On some causatives, predominantly those denoting emotional states or spontaneous actions, the reciprocal marker may have the sociative meaning:

- (41) a. *a:-bə a:-r Ø-i-ya-dəx'aš^αš-a:-s'*
 he-ERG he-ABS 3SG.ABS-3SG.ERG-CAUS-laugh-PAST-ASS
 'He made him laugh.'
 b. *a:-š^αa -r Ø-zara-ya-dəx'aš^αš-a:-s'*
 he-PL-ABS 3SG.ABS-REC-CAUS-laugh-PAST-ASS
 'They made *each other* laugh', or 'They laughed *together*.'
- (42) a. *a:-bə a:-r Ø-i-ya-g^ozaw-a:-s'*
 he-ERG he-ABS 3SG.ABS-3SG.ERG-CAUS-worry-PAST-ASS
 'He made him worry.'
 b. *a:-xa-r Ø-zara-ya-g^ozaw-a:-s'*
 he-PL-ABS 3SG.ABS-REC-CAUS-worry-PAST-ASS
 'They made *each other* worry', or 'They became worried *together*'.

Here are some more examples of the complex "reciprocal + causative" with sociative meaning (among underived transitives and causatives only those actually attested are listed):

- (43) a. *yabadan* 'to make firm, strengthen' – *zara-yabadan* 'to prepare *together* for defense' (instead of 'to prepare *each other* for defense')
 b. *ya-delan* 'to be enticed with sth' – *zara-ya-delan* 'to commit *together* an unseemly action' (instead of 'to entice *each other*')
 c. *k'iin* 'to shout' – *zara-ya-k'iin* 'to shout *together*' (instead of 'to make *each other* shout').

Seeking for a semantic explanation of the present effect, it is interesting to note that all the listed verbs denote either an emotional state, or an action which expresses an emotional

state (*laugh, cry*). Performing such actions or achieving such states together may be seen as the co-agents' affecting each other: indeed one is likely to start worrying when other people worry, to shout when everybody around is shouting, etc.

It is very important to note that the meanings of reciprocals and causatives interact with each other rather than neutralize each other in verbal forms. That this is so is clear because their combination brings about a sociative meaning, whereas in case of pure neutralization it would be expected that the verbs with *zarə-ya-* would have the same meaning as the corresponding underived verbs.

There are reasons to assume that the present semantic effect is not a matter of specific interaction of the particular reciprocal and causative morphemes, but rather a realization of a mechanism of metaphorization which is not limited to any particular morphological contexts. As a matter of fact, the same effect of sociative meaning appears when a reciprocal marker is attached to some lexical causatives lacking the causative marker *-ya*:

- (44) *ḡun* 'to chase' – *zarəḡuḡan* 'to persecute sb together'
ṣʰan 'to lead' – *zareṣʰaḡan* 'to lead sb together'
lʰafən 'to pull' – *zarelʰafaḡan* 'to pull each other' / 'pull one after another'

3.2.2.2 Object-oriented reciprocals derived from three-place verbs. All the examples attested are from three-place transitives only. Here an indirect object NP is omitted as coreferential with the direct object NP, because the position of indirect object is lower than that of the direct object in the hierarchy under (34). The reciprocal marker, as expected, is *-za-* inserted into the indirect object agreement slot:

- (45) a. *a:-bə mo kʰa:psa-r mə kʰa:psa-m Ø-Ø-p-i-ṣʰ-a:-sʰ.*
 he-ERG this wire-ABS that wire-OBL 3SG.ABS-3SG.OBL-DIR-3SG.ERG-tie-PAST-ASS
 'He tied this wire with that wire.'
 b. *a:-bə mə kʰa:psa-m-ra mo kʰa:psa-m-ra*
 he-ERG that wire-OBL-AND this wire-OBL-AND
Ø-za-p-i-ṣʰ-a:-sʰ.
 3PL.ABS-REC-DIR-3.SG.ERG-tie-PAST-ASS
 'He tied this wire and that wire together.'

This type of reciprocals often undergoes certain reinterpretation of which two types can be distinguished:

1) if the underlying verb denotes separating a part or an element from the (whole) object, or inverse action of putting a part or an element together with the whole object, the verb with *-za-* often means dividing one object into parts:

- (46) a. *a:-bə pxa-m qʰda:ma Ø-qə-Ø-p-i-ḡ-a:-sʰ.*
 he-ERG tree-OBL branch 3SG.ABS-DIR-3SG.OBL-PREV-3SG.ERG-saw-PAST-ASS
 'He sawed a branch from the tree.'
 b. *a:-bə pxa-r Ø-za-p-i-ḡ-a:-sʰ.*
 he-ERG tree-ABS 3SG.ABS-REC-PREV-3SG.ERG-saw-PAST-ASS
 'He sawed the tree into pieces.'

This pattern of reinterpretation is generalized in (47):

- (47) Three-place transitive: ‘X separates Y (DO) from Z (IO), where Y is a part or an element of Z’ → Object-oriented reciprocal: ‘X divides Z into parts.’

This reinterpretation is quite natural, because object-oriented reciprocals proper are impossible for the corresponding bitransitives: indeed, if Y (DO) is a part of Z (IO), then Z may not be a part of Y, hence no reciprocity is possible.

This mechanism of reinterpretation appears to be very productive in Kabardian. As a matter of fact, for instance, the verb in (46b) is the principal Kabardian verb for sawing. Three-place verbs of separation as in (46a) are much less frequent than reciprocals derived from them. There are very many verbs of separation or putting together which are used only with the reciprocal marker, without a counterpart corresponding to (46a). As most verbs of separation are used with preverbs, it is reasonable to claim that the reciprocal marker forms an integral complex morpheme with the preverb. Therefore further discussion of such verbs will follow in Section 10 concerned with the interaction of preverbs with the reciprocal markers.

2) Many object-oriented reciprocals from three-place verbs are interpreted as *locative* reciprocals. This happens with especially high frequency in verbs with preverbs. The reason for this reinterpretation is quite clear: an indirect object required by the verb with a preverb often denotes space, a mass, a liquid, etc., into which the direct object referent is put or where it is situated. The direct and indirect objects of such verbs belong to different semantic classes, therefore the “canonical” reciprocal interpretation is blocked; cf.:

- (48) a. *γaʔəsən* ‘to seat sb (DO)’ (vt)
 b. *xa-γaʔəsən* ‘to seat sb (DO) somewhere (IO)’ (vb)
 c. *za-xa-γaʔəsən* ‘to seat some people (DO) together.’

This kind of reinterpretation is also considered in detail in Section 10, where combinations of the reciprocal marker with different preverbs are dealt with. Here I will just note that both types of reinterpretation of object-oriented reciprocals take place under similar conditions when reciprocal proper is impossible for semantic reasons.

3.3 Reciprocals from nominals

Nouns and adjectives denoting two-place relations cross-reference both subordinate NPs in the same way as two-place intransitives do:

- (49) a. *a:r a:bə Ø-e-q⁰a^{3α}-s²*
 he-ABS he-OBL 3SG.ABS-3SG.OBL-brother-ASS
 ‘He is his brother.’
- (50) a. *sa ua sə-n[-w]-o-^{3α}x²-s²*
 I you 1SG.ABS-DIR-2SG.OBL-o-similar-ASS
 lit. ‘I am similar to you.’

When two arguments of such nouns coincide, the reciprocal marking is obligatory:

- (49) b. *a:-ša-r Ø-za-q^oaš^α-s'.*
 he-PL-ABS 3PL.ABS-REC-brother-ASS
 'They are brothers to each other.'
- (50) b. *ua-ra sa-ra də-za-š^αx'-s'.*
 you-CONJ I-CONJ 1PL.ABS-REC-similar-ASS
 lit. 'You and I are similar to each other.'

The meanings of (49b) and (50b) cannot be expressed without the reciprocal marker on the predicative noun. The reciprocal nominal forms occur in the argument position as well:

- (51) a. *Ø-sa-š^αx'u çəx^o ma:-k^oa-Ø.*
 3SG.ABS-1SG.OBL-similar man 3SG.ABS-go-PRES
 'A person similar to me is going.'
- b. *Ø-za-š^αx'u çəx^o-xa ma:-k^oa-Ø.*
 3SG.ABS-REC-similar man-PL 3PL.ABS-go-PRES
 'Similar (to each other) people are going.'
- (52) a. *wi-q^oaš ma:-k^oa-Ø.*
 you-brother 3SG.ABS-go-PRES
 'My brother is walking.'
- b. *Ø-za-q^oaš ma:-k^oa-Ø.*
 3SG.ABS-REC-brother 3.SG.ABS-go-PRES
 'The brothers (of each other) are walking.'

The reciprocal forms are the canonical way of expressing plurality on the following nouns which denote symmetrical relations:

- (53) *za-šəpx^o* 'sisters'
za-γ^onay^o 'neighbours'
za-nəbžay^o 'friends'
za-bij 'enemies', etc.

4. The comitative meaning

4.1 Subject-oriented comitative

The comitative is formed with the preverb *-da-*, the collaborator being expressed by an indirect object NP:

- (54) a. *sa txəl'-am s-Ø-o-ž-a.*
 I book-OBL 1SG.ABS-3SG.OBL-DYN-read-PRES
 'I am reading the book.'
- b. *sa ua txəl'-am sə-b-d-Ø-o-ž-a.*
 I you book-OBL 1SG.ABS-2SG.OBL-COM-3SG.OBL-DYN-read-PRES
 'I am reading the book *with you*.'

The comitative marker *-da-* should be treated as a morpheme belonging to the same class as locative preverbs. It follows from the fact that the comitative marker is incompatible with a locative preverb in a verbal form, just as two locative preverbs are always incompat-

ible. In case the comitative has to be expressed with a verb which already has a preverb, an adverbial comitative is used (see 4.3).

It should be mentioned that there also exists a preverb *-da-* with the meaning of movement in or out of space or staying within some space, cf.:

- (55) a. *x'ən* 'to carry sth (DO)' (vt)
 b. *da-x'ən* 'to carry sth (DO) out of somewhere (IO)' (vb).

The synchronic and diachronic relations between the comitative *-da-* and the locative preverb *-da-* are not clear. Possibly they should be treated as homonyms, as no direct semantic relationship between them may be seen at the present stage of language development.

4.2 Object-oriented comitative

The object-oriented comitative is also possible in Kabardian. It is formed according to the same rules as the subject-oriented comitative, i.e. the preverb also appears in the verbal form, and the collaborator is expressed by an indirect object cross-referenced on the verb by an agreement morpheme immediately preceding the preverb:

- (56) a. *sa s'a:q^oa-r Ø-s-o-š^ox-Ø.*
 I bread-ABS 3SG.ABS-1SG.ERG-DYN-eat-PRES
 'I am eating the bread.'
 b. *sa q^oej-m s'a:q^oa-r Ø-Ø-da-z-o-š^ox-Ø.*
 I cheese-OBL bread-ABS 3SG.ABS-3SG.OBL-COM-1SG.ERG-DYN-eat-PRES
 'I'm eating the bread *and* (lit. 'with') *cheese*.'

Since there is no structural difference between subject-oriented and object-oriented comitatives, many comitative constructions are ambiguous. However, if a given construction may be understood as subject-oriented comitative, this interpretation is by far the most preferable. Thus, interpretations (ii) and (iii) for (57) are marginal, if at all possible, for the informants:

- (57) *Ø-qə-Ø-da-z-i-t-a:-s'.*
 3SG.ABS-DIR-3SG.OBL-COM-1SG.OBL-3SG.ERG-give-PAST-ASS
 i. 'He_i *together* with him_j; gave this to me' (subject-oriented)
 ii. '?He gave this *together* with that to me' (direct object-oriented)
 iii. '?He gave it to me *and* to (lit. 'with') him' (indirect object-oriented)

The object-oriented comitative meaning regularly arises only in cases like (56), where the subject-oriented comitative reading is absolutely impossible for semantic reasons.

4.3 Adverbial comitative

The comitative meaning may also be expressed lexically by the adverb *y^osau* 'together', historically a converb derived from the bivalent intransitive verb *y^osan* 'to join'. It agrees with the subject and the indirect object (collaborator), respectively as with the subject and with indirect object:

- (58) *sa a:-bə-ʃa-m sə-r-a-γ^osau s^ʰaγər*
 I he-OBL-PL-OBL 1SG.ABS-r-3PL.OBL-together wine
Ø-s-o-f-a:-s’
 3SG.ABS-1SG.ERG-DYN-drink-PAST-ASS
 ‘I was drinking wine *together* with them (lit. having joined with them).’

5. The sociative meaning

5.1 Subject-oriented sociative

The Kabardian sociative may be treated as a reciprocal derived from the respective comitative (cf. Kumaxov 1989:239). In fact, the sociative marker *-zada-* can be analysed as *-za-* (REC) + *-da-* (COM). The semantic justification of this analysis is quite clear. Indeed, if A is B’s collaborator in some situation and B is, in turn, A’s collaborator, mutual collaboration of A and B can be treated as their joint participation in the situation. Since the NP naming the collaborator is always in the oblique case, the marker that signals its deletion is *-za-*, but never *-zarə-*, therefore there is no sociative marker **-zarəda-*.

Consider derivation of sociative from comitative:

- (59) a. *sa ua txəl’-am sə-b-d-Ø-o-ža-Ø.*
 I you book-OBL 1SG.ABS-2SG.OBL-COM-3SG.OBL-DYN-read-PRES
 ‘I am reading the book with you.’
 b. *ua-ra sa-ra txəl’-am fə-za-d-Ø-o-ža-Ø.*
 you-CONJ I-CONJ book-OBL 1PL.ABS-REC-COM-3SG.OBL-DYN-read-PRES
 ‘You and I are reading the book *together*.’

The sociative marked with *-zada-* does not mean mere simultaneity of actions performed by several agents, but joint participation of agents in an action at the same time. For instance, in (59b) the agents are reading one and the same book; if they were separately reading different books, the sociative would be impossible.

According to Kumaxov (1989:239), the sociative is an innovation in the Adyghean languages. It is remarkable that in one of the dialects of Kabardian’s closest relative Adyghe, viz. Shapsug, there is no marker *-zada-*, and the sociative as well as the comitative is marked with *-da-* (see Kerasheva 1957:74).

5.2 Object-oriented sociative

The object-oriented sociative is regularly derived from an object nominative, cf.:

- (60) a. *sa q^oej-m s’a:q^oa-r Ø-Ø-da-z-o-s^ʰx-Ø.*
 I cheese-OBL bread-ABS 3SG.ABS-3SG.OBL-COM-1SG.ERG-DYN-eat-PRES
 ‘I am eating bread *and* (lit. ‘with’) cheese.’
 b. *sa q^oej-m-ra s’a:q^oa-m-ra Ø-za-da-z-o-s^ʰx-Ø.*
 I cheese-OBL-CONJ bread-OBL-CONJ SG.ABS-REC-COM-1SG.ERG-DYN-eat-PRES
 ‘I am eating *bread and cheese together*.’

(There is an interesting semantic difference between (60a) and (60b): (60a) is the standard way of describing someone eating bread with cheese on top of it, while (60b) sounds rather funny to the informants as it means eating cheese simultaneously with bread, but not placed on the bread, i.e. having bread in one hand and cheese in the other. I leave it here without further comment, but it seems that, at least in the case of the object-oriented sociative and comitative, derivation of sociative from comitative implies a kind of semantic shift: while comitative allows certain asymmetry between the ‘main’ participant and the collaborator, sociative always implies an absolutely symmetric relation between the two participants.)

5.3 Adverbial sociative

As is shown in 4.3, the comitative may be expressed lexically by the adverb γ^0 *sau*, which agrees with the subject and the indirect object (collaborator). When the NP denoting the collaborator is coordinated with the subject NP and the collaborator agreement slot in the adverb is filled with the reciprocal marker *-za-*, the whole construction becomes an instance of adverbial sociative. Consider the lexical sociative in (61b) derived from a lexical adverbial in (61a):

- (61) a. *sa a:-bə-xa-m sə-r-a-γ⁰ sau s^α ayər*
 I he-OBL-PL-OBL 1SG.ABS-*r*-3PL.OBL-together wine
Ø-s-o-f-a:-s’.
 3SG.ABS-1SG.ERG-DYN-drink-PAST-ASS
 ‘I was drinking wine *together* with them.’
- b. *sa-rə a:-bə-xa-m-rə də-za-γ⁰ sau s^α ayər*
 I-CONJ he-OBL-PL-OBL-CONJ 1PL.ABS-REC-together wine
Ø-d-o-f-a:-s’.
 3SG.ABS-1PL.ERG-DYN-drink-PAST-ASS
 ‘They and me were drinking wine *together*.’

Note that the agreement on the verb in the construction with an adverbial sociative obeys the rule for the agreement with coordinated NPs outlined in 2.5. For instance, in (61b) the subject, which itself includes a 3rd person plural NP and a first person singular NP, is cross-referenced as a first person plural NP, in accordance with that rule (see 2.5). It may be said that this agreement pattern contributes to marking sociative on a par with the adverb. Therefore the sociative in (61b) more precisely should be treated as “adverbial-syntactic” rather than purely adverbial. The sociative adverb itself also obeys the rule of agreement with coordinated NPs, so that only its forms with plural agreement markers are attested:

- (62) *də-za-γ⁰ sau* ‘we together’
fə-za-γ⁰ sau ‘you (PL) together’
Ø-za-γ⁰ sau ‘they together.’

A combination of morphological-paradigmatic and adverbial(-syntactic) sociative within one clause leads to pleonasm and is to be avoided:

- (63) ^{??}*sa-ra a:-bə-ǰa-m-ra ǰ^αayər də-za-γ^osau*
 I-CONJ he-OBL-PL-OBL-CONJ wine 1PL.ABS-REC-together
Ø-za-da-ra-f-a:-sʹ.
 3SG.ABS-REC-COM-3PL.ERG-drink-PAST-ASS
 lit. 'I and you we-are-drinking-together wine we-together.'

5.4 Syntactic sociative

When the sociative adverb is omitted in sentences like (61b), the sentence may still denote joint participation:

- (61b') *sa-ra a:-bə-ǰa-m-ra ǰ^αayər Ø-d-o-f-a:-sʹ.*
 I-CONJ he-OBL-PL-OBL-CONJ wine 3SG.ABS-1PL.ERG-DYN-drink-PAST-ASS
 'They and me were drinking wine.'

It should be noted, however, that (61b') differs from the other devices for expressing sociative in an important aspect. Unlike the sociative with *-zada-* and adverbial sociative, this construction does not obligatorily mean joint participation, but may mean parallel participation as well. Therefore in (61b') the action of drinking wine might be performed by the two participants separately, e.g. in different places or at a different time. Such 'separate' interpretation is not available in (61b). Similarly, (64) may be used to denote either that two Agents bought one and the same horse, or that each bought a horse separately; again, this interpretation would not be available with an adverbial or morphological-paradigmatic sociative:

- (64) *a:-bə-ra sa-ra mə ua Ø-qə-p-x^oa-t-ǰ^αax^o-a:-sʹ.*
 he-ERG-CONJ I-CONJ horse you 3SG.ABS-DIR-2SG.OBL-BEN-1PL.ERG-buy-PAST-ASS
 'I and he together bought a horse for you.'

It can be assumed, therefore, that Kabardian does not possess a syntactic sociative proper. This is not surprising because the same holds true for the reciprocal and comitative as well.

6. The reflexive meaning

6.1 The general rule for the formation of reflexives

Reflexives are formed according to the following rules:

- (I) The coreferential participants of a reflexive action are always expressed by one NP.
 (II) The omitted NP is always the one which occupies lower position on the hierarchy in (65):

- (65) SUBJECT > DIRECT OBJECT > INDIRECT OBJECT.

(III) The reflexive marker is put in the agreement slot of the NP which is omitted in reflexive construction.

(IV) The reflexive marker is *-zə-* when it is placed in the absolutive agreement slot, and *-za-* otherwise.

As (II) implies, in the case of reflexive from two-place transitives the direct object is deleted (*ua* in (66a)) and the subject is retained (*sa* in (66b)). In the reflexives from two-place intransitives the indirect object is deleted (*a:bə* in (68a)) and the subject is retained (*sa* in (68b)).

A comparison of the general rule for reflexives with the general rule for reciprocals outlined in 3.1 reveals that the reciprocal and reflexive differ only in the case of transitives: reflexives from these verbs delete direct object, i.e. the NP in the absolutive case, whereas reciprocals delete the subject, i.e. the NP in the ergative case. Besides, reflexives from bi-transitives differ from reciprocals in the marker of the category: the former are marked with *-zə-*, and the latter with *-zarə-*.

6.2 Reflexives derived from different types of verbs

6.2.1 From two-place transitives

The subject of a reflexive derived from a transitive verb assumes the ergative case, the coreferential absolutive NP being deleted. Therefore the subject of this type of reflexive construction is cross-referenced on the verb in the ergative agreement slot. The absolutive agreement slot is filled with the marker *-zə-* (as a rule, *-ə-* is deleted before vowels):

- (66) a. *sa ua wə-z-o-x'ap-a.*
 I YOU 2SG.ABS-1SG.ERG-DYN-dress-PRES
 'I'm dressing you.'
- b. *sa zə-z-o-x'ap-a.*
 I REFL-1SG.ERG-DYN-dress-PRES
 'I am dressing myself.'
- (67) a. *a:-bə a:-r Ø-e-tx'aš'-Ø.*
 he-ERG he-ABS 3SG.ABS-3SG.ERG-wash-PRES
 'He is washing him.'
- b. *a:-bə z(ə)-e-tx'aš'-Ø.*
 he-ERG REFL-3SG.ERG-wash-PRES
 'He is washing himself.'

6.2.2 From two-place intransitives

With reflexives from bivalent intransitives the indirect object NP in the oblique case is omitted, and the subject in the absolutive case is retained. The reflexive marker *-za-* is therefore inserted in the indirect object agreement slot.

All these parameters of reflexives from two-place intransitives coincide with those of reciprocals from the same class of verbs. To distinguish between reflexives and reciprocals from these verbs, the suffix *-ž-* is optionally attached to reflexives:

- (68) a. *sa a:-bə s-Ø-o-ups'ə-Ø.*
 I he-OBL 1SG.ABS-3SG.OBL-DYN-ask-PRES
 'I am asking you.'

- b. *sa sə-z-o-ups'ə-Ø[-ž].*
 I 1SG.ABS-REFL-DYN-ask-PRES-SUFF
 'I am asking myself.'

6.2.3 From non-benefactive and benefactive three-place transitives

Here both reflexives entailing the cross-reference of subject with direct object and with indirect object are possible. The former do not differ from reflexives from two-place transitives. The indirect object is deleted, and hence, according to the general rule in 8.1, the reflexive marker should be *-za-*. However, it is often *-zə-* instead of *-za-*; cf. the following reflexive from a benefactive:

- (69) a. *Ø-uə-x^oa-z-o-tx̣-Ø.*
 3SG.ABS-2SG.OBL-BEN-1SG.ERG-DYN-write-PRES
 'I am writing this for you.'
- b. *Ø-zə-x^oa-z-o-tx̣-Ø.*
 3SG.ABS-REFL-BEN-1SG.ERG-DYN-write-PRES
 'I write this for myself.'

This is an instance of sporadic change of *-a-* into *-ə-* in the indirect object agreement slot, which may take place if the absolutive marker is zero (see 2.2.1). The example in (69) makes it clear that *-zə-* and *-za-* should be treated as instances of a single marker, with the vowel depending upon morphonemic rules common for all the CV-markers in personal agreement slots (see Section 8 for further development of this idea).

7. Reciprocal and reflexive markers on participles

The markers *-za-*, *-zə-* and *-zarə-* also participate in formation of participles. They occur in agreement slots of certain types of relativized NPs. Specifically, *-za-* is placed in the agreement slot of relativized indirect object:

- (70) a. *sa šə s-Ø-o-pl'a.*
 I horse 1SG.ABS-3SG.OBL-DYN-look-PRES
 'I am looking at a horse.'
- b. *sə-za-pl'a:-r šə-r.*
 1SG.ABS-REL-look-PART horse-ABS
 'The horse [which] I am looking at.'

The marker *-zə-* is put in the ergative agreement slot when an ergative subject is relativized:

- (71) a. *Ø(-j) -i-t-a:-s'.*
 3SG.ABS-3SG.OBL-3SG.ERG-give-PAST-ASS
 'He gave this to him.'
- b. *Ø-je-zə-t-a:-r.*
 3SG.ABS-3SG.OBL-REL-give-PAST-PART
 'The one who gave this to him.'

Relativization of absolutive of both intransitives and transitives does not require any marker in the absolutive agreement slot. This allows to conclude that whenever the agreement slot of relativized core NP is not empty, it is filled with a marker of the reflexive/reciprocal domain.

The marker *-zə-* is also used when certain adjuncts are relativized. Purposive participles are formed with the prefix *-zə-fa-*, and locative participles are formed with the prefix *-zə-da-* or *-zə-šə*.

- (72) Purposive participle with *-zə-fa-*:

Ø-zəfa-kʰa-r

3SG.ABS-PREF-GO-PART

‘the purpose of his going.’

- (73) Locative participle with *-zə-da-*:

Ø-zəda-kʰa-r

3SG.ABS-PREF-GO-PART

‘(the place) where he goes.’

Remarkably, these prefixes occur in the position where usually preverbs occur, i.e. after the absolutive agreement slot. Furthermore, the elements following *-zə-* in these prefixes are in fact preverbs whose meanings correspond to the meanings of the participles: *-fa-* is a purposive preverb, and *-da-* and *-šə-* are locative preverbs. Given this, it is easy to see that *-zə-* in these participles is put in the agreement slot of relativized NP, as, according to 2.2.4, an agreement marker cross-referencing purpose must immediately precede a purposive preverb, and an agreement marker cross-referencing location must immediately precede a locative preverb. Therefore on these participles *-zə-* functions in the same way as on participles relativizing core NPs.

Now I am coming to the last marker used both in reciprocals and in participles: *-zarə-*, employed in “canonical” subject-oriented reciprocals (see 3.2.1.1.1), also occurs in instrumental participles and participles of manner.

- (74) Instrumental participle with *-zarə-*:

Ø-zarə-p-tʃə-r

3SG.ABS-PREF-2SG.ERG-write-PART

‘(the instrument) with which you are writing this (vt).’

- (75) Participle of manner with *-zarə-*:

Ø-zarə-lʼaža-r

3SG.ABS-PREF-work-PART

‘the way he works.’

This participial marker allows decomposition into *-za-* and a preverb in the same way as *-zə-fa-*, *-zə-da-* or *-zə-šə-*. The morpheme *-rə-* is reported in Jakovlev & Ashxamaf (1941:278) as an instrumental preverb, cf.:

- (76) *pxʼaʼa:šʷa-m Ø-Ø-r-e-zʼo-Ø.*

plough-OBL 3SG.ABS-3SG.OBL-INST-3SG.ERG-plough-PRES

‘He is ploughing with a plough.’

Therefore here again *-za-* is placed in the agreement slot of a relativized NP.

8. An overview of “syntactic” functions of *-za-*, *-zə-* and *-zarə-*

So far, we have been studying the markers *-za-*, *-zə-* and *-zarə-* in regular formation of syntactic constructions. Although their use is in fact not confined to such constructions, an overview of them, with possible generalizations, is useful at the present stage of our study.

We have seen that the markers *-zə-* and *-za-* appear in the agreement slot of an NP which is deleted as coreferential with some other NP. This is the case in reciprocalization, reflexivization and relativization. Since the choice of vowels obeys general rules for the choice of vowels on agreement markers in Kabardian (with slight deviations), it can be claimed that *-z-* is a special “substitute” of agreement markers used when an NP triggering agreement is omitted. The essential difference between reciprocals and reflexives is then observed only in the syntactic position of the omitted NP, but not in the markers.

This interpretation, simple and attractive though it is, in fact meets with two major difficulties. The first one concerns idiomatization of the reciprocal markers, which takes place in certain morphosyntactic contexts. Idiomatization is hardly expected for a marker whose functions are defined as merely “syntactic”. This issue, however, will be treated in more detail in the next section. Here I would like to turn to the second problem arising from this interpretation of the reciprocal markers: as soon as we assume that *-z-* is a special “substitutional” agreement marker, it comes as a surprise that when placed in the ergative agreement slot it takes the form *-zarə-*. Remember that normal agreement markers do not have any vowel in the ergative agreement slot, so that the reciprocal marker should be just *-z-* in this position. I do not have any non-speculative explanation of why it is *-zarə-* for now. However, some observations are worth mentioning.

As we saw it in Section 7 (see especially (76)), *-rə-* functions as an instrumental preverb. Therefore it is possible to say that the omitted ergative NP is introduced as an omitted instrument (not agent) in a reciprocal construction. Parallelism in expressing agent and instrument is not at all uncommon cross-linguistically, cf. instrumental case marking of agent in passive constructions, very common across languages. Parallelism in expressing agent and instrument is attested in some ergative languages as well. However, it is not clear why in Kabardian this parallelism is instantiated only in reciprocals.

9. The reciprocal marker *-za-* as a part of locative preverbs

9.1 Reciprocals derived from verbs with preverbs

As was already mentioned (see 2.2.4), Kabardian possesses many locative preverbs which increase valence of the verb by addition of an indirect object. As examples (77a-b) show, the indirect object agreement slot immediately precedes the preverb in verbal form:

- (77) a. $\xi^{\prime}a:la-r$ $\emptyset-s^{\alpha}\partial-s-s^{\prime}$ = (28a, b)
 young.man-ABS 3SG.ABS-PREF-sit-ASS
 ‘The young man is sitting.’

- b. *ʃ'a:la-r psə-m Ø-Ø-x^oa-s-s'.*
 young.man-ABS water-OBL 3SG.ABS-3SG.OBL-PREV-sit-ASS
 'The young man is sitting in the water.'

The indirect object agreement slot of verbs with preverbs, as any other agreement slot in Kabardian verbs, may be filled with a reciprocal marker, specifically with *-za-*, which, as the reader remembers, is used in subject-oriented “indirect” reciprocals:

- (78) a. *a:-r sa-te-uḥ-a:-s'.*
 he-ABS 1SG.OBL-PREV-step-PAST-ASS
 'He stepped on me.'
 b. *a:-ḥa-r za-te-uḥ-a:-s'.*
 he-PL-ABS REC-PREV-step-PAST-ASS
 'They stepped on each other.'

On some verbs with preverbs, like the predicate in (78), the reciprocal marker inserted in the indirect object agreement slot signals the standard reciprocal meaning. These instances of course do not deserve any additional study after I have considered reciprocals from different types of verbs with indirect object(s) along the lines of Section 3.

9.2 Idiomatic usages of *-za-* with preverbs

Sometimes, however, the reciprocal marker in combination with preverbs loses the standard reciprocal meaning. This use of *-za-* could be called idiomatic. In the following subsections I shall attempt to present briefly the major types of this idiomatization. It is not easy, however, to classify all the instances of idiomatic uses of *-za-* with preverbs. Therefore in 9.2.1–9.2.3 I shall survey the use of *-za-* with three frequent preverbs, and after this I shall attempt to draw a conclusion about the idiomatic use of *-za-* in 9.2.4. Interaction with preverbs is the very domain in which semantic nature of the reciprocal markers undergoes especially complex transformations, some of which are difficult to register due to complexity of semantic nuances and great variety of material. The examples below only serve as illustrations of the relevant phenomena, a complete description of which definitely would exceed the limits of not just the present chapter, but indeed those of the whole present volume, too.

9.2.1 *Reciprocal marker with the preverb -pa-*

This preverb has the following functions:

1) it may render a reversed action (optionally with the suffix *-žə*): *džən* 'to throw sth (DO)' – *pa-džən* / *pa-dzə-žə-n* 'to throw sth (DO) back to sb (IO)';

2) it may indicate that the action expressed by the verb is performed in front of an object or the movement expressed by the verb is directed to the front of an object: *uḥən* 'to stand' – *pa-uḥən* 'to stand in front of sth (IO)'.

Sometimes *za-* combined with *-pa-* marks a standard reciprocal meaning, entailing cross-reference of indirect object introduced by the preverb either with a direct object or with the subject, cf.:

- (79) a. *təsən* 'to sit down' (vi)
 b. *pa-təsən* 'to sit down in front of sth (IO)' (vi)
 c. *za-pa-təsən* 'to sit down in front of each other' (vi).
- (80) a. *γ^oa-uχən* 'to put sth (DO)' (vt, causative)
 b. *pa-γ^oa-uχən* 'to put sth (DO) in front of sth (IO)' (vb)
 c. *za-pa-γ^oa-uχən* 'to put sth/sb (DO) in front of each other' (vt).

With some other verbs, however, *-za-* combined with *-pa-* loses the reciprocal meaning, and the whole complex has the meaning 'on all sides of an object, on the whole surface of an object' (sometimes the verb with *zapa-* contains the suffix *-x'ə-*). Remarkably, some verbal stems which may be combined with *zapa-* in this meaning do not combine with *-pa-* alone, cf.:

- (81) a. *l'aş'-ən* 'to dust sth (DO)' (vt)
 b. **pa-l'aş'-ən*
 c. *za-pa-l'aş'ə-x'ə-n* 'to dust sth (DO) on all sides.'
- (82) a. *lādən* 'to shine' (vi)
 b. *za-pa-lādən* 'to shine brightly, from all sides.'
- (83) a. *pl'an* 'to look at sth (IO)' (vi)
 b. *pa-pl'an* 'to wait for sb (IO)' (vi)
 c. *za-pa-pl'ə-x'ə-n* 'to look at sth (IO) from all its sides, study sth carefully.'

In these examples the verbs with *-za-pa-* differ in meaning from verbs without the preverb. The main difference is that while ordinary verbs with *-pa-* denote three-place situations, the verbs in (81)–(83) denote two-place situations, i.e. it happens that the preverb does not add a participant in these cases. Surely this is an effect of metaphorical change of meaning. Consider (81): here, if a verb with *-pa-* and without *-za-* were possible, it would mean 'to dust sth (DO) in front of sth (IO)'. Now if the direct and indirect objects of this verb were parts of one entity, the verb would mean 'to dust one part of sth in front of another part'. The reciprocal meaning would be 'to dust parts of an object in front of each other'. It is probably the very meaning from which the present meaning of dusting an object on all sides has developed. Indeed, the reciprocal proper meaning of dusting parts of an object in front of each other can hardly be grasped as it is, and is most likely to be reinterpreted as dusting the whole object. Essential for this reinterpretation is the part-whole relation between direct and indirect objects of the underlying verb. A reciprocal of part-whole relation brings in the notion of covering an object from all sides.

9.2.2 Reciprocal marker with the preverb *-te-*

This preverb is used when an indirect object with the meaning of (surface) location of the action is added to the verb, cf. :

- (84) a. *q^otan* 'to break sth (DO)' (vt)
 → b. *te-q^otan* 'to break sth (DO) on some surface (IO)' (vb).

The reciprocal marker is very often used with *-te-* idiomatically, to the extent that *-zate-* is treated as a single preverb in the *Kabardian-Russian Dictionary* (Apazhev et al. 1957).

Often when a verb with *-te-* means connecting an object with a surface or separating it from a surface, the verb with *-za-te-* means connecting or separating two or more objects:

- (85) a. *te-l'x'an* 'to put sth (DO) upon sth (IO)' (vb)
 b. *za-te-l'x'an* 'to put sth (DO) together; construct sth (a wall, etc.) (DO)' (vt).
- (86) a. *txən* 'to skin sth (DO)' (vt)
 b. *te-txən* 'to tear sth (DO) off something (IO)' (vb)
 c. *za-te-txən* 'to open sth (DO)' (vt).
- (87) a. *ḱ^oan* 'to go' (vi)
 b. *te-ḱ^oan* 'to go away from sth (IO)' (vi)
 c. *za-te-ḱ^oan* 'to open' (vi).
- (88) a. *x'ən* 'to carry sth (DO)' (vt)
 b. *te-x'ən* 'to take sth (DO) away from sth (IO)' (vb)
 c. *za-te-x'ən* 'to open sth (DO)' (vt).

In these examples a “classical” reciprocal entailing indirect object deletion in verbs with *-te-* is impossible because indirect objects of the verbs with *-te-* do not belong to the same semantic class with subject or direct object (prototypically, a direct object or subject is an entity which moves, whereas the indirect object names a surface). Therefore with the addition of *-za-* a semantic shift takes place, with the result that the two entities which are connected or separated belong to the same semantic class: while the preverb without the reciprocal marker means separation of an object from or putting it together with some surface, the reciprocal marker brings in the meaning of putting two objects of the same class together or separating them.

With some verbs the complex *-za-te-* means intensity of action or action upon a multitude of objects. This meaning is possible, among other verbs, with verbs which are not combined with *-te-* alone:

- (89) a. *q^otan* 'to break sth' (vt)
 b. *zate-q^otan* 'to break sth entirely' (vt)
- (90) a. *l'an* 'to die' (vi)
 b. *zate-l'an* 'to die in great numbers' (vi)
- (91) a. *uk'ən* 'to kill sb' (vt)
 b. *zate-uk'ən* 'to kill a great multitude of' (vt)
- (92) a. *upaṣ'ən* 'to flatten sth (DO)' (vt)
 b. *zate-upaṣ'ən* 'to flatten sth (DO) up in great quantities.'

What could give rise to this meaning of *-za-te-* is quite obscure. As a matter of fact, this meaning is close to sociative, but the explanation of semantic shift from reciprocal to sociative, proposed for causatives in 3.2.2.1.2, surely cannot be valid also for the present examples. One could only note that morphological devices normally serving to denote separation sometimes may mean multitude of objects or intensity of action in some other languages as well, e.g. the Russian prefix *raz-*, which has separation as one of its basic meanings, sporadically means action over a large number of objects or intensive

action: *ras-prodat'* 'to sell out, sell everything (out of a large number)', *ras-krichat'sja* 'to raise a cry'.

9.2.3 Reciprocal marker with the preverb *-xa-*

The preverb *-xa-* introduces an indirect object with the meaning of location, direction or source of movement. When the indirect object agreement slot is filled with *-za-*, the verb sometimes means putting two or more objects together:

- (93) a. *žən* 'to throw sth (DO)' (vt)
 b. *xa-žən* 'to throw sth (DO) into sth (IO)' (vb)
 c. *za-xa-žən* 'to throw, put sth (DO) together' (vt).

The source of this semantic transformation could be the same as the one proposed for *-za-te-* in 9.2.2 above. In a number of instances *-za-xa-* denoting separation at the same time denotes intensity of action:

- (94) a. *š^αašan* 'to break' (vi)
 b. *za-xa-š^αašan* 'to break into small pieces.'
 (95) a. *taṗən* 'to rip sth (DO) up'
 b. *za-xa-taṗən* 'to rip sth (DO) into many pieces.'
 (96) a. *čatxan* 'to tear sth (DO)'
 b. *za-xa-čatxan* 'to tear sth (DO) into small pieces.'

The complex *-za-xa-* often brings in the meaning of object-oriented sociative:

- (97) a. *γ^oalybžan* 'to roast sth' (vt)
 b. *xa-γ^oalybžan* 'to roast sth (DO) somewhere (in oil, etc.) (IO)' (vb)
 c. *za-xa-γ^oalybžan* 'to roast several things (DO) together' (vt).
 (98) a. *γα-žan* 'to boil sth (DO)' (vt)
 b. *xa-γα-žan* 'to boil sth (DO) in sth (in water, etc.) (IO)' (vb)
 c. *za-xa-γαžan* 'to boil several things (DO) together' (vt).
 (99) a. *xun* 'to drive sb (DO)' (vt)
 b. *xa-xun* 'to drive sb (DO) somewhere (IO)' (vb)
 c. *za-xa-xun* 'to drive sb (DO) altogether' (vt).

In all these examples the direct object and indirect object of the verb with *-xa-* belong to different semantic classes (e.g. with the verbs meaning 'to roast' and 'to boil' the direct object is a compact entity, and the indirect object is a mass). Therefore an object-oriented reciprocal proper is impossible with such verbs, and the verbs with *-zaxa-* are reinterpreted as object-oriented sociatives.

With some other intransitive verbs with *-xa-* prefixation of *-za-* entails a "locative" reciprocal meaning, which is likely to be reinterpreted as sociative:

- (100) a. *yaṭəsən* 'to seat sb (DO)' (vt)
 b. *xa-yaṭəsən* 'to seat sb (DO) somewhere (IO)' (vb)
 c. *za-xa-yaṭəsən* 'to seat some people (DO) together' (vt).

- (101) a. ($\check{s}^{\alpha} \partial$ -)sən ‘to sit’ (vi)
 b. xa-sən ‘to sit somewhere (IO)’
 c. za-xa-sən ‘to sit together’ (vi).
- (102) a. ($\check{s}^{\alpha} \partial$ -)tən ‘to stand’ (vi)
 b. xa-tən ‘to stand somewhere (IO)’
 c. za-xa-tən ‘to stand together’ (vi).

Naturally, the “canonical” reciprocal meaning of ‘sitting/standing in each other’ would make no sense, and therefore it is replaced by the much more natural meaning of ‘sitting/standing *with* each other’ (“locative” reciprocal), that is, ‘sitting *together*’ (sociative).

Finally, with some other verbs the complex *-zaxa-* means mere intensity of action:

- (103) a. çalan ‘to smear sth (DO)’ (vt)
 b. za-xa-çalan ‘to smear sth (DO) all over’ (vt).

9.2.4 The complex “-za- + preverb” as a single marker

To conclude, the examples of *-ta-* and *-xa-* have shown that combination of the reciprocal marker with a preverb can result in idiomatization, to the effect that the verb including the reciprocal marker and a preverb may not be understood as a true reciprocal form. This happens, first of all, with preverbs which bring in the meaning of putting an object together with or separating it from some surface or some mass or some group of objects. Here, instead of a reciprocal meaning, the complex “reciprocal marker + preverb” signifies either sociativity or intensity of action.

Apart from *-ta-* and *-xa-*, similar idiomatization is observed with a large variety of other preverbs which mean separation or putting together, among which *-s’a-*, *-ga-*, *-bla-*, and *-pəɾə-* are especially frequent.

Of course this idiomatization may not be treated as a hundred percent regular rule for Kabardian, because, as already mentioned, any preverb and any verbal root can bring in various nuances of meaning in such combinations. Therefore in all cases of idiomatization it is preferable to treat the verbs with the “za + preverb” complex as one-step derivatives from verbs without a preverb. The combinations “za + preverb”, therefore, should be treated as complex derivational morphemes, with the basic meaning of separating/putting together and/or of intensity.

9.3 The reciprocal marker as a part of underived preverbs

Section 9.2 dealt with the combinations “-za + preverb” which, although synchronically are better treated as single derivational markers, still include preverbs which may be used without *-za-* as well. However, the marker *-za-* is also a part of some prefixes in which the other part, historically a preverb, does not function as such in present-day Kabardian. In such instances pure morphological conflating of *-za-* and the morpheme that follows it takes place. Usually resulting prefixes also have the meaning of separating or putting together, with various aspects. This means that that was also the meaning of historical preverbs on the basis of which such prefixes were formed. The mechanism of reinterpretation

tion could be the same as described in 9.2, with the only difference that in 9.2 the preverbs combined with *-za-* can occur without *-za-* as well.

A prefix which surely belongs to the present class is *-zabgərə-*, because there is no separate prefix *-bgərə-* in contemporary Kabardian. This preverb has a *diversative* meaning:

- | | | | |
|-------|----|---------------------------|-----------------------------------|
| (104) | a. | ž ^α an | ‘to run’ |
| | b. | zabgərə-ž ^α an | ‘to run in different directions.’ |
| (105) | a. | x’an | ‘to carry’ |
| | b. | zabgərə-x’an | ‘to distribute.’ |

Sometimes it is difficult to decide whether a historical preverb should still be analysed as such or not – some preverbs have a strong tendency to co-occur with *-za-*, but in some instances they may occur without it as well. Another probable candidate for this class of preverbs is *-zal’ə-*, also with the diversative meaning (‘*uk^oatən* ‘to move away from sth’ (vi) - *zal’ə-uk^oatən* ‘to move altogether in different directions’ (vi)).

10. Some additional remarks on the status of reciprocal markers

In Section 8, I suggested that the reciprocal markers may be treated as special markers of agreement, used when the NP which triggers agreement is omitted as a result of some syntactic process. This would put the reciprocal markers in one class with the agreement markers proper, in other words, they would become inflectional markers. This is what gives rise to the morphological-paradigmatic type of reciprocal. The first objection against such interpretation, concerning the form of the “canonical” subject-oriented reciprocal, was already discussed in Section 8. However, the data presented in Section 9 questions such an approach to the reciprocal markers more seriously.

Indeed, it can be argued that nowhere else inflectional markers are capable of idiomatization, specifically of building complex morphemes of special semantics with derivational markers. A preliminary cross-linguistic study suggests that this is true not only for the 1st, 2nd and 3rd person inflectional markers, but also for inflectional markers of special syntactic functions, substituted into agreement slots.

This hints at a specific position of the reciprocal marker between derivational and inflectional elements. It is true that these markers have the same location as agreement markers proper in verbal form, and that their basic function is to mark omission of NP triggering agreement in the corresponding slot. However, this definition of function is in fact too broad for the markers in question. As a matter of fact, Kabardian, as most languages with a developed system of personal agreement, normally does not require an overt NP in case its referent is unambiguously reconstructed from the context. However, this kind of omitted NPs, unlike NPs omitted in reciprocal, reflexive or relative clauses, never require *-z-* and its cognates in verbal form. The latter occur in a much more restricted set of grammatical contexts. This is what gives these markers their very special status. On the one hand, they behave as a part of verbal inflectional paradigm, but on the other hand, they are related to a restricted set of grammatical categories, that is, to a very

restricted set of reasons for omission of NP. In my opinion, this is why these markers are capable of interaction with derivational verbal morphology, without being themselves a part of it.

1. Introduction

1.1 Adyghe

The Adyghe language is a member of the Abkhaz-Adyghe (West Caucasian) language family – it is included into the Adyghe group of this family with the Kabardian language. There are about 300,000 native speakers of Adyghe, 125,000 of them in Russia. Nearly all of the latter speak Russian. The vast majority of them live in the Adyghe Republic of Russian

Federation; there are also Adyghe speakers in other regions of Russia, in Turkey and other countries. In Russia newspapers and books in Adyghe are published.

Adyghe has four main dialects: Temirgoj, Bzhedugh, Abdzakh, Shapsug.

1.2 Sources of data

My materials were obtained in the Xakurinoxabl' village where the Temirgoj dialect is spoken and some Abdzakh features can also be noted (the Shovgenov district of Adyghe Republic) in the course of the fieldwork expeditions organized by the Russian State University for Humanities (2003–2004, 2006).¹ Most of the data were obtained by means of questioning native speakers (about 80 hours of interviews). When possible, the data from the texts written down in the course of the expeditions were also used.

Some data and a considerable number of characteristics of the phenomena under analysis are borrowed from the grammar of Standard Adyghe (Rogava & Kerasheva 1966).

1.3 On transliteration

In this chapter, in contrast to Chapter 17 on Kabardian reciprocals, the phonetic transcription is not used. The Cyrillic characters of the Adyghe alphabet are mostly replaced by the corresponding Latin characters, as is commonly accepted in the transliteration of the Russian alphabet. This concerns the following consonantal characters: *б*, *в*, *з*, *д*, *ж* (= *ž*), *з*, *к*, *п*, *м*, *н*, *п*, *с*, *м*, *ф*, *х*, *ц*, *ч* (= *č*), *ш* (= *š*), and vowel characters *а*, *о*, *у*, *и*. The Cyrillic letter *ш* is denoted by the combination *šb*. The letter *э* (= /e/) is preserved. The letter *я* is transliterated as *ja*; the letter *е* which usually signifies the diphthong /jə/ is retained. The following characters are preserved: *ʔ* (either a glottal stop or abruptivity of the previous consonant), *ь* and *ъ* (the latter two do not denote separate sounds: they change the value of the previous letter; cf. *г* = /g/ and *гъ* = /ɣ/). The letter *и* is rendered by schwa (ə). This way of transliterating the Adyghe material is intended to make it easier for the reader to use the Adyghe dictionaries, grammars and publications where the Cyrillic writing is used.

1.4 Overview. Means of expressing the reciprocal, reflexive, comitative, and sociative meanings

This paper is concerned with reciprocal, reflexive, comitative, and sociative constructions in Adyghe.

Adyghe has numerous means for expressing reciprocity:

1. The expeditions of 2003 and 2004 were financed by the Russian Humanitarian Scientific Fund (Grant “Adyghe linguistic expedition”: 03-04-1801e and 04-04-18008e) and the expedition of 2006 was financed by the same Fund (Grant “Syntax of a polysynthetic language” 06-04-00194a).

1. Prefixes: (a) the main means are two prefixes, the reflexive-reciprocal prefix *zə-* (with allomorphs *zə-* and *z-*; see 2.7, 3.1.1.1.2, 3.1.1.2) and reciprocal *zəɾə-* (3.1.1.1.1, 3.1.3.1); (b) a peripheral device is the complex prefix *zəɾəgəə-* (3.1.1.1.3, 3.1.3.2).

The marker *zə-* (in particular, its allomorph *zə-*) is also the only morphological device of expressing reflexivity. This prefix presumably goes back to the pronoun *zə* ‘one’, which also exists in the present-day language. Typologically, the reciprocal meaning is likely to be a result of reinterpretation of the reflexive marker on verbs whose lexical meaning makes it possible.

2. Reciprocal pronouns used as peripheral means: *zəm zər* ‘each other’, lit. ‘one one’ and (sometimes) *zəm adrər* ‘one another’ (see Section 9).
3. A possessive marker on the direct object in combination with the plural verbal marker *-x*, used as a peripheral device (see 3.1.3.3).

Comitative is coded with the marker *də-/də-* (see Section 4), which sometimes expresses the assistive meaning.

Sociative is marked with the prefixes *zə-də-*, which is a combination of the reciprocal and the comitative markers (see 5.1), and *zəɾə-gəə-* – a combination of the reciprocal and the causative markers (see 5.2).

All these means very often co-occur with the iterative suffix *-žbə* (see Section 6). This polysemous affix has the intensifying function when used on derivatives with the reciprocal and the reflexive markers, but it is glossed as ITER, because of its main meaning.

The first two prefixes, viz. *zə-* and *zəɾə-*, occupy the slot of one of the agreement affixes in the verb form, while other slots are occupied by agreement markers.

The prefix *zə-* is used in subject-oriented “canonical” reciprocals of two-place “common” intransitive bases (see (24), (25b)), inverse intransitive bases (see (28), (29b)) and subject-oriented “indirect” reciprocals of three-place transitive bases (see (32), (33b)), when the non-direct (indirect) object is deleted and the valency of the base verb decreases. Occasionally, *zə-* is used instead of *zəɾə-* in subject-oriented “canonical” reciprocals of transitive bases, in which case it converts the verb into an intransitive one (see (16c)). The marker *zə-* is also used in object-oriented reciprocals of all base verbs (cf. (40b)).

The marker *zəɾə-* is used on “canonical” reciprocals of transitives and has an intransitivizing force (see (13b)). It is never used on “canonical” reciprocals of two-place intransitive verbs and on object-oriented reciprocals.

The reciprocal pronouns and the prefix *zəɾə-gəə-* are used very rarely and have not been analyzed in linguistic literature so far.

In Adyghe, there are only simple reciprocal constructions, with both reciprocants expressed by the same syntactic argument. The only verb that forms a discontinuous construction is *zə-on* ‘to fight (with sb)’, which can take the second reciprocal marker to produce a simple reciprocal *zə-zə-on* ‘to fight’. Possibility of the discontinuous construction and compatibility with the second reciprocal marker is a result of lexicalization of the verb *zə-on*.

Another restriction is that the simple affixes *zərə-* and *zə-*, with rather few exceptions, express reciprocity only between arguments of a verb (see (13b) and (25b) respectively). The term “argument” will be understood as *a participant that controls agreement affixes of the verb*. The affix *zərə-gəə* and the reciprocal pronouns *zəm zər* and *zəm adrər* can express reciprocity between an argument and an adjunct (see (36b) and (67b) respectively).

2. Grammatical notes

2.1 Introductory

Like other languages of the West-Caucasian group, Adyghe is an ergative polysynthetic language. The subject of a transitive verb is marked with the ergative case, whereas the object of a transitive verb and the subject of an intransitive one must be marked with the absolutive. Most of the grammatical meanings are expressed by bound morphemes within a verb form: valency derivations, temporal, modal and aspectual meanings, subject and object agreement, direction and location.

Nominal morphology is much simpler. Only number, case and possession are expressed in the form of a noun, and all of them must be expressed only once in a noun phrase.

Below expression of the categories relevant for this paper will be sketched.

2.2 Nominal categories: Case, number, possession

In Adyghe, four cases are distinguished: absolutive, oblique, instrumental and the so-called “transformational” or adverbial case (in some works the inventory of cases is broadened), and two numbers – singular and plural. Table 1 shows case markers in singular and plural. Plural is marked by the suffix *-xə*.

The form with the affix *-m* is traditionally called ergative. Ergative is the case form of the transitive subject. All indirect objects are also marked with the ergative case. This is why I will call the marker *-m* ‘oblique’ rather than ‘ergative’ and gloss it as OBL, because it has a very broad range of uses.

The first and second person pronouns (*sə* ‘I’, *o* ‘you (SG)’, *tə* ‘we’, *šəu* ‘you (PL)’) do not distinguish absolutive and oblique – therefore, in the examples below the case of these pronouns is given in parentheses either as ABS or OBL depending on whether an oblique or

Table 1. Case-number markers

	Singular	Plural
Absolutive	<i>-r</i>	<i>-xə-r</i>
Oblique	<i>-m</i>	<i>-xə-m, -mə, -xə-mə</i>
Instrumental	<i>-klə, -m-klə</i>	<i>-xə-klə</i>
Adverbial	<i>-əw</i>	<i>-x-əw</i>

Table 2. Possessive prefixes

Person/number	Inalienable possession	Alienable possession
1SG	<i>s-</i> , <i>sə-</i>	<i>s-i-</i>
2SG	<i>p-</i>	<i>w-i-</i>
3SG	<i>ə-</i>	<i>jə-</i>
1PL	<i>t-</i>	<i>t-i-</i>
2PL	<i>švu-</i>	<i>švu-i-</i>
3PL	<i>a-</i>	<i>ja-</i>

an absolutive agreement marker in the verb form agrees with the pronoun (see (3), (8a), (10a), (12a, b), etc.).

In the function of the third person pronoun, the demonstrative pronoun *a-* ‘that’ is used. It is always case-marked: *a-r* <s/he-ABS>, *a-šv* <s/he-OBL>, *a-xə-r* <s/he-PL-ABS>, *a-xə-m* <s/he-PL-OBL>. The second component *-šv* in the 3SG.OBL form *a-šv* does not occur anywhere and it is distinguished here tentatively, and its glossing as OBL is questionable.

Possessivity is marked on the name of the possessum and expresses person and number of the possessor. The marking of inalienable and alienable possession is different.

In the third person metathesis changes sequence of the affixes: the marker of alienable possession *j-* is attached before the possessive affix. They are glossed by means of possessive pronouns (*my, your, his/her, our, your* and *their*).

2.3 Tense and aspect

Adyghe has a rich system of tense-aspect forms. Temporal and aspectual meanings are expressed by suffixes.

The most common are the present tense which is unmarked (*e-bəu-Ø* <3SG.IO-KISS-PRES> ‘he/she kisses him/her’), the past tense marked with the suffix *-gθ(ə)* (*ə-upsə-gθ* <3SG.S-SHAVE-PAST> ‘he shaved him’) and the future tense marked with the suffix *-švt* (*kəə-klo-švt* <DIR-GO-FUT> ‘he will come’), which can also express modal meanings. Adyghe has also a pluperfect marked with two past affixes *-gθa-gθə*, and habitual/progressive past formed by means of the affix *-švtə-gθə* (future + past) (on the meaning of these affixes see Kumaxov (1971) and Zekox (2002)).

2.4 Verb classes

Adyghe has three verb classes: transitive, intransitive non-inverse (“common”) and intransitive inverse verbs.

The class of transitive verbs includes lexemes that express a situation with a prototypically agentive subject and a prototypically patientive object; cf. *kəutən* ‘to shatter sth’, *zəpəklən* ‘to break sth’, *uuklən* ‘to kill sb’ (all Adyghe verbs are cited in the form of deverbal noun (masdar)).

- (1) *sə* *čaškə-r* *Ø-s-kəuta-gəə*.
 I(OBL) cup-ABS 3SG.DO-1SG.A-shatter-PAST
 ‘I broke (shattered) a cup.’

Intransitives are divided into non-inverse and inverse verbs. “Common” intransitive verbs (cf. *kIon* ‘to go’) have the subject and some of them also have an oblique object.

- (2) *vase* *Ø-kəə-kIua-gə*.
 V.ABS 3SG.S-DIR-go-PAST
 ‘Vasja came [-*kəə* = direction towards the speaker].’

Inverse verbs have, as a rule, two arguments – a stimulus and an experiencer (cf. *zəxəxen* ‘to hear’):

- (3) *sə* *a-r* *Ø-zəxə-sə-xə*.
 I(OBL) s/he-ABS 3SG.DO-LOC-1SG.A-hear
 ‘I hear him.’

Inverse verbs, in contrast to transitive ones, do not form reciprocals by means of the prefix *zərə-*. On the other hand, inverse verbs have an oblique subject – in this respect they differ from “common” intransitives, which have an absolutive subject. Subject properties are distributed between both of their arguments: the stimulus and the experiencer.

2.5 Agreement

In Adyghe, the absolutive argument and all oblique arguments (including oblique objects introduced by derivations) are cross-referenced in the verb form. All agreement markers are prefixes, except the 3PL marker of the absolutive argument *-x(ə)* which is a suffix.

The predicate takes agreement markers of absolutive arguments: the direct object of transitive and the subject of intransitive verbs (the first slot in the verb form). In the case of ergative (oblique) arguments the predicate takes the agreement markers of the subject and indirect objects of all groups of verbs, including indirect objects introduced by derivations. The markers of agreement with the latter indirect objects occupy the position immediately before the markers of these derivations. The markers of agreement with the absolutive subject are glossed as “s” (subject), the markers of agreement with the ergative subject as “A” (agent); the markers of agreement with the absolutive (direct) object are glossed as “DO” (direct object) and those for indirect objects (with oblique case marking) are glossed as “IO” (indirect object).

In Table 3 the absolutive and oblique markers on the predicate are listed.

Note the use of the only suffix *-x* among the agreement markers: it is controlled by the absolutive subject (see, for instance, (13b) and (14b)) or by the absolutive (direct) object (see, for instance, (8a), (33a, b)).

Table 3. Agreement markers

Person and number	Absolutive	Oblique
1 SG	<i>sə-</i>	<i>sə-, s-</i>
1 PL	<i>tə-</i>	<i>tə-, t-</i>
2 SG	<i>u-</i>	<i>o-, p-</i>
2 PL	<i>švu-</i>	<i>švo-, švu-</i>
3 SG	<i>∅-</i>	<i>ə-, e-, i-, ∅-</i>
3 PL	<i>-x</i>	<i>a-</i>

2.6 Locative and directional preverbs

Adyghe has a great number of locative preverbs (see, for example, (41)). Locative preverbs express or specify the location of the situation or direction. The location or direction is usually determined by the lexical meaning of the verb rather than by the preverb; cf. the following examples with the locative preverb *i-/r-* ‘in, inside, into’: *unə-m i-s* ‘[s/he] sits in the house’ (location), *unə-m i-xba-gə* ‘[s/he] entered the house’ (direction) (Rogava & Kerasheva 1966: 117). All locative preverbs add the locative to the verb arguments; cf. (4b) with the prefix *d-*:

- (4) a. *kIalə-m pšəašəə-r ∅-e-šbə.*
 boy-OBL girl-ABS 3SG.DO-3SG.A-lead
 ‘The boy leads a girl.’
 b. *kIalə-m pšəašəə-r unə-m ∅-∅-d-e-šbə.*
 boy-OBL girl-ABS house-OBL 3SG.DO-3SG.IO-LOC-3SG.A-lead
 ‘The boy leads a girl into the house.’

The polysemous directional preverb *kəə-/kəə-* deserves special mention. As a rule, it precedes another locative preverb in the verb form and may even form a complex preverb with it; cf. (44). With verbs of motion it denotes direction towards the speaker (cf. (2)). In certain cases this preverb serves as a component of verb conjugation; cf., for instance, (52b, c), (70a), (78a); see Rogava & Kerasheva (1966: 112–14).

2.7 Meanings of the reflexive marker *z(ə)-/z(ə)-*

Adyghe has three means of marking semantic reflexivity. The main marker is the reflexive-reciprocal prefix *z-*, more peripheral are the reflexive pronouns *ežv* ‘oneself’ and *əšəxə* ‘oneself’, lit. ‘one’s head’.

The reflexive prefix expresses coreference of any two arguments, i.e. the initial subject and any object, direct or indirect, but not between an argument and an adjunct. This prefix is controlled by the subject and, therefore, occupies the position of a non-subject agreement marker, i.e. the absolutive slot of transitive and intransitive inverse verbs, and the oblique slot of intransitive non-inverse verbs. Inverse verbs demonstrate variability of reciprocal forms (see 3.1.1.2.2). The subject of reflexive derivatives almost always has the same case form as the subject of the base verb (cf. (5a, b) with oblique subjects).

Alongside the reflexive proper and reciprocal meaning, the prefix *z-* has autocausative, anticausative, antipassive and possessive-reflexive uses. It is a highly polysemous marker demonstrating a widespread type of polysemy of reflexive-reciprocal markers. Henceforth, “reflexive” is used as a cover term for all its usages except the reciprocal one. The reflexive function (cf. (5b)) is referred to as “reflexive proper”. I gloss this prefix as REFL in all the functions except the reciprocal one.

Reflexive proper:

- (5) a. *si-gʷunəgʷu-m a-r Ø-ə-ukIə-gʷ.*
 my-neighbour-OBL s/he-ABS 3SG.DO-3SG.A-kill-PAST
 ‘My neighbour killed him.’
 b. *si-gʷunəgʷu-m z-i-ukIə-žbə-gʷ.*
 my-neighbour-OBL REFL-3SG.A-kill-ITER-PAST
 ‘My neighbour killed himself.’

Autocausative:

- (6) a. *a-šʷ a-r Ø-ə-Iətə-gʷ.*
 s/he-OBL s/he-ABS 3SG.DO-3SG.A-lift-PAST
 ‘He lifted it.’
 b. *a-šʷ z-i-Iətə-gʷ*
 s/he-OBL REFL-3SG.A-lift-PAST
 ‘He rose.’

Reciprocal:

- (7) a. *a-šʷ sə sə-zəx-e-xə.*
 s/he-OBL I(ABS) 1SG.DO-LOC-3SG.A-take
 ‘He hears me.’
 b. *a-xe-m zə-zəx-a-xə-žbə.*
 s/he-PL-OBL REC-LOC-3PL.A-take-ITER
 i. ‘They hear themselves.’ ii. ‘They hear each other.’

Antipassive:

- (8) a. *sə šʷxʷangʷupkIə-xə-r Ø-zəfə-s-šIə-gʷə-x.*
 I(OBL) window-PL-ABS 3SG.DO-LOC-1SG.A-do-PAST-PL.S
 ‘I closed the windows.’²
 b. *zə-zəfə-s-šIə-žbə.*
 REFL-LOC-1SG.A-do-ITER
 ‘I close (my shop, etc.),’ lit. ‘I close myself.’

Possessive reflexive (of a two-place intransitive verb):

- (9) a. *xʷə-r ə-lʷakʷo Ø-e-pləstxʷə-gʷ.*
 dog-ABS his-leg 3SG.S-3SG.IO-scratch-PAST
 ‘The dog scratched its leg.’ (two-place vi).

2. *zə-* in (8a) denotes an object-oriented reciprocal: see 3.2 about this type of reciprocals.

- b. *xvə-r Ø-zə-pləstxvə-žvə-gv.*
 dog-ABS 3SG.S-REFL-SCRATCH-ITER-PAST
 ‘The dog scratched itself (some part of its body).’

Anticausative:

- (10) a. *sə čvəgvə-r Ø-sə-ufa-gv.*
 I(OBL) tree-ABS 3SG.DO-1SG.A-bend-PAST
 ‘I bent the tree.’
 b. *čvəgvə-m z-i-ufa-gv.*
 tree-OBL REFL-3SG.A-bend-PAST
 ‘The tree bent.’

The prefix *zə-* on transitive bases always occupies the first slot in the verb form, i.e. the position of the DO agreement marker, including the cases, when it is used in “canonical” reciprocals derived from transitive verbs.

In all the uses of *zə-*, except the anticausative one, the subject of the derived construction corresponds to the underlying subject and retains its oblique case form. In the anticausative construction the subject of derived constructions with *zə-* forms corresponds to the object (patient) of the base construction (cf. (10b)). In other words, all the uses of *zə-* are subject-oriented, except the anticausative use, which is object-oriented.

In this respect the marker *zə-* in all its uses, except the anticausative one, differs from the reciprocal marker *zərvə-*: in constructions with *zərvə-* forms the underlying subject changes its marking to the absolutive one.

Reflexives proper of intransitive non-inverse verbs, as in (24b) (less frequently, of inverse verbs as in (28b)), contain the same reflexive-reciprocal prefix and the same agreement markers as “canonical” reciprocals. Some native speakers distinguish reflexive derivatives from reciprocal ones formally by using *zə-* in the reciprocal and *zə-* in the reflexive proper and other meanings, while others do not.

On the meanings of formally reflexive verbs see also Rogava & Kerasheva 1966:265–8.

2.8 Other means of valency derivation

Besides the reflexive-reciprocal marker *zə-* and the reciprocal markers *zərvə-* and *zərvə-gvə-* discussed in 1.3 and 2.7, there are the following valency changing markers (on the valency-increasing functions of locative preverbs see 2.6 above):

- (11) *gvə-* causative (40)
də- comitative (51b)
fə- benefactive (34)
šlo- malefactive

Besides these prefixes, there is a rarely used antipassive marker *-ə*: it substitutes for the last vowel of the verbal root; cf. *txən* ‘to write sth’ (two-place transitive verb) vs. *txən* ‘to write’ (antipassive, one-place intransitive verb).

- (12) a. *sə piʂmə-r Ø-sə-txə.*
 I(OBL) letter-ABS 3SG.DO-1SG.A-write
 ‘I write a letter.’
- b. *sə sə-txə.*
 I(ABS) 1SG.S-write.A.PASS
 ‘I write.’

Causative, benefactive, malefactive and comitative are valency-increasing markers: they add a new argument to the valency structure of the verb. The causative marker occupies the closest position to the verbal root among all derivational markers, i.e. it occurs immediately before the root. Reciprocals with the prefix *zərə-* undergo intransitivization, i.e. valency decrease takes place, and the ergative base construction changes into absolutive (see (13) and (14); for an exception see (35)). Reciprocals with the prefix *zə-* do not change the base construction: base constructions remain transitive (see (33), (34)) though the valency decreases due to the loss of an oblique object. And intransitive constructions with reciprocals in *zə-* remain intransitive (see (25), (27); a special case are reciprocals of inverse intransitive verbs, cf. (29), (30), (31)).

Reflexives are specific in that the verb retains the morphological structure as in the base construction and the subject does not change its case marking; thus for instance the oblique marking of the subject is preserved if the meaning of the derivative is reflexive proper, autocausative, antipassive and anticausative (see (5), (6), (8), (10)). In “common” intransitive verbs the reflexive marker occupies the oblique slot and the subject preserves the absolutive marking (see (9)). In inverse intransitive verbs it occupies the absolutive slot and the subject remains oblique (see (7)).

2.9 Compatibility of derivational markers

Most of the derivational markers are compatible with one another. On the other hand, only the causative prefix can be regularly repeated in a verb form, cf. *gəə-gəə-klon* <CAUS-CAUS-go> ‘to make sb lead sb’).

The sequence of the benefactive, malefactive and comitative affixes may vary. However, all of them always precede the causative prefix.

3. Morphological (prefixed) reciprocals

3.1 Subject-oriented reciprocals (intransitive and, rarely, transitive)

In Rogava & Kerasheva (1966:271–2), two morphological markers of reciprocity – *zərə-* and *zə-* are distinguished: *zərə-* is claimed to designate reciprocal relations between the subject and direct object referents of the underlying transitive verb, and *zə-* is claimed to be used in all other cases. My research shows that the situation is somewhat more complicated.

Table 4. Types of reciprocal constructions

Type of construction	REC marker	Case marking of the subject	Slot occupied by the REC marker
“Canonical” of vt	zərə-	ABS	OBL (S)
	zə-	OBL	ABS (DO)
“Canonical” of non-inverse vi	zə-	ABS	OBL (IO)
“Canonical” of inverse vi	zə-	ABS	OBL
	zə-	OBL (less frequently)	ABS
“Indirect” of vt	zə-	OBL	OBL
Object-oriented of vt	zə-	OBL	OBL

Table 5. Types of reflexive constructions³

Type of construction	REFL marker	Case marking of the subject	Slot occupied by the REFL marker
“Canonical” of vt	zə-/zə ⁴	OBL	ABS (DO)
“Canonical” of non-inverse vi	zə-/zə-	ABS	OBL (IO)
“Canonical” of inverse vi	zə-/zə-	ABS (less frequently)	OBL
	zə-/zə-	OBL	ABS
“Indirect” of vt	zə-/zə-	OBL	OBL
Object-oriented	zə-/zə-	OBL	OBL

This section concerns reciprocal constructions with *zə-* and *zərə-*-marked predicates. They are compared with reflexive proper constructions with the marker *zə-*. “Canonical” reciprocals of transitive verbs can also be formed by means of the complex prefix *zərə-gəə-*, which is analyzed in 3.1.1.1.3.

In Tables 4 and 5 the types of reciprocal and reflexive constructions are listed.

In the following subsections the constructions from Tables 4 and 5 are analyzed in detail.

3.1.1 “Canonical” (intransitive) reciprocals

3.1.1.1 Reciprocals derived from two-place transitive verbs

3.1.1.1.1 With the prefix *zərə-*.

Reciprocity between the subject and the direct object of a transitive verb is expressed by the prefix *zərə-*. Though *zərə-* is highly productive and combines with transitive verbs irrespective of their lexical meaning, some transitive verbs may form reciprocals both with *zərə-* and *zə-*, the latter occupies the position of the absolutive object (patient) agreement marker and thus substitutes for this marker. Cf. (13) and (14):

3. Reflexive constructions are classified in the same way as in the other papers of the present volume.

4. The distribution of *zə-* and *zə-* will not be discussed in this paper.

- (13) a. *klalə-m pšəašəə-r Ø-e-ləegəu.* (transitive)
 boy-OBL girl-ABS 3SG.DO-3SG.A-see
 ‘The boy sees the girl.’
 b. *zəklə cləf-xə-r zərə-ləegəu-žbə-x.*
 all man-PL-ABS REC-see-ITER-PL.S
 ‘All people see each other (= meet).’
- (14) a. *sə a-r Ø-z-gəəklodə-gə.* (transitive)
 I(OBL) s/he-ABS 3SG.DO-1SG.A-lose-PAST
 ‘I lost him/her.’
 b. *a-xə-r zərə-gəəklodə-gəə-x.*
 s/he-PL-ABS REC-lose-PAST-PL.S
 ‘They lost each other.’

Reciprocals of this type can also be formed from the following verbs:

- | | | |
|---------------------------------|---|---|
| (15) <i>uklən</i> ‘to kill’ | → | <i>zərə-uklən</i> ‘to kill each other, beat each other’ |
| <i>gəəšbəənən</i> ‘to frighten’ | → | <i>zərə-gəəšbəənən</i> ‘to frighten each other’ |
| <i>ulən</i> ‘to wound’ | → | <i>zərə-ulən</i> ‘to wound each other’ |
| <i>šlən</i> ‘to know’ | → | <i>zərə-šlən</i> ‘to know each other’ |
| <i>gəəšxən</i> ‘to feed’ | → | <i>zərə-gəəšxən</i> ‘to feed each other’ |
| <i>gəəpsklən</i> ‘to bath’ | → | <i>zərə-gəəpsklən</i> ‘to bath each other.’ |

However, it will be shown in the next section that these verbs can also form reciprocals of other types.

3.1.1.1.2 *Prefix zə- instead of zərə-.* As mentioned, *zə-* can be used on some verbs instead of *zərə-*. As also mentioned, *zərə-* is monosemous and *zə-* may have both a reciprocal and reflexive reading:

- (16) a. *pijə-m klalə-r Ø-ə-ula-gə.*
 enemy-OBL boy-ABS 3SG.DO-3SG.A-wound-PAST
 ‘The enemy wounded the boy.’
 b. *pij-xə-r zərə-ula-žbə-gəə-x.*
 enemy-PL-ABS REC-wound-ITER-PAST-PL.S
 ‘The enemies wounded each other.’
 c. *pij-xə-m z-a-ula-žbə-gə.*
 enemy-PL-OBL REC/REFL-3PL.A-wound-ITER-PAST
 ‘The enemies wounded each other/themselves.’

The subject in (16c) takes the oblique case form. This feature brings reciprocals in *zə-* together with reflexives proper of transitive verbs. In this case the reciprocal form coincides with the reflexive one, though the reciprocal reading is not available with a singular subject:

- (17) *sə zə-sə-ula-žbə-gə.*
 I(OBL) REFL-1SG.A-wound-ITER-PAST
 ‘I wounded myself.’

Significantly, my sample does not contain any verbs that form a reciprocal with *zə-* only. Therefore, the *zə-*variant seems to be secondary diachronically and synchronically.

On the other hand, in some cases the *zə-*variant may differ from the *zəɾə-*variant in meaning. The verb *ləɣgʊun* ‘to see’ which, unlike many other verbs of perception and emotions is transitive (cf. *zəxəxen* ‘to hear’, *ʃbəɣupʃən* ‘to be afraid’) forms reciprocals both with *zə-* and *zəɾə-*, with the following difference in meaning:

- (18) *tə təɣʊas tə-zəɾə-ləɣgʊ-gʊ.*
 we(ABS) yesterday 1PL.S-REC-SAW-PAST
 i. ‘We met yesterday.’ ii. ‘We saw each other.’
- (19) *dʒədədəm tə zə-tə-ləɣgʊ-ʒbə.*
 now we(OBL) REC-1PL.A-SAW-ITER
 ‘Now we see each other.’, but not ‘Now we are meeting.’

Two variants of the reciprocal form of *ləɣgʊun* ‘to see’ may be a result of the gradual loss of the inverse variant *ləɣgʊon* ‘to be seen, be visible’ which is cited in Rogava & Kerasheva (1966:99): now most speakers, except the oldest of them, do not use the inverse form *ləɣgʊon*. Perhaps the verb *ləɣgʊun*, which is initially transitive, received the functions of the inverse variant, which is proved by the high frequency of the *zəɾə-*variant formed according to the “transitive” pattern – this variant has not only the meaning ‘to meet’, but also ‘to see each other’.

This opposition has a close counterpart in Russian: the base verb *videt* ‘to see’ does not form a morphological reciprocal with the meaning of perception ‘to see each other’, but the form *videt’-sja* does exist and means ‘to meet.’

Another verb which combines with both reciprocal prefixes is *gʊə-stən* ‘to burn (with fire; vt)’, the morphological causative of *stən* ‘to burn (vi)/to burn (about fire; vt)’. The *zəɾə-*variant expresses reciprocity and *zə-*variant both reciprocity and reflexivity:

- (20) a. *tə pxəə-r Ø-tə-gʊəstə.*
 we(OBL) firewood-ABS 3SG.DO-1PL.A-burn
 ‘We burn firewood.’
- b. *zə-d-gʊəstə.*
 REC/REFL-1PL.A-burn
 i. ‘We burn each other.’ ii. ‘We burn ourselves.’
- c. *tə-zəɾə-gʊəstə.*
 1PL.S-REC-burn
 ‘We burn each other.’

This variation is probably determined by the fact that the causer and the causee in Adyghe do not generally tend to be bound by morphological reciprocals.

This, non-productive way of forming “canonical” reciprocals from transitive verbs by means of the prefix *zə-* has been noted only for the three verbs examined above: *gʊə-stən* ‘to burn’, *ləɣgʊun* ‘to see’ and *ulan* ‘to wound’.

3.1.1.1.3 *zəɾə-gʷə* instead of *zəɾə-*. The complex marker *zəɾə-gʷə* has two meanings which cannot be analyzed as the sum of causative and reciprocal meanings: the “canonical” reciprocal and the “possessive” (the latter is examined in 3.1.3.2).

The combination *zəɾə-gʷə-* can mark a “canonical” reciprocal of a transitive verb (21b) and in this case it is synonymous with the *zəɾə-* form (21c):

- (21) a. *sə a-r Ø-sə-ula-gʷə*
I(OBL) s/he-ABS 3SG.DO-1SG.A-WOUND-PAST
‘I wounded him.’
- b. *tə tə-zəɾə-ula-ʒbə-gʷə*
we(ABS) 1PL.S-REC-WOUND-ITER-PAST
‘We wounded each other.’
- c. *tə tə-zəɾəgʷə-ula-ʒbə-gʷə*
we(ABS) 1SG.S-REC-WOUND-ITER-PAST
‘We wounded each other.’

zəɾə-gʷə- is apparently a less productive marker of “canonical” reciprocals than *zəɾə-*. It marks “canonical” reciprocals derived from the following verbs of my sample:

- (22) *upsən* ‘to shave’ → *zəɾəgʷə-upsən* ‘to shave each other’
ulan ‘to wound’ → *zəɾəgʷə-ulan* ‘to wound each other’
ləɟɟun ‘to see’ → *zəɾəgʷə-ləɟɟun* ‘to see each other.’

These *zəɾəgʷə-* forms are interchangeable with forms in *zəɾə-*. On the other hand, almost all of verbs that can form *zəɾəgʷə-* derivatives can also form *gʷə-* causatives (e.g. *gʷə-upsən* ‘to make sb to shave sb’), but their meaning is not a combination of the causative and the reciprocal meaning.

The valency structure of derived verbs apparently does not result from consecutive causativization and reciprocalization of the base verb: the verb form in (21b) has only one argument. Consecutive causativization and reciprocalization, independently of the order of derivations, would result in a final two-place derivative, as in (23):

- (23) a. ‘to shave sb’ (vt) → ‘to cause sb to shave sb’ (three-place vt) → ‘to cause sb to shave each other’ (vt)
b. ‘to shave sb’ → ‘to shave each other’ (vi) → ‘to cause sb to shave each other’ (vt).

Therefore, we regard *zəɾəgʷə-* as a single complex marker, because its meaning cannot be regarded as a sum of the meaning of two derivative prefixes (compare the sociative use of *zəɾəgʷə-* in which it can be regarded as two distinct prefixes).

Explanation of the role of the causative marker *gʷə-* in cases like (21b) requires historical data about semantic changes in the meaning of such derivatives. It is worth noting, however, that *zəɾəgʷə-* most often attaches to verbs that can take the name of a body part in the object position (cf. (21b)), which makes this construction similar to a “possessive” one – therefore, “canonical” and “possessive” uses of *zəɾəgʷə-* historically are not independent from each other.

3.1.1.2 Reciprocals derived from two-place intransitive verbs (prefix *zə-*)

3.1.1.2.1 From non-inverse (common) intransitive verbs. These underlying verbs fall into two subsets, i.e. non-spatial and spatial intransitives. They combine exclusively with the marker *zə-*, which occupies the position of oblique agreement marker.

1. Reciprocals of non-spatial intransitives:

- | | | | |
|------|----------------------------------|---|---|
| (24) | <i>bəun</i> ‘to kiss sb’ | → | <i>zə-bəun</i> ‘to kiss each other’ |
| | <i>uepləsklun</i> ‘to pinch sb’ | → | <i>u-z-epləsklun</i> ‘to pinch each other’ |
| | <i>on</i> ‘to hit sb’ | → | <i>zə-on</i> ‘to hit each other’ |
| | <i>pləən</i> ‘to look at sb’ | → | <i>zə-pləən</i> ‘to look at each other’ |
| | <i>pIəstxəən</i> ‘to scratch sb’ | → | <i>zə-pIəstxəən</i> ‘to scratch each other’ |
| | <i>dəIəpələn</i> ‘to help sb’ | → | <i>zə-dəIəpələn</i> ‘to help each other’ |
| | <i>šbəgugəun</i> ‘to rely on sb’ | → | <i>zə-šbəgugəun</i> ‘to rely on each other’ |
| | <i>etIərgun</i> ‘to push sb’ | → | <i>zə-tIərgun</i> ‘to push each other.’ |

Cf. the following example:

- | | | | | |
|------|----|---|-----------------------------------|----------------------------|
| (25) | a. | <i>sə</i> | <i>a-šb</i> | <i>sə-Ø-šbə-gugəu-žbə.</i> |
| | | I(ABS) | s/he-OBL | 1SG.S-3SG.IO-LOC-rely-ITER |
| | | ‘I rely on him/her.’ | | |
| | b. | <i>tə</i> | <i>tə-zə-šbə-gugəu-žbə-x.</i> | |
| | | we(ABS) | 1PL.S-REC/REFL-LOC-rely-ITER-PL.S | |
| | | i. ‘We rely on each other.’ ii. ‘We rely on ourselves.’ | | |

2. Reciprocals of spatial intransitives. Spatial intransitives contain a locative prefix that retains its position after the derivation.

- | | | | |
|------|--------------------------------------|---|---|
| (26) | <i>xə-xəən</i> ‘to join to sb’ | → | <i>zə-xə-xəən</i> ‘to join to each other’ |
| | <i>go-kIən</i> ‘to go aside from sb’ | → | <i>zə-go-kIən</i> ‘to go aside from each other’ |
| | <i>go-fən</i> ‘to drop near sb’ | → | <i>zə-go-fən</i> ‘to drop near each other’ |
| | <i>go-tən</i> ‘to stay near sb’ | → | <i>zə-go-tən</i> ‘to stay close’ |
| | <i>te-ləən</i> ‘to lie on sb’ | → | <i>zə-te-ləən</i> ‘to lie on each other’; cf.: |

- | | | | | |
|------|----|----------------------------------|---------------------|---------------------|
| (27) | a. | <i>a-r</i> | <i>a-šb</i> | <i>Ø-Ø-go-kIə.</i> |
| | | s/he-ABS | s/he-OBL | 3SG.S-3SG.IO-LOC-go |
| | | ‘S/he goes aside from him/her.’ | | |
| | b. | <i>axə-r</i> | <i>zə-go-kIə-x.</i> | |
| | | they-ABS | REC-LOC-go-PL.S | |
| | | ‘They go aside from each other.’ | | |

3.1.1.2.2 From inverse intransitive verbs. This class includes non-derived verbs denoting perception, emotions and possession, and some others (see (28a)). Besides, here belong verbs with the potential meaning derived by means of the prefix *fə-* and suffix *-šbu* (see (28b)). All verbs with the potential meaning are inverse. Inverse verbs form reciprocals by means of the affix *zə-* (or its variant *zə-*).

- | | | | | |
|------|----|--|---|---|
| (28) | a. | <i>iIən</i> ‘to have’ (lit. ‘to be at sb’) | → | <i>z-iIən</i> ‘to have each other’ |
| | | <i>šbəgəupšən</i> ‘to forget’ | → | <i>zə-šbəgəupšən</i> ‘to forget each other’ |
| | | <i>zəxəən</i> ‘to hear’ | → | <i>zə-zəxəən</i> ‘to hear each other’ |

- b. *lʷəgʷun* ‘to see’
 → *fə-lʷəgʷun* ‘to be able to see’ → *zə-fə-lʷəgʷun* ‘to be able to see each other.’

As mentioned, reciprocalization of inverse verbs distinguishes them from transitive and non-inverse intransitive verbs. Many of their derivatives are ambiguous between the reflexive and the reciprocal meaning; cf.:

- (29) a. *a-r* *a-šb* \emptyset -*zəx-e-xə*. (= (7))
 s/he-ABS s/he-OBL 3SG.A-LOC-3SG.A-take
 ‘S/he hears him/her.’
 b. *a-xə-m* *zə-zəx-a-xə-žbə*.
 s/he-PL-OBL REC/REFL-LOC-3PL.A-take-ITER
 i. ‘They hear each other’; ii. ‘They hear themselves.’

Polyfunctionality of the reflexive/reciprocal affix obviously unites inverse verbs with non-inverse “common” intransitives. At the same time, we must note variation of the reciprocal constructions with inverse verbs: cf. (30b) with an absolutive subject where the reciprocal marker occupies the oblique agreement slot, and (30c) with an oblique subject where the reciprocal marker occupies the absolutive agreement slot:

- (30) a. *sə* *a-r* \emptyset -*s-šbə-gupš-žbə-gʷ*.
 I(OBL) s/he-ABS 3SG.S-1SG.A-LOC-forget-ITER-PAST
 ‘I forgot about him.’
 b. *a-xə-r* *zə-šbə-gʷupšə-žbə-gʷə-x*.
 s/he-PL-ABS REC-LOC-forget-ITER-PAST-PL.S
 ‘They forgot about each other.’
 c. *a-xə-m* *z-a-šbə-gʷupšə-žbə-gʷ*.
 s/he-PL-OBL REC-3PL.A-LOC-forget-ITER-PAST
 ‘They forgot about each other.’

Unlike transitives, inverse verbs never take the reciprocal marker *zərə-*. As we have seen, the marker *zərə-* is used only when the base verb is transitive and the reciprocal derivative is intransitive.

The reflexive marker in the reflexive proper meaning in Adyghe is always co-referential with the subject of the sentence: the oblique argument of inverse verbs has more semantic properties of a prototypical subject than the absolutive one (e.g., it is animate). On the other hand, the reciprocal markers are more often co-referential with the absolutive argument, irrespectively of its status, and occupy the non-absolutive slot, be it the subject position, as with *zərə-* on transitive verbs, or object position, as with *zə-* on intransitive verbs. Thus, it is not surprising that if there exist two forms of a particular inverse verb with a different order of affixes, forms with *zə-* in the oblique position get the reciprocal interpretation:

- (31) a. *a-xə-r* *zə-šbə-gʷupšə-žbə-gʷə-x*.
 s/he-PL-ABS REC-LOC-forget-ITER-PAST-PL.S
 ‘They forgot about each other.’

- b. *a-xə-m z-a-švə-gəvəpšə-žvə-gə.*
 s/he-PL-OBL REFL-3PL.A-LOC-forget-ITER-PAST
 ‘They forgot about themselves.’

(Compare, though, (29b), where both readings are available).

I think that we must consider constructions of type (31a) as “prototypically reciprocal” (they are built according to the reciprocal type, with *zə-* in the oblique slot, but later on acquire the reflexive reading). Constructions of type (31b) can be called “prototypically reflexive”, as they are built according to the reflexive type.

Thus, as we see, Adyghe displays three types of morphological marking in constructions which can express the reciprocal meaning:

- (1) *zəvə-*forms with an absolutive subject, absolutive subject agreement marker on the predicate, and the reciprocal prefix in the slot of oblique agreement marker, as in (13);
- (2) *zə-*forms with an absolutive subject, absolutive subject agreement marker on the predicate, and the reciprocal prefix in the slot of oblique argument agreement, as in (30b);
- (3) *zə-*forms with an oblique subject, oblique subject agreement marker on the predicate and the reciprocal prefix in the slot of absolutive argument agreement marker, as in (30c) (presumably a result of reinterpretation of reflexive forms).

3.1.2 “Indirect” (transitive) reciprocals (prefix *zə-*)

“Indirect” reciprocals are derived from three-place transitive verbs by means of the prefix *zə-* which designates coreferentiality between the subject and the indirect object:

- (32) *gəvəlvəgəvun* ‘to show sth to sb’ → *zə-gəvəlvəgəvun* ‘to show sth to each other’
etən ‘to give sth to sb’ → *z-etən* ‘to give sth to each other’
gəvəšxən ‘to feed sth to sb’ → *zə-gəvəšxən* ‘to feed sth to each other’
gəvəšlən ‘to teach sb sth’ → *zə-gəvəšlən* ‘to teach each other sth’
 (lit. ‘to teach sth to sb’) (lit. ‘to teach sth to each other’)
fəšlən ‘to build, make sth for sb’ → *zə-fəšlən* ‘to build make sth for each other’; cf.:
- (33) a. *sə klalə-m fotografija-xə-r e-z-gəvəlvəgəvə-gəvə-x.*
 I(OBL) boy-OBL photo-PL-ABS 3SG.IO-1SG.A-SHOW-PAST-PL.DO
 ‘I show the boy the photos.’
 b. *tə fotografija-xə-r zə-tə-gəvəlvəgəvə-žvə-x.*
 we(OBL) photo-PL-ABS REC-1PL.A-SHOW-ITER-PL.DO
 ‘We show photos to each other.’

As mentioned, reciprocals of benefactive and malefactive transitive verbs, which are naturally three-place, are also of this type:

- (34) a. *sə (a-šv) unə-r Ø-fə-s-šlə-gə.*
 I(OBL) s/he-OBL house-ABS 3SG.IO-BEN-1SG.A-make-PAST
 ‘I built a house for him.’
 b. *tə unə-xə-r zə-fə-t-šlə-gə.*
 we(OBL) house-PL-ABS REC-BEN-1PL.A-make-PAST
 ‘We built houses for each other.’

3.1.3 “Possessive” (transitive) reciprocals

“Possessive” reciprocity, i.e. a reciprocal relation between an argument of the predicate and expression of the possessor on another argument, is marked in the following ways: the prefix *zəɾə-*, the complex prefix *zəɾəgʊə-* and plural affixes on the object of the verb, none of which is productive in this sense. Some Adyghe verbs combine with several of these devices; for example, the verb *ulan* ‘to wound’ admits all three variants of “possessive” reciprocal constructions. The fact that “possessive” reciprocals are not productive seems to result from the semantic features of this type of reciprocal meaning.

3.1.3.1 *With the prefix zəɾə-*. Some native speakers allow transitive “possessive” use of *zəɾə-* forms, cf.:

- (35) a. *sə ə-la Ø-s-fəze-gʊ.*
 I(OBL) his-hand 3SG.DO-1SG.A-shake-PAST
 ‘I shook his hand.’
 b. *tə t-Iə-xə-r zəɾə-t-fəze-gʊ.*
 we(OBL) our-hand-PL-ABS REC-1PL.A-shake-PAST
 ‘We shook each other’s hands.’

This use of *zəɾə-* forms differs from its most productive “canonical” use in which the verb becomes syntactically monovalent. In examples like (35b) reciprocal derivation introduces a new slot in the verb form for indirect object, which is occupied by the reciprocal prefix *zəɾə-*. The “possessive” *zəɾə-* derivatives are syntactically two-place.

In fact, constructions like (35b) are rather semantically close to “canonical” reciprocal constructions derived from transitive verbs like ‘We wounded each other’: they are formed from the same semantic class of verbs.

3.1.3.2 *With the prefix zəɾəgʊə-*. The affix *zəɾəgʊə-* can mark not only “canonical” but also “possessive” reciprocals. In (36a), the possessor *pšəašʊə-m* ‘girl-OBL’ is an attribute of *əla* ‘her hand’.

- (36) a. *klalə-m pšəašʊə-m ə-la Ø-ə-ula-gʊ.*
 boy-OBL girl-OBL her-hand 3SG.DO-3SG.A-wound-PAST
 ‘The boy wounded the girl’s hand.’
 b. *tə t-Iə-xə-r ə-zəɾəgʊə-ula-gʊə-x.*
 we(OBL) our-hand-PL-ABS 1PL.IO-REC-wound-PAST-PL.DO
 ‘We wounded each other’s hands.’

Examples like (36b) are an exception in the sense that the reciprocal prefix binds an argument and an attribute of the argument (this attribute is, of course, not cross-referenced by agreement markers on the verb; possessive attributes do not control any slots on the verb), because usually Adyghe reciprocals tend to bind only arguments. Verbs with meanings like ‘to wound’ and ‘to hold’ are essentially two-place. Besides animate objects, they can take a direct object denoting a body part, in which case this object occurs with a possessive marker, as in (36a). In (36b) the verb has a direct object denoting a body part, the pos-

sensor becomes an indirect object, controls the IO prefix *tə-* and this makes a “possessive” reciprocal possible.

The complex affix *zəɾəgəθə-* in this use also combines with common intransitive verbs according to the same pattern: the only difference is that the possessee *nə* ‘eye’ in (37) is an indirect object:

- (37) a. *sə a-šb ə-nə sə-Ø-kIə-pləa-gə.*
I(ABS) s/he-OBL his-eye 1SG.S-3SG.IO-LOC-look-PAST
‘I look in his eyes.’
- b. *tə zə-m zə-r ə-nə⁵ tə-kIə-zəɾəgəθə-pləa-gə.*
we(ABS) one-OBL one-ABS his-eye 1PL.S-LOC-REC-look-PAST
‘We looked in each other’s eyes.’

The word *nə* ‘eye’ has the 3SG agreement prefix in (37b), because it agrees with the 3SG pronoun *zəm zər* ‘one another’.

In these examples the complex prefix *zəɾəgəθə-* either cannot be replaced with simple prefixes *zəɾə-* and *zə-* or such substitution makes the sentences marginal.

I regard the prefix *zəɾəgəθə-* in its “possessive” use as a single complex affix, as in the “canonical” use, because the “possessive” meaning is not a combination of the causative meaning of *gəθə-* and the “canonical” reciprocal meaning of *zəɾə-* (the combination would be reciprocal of causative or causative of reciprocal).

3.1.3.3 *With possessive plural prefixes on nominal constituents (objects of the base verb).* In some cases a plural possessive affix *t(ə)-* (1PL), *šəu(i)-* (2PL) and *(j)a-* (3PL) on the object of the verb is sufficient to make a sentence reciprocal, which happens when the predicate is also plural and describes a situation in which the patient is a body part of the agent (cf. (38b) and (39)). If the meaning of the verb or the context blocks the usual possessive interpretation ‘The enemies wounded their hands’, the reading is reciprocal, as in (38b):

- (38) a. *a-šb kIalə-m ə-Ia Ø-ə-ula-gə.*
s/he-OBL boy-OBL his-hand 3SG.DO-3SG.A-WOUND-PAST
‘He wounded the boy’s hand.’
- b. *zə-pij-xə-m a-Ia-xə-r a-ula-žbə-gəθə-x.*
REC-enemy-PL-OBL their-hand-PL-ABS 3PL.A-WOUND-ITER-PAST-PL.DO
‘The enemies wounded each other’s hands’ (“possessive” reciprocal).

(On the prefix *zə-* on relative nouns like *pij* ‘enemy’ and the like see Section 7 below.)

If the meaning or the context does not block the usual possessive interpretation, examples are ambiguous between the usual reflexive-possessive and reciprocal interpretation, as in (39):

- (39) *zəkIə gəunəgəθu-mə ja-Iaxəθəl-xə-r šlu a-ləgəθu-x.*
all neighbour-OBL.PL their-relative-PL-ABS good 3PL.A-see-3PL.DO
‘All neighbours love their/each other’s relatives.’

5. The 3SG possessive affix shows agreement with the noun phrase *zəm* (see Section 9).

In (39) we can see a phenomenon analogous to reflexive-reciprocal polysemy, which is analyzed below (cf. (38b) with (16c) ‘The enemies wounded themselves/each other’).

3.2 Object-oriented reciprocals (transitive; prefix *zə-*)

Object-oriented reciprocal constructions are formed from transitive three-place verbs having a direct and an indirect object and designate reciprocal relations between these two objects. They are marked only with the reciprocal prefix *zə-*, with the exception of the derivative of the verb *gəʔləgəʔun* ‘to show’ (see example (48b)). Object-oriented reciprocals can be divided into two types: spatial, which will be analyzed in 3.2.1, and non-spatial, analyzed in 3.2.2. The prefix *zə-* always occupies the IO slot.

3.2.1 *Spatial reciprocals*

Spatial object-oriented reciprocal constructions are derived from verbs with locative prefixes expressing localization and direction. These prefixes add to the valency structure an indirect object denoting the reference point. Like other arguments, these indirect objects may enter into reciprocal relations with direct objects denoting referents of the same semantic class. The main meanings of derived spatial reciprocals are those of joining the referents to each other and separating them from each other. Spatial reciprocals are very productive in Adyghe, they are often used in speech and many of them are lexicalized.

As mentioned, the prefix *zə-* in object-oriented reciprocals occupies the indirect object slot: in the case of spatial reciprocals it is the slot for the agreement marker of the object introduced by a locative prefix (e.g., in (40a) the prefix *te-* adds a new slot for an oblique object which is filled by the prefix *zə-* in (40b)).

3.2.1.1 *Reciprocals of joining.* Verbs like *teɡəʔpkIən* ‘to glue sth to sth’ denote joining of one referent to another. Their reciprocal derivatives denote joining of the referents together, i.e. to each other:

- (40) a. *te-gəʔ-pkIən*
 LOC-CAUS-g glue
 ‘to paste X to Y’
 b. *txəʔəʔpIə-xə-r zə-te-gəʔ-pkIən*
 paper-PL-ABS REC-LOC-CAUS-g glue
 ‘to paste pieces of paper together.’

Such derivatives are also formed from the following verbs with locative preverbs:

- (41) *pə-dən* ‘to sew X to Y’ → *zə-pə-dən* ‘to sew X and Y to each other, together’
pə-gəʔpkIən ‘to paste X to Y’ → *zə-pə-gəʔpkIən* ‘to paste X and Y together’
pə-gəʔəucon ‘to hook X to Y’ → *zə-pə-gəʔəucon* ‘to hook X and Y together, connect’
pə-ʂIən ‘to tie X to Y’ → *zə-pə-ʂIən* ‘to tie X and Y together’
xə-gəʔəxʁan ‘to join X to Y’ → *zə-xə-gəʔəxʁan* ‘to join X and Y together’
xə-lulʁən ‘to chain X to Y’ → *zə-xə-lulʁən* ‘to chain X and Y together’
te-pləxʁan ‘to lay X on Y’ → *zə-te-pləxʁan* ‘to lay X on Y on one another.’

In some cases such reciprocals do not have a plural object: it may be singular if the referent is composed of parts that are joined together; cf.:

- (42) a. *te-gvə-pkIən*
 LOC-CAUS-glye
 ‘to paste (X to Y)’
 b. *pisəmə-r zə-te-gvə-pkIən*
 letter-ABS REC-LOC-CAUS-paste
 ‘To glue the letter up.’ (‘to paste one of its part to the other’)

3.2.1.2 *Reciprocals of separating.* Verbs of separating like *pikIəkIən* ‘to break X from Y’ form reciprocals that have the meaning of separating the objects (or parts of an object) from one another.

- (43) a. (*a-šv*) *kəutamə-r cəəgə-m Ø-Ø-p-i-kIəkIə-gv.*
 [s/he-OBL] branch-ABS tree-OBL 3SG.DO-3SG.IO-LOC-3SG.A-break-PAST
 ‘S/he broke a branch from the tree.’
 b. (*a-šv*) *kəutamə-r Ø-zə-p-i-kIəkIə-gv.*
 [s/he-OBL] branch-ABS 3SG.DO-REC-LOC-3SG.A-break-PAST
 ‘S/he broke the branch (into parts).’

Such derivatives are also formed from the following verbs:

- (44) *gə-xən* ‘to separate X from Y’ → *zə-gə-xən* ‘to separate X and Y from one another’
kəi-txən ‘to tear X from Y’ → *zə-kəi-txən* ‘to tear X and Y from each other’
kəə-gə-Iən ‘to break X from Y’ → *zə-kəə-gə-Iən* ‘to break X and Y from each other’
kəə-pə-tlətəkIən ‘to untie X from Y’ → *zə-kəə-pə-tlətəkIən* ‘to untie X and Y from each other’
kəə-te-gvətIəpIəkIən ‘to unpick seams’ → *zə-kəə-te-gvətIəpIəkIən* ‘to unpick seams from each other’
pə-xən ‘to separate X from Y’ → *zə-pə-xən* ‘to separate X and Y from each other.’

3.2.2 *Non-spatial object-oriented reciprocals*

Non-spatial object-oriented reciprocals are peripheral in Adyghe. The only non-derived three-place verb in Adyghe is *tən* ‘to give X to Y’. The reciprocal derivative *zə-tən* ‘to give X and Y to each other’ is pragmatically peculiar: we can hardly imagine a situation when the subject gives two animate objects to each other, though it is grammatically possible. Non-spatial object-oriented reciprocals can be derived from causative, benefactive and malefactive derivatives, and also from verbs with locative prefixes if they are used in non-locative meanings:

- (45) *gəə-ləəgvun* ‘to show X to Y’ → *zə-gəə-ləəgvun* ‘to show X and Y to each other.’

The reciprocal marker occupies the indirect object slot:

- (46) a. *sə čətəu-r xba-m Ø-e-z-gvə-ləvəvəu-gv.*
 I(OBL) cat-ABS dog-OBL 3SG.DO-3SG.IO-1SG.A-CAUS-see-PAST
 ‘I showed the cat to the dog.’
- b. (*sə*) (*švə*) *švə-zə-z-gvə-ləvəvəu-gv.*
 (I(OBL)) (you(ABS)) 2PL.DO-REC-1SG.A-CAUS-see-PAST
 ‘I showed you to each other.’

Reciprocals of these three-place transitive verbs are often ambiguous between object-oriented readings relating direct and indirect objects, and subject-oriented reciprocals which relate the subject and the indirect object. This polysemy cannot be resolved by the position of the affixes: as mentioned, in both cases the reciprocal affix occupies the oblique slot of the indirect object, as in (47):

- (47) a. *sə a-šv si-švuz Ø-e-z-gvə-ləvəvəu-gv.*
 I(OBL) s/he-OBL my-wife 3SG.DO-3SG.IO-1SG.A-SHOW-PAST
 ‘I showed him my wife.’
- b. *cləf-xə-m ja-švuz-xə-r zə-r-a-gvə-ləvəvəu-žvə.*
 person-PL-OBL their-wife-PL-ABS REC-r-3PL.A-SHOW-ITER
 ‘People show their wives to each other.’
- i. ‘Each person shows his wife to other people.’ (‘indirect’ reciprocal)
 ii. ‘Each person shows his wife to the wives of other people.’ (object-oriented).

Semantic restrictions on the arguments of reciprocal verbs often do not help to distinguish two meanings: participants of the reciprocal relation (a) must be plural and (b) in most cases are animate, but some examples, like (47b), are ambiguous between two readings: both the subject and the direct object are plural and animate.

The causative derived from the transitive verb *gvə-ləvəvəu* ‘to show’ differs from other transitive verbs in that it can combine either with *zərə-* or with *zə-*:

- (48) a. *sə čətəu-r xba-m Ø-e-z-gvə-ləvəvəu-gv.*
 I(OBL) cat-ABS dog-OBL 3SG.DO-3SG.IO-1SG.A-CAUS-see-PAST
 ‘I showed the cat to the dog.’
- b. *sə čətəu-m-rə xba-m-rə zərə-z-gvə-ləvəvəu-gvə-x.*
 I(OBL) cat-OBL-and dog-OBL-and REC-1SG.A-CAUS-see-PAST-PL.DO
 ‘I showed the cat and the dog to each other.’
- c. *sə švə švə-zə-z-gvə-ləvəvəu-gv.*
 I(OBL) you.PL.ABS 2PL.S-REC-1SG.A-CAUS-see-PAST
 ‘I showed you to each other.’

Variation of reciprocal forms of *gvə-ləvəvəun* ‘to show’ may be presumably explained by the different sequence of reciprocalization and causativization, the following variants being possible:

(1) ‘A sees B’ > ‘A and B see each other’ > ‘X makes A and B see each other’ (‘X shows A and B to each other’, causative of a reciprocal base verb).

(2) ‘A sees B’ > ‘X shows A to B’ > ‘X shows A and B to each other’ (object-oriented reciprocal of a causative base verb).

In the first case the subject and the direct object of the underlying verb are reciprocalized, therefore the marker *zərə-* must be chosen. The second variant requires the prefix

zə-, because reciprocalization applies after causativization and binds the indirect object and the direct object.

3.2.3 Meanings of combinations of the prefix *zə-* with locative markers

The marker *zə-* forms complex affixes with a number of locative preverbs, including *pə-* ‘at the end of X’ and *i-* ‘in X’. These complex affixes may acquire idiomatic locative meanings, of which I have illustrations for the translative and reciprocal meanings.

In these combinations *zə-* seems to lose its reciprocal meaning and designate only a special type of spatial characteristics of the situation.

3.2.3.1 Translative meaning (motion across an object). The complex prefix *zəpə-* has the translative meaning ‘through, across X’. When used on its own, the prefix *pə-* marks location at the end of the object (Rogava & Kerasheva 1966:276), cf. *pə-ləən* ‘to hang on X’, lit. ‘to lie at X’s end.’

- (49) a. *a-šb a-r a-šb Ø-Ø-r-i-fə-gv̄.*
 s/he-OBL s/he-ABS s/he-OBL 3SG.DO-3SG.IO-LOC-3SG.A-lead-PAST
 ‘S/he drove her/him out away from it.’
- b. *a-šb čəmə-r psə-m Ø-zəpə-r-i-fə-gv̄.*
 s/he-OBL COW-ABS river-OBL 3SG.DO-zəpə-LOC-3SG.A-lead-PAST
 ‘S/he drove the cow across the river.’

This type of meaning occurs only when *zəpə-* is used on verbs with the locative prefix *r/i-* ‘in’.

3.2.3.2 Reciprocal meaning (motion in different/opposite directions). In combination with the locative prefix *r/i-* ‘in’ the reciprocal prefix *zə-* can acquire the meaning ‘in different directions’, though I have only the following example borrowed from Rogava & Kerasheva (1966:276) for this meaning:

- (50) a. *a-šb a-r Ø-e-šbə.*
 s/he-OBL s/he-ABS 3SG.DO-3SG.A-lead
 ‘S/he leads him/her.’
- b. *a-šb ku-klə xəəlʔa-bə Ø-zə-r-i-šbə-gv̄.*
 s/he-OBL cart-INST load-many 3SG.DO-REC-LOC-3SG.A-lead-PAST
 ‘S/he transported many loads by cart (in different directions).’

4. Comitatives and assistives with the prefix *də-*

The comitative meaning ‘with’ is marked with the prefix *də-/də-*. It precedes the agreement marker of the agent and the inherent IO marker. It adds an indirect object to the syntactic structure, e.g. *a-šb* in (51b) and *ramə-m* in (51c). The agreement marker of this indirect object occupies the slot preceding the comitative marker.

- (51) a. *sə o surət Ø-kʷə-o-s-tə-gʷ.*
 I(OBL) you(OBL) picture(ABS) 3SG.DO-DIR-2SG.IO-1SG.A-give-PAST
 ‘I gave you a picture.’
- b. *sə o a-šb surət-er*
 I(OBL) you(OBL) s/he-OBL picture-ABS
Ø-kʷə-Ø-də-o-s-tə-gʷ.
 3SG.DO-DIR-3SG.IO-COM-2SG.IO-1SG.A-give-PAST
 ‘I and he gave you a picture’, lit. ‘I with him gave you a picture.’
- c. *sə o surət ramə-m*
 I(OBL) you(OBL) picture frame-OBL
Ø-kʷə-Ø-də-o-s-tə-gʷ.
 3SG.DO-DIR-3SG.IO-COM-2SG.IO-1SG.A-give-PAST
 ‘I gave you a picture with the frame.’

Comitatives, like reciprocals, can be subject-oriented or object-oriented. In subject-oriented comitatives, like (51b) a secondary agent (object) is added, while in object-oriented constructions, like (51c), a secondary patient (object) is introduced. The subject-oriented (51b) and object-oriented (51c) comitative verb forms are identical but the constructions are not: subject-oriented (51b) contains an animate IO *a-šb* ‘s/he’ participating in the situation as agent and lacks the IO *ramə-m*, while object-oriented (51c) lacks the animate IO *a-šb* and contains the IO *ramə-m*, which is a patient.

In (51b) the first agent *sə* ‘I’ is more salient than *a-šb* ‘s/he’. This distinguishes comitatives from sociatives – the latter presuppose that the participants of the sociative relation are equally salient. Likewise, in (51c) the first, inherent patient *surət* ‘picture’ is more salient than the second one, added by the derivation (*ramə* ‘frame’).

The prefix *də-* may also have an assistive meaning, and a construction with a *də-* form may have both readings:

- (52) a. *klalə-m usə zə-r-i-gʷə-šIə.*
 boy-OBL poem.ABS REFL-AUG-3SG.A-CAUS-know
 ‘The child learns a poem’ (lit. ‘makes himself know a poem’).
- b. *ja-nə klalə-m usə Ø-də-zə-r-i-gʷə-šIə.*
 their-mother boy-OBL poem.ABS 3SG.DO-COM-REC-AUG-3SG.A-CAUS-know
 i. ‘Their mother learns the poem with her child.’ (comitative)
 ii. ‘Their mother helps her child to learn the poem.’ (assistive)

The assistive reading seems to be especially clear in the imperative:

- (53) *Ø-a-də-šIə ba šʷo unə.*
 3SG.DO-3PL.IO-COM-do let you(OBL) house
 i. ‘Build the house with them!’ (comitative)
 ii. ‘Help them to build the house!’ (assistive)

In the registered examples the assistive meaning is concomitant with the comitative and it may be seen as a possible pragmatic interpretation of the comitative situation: joint action is often performed in order to help someone. The existence of the assistive meaning requires additional investigation.

5. Sociatives

As mentioned in 1.3, the sociative meaning is marked with the combinations of prefixes *zə-də-* and *zə-rə-gəə-*.

5.1 With the reciprocal prefix *zə-* on comitative verbs with the prefix *də-*

The most common way of marking the sociative meaning is the reciprocal prefix *zə-* on derived comitative verbs with the prefix *də-* (cf. (54a, b)). The prefix *zə-* never marks the sociative meaning on verbs without *də-*. Therefore, the combination *zə-də-* may be regarded as a complex sociative prefix; henceforth it is glossed as *SOC* (cf. also Rogava & Kerasheva 1966:277–9).

- (54) a. *sə o čəmə-r Ø-o-də-sə-uklə-gə* (comitative)
 I(OBL) you(OBL) COW-ABS 3SG.DO-2SG.IO-COM-1PL.A-kill-PAST
 ‘I killed the cow with you.’
- b. *tə čəmə-r Ø-zədə-tə-uklə-gə* (sociative)
 we(OBL) COW-ABS 3SG.DO-SOC-1PL.A-kill-PAST
 ‘We killed the cow together.’

The reciprocal prefix *zə-* changes the degree of salience of the two participants: both of them become equally salient. The prefix changes a discontinuous comitative construction into a simple sociative.

If the subject is non-agentive, especially inanimate, sociatives in *zədə-*, like (55c), seem to be more acceptable than comitatives in *də-*, like (55b):

- (55) a. *ručka-r Ø-xə-gəə.*
 pen-ABS 3SG.S-drop-PAST
 ‘The pen dropped.’
- b. *?ručka-m karandašə-r e-gəus-əw Ø-Ø-də-fəxə-gə.*
 pen-OBL pencil-ABS DYN-together-CONV 3SG.S-3SG.IO-COM-drop-PAST
 ‘The pencil dropped with the pen.’
- c. *ručka-m-rə karandašə-m-rə zədə-xə-gəə-x.*
 pen-OBL-and pencil-OBL-and SOC-drop-PAST-PL.S
 ‘The pen and the pencil dropped (together).’

5.2 With the reciprocal prefix *zə-rə-* on causative verbs with the prefix *gəə-*

When the reciprocal prefix *zə-rə-* is used on derived causatives with the prefix *gəə-*, some causatives of intransitive emotional verbs may lose their causative meaning and denote that the participants experience an emotional state *together*; compare the derivational chain *šbtən* ‘to fear’ → *gəə-šbtən* ‘to frighten, cause to fear’ → *zə-rə-gəə-šbtən* ‘to frighten each other’. Alongside the reciprocal meaning which compositionally follows from the reciprocal and causative meanings of the two prefixes, the latter form may also have the sociative meaning ‘to fear together’. This combination of prefixes may be regarded as one complex marker of sociativity, by analogy with the combination *zə-də-* in 5.1, though with

a very narrow lexical base. Here is a list of sociative derivatives which are semantically related to the base intransitives rather than to the middle causatives:

- (56) *šbtən* ‘to fear’ → *zərə-gwə-šbtən* ‘to fear together’
šbənən ‘to fear’ → *zərə-gwə-šbənən* ‘to fear together’
gubžən ‘to be angry’ → *zərə-gwə-gubžən* ‘to be angry together’
gušlon ‘to be glad’ → *zərə-gwə-gušlon* ‘to be glad together’
guməklən ‘to be worried’ → *zərə-gwə-guməklən* ‘to worry together.’

In (57b) the reciprocal verb expresses sociativity (‘to fear together’), not reciprocity. Perhaps the word *zəklə* ‘all’ also contributes to this interpretation. Note that its translation alone explicates the sociative meaning in English:

- (57) a. *kIalə-m jə-gvunəgvu-r Ø-ə-gwə-šbta-gv.*
 boy-OBL his-neighbour-ABS 3SG.DO-3SG.A-CAUS-fear-PAST
 ‘The boy frightened his neighbour.’
 b. *cləf-xə-r zəklə zərəgwə-šbta-gwə-x.*
 person-PL-ABS all SOC-fear-PAST-PL.S
 ‘All people were frightened.’

See also Rogava & Kerasheva (1966: 272–5).

6. The iterative suffix *-žbə-* (often co-occurrent with reciprocal and reflexive prefixes)

The iterative suffix *-žbə-* seems to be worth noting here, because most reciprocal forms, both morphological and pronominal, may optionally contain the iterative suffix *-žbə-*.

- (58) a. *a-r a-šv Ø-Ø-dəIəpələ.*
s/he-ABS s/he-OBL 3SG.S-3SG.IO-help
 ‘He helps him.’
 b. *a-xə-r zə-dəIəpələ-žbə-x.*
s/he-PL-ABS REC-help-ITER-PL.S
 ‘They help each other.’
 c. *a-xə-r zə-dəIəpələ-x.*
s/he-PL-ABS REC-help-PL.S
 ‘They help each other.’

The difference in meaning between (58b) and (58c) is not clear. The iterative meaning is apparently close to reciprocity, because reciprocity presupposes multiple actions of several participants.

The non-reciprocal form with the iterative suffix *ləəgvu-žbə-n* of the verb *ləəgvun* ‘to see’ means ‘to see again’, cf. also:

- (59) *qutən* ‘to break’ – *qutə-žbə-n* ‘to break again’
zələtxəən ‘to tear’ – *zələtxəə-žbə-n* ‘to tear again.’

The suffix *-žbə* may also express the meaning of reverse direction of motion:

- (60) *bəbən* ‘to fly’ – *bəbə-žbə-n* ‘to fly back’
kIon ‘to go’ – *kIo-žbə-n* ‘to go back.’
 Compare also Rogava & Kerasheva (1966: 310–14).

7. The prefix *zə-* with relative nouns

In Adyghe, the use of the prefix *zə-* is not restricted to verbs: it can also combine with relational nouns. They are often kinship terms like *šə* ‘brother’, *šəpxəu* ‘sister’, *Iaxəəl* ‘relative’, and also reciprocal nouns like *gəvunəgəu* ‘neighbour’, *nəbdžəgə* ‘friend’, *nəIose* ‘acquaintance’, *clələgəu* ‘person from the same village’, *IofšIəgəu* ‘colleague’, *džəgəogəu* ‘enemy’, *pij* ‘enemy’. These nouns are in fact lexical reciprocals. Therefore, when used in the singular, they take an attribute expressed by a possessive noun phrase in the oblique case or a possessive prefix (see Table 2 above), as in (61a) and denoting the second participant of the reciprocal relation. When used with the reciprocal prefix they naturally occur in the plural.

- (61) a. *sə si-pij*
 I(OBL) my-enemy
 ‘my enemy’
 b. *zə-pij-xə-r*
 REC-ENEMY-PL-ABS
 ‘enemies’ (see also (38b)).

Here, the reciprocal prefix *zə-* denotes reciprocity of the relation ‘to be enemies’: the noun in (61b) literally means ‘enemies of each other’. Therefore, *zə-* is not here a marker of plurality proper.

Compare also Rogava & Kerasheva (1966: 276–7).

8. Prefixes *zə-* and *zərə-* on participles in relative constructions

The markers *zə-* and *zərə-* are used to mark non-finite forms (participles). In this paper this use will not be analyzed in detail. The data in this section are borrowed from Rogava & Kerasheva (1966: 314–27).

In non-finite forms, the markers *zə-* and *zərə-* are used as markers of relativization denoting co-reference between the arguments and adjuncts of the main and the embedded clauses.

The affix *zə-* is used on participles to refer to oblique arguments of the base verbs. These participles are in fact nominalized. Thus, this affix cannot be used in (62a) and (62b), because in (62a) the participle refers to the absolutive argument (subject) of the base intransitive verb ‘to go/come’ and in (62b) it refers to the absolutive argument (direct object, patient) of the base transitive verb ‘to throw’. But in (63a) the participle refers to the oblique argument (subject, agent) of the base transitive verb – therefore, *zə-* must be used. It is also used in participles referring to time, reason and localization of the situation. The affix *zərə-* marks participles of mode (see 63e), instrument and participles referring

to a situation as a whole (see Lander & Gerasimov, in press). In (63a)–(63e) the reciprocal affixes are obligatory, and participles with the same meanings cannot be built without these affixes.

- (62) a. *kʊə-kʌua-gʊə-r*

'the going *mode*' ('the *mode* how he went').

9. Pronominal reciprocals with the pronouns *zəm zər* 'each other' and *zəm adrər* 'one another'

As mentioned in Section 1, there are two reciprocal pronouns in Adyghe: the more productive one is *zə-m zə-r* 'one another', 'each other', lit. 'one-OBL one-ABS', and *zə-m adrər* 'one-OBL another-ABS'. Only the first pronoun will be discussed, because the second is not productive enough and the data at my disposal is insufficient.

9.1 Degree of the independence of the components and grammaticalization of the pronoun *zəm zər*

The pronoun *zəm zər* can be added both to reciprocal (64) and non-reciprocal (65) verbs, be it transitive or two-place intransitive verbs. I do not have any examples of object-oriented reciprocals marked by the prefix *zə-* and the pronoun *zəm zər* simultaneously – however, the pronoun alone can be used to mark object-oriented reciprocity (cf. (79b)). Constructions like (65) without a morphological reciprocal marker show that the pronoun is close to a grammaticalized marker and can be used as a sole marker of reciprocity in a sentence.

As a rule, in “canonical” reciprocals of transitive verbs the variant *zəm zər* is used and in reciprocals of two-place intransitive verbs the reverse order *zər zəm* with the first absolutive and the second oblique component is preferred. Therefore, the case marking of the first component repeats the case of the subject of the initial verb: cf. (64) derived from a transitive base verb *ləɖgun* ‘to see’ – the base verb has the oblique subject, though the derived reciprocal verb in (65) has the absolutive one. The oblique case of the first component *zəm* repeats the case of the subject of the base verb. In (65), derived from an intransitive base verb with absolutive subject, the first absolutive component *zər* also repeats the case of the subject of the base verb.

With a transitive base verb:

- (64) *tə zə-m zə-r tə-zərə-ləɖgəu-žvə.*
 we(ABS) one-OBL one-ABS 1PL.S-REC-see-ITER
 ‘We see each other.’

With a two-place intransitive base verb:

- (65) *a-xə-r zə-r zə-m gu-Ø-rə-Io-žvə-x.*
 s/he-PL-ABS one-ABS one-OBL heart-3SG.IO-LOC-be-ITER-3PL.S
 ‘They trust each other.’

The reciprocal pronoun is also used to denote reciprocity between the oblique subject and oblique indirect object of three-place transitives like *tən* ‘to give sth to sb’. In this case instead of the expected variant *zəm* (OBL) *zəm* (OBL) reflecting the case marking of the arguments native speakers usually choose the variant *zəm* (OBL) *zər* (ABS):

- (66) a. *sə o švuxvəftən-xə-r o-sə-tə-žvə-x.*
 I(OBL) you(OBL) gift-PL-ABS 2SG.IO-1SG.A-give-ITER-PL.DO
 ‘I give gifts to you’
 b. *tə zə-m zə-r švuxvəftən-xə-r e-tə-tə-žvə-x.*
 we(OBL) one-OBL one-ABS gift-PL-ABS 3SG.IO-1PL.A-give-ITER-PL.DO
 ‘We give gifts to each other.’

Therefore the case form *zəm zər* is in a certain sense grammaticalized – it is a default variant and can be used with all verb classes.

Reciprocal pronouns can occur in all types of subject-oriented reciprocal constructions: “canonical” from transitive and intransitive verbs, “indirect” from three-place transitive verbs and “possessive”.

The predicate with or without a reciprocal affix of a construction with a reciprocal pronoun may contain different agreement markers, because the pronoun may control one agreement slot (in which case this slot is filled with the 3SG marker, as in (66b)), or two agreement slots, as in (67b), where the oblique component *zəm* controls the oblique prefix *ə-* and the absolutive component *zər* is cross-referenced by the absolutive zero prefix:

- (67) a. *sə a-r Ø-sə-uIa-gv.*
 I(OBL) s/he-ABS 3SG.DO-1SG.A-wound-PAST
 ‘I wounded him/her.’

- b. *tə zə-m zə-r Ø-ə-ula-žbə-gəə-(x).*
 we(OBL) one-OBL one-ABS 3SG.DO-3SG.A-WOUND-ITER-PAST-(PL.S)
 ‘We wounded each other.’
- c. *tə zə-m zə-r te-ula-žbə-x.*
 we(OBL) one-OBL one-ABS 1PL.A-WOUND-ITER-PL.S
 ‘We wounded each other.’

Finally, it may control no slot at all (see (64)). The second and the third variants are the most productive.

Therefore, each of two valency slots can be controlled either by the reciprocal pronoun or by an argument noun phrase. If the pronoun controls a particular slot, this slot is occupied by the 3SG agreement marker – therefore, the pronoun and each of its components are regarded as 3SG pronouns. The agreement markers show which variant of agreement is chosen in a particular construction: if the pronoun controls a slot, it is filled by a 3SG agreement marker; otherwise, it can be filled by a reciprocal prefix *zə-rə-* or *zə-* or by a plural agreement affix.

We can see that the pronoun is in the intermediate stage of grammaticalization. Since in one of the productive variants each of the components of the pronoun controls two slots (68b) and is thus to a certain degree autonomous, this seems to show that the pronoun is not yet a simple but a complex marker consisting of two components. Variants like (64), where the pronoun does not control any agreement slot, show that the pronoun can be not an argument noun phrase, but a grammatical marker which only expresses reciprocity, but does not control agreement markers. As mentioned, variants of verb forms in which the pronoun controls only one slot also occur.

The pronoun *zəm zər* admits insertion of a possessive noun phrase between its components. When a noun phrase intervenes between them, the type of agreement changes. When the pronoun is not discontinuous it behaves like one unit and controls only the oblique indirect object agreement slot as in (67b). Insertion of the possessee makes the variant *kləpləgə* in (68c) preferable for informants. In (68c) the pronoun is discontinuous and controls both agreement slots (both the subject absolute and the oblique indirect object slots are occupied by zero prefixes, because they are controlled by the 3SG components *zəm* and *zər*, which are cross-referenced by zero prefixes of the subject and the indirect object of the preverb *klə-*). The same variant of agreement is much worse when the pronoun is discontinuous (cf. (68d)).

- (68) a. *tə šəo šəu-nə tə-Ø-klə-pləa-gə.*
 we(ABS) you(PL.OBL) your-eye 1PL.S-3SG.IO-LOC-look-PAST
 ‘We looked into your eyes.’
- b. *tə zə-m zə-r ə-nə tə-Ø-klə-pləa-gə.*
 we(ABS) one-OBL one-ABS his-eye 1PL.S-3SG.IO-LOC-look-PAST
 ‘We looked in each other’s eyes.’ (“canonical” reciprocal of two-place vi).

Note that the 3SG possessive marker *ə-* in the word *ə-nə* in (68b, c, d) shows that it agrees with the reciprocal pronoun *zəm zər*. The pronoun is regarded in the language as a 3SG noun phrase, while in (68a) it agrees with the 2PL constituent *šəo*.

- c. *tə zə-m ə-nə zə-r Ø-Ø-kIə-plʋa-gv.*
 we(ABS) one-OBL his-eye one-ABS 3SG.S-3SG.IO-LOC-look-PAST
 ‘We looked in each other’s eyes.’
- d. *tə zə-m zə-r ə-nə ??Ø-Ø-kIə-plʋa-gv.*
 we(ABS) one-OBL one-ABS his-eye 3SG.S-3SG.IO-LOC-look-PAST
 ‘We looked in each other’s eyes.’

In fact, most frequently the pronoun is not discontinuous, which shows that *zəm zər* is conceived as one syntactic unit rather than as two independent items.

9.2 Subject-oriented reciprocals

As mentioned, in subject-oriented reciprocal constructions with the reciprocal pronoun *zəm zər* both non-reciprocal (9.2.1) and reciprocal (9.2.2) verb forms can be used.

9.2.1 *Constructions with reciprocal pronouns only*

Constructions, where reciprocity is marked with the pronouns only, can be of all diathesis types of subject-oriented reciprocals, which can also be designated by *zə-*, *zərə-* and *zərə-gvə-* (see 3.1).

9.2.1.1 “Canonical” reciprocal constructions

9.2.1.1.1 *Derived from two-place transitives.* For an example see (67b) above, the 3SG marker *ə-* in the oblique subject slot is controlled by the 3SG component *zəm*. In (67c), on the other hand, the 1PL prefix *tə-* is controlled by the oblique subject *tə*. The absolutive slot is in both cases controlled by the absolutive object component of the reciprocal pronoun *zər*. In (67b) the pronoun is less grammaticalized than in (67c) and behaves like two lexical items.

9.2.1.1.2 *Derived from two-place intransitives.* In (68b) the IO slot is occupied by a zero prefix and controlled by the oblique component of the pronoun. The reciprocal pronoun is highly grammaticalized and controls only one agreement slot, whereas the other one is controlled by the pronoun *tə* ‘we’.

9.2.1.1.3 *Reciprocals of one-place verbs of motion.* Monovalent verbs cannot form morphological reciprocals. For instance, the verb *kIon* ‘to go’ has only one argument – the subject which is coded in the predicate. If the endpoint is denoted metonymically by a personal pronoun or an animate noun, as in (69a), the verb may undergo reciprocalization which can be expressed by means of *zər zəm*, as in (69b):

- (69) a. *sə a-šb ədi sə-kIo.*
 I(ABS) s/he-OBL to 1SG.S-go
 ‘I go to him.’
- b. *cləf-xə-r zə-r zə-m ədi ma-kIo-x.*
 PERSON-PL-ABS one-ABS one-OBL to DYN-go-PL.S
 ‘People go to one another’ (= ‘visit one another’).

In some cases, there is an alternative variant with verbs like *kIon* ‘to go’: the initial verb increases its valency by taking the benefactive affix *fa-/fə-* and thus becomes two-place intransitive. The benefactive derivative (69c) acquires the ability to take on the prefix *zə-* and form a morphological reciprocal, as in (69d), though a pronominal reciprocal, as in (69e), is also possible:

- c. *sə a-šb sə-Ø-fa-kIo.*
I(ABS) s/he-OBL 1SG.S-3SG.IO-BEN-go
‘I go to him/her (visit him/her).’
- d. *zəkIə kləf-xə-r xəakle zə-fə-kIo-x.*
all person-PL-ABS guest REC-BEN-go-PL.S
‘All people visit each other.’
- e. *a-xə-r zə-r zə-m Ø-fə-kIo-žbə-x.*
s/he-PL-ABS one-ABS one-OBL 3SG.IO-BEN-go-ITER-PL.S
‘They go to each other.’

9.2.1.2 “Indirect” reciprocal constructions. “Indirect” reciprocals derive from three-place transitive verbs. It is an interesting fact that in (70b) both oblique agreement slots are occupied by 3SG prefixes, and both the absolutive and the oblique component of the pronoun *zəm zər* control *oblique* slots (\emptyset - in the preverb object slot and *e-* in the agent slot) and the oblique case of the pronoun *tə* ‘we’ does not control any slot. The word *kəəbar-kIə-xə-r* ‘news’ is the direct object but the 3PL absolutive suffix *-x* does not occur on the verb, because it is not strictly obligatory in Adyghe. On the one hand, the pronoun controls two slots and thus behaves as two items. On the other hand, the pronoun does not change its form to *zəm zəm*, although it controls *two oblique slots* – in this sense it is grammaticalized and does not show all variants of combinations of case forms:

- (70) a. *sə o kəəbar-kIə-xə-r kəəp-fə-sə-Iotə.*
I(OBL) you(OBL) news-new-PL-ABS DIR-2SG.IO-BEN-1SG.A-tell
‘I tell you the news.’
- b. *tə kəəbar-kIə-xə-r zə-m zə-r kəə-Ø-f-e-Iotə-žbə.*
we(OBL) news-new-PL-ABS one-OBL one-ABS DIR-3SG.IO-BEN-3SG.A-tell-ITER
‘We tell the news to each other.’

9.2.1.3 “Possessive” reciprocal constructions. The reciprocal pronoun *zəm zər* can be used to mark “possessive” reciprocity. As mentioned in 3.1.3, this type of reciprocals can also be marked by the affixes *zərə-* and *zərgəbə-*. The morphological and the pronominal devices cannot be used in the same clause (see (71c)).

- (71) a. *a-šb kIalə-m ə-Ia Ø-ə-ula-gə.*
he-OBL boy-OBL his-hand 3SG.DO-3SG.A-wound-PAST
‘He wounded the boy’s hand.’
- b. *tə zə-m zə-r ə-Ia Ø-ə-ula-gə.*
we(OBL) one-OBL one-ABS his-hand 3SG.DO-3SG.A-wound-PAST
‘We wounded each other’s hands.’

- c. *tə zə-m zə-r ə-lə tə-zərə(ɡvə)-ulə-ɡv̄.
 we(OBL) one-OBL one-ABS his-hand 1PL.IO-REC-wound-PAST
 ‘We wounded each other’s hands.’

In (71b) the components of the reciprocal pronoun control the oblique and the absolutive slots on the predicate. Therefore, the pronoun here is not highly grammaticalized and occurs as a combination of two items.

9.2.1.4 Third person: Pronominal reciprocals with non-reciprocal verbs. If reciprocal relations hold between two third person participants, native speakers usually use either only *zə-* or *zərə-* (see (5b)) or only the reciprocal pronoun (see (72b) and (73b)), but not both a prefix and the pronoun *zəm zər*:

- (72) a. sə o u-s-švəɡupšə-ɡv̄.
 I(OBL) you(ABS) 2SG.DO-1SG.A-forget-PAST
 ‘I forgot you.’
 b. a-xə-r zə-r zə-m Ø-Ø-švəɡupšə-žvə-ɡv̄.
 s/he-PL-ABS one-ABS one-OBL 3SG.DO-3SG.A-forget-ITER-PAST
 ‘They forgot each other.’ (“canonical” reciprocal of an inverse vi)
- (73) a. sə a-šv sə-Ø-dəIəpələ.
 I(ABS) s/he-OBL 1SG.S-3SG.IO-help
 ‘I help him/her.’
 b. a-xə-m/a-xə-r zə-r zə-m Ø-Ø-dəIəpələ-x.
 s/he-PL-OBL / s/he-PL-ABS one-ABS one-OBL 3SG.S-3SG.IO-help-PL.s
 ‘They help each other.’ (“canonical” reciprocal of a non-inverse vi)

For a construction with a transitive base verb, see (15b).

If the participants are the 1st or 2nd persons the prefix *zə-* and the pronoun *zəm zər* may be used simultaneously, as in (74b) and (75b):

- (74) a. sə o u-s-švəɡupšə-ɡv̄. (= (72a))
 I(OBL) you(ABS) 2SG.DO-1SG.A-forget-PAST
 ‘I forgot you.’
 b. tə zə-r zə-m tə-zə-švəɡupšə-žvə-ɡv̄.
 we(ABS) one-ABS one-OBL 1PL.S-REC-forget-ITER-PAST
 ‘We forgot each other’ (“canonical” reciprocal of an inverse vi)
- (75) a. sə o sə-b-dəIəpələ.
 I(ABS) you-OBL 1SG.S-2SG.IO-help
 ‘I help you.’
 b. tə zə-r zə-m tə-zə-dəIəpələ.
 we(ABS) one-ABS one-OBL 1PL.S-REC-help
 ‘We help each other’ (“canonical” reciprocal of a non-inverse vi).

In the underlying construction (74a) the subject *sə* is in the oblique case, because it is the subject of an *inverse* verb and is coded by an oblique marker *s-* which follows the absolutive marker *u-*. In (75a) *sə* is in the absolutive case: it is cross-referenced by the absolutive marker *sə-* in the first slot of the verb form.

The 1PL marker in (74b) and (75b) *tə-* occupies the absolutive slot, whereas the oblique slot is occupied by the reciprocal prefix.

Perhaps the reason for the difference determined by the person of the participants is that semantically, the first and second persons are higher in the animacy hierarchy than the third person. If the subject is in the first or second person, it overranks the reciprocal pronoun (which is formally of the third person) and controls agreement, which is not the case when the subject is the third person.⁶

9.2.2 Constructions with the reciprocal pronoun and reciprocal verbs

Constructions where the pronoun *zəm zər* and reciprocal verbs with the prefixes *zə-* and *zərə-* occur simultaneously can be of all types, except “possessive” constructions.

9.2.2.1 “Canonical” reciprocal constructions

9.2.2.1.1 *Derived from two-place transitives.* Here is an example:

- (76) a. *sə a-r Ø-sə-ula-gv̆.*
 I(OBL) s/he-ABS 3SG.DO-1SG.A-WOUND-PAST
 ‘I wounded him.’
- b. *tə zə-m zə-r z-i-ula-žv̆ə-gv̆.*
 we(OBL) one-OBL one-ABS REC-3SG.A-WOUND-ITER-PAST
 ‘We wounded each other.’ (canonical reciprocal of a transitive verb).

Oblique agreement in (76b) is controlled by the component *zəm* of the reciprocal pronoun (the prefix *i-* is a variant of *ə-*). The absolutive slot in (76b) is occupied by the reciprocal prefix *z(ə)-*. I regard cases like (76b) where only one slot is controlled by the pronoun as a proof of grammaticalization of the pronoun, when it functions as a single unit.

9.2.2.1.2 *Derived from two-place intransitives.* An example:

- (77) a. *sə a-šb sə-Ø-šbə-gugv̆u.*
 I(ABS) s/he-OBL 1SG.S-3SG.IO-LOC-hope
 ‘I rely on him.’
- b. *a-xə-r zə-m zə-r zə-šbə-gugv̆u-x.*
 s/he-PL-ABS one-OBL one-ABS REC-LOC-hope-PL.S
 ‘They rely on each other.’

In the base construction (77a) the subject absolutive slot in the predicate is controlled by the absolutive subject phrase *sə* ‘I’ and the oblique one is controlled by the oblique form *ašb* ‘s/he’. In the reciprocal construction (77b), the absolutive slot is also controlled by the subject *axər* ‘they’ (if it were controlled by the pronoun *zəm zər*, which is 3SG, the plural marker *-x* would not occur) and the oblique one is occupied by *zə-*. The pronoun *zəm zər* does not control any slot (in (77b) no slot is filled by the 3SG agreement marker).

6. The difference between persons is illustrated by examples of canonical reciprocals, because other types of reciprocals show the same distinction less apparently.

9.2.2.2 “Indirect” reciprocal constructions. Compare:

- (78) a. *sə o kəəbar-klə-xə-r kəəp-fə-sə-Iotə-x.*
 I(OBL) you(OBL) news-new-PL-ABS DIR-2SG.IO-BEN-1SG.A-tell-PL.S
 ‘I tell you news.’
- b. *tə kəəbar-klə-xə-r zə-m zə-r kəə-zə-fə-tə-Iotə-žəə-x.*
 we(OBL) news-new-PL-ABS ONE-OBL ONE-ABS DIR-REC-BEN-1PL.A-tell-ITER-PL.DO
 ‘We tell news to each other.’

In (78a) the subject oblique slot is controlled by the subject *sə* and the IO oblique slot is controlled by the indirect object *o*. In (78b) the subject oblique slot is also controlled by the oblique subject *tə* and the oblique slot is occupied by the reciprocal prefix.

9.3 Object-oriented reciprocals

As I have mentioned above, in my data there are object-oriented reciprocals with the pronoun *zəm zər* only but not with both the pronoun and the reciprocal prefix; an example:

- (79) a. *sə klalə-m txəlv-ər Ø-e-z-gəvləgəv-u-gv.*
 I(OBL) boy-OBL book-ABS 3SG.DO-3SG.IO-1SG.A-show-PAST
 ‘I showed the book to the boy.’
- b. *sə ti-gəvunəgəv-u-xə-m zə-m zə-r*
 I(OBL) our-neighbour-PL-OBL one-OBL one-ABS
Ø-e-z-gəvə-ləgəv-u-gəvə-x.
 3SG.DO-3SG.IO-1SG.A-show-PAST-PL.DO
 ‘I showed our neighbours to each other.’

In (79b) the pronoun occurs as one grammaticalized unit and controls only one slot – the IO slot. The absolutive slot cannot be controlled by the oblique noun phrase *tigəvunəgəvuxəm*, because the controller must also be in the absolutive case.

9.4 Differences between constructions with the reciprocal pronoun only and constructions with reciprocal prefixed predicates and the pronoun

From what was said above we can see that constructions where the reciprocal pronoun and the morphological marker *zə-* or *zərə-* co-occur differ from those with the pronoun alone. First, constructions with “double marking” of reciprocity tend to bind a core participant (the subject or the direct object) with a participant of lower syntactic status (the indirect object or an adjunct): they are more frequent in “canonical” reciprocal constructions derived from two-place intransitive verbs (77b) and in “indirect” reciprocal constructions (78b) than in “canonical” reciprocal constructions from transitive verbs (see (12b) and (68b)). Second, constructions with double marking tend to designate reciprocity between the second or first person participants (cf. (74b)).

9.5 Expression of the subject or the object in constructions with reciprocal pronouns

In Adyghe, contrary to constructions of the type *They hate each other* where the antecedent of the reciprocal pronoun is unambiguously the subject and the reciprocal pronoun is usually regarded as an object, the situation is more complicated. The antecedent of the reciprocal pronoun may be either the absolutive subject or an oblique object, cf. (73b) where either the subject (*axər* (ABS) ‘they’) or the object (*axəm* (OBL) ‘them’) can be used in the initial position. Defining the syntactic role of the pronoun itself is problematic: if the pronoun does not control any agreement slot (as in (78b)), we do not have any test to determine whether the pronoun is the subject or an indirect object, or one of its components is the subject and the other one the indirect object. Case marking of the components, as I have shown in the case of “indirect” reciprocals, does not always let us to define their syntactic role.

We can see that, on the one hand, Adyghe reciprocals of all types generally tend to have an absolutive antecedent of the reciprocal pronoun. Constructions like the variant of (73b) with *axər* better agree with this tendency. All the types of reciprocal constructions more frequently contain an absolutive noun phrase than an oblique one, whatever the syntactic role of the absolutive noun phrase in the sentence.

On the other hand, the subject noun phrase is more often the antecedent of the pronoun *zəm zər* than the object one. Therefore, the pronoun tends to be subject-oriented. Sometimes this factor (subject orientation) contradicts the first one (absolutive orientation), because transitive verbs in Adyghe have an absolutive argument which is not the subject; therefore, in reciprocals of transitive verbs theoretically either the *oblique subject* or the *absolutive direct object* must be expressed.

The second factor is stronger than the first one: in reciprocal constructions derived from verbs which have oblique subjects in the base structure (i.e. inverse and especially transitive verbs) the reciprocal pronoun is usually controlled by the *oblique subject* and not *absolutive object*; cf. a “canonical” reciprocal of a two-place inverse intransitive verb which has an oblique subject: the oblique subject *axəm* and not the absolutive object *axər* tends to be used.

- (80) a. *sə a-r Ø-zəxə-sə-xə.*
 I(OBL) s/he-ABS 3SG.DO-LOC-3SG.A-take
 ‘I hear him.’
- b. *a-xə-m^l a-xə-r zə-r zə-m zəx-e-xə.*
 s/he-PL-OBL / s/he-PL-ABS one-ABS one-OBL LOC-3SG.A-take
 ‘They hear each other.’

In reciprocal constructions derived from some intransitive verbs, especially from comitative verbs like the one in (73a), the participant expression may be either the subject or an object (see (73b)). Generally, the choice of the subject case form *axər* or the object case form *axəm* does not influence the choice of the variant *zər zəm* or *zəm zər* of the reciprocal pronoun: the choice is determined by the valency class of the base verb, viz. with transitive bases *zəm zər* is preferable, and with intransitive bases *zər zəm*.

9.6 Difference between *zəm zər* and *zəm adrər*

The pronoun *zəm adrər* is very similar to *zəm zər* semantically. However, their syntactic properties are not absolutely identical. *Zəm zər* is more productive than *zəm adrər*. The latter seems to behave as two separate free morphemes. This results in two differences between *zəm zər* and *zəm adrər*.

(1) Though both pronouns may combine with several agreement variants of the predicate, the use of the plural suffix in constructions with *zəm zər* and *zəm adrər* tends to differ: it is usually, though optionally, present in constructions with *zəm zər* but not with *zəm adrər*. This suffix in (81) is not controlled by the absolutive component of the reciprocal pronoun, because the pronoun can control only 3SG markers:

- (81) *a-xə-m zə-m zə-r* (Ø)-ə-*ulə-žbə-gəə-(x)*.
s/he-PL-OBL one-OBL one-ABS 3SG.DO-3SG.A-WOUND-ITER-PAST-PL.DO
'They wounded each other' ("canonical" reciprocal of a two-place vt)
- (82) *a-xə-m zə-m adrə-r* (Ø)-ə-*ulə-žbə-gəə-(²x)*.
s/he-PL-OBL one-OBL other-ABS 3SG.DO-3SG.A-WOUND-ITER-PAST-PL.DO
'They wounded each other.'

The absolutive component of *zəm adrər* more readily controls 3SG absolutive agreement than the absolutive component of *zəm zər*, which shows that the components of the former are more independent than of the latter.

(2) The pronoun *zəm adrər*, in contrast to *zəm zər*, has the third morphological variant *zəm adrəm* with two oblique components, though it is peripheral in comparison with the other variants. This variant is possible only when the reciprocal relations connect two arguments which were oblique in the underlying structure:

- (83) a. *sə a-šb ə-la* Ø-Ø-*fə-sə-ula-gə*.
I(OBL) s/he-OBL his-hand 3SG.DO-3SG.IO-BEN-1SG.A-WOUND-PAST
'I wounded his hand.'
- b. *tə zə-m adrə-m / *zə-m zə-m ə-la-xə-r*
we(OBL) one-OBL other-OBL one-OBL one-OBL his-hand-PL-ABS
zə-fə-tə-ule-žbə-gəə-x.
REC-BEN-1PL.A-WOUND-ITER-PAST-PL.DO
'We wounded each other's hands.' ("possessive"/"indirect" reciprocal of vt).

If *zəm zər* were used in (83), it would have the sequence *zəm zər* because this pronoun does not have a variant with two components in the oblique form.

Acknowledgments

I thank Nina Sumbatova, Yakov Testelets, Yury Lander and the editors of this monograph Vladimir P. Nedjalkov and Emma Geniušienė, without whose help this paper could not have been written.

I am glad to have an opportunity to thank the native speakers who participated in the fieldwork of the expeditions: Zarema Meretukova, Rimma Barova, Anna Xamerzokova and many others (about 20 informants).

1. Introduction

1.1 West Greenlandic

West Greenlandic (henceforth WG) is a member of the Inuit branch of the Eskimo language family that stretches from Bering Strait to eastern Greenland. It is spoken by nearly all west coast Greenlanders (around 41,000 – a further 3,500 Greenlanders speak East Greenlandic and around 800 speak Polar Eskimo, very divergent dialects), and thus represents the Eskimo language spoken by the greatest number of speakers and by the highest percentage of speakers anywhere. Itself it falls into several sub-dialects of which the written language is based on the central sub-dialect of the capital Nuuk (previously Godthåb), as reflected also in the present study. Although over 8,000 Danes are also resident at any time in the country (which has Home Rule status within the Danish Kingdom), the influence of Danish on WG has been rather restricted apart from relatively recent loanwords.

1.2 Reciprocal constructions in West Greenlandic

Reciprocal constructions in WG represent an exclusively intransitive diathesis (see Section 7). They are expressed either by purely paradigmatic (inflectional) means – usually with support of a case-inflected reciprocal-reflexive pronoun – or by mixed inflectional-derivational means. The basic process is the replacement of transitive subject-object agree-

ment with plural intransitive (subject-only) agreement on the verb. The purely paradigmatic – perhaps more accurately termed pragmatic-syntactic – construction is used freely with transitive stems: there is a close parallel here with the basic reflexive construction and indeed considerable ambiguity with it, since the forms of the latter are identical when the subject is plural (in the following example the reflexive sense is excluded however by the semantics of the stem):

- (1) a. *nukappiaqqa-t niviarsiaqqa-t saap-pai.*
 boy-PL.REL girl-PL.ABS turn.to.face-3PL/3PL.IND
 ‘The boys turned to face the girls.’
 b. *nukappiaqqa-t immin-nut saap-put.*
 boy-PL.ABS self.PL-ALL turn.to.face-3PL.IND
 ‘The boys turned to face each other.’

Mixed inflectional-derivational constructions are much more limited and may be found with both transitive and intransitive stems. As in the purely paradigmatic case verbal agreement is always intransitive (plural subject). One derivational affix, *-ut(i)-*, originally a transitive applicative, has produced a considerable number of lexicalized reciprocals, however, and is usually given as an independent reciprocal suffix in standard dictionaries, this being the most common sense of the suffix when followed by intransitive plural inflections. Examples are given under 3.2.

2. Grammatical notes

The important features of the grammatical system of West Greenlandic that are relevant to understanding the workings of its reciprocal constructions are briefly sketched below.

2.1 General morphosyntactic characteristics

Like all Eskimo languages, WG is highly polysynthetic: individual words (apart from particles) must consist of a stem (verbal or nominal) plus a portmanteau inflection. On verbs the latter indicates mood, person and number of subject and – when transitive – object, and on nouns it indicates number, case and – where relevant – personal possessor). Between stem and inflection there can appear from zero to at least ten or so derivational affixes (“suffixes” or “infixes”) according to a general rule of cumulative scope from left to right. This is a recursive system with the possibility of several successive nominalizations and verbalizations in the same complex word-form, built up in layers, and of several switches of transitivity back and forth with successive affixes (see Fortescue 1984: 313ff.). Inflectional and derivational affixes are formally easy to distinguish in WG: the former morphemes are obligatory and occur (except for phrasal and clausal enclitics) word-finally, while the latter are optional and must be followed by an inflection (including \emptyset for the singular absolutive case on nominals). A “base” is defined as the combination of

a stem plus any number of successive derivational affixes standing before any “sentential” affix (see 2.6 below) and/or the true (paradigmatic) inflectional ending.

WG is a morphologically ergative language with a special “relative” (ergative) case marking for transitive subjects. Direct objects of morphologically transitive verbs are in the absolutive case, and semantically indefinite objects of morphologically intransitive/antipassivized verbs are in the instrumental case.

2.2 Parts of speech

The only parts of speech are verbs, nominals (including nouns, pronouns and participials) and uninflected particles, the latter principally in adverbial or conjunctive functions. There are no subordinating particles (verbal inflection covers these). Corresponding to the category “adjective” WG has stative/descriptive verbs – occurring in participial form when used attributively. Instrumental cases of such forms may have an adverbial function. WG does not have pre-/postpositions as such, only simple oblique cases of nominals and phrasal postpositional constructions (often headless) in adverbial function.

2.2.1 Verbs and their inflection

Inflected verbal bases represent minimal clauses since WG is a language with wide-spread zero-anaphora. With explicit NP arguments agreement is with the subject and, for transitives, also the object. No verb can be inflected for more than two actants even if semantically trivalent. They fall into four classes: intransitive-only, transitive-only, and two ambivalent classes. Of these, “agentive” verbs such as *niri-* ‘to eat/eat sth’ have the same actant as subject whatever the transitivity, the intransitive form acting like a zero-marked antipassive. “Non-agentive” verbs on the other hand, such as *matu-* ‘to close/be closed’ have different actants as subject in the two cases, the intransitive acting like a zero-marked passive of the transitive, as in (2) (and compare the anticausatives in 7.2.3).

- (2) a. *arna-p matu matu-aa.*
 woman-REL door close-3SG/3SG.IND
 ‘The woman closed the door.’
 b. *matu matu-vuq.*
 door close-3SG.IND
 ‘The door was closed.’

All verbs can be inflected in three superordinate moods (indicative, interrogative and imperative/optative) and four subordinate ones (causative, conditional, participial and contemporative – the latter also having coordinative function and generally indicating coreference with the subject of the main verb).

2.2.2 Nouns and their inflection

Nominal cases include absolutive and “relative”, the latter covering ergative (for transitive subjects) and genitive functions. Singular and plural number are distinguished. Nouns may further be inflected for possessor (any combination of case and possessor/possessum

number). The absolutive case is treated as the default in the example sentences in this chapter so it is not specifically indicated (it is marked by zero in the singular; the plural marker *-(i)t* may be either absolutive or relative). For similar reasons of simplification, the singular is treated as the default number marking in the glosses. The other noun cases are instrumental, locative, allative, ablative, vialis (perlative) and equalis.

Modifiers (whether nouns, quantifiers or participial forms of verbs) agree with head nouns in case and number.

2.2.3 Pronouns

1st and 2nd person pronouns are inflected for the same case categories as nouns except that there is no formal distinction between absolutive and relative. They are only used for special (e.g. contrastive) emphasis. Corresponding to 3rd person pronouns are an array of demonstrative stems that may be inflected for all cases (though with some idiosyncrasy of form).

Besides these, WG has a “4th” (= reflexive 3rd) person pronominal stem, *immi-*, plural *immiC-* (the “C” at the end of the stem indicates an indeterminate non-uvular consonant that undergoes assimilation). It is inflected like other pronouns for number and case, but lacks an absolutive form. It may further take possessor markings for 1st and 2nd person in the sense ‘myself, yourself’, etc. The plural allative case forms relevant for reciprocal constructions are:

1PL	<i>immi-tsin-nut</i>	‘to ourselves’
2PL	<i>immi-ssin-nut</i>	‘to yourselves’
4PL	<i>immin-nut</i>	‘to themselves.’

2.3 Word order

The basic sentential word order is fairly flexible SOXV, but NPs have an obligatory order of head plus modifier (the head may only be preceded by a possessor nominal).

2.4 Derivational affixes

There are between four and five hundred derivational affixes displaying varying degrees of productivity, and many of the fully productive ones perform functions which in less synthetic languages would be handled by the syntax. They may be verbal-deverbal (either extenders with lexically weighty meanings like ‘to try to’, ‘to want to’, ‘to ask to’, or modifiers for aspect, manner, degree and the like); verbal-denominal (with “incorporative” meanings like ‘to have’, ‘to be’, etc.); nominal-denominal (with meanings like ‘big’, ‘previous’, etc.); or nominal-deverbal (general participial-formants or with meanings like ‘result of V-ing’, ‘means of V-ing’, etc.). These apply successively to build up words of considerable complexity but with quite transparent scope relations.

2.5 Valency-changing affixes

There are various valency-affecting derivational affixes. Valency-increasing affixes include *-(v)vigi-* ‘to have as place/time/person of V-ing’ and the “double-transitive” affixes like *-tit-* ‘to let/cause to’ and *-qqu-* ‘to ask to’ that may be attached to either intransitive or transitive bases, and also the applicative and the comitative affixes treated separately under 2.9 and 11. Valency-decreasing affixes include the passive *-niqar-* and antipassive *-si-* or *-i-*.

2.6 Tense, aspect and modality

There is a group of completely general/productive “sentential” affixes which may appear after all recursiveness within a complex verb form ceases (i.e. just before the inflection) and these, although optional and not forming neat paradigmatic oppositions, correspond semantically more to inflectional than derivational categories in other languages, e.g. tense and epistemic modality, so there is a cline between more derivational-like and more inflectional-like derivational affixes (see Kristoffersen 1992 for further discussion). Paradigmatic reciprocals are of course a matter of true inflection, but mixed inflectional-derivational reciprocals involve affixes that always stand close to the stem (like other less productive affixes).

There is no (obligatory) distinction between past and present tense; in the example sentences simple indicative forms are generally glossed as referring to the past.

There are numerous aspectual/aspectoidal affixes in the language (at least fifty, none of them obligatory except for habitual *-sar-* in certain circumstances). Among them are several iteratives/frequentatives, including *-qattaar-*, *-sar-* (an iterative as well as a habitual) and more lexicalized *-rar*. There are also a number of distributive affixes with contiguous meanings that can be added with varying degrees of productivity to either intransitive or transitive bases (‘more than one subject together/ more than one object at a time’). Note in particular *-urar-* and *-urtur-*, which are usually found on transitive stems and indicate action on more than one object, as in *nui-urar-pai* ‘she strings them (e.g. beads onto a string)’. Such affixes are compatible with reciprocal derivations (though this is not productive) – thus *nui-uru-up-put* ‘they are braided or strung together’ under 7.2.3.

2.7 Morphophonology

Both derivational and inflectional affixes fall into two major morphophonological types: those that truncate a preceding consonant and those whose initial consonant assimilates regressively to it (vowel-initial affixes are generally truncating and assimilate to the preceding vowel progressively). Some inflectional endings are only “selectively” truncating and a small sub-class of derivational affixes is of a more radically “replacive” sort, causing the collapse of whole syllables (*-ut(i)-* may – but does not always – behave this way). There are also morpheme-initial intrusive consonants such as the first “p” in 3PL intransitive indicative inflection *-(p)put*, which only appears (orthographically) after vowel stems (or when

there is assimilation). There are various other morpheme-initial alternation patterns, e.g. between /p/ or /k/ after a consonant stem and /v/ or /g/ after a vowel stem respectively, also between /t/ and /s/. More idiosyncratic patterns of attachment are found with individual morphemes or small groups of affixal morphemes; in general there is considerable allomorphy in the language.

2.8 Reflexive constructions

The manner of forming reflexives has already been mentioned in 2.1, namely the intransitive inflection of a transitive base, with or without support of reflexive-reciprocal pronoun *immi(C)*- in the allative case. (3) is an example of the construction with a singular subject:

- (3) *arnaq atugarliurtuq immi-nut tuqup-puq.*
 woman unhappy self-ALL kill-3SG.IND
 ‘The unhappy woman killed herself.’

The category of “4th person” occurs in both nominal (possessed) and verbal (subordinate mood) inflectional paradigms in a reflexive (3rd person) sense, e.g. in the distinction between 3rd person *ui-a* ‘her (someone else’s) husband’ and *ui-ni* ‘her (own) husband’.

There are also corresponding 4th person plural inflections (absolutive *-tik*, relative *-mik*) and these may sometimes have a reciprocal sense in adverbial expressions – see also sentence (36) under 7.1.3.

2.9 Applicatives

The precise meaning of applicative (transitive) derivations with *-ut(i)*- depends on the semantic nature of the non-derived verbal stem and in general involves much idiosyncrasy (see Fortescue 1984: 89f.). The object of the non-derived verb if already transitive will be put into an oblique case in the derived sentence; the direct object introduced by *-ut(i)*- itself will be marked inflectionally on the verb – and if it cross-references an overt object NP that will be in the absolutive case.

In (4b) *-ut(i)*- is used in a benefactive sense; compare the non-derived stem in (4a):

- (4) a. *piniartu-p qajaq sana-vaa.*
 hunter-REL kayak work.on-3SG/3SG.IND
 ‘The hunter worked on the kayak.’
 b. *piniartu-p nukappiaraq qaja-ssa-anik sana-ap-paa.*
 hunter-REL boy kayak-FUT-3SG.INST work.on-APPL-3SG/3SG.IND
 ‘The hunter worked on a kayak for the boy.’

Besides the benefactive sense of ‘for’ the direct object, the applicative may be glossed as ‘with’, ‘with respect to’, or ‘along with sth else’, depending on the stem. With verbs of motion it generally has a comitative-causative sense of conveying an object in the manner depicted by the stem, as in *tiki-up-paa* ‘he has brought it’ (from *tikit-* ‘come’). Inflected intransitively these have the special meaning of arriving from nearby, as in *tiki-up-puq* ‘he has come’ (lit. ‘he has brought himself’).

Many such derivatives can be given a reflexive and/or reciprocal meaning by inflecting them intransitively (see (32) for a complete derivational sequence).

3. Means of expressing reciprocals

The basic means of forming reciprocals is, as mentioned, paradigmatic, but it is important to distinguish purely paradigmatic (the productive process) from mixed inflectional-derivational means. The latter process with the affix *-ut(i)-*, though highly lexicalized in WG today, probably represents the original way of forming reciprocals in Eskimo languages: outside of Greenland it is much more productive and appears to be the only way of coding this meaning apart from a few lexical reciprocals. Nor is “4th” person pronominal *immiC-* used in such constructions as in WG; the meaning of the cognate stem – as indeed the meaning of the cognate construction to the paradigmatic reciprocal in WG – is unambiguously reflexive outside of Greenland, as far as I have been able to ascertain. It is possible that there has been influence here from Danish and its analytic reciprocal construction with *hinanden* ‘each other’, but the ambiguity in WG between reciprocal and reflexive could not have come directly from that source (compare Danish reflexive *sig* ‘himself/ herself/ themselves’). Loss of productivity of *-ut(i)-* may have been the immediate motivation for the development of the newer construction type.

3.1 Purely paradigmatic (inflectional) means

The simple use of a plural intransitive inflection on a transitive verbal base produces a reciprocal sense, although as in the parallel reflexive (singular or plural) case this is usually supported – especially in main clauses – by reflexive-reciprocal pronoun *immiC-* in the allative case. An example has been given in (1a). With the 1st and 2nd person plural the pronoun (in the relevant possessor form) is obligatory and with the 3rd person it is generally only dispensable in subordinate contexts where the reference conditions are clear:

- (5) a. *arviq tuqun-niar-parsi.*
 walrus kill-FUT-2PL/3SG.IND
 ‘You are going to kill the walrus.’
 b. *immi-ssin-nut tuqun-niar-pusi.*
 self-2PL-ALL kill-FUT-2PL.IND
 ‘You are going to kill *yourselves* / *each other*.’
- (6) a. *nukappiaraq (pinngussa-mik) tuni-vaa.*
 boy toy-INST give.to-3SG/3SG.IND
 ‘He gave the boy sth (a toy).’
 b. *immi-tsin-nut (pinngussa-nik) tuni-vugut.*
 self-1PL-ALL toy-INST.PL give.to-1PL.IND
 ‘We gave things (toys) to each other.’

In (6) note that *tuni-* ‘to give sth to’ is a morphologically bivalent stem with recipient as direct object (the thing given may appear as a nominal in the instrumental case).

3.2 Mixed inflectional-derivational means

As mentioned above, this is not a productive process in the language today, but it is one that has left many lexicalized forms; these could in principle be treated under “lexical reciprocals” (3.4).

3.2.1 With affix *-ut(i)-*

Derivations with the applicative affix *-ut(i)-* inflected intransitively for plural subject will usually have a reciprocal sense, approximately ‘subjects V with each other’. I do not consistently gloss the morpheme as REC in the sentence examples in this article since in most cases it transparently adds its own applicative nuance to the stem (though this is often obscured by lexicalization): it only takes on a reciprocal sense with the concomitant change of a following transitive to an intransitive inflection on the verb. Note that owing to relatively recent assimilation and the dropping of the /i/ except before following truncating affixes (also sometimes of the preceding /u/, leaving gemination of the preceding consonant) the underlying form of the affix is often obscured in the surface chain. The combination of *-ut(i)-* plus 3PL indicative inflection *-put* needs to be carefully distinguished from the allomorph *-pput* of that inflection after vowel stems.

- (7) *nuliariit saqitsa-ap-put.*
 couple.PL quarrel-*ut(i)*-3PL.IND
 ‘The couple quarrelled (with each other).’
- (8) *nukappiaqqat assuru-up-put.*
 boy.PL exert.self-*ut(i)*-3PL.IND
 ‘The boys wrestled.’

The non-derived stem may be historically transitive (as in (7)) or intransitive (as in (8)), and the resultant meaning may be somewhat unpredictable, as for example derived *assuruupput* ‘they wrestled’ in (8) from non-derived stem *assuru(u)r-* ‘to exert oneself’ (it can also mean literally ‘they exerted themselves together’ – i.e. have a sociative sense). In (7) the non-derived stem is not used but is cited in older dictionaries such as Schultz-Lorentzen (1927) as transitive (*saqitsar-* ‘to quarrel with’) – etymologically it seems that it meant at an earlier stage something like ‘shove away’. There are, in other words, gaps in the original derivational chains.

There is less possibility of ambiguity with a reflexive sense than is the case with paradigmatic reciprocals, given the semantic nature of the bases concerned. It is possible to add a pleonastic allative case form of the reciprocal-reflexive pronoun *immiC-* (*imminnut*), though this does not add anything to the meaning here.

When *-ut(i)-* in its reciprocal sense is added to transitive-only stems, the additional meaning added by the applicative derivation (if it exists) is also generally discernible in the reciprocal, though this is not always immediately apparent from the nearest English gloss:

- (9) a. *akiqqata savik tigu-aa.*
 opponent.3SG.REL knife take-3SG/3SG.IND
 ‘His opponent took the knife.’
- b. *politii-p allartirum-mut savik tigg-up-paa.*
 policeman-REL cloth-ALL knife take-APPL-3SG/3SG.IND
 ‘The policeman took the knife together with the cloth (e.g. around it).’
- c. *akiqqat tigg-up-put.*
 opponent.PL take-*ut(i)*-3PL.IND
 ‘The opponents took hold of each other.’

In (9c) the ‘sth else’ of the applicative base *tiggut(i)*- ‘to take together with sth else’ is understood presumably as the subjects’ own bodies, but such sentences cannot be extended to include reference to a particular body part, for instance. Note that the corresponding simple inflectional reciprocal from *tigu-* (*imminnut tigu-pput*) would mean rather ‘they took themselves’, a semantically unlikely but otherwise well-formed sentence.

The most common reciprocals with *-ut(i)*- based on transitive-only stems – i.e. those found in Berthelsen et al. (1990) plus a few more from Schultz-Lorentzen (1927) – follow (many of them have semantic or formal idiosyncrasies, as exemplified in this article):

<i>malirsu-up-put</i> ‘they pursued one another’	(<i>malirsur-paa</i> ‘he pursued him’)
<i>tigg-up-put</i> ‘they took hold of each other’	(<i>tigu-aa</i> ‘he took it’)
<i>iliu-up-put</i> ‘they alternated (with each other) at doing sth’	(<i>iliur(ur)</i> - ‘do sth to’ (vt/vi))
<i>kinguraarta-ap-put</i> ‘they replace each other/ alternate (regularly)’	(<i>kinguraar-paa</i> ‘he replaced it’)
<i>assurtu-up-put</i> ‘they quarreled/ fought’	(<i>assurtur-paa</i> ‘he contradicted, went against him’)
<i>tikku-up-put</i> ‘they pointed things out to each other’	(<i>tikkuar-paa</i> ‘he pointed it out’)
<i>qirlira-ap-put</i> ‘they elbowed their way forward’	(<i>qirlir-paa</i> ‘he pushed him aside to get past’)
<i>akiu-up-put</i> ‘they answered each other back’	(<i>akiur-paa</i> ‘he answered him back’)
<i>sakka-ap-put</i> ‘they jostled forward’	(<i>sakap-paa</i> ‘he jostled him’)
<i>apura-ap-put</i> ‘they knocked into each other’	(<i>apuraC-</i> ‘knock into’ is vt/vi in Schultz-Lorentzen (1927) but is no longer in use).

The last of these (at least) may be better analysed as an anticausative rather than a reciprocal – from a transitive meaning of the sort ‘X caused Y and Z to join together’, parallel to *kasu-up-put* ‘they clinked glasses’ under 7.2.3. It has an alternative sociative/collective meaning, however: ‘they all arrived at the same place together’. In fact, the two meanings are actually compatible in the sense ‘they all (people on several sledges, etc.) knocked into each other’.

3.2.2 With affix *-qatigiic-*

Another important derivational affix with a reciprocal sense is *-qatigiic-* ‘to have each other as fellow V-er’. It is related to comitative affix *-qatigi-* ‘to have as fellow V-er’ and, on nominal stems, converse affix *-giic-* ‘to be mutual N-s’.

- (10) a. *ikinngutit uqalup-put.*
friend.PL speak-3PL.IND
‘The friends talked/spoke.’
b. *ikinngutit uqalu-qatigiip-put.*
friend.PL talk-together-3PL.IND
‘The friends talked together.’

This affix also has a more common sociative sense as in *niri-qatigiip-put* ‘they ate together’. Usually it attaches to intransitive stems only in this sense but in reciprocal use the stem may be transitive, as in (11):

- (11) a. *Tuumasi-p niviarsiaq taanna asa-vaa.*
Tuumasi-REL girl that love-3SG/3SG.IND
‘Tuumasi loves that girl.’
b. *inuusuttut taakku asa-qatigiip-put.*
young.person.PL that.PL love-REC-3PL.IND
‘Those young people love each other.’

Other common (though lexicalized) reciprocal combinations with this affix (most of them to be found in Berthelsen et al. 1990) are:

<i>atu-qatigiip-put</i> ‘they had intercourse’	(<i>atur-paa</i> ‘he used it, borrowed it, had intercourse with her (of man)’)
<i>ata-qatigiip-put</i> ‘they are coherent/connected’	(<i>ata-vuq</i> ‘it is coherent/connected (to sth)’)
<i>isuma-qatigiip-put</i> ‘they agree’	(<i>isuma-vuq</i> ‘he thinks’)
<i>paasi-qatigiip-put</i> ‘they understand each other’	(<i>paasi-vaa</i> ‘he understands him’)
<i>ilagi-qatigiip-put</i> ‘they accompanied one another’	(<i>ilagi-vaa</i> ‘he accompanied her’)
<i>taamaa-qatigiip-put</i> ‘they are equal/the same (e.g. age)’	(<i>taamaap-puq</i> ‘he does thus, it is like that’)
<i>asa-qatigiip-put</i> ‘they love each other’	(<i>asa-vaa</i> ‘he loves her’).

Compare the last example with *asa-* ‘to love’ intransitively inflected as in *imminnut asa-pput* ‘they love themselves’ (= ‘are selfish’) – i.e. with a reflexive, not a reciprocal sense. The form with *-qatigiic-* may have been introduced through biblical translations to distinguish it from the reflexive sense of *asa-pput*.

Note also combinations with “adjectival” – actually qualitative verbal – stems, as in *angi-q(q)atigiip-put* ‘they are equally big’ (from *angi-* ‘to be big’) and *taki-qqatigiip-put* ‘they are equally long’ (from *taki-* ‘to be long’), where the form of the affix is somewhat idiosyncratic.

3.2.3 With affixes *-giiC-* and *-giiaar-*

The verbal-denominal affix *-giiC-* is used to indicate a natural converse relationship in forms such as (12) from *irniq* ‘son’:

- (12) *irni-riip-put*.
 son-be.conversely-3PL.IND
 ‘They are father and son.’

It may be combined with all converse kinship stems (the junior member of the pair being the stem) and many relative positional stems and is also found in a few other lexicalized forms like *assi-giip-put* ‘they are identical, resemble each other’ (from *assik* ‘likeness, picture’) and *ikinnguti-giip-put* ‘they are friends’ (*ikinngut* ‘friend’). These refer to states rather than actions. See 12.3.3 for the corresponding nominal-denominal forms.

The related affix *-giiaar-* is used when there are more than two sets of participants in the converse relation concerned. Thus corresponding to *qali-riip-put* ‘they lie one on top of the other’ (of any number of things piled up in one pile) is *qali-riiaar-put* of several such piles, both from the stem *qaliq*, originally ‘thing on top’ (now restricted as an independent noun to the meanings ‘bow in hair’ or ‘tablecloth’). In (13) the stem (*saniliq* ‘person or thing at one’s side, neighbour’) has retained its original locational sense better:

- (13) *sanili-riiaar-put*.
 thing.at.side-be.several.conversely-3PL.IND
 ‘They lie (several groups or pairs) side by side.’

3.2.4 With other derivational affixes

There are three other derivational affixes of limited productivity which contain a reciprocal element and share the notion of competition, namely *-niqqisaat(i)-*, *-qqaanniut(i)-* and *-niut(i)-* ‘compete at V-ing’. It is difficult to state categorically whether these are reciprocal rather than sociative in sense; stems to which they are attached are always intransitive. Historically they all contain *-ut(i)-*.

- (14) *inuusuttut ajumngin-niqqisaap-put*.
 young.person.PL be.good-compete.at-3PL.IND
 ‘The young people competed at being best.’

Other stems to which this affix may be attached are: *illar-* ‘to laugh’ (thus *illar-niqqisaap-put* ‘they tried to see who could laugh the most’), *sapiit-* ‘to be brave’, *uqila-* ‘to be fast’, *pinnir-* ‘to be beautiful’ and *angi-* ‘to be big’.

Stems to which *-qqaanniut(i)-* attaches include *ani-* ‘to go out’, *isir-* ‘to go in’ and *aki-* ‘reply’; the meaning can often be glossed as ‘to try to V first’, as in:

- (15) *miiqqat tamarmik aki-qqaanniuti-lir-put*.
 child.PL all answer-compete-begin-3PL.IND
 ‘All the children started trying to answer first.’

A typical (lexicalized) example with *-niut(i)-* alone is *sukan-niup-put* ‘they raced’ (from *sukaC-* ‘to be fast’).

3.3 The syntactic reciprocal marker

The syntactic reciprocal marker, pronoun *immiC-*, is of the actant-circumstantial type, since it may in the allative case represent the direct object or an oblique adverbial (in any oblique case) and may also be used pleonastically with a derived reciprocal. It is generally required in the paradigmatic reciprocal construction. When used pleonastically, i.e. with lexical reciprocals (as in 3.4) and with *-ut(i)-* (as in 3.2.1), it seems simply to underline the reciprocity of the action (which may be weakened and/or lexicalized with such verbs). It may, however, also function in such pleonastic cases to indicate that the reciprocal action involves exactly two participants, no more (i.e. not several pairs). It is not used (except adverbially) with the other derivational affixes such as *-qatigiiC-*. The reciprocal pronoun can never occur as simple subject, whether in a main or a subordinate clause, since as a verbal argument it must always stand in the allative case (as combined subject/object). In adverbial usage (any oblique case) it may have the special reflexive-reciprocal meaning ‘one’s/each other’s house(s) or place(s)’. Even though the stem is originally 4th person (reflexive 3rd), 1st and 2nd person markers can, as has been seen, regularly be added to it. An example of its use in adverbial function (typically ambiguous with the reflexive sense) is seen in (16):

- (16) *immi-tsin-nit ani-vugut.*
 self-1PL-ABL go.out-1PL.IND
 ‘We came out of each other’s houses/we came out of our own house(s).’

Substitution of *nammin(n)i-tsin-nit* ‘from ourselves’ with the emphatic reflexive stem *nammin(n)ir-* for of the first word here would preclude the reciprocal meaning.

Note also the following postpositional construction with the stem *akunir-/akurni-* ‘between, among’ (other suitable verbs, including reciprocals, could be substituted):

- (17) *akurni-tsin-ni uqalu-lir-pugut.*
 among-1PL-LOC speak-begin-1PL.IND
 ‘We began to talk among ourselves.’

Further verbalizing derivation of the reciprocal-reflexive pronoun is possible:

- (18) *immi-tsin-niip-pugut.*
 self-1PL-be.in-1PL.IND
 ‘We are in *our (own)* house(s) / *each other’s* houses.’

3.4 Lexical reciprocals

If a lexical stem itself contains an element of inherent reciprocity (i.e. some degree of mutuality of action between obligatorily plural subjects), the inflected form is that expected in the paradigmatic case but *immiC-* can be – and usually is – dispensed with, as in:

- (19) a. *Suulu-p Maalia kunip-paa.*
 S.-REL M. kiss-3SG/3SG.IND
 ‘Suulut kissed Maalia.’

- b. *asaqatigiit kunip-put.*
 lover.PL kiss-3PL.IND
 ‘The lovers kissed (each other).’

Interestingly enough, the corresponding form meaning ‘they kissed several times’ is not a pure lexical reciprocal but contains *-ut(i)-*: *kunis-su-up-put* (where *-su(r)-* is a non-productive affix of repeated action). In Canadian Inuktitut *-ut(i)-* is present even in the basic non-repetitive reciprocal form of this verb (Spalding 1993:155). Besides *kuniC-* ‘to kiss’ the following lexical reciprocals (all from Berthelsen et al. 1990) are in common use:

<i>tutip-put</i> ‘they slept together’	(cf. <i>tutip-paa</i> ‘he lay down/slept next to her’)
<i>paa-pput</i> ‘they fought’	(<i>paa-vaa</i> ‘he fought him’)
<i>patip-put</i> ‘they supported each other to avoid capsizing (two kayakers alongside each other placing their paddles across each other’s kayaks)’	(cf. <i>patip-paa</i> (vt) of one kayaker supporting another in this fashion)
<i>katip-put</i> ‘they got married’	(cf. <i>katip-paa</i> ‘he joined them’)
<i>avip-put</i> ‘they got divorced’	(cf. <i>avip-paa</i> ‘he divorced her’)
<i>nuliar-put</i> ‘they mated (of animals)’	(<i>nuliar-paa</i> ‘it (male) copulated with it (female)’)
<i>avissaar-put</i> ‘they separated’	(<i>avissaar-paa</i> ‘he separated himself from him/her’)
<i>kii-pput</i> ‘they squeezed together (ice floes)’ or ‘they quarreled/fought’	(<i>kii-vaa</i> ‘he bit it’)
<i>unammi-pput</i> ‘they competed’	(<i>unammi-vaa</i> ‘he competed with him’)
<i>paarlap-put</i> ‘they passed each other in opposite directions’	(<i>paarlap-paa</i> ‘he crossed his path’)
<i>sammi-pput</i> ‘they discussed something’	(<i>sammi-vaa</i> ‘he turned towards him, occupied himself with him/it’).

The last verb is of particular interest here, since it may also occur in constructions with the reciprocal pronoun *imminnut*, in which case it has a different, more literal meaning, namely ‘they faced each other’. Also *kii-pput* may appear with *immiC-* in a more literal sense of ‘bite each other’, as illustrated in (39). None of these verbs can be used (in the meanings given) with a singular intransitive subject.

4. Polysemy of reciprocal markers

4.1 Reciprocal – reflexive

The basic reflexive construction in WG utilizes the same detransitivizing process as for reciprocals; the same process may produce anticausatives (see further under 7.2.3), and also antipassives (though here without *immiC-*). The basic anticausative construction with non-agentive stem *matu-* was illustrated in example (2).

The antipassive corresponding to transitive *matu-* in (2) is as in (20), where, as can be seen, an overt object can be added in the instrumental case but with concomitant despecification (i.e. an indefinite meaning):

- (20) *arnaq (matu-mik) matu-si-vuq.*
 woman door-INST close-APASS-3SG.IND
 ‘She closed sth (a door).’

Note also the possibility of zero-marked antipassives, producing the so-called agentive verbs mentioned under 2.2.1, which may also be inflected either transitively or intransitively.

As already illustrated, transitive verbs inflected for plural subject may be ambiguous between a reflexive and a reciprocal reading, which is also the case with the pronoun *immiC-* in adverbial phrases. There is no way of disambiguating a sentence such as the following short of breaking it into two:

- (21) *Paavia Suulul-lu immin-nut assuari-pput*
 P. S.-and self-ALL.PL blame-3PL.IND
surraat-su-u-nirar-lutik.
 be.thoughtless-PART-be.say.that-4PL.CONTM
 ‘Paavia and Suulut blamed *each other / themselves* for being thoughtless.’

4.2 Reciprocal – sociative

Although *-ut(i)-* is arguably not a reciprocal marker in its own right (independent of a concomitant inflectional change), it is important to note that with suitable stems its meaning when followed by plural subject inflection may be sociative (actually collective/sociative) rather than reciprocal, as in:

- (22) a. *arna-t kavvi-sur-put.*
 woman-PL coffee-drink-3PL.IND
 ‘The women drank coffee.’
 b. *arna-t kavvi-su-up-put.*
 woman-PL coffee-drink-COLL-3PL.IND
 ‘The women (a whole group) drank coffee together.’

Similarly with *angirla-ap-pugut* ‘we went home in a group’ from *angirlar-* ‘to go home’. This is not a productive process, but in the modern language one particular allomorph, *-rrat(i)-* (from combination with preceding uvular-stems) has become more productive, as in (23):

- (23) *qaqqa-mi sisura-rrap-put.*
 mountain-LOC ski-COLL-3PL.IND
 ‘There were (lots of) people out skiing on the mountain.’

As opposed to *-qatigiiC-*, which may also be ambiguous between a reciprocal and its more productive sociative sense (see 3.2.2), these forms always refer to a group, i.e. more than two subjects acting together. Sometimes a base with *-ut(i)-* may have two distinguishable

senses, a reciprocal and a sociative, as for example *atuvv-ap-put* ‘they are reading to *each other*’ or ‘*many* are reading’, both from stem *atuar-* ‘read’. But in many instances the combination conflates both meanings, as with *tigg-up-put* in sentence (9), which could refer to just two opponents or several sets. See also under 11.

5. Referential situations and the reciprocals

There is considerable overlap and ambiguity between canonical two-actant and collective interpretations of reciprocals: the number of participants (whether just two or more) is usually indeterminate except from overall context. Thus in the following (with lexicalized derived reciprocal *malirsu-ut(i)-* from *malirsur-* ‘to pursue, follow’) there could be just two actants or several groups in parallel or in a chain:

- (24) *pinniartut malirsuup-put.*
 hunter.PL pursue.each.other-3PL.IND
 ‘The hunters pursued / followed each other.’

Observe the possibility of a reciprocal construction without overt antecedent in:

- (25) *immin-nut uqarviga-luni pitsaa-niru-ssa-aq.*
 self.PL-ALL speak.to-4SG.CONTM be.good-more-FUT-3SG.IND
 ‘talking to each other would be better.’

This is an example of the “impersonal subject” use of the contemporative mood (which otherwise expresses identical subject conditions with the main clause). The transitive base *uqarvigi-*, though itself derived, enters here into the usual paradigmatic reciprocal construction.

A further derivational extension of a derived reciprocal verb form can produce an existential construction without any antecedent, as in:

- (26) *(amirlasuu-nik) saqitsaat-tu-qar-puq.*
 many-INST.PL quarrel-PART-have-3SG.IND
 ‘There are (many) people quarreling.’

This is the usual existential construction with impersonal 3SG subject and verbalizing affix *-qar-* ‘to have’; it allows for a possible number distinction on any stranded modifier. With a paradigmatic reciprocal the construction is also possible, but here, even with *immiC-*, there is ambiguity between the reflexive and reciprocal senses:

- (27) *immin-nut uqaluvvigi-su-qar-puq.*
 self-ALL.PL talk.to-PART-have-3SG.IND
 ‘There are people talking to *themselves* / *each other*.’

6. Simultaneity and succession of actions

Simultaneity and succession may be expressed by adverbials such as *ataatsikkut* ‘at the same time’ and *kingulirriaaginnarlutik* (or *tulliriillutik*) ‘one after the other’; these are compatible with suitable reciprocals, as are adverbials of precise temporal points such as *marlunut* ‘at two o’clock’. This is purely a matter of the semantics of the verb concerned. Thus *ataatsikkut imminnut takulirput* ‘they saw each other at the same time’ is perfectly normal but *²*ataatsikkut kunipput* ‘they kissed at the same time’ would require a special situation (e.g. more than one couple).

There does not appear to be any consistent distinction between derived and non-derived reciprocals in this respect, nor does the presence or absence of *immin-nut* seem to play any role. In (28a) the time frame is indeterminate (one of the friends may or may not have written before the other), whereas in (b) the meaning is habitual and therefore by inference successive:

- (28) a. *ikinngutigiĩt immin-nut allavvigi-pput.*
 friends self-ALL.PL write.to-3PL.IND
 ‘The friends wrote to each other.’
 b. *ikinngutigiĩt immin-nut allavvigi-sar-put.*
 friends self-ALL.PL write.to-HAB-3PL.IND
 ‘The friends write / wrote to each other (regularly).’

Depending on the meaning of the verb, the addition of *-sar-* may produce sentences referring to successive parallel incidents of the reciprocal action, rather than to the one actant being first subject then object, switching roles with the other actant. The latter meaning may require spelling out as two symmetrical actions or by the addition of expressions like *sinnirsiraallutik* ‘alternating at V-ing’ (itself a derived reciprocal verb) as in the following (with *-sar-* of repeated action):

- (29) *sinnirsiraal-lutik immin-nut uqarvigi-sar-put.*
 alternate-4PL.CONTM self-ALL.PL speak.to-ITER-3PL.IND
 ‘They alternated in addressing each other.’

With the lexical reciprocal *paa-pput* ‘they fought’ instead in the last example, for instance, the meaning would not be ‘first the one fought the other then the reverse’, but rather ‘first one pair/team fought, than another’.

The more lexicalized kind of combination of base plus iterative affix illustrated in (30b) does not indicate a repetition of the reciprocal action but more than one action of the same type being performed during the same reciprocal incident:

- (30) a. *akiqqat immin-nut ikilir-put.*
 enemy.PL self-ALL.PL wound-3PL.IND
 ‘The enemies wounded each other.’
 b. *akiqqat immin-nut ikilirsur-put.*
 enemy.PL self-ALL.PL inflict.wounds.ON-3PL.IND
 ‘The enemies inflicted wounds on each other.’

The affix *-ut(i)-* may itself (in lexicalized forms) follow affixes of iteration, notably the suffix *-(sa)qattaar-* of repeated action, which produces the lexicalized combination *-(sa)qattaat(i)-*, limited to a few combinations like *pasillir-saqattaap-put* ‘they hurled accusations back and forth’ (from *pasillir-* ‘to accuse’). In derivations meaning ‘to replace each other regularly, alternate’ the meaning is quite overtly one of successive actions, as in *kinguraarta-at(i)-* ‘to alternate’, where *-ut(i)-* follows habitual *-tar-* (an allomorph of *-sar-*); in (31c) this repetitive action can itself be qualified as habitual with a second (productive) occurrence of *-tar-*:

- (31) a. *suliqati-ni kinguraar-paa.*
 fellow.worker-4SG replace-3SG/3SG.IND
 ‘He took over from his fellow worker (e.g. starting a new shift).’
 b. *sulisartut kinguraarta-ap-put.*
 worker.PL replace.regularly-*ut(i)*-3PL.IND
 ‘The workers work in shifts.’
 c. *ullu-t tamaasa kinguraartaat-tar-put.*
 day-PL all work.in.shifts-HAB-3PL.IND
 ‘They work in shifts every day.’

That such combinations as in (31b) are completely lexicalized can be seen from the unusual order of the habitual marker preceding *-ut(i)-* (itself non-productive). Also *sin-nirsiraat(i)-* in (29) above contains a lexicalized habitual marker (*-rar-*) before *-ut(i)-*.

7. Types of diathesis

As stated in 1.2, all reciprocal constructions in WG represent an intransitive type of diathesis. Moreover, the distinction between bivalent and trivalent transitive verbs as the source of reciprocals is obscured by the fact that transitive verbs are morphologically limited to two arguments (marked in the inflectional complex). Thus there is no symmetrization of subject and morphological oblique as opposed to direct object. Nevertheless, the following remarks correlating the phenomenon in WG to cross-linguistic diathesis categories can be made.

7.1 Subject-oriented diathesis

The same process of forming reciprocals by inflecting a transitive verbal base intransitively in WG applies to transitive verbs whatever their number or type of semantic arguments. The basic (non-derived) type is the “canonical” reciprocal construction exemplified in 3.1. Non-basic types (including the benefactive) require an intermediate derivational stage, for example with *-ut(i)-* as in 3.2, which draws an oblique item into the direct object slot of the verbal inflection.

Although there is no transitive subject-oriented diathesis in WG, in semantically analogous cases an oblique object may correspond to a direct object involved in such a diathesis in other languages (see 7.1.2).

7.1.1 Reciprocals from bivalent transitives

See Sections 3.1 and 3.4 for examples of non-derived reciprocals from semantically bivalent verbs, respectively with and without reciprocal pronoun support.

7.1.1.1 Reciprocals with *-ut(i)-* on intransitive stems. As described in 3.2.1, many lexicalized reciprocals are derived with the applicative affix *-ut(i)-* before being inflected intransitively; the case where the non-derived stem is intransitive belongs here (note the usual reflexive/reciprocal ambiguity):

- (32) a. *angut kamap-puq.*
 man get.angry-3SG.IND
 ‘The man got angry.’
 b. *angut kama-ap-paa.*
 man get.angry-APPL-3SG/3SG.IND
 ‘He got angry with the man.’
 c. *angutit kama-ap-put.*
 man.PL get.angry-*ut(i)*-3PL.IND
 ‘The men got angry *with themselves / with each other.*’

It is in fact possible to use the productive benefactive allomorph of this affix, *-ssut(i)-* (which is attached to intransitive – or antipassivized – bases only), to produce a reciprocal construction in which the object retains its benefactive sense, thus:

- (33) a. *irn-i (mamakujuttu-nik) pisi-ssup-paa.*
 son-4SG sweets-INST.PL buy.sth-for-3SG/3SG.IND
 ‘He bought sth (sweets) for his son.’
 b. *immin-nut (mamakujuttu-nik) pisi-ssup-put.*
 self-ALL.PL sweets-INST.PL buy.sth-for-3PL.IND
 ‘They bought things (sweets) for each other.’

Here the stem (*pisi-* ‘to buy sth’) is morphologically intransitive. A semantic direct object may be present as an oblique object.

7.1.1.2 Reciprocals from derived transitives with *-(v)vigi-*. Reciprocals are formed in the same basic manner from verbal bases derived with affixes such as *-(v)vigi-* ‘have as place/time/person of V-ing’ (always added to intransitive bases). For an example with a derived base see sentence (28) in Section 6, where the underived stem is *allaC-* ‘to write’ and the derived base *allavvigi-* ‘have as place/thing/person of writing to’ is inflected intransitively to produce a reciprocal sense in the normal way.

7.1.1.3 Reciprocals from morphological causatives on intransitive stems. Morphological causatives may enter into reciprocal constructions where the reciprocal relation is between the causer and causee, but they are ambiguous between a reciprocal and a reflexive reading, just as with plain (non-causative) reciprocals:

- (34) a. *niviarsiaq illar-puq.*
 girl laugh-3SG.IND
 ‘The girl laughed.’

- b. *nukappiaqqa-p niviarsiaraq illar-tip-paa.*
 boy-REL girl laugh-make-3SG/3SG.IND
 ‘The boy made the girl laugh.’
- c. *immin-nut illar-tip-put.*
 self-ALL.PL laugh-make-3PL.IND
 ‘They made *each other / themselves* laugh.’

7.1.2 Reciprocals from (semantically) trivalent transitives

See sentence (6) for an example of a reciprocal formed from a non-derived semantically trivalent stem, *tuni-* ‘to give to’. Although derived applicative forms with *-ut(i)-* (in locative/benefactive senses) added to transitive stems can in turn form the basis of reciprocals, as has been seen in 3.2.1, these are still morphologically bitransitive. A semantic direct object appears in some cases to be present as an oblique, as in (35), but the non-derived stem here is of the “agentive” type, i.e. may be either transitive or intransitive, in the latter case acting as a zero-marked antipassive, so it could be that the derived form in (b) is based on the intransitive *nassar-puq* ‘he has brought sth along’, which would itself take an instrumental case semantic object:

- (35) a. *Tuumasi-p tunissut nassar-paa.*
 T.-REL gift bring.along-3SG/3SG.IND
 ‘Tuumasi brought a gift along.’
- b. *Tuumasi-p Suulut tunissum-mik nassa-ap-paa.*
 T.-REL S. gift-INST bring.along-APPL-3SG/3SG.IND
 ‘Tuumasi brought along a gift for Suulut.’
- c. *Tuumasi Suulul-lu tunissun-nik nassa-ap-put.*
 T. S.-and gift-INST.PL bring.along-APPL-3PL.IND
 ‘Tuumasi and Suulut brought each other gifts.’

Such cases are at all events lexicalized, and cannot be generalized to all reciprocal expressions involving *-ut(i)-* with transitive bases.

7.1.3 “Possessive” type diathesis

A further “possessive” type found cross-linguistically has no direct parallel in WG, but compare (36), where there is the usual ambiguity between reflexive and reciprocal, but here with 4th person possessor inflection on a noun, and (37), where it is a matter of an adverbial reciprocal:

- (36) *angutit qimmi-tik tuqup-paat.*
 man.PL dog-4PL.PL kill-3PL/3PL.IND
 ‘The men killed their (own) dogs/ killed *each other’s* dog.’
- (37) *immi-tsin-nut pulaar-tar-pugut.*
 self-1PL-ALL visit-ITER-1PL.IND
 ‘We visited *each other / each other’s* houses.’

One could substitute the *illuqarvi-tsin-nut* ‘(to) each other’s towns’ (with 1PL possessed noun stem) for the first expression in (37). Compare also (16), where the allative expression could just as well have been in the ablative, for example.

Note the following with productive nominal-denominal affix *-ir-* ‘remove (from), remove N’s’, underlyingly transitive in this sense:

- (38) a. *ilinniartitsisua kavaaja-ar-paa.*
 teacher jacket-remove-3SG/3SG.IND
 ‘He took the teacher’s jacket from him.’
 b. *immin-nut kavaaja-ar-put.*
 self-ALL.PL jacket-remove-3PL.IND
 ‘They helped each other off with their jackets.’

7.2 Object-oriented diathesis

It is possible to causativize reciprocals, the causee being different from the subject/object of the non-derived verb. In such cases an analogue to objective diathesis in other languages is achieved.

7.2.1 Non-derived reciprocals

Compare the following, involving a lexical reciprocal:

- (39) a. *Paavia-p Maalia paarlap-paa.*
 P.-REL M. cross.path-3SG/3SG.IND
 ‘Paavia crossed Maalia’s path (going in the opposite direction).’
 b. *Paavia Maalia-lu paarlap-put.*
 P. M-and cross.path-3PL.IND
 ‘Paavia and Maalia crossed each other going in opposite directions.’
 c. *Paavia Maalia-lu paarlat-sip-pai.*
 P. M.-and cross.path-make-3SG/3PL.IND
 ‘He had Paavia and Maalia pass each other.’

It is only the inflection on the derived form in (39c) that makes it clear that the underlying subject must be plural.

It is also possible to causativize a paradigmatic reciprocal in the same way (note that the reciprocal pronoun is necessary):

- (40) a. *qimmit immin-nut kii-pput.*
 dog.PL self-ALL.PL bite-3PL.IND
 ‘The dogs bit each other.’
 b. *Paavia-p qimmi-ni immin-nut kii-tip-pai.*
 P.-REL dog-4SG.PL self-ALL.PL bite-make-3SG/3PL.IND
 ‘Paavia let/made his dogs bite each other.’

With a plural subject the meaning of the underlying non-derived sentence would be the same; if one wanted a meaning equivalent to ‘the men let their dogs bite them (the men)’ a (quasi-)passive construction would have to be used instead:

- (41) *anguti-t marluk immin-nut qimmi-min-nut kii-tip-put.*
 man-PL two self-ALL.PL dog-4PL.PL-ALL bite-make-3PL.IND
 ‘The two men let themselves be bitten by *their / each other’s* dogs.’

7.2.2 *Derived reciprocals*

Also reciprocals with *-qatigiiC-* or *-giiC-* may be freely causativized, as in:

- (42) *palasi-p aapparit asaqatigii-qqu-ai.*
 priest-REL married.couple.PL love.each.other-ask.to-3SG/3PL.IND
 ‘The priest told the couple to love each other.’
- (43) *quppirnirit qaliriis-sip-pai.*
 page.PL lie.on.top.of.each.other-make-3SG/3PL.IND
 ‘He laid the pages on top of one another.’

Causatives based on reciprocals formed with *-ut(i)-* are somewhat less common, but the following is quite normal with lexicalized *tigg-up-put* ‘they took hold of each other’ (from *tigu-* ‘to take’):

- (44) *tiggut-sip-pai.*
 take.hold.of.each.other-make-3SG/3PL.IND
 ‘He had them take hold of each other.’

7.2.3 *Verbs of connecting and disconnecting*

It is possible to form anticausative forms from derived causatives by a similar process of intransitivization as for reciprocals, thus with lexical applicative *nuiu-ut(i)-* from transitive *nuiurar-* ‘to string (beads), braid (hair, etc.) together’ (*-ut(i)-* does not itself add anything discernible to the meaning of the stem here):

- (45) a. *arna-p allunaasat (immin-nut) nuiu-up-pai.*
 woman-REL string.PL self-ALL.PL braid-APPL-3SG/3PL.IND
 ‘The woman braided the strings together.’
- b. *allunaasat immin-nut nuiu-up-put.*
 string.PL self-ALL.PL braid-*ut(i)*-3PL.IND
 ‘The strings were braided together.’

Similarly from derived applicative base *kattut(i)-* ‘to join or add to sth else’ can be formed intransitive *kattup-put* ‘they are joined or mixed together’ (note that *sukkut* ‘sugar’ is plural in WG):

- (46) a. *niuirtu-p puuttu-p sukkut paassa-nut kattup-pai.*
 shopkeeper-REL confused-REL sugar gunpowder-ALL join.to-3SG/3PL.IND
 ‘The confused shopkeeper mixed the sugar and gunpowder together.’
- b. *sukkut paassa-nut kattup-put.*
 sugar gunpowder-ALL join-3PL.IND
 ‘The sugar was mixed with the gunpowder.’

However, this could just as well take a singular subject, *kattup-puq* ‘it was joined (to sth else)’. In fact this is parallel to the ordinary “non-agentive” verb (see 2.2.1), where the object of the transitive form of the stem is the same as the subject of the corresponding intransitive, but is much more restricted.

There is, as elsewhere with *-ut(i)-*, considerable lexicalization, thus *katt-up-put* in (46b) may also have a somewhat different, purely reciprocal meaning with animate subjects:

- (47) *angalirnir-mut immin-nut katt-up-put.*
 trip-ALL self-ALL.PL join-ut(i)-3PL.IND
 ‘They joined together for the trip.’

Compare also transitive *katt-up-paat* ‘they did it together’ with 3PL/3SG transitive inflection (a secondary extension).

The simple non-applicative transitive verb to which these forms correspond is *katip-pai* ‘he joined them’ (stem *katiC-*), as in (48a); being a non-agentive stem it may also function as an anticausative as in (b):

- (48) a. *allunaasat marluk katip-pai.*
 rope.PL two join-3SG/3PL.IND
 ‘He joined the two ropes.’
 b. *allunaasat marluk katip-put.*
 rope.PL two join-3PL.IND
 ‘The two ropes are joined.’

Inflected intransitively in the plural this also produces a lexical reciprocal in the sense ‘they joined together, were married’, as listed in 3.4 (note also regular causative derivation *kati-tip-pai* ‘he married them’).

Other anticausatives of the same type as *kattup-put* include *ilanngup-put* and *akuliup-put*, both ‘they are added, mixed (together)’ (also historically containing *-ut(i)-*). They are often used together with *imminnut* or allative case adverbial *ataatsimut* ‘together’. Note also *turr-up-put* ‘they pressed together’ corresponding to applicative *turr-up-paa* ‘he pressed it against sth’ (the non-derived stem *tuur-* on which it is based has a different sense altogether: ‘to jab, thrust away from oneself’). Some of the forms with *-ut(i)-* on transitive stems given in 3.2.1. probably also belong here, e.g. *kasu-ut(i)-*:

- (49) a. *immiarturvik kasu-paa.*
 beer.glass knock-3SG/3SG.IND
 ‘He knocked the beer glass.’
 b. *savik immiarturvim-mut kasu-up-paa.*
 knife beer.glass-ALL knock-APPL-3SG/3SG.IND
 ‘He clinked his knife against the beer glass.’
 c. *ikinngutigjit kasu-up-put.*
 friend.PL knock.against-ut(i)-3PL.IND
 ‘The friends clinked glasses together (drinking).’

In (49c) the verb literally means ‘they knocked against each other with sth (i.e. their glasses)’ – this is a fixed lexicalization and ‘glasses’ is not expressed as an NP.

The stem *aviC-* ‘to separate, divide in two’ has already been listed as a lexicalized reciprocal under 3.4 in the sense ‘to be separated/divorced (of man and woman)’. A further derivative, *avissaar-* ‘to separate (oneself from sth), come apart’, transitive ‘to separate from, go one’s own way from’ (with the affix *-saar-* ‘make an effort to V’) follows a similar pattern: with plural inflection it can be regarded as a lexicalized anticausative. It can be further causativized as in (50c).

- (50) a. *aalakuurtuq avissaar-paa.*
 drunk separate.oneself.from-3SG/3SG.IND
 ‘He separated himself from the drunk.’
- b. *inuusuttut marluk avissaar-put.*
 youth.PL two separate-3PL.IND
 ‘The two youths separated/went their own ways.’
- c. *inuusuttut avissaar-tip-pai.*
 youth.PL separate-make-3SG/3PL.IND
 ‘He separated the youths.’

For the productive affix *-ir-* ‘remove (N’s-)’ see Section 7.1.3.

7.3 Multiple-diathesis reciprocals

There are no single verb forms that display binary reciprocal readings, but the highly productive derivational apparatus of the language allows numerous sets of derivationally related forms from a single stem that display different diathesis relations. Compare the ‘joining’ verbs from basic *katiC-* in 7.2.3 for an example.

8. Productivity and restrictions on reciprocal derivation

WG is a language where practically any transitive verb of suitable semantic content can be inflected as a reciprocal.

Also many intransitives can be first transitivized (typically with applicative affix *-ut(i)-*) then inflected intransitively as a reciprocal. Here the situation is much more lexicalized, but the restrictions are still purely semantic: if an applicative derivation exists then the corresponding reciprocal will usually exist if the semantics allows it. The reciprocal usage of *-ut(i)-* is of similarly restricted productivity to the applicative itself, which is textually very common but highly lexicalized. Only a few derivations formed with *-ut(i)-* exist solely as reciprocals and not as applicatives as well. This is usually a matter of loss of the intermediate applicative. Note that verbs of ‘directed emotion’ like *ajuri-* ‘to dislike’ do not combine with *-ut(i)-* as is apparently possible in Central Alaskan Yupik – cf. *kenk-ut-uk* ‘they love each other’ (Jacobson 1984:199). In WG these enter rather into the usual paradigmatic reciprocal construction when inflected intransitively (cf. (51) below). This is symptomatic of the greater productivity of *-ut(i)-* as a mixed derivational-inflectional reciprocal marker in Eskimo languages outside of West Greenland.

All reciprocal derivations with *-qatigiC-*, *-giiC-* and the other derivational affixes under 3.2.2. are lexicalized.

9. Means of expressing symmetrical actants

The subject of a reciprocal construction in WG must be plural (there are no collective singular nouns requiring singular inflection of the verb). Such a subject may be covert (referred to by the plural inflection of the verb alone) or expressed by an overt NP, including a plural pronoun, a plural noun (derived or non-derived) and a coordinated structure joined by the enclitic *-lu* ‘and’: *X Y-lu*, where *X* and *Y* can each be singular:

- (51) a. *Paavia-p Suulut qinngari-vaa.*
 P.-REL S. hate-3SG/3SG.IND
 ‘Paavia hates Suulut.’
 b. *Paavia Suulul-lu immin-nut qinngari-pput.*
 P. S.-and self-ALL.PL hate-3PL.IND
 ‘Paavia and Suulut hated each other.’

Note that the first of the two coordinated nouns could be dropped in (51b), the rest of the sentence remaining unchanged; the meaning of *Suulullu* is then ‘he and Suulut’.

There is no way that *S*₂ can be moved to object position leaving a singular *S*₁ in subject position and retaining a reciprocal meaning.

10. Formal and semantic correlation between the reciprocal, the reflexive and the sociative

Paradigmatic reciprocals seem to represent a special extension of the reflexive – similarly formed but not restricted to plural subjects. Both constructions are quite general and productive in texts, though the reflexive as a whole must occur at least twice as often as the reciprocal since it allows both plural and singular subjects.

As has been illustrated in 4.2, the applicative affix *-ut(i)-* ingredient in a mixed inflectional-derivational reciprocal construction also has a restricted sociative use when inflected intransitively for plural subject in a sociative/collective sense (‘in a group’). This is no doubt a secondary development from the original applicative construction, understood as referring to more than just two actants (literally ‘with others’).

11. Sociatives and comitatives

Regular subject-oriented sociative and comitative expressions are formed by verbal derivation in WG, i.e. by the sociative affix *-qatigiiC-* ‘do together’ and related (transitive) comitative affix *-qatigi-* ‘do together with’:

- (52) a. *ilinniaritsisuuq nukappiarar-lu ani-pput.*
 teacher boy-and go.OUT-3PL.IND
 ‘The teacher and the boy went out.’

- b. *ilinniartitsisu-p nukappiaraq ani-qatig-aa.*
 teacher-REL boy go.out-COM-3SG/3SG.IND
 ‘The teacher went out with the boy.’
- c. *ilinniartitsuuq nukappiarar-lu ani-qatigiip-put.*
 teacher boy-and go.out-SOC-3PL.IND
 ‘The teacher and the boy went out together.’

The non-symmetrical verb of accompaniment *ilagi-* can also form reciprocals as in (53):

- (53) a. *Tuumasi-p Maalia illuqarvim-mut ilag-aa.*
 T.-REL M. town-ALL accompany-3SG/3SG.IND
 ‘Tuumasi accompanied Maalia to town.’
- b. *Tuumasi Maalia-lu immin-nut ilagi-uar-put.*
 T. M.-and self-ALL.PL accompany-always-3PL.IND
 ‘Tuumasi and Maalia are always together (always accompany each other).’

There is no diathesis type as such corresponding to object-oriented reciprocals here, but some of the lexicalized applicatives have the meaning ‘to take X along with one’ (as in *tiki-up-paa* ‘he took/brought her along’) or ‘V object X together with sth else’, as in *napp-up-paa* ‘he broke it together with sth else’. If all actants are expressed as overt NPs in the latter type of construction the second object must be in an oblique case, thus:

- (54) a. *piniartu-p cigaretti napi-vaa.*
 hunter-REL cigarette break-3SG/3SG.IND
 ‘The hunter broke the cigarette.’
- b. *piniartu-p cigaretti puu-ani napp-up-paa.*
 hunter-REL cigarette packet-3SG.LOC break-APPL-3SG/3SG.IND
 ‘The hunter broke a cigarette together with / inside its packet (e.g. crumpling it up).’

12. Non-canonical reciprocals

12.1 Irregular derivations

Derived reciprocals often display irregularities of both form and meaning. The affixes concerned are not productive in producing reciprocal meanings and sometimes are attached idiosyncratically to the stem with intervening affixal (usually aspectual) material. Reciprocals with *-ut(i)-* in particular may occur without the corresponding applicative existing as in the following:

- (55) a. *assurtur-paa* ‘He contradicted/opposed him.’
 b. **assurtu-up-paa*
 c. *assurtu-up-put* ‘They quarreled/fought.’
 d. *imminnut assurtur-put* ‘They contradicted each other.’

Here the intermediate applicative form is not used (any more), although the corresponding non-derived paradigmatic reciprocal as in (55d) is quite possible.

A group of such derived verbs refers to the playing of games, in which the distinction between reciprocal and sociative is neutralized so that *-ut(i)-* could equally well be analysed as sociative, cf.:

- (56) a. *arsar-put.* 'They play (with a) ball.'
 b. **arsa-ap-paa.*
 c. *arsa-ap-put.* 'They played football (together).'

(56a) could also have had a singular subject (the nominal *arsaq* refers to any kind of ball). Similarly *patta-ap-put* 'they played (hand)ball' (also non-reciprocal 'they applauded') from *pattaC-* 'to strike with the hand', *irsullira-ap-put* or *irsulliga-ap-put* 'they played hide and seek' from *irsuC-* 'to hide from', and *atturtara-ap-put* 'they played tag' from *attur-* 'to touch'. The stems to which *-ut(i)-* is directly attached here may be either intransitive (e.g. *arsar-*) or transitive (e.g. *pattaC-*), as the glosses indicate.

In cases such as *atturtara-ap-put* above and others like *qungujuru-up-put* 'they smiled at each other in a friendly fashion' from *qungujuC-* 'to smile', lexically obscure intervening material appears before *-ut(i)-* when compared with the basic non-derived stem. In other cases there is simply irregularity of derivation, as in the two derivations from *paa-* 'to fight' (already a lexical reciprocal) plus *-ut(i)-*:

- (57) a. *paa-pput.* 'They fought.'
 b. *pagg-ip-put.* 'They fought, there was a big fight going on.'
 c. *pagg-ap-put.* 'They scrambled for cast coins (a Greenlandic custom).'

In both of these there is conflation between the sociative/collective and reciprocal senses of the marker *-ut(i)-*.

Another case of two different derivations from the same stem with *-ut(i)-*, the one form historically older – and more irregular – than the other, is found in the following series based on stem *sakaC-* 'to shove':

- (58) a. *immin-nut sakap-put.*
 self-ALL.PL shove-3PL.IND
 'They shoved each other.'
 b. *sakk-ap-put.*
 shove-APPL-3PL.IND
 'They elbowed their way forward.'
 c. *sakka-ap-put.*
 shove-*ut(i)*-3PL.IND
 'They shoved each other (violently) to get past.'

The first construction is an ordinary paradigmatic reciprocal, the second contains an old lexicalized derivative with applicative *-ut(i)-* which could just as well have been in the singular if the subject had been singular (as with verbs of motion with *-ut(i)-* like *tiki-up-puq* mentioned under 2.9), whereas (58c) is a more regular formation with *-ut(i)-* in its reciprocal and/or sociative sense (plural subject only). A further form *sakat-ta-ap-put* 'they jostled each other' is also possible, where *-ut(i)-* follows an affix of repetition, *-sar/tar-*.

Some stems may take more than one clearly reciprocal (not sociative) derivation, e.g. *akiu-up-put* or *akiu-riip-put* ‘they answered each other back, quarreled, sang alternately’ from transitive *akiur-* ‘to answer back’ and respectively *-ut(i)-* and *-giiC-* (here irregularly on a verbal stem).

12.2 Reciprocal verbs formed from other than verbal stems

Converse derivational affixes *-giiC-* and *-giiaar-* mentioned under 3.2.3 are both typically added to nominal stems and may be inflected either verbally or nominally.

Also *-qatigiiC-* can be added in lexicalized cases to nominal stems, as in:

- (59) *illu-qatigiip-put*.
house-have.mutually-3PL.IND
‘They share a house.’

12.3 Nouns with a reciprocal marker

12.3.1 Nominalized reciprocals

Both paradigmatic and mixed derivational-inflectional reciprocals may be further nominalized by a simple addition of nominalizing affixes such as *-niq* (with or without a suitable possessive inflection) as in (60):

- (60) *angutit uqalu-qatigiin-nir-at*
man.PL.REL speak-REC-NOM-3PL
‘their speaking together.’

Similarly *paa-nir-at* ‘their fighting (each other)’, and *asurtu-un-nir-at* ‘their contradicting of each other’, and (without possession marking) *paasi-qatigiin-niq* ‘mutual understanding’. Note also participial forms like *imminnut tuqut-tut* ‘those who killed *themselves / each other*’ and *saqitsa-at-tut* ‘those who quarrelled’, which can be formed freely.

A lexicalized reciprocal base may be nominalized and reverbalized several times within one complex word, as for example:

- (61) *saqitsa-ati-lir-niar-tuar-tu-qa-rumaa-raluar-put*.
quarrel-*ut(i)*-begin-try-all.the.time-PART-have-FUT-however-3PL.IND
‘But there will be people who try all the time to start quarrelling.’

12.3.2 Nominal forms with *-qatigiit*

The affix *-qatigiiC-* (see 3.2.2) used and inflected as a nominalizer on its own usually has a sociative meaning (‘club, association of V-ers’); cf.:

- (62) *irinarsu-qatigiit*
sing-association.of.V-ers
‘choir.’

12.3.3 Nominal forms with *-giit* and *-giiaat*

Corresponding to all verbal converses with *-giitC-* and *-giiaar-* discussed in 3.2.3 are nominal forms in *-giit*, *-giiaat*. Thus *irni-riit* ‘father and son’, and *irni-riiaat* ‘several fathers and their sons’, both from *irniq* ‘son’. Usually the overt stem in such converse pairs refers to the junior/subordinate member; cf. also *nulia-riit* ‘married couple’ from *nuliaq* ‘wife’. As with the verbal forms, the underlying nominal stem usually denotes either a kinship relationship between two humans or a spatial relationship between two things as in *sanili-riiaat* ‘a row of things side by side’ from *saniliq* ‘thing beside’.

13. Etymology of the reciprocal markers

The reciprocal-reflexive pronoun *immiC-* comes from Proto-Eskimo **almig-* containing the relative case form of the 4th person plural possessor marker *-miC-* on a stem probably deriving from **ət-* ‘to be’ plus an l-initial nominalizer, so literally ‘their (own) being’; cognate forms are found in Aleut. There are parallel 2nd and 3rd person forms (2p. **əlpaci*, 3p. **ələŋa*; 1st plural **uvakut* has been reformulated on a different stem).

The affix *-ut(i)-* of the mixed inflectional-derivational reciprocal construction is an original applicative formant (Proto-Eskimo **-utə-*), a function it has in all Eskimo languages and in Aleut as well (it further functions as a reciprocal in all the former, but not in Aleut). For details see Fortescue et al. (1994: 431). In all the languages of the family it has a corresponding nominal form **-un/-utə-* meaning ‘instrument/means for V-ing’ and it may well be that this represents the oldest source of the morpheme.

The etymological sources of the other derivational affixes used reciprocally are:

1. *-qatigiiC-* < **-qan/qatə-* ‘fellow V-er/ companion at V-ing’ + *-giitC-* (as follows);
2. *-giitC-* < nominal plural *-giit*, dual *-giik* (used verbally), itself from **-kə-* ‘have as’ + collective *-it* / dual *-ik* ‘group/set of’ (*-giiaar-* contains a further iterative affix);
3. *-niqqisaat(i)-* < the nominalizer **-nər* + Proto-Inuit **-tqisaq-* ‘do more/most’ + applicative *-ut(i)-*; and finally
4. *-qqaanniut(i)-* < Proto-Inuit **-qqaq-* ‘do first’ + *-niut(i)-*, itself from *-niaq-* ‘try’ + *-ut(i)-*.

Acknowledgments

My thanks go to the late Gaba Thorning and to Christian Berthelsen for their help with the Greenlandic examples.

1. Introduction

1.1 General remarks

This paper considers reciprocals and reflexives in three North-Arawak languages spoken in the region of the Upper Rio Negro: Warekena of Xié, Bare and Baniwa of Içana.¹

Warekena is spoken on Xié river in Brazil by a few dozen old people. It is a dialect of Baniwa of Guainia spoken by c. 200 people in Venezuela. All the speakers of Warekena use *Língua Geral* and Portuguese in their everyday life. Bare is an almost extinct language, formerly spoken in Venezuela and Brazil, around the Casiquaire Channel.

This explains the possible influence of Portuguese and Spanish patterns of reflexives and reciprocals in Warekena and Bare.

Baniwa of Içana is spoken in Brazil and Colombia on the Içana river by around 3,000 people (some Baniwa dialects are also known as Kurripako).

Within North-Arawak, Baniwa of Içana belongs to the same subgroup as Tariana (see Aikhenvald, Ch. 30 in this monograph). The two languages display lexical similarity and significant grammatical differences due to areal diffusion from East-Tucanoan to Tariana (see Aikhenvald 2002). Bare and Warekena are more closely related to each other than they are to Baniwa and Tariana. Warekena belongs to the Baniwa-Yavitero subgroup of North-Arawak (see Aikhenvald 1998). Bare belongs to the Bare-Guinau subgroup (see Aikhenvald 1999a).

These languages belong to three different subgroups of North-Arawak. However, they display a number of typological similarities, some of which are due to common genetic origins and some due to their long-term coexistence in the linguistic area of the Upper Rio Negro, with a certain amount of bilingualism (see Aikhenvald 1999b).

1.2 Typological characteristics

The North-Arawak languages of the region of the Upper Rio Negro are head-marking and predominantly suffixing, with a few prefixes. They tend to display a split-ergative pattern. Cross-referencing prefixes are used to mark subjects of transitive and intransitive active verbs ($A=S_a$). Cross-referencing enclitics mark direct objects and subjects of intransitive stative verbs ($O=S_o$; see Aikhenvald 1995b). Verbs fall into transitive (which

1. Materials on Baniwa of Içana were collected in 1991–1994, during three field trips. My materials contain about 350 pp. of narratives (Siuci and Hohòdene dialects).

The discussion of Bare is based on fieldwork (July–August 1991) with the last fluent speaker of Bare in Brazil, late Candelário da Silva multilingual in Bare, *Língua Geral*, Spanish and Portuguese. His Bare displayed symptoms of language attrition, which resulted in a heavy impact of syntactic influence of Spanish and Portuguese. My data contain around 150 pp. of texts.

The discussion of Warekena is based on the materials collected during three field trips to the Upper Rio Negro region in 1991, 1994 and 1995. My corpus includes approximately 200 pp. of texts.

divide into obligatorily transitive, A=S and S=O ambitransitives), intransitive active (S_a) and intransitive stative (S_o). Case-marking is not used for core arguments.

1.3 Overview

North-Arawak languages of the Upper Rio Negro do not have reflexive or reciprocal pronominal of any sort. There is no special sociative marking. All three languages use an etymologically different verbal suffix to mark reciprocals and reflexives: Warekena *-na*, Bare *-tini*, Baniwa *-wa*. These suffixes more often occur with obligatorily transitive verbs; when they occur with intransitive ones they have a different meaning. These suffixes are also used to mark impersonal passives. This is the only valency reducing operation in North-Arawak languages of the Upper Rio Negro.²

The typological patterns of polysemy of reciprocal and reflexive suffixes are very similar, which may be due both to genetically inherited patterns and areal diffusion between genetically related languages spoken in the same linguistic area (see Section 1.4).

1.4 Reciprocals and reflexives in Arawak languages

About half of Amazonian languages have some sort of intransitivizing derivation, usually just one (Dixon & Aikhenvald 1999: 1–22). This derivation is typically used for agentless passives, reflexives and reciprocals. Such is the case in Carib languages (Derbyshire 1999: 23–64), Ika (isolate from Colombia: Frank 1990), Wari (Chapacuran: Everett & Kern 1997), and the North Arawak languages discussed in the previous sections.

However, the majority of Arawak languages mark reflexives and reciprocals differently. Reciprocal meanings are expressed with a verbal derivation. Reflexive markers are often used as general intransitivizers on verbs of motion (Campa, Amuesha, Achagua); in some languages they can acquire a meaning of agentless passive (Waura). Reflexive pronouns are rare – in agreement with predominantly head-marking morphology of Arawak languages (see Aikhenvald 1999a).

Thus, the pattern encountered in the Arawak languages of the Upper Rio Negro is quite common for Amazonian languages, but unusual for languages of the Arawak family.

Intransitivizing verbal derivations with a reflexive, reciprocal and impersonal passive meaning in Baniwa, Bare and Warekena are very similar typologically, in spite of their different etymology. Possibly, they developed on the level of individual subgroups, as the result of an areal diffusion between languages spoken in the linguistic area of the Upper Rio Negro.

Intransitivizing derivations in Baniwa and Bare also have other meanings. For one thing, Baniwa *-kawa* and Bare *-tini* can mark intensive action, or coreferentiality of the subject of a subordinate predicate to the main predicate, respectively, if used with intransitive verbs.

2. The only valency increasing operation is causative. Morphological causatives (marked with *-sa* in Bare, *-ta* in Warekena and *-ita* in Baniwa) are typically formed on intransitive verbs. Periphrastic causatives are used with transitive verbs.

sitive verbs. *-Tini* derivation in Bare can also have a few other meanings, e.g. sociative; it is also sometimes used to suppress the identity of the agent (A/S_a constituent). These divergencies may be accounted for by the fact that these languages belong to different subgroups within North Arawak.

2. Warekena of Xié

2.1 Reciprocals

-Na ‘reflexive-reciprocal’ in Warekena has a reciprocal meaning with a plural subject. (1) illustrates this meaning of the *-na* derivation.

- (1) *ni-wiyu-yua ni-mai-na-wa ni-yutfia-na-wa payalu ifi ni-ma-li.*
 3PL-die-RED 3PL-quarrel-REC-NACC 3PL-kill-REC-NACC all what 3PL-do-RELTR
 ‘They (non-evangelicals) faint of drunkenness, they quarrel with each other and kill each other, this is all they do.’

A transitive verb *-yutfia* ‘to kill’ is illustrated in (2).

- (2) *nu-yutfia pifiwa mawaya.*
 1SG-kill 2SG.from snake
 ‘I shall kill the snake from you.’

More examples of reciprocal meaning of *-na* derivation are given in (3) and (4). All verbs with reciprocal meanings in Warekena are *-na* derivations.

- (3) *ni-mai-na-wa.*
 3PL-fight-REC-NACC
 ‘They fought each other.’
- (4) *ni-we-na-wa.*
 3PL-leave-REC-NACC
 ‘They left each other.’

2.2 Reflexives

With a non-plural subject, *-na* derivation has reflexive meaning, illustrated with *nu-teluka-na-wa* ‘I cut myself’ in (5). The transitive use of *-teluka* ‘to cut’ is shown in (6).

- (5) *nu-teluka-na-wa kutfiyu iyu.*
 1SG-cut-REFL-NACC knife with
 ‘I cut myself with a knife.’
- (6) *piya-hā nu-yalitua pi-fa pi-teluka a:tapi.*
 YOU-PAUS 1SG-brother 2SG-go 2SG-cut tree
 ‘You, brother, go and cut a tree (to make a smoking grid, to smoke our stock).’

(7) illustrates the transitive use of *-alaka* ‘to put on (clothes)’. (8) illustrates the reflexive intransitive use of the same verb with the suffix *-na*: *alaka-na* ‘dress oneself’:

- (7) *ni-alaka ni-tsiluɬa-ne ni-kamitsa-ne ne-palu ni-tsume-ne*
 3PL-put.on 3PL-trousers-POSS 3PL-shirt-POSS 3PL.eat-PURP 3PL-food-POSS
ni-tsume-ne.
 3PL-food-POSS
 ‘They put on their trousers and shirts, to eat their food.’
- (8) *wa: tsuludawa wa alake-na-mia-wa.*
 then soldier then get.dressed-REFL-PFV-NACC
 ‘Then the soldier got dressed.’

There are a few cases of the use of *-na-* ‘reflexive’ with intransitive S_a verbs which are probably influenced by Portuguese, as in (9).

- (9) *neda wafi nu-escape-na-wa ifiwa.*
 1SG.see jaguar 1SG-escape-REFL-NACC from
 ‘I saw a jaguar and escaped (lit. ‘escaped myself’; cf. Portuguese: *me escapei*) from him.’

Reflexive *-na* derivation can be formed on a causative of an intransitive verb:

- (10) *ya-mia-tse-pia daba kunehu pipi-nia-ta-na-mia-wa ifiwa.*
 NEG-PFV-know-NEG where rabbit lost-INCH-CAUS-REFL-PFV-NACC from
 ‘The rabbit did not know where to hide himself (lit. ‘make himself get lost’) from him (jaguar).’

A *-na* derivation can sometimes have a reflexive meaning even if the subject is plural, as in (11). Then, reflexive and reciprocal meanings can only be distinguished by the context. Without a reciprocal marker, *-bayata* is a regular transitive verb.

- (11) *ale-hē ni-bayata-na-wa-mia-hā.*
 SO-PAUS 3PL-spread-REFL-NACC-PFV-PAUS
 ‘So they (the turtles) spread themselves (over the road) (they went away).’

Reflexive derivation does not apply to S=O ambitransitives. The verb *-eta* ‘to burn’ is an ambitransitive. (12a) illustrates its transitive use, and (12b) its intransitive use. Note that Ø prefix is used to cross-reference 3.SG.NF A/S_a in Warekena.

- (12) a. *nata-mia-wa napi.*
 1SG.burn-PFV-NACC 1SG.hand
 ‘I burnt my hand.’
 b. *eta-mia-wa pani-fi.*
 burn-PFV-NACC house-NPOSS
 ‘The house burnt.’

If the O is omitted, the construction is understood as reflexive by default; cf.:

- c. *nata-mia-wa payalu.*
 1SG.burn-PFV-NACC all
 ‘I burnt myself all.’

Reflexive derivation in Warekena is not used to emphasize the identity of the A constituent. The instrumental-comitative adposition *ima* which cross-references A, is used for this purpose, as illustrated in (13):

- (13) *pi-wakwa-na pima.*
 2SG-untie-1SG 2SG.with.
 ‘Untie me yourself’ (lit. ‘with yourself’) (said the jaguar to the monkey).’

2.3 Agentless passives

-*Na* derivations can be used as agentless passives, as illustrated below. In (14) *-na* cannot be understood as reflexive because it is known from the previous text that the jaguar did not tie himself to the tree (it was the smart rabbit who did it).

- (14) *wa ja-wa puatfi mutfita-mia-hā a:ta wali alita-na-wa.*
 then go-NACC monkey bite-PFV-PAUS vine where tie-REFL-NACC
 ‘Then the monkey went and bit the vine where he (the jaguar) was tied.’

In (15), the jaguar could not have untied himself, since it is known from the previous stretch of the text that it was a young monkey who untied him.

- (15) *mutfita puatfi ate balika-mia-wa a:ta wakwe-na-mia-wa*
 bite monkey until tear-PFV-NACC vine untie-REFL-PERFS-NACC
wakwe-na-mia-wa.
 untie-REFL-PERFS-NACC
 ‘The monkey bit (the vine) until it tore, and he (the jaguar) was untied, untied.’

The agent cannot be expressed, as illustrated by (16) and (17) (elicited).

- (16) *wafi alite-na-wa minafi atapi.*
 jaguar tie-REFL-NACC on tree
 ‘The jaguar was tied to the tree.’
- (17) **wafi alite-na-wa minafi atapi ima kunehu.*
 jaguar tie-REFL-NACC on tree with rabbit
 ‘?The jaguar was tied to the tree by the rabbit.’

Agentless passive is used very rarely. It may be the result of an influence of Portuguese *se*.

3. Bare

3.1 Reciprocals

The marker *-tini* ‘reflexive-reciprocal’ in Bare (see Aikhenvald 1995a) has a reciprocal meaning if the subject is plural. The reciprocal meaning of *-tini* is illustrated with (18). The transitive use of *-kuyud’a* ‘to embrace’ is illustrated in (19).

- (18) *nu-tfitfi-ka kuhu u-tfitfi-ka nū wa-kuyud’a-tini.*
 1SG-kiss-SEQ she 3SG.F-kiss-SEQ I 1PL-embrace-REC
 ‘I kissed her (the woman), she kissed me, we embraced each other.’
- (19) *nu-kuyud’ā kuhu.*
 1SG-kiss/hug.PFV she
 ‘I embraced her.’

3.2 Reflexives

-Tini ‘reflexive-reciprocal’ has a reflexive meaning when the subject is singular. Its reflexive meaning is illustrated with (20). The transitive use of the verb ‘to cover’ is shown in (21).

(20) *nu-bale-d’a-tini.*

1SG-cover-INCH-REFL

‘I covered myself.’

(21) *nu-bale-d’ā kuhū nu-kaku-λe abi.*

1SG-cover-INCH.PFV he 1SG-fishing.net-POSS with

‘I covered him with my fishing-net.’

3.3 Other meanings of *-tini* derivation

-Tini derivation has a number of other meanings. It has a spatial reciprocal meaning with transitive and intransitive verbs (Section 3.3.1). Other meanings considered here, i.e. subject coreferentiality, full involvement of the subject and unspecified subject, are confined to intransitive verbs. All these uses are rather rare in my corpus. Some of them may be due to calques from Portuguese, or Spanish.

3.3.1 Spatial reciprocal meaning

The spatial reciprocal meaning of the *-tini* derivation with a transitive verb is illustrated in (22), and with an intransitive one in (24). The transitive use of *-wabukuda* ‘to join, collect’ is illustrated in (23). The verb *-ituka* ‘to return’ is used intransitively in (25).

(22) *kuļimau-nu me-wabukuda-tini me-nika-waka kwati.*

turtle-PL 3PL-join-REC 3PL-eat-PURP jaguar

‘Turtles joined each other (came together) to eat the jaguar.’

(23) *wamisi hiwiña kameni-ute ikha wa-wabukuda idi wa-nika ted’a.*

1PL.smoked 3SG.NF.fall fire-DIR 3SG.NF.burn 1PL-join then 1PL-eat that

‘Our smoked food fell into the fire, it burnt. We joined (it), then we ate (all) that.’

(24) *hwetuka-tini-ka wa-bahada-tini.*

1PL.return-REC-DECL 1PL-share-REC

‘We will return to each other and divide (the found money) between ourselves.’

(25) *nu-dirikā kuhū hetuka ihiwa-na.*

1SG-hit he 3SG.NF.return 3SG.NF.GO-PFV

‘I hit him (the dog), he went away.’

3.3.2 Subject coreferentiality

-Tini derivation can be formed on intransitive verbs. Then it may express coreferentiality of the subject of a subordinate predicate to that of the main predicate. Such an example is (26). *Helu-da* in (26) is an intransitive verb, and so *helu-da-tini* cannot mean ‘make himself dry’. These examples are very rare.

- (26) *ihīwa i-pīli-li-ka helu-da-tini-waka.*
 3SG.NF.GO 3SG.NF-FOLL-RED-TH dry-INCH-REC-PURP
 'He (the dog) went to roll (in the sand) for him to become dry.'

3.3.3 Full involvement of subject

In the following examples the *-tini* derivation means that the subject fully undergoes the action/state expressed by the verb. This is illustrated with (27) and (28). Intransitive uses of *kahawi* 'to be painful' and *-khuna* 'to excrete' are shown in (29) and (30).

- (27) *nu-kahawi-d'a-tini.*
 1SG-pain-INCH-REFL
 'I feel pain all over myself, I am complaining about pain.'
- (28) *tantu nu-kiate-d'a-ka kasi nu-khuna-tinyaka.*
 so 1SG-fear-INCH-DECL almost 1SG-excrete-REFL.DECL
 'I was so scared that I almost excreted on myself.' (Port. *quase me cageui*)
- (29) *tekiyabite kahawi nu-dusia.*
 this.over pain 1SG-head
 'This is why I had a headache.' (lit. 'my head was painful.')
- (30) *nu-khunā.*
 1SG-excrete.PFV
 'I excreted.'

3.3.4 Unspecified subject

The marker *-tini* is also sometimes used when the subject is unspecified, as in (31). Examples of this sort are rare.

- (31) *lansa id'uali hamuduka-tini-waka.*
 spear good INDF.kill-REFL-PURP
 'Spear is good for fighting.'

Examples like (31) may be considered the result of the influence of Spanish or Portuguese *se* 'reflexive-reciprocal enclitic', which is frequently used in this meaning. (32) is the Portuguese equivalent of (31) given by the speaker:

- (32) *a lança é boa para se matar.*
 ART.SG.F spear be.PRES.3SG good.SG.F for REFL kill
 'A spear is good for fighting.' (lit. 'for killing each other.')

The use of *-tini* with a number of verbs could result from Portuguese/Spanish influence. *Nu-takasa-tini* (1SG-cheat-REFL) 'I was mistaken' looks like a calque of Portuguese *eu me enganei* (lit. 'I cheated myself') 'I was mistaken'; *nu-karakasa-tini* (1SG-stumble-REFL) 'I stumbled by hitting myself (on something)'.

The *-tini* derivation is not used to emphasize the identity of agent. Then, Bare uses the emphatic particle *-ki*.

4. Baniwa of Içana

Baniwa of Içana uses *-kawa* ‘intransitivizer’ for both reciprocal and reflexive meanings (also see Taylor 1991:47).

4.1 Reciprocals

When *-kawa* is used on a transitive verb with a plural subject, the verb acquires a reciprocal meaning, as in (33). The verb can optionally take a comitative constituent (‘with their enemies’ in (33)). The verb *-inua* ‘to kill’ is used transitively in (34).

- (33) *na-inua-kawa hnepūda i-apidza.*
 3PL-kill-REC 3PL.enemy INDF-with
 ‘They fought (lit. ‘killed each other’) with their enemies.’

- (34) *na-inua dzawi.*
 3PL-kill jaguar
 ‘They killed a jaguar.’

4.2 Reflexives

When *-kawa* is used on a transitive verb with a singular subject, the verb acquires a reflexive meaning. Reflexive use of *-takha* ‘to cut’ is shown in (35). Its transitive use is illustrated in (36).

- (35) *kwame-kha pi-kaphiwida n̄ame nu-takha-kawa-ka.*
 how-INT 2SG-finger no 1SG-cut-REFL-DECL
 ‘What is there with your finger? (asked the mother). Nothing, I cut myself’ (answered the daughter).’

- (36) *nu-takha nu-kapi.*
 1SG-cut 1SG-hand
 ‘I cut my hand.’

If *-kawa* is used on a transitive verb which can also be used intransitively (as a A=S ambitransitive verb), it still expresses a reflexive meaning with a singular subject, see (37). The verb *-kapuku* ‘to turn’ is used transitively in (38), and intransitively in (39).

- (37) *dzama kadzu-pida li-kapuku-kawa.*
 two SO-RPRT 3SG.NF-turn-REFL
 ‘He (the god) turned around (lit. ‘turned himself’) twice.’

- (38) *nu-kapuku ita.*
 1SG-turn canoe
 ‘I turned the canoe.’

- (39) *ita li-kapuku.*
 canoe 3SG.NF-turn
 ‘The canoe turned.’

4.3 Agentless passive

When used with a transitive verb, *-kawa* derivation may have the meaning of an agentless passive. Example (40) illustrates this use of the verb *-phiuta* ‘to trap’, and of *-taita* ‘to finish’. The verb *-phiuta* is used transitively in (41).

- (40) *kamena inemi li-phiuta-kawa li-taita-kawa.*
 then devil 3SG.NF-trap-INTR 3SG.NF-finish-PASS
 ‘Then the devil was trapped, he was finished.’

- (41) *nu-phiuta dzawi.*
 1SG-trap jaguar
 ‘I trapped a jaguar.’

4.4 Other uses of *-kawa*: Intensive action

The marker *-kawa* can be used to mark intensive action, both with transitive and with intransitive verbs. (42) and (43) follow each other in the origin myth. (42) contains the transitive predicate *-hmaita* ‘to burn’ and (43) contains an intransitivized *-hmaita-kawa* ‘to burn strongly’.

- (42) *na-hmaita-pida heku pamudzua.*
 3.PL-burn-RPRT wood middle
 ‘They burnt the wood in the middle.’

- (43) *na: na-kapuku, na-dana li-hmaita-kawa tidze.*
 3PL.go 3PL-go.around, 3PL-around 3SG.NF-burn-INTS fire
 ‘They went around, around them fire was burning.’

-Kawa is used with an intransitive verb *-eku* ‘to run’: *-eku-kawa* ‘to run around (a lot)’ in (44):

- (44) *kame-tsa-pide-ka li-eku-kawa-ka kamuy rii li-fwa-ta.*
 then-EMPH-RPRT-DECL 3SG.NF-run-INTS-DECL sun rii! 3SG.NF-stay-again
 ‘Then the sun started running around, rii! it stopped.’

Unlike To’aba’ita, where, according to Lichtenberk (1991; also Lichtenberk, Ch. 36), the depatientive function of the morpheme *kwai-* developed from its reciprocal function, there are no reasons to believe that it happened the same way in Baniwa. The suffix *-kawa* is polysemous. In this language, there is no reason for considering any of its meanings as primary, or secondary.

Acknowledgments

I am extremely grateful to my teachers of the indigenous languages of the Amazon – Humberto Baltazar and Pedro Ângelo Tomas (Warekena), late Candelário da Silva (Bare), late Marcília Rodrigues, Afonso, Albino and João Fontes, Celestino da Silva and Cecilia and

Laureano da Silva (Baniwa). I owe thanks to R.M.W. Dixon, Elias and Lenita Coelho, and Silvana and Valteir Martins for useful discussion and help.

1. Introductory notes

1.1 Djaru and other Australian languages

At the time of the arrival of Europeans, there were approximately 250 Aboriginal languages in Australia. However, their number has since decreased drastically, and there are only around 20 really viable languages left. (Dixon & Blake 1991:27; Thieberger & McGregor 1994:xi–xii). “The languages of the Australian mainland appear to be genetically related”, but “it has not proved possible to establish a genetic link with any language outside Australia” (Dixon & Blake 1991:3).

Djaru (*/jaru/*) is spoken in and around Halls Creek, Kimberley, Western Australia. It has perhaps about 200 fluent speakers, including a fair number of children. The closest relatives of Djaru are Wanyjirra and Gardangarurru. As of 1995, Wanyjirra has probably less than 20 speakers, while Gardangarurru has no speakers left.

Publications on Djaru include Tsunoda (1981), for which the principal consultant was the late Mr. Robert Moses. During my 1995 field trip additional information was provided by the late Mr. Jack Jugayarri (*/jukayarri/*), and also by Mrs. Danba (*/tanpa/*) Moses and Mrs. Lily Banks. Both the late Mr. Robert Moses and the late Mr. Jack Jugayarri were speakers of the western dialect, and most of the examples given below are from this dialect. (In the following, I shall omit the titles, e.g. “Mr.” when I mention people’s names.)

The Djaru phoneme inventory, written in a practical orthography, contains twenty one phonemes: /p, t, rt, j, k, m, n, rn, ny, ng, l, rl, ly, rr, r, y, w, i, a, u, aa/.

1.2 Overview

Djaru has enclitic pronouns as well as free pronouns. The enclitic pronouns have the following four cases: nominative (for the subject), accusative (for the direct object), dative (for the indirect object/recipient, possessor, beneficiary, and so on) and general oblique (for “locative”, “allative” and “ablative” meanings/functions).¹

Enclitic pronouns may cross-reference free NPs, e.g. (1a), (1c), (2), although they may – and in natural speech often do – occur without cross-referenced NPs, e.g. (13b), (14b), (35), (43). In other words, they are agreement markers. Henceforth, I shall often refer to the nominative forms as “subject agreement markers” (“SB”), to the accusative forms as “direct object agreement markers” (“DO”), to the dative forms as “indirect object agreement markers” (“IO”), and to the oblique forms as “oblique agreement markers” (“OBL”).²

If any non-subject agreement marker is coreferential with the subject agreement marker, it is obligatorily replaced by the reciprocal-reflexive enclitic pronoun *-nyunu* (or *-nyanu*) (henceforth, “REC/REFL pronoun” or “REC/REFL marker” or simply “REC/REFL”). Thus, compare the following examples.

- (1) a. *ngaju-ngku nga=rna=ngku nyuntu-Ø nyanya.*
 1SG-ERG C=1SG.SB=2SG.DO 2SG-ABS see/look.PAST
 ‘I looked at you.’ (TT)³
- b. **ngali-ngku nga=li=ngaliny ngali-Ø nyanya.*
 1DU.INC-ERG C=1DU.INC.SB=1DU.INC.DO 1DU.INC-ABS see.PAST
 (intended meaning:) ‘We two looked at us two.’ (TT)
- c. *ngali-ngku nga=li=nyunu ngali-Ø nyanya.*
 1DU.INC-ERG C=1DU.INC.SB=REC/REFL 1DU.INC-ABS see.PAST
 i. ‘We two looked at *each other*’, or
 ii. ‘We two looked at *ourselves*.’ (TT)

The REC/REFL pronoun indicates the coreferentiality with the subject, and not with any other member of the sentence. That is, Djaru reciprocal-reflexive constructions are subject-oriented.

1. The term ‘general oblique’ is from Mary Laughren (p.c.), via Lee Cataldi. Hereafter, I shall simply refer to it as ‘oblique’.

2. In this paper, I use the terms “subject”, “direct object”, “indirect object” and “oblique” in a loose sense. An attempt at a rigid identification of grammatical relations in Djaru is in Tsunoda (1981:106–24). Identification of the subject and the direct object (cross-referenced respectively by the nominative and the accusative enclitic pronouns) is reasonably straightforward, but this is not necessarily true of other grammatical relations. For example, I have found no syntactic evidence to set up the indirect object as distinct from other uses of the dative, such as “possessor” and “beneficiary”. Nonetheless, I use these terms – albeit not in a rigid sense – largely in the hope that this will facilitate comparison with other papers in the volume.

3. “TT” indicates those examples which have been made up by me or those words which have been added by me but which have not been checked with a Djaru speaker.

The diathesis types involved in Djaru reciprocal-reflexive constructions may be classified as follows (partly on morphosyntactic grounds, but largely on semantic grounds): “canonical” type, “indirect”/recipient type, “possessive”/possessor type, benefactive type, and oblique type.

Formation of reciprocal-reflexive constructions involves enclitic pronouns only, and it does not affect free pronouns or any other free NPs. The only change that occurs is for the REC/REFL pronoun to replace the non-subject agreement marker that is coreferential with the subject agreement marker. In other respects, there is no change. That is, there is no change, for instance, in (a) verb morphology, and (b) (regarding both clitic pronouns and free NPs) transitivity of the clause in terms of (i) valency and (ii) case-marking. Note, for instance, that in (1c) the free pronoun for the subject remains in the ergative and also that the free pronoun for the direct object can be retained.

As noted above, Djaru reciprocal-reflexive constructions are subject-oriented. It does not seem possible to have an object-oriented reciprocal involving causativization such as ‘he made them hit each other’.

The central meanings of the REC/REFL pronoun are reflexive and reciprocal. They can also express a few other related meanings. There is no other way to express reciprocity or reflexivity. Thus there is no verbal suffix for reciprocal or reflexive. Nor are there any valency-changing markers, such as causative, anticausative, passive, or antipassive.

2. Grammatical notes

In the following, I shall deal with only those aspects of Djaru grammar which are pertinent to the ensuing discussions. For further details, see Tsunoda (1981).

2.1 Morphology

Djaru is almost entirely suffixing. It is also largely agglutinating, although there are elements of fusion as well. In the examples, morpheme boundaries are indicated by hyphens, and equation signs are used for enclitics. In instances of fusion, glosses are given as, for instance, =*rna* ‘1.SG.SB’, without indicating morpheme boundaries.

There are a few linking morphemes (glossed ‘LINK’). They merely occur between morphemes without expressing any meaning; see (11c), (49), (51).

There are occasionally instances of homonymy of morphemes. Thus, *-ngku* may be one of the ergative case suffixes (cf. (1a)), the enclitic pronoun ‘2SG.DO’ or ‘2SG.IO’ (see (1a)), or a linking morpheme (cf. (11c)).

2.2 Parts of speech

The following parts of speech can be set up for Djaru: nouns, free pronouns, adverbs, preverbs, verbs, conjunctions, carriers, and interjections. Carriers carry enclitic pronouns. In

addition to these parts of speech, there are three types of enclitics: pronominal, directional and modal/discourse. The meaning/function of most of the modal/discourse enclitics is not quite clear, and they will be simply glossed ‘CLT’, e.g. (14b), (26b), (28b).

2.3 Verbs and preverbs

Verbs inflect for tense, aspect, mood and the like, but not for person or number.

There are only forty odd verb roots, but this is compensated for by the existence of numerous compound verbs, each of which (roughly speaking) consists of a verb root and preverb(s). An example:

- (2) *ngaju-Ø nga=rna purja yan-i.*
 1SG-ABS C=1SG.SB run-PAST
 ‘I ran.’ (TT)

The compound verb *purja yan-i* consists of the preverb *purja* ‘running’ and the verb root *yan-* ‘go’, which jointly mean ‘to run’. As shown in (2), I provide just one gloss for the entire compound verb, rather than separate glosses for individual words.

There are also compound verbs which involve a verb and a participle, rather than a preverb. Examples are in (43) and (51).

2.4 Nouns and pronouns

Nouns (which include “adjectives” and “demonstratives”) lack number distinction. Both free and enclitic pronouns (except for the REC/REFL pronoun) distinguish three numbers (singular, dual, plural), and they also possess an inclusive-exclusive distinction in the dual and the plural of the first person. The enclitic pronouns include the REC/REFL pronoun =*nyunu* (used in all dialects) and =*nyanu* (used in Sturt Creek and Gordon Downs dialects only). (For examples of =*nyanu*, see (36) and (53). See also Section 11 on the possible etymology of =*nyanu*.)

In terms of case-marking patterns employed, the nouns and pronouns can be, very roughly, classified as follows (see Table 1):

- (a) nouns and free pronouns, exemplified by ‘water’;
- (b) enclitic pronoun ‘3SG’;
- (c) enclitic pronoun ‘reciprocal-reflexive’, and;
- (d) other enclitic pronouns, exemplified by ‘1SG’.

The four dots (...) in Table 1 mean ‘non-existent’.

Note that, roughly speaking, nouns and free pronouns have an ergative-absolutive pattern, while enclitic pronouns have a nominative-accusative pattern. As noted in 1.2, I shall use labels such as “subject agreement marker”, etc., rather than case labels such as “nominative” – in the hope that this will facilitate comparison with other papers in this volume.

Table 1. Case-marking patterns

	Nouns, free pronouns 'water'			Clitic pronouns		
				1sg	3sg	REC/REFL
transitive subject	ERG	<i>ngapa-ngku</i>	NON/SBJ	= <i>rna</i>	= \emptyset
intransitive subject	ABS	<i>ngapa-\emptyset</i>	NOM/SBJ	= <i>rna</i>	= \emptyset
direct object	ABS	<i>ngapa-\emptyset</i>	ACC/DO	= <i>yi</i>	= \emptyset	= <i>nyunu</i>
	DAT	<i>ngapa-wu</i>	DAT/IO	= <i>yi</i>	= <i>la</i>	= <i>nyunu</i>
	LOC	<i>ngapa-ngka</i>	OBL	= <i>yila</i>	= <i>nyanta</i>	= <i>nyunu(ngkula)</i>
	ALL	<i>ngapa-ngkawu</i>	OBL	= <i>yila</i>	= <i>nyanta</i>	= <i>nyunu(ngkula)</i>
	ABL	<i>ngapa-ngu</i>	OBL	= <i>yila</i>	= <i>nyanta</i>	= <i>nyunu(ngkula)</i>
	INST	<i>ngapa-ngku</i>

Table 2. Subject forms of clitic pronouns

	Singular	Dual	Plural
1st person	= <i>rna</i>	= <i>li</i>	= <i>liwa</i> (inclusive)
		= <i>liyarra</i>	= <i>rnalu</i> (exclusive)
2nd person	= <i>n</i>	= <i>npula</i>	= <i>nta</i>
3rd person	= \emptyset	= <i>wula</i>	= <i>lu</i>

2.5 Enclitic pronouns

2.5.1 General notes

As Table 1 shows, the subject and direct object forms of the enclitic pronoun '3sg' are phonologically zero. It is difficult to distinguish between a zero clitic pronoun and the absence of any clitic pronoun. In the examples below, the zero pronoun will be omitted where it seems irrelevant to the discussion.

The REC/REFL pronoun lacks a subject form; it always indicates coreferentiality with the subject. It has only two forms: one for the accusative/direct object and the dative/indirect object, and the other for the oblique. The former, simple form is often used in place of the longer, oblique form, cf. (12b), (28b), (32b). It is in view of this that the element =*ngkula* is parenthesized in Table 1.

When more than one enclitic pronouns occur together, their relative order is determined by certain principles (for details see Tsunoda 1981: 131–2). The REC/REFL pronoun is always and immediately preceded by the subject marker. All the subject forms of enclitic pronouns are shown in Table 2.

The host for enclitic pronouns is generally *nga*, the carrier morpheme for declarative sentences.

Enclitic pronouns of Djaru show a striking similarity (partial or total) to free pronouns of Djaru and/or some other Australian languages (Tsunoda 1981: 129). Etymologically, they are perhaps cliticised pronouns that were once free (see Hale 1973: 340).

Table 3. Clause types

	Free NPs	Clitic pronouns	Examples of verbs	Examples of sentences
intransitive				
one-place	ABS	SBJ	'to go', 'to run'	(2)
two-place	ABS-DAT	SBJ-IO	'to talk about'	(24a)
	ABS-LOC	SBJ-OBL	'to talk to/with'	
transitive				
two-place	ERG-DAT	SBJ-IO	'to search', 'await'	(10)
	ERG-ABS	SBJ-DO	'to hit', 'to see'	(1a), (4a)
three-place	ERG-ABS-DAT	SBJ-DO, SBJ-IO	'to give', 'ask for'	(25a), (26a)
	ERG-ABS-LOC	SBJ-OBL	'to show', 'to tell'	(27a)
	ERG-ABS-ALL	SBJ-OBL	'to send to'	(28a)

2.5.2 *Cross-reference (1): Correspondence with free NPs*

Enclitic pronouns are agreement markers, or, to be more precise, cross-reference markers (except that the REC/REFL pronoun does not cross-reference any NP; it indicates coreferentiality with the subject). They indicate number and person (and also inclusiveness/exclusiveness in the case of 1st person non-singulars) and also, roughly speaking, the case and grammatical function of the cross-referenced NPs, as shown in Table 1.

2.5.3 *Cross-reference (2): Clause types*

Non-derived clauses in Djaru, i.e. those other than reciprocal-reflexive clauses, can be classified as shown in Table 3. The table shows the correspondence between free NPs and enclitic pronouns in terms of the case frames employed. It does not exhaust the clause types encountered, but they are sufficient for our purpose. Also, it must be admitted that valency of verbs has been determined here somewhat arbitrarily. The case frames listed do not imply any rigid ordering of the free NPs; the latter's relative order is not fixed. For a discussion of word order in Djaru, see Tsunoda (1989).

2.6 Expression of possession

Possession in Djaru is of two types: (a) alienable possession, including that of languages and kinsmen, and (b) inalienable possession, including that of body parts, parts of inanimate objects, body secretions, footprints, shadows, names, and possibly dreams. These two types will be dealt with below.

2.6.1 *Alienable possession*

Alienable possession can be expressed by the dative, by the ablative-1 (of free pronouns only), and so on. The dative case can also indicate a possessor, a beneficiary, and a purpose in a general sense (e.g. 'in order to get'). Thus, the dative can denote either a possessor or a beneficiary in:

- (3) *ngaju-ngku nga=rna=la mangarri-Ø kamparn-i ngama-yi-wu.*
 1SG-ERG C=1SG.SB=3SG.IO food-ABS COOK-PAST mother-KIN-DAT
 i. 'I cooked [my] mother's food', or ii. 'I cooked food for [my] mother.'

2.6.2 *Inalienable possession*

Inalienable possession is generally expressed in one of the following two ways:

(a) by apposition: the possessor and the possessed are in apposition, occurring in the same case, cf. (4a), (5a);

(b) by non-apposition: for instance, the possessor is a direct object (in the absolutive) and the possessed is in the locative, as in (4b), or the ablative, as in (5b).

Thus, compare:

- (4) a. *ngaju-ngku nga=rna=Ø mawun-Ø langka-Ø pung-an.*
 1SG-ERG C=1SG.SB=3SG.DO man-ABS head-ABS hit-PRES
 'I hit a man's head.'
- b. *ngaju-ngku nga=rna=Ø mawun-Ø pung-an langka-ka.*
 1SG-ERG C=1SG.SB=3SG.DO man-ABS hit-PRES head-LOC
 'I hit a man on the head.'
- (5) a. *ngaju-ngku nga=rna=Ø jaji-Ø narra-Ø lan-i.*
 1SG-ERG C=1SG.SB=3.SG.DO kangaroo-ABS back-ABS spear-PAST
 'I speared a kangaroo's back.'
- b. *ngaju-ngku nga=rna=Ø jaji-Ø lan -i narra-ngu.*
 1SG-ERG C=1SG.SB=3SG.DO kangaroo-ABS spear-PAST back-ABL
 'I speared a kangaroo from the back.'

(I have attempted to show the possible semantic difference in these pairs of examples by means of the English translations. But this is only tentative.)

3. Formation of reciprocal-reflexive constructions

3.1 Marking in clitic pronouns only

The formation of reciprocal-reflexive constructions involves enclitic pronouns only and does not affect free NPs. Thus, free pronouns can be retained in reciprocal-reflexive constructions – even when a given free pronoun is coreferential with the subject, e.g. the direct object in (1c), (7c). Also, the case-marking of free NPs is not affected. For instance, a transitive subject remains ergative, as in (1c), (7c). This applies even when the direct object is elliptical, cf. (49).

3.2 Reflexive and reciprocal meanings

The central meanings of the REC/REFL pronoun are reciprocal and reflexive, and it has a few related meanings. There are eleven subject markers (see Table 2). If the subject is

singular, the meaning is always reflexive, as in (6a, b, c). If the subject is dual or plural, the meaning can be either reflexive or reciprocal, cf. (6d, e):

- (6) a. *nga=rna=nyunu parr winya.*
 C=1SG.SB=REC/REFL paint.PAST
 'I painted myself.' (TT)
- b. *nga=n=nyunu parr winya.*
 C=2SG.SB=REC/REFL paint.PAST
 'You (SG) painted yourself.' (TT)
- c. *nga=Ø=nyunu parr winya.*
 C=3SG.SB=REC/REFL paint.PAST
 'He/She painted himself/herself.' (TT)
- d. *nga=li=nyunu parr winya.*
 C=1DU.INC.SB=REC/REFL paint.PAST
 i. 'We two painted *ourselves*,' or
 ii. 'We two painted *each other*.' (TT)
- e. *nga=lu=nyunu parr winya.*
 C=3PL.SB=REC/REFL paint.PAST
 i. 'They painted *themselves*,' or
 ii. 'They painted *one another*.' (TT)

3.3 Oblique case

The oblique case, =*nyunungkula*, cross-references the locative, the allative, or the ablative of free NPs. As was mentioned in 2.5.1 in connection with Table 1, often, though not always, the simple form, =*nyunu* (which otherwise functions as an direct object agreement marker or as an indirect object agreement marker) is used in place of the longer, oblique form.

We shall now look at details of reciprocal-reflexive constructions. We shall look at those with a reflexive meaning, followed by those with a reciprocal meaning and those with related meanings, such as 'partial coreferentiality' and 'sociative'.

The classifications of constructions with a reflexive meaning and also that of those with a reciprocal meaning are semantic, rather than morphosyntactic, and they do not accurately reflect the morphosyntactic facts of Djaru. However, these classifications have been recommended by the editor of this volume and will facilitate comparison with other papers in the volume.

4. Reflexives

4.1 The reflexive meaning proper

Consider the following three sentences:

- (7) a. *ngaju-ngku nga=rna=yanu mawun-Ø parr wung-an.*
 1SG-ERG C=1SG.SB=3PL.DO man-ABS paint-PRES
 'I paint the men.' (TT)

- b. **ngaju-ngku nga=rna=yi ngaju-Ø parr wung-an.*
 1SG-ERG C=1SG.SB=1.SG.DO 1SG-ABS paint-PRES
 *‘I paint me.’
- c. *ngaju-ngku nga=rna=nyunu ngaju-Ø parr wung-an.*
 1SG-ERG C=1SG.SB=REC/REFL 1SG-ABS paint-PRES
 ‘I paint myself.’

(7a) is an ordinary transitive clause. (7b) is ungrammatical; the sequence of the enclitic pronouns *=*rna=yi*, in which =*rna* ‘1SG.SB’ and =*yi* ‘1SG.DO’ are coreferential, is not allowed, and =*yi* ‘1SG.DO’ must be replaced by the REC/REFL pronoun, as in (7c).⁴ The behaviour of free NPs is different, the case frame of ERG-ABS being left intact. It is important to emphasize that the free pronoun *ngaju-Ø*, a direct object, can be retained. This is despite the fact that it is coreferential with the free pronoun subject *ngaju-ngku* (and, for that matter, coreferential with the subject agreement marker, =*rna*, as well). (It should be noted, however, that in natural speech, e.g. running texts, free pronouns, e.g. *ngaju-ngku* and *ngaju-Ø* in (7a, c) are likely to be elliptical.)

4.2 The possessive-reflexive meaning

Here, the free NP direct object refers to a body part, an inalienably possessed item. Consider the following three examples:

- (8) a. *ngaju-ngku nga=rna=ngku nyuntu-Ø wirrkil-Ø pangin-an.*
 1SG-ERG C=1SG.SB=2.SG.DO 2SG-ABS hair-ABS comb-PRES
 ‘I comb your hair.’ (TT)
- b. **ngaju-ngku nga=rna=yi ngaju-Ø wirrkil-Ø pangin-an.*
 1SG-ERG C=1SG.SB=1SG.DO 1.SG-ABS hair-ABS comb-PRES
 (intended meaning: ‘I comb my hair.’)
- c. *ngaju-ngku nga=rna=nyunu [TT ngaju-Ø] wirrkil-Ø pangin-an.*
 1SG-ERG C=1SG.SB=REC/REFL 1SG-ABS hair-ABS comb-PRES
 ‘I comb my [own] hair.’

As noted in 2.6.2, inalienable possession can be expressed by the apposition of the possessor and the possessed. In (8a), which is an ordinary transitive clause, the possessor and the possessed are in the direct object position. Now, (8b) is ungrammatical, and =*yi* ‘1SG.DO’ must be replaced by the REC/REFL pronoun, as in (8c). The direct object denoting the body part affected by the action, e.g. *wirrkil-Ø* ‘hair-ABS’ in (8c), can be retained in the reflexive version and in fact is often retained. The free pronoun for the direct object, e.g. *ngaju-Ø* ‘1SG-ABS’ presumably can be retained, although it is likely to be elliptical.

4. Djaru places no restrictions on the person of the reflexive use of the REC/REFL pronoun. Now, the neighbouring languages to the east, e.g. Mudbura, and to the south, e.g. Warlpiri, have the enclitic REC/REFL pronoun =*nyunu* or =*nyanu*. Warlpiri (Hale 1973:337) and Mudbura (McConvell 1980:34) differ in two respects from the Djaru pattern described above. In Mudbura and Warlpiri, very roughly speaking, reflexivization (as against reciprocalization) fails to apply: (a) if the subject is the first person singular, or (b) if the subject of an imperative sentence is the second person. For example, a sequence equivalent to =*rna=yi* ‘1SG.SB=1SG.DO’ is allowed in those languages.

4.3 The possessive-benefactive-reflexive meaning

This type concerns a dative NP expressing a possessor or a beneficiary of the direct object (in the absolutive case). Consider the following three examples:

- (9) a. *ngaju-ngku nga=rna=la ngama-yi-wu mangarri-Ø kamparn-an.*
 1SG-ERG C=1SG.SB=3SG.IO mother-KIN-DAT food-ABS cook-PRES
 i. 'I cook [my] mother's food', or
 ii. 'I cook food for [my] mother.' (TT)
- b. **ngaju-ngku nga=rna=yi nganinga mangarri-Ø kamparn-an.*
 1SG-ERG C=1SG.SB=1SG.IO 1SG.DAT food-ABS cook-PRES
 (intended meaning:) i. 'I cook my [own] food', or ii. 'I cook food for myself.'
- c. *ngaju-ngku nga=rna=nyunu nganinga mangarri-Ø kamparn-an.*
 1SG-ERG C=1SG.SB=REC/REFL 1SG.DAT food-ABS cook-PRES
 i. 'I cook my [own] food', or ii. 'I cook food for myself.'

The free pronoun expressing a possessor or a beneficiary of the direct object, e.g. *nganinga* '1SG.DAT' in (9c), can be retained.

4.4 The benefactive-reflexive meaning

In clauses of the ERG-DAT case frame, the dative NP indicates the goal of pursuit (e.g. 'to look for sb', 'to wait for sb', 'to sneak up on sb'):

- (10) *ngaju-ngku nga=rna=la jaji-wu muwu wung-an.*
 1SG-ERG C=1SG.SB=3.SG.IO kangaroo-DAT search-PRES
 'I am looking for a kangaroo.' (TT)

Now, in addition to the dative NP which marks the goal of pursuit, ERG-DAT clauses can contain a dative NP which marks a beneficiary, resulting in ERG-DAT-DAT clauses. (I am not certain if they can contain a dative NP which marks a possessor rather than a beneficiary.) Compare the following three sentences:

- (11) a. *ngaju-ngku nga=rna=ngku=la jaji-wu muwu wung-an nyunu-nga.*
 1SG-ERG C=1SG.SB=2SG.IO=3SG.IO kangaroo-DAT search-PRES 2SG-DAT
 'I am looking for a kangaroo for you (SG).' (TT)
- b. **ngalipa-lu nga=liwa=ngalipa=la jaji-wu muwu wung-an*
 1PL.INC-ERG C=1PL.INC.SB=1PL.INC.IO=3SG.IO kangaroo-DAT search-PRES
ngalipa -nga.
 1PL.INC-DAT
 (intended meaning:) 'We are looking for a kangaroo for ourselves.'
- c. *ngalipa-lu nga=liwa=nyunu=ngku=la jaji-wu*
 1PL.INC-ERG C=1PL.INC.SB=REC/REFL=LINK=3SG.IO kangaroo-DAT
muwu wung-an ngalipa-nga.
 search-PRES 1PL.INC-DAT
 'We are looking for a kangaroo for ourselves.'

=*ngku*= is a linking morpheme and its nature is epenthetic. =*nyunu*=*ngku*=*la* ‘REC/REFL =LINK=3SG.IO’ should not be confused with the oblique form of the REC/REFL pronoun =*nyunungkula*: see Table 1.

4.5 The oblique-reflexive meaning

The oblique form of an enclitic pronoun may have various oblique meanings, such as ‘to’ (when it cross-references a free NP in the allative), ‘at’, ‘on’ (when cross-referencing a free NP in the locative), ‘from’ (when cross-referencing a free NP in the ablative), and so on. If an oblique enclitic pronoun is coreferential with the subject marker, it is obligatorily replaced by the REC/REFL pronoun. Thus, a pair of examples involving the locative:

- (12) a. **ngaju-ngku nga=rna=yila makarta-Ø yaan-an nganinginy-ja.*
 1SG-ERG C=1SG.SB=1SG.OBL hat-ABS put-PRES 1SG-LOC
 *‘I put a hat on me.’ (TT)
- b. *ngaju-ngku nga=rna=nyunungkula* [or *nga=rna=nyunu*] *makarta-Ø yaan-an*
 1SG-ERG C=1SG.SB=REC/REFL C=1SG.SB=REC/REFL hat-ABS put-PRES
nganinginy-ja.
 1SG-LOC
 ‘I put a hat on myself.’

As mentioned in 3.3, the simple form =*nyunu* is often used in place of the oblique form =*nyunungkula*.

4.6 Unclear cases

There are a few instances for which it is difficult to make up a corresponding non-reflexive version. (13b) and (14b) are two such instances. I tentatively suggest (13a) and (14a) as their respective corresponding sentences.

- (13) a. **ngaju-ngku nga=rna=yi ngaju-Ø payan-i nganyju-ku.*
 1SG-ERG C=1SG.SB=1SG.DO 1SG-ABS bite-PAST calf-INST
 (intended meaning:) ‘I bit me with the calves [of my legs].’ (TT)
- b. *nga=rna=nyunu nganyju-ku payan-i.*
 C=1SG.SB=REC/REFL calf.of.leg-INST bite-PAST
 ‘I had a cramp [in my legs].’

Presumably, (13b) literally means ‘I bit myself with the calves [of my legs].’

- (14) a. **ngaju-ngku nga=rna=yi ngaju-Ø kit man-i kanyji-ku.*
 1SG-ERG C=1SG.SB=1SG.DO 1SG-ABS catch/entangle-PAST leg-INST
 *‘I entangled/caught me with [my] legs.’ (TT)
- b. (‘I was riding a horse, and it bucked’)
kit man-i nga=rna=nyunu kanyji-ku=yali.
 catch-PAST C=1SG.SB=REC/REFL leg-INST=CLT
 ‘I caught myself with [my] legs’, or ‘I was caught/got stuck, with [my] legs.’

5. Reciprocals

5.1 “Canonical” reciprocals

5.1.1 *Derived from* ERG-ABS *clauses: Two-place transitive with an absolutive object*

Two-place clauses with an ERG-ABS case frame (with an absolutive object) are typical transitive clauses, and the derived reciprocals may be considered as the most canonical. Thus:

- (15) a. *ngaju-ngku nga=rna=ngku nyuntu-Ø nyanya.*
 1SG-ERG C=1SG.SB=2SG.DO 2SG-ABS see-PAST
 ‘I looked at you.’ (TT)
- b. *ngali-ngku nga=li=nyunu ngali-Ø nyanya.*
 1DU.INC-ERG C=1DU.INC.SB=REC 1DU.INC-ABS see.PAST
 ‘We two looked at each other.’ (TT)

Among “canonical” reciprocals, two subtypes may be set up: those involving inalienable possession (5.1.1.1) and those involving an inanimate subject (5.1.1.2).

5.1.1.1 *Involving a part-whole relationship.* As noted in 2.6.2, inalienable possession, which typically concerns body parts, can be expressed by the apposition of the possessor and the possessed. Thus, in (4a), the possessor and the possessed are in apposition and they are in the direct object position. Corresponding to (4a), we can have a reciprocal version such as:

- (16) *ngali-ngku nga=li=nyunu ngali-Ø langka-Ø pung-an.*
 1DU.INC-ERG C=1DU.INC.SB=REC 1DU.INC-ABS head-ABS hit-PRES
 ‘We two hit each other’s head.’

When the possessor and the possessed are not in apposition, the possessed may be either in the locative or the ablative. In (4b), the possessed is in the locative. Corresponding to (4b), we can have a reciprocal version such as:

- (17) *ngali-ngku nga=li=nyunu ngali-Ø pung-an langka-ka.*
 1DU.INC-ERG C=1DU.INC.SB=REC 1DU.INC-ABS hit-PRES head-LOC
 ‘We two hit each other on the head.’

In (5b), the possessed is in the ablative; compare it with (18):

- (18) *ngali-ngku nga=li=nyunu ngali-Ø lan-i narra-ngu.*
 1DU.INC-ERG C=1DU.INC.SB=REC/REFL 1DU.INC-ABS spear-PAST back-ABL
 ‘We two speared each other in (lit. from) the back [in turns].’

5.1.1.2 *With an inanimate subject.* Reflexives do not seem to allow an inanimate subject, while on the other hand reciprocals do; I have obtained at least three examples. (They are all Djaru translations of the English sentences I put forward.) I tentatively set up (19a), (20a) and (21a) as respective corresponding sentences. (I am not certain if they are acceptable sentences.)

- (19) a. *mutaka-lu nga=Ø=Ø mutaka-Ø tumal-a pinya.*
 car-ERG C=3SG.SB=3SG.DO car-ABS middle-LOC hit.PAST
 (intended meaning:) ‘A car hit [another] car in the middle.’ (TT)
- b. (‘One car came from the north and another came from the south’):
kujarra-lu mutaka-lu nga=wula=nyunu tumal-a pinya.
 two-ERG car-ERG C=3DU.SB=REC/REFL middle-LOC hit.PAST
 ‘The two cars hit (i.e. collided with) each other in the middle.’
- (20) a. *purnu-ngku nga=Ø=Ø purnu-Ø purrpurr wung-an.*
 tree-ERG C=3SG.SB=3SG.DO tree-ABS rub-PRES
 (intended meaning:) ‘A tree is rubbing [against another] tree.’ (TT)
- b. (‘The wind is blowing’):
yalu-ngku jilawaja-lu purnu-ngku nga=lu=nyunu purrpurr wung-an.
 that-ERG many-ERG tree-ERG C=3PL.SB=REC/REFL rub-PRES
 ‘Those many trees are rubbing against one another.’
- (21) a. *purnu-ngku nga=Ø=Ø purnu-Ø kit pan-i.*
 tree-ERG C=3SG.SB=3SG.DO tree-ABS entangle-PAST
 (intended meaning:) ‘A tree entangled [another] tree.’ (TT)
- b. (‘The wind is blowing’):
nyila purnu-ngku nga=wula=nyunu kit pan-i.
 there tree-ERG C=3DU.SB=REC/REFL entangle-PAST
 lit. ‘The trees entangle each other there’, i.e. ‘The trees are stuck with each other there.’

Sentence (19b) may not be a good example of an inanimate subject (for cars move like animate beings), but (20b) and (21b) are better examples.

All of these three examples describe actions. It is not certain if an inanimate subject (for a reciprocal sentence) is allowed when the sentence describes a state. Consider:

- (22) *kujarra-lu pinka-ku nga=wula=nyunu palmuku yaan-i.*
 two-ERG creek-ERG C=3DU.SB=REC/REFL meet(?) -PAST
 lit. ‘The two creeks met (or, have met) here.’

Jack Jugayrri did utter (22), but his subsequent comment makes it uncertain if this is really an acceptable sentence.

5.1.2 Derived from two-place clauses with a dative object

There are two types: transitive ERG-DAT and intransitive ABS-DAT.

5.1.2.1 *Derived from ERG-DAT clauses.* Corresponding to sentences such as (23a) (ERG-DAT), we can have a reciprocal version such as (23b):

- (23) a. *mawun-tu nga=Ø=la yampakina-wu muwu wung-an.*
 man-ERG C=3SG.SB=3SD.IO child-DAT search-PRES
 ‘The man is looking for the child.’ (TT)
- b. *kujarra-lu nga=wula=nyunu muwu wunga-n.*
 two-ERG C=3DU.SB=REC/REFL search-PRES
 ‘The two people are looking for each other.’

5.1.2.2 *Derived from ABS-DAT clauses.* Corresponding to sentences such as (24a) (ABS-DAT), we can have a reciprocal version such as (24b):

- (24) a. *ngaju-Ø nga=rna=la marn-an mawun-ku.*
 1SG-ABS C=1SG.SB=3SG.IO talk-PRES man-DAT
 ‘I am talking about the man.’
 b. *ngajarra-Ø nga=liyarra=nyunu ngajarra-nga marn-i.*
 1DU.EXC-ABS C=1DU.EXC.SB=REC 1DU.EXC-DAT talk-PAST
 ‘We two talked about each other.’ (TT).

5.1.3 *Derived from three-place (or ditransitive) clauses*

As a pair of examples, consider:

- (25) a. *mawun-tu nga=lu=yanu ngumpirr-Ø miyangki man-an pamarr-ku.*
 man-ERG C=3PL.SB=3PL.DO woman-ABS ask-PRES stone-DAT
 ‘The men ask the women for money (lit. stone).’ (TT)
 b. *nga=lu=nyunu miyangki man-an pamarr-ku.*
 C=3PL.SB=REC/REFL ask-PRES stone-DAT
 ‘They (PL) ask one another for money.’

The direct object marker is coreferential with that for the subject, and is (obligatorily) replaced by the REC/REFL pronoun. The verb *miyangki man-* ‘to ask for’ (ERG-ABS-DAT) has yielded the only example of this type.

(25b) may appear similar to the reciprocals of three-place clauses discussed below, but it differs from the latter in that it is a direct object, and not an indirect object or the like, that is replaced by the REC/REFL pronoun. Thus, unlike the latter, it is of the “canonical” type.

5.2 “Indirect”/recipient reciprocals

Here, the term “indirect” refers to the semantic role of “recipient”. This type involves three-place (or ditransitive) clauses: ERG-ABS-DAT, ERG-ABS-LOC and ERG-ABS-ALL. The case of the free NP denoting a recipient is the dative, the allative or the locative, depending on the verb employed. The clitic pronoun referring to the recipient – the IO in (26a), the OBL in (27a) and (28a) – is replaced by the REC/REFL pronoun.

As a pair of examples involving *yung-* ‘to give’ (ERG-ABS-DAT), consider:

- (26) a. *ngaju-ngku nga=rna=ngku kuyu-Ø nyumunga yung-an.*
 1SG-ERG C=1SG.SB=2SG.IO meat-ABS 2SG.DAT give-PRES
 ‘I give you meat.’ (TT)
 b. *ngali-ngku nga=li=nyunu ngali-nga=lu kuyu-Ø yung-an.*
 1DU.INC-ERG C=1DU.INC.SB=REC 1DU.INC-DAT=CLT meat-ABS give-PRES
 ‘We two give each other meat.’

As a pair of examples involving *jirri yaan-* ‘to show’ (ERG-ABS-LOC), compare:

- (27) a. *maluga-maluga-la nga=rnalu=yanula jirri yaan-an kirmimiliny-Ø.*
 old.man-old man-LOC C=1PL.EXC.SB=3PL.OBL show-PRES spear-ABS
 ‘We show the spear to many old men.’

- b. *nganampa-lu nga=rnalu=nyunungkula jirri yaan-an kirmimiliny-Ø*
 1PL.EXC-ERG C=1PL.EXC.SB=REC/REFL show-PRES spear-ABS
nganampanginy-ja.
 1PL.INC-LOC
 ‘We (PL) show spear(s) to one another.’ (TT)

As a pair of examples involving *yuwarn-* ‘to send’ (ERG-ABS-ALL), compare:

- (28) a. *ngaju-ngku nga=rna=nyanta marnu-Ø yuwarn-i mawun-tawu.*
 1SG-ERG C=1SG.SB=3SG.OBL word-ABS send-PAST man-ALL
 ‘I sent a message to the man.’
 b. *ngali-ngku nga=li=nyunu* [or *nga=li=nyunungkula*] *marnu-Ø*
 1DU.INC-ERG C=1DU.INC.SB=REC/REFL C=1DU.INC.SB=REC/REFL word-ABS
yuwarn-an ngalinginy-jawu wayini mirni-mirni=lu.
 send-PRES 1DU.INC-ALL in.the.same.way=CLT
 ‘We two send words to each other likewise.’

5.2.1 Unclear case: A four-place transitive clause?

It seems that reciprocals which could be considered as corresponding to an underlying four-place transitive clause are possible. Thus, (29b) may be taken to correspond to (29a), which has the ERG-ABS-ALL-ABL case frame. (This case frame would be obtained by the addition of an ablative NP to the ERG-ABS-ALL case frame, e.g. (28a).)

- (29) a. **ngaju-ngku nga=rna=yila=ngkula yuwarn-i kuyu-Ø nganinginy-ngu*
 1SG-ERG C=1SG.SB=1SG.OBL=2SG.OBL send-PAST meat-ABS 1SG-ABL
nyununginy-jawu.
 2SG-ALL
 (intended meaning:) ‘I sent meat from me to you (SG).’ (TT)
 b. *ngali-ngku nga=li=nyunungkula yuwarn-i kuyu-Ø ngalinginy-ngu.*
 1DU.INC-ERG C=1DU.INC.SB=REC/REFL send-PAST meat-ABS 1DU.INC-ABL
 ‘We two sent meat to (lit. from) each other [e.g. in turns].’

It would appear that the oblique REC/REFL =*nyunungkula* corresponds to the oblique =*yila* and =*ngkula*.

5.3 “Possessive”/possessor reciprocals

The reciprocals in question generally correspond to two-place transitive clauses. Here, the enclitic pronoun denoting the possessor is coreferential with the subject marker and is replaced by the REC/REFL pronoun. The possession concerned may be either alienable or inalienable.

When the possession is of the alienable type, the dative case is employed to denote the possessor. Compare:

- (30) a. *nganampa-lu nga=rnalu=yanu nyanunga marnu-Ø ngarra man-an.*
 1PL.EXC-ERG C=1PL.EXC.SB=3PL.IO 3PL/SG.DAT language-ABS know-PRES
 ‘We (PL) know their (PL) language.’ (TT)

- b. *nganampa-lu nga=rnalu=nyunu nganampa-nga marnu-Ø*
 1PL.EXC-ERG C=1PL.EXC.SB=REC/REFL 1PL.EXC-DAT language-ABS
ngarra man-an.
 know-PRES
 ‘We (PL) know one another’s languages.’ (TT).

When the possession is of the inalienable type, the possessor and the possessed may be in apposition or in non-apposition; their reciprocal versions are (16), (17) and (18).

5.4 Adverbial/oblique reciprocals

If the oblique form of an enclitic pronoun (which can cross-reference free NPs in the allative ‘to’, locative ‘at, on’ or ablative ‘from’) is coreferential with the subject marker, it is replaced by the REC/REFL pronoun. A pair of examples involving the allative:

- (31) a. *ngaju-Ø nga=rna=ngkula yatik yan-i nyununginy-jawu.*
 1SG-ABS C=1SG.SB=2SG.OBL close.by go/come-PAST 2SG-ALL
 ‘I went/came close to you.’ (TT)
 b. *ngali-Ø nga=li=nyunungkula yatik yan-i ngalinginy-jawu.*
 1DU.INC-ABS C=1DU.INC.SB=REC/REFL close.by go-PAST 1DU.INC-ALL
 ‘We two went close to each other.’

Examples involving the ablative:

- (32) a. *yampakina-Ø nga=Ø=nyanta yan-an mawun-ngu.*
 child-ABS C=3SG.SB=3SG.OBL go-PRES man-ABL
 ‘The child is going [away] from the man.’ (TT)
 b. *kujarra-Ø nga=wula=nyunu [or nga=wula=nyunungkula] warrngaarra*
 two-ABS C=3DU.SB=REC/REFL separately
yan-an [TT nyanpulanginy-ngu].
 go-PRES 3DU-ABL
 ‘Two people are going [away] from each other.’

A final pair of examples involving the locative:

- (33) a. *ngaju-Ø nga=rna=ngkula yatik yut nyinang-an nyununginy-ja.*
 1SG-ABS C=1SG.SB=2SG.OBL close.by sit-PRES 2SG-LOC
 ‘I am sitting close by with you.’ (TT)
 b. *ngali-Ø nga=li=nyunungkula yatik yut nyinang-an*
 1DU.INC-ABS C=1DU.INC.SB=REC/REFL close.by sit-PRES
 [TT *ngalinginy-ja*].
 1DU.INC-LOC
 ‘We two are sitting close with/to each other.’

Semantically, these reciprocals are similar to “indirect”/recipient reciprocals (see 5.2).

5.5 Benefactive reciprocals

A dative NP may denote a possessor or a beneficiary; see (9a) and (30a). It is interesting to note that clauses with the ERG-DAT frame, e.g. (23a), can take an additional dative NP denoting a beneficiary, resulting in the ERG-DAT-DAT frame, e.g. (11a), from which a reflexive or reciprocal sentence can be derived, e.g. (11c). The resultant sentence can have either a reflexive reading (e.g. ‘we are looking for a kangaroo for ourselves’, as shown in (11c)) or a reciprocal reading: ‘we are looking for a kangaroo for one another’, i.e. for the benefit of one another.

6. Differentiation between reciprocal and reflexive readings

As demonstrated above, the REC/REFL pronoun can have both reciprocal and reflexive readings. When the subject is singular, naturally only the reflexive reading is possible; cf. (6a, b, c). When the subject is dual or plural, both reciprocal and reflexive readings are possible, e.g. (6d, e), although the vast majority of such examples have a reciprocal reading in the sense intended by the context. Thus, consider:

- (34) *mawun-tu nga=lu=nyunu pung-an.*
 man-ERG C=3PL.SB=REC/REFL hit-PRES

According to Matthew Wrigley (p.c.), when confronted with (34), Jack Jugayarrri stated to the effect that (34) can have the following two readings: (a) reciprocal: ‘the men are fighting one another’, and (b) reflexive: ‘the men are hitting themselves’, like when a group of people in mourning hit themselves in anguish.

There is at least one way to select a reciprocal reading, namely, inclusion of a phrase which contains *wayini(ny)* ‘similar, same’ or ‘thus, like this, like that’. An instance of such a phrase is *wayininy mirni-mirni=lu* ‘in return’.

- (35) *nga=rnalu=nyunu pirrirrki yaan-inyurra wayininy mirni-mirni=lu.*
 C=1PL.EXC.SB=REC/REFL shoot-PAST.NARR in.return
 ‘We shot one another in return.’

The phrase *wayininy mirni-mirni=lu* apparently contains the adverb *mirni* ‘at here, in here’. The entire phrase seems to mean ‘in the same way’ or ‘in return’. It is often followed by the discourse enclitic =*lu*, whose meaning is not understood well. Another example is (28b).

There appear to exist at least three ways to select a reflexive reading. One is the inclusion of the adverb *limpal-limpal* ‘respectively, to oneself, for oneself’. (Etymologically, *limpal-limpal* contains *limpal* ‘one’s own’); e.g.:

- (36) [TT *ngalipa-lu*] *nga=liwa=nyanu kang-ku* [TT *ngalipa-nga ngari-Ø*]
 1PL.INC-ERG C=1PL.INC.SB=REC/REFL carry-PURP 1PL.INC-DAT clothes-ABS
limpal-limpal.
 respectively
 ‘We (PL) will each carry our own [clothes].’

The second method is the affixation of the derivational suffix *-wariny* ‘by oneself’ to the root of a free pronoun, e.g.:

- (37) *nga=li=nyunu ngali-wariny-ju ngali-ngku parr wung-ku*
 C=1DU.INC.SB=REC/REFL 1DU.INC-by.oneself-ERG 1DU.INC-ERG paint-PURP
 [TT *ngali-Ø*].
 1DU.INC-ABS
 ‘We two will paint ourselves, by ourselves.’

The third method is exemplified by the following:

- (38) (‘They panicked and were in chaos’):
wakurra nga=lu=nyunu man-an-i nyanunga-nyaaniny-Ø [TT *ngari-Ø*].
 not C=3PL.SB=REC hold-CONT-PAST 3SG/PL.DAT-very-ABS clothes-ABS
 ‘They (PL) did not grab their own [clothes].’ (‘They each took someone else’s’).

The derivational suffix *-nyaaniny* can be translated by the English adjective *very* (not the adverb *very*). Inclusion of a dative free pronoun (here, indicating possessors), affixed with the derivational suffix *-nyaaniny*, seems to select the reflexive reading ‘one’s own’.

It is not known whether or not the use of a phrase such as *wayininy mirnimirni* ‘in the same way’, without using the REC/REFL pronoun, is sufficient for the purpose of expressing reciprocity. Similarly for the three methods used for reflexive readings.⁵

7. Partial coreferentiality

With reflexives and also with reciprocals, the participants who perform the action and those who receive it are completely coreferential. There are, however, instances in which these two sets of participants are only partially coreferential. In these instances, there may be participants who only perform the action, without receiving it, and/or those who only receive the action, without doing it. Two types can be recognized: extended reflexives (see 7.1) and chaining (see 7.2).

7.1 Extended reflexives

Consider:

- (39) **ngaju-ngku nga=rna=ngaliny ngali-Ø parr winya.*
 1SG-ERG C=1SG.SB=1DU.INC.DO 1DU.INC-ABS paint.PAST
 (intended meaning: ‘I painted us (you and me).’)

5. Alan Rumsey (p.c.) points out that in Bunaba, about 300 km west of Djaru, at least in certain instances the reciprocal vs. the reflexive reading can be distinguished by the ergative vs. the absolutive marking on the subject. However, this does not apply to Djaru. See (34). As noted in 1.2 and 9, reciprocalization/reflexivization in Djaru does not concern the case-marking of free NPs.

Table 4. Reflexive, reciprocal and extended reflexive

	(41) as reflexive	(41) as reciprocal	extended reflexive (41)=(39)	(41)=(40)
	I → I	I → you	I → I, you	I ← I, you
	you → you	I ← you		
agent(s)	two	two	one	two
patient(s)	two	two	two	one

- (40) **ngali-ngku nga=li=yi ngaju-Ø parr winya.*
 1DU.INC-ERG C=1DU.INC.SB=1SG.DO 1SG-ABS paint.PAST
 (intended meaning: ‘We (you and I) painted me.’)

Examples (39) and (40) are ungrammatical. Instead of them, Robert Moses gave:

- (41) *ngali-ngku nga=li=nyunu ngali-Ø=lu parr winya.*
 1DU.INC-ERG C=1DU.INC.SB=REC 1DU.INC-ABS=CLT paint.PAST
 i. ‘I painted us (you and me),’ or ii. ‘We (you and I) painted me.’

Note that (41) can have the meaning of either (39) or (40). In each of the intended readings of (41), the subject and the object (the latter which is replaced by the REC/REFL pronoun) are only partly coreferential. I termed sentences such as (41) “extended reflexive” (Tsunoda 1981: 157). Admittedly, extended reflexives have never been uttered in natural speech. All the examples were obtained through elicitation.

In addition to the two extended reflexive readings, (41) can also have the reflexive reading ‘we each painted *ourselves*’ and the reciprocal reading ‘we painted *each other*’. Similarly for other examples of extended reflexives. (Out of context, the reciprocal reading will probably be preferred.) These four possible readings are shown in Table 4.

7.2 Chaining

I have found two instances which appear to exemplify what Lichtenberk (1985: 24–6) terms “chaining” type. Both examples involve variants of the compound verb *pila man-* ‘to chase, follow’ (with the ERG-ABS case frame); cf.:

- (42) a. *kunyarr-u nga=Ø=Ø pila-pila man-an kunyarr-Ø.*
 dog-ERG C=3SG.SB=3SG.DO chase-PRES dog-ABS
 (intended meaning: ‘A dog chases [another] dog.’ (TT))
 b. *kunyarr-u nga=lu=nyunu pila-pila man-an.*
 dog-ERG C=3PL.SB=REC/REFL chase-PRES
 ‘The dogs are chasing one another.’

(I am not certain if (42a) is an acceptable sentence.)

The subject must be plural for the chaining type. A chaining situation is not possible with a singular or dual subject.

In line with Lichtenberk’s statement, these two examples involve the verb ‘to follow’, and there is no example of ‘to precede’.

8. Sociative (?)

With the “partial coreferentiality” type, at least one of the participants who receives the action is coreferential with one member of the set of participants who perform the action. There are instances, however, in which even this partial coreferentiality does not seem to hold. These instances seem to have a sociative meaning: ‘to act together’. The subject is naturally dual or plural, but never singular. All the examples obtained appear to correspond to clauses that are intransitive and one-place. It is not certain if this sociative use of the REC/REFL pronoun is productive, and it is difficult to find an unequivocal example of this type. The only example obtained in spontaneous speech is (43), which was uttered by an old lady (the late Inverway Ruby), who was trying to comfort her old friend (Tiny McCale) who had lost her only daughter in a car accident.

- (43) *nga=li=nyunu lung-u=lu lung-ku.*
 C=1DU.INC.SB=REC/REFL cry-PART=CLT cry-PURP
 ‘We two will cry together.’

(This sentence contains a compound verb which consists of a verb and a participle; see 2.3. Both verb and participle happen to involve the same verb root: *lung-* ‘to cry’ (vi). The function or necessity of the participle in this compound verb is not understood.) Inverway Ruby herself translated (43) as ‘we got to cry one another’. Maggie Scott translated it as ‘we will cry with one another’. She also approved my translation ‘we cry together’ and said as follows: ‘Yes, “We cry together” in English’.

I have made up (44) and (45a, b) by analogy with (43):

- (44) *mawun-Ø nga=wula=nyunu lung-an.*
 man-ABS C=3DU.SB=REC/REFL cry-PRES
 ‘The two men are crying together.’
- (45) a. *mawun-Ø nga=wula=nyunu makin nyinang-an.*
 man-ABS C=3DU.SB=REC/REFL sleep-PRES
 ‘The two men are sleeping together.’

(The translation for (45a) provided by Danba Moses and Lily Banks is ‘that two man sleeping together.’)

- b. *mawun-Ø nga=lu=nyunu makin nyinang-an.*
 man-ABS C=3PL.SB=REC/REFL sleep-PRES
 ‘Big mob sleeping together.’ (Translation by Danba Moses and Lily Banks).

All of (44) and (45a, b) were approved in the ‘together’ reading (although the speakers would often use ‘one another’ in their translations, e.g. ‘cry one another’). (Regarding the men referred to in (45a), a certain speaker remarked as follows: “Poofter!” (i.e. male homosexual). This comment makes it clear that (45a) has the meaning of ‘together’.)

The use of the REC/REFL pronoun with a sociative meaning (‘together’) was checked for a fair number of intransitive verbs with three or four Djaru speakers, but not all of the suggested examples were approved. It is difficult to decide which are acceptable and

which are not. Thus, Danba Moses and Lily Banks approved (46a, b) and translated them as shown:

- (46) a. *mawun-Ø nga=wula=nyunu purja marn-an.*
 man-ABS C=3DU.SB=REC/REFL run-PRES
 ‘(TT: Two men are) running together.’
 b. *mawun-Ø nga=lu=nyunu purja marn-an.*
 man-ABS C=3PL.SB=REC/REFL run-PRES
 ‘Big mob running together.’

However, Jack Jugayarri rejected sentences such as (46a, b) and gave (47) instead and translated as shown, using the word ‘together’:

- (47) *nga=wula purja marn-a.*
 C=3DU.SB run-PRES.CONT
 ‘Tobala (i.e. two people) running together.’

The use of the word “together” clearly indicates that (47) describes a sociative situation, despite the absence of the REC/REFL pronoun. In other words, the use of the REC/REFL pronoun is not obligatory in order to express ‘together’.

It seems that a dual or plural subject by itself generally describes joint actions, and that, like passives, the use of the REC/REFL pronoun for “sociative” is optional, being employed when it is considered necessary or adequate by the speaker. (I owe this observation to Vladimir Nedjalkov (p.c.).)

9. Expression of the reciprocal arguments

As has been demonstrated above, formation of reciprocal-reflexive constructions concerns enclitic pronouns only; the only change is the replacement of the non-subject agreement marker coreferential with the subject, by the REC/REFL pronoun. The formation does not involve or affect free pronouns or any other free NPs. Note the following points in particular.

(a) There is no free pronoun that has a reciprocal or reflexive meaning/function.

(b) Unlike enclitic pronouns, a free NP coreferential with the subject can remain (although it may be elliptical). This applies not only to nouns but also to free pronouns. Examples of free pronouns:

- (i) the direct object – *ngali-Ø* ‘1DU.INC-ABS’ in (41);
 (ii) the indirect object/recipient – *ngali-nga* ‘1DU.INC-DAT’ in (26b);
 (iii) the dative for a possessor or a beneficiary – *nganampa-nga* ‘1PL.EXC-DAT’ in (30b),
ngalipa-nga ‘1PL.INC-DAT’ in (11c);
 (iv) the locative – *nganampanginy-ja* ‘1PL.EXC-LOC’ in (27b);
 (v) the allative – *ngalinginy-jawu* ‘1DU.INC-ALL’ in (31b), (28b);
 (vi) the ablative – *ngalinginy-ngu* ‘1DU.INC-ABL’ in (29b).

Examples of nouns:

- (i) the direct object – *langka-Ø* ‘head-ABS’ in (16);
 (ii) the locative – *langka-ka* ‘head-LOC’ in (17);

(iii) the ablative – *narra-ngu* ‘head-ABL’ in (18).

(c) Consequently, there is no valency decrease – as far as free NPs are concerned. (In the case of enclitic pronouns as well, it is difficult to show that valency does decrease. The replacement by the REC/REFL pronoun may be taken as evidence of valency decrease. However, the REC/REFL pronoun does remain and this may be considered as evidence of no change in valency.)

(d) Case-marking of free NPs is not affected at all. For instance, the transitive subject remains ergative.

(e) That is, the transitivity of the clause, in terms of valency and case-marking of free NPs, is left intact.

These remarks apparently apply to all the examples containing the REC/REFL pronoun.

10. Lexicalization

There are a few instances of what may be considered as idiomatic expressions.

10.1 Reflexives

[1] *pura nyang-* (which takes the ERG-ABS frame) means ‘to hear, listen to’.

- (48) *ngaju-ngku nga=rna=∅ pura nyang-an ngama-yi-∅.*
 1SG-ERG C=1SG.SB=3SG.DO hear-PRES mother-KIN-ABS
 ‘I am listening to [my] mother.’ (TT).

The combination of this verb and the REC/REFL pronoun means ‘to think (about someone)’, in all of the examples (with one exception: (50)):

- (49) *ngaju-ngku nga=rna=nyunu pura nyang-an ngama-yi-wuny-ja*
 1SG-ERG C=1SG.SB=REC/REFL hear-PRES mother-KIN-LINK-LOC
 [or *ngama-yi-wu*].
 mother-KIN-DAT
 ‘I am thinking about [my] mother.’ (lit. ‘I am listening to myself about mother.’)

This combination can also have the usual reciprocal meaning. Thus, when confronted with something like (50), Jack Jugayarri translated it as follows:

- (50) [TT *ngali-ngku*] *nga=li=nyunu pura nyanga-n.*
 1DU.INC-ERG C=1DU.SB=REC/REFL hear-PRES
 ‘We two are listening to each other.’

It seems that the addition of a locative NP or a dative NP referring to the person thought of, e.g. *ngama-yi-wuny-ja* ‘mother-KIN-LINK-LOC’ and *ngama-yi-wu* ‘mother-KIN-DAT’, makes the meaning ‘to think’ clear.⁶

6. The reflexive form of the verb ‘hear, listen to’ can mean ‘think’ in Dyirbal (Dixon 1972: 89–92) and Warrungu (Tsunoda 1988: 606–7) of North Queensland, Australia, as well.

[2] For another example of an idiomatic expression, see (13b) ‘to have a cramp’, lit. ‘to bite oneself with the calves of the legs’.

10.2 Reciprocals

[1] *nyanga-* ‘to see, look at’ (ERG-ABS, cf.(1a)) can take a dative NP, resulting in the ERG-ABS-DAT frame, which in turn can be reciprocalized. Thus:

- (51) *murrkun-tu mawun-tu nga=lu=nyunu=ngku=la nyangu-nyangu man-an*
 three-ERG man-ERG C=3PL.SB=REC/REFL=LINK=3SG.IO watch-PRES
yangi-wu yalu-wu ngumpirr-ku.
 one-DAT that-DAT woman-DAT
 ‘The three men watch one another over that one woman.’

This is a common way of expressing rivalry in love. (The enclitic pronoun =*la* ‘3SG.IO’ cross-references the DAT phrase *yangi-wu yalu-wu ngumpirr-ku*. Etymologically, the compound verb *nyangu-nyangu man-* ‘watch’ contains the participle form of the verb *nyang-* ‘to see, look at’, i.e. *nyang-u*, and the verb root *man-* ‘to get, obtain’.)

[2] *pali wung-* ‘to find’ (ERG-ABS). Its reciprocal versions can generally be best translated by ‘to meet’ (although the translation ‘to find one another/each other’, too, would be possible), e.g.:

- (52) *matarn-rtu nga=li=nyunu pali winya jalani=lu.*
 countryman-ERG C=1DU.INC.SB=REC find.PAST today=CLT
 ‘We two, countrymen, met [for the first time] [only] today.’

This expression of ‘to meet’ appears to describe accidental, rather than deliberate, meeting. Reciprocal-reflexive constructions almost always describe volitional/deliberate actions when the subject is human, and (52) is an exception to this general tendency.

[3] *pung-* ‘to hit’ (ERG-ABS, cf. (4a, b)). Its reciprocal versions can mean ‘to hit one another/each other’, e.g. (34). They can also mean ‘to fight with/against someone’, without actually meaning punching or hitting, e.g.:

- (53) *nga=lu=nyanu nguyuru-lu pung-an.*
 C=3PL.SB=REC/REFL many-ERG hit-PRES
 lit. ‘Many people are hitting one another’, i.e. ‘they are fighting.’

[4] *yunga-* ‘to give’ (ERG-ABS-DAT, cf. (26a)). There is an idiomatic expression involving this verb: (54b) ‘to shake hands’. This would correspond to a (no doubt ungrammatical) sentence such as (54a).

- (54) a. **ngaju-ngku nga=rna=yi=ngku ngaju-Ø marla-Ø yinya nyununga.*
 1SG-ERG C=1SG.SB=1SG.DO=2SG.IO 1SG-ABS hand-ABS give.PAST 2SG.DAT
 (intended meaning:) ‘I gave my hand to you.’ (TT)
 b. *marla-Ø yung-ka=li=nyunu.*
 hand-ABS give-IMP=1DU.INC.SB=REC/REFL
 ‘Let’s shake hands.’ (lit. ‘Let’s give each other a hand.’)

[5] *marran-* ‘to tell’ takes the case frame of ‘ERG(narrator) tells ABS(topic) to LOC(audience)’, e.g.:

- (55) *yangi-ngku mawun-tu nga=Ø=wulaanungkula marran-an yangi-Ø wajpali-Ø*
 one-ERG man-ERG C=3SG.SB=3DU.OBL tell-PRES one-ABS white
kujarra-la yampa-wuyarra-la.
 man-ABS two-LOC child-two-LOC
 ‘One man is telling [a story about] one white man to two children.’

A combination of this verb and the REC/REFL pronoun can mean ‘to argue, quarrel, growl’. (No doubt, it can mean ‘to tell one another/each other’ as well.) In the sense of ‘argue, quarrel, growl’, it is almost always accompanied by the word *kuli* ‘anger, angry, angrily’, e.g.:

- (56) *yampaji-lu nga=wula=nyunu kuli marran-an.*
 child-ERG C=3DU.SB=REC/REFL angrily tell-PRES
 ‘The two children are arguing with each other.’

It seems that reciprocals such as (56) do NOT correspond to sentences such as (55) (‘ERG tells ABS(topic) to LOC(audience)’). And that they rather correspond to sentences of the case frame ‘ERG tells ABS(a person)’, but no instance of this latter case frame has been attested.

11. Etymology of the reciprocal/reflexive pronoun

There is no information regarding the origin of the REC/REFL pronoun =*nyunu*/=*nyanu*. (The =*nyanu* form is used in certain dialects only; examples include (36), (53).) At least, the enclitic REC/REFL pronoun =*nyunu* or =*nyanu* occurs in the neighbouring languages to the east and to the south, e.g. Warlpiri; see Note 4. This may not be relevant, but Djaru has a noun-stem-forming suffix *-nyan* ‘3rd person’s own’. It is attached to kinship-term roots and the noun *jaliji* ‘friend’, e.g. *ngawu-nyan* ‘his/her/their own father’, and *ngama-nyan* ‘his/her/their own mother’ (Tsunoda 1981:233). Note that *-nyan* is phonologically similar to the REC/REFL pronoun =*nyanu*. It is interesting to note that Warlpiri has the REC/REFL enclitic pronoun =*nyanu* (Hale 1973:337), and also has the noun-stem-forming suffix *-nyanu* ‘own’, e.g. *kirta-nyanu* ‘his own father’ (Hale 1976:83). It is not known, however, whether these kin suffixes are related to the REC/REFL pronoun.

The Djaru REC/REFL pronoun =*nyunu*/=*nyanu* cannot be used as a derivational marker.

Acknowledgments

Four spells of fieldwork on Djaru (in 1975, 1976, 1987–79, 1995) were financed by the then Australian Institute of Aboriginal Studies (now the Australian Institute of Aboriginal and

Torres Strait Islander Studies), Griffith University, and the Mitsubishi Trust Yamamuro Memorial Scholarship Foundation.

Matthew Wrigley, William McGregor, and Alan Rumsey read an earlier draft of this paper and provided useful comments. Furthermore, Matthew Wrigley went through the entire draft with the late Mr. Jack Yugayarri (a Djaru speaker).

Vladimir Nedjalkov and Emma Geniušienė, editors of this volume, supplied detailed and valuable comments.

PART III

**Reciprocal-sociative polysemy
of reciprocal markers**

A. Verbal and pronominal reciprocal markers

Reciprocal, sociative, and comitative constructions in Tagalog

Lina I. Shkarban and Gennadij E. Rachkov

Institute for Oriental Studies, Moscow / St. Petersburg University

1. Introductory notes
 - 1.1 The Tagalog language
 - 1.2 Overview
2. Grammatical information
 - 2.1 Verbs, nouns, adjectives
 - 2.2 Sentence structure. Case marking. Word order. Attributive constructions
 - 2.3 Voice system
 - 2.3.1 Involitional verbs
 - 2.4 Number
 - 2.5 Mood, aspect, tense
 - 2.6 Verb classes
 - 2.7 Verbal derivation
 - 2.7.1 Valency increasing means
 - 2.7.2 Valency decreasing means
 - 2.7.3 Valency retaining means
 - 2.8 Affixation. Phoneme alternation. Reduplication
 - 2.9 Alternation of stress patterns
3. Reciprocals with the prefix *mag-* only (= lexical reciprocals). Subject-oriented reciprocals only
 - 3.1 Introductory
 - 3.2 “Canonical” diathesis only
 - 3.2.1 Lexical reciprocals in *mag-* and morphological reciprocals in *mag-...-an* derived from the same root-morphemes
 - 3.3 Polysemy of the prefix *mag-*
 - 3.3.1 Polysemy of *mag-* in the verbal domain
 - 3.3.2 Polysemy of *mag-* in the nominal domain. Duality
 - 3.3.3 One-place reciprocals in *mag-* and three-place transitives in *mag-* (object-oriented lexical reciprocals) derived from the same root-morphemes
 - 3.4 “Passives” in *pag-...-an* from *mag-* reciprocals. Voice transformations of lexical reciprocals
 - 3.5 Reciprocal *nomina actionis*
4. Reciprocal verbs with *mag-...-an*
 - 4.1 Introductory
 - 4.2 Polysemy of the suffix *-an*

- 4.2.1 In the verbal domain
- 4.2.2 In the nominal domain
- 4.3 Diathesis types of reciprocal constructions
 - 4.3.1 The “canonical” diathesis type

1. Introductory notes

1.1 The Tagalog language

Tagalog belongs to the Philippine group of Western Austronesian languages. To be precise, it belongs to the Central subgroup of the Philippine group, together with the Bikol, Bisayan and Mansakan languages. It functions as a basis of the official language of the Republic of the Philippines, now called Filipino (formerly Pilipino). The number of its native speakers, according to the census of 1980, exceeds 16 million. All in all, there are more than 100 related languages in the Philippines spoken by about 60 million people. Alongside Tagalog, the most numerous are the speakers of Cebuano, Ilokano and Hiligaynon (see McFarland 1980).

Tagalog is a highly synthetic language, with a rich inventory of agglutinative affixes (prefixes, suffixes and infixes). Prefixation is prevalent. Lengthy affixal combinations are mostly formed by prefixes. Various kinds of reduplication and phonological accent play an essential role in inflection and derivation.

Tagalog syntax combines features of different typologies – of the ergative, active and accusative types (for a discussion of this problem see, among others, Foley & Van Valin (1984: 138); Drossard (1984); Himmelmann (1991: 1–2); Payne (1982: 75–106); Shibatani (1988: 85–142); De Wolf (1988: 143–93)).

1.2 Overview

Tagalog grammars published so far do not contain any special sections on reciprocal constructions.

There are no specialized morphological markers of reciprocity in Tagalog. All morphemes used for this purpose are highly polysemous – this feature unites reciprocal

derivation with other derivational (valency changing and preserving) processes (see 2.7). The Tagalog equivalent of the English phrase *each other* does not play any important role in the expression of reciprocity.

The following means are used to derive reciprocals in Tagalog:

1. The prefix *mag-* which forms what might be called (with some reservations) lexical reciprocals (see (18c)).

2. The prefix-suffix combination (not a circumfix!) *mag-...-an*, each affix corresponding to one derivational step. This combination marks the best known kind of Tagalog reciprocals, which may be regarded as morphological reciprocals (see (1)).

3. The prefixal combination *mag-ka-* forms involitional reciprocals denoting uncontrollable processes (see (144c)).

4. The combination *mag-ka-...-an* that contains the suffix *-an* is also used to form involitional reciprocals (see (158b)).

5. The combinations *pag-...-in* and *pag-ka-...-in* with the suffix *-in* derive causative reciprocals from *mag-* and *mag-ka-* reciprocals, i.e. from types 1 and 3 listed here.

The first four types of reciprocals represent the “canonical” subject-oriented diathesis. Reciprocals marked by *mag-...-an* are able to form the “indirect” type of diathesis. The “possessive” type seems to exist on a very limited scale (if at all!).

Reciprocals in *pag-...-in* and *pag-ka-...-in* form the object-oriented diathesis.

There seem to be semantic and no formal restrictions on the derivation of reciprocals in *mag-...-an*, *mag-ka-* and *mag-ka-...-an*.

Derivational relations between reciprocal and non-reciprocal verbs, and often the direction of derivation, are far from clear in Tagalog. Morphologically, non-reciprocal verbs do not serve as immediate bases for the formation of reciprocals, as is the case in most languages. Paradigmatic relations between them cannot be described as derivational, but rather as relations based on affix correspondences between lexically related non-reciprocal and reciprocal verbs (cf. affix correspondence classes in Schachter & Otanes (1972:293ff.)). When speaking of non-reciprocal verbs as semantically underlying related reciprocals, we shall keep in mind that morphologically, Tagalog reciprocal verbs are mainly derived from bases identical to reciprocal nouns.

Numerous involitional reciprocals throw light on that part of morphology which contributes heavily to the typological peculiarity of Tagalog (see 2.3.1).

Involitional reciprocals display morphological similarity of verbs and nouns: they are a manifestation (one out of many!) of fundamental affinity of the Tagalog verb and noun (on the low level of the noun/verb differentiation in Philippine languages see, e.g. the following works where this issue is central: Himmelmann (1991); Gil (1993); Shkarban (1995)).

Another peculiarity of Tagalog is the optional marking of plurality (‘more than two’) of reciprocal agents (see Section 7; cf. 3.2.1), and also the existence of comitative forms derived from reciprocals (see Section 12).

Here is an example of two base constructions and corresponding reciprocal construction (in (1a) and (1b) the infixes *-um-* and *-in-* split the root morpheme *sulat* ‘to write’,

hence the translation for each segment of the root morpheme; further on, however, the second segment alone is glossed):

- (1) a. *S-um-ulat ang binata sa dalaga.*
 write-AG.PFV-write NOM boy OBL.ADR girl
 ‘The boy wrote to the girl.’
 b. *S-in-ulat-an ang binata nang dalaga.*
 write-PFV-write-ADR NOM boy ERG.AG girl
 ‘The boy was written to by the girl.’
 → c. *Nag-sulat-an ang binata at dalaga.*
 REC.PFV-write-REC NOM boy and girl
 ‘The boy and the girl wrote to each other.’

Here is an example of a comitative verb derived by the prefix *maki-* from a reciprocal base (so far, analogous forms are not attested in any other languages):

- d. *Naki-pag-sulat-an ang binata sa dalaga.*
 AG.COM.PFV-REC-write-REC NOM boy OBL.ADR girl
 ‘The boy corresponded/entered into correspondence with the girl.’

2. Grammatical information

2.1 Verbs, nouns, adjectives

Morphologically marked grammatical categories provide the most obvious distinctions between the parts of speech. Every verbal lexeme is represented by a paradigm of four modal-aspectual forms and is obligatorily marked for voice. Unlike verbs, Tagalog nouns and adjectives may be root-words.

Syntactically, verbs, nouns and adjectives are practically not differentiated. The majority of the affixes are common to different word classes.

2.2 Sentence structure. Case marking. Word order. Attributive constructions

Syntactic constituents are marked with prepositional particles: case markers, predicative and attributive linkers.

Case markers of common nouns (the abbreviation ERG refers to *nang* (*ng* in writing) when it marks the agent in “passive” constructions; see 2.3; the term OBL[ique] here covers the dative and locative cases):

- (2) NOM GEN, ERG, ACC OBL, ACC
ang nang sa

Case markers of personal names:

- (3) NOM GEN, ERG OBL, ACC
 SG *si ni kay*
 PL *sina nina kina*

Basically, Tagalog is a predicate initial, VOS/VSO language. In derived structures, the SVO order occurs entailing the use of the predicative linker *ay* which precedes the predicate in its non-initial position:

- (4) a. *Um-alis ang bata.* b. *Ang bata ay um-alis.*
 AG.PFV-leave NOM child NOM child LNK AG.PFV-leave
 ‘The child went away.’ ‘The child went away.’

Attributive constructions are formed with the help of the linker *na/ng*, each allomorph being phonetically determined. The word order in attributive constructions is relatively free:

- (5) a. *maliit na bahagi* b. *bahagi-ng maliit*
 small LNK part part-LNK small
 ‘a small part’ ‘a part which is small.’

2.3 Voice system

Every voice (in other terms, focus) affix on a Tagalog verb manifests argument (role) agreement between the verbal predicate and the subject, i.e. it shows which of the arguments is chosen as subject. This is to say that the verb always contains an affix indicating the semantic role of the subject (topic).

The core of the voice system in Tagalog is the opposition of the “active” (agentive) voice vs. “passive” (non-agentive) voices. Here is a fragment of the voice system markers:

- (6) “Active” voice (for Agent) “Passive” voices
-um- (see (1a)) *-in* – Patient
mag- (see (1c)) *-an* – Patient (see (9b)), Addressee, Location
maki- (see (1d)) *i-* – Patient, Instrument, Beneficiary

Here is a fragment of the voice paradigm (for the root morpheme *-luto-* ‘cooking’):

- (7) a. *mag-luto* ‘to cook, prepare food’
 b. *lutu-in* ‘to cook’ (the subject is the prepared food)
 c. *pag-lutu-an* ‘to cook’ (the subject is the place of cooking)
 d. *i-pag-luto* ‘to cook’ (the subject is the person for whom the food is cooked).

Two points should be stressed in this connection: (a) verbal prefixes with the initial *m-* have correlates with the initial *n-* (see 2.5; 2.8); (b) prefixes with the initial *m-* and *n-* have base-forming correlates with the initial *p-* which are obligatory for some voice forms (like *pag-* in (7c) and (7d)); hence affix paradigms like *mag-/nag-/pag-* or *maki-/naki-/paki-*. Prefixes in *p-* (*pag-*, *paki-*, etc.) are also used in nominal derivation. (For the base-forming function of *pag-* the gloss *PAG* is used in some examples below if its meaning is vague).

For common nouns, the main argument positions are marked with the following case markers:

(8)	Subject	Complements
“Active”	<i>ang</i> – Agent	<i>nang</i> – indefinite Patient
voice	(see <i>ang dalaga</i> in (9a))	(see <i>nang pinggan</i> in (9a))
		<i>sa</i> – definite Patient
		(see <i>sa bisita</i> in (28a))
“Passive”	<i>ang</i> – definite Patient	<i>nang</i> – Agent
voice	(see <i>ang pinggan</i> in (9b))	(see <i>nang dalaga</i> in (9b)).

As a rule, indefinite patients are encoded by a *nang* complement in “active” constructions, and definite patients by (grammatical) subject in “passive” constructions:

- (9) a. *Nag-hugas nang pinggan ang dalaga.*
 AG.PFV-wash ACC.PAT dish NOM girl
 ‘The girl washed a dish/dishes.’
- b. *H-in-ugas-an nang dalaga ang pinggan.*
 PFV-wash-PAT ERG.AG girl NOM dish
 ‘The girl washed the dish.’

Note that the so called “passive” (i.e. type (9b)) constructions are more common in texts than respective “active” (i.e. type (9a)) constructions (see, e.g., Cooreman et al. (1984:17)).

2.3.1 Involitional verbs

Another subsystem of voice affixes is realized on involitional verbs, i.e. verbs denoting uncontrollable processes undergone by an experiencer or involuntary, accidental actions and also actions an agent is able to perform.

The main variant of this subsystem is based on the following three voices opposed to each other: experiencer voice vs. involitional “active” (for indefinite non-human cause) vs. involitional “passives” (for definite non-human cause, addressee/location):

- | | | | |
|------|-------------------|-----------------------|------------------------|
| (10) | Experiencer voice | “Active” involitional | “Passive” involitional |
| | <i>ma-</i> (11a) | <i>ma-ka-</i> (11b) | <i>i-ka-</i> (11c) |
| | | | <i>ka-...-an</i> |
- (11) a. *ma-galit* ‘to be/become angry’
 b. *ma-ka-galit* ‘to cause anger’ (for non-human cause)
 c. *i-ka-galit* ‘to be the cause of anger’ (non-human, definite)
 d. *ka-galit-an* ‘to be the addressee (object) of anger.’

Other verbs of this kind are *ma-gulat* ‘to be astonished’, *ma-takot* ‘to be afraid’, *ma-gising* ‘to be awake’, *ma-galak* ‘to rejoice’, etc.

Another variant of the involitional subsystem is realized on verbs of perception, and also ability verbs (ability counterparts of volitional verbs in *-um-*, *mag-*, etc.; cf. Schachter & Otnes (1972:331)). Below is a fragment of these complicated paradigmatic relations:

- | | | | |
|------|----------------------|------------------------|------------------------|
| (12) | “Active” voilitional | “Active” involitional | “Passive” involitional |
| | <i>-um-</i> (14a) | <i>ma-ka-</i> (13a) | <i>ma-</i> (13b) |
| | <i>mag-</i> (15a) | <i>ma-ka-</i> (14b) | <i>ma-</i> (14c) |
| | | <i>ma-ka-pag</i> (15b) | <i>ma-pag-</i> (15c) |

- (13) a. *ma-ka-kita* 'to see'
 b. *ma-kita* 'to be seen'
- (14) a. *g-um-awa* 'to do'
 b. *ma-ka-gawa* 'to be able to do'
 c. *ma-gawa* 'able to be done'
- (15) a. *mag-bigay* 'to give'
 b. *ma-ka-pag-bigay* 'to be able to give'
 c. *ma-pag-bigay* 'able to be given.'

In publications on Tagalog grammar, besides the terms “volition” vs. “non-volition” (Ferrell 1983) and “volitive” vs. “non-volitive” (Kroeger 1993:80–5, 94–6), the alternative terms are used, namely, “active” vs. “stative” (Drossard 1984).

2.4 Number

There is no obligatory agreement in number between subject and predicate in Tagalog. The marking of plurality on nouns, anjectives and verbs is optional.

The main means of encoding plurality are as follows:

1. The proclitic particle *manga* (*mga* in writing): *bahay* ‘house’ – *manga bahay* ‘houses’.
2. Reduplication: *ka-putol* ‘a piece’ – *mag-ka-putol* ‘two pieces’ – *mag-ka-ka-putol* ‘(more than two) pieces’, *mag-hiwalay* ‘to part’ – *mag-hiwa-hiwalay* ‘to part’ (of many agents).

2.5 Mood, aspect, tense

The Tagalog verb has two aspect forms, perfective and imperfective, and one tense form – future which shares (with few exceptions) affixation with the infinitive. The latter two forms are opposed to the former two as irrealis to realis.

There are four main types of modal-aspectual paradigms:

- | | | |
|------|------------------|----------------------|
| I. | <i>mag-bigay</i> | ‘to give’ |
| II. | <i>s-um-ulat</i> | ‘to write’ |
| III. | <i>sulat-in</i> | ‘to be written’ |
| IV. | <i>i-bigay</i> | ‘to be given to sb.’ |

Example (16) illustrates these types:

(16)	I.	II.	III.	IV.
Perfective	<i>nag-bigay</i>	<i>s-um-ulat</i>	<i>s-in-ulat</i>	<i>i-b-in-igay</i>
Imperfective	<i>nag-bi-bigay</i>	<i>s-um-u-sulat</i>	<i>s-in-u-sulat</i>	<i>i-b-in-i-bigay</i>
Future	<i>mag-bi-bigay</i>	<i>su-sulat</i>	<i>su-sulat-in</i>	<i>i-bi-bigay</i> .
Infinitive	<i>mag-bigay</i>	<i>s-um-ulat</i>	<i>sulat-in</i>	<i>i-bigay</i> .

In these paradigms, the following means are used to mark mood, aspect and tense (RED – reduplication of the first syllable of the root-morpheme):

(17)		I.	II.	III.	IV.
	Perfective	<i>nag-</i>	<i>-um-</i>	<i>-in-</i>	<i>i-...-in-</i>
	Imperfective	<i>nag-</i> + RED	<i>-um-</i> + RED	<i>-in-</i> + RED	<i>i-...-in-</i> + RED
	Future	<i>mag-</i> + RED	+ RED	+ RED + <i>-in</i>	<i>i-</i> + RED
	Infinitive	<i>mag-</i>	<i>-um-</i>		+ <i>-in i-</i>

In paradigms II, III and IV the infixes (*-um-* and *-in-*) are inserted into the reduplicated syllable of the root-morpheme: *su-sulat* + *-um-* = *s-um-u-sulat* ‘is/was writing’. The Tagalog infixes are capable of splitting not only roots and reduplicated root syllables (see (II, III, IV in (16)), but also other prefixes (see (74b), (157b), (173b)).

In paradigm III, the suffix *-in* (marking “passive” voice) is omitted in the perfective and imperfective, so that only the infix *-in-* (marking realis on all “passive” voice verbs) indicates the voice on these forms (for some other verbs with the alternative *-in/-in-* marking of “passive” voice see 3.2 (29), 4.3.1 (82)).

2.6 Verb classes

Roughly speaking, Tagalog has two kinds of transitivity, one for an indefinite patient (“active” voice) and the other for a definite one (mainly “passive” voice; see 2.3).

Transitivity and intransitivity are not always differentiated formally, since in both cases the same, highly polysemous affixes and syntactic markers are used; besides, “passive” voices may promote to subject position not only a patient, but also addressee, location, cause, etc. Keeping all this in mind, we shall speak of the following main syntactic verb classes:

1. One-place intransitives: *um-ubo* ‘to cough’ (← *ubo* ‘cough’), *mag-saya* ‘to rejoice’ (← *saya* ‘joy’).

2. Two-place intransitives: *d-um-aan* ‘to pass by/across’ – *daan-an* ‘to be the place of passing by/across’, *mag-sawa* ‘to get bored’ – *pag-sawa-an* ‘to be sb/sth one gets bored with’.

3. Two-place transitives: *k-um-ain* ‘to eat’ – *kain-in* ‘to be eaten’, *mag-sabi* ‘to say’ – *sabih-in* ‘to be said’.

4. Three-place transitives: *mag-lagay* ‘to put’ – *i-lagay* ‘to be put’ – *lag(a)y-an* ‘to be the place where sth is put’.

The following examples illustrate the use of verbs of these classes (due to space limitations, only “active” voice constructions are given):

- (18) *Um-u-ubo siya.*
AG-IPFV-cough 3SG.NOM
‘He is coughing.’
- (19) *D-um-aan siya sa damuhan.*
-AG.PFV-pass 3SG.NOM LOC lawn
‘He passed across the lawn.’
- (20) *K-um-ain siya nang saging.*
-AG.PFV-eat 3SG.NOM ACC.PAT banana
‘He ate a banana.’

- (21) *Nag-lagay sila nang manga bulaklak sa libing.*
 AG.PFV-put 3PL.NOM ACC.PAT PL flower LOC grave
 ‘They put flowers on the grave.’

2.7 Verbal derivation

All valency affecting processes use non-specialized highly polysemous affixation whose function in each case depends on semantic features of root-morphemes.

2.7.1 Valency increasing means

These are:

1. Transitivity-causative, e.g.:

- (22) *um-alis* ‘to leave’ → *mag-alis* ‘to remove.’

2. Causative proper (indirect-action verbs, in terms of Schachter & Otanes (1972: 321)):

- (23) *mag-dala* ‘to carry’ → *mag-pa-dala* ‘to make sb carry.’

3. Comitative, e.g.:

- (24) *um-inom* ‘to drink’ → *maki-inom* ‘to drink together with sb.’

(For details see Section 12).

Such valency increasing means as benefactive, applicative/locative, instrumental are voice markers in voice paradigms of various verb groups; cf.:

- | | | | |
|---------|-----------------------|------------------------------|------------------------|
| (25) a. | <i>p-um-utol</i> | ‘to cut’ “active” | voice |
| b. | <i>putul-an</i> | ‘to be the place of cutting’ | locative “passive” |
| c. | <i>i-putol</i> | ‘to cut for sb’ | benefactive “passive” |
| d. | <i>i-(pang-)putol</i> | ‘to cut with sth’ | instrumental “passive” |

2.7.2 Valency decreasing means

Here belong the following markers:

1. Reciprocal (see (1)).

2. Reflexive, e.g.:

- (26) a. *um-ahit* ‘to shave sb’ → *mag-ahit* ‘to shave oneself’
 b. *p-um-atay* ‘to kill’ → *pag-pa-ka-matay* ‘to kill oneself’
 c. *p-um-uri* ‘to praise sb’ → *mag-ma-puri* ‘to praise oneself’
 d. *mag-pa-ganda* ‘to beautify sb’ → *mag-pa-ganda* ‘to beautify oneself.’

3. Anticausative, e.g.:

- (27) a. *ma-basag* ‘to be broken by sb’ – *ma-basag* ‘to get broken (by itself)’
 b. *sunug-in* ‘to burn sth’ – *mag-ka-sunog* ‘to get on fire (by itself)’
 c. *mag-pa-tawa* ‘to make sb laugh’ – *ma-pa-tawa* ‘to burst out laughing.’

The so-called “direct passive” (patient voice/focus) does not, as a rule, decrease valency, since the underlying subject is preserved.

2.7.3 Valency retaining means

Here belong:

1. Sociative (formed by the same means as reciprocals; see Section 11).
2. Intensive, e.g. *s-um-ikap* ‘to strive’ – *mag-sikap* ‘to strive hard’ – *mag-s-um-ikap* ‘to strive very hard’ – *mag-pa-ka-sikap* ‘to strive with extreme efforts’.
3. Intensive-iterative: *s-um-ulat* ‘to write’ – *mag-sulat* ‘to write much and often’.

2.8 Affixation. Phoneme alternation. Reduplication

There are fourteen grammatically most important prefixes: *mag-*, *nag-*, *pag-*, *mang-*, *nang-*, *pang-*, *maki-*, *naki-*, *paki-*, *ma-*, *na-*, *pa-*, *ka-*, and *i-*.

There are two suffixes: *-in*, *-an*; two infixes/prefixes: *-um-*, *-in-/ni-*. An infix is placed after the first consonant of the word.

As the list of prefixes shows, there is grammatical alternation of the initial consonants *m-/n-/p-*. Except for the grammatical functions of *m-* and *n-* (see 2.5), members of pairs like *mag-/nag-* are functionally and semantically identical prefixes. In grammars they are usually listed as *mag-*, *mang-*, *maki-*, etc.

The prefixes with *p-* (*pag-*, *pang-*, etc.) are nominal and base-forming correlates of the verbal *m-/n-* prefixes; cf.: *mag-bigay* ‘to give’ – *nag-bigay* ‘gave/has given’ – *pag-bi-bigay* ‘a giving’ – *maki-pag-bigay* ‘to give together with sb’.

Rules of affix combinability allow to form more than 100 combinations of affixes (including less important morphemes), of which more than 30 are combinations of two prefixes (like *ma-ka-*, *mag-ka-*, *i-ka-*, *pag-ka-*, *mag-ka-*, *pag-pa-*, etc.), a considerable number are combinations of three and four affixes, etc.

A number of affix combinations act, each, as a single morpheme, like the circumfix *ka-...-an*, the complexes *ma-ka-*, *i-ka-*, etc.

In the following example, the third word contains the affixal complex *i-ka-* which indicates an (involitional) cause: *ka-sundo* ‘a partner in reaching an agreement’ – *mag-ka-sundo* ‘to reach an agreement’ – *i-ka-pag-ka-sundo* ‘to be the cause of reaching an agreement’.

There are phonetically determined alternations *d/r* (with *r* occurring in intervocalic position only) and *u/o* (with *o* occurring in word-final syllables), e.g. *mag-digma* ‘to wage a war against each other’ – *mag-di-rigma* ‘will wage a war against each other’; *tulong* ‘help’ – *t-um-ulong* ‘to help’ – *tulong-an* ‘to be helped’.

Two kinds of reduplication interact with affixation:

- reduplication of the first syllable of the base, e.g. *nag-bi-bigay* ‘is/was giving’ – *mag-bi-bigay* ‘will give’;
- reduplication of two syllables of the base, e.g. *mag-ka-sundu-sundo* ‘to reach an agreement (of many agents)’, *mag-lutu-lutu-an* ‘to pretend to be cooking’, ‘to play cooking’.

The complexity of Tagalog morphology is described in grammars (see, for instance, Bloomfield 1917; Schachter & Otanes 1972) and also in a number of specialized monographs (Makarenko 1970; Guzman 1978; Rachkov 1981).

2.9 Alternation of stress patterns

Phonological accent helps to resolve high polysemy of affixation and reduplication. Two kinds of changes in stress patterns perform this function:

1. Shift of the main stress (inherent to a root-morpheme, obligatory for a full word; marked `).

2. Presence vs. absence of secondary stress (marked ^).

Examples: *útos* ‘order’ – *utús-an* ‘to be given an order’ – *utus-án* ‘a servant’ – *ùtús-an* ‘giving orders to each other’; *mag-kà-ka-galít* ‘will be quarrelling with each other’ – *mag-ka-ka-galít* ‘more than two people quarrelling with each other’.

Henceforth, stress is marked only in examples meant to show its grammatical function (see (116), (117)).

3. Reciprocals with the prefix *mag-* only (= lexical reciprocals). Subject-oriented reciprocals only

3.1 Introductory

There are about 30 reciprocals with the prefix *mag-*. It should be remembered that throughout this text the prefix *mag-* is mostly used to refer to two alternate prefixes of the same verb, viz. *mag-* and *nag-* differing only in the meanings of irrealis and realis respectively (see 2.5).

Reciprocals in *mag-* are derived mainly from verbal bases (root-morphemes) which denote actions with the following features:

1. The action of the agent implies an identical action from the patient, see (30).
2. The patient is provoked to respond/responds to the agent with an identical action (with the resulting dual agent), see (28).
3. The patient is typically definite for the agent.
4. The patient is typically human (excepting verbs of connecting/disconnecting).

- (28) a. *B-um-ati ang dalaga sa bisita.*
AG.PFV-greet NOM girl PAT visitor
‘The girl greeted the visitor.’
- b. *B-in-ati ang dalaga nang bisita.*
PAT.PFV-greet NOM girl AG visitor
‘The girl was greeted by the visitor.’
- c. *Nag-bati ang dalaga at ang bisita.*
AG.REC.PFV-greet NOM girl and NOM visitor
‘The girl and the visitor greeted each other.’

Lexical meaning makes the suffix *-an* redundant on *mag-* reciprocal bases (contrary to morphological reciprocals marked by *mag-...-an*). Features 1 and 2 listed above show that the underlying verbs are [near-]lexical reciprocals, therefore the term “non-reciprocals” is a conventional label for them. In some cases, their derivation involves only substitution of a simple reciprocal construction for a discontinuous one (see 3.3.3).

Affix correspondences between lexically related verbs – reciprocal and non-reciprocal – include affix correspondences between the “active” and “passive” voice non-reciprocals.

Formally, the “active” voice marking on a non-reciprocal (mostly with *-um-*) corresponds to the grammatical role of *mag-*, the “active” voice marker on a reciprocal.

Semantically, however, “passive” voice constructions (specializing in encoding definite patients as grammatical subjects) render the “agent – patient” relation in reciprocal situations more adequately than “active” constructions (normally, chosen when the patient is indefinite).

3.2 “Canonical” diathesis only

In (28) above and (30)–(55) below, various types of the “active” and “passive” voice marking on underlying non-reciprocals are represented, the main types being the following (*-in/-in-* means that the suffix *-in* and infix *-in-* alternate in marking the “passive” voice; see in this connection 2.5):

- | (29) | Non-reciprocals | | Reciprocals | |
|---------|-----------------|------------------|-------------|---------------------|
| | “Active” voice | “Passive” voices | | |
| Type A: | <i>-um-</i> | <i>-in/-in-</i> | <i>mag-</i> | cf. (28), (31)–(38) |
| Type B: | <i>-um-</i> | <i>-an</i> | <i>mag-</i> | cf. (30), (39)–(52) |
| Type C: | – | <i>-in/-in-</i> | <i>mag-</i> | cf. (53)–(55) |
- (30) a. *L-um-a-laban ang Tailand sa Vietnam sa Kambodya.*
 -AG-IPFV-fight NOM T. PAT V. LOC C.
 ‘Thailand was fighting against Vietnam in Cambodia.’
- b. *Ni-la-laban-an ang Tailand nang Vietnam sa Kambodya.*
 IPFV-fight-PAT NOM T. AG V. LOC C.
 ‘Thailand was fought against by Vietnam in Cambodia.’
- c. *Nag-la-laban ang Tailand at Vietnam sa Kambodya.*
 AG.REC-IPFV-fight NOM T. and V. LOC C.
 ‘Thailand and Vietnam were fighting against each other in Cambodia.’

The following are reciprocals with the marker *mag-* listed according to the morphological type of underlying verbs given in (29).

Type A

- (31) a. *s-um-alubong* ‘to meet (on the way), to greet’
 b. *salubung-in* ‘to be met (on the way), to be greeted’
 → c. *mag-salubong* ‘to meet, greet each other.’

- (32) a. *t-um-agpo* 'to encounter'
 b. *tagpu-in* 'to be encountered'
 → c. *mag-tagpo* 'to encounter each other.'
- (33) a. *um-usap* 'to talk to sb'
 b. *usap-in* 'to be talked to'
 → c. *mag-usap* 'to talk to each other.'
- (34) a. *y-um-akap* 'to embrace'
 b. *yakap-in* 'to be embraced'
 → c. *mag-yakap* 'to embrace each other.'
- (35) a. *b-um-abag* 'to fight with sb'
 b. *babag-in* 'to be fought with'
 → c. *mag-babag* 'to fight with each other.'
- (36) a. *s-um-igalot* 'to disagree with sb'
 b. *sigalut-in* 'to be in disagreement with'
 → c. *mag-sigalot* 'to disagree with each other.'
- (37) a. *s-um-unod* 'to follow sb'
 b. *sun(u)d-in* 'to be followed'
 → c. *mag-sunod* 'to follow each other.'
- (38) a. *k-um-ita* 'to see', 'to find', 'to earn'
 b. *kita-in* 'to be seen', 'to be found', 'to be earned'
 → c. *mag-kita* 'to see each other', 'to meet with each other.'

Type B

- (39) a. *k-um-amay* 'to shake sb's hand'
 b. *kamay-an* 'to have (one's) hand shaken'
 → c. *mag-kamay* 'to shake hands with each other.'
- (40) a. *t-um-ulong* 'to help'
 b. *tulong-an* 'to be helped'
 → c. *mag-tulong* 'to help each other.'
- (41) a. *p-um-isan* 'to stay under one roof with sb'
 b. *pisan-an* 'to be joined under one roof'
 → c. *mag-pisan* 'to stay together under one roof.'
- (42) a. *s-um-abay* 'to act simultaneously with sb'
 b. *sabay-an* 'to be the one with whom sb acts simultaneously'
 → c. *mag-sabay* 'to act simultaneously with each other.'
- (43) a. *s-um-ama* 'to join sb'
 b. *samah-an* 'to be joined (by sb)'
 → c. *mag-sama* 'to get together', 'to join each other.'
- (44) a. *b-um-angga* 'to hit against sth'
 b. *bangga-an* 'to be hit against'
 → c. *mag-bangga* 'to hit against each other', 'to collide with each other.'

- (45) a. *d-um-ikit* 'to stick to sth'
 b. *dikit-an* 'to be stuck/pasted to sth'
 → c. *mag-dikit* 'to stick/get pasted to one another.'
- (46) a. *d-um-ugtong* 'to increase/complete (by adding)'
 b. *dugtong-an* 'to be increased, completed (with sth added)'
 → c. *mag-dugtong* 'to increase/complete each other.'
- (47) a. *b-um-ukod* 'to separate from sth/sb'
 b. *bukur-an* 'to be separated from'
 → c. *mag-bukod* 'to separate from each other.'
- (48) a. *h-um-iwalay* 'to separate from sth/sb'
 b. *hiwalay-an* 'to be separated from'
 → c. *mag-hiwalay* 'to separate from each other.'
- (49) a. *l-um-apit* 'to come close/approach'
 b. *lapit-an* 'to be approached'
 → c. *mag-lapit* 'to approach each other.'
- (50) a. *l-um-ayo* 'to stay/keep away from sth/sb'
 b. *layu-an* 'to be kept away from'
 → c. *mag-layo* 'to stay/keep away from each other.'
- (51) a. *s-um-iping* 'to sit, lie beside sth/sb'
 b. *siping-an* 'to be that beside which sth/sb lies, sits'
 → c. *mag-siping* 'to sit down/lie beside each other.'
- (52) a. *t-um-ama* 'to hit (the mark, target)'
 b. *tama-an* 'to be hit (as a mark, target)'
 → c. *mag-tama* 'to hit each other.'

Type C

In this type, non-reciprocals seem to be represented only by “passive” voice forms:

- (53) a. *alit-in* 'to quarrel' (lit. 'to be quarrelled with')
 → b. *mag-alit* 'to quarrel with each other'
- (54) a. *away-in* 'to quarrel' (lit. 'to be quarreled with')
 → b. *mag-away* 'to quarrel with each other'
- (55) a. *digma-in* 'to wage a war against sb' (lit. 'to be waged a war against')
 → b. *mag-digma* 'to wage a war against each other.'

3.2.1 Lexical reciprocals in *mag-* and morphological reciprocals in *mag-...-an* derived from the same root-morphemes

As a rule, a lexical reciprocal in *mag-* has a suffixed correlate. The two variants are not identical in meaning: verbs in *mag-...-an* denote reciprocal situations with *more than two agents* involved and/or a more intensive action than parallel *mag-* reciprocals. Compare:

- (56) a. *b-um-ati* 'to greet sb'
 b. *bati-in* 'to be greeted by sb' (*b-in-ati* 'was greeted by sb')
 → c. *mag-bati / mag-bati-an* 'to greet each other' (see also (28)).

- (57) *mag-digma / mag-digma-an* 'to wage a war against each other'
 (58) *mag-kamay / mag-kamay-an* 'to shake hands with each other' (cf. also (39))
 (59) *mag-tagpo / mag-tagpu-an* 'to encounter each other' (cf. (32))
 (60) *mag-bangga / mag-bangga-an* 'to collide with each other' (cf. (44)).

J.V. Panganiban (1969–1972:576) describes the difference between *mag-laban* and *mag-laban-an* 'to fight with each other' in the following way: "*Maglabanan*, as *maglaban*, but involving more participants and more active opposition or fighting". The same difference is observed between *mag-hiwalay* and *mag-hiwalay-an* 'to separate from each other' of which the latter is used "if more than two persons are involved". Compare also *mag-usap* 'to talk (a mutual action)' and *mag-usap-an* 'to hold a conversation' (Wolff 1991:1252), *mag-away* 'to fight with each other' and *mag-away-an* 'to fight with each other in numbers' (Wolff 1991:685).

3.3 Polysemy of the prefix *mag-*

The prefix *mag-* is selected – out of all "active" voice affixes – to form lexical reciprocals due to its individual semantic features (corresponding to the above mentioned properties (see 3.1) of the relevant verbal bases). This fact, i.e. the selection of the marker with regard to its semantics, makes *mag-* reciprocals as morphological (and lexical at the same time) as all other groups of Tagalog verbs. We make this reservation while labelling these *mag-* reciprocals as lexical.

The number of verbs covered by each of the meanings of the polysemous prefix *mag-*, i.e. the nature of productivity of its meanings, is subject to further investigation.

3.3.1 Polysemy of *mag-* in the verbal domain

This prefix usually implies:

1. Involvement of human participants in a situation: of the agent, also of the counter-agent (in reciprocal situations), of the agent=patient (in reflexive situations), or of collaborating agents (in sociative situations).

2. A relation between two (in the first place) or more actants.

These prevailing semantic features of *mag-* ('human' and 'dual/plural') are represented in the following main meanings it encodes in the verbal domain; in groups (a), (b), (c), (d), (e) and (f) semantically underlying verbs are entered (in group (g) *mag-* verbs have none); groups (h), (i) and (k) contain *mag-* verbs derived from nominal bases:

(a) Reciprocal, see (28), (30)–(55).

(b) Anticausative:

- (61) a. *mag-tipon/tipun-in* 'to gather/collect' → *mag-tipon* 'to get together'
 b. *s-um-ugat* 'to wound' → *mag-sugat* 'to develop into a wound'
 c. *pag-umpuk-in* 'to group sb/sth' → *mag-umpok* 'to group (together)'
 d. *pag-samah-in* 'to join sth/sb' → *mag-sama* 'to become joined.'

(c) Reflexive:

- (62) a. *um-ahit* 'to shave sb' → *mag-ahit* 'to shave oneself'
 b. *p-um-igil* 'to restrain sb' → *mag-pigil* 'to restrain oneself'
 c. *b-um-igti* 'to kill sb by hanging' → *mag-bigti* 'to kill oneself by hanging.'

(d) Transitivity-causative:

- (63) a. *um-alis* 'to go away' → *mag-alis* 'to remove'
 b. *um-akyat* 'to go up' → *mag-akyat* 'to take sth upstairs'
 c. *l-um-apit* 'to come close' → *mag-lapit* 'to bring sth close to sth'
 d. *s-um-anay* 'to train oneself' → *mag-sanay* 'to train sb.'

(e) Converse:

- (64) a. *b-um-ili* 'to buy' → *mag-bili* 'to sell'
 b. *um-abot* 'to reach for sth' → *mag-abot* 'to hand over sth to sb.'

(f) Intensive/iterative:

- (65) a. *s-um-ulat* 'to write' → *mag-sulat* 'to write much and often'
 b. *k-um-ain* 'to eat' → *mag-kain* 'to eat much and often'
 c. *b-um-asa* 'to read' → *mag-basa* 'to read much and often.'

(g) Mental and speech activities, psychological processes:

- (66) a. *mag-salita* 'to speak'
 b. *mag-aral* 'to study'
 c. *mag-turo* 'to teach'
 d. *mag-damdam* 'to feel.'

(h) Professional occupations (derived from professional names):

- (67) a. *presidente* 'president' → *mag-presidente* 'to be a president'
 b. *hukom* 'judge' → *mag-hukom* 'to be a judge'
 c. *pulube* 'beggar' → *mag-pulube* 'to be a beggar.'

(i) Occupational/habitual (derived from names of things and qualities):

- (68) a. *bukid* 'field' → *mag-bukid* 'to cultivate land', 'to be a farmer'
 b. *bigas* 'rice' → *mag-bigas* 'to deal in rice'
 c. *pula* 'red' → *mag-pula* 'to wear red.'

(j) Possessive:

- (69) a. *asawa* 'a spouse' → *mag-asawa* 'to get married' (= 'to get a wife/husband')
 b. *bahay* 'house' → *mag-bahay* 'to build up one's own house'.

3.3.2 Polysemy of *mag-* in the nominal domain. Duality

This covers two cases.

(a) This prefix derives nouns denoting two persons in a reciprocal relation:

- (70) a. *asawa* 'a spouse' → *mag-asawa* 'a married couple'
 b. *kapit-bahay* 'neighbour' → *mag-kapit-bahay* 'two neighbours'

- c. *nobyo* ‘sweetheart’ → *mag-nobyo* ‘two sweethearts’
 d. *pinsan* ‘cousin’ → *mag-pinsan* ‘two cousins’
 e. *ka-patid* ‘brother/sister’ → *mag-ka-patid* ‘two brothers/sisters, brother and sister.’

(b) It derives nouns denoting two persons in a converse relation; these forms derive from the names of socially more important or superior members:

- (71) a. *ama* ‘father’ → *mag-ama* ‘father and child’
 b. *ina* ‘mother’ → *mag-ina* ‘mother and child’
 c. *ale* ‘aunt’ → *mag-ale* ‘aunt and nephew/niece’
 d. *ginoo* ‘master’ → *mag-ginoo* ‘master and servant.’

3.3.3 One-place reciprocals in *mag-* and three-place transitives in *mag-* (object-oriented lexical reciprocals) derived from the same root-morphemes

Transitive or intransitive use of these verbs depends on the syntactic construction they occur in; cf.:

- (72) a. *mag-hiwalay* ‘separate from each other’ – *mag-hiwalay* ‘to separate sth from sth’
 b. *mag-lapit* ‘come close to each other’ – *mag-lapit* ‘to bring sth close to sth’
 c. *mag-tabi* ‘be side by side with each other’ – *mag-tabi* ‘to put sth aside.’
- (73) a. *Nag-hiwalay sila.*
 AG.PFV-separate 3PL.NOM
 ‘They separated from each other.’
 b. *Mag-hiwalay ka nang karne sa gulay.*
 AG-separate 2SG.NOM PAT meat OBL vegetable
 ‘Separate meat from vegetables.’

Compare also Section 6.

3.4 “Passives” in *pag-...-an* from *mag-* reciprocals. Voice transformations of lexical reciprocals

Lexical reciprocals with an oblique object may undergo “passivization” which promotes the oblique object to subject position (in (74b) the infix *-in-* is incorporated in *pag-*):

- (74) a. *Nag-away kami dahil sa bagay na iyon.*
 AG.REC.PFV-fight 1PL.NOM because OBL thing LNK that
 ‘We fought with each other for that thing.’
 b. *P-in-ag-away-an namin ang bagay na iyon.*
 PFV-fight-OBL 1PL.AG NOM thing LNK that
 lit. ‘That thing was fought for by us’; cf. also:
- (75) a. *mag-alit* ‘to quarrel with each other’ – *pag-alit-an* ‘to be the object of a quarrel’
 b. *mag-babag* ‘to be in conflict with each other’ – *pag-babag-an* ‘to be the object of a mutual conflict’.

3.5 Reciprocal *nomina actionis*

A number of lexical reciprocals are derived from bases identical to underived (root-word) *nomina actionis*, e.g.:

- (76) *usap* ‘a talk’ → *mag-usap* ‘to talk with each other.’

Besides, names of actions are formed from all *mag-* reciprocals by the prefix *pag-* (a regular correlate of *mag-*) and a reduplication of the first syllable of the root-morpheme, e.g.:

- (77) a. *mag-usap* ‘to talk with each other’ → *pag-u-usap* ‘a talk with each other’
 b. *mag-digma* ‘to wage a war against each other’ → *pag-di-rigma* ‘waging a war against each other.’

There are also pairs of underived (root-word) and derived *nomina actionis*. The difference between the members of such a pair has been explained as follows: “The root-word is used of a single instance rather than of the action in general, which is expressed rather by abstracts of action” (with *pag-* – L.Sh., E.R.) (Bloomfield 1917: 219); cf.:

- (78) a. *usap* / *pag-u-usap* ‘a talk with each other’
 b. *away* / *pag-a-away* ‘quarrelling with each other.’

4. Reciprocal verbs with *mag-...-an*

4.1 Introductory

These reciprocals have a double marking of reciprocity: the suffix *-an* on the verbal base and the prefix *mag-* forming a verb from this base. It should be kept in mind that *mag-* alternates with the prefix *nag-* on the same verbs, the two prefixes differing only in modality (see 2.5; cf. 3.1).

The bases with the suffix *-an* are identical to reciprocal *nomina actionis*. Therefore, derivationally, reciprocals marked with *mag-...-an* are relatable to these nouns; e.g.:

- (79) a. *ibig-an* ‘mutual love’ → *mag-ibig-an* ‘to love each other’
 b. *sulat-an* ‘writing to each other’ → *mag-sulat-an* ‘to write to each other’
 c. *baril-an* ‘shooting (at) each other’ → *mag-baril-an* ‘to shoot (at) each other’
 d. *tulong-an* ‘mutual help’ → *mag-tulong-an* ‘to help each other.’

We may view derivation of the previous type (see Section 3) as similar to this one, since most of the verbs in *mag-* are also formed from underlying bases with a [near] reciprocal meaning. Compare:

- (80) a. *alit* ‘quarrel’ → b. *mag-alit* ‘to quarrel with each other’ (see (53)).
 (81) a. *alit-an* ‘mutual quarrel’ → b. *mag-alit-an* ‘quarrel with each other’ (cf. 3.2.1).

As this chapter concerns reciprocal and related non-reciprocal verbal constructions in the first place, further on the relationship of reciprocals in *mag-...-an* with the (actual or potential) underlying [near-]reciprocal nouns is not taken into consideration.

Paradigmatic relations of reciprocal verbs with related non-reciprocal verbs are based on affix correspondences between them (including affix correspondences between “active” and “passive” voice non-reciprocals).

The main types of correspondences between reciprocals and related non-reciprocals are the following (*-in/-in-* means here the alternative suffix/infix marking of the “passive” voice; see 2.5; 3.2):

(82)	Non-reciprocals			Reciprocals
	“Active” voice	“Passive” voices		
Type A:	<i>-um-</i>	<i>-an</i>	<i>mag-...-an</i>	see (83), (94a, b, c, d)
Type B:	<i>-um-</i>	<i>-in/-in-</i>	<i>mag-...-an</i>	see (84), (94e)
Type C:	<i>-um-</i>	<i>i-</i>	<i>mag-...-an</i>	see (94g)
Type D:	<i>mag-</i>	<i>-in/-in-</i>	<i>mag-...-an</i>	see (94f).

For instance:

- (83) a. *T-um-ulong ang binata sa dalaga.*
 -AG.PFV-help NOM boy PAT girl
 ‘The boy helped the girl.’
- b. *T-in-ulung-an ang binata nang dalaga.*
 -PFV-help-PAT NOM boy AG girl
 ‘The boy was helped by the girl.’
- c. *Nag-tulong-an ang binata at dalaga.*
 AG.REC.PFV-help-REC NOM boy and girl
 ‘The boy and the girl helped each other.’
- (84) a. *B-um-a-baril ang manga kriminal sa manga pulis.*
 -AG-IPFV-shoot NOM PL criminal PAT PL police
 ‘Criminals were shooting at policemen.’
- b. *B-in-a-baril ang manga kriminal nang manga pulis.*
 -PAT-IPFV-shoot NOM PL criminal AG PL police
 ‘Criminals were being shot (at) by policemen.’
- c. *Nag-ba-baril-an ang manga kriminal at manga pulis.*
 AG.REC-IPFV-shoot-REC NOM PL criminal and PL police
 ‘Criminals and policemen were shooting (at) each other.’

4.2 Polysemy of the suffix *-an*

Semantic relations between the various meanings of the suffix *-an* on verbs, on the one hand, and its meanings on nouns, on the other, are not always quite clear.

4.2.1 In the verbal domain

This suffix is mainly used to indicate:

1. Situational participants partly (superficially) affected by the action.
2. Plurality (more than one) of situational participants.

In the verbal domain, the suffix *-an* functions as a “passive” voice marker if the affected (partly or superficially) actant is

- (a) the patient, e.g.:

- (85) a. *h-um-alik* ‘to kiss’ – *halik-an* ‘to be kissed’
 b. *t-um-ingin* ‘to look at’ – *ting(i)n-an* ‘to be looked at’
 c. *s-um-ugat* ‘to wound’ – *sugat-an* ‘to be wounded’

(b) an addressee:

- (86) a. *s-um-ulat* ‘to write’ – *sulat-an* ‘to be written to’
 b. *mag-bigay* ‘to give’ – *big(a)y-an* ‘to be given to’

(c) location/direction:

- (87) a. *t-um-ira* ‘to stay, live’ – *tir(a)h-an* ‘to be the place of staying/living’
 b. *h-um-iram* ‘to borrow from sb’ – *hiram-an* ‘to be borrowed from’

(d) a beneficiary:

- (88) a. *b-um-asa* ‘to read’ – *basah-an* ‘to read for sb’
 b. *s-um-ayaw* ‘to dance’ – *sayaw-an* ‘to dance for/before sb.’

4.2.2 In the nominal domain

Nouns with the suffix *-an* may be or denote:

(a) reciprocal *nomina actionis* (for details see 4.5), e.g.:

- (89) a. *patay-an* ‘killing each other’
 b. *bigay-an* ‘giving each other’

(b) sociative *nomina actionis*, e.g.

- (90) a. *sayaw-an* ‘collective dancing’
 b. *inum-an* ‘collective drinking’
 c. *sigaw-an* ‘collective shouting’

(c) place of a habitual action (performed by a plural agent or over plural patients):

- (91) a. *laru-an* ‘place for games’
 b. *gupit-an* ‘barber shop’
 c. *kain-an* ‘place for eating’

(d) location of many homogeneous objects:

- (92) a. *saging-an* ‘banana grove’
 b. *babuy-an* ‘piggery’
 c. *manuk-an* ‘chicken raising business’

(e) (in combination with disyllabic reduplication) simulative:

- (93) a. *bahay* ‘house’ → *bahay-bahay-an* ‘toy house’
 b. *tao* ‘man’ → *tau-tauh-an* ‘puppet’
 c. *duktur* ‘doctor’ → *duktur-duktur-an* ‘sb pretending to be a doctor.’

Compare also 5.2.3.3.

4.3 Diathesis types of reciprocal constructions

4.3.1 The “canonical” diathesis type

Reciprocals with the marker *mag-...-an* characterized by “canonical” diathesis derive from two-place non-reciprocals. In (83) and (84) above (see 4.1), the main types of affix correspondences between reciprocals and underlying non-reciprocals (including “active” – “passive” voice correspondences) are illustrated. See example (1) and the following:

- (94) a. *h-um-alik* ‘to kiss’/ *halik-an* ‘to be kissed’ → *mag-halik-an* ‘to kiss each other’
 b. *s-um-ugat* ‘to wound’/ *sugat-an* ‘to be wounded’ → *mag-sugat-an* ‘to wound each other’
 c. *um-utos* ‘to give order(s)’/ *utus-an* ‘to be given orders’ → *mag-utus-an* ‘to give orders to each other’
 d. *p-um-atay* ‘to kill’/ *patay-an* ‘to be killed’ → *mag-patay-an* ‘to kill each other’
 e. *um-ibig* ‘to love’/ *ibig-in* ‘to be loved’ → *mag-ibig-an* ‘to love each other’
 f. *mag-biro* ‘to joke at sb’/ *biru-in* ‘to be joked at’ → *mag-biru-an* ‘to joke at each other’
 g. *t-um-ulak* ‘to push’/ *i-tulak* ‘to be pushed’ → *mag-tulak-an* ‘to push each other.’

4.3.2 The “indirect” diathesis type. Reciprocals with *mag-...-an* derived from three-place non-reciprocals

The nominal environment of the underlying non-reciprocals includes an agent, patient and addressee. The addressee is encoded by a *sa* complement, the patient being marked by the case particle *nang*:

- (95) a. *Nag-bigay nang saging ang binata sa dalaga.*
 AG.PFV-give PAT banana NOM boy ADR girl
 ‘The boy gave a banana to the girl.’
 b. *B-in-ig(a)y-an nang saging ang binata nang dalaga.*
 -PFV-give-ADR PAT banana NOM boy AG girl
 ‘The boy was given a banana by the girl.’
 c. *Nag-bigay-an nang saging ang binata at dalaga.*
 AG.REC.PFV-give-REC PAT banana NOM boy and girl
 ‘The boy and the girl gave bananas to each other.’
- (96) a. *Nag-balita nang nangyari ang binata sa dalaga.*
 AG.PFV-inform PAT event NOM boy ADR girl
 ‘The boy informed the girl of the event.’
 b. *B-in-alita-an nang nangyari ang binata nang dalaga.*
 -PFV-inform-ADR PAT event NOM boy AG girl
 ‘The boy was informed of the event by the girl.’
 c. *Nag-balita-an nang nangyari ang binata at dalaga.*
 AG.REC.PFV-inform-REC PAT event NOM boy and girl
 ‘The boy and the girl informed each other of the event.’

Here also belong:

- (97) a. *mag-handog nang libro* 'to present a book'
 b. *handug-an nang libro* 'to be presented (with) a book'
 c. *mag-handug-an nang libro* 'to present books to each other'
- (98) a. *h-um-iram nang pera* 'to borrow money'
 b. *hiram-an nang pera* 'to be borrowed money from'
 c. *mag-hiram-an nang pera* 'to borrow money from each other.'

4.3.3 The “quasi-possessive” diathesis type

The existence of the “possessive” type of reciprocal diathesis in Tagalog arouses doubts. Restrictions imposed on it deserve special study, being, it seems, mainly connected with the peculiarities of encoding alienable and inalienable possession. Meanwhile, we shall only present some instances of what might be labelled the “quasi-possessive” diathesis type.

If an object of inalienable possession (a body part) is directly affected by the action, it is nevertheless the possessor that is encoded as a patient, while the body part is encoded by a non-referential adjunct (modifying the predicate). Although the adjunct retains the meaning of patient, it is functionally closer to an adverbial modifier; this is why its marker *nang* is glossed here as LNK (linker; see (99a, d), (100a, d)).

In some non-reciprocal constructions, a body part may be encoded as an oblique object marked with *sa*, as in (99b), or as head of a possessive phrase filling in subject position in a “passive” voice clause, as in (99c) and (100c); cf. Guzman (1978:36–7).

In reciprocal constructions, a body part may be encoded only by a verb adjunct, viz. by a constituent which may not be transformed into subject of a clause (the verb adjuncts in reciprocal clauses below (see *nang paa* ‘in the foot’ in (99d) and *nang kamay* ‘by the hand’ in (100d)) may be omitted, the clauses retaining grammaticality):

- (99) a. *S-um-ugat ako sa kanya nang paa.*
 -AG.PFV-WOUND 1SG.NOM PAT 3SG LNK foot
 ‘I injured his foot’, lit. ‘I wounded him in the foot.’
- b. *S-in-ugat-an niya ako sa paa.*
 -PFV-WOUND-PAT 3SG.AG 1SG.NOM OBL foot
 ‘My foot was injured by him’, lit. ‘I was wounded by him in the foot.’
- c. *S-in-ugat-an niya ang aki(n)-ng paa.*
 -PFV-WOUND-OBL 3SG.AG NOM 1SG.GEN-LNK foot
 ‘My foot was injured by him.’
- d. *Nag-sugat-an kami nang paa.*
 AG.REC.PFV-WOUND-REC 1PL.NOM LNK foot
 ‘We injured each other’s feet’, lit. ‘We wounded each other in the foot.’
- (100) a. *H-um-awak ang dalaga sa binata nang kamay.*
 -AG.PFV-HOLD NOM girl PAT boy LNK hand
 ‘The girl took hold of the boy’s hand.’
 lit. ‘The girl took hold of the boy by the hand.’
- b. *H-in-awak-an nang binata ang dalaga nang kamay.*
 -PFV-HOLD-PAT AG boy NOM girl LNK hand
 ‘The boy took hold of the girl’s hand.’
 lit. ‘The girl was taken hold of by the boy by the hand.’

- c. *H-in-awak-an nang binata ang kamay nang dalaga.*
 -PFV-hold-OBL AG boy NOM hand GEN girl
 ‘The boy took hold of the girl’s hand.’
 lit. ‘The girl’s hand was taken hold of by the boy.’
- d. *Nag-hawak-an nang kamay ang dalaga at binata.*
 AG.REC.PFV-hold-REC LNK hand NOM girl and boy
 ‘The girl and the boy took hold of each other’s hand.’
 lit. ‘The girl and the boy took hold of each other by the hand.’

(For more information on verb adjuncts in Tagalog see Schachter & Otones (1972:384ff.). The functional proximity of the marker *nang* to the attributive linker *na/-ng* is shown in Gonzalez (1971), Naylor (1980)).

4.3.4 The “quasi-dative” diathesis type

A number of reciprocal constructions are derived from non-reciprocals with two nominal constituents denoting agent and addressee, and also with an adjunct marked by the attributive marker (linker) *-ng* allowing, in some cases, an alternative marking similar to that of a patient, i.e. marking with *nang*. As this marker alternates here with the attributive linker *-ng* it is glossed as LNK (see 4.3.3):

- (101) a. *T-um-awag ako sa kanya-ng // nang pinsan.*
 -AG.PFV-call 1SG.NOM ADR 3SG-LNK LNK cousin
 ‘I called him cousin.’
- b. *T-in-awag-an niya ako-ng // nang pinsan.*
 -PFV-call-ADR 3SG.AG 1SG.NOM-LNK LNK cousin
 ‘I was called cousin by him.’
- c. *Nag-tawag-an kami-ng // nang pinsan.*
 AG.REC.PFV-call-REC 1PL.NOM-LNK LNK cousin
 ‘We called each other cousins.’
- (102) a. *S-um-umpa siya sa kanya-ng pakakasal.*
 -AG.PFV-swear 3SG.NOM ADR 3SG-LNK be.married
 ‘He swore to her that he would marry her.’
- b. *Nag-sumpa-an sila-ng pakakasal.*
 AG.REC.PFV-SWEAR-REC 3PL.NOM-LNK be.married
 ‘They swore to each other to marry each other.’

4.4 Polysemy of the complex *mag-...-an* (in the verbal domain only)

The polysemy of *mag-...-an* verbs is determined by their bases in *-an*. It includes the following meanings:

- (a) Reciprocal (see (1)).
- (b) Sociative, e.g.:
- (103) a. *awit-an* ‘collective singing’
 → b. *mag-awit-an* ‘to sing collectively’ (for details see below).
- (c) Competitive (= sociative – reciprocal):

- (104) a. (*takbo* ‘a run’ →) *takbuh-an* ‘a running race’
 → b. *mag-takbuh-an* ‘to run a race/in competition with others’
- (105) a. (*pana* ‘a bow and arrows’ →) *panah-an* ‘a contest in shooting arrows’
 → b. *mag-panah-an* ‘to shoot arrows in contest.’

With bases in *pa...-an*:

- (106) a. (*ganda* ‘beauty’ →) *pa-gandah-an* ‘a beauty contest’
 → b. *mag-pa-gandah-an* ‘to contest for beauty’
- (107) a. (*lakas* ‘strength’ →) *pa-lakas-an* ‘a strength contest’
 → b. *mag-pa-lakas-an* ‘to contest for strength.’

(d) The meaning ‘to be engaged in an activity related to the referent of the base word’:

- (108) a. *manuk-an* ‘chicken raising business’
 → b. *mag-manuk-an* ‘to be engaged in chicken raising business’
- (109) a. *babuy-an* ‘piggery’
 → b. *mag-babuy-an* ‘to be engaged in pig raising.’

(e) Simulative (with disyllabic reduplication):

- (110) a. *bahay-bahay-an* ‘a toy house’
 → b. *mag-bahay-bahay-an* ‘to play house’
- (111) a. *duktur-duktur-an* ‘sb pretending to be a doctor’
 → b. *mag-duktur-duktur-an* ‘to play doctor’, ‘to pretend to be a doctor’
- (112) a. *pilay* ‘lame’
 → b. *mag-pilay-pilay-an* ‘to pretend to be lame’
- (113) a. *iyak* ‘crying’
 → b. *mag-iyak-iyak-an* ‘to pretend to be crying.’

4.5 Reciprocal *nomina actionis*

Each *mag...-an* reciprocal correlates with two reciprocal *nomina actionis*, one identical with the nominal base in *-an* and another formed with the prefix *pag-* (a regular correlate of *mag-*) in combination with *-an* and monosyllabic reduplication:

- (114) a. *palit-an* ‘exchange’
 → b. *mag-palit-an* ‘to exchange with each other’
 → c. *pag-pa-palit-an* ‘mutual exchange’
- (115) a. *tulong-an* ‘mutual help’
 → b. *mag-tulong-an* ‘to help each other’
 → c. *pag-tu-tulong-an* ‘mutual help.’

The semantic difference between these two kinds of *nomina actionis* is the same as between the root-word and derived actional noun related to lexical *mag-* reciprocals (see 3.5).

In (numerous enough) cases when a *nomen actionis* is morphemically identical to a non-reciprocal verb in the “passive” voice form in *-an*, stress is employed to resolve ambiguity:

- (116) a. *tùlúng-an* ‘mutual help’ → b. *tulúng-an* ‘to be helped’
 (117) a. *bàti-an* / *bati-án* ‘greeting each other’ → b. *bati-an* ‘to be greeted.’

5. Nouns and verbs with the combinations *mag-ka-* and *mag-ka-...-an* (= involitional reciprocals). Subject-oriented reciprocals only

5.1 Introductory

Reciprocals of this type refer to processes and states (emotions, attitudes, relations, etc.) involuntarily inflicted by the counter-agents upon each other, or accidental actions towards each other.

These reciprocals are not derived from verbal bases only (as reciprocals in *mag-...-an* are): they are also freely derived from nominal and adjectival roots (with more freedom than lexical reciprocals in *mag-*).

The prefix *ka-* is a characteristic feature of involitional reciprocals. As a common trait of nouns and verbs, it creates one of the haziest areas of noun/verb differentiation in Tagalog.

The (unstressed) prefix *ka-* marks nouns referring to a participant of a reciprocal relation. They denote a person (or a thing) similar or equal to another in respect of a given feature. From these nouns, the prefix *mag-* derives reciprocal nouns denoting both participants.

5.2 Reciprocal nouns in *mag-ka-* and *mag-ka-...-an* with the meaning of dual reciprocity

5.2.1 Reciprocals in *mag-ka-* derived from nouns in *ka-* denoting class membership

The meaning of the prefix *ka-* on these nouns is ‘singularity’ + ‘equality with others in what is denoted by the root-morpheme’ (= ‘a member of the class’).

The meaning of the prefix *mag-* here is ‘dual’, i.e. it has a clearly quantitative character (cf. 3.3.2). For the meaning ‘more than two’ see Section 7.

The underlying nouns in *ka-* are in their turn derived from two main types of bases:

(a) From root-morphemes with nominal, adjectival and verbal meanings, e.g.:

- (118) a. *pangalan* ‘name’
 → b. *ka-pangalan* ‘namesake’
 → c. *mag-ka-pangalan* ‘two namesakes’
 (119) a. *klase* ‘class’
 → b. *ka-klase* ‘class-mate’
 → c. *mag-ka-klase* ‘two class-mates’
 (120) a. *salungat* ‘contradictory’
 → b. *ka-salungat* ‘one in contradiction with sb’
 → c. *mag-ka-salungat* ‘two in contradiction with each other’

- (121) a. *kilala* 'known'
 → b. *ka-kilala* 'one acquainted with sb'
 → c. *mag-ka-kilala* 'two acquainted with each other'
- (122) a. *iba* 'different'
 → b. *ka-iba* 'one different from sb/sth'
 → c. *mag-ka-iba* 'two different from each other'
- (123) a. *pareho* 'equal'
 → b. *ka-pareho* 'one equal to sb/sth'
 → c. *mag-ka-pareho* 'two equal to each other'
- (124) a. *tiwala* 'belief, trust'
 → b. *ka-tiwala* 'one trusted by sb'
 → c. *mag-ka-tiwala* 'two who trust each other.'

(b) From derived bases with the components (*i*)*sang-* 'one', *sing-* 'equal in sth' and some other prefix-like components:

- (125) a. *isang-palad* 'the same fate'
 → b. *ka-isang-palad* 'one of the same fate with sb'
 → c. *mag-ka-isang-palad* 'two of the same fate'
- (126) a. *sang-ayon* 'the same opinion'
 → b. *ka-sang-ayon* 'one of the same opinion with'
 → c. *mag-ka-sang-ayon* 'two of the same opinion'
- (127) a. *sing-taas* 'equal height'
 → b. *ka-sing-taas* 'one of equal height with sb/sth'
 → c. *mag-ka-sing-taas* 'two of equal height'
- (128) a. *sing-tamis* 'equally sweet'
 → b. *ka-sing-tamis* 'sth equally sweet with sth'
 → c. *mag-ka-sing-tamis* 'two equally sweet'
- (129) a. *taga-Maynila* 'a native of Manila'
 → b. *ka-taga-Maynila* 'a co-native of Manila'
 → c. *mag-ka-taga-Maynila* 'two co-natives of Manila.'

Typical constructions with nouns in *ka-* and *mag-ka-*:

- (130) a. *Ka-pangalan ko siya.*
 REC.SG-name 1SG.GEN 3SG.NOM
 'He is my namesake.'
- b. *Mag-ka-pangalan kami.*
 REC.DU-REC.SG-name 1PL.NOM
 'We two are namesakes.'

5.2.2 Reciprocals in *mag-ka-...-an* derived from nouns in *ka-...-an* denoting a participant of a reciprocal relation

Reciprocal nouns of this formal type have triple marking of reciprocity: with the suffix *-an* and the prefixes *ka-* and *mag-* each added at a successive derivational step:

1. A reciprocal noun of action with *an-* serves as the base for 2.

2. The derived noun in *ka-...-an* denotes a participant of a reciprocal relation and serves as the base for 3.

3. The subsequently derived noun in *mag-ka-...-an* denotes two participants in reciprocal relation (for the meaning ‘more than two’ see Section 7; cf. also 3.2.1). Compare:

- (131) a. *galit-an* ‘angry discord’
 → b. *ka-galit-an* ‘one in angry discord with sb’
 → c. *mag-ka-galit-an* ‘two persons in angry discord with each other.’
- (132) a. *bigay-an* ‘giving each other’
 → b. *ka-bigay-an* ‘one of two giving to each other’
 → c. *mag-ka-bigay-an* ‘two persons giving to each other.’
- (133) a. *ibig-an* ‘mutual love’
 → b. *ka-ibig-an* ‘one of the two in love with each other’
 → c. *mag-ka-ibig-an* ‘two persons in love with each other.’

Although a reciprocal meaning is common both for nouns in *mag-ka-* and *mag-ka-...-an*, they differ in some properties of the underlying nominal bases: typically, nouns in *ka-* are derived from nominal and adjectival root-morphemes, their meaning of reciprocity being connected with another, somewhat broader meaning of class membership; cf.:

- (134) *ka-ba-bayan/ka-bayan* ‘townsman’, ‘compatriot’ (← *bayan* ‘town, country’)
ka-barkada ‘member of a group of people’ (← *barkada* ‘a group of people’)
ka-bahala ‘member of a board of trustees’ (← *bahala* ‘responsibility’).

As for nouns in *ka-...-an* that underlie reciprocals in *mag-ka-...-an*, they contain the suffix *-an* which explicates reciprocity, being mainly added (in this meaning) to verbal root-morphemes (see (131), (132), (133)).

The following examples illustrate the use of nouns in *ka-...-an* and *mag-ka-...-an*:

- (135) a. *Ka-galit-an ni Maria si Neni.*
 REC.SG-anger-REC GEN M. NOM N.
 ‘Neni is in a quarrel with Maria’, lit. ‘N. is opponent of M. in a quarrel.’
- b. *Mag-ka-galit-an si Neni at si Maria.*
 REC.DU-REC.SG-anger-REC NOM N. and NOM M.
 ‘Neni and Maria quarrel with each other’, lit. ‘N. and M. are opponents in a quarrel.’

5.2.3 Meanings of the prefix *ka-* on non-reciprocals

5.2.3.1 *In the nominal domain.* It has two meanings, both of which are semantically related to the reciprocal meaning of *ka-* discussed above:

(a) classifying/numerative (with *tao* ‘man’ only; this function is a relic):

- (136) *tao* ‘man’ → *ka-tao* ‘one man’;

(b) fractional/ordinal (on numerals):

- (137) a. *apat* ‘four’ → *ka-apat* ‘one fourth’ → *i-ka-apat* ‘the fourth (one)’
 b. *lima* ‘five’ → *ka-lima* ‘one fifth’ → *i-ka-lima* ‘the fifth (one)’

5.2.3.2 *In the verbal and adjectival domains.* The prefix *ka-* is used in combination with reduplication to encode the following meanings:

(a) recent perfect:

- (138) a. *d-um-ating* ‘to come/arrive’ → *ka-ra-rating* ‘have/has just come’
 b. *g-um-awa* ‘to make’ → *ka-ga-gawa* ‘have/has just made’;

(b) intensive:

- (139) a. *ma-taas* ‘high’ → *ka-taas-taas* ‘very high’
 b. *mahal* ‘expensive’ → *ka-mahal-mahal* ‘very expensive.’

5.2.3.3 *The prefix ka- as part of the nominal circumfix ka-...-an.* It is used to derive:

(a) collective nouns:

- (140) a. *pulo* ‘island’ → *ka-pulu-an* ‘archipelago’
 b. *tao* ‘man’ → *ka-tauh-an* ‘mankind’;

(b) abstract nouns from adjectives:

- (141) a. *ma-ganda* ‘beautiful’ → *ka-ganda-an* ‘beauty’
 b. *ma-yaman* ‘wealthy’ → *ka-yaman-an* ‘wealth.’

For the prefix *ka-* as part of verbal affixal complexes see 2.3, 5.1, 5.3.1.1. On its various meanings and its place in the Tagalog morphological system see Bloomfield (1917:265–98).

5.3 Reciprocal verbs in *mag-ka-* and *mag-ka-...-an*

5.3.1 *Reciprocals in mag-ka-*

Most of these verbs are related to involitional non-reciprocal verbs marked with *ma-* (for the “experiencer” voice), *ka-...-an* (for “passive”) (see 2.3.1) and to reciprocal nouns in *ka-* simultaneously. Here are forms with this dual relationship all derived from the root-morpheme *-galit-* ‘anger’.

(a) Derived reciprocal nouns (see 5.2.1):

- (142) a. *ka-galit* ‘a person in angry discord with sb’
 b. *mag-ka-galit* ‘two persons in angry discord *with each other*.’

(b) Derived involitional verbs (see 2.3.1):

- (143) a. *ma-galit* ‘to become angry at sb’
 b. *ka-galit-an* ‘to become an object of sb’s anger’
 c. *mag-ka-galit* ‘to fall into mutual angry discord *with each other*.’

The following examples illustrate case (b):

- (144) a. *Na-galit ang Ina sa Ama.*
 AG.INVL.PFV-anger NOM mother OBL father
 ‘Mother got angry with Father.’

- b. *K-in-a-galit-an* *ang Ina nang Ama.*
 -PVF-INVL-anger-OBL NOM mother AG father
 ‘Father got angry with Mother’, lit. ‘Mother became object of Father’s anger.’
- c. *Nag-ka-galit* *ang Ina at ang Ama.*
 AG.REC.DU.PVF-INVL.SG-anger NOM mother and NOM father
 ‘Mother and Father got angry with each other.’
- (145) a. *Na-lugod* *ang dalaga sa binata.*
 AG.INVL.PFV-CORDIAL NOM girl OBL boy
 ‘The girl became cordial with the boy.’
- b. *K-in-a-lug(o)d-an* *ang dalaga nang binata.*
 -PVF-INVL-CORDIAL-OBL NOM girl AG boy
 ‘The boy became cordial with the girl’, lit. ‘The girl became object of cordiality.’
- c. *Nag-ka-lugod* *ang dalaga at binata.*
 AG.REC.DU.PVF-INVL.SG-CORDIAL NOM girl and boy
 ‘The girl and the boy became cordial with each other.’

Here are a few more verbs of case (b):

- (146) a. *ma-muhi* ‘to hate sb’
 b. *ka-muhi-an* ‘to be hated by sb’
 c. *mag-ka-muhi* ‘to hate each other.’
- (147) a. *ma-inggit* ‘to feel envy toward sb’
 b. *ka-inggit-an* ‘to become an object of sb’s envy’
 c. *mag-ka-inggit* ‘to feel envy toward each other.’

Those verbs in *mag-ka-* which have related nominal and adjectival root-morphemes can be viewed as derived from nouns in *ka-* (see 5.2.1) rather than from non-reciprocal involitional verbs. As a rule, these reciprocal verbs have the accented prefix *kà-* which points to the accidental character of an involuntary action, e.g.:

- (148) a. *ka-klase* ‘class-mate’
 → b. *mag-kà-klase* ‘to happen to become class-mates’
- (149) a. *ka-pareho* ‘one equal to sb’
 → b. *mag-kà-pareho* ‘to happen to become equal to each other’
- (150) a. *ka-sang-ayon* ‘one of the same opinion with sb’
 → b. *mag-kà-sang-ayon* ‘to happen to become of the same opinion with each other’
- (151) a. *ka-sing-taas* ‘one of equal height with sb/sth’
 → b. *mag-kà-sing-taas* ‘to happen to become of the same height with each other.’

5.3.1.1 *Polysemy of mag-ka- (in the verbal domain only).* It encodes the following meanings:

- (a) Reciprocal (including accidental reciprocal and potential reciprocal; see 5.3.3).
 (b) Anticausative (see also 2.7.2):

- (152) a. *sira-in* ‘to be broken by sb’
 b. *mag-ka-sira* ‘to get broken (by itself)’

- (153) a. *ma-ka-sakit* 'to cause pain, to hurt' (of non-human causer)
 b. *mag-ka-sakit* 'to get ill'

(c) Coming into possession, acquiring (what is denoted by the root-morpheme):

- (154) a. *apo* 'grandchild'
 b. *mag-ka-apo* 'to get a grandchild'
- (155) a. *panahon* 'time'
 b. *mag-ka-panahon* 'to get time'
- (156) a. *malay* 'consciousness, awareness'
 b. *mag-ka-malay* 'to get consciousness, awareness.'

5.3.1.2 "Passives" in *pag-ka-...-an* from *mag-ka-* reciprocals. Reciprocals in *mag-ka-* which have an oblique object may undergo "passivization", with the latter object being promoted to subject position. Examples:

- (157) a. *Nag-ka-galit* *kami dahil sa bagay na iyon*
 AG.REC.DU.PFV-REC.INVL.SG-anger 1PL.NOM because OBL thing LNK that
 'We quarrelled because of that thing.'
- b. *P-in-ag-ka-galit-an* *namin ang bagay na iyon.*
 -PFV-PAG-REC.INVL.SG-anger-OBL 1PL.AG NOM thing LNK that
 'That thing became the object of our quarrel.'

5.3.2 Reciprocals in *mag-ka-...-an*

It is not always clear what underlying derivatives these reciprocals are related to. There seem to be two different solutions, viz. verbs in *mag-ka-...-an* may be viewed as derived from:

(a) involitional *nomina actionis* with the complex *ka-...-an*:

- (158) a. *ka-sundu-an* 'accord, agreement'
 b. *mag-ka-sundu-an* 'to reach an agreement with each other'
- (159) a. *ka-unawa-an* 'mutual understanding'
 b. *mag-ka-unawa-an* 'to reach mutual understanding';

(c) involitional *nomina agentis* with the complex *ka-...-an*:

- (160) a. *ka-ibig-an* 'one of two who love each other'
 b. *mag-ka-ibig-an* 'to love each other', 'fall in love with each other'
- (161) a. *ka-galit-an* 'a person at odds with sb'
 b. *mag-ka-galit-an* 'to fall out with each other.'

It should be noted that prosodic differences and similarities between *nomina actionis* and *nomina agentis* in *ka-...-an* require special detailed study.

5.3.3 *Reciprocals in mag-ka- and mag- derived from the same root. Reciprocals in mag-ka-...-an and mag-...-an derived from the same root*

5.3.3.1 *Accidental vs. non-accidental reciprocal actions.* Involitionals with the complexes *mag-kà-* and *mag-kà-...-an* (with secondary stress on *-kà-*) are kind of accidental correlates of *mag-* and *mag-...-an* reciprocals respectively, cf.:

- (162) a. *mag-kita* 'to see/meet each other'
 b. *mag-kà-kita* 'to happen to see/meet each other'
- (163) a. *mag-tagpo* 'to encounter each other'
 b. *mag-kà-tagpo* 'to happen to encounter each other'
- (164) a. *mag-away* 'to quarrel with each other'
 b. *mag-kà-away* 'to happen to fall out with each other'
- (165) a. *mag-tulak-an* 'to push each other'
 b. *mag-kà-tulak-an* 'to push each other by accident.'

5.3.3.2 *Potential vs. non-potential reciprocal actions.* There are two ways of marking potentiality on reciprocals, either with *mag-ka-* (*-ka-* may be unstressed) or with *ma-ka-pag-* (where *ma-ka-* is a widely used marker of potentiality not confined to the domain of reciprocity/sociativity; see 2.3); cf.:

- (166) a. *mag-usap* 'to talk with each other'
 b. *ma-ka-pag-usap* 'to be able to talk with each other'
 c. *mag-ka-usap* (same translation)
- (167) a. *mag-hiram-an* 'to borrow from each other'
 b. *ma-ka-pag-hiram-an* 'to be able to borrow from each other'
 c. *mag-ka-hiram-an* (same translation).

5.4 Involitional reciprocal *nomina actionis*

Besides nouns of action mentioned in 5.3.2 there are abstract nouns in *pag-ka-* and *pag-ka-...-an* (where *pag-* is a regular nominal correlate of *mag-*) in combination with unaccented reduplication of prefix *ka-* (*pag-ka-ka-*):

- (168) a. *mag-ka-lapit* 'to become close to each other'
 b. *pag-ka-ka-lapit* 'becoming close to each other.'

5.5 Morphemic homonymy between reciprocal nouns and verbs. Prosody as a means of disambiguation

5.5.1 *Mag-kà- infinitives and mag-ka- nouns*

At least in the case of verbs denoting accidental actions, the accented *kà-* distinguishes infinitives with the complex *mag-kà-* from nouns in *mag-ka-* with obligatorily unstressed *ka-*; e.g.:

- (169) a. *mag-kà-lapit* 'to happen to be close to each other'
 b. *mag-ka-lapit* 'two close to each other.'

As for other meanings of *mag-ka-* verbs, the role of accent on *ka-* requires special study.

5.5.2 Future forms with the marker *mag-kà-ka-* and pluralized nouns with *mag-ka-ka-*

These verbal and nominal forms also differ in the presence vs. absence of accent on the reduplicated syllable. This prosodic difference is obligatory; cf.:

- (170) a. *mag-kà-ka-lapit* 'will happen to be close to each other'
 b. *mag-ka-ka-lapit* 'more than two close to each other.'

6. Object-oriented diathesis type of reciprocal constructions

6.1 Two-place lexical reciprocals in *pag-...-in*. Verbs of connecting and disconnecting

Formally, these reciprocals appear as a result of “passivization” of lexical reciprocals in *mag-* (due to the “passive” voice marker *-in* and regular *mag-/pag-* alternation of affixes, where *pag-* is a base-forming correlate of *mag-*; cf. “passives” in *pag-...-an* in 3.4):

- (171) a. *mag-lapit* 'to come close to each other'
 b. *pag-lapit-in* 'to be brought close to each other.'

Semantically, however, two-place verbs in *pag-...-in* are causative correlates of one-place lexical reciprocals in *mag-*. This is due to the fact that the derivation of reciprocals in *pag-...-in* involves valency increase, viz., the appearance of an agent valency. Therefore, a reciprocal relation appears as caused from the outside, by an agent expressed by a *nang* complement (see *nang eruplano* in (173b)). The position of (grammatical) subject is filled by a plural patient/(semantic) object, i.e. by a noun phrase denoting participants of a reciprocal relation (see *ang mangga bansa* in (173b)). This is why reciprocals in *pag-...-in* are treated here as “two-place lexical reciprocals” with the object (patient)-oriented type of diathesis.

Besides, the presence of agent (causer) and the “passive” voice form of reciprocals in *pag-...-in* make them related also to three-place lexical reciprocals in the form of the “passive” voice in *i-*, used in a discontinuous construction (see (173a)). Compare also three-place transitive verbs (object-oriented lexical reciprocals) in *mag-*, viz., in the form of the “active” voice, also used in a discontinuous construction, as in (72), (73b).

Thus, the list of the related verbs under (171) may be enlarged by the following three-place (object-oriented) lexical reciprocals:

- (172) a. *mag-lapit* 'to bring sth close to sth' (see (72b))
 b. *i-lapit* 'to be brought close to sth (by sb).'

The following examples illustrate the use of the verbs *i-lapit* and *pag-lapit-in*:

- (173) a. *I-ni-la-lapit nang eruplano ang isa-ng bansa. sa iba-ng bansa*
 PAT-IPFV-close AG plane NOM one-LNK country ADR other-LNK country
 'One country is being brought close to another country by planes.'

- b. *P-in-ag-la-lapit nang eruplano ang manga bansa nang daigdig.*
 -PAT-PAG-IPFV-close AG plane NOM PL country GEN world
 ‘Countries of the world are being brought close to each other by planes.’

Other verbs of this type:

- (174) a. *i-dikit* ‘to be pasted to sth’
 → b. *pag-dikit-in* ‘to be pasted to each other’
 (175) a. *i-dugtong* ‘to be added to sth’
 → b. *pag-dugtong-in* ‘to be added to each other’
 (176) a. *i-siping* ‘to put/lay close to sth/sb’
 → b. *pag-siping-in* ‘to make sit/lie close to each other’
 (177) a. *i-hiwalay* ‘to be separated from sth’
 → b. *pag-hiwalay-in* ‘to be separated from each other’
 (178) a. *i-layo* ‘to take/keep away from sth’
 → b. *pag-layu-in* ‘to be taken/kept away from each other.’

6.2 Two-place involitional reciprocals in *pag-ka-...-in*

Formally, these causative object-oriented reciprocals also appear as a result of “passivization” of involitional reciprocals in *mag-ka-* (cf. 6.1):

- (179) a. *Nag-ka-sundo sila.*
 AG.PFV-REC-agree 3PL.NOM
 ‘They have come to an agreement.’
 b. *Dapat sila-ng pag-ka-sundu-in.*
 must 3PL-LNK PAG-REC-agree-PAT
 ‘They must be brought to an agreement.’
 (180) a. *mag-ka-galit* ‘to fall into angry discord with each other’
 b. *pag-ka-galit-in* ‘to cause mutual angry discord’
 (181) a. *mag-ka-sang-ayon* ‘to be of the same opinion’
 b. *pag-ka-sang-ayun-in* ‘to bring to mutual concord.’

7. Reciprocals with base reduplication (for more than two agents)

Plurality of agents marked by disyllabic reduplication of the root characterizes reciprocals in *mag-*, *mag-ka-*, *pag-...-in*, and *pag-ka-...-in* (for involitionals with *ka-* an alternative kind of reduplication is possible, viz. reduplication of the first two syllables of *ka-* bases):

(a) Lexical reciprocals (cf. also 3.2.1)

- (182) a. *mag-away* ‘to quarrel with each other’ (of two or more persons)
 b. *mag-away-away* (same of more than two persons)
 (183) a. *mag-hiwalay* ‘to separate from each other’ (of two or more persons)
 b. *mag-hiwa-hiwalay* (same of more than two persons)

- (184) a. *mag-kita* 'to see, meet each other' (of two or more persons)
 b. *mag-kita-kita* (same of more than two persons).

(b) Reciprocal nouns in *mag-ka-* (see also 5.2.1)

- (185) a. *mag-ka-klase* 'two classmates'
 b. *mag-ka-ka-klase* 'more than two classmates'
 (186) a. *mag-ka-kilala* 'two acquainted with each other'
 b. *mag-ka-ka-kilala* 'more than two acquainted with each other.'

(c) Reciprocal verbs in *mag-ka-* (see also 5.3.1)

- (187) a. *mag-ka-galit* 'to fall into angry discord with each other' (of two or more)
 b. *mag-ka-ga-ka-galit* (same of more than two)
 (188) a. *mag-ka-sunod* 'to follow one another'
 b. *mag-ka-sunud-sunod* (same of more than two).

(d) Reciprocals in *pag-...-in* and *pag-ka-...-in* (see also 6.1, 6.2)

- (189) a. *pag-lapit-in* 'to bring close to each other' (of two or more objects)
 b. *pag-lapit-lapit-in* (same of more than two objects)
 (190) a. *pag-dikit-in* 'to paste to each other' (of two or more objects)
 b. *pag-dikit-dikit-in* 'to paste to one another' (more than two objects)
 (191) a. *pag-ka-sundu-in* 'to be brought to an agreement' (of two or more persons)
 b. *pag-ka-sundu-sundu-in* (same of more than two).

With regard to the opposition 'two or more' vs. 'more than two', it should be pointed out that this opposition can be optionally expressed by means of the prefix *-si-* in immediate postposition to the prefixes *mag-* or *nag-*; cf.:

- (192) a. *Nag-a-anas-an sila.*
 'They whispered to each other' (two or more persons).
 b. *Nag-si-si-pag-anas-an sila.*
 'They whispered to each other' (more than two persons).

The opposition 'two or more' vs. 'more than two' may also be expressed with the help of the suffix *-an* (see 3.2.1).

7.1 Disyllabic reduplication for other meanings

This type of reduplication (like mono-syllabic reduplication) is highly polysemous. Only a few of its various meanings are illustrated below (for more details see, for instance, Lopez 1970; Naylor 1986):

- (a) distributive, cf. *bahay-bahay* 'every house', *bayan-bayan* 'every town';
 (b) moderative, cf. *mag-walis-walis* 'to sweep a little', *ma-asim-asim* 'a little salty';
 (c) simulative, cf. *mag-pilay-pilay-an* 'to pretend to be lame' (see also (e) in 4.4);
 (d) intensive, emphatic, cf. *Ang-ganda-ganda!* 'How beautiful!';
 (e) iterative, cf. *mag-bulung-bulung-an* 'to whisper with each other from time to time'.

8. Reciprocal constructions with *isa't isa* 'each other'

8.1 In combination with reciprocal verbs

The pronominal phrase *isa't isa* 'each other' (lit. 'one and one') is mainly used in combination with reciprocal verbs, either pleonastically or as a means of disambiguation (in the case of polysemous verbs). It should be mentioned that the numeral *isa* 'one' also occurs in the adverb *isa-isa* 'one after another, singly'.

8.1.1 *In non-subject position*

In these cases *isa't isa* occurs in both functions.

(a) It is pleonastic in the following sentences:

(193) *Nag-ibig-an sila sa isa't isa.*
 AG.REC.PFV-love-REC 3PL PAT one.and one
 'They loved each other.'

(194) *Nag-pasalamat-an sila sa isa't isa.*
 AG.REC.PFV-thank-REC 3PL PAT one.and one
 'They thanked each other.'

(b) It is used for disambiguation in (195a) and (196a):

(195) a. *Nag-tulak-an sila sa isa't isa.*
 AG.REC.PFV-push-REC 3PL PAT one.and one
 'They pushed each other.'

cf.: b. *Nag-tulak-an sila.*
 AG.REC.PFV-push-REC 3PL
 'They pushed each other / They pushed collectively.'

(196) a. *mag-sulat-an sa isa't isa* 'to write to each other'

cf.: b. *mag-sulat-an* 'to write to each other', 'to write together.'

8.1.2 *In subject position*

Examples:

(197) *Nag-patawar-an ang isa't isa.*
 AG.REC.PFV-forgive-REC NOM one.and one
 '[They] forgave each other.'

(198) *Nag-pasalamat-an ang isa't isa.*
 AG.REC.PFV-forgive-REC NOM one.and one
 '[They] thanked each other.'

8.2 In combination with non-reciprocal verbs. In non-subject position only

The phrase *isa't isa* 'each other' rarely occurs as a single marker of reciprocity in a clause. It also has the meanings 'everybody', 'everyone', 'each one'. Therefore it needs contextual means to resolve its polysemy; cf.:

- (199) *Nang-ako [sila] sa isa't isa.*
 AG.PFV-promise 3PL ADR one.and one
 '[They] promised to each other.'
- (200) *Ang manga ka-harap ay... nag-ta-tanong sa isa't isa.*
 NOM PL REC-front LNK AG-IPFV-ask ADR one.and one
 'The opponents ... asked each other.'
 lit. 'Those in front of each other... asked each other.'

In subject position with non-reciprocal verbs, the polysemous phrase *isa't isa* cannot express a reciprocal meaning, because Tagalog verbal morphology requires that role agreement between the verbal predicate and subject be obligatorily marked on the verb. Therefore, the phrase *isa't isa* does not code reciprocity unless it is marked on the verb:

- (201) *Nag-pasalamat ang isa't isa.*
 AG.PFV-thank NOM one.and one
 'Everyone/everybody/each one gave his thanks.'

9. Means of expressing reciprocal arguments

The reciprocal arguments always surface as subject which is marked in the same way as in non-reciprocal clauses (cf. (202)), namely with markers of the nominative case (see 2.2). Reciprocal arguments encoded by a coordinate construction are either marked separately, each with its own nominative marker or with a single marker for the whole construction:

- (202) a. *Nag-tulong-an ang binata at [ang] dalaga.*
 'The boy and the girl helped each other.'
 b. *Nag-trabaho ang binata at [ang] dalaga.*
 'The boy and the girl worked.'

Naturally enough, reciprocal nouns may also function as arguments:

- (203) a. *Nag-away ang mag-asawa* 'The married couple quarrel'
 b. *Nag-pasyal ang mag-ka-sama* 'The two companions took a walk.'

Thus reciprocal constructions of the types considered so far in this chapter are simple, while discontinuous constructions require a special comitative prefix (see Section 12).

A special place is reserved for lexical reciprocals (see Section 3) on which substitution of the prefix *mag-* for the infix *-um-* results in replacing a discontinuous construction with a simple one; cf.:

- (204) a. *L-um-a-laban ang X sa Y.* 'X was fighting against Y.'
 b. *Nag-la-laban ang X at Y.* 'X and Y were fighting against each other.'

10. Referential situations and sequence of actions

10.1 Deviations from canonical cross-reference of the actants

Semantic properties of verbal root-morphemes and/or certain contextual factors may cause deviations from the canonical reciprocal situation in which each participant is both agent and patient (below the canonical situation is denoted by the lexical reciprocal *mag-yakap* ‘to embrace each other’):

- (205) *Nag-yakap sila.*
 AG.REC.PFV-embrace 3PL.NOM
 ‘They embraced each other.’

In (206) and (207) below, the reciprocal verbs refer to groups of persons affecting each other in such a way that no single patient may become anybody’s counter-agent:

- (206) *Nag-pa-patay-an sila.*
 AG.REC-IPFV-kill-REC 3PL
 ‘They are killing one another.’
- (207) *Nag-ba-baril-an sila.*
 AG.REC-IPFV-shoot-REC 3PL
 ‘They are shooting one another.’

10.2 Simultaneity and non-simultaneity of reciprocal actions

One or the other interpretation of a reciprocal situation is usually determined by the lexical meaning of the base verb. The following examples illustrate simultaneous reciprocal actions:

- (208) *Nag-hawak-an sila nang kamay.*
 AG.REC.PFV-hold-REC 3PL PAT hand
 ‘They took hold of each other’s hands.’
- (209) *Nag-palit-an sila nang suntok.*
 AG.REC.PFV-change-REC 3PL PAT blow
 ‘They exchanged blows.’

Verbs like the following typically denote non-simultaneous actions within a reciprocal situation:

- (210) a. *mag-hiram-an* ‘to borrow from each other’
 b. *mag-utus-an* ‘to give orders to each other’
 c. *mag-sulat-an* ‘to write to each other.’

11. Sociatives in *mag...-an*

This type of sociatives is highly productive, They are formed from transitive as well as intransitive verb bases. Examples:

- (211) *Ang manga tao-ng yaon ay nag-sa-sayaw-an at*
 NOM PL man-LNK that LNK AG.SOC-IPFV-dance-SOC and
nag-i-imun-an nang alak.
 AG.SOC-IPFV-drink-SOC PAT wine
 ‘Those people were dancing together and drinking wine together.’
- (212) a. *k-um-ain* ‘to eat’ → *mag-kain-an* ‘to eat together’
 b. *d-um-ating* ‘to come’ → *mag-dating-an* ‘to come together’
 c. *um-upo* ‘to sit down’ → *mag-upu-an* ‘to sit down together’
 d. *um-iyak* ‘to cry’ → *mag-iyak-an* ‘to cry together.’

There are parallel reciprocals and sociatives with the marker *mag-...-an* derived from the same root-morphemes:

- (213) a. *mag-kamay-an* i. ‘to shake hands with each other’
 ii. ‘to eat collectively with hands (instead of cutlery)’
 b. *mag-sulat-an* i. ‘to write to each other’
 ii. ‘to write collectively’
 c. *mag-tulak-an* i. ‘to push each other’
 ii. ‘to push collectively.’

Disambiguation is achieved by lexical means: the pronominal phrase *isa’t isa* ‘each other’ on the one hand and nominal sociatives used adverbially, mainly *mag-ka-sama* ‘together’ (lit. ‘two companions’), *mag-ka-ka-sama* ‘together, collectively’ (lit. ‘companions’ (for more than two persons)), on the other hand; cf.:

- (214) a. *Nag-sulat-an sila nang liham sa isa’t isa.*
 AG.REC.PFV-write-REC 3PL PAT letter ADR one.and one
 ‘They wrote letters to each other.’
 b. *Mag-ka-sama sila-ng nag-sulat-an nang liham.*
 DU-SOC-together 3PL-LNK AG.SOC.PFV-write-SOC PAT letter
 ‘They wrote a letter together.’

12. Comitative

12.1 Introductory

Comitativity is marked with the prefix *maki-* which forms verbs from various types of verbal bases, including reciprocal and sociative bases. In all cases, valency increase leads to separate encoding of a collaborating counteragent as an oblique object with the case marker *sa* (for common nouns) or *kay* (SG)/*kina* (PL) (for personal names). As a rule, comitatives in *maki-* express joining in an action started earlier by another agent – “this either through interference or by favour of someone else” (Bloomfield 1917:263). As Schachter & Otanes (1972:334) put it, these comitatives “often carry the implication that the performer (expressed by the sentence topic) is taking part in an activity in which another person (expressed by the *sa* phrase) has, in some sense, a prior or more direct involvement”. Besides, according to Wolff (1991:539), comitatives derived from reciproc-

cals (“mutual action forms”) express the meaning ‘engage sb in doing (so and so) together with one’ (see (220b)).

12.2 Comitatives derived from non-reciprocal / non-sociative transitives and intransitives

Comitatives derived from verbs in *mag-* display a regular *mag-* → *pag-* substitution (although the base-forming prefix *pag-* is optional on these comitatives). Compare:

- (215) a. *Um-inom nang alak si Juan at si Jose.*
AG.PFV-drink PAT wine NOM J. and NOM J.
‘Juan and Jose drank wine.’
b. *Naki-inom nang alak si Jose kay Juan.*
AG.COM-drink PAT wine NOM J. OBL J.
‘Jose drank wine with Juan.’
- (216) *T-um-awa ka at ang mundo ay naki-ki-tawa sa iyo.*
-AG.PFV-laugh 2SG.NOM and NOM world LNK AG.COM-IPFV-laugh OBL 2SG
‘You have started laughing and the world is laughing with you.’
- (217) a. *mag-laro* ‘to play’
b. *maki-pag-laro* ‘to play together with sb’, ‘to join sb at play’
- (218) a. *mag-luto* ‘to cook’
b. *maki-(pag-)luto* ‘to cook with sb’, ‘to share cooking facilities with sb’
- (219) a. *mag-dalamhati* ‘to grieve’
b. *maki-(pag-)dalamhati* ‘to grieve with sb.’

12.3 Comitatives derived from reciprocal verbs. Discontinuous constructions only

In contrast to reciprocal constructions dealt with above (which are simple; see reciprocals in *mag-*, *mag-...-an* and *mag-ka-* in Sections 3, 4 and 5 respectively), those considered below may take a subject argument in the singular form. In contrast to comitatives considered in 12.2, comitatives derived from reciprocals necessarily retain the prefix *pag-*.

12.3.1 Derived from reciprocals in *mag-* and *mag-...-an*

Compare:

- (220) a. *Nag-away kami.*
AG.REC.PFV-quarrel 1PL.NOM
‘We quarrelled with each other.’
b. *Naki-pag-away siya sa akin.*
AG.COM-REC-quarrel 3SG.NOM OBL 1SG
‘He picked a quarrel with me.’
- (221) a. *Nag-tulong-an sila.*
AG.REC.PFV-help-REC 3PL.NOM
‘They helped each other.’
b. *Naki-pag-tulong-an siya sa manga Japones.*
AG.COM.PFV-REC-help-REC 3PL.NOM OBL PL J.
‘He entered into cooperation with the Japanese.’

- (222) a. *mag-babag* 'to be in conflict with each other'
 b. *maki-pag-babag* 'to get into a conflict with sb', 'to get into conflicts'
- (223) a. *mag-kamay* 'to shake hands with each other'
 b. *maki-pag-kamay* 'to shake hands together with sb'
- (224) a. *mag-palit-an* 'to exchange sth with each other'
 b. *maki-pag-palit-an* 'to join in the action of exchange.'

An oblique object marked with *sa* may be absent, as in (225):

- (225) *Naki-pag-away si Ben.*
 AG.COM.PFV-REC-quarrel NOM B.
 'Ben got into fights / picked quarrels.'

12.3.2 Derived from involitional reciprocals in *mag-ka-* and *mag-ka-...-an*

Examples:

- (226) a. *Nag-ka-sundo ang dalawa-ng bansa.*
 AG.REC.PFV-REC.INVL-agree NOM two-LNK country
 'The two countries reached an agreement.'
- b. *Ang isa-ng bansa ay naki-pag-ka-sundo. sa iba-ng bansa-ng pa-dalh-an nang armas.*
 NOM one-LNK country LNK AG.COM.PFV-REC-REC.INVL-agree OBL other-LNK
 country-LNK CAUS-carry-ADR PAT arms
 'One country entered into an agreement with another country to get arms (sent to it).'
- (227) a. *mag-ka-sundu-an* 'to reach an agreement (of many agents)'
 b. *maki-pag-ka-sundu-an* 'to enter into an agreement with (of many agents)'
- (228) a. *mag-ka-ibig-an* 'to become friends with each other'
 b. *maki-pag-ka-ibig-an* 'to become friends with sb', 'to win one's way into sb's friendship.'

12.4 Comitatives derived from sociative verbs

In this case the subject argument can also be in the singular, in contrast to non-comitative constructions; cf. (229a) and (229b):

- (229) a. *Nag-inum-an sila.*
 AG.PFV-drink-SOC 3PL.NOM
 'They drank together.'
- b. *Naki-pag-inum-an siya sa manga kaibigan.*
 AG.COM.PFV-PAG-drink-SOC 3PL.NOM OBL PL friend
 'He drank together with friends.'
- (230) a. *mag-tawan-an* 'to laugh simultaneously'
 b. *maki-pag-tawan-an* 'to join in laughing'
- (231) a. *mag-takbuh-an* 'to run a race'
 b. *maki-pag-takbuh-an* 'to join a running race.'

- (232) a. *mag-languy-an* 'to swim collectively'
 b. *maki-pag-languy-an* 'to go swimming with others'

12.5 Polysemy of the prefix *maki-*

Alongside its comitative meaning, this prefix also renders the meaning 'to ask for a permission/agreement to do what is indicated by the root'.

The meaning of obtaining permission or agreement to perform the action together with someone accompanies the comitative meaning of many verbs in *maki-*, but in some contexts these verbs express only the meaning of polite request, as in (233) and (234) (the examples are borrowed from Wolff (1991:370)):

- (233) *Pwede ba-ng maki-gamit ako nang CR.*
 may INT-LNK AG.COM-use 1SG.NOM PAT comfort-room
 'Could I (ask the favour of allowing me to) use the comfort-room?'
 (234) *Maki-ki-inom ako sa kok mo.*
 AG.COM-FUT-drink 1SG.NOM OBL coke 2SG.GEN
 'Let me have a sip of your coke.'

The idea of asking someone to do what the root indicates for the sake of the speaker is mostly expressed by verbs with the prefix *paki-* (a regular correlate of *maki-*) in combination (optionally) with a "passive" voice marker:

- (235) *[I]-paki-gawa mo ako nang tula.*
 BEN-COM-do 2SG.AG 1SG.NOM PAT poem
 'Please, do me the favour of writing a poem for me.'

With roots denoting similarity, the prefix *maki-* forms verbs meaning 'to imitate or follow suit', e.g.:

- (236) a. *gaya* 'similar' → *maki-gaya* 'to imitate'
 b. *tulad* 'similar' → *maki-tulad* 'to emulate' (Panganiban 1969–1972:677).

12.6 Comitative nomina actionis

Nouns of action are derived from all types of comitative verbs with the help of the prefix *paki-* and a reduplication of its second syllable *-ki-*; e.g.:

- (237) a. *maki-ramay* 'to sympathize with'
 b. *paki-ki-ramay* 'sympathizing with sb'
 (238) a. *maki-pag-ka-sundo* 'to enter into an agreement with sb'
 b. *paki-ki-pag-ka-sundo* 'entering into an agreement with sb'

13. Etymology of the reciprocal markers

All affixes used as (non-specialized) means of reciprocal derivation in Tagalog, i.e. *mag-*, *pag-*, *ka-* and *-an*, descend from the core of the morphemic stock of Proto-Austronesian (PAN), with reflexes in numerous Austronesian languages (AN).

Thus, the protoform for the prefix *mag-* is reconstructed as **maR-* regarded as historically derived from **-um-* + **paR-*, where **-um-* is an Agent (Actor) voice/focus marker and **paR-* is a derivational morpheme (Wolff 1973:72–4; Ross 1995:741, 772). This historical derivation of **maR-* is referred to Pre-PAN, which is to say the sets of voice/focus markers (including **maR-*) and of derivational morphemes (including **paR-*) are ascribed to PAN, with an idea that “**maR-* of the protolanguage [is] a surface representation of a deep structure **-um-* + **paR-*”, in the same way as *mag-* in many Philippine languages (including Tagalog) is “the surface representation of a deep structure *-um-* + *pag-*” (Wolff 1973:74).

As for the hypothetical semantic and functional characteristics of PAN **maR-*, the following observation on the functions of its reflexes in some AN languages is informative: according to Ross (1995:772), *mag-* as an Agent (Actor) voice/focus marker (in terms of Ross, pivot marker) is an innovation in Philippine languages, as compared to reflexes of **maR-* in Formosan languages “where they are apparently only marking reciprocal verbs”.

The Tagalog prefix *ka-* is a reflex of PAN **ka-*, another derivational morpheme (alongside **paR-*, **paN-*, **pa-*) ascribed to the protolanguage (see Wolff 1973:72; Ross 1995:741). Since no sufficient comparative work on the PAN derivational morphemes has yet been done, there is little to be said about the functions of PAN **paR-* and **ka-*. To quote Wolff (1973:78), with relation to the Javanese verbs with *ke-...-an* (where *ke-* is a reflex of PAN **ka-*): “*ke-* is a prefix forming verbs which refer to accidental actions”. Another observation by Wolff (1973:82) concerns verbs with *i-ka-* in Samar-Leite (a language of the Philippines) referring to mutual actions: “they have a focus (marked with *i-ka-* – L.Sh., G.R.) which refers to the one with whom (which) the agent engages in the action: ... *i-ka-sakay* ‘... to ride together with’”.

The Tagalog suffix *-an* is recognized by the AN comparativists to be a reflex of PAN **-an*, a location voice/focus marker and at the same time, a nominal derivational morpheme (“a marker of nominalisation”) meaning ‘place where one (root)-s’ (Ross 1995:756).

In his summary of the results achieved by the leading scholars in AN comparative-historical grammar (O.Ch. Dahl, J. Wolff, S. Starosta, A.K. Pawley, L.A. Reid et al.), M. Ross writes: “Daughter languages inherited two functions, nominalising and pivot-marking (voice/focus marking – L.Sh., G.R.) for the reflexes of [...] **-an*” (Ross 1995:758). Note also two observations made by M. Ross concerning the functions of PAN **-an*: “The location pivot (voice/focus) also seems to have served as a benefactive pivot in PAN” (Ross 1995:741), and, further on: “Possible points of investigation are the drift of forms in **an* from marking location pivot (voice/focus) to marking undergoer pivot, the rise of **-an* as the instrumental pivot (atemporal forms)” (Ross 1995:771).

1. Introduction

1.1 Udehe

Udehe (or: *Udeghe*, *Udihe*, *Ude*) is a Tungus language spoken in the southern part of the Russian Far East. According to the official census data, there were 2,011 Udehe in 1989 among whom 528 (26.2%) have some knowledge of their language. However, the number of people who have Udehe as their first language is considerably smaller and does not seem to exceed 100. Udehe lacks official status and is only used in everyday oral communication. There is no systematic school teaching of Udehe, although there have recently been some attempts to introduce it as an optional subject. The writing system is based on the Cyrillic alphabet.

Udehe is represented by two dialects with several local idioms. The Southern dialect comprises idioms spoken on the rivers Bikin and Iman in the northern part of the Primorye region. The Northern dialect is spoken by the Udehe groups which live on the rivers Khor, Anyui and Samarga in the Khabarovsk region. Divergences between the dialects are minor (cf. Schneider 1936:4) and are mostly observed at the phonological and lexical levels, while the morphological and syntactic differences are insignificant. The most important phonological difference concerns the presence of the so-called pharyngealized vowels, denoted here with the sign *h* after the vowel, in the Northern dialect. In the South-

ern dialect they correspond to simple long vowels, cf. the Northern *ahnta* ‘woman’ and the Southern *a:nta*.

1.2 Overview

In Udehe, reciprocals are always subject-oriented (with the exception of some non-productive reduplicational constructions, see 5.2 and 5.3). Not only objects but also most adjuncts can reciprocalize; reciprocalization is conditioned by semantic rather than syntactic constraints. The reciprocal meaning is expressed in several ways:

- (i) morphologically, by verbs derived by means of the suffix *-masi*; cf. (1a);
- (ii) lexico-syntactically, by means of the reciprocal pronoun *me(n)*- (the allomorph *me-* is used in the nominative and the accusative and *men-* in all the other case forms); cf. (1b);
- (iii) by combination of (i) and (ii), as in (1c);
- (iv) by reduplication.

Types (i), (ii), and (iii) are used to reciprocalize direct objects, indirect objects and some oblique objects. There is no apparent semantic difference between these three types; cf.:

- (1) a. *Nuati aju:-masi:-ti.*
 they love-REC-3PL
 = b. *Nuati me-fei-me-fei aju:-iti.*
 they REC-PL-REC-PL love-3PL
 = c. *Nuati me-fei-me-fei aju:-masi-iti.*
 they REC-PL-REC-PL love-REC-3PL
 ‘They love each other.’

Type (iv) involves reduplication of postpositions, rarely of nouns, adverbs, and adjectives. It typically serves to reciprocalize adjuncts.

- (2) a. *A:nta dā xuli:-ni.*
 woman next walk-3SG
 ‘(He) is walking next to a woman.’
 b. *Dā: dā: xuli:-ti.*
 next next walk-3PL
 ‘They are walking next to one another.’

On intransitive verbs the reciprocal affix *-masi* may have the sociative meaning, or denote an action performed by several participants alternately. In the Southern dialect the sociative meaning is also expressed morphologically by the suffix *-niŋa*, e.g. *taŋi-niŋa-si:-ti* [read-SOC-IPFV-3PL] ‘they read together’, but its usage is rather infrequent.

1.3 Sources

The present description is mostly based on the Southern dialect of Udehe, namely the language of the Bikin Udehe as spoken in the settlement Krasnyi Yar. The data comes

from the field materials collected between 1989 and 1997. In certain cases I refer to data from the Northern dialect extracted from the following published sources: Schneider (1937), Kormushin (1998), Simonov, Kjalundzjuga, and Xasanova (1998), and Simonov and Kjalundzjuga (1998–1999), abbreviated as S, K, SK and SKX respectively. The transcription used in these sources has been modified on phonological grounds.

2. Grammatical notes

These notes are necessarily brief as they are only meant to help the reader understand the Udehe sentences below (for more information on the grammar of Udehe see Nikolaeva & Tolskaya 2001).

2.1 General characteristics of Udehe grammar

Udehe exhibits the typological features of an SOV language. However, head-finality is not rigid: in the main clause the word order is largely motivated by information structure, and there are some instances of non-head-final NPs as well. Major grammatical relations, such as the subject, direct object, and indirect object, can be identified by a cluster of grammatical properties. In particular, the subject is a grammatical constituent associated with the highest syntactic activity and is the main controller of coreferential relations, both within the clause and clause-externally. The case marking is based on the Accusative pattern. The subordinate clause makes extensive use of non-finite verbal forms containing switch-reference markers.

The major open word classes (nouns, verbs, adjectives and adverbs) are rather easily identified by morphological and syntactic criteria. Although synthesis predominates in the expression of grammatical meanings, Udehe also has a few analytical constructions; certain aspectual, temporal, and modal categories are formed by means of auxiliary verbs. The morphological structure is characterized by suffixation exclusively (note there are no prefixes in Udehe) and a rather high level of agglutination. However agglutination is not absolute. In particular, both nouns and verbs fall into two morphological classes, depending on the type of the stem: either vowel-final or *n*-final. Some grammatical categories have two phonologically different exponents, compatible with one or another morphological class. These variants are shown in the tables below with a slash.

Udehe has a dual system of root-controlled vowel harmony based on rounding and height distinctions. In affixal morphemes non-high vowels can only be non-front (*a*, *e*, or *o*) and typically harmonize to the non-high vowels of the root. In the tables below a harmonizing non-high non-front vowel in affixes is schematically indicated by the capital *A*. Two-syllabic affixes are often disharmonic. Another peculiarity of Udehe phonology is that it exhibits a class of laryngealized non-high vowels phonologically opposed to the simple vowels and denoted here by an apostrophe before the vowel: *'a*, *'o*, or *'e*.

2.2 Nominal morphology

Nouns are characterized by grammatical categories of number, case, and possession. The order of inflectional morphemes in the nominal word is as follows: stem – [non-possessive plural] – [alienable possessive] – [possessive plural] – [case] – [possessive]. The case affixes and their major syntactic functions are presented below in (3):

(3) Case	Affix	Functions
Nominative	∅	subject, possessor, object of postpositions, reflexive object, predicate
Accusative	<i>-wA / -mA</i>	direct object, causee
Dative	<i>-du</i>	indirect object, causee, passive agent, locative adjunct
Lative	<i>-tigi</i>	locative adjunct, indirect object
Locative	<i>-lA / -dule</i>	locative adjunct
Prolative	<i>-li / -duli</i>	locative adjunct
Ablative	<i>-digi</i>	locative adjunct, standard of comparison
Instrumental	<i>-zi</i>	manner adjunct, comitative adjunct or modifier
Destinative	<i>-nA-</i>	direct object, beneficiary (the Destinative must be followed by a possessive affix).

The possessive affixes are divided into non-reflexive and reflexive. The non-reflexive possessive affixes are opposed for person and number:

(4)	SG	PL
1SG	<i>-i/-mi</i>	<i>-u/-mu</i> (EXC), <i>-fi</i> (INC)
2SG	<i>-i</i>	<i>-u</i>
3SG	<i>-ni</i>	<i>-ti</i>

The reflexive possessive forms are not opposed for different persons, but only for the singular possessor (*-i/-mi*) and the plural possessor (*-fi*); cf. *agda-i* ‘my/your(SG)/his/her boat’ and *agda-fi* ‘our/your(PL)/their boat’. The so-called alienable possessive *-ŋi-* must be used in combination with a regular possessive affix. It indicates that the relationship between two nouns is not that of ordinary possession, but is rather some kind of situationally determined association, cf. *oloxi-ni* ‘his squirrel (which belongs to him)’ and *oloxi-ŋi-ni* ‘his squirrel (in the meaning: the squirrel he pursued, or shot at, or saw, etc.)’.

The plural is marked with the suffix *-ziga* in non-possessive forms and by *-nA* in possessive forms: *oloxi-ziga* ‘squirrels’ but *oloxi-ne-ni* ‘his squirrels’. The expression of plurality is optional.

2.3 Verbal morphology: Tense/aspect/mood, agreement

The tense system in the Indicative includes the following tenses:

(5) Present	morphologically unmarked
Past	derived by lengthening of the stem-final vowel from stems ending in a non-high vowel; with the suffix <i>-o-</i> from <i>u</i> -final stems; with the suffix <i>-e</i> from <i>i</i> -final stems; or with the suffix <i>-ki</i> from <i>n</i> -final stems

Perfect	derived by laryngealization of the stem-final non-high vowel, with the suffix <i>-ge</i> from stems ending in a high vowel, or with the suffix <i>-kA</i> from <i>n</i> -final stems
Future	<i>-zAŋA</i>

Subject agreement affixes in most cases follow the tense marker. Subject agreement affixes differ slightly in different tenses, as is demonstrated in (6).

(6)	Present	Perfect	Future	Past
1SG	<i>-mi</i>	<i>-i</i>	<i>-i</i>	<i>-mi</i>
2SG	<i>-i</i>	<i>-i</i>	<i>-i</i>	<i>-i</i>
3SG	<i>-ini</i>	∅	<i>-ni</i>	<i>-ni</i>
1PL.INC	<i>-fi</i>	<i>-ti</i>	<i>-fi</i>	<i>-fi</i>
1PL.EXC	<i>-u</i>	<i>-u</i>	<i>-u</i>	<i>-mu</i>
2PL	<i>-u</i>	<i>-u</i>	<i>-u</i>	<i>-u</i>
3PL	<i>-iti</i>	<i>-du</i>	<i>-ti</i>	<i>-ti</i>

In addition, there is the analytic pluperfect, formed with the past participle of the content verb and the copula *bi-* ‘to be’, several synthetic oblique moods (imperative, subjunctive, conditional, and permissive), and the analytic necessitative. Aspectual distinctions are expressed both by analytic constructions (habitual and imperfective aspects) and by numerous aspectual (*Aktionsart*) suffixes.

2.4 Voices and their combinability

The following voices are distinguished: passive, impersonal passive, causative, anticausative, reciprocal, and sociative. The passive, impersonal passive, anticausative, and reciprocal involve valency decrease by one. The causative is a valency-increasing derivation, while the sociative does not affect the valency.

The passive is derived by means of the suffix *-u*, *-w* (which precedes the tense and agreement markers) from all transitive verbs, and from at least four intransitive “meteorological” verbs. In the passive construction the passive agent is encoded by the dative, while the patient/theme argument is either in the accusative or in the nominative, depending on its lexical vs. pronominal status, respectively.

The impersonal passive can be derived both from transitives and intransitives. Its main function is to eliminate or demote the agent, hence the agent argument is absent in such constructions, and so is the grammatical subject. The impersonal passive forms consist of the passive participle of the content verb and a 3SG tense form of the copula *bi-* ‘to be’. Obviously, the passive and the impersonal passive are not compatible.

The causative derivation is marked by the suffix *-wAn* (rarely *-u*). Causatives are productive both with intransitives (7a) and intransitives (7b).

- (7) a. *eme-* ‘to come’ *eme-wen-* ‘to cause to come’
 b. *bu-* ‘to give’ *bu-wen-* ‘to cause to give’

Causatives can be derived from passives and impersonal passives, cf.:

- (8) *Ñ'aula-wa činda-du ña:ma-u-wana:-ni* (K. 168)

child-ACC bird-DAT curse-PASS-CAUS.PAST-3SG

'The children let the bird curse them (literally: caused them to be cursed).'

The anticausative is encoded by the suffix *-ptA*, *-ktA* or *-kpi* on the stem, e.g.:

- | | | | |
|---------------------|-----------------|---------------------|---------------------------|
| (9) <i>mantila-</i> | 'to spill' (vt) | <i>mantila-kpi-</i> | 'to spill' (vi) |
| <i>xolo-mu-</i> | 'to leave' (vt) | <i>xolo-pto-</i> | 'to remain, be left' (vi) |
| <i>ise-</i> | 'to see' | <i>ise-pte-</i> | '(can/could) be seen'. |

The anticausative is not compatible with passives and impersonal passives, but it is compatible with a causative marker, e.g.: *sa-u-* [know-CAUS] → *sa-u-pte-* [know-CAUS-ACAUS] 'to be known (to sb)', *ise-kte-* [see-ACAUS] → *ise-kte-wen-* [see-ACAUS-CAUS] 'to appear (to sb)'.

The reciprocal is derived from transitive and rarely intransitive bases with the suffix *-masi*. Although this suffix is sometimes pronounced as *-mesi* when it follows a stem with *e*, in the pronunciation of most speakers it is disharmonic, i.e. the non-high vowel in the suffix always surfaces as *a*. The reciprocal is definitely incompatible with the passive, the impersonal passive, and the anticausative, and I do not know of any evidence for its co-occurrence with the causative either.

The sociative is formed with the suffix *-niŋa*. Like the reciprocal marker, it does not participate in vowel harmony. Reciprocal and sociative affixes do not co-occur on one verb.

3. Reciprocals with the suffix *-masi*

In the verbal form the suffix *-masi*, which derives morphological reciprocals, typically follows the aspectual affixes and precedes the tense agreement affixes, e.g.: *kaja-sa-masi-e-ti* [send-EXP-REC-PAST-3PL] 'they have sent (her) to one another' (Kormushin 1998: 174). However, certain aspectual affixes, such as the inchoative *-li* or the repetitive *-gi*, may follow the reciprocal *-masi*, cf.: *sauli-masi-li-e-ti* <offer.food-REC-INCH-PAST-3PL> 'they started having a feast together'.

Reciprocalization is always controlled by the clausal subject. Across-clause reciprocalization is impossible, cf.:

- (10) a. *Nuati bele-masi-e-ti.*
 they help-REC-PAST-3PL
 'They helped each other.'
- b. **Aziga-ziga sa-iti bele-masi-e-me-fi.*
 girl-PL know-3PL help-REC-PAST.PART-ACC-SS.PL
 'The girls know that they helped each other.'

Both transitive and two-place intransitive verbs can take *-masi* and thus acquire the reciprocal meaning provided they are not subject to any semantic constraints (see 3.2).

On one-place intransitives the suffix *-masi* has non-reciprocal meanings; these cases are discussed in 3.3.

3.1 Subject-oriented constructions

Morphological subject-oriented reciprocals may have only the “canonical” and the “indirect” diathesis. Reciprocalization of other constituents, such as possessors and adjuncts, does not involve a change in the verbal form and is described in Sections 4.2.1 and 5.

3.1.1 “Canonical” reciprocals

“Canonical” reciprocals can be derived from two-place transitive and intransitive verbs. In the former case the second participant of the reciprocal situation is a direct object of the corresponding non-reciprocal construction, while in the latter case it is an indirect object encoded by various oblique cases.

3.1.1.1 *Derived from two-place transitives.* In (11) I illustrate the derivation of “canonical” reciprocals from some two-place transitive verbs.

(11)	<i>a:kta-</i>	‘to chase’	<i>a:kta-masi-</i>	‘to chase each other’
	<i>bele-</i>	‘to help’	<i>bele-masi-</i>	‘to help each other’
	<i>ekpi-</i>	‘to spray at’	<i>ekpi-masi-</i>	‘to spray at each other’
	<i>ekte-</i>	‘to protect’	<i>ekte-masi-</i>	‘to protect each other’
	<i>galu-</i>	‘to hate’	<i>galu-masi-</i>	‘to hate each other’
	<i>gida-la-</i>	‘to hit with a spear’	<i>gida-masi-</i>	‘to hit each other with spears’
	<i>kala-</i>	‘to replace’	<i>kala-masi-</i>	‘to replace each other’
	<i>keni-</i>	‘to scold’	<i>keni-masi-</i>	‘to scold each other’
	<i>mäusa-si-</i>	‘to shoot’	<i>mäusa-masi-</i>	‘to shoot at each other’
	<i>ɲousi-</i>	‘to smell’	<i>ɲousi-masi-</i>	‘to smell each other’
	<i>pila-</i>	‘to tease’	<i>pila-masi-</i>	‘to tease each other’
	<i>santu-la-</i>	‘to beat with a fist’	<i>santu-masi-</i>	‘to beat each other with fists’
	<i>tugele-</i>	‘to hug’	<i>tugele-masi-</i>	‘to hug each other.’

A sentential example is (12b):

- (12) a. *Nuani ei a:nta-wa ekte-si:-ni.*
 he this woman-ACC protect-IPFV-3SG
 ‘He protects this woman.’
- b. *Nuati ekte-si-masi:-ti.*
 they protect-IPFV-REC-3PL
 ‘They protect each other.’

3.1.1.2 *Derived from two-place intransitives.* Reciprocals derived from two-place intransitives are not numerous. In (13), which contains all the instances at my disposal, I present them together with the indication of the case associated with the reciprocalized object in the corresponding non-reciprocal construction. All the examples at my disposal involve reciprocalization of an instrumental or a lative object.

- | | | | | |
|------|--------------------------|-----------------|---------------------|------------------------------|
| (13) | <i>iñi-</i> + INST | 'to laugh at' | <i>iñi-masi-</i> | 'to laugh at each other' |
| | <i>mosoni-</i> + INST | 'to fight with' | <i>mosoni-masi-</i> | 'to fight with each other' |
| | <i>ñele-</i> + INST | 'to be afraid' | <i>ñele-masi-</i> | 'to be afraid of each other' |
| | <i>xuli-</i> + LAT | 'to go to' | <i>xuli-masi-</i> | 'to go to each other' |
| | <i>zima-</i> + INST, LAT | 'to visit' | <i>zima-masi-</i> | 'to visit each other.' |

An example of the reciprocal construction with one of these verbs is (14b):

- (14) a. *Ei a:nta tutulu nua-tigi-ni xuli:-ni.*
 this woman always he-LAT-INST go-3SG
 'This woman always goes to him.'
- b. *Nuati tutulu xuli-masi:-ti.*
 they always go-REC-3PL
 'They always go to each other.'

3.1.2 "Indirect" reciprocals

"Indirect" reciprocals express the reciprocalization of the third (animate) argument of a transitive verb. Typical "indirect" reciprocals involve verbs of giving, speech, and "taking away". In Udehe, verbs of the first lexical group take the indirect dative object (15a), verbs of speech take either the lative (15b) or the locative object (15c), and verbs of the third group always take the locative object (15d). Note the semantic change which accompanies reciprocal derivation from the verb *ga(da)-* in (15d).

- | | | | | |
|---------|-------------------|------------------------|-----------------------|--------------------------------------|
| (15) a. | <i>nexu-</i> | 'to bring' | <i>nexu-masi-</i> | 'to bring to each other' |
| | <i>bu-</i> | 'to give' | <i>bu-masi-</i> | 'to give to each other' |
| | <i>kaja-</i> | 'to send' | <i>kaja-masi-</i> | 'to send to each other' |
| | <i>suñele-</i> | 'to give as a present' | <i>suñele-masi-</i> | 'to give as a present to each other' |
| b. | <i>jexe-</i> | 'to sing' | <i>jexe-masi-</i> | 'to sing to each other' |
| | <i>teluñu-si-</i> | 'to tell' | <i>teluñu-masi-</i> | 'to tell sth to each other' |
| | <i>dia-na-</i> | 'to say' | <i>dia-masi-</i> | 'to say to each other' |
| | <i>imasi-</i> | 'to tell tales' | <i>imasi-masi-</i> | 'to tell tales to each other' |
| c. | <i>xauntasi-</i> | 'to ask' | <i>xauntasi-masi-</i> | 'to ask from each other' |
| | <i>gele-</i> | 'to ask' | <i>gele-masi-</i> | 'to ask from each other' |
| d. | <i>titi-</i> | 'to take away' | <i>titi-masi-</i> | 'to take away from each other' |
| | <i>ga(da)-</i> | 'to take' | <i>ga-masi-</i> | 'to exchange women (between clans).' |

When reciprocalized, these verbs retain the direct object, cf.:

- (16) a. *Ei a:nta nua-tigi-ni teluñu(-we) teluñu-si-e-ni.*
 this woman he-LAT-3SG story(-ACC) story-VR-PAST-3SG
 'This woman told him stories.'
- b. *Teluñu teluñu-masi-e-ti.* (K. 175)
 story story-REC-PAST-3PL
 'They told stories to each other.'
- (17) a. *Ei a:nta nuan-dule-ni lepeška-we titi:-ni.*
 this woman he-LOC-3SG flat.cake-ACC take.away-3SG
 'This woman takes a flat cake away from him.'

- b. *Lepėška-we titi-masi:-ti.*
 flat.cake-ACC take.away-REC-3PL
 ‘They take the flat cake away from each other.’

3.2 Restrictions on derivation

The derivation of “canonical” reciprocals from transitive verbs is highly productive, provided there are no trivial semantic constraints against it. Apparently reciprocals can be formed from all or most transitive verbs, if they allow an animate (typically human) object participant, but reciprocalization of a non-animate object is also attested.

- (18) *Tokō kala-masi:-ti.*
 cloud replace-REC-3PL
 ‘Clouds replace one another.’

“Indirect” reciprocals are equally productive.

With intransitives the situation is more complex. As mentioned in 3.1, morphological reciprocalization only involves arguments. However, there are some further grammatical restrictions on it, which do not seem to correlate directly with the argument/adjunct status of the secondary participant involved in the reciprocal relationship. Not all arguments of two-place intransitive verbs are subject to reciprocalization, even if they involve animate participants and the corresponding reciprocal situation can in principle be imagined. Two-place intransitive verbs that take a locative or an ablative object do not allow reciprocal derivation, cf.:

- (19) *nagda- + LOC* ‘to get in (while shooting)’ **nagda-masi-*
dekte- + ABL ‘to separate from’ **dekte-masi-*
susa- + ABL ‘to escape from’ **susa-masi-*.

3.3 Non-reciprocal meanings of the suffix *-masi*

The suffix *-masi* with a non-reciprocal meaning occurs fairly infrequently and only on intransitives. In non-reciprocal use it does not involve any valency change.

3.3.1 *Alternative meaning*

The suffix *-masi* may indicate an action performed by two participants alternately.

- (20) a. *Nuati etete-masi:-ti.*
 they work-REC-3SG
 ‘They work by turns (i.e. one sleeps while the other works, and vice versa).’
 b. *Nuati utebe bagdi-si-masi:-ti.*
 they so live-IPFV-REC-3PL
 ‘So they live at each other’s place by turns.’

The alternative meaning is possible only if the base verb is a one-argument intransitive which otherwise is not compatible with the reciprocal marker. This seems to be conditioned by a tendency to avoid semantic ambiguity. The surface expression of the direct

object and the indirect dative object is not obligatory in Udehe, if their identity is recoverable from the context:

- (21) *Nuati bele-si:-ti.*
 they help-IPFV-3PL
 ‘They help (him).’

Therefore the reciprocal construction involving transitive verbs could have been ambiguous in respect of the reciprocal and the alternative interpretations. In practice, however, such an ambiguity does not arise, cf.:

- (22) *Nuati bele-si-masi:-ti.*
 they help-IPFV-REC-3PL
 ‘They help each other’, but not *‘They help (him) alternately.’

I only have one example where the reciprocal form of the verb *xuli-* ‘to go to’ which is normally two-place (see 3.1.1.2) denotes an alternating situation. However in this case it may rather be analyzed as one-place. In addition, the manner adjunct *wakca-mi* ‘hunting’ clearly indicates that the reciprocal interpretation of the situation is ruled out.

- (23) *Nuati wakca-mi xuli-masi:-ti.*
 they hunt-INF go-REC-3PL
 ‘They go hunting by turns.’

3.3.2 Sociative meaning

The sociative meaning of the reciprocal suffix *-masi* is not generally typical of the Southern dialect of Udehe, but is attested in a few instances in the Northern dialect. This is probably due to the fact that the Southern dialect, unlike the Northern dialect, has another grammaticalized means to express the sociative meaning, the sociative affix *-niŋa* (see Section 6). In (24) I present examples of the morphological sociatives derived with *-masi* in the Northern dialect.

- (24) a. *In’ei site-ni-de a:kta-masi-mi bie eni-fei, mafa*
 dog child-3SG-and chase-REC-INF be.PRES.HAB mother-REFL.PL bear
site-ni-de a:kta-masi-mi bagdi. (SK. 89)
 child-3SG-and chase-REC-INF live.PRES.PART
 ‘Puppies chase their mother together, and bear cubs also go chasing together.’
 b. *Teu-ni sauli-masi-li-e-ti.* (SKX. 264)
 all-3SG offer.food-REC-INC-PAST-3PL
 ‘All (of them) started having a feast together.’

The sociative derivation with the suffix *-masi* may involve a slight change of meaning. For example, the non-derived verb *sauli-* is transitive and means ‘to offer (food) to sb’, while its sociative form means ‘to have a feast together’ (24b). The transitive verb *zuza-* means ‘to argue about sth’, and its derivative *zuza-masi-* means ‘to investigate a conflict situation together (in the traditional court of the elders)’, cf.:

- (25) a. Čingese Kimonko sagdimzi-ni zuza-masi-zaŋa-ti mafa xaŋa-zi-ni. (SK. 1335)
 Ch. K. elder-3SG argue-REC-FUT-3PL bear soul-INST-3SG
 ‘Chingese, the elder of (the clan) Kimongko, will investigate (the conflict) together with the bear’s soul.’
- b. Bu utemi geje zuza-masi-u.
 we therefore together argue-REC-1PL.EXC
 ‘That is why we investigate (the case) together.’

3.4 Co-occurrence of the suffix *-masi* with other verbal affixes

Although it need not be so, the reciprocal *-masi* is very frequently combined with the aspectual affix *-si*. This affix conveys a wide range of imperfective meanings: progressive, multiplicative, diversative, and some others. It may also indicate that the situation described involves multiple participants referred to either by the subject (26a) or direct object (26b).

- (26) a. *tiyme-* ‘to fall’ *tiyme-si-* ‘to fall (of several people or objects)’
 b. *nodo-* ‘to lose’ *nodo-si-* ‘to lose (many objects).’

For transitive verbs there may be some ambiguity between these meanings; e.g. (*teti-* ‘to dress’ →) *teti-si-* may mean ‘to dress many children’ or ‘to dress one child many times’. With reciprocal verbs the imperfective *-si* indicates plurality of the subject. For some reciprocal verbs this suffix is optional; thus, there are such pairs as *zima-masi-* and *zima-si-masi-* ‘to visit each other’, *bele-masi-* and *bele-si-masi-* ‘to help each other’, *ŋuga-masi-* and *ŋuga-si-masi-* ‘to kiss each other’. But in at least one case the reciprocal derivation must obligatorily be accompanied by the suffix *-si*: *b’a-* ‘to find, meet’ → *b’a-si-masi-* ‘to meet each other’, but not **b’a-masi-*.

When the verbal stem does not occur in an unbound form and always carries an aspectual marker, the reciprocal suffix replaces the latter. This mostly concerns the singulative *-la* and the imperfective *-si*. For example, the verbs *kata-la-* and *kata-si-* ‘to pull sb’s hair’ are not used without aspectual markers, i.e. the unbound stem **kata-* does not exist. But the corresponding reciprocal form is *kata-masi-* ‘pull each other’s hair’. Similarly, the reciprocal forms of the verbs *gida-la-* ‘to hit with a spear’, *mäusa-la-* ‘to shoot’, and *santu-la-* ‘to hit with a fist’ are *gida-masi-*, *mäusa-masi-*, and *santu-masi-*, respectively. In verbs derived from nouns by means of interclass derivational affixes, the reciprocal marker normally replaces them, cf. *teluŋu* ‘story’ → *teluŋu-si-* ‘to tell stories’ (*-si* is a derivational affix of denominal verbs), but *teluŋu-masi-* ‘to tell stories to each other.’

3.5 Expression of reciprocal arguments

In the reciprocal construction the secondary argument (the co-participant of the reciprocal event) can be expressed in several formal ways. The encoding of the co-participant is formally similar to the encoding of the secondary argument of non-derived symmetrical verbs, considered in 7.4. They may both be encoded homogeneously, i.e. by a plural NP, or heterogeneously, i.e. by an instrumental NP, a coordinated structure, or a postpositional

phrase. The difference, however, is in the verbal form: morphological reciprocals are always in the plural, while non-derived symmetrical verbs take a plural agreement affix only if the subject is formally plural.

3.5.1 Instrumental noun phrase

The instrumental NP is widely used in Udehe as a comitative adjunct semantically associated with the subject participant, see 6.3. The secondary participant of the reciprocal situation may be encoded as an instrumental NP as well, cf.:

- (27) *Gionka Pionka-zi zogzo-masi-e-ti.*
 G. P.-INST quarrel-REC-PAST-3PL
 ‘The Gionkas had a quarrel with the Pionkas.’

There are reasons to think that in these cases the instrumental NP does not have adverbial or object status, but rather has a modifying or coordinative function and forms a complex NP with the subject. First, as mentioned above, the subject always triggers plural agreement on the verb, although it may be semantically and grammatically singular. Moreover, in the case of a person mismatch between the second and the first participants, the 1st and the 2nd person take over the 3rd person (see 6.3 for a similar situation in non-reciprocal comitative constructions). In (28) the first participant is in the 3rd person and the second participant denoted by the instrumental NP is in the 1st person. The verb takes the 1PL agreement. Thus, agreement on the verb is determined by the complex NP rather than by the first participant alone.

- (28) *Ag'a min-zi kusige dieleni ñagda-masi-e-mu.*
 brother me-INST knife because curse-REC-PAST-1PL.EXC
 ‘My brother had a row with me because of the knife.’

Second, if the subject is formally and semantically singular, the instrumental NP cannot be removed from the reciprocal sentence without affecting its grammaticality, which argues against its status as an adjunct.

- (29) **Pakula ñagda-masi-e-ti.*
 P. CURSE-REC-PAST-3PL
 lit. ‘Pakula cursed each other.’

Finally, the instrumental NP must be adjacent to the subject NP, cf. (28) and (30):

- (30) **Pakula ñagda-masi-e-ti tukca-zi.*
 P. CURSE-REC-PAST-3PL hare-INST
 ‘Pakula had a row with the hare.’

Linear separation of the instrumental NP from the subject is only possible in the Northern dialect when the reciprocal suffix on the verb has a sociative meaning (see (25a)). This shows that under normal conditions it forms a single syntactic constituent with the subject.

3.5.2 Postpositional phrase

The secondary participant can be specified by a postpositional phrase with the postposition *mule* ‘with’. This postposition is used outside reciprocal constructions as well (6.3). It indicates that the two participants are related by a close (family) association and constitute a natural pair: a husband and wife, a mother and son, and so on. The object of the postposition cannot bear any possessive markers because the postposition itself indicates the possessive relationship between the two participants. Thus, (31) can be understood only in the sense that the speaker climbed the tree with his own and not someone else’s younger brother.

- (31) *Bi neŋu mule mo:-tigi tukti-e-mi.*
 I younger.brother with tree-LAT climb-PAST-1SG
 ‘I climbed the tree with my younger brother.’

The same meaning of the postposition *mule* is observed in reciprocal constructions, as in (32). Note that in (32) the first participant of the reciprocal situation corresponds to a plural NP.

- (32) *Nuati sita mule ŋa:-masi-e-ti.*
 they son with curse-REC-PAST-3PL
 ‘He had a row with his son.’

In the Northern dialect the postpositional phrase with *mule* can be employed in sociative constructions as well.

- (33) *Belie Biatu-ŋi: mule sauli-masi-li-e-ti.* (SK. 786)
 fairy B.-AL.REFL with offer.food-REC-INC-PAST-3PL
 ‘The fairies started having a feast with their Biatu.’

3.5.3 Plural

All reciprocal arguments may be represented on the surface by one constituent, namely, the plural subject. In this case the reciprocal relation holds between the members of one homogeneous group.

- (34) *B’ata-ziga santu-masi-e-ti.*
 boy-PL fist-REC-PAST-3PL
 ‘The boys beat each other with their fists.’

The subjects are regularly dropped in Udehe, in which case there is no overt antecedent of the reciprocal relationship within the clause. Both reciprocal arguments are represented only by verbal agreement.

- (35) *Gida-zi gida-masi-e-ti.* (K. 177)
 spear-INST spear-REC-PAST-3PL
 ‘They were throwing spears at each other.’

When it is necessary to emphasize that the action is performed by two (and not more) participants, the collective numeral *zuŋe* ‘two, both’ can be used either on its own or following the plural subject.

- (36) a. *Nuati zuŋe jexe-masi:-ti.*
 they both sing-REC-3PL
 ‘The two of them sing to each other.’
 b. *Zuŋe imasi-masi-e-ti.*
 both tell-REC-PAST-3PL
 ‘They were telling (tales) to each other.’

3.5.4 Several participants

The reciprocal situation does not necessarily involve only two participants, although two seems to be the default interpretation. Without an additional indication the construction is in fact ambiguous. In (37) the reciprocal situation pertains to three participants, as is clear from the nearest left context.

- (37) *Omo ni: zu: ni:-we b'a-si-e-ni. Teluŋu teluŋu-masi-e-ti* (K. 175)
 one man two man-ACC find-IPFV-PAST-3SG story story-REC-PAST-3PL
 ‘One man met two men. They told each other stories.’

When it is necessary to emphasize the number of participants, lexical means are used, namely, numerals. In (38) the number of participants is overtly indicated by the collective numeral *di:n-tuŋe* ‘four’.

- (38) *Di:n-tuŋe sa-masi:-ti.*
 four-COLL know-REC-3PL
 ‘The four people know each other.’

4. Constructions with reciprocal pronouns

The reciprocal meaning can be expressed lexico-syntactically, by means of free pronominal expressions (reciprocal pronouns), but without morphological changes in the verb. Like morphological reciprocals, lexico-syntactic reciprocals indicate the referentiality of the subject with a direct or indirect object, and sometimes also with the possessor. In other words, like morphological reciprocals, they are always subject-oriented. However, lexico-syntactic reciprocalization does not affect the valency of the verb, while morphological reciprocalization involves valency reduction.

4.1 Reciprocal pronouns

Morphologically, the reciprocal pronouns are based on the reflexive pronoun *mene/me(n)-* ‘oneself (myself, yourself, him-/herself, itself)’ which is unmarked for person. In the reflexive function this pronoun has the full case paradigm. In the nominative it does not take number inflection, but plurality may be optionally indicated by the reduplication of the stem: *mene-mene* ‘oneselves (ourselves, yourselves, themselves)’. In cases other than the nominative the reflexive pronoun takes the reflexive possessive affixes *-i/-mi* and *-f(e)i*, which indicate the singularity and plurality of its antecedent, respectively. For example, the accusative forms of the reflexive pronoun are *me-mi* (SG) and *me-f(e)i* (PL).

Reciprocal pronouns are derived by reduplication of the reflexive pronoun. In Udehe they occur only in the nominative and accusative, and they are not marked for plural. In the nominative they may be homonymous to the plural reflexive. The accusative is formed by reduplication of the reflexive plural accusative.

- (39) NOM *mene-mene* ‘each other’, lit. ‘self self’
 ACC *me-f(e)i-me-f(e)i* (same).

In what follows I gloss the stem *mene/me(n)-* as REFL in all the cases.

The reciprocal pronouns function as verbal arguments. In addition, nominative reciprocals act as possessive modifiers and can be used adverbially (4.3).

4.2 Subject-oriented reciprocals

Lexico-syntactic reciprocals convey reciprocal situations that are not expressed by morphological reciprocals, namely, the possessive diathesis (4.2.1). Further, the nominative form of the reciprocal pronoun functions as an oblique object (4.2.2), and the accusative form as a direct object (4.2.3). Unlike morphological reciprocals, lexico-syntactic reciprocals do not seem to express the dative diathesis.

4.2.1 “Possessive” reciprocals

When the coreferential relationship holds between the subject and the possessor, this is expressed by the nominative reciprocal pronoun in the modifier function. Udehe does not seem to restrict the syntactic roles available for the head of the possessive reciprocal NP; it can correspond either to an argument or to an adjunct. The verb exhibits plural agreement, for example:

- (40) *Mamaka mafasa mene-mene řukte-le kitiga-si:-ti.*
 old.man old.woman REFL-REFL hair-LOC pull-IPFV-3PL
 ‘The old man and the old woman are pulling each other’s hair.’

As was mentioned in 4.1, the nominative reciprocal pronoun is morphologically identical to the plural form of the reflexive pronoun *mene-mene*. This reflexive pronoun can also function as a possessive modifier, typically with a distributive meaning. In this case the head noun takes a reflexive possessive affix.

- (41) *Uta bede bagdi-e-ti mene-mene na:-di-fei.* (SKX. 326)
 that like live-PAST-3PL REFL-REFL land-DAT-REFL.PL
 ‘They started living like this, each on his own land.’

In contrast to that, in the reciprocal “possessive” construction the head noun does not take possessive affixes (see example (40) above). So the presence vs. absence of possessive marking on the head is the only device that formally differentiates between the reciprocal and reflexive interpretation of the possessive modifier *mene-mene*, cf. (42a) with a reflexive reading and (42b) with a reciprocal reading.

- (42) a. *Mene-mene xokto-zi-fi ηene-kte-gi-e-ti.*
 REFL-REFL road-INST-REFL.PL go-DISTR-REP-PAST-3PL
 ‘They returned along their road.’ or: ‘They returned each along his own road.’
- b. *Mene-mene xokto-zi ηene-kte-gi-e-ti.*
 REFL-REFL road-INST go-DISTR-REP-PAST-3PL
 ‘They returned along each other’s road.’

The “possessive” reciprocal construction is in fact the only non-head-marked possessive construction in Udehe. The lack of head marking here can perhaps be explained by the need to disambiguate between the reflexive and reciprocal readings of the pronoun *mene-mene*. On the other hand, this pronoun may function adverbially with the meaning ‘separately, each on his own’ (4.3). So it is also conceivable that in cases like (42b) it should be analyzed as an adverbial rather than a possessor within a possessive NP, in which case the lack of possessive marking is to be expected.

4.2.2 “Canonical” reciprocals with two-place intransitives

The nominative form of the reciprocal pronoun expresses reciprocalization of an oblique object. Lexico-syntactic reciprocalization applies to two-place intransitive verbs that can also take the morphological reciprocal marker (see 3.1.1.2). For example, the verb *ηele-* takes the instrumental object, and the verb *xuli-* takes the lative object. They derive the morphological reciprocals *ηele-masi-* and *xuli-masi-*, but also co-occur with free reciprocal expressions, as shown below.

- (43) a. *Nuati mene-mene ηele-iti.*
 they REFL-REFL be.afraid-3PL
 ‘They are afraid of each other.’
- b. *Nuati mene-mene zima-mi xuli:-ti.*
 they REFL-REFL visit-INF go-3PL
 ‘They pay visits to each other.’

4.2.3 “Canonical” reciprocals with two-place transitives

The accusative reciprocal pronoun participates in reciprocal constructions with two-place transitive verbs. All these verbs also allow morphological reciprocal derivation with the suffix *-masi* (3.1.1.1). The morphological and the lexico-syntactic constructions seem to be fully synonymous. It should be noted, however, that analytic reciprocal constructions are somewhat more frequent and clearly preferred in the speech of younger informants, probably under the influence of Russian syntax. Examples of lexico-syntactic reciprocal constructions with two-place transitives:

- (44) a. *N’aula-ziga me-fei-me-fei uli-zi ekpisi:-ti.*
 child-PL REFL-PL-REFL-PL water-INST spray-3PL
 ‘Children are spraying water at each other.’
- b. *Me-fei-me-fei dukte-iti.* (SK. 377)
 REFL-PL-REFL-PL lash-3PL
 ‘They lash each other.’

4.3 Adverbial function of reciprocal pronouns

The nominative reciprocal pronoun can be used adverbially with the meaning ‘separately’ or ‘each by himself’, cf.:

- (45) a. *Mene-mene bagdi-ti.*
REFL-REFL live-3PL
‘They live separately (each on his own).’
b. *Bueti mene-mene ηene:-ti..*
they REFL-REFL go.PAST-3PL
‘They left separately.’

Another possible meaning of this construction is ‘in different directions’.

- (46) a. *Teu mene-mene we-si-e-ti.* (SKX. 162)
all REFL-REFL throw.away-IPFV-PAST-3PL
‘They threw everything away in different directions.’
b. *In’ei ηene-isi-ni mene-mene susa-kta, mene-mene.*
dog go-PC-3SG REFL-REFL escape-DISTR REC-REC
‘When the dog came, (the badgers) escaped in different directions.’

4.4 Expression *mene dolo* ‘among themselves’

The reciprocal expression *mene dolo* ‘among themselves’ comprises the reflexive pronoun *mene* and the postposition *dolo* ‘within’. This expression functions adverbially and mostly (though not exclusively) co-occurs with intransitive verbs. Normally it is used when the number of participants involved in the reciprocal situation is more than two.

- (47) *Mene dolo e-iti asa.*
REFL within NEG-3PL respect
‘They don’t respect each other.’

The same expression can be used in possessive reciprocalization, as below. Note that in (48a) the reflexive pronoun is reduplicated, while the nominative reciprocal pronoun in the function of the possessor is absent.

- (48) a. *Nada-niηa tu: mene-mene dolo aka-la-fi bogdo-lo*
seven-COL all REFL-REFL within back-LOC-REFL.PL shoulder-LOC
zawa-si-ga-si. (K. 185)
take-IPFV-PERF-PC
‘All seven hold each other’s backs and shoulders.’
b. *Mene dolo e-iti xuli mene-mene zugdi-tigi.*
REFL within NEG-3PL go REFL-REFL house-LAT
‘They don’t visit each others’ houses.’

4.5 Co-occurrence of reciprocal pronouns with suffixed reciprocals

The accusative reciprocal pronoun *mefei-mefei* is frequently used in combination with the morphological reciprocalization of the verb, but is by no means obligatory in this case. The

examples in (49) show that “pleonastic” reciprocals are available when an argument other than the direct object is involved in the reciprocal relation, for example, an instrumental (49a) or lative object (49b).

- (49) a. *Nuati me-fei-me-fei ŋele-masi:-ti.*
 they REFL-PL-REFL-PL be.afraid-REC-3PL
 ‘They are afraid of each other.’
 b. *Nuati me-fei-me-fei xuli-masi:-ti.*
 they REFL-PL-REFL-PL go-REC-3PL
 ‘They visit each other.’

Pleonastic constructions where the accusative argument of a transitive verb is reciprocalized are questionable. Not all informants accept examples such as (50), and (51) is judged to be ungrammatical.

- (50) a. [?]*Bu me-fei-me-fei nodo-masi-e-mu.*
 we REFL-PL-REFL-PL lose-REC-PAST-1PL.EXC
 ‘We lost each other.’
 b. [?]*Me-fei-me-fei aju:-masi:-ti.*
 REFL-PL-REFL-PL love-REC-3PL
 ‘They love each other.’
 (51) **Nuati me-fei-me-fei sa-masi:-ti.*
 they REFL-PL-REFL-PL know-REC-3PL
 ‘They know each other.’

The nominative reciprocal pronoun *mene-mene* is pleonastically used to indicate the “possessive” reciprocal diathesis. Recall that reciprocalization of the possessor is impossible by purely morphological means, cf. (52a). However, possessive reciprocals can be formed by combination of a morphologically reciprocal verb with the suffix *-masi* and reciprocal pronoun *mene-mene* (52b).

- (52) a. **Kusige-we gele-masi:-ti.*
 knife-ACC ask-REC-3PL
 ‘They ask for each other’s knife.’
 b. *Mene-mene kusige-we gele-masi:-ti.*
 REC-REC knife-ACC ask-REC-3PL
 ‘They ask for each other’s knife.’

Finally, reciprocity may be pleonastically marked by the postpositional expression *mene dolo* ‘among themselves’ which co-occurs with the reciprocal form of two-place transitive verbs (53a), two-place intransitive verbs (53b) or three-place transitive verbs, as in (53c). It indicates that more than two participants are involved in the reciprocal relation.

- (53) a. *Mene dolo aju-masi:-ti.*
 REFL within love-REC-3PL
 ‘They love each other.’
 b. *Nuati mene dolo zima-si-masi:-ti.*
 they REFL within visit-IPFV-REC-3PL
 ‘They visit each other.’

- c. *Nuati mene dolo zeu-we nexu-masi:-ti.*
 they REFL within food-ACC bring-REC-3PL
 ‘They bring each other food.’

4.6 Reciprocal pronoun *za:-* (Northern dialect)

The pronoun *mene-mene* is equally available in both Udehe dialects. In addition, the Northern dialect as recorded by Simonov and Kjalundzjuga has a second reciprocal pronoun, which goes back to the lexical word *za:* ‘relative, friend, associate’. This word exists in both the Southern and the Northern dialects, but only in the Northern dialect it is the base of reciprocal pronouns. In the material at my disposal the corresponding reciprocal pronoun mostly occurs in the accusative formed by reduplication of the plural reflexive possessive form: *za:-fi-za:-fi*, where *-fi* is a possessive-reflexive plural marker. It can be used as the only reciprocal marker, as in (54), or in combination with morphological reciprocals as in (55). In both cases it is compatible with transitive verbs.

- (54) *za:-fi-za:-fi bele-si-mi.* (SK. 310)
 REFL-PL-REFL-PL help-IPFV-INF
 ‘helping each other.’
- (55) a. *Čind’a-da bui-de za:-fi-za:-fi akta-masi-mi bagdi.* (SK. 310)
 bird-and animal-and REFL-PL-REFL-PL chase-REC-INF live.PRES.PART
 ‘Birds and animals live chasing each other.’
- b. *In’ei-ziga za:-fi-za:-fi ikte-masi:-ti.* (SK. 354)
 dog-PL REFL-PL-REFL-PL bite-REC-3PL
 ‘Dogs bite each other.’

I have only one example where the reciprocal pronoun derived from the stem *za:-* takes the oblique lative case. According to the general rule of Udehe (2.2), the case marker is located between the stem and the possessive affix. The construction denotes the reciprocation of the lative argument of the three-place transitive word *ana-* ‘to push sth onto sth’.

- (56) *Za:-tigi-fi-za:-tigi-fi ana-masi:-ti.* (SK. 310)
 REFL-LAT-PL-REFL-LAT-PL push-REC-3PL
 ‘They force work on each other.’

This example suggests that the pronoun *za:fi-za:fi*, unlike *mene-mene*, might have a whole case paradigm and serve to reciprocate various indirect objects and adjuncts, but I do not have the data to support this claim.

4.7 Expression of the second participant

In reciprocal constructions involving free reciprocal expressions the subject is either a plural NP (57) or a coordinated NP (58). As far as my material shows, expression of the second participant by means of an instrumental NP or a postpositional phrase, as is typical of morphological reciprocals (see 3.5.1, 3.5.2), is not available.

- (57) *N'aula-ziga me-fei-me-fei uli-zi ekpisi:-ti.*
 child-PL REFL-PL-REFL-PL water-INST spray-3PL
 'Children are spraying each other with water.'
- (58) *Mamaka mafasa mene-mene nukte-le kitiga-si:-ti.*
 old.man old.woman REFL-REFL hair-LOC pull-IPFV-3PL
 'The old man and the old woman are pulling each other's hair.'

The collective subject may be grammatically singular but semantically plural and trigger plural agreement on the verb. In (59a) the subject is expressed by a noun derived with the collective suffix *-mule* (on this suffix see 7.2). In (59b) a non-derived collective noun corresponds to it. Note that the reciprocal pronoun here does not exhibit reduplication.

- (59) a. *Xunazi-mule me-fei-me-fei aju:-iti.*
 sister-COLL REFL-PL-REFL-PL love-3PL
 'The sisters love each other.'
- b. *Ei zugdiŋke me-fei teu aju-iti.*
 this family REFL-PL all love-3PL
 'In this family everybody loves one another.'

5. Constructions with reduplications

Udehe employs a special reciprocal construction which involves reduplication. These constructions are mostly available when the reciprocal relationship holds between the subject and an adverbial expression, i.e. they may be regarded as an "adverbial" diathesis. Reciprocalization is encoded by reduplication of the postposition, as in (60b). The postposition specifies which non-subject participant is involved in the reciprocal relation. The corresponding non-reciprocal sentence is cited in (60a).

- (60) a. *B'ata aziga dä: te:-ini.*
 boy girl next sit-3SG
 'The boy sits next to the girl.'
- b. *B'ata aziga dä: dä: te:-iti.*
 boy girl next next sit-3PL
 'The boy and the girl sit next to each other.'

Constructions with reduplications typically involve reduplication of postpositions (5.1), but other elements can be reduplicated as well (5.2, 5.3, and 5.4). The verb shows plural agreement, and the plurality of the subject is expressed either morphologically or by coordination.

It should be noted that generally speaking reduplication in Udehe is very frequent. It is quite a productive means used to express intensity of adverbial meanings, e.g. *xele xele* 'very quickly' (← *xele* 'quickly'). Reduplication of numerals (often in the instrumental form) conveys the distributive meaning:

- (61) a. *Ni-du ila ila cä:ze-we obolo:-ni.*
 man-DAT three three money-ACC divide.PAST-3SG
 ‘He divided the money, three roubles to each man.’
 b. *Zu:zi zu:zi nede:-ni.*
 two-INST two-INST put.PAST-3SG
 ‘He put (them) in twos.’

Some reduplicated nominal and adverbial expressions with a non-reciprocal meaning are lexicalized, cf. *emne emne* ‘seldom, sometimes’ (← *emne* ‘once’), *kesem kesem* ‘hardly, with difficulty’ (← *kese-mi* ‘suffering’), *geje geje* ‘equally’ (← *geje* ‘together’), *onobui onobui* ‘various’ (← *onobui* ‘which’), *onodgo onodgo* ‘in all ways’ (← *onodgo* ‘how’), and *j’eu j’eu* ‘all sort of’ (← *j’eu* ‘what, what sort of’).

5.1 Reduplication of postpositions

This phenomenon is highly productive as a means of marking reciprocity, usually chain-ling relations (cf. (62a, b)). The reciprocal construction with reduplicated postpositions is fully productive. Of course it is subject to the usual semantic restrictions, but is generally available with all or most postpositions.

- (62) a. *Amä:ta amä:ta tukä-iti n’aula-ziga.*
 after after run-3PL child-PL
 ‘Children are running after each other.’
 b. *Kil’ai-ziga tene zulefe zulefe-de ηene-i.* (K. 181)
 seagull-PL and before before-FOC go-PRES.PART
 ‘And the seagulls are flying one after another.’
 c. *Nuati geje geje xuli:-ti.*
 they with with go-3PL
 ‘They walk with one another.’

I also have two examples from the Northern dialect where a reduplicated postposition does not have the canonical form, but acquires a suffix *-ktA* or *-ktu*. The usual form of the postposition ‘on top of’ is *we:-le-ni* (*-le* is a locative affix and *-ni* is a possessive inflection), but in (63a) it takes the form *we:-ktu*. The usual form of the postposition ‘after’ is *amä:ta*, but in (63b) it takes the form *amä:-kta*. The meaning of this suffix in these cases is unclear, but remarkably it is formally identical to the verbal distributive suffix *-ktA* which typically denotes the plurality of the subject (and occasionally the object), e.g. *eme-kte-* ‘to come (of several people)’.

- (63) a. *To:to:-ni we:-ktu we:-ktu-de.* (K. 185)
 sit.on.the.back.PAST-3SG top-DISTR top-DISTR-FOC
 ‘They sat on top (not on the back) of each other.’
 b. *amä:-kta amä:-kta.*
 after-DISTR after-DISTR
 ‘one after another.’

5.2 Reduplication of adverbs, adjectives and numerals

The reduplicative reciprocal construction is also available when the subject is cross-coreferential with an argument of an adjective. Udehe has several adjectives that take arguments, e.g. *bejeku* ‘alike, similar to’ (+ NOM), *xoŋto* ‘different from’ (+ ABL), and *das’a* ‘close to’ (+ LAT). Reduplication of an adjective indicates that the participants (at least two) of a stative situation stand in a symmetrical relationship to each other. Like all adjectives in Udehe, a reduplicated adjective may be used predicatively (64a) or as a prenominal modifier (64b).

- (64) a. *Xa:-mule bejeku bejeku bi:-ni.*
 relative-COLL similar similar be-3SG
 ‘Relatives look like each other.’
 b. *bejeku bejeku b’ata-ziga.*
 similar similar boy-PL
 ‘boys looking like each other.’

Note that unlike in constructions where an immediate constituent of the clause or a possessor is reciprocalized, in constructions with the reciprocalized object of an adjective the finite verb (the copula) does not necessarily show plural agreement (64a). But when a reduplicated adjective is used attributively, the head noun typically receives the plural marker *-ziga*.

Example (65) illustrates the reciprocalization of an argument of an adverb. The adverb *pazi* ‘separately from’ normally takes an ablative argument:

- (65) a. *Ei a:nta-digi pazi bagdi:-ni.*
 this woman-ABL separately live-3SG
 ‘He lives separately from this woman.’
 b. *Pazi pazi bagdi-li-e-ti.* (SK. 463)
 separately separately live-INCH-PAST-3PL
 ‘They started living separately from each other.’

In some cases a reduplicated adjective has the distributive rather than the reciprocal meaning. This is only observed with one-argument adjectives. For example, in (66) reduplication of the quantifying adjective *wac’a* ‘a little’ results in the meaning ‘a little of each’. The head remains in the singular.

- (66) *Wac’a wac’a okto-wo jeugie-mi tu: okto-si-e-ni.* (SK. 214)
 little little medicine-ACC bring-INF all medicine-VR-PAST-3SG
 ‘He brought a little of each medicine and cured (him) with them all.’

The lexicalized reciprocal *omonzi omonzi* is formed from the instrumental case of the numeral *omo* ‘one’ and means ‘one after another’ and is used to refer to chaining situations. It may express both the subject-oriented and the object-oriented reciprocal diathesis. The latter is illustrated below.

- (67) *Sigi-li-e-ni beliente, omon-zi omon-zi wo:-si-e-ni.* (K. 191)
 shuffle-INCH-PAST-3SG fairy ONE-INST ONE-INST make-IPFV-PAST-3SG
 ‘The fairy started shuffling them one after another.’

5.3 Reduplication of nouns. Object-oriented reciprocal construction

Reciprocal reduplication of nouns is not productive, it only occurs very marginally. Interestingly, this seems to be the only instance of object-oriented reciprocals in Udehe. Reduplication of a noun in the instrumental may have the meaning ‘(beating) against each other’; cf. (68a) where the instrumental marker is repeated on each component of the reduplicated noun. It is also possible that only the second component bears the instrumental affix, as in (68b).

- (68) a. *Sagdi bu:-we b'a ut'asi zolo-zi zolo-zi kakta-sie nekce-iti.*
 big flint-ACC find then stone-INST stone-INST split-IPFV.PRES.PART keep-3PL
 ‘When they find a big flint, they split it (hitting) one stone against another, and keep it.’
- b. *Bi abuga-i suala suala-zi ima:-wa giugi:-ni.*
 I father-1SG ski ski-INST snow-ACC shake.off-3SG
 ‘My father is shaking the snow off by (beating) the skis against one another.’

Reduplication of certain nouns in the nominative also expresses the adverbial meaning ‘against each other’. These are nouns denoting part of the whole, such as *kakt'a* ‘half’ and *k'ä* ‘edge’; e.g.:

- (69) a. *Zolo kakt'a kakt'a gekti-wene-mi.* (K. 124)
 stone half half freeze-CAUS-1SG
 ‘I make the stones freeze against one another.’
- b. *bu:-zi k'ä-fa k'ä-fa sikti-si-mi.* (SK. 470)
 flint-INST edge-ACC edge-ACC hit-IPFV-INF
 ‘to hit flints against one another.’

In the following example the reduplicaton of the noun *bua* ‘place, nature, forest’ has a dispersive meaning: ‘in all directions (in the forest)’. The second reduplicant is marked by the lative affix and the 3rd person personal inflection, which seems to indicate definiteness in this case, as is generally typical of Udehe. The first noun remains uninflected.

- (70) *Bua bua-tigi-ni tukä:-ti.* (SKX. 291)
 place place-LAT-3SG escape.PAST-3PL
 ‘They escaped in different directions (in the forest).’

5.4 Clausal reduplications

Clausal reduplications occur very rarely; in my material I only have two examples. They involve reduplication of the whole clause (the subject and the predicate). The resulting meaning can be characterized as competitive. In (71a) the reduplicated clause falls under the scope of an indirect question ‘who will win in X-ing’, where X corresponds to the predicate of the reduplicated clause.

- (71) a. *Ni maje ni maje, ana-masi-ti.* (SKX. 302)
 who strong who strong push-REC-3PL
 ‘They push each other (trying to see) who is stronger.’

- b. *Gusi:-ti b'ata-ma sita-ziga, ni ete-i ni ete-i.* (SKX 302)
 play-3PL boy-ADJ child-PL who win-PRES.PART who win-PRES.PART
 'The boys play with each other (trying to see) who will win.'

6. Sociatives

The Southern dialect of Udehe employs sociatives derived morphologically by means of the suffix *-niŋa*. There is no evidence of them in the Northern dialect.

6.1 Origin of the sociative suffix

The sociative suffix *-niŋa* is homonymous to and likely to be etymologically related to the affix of collective numerals *-niŋa*. The latter derives non-attributive collective numerals from 'three' to 'ten', cf.: *ila-niŋa* 'all three together', *di:-niŋa* 'all four together', and so on. In the Northern dialect collective numerals employ the suffix *-ŋAħA*, but it is not used in verbal derivation. The collective suffix *-niŋa* also occurs in several quantificational words such as *xufa-niŋa* 'all together' (cf. *xufa* 'group') and *teu-niŋa* 'all' (cf. *teu* 'all'). A similar formant may be present in the collective numeral *zu-ŋe* 'both' (← *zu*: 'two') and the homonymous postposition with the meaning 'with'. Neither the sociative affix nor the suffix of collective numerals have harmonic variants.

6.2 Sociative verbs

Sociatives are only subject-oriented. The sociative suffix *-niŋa* indicates that the action is performed by at least two equally involved participants together. In the verbal form it typically precedes the aspectual affixes, e.g. the imperfective and the inchoative.

- (72) *Soŋo-niŋa-si-li-e-ti jazata uti.*
 cry-SOC-IPFV-INC-PAST-3PL of.course that
 'Of course they began to cry together.'

In fact, in all the examples at my disposal the sociative is followed by the imperfective affix *-si* (cf. 3.4), so it is perhaps possible to speak about the complex sociative marker *-niŋa-si*.

The sociative verbs take only plural agreement and normally co-occur with the subject in the plural or the coordinated subject. Sociatives can be derived from basically every verb, both transitive and intransitive, that requires an animate subject; e.g.:

- (73) *gusi-niŋa-si* 'to play together'
jexe-niŋa-si 'to sing together'
ise-niŋa-si 'to see together'
oŋo-niŋa-si 'to write together'
te-niŋa-si 'to sit together'
umi-niŋa-si 'to drink together.'

At least in one case a verb with the sociative marker conveys the reciprocal meaning. The sociative *diana-niŋa-si-* is derived from the intransitive verb *diana-* ‘to talk’. The meaning of the derivate is ‘to talk to each other’ rather than ‘to talk together’, so it is synonymous with the morphological reciprocal *diana-masi-*.

It should be noted that although morphological sociatives are fully productive in the Southern dialect, they are very infrequent. In most cases speakers express the sociative meaning by means of a free sociative marker (see 6.3).

6.3 Other means of expressing the sociative and comitative meanings

The sociative is rendered by the free marker *geje* ‘together’; the comitative is rendered by (i) the postposition *geje* ‘together with’ homonymous to it, with an instrumental object; (ii) by the instrumental NP; and (iii) by the postpositional phrase with the postposition *mule* ‘with’. The instrumental NP and the postpositional phrase also mark reciprocal situations (see 3.5 and 7.4).

The free sociative marker *geje* ‘together’ is the main sociative marker, since, as mentioned in 6.2, morphological sociatives are infrequent even in the Southern dialect. In sentences with an inanimate subject it is the only available option, but even for animate subjects this construction is generally preferred. The subject is expressed either by a plural NP (74a) or a coordinated group (74b), but in both cases the verb takes the plural agreement.

- (74) a. *Minti geje etete-fi.*
 we together work-1PL.INC
 ‘We work together.’
 b. *Bula mo:-ni xulu mo:-ni geje bagdi:-ti.*
 poplar tree-3SG ash.tree tree-3SG together live-3PL
 ‘The poplar and the ash trees grow together.’

The postpositional phrase with the postposition *geje* and an instrumental object is compatible with both singular and plural agreement markers on the verb. In the first case the syntactic status of the postpositional phrase can be defined as an adjunct. Such a phrase is located fairly freely in the sentence, that is, it does not have to be adjacent to the subject. The subject controls agreement on the verb.

- (75) *Bi susu-i tineŋi sin-zi geje we:-tigi xuli-se:-ni.*
 I uncle-1SG yesterday you-INST together mountain-LAT travel-EXP.PAST-3SG
 ‘Yesterday my uncle went to the mountains together with you.’

In the second case, the postpositional phrase has the status of a postnominal modifier, or it forms a coordinative group with the subject, just like the instrumental NP in reciprocal constructions (see 3.5.1). There is an adjacency requirement for such a postpositional phrase: it must immediately follow the subject and form a single syntactic constituent with it.

- (76) *Bi mamasa-i (*zugdi:) sita-na-zi: geje zugdi: amä:sa:-ti*
 I wife-1SG at.home child-PL-INST.1SG together at.home remain.PAST-3PL
 'My wife remained at home together with the children.'

In this case the verb takes a plural affix. Remarkably, the person agreement on the verb is not controlled by the nominative NP, but is rather determined by the person hierarchy: 1st person > 2nd person > 3rd person. If the two participants are the 1st and 2nd or the 1st and 3rd persons the verb takes the 1PL agreement, as in (77a) and (77b). If the participants are the 2nd and 3rd persons, the verb takes the 2PL agreement, as in (77c). This does not depend on the grammatical status of the participants (nominative NP vs. instrumental NP), nor on their linear position. The inclusive/exclusive opposition in the 1PL is conditioned by the general rule: the inclusive is used when two participants are of the 1st and 2nd person and the exclusive is used when they are of the 1st and 3rd person.

- (77) a. *Ag'a min-zi geje mo:-du te-u.*
 brother I-INST together tree-DAT sit-1PL.EXC
 'My brother is sitting with me on a tree', lit. 'brother with me together are sitting ...'
 b. *Si mun-zi geje ei baraka-du añasi-e-fi.*
 you we.EXC-INST together this hut-DAT spend.night-PAST-1PL.INC
 'You spent a night in this hut together with us', lit. 'You with us together spent ...'
 c. *Ei aziga sin-zi geje te-u kluba-du.*
 this girl you-INST together sit-2PL club-DAT
 'This girl is sitting with you in the club', lit. 'This girl with you together are ...'

Similar properties are exhibited by the instrumental NP with the comitative meaning and the postpositional phrase with *mule*: they either have an adverbial status or form a complex NP with the nominative subject. So the verb agrees either with the nominative NP alone or shows plural agreement. In the latter case person agreement seems to be determined by the same rules as in constructions with the postposition *geje*.

- (78) a. *Bi ogzo-zi na: xegiele-ni bi-si-mi.*
 I devil-INST earth under-3SG be-PAST-1SG
 'I was under the earth together with the devil.'
 b. *Bi mamasa-zi: mo:-lo anči bi-u.*
 I wife-INST.1SG tree-PART no be-1PL.EXC
 'My wife and I (lit. 'I with my wife') live without wood.'
- (79) a. *Bi anda mule ŋäixi ŋene-mi.*
 I friend with to.riverbank go-1SG
 'I am going to the riverbank with my friend.'
 b. *Bi anda mule ŋäixi ŋene-u.*
 I friend with to.riverbank go-1PL.EXC
 'I am going to the riverbank with my friend', lit. 'I with (my) friend are going ...'

In sum, in constructions describing non-reciprocal comitative situations, verbal agreement depends on the syntactic status of the secondary participant: if it corresponds to an adjunct, agreement is controlled by the subject alone; if it forms one constituent with the subject, agreement is triggered by the complex subject NP. A similar situation is ob-

served with lexical reciprocals as well (7.4.1). In contrast, in morphological and syntactic reciprocal constructions only the second option is available.

7. Lexical reciprocals

Lexical reciprocals do not take reciprocal and sociative affixes, unlike in Evenki where the reciprocal affix can emphasize the reciprocal meaning of the lexical reciprocal verb (Nedjalkov & Nedjalkov, Ch. 38, §11).

7.1 Non-derived symmetrical verbs

Although symmetrical verbs are not morphologically marked by reciprocal markers and are not compatible with reciprocal pronouns, their meaning is inherently reciprocal. They are mostly two-place intransitives, except for the three-place transitive verb *xefisi-* ‘to discuss sth with each other’.

- (80) *andata-* ‘to be friends with each other’
b’agd- ‘to meet each other’
čuli- ‘to talk to each other’
dekte- ‘to separate from each other’
diasi- ‘to talk to each other’
koilan- ‘to copulate’
ńa:ma- ‘to quarrel with each other’
w’ali- ‘to fight with each other.’

I have no two-place transitive lexical reciprocals in my material.

7.2 Lexical reciprocals in copular clauses

Udehe has several nouns derived from other nouns by means of the derivational suffix *-mule* tentatively glossed as PL here. This suffix is homonymous with the comitative postposition *mule* (see 3.5.2) and is obviously related to it. However, as distinct from the postposition *mule*, it is phonologically bound to the stem and does not bear an independent stress, although it is disharmonic with respect to vowel harmony. Further, as distinct from postpositional phrases, the derived nouns take case inflection (81a) and the plural (81b), and can be modified by an adjective (81c) or a numeral (81d). Example (82d) additionally shows that they may refer to more than two people.

- (81) a. *Uŋta tie-mule-du siŋe ono-no-mi wo:-ni.*
 boot pair-PL-DAT mouse nest-DEST-REFL make.PAST-3SG
 ‘A mouse made a nest in the pair of boots.’
 b. *xa:-mule-ziga.*
 sibling-PL-PL
 ‘brothers.’

- c. *Bueti ketu aja anda-mule bi-ti.*
 they very nice friend-PL be-3PL
 ‘They are a very nice couple.’
- d. *ila xunazi-mule.*
 three sister-PL
 ‘three sisters.’

The suffix *-mule* derives the next closed class of nouns denoting a close symmetrical relationship between two or more people from reciprocal (in the broad sense) nouns and an adjective:

(82)	<i>anda</i>	‘friend’	→	<i>anda-mule</i>	‘friends, couple’
	<i>ag’a</i>	‘elder brother’	→	<i>ag’a-mule</i>	‘brothers’
	<i>bagäbu</i>	‘similar’	→	<i>bagäbu-mule</i>	‘doubles’
	<i>gagda</i>	‘the other’	→	<i>gagda-mule</i>	‘(married) couple’
	<i>getu</i>	‘comrade’	→	<i>getu-mule</i>	‘comrades’
	<i>neŋu</i>	‘younger sibling’	→	<i>neŋu-mule</i>	‘siblings’
	<i>nimeŋke</i>	‘neighbour’	→	<i>nimeŋke-mule</i>	‘neighbours’
	<i>seŋgite</i>	‘relative’	→	<i>seŋgite-mule</i>	‘relatives by marriage’
	<i>ue</i>	‘a wife taken from a different clan in exchange for another woman’	→	<i>zue-mule</i>	‘wives of one man’
	<i>uil’e</i>	‘a little girl who lives in the house of her future husband’	→	<i>uil’e-mule</i>	‘wives of one man’
	<i>xa:</i>	‘sibling’	→	<i>xa:-mule</i>	‘brothers’
	<i>xunazi</i>	‘elder sister’	→	<i>xunazi-mule</i>	‘sisters’
	<i>za:</i>	‘relative’	→	<i>za:(lä)-mule</i>	‘relatives.’

The word *tie-mule* ‘pair’ (← *tie* ‘pair’) refers to an inanimate entity.

In the predicative function these nouns are combined with the copular verb *bi-* ‘to be’. They express a symmetrical state, e.g. *anda-mule bi-* ‘to be friends’, *xa:-mule bi-* ‘to be brothers’. Similar properties are typical of the copular predicate *aja bi-* ‘to be friends’ (*aja* ‘good, nice’).

7.3 Lexicalized reciprocals

Some verbs derived from nominals with the reciprocal suffix *-masi* have undergone lexicalization; cf.:

(83)	<i>gagda</i>	‘second, another’	→	<i>gagda-masi-</i>	‘to do half (of the work) make one of the pair; divide in two’
	<i>kakt’a</i>	‘half’	→	<i>kakt’a-masi-</i>	‘to do half (of the work), make one of a pair; divide in two’ (K. 115)
	<i>za:</i>	‘relative, friend’	→	<i>za:-masi-</i>	‘to be related’ (S. 30)
	<i>zule:-</i>	‘before, in front’	→	<i>zule-masi-</i>	‘to overtake.’

For the following formally reciprocal verbs the base word is unknown.

- (84) *geu-masi-* ‘to flirt’ (SK. 267)
dabdu-masi- ‘to compete’ (SK. 267).

7.4 Encoding of the second participant

Verbs referring to a symmetrical naturally reciprocal situation allow alternative expressions of the secondary argument. They are basically similar to those used to express the second participant of morphological reciprocals (see 3.5), but the rules of number agreement on the verb differ.

7.4.1 Instrumental noun phrase

The co-participant of a symmetrical situation is commonly expressed by the instrumental noun with an argument function. It cannot be omitted from the clause and so differs from the formally identical instrumental NP functioning as a comitative adjunct to non-symmetrical verbs. However, the instrumental NP is not characterized by any grammatical properties of the subject. Most importantly, the subject in Udehe controls switch-reference indicators in subordinate clauses based on non-finite verbal forms, but this is not characteristic of the instrumental NP. In (85) I demonstrate that it cannot control the infinitival adverbial clause, available only in same-subject sentences.

- (85) *Wakca-mi Pakula tukca-zi ná:ma-si-e-ti.*
 hunt-INF P. hare-INST quarrel-IPFV-PAST-PL
 Pakula_i and a hare_j had a quarrel while he_{i/*j} was hunting.’

If the first participant is singular, the main verb is normally in the singular, and thus it agrees only with the subject both in person and number.

- (86) *Bi Iwana-zi w’ali-mi.*
 I Ivan-INST fight-1SG
 ‘I am fighting with Ivan.’

Alternatively, the verb may take plural agreement even if the first participant is singular.

- (87) a. *Bi zube n’aula-zi w’ali-se:-mu.*
 I two boy-INST fight-EXP-1PL.EXC
 ‘I have fought with two boys.’
 b. *Kuti kejge-zi anana aja bi-si-ti.*
 tiger cat-INST earlier good be-PAST-3PL
 ‘The tiger and the cat used to be friends.’

If the predicate exhibits plural agreement, it does not necessarily agree with the subject in person. I do not have enough material to decide whether person agreement on symmetrical verbs is controlled by the linearly first NP (the subject) or is conditioned by other factors. However, evidence from non-symmetrical verbs combined with the comitative adjunct (the postpositional phrase with the postposition *geje* ‘together with’) suggests that agreement may rather be determined by the person hierarchy (see 6.3).

7.4.2 Postpositions *mule* and *zunje* ‘with’

The secondary participant can be expressed by a phrase with the postposition *mule* or *zunje* ‘with’. The postposition *mule* is only possible with two participants who form a natural

pair of relatives or friends (cf. 3.5.2). The postposition *zuŋe* does not necessarily involve a close (family) relationship between the two participants.

In constructions with the postposition *mule* both the subject and the verb may be in the singular or plural, and this does not affect the meaning. Thus, (88a) and (88b) are practically synonymous.

- (88) a. *Nuani mamasa mule dekte-gi-e-ni.*
 he wife with separate-REP-PAST-3SG
 ‘He and his wife separated again.’
 b. *Nuati mamasa mule dekti-gi-e-ti.*
 they wife with separate-REP-PAST-3PL
 (same translation).

In constructions with the postposition *zuŋe* the verb always takes the plural agreement although the subject is in the singular. As shown in (89b), the subject may be dropped from the surface. This makes it impossible to analyze the comitative postpositions as coordinators. Example (89a) demonstrates that when the subject is 1st person, the verb takes 1PL agreement. Again, it remains unclear whether this is conditioned by its status as subject or by its highest position on the person hierarchy (cf. 7.4.1). But the question is actually irrelevant in this case since, because the personal pronouns cannot function as objects of the postposition *zuŋe*, they are always encoded as subjects in such constructions.

- (89) a. *Bi Iwana zuŋe xefisi-e-mu.*
 I I. both discuss-PAST-1PL.EXC
 ‘We had a discussion with Ivan,’ lit. ‘I with Ivan had a discussion.’
 b. *Gä:ŋa neŋi-ni w’ali:-ti mafasa zuŋe.*
 every day-3SG fight-3PL old.man with
 ‘Every day she fights with her husband.’

7.4.3 Plural

The alternative encoding of two participants is by means of the homogenous NP, either grammatically plural (90a) or semantically plural but grammatically singular (90b).

- (90) a. *Minti b’agdi-e-fi.*
 we meet-PAST-1PL.INC
 ‘We met each other.’
 b. *Zu: ni: zä: diele-ni w’ali:-ti.*
 two man money because-3SG fight-3PL
 ‘Two men are fighting because of money.’

Southern Udehe has a special 1st person dual inclusive form of personal pronouns (the grammatical dual is otherwise absent in the language). It is formed from the oblique stem of the 1SG pronoun *min-* by means of the element *-zuŋe* ‘both, two’, which functions as an affix here: *min-zuŋe*. The dual form occurs only in the nominative and may be employed as a subject of a naturally reciprocal verb. It triggers the 1PL inclusive agreement.

- (91) *Min-zuŋe za:lä-mule bi-fi.*
 I-both relative-PL be-1PL.INC
 ‘We (you and I) are relatives.’

When the number of participants is more than two, this can be indicated by means of the reciprocal expression *mene dolo* ‘among themselves’ (see 4.4), but the reciprocal pronoun *mene-mene* is also possible in this function.

- (92) a. *Sanŋa-ziga mene dolo čuli-e-ti.* (SK. 1079)
 old.man-PL REFL within discuss-PAST-3PL
 ‘The old men (more than two) talked among themselves.’
 b. *Mene-mene dekte-li-e-ti.* (S. 28)
 REFL-REFL separate-INC-PAST-3PL
 ‘They [four clans] started separating from one another.’

7.4.4 Coordinated noun phrase

When the subject is expressed by a complex coordinated NP, the verb obligatorily takes the plural agreement.

- (93) a. *Waŋba oloxi anda-mule bi-si-ti.* (K. 137)
 tortoise squirrel friend-PL be-PAST-3PL
 ‘Tortoise and Squirrel were friends.’
 b. *Kimonŋko se:-ni Kälunziga se:-ni bagu-masi:-ti mamas-fai dieleni.*
 K. clan-3SG K. clan-3SG enemy-REC-3PL wife-REFL.PL because
 ‘The clans Kimongko and Kyalunziga are enemies because of their women.’

8. Udehe and other Tungus languages

Udehe belongs to the Southern Tungus group. With respect to reciprocals and sociatives, it shows both striking similarities and considerable differences with the Northern Tungus languages, Evenki and Even.

1. In all three languages, the principal morphological means to express the reciprocal meaning are the etymologically related verbal affixes *-maat/-mat/-masi*. However, morphological reciprocals function rather differently. In Udehe they are strictly subject-oriented, but in Even regular object-oriented reciprocals within causative-reciprocal constructions also exist (Malchukov, Ch. 39, §3.1.2). In Evenki, causative derivation from reciprocals is much more restricted than in Even: it is marginally accepted only by some speakers and in some dialects (Nedjalkov & Nedjalkov, Ch. 38, §3.2). In Udehe it is altogether impossible.

2. Further, the languages in question differ in the diathesis types available in reciprocal constructions. In Udehe, morphological subject-oriented reciprocals are only employed for the reciprocalization of a verbal argument (the second and the third argument) and are not used for the reciprocalization of possessors or adjuncts, as distinct from Even (Malchukov, Ch. 39, §3.1.1.4) and to some extent from Evenki (Nedjalkov & Nedjalkov, Ch. 38, §3.1.4). These reciprocal meanings are regularly expressed in Udehe

by non-morphological reciprocal constructions: the “possessive” diathesis by means of a free reciprocal marker (see 4.2.1), and the reciprocalization of adjuncts by means of reduplication (Section 5). There are further minor differences in the availability of morphological reciprocals. For example, as distinct from Even (Malchukov, Ch. 39, §3.1.1.1), and in the same way as Evenki (Nedjalkov & Nedjalkov, Ch. 38, §3.1.1.4), in Udehe some intransitive verbs of motion allow reciprocal derivation. I do not have evidence for the reciprocalization of the direct object in three-place transitive verbs, as attested, for instance, in Even (Malchukov, Ch. 39, §3.1.1.1.3). Generally speaking, with respect to derivation and the function of the morphological reciprocals, Udehe seems to be closer to Evenki than to Even.

3. Reciprocal pronouns in Even and Evenki take all or most of the cases available for nouns. Thus in these languages constructions with reciprocal pronouns are employed in various diathesis types of reciprocals, and the grammatical status of the reciprocalized element is indicated by the morphological form of the reciprocal pronoun. In contrast, in Udehe reciprocal pronouns only have nominative and accusative forms. The nominative form is marginally available when two-place intransitives are reciprocalized, and in “possessive” reciprocals. As mentioned above, this situation is opposite to that observed in Even and Evenki, where the “possessive” reciprocal diathesis is expressed morphologically and is impossible with free reciprocal expressions. The accusative reciprocal pronoun in Udehe forms “canonical” reciprocals from two-place transitives and may be pleonastically used with morphologically reciprocal verbs. This is typical of Northern Tungus languages as well (Nedjalkov & Nedjalkov, Ch. 38, §7.4; Malchukov, Ch. 39, §4.3.2).

4. The most peculiar property of reciprocalization in Udehe is reduplication. Reduplicational reciprocals are completely absent from the Northern Tungus languages, and, as far as I know, are not attested in any Southern Tungus language other than Udehe. In other words, reduplication as a grammatical means of reciprocalization is altogether atypical of Tungus languages, and its emergence in Udehe requires special investigation. The main function of reduplicational constructions is reciprocalization of adjuncts, typically expressed by adverbials and postpositional phrases. In contrast, Evenki (Nedjalkov & Nedjalkov, Ch. 38, §12) and Even (Malchukov, Ch. 39, §9.2) use derived reciprocal adverbs in this function, and these are unknown in Udehe.

5. The expression of reciprocal arguments seems to be rather similar in all three languages in question, with the proviso that Udehe does not have a special comitative case found in Evenki (Nedjalkov & Nedjalkov, Ch. 38, §3.1.5.1) and Even. It uses the instrumental NP instead, as well as some postpositional constructions. In short, the instrumental has more functions in Udehe than in the Northern Tungus languages.

6. Another important difference concerns verbal agreement. In Evenki (Nedjalkov & Nedjalkov, Ch. 38, §3.1.5) and Even (Malchukov, Ch. 39, §2.6) morphologically reciprocal verbs can show both singular and plural agreement, depending on the syntactic status of the second participant (a conjoint element vs. a part of the subject NP). In Udehe the same ambiguity arises only in sociative constructions (6.3) and with lexical reciprocals (7.4), while morphologically reciprocal verbs obligatorily take plural agreement. In other words, in Udehe morphological reciprocals are available only if both reciprocal arguments

are represented by one subject constituent (be it a plural subject or a complex NP), while in Northern Tungus the second reciprocal argument (the object) may be represented by a discontinuous (coordinated) construction.

7. In Udehe the morphological means specializing in the expression of the sociative meaning are more restricted than in Evenki and Even. Both Northern Tungus languages have productive morphological sociatives in *-lda/-ldə* (Nedjalkov & Nedjalkov, Ch. 38, §5; Malchukov, Ch. 39, §8). In Udehe the morphological sociative in *-niŋa* is only used in one of the dialects and even in this dialect it is typically dispreferred by speakers in favor of constructions with free sociative markers. This may reflect a general preference for analytical constructions in Udehe compared to Evenki and Even. In addition, in Udehe the sociative meaning (as well as the alternative meaning) is partly taken over by morphological reciprocals with the suffix *-masi* (see 3.3.1 and 3.3.2). This is also attested in a related Southern Tungus language Nanai (Avrorin 1961:43), but is not typical of Northern Tungus, probably due to the presence of the productive sociative affix on its own.

Acknowledgments

I am greatly indebted to Maria Tolskaya for her comments on the earlier versions of this paper and for sharing her Udehe materials with me. Any errors that remain are my responsibility.

1. Introduction

1.1 Karachay-Balkar

This language is represented by two dialects, Karachay (150,000 speakers) and Balkar (85,000 speakers). They are separated by a mountain range which hinders communication. The differences between these dialects are very slight and mostly concern phonetics, and what can be said about Karachay applies to Balkar. There are four subdialects in Balkar and none in Karachay (the Karachay *džol* ‘road’ corresponds to the Balkar dialectal *džol*, *žol* and *zol*). Karachay-Balkar boasts of rich folklore, it is also a written language with orthography based on the Cyrillic alphabet.

The Karachay-Balkar language belongs to the Western Turkic group, viz. to the Kipchak-Polovtsian subgroup (the other two subgroups are (a) Kipchak-Bulgar including Tatar and Bashkir and (b) Aralo-Caspian (or Central Turkic) including Karakalpak, Kazakh, Kirghiz and Noghai). The Kipchak-Polovtsian subgroup also includes Kumyk spoken mostly in Dagestan (around 280,000 speakers), extinct Cuman (Polovtsian), and Karaim (around 500 first-language speakers in Lithuania (about 290 individuals) and Southern Ukraine (around 1,400 persons), apart from around 20,000 Karaims who live in Israel). (See Comrie 1992: 187–90; Tishkov (ed.) 1994: 102–5, 181–2, 184–6, 214–6; Pritsak 1959: 340–4).

For centuries the Karachay and Balkars have lived in the Central Caucasus out of contact with other Turkic peoples. Their neighbours are Georgians, Svans and Abkhazians in the south, Kabardians, Adyghe and Cherkess in the north, Abaza in the west, and Ossete in the east. Karachay and Balkar migrants live in Turkey, Syria and Jordan. Culturally and anthropologically they are closer to the neighbouring peoples of the Caucasus, especially to the Ossete, rather than to the other Turkic peoples. With regard to their ethnogenesis there are several hypotheses. There is an opinion that they are descended from a mixture of the indigenous Northern Caucasian tribes with Iranian and Turkic tribes; of the latter, the most important role seems to have belonged to the “Black Bulgars” and especially to one of the western Kipchak tribes (see Aliev 1972: 5–8).

In ancient times (approximately until the 11th century), the Karachay and Balkar people were under the cultural influence of Alani with whom they entered into a political union. It is pointed out in specialist literature that their ethnonym was Alan. “Alan” is the common address of the Karachay and Balkar to each other. The Mengreli and Noghai also call them Alani (Habichev 1971a: 126).

1.2 Overview

In Karachay-Balkar, the reciprocal meaning is expressed in two ways, by the suffix *-š* and the reciprocal pronoun *biri biri-n* (ACC) ‘each other’ inflected for person and case. The latter device is the principal one, the former being in the process of losing its productivity as a reciprocal marker and being ousted by the pronoun, which drastically distinguishes

Karachay-Balkar from the other Turkic languages. Both markers frequently co-occur in the same sentence. Examples:

- (1) a. *Ol-Ø an-ə at-də.*
 he.NOM he-ACC shoot-PAST.3SG
 'He shot at him.'
- b. *Ala-Ø at-əš-də-la.*
 they.NOM shoot-REC-PAST-3PL
 'They shot at each other' (at a duel, etc.).
- c. *Ala-Ø biri biri-n at-də-la.*
 they.NOM each other-ACC shoot-PAST-3PL
 (same translation).
- d. *Ala-Ø biri biri-n at-əš-də-la.*
 they-NOM each other-ACC shoot-REC-PAST-3PL
 (same translation).

Another feature that distinguishes Karachay-Balkar from other Turkic languages (Yakut, Kirghiz, Tuvan) is the high productivity of the suffix *-š* in the *competitive* meaning. It may be assumed that a form in *-š* with this meaning can be derived from any verb that allows it pragmatically (including some rather unexpected verbs). One and the same derived form may express both a reciprocal (or sociative) and a competitive meaning; in the latter case substitution of the reciprocal pronoun for the suffix *-š* is ruled out. Compare:

- e. *Ala-Ø [qara-Ø¹] at-əš-də-la.*
 they.NOM target.NOM shoot-REC-PAST-3PL
 'They competed in shooting.'

Being generally much less productive than in some other Turkic languages (cf. Yakut, Tuvan and Kirghiz), the reciprocal suffix has no assistive meaning (as in Azerbaijani and Karaim), while the sociative meaning is expressed almost exclusively on intransitive verbs (in this respect Karachay-Balkar is similar to Tatar; see Zinnatullina 1969: 187, 193–5) and it is not very productive, which fact is related to the near loss of the comitative meaning (cf. Kirghiz (Nedjalkov, Ch. 28, §1.2) where the sociative meaning is practically lost along with the comitative).

- (2) a. *Čəpčəq-la səzyər-a-dəla.*
 bird-PL whistle-PRES-3PL
 'Birds are whistling.'
- b. *Čəpčəq-la səzyər-əš-a-dəla.*
 bird-PL whistle-REC-PRES-3PL
 i. 'Many (various) birds are whistling.'
 ii. 'Birds whistle as if *vying* with each other.'
 iii. 'Birds whistle to *each other*', etc.
- c. *Džaš-la səzyər-əš-a-dəla.*
 youth-PL whistle-REC-PRES-3PL
 'The youths *compete* in whistling.'

1. Henceforth, the zero endings are not marked and glossed.

Another peculiarity of Karachay-Balkar is that the suffix *-laš* used in the Turkic languages to derive reciprocal verbs from nouns and highly productive in Yakut and Kirghiz, is of very low productivity. The reciprocal pronoun in the 3rd p. form is used as a generalized form in “possessive” reciprocal constructions, and sometimes in other constructions, for the 1st and 2nd persons as well.

1.3 Database

The main source of the language data is the *Karachay-Balkar-Russian Dictionary* (KB, 1989; 30,000 entries); our verb-list comprises most of the forms in *-š* registered in this dictionary. Examples from specialist literature are also used. Estimations of the data reflect the intuitions of Azret Ali Hasanov, a native speaker of the Karachay dialect. Examples without attribution are also his. It should be stressed that not infrequently our informant does not quite accept the data of KB or rejects them as archaic or out of use; nevertheless we have considered it possible to use some of these data here.

In the lists below, verbs are quoted in the stem form (while in KB they are entered in the infinitive form), the latter coinciding with the 2SG imperative form; but for convenience these stems are translated as infinitives.

2. Grammatical notes

2.1 Introductory

In Karachay-Balkar, sentence structure is verb final; the predicate may be preceded by one or more converbs, most commonly the so-called converb of priority (marked by *-b/-ab/-ib/-ub/-üb*; cf. (15), (16b, c), (61), etc.) and the so-called converb of simultaneity (marked by the suffix *-a/-e/-j*; cf. (16d), (60c)). Vowel harmony is observed, root vowels determining the subsequent vowels in a word (all the eight vowels are phonemically short). Progressive assimilation of consonants is observed. There are no prepositions, postpositions being used instead. Of special importance is the postposition *bla* with the instrumental (if the noun is nominative) and comitative (if the noun is genitive) meaning ‘with’ (cf. (16e), (30c)), and also with the meaning ‘instead’; its homonym functions as a conjunction ‘and’ (cf. (26b), (30b, c)). Personal pronouns in subject position, when unstressed, are usually omitted. In the examples of this paper they are usually given for clarity. The cluster *dž* denotes a front voiced affricate.

2.2 Case and number. Possessivity

There are seven cases; the genitive case (denoting possessivity) is mostly identical in form with the accusative; the case endings follow the markers of plurality and possessivity. The latter represent the possessive declension. The marker of plurality is the suffix *-la/-le*; as a possessive 3PL suffix it appears as *-lar/-ler*. The nominative case of the subject (see (1a–

d)) and sometimes a non-referential direct object (cf. *qara* in (1e)) have zero marking; henceforth it is not as a rule glossed in the examples. Here is the case paradigm of the noun *tala* ‘glade’:

(3)	NOM	<i>tala-Ø</i>	LOC	<i>tala-da</i>
	GEN	<i>tala-nə</i>	ABL	<i>tala-dan</i>
	ACC	<i>tala-nə</i>	TRNSL	<i>tala-tən</i>
	DAT	<i>tala-ya</i>		

The case markers have allomorphs determined by vowel harmony and consonant assimilation (accusative: *-nə/-ni/-nu/-nü/-ə/-i/-u/-ü*; ablative: *-dan/-den/-tan/...*; dative: *-na/-ga/-ya/-ηa/-ge/-ne/-xa/-a*, etc.); between the 3rd person possessive marker and an ablative and locative markers the consonant *-n-* (glossed as *-n-*) is inserted: *-n-dan*, *-n-de*, etc.

An attributive possessive phrase is expressed by the *izafet* construction: an attributive noun is genitive, and the head noun has a possessive marker and agrees in person and number with the attribute (see also (48b–d)); e.g.:

(4)	<i>ata-m-ə</i>	<i>qarnaš-ə</i>
	father-my-GEN	brother-his
	‘my father’s brother.’	

The following are possessive suffixes on the nominative case of the noun *ata* ‘father’ (they may have variants determined by the preceding phonemes):

(5)	<i>ata-m</i>	‘my father’	<i>ata-bəz</i>	‘our father’
	<i>ata-η</i>	‘your father’	<i>ata-γəz</i>	‘your father’
	<i>ata-sə</i>	‘his father’	<i>ata-larə</i>	‘their father’ (see (6)).

2.3 Tense/aspect system. Agreement. Negation

Karachay-Balkar has two sets of agreement markers on the verb. There are numerous tense/aspect forms, both simple and periphrastic, the latter containing an auxiliary and a converb or participle of the lexical verb; e.g. *džaz-də-m* ‘I wrote’ (past; cf. (1)), *džaz-yan-ma* ‘I have (already) written’ (perfect; cf. (20)), *džaz-yan edi-m* ‘I had written (a long time ago)’ (pluperfect), etc. The perfect suffix is in fact the suffix of the past participle.

Examples are mostly cited in the present tense (the marker is *-a/-e/-j*), or in the past tense (the marker is *-də/-di/-du/-dü*), and sometimes in perfect (the marker is *-gan/-yan/-xan /-ηan/-gen*); there is also a durative form comprised of a converb in *-b/-ib/-ub/-əb* and the auxiliary *tur-* ‘to exist/live, stay’ (see (15), (19)). Note the homonymy of suffixes: *bar-a-dəla* ‘they go’ (*-a* = PRES and *-dəla* is a 3PL inflection) and *bar-də-la* ‘they went’ (*-də* is the past tense suffix and *-la* is a 3PL inflection). The suffix of negation is *-ma/-me* (cf. (16a)). The suffix of the infinitive is *-(ə)rya*.

2.4 Reflexive and reciprocal pronouns

These pronouns are formed on different stems. The reflexive pronoun is formed on the base *kes-* (practically all its forms contain the possessive marker); cf. the nominative case

forms: *kesi* '(s/he) her/himself', *kesi-m* '(I) myself', *kesi-ŋ* '(you) yourself', *kesi-biz* '(we) ourselves', *kes-leri* '(they) themselves', etc. (cf. the accusative *kesi-n qor-du* 'he defended himself').

The reciprocal pronoun is a reduplication of the numeral *bir* 'one'. Both pronouns are inflected for person and case; the reflexive pronoun has both singular and plural forms, and the reciprocal plural forms only, which is only to be expected. Both pronouns take the case endings of the possessive declension. The reflexive pronoun has the nominative case, while the reciprocal pronoun does not. The reciprocal pronoun has two variants for the 3rd person: one without the possessive suffix *-leri* (a more common variant) and the other with it (cf. (6b), (57a)). Here are the accusative case forms of the reflexive and the reciprocal pronouns.

(6)	a. Reflexive pronoun	b. Reciprocal pronoun
	SG <i>kesi-m-i</i>	–
	2SG <i>kesi-ŋ-i</i>	–
	3SG <i>kesi-n</i>	–
	1PL <i>kesi-biz-ni</i>	<i>biri biri-biz-ni</i>
	2PL <i>kesi-giz-ni</i>	<i>biri biri-giz-ni</i>
	3PL <i>kes-leri-n</i>	<i>biri biri-n / biri biri-leri-n</i>

The base of the reciprocal pronoun also occurs as *bir biri* and *bir bir* (this form appears in the attributive function; see 4.2.3). The latter variant may determine the choice of the allomorph of the case marker. Thus the dative of this form is *bir bir-ge* (cf. (63f)) instead of *bir biri-ne* (cf. (63b)). The spelling of this pronoun varies, and the hyphenated form (cf. *bir-biri-ne*) is sometimes used below, as in the source.

2.5 Voices (means of valency change)

Like other Turkic languages, Karachay-Balkar has three valency-decreasing voices and one valency-increasing voice. Needless to say, each of the valency-decreasing suffixes is polysemous and not infrequently the derivatives undergo lexicalization ((7) and other examples below illustrate only some of the meanings, of course).

1. The passive suffix *-əl/-il/-ul/-ül/-l*; it may also encode a number of other meanings, e.g. anticausative and autocausative; cf.:

(7)	a.	<i>ajər-</i> 'to separate', 'to elect' → <i>ajər-əl-</i> i. 'to be elected' (passive)
		ii. 'to get separated' (anticausative) (KB. 39)
	b.	<i>qəs-</i> 'to press' → <i>qəs-əl-</i> i. 'to be pressed/closed/tied' (passive)
		ii. 'press oneself to sth/sb' (autocausative) (KB. 449)
	c.	<i>at-</i> 'to throw sth' → <i>at-əl-</i> i. 'to throw oneself' (autocausative)
		ii. 'to explode' (lexicalization) (KB. 90).

2. The reflexive suffix *-ən/-in/-un/-ün/-n*; forms with this marker can also express a number of other meanings, e.g. passive, anticausative, etc. Contrary to Yakut, Tuvan and Kirghiz, the Karachay-Balkar reflexive suffix does not have a possessive-reflexive meaning. The reflexive suffix can be synonymous to the reflexive pronoun; cf. (8c):

- (8) a. *džuw-* ‘to wash’ → *džuw-un-* ‘to wash oneself’ (KB. 262) (reflexive)
 b. *urla-* ‘to steal’ → *an-ə ašxa-sə urla-n-də* ‘his money is stolen’ (passive)
 c. *maxta-* ‘to praise’ → *maxta-n-* ‘praise oneself’, cf. *kesi-n maxta-* (same) (KB.463)
 d. *džalya-* ‘to join/link sth’ → *džalya-n-* ‘to join/get linked’ (KB. 220) (anticausative)
 e. *čulya-* ‘to wrap/roll up sth’ → *čulya-n-* ‘to coil’ (e.g. of snakes) (KB. 738)
 (autocausative)

3. The reciprocal suffix *-əš/-iš/-uš/-üš/-š*; as mentioned above, it can also encode a sociative and a competitive meaning (see, for instance, (1b, d), (2b, c)), and it can be used as an anticausative marker (see 9.2).

4. The causative suffixes *-dər/-dir/-dur/-dür, -t*, etc. They express both factitive and permissive causation (cf. (9a-b)) and may also render a permissive-passive meaning, cf. (9c):

- (9) a. *bar-* ‘to walk’ → *bar-dər-* ‘to lead sb’, ‘to cause/allow sb to walk’ (KB. 111)
 b. *išle-* ‘to work’ → *išle-t-* ‘to cause/allow sb to work’ (KB. 311)
 c. *urla-* ‘to steal’ → *ol ašxa-nə urla-t-də* ‘he had his money stolen (by his own fault)’ (KB. 682).

To complete the survey, we shall mention the suffix *-lan/-len* (see Habichev 1966:223) which cannot be regarded as a combination of the passive and reflexive suffixes from the viewpoint of Modern Karachay-Balkar (though not diachronically), because the latter does not have variants *-an/-en*. It seems to be used mostly to derive verbs from nouns, sometimes from adjectives.

- (10) a. *awuz* ‘mouth’ → *awuz-lan-* i. ‘to have a snack’, ii. ‘to promise’ (KB. 95)
 b. *sayəš* i. ‘meditation’, ii. ‘care’ → *sayəš-lan-* ‘to become thoughtful’ (KB. 781)
 c. *üj* i. ‘house’, ii. ‘family’ → *üj-len-* ‘to get married’ (KB. 782)
 d. *gərxə* i. ‘rough’, ii. ‘roughly’ → *gərxə-lan-* ‘to be rough with sb’ (KB. 194).

2.6 Combinability of voice markers

The voice markers may co-occur in the same verbal form in various combinations. At least three cases can be distinguished (if we disregard lexicalization).

1. In some cases each of the markers retains (one of) its standard meaning(s); e.g.:

- (11) a. *at-* ‘to throw’
 → *at-əl-* ‘to throw oneself’ (autocausative)
 → *at-əl-əš-* ‘to throw oneself into a race’ (competitive)
 b. *bil-* ‘to know’
 → *bil-dir-* ‘to teach sb’ (causative)
 → *bil-dir-t-* ‘to make sb teach sb’ (KB. 142) (causative)
 c. *čab-* ‘to run’
 → *čab-əš-* i. ‘to race’, ii. ‘to run (all together)’ (i. competitive, ii. sociative)
 → *čab-əš-dər-* ‘to organize horse races’ (KB. 718-20) (causative)
 d. *tay-* ‘to tie’
 → *tay-əl-* ‘to be tied’ (passive)
 → *tay-əl-əš-* ‘to be tied to each other’ (KB. 596) (reciprocal)

2. In some cases the causative marker may, in a way, cancel the meaning of the preceding marker, which makes the causative form synonymous to the base form (see (12b, c)), or it does not (practically) change the meaning (see (12a)):

- (12) a. *buy-* 'to hide' (vi)
 → *buy-un-* (same translation (vi)) (reflexive)
 → *buy-un-dur-* 'to hide sb' (KB. 165) (causative)
- b. *džəj-* 'to gather' (vt)
 → *džəj-əš-* 'to compete in gathering sth for speed' (competitive)
 → *džəj-əš-dər-* (same translation as *džəj-* (vt)) (KB. 265, 269) (causative)
- c. *džuw-* 'to wash sb/sth'
 → *džuw-un-* 'to wash oneself' (reflexive)
 → *džuw-un-dur-* (same translation as *džuw-*) (KB. 260, 262) (causative)

3. Finally, the most interesting case: the “sum” of the meanings rendered by the suffixes produces an unpredictable result; this occurs in derivatives with a causative suffix; cf. the derivational chain for *čab-* ‘to run’ → *čab-əš-* ‘to race’ in (11c) and the following derivatives mentioned in specialist literature (the form *čab-dər-* ‘to make sb run’, ‘to chase sb’ is a causative derivative from *čab-* ‘to run’).

- (13) a. *čab-dər-əš-* ‘to set out at a gallop competing with each other’ (U. 56)
 b. *čab-əš-dər-əš-* (same translation) (U. 56).

The reflexive form (with an anticausative meaning) is sometimes possible from derivatives in *-š* unless they have a reciprocal meaning (in (14) this suffix is desemanticized); e.g.:

- (14) a. *Endi iš-ni tol-u aŋəla-də-m /*
 at.last work-GEN essence-3SG.POSS understand-PAST-1SG /
/aŋəla-š-də-m. (KB. 68, 69)
 /understand-REC-PAST-1SG
 ‘At last I understood the essence of the matter.’
- b. *Endi iš tol-u aŋəla-š-ən-də.* (KB. 68, 69)
 at.last work essence-3SG.POSS understand-REC-REFL-PAST
 ‘At last the essence of the matter became clear.’

3. Diathesis types of reciprocals with the suffix *-š* only

3.1 Subject-oriented reciprocal constructions

3.1.1 “Canonical” reciprocals

3.1.1.1 *Derived from two-place transitives.* This is the most numerous group of reciprocals registered in the dictionary. It comprises not less than 40 items. The following examples as well as (1) illustrate this type.

- (15) a. *Ol men-i džawla-b tur-a-də.* (KB. 236)
 he I-ACC resent-CONV AUX-PRES-3SG
 ‘He resents me.’

- b. *Ala džawla-š-əb tur-a-dəla.*
they resent-REC-CONV AUX-PRES-3PL
'They resent each other/have quarrelled.'
- (16) a. *Biz kör-üš-me-genli dzəl bol-du.* (KB. 344)
we see-REC-NEG-since.CONV year AUX-3SG
'We haven't seen each other for a year', lit. 'Since we met a year has passed.'
- b. *Qoltuqla-š-əb bar-a-dəla.* (KB. 412)
walk.arm.in.arm-REC-CONV go-PRES-3PL
'They walk arm in arm.'
- c. *Qučaqla-š-əb bar-a-lla.* (KB. 432) (-lla < -dəla)
embrace-REC-CONV go-PRES-3PL
'They walk embracing each other.'
- d. *Sabij-le ojna-š-a arqala-š-ərya öč-dü-le.* (KB. 74)
child-PL play-REC-CONV take.on.back-REC-INF like-PAST-3PL
'When playing the children liked to take each other on their backs.' (play leap-frog)
- e. *Ala tajaq-la bla sal-əš-də-la.* (KB. 538)
they stick-PL with hit-REC-PAST-3PL
'They hit each other with sticks.'
- f. *Buya-la tut-uš-a-dəla.* (KB. 655)
bull-PL grasp-REC-PRES-3PL
'The bulls fight.'

Here belong the following verbs (the list contains all those registered in KB) which fall into two main lexical groups according to the feature "hostile/non-hostile", the most numerous being verbs of hostile actions. The meaning of the underlying transitives is mostly recoverable from the meaning of the reciprocals. In a number of instances, a slight degree of typologically predictable lexicalization is observed, like 'to beat' → 'to fight/quarrel'.

- (17) *at-əš-* 'to fire at each other' (KB. 91)
bekle-š- 'to fight' (← *bekle-* 'to hit') (KB. 130)
buw-uš- 'to come to blows/fight' (← *buw-* 'to press/strangle') (KB. 171)
čanč-əš- 'to stab each other'
čimde-š- 'to pinch each other' (KB. 734)
dawla-š- 'to argue with each other' (← *dawla-* 'to lay claim to sth') (KB. 199)
džayala-š- 'to fight/squabble' (← *džayala-* 'to take sb by the collar') (KB. 236)
džawla-š- 'to quarrel' (← *džawla-* 'to be at odds with sb') (KB. 236)
džərt-əš- 'to fight' (← *džərt-* 'to pluck (hair)') (KB. 269)
malta-š- 'to slash each other' (KB. 458)
mara-š- 'to lie in wait for each other' (KB. 460)
qab-əš- 'to bite each other' (KB. 371)
qay-əš- i. 'to fight/hit each other, quarrel', ii. 'to clink (of glasses)'
(← *qay-* 'to knock/hit') (KB. 373)
qəjpa-š- 'to chop/slash each other' (KB. 440)
samarqawla-š- 'to jeer at each other' (KB. 538)
serme-š- i. 'to come to blows/grapple'
ii. 'quarrel' (← *serme-* 'to grasp sb/sth') (KB. 554)
soy-uš- 'to scratch/torment each other' (KB. 569)
sopala-š- 'to fight/grapple' (← *sopala-* 'to beat') (KB. 566)

<i>sög-üş-</i>	‘to abuse each other’ (← <i>sög-</i> ‘to curse/abuse’) (KB. 555)
<i>sürtü-š-</i>	‘to whip each other’
<i>tabanla-š-</i>	‘to kick each other’ (KB. 593)
<i>tajaqla-š-</i>	‘to beat/hit each other with sticks’ (KB. 614)
<i>tala-š-</i>	‘to fight (about dogs), wrangle, bicker’ (← <i>tala-</i> ‘to bite sb’) (KB. 599)
<i>teber-iš-</i>	‘to push/shove each other’ (KB. 615)
<i>topala-š-</i>	‘to fight/hit each other’ (← <i>topala-</i> ‘to beat/thrash’) (KB. 645)
<i>topuldat-aš-</i>	‘to fight’ (← <i>topulda-</i> ‘to beat/thrash’) (KB. 646)
<i>toqmaqla-š-</i>	‘to fight with clubs’ (KB. 642)
<i>tərna-š-</i>	‘to scratch each other’ (KB. 663)
<i>tüj-üş-</i>	‘to fight/struggle’ (← <i>tüj-</i> ‘to beat’) (KB. 671, 667)
<i>türt-üş-</i>	‘to push/shove each other’ (KB. 675)

In a number of cases the relationship between a reciprocal and its base verb is somewhat different from the standard semantic relationship. Thus the reciprocal *džanəwla-š-* ‘to be angry with each other’ is formally but not semantically derived from *džanəwla-* ‘to make sb angry’ (otherwise it would mean ‘to make each other angry with sb’); in fact, it is semantically related to the anticausative derivative *džanəwla-n-* ‘to be angry with sb’ (KB. 226). The reciprocal verb *sal-aš-* ‘to fight/quarrel’ is derived from *sal-* i. ‘to put sth’, ii. ‘to hit’ (cf. *džumduruq-nu sal-* ‘to hit with a fist (ACC)’ (KB. 538)), but the underlying syntactic construction cannot contain a direct object only because in this case the meaning ‘to put’ would be realized; the underlying sentence must contain the name of a body part for the meaning ‘to hit’; e.g.: *Ol džaš-nə qulaq artəna sal-da* ‘He boxed his son (ACC) on the ears’ (*qulaq* ‘ear’, *artəna* ‘behind’).

Reciprocals of “non-hostile” actions are far from numerous:

- (18) *čaqər-aš-* ‘to call, invite each other’
džoqla-š- ‘to visit each other’ (KB. 250)
ijnaqla-š- ‘to caress each other’ (KB. 298)
kör-üş- ‘to see each other’ (KB. 343)
qoltuqla-š- ‘to take each other by the arm’ (KB. 412)
qučaqla-š- ‘to embrace each other’ (KB. 432)
tanə-š- ‘to get acquainted with each other’ (← *tanə-* ‘to know’) (KB. 604).

3.1.1.2 Derived from two-place intransitives. In KB, the reciprocal pronoun occurs much more frequently with two-place intransitives (with or without the reciprocal suffix) than with transitives considered in 3.1.1.1. These intransitives registered with the reciprocal pronoun noticeably outnumber reciprocals with the suffix *-š* only. Therefore all the verbs (about 20) considered here in 3.1.1.2 are repeated in 4.2.1.2, where constructions with the reciprocal pronoun are discussed. Typical intransitives of this group denote negative emotions (‘to be angry’, ‘to be sulky’, etc.), hostile actions (e.g. ‘to fly at sb’), physical contact or parting (e.g. ‘to lean on sb’, ‘to part’), speech (e.g. ‘to shout’, ‘to whisper’), meeting and seeing (e.g. ‘to meet’, ‘to see’), etc.

- (19) a. *Ol men-ŋe gammojlan-əb tur-a-da.*
s/he I-DAT be.angry-CONV AUX-PRES-3SG
‘He is angry with me.’

b. *Kes-leri allarəna gammojlan-əš-əb tur-a-dəla.* (KB. 181)
 self-their.NOM by.themselves be.angry-REC-CONV AUX-PRES-3PL
 ‘They themselves are angry with each other (without reason).’

(20) *Mal-la qoš-dan üz-ül-üş-üb qawum-qawum tüš-gen-dile.* (KB. 781)
 cattle-PL pasture-ABL tear-PASS-REC-CONV group-group appear-PERF-3PL
 ‘The cattle dragged slowly in groups (lit. torn from each other) from the pasture.’

The base verbs (including two-place anticausatives derived from lexical reciprocals by the suffixes *-I* and *-n*; see (119), (130)–(132)) of these reciprocals fall into three groups.

1. The underlying verbs of the reciprocals under (21) require a dative object (unlike verbs in 3.1.1, these reciprocals sound awkward when used with the phrase *biri biri bla* ‘with each other’ and they are preferable with the dative form *biri biri-ne* ‘to/at each other’):

(21) *džekir-iš-* ‘to shout at/attack each other’ (KB. 240)
džoluy-uš- ‘to meet, associate’ (← *džoluy-* ‘to meet sb, meet’) (KB. 252)
gammojlan-əš- ‘to be sulky with each other’ (KB. 182)
öšünle-š- ‘to press each other with one’s breast’ (KB. 283)
qajna-š- ‘to be angry with each other’ (KB. 378)
qara-š- ‘to glance at each other’ (KB. 393)
qatəl-əš- ‘to badger each other’ (KB. 401)
qəčər-əš- ‘to shout at each other’ (KB. 450)
qəz-əš- ‘to fly at each other’ (← *qəz-* i. ‘to heat up/blaze up’) (KB. 435)
temirçile-š- ‘to be angry with each other’ (KB. 619)
temirçile-n-iš- ‘to be angry with each other’ (KB. 619)
tübe-š- ‘to meet, associate’ (← *tübe-* ‘to meet sb, meet’) (KB. 666)
uč-uš- ‘to pounce on each other’ (KB. 691)
əšar-əš- ‘to smile at each other’ (KB. 761).

2. The base verb of the reciprocal under (22) takes an ablative object:

(22) *suw-uš-* ‘to be disappointed in each other’ (KB. 577).

3. The base verbs of the reciprocals in (23) take an object with the postposition *bla* ‘with’:

(23) *dəyərdə-š-* ‘to mutter to each other’ (KB. 212)
ojna-š- ‘to play with each other’ (KB. 493)
qurqurla-š- ‘to whisper to each other’ (KB. 424).

3.1.2 “Indirect” reciprocals

A distinctive feature of these reciprocals is the retention of a direct object of the base constructions with three-place transitives. “Indirect” reciprocals in *-š* are also preferable with the reciprocal pronoun (see 4.2.2), both *biri biri bla* and *biri biri-ne* being possible, though with a certain degree of selectivity. The possibility of the use without the reciprocal pronoun increases with a non-referential direct object, i.e. when a direct object is unmarked. This is a small group, with the base verb of most derivatives taking a dative object (verbs with the meanings like ‘to give’, ‘to tell’, ‘to throw’, etc.), and some (like ‘to ask’, ‘to take’) taking an ablative object, alongside an accusative one.

- (24) a. *Ol an-ηa taš džiber-di.*
 he he-DAT stone throw-PAST.3SG
 ‘He threw a stone at him.’
 b. *Ala taš džiber-iš-di-le.*
 they stone throw-PAST-3PL
 ‘They threw stones at each other.’
- (25) a. *Ol an-dan kitab-nə səjər-də.*
 he he-ABL book-ACC take.from-PAST.3SG
 ‘He took a book away from him.’
 b. *Ala kitab səjər-əš-də-la.*
 they book take.from-REC-PAST-3PL
 ‘They take book[s] away from each other.’

A few more examples of both types:

- (26) a. *Ata-sə bla džaš-ə xapar ajt-əš-də-la.*
 father-his and son-his news tell-REC-PAST-3PL
 ‘Father and son told each other the news.’
 b. *Ala qol uzat-əš-də-la.*
 they hand shake-REC-PAST-3PL
 ‘They shook hands [with each other].’
 c. *Ala köz qəs-əš-də-la.*
 they eye wink-REC-PAST-3PL
 ‘They winked at each other’, lit. ‘They winked eyes to each other.’
 d. *Ata-sə bla džaš-ə xapar sor-uš-du-la.*
 father-his and son-his news ask-REC-PAST-3PL
 ‘Father and son asked each other about the news.’

3.1.3 “Possessive” reciprocals

In this case the direct object of the underlying construction with a two-place transitive is retained and the possessive attribute is deleted. As in the previous case (see 3.1.2), the use of “possessive” reciprocals is linked to a direct object, mostly without a case marker; anyway, sentences with an unmarked direct object sound better than those with a possessive and case markers on the direct object denoting mostly inalienable possession. The reciprocal pronoun, namely *biri biri bla*, cannot be used with “possessive” reciprocals. The informant allows the following sentences with “possessive” reciprocals:

- (27) a. *Ol an-ə xali-si-n səna-də.*
 he he-GEN nature-his-ACC put.to.test-PAST.3SG
 ‘He put his character to the test.’
 b. *Ala xali / xali-leri-n səna-š-də-la.*
 they character / character-their-ACC put.to.test-REC-PAST-3.PL
 ‘They put each other’s characters to the test.’
- (28) a. *Ol bet-i-n sədər-də.*
 he face-his-ACC scratch-PAST.3SG
 ‘He scratched his face.’

- b. *Ala bet / bet-leri-n sädär-äš-dä-la.*
 they face face-their-ACC scratch-REC-PAST-3PL
 ‘They scratched each other’s faces.’
- (29) a. *Ol taxsa-nə čučx-ub küreš-di.*
 he secret-ACC find.out-CONV try-PAST.3SG
 ‘He tried to worm out the secret.’
- b. *Ala taxsa / taxsa-larə-n čučx-uš-ub küreš-di-le.*
 they secret secret-their-ACC find.out-REC-CONV try-PAST-3PL
 ‘They tried to worm out each other’s secrets.’

3.1.4 Discontinuous reciprocal constructions with the postposition *bla* ‘with’

In Karachay-Balkar, subject-predicate agreement in person and number is obligatory, therefore in the simple reciprocal construction the predicate is necessarily plural. Thus (30b) is a simple construction in which both arguments are conjoined by the conjunction *bla* ‘and’ and the predicate agrees with both in the plural.

In the discontinuous construction, with the second argument expressed by an object with the postposition *bla* ‘with’ the number of the predicate is dependent on the number of the first argument, i.e. it may be either singular or plural. (30c) is a discontinuous construction in which the subject, i.e. the first argument, is singular and the predicate agrees with it in number (cf. also (31b, c)). In (31d) the agreement is plural. It may be pointed out in passing that constructions with the reciprocal pronoun, including those with *biri biri bla* ‘with each other’, cannot be discontinuous.

Almost all of “canonical” suffixed reciprocals derived from two-place transitives may occur in the discontinuous construction, the second argument with the postposition *bla* ‘with’ being in the genitive case (as in other Turkic languages, this postposition is materially identical with the conjunction *bla*).

- (30) a. *Ata-sə džaš-ə-n qučaqła-də.*
 father-his son-his-ACC embrace-PAST.3SG
 ‘Father embraced his son.’
- b. *Ata bla džaš-ə qučaqła-š-də-la.*
 father and son-his embrace-REC-PAST-3PL
 ‘Father and son embraced [each other].’
- c. *Ata-sə džaš-ə-nə bla qučaqła-š-də.*
 father-his son-his-GEN with embrace-REC-PAST.3SG
 (same translation as (b)); lit. ‘Father embraced with his son.’

The following are discontinuous constructions with reciprocals from 3.1.1.1:

- (31) a. *Men an-ə bla sal-əš-də-m.* (KB. 538) ‘I quarrelled with him.’
 b. *Men an-ə bla tan-əš-də-m.* (KB. 603) ‘I got acquainted with him.’
 c. *Ol džaw-la-nə bla serme-š-di.* (KB. 554) ‘He fought with the enemy.’
 d. *Ala men-i bla dawla-š-ma-j-dəla.* (KB. 199) ‘They do not argue with me.’

It follows from the assertion above that there are restrictions on transformation of simple constructions into discontinuous. Thus “indirect” and “possessive” reciprocals as well as “canonical” reciprocals derived from two-place intransitives (excepting those under (23)

because their base verbs take an object with *bla*) are used in the simple construction only. The discontinuous construction with these reciprocals sounds unnatural; cf.:

- (32) **Men an-ə bla gammojlan-əš-əb tur-a-ma.*
 I he-GEN with be.angry-REC-CONV AUX-PRES-1SG
 (intended meaning:) lit. 'I with him am angry with each other.'

3.1.5 *Biri biri bla* 'with each other' in the simple construction

Three cases are distinguished here: the *bla* noun phrase can be either a free adjunct (cf. (33c)) or an argument (cf. (34a)) or (with the reciprocal pronoun) a lexical specifier of a reciprocal verb (cf. (37d)). This reciprocal phrase has the following personal forms: *biri biri-biz bla* 'we with each other', *biri biri-giz bla* 'you with each other', *biri biri-Ø bla* 'they with each other'.

3.1.5.1 *The bla noun phrase as a free adjunct.* The comitative postposition *bla* 'with' has the properties of a lexical reciprocal in that (33a) entails (33b), and vice versa. These constructions are discontinuous, and the simple construction is formed with the help of the reciprocal pronoun in (33c). Here the comitative meaning of *bla* combined with the reciprocal meaning of the pronoun results in a meaning close to the sociative. All these constructions differ in topicalization (note that omission of *biri biri bla* in (33c) also allows non-simultaneous interpretation of the subevents, unlike in (33a) and (33b)); cf. (note that *-də* = 3SG and *-dəla* = 3PL):

- (33) a. *Soltan [Aminat bla] bar-a-də.* 'Soltan goes [together with Aminat].'
 = b. *Aminat [Soltan bla] bar-a-də.* 'Aminat goes [together with Soltan].'
 = c. *Soltan bla Aminat [biri biri bla] bar-a-dəla.* 'S. and A. go [together/with each other].'

The phrase *biri biri bla*, roughly synonymous to the adverb *birge* 'together, jointly' with the sociative meaning whose distribution displays subtle selectivity (cf. (33e)), may in principle be used with many verbs that allow expression of joint action; *birge* may be added to the comitative phrase: moreover, it may be advisable, as in (33h); cf.:

- d. *Ala biri biri bla / birge bar-a-dəla.* 'They go together.'
 e. *Ala biri biri bla / birge işle-j-dile.* 'They work together' (*birge* is preferable).

Sentences containing *biri biri bla* seem to presuppose existence of corresponding non-reciprocal noun phrases with *bla* or *bla birge*; e.g.:

- f. *Ol an-ə bla [birge] bar-a-də.* 'He goes [together] with him.'
 g. *Ol an-ə bla [birge] işle-j-di.* 'He works [together] with him.'
 h. *Ol qart-la bla birge tur-a-də.* (KB. 147) 'He lives together with his parents.'

3.1.5.2 *The bla noun phrase as an argument.* In this case its use is conditioned by the lexical meaning of the verb. We have in mind verbs (most of which are lexical reciprocals) with meanings like 'to play with sb', 'to talk with sb', 'to wrestle with sb', 'to quarrel with sb', 'to agree with sb', etc. (see the list under (23) and examples (34)–(35) with these verbs). Thus, in examples (35a), (35b) and (35c), unlike in the above cases (see (33)), the meaning of

the co-participant (expressed by a comitative phrase with *bla* ‘with’) is usually implied in the lexical meaning of the base verbs as well.

- (34) a. *Soltan Aminat bla ojna-də.* ‘Soltan played with Aminat.’
 b. *Aminat Soltan bla ojna-də.* ‘Aminat played with Soltan.’
 c. *Ala biri biri bla ojna-də-la.* ‘They played with each other.’
- (35) a. *Ala biri biri bla ojna-š-də-la.*
 they each other with play-REC-PAST-3PL
 ‘They played with each other.’
 b. *Ala biri biri bla kes-leri-ča dəγərd-əš-də-la.* (KB. 112)
 they each other with self-their-ča chatter-REC-PAST-3PL
 ‘They began to chatter with each other in their language.’
 c. *Ala bir biri bla qurqurla-š-də-la.* (KB. 424)
 they each other with whisper-REC-PAST-3PL
 ‘They whispered between themselves.’

This type also includes many lexical reciprocals (in the broad sense (see Sections 6, 7, 8), i.e. reciprocals that have no non-reciprocal counterparts, among them verbs with the final *-š* which have lost their base verb (cf. (36’a, b)) or relate semantically to it in a non-standard way (cf. (36’c): *kel-* ‘to come’, *tart-* ‘to pull, hit’). The simple constructions under (36’) have discontinuous counterparts with the postposition *bla* ‘with’ with all the participants named (cf. (36) and (36’)), whereas the constructions in (36’) without the reciprocal pronoun allow dual interpretation: (a) as simple with all the participants named by the subject and, though less likely, (b) as discontinuous with an omitted second participant. The reciprocal pronoun in (36’) clearly points to the first interpretation (this also pertains to (35); *-me* in (36c) and (36’c) = NEG and *-j* = CONV).

- (36) a. *Ala an-ə bla küreš-di-le.* ‘They quarrelled with him.’
 b. *Ala an-ə bla demleš-di-le.* ‘They abused him.’
 c. *Ala an-ə bla kel-iš-me-j, tart-əš-a-də-la.* ‘They don’t get on with him, quarrel.’
- (36’) a. *Ala bir biri bla küreš-di-le.* ‘They quarrelled with each other.’ (KB. 365)
 b. *Ala bir biri bla demleš-di-le.* ‘They abused each other’ (KB. 201)
 c. *Bir biri bla kel-iš-me-j, tart-əš-a-də-la.* ‘They don’t get on with each other, quarrel.’
 (KB. 607).

3.1.5.3 *Biri biri bla* as a lexical specifier. Frequent use of *biri biri bla* ‘with each other’ is a specific feature of Karachay-Balkar in comparison with Yakut, Tuvan and Kirghiz. All of the reciprocals dealt with in 3.1.1.1 allow *biri biri bla* in the simple construction. This phrase seems to be pleonastic in most cases, though sometimes, as is noted above, it serves to highlight the reciprocal meaning and rule out discontinuous interpretation with an omitted object (see above).

Some of the pronominal reciprocals with *biri biri bla* are derivatives from verbs with a comitative object with the postposition *bla* (see 3) in §3.1.1), i.e. there is a kind of parallelism between (37a)–(37b) on the one hand and (37c)–(37d) on the other:

- (37) a. *Ol an-ə bla ojna-də.* ‘He played with him.’ (cf. (34a))
 b. *Ala biri biri bla ojna-də-la.* ‘They played with each other.’ (cf. (34c)).

- c. *Ol an-a qay-da.* 'He hit him.'
 d. *Ala biri biri-n qay-da-la.* 'They hit each other.'

If, however, we use the reciprocal form in (37b) and (37d) the second sentence will be less acceptable than the first:

- b'. *Ala biri biri bla ojna-š-də-la.* (same as (37b))
 d'. *Ala biri biri-n* (better without it) *qay-aš-də-la.* (same as (37d); cf. (1c, d)).

But substitution of *biri biri bla* for *biri biri-n* in (37d'), though not in (37d), sounds natural. Addition of *biri biri-n* in (37e) or, which is the same, of *biri biri bla* in (37d) does not make the sentence grammatical.

- d". *Ala biri biri bla qay-aš-də-la.* lit. 'They hit each other among themselves.'
 e. **Ala biri biri bla qay-da-la.* lit. 'They hit (whom?) among themselves.'
 f. **Ala biri biri bla biri biri-n qay-da-la.* lit. 'They hit each other among themselves.'

Substitution of the semantically contiguous adverb *birge* 'together' for *biri biri bla* 'with each other' in a construction with a reciprocal verb may involve reinterpretation: the subject referent comes to be interpreted as only one of the participants of the situation, and the construction sounds unfinished, with the second participant being unnamed; this adverb is made necessary by the second participant; e.g.:

- g. *Ala birge ojna-š-də-la.* 'They played together ... [with whom?]'
 h. *Ala Ali bla birge ojna-š-də-la.* 'They played together with Ali.'

A few more examples of the (37d") type with reciprocals from 3.1.1.1:

- (37') a. *Ala bir biri bla kör-üş-di-le.* 'They met with each other' (KB. 344)
 b. *Biz biri biri bla soj-ul-uš-du-q.* 'We quarrelled with each other' (KB. 569)
 c. *Ala bir biri bla samarqawla-š-də-la.* 'They jeered at each other' (KB. 538)
 d. *Ala bir biri bla serme-š-di-le.* 'They quarrelled with each other' (KB. 554)
 e. *Ala biri biri bla sög-üş-dü-le.* 'They abused each other' (KB. 555).

The possibility of *biri biri bla* in type (37') constructions with suffixed reciprocals seems to correlate, to some extent, with the possible use of the same reciprocals in discontinuous constructions with *bla* (see 3.1.4). As noted above, discontinuous constructions do not sound right with (a) "canonical" reciprocals from two-place intransitives, (b) "possessive" reciprocals and (c) "indirect" reciprocals. It is only in case (c) that the phrase *biri biri bla* sounds acceptable. This is probably related to the fact that because of the non-referential object the transitivity of these reciprocals is weakened and they become closer to intransitive reciprocals from 3.1.1.1.

3.1.5.4 *Biri biri bla* 'with each other' ≠ *birge* 'together'. As a rule, adverbs with the meaning 'together' (and also affixed sociative markers, it seems) do not combine with reciprocals, while the semantically close expression 'with each other' does combine with many reciprocals without changing the meaning of a reciprocal construction in any noticeable way, as is shown in the above sections. When added in a reciprocal construction the adverb *birge* may change its meaning. Note that (38) is ungrammatical if only two participants

are involved in the situation. But it can be interpreted as discontinuous with an ellipted second group of participants which may be introduced by the postposition *bla* ‘with’, i.e. the subject names only one group of participants. In another interpretation the meaning ‘together’ implies several pairs of participants who are embracing simultaneously.

- (38) *Ala birge qučakla-š-əb bar-a-dəla.*
 they together embrace-REC-CONV go-PRES-3PL
 i. *‘They (two persons) walk embracing *each other together*.’
 ii. ‘They (two persons) walk embracing *each other with someone else*.’
 iii. ‘They (more than one pair) walk embracing *each other together*.’

3.2 Object-oriented reciprocals

3.2.1 Causatives from subject-oriented reciprocals

Causativization is a common way of forming object-oriented reciprocals; cf.:

- (39) a. *Rümka-larə qay-əš-də-la.*
 glass-their clink-REC-PAST-3PL
 ‘Their glasses clinked.’
 b. *Ala rümka-la-nə qay-əš-dər-də-la.* (KB. 373)
 they glass-PL-ACC clink-REC-CAUS-PAST-3PL
 ‘They clinked their glasses together’; cf. also:
 c. *Ala bokal-la-nə tij-iš-dir-di-le.* (KB. 633)
 they glass-PL-ACC clink-REC-CAUS-PAST-3PL
 ‘They clinked their glasses together.’

Characteristically, most of the examples of this type registered in KB contain *biri biri bla* ‘with each other’ and, naturally, they are simple reciprocal constructions (cf. discontinuous (40a) and simple (40b)–(40g)). Not uncommonly such causative formations function as set phrases (sometimes they correspond to non-derived lexical reciprocals of other languages; cf. ‘to acquaint’, ‘to compare’, ‘to introduce’ in the translations below); cf. (40c.ii), (40d). Here are examples with reciprocals listed in (17) and (18):

- (40) a. *Ol kəz bla džaš-ən kör-üş-dür-dü.* (KB. 44)
 he girl with youth-ACC see-REC-CAUS-PAST
 ‘He acquainted the youth with the girl.’
 b. *Ol ala-nə bir biri bla qay-əš-dər-də.* (KB. 373)
 he they-ACC each other with beat-REC-CAUS-PAST.3SG
 ‘He provoked a fight between them.’
 c. *Ol ala-nə bir biri bla sal-əš-dər-də.* (KB. 538)
 he they-ACC each other with hit-REC-CAUS-PAST.3SG
 i. ‘He *caused* them to *fight between themselves*.’
 ii. ‘He *compared* them *with each other*.’
 d. *Men ala-nə bir biri bla tan-əš-dər-də-m.* (KB. 603)
 I they-ACC each other with know-REC-CAUS-PAST-1SG
 ‘I introduced them *to each other*.’

- e. *Ol ala-nə biri biri bla buw-uš-dur-du.* (KB. 171)
 he they-ACC each other with press-REC-CAUS-PAST.3SG
 ‘He set them on each other.’
- f. *Ol ala-nə bir biri bla soy-uš-dur-du.* (KB. 563)
 he they-ACC each other with beat-REC-CAUS-PAST.3SG
 ‘He made them fight between themselves.’
- g. *Ol ala-nə bir biri bla dawla-š-tər-də.* (KB. 199)
 he they-ACC each other with dispute-REC-CAUS-PAST.3SG
 ‘He provoked a quarrel between them.’

3.2.2 Object-oriented lexical reciprocals

The following verb is the only example of a lexical reciprocal which can be used optionally with the reciprocal suffix without any perceptible change of meaning. This case is not quite clear. The meaning of growing smaller in size or space taken up is sometimes expressed by a marker one of whose basic meanings is ‘joining together’ (reciprocal meaning proper) not only in Karachay-Balkar. These meanings are on the periphery of the proper reciprocal meaning.

- (41) a. *džəjər-* i. ‘to wrinkle (forehead), screw up (eyes)’ (vt)
 ii. ‘to press sth to/under oneself’, ‘draw in (head)’ (vt)
 b. *džəjər-əš-* i. (same), ii. (same) (cf. also (132)) (KB. 264) (vt)
- (42) a. *Köz-leri-n džəjər-əš-əb qara-j-dəla.* (KB. 264)
 eye-PL-ACC screw-REC-CONV look-PRES-3PL
 ‘[They] look screwing their eyes.’
 b. *[Ol] ajaq-lar-ə-n džəjər-əš-əb džat-a-də.* (KB. 264)
 he foot-PL-his-ACC press-REC-CONV lie-PRES-3SG
 ‘He lies with his feet pressed underneath.’

In (41) the suffix *-š* does not change the meaning of the transitive lexical reciprocal. But generally, when added to a lexical reciprocal, it produces an intransitive anticausative verb from which a causative suffix can form a three-place derivative; cf.:

- (43) a. *čal-* ‘to braid’(vt) → *čal-əš-* ‘to intertwine/cross’(vi) → *čal-əš-dər-* ‘to cross sth’(vt)
 b. *Ol ajaq-lar-ə-n čal-əš-dər-əb oltur-a-də.* (KB. 725)
 he leg-PL-his-ACC braid-REC-CAUS-CONV sit-PRES-3SG
 ‘He sits with his legs crossed.’ (see also 8.3).

3.3 Restrictions on reciprocals with the suffix *-š*

As mentioned above, suffixed reciprocals are of low productivity in Karachay-Balkar, being probably the least productive among all the Turkic languages. On the whole, productivity of the suffix *-š* in the Turkic languages seems to diminish from east to west. Geljaeva (1982:53) claims that reciprocals in *-š* “are derived from a rigidly limited set of transitive verbs and a few intransitives”. Below are lists of some of the verbs which (probably with one or two exceptions) form reciprocals in some other Turkic languages but not in Karachay (some of these verbs do allow formation of suffixed reciprocals, usually on condition that they are combined with the reciprocal pronoun: *alda-*, *džoqla-*, *maxta-*, *süj-*, *qozu-*, *əsar-*,

ajt-; these verbs are entered in lists (44)–(46)). The borderline between the acceptable and unacceptable suffixed reciprocals is rather vague: sometimes the informant hesitates in his evaluation of the same sentences when asked at intervals, and this may find expression in some inconsistencies in this paper.

1. Two-place transitives:

(44)	<i>alda-</i>	‘to deceive’	<i>qozu-</i>	‘to tease’
	<i>çaqər-</i>	‘to call sb’	<i>qutxar-</i>	‘to save’
	<i>džala-</i>	‘to lick’	<i>qəjna-</i>	‘to torment’
	<i>džazəqsən-</i>	‘to pity’	<i>saqla-</i>	‘to await’
	<i>džoqla-</i>	‘to visit’	<i>süj-</i>	‘to love’
	<i>džuw-</i>	‘to wash’	<i>tile-</i>	‘to beg/ask’
	<i>ešit-</i>	‘to hear’	<i>töze-</i>	‘to tolerate’
	<i>(uppa) ete-</i>	‘to kiss’, lit. ‘to do (a kiss)’	<i>tüş(ür)-</i>	‘to recall’
	<i>ker-</i>	‘to forgive’	<i>unut-</i>	‘to forget’
	<i>maxta-</i>	‘to praise’	<i>əsar-</i>	‘to smile.’

2. Two-place intransitives:

(45)	<i>inan-</i>	‘to believe sb (DAT)’	<i>qara-</i>	‘to look after sb (DAT)’
	<i>išan-</i>	‘to trust sb (DAT)’	<i>ujal-</i>	‘to be ashamed of sb (ABL).’

3. Three-place transitives:

(46)	<i>ajt-</i>	‘to say’		
	<i>ašat-</i>	‘to feed’	<i>ičir-</i>	‘to give to drink’
	<i>ber-</i>	‘to give’	<i>ije-</i>	‘to send’
	<i>de-</i>	‘to say’	<i>sat-</i>	‘to sell.’

Practically no morphological causatives with productive suffixes form reciprocals. Thus there are no reciprocals from causatives such as *quwan-dər-* ‘to make happy/merry’ (← *quwan* ‘to be happy/merry’), *ačəwlan-dər-* ‘to make angry’ (← *ačəwlan*). A number of such reciprocals are registered in KB: *öl-tür-üş-* ‘to kill each other’ (← *öl-* ‘to die’) (KB. 277), *kül-dür-üş-* ‘to make each other laugh’ (← *kül-* ‘to laugh’) (KB. 362). But the informant does not accept them though he considers them possible in careless speech (nevertheless, he approves the reciprocal from a causative in (74a) as entirely correct; the suffixed reciprocal is combined with the reciprocal pronoun here).

Suffixed reciprocals cannot be derived from the following two-place intransitives; even in combination with the reciprocal pronoun they are rejected by the informant, and without the pronoun the meaning of these derivatives is not clear.

- (47) a. *Ol an-dan ilgen-di* / *qorq-du.*
 he he-ABL get.scared-PAST.3SG be.afraid-PAST.3SG
 ‘He got scared/was afraid of him.’
- b. **Ala ilgen-iš-di-le* / *qorq-uš-du-la.*
 they get.scared-REC-PAST-3PL be.afraid-REC-PAST-3PL
 (intended meaning:) ‘They got scared/were afraid of each other.’

3.4 Nomina actionis

This section concerns nouns derived from both verbal and nominal stems, and derived nouns whose relation to any stem is not quite clear.

3.4.1 *With the suffix -w*

This suffix can be used to derive *nomina actionis* from any derived verb with any number of suffixes. There are practically no restrictions on its use. In KB, they occur several times per page. In the process of nominalization of reciprocal constructions a direct object is retained and the subject becomes an attribute in the genitive case; e.g.:

- (48) a. *Ala kör-üş-dü-le.*
 they see-REC-PAST-3PL
 'They met.'
- b. *Ala-nə kör-üş-üw-leri.*
 they-GEN see-REC-NR-their
 'Their meeting/date.'
- c. *Ala-nə an-ə bla kör-üş-üw-leri.*
 they-GEN he-ACC with see-REC-NR-their
 'Their meeting with him.'
- d. *An-ə ala-nə bla kör-üş-üw-ü.*
 he-GEN they-GEN with see-REC-NR-his
 'His meeting with them.'
- (49) *Dawla-š-əw iš-ge boluš-maz.* (KB. 198)
 dispute-REC-NR work-DAT help-NEG.3SG
 'Quarrelling won't improve things.' (cf. (40g))

3.4.2 *With the suffix -š*

In some of the Turkic languages, e.g. in Kirghiz (see Nedjalkov, Ch. 28, §4.3), this suffix is highly productive (though less so than the suffix *-uu/-ii/...*) in forming nouns of action. In Karachay-Balkar it is unproductive, and nouns in *-š* are rather few in KB. But it is of interest from the viewpoint of its material coincidence with the reciprocal marker (genetic relatedness is possible; cf. Nedjalkov & Nedjalkov, Ch. 26 on Yakut, §14). If we take into account a broader domain than *nomina actionis*, the following cases of the use of *-š* on nouns can be distinguished. Most of the cited forms in *-š* are reciprocal in meaning and denote mostly hostile actions.

1. The meaning of the word (noun and verb) in *-š* is reciprocal.

1.1. The stems of verb and noun coincide; there is a base verbal stem but the derivational relationship between the first two forms is not straightforward; as well as in the other cases, a noun with the suffix *-w* can be formed, e.g.:

- (50) a. *soy-* 'to beat, torment'
 b. *soy-uš-* 'to fight'
 c. *soy-uš* 'fight, battle, struggle'
 d. *soy-uš-uw* 'beating' (KB. 563).

- (51) a. *dawla-* 'to dispute, call in question'
 b. *dawla-š-* 'to argue/dispute with each other'
 c. *dawla-š* 'argument, quarrel'
 d. *dawla-š-əw* 'arguing, quarrelling' (KB. 198).

The semantic relation between (b) and (d) is more regular than between (b) and (c). Nouns in *-š* are more concrete in meaning than those in *-w* which are as a rule more actional in meaning; cf. 'a fight' and 'fighting', 'a quarrel' and 'quarrelling', though they are sometimes treated as synonyms in KB, as in the case of *qeqeš* = *qeqeš-ıw* 'conference, meeting' (but they are not synonymous in the meaning 'an exchange opinions' (*biri biri bla qeqeš-ıw*)). Following are additional examples. As nouns in *-w* are derived automatically, only the first three members of the derivational chains are quoted here:

- (52) a. *džəq-* 'bring sb down' → *džəq-əš-* 'to wrestle'; *džəq-əš* 'fight/struggle' (KB.262, 814)
 b. *sög-* 'to scold' → *sög-üş-* 'to scold each other'; *sög-üş* 'swearing/abuse' (KB. 555)
 c. *tüj-* 'to beat' → *tüj-üş-* 'to fight/struggle'; *tüj-üş* 'fight, brawl' (KB. 671)
 d. *ur-* 'to beat' → *ur-uš-* 'to scold/quarrel'; *ur-uš* 'battle', 'scandal' (KB. 686)
 e. *tart-* 'to pull' → *tart-əš-* 'to quarrel'; *tart-əš* 'wrestling' (B. 262)
 f. *tut-* 'to hold, grasp' → *tut-uš-* 'to wrestle'; *tut-uš* 'wrestling' (KB. 655).

The middle member of a derivational chain may be absent or unrelated to the other two semantically; e.g.:

- g. *ajər-* 'to disjoin' → [*ajər-əš-*]; *ajər-əš* 'discord, dissention' (KB. 34, 40).

1.2. The base stem is non-existent: it is mostly likely lost, and thus the verbs and nouns listed below are lexical reciprocals, namely, *reciproca tantum* and as such they are included in 6.3. Here belong:

- (53) a. *eriš-* 'to compete/be rivals' – *eriš* 'arguing' (KB. 771)
 b. *keqeš-* 'to exchange opinions' – *keqeš* 'conversation' (KB. 324)
 c. *küreš-* 'to struggle/wrestle' – *küreš* 'wrestling/struggle' (KB. 365)
 d. *öčeš-* i. 'to argue', ii. 'bet', iii. 'compete' – *öčeš* 'arguing' (cf. *öç* 'bet') (KB. 282)
 e. *üleş-* 'to divide/share' – *üleş* 'share/part' (KB. 784).

2. The meaning of a noun in *-š* is not reciprocal.

The respective verbs in *-š* are semantically unrelated to the nouns listed: *bol-uš-* 'to help', *kir-iš-* and *tig-iš-* are defined as sociatives (with the explanation 'of many') and *quw-uš-* has the reciprocal meaning 'to chase/pursue each other', and *qary-əš-* 'to curse, damn each other'. The verb *džür-* does not take the suffix *-š*.

- (54) *bol-* 'to be, happen' → *bol-uš* 'result' (KB. 158)
džür- 'to walk, move' → *džür-üş* 'gait' (KB. 274)
kir- 'to enter' → *kir-iš* 'entrance' (KB. 814)
qary- 'to curse/damn' → *qary-əš* 'damnation' (KB. 394)
quw- 'to drive/pursue' → *quw-uš* 'persecution' (KB. 432)
tig- 'to sew' → *tig-iš* '(way of) embroidering' (KB. 631).

3. Related issues.

To complete the survey, here are a few nouns denoting persons and not actions. As we see, the nouns are derived from suffixed reciprocals.

- (55) a. *teŋ* 'equal'
 b. *teŋ-iš-* 'to be equal'
 c. *teŋ-iš* 'person of the same age' (KB. 621).
- (56) a. *tan-* 'to know/recognize'
 b. *tan-əš-* 'to get acquainted'
 c. *tan-əš* '(an) acquaintance' (KB. 603-4).

4. Diathesis types of constructions with the reciprocal pronoun *biri biri-n* 'each other'4.1 Introductory. *Bir biri* in the meaning 'some of them'

This section is devoted to constructions with the reciprocal pronoun only and those with both markers of reciprocity. The point is that in Karachay-Balkar the suffixed expression of reciprocity is being ousted, it seems, by the mixed pronominal-suffixed and even pronominal only expression. There are practically no restrictions on the pronominal expression of reciprocity. The main exception may be a limited number of stable suffixed reciprocals dealt with in 3.1.1.1. This is probably due to the areal influence: it is only Adyge languages that display affixed expression of reciprocity, while other neighbouring languages use reciprocal pronouns. The following table shows those case forms of the reciprocal pronoun for all the three persons (see also (6)) that have occurred in our material; note that the case endings are preceded by a reflexive-possessive suffix: *-biz* 'our', *-giz* 'your', and *-Ø* or, seldom, reflexive-possessive *-leri* (see (63a), (66b)). In the 3PL genitive, locative and ablative forms there appears the consonant *-n-* without any particular meaning. The reciprocal pronoun may appear as *bir biri-* (see (60a, b), etc.) or *bir bir-* (cf. (63f)). In (63f) it contains no reflexive-possessive suffix for some reason, i.e. the form *bir bir-ge* is used instead of *biri biri-biz-ge*.

(57) a.	1PL	2PL	3PL	3PL
NOM	<i>biri biri-biz</i>	<i>biri biri-giz</i>	<i>biri biri-Ø</i>	<i>biri biri-leri-Ø</i>
GEN	<i>biri biri-biz-ni</i>	<i>biri biri-giz-de</i>	<i>biri biri-n-de</i>	<i>biri biri-leri-n-de</i>
DAT	<i>biri biri-biz-ge</i>	<i>biri biri-giz-ge</i>	<i>biri biri-ne</i>	<i>biri biri-leri-ne</i>
ACC	<i>biri biri-biz-ni</i>	<i>biri biri-giz-ni</i>	<i>biri biri-n</i>	<i>biri biri-leri-n</i>
LOC	<i>biri biri-biz-de</i>	<i>biri biri-giz-de</i>	<i>biri biri-n-de</i>	<i>biri biri-leri-n-de</i>
ABL	<i>biri biri-biz-den</i>	<i>biri biri-giz-den</i>	<i>biri biri-n-den</i>	<i>biri biri-leri-n-den</i>
TRNSL	<i>biri biri-biz-tin</i>	<i>biri biri-giz-tin</i>	<i>biri biri-tin</i>	<i>biri biri-leri-tin</i>

The "nominative" case form of the reciprocal pronoun seems to appear only as an attribute in "possessive" reciprocal constructions, the form *biri biri* or *bir biri* being generalized for all the persons (see 4.2.3). Less frequently, such generalized forms are used in other diathesis types of reciprocal constructions (see (58b) where *bir bir-den* is used instead of *bir biri-biz-den*).

The form *bir biri* (only with *bir* and not *biri* as the first component) of the reciprocal pronoun is homonymous to one of the indefinite pronouns.

- b. *bir biri-biz* 'some of us'
bir biri-giz 'some of you'
bir biri/bir biri-leri 'some of them'; cf.:
 c. *Bir biri-biz an-ə at-də-q*
 'Some of us fired at him.'

The reciprocal pronoun can be separated from the predicate by other words; e.g.:

- (58) a. *Ala biri biri-ne səna-š-əb qara-də-la.* (KB. 584)
 they each other-DAT size.up-REC-CONV look-PAST-3PL
 'They looked at each other sizing each other up.'
 b. *Bir bir-den, köl-übiz tol-a, ajər-əl-əš-də-q.* (G. 54)
 each other-ABL lake-our fill-CONV divide-PASS-REC-PAST-1PL
 'We parted [lit. 'from each other'], our eyes full of tears.'

4.2 Subject-oriented constructions

4.2.1 "Canonical" reciprocals

4.2.1.1 *With two-place transitives.* As mentioned above, this is the principal type of reciprocal constructions with transitive verbs: suffixed reciprocals cannot be derived from most transitives. In KB, sometimes on the same page, examples containing a reciprocal pronoun with and without a suffixed reciprocal are entered; e.g.:

- (59) a. *Ala an-ə bayalat-əb söleş-di-le.*
 they he-ACC respect-CONV speak-PAST-3PL
 'They spoke of him with respect.'
 b. *Ala biri biri-n bayalat-əb söleş-di-le.* (KB. 110)
 they each other-ACC respect-CONV speak-PAST-3PL
 'They spoke of each other with respect.'
 c. *Ala biri biri-n bayalat-əš-əb söleş-di-le.* (KB. 110)
 they each other-ACC respect-REC-CONV speak-PAST-3PL
 (same translation).

1. The following examples contain the reciprocal pronoun only. In the reciprocals listed in (17) and (18) the suffix is interchangeable with the reciprocal pronoun, with no change or a slight change of the overall meaning.

- (60) a. *Bir-leš-ej-iq, bir biri-biz-ni zoqla-j-əq.* (G. 58)
 one-leš-HORT-1PL each other-GEN take.care-HORT-1PL
 'Let's unite, take care of each other.'
 b. [*Ala*] *bir biri-n oza-rya küreš-di-le.* (KB. 365, 490)
 they each other-ACC overtake-INF try-PAST-3PL
 'They tried to overtake each other.'
 c. ... *bir biri-n dzoqla-j...* (KB. 250)
 each other-ACC call-CONV
 '... calling to each other...'

- d. *Ala biri biri-n soy-du-la.* (KB. 569)
 they each other-ACC beat-PAST-3PL
 ‘They beat each other.’
- e. *Ala bir biri-n uppa et-di-le.* (KB. 684)
 they each other-ACC kiss do-PAST-3PL
 ‘They kissed each other.’
- f. *Ala biri biri-n sənaj-də-la.* (KB. 584)
 they each other-ACC size.up-PAST-3PL
 ‘They sized each other up.’

2. The following examples contain two markers of reciprocity. Most of transitive verbs can be used in this way. But the reciprocals listed in (17) and (18) are preferable without the reciprocal pronoun, probably due to customary use. With these verbs the reciprocal pronoun *biri biri-n* seems to be redundant in most cases, though, as noted above, this pronoun with the postposition *bla*, i.e. *biri biri bla* ‘with each other’, sounds natural enough (cf. 3.1.5.3).

- (61) a. *Köb kün-le aq-də-la bir biri-n quw-uş-ub.* (KB. 432)
 many day-PL pass-PAST-3PL each other-ACC pursue-REC-CONV
 ‘Many days passed one after another’, lit. ‘pursuing one another.’
- b. *Ala biri biri-n səndər-əş-əb söleş-di-le.* (KB. 585)
 they each other-ACC offend-REC-CONV speak-PAST-3PL
 ‘They spoke offending each other.’

Despite the tendency noted above, there occur verbs with all the three variants of encoding reciprocity being more or less equally acceptable:

- (62) a. *Ala an-ə dżanəwla-də-la.* ‘They make him angry (with sb).’
 b. *Ala biri biri-n dżanəwla-ş-də-la.* ‘They are angry with each other.’
 c. *Ala biri biri-n dżanəwla-də-la.* (same translation).
 d. *Ala dżanəwla-ş-də-la.* (same translation) (KB. 226).

4.2.1.2 *With two-place intransitives.* The reciprocal pronoun is used with the same three syntactic types of base intransitives as in 3.1.1.2. A tentative generalization for this class may be proposed: sentences with a reciprocal pronoun only (without the reciprocal suffix on the predicate) are always acceptable; sentences with both markers are acceptable, too, although sometimes the informant considers them slightly less acceptable; sentences with a suffixed reciprocal without the pronoun are very often either less acceptable or unacceptable. Let us consider these three groups.

1. Reciprocals of base verbs with a dative object. In dictionary entries and in specialist literature, constructions with these intransitives taking the reciprocal suffix usually contain the reciprocal pronoun as well; cf.:

- (63) a. *Ala bir bir-leri-ne aılan-əş-əb oltur-a-dəla.* (KB. 33)
 they each other-their-DAT turn-REC-CONV sit-PRES-3PL
 ‘They sit facing each other.’

- b. *Ala bir biri-ne ačəwlan-əš-əb tur-a-dəla.* (KB. 102)
 they each other-DAT be.angry-REC-CONV AUX-PRES-3PL
 ‘They are angry with each other.’
- c. *Tereze-ler-ibiz bir biri-ne bay-əš-əb tur-a-dəla.* (KB. 111)
 window-PL-our each other-DAT look-REC-CONV AUX-PRES-3PL
 lit. ‘Our windows look at each other.’
- d. *Ala bir biri-ne tayəl-əš-əb kel-e-dile.* (KB. 596)
 they each other-DAT tie-REC-CONV walk-PRES-3PL
 ‘They walk as if tied to each other.’
- e. *Sabij-le biri-biri-ne uša-š-əb bar-a-dəla* (KB. 692)
 child-PL each-other-DAT be.alike-REC-CONV AUX-PRES-3PL
 ‘The children are becoming alike.’
- f. *Batər bla men bir bir-ge ilin-iš-di-q.* (G. 53)
 B. and I each other-DAT seize-REC-PAST-1PL
 ‘Batyr and I seized each other.’

We have found only a few verbs that occur with the reciprocal pronoun alone:

- (64) a. *Eki šar bir biri-ne tij-di-le.* (KB. 632)
 two ball each other-DAT hit-PAST-3PL
 ‘Two balls collided one against the other.’
- b. *Buya-la bir biri-ne məŋaj-a-dəla.* (KB. 476)
 bull-PL each other-DAT butt-PRES-3PL
 ‘The bulls are on the point of starting to butt each other.’
- c. *Ala biri biri-ne qəsəl-də-la.* (KB. 449)
 they each other-DAT snuggle-PAST-3PL
 ‘They snuggled up to each other.’
- d. *Ala biri biri-ne džetdir-me-j-dile.* (KB. 145)
 they each other-DAT trust-NEG-PRES-3PL
 ‘They don’t trust each other.’

In most cases, however, the informant prefers variants with the reciprocal pronoun only: he either rejects constructions with a suffixed reciprocal only or estimates them as less acceptable (see below (65b)) or hardly acceptable (“the meaning is clear, but it is not used in speech” or, rarely, “the meaning is not clear”); cf.:

- (65) a. *Ol an-ŋa qatəl-də.*
 he he-DAT pester-PAST.3SG
 ‘He pestered him.’
- b. [?]*Ala qatəl-əš-də-la.*
 they pester-REC-PAST-3PL
 ‘They pestered each other.’
- c. *Ala biri biri-ne qatəl-əš-də-la.*
 they each other-DAT pester-REC-PAST-3PL
 ‘They pestered each other.’ (“correct, but (d) is better”)
- d. *Ala biri biri-ne qatəl-də-la.*
 (same translation).

Generally, however, some of the suffixed reciprocals are accepted by the informant as (almost) equally correct. The causes of this selectivity are not clear. Moreover, in the dic-

tionary and specialist literature, there occur instances like (65b) and (65c), i.e. with one and the same suffixed reciprocal; cf.:

- (66) a. *Osman bla Fazilat-čaq bosaya-dan təšəna qara-š-də-la.* (G. 53)
 O. and F.-DIM threshold-ABL out glance-REC-PAST-3PL
 ‘Osman and little Fazilat glanced at each other from the threshold.’
 b. *Džaš-la bir bir-leri-ne qara-š-də-la.* (G. 53)
 child-PL each other-their-DAT glance-REC-PAST-3PL
 ‘The children glanced at each other.’

Sentences like (66a) and (66b) with the following verbs are assessed by the informant as almost equally acceptable (these and semantically contiguous suffixed reciprocals are considered in 3.1.1.2 under (21) and (22)).

- (67) *džekir-iš-* ‘to shout at each other’ (KB. 27)
gammojlan-əš- ‘to be sulky with each other’ (KB. 182)
ilin-iš- ‘to grapple with each other’ (KB. 300)
kiršelen-iš- ‘to fume before each other’ (KB. 350)
qara-š- ‘to look/glance at each other’ (KB. 397)
qəčər-əš- ‘to shout at each other’ (KB. 450)
qəsəl-əš- ‘to huddle/press oneself to each other’ (KB. 449)
supulan-əš- ‘to flaunt one’s decency to each other’ (KB. 573).

Here is a list of suffixed reciprocals (most of which are related to intransitives with a dative object) that have also occurred with the reciprocal pronoun in KB and specialist literature. This list and the one under (66) subsume all the verbs discussed in 3.1.1.2.

- (68) *ačawlan-əš-* ‘to be angry with each other’ (KB. 102)
aılan-əš- ‘to turn to/face each other’ (KB. 32)
ajrəl-əš- ‘to part from each other’ (KB. 39)
bay-əš- ‘to look at each other’ (KB. 111)
čamlan-əš- ‘to get angry with each other’ (KB. 725)
ičgisiñ-iš- ‘to confide in each other’ (KB. 308)
qəsəl-əš- ‘to snuggle up to each other’ (KB. 449)
öšünle-š- ‘to pounce/fall upon each other’ (KB. 283)
keril-iš- ‘to lift up one’s hand against each other’ (KB. 326)
kirpilen-iš- ‘to get angry with each other’ (KB. 349)
qajna-š- ‘to be angry with each other’ (KB. 378)
qajrəl-əš- ‘to wrangle with each other’ (KB. 379)
qatəl-əš- ‘to pester each other’ (KB. 401)
məqaj-əš- i. ‘to resent each other’, ii. ‘to butt each other’ (KB. 474)
tayan-əš- ‘to lean upon each other’ (KB. 614)
tayəl-əš- ‘to be tied to each other’ (KB. 596)
temirçile-š- ‘to threaten/be angry with each other’ (KB. 612)
uč-uš- ‘to fall upon/attack each other’ (KB. 691)
uša-š- ‘to resemble each other’ (KB. 692)
xagoklan-əš- ‘to show off to each other’ (KB. 699)
əsar-əš- ‘to smile at each other’ (KB. 761).

2. Reciprocals of verbs with an ablative object. This group is much smaller than the first one. The same tendencies are observed here as with verbs with an underlying dative object. Thus, for instance, in the following examples suffixed reciprocals are hardly acceptable without the reciprocal pronoun. Other reciprocals of this type are *suw-uš-* ‘to get disappointed in each other’ (KB. 577), *üzül-üş-* ‘to tear away from each other’ (KB. 781).

- (69) a. *Ol an-dan uzaj-də.*
 he he-ABL move.away-PAST.3SG
 ‘He moved away from him.’
 b. *Ala biri biri-n-den uzaj-əš-də-la.*
 they each other-n-ABL move.away-REC-PAST-3PL
 ‘They moved away from each other.’
- (70) *Alqən bir biri-biz-den tartən-əš-əb tur-a-bəz.* (KB. 607)
 still each other-ABL be.shy-REC-CONV AUX-PRES-1PL
 ‘We are still shy with each other.’

The reciprocal constructions under (71c, d, e) are more or less equally acceptable. Moreover, the underlying verb is also semantically close. The point is it is a lexical reciprocal, which probably accounts for the acceptability of the three marked constructions, and the reciprocal devices are pleonastic here.

- (71) a. *Ol adam-la-dan ajərəl-də.*
 he man-PL-ABL part-PAST.3SG
 ‘He parted from the people.’
 b. *Ala ajərəl-də-la.*
 they part-PAST-3PL
 ‘They parted.’
 c. *Ala küçden ajərəl-əš-də-la.*
 they hardly part-REC-PAST-3PL
 ‘They could hardly part from each other.’
 d. *Ala bir biri-n-den küçden ajərəl-də-la.*
 they each other-n-ABL hardly part-PAST-3PL
 (same as (c)).
 e. *Bir biri-n-den küçden ajərəl-əš-də-la.* (KB. 39)
 each other-n-ABL hardly part-REC-PAST-3PL
 (same as (c) and (d)).

3. Reciprocals of verbs taking an object with the postposition *bla* ‘with’. For these verbs all the three variants seem to be more or less acceptable; cf.:

- (72) a. *Ol an-ə bla ojna-də.* ‘He played with him.’
 b. *Ala biri biri bla ojna-š-də-la.* ‘They played with each other.’
 c. *Ala biri biri bla ojna-də-la.* (same translation as (b)).
 d. *Ala ojna-š-də-la.* (same translation as (b) and (c); KB. 493–4)
 (cf. (23), (34), (35)).

4.2.2 “Indirect” reciprocals

All the suffixed reciprocals derived from verbs with a dative or ablative object alongside a direct (preferably non-referential) object and discussed in 3.1.2 can also be used with the reciprocal pronoun. The pronoun can be omitted, but its use is preferable, though with some exceptions. Thus in (73) all the three reciprocal constructions are correct though variant (d) is somewhat better than (b) and (c). This is due to the fixed use of the suffixed reciprocal, though in most other cases the reciprocal pronoun is used.

- (73) a. *Ata-sə džaš-ə-n-dan xapar sor-du.*
 father-his son-his-*n*-ABL news ask-PAST
 ‘Father asked his son about the news.’
- b. *Ata-sə bla džaš-ə biri biri-n-den xapar sor-uš-du-la.*
 father-his and son-his each other-*n*-ABL news ask-REC-PAST-3PL
 ‘Father and son asked each other about the news.’
- c. *Ata-sə bla džaš-ə biri biri-n-den xapar sor-du-la.*
 father-his and son-his each other-*n*-ABL news ask-PAST-3PL
 (same translation).
- d. *Ata-sə bla džaš-ə xapar sor-uš-du-la.*
 father-his and son-his news ask-REC-PAST-3PL
 (same translation).

The latter claim is based on the fact that all the relevant examples in KB contain the reciprocal pronoun as well as the reciprocal suffix; here are some of these examples:

- (74) a. *Ulaq-la müjüz-leri-n biri biri-ne ur-dur-uš-ub*
 kid-PL horn-their-ACC each other-DAT beat-CAUS-REC-CONV
ojna-j-dəla. (KB. 684)
 play-PRES-3PL
 ‘The kids play butting each other with their horns.’
- b. *Ala biri biri-ne qol uzat-əš-də-la.* (KB. 679)
 they each other-DAT hand stretch-REC-PAST-3PL
 ‘They shook hands.’ (cf. (25))
- c. *Ala bir biri-ne köz qəs-əš-də-la.* (KB. 449)
 they each other-DAT eye wink-REC-PAST-3PL
 ‘They winked (lit. ‘winked an eye’) at each other.’ (cf. (26))
- d. *Ala biri biri-n-den kitab-nə səjər-əš-də-la.* (KB. 582)
 they each other-*n*-ABL book-ACC take.away-REC-PAST-3PL
 ‘They tried to take books away from each other.’
- e. *Sabij-le bir biri-ne qar dzummaq borya-š-də-la.* (KB. 174)
 child-PL each other-DAT snow ball throw-REC-PRES-3PL
 ‘The boys throw snowballs at each other.’
- f. *Ala biri biri-ne qol ber-iš-di-le.*
 they each other-DAT hand give-REC-PAST-3PL
 ‘They gave each other hands.’

4.2.3 “Possessive” reciprocals; generalized use of *biri biri* for all persons

4.2.3.1 *With two-place transitives.* In all the example sentences in 3.1.3 the attributive form *biri biri* of the reciprocal pronoun preceding the retained direct object can be added.

A peculiarity of Karachay-Balkar in comparison with the three other Turkic languages considered in this volume is the use of the 3rd p. form of the reciprocal pronoun, i.e. a form with zero marking of the 3rd p., for the 1st and 2nd persons as well (cf. (57a)); in Kirghiz and Tuvan, the genitive case of the reciprocal pronoun and in Yakut the unmarked case form of the reciprocal pronoun with a possessive suffix are used in this function (see Ch. 28, §5.2.3, Ch. 26, §4.2.4 and Ch. 24, §5.2.3 respectively). Compare Karachay-Balkar:

- (75) a. *Ala biri biri xali-n səna-j-dəla.* (KB. 584)
 they each other character-ACC size.up-PRES-3PL
 lit. 'They size up each other's character.'
- b. *Biz biri biri (*biri biri-biz) xali-n səna-j-bəz.*
 we each other each other-our character-ACC size.up-PRES-3PL
 lit. 'We size up each other's character.'
- c. *Siz biri biri (*biri biri-giz) xali-n səna-j-səz.*
 you.PL each other each other-your character-ACC size.up-PRES-3PL
 lit. 'You size up each other's character.'

Sentences (75) contain the reciprocal pronoun and unsuffixed predicates, and (76) contain both reciprocal markers (on *aŋəlaš-* see (14)):

- (76) a. *Bir biri söz-übüz-nü aŋəla-š-ərya kerek-biz.* (KB. 69)
 each other word-our-ACC understand-REC-INF necessary-1PL
 'We should understand each other.' (lit. 'each other's words').
- b. *Ala biri biri bet-leri-n sädər-əš-də-la.* (KB. 579)
 they each other face-their-ACC scratch-REC-PAST-3PL
 'They scratched each other on the face.' (lit. 'each other's faces'.)
- c. *Ala biri biri taxsa-nə čučx-uš-ub küreš-di-le.* (KB. 739)
 they each other secret-ACC find.out-REC-CONV try-PAST-3PL
 'They tried to find out each other's secrets.'

4.2.3.2 *With two-place intransitives.* In the following sentences the reciprocal pronoun is an attribute to an oblique object, while in the above examples it is dependent on a direct object:

- (77) a. *Džaš qəz-nə qulay-ə-na süjmeklik söz-le šəbərda-də.*
 youth girl-GEN ear-her-DAT love word-PL whisper-PAST.3SG
 'The youth whispered words of love into the girl's ear.'
- b. *Džaš bla qəz biri biri qulay-ə-na süjmeklik söz-le*
 youth and girl each other ear-her/his love word-PL
šəbərda-[š-]də-la.
 whisper-[REC-]PAST-3PL
 'The youth and the girl whispered love words into each other's ears.'

Compare also:

- (77') a. *Ala bir biri džan-ə-na tij-iš-di-le.* (KB. 633)
 they each other soul-their-DAT touch-REC-PAST-3PL
 'They offended each other.' (lit. 'each other's soul.')

- b. *Ala biri biri bet-i-ne qara-j-dəla.* (KB. 145)
 they each other face-their-DAT look-PRES-3PL
 ‘They looked each other in the face.’

4.3 Object-oriented constructions

4.3.1 Causatives from subject-oriented reciprocals

As well as in 3.2, these constructions can be derived from subject-oriented constructions by causativization (cf. (75b)).

- (78) a. *Xuna-nə taş-lar-ə bir biri-ne tab-əş-xan-dəla.* (KB. 595)
 fence-GEN stone-PL-its each other-DAT find-REC-PERF-3PL
 ‘The stones of a stonewall are fixed tightly’, lit. ‘... have found each other.’
 b. *Ala xuna-nə taş-lar-ə-n bir biri-ne tab-əş-dər-xan-dəla.* (KB. 595)
 they fence-GEN stone-PL-its-ACC each other-DAT find-REC-CAUS-PERF-3PL
 ‘They laid the stones of the stonewall tightly on each other.’ (cf. 3.3.1)

4.3.2 With three-place transitives of joining

4.3.2.1 *Without a postposition.* The reciprocal pronoun can also be used with three-place transitives, especially if they are lexical reciprocals (at least in one of their meanings). Respective constructions with suffixed reciprocals are not found (cf., however, 3.2.2).

- (79) a. *Qanitat eki džumduruy-un bir biri-ne qay-əb tebre-di.* (A. 143)
 Q. two fist-ACC each other-DAT hit-CONV begin-PAST.3SG
 ‘Qanitat began hitting her fists against one another.’
 b. *Bir biri-ne əşə!* (KB. 762)
 each other-DAT rub
 ‘Rub [them] against each other!’
 c. *Ol adam-la-nə bir biri-ne et-di.* (KB. 778)
 he person-PL-ACC each other-DAT set-PAST.3SG
 ‘He set people on each other.’
 d. ... *bir emegen bələj eki qol-nu bir-biri-ne tut-dur-urya,*
 one she.giant thus two ravine-ACC each-other-DAT join-CAUS-INF
žama-rya küreš-e tur-yanlaj bar-yan-də. (B. 63)
 fix-INF try-CONV AUX-CONV AUX-PERF-3SG
 ‘... one she-giant tried to join two ravines together.’

4.3.2.2 *With a postposition.* With a limited number of three-place transitives denoting placing one object on another, the reciprocal pronoun is dependent on a locative auxiliary noun (in the function of a postposition). It is not clear whether *bir biri* here is part of the object governed by the postposition or an attribute. In the first instance *bir biri* should be seen as a nominative case form, i.e. in the case form of the subject, but this form does not occur in subject position, therefore it is an attribute rather than an object. In (80a) the auxiliary noun *üs* ‘top’ is the head word of the genitive case form *kitab-la-nə* in the attributive function (probably an izafet construction; cf. *-ü-* ‘their’ in agreement with the attribute); the noun *stol* ‘table’ in the nominative case is also an attribute in the phrase *stol üs-ü-ne sal* ‘put [it] on the table’, lit. ‘... on the table top’ (KB. 786).

- (80) a. *Ol gitče kitab-la-nə ullu kitab-la-nə üs-ü-ne sal-də.*
 he small book-PL-ACC big book-PL-GEN top-their-DAT put-PAST.3SG
 'He put small books on top of the big books.'
- b. *Ol kitab-la-nə bir biri üs-ü-ne sal-də.*
 he book-PL-ACC each other top-their-DAT put-PAST.3SG
 'He put books on one another', lit. '... on each other's top.'

4.4 Nomina actionis

Such derivatives are formed without restrictions from pronominal reciprocals. As usual, the underlying subject is in the genitive case and the object, if present, retains its case form. Examples with the suffix *-əw*, the main marker of deverbal nouns (the reflexive-possessive suffix on a deverbal noun agrees with the underlying subject):

- (81) a. *Ala-nə bir biri-n aḡəlaš-əw-larə.* (KB. 69)
 they-GEN each other-ACC understand-NR-their
 'Their mutual understanding.'
- b. *Ala-nə biri biri-n-den suw[-uš]-uw-larə.* (KB. 577)
 they-GEN each other-n-ABL disappoint-REC-NR-their
 'Their mutual disappointment.'

5. The suffix *-š* as a sociative and competitive marker

5.1 Introductory

The verbs considered in this section do not as a rule coincide with those from which reciprocals with the suffix *-š* can be formed, though some of the derivatives may have both a reciprocal and a competitive meaning, and some of the competitive verbs may also have a sociative meaning.

5.2 The sociative meaning

In the dictionary (KB) about 140 sociative verbs are registered. With a few exceptions, they are formed from intransitives (our informant, however, does not accept some of the verbs defined as sociatives in the dictionary). To quote Geljaeva (1982:54), "the majority of verbs in *-š* with the sociative meaning are formed from intransitives expressing various active purposeful actions". Many intransitives, however, do not have a respective sociative form (e.g., *džaša-* 'to live', *termil-* 'to suffer'; see Urusbiev 1963:52). The reasons of selectivity are not quite clear. The meaning most commonly added by the suffix *-š* on these verbs (in the dictionary and by the informant) is 'many (at least more than one)', or it may be 'all together', 'all at once', 'all those present', with the following semantic nuances: 'disjointedly (here and there, first one then another, overlapping)', 'interrupting each other without waiting for one's turn', 'in a hurry', 'feverishly (as if in competition)', 'competing in speed' (cf. 5.3). All these components often imply an intensive action. If it is a verb of

speech it may acquire an additional reciprocal meaning of intercommunication. Sometimes, the borderline between the sociative and reciprocal as well as comitative meanings is vague (the reciprocal meaning is on the whole more clear-cut semantically than the sociative which is sometimes elusive). In some cases the sociative meaning implies very subtle semantic nuances which are hard to render adequately in English: this may be due to the fact that if the meaning of the suffix is translated by means of a separate word it acquires undue emphasis which is absent in the original. For instance, in (82) the sociative meaning is more or less rendered in the translation by means of the pronoun ‘all’, but in (83) the English translation of the sociative sense is not quite adequate. (In (82b) the suffix is added to an aspectual verb.)

- (82) a. *Üj-ge kir-iš-ib ket-di-le.* (KB. 349)
 house-DAT enter-REC-CONV AUX-PAST-3PL
 ‘All (the people) entered the house.’
 b. *Saban işle-ge kir-iš-di-k.* (KB. 349)
 spring work-DAT enter-REC-PAST-1PL
 ‘We all started spring field work.’ (lexicalized verb).

Not infrequently, two sentences, one with a base verb and the other with the sociative derivative, are translated in the same way in KB; cf.:

- (83) *Turna-la qurulda-š-əb / qurulda-b bar-a-dəla.* (KB. 426)
 crane-PL cry-REC-CONV cry-CONV go-PRES-3PL
 ‘The cranes fly crying.’

A derivative in *-š* from some two-place intransitives may sometimes allow two readings, reciprocal and sociative. The former reading may be supported by the reciprocal pronoun; e.g.:

- (84) *Ala [bir biri-ne] oňsun-uš-ub tur-a-dəla.* (KB. 499)
 they each other-DAT be.pleased-REC-CONV AUX-PRES-3PL
 i. ‘They are pleased *with each other*.’
 ii. ‘They [*all, many*] are pleased’ (without *bir biri-ne*).

Sociatives can be divided into two groups.

5.2.1 Sociatives with a singular subject

The less numerous group of sociatives allows a singular subject, but with an implication that the referent does not act alone, i.e. in the meaning which can be viewed as comitative (this meaning is very rare and may be regarded as going out of use). A comitative object indicating a co-participant can be added in the construction. Its absence, as has been mentioned above, presupposes some other participants inferred from the context. The nuances of the sociative meaning mentioned above may be retained.

- (85) a. *Ol dəbərtla-də.* ‘He set off at a gallop.’
 b. *Ala dəbərtla-də-la.* ‘They set off at a gallop.’
 c. *Ala dəbərtla-š-də-la.* ‘They all set off at a gallop [in a hurry, without order].’

- d. *Ol dābərtila-š-dā.* ‘He set off at a gallop [in company, as if competing with sb, etc.]’
 e. *Ol an-ə bla dābərtila-š-dā.* ‘He set off at a gallop with him [in a hurry, etc.]’
- (86) a. *Ala dabərda-də-la.* ‘They were making noise.’
 b. *Ala dabərda-š-də-la.* ‘They all were making noise [vying with/interrupting e. o.]’
 c. *Ol dabərda-š-dā.* ‘He was making noise [taking part in the general hubbub]’
 d. *Ol an-ə bla dabərda-š-dā.* ‘He was making noise with him [taking part in the general hubbub]’
- (87) a. *Bu qatən [an-ə bla] zampəlda-š-dā.* (KB. 287)
 that woman he-ACC with chatter-REC-PAST.3SG
 ‘That woman chattered [with him].’
 b. *Ol [ata-sə bla birge] awuzlan-əš-dā.* (KB. 95)
 he father-his with together eat-REC-PAST.3SG
 ‘He had a meal [together with his father].’

In a limited number of cases, the suffix seems to be semantically empty on intransitives in -š with a singular subject, unless there is a subtle change of meaning which is difficult to define or pinpoint, as in (88a) and (88b), or unless lexicalization takes place, as in (88d). Another case of a singular subject with sociatives is (88c) where the subject is a *nomen actionis* implying a plural agent.

- (88) a. *Qart čokunla-š-əb bar-a-dā.* (KB. 735)
 old.man hobble-REC-CONV go-PRES-3SG
 ‘The old man walks hobbling.’
 b. *Šorpa sor-uš-xan-dā.* (KB. 568)
 soup grow.cold-REC-PERF-3SG
 ‘The soup has grown cold.’
 c. *Džəlaw bir kesek seriwünle-š-di.* (KB. 554)
 crying little.by.little calm.down-REC-PAST.3SG
 ‘The crying calmed down little by little.’
 d. *Qol-um quru-š-xan-dā.* (KB. 427)
 arm-my dry.up-REC-PERF-3SG
 ‘My arm has become numb.’

5.2.2 Sociatives with a plural subject only

With another group of forms in -š the subject cannot be singular unless a comitative phrase with the postposition *bla* is used (but if the verb allows competitive reading a singular subject is possible):

- (89) a. *Ol awuzlan-dā.* ‘He had a snack.’
 b. *Ala awuzlan-əš-də-la.* (KB. 95) ‘They (all of them, in a hurry, etc.) had a snack.’
 c. **Ol awuzlan-əš-dā.* (intended meaning:) ‘He had a snack with sb.’
 d. *Ol an-ə bla awuzlan-əš-dā.* ‘He had a snack with him (in a hurry, etc.)’
- (90) a. *Ala džutlan-də-la.* ‘They fell upon their food.’
 b. *Ala džutlan-əš-də-la.* (KB. 260) ‘They fell upon the food (many of them, in a hurry).’
 c. **Ol džutlan-əš-dā.* (intended meaning:) ‘He fell upon his food with sb else.’
 d. *Ol an-ə bla džutlan-əš-dā.* ‘He fell upon his food with him.’

A singular subject, even co-occurrent with a comitative phrase, is usually wrong or pragmatically unnatural unless it is human. This concerns cases like the following:

- (91) a. *Tögerekde bal čibin-le duwulda-š-a-dəla.* (KB. 210)
 around honey fly-PL buzz-REC-PRES-3PL
 ‘Bees are buzzing around.’
- b. *Oq-la džuwulda-š-a-dəla.* (KB. 261)
 bullet-PL whistle-REC-PRES-3PL
 ‘Bullets are whistling by.’ (it implies “more noise” than the non-reciprocal form).
- c. *Džulduz-la džəltəra-š-əb čəq-də-la.* (KB. 267)
 star-PL twinkle-REC-CONV appear-PAST-3PL
 ‘Stars came out (fig. ‘one after another as if competing’) twinkling.’

The meaning ‘many’ should not be taken literally, because not infrequently the subject denotes two referents. In these cases the prevalent meaning is of joint and simultaneous action. The following examples can be added to the above (cf. *ol an-ə bla* lit. ‘he with him’):

- (92) a. *Eki-biz da sət-əš-də-q.* (KB. 587)
 two-our EMPH shed.tears-REC-PAST-1PL
 ‘We both shed a few tears.’ (the particle *da* stresses the preceding word)
- b. *Eki-si da səzəl-əš-əb ket-di-le.* (KB. 588)
 two-their EMPH rush-REC-CONV go.away-PAST-3PL
 ‘Both of them rushed away together.’
- c. *But-lar-əm qəjəl-əš-də-la.* (KB. 441)
 leg-PL-my give.way-REC-PAST-3PL
 ‘My legs gave way under me.’

5.2.3 Lexical groups of registered sociatives

The examples below give an idea of the lexical range of intransitive verbs from which sociatives derive. In view of the sociative use going out, we have decided to give the maximum number of the examples registered in KB. They are not subdivided into the above two types (see 5.2.1 and 5.2.2). The subject may be any of the three persons. Note the prevalence of the converbal form of sociative verbs in dependent predication. Characteristically, the Russian translations in KB do not as a rule reflect the sociative meaning, and this in turn is reflected in the English translations. The lexical meanings are:

- (a) producing sounds (e.g. ‘to snore’, ‘to cluck’, etc.),
- (b) emitting light (e.g. ‘to sparkle’);
- (c) motion (e.g. ‘to sit down’, ‘to hobble’);
- (d) physiological processes (e.g. ‘to grow thin’, ‘to grow old’);
- (e) psychological states and processes (e.g. ‘to get scared’, ‘get confused’, ‘rejoice’);
- (f) natural states (e.g. ‘to hang down’, ‘to burst into leaf’, ‘to grow green’).

Of course, this does not mean that sociatives can be derived from all verbs of these lexical groups.

- (93) a. *Bir-er šintik al-əp, oltur-uš-du-la.* (G. 55)
 one-DISTR stool take-CONV sit.down-REC-PAST-3PL
 ‘Taking each a stool, they took seats (all together).’

- b. *Tawuq-la qanqalda-š-də-la.* (G. 56)
hen-PL cackle-REC-PAST-3PL
'The hens started cackling all at once.'
- c. *Xalq qəcər-əš-də.* (G. 56)
people make.noise-REC-PAST.3SG
'The people raised a noise.'
- d. *Qatən-la zampəlda-š-əb baš-əm-ə awru-t-du-la.* (KB. 287)
woman-PL chatter-REC-CONV head-my-ACC ache-CAUS-PAST-3PL
'The women gave me a headache with their chatter.'
- e. *Ašəy-əš-əb bar-a-dəla.* (KB. 105)
hurry-REC-CONV go-PRES-3PL
'Everybody is in a hurry.'
- f. *Gezen-de čəcxan-la dəyərdə-š-a-dəla.* (KB. 112)
pantry-LOC mouse-PL make.noise-REC-PRES-3PL
'The mice in the pantry are making noise.'
- g. *Qajrə guzabalan-əš-xan-səz?* (KB. 191)
where hurry-REC-PERF-2PL
'Where have you all started to hurry?'
- i. *Qatən-la dəbəlda-š-ərga bol-ub zamanə-bəz-nə al-də-la.* (KB. 211)
woman-PL chatter-REC-INF AUX-CONV time-our-ACC take-PAST-3PL
'The women got engrossed in chattering and took our time.'
- j. *Ala džasan-əš-də-la.* (KB. 234)
they smarten.oneself-REC-PAST-3PL
'They (many of them) smartened themselves up.'

qal-yan-dəla. (KB. 683)
 AUX-PERF-3PL
 ‘The children, on parting with their father, felt depressed.’

A sociative verb may co-occur with the reciprocal pronoun. In (93'm) the latter is dependent on the verb which in its turn is dependent on the sociative verb. In (93'n) the reciprocal pronoun is an attribute to a denominal adverb dependent on the sociative verb.

- (93') m. *It-le biri biri-ne eriş-ib ul-uş-a-dəla*. (KB. 682)
 dog-PL each other-DAT rival-CONV howl-REC-PRES-3PL
 ‘The dogs [all together] howl rivalling with each other.’
 n. *Ala biri biri əzərdan uş-uş-du-la*. (KB. 677)
 they each other after rush-REC-PAST-3PL
 ‘They [all together] started rushing one after another.’

5.3 The competitive meaning

It seems that no other Turkic language has such a number of reciprocally marked verbs with the meaning of competition² (among the languages of our list, it is only the reciprocal affix in Japanese that is productive as a competitive marker; incidentally, the sociative meaning is as unproductive in Japanese as in Karachay-Balkar). Thus, for instance, Urusbiev (1963: 51) claims that alongside the meanings of sociativity and reciprocity the suffix *-ş* clearly expresses the competitive meaning, and he gives the following examples: *sana* ‘to count’ → *sana-ş* ‘to count together competing in speed or precision of counting’, *at* ‘to shoot/fire’ → *at-əş* ‘to fire at each other or compete in shooting’. This same fact is noted by Geljaeva (1982: 55) who quotes the following examples: *čab* ‘to run’ → *čab-əş* ‘to race with each other’, *sekir* ‘to jump’ → *sekir-iş* ‘to compete in jumping’, *kötür* ‘to lift’ → *kötür-iş* ‘to compete in weight-lifting’. Sometimes, competition may involve pragmatically unlikely actions. KB registers around 20 such verbs, and another 20 have been elicited from the informant. The list may be continued, it seems. Any verb can be used in the competitive form provided it implies comparison of the participants with regard to any action, quality/feature, etc. As a rule, the competitive suffix does not affect the verbal valency, but transitives tend to be used absolutely, without an object. Of course, the reciprocal pronoun cannot substitute for the suffix *-ş* when it is used in the competitive sense (as well as in the sociative meaning) but sometimes it can be added to a suffixed competitive (see (99c)). The phrase *biri biri bla* ‘with each other’ can be used in simple constructions. This is determined by the possibility of introducing an argument denoting a rival by means of the postposition *bla*. Compare.:

2. Note that this development of the competitive meaning is attested in one Turkic language only, viz. Karachay-Balkar, very much like the competitive meaning of the reflexive clitic in one Indo-European language only, viz. Bulgarian (see Penchev, Ch. 13, §10). Curiously enough, both peoples, according to some opinions, are genetically descended from the ancient Bulgar tribes.

- (94) *Kel, dabərtla-š-aj-aq!* (KB. 211)
 now rush-REC-PRES-IMP.1PL
 ‘Now, let’s race with each other!’
- (95) *Džaš-la üj-nü oyarə džanənda qol taš ata-š-əp,*

džəy-əš-əp ojna-j edi-le. (G. 53)
 wrestle-REC-CONV play-CONV AUX-3PL
 ‘Behind the house, the youths threw stones and wrestled competing with each other.’
- (96) *Džaš-la tut-uš-a-dəla, čab-əš-a-dəla, sekir-iš-e-dile, awur*
 youth-PL hold-REC-PRES-3PL run-REC-PRES-3PL jump-REC-PRES-3PL heavy
taš-la-nə kötür-üş-e-dile. (G. 55)
 stone-PL-ACC lift-REC-PRES-3PL
 ‘The youths wrestle, compete in running and jumping and lifting heavy stones.’

Competitive verbs in -š at our disposal can be subdivided into a number of groups.

5.3.1 Competitives denoting sporting events

They derive from both intransitives and transitives.

1. Derived from intransitives:

- | | | |
|----------------------------------|---|---|
| (97) <i>biji-</i> ‘to dance’ | → | <i>biji-š-</i> ‘to compete in dancing’ |
| <i>čab-</i> ‘to run’ | → | <i>čab-əš-</i> ‘to compete in running’ (KB. 720) |
| <i>čəŋa-</i> ‘to jump’ | → | <i>čəŋa-š-</i> ‘to compete in jumping’ (KB. 744) |
| <i>dəbərtla-</i> ‘to rush’ | → | <i>dəbərtla-š-</i> ‘to compete in speed’ (KB.211) |
| <i>džərla-</i> ‘to sing’ | → | <i>džərla-š-</i> ‘to compete in singing’ (KB. 268) |
| <i>džüz-</i> ‘to swim’ | → | <i>džüz-üş-</i> ‘to compete in swimming’ (KB. 271) |
| <i>kijin-</i> ‘to dress oneself’ | → | <i>kijin-iš-</i> ‘to compete in fast dressing’ |
| <i>ojna-</i> ‘to play’ | → | <i>ojna-š-</i> ‘to compete in playing a game’ |
| <i>sekir-</i> ‘to jump’ | → | <i>sekir-iš-</i> ‘to compete in jumping’ (KB. 550) |
| <i>səzyər-</i> ‘to whistle’ | → | <i>səzyər-əš-</i> ‘to compete in whistling’ (KB. 579) |
| <i>tepsə-</i> ‘to dance’ | → | <i>tepsə-š-</i> ‘to compete in dancing’ (KB. 622) |
| <i>uč-</i> ‘to fly, roll, dance’ | → | <i>uč-uš-</i> ‘to compete in flying/dancing’ (KB. 691). |

2. Derived from transitives:

- (98) *kötür-* ‘to raise/lift’ → *kötür-üş-* ‘to compete in weight lifting’
mara- ‘to shoot’ → *mara-š-* ‘to compete in shooting’
sür- ‘to pursue/chase’ → *sür-üş-* ‘to compete in racing’ (KB. 592)
tart- ‘to draw/pull’ → *tart-əš-* ‘to compete in rope pulling.’ (KB. 607).
- (99) a. *Ala barmaq taš džiber-iš-di-le.*
 they finger stone throw-REC-PAST-3PL
 ‘They competed in pushing pebbles with fingers (national sport).’
- b. *Ala basuk səndər-əš-də-la.*
 they bone break-REC-PAST-3PL
 ‘They competed in breaking a sheep’s bone.’
- c. *Ala [biri biri-n] sür-üş-üb bar-a-dəla.* (KB. 592)
 they each other-ACC chase-REC-CONV go-PRES-3PL
 i. ‘They ran competing in speed’, ii. ‘They chased each other.’

5.3.2 *Competitives denoting household activities*

These are derived mostly from transitives:

(100) <i>art</i> - ‘to peel (potatoes)’	→	<i>art-əš</i> - ‘to compete in peeling potatoes’
<i>čal</i> - ‘to mow/make hay’	→	<i>čal-əš</i> - ‘to compete in mowing’
<i>džaj</i> - ‘to gather sth’	→	<i>džaj-əš</i> - ‘to compete in gathering’ (KB. 265)
<i>džaz</i> - ‘to write’	→	<i>džaz-əš</i> - ‘to compete in writing’
<i>išle</i> - ‘to work’	→	<i>išle-š</i> - ‘to compete in work’ (Ba. 177)
<i>oqu</i> - ‘to read’	→	<i>oqu-š</i> - ‘to compete in reading’ (Ba. 177)
<i>or</i> - ‘to reap’	→	<i>or-uš</i> - ‘to compete in reaping’
<i>qarq</i> - ‘to shear’	→	<i>qarq-əš</i> - ‘to compete in shearing’ (KB. 447)
<i>sana</i> - ‘to count sth’	→	<i>sana-š</i> - ‘to compete in counting’ (KB. 539)
<i>saw</i> - ‘to milk’	→	<i>saw-š</i> - ‘to compete in milking’
<i>soj</i> - ‘to skin’	→	<i>soj-uš</i> - ‘to compete in skinning (sheep)’ (KB. 569)
<i>tazala</i> - ‘to groom/tidy’	→	<i>tazala-š</i> - ‘to compete in grooming’
<i>tig</i> - ‘to sew’	→	<i>tig-iš</i> - ‘to compete in sewing’
<i>tomur</i> - ‘to chop’	→	<i>tomur-uš</i> - ‘to compete in chopping’
<i>tut</i> - (<i>balyq</i>) ‘to fish’	→	<i>tut-uš</i> - ‘to compete in fishing’
<i>tuwra</i> - ‘to chop/shred’	→	<i>tuwra-š</i> - ‘to compete in chopping/shredding.’

5.3.3 *Occasional competitives*

These are *ad hoc* derivations elicited from the informant and showing productivity of competitives. Most of them may have a reciprocal meaning as the main one.

(101) a. <i>ajt</i> - ‘to speak’	→	<i>ajt-əš</i> - i. ‘to speak to each other’ ii. ‘to try to surpass sb in talking’
<i>čimd</i> - ‘to pinch’	→	<i>čimd-iš</i> - i. ‘to pinch each other’ (KB. 734) ii. ‘to try to surpass sb in pinching’
<i>čəy</i> - ‘to climb (a mountain, etc.)’	→	<i>čəy-əš</i> - ‘to climb (a mountain) competing’
<i>džab</i> - ‘to close/cover sth’	→	<i>džab-əš</i> - i. ‘to stick to sth’ (lexicalization) ii. ‘to compete in closing/covering at speed’
<i>džulq</i> - ‘to pluck/tear out’	→	<i>džulq-uš</i> - i. ‘to fight/quarrel’ (lexicalization) ii. ‘to pluck fowl competing in speed’
<i>qara</i> - ‘to look/stare’	→	<i>qara-š</i> - i. ‘glance at each other’ (KB. 397) ii. ‘to surpass sb in staring at each other’
<i>seb</i> - ‘to pour/sow/sprinkle’	→	<i>seb-iš</i> - ‘to pour/sow/sprinkle competing’
<i>tuwra</i> - ‘to chop/cut’	→	<i>tuwra-š</i> - i. ‘to fight with swords’ ii. ‘to compete in chopping sth’
<i>tükür</i> - ‘to spit’	→	<i>tükür-üş</i> - i. ‘to spit at each other’ ii. ‘to try to surpass each other in spitting farther.’
b. “Zür, <i>qart kiši, üfgür-üş-ej-əq.</i> ” (B. 60)		
come.on old man blow-REC-IMP.1PL		
‘Come on, old man, let’s compete in blowing.’ (to see which one blows the other away’)		

5.3.4 *Lexicalized competitives*

These are competitives semantically related to the base verbs in a non-standard, individual way: the meaning of competition may be figurative, and polysemy is possible.

- (102) *ajt-* ‘to speak’ → *ajt-əš-* ‘to compete in wit’ (KB. 37)
al- ‘to take’ → *al-əš-* i. ‘to compete in wrestling, dancing’
 ii. ‘to take sth by competing with sb’ (KB. 58)
at- ‘to throw sth’ → *at-əš-* i. ‘to bandy sth’
 ii. ‘to compete in throwing sth’ (KB. 91), cf. (1b), (1d)
kes- ‘to cut/cross’ → *kes-iš-* i. ‘to cut/knife each other’
 ii. ‘to wrestle/compete’ (KB. 330).

5.3.5 Nominal derivation

Nouns may be derived from competitiveness and sociatives in the same way as they are derived from reciprocals (cf. 3.4):

- (103) *ajt-əš-əw* i. ‘competition in wit’, ii. ‘quarrel, argument’ (KB. 37)
at-əš-əw i. ‘shooting competition’, ii. ‘exchange of fire’ (KB. 91)
džarla-š-əw ‘singing competition’. (KB. 268)

6. Lexicalization of verbs with the suffix -š

In case of lexicalization, a derived verb is related to the base verb in a non-standard way semantically. The common feature of lexicalized verbs is that the suffix -š cannot be replaced by the reciprocal pronoun, at least without a perceptible change of meaning. As a rule, lexicalization is a result of diachronical semantic development. In these verbs a lexicalized meaning may be reciprocal (though related to the meaning of the base in an individual way) and non-reciprocal. Thus, *džara-š-* ‘to be on good terms, to get on’ (as in *Ala džara-š-ma-j-dala* ‘They do not get on with each other’) is not related in a standard way to *džara-* ‘to suit, do (for), be good (for)’ (as in *Bu darman džara-j-da* ‘This medicine relieves/is helpful’) (KB. 229-30). Another example is the verb *bol-uš-* ‘to help’ < *bol-* ‘to be/take place/happen’. It is used to express an assistive meaning with infinitives (we remind the reader that the suffix -š is not used to mark the assistive meaning in Karachay-Balkar); e.g. *oqu-rya bol-uš-* ‘to help to learn/read’ (*-rya* = INF; KB. 159).

An interesting case of lexicalization is the verb *ur-uš-* i. ‘to quarrel/squabble’, ii. ‘to scold’ from *ur-* ‘to beat/hit’ (vt). In its second, non-reciprocal meaning it takes a dative object:

- (104) a. *Ata-m sen-i ur-uruq-du.*
 father-my you-ACC beat-FUT.PART-3SG
 ‘My father will beat you.’
 b. *Ata-m sen-ŋe ur-uš-uruq-du.*
 father-my you-DAT beat-REC-FUT.PART-3SG
 ‘My father will scold you.’ (KB. 686)

Some reciprocals, along with the standard semantic relation to the base stem, may have a meaning which is not related in a standard way to any of the meanings of the base verb (cf. the meanings of the base and the derivative in the following examples). Thus, for instance,

in (105b) meaning (i) alone is related in a standard way to meaning (i) in (105a), while (ii) and (iii) are lexicalized meanings.

- (105) a. *qab-* i. 'to bite'; ii. 'to win (e.g. in chess)'; iii. 'to spend'; iv. 'to lose'; v. 'to eat'
 b. *qab-əš-* i. 'to bite each other'; ii. 'to stop/fall silent'; iii. 'to die' (KB. 369, 371).
- (106) a. *tala-* i. 'to bite (of dogs, horses)'; ii. 'to torment'; iii. 'to wash away (of river banks)'
 b. *tala-š-* i. 'to bite each other (of dogs, horses)'; ii. 'to quarrel'; iii. 'to strive for sth' (KB. 599).

The largest group of lexicalized reciprocals denotes hostile and "competitive-aggressive" actions. (107a) is a list of derivatives that are reciprocal in meaning and (107b) is a derivative that retains the meaning of the base verb:

- (107) a. *aw-* i. 'to fall'; ii. 'to cross (a mountain range)' → *aw-uš-* 'to alternate' (KB. 92, 96)
džara- 'to suit' → *džara-š-* 'to be on good terms' (KB. 230)
džulq- 'to pluck/tear out' → *džulq-uš-* 'to quarrel/abuse each other' (KB. 257)
kel- 'to come' → *kel-iš-* i. 'to suit'; ii. 'come to agreement' (KB. 321)
qəzar- i. 'to redden'; ii. 'to be angry' → *qəzar-əš-* 'to quarrel' (KB. 436)
suy- 'to stick/thrust (into)' → *suy-uš-* coll. vulg. 'to fight'
tart- 'to pull/drag', 'beat' → *tart-əš-* 'to argue/quarrel' (KB. 607)
toxta- i. 'to stop'; ii. 'to abate' → *toxta-š-* 'to come to an agreement' (KB. 648)
tur- 'to stand (up)/rise' → *tur-uš-* 'to fight (of bulls)' (KB. 654)
tut- 'to hold, grasp' → *tut-uš-* 'to fight, struggle' (KB. 665)
 b. *soruwla-* 'to inquire' → *soruwla-š-* 'to inquire' (KB. 568).

Discontinuous constructions are usually formed with the postposition *bla* (see (108b, c)). An unexpected phenomenon is the use of the reciprocal pronoun in the accusative with lexicalized reciprocals in *-š* (see (108d)).

- (108) a. *Buya-la tur-uš-a-dəla.* (KB. 654)
 bull-PL stand-REC-PRES-3PL
 'The bulls fight.'
- b. *Ol xonšu bla kel-iš-me-di.* (KB. 321)
 he neighbour with come-REC-NEG-PAST.3SG
 'He did not get on with his neighbour.'
- c. *Seni amaltən an-ə bla qəzar-əš-də-m.* (KB.436)
 you because.of he-GEN with be.angry-REC-PAST-1SG
 'Because of you I quarrelled with him.'
- d. *Ala bir bir-in džulq-uš-də-la.* (KB. 257)
 they each other-ACC pluck-REC-PAST-3PL
 'They quarrelled.'

Less frequent is lexicalization unlinked to the reciprocal or a contiguous meaning. The example with *aŋəla-š-* 'to understand' in (14) above can be amplified by the following cases. In the second of the examples the verb expressing a wish is used only in the imperative sentence quoted. It is not clear why the reciprocal suffix is used. This also applies to (110).

- (109) a. *Škaf ornu-n-dan taj-aš-xan-də / taj-yan-də.* (KB. 598, 614)
wardrobe place-*n*-ABL move-REC-PERF-3SG / move-PERF-3PL
'The wardrobe moved from its place.'
- b. *Tüš-iiŋ igi-ge džorala-š-sən!* (KB. 253)
dream-your good-DAT wish-REC-IMP.3SG
'Let your dream promise good!'
- (110) a. *ojla-* 'to think, ponder'
b. *ojla-š-* i. 'to think, ponder', ii. 'to change one's mind'
c. *ojla-n-* 'to fall to thinking (about sth)'
d. *ojla-n-aš-* (same)
e. *ojla-š-ən-* (same) (KB. 491-2).

7. *Reciproca tantum*

Here belong two-place intransitive verbs and one or two transitive verbs, both reciprocal, and those that imply a response action (cf. 'to resist'), which contain the final *-š* but do not have any underlying verb, though they may be related to materially identical nouns or adverbs with similar meanings.

- (111) a. *Ala öčeš-ib čal-a-dəla.* (KB. 282)
they compete-CONV mow-PRES-3PL
'They compete in cutting hay', lit. 'They cut hay competing.'
- b. *Ala eriš-ib işle-j-dile.* (KB. 771)
they compete-CONV work-PRES-3PL
'They compete in work', lit. 'They work competing.'
- c. *Budaj bla nartüx bir biri-ne qatəš-xan-dəla.* (KB. 402)
wheat and maize each other-DAT mix-PERF-3PL
'Wheat and maize got mixed.'

Verbs of this set are listed in (112). Their non-reciprocal meanings are given along with the reciprocal. On the right, materially identical and semantically close nouns and adverbs are given (see also Zhappuev 1982: 168–70):

- (112) *adžaš-* i. 'to get lost/lose one's way', ii. 'to make a mistake' (KB. 25)
almaš- 'to alternate/replace each other'; cf. *almaš* 'by turns/alternating' (KB. 54-5)
aralaš- 'to alternate'; cf. *aralaš* 'alternating/by turns' (KB. 70, 71)
awuš- 'to alternate' (KB. 96)
demleš- 'to abuse each other/threaten each other with fists' (KB. 201)
eriš- 'to compete' (KB. 771)
eš- 'to plait, weave, roll together' (KB. 779)
keŋeš- 'to exchange opinions' (KB. 324)
küreš- i. 'to wrestle/struggle', ii. 'to try to do sth', iii. 'to be busy with sth'
öčeš- i. 'to argue', ii. 'to compete', iii. 'to bet'; cf. *öč* 'bet' – *öč-eš* 'argument' (KB. 282)
qaraš- i. 'to resist', ii. 'to clutch', ii. 'to become rigid' (KB. 398)
qatəš- i. 'to get mixed', ii. 'to get dishevelled', 'to be confused'; cf. *qat* 'layer' (KB.402)
söleš- 'to talk/speak' (KB. 557)
üleš- 'to divide' (vt) (KB. 784).

8. Denominal reciprocals

8.1 Verbs with the suffix *-la-š*

In comparison with some other Turkic languages, the number of these derivatives is rather small in Karachay-Balkar. The lists below contain all the derivatives of these types we could find in KB and specialist literature. Most of the verbs in (113) are derived from nominal stems (cf. Geljaeva 1982: 57–9).

1. Verbs with reciprocal meanings. Their lexical meanings are typical of lexical reciprocals across languages: ‘to fight’ – ‘to become friends/agree’, ‘to unite’ – ‘to separate’, ‘to exchange greetings’ – ‘to say goodbye to each other’, ‘to approach’ – ‘to move away’, etc. The latter meanings, like the meaning ‘to resist’ (which implies a previous action), are peripheral rather than reciprocal proper, but it is not accidental that in different languages verbs with these meanings may contain a reciprocal marker.

- (113) *ajaq-laš*- ‘to lie down feet to head (of two)’ ← *ajaq* ‘foot’ (KB. 107)
aqal-laš- ‘to discuss’ ← *aqal* ‘viewpoint, opinion’ (KB. 44)
arqa-laš- ‘to live in peace with each other’ ← *arqa* ‘back’ (G. 58)
bir-leš- ‘to get united’ ← *bir* ‘one’ (KB. 149) (cf. (60a))
džaya-laš- ‘fight/take each other by the scruff of the neck’ ← *džaya* ‘collar’ (KB.215)
džan-laš- ‘to approach’ ← *džan* ‘thigh’ (KB. 224)
džuwab-laš- ‘to object/quarrel’ ← *džuwab* ‘reply’ (KB. 260)
džuwuq-laš- ‘to approach’ ← *džuwuq* ‘close, nearby’ (KB. 261)
džəjən-laš- ‘to gather in groups’ ← *džəjən* ‘group, crowd’ (KB. 264)
mammət-laš- arch. ‘to gather for help’ ← *mammət* ‘(collective) help’ (KB. 458)
nöger-leš- arch. ‘to unite/rally’ ← *nöger* ‘partner, comrade, ally’ (KB. 484)
onow-laš- ‘to take counsel’ ← *onow* ‘advice’ (KB. 497)
qarəw-laš- ‘to resist’ ← *qarəw* ‘strength, power’ (KB. 397)
qazan-laš- ‘to live/eat together/live in peace’ ← *qazan* ‘pot, copper’ (KB. 375)
qoltuq-laš- ‘to join arms’ ← *qoltuq* ‘armpit’ (KB. 412)
qoš-laš- i. ‘to mate’, ‘to lie in a pile’ ← *qoš* ‘double, twin’ (adj.) (KB. 417)
salam-laš- ‘to greet/exchange greetings’ ← *salam* ‘greeting’ (KB. 536)
sawda-laš- ‘to bargain’ ← *sawda* ‘bargaining, trade’ (KB. 545)
sawqaldə-laš- ‘to say goodbye to each other’ ← *sawqaldə ajt-* ‘to say goodbye’ (545)
tatax-laš- ‘to become friends’ ← *tatax* ‘bosom friend’ (KB. 608)
til-leš- ‘to come to an agreement’ ← *til* ‘language, speech’ (KB. 635)
uzaq-laš- ‘to move off/away’ ← *uzaq* ‘faraway/distant’ (KB. 479).

2. Verbs with non-reciprocal meanings:

- (114) *džer-leš*- ‘to settle (somewhere)’ ← *džer* ‘place, earth’ (KB. 243)
murat-laš- ‘to intend to do sth’ ← *murat* ‘aim, intention’ (KB. 472)
orun-laš- ‘to be situated/located’ (= *orna-š*-) ← *orun* ‘place’ (KB. 504)
qəjən-laš- ‘to become complicated/difficult’ ← *qəjən* ‘work, difficult’ (KB. 441).

A number of verbs have parallel forms with the suffix *-lan*; cf.:

- (115) *aqəl-laš-* = *aqəl-lan-* ‘to intend to do sth’ (KB. 44); cf. *aqəl-laš-* in (113)
džuwuq-laš- = *džuwuq-lan-* ‘to approach’ (KB. 261); cf. *džuwuq-laš-* in (113)
murat-laš- = *murat-lan-* ‘to intend’ (KB. 472)
orun-laš- = *orun-lan-* (see (115)).

It is probably not accidental that there is a verb *džer-iš-* ‘to be situated/located’ derived from the noun *džer* ‘place, earth’ and semantically close to *džer-leš-* ‘to settle (somewhere)’ with the same root, and also *orna-š-* synonymous to *orun-laš-* ‘to be situated/located’ derived from *orun* ‘place’. It is not clear why these verbal derivatives contain the suffix *-š* or *-laš* though semantically they are not reciprocal.

The suffix *-lan* also occurs on derivatives that are typical of the suffix *-laš*; cf.:

- (116) *qarnaš-lan-* ‘to fraternize’ ← *qarnaš* ‘brother’. (KB. 395)

8.2 Nouns with the suffix *-d-aš*

The suffix *-daš* genetically related to *-laš* is also retained on a small number of nouns derived from nouns (in earlier times these suffixes used to be allomorphs, and they are still allomorphs in Yakut and Kirghiz). There seems to have existed a tendency to formally differentiate the functions of one suffix which has become *-laš* on verbs and *-daš* on nouns (cf. distribution of the suffixes *-la* and *-da* between different verbs; these suffixes form denominal verbs and they are genetically related to the first component of *-la-š* and *-da-š*). Currently both suffixes are unproductive, judging by the KB data and in comparison with Yakut and Kirghiz (cf. also Habichev 1971b: 199–202). The meanings of the nouns in *-daš* are typical of non-derived lexical reciprocals:

- (117) *džer-deš* ‘compatriot’ (Balkar) ← *džer* ‘place, earth’ (KB. 243)
džol-daš ‘comrade, fellow-traveller’ ← *džol* ‘road’ (KB. 251)
kün-deš ‘rival (of women)’ ← *küni* ‘concubine’ (KB. 815)
qarən-daš ‘brother’ (Balkar) ← *qarən* ‘belly’ (KB. 397)
emil-deš ‘foster-brother’ ← cf. *em* ‘breast’, *em-* ‘to suckle’, (*-il-* = PASS)
(KB. 767, H. 201).

9. Lexical reciprocals and their derivatives

9.1 Introductory

This section is an amplification of Section 5, as it concerns polysemy of the suffix *-š*, namely, its anticausative function. But first we shall consider verbs from which anticausatives can be derived. There are numerous three-place lexical reciprocals (which are lexical causatives at the same time) that are used in object-oriented constructions either with or without the reciprocal pronoun. Most commonly they denote connecting things and, less commonly, disconnecting. They retain the lexical reciprocal meaning of the base verb and it is intensified by the suffix *-š*. Semantically close to these verbs are two-place lexical reciprocals taking a plural object, like ‘to gather sth’; they may be tentatively included

in the class of three-place reciprocals, especially because anticausatives can be derived from them by means of a reciprocal marker in a number of languages. Let us consider constructions with the underlying verb *ajər-* 'to separate A from B' (discontinuous construction) or 'to separate A and B / (A+A)' (simple construction) and with its two-place intransitive anticausative derivative with the suffix *-l*.

1. In the discontinuous construction, if the reciprocal arguments (= object referents) are of the same semantic class their positions can be reversed (this is a distinctive feature of lexical reciprocals); cf. (118a) and (118b). In the simple construction the reciprocal pronoun has to be used in order to avoid its elliptical discontinuous interpretation (see (118c)).

- (118) a. Qazawat *biz-ni üjdegi-leri-biz-den ajər-yan-də*. (KB. 40)
 war we-ACC family-PL-OUR-ABL separate-PERF-3SG
 'The war separated us from our families.'
- b. Qazawat *biz-den üjdegi-leri-biz-ni ajər-yan-də*.
 war we-ABL family-PL-OUR-ACC separate-PERF-3SG
 'The war separated our families from us.'
- c. Qazawat *üjdegi-leri-biz-ni [bir biri-n-den] ajər-yan-də*.
 war family-PL-OUR-ACC each other-n-ABL separate-PERF-3SG
 'The war separated our families from each other.'
- d. Qazawat *biz-ni bla üjdegi-leri-biz-ni [bir biri-n-den] ajər-yan-də*.
 war we-ACC and family-PL-OUR-ACC each other-n-ABL separate-PERF
 'The war separated us and our families from each other.' (cf. also (71))

2. In the derived constructions with the anticausative *ajər-əl-* 'to get separated' (cf. (7) and the discussion) the behaviour of the reciprocal arguments is analogous to that in (118). This anticausative can be used with the suffix *-š* to denote reciprocity.

- (119) a. Qazawat *baryan zaman-da biz üjdegi-leri-biz-den ajər-əl-də-la*
 war during time-LOC we family-PL-OUR-ABL separate-PASS-PAST-3PL
 / *ajər-əl-əš-də-la*.
 separate-PASS-REC-PAST-3PL
 'During the war we separated from our families.'
- b. Qazawat *baryan zaman-da üjdegi-leri-biz biz-den ajər-əl-də-la*
 war during time-LOC family-PL-OUR we-ABL separate-PASS-PAST-3PL
 / *ajər-əl-əš-də-la*.
 separate-PASS-REC-PAST-3PL
 'During the war our families separated from us.'
- c. Qazawat *baryan zaman-da üjdegi-leri-biz [bir biri-n-den]*
 war during time-LOC family-PL-OUR each other-n-ABL
ajər-əl-də-la / ajər-əl-əš-də-la.
 separate-PASS-PAST-3PL separate-PASS-REC-PAST-3PL
 'During the war our families separated from each other.'
- d. Qazawat *baryan zaman-da biz bla üjdegi-leri-biz [bir biri-n-den]*
 war during time-LOC we and family-PL-OUR each other-n-ABL
ajər-əl-də-la / ajər-əl-əš-də-la.
 separate-PASS-PAST-3PL separate-PASS-REC-PAST-3PL
 'During the war we and our families separated from each other.' (cf. (58b))

9.2 The suffix *-š* as an anticausative marker. Verbs of joining

Thus, the reciprocal arguments can be discontinuous (see (118a, b), (119a, b)) or simple (see (118c, d) and (119c, d)). In (119), the anticausative carries the suffix *-əl*. Similar anticausatives can be derived from lexical reciprocals by means of the suffix *-š* (these forms seem to be less numerous in Karachay-Balkar than in Yakut). Examples ((120a) and (121a) are analogous to (118c), and (120b) and (121b) are analogous to (119c):

- (120) a. *Ol tiš-ler-i-ni [bir biri-ne] qada-də.* (KB. 373)
 he tooth-PL-his-ACC each other-DAT clench-PAST.3SG
 ‘He clenched his teeth.’ (i.e. the upper and the lower jaws)
- b. *Tiš-ler-i [bir biri-ne] qada-š-əb tur-a-dəla.* (KB. 374)
 tooth-PL-his each other-DAT clench-REC-CONV AUX-PRES-3PL
 ‘His teeth (upper and lower jaws) are clenched.’
- (121) a. *Ol qoj-lar-ə-n [bir biri-ne] džoppula-də.* (KB. 252)
 he sheep-PL-his-ACC each other-DAT gather-PAST.3SG
 ‘He gathered his sheep.’
- b. *Qoj-la [bir biri-ne] džoppula-š-əb džat-a-dəla.* (KB. 253)
 sheep-PL each other-DAT gather-REC-CONV lie-PRES-3PL
 ‘The sheep are lying huddled together.’

(122) is a list of relevant anticausatives. From these derivatives, causative verbs with meanings close to the meaning of the base verbs of these derivational chains can be formed (see (123)).

- (122) *čal-* ‘to spin, twine sth’ → *čal-əš-* ‘to intertwine’ (of sth) (KB. 725)
čulya- ‘to roll up/wrap sth’ → *čulya-š-* ‘to intertwine/get entangled’ (KB. 738)
džalya- ‘to join/combine sth’ → *džalya-š-* ‘to join/combine’ (of sth) (KB. 220)
džoppula- ‘to gather sth’ → *džoppula-š-* ‘to gather’ (KB. 252, 253)
qadawla- ‘to clench sth’ → *qadawla-š-* ‘to get clenched’ (KB. 374)
qawumla- ‘to group sth’ → *qawumla-š-* ‘to group oneself’ (KB. 403)
tizginle- ‘to line sb up’ → *tizginle-š-* ‘to line up’ (KB. 632)
tögerekle- ‘to put in a circle’ → *tögerekle-š-* ‘to stand in a circle/around sth’ (KB.627).

9.3 Derivational chains

Above, we have considered the case when an anticausative verb, i.e. a derivative, is formed from a morphologically unmarked lexical reciprocal. This may be denoted as $L \rightarrow A$ where L stands for a lexical reciprocal, and A for an anticausative. There is another morphological device for analogous semantic oppositions, namely, derivation of a causative verb from an anticausative (or non-causative, i.e. a non-marked intransitive verb). A causative derivative (= C) from an anticausative verb may be roughly synonymous to the base lexical reciprocal (cf. (12) and the text above). In this case the derivational chain is $L \rightarrow A \rightarrow C$ where $L \rightarrow A = C \leftarrow A$, i.e. we observe two synonymous causative oppositions within this chain. Note that in the second opposition (when the valency increases) more standard relations hold than in the first one with valency decrease.

This three-member derivational chain may be termed a standard chain. Besides this, the following incomplete derivational chains are possible:

1. L only.
 2. A only (A here denotes only the presence of the reciprocal suffix or final -š; here belong *reciproca tantum* which have lost the base verb and have no related causatives).
 3. C only (an unlikely chain).
 4. L → A, when there is no C derived from A.
 5. L → A + C, when a lexical reciprocal takes two morphemes simultaneously.
 6. L – A → C, when there is no standard semantic opposition between L and A.
- The following examples illustrate the chains we have registered in Karachay-Balkar.

I. Chain L → A → C.

- | | | | | |
|-------|----|--------------------------|---|------|
| (123) | a. | <i>čal-</i> | ‘to spin/twine sth’ | (vt) |
| | → | b. <i>čal-əš-</i> | ‘to intertwine (of sth)’ | (vi) |
| | → | c. <i>čal-əš-dər-</i> | (same as (a); cf. (12)) (KB. 725) | (vt) |
| (124) | a. | <i>qadawla-</i> | ‘to clench (e.g. teeth)’ | (vt) |
| | → | b. <i>qadawla-š-</i> | ‘to clench’ (e.g. of teeth) (see (120)) | (vi) |
| | → | c. <i>qadawla-š-dər-</i> | (intended meaning same as (a)) | (vt) |

II. Chain L → A.

(No examples so far.)

III. Chain L → A + C.

This case seems to indicate that the sequence *-š-dər-* may function as a single morpheme. Thus this complex derives a causative verb roughly synonymous to the base verb. As a result, a lexical reciprocal which is at the same time a lexical causative though neither meaning is marked formally acquires markers for both meanings without a significant change in its lexical meaning. Similar cases are observed in other Turkic languages as well.

- | | | | | |
|-------|----|------------------------|---|------|
| (125) | a. | <i>bajla-</i> | ‘to tie sth together/into a bundle’ | (vt) |
| | → | b. <i>*bajla-š-</i> | | |
| | → | c. <i>bajla-š-dər-</i> | ‘to tie/link/join sth together’ (KB. 113-4) | (vt) |

IV. Chain L – A → C.

Here an intransitive derivative in *-š* is not semantically related in a standard way to the underlying verb, and the causative semantic opposition is comprised of A and C; e.g.:

- | | | | | |
|-------|----|------------------------|--------------------------------------|------|
| (126) | a. | <i>džab-</i> | ‘to close (e.g. a door)’ | (vt) |
| | → | b. <i>džab-əš-</i> | ‘to get stuck/adhere (to)’ | (vi) |
| | → | c. <i>džab-əš-dər-</i> | ‘to glue/paste sth to sth’ (KB. 214) | (vt) |

V. Chain “A” → C.

Here the symbol A is used arbitrarily – to indicate the semantic node of the underlying verb. This verb may either contain the final *-š* or not. The term “anticausative” here stands for a two-place lexical non-causative reciprocal.

- (127) a. *qatəš-* 'to get mixed'
 b. *qatəš-dər-* 'to mix, stir' (KB. 402) (cf. (11b)).

VI. Chains III and V.

This is an intermediate case: as in Chain V, the underlying verb is a two-place lexical reciprocal (but it is transitive, unlike in Chain V); on the other hand, as in Chain III, the underlying verb takes on the complex suffix, which assumes the form *-uš-dur* in this case, the result being a three-place transitive reciprocal. The form *tut-uš-* does relate semantically to *tut-uš-dur-*. Cf.:

- (128) a. *tut-* 'to correspond to sth, coincide with sth' (see (129a, b)) (vt)
 b. *tut-uš-dur-* 'to let/make sth coincide with sth' (vt)

Sentential examples:

- (129) a. *Anə söz-ü iş-i tut-ma-j-də.* (discontinuous)
 he.GEN word-his deed-ACC coincide-NEG-PRES.3SG
 lit. 'His words do not coincide with his deeds.'
- b. *Anə söz-ü bla iş-i-n bir biri-n*
 he.GEN word-his and deed-his-ACC each other-ACC
tut-ma-j-də-la. (KB. 654) (simple)
 coincide-NEG-PRES-3PL
 'His words and deeds are at variance', lit. '...do not coincide with each other.'
- c. *Ol söz-ü bla iş-i-n tut-uš-dur-ma-j-də.*
 he word-his and deed-his-ACC coincide-REC-CAUS-NEG-PRES-3SG
 'His words and deeds are at variance.'
 lit. 'He does not let his words and deeds coincide.'

9.4 Competition of anticausatives in *-š*, *-l*, *-n*, *-l-əš* and *-n-əš*. Desemantization

It has been mentioned above that, as in the other Turkic languages, anticausatives are also formed by means of *-l* (see (119)) and *-n*, which sometimes results (a) in synonymy with anticausatives in *-š* (we disregard subtle semantic differences), and also (b) in a combination of competing suffixes. Thus when used as an anticausative marker, the suffix *-š* enters into complex relations with the other two voice markers (cf. 2.5 and 2.6). Following are illustrations of some of these cases. In (130) the suffixes *-əl* and *-əl-əš* compete in anticausative derivation (L → A), and in (131) three suffixes *-š*, *-n* and *-nəš* are competing. The complex suffixes *-ləš* and *-nəš* each may be regarded as a result of contamination of two suffixes with similar meanings.

- (130) a. *džəj-* 'to gather' (vt)
 b. *džəj-əl-* i. 'to be gathered', ii. 'to gather' (vi)
 c. *džəj-əl-əš-* 'to gather' (KB. 264) (vi)

Although (131b) is autocausative rather than anticausative in meaning, nevertheless its combination with *-š*, namely (131d), is anticausative:

- (131) a. *čulya-* ‘to roll up/wrap/wind (round sth)’ (vt)
 b. *čulya-n-* ‘to roll/wind itself/oneself’ (vi)
 c. *čulya-š-* ‘to intertwine/get entangled’ (vi)
 d. *čulya-n-əš-* ‘to get tangled (e.g. thread)’ (KB. 738) (vi)

From each of the derived anticausatives (see (130), (131)), a causative form may be derived and these latter forms, judging by the dictionary definitions, are also synonymous to each other and to the base form (132a), i.e. their meaning is ‘to join/combine/couple sth’ (this translation is omitted below). (132) illustrates three variants of the standard three-member chain $L \rightarrow A \rightarrow C$ (cf. (123)).

- (132) a. *džalya-* ‘to join/combine/couple’ vt (*uč-larə-n džalya-* ‘to join the ends of sth’)
 b. *džalya-š-* ‘to join/combine’ (vi), also fig. → *džalya-š-dər-* (vt)
 c. *džalya-n-* ‘to join/combine’ (vi), also fig. → *džalya-n-dər-* (vt)
 d. *džalya-n-əš-* ‘to join/combine’ (vi), also fig. → *džalya-n-əš-dər-* (vt)
 (KB. 220–1).

Compare their figurative use:

- (133) a. *Ol tiširəw-ya džalya-š-də / džalya-n-də / džalya-n-əš-də.*
 he woman-DAT join-REC PAST.3SG join-REFL-PAST.3SG join-REFL-REC-PAST.3SG
 ‘He got married’, lit. ‘He joined each other/himself with a woman.’
 b. *Ata-sə džaš-ə-n tiširəw-ya džalya-š-dər-də / džalya-n-dər-də / džalya-n-əš-dər-də.*
 ‘Father married his son’ (KB. 220–1), lit. ‘Father joined his son with a woman.’

In conclusion, we shall cite the oddest derivational chain where the suffix *-š* is used twice. This is evidence of lexicalization of this suffix and a weakening of its reciprocal meaning (see also (41)–(42)).

- (134) a. *žəjər-/ džəjər-əš-/ džəjər-tər-* ‘to wrinkle (one’s forehead)’ (vt)
 b. *žəjər-əl-* ‘to wrinkle (of face)’ (vi)
 c. *žəjər-əl-əš-* ‘to wrinkle/get distorted (of face)’ (vi)
 d. *džəjər-əl-tər-* i. ‘to wrinkle (one’s face)’ (vt)
 ii. ‘to fry (meat)’ (KB. 264) (vt)

For another example of desemantization of the suffix *-š* appearing in an unclear meaning and co-occurring with the suffix *-n* in either sequence see (110) above. This synonymy of morphologically marked derivatives is truly amazing.

Acknowledgments

The authors are deeply indebted to Azret Ali Hasanov for his conscientiousness and exceptional patience in explaining the subtleties of Karachay to us.

1. Introduction

1.1 Japanese

It is the language spoken by the population of the Japanese Islands (about 124 million). There are over a million of native speakers of Japanese in Brazil, the United States and elsewhere. In accordance with the most widely accepted viewpoint, Japanese is an isolated branch of the Altaic language family. It has a long literary history which goes back to the 8th century. It is extremely rich in dialect variation due to the mountainous character of the country, the dialects often being mutually unintelligible. Moreover, the Ryukyuan

dialects (often mutually entirely unintelligible) can be viewed as an independent language (see Shibatani 1990: 89–118, 191).

1.2 Overview

In Japanese, the reciprocal meaning is expressed morphologically by the suffix *-aw/-at/-a*. Reciprocals with this affix form all the subject-oriented diathesis types of constructions. They are used in both simple and discontinuous constructions (see (1b) and (1c) respectively). Compare (on the morphemic division *-te-ita* see 2.4):

- (1) a. *Taroo wa Akiko o hagemasi-te-ita.*
 T. TOP A. ACC encourage-CONT.PAST
 ‘Taro was encouraging Akiko.’
 a’. *Akiko wa Taroo o hagemasi-te-ita.*
 A. TOP T. ACC encourage-CONT.PAST
 ‘Akiko was encouraging Taro.’
 b. *Taroo to Akiko wa hagemasi-at-te-ita.*
 T. and A. TOP encourage-REC-CONT.PAST
 ‘Taro and Akiko were encouraging each other.’
 c. *Taroo wa Akiko to hagemasi-at-te-ita*
 T. TOP A. with encourage-REC-CONT.PAST
 (same translation as (b)).

The second reciprocal device is the auxiliary noun *otagai/tagai* ‘each other’ which may take case markers and which may be used instead of the reciprocal suffix, with a subtle difference in meaning, (see (1d)) or pleonastically with suffixed reciprocals (see (1e): with this verb it sounds better than (1d)).

- d. *Taroo to Akiko wa otagai o hagemasi-te-ita.*
 T. and A. TOP each.other ACC encourage-CONT.PAST
 (same translation as (b)).
 e. *Taroo to Akiko wa otagai o hagemasi-at-te-ita.*
 (same translation).

Verbs differ in respect of the possibility (and preference) of their use in constructions of types (1b) to (1e).

The noun *otagai* may also render the distributive meaning (‘each of the set of subject/object referents’) which may be its only possible interpretation or a possible interpretation alongside the reciprocal (see also (2b)); cf. (without *-at* this example allows both readings, and with *-at* it allows reading (ii) only):

- f. *Taroo to Akiko wa otagai no kodomo o hagemasi-te-i-ta.*
 T. and A. TOP each.other GEN child ACC encourage-CONT-PAST
 i. ‘Taro and Akiko each were encouraging his/her/their child(ren).’
 ii. ‘Taro and Akiko were encouraging each other’s children.’
 g. *Taroo to Akiko wa otagai no kodomo o hagemasi-at-te-ita.*
 (same translation as (ii), but the subject referents are obligatorily in the same place, while in (f) this is optional).

The reciprocal suffix seems to be of low productivity (or unproductive at all?) as a sociative marker, though it is registered in specialist literature and sometimes turns up in the informants' evaluations.

- h. *Taroo to Akiko wa zibun-tati no kodomo o hagemasi-at-te-ta.*
 T. and A TOP REFL-PL GEN child ACC encourage-REC-CONT-PAST
 'Taro and Akiko were encouraging their own child(ren) together.'
 (We owe the information on sentences (1) to F. Endoo, H. Narrog and T. Takiguchi.)

More productive is the competitive meaning which may be the only meaning of a reciprocal form or one of its possible meanings. Example (2) illustrates both of these meanings (moreover, this derivative may be interpreted as reciprocal with the meaning 'to laugh at each other' if it is related to the transitive meaning 'to laugh at sb' of the base verb). A laughing contest is held annually in certain localities in Japan (T. Tsunoda, p.c.; see (43)).

- (2) a. *Gakusei wa warai-at-ta.*
 student TOP laugh(vi)-REC-PAST
 i. 'The students laughed *together*.' (sociative)
 ii. 'The students *competed* in laughing.' (competitive)
 b. *Gakusei wa otagai-ni warat-ta.*
 student TOP mutually laugh-PAST
 'The students laughed (each separately).' (T. Tsunoda, p.c.) (distributive)
 c. *T. to M. wa T. no yuuzin no si o otagai-ni nageki-at-te-ita.*
 T. and M. TOP T. GEN friend GEN death ACC mutually mourn-REC-CONT
 'T. and M. were mourning the death of T.'s friend together.' (F. Endoo, p.c.)

Forms in *-aw* from certain verbs are polysemous or they are vague. This is particularly characteristic of transitive reciprocals, i.e. when the valency does not undergo any change, and also of embedded reciprocals. These cases cause disagreement among the informants, especially with regard of the number of meanings established and their acceptability (see, for instance (21), (35b), (48)).

Causative verbs are not formed from suffixed reciprocals, as a rule. Thus Japanese does not possess the common way of deriving object-oriented reciprocal constructions. However, there is a limited group (about 85 items) of unproductive mostly lexicalized derivatives with the complex suffix *-aw-ase* (where *-ase* is a causative suffix) commonly used with the meaning 'to bring together' (see 6.1); cf. *nu-u* 'to sew sth' → *nui-aw-ase-ru* 'to sew sth together'. There is also a group of unproductive reciprocal formations – verbs, nouns and adverbs – with an archaic prefix *a-i-* which is genetically identical with the reciprocal suffix *-aw/-at/-a*; cf. *omo-u* 'to love' → *omoi-a-u* 'to love each other' and *ai-omo-u* (same) (see Section 8), and also semantically similar groups with the prefix *soo-* borrowed from Chinese (see Section 12).

Most of Japanese lexical reciprocals do not combine with the reciprocal suffix. Another characteristic feature of Japanese (at least in comparison with the description of other languages in this monograph) is the existence of distant reciprocal constructions (cross-reference takes place not directly but via a third party; see 3.4) and double reciprocal constructions (which describe situations with two or more pairs of participants; see

10.3.2). There is some doubt, however, whether the latter two meanings ever occur in natural discourse of native speakers, and not only in the specialist literature.

1.3 Database

The language data are drawn from dictionaries and specialist literature (see Sources) and also elicited from native speakers (see Acknowledgments). It is interesting to note that the information obtained from the latter sometimes contradicts and does not confirm the data from the Sources. On the other hand, the informants sometimes disagree on various points, which may probably be due to subdialectal differences. It may also reflect individual variation in the use of reciprocals in Japanese. But the main cause of contradictions in evaluations of different speakers and even of the same speaker when asked at intervals (“the best variant” vs. “does not sound right” with regard to one and the same sentence) is, as is usual in such cases, the subtlety of semantic differences between the sentences given for evaluation and, secondly, the relative rarity of constructions under consideration in speech and probably the somewhat unnatural character of the situations described. But sometimes the authors were driven to despair. . . Examples without attribution are elicited from the native speakers or approved by them.

Note that the asterisk on a verb (usually a derivative, including those registered in the dictionaries) or on its meaning signifies that the verb or this meaning is obsolete or unknown to most of the informants asked. On sentences, the asterisk shows that the sentence is considered ungrammatical by most of the informants. The question mark denotes that most of them doubt the acceptability of a verb, or a sentence, or its interpretation. Note that, inevitably, the choice of an asterisk or a question mark or their use in general is sometimes arbitrary.

2. Grammatical notes

2.1 Sentence structure. Case relations. Possessivity

The basic word-order is SOV, the OSV order being possible too. An indirect object usually precedes a direct object. The subject-object relations are marked by adnominal case markers (postpositions, or postpositional particles); there is no subject-predicate agreement. In the case of coordinated noun-phrases the case marker follows the last noun phrase, the preceding noun phrases being marked by a coordinating conjunction or by intonation; the most common conjunction is *to* ‘and’.

The subject marker is *ga*; the direct object marker is *o*; the universal indirect object marker is *ni*. There are also markers for more specialized relations, e.g. the postposition *to* ‘with’ (homonym of the conjunction *to*; see (1c) and (1b) respectively) for the counteragent which is frequent in reciprocal constructions. The markers *ga* and *o* may be replaced by the topic marker *wa* and by a number of other markers (*mo* ‘too’, *demo* ‘even’, etc.).

Possession (alienable and inalienable) is signified by the particle *no* in post-position to the possessor (3b). The same marker is used to indicate attributive relations (3a). It is glossed as GEN:

- (3) a. *Koobe no sensei* b. *sensei no atama*
 Kobe GEN teacher teacher GEN head
 ‘the teacher from Kobe.’ ‘the teacher’s head.’

2.2 Word classes

There is a sharp distinction between nouns and verbs. Nouns are not inflected. Verbs display a complicated inflectional paradigm. A verbal form consists of (a) a stem, (b) one or more non-syntactic suffixes (the reciprocal affix *-aw* is one of them), (c) an ending which signals syntactic position (finite, attributive, adverbial) and denotes tense (for finite and attributive forms) and mood (for finite forms). Verbs are not marked for number and person. The paradigm contains many periphrastic verb forms with auxiliary verbs. Deverbal nouns are formed by means of the suffix *-i*. Among Japanese verbs, there is a large group of denominal derivations with the verb ‘to do’: *su-ru* (NPAST) and *si-ta* (PAST). In this paper, they are spelt together with the base stem; cf. *kekkon* ‘marriage, wedding’ → *kekkonsu-ru* ‘to marry, be married’. The principal process of new word creation both for verbs and nouns is compounding (see Shibatani 1990:237–47). In compound verbs the first component usually has the form of a deverbal noun, cf. *kukur-u* ‘to tie, bind’ → *kukur-i* ‘the act of binding’ + *tuke-ru* ‘to fasten sth to sth’ → *kukuri-tuke-ru* ‘to fasten, tie, bind’ (B. 785, 784, 1523) (see also 2.5.4 and (28)). Formations with the reciprocal marker *-aw/-at/-a* are also regarded by some Japanese linguists as compounds with the verb *a-u* ‘to meet’ whose allomorphs are entirely identical with those of the reciprocal suffix.

Nouns have plural forms indicated by the suffix *-tati*, but expression of plurality is not always obligatory, and a sentence like (4) can be interpreted both ways depending on the context, or it may remain unclear:

- (4) *Inu wa neko o oikake-te-iru.*
 dog TOP cat ACC chase-CONT-NPAST
 ‘The dog chases a cat/cats,’ ‘The dogs chase a cat/cats.’

2.3 Verb classes

There are two main verb classes: verbs proper and qualitative verbs (predicative adjectives). Verbs proper denote actions, states and qualities, while qualitative verbs denote states and qualities only. These two verb classes have distinct sets of affixes. The lexicographic (non-past indicative finite) form of verbs proper has the ending *-ru/-u*, the respective form of qualitative verbs being marked with the ending *-i*. Nearly all qualitative verbs are one-place verbs, the two-place qualitative verbs, e.g. *hitosi-i* ‘equal’, being lexical reciprocals (see (128c) in 11.2.1.1.1).

Verbs proper are divided into the following principal valence classes:

1. One-place intransitives (with the subject marked by the postposition *ga*);
2. Two-place intransitives (the subject is marked by *ga*, and the object by the postposition *ni* roughly corresponding to the European dative case, and by other postpositions);
3. Two-place transitives (the subject – direct object markers are *ga – o*);
4. Three-place transitives (subject – indirect object – direct object markers: *ga – ni – o*).

For the reader's convenience, the syntactic markers are glossed in the examples by the respective European case names (*ga* as NOM, *ni* as DAT, *o* as ACC, *no* as GEN, *de* as LOC).

Attributive verb forms coincide with predicative verb forms in the indicative mood; thus *kai-ta* means 'wrote' as well as '[the one] who has written'.

2.4 Tense/aspect markers

In the examples, the following markers occur:

1. *-u/-ru* for the non-past,
2. *-ta/-da* for the past,
3. *-te-i-ru* for the continuous non-past (and perfect-resultative), and
4. *-te-i-ta* for the continuous past (note that for brevity the latter two sequences are segmented as *-te-iru* and *-te-ita* in examples).

In the latter two forms *-te* (which alternates with *-de*) is a converb marker and *-i-* is the auxiliary verb 'to be' in the non-past and past form respectively. In the lists further below, the verbs are cited in the non-past tense in accordance with tradition; they are translated by the infinitive.

Linking vowels are attached to the preceding or following morpheme at random, as this is irrelevant for our purposes.

2.5 Valency-changing means

Besides the devices of valency change enumerated below, there are a limited number of unproductive devices of increasing and decreasing the verb valency which result in such oppositions as the following (see Kholodovich 1979:28–54; Shibatani 1990:235–7):

- | | | | |
|-----|--|---|--------------------------------------|
| (5) | Intransitive | | Transitive |
| a. | <i>karam-u</i> 'to coil, twine (around)' | → | <i>karam-e-ru</i> 'to (en)twine sth' |
| b. | <i>maz-ar-u</i> 'to get mixed' | ↔ | <i>maz-e-ru</i> 'to mix sth' |
| c. | <i>or-e-ru</i> 'to be broken' | ← | <i>or-u</i> 'to break sth' |
| d. | <i>a(w)-u</i> 'to meet' | → | <i>aw-as-u</i> 'to unite sb/sth' |
| e. | <i>ar-e-ru</i> 'to be ruined' | ↔ | <i>ar-as-u</i> 'to ruin sth' |
| f. | <i>hirak-u</i> 'to open' | = | <i>hirak-u</i> 'to open.' |

2.5.1 Valency-increasing means

There are two principal means of valency increase.

1. The causative suffix *-sase/-ase* (the first allomorph occurs after vowels and the second after consonants). Causativization of intransitive sentences allows two forms of the

causee, *o*-marked and *ni*-marked (the first form is used in the case of coercive causation, like the English ‘make’, and the second for non-coercive causation, rendered by ‘have’). Causativized transitives allow only the *ni*-marked causee which is used with both types of causation (Shibatani 1976:243–5). Compare:

- (6) a. *Taroo ga arui-ta.* ‘Taro walked.’
 → *Ziroo ga Taroo o / ni aruk-ase-ta.* ‘Jiro made/had Taro walk.’
 b. *Taroo ga hon o yon-da.* ‘Taro read a book.’
 → *Ziroo ga Taroo ni / *o hon o yom-ase-ta.* ‘Jiro made/had Taro read a book.’

2. The passive suffix *-rare/-are* (the first allomorph occurs after vowels and the other after consonants) when used in adversative meaning, e.g.:

- (7) a. *Tuma ga yam-u.* ‘(His) wife is ill.’
 b. *Otto ga tuma ni yam-arer-u.* ‘The husband has his wife ill [on him]’, i.e.
 ‘The husband is adversely affected by his wife’s illness.’

2.5.2 Valency-decreasing means

These are:

1. The reciprocal suffix *-aw/-at/-a* (the morphophonemic form is *-aw*; /w/ drops out before all vowels but /a/; it is assimilated before the following /t/). It does not decrease valency in the case discussed in 3.3.

This suffix is added to the verb roots with the help of the meaningless connective suffix *-i* or \emptyset (see example (1)). Generally, the suffix *-i* is added to root-final consonant and also roots with final *-a* and *-o*. There is however a small number of reciprocals in *-aw* derived immediately from consonant-final roots without *-i*; these are probably the most ancient formations; they often have regular correlates, cf., for instance, *tatak-u* ‘to beat, hit’ → *tatak-a-u* ‘to fight’ and *tataki-a-u* ‘to beat/hit each other’, *katar-u* ‘to speak, tell’ → arch. *katar-a-u* ‘to converse’ and *katari-a-u* ‘to converse’.

2. The resultative marker comprised of the converb suffix *-te-* and the auxiliary *ar-u* (this form is polysemous: it also serves as a perfect marker), e.g.:

- (8) a. *Kare wa heya ni e o kake-ta.*
 he TOP room DAT picture ACC hang-PAST
 ‘He has hung a picture in his room.’
 b. *Heya ni e ga kake-te ar-u.*
 room DAT picture NOM hang-CONV have-NPAST
 ‘The picture is hanging in the room.’

3. The passive marker *-rare/-are* when used in a non-adversative meaning, the underlying subject becoming optional; e.g.:

- (9) a. *Sensei wa kodomo-tati o sikat-ta.*
 teacher TOP child-PL ACC scold-PAST
 ‘The teacher scolded the children.’
 b. *Kodomo-tati wa [sensei ni] sikar-are-ta.*
 child-PL TOP teacher DAT scold-PASS-PAST
 ‘The children were scolded [by the teacher].’

There is no morphological reflexive marker which usually decreases valency, as is the case in the Turkic languages (cf. the chapters on Turkic reciprocals in this volume). Instead, the reflexive pronoun *zibun* ‘oneself’ is used (in this respect Japanese is similar to Mongolic and Tungusic languages; see Nedjalkov et al., Ch. 29; Malchukov, Ch. 39; Nedjalkov & Nedjalkov, Ch. 38); e.g.:

- (10) a. *Kare wa Taroo o aisi-te-iru.*
 he TOP Taro ACC love-CONT-NPAST
 ‘He loves Taro.’
 b. *Kare wa zibun [dake] o aisi-te-iru.*
 he TOP oneself only ACC love-CONT-NPAST
 ‘He loves [only] himself.’

2.5.3 Valency-retaining means

Most of the non-syntactic verbal affixes (markers of negation, desire, politeness, etc.) do not change valency. In the “possessive” diathesis type (see 3.3), the reciprocal suffix does not change the verb valency either.

Combinations of several such markers are possible; e.g.:

- (11) *Kare wa ik-ase-rare-taku-nai-des-u.*
 he TOP GO-CAUS-PASS-DES-NEG-POL-NPAST
 ‘He does not want to be made to go.’

2.5.4 Reciprocals and verb compounding

In Japanese linguistics, reciprocals with the component *-aw* which is obviously descended from the verb *a-u* ‘to meet’, ‘to fit’, etc. are usually regarded as compounds of two verbs. It is not accidental that this reciprocal marker is not mentioned among verbal suffixes, such as passive, causative, potential, etc. in Rickmeyer (1995:95–102) (curiously enough, the reciprocal marker *a-i-* (see 9.1) descended from the verb *a-u* is mentioned among the six verbal prefixes in the same book; *ibid.*, 103–4). The point is, verb compounding is extremely widespread in Japanese, and all verbs that occur as recurrent auxiliary components are also used as lexical verbs on their own. It is reasonable to mention these compounds as a background for the development of reciprocals in Japanese and as a system they belong to. Productivity of compounding is witnessed by the fact that Hasselberg (1996) names about 75 verbs that appear in at least 20 compounds each. In this book, about 4,000 compounds are cited. Among them, verbs in *-aw* constitute about 285 compounds (over 400 of such compounds are listed in Himeno (1982:47–50); this list is certainly far from exhaustive) and verbs in *-aw-ase-ru/-aw-as-u* (see Section 6) make up 85 compounds. Sometimes, both components of a compound are close in meaning. These verbs render numerous meanings, most commonly spatial, aspectual and intensifying. Many of these verbs display in these compounds meanings which they do not have when used as independent predicates.

Out of the 75 verbs only 8 appear in the initial position as the first component of compounds. Here are examples with the first recurrent component *ut-u* ‘to beat’, ‘to shoot’ (over 130 compounds):

- (12) a. *koros-u* ‘to kill’ → *uti-koros-u* ‘to shoot sb down, to kill’
or-u ‘to break sth’ → *uti-or-u* ‘to break sth by hitting’
atar-u ‘to correspond’ → *uti-atar-u* ‘to correspond exactly’
ate-ru ‘to hit (the aim)’ → *uti-ate-ru* ‘to hit (the aim) exactly.’

67 verbs out of the 75 mentioned occur in the final position. Here are examples with two *second* recurrent components *kaer-u* ‘to return’ (over 60 compounds) and *kir-u* ‘to cut, tear’ (over 250 compounds):

- b. *mi-ru* ‘to look’ → *mi-kaer-u* ‘to look back’
hibik-u ‘to sound, ring’ → *hibiki-kaer-u* ‘to be reflected (of sounds)’
sak-u ‘to blossom’ → *saki-kaer-u* ‘to blossom again’
sinabi-ru ‘to wilt’ → *sinabi-kaer-u* ‘to wilt completely’
c. *ake-ru* ‘to dawn’ → *ake-kir-u* ‘to dawn completely’
kakuse-ru ‘to hide sb/sth’ → *kakusi-kir-u* ‘to hide everybody/everything’
o-u ‘to pursue’ → *ow-are-kir-u* ‘be pursued to the end’ (-are = PASS)
kam-u ‘to bite’ → *kami-kir-u* ‘to bite through.’

In order to complete the picture, we shall list some of the compounds based on the verb *nu-u* ‘to sew’:

- d. *nui-kaer-u* ‘to alter (a dress, etc.), lit. ‘to re-sew’
nui-kom-u ‘to sew carefully’
nui-age-ru ‘to finish sewing’
nui-awase-ru ‘to sew sth and sth together’
nui-kake-ru ‘to be engaged in sewing’
nui-naos-u ‘to sew sth anew’, etc.

Note that both the verb *a-u* ‘to meet, etc.’ and practically all the other verbs in question are used in these compounds in various meanings. On the whole, these (semi-auxiliary?) verbs can be compared to the detachable and non-detachable first components of German compounds and derivatives (e.g. *hinaus-*, *hinunter-*, *hinauf-*, *auseinander*, *zer-*).

3. Reciprocals with the suffix *-aw/-at/-a*. Subject-oriented reciprocals only

The three diathesis types of subject-oriented reciprocals, “canonical” (derived from two-place transitives and two-place intransitives), “indirect” (derived from three-place transitives) and “possessive” (derived from two-place transitives which partly overlap with the base verbs of the “canonical” type), can be grouped in two overlapping ways with regard to the type of cross-coreferentiality and intransitivity/transitivity:

1. Constructions with subject-object cross-co-referentiality (“canonical” and “indirect” reciprocals) vs. constructions with subject-attribute cross-coreferentiality (“possessive” reciprocals)

2. Intransitive reciprocal constructions (“canonical” reciprocals) vs. transitive reciprocal constructions (“indirect” and “possessive” reciprocals).

3.1 “Canonical” reciprocals

These reciprocals derive from numerous verbs. Their distinctive feature is omission of a direct or the only non-direct object co-referential with the subject. The derived construction is intransitivized if the direct object is deleted and it remains intransitive in the second case. In both cases the derived construction is one-place (see, however, discontinuous constructions in 4.2).

3.1.1 *Derived from two-place transitives*

This is the main type of reciprocals statistically prevalent in texts, which is only to be expected given the prevalence of two-place transitives among the verbs which may serve as source verbs for reciprocals. The underlying verb is intransitivized by the reciprocal suffix:

- (13) a. *Taroo wa Akiko o aisi-te-iru.*
 T. TOP A. ACC love-CONT-NPAST
 ‘Taro loves Akiko.’
 b. *Taroo to Akiko wa aisi-at-te-iru.*
 T. and A. TOP love-REC-CONT-NPAST
 ‘Taro and Akiko love each other.’

Derivations in (1) and (13) can be supplemented by the following:

- | | | |
|-------------------------------------|---|---|
| (14) <i>dak-u</i> ‘to embrace’ | → | <i>daki-a-u</i> ‘to embrace each other’ |
| <i>damas-u</i> ‘to deceive’ | → | <i>damasi-a-u</i> ‘to deceive each other’ |
| * <i>hes-u</i> ‘to press’ | → | <i>hesi-a-u</i> ‘to push each other aside’ |
| <i>hiansu-ru</i> ‘to criticize’ | → | <i>hiansi-a-u</i> ‘to criticize each other’ |
| <i>kakae-ru</i> ‘to embrace’ | → | <i>kakae-a-u</i> ‘to embrace each other’ |
| <i>kobusu-ru</i> ‘to inspire sb’ | → | <i>kobusi-a-u</i> ‘to inspire each other’ |
| <i>koros-u</i> ‘to kill’ | → | <i>korosi-a-u</i> ‘to kill each other’ |
| <i>massaazisu-ru</i> ‘to massage’ | → | <i>massaazisi-a-u</i> ‘to massage each other’ |
| <i>nade-ru</i> ‘to touch, stroke’ | → | <i>nade-a-u</i> ‘to touch/massage each other’ |
| <i>nagur-u</i> ‘to hit’ | → | <i>naguri-a-u</i> ‘to hit each other’ |
| <i>nonosir-u</i> ‘to scold’ | → | <i>nonosiri-a-u</i> ‘to scold each other’ |
| <i>osinoke-ru</i> ‘to push sb away’ | → | <i>osinoke-a-u</i> ‘to push each other away’ |
| <i>os-u</i> ‘to push’ | → | <i>osi-a-u</i> ‘to push each other’ |
| <i>seme-ru</i> ‘to reproach’ | → | <i>seme-a-u</i> ‘to reproach each other’ |
| <i>sonkeisu-ru</i> ‘to respect’ | → | <i>sonkeisi-a-u</i> ‘to respect each other’ |
| <i>syukusu-ru</i> ‘to congratulate’ | → | <i>syukusi-a-u</i> ‘to congratulate each other’ |
| <i>tasuke-ru</i> ‘to help’ | → | <i>tasuke-a-u</i> ‘to help each other.’ |

3.1.2 *Derived from two-place intransitives*

The underlying verb takes an indirect object, most commonly with the dative particle *ni*, which is deleted in the derived construction:

- (15) a. *Taroo wa Ziroo ni ozigisi-ta.* ‘Taro greeted Jiro (by bowing).’
 b. *Taroo to Ziroo wa ozigisi-at-ta.* ‘Taro and Jiro greeted each other.’

(16) is a list of this type of derivations. It contains many verbs denoting an action which presupposes another action or reaction (e.g., if A greets B, B usually reciprocates the greeting).

(16)	<i>aisatusu-ru</i> ‘to greet sb’	→	<i>aisatusi-a-u</i> ‘to greet each other’
	<i>hanare-ru</i> ‘to move away from sb’	→	<i>hanare-a-u</i> ‘to move away from each other’
	<i>hantaisu-ru</i> ‘to object to sb’	→	<i>hantaisi-a-u</i> ‘to object to each other’
	<i>kamituk-u</i> ‘to bite’	→	<i>kamituki-a-u</i> ‘to bite each other’
	<i>kansyasu-ru</i> ‘to thank sb’	→	<i>kansyasi-a-u</i> ‘to thank each other’
	<i>motare-ru</i> ‘to lean against sb/sth’	→	<i>motare-a-u</i> ‘to lean against each other’
	<i>ozigisu-ru</i> ‘to make a bow’	→	<i>ozigisi-a-u</i> ‘to make a bow to each other’
	<i>renrakusu-ru</i> ‘to contact sb’	→	<i>renrakusi-a-u</i> ‘to communicate’
	<i>somuk-u</i> ‘to rebel against sb’	→	<i>somuki-a-u</i> ‘to revolt against each other’
	<i>tayor-u</i> ‘to depend on sb/sth’	→	<i>tayori-a-u</i> ‘to depend on each other’
	<i>tikazuk-u</i> ‘to approach sb/sth’	→	<i>tikazuki-a-u</i> ‘to approach each other.’

3.2 “Indirect” reciprocals

The base verbs are three-place transitives: they take two objects, direct and indirect (mostly dative; hence the name of this type, but this term should be regarded as a cover label). The latter object is deleted in a reciprocal construction while the direct object is retained; cf.:

- (17) a. *Taroo ni kai-ta mono o minna-de mise-masi-ta.*
 T. DAT write-PAST thing ACC all show-POL-PAST
 ‘All (of them) showed the writing to Taro.’
- b. *Kai-ta mono o minna-de mise-a-imesi-ta.* (Kh. 11)
 write-PAST thing ACC all show-REC-POL-PAST
 ‘All (of them) showed each other the writing’; cf. also:
- c. *Taroo to Akiko ga zibun no kangae o osie-at-ta.* (N. 170)
 T. and A. NOM self GEN idea ACC tell-REC-PAST
 ‘Taro and Akiko told about their (lit. ‘self’s’) ideas to each other.’

In contrast to some other languages whose “indirect” constructions may be two-diathesis (subject- and object-oriented) and thus allow two interpretations (see, for instance, Malchukov, Ch. 39 on Even, §3.1.1.3), Japanese “indirect” constructions do not allow object-oriented interpretation: cross-reference is possible only between the subject referents. Thus in (17d) the subject cannot be singular and reading (ii), which is possible and common with a singular subject, is ruled out (see Nishigauchi 1992: 161); this example is followed by its underlying construction:

- d. *Taroo to Ziroo ga Akiko to Noriko o syookaisi-at-ta.*
 i. ‘Taro and Jiro introduced to each other Akiko and Noriko.’
 ii. *‘Taro and Jiro introduced Akiko and Noriko to each other.’ (i.e. Akiko to Noriko and Noriko to Akiko.)

Reading (ii) is possible only as a result of causative transformation; see (25).

- e. *Taroo wa Ziroo ni Akiko o syookaisi-ta.*
 T. TOP Z. DAT A. ACC introduce-PAST
 'Taro introduced Akiko to Jiro.'

Here is a list of this type of derivations:

- | | | |
|---|---|--|
| (18) <i>abise-ru</i> 'to pour sth on sb' | → | <i>abise-a-u</i> 'to pour sth on each other' |
| <i>atae-ru</i> 'to give sth to sb' | → | <i>atae-a-u</i> 'to give sth to each other' |
| <i>hakensu-ru</i> 'to direct sb to sb' | → | <i>hakensi-a-u</i> 'to direct sb to each other' |
| <i>kakus-u</i> 'to hide sth from sb' | → | <i>kakusi-a-u</i> 'to hide sth from each other' |
| <i>mise-ru</i> 'to show sth to sb' | → | <i>mise-a-u</i> 'to show sth to each other' |
| <i>nage-ru</i> 'to throw sth to sb' | → | <i>nage-a-u</i> 'to throw sth to each other' |
| <i>nusum-u</i> 'to steal sth from sb' | → | <i>nusumi-a-u</i> 'to steal sth from each other' |
| <i>okur-u</i> 'give sth as a present to sb' | → | <i>okuri-a-u</i> 'to give presents to each other' |
| <i>osie-ru</i> 'to explain sth to sb' | → | <i>osie-a-u</i> 'to explain sth to each other' |
| <i>syookaisu-ru</i> 'introduce sb to sb' | → | <i>syookaisi-a-u</i> 'to introduce sb to each other' |
| <i>uba-u</i> 'to take sth away from sb' | → | <i>ubai-a-u</i> 'to take sth away from each other.' |

3.3 "Possessive" reciprocals

They differ from the above two types in that they do not change their valency: the direct object is retained and its possessive attribute is deleted; the list of these verbs overlaps with that under 3.1.1 (e.g. *naguri-a-u*, *hiansi-a-u*, *syukusi-a-u*, *massaazisi-a-u* occur in both lists).

- (19) a. *Boku wa kare no te o nigit-ta.*
 I TOP he GEN hand ACC grasp-PAST
 'I grasped his hand.'
- b. *Karera wa te o nigiri-at-te-ita.*
 they TOP hand ACC grasp-REC-CONT-PAST
 'They were holding each other's hands.'
- (20) a. *Taroo to Akiko wa te o tori-at-ta.*
 T. and A. TOP hand ACC take-REC-PAST
 'Taro and Akiko took each other's hands.'
- b. *Taroo to Mitiko wa zibun-tati no senaka o massaazisi-at-ta.*
 T. and M. TOP one's.OWN-PL GEN back ACC massage-REC-PAST
 'Taro and Mitiko massaged each other's backs.'
- c. *Taroo to Akiko ga atama o naguri-at-ta.* (N. 178)
 T. and A. NOM head ACC hit-REC-PAST
 'Taro and Akiko hit each other on the head.' (lit. 'each other's head.')
- d. *Taroo to Akiko ga kai-ta ronbun o hinansi-at-ta.* (N. 179)
 T. and A. NOM write-PAST paper ACC criticize-REC-PAST
 'Taro and Akiko each criticized the paper that the other wrote.'
- e. *Karera wa seikoo o syukusi-at-ta.* (Kh. 11)
 they TOP success ACC congratulate-REC-PAST
 'They congratulated each other on their success.'

3.4 Distributive meaning; distant reciprocal constructions by default

Judging by the interpretation of example (21) cited by Nishigauchi (1992:176), this type of construction with a suffixed reciprocal is found in a sentence containing an embedded clause (placed between subject and predicate of the matrix clause). It describes a situation where the subject referents of the main clause in (21e) (Akiko and Noriko) interact with each other *via a third party* (the boys) and *not immediately with each other*; cf. (21c) and (21d). The verb *siraberu* in the meaning ‘to check’ combines with names of situations, phenomena, things, etc., but not with human nouns (cf. (21a) and (21b)). Besides reading (i) in (21e) suggested by Nishigauchi (1992:176), two more readings are possible: (ii) and (iii) (p.c. M. Shibatani). It seems possible to subsume these readings in reading (iv). Interpretations (ii), (iii) and (iv) are assessed by some of our informants as possible though not preferable.

- (21) a. **Akiko to Noriko ga sirabe-at-ta.*
 A. and N. NOM check-REC-PAST
 (intended meaning:) ‘Akiko and Noriko checked each other.’
- b. *Akiko to Noriko ga heya no naka o sirabe-ta.*
 A. and N. NOM room GEN inside ACC check-PAST
 ‘Akiko and Noriko checked the room.’
- c. *Akiko ga {dono otokonoko ga Noriko o sasot-ta ka} sirabe-ta.*
 A. NOM which boy NOM N. ACC invite-PAST Q check-PAST
 ‘Akiko checked {which boy asked Noriko out}.’
- d. *Noriko ga {dono otokonoko ga Akiko o sasot-ta ka} sirabe-ta.*
 ‘Noriko checked {which boy asked Akiko out}.’
- e. *Akiko to Noriko ga {dono otokonoko ga sasot-ta ka}*
 A. and N. NOM which boy NOM ask.out-PAST Q
sirabe-at-ta.
 check-REC-PAST
- i. ‘Akiko and Noriko *each* checked which boy asked the *other* out.’ (N. 176)
 ii. ‘Akiko_i and Noriko_j *each* checked which boy asked Akiko_i and Noriko_j out.’
 iii. ‘Akiko and Noriko *each* checked which boy asked *someone else* out.’
 iv. ‘Akiko and Noriko *each* checked which boy asked *them or someone else* out.’

(21e) in reading (i) is an example of a “canonical” reciprocal construction; distant “indirect” and “possessive” constructions are not accepted by the informants; even reading (iv) of (21e) is rather exotic though grammatical. Two more readings of (21e), competitive and sociative have also been added by one of our informants who rejected the previous four readings:

- v. ‘Akiko and Noriko *competed* in checking which boy asked them out.’
 vi. ‘Akiko and Noriko *together* checked which boy asked out someone else.’
 (Y. Nagayama, p.c.; see also Nishigauchi (1992:176))

Constructions like (21e) are not registered (so far?) in the other languages of this collective monograph.

3.5 Simultaneity and succession

Subevents within a situation expressed by a morphological reciprocal can be simultaneous or successive, i.e. happening one after another immediately or at different times. This depends on the lexical meaning of a reciprocal verb and on some pragmatic factors. Thus the reciprocal under (22a) denotes simultaneous actions of two participants (A hugs B and B hugs A at the same time), while the reciprocals under (22b) cannot, as a rule, denote simultaneous actions; the reciprocal under (22c) may have both readings depending on the situation. Himeno (1982: 24–5) even claims that practically all reciprocals may express both simultaneous and successive actions depending on the context, and only a few verbs allow one of the readings.

- (22) a. *kakae-a-u* 'to hug each other'
 b. *hakari-a-u* 'to weigh each other'
 iki-ikisi-a-u 'to visit each other'
 katagurumasi-a-u 'to give each other a "ride" on the back'
 oikake-a-u 'to pursue each other'
 okosi-a-u 'to wake each other up'
 tazune-a-u 'to visit each other'
 c. *keri-a-u* 'to kick each other.'

The actions are not simultaneous if a reciprocal verb denotes transference to or from the position of the counteragent, an exchange of positions or influence on the counteragent (Himeno 1982: 26–7).

Succession of reciprocal subevents may be explicated by adverbs indicating alternate performance of the actions by two or more subject referents: *kootai-ni* 'by turns, in turn', *zyunban-ni* 'one after another' or *tugi-tugi-ni* 'one after another'. The latter adverb seems to be more acceptable in (23a) for the informants (some of whom rejected the use of the first two adverbs in (23a)).

- (23) a. *Taroo to Akiko wa zyunban-ni / kootai-ni / tugi-tugi-ni damasi-at-ta.*
 'Taro and Akiko deceived each other in turn/by turns.' (see also 5.3)
 b. *Taroo to Akiko wa zyunban-ni / kootai-ni / tugi-tugi-ni hakari-at-ta.*
 i. (with *zyunban-ni*) 'Taro and Akiko weighed each other in turn/by turns.'
 (subevents follow immediately one after another).
 ii. (with *kootai-ni*) 'Taro and Akiko weighed each other.'
 (not necessarily immediately, may be on different days.' (H. Narrog, p.c.)

In some instances, collocation with *zyunban-ni* is determined by the type of construction (three participants in (23d)).

- c. **Taroo to Akiko wa zyunban-ni daki-at-ta.*
 (intended meaning:) 'Taro and Akiko embraced each other in turn.'
 d. *Taroo to Akiko wa sono gaikoku-zin to zyunban-ni daki-at-ta.*
 'Taro and Akiko embraced with this foreigner in turn.' (cf. also 5.3)

As a rule, reciprocals do not take the sociative adverb *issyō-ni* 'together' which presupposes simultaneity and cooperation (in many other languages, adverbs with this meaning

behave in the same way), but the informants allow the adverb *tomo-ni* (which does not presuppose simultaneity) with some reciprocals.

- e. **Taroo to Ziroo wa issyo-ni naguri-at-te-ita.*
lit. ‘Taro and Jiro were hitting each other together/in collaboration.’

Collocation with the adverb of simultaneity *doozi-ni* is not clear: the informants differ on this point.

- f. ?*Taroo to Ziroo wa doozi-ni naguri-at-te-ita.*
‘Taro and Jiro were hitting each other simultaneously.’

3.6 Unproductivity of causatives from reciprocals and reciprocals from causatives

3.6.1 Object-oriented constructions

With the exception of a limited number of mostly three-place reciprocals derived by means of the unproductive lexicalized reciprocal-causative complex suffix *-aw-ase* (see Section 6; but this sequence is not as a rule a “sum” of the components), suffixed reciprocals have no causative derivatives with the suffixes *-sase/-ase*, i.e. they have no related object-oriented constructions. Thus, for instance, the reciprocals *nirami-a-u* ‘to glare at each other’ and *nonosiri-a-u* ‘to curse each other’ when causativized into *nirami-aw-ase-ru* and *nonosiri-aw-ase-ru* with the intended meanings ‘to make/let sb glare at each other’ and ‘to make/let sb berate each other’ are not readily acceptable (Y. Yamakoshi points out that lexicalized *nirami-aw-ase-ru* is used in dog and cock fighting when the animals are brought together before a fight). Possible, but still awkward versions are *nirami-awa-s-ase-ru*, etc. with epenthetic *-s-* with the transitive ending used for the verb *a-u-* (‘to meet’) related to the reciprocal suffix. But this *-s-* does not occur with the reciprocal verbs like those cited (M. Shibatani, p.c.). Causatives from reciprocals, however, seem to be grammatical, as they are mentioned in specialist literature (see, for instance, Nishigauchi (1992: 173); cf (24c)) but most of our informants say “they do not sound right” though they understand the intended meaning. In the examples that follow the verb *nagur-u* ‘to hit’ and its derivatives can be replaced by other verbs from (14), e.g. by *dak-u* ‘to embrace’, *tasuke-ru* ‘to help’ and their derivatives.

- (24) a. *Taroo wa Ziroo o nagut-ta.*
‘Taro hit Jiro.’
→ b. *Karera wa naguri-at-ta.*
‘They hit each other.’
→ c. ?*Kare wa karera o naguri-aw-ase-ta.*
he TOP they ACC hit-REC-CAUS-PAST
‘He made them hit each other.’

Though type (24c) constructions, i.e. causative derivations from suffixed reciprocals, are regarded by our informants as not quite acceptable or unacceptable, a causative construction with the intended meaning as in (24c) can be formed from a different type of reciprocal, namely from a construction with *otagai o* according to the general rule of causative derivation from transitive constructions (the underlying subject is marked with

ni in the causative construction; see (6b) and the discussion). It is interesting to note that a causative construction is accepted even by those informants who do not accept the underlying construction with *otagai o*. It is not quite clear why the informants accept (24f), i.e. a construction with reversed case markers on the objects in (24e) (which entails a slight shift in meaning). As mentioned above, (24e) is definitely derived from (24d); but there seems to be no analogous underlying structure for (24f), which is also probably descended from (24d).

- d. ²*Karera wa otagai o nagut-ta.*
 they TOP each.other ACC hit-PAST
 'They hit each other.'
- e. ²*Kare wa karera ni otagai o nagur-ase-ta.*
 he TOP they DAT each.other ACC hit-CAUS-PAST
 'He made them hit each other.'
- f. *Kare wa karera o otagai ni nagur-ase-ta.*
 'He let them hit each other.' (T. Takiguchi and F. Endoo, H. Narrog, p.c.)

Here is one more example violating the above mentioned restriction on causative derivation from suffixed reciprocals (cf. also (17d) and (25a)). Besides, constructions like (24e) (see (25b)) and (24f) (see (25c)) are possible here:

- (25) a. *Taroo ga Akiko to Noriko o syookaisi-aw-ase-ta.*
 'Taro made Akiko and Noriko introduce themselves to each other.' (F. Endoo, p.c.)
- b. *Taroo ga Akiko to Noriko ni otagai o syookais-ase-ta.*
 (same translation).
- c. *Taroo ga Akiko to Noriko o otagai ni syookais-ase-ta.*
 (same translation; F. Endoo, H. Narrog, p.c.)

3.6.2 Subject-oriented constructions

On the other hand, reciprocals derived from three-place causatives (see (26c)) which are in their turn derived from two-place transitives (Himeno 1982:42; Martin 1988:451) are considered by our informants as even less acceptable than (24c). As a substitute for (26c) they suggest a sentence with *otagai ni* 'mutually', 'each other' though they describe it as "a bit OK but not perfect"; see (26).

- (26) a. *yom-u* 'to read sth'
- b. *yom-ase-ru* 'to cause sb to read sth'
- c. *yom-ase-a-u* 'to cause each other to read sth' (HI. 42)
- d. *Karera wa otagai-ni mazimena hon o yom-ase-ru.*
 they TOP mutually serious book ACC read-CAUS-NPAST
 'They make each other read serious books.' (T. Tsunoda, p.c.)

3.7 Other restrictions on reciprocal derivation

Morphological reciprocals are not derived from many lexical reciprocals (see 11.1). By definition, they are not derived from one-place intransitives (e.g. *sin-u* 'to die', *umare-ru* 'to be born', etc.) and two- and three-place verbs without human objects (e.g. *kansokusu-ru*

‘to observe sth, not sb’, *sirabe-ru* ‘to check sth’; see, however, 3.3 and (21)). Some of these restrictions are non-trivial from the viewpoint of speakers of European languages. Thus, for instance, the sentence ‘They forgot each other’ cannot be translated into Japanese literally, but only as ‘They forgot each other’s affairs’, without a morphological reciprocal; in this case the nominal reciprocal with *otagai* is used:

- (27) *Taroo to Akiko wa otagai no koto o wasure-ta* /**wasure-at-ta*.
 T. and A. TOP each.other GEN affair ACC forget-PAST/forget-REC-PAST
 ‘Taro and Akiko forgot each other.’ (M. Shibatani, p.c.)

This construction is formally identical with the “possessive” type (see 10.2.3.2)

It is difficult to suggest any generalizations for those cases when reciprocals cannot be derived. In 3.6 a morphological cause is named, viz. the causative suffix *-sase/-ase* in the verb structure. We might add to this the absence of reciprocals from many combined verbs composed of two roots (M. Shibatani, p.c.), e.g.:

- (28) *aite-dor-u* (lit. ‘opponent+take’) ‘to treat sb as an opponent’
keri-age-ru (lit. ‘kick+raise’) ‘to kick sb up’
naguri-taos-u (lit. ‘hit+fell’) ‘to knock sb down/off his feet’
tobi-kaka-ru (lit. ‘jump+hang’) ‘to attack sb’
tuite-yuk-u (lit. ‘after+go’) ‘to follow sb’
oi-tuk-u (lit. ‘pursue+stick’) ‘to catch up with sb’

Semantic causes cannot be the main ones since reciprocals can be formed from verbs denoting pragmatically rare or unlikely situations; e.g.:

- (29) *taihosu-ru* ‘to arrest sb’ → *taihosi-a-u* ‘to arrest each other’
mitibik-u ‘to lead sb’ → *mitibiki-a-u* ‘to lead each other.’

From the following verbs, reciprocals are not formed. We have no explanation why; these may be individual restrictions which do not submit to generalization (in brackets, the intended meaning of the derivatives is given). For verbs with meanings like ‘to overcome sb’, ‘to catch up with sb’, ‘to follow sb’, the absence of a reciprocal is accounted for pragmatically, though some other languages allow reciprocals from verbs with similar meanings (see, for instance, Kuular, Ch. 27 on Tuvan, examples (55), (58); and Penchev, Ch. 13 on Bulgarian, §10).

- (30) a. *katu/utikat-u* ‘to overcome sb’ → **kati-a-u*/**utikati-a-u* (‘to overcome each other’,
 e.g. by turns, etc.)
sar-u ‘to leave’, ‘to go away from sb’ → **sari-a-u* (‘to leave each other’)
toozakar-u ‘to keep distance from sb’ → **toozakari-a-u* (‘to keep distance from
 each other’)
kure-ru ‘to give’ → **kure-a-u* (to give sth to each other’) (Hi. 40)
i-ru ‘to shoot, fire’ → **i-a-u* (‘to shoot at each other’) (Hi. 40)
 ?*war-u* ‘to divide sth into several parts’ → **wari-a-u* (though there is a corre-
 sponding deverbal nominal *wari-a-i* ‘proportion’).

The expected meaning for **wari-a-u* is ‘to divide sth among themselves’, by analogy with reciprocals in some other languages. The verb *wakat-u* ‘to divide’, ‘share with sb’ has a

form in *-aw* but it is sociative in meaning; cf. *wakati-a-u* ‘to divide sth together’ (Hi. 25); the latter reading is probably not far different from the reading ‘to divide sth among themselves’).

As is often the case, the informants’ opinions diverge: some of them find the following reciprocals (cited from the dictionaries) more or less acceptable (but rarely used) while the others reject them without hesitation:

- | | | | |
|----|-------------------------------|---|--|
| b. | <i>mi-ru</i> ‘to look, see’ | → | <i>mi-a-u</i> ‘to look at each other’ (M. 1087) |
| | <i>mat-u</i> ‘to wait for sb’ | → | <i>mati-a-u</i> ‘to wait for each other’ (B. 859). |

4. Expression of reciprocal arguments

There are two ways of expressing reciprocal arguments. All morphological reciprocals allow both ways though not in equal measure, i.e. different lexical groups may differ in this respect. By way of anticipating the discussion, we shall note that as a rule *otagai o* (see (1d)) occurs in simple constructions (see 10.2.4).

4.1 Simple reciprocal constructions

In this case both reciprocal arguments are expressed by the subject with the subject marker *ga* or with the topic marker *wa*. In reciprocal constructions, the subject should be semantically plural; as in non-reciprocal constructions, the subject can be a single word with a plural meaning (see, for instance, (4)) or by two or more words linked by the coordinative conjunction *to* (see (1b), etc.) and other means (see Kholodovich 1978: 10–2). The former may be termed homogeneous reciprocal arguments, and the latter heterogeneous reciprocal arguments. Both types of subject expression are equal pragmatically. The conjunction *to* may be repeated after each noun (see (32)).

4.2 Discontinuous reciprocal constructions; comitative only

This heading means that the discontinuous reciprocal construction contains only a noun phrase with the postposition *to* ‘with’ (but a noun phrase of this type occurs not only in reciprocal constructions). Thus the first argument is marked by the nominative marker *ga* (or by *wa* in its place), and the second by the comitative marker *to* with the main comitative meaning (as mentioned above, homonymous to the coordinative conjunction *to*; similar homonymy of comitative and coordinative markers is attested in many other languages: Turkic, Quechua, Swahili, Fula, etc.; cf., among others, Kuular, Ch. 27 on Tuvan, §1.2; van de Kerke, Ch. 31 on Bolivian Quechua, §3.1). This meaning is defined by a Japanese researcher as follows: “A person or a thing having a form of existence which has equal relations with a form of existence of his (her, its) partner” (Kaneko 1984: 33). The comitative meaning may be emphasized by the adverb *issyoni* ‘together’. In both cases,

i.e. with and without *issyo-ni*, the first participant is topicalized. (In (31a) the case marker *e* denotes direction.)

- (31) a. *Taroo to Akiko wa Nara e it-ta.* 'Taro and Akiko went to Nara.'
 b. *Taroo wa Akiko to [issyo-ni] Nara e it-ta.* 'T. went to Nara [together] with A.'

Sentence (31a) allows the reading that they went separately. Insertion of *issyo-ni* 'together' resolves the ambiguity. (31b) is not ambiguous with or without this adverb. In (31b), the semantic roles of the subject referent and the comitative phrase referent are identical and they are in symmetrical relation. The postposition *to* 'with' is a lexical reciprocal: *A is going with B* implies that *B is going with A*. However, as mentioned above, the arguments are unequal pragmatically, and/or grammatical difference can be observed. The reciprocal remains two-valent semantically. Compare:

- (32) a. *Ozi to sono hito to wa hanasi-te-ita.*
 uncle and this man and TOP talk-CONT-PAST
 'Uncle and this man were talking.'
 b. *Ozi to sono hito to wa hanasi-at-te-ita.*
 uncle and this man and TOP talk-REC-CONT-PAST
 'Uncle and this man were talking with each other.'

It is but natural that the subject of a reciprocal verb should be plural. In (32c) the noun preceding the topic marker is singular; therefore the comitative *to* phrase, as Nishigauchi (1992: 162) points out, "behaves as part of the subject", but substitution of *to issyo-ni* ('together with') for *to* 'with' is impossible in this case (ibid., with reference to Miyake), i.e. the comitative group here is a full-fledged subject; cf. (31b); but the comitative group can be separated from the subject by other words (see *itizikan* 'for one hour' in (32d); cf. Nishigauchi (1992: 162)), which makes it intermediate between subject proper and a complement.

- c. *Ozi wa sono hito to [*issyo-ni] hanasi-at-te-ita.*
 uncle TOP this man with together talk-REC-CONT-PAST
 'Uncle was talking with this man.'
 d. *Ozi wa itizikan sono hito to hanasi-at-te-ita.*
 'Uncle talked with this man for an hour.'

Reciprocals formed from different lexical groups of verbs demonstrate individual predisposition to the use in discontinuous constructions. Thus, for instance, *korosi-a-u* 'to kill each other' is equally acceptable in both simple and discontinuous constructions, whereas *aisi-a-u* 'to love each other' and *nikumi-a-u* 'to hate each other' are preferable in the simple construction. This is probably determined by the first being an activity verb and the latter two being stative verbs (M. Shibatani, p.c.; see also 10.2.4).

The discontinuous construction is especially characteristic of lexical reciprocals (see 11.1).

5. Non-reciprocal meanings of the suffix *-aw*

5.1 Sociative

Sociatives are of restricted productivity and seem to be formed from a limited set of verbal stems. Thus, for instance, there are no sociatives based on the verbs in (33a) (brackets contain ungrammatical forms with intended meanings). Himeno (1982:40) notes that sociatives are formed with difficulty from passives though sometimes they are allowed (33b). In this connection he also notes that sociatives are not derived from verbs denoting unobservable inner states. If a state is observable the verb allows sociative derivation (33c). Forms in *-aw* from two-place verbs can be interpreted either as reciprocal or sociative depending on the construction (Himeno 1982:25; see (33d)).

- (33) a. *sin-u* 'to die' (→ **sini-a-u* 'to die together')
tob-u 'to fly' (→ **tobi-a-u* 'to fly together')
- b. *tatak-u* 'to beat/hit sb' (→ **tatak-are-a-u* 'to be beaten together with sb')
syookaisu-ru 'to invite sb' → *syookais-are-a-u* 'to be invited together with sb'
- c. *unadare-ru* 'to drop one's eyes' → *unadare-a-u* 'to drop one's eyes together'
iradat-u 'to get irritated' → *iradati-a-u* 'to get irritated together'
- d. *o-u* 'to chase sb' → *oi-a-u* i. 'to chase sb together' (if there is an object),
 ii. 'to chase each other' (if there is no object).

Our goal here is only to show how complicated the sociative use of *-aw* is. It is noteworthy that sentences (33b) and (33d) are considered by some of our informants as "bad", and (33d) is considered "possible" only in the competitive sense (M. Shibatani, p.c.).

We have examples of subject-oriented sociatives only. The suffix *-aw* renders the sociative meaning on those verbs which mostly cannot be used reciprocally, i.e. two-place transitives with a second inanimate argument (see *ki o* in (35) and *otiba o* in (36) with the verb *ue-ru* 'to plant sth') (Himeno 1982:23–5); thus the sociative meaning is not expressed by the following forms in *-aw*:

- (34) a. *ue-ru* 'to plant' → *ue-a-u* 'to plant sth together' (see also (35)–(36))
 b. *aisi-a-u* 'to love each other', but not 'to love sb together'
seme-a-u 'to reproach each other', but not 'to reproach sb together'
home-a-u 'to praise each other' but not 'to praise sb together', etc.

Sociative constructions retain the valency properties of the underlying verbs. In the examples of §5, the gloss REC identifies the morpheme *-aw* without referring to its meaning. (35d) and (36b) are discontinuous sociative constructions; the latter are interpreted as comitative by definition (cf. Nedjalkov, Ch. 1). For lack of material, we do not consider comitative constructions specially (cf. in this respect Nedjalkov & Nedjalkov, Ch. 26 on Yakut, §9.2.2). In the examples with the alleged sociative meaning below, other interpretations suggested by the informants are also given (they are mostly competitive and alternative).

- (35) a. *Akiko to Taroo ga ki o ue-ru.*
 A. and T. NOM tree ACC plant-NPAST
 'Akiko and Taro plant trees' (together or not together).

Our informants reject (35b) and (35d) in the sociative meaning, but two of them regard it as correct in the alternative or benefactive-reciprocal reading.

- b. *Akiko to Taroo ga ki o ue-a-u.*
 A. and T. NOM tree ACC plant-REC-NPAST
 i. 'Akiko and Taro plant trees *together*.'
 ii. 'Akiko and Taro *compete* in planting trees.' (M. Shibatani, p.c.)
 iii. 'Akiko and Taro plant trees *by turns*.' (Y. Takahashi, p.c.)
 iv. 'Akiko and Taro plant trees for each other.' (Y. Nagayama, p.c.)
- c. *Akiko ga Taroo to ki o ue-ru.*
 A. NOM T. with tree ACC plant-NPAST
 'Akiko plants trees together with Taro.'
- d. *Akiko ga Taroo to ki o ue-a-u.* (cf. Hi. 23)
 A. NOM T. with tree ACC plant-REC-NPAST
 i. 'Akiko plants trees with Taro.'
 ii. 'Akiko and Taro plant trees by turns.' (Y. Takahashi, p.c.)
 iii. 'Akiko and Taro plant trees for each other.' (Y. Nagayama, p.c.)
- (36) a. *Miyoko wa ityoo no otiba o hirot-te-ita.*
 M. TOP ginkgo GEN fallen.leaves ACC pick.up-CONT-PAST
 'Miyoko picked up fallen ginkgo leaves.'
- b. *Miyoko wa, Tomoko to futaride, ityoo no otiba o hiroi-at-te-ita.* (K. 4/2. 20)
 M. TOP T. with both ginkgo GEN fallen.leaves ACC
 pick.up-REC-CONT-PAST
 i. 'Miyoko picked up fallen ginkgo leaves *together* with Tomoko.'
 ii. 'Miyoko picked up ... leaves *by turns* with Tomoko.' (Y. Takahashi, p.c.)
 iii. 'Miyoko and Tomoko *competed* in picking up ... leaves.' (Y. Yamakoshi, p.c.)
- (37) a. *?Taroo to Jiroo wa hagemi-at-ta.*
 'Taro and Jiro did their best together.'
- b. *Taroo to Jiroo wa karada o kitae-at-ta.*
 i. 'Taro and Jiro trained their bodies *together*.' (M. Shibatani, p.c.)
 ii. 'Taro and Jiro *competed* in training their bodies.' (Y. Yamakoshi, p.c.)
 iii. 'Taro and Jiro trained *each other's* bodies.' (M. Matsumoto, p.c.)
- c. *Taroo to Akiko wa zibun-tati no kodomo o hagemasi-at-te-iru.*
 i. 'Taro and Akiko were encouraging *their own* child(ren) *together*.' (T. Takiguchi, p.c.)
 ii. 'Taro and Akiko were encouraging *each other's* children.' (M. Matsumoto, p.c.)
- d. *Taroo to Akiko wa te o tori-at-te, yorokobi-at-ta.*
 T. and A. TOP hand ACC take-REC-CONV rejoice-REC-PAST
 'Taro and Akiko took each other's hands and rejoiced together.' (M. Shibatani, p.c.)
- e. *Taroo to Akiko wa akambo o zyunban-ni daki-at-ta.*
 'Taro and Akiko embraced the baby by turns.' (cf. also Himeno 1982: 19)

In (37d), a sociative verb is co-ordinated with a semantically reciprocal verb. The context for (37e), is described as follows: “Taro was looking at how Akiko embraced the baby, and wanted to embrace the baby himself. So he asked Akiko to pass the baby to him, and he embraced the baby in turn. Probably they are a husband and wife, family members, or very close friends. The point is that they did these actions with shared affection, not just embraced the baby in turn” (T. Takiguchi, F. Endoo, p.c.). Collocation with the adverb *zyunban-ni* ‘in turn, by turns’ extends the meaning of simultaneity which is usually common to sociativity: it may cover successive actions within the limits of one and the same situation. The situation described by (37e) is characterized by the fact that the referent who is awaiting his turn is nevertheless involved in the action (*Taro was looking... wanted to embrace*).

Sociative verbs require certain contextual conditions, such as plural expression of the subject, etc., though the conditioning factors are not clear. A verb with the sociative meaning does not combine with *otagai-ni* ‘mutually’ (also translated as ‘together’ in the dictionaries), but it combines with *issyo-ni* ‘together’. Compare the following series of examples with the native speakers’ evaluations (judging by the situations the informants suggest, the sociative meaning is intertwined with the reciprocal in the sentences with the verb *nak-u*):

- (38) a. *Suzume wa nai-ta.* ‘A sparrow chirped’, ‘Sparrows chirped.’
 b. *Suzume-tati wa nai-ta.* ‘Sparrows chirped.’
 c. *Suzume wa otagai-ni nai-ta.* lit. ‘Sparrows chirped mutually.’ (“an odd sentence”)
 d. *Suzume wa issyo-ni nai-ta.* ‘Sparrows chirped together.’ (“acceptable, though a little strange”; possible situation: “nestlings chirped together when their mother-bird brought some food”)
 e. *Suzume wa naki-at-ta.* ‘Sparrows chirped together.’ (“acceptable”; possible situation: “(many) sparrows chirped together (loudly) towards other sparrows”)
 f. *Suzume-tati wa [issyo-ni] naki-at-ta.* (same as (e); M. Shibatani, F. Endoo, p.c.).

Hesitation in evaluating sentences with the sociative meaning may be illustrated by the following examples from Nishigauchi (1992: 161) which, though grammatical, nevertheless according to our informants, “are difficult to accept”:

- (39) *John to Mary wa Bill o naguri-at-ta.*
 ‘John and Mary hit Bill in collaboration.’

The suffix *-aw* in the sociative meaning enters into complex relations with *otagai*. Thus, (40b) is not acceptable pragmatically (because people usually admit their own mistakes). In (40b) *otagai no* has a possessive-reciprocal meaning ‘each other’s’ (and is an attribute to the noun *mitigai*); in (40c) this meaning is neutralized by the suffix *-aw*, and *otagai no* renders a distributive meaning ‘each respectively’ and it may be replaced by *otagai-ni* ‘mutually’ (and is an adverbial dependent on the verb *mitome-at-ta*).

- (40) a. *Taroo to Akiko wa mitigai o mitome-ta.*
 T. and A. TOP mistake ACC admit-PAST
 ‘Taro and Akiko admitted their mistakes’ (naturally, each his/her own).

- b. ?*Taroo to Akiko wa otagai no matigai o mitome-ta.*
 ‘Taro and Akiko admitted each other’s mistakes.’
- c. *Taroo to Akiko wa [otagai no/otagai-ni] matigai o mitome-at-ta.*
 ‘T. and A. admitted [respectively/mutually] their mistakes together.’ (F. Endoo, p.c).

It may be interesting to note that the corpus-based list of 285 forms in *-aw* cited in Hasselberg (1996: 37–46) contains only 19 (mostly intransitive) items with the sociative meaning (see (41)). This ratio is indicative of the low productivity of the sociative function of this suffix.

- (41) *hibiki-a-u* ‘to sound together’
huzake-a-u ‘to fool about together’
kangae-a-u ‘to ponder over sth together’
kaziri-a-u ‘to gnaw sth together’
koe-a-u ‘to overcome together’
kui-a-u ‘to eat together’
kyooryokusi-a-u ‘to work together’
musebi-a-u ‘to cry together’
nomi-a-u ‘to drink together’
rakuruisi-a-u ‘to cry with each other’
seikatusi-a-u ‘to live together’
seri-a-u ‘to fight for sth together’
sonzaisi-a-u ‘to exist together’
syaburi-a-u ‘to suck together’
tabe-a-u ‘to eat together’
tate-a-u ‘to build together’
umeki-a-u ‘to suffer together’
warai-a-u ‘to laugh together.’

In Himeno’s opinion (1982:25), sociatives may denote both simultaneous and non-simultaneous actions of the participants; e.g.:

- (42) *wakati-a-u* ‘to divide sth together’ (simultaneously)
ki-a-u ‘to dress sb together’ (by turns)
ne-a-u ‘to plant (e.g. trees) together’ (either simultaneously or by turns).

On sociative nouns see (81).

5.2 Competitive

This meaning is closely related to the reciprocal and sociative. It occurs in derivatives in *-aw* as the only meaning or one of possible meanings. (We have found only two more languages where a reciprocal marker also has a competitive meaning: Bulgarian where the reciprocal marker also has a reflexive meaning, and especially Karachay-Balkar where the reciprocal marker has a sociative meaning as well; see Penchev, Ch. 13, §10; and Nedjalkov & Nedjalkov, Ch. 24, §5.3).

- (43) *Gakusei wa warai-at-ta.*
 i. ?‘The students laughed *together*.’
 ii. ‘The students *competed* in laughing.’

Laughing contests are held annually in certain localities in Japan. The competitive meaning is realized in this situation. If we add *issyoni* the sociative meaning, i.e. (i), will be retained and the competitive meaning will become marginally possible. (T. Tsunoda, p.c.).

According to T. Tsunoda, in (44a) the competitive reading is possible and the more acceptable (though it is questioned by some other informants); the reciprocal reading seems marginally acceptable (the sociative interpretation was suggested by Y. Takahashi, p.c.). In (44b) both readings are acceptable (competition in this case is typical of Japanese tourists; T. Tsunoda, p.c.). In (45a) and (45b) the competitive reading alone is possible.

- (44) a. *Gakusei wa tegami o kaki-at-ta.*
 students TOP letter ACC write-REC-PAST
 i. ?‘The students *competed* in writing letters.’
 ii. ?‘The students wrote letters (in order to send) *to each other*.’
 iii. ?‘The students were writing a letter *together*.’ (Y. Takahashi, p.c.)
 b. *Kankookyaku wa miyage o kai-at-ta.*
 sightseer TOP souvenir ACC buy-REC-PAST
 i. ‘The sightseers bought souvenirs *for each other*.’
 ii. ‘The sightseers bought souvenirs *as if in competition*.’
- (45) a. *Gakusei wa sake o nomi-at-ta.*
 ‘The students *competed* in drinking sake.’
 b. *Siken de gakusei wa ten o tori-at-ta.*
 exam LOC student TOP mark ACC take-REC-PAST
 ‘In an examination, the students *competed* in getting (higher) marks.’

The competitive meaning seems to be more common than sociative. This claim is supported by the fact that the informants confronted with the following rather unusual sentences are ready to interpret them, under pressure, as competitive only, though some of our informants prefer the “possessive” reciprocal and benefactive-reciprocal interpretation for them (as well as in other cases). The distributive *otagai* is compatible with the competitive meaning. The examples below and their competitive interpretation are questioned by some of our informants.

- (46) a. *Taroo to Akiko wa [otagai no] ie o tate-at-ta.*
 i. ?‘Taro and Akiko *competed* in building *houses*.’ (without the bracketed words)
 ii. ?‘Taro and Akiko *competed* in building *their respective houses*.’ (this reading requires the use of *otagai no*; M. Shibatani, p.c.)
 iii. ‘Taro and Akiko built *each other’s* houses.’ (Y. Nagayama, p.c.)
 iv. ‘Taro and Akiko built houses *for each other*.’ (Y. Nagayama, p.c.)
 b. *Taroo to Akiko wa kodomo o nirami-at-ta.*
 ‘Taro and Akiko *competed* in glaring at the child.’ (T. Tsunoda, p.c.) (see also iii. in (91d)).

Similarly, when faced with the form *nui-a-u* (← *nu-u* ‘to sew’) the informant said: ‘I’ve never heard this, it may mean ‘to sew as if in a competition’. The following transitive re-

reciprocal forms are also interpreted as competitive (though marginally): *kangae-a-u* ‘to compare sth as if in competition’ (← *kangae-ru* ‘to consider, compare’; cf. (41) where it means ‘to think, ponder, consider’), *kui-a-u* ‘to compete in eating sth (e.g. cakes)’ (← *ku-u* ‘to eat sth’), *maze-a-u* ‘to compete in mixing sth’ (← *maze-ru* ‘to mix sth’), *nori-a-u* ‘to compete in taking a ride’ (← *nor-u* ‘to take a ride’) (M. Shibatani, p.c.). Some of our informants regard the competitive meaning as the only one possible or one of the possible in examples (21e) (see reading (v)), (35b) (see reading (ii)), (36b) (see reading (iii)), and (47) as well.

5.3 The meaning of alternation

Some of the authors consider succession (the meaning of alternation) as one of the possible readings of a number of reciprocal forms (some of our informants doubt this meaning in the following example with the reciprocal form of the verb *syootaisu-ru* ‘to invite’, though they say that some native speakers may accept this), the competitive reading was suggested by one informant:

- (47) *John to Bill ga Mary o syootaisi-at-ta.*
 J. and B. NOM M. ACC invite-REC-PAST
 i. ‘John and Bill invited Mary *alternately*.’
 ii. ‘John and Bill *competed* in inviting Mary.’ (M. Matsumoto, p.c.)

According to Nishigauchi (1992:174; with reference to Miyake), “this sentence ... designates a series of events, where John and Bill invited Mary in an alternative order”. In his analysis of this sentence, Nishigauchi argues that “... while John’s and Bill’s invitations of Mary are separate, individual events, there is some sense of collaboration or competition that results from the activities” (ibid. p. 175). In (48), the reading may be alternate as well as “possessive” reciprocal or sociative:

- (48) *A ga B to inu o daki-a-u.*
 i. ‘A and B hold the dog in their arms *by turns*.’ (Hi. 52).
 ii. ‘A and B embrace *each other’s* dogs.’ (H. Narrog, p.c.; cf. 3.5)
 iii. ‘A and B embraced the dog *together*.’ (Y. Takahashi, p.c.)
- (49) *A ga B to kuruma o umpansi-a-u.*
 ‘A and B drive the car *by turns*.’ (Hi. 26) (see also (23), (35b, c), (36b), (37e)).

A pragmatic explanation of the meaning ‘by turns’ may probably lie in the technical difficulty in performing the action by both participants simultaneously.

5.4 The meaning of unexpectedness

It seemed expedient to consider the relevant material in 6.3.2.2, i.e. immediately after the discussion of verbs with the analogous meaning derived by means of the reciprocal-causative suffix *-aw-ase*. A more detailed definition of this meaning is also proposed there.

6. Verbs of conjoining with the unproductive reciprocal-causative suffix *-aw-ase*

6.1 Introductory

This suffix is a combination of the reciprocal suffix *-aw* and causative suffix *-ase*. The complex *-aw-ase* is viewed by a number of linguists as a single morpheme with the meanings ‘to bring together’, ‘to do together at the same time’ (Himeno 1982: 52). As it follows from the first meaning, certain derivatives may be expected to denote putting together, connecting, combining, mixing of two or more objects (see (50d) where *-aw-ase* has a very strong meaning of joining), including considering or comparing two or more things or phenomena – a kind of mental conjoining. There are about 85 forms with this suffix (nearly all of them are listed in this section). These derivatives without additional lexicalization are rare (Himeno 1982: 41–2). The base verbs are mostly transitive, many of them three-place lexical reciprocals with the meaning of joining in a narrow or broad sense, too.

The language data for this section are borrowed mostly from Himeno (1982: 17–52) and Hasselberg (1996: 37–51).

Many derivatives (as well as base verbs) are not intelligible to native speakers though they are registered in dictionaries and quoted in specialist literature. They are also entered in the lists below, since they are relevant for the semantic characterization of the derivational groups. This symbol marks also forms which have been ousted as a result of (possible) competition of semantically contiguous forms.

Thus, semantic competition between the *-aw* and *-aw-ase* derivatives has resulted in the loss of *-aw* forms (see (50a) and (50b)) and semantic similarity between the base verb and the *-aw-ase* form has resulted in the loss of the respective meaning of the base form (see (50c)). Some of the derivatives are not related semantically to the base verb (have lost it?) and/or do not have the meaning of joining or connecting proper (see (50c) again):

- (50) a. *mat-u* ‘to wait’
 → [?]*mati-a-u* ‘to wait for each other’, ‘to wait for, meet another by appointment’
 → *mati-aw-ase-ru* ‘to wait for the coming of the other, for each other by appointment’ (B. 786)
- b. *kum-u* i. ‘to braid, knit together, entwine’(vt)
 ii. ‘to fit into each other, join, unite’(vi) (B. 788)
 → [?]*kumi-a-u* i. [?]‘to knit or link together, interlace’
 ii. *‘to join together in company, unite’ (vi) (B. 786)
 → *kumi-aw-ase-ru* i. ‘to knit together, interlace’ ii. ‘join together’ (B. 786)
- c. *teras-u* i. ‘to shine upon’, ii. *‘to compare sth/sb with sth/sb’
 → **terasi-a-u* (not registered in dictionaries; our informants accept it in the meaning ‘to shine (e.g. with a torch) in each other’s face’)
 → *terasi-aw-ase-ru* ‘to examine sth by comparing it with sth’ (B. 1469)
- d. *nu-u* ‘to sew sth’ → *nui-aw-ase-ru* ‘to sew two things together’ (B. 1046).

Below, we shall be concerned mostly not with such derivatives but with those that retain or are more or less related to the reciprocal meaning, in order to give an idea of the semantic content of this group. The semantic behaviour of causatives from reciprocals is of typo-

logical interest. Verbs, especially those of conjoining have specific features in combination with a reciprocal-causative complex or with a reciprocal and/or sociative affix in other languages as well. Thus, for instance, three-place transitives of conjoining in Kirghiz are mostly causatives derived from anticausatives which are in their turn derived from three-place lexical reciprocals by means of the reciprocal suffix, the first and the last members of the derivative chain being semantically similar and sometimes closely synonymous; cf.

- (51) a. *čapta-* ‘to glue sth to sth’ → *čapta-š-* ‘to get glued together’
 → *čapta-š-tər-* ‘to glue sth together.’ (cf. Nedjalkov, Ch. 28 on Kirghiz, §13.2)

Compare the analogous derivational chain in Mongolic languages:

- b. Buryat *xolbo-* ‘to tie, join sth together’ → *xolbo-ldo-* ‘to be tied, joined together’
 → *xolbo-ld-uul-* (same as *xolbo-*). (see Nedjalkov et al., Ch. 29, §4.8)

In Evenki, three-place transitive lexical reciprocals of joining combine with the sociative (not reciprocal) suffix, while retaining their meaning – in this case the sociative suffix serves as an overt reciprocal marker; in a few cases, when attached to non-reciprocal transitives it is the only marker of the reciprocal meaning; e.g.:

- c. *dalbu-* ‘to glue sth to sth’ → *dalbu-ldə-* ‘to glue sth together’
ulli- ‘to sew sth’ → *illi-ldə-* ‘to sew sth together’ (cf. (57);
 see Nedjalkov & Nedjalkov, Ch. 38 on Evenki, §6.3; Kazenin, Ch. 17 on Kabardian, §§3.2.2.1.2 and 3.2.2.2).

Incidentally, the meaning ‘to inquire’ in (43d) does not sound accidental if we take into consideration analogous data from some other languages:

- d. *to-u* ‘to inquire, ask’ → *toi-aw-ase-ru* ‘to inquire (about sth)’ (M. 1811);
 ‘to inquire (here and there)’ (Ha. 48)
kik-u ‘to hear, listen, inquire’ → [?]*kiki-aw-ase-ru* ‘to inquire about’ (B. 666)
tazune-ru ‘search, inquire’ → [?]*tazune-aw-ase-ru* ‘inquire (here and there).’
 (Ha. 48)

Compare Kirghiz (e) and Karachay-Balkar (f) respectively:

- e. *aŋda-* ‘to understand’, ‘to notice’ → *aŋda-š-tər* ‘to find out’, ‘to make inquiries’
 (see Nedjalkov, Ch. 28, §10.2)
 f. *soruwla-* ‘to inquire’ → *soruwla-š-* ‘to inquire’ (see Nedjalkov & Nedjalkov,
 Ch. 24, ex. (107b)).

It seems possible that historically this suffix is an aborted attempt to create a marker for object-oriented reciprocals denoting conjoining but the process did not develop and only a limited number of formations have been preserved. At the same time, it is possible that in some cases the derivatives do not contain the suffix *-aw-ase* but they are compounds with the verb *aw-ase-ru/aw-as-u* (a causative derived from the verb *a-u* by means of the causative suffix; cf. 2.5.1). The verb *a-u* is represented in dictionaries by two different characters with the following respective meanings:

- (52) a. 1) i. 'to see, meet, etc.', ii. 'to meet with (an accident), etc.' and
 2) i. 'to suit, fit, etc', ii. 'agree (with); accord (with); coincide (with); tally (with); square (with), etc.', iii. 'to keep good time'.

In both cases the verb is a typical lexical reciprocal. The meanings of the causative *aw-ase-ru* derived from the first verb are i. 'to let (sb) see, arrange a meeting'; ii. 'to expose (to)'.

Note that the second verb *aw-ase-ru* covers most of the meanings of the three-place derivatives with the suffix *-aw-ase*. Thus, on the basis of semantics, we cannot determine whether we are faced with a derivative in *-aw-ase* or a compound with the verb *aw-ase-ru*. Here are all the meanings of the verb *aw-ase-ru* as they are registered in (M. 60):

- (52) b. 1) 'to put (bring) together; unite; combine; connect; join together; amalgamate; merge, annex; join [fold, clasp] (one's hands)'
 2) 'to sum up, add up, total'
 3) 'to mix, compound'
 4) 'to set, fit, suit, adjust, adapt, conform, square, gear (one thing to another), tune [tailor] (sth to the purpose); bring (a thing) into line (with another)'
 5) 'to match (colors)'
 6) 'to put (one thing) upon (another), overlap'
 7) 'to compare, check (up) (with), tally (with)'
 8) 'to strike (a fish)'.

One may assume from the list of meanings in (52b) that different meanings of the verbs in *-aw-ase* are most likely descendants from these meanings rather than a result of independent development within the derivatives.

6.2 Object-oriented reciprocals

The verbs in question enter into two types of derivational chains. In the first chain (see 6.2.1), the base verbs are two-place transitives or intransitives; in the second (which is much more numerous; see 6.2.2) they are three-place or two-place transitives. In both chains, the final members with a few exceptions are three-place transitives.

6.2.1 Three- and four-member chains. Causatives in *-ase* from reciprocals

We have in mind derivational chains illustrated by (24), where (24c) is an object-oriented reciprocal construction. This type of causative reciprocal meaning is possible though rare (Himeno 1982:42), but it is this type with the standard semantic relations that is historically the earliest among derivatives in *-aw-ase*. The base verbs can be of two types, two-place transitives and two-place intransitives (with a dative object).

6.2.1.1 With two-place transitive bases. Here, the first, reciprocal stage of derivation entails intransitivization (but the number of participants is retained); at the second, causative stage of derivation, transitivity is restored (and one more participant, viz. Causer, is added) but the direct object must be semantically plural and denote two or more participants named by one or two NPs. As mentioned, at present this type is represented by a few exam-

ples at best. The (partially lexicalized; see bold type in the translations) final derivatives in these chains denote conjoining, comparing, etc. The base verbs denote aggressive actions:

- (53) a. *tuk-u* 'to stab'
 → *tuki-a-u* i. 'to keep company' (B. 1524)
 ii. ?'to push each other'
 → *tuki-aw-as-u/tuki-aw-ase-ru* i. 'to compare/collate'
 ii. *'to bring sb face to face with sb' (M.1876–7)
- b. *tatak-u* 'to beat, stab'
 → *tataki-a-u* 'to beat, stab each other' (B. 1442)
 → *tataki-aw-ase-ru* i. ?'to hit sth against each other' (Ko2. 249)
 ii. *'to strike (things) together' (M. 1748)
- c. *tatak-u* 'to beat, stab'
 → *tatak-a-u* 'to struggle/fight' (B. 1442)
 → *tatak-aw-as-u* i. 'to cause sb to fight' (B. 1442)
 ii. 'to argue/debate' (with object 'argument, opinion')
 iii. ?'to compete with sb' (M. 1747)
- d. *ut-u* 'to beat'
 → *uti-a-u* 'to beat each other' (B. 1546)
 → ?*uti-aw-ase-ru* i. ?'to join by beating' (B. 1546)
 ii. ?'to strike (a thing) against another' (N. 1902)
- e. *tur-u* 'to hang/suspend'
 → *turi-a-u* 'to balance', 'be in harmony with each other' (Ha. 43)
 → *turi-aw-ase-ru* 'to balance sth and sth' (Ha. 47).

6.2.1.2 *With two-place intransitive bases.* In this case causatives are derived from lexical reciprocals with a dative object (*if you are opposite me then I am opposite you*). In the causative opposition the semantic relation is more regular than in the reciprocal opposition where the difference between the base and the derivative is lexicalized. (54b) is probably a unique four-member derivational chain in which the first reciprocal *muk-a-u* is formed in a non-standard way (not from a verbal noun in *-i-*) and retains the main meaning of the base verb. From this form with the fossilized reciprocal suffix *-aw-*, a standard reciprocal verb *mukai-a-u* is derived which serves as base for a causative derivative.

- (54) a. *ni-ru* 'to be/look like'
 → *ni-a-u* 'to suit, be like sb, be suitable for' (M. 1219)
 → ?*ni-aw-ase-ru* 'to make suit/fit', 'to adopt' (B. 1021)
- b. *muk-u* 'to be facing sb/sth'
 → *muk-a-u* 'to face sb/sth and come in this direction'
 → *muk-a-i-a-u* 'to be opposite (to), face each other' (M. 1146)
 (used mostly as *muk-a-i-at-te* 'opposite each other')
 → *muk-a-i-aw-ase-ru* 'to oppose (A to B)' (M. 1146).

6.2.2 Two-member chains. Derivatives in *-aw-ase*. With three- and two-place transitive bases

In these chains a derivative in *-aw* is either non-existent or unrelated in the standard way semantically to the reciprocal-causative derivative. Most of the derivatives of this type are three-place verbs with the meaning of conjoining (from three-place lexical reciprocals). Both reciprocal arguments of these verbs are expressed either by a plural object or by two coordinated objects (one of which may be ellipted), while the subject can be singular (the meaning may be weakened if one of the reciprocal arguments is presented as stationary and the other as mobile (see (55b)). These verbs are in a way intermediate between morphological and lexical reciprocals. On the one hand, they are derivatives and on the other, they are unproductive and entered in dictionaries as lexicalized items. In many of the chains both verbs are close in meaning and the suffix is either pleonastic or emphasizes plurality of interrelating objects. With *-aw-ase* verbs, a comitative object seems to be preferable to dative (cf. (56a) and (56b)):

- (55) a. *Taroo wa kono paipu o ano paipu ni tunai-da.*
 T. TOP this pipe ACC that pipe DAT join-PAST
 ‘Taro joined this pipe to that pipe.’
- b. *Taroo wa kono paipu to ano paipu o tunagi-aw-ase-ta.*
 T. TOP this pipe and that pipe ACC join-REC-CAUS-PAST
 ‘Taro joined this pipe and that pipe.’ (M. Shibatani, p.c.); cf. also:
- (56) a. *Aokiko no baai o kangae-aw-ase-temo...* (MK. 121)
 lake.Aoki GEN case ACC consider-REC.CAUS-although
 ‘Although [he] took into consideration the [different] cases at lake Aoki.’
- b. *²Niku o yasai to take-aw-ase-ru.* (Hi. 43)
 meat ACC vegetables COM add-REC-NPAST
 ‘[He] adds meat to vegetables.’

Two main groups, each with two subgroups, can be distinguished according to the meaning of the base verbs.

6.2.2.1 Derivatives with the meaning of physical joining. They fall into two subgroups.

6.2.2.1.1 *Group A. Verbs of fixing things together.* In this group most of the bases are three-place transitive verbs of joining or two-place transitives denoting actions that involve joining or mixing of parts (cf. ‘to sew’, ‘to knit’, ‘to knead’, etc.); one base verb is a two-place intransitive. Their derivatives are more or less similar in meaning to or share an essential semantic component with the base verbs and also denote joining sth together, or mixing; the base verb (along with the derivative) may be either active or going out of use in Modern Japanese (the meaning of *-aw-ase* in this group is similar to that of the separable German prefix *zusammen-*; see Wiemer & Nedjalkov, Ch. 10, §7.2.2); cf.:

- (57) *am-u* ‘to knit’ → *²ami-aw-ase-ru* ‘to knit together’ (M. 25)
*hag-u** ‘to patch, join together’ → *²hagi-aw-ase-ru* (same) (B.274), (M. 370)
har-u ‘to paste over’ → *hari-aw-ase-ru* ‘to paste sth together’ (M. 404)
ire-ru ‘to put sth into sth’ → *ire-aw-ase-ru* ‘put sth and sth together into sth’ (Ha. 46)

- kagar-u* ‘to lace together by sewing’ → [?]*kagari-aw-ase-ru* ‘to sew sth together’ (HN)
kam-u i. ‘to bite’, ii. ‘to gnash (one’s teeth)’ → *kami-aw-ase-ru* ‘to clench one’s teeth’
 (M. 697)
- karam-u* (vi) ‘to coil, twine around’ → *karami-aw-ase-ru* ‘to coil, twine sth’ (Ha. 47)
kasane-ru ‘to pile sth up’ → *kasane-aw-ase-ru* ‘to lay one on top of another’ (Ha.48)
kone-ru ‘to knead, mix up together’ → *kone-aw-ase-ru* ‘to knead together’ (HN)
[?]*kuke-ru* ‘sew the edges of two pieces together’ (B.783) → **kuke-aw-ase-ru* (same)
kum-u i. ‘to braid, knit together, entwine’; ii. ‘to fit into each other, join, unite’ →
 → *kumi-aw-ase-ru* i. ‘to knit together, interlace’; ii. ‘to join together’ (B. 786)
maze-ru ‘to mix, add’ → *maze-aw-ase-ru* ‘to compound, mix together, mingle, blend’
 (M. 1067)
- mom-u* ‘to rub/crumple’ → [?]*mom-i-aw-ase-ru* ‘rub (one’s hands) together’ (M.1124)
musub-u ‘to tie (up), knot together’ → *musubi-aw-ase-ru* ‘to tie/link/fasten sth
 together’ (M. 1157)
- na-u* ‘to entwine’ → **nai-aw-ase-ru* ‘to entwine together into a rope, etc.’ (HN)
ner-u ‘to knead (dough)’ → *neri-aw-ase-ru* ‘to knead together, mix by kneading’
 (M. 1214)
- nezir-u* ‘to screw, twist, wrench’ → [?]*neziri-aw-ase-ru* ‘to twist together’ (HN)
nigir-u ‘to grasp, hold’ → *nigiri-aw-ase-ru* ‘to make sth closely intertwined’ (Ha. 47)
nu-u ‘to sew sth’ → *nui-aw-ase-ru* ‘to sew two things together’ (B. 1046)
or-u ‘to weave’ → [?]*ori-aw-ase-ru* ‘to weave/interweave’ (M. 1312)
sibar-u ‘to tie (with a cord)’ → [?]*sibari-aw-ase-ru* ‘to bind/tie together’ (Ha. 47)
tabane-ru ‘to tie, bind into sheaves’ → *tabane-aw-ase-ru* ‘to bind together (into a
 bundle)’ (HN)
- tatam-u* ‘to fold’ → [?]*tatami-aw-ase-ru* ‘put one upon another, fold together’ (Ha. 47)
tozi-ru ‘to bind/sew/stitch (a book)’ → *tozi-aw-ase-ru* ‘to stitch/bind together’ (Ha. 47)
tug-u ‘to join two things’ → *tugi-aw-as-u* ‘to join two things’ (B. 1516)
tuke-ru ‘to attach/add sth to sth’ → [?]*tuke-aw-ase-ru* ‘to join together, add (some
 vegetable to meat)’ (M. 1874)
- tunag-u* ‘to tie, link’ → *tunagi-aw-ase-ru* ‘to join/tie together’ (M. 1888)
tuzur-u ‘to sew sth together’ → [?]*tuzuri-aw-ase-ru* ‘to sew sth together’ (B. 1544)
yor-u ‘to twist (thread, etc.)’ → *yori-aw-ase-ru* ‘to twist together (as threads)’
 (B. 1642; Ko.1. 243).

6.2.2.1.2 Group B. Verbs of bringing things into contact. In this group most of the base verbs are two-place transitives most of which do not denote joining, i.e. they are not lexical reciprocals (with one exception). The derivatives acquire the meaning of joining due to the suffix *-aw-ase*. They presuppose two objects or a mass object. Here is a list of these verbs:

- (58) *buttuke-ru* ‘dash against, collide with’ → *buttuke-aw-ase-ru* ‘to make collide’ (HN)
kosur-u ‘to rub’ → *kosuri-aw-ase-ru* ‘to rub sth against each other’ (Ha. 47)
nuk-u ‘to draw/pull sth out’ → [?]*nuki-aw-ase-ru* ‘to draw and cross swords’ (B. 1047)
sur-u ‘to rub’ → *suri-aw-ase-ru* ‘to rub one’s hands together’ (Ha. 51)
tor-u ‘to take’ → [?]*tori-aw-ase-ru* ‘to take and put together, combine, mix together’
 (B. 1497)

- tume-ru* ‘to pack, shorten’ → *tume-aw-ase-ru* ‘to pack an assortment, to assort’ (M. 1884)
ut-u ‘to beat’ → *uti-aw-ase-ru* ‘strike sth against sth’ (Ha. 47); cf. (53d).

6.2.2.2 Derivatives with the meaning of non-physical, mostly “mental” joining. Two subgroups are also distinguished here of which the first is semantically homogeneous and the second is rather mixed.

6.2.2.2.1 Group C. Verbs of comparison. This group subsumes three-place derivatives with the meaning named. Note that comparison is one of the meanings of the verb *aw-ase-ru*. (see 7) in (52b)). Most of the base verbs do not have this meaning and most of them are two-place transitives, with the exception of the three-place *kurabe-ru* ‘to compare’ which is synonymous both to *aw-ase* and also to the derivative in *-aw*, namely *kurabe-a-u*. Here is a list of these verbs:

- (59) *hik-u* ‘to pull, etc.’ → [?]*hiki-aw-ase-ru* i. ‘to compare’, ii. ‘to introduce’ (B. 338)
kangae-ru ‘to consider sth’ → *kangae-aw-ase-ru* ‘to take sth into consideration with sth’ (M. 708)
kurabe-ru ‘to compare’ → *kurabe-aw-ase-ru* ‘to compare with each other’ (Na)
mi-ru ‘to see, look’(vi) → [?]*mi-aw-as-u* /*mi-aw-ase-ru* ‘to compare with’ (B. 916); currently used in the meanings i. ‘to postpone’, ii. ‘to exchange glances’ (Y. Takahashi, M. Matsumoto, etc., p.c.)
niram-u ‘to glare, estimate, suspect (sb of a crime)’ → *nirami-aw-ase-ru* ‘to take sth for comparison’ (M.1235)
omo-u ‘to think’ → [?]*omoi-aw-as-u* (vi) ‘to call to mind (as some previous event by the association of the present case)’ (B. 1079); ‘consider by comparing sth’ (Ha. 48)
teras-u i. ‘to illuminate’, ii. ‘to compare sb/sth with sb/sth’ → *terasi-aw-ase-ru* ‘to examine sth by comparing it with sth’ (B. 1469)
ter-u ‘to shine’ → ^{*}*teri-aw-ase-ru* ‘to compare’ (Ha. 48)
tuk-u ‘to stick. attach’ → *tuki-aw-as-u*/*tuki-aw-ase-ru* ‘compare/collate’ (M. 1876) cf. (53a)
yom-u ‘to read’ → *yomi-aw-ase-ru* ‘to read out and collate (one copy with another)’ (M. 199) (see also (26c)).

6.2.2.2.2 Group D. Verbs of adjusting, compensating, etc. This mixed group comprises mostly three-place derived verbs with various meanings, such as coming to an agreement, achieving consensus, fitting, arranging, following a pattern, compensating, involving two homogeneous objects, etc., i.e. meanings on the periphery of reciprocity. The base verbs are mostly two-place transitives.

- (60) *dak-u* ‘to embrace, hold in one’s arms’ → *daki-aw-ase-ru* ‘to sell good and bad goods together / at the same time’ (Ha. 46)
ire-ru ‘to pay in’ → *ire-aw-ase-ru* ‘to compensate, pay off’ (Ha. 48)
kake-ru ‘to multiply’ → *kake-aw-ase-ru* i. ‘multiply’, ii. ‘cross/breed (with)’ (M.679)
kak-u ‘to scratch sth’, ‘to gather’ → *kaki-aw-as-u* ‘to adjust, put in order (as one’s clothes)’ (B. 548)

- kur-u* 'to roll up/over' → *kuri-aw-ase-ru* 'to manage or adjust one's business so as to get time for sth else' (B. 794).
- ku-u* 'to eat' → **kui-aw-ase-ru* i. 'to eat two things at the same time' (B. 781)
 ii. 'to fit (two things) into each other' (M. 973)
- matur-u* (vi) 'to worship (as a God), deify' → **maturi-aw-ase-ru* 'to worship (two or more deities) together' (HN)
- moos-u* 'to speak' → *moosi-aw-ase-ru* 'to settle/arrange sth' (Ha. 48)
- mor-u* 'to serve, dish up' → **mori-aw-ase-ru* 'to dish up sth together' (Ha. 47)
- simes-u* 'to show', 'point out', 'inform' → *simesi-aw-ase-ru* 'to collude', 'to preconcert' (M. 1539), 'to coordinate sth with sb', 'to arrange things' (Ha. 48)
- tak-u* 'to cook' → *taki-aw-ase-ru* 'to cook different ingredients' (M. Shibatani, p.c.)
- tat-u* 'to cut off, divide' → *tati-aw-ase-ru* 'to cut out precisely according to a pattern' (Ha. 48)
- tur-u* 'to hang up' → *turi-aw-ase-ru* 'to (counter)balance' (Ha. 48)
- ume-ru* 'to fill up', 'make (amends) for' → *ume-aw-ase-ru* 'to compensate' (B. 1563)
- ut-u* 'to beat/hit' → *uti-aw-ase-ru* 'to (counter)balance, compensate' (Ha. 48).

It seems that in these four groups of derivatives the same tendency was beginning to develop as the one attested in a number of Turkic languages, namely, morphological reciprocal-causative marking of three-place verbs with symmetrical (or quasi-symmetrical) objects. This tendency was probably active at some time in the past, as is shown by the formation of *nui-aw-as-u* 'to sew two things together' immediately from *nu-u* 'to sew sth' (note that this action usually involves joining parts into a whole): in this case it is difficult to imagine a reciprocal **nui-a-u*; in other words, by the time of the derivation of *nui-aw-as-u* it was perceived as a single semantic whole (*nui-awa-se-ru* may also be regarded as a compounding of two verbs, *nu-u* 'to sew' and *awa-se-ru* 'to join, match sth'; M Shibatani, p.c.). This is probably supported also by the replacement of *teras-u* 'to compare sb/sth with sb/sth' (it is registered in the dictionaries but the informants do not know it) by *terasi-aw-ase-ru* with the same meaning. The intermediate form **terasi-a-u* is not registered in the dictionaries either.

A curious detail: the reciprocal suffix loses its reciprocity and does not essentially change the meaning of the base verb when affixed on the verb meaning 'to think' not only in Japanese, as in

- (61) *omo-u* 'to think' → **omoi-aw-as-u* 'to call to mind' (see (59)),

but also, for instance, in Karachay-Balkar (Nedjalkov & Nedjalkov, Ch. 24, ex. (110)):

- (62) *ojla-* 'to think, ponder' → *ojla-n-* 'to fall to thinking' → *ojla-n-əš-* (same).

An even closer parallel is attested in Kirghiz where the reciprocal (-*əš-/uš*) and the causative (-*tur*) suffixes are affixed simultaneously without adding the reciprocal and the causative meanings (Nedjalkov, Ch. 28, §10.2):

- (63) *ojlo-* 'to think, ponder' → *ojlo-n-* 'to fall to thinking' → *ojlo-n-uš-tur-* 'to think'; cf. also *ojlo-š-* i. 'to think', ii. 'to change one's mind' (-*n* = REFL).

The associative link between a reciprocal marker, or a reciprocal and a causative marker, and a verb with the meaning 'to think' is not clear, but its occurrence in genetically unrelated languages makes it typologically relevant. Incidentally, the following Japanese case probably belongs here as well:

- (64) *hakar-u* (vt) 'to think about, consider, reflect upon ...' → *hakar-a-u* (vt) (same; B. 281); cf. also semantically close derivatives in (51d, e, f).

6.3 Subject-oriented reciprocals

Subject-oriented constructions are based almost exclusively on intransitive (two- or one-place) verbs. Two semantic groups can be distinguished.

6.3.1 Group E. Derivatives with the reciprocal meaning

Here is an example followed by a list of derivatives which includes a number of lexicalized reciprocals (some are non-reciprocal in meaning):

- (65) a. *Onna futari ga kao o mi-aw-ase-te warat-ta.* (MK. 58)
 woman two.persons NOM face ACC look-REC-CAUS-CONV laugh-PAST
 'The two women looked at each other and laughed.'
 lit. 'The two women caused (their) faces to look at each other.'
- b. *i-u* 'to speak/say' → *ii-aw-ase-ru* (vt) 'to discuss sth with each other' (Ha.48),
 'to make a previous agreement' (M.517)
mat-u 'to wait' → *mati-aw-ase-ru* 'to wait for the coming of another, for each other by appointment' (B. 859), 'to make an appointment' (Ha. 51)
moos-u 'to say' (humble) → *moosi-aw-ase-ru* 'to agree, consent or unite together' (B. 959)
mi-ru 'to see, look' → *mi-aw-ase-ru* i. 'to exchange glances' (B. 916) (cf. (59))
 ii. 'to put sth off, postpone sth' (M.1087)
saso-u 'to invite' → *sasoi-aw-ase-ru* 'to invite each other' (Ka.)
yose-ru 'to gather sth/sb' (← *yo-ru* 'to gather' (vi)) → *yose-aw-ase-ru* i. 'to gather in a certain place', ii. 'to love each other clandestinely' (Na).

6.3.2 Derivatives with the meaning of unexpectedness

6.3.2.1 Group F. Verbs with the suffix *-aw-ase*. Himeno (1982:52) defines this meaning as 'to do together at the same time'. In fact, these verbs denote either motion (e.g. 'to travel', 'to ride', 'to come', 'to pass by') or location or position (e.g. 'to sit', 'to be', 'to stay'), a few verbs with other meanings being close to these verbs (e.g. 'to have', 'to be born'). The derivatives acquire the meaning of unexpectedness ('happen' and 'by chance' in the translations). Its relatedness to the meaning of joining may be discerned in the implication of encounter (in a broad sense) in most of these derivatives. An example and a list of relevant derivatives follow:

- (66) a. *Hikooki no naka de, guuzen nori-aw-ase-ta.* (MK. 65)
 plane GEN inside LOC by.chance travel-REC-CAUS-PAST
 '[They] travelled by chance in the same plane.'

- b. *ar-u* 'to be/have' → **ari-aw-as-u* 'to happen to be/have' (*ari-a-u* (same)) (B. 38)
ik-u 'to go' → ?(*i*)*ki-aw-ase-ru* 'to happen to come/be present' (B. 655)
i-ru 'to be' → *i-aw-ase-ru* 'to happen/chance to be (present)' (M. 504)
mot-u 'to possess/have/hold' → ?*moti-aw-ase-ru* i. 'to happen to have'
 ii. 'to have ready at hand' (B. 943)
nor-u 'to take a ride (in a train, car, etc.)' → *nori-aw-ase-ru* 'to happen to ride in the same train, car, etc.' (M. 1251)
suwar-u 'sit on a quilt' → ?*suwari-aw-ase-ru* 'happen to sit next to each other' (HN)
tomar-u 'to stop at a hotel' → ?*tomari-aw-ase-ru* 'stop/stay/happen to put up at same hotel' (M. 1821)
tonar-u 'to lie next to' → *tonari-aw-ase-ru* 'to happen to sit next to each other' (Ha. 49)
toor-u 'to pass by' → ?*toori-aw-ase-ru* 'to happen to pass/come by' (M. 1838)
umare-ru 'to be born' → **umare-aw-ase-ru* i. 'to be born together in one family' (B. 1561), ii. 'to be born under a lucky star' (M. 1915).

6.3.2.2 *Group G. Verbs with the suffix -aw.* The meaning of unexpectedness in derivatives in *-aw-ase* cannot be semantically related to the causative suffix because there is a group of verbs with the same general meaning of unexpectedness but with *-aw* alone, most of these verbs being derived from the same roots (the meaning of unexpectedness is probably descended from the lexical meaning of the verb *a-u* 'to meet' which generally implies an unplanned, unexpected event). Many of these verbs have been ousted by the respective verbs with the causative suffix. As mentioned above, this is possibly due to the fact that most of the verbs in *-aw-ase* denote joining, and the meaning of being present or meeting with someone can also be interpreted as a kind of joining, though unintentional (the derivatives *tati-a-u* and *oti-a-u* are an exception). Following is a list of these verbs borrowed from Hasselberg (1996:45) who defines their meaning as "V₁ + f (zufällig) gerade auch (dort)", i.e. "(accidentally), just + Verb (without *-aw*) + as well (there)". The definitions in (67) are our translations from German, and the comments in square brackets have been suggested by M. Shibatani (p.c.). The asterisk and the question mark in the lists below (including words in square brackets) reflect the (sometimes) more liberal evaluations of Y. Takahashi, M. Matsumoto, Y. Yamakoshi, T. Takada and Y. Nagayama.

In the list of derivatives in *-aw-ase* under (66b), three subgroups can be distinguished:

- (67) a. Verbs with *-aw* which are ousted by verbs in *-aw-ase* (some of the latter sound "old-fashioned" as well, or they are used in set phrases, especially as attributes)
- **ari-a-u* 'to happen to be there, happen to be handy, happen to be also there' [only **ari-aw-ase-ru* is used instead, usually as an attribute; cf. *ari-aw-ase no mono o tabe-ru* 'to eat what happens to be available']
 - **i-a-u* 'to be/exist next to/along with each other' [only ?*i-aw-ase-ru* is used; cf. *soko ni i-aw-ase-ta* '(we) happen to be there']
 - iki-a-u* 'to meet by chance, come upon by chance' [only *iki-aw-ase-ru* is used]
 - kati-a-u* 'to appear at the same time by accident' [only *kati-aw-ase-ru* is used]
 - nori-a-u* 'travel by the same means of transportation' [only *nori-aw-ase-ru* is used]
 - yuki-a-u* 'to meet by accident while travelling, come across by chance' [the *yuki-aw-ase-ru* form is the norm, though this itself is a bit old-fashioned].

b. Verbs in *-aw* which are not ousted by *-aw-ase* forms:

**deki-a-u* 'to (happen to) come into existence at the same time' [used only in the nominal form as an attribute: *deki-a-i no huku* 'ready-made clothes']

meguri-a-u 'to come across sb by chance, meet by accident' [is used as such along with *meguri-aw-ase-ru*, the latter emphasizing a chance encounter]

oti-a-u 'to meet' [an intentional action]

tati-a-u 'to be present as an eyewitness, be present' [is used regularly but it indicates intentional participation, i.e. it does not contain the sense 'by accident'].

c. Verbs in *-aw* that have gone out of use without replacement by synonymous *-aw-ase* verbs:

?*sonzaisi-a-u* 'to exist in the same place at the same time'

**omoi-a-u* 'also to think by chance' (in Modern Japanese this form has only one meaning 'to love each other').

6.4 Deverbal nouns

Some of the verbal derivatives with the suffix *-aw-ase* are much less frequently used (if at all) than the nouns derived from them. Some of the latter "sound better" than the verbs; cf.

1) *tuke-aw-ase-ru* 'to join together, add (some vegetables to meat)' (57) and the respective noun *tuke-aw-ase*;

2) *tori-aw-ase-ru* 'to take and put together, combine, mix together' (58) and the noun *tori-aw-ase*;

3) *tume-aw-ase-ru* 'to pack an assortment, to assort' (58) and the noun *tume-aw-ase*;

4) *kui-aw-ase-ru* 'to eat two things at the same time' (60) and the noun *kui-aw-ase*;

5) *mori-aw-ase-ru* 'to dish up sth together' (60) and the noun *mori-aw-ase*;

6) *taki-aw-ase-ru* 'to cook different ingredients together' (60) and the noun *taki-aw-ase*;

7) **ari-aw-asu* 'to happen to be/have' (66b) and the noun *ari-aw-ase*;

8) **moti-aw-ase-ru* i. 'to happen to have', ii. 'to have ready at hand' (66b) and the noun *moti-aw-ase*.

7. Lexicalization

There is a fair number of lexicalized reciprocals with the suffix *-aw*, i.e. lexicalized reciprocals proper. These forms are registered in dictionaries as separate items. Most of them are derived from transitive verbs. Lexicalized meanings are mostly reciprocal (some derivatives may retain the standard reciprocal meaning alongside the lexicalized reciprocal meaning). The typical meanings are 'to compete', 'to argue', 'to meet', 'to come to an agreement', 'to fight', etc. The speakers do not connect some of these reciprocals with their base verbs (which is witnessed by the fact that different characters are used for them, e.g. for *kataru* vs. *katarau* or *tataku* vs. *tatakau*). Here is a list of these verbs (as mentioned above, most of the verbs in *-aw-ase* discussed in Section 6 are lexicalized and can be added to this

list). If we take into account the case frames of lexicalized reciprocals, at least four groups can be distinguished (we owe this information to M. Shibatani and F. Endoo).

1. Two-place intransitives with the case frames *A to B ga* or *A ga B to*:

- (68) *ayum-u* 'to go, walk' → **ayumi-a-u* 'to compromise, concede to each other' (B. 53)
der-u 'to go out, issue forth' → *de-a-u* i. 'to meet (with)', ii. 'to agree' (B. 167)
hanas-u 'to speak' → *hanasi-a-u* i. 'to speak together', ii. 'consult together'
har-u i. 'to spread/strain', ii. 'to rival' → *hari-a-u* 'to rival/compete'
i-u 'to say, speak, tell' → *ii-a-u* 'to dispute with each other' (B. 414)
kake-ru i. 'to hang', ii. 'to bet' → *kake-a-u* 'to communicate on business' (B.544)
kam-u 'to bite' → *kami-a-u* 'to be harmonious'
kane-ru i. 'to combine', ii. 'to substitute' → *kane-a-u* 'to balance'
katar-u 'to talk, speak, tell' → *katar-a-u* arch. i. 'to talk together, confer with', ii. 'to promise or agree' (B. 607) (cf. the regular derivative *katari-a-u* 'talk, speak with each other')
megur-u 'to go round' → *meguri-a-u* 'to meet by chance'
nagur-u 'to hit' → *naguri-a-u* i. 'to hit each other', ii. 'to fight'
nare-ru i. 'to be accustomed', ii. 'to become familiar' → *nare-a-u* 'to conspire together' (B. 1005)
os-u 'to push' → *osi-a-u* i. 'to push each other', ii. 'to throng'
sas-u (obs.) 'to point out, indicate' → **sasi-a-u* i. (obs.) 'to meet together', ii. 'to obstruct each other' (B. 1190)
tatak-u 'to hit, stab' → *tatak-a-u* 'to struggle' (cf. the regular derivative *tataki-a-u* 'to hit, stab each other')
toke-ru 'to melt', 'to dissolve' (vi) → *toke-a-u* 'to be reconciled to each other', 'to come to mutual understanding, harmonize' (B. 1483)
tug-u i. 'to join sth', ii. 'to follow' → *tug-a-u* 'to copulate (of animals)' (B. 1516)
tuk-u 'to stick/adhere' → *tuki-a-u* 'to associate/keep company with sb'
yar-u 'to do sth' → *yari-a-u* 'to quarrel'
yuzur-u i. 'give up', ii. 'sell' → *yuzuri-a-u* 'compromise, settle a dispute' (B. 1666);
mom-u 'to crumple, rumple, jumble together' → *momi-a-u* 'to contend/struggle together (as in fighting or wrestling)' (B. 950).

2. Two-place intransitives with the case frame *A ga B to* only:

- (69) *kakawar-u* 'to be involved' → *kakawari-a-u* 'to be involved'
or-u 'to break sth' → *ori-a-u* i. 'to be on good terms with sb'
 ii. 'to come to an agreement.'

3. Two-place intransitives with the case frame *A ga B ni*:

- (70) *mi-ru* 'to see, look' → *mi-a-u* 'to counterbalance each other' (M. 1087)
ni-ru 'to be like sb, resemble' → *ni-a-u* 'to be suitable' (M. 1219)
sakar-u 'to be apart' → *sakar-a-u* 'to go against, oppose' (B. 1163).

4. Three-place transitives with the case frame *[A to] B ga C o* or *A ga [B to] C o*:

- (71) *das-u* 'to pay out/for sth' → *dasi-a-u* 'to split the bill'
mot-u 'to have' → *moti-a-u* 'to split the bill'
uke-ru i. 'to rent', ii. 'to redeem' → *uke-a-u* 'to contract' (B. 1557).

Sentential examples:

- (72) a. *Inu ga tug-at-ta* (B. 1516) 'The dogs have coupled.'
 b. ... *Sooiu sensei ni wa, meguri-at-ta koto nai desu.* (H. 264)
 such teacher DAT TOP encounter-REC-PAST fact not COP
 '... [I] never did meet the kind of teacher [you say].'

As is seen from the latter example, some verbs of group 1 can also have the case frame of group 3. Our informants say that example (72b) is correct, and the marker *ni* is also possible instead of *to*. Himeno (1982:26) asserts that the marker *ni* is used only if a construction with a verb in *-aw* has a reciprocal (not sociative) meaning and the actions of two participants are simultaneous.

The meaning of intensivity is represented by a single example registered in a dictionary which is nevertheless accepted by a number of informants, who noted that the derivative implies greater density of the plants and greater surface:

- (73) a. *siger-u* (vi) 'to grow in profusion'
 b. *sigeri-a-u* (vi) 'to cover all the surface abundantly (of plants)' (Ko. 2, 72).

Note that verbal nouns with the suffix *-i* are generally formed from lexical and lexicalized reciprocals; cf.:

- (74) *hanasi-a-u* 'to discuss' → *hanasi-a-i* 'discussion, negotiation'
hari-a-u 'to rival/compete' → *hari-a-i* 'rivalry/competition'
kane-a-u 'to balance' → *kane-a-i* 'balance, equilibrium'
meguri-a-u 'to meet by chance' → *meguri-a-i* 'chance meeting'
ori-a-u 'to be on good terms with sb' → *ori-a-i* 'interrelations'
toke-a-u 'to come to an agreement' → *toke-a-i* 'compromise.'

By way of overstepping the boundaries of lexicalization proper, we might as well mention the following. The noun *si-a-i* 'competition, contest, fight' is possibly derived immediately from the verb *su-ru* 'to do' without an intermediate reciprocal **si-a-u* 'to compete' (the latter verb is not registered in the dictionaries and it is rejected by the informants).

8. *Reciproca tantum*

If we identify the final *-a* as a historically reciprocal suffix on the verbs in (75), they can be regarded as *reciproca tantum*, because they do not have base forms without this component (or they are archaic and gone out of use, as, for instance, *semeg-u* 'to quarrel,' 'to fight', *tonar-u* 'to adjoin, lie next to'). In some cases, a tendency to pleonastically mark lexical reciprocals seems to be at play. This is particularly obvious in the derivative *muk-a-u* 'to be facing sb/sth' which retains the main meaning of the base verb *muk-u* (see (54b)). Attribution of some verbs to the class of *reciproca tantum* is not self-evident, i.e. the final

-a may be a part of the root (in this case these verbs should be placed in Section 11, among lexical reciprocals proper). Moreover, the meaning of some of the verbs cannot be regarded as reciprocal proper but as peripheral (characteristic meanings are those of response actions (cf. ‘to condole’ < ‘to die, etc.’) or, on the contrary, actions implying a response action (cf. ‘to inquire’ > ‘to answer’). When compiling the list below, we took into account the fact that in some languages these meanings are expressed by *reciproca tantum* or by lexicalized reciprocals. The relevant verbs have the following case frames:

(a) *A to B ga* or *A ga B to*

- (75) a. **aibia-u* ‘to compromise, yield mutually in settling a transaction’ (B. 9)
 **araga-u* ‘to dispute, contend with, resist’ (B. 35)
 **isaka-u* ‘to quarrel, wrangle, dispute’ (B. 45)
semegia-u ‘to struggle’
tiga-u (= *taga-u*) i. ‘to be different from sb/sth’, ii. ‘be mistaken’, iii. ‘to cross, pass by’,
 iv. (vt!) ‘to put things cross-wise’ (B. 111, M. 1699).

(b) *A ga B ni*

- b. *kana-u* ‘to match’, ‘to be equal’, ‘to rival’ (M. 702)
maga-u ‘to resemble, be similar to’ (M. 1140)
muka-u ‘to stand opposite to’ (M. 1546)
nara-u ‘to imitate sb’ (M. 1192)
tekita-u ‘to be hostile, contend, fight with’ (B. 1459);
tonaria-u ‘to be next to each other’ (M.1832).

(c) *A ga [B to] C o*

- c. *agana-u* ‘to buy (back)’ (B. 6)
akina-u ‘to drive commerce, to trade, to buy and sell’ (B. 20)
 **asana-u* ‘to twist (a rope)’ (B. 53)
 **mika-u* ‘to change one favorite for another’ (B. 921)
mima-u ‘to inquire (after sb’s health), condole’ (B. 924)
na-u ‘to twist (together), twine’ (M. 1201)
ogina-u ‘to compensate’ (cf. *oginai-a-u* ‘to complement each other’ (Hi. 41))
tika-u ‘to make an oath’ (B. 116)
tomura-u ‘to mourn (over a person’s death), condole’ (M. 1831)
tuguna-u ‘to compensate, repay’ (B. 1517)
ukuna-u ‘to ask, inquire’ (B. 1555).

9. Reciprocals with the archaic prefix *a-i-* (< *aw-*)

9.1 Introductory

The meaning of this prefix is defined as ‘mutually, each other’ (B. 9). Formations with this prefix may be regarded as a failed attempt of Japanese to create at least one derivational verbal prefix (though by origin it is a deverbal noun with the suffix *-i* (cf. (74)), which makes these formations compounds by origin). Most Japanese prefixes are affixed

to nouns and only the honorific prefix *o-* also attaches to verbs, though in the adverbial or infinitival form only (Shibatani 1990:218). It is typologically significant that in the case of success the prefix *ai-* would have been reciprocal (as it happens, the only prefix proper in Nivkh (Gilyak) and the only infix in Mundari are reciprocal in meaning). In Modern Japanese the prefix *ai-* is absolutely unproductive. Moreover, most Japanese do not understand most of the formations with it, both verbs and nouns (and sometimes even their base verbs) though they are registered in the dictionaries. Most of them are archaic and even obsolete, and additional marking with an asterisk is redundant. Bookishness is mostly characteristic of verbs in *ai-*, while nouns and adverbs are not infrequently neutral, cf. *ai-te* ‘mate, fellow’, *ai-kawarazu* ‘as usual’. Nevertheless, we shall list below most of these formations because they are of interest typologically. It may be useful to give an idea of the lexical range of these derivatives. But this prefix is used not only to express the reciprocal meaning: it is sometimes used for stylistic purposes, to make the words sound bookish, or formal, or archaic, or “important”. Thus, for instance, in the dictionary the verb *ai-nar-u* ‘to become’ (← *nar-u* ‘to become’) is defined as “the emphatic form of “*nar-i*”, “*ai*” having no special meaning. This form is invariably used in epistolary writings or on the stage; but not in conversation” (see B. 11). Compare also: “This word is often used as a meaningless prefix to verbs, especially in epistolary writings: *Ai ukagai* ‘enquiry’, *Ai motome* ‘request’” (B. 9).

9.2 Verbs

It is a very interesting case when genetically related and semantically similar affixes are used as suffixes and prefixes. As mentioned above, the prefix *ai-* is retained in a limited number of verbs. Some derivatives in *ai-* have synonymous forms with the suffix *-a-*; cf.:

- (76) a. *ham-u* arch. ‘to eat, devour’ → *ai-ham-u* ‘to devour each other’ (Ko.1. 11)
suku-u ‘to save, help’ → *ai-suku-u* ‘to save, help each other’ (Ko.1. 11)
- b. *koros-u* ‘to kill’ → *ai-koros-u* ‘to kill each other’ (Ko.1. 9), *korosi-a-u* (same)
omo-u ‘to love’ → *ai-omo-u* ‘to love each other’ (B. 9), *omoi-a-u* (same)
muka-u ‘to stand opposite’ → *ai-muka-u* ‘to face each other’ (R. 104), *mukai-a-u* (same) (M. 1146) *sinzi-ru* ‘to trust’ → *ai-sinzi-ru* ‘to trust each other’ (M. 7),
sinzi-a-u (same)
tuguna-u ‘to compensate’ → *ai-tuguna-u* ‘compensate to each other’ (Ko.1. 11),
tugunai-a-u (same)
yorokob-u ‘to rejoice’ → *ai-yorokob-u* ‘to share joy’ (M. 7), *yorokobi-a-u* (same)
kasanar-u ‘to put sth upon sth’ → *ai-kasanar-u* ‘to be piled on top of each other’
(Ko.1. 8), *kasanari-a-u* ‘to be piled on top of each other’ (Ko.1. 366).

The underlying verbs are often lexical reciprocals (cf. *A faces B = B faces A*) or converses (cf. *A succeeds B = B follows A*). In the first case the prefix *-ai-* occurs sometimes pleonastically (or as an intensifier?); see (77b).

- (77) a. *hansu-ru* ‘to oppose’ → *ai-hansu-ru* ‘be contrary to each other’ (M. 8; Ko.1. 8)
mat-u ‘to depend on’ → *ai-mat-u* arch. ‘to be interdependent’ (Ko.1. 9)
sar-u ‘to be apart from sb’ → *ai-sar-u* ‘to be/stand apart from each other’ (B. 9)

- taisur-u* ‘to face’ → *ai-taisur-u* ‘to face each other’ (M. 11)
tug-u ‘to succeed’ → *ai-tug-u* ‘to succeed one another’ (M. 12)
toozakar-u ‘separate/get detached from sb’ → *ai-toozakar-u* ‘to avoid each other’
 (Ko.1. 9);
- b. *Karera wa araso-u / ai-araso-u* ‘They argue with each other’
Karera wa hakutyuusuu-ru/ ai-hakutyuusuu-ru ‘They equal each other in strength’
Karera wa maziwar-u / ai-maziwar-u ‘They keep company with each other’
Karera wa tomona-u / ai-tomona-u ‘They accompany each other’
Kono sen to ano sen wa kono titen de sessu-ru/ai-sessu-ru ‘This line and that line meet
 at this point’ (M. Shibatani, p.c.).

A few more sentential examples:

- (78) a. *Titoku ai-mat-te hazimete kanzen-na zinkaku*
 knowledge.and.virtue REC-depend-CONV for.the.first.time perfect person
ga deki-ru. (M. 10)
 NOM be.possible-NPAST
 ‘Wisdom and virtue are interdependent to make a perfect personality.’
- b. *Kondo no siai de wa A to B ga ai-taisuru koto ni*
 next GEN competition in TOP A and B NOM REC-oppose that ADV
nat-ta.
 became
 ‘It turned out that A and B are to oppose [each other] in the next competition.’
 (M. Shibatani, p.c.)

9.3 Nouns

In some cases the prefix is probably fused with the root. Four semantic groups of nouns can be distinguished. Among the formations below the majority are rejected by most of our informants as archaic or incomprehensible.

1. Nouns with the reciprocal meaning proper (animate participants are implied):

- (79) *ba* ‘place, surface’ → **ai-ba* ‘a joint surface’ (M. 7)
dootjaku ‘contradiction’ → *ai-dootjaku* ‘contradiction’ (Ko.1. 8)
hore-ru ‘to fall in love’ → *?ai-bore* ‘mutual (reciprocal) love’ (M. 7)
**kakusitu* ‘hostility’ → *?ai-kakusitu* ‘mutual hostility’ (Ko.1. 8)
kanren ‘relation, connection’ → *?ai-kanren* ‘interconnection’ (Ko.1. 8)
**ko* ‘?’ → *?ai-ko* i. ‘a tie’, i. ‘a draw, a drawn game’ (M. 9)
koō ‘co-ordination’ → **ai-koō* ‘co-ordination’ (Ko.1.8)
mi-tagai ‘mutual help’ → *?ai-mi-tagai* ‘helping each other’, ‘mutual sympathy’
 (B. 11)
moti ‘share’ → *?ai-moti* ‘mutual share, joint ownership’ (M. 10)
syaku ‘dipper’ → *?ai-syaku* ‘mutual helping (when drinking sake)’, ‘filling
 each other’s cup’ (M. 9)
ut-u ‘to beat’ → *ai-uti* ‘cutting, killing, hitting each other at the same
 time’ (M.12).

2. Nouns denoting joint class membership (mostly of persons):

- (80) *ban* 'guard' → **ai-ban* 'fellow guard'
boo 'stick' → *ai-boo* 'one's pal, partner, mate, fellow' (M. 7)
desi 'pupil, disciple, follower' → **ai-desi* 'a fellow pupil, fellow apprentice' (M. 8)
go 'go (a game like draughts)' → **ai-go* 'go players of equal skill' (M. 8)
kata 'person' → *ai-kata* 'one's girl, partner (for the night)' (M. 9)
kyaku 'guest' → *ai-kyaku* 'a guest who has come at the same time with another' (Ko 1. 9)
muko 'brother-in-law, bridegroom' → **ai-muko* 'the husbands of sisters' (M. 10; B. 11)
te 'hand' → *ai-te* 'companion, mate, fellow; opponent' (M. 11)
yaku 'service, post' → *ai-yaku* 'colleague'
yome 'wife' → **ai-yome* 'the wives of two brothers' (B. 13).

3. Nouns with the sociative meaning:

- (81) *heya* 'room, chamber' → *ai-beya* 'living together in the same room' (B. 9)
hiki 'withdrawing (military)' → ?*ai-biki* 'mutual retreat (withdrawal)' (M. 7)
kasa 'umbrella' → *ai-gasa* 'together under one umbrella' (B. 9)
nori 'riding' → *ai-nori* 'riding in the same carriage' (B. 11)
oi 'growing old, old age' → **ai-oi* 'two growing [old] together' (B. 11)
yado 'flat, apartment' → **ai-yado* 'lodging together' (M. 12)
tuti 'hammer' → **ai-zuti* i. 'hammering together', ii. 'alternate hammering (by two blacksmiths)' (M. 12).

4. Nouns denoting an object in between two entities (close to the reciprocal meaning: if X is situated between A and B it is also between B and A) (*ai-* is rendered here by a different character, however, with the literal meaning 'merging, crossing, meeting'; M. Shibatani, p.c.); in this meaning *ai-* also occurs in final position, e.g. *yama-ai* 'area between mountains' (lit. '(area) crossing mountains'). In some nouns, *ai-* is combined with the genitive marker *no* (see (82b)). In fact, it cannot be regarded as a prefix in this case.

- (82) a. *han* 'typing size' → **ai-ban* 'medium size' (M. 7) (*h > b* – diachronic alternation)
ki-ru 'to wear' → **ai-gi* 'between-season wear' (M. 8)
han 'seal' → **ai-han* 'joint seal' (M. 8)
ko 'child' → *ai-no-ko* 'half blood, half breed, mulatto' (M. 10)
ma 'interval of time/space' → *ai-ma* 'interval (of, in between), interstice' (M. 9)
tai 'contrast, opposition' → **ai-tai* 'between two parties'
- b. *ma* 'room' → *ai-no-ma* 'an intermediate room' (M. 10)
syuku 'post station' → ?*ai-no-syuku* 'a half way town, a half way stop' (M. 10)
te 'hand' → *ai-no-te* 'interlude'.

9.4 Adverbs

The underlying adverbs (there occur forms with the adverbializers *-ni* and *-te*) have a converse or reciprocal meaning. Examples:

- (83) *tagai-ni* 'mutually' → *ai-tagai-ni* (same) (M. 11) arch.
mukai-ni 'on the opposite side' → ?*ai-mukai-ni* 'on opposite sides, 'face to face' (B. 11)
mukat-te 'face to face' → *ai-mukat-te* 'face to face with each other' (Ko1. 9)

<i>tazusae-te</i> ‘carrying in one’s hand’	→	<i>ai-tazusae-te</i> ‘hand in hand’ (Ko1. 10)
<i>tomo-ni</i> ‘together with’	→	<i>ai-tomo-ni</i> (same) (B. 12)
<i>tui-de</i> ‘behind, after, following’	→	<i>ai-tui-de</i> ‘one after another’ (Ko1. 11).
<i>kawara-zu</i> ‘without changing’ (CONV of <i>kawar-u</i> ‘change’ vi)	→	<i>ai-kawarazu</i> ‘as before/as usual’.

10. The noun *otagai* ‘each other’

10.1 Introductory

The word *tagai* ‘each other’ (commonly used with the honorific prefix *o-* which has practically lost this sense; it is more common in colloquial speech, while in the written style, and in dictionary definitions, *tagai* is more common without *o-*) called “reciprocal anaphor” by Nishigauchi (1992:157) is a noun. According to Martin (1988:812), it cannot appear in subject position and thus cannot take the subject marker *ga*, but this definition does not cover embedded sentences. As Nishigauchi (1992:159) claims, “*otagai* is capable of appearing in the subject position of an embedded clause, while *each other* in English is generally excluded in the corresponding position”. In this connection, it may be expedient to quote an example from Jespersen (1924:224) taken from a latest English novel (he notes that such sentences are to be found in Danish, too):

(84) *Miss C. and I are going to find out what each other are like.*

‘Miss C. and I each are going to find out what the other is like’, i.e. ‘Miss C. is going to find out what I am like and I am going to find out what Miss C. is like.’

In this interpretation, *each other* is distributive in meaning (and it doubles the number of the participants of the base situation).

The noun *otagai* may appear with the marker *ga* in the distributive meaning in embedded clauses only. The other forms may render this meaning along with the reciprocal one (a similar situation is attested in Tuva with regard to the pronoun *bot-bot-tara* which may render the meaning ‘each other’ and also ‘each (separately)’, ‘respectively’; see Kuular, Ch. 27, §4.1.1). This word cannot precede the subject (Kholodovich 1978:11). It appears in the following main forms:

(a) *otagai o* ‘each other’ where *o* is a direct object marker – with transitive verbs including suffixed reciprocals from transitives (see 10.3.1.1);

(b) *otagai ni* where *ni* is an indirect object marker (with the meaning ‘to each other’ and the like’) – with intransitive and transitive verbs (in the examples, *ni* is spelt separately, like other case markers);

(c) *otagai-ni* – in this spelling the form functions as an adverbial with the meaning ‘mutually’, ‘reciprocally’; in contrast to *otagai ni* under b), the use of *ni* here is not dependent on the case frame of the predicate; therefore it is hyphenated; here the particle *ni* serves as an adverbializer (*otagai* may be used as a truncated form of *otagai-ni*);

(d) *otagai no* – as an attributive reciprocal-possessive form meaning ‘each other’s’;

(e) *otagai ga* – as subject of an embedded clause (cf. 10.2.6).

The noun *otagai* does not seem to occur with other case markers.

M. Shibatani (p.c.) has drawn our attention to the fact that native speakers are unlikely to understand *ni* as the dative marker and they see *otagai ni* as an adverbial in all its usages (note that *ni* serves both as a dative and an adverb marker). We agree with this, but for technical reasons we retain separate spelling, i.e. *otagai ni*, for the cases where it corresponds to the dative argument of the underlying construction (cf. 10.2.1.2 and 10.2.3.1), and we hyphenate it as *otagai-ni* when this condition is not observed.

10.2 The noun *otagai* with non-reciprocal verbs

In those functions in which the suffix *-aw* is used this noun occurs less commonly, but, as mentioned above, it has its own specific functions in which the two markers do not compete. The different forms of *otagai* are distributed among the diathesis types of reciprocal constructions as follows (*otagai* generally inherits the case form of the noun it replaces):

1. “Canonical” constructions: (a) with two-place transitives – *otagai o*;
(b) with two-place intransitives – *otagai ni*;
2. “Indirect” constructions: – *otagai ni*;
3. “Possessive” constructions: – *otagai no*.

Combinability of these forms with non-reciprocal verbs is restricted but the conditioning factors are not clear, and sometimes the informants reject some combinations. Sometimes this seems to be due to the existence or absence of a commonly used suffixed reciprocal counterpart. Thus combinability of *otagai* differs considerably from the English reciprocal pronoun *each*.

The three forms in question differ in the meanings they may express:

a. The form *otagai o* is always unambiguously reciprocal in meaning; this meaning is also expressed by *otagai ni* in combination with two-place intransitives (see 10.2.1.2).

b. The form *otagai ni* with three-place transitives may render the reciprocal meaning ‘to each other’ or the distributive meaning ‘each (of the subject referents) to someone else’ (see 10.2.3.1).

c. The form *otagai no* with two-place transitives may convey the reciprocal meaning ‘each other’s’ (hand, etc) and the distributive meanings ‘each ... his/her own’ (hand, etc.) and ‘each ... someone else’s’ (hand, etc.) (see 10.2.3.2).

10.2.1 “Canonical” constructions

Most of the examples at our disposal are of “canonical” reciprocal constructions.

10.2.1.1 *With two-place transitives.* The form *otagai o* (with the direct object marker) is used with these verbs (see also (1d)). Though constructions of this type are formed with greater ease than with *otagai ni*, not all the sentences are equally acceptable to the informants. The sentences in (85) are approved by the informants, (86) is marginally possible, and (87) is “not good”.

1. The collocations are “fine”; there is no corresponding *-aw* form (some forms in *-aw* registered in dictionaries are out of use, not common):

- (85) a. [*Karera wa*] *otagai o mi-te-i-nai desu kara ne.* (H. 263)
 they TOP each.other ACC look-CONT-be-NEG COP since EMPH
 ‘[They] are not looking at each other.’
 b. *Karera wa otagai o mat-u.*
 ‘They wait for each other.’
 c. *Karera wa otagai o aitedor-u.*
 ‘They treat each other as opponents.’

2. The collocation is “fine”; there is a parallel form in *-aw* (this group also includes combinations with the verbs *hakaru-u* ‘to weigh’, *tazuner-u* ‘to visit’, *syukusu-ru* ‘to congratulate’, *aisu-ru* ‘to love’, *kowagar-u* ‘to be afraid’, *sir-u* ‘to know’, etc.):

- d. *Taroo to Akiko wa otagai o rikaisu-ru.* (M. 719)
 ‘Taro and Akiko understand each other.’

3. The collocation is marginally possible, “not very good” (here also belong combinations with the verbs *ikikisu-ru* ‘to visit’, *okos-u* ‘to wake up’, *oikake-ru* ‘to chase’, *naguritaos-u* ‘to knock down’, *keriage-ru* ‘to kick up’, *dak-u* ‘to embrace’, *nagur-u* ‘to hit, beat’, etc.):

- (86) *Karera wa otagai o dak-u.* ‘They embrace each other.’

4. The collocation is “bad”:

- (87) *Karera wa otagai o ker-u.* ‘They kick each other.’

10.2.1.2 *With two-place intransitives.* The form *otagai ni* corresponding to the underlying dative object marker is used here. The following is an example with an underlying dative object. Like the previous case, this type cannot be formed from all the relevant verbs. The conditioning factors are not quite clear either: some collocations are “fine” (see (88)) or (marginally) acceptable and, as the informants say, not as good as with the reciprocal suffix (with or without *otagai ni*; see (89)); (90) is assessed as “not good” though intelligible.

1. “Fine” collocation:

- (88) *Karera wa otagai ni tikazui-ta.* ‘They approached each other.’

2. (Marginally) acceptable to one of our informants only (here also belong *tayor-u* ‘to depend’, *aisatusu-ru* ‘to greet’, *kansyasu-ru* ‘to thank’, *motare-ru* ‘to lean against’, *tobikakar-u* ‘to attack’ (*tobikakari-a-u* is “not good” either), *oituk-u* ‘to catch up with’, etc.):

- (89) *Tagai ni ozigisu-ru.* (M. 1699)
 each.other DAT bow-NPAST
 ‘[They] bow to each other.’

3. “Not good”:

- (90) [?]*Karera wa otagai ni muka-u.* ‘They are opposite (to) each other.’

10.2.2 Subject-oriented benefactive reciprocal constructions

They are derived from two-place transitives, i.e. from the same transitives “canonical” reciprocals derive from, and also from two-place transitives with inanimate object (cf. (91a)). Needless to say, benefactive constructions differ from “indirect” ones (see (10.2.3.1) in that the subject is cross-referenced with an optional beneficiary. The object-oriented benefactive construction contains an expression *tame ni* (*tame* ‘reason, sake’) preceded by the name of the beneficiary in the genitive case (see (91b); it is opposed to the subject-oriented benefactive construction with the meaning ‘Father built a house for himself’). In the reciprocal construction, *otagai* is an attribute (with the genitive marker) to a direct object (see (91c)); cf.:

- (91) a. *Titi to musuko wa ie o tate-ta.*
 father and son TOP house ACC build-PAST
 ‘Father and son built a house.’
- b. *Titi wa musuko no tame ni ie o tate-ta.*
 father TOP son GEN for DAT house ACC build-PAST
 ‘Father built a house for his son.’
- c. *Titi to musuko wa otagai no tame ni ie o tate-ta.*
 father and son TOP each.other GEN for DAT house ACC build-PAST
 ‘Father and son built houses for each other.’ (M. Shibatani, p.c.)

Constructions of type (91c) but with a suffixed reciprocal are not used or they are marginal at best (see (91d)). If we omit the bracketed words in (91d), the likeliest reading is sociative or competitive (thus, in contrast to some languages, e.g. Yakut (see Ch. 26, example (73) in 4.1.2), the reciprocal suffix cannot be used to express the reciprocal-benefactive meaning):

- d. *Titi to musuko wa [otagai no tame ni] ie o tate-at-ta.*
- i. with the bracketed words: same as (c); marginally; it is much worse than (91c).
 - ii. without the bracketed words: ‘Father and son built a house *together*.’
 - iii. ‘Father and son built houses *as if in a competition*.’ (T. Tsunoda, p.c.)
 - iv. ‘Father and son built *each other’s* houses’ (M. Shibatani, p.c.).

Apart from object-oriented benefactive constructions like (91b) and subject-oriented benefactive reciprocal constructions of type (91c), there are two more types of constructions which are semantically close to these two: see (91e) and (91f) respectively; the latter two constructions are peculiar in that (91e) cannot be transformed (mostly probably due to the deictic asymmetry of the auxiliary *ya-ru*) into a reciprocal one and (91f) has no underlying non-reciprocal construction. (91e) contains the object-oriented benefactive auxiliary *ya-ru* postposed to the notional verb and governing the dative case of beneficiary, and (91f) contains the noun *aite* ‘companion’ and optional *otagai-ni*:

- e. *Titi wa musuko ni ie o tate-te yat-ta.*
 father TOP son DAT house ACC build-CONV O.BEN-PAST
 ‘Father built his son a house.’
- f. *Titi to musuko wa [otagai-ni] aite no ie o tate-ta.*
 father and son TOP mutually companion GEN house ACC build-PAST
 (same translation as in (91c)).
 lit. ‘Father and son built [mutually] the companion’s house.’

10.2.3 *Reciprocal or distributive constructions?*

10.2.3.1 “Indirect” constructions. As in the type discussed in 10.2.1.2, the dative form *otagai ni* is used here. In the case of the reciprocal meaning each subject referent, being agent, acts upon another subject referent as patient, i.e. they are cross-referenced, while in the case of the distributive reading of the constructions under consideration each subject referent acts upon an anonymous participant. This type also seems to be unstable: unambiguous reciprocal interpretation seems to be rare. The distributive reading of *otagai ni* competes with the reciprocal; cf. (i) and (ii) in (93); this also applies to “possessive” constructions (see 10.2.3.2). *Otagai ni* with different verbs reveals different preferences for the reciprocal or distributive interpretation; thus, for instance, for (92b) the reciprocal interpretation is rejected by our informants; in most of the examples at our disposal, the distributive reading is less possible or marginal. In the reciprocal reading, the number of participants does not change but their semantic roles are doubled, whereas in the distributive reading the number of participants is doubled, i.e. there are two pairs of participants; cf. (93.ii) where Akiko and someone else and Taro and someone else are taking part in the situation.

- (92) a. *Taroo wa Akiko ni booru o nage-ru.*
 T. TOP A. DAT ball ACC throw-NPAST
 ‘Taro throws a ball to Akiko.’
- b. [*Taroo to Akiko wa*] *tagai ni booru o nage-ru.* (Kn. 1185)
 i. *[Taro and Akiko] throw a ball to each other.’ (M. Shibatani, p.c.)
 ii. ‘[Taro and Akiko] each throw a ball to someone else.’
- (93) *Taroo to Akiko ga otagai ni kai-ta mono o mise-ta.*
 T. and A. NOM each.other DAT write-PAST hing ACC show-PAST
 i. ‘Taro and Akiko showed *each other* what they had written.’ (two participants)
 ii. ‘Taro and Akiko *each* showed to *someone else* what *each* of them had written.’ (cf. (84))
 (two pairs of participants; M. Shibatani and T. Tsunoda, p.c.; our younger informants do not accept this reading.)

10.2.3.2 “Possessive” constructions. Unlike respective constructions with verbal reciprocals that lose the underlying possessive attribute (cf. (19a) and (19b)), these constructions retain the underlying structure entirely. The possessive form *otagai no* is not unambiguously reciprocal in meaning and the reciprocal reading is established by default, too. Thus in (94b) reading (i) is more likely than (ii), (iii) being excluded. In (95a), the reciprocal reading is also “stronger” pragmatically than the distributive, because normally no one sets his own house on fire (to make the reciprocal reading unambiguous, the reciprocal verb form *yaki-at-ta* should be used instead of *yai-ta*), while in (95b) the distributive reading (ii) is more likely pragmatically than the reciprocal. In contrast to the “indirect” type, the distributive reading of a “possessive” construction does not entail doubling of participants in comparison with the reciprocal reading. Instead, cross-referenced possession of the object (see (94b.i)) is replaced by reflexive possession (see (94b.ii)):

- (94) a. *Taroo wa Akiko no / zibun no te o tor-u.*
 T. TOP A. GEN self GEN hand ACC hold-NPAST
 ‘Taro holds Akiko’s/his own hand.’
 b. *Taroo to Akiko wa otagai no te o tor-u.*
 i. ‘Taro and Akiko hold each other’s hands.’
 ii. ^(?)‘Taro and Akiko each holds his/her own hand.’
 iii. *‘Taro and Akiko each hold someone else’s hand.’
- (95) a. *Taroo to Akiko wa otagai no ie o yai-ta.*
 T. and A. TOP each.other GEN house ACC burn-PAST
 i. ‘Taro and Akiko burned each other’s houses.’
 ii. ^(?)‘Taro and Akiko each burned his/her own house.’
 iii. *‘Taro and Akiko each burned someone else’s house.’
 b. *Taroo to Akiko wa otagai no kane o kakus-u.*
 i. [?]‘Taro and Akiko hide each other’s money.’
 ii. ‘Taro and Akiko each hide his/her own money.’
 iii. *‘Taro and Akiko each hide someone else’s money.’ (M. Shibatani, p.c.)
 c. *Taroo to Akiko wa otagai no senaka o massazisi-ta.*
 i. ‘Taro and Akiko massage each other’s back.’
 ii. [?]‘Taro and Akiko each massage his/her own back.’
 iii. ‘Taro and Akiko each massage someone else’s back.’
 d. *Taroo to Akiko wa otagai no kodomo o niran-da.*
 i. ‘Taro and Akiko glared at each other’s children.’ (T. Tsunoda, p.c.)
 ii. ‘Taro and Akiko each glared at his/her child.’ (M. Shibatani, p.c.)
 iii. [?]‘Taro and Akiko each glared at someone else’s child.’

10.2.4 The discontinuous construction

The discontinuous construction serves as a means of topicalization of the first reciprocal argument (see also 4.2). Such constructions are generally less acceptable (“not very good”) or unacceptable (“bad”) with *otagai*. In the discontinuous construction, the form in *-aw* should be used. The latter form alone allows to interpret the comitative group as part of the subject. Nevertheless, some of our informants regard this construction with *otagai* as acceptable. Here are examples of “canonical” and “possessive” constructions respectively:

- (96) a. *Taroo to Akiko wa otagai o aisite-ita.*
 b. **Taroo wa Akiko to otagai o aisite-ita.*
 c. [?]*Taroo wa Akiko to otagai o aisi-at-te-ita.*
 ‘Taro and Akiko love each other’ (for all the three sentences).

“Possessive” sentences with *otagai no* also have peculiarities of usage in the discontinuous construction: in this case a suffixed reciprocal is obligatory; cf. (97b) and (97c):

- (97) a. *Taroo to Ziroo wa otagai no ie o yai-ta.* (cf. (94b))
 b. **Taroo wa Ziroo to otagai no ie o yai-ta.*
 c. [?]*Taroo wa Ziroo to otagai no ie o yaki-at-ta.*
 ‘Taro and Jiro burnt each other’s houses.’ (for all the three sentences).

We owe this information to M. Shibatani.

10.2.5 *Object-oriented constructions*

Causative constructions derived from suffixed reciprocals were discussed in 3.6. Analogous derivations from *otagai* constructions are accepted by some informants more readily than the underlying constructions. As mentioned above (see (24d, e) and discussion), in such cases an object-oriented construction is formed according to the general rule of causative formation from transitives, the underlying subject taking the dative case marker (see (98e)). In addition to the data in (24d, e, f), the following may be cited:

- (98) a. *Taroo ga Akiko o dai-ta.* 'Taro embraced Akiko.'
 → b. *Taroo to Akiko ga daki-at-ta.* 'Taro and Akiko embraced each other.'
 → c. ²*Kare ga T. to A o daki-aw-ase-ta.* 'He made T. and A. embrace each other.'
 d. ²*Taroo to Akiko ga otagai o dai-ta.* 'Taro and Akiko embraced each other.'
 → e. *Kare ga T. to A. ni otagai o dak-ase-ta.* 'He let T. and A. embrace each other.'
 (T. Takiguchi and F. Endoo, p.c.)

(98f) is the only example at our disposal of an object-oriented reciprocal with *otagai o* derived from a "indirect" reciprocal (borrowed from specialist literature; but not all of our informants find it acceptable, and one of them interpreted it as non-reciprocal); cf. (25) and i) in (98f):

- f. *Taroo ga Ziroo to Akiko ni otagai o syookaisi-ta.*
 i. 'Taro introduced Jiro and Akiko to each other.' (Is. 159)
 ii. 'Taro introduced himself and someone else to Jiro and Akiko.' (Y. Takahashi, p.c.)

10.2.6 *Distributive otagai ga in embedded clauses. Reciprocals by default?*

This case is somewhat similar to the case considered in 3.4. The specific meaning of the sentences in both cases is determined by the presence of an embedded clause. They are similar in that the subject referents are agents of the matrix predicate. And the principal semantic difference between them is that in (21e) the subject referents of the matrix clause are at the same time the patients of the embedded clause, while in (99d) they are the agents of both the matrix and embedded clause (and they are in reciprocal relation within the matrix clause: by default, 'they thought about each other...'):

- (99) a. *Akiko ga Noriko no koto o omot-ta.*
 A. NOM N. GEN affair ACC think-PAST
 (intended meaning:) 'Akiko thought about Noriko.'
 b. *Akiko ga [Noriko ga Taroo o seme-ta to] omot-ta.*
 A. NOM N. NOM T. ACC accuse-PAST and think-PAST
 'Akiko thought that Noriko accused Taro.'
 c. *Noriko ga [Akiko ga Taroo o seme-ta to] omot-ta.*
 'Noriko thought that Akiko accused Taro.'
 d. *Akiko to Noriko ga [otagai ga Taroo o seme-ta to]*
 A. and N. NOM each.other NOM T. ACC accuse-PAST and
omot-ta.
 think-PAST
 'Akiko and Noriko thought each other accused Taro' (N. 159), i.e. *Akiko* thought that *Noriko* accused Taro and *Noriko* thought that *Akiko* accused Taro.'

In other words, *each* thought that *the other* accused Taro (cf. 3.4).

10.3 Pleonastic and distributive use of the noun *otagai*

As in many other languages, there is a tendency in Japanese to emphasize the reciprocal meaning of the reciprocal suffix by lexical means. Moreover, the noun *otagai* seems to be more common with morphological reciprocals than with non-reciprocal verbs. In this case we observe pleonastic use of *otagai* and the suffix *-aw*, because they are very close in meaning (see, however, Columns C and D in (119)). Co-occurrence of the reciprocal suffix and *otagai* may have a number of other functions as well. Needless to say, this does not concern the pleonastic use.

There are all the three main diathesis types of reciprocal constructions with pleonastic *otagai*. Reciprocal verbs and/or diathesis types of reciprocal constructions differ with respect to their combinability with different forms of *otagai*, or to its absence. The situation here is rather complicated. The main cases are as follows (cf. 10.2).

1. A combination of *otagai o* with a suffixed reciprocal (if it is possible) is always unambiguously reciprocal in meaning; this meaning is also coded by *otagai ni* in combination with suffixed reciprocals derived from two-place intransitives (see 10.3.1.2). Instead of *otagai o*, the adverb *otagai-ni* may be used, with subtle differences in meaning (see 10.3.1.1).

2. A combination of *otagai ni* with suffixed reciprocals (if it is possible) may render the reciprocal meaning ‘to each other’ or the distributive-reciprocal meaning ‘each (of the subject referents) and someone else (anonymous) to each other’ (double reciprocity). In certain cases, *otagai no* sounds better instead of *otagai ni* (see 10.3.2.1).

3. A combination of *otagai no* with suffixed reciprocals derived from two-place transitives may render either the possessive reciprocal meaning ‘each other’s (back, etc.)’ or the distributive reciprocal meaning ‘each (of the subject referents) and someone else (anonymous) ... each other’s (back, etc.)’. The adverb *otagai-ni* may sometimes be used instead of *otagai no*, with subtle differences in meaning.

10.3.1 “Canonical” constructions

10.3.1.1 *With two-place transitives.* In (100c) *otagai* has the direct object marker *o*, though the reciprocal verb is intransitive, because the underlying object is deleted: either the verb retains the valency of the base verb, or *otagai o* is not perceived as a full-fledged direct object, i.e. the accusative meaning is weakened. The reciprocal form in (100b) and (100c) is slightly lexicalized (some of our informants do not accept a human object with the base verb and prefer an inanimate object though all of them unanimously accept the derived reciprocal).

- (100) a. *Taroo wa Akiko o / Akiko no koto o rikaisu-ru.*
 ‘Taro understands Akiko / Akiko’s affairs.’
 b. *Taroo to Akiko wa rikaisi-a-u.*
 ‘Taroo and Akiko understand each other.’

- c. *Taroo to Akiko wa [otagai o] rikaisi-a-u.* (M. 719)
 ‘Taro and Akiko understand each other.’ (cf. also (85d))

Many of the transitives in 3.1.1 and 10.2.1.1 may be used here as well though the degree of their acceptability varies. Sometimes, the possibility or necessity of *otagai o* is determined by factors that are hard to pinpoint; cf. (101a) where *otagai o* is needed to make the sentence complete (it is redundant if there is indication of the cause of congratulation) and (101e, f, g) where it is rejected by the informants.

- (101) a. *Taroo to Akiko wa otagai o / seikoo o syukuhukusi-at-ta.*
 T. and A. TOP each.other ACC success ACC congratulate-REC-PAST
 ‘Taro and Akiko congratulated each other/on their success.’
 b. *Karera wa [otagai o/otagai-ni] hagemasi-at-ta.*
 ‘They encouraged each other.’
 c. *Taroo to Akiko wa [otagai o /*otagai-ni] warai-at-ta.*
 ‘Taro and Akiko laughed at each other.’
 d. *Karera wa [²otagai o/²otagai-ni] naguri-at-ta.*
 ‘They hit each other.’
 e. *Taroo to Akiko wa [*otagai o/²otagai-ni] korosi-at-ta.*
 ‘Taro and Akiko killed each other.’
 f. *Karera wa [*otagai o/²otagai-ni] siri-at-ta.*
 ‘They got acquainted [with each other].’
 g. *Karera wa [*otagai o/otagai-ni] daki-at-ta.*
 ‘They embraced [each other].’

The variant *otagai-ni* ‘mutually’ seems to be more common in “canonical” constructions than *otagai o*, but in this case the reciprocal suffix is obligatory on the verb (cf. Columns C and D in (119)); cf:

- (102) a. *Hitobito wa tagai-ni idaki-at-ta.* (Kh. 11)
 people TOP mutually embrace-REC-PAST
 ‘People embraced each other.’
 b. *Hutari wa otagai-ni nagusame-a-i, kobusi-at-ta.*
 both TOP mutually comfort-REC-CONV cheer.up-REC-PAST
 ‘The two cheered each other up, having comforted each other.’ (Kh. 11)
 c. *Maa, hanasi-tara, nanka otagai-ni siri-a-e-tara ...* (H. 263)
 well speak-if like mutually know-REC-can-if
 ‘Well, if [you] spoke, if [you] could know each other ...’

10.3.1.2 *With (two-place) intransitives.* All the verbs mentioned in 10.2.1.2 sound better with the reciprocal suffix and *otagai ni* rather than with *otagai o* only. In the opinion of some of our informants, some of these verbs, like *ozigisu-ru* ‘to make a bow’, are preferable with both markers rather than with the reciprocal suffix only, while other informants consider the use of *otagai ni* here as redundant. In (103d) either *otagai ni* or the reciprocal suffix can be omitted (M. Matsumoto, p.c.); cf.:

- (103) a. *Karera wa otagai ni aisatusi-a-u.* ‘They greet each other.’
 b. *Karera wa otagai ni ozigisi-at-ta.* ‘They made a bow to each other.’

- c. *Karera wa otagai ni sasayaki-at-ta.* (Kh. 11) ‘They whispered [sth] to each other.’
 d. *Karera wa otagai ni zikosyookaisi-at-ta.* ‘They introduced themselves to each other.’

10.3.2 Reciprocal or distributive-reciprocal constructions (double reciprocity)?

10.3.2.1 “Indirect” constructions. In the examples at my disposal, the noun *otagai* is commonly used with the dative marker *ni* of indirect object, the direct object of the underlying construction being retained. As often as not, *otagai* can be omitted without affecting the meaning (cf. 3.2 where there is no *otagai*), though sometimes its presence is preferable.

- (104) a. *Kare wa kanozyo ni tumi o abise-ta.*
 he TOP she DAT blame ACC lay-PAST
 ‘He laid the blame on her.’
 b. *Kare to kanozyo wa tagai ni tumi o abise-at-ta.* (Kh.12)
 he and she TOP each.other blame ACC lay-REC-PAST
 ‘He and she laid the blame on each other’; cf. also:
 (105) *Taroo to Akiko ga otagai ni kai-ta mono o mise-at-ta.*
 T. and A. NOM each.other DAT write-PAST thing ACC show-REC-PAST
 ‘Taro and Akiko showed each other what they had written.’

The form *otagai ni* is characteristic of constructions with three-place transitives, but there are cases when *otagai no* is preferable. We shall consider two such examples.

Some verbs governing a human dative object in the base form sound better with the genitive rather than the dative case of *otagai* in a reciprocal construction; i.e. in this case the “indirect” reciprocal construction undergoes mutation into “possessive”, due to the meaning of the reciprocal construction (see (106b)). This holds in those cases when the direct object of the underlying non-reciprocal construction has an obligatory reflexive-possessive attribute; the latter is usually retained in the reciprocal construction:

- (106) a. *Taroo wa Akiko ni zibun no kangae o osie-ta.*
 T. TOP A DAT self GEN idea ACC tell-PAST
 ‘Taro told about *his* idea to Akiko.’
 b. *Taroo to Akiko wa otagai ni zibun no* (much better *otagai no*) *kangae o osie-at-ta.*
 ‘Taro and Akiko told each other about their ideas.’ (M.Shibatani, T.Tsunoda, p.c.)

Another analogous case also concerns semantically three-place verbs which allow expression of a human argument by a complement or by an attribute, with a certain shift in meaning (these two means of expression, though different semantically (Mary’s money may be stolen from someone else), may describe the same denotational situation, i.e. the difference between them may be neutralized by the context); see (107a). Following is a series of examples with the informants’ evaluations, the most acceptable variant being the pleonastic “possessive” construction (typical of verbs denoting stealing, taking away, etc.):

- (107) a. *John wa Mary kara/ Mary no kane o nusum-u.*
 J. TOP M. from M. GEN money ACC steal-NPAST
 ‘John steals from Mary/Mary’s money.’
 b. *John to Mary wa kane o nusumi-a-u.* (“a bit strange”)
 ‘John and Mary steal money from each other.’

- c. *John to Mary wa otagai kara kane o nusum-u.* (“better, but still a bit strange”) (same translation).
- d. *John to Mary wa otagai kara kane o nusumi-a-u.* (“just as good as (c)”) (same translation).
- e. *John to Mary wa otagai-ni kane o nusumi-a-u.* (“slightly odd”) (same intended meaning).
- f. *John to Mary wa otagai no kane o nusumi-a-u.* (“the best expression”) lit. ‘John and Mary steal each other’s money from each other.’ (M. Shibatani, p.c.)

Co-occurrence of *otagai ni* in the distributive meaning with the predicate in the reciprocal meaning in the same sentence allows an interpretation which may be termed double reciprocity: alongside the standard reading (see (108.i)), another interpretation is possible with the subject referents as not the only participants of the same subevents but each interacting with “anonymous” participants, i.e. such sentences describe reciprocal situations with two pairs of subevents; but again not all informants allow interpretation (ii). Thus this also involves a doubling of the participants, as in the examples discussed in 10.2.3.1. Reading (108.ii) is not accepted by most of our informants.

(108) *Taroo to Akiko ga otagai ni kai-ta mono o mise-at-ta.*

- i. ‘Taro and Akiko showed *each other* what they had written.’ (M. Shibatani, p.c.)
- ii. ‘Taro *and someone else* showed *each other* what *each* had written and Akiko *and someone else* showed *each other* what *each* had written.’ (T. Tsunoda, p.c.)

It is worthwhile noting that interpretation (108.ii) is symmetrical to that of *zibun-tati* given by Nishigauchi (1992: 171). Thus, he considers the reciprocal reading (see (i)) of (109) to be pragmatically inappropriate (indeed, there is no sense in telling each other about general ideas), but he allows the second reading which entails a doubling of the participants and related to the distributive reading of the suffix *-aw*:

(109) ^{??}*John to Mary ga zibun-tati no kangae o osie-at-ta.*

J. and M. NOM self-PL GEN idea ACC tell-REC-PAST

- i. ‘John and Mary told about selves’ idea to each other.’
- ii. ‘John revealed to Mary the idea that he and somebody else had and Mary revealed to John the idea that she and somebody else had.’

10.3.2.2 “Possessive” constructions. As mentioned above (see 3.3), these constructions are formed from two-place transitives with a possessive attribute to the direct object. Here also belong reciprocals (from three-place transitives) taking *otagai no*. This concerns sentences like (106b) and (107f) above. In contrast to 10.2.3.2 where *otagai no* alone is used, both *otagai no* and *otagai ni* can be used here with a subtle difference in meaning. As often as not, either form can be omitted without noticeably affecting the meaning.

(110) a. *Taroo wa Akiko no kosei o mitome-ru.*

T. TOP A. GEN individuality ACC recognize-NPAST

‘Taro recognizes Akiko’s individuality.’

b. *Akiko wa Taroo no kosei o mitome-ru.*

‘Akiko recognizes Taro’s individuality.’

- c. *Hutari wa [otagai no / otagai-ni] kosei o mitome-a-u.* (Kh. 14)
 both TOP each.other GEN mutually individuality ACC recognize-REC-NPAST
 ‘Both persons recognize each other’s personality.’
- (111) a. *Karera wa [otagai no / otagai-ni] te o tori-at-ta.*
 ‘They held each other’s hands.’
- b. *T. to M. wa [otagai no / otagai-ni] senaka o massaazisi-at-ta.*
 i. ‘T. and M. massaged *each other’s* backs.’ (M. Shibatani, p.c.)
 ii. ‘T. and *someone else* massaged *each other’s* backs, and M. and *someone else* massaged *each other’s* backs.’ (T. Tsunoda, p.c.)
- c. *T. to M. wa [otagai no / otagai-ni] ie o tate-at-ta.*
 i. ‘T. and M. built *each other’s* houses.’ (cf. (91d))
 ii. ‘T. and M. *each* built *his/her* house.’

As (111b.ii) shows, in this diathesis type, what has been called above double reciprocity is also possible. As in the previous case (see (108)), actualization of this meaning is linked to the use of *otagai no* or *otagai-ni*. (True, in (111c) the second interpretation entails the interpretation of *otagai-ni* as ‘respectively’.) Again, not all of our informants accept this interpretation.

- (112) a. *Taroo wa Akiko no ude o ot-ta.*
 ‘Taro broke Akiko’s arm.’
- b. *Taroo to Akiko wa [otagai no] ude o ori-at-ta.*
 ‘Taro and Akiko broke *each other’s* arms.’
- c. *Taroo to Akiko wa otagai-ni ude o ori-at-ta.*
 ‘Taro and *someone else* broke *each other’s* arms, and Akiko and *someone else* broke *each other’s* arms.’ (T. Tsunoda, p.c.)

10.4 -aw reciprocals and *otagai* reciprocals: Examples of selectivity

As has been pointed out above, the meaning of *otagai* is close to that of *-aw* (this does not concern *otagai* in the distributive sense). Sometimes, however, they are semantically distinct (Nishigauchi 1992: 158). Compare the following two examples:

- (113) a. *Baa de otoko-tati ga naguri-at-te-iru.*
 bar LOC man-PL NOM hit-REC-CONT-NPAST
 ‘Men are hitting one another in the bar.’
- b. *Baa de otoko-tati ga otagai o nagut-te-iru.*
 bar LOC man-PL NOM each.other ACC hit-CONT-NPAST
 (same translation).

The translation of (113a) and (113b) is the same but they may differ in connotations: (113b) “depicts a rather bizarre situation in which the men, presumably drunken, are engaged in the activity of hitting everybody – man A hits man B, B hits C, C hits A, etc.,” while (113a) “may be true if the men can be subdivided into groups within which they are in the mutual hitting relation” (Nishigauchi 1992: 158–9). If we take into account the differences in the degree of acceptability of combinability of the base verbs with both re-

reciprocal markers this explanation, it seems, does not cover all or most of the analogous pairs of constructions.

The following statement contains an analogous interpretation characterizing the difference between (1b) and (1d) on the one hand and (1b) and (1e) on the other. In the first two (1b) reciprocity is taken holistically whereas in the latter case (1d, e) it is emphasized so that the actions of the participants are individuated (M. Shibatani, p.c.)

Some examples of selectivity are cited above. For the most common (namely “canonical”) type of reciprocal constructions, we shall give preliminary results of the native speakers’ reaction to the use of five verbs with the four types of marking reciprocity:

- (a) only or preferably with the suffix *-aw*;
- (b) only or preferably with *otagai o*;
- (c) with *-aw* and *otagai o* simultaneously;
- (d) with *-aw* and *otagai-ni* simultaneously.

Our informants do not consider the latter two cases as preferable with our five verbs (for an example of “possessive” reciprocal, see (107f)). This is shown in the table under (119) based on the data elicited from the informants (the symbol “+” means “OK”, “-” means “bad, strange”, parentheses denote hesitation or disagreement of the informants). The examples contain reciprocals based on five two-place transitives. It is not easy to point out the conditioning factors for this selectivity.

- (114) a. *Taroo to Mitiko wa mi-at-te-ita.*
 b. *Taroo to Mitiko wa otagai o mi-te-ita.*
 c. *Taroo to Mitiko wa otagai o mi-at-te-ita.*
 d. *Taroo to Mitiko wa otagai ni mi-at-te-ita.*
 ‘Taro and Mitiko were looking at each other.’
- (115) a. *Taroo to Mitiko wa aisi-at-te-ita.*
 b. *Taroo to Mitiko wa otagai o aisi-te-ita.*
 c. *Taroo to Mitiko wa otagai o aisi-at-te-ita.*
 d. *Taroo to Mitiko wa otagai-ni aisi-at-te-ita.*
 ‘Taro and Mitiko loved each other.’
- (116) a. *Taroo to Mitiko wa nikumi-at-te-ita.*
 b. *Taroo to Mitiko wa otagai o nikun-de-ita.*
 c. *Taroo to Mitiko wa otagai o nikumi-at-te-ita.*
 d. *Taroo to Mitiko wa otagai-ni nikumi-at-te-ita.*
 ‘Taro and Mitiko hated each other.’
- (117) a. *Taroo to Mitiko wa korosi-at-ta.*
 b. *Taroo to Mitiko wa otagai o korosi-ta.*
 c. *Taroo to Mitiko wa otagai o korosi-at-ta.*
 d. *Taroo to Mitiko wa otagai-ni korosi-at-ta.*
 ‘Taro and Mitiko killed each other.’
- (118) a. *Taroo to Mitiko wa hagemasi-at-te-ita.*
 b. *Taroo to Mitiko wa otagai o hagemasi-te-ita.*
 c. *Taroo to Mitiko wa otagai o hagemasi-at-te-ita.*
 d. *Taroo to Mitiko wa otagai-ni hagemasi-at-te-ita.*
 ‘Taro and Mitiko were encouraging each other.’

(119)	A	B	C	D
	<i>-aw</i>	<i>otagai o</i>	<i>otagai o</i>	<i>otagai-ni</i>
	only	only	and <i>-aw</i>	and <i>-aw</i>
1. <i>mi-ru</i> 'to look'	(-)*	+	-	-
2. <i>aisu-ru</i> 'to love'	+	+	(-)	+
3. <i>nikum-u</i> 'to hate'	+	+	(+)	+
4. <i>koros-u</i> 'to kill'	+	-**	-	(+)
5. <i>hagemas-u</i> 'to encourage'	+	+	(-)	+

* Absence of a reciprocal with *-aw* on the stem *mi-ru* is probably due to the existence of the reciprocal *mi-aw-as-u* 'to exchange glances' used with a direct object as a set phrase (see (65b); see, however, (30b)).

** The non-combinability of the verb *koros-u* 'to kill' with *otagai o* is a puzzle to us. It is interesting to note that some of our informants reject combinability of *otagai o* with the semantically contiguous verb *nagur-u* 'to hit' (T. Takiguchi, F. Endoo, p.c.). Cf. (113b) and its discussion.

10.5 The "inclusive" meaning of the adverb *otagai-ni* 'mutually'

This material is included here to complete the picture. This meaning of the adverb is closely related to the sociative and it most frequently occurs in hortative (i.e. forms inviting to perform a joint/sociative action) sentences which imply the 1st and 2nd persons (speaker and addressee) as the participants though they cannot be expressed overtly. The dictionary (Ko.2. 221) gives the following contexts (among others) for this word: i. 'and I too' (e.g. 'and I am not obliged to you either'), ii. 'and you too (e.g. 'and you too are not better than I'). Also, when complimented, for instance, on work well done, one often responds with *otagai-sama* which means something like 'You too' (Hinds 1986:263). In the examples below the speaker has in mind, it seems, the addressee rather than himself but includes himself out of politeness. The adverb *otagai-ni* cannot be used in this meaning in an affirmative sentence, or in a sentence with the participants named. In these cases it is replaced by the adverb *tomo-ni* (see (120b)). Examples ((120) and (121a, b), and the comments on them, have been suggested by M. Shibatani.

- (120) a. *Otagai-ni boke-te ki-ta ne?*
mutually/both grow.senile-CONV come-PAST FIN.Q
'[We, i.e. you and I] are both (lit. 'mutually/together') growing old, aren't we?'
- b. *Kimi to boku to tomo-ni [*otagai-ni] boke-te ki-ta ne?*
you and I and together mutually grow.old-CONV come-PAST FIN.Q
'You and I are growing old together, aren't we?'
- (121) a. *Otagai-ni ganbari-mas-yoo!*
mutually do.the.best-POL-HORT
'Let us do our best!'
- b. *Otagai-ni kirei-ni si-mas-yoo!*
mutually clean-ADVZ do-POL-HORT
'Let's keep it clean!' (notice in Japanese toilets).

- c. *Zya, otagai kenkoo de i-ru koto o negat-te kampai desu.*
 then mutually healthy COP be-NPAST that ACC wish-CONV drink.up COP
 ‘Let’s then drink up wishing for our (mutually) being healthy.’

Some of our young informants are more liberal in their opinion and consider *otagai-ni* in (120b) acceptable.

10.6 Reciprocal constructions with locative nouns

(The data for this section are A. Bugaeva’s contribution.) In Japanese, locative nouns may take the noun *otagai* with the genitive marker *no* (never the reciprocal suffix) to form reciprocal adverbial constructions, contrary to a number of other languages (more or less close areally) where locative nouns (and locative postpositions and adverbs) may combine with a reciprocal affix and thus form reciprocal adverbs, postpositions, etc. (cf. Ainu in Alpatov et al., Ch. 42, §12.1; Even in Malchukov, Ch. 39, §12; Evenki in Nedjalkov & Nedjalkov, Ch. 38, §12; Yukaghir in Maslova, Ch. 44, §4.1.4.2). The term “adverbial constructions” is used in a broad sense here:

(a) to refer to constructions, including spatial ones where the respective spatial meaning is part of the verb’s lexical meaning, which are not proper adverbial constructions; this is shown in the following example with a lexical reciprocal whose meaning contains the component of close spatial contact. In (122) the meaning ‘on top of sth’ is implied by the meaning of the verb *kasari-ar-u* ‘to be placed one upon another’ (cf. (129), (146)), i.e. it is a kind of argument.

- (122) *Hon ga otagai no ue ni kasanari-at-te-iru.*
 book NOM each.other GEN top DAT pile-REC-CONT-NPAST
 ‘The books are piled on top of one another.’

(b) It is also used to refer to proper adverbial constructions, viz. those where the meaning of an adverbial noun phrase is not implied by the verb’s lexical meaning, as is the case with the verb *asob-u* ‘to play’ in (124c).

In a reciprocal adverbial construction, the predicate may be used either with or without the reciprocal suffix. The first option seems to be preferable when the reciprocal referents are in close spatial contact. In (122) this is inherent in the verbal meaning. In (123a, b) close contact is expressed by a noun phrase: ‘on each other’s knees’, ‘on each other’s backs’. Note also that in all the examples of this section with reciprocals in *-aw* we find the locative noun *ue* ‘top’ which usually implies a close contact between objects (see (122) and (123)), and in the examples without a verbal reciprocal we find locative nouns that do not imply this kind of contact, cf. *soba* ‘close’, *mae* ‘front’ (see (124)).

- (123) a. *A to B ga otagai no hiza no ue ni suwari-a-u.*
 A and B NOM mutually GEN knee GEN top DAT sit-REC-NPAST
 ‘A and B are sitting by turns on each other’s knees.’
 b. *Kodomo ga otagai no senaka no ue ni nori-at-te-iru.*
 children NOM mutually GEN back GEN top DAT climb-REC-CONT
 ‘The children are climbing on top of each other’s backs.’

In the following examples there is no implication of close spatial contact (cf. ‘on each other’s knees’ and ‘next to each other’ with the same verb in (123a) and (124a)) and therefore the reciprocal suffix cannot be used in the sentences below.

- (124) a. *Karera wa otagai no soba ni suwaru* [**suwari-a-u*].
 they TOP mutually GEN close DAT sit sit-REC-NPAST
 ‘They sit next to each other.’ (cf. (123a))
- b. *Watasi-tati wa otagai no soba ni sun-de-iru* [**sumi-at-te-iru*].
 I-PL TOP mutually GEN close DAT live-CONT-NPAST
 ‘We live next to each other.’
- c. *Kono kodomo-tati wa itumo otagai no soba de ason-de-iru*.
 these children-PL TOP always mutually GEN close LOC play-CONT-NPAST
 ‘These children always play next to each other.’
- d. *Otagai no mae ni bakemono ga de-te ki-ta*.
 mutually GEN front DAT monster NOM appear-CONV come-PAST
 ‘A monster/Monsters appeared in front of us’, lit. ‘... in each other’s (our) front.’
 (a situation with two observers is described, with a monster appearing between them).

As we see, adverbial reciprocal constructions with *otagai no* and locative nouns can be formed from intransitive verbs as well, i.e. from verbs that do not take *-aw* at all (cf. *sum-u* ‘to live’ → **sumi-a-u*) or in constructions without locative nouns. Certain verbs that have a reciprocal form, e.g. *asob-u* ‘to play’ → *asobi-a-u* ‘to play with each other’, or *der-u* ‘to appear’ → *de-a-u* ‘to meet each other’ (lexicalized; cf. (68)), cannot be used in sentences like (124c) and (124d) respectively. The form *suwari-a-u* is accepted in the meanings ‘to sit by turns’ and ‘to sit facing each other’ by some of our informants (cf. *suwari-aw-ase-ru* ‘to happen to sit next to each other’ in (66b)). The verb *nor-u* from (123b) means ‘to climb’ in the sense of climbing on a dais, a chair, etc., never climbing a mountain (cf. the derivatives *nori-a-u* and *nori-aw-ase-ru* in (67a) and (66b) in the meaning ‘to happen to ride in the same train, car, etc.’ derived from *nor-u* in the meaning ‘to take a ride in a train, a car, etc.’).

11. Lexical reciprocals proper

11.1 Introductory

If we define lexical reciprocals as verbs with a reciprocal meaning which do not enter into a standard semantic opposition with a base verb (cf. (1a, b, c)), we obtain a class within which three main groups can be distinguished:

1. Lexicalized reciprocals with a reciprocal suffix and a non-standard semantic relation to the base verb (see Section 7).
2. *Reciproca tantum*, i.e. verbs with a presumably reciprocal suffix and no base verb (see Section 8).
3. Lexical reciprocals with no (obligatory) reciprocal marker.

The first two groups have been considered above, and further below we shall discuss the third group which may be termed lexical reciprocals proper. These are verbs with an inherent reciprocal meaning.

A distinctive feature of prototypical lexical reciprocals is semantic (but not pragmatic) equivalence of three constructions of which the first two ((125a) and (125a')) are discontinuous (with a reversed syntactic arrangement of the arguments) and (125b) is a simple construction with both participants named by the subject (cf. Section 4). The ambiguity of interpretation of the simple construction as elliptical with an implied second participant(s) is resolved by context. Thus, in contrast to (125a-a') with discontinuous constructions, the reciprocal interpretation of simple construction (125b) is foremost though not the only one possible (cf. Hinds 1986:97). It is potentially ambiguous as it may also signify that each of the agents got engaged to someone else. Following are illustrations of two main types of prototypical constructions (three constructions of the first type correspond to two of the second type; note that we have found only one two-place transitive lexical reciprocal, see 11.2.2; most likely, they are more numerous but the fact that we have found only one verb is indicative of their limited number).

1. Subject-oriented two-place intransitive construction (see 11.2.1.1):

- (125) a. *Taroo wa Akiko to kekkonsi-ta.* 'Taro married Akiko.'
 = a'. *Akiko wa Taroo to kekkonsi-ta.* 'Akiko married Taro.'
 = b. *Taroo to Akiko wa kekkonsi-ta.* i. 'Taro and Akiko got married [to each other].'
 ii. 'Taro and Akiko each got married to someone else.'
 c. **Taroo to Akiko wa kekkonsi-at-ta.* (same intended meanings as (b)).

2. Object-oriented three-place transitive construction (see 11.3):

- (126) a. *Karera wa Taroo to Akiko o kekkons-ase-ta.*
 lit. 'They married Taro and Akiko' ambiguous between:
 i. 'They married Taro to Akiko.'
 ii. 'They married Taro and Akiko each to someone else.'
 = b. *Karera wa Akiko to Taroo o kekkons-ase-ta.*
 i. 'They married Akiko to Taro.'
 ii. 'They married Akiko and Taro each to someone else.'
 (We owe (125) and (126) to M. Shibatani, p.c.)

To complete the picture, here is an example of a construction with the reciprocal form derived from the lexical reciprocal under (126a)–(126b), i.e. from a causative verb derived from a lexical reciprocal. The semantic difference is very slight.

- (127) *Mukasi kono mura de wa, A-ke to B-ke wa otagai ni*
 long.ago this village LOC TOP A.family and B.family TOP mutually
itizoku o kekkons-ase-at-te-ita.
 family.members ACC marry-CAUS-REC-CONT-PAST
 'Long ago in this village, the A family and the B family used to make their family members marry to (one of) each other's family members.' (T. Takiguchi, F. Endoo, p.c.)

Unlike some other languages which may employ a reciprocal marker on lexical reciprocals (generally or in the simple construction only), Japanese lexical reciprocals, with the ex-

ception of a small group (see (129), (134)–(136), (148)–(152)), are incompatible with the reciprocal suffix. In this respect they differ particularly from lexical reciprocals in Mongolic languages most of which may occur with the reciprocal marker used pleonastically, cf. Khalkha *tox'oo-/tox'oo-ldo-* 'to meet', 'to coincide'; *marga-/marga-lda-* 'to argue' (see Nedjalkov et al., Ch. 29, §10.1, where about 70 such pairs are listed). Thus in Japanese the reciprocal marker and two-place intransitive lexical reciprocals usually “repel” each other while in Buryat they are mutually attracted. It is different with three-place lexical reciprocals of joining (in the broad sense) in Japanese: there was a tendency to mark these verbs with the (now unproductive) compound reciprocal-causative suffix *-aw-ase* (see Section 6).

Japanese lexical reciprocals seem to run into several hundred items. As in some other languages, they display great semantic, syntactic and morphological diversity. Needless to say, we shall consider only some of them below.

11.2 Subject-oriented two-place reciprocals

11.2.1 *Two-place intransitives*

11.2.1.1 *Combinability with the reciprocal suffix -aw.* This feature distinguishes two groups, Group A and Group B. Two-place intransitive lexical reciprocals mostly denote fighting, getting engaged, joining together or parting, quarrelling or getting reconciled, being different or alike, etc. As pointed out in the heading, they are two-place intransitives; some lexicalized reciprocals (see (68)) and some *reciproca tantum* (cf. (75)) are also of this type.

Lists (128) and (129) have been compiled with the help of the informants who rejected reciprocal forms from the verbs in (128), but there is no strict borderline between these two lists, which is supported by the fact that two verbs from (128a) are registered in specialist literature with the suffix *-aw*: *araso-i-a-u* 'to argue with each other' and *hanare-a-u* 'to part from each other' (Ha. 37).

11.2.1.1.1 *Group A. Verbs which do not take -aw.* Here belong mostly dynamic verbs (see (128a)), a number of stative verbs (cf. (128b)) and qualitative verbs (predicative adjectives; cf. (128c); suffixed reciprocals are not formed from qualitative verbs at all), some of the latter with a unique paradigm (e.g. (128d)).

- | | | |
|----------|-----------------------|--|
| (128) a. | <i>araso-u</i> | i. 'to dispute, argue, quarrel', ii. 'to compete' (M. 36) |
| | <i>atumar-u</i> | 'to meet or come together' (B.50) |
| | <i>a-u</i> | i. 'to correspond to', 'agree, harmonize'; ii. 'fit/suit' (B.50) |
| | <i>a-u</i> | 'to meet with, encounter, face' (B. 50) |
| | <i>hanare-ru</i> | 'to separate from, part, become disjoined' (M. 390) |
| | <i>kaigoosu-ru</i> | 'to meet, get together' (M. 662) |
| | <i>kekonsu-ru</i> | 'to marry sb, be/get married to' (M. 787) |
| | <i>kenkasu-ru</i> | 'to quarrel' (M. 793) |
| | <i>konyakusu-ru</i> | 'to be engaged to sb' (M. 926) |
| | <i>nakanaorisu-ru</i> | 'to make peace' (B. 991) |

	<i>rikonsu-ru</i>	‘to get divorced’ (Hi. 39)
	<i>sakar-u</i>	‘to copulate (as animals)’ (B. 1064)
	<i>sensoosu-ru</i>	‘to fight, make war’ (B. 1231)
	<i>sessu-ru</i>	i. ‘to come in(to) contact with’, ii. ‘to be adjacent to’ (M. 1501)
	<i>soro-u</i>	i. ‘to make a pair/set’, ii. ‘to be equal/uniform’ (M. 1654)
	<i>yakusokusu-ru</i>	‘to come to an agreement, to promise’ (Ko.2. 584)
	<i>wakare-ru</i>	i. ‘to divorce’, ii. ‘to part/be divided from sb/sth’, etc. (M. 1940)
b.	<i>kotonar-u</i>	‘to differ’ (Hi. 39)
	<i>ni-ru</i>	‘to be alike or similar, resemble’ (B. 1032)
	<i>ruisu-ru</i>	‘to be similar, to be like, resemble’ (B. 1136)
	<i>sum-u</i>	‘to live somewhere/with sb’ (Hi. 39)
	<i>tonar-u</i>	‘to adjoin, to lie next to’ (B. 1493)
	<i>toto-no-u</i>	‘to be in harmony, to accord’ (B. 1509)
c.	<i>hitosi-i</i>	‘equal, similar to sb/sth’ (B. 362)
	<i>tika-i</i>	‘close to sb/sth’ (also with <i>kara</i> ‘from’)
	<i>too-i</i>	‘far from sb/sth’ (with <i>kara</i>)
d.	<i>onazi</i>	‘the same, like, similar to sb/sth’ (B. 1084).

Compare Himeno (1982:17–8).

11.2.1.1.2 *Group B. Verbs taking -aw optionally.* The dictionary translations are given for the unsuffixed forms; they are more or less valid for the suffixed forms as well. Himeno (1982:21) claims that *-aw* only highlights the reciprocal meaning on verbs that already have this meaning in their base form, i.e. it serves to emphasize it.

(129)	<i>buttukar-u / buttukari-a-u</i>	‘to collide with’ (B. 103)
	<i>karam-u / karami-a-u</i>	‘to coil, twine around’ (B. 587)
	<i>kasamar-u / kasanari-a-u</i>	‘to be placed one upon another’ (B. 595)
	<i>kooronsu-ru / kooronsi-a-u</i>	‘to argue’ (Hi. 21)
	<i>kuttuk-u / kuttuki-a-u</i>	‘to stick, adhere’ (B. 806)
	<i>kyoosoosu-ru / kyoosoosi-a-u</i>	‘to compete, rival’ (M. 1020; B. 849)
	<i>mazar-u / mazari-a-u</i>	‘to be mixed, blended, mingled’ (B. 897)
	<i>maziwar-u / maziwari-a-u</i>	‘to keep company’ (B. 871)
	<i>moture-ru / moture-a-u</i>	‘to get entangled (as threads)’ (B. 962).

11.2.1.2 *Two main types of discontinuous constructions: Dative and comitative.* To form a discontinuous construction, most lexical reciprocals take either a comitative object (marker *to*; see (125a, a’)), or a dative object (marker *ni*; see (132a)), though with a slight shift of meaning (other case markers of the object, e.g. *kara* ‘from’, are rare). When *to* is used both reciprocal argument (subject and object) referents are presented as more “equal” semantically and/or pragmatically (see (130), (131) and the discussion). Thus the generalized formula of the case frame is (a) *A ga B to* = (b) *B ga A to* (see (125a) = (125a’)). A small group of lexical reciprocals may take optionally the reciprocal marker. Below are the lists of these two groups.

In the discontinuous construction, some of the predicates can be entered in the lists under (128)–(129) if both arguments are homogeneous semantically and pragmatically

(as is known, if Taro resembles Jiro, Jiro resembles Taro as well but if Taro resembles a bull it does not follow that the bull resembles Taro). As mentioned, two constructions with the same lexical reciprocal and reversed comitative objects are mostly synonymous (cf. (125a) and (125a')). Analogous constructions with a dative object may be non-synonymous (only a few lexical reciprocals do not take a dative object, e.g. *kekonsu-ru* 'to marry sb', *kenkasu-ru* 'to quarrel', *tiga-u* 'to be different'). If they are not synonymous, their "sum" may be more or less synonymous to the simple construction, which is reflected in the simplified equation $A \text{ ga } B \text{ ni} + B \text{ ga } A \text{ ni} = A \text{ to } B \text{ ga}$; cf. (130a) + (130a') = (130b). The latter relationship is analogous to $(1a) + (1a') = (1b)$. The difference lies in the fact that the simple construction under (1b) contains a suffixed reciprocal and (130b) does not.

Generally, the object with *ni* denotes a less active referent than the object with *to*. Thus, (130a) and (130a') describe a situation when one participant meets the other (probably by chance) and (130c) describes a meeting by arrangement (as well as (130b)), therefore in (130a-a') the object may denote a referent of a different semantic class (e.g. non-human, e.g. a cat; e.g. 'when walking in the park I met a cat': F. Endoo, p.c.), but (130c) does not allow such usage.

- | | | | |
|-------|----|---------------------------------|---|
| (130) | a. | <i>Taroo wa Akiko ni at-ta.</i> | 'Taro went to meet Akiko.' |
| | a' | <i>Akiko wa Taroo ni at-ta.</i> | 'Akiko went to meet Taro.' |
| | b. | <i>Taroo to Akiko wa at-ta.</i> | 'Taro and Akiko went to meet each other.' |
| | c. | <i>Taroo wa Akiko to at-ta.</i> | 'Taro met with Akiko.' |

The *to* marking is more typical of active verbs (e.g. *kekonsu-ru* 'to marry sb'; see (125)), while *ni* marking is more typical of stative verbs (*ni-ru* 'to be alike', *hitosii* 'to be equal'), although many verbs (e.g. *a-u* 'to meet', etc.) allow both markers. In the latter case there is a semantic difference depending on the choice of the marker (Kuno 1970; Martin 1988: 203). In contrast to *ni*, the postposition *to* implies that the roles of the participants are entirely symmetrical. Therefore the form *buttukari-at-ta* is readily accepted in (131a') and (131e) but it sounds worse in (131b') and it is hardly acceptable in (131d) (Examples (131a-b-c) are borrowed from Martin (1988: 203) who quotes Kuno (1970)):

- | | | |
|-------|----|---|
| (131) | a. | <i>A no atama ga B no atama to buttukat-ta.</i>
A GEN head NOM B GEN head with strike-PAST
'A's head struck against B's head.' (both heads moved) |
| | a' | <i>A no atama ga B no atama to buttukari-at-ta.</i>
(same as (131a)). |
| | b. | <i>A no atama ga B no atama ni buttukat-ta.</i>
A GEN head NOM B GEN head DAT strike-PAST
(same as (131a)). (only A's head moved) |
| | b' | <i>?A no atama ga B no atama ni buttukari-at-ta.</i>
(same as (131a)). |
| cf. | c. | <i>A no atama ga kabe ni / *to buttukat-ta.</i>
A. GEN head NOM wall DAT / with strike-PAST
'A's head struck against the wall.' |
| | d. | <i>*A no atama ga kabe ni / to buttukari-at-ta.</i>
(intended meaning: same as (131c)). |

- e. *A no atama to B no atama ga buttukat-ta / buttukari-at-ta.*
 'A's head and B's head struck against each other.'

In (131e) the unsuffixed verb form denotes most likely accidental collision, while the suffixed form may imply a certain purpose (T. Takiguchi and F. Endoo, p.c.).

11.2.1.3 *The simple construction.* By way of partially repeating ourselves, we shall consider formation of the simple construction. In this construction, the subject must be semantically plural. The formation varies depending on the predicate. There are three main means.

1. Most of these predicates may form a simple construction without any additional means (see (125b); see the list under (128)); cf. also:

- (132) a. *Taroo no seikaku wa Akiko no seikaku ni ni-te-iru.*
 lit. 'Taro's character is like Akiko's character.'
 b. *Karera wa seikaku ga yoku ni-te-iru.* (M. 1236)
 they TOP character NOM much be.alike-CONT-NPAST
 lit. 'As for them, the characters are very much alike.'
 'They are very alike in character.'

2. A few verbs require the use of the adverb *otagai-ni* 'mutually'. If the latter adverb is omitted the sentence may be interpreted as a discontinuous construction in the sense that the streets named are close to a third street which is not named (this peculiarity of unmarked lexical reciprocals is pointed out above; see (125b) and the discussion). *Otagai ni* may also occur with suffixed reciprocals (see (147b)).

- (133) a. *A-doori wa B-doori ni / kara / to tika-i.*
 'Street A is close to Street B.'
 b. *A-doori to B-doori wa otagai-ni tika-i.*
 'Street A and Street B are close to each other.' (F. Endoo, p.c.)

3. A limited number of lexical reciprocals (listed under (129)) may be used in the simple (as well as in the discontinuous) construction both with and without the reciprocal suffix (cf. also (135)). As mentioned, if the object of a discontinuous construction is dative (see (134a)) its referent (in this case, Akiko's hand) is static and only Hanako's hand moves, and in a construction with the comitative object this is not specified. The latter is also true of the simple construction. The reciprocal suffix stresses that no other participants are involved besides those named in the sentence, and it also stresses mutual entangling. In (134a) the non-reciprocal form is preferable, and in (134b) both forms are equally acceptable; this also applies to (135) (H. Narrog, p.c.). Note that (134) contains six variants, four for (134a) and two for (134b).

- (134) a. *Hanako no yubi ga Akiko no yubi ni / to karan-da /*
 H. GEN finger NOM A. GEN finger DAT / COM entangle-PAST /
karami-at-ta.
 entangle-REC-PAST
 'Hanako's fingers and Akiko's fingers intertwined.'

- b. *Hanako no yubi to Akiko no yubi ga karan-da / karami-at-ta.*
 H. GEN finger and A. GEN finger NOM entangle-PAST
 ‘Hanako’s and Akiko’s fingers intertwined.’ (M. Shibatani, p.c.)
- (135) a. *Kona ga satoo to mazat-ta / mazari-at-ta.*
 flour NOM sugar COM mix-PAST / mix-REC-PAST
 ‘Flour got mixed with sugar.’
- b. *Kona to satoo ga mazat-ta / mazari-at-ta.*
 ‘Flour and sugar got mixed.’

11.2.2 Two-place transitives

So far, we have only one example of such lexical reciprocals, viz. *sir-u* ‘to be acquainted’. Our informants disagree with regard to the formation of both simple and discontinuous constructions: some allow both an accusative object and a comitative object, others regard a comitative object as “old-fashioned”, some consider a suffixed reciprocal obligatory in the simple construction and others allow both a suffixed and an unsuffixed verb in both constructions. In the discontinuous construction, some informants see a slight difference in meaning between the base and the suffixed forms; thus *sit-ta* in (136a, b) but not in (136c) may have sexual connotations which the form *siri-at-ta* lacks.

- (136) a. *Taroo wa Akiko o / to sit-ta / siri-at-ta.* ‘Taro got acquainted with Akiko.’
 = b. *Akiko wa Taroo o / to sit-ta / siri-at-ta.* ‘Akiko got acquainted with Taro.’
 = c. *Taroo to Akiko wa sit-ta / siri-at-ta.* ‘Taro and Akiko got acquainted with each other.’ (T. Takiguchi, F. Endoo, H. Narrog, p.c.; (136a-b) are “very bad” – M. Shibatani, p.c.)

11.3 Object-oriented three-place reciprocals. Verbs of joining two objects together

11.3.1 Introductory

This is a group of transitives denoting actions with two interacting (mostly inanimate) object referents or with one plural object (in this case the verbs are syntactically two-place, but for convenience they are included here; see *atume-ru* in (142b)). Most of them are lexical or morphological causatives. The typical meanings are those of joining and mixing, and less commonly separating and comparison. Here also belong many lexicalized verbs with the suffix *-aw-ase*, as well as their base verbs (see (57) and (58)). The latter base verbs are listed under (138) and (142). As mentioned above, there was a tendency in Japanese to mark three-place transitives of conjoining by means of the complex suffix *-aw-ase*. As the semantic relation between the base and the derivative in *-aw-ase* is not reciprocal standard they also belong to lexical reciprocals by definition.

Many of the verbs considered here have two-place non-causative intransitive counterparts, i.e. lexical reciprocals listed in 11.2.1.1 above. There seem to be no anti-causatives among the latter, i.e. derivatives formed by attaching an affix (an example of an anti-causative, though not from a reciprocal, is (5c)). The reciprocal suffix in Japanese, unlike reciprocal suffixes in some other Altaic languages (e.g. Turkic and Mongolic; cf. Buryat *hürme-* ‘to entwine sth’ → *hürme-lde-* ‘to get entwined’, *zalga-* ‘to join sth with sth’ → *zalga-lda-* ‘to become joined’; see Nedjalkov et al., Ch. 29, §12.2), is not used as an an-

ticausative marker on three-place transitives (it would be interesting to find out whether *-aw* had an anticausative function in the past, though it is rather unlikely in view of the relatively “young age” of the marker *-aw-* which is undergoing a change from an auxiliary verb into a suffix).

11.3.2 Two main types of discontinuous constructions: Dative and comitative

The non-direct object may be introduced either by *to* or by *ni*. The use of these case markers is analogous to their use with two-place intransitives discussed in 11.2.1.2. If the object is introduced by the comitative marker *to* both object referents are presented as pragmatically equal, without any implication of their size, volume or mobility (cf. (130), (131), (134) and discussion). Thus, (137a) and (137a') do not indicate whether the amount of flour is much larger than that of sugar, therefore the reversal of the objects does not violate the correctness of the sentence. (137b) implies that the object referent with *ni* (i.e. the flour) is stationary and larger in quantity, which is usually the case pragmatically, while (137b'), being grammatically correct, is unlikely “because of our pragmatic knowledge that we mix much more flour than sugar when baking a cake” (F. Endoo, p.c.). Most of the verbs listed below have the case frames:

- (a) *A ga B to/ni C o*
 = (a') *A ga C to/ni B o*
 = (b) *A ga [B + B ...] o.*

The discontinuous constructions (a) = (a') are illustrated by (137a, b) and (137a', b') respectively, and type (b) by (137c):

- | | | | | |
|-------|----|--|---|--|
| (137) | a. | <i>Taroo wa kona to satoo o maze-ta.</i> | ‘Taro mixed sugar with flour.’ | |
| | = | a'. | <i>Taroo wa satoo to kona o maze-ta.</i> | ‘Taro mixed flour with sugar.’ |
| | | b. | <i>Taroo wa kona ni satoo o maze-ta.</i> | ‘Taro added (lit. mixed) sugar to flour.’ |
| | # | b'. | <i>?Taroo wa satoo ni kona o maze-ta.</i> | ‘Taro added (lit. mixed) flour to sugar.’ |
| | | c. | <i>Taroo wa nisyu no kona o maze-ta.</i> | ‘Taro mixed two kinds of flour.’
(<i>nisyu</i> ‘two kinds’). |

11.3.3 Existence of a non-causative counterpart

With respect to the relatedness between the lexical reciprocals in question and (possible) same-root non-causatives, three groups of verbs can be distinguished (we have in mind morphological relatedness of the verbs in question to two-place intransitives from the lists under (128)–(129)). In the list of each group, verbs that may also take the suffix *-aw* are given under (a), and those that cannot under (b) (we owe this subclassification to T. Takiguchi, F. Endoo and H. Narrog).

11.3.3.1 Group A: Verbs without non-causative counterparts. However, the passive forms with the suffix *-rare/-are* (see 2.5.2) from some of these verbs are close in meaning to non-causatives. Groups A and C also include three-place transitives listed under (57) as base verbs for the *-aw-ase* verbs. Some of these base verbs are entered under (138) and

(142) in bold type (the compound verbs *kaki-maze-ru* and *musubi-tuke-ru* do not have forms in *-aw-ase* but their components do, therefore they are also in bold type).

- (138) a. *hikakusu-ru* 'to compare sth with sth' (B. 337)
kurabe-ru 'to compare sth with sth' (B. 791)
 b. *kagar-u* 'to lace sth together by sewing' (B. 525)
kakimaze-ru 'to stir and mix together' (B. 555)
kak-u 'to interlace, intertwine, braid' (B. 554)
kongoosu-ru 'to mix up, blend together' (B. 740)
kubetusu-ru 'to distinguish' (B. 772)
kuker-u 'to sew the edges of two pieces together' (B. 783)
musubituke-ru 'to tie, join sth with sth, fasten together' (B. 977)
musub-u 'to tie, knot' (B. 977)
renketusu-ru 'to combine, unite' (B. 1121)
teras-u 'to compare sth with sth' (B. 1469)
tunag-u 'to tie (as with a rope)' (B. 1534)
tuzur-u i. 'to sew sth and sth together', ii. 'to patch' (B. 1544)
war-u 'to divide sth into parts' (M. 1948).

11.3.3.2 *Group B: Derivatives from non-causative stems.* Their marker is the productive causative suffix *-sase/-ase* (see 2.5.1). Following is an example and a list of these verbs (the non-causative verbs, listed above under (128), are given in brackets without translation):

- (139) a. *Taroo ga Akiko to kekkonsi-ta.* 'Taro married Akiko.'
 → b. *Karera wa Taroo o Akiko to kekkons-ase-ta.* 'They married Taro to Akiko.'
- (140) a. *aw-ase-ru* 'to put sth together, sum up' (←*a-u*)
kekkons-ase-ru 'to marry sb to sb' (←*kekkonsu-ru*)
kenkas-ase-ru 'to make sb quarrel with sb' (←*kenkasu-ru*)
 b. *nakanaoris-ase-ru* 'to reconcile sb with sb' (←*nakanaorisu-ru*)
wakares-ase-ru 'to make part' (←*wakare-ru*).

11.3.3.3 *Group C: Verbs with non-causative counterparts with alternation of fossilized suffixes.* Some have lost a fossilized causative suffix. What follows is an example and a list of these verbs (the information on this group of verbs has been provided by M. Shibatani, F. Endoo, H. Narrog and T. Takiguchi):

- (141) a. *Taroo wa kona to satoo o maz-e-ta.* 'Taro mixed flour with sugar.'
 ↔ b. *Kona to satoo wa maz-at (<-ar)-ta.* 'Flour and sugar got mixed.'
- (142) a. *karam-e-ru* 'to entangle sth and/with sth' (←*karam-u*)
kasan-e-ru 'to put sth over sth' (↔*kasan-ar-u*)
kuttuk-e-ru 'to join/fasten together, glue sth to sth' (←*kuttuk-u*)
totono-e-ru i. 'to harmonize sth', ii. 'to adjust' (←*totono-u*)
wak-e-ru 'to part, divide, share' (↔*wak-are-ru*)
 b. *atum-e-ru* 'to assemble, to call together' (↔*atum-ar-u*)
han-as-u i. 'to divide sth from sth', ii. 'to distinguish' (↔*hana-rer-u*)
maz-e-ru 'to mix sth with sth' (↔*maz-ar-u*)
motur-as-u 'to entangle sth and/with sth' (↔*motur-er-u*).

11.3.4 Existence of a suffixed reciprocal

Some object-oriented lexical reciprocals can take the reciprocal suffix displaying selectivity in this respect. As mentioned above, the base verbs taking the suffix are given in (138a), (140a) and (142a). The derivatives may differ in meaning from the base verbs and from one another. We shall consider derivatives of Groups A, B and C consecutively.

11.3.4.1 Suffixed reciprocals of Group A. With the exception of two verbs, suffixed reciprocals are not formed from verbs of this group. However, many of them take the suffix *-aw-ase* (they are given in bold type in (138)). Both verbs that form suffixed reciprocals denote comparison. In the simple construction, unlike their base verbs and like these bases with *otagai no* (see (143b)), the suffixed derivatives denote actions in which the subject referents alone take part, while the base verbs allow two readings (see (143a)). The discontinuous construction (analogous to (125a–b)) does not imply any other participants except those named.

- (143) a. *Taroo to Ziroo wa sintyoo o kurabe-ta.* (*sintyoo* ‘height’)
 i. ‘Taro and Jiro compared *their (own)* heights with each other.’
 ii. ‘Taro and Jiro compared (*someone else’s*) heights.’
 b. *Taroo to Ziroo wa otagai no sintyoo o kurabe-ta.*
 (same as (i)).
 c. *Taroo to Ziroo wa sintyoo o kurabe-at-ta.*
 (same as (i)).
 d. *Taroo wa Ziroo to sintyoo o kurabe-ta.*
 (same as (i); T. Takiguchi, F. Endoo, p.c.)

11.3.4.2 Suffixed reciprocals of Group B. The nature of the changes in this group differs from that in Group A: the difference in meaning between the bases and respective derivatives is very subtle and hard to pinpoint, but there seems to be an implication of sociativity in the latter; cf.:

- (144) a. *Taroo to Ziroo wa otagai ni nittei o awase-ta.* (*nittei* ‘schedule’)
 ‘Taro and Jiro arrange their schedule (by talking with each other).’
 b. *Taroo to Ziroo wa otagai ni nittei o awase-at-ta.*
 (≈ same as (a); T. Takiguchi, F. Endoo, p.c.)

In the opinion of the native speakers named, (144b) implies that the subject referents are more deeply involved in the arranging of their schedule than in (144a): they must have discussed it in a detailed way suggesting several alternatives, but they say that some speakers may consider the reciprocal suffix redundant.

11.3.4.3 Suffixed reciprocals of Group C. Some of the lexical reciprocals of this group are of particular interest because they derive not only from three-place causative transitives (cf. *karam-e-ru*, *kasan-e-ru* and *kuttuk-e-ru* in (148)–(150)) but also from the two-place non-causative correlates (cf. *karam-u*, *kasan-ar-u* and *kuttuk-u* in (148)–(150); see also list (129)). The difference between the variants with *ni* and *to* is parallel to the difference between the variants of the corresponding non-causative verb (see (134) and the discus-

sion). The meaning of joining is contained in the lexical meaning of the verb and the reciprocal suffix highlights it. In the discontinuous construction, some informants prefer the unsuffixed form. The diathesis type of these reciprocals is not quite clear: they have features of both “indirect” (because they are derived from three-place transitives) and “possessive” (because of the possessive relationship between the subject and object referents) reciprocals.

To complete the picture, here are two derivatives in *-aw-ase-*: *karami-aw-ase-ru* ‘to coil, twine sth’ (see (57) and (145c)) for (148a) and *kasan-e-aw-ase-ru* ‘to lay one on top of another’ (see (57) and (146c)) for (149b). Compare:

- (145) a. *H. ga yubi o A. no yubi i / to karam-e-ta / karam-e-at-ta.*
 H. NOM finger ACC A. GEN finger DAT COM entangle-PAST (-at < -aw)
 ‘H. intertwined his fingers with Akiko’s fingers.’
- b. *Hanako to Akiko ga yubi o karam-e-ta / karam-e-at-ta.*
 H. and A. NOM finger ACC entangle-PAST (-at < -aw)
 ‘Hanako and Akiko intertwined their fingers.’ (cf. (135))
- c. *Hanako to Akiko ga [otagai no] yubi o karami-aw-ase-ta.*
 H. and A. NOM each.other GEN finger ACC entangle-REC-CAUS-PAST
 ‘Hanako and Akiko joined their fingers together.’
- (146) a. *H. ga zibun no te o T. no te ni kasan-e-ta / kasan-e-at-ta.*
 H. NOM self GEN hand ACC T. GEN hand DAT put.OVER-PAST/put.OVER-REC
 ‘Hanako put his own hand on Taro’s hand.’
- b. *Hanako to Taro ga te o kasan-e-ta / kasan-e-at-ta.*
 H. and T. NOM hand ACC put.OVER-PAST / put.OVER-REC-PAST
 ‘Hanako and Taro put their hands on top of one another.’
- c. *H. to T. ga [otagai no] te o kasane-aw-ase-ru.*
 H. and T. NOM each.other GEN hand ACC put.OVER-REC-CAUS-PAST
 ‘H. and T. put their hands one over another.’
- (147) a. *Taroo no mi ga Akiko no mi ni kuttui-ta.*
 T. GEN body NOM A. GEN body DAT huddle-PAST
 ‘Akiko’s body huddled to Taro’s body.’
- b. *Taroo to Akiko no mi ga kuttuki-at-ta.*
 T. and a. GEN body NOM huddle-REC-PAST
 ‘Taro’s and Akiko’s bodies huddled together/to each other.’
- c. *W. wa U. ni [zibun no] mi o kuttuk-e-ta.*
 W. TOP U. DAT self GEN body ACC huddle-PAST
 ‘W. huddled his body to U.’s body.’
- d. *W. to U. to wa... tagai ni mi o kuttuk-e-at-ta. (Kh. 12)*
 W. and U. and TOP each.other DAT body ACC huddle-REC-PAST
 ‘W. and U. were huddling (lit. ‘their bodies’) to each other.’

(148) shows four-member derivational chains with suffixed reciprocals derived from both the intransitive and the transitive lexical reciprocals. The numbers of the examples, including those where the translations of these verbs can be found, are given beneath the relevant forms.

(148)	a. (vi)	b. (vt)	(149)	a. (vi)	b. (vt)	(150)	a. (vi)	b. (vt)
	<i>karam-u</i> →	<i>karam-e-ru</i>		<i>kasan-ar-u</i> ↔	<i>kasan-e-ru</i>		<i>kuttuk-u</i> →	<i>kuttuk-e-ru</i>
	↓	↓		↓	↓		↓	↓
	<i>karami-a-u</i>	<i>karam-e-a-u</i>		<i>kasan-ari-a-u</i>	<i>kasan-e-a-u</i>		<i>kuttuki-a-u</i>	<i>kuttuk-e-a-u</i>
	(134)	(145)		(129), (122)	(146)		(129), (147)	(147)

Forms like *karam-e-a-u* which can be used in a transitive construction seem to be possible on verbs which may combine with objects in possessive relationship with the subject (in a broad sense), mostly of inalienable possession (see (145), (146), and (147); cf., however, (122)). An indication of this seems to be the fact that a suffixed reciprocal is unlikely to be formed from the three-place transitive *maze-ru* ‘to mix sth with sth’ of the same Group C listed under (142), though it also denotes joining, because this condition is not observed:

- (151) *Taroo to Akiko ga nisyu no kona o maze-ta / *maze-at-ta.*
 T. and A. NOM two.kinds GEN flour ACC mix-PAST / mix-REC-PAST
 ‘Taro and Akiko mixed two kinds of flour.’ cf (135).

The difference between *totonoe-a-u* and *totonoe-ru* seems to be parallel to that in (144). As to *wake-a-u*, its meaning can be regarded as predictable, because the meaning ‘with each other’ is acquired by verbs with the same lexical meaning in other languages as well; cf.:

- (152) a. *Taroo to Ziroo wa tabemono o wake-ta.*
 ‘Taro and Jiro divided the food.’ (between other persons or between themselves?)
 b. *Taroo to Ziroo wa otagai ni tabemono o wake-at-ta.*
 ‘Taro and Jiro shared the food with each other.’ (T. Takiguchi, F. Endoo, p.c.)

12. Reciprocals with the prefix *soo-*

This prefix borrowed from Chinese has the same meaning as the prefix *a-i-* (see Section 8). It occurs in Chinese loan-words. It derives reciprocal nouns from nouns and the former become verbs if combined with the verbalizer *su-ru*. This prefix is rather productive, many words with it being lexicalized. Derivational chains that belong here may be divided into the following three types:

1. Three-member derivational chains; in a number of cases, some derivatives were ousted by respective formations with the prefix *a-i-* (though they may be registered in dictionaries); cf. (153a) and (153b) respectively:

- (153) a. *zoku* ‘second series’
 → *soo-zoku* ‘succession, inheritance’
 → *soo-zoku-suru* ‘to inherit’
 b. *han* ‘antithesis’
 → [*soo-han*] *a-i-han* ‘reciprocal’ (in combinations)
 → [*soo-han-suru*] *a-i-han-suru* ‘to oppose.’

2. The derivational chains in which the final verbal derivative is not used though some of them may be registered in the dictionaries:

(154) *ai* 'love' → *soo-ai* 'mutual love' [→ *soo-ai-suru* 'to love mutually'].

3. Probably the most numerous group comprises two-member chains in which the base word is out of use. Many Chinese roots are not generally used as words, and composita of two roots are the standard. Therefore some roots with a reciprocal meaning become words in combination with *soo-*:

(155) [*i* 'difference' →] *soo-i* 'difference' → *soo-i-su-ru* 'to differ'
 [*kan* 'barrier' →] *soo-kan* 'conversation, mutual relation' → *soo-kan-su-ru* 'correlate'
 [*koku* 'predominance' →] *soo-koku* '(a) conflict' → *soo-koku-su-ru* 'to conflict'
 [*zi* 'resemblance' →] *soo-zi* 'similar figure, resemblance' → *soo-zi-su-ru* 'to resemble'
 [*dan* 'conversation' →] *soo-dan* 'consultation/conference' → *soo-dan-su-ru* 'to consult/discuss' (M. Shibatani, p.c.)

13. Etymology of the reciprocal markers

As discussed above (see 2.5.4), the reciprocal suffix *-aw/-at/-a* is related etymologically to the two-place intransitive verb *a-u* 'to meet', 'to fit' (their allomorphs are entirely identical). Some of the authors regard morphological reciprocals as compounds with the verb *a-u* (see, among others, Hinds (1986: 124) who ascribes the meaning 'to suit, fit' to this verb). As a matter of fact, the two meanings of this verb, 'to meet' and 'to fit' are denoted by different characters. Nishigauchi (1992: 157) calls *a-u* "a reciprocal verb" (though he hyphenates it on the root). The viewpoint that verbal forms with the component *-aw* are compounds is the most widely accepted and traditional.

The nearest parallel to this etymological relation is found in Chukchi where the reciprocal marker (suffix or second component of an incorporated verb) is descended from the two-place intransitive verb *wəly-* 'to collide, join, cross'; cf. *penrə-nen* '[he] attacked-him' → *penrə-wəly-əgʔet* '[they] attacked-each-other-they' (see Nedjalkov, Ch. 40, §8).

By origin, the noun *tagai* 'difference, variation' is a deverbal derivation with the suffix *-i* (cf. (74)) from the lexical reciprocal verb *taga-u* i. 'to differ, be varied', ii. 'to act contrary to'. The root-final *-a* is possibly related genetically to the reciprocal suffix *-aw*, in which case this latter verb could be segmented as *tag-a-u* and thus interpreted as reciprocal *tantum*.

Acknowledgments

We are deeply indebted to our informants, especially Masayoshi Shibatani and Tasaku Tsunoda, whose patience and generous help have been beyond praises. M. Shibatani has read the pre-final version and made some criticisms, special thanks for that. Our thanks also go to Tomoko Takiguchi and Fubito Endoo and Heiko Narrog who contributed heavily in the final stages of work. We are also grateful to Heiko Narrog, Tasaku Tsunoda, Masayoshi Shibatani and Anna Bugaeva for supplying us with literature on the subject. Anna Bugaeva has checked the data with Yasushige Takahashi, Michiaki Matsumoto, Ya-

suihiro Yamakoshi, Tomokazu Takada, Yukari Nagayama, Sigeo Kimura and Maki Satoo, all of them postgraduates at Hokkaido University. We thank them all and particularly Anna who has also read the final version and eliminated many misprints and minor mistakes. Needless to say, the remaining errors and misinterpretations are our own fault.

We are also grateful to Taro (masc.) and Akiko (fem.), the personages of this paper, for serving us honestly in finding out the facts about the Japanese reciprocals.

1. Introduction

1.1 Yakut

Yakut (Sakha) belongs to the Siberian group of the Northern Turkic (Eastern Hunnic) languages. This group also includes Altai (Oïrot; 71,317 individuals, according to the 1989 Census), Khakas (Abakan Tatar; numbering 81,428), Shor (16,650), Tofa (Tofalar; 730), Tuvan (Uryankhai; 222,000 persons), and *Runic Turkic. Yakut is spoken natively by nearly all of the 440,000 Yakuts most of whom live in the Republic of Sakha-Yakutia (which covers about one fifth of the territory of Russia in Eastern Siberia) and in the adjacent territories. The neighbouring aboriginal languages are Evenki, Even, Yukaghir and Chukchi. The Yakuts have migrated to their present territory (previously occupied by Tungusic tribes) from the area around Lake Baikal (which was not their original territory either, according to some sources). The migration began approximately in the 13th century CE under the pressure of Mongolian tribes and reached the northern boundaries by the 17–18th centuries (Korkina 1992: 3–5; Voronkin 1984: 8–9). As a result of strong in-

fluence of Evenki, a specific dialect of Yakut, viz. Dolgan, was formed to the north-west of Yakutia (about 7,000 speakers; Dolgans, mostly descended from Evenkis, developed into a separate ethnic group at the beginning of the 20th century). Dolgan differs from Standard Yakut to a greater degree than other dialects.

Yakut has undergone a strong influence of Mongolic and Tungusic languages in phonetics, grammar and lexicon due to contacts over a long period of time.

In respect of its grammatical features, Yakut is closer to the ancient Turkic languages than to other modern Turkic languages.

The Turkic languages are in general very similar and form a continuum of mutually intelligible dialects, with the exception of two widely divergent languages, Yakut and especially Chuvash.

1.2 Overview

Reciprocity is marked by the suffix *-s* alternating with *-h* in intervocalic position. This same marker also expresses the other three meanings listed in the heading, all the four meanings being closely related semantically. The interpretation of the marker is determined by sentence structure and/or context. For instance, in (1b) the form *tiej-s-* of the verb *tiej-* 'to carry/cart' allows all the four readings but the reciprocal reading of this particular verb is only possible if we add the adverb *xardarəta* 'by turns', 'mutually':

- (1) a. *Kiniler xardarəta ot tiej-el-ler.*¹
 they.NOM by.turns hay.NOM cart-PRES-3PL
 'They cart hay by turns.'
- b. *Kiniler [xardarəta] ot tiej-s-el-ler.*
- i. 'They cart hay together.' (sociative)
 - ii. 'They cart hay [with somebody].' (comitative)
 - iii. 'They help [somebody] to cart hay.' (assistive)
 - iv. 'They cart hay to each other.' (reciprocal)

The readings of (1b) are arranged in the order of preference for this reciprocal form.

In the following two sentences with a singular subject the dative object allows the assistive reading only and the comitative phrase with the postposition *kəttə* 'with' allows two interpretations:

- c. *Kini aya-tə-yar ot tiej-s-er.*
 he.NOM father-his-DAT hay.NOM cart-REC-PRES.3SG
 'He helps his father to cart hay.' (assistive)
- d. *Kini aya-tə-n kəttə ot tiej-s-er.*
 he.NOM father-his-ACC with hay.NOM cart-REC-PRES.3SG
- i. 'He carts hay with his father.' (comitative)
 - ii. lit. 'He with his father helps [someone] to cart hay.' (assistive)

1. In the examples, double letters denote long vowels, as in Yakut orthography based on the cyrillic alphabet. The boundaries between morphemes in verbs are drawn in accordance with the specialist literature on Yakut. In some unclear cases the boundaries are arbitrary, which does not affect the issues under discussion.

Sentence (1e), in comparison with (1d), lacks a comitative phrase. The sentence remains ambiguous but it has the opposite order of preferable interpretations:

- e. *Kini ot tiej-s-er.*
 he hay cart-REC-PRES.3SG
 i. ‘He *helps* [somebody] to cart hay.’ (assistive)
 ii. ‘He carts hay *together* [with *someone*].’ (comitative)

To save space, NOM is not glossed henceforth; this also pertains to the unmarked ACC, as in (1e). As a rule, these cases are clear enough in sentences.

The reciprocal meaning can also be rendered by a reciprocal pronoun which is derived from the reflexive pronoun by root reduplication. It is inflected for person and case. This reciprocal pronoun is used with non-reciprocal verbs as the only marker of reciprocity, and it may also occur with reciprocal verbs, as in (2) where the reciprocal suffix can be omitted without affecting the meaning:

- (2) *Kiniler beje-beje-leri-n homuruj-s-al-lar.* (S. 496)
 they self-self-their-ACC reproach-REC-PRES-3PL
 ‘They reproach each other.’

To sum up, there are three ways of expressing reciprocity in Yakut: (1) by means of the reciprocal suffix, (2) by means of the reciprocal pronoun, and (3) by a combination of these two means.

Alongside the four meanings which are very close semantically, the reciprocal suffix may also render a number of other (unproductive) meanings (e.g. anticausative, intensive, etc.), and it also occurs as a lexicalized component in a great many verbs. Verbs with the reciprocal marker form all the three subject-oriented diathesis types: “canonical” (2), “indirect” (1b.iv) and “possessive” (3a). Subject-oriented constructions may be transformed into object-oriented by means of the causative suffix (3b):

- (3) a. *Kiniler oyo-loru-n bil-s-el-ler.*
 they child-their-ACC know-REC-PRES-3PL
 ‘They know each other’s children.’
 b. *Kini oyo-loru-n bil-ih-in-ner-d-e.*
 he child-their-ACC know-REC-REFL-CAUS-PAST-3SG
 ‘He introduced (lit. ‘made know each other’) their children to each other.’

There is a special suffix *-la-s-/la-h-* (containing the reciprocal suffix *-s-/h-*) which derives reciprocal verbs from nouns, e.g.: *tuspa* ‘difference’ → *tuspa-las-* ‘to differ from’.

1.3 Data sources

The material for this chapter has been elicited from informants and obtained from the following dictionaries and specialist literature: Afanasjev & Kharitonov (eds. 1968), Böhntlingk (1989), Pekarskij (1959), Slepcev (ed. 1972), Ubrjatova (ed. 1982), Kharitonov (1963, 1982), Cheremisina (ed. 1995). The informants Alexandr Petrov and Nikolaj Artemjev, and Nikolaj Efremov have provided important information. Their examples are

given without reference to the source. Some of the examples borrowed from dictionaries and specialist literature (written by Yakut authors) are not confirmed by our informants.

This chapter relies heavily on the insightful work of the outstanding Yakut linguist L. Kharitonov (1963).

2. Grammatical notes²

2.1 Morphology

Yakut suffixes may have as many as 16–20 variants due to vowel harmony and processes of assimilation and dissimilation of consonants at the morphemic boundaries. For instance, the dative case marker may have the following 20 allomorphs in the paradigm of simple (non-possessive) declension, viz. five consonant variants with four vowel alternations each: *-ya/-ye/-yo/-yö*, or *-ga/-ge/-go/-gö*, *-ka/-ke/-ko/-kö*, *-xa/-xe/-xo/-xö*, *-ŋa/-ŋe/-ŋo/-ŋö*, determined by the preceding root vowel(s). There are two sets of vowel alternations, of open vowels (viz. *-a/-e/-o/-ö*, as in the dative endings) and of narrow vowels (viz. *-ə/-i/-u/-ü*, as in the reciprocal suffix; see 2.5). Respective long vowels (signified in this paper by geminated letters) are subject to the same type of alternations. Possessive declension has its own morphonological series of endings (4). Needless to say, in most cases we will refer to one (or four) of the variants only instead of an entire series.

2.2 General characteristics. Sentence structure

Yakut is an agglutinating (suffixing) language. There are no prefixes in Yakut. It has numerous postpositions (cf. *katta* ‘with’ in (1d)) and no prepositions. The predicate usually takes the sentence final (rightmost) position. In sentence structure, an important role belongs to converbs: there may be as many as three or four converbs in a sentence preceding a final finite verb form (see (150)). Converbs may (a) be used adverbially and depend on lexical verbs (see (23)), or constitute (b) periphrastic aspectual forms (see (57), (63b), etc.) or (c) periphrastic tense forms.

Syntactic relations are expressed by case markers. The subject is expressed by the nominative case of a nominal (personal pronouns are usually omitted) in sentence initial position (in most sentential examples, the subject is not glossed for the nominative case which has zero marking). Objects are placed between subject and predicate. Thus Yakut is a SOV language. A direct object is mostly expressed by the accusative case if it is definite (see the ending *-n* in (3)) or by the nominative (cf. *ot* in (1)), or by the partitive (along with the cases named) in imperative clauses (cf. (31) below). In the case of a nominative direct object, it is generally not marked for number and possession and is positioned immediately before the verb. An attribute precedes its head noun.

2. For a more detailed survey of Yakut grammar written in English see Krueger (1962).

2.3 Case and number. Possessive relations

The Yakut noun has two declensions, simple and possessive. In the latter, the possessive marker immediately follows the nominal stem in the majority of forms. Case markers of the two declensions are mostly the same. Plural is marked by the suffix *-lar/-tar/-dar/-nar*, etc.; sometimes, the plural suffix is absent (if a noun in the singular is used in the generic or collective sense or if it is inanimate; cf. (70b), (124)). There are eight cases in Yakut. Here are the two paradigms (depending on the stem final, the endings may partly vary):

(4)	a. Simple declension (for SG)	b. Possessive declension (for 1.SG)
NOM	<i>at</i> 'horse'	<i>at-əm</i> 'my horse'
ACC	<i>at-ə</i>	<i>ap-pə-n</i> (<i>pə < mə</i>)
PRTV	<i>at-ta</i>	<i>ap-pə-na</i>
DAT	<i>ak-ka</i>	<i>ap-par</i>
ABL	<i>at-tan</i>	<i>ap-pə-ttan</i>
INST	<i>at-ənan</i>	<i>ap-pə-nan</i>
COM	<i>at-təən</i>	<i>ap-pə-nəən</i>
COMP	<i>at-taayar</i>	<i>ap-pə-naayar</i> .

The plural number of both declensions (*at-tar* 'horses' and *at-tar-a* 'his/their horses', etc.) and the 2nd (*at-əŋ* 'your horse', etc.) and 3rd person (*at-a* 'his/her horse', etc.) of the possessive declension have special sets of forms.

Nominative case forms are used in the initial position of *izafet* (possessive) constructions, i.e. in the function of an attribute to a head noun that takes the possessive marker; e.g.:

(4)	c.	<i>αγα-m</i>	<i>at-a</i>
		father-my.NOM	horse-his
		'my father's horse', lit. 'father-my horse-his.'	

2.4 Tense/aspect system

There are about ten simple and periphrastic tense-aspect forms: present, future, and eight past tenses. Each of the tenses has a negative form (see (c) under (5)). Agreement in person and number is expressed by means of two sets of endings, one of the sets coinciding entirely with the possessive markers (see (b), (c) and (d) under (5)) and the other only partially overlapping with them (see (a) and (e) under (5)). The present tense markers are *-a* (1 and 2 p. SG and PL), *-ar* (3SG) and *-al* (3PL). Recent past (abbreviated as PAST) is marked by the suffix *-t/-d/-n/-l*. (Here we gloss tense markers separately from agreement markers, as suggested by Korkina 1970:61–2.) Non-recent past (abbreviated as NR.PAST) and resultative perfect (abbreviated as PERF) are marked by the suffix *-bət/-pət/...* but they differ in their agreement endings (cf. (d) and (e) under (5)). Here are fragments of the paradigms of the verb *as-/ah-* 'to open' (in (5c) *-pa < -ma*; in (5d, e) *-pət < -bət*):

(5)	a.	PRES	b.	PAST (positive)	c.	PAST (negative)	d.	NR.PAST	e.	PERF
	1.SG	<i>ah-a-bən</i>	<i>as-t-əm</i>	<i>as-pa-t-əm</i>	<i>as-pət-əm</i>	<i>as-pəp-pən</i>				
	3.SG	<i>ah-ar</i>	<i>as-t-a</i>	<i>as-pa-t-a</i>	<i>as-pət-a</i>	<i>as-pət-Ø</i>				
	3.PL	<i>ah-al-lar</i>	<i>as-t-əlar</i>	<i>as-pa-t-əlar</i>	<i>as-pət-tara</i>	<i>as-pət-tar</i>				

There are at least a dozen auxiliary verbs used in periphrastic aspectual forms, the lexical verb assuming one of the converbal suffixes (*-an*, *-a*, *-aarə* and their allomorphs). For instance, the verb *is-* ‘to go’ when used as an auxiliary with a converb in *-an* expresses an imperfective meaning.

2.5 The reciprocal suffix

As was mentioned above (see 1.2), the reciprocal meaning is rendered by the suffix *-s* (voiceless dorsal fricative) which alternates with *-h* (voiced faringal fricative) in intervocalic position (as it happens, this alternation is especially frequent in this suffix; in other cases *-h* has become permanent). The latter phoneme is of recent origin and occurs almost exclusively in intervocalic position. In certain positions the consonant *-s-* takes a connective vowel determined by vowel harmony: *-əs/-is/-us/-üs*. Not infrequently, this suffix is reduplicated and assumes the allomorphs *-səs/-sis/-sus/-sius* (see (6a) and (6b)). Both simple and reduplicated variants are regarded as identical in meaning although sometimes the reduplicated form is “preferable for the expression of reciprocal action in contrast to the sociative meaning, and also for the expression of a special emotive colouring in the verbal meaning” (Kharitonov 1963:19). When followed by the reciprocal marker, stem-final long vowels and diphthongs become short (see (6c)); the final *-j* may be retained in a monosyllabic stem with a short vowel, while in other cases it is optional (see (6b)).

- (6) a. *bil-* ‘to know’ → *bil-is-/bil-sis-* ‘to get acquainted [with each other]’
 b. *suruj-* ‘to write’ → *suru-s-/suruj-us-/suruj-sus-* ‘to write [letters] to each other’
 c. *uuraa-* ‘to kiss’ → *uura-s-* ‘to kiss each other.’

In certain verb forms, the vowel and the reciprocal *-s* undergo metathesis, e.g. *bil-is-/bil-sis-/bil-si-* ‘to get acquainted’ (6a). In nouns derived from reciprocal verbs, the marker *-s*, when preceded by a vowel, always alternates with *-h*, due to intervocalic position:

- (7) a. *bil-si-* ‘to get acquainted’ → *bil-s-ii* ‘acquaintance’
 b. *suru-s-* ‘to write to each other’ → *suru-h-uu* ‘exchange of letters.’

2.6 Reflexive and reciprocal pronouns

The reflexive pronoun is descended from the noun *beje-* ‘self’ (an ancient borrowing from the Mongolian *bie* ‘body, person’). It is inflected for person, number and case (the *possesive* declension), which results in 42 forms all in all (in specialist literature, six case forms are usually given). The most frequently used case forms are accusative, dative, and ab-

lative. The reciprocal pronoun is formed from the reflexive by reduplication;³ it has 21 forms, as it naturally lacks forms in the singular. Under (8a) are the accusative case forms of the reflexive pronoun whose 1SG.NOM forms are [*min*] *beje-m* ‘[I] myself’, [*en*] *beje-η* ‘[you] yourself’, [*kini*] *beje-te* ‘[he/she] him/herself’, etc. The accusative case forms of the reciprocal pronoun are given under (8b).

(8)	a.	Reflexive pronoun	b.	Reciprocal pronoun
	1.SG	<i>beje-bi-n</i> ‘myself’	–	
	2.SG	<i>beje-yi-n</i> ‘yourself’	–	
	3.SG	<i>beje-ti-n</i> ‘him/herself’	–	
	1.PL	<i>beje-biti-n</i> ‘ourselves’	<i>beje-beje-biti-n</i> ‘each other’	
	2.PL	<i>beje-yiti-n</i> ‘yourselves’	<i>beje-beje-yiti-n</i> ‘each other’	
	3.PL	<i>beje-leri-n</i> ‘themselves’	<i>beje-beje-leri-n</i> ‘each other’.	

The reflexive pronoun can combine pleonastically with reflexive verbs (cf. the analogous use of the reciprocal pronoun in (2)):

- (9) *Kini beje-ti-n xajya-n-ar.*
 he self-his-ACC praise-REFL-PRES.3SG
 ‘He praises himself.’

2.7 Voices (means of changing valency)

In Yakut grammar, as well as in the grammars of other Turkic languages, the reciprocal is traditionally included in the voice system. Five voices are commonly distinguished: active, or basic (zero marking), reflexive (the marker *-n*; see (10b), (11b), (12b)), passive (the marker *-ələn* or *-n*; see (10c), (11b.iv), (11c), (12c)), causative (the markers *-t/-d*, *-tar/-dar/-lar/-nar*, and unproductive *-ar*, *-əar*; see (10d), (11d), (12d)), and reciprocal (the marker *-s/-h*; see (10e), (11e), (12e)). Verbal valency in Yakut may be changed only by means of these marked voices.

The names of the voices do not cover the semantic range of their usages. To illustrate the derivational properties of the voice markers, here are a few derivational clusters; as can be seen from the examples, derivatives may have meanings which are not “a sum” of the meanings of the components; cf.:

3. However, we have encountered single instances of the use of the reflexive pronoun instead of the reciprocal and also of a reciprocal expression formed after the common Turkic pattern, i.e. from the numeral ‘one’; cf.:

- (i) *ayas balas saŋa-larə-n ist-is-el-ler ühü beje-leri-n*
 elder.sister younger.sister voice-their-ACC listen-REC-PRES-3PL they.say self-their-ACC
kör-sü-mne-ʼre ühü. (P. 977)
 see-REC-NEG.CONV-3PL (-ʼre < -ler) they.say
 ‘They say two sisters hear each other’s voices without seeing each other.’ (ear-rings).
- (ii) ... *biir biir-giti-n tuluj-a sald’a-ηne-t* ... (P. 2803; translation of New Testament)
 one one-YOUR-ACC suffer-CONV AUX-ITER-CONV
 ‘... [you.PL] tolerating each other...’

- (10) a. *bis-* i. 'to smear/spread'
 ii. 'to soil'
 b. *bih-in-* 'to smear sth for oneself' (reflexive-possessive)
 c. *bih-ilin-* i. 'to smear/soil oneself' (reflexive proper)
 ii. 'to be smeared/soiled' (passive)
 iii. 'to get smeared/soiled' (anticausative)
 d. *bis-ter-* 'to cause/allow to smear/soil sth'
 e. *bih-is-* i. 'to smear/soil *each other*'
 ii. 'to smear/soil *together*'
 iii. 'to *help* to smear/soil', etc.
- (11) a. *sot-* 'to rub sth/sb'
 b. *sot-un-* i. 'to rub *oneself*' (e.g. with a towel) (reflexive proper)
 ii. 'to rub *one's body part*' (reflexive-possessive)
 iii. 'to *rub* against sth' (autocausative) (see S. 335)
 iv. 'to *be rubbed*' (passive)
 c. *sot-ulun-* 'to *be rubbed/towelled*, etc.' (passive) (S. 335)
 d. *sot-tor-* 'to *cause/allow* to rub sth/sb'
 e. *sot-us-* i. 'to rub *each other*'
 ii. 'to rub *together*'
 iii. 'to *help* to rub.'
- (12) a. *albən-naa-* 'to deceive' (← *albən* 'sly, a sly person' + denominal suffix *-naa*)
 b. *albən-na-n-* i. 'to deceive *oneself*'
 ii. 'to *pretend* (to be)'
 c. **albən-na-lən-* 'to be deceived' (the passive meaning is expressed by (12d); see (14))
 d. *albən-na-t-* i. **to cause/allow* to deceive sb'
 ii. 'to *be deceived* (through one's own fault)'
 e. *albən-na-s-* i. 'to *fawn* (on sb)'
 ii. 'to deceive *each other*'

3. Co-occurrence of voice markers

3.1 Introductory

The voice markers may co-occur in the same verbal form in various combinations. The order of voice markers reflects the sequence of derivational operations. Below is a simplified survey of the meanings and derivational relations between the four voices, of which one (causative; the most productive) increases valency and the other three decrease valency. The purpose is to show the place of the reciprocal suffix among the means of valency change. The passive and causative can be expressed by two markers each, in complementary distribution (which is not quite consistent but covers most of the cases). On verbs with a stem final consonant (a) the passive voice is expressed by the suffix *-ələn*, and (b) the causative by the suffix *-tar* (also used on all the derived verbs). On verbs with a final vowel (a) the passive is expressed by the reflexive polysemous suffix *-n*, and (b) the causative by the suffix *-t*.

3.2 Causative: Its meanings and co-occurrence with other voice markers

Apart from causativity (permissive and factitive; see (10d), (11d) and (15)), causative forms may also express a kind of passive (reflexive-permissive) meaning; in this case the number of valencies is retained, but agent valency becomes optional; cf.:

- (13) a. *aal kini-ni saaxamak-ka kəaj-d-a.*
 neighbour he-ACC chess-DAT defeat-PAST-3SG
 ‘The neighbour defeated him in chess.’
 b. *Kini saaxamak-ka kəaj-tar-d-a.* (S. 203)
 he chess-DAT defeat-CAUS-PAST-3SG
 ‘He lost (lit. ‘let-defeat’) a game of chess.’
- (14) *Kimie-xe albanna-t-t-əŋ?* (S. 37)
 who-DAT deceive-CAUS-PAST-2SG
 ‘Who has deceived you?, lit. “Whom did you allow to deceive yourself?” (cf. (12c))

1. *Causative derivation from causatives.* Basically, from any intransitive verb a causative verb can be derived which does not differ in any way from other transitives. Furthermore, from any two-place causative (and from any other transitive verb) a three-place causative can be formed; e.g.:

- (15) *öl-* ‘to die’ → *öl-ör-* ‘to kill sb’ → *öl-ör-tör-* ‘to cause/allow sb to kill sb.’

2. *Causatives derived from reciprocals.* In principle, a causative can be derived from any reciprocal (see 4.2); for unclear reasons, a reflexive marker is inserted between the reciprocal and the causative markers without affecting the meaning; in verbs with the final -s which is not (at least genetically) related to the reciprocal marker, insertion of the reflexive suffix is not possible; cf. (16) and (17) respectively:⁴

- (16) a. *ətə-s-* ‘to shoot at each other’ (← *ət-* ‘to shoot’) → **ətə-s-tər*
 b. *ətə-h-ən-nər-* ‘to cause/allow to shoot at each other.’
- (17) a. *tas-* ‘to carry’ → *tas-tar-* ‘to cause/allow to carry’
 b. **tah-un-nar-*.

3. *Causative derivation from reflexives.* A causative can be derived practically from any formal reflexive, whatever the meaning of the latter; cf.:

- (18) a. *öjöö-* ‘to support sb/sth’, ‘to prop sth up’
 b. *öjö-n-* ‘to lean/rest (up) on sth/sb’ (autocausative)
 c. *öjö-n-nör-* ‘to lean/prop sb/sth against sth’; cf.:

4. Böhtlingk (1959: 318–9) has noted instances of the reflexive marker included not only after the root-final -s- but also after other root-final consonants (mostly after -t-, it seems); e.g.: *əraat-* ‘to leave, go far away’ → *əraat-ən-nar-* i. ‘to let leave/go’, ii. ‘to send away’; *kətaat-* ‘to hearten up’ → *kətaat-ən-nar-* ‘to encourage’; *xorgut-* ‘to be upset’ → *xorgut-un-nar-* ‘to upset sb’; *kepset-* ‘to tell’ → *kepset-in-ner-* ‘to make/let tell’; *ihit-* ‘to listen’ → *ihit-in-ner-* ‘to announce’; *kəaj-* ‘to overcome’ → *kəaj-ən-nar-* ‘to make overcome’. All these causatives excepting the last one are registered in (S. 528, 213, 500, 220, 156).

- (19) *Kini saa-nə mas-ka öjö-n-nör-d-ö.* (S. 286)
 he rifle-ACC tree-DAT prop-REFL-CAUS-PAST-3SG
 ‘He propped a rifle against a tree.’

4. *Causative derivation from passives.* Causatives cannot be formed from passives proper.

3.3 Reciprocal: Its meanings and co-occurrence with other voice markers

Apart from the four meanings listed in 1.2, reciprocal forms may also render a number of other meanings, the most important of them being anticausative and converse (see 10.2). Moreover, many of the derivatives with a reciprocal marker are lexicalized and the reciprocal meaning may be absent (see 11.3).

1. *Reciprocal derivation from causatives.* Reciprocals are derived from two-place causatives without restrictions, like from any ordinary transitives (cf., for instance, (20a)). From three-place causatives reciprocals are not likely (at least they are not registered in dictionaries), with two or three exceptions (the only instances we have found are the verbs meaning ‘to show’ and ‘to let sb know’, ‘to inform’; see (21), (21’)); cf.:

- (20) a. *öl-ör-* ‘to kill’ → *öl-ör-üs-* ‘to kill each other’;
 b. *öl-ör-tör-* ‘to cause/allow to kill’ → *öl-ör-tör-üs-* (intended meaning:
 ‘to cause/allow each other to kill sb.’)
- (21) a. *kör-* ‘to see/look’
 b. *kör-dör-* ‘to show’
 c. *kör-dör-üs-* ‘to show sth to each other.’
- (21’) a. *bil-* ‘to know’
 b. *bil-ler-* ‘to let sb know sth/inform’
 c. *bil-ler-is-* ‘to inform each other about sth.’

2. *Reciprocal derivation from reciprocals.* This kind of derivation is impossible. There are irregular cases of reduplication of the reciprocal marker which can hardly be regarded as instances of reciprocal derivation from reciprocals (see 2.5), though Slepcev (1972) and Pekarskij (1959) do treat some instances as such: e.g. *kör-süs-* ‘to see/meet each other’ is interpreted as a reciprocal derivative from the reciprocal *kör-üs-* (same meaning) (← *kör-* ‘to see’) (S. 181; P. 1165).

3. *Reciprocal derivation from reflexives.* One-place reflexives, like one-place verbs in general, do not yield reciprocals, but the latter can be derived without special restrictions from two-place reflexives with an anticausative, anticausative and other meanings; cf.:

- (22) a. *öjöö-* ‘to support sb’, ‘to prop up’ (vt)
 b. *öjö-n-* ‘to lean/rest (up) on sth/sb’ (vi; autocausative)
 c. *öjö-n-üs-* ‘to lean (up) on/support each other’; e.g.:
- (23) *Kiniler beje-beje-leri-tten öjö-n-s-ön tur-al-lar.* (S. 286)
 they self-self-their-ABL support-REFL-REC-CONV stand-PRES-3PL
 ‘They stand supporting each other.’

As a curiosity, formation of a reciprocal from a one-place reflexive can be cited:

- (24) a. *kuus-* 'to hug/embrace sb'
 b. *kuuh-un-* 'to hug/embrace oneself/one's breast' (e.g. 'to stand facing one's superior with one's arms crossed on one's breast') (cf. *kuus-t-an* in (135))
 c. *kuus-t-us-* 'to hug/embrace each other' (-*t-* < -*un-*, by way of assimilation).

4. *Reciprocal derivation from passives.* Reciprocals from passives proper cannot be formed, not even reciprocal forms with a sociative meaning; e.g.:

- (25) *öl-ör-ülün-* 'to be killed' (S. 286)
 (26) **öl-ör-ülün-üs-* (intended meaning:) 'to be killed together.'

3.4 Reflexive: Its meanings and co-occurrence with other voice markers

As often as not, the suffix *-n* renders meanings characteristic of reflexive markers in a number of European languages, such as anticausative, autocausative, etc., and after some stem finals (usually after vowels) it may render the passive meaning (on stems with a final consonant its meaning is not passive). In derivatives from lexical reciprocals, the suffix *-n* sometimes competes with the reciprocal suffix *-s* (cf. (27b.iii) and (27c)):

- (27) a. *xolboo-* 'to join sth to sth'
 → b. *xolbo-n-* i. *'to join oneself' (reflexive proper is ungrammatical)
 ii. 'to join/add to oneself' (reflexive-benefactive)
 iii. 'to get joined to sth' (anticausative)
 iv. 'to be joined' (passive)
 c. *xolbo-s-* i. 'to get joined to sth' (anticausative)
 ii. 'to get joined together' (Kh.1. 44)

The reflexive marker expresses the reflexive meaning proper (like 'to wash oneself') less frequently than the more common reflexive-possessive meaning in transitive constructions denoting actions performed on one's body part or for one's own benefit (i.e. 'to wash one's hands' and the like; cf. the respective meaning of the Ancient Greek Middle). (Note that most of the Turkic languages have practically lost the reflexive-possessive meaning). This is due to the difference in the lexical range of base verbs that allow one or the other derivative meaning (cf. (i) and (ii) under (27b) and (28b)). If the meaning is reflexive-possessive, as in (28c) and (30), or reflexive-benefactive, as in (29b–c) and (31), a direct object is retained. In cases of the (28b) type, the reflexive suffix corresponds to the object argument (i.e. *sirej-in* in (28a)), while in (28c) the reflexive suffix corresponds to the possessive attribute of the underlying sentence (i.e. *oyo-m* in (28a)).

- (28) a. *Min oyo-m sirej-in suuj-uo-m.*
 I child-my face-ACC wash-FUT-1SG
 'I will wash my child's face.'
 b. *Min suu-n-uo-m.*
 I wash-REFL-FUT-1SG
 'I will wash myself.' (reflexive proper)

- c. *Min sirej-bi-n suu-n-uo-m.*
I face-my-ACC wash-REFL-FUT-1SG
'I will wash my face.' (reflexive-possessive)
- (29) a. *Ot tiej-e-bin.*
hay cart-PRES-1SG
'I cart hay.'
- b. *Ot tie-n-e-bin.*
hay cart-REFL-PRES-1SG
'I cart hay for myself.' (reflexive-benefactive)
- c. *O-pu-n beje-m tie-n-e-bin.* (Kh.1. 79)
hay-my-ACC self-my cart-REFL-PRES-1SG
lit. '[I] myself cart my hay for myself.' (reflexive-benefactive)
- (30) *Taŋas-kə-n kuur-d-un-Ø!*
clothes-your-ACC dry-CAUS-REFL-IMP.2SG
'Dry your clothes!' (S. 195) (reflexive-possessive)
- (31) *Mas-ta kerd-in-Ø!* (Kh.1. 79)
wood-PRTV chop-REFL-IMP.2SG
'Chop some fire-wood for yourself!' (reflexive-benefactive)

In the northern dialects of Yakut, an extremely characteristic feature of the reflexive marker *-n-* is its (mostly desemanticized) use in those cases where Standard Yakut does not resort to it (analogous extension of the use of the reflexive suffix in Turkic languages is attested only in the eastern dialects of Bashkir; cf.: *aša-n* (instead of *aša*) 'to eat' (Maksjutova 1976: 58, 142)). In a number of dialects, e.g. in the Kolyma dialect, nearly total extension of the reflexive suffix over the active voice without any perceptible semantic contribution is observed (Korkina 1992: 57, 190, 207, 256; Voronkin 1984: 189–90)). The following examples are from the north-eastern (see (32), (33)) and north-western (see (34)) dialects:

- (32) *Kinige aay-ən-ar* (instead of *aay-ar*) ' [He] is reading a book.'
- (33) *[Kini] min ih-in-er* (instead of *ih-er*) ' [He] is eating soup.'
- (34) *Min manna ülele-n-i-em* (instead of *ülel-i-em*) 'I will work here.'

1. *Reflexive derivation from causatives.* Reflexives are derived from two-place causatives in the same way as from any other two-place verbs, while from three-place causatives they are not formed (cf. (35c)), very much like reciprocals. Thus, in Kharitonov's (1963: 84) opinion, reflexive forms of three-place causative verbs that sometimes occur in texts look rather odd (cf. (36)).

- (35) a. *öl-ör-* 'to kill sb' → *öl-ör-ün-* 'to kill oneself'
b. *öl-öt-tör-* 'to cause/allow sb to kill some one'
→ c. **öl-öt-tör-ün-* (intended meaning) 'to cause/allow oneself to kill sb.'
- (36) *Doktor-ga kör-dör-ün!* 'See the doctor!'
(lit. 'Let the doctor see you'; Kh.1. 84; S. 180)

2. *Reflexive derivation from reciprocals.* Such cases are semantically ruled out. An exception are cases of causative derivation from reciprocals which involve automatic insertion of the reflexive marker (see case 2) in Section 3.2).

In a limited number of lexicalized verbs with a non-reciprocal meaning, the reflexive marker follows the reciprocal suffix (see 14.3):

- (37) a. *ək-* 'to press/squeeze' (vt)
 b. *əg-ən-* 'to press/squeeze for/on oneself' (vt) (reflexive-benefactive or possessive)
 c. *əg-əh-ən-* 'to exert oneself, distend' (vi) (autocausative) (Kh.1. 88).
- (38) a. *tart-* i. 'to pull'; ii. 'to restrain'
 b. *tard-ən-* i. 'to restrain oneself' (autocausative)
 ii. 'to pull [up] for/on oneself' (reflexive-benefactive)
 c. *tard-əh-ən-* 'to pull [oneself] up.' (autocausative)

3. *Reflexive derivation from passives.* This seems to be forbidden.

3.5 Passive markers: Their meanings and co-occurrence with other voice markers

Passives proper, especially with an agentive object, are rather rare in spoken Yakut (instead of agentive passive, the active is preferred (Kharitonov 1963: 104, 108)).

- (39) *Suruk suru-lun-n-a.* 'The letter is written.' (← *suruj-* 'to write')
 (40) *Ot oxsu-lun-n-a.* 'The grass is mown down.' (← *oxsu-* 'to mow')

Apart from the passive meaning proper which is its main meaning, the marker *-ələn/-lən* (in complementary distribution with *-n* depending on the stem final; see 3.1) is also used to render meanings characteristic of the reflexive-passive marker *-n*. Not infrequently, a derivative has two or more meanings, including lexicalized ones; cf:

- (41) a. *əal bəa-nə tüür-d-e.*
 neighbour rope-ACC coil-PAST-3SG
 'The neighbour coiled the rope.'
 b. *ət təmnə-ttan tüür-üllü-büt.* (S. 417) (autocausative)
 dog cold-ABL coil-PASS-PERF.3SG
 'The dog coiled from cold.'
 c. *Bəa tüür-üllü-büt.* (S. 417) (passive)
 rope coil-PASS-PERF.3SG
 'The rope is coiled.'

Sometimes it is difficult to draw a borderline between the passive and the anticausative meanings, the distinction between them being context-dependent.

- (42) a. *əal aan-ə xataa-t-a.*
 neighbour door-ACC open-PAST-3SG
 'The neighbour locked the door.'
 b. *Aan xata-n-n-a.*
 door open-REFL-PAST-3SG

- i. 'The door was locked [by sb].' (passive)
 ii. 'The door locked.' (anticausative)

1. *Passive derivation from causatives.* This is a common case: passives are derived from two-place causatives like from any other transitives; from three-place causatives their derivation is unlikely. As Kharitonov (1963: 107) points out, such forms are grammatically possible but they are avoided in speech; the following example illustrates this form:

- (43) *tiej-* 'to cart' → *tiej-ter-* 'to cause to cart' → *tiej-ter-ilin-* 'to be caused to cart sth'.

2. *Passive derivation from reflexives, reciprocals, and passives.* These types of derivation are not registered. Nevertheless, there is a tendency in Yakut to combine two passive markers. As it happens, in some other Turkic languages the suffix *-l* alone is used to mark the passive voice. In Yakut, it is supplemented by the reflexive-passive suffix *-n*, yielding the complex suffix *-əl-ən* (as has just been mentioned, it is used on stems with a final consonant). Since *-n* is more polysemous than *-ələn* this latter suffix is sometimes added to it when it has a passive meaning, thus yielding a three-component passive marker *-n-əl-ən* (Kharitonov 1963: 106). (This combination is facilitated by the final consonant on stems in *-n*.) Thus no component of meaning is added but the form becomes less ambiguous. Compare:

- (44) a. *battaa-* 'to press/squash'
 b. *batta-n-* 'to be pressed/squashed'
 c. *batta-n-ələn-* (same meaning) (Kh.1. 106).

In the following example, additional marking of the passive resolves ambiguity of the underlying form:

- (45) a. *erbee-* 'to saw'
 b. *erbe-n-* i. 'to saw for oneself' (reflexive-possessive)
 ii. 'to be sawn' (passive)
 c. *erbe-n-ilin-* 'to be sawn [by sb]' (passive) (S. 543; Kh.1. 106).

4. Diathesis types of reciprocals with the suffix *-s/-h* only

4.1 Subject-oriented reciprocal constructions

4.1.1 "Canonical" reciprocals

In this type, the reciprocal marker obligatorily deletes either the direct or the indirect object of the underlying non-reciprocal construction. This type also includes reciprocals derived from intransitives commonly used as one-place verbs (see 4.1.1.6). Thus "canonical" reciprocals are always intransitive, while the underlying verbs can be either transitive or intransitive.

4.1.1.1 *Derived from two-place transitives.* This is the main type of reciprocals. It is likely that all two-place transitives (with both human referents) may be used reciprocally, this process involving intransitivization.

- (46) a. *Min urukkuttan kini-ni bil-e-bin.*
 I for.a.long.time he-ACC KNOW-PRES-1SG
 ‘I have known him for a long time.’
 b. *Bihigi urukkuttan bil-s-e-bit.* (Kh.2. 271)
 we for.a.long.time KNOW-REC-PRES-1PL
 ‘We have known each other for a long time.’
- (47) a. *Kini kini-ni balaj-d-a.*
 he he-ACC slander-PAST-3SG
 ‘He slandered him.’
 b. *Kiniler balaj-sas-t-alar.* (P. 62)
 they slander-REC-PAST-3PL
 ‘They slandered each other.’

Below, representative lists of the most common lexical groups of “canonical” reciprocals are given. The underlying verbs are not quoted because their meaning is part of and therefore recoverable from that of the derived reciprocals.

A. The first group comprises verbs of physical action upon an object referent that may result in a change of state of the latter (it is noteworthy that among verbs of physical action, those of violent hostile actions are prevalent).

- (48) *ann’-as-* ‘to push each other’
battaxta-s- ‘to seize each other by the hair’
kəɖaj-as-, kəɖa-s- ‘to kill/exterminate each other’
kərba-s- ‘to beat/hit each other’
muomala-s- ‘to squeeze each other when fighting’
musku-s- ‘to wring/twist each other’s hands’
oxs-us- ‘to beat each other’, ‘to fight’
ölör-üs- ‘to kill each other’
öttükte-s- ‘to throw each other over the thigh’
sejmekte-s- ‘to tear each other to pieces’
suturukta-s- ‘to attack each other with fists’
sərbat-as- ‘to beat/hit each other’, ‘to fight’
tabaj-as- ‘to kick each other with front hooves’
tarba-s- ‘to scratch each other’
toyonoxto-s- ‘to push each other with elbows’
tuppaxta-s- ‘to pinch each other’
tut-us- ‘to seize/grasp each other’
təg-as- ‘to flick each other on the forehead’
uolukta-s- ‘to seize/grab each other by the clothes above the waist’
ütürü-s- ‘to push each other’
xaanna-s- ‘to beat each other till bleeding’
xabəala-s- ‘to bite each other (of dogs)’
xabərə-s- ‘to press/push each other’
xad’əkta-s- ‘to bite each other’

<i>xad'ərə-s-</i>	'to tear/torment each other'
<i>xap-səs-</i>	'to seize each other', etc.

B. Here belong verbs denoting all kinds of relations between people that do not necessarily imply physical action, and also verbs of speech:

(49) <i>aatta-s-</i>	'to name each other'
<i>burujda-s-</i>	'to condemn/accuse each other'
<i>bəðha-s-</i>	'to free/save/rescue each other'
<i>keteh-is-</i>	'to wait for each other'
<i>küüt-üs-</i>	'to wait for each other'
<i>kəra-s-</i>	'to curse/damn each other'
<i>sura-s-</i>	'to ask about each other'
<i>tuorajda-s-</i>	'to disturb/hinder each other'
<i>xomuruj-us-</i>	'to reproach each other'
<i>əjat-əs-</i>	'to ask each other'
<i>əsta-s-</i>	'to scold/curse each other', etc.

C. Verbs denoting feelings or their manifestation, approval or disapproval, mental activities, or sense perception form a distinct lexical group:

(50) <i>axt-əs-</i>	'to remember each other'
<i>albənna-s-</i>	'to deceive each other'
<i>atayasta-s-</i>	'to offend each other'
<i>bil-is-</i>	'to know each other', 'to get acquainted with each other'
<i>künüüle-s-</i>	'to be jealous of/envy each other'
<i>küöte-s-</i>	'to scare each other'
<i>kütüre-s-</i>	'to suspect each other'
<i>maanəla-s-</i>	'to respect each other'
<i>öjdö-s-</i>	'to understand each other'
<i>tapta-s-</i>	'to love each other'
<i>umm-us-</i>	'to forget of each each', etc.

Verbs of sense perception:

(51) <i>bul-us-</i>	'to find each other'
<i>ist-is-</i>	'to hear each other'
<i>kör-üs- / kör-süs-</i>	i. 'to see each other', ii. 'to meet each other'
<i>seŋeer-is-</i>	'to listen to each other attentively'.

D. Verbs of motion also form a distinct lexical group:

(52) <i>aah-əs-</i>	'to pass/go by each other'
<i>kötöy -üs-</i>	'to lift/raise each other'
<i>oro-s-</i>	'to take each other out'
<i>tohuj-us-</i>	'to go to meet each other', etc.

4.1.1.2 *Derived from two-place transitives with a split object valency.* Here belong the same verbs as in 4.1.1.1. The difference lies in the fact that in this case the underlying construc-

tion contains an optional ablative object (denoting a body part) which appears as a result of splitting the obligatory human object argument: thus the latter is expressed twice, as a whole by a direct object and as an immediately affected body part by an ablative object. This type is semantically close to “possessive” reciprocals due to the involvement of a body part (inalienable possession) (see 4.1.3): cf.:

- (53) a. *Ije-m kəh-ə-n [uoh-u-ttan] uuraa-t-a.*
 mother-my daughter-her-ACC lip-her-ABL kiss-PAST-3SG
 ‘My mother kissed her daughter [on the lips].’
 b. ... *uos-tarə-ttan uura-h-an* ... (P. 2974)
 lip-their-ABL kiss-REC-CONV
 ‘[they]... having kissed each other on the lips...’
- (54) a. *Tustaaččə ilii-bi-tten [miig-in] xab-an əl-l-a.*
 wrestler hand-my-ABL I-ACC grasp-CONV take-PAST-3SG
 lit. ‘The wrestler grasped [me] by my hand.’
 b. *Tustaaččə-lar ilii-ilii-leri-tten xap-səh-an əl-l-əlar* (S. 480)
 wrestler-PL hand-hand-their-ABL grasp-REC-CONV take-PAST-3PL
 ‘The wrestlers grasped each other’s hands.’
- (55) *Kiniler ili’i-ilii-leri-tten sietti-h-en ih-el-ler.*
 they hand-hand-their-ABL lead.by.hand-REC-CONV go-PRES-3PL
 ‘They lead each other holding each other’s hands.’
- (56) ... *Ilii ilii-leri-tten əl-səs-t-əlar.* (S. 525)
 hand hand-their-ABL grasp-REC-PAST-3PL
 ‘[They] grasped each other by the hands.’
- (57) *tüös tüös-teri-tten utarata kep-s-en kebih-en bar-an* (P. 1003)
 breast breast-their-ABL opposite push-REC-CONV AUX-CONV AUX-CONV
 ‘[they] ... having pushed each other on the breast.’

4.1.1.3 Derived from two-place intransitives. Most of these intransitives take an object with the postposition *kəttə* ‘with’ (see the list of verbs under A below). Some of the speech and motion verbs may require an object either in the dative (see lists A and C) or, much less commonly, in the ablative case (see list B). In the derived sentences, the nominal with *kəttə* is a part of the subject group.

Intransitives that can acquire the reciprocal form seem to be much more numerous in Yakut than in some other Turkic languages.

- (58) a. *əal kimie-xe kuruutun saan-ar.* (P. 305)
 neighbour he-DAT all.time threaten-PRES.3SG
 ‘The neighbour threatens him all the time.’
 b. *əal kini-ni kəttə kuruutun saan-s-al-lar.*
 neighbour he-ACC with all.time threaten-REC-PRES-3PL
 ‘The neighbour and he threaten each other all the time.’
- (59) a. *Min atas-par sərət-t-əm.*
 I friend-my.DAT come-PAST-1SG
 ‘I visited my friend.’

- b. *Bihigi atas-pə-n kəttə səld'-əs-t-əbət.*
 we friend-my-ACC with come-REC-PAST-1PL
 'I and my friend visited each other.'

Here belong verbs of the following lexical groups.

A. Verbs of speech and communication (most of the underlying verbs take a dative human object (see (60a)), and some an object with the postposition *kəttə* (see (60b)) or both (see (60c)); some of the verbs may take an optional object with the postposition *toyunan* 'about' denoting the content of speech):

- (60) a. *botugura-s-* 'to whisper with each other'
de-s- 'to talk with each other'
imnen-is- 'to make signs to/wink at each other'
muḡatə-s- 'to complain to each other'
n'əlaḡna-s- 'to flatter each other'
sibigine-s- 'to whisper with each other'
sipsi-s- 'to whisper with each other'
üögüle-s- 'to shout to each other'
əhəta-s- 'to shout to each other'
- b. *kepset-is-* 'to talk with each other'
labaxala-s- 'to chatter with each other'
xalaata-s- 'to talk loudly with each other'
xobd'oor-us- 'to talk loudly and quickly with each other'
- c. *sarḡar-əs-* 'to talk with each other.'

B. Verbs expressing mental states (the underlying verbs govern an ablative object):

- (61) *xomoj-us-* 'to be disappointed with each other'
xorgut-us- 'to become upset by each other('s behaviour).'

C. Verbs of various human activities and relations:

- (62) *bat-əs-* 'to live in harmony with each other'
mehejde-s- 'to hinder each other.'

4.1.1.4 *Derived from two-place intransitives with a split object valency.* This case is analogous to that under 4.1.1.2.; cf.:

- (63) a. *Kini östöö-gör [ilii-ti-ger] sillee-t-e.*
 he enemy-his.DAT hand-his-DAT spit-PAST-3SG
 lit. 'He spat his enemy into his hand.'
- b. ... *ilii ilii-leri-ger sillee-h-en bar-an-nar.* (P. 933)
 hand hand-their-DAT spit-REC-CONV AUX-PAST-3PL
 lit. '[They] spat each other into their hands.'

4.1.1.5 *Derived from three-place intransitives.* Unlike the verbs in 4.1.1.2, the base verbs of this type contain two non-direct objects of which one is retained in a reciprocal construction. Semantically, this type is adjacent to "indirect" reciprocals; cf.:

- (64) a. *aal kinie-xe ah-ənan-üöülü-nen xardala-ə.*
 neighbour he-DAT food-INST-food-INST give.in.exchange-PRES.3SG
 ‘The neighbour gives him food in exchange.’
 b. *Kiniler ah-ənan-üöülü-nen xardala-h-al-lar.* (S. 484)
 they food-INST-food-INST exchange-REC-PRES-3PL
 ‘They exchange their supplies of food with each other.’
- (65) a. *Oyo oyo-yo xaar-ənan bəray-ar.*
 child child-DAT snowball-INST throw-PRES.3SG
 ‘A child throws snowballs at another child.’
 b. *Oyo-lor xaar-ənan bərax-s-al-lar.* (Kh.2. 271)
 child-PL snowball-INST throw-REC-PRES-3PL
 ‘The children throw snowballs at each other.’

4.1.1.6 *Derived from one-place intransitives.* The latter commonly denote uttering sounds by animate beings or other signals; these actions usually imply an addressee which is practically never expressed. The derived reciprocals denote an exchange of signals provoked by the partner(s). This type is kind of intermediate between reciprocals and sociatives. The list of one-place intransitives used reciprocally is limited. Compare:

- (66) a. *Küöl-ge kus-tar maatəry-əl-lar.*
 lake-DAT duck-PL quack-PRES-3PL
 ‘The ducks are quacking in the lake.’
 b. *Kus-tar maatərya-h-al-lar.*
 duck-PL quack-REC-PRES-3PL
 ‘The ducks are quacking to each other.’
- (67) a. *Börö ərd’əgənaa-t-a.*
 wolf growl-PAST-3SG
 ‘The wolf began to growl.’
 b. *Börö-lör ərd’əgəna-h-al-lar.* (S. 529)
 wolf-PL growl-REC-PRES-3PL
 ‘The wolves growl at each other.’
- (68) a. *Otčut əhətaa-n bar-d-a.*
 mower shout-CONV AUX-PAST-3SG
 ‘The mower began to shout loudly.’
 b. *Otčut-tar əhəta-h-al-lar.* (S. 531)
 mower-PL shout-REC-PRES-3PL
 ‘The mowers are loudly shouting to each other.’
- (69) a. *Bu atəər d’oxsoottoo-n bar-d-a.*
 this stallion assume.threatening.posture-CONV AUX-PAST-3SG
 ‘This stallion assumed a threatening posture.’ (when he saw another stallion)
 b. *Atəər-dar d’oxsoottoo-h-on er-el-ler.*
 stallion-PL assume.threatening.posture-REC-CONV begin-PRES-3PL
 ‘The stallions begin to behave towards each other in a threatening way.’
- (70) a. *Bu ənax mayəraa-n bar-d-a.*
 this cow moo-CONV AUX-PAST-3SG
 ‘The cow began to moo.’

- b. *Bu ənax mayəra-h-an bil-s-er.* (Kh.1. 23)
 this cow moo-REC-CONV know-REC-PRES.3SG
 ‘The cows recognize each other by mooing to each other.’

The following reciprocals also belong in this group:

- (71) *ajaata-s-* ‘to roar/bellow at/to each other (of oxen)’
kiste-s- ‘to neigh to each other’
kürd’üütte-s- ‘to assume a threatening pose against each other (of oxen)’
xongkuna-s- ‘(of geese) to exchange cackles.’

4.1.2 “Indirect” and benefactive reciprocals

In reciprocal constructions of this type, a direct object is retained and an indirect dative or ablative object is deleted. Therefore the underlying transitive structure is retained. The number of reciprocals with the “indirect” diathesis derived from three-place verbs with an obligatory indirect object does not exceed ten or fifteen. If we count reciprocals with the benefactive meaning (derived from verbs with an optional indirect object; cf. (73)) their number will increase significantly. As is mentioned above (see 2.2) the retained object has the nominative case form or, if the object is definite, the accusative.

- (72) a. *Beje-η üle-γə-n mie-xe najəlaa-ma.*
 self-2SG.NOM work-thy-ACC I-DAT shift-NEG.IMP
 ‘Don’t shift your work on me.’
 b. *At-tar-ə manəł-larə-n najəla-h-an, mökküh-er*
 horse-PL-ACC guard-their-ACC shift-REC-CONV argue-PART
buol-al-alara. (Kh.1. 37)
 AUX-PAST-3.PL
 ‘It happened from time to time that they argued with each other trying to shift on each other the guarding of the horses.’
- (73) a. *Aya-m kinie-xe die-ni tut-t-a.*
 father-my he-DAT house-ACC build-PAST-3SG
 ‘My father built a house for him.’
 b. *Kiniler die-leri-n tut-us-t-ular.*
 they house-their-ACC build-REC-PAST-3PL
 ‘They built houses for each other.’
- (74) a. *Ini bii-tten kur-u bəld’a-t-a.*
 younger.brother elder.brother-ABL belt-ACC take.away-PAST-3SG
 ‘The younger brother took the belt from the elder brother.’
 b. *Ikki ini-bii kur-dar-ən bəld’a-s-pət-tar ühü.* (P. 616)
 two brothers belt-PL-ACC take.away-REC-PERF-3PL they.say
 ‘They say, the two brothers are taking belts from each other.’ (see also (1b))
- (75) *Barə xardarəta sonu-nu bil-ler-s-el-ler.* (Kh.1. 37)
 all mutually news-ACC know-CAUS-REC-PRES-3PL
 ‘All (people) tell each other the news.’

The following verbs meet this description:

- (76) *belexte-s-* ‘to exchange presents’
ber-is- i. ‘to give sth to each other’
 ii. ‘to share sth with each other’ (← *bier-* ‘to give’)
bəld’a-s- ‘to take sth away from each other’
kepset-is- ‘to tell sth to each other’
kör-dör-üs- ‘to show sth to each other’
najala-s- ‘to shift sth on(to) each other’
n’əmaatta-s- ‘to exchange presents’
suruj-us-/suru-s- ‘to write to each other’
tiej-s- ‘to carry sth to/for each other’
tut-us- ‘to build sth for each other’
ular-səs- ‘to give sth to each other for a time’
(ies) əl-səs- ‘to borrow sth from each other’
əət-əs- ‘to send sth to each other.’

4.1.3 “Possessive” reciprocals

In this type of reciprocals, the diathesis of the underlying transitive construction is retained, due to object retention as in “indirect” reciprocals. The reciprocal marker corresponds to the possessive suffix of the object of the base verb which usually denotes a body part (e.g., a hand, a face, lips, breast, often an injured body part, etc.) or, much more rarely, other inalienable or alienable possession (a house, weakness, etc.), or it corresponds to the possessive attribute of an *izafet* construction of the object (cf. *baləh-ə-n* in (77a)). In many of the examples the direct object is reduplicated (see (78)–(81)), thus iconically signalling two objects in the situation described (the structure of the direct object is thus similar to that of the reciprocal pronoun; cf. *beje-beje-leri-n* and *ilii-ilii-leri-tten*). Semantically adjacent to these reciprocals are some “canonical” reciprocals (see 4.1.1.2 and 4.1.1.4), which may find expression in object reduplication (cf. (54)–(57)).

- (77) a. *Ayas baləh-ə-n saŋa-tə-n ist-er.*
 elder.sister younger.sister-her-ACC voice-her-ACC hear-PRES.3SG
 ‘The elder sister hears her younger sister’s voice.’
 b. *Ayas-baləs saŋa-larə-n ist-ih-el-ler.* (P. 977)
 blood.sisters voice-their-ACC hear-REC-PRES-3PL
 ‘The sisters hear each other’s voices.’
- (78) ... *tüü tüü-leri-n, et et-teri-n, tirii tirii-leri-n*

 ‘[They] began to slash [at] each other’s upper bones.’
- (88) ... *xaləñ tirii-leri-n xajət-əs-pət-tara.* (P. 3252)
 thick skin-their-ACC tear-REC-NR.PAST-3PL
 ‘[They] tore each other’s skin.’
- (89) ... *xohox xohox-toru-n xosto-s-put-tar.* (P. 3523)
 offence offence-their-ACC dig.out-REC-PERF-3PL
 ‘... [they] dug out each other’s offences.’
- (90) ... *kepset-er təl-larə-n öjdö-s-pöt gən-an*
 speak-PART speech-their-ACC understand-REC-NEG.PART AUX-CONV
kees-t-e. (P. 1917)
 AUX-PAST-3SG
 ‘... [he] did so that [they] did not understand each other’s speech.’
- (90’) *[Kiniler] əjə əja-s-pət-tar.* (P. 3766)
 they weight weigh-REC-PERF-3PL
 lit. ‘[They] weighed the weight of each other.’

The reciprocals that occur in this diathesis type can also be used in the “canonical” diathesis (see 4.1.1). Some of them can also occur in the “indirect” diathesis, with a slight shift of

meaning; e.g.: *ihit-* ‘to hear’ → *ist-is-* i. ‘to hear each other’ (“canonical”), ii. ‘to hear sth from each other’ (“indirect”), iii. ‘to hear each other’s voices, etc.’ (“possessive”; (77b)).

4.2 Causatives derived from reciprocals

Causatives from intransitive reciprocals are widely attested in Yakut texts and registered in dictionaries. As mentioned above, contrary to other Turkic languages with object-oriented reciprocals, the causative marker in respective Yakut forms can be added only after an additional reflexive suffix which does not affect the meaning (the cause of this phenomenon is not clear; see also (16) and (17 above)).

- (91) a. *bil-* ‘to know’
 → b. *bil-is-* ‘to become acquainted with each other’
 → c. *bil-ih-in-ner-* (REC-REFL-CAUS) ‘to acquaint sb with sb.’

Here are a few examples of object-oriented constructions with embedded “canonical” (92)–(93), “indirect” (94) and “possessive” (95) reciprocals respectively:

- (92) *Aya-m kiniler-i bil-ih-in-ner-d-e.*
 father-my they-ACC know-REC-REFL-CAUS-PAST-3SG
 ‘My father introduced them to each other.’
- (93) *Kiniler uol-larə-n kör-üh-ün-ner-d-iler.*
 they son-their-ACC see-REC-REFL-CAUS-PAST-3PL
 ‘They made (let) their sons meet each other.’
- (94) *Aya-m kiniler-i kinige-leri-n ber-ih-in-ner-d-e.*
 father-my they-ACC book-their-ACC give-REC-REFL-CAUS-PAST-3SG
 ‘My father made them give books to each other.’
- (95) *Aya-m kiniler-i sirej-sirej-deri-n kör-üh-ün-ner-d-e.*
 father-my they-ACC face-face-their-ACC see-REC-REFL-CAUS-PAST-3SG
 ‘My father made them look into each other’s face.’

4.3 Deverbal nouns

Deverbal nouns are formed from all the verb bases by means of the suffix *-əə* (or its synharmonic variants *-ii/-uu/-üü*). These deverbal nouns can contain any derivational affixes: either aspectual or voice markers. Reciprocal verb forms can also be nominalized by means of this suffix; e.g.:

- (96) a. *bəlxətə-s-* ‘to give presents to each other’ → *bəlxətə-h-ii* ‘exchange of presents’
 b. *tiej-s-* ‘to cart to each other’ → *tiej-s-ii* ‘carting to each other’
 c. *uura-s-* ‘to kiss each other’ → *uura-h-əə* ‘mutual kissing’
 d. *xorgut-us-* ‘be offended with each other’ → *xorgut-uh-uu* ‘mutual resentment’
 e. *əl-səš-* ‘to take from each other’ → *əl-səh-əə* ‘taking from each other’
 (see also (7)).

The following examples illustrate the use of (96d) and (96b):

- (97) a. *Bihigi əkkardə-bətə-gar xorgut-uh-uu taxs-a səs-t-a.*
 we among-our-DAT be.offended-REC-NR appear-CONV hardly-PAST-3SG
 ‘We almost got offended with each other.’ (S. 500)
 lit. ‘Mutual resentment almost developed between us.’
- b. *Bügün aya-laax uol ikki ardə-larə-gar ot tiej-s-ii buol-l-a.*
 today father-POSS son two between-their-DAT hay cart-REC-NR be-PAST-3SG
 lit. ‘Today mutual carting of hay between father and son took place.’

In (98) illustrating the use of (96c) the name of a reciprocal action occupies the position of a direct object (as a cognate object) with the underlying reciprocal verb as predicate:

- (98) *uonna kiniler aan bastaanəə uura-h-ə-larə-n uura-s-t-əlar.* (U. 22)
 and they very first kiss-REC-NR-their-ACC kiss-REC-PAST-3PL
 ‘... and they kissed for the first time.’
 lit. ‘... and they kissed-each-other their very first mutual-kiss.’

5. Diathesis types of reciprocals with the pronoun *beje-beje-leri-n* ‘each other’

5.1 Introductory

As was mentioned above (see 1.2), reciprocity can be expressed not only by the suffix *-s/-h* but also by a reciprocal pronoun. Sometimes, these two means co-occur in the same sentence (see 5.4). As was shown above, the reciprocal pronoun is marked for person (see the forms under (8b)), and inflected for case: it can assume five out of eight case forms marked on nouns (accusative, dative, ablative, instrumental and comitative). (99) shows these case forms for the 3.PL form of the reciprocal pronoun:

- (99) ACC *beje-beje-leri-n* ‘[they ...] each other’
 DAT *beje-beje-leri-ger* ‘[they ...] to each other’
 ABL *beje-beje-leri-tten* ‘[they ...] from/by each other’
 INST *beje-beje-leri-nen* ‘[they ...] of each other’
 COM *beje-beje-leri-niin* ‘[they ...] with each other.’

Needless to say, the valency properties of the underlying construction do not change in the reciprocal pronominal construction.

The instrumental case form of the reciprocal pronoun is quite rare, being required by verbs like *kien tut-* ‘to be proud of’ (lit. ‘to hold wide’; see (104)). The comitative case form is also rather rare as the accusative form with the postposition *kəttə* ‘with’ (*beje-beje-leri-n kəttə* ‘with each other’) is more commonly used instead.

5.2 Subject-oriented reciprocal constructions

5.2.1 “Canonical” reciprocals

5.2.1.1 *Derived from two-place transitives.* Most of the verbs listed in 4.1.1.1 may be used with the reciprocal pronoun instead of the reciprocal suffix, as in the following example:

- (100) a. *Kiniler üčügejdik ist-is-t-iler.* (*ist- < ihit-*)
 they good hear-REC-PAST-3PL
 ‘They heard each other well.’
 b. *Kiniler beje-beje-leri-n üčügejdik ihit-t-iler.*
 they each.other-their-ACC good hear-PAST-3PL
 (same translation).

The following are examples from the dictionary by Pekarskij (1959):

- (101) a. *Bihigi beje-beje-biti-n küüt-t-übüt.*
 we.NOM each.other-our-ACC wait-PAST-1PL
 ‘We waited for each other.’
 b. *Kiniler beje-beje-leri-n xarəstə-əl-lar.*
 they.NOM each.other-their-ACC take.care-PRES-3PL
 ‘They take care of/protect each other.’

In these two sentences, the suffixed reciprocal forms *küüt-üs-t-übüt* ‘we waited for each other’ and *xarəsta-h-al-lar* ‘they take care of/protect each other’ are also possible. Substitution of the reciprocal pronoun for the reciprocal suffix seems to be less acceptable in the case of the most frequent common suffixed reciprocals; cf. *bil-is-* ‘to get acquainted/ know each other’ and *beje-beje-leri-n bil-* (same meaning).

5.2.1.2 Derived from two-place intransitives. Most of the reciprocals listed in 4.1.1.3 may be used with the reciprocal pronoun instead of the suffix *-s/-h*, as in the following examples:

- (102) a. *Kini miig-in tus-p-unan ihit-t-e.*
 he I-ACC direction-1SG-INST hear-PAST-3SG
 ‘He heard about me.’
 b. *Kiniler beje-beje-leri-n tus-tar-ənan ihit-t-iler.*
 they each.other-their-ACC direction-3PL-INST hear-PAST-3PL
 ‘They heard about each other.’
 (103) a. *Aya-m kini-ni kəttə kepset-t-e.*
 father-my he-ACC with speak-PAST-3SG
 ‘My father spoke with him.’
 b. *Kiniler beje-beje-leri-n kəttə kepset-t-iler.*
 ‘They spoke with each other.’
 (104) a. *Kini miigi-nen kien tutt-ar.*
 he I-INST wide hold-PRES.3SG
 ‘He is proud of me.’
 b. *Kiniler beje-beje-leri-nen kien tutt-al-lar.*
 they.NOM each-other-their-INST wide hold-PRES-3PL
 ‘They are proud of each other.’

5.2.1.3 Derived from one-place intransitives. If we replace the reciprocal suffix with the reciprocal pronoun in the verbs listed in 4.1.1.6 it may involve a shift in meaning; thus, for instance, (105a) denotes acts of the subject referents directed at each other, while (105b) denotes a sociative action. The accusative form of the reciprocal pronoun with

the comitative postposition in (105b) can be replaced by the dative form *beje-beje-leri-ger* ‘to each other’, but the informants find it preferable with the reciprocal form of the verb (see (105c)), and the sentence becomes synonymous to (105a), though the informants consider (105c) less acceptable.

- (105) a. *Kus-tar maatərya-h-al-lar.* (see (66b))
 ‘The ducks are quacking at each other.’
 b. *Kus-tar beje-beje-leri-n kəttə maatəryə-əl-lar*
 duck-PL each.other-their-ACC with quack-PRES-3PL
 ‘The ducks are quacking together (lit. ‘with each other’)’
 c. *Kus-tar beje-beje-leri-ger maatərya-h-al-lar.*
 (same as (a)).

5.2.2 “Indirect” reciprocals

All “indirect” reciprocals listed in 4.1.2 may be used with the reciprocal pronoun instead of the reciprocal suffix; e.g.:

- (106) a. *Kini əalə-ttan kinige-ni əl-l-a.*
 he neighbour-ABL book-ACC take-PAST-3SG
 ‘He took a book from the neighbour.’
 b. *Kiniler kinige-leri-n beje-beje-leri-tten əl-l-əlar.*
 they book-their-ACC each.other-their-ABL take-PAST-3PL
 ‘They took books from each other.’
 (107) a. *Kini əalə-gar kinige-ni əl-l-a.*
 ‘He took a book for the neighbour.’
 b. *Kiniler kinige-leri-n beje-beje-leri-ger əl-lə-lar.*
 ‘They took books for/to each other.’
 (108) a. *Kini əalə-gar kinige-ni bier-d-e.*
 ‘He gave a book to the neighbour.’
 b. *Kiniler kinige-leri-n beje-beje-leri-ger ber-di-ler.*
 ‘They gave books to each other.’

5.2.3 “Possessive” reciprocals

The majority of “possessive” reciprocals listed in 4.1.3 allow, in the informants’ opinion, the reciprocal pronoun (without a case marker) as an attribute instead of the reciprocal suffix, but we have no textual examples.

- (109) a. *Kini aya-tə-n kuolah-ə-n ist-er.*
 he.NOM father-his-ACC voice-his-ACC hear-PRES.3SG
 ‘He hears his father’s voice.’
 b. *Kiniler beje-beje-leri kuolas-tarə-n ist-el-ler.*
 they.NOM each.other-their voice-their-ACC hear-PRES-3PL
 ‘They hear each other’s voices.’
 c. *Bihigi beje-beje-bit kuolas-pətə-n ist-e-bit.*
 we.NOM each.other-our voice-our-ACC hear-PRES-1PL
 ‘We hear each other’s voices.’

- d. *Ehigi beje-beje-yit kuolas-kətə-n ist-e-yit.*
 YOU.NOM each-other-your voice-your-ACC hear-PRES-2PL
 ‘You hear each other’s voices.’

5.3 Causatives from subject-oriented reciprocals

Reciprocal constructions of this syntactic type are rather rare. The antecedent of the reciprocal pronoun of (110) can be either a direct object (which makes the sentence object-oriented; see (i)) or the subject of the underlying sentence (in this case it is a subject-oriented constructions; see (ii)). In (111) the subject is singular, therefore it cannot be the antecedent of the reciprocal pronoun and the antecedent can be only the object referents, which makes the construction unambiguously object-oriented.

- (110) *Kiniler uol-lattar-ən beje-beje-leri-ger kör-dör-d-üler.*
 they son-their-ACC each.other-their-DAT see-CAUS-PAST-3PL
 ‘They made (let) their sons meet each other.’
 i. = ‘the sons met/saw each other’
 ii. = ‘Each of the subject referents showed his son to the other subject referent.’
- (111) *Aya-m kiniler-i kinige-leri-n beje-beje-leri-ger bier-der-d-e.*
 father-my they-ACC book-their-ACC each.other-their-DAT give-CAUS-PAST-1SG
 (intended meaning:) ‘My father made them give books to each other.’

5.4 Co-occurrence of the reciprocal suffix and reciprocal pronoun

Concomitant use of these markers is a very common phenomenon (cf. (2), (23), (112), (114)). As the suffix *-s/-h* intransitivizes a verb in “canonical” constructions, interpretation of the reciprocal pronoun as a direct object becomes problematic. Sometimes such a combination may sound unusual; thus, for instance, in (106b) the verbal form *əl-l-əlar* cannot be replaced by the reciprocal form *əl-əs-t-əlar* for unclear reasons, though most sentences with the reciprocal pronoun we find in dictionaries and specialist literature contain the reciprocal verb form (the following combinations can be cited in addition to the examples below: *beje-beje-leri-n maanəla-s-* ‘to respect each other’ (S. 232), *beje-beje-leri-n burujda-s-* ‘to accuse each other’ (S. 84), *beje-beje-leri-ger n’əlaŋna-s-* ‘to fawn upon each other’ (S. 263), etc.; see also 5.2.1.3). In sentences with both reciprocal markers one of them can be omitted in most cases, though, as we have just mentioned, there are certain preferences which require further study.

- (112) *Beje-beje-yiti-n atayasta-hə-ma-ŋ!* (S. 51)
 each.other-your-ACC hurt-REC-NEG-IMP.2PL
 ‘Do not hurt each other!’
- (113) *ət-tar oxs-uh-an beje-beje-leri-n muomaxta-s-t-əlar.* (S. 245)
 dog-PL hit-REC-CONV each.other-their-ACC throttle-REC-PAST-3PL
 ‘In the fight, the dogs throttled each other to death.’
- (114) *Bihigi duohuja seherge-s-t-ibit, beje-beje-bit-i-n öjdö-s-t-übüüt.* (Kh.1. 36)
 ‘We talked to our heart’s content, understood each other.’ (see also (2))

5.5 Deverbal nouns

Derivation of *nomina actionis* by means of the suffix *-æð/-ii/-üü/-uu* from verbs with *beje-beje-leri-n* instead of the reciprocal suffix is possible though restricted. The scope of these restrictions is unclear. For instance, in (115a) and (115b) the verbs allow *nomina actionis* with the reciprocal suffix only, while (115c) and (115d) allow *nomina actionis* both with and without the reciprocal suffix:

- (115) a. *beje-beje-leri-n belextee-* 'to give presents to each other'
 → *beje-beje-leri-n belexte-h-ii* 'giving presents to each other'
 b. *beje-beje-leri-n uuraa-* 'to kiss each other'
 → *beje-beje-leri-n uura-h-æð* 'kissing each other'
 c. *beje-beje-leri-n bier-* 'to give sth to each other'
 → *beje-beje-leri-n bier-ii/bier-s-ii* 'giving sth to each other'
 d. *beje-beje-leri-tten xorgut-* 'to be offended with each other'
 → *beje-beje-leri-tten xorgut-uu/xorgut-uh-uu* 'mutual offence.'

Sentential examples for (115d):

- (116) a. *Bihigi ækkardə-bətə-gar beje-beje-biti-tten xorgut-uu taxsəs-t-a.*
 we among-our-DAT each.other-our-ABL be.offended-NR AUX-PAST-3SG
 'We almost got offended with each other.' (cf. (97))
 b. *Kini aya-laax uol beje-beje-leri-n /beje-beje-leri-ger kinige*
 he father-POSS.PART son each.other-their-ACC each.other-their-DAT book
bier-ii-leri-n tuyunan kepsee-t-e.
 give-NR-their-ACC about tell-PAST-3SG
 lit. 'He told [sb] about father and son giving books to each other.'

6. Simultaneity and succession of reciprocal acts

The reciprocal verbal form itself is neutral with respect to the feature named, i.e. it cannot denote either succession or simultaneity of the acts within a reciprocal event by itself. One or the other interpretation is determined solely by the lexical meaning of the base verb. The situation 'X and Y kissed each other' obligatorily presupposes simultaneity of the acts within this reciprocal situation for pragmatic reasons, while the situation 'They visit each other' necessarily presupposes their succession. And there are a great many other situations which may be either simultaneous or successive, e.g. 'They fired at each other', 'They write letters to each other', etc.

Simultaneity may be explicated by the adverb *biir biriemeye* 'simultaneously, at the same time': its combinability with reciprocals has rather trivial restrictions; thus it does not collocate with the reciprocals *uura-s-* 'to kiss each other', *ber-is-* 'to give each other' and *təl bərag-əs-* lit. 'to fling words at each other', *kuot-us-* 'to outrun each other', etc. but it can collocate with the reciprocals *suruj-us-* 'to write to each other', *ann'-əs-* 'to push each other', *xad'ækta-s-* 'to bite each other', *küüt-üs-* 'to wait for each other', etc.

The adverb *biirge* 'together' is not used with reciprocals at all.

Succession of reciprocal acts can be expressed by the adverbs *utum-sitim* ‘one after another’ (which does not collocate with the reciprocal form *oxs-us-* ‘to beat each other’) and *xardarə-tarə* with the same meaning, *xardarəta/xardarə* ‘alternately’, ‘in turn’, ‘by turns’, and *utuu-subuu* ‘one after another’ (only with verbs of motion). The reciprocal acts of both agents are fused to a varying degree depending on the situation. For instance, the acts within such situations as ‘to embrace [each other]’, ‘to fight with each other’, can hardly be separated, while non-contact acts within a situation like ‘to try to surpass each other’, can be separated quite easily. Examples:

(117) *Xardarə-taarə təl bərax-s-al-lar.* (S. 484)
 by.turns word fling-REC-PRES-3PL
 lit. ‘By turns they are flinging words at each other.’

(118) *Xardarə-taarə səld’ə-h-al-lar.*
 by.turns visit-REC-PRES-3PL
 ‘They call on each other by turns.’

(119) *Bihigi ügüstük suru-h-a-bət.*
 we often write-REC-PRES-1PL
 ‘We often write [letters] to each other.’

(120) *Bihigi kini-liin solbuj-s-an ülelii-bit.*
 we he-COM replace-REC-CONV work-PRES.1PL
 lit. ‘We work replacing each other.’

Reciprocals like *kuot-us-/kuot-ala-s-* in the meaning ‘to try to catch/outrun each other’ (← *kuot-* ‘to outrun’; *-ala-* is an iterative suffix), *kepset-is-* ‘to tell each other [stories]’ (← *kepset-* ‘to (re)tell [stories]’), do not allow simultaneous interpretation pragmatically; cf.:

(121) a. *Die tahəgar xas künnete ünüges oyo-loro sər-s-al-lar, xaja-lara*
 home outside each day puppy child-PL run-REC-PRES-3PL which-PL
dayanə kuot-us-pat-tar. (answer: sledge runners; P. 1235)
 PRTL outrun-REC-NEG.PRES-3PL

‘Two puppies outside run together every day and cannot outrun each other.’
 b. *Ikki čolbot-tor miin-s-en-ner ölüü-nü oŋor-uox-tara.* (P.1571)
 two Venus-PL mount-REC-PRES-3PL misfortune-ACC do-FUT-3PL
 ‘Venus now appears now disappears (lit. ‘Two stars mount each other’) betokening misfortune.’

7. Productivity and restrictions on reciprocal formation

It has been claimed that reciprocal verbs are relatively few in number but they are very widely used in spoken language (Kharitonov 1963:31, 1982:271). The cited dictionaries (Pekarskij; Slepcev) register the forms in *-s/-h* as either reciprocal or sociative (in our terminology) or both. These forms may have either one of the two meanings or both. Judging by the dictionaries, there are no less than 300 verbs in which the reciprocal meaning can be expressed by the suffix *-s/-h*.

As for restrictions, they seem to be mostly trivial, being imposed by the inanimateness of the second argument in two-place verbs. Thus, Kharitonov (1963:31, 1982:271) lists *xoruj-* ‘to dig up’, *ör-* ‘to put on a fire’, *xataa-* ‘to close’, *orgut-* ‘to boil’, *buhar-* ‘to cook, brew’ and the like as examples of verbs that cannot be used in the reciprocal form. According to our informants, however, these verbs may take the reciprocal suffix but not in the reciprocal meaning. In fact, “canonical” reciprocals cannot be formed from these and similar verbs (see (122b.i)), unless for a description of a fantastic situation, but “indirect” and “possessive” reciprocals, at least from some of them, are quite possible, especially if the reciprocal pronoun is used; cf. (122c) and (122d):

- (122) a. *Kini as belemnee-bit-e.*
 he food cook-NR.PAST-3SG
 ‘He has cooked the food.’
- b. *Kiniler belemne-s-pit-tere.*
 they cook-REC-NR.PAST-3PL
 i. *‘They have cooked *each other*.’ (reciprocal)
 ii. ‘They have cooked *together*.’ (sociative)
 iii. ‘They *helped* [sb] to cook.’ (assistive)
- c. *Kini mie-xe as belemnee-bit-e*
 he I-DAT food cook-NR.PAST-3SG
 ‘He has cooked food for me.’
- d. *Kiniler səl-ə bəha beje-beje-leri-ger as belemne-s-pit-tere.*
 they year-ACC whole each.other-DAT food prepare-REC-NR.PAST-3PL
 ‘They have cooked food for each other for a whole year.’ (“indirect” reciprocal).

If the reciprocal pronoun is omitted in (122d), it results in the loss of the reciprocal meaning and acquisition of the assistive or the sociative meaning.

According to our informants, the reciprocal meaning is not rendered by the *-s/-h* forms of the following base verbs: *orulaa-* ‘to wheeze/shout in a hoarse voice’, *orunnaa-* ‘to provide with a sleeping place’, *öhöö-* ‘to feel hostile towards sb’, *ülelet-* ‘to make sb work’, but they can render the sociative meaning. Sometimes, the informants (one or both) do not accept reciprocals registered in the dictionaries or they recommend adding the reciprocal pronoun. An example can be the form *axt-əs-t-əlar* ‘[they] remember/miss each other’ where the reciprocal pronoun *beje-beje-leri-n* ‘each other’ should be added, in the opinion of an informant (see also 5.4). The form *saan-s-al-lar* ‘they threaten each other’ requires the dative form *beje-beje-leri-ger*, in the opinion of the same informant. Sometimes, the informants’ opinions do not coincide.

Due to their lexical meaning, some of the reciprocals can be used only in the negative form or with a specifier; thus (123b) sounds strange though acceptable if we add *xardarəta* ‘by turns’ (the sense is ‘They overcome one another by turns’); in the perfective aspect the sentence without negation is ungrammatical; e.g.:

- (123) a. *Kiniler beje-beje-leri-n kəaj-sə-bat-tar.* (S. 203)
 they each.other-their-ACC overcome-REC-NEG.PRES-3PL
 ‘They cannot overcome one another.’

- b. [?]*Kiniler beje-beje-leri-n kəaj-sə-lar.*
 ‘They are overcoming each other.’
- c. **Kiniler beje-beje-leri-n kəaj-s-əən kebis-t-iler*
 they each.other-their-ACC overcome-REC-CONV AUX-PAST-3PL
 ‘They overcame each other.’

Compare, however, paragraph 7) in 10.2.

8. Expression of reciprocal arguments

8.1 Simple reciprocal constructions

In this type of constructions, both reciprocal arguments are in subject position, which requires a predicate in the plural. Their expression is no different from that of plural subjects in non-reciprocal constructions. There are two subtypes of the syntactic subject: a) homogeneous subject, expressed either by a plural nominal (e.g. (122d)) or by a collective noun like *kergen* ‘family’, *d’on* ‘people’, etc. (124); b) heterogeneous subject, covering such means of expression as i) two nominals conjoined by the numeral *ikki* ‘two’ (for two participants only) which as a rule occurs twice, after each of the nominals (125a); ii) two nominals conjoined by the conjunction *uonna* ‘with’ (125b); iii) two nominals conjoined by the coordinative postposition *kətta* ‘with’ placed after the second nominal in the accusative form (125c); iv) two nominals conjoined by the comitative case marker on the second nominal or on both (125d); v) the first component containing a possessive suffix in attributive position (*oyonn’or-doox emeexsin* ‘an old man and woman’, lit. ‘an old woman possessing an old man’). In all these cases the verb agrees with the subject group in the plural number.

- (124) *D’on / d’on-nor beje-beje-leri-n ölör-üh-ül-ler.*
 people people-PL each.other-their-ACC kill-REC-PRES-PL
 ‘People kill each other.’
- (125) a. *Kini [ikki] aya-ta ikki sura-h-al-lar.* ‘He and his father ask each other.’
 b. *Kini uonna aya-ta sura-h-al-lar* (same)
 c. *Kini aya-tə-n kətta sura-h-al-lar* (same; lit. ‘He with his father ask each other.’)
 d. *Kini aya-tə-nəən sura-h-al-lar* (same; lit. ‘He father-his-with ask each other.’)

8.2 Discontinuous reciprocal constructions

It should be pointed out at once that verbs with *beje-beje-leri-n* cannot be used in the discontinuous construction, which is to say we shall discuss here only suffixed reciprocals, i.e. the possibility of their use with a singular subject. In discontinuous constructions, one of the arguments is the subject and the other is an object. This object may be marked either by the postposition *kətta* ‘with’ or by the comitative case form, i.e. it is homonymous with the second part of a heterogeneous subject in (125c–d). Schematically, this homonymy looks as follows: Sb₁ + Sb₂ and Sb₁ + Ob₂; cf.:

- (126) a. *Kini aya-tə-n kəttə kuust-uh-a tiis-t-üler.*
 he father-his-ACC with hug-REC-CONV AUX-PAST-3PL
 ‘He and his father hugged each other quickly.’
- b. *Kini aya-tə-n kəttə kuust-uh-a tiis-t-e.* (Kh.1. 36)
 he father-his-ACC with hug-REC-CONV AUX-PAST-3SG
 ‘He and his father hugged each other quickly.’
 lit. ‘He quickly hugged each other with his father.’

This homonymy is due to the sentence-final position of the verb: it prevents placing a comitative phrase after the predicate, which would unambiguously point to its object status. However, an object does occur in the final position, though rarely, for emphasis, etc.; thus in the following example the comitative object is in post-verbal position:

- (127) *Min bil-si-bit-im onnuk soru kəttə.* (B. 393)
 I know-REC-PERF-1SG misfortune with
 ‘I met (lit. ‘got acquainted’) with misfortune.’

If the first nominal preceding a comitative phrase is singular and the predicate agrees with it in number the construction is unambiguously discontinuous (because “the subject and predicate are always linked by agreement in Yakut” (Ubrjatova 1962: 103)). Constructions of this type have the function, among others, of topicalizing the first nominal (see (126b)).

It should be borne in mind that a transformation of the (126a) → (126b) type may be complicated by the fact that with a singular subject a verb with the suffix *-s/-h* may have a sociative or comitative or assistive meaning; in other words, this may result in the loss of the reciprocal meaning or at least the reciprocal reading may become a less preferable one.

Let us consider instances with the first nominal in the plural number. In this case the predicate is necessarily plural, too. If the first nominal is the 1.PL pronoun *bihigi* ‘we’ the second nominal can be only the 2nd or 3rd person. If the first nominal is the 2.PL pronoun *ihigi* ‘you’ the second may be either the 1st or the 3rd person. In these cases we obtain a discontinuous construction, because the verb agrees with the first nominal; cf.:

- (128) *Bihigi elbex saxa-nə gəttə kör-sü-büp-püt.* (B. 393)
 we many Yakut-ACC with see-REC-PERF-1PL
 ‘We met/collided with (lit. ‘saw each other’) many Yakuts.’

If the first nominal is the 3PL pronoun *kiniler* ‘they’ (or a plural noun) the second nominal can be any of the three persons. As a result, if the second nominal is a 3rd person pronoun or a noun it is practically impossible to distinguish between a simple and a discontinuous reciprocal construction as they are formally homonymous. The syntactic difference between (126a) and (126b) is neutralized if the subject is plural, because the predicate is also plural and therefore it is not clear whether it agrees with the first nominal alone (which would make it a discontinuous construction) or with both arguments (which would make it a simple construction):

- (129) *Kiniler aya-larə-n kəttə kuust-uh-a tiis-t-üler.*
 they father-their-ACC with hug-REC-CONV AUX-PAST-3PL

- i. ‘They and their father quickly hugged each other.’ (simple)
 ii. (same) lit. ‘They quickly hugged each other with their father.’ (discontinuous)

As a rule, such constructions are interpreted as simple.

And now, let us consider sentences with the first nominal in the singular number. There seem to be certain restrictions imposed by combinations of personal pronouns in both positions. Let us discuss combinations of the 1SG, 2SG and 3SG pronouns in the first position with the 3SG pronoun (or a noun) in the comitative phrase. The following regularity, which is not quite clear, can be observed: if the first nominal is the 1SG pronoun *min* ‘I’ or the 3SG pronoun *kini* ‘s/he’ the predicate may be either in the singular or in the plural, the constructions being discontinuous or simple respectively (see (130a, b)), but if the subject is the 2SG pronoun *en* ‘thou’ the predicate can assume the singular form only, which makes it a discontinuous construction (see (130c, d)).

- (130) a. *Min kini-ni katta ann'-əh-a-bən.*
 I he-ACC with push-REC-PRES-1SG
 ‘He and I push each other.’
 b. *Min kini-ni katta ann'-əh-a-bət.*
 I he-ACC with push-REC-PRES-1PL
 ‘He and I push each other.’
 c. *En kini-ni katta ann'-əh-a-γən.*
 you.SG he-ACC with push-REC-PRES-2SG
 ‘You and he push each other.’
 d. **En kini-ni katta ann'-əh-a-γət.*
 you.SG he-ACC with push-REC-PRES-2PL
 ‘You and he push each other.’
 e. *Kini aya-tən katta ann'-əh-ar.*
 he father-his with push-REC-PRES.3SG
 ‘He and his father push (lit. ‘pushes’) each other.’
 f. *Kini aya-tən katta ann'-əh-al-lar.*
 he father-his with push-REC-PRES-3PL
 ‘He and his father push each other.’

With regard to (130d), it should be noted that the predicate is plural if the subject is expressed by a form for two persons only, like *en bih-ikki* ‘you and I’ (lit. ‘thou we-two’) and *kini / aya-m bih-ikki* ‘s/he / my father and I’ (lit. ‘s/he/my father we-two’); cf.:

- g. *En bih-ikki ann'-əh-a-bət.*
 you I-two push-REC-PRES-1PL
 ‘You and I push each other.’

In most of the sentences of these types in the dictionaries and literature, agreement in the singular is observed, which makes them discontinuous constructions. Here are examples for “canonical”, “indirect” and “possessive” reciprocals respectively:

- (131) a. *Kini... ayabəət-ə katta tərət-a tət-s-pət-a.* (Kh.1. 36)
 he priest-ACC with tear-CONV tear-REC-NR.PAST-3SG
 lit. ‘He scratched each other with the priest.’ (see also (126b))

- b. *En on-u katta təl ber-si-bit-iŋ.* (P. 440)
 you.SG s/he-ACC with word give-REC-NR.PAST-2SG
 lit. 'You gave word (=made promise) to each other with him.'
- c. [*Kini*] *Edlin-i katta ilii tut-us-put-a.* (Kh.1. 36)
 he E.-ACC with hand hold-REC-NR.PAST-3SG
 'He exchanged handshakes with Edlin.'

In the examples of discontinuous constructions at our disposal, reciprocals with a greater or lesser degree lexicalization are prevalent. But this issue requires further study. Thus, it is not clear why the reciprocal *axt-əs-* 'to remember/miss each other' cannot be used (according to one of our informants) in a discontinuous construction, while *kütüre-s-* 'to suspect each other' allows such usage.

The tendencies in agreement in constructions with comitative phrases are not, it seems, a specific feature of reciprocal verbs. Analogous tendencies are also observed in constructions with non-reciprocals, i.e. in constructions of type (164c–d). But the following example from specialist literature, unlike (130d), is accepted by the informants without hesitation (if we substitute the phrase with *katta* 'with' for *Ivan-nəən* the sentence will retain the agreement scheme).

- (132) *En Ivan-nəən baləkt-əax-xət.* (Kh.3. 176)
 you.SG I.-COM fish-FUT-2PL
 'You and Ivan will go fishing.' (lit. 'You with Ivan will fish.')

8.2.1 *The second reciprocal argument in direct object position*

Two reciprocals of this type have been registered so far, both of them lexicalized. But their object can also be of the regular type (cf. (133c) and (133d)).

- (133) a. *Kini bu kihi-ni bil-bet [ete].*
 he this man-ACC know-NEG AUX.PAST
 'He did not know this man.'
- b. *Kiniler bil-si-bet eti-ler.*
 they know-REC-NEG AUX.PAST-3PL
 'They did not know each other.'
- c. *Kini bu kihi-ni bil-si-bet ete.*
 he this man-ACC know-REC-NEG AUX.PAST
 (same meaning); lit. 'He this man did not know each other.'
- d. *Saŋa ülehit-i katta bil-is-t-im.* (S. 70)
 new worker-ACC with know-REC-PAST-1SG
 'I got acquainted with the new colleague.'

Sentence (134) contains the reciprocal verb *kör-üs-* (← *kör-* 'to look, to see') registered in the Russian-Yakut dictionary as the only equivalent of the Russian verb *vstretit'* 'to meet':

- (134) *Min uulussa-ya biler kihi-bi-n kör-üs-t-üm.* (A. 85)
 I street-DAT familiar man-my-ACC know-REC-PAST-1SG
 'I met an acquaintance in the street.'

8.2.2 *Non-reversible discontinuous constructions*

These are constructions that cannot be transformed into simple reciprocal constructions. This may involve a shift in meaning or metaphoric use, which allows the speakers to use in comitative object position entities that differ from the subject referent semantically; cf. (127) and the following:

- (135) a. *Bəar kuus-t-an tur-an, ohoy-un katta xumuru-s-t-a.* (Kh.1. 40)
 breast hug-REFL-CONV AUX-CONV stove-ACC with scold-REC-PAST-3SG
 ‘Standing with her arms crossed on her breast (lit. ‘hugging her breast’), she was reproaching her stove.’ (on *kuus-t-an* see (24b) and (24c))
- b. **Kini ohoy-un katta xumuru-s-t-ular.*
 s/he stove-ACC with scold-REC-PAST-3PL
 ‘She and the stove reproached each other.’

9. Meanings immediately related to reciprocal: Sociative, comitative, assistive

9.1 Introductory

The four meanings listed in the heading are closely related semantically: *all of them presuppose at least two participants of the same situation acting together*. It is not accidental that they may be expressed by the same form (cf. (1)). It is tempting to regard them as realizations of one and the same meaning dependent on contextual factors in the broad sense, including the lexical meaning of the underlying verbs, the type of construction, pragmatic factors, etc. But it is necessary to distinguish between these meanings one way or another because they are attested to a different degree across the Turkic languages, including possible absence of some of them in a particular language: compare the weak development of the competitive meaning in Yakut (see 7) in 10.2) and its extreme productivity in Karachay, very high productivity of the sociative meaning in Yakut and its next to total absence in modern Kirghiz, extreme productivity of the assistive meaning in Yakut, Tatar and some other languages and its nearly absolute absence in Azerbaijani and Turkish, etc. (see, for instance, Sevortjan 1962:532, 539). Therefore it is reasonable and convenient to regard them as distinct meanings, whatever our attitude to the possibility of their interpretation as manifestations of one general meaning. It is noteworthy that the reciprocal meaning proper is attested in all of the Turkic languages, though with a varying degree of productivity.

The relationship between the four meanings can be shown in the following way:

- | | | |
|-------|---------------|------------|
| (136) | a. | b. |
| | 1. reciprocal | assistive |
| | 2. sociative | comitative |

1. In column (a), the meanings (reciprocal and sociative) obligatorily require a plural subject (discontinuous reciprocal constructions, which allow a singular subject, are derivative relative to simple reciprocal constructions).

2. In column (b), the two meanings (assistive and comitative), contrary to those in column (a), can be realized with a singular subject.

3. In column (b), realization of both meanings involves valency increase by one. The sociative meaning (2a) involves an increase of the number of participants by at least one.

4. In column (a), the reciprocal meaning, with the exception of ‘possessive’ reciprocals, involves valency decrease, and the sociative meaning retains the valency of the underlying form.

5. In line 1, the meanings (reciprocal and assistive) involve a more significant shift in the lexical meaning of a verb than those (i.e. sociative and comitative) in line 2.

6. In column (a), the subject referents perform identical actions, while in the case of the assistive meaning (1b) the dative object referent is the main “performer” (though it may be not mentioned or it may not take part in the action; cf. (171) and 9.2.4). In the case of the comitative meaning, on the contrary, the subject referent is the main “performer”.

9.2 Subject-oriented constructions

9.2.1 *The sociative meaning*

Judging by the data registered in Slepcev (1972) (and checked with the informants), the number of verb forms in *-s/-h* which may render the sociative meaning is at least twice as large as that of forms that can express the reciprocal meaning (approximately 600 sociatives vs. 300 reciprocals). Needless to say, this involves a significant overlapping of meanings in the same forms rather than in different sets of verbs. Most of the verb bases whose reciprocal form can acquire the sociative meaning (about 60 per cent of the relevant forms) denote everyday activities of humans, i.e. controlled actions (about 90 per cent of them are transitives).

The sociative meaning can be emphasized (or expressed only) by the adverb *biirge* ‘together’ or by the postpositional reciprocal pronoun *beje-beje-lerin katta* ‘with each other’.

9.2.1.1 *Sociatives derived from one-place intransitives.* These are verbs denoting motion of animate subjects, emotions, sounds, etc.; e.g.:

(137) <i>kel-is-</i>	‘to come together’ (= simultaneously)
<i>köt-üs-</i>	‘to fly together’
<i>sət-əs-</i>	‘to lie down together’
<i>taxs-əs-</i>	‘to go out together’
<i>xaal-əs-</i>	‘to stay/remain together’
<i>xon-us-</i>	‘to spend a night together’, etc.

The number of sociatives with inanimate subjects is very limited and includes, for instance, verbs denoting burning, flashing, glittering, sounding and the like: these processes involve at least a degree of activity on the part of the subject referents perceived visually; cf.:

(138) <i>d’irimne-s-</i>	‘to glitter/flash/blink together (of several objects)’
<i>kilengne-s-</i>	‘to glitter together (of several objects)’

- külimne-s-* 'to flash/flare up/sparkle together (of several objects)'
kalamna-s- 'to burn/twinkle together (of several objects)', etc.

In (138) and in the other lists of verbs, the sociative meaning is more or less adequately rendered by the translations, but in sentential examples selected from texts the translations do not always reflect this meaning, which may be due to subtle semantic deviations from the meaning roughly rendered by the adverb 'together'. The following examples illustrate this type of sociative forms:

- (139) *Uot-tar suburuŋna-s-t-alar.*
 fire-PL flash-REC-PAST-3PL
 'Sparks began to flash/glitter.'
- (140) *Təhənča-nan hojuu bugul-lar bačəgəra-h-al-lar.*
 thousand-INST thick haystack-PL stand-REC-PRES-3PL
 'Thousands of haystacks stand here and there.'
- (141) *Kölöhən-ner-e čallərya-ččə tammala-s-t-alar.*
 sweat-PL-his drop-CONV drop-REC-PAST-3PL
 'Drops of his sweat fell down.'
- (142) *Üöhe sulus-tar d'irimme-h-el-ler.*
 above star-PL glitter-REC-PRES-3PL
 'Stars are twinkling above.'
- (143) *Töbö-tü-ger bəstala suox čuraan-nar ləŋnkəna-h-al-lar.*
 head-his-DAT continuously little.bell-PL ring-REC-PRES-3PL
 'Little bells were continuously ringing in his ears.'
- (144) *D'on küil-en n'irg-is-t-iler.*
 people laugh-CONV ring,OUT-REC-PAST-3PL
 'The people burst into loud laughter.'
 (these six examples are borrowed from Kh.1. 270).

In most of the examples of our sample the sociative subject has a plural referent, but sociatives can also describe situations with two subject referents; e.g.:

- (144') *Čoxu ikki baya ikki sir-ten ikki-te-üs-te örüte*
 snail and frog and ground-ABL two-times-three-times upwards
tej-iekkele-h-e tüs-t-üler. (P. 2118)
 rise-ITER-REC-CONV AUX-PAST-3PL
 'The snail and the frog raised themselves together two or three times.'

Sociatives are especially frequent from onomatopoeic verbs (typically used in iterative contexts) and expressive verbs (often with an iterative suffix; cf. *-ŋŋö-*, *-əala-* and *-uoxxala-* below; see Kharitonov 1963:28). Sociatives are easily formed from verbs denoting multi-directional, disorderly actions. Compare:

- (145) *ajbarda-s-* 'to rush from side to side together, fuss together'
bəg-əala-s- 'to look out/show oneself out together repeatedly'
d'abd'alə-s- 'to do sth together in a rush, fussily, with energy'
oj-uoxxala-s- 'to jump up together repeatedly'
tohugura-s- 'to produce together frequent slight knocks'

<i>töñkö-ññö-s-</i>	‘to bend together repeatedly’
<i>xaaxəna-s-</i>	‘to creak together raucously and slowly.’

The sociative meaning differs from simple plurality in that the subject referents are presented as participants of the same situation connected in one way or another and acting at the same time and place or iteratively within the same situation. The sociative form of some verbs implies a kind of coordinated action. Sometimes, a common cause of several actions is implied. A sociative meaning may also acquire additional emotive or intensive overtones (see Kharitonov 1963: 22–5).⁵ Compare:

- (146) a. *Turaax-tar daayənə-l-lar* ‘Crows are crowing.’
 b. *Turaax-tar daayəna-h-al-lar* ‘Crows are crowing (all of them together, simultaneously).’
- (147) a. *Oyo-lor ətə-l-lar* ‘The children are crying.’
 b. *Oyo-lor əta-h-al-lar* ‘The children are crying (all of them together, as if vying with each other, etc.).’

Compare also:

- (148) *Ojuur-ga čəčəax-tar čəbəgəra-h-al-lar.*
 ‘In the woods, birds are chirping (all of them together, at high tempo, etc.).’
- (149) *Suol-ga d’on-nor eleñne-h-el-ler.*
 ‘On the road, people are rushing back and forth (rapidly, one after another).’
- (150) *Talax-tar bəs-tarə-ttan ənax-tar mülüküččü-h-en taxs-an*
 willow-PL border-their-ABL cow-PL dash-REC-CONV go.out-CONV
kel-l-iler. (Kh.1. 29)
 come-PAST-3PL
 ‘Suddenly cows came out rushing from the willow-wood.’

In constructions with verbs of uttering sounds, a kind of semantic neutralization between reciprocal and sociative interpretation can be perceived if a situation can be interpreted as a kind of exchange; cf. 4.1.1.6.

Sociative forms in *-s/-h* are not derived from verbs denoting “passive” properties, interior processes or states (see Kharitonov 1963: 21), such as the following:

- (151) a. *sələj-* ‘to grow tired’ c. *üün-* ‘to grow’
 b. *toŋ-* ‘to be cold’ d. *uoj-* ‘to grow fat’, etc.

5. The following description of the Turkish sociatives seems to be applicable to the Yakut sociatives of this type: “A second readily definable use of the reciprocal is to form verbs in which the (plural) subjects act separately but with a common goal or purpose – that is, in which a number of separate actions are in some way related. If the subjects act jointly or together, the action is not reciprocal. For example, *Kuşlar uçtular* means ‘The birds flew’ and implies that they all flew together in a flock; thus there was, so to speak, only a single action of flying. But *Kuşlar uçuştular* implies that although each bird flew in a different direction, the actions were related: either they flew toward or away from a common point, or flew for a common reason, or simply flew simultaneously” (Underhill 1979: 368).

9.2.1.2 Sociatives derived from two-place transitives and intransitives. Unlike the sociatives from one-place intransitives which do not as a rule allow parallel reciprocal interpretation, those derived from two-place verbs may in principle, though not always, allow dual interpretation. They can be divided into three main groups with respect to their relatedness to the reciprocal meaning: (a) derivatives that can assume the reciprocal as well as the sociative meaning; (b) verbs that can assume the sociative meaning only; (c) verbs that assume the reciprocal meaning only. Let us consider these three groups.

A. Verbs assuming both the reciprocal and the sociative meaning; cf.:

- (152) a. *Kiniler is taŋah-ə məɬala-s-t-əlar.*
 they interior clothes-ACC soap-REC-PAST-3PL
 ‘They soaped the underwear together.’
 b. *Kiniler məɬala-s-t-əlar.*
 ‘They soaped each other.’

The following verbs with the reciprocal suffix derived from transitives belong here:

- (153) *ann’-əs-* i. ‘to push sb/sth together’ ii. ‘to push each other’
ist-is- i. ‘to listen to sb together’ ii. ‘to listen to each other’
kör-süs- i. ‘to look at sb together’ ii. ‘to look at each other’
kərba-s- i. ‘to beat sb together’ ii. ‘to beat each other’, etc.

The following derivatives are based on two-place intransitives:

- (154) *ihür-is-* i. ‘to whistle to sb together’ ii. ‘to whistle to each other’
səld’-əs- i. ‘to call on sb together’ ii. ‘to call on each other’
tüh-üs- i. ‘to rush at/attack sb together’ ii. ‘to rush at/attack each other’, etc.

The meaning, sociative or reciprocal, is determined by the construction: in the case of the sociative meaning the structure of the underlying construction remains unchanged, the object being retained, while in the case of reciprocal meaning the object is omitted as it is co-referent with the subject (though in the case of ellipsis the interpretation may present difficulties).

B. Verbs that can assume the sociative meaning only: they cannot assume the reciprocal meaning because of the inanimate object, which is retained in sociatives (a special problem is the possibility of a benefactive dative and its reciprocalization; cf. (122)):

- (155) a. *Kiniler uulussa-nə muosta-s-t-əlar.*
 they street-ACC pave-REC-PAST-3PL
 ‘They paved the street together.’
 b. *Kiniler muosta-s-t-əlar*
 i. *‘They paved each other’, but: ii. ‘They did the paving together.’

Verbs of this type:

- (156) a. *d’üülle-s-* ‘to discuss (a project, etc.) together’
 b. *mehij-is-* ‘to knead (dough) together’
 c. *naarda-s-* ‘to stack (in a certain order, books, etc.) together’
 d. *naborda-s-* ‘to set up/compose (a book, etc.) together’
 e. *narəla-s-* ‘to trim up (sth) together’

- f. *nastaabəla-s-* 'to brew (tea, etc.) together'
 g. *nuormala-s-* 'to normalize, standardize together', etc.

This derivational pattern is highly productive, as is testified by the sociative use of many latest borrowings from Russian (see (156b, c, e, g)).

C. *Verbs that can assume the reciprocal meaning only.* Here belong relatively few verbs which take an animate object whose form in *-s/-h* does not assume the sociative meaning due to their lexical meaning or for some pragmatic reasons. According to Kharitonov (1963: 33), the following verb forms in *-s/-h* are of this type:

- (157) *axt-əs-* 'to miss each other'
bil-is- 'to get acquainted with/know each other'
kig-is- 'to instigate each other'
küniüle-s- 'to be jealous of each other'
kəaj-əs- 'to win a victory over/overcome each other'
süij-üs- 'to win from each other'
tapta-s- 'to love each other'
ubura-s- 'to kiss each other'
umn-us- 'to forget each other'
üöx-süs- 'to curse each other, to quarrel.'

9.2.1.3 *Sociatives derived from three-place transitives.* There are probably no derivatives from this class of transitives that are used as sociatives only. In other words, two subtypes can be expected here: (a) verbs in *-s/-h* with two meanings, both sociative and reciprocal (cf. (1)), and (b) verbs acquiring the reciprocal meaning only. This issue requires further study.

9.2.2 *The comitative meaning*

Unlike verbs with the sociative meaning, those with the comitative meaning can be used with a singular subject. The co-participant can be expressed in two ways: either by a noun phrase with the postposition *kətta* 'with' or by a nominal in the comitative case; or it may be omitted though implied by the verb form. The possibility of transformation of sociative sentences into comitative divides the verbs considered in 9.2.1 into two groups: verbs that allow it without restrictions and verbs that do not allow it or produce unnatural sentences.

A kind of parallelism can be observed in the relations between sociative and comitative, on the one hand, and between simple and discontinuous reciprocal constructions, on the other. It is possible that the existence of comitative constructions furthered the development of discontinuous constructions. In sociative and simple reciprocal constructions both participants are presented as pragmatically equal while in comitative and discontinuous reciprocal constructions the subject referent (to be more precise, the first reciprocal argument) is foregrounded. The difference lies in the fact that the object referent of a discontinuous reciprocal construction cannot as a rule be omitted as it is implied by the lexical meaning of the verb, while the object referent of a comitative construction is not infrequently absent and the reciprocal suffix indicates only that the subject referent does not act alone and there is a co-participant in the situation named.

9.2.2.1 Comitatives derived from one-place intransitives. Sociatives from certain groups of intransitives, especially those implying a non-human agent, are never found in comitative constructions. We have in mind intransitives in (139)–(144) and (146), (148), (150). Other sociative constructions are easily transformable into comitative ones.

This transformation triggers predicate agreement with the first nominal only, therefore (158a) where the first nominal is singular and the predicate plural, is ungrammatical. Note that formally analogous constructions with a reciprocal verb allow plural agreement with the subject containing a comitative noun group (see (126a)).

There are a few intransitives that are used in comitative but not in sociative constructions (see (158a)). If the predicate agrees with the plural subject (see (158b)), the expected sociative meaning is ungrammatical (cf. (ii) in (158b)) and the sentence retains its comitative interpretation with an implied participant of the situation (see (i) in (158b)).

- (158) a. **Kini aya-tə-n kəttə bar-s-al-lar*
 he father-his-ACC with go-REC-PRES-3PL
 ‘He goes away with his father.’
 b. *Kini ikki aya-ta bar-s-al-lar.*
 he and father-his go-REC-PRES-3PL
 i. ‘He and his father go away together with someone.’
 ii. *‘He and his father go away together.’

Comitative verbs can express actions that are not simultaneous with but follow another action (in the following sentence comitativity is emphasized by the adverb *biirge* ‘together’):

- (159) *Kennitten aya-m biirge taxs-əs-t-a.* (Kh.1. 25)
 behind[him] father-my together go.OUT-REC-PAST-3SG
 ‘Immediately after him my father went out.’

In the following examples the second co-participant is not named (as a translation equivalent, the adverb ‘too’ can be used here in certain contexts; see also (165b)):

- (160) a. *Bar-s-aarə gən-a-bən.*
 go-REC-CONV AUX-PRES-1SG
 ‘I want to go together/too’, ‘I want to join/accompany.’
 b. *Biirge ülele-h-er.*
 together work-REC-PRES.3SG
 ‘He works together/too.’

Comitativity can also be expressed by lexical means alone, viz. by the adverb *biirge* ‘together’, or by a noun phrase with the same postposition *kəttə* ‘with’. The difference between this and a construction with a comitative verb is very subtle. In the case of a comitative verb form the co-participants are more closely related within the situation described, though the first participant remains pragmatically more prominent than the second:

- (161) a. [*Min*] *ehigi-ni kəttə üör-e-bin.*
 I you.PL-ACC with rejoice-PRES-1SG
 ‘I rejoice together with you’, ‘I share your joy.’

- b. [Min] ehigi-ni *kætta* üör-s-e-bin.
(same translation).
- (162) a. Min ehigi-ni *kætta* bar-a-bən.
I you.PL-ACC with go-PRES-1SG
'I am going away with you.'
- b. Min ehigi-ni *kætta* bar-s-a-bən.
(same translation).

9.2.2.2 *Comitatives derived from two-place transitives and intransitives.* Comitatives can be derived from two-place transitives, and not from two-place intransitives (see the lists under (60), (61), (62)): as a rule, a comitative object with the postposition *kætta* 'with' cannot be added in a sentence which already contains an oblique object with the same postposition, viz. in sentences with meanings like 'He is whispering with her', 'He is talking with her', etc. Its addition would yield an unnatural sentence (see also 9.2.3.2).

- (163) a. En bihigi-ni *kætta* mas-ta *kerd-is-Ø!*
you.SG we-ACC with fire.WOOD-PRTV cut-REC-IMP.2SG.
'Cut firewood together with us!'
- b. Kini ije-tin *kætta* ənax əa-s-t-a.
s/he mother-her.ACC with cow milk-REC-PAST-3SG
lit. 'She with her mother milked cows.'

The following examples illustrate the four main ways of expressing comitativity: two of the examples, viz. (164a) and (164b), contain the reciprocal suffix and the other two contain only the lexical means which may co-occur with the grammatical expression; all of the sentences are roughly synonymous:

- (164) a. Kini miig-in *kætta* [biirge] ot tiej-is-t-e.
he I-ACC with together hay cart-REC-PAST-3SG
'He and I (lit. 'He with me') carted hay [together].'
- b. Kini miigin-niin [biirge] ot tiej-is-t-e.
he I-COM together hay cart-REC-PAST-3SG
(same translation)
- c. Kini miig-in *kætta* [biirge] ot tiej-d-e.
he I-ACC with together hay cart-PAST-3SG
(same translation)
- d. Kini miigin-niin [biirge] ot tiej-d-e.
(same translation).

If the first nominal is plural, which involves plural marking on the predicate, the comitative phrase allows two interpretations, as part of the subject and as a comitative object:

- e. Kiniler miig-in *kætta* ot tiej-d-iler.
they I-ACC with hay cart-PAST-3PL
i. 'They and I carted hay.'
ii. 'They carted hay with me.'

In the following example the second co-participant is not named, the implication being that the subject referent was one of a group of hunters:

- (165) a. [Min] *tajay-ə bulta-s-t-əm.*
 I elk-ACC hunt-REC-PAST-1SG
 ‘I took part in hunting down elk.’
 b. *Et-te kərba-s-Ø!*
 meat-PRTV chop-REC-IMP.2SG
 ‘Chop some meat, too!’ (in a situation when someone is already chopping the meat).

9.2.3 The assistive meaning

As mentioned above, a comitative or assistive interpretation of a reciprocal form is determined by the way the second co-participant is expressed: in the case of its comitative marking (the postposition *katta* ‘with’ or the comitative case ending *-læn*, etc.) the reading is as a rule comitative, and if the marking is dative it is usually assistive. If the expression of this co-participant is omitted the interpretation is determined pragmatically and by context. Thus in the case of motion verbs the reading is likely to be comitative; e.g.:

- (166) a. *Kini bar-s-ar* i. ‘He is going with somebody.’
 ii. *‘He is helping somebody to go.’
 b. *Kini aha-s-ta* i. ‘He has eaten with somebody.’ (= in company)
 ii. *‘He has helped somebody to eat.’
 c. *Min üör-s-e-bin* i. ‘I rejoice [together] with sb’; ‘I also rejoice.’
 ii. *‘I help sb to rejoice.’

It has been pointed out above that the lexical range of comitatives is somewhat narrower than that of sociatives, partly due to the fact that sociatives from certain intransitives do not have corresponding comitatives. If we take into account (166) and similar data we can assume that the lexical range of assistives is somewhat narrower than that of comitatives.

The lexical range of sociatives and reciprocals most likely overlaps. The following acceptability hierarchy in the lexical range of reciprocals, sociatives, comitatives and assistives can be tentatively proposed:

reciprocal \cap sociative \supset comitative \supset assistive.

9.2.3.1 Assistives derived from one-place intransitives. The number of assistives of this type seems to be rather limited and covers mainly verbs denoting various everyday activities; cf.:

- (167) *Aya-m miexe üleli-h-ir.*
 father-my I.DAT work-REC-PRES.3SG
 ‘Father helps me to work.’

9.2.3.2 Assistives derived from two-place transitives and intransitives. Assistives derived from two-place transitives comprise the main group. There are no assistives from two-place intransitives, which is accounted for by the lexical meaning of the verbs: assisting in such actions and states as whispering, flattering, being disappointed, etc. (see (60), (61), etc.) is pragmatically unlikely (cf. 9.2.2.2).

- (168) *bəh-əs-* ‘to help to cut’
kötöy-üs- ‘to help to lift/raise’

- | | | |
|----------|---------------------------------------|---|
| | <i>kərg-əs-</i> | ‘to help to chop/hack’ |
| | <i>suuj-us-</i> | ‘to help to wash’ |
| | <i>tut-us-</i> | ‘to help to catch’, ‘to help to build’; e.g.: |
| (169) a. | <i>At tut-us-t-a.</i> | ‘[He] helped to catch the horse.’ |
| b. | <i>Aya-m miexe otuu tut-us-t-a.</i> | ‘Father helped me to build a hut.’ |
| c. | <i>Bihiexe mas-ta kerd-is!</i> | ‘Help us to chop the firewood.’ |
| d. | <i>Iti d’oh-ŋo ot munn’-uh-a-bən.</i> | ‘[I] help these people to rake hay.’ |
| e. | <i>Ije-tiger ənax əa-s-t-a.</i> | ‘[She] helped her mother to milk cows.’ |

The following sentence contains no expression of the second co-participant.

- (170) *Min d’ie-ber uu bas-əh-a-bən.*
 I home-DAT.POSS water bring-REC-PRES-1SG
 ‘At home, I help to bring water.’

The reciprocal form is used to encode the assistive meaning even when the subject referent performs the action alone (171). If the reciprocal form of a given verb customarily has a comitative meaning the lexical verb meaning ‘to help’ is used instead of the reciprocal suffix (172):

- (171) *Min kəaj-an xaam-bap-pən ol ihin da əal-əm mie-xe*
 I overcome-CONV walk-NEG.PRES-1SG that because.of neighbour-my.NOM I-DAT
mas kerd-is-t-e.
 firewood chop-REC-PAST-3SG
 ‘I could not walk, therefore my neighbour helped me to chop the firewood.’
- (172) a. *Kini bar-əs-t-a.*
 he walk-REC-PAST-3SG
 ‘He walked *with* somebody.’
- b. **Kini miexe bar-əs-t-a.*
 (intended meaning:) ‘He helped me to walk.’
- c. *Kini miexe bar-ar-əgar kömölös-t-ö.*
 he I.DAT walk-PART-DAT help-PAST-3SG
 ‘He helped me to walk.’

9.2.4 The use with negation

When used with negation, verbs with a comitative meaning show that the subject referent either does not perform the action at all or performs it alone. The action of the co-agent is not negated. Verbs with a negated assistive meaning denote that the co-agent performs the action alone:

- (173) a. *Kini biirge ülele-s-pet.*
 he together work-REC-NEG.PRES.3SG
 ‘He does not work together [with anybody].’
- b. *Kini miexe ülele-s-pet.*
 he I.DAT work-REC-NEG.PRES.3SG
 ‘He does not help me to work.’

9.3 Causatives from sociatives, comitatives and assistives

As well as in the other cases, causative constructions can be easily formed from all the semantic types of derivatives with the reciprocal suffix (see (16) and the relevant text, and also 4.2); cf.:

- (174) a. *baləktaa-* 'to fish'
 b. *baləkta-s-* 'to fish together'
 c. *baləkta-h-ən-nar-* 'to make/allow to fish together'.

A causative based on an assistive (cf. (169e)):

- (175) *Aya-m kini-ni ije-ti-ger ənax əa-h-ən-nar-d-a.*
 father-my she-ACC mother-her-DAT COW milk-REC-REFL-CAUS-PAST-3SG
 'My father made her help her mother to milk the cow.'

A causative based on a comitative:

- (176) *Aya-m kini-ni müig-in kəttə bar-əh-ən-nar-d-a.*
 father-my he-ACC I-ACC with go-REC-REFL-CAUS-PAST-3SG
 'My father made him go with me.'

9.4 Deverbal nouns

Nouns are easily formed from all the semantic types of derivative verbs with the reciprocal suffix. (177) contains a deverbal noun with a sociative meaning, and (178) with an assistive meaning (it contains a substantivized participle with the suffix *-er/-ar*, etc.):

- (177) *Kini ənax mayəra-h-əə-tə-n ist-er.*
 he.NOM COW.NOM moo-REC-NR-its-ACC hear-PRES.3SG
 'He hears the mooing of many cows.' (SG of both nouns has collective meaning).
- (178) *Emtieke ot-un tiej-s-er-e, mah-ən erbe-h-er-e muuh-un*
 drugstore hay-ACC cart-REC-PART-his firewood-ACC saw-REC-PART-his ice-ACC
əl-s-ar-a barammat buol-l-a. (Kh.1. 27)
 take-REC-PART-his endless be-PAST-3SG
 'His help in carting hay to the hospital, his help in sawing firewood and his help in bringing ice became endless.'

10. Non-productive meanings of the reciprocal suffix

10.1 Introductory

In the literature on the Turkic languages, it has been noted that the reciprocal markers in these languages are the most polysemous among the voice markers (the other three being passive, reflexive and causative). There is an opinion that this is particularly true of the Yakut language (Kharitonov 1982:268). The four productive meanings covering

hundreds of verbs considered above are supplemented by a number of other meanings less productive but interesting typologically.

It should also be pointed out here that in many verbs the meaning of the reciprocal marker undergoes lexicalization and it cannot be assigned a distinct meaning in some of the derivatives. The meanings listed below are characteristic of small groups of reciprocal forms, sometimes of two or three only (according to our probably incomplete data). Nevertheless, they deserve mention, in particular those cases where a semantic shift is parallel to that in the reciprocal (or reflexive) marker in other Turkic and non-Turkic languages.

Some reciprocal forms may have several meanings; for instance, alongside unproductive meanings they may have the reciprocal proper, or sociative, or comitative meaning. Thus the reciprocal form *ələ-s-* (← *əl-* ‘to take’) acquires at least three meanings: the regular meanings ‘to take/grasp each other’ and ‘to grasp sth together’ and also the two-place intransitive meaning ‘to grasp at/take hold of sth’ which may be tentatively called “contact-locative”.

- (179) *Kini aan tutaayə-ttan əl-əs-t-a.* (Kh.2. 272)
 he door handle-ABL take-REC-PAST-3SG
 ‘He took hold of the door handle.’

10.2 The list of non-productive meanings

Derivation of these meanings involves valency reduction, including object demotion, or valency retention. Here belong the following meanings.

10.2.1 *The anticausative meaning (i.e. the meaning which is a result of the elimination of the causative meaning)*

This group of forms is derived from three-place transitive lexical reciprocals (see 13.3). The derivatives are two-place intransitives.

- (180) *xolboo-* ‘sb joins (sth to/with sth)’ → *xolbo-s-* ‘sth joins to sth.’

The anticausative meaning seems to be more commonly marked by the reflexive suffix which also derives anticausatives from lexical reciprocals, thus competing in this function with the reciprocal marker. The reciprocal suffix may have acquired this function due to a kind of “mutual attraction” of the lexical reciprocal meaning of the underlying verbs and the grammatical reciprocal meaning of the suffix which most commonly appears on “canonical” reciprocals which are intransitive.

10.2.2 *The converse meaning*

Here belong verbs derived from base verbs meaning ‘to sell’, ‘to rent out’, etc. The derivatives denote the actions of the counter-agent implied by the meaning of the base verb, i.e. they have meanings like ‘to buy’, ‘to rent/hire’. The actions they describe seem to be more “active” than those described by the base verbs.

- (181) a. *ajaxtaa-* ‘to give sb to sb who should provide for him/her’
 → *ajaxta-s-* ‘to take sb in order to provide for him/her’ (S. 34)
 b. *atəlaa-* ‘to sell sth to sb’
 → *atəla-s-* ‘to buy sth from sb’
 c. *ettee-* ‘to hire out (a horse, a scythe ...)’
 → *ette-s-* ‘to hire (a horse, etc.)’
 d. *kuortamnaa-* ‘to lease (e.g. lodgings)’
 → *kuortamna-s-* ‘to rent (lodgings, etc.)’
 e. *tüülee-* ‘to lease (meadow-land)’
 → *tüüle-s-* ‘to take (meadow-land) on lease’ (arch.; S. 417).

10.2.3 *The meaning of response action*

These are derivations of the following type:

- (182) a. *ajaataa-* ‘to produce a long drawn-out bellow before a fight’
 → *ajaata-s-* ‘to produce a drawn-out bellow in response to the same kind of bellow’
 (Kh.1. 32)
 b. *maḡəraa-* ‘to moo’ → *maḡəra-s-* ‘to moo in response’ (Kh.1. 32).

10.2.4 *The contact-locative meaning*

This meaning is attested in the derivatives of several verbs of manual physical actions involving a relatively long physical contact in order to keep balance, a posture, or contact between agent and a (fixed) object, etc.:

- (183) a. *əl-* ‘to take’ → *əl-əs-* ‘to take hold of/to grasp’ (see (179))
 b. *tart-* ‘to pull’ → *tard-əs-* ‘to pull oneself up to sth’
 c. *tut-* ‘to hold/grasp’ → *tut-us-* ‘to hold on to sth.’
 (184) a. *Bəa-ttan tut-us-Ø!* (Kh.1. 39)
 rope-ABL hold-REC-IMP.2SG
 ‘Get hold of the rope!’
 b. *Mas-tan tard-əs-Ø!* (Kh.2. 279)
 tree-ABL pull-REC-IMP.2SG
 ‘Pull yourself up to the tree!’

10.2.5 *The absolutive meaning*

In this case the surface object is deleted:

- (185) a. *Miigin meneek üögü-me-Ø!*
 I.ACC for.nothing scold-NEG-IMP-2SG
 ‘Don’t scold me for nothing!’
 b. *Meneek üöx-sü-me-Ø!* (S. 454)
 for.nothing scold-REC-NEG-IMP.2SG
 ‘Don’t swear without reason!’

10.2.6 *The intensive meaning*

This meaning is present in (186b) (see Kharitonov 1963:40). It can also be discerned in the lexicalized form *teb-is-* ‘to trample down/on’ (vt) derived from *tep-* ‘to kick’ (vt) (S. 424; P. 2613), and also in a number of verbs listed in (193).

Most of lexicalized reciprocals are two-place intransitives governing an object with the postposition *katta* ‘with’ or in the comitative case (these verbs are not marked as (vi) in the lists below). A few verbs govern a dative object and some of them are transitive (they are marked as (vt)). Alongside a lexicalized meaning some of the verbs have a standard reciprocal, sociative or assistive meaning (see the meanings ii and iii in (190) for the verb *xap-səs-*).

11.2 *Reciproca tantum*

(189) is a list of verbs whose underlying bases are lost or almost extinct, or semantically not associated with the formally reciprocal counterparts. We list not only verbs whose reciprocal meaning is more or less clear but also verbs which are in a way peripheral to the reciprocal meaning. This list and those in the subsequent subsections have been compiled on the basis of the data from Slepcev (1972) and Pekarskij (1959). It covers half the verbs with (fossilized) *-s/-h* registered in Kharitonov (1963: 120–1).

(189) <i>batəs-</i>	‘to follow’ (vt)
<i>böülüös-</i>	‘to form into a clot, to condense’
<i>iris-/kiris-</i>	‘to couple (of animals); ‘to gather for coupling’
<i>kečes-</i>	‘to persist’ (vt)
<i>killeekele-s-</i>	‘to contradict (about an obstinate person)’ (P. 1088)
<i>meld’es-</i>	‘to deny’ (vt)
<i>sajəs-</i>	‘to want to go together’, ‘to not let go (of children)’ (vt)
<i>seles-</i>	‘to converse with sb (for a long time)’
<i>sərəs-</i>	‘to race with one another’
<i>tigis-</i>	‘to gather (from different directions)’ (coll.)
<i>tubus-</i>	i. ‘to make peace with each other’, ii. ‘to improve’
<i>üles-</i>	‘to settle with sb’, ‘to come to an agreement’
<i>üilles-</i>	‘to share with sb’
<i>xarəs-</i>	‘to butt’, ‘to compete’, ‘to collide’
<i>əbəs-</i>	‘to close up’, ‘to adhere closely to sth.’

11.3 Some types of lexicalization

The groups of verbs are listed below with the aim of giving an idea of the semantic range of lexicalization. Verbs that do not lend themselves to any classification are quoted as a separate group: the function of the suffix *-s/-h* in these verbs is not clear. In the case of polysemous verbs, sometimes only some of the meanings are quoted. Needless to say, the lists of lexicalized reciprocals are not exhaustive.

1. The first group comprises intransitive verbs in *-s/-h* which denote various hostile actions; the underlying verbs denote actions that may be a part (not necessarily hostile) of the latter; the typical lexical meaning of the derivatives is ‘to quarrel’, ‘to fight’:

(190) <i>et-</i> ‘to say, speak’	→	<i>et-is-</i> i. ‘to quarrel’, ii. ‘to speak with each other’
<i>oyus-</i> ‘to beat/hit’	→	<i>oxs-us-</i> i. ‘to fight’, ii. ‘to struggle against sth’

- xap-* i. 'to catch/seize' → *xap-səs-* i. 'to enter into a fight'
 ii. coll. 'to scold/abuse' ii. 'to enter into an argument'
 iii. 'to seize each other'
- kumalaa-* 'to break, rumple' → *kumala-s-* 'to fight' (cf. P. 1212)
kiir- 'to enter' → *kiir-is-* 'to enter into a fight' (Kh.1. 32); etc.

2. The derivatives denote resistance, objecting, defence of someone. The base verbs may render these meanings as well; cf.:

- (191) *bečigennee-* 'to be stubborn, to resist' → *bečigenne-s-* 'to persist (in one's own opinion)'
 (vt) (P. 451)
- d'oryoj-* 'to show courage' → *d'oryo-s-* 'to vie (with)/rival' (P. 835)
- kirietee-* i. 'to cut with a blunt knife' → *kiriete-s-* 'to contradict' (P. 1105)
 ii. 'to reproach'
- kömüskee-* 'to intercede (for)/defend' → *kömüske-s-* 'to intercede (for)/defend.'

3. The derivatives (all of them intransitive) denote coming to an agreement and the like, or they denote actions that lead to coming to an agreement; the underlying verbs are roughly synonymous to the derivatives, or they denote actions that may be a part of the meaning of the derivative:

- (192) *aax-* i. 'to read', ii. 'to count' → *aax-səs-* i. 'to settle accounts with each other'
 iii. 'to regard as' ii. 'to take sb into account'
- ana-* i. 'to appoint', ii. 'to bequeath' → *ana-s-* 'to come to an agreement'
- kepset-* 'to talk/converse' → *kepset-is-* i. 'to enter into a conversation'
 ii. 'to agree (with sb) to do sth'
- kik-* 'to incite, provoke' → *kik-sis-* 'to agree to do sth'
- söbulee-* i. 'to give consent/approve' → *söbule-s-* 'to agree (with sb/sth)'
 ii. 'to agree with sb/sth'
- sübelee-* 'to advise' → *sübele-s-* 'to ask advice of/consult together.'

4. The meaning of this group of derivatives can be roughly defined as an intention to obtain or achieve, to follow or pursue something; the underlying verbs may be synonymous to their derivatives at least in one of the meanings, or the difference in meaning may be so great that the dictionaries register them as unrelated items. Most of the derivatives retain transitivity; two verbs take a dative object. The actions denoted by the derivatives often imply a response action of the object (e.g., imploring presupposes compliance with the wish expressed, etc.).

- (193) *aartaa-* 'to implore, to beg' → *aarta-s-* i. 'to implore', ii. 'apologize' (vt)
- bat-* 'to follow/pursue' (out of use) → *bat-əs-* 'to follow/pursue' (vt)
- d'anəj-* i. 'to pursue (a goal), to strive' → *d'anə-s-* 'to pursue a goal/strive' (vt)
 ii. 'to revenge'
- d'uluj-* i. 'to do sth persistently'
 ii. 'to wish/strive for sth' → *d'ulu-s-* 'to wish/strive for sth' (vi+DAT)
- ekkiret-* 'to follow/pursue' → *ekkiret-is-* 'to follow/pursue' (vt)
- ellee-* 'to pound, to knead', 'to forge' → *elle-s-* i. 'to try to achieve (with difficulty)'
 ii. 'to endure/hold out against' (vt)

<i>iettee-</i>	i. 'to pluck/pick out'		
	ii. 'to force, to implore persistently'	→	<i>iette-s-</i> 'to implore persistently' (vt)
<i>irdee-</i>	i. 'to track/trace (an animal)'	→	<i>irde-s-</i> i. 'to find out (by inquiring)'
	ii. 'to demand (a debt)'		ii. 'to demand (a debt)' (vt)
<i>kete-</i>	i. 'to await/wait for'	→	<i>kete-s-</i> i. 'to await/wait for, lie in wait'
	ii. 'to guard/watch over'		ii. 'to be on the look out for' (vt)
	iii. 'to watch/spy on'		
<i>kördöö-</i>	i. 'to look for', ii. 'to beg, to demand'	→	<i>kördö-s-</i> 'to beg/demand' (vt)
<i>sit-</i>	i. 'to catch up with sb'	→	<i>sit-is-</i> i. 'to achieve (a goal, etc.)'
	ii. 'to achieve (a goal, etc.)'		ii. 'to revenge' (vt)
<i>sojuolaa-</i>	i. 'to look for'; ii. 'to track hunting'	→	<i>sojuola-s-</i> 'to persecute (like a hunted elk)' (P. 2264) (vt)
<i>suraa-</i>	'to inquire'	→	<i>sura-s</i> 'to inquire' (vt)
<i>tiij-</i>	'to reach'	→	<i>tii-s-</i> (disapproval) 'try to achieve/secure' (vi+DAT)
<i>tuluj-</i>	'to endure/suffer'	→	<i>tulu-s-</i> 'to endure/suffer' (vt).

5. The intransitive derivatives denote entering into or having a love affair, etc.:

- (194) *bul-* 'to find' → *bul-us-* i. 'to find each other', 'find sth together'
 ii. 'to enter into a love affair' (P. 546)
- kulaa-* 'to hit/strike violently' → *kula-s-* 'to begin/have a love affair' (P. 1203)
- kuud'uj-* i. 'to lure', ii. 'fall in love' → *kuud'uj-us-* i. 'to lure', ii. 'to have a love affair'
 iii. 'to long (for)' (with)' (P. 1195).

6. Residual verbs with various meanings:

- (195) *bier-* 'to give sth to sb' → *ber-is-* i. 'to share sth with sb'
 ii. 'to give sth to each other' (vt)
- bil-* 'to know, recognize' → *bil-sis-* i. 'to be/get acquainted', 'to know each other'
 ii. 'to call on each other regularly'
 iii. 'to consort with' (P. 471)
- kör-* i. 'to look/see'; ii. 'to look after' → *kör-üs- /kör-süs-* i. 'to see each other'
 iii. 'to suffer (sth)/experience' ii. 'to meet/gather (from different directions)'
 iii. 'to look after (sb) together' (sociative)
 iv. 'to help to look after' (assistive)
 v. 'to suffer/experience together' (sociative)
- oinoo-* 'to play' → *oino-s-* 'to flirt (with a woman)' (P. 1801)
- äl-* 'to take/seize' → *äl-säs-* i. 'to seize each other'
 ii. 'to start (doing sth).'

12. Lexical reciprocals with the suffix *-la-s/-la-h* derived from non-verbal bases

12.1 Introductory

The principal means of denominal verb derivation is the suffix *-laa/-taa/-daa/-naa...* which has 16 synharmonic variants. This suffix can derive verbs from any part of speech. Among 16 meanings of denominal derivatives with this suffix cited in the grammar of cur-

rent Yakut (Korkina 1982: 215–6; see also (12)), only one has parallels among verbs in *-la-s*, viz. verbs derived from names of games; cf. *xaartə* ‘cards’ → *xaartə-laa-* ‘to play cards’ vs. *temteti* ‘a card game’ → *temteti-le-s-* ‘to play temteti’ (P. 2634). The suffix *-la-s* derives a considerable number of reciprocal verbs from nominal stems (Kharitonov 1963: 34). Characteristically, these base nouns are in fact lexical reciprocals. It is easy to see that *-la-s* is composed of the suffix *-laa* and the reciprocal suffix *-s* (*-laa* > *-la* before *-s* according to the general rule of final vowel shortening before a derivational suffix). It should be noted, however, that verbs with the suffix *-las* do not have non-reciprocal counterparts without *-s*, i.e. with the suffix *-laa* alone. This fact makes it possible to qualify them as lexical reciprocals according to our definition. They can be divided into two groups: (1) those with non-spatial meanings and (2) those with spatial meanings. Needless to say, the lists below are not exhaustive.

12.2 Non-spatial reciprocals

They fall into three subgroups.

12.2.1 Verbs derived from nouns denoting reciprocal relations

The base nouns of these derivatives have such lexical meanings as ‘peace’, ‘agreement’, ‘game’, ‘quarrel’, ‘exchange’, ‘struggle’, etc. With the exception of *atas*, all the verbs below are two-place intransitives.

(196) <i>atas</i> ‘exchange’	→ <i>atas-tas-</i> ‘to exchange sth’ (vt)
<i>baarəs</i> ‘a card game’	→ <i>baarəs-tas-</i> ‘to play baarys’ (P. 387)
<i>besiede</i> ‘conversation, a talk’	→ <i>besiede-les-</i> ‘to converse/talk with’
<i>d’üül</i> ‘trial’	→ <i>d’üül-les-</i> ‘to be at law with, to argue with’
<i>eje</i> ‘peace’	→ <i>eje-les-</i> ‘to get reconciled/make peace with’
<i>il</i> ‘peace, concord’	→ <i>il-les-</i> ‘to make peace with’
<i>iirseen</i> ‘quarrel’	→ <i>iirseen-nes-</i> ‘to quarrel’ (P. 958)
<i>kör-s-üü</i> i. ‘meeting’, ii. ‘lover’, ii. ‘love affair’	→ <i>kör-s-üü-les-</i> ‘to have a love affair’, etc.
<i>kuomun</i> ‘complicity’	→ <i>kuomun-nas-</i> ‘to be accomplices’
<i>küres</i> ‘competition’	→ <i>küres-tes-</i> ‘to compete’
<i>tuspa</i> ‘difference, distinction’	→ <i>tuspa-las-</i> ‘to differ, to be distinct from’
<i>xoxučuol</i> ‘quarrel, squabble’	→ <i>xoxučuol-las-</i> ‘to quarrel/squabble’, etc.

The base noun (*nomen actionis* with the suffix *-üü*; see *kör-s-üü* under (196)) is in its turn a derivative from the reciprocal verb *kör-üs-* ‘to see/meet each other’ derived from the transitive *kör-* ‘to see/look’.

12.2.2 Verbs derived from nouns denoting participants of a reciprocal situation

The base nouns have such lexical meanings as ‘fellow-traveller’, ‘friend’, ‘neighbour’, ‘family’, ‘relatives’, ‘collaborator’, ‘people’, etc. (it is probably not accidental that the final consonant in three nouns (*argəs*, *atas*, *böyös* in (197)) is materially identical with the reciprocal suffix). This pattern of derivation is rather productive, as we find such derivatives from

fairly recent Russian borrowings: cf. *tabaarəs* ‘comrade’ (< Russian *tovarišč*) → *tabaarəs-tas*- ‘to establish friendly relations with’. All the derivatives are two-place intransitives:

- | | | | |
|-------|---------------------------------------|---|--|
| (197) | <i>ajmax</i> ‘relatives, kinsfolk’ | → | <i>ajmax-tas</i> ‘to become relatives’ |
| | <i>argəs</i> ‘fellow-traveller’ | → | <i>argəs-tas</i> - ‘to travel together’ |
| | <i>atas</i> ‘friend’ | → | <i>atas-tas</i> ‘to become/make friends’ (P. 190) |
| | <i>böyös</i> ‘fighter, wrestler’ | → | <i>böyös-tös</i> - ‘to fight/wrestle’ |
| | <i>doyor</i> ‘friend’ | → | <i>doyor-dos</i> - ‘to become/make friends’ |
| | <i>d’on</i> ‘a people, relatives’ | → | <i>d’on-nos</i> - ‘to become friends’ |
| | <i>d’ukaax</i> ‘neighbour’ | → | <i>d’ukaax-tas</i> - ‘to share a room/house’ |
| | <i>kergen</i> ‘family, family member’ | → | <i>kergen-nes</i> - ‘to get on with/get used to each other.’ |

12.2.3 Verbs denoting resistance or assistance, derived from nouns, adjectives and adverbs

Verbs of this group do not express reciprocity but they denote an action performed in response to another implied action, which sense may be termed semi-reciprocal. It should be noted that in this case situations that are not reciprocal proper are treated by the languages in the same way as reciprocal proper. All the verbs, excepting *tur-uu* in (198), are two-place intransitives.

- | | | | |
|-------|--|---|--|
| (198) | <i>böppörök</i> ‘across’, ‘rude’,
‘the one who contradicts’ | → | <i>böppörök-tös</i> - ‘to contradict [each other]’
(P. 523) |
| | <i>breeki</i> ‘stubborn, stubbornness’ | → | <i>breeki-les</i> - ‘to contradict/object’ (P. 532) |
| | <i>kirdiex</i> ‘obstinate, unyielding’ | → | <i>kirdiex-tes</i> - ‘to be obstinate’ (P. 1102) |
| | <i>örö</i> ‘upstream’ | → | <i>örö-lös</i> - ‘to contradict/oppose/counteract’ |
| | <i>tur-uu</i> ‘standing’ (<i>nomen actionis</i>) | → | <i>tur-uu-las</i> - ‘to struggle persistently against’ |
| | <i>utarə</i> ‘opposite, against’ | → | <i>utarə-las</i> - ‘to contradict/counteract’ |
| | <i>xarsaax</i> fig. ‘stubborn’ | → | <i>xarsaax-tas</i> - ‘to be stubborn, to disobey’ (vt) |
| | <i>xataj</i> ‘opposite, stubborn’ | → | <i>xataj-das</i> - ‘to contradict each other’ |
| | <i>alax</i> ‘cross-clamp (in a sled)’ | → | <i>alax-tas</i> - ‘to do sth stubbornly, overcoming
difficulties’ (S. 525). |

There are a number of verbs with the suffix in question that are unrelated to any attested bases; e.g.:

- (199) a. *kičenke-les*- ‘to be obstinate, to disobey’ (P. 1116; S. 169) (vt).

Curiously enough, there are a few verbs which are to a certain degree antonymous to the verbs under (198); the verbs under (200) are two-place intransitives with a dative object:

- | | | | |
|-------|--|---|---|
| (200) | <i>köd’üüs</i> ‘usefulness/benefit/profit’ | → | <i>köd’üüs-tös</i> - ‘to help’ (P. 1127) |
| | <i>kömö</i> ‘help, assistance’ | → | <i>kömö-lös</i> - ‘to help/assist’ |
| | <i>önö</i> ‘service, good turn’ | → | <i>önö-lös</i> - ‘do service [to each other]’ (P. 1950) |
| | <i>tuha</i> ‘use(fulness)’ | → | <i>tuha-las</i> - ‘to help’ (P. 1127). |

12.3 Spatial (locative) reciprocals

Here belong verbs derived from various parts of speech and denoting all kinds of motion or position relative to each other, or changing position of parts of a whole, including chaotic movements. These verbs are either two-place or one-place intransitives with a plural subject:

(201) <i>aal</i> 'raft, any floating means'	→	<i>aal-las-</i> 'to crowd/move (about a crowd)'
<i>atax</i> 'leg/foot'	→	<i>atax-tas-</i> 'to lie together with heels touching'
<i>eŋer</i> 'side, edge'	→	<i>eŋer-des-</i> 'to live next to [each other]'
<i>kiliiep</i> 'bread'	→	<i>kiliiep-tes-</i> 'glue/stick together into a mass' (P.1088)
<i>n'uur</i> 'face'	→	<i>n'uur-das-</i> 'to stand face to face' (P. 1738)
<i>ojoyos</i> 'side, rib'	→	<i>ojoyos-tos-</i> 'to be side by side with sb' (S. 268)
<i>serge</i> 'next to, near' (PPS)	→	<i>serges-tes-</i> 'to line up, walk next to [each other]'
<i>üömex</i> 'disorderly crowd/flock'	→	<i>üömex-tes-</i> 'to flock/crowd/mill together'
<i>üörüik</i> 'matted hair'	→	<i>üörüik-tes-</i> 'to become matted/entangled'
<i>ürüö-taraa</i> 'to and fro/in all directions'	→	<i>ürüö-tes-</i> 'to gather/crowd together'
<i>xar-əə</i> 'ice-blocking'	→	<i>xar-ta-las-</i> 'pile up (of ice blocks) one upon another'
<i>əam</i> 'spawning'	→	<i>əam-naa-/əam-nas-</i> 'gather for spawning' (S. 520)
<i>əama</i> 'young fish'	→	<i>əama-las-</i> 'to swarm/teem with'
<i>əksa</i> 'nearby, close (to)'	→	<i>əksa-las-</i> 'to be next to each other.'

13. Lexical reciprocals and their derivatives

13.1 Introductory

The verbs to be discussed in this section are heterogeneous both morphologically and lexically. Most of them denote connecting (in the broad sense, i.e. combining or fixing things together literally or figuratively), gathering or collecting things in one place, or changing the position of an object or one part of an object relative to another part. Less commonly, they denote disconnecting. We shall confine ourselves to this major group of lexical reciprocals with the meanings of connecting and disconnecting.

Reciprocal arguments may be separate entities or substances (cf. (210) and (205)) as well as parts of a whole which move to one point from different directions (or perform chaotic movements) or, if they compose one whole entity, contract thus growing smaller. All these different actions and processes are similar in the sense that the space taken up by the argument referents is reduced.

According to valency and derivational properties, three main types of verbs can be distinguished:

1. *Group A* is the main group of verbs under consideration which comprises three-place lexical reciprocals (= lexical causatives), cf. *xolboo-* 'to join sth to sth'.

2. *Group B1*: from some of Group A verbs, the reciprocal (or reflexive) morpheme can derive two-place intransitive anticausatives, cf. *xolbo-s-* 'to become/get joined';

3. Group B2 is comprised of underived (though they may contain the root-final *-s/-h-*) two-place intransitives which are also lexical reciprocals, cf. *eps-* ‘to get clenched’;

4. Group C are morphological causatives – three-place lexical reciprocals derived from the latter verbs, cf. *eps-er-* ‘to clench (two entities)’.

13.2 Group A: Underived three-place transitives

This group comprises at least 15 lexical reciprocals with the typical meanings ‘to join’, ‘to combine’, ‘to tie’, ‘to mix’, ‘to glue together’, etc.:

(202)	a.	<i>baaj-</i>	‘to tie together’
	b.	<i>bölötöö-</i>	‘to gather (cattle, etc.)’
	c.	<i>bulkuj-</i>	‘to mix, to join’
	d.	<i>d’üörelee-</i>	‘to couple/mate’
	e.	<i>ilbee-</i>	‘to join/gather’
	f.	<i>kelgij-</i>	‘to tie together’
	g.	<i>kətar-/kətəar-</i>	‘to mix/join’
	h.	<i>mus-/munn’-</i>	‘to gather/pile’
	i.	<i>silimnee-</i>	‘to glue up/glue together’
	j.	<i>tüüm-</i>	‘to tie/gather together’
	k.	<i>xanəlaa-</i>	‘to put/join in pairs’
	l.	<i>xatəj-</i>	‘to put crosswise’
	m.	<i>xolboo-</i>	‘to join/mix/tie together’, etc.

13.3 Group B1: Two-place anticausative intransitives

These are derivatives from Group A verbs mostly by means of the reciprocal marker *-s/-h-*. Other anticausative markers are also used. In a number of cases both co-participants are expressed by a semantically plural subject. In some of their usages these verbs may have non-reciprocal meanings (cf. English: *The stamp got glued to the wall* # **The stamp and the wall got glued together* vs. *The old stamp got glued to the new one* = *The old stamp and the new stamp got glued together*). These derivatives enter into the following three formal types of oppositions with Group A verbs.

1. The base verb has no related anticausative, though it may have a derived form with the suffix *-s/-h-*. Anticausative derivation is blocked by the (“ever-present”) agent-oriented component in the meaning of the base verb (see Haspelmath 1993:93). The derivative may be sociative, comitative or assistive, as in (203a), or it may be lexicalized, as in (203b).

(203)	a.	<i>kelgij-</i> ‘to bind/tie together’	→	<i>kelgi-s-</i>	i. ‘to do the tying together’
					ii. ‘to help to tie’
	b.	<i>baaj-</i> ‘to tie a knot’	→	<i>baaj-əs-/baaj-səs-</i>	i. ‘to do the tying together’
					ii. ‘to help to tie’
					iii. ‘to nag/find fault with.’

2. Most base verbs have respective anticausatives derived by means of the suffix *-s/-h-*:

- (204) a. *bulku-s-* 'to get mixed' (P. 545)
 b. *d'üörole-s-* 'to couple/mate'
 c. *ilbe-s-* 'to join/unite/gather'
 d. *silimne-s-* 'to get glued together'
 e. *tüm-üs-* 'to gather'
 f. *xanəla-s-* 'to be/move in groups'
 g. *xatə-s-* 'to get intertwined'
 h. *xolbo-s-* 'to join/mix', 'to marry'; cf.:
- (205) a. *Kini kumax-ə burduk-ka xolboo-t-a.*
 he sand-ACC grain-DAT mix-PAST-3SG
 'He added sand to grain.'
 b. *Kini burdug-u kumax-ə kəttə xolboo-t-a* (three-place reciprocal)
 he grain-ACC sand-ACC with mix-PAST-3SG
 'He mixed grain with sand.'
 c. *Burduk kumax-ə kəttə xolbo-s-t-ular* (anticausative)
 grain sand-ACC with mix-REC-PAST-3PL
 'The grain and sand mixed together.'

3. A few base verbs also have respective intransitive anticausatives marked by the reflexive (-*n-*, etc.) or passive (-*ulun-*, etc.) suffix, sometimes in combination with the reciprocal suffix (-*uh-un-*); these anticausatives may have parallel anticausatives in -*s-/-h-*. In one instance three anticausatives with a different marking are derived from the same base verb (206d, e, f).

- (206) a. *silimne-n-* 'to get stuck/glued together' (S. 323) (cf. (204d))
 b. *bulku-lun-* 'to get mixed' (cf. (204a)) (S. 81)
 c. *tüm-ülün-* 'to assemble/gather' (S. 412) (cf. (204e))
 d. *muh-un-* 'to gather' (S. 246) (cf. (202h))
 e. *munñ'-ulun-* 'to gather' (S. 244)
 f. *munñ'-uh-un-* 'to gather' (S. 244).

It is interesting to note that (206f) contains the reflexive suffix *-un* added to the reciprocal marker *-us/-uh*. It is most likely that the form *munñ'-us* had an anticausative meaning, which made it possible to add the pleonastic reflexive suffix. In present-day Yakut this form does not have this meaning; cf. *munñ'-us-* 'to help sb to gather sth'.

4. To complete our account of Group B1 verbs, we shall mention two equipollent oppositions in which the causative verb and its non-causative counterpart contain an unproductive causative suffix *-əar* and the reflexive suffix *-ən* respectively (the root verb is not used without suffixes any longer, therefore the non-causative verb may be regarded as anticausative only from the diachronical point of view); moreover, the non-causatives also occur with the reciprocal marker added to the reflexive suffix (in the examples, the reflexive marker is assimilated as *-t-*):

- (207) a. **kət-*
 b. *kət-əar-* 'to join sth to sth' (vt)
 ↔ c. *kət-ən-* 'to join sth' (vi)
 → d. *kət-t-əs-* 'to join sth, to copulate' (vi).

- (208) a. **səh-*
 b. *səh-əar-* ‘to stick/glue/press sth to sth’ (vt)
 ↔ c. *səh-ən-* i. ‘to get stuck/glued to sth’
 ii. ‘to press oneself to sth/sb’ (vi)
 → d. *səs-t-əs-* i. ‘to get stuck/glued *together*’
 ii. ‘press oneself to *each other*’ (vi).

13.4 Group B2: *Reciproca tantum*

Group B2 comprises intransitive lexical reciprocals which have either no underlying verbs at all or no verbs with a semantically related meaning in current Yakut. Nearly all the verbs of this group contain, however, the final *-s/-h*, which is hardly accidental. This may be accounted for by two reasons:

(1) the underlying verb has gone out of use after a reciprocal form was derived from it; (2) there has never been an underlying verb, i.e. a lexical reciprocal may have acquired the reciprocal suffix by analogy due to its meaning (lexical reciprocal meaning may have attracted the reciprocal marker because there were numerous verbs that became reciprocal due to this suffix; this is supported by the pleonastic use of the reciprocal suffix in (209e, g, n, q)).

With respect to the range of lexical meanings Group B2 verbs are similar to Group B1 verbs. The typical meanings are: ‘to join together’, ‘to get clenched’, ‘to mate/couple’, ‘to adjoin’, ‘to border on’, ‘to make peace/reconcile’, ‘to argue’, ‘to fight/butt (about bulls, etc.)’, ‘to disperse’, ‘to divorce’, ‘to miss (not to meet) each other’, etc. All the following verbs with the exception of (209i) and (209r) are intransitive:

- (209) a. *arayəs-* ‘to branch/fork’, ‘to part’
 b. *batəs-* ‘to get along together’
 c. *böliös-* ‘to clot’
 d. *əbis-/əbəs-/əps-əs-* ‘to get clenched’
 e. *illes-* ‘to get reconciled’
 f. *iris-/irs-is-* ‘to mate/couple’
 g. *könüs-* ‘to get reconciled’
 h. *kuodarəs-* ‘to court each other’ (P.1223)
 i. *meld’es-* ‘to deny’ (vt)
 j. *mökküs-* ‘to argue/altercate’
 k. *seles-* ‘to converse for a long time’
 l. *silbes-* ‘to join’
 m. *sərəs-/sərs-əs-* ‘to compete in running’
 n. *taryas-* ‘to disperse’
 o. *tigis-* coll. ‘to gather’ (S.382)
 p. *tubus-/tups-us-* ‘to get reconciled’
 q. *üömextes-* ‘to crowd’
 r. *xarəs-* ‘to fight/butt’ (of bulls, etc.)
 s. *xardarəs-* ‘to disperse, miss each other’ (vt).

In the following two instances, there are two parallel roughly synonymous forms, one underived and the other derived (the forms in *-s* probably have a sociative meaning).

- kekkelee-/kekkele-s-* 'to stand up/sit down in a row/next to each other' (S. 217)
kečigiree-/kečigire-s- 'to stand in/form an even row' (S. 224).

13.5 Group C: Causatives derived from verbs of Group B2

All of them are regular derivatives, with the exception of two verbs which take an unproductive causative suffix: *ebis-* 'to get clenched' → *eps-er-* 'to clench (jaws, etc.)' and *tubus-* 'to get reconciled' → *tups-ar-* 'to reconcile sb with sb'; see (209d) and (209p); in (P. 2791) the latter verb is registered with the productive causative suffix as well: *tubus-un-nar-* 'to reconcile sb with sb'); cf.:

- (210) a. *Səŋaay-a eps-en xaal-bət.*
 jaw-his get.clenched-CONV AUX-PERF.3SG
 'His jaws have clenched.'
 b. *Kini səŋaay-ən eps-er-en kees-pit.*
 he jaw-his.ACC get.clenched-CAUS-CONV AUX-PERF.3SG
 'He clenched his jaws.'

In all the other instances the productive suffix *-tar* is preceded by the reflexive suffix (inserted, as is common, after the base-final *-s/-h*; see case 2) in 3.2); cf.:

- (211) *aray[əh]-ən-nar-* 'to make sb part' (cf. (209a))
irs-ih-in-ner- 'to couple/mate (of animals)' (cf. (209f))
silbeh-in-ner- 'to connect/join sth' (cf. (209.l)), etc.

Finally, here is an interesting example in which a verb of Group B1, like Group B2 verbs, assumes a form characteristic of Group C verbs, i.e. the underlying and the final forms of the derivational chain are roughly synonymous:

- (212) a. *ilbe-* 'to connect/gather sth' (vt) Group A
 → b. *ilbe-s-* 'to be connected, to gather'(vi) Group B1
 → c. *ilbe-h-in-ner-* 'to join/connect sth between them' (P. 914) Group C

14. Notes on diachrony

14.1 Introductory

Reciprocity was marked by the suffix *-š* as early as in Common Turkic (approximately in the last centuries BCE). This suffix is retained in most of the present-day Turkic languages. In Kazakh, Nogai and Kara-Kalpak it has changed into *-s* in intervocalic position. In the Turkic languages of Siberia, the intervocalic variant is *-ž* (in Tuvan, Altai, and Shor), *-z* (in Khakas) and voiced *-h* (probably via *-z*) in Yakut. In a non-intervocalic position it has changed into *-s* in Yakut.

There is no generally accepted etymology of the reciprocal suffix *-š*. Of the various hypotheses concerning its origin, we shall cite one which sounds plausible enough and finds support in the typological data at our disposal. This hypothesis relates the reciprocal suffix to markers of plurality. We shall also consider the problem of the connection of the reciprocal meaning in this marker with the reflexive meaning.

Prior to the discussion, we wish to stress that in the Turkic languages the most frequently combined affixes are similar in meaning. Thus, the widely used Turkic plural suffix *-lar/-ler* is a result of contamination of the two ancient markers of collective plurality *-l* and *-r* (Serebrennikov & Gadzhieva 1979:210, 93).

14.2 Markers of plurality as possible sources of the reciprocal suffix

There are two main possible sources of the reciprocal suffix. One of them is an expression of nominal plurality, and the other of verbal plurality, or iterativity. Both these sources may be materially identical and genetically related. Below, we cite cases of material similarity of the reciprocal suffix and other suffixes which are discussed in specialist literature as instances of genetic relatedness (for a detailed survey see Serebrennikov 1974:9–12; Juldashv 1988:269–324). A number of opponents point out that material similarity may be accidental (cf. Shcherbak 1981:13), which cannot be rejected out of hand. The suffix *-š* also occurs in combination with suffixes semantically more or less similar to it.

14.2.1 Nominal plurality

According to this hypothesis, the reciprocal marker is descended from the Common Turkic suffix of (collective) plurality **-š* (cf. Sevortjan 1962:138; Serebrennikov 1974:10–1). This hypothesis is supported by the existence of various traces of the meaning of plurality in this suffix across the Turkic languages. In the following three cases, the words containing the component *-š* denote groups of referents mostly in reciprocal or converse relations.

(a) In Ancient Turkic, there were collective nouns with the final component *-š*:

(213) Ancient Turkic

- | | | | |
|----|------------------------|----|---|
| a. | <i>arquš</i> ‘caravan’ | c. | <i>toquš</i> ‘cattle for slaughter’ |
| b. | <i>jarmaš</i> ‘cereal’ | d. | <i>uhuš</i> ‘tribe, kin’ (see Juldashv 1988:310). |

Compare the polysemy of reciprocal markers in Tagalog and Mundari (see Shkarban & Rachkov, Ch. 22, example (92); Osada, Ch. 37, §§9.2.2 and 11).

(b) Traces of this meaning are preserved in Tuvan. In this language the suffix in question also serves to express the meaning ‘a group of people (members of a family) related by a (given) degree of kinship’. In the examples below the suffix *-kə* may function as a marker of relative adjectives (cf. Altai *kəš* ‘winter’ → *kəš-kə* ‘winter (adj.)’) and the suffix *-lar* is a plural marker:

(214) a. *ana* ‘mother’ → b. *ana-š-kə-lar* ‘mother and her children.’

(215) a. *ugba* ‘elder sister’ → b. *ugba-š-kə-lar* ‘sisters’ (‘both the elder and other sisters’) (Isxakov & Pal’mbax 1961:171).

This hypothesis seems to be supported by more or less similar meanings of reciprocal markers in such diverse unrelated languages as Yukaghir, Mundari, Tagalog, Kabardian, To'aba'ita, Piro, etc. (see Maslova, Ch. 44, §6.2; Osada, Ch. 37, §§11, 5.2.3.3; Shkarban & Rachkov, Ch. 22, §3.2.2; Kazenin, Ch. 17, §3.3; Lichtenberk, Ch. 36, §8.1.5; Matteson 1965:38, 78–9, 82, 108).

(c) Another trace of the suffix in question can be discerned in the marker of distributive numerals *-ar/-er* (after a final consonant) and *-šar/-šer* (after a final vowel) in most of the current Turkic languages (see Tenishev 1988:193–5); the component *-ar/-er* is traced back to the ancient marker of collective plurality. It is worth noting that reciprocal pronouns and distributive numerals may display similarity in iconical reflection of the respective meanings, which is manifested in their reduplicated forms (cf. (218) and (219)).

- | | | | | |
|-------|---------|------------------------|---|-----------------------------|
| (216) | Turkish | <i>iki</i> 'two' | → | <i>iki-šer</i> 'in twos.' |
| (217) | Tatar | a. <i>žide</i> 'seven' | → | <i>žide-šar</i> 'in sevens' |
| | | b. <i>dürt</i> 'four' | → | <i>dürt-är</i> 'in fours.' |

Azerbaijani

- | | | | |
|-------|------------------|---|--|
| (218) | <i>bir</i> 'one' | → | <i>bir-är bir-är</i> 'one by one, singly.' |
| (219) | <i>bir</i> 'one' | → | <i>bir bir-ini</i> 'each other' (ACC). |

Reciprocal markers are used in a similar way in a number of other languages (see Osada, Ch. 37, §9.2.2).

(d) It is likely that the material coincidence of the suffix of nominal plurality and that of deverbal *nomina actionis* is not accidental. Note that these nouns of action, like collective nouns, do not as a rule occur in the plural number. The genetic proximity between the reciprocal suffix and that of *nomina actionis* was pointed out by Radloff (1897: 57–8) and a number of other researchers (Clauson 1967:6–7). The following tentative explanation of the reciprocal use of the marker of *nomina actionis* is proposed: in nouns of action the object valency is weakened, and as a result the agent expression connected semantically with an actional noun can be interpreted as both agent and patient (as an approximate illustration, cf. *I love her* → *I am in love with her* → *We are in love* 'We love each other'; cf. also **We mutually love* but *Our mutual love*. Compare in this connection the possible reciprocal interpretation of the phrases *The shooting of the soldiers* and *The touching of the knees*; see Uhlenbeck 1967:271). It should also be taken into consideration that in the Turkic languages deverbal nouns can in their turn be verbalized (see (196) and the commentary). The following examples are not from Yakut, as it has lost the Common Turkic suffix of deverbal nouns *-š*:

- | | | | | |
|-------|---------|-----------------------------|---|---|
| (220) | Uzbek | <i>kir-</i> 'to enter' | → | <i>kir-iš</i> 'entering.' |
| (221) | Kirghiz | a. <i>körsöt-</i> 'to show' | → | <i>körsöt-üş</i> 'showing, a show' |
| | | b. <i>körsöt-</i> 'to show' | → | <i>körsöt-üş-</i> 'to show each other.' |

This connection between the reciprocal suffix and that of deverbal *nomina actionis* is probably somewhat analogous to the means of expressing the reciprocal meaning in some of the Kiranti languages (Tibeto-Burman family). Thus in Bantawa a verb takes the active

participle suffix *-pa* and is followed by the inflected verb *mi-* ‘to do’. The suffix *-pa* functions as a nominalizer in Limbu which genetically and areally is closely related to Bantawa (see van Driem 1987: 193–9); therefore we may assume with a high degree of certainty that this suffix had this function in Bantawa as well.

Bantawa (Ebert 1994: 54)

- (222) *dhat-pa mi-c-a.*
 beat-ACT.PART do-DU-EXC
 ‘we two (DU) beat each other (NON-PAST)’; lit. ‘we do fighter.’

Reciprocal suffixes are also materially identical with the suffix of *nomina actionis* in Indonesian and Tagalog (see Ogloblin & Nedjalkov, Ch. 33, §2.3; Shkarban & Rachkov, Ch. 22, §4.2.2).

With regard to the data presented in (c) and (d) of this section, it should be noted that material identity may hold not only between the markers of reciprocity and distributive numerals (as is shown under (c)) and those of reciprocity and *nomina actionis* (as is shown under d)), on the one hand, but also between the markers of distributive numerals and *nomina actionis*, on the other hand. Thus in Yakut ‘... distributive, collective and ordinal numerals are names of action genetically’ (Shcherbak 1981: 13); cf. *könüs-* ‘to make peace with sb’ → *könüs-üü* ‘reconciliation’ and *tüört* ‘four’ → *tüört-üü* as in the sentence *Tüört-üü kuh-u* (ACC) *ölor-d-übüt* ‘[We] killed four ducks each’.

14.2.2 Verbal plurality

Above, we have discussed plurality in nominals. Semantically, this notion is closely related to the meaning of verbal plurality, i.e. iterativity: when an action is performed by a number of agents it is naturally performed several times, viz. at least as many times as there are agents. It is not by accident that nominal and verbal plurality sometimes have the same marking in different languages (the most common instance is reduplication in nouns and verbs). Verbal “plurality” manifests itself either in iteration of an action or in the plurality of subject referents. Most likely, the meaning of verbal plurality in the suffix *-š-* is historically a later phenomenon than nominal plurality in the same suffix. It should be noted that the plural suffix *-lar* appeared on verbs later than on nouns.

(a) Plurality or iterativity enters as a natural component into the reciprocal meaning in which an action must necessarily be repeated at least two times. Traces of the iterative meaning of the marker *-š-* can be observed in some of the Turkic languages, though in very few cases; cf. Uzbek:

- (223) Uzbek *mal-* ‘to dip/plunge’ (vt) → *mal-əš-* ‘to dip/plunge several times.’

This suffix also occurs (together with the causative suffix) within the complex suffix of iterativity *-š-tər-*; cf.:

- (224) Tatar *ukə-* ‘to read’ → *ukə-štər-* ‘to read for a while from time to time.’
 (225) Uighur *tiq-* ‘to hide’ → *tiqi-štur-* ‘to hide (sth) several times’ (Kibirov 1989: 296).

There is an opinion that the second component is a non-causative suffix and it is a contamination of two suffixes of iterativity, *-t* and *-r* (Serebrennikov 1975: 17–22; Serebrennikov & Gadžieva 1979: 210).

(b) The meaning of the plural number in the 3rd person form of verbs is quite often rendered by the suffix *-š* in ancient Turkic languages and this is particularly common in current Kirghiz, Kazakh and Uzbek. Thus in current Kirghiz, in verbal forms like

- (226) *jaz[-iš]-a-t*.
 write-PL-PRES-3SG/PL
 ‘they write’

the optional suffix *-iš* marks the plural number in the 3rd person only. In the 1st and 2nd persons it cannot be used as a plural marker. It is not used as a sociative marker in current Kirghiz. This is one more reason why this suffix cannot be used in forms meaning ‘we write’ and ‘you write’ in Kirghiz (cf. (226)). But it is unclear whether this is a new development of the reciprocal suffix or a relic inherited from Common Turkic.

The use of a polysemous marker with the reciprocal meaning to form verbal nouns is attested in a number of Oceanic languages; cf.: Bauan *wali* ‘to joke’ → *vei-wali* ‘jest, joke’, *loma-ni* ‘to feel compassion for sb’ → *vei-loma-ni* ‘love, compassion’; Motu *nanadai* ‘to ask sth’ → *he-nanadai* ‘question’ (Pawley 1973: 152). This marker is also used to indicate ‘collective plural, a group of something’: Fijian *vei-kau* ‘forest, a group of trees’, *vei-vale* ‘group of houses’ (ibid.). Thus this latter fact supports the hypothesis proposed in 14.2.1.

14.3 Relations between the reciprocal and the reflexive markers

Above, we have discussed the possible sources of the reciprocal marker. In this section, we will discuss its semantic proximity to the reflexive meaning in the subsequent period. This proximity manifests itself in the similarity of the secondary meanings of the markers of reciprocity and reflexivity and their contamination during this period. As Kharitonov (1963: 50) suggests, the modern principal reciprocal-sociative meaning was not the only primary meaning of *-s* and unproductive fossilized formations with this suffix show that in the earlier period it expressed meanings close to those of reflexive verbs. Later, Kharitonov (1982: 274) suggests that before the suffix *-n* came to be used as the principal reflexive marker, the suffix *-s* had been used in this function (including other functions that involved intransitivization) for a long time and for a while later the two markers functioned as alternative means. The order of these suffixes in the fossilized compound suffix also indicates that *-s* had preceded *-n* historically.

The following should be pointed out here. There exist very ancient pairs of verbs in which the reciprocal marker (usually the variant *-h*) alternates with the unproductive causative marker *-r/-ar/-əar*. Respective verbs without these suffixes are not registered. In these instances the reciprocal marker is usually followed by the reflexive marker, i.e. they appear as *-hən/-hin*, etc., and function as a morphological and semantic unity (it should be remembered in this connection that this combination also occurs in causative forms derived from reciprocals (see (16)–(17))). The meaning of this compound suffix is usually

non-reflexive and non-reciprocal and it coincides with one of the secondary meanings of the reflexive suffix. Verbs with this compound suffix fall into two groups.

Group A comprises verbs which have no unmarked underlying form. The reflexive forms derived from causative forms retain their reflexive proper or reflexive-possessive meaning (see (227c)–(229c)), whereas the derivatives with the compound suffix (reciprocal + reflexive; see (227d)–(229d)) are either anticausative or autocausative in meaning:

- (227) a. *oŋo-
 b. oŋo-r- 'to make sth' (vt)
 c. oŋo-r-un- 'to make sth for oneself' (vt)
 d. oŋo-h-un- i. 'to make sth for oneself' (vt)
 ii. 'to put oneself (or sth upon oneself) in order' (vi, vt)
 iii. 'to get ready, prepare oneself for sth' (vi).
- (228) a. *ətə-
 b. ətə-r- 'to bite, snap' (vt)
 c. ətə-r-ən- 'to bite oneself' (vi)
 d. ətə-h-ən- 'to clench (of jaws)' (vi).
- (229) a. *tүүŋe-
 b. tүүŋe-r- 'to overturn' (vt)
 c. tүүŋe-r-in- 'to overturn sth upon oneself' (vt)
 d. tүүŋe-h-in- 'to overturn/capsize' (vi).

There is an analogous alternation between the reflexive and the causative suffixes, as in (207c) and (207b), (208c) and (208b). It is interesting to note that in these cases the reciprocal marker added to to the reflexive suffix (see (207d) and (208d)), unlike in cases (227d)–(229d) with the opposite order of the suffixes, retains its own reciprocal proper or reflexive-possessive meaning.

Group B comprises verbs differing from the above in that they have underlying forms which are lexical reciprocals. The behaviour of forms with the compound suffix (-uh-un- in (230c)) and of those with the reflexive suffix alone is analogous to that of similar forms in the previous subgroups; cf.:

- (230) a. mus-/munn'- 'to gather' (vt)
 b. munn'-un- 'to gather for oneself' (vt) (see also (37)–(38))
 c. munn'-uh-un- 'to gather/assemble' (vi).

One may assume on the basis of the data cited that at an ancient stage of development the Yakut reciprocal marker also had a tendency to develop the reflexive meaning which disappeared at a later stage. This tendency to unite in a contamination the reciprocal and the reflexive markers ((231c); see (16) above) which were probably closer in meaning to each other than at present can be compared with 1) the contamination of two causative suffixes (231a); 2) contamination of the passive and the reflexive-passive suffixes in passive forms (see (231b) and 3.5); 3) reduplication of the reciprocal suffix ((231d); cf. 2.5). We shall risk drawing a parallel between the following four symmetrical (in the sense of two identical or semantically close affixes being combined into a compound) sets of suffixes:

(231)	a.	CAUS + CAUS	b.	PASS + REFL	c.	REC + REFL	d.	REC + REC
		-t-		-il-		-is-		-is-
		-ar-		-in-		-in-		-is-
		-t-ar-		-il-in-		-is-in- (> -ih-in)		-is-is-

CHAPTER 27

Reciprocals, sociatives, comitatives, and assistives in Tuvan

Klara B. Kuular

University of Kyzyl

1. Introduction
 - 1.1 The Tuvan language
 - 1.2 Overview
 - 1.3 Database
 - 1.4 Note on glossing
2. Grammatical notes
 - 2.1 General remarks. Sentence structure
 - 2.2 Case and number. Possessivity
 - 2.3 Tense/aspect system. Agreement
 - 2.4 Reflexive and reciprocal pronouns
 - 2.5 Voices (means of valency change)
 - 2.5.1 Passive
 - 2.5.2 Reflexive
 - 2.5.3 Reciprocal
 - 2.5.4 Causative
 - 2.6 Combinability of voice markers
3. Reciprocals with the suffix *-š* only
 - 3.1 Subject-oriented reciprocal constructions
 - 3.1.1 “Canonical” reciprocals
 - 3.1.1.1 Derived from two-place transitives
 - 3.1.1.2 Derived from two-place intransitives
 - 3.1.2 “Indirect” and benefactive reciprocals
 - 3.1.3 “Possessive” reciprocals
 - 3.1.3.1 Derived from two-place transitives
 - 3.1.3.2 Derived from two-place intransitives
 - 3.1.4 Discontinuous constructions
 - 3.1.5 Lexical specifiers *udur-dedir* ‘mutually’, ‘face to face’, ‘to meet’ and *arazonda* ‘among/between themselves’
 - 3.2 Object-oriented reciprocals in *-š-tər*
 - 3.2.1 Causatives from subject-oriented reciprocals
 - 3.2.2 Causatives from two-place anticausatives
 - 3.3 Restrictions on reciprocals with the suffix *-š*
 - 3.4 Simultaneity and succession
 - 3.5 Derivatives from reciprocals

- 3.5.1 *Nomina actionis*
 - 3.5.1.1 With the suffixes *-ar* and *-kan*
 - 3.5.1.2 With the suffixes *-əškən* and *-lga*
 - 3.5.1.3 With the suffix *-š*
- 3.5.2 Adjectives in *-š* and adverbs in *-š-tər*
- 4. Diathesis types of constructions with the reciprocal pronoun *bot-bot-tar-ə* ‘each other’
 - 4.1 Introductory
 - 4.1.1 The reflexive-distributive meaning of the reciprocal pronoun
 - 4.1.1.1 In subject position
 - 4.1.1.2 In non-subject positions
 - 4.1.2 Relations between suffixed and pronominal reciprocals
 - 4.2 Subject-oriented constructions
 - 4.2.1 “Canonical” reciprocals
 - 4.2.1.1 With two-place transitives
 - 4.2.1.2 With two-place intransitives
 - 4.2.2 “Indirect” reciprocals
 - 4.2.3 Benefactive reciprocals
 - 4.2.4 “Possessive” reciprocals
 - 4.3 *Nomina actionis*
 - 4.4 Object-oriented constructions
- 5. Polysemy of the suffix *-š*
 - 5.1 Introductory
 - 5.2 The sociative meaning
 - 5.2.1 Sociatives derived from intransitives
 - 5.2.2 Sociatives derived from transitives
 - 5.2.3 Restrictions on derivation of sociatives with *-š*
 - 5.3 The comitative meaning
 - 5.4 The assistive meaning
 - 5.4.1 Expression of the co-participant. Object-oriented benefactive auxiliary
 - 5.4.2 Reciprocal assistives. Subject-oriented benefactive auxiliary. Reciprocal pronoun
 - 5.5 Other meanings
 - 5.5.1 Imitative
 - 5.5.2 Competitive
 - 5.5.3 Anticausative
 - 5.5.4 Reflexive
 - 5.5.5 Autocausative
 - 5.5.6 Converse
 - 5.5.7 Detransitive
 - 5.5.8 Detopicalization
 - 5.6 Object-oriented constructions
- 6. Lexicalization of verbs in *-š*
 - 6.1 Introductory
 - 6.2 A derivative in *-š* differs from the base in meaning
 - 6.3 A derivative in *-š* does not practically differ from the base in meaning
- 7. Derivatives with the suffix *-la-š*

1. Introduction

1.1 The Tuvan language

Tuvan (Uryankhai; this was the ancient self-name of Yakuts; see Poppe 1959:671) belongs to the Siberian group of the Northern Turkic (Eastern Hunnic) languages (for details see Nedjalkov & Nedjalkov, Ch. 26 on Yakut, Section 1.1). It is spoken by approximately 222,000 speakers (in 1992), mostly in the Republic of Tyva (Southern Siberia) and also in Mongolia (25,000 people) and in China (3,000) (see Tishkov (ed.) 1994:337–8). Tuvan is a written language used in publications and schooling. The grammatical structure and particularly the lexicon are strongly influenced by the Mongolian language which for a period served as a written language in Tuva. The Tuvan people are the oldest aborigines of Central Asia. Tuva borders on Mongolia in the south and on Buryat-Mongolia in the east. Its neighbours in the west are the Altai people, and the Altai and Khakass in the north-west. (See also Menges 1959:640–2.)

The closest to Tuvan are the Altai, Tofa and Shor languages, mutual intelligibility being very high.

1.2 Overview

Tuvan marks reciprocity in two main ways, by means of the suffix *-š* alternating with *-ž* and *-č* (variant *-š* is used as a generalized allomorph) and by means of the reciprocal pronoun *bot-bod-u/bot-bot-tar-ə* ‘(they) each other’ which mostly co-occurs with suffixed reciprocals (see (2d)). This pronoun sometimes allows reflexive-distributive reading (see (2e)). The following illustrates a standard semantic reciprocal opposition: the action described in (1c) is, roughly speaking, the “sum” of the actions described by (1a) and (1b); in this example a converb in *-p* and an auxiliary, e.g. *tur* in the present tense, comprise the present progressive tense/aspect form (see 2.3):

- (1) a. *Ava-m ača-zə-n kuspakta-p tur.*
 mother-my father-her-ACC embrace-CONV AUX.3.PRES (= PRES.PROGR)
 ‘My mother is embracing her father.’

- b. *Ača-zə ava-m-nə kuspakta-p tur.*
 father-her mother-my-ACC embrace-CONV AUX.3.PRES (= PRES.PROGR)
 ‘(Her = ‘my mother’s’) father is embracing my mother.’
- c. *Ava-m bile ača-zə kuspakta-ž-əp tur-lar.*
 mother-my and father-her embrace-REC-CONV PRES-3PL (=PRES.PROGR)
 ‘My mother and her father are embracing each other.’
- d. *Ava-m ača-zə-bile kuspakta-ž-əp tur*
 mother-my father-her-with embrace-REC-CONV 3.PRES (=PRES.PROGR)
 (same translation), lit. ‘My mother is embracing each other with her father.’

Verbs in *-š* may also have an assistive, sociative or comitative reading, depending on the lexical meaning of the base verb, sentence structure and broad context. Thus *ber-* used as an auxiliary in (2c) denotes an action performed for sb’s benefit and unambiguously indicates the assistive reading:

- (2) a. *Bis sigen kez-ip tur bis.*
 we hay mow-CONV AUX.PRES 1PL (= PRES.PROGR)
 ‘We are making hay.’
- b. *Bis sigen kes-č-ip tur bis.*
 we hay mow-REC-CONV AUX.PRES 1PL
- i. ‘We are making hay *together*.’ (sociative)
 ii. ‘We are making hay *with somebody else*.’ (comitative)
 iii. ‘We *help somebody* to make hay.’ (assistive)
 iv. ‘We are making hay *together helping each other*.’ (assistive-reciprocal)
- c. *Bis sigen kes-č-ip ber-ip tur bis.*
 we hay mow-REC-CONV O.BEN-CONV AUX.PRES 1PL
 ‘We *help* [someone] to make hay.’ (assistive)

Besides the meanings listed above, the reciprocal suffix may render at least six other unproductive meanings: imitative, competitive, anticausative, reflexive, autocausative and converse (see 5.5).

Example (3b), as well as (2d) and (2e), illustrates the use of the reciprocal pronoun in the dative case; it may be glossed as ‘body-body-PL-our-DAT’ in (2d-e) and ‘body-body-PL-their-DAT’ in (3b). If we take into account the fact that it is a reduplicated reflexive pronoun, ‘body-body’ is equivalent to ‘self-self’. For simplicity, it is glossed as ‘each other’.

- (2) d. *Bis bot-bot-tar-əvəs-ka sigen kes-č-ip tur bis.*
 we each-other-PL-our-DAT hay mow-REC-CONV AUX.PRES 1PL
 ‘We make hay *for each other*.’
- e. *Bis bot-bot-tar-əvəs-ka sigen kez-ip tur bis.*
 we each-other-PL-our-DAT hay mow-CONV AUX.PRES 1PL
- i. (same as (2d)).
 ii. ‘We make hay *each for himself*.’
- (3) a. *Öörenikči-ler nom-nar-nə eš-ter-i-n-ge damčə-t-kan-nar.*
 pupil-PL book-PL-ACC friend-PL-their-*n*-DAT pass(VI)-CAUS-PERF-3PL
 ‘The pupils passed books to their friends.’

- b. *Öörenikçi-ler nom-nar-nə bot-bot-tar-ə-n-ga damčə-t[-əš]-kan-nar.*
 pupil-PL book-PL-ACC each-other-PL-their-*n*-DAT pass-CAUS-REC-PERF-3PL
 ‘The pupils passed the books to each other.’

Tuvan reciprocals are very similar to Yakut reciprocals in respect of both the polysemy of the reciprocal suffix and diathesis types. In comparison with Yakut and Kirghiz, denominal derivation of reciprocals by means of the suffix *-laš* is unproductive in Tuvan.

Reciprocals are quite frequent in texts: they seem to be more frequent than in other Turkic languages. Sometimes several reciprocals occur in the same sentence (analogous repetition of the reciprocal pronoun sounds “heavy” and is very rare; see, however, (4c)); here are examples (a converb in *-p* and the auxiliary *tur* with the perfect suffix *-gan* form past progressive):

- (4) a. *Iji möge bot-bot-tar-ə-n-dan sezin-č-ip, deskin-č-ip, birde*
 two wrestler each-other-*n*-ABL fear-REC-CONV walk.round-REC-CONV either
xol-dar-ə-n-dan segir-ž-ip, birde but-tar-ə-n sun-č-up
 hand-PL-their-*n*-ABL clasp-REC-CONV or foot-PL-their-ACC thrust-REC-CONV
ka-ap čoru-p-la tur-gan. (ST.)
 AUX-CONV AUX-CONV-INTS AUX-3.PAST
 ‘Two wrestlers feared each other, [they] only walked round each other, either clasping
 each other’s hands or thrusting their feet at each other.’
- b. *Urug-lar ooŋ soonda sajzanak ee-ler-i-niŋ xaralzaa-zə-n*
 child-PL then play.house head.of.family-PL-GEN relation-their-ACC
čoru-d-ar: aalda-ž-ər, kudala-ž-ər, kel di-ž-ip
 go-CAUS-3.NPAST visit-REC-3.NPAST propose-REC-3.NPAST come say-REC-CONV
čala-ž-ər. (SA.)
 invite-REC-3.NPAST
 ‘Then the children play family: (they) visit each other, propose to each other, call and
 invite each other.’

Besides the reciprocal pronoun named above, there are other similar means of expressing reciprocity. Here is one containing the word *biree* ‘one’:

- c. *Kiži-ler bot-bot-tar-ə-n detki-ž-ip, bot-bot-tar-ə-n-ga*
 man-PL each-other-PL-their-ACC support-REC-CONV each-other-PL-their-*n*-DAT
duzala-ž-əp, biree-zi-n-ge biree-zi eki čüve-ni kəl-əp azə
 help-REC-CONV one-his-*n*-DAT one-his good thing-ACC do-CONV or
kəl-ər-ə-n oraldaz-əp čoru-ur. (SS.)
 do-PART-his-ACC try-CONV AUX-3.NPAST
 ‘People support each other, help each other, do or try to do something good for one
 another.’

1.3 Database

The language data are drawn from original written Tuvan texts and folklore (see Sources). In the examples from modern fiction the author’s initials are indicated. Examples without attribution are mine, Tuvan being my native language. Dictionary data have also been

used (Tenishev (ed.) 1968; Mongush (ed.) 1980). In the lists, verbs are cited in the stem form which in Turkic languages coincides, as is known, with the 2SG of the imperative (for convenience, it is translated by means of the infinitive). The explanations reflect my intuitions.

1.4 Note on glossing

To save space in the sentential examples below (and in some examples above), the glosses of the morphemes *-tar* (3PL), and *-ə* ('their') in the reciprocal pronoun *bot-bot-tar-ə-n-ga* and its other forms (see (74)) are as a rule omitted; the epenthetic *-n* is glossed as *-n-*. Sometimes, the glosses of certain morphemes are omitted if analogous glosses are to be found in the preceding or following examples.

2. Grammatical notes

These notes are based mostly on Isxakov & Pal'mbax (1961).

2.1 General remarks. Sentence structure

The grammar of Tuvan is very similar to that of Yakut. As in Yakut, the Tuvan sentence is mainly verb-final (see, however, (21)).

The predicate may be preceded by one or more converbs (cf. (4a) containing six converbs); the most common are conjoining converbs (in a sentence, they function as verbal adverbials or conjoined predicates) of prior action with the suffix *-p* (after vowels)/*-əp/-ip/-up/-üp* (after consonants) which marks homogeneous predicates, the lexical part of complex verbs, and also periphrastic tense/aspect verb forms (cf. present progressive in (1) and (2)), and converbs of so-called simultaneous action with the suffix *-j* (after vowels) */-ə/-i/-a/-e/-u/-ü* (after consonants).

At morpheme boundaries assimilation of consonants (mostly progressive) is observed. Note that certain consonants in inter-vocalic position at morpheme boundaries often drop out; as a result short vowels of two morphemes are fused into a long one (*ee* and *aa*) and the boundary between the morphemes disappears (in these cases morphemic division is made provisionally between two letters signifying one long vowel, for the sake of glossing: cf. perfect forms *nomča-an men* 'I have read' < **nomča-gan*; *ka-an* < **kag-gan* or converbal forms *ka-ap* < **kag-əp*; cf. (4a), (35a), (36e), (54b)). As the examples above show, Tuvan also displays vowel harmony. Another example may be the accusative case marker which has three series of allomorphs: *-nə/-ni/-nu/-nü*, *-də/-di/-du/-dü* and *-tə/-ti/-tu/-tü*. Root vowels do not alternate.

A specific feature of Tuvan is that in addition to oppositions of long and short vowels (8 pairs) it has 8 pharyngalized vowels (which occur in the first syllable only), as in *e"t*

‘meat’ vs. *et* ‘property’, *a”t* ‘horse’ vs. *at* ‘name’. In this paper, long vowels are signified by jeminated letters, as in the Tuvan cyrillic writing.

The principal conjunction is *bile* ‘and’; the materially identical postposition *bile* ‘with’ is hyphenated on a noun (cf. (1b) and (1c)).

Nouns can function as adjectives without changing their form, as in English, cf. *mege* ‘a lie’ and ‘false’, *usun* ‘length’ and ‘long’. Adjectives and adverbs have distinctive suffixes but they often coincide in form; cf. *dürgen* ‘quick’ and ‘quickly’.

2.2 Case and number. Possessivity

The Tuvan noun has seven cases and two declensions, simple (see (5a)) and possessive (see (5b), (5c), (7)). The nominative, which is zero marked, has two functions, namely those of marking the subject and non-referential (usually) direct object (it is not glossed in the examples). Such an unmarked direct object is always in contact pre-position to the predicate (cf. *sigen* ‘hay’ in (2)). In specialist literature this object marking is sometimes regarded as non-marked accusative (see Isxakov & Pal’mbax 1961:131–2). Here is a case paradigm of the noun *tal* ‘willow’, *tal-əm* ‘my willow’ and *tal-ə* ‘his/her willow’ in the singular:

(5) a.	NOM	<i>tal</i>	b.	NOM	<i>tal-əm</i>	c.	NOM	<i>tal-ə</i>
	GEN	<i>tal-dəŋ</i>		GEN	<i>tal-əm-nəŋ</i>		GEN	<i>tal-ə-nəŋ</i>
	ACC	<i>tal-də</i>		ACC	<i>tal-əm-nə</i>		ACC	<i>tal-ə-n</i>
	DAT	<i>tal-ga</i>		DAT	<i>tal-əm-ga</i>		DAT	<i>tal-ə-n-ga</i>
	LOC	<i>tal-da</i>		LOC	<i>tal-əm-da</i>		LOC	<i>tal-ə-n-da</i>
	ABL	<i>tal-dan</i>		ABL	<i>tal-əm-dan</i>		ABL	<i>tal-ə-n-dan</i>
	ALL	<i>tal-če</i>		ALL	<i>tal-əm-če</i>		ALL	<i>tal-ə-n-če</i>

When preceded by a possessive 3rd person suffix, the accusative ending is *-n* (cf. *ada-zə-n* in (1a)); when preceded by the 3rd p. possessive suffix *-ə/i* a semantically empty *-n* (glossed as *-n-*) is inserted before the DAT, LOC, ABL and ALL case marker (5c); cf. also *eš-teri-n-ge* and *bot-bot-tar-ə-n-ga* in (3a) and (3b) respectively. The plural number on nouns (and also 3PL on verbs) is marked by the suffix *-lar/-ler*, *-nar/-ner*, *-tar/-ter*, *-dar/-der* (3).

A peculiarity of Tuvan in comparison with other Turkic languages (with the exception of geographically adjacent Tofa; see Rassadin 1978:63) is the suffix *-škə/-lə-škə* (glossed as COLL; it is usually combined with the plural suffix *-lar*). It derives collective nouns from terms of kinship, with the meaning ‘a group of people or members of a family linked by a given degree of kinship or friendship’ (Isxakov & Pal’mbax 1961:171–2):

(6) a.	<i>ača</i> ‘father’	→	<i>ača-škə[-lar]</i> ‘father and his child(ren)’
	→	<i>ača-lə-škə</i>	(same) (T. 77)
	b.	<i>čaava</i>	‘eldest brother’s wife’
	→	<i>čaava-škə[-lar]</i>	‘sisters and brothers with the eldest brother’s wife’ (T. 528); (176)
	c.	<i>eš</i>	‘friend/comrade’
	→	<i>eži-ški[-ler]</i>	‘friends/comrades’ (T. 607).

Possessivity is marked by the following suffixes (for the 1st and 2nd persons plural and singular, the allomorphs used after vowels are given; in allomorphs after consonants these markers are preceded by one of the same four vowels as is shown for the 3rd person):

(7) a.	SG	PL
1st p.	<i>-m</i>	<i>-vəs/-vis/-vus/-vüs</i>
2nd p.	<i>-ŋ</i>	<i>-ŋar/-ŋer</i>
3rd p.	<i>-ə/-i/-u/-ü</i> (after consonants)	<i>-ə/-i/-u/-ü</i> (after consonants)
	<i>-zə/-zi/-zu/-zü</i> (after vowels)	<i>-zə/-zi/-zu/-zü</i> (after vowels)

Possessive relation between two nouns is expressed by an *izafet* construction: the attributive noun is genitive and the head noun carries the possessive suffix which agrees in person and number with the attribute.

b.	<i>Ata-nəŋ</i>	<i>aʹd-ə</i>	c.	<i>stol-duŋ</i>	<i>usun-u</i>
	father-GEN	horse-his		table-GEN	length-its
	‘father’s horse’			‘the length of the table’ (cf. also (177b)).	

2.3 Tense/aspect system. Agreement

The Tuvan verb has eleven simple and periphrastic tense/aspect forms, five for the past tense, three for the present and three for the future. Most of the examples in this paper have the following tense/aspect forms (below, these forms are given tentative labels which most closely reflect their meaning):

1. Recent past tense (suffix *-də/-di/...* and other variants; glossed as PAST) which also denotes actions the speaker has observed (cf. (13)–(16), (19), etc.);

2. Perfect (suffix *-gan/-kan/...* which also marks past tense participles; cf. *čit-ken* in (10)); it does not have the features of the recent past (cf. (3), (11), (12), (18), (21), etc.);

3. Present progressive comprised of a converb in *-əp* and auxiliary *tur* ‘to stand, be’, or *čor(u)* ‘to go, be’, or *čət* ‘to stand, be’, or *olur* ‘to sit, be’ (cf. (1), (2), (17), (33a, b), etc.; only these four when used as notional verbs (with the same lexical meanings) form the present progressive tense synthetically, i.e. without an auxiliary; see (43), (44)). Past progressive is formed in the same way, the auxiliary taking the perfect suffix *-gan/-kan/...*; cf. (32);

4. Non-past otherwise termed present-future denoting future or generic actions (suffix *-ar/-er/-ər/-ir/-ur/-ür* for non-negated actions (cf. (28a, b)) which also marks future tense participles, and *-mas/-bas/-pas/-vas/...* for negated actions; cf. (20), (33c, d).

The so-called future participle in *-ar* (forming present-future tense forms) functions as the English gerund (masdar in some non-European languages), i.e. it may appear in subject, object and attribute positions, it is inflected for case and may be governed by postpositions, and it also retains its objects (28a). This participle, as well as the past participle in *-gan/-kan*, is the principal means of nominalization (see 3.5.1.1).

There are two agreement systems: (a) synthetic markers which are used in only one indicative form out of eleven, namely, on recent past forms; in the 1st and 2nd person SG and PL they coincide with possessive markers on nouns (cf. (7a) and (8a)); (b) analytical markers found in the remaining ten tense/aspect forms of the indicative mood; in

this case agreement is marked by bound pronouns which always follow the predicate (unlike suffixes, they are not subject to vowel harmony; thus phonetically they behave as free morphemes; cf. (2)); they coincide with respective 1st and 2nd person pronouns of both numbers and are spelt separately (see (8b); cf. (1), (2)); the 3SG marker is zero and 3PL optional marker is the same as in the first system of agreement.

(8) a.	Recent past		b.	Present progressive (<i>ap</i> < <i>al-əp</i>)		
	[<i>men</i>]	<i>al-də-m</i>	'I took'	[<i>men</i>]	<i>a-p tur men</i>	'I am taking'
	[<i>sen</i>]	<i>al-də-ŋ</i>	'you took'	[<i>sen</i>]	<i>a-p tur sen</i>	'you are taking'
	[<i>ol</i>]	<i>al-də-Ø</i>	'he took'	[<i>ol</i>]	<i>a-p tur-Ø</i>	'he is taking'
	[<i>bis</i>]	<i>al-də-vəs</i>	'we took'	[<i>bis</i>]	<i>a-p tur bis</i>	'we are taking'
	[<i>siler</i>]	<i>al-də-ŋar</i>	'you took'	[<i>siler</i>]	<i>a-p tur siler</i>	'you are taking'
	[<i>olar</i>]	<i>al-də(-lar)</i>	'they took'	[<i>olar</i>]	<i>a-p tur(-lar)</i>	'they are taking.'

There are also aspectual forms with semi-auxiliary verbs *kel-*, *kal-*, *ber-*, *bol-*, *kag-*, *al-*, etc. which in combination with conjoining converbs denote the beginning, continuation, completion of an action; cf. (2c), (4a), (10), (35a, b), (30), (36e), (37), etc. Thus the verb *ber-* (lexical meaning 'to give') with a pre-posed converb in *-j/-ə/...* denotes the beginning of an action, and with a converb in *-p/-əp/...* it renders the meaning of object-oriented benefactive (glossed as O.BEN), and the verb *al-* (lexical meaning 'to take') with a converb in *-p/-əp/...* renders the meaning of subject-oriented benefactive (glossed as S.BEN).

The marker of the perfective aspect (glossed as ASP) is the suffix *-əvət/-əpt/...*; in the examples below, it usually appears in its contracted form *-əp* materially identical with the converbal suffix *-əp* (Isxakov & Pal'mbax 1961:410).

As in other Turkic languages, a vast number of verbs are derived from non-verbal stems (and from some verbal stems) by means of the suffix *-la/-na/-da/-ta/...*, these derivations being mostly transitive (cf. *kuspak-ta-* 'to embrace' derived from *kuspak* 'armful'; see (1)). This suffix in combination with the reciprocal *-š* has given rise to the suffix *-la-š* which derives reciprocal verbs immediately from nominals (see Section 7). Another complex suffix is *-la-n* – a combination of *-la/...* and the reflexive suffix *-n* (see case 2 in 2.5; see (72)).

2.4 Reflexive and reciprocal pronouns

As mentioned above, the reciprocal pronoun is formed from the reflexive by means of reduplication. The reflexive pronoun in its turn is descended from a noun meaning 'body' (which is preserved, for instance, in this meaning in the compound *e''t-bot* '(human) body', with the first component meaning 'meat/flesh'; see M1. 578). Both pronouns are obligatorily used with possessive suffixes (without the latter, the root has a different meaning, e.g. *bot čurttalga* 'lonely life', *bot kiži* 'single man/woman'); cf. the nominative case of the reflexive pronoun: *bod-um* 'I myself', *bod-uŋ* 'you yourself', *bod-u* 'he himself', *bod-uvus* 'we ourselves', *bod-uŋar* 'you yourselves', *bot-tar-ə* 'they themselves'. Both pronouns are inflected for case. The forms of both pronouns with the plural marker *-tar* in the right-hand column below are synonymous with those without *-tar*. The forms with *-tar*

are more frequent in colloquial speech. Here are the accusative forms of the reflexive and reciprocal pronouns:

- (9)
- | | SG | | PL |
|----|------------------------------|--------------------|---------------------------------------|
| 1. | <i>bod-um-nu</i> ‘myself’ | <i>bod-uvus-tu</i> | = <i>bot-tar-əvəs-tə</i> ‘ourselves’ |
| 2. | <i>bod-uŋ-nu</i> ‘yourself’ | <i>bod-uŋar-nə</i> | = <i>bot-tar-əŋar-nə</i> ‘yourselves’ |
| 3. | <i>bod-u-n</i> ‘him/herself’ | | = <i>bot-tar-ə-n</i> ‘themselves’ |
- b. Reciprocal pronoun
- | | | | | |
|------|------------------------|---|----------------------------|--------------------|
| 1. – | <i>bot-bod-uvus-tu</i> | = | <i>bot-bot-tar-əvəs-tə</i> | ‘we each other’ |
| 2. – | <i>bot-bod-uŋar-nə</i> | = | <i>bot-bot-tar-əŋar-nə</i> | ‘you each other’ |
| 3. – | <i>bot-bod-u-n</i> | = | <i>bot-bot-tar-ə-n</i> | ‘they each other.’ |

The reciprocal pronoun also appears with postpositions: *bot-bot-tar-ə-n-ga udur* ‘one against the other’ (-*ga* = DAT), *bot-bot-tar-ə-nəŋ dugajənda* ‘about each other’ (-*nəŋ* = GEN), *bot-bot-tar-ə-bile* ‘with each other’, etc.

In the sentential examples, the reciprocal pronoun is glossed as ‘each-other+case’, with the glosses of the possessive suffixes (and the plural suffix *-tar* in the 3rd person) being omitted.

2.5 Voices (means of valency change)

Let us consider the system of suffixes into which the reciprocal suffix enters. Like other Turkic languages, Tuvan has three valency decreasing voices, namely *reflexive*, *reciprocal*, and *passive*, and one valency increasing, namely *causative* voice. These are the main valency characteristics of the voice markers. The former two voices may also retain (cf. (14), and (i) and (iv) in (2b)) and even increase valency (cf. (ii) and (iii) in (2b)) and the latter voice may decrease valency (cf. (21)). All the voice markers are polysemous (moreover, one form of the same verb may have more than one meanings), and the derivatives may undergo lexicalization. Therefore the names of the voices are often used as labels. The list of the most common functions of the voice markers below is to show the place of reciprocals among other voices (see also Isxakov & Pal’mbox 1961:272–94).

2.5.1 *Passive*

The passive suffix is *-I* (after vowels)/*-əl/-il/-ul/-ül* (after consonants). As often as not, this suffix marks other than passive meanings.

(a) Passive

- (10) *Čit-ken* *nom* *təp-t-əp* *kel-gen.* (*təp-t- < təv-əl-*)
 get.lost-PART book find-PASS-CONV AUX-3.PAST
 ‘The lost book has been found.’

(b) Autocausative

- (11) *Ogl-u* *düün* *dag-nə* *örü ködür-ül-gen.*
 son-his yesterday mountain-ACC up lift(vt)-PASS-3.PERF
 ‘Yesterday his son climbed up the mountain.’

(c) Anticausative

- (12) *Soŋga ŧil-i xat-tan buz-ul-gan.*
 window glass-its wind-ABL break(vt)-PASS-3.PERF
 ‘The window glass broke in the wind.’

2.5.2 Reflexive

The reflexive suffix has seventeen allomorphs: *-n* (after vowels), *-ən/-in/-un/-ün* (after consonants); *-tən/-tin/-tun/-tün* (after voiceless consonants); *-dən/-din/-dun/-dün* (after sonorants); and *-ttən/-ttin/-ttun/-ttün* (after vowels). The latter variants are not positional because they occur in the same positions as *-n*, with a semantic difference (for details see Kuular 1986b:33–52). There is an opinion that the last suffix is descended from a combination of the causative-passive *-t* (see (21)) and reflexive *-tən* (see Isxakov & Pal'mbax 1961:286). Here are examples of various meanings (the first four are subject-oriented and the last two are object-oriented):

(a) Reflexive proper

- (13) *Ol savaŋna-n-də.*
 he soap-REFL-3.PAST
 ‘He soaped himself.’

(b) Reflexive-possessive

- (14) *Ol arn-ə-n savaŋna-n-də.*
 he face-his-ACC soap-REFL-3.PAST
 ‘He soaped his face.’

(c) Reflexive-benefactive

- (15) *Ol aⁿt-tə tergele-n-di.*
 he horse-ACC harness-REFL-3.PAST
 ‘He harnessed the horse for himself.’

(d) Autocausative

- (16) *Ol iji xol-u-bile it-tin-di.*
 he two hand-his-with push-REFL-3.PAST
 ‘He pushed himself off with both hands.’

(e) Absolutive

- (17) *Ava-m am daara-n-əp tur.*
 mother-my now sew-REFL-CONV AUX.3
 ‘My mother is sewing now.’

(f) Passive

- (18) *Soŋga ŧalde-n-gen.*
 window glaze-REFL-3.PERF
 ‘The window is glazed.’

(g) Anticausative

- (19) a. *Ogl-u dūūn ögle-n-di.*
 son-his yesterday marry(sb.to.sb)-REFL-3.PAST
 ‘His son got married yesterday.’

Sometimes, the suffix *-n* appears together with the reciprocal marker as a single complex suffix *-n-əš* (in such cases there are no parallel derivatives with *-n* alone). The latter suffix may compete with the suffix *-š* (in (19b)), the form in *-n-əš* is even more widely used than the form in *-š*; cf.:

- (19) b. *badāla-* i. ‘to vote’, ii. ‘to register’
 → *badāla-š/-badāla-n-əš-/*badāla-n* i. ‘to vote/register together’ (sociative)
 ii. ‘to get married at the registrar’s’ (anticausative) (T. 83).

2.5.3 *Reciprocal*

The reciprocal suffix has allomorphs *-š/-əš/-iš/-uš/-üš* before consonants (33c–d); in intervocalic position *-š* changes into *-ž* (1c, d) and after voiceless consonants and before vowels into *-č* (2b, c). Apart from the meanings which the reciprocal suffix can express alongside the reciprocal, viz. the sociative, comitative and assistive (2b), it also has a number of less productive and non-productive meanings: imitative, competitive, etc. This suffix may decrease, or retain, or increase the valency of the base verb (see Section 5). (See Kuular 1986a:73–82.)

2.5.4 *Causative*

The causative suffixes are *-t* (after vowels)/*-ət/-it/-ut/-üt* (after consonants and after *-r* in polysyllabic stems), *-dər/-dir/-dur/-dür*, *-tər/-tir/-tur/-tür*. There is also a number of unproductive suffixes, e.g. *-ər*, *-gəz*, etc. Causative derivatives from intransitives always express the causative meaning (cf. *öl-* ‘to die’ → *öl-ür-* ‘to kill’; cf. (20)), while derivatives from transitives may have a causative or passive meaning depending on context (see also Letjagina & Nasilov 1974:13–24; Kulikov 1987:73–5); cf.:

(a) Causative

- (20) *Xoj-lar-ə-n bōrū-ge öl-ür-t-pes.* (I.P. 236)
 sheep-PL-their-ACC wolf-DAT die-CAUS-CAUS-NEG.3.NPAST
 ‘Not to let wolves kill the sheep.’

(b) Passive

- (21) *Bōrū-ge öl-ür-t-ken xoj-uvus iji.* (I.P. 236)
 wolf-DAT die-CAUS-CAUS-PERF sheep-our two
 ‘Two of our sheep have been killed by a wolf.’

2.6 Combinability of voice markers

Different voice markers may combine within a verbal form. Combinations of two suffixes are common enough, and derivatives with three and even four different suffixes

can be found as well (Isxakov & Pal'mbax 1961:293–4). Among three-member chains of derivatives, there occur two principal types.

1. The first and the last members are not synonymous, cf. (22) and (23); at each step of derivation the meaning of the preceding suffix is retained, the meanings being added consecutively:

- (22) a. *čöle-* 'to lean sth to sth'
 b. *čöle-n-* 'to lean on sth' (autocausative)
 c. *čöle-n-iš-* 'to lean on each other' (T. 542–3) (reciprocal of autocausative)
- (23) a. *ke^os-* 'to cut/mow'
 b. *ke^oz-iš-* 'to help to mow' (assistive)
 c. *ke^oz-iš-tir-* 'to ask/cause sb to help sb mow' (causative of assistive)
- (24) a. *tur-* 'to stand'
 b. *tur-gus-* 'to put up/stand, build' (causative of intransitive)
 c. *tur-guz-uš-* 'to build together' (sociative of causative)
 d. *tur-guz-uš-tur-* 'to let sb build sth together' (I.P. 294) (causative of sociative)

2. The first and the third members are roughly synonymous, as is observed in chains with the second anticausative derivative, cf. (25) and (26). Here, in the first stage of derivation instead of addition a component of meaning is subtracted, and the next step restores this meaning:

- (25) a. *ögle-* 'to marry sb to sb'
 b. *ögle-n-* 'to get married' (anticausative)
 c. *ögle-n-dir-* (same translation as (a); rare) (T. 331) (causative of anticausative)
- (26) a. *buda-* 'to confuse sb'
 b. *buda-l-* 'to become confused (when reading, etc.)' (anticausative)
 c. *buda-l-dər-* (same translation as (a); rare) (T. 119–20) (causative of anticausative)

3. Reciprocals with the suffix *-š* only

3.1 Subject-oriented reciprocal constructions

3.1.1 “Canonical” reciprocals

3.1.1.1 *Derived from two-place transitives.* In this diathesis type, the direct object of the underlying construction is deleted and the reciprocal construction is intransitivized; cf. (1a) and (1c), (27a) and (27b).

- (27) a. *Men onu tanə-ər men. + a. Ol meni tanə-ər.*
 I he.ACC know-NPAST 1SG he I.ACC know-3.NPAST
 'I know him.' 'He knows me.'
- b. *Bis tanə-ž-ar bis.*
 we know-REC-NPAST 1PL
 'We know each other.'

A few more examples:

- (28) a. *Ulgad-ə ber-gen ool-dar eʹt bəžək-tər-ar deeš,*
 become.adult-CONV AUX-PART youth-PL body become.strong-CAUS-NR for
čirim-bile šaagajta-ž-əp, kəmčə-bile kak-č-əp tur-ar. (SA.)
 saddle.strap-with beat.torture-REC-CONV whip-with hit-REC-CONV AUX-3.NPAST
 ‘The youths who have grown up, in order to make their bodies stronger, torture each other with saddle straps and beat each other with whips.’
- b. *Ekide eder-ž-ir – bakta kag-ž-ir.* (T. 606)
 well follow-REC-NPAST bad leave-REC-3.NPAST
 ‘When all is well he is a friend – when things are bad he deserts.’ (*eder-ž-ir* is a lexicalization; see 6.2).
- c. *Olar čügle aas-tar-ə-bile duza-ž-əp čoru-p-kan-nar.* (KK.)
 they only mouth-PL-their-with abuse-REC-CONV go-ASP-PERF-3PL
 ‘They left only abusing each other.’ (lit. ‘... with their mouths’).

Reciprocals of this type:

- (29) *aalda-š-* ‘to pay visits to each other’ (T. 28)
aspakta-š- ‘to clutch at each other (with nails, etc.)’ (T. 73)
atkəla-š- ‘to exchange fire’ (T. 75)
baraanna-š- ‘to see each other from afar’ (T. 91)
bekte-n-iš- ‘to hold on to each other’ (T. 97)
čaŋča-š- ‘to scold each other’ (T. 517)
čokta-š- ‘to miss each other’ (T. 538)
čalga-š- ‘to lick each other’ (T. 555)
čətta-š- ‘to sniff at (= kiss) each other’ (T. 560)
dəile-š- ‘to look for each other’ (T. 163)
duza-š- ‘to call each other names’ (T. 182)
dükpür-üš- ‘to spit at each other’ (T. 187)
ekile-š- ‘to greet each other’ (T. 609)
imne-š- ‘to wink to each other’ (T. 207)
itkile-š- ‘to push each other’ (T. 211)
ka-aš- (< *kag-aš-*) ‘to leave/desert each other’ (T. 214)
kag-aš- ‘to hit each other’
kajga-š- ‘to stare at each other’ (T. 219)
karga-š- ‘to curse each other’ (T. 229)
kuspakta-š- ‘to embrace each other’ (T. 267)
kəjgər-aš- ‘to call to each other’ (T. 275)
kəmčəla-š- ‘to whip each other’
kər-aš- ‘to exterminate one another’ (T. 279)
makta-š- ‘to praise each other’
medegle-š- ‘to inform each other’ (T. 292)
megele-š- ‘to deceive each other’
mendile-š- ‘to greet each other’ (T. 293)
mogad-aš- ‘to resent each other’ (T. 297)
ökpele-š- ‘to be displeased with each other’ (T. 334)
öored-iš- ‘to teach each other’ (T. 338)
öskele-š- ‘to shun each other’ (T. 341)
segir-iš- ‘to clasp each other in a fight’ (T. 371)

<i>sögle-š-</i>	‘to offend each other’ (T. 385)
<i>suragla-š-</i>	‘to question each other’ (T. 391)
<i>šaagajta-š-</i>	‘to torture each other’
<i>šamna-š-</i>	‘to accuse each other of theft’ (T. 566)
<i>šüg-diün-üš-</i>	‘to test each other’
<i>tana-š-</i>	‘to know each other’ (T. 406)
<i>tepkile-š-</i>	‘to kick each other (repeatedly)’ (T. 411)
<i>üsküle-š-</i>	i. ‘to butt each other’, ii. ‘to collide’ (T. 452)
<i>xəjərta-š-</i>	‘to look askance at each other’ (T. 699)
<i>xərbekte-š-</i>	‘to scratch each other, to fight’ (T. 474)
<i>xerberle-š-</i>	‘to fight/tear each other to pieces’ (T. 475)
<i>əzər-əš-</i>	‘to bite each other (of dogs, etc.)’ (T. 593).

3.1.1.2 *Derived from two-place intransitives.* In this type of derivatives, the indirect object (usually dative, less commonly ablative, etc.) is deleted in the reciprocal construction and the latter is formally identical with constructions derived from two-place transitives.

- (30) a. *Ol eš-ter-i-n-ge el-xol bol-u ber-gen.*
 he friend-PL-his-n-DAT help become-CONV O.BEN-3.PERF
 ‘He helped his friends.’
- b. *Šaandan tura eder-ž-ip kel-gen ež-iški-ler el-xol*
 since.long.ago since accompany-REC-CONV AUX-PART comrade-COLL-PL help
bol-č-up, ulam čook čurtta-j ber-gen-ner. (ED.)
 become-REC-CONV even.more close live-CONV O.BEN-PERF-3PL
 lit. ‘Friends being friends since long ago began to live even closer to each other, becoming a support to each other.’

The following reciprocals are based on two-place intransitives governing (a) dative, (b) ablative and (c) allative object respectively; the base verbs typically denote emotional attitudes, help, meeting, contact, etc.

- (31) a. *adaarga-š-* ‘to envy each other’ (T. 36)
ažən-əš- ‘to be angry with each other’ (T. 43)
bajərga-š- ‘to boast of one’s wealth to each other’ (T. 87)
büzüre-š- ‘to believe each other’
čookšula-š- ‘to come together/approach each other’ (T. 540)
čöpšeere-š- ‘to agree with/allow each other’ (T. 543)
daŋəragla-š- ‘to give an oath to each other’ (T. 147)
de-eš- (← *deg-iš-*) ‘to touch each other, come into contact’ (T. 151)
duzala-š- ‘to help each other’ (T. 182)
el-xol bol-uš- ‘to support each other’
idege-š- ‘to rely on each other’ (T. 200)
kör-üš- ‘to see each other (= meet)’ (T. 229)
ögen-eš- ‘to rub against each other’
səməran-əš- ‘to whisper to each other’ (T. 397)
xomuda-š- ‘to complain of each other’ (T. 481)
ənan-əš- ‘to rely on/be sure of each other’ (T. 596)

- b. *biziirge-š-əjad-əš-* ‘to be shy of each other’ (T. 102)
 ‘to be ashamed of each other’ (T. 603)
- c. *kuskunna-š-xülümziir-üš-alčəŋna-š-* ‘to call to each other’ (T. 267)
 ‘to smile at each other’
 i. ‘to tease each other’, ii. ‘to flirt with each other’ (T. 595).

3.1.2 “Indirect” and benefactive reciprocals

These reciprocals are derived from three-place transitives. As in the previous case, an indirect object is deleted in the reciprocal construction; the direct object is retained; e.g.:

- (32) a. *Olar ol kino-nu eš-ter-i-n-ge čugaala-p tur-gan-nar.*
 they this film-ACC friend-PL-their-*n*-DAT tell-CONV AUX-PERF-3PL
 ‘They told their friends about this film.’
- b. *Olar ol kino-nu čugaala-ž-əp tur-gan-nar.*
 they this film-ACC tell-REC-CONV AUX-PERF-3PL
 ‘They were telling each other about this film.’

Here are a few more examples:

- (33) a. *Ol-la “Kaŋgəvaj-Mergen-ni” am-daa toolda-ž-əp tur-lar.*
 same K.-M.-ACC still tell.tale-REC-CONV AUX-3PL
 ‘(They) are still telling each other the same tale “Kangyvaj-Mergen”’
- b. *Kara-ool bile duŋma-sə nom bəlaa-ž-əp tur-lar.*
 K. and younger.brother-his book take.away-REC-CONV AUX-3PL
 ‘Kara-ool and his younger brother try to take a book away from each other.’
- c. *Kəžən, čajən-daa inek bile xoj o”t xunaa-š-pas.* (KK.)
 winter summer-even cow and sheep grass take.away-REC-NEG.3.NPAST
 ‘Either in winter or even in summer, the cow and the sheep do not take grass from each other (in the pasture).’
- d. *Bot-tar-ə-nəŋ kajgal-erez-i-n čüge makta-n-əš-pas*
 self-PL-their-GEN daring-their-ACC why boast-REFL-REC-NEG.3.NPAST
er-ler-il? (KK.)
 lad-PL-Q
 ‘Why don’t they boast of their daring to each other?’
- e. *Ol nom-nu sonuurga-an ulus oorla-ž-əp tur-gan.* (KK.)
 this book-ACC be.interested-CONV people steal-REC-CONV AUX-3.PAST
 ‘Those who wanted to read this book stole it from each other.’
- f. *Čaa koža-m-bile at-tar-əvəs ada-ž-əp, tanə-ž-əp*
 new neighbour-my-with name-PL-our name-REC-CONV know-REC-CONV
al-də-vəs. (SA.)
 AUX-PAST-1PL
 ‘We got acquainted with my new neighbour and gave our names to each other.’
- g. *Ojtulaaštaa-n ool-dar, kəs-tar sagəš-setkil-i-n ərla-p*
 have.night.fete-PART boy-PL girl-PL feeling-their-ACC sing-CONV
ilere-t-č-ip čora-an. (K-L.)
 appear-CAUS-REC-CONV AUX-3.PERF
 ‘During the night fete, the young people expressed to each other their feelings by singing.’

Note the fixed combination of two hyphenated reciprocals from three-place transitives used as a rule without a direct object, usually in the figurative sense ‘to help each other’, ‘to mutually exchange sth’ (cf. (68)).

- h. *Ugba-škə-lar ürgülčü al-čəp-ber-ž-ip čoru-ur.*
 sister-COLL-PL always take-REC-CONV-give-REC-CONV AUX-3.NPAST
 ‘Sisters always help each other’, lit. ‘... take from each other and give each other.’

Two-place transitives can be used with the reciprocal suffix in the benefactive meaning, though in sentences like (33i) *bot-bot-tar-ə-n-ga* is more common; cf.:

- i. *Olar [bot-bot-tar-ə-n-ga] bažəŋ-nar tut-č-up al-gan-nar.*
 they each-other-n-DAT house-PL build-REC-CONV AUX-PERF-3PL
 ‘They have built houses for each other’ (with the bracketed word omitted, it may be interpreted as ‘They helped someone to build a house’).

Reciprocals of this type are derived from main two subtypes of three-place transitives: a) those with the underlying verb taking an indirect object in the dative or in the allative case; b) those with the underlying verb taking an indirect object in the ablative case (sometimes interchangeable with a genitive attribute; cf. *I took a book from him – I took his book*). Besides, one or two verbs are in fact used as two-place, but they imply an addressee, and their reciprocal derivatives do not differ from reciprocal of the two groups named, as they retain the direct object (see *ada-š-* in (33f)).

- (34) a. *aaza-š-* ‘to promise sth to each other’
biži-š- ‘to write to each other’
čorud-uš- ‘to send sth to each other’
čugaala-š- ‘to tell sth to each other’ (T. 545)
dagdən-əš- ‘to promise sth to each other’
damčət-əš- ‘to pass sth to each other’
ileret-iš- ‘to express sth to each other’
makta-n-əš- ‘to boast of sth to each other’
okta-š- ‘to throw sth at each other’
sun-uš- ‘to hold out/offer sth to each other’
toolda-š- ‘to tell tales to each other’
 b. *ajtər-əš-* ‘to ask each other about sth’ (T. 48)
al-əš- i. ‘to take from each other’, ii. ‘to exchange sth’ (T. 56)
bəlaa-š- ‘to take sth away from each other’ (T. 130)
čəžər-əš- ‘to hide sth from each other’ (T. 509)
če-eš- (< *čeg-iš-*) ‘to borrow (money) from each other’ (T. 525)
nege-š- ‘to demand sth from each other’ (T. 308)
oorla-š- ‘to steal sth from each other’ (T. 323)
xunaa-š- ‘to take sth away from each other’ (T. 494).

3.1.3 “Possessive” reciprocals

3.1.3.1 *Derived from two-place transitives.* Base constructions of this type of reciprocals contain a two-place transitive (cf. (35) and (36c–h)) or intransitive (cf. (36a–b)) and an object with a possessive attribute (cf. *Maša-nəŋ* in (35a)). As in “indirect” constructions,

the object is retained and the possessive attribute is deleted. In the derived construction the object is usually plural and contains a possessive marker which agrees in person and number with the subject; it usually denotes inalienable (seldom alienable) possession.

- (35) a. *Galja Maša-nəŋ xol-u-n tud-up, baž-ə-n sujba-p ka-an.*
 G. M.-GEN hand-her-ACC press-CONV head-her-ACC stroke-CONV AUX.3
 ‘Galja shook Masha’s hand and stroked her head.’
- b. *Galja bile Maša xol-dar-ə-n tut-č-up, baš-tar-ə-n*
 G. and M. hand-PL-their-ACC press-REC-CONV head-PL-their-ACC
sujba-š-kan
 stroke-REC-3.PERF
 ‘Galja and Masha shook (each other’s) hands and stroked each other’s head.’

A few more examples:

- (36) a. *Xöj kiži at-kəla-š-kaš, a”t-tar-ə-n öl-ür-üš-ken.* (KK.)
 many man shoot-ITER-REC-CONV horse-PL-their-ACC die-CAUS-REC-PERF
 ‘Many people, shooting at each other, killed each other’s horses.’
- b. *Sara bile Šolban-ool xol-dar-ə-n tut-č-up, sujba-ž-əp*
 S. and Sh. hand-PL-their-ACC hold-REC-CONV stroke-REC-CONV
ka-ap or-gan-nar. (NO.)
 AUX-CONV AUX-PAST-3PL
 ‘Sara and Sholban pressed each other’s hands and stroked them from time to time.’
- c. *Olar baš-tar-ə-n čətta-ž-əp ka-an-nar.*
 they head-PL-their-ACC kiss-REC-CONV AUX-PAST-3PL
 lit. ‘They kissed (lit. ‘sniffed’) each other’s heads.’
- d. *Bis čunar-bažəŋ-ga oorga-lar-əvəs dərbü-ž-er bis.* (KK.)
 we wash-house-DAT back-PL-our rub-REC-NPAST 1PL
 ‘In the bath-house, we shall rub each other’s backs.’
- e. *Iji ava-škə baš-tar-ə-n kərgə-š-kan*
 two mother-COLL head-PL-their-ACC cut-REC-3.PERF
 ‘Mother and daughter (or son) have cut each other’s hair.’
- f. *Olar baš-tar-ə-n dərə-š-kan.*
 they head-PL-their-ACC comb-REC-3.PERF
 ‘They have combed each other’s hair.’

A specific instance with a possibly “possessive” reciprocal interpretation: omission of the reciprocal suffix changes the meaning considerably:

- (37) a. *Bis ənakšəl-əvəs-tə bil-č-ip al-də-vəs.* (DB.)
 we love-our-ACC understand-REC-CONV AUX-PAST-1PL
 ‘We realized we loved each other’ (= lit. ‘I understood her love for me’ + ‘She understood my love for her’).
- b. *Bis ənakšəl-əvəs-tə (baskə-lar-ga) bil-ip al-də-vəs*
 we love-our-ACC teacher-PL-DAT understand-CONV AUX-PAST-1PL
 ‘We realized we loved (our teachers); lit. ‘We understood our love (for teachers).’

3.1.3.2 *Derived from two-place intransitives.* In this case an oblique object referent of the underlying verb denotes an inalienable part of the attribute referent (cf. *oŋ* in (38a)).

Semantically, this type is close to the reciprocals considered above in 3.1.3.1, but it differs from the latter by the absence of a direct object (in colloquial speech, instead of the genitive attribute, sometimes a direct object occurs); e.g.:

- (38) a. *Ojna-an ool ooŋ arnə-baz-ə-n-če xa-pt-ar.*
 play-PART child he.GEN face-head-his-*n*-ALL hit-ASP-3.NPAST
 ‘The playing boy may hit him on the head.’
- b. *Ojna-an ool-dar bil-bein arnə-baz-ə-n-če kak-č-əpt-ar.*
 play-PART child-PL notice-NEG.CONV face-head-their-*n*-ALL hit-REC-ASP-3.NPAST
 ‘The playing children may hit each other on the head without noticing it.’
- (39) a. *Olar baš-tar-ə-n-dan sirbekte-š-ken.*
 they head-PL-their-*n*-ABL pull-REC-3.PERF
 ‘They pulled each other by the hair.’
- b. [*Olar*] *xol-dar-ə-n-dan čet-tin-č-ip-keš baz-əp-kan-nar.* (AD)
 they hand-PL-their-*n*-ABL lead-REFL-REC-ASP-CONV go-ASP-PERF-3PL
 ‘They went leading each other by the hand.’
- c. *Majgak-təŋ ool-dar-ə mojun-nar-ə-n-ga öge-n-iš-ken*
 she.maral-GEN baby-PL-their neck-PL-their-*n*-DAT rub-REFL-REC-PART
tur-lar. (DB.)
 stand.PRES.PROGR-3PL
 ‘The young of the maral are standing rubbing their necks against each other.’
- d. *Bis ijilee arən-nar-əvəs-če kör-ž-üp-ken tur bis.*
 we both face-PL-our-ALL look-REC-ASP-PART PRES.PROGR 1PL
 ‘We two are standing looking into each other’s faces.’
- e. *Olar xol-dar-ə-n-dan tut-un-č-up-kan-nar.*
 they hand-PL-their-*n*-ABL take-REFL-REC-ASP-PERF-3PL
 lit. ‘They took each other’s hands (in order to keep balance).’

3.1.4 Discontinuous constructions

Subject expression in reciprocal constructions does not differ from that in non-reciprocal constructions: it may be a plural noun, a collective noun in the singular, or it may be a singular noun if it is preceded by an expression of number, or a conjoined subject. The predicate always agrees with the subject in person, and in the 1st and 2nd persons in number, while in the 3rd person, as is mentioned above, the ending is \emptyset in the singular, while in the plural it may be optionally marked; e.g.:

- (40) a. *Bis xündüle-ž-ip čor bis.*
 we respect-REC-CONV AUX.PRES 1PL
 ‘We respect each other.’

The conjoined subject nouns are most commonly connected by the conjunction *bile* ‘and’; e.g.:

- b. *Men bile kadaj-əm xündüle-ž-ip čor bis.*
 I and wife-my respect-REC-CONV AUX.PRES 1PL
 ‘My wife and I respect each other.’

If the subject is singular and the co-participant is encoded by a noun phrase with the post-position *bile* ‘with’ (it should not be confused with the materially identical and genetically related conjunction *bile*, as in (40b)), the predicate may agree either with the singular subject or with the subject and expression of co-participant though the latter is most likely an object, i.e. in this case we are faced with a discontinuous construction; cf. respectively:

- c. *Men kadaj-əm-bile xündüle-ž-ip čor men.*
 I wife-my-with respect-REC-CONV AUX PRES.1SG
 (same translation as in (b)) lit. ‘I wife-my-with respect each other.’
- d. *Men kadaj-əm-bile xündüle-ž-ip čor bis.*
 I wife-my-with respect-REC-CONV AUX PRES.1PL
 (same as (c)).

Note that the difference between (40c) and (40d) can be neutralized in the case of a 3rd person subject and absence of the 3PL marker on the verb; thus (40e) may correspond both to (40c) and (40d), while (40f) corresponds to (40d) only:

- e. *Ol kadaj-ə-bile xündüle-ž-ip čor.*
 he wife-his-with respect-REC-CONV AUX.3.PRES
 ‘He and his wife respect each other.’
- f. *Ol kadaj-ə-bile xündüle-ž-ip čor-lar.*
 he wife-his-with respect-REC-CONV AUX-PRES.3PL
 (same translation).

It is problematic whether the postpositional noun-phrase in type (40d) and (40f) cases should be regarded as part of the subject group.

In a number of cases, as in the following example (see also (1d)), the comitative object with *bile* is possible if only the predicate contains the reciprocal suffix.

- (41) *Činčizik öreel-če kir-e ber-geš, uruu-bile čugaala-ž-ə*
 Ch. room-ALL enter-CONV AUX-CONV daughter-with talk-REC-CONV
ber-gen. (K-L.)
 AUX-3.PERF
 ‘Chinchizhik entered the room and began talking to her daughter.’

At the same time the discontinuous construction in (42) cannot be converted into a simple one, because the comitative group contains a reflexive pronoun.

- (42) *Bod-u-bile bod-u čugaala-ž-əp or-ar kiži boor be?* (K-L.)
 himself-with himself speak-REC-CONV AUX-3.NPAST man possibly really
 ‘Does the man really talk with himself?’

Practically all subject-oriented reciprocals can be used in discontinuous constructions.

3.1.5 Lexical specifiers *udur-dedir* ‘mutually’, ‘face to face’, ‘to meet’ and *arazənda* ‘among/between themselves’

When used separately, *udur* means i. ‘against sth’, ii. ‘to meet’ (cf. German *entgegen, gegenüber*), iii. ‘immediately’, iv. ‘simultaneously’, and *dedir* i. ‘in the opposite direction’, ii. ‘obstinate’, *ara* means i. ‘among/between’ and ii. ‘space (between two objects)’. In *ara-zə-*

n-da ‘among/between themselves’ the middle component *-zə-* is a 3SG and 3PL possessive suffix (cf. the table in (7a)), which means that the subject must be either a noun or a 3rd p. pronoun; *-n-* in this form is a semantically empty infix and *-da* is DAT. The other two forms are *ara-vəs-ta* ‘between/among ourselves’ and *ara-ŋar-da* ‘between/among yourselves’.

When used without a suffixed reciprocal, these two words are usually spatial in meaning, like lexical reciprocals, denoting either position between two or more entities (in this case *arazənda* functions as a postposition) or position or motion of two objects opposite each other respectively:

- (43) *Olar tal-dar arazənda tur.*
 they willow-PL among stand.3.PRES.PROGR
 ‘They are standing among willows.’
- (44) *Olar udur-dedir olur.*
 they opposite sit.3.PRES.PROGR
 ‘They are sitting opposite each other.’

These specifiers occur with reciprocals, both morphological and lexical. They emphasize that the action is taking place between the subject referents. Unlike the reciprocal pronouns, these adverbs cannot substitute for the reciprocal suffix nor, as a rule, for each other. The specifier *udur-dedir* is characteristic of sentences describing situations with participants opposite each other. In rare cases, as in (45), the reciprocal suffix may be omitted.

- (45) *Bujan bile Artaakə udur-dedir [→*arazənda] xülümzür-ž-üp-ken.* (KK.)
 B. and A. mutually between.them smile-REC-ASP-PERF
 ‘Bujan and Artaky smiled at each other.’
- (46) *Daartazənda udur-dedir [→?arazənda] mendile-ž-ir kiži čok bol-gan.* (VM.)
 next.day mutually between.them greet-REC-PART man NEG COP-3.PERF
 ‘On the next day the people did not greet each other.’
- (47) *Iji urug arazənda [→*udur-dedir] bir-le čüve dees margə-š-kan xevirliġ.*
 two girl between.them mutually something because.of argue-REC-3.PERF likely
 ‘It looked as if the two girls argued between themselves about something.’
- (48) *Iji ež-iški arazənda [→*udur-dedir] sümele-š-ken.*
 two friend-COLL between.them mutually advise-REC-3.PERF
 ‘The two friends talked things over between themselves.’

3.2 Object-oriented reciprocals in *-š-tər*

3.2.1 Causatives from subject-oriented reciprocals

This is a trivial case: in principle, any subject-oriented reciprocal (those that have been considered above) can be converted into object-oriented by means of the causative suffix *-tər* on condition that the situation described is natural (cf. (23) and the following).

- (49) a. = (27a, b)
 b. *Baškə olur-ž-up tur-gan ada-bile o-nu tanə-š-tər-də.*
 teacher sit-REC-CONV AUX-PART father-with he.ACC know-REC-CAUS-3.PAST
 ‘The teacher introduced (lit. ‘acquainted’) him to the father (who was present).’

3.2.2 Causatives from two-place anticausatives

By way of forestalling things, I wish to point out transformations which at first glance look like the one in (49), but in fact they differ sharply from it, though the derivational components and their mechanism are the same. The difference lies in the fact that in the relationship (27a) → (27b) both the subject and object of the former turn up as subject of the latter, while in (50a) → (50b) the object of the underlying sentence alone turns up as subject of the derived construction, while the original subject is dropped. This type of transformation is termed anticausative. If this transformation is semantically unburdened by any additional semantic changes, at the second stage, namely causativization, a return to the initial meaning or a meaning more or less similar to it is alone possible, though their interchangeability is very often impossible. For this reason Russian three-place lexical reciprocals in the *Russian-Tuvan Dictionary* (Mongush (ed.) 1980) are sometimes translated by means of the first and the third verbs of a chain of this kind.; e.g.: ‘to mix sth with sth’ = *holu-* and *holu-š-tur-* (M1. 542), ‘to join sth with sth’ = *ula-* and *ula-š-tər-* (M1. 549), ‘to liken sth to sth’ = *dömejle-* and *dömejle-š-tir-* (M1. 609), ‘to confuse sth/sb with sth/sb’ = *salča-* and *salča-š-tər-* (M1. 542), ‘to compare sth with sth’ = *deñne-* and *deñne-š-tir-* (M1. 552), ‘to collate sth with sth’ = *šüg-* and *šü-ü-š-tür-* (M1. 520) (< *šüg-üš-tür*). Not infrequently, three-place lexical reciprocals are translated by two, three and even four verbs in *-š-tər*, as the verb meaning ‘to combine/bring into concord’ is translated as *kattəštər-*, *düüštür-*, *taarəštər-*, and *xolbaštər-* (M1. 555).

- (50) a. *Ol meni ooñ-bile deñne-p tur.*
 he I.ACC he.GEN-with compare-CONV AUX.3.PRES
 ‘He compares me with him.’
 b. *Ooñ-bile deñne-š-ip šəda-vas men.* (T. 157)
 he.GEN-with compare-REC-CONV be.able-NEG.NPAST 1SG
 ‘I cannot be compared with him.’
 c. *Ol meni ooñ-bile deñne-š-tir-ip tur.*
 he I.ACC he.GEN-with compare-REC-CAUS-CONV AUX.3.PRES
 (same translation as (a)).

For more details see Section 8 below.

3.3 Restrictions on reciprocals with the suffix *-š*

There do not seem to be any significant non-trivial restrictions on the derivation of “canonical” and “indirect” reciprocals. As examples of rare restrictions, the following verbs (which sound strange to native speakers) can be quoted: *sagə-n-dər-* ‘to remind sb (ACC) of sth’, *des-* ‘to run away from/avoid sth (ABL)’ (and its synonyms *ojla-* and *durgunna-*), *čalən-* ‘to implore sb (DAT)’, *eereš-* ‘to implore sb (ACC)’, *idege-* ‘to rely on/trust

sb (ABL), *ijle-* ‘to miss sb very much’. Semantically, these verbs allow reciprocal use (which is shown by the fact that the synonyms of the latter verbs *çokta-* ‘to miss’ and *büzüre-* ‘to trust’ do have a reciprocal form (see T. 538 and (86b)). In these cases the reciprocal pronoun alone or in combination with a suffixed reciprocal is used, e.g.:

- (51) a. *Olar ürgülçü akə-m-dan dez-er tur-gan.*
 they always elder.brother-my-ABL avoid-PART AUX-3.PAST
 ‘They always avoided my elder brother.’
 b. *Olar ürgülçü bot-bot-tar-ə-n-dan dez-er tur-gan*
 they always each-other-n-ABL avoid-PART AUX-3.PAST
 ‘They always avoided each other.’
- (52) a. *Olar bot-bot-tar-ə-n-ga idege-p tur-gan-nar.*
 they each-other-n-DAT rely-CONV AUX-PAST-3PL
 ‘They relied on each other.’
 b. *Olar bot-bot-tar-ə-n-ga onu sagən-dər-əp tur-gan-nar.*
 ‘they each-other-n-DAT this.ACC remember-CAUS-CONV AUX-PAST-3PL
 ‘They reminded each other of this.’
 c. *Olar bot-bot-tar-ə-n eerež-ip tur-gan-nar.*
 they each-other-ACC implore-CONV AUX-PAST-3PL
 ‘They implored each other.’
 d. *Olar bot-bot-tar-ə-n-ga čann-əp tur-gan-nar.*
 they each-other-n-DAT implore-CONV AUX-PAST-3PL
 ‘They implored each other.’

As for “possessive” reciprocals, there are none to translate sentences with the following meanings: ‘A and B saddled each other’s horses’, ‘A and B broke each other’s arms’.

There are more complicated cases of reciprocals connected with certain lexical meanings. Thus, for instance, the reciprocal form of the verb *ənakšə-* ‘to love/fall in love’ (from the adjective *ənak* ‘beloved’), namely *ənakšə-š-*, whose meaning is defined as ‘to fall in love with each other’ (T. 596) is most commonly used in the participial form *ənakšə-š-kan* ‘(having fallen) in love with each other’, while the meaning ‘to love each other’ is rendered by the adjective *ənak* ‘beloved’ with the dative case of the reciprocal pronoun:

- (53) *Olar bot-bot-tar-ə-n-ga ənak.* ‘They love each other.’

Though most of the reciprocals raise no doubts, the informants are sometimes in doubt whether the reciprocal form of a given verb is possible (this may be due to the frequency of the relevant situations in life); sometimes they disagree with each other and even with the dictionary. Thus, for instance, some of the native speakers reject reciprocals registered in the dictionary (see (54)); this rejection may be accounted for by the fact that a form in *-š* has a lexicalized meaning rather than a standard reciprocal meaning, like *či-š-* lit. ‘to eat each other’ more often used in the meaning ‘to compete’; in these cases the reciprocal reading requires support of the reciprocal pronoun (see (54b)):

- (54) a. *aaza-š-* ‘to promise each other’ (T. 26)
ažaa-š- ‘to take care of/feed each other’ (T. 39)
xöŋnü kal-əš- ‘to be disappointed with each other’
məžəra-š- ‘to whisper together with each other’ (T. 305).

- b. *Ol ajmak-tar bot-bot-tar-a-n čičip ka-ap-kan.*
 this tribe-PL each-other-ACC eat-REC-CONV AUX-ASP-3.PERF
 ‘These tribes ate one another.’

Some of the verbs may acquire the reciprocal suffix when used with negation only, due to their lexical meaning; e.g.: *tiile-/šüg-/aš-* ‘to win, overcome sb’ (see (55a)); though other verbs with a similar meaning are used reciprocally (see (55b)). But the causative from (55b) does not yield a reciprocal (cf. (55c, d)).

- (55) a. *Alaškalar kažan-daa tiile-š-pes (= šü-üş-pes = aš-aš-pas).*
 brothers never-EMPH overcome-REC-NEG.3.NPAST
 ‘The brothers never overcome one another.’
 b. *Alaškalar šadāraa-ga ut-č-up kaap-kan-nar.*
 brothers chess-DAT defeat-REC-CONV AUX-PAST-3PL
 ‘The brothers finished the chess game’, lit. ‘... defeated each other.’
 c. *Ol akā-m-ga šadāraa-ga ut-tur-up al-gan.*
 he elder.brother-my-DAT chess-DAT defeat-CAUS-CONV AUX-3.PERF
 ‘He lost a game of chess to my elder brother’, lit. ‘... let ... defeat himself.’
 d. **Alaškalar šadāraa-ga ut-tur-uš-up kaap-kan-dār.*
 brothers chess-DAT defeat-CAUS-REC-CONV AUX-3.PAST-PRTL
 (intended meaning:) ‘The brothers lost chess games to each other [by turns].’

3.4 Simultaneity and succession

As well as in other languages, reciprocals can denote both simultaneous and successive sub-actions of the participants; cf. (1c) and (56) respectively:

- (56) a. *Duruja-lar murnuu čük-če šuuž-up-kaš soñnug-murnug*
 crane-PL southern side-ALL move.in.a.line-ASP-CONV by.turns
kājgər-aš-kan-nar. (ED.)
 call-REC-PERF-3PL
 ‘The cranes flew south in a line, [they] called to each other by turns.’
 b. *Iji xovagan-nar ... səvər-ž-əp ...* (AD.)
 two butterfly-PL chase-REC-CONV
 ‘Two butterflies chased each other ...’
 c. *Student čora-aš, xöjleñ-ner-ivis ačāla-ž-əp, ket-č-ip čora-an*
 student be-CONV shirt-PL-our borrow-REC-CONV put.ON-REC-CONV be-PERF
bis. (BM.)
 1PL
 ‘When we were students we borrowed shirts from each other and wore them by turns.’

This is true of both suffixed and pronominal reciprocals; cf.:

- (57) a. *Doržu onu telefon-bile ottur-up tur-gan.*
 D. him telephone-with waken-CONV AUX-3.PAST
 ‘Dorju wakened him by telephone.’

- b. *Olar telefon-bile ottur-ž-up tur-gan-nar.*
 they telephone-with waken-REC-CONV AUX-PAST-3PL
 ‘They wakened each other by telephone.’
- c. *Olar bot-bot-tar-a-n ottur-ž-up tur-gan-nar.*
 they each-other-ACC waken-REC-CONV AUX-PAST-3PL
 ‘They wakened each other (by turns).’
- d. *Olar bot-bot-tar-a-n oočurlap üde-ž-ip tur-gan-nar.*
 they each-otherACC by.turns see-REC-CONV AUX-PAST-3PL
 ‘They saw each other off by turns.’
- e. *Tarbagan-nar örü-kudu mañna-ž-əp, səvarta-ž-əp, bot-bot-tar-a-n*
 marmot-PL up.down run-REC-CONV chase-REC-CONV each-other-ACC
aža hal-č-əp-la tur-lar. (KK.)
 jump.over-REC-CONV-INTS AUX-3PL
 ‘Marmots ran back and forth, chased each other, jumped over each other.’

It is but natural that reciprocals with a successive reading are derived from verbs whose lexical meaning excludes simultaneous action of co-participants (e.g., ‘to defeat’, ‘to pay a visit’, ‘to shave’, ‘to chase’, ‘to inform’, etc.).

- (58) a. *okta-* ‘to overcome/defeat sb in wrestling’
 → *okta-š-* i. ‘to overcome/defeat each other by turns in wrestling’
 ii. ‘to throw each other somewhere’ (in wrestling) (T. 317)
- b. *kag-* ‘to win in wrestling’
 → *ka-aš-* ‘to win over each other by turns in wrestling’ (T. 214)
- c. *šala-* ‘to check (in chess)’
 → *šala-š-* ‘to check each other’s king by turns’ (T. 566)
- d. *aalda-* ‘to pay visits to sb’
 → *aalda-š-* ‘to pay visits to each other’ (T. 228)
- e. *čülü-* ‘to shave sb’
 → *čülü-š-* ‘to shave each other’ (T. 551)
- f. *medegle-* ‘to inform sb’
 → *medegle-š-* ‘to inform each other’ (T. 292)
- g. *a”sta-n-* ‘to tidy up (one’s place)’ (← *a”sta-* ‘to tidy up (a flat, etc.)’)
 → *a”sta-n-aš-* ‘to tidy up each other’s place by turns.’

A peculiar feature of reciprocals with meanings like ‘to overcome each other’ (cf. (59b, c)) is a slight shift of meaning in perfective past forms: these forms express completion of the action with an unclear outcome: it remains unclear if one of the co-participants has won, or if it has been a draw, the main point being that the competition, wrestling, etc. is over. The singular number of the subject is not correct. These reciprocals do not combine with the reciprocal pronoun (59e), in contrast to standard “canonical” reciprocals (cf. (85)).

- (59) a. *Möge onu okta-p-kan.*
 wrestler he.ACC defeat-ASP-3.PERF
 ‘The wrestler has defeated him’, lit. ‘... threw him (to the ground).’
- b. *Möge-ler okta-ž-əp tur.*
 wrestler-PL defeat-REC-CONV AUX.3.PRES
 ‘The wrestlers are wrestling defeating each other by turns.’

- c. *Möge-ler okta-ž-əp-kan.*
wrestler-PL defeat-REC-ASP-3.PERF
'The wrestlers have had a fight/finished a fight.'
- d. **Möge okta-ž-əp-kan.*
wrestler defeat-REC-ASP-3.PERF
(intended meaning:) 'The wrestler has finished a fight'; cf. also:
- e. **Möge-ler bot-bot-tar-ə-n okta-ž-əp tur.*
wrestler-PL each-other-ACC defeat-REC-CONV AUX.3.PRES
'The wrestlers are wrestling defeating each other by turns.'
- (60) a. *Šomaadər Daržaa-nə šədəraa-ga ut-kan.*
Š. D.-ACC chess-DAT defeat-3.PERF
'Shomadyr won a game of chess from Darzha' (lit. '... defeated D. in chess').
- b. *Š. bile D. šədəraa-ga ut-č-up-kan.*
Š. and D. chess-DAT defeat-REC-ASP-3.PERF
'Sh. and D. have finished a game of chess.'

It is typologically interesting that in Bulgarian reciprocals of competition derived from verbs of overcoming and the like may sound somewhat unnatural in aorist of the perfective aspect, as both contestants cannot win in the same event (see Penchev, Ch. 13, §10), while respective Tuvan reciprocals are used in analogous tense/aspect forms, but with a slight shift in meaning.

3.5 Derivatives from reciprocals

3.5.1 *Nomina actionis*

In Tuvan, like in other Turkic languages, there is a considerable number of suffixes used to derive nouns from verbs. I shall briefly survey the forms in *-ar* and *-kan* which are in fact verbal forms, and also a number of other suffixes which derive nouns proper.

3.5.1.1 *With the suffixes -ar and -kan.* These suffixes seem to have no restrictions on their combinability with verbal stems. The form in *-ar* (see case 4 in 2.3) is the one in which verbs are usually entered in the dictionaries (like infinitives in some European languages), but it differs from infinitives in that it is inflected for cases though it retains a direct object like infinitives; its agent is expressed by the genitive case. Its nearest analogue in some languages seems to be the English gerund. These forms are used with possessive suffixes (cf. *olur-ar-ə* in (61b) and *sümele-š-ken-i-n* in (62b)).

- (61) a. *Iji ež-iški mogat-tən-č-əp, xəjərta-ž-əp olur-lar.*
two friend-COLL resent-REFL-REC-CONV look.askance-REC-CONV AUX-3PL
'Both friends resent each other and look askance at each other.'
- b. *Iji ež-iški-niñ mogat-tən-č-əp xəjərta-ž-əp*

AUX-PART-their side-their-n-ABL seen COP-3.PERF
lit. 'The two friends' resenting each other and looking askance at each other was obvious.'

- (62) a. *Ava-m bile ača-m sümele-š-ken-ner.*
 mother-my and father-my advise-REC-PERF-3PL
 ‘My mother and father talked things over with each other.’
- b. *Ava-m bile ača-m-nəŋ sümele-š-ken-i-n bil-ip*
 mother-my and father-my-GEN advise-REC-PART-their-ACC understand-CONV
kag-də-m.
 AUX-PAST-1SG
 lit. ‘I understood mother and father’s talking things over with each other.’

3.5.1.2 *With the suffixes -əškan and -lga.* Besides these two, the suffixes *-əl*, *-əlda*, *-əm*, *-əg*, etc., are also used, but practically only they can derive *nomina actionis* from a limited number of suffixed reciprocals. They are probably the most frequent noun-forming suffixes, and nouns with these suffixes are quite numerous in the dictionaries; there are also some derivatives from reciprocal verbs. The latter manifest a kind of selectivity of these suffixes; as it happens, the derivatives from reciprocals (including those entered in the dictionaries) are rarely used or out of use (here belong (63.b.1–2); (64.b.1–2–3); (65.b.1)). The following examples registered in the dictionaries give an idea of these derivatives, though some informants reject them or consider them outdated (e.g. (63b.1, 2), (64b.1, 2, 3)).

- (63) a. *oška-* ‘to kiss’ → *oška-aškən* ‘a kiss’ (M1. 432)
- b. *oška-š-* ‘to kiss each other’ → 1. *oška-ž-əškan* ‘mutual kiss’ (T. 329)
 2. *oška-ž-əlga* (same) (T. 329)
 3. *oška-ž-ər-ə* lit. ‘kissing-their’ (M1. 432).
- (64) a. *at-kəla-* ‘to fire repeatedly’ → *at-kəla-aškən* ‘repeated fire’
- b. *at-kəla-š-* ‘to exchange fire’ → 1. *at-kəla-ž-əškan* ‘exchange of fire’ (T. 75; M1.383)
 2. *at-kəla-ž-əlga* (same)
 3. *at-kəla-ž-əg* (same).
- (65) a. *bil-* ‘to understand’ → 1. *bil-iškin* ‘concept’
 2. *bil-ig* i. ‘concept’, ii. ‘knowledge’ (M1. 420; T. 103)
 3. *bil-ir-i* ‘understanding’ (M1. 420)
- b. *bil-iš-* ‘to understand each other’ → 1. *bil-č-ilge* ‘mutual understanding’
 2. *bil-č-iškin* (same)
 3. *bot-bottaran bil-č-ir-i* (same) (M1. 67).

3.5.1.3 *With the suffix -š.* These are nouns ending in *-š* which are formally identical with semantically related reciprocals. In contrast to some other Turkic languages (e.g. Kirghiz), this suffix is unproductive in Tuvan (Isxakov & Pal’mbox 1961:157, 161). Nevertheless, it may be useful to briefly consider derivations with it, especially because there is an opinion that it is genetically related to the reciprocal suffix *-š* (Radloff 1897:57–8; for an overview of the opinions see Ch. 26 on Yakut). Most of the semantically reciprocal nouns of this type denote aggressive or competitive actions. This unproductive nominal suffix (its allomorphs coincide with those of the reciprocal suffix; see case 3 in 2.4) is used in two types of derivational chains. In both types the derivational direction between the forms in *-š* is not self-evident.

(a) The verb and the noun coincide entirely and are equally related to the same underlying non-reciprocal verb:

- (66) a. *sok-* ‘to beat’ → *sog-uš-* ‘to fight’, *sog-uš* ‘a fight’ (T. 379)
 b. *margə-* ‘to argue’, ‘to compete’ → *margə-š-* ‘to argue’, *margə-š* ‘argument’ (T. 287)
 c. *üle-* ‘to divide’ → *üle-š-* ‘divide among each other’, *üle-š* ‘dividing/division’ (T. 447).

(b) The base verb is non-existent, and the marked verb and the noun are materially identical; all of them are *reciproca tantum* (see 8.1):

- (67) a. *xüreš-* ‘to wrestle’ – *xüreš* ‘wrestling’ (T. 498)
 b. *kəṛəš-* ‘to quarrel’ – *kəṛəš* ‘quarrel’ (T. 279-80)
 c. *algəš-* ‘to quarrel’ – *algəš* ‘quarrel’ (T. 53)
 d. *čarəš-* ‘to compete’ – *čarəš* ‘competition/contest’ (T. 280)
 e. *čoguš-* ‘to fight’ – *čoguš* ‘a fight’ (T. 538); *čo(gu)š* → *čoš* ‘a fight’ (T. 579).

There exist paired formations of this kind of reciprocal nouns; e.g.:

- (68) *adaš-čarəš* flk. ‘competition (e.g. in shooting, running)’ (T. 39) (cf. *at-* ‘to shoot’)
aləš-beriš ‘mutual exchange’ (T. 56) (cf. *al-* ‘to take’, *ber-* ‘to give’; cf. (33h))
čoguš-kəṛəš ‘quarrel/fight’ (T. 538).

This same suffix is also encountered on non-reciprocal nouns; as a rule, though not always (cf. (69a) and (69b)), their derivational status is obvious. Paired nouns may be formed from non-reciprocals as well (60c):

- (69) a. *kör-* ‘to see’ → *kör-üš* ‘sight’
tən- ‘to breathe’ → *tən-əš* ‘breath’
təp- ‘to find’ → *təp-əš* ‘(a) find’
či- ‘to eat’ → *či-š* ‘food’ (I.P. 158)
 b. *dalaš-* ‘to be in a hurry’ – *dalaš* ‘hurry’ (T. 145)
 c. *eegiš-tənəš* ‘short breath/wind’ (T. 605).

3.5.2 Adjectives in *-š* and adverbs in *-š-təṛ*

To complete the picture, we shall consider these derivatives.

There is a small group of adjectives with final *-š* which are derived by means of grammatical conversion from lexical or suffixed reciprocals. In (70a, b, c), the types symmetrical to (66) are illustrated. Very seldom, an adjective with a reciprocal meaning is formed from a non-reciprocal verbs, cf. (70d) and (70e):

- (70) a. *tut-* ‘to squeeze/hold’ b. *xevirle-* ‘to give form/shape’
tud-uš- ‘to join/merge/flow together’ *xevirle-š-* ‘to be alike/like’
tuduš ‘solid/dense/continuous’ (T. 428) *xevirle-š* ‘alike’ (T. 472).
 c. *öže-* ‘to do sth to spite sb’ d. *dužaa-* ‘to be/come alongside of sth’
öže-š- i. (same), ii. ‘to be obstinate’ *dužaaš* i. ‘situated opposite sth’
öže-š ‘obstinate’ (T. 332, 333) ii. ‘situated opposite each other’ (T. 181).
 e. *okta-* ‘to load/charge’ (a gun, etc.)
okta-š ‘of the same calibre’ (of weapons)
 (cf. *okta-š-* ‘to load/charge sth together’) (T. 317).

Adverbs, mostly of *manner*, can be derived from a limited number of reciprocals by means of the causative suffix *-tur/-tər/-tür/-tir/...* (see 4 in Section 2.5). These adverbs can be derived from qualitative adjectives, and from root and derived verbs, including, as mentioned, reciprocal verbs (see Isxakov & Pal'mbax 1961:426–7). Adverbs from reciprocals are as a rule homonymous to causatives with the same root (see (71d)) and (72)); an exception is (71c) in which there is no verb *utku-š-tur-*.

- (71) a. *čaraš* i. 'beautiful', ii. 'beautifully' → *čaraš-dər* 'beautifully' (T. 518);
 b. *dəŋna-* 'to hear' → *dəŋna-l-* 'to be heard' (pass.) → *dəŋna-l-dər-* 'aloud' (T. 193–4)
 c. *utku-* 'to go to meet sb' → *utku-š-* 'to meet (each other)'
 → **utku-š-tur-* (intended meaning:) 'to bring together'
utku-š-tur (T. 441) = German *entgegen*
 d. *tut-* 'to squeeze/hold' → *tud-uš-* 'to join/merge'
 → *tud-uš-tur-* 'join/merge sth together', *tud-uš-tur* 'in one, inseparably' (T. 422–3).
- (72) *udur* i. 'against (sth)', ii. 'to meet'
 → *udur-lan-* i. 'to go against sth/resist' ii. 'to be against, object, protest'
 → *udur-lan-əš-* 'to oppose each other'
 → *udur-lan-əš-tər-* 'to oppose sth to sth'
udur-lan-əš-tər i. 'in opposition to sb/sth', ii. 'opposite each other' (T. 434).

An expansion of the suffix *-tur* is *-kula-š-tər/-kəla-š-tər/...* which differs from it in that it derives a limited number of adverbs from nouns, not verbs (Isxakov & Pal'mbax 1961:428), with the meaning of *comparison* (as is known, comparison is a reciprocal concept). This suffix includes the two-component combination *-š-tər* as a semantically fused whole, even within the structure of the adverbs cited above. The genetic relations of *-kula-/kəla/...* are unclear (it is unlikely to be related to the materially identical suffix *-kula /-kəla/...* 'repeatedly and in many places'; this is supported by the fact that in the Todža dialect this suffix has the form *-šəla-š-tər*; cf. *balək-šəla-š-tər* 'like a fish, in a fishlike manner'; cf. *balək šəlaŋ* with the same meaning (Čadamba 1974:95)).

- (73) *kuš* 'bird' → *kuš-kula-š-tər* 'like a bird', 'in a birdlike manner' (T. 267)
oor 'thief' → *oor-gula-š-tər* 'like a thief', 'in a stealthy manner' (T. 323)
ot 'fire' → *ot-kula-š-tər* 'like fire' (T. 326)
sogun 'arrow' → *sogun-gula-š-tər* 'like an arrow' (T. 379)
xat 'wind' → *xat-kəla-š-tər* 'like wind' (T. 471).

4. Diathesis types of constructions with the reciprocal pronoun *bot-bot-tar-ə* 'each other'

4.1 Introductory

The following table contains all the case forms of the reciprocal pronoun for all the three persons (see also (9)). Note that the case endings are preceded by a possessive suffix: *-əvəs* 'our', *-əŋar* 'your' and *-ə* 'their'. As mentioned above, in the 3PL forms the component *-n*

which has no meaning is inserted between the possessive suffix *-ə* and a case suffix unless the latter contains *-n*.

(74)	1PL	2PL	3PL
NOM	<i>bot-bot-tar-əvəs</i>	<i>bot-bot-tar-əŋar</i>	<i>bot-bot-tar-ə</i>
GEN	<i>bot-bot-tar-əvəs-təŋ</i>	<i>bot-bot-tar-əŋar-nəŋ</i>	<i>bot-bot-tar-ə-nəŋ</i>
DAT	<i>bot-bot-tar-əvəs-ka</i>	<i>bot-bot-tar-əŋar-ga</i>	<i>bot-bot-tar-ə-n-ga</i>
ACC	<i>bot-bot-tar-əvəs-tə</i>	<i>bot-bot-tar-əŋar-nə</i>	<i>bot-bot-tar-ə-n</i>

ALL	<i>bot-bot-tar-əvəs-če</i>	<i>bot-bot-tar-əŋar-že</i>	<i>bot-bot-tar-ə-n-če</i>

This section concerns both constructions with this pronoun and a non-reciprocal verb and those in which it appears with suffixed reciprocal verbs.

4.1.1 *The reflexive-distributive meaning of the reciprocal pronoun*

Before we consider constructions with the reciprocal meaning, we shall discuss briefly the distributive meaning i.e. the meaning ‘each (separately)’. It is less common than the reciprocal meaning proper. With regard to this meaning, Tuvan seems to differ from Yakut, Kirghiz, and Karachay-Balkar. A kind of analogy is observed in Japanese where the counterpart reciprocal noun occurs in the same syntactic positions as the Tuvan reciprocal pronoun, namely it appears in any syntactic position excepting, it seems, that of direct object – in this position the proper reciprocal meaning alone is realized (see Alpatov et al., Ch. 42, §2.9.3).

The different case forms of the reciprocal pronoun are distributed between the two meanings as follows: (1) nominative – reflexive-distributive meaning only; (2) accusative – reciprocal meaning only; (3) dative (and possibly other oblique cases) and genitive – reciprocal when used with a reciprocal verb and reflexive-distributive or reciprocal when used with a non-reciprocal verb. In the latter instance the interpretation is not obvious and native speakers hesitate and sometimes contradict each other and even themselves if asked at intervals.

4.1.1.1 *In subject position.* In this function, the reciprocal pronoun appears in the *nominative case* as part of the subject group (75). It is used with the subject proper like an identifying pronoun, compare the English reflexive pronoun in the sentence *Father himself said so*. To be precise, the counterpart of the English *himself* is the nominative case of the reflexive pronoun *bod-u* and *bot-tar-ə* is a counterpart of *themselves* (with a plural subject):

- (75) a. *Ol bod-u onu kamgala-ar.*
 he self-his he.ACC defend-3.NPAST
 ‘He himself defends him.’
- b. *Olar bot-tar-ə onu kamgala-ar.*
 they self-PL-their he.ACC defend-3.NPAST
 ‘They themselves defend him.’

In (75c) the reciprocal pronoun (glossed here as ‘self-self-...’ in agreement with the glossing of the reflexive pronoun) takes the direct object position and has accusative marking. In (75d) *bot-bot-tarə* does not occupy an object position, which is shown by the ungrammaticality of (75f) because the object position is unoccupied and by the artificial, though grammatical, character of (75g) in which the direct object position is taken by the reciprocal pronoun. The meaning of *bot-bot-tar-ə* in (75d, e) differs from that of *bot-tar-ə* in (75b) by the component of distributivity, i.e. ‘each (of the subject referents) separately’.

- c. *Olar bot-bot-tar-ə-n kamgala-ar.*
 they self-self-PL-their-ACC defend-3.NPAST
 ‘They defend each other.’
- d. *Olar bot-bot-tar-ə onu kamgala-ar.*
 they self-self-PL-their he.ACC defend-3.NPAST
 ‘They themselves (each separately) defend him.’
- e. *Olar bot-bot-tar-ə kamgala-ž-ər.*
 they self-self-PL-their defend-REC-3.NPAST
 ‘They themselves (each separately) defend each other.’
- a. **Olar bot-bot-tar-ə kamgala-ar.*
 they self-self-PL-their defend-3.NPAST
 ‘They themselves defend’ (whom?)
- g. *Olar bot-bot-tar-ə bot-bot-tar-ə-n kamgala-ar*
 they self-self-PL-their each.other-PL-their-ACC defend-3.NPAST
 ‘They themselves defend each other.’

Usages of the (75e) type are also possible for the 1PL and 2PL persons:

- h. *Bis bot-bot-tar-əvəs kamgala-ž-ər bis.*
 we self-self-PL-our defend-REC-NPAST 1PL
 ‘We ourselves defend each other.’
- i. *Siler bot-bot-tar-əŋar kamgala-ž-ər siler.*
 you.PL self-self-PL-your defend-REC-NPAST 2PL
 ‘You yourselves defend each other.’

4.1.1.2 *In non-subject positions.* In these cases the reciprocal pronoun occurs most commonly in the dative object and attributive position in which it may have both reciprocal and reflexive-distributive reading; cf. respectively (for comparison, parallel constructions with the reflexive pronoun are given):

- (76) a. *Olar bot-bot-tar-ə-n-ga büzüre-er.*
 they each-other-n-DAT believe-3.PRES
 i. ‘They believe *each himself / themselves*.’
 ii. ‘They believe *each other*.’
- b. *Olar bot-tar-ə-n-ga büzüre-er.*
 they self-PL-their-n-DAT believe-3.PRES
 ‘They believe themselves’ (see also (2e)).

- (77) a. *A bile B bot-bot-tar-ə-nəŋ a”d-ə-n suggar-gan.*
 A and B each-other-GEN horse-their-ACC water-3.PERF
 i. ‘A and B have watered *each his own* horse.’
 ii. ‘A and B have watered *each other’s* horses.’
 b. *A bile B bot-tar-ə-nəŋ a”d-ə-n suggar-gan.*
 A and B self-PL-their-GEN horse-their-ACC water-3.PERF
 ‘A and B have watered their horses.’

(76a) is a “canonical” construction derived from a two-place intransitive and (77a) is a “possessive” construction.

4.1.2 *Relations between suffixed and pronominal reciprocals*

As has been mentioned above, *the reciprocal pronoun most frequently occurs with suffixed reciprocals in texts*, but suffixed reciprocals mostly occur without a reciprocal pronoun. If a suffixed reciprocal is very frequent in speech or it is lexicalized to a greater or lesser degree its pronominal counterpart is not used, as a rule (cf. (78b) which is grammatical and clear but not natural), or it requires special context justifying its use; sometimes they may differ in meaning, as in (79). Generally, pronominal reciprocals seem to be more frequent in everyday speech, but in the case of some verbs naming the most common activities the suffixed form is preferable; thus (78a) is preferable to (78b).

- (78) a. *Olar kuspakta-ž-əp tur-lar.*
 they embrace-REC-CONV AUX-PRES.3PL
 ‘They are embracing’ (cf. (1c)).
 b. *Olar bot-bot-tar-ən kuspakta-p tur-lar.*
 they each-other-ACC embrace-CONV AUX-PRES.3PL
 (same translation).
 (79) a. *Olar bil-č-ir.*
 they understand-REC-3.NPAST
 ‘They understand each other’ (= ‘They are like-minded’, etc.).
 b. *Olar bot-bot-tar-ən bil-ir.*
 they each-other-ACC know-3.NPAST
 ‘They know each other’ (i.e. ‘sth/all about each other’).

The reciprocal pronoun can be related to several coordinated predicates without -š; cf.:

- (80) *Urug-lar bot-bot-tar-ə-n kajga-p, magada-p tur-gan-nar.*
 girl-PL each-other-ACC stare-CONV admire-CONV AUX-PAST-3PL
 ‘The girls stared at and admired each other.’

In some cases, the reciprocal pronoun is used with suffixed reciprocals to avoid ambiguity of the latter; cf. (54b) and the text above. Thus in the following example the reciprocal pronoun serves to exclude the sociative reading ‘to smile together’ (see also (45)):

- (81) *A bile B bot-bot-tar-ə-n-če xülümzür-ž-üp-ken.*
 A and B each-other-n-ALL smile-REC-ASP-3.PERF
 ‘A and B smiled at each other.’

For obscure reasons, certain suffixed reciprocals are preferably used with the reciprocal pronoun. Sometimes, such simultaneous use makes an utterance “milder”; cf. respectively:

- (82) a. *Daržaa bile Arakčaa bot-bot-tar-ə-n makta-ž-əp tur-gan-nar.*
 D. and A. each-other-ACC praise-REC-CONV AUX-PAST-3PL
 ‘Darzha and Arakcha praised each other.’
 b. *Sajana bile Saglaj ol ažal-ga bot-bot-tar-ə-n ažagla-ž-əp tur-gan.*
 S. and S. that work-DAT each-other-ACC use-REC-CONV AUX.3.PERF
 ‘Sajana and Saglaj helped (lit. ‘used’) each other in that work.’

4.2 Subject-oriented constructions

4.2.1 “Canonical” reciprocals

A characteristic feature of these reciprocals is that in the direct object position, i.e. with two-place transitives, the reciprocal pronoun *bot-bodu/bot-bottarə* is relatively rare, while in a non-direct object position, i.e. with two-place intransitives and three-place transitives, it is much more common. As mentioned, *the reciprocal pronoun most commonly occurs with suffixed reciprocals*. In this case it may be omitted, as a rule. Its function is limited to emphasizing the reciprocal meaning (and/or two participants) by explicitly distinguishing it from other possible interpretations (see Section 5).

4.2.1.1 *With two-place transitives.* In reciprocal constructions the pronoun occupies the direct object slot and acquires the accusative marker. The following examples illustrate co-occurrence of the reciprocal suffix and the reciprocal pronoun. So far, we have only three textual examples with the reciprocal pronoun without a suffixed reciprocal (see (84)). Constructions can be formed by the same verbs as in 3.1.1.1.

- (83) a. *Olar bis-ti detki-zin-ner!*
 they we-ACC support-IMP.3-3PL
 ‘Let them help us!’
 b. *Bot-bod-uvus-tu detki-ž-eeli!*
 each-other-our-ACC support-REC-IMP.1DU
 ‘We shall help each other!’
- (84) a. *Ava-zə bile uruu bot-bot-tar-ə-n čokta-j be-er*
 mother-her and daughter each-other-ACC miss-CONV BEN-PART
apar-gan-nar. (SS.)
 begin-PAST-3PL
 ‘Mother and daughter began to miss each other.’
 b. *Az-aš-kan iji kiži bot-bot-tar-ə-n araj dep tə-p al-gan-nar.* (ED.)

 two self-their quite-well each-other-ACC good know-REC-3.NPAST
 ‘Both of them are quite well, (they) know each other well.’
- f. ... *bot-bot-tar-ə-n bil-iš-pes ög-ler tur-ar ...* (K-L.)
 each other-ACC know-REC-NEG.PART family-PL AUX-3.NPAST
 ‘... there are families who don’t know each other.’
- g. *Kiži-ler čüge bot-bot-tar-ə-n öl-ür-ž-ür čüvel?* (AD.)
 man-PL why each-other-ACC die-CAUS-REC-3.NPAST Q
 ‘Why do people kill each other?’
- h. *Demir bile Bajərmaa bot-bot-tar-ə-n ol deš čemele-š-pe-en.* (AD.)
 D. and B. each-other-ACC this because.of reproach-REC-NEG-3.PERF
 ‘Demir and Bajirmaa did not reproach each other because of this.’
- i. ... *bot-bot-tar-ə-n čemger-ž-ip olur-ar kögebuga-lar ...* (AD.)
 each-other-ACC feed-REC-CONV AUX-PART pidgeon-PL
 ‘... pidgeons feeding each other ...’
- j. [*Bis*] *bot-bod-uvus-tu ajtər-ž-əp ...* (AD.)
 we each-other-our-ACC ask-REC-CONV
 ‘[We]... asking each other ...’
- k. *Bot-bod-uvus-tu šagga kiir kajga-ž-əp al-də-vəs.* (AD.)
 each-other-our-ACC long.time look-REC-CONV AUX-PAST.1PL
 ‘We looked at each other for a long time.’
- l. *Iji ool... bot-bot-tar-ə-n čug-dun-č-u ber-gen-ner.*
 two boy each-other-ACC wash-REFL-REC-CONV AUX-PERF-3PL
 ‘Two boys began washing each other.’

4.2.1.2 *With two-place intransitives.* The reciprocal pronoun takes the place of an oblique object and acquires the same case marking:

- (86) a. *Olar ada-sə-n-ga büzüre-er.*
 they father-their-n-DAT believe-3.NPAST
 ‘They believe their father.’

- b. *Olar bot-bot-tar-ə-n-ga büzüre-ž-ir.*
 they each-other-*n*-DAT believe-REC-3.PRES
 ‘They believe each other.’

As in the previous case, the reciprocal pronoun occurs most commonly with suffixed reciprocals. Needless to say, the same verbs are used here as in 3.1.1.2, and those which cannot take the reciprocal suffix (see 3.3).

- (87) a. *Olar bot-bot-tar-ə-n-dan bižiirge-ž-ip tur-lar.*
 they each-other-*n*-ABL feel.shy-REC-CONV AUX-PRES.3PL
 ‘They feel shy before each other.’
- b. *Amədəral bot-bot-tar-ə-n-ga büzüre-š-pes kəldər öödred-ip*

ka-an. (KK.) (*ka-an* < **kag-gan*; see 2.1)
 AUX-PERF
 ‘Life ... has taught [people] not to believe each other.’
- c. “... *Bot-bot-tar-ənar-že kör-ž-üp, oška-ž-əp kör-üner.*” (DB.)
 each-other-ALL look-REC-CONV kiss-REC-CONV look-IMP.2PL
 ‘Look at each other, kiss each other.’ (*kör-üner* expresses polite request).

4.2.2 “Indirect” reciprocals

The reciprocal pronoun occupies the indirect object position and takes the suffix of the relevant case (see (3)). As with other suffixed reciprocals, the reciprocal pronoun can be omitted. In this type of constructions the same verbs can be used as in 3.1.1.3.

In the following examples the reciprocal pronoun is the only marker of reciprocity:

- (88) a. *Aalčə-lar bot-bot-tar-ə-n-če baš-tar-ə-n soqaŋna-t-kəla-an.* (ED.)
 guest-PL each-other-*n*-ALL head-PL-their-ACC nod-CAUS-ITER-3.PERF
 lit. ‘The guests nodded their heads to each other.’
- b. *Iji anəjak kiži čərlə-p tur-a, bot-bot-tar-ə-n-ga čügə eki-ni*
 two young man part-CONV AUX-CONV each-other-*n*-DAT only good-ACC
kü ‘ze-er di-š-ken-ner. (SS.)
 wish-PART say-REC-PERF-3PL
 ‘The young men promised on parting that they would wish each other only luck.’
- c. *əndəg xarə-nə olar bot-bot-tar-ə-n-dan nege-er-daa użurlug.* (KK.)
 such reply-ACC they each-other-*n*-ABL demand-PART-INTS must
 ‘They must demand such a reply from each other.’
- d. ... *magadaan-ə-n bot-bot-tar-ə-n-ga ilered-ip tur-gan-nar.* (ET.)
 admiration-their-ACC each-other-*n*-DAT show-CONV AUX-PAST-3PL
 ‘[They] showed their admiration to each other.’
- e. *Oruk-ka eki čoru-ur-u-n olar bot-bot-tar-ə-n-ga kü* ‘ze-p
 road-DAT well go-PART-ACC they each-other-*n*-DAT wish-CONV
ka-an-nar. (cf. *ka-an* in (87b))
 AUX-PERF-3PL
 ‘They wished each other godspeed.’
- f. *Edik bile Sara bot-bod-u-n-dan ol töögü-nü čəžər-əp-kan-nar.*
 E. and S. each-other-*n*-ABL this event-ACC conceal-ASP-PERF-3PL
 ‘Edik and Sara concealed this story from each other.’

In (89) the reciprocal pronoun co-occurs with suffixed reciprocals (see also (4c)):

- (89) a. *Ava-škə-lar bot-bod-u-n-dan čünü-daa čazər-əš-pa-s.*
 mother-COLL-PL each-other-*n*-ABL anything conceal-REC-NEG-3.NPAST
 ‘Mother and her children do not conceal anything from each other.’
- b. *Koza-lar bot-bot-tar-ə-n-ga sigen kezi-š-ken-ner.*
 neighbour-PL each-other-*n*-DAT hay mow-REC-PERF-3PL
 ‘The neighbours mowed hay for each other.’
- c. *Sveta bile Olja telefon-ga bot-bot-tar-ə-n-ga bajər čedir-ž-ip,*
 S. and O. telephone-DAT each-other-*n*-DAT greetings send-REC-CONV
kadə-ə-n ajtər-əš-kan-nar.
 health-their-ACC ask-REC-PERF-3PL
 ‘Sveta and Olja sent each other greetings on the telephone and asked each other about their health.’
- d. *Kuda-škə-lar bot-bot-tar-ə-n-ga aas-kežik-ti kü”ze-ž-ken-ner.*
 in.law-COLL-PL each-other-*n*-DAT happiness-ACC wish-REC-PERF-3PL
 ‘The in-laws wished each other happiness.’
- e. *Ool-dar bot-tar-ə-n-če čoçakta-an xar-lar okta-ž-əp tur-gan.* (K-L.)
 child-PL self-*n*-ALL crumple-PART snow-PL throw-REC AUX-3.PERF
 ‘Children threw snow-balls at each other.’
- f. *Bajərlal xün-ner-i-n-de ög-büle-niñ kežigün-ner-i bot-bot-tar-ə-n-ga*
 holiday day-PL-its-*n*-LOC family-GEN member-PL-its each.other-*n*-DAT
bajər čedir-ž-ip, belek-selek sun-č-ur-u čaagaj čančal. (ET.)
 greetings deliver-REC-CONV present hand-REC-PART-their good tradition
 ‘[There is] a nice tradition [according to which] on holidays members of a family send each other greetings and give each other presents.’

Sentence (89h) is a special case which is not quite clear: the transitive reflexive verb *čaš-tən-* ‘to splash sth over oneself’ differs from the base *čaš-* ‘to splash sth (over sb/sth)’ in that it cannot take an object in the allative case but despite this it is used reciprocally with both the reciprocal suffix and reciprocal pronoun; cf.:

- g. *[Olar] ... bot-bot-tar-ə-n-če sug čaš-č-əp ...* (ET.)
 they each-other-*n*-ALL water splash-REC-CONV
 ‘[They] ... splashing water over each other ...’
- h. *[Olar] ... bot-bot-tar-ə-n-če sook sug čaš-tən-č-əp ...* (K-L.)
 they each-other-*n*-ALL cold water splash-REFL-REC-CONV
 ‘[They] ... splashing water over each other’; cf. the underlying structures:
- g’. *Ol olar-že sook sug čaž-əp tur-gan.*
 he they-ALL cold water splash-CONV AUX-3.PERF
 ‘He splashed cold water over them.’
- h’. *Ol [*olar-že] sook sug čaš-tən-əp tur-gan.*
 he they-ALL cold water splash-REFL-CONV AUX-3.PERF
 ‘He (*over them) splashed cold water over himself.’

4.2.3 Benefactive reciprocals

The following examples illustrating this type also contain the reciprocal pronoun in the dative case:

- (90) a. *Olar bot-bot-tar-ə-n-ga bažəŋ-nar tud-up al-gan-nar.*
 they each-other-*n*-DAT house-PL build-CONV S.BEN-PERF-3PL
 ‘They have built houses for each other.’
- b. *Olar bot-bot-tar-ə-n-ga nom-nar sad-əp a-p tur-ar.*
 they each-other-*n*-DAT book-PL buy-CONV S.BEN-CONV AUX-3.NPAST
 ‘They buy books for each other.’

4.2.4 “Possessive” reciprocals

In this diathesis type the possessive attribute of the underlying construction is replaced by the genitive case of the reciprocal pronoun. In most cases, the latter can be omitted if it is dependent on a suffixed reciprocal. “Possessive” reciprocals seem to be less common in Tuvan than in Yakut and Kirghiz. The same verbs may be used in this way as the verbs in 3.1.3. (91b) is an example with the reciprocal pronoun only and (92b) and (93) are examples with both a suffixed reciprocal and a reciprocal pronoun:

- (91) a. *Ol ooŋ xan-ə-n tök-ken.*
 he his blood-his-ACC shed-3.PERF
 ‘He has shed his blood.’
- b. *Olar bot-bot-tar-ə-nəŋ xan-ə-n tök-ken-ner.*
 they each-other-GEN blood-their-ACC shed-PERF-3PL
 ‘They have shed each other’s blood.’
- (92) a. *Dima Saša-nəŋ a”d-ə-n suggar-gan.*
 D. s.-GEN horse-his-ACC water-PERF.3
 ‘Dima has watered Sasha’s horse.’
- b. *Dima bile Saša bot-bot-tar-ə-nəŋ a”t-tar-ə-n suggar-əš-kan.*
 D. and S. each-other-GEN horse-PL-their-ACC water-REC-3.PERF
 ‘Dima and Sasha have watered each other’s horses.’
- (93) a. *Iji kiži bot-bot-tar-ə-nəŋ bodal-dar-ə-n sös-domak čokka*
 two man each-other-GEN thought-PL-their-ACC word-speech without
öttür bil-č-ip tur-gan. (KL.)
 through understand-REC-CONV AUX-3.PERF
 ‘The two men understood each other (lit. ‘each other’s thoughts’) without words.’
- b. *Ež-iški-ler čar-l-əp čoru-ur-da bot-bot-tar-ə-nəŋ*
 friend-COLL-PL part-PASS-CONV go-FUT.LOC each-other-GEN
adres-ter-i-n solu-š-kan-nar. (SS.)
 address-PL-their-ACC exchange-REC-PERF-3PL
 ‘On parting the friends exchanged their addresses.’
- c. *Tolja bile Ivan bot-bot-tar-ə-nəŋ xol-dar-ə-n bas-č-əp ojna-p*
 T. and I. each-other-GEN hand-PL-their-ACC press-REC-CONV play-CONV
tur-gan-nar.
 AUX-PERF-3PL
 ‘Tolja and Ivan pressed each other’s hands playing (played armwrestling).’
- d. *Olar bot-bot-tar-ə-nəŋ dəl-ə-n bil-iš-pes.*
 they each-other-GEN language-their-ACC understand-REC-NEG.3.NPAST
 ‘They do not understand each other’s language.’

4.3 *Nomina actionis*

Nominalization does not involve any changes in the case form of the reciprocal pronoun, and a noun of action acquires a possessive marker which agrees in person with the reciprocal pronoun. The base verb and its nominalization occur both with and without the reciprocal suffix (cf. *bil[-č]-ir* and *bil[-č]-ir-i-n*).

- (94) a. *Olar bot-bot-tar-ə-n bil[-č]-ir.*
 they each-other-ACC know-REC-3.NPAST
 ‘They know/understand each other.’ (cf. also (46e)).
- b. *Olar bot-bot-tar-ə-n doluzu-bile bil[-č]-ir-i-n če”d-ip*
 they each-other-ACC completely know-REC-PART-their-ACC achieve-CONV
al-da. (M1. 67)
 AUX-3.PAST
 ‘They achieved complete mutual understanding.’

By way of referring to 3.5.1.2, I wish to point out that in (94b) instead of the collocation *bot-bot-tar-ə-n bil[-č]-ir-i-n* the single word *bil-č-iiškin-i-n* with the same meaning can be used; moreover, the informants claim it is much more preferable than the collocation. In (95b) the verbal form in *-ar* can be replaced by the noun *büzüre-ž-ilge*:

- (95) a. *Olar bot-bot-tar-ə-n-ga büzüre-ž-ir.*
 they each-other-n-DAT trust-REC-3.NPAST
 ‘They trust each other.’
- b. *Olar bot-bot-tar-ə-n-ga büzüre-ž-ir-i-n če”d-ip al-da.* (M1. 67).
 they each-other-n-DAT trust-REC-PART-their-ACC achieve-CONV AUX-3.PAST
 ‘They achieved mutual trust.’

The reciprocal pronoun is also used with deverbal nouns which cannot be descended from suffixed reciprocals (cf. (53) and the preceding text); e.g.:

- (96) a. *ənak* ‘beloved’ → *ənak-šə-* ‘to love/fall in love’ → *ənak-šə-l* ‘love’
 → b. *bot-bot-tar-ə-n-ga ənak-šə-l* ‘mutual love’ (M2. 30).

4.4 Object-oriented constructions

These constructions are formed in a standard way by means of causativization; cf. (3b) and (97):

- (97) *Baškə-lar öörenikçi-ler-ge nom-nar-nə bot-bot-tar-ə-n-če damičət-tər-kan-nar.*
 teacher-PL pupil-PL-DAT book-PL-ACC each-other-n-DAT pass-CAUS-PERF-3PL
 ‘Teachers told the pupils to pass the books to each other.’

5. Polysemy of the suffix -š

5.1 Introductory

In this section I will consider meanings both closely related to the reciprocal and often accompanying it in various languages, and less closely related or distant meanings. Realization of one or another of these meanings may be dependent on the semantic and syntactic properties of the base verb and also on context.

In certain cases a sociative or assistive meaning is not possible probably due to the unusual character of the intended situation (cf. *deg-* ‘to touch’ → *de-eš-* (intended meanings:) *‘to help to touch’, *‘to touch sth together’) and/or to the frequent use of the same form in the reciprocal meaning (*de-eš-* ‘to touch each other’ (T. 151); cf. *Olar-nəŋ xol-dar-a deg-ž-i ber-gen*. ‘Their hands touched’). In other words, the given form is used in the reciprocal sense only. On the other hand, it is not uncommon for a derivative in -š to have all the four principal meanings (cf. (2b)). Here are a few common types of polysemy:

1. If the subject alone is human (and the object, which is retained in the derived construction, is not human and therefore cannot be co-referential with the subject) the reciprocal meaning in the derivative is not possible (this is a common trivial restriction):

- (98) a. *aajla-* ‘to tidy up (a room)’
 → b. *aajla-š-* i. ‘to tidy up (a room) together’ (sociative)
 ii. ‘to tidy up (a room) with sb’ (comitative)
 iii. ‘to help sb tidy up (a room)’ (T. 26) (assistive)

2. If both subject and object of the underlying construction are human, the reciprocal meaning is also possible alongside the above set of meanings:

- (99) a. *üpte-* ‘to rob sb’
 → b. *üpte-š-* i. ‘to rob *each other*’ (“canonical” reciprocal)
 ii. ‘to rob sb *together*’ (sociative)
 iii. ‘to rob sb *with sb*’ (comitative)
 iv. ‘to *help* sb rob sb’ (T. 450) (assistive)
- (100) a. *čazər-* ‘to conceal sth (from sb)’ (also ‘to cover’)
 → b. *čazər-əš-* i. ‘to conceal sth from *each other*’ (“indirect” reciprocal)
 ii. ‘to conceal sth *together*’ (sociative)
 iii. ‘to conceal sth *with sb else*’ (comitative)
 iv. ‘to *help* sb conceal sth’ (assistive)
 v. ‘to help *each other* to conceal sth’ (T. 85) (reciprocal of assistive)

3. Some actions rule out the assistive meaning; e.g.:

- (101) a. *boda-* ‘to think over/ponder sth’
 → b. *boda-š-* i. ‘to think over/ponder sth *together*’ (sociative)
 ii. ‘to think over/ponder sth *with sb*’ (T. 107) (comitative)

4. The reciprocal form of certain one-place and potentially two-place intransitives (usually verbs of speech (indicating manner) or sound emission) may render the sociative and reciprocal meaning which are sometimes difficult to distinguish from one another,

because sound emission by humans and animals presupposes the presence of someone who perceives them; e.g.:

- (102) a. *ximiren-* 'to grumble/mumble'
 → b. *ximiren-iš-* i. 'to grumble/mumble (*of many*)' (sociative)
 ii. 'to grumble at *each other*' (T. 477) (reciprocal)

Alongside these regular cases of polysemy, derivatives in *-š* may have lexicalized meanings which may retain the reciprocal component or be non-reciprocal. Thus, for instance, *sana-š-* (← *sana-* 'to count sth') has the standard reciprocal and non-reciprocal meanings i. 'to count each other (by turns)', ii. 'to count sth together', iii. 'to count sth with sb else', iv. 'to help sb count sth' and also the lexicalized meaning 'to settle accounts with sb' (T. 367).

5.2 The sociative meaning

The sociative sense, when all the participants are named by the subject, is usually defined in the dictionaries as follows:

1. 'together', 'all together', 'jointly';
2. 'of many (at least several);
3. 'simultaneously' (about the actions of the subject referents).

As in other Turkic languages these are highly approximate characteristics, especially with regard to sociatives derived from intransitives. In transitive sociatives, the sociative meaning is more clear-cut. By definition, in sociatives both or more participants are encoded by the subject (needless to say, the number of participants also increases in the comitative and assistive usages). Sociative derivation does not involve any valency change, though it implies a multiple subject referent, in contrast to comitatives and assistives which increase valency. As often as not (probably in most cases) the sociative meaning is not rendered in the English translations (cf. (106)), to avoid unnatural emphasis on it (cf. analogous cases of translating the Slavic aspects into English). In a number of cases, sociative forms are used to render specific situations; thus, for instance, (*xon-* 'to spend a night' →) *xon-uš-* is not used in the sense 'to spend a night together', but it implies that one participant is afraid of spending a night alone and the other participant helps him by staying with him for the night.

In Tuvan, the meaning 'simultaneously', contrary to sociatives of some other languages, can refer to a series of successive actions within one situation, e.g.:

- (103) *A bile B oočurlap arla-ž-əp tur-lar.*
 A and B by.turns sing-REC-CONV AUX-3PL
 'A and B are singing by turns.'

5.2.1 Sociatives derived from intransitives

Below are given lists of the sociative form of verbs, (most of those registered in T.) and the translations given in this dictionary, in those cases when the dictionary does not supply an explanation, the meaning of the underlying verb alone is given: the reader may add the meaning in question (any of those listed in the above paragraph) himself; the expla-

nations in brackets that follow reference to the dictionary or the translation are added by the author.

- (104) a. *Səldəs-tar čiveŋejn-ip tur-lar.*
 star-PL twinkle-CONV AUX-PRES.3PL
 ‘The stars are twinkling’ (stating a plain fact).
 b. *Səldəs-tar čiveŋejn-č-ip tur-lar.*
 star-PL twinkle-REC-CONV AUX-PRES-3PL
 ‘The stars are twinkling’ (‘together’, ‘to each other’, ‘as if they were alive’).

As often as not, sociatives are derived from verbs of motion, sound and light emission, etc.

- (105) *algər-əš-* ‘to shout (simultaneously, together, of many)’ (T. 53)
čirile-š- ‘to cry/squeak ...’ (T. 535) (of many)
čiveŋne-š- ‘to twinkle (of stars, in different places)’ (T. 531)
deškile-š- ‘to romp/frisk ...’ (of animals)
karaŋna-š- ‘to gleam/appear briefly (of sth black) ...’
kattər-əš- ‘to laugh together with sb’ (T. 232) (of many together)
kujtula-š- ‘to cackle (of several hens)’ (T. 263)
kəlaŋna-š- ‘to sparkle/glisten ...’ (of many together)
kəlašta-š- ‘to go/walk together’ (T. 271)
mižire-š- ‘to chirp ...’ (T. 295)
mööle-š- ‘to moo (of many cows simultaneously)’ (T. 301)
məžərə-š- ‘to twitter ...’ (T. 305)
səgər-əš- ‘to whistle ...’ (of many)
səldərə-š- ‘to rustle ...’ (simultaneously)
səŋ-əš- ‘to go in (some space, of many)’ (T. 397)
šimeerge-š- ‘to make noise together (of many)’
tura xalə-š- ‘to stand up together simultaneously’
ulu-š- ‘to howl ...’ (of many)
xalə-š- ‘to run (simultaneously, of many)’ (T. 465)
ximiren-iš- i. ‘to mutter/mumble (of many)’
 ii. ‘to grumble at each other’ (T. 477)
xögle-š- arch. ‘to make merry together’ (T. 487)
xolže-š- arch. ‘to fuss (of many)’ (T. 489)
əgla-š- arch. ‘to cry/weep (of several persons)’ (T. 591)
ərļa-š- ‘to sing together/in chorus’ (T. 600)
əəla-š- ‘to whimper/moan ...’ (T. 602)
əətta-š- ‘to make noise/shout (of many)’ (T. 602) (of many together).
- (106) a. *ənaar xem kežildir börü-ler ulu-š-kan.* (AD.)
 there river across wolf-PL howl-REC-3.PERF
 ‘There, across the river, wolves howled.’
 b. *Bis oŋ soondan kəlasta-ž-əp olur bis.* (AD.)
 we he.ABL behind walk-REC-CONV AUX.PRES 1PL
 ‘We are walking behind him.’
 c. *Čük-čük-ten tabagan-nar čiriŋejn-č-ip-le egele-en.* (KK.)
 side-side-ABL marmot-PL cry-REC-CONV-INTS begin-3.PERF
 ‘The marmots began to whistle on all sides.’

- d. *Kuš-tar čagə baž-ə-n-da məžərtkaj-n-č-əp or-gan-nar.*
bird-PL pole top-his-n-LOC chirp-REC-CONV AUX-PAST-3PL
'Birds perched on the pole chirping' (as if conversing).
- e. *Sug kədə-ə-n-ga maŋna-ž-əp kel-geš, ənda balək-tar*
river bank-his-n-DAT run-REC-CONV come-CONV there fish-PL
karaŋna-š-kan-ə-n ürgülčü kö-ör bis. (KK.)
flash-REC-PART-their-ACC constantly look-NPAST 1PL
'We used to run to the river bank and look at the fish flashing [in the water].'
- f. *Anaj, xuragan aal dolgandər deškile-ž-ip tur-gan.*
kid lamb house around frisk-REC-CONV AUX-3.PAST
'Kids and lambs were frisking around the house.'
- g. *Urug-lar xenerten algər-ž-əp, əgla-ž-əp egele-en.*
child-PL suddenly shout-REC-CONV cry-REC-CONV begin-3.PERF
'Suddenly the children began to shout and cry.'
- h. *Šuptu tura xalə-š-kan-nar.*
all rise jump-REC-PERF-3PL
'All of them jumped up together.'

The dictionary definition of the form *səŋ-əš-* as 'to go in (some space, of many)' (T. 397) does not reflect the automatic use of this form if many participants are involved. On the same page, the following example is cited:

- i. *Bo zal-ga bir muŋ kiži səŋ-a be-er.*
this hall-DAT one thousand man go.in-CONV AUX-3.NPAST
'This hall seats a thousand people.'

The use of the sociative form here may be motivated by a desire to stress the multitude of participants in this situation instead of neutrally stating the fact by means of the base form. Thus, in the following instance there are only four participants, and the *-š-* form may imply, among other things, that the car is very small for this number.

- j. *Bo mašina-ga dört kiži səŋ-č-ər.*
this car-DAT four man go.in-REC-3.NPAST
'This car seats four persons.'

5.2.2 Sociatives derived from transitives

Unlike most of intransitive sociatives, transitive ones may often be interpreted as assistives and comitatives, and some even as reciprocals. Here is a list of sociatives with definitions from the *Tuvan-Russian Dictionary* (T), with the meanings added by the author of this paper.

- (107) *agla-š-* 'to bring (prey) to bay together' (T. 35); also 'to help...'
al-əš- i. 'to take sth together', ii. 'to take sth from each other' (T. 56)
analizte-š- 'to analyze together' (T. 60)
a"sta-š- 'to clean/tidy sth up together' (T. 78)
ažəgla-š- 'to use sth together' (T. 41)
biži-š- 'to write sth together' (T. 101); i. 'to help ...', ii. 'to write to each other'
boda-š- 'to think over sth together' (T. 107); also 'to think of each other'
bəžər-əš- 'to bake sth together', also 'to help sb bake sth' (T. 129)

<i>da-aš-</i>	‘to make a raft together’, also ‘to help sb make a raft’ (T. 141)
<i>kamgala-š-</i>	‘to defend sth together’, also ‘to defend each other’ (T. 223); ‘to help ...’
<i>kərgə-š-</i>	‘to shear sheep together’, also ‘to help sb shear sheep’ (T. 279)
<i>megele-š-</i>	‘to deceive sb together’, also ‘to deceive each other’
<i>oorla-š-</i>	‘to steal sth together’, ‘to steal sth from each other’ (T. 323); ‘to help...’
<i>sal-aš-</i>	‘to put down/place (together) sth’, also ‘to help sb put sth down’ (T. 365)
<i>sana-š-</i>	‘to count together’, also ‘to help count’ (T. 367)
<i>septe-š-</i>	‘to mend/fix sth together’, also ‘to help sb mend/fix sth’ (T. 373)
<i>silgi-š-</i>	‘to shake sth [out] together’, ‘to shake each other (in wrestling)’ (T. 376); also ‘to help to shake sth’
<i>šü-üš-</i>	‘to collate sth together’ (T. 583)
<i>tarə-š-</i>	‘to plough soil together’, also ‘to help sb plough’ (T. 408)
<i>uzutka-š-</i>	‘to exterminate sb together’, also ‘to exterminate each other’ (T. 437); also ‘to help exterminate’
<i>üde-š-</i>	‘to see sb off together’ (T. 443); ‘to help see sb off’, ‘see each other off’.

- (108) Olar *sal dag-ž-əp tur-lar.* (T. 141)
 they raft make.raft-REC-CONV AUX-3PL
 ‘They are making a raft together.’

There is a lexical sociative (this seems to be an extremely rare phenomenon cross-linguistically) whose *-š* form has the same meaning as the base verb: *emigle-* ‘to attack sb jointly’ – *emigle-š-* i. (same), ii. ‘to help sb’ (sic! – K.K.) (T. 613); another lexical sociative is *xojgaš-* ‘to sleep together’ (T. 479): it contains the reciprocal suffix on a bound stem (there is a form *xojgar-* ‘to let/take sb into one’s bed’ (T. 479) with an unproductive causative suffix; note that *udu-* ‘to sleep’ (T. 438) does not have a suffixed sociative form).

- (109) a. *Bičii uru-u-n ava-zə xojgar-əp al-də.*
 little child-her-ACC mother-her let.sleep-CONV AUX-PAST.3
 ‘Mother slept together with her little daughter’, ‘... let her daughter into her bed.’
 b. *Bičii urug-bile ava-zə xojgaž-əp al-də.*
 little child-with mother-her sleep.together AUX-PAST.3
 ‘Mother slept together with her daughter.’

5.2.3 Restrictions on derivation of sociatives in *-š*

There seem to be more restrictions on sociative formation in Tuvan than in Yakut. There are restrictions on verbs which pragmatically seem to allow it, e.g. verbs meaning ‘to hunt’, ‘to fish’, etc.

The most numerous group comprises intransitives denoting uncontrolled actions, e.g. the following lexical-semantic groups:

(a) verbs denoting natural phenomena, e.g. *nogaarar-* ‘to be/look green’, *bulutta-* ‘to be clouded over’, etc.;

(b) verbs denoting acquisition of a quality or feature, e.g. *iri-* ‘to go sour’, *dadar-* ‘to rust’, etc.;

(c) verbs denoting changes of psychological or physical state that do not depend on human will, e.g. *ar-* ‘to grow thin’, *semiri-* ‘to grow fat’, *aarə-* ‘to be ill’, *ottu-* ‘to awaken’, *buuk-* ‘to languish’, *albəsta-* ‘to go mad’, *eziri-* ‘to become drunk’, etc.;

(d) verbs expressing actions which cannot as a rule be performed collectively, in a group (but this does not mean they cannot be used with a plural subject), e.g. *božu-* ‘to give birth’ (of a woman), *törü-* ‘to give birth’ (of animals), *bəzaala-* ‘to calf’; *mög-* ‘to throw off (a rider)’, *kudurukta-* ‘to grasp by the tail’, *dargala-* ‘to be a boss’, *baškəla-* ‘to teach’, *bədaala-* ‘to eat soup’, *bəštakta-* ‘to make/eat cheese’, *aragala-* ‘to drink wine’, *amza-* ‘to taste sth’, *duza-* ‘to salt’, *durgunna-* ‘to run away/hide/desert’, *kulažəla-* ‘to measure in sagènes’, *kilde-* ‘to weigh’, *örümne-* ‘to drill’, *kada-* ‘to nail’, *čətkile-* ‘to fish with a net’, *dagala-* ‘to shoe (a horse)’, *šoočala-* ‘to padlock’, *xomusta-* ‘to play the homus’, *čadaganna-* ‘to play the chadagan’, *sagə-* ‘to observe (order, etc.)’, etc.

Some changes may be noted in the formation of sociatives; thus Katanov (1903:533) mentions the sociative verbs *či-š-* ‘to eat together’ and *iš-iš-* ‘to drink together’ which have gone out of use in modern Tuvan. Some of the listed verbs do have a form in *-š* but it has an assistive meaning instead of the sociative: *kilde-* ‘to weigh’, *örümne-* ‘to drill’, *kada-* ‘to nail’.

There is also a group of verbs whose meaning allows or even implies a collective action but they do not form sociatives: *aŋna-* ‘to hunt’, *baləkta-* ‘to fish’, *diiŋne-* ‘to hunt squirrels’, *möögüle-* ‘to gather mushrooms’, etc. Here also belong verbs denoting playing games: *saizanakta-* ‘to play mother-daughter’, *oĵtulaašta-* ‘to participate in public merrymaking (in traditional Tuva)’, *közerle-* ‘to play cards’, *šədəraala-* ‘to play chess’, *futbolda-* ‘to play football’, *xaakta-* ‘to ski’, *tenniste-* ‘to play tennis’, and also verbs like *orukta-* ‘to go/ride along a road’, *tajgala-* ‘to go to the taiga’, *xoorajla-* ‘to go to town’, *avtobusta-* ‘to go by bus’, *okta-* ‘to throw’ (in the figurative sense ‘to drop (e.g. studies)’), etc.

The sociative sense can be expressed on these verbs lexically, by means of the adverb *kadə* ‘together’, ‘next to’ (but in most cases it cannot replace the suffix *-š* in the sociative sense, for instance in the intransitive sociatives listed in (105)). Compare:

- (110) a. *Olar kadə adəg-nə aŋna-ar.*
 they together bear-ACC hunt-3.NPAST
 ‘They hunt bears together.’
 b. *Maadər bile Sarəg-ool ööredilge-zi-n kadə okta-p-kan.*
 M. and S. studies-their-ACC together drop-ASP-3.PERF
 ‘Madyr and Saryg-ol dropped their studies together.’

Note that this adverb can combine with assistives; e.g.:

- c. *Bis akə-m-ga kadə sigen kes-č-ip ber-ip tur bis.*
 we elder.brother-my-DAT together hay mow-REC-CONV O.BEN-CONV AUX 1PL
 ‘We help my elder brother together to make hay.’

5.3 The comitative meaning

Unlike the sociative meaning, in which all the participants are equally involved in an action, the comitative meaning implies that the subject referent takes part in an action initiated by another party which may be named by a non-subject or remain unnamed though always implied. Thus, unlike in the sociative, the subject may be singular. The presence of

the comitative sense is shown by the fact that comitatives do not combine with the adverb *čaaskan* ‘singly, alone’. Sentence (111d) is wrong because it is contradictory. Compare:

- (111) a. *Ol čaaskaan ərla-p tur.*
 he alone sing-CONV AUX.3.PRES
 ‘He is singing alone.’
- b. *Olar ərla-ž-əp tur-lar.*
 they sing-REC-CONV AUX.PRES-3PL
 ‘They are singing together.’ (sociative)
- c. *Ol ərla-ž-əp tur.*
 he sing-REC-CONV AUX.3.PRES
 ‘He is singing with someone else.’ (comitative)
- d. **Ol čaaskaan ərla-ž-əp tur.*
 he alone sing-REC-CONV AUX.3.PRES
 lit. ‘He is singing alone with someone else.’

It may be noted in passing that in contrast to comitative constructions, reciprocal constructions with the subject in the singular, like (111c), sound incomplete, as a rule, cf.:

- (112) **Ava-m kuspakta-ž-əp tur.*
 mother-my embrace-REC-CONV AUX.3
 ‘My mother is embracing (with whom?).’

If there is no indication of a co-participant, or if it is named by a postpositional phrase with *-bile*, a construction with a verb in *-š* is usually interpreted as comitative, i.e. that the subject referent does not act alone but with a second party. In these cases the assistive reading is also possible (see (2)). If the co-participant is not mentioned, a plural subject referent is commonly implied, whose naming is irrelevant for the utterance. Overt expression of the comitative meaning in English translations usually sounds too heavily stressed as something very important, because it has to be explicated by a phrase, while in the original it is not stressed due to its expression by means of the suffix.

The co-participant of a comitative action is usually denoted (if at all) by a noun with the postposition *-bile* ‘with’. This construction is synonymous to that with a suffixed comitative. The adverb *kada* ‘together’ (also ‘neighbour’) is usually used in these cases.

- (113) *Doržu-bile kada kel-di-m.* (T. 103)
 D.-with together come-PAST-1SG
 ‘I came together with Dorju.’

The following examples illustrate the use of comitative constructions. The sentences with a plural subject may also be interpreted as sociative, and those with a singular subject as assistive. The assistive interpretation can be excluded by the use of the auxiliary *al-* with the subject-oriented benefactive meaning (its lexical meaning is ‘to take’) in the form of a final verb or converb *ap* (< *al-əp*), as in (114f).

- (114) a. *Bujan bile Anaj-Kara čügle daš ašta-š-kan-nar.* (KK.)
 B. and A.K. only stone remove-REC-PERF-3PL
 ‘Bujan and Anaj-Kara (together with sb else) were only removing the stones.’

- b. *Xurbe arək kas-č-əp, čer suggar-ž-əp tur-gan.* (KK.)
 X. canal dig-REC-CONV soil water-REC-CONV AUX-3.PAST
 ‘Xurbe (together with sb else) dug a canal, watered the soil.’
- c. *Xöj öreeldig bažəŋ tut-č-up tur-du-m.* (ED.)
 I flat house make-REC-CONV AUX-PAST-1SG
 ‘I built (together with other people) apartment houses.’
- d. *Ertine Šagaan-Arəg xooraj-nə tut-č-up tur-ar.*
 E. Sh. town-ACC make-REC-CONV AUX-3.NPAST
 ‘Ertine builds (with all the people) the town of Shaganar.’
- e. *Töreen čurt-um-nu kamgala-ž-ər men.* (DB.)
 native country-my-ACC defend-REC-NPAST 1SG
 ‘I will defend my motherland (together with other people).’
- f. *Men čer aŋdar-ž-əp al-də-m.*
 I soil plough-REC-CONV S.BEN-PAST-1SG
 lit. ‘I ploughed the soil (with someone) for myself.’

There is also a lexical comitative *kir-iš-* ‘to participate in sth’ (a lexicalized form of *kir-* ‘to come’).

5.4 The assistive meaning

This meaning, which is contiguous to comitative (joint action often pragmatically involves assistance), occurs mainly in derivatives from transitives mostly denoting concrete physical actions. As mentioned above, assistive derivation involves valency increase: a dative object is added and a two-place verb becomes three-place. When a verb is used without a dative object referring to the second participant, the meaning of assistance can be replaced by that of co-participation, depending on the context (i.e. the assistive meaning is replaced by the comitative). In this case, if the second participant is unnamed, its presence is unambiguously indicated by the verb form. The meaning of acting for sb’s benefit can be emphasized by the verb *ber-* ‘to give’ with a converb in *-p* (see (117) and (119)). If we omit *ber-ip* in (117a) the meaning of the action performed for the brother is weakened.

The co-occurrence of the auxiliary verb *ber-* ‘to give’ with the *-ip* form of a suffixed reciprocal unambiguously points to the assistive rather than the comitative meaning.

As well as in the case of comitatives, the assistive implies participation in the action of another party, therefore the subject may be not only plural but also singular: in the latter case the sociative interpretation is ruled out by definition but the comitative meaning is mostly possible. Nearly all the verbs with the assistive meaning may be interpreted as comitative or sociative in certain contexts, it seems. In examples like (115), the first reading that comes to mind to some informants is assistive, and to others comitative. As in (111d), we cannot add *čaaskan* ‘alone’ in (115).

- (115) *Men čer aŋdar-ž-əp tur-du-m.* (T. 62)
 I soil plough-REC-CONV AUX-PAST-1SG
 i. ‘I helped to plough the soil.’
 ii. ‘I ploughed the soil together with others.’

In the *Tuvan-Russian dictionary* (T) forms in *-š* which may be interpreted as assistive are often supplied with a sociative and/or comitative reading, or with the latter two only (see (107)). Combinations of these readings offered in the dictionary sometimes seem arbitrary. But some of the verbs are defined as assistive only (which does not mean they cannot have the other readings). Here is a list of these verbs, in addition to the list in (107):

- (116) *adakta-š-* 'to assist sb in helping sb to mount a horse.' (T. 37)
čemger-iš- 'to help sb feed sb' (T. 524)
čugajla-š- 'to help sb to whitewash sth'
dažəgla-š- 'to help sb carry sth' (T. 143)
duza-š- 'to help sb salt/pickle sth' (T. 182)
düpte-š- 'to help sb make the bottom of a barrel' (T. 189)
kadar-əš- 'to help sb tend (sheep)'
keđir-iš- 'to help sb put sth on' (T. 235)
ölür-üš- 'to help sb kill sb', also 'to kill each other' (T. 335)
tud-uš- 'to help sb build sth' (T. 427).

Sentence (117a) cannot be preceded by a statement like 'My brother is in bed', because the reciprocal form implies obligatory participation of a co-participant in the action (in these cases the lexical assistive *duzala-* 'to help sb do sth', though not in the reciprocal form, can be used). The sentence in question can be followed by a verb without the suffix *-š*, as is the case in (117b) where the verb *ber-* indicates that the action is performed for the brother. Omission of *ber-* in (117a) makes the sentence slightly less natural if the dative object is preserved.

- (117) a. *Bis akə-m-ga* *sižen kes-č-ip* *ber-ip* *tur* *bis*.
 we elder.brother-my-DAT hay mow-REC-CONV O.BEN-CONV AUX.PRES 1PL
 'We help my elder brother to make hay for him.'
- b. *Akə-m* *aarəg čəd-ar,* *ənčangaš bis aŋaa* *sižen kez-ip*
 elder.brother-my sick lie-PRES.PROGR therefore we he.DAT hay mow-CONV
ber-ip *tur-du-vus*.
 give-CONV AUX-PAST-1PL
 'My brother is ill in bed, therefore we made hay for him.'

Note that verbs with the meaning 'to help' may appear in two forms (with and without *-š*) which are sometimes interchangeable without affecting the meaning: *duzala-* 'to help sb do sth' and *duzala-š-* i. 'to help sb do sth', ii. 'to help each other do sth' (T. 182), *karakta-* i. 'to help sb', ii. 'to help each other' and *karakta-š-* 'to help each other' (T. 228).

5.4.1 Expression of the co-participant. Object-oriented benefactive auxiliary

At least six cases can be distinguished, some of them indicating unambiguously the assistive meaning only and thus outruling the comitative interpretation.

1. The co-participant is not expressed.

1.1. It may be anonymous (see (115)) or it may be recoverable from the context, including a situation of dialogue as well; cf.:

- (118) *“Adar, men taraa-m sokta-p ka-apt-ajn.”* – *“Men sokta-ž-əpt-ajn.”* (AD.)
 wait I corn-my grind-CONV AUX-ASP-1SG.IMP I grind-REC-ASP-1.SG.IMP
 ‘Wait, I’ll finish grinding the corn.’ – ‘I’ll help [you] to grind it’

1.2. Though it is not expressed the benefactive auxiliary *ber-* ‘to give’ (as a final predicate, e.g. in the NPAST form *be-er*, or as converb *ber-ip*) preceded by converb in *-p* of the main notional verb points to it unambiguously and makes the assistive reading the only one possible.

- (119) *Ol bažəŋ išt-i-n aažla-ž-əp be-er.* (< **ber-er*)
 he house interior-its-ACC tidy-REC-CONV O.BEN-3.NPAST
 ‘He helps [sb] tidy up the house (flat)’ (see also (93b)).

2. The co-participant is named; at least four ways of its expression can be distinguished.

2.1. The co-participant is denoted by an attribute in the genitive case; as a rule, pragmatically, the referent of the genitive case *is* a co-participant, though grammatically a genitive attribute denotes a possessor; cf.:

- (120) a. *Dolgar-ool duŋma-m-nəŋ xoj-u-n katar-ž-ər men.* (AD.)
 D. younger.brother-my-GEN sheep-his-ACC tend-REC-NPAST 1SG
 ‘I’ll help my younger brother Dolgar-ool to tend the sheep.’

2.2. The co-participant is expressed by the dative case:

- b. *Anaj-Kara kunču-u-n-ga duzala-ž-əp, inek sag-ž-əp*
 A. mother.in.law-his-DAT help-REC-CONV cow milk-REC-CONV
tur-gan. (KK.)
 AUX-3.PAST
 ‘Anaj-Kara helped his mother-in-law, helped to milk the cow.’

2.3. The co-participant is expressed by the genitive supported by the benefactive auxiliary:

- (121) *Eki aŋčə ež-i-niŋ baləgla-p ka-an aŋ-ə-n čügə*
 good hunter friend-his-GEN wound-CONV AUX-PART beast-his-ACC only
əl-ür-ž-üp be-er. (KK.)
 die-CAUS-REC-CONV O.BEN-3.NPAST
 ‘A good hunter will help his friend to kill his quarry which he has only wounded.’

2.4. The co-participant is expressed by the dative supported by the benefactive auxiliary:

- (122) *Bujan Aŋgər-ool-g bažəŋ tut-č-up ber-ip tur.*
 B. A.-DAT house build-REC-CONV O.BEN-CONV AUX.3.PRES
 ‘Bujan helps Angyr-ool to build his house.’

5.4.2 *Reciprocal assistives. Subject-oriented benefactive auxiliary. Reciprocal pronoun.* In this case the subject can be plural only, of course. This meaning presupposes two or more subject referents that help each other. At least three ways of expressing the reciprocal assistive meaning can be distinguished:

1. The reciprocal assistive meaning is one of the possible readings of a form in *-š*:

- (123) *Bis sigen kes-č-ip tur bis.*
 we hay mow-REC-CONV AUX.PRES 1PL
 i. ‘We help *sb* to make hay.’
 ii. ‘We are making hay *helping each other*.’
 iii. ‘We are making hay *together*.’
 iv. ‘We are making hay *with sb else*’ (cf. (2c)).

2. This meaning is indicated by the subject-oriented benefactive auxiliary *al-* ‘to take’. Needless to say, this marker does not combine with a dative object (cf. *akə-m-ga* ‘for my brother’ in (124b)):

- (124) a. *Bis sigen kes-č-ip a-p (<al-əp) tur bis.*
 we hay mow-REC-CONV S.BEN-CONV AUX.PRES 1PL
 ‘We are making hay *helping each other*.’
 b. **Bis akə-m-ga sigen kes-č-ip a-p tur bis.*
 we brother-my-DAT hay mow-REC-CONV S.BEN-CONV AUX 1PL
 lit. ‘We are making hay for my brother for ourselves.’

3. The meaning in question is indicated by the reciprocal pronoun:

- (125) *Oruk-ka čolaačə-lar bot-bod-u-n-ga duzala-ž-ər, mašina-lar-ə-n*
 road-DAT driver-PL each-other-*n*-DAT help-REC-3.NPAST car-PL-their-ACC
septe-ž-ir. (AD.)
 fix-REC-3.NPAST
 ‘On the road, drivers help each other to fix each other’s cars.’

4. A combination of the reciprocal pronoun with the subject-oriented benefactive auxiliary serves to emphasize the reciprocal assistive meaning:

- (126) *Bis bot-bod-uvus-ka sigen kes-č-ip a-p tur bis.*
 we each-other-our-DAT hay make-REC-CONV S.BEN-CONV AUX.PRES 1PL
 lit. ‘We are making hay for each other *helping each other* for ourselves.’

5.5 Other meanings

In this section, the meanings are listed which are much less productive in the reciprocal suffix than the those considered above: they may number from a few verbs to as many as 15–20, but they are of typological interest because they may also occur in the reciprocal markers of other languages.

5.5.1 *Imitative*

There is a group of verbs with the suffix *-š* derived from denominal verbs whose meaning is defined as ‘to play what is named by the root’:

- (127) *baškəla*- ‘to be a teacher/teach’ → *baškəla-š-* ‘to play teachers’ (cf. *baškə* ‘teacher’)
bokserla- ‘to be a boxer’ → *bokserla-š-* ‘to play boxers’ (cf. *bokser* ‘boxer’)
emčile- ‘to work as a doctor’ → *emčile-š-* ‘to play doctors’ (cf. *emči* ‘doctor’)
kassirle- ‘to work as a cashier’ → *kassirle-š-* ‘to play cashiers’ (cf. *kassir* ‘cashier’)
sadəgla- ‘to work as a salesperson’ → *sadəgla-š-* ‘to play shopping’ (cf. *sadəg* ‘trade’).

5.5.2 *Competitive*

All the registered verbs with this meaning can also have a reciprocal or some other reading.

- (128) a. *kožaməktə*- ‘to sing comic songs’ → *kožaməktə-š-* i. ‘to sing comic songs with sb’
 ii. ‘to compete in singing comic songs’
selemele- ‘to hit with a sword’ → *selemele-š-* i. ‘to play with swords with sb’
 ii. ‘to compete in sword fighting’
təvəzəktə- ‘to ask riddles’ → *təvəzəktə-š-* i. ‘to ask each other riddles’
 ii. ‘to compete in asking riddles’
xaakta- ‘to ski’ → *xaakta-š-* ‘to take part in a skiing competition.’

The following verb may also be included under this heading, though it undergoes a degree of lexicalization:

- b. *kag*- ‘to overcome sb in wrestling’ → *ka-aš-* i. ‘to overcome each other by turns in wrestling’, ii. ‘to compete (e.g. in eloquence)’, iii. ‘to argue’ (T. 214).

I might as well mention here the lexicalized verb *či-š-* ‘to compete’ derived from the transitive *či-* i. ‘to eat sth’, ii. fig. ‘to take (a chess figure)/cover (a card)’: the object is either clear from the context or named by the dative case; thus, instead of *təvəzəktə-š-* in (128) we can use *təvəzək-ka či-š-* ‘to compete in asking riddles’.

It may also be relevant to mention the verb *kör-üş-* i. ‘to see *each other*’, ii. ‘to look *together*’, iii. ‘to *help* sb look through sth’, iv. fig. ‘to measure swords with *each other*, compete’. The latter competitive meaning is a lexicalization which may be a result of the usage: like (129a) where the lexicalized meaning is revealed due to the direct object. But this verb can also be used intransitively, as in (129b):

- (129) a. *Olar küž-ü-n kör-üş-tü.*
 they strength-their-ACC see-REC-3.PAST
 ‘They measured strength with each other’, lit. ‘...looked at each other’s strength.’
 b. *Iji kəzəl čuduruk-tar-ə-bile kör-ž-üpt-er bolgai.* (ST)
 two red fist-PL-their-with see-REC-ASP-3.NPAST you.know
 ‘One must fight with fists only’, lit. ‘...test each other with two red fists.’
 (130) a. *šene-* ‘to try sb/sth’
 b. *šene-š-* ‘to check, try each other’
 c. *küž-ü-n šene-š-* ‘to try each other’s strength’ (T. 570).

5.5.3 *Anticausative*

This is probably the most productive meaning among those considered in this section. Anticausative derivatives are usually formed from lexical reciprocals. The causative suffix may bring back the meaning of the base form (cf. (131a) and (131c)). This type is considered in more detail in 3.2.2 and 8.2.

- (131) a. *Ol spirt-ti sug-bile xolu-p tur.* (T. 481)
 he alcohol-ACC water-with mix-CONV AUX.3.PRES
 ‘He is mixing alcohol with water.’
- b. *Spirt sug-bile xolu-ž-a ber-gen.*
 alcohol water-with mix-REC-CONV AUX-3.PERF
 ‘Alcohol has mixed with water.’
- c. *Ol spirt-ti sug-bile xolu-š-tur-up tur.* (T. 481)
 he alcohol-ACC water-with mix-REC-CAUS-CONV AUX.3.PRES
 (same translation as in (a)).

5.5.4 Reflexive

All the registered derivatives with this meaning are formed from verbs with the same meaning ‘to make dirty/smear’. The origin of the reflexive meaning in formal reciprocals is not clear, as there is a specialized and highly productive marker of reflexivity in Tuvan (see 2) in §2.5), and also a reflexive pronoun (see (9a)).

- (132) *bälča-* ‘to dirty/smear sb/sth’ → *bälča-š-* ‘to smear/dirty oneself’ (T. 131)
bälčakta- ‘to dirty/smear sb/sth’ → *bälčakta-š-* ‘to smear/dirty oneself’ (T. 131)
bälga- i. ‘to dirty/smear’, ii. ‘to stir/rinse sth’ → *bälga-š-* ‘to dirty oneself’ (T. 130)
bora- ‘to make sb/sth dirty’ → *bora-š-* ‘to make oneself dirty’ (T. 113)
öge- ‘to smear/dirty sb/sth’ → *öge-š-* ‘to make oneself dirty’ (T. 331)
 (cf. *buduk-ka öge-š-* ‘smear oneself with paint’); cf.:
- (133) a. *Bora-xirilee-ler dovurak-ka bora-ž-ər, a köge-buga-lar xöölbek-ke*
 sparrow-PL dust-DAT dirty(vt)-REC-NPAST and pidgeon-PL puddle-DAT
bälga-ž-ər. (SS.)
 swill(vt)-REC-3.NPAST
 ‘The sparrows usually dirty themselves in dust, and pigeons dirty themselves in puddles.’
- b. *Siler xünnüñ-ne xavan-nar əškaš malgaš-ka bora-ž-ər ulus-tur*
 you every.day-INTS pig-PL like dirt-DAT smear-REC-PART people-be
siler. (SS.)
 2PL
 ‘You, like pigs, smear yourselves with dirt (from the lake).’

5.5.5 Autocausative

These verbs are derived from transitive verbs of moving objects and denote bodily moves.

- (134) *Čalan terek-ke oraa-ž-ə ber-gen.*
 snake tree-DAT coil(vt)-REC-CONV AUX-3.PERF
 ‘The snake has coiled round a tree.’

5.5.6 Converse

In this case both the base and the derived sentences have the same denotational meaning but subject and object referents exchange syntactic status:

- (135) a. *Izig-ni seriin solu-p-kan.* (M1. 542)
 heat-ACC cool.air change-ASP-3.PERF
 ‘Coolness gave way to heat.’

- b. *Končug izig seriin-bile solu-š-kan.* (M1. 542)
 strong heat cool.air-with change-REC-3.PERF
 ‘Strong heat gave way to coolness.’

5.5.7 Detransitive

A direct object is transformed into a non-direct object:

- (136) a. *Saaja seni öže-en-i ol be?*
 S. YOU.ACC spite-PERF-3SG really Q
 ‘Did Sajaa really do it to spite you?’
 b. *Saaja seŋee öže-š-ken-i ol be?*
 S. YOU.DAT spite-REC-PERF-3SG really Q
 ‘Did Sajaa really do it to spite you?’

5.5.8 Detopicalization

There are a few examples that stand apart from the above listed meanings: the derivative is used in the simple construction and involves two or more participants named by the subject, usually two relatives of different status (e.g. age), and only one of them performs the action named. In other cases, with equally active participants, the very same derivatives may describe “canonical” situations (e.g., ‘to swing each other’). A somewhat similar case is registered in Vietnamese (Bystrov & Stankevich, Ch. 47, §5.2) and Ancient Chinese (Yakhontov, Ch. 48, ex. (52)), when also relatives of different ages take part.

- (137) a. *Bičii urug [emi-in] daka ür em-gen.*
 little child breast-ACC very long.time suck-3.PERF
 ‘The baby has been sucking [the breast] for a long time.’
 b. *Ava-zə uru-u-n daka ür em-zir-gen.*
 mother-her child-her-ACC very long.time suck-CAUS-3.PERF
 ‘Mother has suckled the baby for a long time.’
 c. *Ava-škə-lar em-zir-ž-ip olur-gan-nar.*
 mother-COLL-PL suck-CAUS-REC-CONV AUX-PERF-3PL
 ‘Mother suckled the baby’, lit. ‘Mother and baby suckled each other.’
- (138) a. *Ava-zə uru-u-n adakta-p olur-gan.*
 mother-her child-her-ACC help.mount-CONV AUX-3.PERF
 ‘Mother helped the child (holding it by the legs) to relieve itself.’
 b. *Ava-škə-lar adakta-ž-əp olur-gan-nar.*
 mother-COLL-PL help.mount-REC-CONV AUX-PERF-3PL
 ‘Mother helped (e.g. by holding) the child to relieve itself’,
 lit. ‘Mother and child helped each other to relieve themselves.’
- (139) *Ügba-zə duŋma-zə-bile čajgan-č-əp olur-gan-nar.*
 elder.sister-her younger.sister-her-with swing-REC-CONV AUX-PERF-3PL
 ‘The elder sister was swinging her younger sister on a swing’,
 lit. ‘The elder and younger sisters were swinging each other on a swing.’
- (140) *Ava-zə ke-er-ge, ugba-škə-lar əgla-š-kan olur-gan-nar.*
 mother-her come-PART-DAT elder.sister-COLL-PL cry-REC-PAST.PART AUX-PERF-3PL
 ‘When mother came, the younger (sic!) sister was crying’,
 lit. ‘... the elder and younger sisters were crying together.’

5.6 Object-oriented constructions

Sociatives, comitatives and assistives can take on a causative suffix, e.g.:

- (141) a. *Ulus dile-p al-gaš, bažəŋ-əm kur-u-n sal-əš-tər-əp*
 people ask-CONV S.BEN-CONV house-my wall-its-ACC put.up-REC-CAUS-CONV
al-ər men. (ED)
 S.BEN-NPAST 1SG
 ‘I will invite people and ask them to help me put up the walls of the house for me.’
- b. *Ol onu ərla-š-tər-əp tur.*
 he he.ACC sing-REC-CAUS-CONV AUX.3.PRES
 ‘He makes him sing with someone else.’
- c. *Ol olar-nu ərla-š-tər-əp tur.*
 he they-ACC sing-REC-CAUS-CONV AUX.3.PRES
 ‘He makes them sing together.’

As for the other meanings listed in 5.5, there are some restrictions on causative derivation; thus, for instance, causatives are not formed from derivatives with the imitative meaning (see 5.5.1), nor from the verb *kaa-š-* ‘under’ (128b). However, here is an example of causative derivation from a derivative considered in 5.5 (derivatives from anticausatives are specially discussed in 8.4):

- d. *Ol onu dovurak-ka bora-š-tər-bajn tur.*
 he he.ACC dirt-DAT smear-REC-CAUS-NEG.CONV AUX.3
 ‘He does not let him smear himself with dirt’ (cf. (133)).

6. Lexicalization of verbs in -š

6.1 Introductory

Lexicalized reciprocals are those which are not related to the base verbs in a standard semantic way illustrated by (1). A distinctive feature of a lexicalized meaning is the impossibility of replacing the reciprocal suffix by the reciprocal pronoun, on condition of retaining the meaning. We do not have in mind a stylistic equivalent but a substitute with the same definition, like *oška-š-* ‘to kiss’(vi) = *bot-bot-tar-ə-n oška-* ‘to kiss each other’. Verbs on which the suffix -š does not form a standard semantic reciprocal opposition can be divided into two groups: those with a marked change of meaning and those with no perceptible change or with a very slight change of meaning. Nearly all of these verbs are intransitive. Here is an example with the lexicalized reciprocal *dü-üş-* (*düg-ž-ür*) formed from *düj-* ‘to tie in a knot/wrinkle’:

- (142) a. *Siler-niŋ bodal-ə-ŋar meeŋii-bile düg-ž-üp tur.* (T. 185)
 you-GEN opinion-your mine-with tie-REC-CONV AUX.3.PRES
 ‘Your opinion coincides with mine.’
- b. *Bis-tiŋ bodal-əvəs düg-ž-üp tur.*
 we-GEN opinion-our tie-REC-CONV AUX.3.PRES
 ‘Our opinions coincide.’

In this section, and elsewhere, the dictionary definitions are supplemented by the author's explanations.

6.2 A derivative in -š differs from the base in meaning

The lexicalized meaning is mostly reciprocal, but we also include here derivatives with the sociative, comitative and assistive meanings. A lexicalized meaning may be the only meaning of a derivative, or one of two or more. A derivative may have both a standard reciprocal (or sociative, etc.) and a lexicalized meaning, or a lexicalized meaning only; e.g.:

- (143) *aajla*- 'to tidy sth up/put sth in order' → *aajla-š*- i. 'to tidy sth up *together*',
 ii. 'to *help* tidy sth up', iii. 'to have luck in sth' (T. 27)
as- 'to lose one's way (get lost)' → *az-əš*- i. 'to lose each other somewhere',
 ii. 'to miss (not to meet) each other' (T. 45, 74)
ber- 'to give' → *beriš*- i. 'to touch sth. (-*bile*)', ii. 'to tease sb (-*bile*)',
 iii. 'to quarrel/squabble' (T. 100)
bol- 'to be/become...' → *bol-uš*- 'to defend/intercede for sb (DAT)' (T. 111)
doṇna- 'to tie with a strong knot' → *doṇna-š*- i. 'to be tied tightly' (anticausative),
 ii. fig. 'to fall in love with each other' (T. 172)
dugur- 'to rivet sth' → *dugur-uš*- i. 'to help sb rivet sth',
 ii. 'to come to an agreement' (T. 181)
düj- i. 'to tie sth in a knot' → *dü-üş*- i. 'to become tied in a knot',
 ii. 'correspond/coincide' (T. 185, 186; see (136))
eder- 'to accompany/follow sb/sth' → *eder-iš*- i. 'to become relatives/friends with sb
 (-*bile*)', ii. 'to mate (of animals)', iii. 'to live together' (T. 606)
emegle- i. 'to attack sb together', ii. 'to shout at sb together', iii. 'do sth together'
 → *emegle-š*- i. (same as i. and ii. of the base, but more common),
 ii. 'to help sb do sth' (T. 613)
ešte- 'make sth paired' → *ešte-š*- i. 'be one of a pair', ii. coll. 'to be friends' (T.621)
ište- 'to fill (a vessel)' → *ište-š*- i. 'to be equal in cubic content (of vessels)',
 ii. 'to help to fill sth' (T. 211)
kir- 'to enter' → *kir-iš*- i. 'to participate', ii. 'interfere' (T. 242)
kör- i. 'to look at sb/sth (ALL)', ii. 'to look after sb/sth (ACC)', iii. 'to see sb/sth' iv. 'to try'
 (+ converb), v. 'to look through sth' → *kör-üş*- i. 'to see each other',
 ii. 'to look at each other', iii. 'to meet (each other)',
 iv. fig. 'to compete in sth (DAT)',
 v. 'to help look through sth' (T. 259)
okta- i. 'to defeat in wrestling', ii. 'to throw sb/sth on sth' → *okta-š*- i. 'to be equal in
 strength', ii. 'to defeat each other by turns' (T. 317)
olur- 'to sit/sit down' → *olur-uš*- i. 'to be present at (e.g. a meeting)', ii. 'to live
 together/as a family', iii. arch. 'to enter into matrimony' (T. 319)
ölür- 'to kill sb' → *ölür-üş*- i. 'to kill each other', ii. 'to tease/mock at (-*bile*)',
 iii. 'to take sth into hands/touch sth (-*bile*)' (T. 335)
taakpala- i. 'to smoke', ii. arch. 'to offer tobacco' → *taakpala-š*- i. arch. 'to offer
 tobacco to each other', ii. 'to share sb's grief by
 visiting (-*bile*) and offering tobacco' (T. 318)
tavar- 'to drop in/visit sb (ACC)' → *tavar-əš*- i. 'to meet (by accident)',

- ii. 'to coincide, fit', iii. 'to be' (e.g. 'In some places there are wild goats'), iv. 'to undergo sth (DAT)' (T. 402)
- törelde*- i. 'to stay with relatives' → *törelde-š-* i. arch. 'to stay with each other',
ii. 'to become relatives' (T. 420)
- tur*- 'to stand/stand up' → *tur-uš-* 'to stand/fight for sth' (T. 425)
- xevirle*- 'give form/shape to sth (ACC)' → *xevirle-š-* 'be like sb/sth (DAT)' (T. 472).

6.3 A derivative in *-š* does not practically differ from the base in meaning

Two groups can be distinguished here: (1) the base verb is a lexical reciprocal, and (2) the base verb is not a lexical reciprocal.

1. In the first case the reciprocal suffix is likely to be acquired by these verbs by way of mutual attraction of lexical and grammatical reciprocity, the base verb often being archaic. The derivatives are roughly synonymous to their base verbs; cf.:

- (144) a. *čaala-* i. arch. 'to be at war', ii. 'to conquer, win'
→ *čaala-š-* (same as i. but not arch.) (T. 504)
- b. *čörü-* arch. 'to be obstinate/contradict'
→ *čörü-š-* (same but not arch.) (T. 544)
- c. *duš-* i. arch. 'to see each other', ii. 'to meet sb.DAT (by accident)'
→ *duž-uš-* (same as (i.) but not arch.) (T. 185)
- d. *margə-* arch. 'to argue/insist on one's opinion'
→ *margə-š-* i. same but not arch., ii. 'to compete' (T. 289)
- e. *öže-* 'to do sth to spite sb'
→ *öže-š-* i. (same), ii. 'to be obstinate' (T. 332, 333).

2. Curiously enough, the reciprocal suffix is added to the following group of verbs, without changing their meaning. The reason for the use of *-š* is not clear.

- (145) *bergede*- 'to be in a difficulty' → *bergede-š-* (same) (T. 99)
čada- 'to be unable' → *čada-š-* (same) (T. 507–8)
šada- 'to be able/endure sth' → *šada-š-* i. arch.(same), ii. 'to endure' (T. 586; M1. 380; M2. 165).
- (146) a. *Men berge-ler-ni šada-p / šada-ž-əp ert-er men.*
I hardship-PL-ACC endure-CONV endure-REC-CONV pass-NPAST 1SG
'I will endure all hardships.'
- b. *Egzamen-ner-de bergede-p / bergede-ž-ip tur men.*
exam-PL-DAT have.difficulty-CONV have.difficulty-REC-CONV AUX 1SG
'I experience difficulties at examinations.'

7. Derivatives with the suffix *-la-š*

7.1 Verbs

Verbs with this suffix are reciprocal in meaning. They are formed from mostly nouns (usually with a reciprocal meaning) and from one or two adjectives. The following list contains

practically all these derivations registered in Tenišev (1968); all of them are intransitive. Most of these verbs are used in the simple construction with a semantically plural subject or in the discontinuous construction with an object introduced by the postposition *-bile* ‘with’ (see (147a)), a few also taking the object in the dative case (see (147b)), and two verbs of the list below are used with a plural subject only (see (147c)).

- (147) a. *adaan-naš-* ‘to be enemies/vengeance on each other’ ← *adaan* ‘vengeance/enmity’
adak-taš- ‘to lie down head to feet (of two)’ ← *adak* ‘lower part’ (T. 37)
beldir-leš- ‘to flow together/merge/intersect’ ← *beldir* ‘confluence/intersection’
bölgüm-neš- ‘to unite, group themselves together’ ← *bölgüm* ‘a group’ (T. 117)
čüül-deš- ‘to be alike’ ← *čüül* ‘thing’ (T. 522)
dajəl-daš- ‘to fight/struggle’ ← cf. *dajən* ‘war’ (T. 144)
dem-neš- ‘to help each other’ ← *dem* ‘help’ (T. 155)
domak-taš- ‘to talk/converse’ ← *domak* ‘speech, language’ (T. 170)
dəl-daš- dial. ‘to talk/converse’ ← *dəl* ‘speech, language’ (T. 193)
eelčeg-leš- ‘to change each other’ ← *eelčeg* ‘queue’ (T. 622-3) (arch.)
elege-leš- ‘to be in blood relations with sb’ ← *elege* ‘relative’ (T. 611) (arch.)
izig-leš- ‘to argue/get excited’ ← *izig* ‘hot’ (T. 203)
kolxoz-taš- ‘to join into a collective farm’ ← *kolxoz* ‘collective farm’
najəral-daš- ‘to become friends’ ← *najəral* ‘friendship’ (T. 307)
öñnik-teš- ‘to become friends’ ← *öñnik* ‘friend’ (526)
öžeən-neš- ‘be enemies/vengeance on each other’ ← *öžeən* ‘vengeance/enmity’ (T.333)
sodaa-laš- ‘to fight’ ← *sodaa* ‘a fight’ (T. 379)
sülčee-leš- ‘to conspire’ ← *sülčee* ‘plot/conspiracy’ (T. 393)
tala-laš- ‘to be friends’ ← *tala* ‘friend’ (T. 405)
- b. *čargəl-daš-* ‘to be at law’ ← *čargəl* ‘lawsuit’ (T. 155) (*čargəl-* is non-existent)
čerge-leš- ‘to be equal in height/age, etc.’ ← *čerge* ‘degree’ (T. 529)
üe-leš- ‘to be of the same age’ ← *üe* ‘age’, ‘same age’ (T. 444)
- c. *daraa-laš-* ‘follow one another’ ← cf. *udaa-daraa* ‘one after another’ (T. 148, 433)
udaa-laš- i. ‘to coincide in time’, ii. ‘follow one another’, iii. ‘to be alike’
← *udaa* ‘once, (several) times’ (cf. *kaš udaa* ‘several times’) (T. 433).

The verb *čərak-taš-* (← *čərak* ‘corners of the mouth’) of this group is of special interest due to its lexical meaning as it describes a traditional act: ‘to pull at a piece of boiled skin from the head of an animal with teeth from two sides (of a bride and groom during the wedding ceremony)’ (T. 559).

7.2 Nouns and adjectives

This suffix is rare on nouns, but in Isxakov & Pal’mbox (1961:172) and/or in the dictionaries we find the following derivatives – nouns and adjectives; see (148) and (149) respectively:

- (148) *ada-čurt-taš* ‘compatriot’ ← *ada-čurt* ‘motherland’
at-taš ‘namesake’ ← *at* ‘name’
čurt-taš ‘fellow countryman’ ← *čurt* ‘country’ (T. 547)
oruk-taš ‘fellow traveller’ ← *oruk* ‘road’ (M1. 560).

- (149) *aas-taš* ‘with the same size/kind of lid’ ← *aas* ‘lid’ (of pots) (T. 30)
aas-taš ‘(houses) with doors opposite each other’ ← *aas* ‘entrance, aperture’ (T. 30)
čüzün-neš ‘of the same coat (of horses)’ ← *čüzün* ‘colour, coat’ (T. 551).

I might as well mention here the unique derivational pair *margə-lda-š-* i. ‘to argue’, ii. ‘to compete’, cf. *margə-ldaa* i. ‘argument’, ii. ‘competition’ (← *margə-* ‘to argue’) (T. 289).

8. Lexical reciprocals and their derivatives

8.1 *Reciproca tantum*

The following lexical reciprocals have no verbal bases without *-š* at all or with corresponding meanings (where material identity is most likely accidental, i.e. we observe homonymy here). Like suffixed reciprocals, they are used in both simple and/or discontinuous constructions, the latter with a co-agent mostly expressed by a noun phrase with the postposition *bile* ‘with’. Some of these verbs have derivatives with pleonastic *-š*; e.g.:

- (150) *Men seen-bile duš-č-u be-er men dep boda-va-də-m.* (NO.)
 I you-with meet-REC-CONV AUX-NPAST 1SG that expect-NEG-PAST-1SG
 ‘I did not expect to meet you.’

The list below contains not only verbs with two symmetrical arguments, like verbs of hostile actions, but also verbs of connecting requiring a plural subject, or, as in the case of the verb ‘to wrinkle’ implying a change in the subject referent like wrinkles, i.e. multiple homogeneous features (details, parts of a whole); I have also entered here verbs which imply converse relations between agent and co-agent, like ‘to contradict’, as such meanings are closely related to reciprocal relations. Most of the verbs listed in (151) are intransitive. As in some other languages, the most common lexical meanings here are ‘to fight’, ‘to quarrel’, ‘to meet’, ‘to join’, ‘to coincide’ – ‘to deviate’, ‘to agree’ – ‘to persist’, ‘to untie’ – ‘to be entangled/intertwined’, ‘to compete’, and the like. Most of these verbs are used in the simple construction with a semantically plural subject or in the discontinuous construction with an object introduced by the postposition *-bile* ‘with’ (151a), a few taking also or only an object in the dative case (151b); one verb is used with a plural subject only (151c); a number of verbs are transitive (151d); a few derivatives combine with a singular (usually inanimate) subject (151e).

It is likely that some verbs are entered in the list by mistake, viz. verbs in which the final *-š* is an inherent part of the root and was not added to a root as a suffix (adding the reciprocal meaning or by analogy). It is for etymologists to clear up this issue. To repeat, the list below contains verbs which, firstly, have a meaning more or less reciprocal or close to it (periphery) and, secondly, end in *-š*. There is a number of verbs with final *-š* which seem to be in no way related to the reciprocal meaning (e.g. *dalaš-* ‘to be in a hurry’ (T. 143), *oraldaš-* ‘to try, endeavour’ (T. 325)); on the other hand, there are lexical reciprocals without the final *-š* (e.g. *birik-* ‘to unite’ (vi)), nevertheless the list below is not

accidental. The verbs listed here may have non-reciprocal meanings if the arguments in the discontinuous construction are of different semantic classes.

- (151) a. *algəš-* 'to quarrel' (T. 53; cf. *algə* 'yell' and *algər-* 'shout', *algəš* 'quarrel')
- aralaš-* 'to associate, to alternate' (T. 65) (? ← *arala-* 'to choose')
- baarlaš-* 'to become relatives' (T. 81)
- čarəš-* arch. i. 'to compete in running', ii. 'to compete/vie' (T. 519)
- čoguš-* 'to fight' (T. 538)
- demiseš-* 'to struggle' (cf. *demisel* 'struggle, contest'; T. 155)
- duguruš-* 'to come to an agreement' (T. 181)
- düüš-* 'to coincide/respond' (T. 185)
- eelčəš-* 'to alternate' (T. 623)
- eptereš-* arch. 'to break friendship/quarrel' (T. 615)
- karəš-* i. 'miss (not to meet) each other on the way', ii. 'to not coincide (of sides)', iii. 'to intersect', iv. fig. 'to wrangle' (T. 230)
- koldamnaš-* coll. i. 'to wrestle/romp', 'to fight' (T. 246)
- kərəš-* 'to quarrel/squabble' (T. 279)
- mesildeš-* 'to fight/struggle' (T. 293)
- səmərə[nə]š-* 'to whisper to each other' (T. 397)
- tuluš-* 'to fight/struggle' (T. 423)
- užuraš-* 'to meet/see each other' (T. 436)
- xarəlzaš-* 'to associate' (cf. *xarəlzaa* 'relation/connection'; T. 470)
- xüliüreš-* 'to whisper to each other'
- xüreš-* 'to wrestle' (T. 498)
- əjmaktaš-* 'to romp playing and teasing each other' (T. 593)
- b. *baštaš-* 'to meet on the way' (T. 97)
- bərəš-* 'to be equal (in strength, etc.)' (T. 131)
- čaržalaš-* i. 'to interfere in a conversation', ii. 'to vie/compete' (T. 519)
- dužaaš-* 'to come alongside (of)' (T. 181)
- kattəš-* 'to join/unite' (vi) (T. 232)
- özeš-* 'to persist/be obstinate' (T. 332)
- taarəš-* i. 'suit/respond', ii. 'get along together', iii. 'to be liked' (T. 401)
- tavarəš-* i. 'to meet', ii. 'to coincide', iii. 'to be subjected to' (T. 402)
- uškaš-* 'to mount (of two together, a horse, etc.)' (T. 442)
- üreldeš-* 'to pester sb/carp at sb' (T. 451)
- xamaarəš-* 'to have relations/concern' (cf. *xamaan* 'relation'; T. 466)
- c. *šuuš-* 'to walk single file' (T. 583)
- d. *čəš-* 'to untie' (T. 526)
- eereš-* 'to urge/persuade' ('to cause to agree') (T. 623)
- keš-* 'to cross (e.g. a street, river)' (T. 235)
- koš-* i. 'to mate', ii. 'to join/couple sth', 'to patch sth on' (T. 245)
- e. *bürüš-* 'to wrinkle one's forehead' (T. 128)
- bərəš-* 'to wrinkle one's face' (T. 131)
- düüš-* 'to get knotted (of thread)' (T. 185)
- dərəš-* i. 'to wrinkle one's forehead', ii. 'to crumple (of clothes)' (T. 195)
- šavəš-* 'to deviate/become warped/distorted' (T. 563)
- šorbaš-* arch. 'to be entangled/intertwined' (T. 579).

The adjective-adverb *aškaš* ‘alike/like’ (T. 601) is also a reciprocal *tantum* and may be added to this list.

8.2 Anticausatives

In the case of anticausatives the underlying transitive lexical (and sometimes a morphological) causative verb takes two objects or one denoting a plurality of objects (cf. ‘to gather sth’), and the derivative is intransitive, the object of the base verb turning up as subject (sometimes, this relationship is complicated by a difference in the lexical meaning of the arguments; i.e. the object of a transitive verb cannot be transformed into the subject of an intransitive anticausative, due to its lexical meaning); cf.:

- (152) a. *Ol kudumču-nuŋ ool-dar-ə bölügle-ž-ıp tur-gan.* (cf. (155))
 that street-GEN youth-PL-its group(vt)-REC-CONV AUX-3.PAST
 ‘The youths of that street grouped themselves together.’
- b. *Kömčə ool-du bir oraa-ž-ə ber-gen.* (cf. (185))
 whip boy-LOC once wind-REC-CONV AUX-3.PAST
 ‘The whip wound itself round the boy.’
- c. *Čep doŋna-ž-əp kal-gan.* (cf. (163))
 rope tie-REC-CONV AUX-3.PAST
 ‘The rope got tied tightly.’
- d. *Bujan duŋma-lar-ə-n-ga dömejle-š-pes.* (KK.) (cf. (179))
 B. younger.brother/sister-PL-his-n-DAT liken-REC-NEG.NPAST
 ‘Bujan does not look like his younger brothers and sisters.’

The following verbs are anticausatives derived from lexical reciprocals:

- (153) a. *borbakta-* ‘to roll sth up into a ball/lump’
 b. *borbakta-š-* ‘to roll oneself into a ball’ (T. 114).
- (154) a. *bökpekte-* ‘to gather sth into a heap’
 b. *bökpekte-š-* ‘to gather into a heap/crowd/to unite’ (T. 117).
- (155) a. *bölügle-* ‘to group sb together’ (cf. *bölük* ‘group’)
 b. *bölügle-š-* ‘to group oneself’ (T. 117).
- (156) a. *čoçakta-* ‘to crumple, roll sth into a ball/clod’ (cf. *čoçak* ‘lump/clod/ball’)
 b. *čoçakta-š-* ‘to form/stick into a lump/clod’ (T. 541).
- (157) a. *čokpakta-* ‘to roll sth into a ball/clod’
 b. *čokpakta-š-* i. ‘to form (of a lump/clod);
 ii. ‘to grow and entwine thickly (of branches)’ (T. 538).
- (158) a. *dakpər-la-* i. ‘to combine (e.g. two posts); ii. ‘to repeat sth’
 b. *dakpər-la-š-* i. ‘to be combined’, ii. ‘to repeat itself/coincide’ (T. 144).
- (159) a. *deg-* ‘to touch sth’
 b. *de-eš-* ‘to touch upon each other’ (T. 151).
- (160) a. *deŋne-* ‘to make sth even/equal’
 b. *deŋne-š-* ‘to be even/equal’ (T. 157).

- (161) a. *deskile-* 'to make sth even/smooth'
 b. *deskile-š-* i. 'to become even/smooth/alike', ii. 'to be clouded over' (T. 159).
- (162) a. *dolga-* 'to coil/wind sth'
 b. *dolga-š-* 'to get entangled' (T. 169).
- (163) a. *doḡna-* 'to tie sth in a strong knot, to knot' (cf. *doḡ* 'strong knot')
 b. *doḡna-š-* 'to get tied firmly' (T. 172).
- (164) a. *düj-* 'to tie sth in a knot/wrinkle'
 b. *dü-üš-* 'to become tied/tie itself in a knot' (T. 185, 186).
- (165) a. *dür-* 'to roll up, wind sth into a ball'
 b. *dür-üš-* 'to roll up, get entwined' (T. 190).
- (166) a. *dəgə-* i. 'to stuff sth (with)', ii. 'to push/force sth through', 'to swallow'
 b. *dəgə-š-* 'to become caked/compressed (of hay)' (cf. *dəgəj/dəgə-š* 'dense'; T. 192).
- (167) a. *ešte-* 'to make sth a pair' (cf. *eš* i. 'comrade', ii. 'pair')
 b. *ešte-š-* i. 'to make up/be a pair', ii. 'to be friends' (T. 621).
- (168) a. *mööhne-* 'to save, accumulate, gather, concentrate sth'
 b. *mööhne-š-* 'to accumulate, pile up, gather, crowd' (T. 301).
- (169) a. *neme-* 'to add/increase sth'
 b. *neme-š-* 'to be added/increase' (T. 309).
- (170) a. *oj-* 'to pass sth round' ((b) retains the component 'not straight' only)
 b. *oj-uš-* arch. 'to become crooked/bent' (T. 329).
- (171) a. *öjle-* 'to fix the limit' (cf. *öj* 'the right size/hust right')
 b. *öjle-š-* 'to fit (in size)' (T. 334).
- (172) a. *öörle-* arch. 'to group sb' (cf. *öör* 'group; friends')
 b. *öörle-š-* i. 'to group oneself/unite', ii. 'to be friends' (T. 338).
- (173) a. *səvər-* i. 'to couple (cattle)' (vt), ii. 'to drive (cattle)'
 b. *səvər-əš-* i. 'to couple (of cattle)' (vi), ii. 'to chase' (T. 395).
- (174) a. *taar-* 'to adjust/fit sth to sth' (arch.)
 b. *taar-əš-* 'to match sth/correspond' (T. 401, 402).
- (175) a. *xala-* i. 'to change (sb on duty)', ii. 'to demobilize', iii. 'to dismiss'
 b. *xala-š-* i. 'to take turns', ii. 'to get demobilized', iii. 'to resign' (T. 468).

8.3 Synonymous anticausatives with the suffixes *-š* and *-l*

As mentioned above (see 2.5), anticausatives can be derived by means of reflexive and passive suffixes as well. These suffixes may derive anticausatives from lexical reciprocals. The latter derivatives are sometimes synonymous to anticausatives with the reciprocal suffix derived from the same stem; cf.:

- (176) a. *ka"tta-l-* 'to form layers'; cf. *ka"tta-š-* (same)
 b. *əlga-l-* 'to differ from each other'; cf. *əlga-š-* (same).

Sentential examples:

- (177) a. *Doj borbakta-ž-əp / borbakta-l-əp kal-gan.*
 clay roll.into.lump-REC-CONV roll.into.lump-PASS-CONV AUX-3.PERF
 ‘The clay turned into a lump.’
- b. *Čoduraa-nəŋ kad-ə čokpakta-ž-ə / čokpakta-l-ə*
 bird.cherry-GEN berry-its make.round-REC-CONV make.round-PASS-CONV
ber-gen.
 AUX-3.PERF
 ‘Bird-cherries became round.’
- c. *Ča”s-ka bižik bala-ž-əp / bala-l-əp kal-gan.*
 rain-DAT letter erase-REC-CONV erase-PASS-CONV AUX-3.PERF
 ‘After rain the writing got washed away.’
- d. *Saazən dürü-ž-e / dür-l-ü ber-gen.*
 paper roll.up-REC-CONV roll.up-PASS-CONV AUX-3.PERF
 ‘The paper rolled up into a tube.’
- e. *Arn-əm bəlcakta-ž-ə / bəlcakta-l-ə ber-ip-tir.*
 face-my make.dirty-REC-CONV make.dirty-PASS-CONV AUX-ASP-PTL
 ‘It turned out my face became dirty’ (-*tir/-tər/-dir/-dər* = ‘it turned out’).

But this kind of synonymy is not found in all derivatives in *-š*. Thus, for instance, judging by the dictionaries, the following anticausatives do not have such same root synonyms: *salča-š-* ‘to get entangled/mixed’, *xolu-š-* ‘to become mixed/intermingled’, *ula-š-* ‘to join/become tied’. On the other hand, there are anticausatives in *-l* or *-n* derived from lexical reciprocals which do not have synonymous parallels in *-š*, e.g. *koš-* i. ‘to join’, ii. ‘to mate/couple’ (vt) → *koš-tun-* i. ‘to join’, ii. ‘to mate/couple’ (vi) (cf. **kož-uš-*) (T. 255). Compare also (193c). And lastly, there are cases of synonymy between same root anticausatives in *-š* and those with the complex suffix *-n-əš*, e.g.: *badəla-* ‘to register sth (e.g. marriage)’ → *badəla-š-* ‘to get registered/married at the registrar’s’; *badəla-n-əš-* (same meaning, but more common in use) (T. 83). Note that the “underlying” reflexive form *badəla-n-* is non-existent.

8.4 Object-oriented reciprocals; the complex reciprocal-causative suffix *-š-tər*

In principle, any verb considered in 8.1 and 8.2 can be causativized. In this case, given the proper lexical meaning, reciprocal relations between two or many objects will find expression.

Basically, an object-oriented reciprocal can be formed from any of these verbs by means of a causative suffix; cf.:

- (178) a. *Arn-ə dərəš-tə.*
 face-his wrinkle-3.PAST
 ‘His face wrinkled.’
- b. *Ol arn-ə-n dərəš-tər-də.*
 he face-his-ACC wrinkle-CAUS.3.PAST
 ‘He wrinkled his face’ (M1. 543) (see also 3.3.2).

There seems to be a tendency to mark three-place lexical reciprocals by means of the double suffix *-š-tər*. This is particularly obvious when there is no standard semantic relation-

ship between the second and the third members of a derivational chain, but an unmarked reciprocal relationship is replaced by a marked expression. In derivation of object-oriented reciprocals from anticausatives, three types of derivational chains can be distinguished, one of them with a standard semantic relationship and two with non-standard relations.

1. The principal and most frequent case: at each stage of derivation a standard change of meaning takes place: from a lexical causative reciprocal the causative meaning is “subtracted” which is restored at the second stage of derivation. As a result, the final derivative is more or less synonymous to the base verb (see 3.2.2), but it presents an action as divisible.

- (179) a. *dömejle-* ‘to compare, liken’ (cf. *dömej* ‘alike/same’)
 b. *dömejle-š-* ‘to be alike/like each other’
 c. *dömejle-š-tir-* (same as (a)) (T. 177).
- (180) a. *ešte-* ‘to make sth one of a pair’ (cf. *eš* i. ‘comrade’, ii. ‘pair’)
 b. *ešte-š-* i. ‘to become one of a pair’, ii. ‘to become a partner’
 c. *ešte-š-tir-* (same as (a)) (T. 621).
- (181) a. *ka”tta-* i. ‘to put one layer on another’, ii. ‘to twist (a rope, etc.)’,
 iii. ‘to double (in chess)’ (cf. *ka”t* ‘row/layer/stratum’)
 b. *ka”tta-š-* i. ‘to coincide’, ii. ‘to form layers’, iii. ‘to be doubled’
 c. *ka”tta-š-tər-* (same translation as (a)) (T. 233).
- (182) a. *ula-* ‘to join/tie sth together’
 b. *ula-š-* ‘to join/become tied’
 c. *ula-š-tər-* (same translation as (a)) (T. 438).
- (183) a. *xolu-* ‘to mix sth with sth’
 b. *xolu-š-* ‘to become mixed/intermingled’
 c. *xolu-š-tur-* (same translation as (a)) (T. 481).
- (184) a. *älga-* i. ‘to choose/sort out’, ii. ‘to distinguish’
 b. *älga-š-* ‘to differ from each other’
 c. *älga-š-tər-* (same translation as (a)) (T. 594).

2. In this derivational chain the standard change of meaning is observed only at the second stage of derivation, and though the semantic connection at the first stage is obvious it is overlaid by a slight shift of meaning; e.g.:

- (185) a. *oraa-* i. ‘to wrap sth’, ii. ‘to twine sth’
 b. *oraa-š-* i. ‘to get entangled (of threads)’, ii. ‘to twine (of plants)’,
 ii. ‘to pester sb’
 c. *oraa-š-tər-* i. ‘to entangle sth’, ii. ‘to beat/whip sb’ (T. 324).
- (186) a. *tut-* i. ‘to hold’, ii. ‘to press’, iii. ‘to catch’, etc.
 b. *tud-uš-* i. ‘to join’, ii. ‘to flow together’, iii. ‘to knit (of bones)’
 c. *tud-uš-tur-* i. ‘to join sth with sth’, ii. ‘to make flow together’ (T. 427).

3. There are instances when the first stage of derivation does not result in any anticausative meaning proper, and what happens is not addition of the causative suffix to the second member of the chain but addition of the complex suffix *-š-tər* to the first member.

This is particularly clear in (189) where (a) and (c) are not reciprocal in meaning and (b) contains the reciprocal suffix but it is semantically unrelated to (a) and (b).

- (187) a. *šüg-* 'to collate/correct'
 b. *šü-üş-* 'to collate together' (sociative)
 c. *šü-üş-tür-* i. (same as (a)), ii. 'to make collate/correct' (T. 283-4).
- (188) a. *xolba-* 'to tie sth (two or more objects)'
 b. *xolba-š-* i. 'to have to do with sb' (usu negative), ii. lit. 'be related to sth'
 c. *xolba-š-tər-* (same as (a)) (T. 480).
- (189) a. *dužaa-* i. 'to suppose', ii. 'to estimate/determine approximately'
 b. *dužaaš-* 'to catch up with/come alongside of sb'
 c. *dužaa-š-tər-* (same translation as (a)) (T. 181).

8.5 Verbs of dividing and exchanging and their derivatives

These two groups of object-oriented lexical reciprocals comprise verbs close semantically but differing in the range of meanings characteristic of derivatives in *-š*, and to a greater or lesser degree determined by the lexical meaning of the base verbs:

1. The derivatives of some of the verbs denote actions performed between the subject referents (this type reminds of "indirect" reciprocals because the direct object is retained; the difference is in the fact that the semantic role of the addressee is not necessarily included in the lexical meaning of the base verb; see (190b), (191b.i), (194b), (195b.i);
2. The derivatives of other verbs are anticausative in meaning; see (191b.ii), (192b), (195b.ii), (196b);

3. The third type of derivatives may have both meanings; cf. (191b) and (195b).

And, lastly, there are verbs close to the base verbs of these in meaning whose derivatives in *-š* have neither of these two meanings (see (193)).

The groups named here are illustrated below by seven typical verbs and their derivatives.

(a) *Verbs of division* denote division of an object into parts/shares (and allow an addressee); they acquire the meaning of dividing and distributing the parts between the subject referents when the suffix *-š* is added.

- (190) a. *üle-* 'to divide sth into parts/to sb (DAT)'
 b. *üle-š-* 'to divide sth between/among oneself' (T. 447) ("indirect")
- (191) a. *xuvaa-* 'to divide sth/sb into sth /distribute sth'
 b. *xuvaa-š-* i. 'to divide/distribute sth among/between oneself' ("indirect")
 ii. '(of sth) to become sb's share' (T. 493) (anticausative)
- (192) a. *onaa-* 'to distribute sth'
 b. *onaa-š-* '(of sth) to become sb's share' (T. 319) (anticausative)
- (193) a. *čar-* 'to divide sth into sth, separate sth from sth'
 b. **čar-əš-* (asterisk indicates the absence of both (i) and (ii) derivatives in *-š*); cf.:
 c. *čar-əl-* 'to part/separate' (anticausative)

(b) *Verbs of exchanging sth for sth* can produce derivatives in -š with analogous sets of meanings; cf.:

- (194) a. *orna-* ‘to exchange sth for sth’
 b. *orna-š-* ‘to exchange between/among themselves’ (T. 326) (“indirect”)
- (195) a. *solu-* ‘to exchange/change sth for sth’
 b. *solu-š-* i. ‘to exchange with sb, between/among oneself’ (“indirect”)
 ii. ‘to change’ (T. 381) (anticausative)
- (196) a. *salča-* ‘to entangle/mix (up) sth with sth’
 b. *salča-š-* ‘to get entangled/mixed’ (T. 365) (anticausative)

Verbs on which the reciprocal marker cannot express the meaning ‘between/among themselves’ acquire it if the subject-oriented benefactive auxiliary is added. (197) illustrates such use of the verb under (193a):

- (197) *Begzi bile Bilzej tarǝlga šöl-ü-n čar-əp al-gan-nar.*
 B. and B. cultivated land-their-ACC divide-CONV S.BEN-AUX-PERF.3PL
 ‘Begzi and Bilzej have divided the land for cultivation between (lit. for) themselves.’

The following examples illustrate the use of the verbs under (191) and (195), with the addition of the causative form. The latter form can be roughly synonymous to the base verb, sometimes differing in the emphasis on the involitional character of the action (cf. (199c)), or it may denote an action between the object referents.

- (198) a. *Direktor baškə-lar-ga šak-tar-nə xuvaa-gan.*
 headmaster teacher-PL-DAT hour-PL-ACC divide-3.PERF
 ‘The headmaster divided the teaching load (lit. ‘hours’) among the teachers.’
- b. i. *Baškə-lar šak-tar-nə xuvaa-ž-əp al-gan-nar.* (“indirect”)
 teacher-PL hour-PL-DAT divide-REC-CONV S.BEN-3.PERF
 ‘The teachers divided the “hours” among themselves.’
 ii. *Badə baškə-ga 300 šak xuvaa-š-kan.* (anticausative)
 B. teacher-DAT 300 hour.NOM divide-REC-3.PERF
 ‘Teacher Bady got 300 “hours” to teach’ (lit. ‘300 “hours” fell to Bady.’)
- c. *Direktor baškə-lar-ga šak-tar-ə-n xuvaa-š-tər-gan.*
 headmaster teacher-PL-DAT hour-PL-his-ACC divide-REC-CAUS-3.PERF
 (same translation as (a)).
- (199) a. *Sajdaš sumka-zə-n solu-p-kan.*
 S. handbag-her-ACC mix.up-ASP-3.PERF
 ‘Sajdash exchanged/mixed up her handbag [with sb/sb’s].’
- b. i. *Sajdaš Ajana-bile sumka-lar-ən solu-š-kan-nar.* (“indirect”)
 S. A.-with handbag-PL-ACC mix.up-REC-PERF-3PL
 ‘Sajdash and Ajana exchanged/mixed up their handbags.’
 ii. *Sajdaš bile Ajana-nəη sumka-lar-ə solu-š-kan.* (anticausative)
 S. and A.-GEN handbag-PL-their.NOM mix.up-REC-3.PERF
 ‘The handbags of Sajdash and Ajana got mixed up.’

- c. *Sajdaš sumka-zə-n Ajana-nəŋ sumka-zə-bile*
 S. handbag-her-ACC A.-GEN handbag-her-with
solu-š-tir-ip-kan-dər. (AD.) (on *-dər* see (177e))
 mix.up-REC-CAUS-ASP-PERF-PRTL
 ‘It turns out Sajdash mixed up her handbag with Ajana’s.’

9. Non-reciprocal suffixes materially identical with the reciprocal *-š* or containing component *-š*

It is difficult to claim anything definite about the genetic relatedness of the suffixes listed below to the reciprocal suffix and their interrelatedness, though such attempts have been made with regard to at least some of them. Some of these suffixes are mentioned in Section 14.2 of Ch. 26 on Yakut reciprocals, and the material mentioned here is a kind of supplement. When investigating the issue of genetic relatedness, not only the data of the Turkic languages should be taken into consideration but also cross-linguistic data. The point is, the semantic development of these suffixes may have been consecutive and retained the link with the original meaning, and it may have followed a path with sharp shifts in meaning. Besides, intermediate semantic stages may have been lost. Although their set of meanings may look accidental, I think it may be useful to list all of these suffixes most of which are nominal.

Below, the reader will find material for reflection. We give all the data we have at our disposal, with references to the data that have already been considered above. The component *-š* occurs in three usages: (1) as the only suffix, (2) as a component of a complex suffix, and (3) as part of the stem (at least from the viewpoint of modern Tuvan). In this material, we can trace the idea of plurality, (rhythmical) iterativity, paired objects, etc., i.e. the meanings contiguous to the reciprocal and sociative which also presuppose plurality of actions and/or participants. Two groups of words with the component *-š* can be distinguished.

1. Nouns denoting *collective* entities; they may be (1.1) *derived* nouns, they include collective nouns in *-škə* and *-lə-škə* (see (6) and the relevant text preceding it); (1.2) *non-derived* nouns with the final *-š* denoting (a) one of a set of objects which do not usually appear separately, e.g. *dış* ‘tooth’; (b) a group of objects (collective nouns): *čiš* ‘cattle for slaughtering’, *ünüş* ‘vegetation, plants’, *koš* ‘caravan, load’, ‘doubled’, *adaš* ‘palm (of the hand)’, *idiš* ‘dishes’, *artəš* ‘junipers’, etc.; (c) objects that move back and forth: *aatkəš* ‘swing’, *kiriš* ‘bow-string’, etc.; (d) paired objects or one of a pair: *koš* ‘doubled/paired thing’, *majəktaaş* ‘shoe’, *čuldurguuš* ‘muff’ (usu. two worn together), *ka”ttaš* ‘wife’ (arch.), etc.; (e) space between objects: *beldireš* ‘hollow between two mountain tops’, *ooraš* ‘small hollow between hill tops’ (cf. *oorga* i. back’, ii. ‘small mountain range’).

2. *Deverbal* nouns, adjectives and adverbs: (a) with the unproductive suffix *-š* (see 3.5.1.3); (b) with the productive suffix (for nouns) *-əškan* (see 3.5.1.2); (c) with the productive suffix of instrumental nouns *-aš*; cf. *širbi-* ‘to sweep’ → *širbi-iš* ‘broom’; (d) with the productive suffix (for deverbal adjectives and nouns) *-aš/-eš*. Adjectives with this suffix

are formed, it seems, mostly from verbs denoting rhythmical, iterative or multidirectional actions, i.e. actions consisting of uniform acts, e.g. *čaja-ηna-* ‘to rock/swing’ → *čaja-ηna-aš* ‘swinging/rocking (of branches, trees)’ (*-ηna* denotes a rhythmic action). Nouns with this suffix may name an object composed of divided uniform parts (sounds, lines, details of relief, etc.), e.g. *kəza-ηna-* ‘to flash (of lightning)’ → *kəza-ηna-aš* ‘lightning’.

1. Introduction

1.1 Kirghiz

Kirghiz belongs to the Aralo-Caspian (Central Turkic) subgroup of the Western Turkic (Kipchak) group of the Turkic languages. It is spoken natively by more than 2,500,000 Kirghiz. The other closely related languages of the Aralo-Caspian subgroup are Kazakh (over 9 million speakers), Karakalpak (more than 400,000), Turkmen (4,300,000), Ujghur (7,500,000) and Uzbek (18,500,000 speakers). About 90 per cent (2,230,000) Kirghiz live in the Kirghiz Republic, and there are Kirghiz minorities in the neighbouring countries of Middle Asia: Uzbekistan, Tajikistan, Afganistan, Mongolia and China.

1.2 Overview

There are two principal means of expressing reciprocity, the reciprocal suffix -š and the reciprocal pronoun *birin-biri* ‘each other’ which are used singly or co-occur in the same clause; cf. (traditionally, the Kirghiz kiss on the neck and not on the lips).

- (1) a. *Kəz apa-sə-n öp-tii.*
 girl.NOM mother-her-ACC kiss-3SG/PL.PAST
 ‘The girl kissed her mother.’
- b. *Kəz menen apa-sə öb-üš-tii.*
 girl.NOM and mother-her.NOM kiss-REC-3SG/PL.PAST
 ‘The girl and her mother kissed.’

Both types of reciprocals occur in all the three diathesis types of both subject-oriented and object-oriented constructions.

Verbal forms with the suffix -š can also express the assistive meaning:

- (2) a. *Apa-m kamər žuuru-du.*
 mother-my.NOM dough.NOM knead-3SG/PL.PAST
 ‘My mother kneaded the dough.’
- b. *Men apa-m-a kamər žuuru-š-tu-m.*
 I.NOM mother-my-DAT dough.NOM knead-REC-PAST-1SG
 ‘I helped my mother to knead the dough.’

Kirghiz differs from Yakut in that its reciprocal suffix lacks the sociative and comitative meanings. Sociatives are attested only in folklore and they are rejected by native speakers. With rather restricted groups of verbs, the reciprocal suffix marks the competitive and the anticausative meanings.

The most interesting function of the Kirghiz reciprocal suffix is optional marking of 3PL on verbs (see (3a)). Thus, though extremely rarely, this suffix may occur twice in a verb form, as a reciprocal and as a plural marker, as in (3b):

- (3) a. *Alar kamər žuuru-š-tu.*
 they dough knead-3PL-3SG/PL.PAST
 ‘They kneaded the dough.’
- b. *Alar kamər žuuru-š-əš-tu.*
 they dough knead-REC-3PL-3SG/PL.PAST
 ‘They helped (sb) to knead dough.’ (assistive)

The interpretation of the suffix *-š* as reciprocal or 3PL may not be obvious (see also 5.2.1.3).

The reciprocal pronoun *birin-biri* is inflected for case and it takes possessive plural markers in agreement with the person of the subject. This reciprocal pronoun stands in complex relation to the reciprocal suffix; they are in overlapping distribution. Thus the reciprocal pronoun is odd with the verb *öp-* ‘to kiss’ in (4) (cf. (1b)), but on the other hand the reciprocal suffix is ungrammatical in (5b) and it is lexicalized in (5c).

- (4) [?]*Alar birin-biri öp-tü.*
 they each-other-ACC kiss-3SG/PL.PAST
 ‘They kissed each other.’
- (5) a. *Men anə terek-ke bajla-də-m.*
 I.NOM he.ACC tree-DAT tie-PAST-1SG
 ‘I tied him to a tree.’
- b. **Biz terek-ke bajla-š-tə-k.*
 we tree-DAT tie-REC-PAST-1PL
 (intended meaning:) ‘We tied each other to a tree.’
- c. *Men anə menen bajla-š-tə-m.*
 I.NOM he.ACC with tie-REC-PAST-1SG
 ‘I made a bet with him.’ (lexicalized meaning)
- d. *Biz birin-biri terek-ke bajla-də-k.*
 we each-other tree-DAT tie-PAST-1PL
 ‘We tied each other to a tree.’

There are no less than 160 verbs and nouns with the reciprocal meaning derived mostly from nominal bases by means of the suffix *-laš* (in Yakut, the respective suffix *-las* is used to derive verbs only, not nouns).

- (6) a. *bet* ‘face’ → *bet-laš-* ‘to meet face to face’
 b. *aj* ‘moon’ → *aj-laš* ‘women in the same month of pregnancy’.

1.3 Database

The bulk of the material used in this chapter is borrowed from a two-volume *Kirghiz-Russian dictionary* (Ju.1 and Ju.2) and a one-volume *Russian-Kirghiz dictionary* (Ju.3; see Sources), and also from specialist literature. The evaluations of grammaticality and acceptability reflect the intuitions of the young Kirghiz linguist Talaj Abdiev who has also supplied the examples cited without references. I am grateful to him for his invaluable

help. Sometimes, his evaluations are at variance with the dictionary data, which may be due to dialectal factors.

2. Grammatical notes

The principal outline and some important features of Kirghiz grammar coincide with those of Yakut, therefore I refer the reader to the chapter on Yakut and advise to read it prior to this chapter. I shall list only some important points of difference:

2.1 Morphology

The suffixes in Kirghiz have fewer allomorphs than in Yakut: not more than 12, as a rule. Thus, for instance, the dative case marker has only 8 variants (*-ga/-ge/-go/-gö; -ka/-ke/-ko/-kö*) corresponding to the 20 variants in Yakut.

2.2 Case and number. Possessivity

There are only six cases in the Kirghiz noun. Kirghiz lacks the comitative case but it has the genitive which is lost in Yakut. The case endings follow the markers of plurality and possessivity (cf. *apa-sə-n* in (1a) and *apa-m-a* in (2b)). Here is the non-possessive case paradigm of the noun *kəz* 'girl' in the singular:

(7)	NOM	<i>kəz-Ø</i>	ACC	<i>kəz-də</i>
	GEN	<i>kəz-dən</i>	LOC	<i>kəz-da</i>
	DAT	<i>kəz-ga</i>	ABL	<i>kəz-dan.</i>

In this paper, the nominative case is not as a rule indicated in the glosses.

In the possessive declension the endings may differ, e.g. the dative case endings are *-a/-e/-o/-ö* (see (2b)). If the 1PL or 2PL possessive marker is used the accusative case ending is *-d/-di/-du/-dü*, while the accusative ending co-occurrent with the 3rd person possessive marker (common for SG and PL) is *-n*. The plural marker which is not always used is the suffix *-lar/-tar/...* (cf. *at* 'horse' – *at-tar* 'horses', *kəz* 'girl' – *kəz-dar* 'girls'). When used attributively an adjective precedes the head noun and it is not inflected. An attributive possessive phrase is an izafet construction: both components are mutually dependent, the head noun requiring the genitive case of the attribute and the possessive suffix of the head noun being in agreement with the person and number of the attribute; cf.:

(8)	<i>at-tən</i>	<i>baş-ə</i>
	horse-GEN	head-its
	'a horse's head.'	

2.3 Tense/aspect system

Like Yakut, Kirghiz has two sets of agreement markers on the verb: one is used on verbs only (see (9)) and the other coincides with the possessive markers on the noun (see (10)). The 3rd person verb form has no plural marker, while Yakut has the plural suffix *-ler*; therefore, when the optional 3PL marker *-š* (which is placed before the tense marker and converbal marker) is not used the SG and PL are not distinguished in the 3rd person. The following tables illustrate the present (more precisely, present-future) and past tense paradigms which make use of different agreement paradigms.

These agreement markers are also used in the perfect marked by *-gan/-kan/...*, past habitual in *-ču*, future in *-ar* and also in nominal predicates.

(9)	Present-future (the marker <i>-a/-e/-o/-ö/-j</i>)			
	SG		PL	
	1. <i>al-a-mən</i>	'I take'	<i>al-a-bəz</i>	'we take'
	2. <i>al-a-səŋ</i>	'you take'	<i>al-a-səŋar</i>	'you take'
	3. <i>al-a-t</i>	's/he takes'	<i>al-a-t</i>	'they take'
			<i>al-əš-a-t</i>	'they take'.

The following set of agreement markers is used in the past and present tenses:

(10)	Past (the marker <i>-də/-di/-du/-dü; -tə/-ti/-tu/-tü</i>)			
	SG		PL	
	1. <i>al-də-m</i>	'I took'	<i>al-də-k</i>	'we took'
	2. <i>al-də-ŋ</i>	'you took'	<i>al-də-ŋar</i>	'you took'
	3. <i>al- də-Ø</i>	's/he took'	<i>al-də-Ø</i>	'they took'
			<i>al-əš-tə</i>	'they took'.

There are numerous periphrastic verbal forms comprised of converbs and auxiliaries which render various aspectual meanings.

2.4 Reflexive and reciprocal pronouns

Kirghiz differs from Yakut in that these pronouns are formed from different bases. The reflexive pronoun is formed from the root *öz* 'self' (cf. nominative *özü-m* '(I) myself', *özü-ŋ* '(you) yourself', *özü* '(s/he) him/herself', *özü-lör-ü/öz-dör-ü* '(they) themselves', etc.), while the reciprocal pronoun is formed from the numeral *bir* 'one' by reduplication. Both pronouns are inflected for person and case, the reflexive pronoun having both singular and plural forms, and the reciprocal only plural forms. Both pronouns take the case endings of the possessive declension. The reflexive pronoun has the nominative case while the reciprocal does not have it. The reciprocal pronoun has two variants for each person, (11b') and, less frequently, (11b'') (for the latter see (52b), (60) and (61)). Here are the *accusative* case forms of both pronouns (see (40) for the forms of four cases):

- | | |
|------------------------------------|---|
| (11) a. Reflexive pronoun | b. Reciprocal pronoun |
| 1SG <i>özü-m-dü</i> ‘myself’ | – |
| 2SG <i>özü-ŋ-dü</i> ‘yourself’ | – |
| 3SG <i>özü-ŋ</i> ‘him/herself’ | – |
| 1PL <i>özü-büz-dü</i> ‘ourselves’ | b. <i>bir[i]-biri-biz-di</i> = b’. <i>biri-biz-di biri-biz</i> ‘each other’ |
| 2PL <i>özü-ŋör-dü</i> ‘yourselves’ | <i>bir[i]-biri-ŋer-di</i> = <i>biri-ŋer-di biri-ŋer</i> ‘each other’ |
| 3PL <i>öz-dör-ün</i> ‘themselves’ | <i>biri-n-biri</i> = <i>bir[i]-biri-n</i> ‘each other’. |

In Kirghiz orthography, the reciprocal pronouns under (11) are usually spelt as *birin-biri*, *biri-biribizdi*, *biribizdi* *biribiz*, etc.; in the examples, they are divided into morphemes.

2.5 Voices (means of valency change)

Kirghiz is like Yakut in that it has three valency decreasing voices and one valency increasing voice. What follows is a list of the voice markers and their principal and additional meanings. The names of the suffixes only partly reflect their functions; moreover, the passive and the reflexive suffixes seem to be used in the functions reflected in their name less commonly than in other functions. The meanings of different markers may be similar (cf. 13.5); thus if we take into account lexicalizations the general overview is very complicated. Among all the verbs (11,645 items) registered in the *Kirghiz-Russian Dictionary* (Ju.1, Ju.2), verbs with the voice markers comprise 5,350 items, or 46 per cent; verbs with causative suffixes number 3,200 (Sadykov 1995:23; Abdiev 1995:36).

1. The passive suffix *-əl/-il/-ul/-ül/-l-*; forms with this marker can also express the reflexive proper, anticausative, and a number of other meanings; cf.:

- | | | |
|---|---|-----------------|
| (12) a. <i>žaz-</i> ‘to write’ | → <i>žaz-əl-</i> ‘to be written’ | (passive) |
| b. <i>əgər-</i> ‘to press sb/sth to sb/sth’ | → <i>əgər-əl-</i> ‘press oneself to sb/sth’ | (autocausative) |
| c. <i>žəjna-</i> ‘to gather sth/sb’ | → <i>žəjna-l-</i> i. ‘to be gathered’ | (passive) |
| | ii. ‘to gather’ | (anticausative) |
| d. <i>as-</i> ‘to hang sb/sth’ | → <i>as-əl-</i> i. ‘to be hanged’ | (passive) |
| | ii. ‘to hang oneself’ | (reflexive). |

2. The reflexive suffix *-ən/-in/-un/-ün/-n-*; this marker can also express a number of other meanings, e.g. the possessive-reflexive, passive (after root-final *-l*), anticausative, etc.:

- | | | |
|-----------------------------------|---------------------------------------|------------------------|
| (13) a. <i>žuu-</i> ‘to wash’ | → <i>žuu-n-</i> ‘to wash oneself’ | (reflexive proper) |
| b. <i>as-</i> ‘to hang sb/sth’ | → <i>as-ən-</i> i. ‘to hang oneself’ | (reflexive proper) |
| | ii. ‘to hang sth on oneself’ | (reflexive-possessive) |
| c. <i>ujpala-</i> ‘to tangle sth’ | → <i>ujpala-n-</i> ‘to get entangled’ | (anticausative) |
| d. <i>al-</i> ‘to take’ | → <i>al-ən-</i> ‘to be taken’ | (passive). |

3. The reciprocal suffix *-əš/-iš/-uš/-üš/-š-*; this suffix may also express the assistive and the anticausative and competitive meanings; it also has a special function of marking plurality in the 3rd person (see (3a, b)). Kirghiz differs from Yakut in that the reciprocal meaning is not rendered by a reduplicated reciprocal suffix. This may be due to the fact that the suffix *-š* may be repeated in the same form as a 3PL marker only, the first suffix

being reciprocal or assistive (see (3b)). In the *Kirghiz-Russian Dictionary*, 960 verb forms with the reciprocal suffix are registered (Abdiev 1995: 114), of which in our opinion not more than half have the standard reciprocal meaning (see 9.3).

4. The productive causative suffixes *-t* and *-där/-dir/-dur/-dür; -tär/-tir/-tur/-tür*, and the unproductive suffixes *-ar, -kar, -az* (and their variants), and two or more very rare suffixes; the suffix *-t* occurs in 82 per cent and *-där* in 15.5 per cent of all the causatives (Abdiev 1996: 33). In the *Kirghiz-Russian Dictionary*, 78 per cent of causatives are derived from intransitives (Abdiev 1995: 136). The productive causative suffixes can also render the passive meaning, viz. permissive-passive (see Kudajbergenov 1987b: 252–3). Compare:

- (14) a. *öl-* ‘to die’ → *öl-tür-* ‘to kill’ → *öl-tür-t-* ‘to order/allow to kill’ (causative proper)
 b. *čap-* ‘to catch (of a trap)’, lit. ‘to hit’ → *čap-tär-* ‘to get caught (in a trap)’
 (permissive passive)
 c. *žen-* ‘to win’ → *žen-dir-/žen-dir-t-* i. ‘to let oneself be conquered’
 ii. ‘to be conquered’
 ii. ‘to submit/resign oneself’ (Ju.1. 248).

Among verbal derivatives registered in the *Kirghiz-Russian dictionary* (Ju.1, Ju.2) the forms considered below are represented as follows: causatives – 60 per cent, reciprocals – 17.9 per cent, passives – 12.5 per cent, and reflexives – 9.8 per cent (Abdiev 1996: 33).

3. Combinability of voice markers

The voice markers may co-occur in the same verbal form in various combinations. The purpose of the following survey is to give an approximate idea of the place of the reciprocal suffix among other voice markers.

1. The causative markers derive verbs from reflexives, and reciprocals, and passives (but not from passives proper), and causatives (cf. (21h), (15)). Alongside a double causative suffix (14a), there are mentions in the literature of triple use of the causative suffixes (cf. (16); Junusaliev 1966: 495). A combination with the reciprocal suffix in which the causative suffix *-där* alone appears, i.e. *-štär* (< *-š-där*), may function as a single derivational morpheme (see (21k); cf. 10.2 and 13.3).

- (15) *kak-* ‘to hit/beat’
 → *kag-ən* ‘to clean oneself by beating dirt, dust, etc. off one’s clothes, shoes, etc.’
 → *kag-ən-där-* ‘to make sb clean his clothes, shoes, etc.’
- (16) a. *žaz-* ‘to write’
 → b. *žaz-där-* ‘to order to write’
 → c. *žaz-där-t-* ‘to order to write sb via a second person’
 → d. *žaz-där-t-tär-* ‘to order to write sb via a third person.’

2. The reciprocal marker may combine with causatives derived from intransitives, but it does not combine with causatives derived from transitives, with a few exceptions. It combines with two-place intransitives containing the passive or the reflexive marker (not in their proper meaning; see (17) and (21g)). In its anticausative function, it appears jointly

with the passive or reflexive marker thus forming derivatives from transitives (including lexicalized reciprocals) (see 13.5).

- (17) *əgər-əl-* 'to press oneself to ...' (cf. (12b))
 → *əgər-əl-əš-* 'to press oneself to each other' (reciprocal proper)

3. The passive marker does not as a rule combine with reflexive or with reciprocal derivatives. In exceptional instances of this type the meaning of the suffixes *-n* and *-š* on the intransitive underlying verbs is not felt; semantically, the passive form is related to the first verb in the derivational chain; cf. (18c) and (18a), and (19c) and (19a):

- (18) a. *ojlo-* 'to think'
 b. *ojlo-n-* 'to fall to thinking'
 c. *ojlo-n-ul-* 'to be the object of thinking' (Ju.2. 63).
 (19) a. *čirke-* 'to tie/link camels (etc.) in single file'
 b. *čirke-š-* 'to stretch (being tied) in single file'
 c. *čirke-š-il-* 'to be tied/linked in single file' (Ju.2. 364).

The passive suffix combines freely with causatives, in particular with two-place causatives; cf.:

- (20) *öl-* 'to die'
 → *öl-tür-* 'to kill'
 → *öl-tür-ül-* 'to be killed' (see also (21i)).

4. The reflexive marker seems to be the least capable of being added to other voice markers; at least the *Kirghiz-Russian dictionary* does not register any derivatives of this kind (Abdiev 1995:40).

I have cited above only some of the meanings of voice derivatives. To give an idea of the complexity of derivational relations, here is a set of all the derivatives of the verb *bajla-* 'to tie sth to sth/tie up' that are registered in the dictionary (Ju.1. 96–7).

- (21) a. *bajla-* 'to tie sth to sth/tie up' (three-place vt)
 b. *bajla-l-* 'to be tied to sth/tied up' (passive)
 c. *bajla-n-* i. 'to tie sth to oneself' (reflexive possessive)
 ii. 'to be tied to sth/tied up' (passive)
 d. *bajla-t* 'to order to tie, etc.' (causative)
 e. *bajla-t-tər-* 'to order to tie via sb' (causative)
 f. *bajala-n-t-* 'to order to tie sth to oneself' (causative)
 g. *bajla-n-əš-* 'get connected with sb on the phone, etc.' (lexicalized reciprocal)
 h. *bajla-n-əš-tər-* i. 'to tie sb/sth with sb/sth' (lexicalized causative)
 ii. 'to coordinate sth with sth' (lexicalized causative)
 i. *bajla-n-əš-tər-əl-* 'to be tied together' (passive from (h))
 j. *bajla-š-* i. *'to tie each other' (*reciprocal)
 ii. 'to help to tie' (assistive)
 iii. 'to wager, compete' (lexicalized reciprocal)
 k. *bajla-š-tər-* 'to tie sth/sb together/with each other' (causative) (see 13).

The following example illustrates (21i) in which the reciprocal suffix is followed by two more suffixes, causative and passive:

1. *At-tar bajla-n-aš-tər-əl-əp, koštošturul-up tur-gan-ən*
 horse-PL tie-REFL-REC-CAUS-PASS-CONV tied.in.pairs-CONV stand-PAST.PART-ACC
kör-ö-süñ. (Ju.1. 97)
 see-NPAST-2SG
 ‘You will see how the horses tied together are standing in pairs.’

4. Diathesis types of reciprocals with the suffix -š only

4.1 Subject-oriented reciprocal constructions

4.1.1 “Canonical” reciprocals

4.1.1.1 *Derived from two-place transitives.* The lexical range of this type of verbs is similar to that in Yakut; therefore I will confine myself to a list of base verbs and a few sentential examples: *alda-* ‘to deceive’, *aŋdə-* ‘to watch/spy on’, *arba-* ‘to enchant’, *at-* ‘to fire’, *bil-* ‘to know’, *čakar-* ‘to call’, *kabarla-* ‘to inform’, *kapa kəl-* ‘to offend’, *karasotto-* ‘to judge/try/put on trial’, *kör-* ‘to see’, *kuu-* ‘to chase’, *makta-* ‘to praise’, *mušta-* ‘to hit (with a fist)’, *ojrondo-* ‘to destroy’, *öp-* ‘to kiss’, *sök-* ‘to scold’, *səjla-* ‘to respect’, *sura-* ‘to ask’, *tab-* ‘to find’, *tikte-* ‘to look’, *türt-* ‘to push’, *šaldənda-* ‘to tease’, *žala-* ‘to lick (of animals)’, *žanč-* ‘to hit/beat’, *žət-* ‘to smell’, etc.; cf.:

- (22) a. *Al meni sotto-du.*
 he I.ACC sue-3.PAST
 ‘He sued me.’
 b. *Biz sotto-š-tu-k.*
 we sue-REC-PAST-1PL
 ‘We sued each other.’
- (23) *Sura-š-pa-j tab-aš-kan.*
 ask-REC-NEG-CONV find-REC-PERF
 ‘They found each other without asking each other (questions).’

The latter example is a saying with a pejorative meaning (used of thieves, drunkards, etc.).

4.1.1.2 *Derived from two-place transitives with a split object valency.* This type is entirely parallel to the respective Yakut type; cf.:

- (24) a. *Al meni kökürök-kö türt-tü.*
 he I.ACC chest-DAT push-3.PAST
 ‘He pushed me on the chest.’
 b. *Biz ekö-büz kökürök-kö türt-üş-tü-k.*
 we two-we chest-DAT push-REC-PAST-1PL
 ‘We pushed each other on the chest.’

4.1.1.3 *Derived from two-place intransitives.* Reciprocals are formed from the following limited group of verbs most of which require a dative object: *ačuulan-* ‘to get angry with’, *čende-* ‘to approach’, *katta-* ‘to pay a visit to’, *kəzuulan-* ‘to be/become furious (while speaking) with’, *kork-* ‘to become afraid/scared of’ (this stem takes an ablative object), *koržongdo-* ‘to swear at/abuse’, *söjkön-* ‘to rub against’, *süjön-* ‘to lean against’, *taarən-* ‘to get offended with’, *əmda-* ‘to wink at’, *əškər-* ‘to whistle to’, *žoluk-* ‘to wink at’, etc.; cf.:

- (25) a. *Men alar-ga əškər-də-m.*
I.NOM they-DAT whistle-PAST-1SG
‘I whistled to them.’
b. *Biz alar menen əškər-əš-tə-k.*
we they with whistle-REC-PAST-1PL
lit. ‘We with them whistled to each other.’

Derived two-place intransitives, including autocausatives with the reflexive suffix *-n*, can form reciprocals in *-š* (note that reciprocals cannot be formed from the underlying three-place intransitives):

- (26) a. *Al tajak-tə dubal-ga süjө-dü.*
he stick-ACC wall-DAT lean-3.PAST
‘He leaned the stick against the wall.’
b. *Al dubal-ga / maga süjө-n-dü.*
he wall-DAT I.DAT lean-REFL-3.PAST
‘He leaned against the wall/on me.’
c. *Biz süjө-n-üş-tü-k.*
we lean-REFL-REC-PAST-1PL
‘We leaned against each other.’

4.1.1.4 *Derived from one-place intransitives.* This type corresponds to the Yakut reciprocals considered in 4.1.1.6 (Nedjalkov & Nedjalkov, Ch. 26). Compare:

- (27) a. *aŋkušta-* ‘to squeak/cry (of marmots)’
b. *aŋkušta-š-* ‘to exchange squeaks (of marmots)’ (Ju.1. 59).
(28) a. *kišene-* ‘to neigh’
b. *kišene-š-* ‘to communicate by neighing’ (Ju.1. 390).

4.1.2 “Indirect” reciprocals

These reciprocals retain the direct object of the underlying construction expressed by a noun either with zero ending or in the accusative case form. The base verbs producing this type of derived diathesis may be divided into two groups: (1) three-place transitives with an obligatory indirect object, like ‘to give’; (2) three-place causatives derived from two-place transitives, like ‘to cause sb to build a house, etc.’.

1. Three-place transitives fall into two syntactic subtypes: (a) verbs taking an indirect object in the dative case, e.g. *ajt-* ‘to tell’, *at-* ‘to throw’, *ber-* ‘to give’, *sat-* ‘to sell’, *süjlө-* ‘to tell’, *sun-* ‘to offer’, *šəbəra-* ‘to whisper’, *taši-* ‘to carry (sth to sb)’, *ubada kəl-* ‘to promise’, *ərgət-* ‘to throw’, *žaz-* ‘to write’; and (b) verbs requiring an indirect object in the ablative case: *al-* ‘to take’, *bekit-* ‘to hide’, *sura-* ‘to ask’. Compare:

- (29) a. *Men koşu-m-a kese sun-du-m.*
 I neighbour-my-DAT cup offer-PAST-1SG
 ‘I offered my neighbour a drink.’
 b. *Men menen koşu-m kese sun-uş-tu-k.*
 I with neighbour-my cup offer-REC-PAST-1PL
 ‘My neighbour and I offered each other drinks.’
- (30) *Alar saat al-əş-əş-tə.*
 ‘They swapped (lit. ‘took from each other’) watches.’

2. Three-place causatives. An instance of this type of base verbs is *körsöt-* ‘to show’ derived from the two-place transitive *kör-* ‘to see’:

- (31) a. *Men koşu-m-a kitep-ti körsöt-tü-m.*
 I neighbour-my-DAT book-ACC show-PAST-1SG
 ‘I showed the book to my neighbour.’
 b. *Biz [koşu-m] eköo-büz kitep-ter-ibiz-di körsöt-üş-tü-k.*
 we neighbour-my two-we book-PL-OUR-ACC show-REC-PAST-1PL
 ‘We two [(with) my neighbour] showed our books to each other.’

4.1.3 “Possessive” reciprocals

This type involves a possessive or part-whole relation between the subject and direct or indirect object referents. The object is either in the nominative, with zero marking (as in (34b)) or in the accusative case of possessive declension (as in (34c)); in the underlying construction the possessor of the object referent is expressed by the genitive case of a noun, or it may be implied. These reciprocal forms can be derived from either transitive or intransitive two-place verbs. In both cases the valency is retained, the possessive attribute to an object being omitted (cf. *uul-um-un* in (32a)). The possessors are expressed by the subject of the reciprocal construction. (cf. *uul-um* in (32b)).

4.1.3.1 *Derived from two-place transitives.* The reciprocal form of a number of transitive verbs can occur in a “possessive” construction as well as in the “canonical” type, with the difference that the object of the underlying construction contains an indication of the possessor (expressed by a possessive attribute and/or a possessive suffix) which is expressed by the subject in the derived construction; (cf. ‘to kiss a girl’ → ‘to kiss each other’; ‘to kiss a girl’s cheek’ → ‘to kiss each other’s cheeks’). The reciprocal form of the following base verbs can be used in “possessive” constructions: (*ün*) *al-* ‘to hear (sb’s voice)’, (*kol*) *karma-* ‘to seize (sb’s hand)’ (the converb of its reciprocal form is used as a formula: *kol karma-ş-əp* ‘holding each other by the hand’; Ju.1. 392), (*but-ə-n*) *kemir-* ‘to bite off (sb’s leg)’, (*kol*) *kəs-* ‘to shake sb’s hand’ (32), *öp-* ‘to kiss’, (*čač*) *ör-* ‘to braid (sb’s hair)’, (*üj/üj-lör-dü*) *örttö-* ‘to burn (sb’s house)’, (*kan*) *tök-* ‘to shed (sb’s blood)’, (*arka-lar-ən*) *žəşə-* ‘to wash/rub/clean by rubbing (sb’s neck)’, (*mojnuman*) *žətta-* ‘to kiss (sb’s neck)’, and the like.

- (32) a. *Men uul-um-un kol-u-n kəs-tə-m.*
 I son-my-GEN hand-his-ACC shake-PAST-1SG
 ‘I shook my son’s hand.’

- b. *Biz uul-um eköö-büz kol käs-əš-tə-k.*
 we son-my two-we hand shake-REC-PAST-1PL
 ‘My son and I shook hands with each other.’
- (33) a. *Men koŋšu-m-un kol-u-n karma-də-m.*
 I neighbour-my-GEN hand-his-ACC grasp-PAST-1SG
 ‘I grasped my neighbour’s hand.’
- b. *Biz koŋšu-m eköö-büz kol karma-š-tə-k.*
 we neighbour-my two-we hand grasp-REC-PAST-1PL
 ‘My neighbour and I grasped each other’s hands.’
- (34) a. *Kəz-əm menin čaç-əm-ə ör-dü.*
 daughter-my I.GEN hair-my-ACC braid-3.PAST
 ‘My daughter braided my hair.’
- b. *[Biz] kəz-əm eköö-büz čaç ör-üş-tü-k.*
 we daughter-my two-we hair braid-REC-PAST-1PL
 ‘My daughter and I braided each other’s hair.’
- c. *[Biz] kəz-əm eköö-büz čaç-əbəz-də ör-üş-tü-k.*
 we daughter-my two-we hair-our-ACC braid-REC-PAST-1PL
 ‘My daughter and I braided each other’s hair.’

4.1.3.2 *Derived from two-place intransitives.* There are few instances of this kind of derivation; examples are *kara-* ‘to look at’, which requires a dative object (35), and *öp-* ‘to kiss’ which is usually transitive but can also occur with an ablative object (36):

- (35) a. *Men kəz-əm-ən bet-i-ne kara-də-m.*
 I daughter-my-GEN face-her-DAT look-PAST-1SG
 ‘I looked into my daughter’s face.’
- b. *Biz eköö-büz bet-ibiz-ge kara-š-də-k.*
 we two-we face-our-DAT look-REC-PAST-1PL
 lit. ‘We looked into each other’s faces.’
- (36) a. *Men kəz-əm-ən bet-i-nen öp-tü-m.*
 I daughter-my-GEN face-her-ABL kiss-PAST-1SG
 lit. ‘I kissed my daughter’s face.’
- b. *Biz kəz-əm eköö-büz bet-ten öb-üş-tü-k.*
 we daughter-my two-we face-ABL kiss-REC-PAST-1PL
 lit. ‘My daughter and I kissed each other’s faces.’

4.2 Object-oriented reciprocal constructions

Basically, any subject-oriented construction can be transformed into an object-oriented construction embedded in a causative construction. The reciprocal relationship of the former is retained in the latter; e.g.:

- (37) a. *Ak it kara it-ti kap-tə.*
 white dog black dog-ACC bite-3.PAST
 ‘The white dog bit the black dog.’

- b. *Ak it menen kara it kab-əš-tə.*
white dog and black dog bite-REC-3.PAST
'The white and the black dogs bit each other.'
- c. *Čal menen koŋšu-su it-ter-di kab-əš-tər-əš-tə.*
old.man and neighbour-his dog-PL-ACC bite-REC-CAUS-PL-3.PAST
'The old man and his neighbour set the dogs on each other.'

For some reason, object-oriented reciprocals of this type sometimes sound unnatural, the reciprocal pronoun instead of the reciprocal suffix being more acceptable.

- (38) a. *Kiři-ler öl-tür-üş-tü.*
man-PL die-CAUS-REC-3.PAST
'People killed each other.'
- b. **Al kiři-ler-di öl-tür-üş-tür-bo-dü.*
he man-PL-ACC die-CAUS-REC-CAUS-NEG-3.PAST
(intended meaning) 'He did not allow people to kill each other.'
- c. *Al kiři-ler-di biri biri-ne öl-tür-t-po-dü.*
he man-PL-ACC each other-DAT die-CAUS-CAUS-NEG-3.PAST
'He did not allow people to kill each other.'

4.3 *Nomina actionis*

Deverbal nouns are derived mostly by means of the suffixes *-əš/-iř/-uř/-üş/-ř* and *-oo/-öö/-uu/-üü*. The latter suffix alone is registered on nouns derived from standard reciprocal verbs. These nouns retain the object (both direct and non-direct) valencies of the base verbs, the subject valency being transformed into genitive; cf.:

- (39) a. *Kəz apa-sə-n kučakta-də.*
daughter mother-her-ACC embrace-3.PAST
'The daughter embraced her mother.'
- b. *Kəz-dən apa-sə-n kučakt-oo-su.*
daughter-GEN mother-her-ACC embrace-NR-her.NOM.SG
lit. 'The daughter's embracing of her mother.'

5. Diathesis types of reciprocals with the pronoun *biri-biri* 'each other'

5.1 Introductory

The forms of the reciprocal pronoun for the four most frequently used cases are (see also (11)):

(40)	1PL	2PL	3PL
ACC	<i>biri-biri-biz-di</i>	<i>biri-biri-ŋer-di</i>	<i>biri-biri-n / biri-n-biri</i>
GEN	<i>biri-biri-biz-din</i>	<i>biri-biri-ŋer-din</i>	<i>biri-biri-nin</i>
DAT	<i>biri-biri-biz-ge</i>	<i>biri-biri-ŋer-ne</i>	<i>biri-biri-ne</i>
ABL	<i>bir-biri-biz-den</i>	<i>biri-biri-ŋer-den</i>	<i>biri-biri-nen.</i>

5.2 Subject-oriented reciprocal constructions

5.2.1 “Canonical” reciprocals

5.2.1.1 *Derived from two-place transitives.* The same verbs can be used in these constructions as those considered in 4.1.1.1, but there are certain preferences (see 5.4).

- (41) a. *Men kečik-pe-š üčün anə šaš-tər-də-m.*
 I be.late-NEG-NR in.order he-ACC hurry-CAUS-PAST-1SG
 ‘In order not to be late I made him hurry.’
 b. *Biz eköo-büz kečik-pe-š üčün biri-biri-biz-di šaš-tər-də-k.*
 ‘In order not to be late we made each other hurry.’
- (42) *Biz biri-biri-biz-di zemele-di-k.*
 ‘We reproached each other.’

5.2.1.2 *Derived from two-place transitives with a split object valency.* This type is parallel to the reciprocals discussed in 4.1.1.2. Compare:

- (43) a. *Al anə koltuk-ka uku-du.*
 he he.ACC side-DAT push-3.PAST
 ‘He pushed him in the ribs.’
 b. [*Alar*] *biri-n-biri koltuk-ka uku-š-up ...* (Ju.2. 302)
 they each-ACC-other side-DAT push-REC-CONV
 ‘[They] pushing each other in the ribs.’

5.2.1.3 *Derived from two-place intransitives.* This type seems to be more common among pronominal reciprocals than among suffixed ones (cf. 4.1.1.3). Some of the verbs require simultaneous use of the reciprocal suffix and reciprocal pronoun. As mentioned with regard to example (3), the suffix -š may also function as a 3PL marker. Thus, this suffix is interpreted by an informant as 3PL in (46b), (47b), (50), (53), (54c, d, e), (58), (72c), (73a) (for details see 9.2). Sometimes the informant may hesitate in such cases (see, for instance, (60)).

- (44) a. *Al ata-sə-na ačuulan-də.*
 he father-his-DAT get.angry-3.PAST
 ‘He got angry with his father.’
 b. *Alar biri-biri-ne ačuulan-əš-tə.*
 they each-other-DAT get.angry-REC-3.PAST
 ‘They got angry with each other.’
- (45) a. *Al ata-sə-nan kork-tu.*
 he father-his-ABL get.scared-3.PAST
 ‘He got scared of his father.’
 b. *Alar biri-biri-nen kork-uš-tu.*
 they each-other-ABL get.scared-REC-3.PAST
 ‘They got scared of each other.’
- (46) a. *Uj dubal-ga sōjkö-n-dü.*
 cow wall-DAT rub-REFL-3.PAST
 ‘The cow rubbed against the wall.’

- b. *Uj-lar biri-biri-ne söjkö-n-üş-tü.*
 COW-PL each-other-DAT rub-REFL-3PL-3.PAST
 ‘The cows rubbed against each other.’

5.2.2 “Indirect” reciprocals

Unlike suffixed “indirect” reciprocals, those with the reciprocal pronoun occur in constructions derived from base constructions both with three-place transitives and three-place causatives from transitives, and also from constructions with a benefactive or assistive object (i.e. there are pronominal reciprocals from assistives); cf. respectively:

- (47) a. *Ata-m dos-u-na et bəşər-t-tə.*
 father-my friend-his-DAT meat cook-CAUS-3.PAST
 ‘My father asked his friend to cook the meat.’
 b. *Ata-m menen dos-u biri-biri-ne et bəşər-t-əş-tə.*
 father-my and friend-his each-other-DAT meat cook-CAUS-3PL-3.PAST
 ‘My father and his friend asked each other to cook meat.’
- (48) a. *Ata-m maga ot taşə-də.* (benefactive)
 ‘My father carted hay to/for me.’
 b. *Ata-m eköö-büz biri-biri-biz-ge ot taşə-də-k.*
 ‘My father and I carted hay to/for each other.’
- (49) a. *Ata-m ma-ga ot taşə-ş-tə.* (assistive)
 father-my I-DAT hay.NOM cart-REC-3.PAST
 ‘My father helped me to cart hay.’
 b. *Ata-m eköö-büz biri-biri-biz-ge ot taşə-ş-tə-k.*
 father-my two-we each-other-DAT hay cart-REC-PAST-1PL
 ‘My father and I helped each other to cart hay.’

5.2.3 “Possessive” reciprocals

As well as in constructions with a direct object of alienable and inalienable possession, the possessor is denoted by the genitive case.

- (50) *Karəşkər-lar biri-biri-nin but-u-n kemir-iş-ti.*
 wolf-PL each-other-their.GEN foot-his-ACC gnaw-3PL-3.PAST
 lit. ‘Wolves gnawed off each other’s paws.’
- (51) *Biz eköö-büz biri-biri-biz-din bal-dar-əbəz-də taanə-j-bəz.*
 we two-we each-other-our.GEN child-PL-our-ACC know-PRES-1PL
 ‘We know each other’s children.’

5.3 Object-oriented reciprocal constructions

Constructions of this type are formed freely from subject-oriented constructions. Note the peculiarity of expressing the reciprocal sense if the referents of both objects (accusative and dative) coincide:

- (52) a. *Al soldat-ka biz-di öl-tür-t-öt.*
 he soldier-DAT we-ACC kill-CAUS-CAUS-PRES-3SG
 ‘He orders the soldier to kill us.’

- b. *Al biri-biz-di biri-biz-ge öl-tür-t-ö-t.*
 he one-our-ACC one-our-DAT die-CAUS-CAUS-PRES-3SG
 ‘He orders us to kill each other.’

Compare the analogous construction with *biri* in a non-reciprocal meaning:

- c. *Biri-ŋ-di biri-ŋ-e öl-tür-t-ö-m.* (Ju.2. 93)
 one-your.SG-ACC one-your.SG-DAT die-CAUS-CAUS-PRES-1SG
 ‘I will make one of you kill the other.’

5.4 Interrelation of the reciprocal suffix and reciprocal pronoun. Their co-occurrence

Five main types of interrelation of these reciprocal markers can be distinguished. Let us consider the following sentence:

- (53) *Ördök-tör keede biri-n-biri kubala-š-əp ...* (Ju.1. 435)
 duck-PL sometimes each-other chase-3PL-CONV
 ‘Ducks sometimes chase each other.’

This verb may assume the following reciprocal forms:

- (54) a. ... *kubala-š-əp* – the reciprocal suffix only
 b. ... *biri-n-biri kubala-p* – the reciprocal pronoun only
 c. ... *biri-n-biri kubala-š-əp* – both the reciprocal pronoun and suffix/3PL
 d. ... *kubala-šə-š-əp* – both the reciprocal and 3PL suffixes
 e. ... *biri-n-biri kubala-šə-š-əp* – the reciprocal pronoun and both suffixes.

Variant (54e) is rejected by the informant and it is not registered in the dictionaries. Variant (54d) is rather uncommon, because context usually makes it clear whether variant (54a) is reciprocal or plural. In isolated sentences, however, the informant may opt for (54d) (cf. 9.2).

The main opposition here is between (54a) and (54b). Some verbs are preferable in form (54a) and other verbs in (54b). This is relevant for the cases considered in Section 7 on restrictions. A number of verbs seem to be used in either form indiscriminately, like the verb in (53)–(54), though the informant prefers variant (54a) for this particular verb. Here are examples of verbs of this type:

- (55) a. *Biz eköö-büz köpkö kuu-š-tu-k.*
 we two-we long.time chase-REC-PAST-1PL
 ‘We chased each other for a long time.’
 b. *Biz eköö-büz köpkö biri-biri-biz-di kuu-du-k.*
 we two-we long.time each-other-our-ACC pursue-PAST-1PL (same meaning).
- (56) a. *Biz eköö-büz səjla-š-ču-buz.* ‘We respected each other.’ (-ču = HAB)
 b. *Biz eköö-büz biri-biri-biz-di səjla-ču-buz.* (same meaning).

The verb in (57) usually occurs in form (57a), (57b) being characterized as possible but very uncommon. This is probably due to the high frequency of the reciprocal situation described. This also pertains to the reciprocal *teb-iš-* ‘to kick each other’ (about

horses) which however has occurred with the reciprocal pronoun in a text (probably for emphasis). The informant sees the suffix *-š-* as unambiguously reciprocal.

- (57) a. *Alar kuçakta-š-tə.* 'They embraced each other.'
 b. *Alar biri-n-biri kuçakta-da.* (same).
 (58) ... *čunaŋda-š-əp kel-iš-e-t, biri-n-biri teb-iš-e-t.* (Ju.2. 377)
 press.ears-3PL-CONV come-3PL-PRES-3 each-other kick-REC-PRES-3
 '... (they = horses) approach each other pressing their ears, kick each other.'

The verb *žala-* 'to lick' is preferable in form (59b):

- (59) a. *Küçük-tör žala-š-tə.* 'The puppies licked (whom?)'
 b. *Küçük-tör biri-n-biri žala-š-tə.* 'The puppies licked each other.'

Verbs with different means of encoding reciprocity may occur in one sentence:

- (60) *Bir-biri-ne kön-üş-kön-dön kijin süj-üş-üp*
 each-other-DAT get.used-REC/3PL(?)-PART-ABL later love-REC-CONV
ket-e-t. (Ju.1. 423) (cf. *süj-* in (70))
 AUX-PRES-3
 'After [they] get used to each other, they will fall in love with each other.'

Instances like (54c) with the reciprocal *-š* are hard to find among sentences in the 3rd person because this suffix may be interpreted as 3PL, and, as I have mentioned above, the informant rejects the doubling of *-š* in these cases. Here is an example with a 1st person predicate which shows the possibility of co-occurrence of the two suffixes:

- (61) *Sen eköb-büz biri-biz-di biri-biz köz-gö saj-əš-pas-bəz.* (Ju.2. 123)
 you two-we each-our-ACC other-our eye-DAT put.out-REC-NEG.FUT-1PL
 'We [you and I] won't put out each other's eyes.'

5.5 *Nomina actionis*

They are formed in the same way as deverbal nouns from suffixed reciprocals (see 4.3); cf.:

- (62) a. *Koŋšu-m menen apa-m biri-n biri səjla-š-a-t.*
 neighbour-my and mother-my each-ACC other respect-REC-PRES-3
 'My neighbour and my mother respect each other.'
 b. *Koŋšu-m menen apa-m-ən biri-n biri səjla-š-uu-sə.*
 neighbour-my and mother-my-GEN each-ACC other respect-REC-NR-their
 lit. 'My neighbour and my mother's [their] respect for each other.'

6. Simultaneity and succession of reciprocal acts

In this respect Kirghiz reciprocals are similar to those of Yakut and other languages, because temporal sequence of reciprocal acts is dependent on the lexical meaning of a verb. Simultaneity of reciprocal acts is inherent in the verbal meaning in (1b), (26), (32), (33), etc. The following are examples of non-simultaneous successive actions:

- (63) *Biz eköö-büz katta-š-a-bəz.*
 we two-we come.and.go-REC-PRES-1PL
 ‘We visit each other.’
- (64) *Biz eköö-büz köpkö kezektešip kuu-š-tu-k.*
 we two-we long.time by.turns chase-REC-PAST-1PL
 ‘We chased each other by turns for a long time.’
- (65) *Biz eköö-büz köpkö kajtar-əš-tə-k.*
 we two-we long.time guard-REC-PAST-1PL
 ‘We two guarded one another for a long time.’ (= ‘by turns’); cf. *kajtar-* in (70).

The following is an example of chain relations within a reciprocal situation:

- (66) *Karkəra-daj eerči-š-ip ...* (Ju.2. 473)
 crane-like follow-REC-CONV
 ‘Following each other like cranes...’

7. Productivity and restrictions on reciprocal formation with the suffix -š

Kirghiz suffixed reciprocals are formed from a large number of verbs and are numerous in the dictionary, though they are somewhat less productive than in Yakut. This section contains fragmentary observations meant to give the reader an idea of possible restrictions on their formation. Some of the restrictions are general, such as absence of reciprocals from causatives derived from transitive verbs (as it happens, this restriction is observed in Yakut as well). Reciprocals are not derived from some two-place causatives, nor from some two-place transitives and intransitives in general, which seem to be subject to individual restrictions (see (5b)). A number of verbs do have a form in -š but with a lexicalized meaning (cf. (5c)) rather than with a standard reciprocal meaning. In these cases, as well as in the previous ones, the reciprocal meaning is commonly rendered by the reciprocal pronoun (cf. (5d)). The existence of a lexicalized meaning in the reciprocal form (5c) is unlikely to be the reason for the absence of the reciprocal meaning proper, the form in -š of other verbs often combining both the reciprocal proper and a lexicalized meaning. Here are a few causatives derived from intransitives (see (67)) and transitives (see (68)) which do not take a reciprocal form:

- | | |
|---|-------------------------------------|
| (67) <i>kal-tur-</i> ‘to leave (sb)’ | (← <i>kal-</i> ‘to stay’) |
| <i>kel-tir-</i> ‘to bring (sb)’ | (← <i>kel-</i> ‘to come’) |
| <i>šaš-tər-</i> ‘to make (sb) hurry’ | (← <i>šaš-</i> ‘to be in a hurry’) |
| <i>žat-kər-</i> ‘to make (sb) lie down’ | (← <i>žat-</i> ‘to lie down’), etc. |
| (68) <i>bil-dir-</i> ‘to inform (sb)’ | (← <i>bil-</i> ‘to know’) |
| <i>ez-dir-</i> ‘to order (sb) to press’ | (← <i>ez-</i> ‘to press’) |
| <i>sat-tər-</i> ‘to make (sb) sell’ | (← <i>sat-</i> ‘to sell’), etc. |

But a reciprocal is derived from the following three-place causative (with a unique lexicalized causative suffix) due to its lexical meaning:

- (69) *kör-* ‘to see’ → *kör-söt-* ‘to show’ → *kör-söt-üš-* ‘to show sth to each other.’

In the informant's opinion, suffixed reciprocals from the following verbs sound unnatural, though some of them are registered in the dictionary (it is hard to say whether this is related to the time factor, as the dictionaries at our disposal were compiled in the 1950s). With these verbs the informant prefers the reciprocal pronoun instead of the suffix. Here are a few two-place transitives (see (70)) and two-place intransitives (see (71)) from which suffixed reciprocals are not formed:

- | | | |
|------|--|--|
| (70) | <i>kajtar-</i> 'to guard' (cf., however, (65)) | <i>sij-</i> 'to love' (cf., however, (60)) |
| | <i>korgo-</i> 'to guard/defend' | <i>sala-</i> 'to stroke' |
| | <i>küülö-</i> 'to egg on' | <i>tüšün-</i> 'to understand' |
| | <i>mojso-</i> 'to destroy/kill' | <i>unut-</i> 'to forget.' |
| | <i>sat-</i> 'to sell/betray' | |
| (71) | <i>ačuulan-</i> | 'to be angry/swear' |
| | <i>kork-</i> | 'to be afraid/scared of' |
| | <i>modəraj-</i> | 'to stare with wide open eyes.' |

The pronominal reciprocal in (72) is more acceptable than the suffixed derivative which the informant considers somewhat unnatural, though it is registered in the dictionary and illustrated by a sentential example; the informant suggests a suffixed reciprocal *tikte-š-* from the verb *tikte-* 'to look fixedly/stare' which is very close in meaning. Curiously enough, in the dictionary the reciprocal meaning of this verb is illustrated by a sentence with the reciprocal pronoun (see (73)); as it happens, the verb *kara-* 'to look' is cited in the specialist literature both with the reciprocal suffix and reciprocal pronoun (72c). This shows that the boundary between the acceptable and non-acceptable is not clear-cut.

- (72) a. *Biz eköö-büz kara-š-tə-k.*
 we two-we look-REC-PAST-1PL
 'We (he and I) looked at each other.'
- b. *Biz eköö-büz biri-biri-biz-dī kara-də-k.*
 we two-we each-other-our-ACC look-PAST-1PL
 (same meaning).
- c. ... *bir neče sekund biri-n-biri kara-š-tə.* (Gr. 243)
 one several second each-ACC-other look-3PL-3.PAST
 '...(they) looked at each other for a few seconds.'
- (73) a. ... *biri-n-biri tikte-š-ip ...* (Ju.2. 235)
 each-ACC-other stare-3PL-CONV
 '... staring at each other.'
- b. ... *tikte-š-ip tur-a-t eki šer.* (Ju.2. 235)
 stare-REC-CONV AUX-PRES-3 two athlete
 '... two athletes staring at each other.'

In the following two examples the suffixed reciprocal is correct but it sounds less natural than with the reciprocal pronoun, though it is registered in the dictionary (Ju.1. 49). I cite these data in order to give the reader an idea of live perception of various reciprocals by a native speaker and divergences from the dictionary.

- (74) a. *Biz alda-š-pa-j-bəz.*
 we deceive-REC-NEG-PRES-1PL
 ‘We do not deceive each other.’
- b. *Biz biri-biri-biz-dī alda-ba-j-bəz.*
 we each-other-our-ACC deceive-NEG-PRES-1PL
 (same meaning).

As a rule, suffixed reciprocals based on compound verbs (comprised of a noun and a de-semanticized verb) sound unintelligible, and the reciprocal pronoun is used for rendering the reciprocal sense; cf.:

- (75) a. **Biz ekö-ö-büz kapa kəl-əš-tə-k.*
 we two-we grief do-REC-PAST-1PL
 (intended meaning:) ‘We grieved over each other.’
- b. *Biz ekö-ö-büz biri-biri-biz-dī kapa kəl-də-k.*
 we two-we each-other-our-ACC grief do-PAST-1PL
 (same meaning).
- (76) a. **Biz žek kör-üş-ö-büz.*
 we hatred see-REC-PRES-1PL
 (intended meaning:) ‘We hate each other.’
- b. *Biz biri-biri-biz-dī žek kör-ö-büz.*
 we each-other-our-ACC hatred see-PRES-1PL
 (same meaning).

In one instance a diathesis restriction seems to be in force which forbids the use of a suffixed reciprocal: the latter are not used to express benefactive reciprocal relations:

- (77) a. *Men aga et bəšər-də-m.*
 I he.DAT meat cook-PAST-1SG
 ‘I cooked meat for him.’
- b. **Biz ekö-ö-büz kezekteš et bəšər-əš-tə-k.*
 we two-we by.turns meat cook-REC-PAST-1PL
 (intended meaning:) ‘We cooked meat for each other by turns.’
- c. *Biz ekö-ö-büz kezekteš biri-biri-biz-ge et bəšər-də-k.*
 we two-we by.turns each-other-our-DAT meat cook-PAST-1PL
 (same meaning).

8. Expression of reciprocal arguments

Subject expression in reciprocal constructions is no different from that in non-reciprocal constructions. It is also more or less the same as in Yakut. Constructions with the reciprocal pronoun can be simple only, while constructions with suffixed reciprocal verbs can be either simple or discontinuous. In the former case the subject is expressed by a conjunctive phrase with the conjunction *menen* ‘and’. In the latter case the second argument is expressed by a comitative phrase with the postposition *menen* ‘with’ and the predicate agrees with the first argument only. (Note that in Yakut *kätta* ‘and’/‘with’ takes the same position between the arguments in both the conjunctive and postpositional functions and

the predicate agrees either with the first argument or with both.) The 3PL marker in (78a) is seen by the informant as quite grammatical but not the best variant (though it is quite acceptable with some reciprocals), while in (78b) it is ungrammatical because the first argument is in the singular. This pertains to sentences with the second argument in the plural as well (see (78c)):

- (78) a. *Kəz menen apa-sə öb-üş-tü / öb-üş-üş-tü.*
 daughter and mother-her kiss-REC-PAST.3 / kiss-REC-3PL-3.PAST
 ‘The daughter and her mother kissed each other.’
- b. *Kəz apa-sə menen öb-üş-tü / *öb-üş-üş-tü.*
 daughter mother-her with kiss-REC-3.PAST kiss-REC-3PL-3.PAST
 (same meaning) lit. ‘The daughter kissed with her mother.’
- c. *Kəz alar menen öb-üş-tü / *öb-üş-üş-tü.*
 daughter they with kiss-REC-PAST.3 kiss-REC-3PL-3.PAST
 lit. ‘The daughter kissed with them.’

Note that the grammar of Kirghiz interprets both expressions of the arguments with *menen* ‘and’ and *menen* ‘with’ as subjects: “The grammatical subject in this case is expressed by a combination of at least two words which are joined by the conjunction *menen* or by the postposition *menen*” (Kudajbergenov 1987b:242–3). I hesitate to interpret the comitative group with the postposition *menen* ‘with’ as a real object, but at the same time agreement of the predicate with the first component only hinders viewing the second argument as a part of the subject, as in sentences with the conjunction *menen*. This is probably an intermediate type of constructions which can be interpreted either as semi-simple or semi-discontinuous.

In constructions with the conjunction *menen* of the (78a) type the reciprocal pronoun can be added, as a rule, while in constructions with the postposition *menen* of the (78c) type this is impossible. This may be an additional argument in favour of interpreting constructions with a comitative phrase as discontinuous.

Kirghiz has special expressions for dual subject in all the three persons.

- (79) a. [*Biz*] *ata-m eköö-büz.*
 we father-my two-we
 ‘my father and I.’
- b. [*Siler*] *ata-m eköö-ñör.*
 you.PL father-my two-you
 ‘my father and you.’
- c. [*Alar*] *ata-m eköö-Ø.*
 they father-my two-they
 ‘my father and s/he.’

The following lexicalized reciprocal seems to allow either the dative or the accusative case of the second argument:

- (80) a. *ur-* ‘to beat’ → *ur-uš-* ‘to fight/quarrel/squabble’
- b. *Men anə menen / aga / anə ur-uš-tu-m.*
 I he.GEN with he.DAT he.ACC beat-REC-PAST-1SG
 ‘I scolded him’/‘I quarreled with him.’
 (the first *anə* is an abridged form of the genitive *anən*).

9. The suffix *-š* as a plural, sociative and assistive marker. *Nomina actionis* in *-š*

9.1 Introductory

In Yakut, the productive meanings immediately related to the reciprocal meaning are sociative, comitative and assistive. Of these three meanings the assistive alone is productive in Kirghiz, the sociative meaning being practically non-existent. The plural meaning is grammaticalized and enters into a different grammatical category, because its marker, i.e. the suffix *-š*, can co-occur with the reciprocal/assistive marker. Therefore this suffix as a plural marker may be viewed as its homonym, though they are close enough semantically since both imply plurality of participants.

It may be not quite justified to include *nomina actionis* in *-š* in this section, accidental coincidence being very likely, though in specialist literature there are indications of their genetic relatedness (see Nedjalkov & Nedjalkov, Ch. 26 on Yakut, §14.2).

9.2 Plural

The suffix *-š* is used as a 3PL marker not only in Kirghiz but also in the neighbouring Kazakh and Uzbek languages. This function of *-š* is also attested in Ancient Turkic. As it happens, the examples cited for Ancient Turkic are often interpreted as sociative, though all the relevant verb forms are in the 3rd person, therefore it is not clear whether they contain the inflectional plural suffix (i.e. an agreement marker) and not a marker of the sociative meaning. In Kirghiz it is clearly a pure agreement marker, though an optional one. Unlike the purely inflectional 1PL and 2PL markers, this suffix is also used on converbs (see (84), (86)). Most likely, this usage is descended from the sociative use and this may be related to the loss of the latter function. Note that in the 1st and 2nd person the singular and the plural are sharply distinguished, while in the 3rd person the endings coincide.

- (81) a. *Biz dušman-də at-tə-k.*
 we enemy-ACC shoot-PAST-1PL
 ‘We shot at the enemy.’
- b. *Biz at-əš-tə-k.*
 we shoot-REC-PAST-1PL
 ‘We exchanged shots.’
- c. *Alar dušman-də at-əš-tə.*
 they enemy-ACC shoot-3PL-3.PAST
 ‘They shot at the enemy.’
- d. *Alar at-əš-əš-tə.*
 they shoot-REC-3PL-3.PAST
 ‘They exchanged shots.’

In sentences of the (81c) type when used in a context, the direct object may be ellipted, in which case the verbal form with the suffix *-š* (unlike the (81d) type) may be ambiguous:

- e. *Alar at-əš-tə.*
 they shoot-REC/3PL-3.PAST
- i. ‘They shot [at sb].’ (-əš = 3PL)
- ii. ‘They exchanged shots.’ (-əš = REC)

In textual examples cited in the dictionary, constructions of the (81d) type, i.e. with double -š, are very rare, because context, including the lexical meaning of the predicate, usually contains an indication of the reciprocal meaning or of 3PL, but in isolated sentences of the (81e) type presented to the informant his first interpretation is 3PL, and second the reciprocal, other things being equal; cf. also:

- (82) *Alar sagən-aš-a-t.*
 they miss-REC/3PL-PRES-3
 i. ‘They are missing somebody.’ (-aš = 3PL)
 ii. ‘They are missing each other.’ (-aš = REC).

In causative derivatives from reciprocals the plural marker -š follows the derivational marker but, as usual, it precedes the tense marker (with the verb in (83a) the plural marker is not used as a rule):

- (83) a. *Alar kučakta-š-tə.*
 they embrace-REC-3.PAST
 ‘They embraced.’
 b. *Alar ... kučakta-š-tər-aš-tə.*
 they embrace-REC-CAUS-3PL-3.PAST
 ‘They made them embrace each other.’

There seem to be no rigid rules of the use of the suffix -š as a plural marker. The following tentative observations can be made with respect to the reciprocal -š and plural -š:

(a) if the underlying verb is a one-place intransitive the suffix -š usually has the 3PL meaning; the same reading obtains in those cases when a two-place transitive is used with a non-possessive direct object; in the following example the informant allows the omission of the plural suffix -š, though he prefers the variant with this suffix.

- (84) a. *Kəz-kelin-der tur-uš-a-t, ərdə ug-uš-up sənd-aš-əp.* (Ju.2. 181)
 girl-bride-PL stand-3PL-PRES-3 song listen-3PL-CONV appraise-3PL-CONV
 ‘The young brides stand listening to the song and appraising it.’
 b. ... *belsen-iš-ip tur-uš-up.* (Ju.2. 192)
 prepare.for.a.fight-3PL-CONV stand-3PL-CONV
 ‘...[they] stand preparing for a fight.’ (see also *kel-iš-e-t* in (58))

(b) If the underlying verb is a two-place intransitive or transitive and if the object is absent, the suffix -š is interpreted either as a reciprocal or as a plural marker, depending on the context and frequency of the given reciprocal (see (84)):

- (85) a. *Kişi-ler öl-tür-üş-üş-pö-dü.*
 man-PL die-CAUS-REC-3PL-NEG-3.PAST
 ‘People did not kill each other.’
 b. *Kişi-ler öl-tür-üş-pö-dü.*
 man-PL die-CAUS-3PL-NEG-3.PAST
 ‘People did not kill [anybody].’
 (86) *Ene-si menen kör-üş-üp, ez-il-iš-ip öb-üş-üp.* (Ju.2. 445)
 mother-his.ACC with see-REC-CONV press-PASS-REC-CONV kiss-REC-CONV
 ‘He met with his mother, they kissed heartily.’

(c) If a sentence contains the reciprocal pronoun and the verb is suffixed with *-š* the interpretation of the latter suffix as reciprocal or as plural is not clear, but it does not affect the interpretation of the sentence (nevertheless, the informant views this suffix either as plural or as reciprocal with a degree of certainty) (see (88a)).

(d) If a verb contains two suffixes *-š* the first of them is naturally reciprocal and the second is plural. In these cases the informant usually objects to the use of the reciprocal pronoun (or requires that one of the suffixes should be omitted).

- (87) *Küçük-tar biri-biri-n žala-š[*-aš-]-tə.*
 puppy-PL each-other-ACC lick-REC[-3PL]-3.PAST
 ‘The puppies licked each other.’

In some frequent reciprocals, the informant does not accept the second (plural) suffix *-š*.

- (88) a. *Alar biri-n biri süj-dü / süj-üş-tü.*
 they each-ACC other love-3.PAST love-REC/3PL?-3.PAST
 ‘They fell in love with each other.’
 b. *Alar süj-üş[*-üş]-tü.*
 they love-REC-3PL-3.PAST
 ‘They fell in love with each other.’

But in the following cases with frequently used reciprocals, the informant allows the optional plural marker; e.g.:

- (89) *Alar əmda-š[-aš]-tə.*
 they wink-REC[-3PL]-3.PAST
 ‘They winked at each other.’
 (90) *Alar koŋšu-m menen ajant-tə süjlö-š[-üş]-tü.*
 they neighbour-my with square-ACC talk-REC-3PL-3.PAST
 ‘They talked with my neighbour about the square.’

9.3 Sociative

The sociative meaning is ascribed to the reciprocal suffix both in specialist literature and in dictionaries. But the examples do not as a rule have this meaning: they usually contain the suffix *-š* marking the 3PL meaning instead of the sociative (this confusion is natural, since these meanings are contiguous; see also case (3) in 2.5), therefore substitution of the 1PL or 2PL subject for a 3rd person subject involves omission of this suffix (existence of a sociative form for the 3rd person only is rather unlikely); thus (91a) which is used as an illustration of the sociative meaning in a modern grammar of Kirghiz cannot be transformed into a sentence with a 1PL or 2PL subject; in (91b) and (91c) the 1PL agreement marker is the ending *-k*:

- (91) a. *Ajša menen Kaləjša kül-üp žat-aš-tə.* (Gr. 242)
 A. and K. laugh-CONV AUX-3PL-3.PAST
 ‘Ajsha and Kalyjša laughed.’
 b. **Biz kül-üp žat-aš-tə-k.*
 we laugh-CONV AUX-3PL-PAST-1PL
 ‘We laughed.’

- c. *Biz küł-üp žat-tə-k.*
 we laugh-CONV AUX-PAST-1PL
 (same meaning).

A distinctive feature of the sociative meaning is simultaneity of actions. If the suffix *-š* in the following sentence were sociative in meaning rather than plural, the verb would not collocate with an adverb with the meaning ‘one after another’, but this is not the case:

- (92) *Alar biri-nin art-ə-nan biri kel-iš-ti.*
 they one-GEN back-ə-ABL one come-PL-3.PAST
 ‘They came one after another.’

Sentences with a 1PL or 2PL subject can be convincing examples that would prove the sociative reading. In present-day Kirghiz the sociative meaning has practically disappeared; it is only preserved in folklore texts. In the dictionary, I have found the following folklore examples with the sociative meaning:

- (93) a. *Olžolo-š-up mal al-də-k.* (Ju.2. 67)
 capture-REC-CONV cattle take-PAST-1PL
 ‘We took the cattle as loot.’
- b. *Sabak-tə birge oku-š-tu-k köñül-go akal*
 lesson-ACC together learn-REC-PAST-1PL heart-DAT reason
toku-š-tu-k. (Ju.2. 246)
 weave-REC-PAST-1PL
 ‘We learnt lessons together, grew wise together.’
- c. *Emček-ti birge em-iš-ken ene-leš-im de-er...*
 breast-ACC together suckle-REC-PART mother-SUFF-my say-PART
ele-m. (Ju.2. 455)
 AUX-1SG
 ‘I called my milk-brother [who] suckled the breast together [with me].’
- d. *Bir tuugan-daj tuu-š-tu-k.*
 one blood.relative-like be.born-REC-PAST-1PL
 ‘We were born together like blood relatives.’
- e. *Čalgan-də birge čal-əš-tə-k.* (Ju.2. 340)
 reconnaissance-ACC together reconnoitre-REC-PAST-1PL
 ‘We did reconnaissance together.’
- f. *Tooru-l-du birge tooru-š-tu-k.* (Ju.2. 251)
 reconnaissance-ACC together reconnoitre-REC-PAST-1PL
 ‘We did reconnaissance together.’
- g. ... *kaj žer-de köñül kal-əš-tə-k?* (Ju.2. 340)
 why earth-LOC heart leave-REC-PAST-1PL
 ‘... why did we grow cold?’ (implying ‘to each other’).

About half the forms with the sociative meaning of the suffix *-š* occurred in hortative sentences (the hortative marker for 1PL is *-alə[k]/...*), i.e. the speaker urges the addressee to perform a joint action. This meaning is also evident in (94f) with the present-future tense of a 1PL predicate:

- (94) a. *Taarənəç-tə žoj-uš-alək.* (Ju.1. 263)
 resentment-ACC stop-REC-IMP.1PL
 ‘Let us forget our resentments.’
- b. *Ötkön-ketken-di unut-uš-alək.* (Ju.2. 306)
 past-ACC forget-REC-IMP.1PL
 ‘Let us forget the past.’
- c. *ədəjla-š-əp kel-eli.* (Ju.2. 430)
 go.down-REC-CONV AUX-IMP.1PL
 ‘Let’s go down [from the mountains to the valley].’
- d. *Sonun turmuš bal-ə-nan sor-uš-ala, žalžal-əm.* (Ju.2. 157)
 wonderful life honey-its-ABL suckle-REC-IMP.1PL darling-my
 ‘Let us taste the honey of wonderful life, my darling.’
- e. *Ojlo-š-up kör-öliü!* (Ju.2. 63)
 think-REC-CONV see-IMP.1PL
 ‘Let us think!’
- f. *Kijin ojlo-n-uš-a-bəz.* (Ju.2. 63)
 then think-REFL-REC-PRES-1PL
 ‘Then we’ll think about it.’

9.4 Assistive

This meaning of the Kirghiz reciprocal marker is highly productive. If the subject is singular the meaning of the reciprocal suffix is usually assistive, excluding cases with a lexicalized or unproductive meaning. The person who receives help is denoted by the dative case (cf. *ma-ga* in (95b, c)), or it is not mentioned (cf. (96c, d, e)). The following examples contain the assistive forms of an intransitive and a transitive verb respectively (see also (2) and (3)):

- (95) a. *Men işte-di-m.*
 I work-PAST-1SG
 ‘I worked.’
- b. *Al ma-ga işte-š-ti.*
 he I-DAT work-REC-3.PAST
 ‘He helped me to work.’
- c. *Alar ma-ga işte-š-iš-ti.*
 they I-DAT work-REC-3PL-3.PAST
 ‘They helped me to work.’
- (96) a. *Al koj-du sat-tə.*
 he sheep-ACC sell-3.PAST
 ‘He sold sheep.’
- b. *Alar koj-du sat-əš-tə.*
 they sheep-ACC sell-3PL-3.PAST
 ‘They sold sheep.’
- c. *Al koj-du sat-əš-tə.*
 he sheep-ACC sell-REC-3.PAST
 ‘He helped [sb] to sell sheep.’

- d. *Biz koj-du sat-əš-tə-k.*
 we sheep-ACC sell-REC-PAST-1PL
 ‘We helped [sb] to sell sheep.’
- e. *Alar koj-du sat-əš-əš-tə.*
 they sheep-ACC sell-REC-3PL-3.PAST
 ‘They helped [sb] to sell sheep.’

Causative forms cannot be derived from assistives; cf.:

- f. **Al sat-əš-t-tə.*
 he sell-REC-CAUS-3.PAST
 (intended meaning:) ‘He ordered [someone] to help [someone] sell [something].’

The assistive reading is the only one possible in (96d), i.e. in a situation when *-š* cannot be interpreted either as a 3PL marker (because the verb is in the 1st or 2nd person) or as a marker of reciprocity (because, in particular, this meaning is rendered by the reciprocal pronoun), on condition that the lexical meaning of the verb allows the assistive meaning; cf.:

- (97) a. *Siler makta-š-tə-ŋar.*
 YOU.PL praise-REC-PAST-2PL
 i. *‘You praised *each other*.’
 ii. ‘You *helped* sb to praise sb.’
- b. *Siler biri-biri-ŋer-di makta-də-ŋar.*
 YOU.PL each-other-YOUR-ACC praise-PAST-2PL
 ‘You praised each other.’

If *-š* is omitted the sentence retains its grammaticality but the dative case form acquires the meaning of beneficiary, its referent not taking part in the action described; cf.:

- (98) a. *Al eže-si-ne paxta ter-iš-ti.*
 he sister-his-DAT cottonwool gather-REC-3.PAST
 ‘He helped his sister to gather cottonwool.’
- b. *Al eže-si-ne paxta ter-di.*
 he sister-his-DAT cottonwool gather-3.PAST
 ‘He gathered cottonwool for his sister.’

Reciprocal constructions based on assistives can be formed with the help of the reciprocal pronoun only (see (49b) in 5.2.2).

9.5 *Nomina actionis* in *-š*

This suffix is not semantically related to the reciprocal suffix *-š* on verbs. There is an opinion that these suffixes are genetically related (Radloff 1897: 57–8), therefore I will briefly consider *nomina actionis* with this suffix and its relation to another suffix of *nomina actionis*, namely, *u/-üü/-oo/-öö*. As mentioned above (see 4.3 and 5.5), in nominal derivation from reciprocal verbs this suffix is favoured over *-š*. Both suffixes are highly productive and derive nouns of action practically from any verbal stem. Roughly speaking, these nouns correspond to infinitives of European languages. Nouns with both suffixes are semantically

contiguous and sometimes entirely synonymous, but the latter suffix tends to be more “concrete” in meaning (see Tojchubekova 1987:310, 312). At least the following cases of relationship between the two formal types of *nomina actionis* can be distinguished.

1. The main case is probably the one in which *nomina actionis* are formed from non-reciprocals by means of both suffixes that are synonymous and interchangeable, while from reciprocals they are formed by means of *uu-*; e.g.:

- (99) a. *süjlä-* ‘to say’ → a’. *süjlä-ö* ‘speaking, speech’
 a”. *süjlä-š* ‘speaking, speech’
 b. *süjlä-š-* ‘to talk/converse’ → b’. *süjlä-š-üü* ‘conversation’ (Ju.2. 171).

2. In another case, *nomina actionis* from non-reciprocals are not synonymous when derived with different suffixes: the derivative in *-uš* (100a”) has a more “concrete” meaning than (100a’) and it is formally identical with and semantically contiguous to the reciprocal under (100b), which makes them different from (99a”) and (99b) whose stems are only formally identical. The relationship between (100b) and (100b’) is the same as between (99b) and (99b’).

- (100) a. *ur-* ‘to beat/hit’ → a’. *ur-uu* ‘beating’
 a”. *ur-uš* ‘(a) fight’
 b. *ur-uš-* ‘to fight’ → b’. *ur-uš-uu* ‘fighting’ (Ju.2. 309).

3. This case differs from the above two in that it includes *reciproca tantum* (see 13.4.1) but it is semantically similar to them, therefore it is expedient to mention it here. These verbs have parallel materially identical and semantically correlated nouns which do not quite meet the description of *nomina actionis*, because the root-final component *-š* is not a suffix, at least not synchronically.

- (101) a. *almaš-* ‘to change’ (vi) → a’. *almaš-uu* ‘change, exchange’
 a”. *almaš* ‘change, replacement’ (Ju.1. 52).

This latter type is also represented by the following pairs for which forms like (101a’) are derived automatically (cf. *eregiš-* ‘to argue’ → *eregiš-üü* ‘arguing’):

- (102) *eregiš-* ‘to argue’ – *eregiš* ‘argument’
 keŋeš- ‘to counsel each other’ – *keŋeš* ‘advice’
 meldeš- ‘to wager/compete’ – *meldeš* ‘wager, competition’
 talaš- ‘to argue/squabble’ – *talaš* ‘argument, squabble’
 tartäš- ‘to argue’ – *tartäš* ‘argument.’

10. Other meanings of the suffix *-š*

10.1 Verbs with the suffix *-š*

The unproductive meanings of this suffix include the sociative, or rather, this meaning is lost in present-day Kirghiz. It is considered above alongside the assistive meaning because it is also very close to the reciprocal and the assistive meanings. Kirghiz differs from Yakut

in that it lacks the converse meaning in the reciprocal suffix, and it has a larger number of competitive verbs. Let us consider the unproductive meanings of the suffix in question.

10.1.1 Anticausative

This meaning is registered not only in derivatives from lexical reciprocals (cf. *batta-* ‘to glue sth to sth’ → *batta-š-* ‘to get glued’; see 13.2) but also in a number of derivatives from other verbs that are lexical causatives; in the example below the suffix *-š* occurs with the passive marker *-l* but it is not related to the passive in any way:

- (103) a. *Men čač-am-ə nəmda-də-m.*
I hair-my-ACC wet-PAST-1SG
‘I wetted my hair.’
b. *Čač nəmda-l-də.*
hair wet-PASS-3.PAST
lit. ‘The hair is wetted [by someone].’
c. *Čač nəmda-l-əš-tə.*
hair wet-PASS-REC-3.PAST
‘The hair became wet.’
- (104) a. *majla-* ‘to smear (with fat)’
b. *Bet-i majla-n-əš-əp tur-a-t.*
face-his smear-REFL-REC-CONV AUX-PRES-3
‘His face shines (with fat).’
- (105) a. *Toŋ alma tiš-im-di kama-də.*
sour apple tooth-my-ACC make.sore-3.PAST
lit. ‘A sour apple made my teeth sore.’
b. *Tiš-im kama-š-tə.*
tooth-my.NOM make.sore-REC-3.PAST
lit. ‘My teeth became sore.’

10.1.2 Competitive

The verbs with this meaning denote all kinds of contests. Some of them may have other, reciprocal proper or lexicalized meanings alongside the competitive. Most likely, these are cases of the development of a reciprocal or sociative meaning in each verb rather than derivation according to a given pattern. Examples:

- (106) *ajt-* ‘to tell, speak’ → *ajt-əš-* i. ‘to compete in improvisation’
(about narrators of folk tales),
ii. ‘to argue/squabble’
at- ‘to shoot’ → *at-əš-* i. ‘to compete in shooting’
ii. ‘to exchange shots’
atta- ‘to jump/jump over’ → *atta-š-* ‘to compete in jumping over sth’
čap- ‘to run/ride fast’ → *čab-əš-* ‘compete in running/riding’
(Ju.2. 333)
čert- ‘to play a string instru- → *čert-iš-* ‘to compete in playing a string
ment’ instrument’ (Ju.2. 359)
eŋ- ‘to touch ground (of riders)’ → *eŋ-iš-* ‘to compete in dismounting the rival
riders’

<i>saj-</i> ‘to stab with a spear’	→ <i>saj-əš-</i>	i. ‘to compete in spear fighting (of riders)’ ii. ‘to put out each other’s eyes, etc.’
<i>sal-</i> ‘to direct the horse’	→ (<i>at</i>) <i>sal-əš-</i>	‘to compete in horse racing’
<i>salmakta-</i> ‘to estimate’	→ <i>salmakta-š-</i>	‘measure one’s strength, wit with sb’
<i>tart-</i> ‘to pull/drag’	→ (<i>ulak</i>) <i>tart-əš-</i>	‘compete in goat-pulling (of riders)’
<i>taskakta-</i> ‘to trot fast’(of horses)	→ <i>taskakta-š-</i>	‘to compete in horse trotting races’
<i>žeq-</i> ‘to win’	→ <i>žeq-iš-</i>	‘to compete, try to win.’

10.1.3 *The meaning of diminishing and entangling*

A number of rather heterogeneous derivatives in *-š* from one-place intransitives have the meanings of diminishing in size, entangling of parts of a whole, and the like (sometimes the derivative verb is close in meaning to the underlying verb):

(107) <i>čipta-</i> ‘to fit closely’	→ <i>čipta-l-əš-</i> ‘to get matted’
<i>kuru-</i> ‘to dry (up)’ (vi)	→ <i>kuru-š-</i> ‘to shrink/contract’
<i>uju-</i> ‘to curdle/coagulate’, ‘to accumulate’	→ <i>uju-š-</i> ‘to get matted/crumpled.’

10.2 Verbs with the complex reciprocal-causative suffix *-š-tər*; the intensifying meaning

This suffix is a combination of the reciprocal and the causative suffixes, but in the derivatives considered below it functions as a single morpheme, because verbs with the reciprocal suffix alone do not correlate with the respective derivatives with this complex suffix (see the (b) examples in (108)–(112)). The underlying verb (see the (a) examples below) and the derivative (which does not manifest a causative meaning) are usually very similar in lexical meaning, the latter verb denoting a more intensive and/or repeated action (see Abдиеv 1995: 97–8). The analogous Turkish suffix *-(i)ş-tir* is also used in this meaning (see Lewis 1967: 148).

(108) a. <i>ojlo-</i>	‘to think’
→ a. <i>ojlo-n-</i>	‘to start thinking’
[→ b. <i>ojlo-n-uš- ?</i>]	(cf. (94f))
→ c. <i>ojlo-n-uš-tur-</i>	‘to ponder/think hard about sth.’
(109) a. <i>kara-</i>	i. ‘to look’, ii. ‘to look after’
[→ b. <i>kara-š-</i>]	i. ‘to look at each other’, ii. ‘to help to look after’]
→ c. <i>kara-š-tər-</i>	‘to look for sth intensely.’
(110) a. <i>aŋda-</i>	i. ‘to understand/go deep (into)’, ii. ‘to notice’
[→ b. <i>ʔaŋda-š-</i>]	(not registered in the dictionaries)]
→ c. <i>aŋda-š-tər-</i>	‘to find out/make inquiries’ (Ju.1. 59).
(111) a. <i>sura-</i>	‘to ask’
[→ b. <i>sura-š-</i>]	‘to question each other’]
→ c. <i>sura-š-tər-</i>	‘to question again and again’ (Ju.2. 166).
(112) a. <i>izde-</i>	‘to look for’
[→ b. <i>izde-š-</i>]	‘to look for each other?’]
→ c. <i>izde-š-tir-</i>	‘to look for sth intensively.’

Sentential examples:

- (113) *Men munu ojlo-n-uš-tur-aj-əm.*
 I this think-REFL-REC-CAUS-OPT-1SG
 ‘I am thinking it over’; ‘I will think it over again and again.’
- (114) *Kara-š-tər-əp, akča taap ber-iñiz.* (Ju.1. 350)
 look-REC-CAUS-CONV money find.CONV give-IMP.2PL
 ‘Look for some money (for me).’
- (115) *Men akča izde-š-tir-dī-m.*
 I money ask-REC-CAUS-PAST-1SG
 ‘I asked around for money (intensively, asking many people).’

On other usages of the complex *-š-tər* see 13.2–13.3.

The meanings of intensity and iterativity of the reciprocal-causative suffix are pointed out in other Turkic languages (see, among others, Gordlevskij 1928:35; Sevortjan 1962:356–8; Lewis 1967:148; Schlögel 1985:106–9).

11. Lexicalization

11.1 Introductory

Lexicalized verbs with the suffix *-š* are represented by derivatives, with the exception of those dealt with above, on which this suffix cannot be substituted for by the reciprocal pronoun (on condition the meaning is more or less retained), i.e. by those derivatives whose meaning does not include that of the underlying verb in a more or less standard way. The main lexical domains of these reciprocals, with the exception of individual instances, are similar to lexicalizations in Yakut to a greater or lesser extent. Lexicalized derivatives are usually reciprocal in meaning. Some of them retain a standard reciprocal meaning alongside the lexicalized one. In some cases the meanings of the underlying base and the derivative differ to such a degree that they may be viewed as occasional coincidences of the stems (this does not concern metaphorical shift in instances like *tajə-* ‘to slide/glide’ → *tajə-š-* ‘to compete’).

11.2 Some types of lexicalization

We shall list the main lexical groups of lexicalized reciprocals, to give an idea of their semantic range in Kirghiz. References to the entries in (Ju.1) and (Ju.2) are not given: they can be found according to the alphabet (this also concerns the lists of verbs in Section 12).

1. The most numerous group comprises intransitive reciprocals denoting various hostile actions, competing, etc., like the following:

(116) <i>ajt-</i> ‘to speak/say’	→	<i>ajt-əš-</i> ‘to quarrel/argue’
<i>čalkalda-</i> ‘to churn’ (vi)	→	<i>čalkalda-š-</i> ‘to thrash/flog each other’
<i>čel-</i> ‘to catch with horns’	→	<i>čel-iš-</i> i. ‘to engage in single combat’ ii. ‘to catch each other with horns (of bulls)’
<i>čelkilde-</i> ‘to bubble’	→	<i>čelkilde-š-</i> ‘to thrash/flog each other’
<i>čuku-</i> ‘to pick’	→	<i>čuku-š-</i> ‘to trip each other’
<i>kajra-</i> ‘to break’ (vi)	→	<i>kajra-š-</i> ‘to come to blows’
<i>kazar-</i> ‘to blush’	→	<i>kazar-əš-</i> ‘to attack each other like cocks’
<i>majmakta-</i> ‘to tie a horse by the front leg’	→	<i>majmakta-š-</i> ‘to accuse each other’ (Ju.2. 12)
<i>ooru-</i> ‘to be ill’	→	(<i>könül</i> ‘heart’) <i>ooru-š-</i> ‘offend/hurt each other’
<i>tajǰ-</i> ‘to slide/glide’	→	<i>tajǰ-š-</i> ‘to compete’, etc.

2. Another group comprises intransitive verbs with the lexical meanings of coming to an agreement, becoming friends, getting reconciled and the like:

(117) (<i>žət</i> ‘smell’) <i>al-</i> ‘to smell/catch the smell of’	→	<i>žət al-əš-</i> ‘to live in concord’
<i>agar-</i> ‘to glitter’	→	<i>agar-əš-</i> ‘to forgive the past to each other’
<i>beki-</i> ‘to strengthen’	→	<i>beki-š-</i> ‘to become friends’
<i>čik-</i> ‘to go out of’	→	<i>čig-əš-</i> ‘to get on/along with sb’
<i>de-</i> ‘to say’	→	<i>de-š-/de-š-iš-</i> ‘to come to an agreement’
<i>kel-</i> ‘to come’	→	<i>kel-iš-</i> ‘to agree’
<i>košto-l-</i> (PASS) ‘to take a spare horse’	→	<i>košto-l-uš-</i> i. ‘to accompany each other’ ii. ‘to become friends/close’
<i>tap-</i> ‘to find’	→	<i>tab-əš-</i> i. ‘to get reconciled’, ii. ‘to find each other’
<i>žara-</i> ‘to like’	→	<i>žara-š-</i> ‘to make peace/get reconciled’
<i>žuuru-l-</i> PASS of ‘to knead’	→	<i>žuuru-l-uš-</i> ‘to become close (friends).’

3. Reciprocals with the main meaning of intention to obtain or achieve something with an implied response action from another referent comprise a separate group:

(118) <i>söjkön-</i> ‘to rub against sth’	→	<i>söjkön-üş-</i> ‘to pester/badger’
<i>šalkalda-</i> ‘to be loosely attached (of a horseshoe, etc.)’	→	<i>šalkalda-š-</i> ‘to flirt with sb’ (Ju.2. 420)
<i>tij-</i> ‘to touch’	→	<i>tij-iš-</i> ‘to flirt with sb’, etc.

4. Individual derivatives:

(119) <i>al-</i> ‘to take’	→	<i>al-əš-</i> ‘to exchange’ (lit. ‘take from each other’)
<i>bošo-</i> ‘to weaken (of a joint)’	→	<i>bošo-š-</i> ‘to weaken (of a person)’
<i>čak-</i> ‘to strike fire’	→	<i>čag-əš-</i> ‘to shine by reflecting light’
<i>kir-</i> ‘to enter’	→	<i>kir-iš-</i> ‘to begin sth’
<i>saj-gəla-</i> ‘to stab repeatedly’	→	<i>saj-gəla-š-</i> ‘to have a stabbing pain’
<i>tište-</i> ‘to bite/take with one’s teeth’	→	(<i>ok</i> ‘arrow’) <i>tište-š-</i> ‘to give an oath to each other (with an arrow in the teeth)’ (Ju.2. 65)
<i>žal-</i> ‘to move slowly’	→	<i>žal-əš-</i> ‘to be deprived of sth’, etc.

12. Denominal lexical reciprocals with the suffix *-la-š*

In this section I will also consider the few deverbal derivatives with this suffix.

12.1 Introductory

The main means of verbal derivation from other parts of speech is the suffix *-la/-da/-ta*. It is extremely productive. As is obvious, *-la-š* is a combination of the suffix *-la* and the reciprocal suffix *-š*. Initially, from verbs in *-la* reciprocal verbs were formed by means of *-š*, i.e. in the regular way described in Section 4 (cf. *sojul* ‘cudgel’ → *sojul-da-* ‘to beat with a cudgel’ → *sojul-da-š-* ‘to beat each other with a cudgel’ (Ju.2. 158)), and later the complex *-laš* came to function as a single suffix and derive verbs which do not have correspondences in *-la* (see Kudajbergenov 1987a:212); cf. *araz* ‘quarrel’ → [**araz-da-* →] *araz-daš-* ‘to quarrel’ (Ju.1. 63)). As these derivatives do not have respective words with a non-reciprocal meaning, they are included among lexical reciprocals by definition. A peculiarity of the Kirghiz suffix *-laš* in comparison with its Yakut counterpart is that it derives both verbs and nouns. This is probably related to the existence of *nomina actionis* in *-š*. This complex suffix forms three groups of derivatives: verbs only, nouns only and both verbs and nouns from the same base (over 160 derived verbs and nouns are cited below).

12.2 Verbs with the suffix *-la-š*

These derivatives commonly belong to the lexical groups of competing, aggressive actions, entering into friendly relations, uniting, belonging to a group, joint actions, exchange of information, coming to an agreement, greeting, position opposite each other, meeting, etc. Some of the derivatives are slightly lexicalized. There are over 60 items of this type in our data. Here are representative lists of these lexical groups.

12.2.1 *Verbs of hostile relations, competing, etc.*

(120) <i>akaj</i> ‘a singing competition’	→	<i>akaj-laš-</i> ‘to compete in singing’
<i>araz</i> ‘quarrel’	→	<i>araz-daš-</i> ‘to quarrel’
<i>arəz</i> ‘complaint’	→	<i>arəz-daš-</i> ‘to quarrel/be at law’
<i>arip</i> ‘witchcraft, magic’	→	<i>arip-teš-</i> ‘to compete in witchcraft’
<i>azuu</i> ‘fang’	→	<i>azuu-laš-</i> ‘to fight furiously’
<i>bas (kel-)</i> ‘(to be) equal’	→	<i>bas-taš-</i> ‘to compete, to bet’
<i>čatak</i> ‘quarrel, wrangling’	→	<i>čatak-taš-</i> ‘to quarrel, wrangle, argue’
<i>čər</i> i. ‘squabble’, ii. ‘squabbler’	→	<i>čər-daš-</i> ‘to squabble/begin a squabble’
<i>karši</i> ‘enemy’	→	<i>karši-laš-</i> ‘to set out against each other’
<i>kəsa</i> ‘revenge’	→	<i>kəsa-laš-</i> ‘to reproach each other for the past’
<i>mijzam</i> arch. ‘law’	→	<i>mijzam-daš-</i> ‘to be at law/litigate’
<i>möröj</i> ‘the result of a victory’	→	<i>mörörj-löš-</i> ‘to compete’
<i>ökmöt</i> ‘government, authorities’	→	<i>ökmöt-töš-</i> ‘to be at law/litigate’
<i>til</i> ‘quarrel’	→	<i>til-deš-</i> ‘to quarrel’
<i>žaaκ</i> ‘jaw’	→	<i>žaaκ-taš-</i> ‘to squabble’

- žadaal* ‘quarrel/wrangling’ → *žadaal-daš-* ‘become embittered against each other’
- žaŋžal* ‘quarrel/wrangling’ → *žaŋžal- daš-* ‘to quarrel, wrangle.’
- 12.2.2** *Verbs of friendly relations*
- (121) *dos* ‘friend’ → *dos-toš* ‘to become friends’
- kuda* ‘father of son-in-law’ → *kuda-laš* ‘to become in-laws’
- mojun* ‘neck’ → *mojun-daš* ‘to embrace each other by the neck’
- munaza* ‘reconciliation’ → *munaza-laš* ‘to get reconciled’
- šerik* ‘friend’ → *šerik-teš* ‘to become friends’
- tamər* ‘friend, pal’ → *tamər-laš* ‘become friends on exchanging presents’
- tatuu* ‘peaceful, friendly’ → *tatuu-laš* ‘to get reconciled/become friends’
- ələm* ‘sympathy, liking’ → *ələm-daš* ‘to be on friendly terms with’
- əraj* ‘mood’ → *əraj- laš-* ‘to make peace/get reconciled’, etc.
- 12.2.3** *Verbs of uniting, belonging to a group, joint actions, etc.*
- (122) *algoo* arch. ‘mutual help in farming’ → *algoo-loš-* ‘to help each other in farming’
- artel* ‘artel’ → *artel-deš-* ‘to join in an artel’
- bir* ‘one’ → *bir-deš-* ‘to unite’ (vi)
- borbor* ‘centre’ → *borbor-doš-* ‘to get centralized’
- kiidip* ‘chase’ → *kiidip-daš-* ‘to unite for a chase’ (Ju.1. 454)
- majdan* ‘battle field’ → *majdan-daš-* ‘to fight jointly’
- öz* ‘(one’s) own’ → *öz-döš-* ‘to become close/one of’
- ujum* ‘organization’ → *ujum-daš-* ‘to become organized’
- üj-* ‘to put into a heap’ → *üj-löš-* ‘to gather together’
- žamaat* arch. ‘community’ → *žamaat-taš-* ‘to be a member of community.’
- 12.2.4** *Verbs of communication*
- (123) *akə* ‘payment’ → *akə-laš-* ‘to make mutual payments, bargain’
- ant* ‘oath’ → *ant-taš-* ‘to give an oath to each other’
- aŋgme* ‘conversation’ → *aŋgme-leš-* ‘to converse’
- sooda* ‘trade, trading’ → *sooda-laš-* ‘to bargain’
- ubada* ‘promise’ → *ubada-laš-* ‘to give each other promises’
- žoop* ‘reply’ → *žoop-toš-* ‘to talk, to make a deal’
- žüjö* ‘reasonable argument’ → *žüjö-löš-* ‘to give each other arguments’
- žüz* ‘face, cheek’ → *žüz-döš* ‘to talk standing face to face’, etc.
- 12.2.5** *Verbs of greeting and saying goodbye*
- (124) *aman (bol!)* ‘(be) well, happy(!)’ → *aman-daš-* ‘to inquire after each other’s health’
- esen* ‘well, happy’ → *esen-deš-* ‘to inquire after each other’s health’
- koš!* ‘goodbye!’ → *koš-toš-* ‘to say goodbye’
- salam* ‘hello’ → *salam-daš-* ‘to say hello to each other.’

12.2.6 *Verbs of spatial relations*

- | | | |
|--------------------------|---|--|
| (125) <i>arka</i> ‘back’ | → | <i>arka-laš-</i> ‘to be back to back to each other’ |
| <i>bet</i> ‘face’ | → | <i>bet-teš-</i> ‘to meet face to face’ |
| <i>but</i> ‘foot’ | → | <i>but-taš-</i> ‘to get entangled (of feet)’ |
| <i>kanat</i> ‘wing’ | → | <i>kanat-taš-</i> i. ‘to become close neighbours’
ii. ‘to fly wing to wing’ |
| <i>köz</i> ‘eye’ | → | <i>köz-döš-</i> ‘to meet <i>tête-à-tête</i> , etc.’ |

12.2.7 *Verbs with non-reciprocal (or peripheral reciprocal) meanings*

- | | | |
|---|---|---|
| (126) <i>kata</i> ‘mistake’ | → | <i>kata-laš-</i> ‘to make mistakes’ |
| <i>kərgəz</i> ‘Kirghiz’ | → | <i>kərgəz-daš-</i> ‘to become like a Kirghiz’ |
| <i>kəštak</i> ‘kishlak (village in Central Asia)’ | → | <i>kəštak-taš-</i> ‘to become settled’ |
| <i>madanijat</i> ‘culture’ | → | <i>madanijat-taš-</i> ‘to become cultured’ |
| <i>načar</i> ‘weak’ | → | <i>načar-laš-</i> ‘to become worse’ |
| <i>sistema</i> ‘system’ | → | <i>sistema-laš-</i> ‘to be(come) systematized’ |
| <i>žergilik</i> ‘indigenous, local’ | → | <i>žergili-teš-</i> ‘to start using the local language (in business, clerical work).’ |

12.2.8 *Lexicalized derivatives*

These are verbs without semantically more or less related underlying bases:

- | | |
|-------------------------|--|
| (127) <i>ataan-daš-</i> | ‘to shift work, etc. on each other/argue’ (cf. <i>ata-/ataa-</i> ‘to call/name’) |
| <i>boor-doš-</i> | ‘to fraternize’ (cf. <i>boor</i> ‘liver’) |
| <i>kez-deš-</i> | ‘to meet, come across’ (cf. <i>kez</i> ‘moment, time, occasion’) |
| <i>sep-teš-</i> | ‘to help each other’ (cf. <i>sep</i> ‘dowry’). |

12.3 Nouns with the suffix *-la-š*

This is a set of about 100 nominal derivatives of which about 20 have verbal homonyms. Below, the lexical groups of nouns with the reciprocal meaning are enumerated. The nouns denote similarity of two (or more) persons or entities with respect to the feature named by the root. This motivation may be literal or rather metaphorical. The respective nouns are non-existent in Yakut, or at least they are not registered in the dictionaries.

Within the groups below, first reciprocal nouns are listed that have no parallel verbs with the same root, and then, under a separate number, nouns with parallel materially identical and usually semantically related verbs.

12.3.1 *Nouns denoting persons sharing a spiritual feature*

- | | | |
|-----------------------------------|---|--|
| (128) <i>bikir</i> ‘thought’ | → | <i>bikir-deš</i> ‘like-minded person’ |
| <i>din</i> ‘belief, religion’ | → | <i>din-deš</i> ‘co-religionist’ |
| <i>keŋeš</i> ‘advice’ | → | <i>keŋeš-teš</i> ‘person with whom one exchanges advice’ |
| <i>sanaa</i> ‘thought, care’ | → | <i>sanaa-laš</i> ‘friend, like-minded person, confidant’ |
| <i>sər</i> ‘secret’ | → | <i>sər-daš</i> ‘like-minded person’ |
| <i>talap</i> ‘search, aspiration’ | → | <i>talap-taš</i> ‘(person) seeking the same goal’ |
| <i>əman</i> ‘(religious) belief’ | → | <i>əman-daš</i> ‘co-religionist’, etc. |

- (129) *akəl* ‘mind, reason, intelligence’ → *akəl-daš* i. ‘advisor’, ii. ‘like-minded person’
akəl-daš- ‘to consult/take counsel.’

12.3.2 Nouns denoting personal relations (*‘friend’, ‘enemy’, etc.*)

- (130) *könül* ‘heart’ → *könül-döš* ‘intimate friend’
opaa ‘loyalty, faithfulness’ → *opaa-laš* ‘persons faithful/loyal to each other’
tanap ‘rope, linking thread’ → *tanap-taš* lit. ‘(persons) tied by a common thread’
ubar ‘dear’ → *ubar-laš* ‘bosom friend’
žaldəz ‘star’ → *žaldəz-daš* ‘(persons) living in concord, happily.’
- (131) *əntəmak* ‘agreement, unanimity’ → *əntəmak-taš* ‘person in agreement with sb’
əntəmak-taš- ‘to become friends/act together’
žurt ‘people, relatives’ → *žurt-taš* ‘living in peace between themselves (about tribes, families)’
žurt-taš- ‘to make peace.’

12.3.3 Nouns denoting membership in a group

- (132) *brigada* ‘brigade’ → *brigada-laš* ‘(person) from the same brigade’
klass ‘class’ → *klass-taš* ‘classmate’
kolxoz ‘collective farm’ → *kolxoz-doš* ‘(person) from the same farm’
kurs ‘course’ → *kurs-taš* ‘fellow-student (from the same year)’
ot ‘fire’ → *ot-toš* i. ‘(person) sharing the hearth’, ii. ‘friend’
sabak ‘lesson’ → *sabak-taš* ‘classmate’
žamaat ‘community, society’ → *žamaat-taš* ‘member of the same community’
žol ‘road, way’ → *žol-doš* ‘fellow-traveller, comrade’, etc.
- (133) *önök* ‘partner (in a game)’ → *önök-töš* ‘partner (in a game)’, ‘co-participant’
önök-töš- ‘to play divided into two groups’
žaat ‘(hostile) side, party’ → *žaat-taš* ‘adherent of one of hostile parties’
žaat-taš- ‘to break into hostile groups.’

12.3.4 Nouns denoting kinship, blood relations, common origin

- (134) *ata* ‘father’ → *ata-laš* ‘born of the same father’
boor ‘liver’ → *boor-doš* ‘blood relative’
emček ‘(woman’s) breast’ → *emček-teš* ‘foster-brother/sister’
ene ‘mother’ → *ene-leš* ‘born of the same mother’
karən ‘belly’, ‘generation’ → *karən-daš* ‘niece, younger sister, relative’
künü ‘wives of one husband’ → *künü-löš* ‘one wife in relation to the other wives’
sijdik i. ‘urine’, ii. flk. ‘sperm’ → *sijdik-tiš* ‘children of the same father and different mothers’
tek ‘origin (by birth)’ → *tek-teš* i. ‘relative’, ii. ‘equal by origin’
tuu- ‘to give birth, to be born’ → *tuu-daš* ‘relative’
uja ‘nest’ → *uja-laš* ‘of the same hatch/brood’
žatən ‘uterus’ → *žatən-daš* ‘born of the same mother’
žer ‘earth’ → *žer-deš* ‘compatriot.’

- (135) *el* ‘tribe, kin, people’, ‘peaceful dweller’ → *el-deš* ‘tribesman, compatriot’
el-deš- ‘to make peace/get reconciled’
söök ‘relative by marriage’ → *söök-töš* ‘relative by marriage of one’s relative’
söök-töš- ‘to become related by marriage’
uruk ‘tribe, kin, family’ → *uruk-taş* ‘tribesman’
 i. ‘to be divided into tribes, etc.’
 ii. ‘to be at war (of tribes).’

12.3.5 Nouns denoting partnership in an activity

- (136) *bajda* ‘gain, advantage, benefit’ → *bajda-laš* ‘companion in profit, benefit’
bötölkö ‘bottle’ → *bötölkö-leš* ‘boon companion’
enči ‘share in inheritance’ → *enči-leš* ‘co-heir, co-parcener’
karal ‘support’ → *karal-daš* ‘(persons) helping each other’
koš ‘roaming’, ‘camp of nomads’ → *koš-toš* ‘member of a roaming group’
olžo ‘loot, bag’ → *olžo-loš* ‘(one) sharing the loot, bag’
oroo arch. ‘storage pit for grain’ → *oroo-loš* ‘(one) sharing a storage pit for grain’
sonor ‘hunting with dogs’ → *sonor-loš* ‘hunting companion’
šabaga ‘share in fate’ → *šabaga-laš* ‘(one) sharing fate’
tabak ‘dish’ → *tabak-taş* ‘table companion’
tastarkon ‘table cloth with food’ → *tastarkon-doš* ‘table companion’
til ‘tongue’ → *til-deš* ‘(person) in collusion’
tuz ‘salt’ → *tuz-daš* ‘table companion.’
- (137) *kol* ‘hand’ → *kol-doš* i. ‘(person) who carries sth with sb’
 ii. ‘(person) who helps’
kol-doš- i. ‘to carry sth together’, ii. ‘to help sb’
kəzmat ‘service, work’ → *kəzmat-taş* i. ‘colleague’, ii. ‘assistant’
kəzmat-taş ‘to collaborate, to assist’
meder ‘help, support’ → *meder-leš* ‘(persons) helping each other’
meder-leš ‘to help each other’
sər ‘secret’ → *sər-daš* ‘confidant’
sər-daš- ‘to confide in each other’
šerik ‘companion, comrade’ → *šerik-teš* ‘companion, co-participant’
šerik-teš- ‘to become companions’
žardam ‘help, assistance’ → *žardam-daš* ‘(those) who help each other’
žardam-daš- ‘to help each other’
žarnak ‘share, part’ → *žarna-laš* ‘(person) who gets his share (of loot, etc.)’
žarna-laš- ‘to take part in an action involving sharing.’

12.3.6 Nouns denoting persons of the same age

- (138) *kurak* ‘time, age, moment’ → *kurak-taş* ‘(person) of the same age’
tuš ‘time, moment, occasion’ → *tuš-taş* ‘(person) of the same age/contemporary’
zaman ‘time, epoch’ → *zaman-daš* ‘contemporary’
žan ‘man’ → *žan-taş* ‘(person) of the same age/year of birth’
žal ‘year’ → *žal-daš* ‘(person) of the same age/year of birth.’

12.3.7 *Nouns denoting persons with similar features*

- (139) *aj* ‘moon’ → *aj-laš* ‘women in the same month of pregnancy’
boj ‘height’ → *boj-loš* ‘(persons) equal in height, age’
čama ‘strength, power’ → *čama-laš* ‘equal in strength, power’
en ‘earmark’ (on cattle) → *en-deš* ‘(cattle) with the same earmark’
sajak ‘likeness, similarity’, ‘face’ → *sajak-taš* ‘(sb, sth) analogous to sb/sth’
sən ‘merit’ → *sən-daš* ‘(person) equal to sb in some respect’
tagdər ‘fate’ → *tagdər-laš* ‘(person) of the same fate’
teŋ ‘equal’ → *teŋ-deš* ‘an equal’
tür ‘appearance, shape’ → *tür-döš* ‘of the same shape, homogeneous’
ün ‘voice, sound, tone’ → *ün-döš* ‘consonant with, of the same voice’
žen ‘sleeve’ → *žen-deš* ‘of the same build, height’
žərgal ‘pleasure, prosperity’ → *žərgal-daš* ‘equal in prosperity’
žün ‘hair, wool’ → *žün-döš* ‘of the same colour/coat.’
- (140) *deŋgel* ‘level’ → *deŋgel-deš* ‘an equal’
deŋgel-deš- ‘to rival, try to equal sb’
öŋ ‘face, complexion, colour’ → *öŋ-döš* ‘of the same colour, alike’
öŋ-döš- ‘to be of the same colour.’

12.3.8 *Nouns denoting persons or things in spatial proximity*

- (141) *ajal* ‘aul’ → *ajal-daš* ‘inhabitants of the same aul’
boluš ‘small rural district’ → *boluš-taš* ‘inhabitants of the same rural district’
čada ‘border, boundary’ → *čada-laš* ‘neighbouring’
čəlbər ‘bridle, rein’ → *čəlbər-daš* ‘riders (riding) next to each other’
ešik ‘door’ → *ešik-teš* ‘next door neighbour’ (‘living side by side’)
kabərga ‘rib’ → *kabərga-laš* ‘next door neighbour’
kəštak ‘settlement, aul’ → *kəštak-taš* ‘fellow villager’
meken ‘abode, shelter’ → *meken-deš* ‘compatriot’
örüš ‘pasture’ → *örüš-töš* ‘(person) in the same pasture with sb’
suu ‘water, river’ → *suu-laš* ‘(settlement) situated on the same river’
tuš ‘a place opposite’ → *tuš-taš* ‘situated against/opposite each other’
üjür ‘herd’ → *üjür-döš* ‘(horse) in the same herd with others’
üstöl ‘table’ → *üstöl-döš* ‘(person) sitting next to sb at the table.’
- (142) *irege* ‘place by the threshold’ → *irege-leš* ‘next door neighbour’ (‘threshold to threshold’)
irege-leš- ‘to be friends with sb’
kanat ‘wing’ → *kanat-taš* ‘next door neighbour’
kanat-taš ‘to be next (wing to wing) to each other’
maŋdaj i. ‘forehead’ ii. ‘opposite side’ → *maŋdaj-laš* ‘(sb/sth) opposite each other’
maŋdaj-laš- i. ‘to collide’, ii. ‘to come to blows.’

12.3.9 Lexicalized nouns

These nouns are also reciprocal in meaning but they have no underlying bases at all or they are unrelated semantically:

- (143) *baar-daš* i. 'close friend', ii. 'beloved' (cf. *baar-daš* 'to have a heart to heart talk')
marka-laš 'person from a group with common interests' (cf. *marka* 'youngest child').

13. Lexical reciprocals and their derivatives. Verbs of joining and separating

13.1 Introductory

This domain of reciprocals seems to be more elaborate in Kirghiz than in Yakut. Three main groups of lexical reciprocals and their derivatives can be distinguished. In Groups A and B the underlying verbs are three-place transitives (including verbs taking a plural object). These groups differ in the character of derivation. Thus in Group A the derivation is consecutive: $a > b > c$ (144). Group B derivatives are both related immediately to the underlying verb: $a > b$ and $a > c$ (145).

The underlying (and the derived reciprocals of the (c) type in Group B) lexical reciprocals of Groups A and B have typical meanings (denoting mostly connecting) like 'to connect', 'to gather', 'to mix', 'to glue/paste', 'to make closer', 'to make denser', 'to part', 'to compare', 'to replace', 'to tie', etc. As we can see, the final derivatives of the (c) type in both groups are more similar to the underlying transitives (sometimes, in the *Russian-Kirghiz dictionary* a Russian verb is translated into Kirghiz by two, types (a) and (c), transitives at once; thus the Russian verb *sojedinjat* 'to connect' is translated by *ula-* and *ula-š-tər-* (Ju.3. 803); the Russian verb *svjazyvat* 'to tie' is translated by *bajla-* and *bajla-š-tər-* (Ju.3. 763). In Group A, derivation of the $a > b$ type results in an anticausative meaning, and derivation $b > c$ brings back the causative meaning. In Group B, derivation $a > b$ results in a variety of meanings, most commonly the assistive. In the case of $a > c$ derivation the meaning is more or less retained or changes slightly.

Group A

- (144) a. *ula-* 'to join sth with sth'
 → b. *ula-š-* 'to join' (vi)
 → c. *ula-š-tər-* 'to join sth with sth' (Ju.2. 302, 304)

Group B

- (145) a. a. *bajla-* 'to tie sth to sth/tie up'
 [→ b. *bajla-š-* 'to help to tie', *'to tie each other'
 → c. *bajla-š-tər-* 'to tie (e.g. horses) together' (Ju.1. 96–7).

In Group C, contrary to the first two groups, the underlying verbs are two-place intransitives (including those with a plural subject) (see (146)). Typical meanings of these intransitives are 'to gather', 'to meet', 'to compete', 'to argue', 'to join', 'to divorce/part', and also such peripheral reciprocal meanings as 'to get entangled', 'to wrinkle', 'to catch (on)',

etc. The difference within pairs (146a) and (146b) is minimal (note the highly developed synonymy of derivatives in Kirghiz). (146) contains a maximum derivational chain for the types of morphological derivatives with the chosen suffixes. In most cases, however, the opposition (146a) seems to be valid.

Group C

- (146) a. *birik-* ‘to unite’ (vi) → *birik-tir-* ‘to unite’ (vt)
 b. *birig-iš-* ‘to unite’ (vi) → *birig-iš-tir-* ‘to unite’ (vt) (Ju.1. 136).

13.2 Group A: Three-member derivational chain vt > vi > vt; anticausatives with the suffix -š

At least 10 three-place transitives and two-place transitives with a plural object belong in this group. They are lexical causatives. Nearly all of them denote combining or joining of two or more entities. Besides the above mentioned (144a, b, c), the following verbs meet this description:

- (147) a. *batta-* ‘to paste sth with starch’
 → b. *batta-š-* ‘to get glued/stuck together’
 → c. *batta-š-tər-* ‘to paste/glue sth together’ (Ju.1. 117).
- (148) a. *čapta-* ‘to glue sth to sth’
 → b. *čapta-š-* ‘to get glued together’
 → c. *čapta-š-tər-* ‘to glue sth together’ (Ju.2. 348).
- (149) a. *čatə-* ‘to tangle sth (threads, strings, etc.)’
 → b. *čatə-š-* ‘to become tangled’
 → c. *čatə-š-tər-* ‘to tangle sth’ (Ju.2. 352–3).
- (150) a. *epte-* ‘to join/glue together’ (rare)
 → b. *epte-š-* ‘to become joined’
 → c. *epte-š-tir-* ‘to glue/join into one’ (Ju.2. 459).
- (151) a. *tij-* ‘to touch (e.g. of one knee against the other)’
 → b. *tij-iš-* ‘to come into contact/adjoin’
 → c. *tij-iš-tir-* ‘to make sth (e.g. knees) come into contact’ (Ju.2. 233–4).
- (152) a. *topto-* ‘to gather (e.g. people) into a crowd’
 → b. *topto-š-* ‘to gather into a crowd’ (vi)
 → c. *topto-š-tur-* ‘to gather sth into a pile’ (Ju.2. 253).
- (153) a. *əkta-* ‘to press’
 → b. *əkta-š-* ‘to press oneself to each other’
 → c. *əkta-š-tər-* ‘to press two entities tightly together’ (vt) (Ju.2. 428).

Compare sentential examples for (151):

- (154) a. *Anən üstünkü tiš-i astəŋkə tiš-i-ne tij-di.*
 he.GEN upper tooth-his lower tooth-his-DAT touch-3.PAST
 ‘His upper teeth clenched with (lit. ‘touched’) his lower teeth.’

- b. *Anən üstünkü tiş-i menen astənkə tiş-i tij-iş-ti.*
 he.GEN upper tooth-his and lower tooth-his touch-REC-3.PAST
 ‘His upper and lower teeth clenched.’ (lit. ‘touched each other.’)
- c. *Al tiş-ter-i-n tij-iş-tir-di.*
 he tooth-PL-his-ACC touch-REC-CAUS-3.PAST
 ‘He clenched his teeth together.’

The following verbs are close to these verbs, but the semantic opposition between the first and the second members is not quite (standard) causative: in general, here as well as in some other cases and, it seems, cross-linguistically, the semantic relation between (b) and (c) is more regular than between (a) and (b), i.e. valency decrease involves a greater shift in meaning than valency increase. The relation between (a) and (b), e.g. in (157) and (158), is not so much purely semantic (in the sense that meaning ‘a’ can be obtained from meaning ‘b’ by subtracting a certain sense) as metaphoric and figurative.

- (155) a. *kak-* ‘to hit’
 → b. *kag-əš-* ‘?to collide/come to blows’
 → c. *kag-əš-tər-* ‘to hit one thing against another’ (Ju.1. 312–3).
- (156) a. *žap-* ‘to close/cover’
 → b. *žab-əš-* ‘to get glued/stuck together’
 → c. *žab-əš-tər-* ‘to glue sth together’ (Ju.1. 209).
- (157) a. *arala-* ‘to walk between sth’ (vt)
 → b. *arala-š-* ‘to get mixed’
 → c. *arala-š-tər-* ‘to mix sth’ (Ju.1. 63–4).
- (158) a. *kajčəla-* ‘to cut sth with scissors’
 → b. *kajčəla-š-* ‘to cross like scissors’ (vi)
 → c. *kajčəla-š-tər-* ‘to cross/fold sth like scissors’ (Ju.1. 323–4); cf.:
- (159) a. *Oη but-u sol but-u-na kajčəla-š-tə.*
 right leg-his left leg-his-DAT CROSS-REC-3.PAST
 ‘His right leg crossed his left leg.’
- b. *Al oη but-u-n sol but-u-na kajčəla-š-tər-də.*
 he right leg-his-ACC left leg-his-DAT CROSS-REC-CAUS-3.PAST
 ‘He crossed his legs.’ (lit. ‘He placed his right leg across his left leg.’)

The data discussed in this section seem to indicate that there is a tendency for opposition *vi* > *vt* (where both members are marked, cf. *-š* > *-š-tər*) to acquire a more important role, i.e. to cover a larger number of verbal pairs, and, correspondingly, for the opposition *vt* > *vi* to lose in importance. This is particularly obvious when the semantic opposition of *vi* > *vt* is more standard than *vt* > *vi*; cf., for instance, (155)–(159). It may be tentatively proposed that one of the functions of the suffix *-š-tər* is to mark object-oriented reciprocals. In this role, it appears not only with standard reciprocals (see 5.3), but also in the domain of lexical reciprocals. And in view of this the material of the subsequent section

is particularly significant, because in this case the suffix in question is added to transitive lexical reciprocals (see also 10.2).

13.3 Group B: Two-member derivational chains $vt_i > vt/vi$ and $vt_i > vt$;
complex suffix *-š-tər*

In this group, derivatives with the suffix *-š* are assistive in meaning (most commonly), or lexicalized, etc., and thus their meaning is not part of the meaning of the respective derivative with the suffix *-tər*. Therefore we can assume that *-š-tər* functions as a single derivational morpheme: it came to be perceived as such probably due to the existence of oppositions considered in 13.2 where it is not a compound suffix. In this group a transitive verb is derived from another transitive, and the moment of joining two entities rather than joining one of them to the other is implied by the derivatives more strongly than by the base verbs; besides, there may be various individual differences between the base and the derivative, but generally their meanings are close enough. This probably reveals a tendency to express the joining or combining of two or more entities by morphological means.

- (160) a. *kotor-* i. 'to change horses', ii. 'move horses from one pasture to another'
 [→ b. *kotor-uš-* 'to help to change horses or move them ...']
 → c. *kotor-uš-tur-* 'to move many horses from one pasture to one place' (Ju.1. 409–10).
- (161) a. *kuj-* 'to pour sth (into)'
 [→ b. *kuj-uš-* 'to help to pour sth (into)']
 → c. *kuj-uš-tur-* 'to pour sth from several vessels into one' (Ju.1. 457).
- (162) a. *kura-* i. 'to make sth out of pieces' (e.g. a patchwork quilt)
 ii. 'to accumulate/save/gather' (e.g. cattle)
 iii. 'to put sth in order'
 [→ b. *kura-š-* 'to help to accumulate, etc.']
 → c. *kura-š-tər-* i. 'to accumulate/save/gather' (e.g. cattle)
 ii. 'to put sth in order'
 iii. 'to construct (one object out of several)' (Ju.1. 247, 248).
- (163) a. *sal-* 'to put sth into sth'
 [→ b. *sal-aš-* 'to help to put sth into sth']
 → c. *sal-aš-tər-* i. 'to put several things one into another'
 ii. 'to compare' (Ju.2. 125).
- (164) a. *səna-* 'to check/test sth'
 [→ b. *səna-š-* 'to help to check/test']
 → c. *səna-š-tər-* 'to compare sth with sth' (Ju.2. 181).
- (165) a. *togo-* 'to count sth as sth (e.g. as part of a debt)'
 [→ b. *togo-š-* 'to stand against/opposite each other']
 → c. *togo-š-tur-* 'to count sth as sth' (e.g. as part of a debt)' (Ju.2. 241–2).
- (166) a. *teŋe-* 'to equalize/make sth equal'
 [→ b. *teŋe-š-* 'to compare (e.g. one's height) with sb' (vi)]
 → c. *teŋe-š-tir-* i. 'to equalize/make sth equal'
 ii. 'to compare with respect to height and length' (Ju.2. 226).

- (167) a. *tüj-* i. 'to knit (a net)', ii. 'to tie into a bundle'
 [→ b. *tüj-üš-* 'to help to knit, to tie ...']
 → c. *tüj-üš-tür-* 'to tie (e.g. several bundles) together' (Ju.2. 278–9).
- (168) a. *ur-* 'to hit/beat'
 [→ b. *ur-uš-* 'to fight/squabble']
 → c. *ur-uš-tur-* i. 'to hit one against another'
 ii. 'to bring together for a fight' (Ju.2. 306, 308, 309).
- (169) a. *žəjna-* 'to gather sth (e.g. cotton-wool)'
 [→ b. *žəjna-š-* 'to help to gather sth']
 → c. *žəjna-š-tər-* i. 'to gather sth', ii. 'to tidy up (a room, flat, etc.)' (Ju.1.277).
- (170) a. *Men bul kap-tə baška kap-ka sal-də-m.*
 I this sack-ACC another sack-DAT put-PAST-1SG
 'I put one sack into another.'
 b. *Men kap-tar-də (*kap-tə) sal-š-tər-də-m.*
 I sack-PL-ACC sack-ACC put-REC-CAUS-PAST-1SG
 'I put the sacks one into another.'
- (171) a. *Men kazan-ga suu kuj-du-m.*
 I pot-DAT water pour-PAST-1SG
 'I poured water into the pot.'
 b. *Men suu-lar-də bir kazan-ga kuj-uš-tur-du-m.*
 I water-PL-ACC one pot-DAT pour-REC-CAUS-PAST-1SG
 'I poured water (from several vessels) into one pot.'

The following instance probably belongs here too, though it denotes disconnecting:

- (172) a. *böl-* 'to divide (into two or more parts), separate (sth from a whole)'
 [→ b. *böl-üš-* 'to divide between/among oneself']
 → c. *böl-üš-tür-* 'to divide/distribute sth among sb' (Ju.1. 151–2).

13.4 Group C: Two-place intransitives and their causative derivatives

The following subgroups can be distinguished here.

13.4.1 Verbs with root final *-š-*. *Reciproca tantum* (?)

It is expedient to consider verbs with the root final *-š-* here: though the connection of this component with the reciprocal suffix is not always obvious, these verbs are mostly reciprocal in meaning and quite numerous. With regard to the four-member derivational group under (146), only the first pair is registered for these verbs. Syntactically and semantically, **a > b** corresponds to **b > c** of Group A. If the dictionary does not register a causative, it is indicated by a question mark. These verbs fall into a number of distinct lexical groups.

1. The base verbs denote competition:

- (173) a. *eregiš-* 'to argue/rival'
 [→ b. *eregiš-tir-* 'to cause to argue, etc.' (Ju.2. 461).

- (174) a. *küröš-* 'to wrestle with each other'
 [→ b. *küröš-tür-* 'to organize wrestling' (Ju.1. 471).
- (175) a. *meldeš-* i. 'to compete', ii. 'wager', iii. 'to come to an agreement'
 [→ b. ? (Ju.2. 24).
- (176) a. *žarəš-* i. 'to compete', ii. 'to compete in running'
 [→ b. *žarəš-tər-* 'to organize a competition' (Ju.2. 237).

2. The base verbs denote diminishing in volume/size, entangling, wrinkling:

- (177) a. *arpaləš-* 'to interlace' (vi)
 [→ b. ? (Ju.1. 69).
- (178) a. *bərəš-* 'to wrinkle' (e.g. of a face') (vi)
 [→ b. *bərəš-tər-* 'to wrinkle/crumple' (vt) (Ju.1. 172).
- (179) a. *bürüš-* 'to double/huddle oneself up' (vi)
 [→ b. *bürüš-tür-* 'to cause to double/huddle oneself up' (Ju.1. 168).
- (180) a. *čataš-* 'to entangle' (vi)
 [→ b. *čataš-tər-* 'to entangle' (vt) (Ju.2. 352).
- (181) a. *čürüš-* 'to wrinkle' (vi)
 [→ b. *čürüš-tür-* 'to wrinkle/crumple' (vt) (Ju.2. 380).
- (182) a. *karəš-* 'to be cramped' (vi)
 [→ b. *karəš-tər-* 'to cause to be cramped' (vt) (Ju.1. 356).
- (183) a. *kuruš-* 'to shrink/contract' (vi)
 [→ b. *kuruš-tur-* 'to cause to shrink/contract' (vt) (Ju.1. 451).

3. The base verbs denote establishing contact, spatial proximity:

- (184) a. *ajkal-/ajkaləš-* i. 'to be entangled [mutually]'
 ii. 'to meet in single combat'
 [→ b. ? (Ju.1. 30).
- (185) a. *ajkaš-* i. 'to be piled cross-wise', ii. 'to adjoin/be in contact'
 [→ b. *ajkaš-tər-* 'to put cross-wise' (Ju.1. 30).
- (186) a. *ermeš-* 'to clutch/grasp at sth', fig. 'to worry/pester' (vi)
 [→ b. ? (Ju.2. 463).
- (187) a. *tutaš-* 'to adjoin' (vi)
 [→ b. *tutaš-tər-* 'to place next to sth/make contiguous' (vt) (Ju.2. 272).
- (188) a. *žanaš-* 'to be/move next to sb/sth' (vi) (cf. *žan* 'side')
 [→ b. *žanaš-tər-* 'to place next to sth' (vt) (Ju.1. 226).
- (189) a. *žarmaš-* 'to clutch/grasp at sth', fig. 'to adhere/follow sb' (vi)
 [→ b. *žarmaš-tər-* 'to cause to clutch/grasp' (vt) (Ju.1. 236).

4. A residual verb:

- (190) a. *almaš-* 'to change into/take turns' (vi)
 [→ b. *almaš-tər-* 'to change/replace' (vt) (Ju.1. 52).

A sentential example:

- (191) a. *əlaj menen kum aralaš-tə.*
 clay and sand mix-3.PAST
 ‘Clay and sand got mixed.’
 b. *Ata-m ələj menen kum aralaš-tər-də.*
 father-my clay and sand mix-CAUS-3.PAST
 ‘My father mixed clay and sand.’

13.4.2 Verbs without root final -š

Example (146) can be amplified by the following derivational chains obtained from the dictionaries:

- (192) a. *ažəra-* ‘to part’ → *ažəra-t-* ‘to cause to part’
 b. *ažəra-š-* ‘to part from each other/divorce’ → *ažəra-š-tər-* ‘to separate’ (Ju.1. 24).
- (193) *büt-* ‘to knit (of bones)’ (vi) → *büt-tür-* ‘to make (bones) knit’ (vt) (Ju.3. 821).
- (194) a. *čogul-* ‘to gather/crowd’ → *čogul-t-* ‘to gather/pile up’
 b. *čogul-uš-* ‘to meet with/see each other’ → ? (Ju.2. 364).
- (195) *irkil-* ‘to crowd/pile up’ → *irkil-t-* ‘to gather into a pile’ (vt) (Ju.1. 304).
- (196) a. *kabəl-* ‘to meet’ (vi) → *kabəl-t-/ kabəl-dər-* ‘to cause to meet’
 b. *kabəl-əš-* ‘to meet/come to blows’ → ? (Ju.1. 311).
- (197) a. *kezik-* ‘to meet with/run into’ → *kezik-tür-* ‘to meet’
 b. *kezig-iš-* ‘to meet with’ → *kezig-iš-tür-* ‘to cause to meet’ (Ju.1.366; Ju.3.831).
- (198) a. *šire-* ‘to weld’ (of two pieces) → *šire-t-* ‘to weld’ (vt)
 b. *šire-š-* ‘to weld’ (vi) → *šire-tür-* ‘to weld’ (vt) (Ju.2. 409).
- (199) a. *žoluk-* ‘to meet’ (vi) → *žoluk-tur-* i. ‘arrange a meeting’ (of two or more persons) ii. ‘to meet’ (vt)
 b. *žolug-uš-* ‘to meet each other’ → *žolug-uš-tur-* ‘to arrange a meeting’ (Ju.1. 259).
- (200) a. *əkta-* i. ‘to press oneself to sth’ → *əkta-t-* i. ‘to cause/order sb to press oneself to sth’ ii. ‘to press sb to sth’
 ii. ‘to press sb/sth to sb/sth’
 b. *əkta-š-* ‘to press oneself to each other’ → *əkta-š-tər-* ‘to press two or more entities tightly together’ (Ju.2. 427–8).

Synonymous forms of these verbs may differ in shades of meaning and in frequency. Thus, for instance, (146a) *birik-* and *birik-tür-* are much more common in speech than the respective forms in *-iš-*, i.e. *birig-iš-* and *birig-iš-tür-*. The latter form is considered by the informant as grammatical though not used in speech. There occur non-standard, individual semantic relations. Thus, in (197) and (199) the underlying forms *kezik-* and *žoluk-*

happen to be synonymous to the respective causatives *kezik-tir-* and *žoluk-tur-*, the only difference lying in the patterns of government; e.g.:

- (201) a. *Al ma-ga* (DAT) *kezik-ti.* 'He met me.'
 b. *Al me-ni* (ACC) *kezik-tir-di.* 'He met me.'

13.5 Anticausatives with the suffixes *-l* and *-n* and their relation to anticausatives in *-š*

Above, I have considered anticausatives with the suffix *-š*. As has already been mentioned (see 2.5), the anticausative meaning can also be marked by the suffixes *-l* and *-n*; besides, it can also be signalled by the complex suffixes *-l-əš* and *-n-əš*. These affixes can also derive anticausatives from lexical reciprocals. Some of these formations are the only way of deriving anticausatives, while others have parallel forms, therefore the overall picture is very complicated (cf. *bajla-* and its derivatives in (21)). It is relevant to consider derivatives with these suffixes and relations between them as well. Four main cases can be distinguished. The choice of a suffix for a derived anticausative is very complicated and the causes of their selectivity are not clear. The classification given below is based on the dictionary data.

1. Anticausatives with the suffix *-l* or *-n* do not have parallel synonymous forms with the suffix *-š*.

- (202) a. *koš-* 'to join two or more entities'
 b. *koš-ul-* 'to join (of two entities)' (Ju.1. 412)
 c. *?koš-uš-*
 d. *Eki too koš-ul-ba-j-t eki el koš-ul-a-t.* (Ju.1. 412)
 two mountain join-PASS-NEG-PRES-3 two people join-PASS-PRES-3
 'Two mountains will not come together, two people will come together.'
- (203) a. *ujpala-* 'to entangle/ruffle'
 b. *ujpala-n-* 'to get crumpled/entangled/ruffled' (Ju.2. 301)
 c. *?ujpala-š-*

2. Anticausatives with the suffix *-l* or *-n* have parallel synonymous forms in *-š*; cf.:

- (204) a. *čapta-* 'to paste/stick sth to sth'
 b. *čapta-l-* 'to get pasted/stuck to sth'
 c. *čapta-š-* (same) (Ju.2. 348).
- (205) a. *ula-* 'to join sth with sth'
 b. *ula-n-* 'to join' (vi)
 c. *ula-š-* (same) (Ju.2. 302–3).

3. Anticausatives are formed by means of the complex suffixes *-l-əš* or *-n-əš* which are a combination of the above suffixes. Here each of the two components expresses an anticausative meaning. Thus (206) is a kind of combination of (204b) and (204c), and (207) a combination of (205b) and (205c).

- (206) (= (204d)) *čapta-l-əš-* (same as (204b–c)) (Ju.2. 348; Ju.3. 641).
 (207) (= (205d)) *ula-n-əš-* (same as (205b–c)) (Ju.2. 302).

4. In anticausatives with the complex suffixes, the meaning of *-l* or *-n* cannot be singled out: these complexes are idiomatic, i.e. the passive meaning of (208b) is absent in (208c):

- | | | | | |
|-------|----|--------------------|-----------------------------------|-----------------|
| (208) | a. | <i>čirma-</i> | ‘to wind/twine sth round sth’ | |
| | b. | <i>čirma-l-</i> | ‘to be wound/twined’ | (passive) |
| | c. | <i>čirma-l-aš-</i> | ‘to intertwine’ (vi) (Ju.2. 392). | (anticausative) |

Sentential examples:

- (209) *Biz koš-ul-uš-tu-k.*
 we join-PASS-REC-PAST-1PL
 ‘We joined together.’ (cf. (202))
- (210) *Biz karaŋe koridor-do ur-un-uš-tu-k.*
 we dark corridor-LOC hit-REFL-REC-PAST-1PL
 ‘We collided in a dark corridor.’ (Ju.3. 831)
- (211) *Žəlan but-um-a oro-l-uš-tu.* (cf. Ju.2. 80)
 snake leg-my-DAT twine-PASS-REC-3.PAST
 ‘A snake twined itself round my leg.’

1. Introduction

1.1 Mongolic languages

The language of the Mongolic group spoken by the largest number of speakers is Khalkha Mongol (or Mongol proper). It is the native language of some 1,900,000 Mongols living in the Mongolian Republic (Outer Mongolia) and by 2,700,000 in China (Inner Mongolia). Contemporary Mongolian subsumes a large number of dialects with common morphological and syntactic features, and almost identical with respect to reciprocals, sociatives, comitatives and assistives.

The common written language (literary Mongolian) was formed as early as at the end of the 12th – beginning of the 13th centuries. It uses the Uighur vertical script. It has never had a spoken variant. In the 13th century, “The Secret History of the Mongols”, an outstanding document, was written. This script is still standard in Inner Mongolia. In the 17th century, it was modified to bring it closer to the contemporary Mongolian dialects.

The following languages also belong to the Mongolic language group: Buryat (spoken by approximately 500,000 people of whom 420,000 live in Russia (mostly in the Buryat Republic to the east of the Baikal Lake), Oirat-Kalmyk (about 150,000 speakers in Kalmykia to the north-west of the Caspian Sea, and around 140,000 mostly in China and also in Mongolia, Kirghizia and Orenburg district), Dagur (120,000 speakers reported in Inner Mongolia), Monguor (or Tu, around 25,000 speakers in China), Dongxiang (or Santa, around 365,000 speakers in China), Moghol (200 or fewer elderly speakers reported near Herat, Afganistan), and also Baoan (or Bonan, 12,000 speakers in China), Ordos (or Urdus, less than 100,000 speakers in China), Darkhat (in Mongolia), Shira Yughur (9,000 speakers in China), Khamnigan Mongol (or “Horse Tungus”, spoken by about 2,000 speakers in Transbaikalia).

(See Binnick 1992: 434–8; Comrie 1981: 54–6; Sanzheev 1960: 8–9; Tishkov 1994: 118–22, 178–81, and especially Janhunen 2003.)

1.2 Database

The material for this chapter is drawn from dictionaries, linguistic literature and fiction (original and translations). Most of the examples and verb lists are obtained from the *Buryat-Russian Dictionary* (referred to as Č.) which is much more extensive and detailed than the *Mongolian-Russian Dictionary* (L.). The verbs borrowed from the reverse dictionary of Mongolian by L. Bold (B.) are interpreted by E.A. Kuzmenkov with the help of the other dictionaries listed in the Sources. Much information on Mongolian reciprocals is borrowed from Sanzheev (1960, 1962, 1963). *The Buryat data are marked with references to A., Bur1, Bur2, Bur3, Cd, Č., D., S2, and T.* The data attributed to other sources are Khalkha. The data without attribution are obtained from native speakers or checked by them. Unfortunately, we could check only a part of the material and observations with the informants. This accounts for the absence of some relevant information in this paper.

Native speakers of Buryat and Khalkha-Mongol (see Acknowledgments below) helped to collect the data and check it.

1.3 On transliteration

In this chapter the transliteration is used which is accepted for the Mongolic languages in Janhunen (ed., 2003).

1.4 Overview

The state of things concerning reciprocals in Khalkha and Buryat is rather complicated and some points have to be clarified yet. These languages have polysemous morphological markers for reciprocals and sociatives. The main marker of reciprocity in both languages is the suffix *-lda* which, like many other suffixes, has a number of allomorphs determined by vowel harmony. Much less commonly, the compound suffix *-ca-lda* is used in Khalkha, and *-sa-lda* in Buryat. Moreover, the reciprocal meaning is sometimes encoded by the sociative (more frequently used as comitative) suffixes *-lca* (Khalkha) and *-lsa* (Buryat; henceforth, they are referred to together as *-lca/-lsa* for brevity). On the other hand, the suffix *-lda* is also used as a sociative (less frequently comitative) marker in both languages, interpreted in the dictionaries not only as ‘together’ but also, much more frequently, as ‘many’ (referring to two participants as well), i.e. a meaning which may or must be a part of the meaning ‘together’. Thus, we may claim that each of these suffixes is both a reciprocal and a sociative marker, though to a different degree. We might add that this is related to the much higher frequency of *-lda* than that of *-lca/-lsa* in texts and in dictionaries.¹

1. In the *Buryat-Russian dictionary* by K.M. Cheremisov (Č.), 470 verbs with the suffix *-lda* are registered and 215 with *-lsa*. Since this dictionary is based on an extensive cardfile (compiled from works by Buryat writers and also from newspapers), this distribution is unlikely to be accidental. A similar distribution is observed in the Buryat fairytales (Bur2.), where 156 *-lda* verbs and only 87 *-lsa* verbs are used.

According to the traditional interpretation, *-lda* is always glossed as REC and *-lca/-lsa* as SOC, whatever their meaning in each particular case. Here are Khalkha examples for *-lda*:

- (1) a. *Dordžo Bat-iig dzodo-džo bai-na.*
 D. B.-ACC beat-CONV AUX-PRES
 ‘Dorji is beating Bat.’
- b. *Dordžo Bata xoyor dzodo-ldo-džo bai-na.*
 D. B. and beat-REC-CONV AUX-PRES
 ‘Dorji and Bat are fighting (beating each other).’
- c. *Dordžo Bata-tai dzodo-ldo-džo bai-na.*
 D. B.-COM beat-REC-CONV AUX-PRES
 (same), lit. ‘Dorji is fighting with Bat.’

(1b) is a simple reciprocal construction, as the participants are denoted by the subject composed of noun phrases conjoined by the connector *xoyor* ‘and’, lit. ‘two’. As regards (1c), where the second participant is denoted by a comitative case form, it displays the features of a discontinuous reciprocal construction (for details see 3.1.4).

In both languages reciprocity is also rendered by the reciprocal pronoun *biye biye-/beye beye-* ‘each other’, but some collocations with this pronoun are hardly ever used, though they are clear to native speakers, like the collocation *biye bij-ee dzodo-* lit. ‘to beat each other’. Suffixed reciprocals of the (1b) type are usually more common than the same base with the reciprocal pronoun (Tuvshintogs, p.c.), though in some contexts (and/or with some other bases) a pronominal form may be more appropriate, especially, it seems, if the predicate requires an oblique object; e.g.:

- (2) a. *Tede xoyor bayan beye beye-d-ee bardamla-xa hanaa-tai*
 these two rich.man each other-DAT-REFL.POSS boast-FUT.PART intend-COM
meyerxe-ldē-ne, šadal erdem-ee beye beye-d-ee
 rival-REC-PRES might knowledge-REFL.POSS each other-DAT-REFL.POSS
xar-uul-na-d. (Bur2. 192)
 see-CAUS-PRES-PL
 ‘Two rich men began rivalling, intending (lit. with a thought) to boast to each other showing their might and knowledge to each other.’

Note also that in the Mongolian language of the first half of the 14th century, as it is represented in the dictionary *Mukaddimat al-Adab* (published in Poppe 1938), this distribution is even more expressive: 82 verbs with the suffix *-ldu/-ldü* are registered, and only 5 verbs with the suffix *-lča/-lče* (= *-lca/-lsa*). Curiously enough, the latter verbs have the reciprocal or, in one case, a vague meaning; in four sentences out of five, these verbs co-occur with the reciprocal pronoun; cf. *nim niken-i asyū-lča-ba-lar* (P. 256) ‘they asked each other’ <each other-ACC ask-lča-PAST-PL> (the borrowed Turkic plural suffix *-lar* is often used in this dictionary). (This reciprocal pronoun is a reduplication of the numeral *niken* ‘one’ (Poppe 1938:65); cf. Turkic *bir bir-* lit. ‘one one-’). At the same time, 8 verbs in *-ldu/-ldü* are registered in the sociative and, more often, comitative meaning; compare respectively: *yabu-ldu-ba-lar* (P. 386) ‘they walked together’, *yabu-ldu-ba tün-lē* (P. 386) ‘he walked with him’ (*-lē* is a marker of the case termed Comitativus sociativus by Poppe (1938:78)). Judging by the data of the language represented in this dictionary, sociativity was mostly expressed by the suffix *-ldu/-ldü*, while *-lča/-lče* was not yet finally established in this meaning. But the main device used for expressing joint action of two or more persons was (as it is now, though with a different marker), a combination of an unmarked predicate with an object with the case marker *-lē*.

In texts, simultaneous use of both markers on the same predicate is not uncommon; cf. (2b). Such cases are also registered in the dictionaries. For instance, in Č. (p. 420) the forms *tašuurda-lda-* and *beye bey-ee tašuurda-lda-* (< *tašuurda-* ‘to whip’, p. 421) are entered as synonymous, with the meaning ‘to whip each other’.² Compare also:

- b. *Xaan xatan xoyor ... beye beye-d-ee žütöörxe-lde-n,*
 khan khan’s wife two each other-DAT-REFL.POSS be.jealous-REC-CONV
nanša-lda-xa deeree bolo-n bai-ba. (Bur2. 248)
 beat-REC-FUT.PART before become-CONV AUX-PAST
 ‘The khan and his wife, having become jealous of each other, were on the point of fighting.’

The above mentioned sociative meaning of the suffix *-lda* is most common on intransitive and rare on transitive bases (which is typologically predictable). These sociative derivatives “[...] express joint or cooperative action. In such usage, the reciprocal suffix is functionally more or less equivalent to the cooperative suffix *-lc-*” (Sechenbaatar 2003:121; “cooperative” corresponds to “sociative” in our terminology). The interpretation of isolated relevant sentences may contain words meaning ‘all (of them)’, ‘many’, ‘plural’, ‘simultaneous’, sometimes ‘jointly’. These meanings, and emotive colouring which may be added by the suffix *-lda* are not usually reflected in the translations into other languages, e.g. Russian and English, especially in running texts. On the other hand, translations, e.g. from Russian, may contain the marker *-lda* when the original does not necessarily require its use, though it does not outrule it if the subject is (semantically) plural. Only in very few sentences with the plural subject do we find verbs in *-lda*. In the following Buryat translation from Russian, the suffix *-lda* occurs on the predicates only if the subject is semantically plural, and it is absent on the same verbs when the subject is singular.

2. The reciprocal pronoun is rather rare in texts. For instance, in 112 pages of the Buryat fairytales (Bur2.) there are 243 derivatives in *-lda* and *-lsa* and only 9 usages of the pronoun: once it co-occurs with a reciprocal verb with *-lda* (see (2b)), 3 times with reciprocals in *-lsa* (cf. (8)) and 5 times with unsuffixed verbs (cf. (2a)). The same tendency in the distribution of different types of reciprocals is observed in the *Buryat-Russian dictionary* (Č.): there are 685 verbs with *-lda* and *-lsa* and only 54 verbs with *beje beje-*. Among the latter, the reciprocal pronoun occurs 11 times with verbs in *-lda*, 20 times with verbs in *-lsa* and 23 times with unsuffixed verbs.

If we compare these data with those of the 14th century dictionary (published in Poppe 1938), we shall see both significant differences and certain similarities. The differences concern prevalence of pronominal reciprocals over suffixed ones in the first place: there are 94 verbs with the reciprocal pronoun *nim niken-i / nim niken-dü /...* and 87 suffixed derivatives (82 with *-ldu/-ldü* and 5 with *-lča/-lče*). Among the 94 combinations with the reciprocal pronoun, there are 30 *-ldu/-ldü* verbs, 4 *-lča/-lče* verbs and 60 unsuffixed verbs. As in the prior two cases (folktales and Č.), we observe prevalence of combinations with unsuffixed verbs over the other two types, but the difference lies in the fact that *-lča/-lče* verbs are much less numerous in combination with the reciprocal pronoun. But these verbs are generally much fewer (only 5) than those in *-ldu/-ldü* (82 verbs). However, the fact that out of 5 *-lča/-lče* verbs 4 are registered with the reciprocal pronoun shows that already in the 14th century the tendency to use derivatives with the reciprocal pronoun was more characteristic of *-lča/-lče* verbs than of those in *-ldu/-ldü*.

- (3) a. *Pest xašxar-ža, xajšaas⁴jeb güi-še-be, yüündeb gexede bultadaa*
 P. shout-CONV anywhere run-INTS-PAST because INTS everyone
güi-lde-ne, bultadaa xašxara-lda-na. (T. 49)
 run-REC-PRES everyone shout-REC-PRES
 ‘Pest ran somewhere shouting, because everyone was running and everyone was shouting.’
- b. ... *homon-uud büri yexeer ešxere-lde-n* ... (T. 18)
 bullet-PL more strongly whine-REC-CONV
 ‘... bullets whined even more loudly ...’

The basic component of the sociative meaning of *-lda* is probably the speaker’s perception of two or more objects as a group or as a whole. In this case there cannot be any rigid rules of usage. For instance, the speaker may perceive as a collective object the stars in the sky, the masts of a sunk ship, the bullets whistling over his head, etc., while a description like ‘many’ commonly used in the dictionaries, is simpler and easier to perceive in comparison with this description.

Semantically, sociatives like those in (3a) and (3b) are close to *-lca/-lsa* sociatives, though they may have different preferences, e.g. *-lda* sociatives may occur both with human and non-human (animals and things) subjects while those in *-lca/-lsa* occur almost exclusively with human subjects.

When the predicate is comitative, the subject may be singular, the co-participant being expressed by a comitative object (4a, b) or remaining anonymous (5b). As mentioned, comitatives in *-lda* are much less common than sociatives (i.e. constructions like (3a, b); some of the sociative constructions, e.g. (3b), are as a rule not transformable into comitative constructions), in contrast to the forms in *-lca/-lsa* with the opposite distribution of these meanings. This is obvious in epic texts, fiction and even in the illustrations in linguistic works. Nevertheless, there are instances of synonymous same-root derivatives with both suffixes; cf. Buryat:

- (4) a. *Vlang tan-tai ošo-ldo-xo.* (T. 104)
 V. 2PL-COM go-REC-FUT.PART
 ‘Vlang will go with you.’
- b. *Basagan-tai-gaa exe-ny ošo-lso-bo.* (Bur2. 220)
 girl-COM-REFL.POSS mother-POSS go-SOC-PAST
 ‘Together with the girl, her mother went [to the khan].’

The same derivative may be used both as sociative and comitative, depending on the syntactic structure (note that in sociative constructions all the participants are named by the subject (see (5c)), and in comitative constructions only one of the participants is denoted by the subject (see (5b), (4a, b); for details see 7.3)):

- (5) a. *Dordžo surguuly-d sur-dag.*
 D. school-DAT study-ITER
 ‘Dorji goes to school.’
- b. *Dordžo surguuly-d sura-lca-dag.*
 D. school-DAT study-SOC-ITER
 ‘Dorji goes to school with someone else.’

- c. *Dordžo Bata xoyor surguuly-d sura-lca-dag.*
 D. B. two school-DAT study-SOC-ITER
 ‘Dorji and Bat go to school (lit. ‘study at school’) together.’

Reciprocal derivation decreases the valency of the base verb, with the exception of “possessive” reciprocals (see 3.1.3). Sociative derivation retains valency but it entails an increase in the number of the subject participants (5c). Assistive derivation, as well as comitative, involves valency increase (thus we observe valency multifunctionality of each suffix). This valency increase rather frequently does not find expression in the sentence structure (see (5b) where the second participant is anonymous, and (6) where the possible (bracketed) dative object is absent because its referent-addressee is already denoted by the possessive suffix *-mni*). Assistives in the Mongolic languages are usually marked by *-lca/-lsa*:

- (6) “*Šexee-mni [nam-da] tahala-ls-aad üge laa.*” (Bur2. 38)
 ear-my 1SG-DAT tear.off-SOC-CONV AUX.IMP PRTL
 ‘Help me to tear off my ears.’

The fact that both suffixes are polysemous and sometimes one may be used instead of the other has been repeatedly pointed out in the linguistic literature (see 8.1). The conditions of such substitution are often vague. The following Buryat example contains two reciprocals with the suffix *-lda* and two verbs with *-lsa* used in the reciprocal meaning.

- (7) *Tani-lsa-haar tata-lda-xa, xara-lsa-haar xaza-lda-xa bolo-xo-mnai*
 recognize-SOC-CONV pull-REC-PART look-SOC-CONV bite-REC-PART AUX-PART-OUR
güi, übgen? (Bur2. 164)
 Q old.man
 ‘As soon as we meet we start fighting, as soon as we see each other we start biting each other, old boy?’

This use of *-lsa* instead of *-lda* in the reciprocal meaning manifests their overlap (in (4a) and (4b) we observe an overlap of the comitative meaning). On some base verbs substitution of one suffix for another is possible (e.g., in the original text, the sentence that follows the sentence entered here under (7) contains the form in *-lsa* instead of *tata-lda*; cf. *ühe zühöö tata-lsa-xa* ... ‘pull each other by the hair’), while the use of *-lda* instead of *-lsa* in the verb *tani-lsa* ‘to get acquainted’ is rejected by all our informants (though this form is registered in the *Buryat-Russian Dictionary* (see Č. 414) and has been found in an original Buryat text, though with a different final root vowel, viz. *tanya-lda* ‘to get acquainted’ in Bur2. 152).

As well as reciprocals in *-lda*, those in *-lca/-lsa* combine with the reciprocal pronoun, and probably more frequently than the former. Such collocations are also registered in the dictionaries. For instance, the reciprocal meaning of the verb *etige* ‘to believe, trust’ is expressed in the *Buryat-Russian Dictionary* (Č.) in two ways, by the morphological reciprocal *etige-lse* ‘to believe each other’ and by the collocation of this derivative with the reciprocal pronoun *beye beye-d-ee etige-lse* (Č. 777). A number of other verbs, e.g. *tuhala* ‘to help’ and *durla* ‘to love’ (see Č. 439, 203), also have the same kind of reciprocal counterparts. Here is a sentential example:

- (8) *Ünšen xübüün haixan xoyor-oi beye beye-d-ee*
 orphan son beauty two-GEN each other-DAT-REFL.POSS
durla-lsa-h-iye-ny Üxin Tööxön böö duula-ba xa. (Bur2. 218)
 love-SOC-PART-ACC-3.POSS U. T. shaman hear-PAST PRTL
 ‘Shaman Uxin Toохон heard that the orphan boy and the beauty had fallen in love with each other.’

These processes and context, and also the fact that reciprocals and assistives derive mostly from transitives and sociatives from intransitives, may help to determine the meaning of a derivative even in cases of the interchangeable use of *-lda* and *-lca/-lsa*. In general, interpretation of derivatives in Khalkha and Buryat raises the same problems as in some Turkic languages which employ one and the same suffix for all the functions in question (see, for instance, Nedjalkov & Nedjalkov, Ch. 26, §9.1).

The suffix *-lda* also derives a small group of verbs, often with a reciprocal meaning, from nouns (cf. Khalkha *nüür* ‘face’ → *nüüre-lde-* ‘to meet in confrontation’). A specific feature of Khalkha and Buryat is the large number (about 70) of lexical reciprocals taking the reciprocal suffix pleonastically; cf. Buryat *arsa-/arsa-lda-* ‘to argue’. Both *-lda* and *-lca/-lsa* are also used to encode a number of meanings besides those mentioned so far; for instance, the suffix *-lda* may signal an anticausative and autocasative meaning (e.g. Khalkha *xolyo-* ‘to mix sth together’ → *xolyo-ldo-* ‘to get/be mixed’ and Buryat *xabša-* ‘to press/squeeze sth’ → *xabša-lda-* ‘to squeeze oneself into sth’), and *-lca/-lsa* the meaning of “attendant action” (e.g. Khalkha *gutl-aa awa-* ‘to take one’s own boots’ → *gutl-aa awa-lca-* ‘to take one’s own boots together with sb’s boots’).

2. Grammatical notes

2.1 Distinctions between Khalkha and Buryat

The differences between Khalkha and Buryat are negligible for our purposes. The main phonetic and morphological differences are as follows: in Buryat, unlike in Khalkha,

- there are no affricates /dz/ and /dž/; /z/; /ž/ occur instead;
- the consonant /s/ has changed into /h/;
- final syllables are retained (e.g., Buryat *sahan* ‘snow’ corresponds to Khalkha *cas*);
- Buryat *-lsa* and *-sa-lda* correspond to Khalkha *-lca* and *-ca-lda*;
- there are enclitic pronominal markers that provide agreement both for verbs and predicate nominals (*-b* for 1SG, *-š* for 2SG, \emptyset for 3SG/PL, *-bdi* for 1PL, *-t* for 2PL and optionally *-d* for 3PL).

The Khalkha *biye biy-ee* ‘each other’ (for ACC) corresponds to the Buryat *beye bey-ee*; in both *-ee* is a reflexive-possessive marker which is obligatory in this case. The root-final *-e* in *biye-/beye-* is ousted here, as in other similar cases, by the vowel-initial suffix.

2.2 General characteristics. Sentence structure. Morphology

The basic word order in Khalkha and Buryat is SOV. An auxiliary follows the main verb. Both Khalkha and Buryat are typical agglutinating suffixing languages; both display vowel harmony (cf. the present tense marker *-na/-ne/-no/-nö*, causative suffix *-uul/-üül*). Inflection markers on the noun follow the stem in rigid order: number (or collective), case, possessivity. Inflection markers on the verb follow the sequence voice, aspect, finite marker. Both languages use postpositions and no prepositions. In transliterations, double letters indicate long vowels, as in the Mongolian spelling.

2.3 Case. Number. Personal-possessive and reflexive-possessive markers

The noun has the inflectional categories of case and number and may take a personal possessive marker (a particle in Khalkha, suffix in Buryat). (9) shows the markers of the seven cases. Depending on pragmatic conditions, a direct object can be either accusative (topical) or unmarked, i.e. coincident with the nominative (rhematic; compare Turkic languages).

(9)	Khalkha	Buryat
NOM	-Ø	-Ø
GEN	-ii/-iin/-e/-en/-n	-(g)ai/-(g)ei/-(g)oi, -(ii)n
ACC	-iig/-eg/-g	-(ii)ye
DAT-LOC	-d/-t (glossed as DAT)	-da/-de/-do, -ta/-te/-to
ABL	-aas/-ees/-oos/-öös	-haa/-hee/-hoo/-höö
INST	-aar/-eer/-oor/-öör	-(g)aar/-(g)eer/-(g)oor/-(g)öör
COM	-tai/-tei/-toi	-tai/-tei/-toi

What is sometimes called “double declension” in Khalkha and Buryat is in fact a combination of derivational affixes with regular case affixes (see Skribnik 1981: 60–70). An example may be lexicalization of the genitive forms of personal nouns and personal names in the meaning ‘the household of’, ‘the family of’, cf.:

- (10) a. *ax* ‘elder brother’ (NOM) → *ax-iin* ‘of the elder brother’ (GEN)
 → *axa-d* ‘to the elder brother’ (DAT)
axiin ‘(family) of the elder brother’ (NOM) → *axiin-d* (“*GEN” + DAT) ‘to the elder brother’s (home)’.

Another such example is due to equation of an affix of adnominal adjectives in *-tai/-güi* (‘with’/‘without’) and a comitative marker (*-tai*); when used as dependent predicates, such adjectives take case affixes (e.g. accusative with verbs of seeing, knowing, dative-locative with emotive verbs etc.; cf. (10c)):

- b. *alta* ‘gold’ (NOM) → *alta-tai* ‘with gold’ (COM);
alta ‘gold’ (NOM) → *alta-tai* ‘gold-having’ / *alta-güi* ‘gold-less’ (ADJ)
- c. cf. *alta-tai-g* (ADJ +ACC, e.g. in context ‘I know that he has gold’).

A case marker may be followed either by a personal-possessive marker (see (11a, b)) or by the reflexive-possessive marker (the same for all the persons and numbers; this marker shows that an object belongs to the subject referent; see (11c, d)):

(11)		Khalkha	Buryat
a.	1SG	<i>miny</i>	<i>-mni, -m, -ni</i>
	2SG	<i>činy</i>	<i>-šni, -š</i>
	1PL	<i>many</i>	<i>-mnai, -nai</i>
	2PL	<i>tany</i>	<i>-tnai</i>
	3SG/PL	<i>ny</i>	<i>-ny, -iiny</i>

Here are parallel forms with personal-possessive markers for the nominative of the noun *ax / axa* ‘elder brother’:

	Khalkha	Buryat	
b.	<i>ax miny</i>	<i>axa-m</i>	‘my elder brother’
	<i>ax činy</i>	<i>axa-šni</i>	‘your elder brother’
	<i>ax ny</i>	<i>axa-ny</i>	‘his/her elder brother’
	<i>ax many</i>	<i>axa-mnai</i>	‘our elder brother’
	<i>ax tany</i>	<i>axa-tnai</i>	‘your elder brother’
	<i>ax ny</i>	<i>axa-ny</i>	‘their elder brother’.

If a reflexive-possessive marker is added to an accusative object the accusative case marker is usually omitted (as is shown by the form *beye bey-ee* in (91) and (92)). In this case the reflexive-possessive markers are glossed as REFL for brevity instead of REFL.POSS in the above examples (Note that Mongolic languages lack reflexive suffixes). The markers of the reflexive-possessive declension are:

	Khalkha	Buryat
c.	NOM	(impossible by definition)
	GEN	<i>-xaa /-xee /-xoo /-xöö</i> <i>-ngaa /-ngee /-ngoo /-ngöö</i>
	COM	<i>-gaa /-geel/-gool/-göö</i> <i>-(g)aa /-(g)ee /-(g)oo /-(g)öö</i>
	DAT-LOC	<i>-aa /-ee /-oo /-öö</i> <i>-aa /-ee /-oo /-öö</i>
	ACC	<i>-aa /-ee /-oo /-öö</i> <i>-aa /-ee /-oo /-öö</i>
	ABL	<i>-aa /-ee /-oo /-öö -n</i>
	INST	<i>-aa /-ee /-oo /-öö</i> <i>-aa /-ee /-oo /-öö.</i>

Here is the reflexive paradigm of the noun *nom* ‘book’:

	Khalkha	Buryat		
d.	GEN	<i>nom-iin-xoo</i>	<i>nom-oi-ngoo</i>	‘of one’s own book’
	COM	<i>nom-toi-goo</i>	<i>nom-toi-goo / nom-toj-oo</i>	‘with one’s own book’
	ACC	<i>nom-Ø-oo</i>	<i>nom-Ø-oo</i>	‘one’s own book’
			(cf. non-reflexive ACC <i>nom-iig-Ø/nom-iije-Ø</i> ‘a/the book’)	
	DAT	<i>nom-d-oo</i>	<i>nom-d-oo</i>	‘to/in one’s own book’
	ABL	<i>nom-oo-s-oo</i>	<i>nom-hoo-n</i>	‘from one’s own book’
	INST	<i>nom-oor-oo</i>	<i>nom-oor-oo</i>	‘with one’s own book’.

Note that in Buryat all possessive forms are actively used, whereas in Khalkha the personal possessive paradigm is in the process of dissolving: the plural forms are practically out of

use; the 1SG and 2SG forms are used mostly with body part terms and terms of relationship; as for the 3SG/PL marker, it has acquired new functions as a pragmatic particle, and acts on the complex sentence level as a marker opposed to the reflexive marker in a new opposition ‘same-subject – different-subject’.

The plural markers in Khalkha are *-nar*, *-čuud*, *-čuul* (collectives, on personal nouns), and *-s*, *-d* (used without restrictions). In Buryat, they are *-nar/-ner/-nor* (collectives, on personal nouns and pronouns). The marker *-(n)uud/- (n)üüd* (*-d* after nouns ending in the so-called “fleeting” *n*) is used without lexical restrictions. All these markers are optional.

2.4 Tense/aspect system. Participles and converbs

The relevant markers coincide in Khalkha and Buryat to a considerable degree. In the examples cited in this paper, the following tense markers occur: for the present tense, the suffix *-na/...* in both languages (see (1), (2)); for the past, *-w* (18e) in Khalkha and *-ba/...* in Buryat (2b); for the recent past, *-laa/...* in both languages (note that this suffix is used in a different meaning in (86)) and for remote past *-džee/-cee/...* in Khalkha (34). The difference between the three past tenses is hard to define (see Sanzheev 1960:70), and they are all glossed as PAST. The remaining tense forms are comprised of a participle or a converb with or without an auxiliary: iterative participles are marked with *-dag* in both languages (see (5) and (84b, d)), past participles with *-san/...* in Khalkha and *-han/...* in Buryat (also functioning as perfect forms (49)), present imperfect participles with *-aa/...* (32), and future participles with *-x* in Khalkha and *-xa/...* in Buryat (4). As mentioned, participles may function as predicates.

There are about 10 converbs in Khalkha and about 20 in Buryat, of which the most common are converbs marked with *-dža/...* in Khalkha and *-ža/...* in Buryat (with an auxiliary they form the progressive; see (1)), *-n* (28a) and *-aad/...* in both languages (28a). They denote actions either simultaneous with the main action or preceding it, depending on the context.

2.5 Voice system. Means of valency change. Reflexive pronoun

The voice markers have the following valency-related properties: (a) three markers can decrease valency; they are passive (13), reciprocal (1b), and causative (16a, b); in the case of the causative markers the underlying transitive construction becomes intransitive, the subject being either deleted (16a) or lowered in status if used in the dative case form (16b); (b) two markers can increase valency, viz. causative (15) and comitative-assistive (6); and (c) two markers may retain valency, viz. sociative (3a, b; 5b) and reciprocal (see 3.1.3). It should be stressed that practically each of these markers is valency-multifunctional, i.e. it may increase, decrease and retain the valency properties of the base verbs.

Characteristically, there is no affix with a reflexive meaning in Khalkha and Buryat, this meaning being rendered by the reflexive pronoun *biye* and *beye* (lit. ‘body’, ‘person’) respectively which always takes a reflexive-possessive marker;³ cf.:

- | | | |
|------|---------------------|-------------------------------------|
| (12) | <i>biy-ee uгаа-</i> | ‘to wash oneself’ |
| | <i>biy-ee нуу-</i> | ‘to hide oneself’ |
| | <i>biy-ee бари-</i> | ‘to restrain oneself.’ ⁴ |

Another reflexive pronoun is formed from the base *өөр* ‘one’s own, oneself, each’; cf.: *өөр-төө* ‘for/to oneself’, *өөр хоорондоо* ‘between oneself’.

1. The passive suffix is *-gd/-d/-t*; it may also encode a number of related meanings (e.g. anticausative (14)), also encoded by passive markers in many other languages. Passives are derived mostly from transitives (13), though passives from intransitives are also possible.

- | | | | |
|------|-----------------------------|---|--|
| (13) | <i>al-</i> ‘to kill’ | → | <i>ala-gd-</i> ‘to be killed’ |
| | <i>ol-</i> ‘to find’ | → | <i>ol-d-</i> ‘to be found’ |
| | <i>aw-</i> ‘to take’ | → | <i>aw-t-</i> ‘to be taken.’ |
| (14) | <i>nee-</i> ‘to open’ (vt) | → | <i>nee-gd-</i> i. ‘to open’ (vi), ii. ‘to be opened’ |
| | <i>tüle-</i> ‘to burn’ (vt) | → | <i>tüle-gd-</i> ‘to burn’ (vi), ‘to be burnt’ |
| | <i>xaa-</i> ‘to close’ (vt) | → | <i>xaa-gd-</i> ‘to close’ (vi), ‘to be closed.’ |

2. The reciprocal suffix is *-lda/-lde/-ldo/-ldö/-ld* in both languages. As mentioned, when used in the reciprocal sense, it decreases valency (see (1b)). When it has the sociative sense, the valency is preserved (see (3a, b)). And when used comitatively, it increases the valency (cf. (4a)). There are also innovative derivatives with the historically complex reciprocal suffix *-ca-lda/-ce-lde/-co-ldo/-cö-ldö* which is used very seldom (for details see Section 5).

3. The comitative/sociative suffix is *-lca/-lce/-lco/-lcö/-lc* in Khalkha and *-lsa/lse-lso/-lsö/-ls* in Buryat. When used as a comitative and assistive marker it increases the valency (cf. (4b) and (6)). When it has the sociative meaning the valency is preserved (cf. (5c)). When used reciprocally it decreases the valency (cf. *tani-* ‘to recognize sb’ and *tani-lsa-* ‘to get acquainted’ in (7)).

4. Sometimes, the pluritative voice with the marker *-cgaa* (Buryat *-sagaa*) is distinguished (see Section 6). As well as the suffix *-lda* used in the sociative sense, this marker expresses an “action performed by many actors” (Sechenbaatar 2003:122). As Sechenbaatar claims, “(t)he functional difference with regard to the cooperative voice is rather vague ...” (ibid.).

3. The Mongolic languages are similar to the neighbouring Tungusic languages in that they possess a reflexive pronoun and lack a reflexive affix (another similarity is the existence of two suffixes, reciprocal and sociative) and they differ from the neighbouring Turkic languages which have both a reflexive pronoun and a reflexive suffix.

4. The following example is probably an isolated case of the use of the reflexive pronoun in the reciprocal sense: ... *xoyuulaa bey-ee xolb-ood yaba-yaa* (Bur2. 68) lit. ‘[Once you are so scared] let us two bind ourselves to each other.’

5. The causative suffixes are *-uul/-üül*, *-lga/-lge/...* (used on both transitive and intransitive bases), less frequently used *-ge/-xe/-go/...*, *-ee/-oo/...*, and *-ga/-aa* (mostly on intransitive bases) in both languages. Their main syntactic property is valency increase.

- | | | |
|--|---|--|
| (15) <i>yaba-</i> ‘to go/walk’ | → | <i>yab-uul-</i> ‘to send/make go’ (Č. 794–5) |
| <i>buuda-</i> ‘to shoot’ | → | <i>buud-uul-</i> ‘to order to shoot’ (Č. 112). |
| <i>huu-</i> ‘to sit (down)’ | → | <i>huu-lga-</i> ‘to cause sb to sit (down)’ (Č. 693) |
| <i>negede-</i> ‘to join together’ (vi) | → | <i>neged-xe-</i> ‘to join, combine sth’ (Č. 337) |
| <i>gomdo-</i> ‘to feel hurt, resent’ | → | <i>gomd-oo-</i> ‘to hurt, offend sb’ (L. 121) |
| <i>gara-</i> ‘to go out’ | → | <i>gar-ga-</i> ‘to take sb out’ (L. 114) |
| <i>xata-</i> ‘to dry’ (vi) | → | <i>xat-aa-</i> ‘to dry sth’ (L. 512). |

They may also have a passive function, i.e. they decrease valency in certain cases; cf.:

- (16) a. *Tede buud-uul-ba.* (Č. 112)
 ‘They were shot.’
- b. *Ceren boroon-d coxy-uul-aw.*
 C. rain-DAT beat-CAUS-PAST
 ‘Ceren was beaten on by the rain’, lit. ‘Ceren let the rain beat on him.’

6. There is a special inchoative anticausative valency-decreasing suffix *-r* in both languages which forms mostly denominal verbs and, unproductively, a group of anticausatives.

- | | | |
|---|---|--|
| (17) <i>adxa-</i> ‘to pour/pour out’ (vt) | → | <i>adxa-r-</i> ‘to pour’ (vi) (D. 129) |
| <i>ebde-</i> ‘to break, destroy’ (vt) | → | <i>ebde-r-</i> ‘to break, get wrecked’ (vi) (Č. 752) |
| <i>delge-</i> ‘to spread out, unfold’ (vt) | → | <i>delge-r-</i> ‘to spread, expand’ (vi) (Č. 216, 215) |
| <i>ilga-</i> ‘to distinguish/separate’ (vt) | → | <i>ilga-r-</i> ‘to differ/be separate’ (vi) (D. 129) |
| <i>mata-</i> ‘to bend’ (vt) | → | <i>mata-r-</i> ‘to be bent/concave’ (vi) (D. 129) |
| <i>mušxa-</i> ‘to twist/wind round’ (vt) | → | <i>mušxa-r-</i> ‘to wind round’ (vi) (D. 129) |
| <i>zaha-</i> ‘to correct/improve’ (vt) | → | <i>zaha-r-</i> ‘to improve’ (vi) (D. 129). |

2.6 Combinability of voice markers

The following is relevant. Causative derivation from reciprocals and sociatives is always possible (see 3.2.2). Reciprocal derivation from causatives in *-uul* and *-lga* is as a rule impossible. Combination of reciprocal and comitative/sociative markers is forbidden, as a rule; for exceptions see (26d). Also forbidden is the combination of the reciprocal marker (but not of the sociative one) with the passive marker. In any case, Amogolonov (1958:198–9) and Sanzheev (1962:161) mention combinations with causative markers (*-ld-uul*, *-ls-uul*, and *-uula-lsa*) and also with the passive marker (*-gda-lsa*, *-lsa-gda*). Forms in *-lda* do not derive, as a rule, from causatives with the suffix *-uul*. An interesting fact is that derivations containing a combination of *-uul*, *-gda* and also *-lsa* can be synonymous with the different sequence of these suffixes; cf. (a) *oro-* ‘to enter’ → *or-uul-* ‘to bring sb in’ → *or-uula-gda-* ‘to be brought in’ → *or-uula-gda-lsa-* ‘to be brought in together with sb’, (b) *oro-* ‘to enter’ → *oro-lso-* ‘to enter together with sb’ → *oro-ls-uul-* ‘to bring sb in together with sb’ → *oro-ls-uula-gda-* ‘to be brought in together with sb’. When a passive marker is absent the meaning depends on the order of sequence of the

suffixes *-lsa* and *-uul*; cf. *or-uula-lsa-* ‘to bring sb in together with sb’ (= ‘someone together with someone else brings sb in’; subject-oriented) and *oro-ls-uul-* ‘to bring in sb and sb together’ (object-oriented).

3. Reciprocals with the suffix *-lda*

3.1 Subject-oriented constructions

3.1.1 “Canonical” reciprocals

Reciprocals of this type are always intransitive. The underlying verbs can be both two-place transitives and two-place intransitives (and even, in isolated instances, one-place intransitives; cf. *cuwa-* and *güj-* in (20)).

3.1.1.1 Derived from two-place transitives. This seems to be the main type of reciprocals. Here are a few examples of the (1b, c) type:

- (18) a. *Xügšen zaluu böömeile-lde-že bai-na.* (Č. 108)
 old young caress-REC-CONV AUX-PRES
 ‘The old (granny) and the young (granddaughter) caress each other.’
- b. *Xerelde-hen xün-iüüd urda urda-haa xašxara-lda-ba.* (Ld. 113)
 quarrel-PAST.PART man-PL face face-ABL shout-REC-PAST
 ‘The quarrelling people shouted at each other.’
- c. *Xoyor moryo tiire-lde-dže bai-na.*
 two horse kick-REC-CONV AUX-PRES
 ‘Two horses are kicking each other.’
- d. *Eedže xüü-tei-gee tewre-lde-ne.*
 mother son-COM-REFL embrace-REC-PRES
 lit. ‘Mother with her son are embracing each other.’
- e. *Bid daisan-tai buuda-lda-w.*
 we enemy-COM shoot-REC-PAST
 ‘We exchanged fire with the enemy.’

A list of reciprocals of this type, most of them denoting hostile actions:

- (19) *ala-* ‘to kill sb’ → *ala-lda-* ‘to kill each other, fight’ (L. 28)
alxya- ‘to beat sb’ → *alxya-lda-* ‘to beat each other’ (L. 32)
barxira- ‘to shout at sb’ → *barxira-lda-* ‘to shout at each other’ (L. 65)
buuda- ‘to shoot at sb’ → *buuda-lda-* ‘to exchange fire’ (Č. 117)
coxyo- ‘to beat sb’ → *coxyo-ldo-* ‘to beat each other’ (B. 67)
čixe- ‘to shove sth in’ → *čixe-lde-* ‘to jostle (in a crowd)’ (L. 634)
dasa- ‘to get used to sb’ → *dasa-lda-* ‘to get used to each other’ (B. 66)
duuda- ‘to call sb’ → *duuda-lda-* ‘to call to each other’ (Č. 205)
duuryasga- ‘to glorify sb’ → *duuryasga-lda-* ‘to glorify each other’ (B. 66)
dzodo- ‘to beat sb’ → *dzodo-ldo-* ‘to beat each other’ (L. 197)
dzuura- ‘to clutch at sb’ → *dzuura-lda-* ‘to clutch at each other’ (L. 207)
gete- ‘to stare at sb’ → *gete-lde-* ‘to stare at each other’ (Č. 173)

<i>mörgö-</i> ‘to butt sb’	→	<i>mörgö-ldö-</i> ‘to butt each other’ (L. 245)
<i>mörgö-</i> ‘to butt sb’	→	<i>mörgö-cöldö-</i> ‘to butt each other’ (B. 68)
<i>muuda-</i> ‘to be offended’	→	<i>muuda-lda-</i> ‘be offended with each other’ (L. 331)
<i>noco-</i> ‘to pounce on sb’	→	<i>noco-ldo-</i> ‘to pounce on each other’ (L. 237)
<i>noolo-</i> ‘to pester sb’	→	<i>noolo-ldo-</i> ‘to pester each other’ (L. 271)
<i>ozo-</i> ‘to kiss sb’	→	<i>ozo-ldo-</i> ‘to kiss each other’ (Č. 350)
<i>ögüülē-</i> ‘to speak to sb’	→	<i>ögüüle-lde-</i> ‘to speak to each other’ (B. 68)
<i>sabša-</i> ‘to chop/slash sb’	→	<i>sabša-lda-</i> ‘to slash each other’ (Č. 380)
<i>soxi-</i> ‘to beat’	→	<i>soxi-ldo-</i> ‘to beat each other’ (Č. 393)
<i>tansagla-</i> ‘to love sb’	→	<i>tansagla-lda-</i> ‘to love each other’ (B. 66)
<i>tewre-</i> ‘to embrace sb’	→	<i>tewre-lde-</i> ‘to embrace each other’ (L. 436)
<i>tiire-</i> ‘to kick sb’	→	<i>tiire-lde-</i> ‘to kick each other’
<i>tula-</i> ‘to lean on sth/sb’	→	<i>tula-lda-</i> ‘to lean on each other’ (L. 422)
<i>tülxe-</i> ‘to push sb’	→	<i>tülxe-lde-</i> ‘to jostle each other (in a crowd)’ (L. 431)
<i>unxida-</i> ‘to sniff at sb’	→	<i>unxida-lda-</i> ‘to sniff at each other’ (Č. 471)
<i>üxöörxe-</i> ‘to hate sb’	→	<i>üxöörxe-lde-</i> ‘to be enemies’ (Č. 519)
<i>xadxa-</i> ‘to stab’	→	<i>xadxa-lda-</i> ‘to stab each other’ (Č. 531)
<i>xašgara-</i> ‘to shout at sb’	→	<i>xašgara-lda-</i> ‘to exchange shouts’ (B. 66)
<i>xočolo-</i> ‘to nickname sb’	→	<i>xočolo-ldo-</i> ‘to nickname each other’ (B. 67)
<i>xuryaca-</i> ‘to desire sb’	→	<i>xuryaca-lda-</i> ‘to desire each other’ (L. 568)
<i>xyada-</i> ‘to exterminate sb’	→	<i>xyada-lda-</i> ‘to exterminate each other.’ (B. 66).

The following four verbs, related to intransitive and transitive bases, denote chaining relations (the verb *xelxe-lde-* displaying a degree of lexicalization is tentatively entered in this group):

- | | | |
|---|---|--|
| (20) <i>cuwa-</i> ‘to walk single file’ | → | <i>cuwa-lda-</i> ‘to walk one after another, single file’ (L. 614) |
| <i>daga-</i> ‘to follow’ | → | <i>daga-lda-</i> ‘to follow each other’ (L. 139) |
| <i>güi-</i> ‘to run’ | → | <i>güi-lde-</i> ‘to chase each other’ (Č. 164) |
| <i>xelxe-</i> ‘to string (e.g. beads)’ | → | <i>xelxe-lde-</i> ‘to trudge one after another.’ (B. 69). |

3.1.1.2 *Derived from two-place intransitives.* The reciprocals listed in (22) are formed from two-place verbs taking a non-direct object (verbs of speech may take a direct object expressed by an indefinite pronoun with the meaning ‘something’; cf. (23)). (21) illustrates the use of *ge-lde-* from (22) and also of *xööre-lde* from (25):

- (21) *Tüxede xoyor yexe hamga-d xööre-lde-ne xa: “Bide zangir-xa-mnai geeše”, –*
 then two big wife-PL talk-REC-PRES PRTL WE lost-FUT-1PL PRTL
ge-lde-že xööre-lde-ne-d. (Bur1. 88)
 say-REC-CONV talk-REC-PRES-3PL
 lit. ‘Then the two elder wives talked between themselves: “We are lost!” – [they] said to each other talking.’

- | | | |
|------------------------------------|---|---|
| (22) <i>ge-</i> ‘to speak to sb’ | → | <i>ge-lde-</i> ‘to converse’ (Č. 169) |
| <i>inyee-</i> ‘to laugh at sb’ | → | <i>inyee-lde-</i> ‘to laugh at each other’ (B. 69) |
| <i>naada-</i> ‘to play (with sb)’ | → | <i>naada-lda-</i> ‘to play together with sb’ (B. 66) |
| <i>oirto-</i> ‘to approach sb/sth’ | → | <i>oirto-ldo-</i> ‘to approach each other’ (Č. 352) |
| <i>šiwne-</i> ‘to whisper to sb’ | → | <i>šiwne-lde-</i> ‘to whisper to each other’ (B. 68). |

3.1.2 “Indirect” reciprocals

In this case the base subject and non-direct object (in the dative or ablative case) referents are construed as acting reciprocally, the direct object being retained. There seems to be a tendency, at least with some three-place transitive verbs of speech, to delete the direct object in a reciprocal construction. Thus, in (23b) the direct object *yüm* ‘something’ is likely to be deleted (though its retention does not make the construction ungrammatical). In this case this verb should be placed in 3.1.1.2, though semantically it is “indirect”. We remind the reader that the term “indirect” is used here as a cover term for constructions with reciprocalization of the subject and non-direct object of a three-place transitive base verb.

- (23) a. *Nege büsgüi nögöö büsgüi-d yüm xašgara-dža bai-na.*
 one girl.NOM other girl-DAT something shout-CONV AUX-PRES
 ‘One girl is shouting something to another girl.’
- b. *Büsgüi-čüüd bayarla-san-d-aa [yüm] xašgara-lda-na.*
 girl-PL rejoice-PART-DAT-their something shout-REC-PRES
 ‘The girls shout [something] to each other joyfully.’

Here are reliable examples of “indirect” reciprocal constructions at our disposal:

- (24) a. *Ta xoyor čixr-ee bitgii bulaa-ld-Ø!* (K. 72)
 you two sweets-REFL NEG take.away-REC-IMP.2
 ‘You two, do not snatch sweets from each other!’
- b. *Bidener deden-tei tus tus-taa xede xeden üge-nüüd-ee yari-lda-ža ...*
 we they-COM each separately several several word-PL-REFL say-REC-CONV
bai-gaa-bdi. (Cd. 111)
 AUX-PAST-1PL
 ‘We and they (lit. ‘with them’), each separately, exchanged words with each other.’
- c. *Xööre-lde-xe yüüme olon bai-xa.* (Č. 594)
 say-REC-PART something much be-PART
 ‘There is much to talk about with each other.’
- d. *Xoyor hamga-d-ai xoorondo zööri xubaa-lda-an,*
 two wife-PL-GEN between.themselves belongings distribute-REC-CONV
arsa-lda-an bolo-bo. (Bur2. 190)
 argue-REC-NS become-PAST
 ‘Both wives began arguing while dividing the property between themselves.’ (lit. between two wives, while dividing the property, began a quarrel).

This group comprises verbs denoting passing sth to sb, or receiving (or taking sth away) of some things or information.

- (25) *awa-* ‘to take, receive sth’ → *awa-lda-* ‘to take sth away from each other’ (B. 66)
bulaa- ‘to snatch sth’ → *bulaa-lda-* ‘to snatch sth from each other’ (B. 66)
čangaa- ‘to draw sth’ → *čangaa-lda-* ‘to draw/pull sth from each other’ (B. 66)
yari- ‘to say sth’ → *yari-lda-* ‘to talk, converse’ (Č. 802)
šede- ‘to throw (stones, etc.)’ → *šede-lde-* ‘to throw (stones) at each other’ (Č. 743)
xašgara- ‘to shout sth’ → *xašgara-lda-* ‘to shout sth to each other’ (B. 66)
xööre- ‘to say sth’ → *xööre-lde-* ‘to talk, converse’ (Č. 594)
xubaa- ‘to distribute’ → *xubaa-lda-* ‘to distribute between oneself.’

Similar to this type is the Buryat *-lda* form of the object-oriented lexical reciprocal *xubaa-* ‘to distribute/divide sth (among sb)’. Its derivative in *-lsa* appears as a synonym of the form in *-lda*. Existence of a derivative with both suffixes (such derivatives are not common; so far, it is the only instance we have found in the *Buryat-Russian Dictionary*) may be accounted for by lexicalization of the reciprocal with the suffix *-lda*. Compare:

- (26) a. *xubaa-* ‘to divide/distribute sth among sb, share’ (Č. 595)
 b. *xubaa-lda-* ‘to divide among oneself’, ‘to take part in sharing sth’ (Č. 595)
 c. *xubaa-lsa-* (same meaning) (Č. 595)
 d. *xubaa-lda-lsa-* ‘to divide together’ (Č. 595).
- (27) *Xügšen müngeŋ-iye xüršen-ner-t-öö xubaa-lda-lsa-ba.* (S2. 246)
 old.woman money-ACC neighbour-PL-LOC-REFL share-REC-SOC-PAST
 ‘The old woman shared the money with her neighbours.’

3.1.3 “Possessive” reciprocals

As well as in the case of “indirect” reciprocals, the underlying direct object is retained. The base subject is reciprocalized with the possessive attribute of the direct object of the base construction, therefore the valency of the underlying verb is retained, in contrast to “indirect” reciprocal constructions. We wonder whether it is accidental that there are only two examples of “possessive” reciprocals in *-lda* and about 10 in *-lsa* attested so far (cf. 8.2.3). As in many other languages, the direct object is usually the name of a body part or inalienable feature. Examples:

- (28) a. *xütel-* ‘to lead sb by the hand’ → *xütere-lde-* ‘to walk holding each other’s hands’
 b. *gar gar-aa xütere-lde-n bari-lc-aad, gal toir-ood*
 hand hand-ACC.REFL lead-REC-CONV hold-SOC-CONV fire walk.round-CONV
xataran naada-. (Č. 633)
 dance participate
 ‘to dance round a fire holding each other’s hands.’
- (29) a. *zulгаа-* ‘to pluck/pick (at)”; *ühen-höö* (ABL) *zulгаа-* ‘to pull sb’s hair’
 b. *ühe züh-öö zulгаа-lda-* (Č. 261)
 hair appearance-ACC.REFL pluck-REC
 ‘to pull each other’s hair.’ (‘to pull each other by the hair’).

3.1.4 Expression of reciprocal arguments

It has been mentioned that, as in other languages, the subject of a subject-oriented reciprocal construction must be semantically plural. In simple reciprocal constructions subject

expression is no different from that in non-reciprocal constructions. In particular, if there is a numeral in the subject group, the latter may have no plural marker. In simple constructions, the subject may be expressed by a plural noun phrase or a juxtaposition of two noun phrases followed by the conjunction *xoyor* ‘and’, lit. ‘two’ (30a). In Khalkha, there seem to be no restrictions on transformation of the second noun phrase into comitative (30b). Joint use of a comitative noun phrase and *xoyor* is ungrammatical (30c).

- (30) a. *Eedže xüü xoyor tewre-lde-ne.*
 mother son two embrace-REC-PRES
 ‘Mother and son are embracing.’
 b. *Eedže xüü-tei-gee tewre-lde-ne.*
 mother son-COM-REFL embrace-REC-PRES
 lit. ‘Mother with her son is/are embracing.’
 c. **Eedže xüü-tei-gee xoyor tewre-lde-ne.*

The comitative noun phrase (cf. *xüü-tei-gee* in (30b)) displays another property of a non-direct object (Poppe (1954:171) employs the term ‘indirect object’), which is related to the co-occurrence with the reciprocal pronoun. The latter can be used with conjoined noun phrases serving as subject (30d). But if the second argument is comitative the use of the reciprocal pronoun, which necessarily agrees with the subject, is forbidden. Thus a sentence in this case shows the features of a discontinuous reciprocal construction (30e).

- d. *Eedže xüü xoyor biye biy-ee tewre-[lde-]ne.*
 mother son two each other-ACC embrace-REC-PRES
 ‘Mother and son are embracing each other.’
 e. **Eedže xüü-tei-gee biye biy-ee tewre-[lde-]ne.*
 mother son-COM-REFL each other-ACC embrace-REC-PRES
 lit. ‘Mother with her son is/are embracing each other.’

(30e) displays the property which rules out interpretation of the comitative noun phrase as part of the subject group. It should be noted that the comitative phrase may be followed by the postposition *xamt*, as in (31), which unambiguously indicates that the comitative noun phrase denotes the second participant (see translation (i) in (31)). If *xamt* is absent the comitative noun phrase together with the subject, in the opinion of an informant (Tuvshintogs), may also be interpreted in some contexts as a collective first participant with an implied second participant (see translation (ii) in (31)). Another informant (Kurebito) claims that even if *xamt* is used interpretation (ii) is possible.

- (31) *Xuca uxna-tai [xamt] mörgö-ldö-džö bai-na.*
 ram goat-COM together butt-REC-CONV AUX-PRES
 i. ‘A ram is butting with a goat’ (if *xamt* is used).
 ii. ‘A ram and a goat together are butting with sb’ (with *xamt* omitted).

In Buryat, where the predicate agrees with the subject, the comitative noun phrase does not affect the agreement. This is one more sign of a discontinuous construction. The second participant may be covert, being indicated by the reciprocal marker.

- (32) *Uulz-aa, uulz-aa, бага зerge [eden-tei] yari-ld-aa-b.* (Bur2. 168)
 meet-PAST meet-PAST a.little they-COM talk-REC-PAST-1SG
 '[We] met, [we] met, I talked a little [with them].'

A similar problem, i.e. expression of the second participant, concerns constructions with the predicate in *-lca/-lsa* (see 7.3), which are interpreted as sociative if all the participants are expressed by the subject only (71a, b) and they are regarded as comitative if the subject names only one of the participants (71c–l). In our material, in constructions with *-lca/-lsa* the second participant is expressed by more varied means than in constructions with *-lda*.

3.1.5 Productivity and restrictions on reciprocal derivation

Suffixed reciprocals are of limited productivity. A large number of examples are cited in dictionaries, special literature and texts (see, for instance, (18)–(22), (24)–(28), (32)). They derive from many two-place transitive and two-place intransitive verbs (on condition that the underlying object is human), including morphological causatives, except those in *-uul* (cf. *duud-uul* 'to order sb to call sb' → **duud-uula-ldo* 'intended meaning 'to order each other to call sb else'). As shown in 3.1.2, they may also be derived from three-place transitives.

At the same time, quite a number of informants reject derivation of morphological reciprocals from many two-place verbs and prefer pronominal reciprocals as the only possibility. Thus, Gerelma accepted only pronominal reciprocals for the following Khalkha transitives: *naida-* 'to rely on sb', *uguisge-* 'to refute, disprove', *xalamžil-* 'to court sb', *magta-* 'to praise', *marta-* 'to forget sb', *ugaa-* 'to wash sb/sth', *inyeelge-* 'to make sb laugh', *ile-* 'to stroke sb', *muula-* 'to slander sb', *uzuule-* 'to cause trouble to sb', *xairla-* 'to love sb'. She accepted only a few morphological reciprocals out of a long list offered to her: *muuda-lda-* 'to have a grudge against each other', *noolo-ldo-* 'to pester each other', *örsö-ldö-* 'to rival with each other', etc. The Buryat informant Darima accepted only three out of seven morphological reciprocals offered to her: *enyeexi-ldo-* 'to smile at each other' (in combination with a reciprocal pronoun), *dolyoo-ldo-* 'to lick each other', *naada bari-lda-* 'to jeer at each other'. In her opinion, only pronominal reciprocals are possible with the following Buryat verbs: *abar-* 'to save sb' (however, in the dictionary (Č.) the form *abara-lda-* is registered), *šagna-* 'to listen to', *marta-* 'to forget', *etige-* 'to believe' (in the dictionary (Č.) the reciprocal meaning for this verb is expressed by the form *etige-lse-* with or without the reciprocal pronoun). In another test, the same native speaker accepted only three suffixed reciprocals out of ten: *xaraa-lda-* 'to abuse each other', *teberi-ldo-* 'to embrace each other' and *tülxi-ldo-* 'to push each other'. Only pronominal reciprocals, in Darima's opinion, are possible from the following seven verbs: *mexel-* 'to deceive', *magta-* 'to praise', *mürde-* 'to chase', *zoboo-* 'to torment' (however, the dictionary (Č.) registers the form *zobo-ldo-*), *naadal-* 'to jeer at sb', *xamgaal-* 'to defend', *zemel-* 'to accuse'.

The informants sometimes disagree between themselves and with the dictionary data with respect to the possibility of the use of *-lda-* on some verbs (and most of these suffixed reciprocals are entered in the dictionaries). For instance, Tuvshintogs prefers the form

buuda-lca- in the meaning ‘to fire at each other, exchange fire’ instead of the dictionary form *buuda-lda-*. He rejects the form *xairla-lda-* in the meaning ‘to love, pity each other’ and suggests a pronominal reciprocal *biye biy-ee xairla-* instead (but Kurebito allows the form *xairla-lda-* in the meaning ‘to love, pity each other’). Similarly, he suggests a pronominal reciprocal *biye biy-ee zala-* instead of the morphological reciprocal *zala-lda-* for the expression of the meaning ‘to invite each other’.

In general, establishing the list of restrictions on reciprocal derivation and possible causes requires additional study. It may even turn out that morphological reciprocals in *-lda* constitute a closed set and they are being ousted by pronominal reciprocals.

3.2 Object-oriented constructions

The participants of the reciprocal relation are expressed by a direct object (cf. *šüd-öö* in (33), *ter xoyor-iig* in (34) and *xül-nüü-gee* in (37))

3.2.1 Without causativization

Since it is the object referents that are in a reciprocal relation, the subject in an object-oriented construction may be singular.

The following two Buryat forms are spatial object-oriented reciprocals; the first underlying verb is a three-place lexical reciprocal with the meaning ‘to rub sth against sth’ (the noun phrase *šüd-öö* ‘tooth’, though singular, refers to the teeth in both jaws rubbing against each other); in the second form the reciprocal suffix stresses reciprocity (the meaning of joining together) without changing the overall meaning.

- (33) a. *šüd-öö xabir-* (vt) ‘to grit one’s teeth’ (-*öö* =REFL.ACC)
 = b. *šüd-öö xabira-lda-* (vt) ‘to grit one’s teeth against each other’ (Č. 526).

There is also a number of unmarked spatial object-oriented reciprocals, e.g. *xolo-* ‘to mix sth with sth’, *naa-* ‘to glue sth to sth’, whose forms in *-lda* are in fact anticausatives rather than object-oriented reciprocals of the (33b) type (see 4.6.1 and 14.2).

3.2.2 Causatives of subject-oriented reciprocals

As a matter of fact, any subject-oriented reciprocal can be turned into object-oriented by way of causativization (given a pragmatically natural situation). Thus, (1b) can be causativized into an object-oriented construction (34). Causatives derived from reciprocals are frequently entered in the dictionaries.

- (34) *Dordžo ter xoyor-iig xoorondo-ny dzodo-ld-uul-džee.*
 D. those two-ACC between.them beat-REC-CAUS-PAST
 ‘Dorji provoked a fight between those two.’

Here are two more three-member chains of this type (the forms in *-lda* with the question mark are not accepted by all of our informants though they are registered in the dictionaries and occurred in the texts):

- (35) a. *tani-* 'to recognize' (Č. 414)
 b. *tani-lsa-/²tani-lda-* 'to get acquainted' (Č. 414) ("canonical")
 c. *tani-ls-uul-/²tani-ld-uul-* 'to acquaint sb with sb' (Č. 414) (object-oriented)
- (36) a. *neše-* 'to push' (Č. 341)
 b. *neše-lde-* 'to push each other' (Č. 341)
 c. *neše-ld-üül-* 'to cause to push each other' (Č. 341).

A sentential example for (36c):

- (37) a. *Axa düü-ner xül-nüü-gee neše-ld-üül-en ...* (T. 75)
 elder.brother younger.brother-PL foot-PL-REFL push-REC-CAUS-CONV
 'The brothers, pushing their feet one against another ...'

The verbs listed in (33a, b) may be marked according to the reciprocal-causative pattern.

- b. *Žada-nuud-aa xabira-ld-uul-an...* (T. 118)
 bayonet-PL-ACC rub-REC-CAUS-CONV
 'Rubbing their bayonets one against another.'

3.3 *Nomina actionis*

The principal suffixes of action nominalization are *-aa/-oo/...* and *-lga/-lgo/...* Numerous reciprocals can take on these suffixes, the derivatives being registered in the dictionaries; cf. Buryat:

- (38) a. *ürdi-* 'to outstrip/leave behind' → *ürdi-lde-* 'to try to outstrip each other, rival'
 → *ürdi-ld-öö* 'rivalry' (Č. 512)
 b. *ozo-* 'to kiss' → *ozo-ldo-* 'to kiss each other' → *ozo-ld-oo* 'a kiss' (Č. 350)
 c. *ühöörxe-* 'to hate' → *ühöörxe-lde-* 'to hate each other' → *ühöörxe-lde-lge*
 'mutual hatred' (Č. 519)
 d. *zodo-* 'to beat' → *zodo-ldo-* 'to fight' → *zodo-ld-oo(n)* 'a fight'.

Nomina actoris can also be formed from reciprocals; cf.:

- e. *zodo-* 'to beat' → *zodo-ld-ooč* 'a pugnacious fellow' (L. 197).

4. Non-reciprocal meanings of the suffix *-lda*

This section concerns two main non-reciprocal groups of verbs with the suffix *-lda*: those with the sociative meaning (see 4.1–4.5) and seven meanings either unproductive or of low productivity (see 4.6).

4.1 Some similarities and differences between sociatives in *-lda* and *-lca/-lsa*

A sociative construction corresponds *semantically* to two non-sociative constructions in the sense that if *A and B are running together* this means that *A is running* and *B is running*. However, in the latter two clauses the component 'together' and other related nuances of

meaning are absent. In this respect the state of things is analogous to that with reciprocal constructions and their non-reciprocal correspondences. The sentence *A and B kissed each other* means that *A kissed B* and *B kissed A*. And again, in the latter two clauses indication of both acts being parts of the same situation is also absent.

As a rule, sociativity presupposes spatial and temporal proximity or a kind of concerted interaction between the subject referents, a kind of relatedness or common reason for their actions, etc. In the *Buryat-Russian Dictionary* (Č.), the sociative meaning is, as mentioned, roughly interpreted mostly as ‘together’ or ‘of many’. These two interpretations actually distinguish two varieties of the sociative meaning in Mongolic languages: although, probably, the meaning ‘of many’, e.g. the plural meaning in the literal sense, cannot be regarded as sociative proper it is so closely related to it (needless to say, ‘together’ requires a plural subject) that we may nevertheless regard it as a variety of sociative. These two senses, i.e. ‘together’ and ‘of many’, are distributed between sociatives in *-lca/-lsa* and those in *-lda* accordingly, though not entirely consistently.

Sanzheev (1963:60) states that *-lca/-lsa* forms and especially those in *-lda* “... often denote actions performed by many, and, so to say, collectively... We find similar usages in all Mongolic languages.” Sanzheev’s attempt to explain the differences between intransitive forms in *-lsa* and *-lda* is provoking though his description is not as complete as might be expected from a native speaker (1962:198): “... *šuuya-* ‘to make noise’, *šuuya-lsa-* ‘to make noise with sb’, *šuuya-lda-* ‘to make noise – of many (so to say, to make noise at each other).”⁵

1. Similar explanations, i.e. definitions of derivatives in *-lda* with the component ‘of many’, and parallel forms in *-lca/-lsa* with ‘together (with sb)’, occur in dictionaries:

- (39) a. *xašgara-* ‘to shout’ (L. 522)
xašgara-lda- ‘to shout (of many)’ (L. 522)
xašgara-lca- ‘to shout (together)’ (L. 522)

5. A subtle though brief characteristic of a *-lda* sociative extracted from a text in comparison with the base verb was suggested by the informants Ja.M. Sondueva and N.D. Rinchinova. Here is the sentence:

- (i) *Ger-te-ny huu-han barlag-uud-iny xašxara-lda-ba* (Bur2. 176)
house-DAT-his sit-PART hired.man-PL-his shout-REC-PAST
‘The hired men sitting in his (owner’s) house started shouting.’
- (ii) *Ger-te-ny huu-han barlag-uud-iny xašxar-ba-d.* (-d = 3PL)
(same translation).

In (i) the labourers shout together in unison, the cause of the shout being some action of the employer. As for (ii), they shout each separately, each in his own manner, and for any reason, e.g. out of joy, pleasure, etc. Besides, in (ii) the 3PL marker *-d* is required, while in (i) plurality is implied by the suffix *-lda*. Although the suffix *-lda* presupposes a plurality of participants, the optional 3PL marker *-d* may be used simultaneously with it; cf.:

- (iii) ... *düliir-ter šaxuu xašxara-lda-ba-d.* (Č. 208)
become.deaf-CONV almost shout-REC-PAST-3PL
‘... [they] shouted so that he almost got deaf.’

- b. *enyee-* 'to laugh' (Č. 767)
enyee-lda- 'to laugh (of many)' (Č. 767)
enyee-lse- 'to laugh (together with sb)' (Č. 767)
- c. *yere-* 'to come, arrive' (Č. 222)
yere-lda- 'to come, arrive (of many)' (Č. 222)
yere-lse- 'to come, arrive together with sb' (Č. 222).

2. Sometimes, derivatives both in *-lda* and *-lca/-lsa* are defined in the same way by means of 'together':

- (40) a. *ošo-* 'to set out somewhere' (Č. 366)
ošo-ldo-žo yere-xe 'will have gone together' (A. 198)
ošo-lso-žo yere-xe 'will have gone together' (A. 198)
- b. *oro-* 'to enter' (Č. 361)
oro-ldo- i. 'to enter together', ii. (usu.) 'to try (to do sth)' (Č. 361)
oro-lso- i. 'to enter together', ii. 'to take part, etc.' (Č. 361).

3. As (41a–b) shows, same-stem derivatives may have other additional meanings and differ in this respect:

- (41) a. *xara-* 'to see' (Č. 551)
xara-lda- i. 'to see (of many)', ii. 'to see' (dial.) (Č. 551)
xara-lsa- i. 'to see together', ii. 'to see each other' (Č. 551)
iii. 'to meet (each other)' (Č. 551).
- b. *yüüle-* 'to pour sth from one vessel/sack into another' (Č. 783)
yüüle-lda- 'to pour sth from one vessel/sack into another (of many)' (Č. 783)
yüüle-lse- i. 'to pour sth together', ii. 'to help sb pour sth' (Č. 783).

4.2 Plural subject and sociative *-lda* forms

As noted above, the meaning 'of many [subjects]' which is often used in the *Buryat-Russian Dictionary* (Č.) to interpret verbs in *-lda* should not be understood literally because it often refers to no more than two or four participants, as illustrated by the following examples. Therefore, the component 'many' should be understood as 'two or more', and, moreover, this characterization stresses the collective nature of the group of participants. Not infrequently, there occur sequences of two or more sociative derivatives in *-lda*.

- (42) a. *Xoyor xulgana tereen-iie toir-ood güi-lda-ne.* (Bur2. 86)
two mouse this-ACC go.around-CONV run-REC-PRES
'These two mice are skittering around it.'
- b. *...tere dürben xüxi-lda-n enyee-ld-ee gexe gü...* (Bur2. 54)
these four make.merry-REC-CONV laugh-REC-PART AUX PRTL
'...those four began making merry and laughing.'

Needless to say, if the predicate is sociative the subject must be (semantically) plural (see (3a)). However, subject plurality is a necessary but insufficient condition, because only in a relatively limited number of cases when the subject is plural we find in the texts the sociative form with the suffix *-lda* (note that the use of the sociative suffix *-lca/-lsa* is more

predictable). The use of sociative forms in *-lda* may be conditioned by both the lexical meaning of the base verb and the context, and, besides, the subjective speaker's choice which is hard to foresee. To repeat, *-lda* is not always used on the predicate if there are several or many participants; moreover, as mentioned, it is normally absent, and its usage is to a certain degree mysterious. Its function is to stress the sociativity, not to express plurality. For instance, the verb *gaixa-* is used with *-lda* in (43a), while it occurs without *-lda*, despite the plural subject, in (43b), though *-lda* is used on the verb *güi-* that follows it:

- (43) a. *Toir-ood bai-han zon exe gaixa-lda-ža, yexe*
 around-CONV be-PART people very be.surprized-REC-CONV very
honir-xo-žo... (Bur2. 254)
 be.interested-PART-CONV
 'The people gathered around are very surprised and very interested.'
- b. *...xaruulša übge-d gaix-aad, gazašaа güi-lde-n*
 watchman old.man-PL be.surprized-CONV outside go-REC-CONV
gara-na-d xa. (Bur2. 82)
 go.OUT-PRES-3PL PRTL
 'The old watchmen were surprised and went outside.'

4.3 Sociatives of transitives

Cross-linguistically, sociatives more commonly derive from intransitives than from transitives. Judging by the dictionary data, this is also typical of the Mongolic languages. Thus, for instance, in the *Buryat-Russian Dictionary* (Č.), there are no more than 10 sociatives in *-lda* with transitive bases and at least 220 sociatives with the suffix *-lda* derived from intransitives. This ratio is certainly indicative of the state of things in the language, though it may not be quite precise (for the quantitative characteristics of the verb classes in *-lda* see 4.5 below). Another indication is the fact that (44) is the only instance of a transitive sociative in *-lda* encountered in the Buryat fairytales (Bur2.).

- (44) *Taanar yüü xara-ža, amaa angai-lda-ža bai-na-b-ta* (Bur2. 176)
 you what look-CONV mouth open-REC-CONV AUX-PRES-INTS-2PL
 'What are you looking at with your mouths open?'

Here is a list of Buryat transitive sociatives (cf. 7.4.2):

- (45) *asara-lda-* 'to bring sth together with sb' (Č. 63)
elgee-lde- '(of many) to send sth' (Č. 764)
gar tabi-lda- 'to sign sth together with sb else' (Č. 408)
yüüle-lde- '(of many) to pour sth from one vessel into another' (Č. 783)
xara-lda- '(of many) to see sth/sb' (Č. 551)
xüdelge-lde- '(of many) to move sth' (Č. 612)
xürte-lde- '(of many) to receive sth' (Č. 627)
xüxe-lde- '(of many) to suck sth' (Č. 636).

There is a restriction on the formation of sociatives in *-lda* from a number of transitives. Thus, in Khalkha, there are no sociatives in *-lda* from the verbs *örgö-* 'to lift sth', *xara-*

‘to look at sth’ and *xiy-* ‘to produce sth’ (informant Gerelma). But there are sociatives in *-lca/-lsa* of these verbs.

4.4 Comitatives and sociatives of one-place intransitives

A. *Comitatives*. As mentioned, among derivatives in *-lca/-lsa* comitatives are prevalent over sociatives, while among *-lda* forms sociatives are prevalent. In (46a), as well as in (4a), the second participant is expressed by a comitative phrase, and in (46b) by a postpositional noun phrase. In (46c) and (46d) it is not expressed syntactically. (Compare 7.3). Not infrequently, the comitative noun phrase also contains the postposition *xamta* ‘together’ (this comitative noun phrase is naturally possible with unsuffixed verbs; cf. *Dordžo Bata-tai xamta tedeem-de yere-be* ‘Dorji together with Bat approached them.’). In general, the comitative meaning seems to be more salient than sociative, all the more so that it may have a distinct lexical expression, including a comitative object (it seems that derivations involving valency increase, including comitatives and assistives, are characterized by a more distinct change of meaning than those involving valency decrease).

- (46) a. *Tere baron ... Praskuxin Neferdov xoyor-toi xamta ... gešxele-lde-n*
 this baron P. N. two-COM together march-REC-CONV
gara-ba (T. 35)
 go.out-PAST
 ‘Baron Praskuxin together with Neferdov went out marching ... (the reciprocal verb is used to translate the Russian original phrase ‘with vigorous strides’).
- b. *Seržüüini Žalm-in xoino-hoo duula-lda-na.* (Cd. 114)
 S. J.-GEN after-ABL sing-REC-PRES
 ‘Serjuni joins Jalm (lit. after Jalm) in singing.’
- c. *Ene manai Sagaadai daamal ošo-ldo-xo.* (A. 198)
 this our S. supervisor leave-REC-PART
 ‘This Sagadai of ours will go [with them] as a supervisor.’
- d. *Hain mory-oo una-ža, xuluuša üilde-xe-m ge-že bayan*
 good horse-REFL mount-CONV thief persecute-FUT-1SG AUX-CONV rich
xüin xoinohoo-ny yaba-lda-na. (Bur2. 196)
 man back-POSS3SG go-REC-PRES
 ‘The rich man mounted his good horse and set out to persecute the thief.’ (lit. ...saying, I’ll persecute the thief, went after him).

B. *Sociatives*. Above, all the textual comitative examples with the suffix *-lda* are entered that we have found; three out of four examples contain verbs of motion. As for the sociative examples, they are very frequent in texts. The sociative examples cited above (see (3a, b), (42a, b), (43a)) can be amplified by the following:

- (47) a. *Dzandalča-d ordon tiiš dawxya-lda-laa.*
 hangman-PL palace to run-REC-PAST
 ‘The hangmen were running to the palace (all of them together, jointly).’
- b. *Ene xed maany tun ixе šuugi-lda-dž bai-na.* (O. 122)
 this several POSS very a.lot make.a.noise-REC-CONV AUX-PRES
 ‘These are making a lot of noise.’

- c. *Cöm inee-lda-n ...* (O. 122)
all laugh-REC-CONV
'All [of them] began laughing..'
- d. *Oro-ldo-n gara-lda-n bai-ba.* (Č. 361)
enter-REC-CONV leave-REC-CONV AUX-PAST
'[From time to time] They would enter and then go out again together.'
- e. *Udabašyegüi ende tende xün-üüd xurxira-lda-ba.* (Cd. 113)
soon here there man-PL snore-REC-PAST
'Soon here and there (many) people snored (loudly).'
- f. *Manai zarasa-nuud šešere-lda-že bai-dag xayam.* (Cd. 113)
our servant-PL shake-REC-CONV AUX-PART MOD
'Our servants are shaking (with fear).'
- g. *Seber haixan ünder baišan-uud tebxi-lda-ne.* (Cd. 113)
beautiful beautiful tall house-PL be.square/even-REC-PRES
'Beautiful tall buildings look like even rectangles.'

4.5 Lexical groups of intransitives taking *-lda* '(of) many'

This group of derivatives is the most numerous among all derivations in *-lda*, numbering, as pointed out above, about 470 in the *Buryat-Russian Dictionary*. They are distributed as follows:

- 220 items are derived from intransitives and acquire the meaning 'of many'.
- Only 10 analogous forms are derived from transitives.
- 85 derivatives are reciprocal in meaning.
- About 60 items are lexicalized derivations.
- About 35 are anticausatives or belong to some very small semantic groups (see 4.6).
- About 30 are unclear due to the lack of explanations in the dictionary.

Verbs in *-sa-lda* (about 20) are not taken into account here (see Section 5).

The derivatives named in the heading are sometimes translated by means of 'together' instead of 'many', which shows their proximity to derivations in *-lsa*. It should be stressed that the number of intransitives taking the suffix *-lsa* is much smaller (25 at the most in the same dictionary) than that of respective derivations in *-lda*. This may be partially related to the fact that sociatives in *-lsa* are always used with a human subject, while sociatives in *-lda* are also used with non-human subjects (animals and things). It follows that most of the intransitives registered with *-lda* that are listed below are not registered with *-lsa*, and many, especially with the comitative meaning, are not possible with *-lsa* at all, e.g. the verbs of lexical group 2 denoting manifestation of existence. Transformation of many sociative sentences into comitative would sound funny, e.g. of a sentence meaning 'A number of the masts of sunken ships stuck up in the bay' into 'One mast together with another stuck up in the bay'.

There are some restrictions on the derivation of these forms. For instance, in Khalkha, according to informant Gerelma, there are no sociatives in *-lda* with the bases *ire-* 'to come, arrive' (she suggests the form *ire-lce-*), *suu-* 'to sit' (suggested form *suu-lca-*), *adžilla-* 'to work', *unta-* 'to sleep', but there are *-lda* forms of the verbs *xurxira-* 'to snore

(in sleep), *nise-* ‘to fly’, *töörö-* ‘to wander’; no *-lda* form for the verb *mordo-* ‘to mount (a horse), leave’; there is a *-lda* form of *inyee-* ‘to laugh’ but not of *mardzai-* ‘to smile’; there is a *-lda* form of *maila-* ‘to bleat’ and not of *naitaa-* ‘to sneeze’. Our informant Darima rejects the sociative forms in *-lda* of the verbs *yere-* ‘to come, arrive’ and *ažilla-* ‘to work’. There seem to be no rigid rules of choice, and the informants sometimes contradict one another and the dictionary data.

What follows is a brief survey of the thematic groups of intransitive verbs that combine with *-lda* in the meaning of ‘many’. The list is compiled on the basis of the *Buryat-Russian dictionary* (Č.). A subdivision into groups is approximate, aiming at giving a general idea of their lexical range. Not all of the verbs listed here when combined with *-lda* are supplied with explanations in the dictionary, but they are entered in these lists because they cannot be ascribed a reciprocal meaning, and their closer examination may reveal meanings deviating from ‘many’.

1. Verbs of emitting sounds: *uuxila-* ‘to breath heavily’, *šali-* ‘to chatter’, *šuuya-* ‘to make noise’, *haršagana-* ‘to rustle’, *yoolo-* ‘to moan’, *žengine-* ‘to ring’, *babana-* ‘to bleat shaking the tuft (of goats)’, *pipagana-* ‘to twitter’, *xusa-* ‘to bark (of dogs)’, *xurxira-* ‘to snore’, *güngene-* ‘to buzz/drone’, *xüšegene-* ‘to rattle (of motor)’, etc. (about 75 verbs).

2. Verbs of manifestation of existence (like emitting light), or perception: *ulagaša-* ‘to flicker (of sth red)’, *selse-* ‘to sparkle (of dew on grass)’, *zuragaša-* ‘to glimmer (of lights at night)’, *yalagaša-* ‘to twinkle (of stars)’, *yodoi-* ‘to jut out’, *derxe-* ‘to protrude/bulge out’, *harai-* ‘to be spread wide’, *toboi-* ‘to rise above sth (about a haystack, woman’s breasts, etc.)’, *gonoi-* ‘to show a long neck (e.g. about a camel)’, *üle-* ‘to stretch out one’s neck/raise one’s head’, *beltegeše-* ‘to goggle’, *belse-* ‘to be protruding (of eyes)’, *harxai-* ‘to be cumbersome, spread wide’, *yoroi-* ‘to rise above, overhang’, *yomboi-* ‘to be protuberant’, *šodoi-* ‘to stick out (of a short tail)’, *šomboi-* ‘to protrude (of lips)’, *herb-* ‘to bristle’, *danxai-* ‘to be unwieldy/clumsy’, *orboi-* ‘to be bristling/dishevelled’, *pampai-* ‘to be fluffy/crumblly’, *arži-* ‘to be raised/embossed’, *arbai-* ‘to stand on end’, *barxai-* ‘to be piled up/look uneven’, *laglai-* ‘to be tousled/stick out (e.g. trees at a hilltop)’, *šoboi-* ‘to be pointed, jut out/stick out’, *zuri-* ‘to look indistinct, as a shape’, *barai-* ‘to be seen as a dark mass’, *burzai-* ‘to be seen as white spots’, *barži-* ‘to be seen as a solid mass’, etc. (over 35 items).

3. Verbs expressing position or change of physical state: *tiire-* ‘to stand (of cattle, whipping away insects)’, *burži-* ‘to curl/coil’, *godir-* ‘to wind (of a river, road)’, *atir-* ‘to writhe, wind, wrinkle’, *ümeri-* ‘to curl/roll up’, *borsoi-* ‘to shrivel/shrink’, *xumiyi-* ‘to be/become wrinkled/warped’, *teži-* ‘to grow fat (of cattle)’, etc. (about 10 items).

4. Verbs expressing emotional, physiological and psychological states and their manifestations: *xeriülxe-* ‘to be angry’, *gaixa-* ‘to be surprised’, *ürge-* ‘to get frightened’, *šugši-* ‘to be depressed’, *enyeebxile-* ‘to smile’, *žarbai-* ‘to bare one’s teeth’, *xüxi-* ‘to make merry/rejoice’, *unta-* ‘to sleep’, *uxaa-* ‘to faint’, *šešer-* ‘to shiver’, *güregeše-* ‘to pulsate’, etc.; *xumxaar-* ‘to be down with a fever’, *šiizga-* ‘to have flux (of animals)’, *edege-* ‘to recover’, *xemšeerxe-* ‘to be shy’, *xürme-* ‘to be alert’, etc. (more than 55 items).

5. Verbs of rhythmic or chaotic motion: *bultagaša-* ‘to appear briefly (repeatedly)’, *darša-* ‘to crowd, jostle’, *tugšara-* ‘to bustle (during preparations)’, *boxino-* ‘to bustle/fuss’, *böögner-* ‘to pile up, swirl, gather/crowd’, *harxagana-* ‘to bustle (of sb large or sth spread

wide), *eti-* ‘to crowd (into a place to capacity)’, *iralta-* ‘to swarm (of water fowl)’, etc. (about 10 items).

6. Verbs denoting purposeful motion or change of position/posture, etc.: *sobxor-* ‘to jump’, *sogsogošo-* ‘to walk skipping’, *maryaa-* ‘to slink’, *alxa-* ‘to step, tread’, *oodor-* ‘to gallop’, *gešxel-* ‘to march’, *hüde-* ‘to work, move’, *übgegle-* ‘to kneel’, *huu-* ‘to sit down’, *matara-* ‘to bend/curve’, *düxi-* ‘to bend/stoop’, *dux-* ‘to bend, lower one’s head’, *begzi-* ‘to be stooping, to bend’, *büx-* ‘to be hunched/bent’, *hexere-* ‘to squat’, *muxari-* ‘to roll’, *xülyber-* ‘to flounder, overturn’, *yadai-* ‘to be turned up (of horns), lean/fold back’, etc. (about 45 items).

7. Verbs denoting other kinds of human activities: *šagaa-* ‘to look/peep’, *haamai-* ‘to gape (about)’, *xaza-* ‘to be given to biting; also to bite sb/sth’, *hoodoi-* ‘to swagger’, *samna-* ‘to dance’, *xaarata-* ‘to play cards’, etc. (about 10 verbs).

4.6 Other meanings

In contrast to the sociative and the comitative meanings, derivatives with the meanings discussed here are, as a rule, natural with a singular as well as with a plural subject. Unlike comitatives, they do not presuppose a second animate participant. They fall into a number of groups that differ semantically and syntactically. A derivative may enter into two groups depending on the nature of the derivational opposition. Some of the derivatives may be either anticausative or autocausative depending on the inanimacy/animacy of the subject referent.

The meanings of these derivatives can be subdivided as follows: (a) some of the meanings are similar to those of reflexive markers in other languages, e.g. in Russian, such as anticausative, autocausative, reflexive and “pleonastic use”; (b) some meanings coincide with those characteristic of *-lca/-lsa* derivatives in the Mongolic languages, viz. assistive and that of “attendant action”. There is one derivative with the converse meaning (often enough expressed by reflexive markers across languages) which has semantic parallels in Yakut.

The valency characteristics of these groups of derivatives can be summed up as follows: anticausatives, autocausatives and reflexives are intransitivized; “pleonastic” derivatives retain their intransitivity; the converse derivative retains transitivity and, lastly, the assistive meaning and that of “attendant action” entail valency increase, which is at least semantic in the latter case.

4.6.1 Anticausative

As anticausatives are derived from object-oriented lexical reciprocals and they are also lexical reciprocals, they are considered below in 14.2 where about 30 anticausatives are cited. Here is a list of anticausatives:

- | | | |
|---------------------------------------|---|--|
| (48) <i>büre-</i> ‘to make sth sour’ | → | <i>büre-lde-</i> ‘to become sour’ (L. 96) |
| <i>ünge-</i> ‘to rumple, crumple sth’ | → | <i>ünge-lde-</i> ‘to become crumpled’ (B.66) |
| <i>xoli-</i> ‘to mix sth’ | → | <i>xoli-ldo-</i> ‘to get mixed’ (L. 534) |

<i>xürme-</i> ‘to weave, interlace sth’	→	<i>xürme-lda-</i> ‘to become entangled’ (Bur2. 88)
<i>zalga-</i> ‘to join, add sth to sth’	→	<i>zalga-lda-</i> ‘to join, become coupled’ (Č. 247)
<i>zuura-</i> ‘to knead, mix sth’	→	<i>zaura-lda-</i> ‘to become sticky, viscid’ (L. 207).

- (49) a. *Bata toson-d čixer-iig muu xolyo-son.*
 B. butter-DAT sugar-ACC bad mix-PERF
 ‘Bat has mixed sugar and butter badly.’ (lit. ‘... sugar into butter.’)
 b. *Čixer toson muu xolyo-ldo-son.*
 sugar butter bad mix-REC-PERF
 ‘Sugar and butter got badly mixed.’

4.6.2 Autocausative

The following derivatives seem to be autocausative in meaning as they denote body moves:

- (50) *šaxa-* ‘to press sth’ → *šaxa-lda-* ‘to squeeze oneself (into sth)’ (Č. 724)
 ‘to jostle, be pressed in a crowd’
xabša- ‘to press/squeeze sth’ → *xabša-lda-* ‘to squeeze oneself (into sth)’ (Č. 528).
nyaa- ‘to glue sth to sth’ → *nyaa-lda-* ‘to press oneself to sb/sth’ (Č. 346)
oryoo- ‘to wrap sth up’ → *oryoo-ldo-* ‘to get wrapped/entangled’ (L. 307)
xürme- ‘to weave, interlace sth’ → *xürme-lda-* ‘to get entangled’ (Bur2. 88).
- (51) a. *Uran ... tende bai-han nege ala-han üxer-ei arxan coo*
 U. there be-PAST.PART one kill-PAST.PART bull-GEN skin in
oryoo-ld-ood lo xebt-ee (Bur2. 202)
 wrap.up-REC-CONV PRTL lie.DOWN-PAST
 ‘Uran got into the skin of the bull killed before and lay down.’
 b. *Arbalza arbalza-haar goloo taxa xürme-lda-š-oo bšii daa.* (Bur2. 88)
 flutter flutter-CONV quite weave-REC-INTS-PAST PRTL PRTL
 ‘[The spider] kept fluttering and got finally entangled [in the web].’

4.6.3 “Pleonastic” use of *-lda*

This is observed when the suffix *-lda* is used on intransitive base verbs, with a minimal change of meaning and retention of the single participant (with the exception of *zöörö-ldö-* which presupposes at least two participants). These are the following verbs (in the third derivative a non-standard change of the final root vowel takes place) which mostly denote motion without a noticeable change of place (the existence of a verb in *-ldo* which has no base verb is probably not accidental: *tereg onxo-ldo-w* ‘the cart overturned’ (L. 302)):

- (52) *arbai-* ‘to get spread out’ → *arbai-lda-* ‘to be spread out’ (Č. 56)
atir- ‘to writhe, twist’ → *atira-lda-* ‘to writhe, twist’ (Č. 64; Bur2. 14)
burši- ‘to be wrinkled’ → *burša-lda-* ‘to crumple’ (Č. 115)
eryye- ‘to turn round, spin’ → *eryye-lda-* ‘to turn’ (Č. 775; T.8)
toro- ‘to stumble’ → *toro-[so]-ldo-* ‘to stumble’ (Č. 431; T. 93)
urba- ‘to turn’ → *urba-lda-* ‘to turn, turn over’ (Č. 473)
zöörö- ‘to move near each other’ → *zöörö-ldö-* ‘to move near each other’ (L. 203, 202)
zuura- ‘to get smeared, soiled’ → *zuura-lda-* ‘to get smeared, soiled’ (Č. 265; T. 16).
 (vt ‘to mix, knead’)

4.6.4 Reflexive

The following derivative seems to have a reflexive meaning. An analogous lexical opposition with a reciprocal suffix is also attested in Tuvan (see Kuular, Ch. 27, §5.5.4); cf.:

- (53) *xööde-* ‘to smear/dirty sth/sb with soot/coal’
 → *xööde-lde-* ‘to smear oneself with soot/coal’ (Č. 593).

4.6.5 Converse

The following type of opposition also occurs in some other languages (cf. Yakut *atəla-* ‘to sell’ → *atəla-s-* ‘to buy’):

- (54) *zeelil-* ‘to lend sth to sb’ → *zeeli-lde-* (< **zeelil-lde-*) ‘to borrow sth from sb’ (Č. 275).

Derivations with the above five meanings have no correlates with the suffix *-lca/-lsa*, whereas the following two meanings are especially characteristic of *-lca/-lsa*.

4.6.6 Assistive

This meaning is characteristic of the suffix *-lca/-lsa* (see 8.3). The following example is the only one at our disposal:

- (55) *Bi esege-tei-ee tülyee asara-ld-aa-b.* (Cd. 114)
 I father-COM-REFL firewood bring-REC-PAST-1SG
 ‘I helped my father to bring the firewood.’

4.6.7 “Attendant” action

(56) is the only example at our disposal with a derivative in *-lda* that is assistive in meaning. As a rule, the assistive meaning is expressed by the suffix *-lca/-lsa* (see 8.3 below).

- (56) *Xün-ei mori asara-lda-ža yer-ee-b.* (S2. 241)
 someone-GEN horse bring-REC-CONV come-PAST-1SG
 ‘I also brought [for someone] someone else’s horse.’ (together with all other horses).

If we take into account the fact that two meanings comprise the polysemy of the comitative-sociative marker *-lca/-lsa* – assistive and that of ‘attendant action’, both very close to the comitative meaning, – we may draw a conclusion that its polysemy differs significantly from that of *-lda*.

The derivatives discussed in Section 4.6 can be supplemented by the following verbs with the meaning of competition which is mostly determined by the lexical meaning of the base verbs (the meaning ‘A overtakes B’ does not mean that A and B are competing: B may be simply running regardless of A): *ürdi-* ‘to outstrip, leave behind’ → *ürdi-lde-* ‘to compete, rival’ (Č. 512), *üdze-* ‘to see, look, try, put to the test’ → *üdze-lde-* ‘to compete in strength’ (also ‘to see each other’) (L. 475). The lexicalisation *ura-* ‘to tear; tear into parts’ → *ura-lda-* ‘to compete’, where it is hard to discern a semantic relation between the base verb and derivative, may also be entered here. This type of semantic change is typologically predictable, as it occurs in some other languages as well. The meaning of competition (= ‘to try to overcome each other’) can be expressed by *-lda* derivatives if the base verbs denote typically competitive actions; cf.: *güi-* ‘to run’ → *güi-lde-* ‘to race with

each other' (B. 67), *dawxi-* 'to gallop' → *dawxa-lda-* 'to compete in galloping', also 'to gallop together' (B. 67), *duula-* 'to sing' → *duula-lda-* 'to compete in singing', also 'to sing together' (B. 66).

4.7 Object-oriented constructions

A number of the derivatives listed in 4.4–4.6 may be used with causative suffixes to produce object-oriented constructions. A two-place anticausative may produce a three-place object-oriented reciprocal of joining which can be roughly synonymous to the base transitive; cf. (57a) and (57c). Such causative verbs of joining seem to be less productive in Mongolic than in some Turkic languages (see Nedjalkov, Ch. 28, §13; Kuular, Ch. 27, §8.4).

- (57) a. *xolbo-* 'to tie/join sth together' (Č. 579)
 b. *xolbo-ldo-* 'to be tied/joined' (Č. 579)
 c. *xolbo-ld-uul-* 'to tie/join sth together' (Č. 579).
- (58) a. *naa-* 'to paste (sth to sth)' (L. 256)
 b. *naa-lda-* 'to get pasted to sth (or together), stick to sth' (L. 255)
 c. *naa-ld-uul-* 'to paste sth to sth, or together' (L. 255).

Causatives derived from *-lda* forms are numerous in the dictionaries and they are rather frequent in both original texts and translations (see also Section 3.2.2). An example:

- (59) "Ene-l xübüün-tnai bult-iyye-tnai nyaa-ld-uul-ža bai-na." (Bur2. 214)
 this-PRTL guy-your all-ACC-your glue-REC-CAUS-CONV AUX-PRES
 'It is this guy here who glues together all your people [with a magic word].'

Sometimes, this results in interesting synonymy between a causative and a respective non-causative derivative. Thus, the causative form in (37b) does not differ significantly in meaning from (33b). Compare (60c) (in (60a, b) *-ee/-öö* is ACC.REFL; in (60b) *-üüd-* is PL):

- (60) a. *šüd-öö xabir-sa-lda-dža bai-na* (vi) 'his teeth are gritting' ("canonical")
 b. *šüden-üüd-ee xabir-sa-ld-uul-* (vt) 'to grit one's teeth' (Č. 526) (object-oriented);

thus:

- c. *xabir-* (vt) 'to grit ...' (=33a) = *xabira-lda-* (=33b) = *xabir-sa-ld-uul-* (60b).

(On the suffix *-sa-lda* see Section 5.)

4.8 *Nomina actionis*

Derivatives with other than reciprocal meanings can also be subject to nominalization; cf.:

- (61) *uila-* 'to sob' → *uila-lda-* 'to sob (of many)' → *uila-ld-aan* 'sobs (of many)' (L. 449)

Deverbal nouns derived from *-lda* forms are not uncommon in the dictionaries and texts. A sentential example:

- (62) ... *nüx-ed-ei-ny* *xüxyüün šuuya-ld-aan* *ba enyee-ld-een*. (T. 82)
 comrade-PL-GEN-POSS merry make.noise-REC-NR and laugh-REC-NR
 ‘[He heard] merry voices and laughter of his comrades.’

5. Reciprocals with the suffix *-ca-lda/-sa-lda*

In this section, we will consider the meanings of derivatives with the Khalkha suffix *-ca-lda* and Buryat *-sa-lda* (there are no analogous suffixes with the component *-lca/-lsa*, namely *-sa-lca/-sa-lsa*).⁶ They have the same meanings as derivatives in *-lda*, with the only difference that sociatives are less numerous among them. (They are cited above alongside *-lda* derivatives; see (60)).

1. *The reciprocal meaning.* Most of the registered reciprocals with this suffix denote violent or confrontational actions. Here are examples of (a) “canonical” and (b) “indirect” reciprocals:

- (63) a. *boho-so-ldo-* ‘to bark at each other, quarrel/squabble’ (Č. 107)
čix-ce-lde- ‘to push each other, jostle’ (L. 634)
daxa-sa-lda ‘to go together’ (Č. 189)
eryüü-se-lde- ‘to chase each other’ (Č. 775)
yobor-so-ldo- ‘to hit each other’ (Č. 226)
mörgö-cö-ldö- ‘to butt each other’ (B. 68)
namna-sa-lda- ‘to chase each other’ (Č. 321)
türi-se-lde- ‘to jostle each other, crowd’ (Č. 446)
xatxa-sa-lda- ‘to stab each other’ (Č. 531)
- b. *bulaa-ca-lda-* ‘to snatch sth from each other’ (L. 85)
čanga-ca-lda- ‘to draw/pull sth from each other’ (B. 66).

2. *The sociative meaning:*

- (64) *aba-sa-lda-* i. ‘to take/receive sth together with sb’, ii. ‘to squabble’ (Č. 21)
nölbo-so-ldo- ‘to spit (of many)’ (Č. 326).

3. *The anticausative meaning:*

- (65) *bari-* ‘to hold sth’ → *bari-sa-lda-* ‘to be connected/related’ (Č. 89)
oroo- ‘to wrap, wind round’ → *oroo-co-ldo-* ‘to entwine, get tangled’ (L. 307)
solbi-/solbi-co- ‘to cross (e.g. legs)’ → *solbi-co-ldo-* ‘to cross’ (vi) (L. 355)
ülxe- ‘to string sth, join’ → *ülxe-se-lde-* ‘to be tangled/joined’ (Č. 501)
xabir- ‘to rub sth against sth’ → *xabir-sa-lda-* ‘rub against each other’ (Č. 526)
xaša- ‘to press sth’ → *xaša-sa-lda-* ‘to cluster/be squeezed’ (Č. 556)
xoli- ‘to mix sth’ → *xoli-so-ldo-* ‘to get mixed’ (Č. 580).

6. This suffix existed in the language of the 14th century registered in the *Mukaddimat al-Adab dictionary* (published in Poppe 1938); cf. *mörgü-* ‘to butt sb’ → *mörgü-če-ldü-* ‘to butt each other’ (P. 240).

4. Lexicalized meanings

- (66) a. *aw-* 'to take, receive' → *aw-ca-lda-* 'to correspond to each other' (L. 20)
bulaa- 'to take away by force' → *bulaa-ca-lda-* 'to argue' (L. 85)
naimaa- 'to sell, trade' → *naimaa-sa-lda-* 'to bargain' (Č. 318)
oro- 'to enter' → *oro-so-ldo-* 'to interfere' (Č. 362)
tula- 'to resist, fight' → *tula-sa-lda-* 'to come to blows' (Č. 435)
tata- 'to pull, tear' → *tata-sa-lda-* 'to squabble' (Č. 412).

The lexicalized derivative in (66b) has a competitive meaning (and denotes a sports game).

- b. *Xoyor xīimūū-s deese čangaa-ca-lda-dža bai-na.*
 two man-PL rope.NOM pull-REC-CONV AUX-PRES
 'Two men are competing in pulling a rope.' (= 'pulling each to himself').

All the verbs in *-ca-lda* seem to have parallel synonymous forms in *-lda*; some have parallel forms in *-ca*; at least one verb has four parallel forms. In one case, the dictionary registers only derivatives in *-ca* and *-ca-lda*, derivatives in *-lda* being absent (probably by accident; see (67b)). The overall view in this respect is varied. Compare:

- (67) a. *bulaa-ca-lda-* 'snatch sth from each other' = *bulaa-lda-* (L. 85)
yobor-so-ldo- 'to fight, hit each other' = *yoboro-ldo-* (Č. 226)
oroo-co-ldo- 'to entwine, get tangled' = *oroo-ldo-* (L. 307)
xatxa-sa-lda- 'to stab each other' = *xatxa-lda-* (Č. 531)
xarga-ca-lda- 'to collide, be in conflict' = *xarga-/xarga-lda-/xarga-ca-* (L. 515)
xoly-co-ldo- 'to get mixed' = *xoly-co-/xoli-ldo-* (L. 534)
 b. *sörgö-cö-ldö-* 'to act against each other' = *sörgö-cö-* (L. 360).

Deverbal nouns are derived from verbs in *-ca-lda* as well as from verbs in *-lda* (cf. (38)):

- c. *aw-* 'to take' → *aw-ca-lda-* 'to correspond to each other' → *aw-ca-ld-aa* 'coordination' (L. 20).

6. The suffix of subject plurality, iterativity and imitativity *-cгаа/-сagaa*

In connection with the meaning of subject plurality encoded by *-lda* it is expedient to discuss the synonymous suffix *-cгаа*. This marker related to the suffix *-čaya/-čege* of Written Mongolian (see Poppe 1954:63) denotes actions performed by many actors. Vladimir-cov (1929:233) asserts that the latter suffix expresses simultaneity of actions, joint action and iterativity. In a paper concerned with this suffix specifically, the author (Shevernina 1985:142) argues that its meaning can best be expressed by words like 'all together', 'all', 'all simultaneously' (she draws special attention to the use of this suffix in 1PL and 2PL imperative forms). Shevernina (1985:141) claims that in Modern Khalkha Mongol this suffix is used only if the subject is animate. In this respect it is similar with the suffix *-lca*. Exceptions may be instances when the subject is presented as animate; cf. (69c).

Here are examples from Modern Khalkha for the suffix *-cгаа/-cгее/-cгөө/-cгөө* (and Buryat *-sагаа/-seгее/-sоgоо*) which, as Sanzheev (1960:66) claims, combines the meanings of weakened iterativity and subject plurality and imitativity:

- (68) a. *bič-* ‘to write’ → *bič-cгее-* i. ‘to write from time to time’
 ii. ‘to write (of many agents)’
 b. *бууд-* ‘to shoot’ → *бууд-cгаа-* i. ‘to shoot from time to time’
 ii. ‘to shoot (of many)’ (S1. 66)
 c. *xарaa-* ‘to scold’ → *xарaa-sагаа-* i. ‘to scold mildly from time to time’
 ii. ‘to pretend to be scolding’ (Cd. 123)
 d. *yаwа-* ‘to walk, drive’ → *yаw-cгаа-* ‘to walk, drive’ (of many)’ (L. 689).

This suffix may co-occur with *-lda* in the sense ‘(of) many’ on the same verb; cf.:

- (69) a. *enyeе-seгее-lde-* ‘to laugh softly from time to time (of many)’ (Č. 767)
 b. *doxi-sоgоо-lдо-* ‘to bow repeatedly (of many)’ (Č. 198)
 c. *emni-seгее-lde-* ‘to twinkle repeatedly (of many stars)’ (Č. 765).

Derivatives in *-cгаа* can be formed from any verbal stem and they are quite widely used. Sanzheev (1963:66) argues that these derivatives are in the process of losing their aspectual meaning and beginning to be used to indicate an action of many participants thus evolving into a plural form.

7. Sociatives and comitatives with the suffix *-lca/-lsa*

7.1 Introductory

The preliminary quantitative characteristics that follow are approximate; they are meant to give a general idea of the number of reciprocals and sociatives among *-lsa* derivations. We are aware that the differences in their number may be to a certain degree accidental.

In the *Buryat-Russian Dictionary* (Č.), about 215 derivatives with the suffix *-lsa* are registered. Of this number, 10 are derived from lexical comitatives and sociatives; the meaning of 15 more derivatives is not quite clear. As mentioned above, this suffix may mark both the sociative and the reciprocal meaning. With regard to the meanings expressed, three sets of derivatives may be distinguished.

- Group A: derivatives that are only sociative in meaning. They derive mostly from transitive verbs taking an inanimate object (cf. *hürile-lse-* ‘to stack (hay) together’, *üsxеberilse-* ‘to grow sth together’) and from one-place intransitives (cf. *sayla-lsa-* ‘to drink tea together with sb’).
- Group B: derivatives that are, as a rule, reciprocal in meaning, and their sociative interpretation is probably possible but pragmatically unlikely; cf. *durla-lsa-* ‘to love each other’ (the interpretation ‘to love someone together’ is possible but pragmatically the situation is not common); *mendešele-lse-* ‘to greet each other’ also belongs here. The base verbs take a human object.

- Group C: derivatives that allow both interpretations, though one of the meanings may be prevalent (the native speakers' choice may differ in these cases); cf. *uri-lsa-* i. 'to invite sb together', ii. 'to invite each other'. Sometimes, the dictionaries give both meanings (in Č., there are approximately 10 such verbs; cf. (77)). Their reciprocal or sociative interpretation is determined by the syntactic structure of the construction; if there is an object the reading is sociative and the absence of an object determines the reciprocal reading; cf. *Ted Bat-iig ala-lsa-w* 'They together killed Bat' – *Ted ala-lsa-w* 'They killed each other'.

Among the 215 derivatives in *-lsa*, the verbs with the sociative meaning in groups A and C number about 120 of which 25 are derived from one-place intransitives (see (72)); at least 25 derivatives among them are also ascribed the assistive meaning in the dictionary (see (82)–(83)).

In groups B and C, there are 70 derivatives with the reciprocal interpretation (see 8.2).

7.2 Sociative derivation from causatives

As mentioned, the suffix *-lda* does not combine with causatives with the most productive suffix *-uul*, whereas the suffix *-lca/-lsa* may be used on causatives in *-uul*.

- (70) a. *oirto-* 'to approach sb/sth' → *oirto-uul-* 'to draw sb/sth nearer' → *oirto-uula-lsa-* 'to draw sb/sth nearer together' (Č. 352)
 b. *ološor-* 'to increase' (vi) → *ološor-uul-* 'increase sth' → *ološor-uula-lsa-* 'to increase sth together' (Č. 355).

Less frequently than with derivatives in *-uul*, *-lca/-lsa* combines with causatives in *-lga/-lge* (see (87) below).

7.3 Expression of the participants in sociative constructions

Judging by the explanations of derivatives with the suffix *-lca/-lsa* in the literature, they seem to be less frequent in the sociative meaning, with all the participants named by the subject (71a, b), than in the comitative meaning, when the second participant is not expressed by the subject. Since both types of constructions easily transform into one another, the suffix *-lca/-lsa* may be termed sociative-comitative and the term 'sociative' may be used as a cover term for both meanings. In the latter case we observe a broad variety in the expression of this participant (it may also remain implicit):

- 1) by the comitative case form (71c, d); a comitative noun phrase may be distanced from the noun phrase denoting the first participant (71f);
- 2) by the instrumental case form (71e),
- 3) by various lexical means in the same clause (71h, i, j),
- 4) by the broader context (71k, l, m, n) (see Sanzheev 1960:65, 1962:239).

According to Sanzheev (1960:65), this suffix indicates that the subject referent is a co-participant of an action whose main agent or initiator is another person named by a noun

phrase in the comitative case form. Moreover, this main participant may remain without explication, but even then it is unambiguously implied by the sociative form. Not infrequently, the subject referent does not perform an action simultaneously with the co-agent but repeats the action already performed by the latter (cf. ‘also’ and ‘too’ in the translation of (71j, l, m) and ‘after him’ in the translation of (71h)); thus the meaning ‘together’ subsumes successive actions as well. Generally, as mentioned, the sociative meaning is expressed more distinctly by *-lca/-lsa* than by *-lda*.

- (71) a. *Axa-nar-iny gaixa-lsa-ba.* (Bur3. 340)
 older.brother-PL-his be.surprised-SOC-PAST
 ‘His older brothers were surprised.’
- b. *“Bide tani xara-ls-aad bai-xa-bdi.”* (Bur2. 110)
 we you.PL take.care.of-SOC-CONV AUX-PART-1PL
 ‘We shall take care of you.’
- c. *Dorži esege-tei gazaa gara-lsa-ba.* (S2. 239)
 D. father-COM outside go.out-SOC-PAST
 ‘Dorji together with his father went out into the street.’
- d. *“Ši nam-tai yaba-lsa.”* (Bur2. 102)
 you.SG I-COM go-SOC-IMP
 ‘Go with me.’
- e. *Ši bidener-eer ošo-lso.* (S2. 239)
 you.SG we-INST set.out-SOC
 ‘You, set out with us.’
- f. ... *tan-tai xamta yaba-lsa-han exener xelexe.* (T. 13)
 2PL-COM together walk-SOC-PART woman tell-FUT
 ‘... the woman who had walked together with you will tell [you].’
- g. *Yaba-han teeše-š yaba-lsa-xa-b.* (Č. 793)
 go-PART direction-2SG go-SOC-FUT-1SG
 ‘I will go in the same direction as you went.’
- h. *Parxai ... xoino-hoo-ny gara-lsa-ba.* (Cd. 109)
 P. behind-ABL-his go.out-SOC-PAST
 ‘Parxai went out *after him*.’
- i. ... *ünegen šono xoyor-oo xažuu-da yaba-lsa-na.* (Bur2. 36)
 fox wolf two-REFL side- go-SOC-PRES
 ‘...[the hare] goes side by side *with the fox and wolf*.’
- j. *Dorži oiro-ny zogso-n xara-lsa-ba.* (S2. 239)
 D. near-his stop-CONV read-SOC-PAST
 ‘Dorji stopped *next to him* and *also* began reading.’
- k. *Bi ošo-žo huu-lsa-xa-m.* (Bur2. 100)
 I go-CONV sit-SOC-FUT-1SG
 ‘I’ll go and sit (together with them).’
- l. *“Xara-lsa-d geerei!”* (Č. 551)
 see-SOC-PL IMP
 ‘You *too*, look [at it]!’
- m. ... *hamg-iye-ny una-gaa-ža, ööröö Možogor una-lsa-ba.* (Bur3. 222)
 wife-ACC-his fall-CAUS-CONV himself M. fall-SOC-PAST
 ‘(The camel) having thrown off his wife, Mozhogor himself *also* fell down.’

- n. *Xuraḡša-d-Ø... xüdelmeriše-d-öör žel büri übhe-Ø xuryaa-lsa-dag.* (Cd. 109)
 pupil-PL-NOM worker-PL-INST year every hay-NOM make-SOC-ITER
 ‘Every year the pupils take part in making hay together with the workers.’

Sentence (71n) contains the plural subject and can be interpreted as sociative, like (71a) and (71b). But the author of the paper from which this example is borrowed, being a native speaker, interprets it as comitative, i.e. the plural subject figures as a single collective participant. This implies that such derivatives are comitative rather than sociative.

The sociative meaning can also be expressed by the adverb *xamta* ‘together’; e.g. *xamta xüdel-* ‘to work together’. The homonymous postposition *xamta* marks a comitative group (see (46) above).

7.4 Subject-oriented constructions

Object-oriented constructions are briefly considered in Section 9.

7.4.1 Derived from intransitives

As mentioned above, the lexical range of sociatives in *-lca/-lsa* is different from that of sociatives in *-lda* (cf. 4.5). In the dictionaries these *-lca/-lsa* sociatives are usually translated with the help of phrases ‘together with sb’, ‘with sb’, very seldom ‘of many’. Thus, the sociative meaning is more distinct in *-lca/-lsa* forms than in those with *-lda*.

(72) <i>bazarla-</i> ‘go to the market’	→	<i>bazarla-lsa-</i> ‘to go to the market together’ (Č. 77)
<i>bai-</i> ‘to be/be present’	→	<i>bai-lca-</i> ‘to be present/be together’ (L. 57)
<i>buuda-</i> ‘to shoot’	→	<i>buuda-lsa-</i> ‘to take part in shooting’ (Č. 117)
<i>enyee-</i> ‘to laugh’	→	<i>enyee-lse-</i> ‘to laugh together with sb’ (Č. 767).
<i>ire-</i> ‘to arrive’	→	<i>ire-lce-</i> ‘to arrive together’ (L. 222)
<i>yaw-</i> ‘to go/walk’	→	<i>yawa-lca-</i> ‘to go/walk together’ (L. 688)
<i>oro-</i> ‘to enter’	→	<i>oro-lso-</i> i. ‘to enter together’ ii. ‘to take part in sth with sb’ (Č.361)
<i>ošo-</i> ‘to walk/go’	→	<i>ošo-lso-</i> ‘to walk/go together with sb’ (Č. 366)
<i>saila-</i> ‘to drink tea’	→	<i>saila-lsa-</i> ‘to drink tea together with sb’ (Č. 383)
<i>suu-</i> ‘to sit’	→	<i>suu-lco-</i> i. ‘to sit together’ ii. ‘to be present at a meeting’ (L. 366)
<i>xiy-</i> ‘to work’	→	<i>xiy-lce-</i> ‘to work together’ (L. 524).

7.4.2 Derived from transitives

In the *Buryat-Russian Dictionary* (Č.), intransitive *-lda* sociatives are 22 times more numerous than transitive sociatives (220 and 10 derivatives respectively; see 4.5), while among derivatives in *-lsa* intransitive sociatives are about 5 times less numerous than transitive sociatives (25 and 120 respectively). We may discern a tendency towards the complementary distribution of both suffixes relative to the transitivity/intransitivity when used in the sociative meaning. This may be due to variation within the sociative meaning.

Here is a list of Buryat transitives in *-lsa* and Khalkha transitives in *-lca* translated in dictionaries by means of the words ‘together’ and ‘participate (in the main action)’.

(73) <i>ala-</i> ‘to kill sb’	→	<i>ala-lsa-</i> ‘to kill sb together’ (Č. 39)
<i>amtala-</i> ‘to try/taste sth’	→	<i>amtala-lsa-</i> ‘to try/taste sth together’ (Č. 50)
<i>asara-</i> ‘to bring sth’	→	<i>asara-lsa-</i> ‘to bring sth together with sb’ (Č. 63)
<i>baiguula-</i> ‘to build sth’	→	<i>baiguula-lsa-</i> ‘to participate in building sth’ (Č. 77)
<i>ceverle-</i> ‘to clean sth’	→	<i>ceverle-lce-</i> ‘to clean together sth’ (L.619)
<i>cutga-</i> ‘to pour sth’	→	<i>cutga-lca-</i> ‘to pour sth together’ (L.616)
<i>dara-</i> ‘to press/squeeze sth’	→	<i>dara-lsa-</i> ‘to participate in pressing sth’ (Č. 187)
<i>haišaa-</i> ‘to approve of sth’	→	<i>haišaa-lsa-</i> ‘approve (of many/together)’ (Č. 667)
<i>hunga-</i> ‘to elect sb’	→	<i>hunga-lsa-</i> ‘to participate in elections’ (Č. 689)
<i>yari-</i> ‘to speak to/tell sb’	→	<i>yari-lsa-</i> ‘to speak with sb’ (Č. 802)
<i>nexe-</i> ‘to chase sb’	→	<i>nexe-lse-</i> ‘to chase sb together’ (Č. 341)
<i>oruula-</i> ‘to bring/let sb in-side’	→	<i>oruula-lsa-</i> ‘to do one’s bit (= participate)’ (Č. 363)
<i>örgö-</i> ‘to lift sth’	→	<i>örgö-lcö-</i> ‘to lift sth together’ (L. 328)
<i>saxi-</i> ‘to keep/take care of’	→	<i>saxi-lsa-</i> ‘to keep/take care of sth together’ (Č. 387)
<i>šara-</i> ‘to fry/bake sth’	→	<i>šara-lsa-</i> ‘(of many) to fry/bake sth’ (Č. 721)
<i>ugaa-</i> ‘to wash sth’	→	<i>ugaa-lca-</i> ‘to wash sth together’ (L. 446)
<i>ugta-</i> ‘to meet/expect’	→	<i>ugta-lsa-</i> ‘meet sb together/take part in a meeting’ (Č. 462)
<i>uya-</i> ‘to tie sth’	→	<i>uya-lca-</i> ‘to tie sth together’ (L. 472)
<i>zaabaril-</i> ‘to teach sb’	→	<i>zaabari-lsa-</i> ‘to teach sb together’ (Č.239)
<i>xai-</i> ‘to clip/trim/square sth’	→	<i>xai-lsa-</i> ‘(of many) to square/plane’ (Č. 534)
<i>xaya-</i> ‘to throw sth’	→	<i>xaya-lca-</i> ‘to throw sth together’ (L. 523)
<i>xalxala-</i> ‘to bar/block sth up’	→	<i>xalxala-lsa-</i> ‘participate in protecting sb/sth’ (Č. 540)
<i>xaraa-</i> ‘to scold sb’	→	<i>xaraa-lca-</i> ‘to scold sb together’ (L.513)
<i>xasa-</i> ‘to cut sth down’	→	<i>xasa-lca-</i> ‘to cut sth down together’ (L. 519)
<i>xöö-</i> ‘to pursue/drive away’	→	<i>xöö-lcö-</i> ‘to pursue/drive sb away together’ (L. 553)
<i>xüre-</i> ‘to reach/achieve sth’	→	<i>xüre-lse-</i> ‘to reach/achieve sth together’ (Č. 628)
<i>xürge-</i> ‘to supply sth’	→	<i>xürge-lse-</i> ‘supply together, take part in supplying’ (Č. 625)
<i>xüdüülüül-</i> ‘to bury sb’	→	<i>xüdüülüüle-lse-</i> ‘to participate in a funeral’ (Č. 612).

8. Non-sociative meanings of the suffix *-lca/-lsa*

8.1 Overlap of meanings of the suffixes *-lda* and *-lca/-lsa*

The interchangeable use of *-lda* and *-lca/-lsa* on some verbs in various Mongolic languages has been repeatedly pointed out (Bobrovnikov 1849:127; Amogolonov 1958:198; Sanzheev 1963:59–61; Dondukov 1964:148–50; Cydendambaev 1979:111–5; Doraeva 1983:202–4; Sechenbaatar 2003:121). It has also been pointed out that *-lda* has the sociative meaning (though seldom on transitive stems, see 4.3) alongside the reciprocal one. On the other hand, the suffix *-lca/-lsa* may encode the reciprocal meaning alongside the comitative/sociative. Not infrequently, the same verb stem may take on both suffixes, the derivatives being synonymous, judging by the dictionary explanations.

It has been claimed that this overlap of the meanings of the two suffixes is increasing in the modern Mongolic languages, though it occurred as early as in the texts of the 13th century (Sanzheev 1963:61). It is significant in this respect that Monguor has retained the suffix *-lde* as the only marker of both reciprocal and sociative meanings, while Dagur, on the contrary, has retained the suffix *-lči* for both of these functions (see Todaeva 1973: 102–3, 1986:60; Sanzheev 1963:63).

Bobrovnikov (1849: 127) explains an overlap of meanings of both markers as follows (our terminology is used in the translation): “a sociative verb may replace a reciprocal one. It depends on the choice of the speaker when he disregards the fact that the action of two items is directed at one another and notes only that they perform the same action. This is the reason why these two voices are often used indiscriminately”.

There is an opinion concerning the suffixes *-lda* and *-lca* that “[in] most of the relevant examples the two suffixes are interchangeable” (Sechenbaatar 2003:121). It seems to us that this assertion is too rigid. Sechenbaatar says that there are verbs that combine with *-lca* only and exemplifies it with the verb *tani-lca-* ‘to get acquainted’ in which *-lca* is not replaceable with *-lda* (2003:121–2; see also example (7) above). Above, we mentioned a verb on which *-lda* is not replaceable with *-lca* (see 4.5). Moreover, some verbs have preferences for one or the other suffix for the expression of one or another meaning. For instance, in Buryat, there are synonymous verbs *xööre-* and *duugara-* ‘to speak’ (Č. 594, 205). Notably, in the translation from Russian (T.) the reciprocal derivative of the former verb *xööre-lde-* occurs 54 times and the form *xööre-lce-* is not used a single time. As to the second verb, its reciprocal derivative occurs as *duugara-lca-* 7 times and never as *duugara-lda-*. There are also other instances of similar mysterious selectivity.

8.2 Reciprocal

When used in the reciprocal sense, derivatives in *-lca* decrease valency similarly to derivatives in *-lda*:

- (74) a. *Cecegmaa namaig tan-aad xeden džil bol-loo.*
 C. I.ACC recognize-CONV several year become-PAST
 ‘Several years have passed since C. got acquainted with me.’
 b. *Cecegmaa bid xoyor tani-lc-aad xeden džil bol-loo.* (O. 122)
 C. I two recognize-SOC-CONV several year become-PAST
 ‘Several years have passed since C. and I got acquainted.’

One more example with two reciprocals in *-lca*:

- c. *Ši bide xoyor üze-lse-ye, ala-lca-ya!* (Bur1. 196)
 you we two try-SOC-IMP kill-SOC-IMP
 ‘You and me, the two of us, let’s [test each other] try and kill together!’

In the *Buryat-Russian Dictionary*, among 70 derivatives with the reciprocal meaning there are 20 with the reciprocal pronoun *beye beye-*; see (95), (98), (101), (102b), (103b, c).

8.2.1 “Canonical” reciprocals

(75) is a list of some Buryat and Khalkha derivatives in *-Isa/-Ica* of two-place transitives and two-place intransitives registered in the dictionaries as semantically reciprocal (the meaning of the underlying verbs is included in that of the derivatives).

(75) <i>ala-Ica-</i>	‘to kill each other’ (ČR. 15)
<i>cusla-Ica-</i>	‘to hit each other until blood appears’ (L. 616)
<i>durla-Isa-</i>	‘to love each other’ (Č. 203)
<i>emni-Ise-</i>	‘to wink at each other’ (Č. 765)
<i>erxelüü-Ise-</i>	‘to caress each other’ (Č. 773)
<i>etige-Ise-</i>	‘to trust each other’ (Č. 777)
<i>gete-Ise-</i>	‘to stare at each other’ (Č. 173)
<i>guugala-Ica-</i>	‘to call to one another’ (L. 128)
<i>yari-Ica-</i>	‘to speak with each other, converse’ (L. 696)
<i>nenge-Ise-</i>	‘to lean against each other’ (Č. 339)
<i>mendešele-Ise-</i>	‘to greet each other’ (Č. 312)
<i>nyudara-Isa-</i>	‘to push each other’ (Č. 342)
<i>süüdle-Ise-</i>	‘to be at law with sb’ (Č. 399)
<i>šalga-Isa-</i>	‘to check each other’ (Č. 716)
<i>tiberi-Ice-</i>	‘to embrace each other’ (ČR. 363)
<i>uyalgal-Ica-</i>	‘to oblige each other’ (Č. 486)
<i>ünerde-Ise-</i>	‘to sniff at each other’ (Č. 509)
<i>xaira-Isa-</i>	‘to kick each other’ (Č. 534)
<i>xaraa-Isa-</i>	‘to curse each other’ (Č. 588)
<i>xele-Ice-</i>	‘to speak with each other, converse’ (L. 587)
<i>xorgodo-Iso-</i>	‘to hide from each other’ (Č. 588)
<i>xyuda-Isa-</i>	‘to exterminate each other’ (Č. 655–6)
<i>xüindele-Ise-</i>	‘to respect each other’ (Č. 623)
<i>zala-Isa-</i>	‘to invite each other’ (Č. 246)
<i>zulgaa-Isa-</i>	‘to tug at each other’ (Č. 261).

This list of reciprocals in *-Ica/-Isa* can be augmented by a number of similar derivatives for which we find, occasionally, parallel synonymous same-stem counterparts in *-Ilda* with the reciprocal meaning (as their only meaning or one of the meanings) in dictionaries.

(76) a.	<i>asuu-</i>	‘to ask sb’
	<i>asuu-Isa-</i>	‘to ask each other’ (Č. 63).
	<i>assu-Ilda-</i>	‘to ask each other’ (Č. 63)
b.	<i>bari-</i>	i. ‘to grasp/take’, ii. ‘to hold’
	<i>bari-Isa-</i>	i. ‘to hold/grasp/catch each other’
	<i>bari-Ilda-</i>	ii. ‘to hold on to each other, grapple’ (Č. 88).
		i. ‘to grasp each other, wrestle/compete in wrestling’
		ii. ‘to be joined/draw together’ (Č. 88)
c.	<i>buuda-</i>	‘to shoot’
	<i>buuda-Ica-</i>	i. ‘to exchange fire’, ii. ‘to shoot together’ (L. 90).
	<i>buuda-Ilda-</i>	i. ‘to exchange fire’ (L. 90), ii. ‘to shoot (of many)’ (Č. 117)

- d. *nyudara-* 'to beat/push'
nyudara-lsa- 'to push each other' (Č. 342).
nyudara-lda- 'to fight/beat each other' (Č. 342)
- e. *tani-* 'to recognize'
tani-lsa- 'to get acquainted' (Č. 414).
tani-lda- 'to get acquainted' (Č. 414)
- f. *tülx-* 'to push'
tülx-lce- i. 'to push/jostle each other', ii. 'to push sb together' (L. 431).
tülx-lde- 'to push/jostle each other' (L. 431)
- g. *üdze-* i. 'to look', ii. 'to taste/try'
üdze-lce- i. 'to look over each other' (L. 478)
ii. 'to see/meet each other' (L. 478).
üdze-lde- i. 'to wrestle/compete/compete in strength'
ii. 'to see/meet each other'
- h. *ünse-* 'to kiss (only relatives)'
ünse-lce- 'to kiss each other' (Cdn. 69).
ünse-lde- 'to kiss each other' (Cdn. 69).

The dictionaries register a number of derivatives in *-lca/-lsa* (including those from two-place intransitives, like (77b)) with both sociative and reciprocal meanings (this applies to some derivatives in *-lca/-lsa* in (75) and (76); see, for instance, (76f)):

- (77) a. *biči-* 'to write'
biči-lce- i. 'to write together', ii. 'to write to each other' (L. 71)
- b. *yaba-* 'to go to sb, etc.'
yaba-lsa- i. 'to go together', ii. 'to go to each other' (Č. 793)
- c. *mede-* 'to know, learn'
mede-lse- i. 'to learn sth together', ii. 'to exchange information' (Č. 310)
- d. *tuhala-* 'to help'
tuhala-lsa- i. 'to help together', ii. 'to help each other' (Č. 439)
- e. *uri-* 'to invite'
uri-lsa- i. 'to invite sb together', ii. 'to invite each other' (Č. 476)
- f. *xarwa-* 'to shoot arrows'
xarwa-lca- i. 'to shoot arrows together', ii. 'to shoot arrows at each other' (L. 515).

Note that in Mongolic languages there are set phrases comprised of two synonymous verbs. Below are two such sets derived from synonyms, with different suffixes in (78a) and with the same suffix in (78b):

- (78) a. *ugta-lsa-n zolgo-lde-* i. 'to meet each other'
ii. 'to greet each other with both hands' (Č. 255)
- b. *xari-lca-n ala-lca-* lit. 'to kill each other exterminating each other' (ČR. 349).

8.2.2 "Indirect" reciprocals

We have encountered only four verbs which can be regarded as "indirect", on condition that they are used with a direct object; the verb *xubaa-* 'to divide/distribute' is a lexical reciprocal and is entered in this type with reservations.

- (79) a. *xaya-* ‘to throw sth to sb/somewhere’
xaya-lsa- ‘to throw sth to each other’ (Č. 567)
 b. *aba-* ‘to get/take sth (e.g. *bešeg* ‘letter’) from sb’
aba-lsa- ‘get/take sth from each other’; cf. *bešeg aba-lsa-* ‘correspond’ (Č. 20)
 c. *hugala-* ‘to snatch sth from sb’
hugala-lsa- ‘to snatch sth from each other’ (Č. 687)
 d. *xubaa-* ‘to divide/distribute’
xubaa-lsa- ‘to divide sth among themselves’ (Č. 595; see also (26) above).

8.2.3 “Possessive” reciprocals

In contrast to “indirect” reciprocals, this type is represented by a significant number of examples; they are peculiar in that the direct object has reflexive-possessive marking and denotes inalienable possession. Object doubling is characteristic of these reciprocals: it occurs in almost all the examples at our disposal; cf.:

- (80) a. *dosoo dosoo-xy-öö taa-lsa-* (Č. 197, 406)

 chop-SOC-CONV AUX-PAST
 ‘[They]... butting each other, broke each other’s horns into smithereens.’

8.3 Assistive

This meaning is a natural extension of the comitative meaning: if a person performs an action (especially a transitive one) with someone else s/he often assists the latter. This meaning is mostly realized if the subject is singular. The person who receives assistance is expressed (a) by the dative-locative case (81a), or (b) by the genitive denoting the possessor of the object referent (81b, c) or by the possessive suffix (see (6)). In case (b) the comitative interpretation is also possible (see (81c)). The person receiving help may remain unnamed (81d), though it may be implied unambiguously (81e).

- (81) a. *Nad awaači-lca-dž ög-ööč!* (L. 17)
I.DAT carry-SOC-CONV O.BEN-IMP.2SG/PL
'Help me to carry this, please!'

'My younger brother, help the eldest brother to do work.'
- c. *Bat Dordži-in ger-iig bari-lca-na.*
B. D.-GEN jur-t-ACC rig.up-SOC-PRES
i. 'Bat will help to rig up Dorji's jur-t.'
ii. 'Bat will rig up Dorji's jur-t with someone else (possibly with Dorji himself).'
- d. *Bidener tülee xaxa-lsa-xa-bdi.* (S2. 243)
we firewood.ACC chop-SOC-FUT-1PL
'We shall help [sb else] to chop the firewood.'
- e. ... *eseg-ei-ny boro moryn-iiny teden-ee yexe*
father-GEN-their grey horse-his they-ACC.REFL big
bol-go-ls-oo. (Bur1. 142)
get-CAUS-SOC-PAST
'... their father's grey horse helped them to grow up.'

The following is a list of verbs in *-lsa* which are ascribed only the assistive meaning in the *Buryat-Russian Dictionary*; nevertheless, all of them could be entered in (83), though the sociative meaning is not indicated in the dictionary.

- (82) *bulaa-lsa* 'to help sb take sth away from sb' (Č. 112)
duuha-lsa 'to help finish sth' (Č. 206)
orxi-lso 'to help throw sth out' (Č. 364)
tee-lse 'to help load sth' (Č. 460)
xaxa-lsa 'to help chop (e.g. firewood)' (Č. 563)
zühel-se 'to help cut sth' (Č. 234).

Many of these Buryat verbs are ascribed a second, sociative or comitative meaning (because, as mentioned, joint action often implies help pragmatically). Restrictions seem to be of pragmatic nature.

- (83) part in hunting' (Cd. 110)
- | | | |
|----------------------|-------------------------------|---|
| <i>agna-lca-</i> | i. 'to help hunt sb' | ii. 'to take' |
| <i>aršala-lsa-</i> | i. 'to help save sb' | ii. 'to take part in saving sb' (Č. 61) |
| <i>ašaala-lsa-</i> | i. 'to help load sth' | ii. 'to take part in loading sth' (Č. 67) |
| <i>bodxoo-lso-</i> | i. 'to help lift/pick sth up' | ii. 'to build together' (Č. 98) |
| <i>elirüüle-lse-</i> | i. 'to help find sth out' | ii. 'to find out together' (Č. 762) |
| <i>yabuula-lsa-</i> | i. 'to help send sth' | ii. 'to take part in sending' (Č. 794) |
| <i>yuule-lse-</i> | i. 'to help pour sth' | ii. 'to pour sth together' (Č. 383) |
| <i>malta-lsa-</i> | i. 'to help dig sth' | ii. fig. 'to pick at each other' (Č. 291) |
| <i>namna-lsa-</i> | i. 'to help pursue/chase sb' | ii. 'take part in pursuing/chasing' (Č. 321) |
| <i>soxi-lso-</i> | i. 'to help beat sb' | ii. 'to beat sb/raid sth together' (Č. 393) |
| <i>šenžele-lse-</i> | i. 'to help investigate sth' | ii. 'to take part in an investigation' (Č. 747) |
| <i>šiidxe-lse-</i> | i. 'to help solve sth' | ii. 'to take part in solving' (Č. 726) |
| <i>tata-lsa-</i> | i. 'to help pull sth' | ii. 'to pull together' (Č. 412) |
| <i>xama-lsa-</i> | i. 'to help sweep sth' | ii. 'to sweep together' (Č. 542) |
| <i>zöö-lse-</i> | i. 'to help carry sth' | ii. 'to carry together' (Č. 259). |

8.4 “Attendant” action

This meaning is an extension of the comitative meaning: in the case of the comitative meaning A acts together with B, and in the case of the “attendant” action (a) the agent performs action A alongside (“together”) with action B (84a, b), or (b) the agent performs the same action on object B as well as (“together”) on object A (84 c, d, e). In other words, the suffix *-lsa* denotes that (a) the action itself is attendant upon another, i.e. performed along with another action, or (b) the object is “attendant”, which means that the subject referent took the boots along with other things which were the main object of his action (Sanzheev 1960:65). The subject referent in sentences (84) “himself is the initiator and only performer of the action” (Sanzheev 1962:239), and the object referent is inactive.

- (84) a. *Gol tiíše yawa-x-d-aa mory-oo xara-lc-aarai.* (S1. 65)

 ‘[They] fear not only their ataman (A) but also Dorji (B).’

- e. *Eji tan-da yüme aba-lsa-nxai* (Ld. 109)
 mother YOU.PL-DAT thing get-SOC-PAST
 ‘Mother has bought things (B) for you too [together with things (A) for someone else].’

In the actions described in (85a, b), an affinity to the meaning of “attendant action” and/or to the comitative meaning can be discerned in that the subject referent involves the object referent in being with him, or in an action he is going to perform:

- (85) a. *Ene exe-yee aba-ls-aad ošo-bo.* (Č. 20)
 this mother-ACC.REFL take-SOC-CONV go.away-PAST.3SG
 ‘He went away taking his mother with him.’
 b. *Namay-aa yüünd abaaša-lsa-n-güi ošo-bo geeše-b?*
 I-ACC why take.with.oneself-SOC-CONV-NEG go.away-PAST PRTL-PRTL
 ‘Why did he go away without taking me with him?’ (Č. 19).

The derivatives listed may have other meanings as well; cf., for instance *xara-lca-* in (80b) and *aba-lsa-* in (79b) and (80d).

9. Object-oriented constructions

Derivatives with the sociative meaning can be causativized, in principle. The following is an example of a causative derivation (with an assistive meaning) from a sociative form which in turn is derived from a causative verb. Not all the meanings of the suffixes on the last derivative can be translated adequately.

- (86) *Darga manai ger-iig nüü-lge-lc-üül-ex-eer xoyor xün*
 chief our jur-t-ACC move-CAUS-SOC-CAUS-PART-INST both man
ir-üül-dž bi-lee. (K. 77)
 come-CAUS-CONV AUX-PAST
 ‘The chief sent two men for them together to help us move with our jur.’

Here is a derivational chain of this complex causative predicate:

- (87) *nüü-* ‘to move over (of nomads)’
 → *nüü-lge-* i. ‘to make sb move over’, ii. ‘to help sb to move over’ (L. 281)
 → *nüü-lge-lce-* ‘together to help sb move over’
 → *nüü-lge-lc-üül-* ‘to cause sb together to help sb move over’.

Derivatives in *-lca/-lsa* with non-sociative meanings can also undergo causativization; this is shown (88) where a reciprocal is causativized:

- (88) *oirto-* ‘to approach’
oirto-lso- ‘to approach each other’
oirto-ls-uul- ‘to cause sb/sth to approach each other’ (Č.352).

10. Reciprocals with the pronoun *biye biye-/beye beye-* ‘each other’

In the constructions considered below, the reciprocal pronoun functions as the only marker of reciprocity (see (93), (96), (99), (100), (102a, c), (103a)) or co-occurs with reciprocals in *-lda* (see (94), (97), (103b)) and *-lca/-lsa* (see (95), (98), (101), (103c)). In the latter cases the pronoun stresses reciprocity or resolves possible ambiguity. The reciprocal pronoun is as a rule monosemous unless we count the adjacent distributive meaning (see (90a, b)).

10.1 Introductory. Distributive meaning of the reciprocal pronoun

The pronoun *biye biye-* ‘each other’ (Buryat *beye beye-*) is a reduplication of the reflexive pronoun *biye* i. ‘one oneself, he himself...’, ii. ‘oneself, himself...’ (cf. (12)). Thus, the literal meaning of *biye biye-/beye beye-* is ‘self self’, but it is glossed as ‘each other’ to reflect its functional meaning. It may assume any case form like common nouns, except for the nominative. As mentioned, it is commonly used with the reflexive-possessive markers.

(89)	GEN	<i>biye biy-iin-xee</i>	INST	<i>biye biy-eer-ee</i>
	DAT	<i>biye biye-d-ee</i>	COM	<i>biye biye-t-ee</i>
	ACC	<i>biye-biy-Ø-ee</i>	ABL	<i>biye biy-ees-ee.</i>

When used with a 3rd p. personal-possessive suffix (*-ny/-iiny/-iny/...*), this pronoun acquires a distributive meaning ‘each one separately’ (cf. Tuvan: Kuular, Ch. 27, §4.1.1):

- (90) a. *beye beye-de-ny üge-xe yüm.* (Č. 129)
 self self-their give-PART AUX
 ‘It is necessary to give (sth) to each separately.’
- b. *Tiigeed beye beye-hee-ny hura-lsa-ža ab-aad...* (Bur2. 146)
 then self self-ABL-their ask-SOC-CONV AUX-CONV
 ‘Then they asked each other questions’, lit. ‘... each asked the other separately.’

10.2 Subject-oriented constructions

Our goal here is to introduce the available material on the syntactic types of reciprocal constructions. Some of our informants allow considerable variation in the use of synonymous means of expressing reciprocity. For instance, Tuvshintogs finds acceptable the following reciprocal forms of the transitive verb *ala-* ‘to kill’: *ala-lca-*, *ala-lda-* (less acceptable), *biye biy-ee ala-*, *biye biy-ee ala-lca-*, and (less willingly) *biye biy-ee ala-lda-*. For the verb *durla-* ‘to love’, he allows the forms *biye biye-d-ee durla-*, *biye biye-d-ee durla-lca-*, and *biye biye-d-ee durla-lda-* (less acceptable). Darima accepts some of the parallel Buryat forms with reluctance or not at all: *ala-lsa-* (acceptable), *ala-lda-* (unacceptable), *beye bey-ee ala-* (acceptable), *beye-bey-ee ala-lsa-* (more or less acceptable), *beye bey-ee ala-lda-* (unacceptable); *durla-lsa-* (possible), *durla-lda-* (unacceptable), *beye bey-d-ee durla-* (acceptable), *beye bey-ee durla-lsa-* (unacceptable), *beye bey-ee durla-lda-* (unacceptable). The reciprocal pronoun is most likely pleonastic. Despite the limited and sometimes ac-

cidental nature of the data in the *Buryat-Russian Dictionary*, we shall risk a few tentative generalizations concerning the frequency of different uses of reciprocal pronouns (the numbers are accidental and therefore indicative):

1. The reciprocal pronoun is more widely used with derivatives in *-lca/-lsa* than with those in *-lda* (among “canonical” reciprocals of transitive bases their number amounts to 14 and 9 respectively; among reciprocals of two-place intransitives they number 4 and 2 respectively). As to “possessive” reciprocals and constructions with postpositions, there occurred only one case in *-lsa* for each type, and none in *-lda*; thus the general ratio is 20 to 11. As it happens, suffixed *-lda* reciprocals are much more frequent in texts than those in *-lca/-lsa*, which indicates the non-accidental character of these numbers. This is probably due to the fact that reciprocals in *-lca/-lsa* need support of the reciprocal pronoun to a greater degree because the suffix *-lca/-lsa* is more often sociative on transitive bases than *-lda* (cf. 4.3 and 7.4.2 above).

2. In constructions with a non-accusative reciprocal pronoun, the number of unsuffixed verbs is prevalent over that of suffixed reciprocals. Among “canonical” reciprocals of two-place intransitives they number 10 and 6 respectively (note that among “canonical” reciprocals of transitive bases the ratio is 5 to 22). The overall ratio of non-accusative reciprocal pronouns with unsuffixed verbs and suffixed reciprocals is 17 to 8. An analogous tendency is observed in other languages as well. Reciprocalization of non-direct objects tends to prefer reciprocal pronouns.⁷

It may be assumed, therefore, that though the reciprocal pronoun can be used independently, with unsuffixed verbs, it occurs predominantly with *-lda* and *-lca/-lsa* forms depending on certain conditions (the latter use is probably accounted for by a desire to underscore their reciprocal meaning, as their main meaning is sociative). In the subsequent discussion we shall list all the instances registered in the dictionaries and specialist literature, but first we shall give a few sentential examples.

(91) *Tede biye biy-ee olo-x-güi tööröldö-nö.*
 they each other.REFL find-PART-NEG wander-PRES
 ‘They both wander around not finding each other.’

(92) *Beye bey-ee bažuu-lda-na, beye bey-ee oroi-ldo-no.* (Bur1. 204)
 each other-REFL squeeze-REC-PRES each other-REFL coil-REC-PRES
 ‘(The two snakes) squeeze each other, intertwine with each other.’

7. This tendency may be illustrated by the data of the 14th century Mongolian registered in the Mongolian dictionary (published in Poppe 1938): the reciprocal pronoun in the accusative case *nim niken-i* occurs 15 times, while its dative case *nim niken-dü* occurs 39 times.

10.2.1 “Canonical” reciprocals

10.2.1.1 With two-place transitives. The following three cases can be distinguished.

1. The reciprocal pronoun is used as the only means of expressing reciprocity.

- | | | |
|------|-------------------------------|--|
| (93) | <i>beye bey-ee ala-</i> | ‘to kill each other’ (Bur2. 42) |
| | <i>beye bey-ee daldal-</i> | ‘to patronize each other’ (Č. 129) |
| | <i>beye bey-ee hažaa-</i> | ‘to mimic each other.’ (Č. 663). |
| | <i>biye biy-ee olo-</i> | ‘to find each other’(?) |
| | <i>beye bey-ee ehe torgo-</i> | ‘to give each other adequate answers’ (Bur2. 184). |

2. The reciprocal pronoun occurs with derivatives in *-lda*:

- | | | |
|------|----------------------------------|---|
| (94) | <i>beye bey-ee axi-lda-</i> | ‘to overtake each other’ (Č. 66) |
| | <i>beye bey-ee bažuu-lda-</i> | ‘to squeeze each other’ (Bur1. 204) |
| | <i>beye bey-ee daxa-lda-</i> | ‘to follow each other’ (T. 53) |
| | <i>beye bey-ee nyudala-lda-</i> | ‘to punch each other’ (Č. 342) |
| | <i>beye bey-ee nyudara-lda-</i> | ‘to push/beat each other’ (Č. 420) |
| | <i>beye bey-ee oroi-ldo-</i> | ‘to coil[around] each other’ (Bur1. 204) |
| | <i>beye beye-d-ee oroso-ldo-</i> | ‘to squabble, bicker’ (Č. 362) |
| | <i>beye bey-ee tašuurda-lda-</i> | ‘to whip each other’ (Č. 420) |
| | <i>beye bey-ee ürđi-ldo-</i> | ‘to (do sth trying to) overtake each other’ (Č. 512). |

3. The reciprocal pronoun occurs with derivatives in *-lca/-lsa*:

- | | | |
|------|--|--|
| (95) | <i>beye bey-ee ala-lca-</i> | ‘to kill each other’ (ČR. 15) |
| | <i>beye bey-ee bari-lsa-</i> | ‘to catch, grasp each other’ (T. 38) |
| | <i>beye bey-ee bodxoo-lso-</i> | ‘to lift each other’ (D. 150) |
| | <i>beye bey-ee दौरа-lsa-xa-güi-</i> | ‘to not touch (brush against) each other’ (Č. 182) |
| | <i>beye bey-ee erxelüü-lse-</i> | ‘to caress each other’ (Č. 773) |
| | <i>beye bey-ee hura-lsa-</i> | ‘to ask each other’ (Bur2. 184) |
| | <i>beye bey-ee muudxa-lsa-</i> | ‘to accuse each other’ (Č. 303) |
| | <i>beye-bey-ee ooglo-lso-</i> | ‘to exchange shouts/shout to each other’ (Č. 358) |
| | <i>beye bey-ee šoglo-lso-</i> | ‘to laugh at each other’ (Č. 728) |
| | <i>beye bey-ee unxida-lsa-</i> | ‘to sniff at each other’ (Č. 471) |
| | <i>beye bey-ee xadxa-lsa-</i> | ‘to push each other slightly’ (Č. 531) |
| | <i>beye bey-ee xündele-lse-</i> | ‘to respect each other’ (Č. 623) |
| | <i>beye bey-ee xara-lsa-n-güi-göör</i> | ‘not seeing each other’ (Č. 551) |
| | <i>beye bey-ee šogtoi xursaxan</i> | ‘to exchange merry glances’ |
| | <i>nüdüör šerbe-lse-</i> | lit. ‘to lash each other with ... eyes’ (Č. 749). |

10.2.1.2 With two-place intransitives.

1. The reciprocal pronoun is used as the only means of expressing reciprocity:

- | | | |
|------|--------------------------------------|--|
| (96) | <i>beye beye-d-ee bardamla-</i> | ‘to boast to each other’ (Bur2. 192) |
| | <i>beye beye-d-ee duratai (bai-)</i> | ‘to love each other’ (T. 74) |
| | <i>beye beye-d-ee dütel-</i> | ‘to approach each other, draw together’ (Č. 211) |
| | <i>beye beye-d-ee emni-</i> | ‘to wink at each other’ (Bur2. 94) |
| | <i>biye biye-d-ee gomdo-</i> | ‘to resent each other’ |
| | <i>biye biy-ees-ee iči-</i> | ‘to be ashamed of each other’ (L. 69) |

<i>beye beye-hee gee-gde-n-güi yaba-</i>	‘to walk not lagging behind each other’ (Č. 179)
<i>beye beye-d-ee mihelze-</i>	‘to smile at each other’ (T. 61)
<i>beye beye-d-ee tegüül-</i>	‘to crave for each other’ (T. 58)
<i>beye beye-d-ee xanda-</i>	‘to address each other’ (T. 6).

2. The reciprocal pronoun is used with reciprocals in *-lda*:

- (97) *beye beye-d-ee xašxara-lda-* ‘to shout at each other’ (T. 108)
beye beye-d-ee žütöörxe-ld- ‘to be jealous of each other’ (Bur2. 248).

3. The reciprocal pronoun is used with reciprocals in *-lca/-lsa*:

- (98) *beye beye-d-ee durla-lsa-* ‘to love each other’ (Č. 203)
beye beye-d-ee etige-lse- ‘to trust each other’ (Č. 777)
beye beye-hee-ny hura-lsa- ‘to ask each other’ (Bur2. 146)
beye beye-d-ee tuhala-lsa- ‘to help each other’ (Č. 439).

10.2.2 “Indirect” reciprocals

In this type (cf. 3.1.2), suffixed reciprocals in combination with a reciprocal pronoun have not occurred.

- (99) *zem-ee beye beye-d-ee xaya-* ‘to put/place the blame on each other’ (Č. 568).
šadal erdemee beye beye-d-ee xaruul- ‘to show his power and knowledge to each other’ (Bur2. 192).

10.2.3 “Possessive” reciprocals

In the examples registered the reciprocal pronoun in the genitive case is an attribute of a direct object.

1. The reciprocal pronoun is used as the only means of expressing reciprocity:

- (100) a. *Xoyor xeree biye biy-iin-xee xar-iig gaixa-na.* (L. 593)
two raven each other-GEN-REFL black-ACC amaze-PRES
‘Two ravens are amazed at each other’s blackness’ (proverb).
b. *biye biye-iin-xee cusu-yi ursga-* (ČR. 237)
each other-GEN-REFL blood-ACC spill-
‘to spill each other’s blood.’

2. The reciprocal pronoun is used with reciprocals in *-lca/-lsa*:

- (101) *Edeš beye beye-iin-gee xubsah-iye zaha-lsa-b.* (Č. 253)
they each other-GEN-REFL clothes-ACC adjust-SOC-PAST
‘They adjusted each other’s clothes.’

10.2.4 Constructions with postpositions

Semantically, these constructions are similar to the syntactic types considered above: (102a) is close to “canonical” reciprocals and (102b, c) to “indirect” reciprocals. The postpositions *tuxai* ‘about’, *deeree* ‘on(to)’, and *rüü* ‘into, onto, towards’ in (102) have a function analogous to case markers (although they themselves may be marked for case). The reciprocal pronoun precedes a postposition and takes no case marking in (102), thus figuring as a kind of the nominative case form.

- (102) a. *beye beye tuxai-gaa bodomžol-* (T. 75)
 each other about-COM.REFL think
 ‘to think about each other.’
- b. *zem-ee beye beye deeree xaya-lsa-* (Č. 567)
 guilt-ACC.REFL each other onto throw-SOC
 ‘to shift the blame on each other.’
- c. *ažl-aa biye biye rüü-gee čixe-* (L. 69).
 work-ACC.REFL each other onto-COM.REFL push.into
 ‘to shift one’s own work on each other.’

10.3 *Nomina actionis*

Nominalization of a reciprocal construction does not change the case form of the reciprocal pronoun:

- (103) a. *beye bey-ee daldal-dag yabadal* (Č. 129)
 each other-REFL patronize-PART behaviour
 ‘relations of nepotism.’
- b. *beye beye-d-ee oroso-ldo-on* (Č. 362)
 each other-DAT-REFL meddle-REC-NR
 ‘squabble/bickering’
- c. *beye bey-ee xündele-lse-lgen oršon baidal-da.* (Č. 623)
 each other-REFL respect-SOC-NR situation state-DAT
 ‘in a state of mutual respect.’

10.4 Object-oriented constructions

We have no data on this type of constructions with the reciprocal pronoun. But collocations like (104) seem to be possible.⁸

- (104) *beye beye-d-ee düitel-üül-* ‘to make sb. approach each other, to draw sth and sth together.’

11. Other pronominal and adverbial means of expressing reciprocity

Both in Khalkha and Buryat, reciprocity can be expressed by non-verbal lexical devices which can be used on their own or support the reciprocal predicate (morphological or lexical) and thus stress a reciprocal relation between the participants. The main grammatical pattern among these devices is reduplication, both of non-spatial components of the *beye bey-ee/biye biye-ee* type (see *nege nege-*, *ööhed ööhed-*, and *dam dam-* in 11.1)

8. The reciprocal pronoun is not registered in object-oriented constructions in the *Buryat-Russian dictionary* (Č.) at all, while in the 14th century dictionary (*Mukaddimat al-Adab* published in Poppe 1938) such usage does occur; cf. *qoyar öbüdüg-i kürge-be nim niken-dü* <two knee-ACC put-PAST each other-DAT> ‘he pressed his knees together’ (P. 305).

and of spatial postpositions expressing converse relations (see *deer deer-*, *xoino xoino-*, *urda urda-*, and *dosoo dosoo-* in 11.2). Alongside the reciprocal meaning (111), these formations may have

(a) the distributive meaning proper, like ‘each (separately)’ (106b, 107b), of the type illustrated by (90) with the pronoun *beye beye-ee*;

(b) the spatial distributive meaning (see (109); also figuratively used in the temporal distributive meaning).

In case (a) the performers of the action are in symmetrical relation, and in case (b) they are in converse relation; in other words, the relations here are the same as among derivatives of converse verbs like ‘to follow’ (*A and B follow each other* = *A follows B* + *B precedes A*). This kind of relations is often termed chaining relations (see Lichtenberk 1985: 24–26).

There is also a case of lexicalization of a converbal form (see *xari-lca-n* in 11.3). This converb, as well as the adverb/postposition *xoorond-oo*, seems to occur mostly with lexical or suffixed reciprocals.

Note that the lexical means of expressing reciprocity are quite numerous, their number reaching at least 10, if we include *biye biye-/beye beye-*.

11.1 Reduplication of non-spatial components

This pattern used to refer to the participants themselves is represented by numerous items, some of which are very close in meaning to *beye beye-* and compete with it, like the phrase *nege neg-iig-ee*, and others are less commonly used and differ from the reciprocal pronoun in meaning to a greater or lesser degree.

1. *Nege nege-*. The pronoun *nege neg-iig-ee* (derived from *nege* ‘one’) seems to be entirely synonymous to *biye biy-ee* (cf. the use of *each other* and *one another* in English). As a rule, the accusative marker *-iig* is omitted on *biye biy-ee* before a possessive-reflexive marker, and for unclear reasons it is not omitted on *nege neg-iig-ee* (and *ööhed ööhed-*, see (106a)). In most cases, the two pronouns are interchangeable. The choice of one or the other is sometimes dependent on style. One or the other pronoun is preferable with individual verbs, *bije bij-ee* being generally more common. In (105a, b) the pronoun in question is in the accusative and dative case forms; it also occurs in other case forms (105c); cf.:

- (105) a. *Bide nege neg-iig-ee xamgaala-xa üüreg-tee yüm.*
 we one one-ACC-REFL defend-PART duty-ADJ AUX
 ‘We must defend each other.’
- b. *Xoyor büsgüi nege negen-d-ee yüm xaşgira-dža bai-na.*
 two girl one another-DAT-REFL something shout-CONV AUX-PRES
 ‘Two girls are shouting something to each other.’⁹
- c. *neg neg-eer* (INST) ‘one after another’.

9. It seems that in Kalmyk the pronoun *neg-negən* is used instead of *biye biyee*. At least in the works on Kalmyk grammar we find examples with *neg-negən* only (see Ilishkin 1973: 115; Doraeva 1983: 203).

2. *Ööhed ööhed-*. The reflexive-demonstrative pronoun *ööhen* ‘I myself, you yourself, he himself ...’ for the singular and *ööhed* ‘we ourselves, you yourselves, they themselves’ for the plural is always used with a reflexive-possessive suffix. When reduplicated, the latter has either the reciprocal meaning ‘each other’ or the distributive meaning ‘each’; e.g.:

- (106) a. *ööhed ööhed-iig-öö amaršal-* (Č. 369)
 self self-ACC-REFL greet-
 ‘to greet each other.’
- b. *ööhed ööhed-in-göö xüdelmer-iin huuri-nuud-ee ezele-nxei.* (Č. 369)
 self self-GEN-REFL work-GEN place-PL-ACC.REFL take-RES.PAST
 ‘Each took his own working place.’

3. *Dam dam-*. This phrase is a reduplication of the adverb *dam* which means ‘yet, even more’ when used with adverbs of direction (cf. *dam saša yaba-* ‘to go even further’ and repetition when used with verbs (cf. *dam hura-* ‘to ask again’). The reduplicated form has a meaning ‘each’ (distributive meaning) or ‘all’ when used with adverbials of direction, and a reciprocal meaning when used with verbs (Č. 185):

- (107) a. *dam dam-aa duulga-lsa-* ‘to inform each other’ (Č. 205);
dam dam-aa ög- ‘to pass sth on to each other’ (L. 143).
- b. *dam dam saša bolo-od huu-g le.* (Č. 185)
 each each further get-CONV sit.DOWN-IMP.3SG PRTL
 ‘Let each move on and take a seat.’

11.2 Reduplication of spatial components

These expressions may be used with both suffixed reciprocals in *-lca/-lsa* and unsuffixed verbs. Some of them can also have a distributive meaning. Such phrases are formed by partial reduplication of postpositions, most of which belong to a special class of nominals with predominantly locative semantics (we mean pairs of nouns with converse meanings, like ‘above’ – ‘under’, ‘behind’ – ‘in front of’, ‘inside’ – ‘outside’) and function both as adverbs when used with possessive marking and as postpositions when preceded by a noun (e.g. Buryat *ger-ei xoino-hoo* ‘from behind the house’ vs. *xoino-hoo-mni* ‘behind me’). Often enough, some of their case forms (ablative or dative) get grammaticalized as postpositions. For expressing chaining relations and reciprocal meaning the stem alone is reduplicated, the case affix being used only once, on the last stem. In this respect they resemble reduplicated nouns in the direct object position of “possessive” reciprocal constructions (cf. *nyuur nyuur-* lit. ‘face face’ and the like in (80a, b, c, d, e)).

In our material, these formations may have the following meanings: (a) the distributive meaning proper (cf. *doro* ‘below’ – *doro dor-oo* ‘each separately’ (Č. 196); reduplication is important here); (b) the reciprocal meaning only (cf. (110a, b), (111)); (c) the spatial distributive meaning (cf. (108a, b), (109)). This distribution of meanings in the dictionary data may be accidental and it probably does not reflect the real distribution of meanings adequately; some formations may have other meanings as well.

1. *Deer deer-*. The stem is the postposition *deer* with the principal meaning ‘above, upon’ (cf. *nogoon deer xewte-* ‘to lie on grass’). It has the following typologically interest-

ing set of meanings: i. ‘one above another/the other’, ii. ‘one after another’, ‘in succession’, iii. ‘frequently’, iv. ‘continually, incessantly’, of which the first two signify chaining relations (they may form object-oriented constructions). The ablative form Khalkha *deer-ees* / Buryat *deere-hee* is also grammaticalized as a postposition ‘(from) above’, cf.:

- (108) a. *deer deer-ees-eny xuraa-* (L. 171)
 above above-ABL-their pile-
 ‘to pile (things) one upon another.’
 b. ... *deere deere-hee güi-lde-že yer-eed* ... (T. 38)
 above above-ABL run-REC-CONV go-CONV
 ‘... [attacking soldiers] rush upon one another in a heap ...’

2. *Xoino xoino-*. Reduplication of the postposition *xoino-hoo* (ablative of *xoino* ‘behind, after’; cf. *ger-iin xoino* ‘behind the jur’t’) may express reciprocal chaining relations:

- (109) a. *xoino xoino-hoo* ‘one after another, one behind another, (in) single file’
 b. *xoino xoino-hoo zogso-* ‘to stand one behind another’ (Č. 578).

3. *Urda urda-*. The partially reduplicated postposition *urda urda-haa* means ‘opposite each other’ (*urda* ‘front’, ‘front part’, ‘face (of people)’; cf. *minii urda* ‘in front of me’; *urda-haa* ‘from the position in front; before’):

- (110) a. *urda urda-haa xara-/xara-lsa-* ‘to look each other in the face’ (Č. 474).
 b. *Noxoi-nuud xeriүүлxe-lde-eeđ, urda urda-haa ard ge-lde-be.* (Č. 58)
 dog-PL be.angry-REC-CONV front front-ABL bow-wow AUX-REC-PAST
 ‘Angry with each other, the dogs barked at each other.’

4. *Dosoo dosoo-*. This form is derived from a postposition with the meaning ‘inside, in’ (cf. *ger dosoo* ‘in(side) the jur’t’). An example:

- (111) *dosoo dosoo-xy-oo taa-lsa-* (Č. 197) ‘to understand each other.’

11.3 Adverbs *xarilcan* ‘mutually’ and *xoorond-oo* ‘among themselves’

Both adverbs are rarely used as the only markers of reciprocity.

The adverb *xarilcan* ‘mutually, between oneself, with each other’ originates from the verb *xari-lca-* ‘to be connected / linked, to relate’ (lexicalized sociative of *xari-* ‘to return’). It may appear as the only marker of reciprocity or, much more frequently, it co-occurs with derivatives in *-lca/-lsa*. There are also instances of its co-occurrence with reciprocal pronouns.

- (112) a. *xari-lca-n xyana-* ‘to check each other’ (L. 517)
 b. *xari-lsa-n tuhala-lsa-* ‘to mutually help each other’ (Č. 439)
 c. *xari-lca-n yari-lca-* ‘to mutually exchange words’ (ČR. 173)
 d. *xari-lca-n kele-lce-* ‘to mutually come to an agreement’ (ČR. 173)
 e. *xari-lca-n kina-lca-* ‘to mutually check each other’ (ČR. 173)
 f. *xari-lca-n biye biy-ee xündetge-x ünsen deer.* (L. 517)
 mutually each other-ACC respect-PART basis on
 ‘on the basis of mutual respect for each other.’

Xoorond-oo ‘among/between themselves’ is a reflexive-possessive form of the postposition *xoorondo* ‘between’ (<DAT of *xoor/xoyor* ‘two’) combining characteristics of the type considered in 11.2. On the one hand, it may be used alone, as an adverbial, since as a lexical item it renders the meaning ‘between oneself’ or ‘with each other’ (other postpositions must be reduplicated in order to acquire this meaning). On the other hand, it can also be used as a postposition preceded by *öör* ‘oneself’ and *ööhed* ‘oneselves’: *ööhed xoorondoo ximara-lda-* ‘to squabble between/among themselves’ (Č. 571). It also occurs in a reduplicated form.

In these meanings this phrase can be combined (judging by the dictionaries) either with lexical or suffixed reciprocals, or with verbs whose meaning implies a converse meaning (cf. *to contradict* vs. *to confirm*, as in (113b)). Thus it is not so much an independent expression of reciprocity as a means of pointing out the range of participants (analogues are attested in other languages as well) (see also (24d) and (34)).

- (113) a. *Tedener xoorond-oo ebtei-nüüd.* (Č. 587)
 they between-REFL friendly-PL
 ‘They are friends between themselves.’
- b. *Medüülge-nüüd xoorond-oo zör-džö bai-na.* (L.203)
 statement-PL between-REFL contradict-CONV AUX-PRES
 ‘The statements contradict one another.’
- c. *(ööhed) xoorond-oo mürise-* ‘to compete with each other’ (Č. 587)
- d. *xooro-xoorond-oo nanša-lda-* ‘to fight with each other’ (Č. 587)
- e. *xooro-xoorond-oo duugara-lsa-* ‘to talk between oneself’ (Č. 587)
- f. *xoorond-oo yari-lca-* ‘to talk between oneself’ (L. 538).

12. Lexicalization

The term “lexicalization” is applied here to verbs with the suffix *-lda* which enter into a non-standard reciprocal opposition with the underlying verb, which is generally a result of semantic evolution of the standard reciprocal opposition shown in example (1). The following two main semantic cases can be distinguished: lexicalization of derivatives that are reciprocal in meaning and that of non-reciprocal derivatives. Let us illustrate these two cases.

Lexicalized derivatives in *-lca/-lsa* seem to be possible but if they are they must be much less numerous than those in *-lda* (this is probably an indication of relatively late development of *-lca/-lsa*).

12.1 Lexicalized derivatives with the reciprocal meaning

These derivatives typically denote fighting, competing, quarrelling, meeting, coming into contact, etc. Some of the shifts in meaning are in fact typologically predictable, i.e. they occur in other languages as well; cf. the derivatives of *barya-* and *üdze-* below. Some derivatives may retain standard meanings alongside the non-standard ones (see *bulaa-* below):

(114) <i>adzragala-</i> ‘to be in command’	→	<i>adzragala-lda-</i> ‘to compete for power’ (B. 66)
<i>ala-</i> ‘to kill/torture/beat’	→	<i>ala-lda-</i> ‘fight/kill each other, squabble’ (Č. 39)
<i>anda-</i> ‘to make mistakes’	→	<i>anda-lda-</i> ‘to exchange’ (L. 38)
<i>bai-</i> ‘to be/exist’	→	<i>bai-lda-</i> ‘to fight’ (L. 57)
<i>barya-</i> ‘to hold’	→	<i>barya-lda-</i> ‘to wrestle’ (L. 63)
<i>bulaa-</i> ‘to take sth away from sb’	→	<i>bulaa-lda-</i> i. ‘to argue’, ii. ‘to take sth away from each other’ (L.85)
<i>čixe-</i> ‘to shove sth in sth’	→	<i>čixe-lde-</i> ‘to jostle (in a crowd)’ (L. 634)
<i>daira-</i> ‘to push’	→	<i>daira-lda-</i> ‘to meet’ (Č. 182)
<i>dzaa-</i> ‘to show/teach’	→	<i>dzaa-lda-</i> ‘to sue sb/be at law’ (L. 184)
<i>ewle-</i> ‘to make up with sb’	→	<i>ewle-lde-</i> ‘to unite’ (L. 664)
<i>ewse-</i> ‘to agree/come to an agreement’	→	<i>ewse-lde-</i> ‘to enter into an alliance’ (L. 664)
<i>garda-</i> ‘to take into one’s hands’	→	<i>garda-lda-</i> ‘to romp/wrestle’ (Č. 150)
<i>ge-</i> ‘to speak’	→	<i>ge-lde-</i> ‘to come to an agreement’ (Č. 169)
<i>yawa-</i> ‘to walk/go’	→	<i>yawa-lda-</i> ‘to copulate’ (L. 688)
<i>ono-</i> ‘to hit the target’	→	<i>ono-coldo-</i> ‘to meet’ (L. 301)
<i>öwcö-</i> ‘to mix (blood)’	→	<i>öwcö-ldö-</i> ‘to copulate’ (L. 314)
<i>sülbe-</i> i. ‘to stab/prick’, ii. ‘fasten with a pin’	→	<i>sülbe-lde-</i> i. ‘to join’ (vi), ii. ‘to conspire’, iii. ‘to be in intimate relations’ (L. 380)
<i>taarxa-</i> ‘to imitate’	→	<i>taarxa-lda-</i> ‘to use a polite address with each other’ (Č. 407)
<i>tušaa-</i> ‘to hand in/turn over’	→	<i>tušaa-lda-</i> ‘to meet/come across each other’ (Č. 440)
<i>ura-</i> ‘to tear’	→	<i>ura-lda-</i> ‘to compete’ (L. 459, 458)
<i>üdze-</i> ‘to see/look’	→	<i>üdze-lde-</i> i. ‘compete in strength’, ii. ‘see each other’ (L. 478)
<i>xaxa-</i> ‘to choke with sth’	→	<i>xaxa-lda-</i> ‘to crowd/jostle each other’ (B. 66)
<i>xere-</i> ‘to tie sth crosswise’	→	<i>xere-lde-</i> ‘to quarrel/squabble’ (Č. 652)
<i>xönöö-</i> ‘to harm sb’	→	<i>xönöö-ldö-</i> ‘to be enemies’ (B. 68)
<i>xyamra-</i> ‘to fall into decay’	→	<i>xyamra-lda-</i> ‘to come into a collision’ (L. 596)
<i>züdxe-</i> ‘to pull/drag’	→	<i>züdxe-lde-</i> ‘to wrangle/squabble’ (Č. 267).

12.2 Lexicalized derivatives with non-reciprocal meanings

Note that the last two reciprocals in (115) have semantic parallels in some other languages among lexicalized reciprocals. Compare, for instance, the verbs denoting “an intention to obtain or achieve” in Yakut (see Nedjalkov & Nedjalkov, Ch. 26, group 4 in Section 11.3).

(115) <i>burgya-</i> ‘to roll (of dust)’	→	<i>burgya-lda-</i> ‘to be in disorder’ (B. 67)
<i>oro-</i> ‘to come in’	→	<i>oro-ldo-</i> ‘to try’ (L. 306, Č. 361)
<i>üxe-</i> ‘to die’	→	<i>üxe-lde-</i> ‘to strive for sth with all one’s might’ (B. 69).

It is in principle possible to derive sociatives from lexicalized reciprocals; cf.:

(116) <i>bari-</i> ‘to hold’	→	<i>bari-lda-</i> ‘to fight’	→	<i>bari-lda-lca-</i> ‘to fight (of many)’ (Bm. 280)
<i>oro-</i> ‘to enter’	→	<i>oro-ldo-</i> ‘to try’	→	<i>oro-ldo-lco-</i> ‘to try (of many)’ (Bm. 280).

13. *Reciproca tantum*

These are suffixed reciprocals which do not have a related underlying verb. This is mostly due to the loss of the latter, which might have a meaning close to that of the derivative. Their typical meanings are competing, quarrelling, meeting, colliding, gathering together, etc. Special cases are (a) two verbs which have converse counterparts (these verbs imply another action, in particular, as a cause or consequence, cf. ‘to resist’ vs. ‘to attack’), and (b) the verb *xunda-lda-* with a kind of sociative meaning. *Reciproca tantum* in *-lca/-lsa* seem to be possible but if there are any they must be much less numerous than *-lda* verbs.

(117) <i>araa-lda-</i>	‘to stand in a row, crowd’ (L. 40)
<i>mungaa-lda-</i>	‘to compete (in singing or verbally)’ (Č. 302)
<i>šergüü-lde-</i>	‘to jib, resist’ (Č. 749)
<i>šii-lde-</i>	‘to tighten/become tight’ (Č. 726)
<i>tušaa-lda-</i>	‘to collide, meet’ (L. 428)
<i>xaxana-lda-</i>	‘to cluster’ (B. 66)
<i>xoibo-ldo-</i>	‘to hobnob’ (Č. 577)
<i>xöndö-ldö-</i>	‘to stand/be situated across a road’ (L. 552)
<i>xuda-lda-</i>	‘to trade’, ‘to sell’ (L. 561) (cf. Manchu <i>xuda</i> ‘trade’)
<i>xuiwa-lda-</i>	‘to conspire/plot’ (L. 562)
<i>xunda-lda-</i>	‘to mount a horse (of two persons)’ (Č. 690).

The following two non-verbal derivatives (an adjective/adverb and a noun) have meanings related to the reciprocal:

(118) <i>džerge-ld-ee</i>	i. ‘neighbouring’, ii. ‘in the neighbourhood’ (L. 213)
<i>nolo-ldo</i>	‘mating season (of birds)’ (B. 67).

For unclear reasons, the following verb contains the suffix *-lda* despite its non-reciprocal meanings; it is synonymous with the verb *urva-gana* (L. 459) with the same base.

(119) <i>urwa-lda-</i>	i. ‘to be sad/doleful’, ii. ‘to complain/lament’ (L. 459).
------------------------	--

14. Lexical reciprocals proper

Among lexical reciprocals, we include formations with the reciprocal meaning which do not enter into standard derivational relations of the type illustrated by (1). Therefore, in the broad sense, the term “lexical reciprocals” covers both lexicalized reciprocals and *reciproca tantum*, and their derivatives (in this section, we are concerned with their anticausative derivatives; see 14.2). Lexical reciprocals proper differ from these groups in that they have no reciprocal marker, but in Khalkha and Buryat many of them may be used with a pleonastic reciprocal marker, and this is a typological peculiarity of these languages. First, we shall consider lexical reciprocals proper that allow both the suffixes *-lda* and *-lca/-lsa* (14.1) and, next, anticausatives derived from them by means of *-lda* only (14.2).

14.1 Suffixes *-lda* and *-lca/-lsa* on lexical reciprocals proper

In this case the meanings of a verb both with and without the suffix coincide entirely or partially, the suffix emphasizing the reciprocal sense and/or changing the verbal case frame. Both forms are given the same or similar definitions in the dictionaries (cf. *toxyoo- / toxyoo-ldo* ‘to meet’, ‘to coincide’ (L. 413); *xarga- / xarga-lda* ‘to collide, enter into a conflict’ (L. 515)) or a reference to the definition of the unmarked verb is given (cf. *xumira-lda* ‘to see’ → *xumira* ‘to curl up, shrivel’ (L. 564)). They may be:

- (a) two-place intransitives or transitives (120a) or, less commonly,
- (b) one-place verbs with a plural subject or a subject consisting of parts pressed together (120b), and
- (c) three-place transitives (120c).

The lists in (120) include some meanings which can hardly be counted as reciprocal semantically, mostly because of the different roles of the referents in the situation, as in *aha-/aha-lda* ‘to clutch at, cling to, seize and hold sth’: here the object referent acts as a participant of the situation of joining (cf. 14.2). In other words, though it is passive, this object referent “behaves” in a different way than, for instance, in a situation like ‘The book fell on the floor’ where the second participant (‘the floor’) is entirely static and no joining of the participants is involved. Therefore it is not accidental that the language marks this situation as reciprocal. Thus a classification of language material is, as a rule, less rigid and more complicated and flexible than a purely logical classification – this is why such marginal cases are also included here. In case of polysemy, the semantic proximity of the unsuffixed and suffixed variants may involve only one of their meanings. Despite the obvious semantic proximity of the verbs in a pair, one can hardly expect their interchangeability in all contexts.

Part of the Khalkha data in Section 14.1 was checked by two informants. The examples in (121) and (122) illustrating the simple reciprocal construction were checked by Kurebito

Tugus (Inner Mongolia) and Galsanjamts Ulziinemekh (Mongolian Republic). In their opinion, the variants of sentence (121a) with *temce-lee* and *temce-ldē-lee* are synonymous; and so are the variants with and without *-lda* in (121b) and (121c):

- (121) a. *Xoyor dzaluu-s goyo oxyon aw-x-aar temce-[ldē]-lee.*
 two youth-PL beautiful girl.NOM take-PART-INST struggle-REC-PAST
 ‘Two young men struggled [with each other] for the beautiful girl.’
- b. *Dordžo Bata xoyor marga[-lda]-dža bai-na.*
 D. B. two argue-REC-CONV AUX-PRES
 ‘Dorji and Bat are arguing [with each other].’
- c. *Dordžo Bata xoyor xoršo[-ldo]-w.*
 D. B. two associate-REC-PAST
 ‘Dorji and Bat associated with each other.’

One of our informants (Kurebito) considers the marked variant of the predicate preferable when the subject refers to many persons or entities (on this meaning see 4.1–4.1.2.1):

- (122) a. *Dordžo Bata xoyor uuldža[-lda]-w.*
 D. B. two meet-REC-PAST
 ‘Dorji and Bat met.’
- b. *Dordžo Bata-nar xoyor uuldža-lda-w.*
 D. B.-PL two meet-REC-PAST
 ‘Dorji and Bat and his family met.’
- (123) *Nawč naxia gadžar deer xumyara[-lda]-w.*
 leaves sprout earth on curl-REC-PAST
 ‘The leaves on the earth curled up.’

In the discontinuous reciprocal construction, one of the informants (Galsanjamts) perceives a slight difference between the synonymous forms with and without the reciprocal suffix. In the variant without the reciprocal suffix the first participant is presented as slightly more active, while in the case of the suffixed variant, both participants are equally active.

- (124) a’. *Dordžo Bataa-tai marga-dža bai-na.*
 D. B.-COM argue-CONV AUX-PRES
 ‘Dorji is arguing with Bat.’
- a’’. *Bata Dordž-toi marga-dža bai-na.*
 B. D.-COM argue-CONV AUX-PRES
 ‘Bat is arguing with Dorji.’
- b’. *Dordžo Bataa-tai marga-lda-dža bai-na.*
 D. B.-COM argue-REC-CONV AUX-PRES
 ‘Dorji and Bat are arguing with each other.’
- b’’. *Bata Dordž-toi marga-lda-dža bai-na.*
 B. D.-COM argue-REC-CONV AUX-PRES
 ‘Bat and Dorji are arguing with each other.’

The reciprocals seem to vary with respect to the possible use in discontinuous constructions. Thus, for unclear reasons, Kurebito accepts sentences (124a’-b’’) but he does not

accept sentences of the (b) type with some other reciprocals, e.g. (124c”), though Galsanjamts finds it acceptable:

- c’ *Dordžo Bataa-tai uulda-w.*
 D. B.-COM meet-PAST
 ‘Dorji met with Bat.’
- c” [?]*Dordžo Bataa-tai uulda-lda-w.*
 D. B.-COM meet-REC-PAST
 ‘Dorji met with Bat.’

Synonymy is also observed between the base verbs and their derivatives in *-lca/-lsa* (though the latter are much less numerous than those in *-lda*; cf. (120)) and in one case (125b) all the three forms are synonymous. The following list contains both reciprocals (cf. ‘to be at war’) and lexical comitatives (cf. ‘to accompany’, ‘to take part in sth’):

- | | | |
|----------|-------------------------------------|---|
| (125) a. | <i>daila-/daila-lsa-</i> | ‘to be at war’ (Č. 182) |
| | <i>naada-/naada-lsa-</i> | ‘to take part in a game, etc.’ (Č. 315) |
| | <i>sala-/sala-lca-</i> | ‘to part’ (L. 344) |
| | <i>tula-/tula-lsa-</i> | ‘to fight/struggle’ (Č. 435) |
| | <i>üdeše-/üdeše-lse-</i> | ‘to accompany’ (Č. 495) |
| | <i>xabaada-/xabaada-lsa-</i> | ‘to take part in sth’ (Č. 758) |
| | <i>xamaara-/xamaara-lsa-</i> | ‘to interfere in sth’ (Č. 541) |
| | <i>xanil-/xanil-lsa-</i> | ‘to be friends’ (Č. 546) |
| b. | <i>dzörö-/dzörö-ldö-/dzörö-lcö-</i> | ‘to move next to each other’ (L. 203). |

Note that this section is based mostly on dictionary data, therefore the synonymy of same-stem pairs with and without the reciprocal marker requires further checking.

14.2 Anticausatives (with *-lda* only); verbs of joining

As a rule, anticausatives derive from three-place lexical reciprocals denoting joining, mixing, entangling, etc., and also from a small group of two-place verbs with a plural object or with an object divisible into moveable parts. Similar to these are verbs that are not lexical reciprocals proper, but they may be termed lexical semi-reciprocals (cf. 14.1) because they denote contact between two “unequal” entities (e.g. ‘to hang sth on sth’, ‘to pile sth up’) or closer contact between parts of the same entity (e.g. ‘to rumple sth’, ‘to wind’), or “curdling” that involves hardening of the whole or its parts (e.g. ‘to turn sour’ of milk). Intransitive derivatives of semi-reciprocals contain a reciprocal suffix in some other languages as well. Naturally enough, if the base verb is polysemous, an anticausative may be derived from one of its meanings only. For instance (see also (49) above):

- (126) a. *Bat nüd ani-dž bai-na.*
 B. eye close-CONV AUX-PRES
 ‘Bat has his eyes closed.’
- b. *Nüd ani-lda-dž bai-na.*
 eye close-REC-CONV AUX-PRES
 ‘The eyes are (kept) closed.’

- (127) *Niidxe xürme-ld-öö*. (Č. 627)
thread entangle-REC-PAST
'The threads got entangled.'
- (128) *ani-* 'to close (eyes)' → *ani-lda-* 'to close (of eyes)' (L. 39)
büre- 'to make sour (milk)' → *büre-ld-* 'to become sour (of milk)' (L. 96)
burša-gail- 'to crumple sth' → *burša-lda-* 'to get crumpled' (Č. 115)
damna- 'to put sth across' → *damna-lda-* 'to be/lie across' (L. 144)
džalga- 'to join/joint sth with sth' → *džalga-lda-* 'to become joined/jointed' (Č. 246)
džuura- 'to knead (dough)' → *džuura-lda-* 'to become glutinous/sticky' (L. 207)
güre- 'to plait/entwine sth' → *güre-ld-* 'to get entwined' (Č. 166)
oroo- 'to wrap, wind round' → *oroo-ldo-* 'to entwine, get tangled' (L. 307)
owoolo- 'to pile sth in a heap' → *owoolo-ldo-* 'to be piled up' (L. 291)
solyboco- 'to cross sth with sth' → *solyboco-ldo-* 'to be crossed' (L. 355)
soli- 'to change, mix up' → *soli-ldo-* 'to get mixed up' (L. 356)
tata- 'to tighten (with a rope)' → *tata-lda-* 'to get tightened' (Č. 417)
tuša- 'to hobble (a horse)' → *tuša-lda-* 'get one's feet entangled' (Č. 440)
ülge- 'to hang sth (on sth)' → *ülge-ld-* i. 'be hanging', ii. 'catch on sth' (Č. 499)
ünge- 'to rumple/crumple sth' → *ünge-ld-* 'to crumple (of sth)' (B. 68)
xolbo- 'to join sth together' → *xolbo-ldo-* 'to join together (of sth)' (L. 533)
xolyo- 'to mix sth with sth' → *xolyo-ldo-* 'to mix/be mixed' (L. 534)
xudxa- 'to mix sth with sth' → *xudxa-lda-* 'to get mixed' (Č. 598)
xürme- 'to twine sth' → *xürme-ld-* 'to get entwined' (Č. 626)
xüše- 'prop (a gate, etc. with a stick)' → *xüše-ld-* 'get stuck (of a stick, etc.)' (Č. 637)
zalga- 'to join sth with sth' → *zalga-lda-* 'to become joined' (Č. 246)
naa- 'to glue sth to sth' → *naa-lda-* i. 'to get stuck/glued to sth' ii. 'to press oneself' (Č. 346); see also (37), (38), (61), (64).

The following Khalkha suffixed verbs with a shift in the standard semantic relation can be added here with reservations, their anticausative status being not quite obvious:

- (129) *nyala-* 'to smear sth/sb with sth' → *nyala-lda-* 'to get stuck to each other' (L.288)
šawa- 'to smear sth' → *šawa-lda-* i. 'get stuck/glued', ii. 'pile up' (L. 638)
šire- 'to quilt sth' → *šire-ld-* 'get entangled (of hair, mane)' (L. 655)
xögnö- 'to tie (lambs) to sth' → *xögnö-ldö-* 'to grow entangled' (L. 547).

Note that the suffix *-lda* functions as an anticausative marker on non-reciprocal verbs as well, though only in two or three cases; cf.:

- (130) *güice-* 'to complete sth' → *güice-ld-* 'to be completed' (L. 129).

15. Denominal verbs with the suffix *-lda*

The suffix *-lda* in this function corresponds to the Turkic *-laš* which is segmentable into a verb-forming suffix *-la* and reciprocal *-š* (cf. Kirghiz: Ch. 26, §12). They are similar in that the derived verbs are mostly reciprocal in meaning, and not infrequently the underlying nouns are also (lexical) reciprocals.

1. Denominal verbs with a reciprocal meaning:

- | | | |
|---|---|--|
| (131) <i>booco</i> ‘argument/wager/bet’ | → | <i>booco-ldo-</i> ‘to bet/wager’ (L. 77) |
| <i>nuruu</i> ‘stack/rick’ | → | <i>nuruu-lda-</i> ‘to stack hay’ (L. 278) |
| <i>nüür</i> ‘face’ | → | <i>nüüre-ldē-</i> ‘to meet at confrontation’ (L. 288) |
| <i>sülbee</i> ‘connections’ | → | <i>sülbee-ldē-</i> ‘to be connected’ (L. 368) |
| <i>zarga</i> ‘complaint/(law)suit’ | → | <i>zarga-lda-</i> ‘to sue sb/take sb to court’ (L. 193). |

In this connection the following derivatives from an adjective and an adverb-postposition should be mentioned:

- | | | |
|--------------------------------|---|--|
| (132) <i>xeder</i> ‘obstinate’ | → | <i>xedere-ldē-</i> ‘to be obstinate’ (Č. 641) |
| <i>urid</i> ‘before’ | → | <i>uri-lda-</i> ‘compete in running/overtake each other’ (Č. 476). |

2. Denominal verbs with non-reciprocal meanings:

- | | | |
|-------------------------------------|---|---|
| (133) <i>boimo</i> ‘loop, noose’ | → | <i>boimo-ldo-</i> ‘to hang oneself’ (D. 149) |
| <i>erxe</i> ‘thumb’ | → | <i>erxe-ldē</i> ‘to hook/press with a thumb’ (Č. 773) |
| <i>hüyee</i> ‘heel’ | → | <i>hüyee-ldē-</i> ‘to step with (one’s) heels’ (Č. 695) |
| <i>hüüže</i> ‘hip(bone)’ | → | <i>hüüže-ldē-</i> ‘to sit sideways’ (Č. 699) |
| <i>seeže</i> ‘breast’, fig. ‘heart’ | → | <i>seeže-ldē-</i> ‘to memorize’ (Č. 405). |
| <i>toxoi</i> ‘elbow’ | → | <i>toxoi-ldo-</i> ‘to lean on one’s elbow’ (L. 414). |

16. Suffixes partially coincident in form with *-lda* and *-lca/-lsa*

We are not in a position to resolve the issue of the proper etymology of these suffixes, but it may be useful to list the suffixes which either entirely or partially are contained in the suffixes *-lda* and *-lca* (Buryat *-lsa* and Written Mongolian *-lča*), since their meanings are similar to a greater or lesser degree to that of the latter suffixes. Their common component is iterativity. Therefore it is quite likely that this material similarity is not accidental (see also Ramstedt 1952:162–7).

1. The suffix *-l* is used to derive verbs denoting frequently repeated or fast actions; they are rather few in number (Sanzheev 1963:65; see also Poppe 1954:64); examples:

- | | | |
|---|---|---|
| (134) <i>coxy-</i> ‘to hit/beat’ | → | <i>coxi-l-</i> ‘to hit repeatedly’ (L. 611) |
| <i>caxy-</i> ‘to flash once (of lightning)’ | → | <i>caxi-l-</i> i. ‘to flash repeatedly (of lightning)’
ii. ‘to walk very fast’ (L. 607, 606) |
| <i>maaži-</i> ‘to scratch’ | → | <i>maaž-l-</i> ‘to scratch lightly, from time to time’ (L. 231) |
| <i>manda-</i> ‘to rise (e.g. of sun)’ | → | <i>mand-l-</i> ‘to rise repeatedly’ (L. 235, 236) |
| <i>mörgö-</i> ‘to butt sb/each other’ | → | <i>mörgö-l-</i> ‘to butt sb/each other often’ (L. 246, 245) |
| <i>mušgi-</i> ‘to twist, roll up’ | → | <i>mušgi-l-</i> ‘to twist, roll up repeatedly’ (L. 250) |
| <i>šunga-</i> ‘to dive’ | → | <i>šunga-l-</i> ‘to dive repeatedly’ (L. 660). |

2. The suffix *-ldz* forms verbs denoting rhythmical actions performed at given intervals; it operates on a limited number of stems (Sanzheev 1963:65–6); cf.:

- (135) *ganx-* ‘to swing/flutter/sway’ → *ganxa-ldz-* ‘swing/flutter/sway repeatedly’ (L. 111)
sew- ‘to wave sth’ → *sewe-ldz-* ‘to flutter/fly repeatedly’ (vi) (L. 372).

3. The suffix *-c-gaa* (Buryat *-sa-gaa*) has the meanings of plurality, iterativity, and imitativity (see Section 6 above). Its first component is materially similar to the second component of the sociative suffix *-l-ca* (Buryat *-l-sa*).

4. The suffix *-ca* (Buryat *-sa*) appears as a second component of the sociative suffix *-l-ca* (Buryat *-l-sa*) and the first component of the complex reciprocal suffix *-ca-lda* (Buryat *-sa-lda*; see Section 5). This unproductive suffix does not have a clear-cut meaning, but the following may be indicative of its primary meaning: it is not accidental that out of 13 Buryat verbs listed in Sanzheev (1962: 180) seven are formed from lexical (semi-)reciprocal non-verbs (to which at least two more forms can be added). And, if we take into account the tendency to form reciprocal verbs from (semi-)reciprocal verbs and other word classes (see Section 14 above and Nedjalkov & Nedjalkov, Ch. 26 on Yakut, §12; and also Nedjalkov, Ch. 28 on Kirghiz, §12.2), we may claim that *-ca/-sa* was once used to derive reciprocal verbs (and this probably accounts for its merging with the suffix *-lda* in *-ca-lda/-sa-lda*). Note in this connection that Poppe (1937: 142) calls verbs with the suffix *-sa/-se* in Written Mongolian as verbs of cooperation and describes their meaning as “an action performed with each other mutually”.

- (136) *alga* ‘past sth, by’ → *alga-sa-* ‘to pass by, separate’ (Č. 41)
dabxar ‘double’ → *dabxa-sa-* ‘to put one upon another, double’ (D. 138)
esergüü ‘against’ → *esergüü-se-* ‘to resist’ (Č. 777)
mürüi ‘competition (arch.)’ → *mürüi-se-* ‘to compete’ (Č. 309)
mürge- ‘to collide’ → *mürge-se-* ‘to collide’ (Č. 308)
nüxer ‘friend’ → *nüxe-se-* ‘to become friends’ (D. 138)
ten ‘evenly, correspondence’ → *ten-se-* ‘to correspond’ (Č. 455)
xaryuu ‘answer’ → *xaryu-sa-* ‘to answer’ (Č. 559)
xaxa- ‘by half’ → *xaxa-sa-* ‘to part’ (Č. 563)
zerge ‘row, rows’ → *zerge-se-* ‘to line up in a row’ (D. 138)
zoxi- ‘to coincide’ → *zoxi-co-* ‘to coincide’ (L. 200)¹⁰
jör- ‘to differ, make way for each other’ → *jör-c-* ‘to disobey’
xäry- ‘to return’ → *xäry-c-* ‘to contact, keep in touch’
 (the latter/last two examples are borrowed from Sechenbaatar 2003: 140).

10. As a curiosity, we would like to mention that Khalkha has a number of nouns, mostly names of small birds, on which the suffix *-lda* is part of the suffix *-ldai*. The latter suffix and its last component are not registered as such in the literature (note that the component *-i* is present in three same-stem words: *abaaxai*, *jobxoi-*, *xiiüxei*). We cannot find any direct semantic relation to the reciprocal suffix *-lda*, but the material coincidence may be not accidental: probably *-lda* first referred to a multitude of small birds. In Khalkha, nouns without plural marking may have a plural meaning; the meaning of implicit plurality is also contained in the noun *nolo-ldo* ‘breeding period (of birds)’ (B.; it has no underlying word) – as is known, during this period birds flock together. The connection between the meanings of nominal plurality, verbal iterativity and reciprocity has been proposed for a

In conclusion, we would like to point out that the material coincidence of the Mongolic reciprocal suffix *-lda* and the sociative suffix *-ldə* (with the original reciprocal meaning) in the areally similar Tungusic languages is hardly accidental. The reciprocal suffix in most Tungusic languages is *-maat* and its variants, but Manchu has retained the suffix *-ndu* (< *-ldu*) with the reciprocal meaning (see Nedjalkov & Nedjalkov, Ch. 26, §14.2).

Acknowledgments

We are deeply indebted to S.Je. Yakhontov for his criticisms on the early draft of this paper which we have done our best to take into consideration. The prefinal versions were read by David A. Peterson and Serguey Say whose comments helped to make further improvements.

We are grateful to our Khalkha-Mongol informants Kurebito Tugus and Galsanjamts Ulziinemekh for their help and Anna Bugaeva for mediation in our communication with them. Thanks are also due to Tuvshintogs and Gerelma who supplied us with some Khalkha data, and to Julia Batueva who provided responses from a number of Buryat native speakers. Many Buryat data were obtained from Darima Dorzhieva and Nadezhda Darzhaeva. Special thanks to Professor Juha Janhunen for some literature on the Mongolic languages.

The misinterpretations and errors are our responsibility.

number of languages, e.g. for the Turkic languages (see, for instance, Ch. 26 on Yakut, §14.2). Here is a list of all nouns with this suffix registered in the *Buryat-Russian Dictionary*:

- | | | | |
|-------|----|---------------------|---|
| (132) | a. | <i>boro-ldoi</i> | dimin. 'lark' (cf. <i>bor</i> 'grey'; L. 78) |
| | | <i>gurga-ldai</i> | 'marsh sparrow' (cf. <i>gurga-</i> 'to chirp'; Č. 161) |
| | | <i>piišča-ldai</i> | 'birdie' (cf. <i>piiščana-lda-</i> 'to cheep (of nestlings)'; Č. 371) |
| | | <i>šiišxa-ldai</i> | 'birdie' (<i>šiišxa</i> ?; Č. 726) |
| | | <i>xügsege-ldei</i> | 'wagtail' (<i>xügsege</i> ?; Č. 611) |
| | | <i>xüxe-ldei</i> | 'blue titmouse' (cf. <i>xüxi-</i> 'to make merry'; Č. 636) |
| | b. | <i>abaaxa-ldai</i> | 'spider' (= <i>abaaxaj</i> ; Č. 19) |
| | | <i>abga-ldai</i> | 'mask' (shaman's idol) (cf. <i>abga-</i> 'to treat elders with respect'; Č. 23–4) |
| | | <i>booxo-ldoi</i> | 'brownie', 'ghost' (cf. ? <i>boo-xo</i> 'to bar/block up'; Č. 105) |
| | | <i>jobxo-ldoi</i> | 'man with a cone-shaped head' (cf. <i>jobxoj-</i> 'to be cone-shaped'; Č. 226) |
| | | <i>xüüxe-ldei</i> | 'doll' (cf. <i>xüüxej</i> 'baby, child'; Č. 634). |

Another instance of unexpected, at first glance, use of the suffix *-lda* with a long final vowel, i.e. *-ldaa*, is its use in Khalkha imperative mood forms along with a number of other suffixes for rendering a honorific sense. This usage is most likely related to the meaning 'many' of this suffix. Compare:

- (133) *Suu!* 'Sit down!' → *Suu-ldaa!* 'Sit down, please!'

1. General remarks

1.1 Tariana

Tariana is the only North Arawak language spoken in the Vaupés linguistic area by about 100 people. This area is characterized by an obligatory polylingualism due to marriage patterns based on linguistic exogamy (see Sorensen 1967/1972; Aikhenvald 1996). Other languages spoken in the area belong to the East-Tucanoan family, genetically not related to Tariana. East-Tucanoan languages and Tariana display a striking number of structural similarities due to areal diffusion of patterns, mostly unilateral, from East-Tucanoan to Tariana. There are no lexical borrowings, due to the inhibition on “language mixing” viewed in terms of lexical interference and the borrowing of phonological shape of morphemes. Thus, Tariana is, in many ways, very divergent from other North-Arawak languages, including those with which it is closely related, as far as its grammatical structure is concerned, since it displays a queer combination of genetically inherited morphemes, areally diffused structural patterns and independent innovations, along with symptoms of language obsolescence (see Aikhenvald 1996). As will be shown below, the treatment of reciprocals also reflects this.

Tariana is an endangered language. It is not spoken by children, and younger speakers use this language only when they address older people. The local lingua franca is Tucano, and so the younger Tarianas speak Tucano between themselves and with their spouses and children, though they state that their language of identity is Tariana. This results in a number of grammatical differences between the younger and the older people who speak Tariana. This also concerns the use of morphological reciprocals.

Grammatical characteristics of Tariana are described in Section 2. This section also discusses classification of verbs, verb structure and reflexives. Reciprocals are discussed in Section 3, and sociative serial verb constructions in Section 4. In Section 5 I consider reciprocals and reflexives in Tucano, a representative of East-Tucanoan language family.

1.2 Overview

Tariana has three mechanisms of expressing reciprocal meanings. There is a morphological reciprocal marked on the verb with a suffix (*-kaka*), e.g. (1b). This mechanism is more frequent in old people’s speech. Ambitransitive (labile) verbs can have a reciprocal meaning, when used intransitively, cf. (1c). Sociative serial verb constructions can also acquire

a reciprocal meaning, e.g. (1d). These two mechanisms are frequently used in the younger people's language. In (1a) the verb *-kwisa* 'to hate' is used transitively. Tariana has only subject-oriented "canonical" reciprocals.

- (1) a. *naha na-kwisa wa-na.*
 they 3PL-hate 1PL-OBJ
 'They hate us.'
- b. *naha na-kwisa-kaka.*
 they 3PL-hate-REC
 'They hate each other.'
- c. *naha na-kwisa.*
 they 3PL-hate
 'They hate each other.'
- d. *naha na-siwa na-kwisa.*
 they 3PL-be.together 3PL-hate
 'They hate each other' (or 'They hate (someone else) together.')

Sociative is used to express reciprocal meaning in other languages of the world. It is a typical polysemy found in Austronesian languages (e.g., Lichtenberk, Ch. 36 on To'aba'ita; Moyses-Faurie, Ch. 35 on East Futunan; Bril, Ch. 34 on Nêlêmwa). A comparison with East-Tucanoan languages shows that sociative serial verb constructions with reciprocal meaning evolved in Tariana as a result of areal diffusion from East-Tucanoan languages. East-Tucanoan languages use verb compounding, or verb root serialization, to mark reciprocals and sociatives. The obsolescence of morphological reciprocal found in other North Arawak languages of the region (see Aikhenvald, Ch. 20) but absent from East-Tucanoan is also a recent development in Tariana.

2. Grammatical notes on Tariana

2.1 Typological characteristics

Typologically, Tariana¹ is predominantly head-marking with a few elements of dependent-marking. Constituent order is free, with a strong tendency towards verb-final order.

For all constituent types, Tariana uses case-marking which depends on the discourse structure (Aikhenvald 1994b). For personal pronouns with an animate referent, there is an obligatory object case suffix *-na* which combines with person cross-referencing prefixes; it is used for marking any non-subject constituent. Case-marking clitic *-nuku* is used on any non-subject constituent if it is referential and is going to be a future topic of the narrative, or a conversation. Suffix *-ne* 'agentive', which historically developed from instrumental

1. Materials on Tariana used in this paper were collected during three fieldtrips in 1991, 1994 and 1995. They contain word lists, conversations and around 700 pp. of texts told by the older speaker (Cândido) and younger speakers – his children Graciliano, Jovino, José and Olivia.

Table 1. Cross-referencing (A/S_a) prefixes in Tariana

	SG	PL
1	<i>nu-</i>	<i>wa-</i>
2	<i>pi-</i>	<i>i-</i>
3.NF	<i>di-</i>	
3.F	<i>du-</i>	<i>na-</i>

-ne, is used to mark the subject (A/S) when it is either in contrastive focus or its actions are consequential for the narrative.

2.2 Classification of verbs

Tariana ‘inherited’ a morphological distinction between active and stative intransitive verbs from Proto-Arawak. In Tariana both active intransitive and transitive verbs obligatorily take cross-referencing prefixes, distinguishing three persons and impersonal in singular and three persons in plural. Stative verbs do not take any cross-referencing markers. Active intransitive and transitive verbs have one obligatory prefixal position, so that when prefixed negation *ma-* is used, personal cross-referencing prefixes are omitted, and person/gender/number distinctions are neutralized. Cross-referencing prefixes are given in Table 1.

An important property of Tariana verbs is their transitivity value. In some languages every, or almost every verb is strictly transitive or intransitive; in other languages at least some verbs can have either transitivity value. These verbs are called ambitransitive, or labile (Dixon 1994: 18, 54). All transitive verbs in Tariana are A=S ambitransitive. This means the object NP can always be optionally omitted, as in English ‘to eat’ (‘he eats dinner’ or ‘he eats’), or ‘to knit’. Example (2) illustrates an ambitransitive verb, and (3) an active (S_a-type) intransitive.

- (2) *(a:si) nu-hñā-ka.*
 (pepper) 1SG.A-eat-DECL
 ‘I eat/am eating (pepper).’
- (3) *nu-ruku.*
 1SG.S_a-go.down
 ‘I go downstream.’

Stative (or S_o-type) intransitive verbs do not take any cross-referencing markers:

- (4) *nuha keru-mha.*
 I angry-PRES.NVIS
 ‘I am angry.’

Ditransitive verbs form a subclass of S=A ambitransitives. Their second argument can be either O or dative, e.g., *-a* ‘to give’, *-phyā* ‘to sell’, *-walita* ‘to offer’ (ritual offering); *-wāya* ‘to buy’.

S=O ambitransitives, i.e. verbs similar to English *break* (*I broke the glass* vs *The glass broke*) are rare. The only consistent S=O ambitransitive is *-bueta* ‘to teach; to learn.’² Another verb in the corpus which is sometimes used as an S=O ambitransitive is *-thuka* ‘to break completely (in two parts)’. It is more frequently used as transitive, as in (5), or A=S ambitransitive, as in (6).

- (5) *di-waliki di-thuka-pidana di-sua di-a-pidana.*
 3SG.NF-spine 3SG.NF-break-RMPAST.REP 3SG.NF-stay 3SG.NF-go-RMPASTREP
 ‘He broke his spine.’
- (6) *di-thuka dhimaita, di-hña di-ña-nhi-pidana diha ñaki.*
 3SG.NF-break 3SG.NF.burn 3SG.NF-eat 3SG.NF-stay-IPFV-RMPAST.REP he spirit
 ‘The spirit was breaking, burning, eating (everything he could find).’

The use of it as an S=O ambitransitive is encountered in a text told by a younger speaker (7). In this example the verb *-thuka* is used ambitransitively after it has been used transitively. This may reflect a recent development.

- (7) *di-thuka-kha di-ruku di-a diha-na-ne.*
 3SG.NF-break-away 3SG.NF-fall 3SG.NF-go he-CLF:VERTICAL-AG
 ‘(After the widow broke a branch and managed to hit (the evil spirit) on his penis), it (the penis) was breaking and falling off.’

2.3 Valency changing derivations

Tariana has one valency-increasing derivation, marked with the suffix *-ita*. It is a morphological causative when used with intransitive verbs, e.g., *-musu* ‘to go out’ → *-musu-ita* ‘to make go out’. When used with transitive verbs, it often expresses promotion of an oblique constituent (instrumental, comitative, purpose or locative) into core, e.g., *-wapa* ‘to wait (for sb)’ → *wape-ta* (from *-wapa-ita*) ‘to wait for sb with a ritual offering’; *-wana* ‘to call’ → *-wane-ta* ‘to invite/call to do something’. Another regular way of forming causatives of transitive verbs is via syntactic causatives, or causative serial verb constructions. On the syntax and semantics of morphological and syntactic causatives in Tariana, see Aikhenvald (2000: 145–72).

There is also a passive, and a topic advancing voice (see Dixon & Aikhenvald 1997: 71–113).

2.4 Verb structure

Tariana has a very complicated verb structure compared to neighbouring North Arawak languages (Baniwa of Içana, Warekena, Bare; see Aikhenvald, Ch. 20). There are two types of predicates – simple predicates and serial verb constructions.

2. This verb is one of the few loan words from *Lingua Geral*, or *Nheêngatú*, a creolized version of Tupinambá which used to be spoken in the whole Amazon. This language was gradually replaced by Tucano as a *lingua franca* of the Vaupés region. This unusual property of the verb *-bueta* may be due to its foreign origin.

2.4.1 *Simple predicate structure*

Simple predicates have the following structure:

- Cross-referencing A/S_a prefix or negative prefix *ma-* + verbal ROOT + thematic syllable + the following suffixes:
- Valency-increasing *-ita* ‘causative, applicative’.
- Negative *-kade*.
- Resultative *-karu* (plus purposive mood *-hyu*); or *-ni* ‘topic advancement’, or *-kana* ‘passive’.
- Verb-incorporated classifier.
- Benefactive *-pena*.
- Reciprocal *-kaka*.
- Relativizing and nominalizing affixes (relative and converb *-ri*, past relative *-kari*, nominalizers *-mi*, *-nipe* or a classifier in a derivational function; see Aikhenvald 1994a).

Suffixes are followed by enclitics. Unlike suffixes, (a) enclitics can often be omitted; (b) they preferably go on the verb, but can also go on any focussed constituent; (c) all enclitics (except those marking mood) allow variable ordering; (d) enclitics longer than one syllable have a secondary stress. Tense-aspect-mood and evidentiality markers are not obligatory. Verbal forms without these are understood as past tense non-eyewitness.

The most frequent and functionally unmarked order of enclitics is:

- mood (imperative, frustrative, conditional);
- evidentiality fused with tense;
- Aktionsart;
- aspect;
- degree (augmentative, diminutive, approximative: ‘a little bit’);
- markers of clause sequencing some of which also mark switch reference.

There is no productive verb compounding (unlike East-Tucanoan languages; see Section 5). (8) is an example of a simple predicate with three suffixes and two enclitics.

- (8) *na-matfi-ka-ita-kaka-sita-pidana*.
 3PL-be.bad-TH-CAUS-REC-ANT-RMPAST.REP
 ‘They have apparently transformed each other into something bad.’
 (lit. ‘made each other be something bad.’)

2.4.2 *Serial verb constructions*

Tariana also has productive verb serialization (Aikhenvald 1999: 479–508). Serial verb constructions (SVC) are known to include up to seven verbs. They are strictly contiguous (i.e. no other constituent can intervene between their components). Each component of a SVC is an independent phonological word, and they all receive the same inflection for person, number and gender of A/S_a. All the components of a SVC have the same tense, aspect, mood, evidentiality and polarity value. The order of the components may be fixed or not depending on the construction type. SVC cannot consist of stative verbs only. (9) is an example of a serial verb construction.

- (9) *phe pi-nu.*
 2SG.enter 2SG-come
 ‘Come in!’

2.5 Intransitives and reflexives in Tariana

All the North-Arawak languages of the Upper Rio Negro use the same verbal suffix for reciprocals and reflexives (see Aikhenvald, Ch. 20). The reciprocal suffix, *-kaka*, can be occasionally used to mark reflexives, as shown in (10). This pattern, common for the Arawak languages of the region, but unusual for East-Tucanoan languages, is being lost from Tariana.

- (10) *nuha nu-pisa-kaka-mha.*
 I 1SG-CUT-REFL-PRES.NVIS
 ‘I have just cut myself.’

Examples of this sort are extremely rare. Usually, A=S ambitransitives can acquire a reflexive meaning when used intransitively.

(11) illustrates a transitive use of *-pisa* ‘to cut’. An intransitive use of *-pisa* with a reflexive reading is illustrated with (12). This is a usual way of expressing a reflexive meaning.

- (11) *diwhida na-pisa na-pala-pidana.*
 3SG.NF.head 3PL-cut 3PL-put-RMPAST.REP
 ‘(They fished the snake, took him into a clay basket,) put him, cut his head and put it (there).’
- (12) *maliye-ne nu-pisa-makha-niki.*
 knife-INST 1SG-cut-RCPAST.NVIS-COMPL
 ‘I cut myself with a knife.’

3. Reciprocals in Tariana

3.1 Morphological reciprocals with the suffix *-kaka*

3.1.1 General properties

Morphological reciprocal is marked on the verb, with the suffix *-kaka*. The reciprocal *-kaka* is used on transitive, or ambitransitive verbs, if they have a plural A identical with the O, and the action is symmetrical. (13) illustrates the reciprocal *-kaka* on the verb *-inu* ‘to kill, fight, hunt’. The same verb is used transitively in (14).

- (13) *patfi nawiki desano alia-pidana, diha talia-seri-sini*
 other person Desano be-RMPAST.REP he Tariana-every-also
pa-ita-sina, na-inu-kaka-pidana.
 one-CLF:GNR-RMPAST.ASSUMED 3PL-kill-REC-RMPAST.REP
 ‘One (group of) people was Desano, the other was Tariana, they fought each other.’

- (14) *yawi na-inu-sina.*
 jaguar 3PL-kill-RMPAST.ASSUMED
 ‘They killed a jaguar.’

In (15) *-inu* is used intransitively, being an A=S ambitransitive, as any transitive verb in Tariana (see Section 2.2).

- (15) *na-inu-sina.*
 3PL-kill-RMPAST.ASSUMED
 ‘They were fighting.’

Reciprocal form of *-nalita* ‘to quarrel, scold’ is illustrated in (16). The same verb is used intransitively in (17).

- (16) *di-pumina na-lita-kaka.*
 3SG.NF-because.of 3PL-quarrel-REC
 ‘They quarreled with each other.’
- (17) *kiaku di-nalita.*
 strong 3SG.NF-quarrel
 ‘He scolded (his son) a lot.’

3.1.2 *Expression of reciprocal arguments*

In Tariana, the instrumental case marker *-ne* is used to mark the comitative argument of a reciprocal. This is illustrated in (18), with a reciprocal of *-kolota* ‘to meet’. Instrumental *-ne* appears on *di-we-ri-ne* ‘with his younger brother’. Similar constructions are found in Baniwa of Içana, a closely related North Arawak language (see Aikhenvald, Ch. 20). More than one participant is involved, and this explains plural cross-referencing on the verb.

- (18) *di-we-ri-ne na-kolota-kaka-sina.*
 3SG.NF-younger.sibling-M-INST 3PL-meet-REC-RMPAST.ASSUMED
 ‘A mythical hero met his younger brother.’
 (lit. ‘They met each other with his younger brother.’)

3.1.3 *Morphological reciprocals and language attrition*

Younger speakers of Tariana tend to avoid using morphological reciprocals in *-kaka*. Ambitransitive verbs, used intransitively, tend to acquire reciprocal reading if they have a plural subject. For instance, the older speaker consistently used morphological reciprocal *-kaka* on such verbs as *-nalita* ‘to quarrel, scold’ in (16) and *-kwisa* ‘to hate, scold’ in (19). These verbs have a reciprocal reading in examples from young people’s speech: see (20) and (21).

- (19) *nha nhamépa na-kwisa-kaka na-wa na:-pidana te halite.*
 they two.CLF:AN 3PL-scold-REC 3PL-try 3PL.go-RMPAST.REP until white.CLF:AN
 ‘Thus they did, they scolded each other until it was dawn.’
- (20) *naha na-kwisa.*
 they 3PL-hate
 ‘They hate each other.’

- (21) *ne-se nemhani-ni-se, naha n̄amepa na-nalita-pidana.*
 then-LOC 3PL.walk-REL-LOC they two.CLF:AN 3PL-quarrel-RMPAST.REP
 ‘Then while they were walking, the two of them (tapir and turtle) quarreled with each other’ (there are no other characters in the story to quarrel with).

One of the reasons for this may be that the existence of a morphological reciprocal is not characteristic of other languages of the area – East-Tucanoan languages (see Sections 1.2; 5). Thus, the loss of morphological reciprocal in Tariana is due to language attrition together with areal pressure of East-Tucanoan languages.

3.2 Symmetrical predicates

Some predicates usually acquire a reciprocal interpretation without taking any special marker. In Tariana, this is the case with A=S ambitransitive verbs which permit the interpretation of the participants as having identical, or symmetric relations to each other. This happens only if the A of these verbs is plural, and the O is omitted. Among symmetrical predicates which behave this way are *-naku* ‘to swive, make love’, *-sape* ‘to speak’, *-keta* ‘to meet’.

The verb *-naku*, when used transitively means ‘to swive, make love to sb’, or ‘to put into one’s lap’, as in (22):

- (22) *nuhua-de nu-ri-nuku nu-naku nu-kwa.*
 I-IMMFUT 1SG-SON-TOP.O 1SG-put.on.the.lap 1SG-hang
 ‘(Bring me my son,) I shall put him in my lap (hanging in the hammock)’ (said the ghost to the widow).

When used without a direct object with plural subject it is always understood as a symmetrical predicate ‘to swive each other’; cf. (23):

- (23) *nha n̄hamepa na-ya-dawa-se na-sua-ri-se na-naku na:-ka*
 they two.CLF:AN 3PL-POSS-CLF:ROOM-LOC 3PL-lie-REL-LOC 3PL-swive 3PL.GO-DECL
na-swa-pidana.
 3PL-stay-RMPAST.REP
 ‘They two were swiving in their room in their bed.’

4. Sociative serial verb constructions

4.1 General properties

Serial verb constructions which contain a prefixed verb *-siwa* ‘to be together’ are used to express sociative meaning ‘together with somebody’. In agreement with the properties of serial verb constructions (see Aikhenvald 1999: 479–508), serial constructions with *-siwa* show the same subject constraint; no other constituent can intervene between *-siwa* and the other component, and there is one tense-aspect-evidentiality marker per construction,

as in (27) or (28). The order of the components in serial verb constructions with *-siwa* is free; *-siwa* is most often the first component in serial constructions.

-Siwa tends to occur mostly in serial verb constructions, but it sometimes can be used as an independent predicate ‘to be together’, as in (24). This sentence does not contain a serial verb construction because *thuya* ‘all’ comes in between *na-sape-pidana* ‘they talked’ and *na-siwa* ‘they were together’.

- (24) *naha itfida-ne na-sape-pidana thuya, na-siwa.*
 they turtle-AG 3PL-speak-RMPAST.REP all 3PL-be.together
 ‘All the turtles spoke, they were all together.’

Prefixless stative verbs cannot form a sociative construction with the verb *-siwa*. This may be due to a more general restriction on the use of stative verbs in serial constructions (see Section 2.4.2).

4.2 Reciprocal meaning

Serial verb constructions with the verb *-siwa* are often used in reciprocal meaning with transitive verbs, especially in younger people’s speech, e.g. (25).

- (25) *São Gabriel-se wa-siwa wa-keta.*
 São Gabriel-LOC 1PL-be.together 1PL-meet
 ‘We all shall meet (each other) in São Gabriel.’

In elicitation at earlier stages of fieldwork, younger speakers often gave constructions with *-siwa* to translate reciprocal constructions from Portuguese, and used Portuguese reciprocal-reflexive *se* to translate *-siwa* constructions, e.g.:

- (26) *tfinu na-siwa na-hwā-ka-nihka.*
 dog 3PL-be.together 3PL-bite-DECL-RCPAST.INFR
 ‘Dogs are biting each other.’

4.3 Other meanings

4.3.1 Sociative meaning

The verb *-siwa* can have a sociative meaning with intransitive verbs, as in (27). This example comes from a traditional story told by the older speaker.

- (27) *nha-nāna-pe alia-pidana na-siwa neka-pidana.*
 they-PEJ-PL existential-RMPAST.REP 3PL-be.together 3PL.laugh-RMPAST.REP
 ‘They were there, the naughty ones (Tariana’s forefathers), they laughed together.’

They can also have a sociative meaning with some transitive verbs, as illustrated in (28) (from an older man’s story), and (29) (from a story told by a younger man). However, the sociative meaning seems to be restricted to verbs which do not occupy a high position on

the transitivity hierarchy (Hopper and Thompson 1980). The verb *-ira* ‘to drink, consume without chewing’ is a typical example.³

- (28) *payaru na-ira-pidana na-siwa.*
 whisky 3PL-drink-RMPAST.REP 3PL-be.together
 ‘They drank whisky together.’

This usage is also found in younger people’s speech; cf. (29) and (30):

- (29) *waha wa-sape-naka wa-siwa talia yarupe.*
 we 1PL-speak-PRES.EYEW 1PL-be.together Tariana thing
 ‘We are speaking Tariana all together.’
- (30) *waha ehkwapi-pe hīda-pada ma-nu-kade-ka wa-siwa.*
 we day-PL every-SUFF NEG-COME-NEG-DECL 1PL-be.together
 ‘We do not come together (lit. come-be together) every day.’

4.3.2 Reflexive-benefactive meaning

Serial verb constructions with *-siwa* may have a benefactive interpretation. (31) is a rather rare example.

- (31) *nuha pa-ita malie nu-wayā-ka nu-siwa.*
 I one-CLF:OBJ knife 1SG-buy-DECL 1SG-be.together
 ‘I bought a knife for myself.’

A serial verb construction with *-siwa* can be understood as having a reflexive meaning. This is very rare. (32) comes from a story about the magic power of evil spirit’s shirt told by a younger speaker. However, this example is ambiguous, because *-siwa* can also be understood as emphasizing the identity of the subject (see 4.3.3), and transitive verb *di-sole* ‘to take off’ as unmarked reflexive. I have mentioned in Section 2.5 that any transitive verb in Tariana can acquire a reflexive reading if used intransitively.

- (32) *di-siwa-pidana di-sole diha-maka.*
 3SG.NF-be.together-RMPAST.REP 3SG.NF-take.off he-CLF:CLOTH
 ‘It (the shirt) took itself off (from the man).’

4.3.3 Emphatic meaning

Serial verb constructions with the verb *-siwa* are widely used by all the speakers to emphasize the identity of the subject, similarly to English ‘self’ in *you yourself do it*. This is illustrated with (33). Note that third person singular non-feminine cross-referencing prefix is used independently of the number of the subject if it has an inanimate referent.

3. Verbs of eating and drinking form a separate class of transitive verbs in all North Arawak languages. They share some morphological properties with intransitive verbs. For instance, unlike transitive verbs, they can have morphological causatives, e.g. Tariana *-ira* ‘to drink’, *-ireta* ‘to make drink’. See Section 2.3.

- (33) *tiya-pe kwe-peri-tupe di-siwa-pidana di-kolo-ka*
 plate-PL what-PL-PL.DIM 3SG.NF-be.together-RMPAST.REP 3SG.NF-roll-SEQ
di-ruku di-a uī-se.
 3SG.NF-go.down 3SG.NF-go port-LOC
 ‘All the little plates (lit. ‘whatever little plates’) went down to the port by themselves.’ (lit. ‘be together-roll.’)

(34) is an idiomatic expression; the hearer is supposed to take all the responsibility for the undesired action, i.e. ‘to know for themselves’.

- (34) *i-siwa i-yeka.*
 2PL-be.together 2PL-know
 ‘You know for yourselves’ (but I have told you that you should not be doing this).

4.4 Morphological reciprocals and sociative serial verb constructions

The reciprocal marker *-kaka* can be used in a sociative serial construction marked with *-siwa* ‘to be together’. The reciprocal suffix *-kaka* goes on the verb *-siwa*, since it is most frequently the first component of the serial verb construction.

The meaning of a serial construction consisting of *-siwa-kaka* + another predicate(s) is ‘do something all together to one another’. Sociative and reciprocal meanings are combined. These constructions are used to emphasize that every one of the participants is, or was involved in a reciprocal action. This use is restricted to serial constructions with transitive verbs. The subject is always plural.

This construction type is found in the speech of both old and young people. (35) comes from a narrative told by a younger speaker.

- (35) *pa:piu-pidana itfiri na-siwa-kaka na-ni.*
 one-CLF:TIME-RMPAST.REP animal 3PL-be.together-REC 3PL-do
 ‘Once the animals did (like this) together to one another.’

Simple morphological reciprocal which involves just two people doing something to each other cannot be marked with *-siwa*. This is illustrated with (36), from a traditional story told by an older speaker. This example describes a tobacco-smoking ritual where everybody participates in talking to each other, and so both sociative serial verb construction and morphological reciprocal are employed (*na-sape-kaka na-siwa*). However, only two people are involved in exchanging cigars – literally, ‘making each other smoke tobacco’. This is why *na-siteta-kaka* (and not *na-siwa-kaka na-siteta*) is used.

- (36) *hiku-nhina na na-sape-kaka na-siwa yema*
 thus-RMPAST.RPRT 3PL.go 3PL-talk-REC 3PL-be.together tobacco
na-siteta-kaka.
 3PL-smoke.CAUS-REC
 ‘So they talked to each other all together, they made each other smoke.’

4.5 ‘Doubling’ of reciprocal *-kaka* in sociative serial verb constructions

The reciprocal suffix *-kaka* can be used twice on both components of a serial verb construction with *-siwa*, to emphasize the reciprocal character of the action and the participation of everybody in it. (37) summarizes a story about Tariana’s wars with a neighbouring tribe.

- (37) *na-siwa-kaka na-inu-kaka.*
 3PL-be.together-REC 3PL-kill-REC
 ‘All (Tariana and Desano) fought all together.’

5. Reflexives and reciprocals in Tucano (East-Tucanoan)

5.1 Typological characteristics

East-Tucanoan languages in close contact with Tariana are Tucano, Guanano-Piratapuya and Desano. Tucano is the main language of communication, a kind of lingua franca of the region, with approximately 6000 speakers (Aikhenvald 1996). When not marked otherwise, Tucano examples come from my field work materials. All East-Tucanoan languages are structurally very similar, though not mutually intelligible. This structural similarity is due both to genetic affinity and to the patterns of indirect structural diffusion in the predominantly East-Tucanoan linguistic area of the Vaupés river basin.

All East-Tucanoan languages are suffixing, predominantly head-marking with a few characteristics of dependent marking. Most transitive verbs in Tucanoan languages are A=S ambitransitives and intransitives (see West 1980:81–83; Ramirez 1997). Transitive verbs can be derived from intransitives by the addition of a causative suffix *-o*. According to West (1980:83), some intransitive verbs can have a reflexive-like meaning, e.g., *ʔa* ‘to bathe (oneself)’, cf. causative *ʔo* ‘to make sb bathe themselves’. The only transitivity reducing operation is passivization (Ramirez 1997).

In Tucano reflexive meaning is mainly conveyed with the help of a reflexive pronoun, also used to emphasize the identity of the agent, or a patient. Reciprocal and sociative meanings are expressed with the help of verb compounding. Typologically, the use of verb compounding to mark reciprocals is an extremely rare phenomenon.

5.2 Reflexives

Tucano, like all the East-Tucanoan languages, has no special reflexive or reciprocal verbal derivations. Reflexive meanings are conveyed with the help of special pronominal forms. Reflexive pronominal *ba(h)sɨ, basi, basu* ‘self’⁴ is used in reflexive meaning; see (38) and (39).

4. Here I preserve different orthographies used by West (1980), Brüzzi (1967), and Ramirez (1997).

- (38) *yɨ bahsu koe.*
 I self wash
 ‘I wash myself.’ (Brüzzi 1967:166)
- (39) *sɛbɛ basi pikô-do ba’â-bi.*
 pacca self tail-SUFF eat-PRES.EYEW.M.3SG
 ‘Pacca eats its own tail.’ (Ramirez 1997:116)

Bahsi ‘self’ can also have emphatic meaning, as in (40).⁵

- (40) *ko bahsu-pe-le wehêa-mo.*
 she self-EMPH-TOP kill-3SG.F
 ‘She killed herself.’ (Brüzzi 1967:166)

5.3 Reciprocals and verb compounding

Reciprocal constructions in Tucano are formed with verb root compounding. Verb compounding is used to express a large variety of meanings, including valency increase. (See Gomez-Imbert 1988). Verb compounding, or verb root serialization, is a subtype of serial verb constructions (see Durie 1997).

5.3.1 Verbal compounds with the postposed verb *poteõ* ‘equalize’

Tucano uses compounded constructions with either of the two verbs, *poteõ* ‘to equalize, retribute, counter-balance’ and *amê* ‘to do to each other, retribute’. According to the explanations given by my consultant, Alfredo Fontes, compounds with *poteõ* mean ‘the equal amount of action on both sides’; cf. (41).

- (41) *mali iyã-poteõ-lã we.*
 we look-equalize-PL do
 ‘We are looking at one another’ (i.e., you are looking at me and I am looking back an equal number of times).

Poteõ can be used in compounding with transitive and intransitive verbs, and its meaning is ‘to do something equally’. *Poteõ* can be with intransitive verbs, e.g. *wihya* ‘to go out’ → *wihya-poteõ* ‘to go out from both sides’ (Brüzzi 1967:317); *õma* ‘to run’ → *õma-poteõ* ‘to run parallelly’; or with transitive verbs, e.g. *wehe* ‘to pull’ → *wehe-poteõ* ‘to pull from both sides’ (Brüzzi 1967:317), cf. (42):

- (42) *yɨ mi-le mahsi-poteõ.*
 I you-TOP know-equalize
 ‘I know as much as you do.’

Poteõ is often used in comparatives of equality:

5. Reflexive and emphatic meanings can be ambiguous. The following example comes from Ramirez (1997:116):

- (1) *kɨ basi wehêa-bi*
 he self kill-RCPAST.EYEW.M.3SG
 ‘He killed himself’, or ‘He himself killed someone else.’

- (43) *yɨ̃ miĩ-ḷe ʔm̃ia poteō.*
 I you-TOP high equalize
 ‘I am equal to you in height.’ (lit. ‘I am as tall as you are.’)

5.3.2 Verbal compounds with the preposed verb *-amē* ‘to do to each other, retribute’

Verbal compounds with *amē(-ni)* ‘to do to each other, retribute, reward’ mean ‘to do to each other, do back’, without necessary equality:

- (44) *ate amē-kē-ḷa we-ma.*
 this.one.PL do.to.each.other-hit-PL do-PL
 ‘These ones hit each other.’

If the identity of the subject has to be emphasized, *amē(-ni)* can co-occur with *bahsi* ‘self’, as in (45).

- (45) *na bahsɨ amēni koea-ma.*
 they self REC wash-PL
 ‘They wash each other themselves.’

According to Brüzzi (1967:279), *amē* can also be used to show that A=O and to emphasize the identity of the subject, and in this case it co-occurs with *bahsɨ*, *ba(h)su* with a non-plural subject, e.g.:

- (46) *kā bahsu amē-wehēa-pɨ.*
 he self REFL-kill-EMPH
 ‘He (himself) killed himself.’

Amē and *poteō* can co-occur, e.g.:

- (47) *amē-kē-poteō-ma.*
 do.to.each.other-hit-equalize-PL
 ‘They hit each other (equally)’ (i.e., one hit the other twice, and the other did so twice).

Verb compounding with *poteō* and *amē* creates intransitive verbs; thus, the two reciprocals in Tucano can be considered as valency reducing operations.

5.3.3 Sociative verbal compounds

Verb compounding is also used to express sociative meaning (see Gomez-Imbert (1988) for Tatuyo and Barasana); cf. Tucano (Brüzzi 1967:314):

- | | |
|------------------------|------------------------|
| (48) <i>dara-peti.</i> | (49) <i>buhi-peti.</i> |
| work-do.all | laugh-do.all |
| ‘All (people) work.’ | ‘All (people) laugh.’ |

Acknowledgments

I am extremely grateful to all my teachers of the indigenous languages of the Vaupés river basin – Cândido, José, Jovino, Graciliano, Olivia and Rafael Brito (Tariana), Al-

fredo Fontes (Tucano) and Tiago Cardoso (Desano, Piratapuya). I owe thanks to R.M.W. Dixon, Elias and Lenita Coelho, Silvana and Valteir Martins and Henri Ramirez, for useful discussion and help.

1. Introduction

1.1 The Quechua languages

The Quechua languages are spoken in the central Andes in South-America.¹ Today Quechua is under strong pressure from Spanish in all of the three Andean countries in which we find a considerable part of the population which has command of these languages: Ecuador, Peru, and Bolivia. Among historical linguists studying the Andes region (Adelaar 1979; Cerrón Palomino 1987; Torero 1964) it is generally assumed that the origin of this language has to be found in the coastal area of central Peru, where the greatest dialect variation is found. There we find a number of dialects (Quechua I) which differ considerably from the dialects spoken to the north, from northern Peru (Quechua IIa) up to Ecuador and southern Colombia (Quechua IIb), and to the south, from southern Peru to northern Argentina (Quechua IIc). The entry on Quechua in the *International Encyclopedia of Linguistics* (IEL 1992, Vol. 2) mentions a total of 46 different dialects. All of these dialects share much of their vocabulary and are structurally comparable, at least from a linguistic point of view. However, superficially many of them differ to such an extent that they are not mutually intelligible.

It is assumed that the Quechua language spread into other parts of Peru when Quechua speaking groups began to expand from their original habitat around the year 500. In the 15th century the expansion of the Cuzco variant began, since it was adopted by the Incas as the lingua franca for the territories they conquered. Most historical linguists agree that the expansion of Quechua to the south went hand in hand with the expansion of the Inca Empire, but the situation in the north is less clear. It may well have been the case that some variant of Quechua was already spoken there as a lingua franca long before the actual Inca conquest.²

1. This article is an elaboration of ideas presented in my thesis (van de Kerke 1996) on the order and interpretation of verbal derivational suffixes in Bolivian Quechua, based on fieldwork in Tarata, a small town near Cochabamba, Bolivia. That research project was financed by the Netherlands Foundation for the Advancement of Tropical Research (WOTRO), a subdivision of the Netherlands Foundation for Scientific Research (NWO). I thank Pieter Muysken, Willem Adelaar, and Leonid Kulikov, for their comments and suggestions. I would like to express my gratitude to Vladimir Nedjalkov. Without his suggestions for improvement of both the content and the presentation, this article would not have been the same.

2. The dispersion of Quechua by the Incas was a short-lived and probably superficial affair. It was only in the second half of the fifteenth century that the Inca expansion was in full swing and around 1530 the Inca Empire collapsed when the invading Spaniards under Pizarro took Cuzco. A hundred years to implant a language is a relatively short period, which is clearly shown by the fact that Quechua itself was able to withstand the pressure of Spanish for over 400 years. Apart from that we have to realize that the language only served as a lingua franca, which in the southern part of the Inca empire was in competition with other languages: Puquina, Uru-Chipaya and Aymara, a language which also originates from the Peruvian coastal area and with which Quechua has been in close contact for such a long time that both languages show a remarkable morphological and syntactic similarity (Cerrón Palomino 1994). This overlap is ascribed by some linguistic researchers to genetic relatedness, while others ascribe it to convergence as the outcome of Sprachbund phenomena (Adelaar 1986; Cerrón Palomino 1987; Hardman

In far too many cases data from Quechua are presented in the linguistic literature as if it were one language, instead of a continuum of dialects with at least as much internal variation as the Romance languages (Muysken 1988). I am mainly concerned with the characteristics of the reciprocal construction in the southern Quechua (IIc) dialects, and especially with Bolivian Quechua. Unless explicitly mentioned, the term Quechua refers to these southern Quechua (IIc) dialects: Cuzco and Bolivian Quechua. Another main southern Quechua (IIc) dialect, Ayacucho Quechua, differs in at least one relevant aspect from these dialects, which will be treated in Section 9.

1.2 Overview

Quechua is an agglutinative language. Among others, the concepts of reflexivity, reciprocity, benefactive, causative and assistive-comitative are marked by means of suffixes on the verb, all of them productively used. There is no nominal reflexive or reciprocal marker of the type ‘oneself’ or ‘each other’.³ Reciprocal marking only applies to verbal bases.

The basic reciprocal construction is subject-oriented. Like reflexive marking, it applies to verbs that express an action in which two animate entities are involved. Both construc-

1985). Mannheim (1991) sketches a picture in which to the south of the Inca capital Cuzco these four southern Andean languages were interspersed in small isolated pockets. At the end of the sixteenth century this was still the prevailing pattern in the Charcas province (today’s Bolivia), as we may conclude from Francisco Toledo’s report to the Spanish king (Bouysson-Bassade 1975). In the southern Andes region Quechua, together with Aymara and Puquina, was accorded the status of *lengua general* ‘official language’, and served as a language for conversion. This has helped enormously to diffuse the Quechua language in the centuries after the conquest. On the basis of the census of 1992 Albó (1995) reports 1,8 million Quechua speakers for Bolivia (400,000 mono-linguals) and 1,2 million Aymara speakers (160,000 mono-linguals). Although all countries with a Quechua speaking minority have accorded Quechua the status of an official state language (Bolivia only quite recently), the mono-lingual Quechua speaker becomes ever more rare and can only be found in the remote parts of the countryside.

3. Quechua has a noun *kiki*, obligatorily marked for person, that is often translated as ‘self’, but which mainly serves as a subject modifier with the meaning ‘in person’:

- (i) *Pedru kiki-n maylla-wa-rqa.*
 P. self-3SG wash-1OBJ-3SG.PAST
 ‘Peter in person/himself washed me.’

The nominal suffixes *-pura* and *-kamalla* indicate that the set to which one refers is homogeneous. All members of the set have the same relevant characteristic, cf. (ii), and for that reason they can be easily used in reciprocal contexts, cf. (iii):

- (ii) *warmi-pura-lla taki-sa-nku.*
 woman-COLL-DEL sing-DUR-3PL
 ‘It is only among women that they are singing.’
- (iii) *warmi-pura-lla much’a-na-ku-sa-nku.*
 woman-COLL-DEL kiss-REC-REFL-DUR-3PL
 ‘Only among women they are kissing each other.’

tions express that an action, which in the underlying form is directed at another person, is directed at the subject itself. Reflexives are formed by means of suffixation with *-ku*, reciprocals by means of suffixation with *-na-ku* (an affix combination containing reflexive *-ku*):

- (1) a. *wawa-kuna alqu-ta maylla-sa-nku.*
 child-PL dog-ACC wash-DUR-3PL
 ‘The children are washing the dog.’
 b. *wawa-kuna maylla-ku-sa-nku.*
 child-PL wash-REFL-DUR-3PL
 ‘The children are washing themselves.’
 c. *wawa-kuna maylla-na-ku-sa-nku.*
 child-PL wash-REC-REFL-DUR-3PL
 ‘The children are washing each other.’

Apart from transitive verbs that select a direct object as in (1), subject-oriented reciprocals can be formed on the basis of intransitive and transitive verbs that select an oblique object. Both reflexive and reciprocal marking lead to a decrease in valency of the derived verb, with the exception of the possessive construction, to be treated in 4.1.1.2 and 4.2.1.2. Like reflexives, reciprocals are strictly subject-oriented in underived constructions. For a reciprocal relation to hold, the set over which the subject of a reciprocal verb predicates must be plural, by definition. If the subject refers to a homogeneous set, it is marked by means of a plural marker as in (1c), which can be modified by a numeral or a quantifier. If the subject refers to a heterogeneous set, it is expressed by means of a coordinative construction where all or only the latter of the constituents is marked with the case marker *-wan*. This latter construction type can lead to reciprocal constructions with a singular subject, to be treated in 3.2.

Reciprocal formation interacts in a number of ways with the valency increasing suffixes causative *-chi*, assistive *-ysi*, and benefactive *-pu*, and with the valency decreasing suffix reflexive *-ku*. With the exception of reciprocal causatives formed by means of *-na-chi* (cf. (2) below) object-oriented reciprocals are impossible to construe in Quechua since reflexive *-ku*, which is a constituent part of the reciprocal marker, is strictly subject-oriented.

In Bolivian Quechua, the suffix *-na-ku* is not merely used for the expression of a reciprocal relation between the subject and a direct, indirect, or oblique object. In different sections its use in sociative, anticausative, and “chain” interpretations will be addressed.

2. The grammatical system of southern Quechua

As has been said, Quechua is morphologically agglutinative. Consider a complex nominalized verb in which individual, clearly defined, morphemes add particular meanings to the verb:

- (2) [*qan*] [*wawa-kuna-ta*] *maylla-ki-pa-na-rpari-chi-na-yki.*
 you child-PL-ACC wash-ITER-REC-INNT-CAUS-NR-2SG
 ‘You should definitely make them (children) wash each other again.’

The root *maylla-* ‘wash’ is modified by the repetitive marker *-kipa* and the reciprocal marker *-na*. The valency of the resulting predicate ‘wash each other again’ can be expanded by means of the causative marker *-chi*, which is modified by the intentional marker *-rpari*. Finally the nominalizing suffix *-na*, which is used to form an obligational construction, and the second person subject marker *-yki* are attached. As such, this derived verb form can be used as a complete sentence, without the expression of one single nominal constituent (‘you’ and ‘the children’) as in (2).

2.1 Sentence structure, word order. General characteristics

Quechua is head final. In principle all complements precede the verb. This is obligatory in subordinated clauses, but in main clauses the order of the constituents is relatively free since Quechua relies on case marking for the interpretation of nominal constituents:

- (3) *Tarata-manta apa-mu-rqa-ni sara-ta.*
 T.-ABL carry-BIL-PAST-1SG corn-ACC
 ‘I brought the corn from Tarata.’

Subordinated clauses are formed in Quechua by means of a nominalized clause (Lefebvre & Muysken 1988) as in (4a), or by means of a switch reference construction, as in (4b):

- (4) a. *qan-wan Cliza-man ri-saq aycha-ta ranti-na-paq.*
 you-COM C.-ALL go-1SG.FUT meat-ACC buy-NR-BEN
 ‘I will go with you to Cliza to buy meat.’
 b. *chakra-pi llank’a-qtí-yki puñu-sa-rqa.*
 field-LOC work-DS-2SG sleep-DUR-3SG.PAST
 ‘While you were working in the field, he was sleeping.’

The switch reference construction is adverbial and does not have a clear tense interpretation. It indicates whether the subject of the main clause and the subordinated clause are identical (Same Subject: *-spa*) or not (Different Subject: *-qti*). Nominalized clauses are typically used as verbal complements and the nominalizing elements, that are also used to form relative clauses, have their own tense specification which is interpreted relative to the tense in the matrix clause: *-q* for “subject-oriented”, *-sqa* for “realized”, *-na* for “unrealized”, and *-y* for “infinitive”. To the left of the nominalizing element we are in a verbal, to the right of it we are in a nominal domain: person markers take the form of the nominal person paradigm and the whole nominalized clause can be marked with case.

2.2 Case relations. Possessivity

I distinguish structural case and semantic case. Structural case is assigned to a nominal constituent in a certain structural position, such as *-ta* in (3), and there is no direct link with the underlying thematic role of an argument, while semantic case is the expression of an underlying thematic role, such as *-man*, *-wan*, and *-pi* in (4).

- (5) Structural case:
- | | | |
|--------|------------|---|
| -Ø | nominative | agent, experiencer, patient, goal (cf. (1)) |
| -ta | accusative | patient, path, experiencer, agent (cf. (1a), (3)) |
| -q/-pa | genitive | possessor, agent, experiencer (cf. (6)) |
- Semantic case:
- | | | |
|--------|-------------|--|
| -man | allative | goal, direction, experiencer (cf. (4a)) |
| -manta | ablative | source, subject matter (cf. (3)) |
| -wan | comitative | comitative, instrument, agent (cf. (4a)) |
| -pi | locative | location (cf. (4b)) |
| -paq | benefactive | benefactive, purpose (cf. (4a)). |

In possessive phrases, which include certain types of nominalized clauses, the possessor is marked with genitive case. The possessed agrees with the possessor in person and in number (optional):

- (6) *Mamani-kuna-q wasi-nku.*
 M.-PL-GEN house-3PL
 ‘The house of the family Mamani.’

2.3 Verb classes

Quechua has the standard verb class types: intransitive verbs that do not, and transitive verbs that do select a direct object marked with accusative case. Both intransitives and transitives may select an oblique object which is expressed by means of a subcategorized case marker. The ditransitive verbs form a sub-group of the latter class. They select a complement with the case marker *-man* ‘allative’, which is the unmarked target for reflexive, object, and reciprocal marking, since it refers to an animate entity.

- | | | | |
|-----|--------------------------|------------------|------------|
| (a) | one-place intransitives: | <i>llank’a-</i> | ‘to work’ |
| (b) | two-place intransitives: | <i>qhapa-ku-</i> | ‘to stay’ |
| (c) | two-place transitives: | <i>maylla-</i> | ‘to wash’ |
| (d) | three-place transitives: | <i>apa-</i> | ‘to carry’ |
| (e) | ditransitives: | <i>haywa-</i> | ‘to give’. |

2.4 Subject and object agreement

Quechua has a fully articulated agreement system for subject and object marking and, as often is the case in such languages, we find extensive pro-drop. Person marking is based on the standard six person system plus a form referring to first (speaker) and second person (person addressed): the first person plural inclusive. Subject marking in most of these paradigms is quite regular and highly comparable on main tense verbs and on nouns, nominalizations, and nominalized and adverbial clauses:

(7) Main Tense Subject Agreement	non-Main Tense Subject Agreement
<i>-ni</i> 'I' [+1,-2/SG]	<i>-y</i>
<i>-nki</i> 'you' [-1,+2/SG]	<i>-yki</i>
<i>-n</i> 'he' [-1,-2/SG]	<i>-n</i>
<i>-nchis</i> 'we' (incl.) [+1,+2]	<i>-nchis</i>
<i>-yku</i> 'we' (excl.) [+1,-2/PL]	<i>-yku</i>
<i>-nkichis</i> 'you' [-1,+2/PL]	<i>-ykichis</i>
<i>-nku</i> 'they' [-1,-2/PL]	<i>-nku</i>

Reference to first and second person objects can be expressed by means of an object marker on the verb.⁴ First person object marking is quite regular and is realized by means of the suffix *-wa*. The expression of the interaction between a first or third person subject and a second person object is realized by means of one indivisible morpheme: the subject-object transitions (subject → object) *-yki* 1SG → 2SG 'I to you', and *-sunki* 3SG → 2SG 'he to you'.

2.5 Tense

Quechua has four simple tense paradigms and a number of compound tenses. The simple are Present, Past, and Sudden Discovery (which has among others the function of narrative past) and Future. Present is not overtly marked, while Past and Sudden Discovery are formed by addition of an affix, respectively *-rqa* and *-sqa*. The expression of Future tense is irregular. The compound tenses are a potential, a habitual, and an obligational construction. Quechua can form imperatives both for second and for third person. Durative aspect is expressed by means of the suffix *-sa*. The basic order of the durative, the inflectional, the object and subject markers is strict and follows the following format:

(8) durative – object marker – tense – subject marker.

2.6 Verbal derivation

The order of derivational suffixes is, to some extent, variable. Roughly speaking we may distinguish a number of affix clusters from left to right: verbal modifiers (local distribution, iterativity), adverbial modifiers (representing the way in which the action is performed), higher verbs, and suffixes interacting with argument expression:

- (9) a. Verbal modifiers
-kipa iteration, diminutive (cf. (2))
-paya frequency

4. The theoretical question whether third person objects have to be presented by a zero-morpheme has not yet been settled, but it is not obligatory to express third person objects by means of a noun or a pronoun, when their reference can be retrieved from the context. The non-appearance of a grammatical object is quite common and such cases are not interpreted as reflexive or reciprocal as we find in English, where the non-appearance of a direct object is ungrammatical with the exception of a small class of verbs which allow such object deletion with a reflexive or reciprocal interpretation: *John shaves, John and Mary kissed*. In Quechua such sentences are interpreted with a third person object, disjoint in reference from the subject.

- raya* resultative (Section 2.6.2.3)
- ykacha* dispersion, distributive of place.
- b. Adverbial modifiers
 - yku* intensifying, inward motion (Section 2.6.1.4)
 - rpari* intended action, rapidly (cf. (2))
 - rqu* incentive (with respect) (cf. (30))
 - ra* distributive, one by one
 - ri* implorative, inceptive, minimizer (cf. (11)).
- c. Higher verbs
 - chi* causative (cf. 2.6.1.1)
 - ysi* assistive (cf. 2.6.1.2)
 - naya* desiderative: ‘feel like’, ‘be at the point of’.
- d. Argument expression
 - na* reciprocal (cf. 2.6.2.2)
 - ku* reflexive (cf. 2.6.2.1)
 - mu* movement towards or away from speaker, bi-location (cf. (3))
 - pu* benefactive, regressive, stative result (cf. 2.6.1.5).

The verbal modifiers have to be realized in immediate post-root position and are rarely combined. The suffixes *-ku*, *-mu* and *-pu* are often combined, they must be realized in this order, and always occur in final position. Some of the elements of the intermediate groups, and the reciprocal marker *-na* in particular, can be realized in either order, sometimes with a concomitant difference in interpretation. It is here that we find considerable variation, even between the closely related southern Quechua dialects (van de Kerke 1996).

2.6.1 Valency increasing means

Quechua has four affixes which increase the valency of the verb they are attached to. Two of them, the higher verbs causative *-chi* and assistive *-ysi*, add an external argument to the arguments that are conceptually associated with the base verb. Although there are semantic restrictions, they can be added to all verb classes mentioned in Section 2.3, with a fully predictable interpretation. The other two, inward motion *-yku* and benefactive *-pu*, raise the status of an adjunct to that of an internal argument, and interact with the conceptual structure of the base verb to which they are attached.

2.6.1.1 Causative. When *-chi* is combined with intransitive base verbs, the Causee (the embedded subject) shows up with accusative case. However, the Causee in causatives based on transitive verbs shows up with semantic case, *-wan* when it is an agent, *-man* when it is an experiencer. Both the Causee and the underlying object may be the target for object marking. When a transitive base verb has been intransitivized as a result of reciprocal or reflexive formation, the Causee is marked with accusative, cf. (2)).

2.6.1.2 Assistive/comitative. Case marking in assistive constructions differs from that in causative constructions treated in the preceding section: the subject of the embedded clause, the person assisted, shows up with accusative case, both in combination with intransitive and transitive bases. With the latter verbs we thus end up with two arguments

marked with *-ta*. In the assistive construction only the embedded subject can be the target for object marking.

The basic meaning of *-ysi* ‘assist’ can easily be broadened to a comitative interpretation, since the person assisting and the person assisted together perform the action expressed by the underlying verb. With verbs like *riy* ‘to go’ and *puriy* ‘to walk’, the interpretation of *-ysi* is then not ‘assist’ but ‘accompany’:

- (10) a. *Pedru noqa-wan Tarata-man ri-n.*
 P. I-COM T.-ALL go-3SG
 ‘Peter goes with me to Tarata.’
 b. *Pedru [noqa-ta] Tarata-man ri-ysi-wa-n.*
 P. I-ACC T.-ALL go-ASST-1OBJ-3SG
 ‘Peter accompanies me to Tarata.’

With verbs that express desirable actions like ‘eating’ and ‘drinking’, *-ysi* expresses the sharing of goods:

- (11) *Maria, qowi-s-ta mikhu-ysi-ri-wa-y.*
 M. guinea.pig-PL-ACC eat-ASST-IMPL-1OBJ-IMP
 ‘Maria, please share (help to eat) the guinea pigs with me.’

2.6.1.3 *Combining causative and assistive/comitative.* The valency increasing higher verbs can be combined in either order with a difference in interpretation and case marking. Compare (12a) and (12b):

- (12) a. *[noqa-wan] Pedru mama-y-ta ñaña-y-ta*
 I-COM P. mother-1SG-ACC sister-1SG-ACC
maylla-ysi-chi-wa-rqa.
 wash-ASST-CAUS-1OBJ-3SG.PAST
 ‘Peter made me help my mother to wash my sister.’
 b. *[noqa-ta] Pedru mama-y-wan ñaña-y-ta maylla-chi-ysi-wa-rqa.*
 I-ACC P. mother-1SG-COM sister-1SG-ACC wash-CAUS-ASST-1OBJ-3SG.PAST
 ‘Peter helped me to make my mother wash my sister.’

2.6.1.4 *Inward motion.* In its directional interpretation *-yku* indicates motion into a place. It can be combined with motion verbs that subcategorize for a directional argument to change the meaning from ‘to’ to ‘into’, but also with verbs that do not specify a directional argument in their conceptual structure:

- (13) *simi-lla-y-man sup'i-yku-wa-sqa.*
 mouth-DEL-1SG-ALL fart-INW-1OBJ-3SG.SD
 ‘He/she farted into my mouth.’

In its underived form *sup'iy* ‘to fart’ does not allow a complement marked with *-man*. However, ‘farts’ may enter somewhere and the attachment of *-yku* not only licenses the expression of the directional argument, but raises it to the status of an internal argument that can be referred to by means of an object marker.

2.6.1.5 Benefactive. Benefactive arguments are marked by means of the case marker *-paq*. When reference is made to a third person beneficiary, affixation of the verbal suffix *-pu* is optional, cf. (14a). In the case of first and second person beneficiaries, affixation of *-pu* is compulsory, which in turn leads to obligatory object marking as in (14b), where the second person beneficiary must be referred to by means of an object marker:

- (14) a. [noqa] Ana-paq kancha-man q'ipi-ta apa(-pu)-saq.
 I A.-BEN square-ALL burden-ACC carry-(BEN)-1SG.FUT
 'I will carry the burden to the square for Ana.'
- b. [qan-paq] Ana kancha-man q'ipi-ta apa-pu-sunki.
 you-BEN A. square-ALL burden-ACC carry-BEN-3SG→2SG
 'Ana carries the burden to the square for you.'

2.6.2 Valency decreasing means

When the valency of a verb is decreased, one of its arguments cannot be syntactically expressed. This holds for reflexives and reciprocals, with the exception of their "possessive" variants to be treated in 4.1.1.2 and 4.2.1.2, since their syntactic subject is associated with two arguments. It also holds for a number of constructions in which the syntactic realization of the external argument is blocked.⁵ Such agentless constructions will be treated in 4.1.2. With the exception of the suffix *-raya*, which is used to derive resultative intransitives from transitive verbs, the valency decreasing processes involve the suffix *-ku*.

2.6.2.1 Reflexive. Two- and three-place intransitive and transitive action verbs, with two animates involved, form the prototypical base for reflexive formation; cf. (1b) and Section 4.1.1.

2.6.2.2 Reciprocal. Two- and three-place intransitive and transitive verbs, which specify an action that holds between two animates, form the proto-typical base for reciprocal formation; cf. (1c) and Section 4.2.

2.6.2.3 Resultative. The suffix *-raya* derives intransitive resultatives⁶ from transitive bases:

- (15) a. tayta kura inlesha punku-ta wisq'a-n.
 father priest church door-ACC close-3SG
 'The priest closes the church door.'

5. Other Quechua dialects also allow *-ku* to block an internal argument, which forces a habitual interpretation. In Cajamarca Quechua (Coombs 1982) (i) may have both the interpretation 'action for one's own benefit' and 'habitual action':

- (i) awa-ku-ni.
 weave-REFL-1SG
 i. 'I weave for my own benefit.'
 ii. 'I am a weaver by profession.'

6. Other Quechua dialects (p.c. W. Adelaar) allow *-raya* as a resultative in transitive structures. With verbs like *wisq'ay* 'close' the ensuing interpretation is 'he closes the door in such a way that it remains closed.'

- b. *inlesha punku wisq'a-**raya**-sa-n.*
 church door close-RES-DUR-3SG
 'The church door remains closed.'

2.6.3 Valency preserving means: Aspectuals

The verbal suffixes which have been presented in Section 2.6 as belonging to the verbal and adverbial modifiers, with the exception of *-raya* and in some cases *-yku*, do not change the valency of the verb to which they are attached.

2.6.4 Status and position of the reciprocal marker

I follow Muysken's (1981, 1988) analysis that *-na* is the reciprocal marker and not, as is stated in many grammars of Quechua, the suffix *-naku*. The fact that *-na* almost always has to be combined with *-ku* is due to grammatical factors, not to the fact that they form one suffix. In Muysken (1981, 1988) two arguments are given for an independent status of the suffix *-na*, adjectival constructions in Bolivian Quechua add a third:

1. *-na* and *-ku* can be separated by another suffix, which would be impossible if they formed one fixed combination (there exists little evidence for discontinuous suffixes in Quechua):

- (16) [*noqayku*] *much'a-**na**-ri-**ku**-rqa-yku.*
 we kiss-REC-IMPL-REFL-PAST-1PL
 'We kissed each other a bit, for a short time.'

2. When combined with the causative suffix *-chi*, *-na* marks the reciprocal relation between the embedded arguments on its own. This is an issue to which we will return in Section 5:

- (17) [*noqa*] *wawa-s-ni-y-ta maylla-**na**-chi-ni.*
 I child-PL-EUPH-1SG-ACC wash-REC-CAUS-1SG
 'I made my children wash each other.'

3. The fact that, at least in Bolivian Quechua, *-na* on its own may mark the reciprocal relation in a small number of adjectival derivations, forms a third argument: As I have argued in van de Kerke (1991), *-ku* is used to mark a non-standard mapping of argument structure onto syntax, since it links an internal argument to the syntactic subject position. As we will see in Section 4.1.2.1, a verb root like *phiña* 'to be in anger with' requires *-ku* to be attached to form a well-formed surface structure. However, in a copula construction in which the verb *kay* 'to be' takes over the function of the reflexive marker, the past participle form of the verb, *phiña-sqa* and for that matter its reciprocal derivation *phiña-na-sqa*, may be realized as such.

- (18) *haku Ana-q wasi-n-man mana phiña-**na**-sqa ka-yku.*
 come A.-GEN house-3SG-ALL not anger-REC-NR be-1PL
 'Let's go to Ana's house. No, we are angry with each other.' (H. & S. 306)

In Section 2.6, I have argued that the reciprocal marker *-na* is relatively free in its position. While the suffix *-ku* has a very strict position immediately after the causative suffix *-chi*,

-na may be realized at either side of it with a clear difference in interpretation, cf. Section 4 and 5. When *-na* is combined with the adverbial modifiers *-yku*, *-rpari*, *-rqu* and *-ri*, the order of these suffixes appears to be free. The affix combination *-na-ri-ku* in (16) may as well be realized as *-ri-na-ku*, without a change in interpretation.

3. Means of expressing reciprocal arguments

The subject of a reciprocally marked verb must refer to a plural set. If the subject phrase is lexically homogeneous, plurality of the referents is marked by the plural marker which matches with plural marking on the verb. After vowels, the plural marker *-kuna* in many cases is replaced by the Spanish loan plural marker *-s*.

If the subject phrase is heterogeneous, it is expressed by means of a coordinated constituent using the comitative case marker *-wan*. There are two options: mark all of the coordinated constituents with *-wan* or only the last. Agreement on the verb may be with the plural character of the set or with one of the entities in the set. In the latter case we find singular subject marking on the verb, cf. Section 3.2.

3.1 The meanings of the suffix *-wan*

An elusive characteristic of the suffix *-wan* is the fact that it can be used as a case marker for quite a coherent class of arguments expressing agent, cause, comitative, and instrument and at the same time as a marker of coordination.

3.1.1 *The suffix -wan as case marker*

Its use as an agent marker in morphological causative constructions has been shown in (12). Clearly related is its use in instrumental and comitative (secondary agent) constructions. It can also be used to express the cause of a certain state of affairs:

instrumental:	<i>ruthuna-wan</i>	‘knife-with’	‘cut, hit’, etc.
comitative:	<i>wawqe-wan</i>	‘friend-with’	‘speak, play, go’, etc.
causal:	<i>onqoy-wan</i>	‘sickness-with’	‘be sick’, etc.

3.1.2 *The suffix -wan as coordination marker*

The fact that we find *-wan* as a coordination marker in combination with other case markers as in (19), shows that it cannot be analyzed merely as a case marker:

- (19) [noqa] *Maria-paq-wan Ana-paq-wan aqha-ta ranti-saq.*
 I M.-BEN-COM A.-BEN-COM chicha-ACC buy-1SG.FUT
 ‘I will buy chicha for Maria and for Ana.’

3.2 Discontinuous reciprocal constructions (comitatives only)

The subject of a reciprocal verb must refer, by definition, to a plural set. If this set is heterogeneous, the different entities contained in the set are coordinated by means of the comitative case marker *-wan*. The verb may then agree with the plural character of that set, or with one of the entities contained in the set. On the basis of (20a), both (20b) and (20c) may be derived:

- (20) a. [noqa] *Pedru-wan puqlla-sa-ni*.
 I P.-COM play-DUR-1SG
 'I am playing with Peter.'
- b. [noqa] *Pedru-wan puqlla-na-ku-sa-ni*.
 I P.-COM play-REC-REFL-DUR-1SG
 'Peter and I are playing with each other (together).'
- c. [noqa] *Pedru-wan puqlla-na-ku-sa-yku*.
 I P.-COM play-REC-REFL-DUR-1PL
 'Peter and I are playing with each other (together).'

The semantic difference between (20b) with a singular subject and the reciprocal sentence with a plural subject in (20c) is the fact that the person speaking is presenting himself as the source of the action of 'playing with each other'. The construction is not merely a regional Bolivian variant, since I also found it described in Guardia Mayor (1973:297) for the Ayacucho dialect, cf. (21):

- (21) *ñoqa qam-wan yanapa-na-ku-ni*. (G.M. 297)
 I you-COM help-REC-REFL-1SG
 'I with you, we help each other' (translation and glosses mine).

4. Reciprocals with the suffix *-na-ku*: Subject-oriented reciprocals only

In subject oriented interpretations the reciprocal marker *-na* has to be combined with the reflexive suffix *-ku*, cf. the contrast between (1c) and (2). Since reciprocal and reflexive formation in Quechua are so intimately tied together and in many cases show identical behaviour, it is expedient to have a clear picture of reflexive formation first.

4.1 Polysemy of the suffix *-ku*

As has been argued above, *-ku* is used in constructions in which one of the underlying arguments is not syntactically expressed. If this holds for an internal argument the reflexive interpretation is obtained, if this holds for the external argument we obtain non-reflexive meanings: agentless passive and anticausative constructions.

4.1.1 Reflexive meanings

Reflexives in the southern Quechua dialects are strictly subject-oriented and mark co-referentiality between the external and one of the internal arguments.

4.1.1.1 *Reflexive proper*. In (1b) we have seen that *-ku* marks co-referentiality between the subject and the direct object, in (22b) *-ku* marks co-referentiality between the subject and the indirect object of a ditransitive verb:

- (22) a. *Pedru Maria-man chompa-ta qu-n.*
 P. M.-ALL sweater-ACC give-3SG
 ‘Peter gives Maria a sweater.’
 b. *Pedru chompa-ta qu-ku-n.*
 P. sweater-ACC give-REFL-3SG
 ‘Peter gives himself a sweater.’

4.1.1.2 *Reflexive possessive*. An analysis based on the idea that the reflexive suffix absorbs the case assigning property of the verb is impossible, since we find NPs marked with accusative in reflexive constructions, the reflexive possessive construction. Especially when making reference to body parts, Quechua allows a marked double object construction besides a genitive construction, the contrast between (23a) and (23b). In the same way a reflexive possessive variant of (1b) can be formed as in (23c).

- (23) a. *wawa-kuna alqu-q uya-n-ta maylla-nku.*
 child-PL dog-GEN face-3SG-ACC wash-3PL
 ‘The children wash the dog’s snout.’
 b. *wawa-kuna alqu-ta uya-n-ta maylla-nku.*
 child-PL dog-ACC face-3SG-ACC wash-3PL
 ‘The children wash the dog (with respect to) his snout.’
 c. *wawa-kuna uya-nku-ta maylla-ku-nku.*
 child-PL face-PL-ACC wash-REFL-3PL
 ‘The children wash themselves (with respect to) their (own) face.’

4.1.1.3 *Reflexive benefactive*. Unlike reciprocal benefactives which require the benefactive marker *-pu* to be attached (cf. Section 4.2.1.3), reflexive *-ku* may refer to a beneficiary argument by itself:

- (24) a. *Maria wawa-n-paq chompa-ta ranti-rqa.*
 M. child-3SG-BEN sweater-ACC buy-3SG.PAST
 ‘Maria bought a sweater for her child.’
 b. *Maria chompa-ta ranti-ku-rqa.*
 M. sweater-ACC buy-REFL-3SG.PAST
 ‘Maria bought herself a sweater.’

4.1.1.4 *Distant reflexive*. If one forms a reflexive of a causative verb, an interpretation in which the subject is coreferential with the embedded subject is marginally possible (‘X causes himself to’), but in most cases the subject is co-referential with the embedded object:

- (25) *mama-y Ana-wan maylla-chi-ku-n.*
 mother-1SG A.-COM wash-CAUS-REFL-3SG
 ‘My mother_i makes Ana wash her_i.’

4.1.1.5 *Permissive-reflexive passive*. Apart from a coercive interpretation as in (25), “distant reflexives” allow permissive and even passive-like interpretations, depending on the degree of control the subject has over the Causee that performs the action. In (26a) the subject has enough control ‘to not allow an action to be performed’, but in (26b) we obtain a passive-like interpretation, since a ‘bee’ is not supposed to be under human control:

- (26) a. *wawa-qa mana Ana-wan maylla-chi-ku-n-chu.*
 child-TOP not A.-COM wash-CAUS-REFL-3SG-Q
 ‘The child does not allow Ana to wash him.’
 b. *uq kuti-lla-ta putina-wan wach’i-chi-ku-rqa-ni.*
 one time-DEL-ACC bee-COM sting-CAUS-REFL-PAST-1SG
 ‘I have been stung only once by a bee.’ (H. & S. 298)

4.1.2 *Non-reflexive meanings*

Apart from the reflexive and reciprocal construction in which two arguments are associated with one syntactic position, all the other realizations of *-ku* share the characteristic that there is no Agent argument projected into syntax. In this sense *-ku* has all the characteristics of a lexical passive.

4.1.2.1 *Reflexiva tantum*. Locative verbs and verbs of emotion, which share the property that they predicate only over one or more internal arguments, require *-ku* to be attached to produce well-formed surface structures:

- (27) *tachi-ku-* ‘to sit’ *kusi-ku-* ‘to be happy’
qhepa-ku- ‘to stay’ *llaki-ku-* ‘to be sad’
ka-ku- ‘to be located’ *phiña-ku-* ‘to be in anger’
tiya-ku- ‘to live’ *phuti-ku-* ‘to be very sad.’
- (28) *Tarata-pi qhepa-ku-sqa-yki-manta kusi-ku-ni.*
 T.-LOC stay-REFL-NR-2SG-ABL happy-REFL-1SG
 ‘I feel happy because of the fact that you have stayed in Tarata.’

4.1.2.2 *Agentless passives*. In van de Kerke (1991) I have argued that, at least in Quechua, nominal constituents without a referential index cannot be realized syntactically. This allowed me to analyze constructions that are often labelled as “middles” as constructions in which the Agent argument has a generic interpretation. Since Quechua requires a syntactic subject, the derivation has to be saved by means of *-ku* attachment, licensing the realization of an internal argument in subject position:

- (29) a. *[noqa] aqha-ta sara-manta ruwa-ni.*
 I chicha-ACC corn-ABL make-1SG
 ‘I make chicha from corn.’
 b. *aqha-qa sara-manta ruwa-ku-n.*
 chicha-TOP corn-ABL make-REFL-3SG
 ‘Chicha is made from corn.’

4.1.2.3 *Anticausatives*. Many change of state or motion verbs have two possible realizations. One, which presents the change in state as being brought about by an external force:

the transitive lexical causatives. Another, which presents the change in state as being self induced, the intransitive anticausative. At least in many Indo-European languages, the transitive and the intransitive realization are not distinguished by overt morphological marking. English examples are ‘to sink’, ‘to grow’, and ‘to break’. The alternation is pervasive in Quechua, where the contrast between lexical causative and anticausative is marked by the absence or presence of *-ku*.

4.1.2.3.1 *Derived from two-place lexical causatives.* The anticausative of a two-place lexical causative verb as *p’akiy* ‘to break’ in (30a) presents the logical object as a surface subject, cf. (30b):

- (30) a. *Pedru sillu-y-ta-mi p’aki-rqu-rqa.*
 P. finger-1SG-ACC-AFFRM break-INCT-3SG.PAST
 ‘Intentionally Peter has broken my finger.’
 b. *sillu-y-mi p’aki-ku-rqa.*
 finger-1SG-AFFRM break-REFL-3SG.PAST
 ‘My finger broke.’

4.1.2.3.2 *Derived from three-place lexical causative reciprocals.* A typical instance from the class of three-place lexical causatives is the verb *t’aqay* ‘to separate, split’, which selects an accusative and a source (*-manta*) complement. The verb contains an agentive argument bringing about a separation in a set of elements. When the direct object refers to a set that is homogeneous, we find cases with a simple accusative as in (31a): ‘we must separate the children’. When reference is made to two or more heterogeneous subsets, one of the subsets is realized as the object with accusative case, while the other is realized as a source argument with *-manta*, as in (31b) where reference is made to ‘boys’ and ‘girls’. The anticausative variant in (31c), with the form *t’aqakuy* ‘to put oneself out of contact from, separate’, presents the logical object of the lexical causative verb as separating off from the source set:

- (31) a. *wawa-s-ta t’aq-na-yki.*
 child-PL-ACC split-NR-2SG
 ‘You should separate the children.’
 b. *qhari wawa-s-ta warmi wawa-s-manta t’aq-na-yki.*
 man child-PL-ACC woman child-PL-ABL split-NR-2SG
 ‘You should separate the boys from the girls.’
 c. *qhari wawa-s warmi wawa-s-manta t’aq-ku-nku.*
 man child-PL woman child-PL-ABL split-REFL-3PL
 ‘The boys have separated from the girls.’

Completely parallel cases can be found with lexical causative verbs which select an accusative and a goal (*-man*) complement like *k’askay* ‘to glue to’ and *taqhay* ‘to hit’ (for a reciprocal derivation cf. (39)), or an accusative and a comitative complement like *chaqruiy* ‘to mix’:

- (32) a. *tata-y rigu-wan sara-ta chaqru-rqa.*
 father-1SG wheat-COM corn-ACC mix-3SG.PAST
 ‘My father mixed corn with wheat.’
 b. *sara rigu-wan chaqru-ku-sqa.*
 corn wheat-COM mix-REFL-3SG.SD
 ‘It results that the corn has mixed with the wheat.’

4.2 Polysemy of the reciprocal suffix *-na-ku*

Above I have shown that *-ku*, labeled as reflexive marker, may have a number of other functions. In the same way, *-na-ku* cannot only be used as a reciprocal marker, but can have a number of related functions.

4.2.1 *Strict reciprocity*

A strict reciprocal relation is said to hold if all members from a set of entities, realized as the subject of the reciprocal verb, perform the action expressed by the verb on all the other members of the same set.

4.2.1.1 *Reciprocal proper.* As we have seen in (1), transitive verbs with two animate arguments form the typical base for reciprocal constructions. This also holds for ditransitive verbs as in (33), the parallel of the reflexive construction in (22):

- (33) *Pedru Ana-wan chompa-ta qu-na-ku-nku.*
 P. A.-COM sweater-ACC give-REC-REFL-3PL
 ‘Peter and Ana give each other a sweater.’

4.2.1.2 *Reciprocal possessive.* In analogy with the reflexive possessive construction in (23c), we find possessive reciprocals:

- (34) *Pedru Juan-wan uya-nku-ta maylla-na-ku-nku.*
 P. J.-COM face-3PL-ACC wash-REC-REFL-3PL
 ‘Peter and John wash each other (with respect to) their face.’

4.2.1.3 *Reciprocal benefactive.* Unlike reflexive benefactives (Section 4.1.1.3), reciprocal benefactives require that the benefactive marker *-pu* is attached:

- (35) *runa-s aqha-ta ranti-na-ka-pu-nku. (-ka-pu < *-ku-pu)*
 man-PL chicha-ACC buy-REC-REFL-BEN-3PL
 ‘The men buy chicha for each other.’

4.2.1.4 *Distant reciprocal.* In Section 4.1.1.4, I have shown that the preferred interpretation for reflexive causatives is the distant one in which the embedded object is co-referential with the subject of the causative verb (Causer). Reciprocal causatives allow both options. Interactions between Causer and Causee are presented in (43c) and (51b), the distant interaction between Causer and embedded object in (48b).

4.2.2 Sociative

With verbs that express ‘perform an action with’ and which, by consequence, select a secondary agent marked with the comitative case marker *-wan*, the reciprocal marker may be interpreted as a sociative ‘perform an action together’:

- (36) a. *Pedru tata-n-wan Cliza-man puri-n.*
 P. father-3SG-COM C.-ALL walk-3SG
 ‘Peter walks with his father to Cliza.’
 b. *Pedru tata-n-wan Cliza-man puri-na-ku-nku.*
 P. father-3SG-COM C.-ALL walk-REC-REFL-3PL
 ‘Peter and his father walk together to Cliza.’

4.2.3 Partial reciprocity

If the subject of a reciprocal verb refers to a set with two members, they perform the action expressed by the verb with regard to each other, a strict reciprocal relation. However, if there are three or more members in the set, the reciprocal relation may be strict in the sense that all members perform the action with regard to all the others, but weak reciprocal relations are quite common, with different interpretational possibilities.

4.2.3.1 ‘Weak’ reciprocity. If the subject of a reciprocal verb refers to a set of more than two members, a sentence like (1c) may be used to describe a collective event in which not every member of the set of children performs the action of washing to all other members of the set.

4.2.3.2 ‘Chain’ interpretations. The reciprocal marker may also be used to describe situations in which an action takes place ‘consecutively’ or in a ‘chain’. Of the set of entities in subject position it is predicated that one entity performs an action with regard to a second, who performs that same action with regard to a third, and so on:

- (37) *q’ipi-s-ta maki-manta maki haywa-na-ku-spa ...*
 load-PL-ACC hand-ABL hand give-REC-REFL-SS
 ‘Giving from hand to hand the loads, ...’ (H. & S. 107)

4.2.3.3 Action ‘in turn’ or ‘in a series’. The ultimate cases of weak reciprocity, and in a sense the logical outcome of the ‘chain’ interpretation, would be those in which there is not even a partial coreferentiality between the subject and the direct or indirect object. Such cases are rejected by most speakers, but the following examples are both taken from natural speech. If the subject refers to a plural set of elements, the ensuing interpretation is ‘in turn’, as in (38), taken from a story collected in Bolivia (van de Kerke 1996: 149):

- (38) *pay-kuna runa-ta maqa-na-ku-nku.*
 he-PL man-ACC hit-REC-REFL-3PL
 ‘They hit the man one after the other, in turn.’ (Mateo I, Iban)

If the object refers to a plural set, the ensuing interpretation is ‘in a series’ as in (39), taken from a compilation of stories from southern Bolivia (Aguiló 1980):

- (39) *pay turril-is-man taqha-na-ku-sqa.*
 he vessel-PL-ALL hit-REC-REFL-3SG.SD
 'He bumped into the vessels the one after the other.'

The latter example may be analyzed as the outcome of anticausative formation, which will be the subject of the next section.

4.2.4 Reciprocal anticausatives

Conceptually it is conceivable that the reciprocal marker would have scope over the two internal arguments of a three-place lexical causative predicate of the type 'mix' or 'separate', but when *-na-ku* is combined with these lexical causatives it always refers back to the syntactic subject, since *-ku* strictly binds a direct or indirect object to the subject in Quechua. However, these verbs present the anticausative pattern as has been shown in Section 4.1.2.3, and as such they present the right structure for reciprocal formation. I encountered one example from Cuzco Quechua in Calvo Pérez (1993: 169):

- (40) *rigu sara-wan chaqru-na-ku-nku.*
 wheat corn-COM mix-REC-REFL-3PL
 'The wheat and the corn have mixed.'

Especially when the subject refers to a set of entities for which a weak reciprocal relation holds, such derivations are correct:

- (41) *animales-ni-nchis mayu-man chaya-qti-nku kurrala-nku-man kurrala-nku-man*
 animal-EUP-1PL.INC river-ALL arrive-DS-3PL corral-3PL-ALL corral-3PL-ALL
t'aqa-na-ku-nqanku.
 split-REC-REFL-3PL.FUT
 'When our animals have arrived at the river they will split, each of them searching his own corral.' (H. & S. 471)

The sentence describes a set of cows, from which at intervals (the passing of the corrals while entering the village) individuals or small groups are separating. It is impossible to obtain a similar interpretation with the lexical causative verb: 'he mixes the corn and the wheat with each other', 'he separates the cows from each other', but the reciprocal derivation from the causative anticausative derivation has this interpretation, cf. Section 5.2.

4.3 Diathesis types of reciprocal constructions: Subject-oriented reciprocals only

The following sections will be devoted to an enumeration of the different diathesis types of the reciprocal construction. Information that has already been provided in the discussion on reflexive and reciprocal formation above will only be repeated as far as necessary. From the two basic diathesis types of reciprocals, subject-oriented and object-oriented, the latter is marginal since it is restricted to the interaction with the causative, which will be the subject of Section 5.

4.3.1 “Canonical” reciprocals

The output of “canonical” reciprocal formation is defined as a reciprocal construction without an accusative constituent. The following types may be distinguished.

4.3.1.1 Derived from two-place transitives. Verbs that select an argument marked with accusative may be either underived transitives or causatives or assistives derived from an intransitive verb.

4.3.1.1.1 From underived transitives. Any transitive verb that expresses an action in which two animates are involved, like *maylla-* ‘wash’ in (1), can be the input for reciprocal formation:

- (42) *much'a-* ‘to kiss’ → *mucha-na-ku-* ‘to kiss each other’
chiqni- ‘to hate’ → *chiqni-na-ku-* ‘to hate each other’
qunqa- ‘to forget’ → *qunqa-na-ku-* ‘to forget each other’
yanapa- ‘to help’ → *yanapa-na-ku-* ‘to help each other’
mask'a- ‘to search’ → *mask'a-na-ku-* ‘to search each other.’

4.3.1.1.2 From two-place causatives and assistives. Any intransitive verb with an animate subject, which forms the input for causative formation produces a two-place derived predicate in which two animates are involved. This is the right format for reciprocal formation:

- (43) a. *wawa-s asi-sa-nku.*
 child-PL laugh-DUR-3PL
 ‘The children are laughing.’
 b. *wawa-s Maria-ta asi-chi-sa-nku.*
 child-PL M.-ACC laugh-CAUS-DUR-3PL
 ‘The children are making Maria laugh.’
 c. *wawa-s asi-chi-na-ku-nku.*
 child-PL laugh-CAUS-REC-REFL-3PL
 ‘The children are making each other laugh.’

One would expect that, what holds for the causative derivation would hold for assistive formation, since it also introduces an animate subject. However, the notion of ‘assist’ implies the conjoined action of ‘person assisting’ and ‘person assisted’, which with many verbs is not easily accepted. A derivation like *asi-ysi-* ‘to help laugh’ is felt to be strange, while *llank'a-ysi-* ‘to help work’ is fine. The latter can be the input for reciprocal formation:

- (44) a. *Pedru Carlos-ta llank'a-ysi-n.*
 P. C.-ACC work-ASST-3SG
 ‘Peter helps Carlos work.’
 b. *Pedru Carlos-wan llank'a-ysi-na-ku-nku.*
 P. C.-COM work-ASST-REC-REFL-3PL
 ‘Peter and Carlos help each other work.’

4.3.1.2 Derived from two-place intransitives. In principle, any two-place intransitive verb that expresses an action in which two animates are involved can be the input for recip-

rocal formation. Apart from that benefactive formation on the basis of intransitive verbs produces two-place predicates which may be the input for reciprocal formation.

4.3.1.2.1 *From underived two-place intransitives.* Apart from verbs that select a secondary agent with *-wan*, like *puqllay* ‘to play with’ presented in (20c) and *puriy* ‘to walk with’ in (36b), two-place intransitives of which the oblique object refers to an animate entity are rare, but the number of verbs that select a secondary agent is considerable:

- (45) *mosqho*- ‘to dream about’ → *mosqho-na-ku*- ‘to dream about each other’
phiña-ku- ‘to be angry with’ → *phiña-na-ku*- ‘to be mutually in anger’
rima- ‘to quarrel’ → *rima-na-ku*- ‘to quarrel with each other’
parla- ‘to speak’ → *parla-na-ku*- ‘to speak with each other.’

4.3.1.2.2 *From two-place benefactives.* Any action that one can perform for the benefit of another, can be repaid by the other to one. Again, the restrictions on reciprocal formation are mainly semantic. As has already been shown in (35) with a transitive base verb in Section 4.2.1.3, the verbal derivational suffix *-pu* is obligatory in the reciprocal benefactive constructions:

- (46) a. *Pedru Carlos-paq llank’a(-pu)-n.*
 P. C.-BEN WORK-BEN-3SG
 ‘Peter works for Carlos.’
 b. *Pedru Carlos-wan llank’a-na-ka-pu-nku. (-ka-pu < *-ku-pu)*
 P. C.-COM WORK-REC-REFL-BEN-3PL
 ‘Peter and Carlos work for each other.’

4.3.1.3 *Two-place “canonical” reciprocals derived from three-place transitives.* In this subsection we are concerned with the small group of three-place underived verbs the direct object of which may refer to an animate entity, and with causative and assistive derivations.

4.3.1.3.1 *From underived three-place transitives.* Three-place transitives which select a direct object that can refer to an animate entity like *kachay* ‘to send sb to’, *apay* ‘to carry sb to’, and *pusay* ‘to guide sb to’, are as good a target for reciprocal formation as plain transitives:

- (47) *Lusia-wan Dumingo-wan aqha wasi-man pusa-na-ku-nku.*
 L.-COM D.-COM chicha house-ALL guide-REC-REFL-3PL
 ‘Lucia and Domingo guide each other (animate each other to go) to the chicheria.’ (H. & S. 278)

The ditransitive verbs, which form a sub-class of the three-place transitives, only marginally allow “canonical” reciprocals to be derived. The animate entity, necessary for the reciprocal interpretation, is proto-typically the ‘goal’ argument marked with *-man*. These verbs produce the “indirect” reciprocals, to be treated in 4.3.2.1, which hardly can be formed with the three place base verbs treated in this section.

4.3.1.3.2 *From three-place causatives and assistives.* The causative of a transitive verb is a three-place verb. The direct object of the base verb is realized as the direct object of the

derived verb, the former subject (the Causee) as an oblique object with *-wan* or *-man*. As has been mentioned in 2.6.1.1, both the Causee and the direct object of the derived predicate have full argument status, since they can be the target for object marking, and more important here, they can be the target for reciprocal formation. In (48b) the reciprocal relation holds between the Causer and the underlying direct object,⁷ which is an instance of what has been called “distant reciprocal” in 4.2.1.4 (the reciprocal relation between Causer and Causee will be subject of 4.3.2.2):

- (48) a. *mama-y warmi-wan wawa-s-ta maylla-chi-n.*
 mother-1SG woman-COM child-PL-ACC wash-CAUS-3SG
 ‘My mother has the children washed by the woman.’
 b. *wawa-s warmi-wan maylla-chi-na-ku-nku.*
 child-PL woman-COM wash-CAUS-REC-REFL-3PL
 ‘The children let/allow each other to be washed by the woman.’

Three-place assistive-comitatives may be derived from a two-place intransitive base verb as in (49a), and they can be the input for reciprocal formation; cf. (49b):

- (49) a. [*noqayku-ta*] *Tarata-man ri-ysi-wayku.*
 we-ACC T.-ALL go-ASST-3SG → 1OBJ.PL
 ‘He accompanied us to Tarata.’
 b. [*noqayku*] *Tarata-man ri-ysi-na-ku-rqa-yku.*
 we T.-ALL go-ASST-REC-REFL-PAST-1PL
 ‘We went in company (together) to Tarata.’

4.3.1.4 Distant “canonical” reciprocals. The distant “canonical” reflexive in (25), that marked co-referentiality between the Causer and the direct object of the embedded verb, has its reciprocal counterpart in (48b) above.

4.3.2 “Indirect” reciprocals

The output of “indirect” reciprocal formation is defined as a reciprocal construction with an accusative marked constituent. The following types may be distinguished.

4.3.2.1 Derived from underived three-place verbs. As has been mentioned in Section 4.3.1.3.1, “indirect” reciprocals can be easily formed on the basis of ditransitive verbs since the ‘allative’ argument, and not the ‘patient’ argument with *-ta* refers, to an animate entity:

7. In Muysken (1988), following Muysken (1981), it is claimed that both in the Quechua I and II dialects this interpretation is expressed by realizing *-na* before and *-ku* after causative *-chi*:

- (i) *riku-na-chi-ku-n-ku.*
 see-REC-CAUS-REFL-3-PL
 i. ‘They cause X to see each other.’
 ii. ‘They let each other be seen by X.’

At least in Bolivian Quechua this is not the case, since the verb form in (i) is used to express a reflexive of an object-oriented reciprocal that will be treated in Section 5.3.

- (50) a. *Maria wawa-s-man misk'i-ta qu-rqa.*
 M. child-PL-ALL sweet-ACC give-3SG.PAST
 'Maria gave the children a sweet.'
 b. *wawa-s misk'i-ta qu-na-ku-nku.*
 child-PL sweet-ACC give-REC-REFL-3PL
 'The children give each other a sweet.'

4.3.2.2 *Derived from three-place causatives, assistives, and benefactives.* The causative of a transitive verb is a three-place verb. The direct object of the base verb is realized as the direct object of the derived verb, the former subject, the Causee, as an oblique object. It is marked with *-wan* when the base verb is an agentive verb as in (48b), with *-man* when the base verb is an experiencer verb, as in (51a). The Causee argument may be the target for reciprocal formation, cf. (51b):

- (51) a. *Maria wawa-s-man t'anta-ta riku-chi-n.*
 M. child-PL-ALL bread-ACC see-CAUS-3SG
 'Maria shows (makes see) the bread to the children.'
 b. *wawa-s t'anta-ta riku-chi-na-ku-nku.*
 child-PL bread-ACC see-CAUS-REC-REFL-3PL
 'The children show (make see) each other the bread.'

In Section 4.3.1.1.2 we have seen that reciprocal assistive derivations can be formed on the basis of an intransitive base verb, and this also possible on the basis of a transitive verb:

- (52) *[noqayku] p'acha-ta t'aqsa-ysi-na-ku-sqayku.*
 we cloth-ACC wash-ASST-REC-REFL-1PL.FUT
 'We will help each other to wash the clothes.'

The same holds for reciprocal benefactives; what is possible with intransitive is also possible with transitive base verbs, as has already been shown in (35).

4.3.2.3 *Distant "indirect" reciprocals.* Three-place reciprocals can easily be formed by means of a causative of a two-place reciprocal: a causative derivation of the two-place benefactive in (35) leads to (53), a causative derivation of the ditransitive verb in (50b) leads to (54):

- (53) *runa-s Ana-wan aqha-ta ranti-chi-na-ka-pu-nku.*
 man-PL A.-COM chicha-ACC buy-CAUS-REC-REFL-BEN-3PL
 'The men make Anna buy chicha for each other.'
 (54) *wawa-s Ana-wan misk'i-ta qu-chi-na-ku-nku.*
 child-PL A.-COM sweet-ACC give-CAUS-REC-REFL-3PL
 'The children make Anna give each other a sweet.'

4.3.3 "Possessive" reciprocals

"Possessive" reciprocals, based on transitive verbs, were illustrated in 4.2.1.2. In (55b) a similar case is presented based on the causative derivation *nana-chi-y* 'to cause to hurt':

- (55) a. *Pedru Ana-ta chaki-n-ta nana-chi-n.*
 P. A.-ACC foot-3SG-ACC hurt-CAUS-3SG
 ‘Peter makes Ana hurt (with respect to) her foot.’
 b. *Pedru Ana-wan chaki-nku-ta nana-chi-na-ku-nku.*
 P. A.-COM foot-3PL-ACC hurt-CAUS-REC-REFL-3PL
 ‘Peter and Ana make each other hurt (with respect to) their foot.’

4.3.4 *Two-diathesis reciprocals*

In the preceding sections we have encountered a small number of diathesis types with the same formal expression:

(a) “Canonical” and “possessive”: ‘to wash each other’ versus ‘to wash each other’s face’. In this case the secondary object is an adjunct to the argument bound by the reciprocal marker.

(b) “Canonical” and “indirect”: ‘to send each other to sb’ versus ‘to send sb to each other’. I have argued that the three-place transitives choose typically the first pattern, while the ditransitives choose the second.

(c) Reciprocals derived from causatives with the form *-chi-na-ku-* may have two interpretations: ‘A, B cause A, B to perform an action on Y’ and ‘A, B cause Y to perform an action on A, B’. When needed, these two diathesis types may be disambiguated by case marking of the different constituents.

5. Reciprocals with the suffix *-na-chi*: Object-oriented reciprocals only

5.1 Causatives derived from subject-oriented reciprocals

In Section 2.6.4 I have argued that *-na* marks a reciprocal relation between two arguments which are subsequently linked to the syntactic subject position by means of *-ku* affixation. This is exactly what underlies the object oriented reciprocal construction in the southern Quechua dialects: Cuzco and Bolivian. In causative constructions based on two and three place underived verbs, *-chi* ‘Cause’ introduces an external argument (the Causer), that is realized as the syntactic subject, and *-na*, on its own, marks a reciprocal relation between two internal, non-subject, arguments. The relevant example, based on a simple causative derivation as in (48a), is (56):

- (56) *mama-y wawa-s-ta maylla-na-chi-n.*
 mother-1SG child-PL-ACC wash-REC-CAUS-3SG
 ‘My mother makes the children wash each other.’

The derivational chain for such cases is as in (57):

- (57) *maylla* Agent wash Patient
maylla-na Agent_{i...n} wash Patient_{i,n}
maylla-na-chi Causer make Agent_{i,n} wash Patient_{i,n}

The reciprocal relation does not involve the surface subject and for that reason *-ku* does not have to be realized. If the Causer in (57) would be involved in the reciprocal relation, we obtain reflexives from object-oriented reciprocals that will be treated in Section 5.3.

5.2 Causatives derived from two-place anticausative lexical reciprocals

As I have argued in Sections 4.1.2.3 and 4.2.4, verbs that present the anti-causative pattern may be either realized as three-place Agentive lexical causatives or as two-place Process anti-causatives: X splits Y from Z and Y splits from Z, respectively. Mapping of the underlying argument structure of the lexical causatives onto syntax is straightforward, but the anticausatives need reflexive *-ku* to be attached in order to create a well-formed syntactic surface structure.

Since reciprocal marking always involves the external argument of the verb to which it is attached, Quechua cannot mark a reciprocal relation between the internal arguments of a lexical causative verb. However, although the causative of an anticausative creates an argument structure which is isomorphic to that of the lexical causative verb, at the moment that the reciprocal marker is attached it only has scope over the arguments that will end up as the internal arguments after the affixation of the causative suffix:

- (58) *raki-na-chi-ra-nki-chis-chu chay taka-na-ku-q-kuna-ta*
 split-REC-CAUS-PAST-2SG-PL-Q that punch-REC-REFL-NR-PL-ACC
 ‘Did you separate those who were punching each other?’ (Ayacucho Quechua; P. 70)

The derivational chain for the causative of a reciprocal anticausative is essentially the same as that for the causative of a reciprocal transitive verb, presented in (57):

- (59) *raki* Theme split from Source
raki-na Theme_{i,n} split from Source_{i,n}
raki-na-chi Causer make Theme_{i,n} split from Source_{i,n}

5.3 Reflexives derived from object-oriented reciprocals

If the two arguments of a transitive verb embedded under a causative verb are co-referential as in (56), they may be co-referential with the subject as well. This leads to an exceptional, but possible interpretation in which all arguments of the derived verb refer to same set of individuals: ‘X makes that Y washes X and Y makes that X washes Y’. Dealing with such interpretations one has to be careful since they may be logical possibilities but it can be questioned whether they really present a pattern in the language. I have at least one interesting and clear case of *-na-chi-ku* order with this reading, although in a construed example, cf. (60):⁸

8. Another instance of this pattern is found in the case of ‘walk together/accompany’ which can be either expressed by *puri-ysi-na-ku-y* ‘assist each other to walk’ or by *puri-na-ku-y* ‘walk one another’, (cf. (36)). The first form is completely transparent and has enough argument positions to allow for a straightforward interpretation of the reciprocal marker: [X,Y assist Y,X to PRO walk]. However, the second form is problematic if we assume that only

- (60) *pay-kuna-pura qonqa-na-chi-ku-nku.*
 he-PL-COLL forget-REC-CAUS-REFL-3PL
 ‘Among them, they cause each other to forget the one the other.’

Parker (1969:70) gives another instance of this pattern of reciprocal interpretation:

- (61) *miku-na-chi-ku-chka-n-ku-m kiki-n-ku-pura.*
 eat-REC-CAUS-REFL-DUR-3-PL-AFFRM they-3-PL-COLL
 ‘Among themselves, they are serving each other themselves.’

The source of this example is not given, but it probably has been taken from some legendary story, since human beings are not supposed to offer parts of themselves to one another. The derivational chain for the latter example is as in (62), which obviously shows

one argument is projected from the lexicon: [Agent walk]. Assistive/comitative interpretation of *-na* apparently gives rise to an interpretation ‘performing an action together’, in which the Comitative adjunct is raised to argument status. This derivation then can be the base for the following cases of causative formation:

- (i) *puri-na-chi-wayku.*
 walk-REC-CAUS-3SG→1PL
 ‘He makes that we go together.’
- (ii) *puri-na-chi-ku-nku.*
 walk-REC-CAUS-REFL-3PL
 ‘They make that they go together.’
- (iii) *wawa-s-ni-y-wan puri-na-chi-ku-ni.*
 child-PL-EUP-1SG-COM walk-REC-CAUS-REFL-1SG
 ‘I had myself be accompanied by my children.’
- (iv) *puri-na-chi-ku-wa-n.*
 walk-REC-CAUS-REFL-1OBJ-3SG
 ‘He had himself be accompanied by me/He makes me accompany him.’

In (i) the internal arguments are not co-indexed with the Causer argument, but are referred to by means of an object marker. In (ii-iv) we find constructions in which one or all of the internal arguments are co-indexed with the Causer by means of reflexive marking. In (ii) the set of elements in the Causer argument is equal to the internal set, in (iii) and (iv) only one of the elements of the internal set is co-indexed with the Causer and this leads to the exceptional case in (iv). From the set of elements over which *-na* has scope: ‘he’ and ‘I’, one is realized as the external argument via *-ku* externalization while the other is spelled out via object marking. In a lexical operation type analysis this may be represented as:

- (v) *puri-* Ag (Com) walk
puri-na- [(Ag_{i,k}) (Com_{i,k})] walk
puri-na-chi- Causer Cause walk [Ag_{i,k} Com_{i,k}]
puri-na-chi-ku- Causer^l Cause walk [(Ag_{i,k})^l (Com_{i,k})]
puri-na-chi-ku-wa- Causer^l Cause walk [(Ag_{i,k})^l (Com_{1Ob})]
puri-na-chi-ku-wa-n Causer^{l3Sb} Cause walk [(Ag_{3sg})^l (Com_{1Ob})]

Assuming that reciprocal marking in Bolivian Quechua is the marking that two sets in argument positions are reciprocally distributed and the special assumption that one individual member of the set can be realized in the external position in the syntax by means of *-ku* indexation, the derivation can be accounted for.

that all three arguments associated with the complex verb *miku-chi-y* ‘to make eat, serve’, refer to the same set of individuals:

- | | | |
|------|-----------------------|--|
| (62) | <i>miku</i> | Agent eat Patient |
| | <i>miku-na</i> | Agent _{i,n} eat Patient _{i,n} |
| | <i>miku-na-chi</i> | Causer make Agent _{i,n} eat Patient _{i,n} |
| | <i>miku-na-chi-ku</i> | Causer _{i,n} make Agent _{i,n} eat Patient _{i,n} |

6. Productivity

Although the use of *-na* to create reciprocal expressions in combination with *-chi* or *-ku* is fully productive, reciprocal marking as such is not a very frequent phenomenon. In the well-known autobiography of Condori Mamani (1981), a speaker of Cuzco Quechua, only 36 of the total of 18045 tokens contained the reciprocal suffix *-na*: one out of every 500 words. These 36 tokens contained 21 different types based on 17 different roots. In the text 11 verb roots are represented with one type/token:

- | | | | | |
|------|--------------------|-------------------|--------------------------|-------------------------------|
| (63) | <i>apa-chi</i> | ‘to make carry’ | <i>apa-chi-na-ku-</i> | ‘to make carry to each other’ |
| | <i>compromete-</i> | ‘to engage’ | <i>compromete-na-ku-</i> | ‘to engage with each other’ |
| | <i>miku-chi-</i> | ‘cause sb to eat’ | <i>miku-chi-na-ku-</i> | ‘to cause each other to eat’ |
| | <i>qechu-</i> | ‘take away from’ | <i>qechu-na-ku-</i> | ‘take away from each other’ |
| | <i>qhawa-</i> | ‘to look at’ | <i>qhawa-na-ku-</i> | ‘to look at each other’ |
| | <i>saru-cha-</i> | ‘to step on’ | <i>saru-cha-na-ku-</i> | ‘to step on each other’ |
| | <i>rima-</i> | ‘to speak with’ | <i>rima-na-ku-</i> | ‘to speak with each other’ |
| | <i>turi-ya-</i> | ‘become brothers’ | <i>turi-ya-na-ku-</i> | ‘become each other’s brother’ |
| | <i>wakha-</i> | ‘to call’ | <i>wakha-na-ku-</i> | ‘to call each other’ |
| | <i>wark’a-</i> | ‘to sling’ | <i>wark’a-na-ku-</i> | ‘to sling each other’ |
| | <i>yanapa-</i> | ‘to help’ | <i>yanapa-na-ku-</i> | ‘to help each other.’ |

Five verb roots are represented with two or more types and/or tokens:

- | | | | | | |
|------|---------------|-----------------|---|-----------------------------|-----------------------------------|
| (64) | <i>huñu-</i> | ‘to unite’ | → | <i>huñu-na-ku-</i> | ‘to assemble’ |
| | <i>riqsi-</i> | ‘to know’ | → | <i>riqsi-na-ku-</i> | ‘to know each other’ |
| | <i>willa-</i> | ‘to tell’ | → | <i>willa-na-ku-</i> | ‘to tell each other’ |
| | <i>k’ami-</i> | ‘to offend’ | → | a. <i>k’ami-na-ku-</i> | ‘to offend each other’ |
| | | | | b. <i>k’ami-na-yu-ku-</i> | ‘to offend each other’ |
| | <i>raki-</i> | ‘to distribute’ | → | a. <i>raki-na-ku-</i> | ‘to distribute among each other’ |
| | | | | b. <i>raki-na-ra-ka-pu-</i> | ‘to distribute among each other.’ |

At last, the root *maqa-* ‘to hit’ yields 12 tokens based on the types *maqa-na-ku-* and *maqa-na-yu-ku-* with the semi-lexicalized interpretation ‘to fight’. In fact it may be better to speak of semantic specialization, since a clear correspondence with the original reciprocal interpretation can be observed. Other verbs that show this type of alternation between a regular reciprocal and a specialized meaning are:

- | | | | | | |
|------|---------------|--------------|---|---------------------|-------------------------------------|
| (65) | <i>qhawa-</i> | ‘to look at’ | → | <i>qhawa-na-ku-</i> | ‘to look at each other’/‘criticize’ |
| | <i>suwa-</i> | ‘to steal’ | → | <i>suwa-na-ku-</i> | ‘to steal from each other’/‘elope’ |

pusa- ‘to guide’ → *pusa-na-ku-* ‘to guide each other’/‘elope’
hap’i- ‘to grasp’ → *hap’i-na-ku-* ‘to grasp each other/grasp each other’s hand’/‘quarrel.’

7. Referential situations

This article has treated reciprocal formation in Bolivian Quechua. In the generative tradition reciprocal formation is normally treated as a special kind of reflexive formation: a binding relation between an anaphor and its antecedent that leads to referential identity of two arguments associated with a verb. I have shown in this article that the reflexive interpretation of the verbal suffix *-ku* is but one of its interpretational possibilities, which follows from its mediating function between underlying semantic and syntactic surface structure. In this way I could account for the fact that the suffix *-ku* has to be combined with the reciprocal marker *-na* in subject-oriented reciprocals, while it is absent in object-oriented causative reciprocals. I have also shown that in Bolivian Quechua reciprocal marking with the suffix *-na* cannot be characterized as a strict coreferential relation between an anaphor and an antecedent. A more promising analysis is to assume that *-na* has to be read as an instruction on how referential values have to be assigned to sets in argument positions associated with a verb, i.e. that a distributive relation holds between two sets. In this way we may account for the different referential situations in which the reciprocal marker may be used:

1. Strict reciprocal interpretation:
 ‘kiss’ [A,B,C,D] [A,B,C,D] → ‘kiss’ [A,B], [A,C], [A,D], [B,C], [B,D], [C,D]
2. Weak reciprocal interpretation:
 ‘kiss’ [A,B,C,D] [A,B,C,D] → ‘kiss’ [A,B], [A,D], [B,C], [C,D]
3. Chain interpretation:
 ‘kiss’ [A,B,C,D] [A,B,C,D] → ‘kiss’ [A,B], [B,C], [C,D]
4. Action in turn or in a series:
 ‘kiss’ [A] [B,C,D] → ‘kiss’ [A,B], [A,C], [A,D] or
 ‘kiss’ [A,B,C] [D] → ‘kiss’ [A,D], [B,D], [C,D].

8. Polysemy of the reciprocal marker in different Quechua dialects

As I have stated in the introduction, I have treated reciprocal formation in the southern Quechua (IIC) dialects. On the basis of my fieldwork data from Bolivia and the literature on Bolivian, Ayacucho, and Cuzco Quechua, which is by far the best studied Quechua dialect, I have shown that these dialects show similar patterns for reciprocal formation and interpretational possibilities, with the exception of one construction in Ayacucho Quechua to be treated in the following section. The derivational suffix *-na*, either in combination with *-chi* or *-ku* may be used in the following contexts:

- (a) reciprocal (see Section 4.2.1)
- (b) sociative (see Section 4.2.2)

(c) anticausative (see Section 4.2.4)

(d) successive: action in ‘turn’ or in ‘a series’ (see Section 4.2.3.3).

To my knowledge, an in-depth study of reciprocal formation in the Peruvian Quechua I and IIa and the Ecuadorian Quechua IIb dialects has not yet been undertaken. However, the data that are presented in the literature on the Peruvian Quechua I and IIa dialects suggest that the reciprocal marker in these dialects shows the same kind of semantic extension that we have encountered in the southern Quechua IIc dialects. Weber (1989: 168–70) mentions for the Huallaga Quechua I dialect, apart from the reciprocal proper, a reciprocal of distributed mutual activity, a reciprocal as a distributed reflexive, and extended meanings. The ‘reciprocal of distributed mutual activity’ coincides with ‘weak reciprocity’ since “the action indicated by the verb to which *-naku* is suffixed is performed by some members of the group on other members of the group; that is, the activity is distributed among members of the group, and not necessarily performed by each member on all others” (Weber 1969: 169). The status of the ‘reciprocal as a distributed reflexive’ is not entirely clear, but it looks as if the reciprocal marker functions primordially as an indication of a distributed action, comparable to what has been presented in 4.3.3.3 as ‘action in turn or in a series’: “In some cases, the reciprocal refers to a group to suggest that each does something to himself; e.g.:

- (66) ... *mayu-pita punta-yaq chura-naku-yku-n* ...
 river-ABL peak-LIM place-REC-INW-3
 ‘... they place themselves from the river to the peak ...’ (actually, each frog puts himself in a hole)” (W. 170; glosses mine).

The “extended meanings” present the same pattern of semantic specialization that has been presented in Section 6.

The picture for the Ecuadorian Quechua IIa dialects is much more confused. Quechua I and IIc medial-reflexive *-ku*, in the Ecuadorian dialects mainly used to express progressive aspect, is replaced by *-ri*, which is used as the inceptive marker in the Quechua I and IIc dialects. According to Cole (1982:91–2, 134–5, 142) *-ri* may have a reflexive, a reciprocal, and an anticausative interpretation:

- (67) a. *ispiju-pi riku-ri-rka-ni*.
 mirror-LOC see-REFL-PAST-1SG
 ‘I saw my self in the mirror.’
 b. *wambra-kuna riku-ri-rka*.
 child-PL see-REFL-3SG.PAST
 ‘The children saw each other.’
 c. *pungu-kuna-ka paska-ri-rka*.
 door-PL-TOP open-REFL-3SG.PAST
 ‘The doors opened.’

However, many Ecuadorian dialects have retained *-naku* (or an allomorphic form). It can be used as a reciprocal marker, but *-naku* may also have a sociative interpretation: ‘together’. It can even be used as a verbal plural marker (Muysken 1977: 54; Cerrón Palomino 1987: 283):

- (68) *miku-naku-n*.
 eat-REC-3
 ‘They eat together’, or ‘They eat.’

The list of meanings of *-naku* may thus be extended with:

- (e) distributive (Huallaga Quechua)
 (f) verbal pluralizer (Ecuadorian dialects).

9. Synopsis of reciprocal and reflexive constructions

I assume that there are two arguments associated with a transitive verb root like *maylla* ‘to wash’. These arguments make reference to sets of elements, which are filled in by person and number markers:

- (69) *maylla-* [Agent] [Patient]
maylla-nku ‘They wash sb (ACC).’

Both reflexive and reciprocal formation mark that the referential index of two arguments is identical, with a special instruction that the action expressed by the verb is performed by every member of the set on itself in the case of reflexives, and on the other members of the set in the case of reciprocals:

- (70) *maylla-* [Agent]_{i,n} [Patient]_{i,n}
maylla-ku-nku ‘They wash *themselves*.’
maylla-na-ku-nku ‘They wash *each other*.’

Causative formation may be characterized as addition of an extra argument:

- (71) *maylla-chi-* [Causer] [Agent] [Patient]
maylla-chi-nku ‘They cause sb (COM) to wash sb (ACC).’

The causative of a two-place verb is a derived verb with three arguments and the interaction with reflexive and reciprocal formation leads to a number of different surface realizations. It is here that we find a major difference between Ayacucho Quechua and the other southern Quechua dialects. In Ayacucho, as well as in the Quechua I dialects, the reflexive marker *-ku* may occur before the causative suffix. That allows these dialects to express embedded reflexive relations as in (72a) (impossible in Cuzco and Bolivian Quechua) and, by consequence, the form of embedded reciprocals is also different, cf. (72b) (as contrasted with (56)):

- (72) a. *warmi-qa wawa-s-ta maylla-ku-chi-n*.
 woman-TOP child-PL-ACC wash-REFL-CAUS-3SG
 ‘The woman makes the children wash themselves.’
 b. *warmi-qa wawa-s-ta maylla-na-ku-chi-n*.
 woman-TOP child-PL-ACC wash-REC-REFL-CAUS-3SG
 ‘The woman makes the children wash each other.’

Interaction between causative, reflexive and reciprocal formation may then be schematically represented as in (73-76) (Q stands for Quechua here):

- | | | |
|------|--|--|
| (73) | <i>maylla-chi-</i>
<i>maylla-ku-chi-n</i>
<i>maylla-na-ku-chi-n</i>
<i>maylla-na-chi-n</i> | [Causer] [Agent] _{i,n} [Patient] _{i,n}
'He makes sb (ACC) wash <i>themselves</i> ' (QI, impossible in QII)
'He makes sb (ACC) wash <i>each other</i> ' (QI, impossible in QII)
'He makes sb (ACC) wash <i>each other</i> ' (QII); |
| (74) | <i>maylla-chi-</i>
<i>maylla-chi-ku-nku</i>
<i>maylla-chi-na-ku-nku</i> | [Causer] _{i,n} [Agent] _{i,n} [Patient]
'They make <i>themselves</i> wash sb (ACC)' (QI, QII)
'They make <i>each other</i> wash sb (ACC)' (QI, QII) |
| (75) | <i>maylla-chi-</i>
<i>maylla-chi-ku-nku</i>
<i>maylla-na-chi-ku-nku</i>
<i>maylla-chi-na-ku-nku</i> | [Causer] _{i,n} [Agent] [Patient] _{i,n}
'They make sb (COM) wash <i>themselves</i> ' (QI, QII)
'They make sb (COM) wash <i>each other</i> ' (QI, possibly QII)
'They make sb (COM) wash <i>each other</i> ' (Bolivian Q.) |
| (76) | <i>maylla-chi-</i>
<i>maylla-chi-ku-nku</i>
<i>maylla-na-chi-ku-nku</i> | [Causer] _{i,n} [Agent] _{i,n} [Patient] _{i,n}
'They make <i>themselves</i> wash <i>themselves</i> ' (not attested)
'They make <i>each other</i> wash <i>each other</i> ' (Bolivian Q.) |

10. Etymology

The fact that Quechua is a linguistic isolate (except the possible genetic relatedness with Aymara) and the fact that written sources only date back to the beginning of the sixteenth century make any etymological claim very tentative, at best. Probably, *-na-ku* may be linked to Aymara *-naka* and Quechua *-kuna* which function as pluralizers on nouns, but it is not clear what is the direction of this link.

1. Introductory notes

1.1 Warrungu and other Australian languages

Warrungu (also spelt Warungu) used to be spoken in the upper Herbert River region, west of Ingham, North Queensland, Australia. Its closest relative is Gugu-Badhun (see Sutton 1973). Neither language has a fluent speaker left.

I conducted fieldwork on Warrungu three times from 1971 to 1974, when there were only two fluent speakers: the late Mr. Alf Palmer (Warrungu name: Jinpilngkay) and the late Mr. Alick Collins. (Hereafter, I shall omit “the late Mr.”) Most of the data on Warrungu was collected by me from Alf Palmer. My corpus includes approximately six hours’ running texts. Prior to my work on Warrungu, a small amount of data had been collected by R.M.W. Dixon from Alf Palmer and by Peter Sutton from Alick Collins.

I dedicate this paper to Alf Palmer, who used to say to me, “When I die, this language will die. I teach you everything I know, so put it down properly”.

The Warrungu phoneme inventory, written in a practical orthography, is the following: /*p, t, j, k, m, n, ny, ng, l, rr, r, w, y, a, i, u, aa*/.

1.2 Overview

Warrungu has the verbal derivational suffix *-wa-Y* ‘reciprocal’. This suffix is generally added to transitive roots, and turns them into intransitive verbs. That is to say, reciprocal verbs are intransitive, and the subject is changed from the ergative into the nominative. Thus, corresponding to a transitive clause such as (1a), we can have a reciprocal version such as (1b):

- (1) a. *kantu-ngku pama-Ø paja-n.*
 dog-ERG man-ACC bite-NFUT
 ‘The dog bit a man.’
- b. *kantu-Ø paja-wa-n.*
 dog-NOM bite-REC-NFUT
 ‘The dogs bit each other/one another.’

(Henceforth, when a reciprocal verb allows both ‘each other’ and ‘one another’ readings, it will be simply glossed ‘each other’.)

The central meaning of *-wa-Y* ‘REC’ is “reciprocal”, but it also has a few other non-productive meanings, such as “sociative”. *-wa-Y* ‘REC’ is the only way to express reciprocity.

Warrungu reciprocal constructions are subject-oriented, and not object-oriented. They can be classified as follows:

1. “Canonical” reciprocals:
 - (a) derived from two-place transitives: subject-direct object diathesis type, and
 - (b) derived from two-place intransitives: subject-oblique object diathesis.
2. “Indirect” reciprocals: subject-receiver diathesis.
3. “Possessive” reciprocals: subject-possessor diathesis type.¹

The subject of “indirect” and “possessive” reciprocals is not ergative but nominative, despite the fact that a direct object can be retained in them.

2. Grammatical notes

Those aspects of Warrungu grammar which are pertinent to the ensuing discussions are given below. Further details are in Tsunoda (1974).

2.1 Morphology

Warrungu is entirely suffixing. Also, it is largely agglutinating, although there are elements of fusion as well. Morpheme boundaries are indicated by equation signs (“=”) for enclitics and by hyphens elsewhere. In instances of fusion and in those in which morpheme boundaries are difficult to recognize, glosses are given as, for instance, *ngaya* ‘1SG.NOM’, without indicating morpheme boundaries.

2.2 Parts of speech

The following parts of speech can be set up for Warrungu: pronouns, nouns (including “adjectives” and “demonstratives”), adverbs, verbs, and interjections. In addition, there are enclitics, which are largely modal.

1. Warrungu syntax is strongly ergative, revolving around the S/O pivot (Tsunoda 1988), and there is no decisive syntactic evidence to set up the subject (S/A). Nor is there any evidence to recognize the direct object. Nonetheless, I shall continue to use terms such as “subject” and “direct object”, in order to facilitate comparison with other papers in this volume.

Table 1. Case system

	pronouns	nouns
	'1sg'	'man'
ergative	<i>ngaya</i>	<i>pama-ngku</i>
nominative	<i>ngaya</i>	<i>pama-Ø</i>
accusative	<i>nganya</i>	<i>pama-Ø</i>

2.3 Nouns and pronouns

Nouns generally lack number distinction (but there are just a few non-productive plural or dual suffixes; see 9.2 for one of these suffixes), while (personal) pronouns distinguish three numbers: singular, dual, and plural. A dual pronoun is sometimes accompanied by a singular pronoun or by a noun with a singular referent. Thus:

- (2) *ngali-Ø yinta yani-yal.*
 1DU-NOM 2SG.NOM go-PURP (TT)²
 'We, including you, will go', i.e. 'you and I will go.'

As the translation indicates, such a combination does not mean 'A and B', but rather has a "subset" reading, i.e. 'A, including B'; the accompanying pronoun or noun specifies a member of the group. Other examples include (8), (62), (65), (66). The same applies to combinations involving a plural pronoun, e.g. (42), (53b). Warrungu lacks a conjunction corresponding to the English *and*.

Warrungu has the following cases: ergative (for the transitive subject), nominative (for the intransitive subject), accusative (for the direct object), dative, genitive, locative, ablative, (nominal) comitative, and instrumental. (The ergative and the instrumental have almost identical allomorphs.) The case system exhibits a type of split ergativity. See Table 1. Roughly speaking, in the pronouns the ergative and the nominative case forms are identical, as opposed to the accusative, while in the nouns, etc. the nominative and the accusative are identical, and distinct from the ergative. (There are, in fact, a few deviations from this generalization. For instance, the pronouns '3DU' and '3PL' each can have an ergative form (with an ergative suffix) distinct from the nominative form (with a zero suffix), e.g. *pula-ngku* '3DU-ERG' in (11)).

2.4 Verbs

Verbs inflect for tense and mood, but not for person or number. Verbal derivational suffixes, some of which express aspect and/or voice, are discussed in 2.6.1 to 2.7. There are three conjugational classes: *L*-class, *Y*-class, and *Ø*-class. The difference between the three classes can be seen, for instance, in certain nonfuture forms, e.g. *palka-l* 'hit-NFUT', *nyina-y* 'sit-NFUT' and *watali-Ø* 'run-NFUT'.

2. "TT" means that this example was made up for this paper and was not checked with a Warrungu speaker. Examples not marked with "TT" were either provided by Alf Palmer, or composed by me and approved by him.

I shall indicate – by means of *-L*, *-Y*, and *-Ø* respectively – the conjugational class membership of verb roots and verbal derivational suffixes wherever relevant information is available.

2.5 Clause types

Roughly speaking, clauses in Warrungu can be divided as follows:

- Non-derived clauses, whose predicate verb does not contain a derivational suffix.
- Derived clauses, whose predicate verb contains a derivational suffix.

Non-derived clauses can be classified as follows:

- | | | | |
|-----|-------------|---------------|---------------------------------------|
| (a) | three-place | transitive: | ERG-ACC-DAT, e.g. ‘give’ in (9) |
| | | | ERG-ACC-GEN, e.g. ‘give’ in (9) |
| | | | ERG-ACC-INST, e.g. ‘give’ in (11) |
| (b) | two-place | transitive: | ERG-ACC, e.g. ‘bite’ in (1a) |
| | | intransitive: | NOM-DAT, e.g. ‘get angry with’ in (6) |
| | | | NOM-LOC, e.g. ‘be afraid of’ |
| (c) | one-place | intransitive: | NOM, e.g. ‘go’ in (2). |

(The valency of verbs is determined somewhat arbitrarily; it is not easy to determine which NPs are arguments and which NPs are not.)

Among derived clauses, reciprocal, reflexive and antipassive clauses, for instance, are intransitive; their subject is nominative, and not ergative.

Word order is not rigid (Tsunoda 1990), and the case frames listed above do not imply any rigid ordering of the NPs. Also, Warrungu discourse is highly elliptical.

2.6 Valency-changing markers

Verbal derivational suffixes can be classified into three types: valency-increasing, valency-decreasing, and valency-preserving. Certain of the valency-preserving suffixes appear to have a sociative meaning. These three types of verbal derivational suffixes will be dealt with very briefly.

2.6.1 Valency-increasing markers

[1] *-nga-L* ‘transitivizing, causative’ is added to nouns, pronouns, verb roots, etc. and yields transitive verbs, often with a causative meaning; e.g.: *walwa* ‘bad, sick’ → *walwa-nga-L* ‘to make bad/sick’; *wanpa-L* ‘to be afraid’ → *wanpa-l-nga-L* ‘to frighten’. Apparently *-wa-Y* ‘REC’ cannot be added to a derivational suffix (see Section 3 below), and consequently we cannot have a reciprocal verb based on a verb formed with *-nga-L*, such as **wanpa-l-nga-wa-Y* ‘to frighten each other’. It also seems impossible to have a *-nga-L* verb based on a reciprocal verb, such as **wanpa-wa-nga-L* ‘to make sb afraid of each other’.

[2] *-pa-L/-mpa-L* ‘transitivizing, causative’ is added to nouns, verb roots, etc., and forms transitive verbs, sometimes with a causative meaning; e.g.: *ngurrmpun* ‘noise’ → *ngurrmpun-pa-L* ‘to make noise’; *waka-L* ‘to get up’ → *waka-mpa-L* ‘to lift up’.

[3] *-ri-L* ‘causative’ is added to two intransitive roots and produces transitive verbs with a causative meaning: *jana-Y* ‘stand’ → *jana-ri-L* ‘to stand (sth) up’; *wanpa-L* ‘to be afraid’ → *wanpa-ri-L* ‘to frighten’.

[4] *-ri-L* ‘verbal comitative’ is added to intransitive roots and produces transitive verbs, whose meaning is comitative. Thus: *wuna-Y* ‘to lie, sleep’ → *wuna-ri-L* ‘to sleep with (sb)/on (sth)/in (a camp)’, cf. (70) and (71).

[5] *-ri-L* ‘verbal instrumental’ is added to transitive roots and forms transitive verbs which mean ‘to do with sth’; e.g.: *kunpa-L* ‘to cut sth’ → *kunpa-ri-L* ‘to cut sth with sth’.

2.6.2 Valency-decreasing markers

[1] *-ra-* and *-ri-* ‘anticausative’ have been attested with just one and the same transitive root: *wuta-L* ‘to take out, pull sth out’ → *wuta-ra-* ‘to come out’ and *wuta-ri-* ‘to come out’.

[2] *-li-Ø* ‘reflexive, anticausative’ is added to transitive roots, and produces intransitive verbs which are reflexive or anticausative: *pangka-L* ‘to paint’ → *pangka-li-Ø* ‘to paint oneself’ (reflexive); *waju-L* ‘to burn, cook’ → *waju-li-Ø* ‘to burn, get/be cooked’ (anticausative), cf. (51).

[3] *-kali-Ø* ‘reflexive, anticausative, antipassive’ is added to transitive roots and certain transitive stems, and produces intransitive verbs which are reflexive, anticausative or antipassive; e.g.: *pampu-L* ‘to shoot’ → *pampu-kali-Ø* ‘to shoot oneself’ (reflexive); *waju-L* ‘to burn, cook’ → *waju-kali-Ø* ‘to get cooked’ (anticausative), cf. (52); *pija-L* ‘to drink’ → *pija-kali-Ø* ‘to drink’ (antipassive). (For a detailed discussion of antipassives, see Tsunoda 1988. For a detailed discussion of reflexives see Tsunoda 2006.)

[4] *-wa-Y* ‘reciprocal’. See (1b).

2.7 Sociative-like suffixes

There are two reciprocal verbs which appear to have a sociative meaning (5.2.1). In addition, there are four suffixes which have a meaning close to “sociative”. They are attached to verb roots. They do not seem to affect the transitivity of the root concerned.

[1] *-karra-Y* ‘iterative, sociative (?)’ is mostly attached to intransitive roots, producing intransitive verbs which mean ‘(the same actor) does repeatedly/continuously, or, here and there’ or ‘(many actors) do here and there, or, simultaneously’. The latter meaning is similar to sociative. Thus: *wuna-Y* ‘to lie, sleep’ → *wuna-karra-Y* ‘(the same actor) lies/sleeps here and there’ and ‘(many actors) lie here and there’.

[2] *-rV-L* (?) ‘sociative (?)’ is added to transitive and intransitive verb roots, yielding verbs which mean ‘(many actors) do here and there’, ‘(many actors) do something to one’, or ‘(one actor) does something to many’; e.g.: *jana-Y* ‘to stand’ → *jana-ra-* ‘(all) stand about’; *kanyji-L* ‘to carry’ → *kanyji-ri-L* ‘to carry (many things), (many actors) carry’;

kuypa-L ‘to give’ → *kuypa-ra-L* ‘to give to many people; many actors give’, cf. (72). The vowel of this suffix copies the last vowel of the verb root.

[3] *-nta-* ‘sociative (?)’ is added to transitive and intransitive verb roots, and forms verbs which seem to mean ‘the same actor or many actors does/do repeatedly, or, here and there’ or ‘(many actors) do simultaneously’; cf.: *wula-Y* ‘to die’ → *wula-nta-* ‘(all) die’; *paja-L* ‘to bite’ → *paja-nta-* ‘to bite everything, bite about’.

[4] *-ya-* ‘sociative (?)’ is added to transitive and intransitive verb roots and two of the resultant stems have a meaning similar to sociative, e.g. *yani-L* ‘to go/walk’ → *yani-ya-* ‘(all) go’.

2.8 Expressions of possession

Possession in Warrungu is of two types: (a) alienable possession, including that of kinsmen, and (b) inalienable possession, including that of body parts, body secretions, footprints, shadows, names, languages, and parts of inanimate objects. Alienable possession is expressed by means of the genitive, e.g.:

- (3) *ngali-Ø nyaka-lku nyilamu-Ø kama-Ø yinu.*
 1DU-ERG see-PURP new-ACC Gama-ACC 2SG.GEN
 ‘We (two) will watch your new Gama dance.’

Inalienable possession is generally indicated by apposing the possessor and the possessed, e.g. (4), although it is sometimes marked by the genitive, e.g. (5):

- (4) *ngaya nyunya manu-Ø muka-n.*
 1SG.ERG 3SG.ACC neck-ACC grab-NFUT
 ‘I grabbed his neck.’
- (5) *ngaya pulu-Ø nyungu muka-n.*
 1SG.ERG belly-ACC 3SG.GEN grab-NFUT
 ‘I grabbed his belly.’

Example (4) demonstrates apposition in the direct object position, but this apposition is possible in other syntactic positions as well.

3. Reciprocal verbs

As noted in 1.2, *-wa-Y* ‘REC’ is generally added to transitive roots; this use is productive. Also, it is (probably non-productively) attached to two intransitive roots (see (8), (42) and (53a, b)), and to one noun only: *kuku* ‘speech, language’ (see 8.2).

There is a strong correlation between the three conjugational classes (see 2.4) and transitivity:

- (a) *L*-class: predominantly transitive.
- (b) *Y*-class: entirely (?) intransitive.
- (c) *Ø*-class: entirely intransitive.

All the verb roots to which *-wa-Y* is added (including the two intransitive roots) belong to the *L*-class, with one possible exception (see [4] in 4.2). Thus, roughly speaking, affixation of *-wa-Y* shifts verbs from the transitive *L*-class to the intransitive *Y*-class. That is, in terms of verb morphology, reciprocal verbs are intransitive.

The verb roots to which *-wa-Y* ‘REC’ is added can be used as verbs by themselves (but see [3] and [4] in 4.2, and also 5.3.2).

It seems that, like some other verbal derivational suffixes, *-wa-Y* cannot be added to another derivational suffix (or to an inflectional suffix). This will be further discussed in 8.1.

A full list of attested reciprocal verbs, including non-productive ones, is given below. The figures in parentheses indicate the (approximate) number of the examples in my data (including the six hours’ running texts). The gloss ‘REC’ is omitted.

[1] Derived from three-place transitive verbs:

<i>pirra-wa-Y</i>	‘to talk/tell’ (240)
<i>kuypa-wa-Y</i>	‘to give’ (28)
<i>mayka-wa-Y</i>	‘to tell’ (13)
<i>panju-wa-Y</i>	‘to ask’ (5)
<i>ngunpa-wa-Y</i>	‘to tell, show’ (4).

[2] Derived from two-place transitive verbs:

<i>palka-wa-Y</i>	‘to kill, hit’ (108)
<i>papa-wa-Y</i>	‘to stab/spear’ (57)
<i>jaynyja-wa-Y</i>	‘to copulate with’ (30)
<i>junta-wa-Y</i>	‘to kiss’ (21)
<i>muka-wa-Y</i>	‘to hold/grab’ (20)
<i>jingka-wa-Y</i>	‘to punch’ (18)
<i>julnyju-wa-Y</i>	‘to watch/stare’ (13)
<i>nyaka-wa-Y</i>	‘to see’ (8)
<i>paja-wa-Y</i>	‘to bite’ (8)
<i>pangka-wa-Y</i>	‘to paint’ (7)
<i>wania-wa-Y</i>	‘to leave’ (6)
<i>jaympa-wa-Y</i>	‘to find’ (5)
<i>payku-wa-Y</i>	‘to bash’ (3)
<i>palpa-wa-Y</i>	‘to roll’ (2)
<i>kuni-wa-Y</i>	‘to fight’ (2)
<i>pinta-wa-Y</i>	‘to put down’ (2)
<i>kampa-wa-Y</i>	‘to cover’ (1)
<i>waju-wa-Y</i>	‘to burn’ (1)
<i>pampu-wa-Y</i>	‘to shoot’ (1)
<i>muja-wa-Y</i>	‘to eat’ (1)
<i>paya-wa-Y</i>	‘to sing’ (1),

and also two variants of the compound verb meaning ‘argue/quarrel with’: *kuku-payi-wa-Y* (7), *kuku-payu-wa-Y* (4).³

3. The transitive counterpart for the reciprocal *kuku-payi-wa-Y/kuku-payu-wa-Y* is *kuku-payi-L* ‘to argue/quarrel with’. *kuku* is a noun meaning ‘speech’. There is a transitive verb *pari-L* ‘to twist, turn’, and it appears to have

[3] Derived from a two-place intransitive verb: *kuli waka-wa-Y* ‘to get angry (with sb)’ (4).

[4] Derived from a one-place intransitive verb: *jarka-wa-Y* ‘to go in’ (3).

[5] Derived from a noun: *kuku-wa-Y* ‘speech’, i.e. ‘to argue/quarrel with each other’ (1).

As can be seen, *-wa-Y* ‘REC’ is most common with those two-place transitive verbs which describe actions that affect or impinge on the patient. See Tsunoda (1985:391) in this connection.

4. Diathesis types of reciprocal constructions

As mentioned in 1.2, the diathesis types exhibited by Warrungu reciprocal constructions are subject-oriented only. The classification of reciprocal constructions is given in 1.2. It should be noted that this classification applies to the central, i.e. reciprocal, use of *-wa-Y*, but it seems inapplicable to certain other uses, such as sociative. The central use of *-wa-Y* is exemplified below. Its non-central use will be dealt with in 5.2.1 through 5.2.4.

4.1 “Canonical” reciprocals

4.1.1 *Derived from two-place transitives: Subject-direct object diathesis type*

This type involves two-place transitive clauses. The correspondence in terms of case frames between the underlying (i.e. non-REC) and respective reciprocal clauses is shown in Table 2. The subject changes from the ergative to the nominative, and the direct object is deleted. This deletion seems obligatory.

Table 2. Subject-direct object diathesis type

	subject	direct object
NON-REC	ERG	ACC
REC	NOM	...

All the relevant reciprocal verbs are listed in Section 3. For an example, see (1b). Many more examples are given below.

4.1.2 *Derived from two-place intransitives: Subject-oblique object diathesis type*

A combination of the noun *kuli-Ø* ‘angry-NOM’ and *waka-L* ‘to get up’ means ‘to get angry (with sb)’. It generally takes the NOM-DAT frame, as in (6), and exceptionally the NOM-GEN

developed into *payi-* in *kuku-payi-L* and *kuku-payi-wa-Y*, and further into *payu-* in *kuku-payu-wa-Y*. If this is the case, the transitive counterpart literally means ‘twist-speech’. In my data, *payi-* and *payu-* are not used as verbs by themselves. Their class membership is not known, but presumably they are of the *L*-class, like *pari-L* (vt) ‘to twist, turn’.

frame in one case, viz. in (7). The reciprocal version *kuli waka-wa-Y* takes the NOM frame, and the dative (or genitive) NP ‘(angry) with sb’ is absent, cf. (8).

- (6) *nyula kuli-Ø waka-n ngayku-n-ku.*
 3SG.NOM angry-NOM get.up-NFUT 1SG-LINK-DAT⁴
 ‘She got angry with me.’
- (7) (‘Why did they get angry with them?’)
jana-Ø=kuli jana-ngu kuli-Ø waka-n.
 3PL-NOM=for.no.reason 3PL-GEN angry-NOM get.up-NFUT
 ‘They (PL) got angry with them for no reason.’
- (8) *ngali-Ø yinta kuli-Ø waka-wa-n.*
 1DU-NOM 2SG.NOM angry-NOM get.up-REC-NFUT
 ‘We, including you, (i.e. you and I) got angry with each other.’

The nominal comitative form *kuli-yi* ‘angry-N.COM’ sometimes occurs in place of the nominative *kuli-Ø* in these expressions: *kuli-yi waka-L* ‘to get angry’ and *kuli-yi waka-wa-Y* ‘to get angry-REC’. But the nominal comitative suffix seems semantically empty here. The examples involving *kuli* (or *kuli-yi*) *waka-L* ‘to get angry’ and *kuli* (or *kuli-yi*) *waka-wa-Y* ‘to get angry with each other’ are the only instances of the subject-oblique object diathesis type.

4.2 “Indirect” reciprocals: Subject-receiver diathesis type

This type involves three-place transitive verbs. All the relevant reciprocal verbs are listed in Section 3. The receiver (i.e. a recipient of “give” or a hearer of “tell”) may be marked by the dative, the genitive or the accusative. But in a reciprocal version it is consistently deleted (apparently obligatorily), irrespective of its case-marking.

Table 3. *kuypa-L* ‘to give’ and *kuypa-wa-Y* ‘to give-REC’

		donor (subject)	gift	recipient (receiver)	example
1a	NON-REC	ERG	ACC	DAT	(9)
2a	NON-REC	ERG	ACC	GEN	(9)
1b, 2b	REC	NOM	ACC	(10)
3a	NON-REC	ERG	INST	ACC	(11)
3b	REC	NOM	INST	(12)

[1] *kuypa-L* ‘to give’ and the reciprocal *kuypa-wa-Y* have the case frames shown in Table 3. Among the underlying case frames, 1a and 2a are frequently used, but 3a is not. An example of 1a and 2a is:

4. Linking suffixes merely occur between two morphemes, apparently with no meaning.

- (9) *kaya-na-wu* (or *kaya-na-ngu*) *ngaya manyja-Ø kuypa-n.*
 father-KIN-DAT father-KIN-GEN 1SG.ERG food-ACC give-NFUT
 ‘I gave food to [my] father.’

An example of 1b and 2b:

- (10) *pama-Ø manyja-Ø kuypa-wa-n.*
 man-NOM food-ACC give-REC-NFUT
 ‘The men gave food to each other.’

An example of 3a:

- (11) *pula-ngku nganya kuypa-n manyja-ngku.*
 3DU-ERG 1SG.ACC give-NFUT food-INST
 ‘They (two) gave me food.’

(This case frame is reminiscent of that of English verbs such as *provide*, *supply* and *present*, as in *to present someone with something*.) There is no spontaneous example of 3b, but the following was approved by Alf Palmer:

- (12) *pama-Ø manyja-ngku kuypa-wa-n.*
 man-NOM food-INST give-REC-NFUT
 ‘The men gave food to each other.’

There is no example of the “subject-gift” type, such as ‘they gave themselves to each other’.

Table 4. *mayka-L* ‘to tell’ and *mayka-wa-Y* ‘to tell-REC’

		speaker (subject)	topic	hearer (receiver)	example
1a	NON-REC	ERG	DAT	ACC	(13)
1b	REC	NOM	DAT	(16)
2a	NON-REC	ERG	ACC	DAT	(14)
2b	REC	NOM	ACC	(15) (?)

[2] *mayka-L* ‘to tell’ and the reciprocal *mayka-wa-Y* appear to have the case frames shown in Table 4. The case frame 1a, e.g. (13), is more common than 2a, e.g. (14).

- (13) *nyula nganya mayka-lku ngani-wu?*
 3SG.ERG 1SG.ACC tell-PURP what-DAT
 ‘What will he tell me about?’
- (14) *ngaya burri-Ø yinu-n-ku mayka-n.*
 1SG.ERG name-ACC 2SG-LINK-DAT tell-NFUT
 ‘I told [their] names to you (SG).’

In all of the examples of the reciprocal *mayka-wa-Y*, the topic and the hearer are elliptical, with one exception. The only exception is:

- (15) *?ngani-Ø ngali-Ø mayka-wa-yal?*
 what-ACC 1DU-NOM tell-REC-PURP
 ‘What shall we (two) tell each other?’

Sentence (15) would be an example of 2b, which corresponds to the (uncommon) case frame 2a. However, when the tape was replayed, Alf Palmer replaced *ngani-Ø* with the dative *ngani-wu*, thus yielding:

- (16) *ngani-wu ngali-Ø mayka-wa-yal?*
 what-DAT 1DU-NOM tell-REC-PURP
 ‘What shall we (two) tell each other about?’

This version is an example of 1b, which corresponds to the (common) case frame 1a. It is not certain if (15) is fully acceptable. It is in view of this that a question mark is placed for (15).

[3] *pirra-L* ‘to tell, talk, speak’ is almost always used in the reciprocal form (about 240 examples), although it can occur in the antipassive form (9 examples) and also can be used as a transitive verb by itself (4 or possibly 6 examples).⁵ The examples are highly elliptical, and it is difficult to determine the case frames employed. Nonetheless, the data suggests that *pirra-L* ‘to tell’ and *pirra-wa-Y* ‘to tell each other’ have the case frames shown in Table 5.

Table 5. *pirra-L* ‘to tell’ and *pirra-wa-Y* ‘to tell-REC’

		speaker (subject)	speech or language	topic	hearer (receiver)	possible examples
1a	NON-REC	ERG	?	DAT	ACC	(17), (18)
1b	REC	NOM	?	DAT	(19)
2a	NON-REC	ERG	?	ACC	DAT	(20)
2b	REC	NOM	?	ACC	(21)
3a	NON-REC	ERG	ACC	DAT	?	no example
3b	REC	NOM	ACC	DAT	(22), (23)

If we ignore the noun denoting speech or a language, then 1a, 2a and 1b, 2b are the same as those of *mayka-L* ‘to tell’ and *mayka-wa-Y* ‘to tell each other’, respectively. However, 3a and 3b, which each contain an accusative noun referring to speech or a language, are confined to *pirra-wa-Y* ‘to tell each other’; they do not seem to occur with *mayka-wa-Y* ‘to tell each other’. It is not known if 1a or 2a can contain an NP referring to speech or a language. Nor is it known if 3a can include an NP denoting the hearer. If any of 1a, 2a and 3a could contain such an additional NP, then *pirra-L* ‘to tell, talk, speak’ would be not three-place but four-place, and it would be the only four-place verb in Warrungu. Two putative examples of 1a:

5. Gugu-Badhun, immediately south of Warrungu, has *pirra-Y* ‘talk’ (Sutton 1973: 147). This *pirra-Y* is used as a verb by itself, but its reciprocal form does not seem attested. Note that the Gugu-Badhun *pirra-Y* is of the Y-class, in contrast with the Warrungu *pirra-L* ‘tell, talk’, which is of the L-class. It is not known whether the Gugu-Badhun *pirra-Y* is transitive or intransitive.

- (17) *ngani-wu pirra-lku ?*
 what-DAT tell-PURP
 ‘What will [he] tell [her] about?’
- (18) *wanyu-lu yina pirra-n ?*
 who-ERG 2SG.ACC tell-NFUT
 ‘Who told you (SG) [about it]?’

An example of 1b is:

- (19) *warrngu-wu ngali-Ø pirra-wa-ya.*
 woman-DAT 1DU-NOM talk-REC-IMP
 ‘Let’s tell each other about women’ or ‘Let’s talk about women.’

A possible example of 2a is:

- (20) *pama-ngku warrngu-wu pirra-n.*
 man-ERG woman-DAT tell-NFUT
 ‘The man told [something] to the woman.’

An example of 2b:

- (21) *pirra-wa-yal ngali-Ø ngani-Ø pirra-wa-yal?*
 tell-REC-PURP 1DU-NOM what-ACC tell-REC-PURP
 ‘What shall we (two) tell each other?’

There is no example of 3a. Two rare non-elliptical examples of 3b follow. (22) contains the noun *kuku* ‘speech’, and (23) contains a language name (*jirrpal*).

- (22) *kuku-Ø ngali-Ø pirra-wa-yal warrngu-wu.*
 speech-ACC 1DU-NOM tell-REC-PURP woman-DAT
 lit. ‘We (two) will tell speech to each other about the woman’, i.e. ‘we two will talk about the woman.’
- (23) (‘You think I don’t understand the Dyirbal language’)
jirrpal-Ø yurra-Ø pirra-wa-n ngayku-n-ku.
 Dyirbal-ACC 2PL-NOM talk-REC-NFUT 1SG-LINK-DAT
 ‘You (PL) are speaking [in] Dyirbal to one another about me.’

[4] *ngunpa-* ‘to tell, show’ and the reciprocal *ngunpa-wa-Y*. Like *pirra-L* ‘to tell, talk’, *ngunpa-* ‘to tell, show’ is hardly ever used as a verb by itself; it generally occurs in the reciprocal *ngunpa-wa-Y* or in *ngunpa-y-nga-L* ‘to show, teach’ (*-nga-L* ‘transitivising, causative’; see 2.6.1).⁶ There is only one example of *ngunpa-* ‘to tell, show’: *ngunpa-n* ‘tell/show-NFUT’. This only example is highly elliptical, and the case frame of *ngunpa-* is not known. Similarly, in all of the examples of the reciprocal *ngunpa-wa-Y*, the topic and the hearer are elliptical, and its case frame is not known. An example:

6. The form *ngunpa-y-nga-L* ‘to show, teach’ suggests that etymologically *ngunpa-* ‘to tell, show’ belonged to the *Y*-class. (If it did, it would be the only transitive root which belonged to the *Y*-class; all the other transitive roots and also all the derived transitive stems belong to the *L*-class; see Section 3.) However, there is no data to confirm this.

- (24) ('We intended to kill our enemies')
ngana-Ø jili-ngku ngunpa-wa-n.
 1PL-NOM eye-INST tell-REC-NFUT
 'We (PL) told one another [of this intention] with [our] eyes.'

[5] *panju-L* 'to ask' ('to request/inquire') has one case frame: 'Someone (ERG) requests someone (ACC) for something (DAT)', or 'someone (ERG) asks someone (ACC) about something or someone (DAT)'. This case frame is similar to 1a of *mayka-L* 'to tell'. The case frame of the reciprocal *panju-wa-Y* is not known.

4.3 "Possessive" reciprocals: Subject-possessor diathesis type

As noted in 2.8, inalienable possession is generally indicated by the apposition of the possessor and the possessed, as in (4), and occasionally by the genitive, as in (5). Now, we have a reciprocal clause:

- (25) (The men were being silly)
 ... *pama-Ø=kuli manu-Ø muka-wa-n.*
 ... man-NOM=alone neck-ACC grab-REC-NFUT
 '... the men grabbed one another's neck for no reason.'

(The discourse enclitic =*kuli* means 'alone, by oneself, for no reason'.)

The direct object indicating the possessed/body part can be retained, as (25) illustrates. However, the direct object denoting the possessor is deleted, apparently obligatorily. This is irrespective of whether the possession in the corresponding underlying clause is marked by apposition, as in (4), or by the genitive, as in (5). Then, the correspondence is as shown in Table 6.

Table 6. Subject-possessor diathesis type

	subject	possessor	possessed
NON-REC	ERG	ACC	ACC
NON-REC	ERG	GEN	ACC
REC	NOM	...	ACC

A pair of examples:

- (26) *ngaya ... warrngu-Ø mara-Ø muka-n.*
 1SG.ERG ... woman-ACC hand-ACC hold-NFUT
 'I held [the] woman's hand.'
- (27) *ngali-Ø mara-Ø muka-wa-n.*
 1DU-NOM hand-ACC hold-REC-NFUT
 'We (two) held each other's hands', i.e. 'we shook hands.'

(The expression *mara-Ømuka-wa-Y* generally means 'to shake hands'. Alf Palmer used this sentence to describe our shaking hands on my return to Palm Island in June 1972.)

The subject-possessor diathesis type has been attested with inalienable possession only. There is no example involving alienable possession, such as ‘we took each other’s hats’. As well, this type has been attested only in the direct object position of transitive clauses. There is no example of this type involving some other syntactic position. Thus, there is no example such as ‘we put a hat on each other’s head’ or ‘we took a hat off each other’s head’.

5. The meanings of reciprocal constructions

The meanings of reciprocal constructions can be classified as follows:

1. Reciprocal proper: an action is reciprocated between/among the participants.
2. Non-reciprocal: there is no such action or the like.

The reciprocal type proper, which covers the vast majority of the instances, is fully productive, while the non-reciprocal type is not.

5.1 Reciprocal proper

Reciprocal constructions of this type can be divided into two subtypes:

1a. Completely coreferential: the participant(s) who perform(s) the action and the one/those who receive(s) it are completely coreferential.

1b. Partly coreferential: the two sets of participants are only partially coreferential.

Admittedly it is not always easy to assign a given instance to one subtype rather than to the other.

Using another parameter, reciprocal constructions of the reciprocal type proper can be classified into the following two subtypes (Takahashi 1988:52–53).

- (a) simultaneous: reciprocation of the action is done simultaneously and
- (b) alternate: reciprocation of the action is done alternately or by turns.

These two classifications are mutually compatible.

5.1.1 *Completely coreferential and partly coreferential*

If the subject has a plural (rather than dual) referent, then out of context a given reciprocal construction may be either “completely coreferential” or “partly coreferential”. For example, in (1b), the subject may have a plural referent. Now, if each of the dogs did the biting and also got bitten, then (1b) is “completely coreferential”. But if dog A bit some other dog(s) but did not get bitten, or, if dog B got bitten but did not bite any other dog, and so on, then (1b) is “partly coreferential”. It seems that the “partly coreferential” reading is more plausible when the number of the participants is fairly large than when it is just two or three.

Clear examples of “partly coreferential” include:

- (28) (They had a (inter-tribal?) fight)

jana-Ø nguni palka-wa-n muja-wa-n.
 3PL-NOM there kill/hit-REC-NFUT eat-REC-NFUT
 ‘They killed one another and ate one another there.’

Obviously, it is not the case that each participant did the killing and also was killed. Rather, some did the killing only without being killed; some others were killed, probably without doing the killing. Naturally, there may also be some who did the killing and also were killed. Similarly for the situation concerning the eating. Therefore, (28) is “partly coreferential”. Another example (see also (67)):

(29) *burun-ta jana-Ø palka-wa-n palka-wa-n palpa-wa-n*
 fighting.ground-LOC 3PL-NOM kill/hit-REC-NFUT kill/hit-REC-NFUT roll-REC-NFUT
palpa-wa-n jingka-wa-n.
 roll-REC-NFUT punch-REC-NFUT
 ‘In the fighting ground, they (PL) killed/hit one another, rolled one another [i.e. rolled dead bodies], and punched one another.’

Where the subject has a dual (rather than plural) referent, all the examples are “completely coreferential”; each of the two participants performs and receives the action; cf. (16), (19), (21), (22), (27). For a reciprocal sentence with a dual subject, a “partly coreferential” reading (e.g. ‘I painted you and me’, ‘You painted you and me’; see “extended reflexive” in my paper on Djaru in this volume) is conceivable, but there is no example.

5.1.2 *Simultaneous and alternate*

[1] *Simultaneous*. Out of context, most of the reciprocal constructions may be either “simultaneous” or “alternate”. For example, in (1b), the dogs may have bitten each other simultaneously, or alternately.

There are verbs which may be termed lexical reciprocals (or symmetrical verbs), e.g. the transitive verbs *jaynyja-L* ‘to copulate with’, *kuni-* ‘to fight’ and the compound transitive verb *kuku-payi-L* ‘to quarrel/argue with’. The reciprocal versions of such verbs naturally describe a simultaneously reciprocal situation or something similar. Examples follow.

The verb *jaynyja-L* ‘to copulate with’ generally takes a male agent/subject and a female patient/object, as in (30). In addition, the reverse is possible, and the agent/subject can be a female and the patient/object a male, as in (31); this was confirmed by Alf Palmer. (Both (30) and (31) are taken from the running texts.) The reciprocal version is (32).

- (30) (‘I said to her:’)
ngaya yina jaynyja-lku.
 1SG.ERG 2SG.ACC copulate.with-PURP
 ‘I [a man] will copulate with you [a woman].’
- (31) *nyula nganya jaynyja-n.*
 3SG.ERG 1SG.ACC copulate.with-NFUT
 ‘She copulated with me [a man].’
- (32) *ngali-Ø yarru-n-ta jaynyja-wa-ya.*
 1DU-NOM this-LINK-LOC copulate.with-REC-IMP
 ‘Let’s copulate with each other here.’

Examples involving the compound verb *kuku-payi-L/kuku-payu-L* ‘to argue/quarrel with’:

- (33) *nganya nyula kuku-payi-n.*
 1SG.ACC 3SG.ERG speech-twist-NFUT
 ‘He argued/quarrelled with me.’
- (34) *ngali-Ø kuku-payi-wa-n.*
 1DU-NOM speech-twist-REC-NFUT
 ‘We (two) argued/quarrelled with each other.’

The reciprocal version *kuku-payi-wa-Y/kuku-payu-wa-Y* is more common than the non-derived, transitive counterpart.

The transitive verbs mentioned above seem to be inherently symmetrical. However, apparently they cannot have a reciprocal meaning without the reciprocal suffix. Consider, for instance:

- (35) *ngali-Ø jaynyja-n.*
 1DU-ERG copulate.with-NFUT (TT)

Almost certainly, this sentence cannot mean ‘we (DU) copulated with each other’, and it has to be considered as an elliptical sentence with the meaning ‘we (two) copulated with [some other people]’.

Verbs such as *jaympa-L* ‘to find’ and expressions such as ‘to hold someone’s hand’ are not symmetrical, but their reciprocal versions will be normally considered symmetrical and also simultaneous. Examples:

- (36) *ngaya pama-Ø jaympa-n.*
 1SG.ERG man-ACC find-NFUT
 ‘I found the man.’ (TT)
- (37) (‘He and I decided to have a fight’)
nguna-ngumay ngali-Ø purun-ta jaympa-wa-n.
 that-after 1DU-NOM fighting.ground-LOC find-REC-NFUT
 ‘Then, we (two) met [each other] at the fighting ground.’

For an example of the meaning ‘hold each other’s hand’, see (27). A further discussion of symmetrical verbs is in 5.3.1.

[2] *Alternate*. Certain reciprocal verbs are “alternate” due to their semantics, e.g. (16), (19), (21) to (23): ‘to tell/talk with each other’. People do not normally talk simultaneously; they take turns (hence the need for turn-taking rules).

There are adverbs *paya* ‘in one’s turn’ and *paya-paya* ‘in one’s turn, in return, in turn, reciprocally’. (The reduplicated form is almost always used, and the non-reduplicated form is hardly ever used.) The use of these adverbs in reciprocal constructions is not obligatory. Nor is it common; I have found only four examples. Nonetheless, inclusion of either of them necessarily selects an alternate reading. (38), taken from the running texts, nicely illustrates the meaning ‘in turn’:

- (38) a. *kajarra-Ø nyula palka-n kuypa-lku ngayku-n-ku.*
 possum-ACC 3SG.ERG kill-NFUT give-PURP 1SG-LINK-DAT
 ‘He killed a possum and gave [it] to me.’

- b. *ngaya palka-n nyungu-n-ku kuypa-lku.*
 1SG.ERG kill-NFUT 3SG-LINK-DAT give-PURP
 ‘I killed [a possum] and gave [it] to him.’
- c. *ngali-Ø paya-paya kuypa-wa-n.*
 1DU-NOM in.turn give-REC-NFUT
 ‘We (two) gave [a possum] to each other in turn.’

(Purposive forms of verbs indicate intention, future events, etc. when used in independent clauses or in main clauses, e.g. *jaynyja-lku* in (30). When used in subordinate clauses, they describe purpose or consequences or successive events, e.g. *kuypa-lku* in (38a, b).)

5.2 Non-reciprocal

In the reciprocal type proper, an action or the like is reciprocated between/among the participants, whereas in the non-reciprocal type, there is no such reciprocation. The non-reciprocal type is not productive, and there are only a very small number of examples, which makes it difficult to determine their meanings. Nonetheless, I shall attempt to ascertain their meanings as much as possible.

5.2.1 Sociative

There are two reciprocal verbs which possibly have a sociative meaning: *paya-wa-Y* ‘to sing-REC’ and *jarka-wa-Y* ‘to go in-REC’. (There are no examples in the running texts.)

The verb *paya-L* ‘to sing’ is transitive, with the ERG-ACC case frame:

- (39) *pama-ngku kama-Ø paya-n.*
 man-ERG Gama-ACC sing-NFUT
 ‘The man/men sang the Gama song.’

My word list contains the reciprocal form *paya-wa-Y*. Alf Palmer’s glossed it as “everyone singing” and it suggests that this reciprocal verb has a sociative meaning. There are only two sentential examples of *paya-wa-Y*; cf.:

- (40) *pama-Ø paya-wa-yal.*
 man-NOM sing-REC-PURP
 (tentative translation:) ‘The men are going to sing together.’

(Alf Palmer’s translation of (40) is “i gonna sing”, i.e. ‘he is going to sing.’) Note that the subject is in the nominative, and not in the ergative. That is, this clause is intransitive, like reciprocal clauses proper.

Examples with *jarka-L* ‘to enter/go in’ and *jarka-wa-Y* ‘to enter-REC’:

- (41) *pama-Ø yampa-ngka jarka-n.*
 man-NOM camp-LOC go.in-NFUT
 ‘The man went into the camp.’ (TT)
- (42) *ngana-Ø yinta jarka-wa-yal.*
 1PL-NOM 2SG.NOM go.in-REC-PURP
 ‘We (PL), including you, will go in together.’

For (42), Alf Palmer provided the following comments/translations: “We all go in”, and “everyone go in, no matter how many, hundred or more”. They suggest that (42) has a sociative meaning.

5.2.2 Reflexive

The verbs *pangka-wa-Y* ‘to paint-REC’, *jingka-wa-Y* ‘to punch-REC’, *muka-wa-Y* ‘to hold-REC’ and *pirra-wa-Y* ‘to tell-REC’ seem to have a reflexive meaning in a few instances, although they are reciprocal proper in the other examples. For instance, consider the following example which involves *jingka-L* ‘to punch’:

- (43) *pama-ngku nganya jingka-n.*
 man-ERG 1SG.ACC punch-NFUT
 ‘The man punched me.’ (TT)

The reciprocal version *jingka-wa-Y* ‘punch-REC’ is generally reciprocal proper, cf. (29). However, it seems to have a reflexive meaning in:

- (44) *manyja-ngku nyula=kuli jingka-wa-n.*
 food-INST 3SG.NOM=by.oneself punch-REC-PP
 (tentative translation:) ‘He punched himself with food.’

Alf Palmer’s gloss for (44) is “hit himself”, and this suggests that (44) has a reflexive meaning. (Unfortunately, my field notes do not describe the context for (44).) Another pair of examples:

- (45) a. *jurpa-ngku pama-ngku nganya pangka-n.*
 white.paint-INST man-ERG 1SG.ACC paint-NFUT
 ‘The man painted me with white paint.’ (TT)
 b. *jurpa-ngku ngaya pangka-wa-n.*
 white paint-INST 1SG.NOM paint-REC-NFUT
 (tentative translation:) ‘I painted myself with white paint.’

Compare also:

- (46) a. *ngaya nyunya (or nyungu) mara-Ø muka-n.*
 1SG.ERG 3SG.ACC 3SG.GEN hand-ACC hold-NONFUT
 ‘I held his/her hand.’ (TT)
 b. *ngaya=kuli mara-Ø muka-wa-n.*
 1SG.NOM=alone/by.oneself hand-ACC hold-REC-NFUT
 ‘I held my own hand.’

(46a) and (46b) are also instances of the subject-possessor diathesis type; see 4.3.

A possible example involving *pirra-wa-Y* ‘tell-REC’ is (57).

The subject in each of these examples is singular. It is partly because of this, and partly because of their contexts and/or Alf Palmer’s gloss, that I suspect they have a reflexive meaning. Also, it is possible, though by no means certain, that the presence of the discourse clitic =*kuli* ‘alone, by oneself’ facilitates the reflexive reading; see (44) and (46b).

5.2.3 Anticausative (?)

There is only one example: *waju-wa-Y* ‘to burn-REC’. This verb might be expected to have the usual reciprocal meaning, i.e. ‘to burn each other/one another’. However, in the only example available, it seems to have an anticausative meaning:

- (47) (“Is the fire burning well?” was translated as follows:)
puri-Ø nguna-Ø waju-wa-n.
 fire(wood)-NOM that-NOM burn-REC-NFUT
 ‘That fire (or, firewood) is burning.’⁷

The verb root *waju-* is generally used transitively (with ERG-ACC), meaning ‘burn, cook’. (It is of the *L*-class in this case).

- (48) *kaya-na-ngku puri-Ø waju-n.*
 father-KIN-ERG fire(wood)-ACC burn-NFUT
 ‘[My] father burned the firewood’, or ‘... made a fire.’

However, it should be noted here there are just three examples in which *waju-* appears to be used intransitively (and presumably belongs to the *L*-class). An example:

- (49) (Alf Palmer described a bush fire on the hills as follows:)
julki-Ø nguni ngarra waju-n.
 scrub-NOM there up burn-NFUT
 ‘The scrub up there is burning.’

In one of the examples, *waju-* ‘to burn’ occurs with the iterative (‘to do repeatedly’ or ‘to do continuously’) suffix (see [1] in 2.7):

- (50) *puri-Ø waju-karra-n ngukalamali.*
 fire-NOM burn-ITER-NFUT on.other.side
 ‘The bushfire is burning on the other side [of the hill].’

Initially it looked as if these three examples of the putatively intransitive *waju-* ‘to burn’ were errors. However, it is possible that they are not errors but bona fide Warrungu sentences. There are two reasons for this.

First, although Australian Aboriginal languages generally do not use one and the same verb root both transitively and intransitively – in contrast with languages like English – such verbs do occur, perhaps in certain semantic domains only. Thus, Megumi Ise (p.c.) points out that Warlpiri of central Australia has *janka-* (vi) ‘to burn’ and (vt) ‘to burn’, and *kampa-* (vi) ‘to burn’ and (vt) ‘to burn’. (See Hale 1974:20, 29.) Warrungu itself has *jarka-L* (vi) ‘to enter/go in’ and (vt) ‘to enter/insert’, and also *ngapa-* (vi) ‘to bathe’ and *ngapa-L* (vt) ‘to soak’. This suggests the possibility that *waju-* ‘to burn’ in the three examples in question is used intransitively.

7. *huri* means both ‘firewood’ and ‘fire’. Dixon (1980:103) notes as follows: “Some – but by no means all – Australian languages take the principle of having a single term to describe some natural object, and also something that can be made from it, to the extreme of having a single lexeme covering both “tree, wood” and “fire” ...”.

Second, the iterative suffix *-karra-Y* is generally added to intransitive roots, although it is attested with transitive roots as well. This suggests the possibility that *waju-* in (50) is intransitive.

Since *waju-L* ‘to burn’ is transitive in the vast majority of examples, it would be reasonable to say that *waju-wa-Y* ‘to burn-REC’ corresponds to the transitive *waju-L* ‘to burn’, in which case *waju-wa-Y* ‘to burn-REC’ would be anticausative. However, it is also possible to say *waju-wa-Y* corresponds to the intransitive *waju-*, in which case the use of *-wa-Y* would seem redundant.⁸

There are two unequivocal anticausative verbs based on *waju-L* (vt) ‘to burn, cook’: *waju-li-Ø* and *waju-kali-Ø*. The verbal suffixes involved are *-li-Ø* ‘reflexive, anticausative’ and *-kali-Ø* ‘reflexive, anticausative, antipassive’, respectively (see 2.6.2). (These suffixes are in the main productive.) Thus:

- (51) (Alf Palmer described a big bush fire as follows:)

puri-Ø kakal-Ø waju-li-n.
 fire-NOM big-NOM burn-ACAUS-NFUT
 ‘A big fire is burning.’

- (52) *yuri-Ø waju-kali-n.*
 kangaroo-NOM burn/cook-ACAUS-NFUT
 ‘The kangaroo got cooked.’⁹

waju-wa-n in (47) is the only example of a reciprocal verb whose subject is inanimate (but fire may not be a typical instance of an inanimate object – V.P. Nedjalkov, p.c.).

5.2.4 *Participating in a group action*

The reciprocal *jarka-wa-Y* ‘to enter-REC’, based on the intransitive *jarka-L* ‘to enter’, seems to be able to have a sociative meaning, as in (42). In addition, it seems to be able to have the meaning “a singular subject participates in a group action” (henceforth, simply “group action”). There are two possible examples. Thus, in an elicitation session, Alf Palmer gave the following sentences successively:

- (53) a. *ngaya jarka-wa-yal jarka-wa-yal jarka-wa-yal.*
 1SG.NOM go.in-REC-PURP
 (tentative translation:) ‘I [and other people] will go in together.’
 b. *ngana-Ø yinta jarka-wa-yal.*
 1PL-NOM 2SG.NOM go.in-REC-PURP
 ‘We (PL), including you, will go in together.’

8. It would be possible to say that (49) and (50) are transitive clauses, with the subject (in the ergative) being elliptical. If this were the case, the use of *-wa-Y* in (48) would not be redundant; *waju-wa-Y* ‘to burn-REC’ would be anticausative. There is, however, a problem with this view; it is difficult to establish what the putative elliptical NP is.

9. Note that the suffix *-kali-Ø* (and also *-li-Ø*) can be reflexive, i.e. there is a close association between anticausative and reflexive. Now, the meaning of (52) (anticausative) is very similar to passive. Cross-linguistically, it is common for reflexive sentences to have a passive meaning when they have a non-agentive reading. See Lyons (1968:375), Shibatani (1985:840), and Tsunoda (1988:638, 2006:304, 306, 313, 315).

The subject in the first sentence is singular, despite the use of *-wa-Y* ‘REC’ on the verb, and this sentence seems to have a “group action” meaning; this is shown by the inclusion of ‘[and other people]’. The subject in the other sentences is plural, and these sentences appear to have a sociative meaning. (Example (42) is actually a part of (53).)

Obviously, the meaning of the first sentence is very similar to “sociative”, but there is one difference: the subject in this sentence is singular, while the subject with a sociative reading is plural in all the examples available (or possibly dual, although there is no example).¹⁰

jarka-wa-Y is the only reciprocal verb that possibly has a “group action” meaning, and no other reciprocal verb has yielded any example of “group action”.

5.3 Lexicalization

Certain reciprocal verbs exhibit irregularities in their formation, use and/or meaning. They will be dealt with below.

5.3.1 *Reciprocals with a singular subject*

The five reciprocal verbs listed below generally have the reciprocal meaning proper. (They are each derived from a transitive, rather than intransitive, root.) However, in a small number of examples, they occur with a singular subject, despite the use of *-wa-Y* on the verb. The number of (possible) examples are given in parentheses.

<i>jaynyja-wa-Y</i>	‘to copulate with-REC’ (2)
<i>kuni-wa-Y</i>	‘to fight-REC’ (1)
<i>pirra-wa-Y</i>	‘to tell, talk-REC’ (10)
<i>kuypa-wa-Y</i>	‘to give-REC’ (1).

We shall look at each of these reciprocal verbs.

The verb *jaynyja-L* ‘to copulate with’ is transitive (with the ERG-ACC frame), as in (30), (31). Its reciprocal version generally has a reciprocal meaning proper, e.g. (32). However, the subject is singular in:

- (54) *yarru-n-ta yinta jaynyja-wa-ya kitu-ngka.*
 this-LINK-LOC 2SG.NOM copulate.with-REC-IMP cold-LOC
 (tentative translation:) ‘You [and someone] copulate with each other here on a cold [night].’

The verb *kuni-* ‘to fight’ (also ‘to punch (?)’) seems to be transitive. Its reciprocal version appears generally to have a reciprocal meaning proper.

- (55) (One day Alf Palmer described as follows a big fight which had occurred on that morning:)

10. As noted in 5.2.3, *jarka-L* can be used both intransitively and transitively. Recall that *-wa-Y* possibly has a reflexive meaning (see 5.2.2). Therefore, it would be possible to say that all the instances of *jarka-wa-Y* in (53) are reflexive (literally, ‘enter oneself’) rather than “sociative” or “group action”.

jana-Ø kuni-wa-n.
 3PL-NOM fight-REC-NFUT
 ‘They fought (or, punched (?)) one another.’

(Alf Palmer provided the gloss ‘punch.’) Now, consider (56), in which the subject is singular.

- (56) (Alf Palmer explained how a man had been named *kuni-ra* ‘fighter’. The suffix *-ra* forms a noun indicating an agent, rather like *-er* of English.)
kanpa-mara nyula kuni-wa-n.
 before-very 3SG.NOM fight-REC-NFUT
 (tentative translation:) ‘A very long time ago he [and other people] fought with one another.’

As noted in [3] of 4.2, *pirra-L* (vt) ‘to tell, talk, speak’ is almost always used in the reciprocal form *pirra-wa-Y*. There are perhaps about ten examples of the reciprocal *pirra-wa-Y* which have a singular subject. At least two of them may be considered as reflexive. An example:

- (57) (‘He is standing there by himself’)
nyula=kuli pirra-wa-n.
 3SG.NOM=alone talk-REC-NFUT
 ‘He is talking by himself.’

(Presumably, the presence of the discourse clitic =*kuli* ‘alone, by oneself’ facilitates the reflexive reading. See also (44) and (46b).) However, in most of the examples with a singular subject, the suffix *-wa-Y* does not seem to have a reflexive meaning. Thus:

- (58) (‘I spoke yesterday’ was translated as follows:)
ngaya pirra-wa-n kunta-kunta.
 1SG.NOM talk-REC-NFUT dark-dark
 (tentative translation:) ‘I [and someone] talked [with each other] yesterday.’ (*kunta-kunta* means ‘yesterday’)
- (59) (‘I am lying here and listening to you’)
yinta=kuli pirra-wa-ya ngayku-n-ku.
 2SG.NOM=alone talk-REC-IMP 1SG-LINK-DAT
 ‘You (sg) alone talk to me.’

Note that, even with the presence of =*kuli* ‘alone, by oneself’, (59) does not have a reflexive meaning.

kuypa-L (vt) ‘give’ is three-place. Its reciprocal version generally has a reciprocal meaning proper; see (10) and (12). However, the reciprocal sentence (60) does not seem to have a reciprocal meaning proper.

- (60) (‘I found a woman. I wanted to copulate with her, so I asked her’)
yinta kuypa-wa-n ?
 2SG.NOM give-REC-NFUT
 (tentative translation:) ‘Do you (sg) [and someone else] give [love?] to each other?’

Most of these sentences seem to be semantically reciprocal proper, perhaps except those such as (60) ('to give'). But they differ from reciprocals proper in that their subject is singular. There are two ways to account for these reciprocal sentences. (I owe these two observations to V.P. Nedjalkov, p.c.)

First, verbs such as 'copulate with', 'fight' and 'talk' inherently describe situations which are reciprocal or similar to them. Due to this inherent reciprocity, these verbs have acquired a close association with *-wa-Y* 'REC' and these verbs may occur with it even when the subject is singular. The person who exchanges the action with the subject no longer needs to be expressed, cf. (54), (56) to (58). (In (59), the person who may be considered as the exchanging partner is overtly expressed, by the dative.) (Naturally, they can still express a reciprocal meaning proper as well.) This association in *pirra-wa-Y* 'to tell, talk-REC' has become so strong that *-wa-Y* has become semantically vacuous in certain instances and *pirra-wa-Y* is ousting the transitive *pirra-L* out of use.¹¹ Subsequently, the use of *-wa-Y* with a singular subject has extended to another reciprocal verb *kuypa-wa-Y* 'to give', whose base *kuypa-L* 'to give' is not inherently reciprocal.¹²

Second, these reciprocal verbs are in fact antipassive, with the indefinite or nonspecific object being elliptical. Then, (54), for instance, can be translated 'You copulate with someone'; and (56) 'He fought someone'.¹³

There is no strong evidence to prefer one account over the other.

5.3.2 Higher frequency of reciprocal verbs

[1] As noted above, *pirra-L* 'to tell, talk, speak' is almost always used in the reciprocal form, due to its inherent reciprocity.

[2] Similarly, as noted in [4] of 4.2, the root *ngunpa-* 'tell, show' is hardly ever used by itself as a verb. It generally occurs in the reciprocal *ngunpa-wa-Y* or in *ngunpa-y-nga-L* (vt) 'to show, teach' (*-nga-L* 'transitivising, causative'; see 2.6.1). It appears that the reciprocal form has almost ousted the transitive form, again due to the inherent reciprocity in this verb.

11. As mentioned in regard of (33) and (34), the reciprocal *kuku-payi-wa-Y/ kuku-payu-wa-Y* 'to quarrel, argue with-REC', which also contains an inherently reciprocal meaning of "argue, quarrel with", is more common than its transitive counterpart. It seems that this verb, too, has acquired a close association with *-wa-Y* 'REC', due to its inherent reciprocity.

12. Reciprocal verbs with a singular subject are possible, for instance, in Icelandic (Irie 1996), Norwegian (Kemmer 1993:107) and Bantu languages (Yasutoshi Yukawa, p.c.). (I am grateful to Koji Irie for drawing Kemmer's work to my attention.) Thus, in Icelandic, reciprocal verbs such as 'fight-REC' and 'marry-REC' can occur with a singular subject, with the partner being left unexpressed. Note that verbs such as "fight" and "marry" are inherently reciprocal. (Naturally, these reciprocal verbs can occur with a plural subject as well.)

13. It may be possible to consider (60) as an instance of reflexive: 'Do you give yourself?' I owe this observation to V.P. Nedjalkov.

5.3.3 *Idiom-like expressions*

There are a small number of idiom-like expressions involving a reciprocal verb. For an example of ‘shake hands’, see (27). The transitive verb *jaympa-L* means ‘to find’, e.g. (36). But its reciprocal version (always ?) means ‘to meet’, cf. (37). Other examples include (61) and (62):

- (61) *wanta-wa-ya*.
 leave-REC-IMP
 ‘Stop fighting!’ lit. ‘Leave each other (alone).’
- (62) *ngalnga yinta ngali-Ø pinta-wa-yal*.
 PROH 2SG.NOM 1DU-NOM stand.up-REC-PURP
 lit. ‘We (DU), including you, should not stand up each other.’

In this case, (62) means ‘we should not go separately’, or, ‘we should travel together.’

6. Morphosyntactic status of reciprocal constructions

As noted in Section 3, *-wa-Y* ‘REC’ is generally added to transitive verb roots only, except that it is attested with two intransitive roots and with one noun. Roughly speaking, affixation of *-wa-Y* shifts verbs from the transitive *L*-class to the intransitive *Y*-class. That is, in terms of verb morphology, reciprocal verbs are intransitive.

The subject of reciprocal verbs is nominative (as in non-derived intransitive clauses), rather than ergative (as in non-derived transitive clauses). (This is in contrast with reciprocal constructions in Djaru, in which the subject remains ergative. See my paper on Djaru in this volume.) That is, regarding the case-marking of the subject as well, reciprocal verbs are intransitive, even where *-wa-Y* is attached to transitive roots.

As mentioned in 2.3, the ergative and the instrumental cases have almost identical, and only slightly different, allomorphs (e.g. *-ngku* in *pama-ngku* and *jula-ngku* in (63a)), but they behave differently. The subject in a reciprocal clause must occur in the nominative, and not in the ergative, even when *-wa-Y* is added to a transitive root. In contrast, a noun in the instrumental case can occur in those reciprocal clauses which are derived from transitive clauses. Thus, compare:

- (63) a. *pama-ngku kantu-Ø palka-n jula-ngku*.
 man-ERG dog-ACC hit-NFUT stick-INST
 ‘The man hit a dog with a stick.’
- b. *pama-Ø palka-wa-n jula-ngku*.
 man-NOM hit-REC-NFUT stick-INST
 ‘The men hit each other with sticks.’

Another example of an instrumental NP in a reciprocal clause is ‘eye-INST’ in (24). Non-derived intransitive clauses do not allow a noun in the instrumental case. Thus, the following sentence would almost certainly be rejected:

- (64) *pama-Ø yani-Ø jula-ngku.*
 man-NOM walk-NFUT stick-INST
 (intended meaning:) ‘The man is walking with a stick.’ (TT)

The nominal comitative case has to be used in place of the instrumental case. These differences are shown in Table 7.

Table 7. Ergative and instrumental

	transitive clauses	reciprocal clauses	non-derived intransitive clauses
subject	ergative	nominative	nominative
instrumental	instrumental	instrumental

We turn to the valency of reciprocal clauses. First, we look at the reciprocal type proper. The direct object in the subject-direct object diathesis type (4.1.1) and the oblique object in the subject-oblique object diathesis types (4.1.2) are deleted and valency decreases by one. Similarly, in the subject-receiver diathesis type (4.2), which involves three-place verbs, the receiver is deleted, and the valency of the reciprocal verbs also decreases by one.

Instances of the subject-possessor diathesis type (4.3), which involve an expression of inalienable possession, are two-place, semantically speaking; the possessor and the possessed/body part are coreferential. (I owe this observation to V.P. Nedjalkov.) In the reciprocal versions, the body part noun (in the direct object position) can be retained but the possessor is deleted, resulting in the NOM-ACC frame, irrespective of whether the possessor is marked by the accusative or by the genitive. When the possessor is marked by the genitive, as in (5), it should probably be considered as an attribute of the direct object, and not as an argument, and its deletion does not affect the valency (two-place ERG-ACC → two-place NOM-ACC). In contrast, when the possessor is marked by the accusative, as in (4), morphosyntactically rather than semantically speaking it should perhaps be considered as an argument, and not as an attribute of the direct object (and the case frame is ERG-ACC-ACC), in which case the valency decreases by one (three-place ERG-ACC-ACC → two-place NOM-ACC). (The preceding analysis is due to Masayoshi Shibatani, p.c.)

We now look at the non-reciprocal type. Valency decreases by one in reflexive (5.2.2) and anticausative (?) (5.2.3), but remains intact in sociative (5.2.1) and group action (5.2.4).

When all of verb morphology, case-marking, valency, the intransitive Y-class membership of reciprocal verbs, the nominative case of the subject, acceptability of an instrumental NP, deletion of the direct object, receiver, possessor, etc. and retention of the body part noun, are taken into consideration, reciprocal clauses are neither fully transitive nor fully intransitive; rather they are intermediate. (This observation is largely due to Masayoshi Shibatani, p.c.) This view parallels Hopper and Thompson’s (1980:277), which assigns reflexives an intermediate status between one-place and two-place clauses.

In connection with the discussion of transitivity, I should briefly comment on the pattern of deletion in linked clauses. As alluded to in Note 1, coreferential deletion in

linked clauses in Warrungu operates largely in terms of the S/O pivot, rather the S/A pivot. (This preference for the S/O pivot is facilitated by antipassives (*-kali-Ø*; see 2.6.2).) This applies to reciprocal clauses as well. That is, their subject, which is an intransitive subject (S), is deleted under identity with the direct object (O) or with another intransitive subject (S), and not with the transitive subject (A). Thus:

- (65) *jana-nya nguna-n-ta ngaya wanta-n [jana-Ø TT] palka-wa-yal.*
 3PL-ACC(O) that-LINK-LOC 1SG.ERG(A) leave-NFUT 3PL-NOM(S) hit-REC-PURP
 ‘I(A) left them(O) there so that [they(S)] would hit one another.’ (O=[S]).

The intransitive subject (S) *jana-Ø*, which I supplied for the sake of exposition, is deleted under identity with the direct object (O) *jana-nya*.

7. Expressions of the subject

With the reciprocal type proper, the subject always has a dual or plural referent, and is expressed by a dual or plural pronoun and/or by a noun with a dual or plural referent. With the non-reciprocal types, the subject is (always?) plural and possibly dual but never singular in “sociative”; and – at least in the examples available – always singular in ‘reflexive’, ‘anticausative’ (?), and ‘group action’. There are also five reciprocal verbs whose subject can be singular (see 5.3.1)

In Warrungu in general, the subject may be of the “subset” type (see 2.3). Warrungu lacks conjunctions such as *and*, but NPs of the subset type can in effect express *and*. They can also express ‘with’. This applies to reciprocal clauses as well. Thus:

- (66) *ngali-Ø majuwarrki-Ø ngayku pirra-wa-n.*
 1DU-NOM friend-NOM 1SG.GEN talk-REC-NFUT
 ‘We two, including my friend, talked with each other’, i.e. ‘my friend and I talked with each other’, or, ‘I talked with my friend.’

In this connection, a comment on the nominal comitative ‘with, having’ is in order. Consider, for example, *pirku-yi* ‘wife-N.COM’, lit. ‘(someone) with a wife’. This word often means ‘married man’. Now, examine:

- (67) *pula-Ø yarru-n-ta pirku-yi pirra-wa-n.*
 3DU-NOM this-LINK-LOC wife-N.COM talk-REC-NFUT
 ‘They two, including the one with a wife, are talking with each other here.’

Note that, despite the presence of the comitative, (67) does NOT mean ‘They two are talking *with* the wife ...’ (In a different context, (67) will be able to have a “total set reading”: ‘They two, married men, are talking with each other ...’)¹⁴

14. It is not certain whether the comitative suffix should really be considered as a case suffix. It can be considered as a derivational suffix, in which case we will have *pirku-yi-Ø* ‘wife-N.COM-NOM’, rather than *pirku-yi* ‘wife-N.COM’, here.

We now look at the animacy of the subject. The subject is human in almost all of the examples. But it has non-human animate referents in just two or three examples, e.g. a dog in (1b), and fish in:

- (68) (The fish caught in a net were trying to get out)
jana-Ø jingka-wa-n.
 3PL-NOM punch-REC-PP
 ‘They were bumping into one another.’

This corresponds to a sentence such as the following:

- (69) *winka-tu jingka-n winkar-kuman-Ø.*
 fish-ERG punch-NFUT fish-another-ACC
 ‘The fish bumped into another fish.’ (TT)

(In *winka-tu*, the root-final *r* is deleted before the ergative suffix *-tu*.) There is only one example of an inanimate subject, viz. “firewood, fire” in (47) ‘The fire/firewood is burning’.

When the subject of a reciprocal clause has human or non-human animate referents, the action described seems to be always volitional. Thus, in all of the examples available the reciprocal *jaympa-wa-Y* seems to mean ‘meet by arrangement’ (i.e. volitionally), and not ‘meet accidentally’, although the transitive verb *jaympa-L* ‘find’ seems to describe situations that cannot be controlled at will. Compare (36) and (37).

8. More on the formation of reciprocal verbs

8.1 Morphological restriction

As seen in 5.3.1, in certain instances of *pirra-wa-Y* ‘to tell, talk-REC’, *-wa-Y* ‘REC’ is present but appears to be semantically empty. There are at least two examples which seem to show the reverse situation: the sentences in question have a reciprocal meaning and *-wa-Y* would be expected but it cannot occur. This non-occurrence is due to the morphological restriction that *-wa-Y* cannot be attached to a derivational (or inflectional) suffix (see Section 3 above). The two examples are given below.

The suffix *-ri-L* can be added to intransitive roots, producing verbal comitative verbs, which are transitive (see 2.6.1) and takes the ERG-ACC frame. Thus, compare:

- (70) *ngaya yampa-ngka wuna-yal.*
 1SG.NOM camp-LOC sleep-PURP
 ‘I will sleep in the camp.’ (TT)
- (71) *ngaya nyunya wuna-ri-lku.*
 1SG.ERG 3SG.ACC lie-V.COM-PURP
 ‘I will sleep with her.’

Now, consider the following:

- (72) *ngali-Ø wuna-ri-n pirri-pirri.*
 1DU-ERG sleep-V.COM-NFUT close-close
 ‘We two slept very close to each other.’

As the translation suggests, (72) has a reciprocal meaning, and *-wa-Y* would be expected to occur (turning the verb and the clause intransitive). The verb *wuna-ri-L* ‘sleep-V.COM’ is transitive, but it cannot be followed by *-wa-Y*, for it already has a derivational suffix (*-ri-L*). That is, in (72) *wuna-ri-L* ‘sleep-V.COM’ appears to be used in place of the unacceptable **wuna-ri-wa-Y* ‘sleep-V.COM-REC’.

The suffix *-rV* is added to verb roots, producing verbs which mean ‘many actors do something to one’ or ‘one actor does something to many’ (see 2.7). Thus: *kuypa-L* ‘to give’ and *kuypa-ra-L* ‘give out to many’ and (apparently) ‘many give to one’. (For examples of *kuypa-L* ‘give’, see [1] in 4.2.) Now, consider (73):

- (73) (‘The boys share out food’ was translated as follows):
kalpiri-ngku kuypa-ra-n manyja-Ø.
 children-ERG give-ra-NFUT food-ACC.

Since (73) is a translation of ‘share out’, its intended meaning would be reciprocal: ‘The boys gave one another food’. A reciprocal version would be expected, but it cannot occur, for *kuypa-ra-L* already has a derivational suffix (*-ra-L*).

8.2 Reciprocal verb based on a noun

There is just one example in which *-wa-Y* ‘REC’ is added to a noun, viz. *kuku* ‘language, speech’:

- (74) (‘Mother scolded/growled at the child’ was translated as follows):
yanga-na-Ø kuku-wa-n kalpiri-wu.
 mother-KIN-NOM speech-REC-NFUT children-DAT.

I am not certain whether or not this is a *bona fide* Warrungu sentence. If it is, it is unusual. First, *-wa-Y* is added to a noun, and not to a verb root. Second, consequently, there is no corresponding non-derived sentence. Third, the meaning of *-wa-Y* is not clear. On the basis of examples such as (16), (19), (22), (23), which contain a dative NP indicating the topic, the expected reading of (74) would be something like ‘The mothers argued with each other about the children’. But this is different from the English sentence for which a Warrungu translation was requested.

V.P. Nedjalkov (p.c.) points out that it is significant that the noun involved denotes a speech activity, i.e. an action which implies mutual exchange of information. As seen in 5.3.1 and 5.3.2, verbs of speech activity seem to be inherently reciprocal and have a close tie with *-wa-Y* ‘REC’. Thus, it is likely that *kuku-wa-n* was used by analogy with the reciprocal versions of those speech verbs. More specifically, it was probably used by analogy with the compound reciprocal *kuku-payi-wa-Y/kuku-payu-wa-Y* ‘to argue, quarrel with-REC’, which contains the noun *kuku* ‘speech’, e.g. (34).

9. Etymology

9.1 Verbal suffixes

The Warrungu *-wa-Y* ‘REC’ has unequivocal cognates in the neighbouring languages and also a possible doublet in Warrungu itself. The relevant verbal suffixes are listed below:

- (a) *-wa-Y* ‘REC’ in Warrungu and also in Gugu-Badhun (Sutton 1973:144–5);
- (b) *-pa* ‘REC’ in the Halifax Bay dialect of Wargamay (Dixon 1981:49, 74–5);
- (c) *-pa-Ø*, etc. ‘REC’ in Nyawaygi (Dixon 1983:489);
- (d) *-parri-Y/-nparri-Y* ‘REC’ in Dyirbal (Dixon 1972:92);
- (e) *-pa-L/-mpa-L* ‘transitivising, causative’ in Warrungu (see 2.6.1);
- (f) *-mpa-* ‘causative’ in Gugu-Badhun (Sutton 1973:142);
- (g) *-ma-L/-mpa-L* ‘verbal comitative, verbal instrumental’ in Dyirbal, Mamu and Giramay (Dixon 1972:95–9);
- (h) *-pa-L/-yma-L* ‘verbal comitative’ in Nyawaygi ((Dixon 1983:489–90);
- (i) *-ma* ‘verbal comitative, verbal instrumental, causative’ in Wargamay (Dixon 1981:77–80).

Clearly, *-wa-Y* ‘REC’ in Warrungu and that in Gugu-Badhun are cognates. No doubt, they are in turn related to the reciprocal suffixes which contain *pa*, that is, those in (b), (c) and (d). We could tentatively postulate **-pa* ‘REC’; its *p* has lenited to *w* in Warrungu and Gugu-Badhun.¹⁵

It seems possible, though by no means certain, that the Warrungu suffix *-pa-L/-mpa-L* ‘transitivizing, causative’ is related to **-pa* ‘REC’. (*-mpa-L* would be a result of prenasalization of *-pa-L*.) If this is the case, we would have a situation in which doublet suffixes indicate “reciprocal” and “causative”, respectively, in one language: *-wa-Y* ‘REC’ and *-pa-L/-mpa-L* ‘causative’. That is, a situation in which these doublets have developed in the opposite directions: valency-decreasing (i.e. reciprocal) and valency-increasing (i.e. causative). Similarly in Gugu-Badhun: *-wa-Y* ‘REC’ and *-mpa-* ‘causative’. Needless to say, this view is only tentative and further work needs to be done, taking into consideration the other suffixes listed above.

15. As in many other Australian languages, stop phonemes in Warrungu and the surrounding languages lack voice contrast. Thus, /pa/ (which can also be presented as /ba/) may be realized either by [pa] or [ba], [ba] being more common than [pa]. Now, one day I was discussing reciprocal verbs with Alf Palmer and cited forms such as *jaympa-wa-n* ‘find-REC’, *muka-wa-n* ‘hold-REC’, *jingka-wa-n* ‘punch-REC’ and *junta-wa-n* ‘kiss-REC’. Upon hearing them, Alf Palmer said, “All *ban*” (phonemically, /pan/). Note that /wan/ was pronounced [ban] rather than [wan]. (This is despite the fact that /wan/ [wan] is possible, for instance, word-initially, e.g. *wanta-n* ‘leave-NFUT’ in (65).) That is, when cited in isolation, this suffix reveals the older, non-lenited form, the form still retained in the suffixes in (b), (c) and (d).

9.2 The nominal suffix *-npa* ‘many’

Warrungu has a (non-productive) nominal suffix *-npa* ‘many’. The only examples available are the following:

<i>warrngu</i> ‘woman, women’	<i>warrngu-npa</i> ‘many women’
<i>rayi</i> ‘young girl(s)’	<i>rayi-npa</i> ‘many young girls.’

-npa, apparently with the meaning ‘many’, occurs in Dyrbal, Giramay and Mamu (Dixon 1972:405).

It is possible that *-npa* consists of *-pa* and the linking suffix *-n*. (For examples of *-n* ‘LINK’, see (59) and (65). Similarly, the Dyrbal suffix *-parri-Y/-nparri-Y* ‘REC’ (see 9.1) possibly contains the linking suffix *-n*.) If this is the case, then, since the meaning ‘many’ shares something in common with the reciprocal meaning, *-npa* may be ultimately related to the tentative **-pa* ‘REC’ discussed in 9.1.¹⁶

This would mean that the tentative **-pa* is reflected in a nominal suffix and also in verbal suffixes. Such a double use of a suffix, for both nouns and verbs, is not uncommon in Australian languages. The most famous and widespread is the suffix *-ku* (Capell 1956:77). Thus, in Warrungu *-ku* is used for the dative of nouns, e.g. *winkar-ku* ‘fish-DAT’; and for the purposive of verbs, e.g. *kuypa-lku* ‘give-PURP’. Kala Lagaw Ya of Torres Strait has as many as five suffixes which can each be used as a case marker for nouns and as a tense/aspect marker for verbs (Kennedy 1984:162).

Again, the view put forward above is only tentative and further work needs to be done.

Acknowledgments

Work on Warrungu was financed by the then Australian Institute of Aboriginal Studies (now, the Australian Institute of Aboriginal and Torres Strait Islander Studies) and by Monash University. R.M.W. Dixon and Peter Sutton kindly made their respective Warrungu data available to me. Peter Sutton also furnished comparative data regarding the Warrungu reciprocal suffix (see Note 16). Masayoshi Shibatani supplied valuable com-

16. Peter Sutton (p.c.) points out that *pa* or a form containing *pa* has the meaning/function of reciprocal, causative or dual/plural in a fair number of languages further away than the immediate neighbours of Warrungu. (See also Sutton 1976.) This seems to provide indirect support for the view that **-pa* may be reflected in the reciprocal, causative and “many” suffixes of Warrungu. A suffix which contains *ma* and which has a reciprocal meaning (often in addition to some other meaning) is attested in widely scattered languages. Thus: *-mali* ‘reciprocal’ and ‘reflexive’ in Pitta-Pitta of Queensland (Blake 1979:206); *-mali* ‘reciprocal’ in Diyari of South Australia (Austin 1981:74); *-marri* and similar forms “sociative” and “reciprocal” in the Ngayarda languages of Western Australia (Dench 1987). (Dench himself does not use the term “sociative”.) In view of the homorganic nature of *m* and *p*, it is possible that these suffixes and the putative suffix **-pa* of Warrungu and its neighbouring languages are ultimately related. Alternation between a pair of homorganic nasal and stop is attested, for instance, in Djaru of Western Australia (Tsunoda 1981:31).

ments on an earlier draft of this paper. Vladimir P. Nedjalkov, the editor of this monograph, provided detailed and most helpful comments.

1. Introduction

1.1 Indonesian and Malay

Indonesian, the state language of Indonesia, belongs to the western branch of the Malayo-Polynesian subgroup of Austronesian languages. It has developed from classical Malay and inherited from it the function of interethnic communication in the Indonesian area. For the majority of speakers (probably over 80% of the population numbering more than 200,000,000 on the verge of the 21st century) it is a second language. Indonesian written texts are far from being homogeneous in respect of grammar, and the data obtained from informants and written texts may somewhat differ.

The variants of this language, usually termed Malay, are used as state language in Malaysia (and spoken by 45% of the 19,000,000 population), Singapore (15% of 2,700,000) and Brunei (90% of 250,000 population). Indonesian, Singaporean/Malaysian and Bruneian Malay differ mostly in the vocabulary.

Genetically, Malay is most closely related to Minangkabau in West Sumatra (5,800,000 speakers), Banjar (South Kalimantan, 2,500,000 speakers), Iban (Malaysia, Northern Kalimantan, 430,000 speakers) and a number of other less significant languages. Indonesian is in close contact with the languages of Java: Javanese (74,000,000 speakers) and Sundanese (20,500,000 speakers), partly via the Jakarta dialect of Malay (West Java). (Ethnic data of the early 1980s; Prentice 1987:913–6).

1.2 Overview

There are morphological and periphrastic reciprocals in Indonesian. Morphological reciprocals are formed by two principal means which are partly in complementary distribution:

1. By means of the circumfix *ber-...-an* (the root can be reduplicated; the suffix is sometimes omitted), see (1c).

2. By means of pre-reduplication of the root (the root of the underlying affixed verb is repeated in pre-position to the prefix), see (1d).

Periphrastic reciprocals are formed with the help of the auxiliary word *saling* ‘mutually’ which is always placed in contact pre-position to the verb, see (1e).

In example (1), the verb *-pandang* ‘to look’ is used; the prefix *meN-* is an active voice marker (the full form *meN-* has variants *mem-*, *men-*, *meny-*, *meng-*, and *me-*, depending on the initial phoneme of the stem, some consonants being replaced by the nasal; cf. (5a–b), (6a), (11b), (12b), (16)–(18), etc.). In (1c–d) the underlying verbs are intransitivized:

- | | | | |
|-----|----|---|---|
| (1) | a. | <i>Amir me-mandang Fatimah.</i> | ‘Amir looks at Fatima.’ |
| | b. | <i>Fatimah me-mandang Amir.</i> | ‘Fatima looks at Amir.’ |
| | c. | <i>Amir dan Fatimah ber-pandang-an.</i> | ‘Amir and Fatima look at <i>each other</i> .’ |
| | d. | <i>Amir dan Fatimah pandang-me-mandang.</i> | (same translation). |
| | e. | <i>Amir dan Fatimah saling me-mandang.</i> | (same translation). |

There are also four unproductive means of marking morphological reciprocals. All the morphological types of reciprocals can take the auxiliary *saling* ‘mutually’, therefore the overall picture is very complicated. The morphological markers of reciprocity are not specialized: they are polysemous.

In Indonesian, there are sociative-like verbs which are formed by means of the circumfix *ber-...-an*, too, but from a different set of roots. Periphrastic sociatives are formed by means of the auxiliaries *sama* and *pada* both meaning ‘together’, which are always immediately preposed to the verb.

There are also verbs of “joint class membership”, derived from nouns by means of the prefix *se-*, e.g.:

- | | | | |
|-----|----|----------------|----------------------------|
| (2) | a. | <i>ayah</i> | ‘father’ |
| | b. | <i>se-ayah</i> | ‘to have the same father.’ |

Lexical as well as certain morphological reciprocals are used in the discontinuous construction. There are no verbal comitatives.

2. Grammatical notes

The following is a brief outline of the basic grammatical information which is to help the reader to better understand the examples quoted in the chapter and to show the place of reciprocal derivation in the grammatical system of Indonesian.

2.1 General characteristics. Sentence structure

Indonesian is an agglutinating-isolating language with a single element of inflection, namely, the prefixes of the passive voice.

A prepositionless object follows the verb thus forming a stable VO group, the subject precedes it and sometimes follows it, which yields the SVO (see (1a)) and VOS order. An object with a preposition commonly follows the verb. An attribute, excepting quantitative attributes, follows the head noun. There is no subject-verb agreement.

The verb has no tense and aspect. In regard of these categories, a sentence is interpreted according to context. Aspectual and temporal meanings can be rendered (although optionally) by words like *masih* ‘yet’, *akan* ‘will be’, etc.

2.2 Nouns. Case relations. Number. Derivation

The noun has no case forms. The subject and direct object are unmarked. Some of the personal pronouns have short forms (clitics) used as attributes and objects:

- (3) a. *guru-nya* lit. ‘teacher-his/her/their’
 b. *Ali me-mandang-nya.* ‘Ali looks at him/her/them.’

Nouns have two forms, indefinite and plural. The indefinite (i.e. unreduplicated) form may have a singular or plural meaning depending on the context. The plural is marked by reduplication or, for human nouns, by the auxiliary word *para*:

- (4) a. *guru* ‘teacher’ → *guru-guru* ‘teachers’
 b. *para guru* ‘teachers.’

The use of a reciprocal verb does not require any plural marking on the subject, the sense being clear from the context.

Besides root nouns, there are nouns derived from nominal and verbal stems by affixes:

- (5) a. *me-makai* ‘to wear’ → *pakai-an* ‘clothes’
 b. *me-nulis* ‘to write’ → *pe-nulis* ‘writer’
 c. *pulau* ‘island’ → *ke-pulau-an* ‘archipelago’
 d. *ber-temu* ‘to meet’ → *per-temu-an* ‘meeting’
 e. *meng-obat-i* ‘to treat medically’ → *peng-obat-an* ‘medical treatment.’

2.3 Inflectional verbal prefixes *meN-* vs. *di-/Ø*. Voices

In Indonesian, both voices are marked: the prefix *meN-* obligatorily marks the active voice of transitive verbs (it also occurs with intransitives; see 2.4), the prefix *di-* marks the passive voice with the 3rd p. agent, and zero prefix the passive of mostly the 1st and 2nd persons. In the latter case the agent marker – a pronoun (full or cliticized form) or a noun is obligatory and it immediately precedes the verb. If the agent follows the verb the preposition *oleh* ‘by’ is optional:

- (6) a. *Ali mem-buka pintu.* ‘Ali opens the door.’
 b. *Pintu di-buka [(oleh) Ali].* ‘The door is opened [by Ali].’
 c. *Pintu saya buka.* ‘The door is opened by me.’
 d. *Pintu ku-buka.* (same translation).

The inflectional prefixes in question distinguish the class of transitive verbs by way of opposing them to intransitives.

2.4 Derivational verbal prefixes: *ber-*, *ter-*, and *meN-*. Root verbs

The prefixes named serve to mark intransitive verbs, both derived and non-derived, i.e. combined with bound roots.

The prefix *ber-*, which is the main means of deriving denominal verbs, marks dynamic and stative verbs with a broad range of meanings comparable with the range of meanings covered by the term “middle” in the Indo-European languages (see examples in 3.2.3):

- (7) *kerja* ‘work’ → *be-kerja* ‘to work’.

The prefixes *ber-*, *ter-*, *per-* have allomorphs *be-*, *te-*, *pe-*, used if the initial consonant of the root is *r* or if the root begins with the cluster “consonant + *er* + consonant” (cf. *be-runding* in (32), *be-terbang-an* in (73b), *be-pergi-an* in (74b)).

The prefix *ter-* which forms both dynamic and stative verbs is also polysemous. It may render non-volitionality and also a number of other meanings; cf. (6a) and (8):

- (8) *Pintu ter-buka*.
 i. ‘The door opened’ (non-volitional anticausative)
 ii. ‘The door is open’ (resultative).
- (9) *me-mekik* ‘to scream’ → *ter-pekik* ‘to scream involuntarily’.

The prefix *meN-* on intransitives can be viewed as a homonym of the inflectional prefix *meN-* (see 2.3), but, however, both have the meaning of activity on the part of the subject. It marks dynamic verbs derived from nouns and it also combines with bound verbal roots; cf.:

- (10) a. *-serah* (bound root) → b. *me-nyerah* ‘to surrender’
 (11) a. *dekat* ‘(to be) near’ → b. *men-dekat* ‘to come near’
 (12) a. *rumput* ‘grass’ → b. *me-rumput* ‘to cut grass’.

Root verbs have no derivational markers; cf.:

- (13) *Ali cinta kepada Isti*. ‘Ali loves Isti’ (*kepada* ‘towards’); see also (11a).

2.5 Derivational verbal circumfix *ber-...-an*

This verbal circumfix is productive, and its principal meaning is reciprocal (see (1c)); it has a number of other meanings as well (see 4.2.4 and 10.1. About the unproductive circumfixes *per-...-kan* and *per-...-i* see 2.7).

2.6 Verb classes

The main syntactic classes of verbs are as follows.

Transitive verbs (i.e. verbs under 2.3) are actional and they are subdivided into two principal subtypes:

- 1) two-place transitives (see (1a), (6a));
- 2) three-place transitives (including ditransitives), e.g.:

2.8 Reduplication

Reduplication in nouns marks plurality. Reduplication on verbs denotes:

1. An iterative action with short intervals: *ber-teriak-teriak* ‘to shout (repeatedly, several times).’
2. A careless, aimless action: *duduk-duduk* ‘to sit doing nothing’ (← *duduk* ‘to sit’).
3. A state of parts (points, pieces) of a thing: *robek-robek* ‘torn’ (in various places); etc.

2.9 Means of valency change

This section is a summary of the semantic changes marked by valency changes. The order of presentation is from meaning to form.

1. The means of valency increase are:

(a) causative *-kan* (see (17), (46)), *-per...-kan* (see (44), (47)), *-i* (see (19); cf. Ogloblin & Kholodovich 1969);

(b) benefactive *-kan* (see (18));

(c) applicative *-kan* (see (49), (50)), *-i* (see (21)), *-per...-kan* (see (48)).

2. The means of valency decrease are:

(a) passive *di-* (see 2.3);

(b) resultative *ber-*, *ter-*, *ber...-kan*, *ber...-an* (see (8)); (see Agus et al. 1988:307–26);

(c) anticausative *ber-* (see (91), (92));

(d) reflexive *ber-* (see (41));

(e) reciprocal *ber...-an*, *ber-*, *R-meN-R*, *saling* (see (1));

(f) involitional *ter-* with the passive diathesis (see (8)).

This list shows that the Indonesian affixes except *di-* are polysemous. Moreover, they can express similar meanings. If we take into consideration unmotivated restrictions on realization of certain functions, and also the optional character of the use of a number of affixes in some meanings, the overview of verbal derivation turns out to be complicated enough and intricate, despite the limited number of the affixes.

3. Lexical reciprocals

3.1 Introductory

In lexical reciprocals, reciprocity is an inherent part of their lexical meaning, i.e. they are not derived from any underlying non-reciprocal verbs although they may contain a derivational marker which in other verbs may add the reciprocal sense. As is known, the

distinctive feature of two-place lexical reciprocals is the equivalence of the sentences with reversed arguments:

- (22) a. *Amir ber-sahabat dengan Yusuf.* 'Amir is friends with Yusuf.'
 b. *Yusuf ber-sahabat dengan Amir.* 'Yusuf is friends with Amir.'

A sentence with a semantically singular subject is either ungrammatical or elliptical:

- c. **Amir ber-sahabat.* 'Amir is friends.'

Sentence (22d) which is semantically equivalent to (22a–b) has a plural subject:

- d. *Amir dan Yusuf ber-sahabat.* 'Amir and Yusuf are friends.'

With a few exceptions, reciprocal arguments may occur both in the *simple* construction (when they are conjoined by *dan* 'and', as in (22d), or expressed by a plural noun) and in the *discontinuous* construction, with the preposition *dengan* 'with' whose basic meanings are comitative and instrumental (see (22a–b)).

Most of the lexical reciprocals contain the prefix *ber-*, less commonly circumfix *ber...-an*, i.e. the same affixes that are used to derive one of the formal types of morphological reciprocals (cf. (47), (56b), (57); (23d), (33), (34)).

3.2 Lexical reciprocals not derived from verbs

Here belong root reciprocals and those with the prefix *ber-* and with the circumfix *ber...-an*.

3.2.1 Subject-oriented lexical reciprocals

All these reciprocals are intransitive: they form either one-place constructions (see (22d)) or two-place constructions with the preposition *dengan* (see (22a–b)).

3.2.1.1 Verbs derived from nouns; types *ber-R* or *ber-R-an*. These lexical reciprocals are formed with the help of the prefix *ber-* or the circumfix *ber...-an*. Two subtypes are distinguished here.

(a) *Subtype 1*: verbs derived from reciprocal nouns. Depending on the meaning of the underlying noun, they can be further subdivided into two groups:

(aa) Verbs formed from nouns denoting persons in reciprocal relationship, e.g.:

- (23) a. *Amir musuh Yusuf.* 'Amir is Yusuf's enemy.'
 = b. *Yusuf musuh Amir.* 'Yusuf is Amir's enemy.'
 → c. *Amir dan Yusuf ber-musuh-an.* 'A. and Y. are at loggerheads with each other.'
 d. *Amir ber-musuh-an dengan Yusuf.* 'Amir is at loggerheads with Yusuf.'

The following lexical reciprocals are of this type:

- | | | | |
|------|-----------------------------------|---|---|
| (24) | <i>tetangga</i> ‘neighbour’ | → | <i>ber-tetangga</i> ‘to be neighbours’ |
| | <i>saudara</i> ‘brother, sister’ | → | <i>ber-saudara</i> ‘to be in brotherly relations’ |
| | <i>tunangan</i> ‘fiance, fiancée’ | → | <i>ber-tunangan</i> ‘to be betrothed’ |
| | <i>kawan</i> ‘friend’ | → | <i>ber-kawan</i> ‘to be friends.’ |

(bb) Verbs derived from names of reciprocal situations; cf.:

- | | | | |
|------|----|---|---|
| (25) | a. | <i>Debat Amir dengan Yusuf.</i> | lit. ‘Debate of Amir with Yusuf.’ |
| | b. | <i>Amir ber-debat dengan Yusuf.</i> | ‘Amir argues /debates with Yusuf.’ |
| | c. | <i>Amir dan Yusuf ber-debat.</i> | ‘Amir and Yusuf argue.’ |
| (26) | a. | <i>Beda puisi lama dengan puisi baru.</i> | ‘Difference of old poetry from new poetry.’ |
| | b. | <i>Puisi lama ber-beda dengan puisi baru.</i> | ‘Old poetry differs from new poetry.’ |

Here also belong:

- | | | | |
|------|-------------------------------------|---|--|
| (27) | <i>dialog</i> ‘dialogue’ | → | <i>ber-dialog</i> ‘to carry on a dialogue’ |
| | <i>perang</i> ‘war’ | → | <i>ber-perang</i> ‘to be at war’ |
| | <i>padan</i> ‘correspondence’ | → | <i>ber-padan-an</i> ‘to correspond, keep in touch with each other; to fit/match/suit each other’ |
| | <i>seberang</i> ‘the opposite side’ | → | <i>ber-seberang-an</i> ‘to be opposite each other’ |
| | <i>sebelah</i> ‘side’ | → | <i>ber-sebelah-an</i> ‘be side by side/next to each other’ |
| | <i>selisih</i> ‘divergence’ | → | <i>ber-selisih</i> ‘to diverge’ |
| | <i>silat</i> ‘art of single combat’ | → | <i>ber-silat</i> ‘to fight using this art’ |
| | <i>kerja-sama</i> ‘cooperation’ | → | <i>be-kerja-sama</i> ‘to cooperate’, etc. |

(b) Subtype 2: lexical reciprocals derived from non-reciprocal nouns. Compare:

- | | | | |
|------|-------------------------------|---|---|
| (28) | <i>tali</i> ‘tether, rope’ | → | <i>ber-tali-an</i> ‘to be tied together’ |
| | <i>tegur-sapa</i> ‘greetings’ | → | <i>ber-tegur-sapa</i> ‘to exchange greetings’ |
| | <i>satu</i> ‘one’ | → | <i>ber-satu</i> ‘to unite’. |

3.2.1.2 *Lexical root reciprocals.* Here belong verbs (some of them are qualitative, i.e. adjectival in meaning) which fall into two subgroups.

1. Reciprocals used in both simple and discontinuous constructions with the preposition *dengan*:

- | | | | |
|------|----|-----------------------------------|--------------------------------|
| (29) | a. | <i>Amir kawin dengan Fatimah.</i> | ‘Amir married Fatima.’ |
| | b. | <i>Amir dan Fatimah kawin.</i> | ‘Amir and Fatima got married.’ |

Verbs of this type are:

- | | | |
|------|----------------------------------|---------------------------------------|
| (30) | <i>cekcok</i> ‘to quarrel’ | <i>bentrok</i> ‘to collide, to fight’ |
| | <i>cocok</i> ‘to correspond’ | <i>campur-baur</i> ‘to be mixed’ |
| | <i>campur-aduk</i> ‘to be mixed’ | <i>sama</i> ‘to be alike/equal.’ |

As we see, two of these verbs are a combination of two roots.

2. The following qualitative verbs occur in discontinuous constructions with an obligatory object with the preposition *dengan* ‘with’ or *dari* ‘from’. The absence of an object is perceived as ellipsis:

- (31) *dekat* ‘to be nearby, close’ *lain* ‘to be different’
jauh ‘to be far’ *mirip* ‘to be similar’ (see also 3.3.2.2).

3.2.1.3 “Deponential” reciprocals; types *ber-R* or *ber-R-an*. The roots of these reciprocals do not ever occur singly and are used as bound uninflected verbal roots. Three groups are distinguished here by the affix attached. Verbs prefixed with *ber-* are predominant.

1. Lexical reciprocals with the prefix *ber-*:

- (32) *ber-bicara* ‘to converse’ *ber-gaul* ‘to associate with’
ber-juang ‘to fight, struggle’ *ber-kelahi* ‘to fight’
ber-runding ‘to confer’ *ber-temu* ‘to meet’
ber-gurau ‘to joke (with one another)’ *ber-gulat* ‘to fight’
ber-tempur ‘to fight’ *ber-simpang-siur* ‘to cross each other,
intermingle’ (combination of roots).

2. Verbs with the circumfix *ber...-an*:

- (33) *ber-papas-an* ‘to come across each other on the road’
ber-hubung-an ‘to be connected, tied together.’

3. Verbs with either *ber-* or *ber...-an* (variably):

- (34) *ber-pisah(-an)* ‘to part’
ber-tengkar(-an) ‘to quarrel’
ber-saing(-an) ‘to compete’; cf.:
(35) *Mereka ber-saing(-an)*. ‘They compete.’

3.2.2 *Object-oriented three-place reciprocals*

Here belong transitive root verbs. The last two verbs of the list occur in constructions with conjoined objects only:

- (36) *meng-adu* ‘to bring together, make fight (rams, etc.)’
men-campur ‘to mix’
me-nyabung ‘to set (cocks) on to fight’
me-nukar ‘to exchange’
meng-ganti ‘to replace.’

The reciprocal arguments occupy the object positions; e.g.:

- (37) a. *Farid me-nyabung ayam Amir dan/dengan ayam Yusuf.*
‘Farid makes Amir’s cock and Yusuf’s cock fight.’

Three-place reciprocals form passives in the same way as other verbs:

- b. *Kedua ayam itu lalu di-sabung.* ‘Both cocks were made to fight.’

3.2.3 *Polysemy of the prefix ber-*

Most of the lexical reciprocals discussed above contain the prefix *ber-*. In order to show that it is not the only usage of the prefix, we shall survey briefly some of its other usages.

1. The prefix *ber-* is used mainly on denominal verbs:

(a) derived from concrete nouns, to denote possessivity including the meaning ‘to use object X’:

- (38) *atap* ‘roof’ → *ber-atap* ‘to have a roof’
 (39) *kuda* ‘horse’ → *ber-kuda* ‘to ride (be on) a horse.’

(b) Derived from *nomina actionis*, to denote respective actions:

- (40) *gerak* ‘movement’ → *ber-gerak* ‘to move’
cerita ‘tale, story’ → *ber-cerita* ‘to tell’.

2. This prefix also derives intransitive verbs of various meanings from transitive roots:

(a) reflexives, e.g.:

- (41) *men-cukur* ‘to shave sb’ → *ber-cukur* ‘to shave oneself’;

(b) resultatives; e.g.:

- (42) *me-nyetrika* ‘to iron’ → *ber-setrika* ‘to be ironed’;

(c) “absolutives” (verbs with a non-referential object); e.g.:

- (43) *me-nanam* ‘to plant (rice)’ → *ber-tanam* ‘to be engaged in (rice-)growing.’

As we see, this prefix displays a wide range of functions determined by the meaning of the base word, without any distinct semantic boundaries.

3.3 Derivatives from lexical reciprocals

All the affixes used in these derivatives are also used, naturally enough, with non-reciprocals.

3.3.1 *Verbs with valency increase*

All the derivatives here are transitive and can be used in the passive voice, like ordinary transitives.

3.3.1.1 *Object-oriented causative reciprocals; types -R-kan or -(per-)R-kan.* Here are some illustrations.

- (44) a. *Mereka ber-temu.* ‘They meet.’
 b. *Tuhan mem-per-temu-kan mereka.* ‘God made them meet.’
 c. *Mereka di-per-temu-kan oleh Tuhan.* ‘They were brought together by God.’
- (45) a. *Fatimah dan Amir kawin.* ‘Fatima and Amir got married.’
 b. *Ayah-nya me-ngawin-kan Fatimah dan Amir.* ‘His father married F. and A.’
 c. *Fatimah dan Amir di-kawin-kan-nya.* ‘F. and A. were married by him.’

Here belong the following derivatives from the intransitives considered above:

(a) causatives with the suffix *-kan*:

- | | | |
|---|---|--|
| (46) <i>kawin</i> ‘to marry’ | → | <i>me-ngawin-kan</i> ‘to make (sb) marry’ |
| <i>sama</i> ‘same, equal’ | → | <i>me-nyama-kan</i> ‘to equalize’ |
| <i>ber-gabung</i> ‘to be joined/united’ | → | <i>meng-gabung-kan</i> ‘to unite, to fuse’ |
| <i>ber-pisah</i> ‘to part, get separated’ | → | <i>me-misah-kan</i> ‘to separate’ |
| <i>campur-baur</i> ‘to be mixed’ | → | <i>men-campur-baur-kan</i> ‘to mix’, etc.; |

(b) causatives with the circumfix *-(per...)-kan*:

- | | | |
|---|---|--|
| (47) <i>ber-kenal-an</i> ‘to make acquaintance’ | → | <i>mem-per-kenal-kan</i> , <i>me-nkenal-kan</i> ‘to acquaint/to introduce’ |
| <i>ber-beda</i> ‘to differ’ | → | <i>mem-(per-)beda-kan</i> ‘to differentiate’ |
| <i>ber-hubung-an</i> ‘to be connected’ | → | <i>mem-per-/meng-hubung-kan</i> ‘to connect’ |
| <i>ber-satu</i> ‘to unite’ (vi) | → | <i>mem-per-satu-kan</i> , <i>me-nyatu-kan</i> ‘to unite’ (vt) |
| <i>ber-kelahi</i> ‘to fight’ | → | <i>mem-per-kelahi-kan</i> ‘to make sb fight’ |
| <i>ber-sahabat</i> ‘to be friends’ | → | <i>mem-per-sahabat-kan</i> ‘to make sb friends’ |
| <i>ber-temu</i> ‘to meet’ (vi) | → | <i>mem-per-temu-kan</i> ‘to bring together/organize meetings’, etc. |

3.3.1.2 *Subject-oriented applicative reciprocals; types -R-kan or -per-R-kan.* As in the previous case, a one-place or a two-place intransitive is transformed into a two-place transitive. But the verb retains its subject-oriented character. The same markers are employed here as in the formation of causatives, and some of the derived forms have two meanings, causative and applicative (cf. *mem-per-kelahi-kan* i. ‘to make sb fight’, ii. ‘to fight over sth’).

In the case of the applicative meaning, the noun introduced by a preposition (= non-reciprocal argument) depending on the verb and/or optional in the underlying construction, becomes a direct (obligatory) object. It (i.e. *Fatimah*) cannot be omitted in (48b).

- | | |
|---------|---|
| (48) a. | <i>Amir dan Yusuf ber-cakap-cakap [tentang Fatimah].</i>
‘Amir and Yusuf talk [about Fatima].’ |
| b. | <i>Amir dan Yusuf mem-per-cakap-kan Fatimah.</i>
(same translation). |

Applicatives with the suffix *-kan*:

- | | | |
|------------------------------------|---|--|
| (49) <i>ber-bicara</i> ‘to speak’ | → | <i>mem-bicara-kan</i> ‘to discuss’ |
| <i>ber-runding</i> ‘to deliberate’ | → | <i>me-runding-kan</i> ‘to deliberate about.’ |

Applicatives with the circumfix *per...-kan*:

- | | | |
|-------------------------------------|---|--|
| (50) <i>ber-gunjing</i> ‘to gossip’ | → | <i>mem-per-gunjing-kan</i> ‘to gossip about’ |
| <i>ber-tengkar</i> ‘to quarrel’ | → | <i>mem-per-tengkar-kan</i> ‘to quarrel because of’ |
| <i>ber-debat</i> ‘to debate’ | → | <i>mem-per-debat-kan</i> ‘to debate on.’ |

3.3.1.3 *Transitivity of reciprocals; type -R-i.* In this case the comitative argument is transformed into a direct object. The human referent of the second argument poses as less active than the subject referent, which may result in the loss of the reciprocal meaning. The marker employed is the suffix *-i*.

- (51) a. *Amir ber-temu dengan Yusuf.* lit. 'Amir met with Yusuf.'
 b. *Amir me-nemu-i Yusuf.* 'Amir visited Yusuf.'
- (52) a. *Amir kawin dengan Fatimah.* 'Amir marries Fatima.'
 b. *Amir me-ngawin-i Fatimah.* 'Amir took Fatima as his wife.'
- (53) a. *Amir ber-tanding dengan Yusuf.* 'Amir entered into a contest with Yusuf.'
 b. *Amir me-nanding-i Yusuf.* 'Amir is equal in contest with Yusuf.'

3.3.2 Verbs with valency decrease

3.3.2.1 Anticausatives derived from three-place reciprocals; type *ber-R*. The prefix *ber-* transforms the underlying object-oriented reciprocals (see 3.2.2) into subject-oriented intransitive reciprocals, by way of retaining the reciprocal meaning. Compare:

- (54) a. *Ayam Amir ber-sabung dengan ayam Yusuf.*
 lit. 'Amir's cock fights with Yusuf's cock.'
 b. *Ayam Amir dan ayam Yusuf ber-sabung.*
 'Amir's cock and Yusuf's cock are fighting.'

Compare also:

- (55) *meng-adu* 'to bring together/make fight (rams, etc.)' → *ber-adu* 'to come together, to come to blows'
men-campur 'to mix' → *ber-campur* 'to get mixed'
meng-ganti 'to replace (sth with sth)' → *ber-ganti* 'to replace each other.'

3.3.2.2 Derived reciprocals compatible with simple constructions. This operation concerns qualitative verbs (analogues of European adjectives). Verbs of the type discussed in 3.2.1.2 are used with a second comitative object only, while derived reciprocals are also used in the simple construction. The operation is marked with the circumfix *ber...-an*:

- (56) a. *Rumah Amir dekat dengan rumah Yusuf.*
 lit. 'Amir's house is near Yusuf's house.'
 b. *Rumah Amir ber-dekat-an dengan rumah Yusuf.* (same meaning)
 c. *Rumah Amir dan rumah Yusuf ber-dekat-an.*
 lit. 'Amir's house and Yusuf's house are near each other.'
 d. **Rumah Amir dan rumah Yusuf dekat.* (intended meaning as in (c)).

Note that the suffix *-an* can be added to some of the above mentioned reciprocals with *ber-* and to root reciprocals without producing any changes in meaning and construction. This may be accounted for by the influence of one of the two principal ways in which morphological reciprocals are derived; cf.:

- (57) *ber-saing* 'to compete/contend' → *ber-saing-an* (same meaning)
ber-tengkar 'to quarrel' → *ber-tengkar-an* (same meaning).

3.4 Actional nominals with the circumfix *per...-an*

Nouns of action are derived (a) from lexical reciprocals and also (b) from nominal stems:

<i>me-lawan</i> 'to resist/oppose'	→	<i>ber-lawan-an</i> 'to oppose each other'
<i>me-nentang</i> 'to object'	→	<i>ber-tentang-an</i> 'to contradict each other'
<i>men-cumbu</i> 'to caress'	→	<i>ber-cumbu-an</i> 'to caress each other'
<i>me-negur</i> 'to greet'	→	<i>ber-tegur-an</i> 'to greet each other'
<i>me-nyentuh</i> 'to touch'	→	<i>ber-sentuh-an</i> 'to touch/be in contact'
<i>meng-genggam</i> 'to squeeze in (one's) hand'	→	<i>ber-genggam-an</i> 'to hold (fast) each other by the hand'
<i>me-rebut</i> 'to take away/snatch'	→	<i>be-rebut-an</i> 'to try to take away from each other, to fight for sth'
<i>me-nubruk</i> 'to bump (into)'	→	<i>ber-tubruk-an</i> 'to collide'
<i>me-langgar</i> 'to bump/run (into)'	→	<i>ber-langgar-an</i> 'to collide'
<i>mem-bentur</i> 'to bump/run (into)'	→	<i>ber-bentur-an</i> 'to collide'
<i>meng-gesek</i> 'to rub'	→	<i>ber-gesek-an</i> 'to rub against each other'
<i>me-mandang</i> 'to look'	→	<i>ber-pandang-an</i> 'to look at each other', etc.

In meaning, many of these reciprocals are close to some typical lexical reciprocals (note the English translations) or to verbs implying, to a greater or lesser degree, a reciprocated action (e.g. 'to resist', 'to be in contact' and the like). Reciprocals of physical contact are quite common among them.

4.2.1.2 *Reciprocals derived from two-place intransitives.* These are verbs taking an object with the prepositions *dengan* 'with', *kepada* 'to, with regard to', etc.:

(61) <i>ter-senyum</i> 'to smile'	→	<i>ber-senyum-an</i> 'to smile at each other'
<i>me-nyahut</i> 'to respond'	→	<i>ber-sahut-an</i> 'to shout to one another'
<i>ber-bisik</i> 'to whisper'	→	<i>ber-bisik-an</i> 'to whisper to each other'
<i>me-lekat</i> 'to stick (to)'	→	<i>ber-lekat-an</i> 'to stick, be glued together'
<i>kena</i> 'to be in contact'	→	<i>ber-kena-an</i> 'to be connected, to adjoin'
<i>cinta</i> 'to love'	→	<i>ber-cinta-an</i> 'to love each other/be lovers'
<i>pamit</i> 'to say goodbye'	→	<i>ber-pamit-an</i> 'to say goodbye to each other'
<i>dempet</i> 'to be close (to)'	→	<i>ber-dempet-an</i> 'to be cramped together.'

4.2.1.3 *Reciprocals derived from one-place (!) intransitives.* There are two verbs whose meaning implies an object which nevertheless cannot be expressed:

(61') <i>tepat</i> 'to hit (the mark)'	→	<i>ber-tepat-an</i> 'to coincide'
<i>salah</i> 'to miss (the aim)'	→	<i>ber-salah-an</i> 'to not coincide'. See also (97a–b).

4.2.2 Type *ber-R-R-an*

Reduplication of the root in circumfixed reciprocals may be due to a number of reasons. The main reasons are the following.

1. The necessity to avoid the homonymy of a *ber-R-an* reciprocal and a possessive verbal derivative from a noun of the same root with the suffix *-an* (cf. (62c) and (63b)):

- (62) a. *me-motong* 'to cut/cut off, to intercept sb's course'
 → b. *potong-an* 'a (cut-off) piece; form, shape'
 → c. *ber-potong-an* 'to consist of (cut-off) pieces/have (certain) shape, style'; cf.:
- (63) a. *me-motong* 'to cut, to cut off; intercept sb's course'
 b. **ber-potong-an* (cf. (62c))
 c. *ber-potong-potong-an* 'to intercept each other's course.'

2. The archaic character of the non-reduplicated root. Thus (64b) is registered in KUBI and absent in KBBI:

- (64) a. *kasih* 'to love'
 b. *ber-kasih-an* 'to love each other'
 c. *ber-kasih-kasih-an* (same).

3. Lexicalization of the meaning of a reciprocal form:

- (65) a. *Amir jauh dengan/dari Yusuf.* 'Amir is far from Yusuf.'
 b. *Amir dan Yusuf ber-jauh-an.* 'Amir and Yusuf are far from each other.'
 c. *Amir dan Yusuf ber-jauh-jauh-an.* 'Amir and Yusuf keep away from each other (avoid each other).'

4. Intensification of the reciprocal action, which commonly, it seems, manifests itself in the iterative meaning often involving variation in the performance of the repeated actions. Nearly all circumfixed reciprocals allow root reduplication for this purpose. Generally speaking, this is not characteristic of reciprocals only, as a great many non-reciprocal verbs can also be reduplicated for iteration (in this case, however, a contrast with the underlying reduplicated non-reciprocal stem is necessary); cf.:

- (66) a. *Amir sering me-meluk Yusuf.*
 'Amir often embraces Yusuf.'
 b. *Amir sering me-meluk-meluk Yusuf.*
 'Amir often embraces Yusuf in various ways.'
 c. *Kami sering ber-peluk-peluk-an.* (P. 134)
 'We often embrace each other [in various ways].'

Iterativity can be expressed in the context if a reciprocal is non-reduplicated, e.g. by the adverb *ber-kali-kali* 'repeatedly, not once, many times'; cf.:

- (67) *Kembali mereka ber-cium-an. Ber-kali-kali mereka ber-cium-an.* (R. 500)
 'They kiss again. They kiss many times.'

In the following reciprocals, iterativity is expressed by reduplication:

- (68) a. *me-megang* 'to hold on to sth/sb'
 → b. *ber-pegang-an* 'to hold fast on to each other'
 → c. *ber-pegang-pegang-an* 'to hold fast on to each other'
 d. *Amir me-megang-megang Yusuf* 'Amir touches Yusuf (in different ways).'

- (69) a. *Amir meng-hadap pada Yusuf.* 'Amir turns to face Yusuf.'
 b. *Amir meng-hadap-hadap [ke arah] Yusuf (yang sedang berlari-lari mengelilinginya).* 'Amir takes position facing [in the direction of] Yusuf (who is running round him).'
 c. *Amir dan Yusuf ber-hadap-an.* 'Amir and Yusuf face each other.'
 d. *Amir dan Yusuf ber-hadap-hadap-an.* 'Amir and Yusuf face precisely each other.'

5. A greater or lesser degree of denotational divisibility or non-simultaneity of two or more actions that comprise a reciprocal situation, i.e. a tendency to iconic designation. Thus, the following forms are either prevalent or used exclusively:

- (70) *ber-bunuh-bunuh-an* 'to kill each other'
ber-cakar-cakar-an 'to scratch each other'
ber-cubit-cubit-an 'to pinch each other'
ber-tolak-tolak-an 'to push each other'
ber-kirim-kirim-an 'to send to each other'
ber-tolong-tolong-an 'to help each other'
ber-kedip-kedip-an 'to wink at each other'
ber-sahut-sahut-an 'to call to each other'
ber-ambil-ambil-an 'to take from each other.'

A number of reduplicated reciprocals have no non-reduplicated counterparts, or the latter are at least very rare. This is related to the fact that repetition or differences in the performance of the same action are determined by the meaning of a given verb or implied by all possible contexts. For instance, *ber-kirim-kirim-an* 'to send each other' (letters: *ber-kirim-kirim-an surat* 'to correspond') presupposes reiteration, while *ber-sahut-sahut-an* 'to call to each other' may imply variety in its manifestation (variety of sounds, from different directions, with different intensity, etc.).

4.2.3 Type *ber-R[-an]*

Reciprocals with an optional suffix illustrate replacement of the historically older prefixed reciprocal derivation by later circumfixation (cf. Ogloblin & Zarbaliev 1993). The attested reciprocals of this type describe standard everyday situations.

- (71) *meng-antuk* 'to knock/touch' → *ber-antuk[-an]* 'to bump into each other'
meng-geser 'to rub' → *ber-geser[-an]* 'to rub against each other'
men-desak 'to press' → *ber-desak[-an]* 'to press close to each other'
men-jabat 'to hold' → *ber-jabat[-an]* 'to shake hands'
men-cium 'to kiss' → *ber-cium[-an]* 'to kiss each other'
me-rebut 'to embrace' → *be-rebut[-an]* 'to embrace each other'
cinta 'to love' → *ber-cinta[-an]* 'to love each other'
baik 'to be nice to sb' → *ber-baik[-an]* 'to be on good terms.'

The following examples illustrate the use of both variants that are interchangeable although there seem to be subtle semantic differences between them:

- (72) a. *Ber-desak, be-rangkul-an seperti anak-anak kucing kedinginan.* (P. 136)
 'They huddled to each other, hugging each other like freezing kittens.'

- b. *Dalam truk yang membawa kami ke rumah almarhum Kartika, kami ber-desak-an.* (BM. 37) lit. 'In the lorry that was taking us to the house of the late Kartika, we [stood] pressing to each other.'

4.2.4 Polysemy of the circumfix *ber-...-an*

This circumfix is also used to encode other meanings:

1. An iterative or joint action of several agents (cf. also the sociative in 10.1):

- (73) a. *Burung-burung terbang.* 'Birds are flying.'
 b. *Burung-burung be-terbang-an.* 'Birds are flying (in all directions, repeatedly).'

2. A prolonged action or state, or an action that covers some distance:

- (74) a. *Amir pergi.* 'Amir has left.'
 b. *Amir be-pergi-an.* 'Amir has gone away (far away or for a long time).'
- (75) a. *Bumi ber-getar.* 'The earth shook.'
 b. *Bumi ber-getar-an.* (T. 96) 'The earth quaked (all around).'
- (76) a. *Ia me-lumur(-i) mukanya dengan minyak.* 'He smeared his face with oil.'
 b. *Muka-nya ber-lumur-an darah.* 'His face was smeared with blood all over.'

The first two meanings can be presented as one with the following explanation: "...*ber-...-an* adds the semantic component 'diffuseness', i.e. plurality of actors, of action or of direction" (see Prentice 1987:921).

4.3 Non-productive means containing the prefix *ber-*

Most of the reciprocals belonging here have no correlates with the same stem among circumfixed reciprocals.

4.3.1 Type *ber-R*

Here belong verbs like the following:

- (77) *mem-bantah* 'to object' → *ber-bantah* 'to wrangle'
me-macu 'to chase' → *ber-pacu* 'to race (with one another)'
damai 'to be peaceful' → *ber-damai* 'to make up with each other.'

It should be remembered that the prefix *ber-* is the main affix to be found on lexical reciprocals (see Section 3).

4.3.2 Type *ber-R-R*

Compare the following derivational pair:

- (78) *ramah* 'to be friendly' → *be-ramah-ramah* 'to be on friendly terms, treat each other in a friendly manner.'

In comparison with (72a), the reduplicated form in (79) is rather common in the iterative sense:

- (79) *ber-desak* ‘to press to each other, to huddle’ → *ber-desak-desak[-an]* ‘to huddle to each other changing the degree of pressure, moving, etc.’

4.3.2.1 *Competitive reciprocals*. Here belong a few reciprocals derived from stative verbs or from adverbs. Reciprocals of different morphological types are cited together as they share root reduplication, unproductivity and meaning:

- (80) *cepat* ‘to be fast’ → *ber-cepat-cepat* ‘to compete in speed’
kuat ‘to be strong’ → *ber-kuat-kuat[-an]* lit. ‘to compete in strength’
dahulu ‘before, earlier’ → *ber-dahulu-dahulu-an* ‘to try to outstrip (leave behind) each other.’

4.3.3 *Type ber-R’-R’*

Reciprocals comprised of two different roots are included here. The roots are semantically close or synonymous:

- (81) a. *me-nyangkut* ‘to clutch’, *me-maut* ‘to cling to sth’
 b. *Kedua masalah itu ber-sangkut-paut* ‘Both these problems are closely related.’
- (82) a. *me-negur* ‘to greet, accost sb’ + *me-nyapa* ‘to greet’
 b. *ber-tegur-sapa* ‘to greet each other.’

4.3.4 *Type ber-si-R*

This double prefix is archaic. Dictionaries and grammars register the following derivatives (which have correlates with the same root among reciprocals of other types; see (80) and (60)):

- (83) *cepat* ‘to be fast’ → *ber-si-cepat* ‘to compete with each other in speed’
dahulu ‘before, earlier’ → *ber-si-dahulu* ‘to try to outstrip each other’
mem-bunuh ‘to kill’ → *ber-si-bunuh* ‘to kill each other.’

There are also a few derivatives with a non-reciprocal meaning:

- (84) *bisu* ‘dumb, mute’ → *ber-si-bisu* ‘to pretend to be dumb’
keras ‘hard’ → *ber-si-keras* ‘to take a firm stand.’

4.4 Substandard variant: Type *R-R-an*

This variant of circumfixed reciprocals characteristic of everyday speech is formed by the suffix *-an* with obligatory (as a rule) root reduplication (in everyday speech, the prefix *ber-* with other grammatical functions is also lost). This variant is a borrowing from the languages of Java, via the Jakarta dialect of Malay. This substandard variant also occurs in literary texts.

- (85) *Sejumlah ujud bayangan, kejar-kejar-an di situ*. (R. 168)
 ‘Several shadows [that] chase one another.’

The following reciprocals of this type have been registered in texts:

(86) <i>cium-cium-an</i>	‘to kiss each other’
<i>hantam-hantam-an</i>	‘to beat, cudgel each other’
<i>kejar-kejar-an</i>	‘to chase each other’
<i>pegang-pegang-an</i>	‘to hold each other by the hand’
<i>pukul-pukul-an</i>	‘to beat each other, to fight’
<i>peluk-peluk-an</i>	‘to hug, embrace each other’
<i>salam-salam-an</i>	‘to greet each other.’

Two reciprocals have occurred without the expected reduplication: *rebut-an* ‘to take away from each other’, *bentrok-an* ‘to collide, have a skirmish’.

In standard Indonesian, the pattern *R-R-an* occurs among verbals (*sakit* ‘to be ill’ → *sakit-sakit-an* ‘sickly, unhealthy’), nouns (*buah* ‘fruit’ → *buah-buah-an* ‘various fruits’) and adverbs (*terang* ‘clear’ → *terang-terang-an* ‘obviously, overtly’).

4.5 Pre-reduplicated reciprocals: Type *R-meN-R/R-i/R-kan*

As has been mentioned above, most of the circumfixed reduplicated reciprocals have one-root correlates. The difference between two parallel verbs may be very slight and hard to define. But pre-reduplicated reciprocals usually have an iterative sense.

4.5.1 Formation of pre-reduplicated reciprocals

The base verb, including its derivational affix (if it has one) and the active marker *meN-*, undergoes no change but its root is repeated in verb-initial position.

Most of the pre-reduplicated reciprocals derive from transitives with the prefix *meN-*. Here are lists of pre-reduplicated reciprocals that have parallel circumfixed reciprocals.

A. Reciprocals derived from transitives

1. Reciprocals derived from two-place transitives:

(87) <i>maki-me-maki</i>	‘to scold each other’
<i>sindir-me-nyindir</i>	‘to exchange biting remarks’
<i>benci-mem-benci</i>	‘to hate each other’
<i>bunuh-mem-bunuh</i>	‘to kill each other’
<i>ganggu-meng-ganggu</i>	‘to worry, tease each other’
<i>tolong-me-nolong</i>	‘to help each other’
<i>tuduh-me-nuduh</i>	‘to accuse each other’
<i>tepuk-me-nepuk</i>	‘to clap each other’
<i>kenal-me-ngenal</i>	‘to know each other’
<i>serang-me-nyerang</i>	‘to attack each other’
<i>desak-men-desak</i>	‘to press, crowd each other’
<i>tunjang-me-nunjang</i>	‘to support each other’
<i>pandang-me-mandang</i>	‘to exchange glances’
<i>lirik-me-lirik</i>	‘to look sideways at each other’
<i>geser-meng-geser</i>	‘to rub against each other’
<i>pukul-me-mukul</i>	‘to beat each other’
<i>bantu-mem-bantu</i>	‘to help each other’
<i>ejek-meng-ejek</i>	‘to ridicule each other’

<i>panggil-me-manggil</i>	‘to call each other’
<i>sambung-me-nyambung</i>	‘to continue each other’
<i>sapa-me-nyapa</i>	‘to greet each other’
<i>tarik-me-narik</i>	‘to pull each other’
<i>tawar-me-nawar</i>	‘to bargain with each other.’

2. Reciprocals derived from three-place transitives:

- (88) *ambil-meng-ambil* ‘to take sth from each other’
beri-mem-beri ‘to give sth to each other.’

B. Reciprocals derived from intransitives

1. Reciprocals derived from two-place or one-place intransitives with the prefix *meN-*:

- (89) *me-nyurat* ‘to write’ → *surat-me-nyurat* ‘to write to each other, correspond’
me-nyahut ‘to respond (to a call)’ → *sahut-me-nyahut* ‘to call to each other’
me-nyusup ‘to penetrate’ → *susup-me-nyusup* ‘to penetrate into each other.’

2. Reciprocals derived from verbs with the prefix *ber-*:

- (90) *ber-sambung* ‘to have a sequel’ → *sambung-ber-sambung* ‘to alternate, to continue (follow) each other’
ber-tanya ‘to ask’ → *tanya-ber-tanya* ‘to ask each other.’

Similar derivatives can be obtained from intransitive anticausative reciprocals which in their turn are derived from three-place lexical reciprocals (see 3.3.2.1 and 3.2.2):

- (91) *me-nyabung* ‘to let fight, to play off one against another’
→ *ber-sabung* ‘to fight/struggle with each other’ (about roosters)
→ *sabung-ber-sabung* ‘to fight (repeatedly).’
(92) *meng-ganti* ‘to replace sth by sth’
→ *ber-ganti* ‘to alternate/replace each other’
→ *ganti-ber-ganti* ‘to replace each other repeatedly.’

4.5.2 *Reciprocals with the transitivizing suffixes -i and -kan*

These reciprocals differ from circumfixed reciprocals in that they may contain suffixes of transitivity (note that suffixes cannot co-occur on a verbal form: they oust one another in the process of derivation). Compare:

- (93) a. *me-ngirim* ‘to send sth to sb’
b. *me-ngirim-i* ‘to send sb sth’
c. *kirim-me-ngirim-i* ‘to send sth to each other’,

but:

- d. *ber-kirim-kirim-an* ‘to send sth to each other’
e. *kirim-me-ngirim* (same).

The verbs in (93a) and (93b) differ in the required order of the objects. The difference between (93c) and (93e) is very subtle and hard to pinpoint.

Here are lists of the reciprocals in question.

1. Reciprocals with the suffix *-i*.

- | | | |
|------|------------------------------|-------------------------------------|
| (94) | <i>dahulu-men-dahulu-i</i> | 'to try to outstrip each other' |
| | <i>harga-meng-harga-i</i> | 'to value each other' |
| | <i>kirin-me-ngirim-i</i> | 'to send (sth) to each other' |
| | <i>percaya-mem-percaya-i</i> | 'to trust each other' |
| | <i>alah-meng-alah-i</i> | 'to make concessions to each other' |
| | <i>kawin-me-ngawin-i</i> | 'to enter into a marital relation' |
| | <i>cinta-men-cinta-i</i> | 'to love each other' |
| | <i>kasih-me-ngasih-i</i> | 'to love each other' |
| | <i>hormat-meng-hormat-i</i> | 'to respect each other' |
| | <i>jauh-men-jauh-i</i> | 'to move apart from each other' |
| | <i>liwat-me-liwat-i</i> | 'to pass each other' |
| | <i>kenal-me-nengal-i</i> | 'to know each other (well)' |
| | <i>suka-me-nyuka-i</i> | 'to like each other.' |

2. Reciprocals with the suffix *-kan*.

- | | | |
|------|-----------------------------|--------------------------------------|
| (95) | <i>empas-meng-empas-kan</i> | 'to throw each other (in wrestling)' |
| | <i>hibur-meng-hibur-kan</i> | 'to entertain each other' |
| | <i>omong-meng-omong-kan</i> | 'to discuss with each other' |
| | <i>salah-me-nyalah-kan</i> | 'to accuse each other.' |

3. There are also a few reciprocals with the circumfixes *per...-i*, *per...-kan*.

- | | | |
|------|------------------------------|---|
| (96) | <i>baik-mem-per-baik-i</i> | 'to correct each other' |
| | <i>olok-mem-per-olok-kan</i> | 'to ridicule each other' (Steinhauer 1994: 76). |

Note that pre-reduplication is the only possible pattern if the suffix of the base verb changes its root valency (cf. (97a) and (97c)). It should be borne in mind that there is only one slot for suffixes in verbs. In the case of secondary derivation the suffix of the base verb form is necessarily ousted. Thus, only (97d) is relatable to (97c), while (97b) derives from (97a):

- | | | | |
|------|----|----------------------------|--|
| (97) | a. | <i>salah</i> | 'to miss' (<i>Tembakannya salah</i> 'His shot missed') |
| | b. | <i>ber-salah-an</i> | lit. 'to be wrong/guilty against one another'
→ 'to contradict, to be contrary' |
| | c. | <i>me-nyalah-kan</i> | 'to accuse', lit. 'to declare wrong/guilty' |
| | d. | <i>salah-me-nyalah-kan</i> | 'to accuse each other.' |

Note that despite retaining the features of the morphological structure of transitive verbs, pre-reduplicated reciprocals of all types should be included among intransitives because they (a) take no direct object (cf. Section 5), (b) do not combine with pronominal enclitics which are common after transitive verbs, and (c) have no passive forms.

4.5.3 Comparison with circumfixed reciprocals

From a great many underlying verbs, both morphological types of reciprocals can be formed: *me-mukul* 'to beat' → *ber-pukul(-pukul)-an* 'to fight', *pukul-me-mukul* 'to fight'.

Kridalaksana (1983:398–401) pointed out that the circumfixed reciprocal denotes a less telic (limited) and more processual action. Demidjuk (1987:93) argues, with reference to Indonesian authors, that in a pre-reduplicated reciprocal the succession of the constituent actions is foregrounded. This opinion is supported by examples, cf.:

- (98) *Mereka ber-pandang-pandang-an hanya antara mereka saja.* (R. 71)
 ‘They exchanged glances with each other only’ (without looking at a third person; or: ‘They looked at each other only’).
- (99) *Mereka semua pandang-me-mandang.* (G. 123)
 ‘They all exchanged glances.’

(99) indicates a succession of actions, while (98) also allows simultaneous interpretation; cf. also:

- (100) *Pertanyaan-pertanyaan lain sudah ber-desak-desak dalam otakku.* (G. 18)
 ‘Other questions were already crowding in my mind’ (simultaneous interpretation is possible).
- (101) *Macam-macam bayangan desak-men-desak dalam pikiranku.* (G. 8)
 ‘Diverse images ousted each other out in my thoughts.’

In (101), successive interpretation is more likely; cf. the subsequent context: *bayangan itu didesak bayangan lain lagi* ‘[at once] this image was ousted by another’.

4.5.4 Iterative meaning of pre-reduplicated forms

These derivatives can also denote diverse actions of one or several persons performed at short intervals (a kind of iterative). The object is usually omitted. Compare:

- (102) *Ketika aku masuk ke rumah, tangan ibu yang gemetar sedang bungkus-mem-bungkus.* (R. 261-2)
 ‘When I entered the house, Mother’s trembling hands were wrapping [sth] into packages.’
- (103) *Mereka di sana penuh-sesak, angkat-meng-angkat, timbang-me-nimbang.*
 (Ge. II-135) ‘They are milling in a crowd there, taking [something], weighing.’

The iterative meaning can also be acquired by some circumfixed reciprocals:

- (104) a. *men-ngejar* ‘to chase, to pursue’
 b. *ber-kejar-an* ‘to chase, to pursue one another’
 c. *kejar-ber-kejar-an* ‘to chase, to pursue one another repeatedly, a long time, in various directions, etc.’
 d. *kejar-me-ngejar* (same translation).

4.5.5 Nominalization

Type *R-meN-R* derivatives sometimes occur in subject or object position. The patient is not named as a rule. Compare:

- (105) *Selalu ada terjadi balas-mem-balas.* (P. 125) ‘All the time an exchange of retorts goes on’, lit. ‘answering each other’; *mem-balas* ‘to answer.’

- (106) *Tidak jarang terjadi pukul-me-mukul, rebut-me-rebut.* (Ge. I-470)
 ‘Sometimes fights begin, mutual attempts to take [the loot] from each other’ (*me-rebut* ‘to take away from sb’).

5. Diathesis types of constructions with morphological reciprocals. Subject-oriented diathesis only

As the morphological types of reciprocals are not sensitive to diathesis, they are treated together below.

One problem insufficiently investigated so far in Indonesian concerns the status of prepositionless objects with intransitive verbs, including morphological reciprocals. Generally such objects do not take attributes, such as *itu* ‘that, this’, *-nya* ‘his/her/their’ and some others, which points to a closer connection between verb and the following noun than is usually the case with direct objects (see 5.1.3, 5.2 and 5.3 below). However, some experimental data are at variance with our textual material, therefore this point needs further investigation. On the semantic scope of such closely attached postverbal nouns see Ogloblin (1994).

5.1 “Canonical” reciprocals

These are one-place intransitive reciprocals derived from two-place transitives or two-place intransitives. The difference between the underlying structures is neutralized in the reciprocal constructions: both the direct and non-direct objects are deleted in the derived construction as co-referential with the subject.

5.1.1 *Derived from two-place transitives*

This is the principal type covering the overwhelming majority of reciprocals:

- (107) a. *Amir meng-ganggu Farid.* ‘Amir teases Farid.’
 b. *Amir dan Farid ganggu-meng-ganggu.* ‘Amir and Farid tease each other.’

See also (1), (59), (69), etc.

5.1.2 *Derived from two-place intransitives*

Here belong nearly all the reciprocals derived from verbs with the prefix *ber-* and a number of *meN-* verbs and root verbs (see their list in (61)). The object is introduced by the preposition *kepada* ‘with’:

- (108) a. *Amir cinta kepada Fatimah.* ‘Amir loves Fatima.’
 b. *Amir dan Fatimah ber-cinta-cinta-an.* ‘Amir and Fatima love each other.’

5.1.3 “Canonical” or “possessive” reciprocal?

In this case, a word denoting inalienable possession of the participants and specifying (or duplicating) the verbal meaning is added in a one-place construction (this is especially common with lexical reciprocals). Compare:

- (109) a. *Amir me-mandang Yusuf.* ‘Amir looked at Yusuf.’
 b. *Amir dan Yusuf ber-pandang-an.* ‘Amir and Yusuf looked at each other.’
 c. *Amir dan Yusuf ber-pandang-an mata.* ‘Amir and Yusuf looked into each other’s eyes.’

We prefer to interpret *mata* ‘eyes’ here as a kind of specifier with a vague syntactic status rather than as a direct object. Sentence (109c) may be compared with the underlying sentence (109d) where ‘Yusuf’ is an attribute of the direct object:

- d. *Amir me-mandang mata Yusuf.* ‘Amir looked into Yusuf’s eyes.’

In this case (109c) should be interpreted as a “possessive” type (see also 5.3). However, underlying sentences of type (109d) are sometimes not available or artificial (cf. (110c) below). Extensive objects like *mata* ‘eyes’, *muka* ‘face’ are quite common with lexical reciprocals which have no underlying non-reciprocal constructions, like *ber-temu muka* ‘to meet face to face’, *ber-beda pendapat* lit. ‘to differ in opinions’. This type then should be interpreted as an extension of the “canonical” diathesis type. Here is another similar example:

- (110) a. *Amir dan Yusuf ber-hadap-an.*
 ‘Amir and Yusuf [sat/stood] opposite each other.’
 b. *Amir dan Yusuf ber-hadap-an muka.*
 lit. ‘Amir and Yusuf [sat/stood] opposite each other face to face’ (*muka* ‘face’).
 c. **Amir meng-hadap muka Yusuf.*
 lit. ‘Amir [sat/stood] opposite Yusuf’s face.’

5.2 “Indirect” reciprocals

These are two-place reciprocals (transitive and intransitive) derived from three-place (transitive and intransitive) verbs. The subject of a reciprocal construction combines the agent and addressee roles.

5.2.1 Derived from three-place transitives

The underlying constructions may have two forms of the object naming the addressee: it is a direct object in (111a) due to the suffix *-i* and non-direct in (111b):

- (111) a. *Amir me-ngirim-i Farid surat.*
 A. *meN*-send-*i* F. letter
 ‘Amir sends Farid a letter.’
 b. *Amir me-ngirim surat kepada Farid.*
 A. *meN*-send letter to F.
 ‘Amir sends a letter to Farid.’

- c. *Amir dan Farid ber-kirim-kirim-an surat.*
 ‘Amir and Farid send each other letters’, ‘A. and F. correspond with each other.’

Here also belong *me-lempar/me-lempar-i* ‘to throw’, *mem-beri* ‘to give’, *meng-ambil* ‘to take’, etc.

5.2.2 Derived from three-place intransitives

In this case the prepositional object denoting an addressee is omitted and the other object is retained:

- (112) a. *Amir ber-tanya kepada Farid tentang Fatimah.*
 A. ber-ask to F. about F.
 ‘Amir asks Farid about Fatima.’
 b. *Amir dan Farid tanya-ber-tanya tentang Fatimah.*
 ‘Amir and Farid ask each other about Fatima.’

Reciprocals of this type are *omong-meng-omong-kan* ‘to talk with each other’ (← *ber-omong-omong* ‘to talk’, *ber-bisik-an* ‘to whisper to each other’ (← *ber-bisik* ‘to whisper’).

5.3 “Possessive” reciprocals

This type comprises two-place transitive reciprocals derived from two-place transitive constructions containing a direct object with an attribute. Between the referents of the latter two, the relationship of inalienable possession is obligatory.

- (113) a. *Amir me-nepuk bahu Farid.*
 A. meN-pat shoulder F.
 lit. ‘Amir patted Farid’s shoulder.’
 b. *Amir dan Farid tepuk-me-nepuk bahu.*
 A. and F. REC-meN-pat shoulder
 ‘Amir and Farid patted each other on the shoulders.’
 lit. ‘Amir and Farid patted each other with respect to shoulders.’
- (114) a. *Amir meng-genggam tangan Farid.*
 A. meN-squeeze hand F.
 ‘Amir squeezed Farid’s hand.’
 b. *Amir dan Farid ber-genggam-an tangan.*
 A. and F. REC-squeeze-REC hand
 ‘Amir and Farid hold tight each other by the hand.’

These constructions differ from those in 5.1.3 in that the base constructions contain regular direct objects. However, here again the objects in the derived constructions should not be identified with a regular direct object. The valency of the derived verb undergoes reduction in the way already mentioned (see the beginning of Section 5).

5.4 Object-oriented reciprocals absent?

There are no morphological means of forming this type of reciprocals from subject-oriented morphological reciprocals, in contrast to subject-oriented lexical reciprocals (see 3.3.1.1). Instead, syntactic means are used, cf. (114) and (115):

- (115) *Yusuf me-nyuruh Amir dan Farid ber-jabat-an tangan.*
 Y. meN-say A. and F. REC-shake-REC hand
 ‘Yusuf told Amir and Farid to shake hands.’

6. Periphrastic reciprocals with the auxiliary *saling* ‘mutually’

6.1 Introductory

The auxiliary *saling* is the most neutral and the least restricted means of encoding reciprocity. As was pointed out by Kridalaksana (1983:400), it occurs with non-reciprocal verbs of various affixal patterns. It is always placed in contact pre-position to the verb (see (1e)) and, as a rule, cannot be separated from the latter by other words. This auxiliary does not occur with any other parts of speech (cf. 6.4). Functionally, it is intermediate between an auxiliary and a prefix. There seem to be no other functionally similar auxiliary words in Indonesian.

There are no restrictions on the formation of reciprocals with *saling* ‘mutually’ other than the trivial semantic restriction (semantic homogeneity of agent and patient allowed by the underlying verb). Note, however, that verbs in the passive form seldom combine with *saling*. With regard to diathesis types, periphrastic reciprocals are almost no different from morphological reciprocals in that the same valency changes take place here, i.e. a transitive verb is intransitivized in the “canonical” diathesis type, and the direct object is retained in the “indirect” type. A minor difference from morphological reciprocals is that the underlying transitive verb retains its ability to combine with the pronominal enclitic:

- (116) *Kami, teman-teman-nya yang ketika hidup-nya saling me-rebut -kan-nya*
 we friend-PL-her REL when life-her mutually ACT-take.away -TR-her
ikut pula kehilangan. (C. 149)
 also PRTL lose
 ‘We, her friends who tried to take her away from each other when she was alive, also felt the loss.’

But on the other hand *saling* co-occurs with intransitive lexical reciprocals. As we see, it has a specific range of syntactic functions.

With respect to aspect, periphrastic reciprocals seem to be less specific than the morphological types. Periphrastic reciprocals are neutral aspectually, while circumfixed reciprocals tend to be processual and pre-reduplicated reciprocals are more likely to denote succession.

Instead of the auxiliary *saling*, the dialectal loan-word *baku* (with the same meaning) can be used. A reciprocal with this element denotes an intensive, “violent” action,

as Steinhauer (1994:81) describes it. The active prefix *meN-* is dropped as common in colloquial speech.

- (117) a. *Yusuf meng-hantam perampok itu.* 'Yusuf struck this robber.'
 b. *Mereka baku hantam.* 'They strike each other wildly.'

6.2 Diathesis types. Subject-oriented constructions only

6.2.1 "Canonical" reciprocals

6.2.1.1 *Derived from two-place transitives.* This case is analogous to (117) in that it also involves intransitivization:

- (118) a. *Amir meng-ganggu Farid.*
 'Amir teases Farid.'
 b. *Amir dan Farid saling meng-ganggu.*
 'They tease each other', lit. 'Amir and Farid mutually tease'; cf. also:
 (119) *Dengan tambahnya hari, mereka tambah saling me-nenal.* (C. 231)
 'In due course, they came to know each other better and better.' (See also (1e)).

6.2.1.2 *Derived from two-place intransitives.* The verb undergoes a valency change in the same way as in 5.1.2 (i.e. the preposition is not retained):

- (120) a. *Amir cinta kepada Fatimah.* 'Amir loves Fatima.'
 b. *Amir dan Fatimah saling cinta.* 'Amir and Fatima love each other.'

A textual example:

- (121) a. *Amir meng-angguk kepada Fatimah.*
 'Amir nods to Fatima.'
 b. *Kami ber-pandang-an dan saling meng-angguk.* (R. 340)
 'We exchanged glances and nodded to each other.'

6.2.2 "Indirect" reciprocals

The following examples, analogous to (111) and (112) respectively, illustrate this diathesis type:

- (122) a. *Amir me-ngirim-i Farid surat.*
 'Amir sends Farid a letter.'
 b. *Amir dan Farid saling me-ngirim-i surat-surat yang telah bertumpuk.*
 'Amir and Farid send each other letters that are already piling up.'
 (123) a. *Amir ber-tanya kepada Farid tentang Fatimah.*
 'Amir asks Farid about Fatima.'
 b. *Amir dan Farid saling ber-tanya tentang Fatimah.*
 'Amir and Farid ask each other about Fatima.'

Compare also (116) and (124):

- (124) *Mereka saling men-cerita-kan kesulitan pembayaran air.* (A. 412)
 'They told each other about the difficulties of paying for water.'

6.2.3 “Possessive” reciprocals

The following example is analogous to (113):

- (125) a. *Amir me-nepuk bahu Farid.* ‘Amir patted Farid’s shoulder.’
 b. *Amir dan Farid saling me-nepuk bahu.*
 lit. ‘Amir and Farid patted each other’s shoulders’, i.e. ‘Amir and Farid patted each other on the shoulder.’

A textual example:

- (126) a. *Beni me-neliti perubahan diriku.*
 ‘Beni looks closely for changes in me.’
 b. *Kami saling me-neliti perubahan yang bisa di-lihat.* (A. 69)
 ‘Both of us look attentively for changes in each other which could be [easily] discerned.’

6.3 Pleonastic use of the auxiliary *saling* with morphological and lexical reciprocals

This usage is not uncommon in texts and it may be accounted for by a desire to emphasize the reciprocal meaning or by a spontaneous “mutual attraction” of synonymous formations. Here are textual examples of *saling* co-occurrent with a lexical, circumfixed, and a pre-reduplicated reciprocal respectively:

- (127) *Sejak itu Prita dan pemuda itu saling dekat.* (A. 93)
 ‘Since then Prita and the young man drew closely together.’

(*dekat* ‘to be close’; cf. (31)). The auxiliary *saling* here plays the role described for *ber...-an* in 3.3.2.2.

- (128) *Mereka tak berani lagi saling ber-pandang-an muka.* (R. 69)
 ‘They did not any more dare to look each other in the face.’ (*me-mandang* ‘to look at sb’).
 (129) *Rupanya mereka saling ber-tubruk-an.* (A. 554)
 ‘Apparently they ran into each other’; cf. *me-nubruk* ‘to collide, run against’.
 (130) *Kami saling liwat-me-liwat-i.* (Ge. II-56) ‘We passed each other.’
 (cf. *me-liwat-i* ‘to go past sb’).

In the following example, *saling* co-occurs with a pre-reduplicated reciprocal derived from the lexical reciprocal *ber-debat* ‘to argue’ (see (25)):

- (131) *Kami saling debat-ber-debat.* (Ge. I-198) ‘We argued with each other.’

6.4 Nominalization

There are practically no action nominals with *saling*. However, *saling pe-ngerti-an* ‘mutual understanding’ is very commonly used (cf. the circumfix *per...-an* in 3.4).

6.5 Object-oriented reciprocals

The situation here is analogous to that described in 5.4; cf.:

- (132) *Amir me-larang Farid dan Yusuf saling me-nuduh.*
 ‘Amir forbids Farid and Yusuf to accuse each other.’

7. Means of expressing reciprocal arguments

7.1 The simple reciprocal construction

In this principal type of constructions a plural or dual agent of the verbal action is named by the subject, the same means of expression being employed for the latter as with non-reciprocal predicates (plural form of nouns and pronouns, collective nouns, conjoined word groups with coordinative conjunctions, etc.; see most of the examples above).

In simple constructions, two principal types of subject can be distinguished: subject expressed by a single word like ‘we’, ‘they’, ‘people’, ‘soldiers’, or by a word group like ‘two boys’, etc., and coordinated subjects, when each reciprocal argument is expressed by a separate word (cf. ‘Amir and Farid’, etc.). It is but natural that only reciprocal sentences with a coordinated subject can be transformed into discontinuous constructions.

We shall consider some extensions of the simple reciprocal construction which are not possible in the discontinuous construction.

1. The explicit expression of reciprocity *satu sama lain* ‘each other’, lit. ‘one with other’ (*sama* ‘with’). In the two registered examples this adverbial expression occurs with lexical reciprocals and serves to emphasize reciprocity, it seems:

- (133) *Mereka selalu ber-tengkar satu sama lain.* ‘They always quarrel with each other.’

This marker of reciprocity may also (though seldom) take the subject position. In (134a) it is the subject of the thematic (topical) construction:

- (134) a. *Satu sama lain ber-jauh-an letak-nya.* (A. 195)
 one with other REC-far-REC location-their
 ‘The one and the other are located (lit. ‘their location’) far from one another’
 (‘their location’ is the subject of subordinated predication).

A more common version:

- b. *Letak-nya ber-jauh-an satu sama lain.*
 lit. ‘Their locations are far from one another.’

The use of *satu sama lain* instead of the marker *saling* seems, however, not quite acceptable for stylistic reasons.

2. The preposition (*di*) *antara* ‘between’. This (complex) preposition within the subject seems to be substandard:

- (135) *Di antara mereka saling ber-pandang-an.* (R. 161)
 ‘They exchanged glances between themselves.’

3. The reciprocal arguments are expressed by an attribute of the subject which is a substantivized/nominalized lexical reciprocal, the predicate being expressed by a pre-duplicated reciprocal with an aspectual meaning. The derivational chain seems to be:

- (136) a. *Tiga orang itu ber-cakap-cakap.*
 ‘These three men talked.’
 → b. *Per-cakap-an antara tiga orang itu.*
 ‘The talk of these three men between themselves.’
 → c. *Per-cakap-an sambung-me-nyambung.*
 ‘The talk (was) continued’, lit. ‘continued each other.’

Compare a textual example:

- d. *Di dalam jip per-cakap-an antara tiga orang itu sambung-me-nyambung.*
 (R. 139) ‘In the jeep, the conversation of these three men continued (lit. ‘continued each other’).

4. Constructions with the subject expressed by a group of coordinated words containing repetition of the same noun cannot be transformed into discontinuous constructions, it seems:

- (137) *Manusia dan manusia bunuh-mem-bunuh.* (M. 23)
 lit. ‘Humans and humans kill each other.’

7.2 Discontinuous arguments with lexical reciprocals

All lexical reciprocals (with a few exceptions; see 3.3.1.2) can be used with discontinuous arguments, it seems. In this case the second argument usually has the preposition *dengan* ‘with’, i.e. the preposition which marks a comitative adjunct of non-reciprocal verbs:

- (138) *Amir datang [dengan Farid].* ‘Amir comes [with Farid].’

With some reciprocals, the prepositions *dari* ‘from’, *kepada* ‘towards’, etc. (commonly used with an object of two-place intransitives; see (13), (14), (15a), (65a), (108a), (111b)) are common:

- (139) a. *Mereka telah ber-pamit-an dengan ibu yang tua.* (A. 158)
 ‘They said goodbye to [their] old mother.’
 b. *Kakaknya itu ber-pamit-an kepada bapak dan emak-nya.*
 ‘Her eldest brother said goodbye to his father and mother.’

The second argument may have no preposition (i.e. a construction looks like a transitive one) in spoken language and in literary texts if a sentence is somewhat aphoristic. This seems to concern lexical reciprocals only :

- (140) coll. *Dia ingin ber-temu Fatimah.*
 ‘He wants to meet with Fatima.’
 (141) *Beras ber-ganti jagung. Jagung ber-ganti galek.* (Bl. 271)
 ‘Rice was followed by maize. Maize was followed by dried cassava.’

- (142) *Dan kembali hari ber-sambung hari.* (Bl. 275)
 ‘And again one day continued another’ (lit. ‘day continued [with] a day’).

7.3 Discontinuous arguments with morphological and periphrastic reciprocals

Native speakers permit the use of all types of reciprocals in the discontinuous construction, but judging by written texts the use of a reciprocal with discontinuous arguments seems to be determined by the degree of its lexicalization, and also by its semantic affinity to lexical reciprocals. The occurrence of the types of reciprocals in the discontinuous construction diminishes from (a) to (c):

- (143) a. lexical reciprocals (see Sections 3 and 7.2)
 b. prefixed (non-productive) and circumfixed reciprocals (see 4.2 and 4.3)
 c. pre-reduplicated and periphrastic reciprocals (see 4.5 and 6).

The types of reciprocals under consideration combine (almost) exclusively with the comitatively marked second argument (i.e. marked by the preposition *dengan* ‘with’). With respect to the diathesis types, discontinuous constructions are similar to simple reciprocal constructions.

1. Circumfixed reciprocals

(a) “Canonical” reciprocals:

- (144) a. *Amir men-cium Fatimah.* ‘Amir kisses Fatima.’
 b. *Amir dan Fatimah ber-cium-an.* ‘Amir and Fatima kiss.’
 c. *Amir ber-cium-an dengan Fatimah.* lit. ‘Amir kisses with Fatima.’

- (145) *Dan di situulah kau ber-kenal-an dengan Lola?* (G. 11)
 ‘And there you got acquainted with Lola?’

- (146) *Aku ber-pandang-pandang-an dengan mereka.*
 ‘I exchanged glances with them.’

(b) “Indirect” reciprocals. In the comitative construction, an object is common and even obligatory. The verb, however, is morphologically intransitive:

- (147) *Fatimah ber-kirim-kirim-an surat dengan Yusuf.*
 ‘Fatima corresponds (lit. ‘mutually-sends letters’) with Yusuf.’

(c) “Possessive” reciprocals:

- (148) *Rejo ber-pegang-an tangan dengan embok Karjo.*
 ‘Rejo was holding hands with Ma Karjo.’

2. *Pre-reduplicated reciprocals.* Although it is claimed in Ogloblin (1981) that these reciprocals are not used in comitative constructions, examples of such usage do occur, though very seldom (they are probably possible with only some of pre-reduplicated reciprocals). Here is an example for “canonical” reciprocals:

- (149) *Setiap bagian tunjang-me-nunjang dengan bagian yang lain.* (ASB. 82)
 lit. ‘Each part supports each other with another part.’

3. *Periphrastic reciprocals*. We do not have any textual examples of periphrastic reciprocals with a comitative argument. Our informant considers (150a) as ungrammatical:

- (150) a. **Saya saling men-cinta-i dengan Rayati*. 'I and Rayati love each other.'

But (150b), with a different word order (where *dengan* takes the position of the conjunction *dan* 'and'), is possible in colloquial speech:

- b. *Saya dengan Rayati saling men-cinta-i*. lit. 'I with Rayati mutually love.'

It is similar to simple reciprocal constructions with the coordinated subject. Examples like (150a) are cited in specialist literature although we have not found any in written texts. It is worthy of note that the periphrastic reciprocal in (150a) is semantically contiguous to a number of lexical reciprocals which are common in constructions of this type:

- (151) *A saling me-maki dengan B*. 'A quarrels with B.' (*me-maki* 'to scold sb')
(see Steinhauer 1994:86).

7.4 Non-reversible discontinuous constructions

In the discontinuous construction, the subject and object are not equal pragmatically. Hence the comitative object may be expressed by a noun of lower denotational status than the subject, particularly by a non-human noun if the subject is human. For this reason a discontinuous construction cannot sometimes be transformed into a simple reciprocal construction; cf. (152) and (153):

- (152) a. *Kami ber-hadap-an dengan musuh*. 'We are facing the enemy.'
b. *Kami dan musuh ber-hadap-an*. 'We and the enemy are facing each other.'
- (153) a. *Kami ber-hadap-an dengan kesulitan*. 'We are facing difficulties.'
b. **Kami dan kesulitan ber-hadap-an*. 'We and difficulties are facing each other.'

7.5 Passive constructions with derived reciprocals

These can be simple and discontinuous; see (37b), (44c), (45c), (154c).

8. Reciprocals derived from reflexives

The reflexive meaning is commonly expressed by the reflexive pronoun *diri* 'oneself' which can take direct object position. It is but natural that reciprocals can be derived only from those reflexives which are in their turn derived from three-place transitives, including causative ones. In such cases, a reciprocal construction is of the "indirect" diathesis type; cf.:

- (154) a. *Amir me-negenal Ali*. 'Amir knows Ali.'

As well as in other languages, the reciprocal relation is expressed by reciprocals derived from verbs like ‘to follow’, ‘to pursue’; the reduplicated form is preferable:

- (160) a. *meng-iring(-i)* ‘to accompany sb’
ber-iring-iring-an ‘to walk one behind the other, in a file’
 b. *me-ngejar* ‘to chase sb’
ber-kejar-kejar-an ‘to chase each other’
 c. *me-nyusul* ‘to follow sb’
ber-susul-susul-an ‘to follow each other.’ Compare also:
- (161) *Daun-daun sampah seperti armada ber-iring-iring-an.* (PR. 27)
 ‘Fallen leaves float (lit. ‘follow’) one after another like a fleet.’

As we see, reciprocals derived from the given verbs can denote referentially non-reciprocal actions, which is due to presenting the participants of a situation as identical or replacing one another.

- (162) *Dan pidato demi pidato sambung-me-nyambung dari radio itu.* (Bl. 346)
 lit. ‘And speech after speech on the radio continued (followed) one another.’

10. Sociative

10.1 Circumfixed sociative-like forms

They are derived by means of the circumfix *ber...-an* from one-place and two-place intransitives (including qualitative verbs), viz. root verbs and those with the prefixes *ber-*, *meN-*, *ter-*. The subject usually refers to more than two persons or things.

These verbs can be viewed as sociative with reservations. Their basic meaning is that of “great quantity” of an action, and plurality of the subject referents is one of the possible implications of this extensive meaning. The other aspects of this meaning are spatial or temporal duration. Thus, the verb *ber-tidur-an* ‘to sprawl in sleep’, ‘to oversleep’ (← *tidur* ‘to sleep’) can characterize a single subject referent. But the prevalent use of these verbs is with plural subjects, although the actions of co-participants can take place at a different time, in different places, in a different manner, etc. (cf. Agus (1989:218ff.) where some derivatives of this type are dealt with from the viewpoint of plurality of action (iterativity, etc.)). Compare:

- (163) a. *Ayah ber-baring di kamar.* (A. 402) ‘Father was lying in the room.’
 b. *Kambing-kambing telah ber-baring-an di sela-sela semak rimbun.* (A. 55)
 ‘The goats were already lying around among shady bushes.’
- (164) a. *Ranting itu patah.* ‘The branch broke.’
 b. *Ranting-ranting ber-patah-an.* ‘Branches are breaking.’
- (165) a. *Buah itu merah.* ‘This fruit is red.’
 b. *Jala kami ber-merah-an.* (A. 139) ‘Our fishing-nets became red.’

The following verbs also belong to the class of morphological sociatives (translation of the sociatives is omitted):

(166) <i>ber-degup</i> ‘to beat (of the heart)’	→	<i>ber-degup-an</i>
<i>ber-diam</i> ‘to live, to inhabit’	→	<i>ber-diam-an</i>
<i>ber-gantung</i> ‘to hang’	→	<i>ber-gantung-an</i>
<i>ber-baris</i> ‘to take up formation/draw up’	→	<i>ber-baris-an</i>
<i>ber-diri</i> ‘to stand’	→	<i>ber-diri-an</i>
<i>me-nangis</i> ‘to cry’	→	<i>ber-tangis-an</i>
<i>cecer</i> ‘to be lost, to slip away’	→	<i>ber-cecer-an</i>
<i>ter-dampar</i> ‘to be washed ashore’	→	<i>ber-dampar-an</i>
<i>jatuh</i> ‘to fall’	→	<i>ber-jatuh-an</i>
<i>muncul</i> ‘to come into evidence’	→	<i>ber-muncul-an</i>
<i>pucat</i> ‘to be pale’	→	<i>ber-pucat-an</i>
<i>me-nangis</i> ‘to cry’	→	<i>ber-tangis-an</i> .

The material discussed in this subsection is part of the problem of polysemy of the reciprocal marker *ber-...-an* and it is a continuation of Section 4.2.4 above.

10.2 Periphrastic sociative with the auxiliaries *sama* and *pada* ‘together’

These auxiliaries are used, like *saling*, in contact pre-position to the verb. Their only meaning is that of joint action. There are no morphological or semantic restrictions on their use in sociative constructions. The subject may have a plural or dual referent. The word *pada* is colloquial.

- (167) a. *Dia me-nunduk.* ‘He lowered his eyes.’
 b. *Keduanya sama me-nunduk.* (A. 453) ‘They both lowered their eyes.’
- (168) a. *Muncul sebuah keranjang.*
 ‘A basket appeared there.’
 b. *Lalu keranjang-keranjang pada muncul.* (A.203)
 ‘Then yokes and baskets appeared.’

The markers of joint action may sometimes co-occur with circumfixed reciprocals:

- (169) *pemain-pemain sama ber-pandang-an.* (A. 440) ‘The musicians exchanged glances.’

10.3 Periphrastic sociative forms with *saling* ‘mutually’

This auxiliary is sometimes used to express the sociative meaning rather than the reciprocal:

- (170) *Torkis dan isteri masuk ke dalam, muncul saling meng-gendong anak yang tidur.* (R. 276)
 ‘Torkis and his wife entered the house, (then) appeared with (lit. ‘mutually carry’) the sleeping child in their arms.’
- (171) *Kami saling me-nge-tahu-i betapa baik arti pergaulan.* (S. 24)
 ‘We [both] know (lit. ‘mutually know’) what a good thing personal contact is.’

11. Verbs of joint class membership

These verbs, semantically contiguous to sociatives and reciprocals, are formed with the help of the prefix *se-* which is a proclitic form of the numeral *satu* ‘one’ (they are interchangeable in colloquial speech). This prefix is added to root or affixed nouns. The subject refers to a plural or dual co-possessor of a third entity or entities. The verbs have a comitative variant with *dengan* ‘with’:

- (172) a. *Amir dan Hasan se-kelas.* ‘Amir and Hasan are in the same class at school.’
 b. *Amir se-kelas dengan Hasan.* ‘Amir is in the same class with Hasan.’

Here is a list of these verbs:

- (173) *se-bangsa* ‘to be of the same nation’
se-tanah-air ‘to be compatriots’
se-nasib ‘to have the same fate’
se-sekolah ‘to go to the same school’
se-pendapat ‘to be of the same opinion’
se-perasaan ‘to share the same feelings’
se-ketiduran ‘to share the bed, to be bed-fellows’
se-rumah ‘to live in the same house.’

12. Etymology of the reciprocal markers

Etymological and historical data on Indonesian reciprocal markers are rather scarce. We will confine ourselves to brief notes.

The prefix *ber-* probably originates from *mar-* (phonetically with the vowels [a] or [0]) found in Old Malay inscriptions of the 7th century. The latter prefix was used in intransitive and active transitive verbs. In medieval (classical) Malay the prefix *ber-* also had both of these functions. In Indonesian the active transitive function of *ber-* is only occasional in earlier texts. Transition from *mar-* to *ber-* can be accounted for by phonetic evolution (see Adelaar 1985: 191).

In the 7th century Malay, a single occurrence of the double prefix *marṣi-* has been found, which was described by Adelaar (1992: 396) as reciprocal (*marṣihāji* ‘to treat each other as royal’ ← *hāji* ‘king’). Its modern counterpart *bersi-*, however, practically does not occur in texts.

Both circumfixed and pre-reduplicated reciprocals are common in medieval Malay (see, for instance, a grammar of traditional Malay (van Wijk (1985: 106–108)).

According to Ogloblin & Zarbaliev (1993) the evolution of reciprocals in languages of the Western Indonesian area shows a certain shift from prefixal to circumfixal and suffixal means in their morphological structure. The suffixal component of the circumfix *ber-...-an* is historically connected to the idea of plurality or large quantity, which is still apparent both in Malay (cf. *laut* ‘sea’ → *laut-an* ‘ocean’) and in some closely related languages.

The auxiliary *saling* ‘mutually’ may be of rather ancient provenance, but we do not have the earliest textual evidence. It has counterparts in some related languages, e.g. *silih* ‘mutually’ in Old Javanese (cf. the Malay idiom *silih berganti* ‘to alternate with each other’).

Acknowledgments

We are grateful to Agus Salim for his generous help with the language data. We also acknowledge valuable comments of the late I. Sh. Kozinsky on an earlier version of this paper.

1. Introduction

Nélêmwa is one of the twenty-eight Kanak languages spoken in New-Caledonia; they belong to the Oceanic subgroup of the Austronesian family. Nélêmwa, and its dialectal variant Nixumwak, are spoken by neighbouring groups (approximately one thousand speakers) in the far north of New Caledonia, around Koumak, Poum, Tiabet and the neighbouring islands (Brill 2002).

1.1 An overview of the *pe-* prefix

There are no reciprocal pronouns in Nélêmwa. Reciprocity is marked morphologically by the prefix *pe-* associated (under certain conditions) with the suffix *-i*. The circumfix *pe-...-i* is a reflex of the Proto-Oceanic reciprocal affixes **pa(R)i-...-i* (Pawley 1973:152). In Proto-Oceanic, this prefix (referred to as reciprocal¹) implies “mutual interaction between the entities denoted by the subject of the verb” and refers to “unified or conjoined

1. A ‘misleading label’ according to Pawley: “the strict reciprocal meaning was restricted to a subclass of verbs whose properties remain to be defined” (Pawley 1973:152).

action by a plural subject, or repeated action by a singular subject, or unification of objects” (Pawley 1973:150–1; see also Lichtenberk 2000; Bril 2005). Nêlêmwa *pe-* has all these meanings, but it does not express reflexivity.

1.1.1 Reciprocal meanings of *pe-*

They are as follows.

- *Subject-oriented reciprocity* (see 3.1). Reciprocity may be restricted (with dual subject arguments) or extended (with plural subject arguments). The reciprocal suffix *-i* (henceforth *R-i*) is restricted to the expression of reciprocity and only suffixed to transitive verbs (see table 3 and Section 3). *pe-* may be prefixed to any lexical item (verbal or nominal), it may also be prefixed to any class of nouns or verbs (intransitive, transitive, ditransitive, active or non-active). Reciprocal subject arguments may be animates or inanimates.
- *Object-oriented reciprocity* (see 3.2). With transitive verbs, *pe-* may express reciprocity between object arguments. Subject pronoun number is then indifferent (singular, dual or plural). The suffix *R-i* never appears in this case. Reciprocal objects are mostly (but not exclusively) inanimates.
- *Reciprocity and expression of identity*. With this meaning, *pe-* is prefixed to stative verbs expressing quality, to impersonal verbs and to nouns with predicative or argument function; it has a comparative force and expresses identity, similarity or symmetry between two or more items (see Section 9). The suffix *R-i* does not appear in this case either.

1.1.2 Polysemy of *pe-*

This prefix may have non-reciprocal meanings. In this case, the two arguments (subject and object) are not co-referential.

- *Sociative value of *pe-**: sociative subject arguments may be dual or plural.
- *Other values*. These are mostly chain relations indicating successive, reversible or non-reversible processes and adverbial² values such as intensive, diversative and spontaneous meanings (see Table 1 and Section 8). Subject pronoun number is indifferent (singular, dual or plural) and varies with the number of arguments involved (see Table 2).

The reciprocal, sociative and adverbial meanings of *pe-* all are very productive. With such semantic diversity, potential ambiguities are avoided by subject pronoun number, the occurrence of the suffix *R-i* and that of additional adverbs. The syntactic/semantic category of verbs also acts as a filter to help interpret the various meanings of *pe-*. With active verbs (transitive or intransitive), *pe-* may have any of these meanings. With stative verbs, *pe-* may express comparison as well as other meanings (intensive, diversative), but not the sociative meaning. There are other semantic filters: intransitive verbs of movement outrule

2. Here “adverbial” refers to the fact that such meanings are often expressed or reinforced by adverbs.

Table 1. Possible association of the prefix *pe-*

	Reciprocity of subjects	Reciprocity of objects	Sociative	Other meanings (intensive, diversative, separative)
<i>pe-</i> + stative verb	comparison	∅	∅	+
<i>pe-</i> + intransitive verb	+	∅	+	+
<i>pe-</i> + transitive verb	+	+	+	+
<i>pe-</i> + noun				
in predicative function	comparison	∅	+	+
in argument function	+	∅	+	+
<i>pe-</i> + pronouns ³	+	∅	+	+

Table 2. Types of subject pronoun agreement

Subject pronouns	Reciprocity of subjects	Reciprocity of objects	Sociative	Other meanings (intensive, diversative, separative)
dual or plural all persons	+	+	+	+

the reciprocal meaning; *pe-* may then express sociative or adverbial values (see Section 8). Context also helps interpret the meaning of *pe-*.

2. Notes on Nêlêmwa grammar

2.1 Nouns and pronouns

2.1.1 *Noun classes*

There are two main classes:

- Bound nouns have an obligatory possessive suffix (*-t* when the determiner is an inanimate noun or a collective, indeterminate animate noun such as *agu* ‘people’; *-n* for a 3rd person human possessor): *duxat-t* ‘noise’ (lit. ‘noise of this’), *axomoo-n* ‘mother’ (lit. ‘mother-his/her’). Bound nouns are marked directly by possessive suffixes or postposed possessor nominals: *pwaxi thaamwa ena* ‘the child of this woman’ (lit. ‘child woman this’). They express inalienable possession and include kinship terms and body parts.
- Independent nouns have an autonomous form (without any obligatory determination marker) as in *mwa* ‘house’, *bu* ‘bait, hook’. There are two subclasses of independent nouns, those which have direct (inalienable) possessive markers like bound nouns (*mwa-ny* ‘house-my’) and those which have indirect (alienable) prepositional posses-

3. Independent, deictic or anaphoric pronouns. *pe-* is never prefixed to subject or object personal pronouns.

sive markers (*i* for humans, *o* for inanimates): *bu i axaleny* ‘this man’s bait’, *bu i ye* ‘his bait/hook’ (lit. ‘bait of him’), (see B in Section 2.1.2).

Nouns do not vary in number. Number (singular, dual, or plural) is marked only by agreement with a subject pronoun or with deictic/anaphoric pronouns. In some cases, reduplication may also express plurality with the meaning ‘all sorts, all types of’.

2.1.2 Personal pronouns

The system of personal pronouns is given in Table 3.

2.1.3 Nouns as predicates

There is a noun-verb opposition evidenced by derivational processes such as nominalising affixes which derive verbal roots.

On the other hand, all lexical items (nouns, pronouns or verbs) may be predicates. Thus, nouns may have both argument and predicative functions. When nouns are used as predicates as in (1), they retain their nominal determiners and may be associated with aspect, modal markers and subject pronouns:

- (1) *i u thaamwa.*
 3SG PFV woman
 ‘It became a woman’ (a coconut was changed into a woman).

Table 3.

	Bound pronouns		Independent pronouns	Suffixes (Inalienable) possession (A)	Alienable possession (B)
	subject	object			
1SG	<i>na</i>	<i>-na</i>	<i>na</i>	<i>-ny</i>	<i>i na</i>
2SG	<i>co/yo</i> ⁴	<i>-yo</i>	<i>co</i>	<i>-m</i>	<i>i yo</i>
3SG	<i>i/Ø</i> ⁵	<i>-e/Ø</i>	<i>ye/e</i>	<i>-n /-t</i>	<i>i ye</i>
1DU.INCL	<i>hî</i>	<i>-hî</i>	<i>hî</i>	<i>-hî</i>	<i>i hî</i>
1DU.EXCL	<i>ma</i>	<i>-man</i>	<i>yaman</i>	<i>-man</i>	<i>i man</i>
1PL.INCL	<i>hâ</i>	<i>-hâ</i>	<i>hâ (âk)</i> ⁶	<i>-hâ</i>	<i>i hâ</i>
1PL.EXCL	<i>va</i>	<i>-va</i>	<i>yava(ak)</i>	<i>-va</i>	<i>i va</i>
2DU	<i>mo</i>	<i>-mon</i>	<i>yamon</i>	<i>-mon</i>	<i>i mon</i>
2PL	<i>wa</i>	<i>-wa</i>	<i>yawa(ak)</i>	<i>-wa</i>	<i>i wa</i>
3DU	<i>hli/Ø</i>	<i>-hli/Ø</i>	<i>hli/Ø</i>	<i>-hli</i>	<i>i hli</i>
3PL	<i>hla/Ø</i>	<i>-hla/Ø</i>	<i>hla(ak)/Ø</i>	<i>-hla</i>	<i>i hla</i>

4. *co* when sentence initial or with emphatic meaning; in all other positions *yo*.

5. For inanimates, 3SG, 3DU, 3PL are marked Ø.

6. Pronouns with final *-ak* are emphatic and occur in ceremonial speeches.

2.2 Verbs

There are four main categories:

- Stative verbs expressing quality (adjectives as a syntactic category do not exist).
- Intransitive verbs with active or non-active meaning.
- Intransitive or transitive verbs of feeling, speech with an indirect object. The indirect object (IO) is marked by a preposition (*i* + humans, *o* + inanimates⁷): *i hiiya* ‘he is jealous’, *i hiiya i hla* ‘he is jealous of them’.
- Transitive verbs with direct objects: most have a transitive flexion (generally marked by a vowel *-i*, *-e*, or of the (V)CV type), or marked by a transitive suffix (*-li* + inanimate objects): v.i. *fuung* and v.t. *fuug-e* ‘to gather’; v.i. *tuâ* and v.t. *tuâ-i* ‘to deceive’; v.i. *khet* and v.t. *khiri* ‘to comb’; v.i. *hiwi* and v.t. *hiwi-li* ‘to rub, grate’.

Some verbs (generally ended in *-a*) do not have any transitive flexion: *khua* ‘to bite’, *thiwalaxa* ‘to tickle’, *cabwa* ‘to pinch’, *oxo* ‘to follow’.

- Ditransitive verbs with either one direct and one indirect object, or with two indirect objects.

2.3 Case marking and word order

Argument structure is split: bound pronouns are accusative (they mark subject and object functions, coded as *s* and *o*), whereas nominal arguments are marked absolutive or ergative.

- Order of personal pronouns: *s* V-*o*

Subject pronouns are preverbal but non-proclitic, object pronouns are postverbal and enclitic (*s*V-*o*).

- Order and case marking of nominal arguments.

The neutral order is verb initial, followed by nominal arguments. The nominal prime argument of a transitive verb (coded A) is marked by agent morphemes ((*e*)*a* for human agents, *ru* for non-human or indefinite, collective human agents), whereas the nominal prime argument of an intransitive verb (coded S) is absolutive, like the second nominal argument of transitive verbs (the object, coded O). The absolutive case is marked \emptyset .

Besides, a prime human nominal argument is cross-referenced by a co-occurring subject pronoun (inanimates are zero-marked):

- (2) *i gi thaamwa ena.*
s V S
 ‘This woman is crying.’
 (*thaamwa* is absolutive and agrees with the subject pronoun *i*).

7. Thus, the indirect object pronouns of a verb and the indirect/alienable possessive pronouns are marked by the same paradigm introduced by the preposition *i*, *o* (see Table 3 on personal pronouns in 2.1.2).

- (3) *hla hiiya i ye a âlô mahleena.*
 3PL be,jealous CONN 3S AG child these.DEICT
 s V IO A
 ‘These children are jealous of him.’
 (*âlô* is ergative and agrees with the subject pronoun *hla*).

Agreement patterns as follows:

- with an intransitive verb: sVS (s = S);
- with a transitive verb: sVOA (s is co-referential with A; O may be a noun or a pronoun, or may be direct or indirect (IO)).

The transitive flexion of verbs varies with object determination, as well as its \pm human, \pm animate feature. Argument structure also varies with object determination:

- an indeterminate object is “incorporated”, verbal flexion is then indeterminate, the prime argument is absolutive as in an intransitive structure;
- with a determined object, verbal flexion is definite, the prime argument is ergative; this is the canonical transitive structure.

2.4 Valence and diathesis

There is no passive in Nêlêmwa; diathesis is expressed by variations of transitivity and verbal valence which can be reduced or increased by various syntactic means.

It may be increased with the causative prefix *fa-*: *coola* ‘to be strong’ \rightarrow *fa-coola* ‘to strengthen’. It can be decreased by nominalisation of verbs or by demotion of the second argument which is then marked as an oblique. This correlates with the absolutive marking of the prime argument (VOA \rightarrow V IO S) and the backgrounding of the agent with a change in diathesis (as in (4b)).

- (4) a. *hla hobwaxe vaayi a agu Pum.*
 3PL take.care.of cattle AG people P.
 ‘The people from Poum raise cattle.’ (VOA).
- b. *hla hobwaxe-wo o vaayi agu Pum.*
 3PL take.care.of-wo CONN cattle people P.
 ‘The people from Poum do some cattle-raising.’ (V IO S)
 (in such a construction, *-wo* fills the position of an indefinite, plural direct object).

Reciprocity and reflexivity are valence decreasing (intransitivising) constructions, due to the non-distinction of the prime and second arguments.

There is no specific morphological expression of reflexivity. For a limited set of verbs, it may be marked by co-referential subject and object pronouns: *i bwagi-e* ‘he returns’ (*i-* and *-e* are co-referential); *hla bwagi-hla* ‘they returned’. When the reflexive argument is a noun, the construction is intransitive and the nominal argument is absolutive: *i bwagi Pwayili* ‘Pwayili retraces his steps’.

Reflexivity may also be expressed by co-reference between the subject pronoun and the possessive determiner of the object-argument: *na khiri pôô-bwaa-ny* ‘I am combing

myself' (lit. 'I comb hair-head-my'). Most commonly, reflexivity is lexical and is expressed by intransitive verbs: *na hnet* 'I am blowing my nose'.

2.5 Tense/mood and aspect

Tense/mood and aspect are expressed mostly by preverbal or pre-predicate morphemes which may be combined. *u* is the marker of perfective form (*i u maak* 'he is dead'); but in narratives, the resultative/perfective aspect is usually unmarked (\emptyset); *io* marks the future, *o* the virtual. There is a complex set of aspect markers which may combine. The iterative marker is *aa*, the continuous marker *na*, the duration marker *gaa* ('still in the process of'), they are all anteposed to predicates.

2.6 Consonant lenition in intervocalic position

Final consonants /p/, /t/, /c/, /k/ regularly undergo lenition when followed by a vowel:

p	>	v (or) w	c[c]	>	y [j]
t	>	r	k [k], kh [x]	>	x [ɣ]

Lenition also occurs at word boundaries (-C#+V) when a final consonant is followed by a vocalic preposition; the phonetic change is then signalled by a hyphen: *jeuk* 'near, close to' – *jeux-i na* 'close to me'; *hla kuluk* 'they hide' – *hla kulux-i na* 'they hide from me'; *faxet* 'taboo' – *pe-faxer-i hli* 'their taboo relationship'; *whaayap* 'fight, war' – *hleeli pe-whaayaw-i hla* 'their wars' (lit. 'these mutual wars of theirs').

3. Types of reciprocal constructions

The suffix *R-i* only occurs with transitive verbs in "canonical" reciprocal constructions, as shown in Table 4.

Table 4. Occurrences of the reciprocal suffix *R-i*

	Reciprocity of subjects	Reciprocity of objects	Sociative	Other meanings (intensive, diversative, separative)
<i>pe-</i> + intransitive verb	\emptyset	*	\emptyset	\emptyset
<i>pe-</i> + transitive verb	<i>R-i</i>	\emptyset	\emptyset	\emptyset

* signals an ungrammatical construction; \emptyset signals the absence of the *R(-i)* suffix.

3.1 Subject-oriented reciprocity

3.1.1 “Canonical” reciprocals

The argument structure of “canonical” reciprocal constructions is intransitive; consequently, the nominal prime argument is absolutive. “Canonical” reciprocals can be derived from two-place transitives and two-place intransitives.

3.1.1.1 Reciprocals of two-place transitives. Reciprocal arguments are expressed in several ways: by nouns (type I); by subject pronouns (type II); by co-referential subject and object pronouns (type III).

- The circumfix *pe- ... -i* occurs in two “light” one-argument constructions:
 - type I: with a nominal reciprocal argument (3.1.1.1.1);
 - type II: with a dual/plural subject pronoun (3.1.1.1.2);
 - The prefix *pe-* occurs alone (without the suffix *R-i*) in the “heavy” two-argument construction (with two co-referential arguments):
 - type III: with co-referential subject and object pronouns (3.1.1.1.3).
- Note that this suffix is glossed as *R* further on.

3.1.1.1.1 Type I: Circumfix *pe-...-i* and a nominal reciprocal argument. There is one syntactic dual or plural nominal argument referring to participants in reciprocal relation.

- (5) *hli pe-thiwalaxa-i âlô mahliili.*
 3DU REC-tickle-R child this.DU.DEICT
 s V S
 ‘These two children tickle each other.’

The dual reciprocal nominal argument (*âlô mahliili*) is absolutive (S) as in any intransitive construction and agrees with the dual subject pronoun *hli*.

Compare the transitive ergative constructions in (6a), (7a), (8a) with reciprocal (6b), (7b) and (8b):

- (6) a. *hli yagei-hli a hliili meewu.*
 3DU help.TR-3DU AG these2.ANAPH brother
 s V o A
 ‘These two brothers help them.’
 b. *hli pe-yage-i hliili meewu.*
 3DU REC-help-R these2.ANAPH brother
 s V S
 ‘These two brothers help each other.’
- (7) a. *hli cabwa-hli a âlô mahliina.*
 3DU pinch-3DU AG child these2.DEICT
 ‘These children are pinching them.’
 b. *hli pe-cabwa-i âlô mahliina.*
 3DU REC-pinch-R child these2.DEICT
 ‘These children are pinching each other.’

- (8) a. *hla khua-hla ru tavia.*
 3PL bite-3PL AG dog
 ‘The dogs bit them.’
 b. *hla pe-xua-i tavia.*
 3PL REC-bite-R dog
 ‘The dogs bit each other.’

There are some exceptions; some transitive verbs do not allow the suffix *R-i*: this is the case of *not* ‘to watch’ whose transitive form is marked by final consonant fall (*nô*), which is preserved in the reciprocal construction.

- (9) *hli pe-nô hliili thaamwa.*
 3DU REC-watch these2.ANAPH woman
 ‘The two women are watching each other.’

3.1.1.1.2 Type II: Circumfix *pe-...-i* and a pronominal argument. The argument is a dual or plural pronoun.

A. Transitive verbs without transitive flexion or root modification.

With such verbs, the suffix *R-i* appears clearly, as there is no possible confusion with the transitive flexion (*-i*). Here is a short list of these verbs: *thiwalaxa* ‘to tickle’, *shêlâ* ‘to know’, *ko* ‘to chase’, *khua* ‘to bite, eat up’, *cabwa* ‘to pinch’, *oxo* ‘to follow’.

Compare non-reciprocal (10a) with reciprocal (10b):

- (10) a. *i ko-e.*
 ‘They chase him.’
 b. *hli pe-xo-i da.*
 3DU REC-chase-R DIR
 ‘They chase each other up.’ (lenition $k > x$ [ɣ])
- (11) *hla pe-xua-i.*
 3PL REC-bite-R
 ‘They bite each other.’
- (12) *hla pe-yêlâ-i.*
 3PL REC-know-R
 ‘They know each other.’ (lenition $sh [f] > y [j]$)
- (13) *hli pe-cabwa-i.*
 ‘They pinch each other.’
- (14) *hli pe-oxo-i.*
 ‘They follow each other (in a line).’

B. Transitive verbs with transitive flexion or root modification.

An example may be *weenge* ‘to agree on, discuss and institute sth’, which is a transitive verb with an obligatory inanimate object. The suffix *-i* is clearly reciprocal. Compare non-reciprocal (15a) with reciprocal (15b):

- (15) a. *hla weenge fek.*
 ‘They discussed to institute a custom.’

- b. *hli pe-weeng-i*.
 3DU REC-agree-R
 ‘They agreed with each other.’

In the case of *yage* ‘to help’, the transitive flexion (associated with a human object) and the reciprocal suffix are identical in form (both are marked by *-i*).

- (16) *hli pe-yage-i*.
 3DU REC-help-R
 ‘They help each other.’

As above, the verb *not* ‘to watch’ does not allow the *R-i* suffix (**hli pe-nô-i*). Only construction (19) (see below) with co-referential subject and object pronouns is allowed.

3.1.1.1.3 Type III: Without *R-i* and with co-referential subject/object pronouns. In the “heavy” construction, there are two syntactic arguments marked by co-referential subject and object pronouns; **R-i* is excluded. The choice of type II or type III, for verbs allowing both constructions, has semantic and diathetic correlates (see Section 3.1.5).

– Verbs with transitive flexion.

Compare non-reciprocal (17a), (18a) with reciprocal (17b), (18b): in (17) the intransitive root is *tuâ* ‘to lie, deceive’, the transitive form is *tuâi*:

- (17) a. *i tuâi-hli*.
 ‘He has deceived them.’
 b. *hli pe-tuâi-hli*.
 3DU REC-deceive.TR-3DU
 s V o
 ‘They deceived each other.’
 (18) a. *i fuugi-hla*.
 ‘He gathers them.’ (the intransitive form is *fuung*)
 b. *hla pe-wuugi-hla*.
 3PL REC-gather.TR-3PL
 ‘They are gathering/meeting [one another].’

– Verbs with root modification (vi *not*, vt *nô*):

- (19) *hli pe-nô-hli*.
 3DU REC-watch-3DU
 ‘They two are watching each other.’

– Transitive verbs without flexion:

- (20) a. *hli cabwa-hli*.
 ‘They pinch them.’
 b. *hli pe-cabwa-hli*.
 3DU REC-pinch-3DU
 ‘They are pinching each other.’
 (21) *hla pe-xua-hla*
 ‘They are biting one another.’

Type III does not allow any nominal reciprocal argument: **hli pe-cabwa-hli âlô mahleena* (intended meaning) ‘the children are pinching each other’ is ungrammatical, the correct sentence is (7b).

3.1.1.2 Reciprocals of two-place intransitives. Here is a short list of some of these verbs: *hiiya* ‘to be jealous’, *kâlaxi* ‘to be ashamed’, *boima* ‘to kiss, embrace’, *kuluk* ‘to hide’, *alu* ‘to stare, watch’, *faaxeen* ‘to ask, inquire’, *celec* ‘to nudge’, *ten* ‘to touch’.

These verbs have indirect objects marked by various prepositions (*i*, *o*; *nai*, *nao*): *hli kâlaxi i hli* ‘They are ashamed of them’; *i boima i ye* ‘She kisses him’.

Again, there are three possible constructions with similar functions and meanings, though the use of *R-i* is restricted to type I in this case:

type I: circumfix *pe-...-i* and a nominal reciprocal argument (3.1.1.2.1).

type II: *pe-* (without **R-i*) and a dual/plural subject pronoun (3.1.1.2.2).

type III: *pe-* (without **R-i*), and with coreferential subject/indirect object pronouns (3.1.1.2.3).

3.1.1.2.1 Type I: Circumfix *pe-...-i* and a nominal reciprocal argument. The nominal reciprocal argument is absolutive and agrees with the dual or plural subject pronoun. Compare non-reciprocal (22a), (23a) and reciprocal (22b), (23b):

- (22) a. *hla hiiya i agu maahleeli.*
3PL be.jealous CONN people those.ANAPH
‘They are jealous of those people.’
- b. *hla pe-hiiya-i agu maahleeli.*
3PL REC-be.jealous-R people those.ANAPH
‘Those people are jealous of each other.’ (absolutive prime argument).
- (23) a. *hli alu i na a hliili thaamwa.*
3DU stare CONN 1SG AG those.ANAPH woman
‘Those women are watching me.’
- b. *hli pe-alu-i hliili thaamwa.*
3DU REC-stare-R those.ANAPH woman
‘Those women are watching each other.’ (absolutive prime argument).

The suffix *R-i* is more restricted even in type I; some verbs do not allow it: for instance, *boima* ‘to kiss, embrace’ and *kuluk* ‘to hide’ do not allow it (see (38) and (70)); nor does *ten* ‘to touch’: *hli pe-ten agu mahliili* ‘those two persons are touching each other’. In fact, the use of *R-i* may have extended to some of these two-place intransitive verbs by analogy with “canonical” transitive verbs.

3.1.1.2.2 Type II: Without *R-i* and with a pronominal argument. The reciprocal argument is a dual or plural subject pronoun.

- (24) *hli pe-hiiya.* ‘They are jealous of each other.’
hli pe-boima. ‘They kiss.’
hli pe-kuluk. ‘They play hide and seek.’

Some verbs do not allow this construction: for instance, *alu* ‘to stare, watch’ only allows types I and III.

3.1.1.2.3 *Type III: Without R-i and with co-referential subject/indirect object pronouns.* In the “heavy” two-argument construction, the reciprocal arguments are marked by co-referential subject and indirect object pronouns. Here, *i* is the preposition marking the indirect object.

- (25) *hâ pe-hiia i hâ.* ‘We are jealous of one another.’
ma pe-faaxeen i man. ‘We question one another.’
hli pe-alu i hli. ‘They stare at each other.’

3.1.2 “Indirect” reciprocals of three-place verbs

In contrast to the usual absolutive marking of reciprocal nominal arguments, in the case of ditransitive verbs or ditransitive constructions, the presence of a non-co-referential object (direct or indirect) triggers the ergative marking of reciprocal nominal arguments (as in (26b)).

3.1.2.1 *Reciprocals of three-place transitive verbs (ditransitives).* Some of these verbs have an obligatory argument structure in which one of the objects is direct and the other is indirect, without any possible position inversion. This is the case of *khiiboxa* ‘to hit’.

Compare the transitive construction (26a) with the reciprocal construction (26b):

- (26) a. *i khiiboxa-ve balô shi âlô a axaleny.*
 3SG hit-DIR ball side child AG this.DEICT
 ‘This man sends the ball to the child.’
 b. *hla pe-khiiboxa-ve shi-hla balô a âlô mahleeli.*
 3PL REC-hit-DIR side-their.PL ball AG child these.ANAPH
 ‘The children send the ball to each other.’

The subject pronoun (*hla*), the recipient (*shi-hla*) and the prime nominal argument (*âlô*) are co-referential. The benefactive case marker *shi-* is a bound noun with a possessive determiner (a suffixed pronoun or a noun). The noun *shi-* ‘hand, claw, tentacle, extremity, side’ has been grammaticalised without losing its nominal properties.

Other verbs, such as *taxe* ‘to give’ (+ inanimate object; *taxi* +human object), allow dative shift: either object may be direct or indirect, according to stress and pragmatic value. In (27) reciprocity is expressed by *pe-* and co-referential subject and indirect object pronouns (*nai hla*); in (28) reciprocity is expressed by *pe-* and co-referential subject and object pronouns *hla*:

- (27) *hla pe-taxe hnoot nai hla.*
 3PL REC-give wealth LOC 3PL
 ‘They give riches to each other.’
 (28) *hla pe-taxi-hla o hnoot a agu mahleena.*
 3PL REC-give-3PL CONN wealth AG people these.DEICT
 ‘These people give each other riches.’

3.1.2.2 *Reciprocals with three-place intransitives (ditransitive constructions)*. Two variants can be distinguished:

- Ditransitive construction with two indirect objects.

Due to the presence of a non-co-referential indirect object argument (*puxet doo* in (29)), the prime argument is ergative as in any canonical transitive construction:

- (29) *hla pe-hiia i hla puxe-t doo a agu mahleeli.*
 3PL REC-jealous CONN 3PL reason-of.it land AG people those.ANAPH
 ‘Those people are jealous of one another on account of the land.’ (*agu* = ergative).

The marker of the oblique argument *puxe-t* is a noun meaning ‘origin, cause of’.

- Ditransitive construction with one indirect object:

- (30) *hli pe-yage-i o ya mwa a hliili meewu.*
 3DU REC-help-R CONN thatch house AG those2.ANAPH brother
 ‘Those two brothers help each other out with the thatching of the house.’
 (*meewu* = ergative).

3.1.3 “Possessive” reciprocals

In such cases, the subject pronoun and the possessive determiner of the object are co-referential. Compare middle-reflexive (31a) and reciprocal (31b–c):

- (31) a. *gi hli na khet.*⁸
 LOC.PRED 3DU CONT comb
 ‘They are combing.’
 b. *hli pe-khiri pôô-bwaa-hli.*
 3DU REC-comb.TR hair-head-their.DU
 ‘They comb each other’s hair.’
 c. *hli pe-khiri pôô-bwaa thaamwa.*
 3DU REC-comb.TR hair-head woman
 ‘The women comb each other’s hair.’ (lit. ‘They two comb mutually the hair-head of the women’; *thaamwa* is possessive determiner of *pôô-bwaa* and agrees with *hli*).

3.1.4 Reciprocals of intransitive verbs

The reciprocal suffix **R-i* never appears in this case (see (32b)).

- (32) a. *na thek na bwa ciic.*
 1SG hit LOC on wood
 ‘I hit on the piece of wood.’
 b. *hli pe-thek bwaa-hli.*
 3DU REC-bump head-their.DU
 ‘Their heads bumped against each other.’ (the subject pronoun and the sole nominal argument of the verb are co-referential).

8. The intransitive form is *khet* ‘to comb’; it is only used with the reflexive construction.

Table 5.

	LIGHT CONSTRUCTION		HEAVY CONSTRUCTION
	Type I 1 nominal argument	Type II 1 pronominal argument	Type III 2 coreferential subject/object pronouns
<i>pe-</i> transitive V (with direct object)	<i>pe-...-i</i> (cf. (8b))	<i>pe-...-i</i> (cf. (36a))	<i>pe-</i>
<i>pe-</i> two-place intransitive V (with indirect object)	<i>pe-...-i</i> (cf. (22b))	<i>pe-...-i</i> (cf. (35a))	<i>pe-</i> (cf. (35b))
<i>pe-</i> intransitive V	<i>pe-</i>	<i>pe-</i>	*

R-i = reciprocal suffix; + signals an existing construction; Ø signals a non-existent or ungrammatical construction.

3.1.5 Summary of the various reciprocal constructions: Diathesis and semantic values

The suffix *R-i* is restricted to “canonical” subject-oriented reciprocal constructions (excluding object reciprocity), in association with canonical transitive verbs, and with most two-place intransitive verbs (with indirect objects); it is also restricted to “light”, one-argument constructions (see Table 5).

The suffix *R-i* is excluded from the “heavy” construction with co-referential subject and object pronouns. It is also excluded with intransitive verbs and two-place intransitives when the reciprocal argument is a subject pronoun.

In Nêlêmwa, the choice of a “light” (one-argument) or “heavy” (two-argument) reciprocal construction has diathetic function. The “light” strategy has the functions of a middle voice, it is deponentive (33a, 34a, 35a, 36a) and refers to a single action involving several undifferentiated participants; while the “heavy” strategy with two co-referential arguments (33b, 35b, 36b) refers to several reciprocal, sequential or iterated actions and often denotes an ongoing action.

- (33) a. *hla pe-taxu.* ‘They are in exchange relationship.’
 b. *hla pe-taxi-hla o hnoot.* ‘They give each other riches.’ (see also (28)).
 (vi *taxu* ‘to make a gift’ has two transitive flexions, *taxe* (+ inanimate object), *taxi* (+ human object) ‘to give’)
- (34) a. *hli pe-faxet.*⁹ ‘They are taboo to each other.’
 3DU REC-be.taboo
- (35) a. *hla pe-kuluk.* ‘They play hide and seek.’
 b. *hla pe-kulux-i hla.* ‘They hide from each other.’ (in turns)
- (36) a. *hli pe-oxo-i.* ‘They are in line.’
 b. *hla pe-oxo-hla.* ‘They are following one another.’

9. Compare with the non-reciprocal transitive construction of *faxet* ‘to forbid, be taboo, set a taboo’: *na faxer-i ye.* ‘I am in taboo relation to her.’ *Faxet* ‘taboo’ is also a noun, see (111).

To quote Lichtenberk: “if the patient is of low salience, it is backgrounded, made non-prominent through not being encoded at all” (1991:179) [...] “there is a lower degree of distinctness of both the relations and the participants” (1991:181) [...] “the overall situation is conceptualised as an undifferentiated whole” (1991:182).

The “light” construction thus constitutes the core of the middle domain as defined by Kemmer (1993:243): “Middle: a semantic area comprising events in which (a) the Initiator is also an Endpoint or affected entity, and (b) the event is characterised by a low degree of elaboration”.

The “light” construction has depatientive and deagentive functions, it often refers to a state or property of the subject and expresses “natural” reciprocity (with verbs like ‘fight, meet, kiss, argue’, etc.) or self-directed actions with verbs of grooming.

As Kemmer (1993:247) notes, “The scale of transitivity [...] forms the conceptual underpinning for voice systems in general, and for reflexive and middle marking systems in particular”.

The middle value of the “reciprocal” prefix also appears in other Kanak languages: in Nemi, reciprocity is marked by the prefix *i-* or *u-* associated with *keu* ‘together’; without *keu*, this prefix may have generic meaning and refers to properties, permanence, duration. In Cemûhi, the prefix *pi-* also expresses reciprocity and the middle voice.

3.1.6 Argument structure in reciprocal constructions

Reciprocal arguments may be expressed by nouns, deictic or anaphoric pronouns, personal pronouns; they may be collective nouns such as *agu* ‘people’, *yameewu* ‘clan’, *âbeen* ‘foreigner, stranger’, etc. Reciprocal arguments may be coordinated nouns (see 38)).

- (37) *ma pe-hiiya i man ma Yul.*
 1.DU.EXC REC-be.jealous CONN us and Y.
 ‘Jules and I are jealous of each other.’ (lit. ‘we two are jealous of us with Jules’).
- (38) *hli pe-boima axomoo-n ma pwaxi-n thaamwa.*
 3DU REC-kiss mother-her and child-her girl
 ‘The mother and the girl kissed.’

Reciprocal nominal arguments are absolutive, except in transitive constructions with a non-co-referential direct or indirect object; the prime argument is then ergative as in (39a, b).

- (39) a. *hla u pe-weeng-i o foliik mahleeli a axamalaaleny.*
 3PL PFV REC-discuss-R CONN thing those.ANAPH AG these.DEICT
 ‘These men agreed on those things’.
- b. *hla u pe-weeng-i i thaamwa hleny.*
 3PL PFV REC-discuss-R CONN woman this.DEICT
 ‘They agreed about this woman’.

weenge is a transitive verb with an obligatory inanimate object. The transitive construction would thus be direct: *hla weenge foliik* ‘they agreed on that’ (see (15a)). The reciprocal construction requires the demotion of the direct object to the oblique position. But this is due to the specific argument structure of this verb and not to any general rule concerning

the case marking of the object in a reciprocal construction, as sometimes occurs in some languages: “the morphosyntactic behaviour of verbs designating natural reciprocal events varies. In some languages, such verbs must always be intransitive; if there is an affected entity in addition to the two mutually involved participants, it must receive coding different from ordinary objects (e.g. in Manam, which requires such objects to appear in the dative). In other languages, such verbs may take object noun phrases [. . .] although these NP may lack some syntactic properties of objects” Kemmer (1993: 107).

In Nêlêmwa, there is no such general restriction, the direct or indirect construction of the object is due to the argument structure of the verbs (see (26b), (27) for direct object, (29) and (40) for indirect object).

- (40) *hla pe-hiiya-i o doo ru yameewu.*
 3PL REC-be.jealous-R CONN land AG clan
 ‘These clans are jealous of each other because of the land.’

3.2 Object-oriented reciprocity

With transitive verbs, object arguments may be reciprocal; they are mostly – though not exclusively (see (44b)) – inanimates set in this type of relation by an animate being. Subject pronouns may be singular, dual or plural. Transitive flexions vary with the \pm human, \pm animate feature of the object. Object arguments may be dual or plural.

Compare (41a) and (41b): *hiwi-lî* is the transitive form (+inanimate) of *hiwi* ‘to rub, grate’. Without *pe-*, (41b) would mean that he is rubbing his hands but not against each other.

- (41) a. *i hiwi-lî hele.* ‘He is sharpening the knife.’
 b. *i pe-hiwi-lî ara-yi-n mali a âlô eli.*
 3SG REC-rub-TR palm-hand-his the.2 AG child this.ANAPH
 ‘This child is rubbing his hands [together].’

khi ‘to hit, strike, knock’ is a transitive verb without flexion; omission of *pe-* in (42b) would mean that the metal pieces are not hit against each other:

- (42) a. *i khi ga.* ‘He knocks on the bamboo (to call on people).’
 b. *i pe-khi dooviu mahliili.*
 3SG REC-hit iron those.2ANAPH
 ‘He hit the two metal pieces against each other.’

Compare the transitive construction in (43a) with (43b), where *pe-* signals that a plurality of objects are set in identical positions, with notions of adjustment, union, junction and symmetry. The affix *pe-* is prefixed to the locution *na bwaa-t* ‘to put on top/head’ with the meaning ‘to pile up’. Since subject and object arguments are not co-referential, the nominal prime argument is ergative:

- (43) a. *i na ara-tin bwa taap a Polie.*
 3SG put CLF.empty-tin on table AG P.
 ‘Polie puts the empty tin on the table.’

- b. *i pe-na bwaa-t ara-tin a Polie.*
 3SG REC-put top-of.it CLF.empty-tin AG P.
 ‘Polie piles up empty tins.’

Compare subject-oriented reciprocity in (44a) and (18b) with object-oriented reciprocity in (44b). *Agu* ‘people’ belongs to the category of collective human nouns and triggers the transitive flexion of inanimates (*fuuge*) as in (44b), which is evidence that *-i* in *wuug-i* (see (44a)) is the reciprocal suffix. (vi *fuung* ‘to pile up, gather’, vt *fuuge* (+inanimate or collective human object), vt *fuugi* (+definite human object)). Note consonant lenition [f] > [w]):

- (44) a. *hâ pe-wuug-i agu Pum ma agu Cavet.*
 we REC-gather-R people P. with people T.
 ‘We people from Poum and people from Tiabet have gathered.’
- b. *hâ pe-wuug-e agu Pum ma agu Cavet me hla pe-taxi-i*
 we REC-gather-R people P. with people T. AIM 3PL REC-give-R
do.
 forgiving
 ‘We have gathered people from Poum and Tiabet together so they forgive one another.’

Compare transitive (45a) and reciprocal (45b) in which *pe-* stresses object reciprocity and symmetry (*kêêlâ* is a transitive verb without flexion):

- (45) a. *i u kêêlâ fââlô nai ye a Kaavo.*
 3SG PFV join route LOC 3SG AG K.
 ‘Kaavo joins him on the way.’ (lit. ‘joins her way to him’).
- b. *i (pe-)kêêlâ kha mahliili a kââma-n.*
 3SG (REC)-join liana those2.ANAPH AG father-his
 ‘His father is joining the two ropes end to end.’

Such a construction with *pe-* requires that object arguments be in genuine reciprocal and symmetric relationship; it cannot express object sociativity (see 8.1.2).

4. Causatives and reciprocals

The prefix *pe-* can be associated with the causative prefix *fa-*. But while causative diathesis marks the causer/agent in the ergative (see (46b)), when associated with the reciprocal prefix, the causer is in the absolutive (see (46d)), as in any canonical reciprocal construction. Compare reciprocal (46c) and causative reciprocal (46d):

- (46) a. *hli kâlaxi i ye a kââma-n ma axomoo-n.*
 3DU be.ashamed CONN 3SG AG father-his and mother-his
 ‘His father and mother are ashamed of him.’
- b. *hli fa-kâlaxi i ye a kââma-n ma axomoo-n.*
 ‘His father and mother are making him feel ashamed.’
- c. *hli pe-kâlaxi kââma-n ma axomoo-n.*
 ‘His father and mother are ashamed of each other.’

- d. *hli pe-fa-kâlaxi agu mahliili.*
 ‘Those two persons are making each other feel ashamed.’ (*agu* is absolutive).

A causative reciprocal construction, as in (46d), can only express causers who are reciprocally involved in the situation. If the causer and the reciprocal arguments are not co-referential, a periphrastic causative construction is used with the verb *diya me* ‘to do in such a way that’; see also (60).

- (47) *hla diya me hla pe-khua-i tavia.*
 3PL make AIM 3PL REC-bite-R dog
 ‘They are making the dogs bite each other.’

5. *pe-* and lexical reciprocals

With active intransitive verbs which are lexical reciprocals, *pe-* stresses reciprocity:

- (48) a. *hla holae Anet.* ‘They said good-bye to/took leave of Annette.’
 b. *hli pe-holae.* ‘They say good-bye to each other.’
- (49) a. *hla whaayap.* ‘They make war.’ (against someone).
 b. *hla pe-whaayap agu Pum.* ‘People in Poum are fighting one another.’

jeuk ‘to be near’ is a locative predicate; without *pe-*, (50) would mean that the houses are close to another reference point, but not to one another:

- (50) *pe-jeuk awôlô mahleena.*
 REC-be.near dwelling these.DEICT
 ‘These dwellings are close to each other.’

In (51) *jeuk* has prepositional function with the meaning ‘close to’ in association with prepositions *i* (+ humans) and *o* (+ inanimates). *pe-* expresses reciprocity and symmetry; and without *pe-*, (51) would mean that they live close to another point of reference, but not to each other:

- (51) *hla mu pe-jeux-i hla.*
 3PL stay REC-near-CONN 3PL
 ‘They live close to each other.’

With stative verbs expressing quality and comparison or difference, such as *khare* ‘to be different, be a stranger’, *maariik* ‘to be similar’, the prefix *pe-* indicates that the property (similarity or difference) applies reciprocally to the arguments. Compare non-reciprocal (52a, b) and reciprocal (52c):

- (52) a. *hli khare.*
 ‘They are different (from us), strangers (to us).’
- b. *na khare nai yo.*
 1SG be.different LOC you
 ‘I am different from you.’ (transitive construction with indirect object).

- c. *hli pe-xare.*
 ‘They are different from each other.’

The reciprocal expression *pe-xare* has undergone lexical fossilisation and is re-analysed as a verbal modifier in (53a, b) meaning ‘separately from each other’.

- (53) a. *hla o pe-xare.* ‘They go their own way.’ (*o* ‘to go’; mutual relation).
 b. *hla hnawo pe-xare.* ‘They make a gift separately.’ (*hnawo* ‘to leave, give’).

It is also reinterpreted as a verb liable to be marked by the transitive suffix *-li*, with the meaning ‘to separate, put aside’, in (54):

- (54) *na pe-xare-li.* ‘I put them apart.’ [from each other] (object-oriented).

The verb *maariik* ‘to be similar’ is also a lexical reciprocal. When *maariik* has an inanimate argument, *pe-* is optional and merely stresses reciprocity:

- (55) (*pe-*)*maariik puyeva-t.*¹⁰
 REC-be.similar height-of.it
 ‘They are of the same height.’ (lit. ‘its height is similar’).

But with a human argument, *pe-* is obligatory; there are few such cases in Nêlêmwa:

- (56) *hli pe-maariik âlô mahliili.*
 3DU REC-be.similar child these.ANAPH
 ‘These children are similar to each other.’ (**hli maariik*).

6. Lexicalisation with *pe-*

6.1 Incomplete fossilisation

Some lexicalised reciprocals are only partially fossilised and their constituent elements may still be dissociated. Their meaning is usually different from that of the root.

The verb *pe-regek* ‘to be stuck’ is analysable into *pe-+tegek* (intervocalic lenition [t] > [r]); *tegek* ‘to be caught, hooked, resist’ also has an abstract meaning ‘to be difficult’. It expresses resistance and its meaning varies with the ±human feature of the argument. It does not imply any symmetry (X catches, Y is caught):

- (57) *tegek pwiak bwa pâânât.*
 be.caught net on rock
 ‘The net is caught on the rock.’

In (58), *pe-* expresses reciprocal and close contact, though the relation involved (rice/pot) is asymmetrical. The optional presence of a singular subject pronoun *i* is evidence that some kind of semantic fossilisation has occurred.

10. The inanimate possessive pronoun *-t* is compatible with singular or plural referents.

- (58) (i) *peregek lai ni cet.*
 (3SG) be.stuck rice in pot
 ‘The rice sticks to the pot.’

The prefix *pe-* expresses symmetry only when both participants belong to the same category, as in (59) where the prefixation of *taa-* has stative and resultative meaning.

- (59) *taa-veregék duu tiiwo hleny.*
 STAT-be.stuck leaf book this.DEICT
 ‘The pages of this book are stuck to one another.’
 (Note the intervocalic consonant lenition: [p] > [v] and [t] > [r] in the verb).

Such a form does not (yet?) allow an agent argument and is not yet interpreted as an active transitive verb, a lexical causative periphrasis is mandatory (see Section 4). This lexical causative is the verb *diya* ‘to make’ associated with *me* ‘in order to, so that’:

- (60) *na diya me peregek duu tiiwo hleny.*
 1SG do AIM be.stuck leaf book this
 ‘I am sticking the pages of this book together.’ (in process).
- (61) *hla diya me taa-veregék duu tiiwo hleny.*
 3PL do AIM STAT-be.stuck leaf book this
 ‘They have glued the pages of this book.’ (perfective, resultative aspect).

In the case of *peru-i*, which is both a noun ‘meeting’ and a verb ‘to meet, gather’, the fossilisation of < *pe-+tu* ‘find, encounter’+ *R-i* > is complete. Yet subject pronoun agreement is still dual or plural; cf.:

- (62) a. *i tu-e* ‘He finds her’.
 b. *hâ perui* ‘We have met’ (or) ‘See you soon!’

The comitative/co-agentive *ma* introduces the co-agent; the dual subject pronoun refers to the sum of participants:

- c. *mo perui ma ti?*
 2DU.EXC meet COM who
 ‘Who have you met?’ (lit. ‘You met with whom?’).

The word *pexaagiik* is a modifier analysable as *pe-* + *khaa* (distributive morpheme ‘each’) + *-giik* (numeral suffix ‘one’, it is generally suffixed to a numeral classifier to count classes of objects). *-xaaagiik* cannot be used autonomously. *Pexaagiik* expresses sequential, symmetric relations and chain relations.

- (63) *hla shaya pe-xaa-giik.*
 3PL work REC-DISTR-ONE
 ‘They work in turn.’

The unit *pe-o-xaaagiik* is composed of *pe-*+ *o* ‘go’+ *khaa* (distributive)+*giik* ‘one’; *pe-* marks the distributive meaning as applying symmetrically to the arguments.

- (64) *hli u pe-o-xaa-giik.*
 3DU PFV REC-go-DISTR-ONE
 ‘They each went their own way.’

6.2 Complete fossilisation

In such cases, the constituent elements are no longer analysable and the root may not even be distinguished. Yet, *pe-* retains its full reciprocal meaning and these expressions only accept dual or plural subject pronouns.

The unit *pe-whan* is both a noun ‘oath, agreement’ and an intransitive verb ‘to swear, promise, take an oath, espouse’; but *whan* has no lexical autonomy.

- (65) a. *hli pe-whan.*
 ‘They got married.’ (‘took an oath’).
 b. *hli pe-whan me io i na shi-n.*
 3DU REC-take.an.oath COMP FUT 3SG give BEN-his
 ‘They agreed that he would give it to him.’

Similarly, *penudavi* ‘to meet on the way’ is always used with dual or plural subject pronouns, which points out its reciprocal origin (*nudavi* has no lexical autonomy).

- (66) *ma penudavi ma thaamwa dalaen.*
 1DU.EXCL meet COM woman European
 ‘I met the European lady on the way.’ (lit. ‘We met on the way, the European lady and I’).

Finally, there are cases of metaphorical resemanticization which changes the meaning of the root. Thus, *pe-oda-i* ‘to fight, argue’ is derived from *oda* ‘to go up’:

- (67) *hli pe-oda-i nai âlô ena a hliili thaamwa.*
 3DU REC-oppose-R LOC child this.DEICT AG those2.ANAPH woman
 ‘Those women argue about this child.’

Similarly, when the verbal compound *o-wuung* (*o* ‘go’ + *wuung* ‘together’) is prefixed by *pe-*, it has the specific meaning ‘to be allied’:

- (68) *hli pe-o-wuung.* ‘They are allies.’ (lit. ‘They go together’).

7. Sequential and chain reciprocity

7.1 Sequential reciprocity

Reciprocity is generally associated with simultaneous processes, but lexical semantics may inflect it towards sequentiality. Thus, sequential reciprocity (i.e. ‘done in turn’), appears in (26b), (30), (31b). The relationship is symmetric.

- (69) *hla pe-pae balô a âlô mahleena.*
 3PL REC-throw ball AG child these.DEICT
 ‘The children are throwing the ball to one another.’ (sequential and reciprocal).

The item *kuluk* ‘to hide from view’ is another such example.

- (70) *hla pe-kuluk hleeli âlô.* ‘Those children play hide and seek.’ (they hide in turn).

Intransitive *kuut* ‘to stand’ allows an indirect transitive construction with the preposition *shi-*:

- (71) a. *hla kuut shi-hla.* ‘They visit them.’
 b. *hla pe-kuut shi-hla.* ‘They visit one another.’
 (the subject pronoun *hla* and the recipient *shi-hla* are co-referential).

7.2 Chaining

In some lexical contexts, *pe-* may express chaining, that is a single event in which participants are involved symmetrically ($X > Y > Z$), but not reciprocally. Compare the transitive construction in (72a) with chaining in (72b) :

- (72) a. *hla oxo-hla a agu mahleeli.*
 3PL follow-3PL AG people those.ANAPH
 ‘These people follow them.’ (*agu* is ergative).
 b. *hla pe-oxo-i.* ‘They walk in a line.’

8. Polysemy of *pe-*

8.1 Sociative meaning of *pe-*

8.1.1 Sociative subject arguments

The prefix *pe-* may refer to collective actors simultaneously involved in a common and identical process. Relation is thus symmetric, but non-reciprocal. Verbal semantics acts as a filter to allow the reciprocal or sociative interpretation.

- (73) *hla pe-gi.* ‘They are crying together.’ (vi *gi*, vt *gĩli*).
 (74) *hla pe-khuwo.* ‘They eat together.’

With transitive verbs, the sociative marker *pe-* may only refer to a collective subject argument; sociative objects are expressed lexically. As there are two non-co-referential arguments, the prime argument is ergative.

- (75) *hla pe-gĩli maaxa i aayo a hlaabai agu bwa fwamwa.*
 3PL REC-mourn.TR death CONN chief AG those.ANAPH people in country
 ‘The inhabitants of the country mourn the chief’s death together.’
 (76) *hla pe-taxe hnoot ru agu.*
 3PL REC-give.TR wealth AG people
 ‘People give away the riches together.’ (cf. with reciprocal constructions in (27), (28)).

8.1.2 Prefix *pe-* with lexical expressions of the sociative meaning

In case of semantic ambiguity between the reciprocal and the collective meaning, or between the intensive and the collective meaning as in (77b) (see Section 8.3), the sociative meaning of *pe-* may be emphasized by the adverb *wuung* ‘together’ (77c), derived from

the verb *fuung* ‘to gather, pile’. The construction in (77c) is emphatic in comparison with (77a).

- (77) a. *hâ shaya wuung.* ‘We work together.’
 b. *hâ pe-shaya.* ‘We work fast,’ (or) ‘We work together.’
 c. *hâ pe-shaya wuung.* ‘We work together.’

The sociative meaning of *pe-* may also be disambiguated and emphasized by the prepositional noun *mudi-* ‘in company of’, as in (78b), (see also (106)).

- (78) a. *co â mudi thaamwa ena.*
 2SG go company woman this.DEICT
 ‘Go with this woman.’
 b. *hla pe-â mudi-hla.*
 3PL REC-GO company-their.PL
 ‘They went away/left together.’

Without *mudi-*, (78b) might be interpreted as diversative in meaning (see 8.4.2).

8.1.3 Lexical expressions of sociative objects

Object sociativity may only be marked by adverbial and lexical items (such as *wuung*); *pe-* only refers to sociative subjects. The adverb *wuung* makes up a complex predicate with the verb and shows transitive agreement with it:

- (79) *i shaawô-lî wuug-e shimiz me taraushi.*
 3SG wash-TR together-TR shirt and trousers
 ‘She is washing the shirt and the pair of trousers together.’
 (80) *hâ fuug-e wuug-e duu ciic.*
 1PL.INCL gather-TR together-TR leaf tree
 ‘We have gathered the leaves of the tree together.’

8.2 Sociative and competitive meanings

Competition is one of the pragmatic interpretations of a collective process, it is conditioned by the semantics of the verb and its object, a single object common to all participants or an object specific to each of them (as in (83)). Competition involves more or less reciprocal and simultaneous actions. Compare the transitive and reciprocal constructions below (*khaaxa* ‘to push, drive in’ and *khaaya* ‘to give a tug’ are transitive verbs without flexion):

- (81) a. *i khaaxa-e du.*
 3SG push-3SG down
 ‘She pushed him down.’
 b. *hla pe-khaaxa do.* ‘They compete in assagai throwing.’
 (82) a. *hla khaaya-e na ni delek.*
 3PL tug-3SG LOC in mud
 ‘They took him out of the mud.’

- b. *hla pe-khaaya-i.*
 3PL REC-tug-R
 ‘They compete at tug-of-war’ (simultaneous).
- (83) *hli pe-kur-i doo-hla.*
 3DU REC-stick-R assagai-their.PL
 ‘They compete in throwing their assagai’ (simultaneously or in turn).
 (Here *-i* is the reciprocal suffix; the transitive form of the verb with inanimate objects being *kure*).

8.3 Intensive meaning

This meaning may develop from the sociative meaning ‘to do together’ to that of ‘to do quickly’. In this case, *pe-* means ‘to achieve a goal quickly, reach a high intensity, be fast’. Subject pronouns may be in any number, including singular (as in (85)). There are possible ambiguities with the sociative meaning, as in (84a) where, according to context, *pe-khoxo* (< *khoxo* ‘to be numerous, in great amount’) may mean ‘to be numerous together’ (sociative) or ‘to increase, be more numerous’ (intensive).

- (84) a. *pe-khoxo* ‘They are numerous together’, (or) ‘It increases.’
 b. *i diya me pe-khoxo.* ‘He did it so that there should be a great amount soon.’
- (85) *na pe-diya me toven.* ‘I did it fast to finish it.’
- (86) *hla pe-shaya.* ‘They work fast’, or ‘They move fast.’

As in other Kanak languages, *shaya* means ‘to move’ and ‘to work’.

Possible ambiguity with the sociative meaning is avoided by addition of lexical items such as *wuung* or *mudi-* (see (77b, c)). Some verb types may also filter the meaning: thus *bwaa* ‘to leave’ in (87) does not admit the sociative meaning of *pe-* (see (78b) for the sociative meaning ‘to leave together’).

- (87) *co yage-i-na ma io hi pe-bwaa.*
 2SG help-TR-me AIM FUT 1DU.INCL REC-leave
 ‘You helped me so we could leave earlier.’
- (88) *pe-noot at, pe-khîli at.*
 REC-wake.up sun REC-heat sun
 ‘Let the sun wake up soon and heat soon.’ (children’s song).
- (89) *kio pe-top ciic hleny.*
 NEG REC-rot wood this.DEICT
 ‘This wood does not rot fast.’
- (90) *i gi me i pe-hmoric mwa.*
 3SG cry and 3SG REC-have.hiccups in.the.end
 ‘He cried to the point of having hiccups.’

With active verbs, *pe-* may infrequently express iteration, but does not express duration:

- (91) *i pe-thalic.* ‘She stumbles.’ (over and over again; *thalic* ‘to stumble’).

In other Kanak languages (Nemi, Ozanne-Rivierre 1979; Cèmuhi, Rivierre 1980; Ajië, La Fontinelle 1976), the polysemous reciprocal-middle prefix expresses the sociative/collective meaning, intensity, iteration, and duration (verbal semantics allowing).

8.4 Non-volitional, undirected, separative action, diversative meaning

The prefix *pe-* also has a variety of interrelated meanings, with no clear boundary between them; both context and verbal semantics help direct the interpretation.

8.4.1 *Non-volitional, undirected meaning*

The prefix *pe-* may signal spontaneous, accidental events that escape intentionality, occur independently from the actor, are done without concertation, project or partner, thus in opposition to the sociative meaning.

– With an inanimate argument, *pe-* has anticausative interpretation as in (92b) and stresses the non-directed, non-volitional meaning:

- (92) a. *ku nuk fagau mwa.*
 PFV fall body house
 ‘The wall of the house fell down.’
- b. *pe-nuk du bwa doo pwâ-mago.*
 REC-fall DIR on earth fruit-mango
 ‘Mangoes are falling.’
 (without anyone shaking the tree, because they are ripe and numerous).

– With human agents and active verbs such as *diya* ‘to do’, *pe-* denotes a tentative undertaking done without any clear project, without any effort or specific intention, listlessly, with various degrees of success. It may have some adversative undertone. Context and verbal semantics help interpret such a meaning.

- (93) *i u pe-kâlap mwamaidu.*
 3SG PFV REC-lie.down over.there.down
 ‘He lay down.’ (having nothing else to do).
- (94) *na pe-â bwa on.*
 1SG REC-leave on sand
 ‘I go by the beach.’
- (95) *va pe-diya fagau mwa.*
 1PL.EXCL REC-make body house
 ‘We have tried to build the wall of the house.’ (as might be, without any preconceived plan or idea).
- (96) *na pe-diya yumwêli.*
 1SG REC-do thus
 ‘I am doing this just so.’ (without much enthusiasm).

8.4.2 *Diversative or separative meaning*

With this meaning, *pe-* is prefixed to active verbs. Subject agreement may be in any number. The diversative meaning of *pe-* is semantically related to the notion of an undi-

rected action, performed separately, on one's own (the reverse of the sociative meaning), as in (97):

- (97) *wa pe-diya roven fo awa-wa.*
 2PL REC-do all there.is will-your
 'You may do as you wish.'

With verbs of movement, *pe-* has the meaning of 'here and there', '(done) aimlessly':

- (98) *bu na xe na gaa pe-hâga du hmwiny.*
 as.for 1SG TOP 1SG DUR REC-fish down here
 'As for me, I'm going to go on fishing around here.' (listlessly, with no intention of catching any specific type of fish in any specific place).

With dual or plural subjects, there may be semantic ambiguities between the sociative and diversative readings of *pe-*, as in (99). Context, verbal semantics and additional adverbs help disambiguate the meaning.

- (99) *hla pe-hâgee mat.*
 3PL REC-fish at.low.tide
 'They are fishing together.' (or) 'They are fishing here and there at low tide.'

8.4.3 Lexical expression of the diversative/separative meaning

Various adverbs, such as *hayu* 'without aim, carelessly' and *hada* 'alone', help disambiguate or stress the diversative/separative meaning of *pe-*. Thus, without the adverbs, examples (100b) and (101b) might be interpreted as intensive: *i pe-vhaa* 'he speaks away' and *i u pe-shaya* 'he has worked/moved fast'. With a dual or plural subject pronoun, there might be some ambiguity with the sociative meaning, which would then be disambiguated by *wuung* 'together' (as in (77c)). As in the case of *wuung*, *hada* and *hayu* suffice to express the separative meaning, their association with *pe-* is emphatic:

– *hada* 'alone'

- (100) a. *i vhaa hada.*
 'He alone is speaking.'
 b. *i pe-vhaa hada.*
 'He speaks for himself.' (i.e. in his own name, not expressing a consensus).

– *hayu* 'haphazardly, without a project'

- (101) a. *i shaya-ayu.*
 'He works carelessly.' (without any method).
 b. *i u pe-shaya-ayu.*
 3SG PFV REC-work-careless
 'He has worked carelessly.' (the intervocalic aspirate of *hayu* is deleted).

9. Reciprocals and sociatives derived from nouns

9.1 Reciprocal nominal predicates with *pe-*: Comparison, symmetry and identity

This function of *pe-* appears when it is prefixed to nouns in predicative function. It may be prefixed to any type of noun (for example, denoting body parts and position). These nominal predicates are stative in meaning and *pe-* expresses symmetry, comparison of equality and identity (of function, direction, position). These nominal predicates retain their possessive determiners, but may have a subject pronoun just like verbs. In the reciprocal construction, the subject pronoun is then co-referential with a possessive determiner (as in (102), (115)).

– Symmetrical position.

1. *duaxa-t* ‘its back’, *duaxa-n* ‘his back’:

- (102) *ma pe-duaxa-man i man* (or: *ma pe-duaxa-i*).
 IDU REC-back-our.DU CONN us.DU
 ‘We are back to back.’ (lit. ‘We are reciprocally our back to us’).

2. *aramaa-t* ‘face’, *aramaa-n* ‘his face’:

- (103) *ma pe-aramaa-man i man* (or: *ma pe-araam-i*).
 IDU REC-face-our.DU CONN us.DU
 ‘We are facing each other.’ (lit. ‘We are reciprocally our face to us’).

3. *ida-t* ‘line, row’; *pe-ida-t* ‘be on the same line’:

- (104) *pe-ida-t dau eli me Negec*.
 REC-line-of.it island this.ANAPH and N.
 ‘That island is on a line with Negec.’ (it lies on a line with the island of Negec).

4. *avi-t* ‘side, flank’; *pe-avi-t* ‘to fit, be adjusted’:

- (105) *co paage kawa me pe-avi-t*.
 2PL lay.out corrugated.iron AIM REC-side-of.it
 ‘Lay out the sheets of corrugated iron so that they fit together.’

– Same direction.

fââla-t ‘way, journey, route’

- (106) *pe-fââla-man ma ye*.
 REC-route-our.DU with 3SG
 ‘He and I have travelled together.’

– Symmetrical quality or quantity.

1. *thala-t* ‘side, flank, width’; *pe-rala-t* ‘to be the same width’:

- (107) *pe-rala-hla*.¹¹ ‘They are of the same width.’

11. When reciprocal arguments are inanimate nominals, the pronoun *-t* is retained:

2. *ura-t* ‘length, distance’; *pe-ura-t* ‘to be the same length, distance’:

- (108) *pe-ura-hli.* ‘Both are of the same length.’
(agreement in the dual is compulsory, **pe-ura-t*).

3. *ka* ‘year’; *pe-kau-n* ‘to be the same age’ (*ka* changes to *kau-* before possessive determination):

- (109) *pe-kau-hli ma Yul.* ‘He is as old as Jules.’
REC-year-their.DU with J.

4. *khora-t* ‘piece of’; *pe-khora da* ‘to be one blood’ (*da* ‘blood’):

- (110) *va pe-khora da.* ‘We are of the same blood’; ‘our family.’

5. *faxet* ‘taboo’; *pe-faxet* ‘to be in taboo relationship’:

- (111) *pe-faxer-i há.* ‘(It’s) our taboo relationship.’
REC-taboo-CONN 1DU.INC

6. *bale-t* ‘the other’ (of a pair, a couple), ‘companion’:

- (112) *kio pe-bale-t.* ‘It is not the (right) pair.’ (*bale-t* is the predicate).
NEG REC-companion-of.it

- (113) *co na me pe-bale-t.* ‘Put them two by two.’
2SG put AIM REC-companion-of.it

7. *bala-t* ‘ally, partner’; (*bala-t* like *bale-t* is a lexical reciprocal); *pe-* stresses reciprocity or sociativity:

- (114) a. *bala-hla.* ‘their partner’
b. *pe-bala-hla.* ‘They are partners/in the same team.’
REC-ally-their.PL

8. *khooba-t* ‘number of’; *pe-khooba-t* ‘be the same number’:

- (115) *wa pe-khooba-wa.* ‘You are equal in number.’
2PL REC-number-your.PL

9.2 Reciprocal nouns with argument function

Without *pe-*, (116) would mean ‘during their war’ without any reciprocity.

pe-rala-t khaxa-yiic.
REC-width-of.it piece-of.log
‘The planks are the same width.’

If they are pronouns, the possessive plural pronoun is obligatory: *pe-rala-hla* (not **pe-thala-t*).

12. *whaayap* is a verb or a noun ‘(to make) war, fight’ with indirect possession marked by preposition *i*. Note intervocalic consonant lenition [p] > [w].

- (116) *na ni hleeli pe-whaayaw-i¹² hla.*
 LOC in those.ANAPH REC-fight-CONN 3PL
 ‘During their mutual fight.’ (lit. ‘in the mutual fights of theirs’).

Compare non-reciprocal (117a) with reciprocal (117b); the noun *puxi-t* ‘origin, cause, reason’ expresses causal relation:

- (117) a. *hla peeva puxi-hla hi thaamwa bai.*
 3PL argue reason-their.PL this woman that.ANAPH
 ‘They argue on account of that woman.’
 b. *kia fo pe-puxi-man na i khiibwa-na.*
 there.is.not thing REC-reason-our but 3SG hit-me
 ‘He hit me without any reason between us.’
- (118) *kia pe-bale-t.*
 there.is.not REC-companion-of.it
 ‘The other (one of a pair, couple) is missing.’ (*pe-bale-t* here is the nominal argument of the verb *kia*).
- (119) *hooli pe-bala-t ak.*
 that.ANAPH REC-ally-of.it man
 ‘A team of men.’ (*ak* has attributive function and specifies *pe-bala-t*).

9.3 Sociative nouns and pronouns

The relation implied here is sociative and inclusive; the prefix expresses symmetrical membership in a group or a whole.

– Prefixation of *pe-* to a noun or nominal group:

- (120) *pe-hmawa-t*
 ‘patch-work’ (*hmawa-t* ‘piece of it’).
- (121) *pe-hlaabai thaamwa, pe-hlaabai ak.*
 ‘those women (*thaamwa*) together, those men (*ak*) together.’

– Prefixation of *pe-* to a deictic, directional pronoun or independent pronoun:

- (122) *pe-hleena, pe-hlaaleny, pe-hlaidu, pe-yava.*
 REC-these REC-these REC-these.down.there REC-1PL
 ‘These together, these together, these down there together, we together.’
- (123) *xam pe-yamon, na ye hada!*
 ASRT REC-2DU.INDEP but 3SG.INDEP alone
 ‘You are together, but he is alone!’ (as the spokesman of his own views).

When prefixed to nouns, the polysemy of *pe-* is actually reduced to its two primitive meanings, viz. the reciprocal and the sociative.

1. Introduction

1.1 East Futunan

East Futunan is a Polynesian language spoken on Futuna, a small Pacific Ocean island to the east of Fiji. Futuna, together with Uvea Island, forms a French “overseas territory”. There are 4600 Futunans living on Futuna itself, while about as many more have emigrated to New Caledonia. From a typological standpoint, East Futunan is very closely related to the other western Polynesian languages (East Uvean, Tongan, Samoan, Tokelau, Niuafo’ou, etc.). These languages have in common a sizable proportion of their lexicon and numerous morphosyntactic features such as a weak noun/verb contrast, little morphology, and ergative argument marking (Clark 1976).

1.2 Means of expressing reciprocals in East Futunan

Derivational processes in these languages usually cover broad ranges of meanings. There are therefore no specific forms for the reciprocal, middle, or sociative. These three senses are nevertheless formally related by the fact of being expressed by the same derivational elements, together with other notions, such as plurality, iterativity, and succession. The affixes used to express this set of senses must therefore be examined with an end to picking out whatever can properly be referred to as reciprocal from the related notions. In East Futunan (as, in all likelihood, in the other western Polynesian languages), the reciprocal meaning associated with derivation by *fe-...-(C)aki* can only be obtained when the derivative takes a single argument denoting a plurality of animate beings. Otherwise, such derivatives will take one of the other values such as the sociative, the dispersive, the alternative, etc., whatever the valence of the base verb may be. In addition to these morphological derivational processes, East Futunan also has a lexical means of expressing the reciprocal sense (see Section 8).

2. Some notes on East Futunan grammar

2.1 Phonology and syllabic structure

East Futunan has a simple phonological system composed of five vowels [a, e, i, o, u], which may be either long or short, and eleven consonants [f, g[ŋ], k, l, m, n, p, s, t, v, 'ʔ]. Stress falls on the penultimate mora in the word. Canonic syllabic forms are V or CV. Consonant clusters are not allowed, and words always end with a vowel.

2.2 Noun and verb classes

The noun/verb contrast is weakly marked in the lexicon. Any lexical form can theoretically function as a noun or a verb without formal change (Moyse-Faurie 1997b). Nevertheless, derivational processes, which are very productive in East Futunan, do give rise to more clearly distinguishable verb and noun classes. Adjectives as a class formally distinct from intransitive stative verbs do not exist.

2.3 Sentence structure and morphology

There is little morphology other than derivational. There are neither declensions nor conjugations. Words do not vary in either gender or number with the exception of thirty odd intransitive verbs describing states, attributes, or positions, which can be partially reduplicated when taking an argument denoting a plurality of participants, e.g., *moe* (SG) – *momoe* (PL) ‘to sleep’; *kula* (SG) – *kukula* (PL) ‘to (be) red’. Oblique case markers take an *-a* suffix when they introduce a dual or plural pronoun or a proper noun, and an *-ate* suffix before singular pronouns. Except for the third person singular, which is always postposed, there are two sets of person markers: those in the first are preposed to the verb phrase and are part of the verbal constituent; those in the second are postposed, act as noun substitutes, and are preceded by case markers. Choice from one or the other of these sets depends on pragmatics (Moyse-Faurie 1997a).

2.4 Tense and aspect markers

Tense and aspect markers are free morphemes. They are generally preposed to the verb phrase and appear in initial position in unmarked sentences. The main tense/aspect markers are *e* ‘non-specific, general imperfective aspect’, *na* ‘past’, *koi* ‘durative’, *ku/kua* ‘perfective’, *ka* ‘imminent’. Only the successive marker *loa* is postposed to the verb phrase.

2.5 Verb classes and argument structure

East Futunan is an ergative language in the sense that the sole argument (S) of an intransitive verb is marked in the same way (as absolutive, by the marker *a* or by \emptyset) as the argument denoting the patient (O) of a transitive verb. The agent (A) of a transi-

tive verb is in the ergative (marked by *e*). Most other arguments are introduced by the oblique markers *i* or *ki*. The *i* marker precedes static spatial and temporal, as well as causal, oblique arguments, while *ki* introduces dynamic spatial and temporal oblique arguments, the patient of the so-called “middle” verbs, the recipient, and the instrumental. There is no passive voice. There are five classes of verbs (Moyses-Faurie 1992).

2.5.1 Impersonal intransitives

The verb with its tense-aspect marker suffices to form a sentence: *kua 'ua* <PFV rain> ‘It is raining’.

2.5.2 One-place intransitives

These verbs have a single argument introduced by the absolutive marker, whether an agent or a patient, as for example:

- | | | | |
|-----|---------------------------|-------------------------------|-----------------------|
| (1) | <i>ano</i> ‘to go’ | <i>makape</i> ‘to run’ | <i>mate</i> ‘to die’ |
| | <i>ifo</i> ‘to go down’ | <i>ma'uli</i> ‘to live’ | <i>nofo</i> ‘to stay’ |
| | <i>konā</i> ‘to be drunk’ | <i>mamafa</i> ‘to (be) heavy’ | <i>moe</i> ‘to sleep’ |
| | <i>lasi</i> ‘to (be) big’ | <i>moso</i> ‘to be cooked’ | <i>sola</i> ‘to flee’ |
| | <i>masaki</i> ‘to be ill’ | <i>'uli</i> ‘to (be) black’ | |

Locative, instrumental, causal phrases may be added, but are not considered as arguments. They are adjuncts, even with movement verbs.

- (2) *e makape a Soane i muli o lona toe.*
 IPFV run ABS S. OBL rear POSS his child
 ‘Soane is running after his child.’
- (3) *kua mate a ia i nānafi.*
 PFV die ABS 3SG OBL yesterday
 ‘He died yesterday.’

2.5.3 Two-place intransitives

Middle verbs is the name traditionally given by Oceanic linguists to verbs with an argument in the absolutive (the experiencer) and a second argument in the oblique case introduced by *ki*, denoting the patient. Actually, these are verbs with an obligatory indirect object. This is a semantically well-defined class containing only verbs of feeling, perception, or communication, e.g.:

- | | | | |
|-----|-----------------------------------|-------------------------|-------------------------|
| (4) | <i>tio</i> ‘to see’ | <i>māsau</i> ‘to speak’ | <i>kalaga</i> ‘to call’ |
| | <i>loi</i> ‘to lie, to tell lies’ | <i>oli</i> ‘to desire’ | <i>logo</i> ‘to hear’ |
| | <i>loto</i> ‘to want’ | <i>kamo</i> ‘to touch’ | <i>alofa</i> ‘to love’. |
- (5) *e kalaga le toe ki lona tinana.*
 IPFV call ART child OBL his mother
 ‘The child is calling his mother.’

2.5.4 Two-place transitives

Transitive or “ergative” verbs are verbs with a patient argument in the absolutive and an optional agent argument in the ergative, marked by *e*. These are all action verbs, e.g.:

- (6) *afa* ‘to seek’ *fō* ‘to wash’ *foke* ‘to peel’
ligi ‘to pour’ *sele* ‘to cut’ *soka* ‘to pound’
ta’aki ‘to dig up’ *’u’uti* ‘to bite’ *tamate* ‘to kill.’
- (7) *na sae loku kofu e le kulī.*
 PAST tear my dress ERG ART dog
 ‘The dog tore my dress.’

2.5.5 Three-place transitives

Three-place transitive verbs or “bitransitive verbs” have an additional recipient argument in the oblique case, e.g.:

- (8) *solī* ‘to give’ *vasi* ‘to share’
tufa ‘to distribute’ *vesilī* ‘to ask’
vae ‘to share, share out’; cf.:
- (9) *na solī e ia le tosi kia Kalepo.*
 PAST give ERG 3SG ART book OBL K.
 ‘He gave the book to Kalepo.’

2.6 Word order

The unmarked word order is VS, VAO, or VOA, when the arguments S, A, and O are nouns. These are generally introduced by a case marker, with order of appearance depending on pragmatic considerations. Two unmarked orders are possible with pronominal arguments:

1. VAO or VOA, as with nouns. In this postverbal position, a pronominal argument always precedes a non-pronominal one, whatever their case roles may be.
2. aVO or oVA, where ‘a’ and ‘o’ are pronouns from the preverbal set taking no case markers.

The unmarked verbal-sentence contains a verbal constituent (comprised of a tense-aspect marker, the verb itself, and sometimes an adverb and/or a preposed pronoun), followed by one or more arguments. Argument topicalisation and focalisation involve shifting to preverbal position and use of the preposition *ko* (the predicative/topic marker), which in some cases leaves a copy in the form of an anaphoric postverbal pronoun.

2.7 Verb derivation

In East Futunan, verb derivation often involves a change of valence by addition or by deletion of an argument. It may also retain all the arguments, this goes along with semantic correlates which will be discussed in detail. A detailed description of the main verbal affixes and their polysemy is necessary to understand how the expression of reciprocity and other related meanings are constructed in East Futunan syntax.

2.7.1 *By addition of an argument*

The causative prefix *faka-*, as well as the suffixes *-(C)aki* and *-(C)i* derive transitive verbs from intransitive ones.

2.7.1.1 *The causative prefix faka-*. Addition of an argument occurs when the causative prefix *faka-* is used. Verbs with a single argument acquire a second one, which will be placed in the ergative.

- (10) a. *e moso le ne'akai.* (vi)
 IPFV be.cooked ART food
 'The food is cooked.'
- b. *e faka-moso a ika e le fafine.* (causative vt)
 IPFV CAUS-be.cooked ABS fish ERG ART woman
 'The woman cooks the fish.'

2.7.1.2 *The suffix -(C)i*.¹ This is a transitivity suffix, but it also has an intensive, terminative sense, indicating that the action is carried to its term, and generally implying that the patient is affected to a greater degree:

- (11) a. *e kava le toe (i le niu).* (vi)
 IPFV climb ART child OBL ART coconut.palm
 'The child climbs up (the coconut palm)'
- b. *e kava-'i e le toe le niu.* (vt)
 IPFV climb-REC ERG ART child ART coconut.palm
 'The child climbs to the top of the coconut palm.'

2.7.1.3 *The suffix -(C)aki*. The suffix *-(C)aki* transitivity suffixes the verbs to which it applies, i.e., allows them to take an ergative argument, resulting in comitative, causative, or applicative senses. For each of these senses, the verbs attested in the author's own data are listed below.

2.7.1.3.1 *The comitative meaning*. A comitative meaning is given by the adjunction of the suffix *-(C)aki* to some intransitive verbs:

- (12) intransitive transitive
ifo 'to go down' → *ifo-'aki* 'to go down with'
moe 'to sleep' → *moe-'aki* 'to sleep on (i.e., go to sleep thinking of)'
nofo 'to stay' → *nofo-'aki* 'to stay with'
sola 'to flee' → *sola-faki* 'to flee with.'
- (13) a. *ifo ake le toe ki 'one o ma'ua a Sina Asoa aia.*
 go.down DIR ART child OBL sand and find ABS S. A. DEICT
 'The child went down to the beach and found Sina from Asoa there.'

1. The initial (C), in both *-(C)i* and *-(C)aki* stands for a stem consonant. In East Futunan, its most common (and only currently productive) representative is the glottal stop (noted by an apostrophe '); all other representatives of this stem consonant are now fossilised.

- b. *ti ifo-'aki loa le nofo'aga e lona tamana ki tai.*
 then go.down-REC SUC ART camp ERG his father OBL sea
 'Then his father went down with the camp to the seaside.'

2.7.1.3.2 *The causative meaning.* A causative meaning is given by the adjunction of the same suffix *-(C)aki* to some other intransitive or “middle” verbs:

- (14) intransitive or “middle” transitive
ako ‘to teach oneself’ → *ako-naki* ‘to teach’
eke ‘to sit, perch’ → *eke-naki* ‘to support’
sao ‘to be freed’ → *sao-faki* ‘to free’
sōsō ‘to move (oneself) over’ → *sōsō-'aki* ‘to push’
tausi ‘to feed oneself’ → *tausi-maki* ‘to feed’
tele ‘to be swept away’ → *tele-kaki* ‘to carry away’
tolo ‘to be dragged’ → *tolo-kaki* ‘to drag.’
- (15) a. *e eke le moa i le ta'ofufu o le fale.*
 IPFV perch ART hen OBL ART top POSS ART house
 ‘The hen perches on the top of the house.’
 b. *e eke-naki e le fafine le matu'a ki aluga.*
 IPFV perch-REC ERG ART woman ART old.man OBL upwards
 ‘The woman helps the old man to stand up.’

2.7.1.3.3 *The applicative meaning.* An applicative meaning is given by the adjunction of the suffix *-(C)aki* to some intransitive verbs:

- (16) intransitive transitive
'oso ‘to rush’ → *'oso-faki* ‘to rush to get’
ulu ‘to go in, start up’ → *ulu-faki* ‘to ask for permission, pray for.’
- (17) a. *e kau 'oso ki fafo.*
 IPFV 1SG rush OBL outside
 ‘I rush outside.’
 b. *na 'oso-faki loku tamana e le fenua.*
 PAST rush-REC my father ERG ART people
 ‘People rushed upon my father.’

2.7.2 *By deletion of an argument*

The resultative prefix *ma-* and a few occurrences of the prefix *fe-* derive transitive verbs into intransitives.

2.7.2.1 *Resultative.* An argument is dropped when the resultative prefix *ma-* is used, e.g., the derived verb *ma'ofa* takes only one argument and cannot acquire an ergative one. In semantic terms, the prefix *ma-* gives the base verb a resultative meaning (as the result of some past action):

- (18) a. *e 'ofa le pusatu'u e Muni.*
 IPFV take.apart ART cupboard ERG M.
 ‘Muni takes the cupboard.’

- b. *e ma-'ofa le pusatu'u (i Muni).*
 IPFV RES-take.apart ART cupboard OBL M.
 'The cupboard has been taken apart (owing to Muni).'

2.7.2.2 Middle. Valence reduction may occur when the *fe-* prefix has a middle value (see 3.1.2.2).

2.7.2.3 Reciprocal. A similar type of valence decrease may also occur with the complex *fe-... -(C)aki* when associated with the reciprocal meaning (see 3.3.1).

2.7.3 By retaining all the arguments

2.7.3.1 Sociative. One of the basic roles of the prefix *fe-* is sociative (see 3.1.2.1).

2.7.3.2 Adverbial meaning. The suffix *-(C)i* may be attached to transitive verbs. In this case, only its adverbial meaning is relevant. The valence of the verb remains unchanged, but the action is carried to its term, and the patient is totally affected. The prefix *fe-* may also have an adverbial meaning (see 3.1.2.3).

2.8 Verbalising

2.8.1 With the suffix *-(C)ia*

There is another suffix which allows a verb to add an ergative argument: *-(C)ia*. From a semantic standpoint, the patient, which remains in the absolutive, is again affected to a greater degree by the action of the derived verb. Unlike *-(C)i*, however, *-(C)ia* has been lexicalised and is no longer productive. However, it can act as a verbaliser:

- (19) *ala* 'road' → *ala-fia* 'to take a road without permission, trespass'
po'uli 'night' → *po'uli-gia* 'to be overtaken by night' (lit. to be benighted).

2.8.2 With the suffix *-(C)i*

This suffix can be used to derive verbs from nouns. The meaning of this derivation is 'to make use of':

- (20) *pa'atai* 'salt' → *pa'atai-i* 'to salt sth.'
saga 'tongs' → *saga-i* 'to use tongs.'

2.8.3 With the causative prefix *faka-*

This prefix can also be used to derive verbs from nouns, with a causative meaning:

- (21) *aliki* 'chief' → *faka-aliki* 'to make sb chief.'
va'e 'leg, foot' → *faka-va'e* 'to lay (foundations).'

3. Morphological types of reciprocals (“canonical” diathesis type only)

3.1 Derivatives with the prefix *fe-*

3.1.1 *The reciprocal meaning (involving two participants only)*

The prefix *fe-* can mark a reciprocal involving no more than two participants, although its primary sense is sociative. The reciprocal sense appears with a dozen of verbs, which can be either transitive, as for example:

- (22) *lau* ‘to say, to tell’ *tā* ‘to hit’ *to’o* ‘to take’
mili ‘to stroke, rub’ *tuli* ‘to pursue’
poko ‘to push’ *tegi* ‘to stroke’

or “middle” verbs, as for example:

- (23) *peu* ‘to disagree’ *sogi* ‘to kiss.’
- (24) a. *e peu le toe ki lona tinana.*
 IPFV disagree ART child OBL his mother
 ‘The child opposes his mother.’
 b. *e fe-peu a Katalina mo Ivete.*
 IPFV REC-disagree ABS K. and I.
 ‘Katalina and Ivete disagree with each other.’
- (25) a. *e tuli e Petelo lona gā taina.*
 IPFV chase ERG P. his CLF brother
 ‘Petelo is chasing his little brother.’
 b. *e fe-tuli a lāua.*
 IPFV REC-chase ABS 3DU
 ‘They are both chasing each other.’

The use of *fe-* alone in a reciprocal meaning involving only two participants remains an exception, and is restricted to verbs denoting actions often performed by only two participants. Generally, *fe-* must be associated with the suffix *-’aki* to mark a reciprocal involving two or more participants (see 3.3.1). In fact, the suffix *-’aki* may always be added in combination with *fe-* to express the same reciprocal meaning.

3.1.2 *Non-reciprocal meanings of fe-*

As mentioned, the prefix *fe-* has various other, more basic senses than the reciprocal. Each sense usually involves a limited number of verbs which are, in some cases, semantically related. There are also instances in which verbs prefixing *fe-* can acquire different senses in different contexts, depending in particular on whether they have an argument denoting one or more participants.

3.1.2.1 *The sociative meaning.* Prefixing *fe-* to some (generally action) verbs marks a plural, or more precisely, an action performed jointly by several participants belonging to a

single group:² the non-derived base form is compatible with a singular or plural absolutive, but the derivative obtained by prefixing *fe-* is only compatible with an absolutive argument denoting a plurality of participants.

1. The sociative meaning of *fe-* can be obtained with intransitive verbs such as *kapu* ‘to run after, drive away’, *kē* ‘to scream, cry out’, *tau* ‘to be at war’, *velo* ‘to fight with spears’. The verb without the prefix is thus used for actions performed by individuals, each for his own purpose (examples (26a) and (27a)), while *fe-* is prefixed when the action is performed jointly and with a single purpose (examples (26b) and (27b)):

- (26) a. *e kapu a toe ki le fā fitipolo.*
 IPFV run.after ABS child OBL ART CLF ball
 ‘Children are running after the ball.’
 b. *e fe-kapu a toe ki le fā fitipolo.*
 IPFV REC-run.after ABS child OBL ART CLF ball
 ‘Children are running together after the ball.’

2. The prefix *fe-* can also be attached to transitive verbs with the same sociative meaning. This is the case, for example, with *tagi* ‘to cry’, *taki* ‘to carry in the hand’ or *koti* ‘to cut with scissors’:

- (27) a. *e taki e Samino lana kete.*
 IPFV carry.in.the.hand ERG S. his bag
 ‘Samino carries his bag in his hand.’
 b. *e fe-taki lalā kete e Setefano mo Samino.*
 IPFV REC-carry.in.hand their bag ERG S. and S.
 ‘Setefano and Samino are carrying their bag together.’

Note that, when the meaning of *fe-* is not reciprocal, no reduction in the number of arguments occurs: the transitive verbs *taki* or *koti* cited above retain the ability to take two arguments when *fe-* is prefixed with a sociative meaning, as in (27b).

3.1.2.2 The middle meaning. In East Futunan, the middle meaning of grooming actions is usually either lexicalised (i.e. expressed by lexically middle verbs, as *ma’anu* ‘to bathe’, *seluselu* ‘to comb’) or by transitive verbs, the two arguments of which refer to the same entity:

- (28) *e kau fefegu loku isu.*
 IPFV 1SG wipe my nose
 ‘I wipe my nose.’

2. When the sociative meaning is restricted to two participants, the use of the noun *soa* ‘peer, companion’, as a preverbal modifier, is preferred to the prefix *fe-*:

- e soa ano a Kalepo mo Petelo ki Numea*
 IPFV peer go ABS K. and P. OBL N.
 ‘Kalepo and Petelo are going together to Numea.’

The second argument may be incorporated into the verb:

- (29) *e tele gutu loku tamana.*
 IPFV shave mouth my father
 ‘My father is shaving.’

There are no reflexive pronouns like ‘myself’, ‘yourself’ in Futunan.

The use of *fe-* is limited to a few verbs designating actions performed on one’s own body. The transitive verbs *lole* ‘to rub (with the hand or a glove)’, *lomi* ‘to massage’, *olo* ‘to rub (with pumice)’, *’umo* ‘to pinch’ and *vaku* ‘to scratch’ are all rendered intransitive and take on a middle meaning after prefixing *fe-*. In the following examples, *vaku* ‘to scratch’ and *’umo* ‘to pinch’ take two arguments in (30a), (31a), while their derivatives with *fe-* take only one in (30b), (31b):

- (30) a. *e ke vaku le tu’a o lou toe.*
 IPFV 2SG scratch ART back POSS your child
 ‘You are scratching your child’s back.’
 b. *e ke fe-vaku i le kai e namu.*
 IPFV 2SG REC-scratch OBL ART eat ERG mosquito
 ‘You are scratching [yourself] because of mosquito bites.’
- (31) a. *e ’umo le toe e lona tinana.*
 IPFV pinch ART child ERG his mother
 ‘The mother is pinching her child.’
 b. *e kau fe-’umo pe kau moemiti fakatotonu pe le’ai.*
 IPFV 1SG REC-pinch or 1SG dream really or not
 ‘I pinch myself to know if I am dreaming or not.’

3.1.2.3 *The adverbial meaning ‘with difficulty’.* The prefix *fe-* is also used to indicate that an action is hard to perform or requires persistence, as when the agent has to try several times in succession. In the following example, *fe-* does not have a sociative meaning as in (27b), since the agent is an individual. Here, though applied to the same verb *taki* ‘to carry in the hand’, *fe* takes on the adverbial meaning defined above:

- (32) a. *e taki e Samino lana kete.*
 IPFV carry.in.the.hand ERG S. his bag
 ‘Samino carries his bag in his hand.’
 b. *e fe-taki e Samino lana kete.*
 IPFV REC-carry.in.the.hand ERG S. his bag
 ‘Samino carries his bag in his hand with difficulty.’

Likewise, *fe-* lends an adverbial modification to the verbs *oli* ‘to desire’, and *fai* ‘to do’ in the following examples. Again, the arguments denote individuals:

- (33) a. *e kau fe-oli ke kau ano ki Mala’e.*
 IPFV 1SG REC-want that 1SG go OBL M.
 ‘I want to go to Malae at any cost.’
 b. *e kau fe-fai ki saku motokā kae le’ese feauga i laku fāfalā.*
 IPFV 1SG REC-do OBL my car but not be enough OBL my money
 ‘I do my best to get a car but I am short of money.’

The use of *fe-* with such an adverbial meaning is not restricted to a few verbs, as for the middle. But it seems that the agent argument must be singular.

3.1.3 Lexicalisations

There are a few fossilised derivatives in *fe-*, but the available examples show no indication of a reciprocal meaning.

1. The verb *feluku* ‘to move (house)’ derives in all likelihood from *luku*, a verb still found in the expression *luku le taua* ‘to skim off the film (formed when edible curcuma is cooked on hot stones)’, an action which, as expected, involves a repetitive gesture.

2. Although there is no longer a verb **lutu*, the verbs *felutu* ‘to squirm, struggle (trying to get somewhere)’ and *felutu’aki* ‘to struggle together’ must certainly derive from it.

3. A fossilised *fe-* can also be found in verbs describing repetitive noises: *fegati* or *fetatoti* ‘to gnash (teeth)’ and *fenoti* ‘to click (said of the jaws of large black ants)’.

4. The derivative *fe-tuli* (← *tuli* ‘to chase’) can have either the reciprocal meaning ‘to chase each other’ when the sole argument denotes two participants as in (25b), or the (highly lexicalised) meaning ‘to hurry, do quickly’ when the argument denotes an individual:

- (34) *e kau fe-tuli.*
 IPFV 1SG REC-chase
 ‘I hurry.’

3.1.4 Derivatives from non-verbal roots (*fe-* prefixed to nouns)

In a single case, *fe-* is used to mark a noun plural: *fetāina* ‘siblings’ (the plural of *taina* ‘sibling’). The same prefix is also probably to be found in *fe’ilo* ‘distant relative, acquaintance’ (← *iloa* ‘to know’).

3.1.5 Nominalisations

The prefix *fe-*, associated with the nominalising suffix *-ga*, derives a few verbs into nouns denoting actions which involve two or more participants:

- (35) *kapu* ‘to run after’ → *fe-kapu-ga* ‘pursuit’
peu ‘to disagree’ → *fe-peu-ga* ‘dispute, contestation’
tau ‘to fight’ → *fe-tau-ga* ‘fight.’

3.2 Reciprocals with the complex *fe...-(C)i*

The suffix *-(C)i* normally has a transitivity effect and an intensive sense (see 2.7.1.2): the action is carried to its term, and the patient is fully affected. In association with the prefix *fe-*, it loses its transitivity effect, but generally retains its intensive sense. Derivatives in *fe...-(C)i* are all intransitive verbs, which take on mainly a sociative, but secondarily an iterative, and in exceptional cases a reciprocal sense.

3.2.1 *The reciprocal meaning*

In East Futunan, *fe-...-(C)i* can have a reciprocal meaning in the following derivative only, and even this one is not acceptable to all speakers.

- (36) *alofa* ‘to love’ → *fe-alofa-ni* ‘to like each other’, as in (37) below,
but most speakers consider this derivative to be a loanword from East Uvean.
- (37) *e fe-alofa-ni le fenua.*
IPFV REC-love-REC ART people
‘People like each other.’

3.2.2 *Non-reciprocal meanings*

3.2.2.1 *The sociative meaning.* The verbs listed below are intransitive, except for *tagi* ‘to cry’:

- (38) *lele* ‘to fly’ → *fe-lele-i* ‘to fly away together (as frightened birds)’
sigā ‘to fall’ → *fe-sigā-i* ‘to fall down together’
sola ‘to flee’ → *fe-sola-ki* ‘to flee together’
tagi ‘to cry’ → *fe-tagī-si* ‘cry together, at the same time or again and again.’

1) An example with a non-derived intransitive verb:

- (39) a. *kua sola le toe ki lona tupuna.*
PFV run.away ART child OBL his grandmother
‘The child ran away to its grandmother.’
b. *e fe-sola-ki a toe o nono i le salatamu.*
IPFV REC-run.away-REC ABS child in.order.to hide OBL ART policeman
‘The children are running together away to hide from the policeman.’

2) An example with a non-derived transitive verb:

- (40) a. *na tagi e au le mate o Petelo.*
PAST cry ERG ISG ART death POSS P.
‘I cried over the death of Petelo.’
b. *na fe-tagī-si a toe ki lolotou tinana.*
PAST REC-cry-REC ABS child OBL their mother
‘The children cried together over their mother’s death.’

3.2.2.2 *The iterative meaning.* An iterative meaning may result from affixing *fe-...-(C)i*, as for example in the case of the following intransitive verbs:

- (41) *sali* ‘to flow’ → *fe-sali-i* ‘to drip’
sopo ‘to jump’ → *fe-sopo-i* ‘to jump several times.’
- (42) a. *e sali ga’ega’e le tane.*
IPFV flow weakly ART water tank
‘The water tank is leaking slowly.’
b. *e fe-sali-i le vai ki le moelaga o lona tupuna.*
IPFV REC-flow-REC ART water OBL ART mat POSS his grandmother
‘Water is dripping on his grandmother’s mat.’

3.2.3 Lexicalisations

Two cases can be distinguished here.

1. Lexicalisations involving an iterative meaning. For instance, *fe-tio-fi* ‘to keep everything for sb, watch over sb’s interests’ derives from *tio* ‘to see’, to which it now bears a fairly tenuous semantic relation. *fe-olo-ni* ‘to follow one another, succeed one another’ is undoubtedly derived, but the only verb *olo* means ‘to scrape, rub’.

2. Lexicalisations involving a reciprocal meaning. The prefix *fe-* appears in fossilised form in some derivatives which are semantically reciprocal, e.g., *felāvei* ‘to meet together’ and *felōgoi* ‘to argue’ are probably former derivatives of *lave* ‘to know where’ and *logo* ‘to hear’. This type of derivation involving the suffix *-i* and vowel lengthening is, however, no longer productive.

- (43) *na mā felāvei i koloa.*
 PAST 1DU.EXC meet OBL store
 ‘We met at the store.’

3.2.4 Polysemy of the same derivative

A derivative may have different meanings depending on its syntactic context. Thus, *fe-sopo-’i* (← *sopo* ‘to jump’) may mean ‘to jump several times’ or ‘to jump together’, depending on whether its argument denotes one or more participants.

1) The iterative meaning, with a singular argument:

- (44) a. *e fe-sopo-’i le kulī mei le vaka ki le tasi a vaka.*
 IPFV REC-jump-REC ART dog from ART boat OBL ART one POSS boat
 ‘The dog is jumping from one boat to another.’

2) The sociative meaning, with a plural argument:

- b. *e fe-sopo-’i a toe i le mala’e sekolā.*
 IPFV REC-jump-REC ABS child OBL ART playground school
 ‘Children are jumping together in the school playground.’

3.2.5 Derivatives from non-verbal roots

There is only one known example of a derivative from a nounlike stem: *soa* ‘companion, peer’ yields *fe-soasoa-ni* ‘to go along with sb (going somewhere)’. This derivative thus has a sociative meaning:

- (45) *e fe-soasoa-ni a Malia mo Ana o ano ki Alo.*
 IPFV REC-peer.RED-REC ABS M. and A. in.order.to go OBL A.
 ‘Malia and Ana are going together to Alo.’

3.3 Derivatives with the complex *fe-...-(C)aki*

3.3.1 The reciprocal meaning (involving two or more participants)

The complex *fe-...-(C)aki* is a combination of affixes which is generally used to express the reciprocal. This is not to say, however, that the reciprocal is its primary sense. Other senses listed below are equally frequent. It is true, nevertheless, that the stem consonant

used for the reciprocal is almost always the glottal stop, and derivation in *-’aki* is in fact the only productive one. When the derivatives have senses other than the reciprocal, the stem consonant is not preferentially the glottal stop. Derived verbs with a reciprocal sense take a single argument and cannot have another one in the ergative. The base verb is usually “middle” or transitive, but can also be an intransitive verb designating a position.

3.3.1.1 Subject/agent-oriented diathesis types of reciprocal constructions

3.3.1.1.1 Reciprocals deriving from transitive verbs. A few transitive verbs also allow derivation with a reciprocal meaning:

- | | | | |
|------|--------------------------|---|--|
| (46) | <i>lau</i> ‘to tell’ | → | <i>fe-lau-’aki</i> ‘to tell each other’ |
| | <i>mili</i> ‘to massage’ | → | <i>fe-mili-’aki</i> ‘to touch each other’ |
| | <i>tā</i> ‘to hit’ | → | <i>fe-tā-’aki</i> ‘to hit each other’ |
| | <i>tali</i> ‘to answer’ | → | <i>fe-tali-’aki</i> ‘to answer each other’ |
| | <i>tamate</i> ‘to kill’ | → | <i>fe-tamate-’aki</i> ‘to kill each other’ |
| | <i>’umo</i> ‘to pinch’ | → | <i>fe-’umo-’aki</i> ‘to pinch each other.’ |

Reciprocal derivation applied to transitive verbs allows only one argument. The derived verbs can no longer take an argument in the ergative.

- (47) a. *na tali loa e Ufigaki le ’aumai o le kava.*
 PAST accept SUC ERG U. ART arrival POSS ART kava
 ‘Ufigaki accepted that the kava be brought.’
- b. *e fe-tali-’aki le fenua i le fonu.*
 IPFV REC-ANSWER-REC ART people OBL ART meeting
 ‘People answer each other during the meeting.’
- (48) a. *na tamate a Petelo e Paulo.*
 PAST kill ABS P. ERG P.
 ‘Paulo killed Petelo.’
- b. *o fe-tamate-’aki fa’i le kau Alo talie kua po’uli e le’ese koi*
 and REC-kill-REC only ART CLF A. because PFV be.dark IPFV not DUR
fe-lave-’aki a lātou.
 REC-know.where-REC ABS 3PL
 ‘And the Alos killed each other, because it was dark and they couldn’t locate each other any longer.’

3.3.1.1.2 Reciprocals deriving from two-place intransitive (“middle”) verbs. The reciprocal meaning is usually obtained from a middle base verb, i.e., a verb requiring a second argument in the oblique case. “Middle” verbs have an absolutive argument denoting the experiencer, and an argument in the oblique case denoting the patient. We may recall that these verbs, the prime candidates for reciprocal derivation because of their meaning, are all verbs of feeling, perception, or communication. Here are a few examples:

- (49) *alofa* ‘to love’ → *fe-alofa-’aki* ‘to love each other’
’ita ‘to be angry’ → *fe-’ita-’aki* ‘to be angry at each other’
kē ‘to cry out’ → *fe-kē-’aki* ‘to argue with each other’
māsau ‘to speak’ → *fe-māsau-’aki* ‘to talk over’
meo ‘to be unhappy’ → *fe-meo-’aki* ‘to be unhappy with each other’
pati ‘to say’ → *fe-pati-’aki* ‘to talk to each other’
sogi ‘to kiss’ → *fe-sogi-’aki* ‘to kiss each other’
tio ‘to see’ → *fe-tio-’aki* ‘to see each other’
vesili ‘to ask’ → *fe-vesili-’aki* ‘to question each other’; cf.:
- (50) a. *e tio a ia ki se matu’a e ’au i le ala.*
 IPFV see ABS 3SG OBL ART old.man IPFV come OBL ART road
 ‘He is looking at an old man coming on the road.’
 b. *ofolele kua fe-tio-’aki le sā tagata o lā fe-iloa-’aki.*
 suddenly PFV REC-see-REC ART CLF man and 3DU REC-know-REC
 ‘Suddenly the two men looked at each other and recognized each other.’
- (51) a. *e ’ita a Paulo ki lona āvaga.*
 IPFV be.angry ABS P. OBL his wife
 ‘Paulo is angry at his wife.’
 b. *e fe-’ita-’aki a Lotoato mo Sanele.*
 IPFV REC-be.angry-REC ABS L. and S.
 ‘Lotoato and Sanele are angry at each other.’

The derived verbs have a single argument and can no longer take a second argument introduced by *ki* and denoting a patient.

3.3.1.1.3 Reciprocals deriving from intransitive verbs. A few positional verbs allow derivation by *fe-...-(C)aki* with a reciprocal meaning. All the following verbs are intransitive; they may take a locative modifier, often simply a directional term, as in (52):

- (52) *e ’aga mai a Petelo.*
 IPFV face DIR ABS P.
 ‘Petelo is opposite (to the speaker).’

Here belong at least the following verbs:

- (53) *tītu’a* ‘to turn one’s back’ → *fe-tītu’a-’aki* ‘to turn backs to each other’
’aga ‘to face’ → *fe-’aga-’aki* ‘to face each other’
sili ‘to pass by, be in front’ → *fe-sili-’aki* ‘to cross each other’ (or *fe-sili-kaki*)
sipa ‘to be crooked’ → *fe-sipa-’aki* ‘to be crooked with respect to each other, to intersect.’

Compare:

- (54) a. *e sili le motokā a Kalala iō ’oku.*
 IPFV pass.by ART car POSS K. by mine
 ‘Kalala’s car is driving past my house.’
 b. *e fe-sili-’aki a Iasinito mo Fapiano i lamatu’a.*
 IPFV REC-pass.by-REC ABS I. and F. OBL road
 ‘Iasinito and Fapiano are passing each other on the road.’

- (55) a. *e tītū'a mai a Isaia kia māua.*
 IPFV turn.one's.back DIR ABS I. OBL 1DU.EXCL
 'Isaia is turning his back to us.'
- b. *e tā fe-tītū'a-'aki.*
 IPFV 1DU.INCL REC-turn.one's.back-REC
 'We are turning our backs to each other.'
- (56) a. *e sīpa le pa'ā o le fale.*
 IPFV be.crooked ART wall POSS ART house
 'The wall of the house is not straight.'
- b. *e fe-sīpa-'aki le tānaki o moelaga.*
 IPFV REC-be.crooked-REC ART gathering POSS mat
 'Mats are not piled neatly.'

3.3.1.2 *Semantic equivalents of the “possessive” diathesis type (“quasi-possessive”).* In Futunan, genitive constructions may be used for semantic roles other than possession. In verbal sentences, with transitive or intransitive verbs, the agent may be marked as the possessor by a genitive noun phrase, and no ergative argument is needed:

- (57) a. *na lavea a lima o le sā tagata.*
 PAST injure ABS hand POSS ART CLF man
 'The two men injured their hands.'

The reciprocal construction is identical with it except that the verb must be a derivative:

- b. *na fe-lavea-'aki a lima o le sā tagata.*
 PAST REC-injure-REC ABS hand POSS ART CLF man
 'The two men injured each other's hands.'

Another example with *ligi*, an ergative verb:

- (58) a. *e ligi lana kafe.*
 IPFV pour his coffee
 'He is pouring his coffee.'
- b. *e fe-ligi-'aki alāua kafe.*
 IPFV REC-pour-REC their coffee
 'They are pouring each other's coffee.'

3.3.1.3 *Semantic equivalents of the “indirect” diathesis type (“quasi-indirect”).* In a bitransitive construction, the recipient is in the oblique case. An agent and a recipient in reciprocal relation may be expressed in two different ways, but in both cases, there is a valence reduction:

1. Either a possessive construction is used (as in 3.3.1.2). The recipient and agent are both expressed as possessors in a genitive noun phrase, in the absolutive case.

- (59) a. *na solī e Petelo a tosi kia Paulo.*
 PAST give ERG P. ABS book OBL P.
 'Petelo gave books to Paulo.'

- b. *na fe-soli-'aki a tosi a Petelo mo Paulo.*
 PAST REC-give-REC ABS book POSS P. and P.
 'Petelo and Paulo gave books to each other.'

2. Or the agent and recipient belong to the same coordinated noun phrase, in which case the absolutive patient (*le fā niu matu'u*) in (60a) is peripherised as an instrumental adjunct (*ki niu matu'u*) in (60b):

- (60) a. *e tuki e Paulo le fā niu matu'u kia Petelo.*
 IPFV throw ERG P. ART CLF coconut dry OBL P.
 'Paulo throws a dry coconut at Petelo.'
- b. *e fe-tuki-'aki a Paulo mo Petelo ki niu matu'u.*
 IPFV REC-throw-REC ABS P. and P. OBL coconut dry
 'Petelo and Paulo throw dry coconuts at each other.'

3.3.2 Non-reciprocal meanings of the complex *fe-...-(C)aki*

It is not the sole function of *fe-...-(C)aki* derivation to express the reciprocal. It is also used to express aspectual values such as the habitual, or adverbial meanings such as the iterative, the dispersive, or the successive (Lichtenberk 1985). In such a case, the derived verb retains the valence of the base verb, and there is no intransitivisation as in the case of the reciprocal meaning. The derived verb can retain two arguments, one in the absolutive and the other in the ergative. Derivation then has no syntactic consequences, only semantic and/or aspectual ones. The meaning of the derivative may show a certain degree of lexicalisation, often intensified in translation though less perceptible to a Futunan. The meanings other than the reciprocal resulting from derivation by *fe-...-(C)aki* are listed below.

3.3.2.1 The sociative meaning. Derivation by *fe-...-(C)aki* may result in a sociative meaning, whereby the action is performed jointly or concomitantly over time. This sense can be found for derivatives from both transitive and intransitive verbs.

1. Derivatives from intransitive verbs:

- (61) *ō* 'to lay (eggs)' → *fe-ō-faki* 'to lay and hatch (eggs) together'
somo 'to grow' → *fe-somo-'aki* 'to grow simultaneously'
'uluga 'to rest (head on a pillow)' → *fe-'uluga-'aki* 'to share (the same pillow).'
- (62) a. *e ō a moa e lua ki le ōfaga e tasi.*
 IPFV lay ABS hen IPFV two OBL ART nest IPFV one
 'The two hens are laying in the same nest.'
- b. *e fe-ō-faki a moa e lua i le ōfaga e tasi.*
 IPFV REC-lay-REC ABS hen IPFV two OBL ART nest IPFV one
 'The two hens lay and hatch *together* in the same nest.'

The translation 'to lay and hatch together' of the derivative in (62b) is an attempt to render the more extended nature of the action in comparison with the more punctual sense of the non-derived verb in (62a). This durative meaning also justifies the use of the stative locative marker *i* in (62b), indicating that the hens are to stay in the nest for some time, while (62a) introduces the locative with the dynamic marker *ki* to show that the nest where

the hens are going to lay is only a temporary destination. Here are a few more examples with intransitive verbs:

- (63) a. *e somo vave le la'akau leinei.*
 IPFV grow fast ART tree this
 'This tree grows fast.'
 b. *kua fe-somo-'aki a 'ufi.*
 PFV REC-grow-REC ABS yam
 'Yams all grew at the same time.'
- (64) a. *e 'uluga le toe ki le fā pila.*
 IPFV rest.one's.head.on.a.pillow ART child OBL ART CLF pillow
 'The child is resting his head on a pillow.'
 b. *e fe-'uluga-'aki a Vasa mo Sanele.*
 IPFV REC-rest.one's.head.on.a.pillow-REC ABS V. and S.
 'Vasa and Sanele are resting their heads on the same pillow' (they share one pillow).

2. Derivative from transitive verbs (a single example):

- (65) *koti* 'to cut (with scissors)' → *fe-koti-'aki* 'to cut (with scissors) together.'
- (66) *e natu a au o ma'ua atu a Petelo mo Sosefo e fe-koti-'aki e*
 IPFV arrive ABS 1SG and find DIR ABS P. and S. IPFV REC-cut-REC ERG
lāua a le siapo.
 3DU ABS ART bark-cloth
 'I found Petelo and Sosefo cutting a bark-cloth together.'

3.3.2.2 *The successive meaning.* Derivation by *fe-...-(C)aki* may also indicate that the actions are performed consecutively. The following are transitive verbs whose derivatives retain the same valence as the base verb:

- (67) *laga* 'to lift' → *fe-laga-'aki* 'to lift in succession'
sulu 'to put on (clothing)' → *fe-sulu-'aki* 'to put on (clothing) one after another'
taki 'to carry in the hand' → *fe-taki-'aki* 'to carry in the hand, one after another'
to'o 'to take' → *fe-to'o-'aki* 'to pass from hand to hand, carry in succession.'
- (68) a. *e sulu loku gā kie e Sosefo.*
 IPFV put.on my CLF cloth ERG S.
 'Sosefo puts on my loin-cloth.'
 b. *e fe-sulu-'aki loku gā kie e toe.*
 IPFV REC-put.on-REC my CLF cloth ERG child
 'Children put on my loin-cloth by turns.'

3.3.2.3 *The alternative meaning.* The movement designated by the derivative is of a back-and-forth nature. There is only one (intransitive) verb in the author's data which has an alternative derivative:

- (69) *ano* 'to go' → *fe-ano-'aki* 'to go back and forth, to and fro.'
- (70) a. *na ano loku tamana o faifeua i le tai malō.*
 PAST go my father in.order.to fish OBL ART tide low
 'My father went fishing at low tide.'

- b. *e fe-ano-'aki le tēpitē i le vakalele.*
 IPFV REC-go-REC ART deputy OBL ART plane
 'The deputy is flying to *and fro*' (between two well-defined places).

3.3.2.4 The iterative meaning. The action is performed several times ('again and again') by one or more participants. The base verb may be either transitive or intransitive, and derivation does not affect the initial valence.

1. Intransitive verbs:

- (71) *tapa* 'to flash (as lightning)' → *fe-tapa-'aki* (or *fe-tapa-laki*) 'to flicker (as lightning).'
- (72) a. *e tapa le uila.*
 IPFV flash ART lightning
 'Lightning flashes.'
- b. *e fe-tapa-'aki le uila i le lagi.*
 IPFV REC-flash-REC ART lightning OBL ART sky
 'Lightnings flicker (flash *again and again*) in the sky.'

The derivative *fe-ulu-'aki* (from the intransitive verb *ulu* 'to go in, to go out') also has an iterative meaning when it means 'to go into several houses in succession':

- (73) *na fe-ulu-'aki sa'ele a ia i loto o fale ma'uke ai.*
 PAST REC-enter-REC everywhere ABS 3SG OBL inside POSS house many very
 'He enters (and goes out of) many houses *successively*.'

2. Transitive verbs:

- (74) *ave* 'to take away' → *fe-ave-'aki* 'to take to one place after another, peddle'
- ligi* 'to pour' → *fe-ligi-'aki* 'to pour several times from one container into another'
- lomi* 'to press, squeeze' → *fe-lomi-taki* 'to swallow bit by bit; pack down (so as to get in as much as possible)'
- opotu* 'to put together' → *fe-opotu-'aki* 'to be piled one on top of another'
- siki* 'to move sth' → *fe-siki-'aki* 'to move sth about.'

The iterative meaning is one of the most common results of using *fe-...-(C)aki* to form derivatives from transitive verbs. The derivatives remain transitive and able to take an ergative argument:

- (75) a. *e ligi e Lita le vai ki fagu.*
 IPFV pour ERG L. ART water OBL bottle
 'Lita is pouring water into bottles.'
- b. *e fe-ligi-'aki e Lita le vai ki fagu.*
 IPFV REC-pour-REC ERG L. ART water OBL bottle

- (76) a. *e kau lomi le 'ua o loku tinana.*
 IPFV 1SG press ART neck POSS my mother
 'I am massaging my mother's neck.'

- b. *na fe-lomi-taki e le tama ona kāvega ki lana pāsikete*
 PAST REC-PRESS-REC ERG ART boy his belongings OBL his suitcase
ke ō.
 in.order.that be.room
 ‘The boy pressed his belongings into his suitcase in order to make room for them’
 (the action is iterative, for the boy has to press *several times* to make room for his belongings).

3.3.2.5 *The habitual meaning.* Derivation by affixing *fe-...-(C)aki* can result in an habitual meaning with at least the following verbs:

- (77) *loi* (‘middle’ verb) ‘to lie/tell lies’ → *fe-loi-saki* ‘to lie all the time’
taka (vi) ‘to go, come around, walk about’ → *fe-taka-’aki* ‘to go around often.’
- (78) a. *na taka loku taina nāpō i Kolopelu.*
 PAST walk my brother yesterday.evening OBL K.
 ‘My brother walked round in Kolopelu yesterday evening.’
 b. *e matala fa’i kia tātou fuli anei e fe-taka-’aki i le vasa.*
 IPFV clear only OBL 1PL.INC all here IPFV REC-walk-REC OBL ART channel
 ‘It is clear for all of us who *often* go both ways across the channel.’
- (79) a. *e loi le toe ki lona tinana.*

 b. *e tio atu a au i le tasi a usu e fe-tuli-'aki e*
 IPFV see DIR ABS 1SG OBL ART one POSS morning IPFV REC-chase-REC ERG
lāua le gā uviki 'uli.
 3DU ART CLF young.pig black
 'I saw them one morning chasing a small black pig *all over the place*.'

3.3.2.8 *The causative meaning.* There is only one recorded example of a *fe-...-(C)aki* derivative with a causative meaning:

- (90) *sola* 'to flee' → *fe-sola-taki* (or *fe-sola-faki*) 'to help sb flee.'

3.3.3 Lexicalisations

In addition to taking on a reciprocal meaning, the meaning of a verb may change slightly under the effects of derivation. In the following two cases, for example, derivation attenuates or restricts the meaning of the base verb:

- (91) *mili* ‘to massage’ → *fe-mili-’aki* ‘to touch each other (as children at play)’
kapu ‘to chase, drive away (by running after)’ → *fe-kapu-’aki* ‘to expel (verbally)’
- (92) a. *e kau kapu le toe ki fafo.*
 IPFV 1SG drive.out ART child OBL outside
 ‘I am driving the child out of the house.’
- b. *e fe-kapu-’aki a Sosefo mo Toviko i le kāiga o lolā*
 IPFV REC-drive.out-REC ABS S. and T. OBL ART domain POSS their
tamana.
 father
 ‘Sosefo and Toviko are chasing each other (with words) from their father’s domain.’
 (Each one says that the domain belongs to him).

In other cases, on the contrary, the derivative has a wider meaning than the base verb. Thus, *fe-sopo-’aki* ‘to jump about’ (← *sopo* ‘to jump’) has an extended (metaphorical) meaning, ‘to sleep with many women’. The introduction of new techniques can also cause shifts in meaning. Thus, the transitive verb *tui* now means ‘to sew’ but also retains its original meaning ‘to insert (an awl) through sheets of pandanus-leaf roofing’:

- (93) a. *e tui e le finematu’a loku kofu.*
 IPFV SEW ERG ART old.woman my dress
 ‘The old woman is sewing my dress.’

The meaning of the derivative *fe-tui-laki* ‘to cross each other’, appears rather distantly related to the base root, but the relationship becomes clearer when considered in the light of the original sense of the awl being passed from one worker to another through the roofing leaves.

- b. *na fe-tui-laki alāua motokā i nānafi.*
 PAST REC-insert-REC their car OBL yesterday
 ‘They met driving on the way yesterday.’

3.3.4 Derivatives from non-verbal roots

Some terms used both as nouns and as verbs can have derivatives formed with the complex *fe-...-(C)aki*. These derivatives are often semantically closer to the nominal than to the verbal sense of the base term.

- (94) *sele* ‘knife; to cut’ → *fe-sele-’aki* (or *fe-sele-taki*) which means:
- i. ‘to fight *each other* with knives’ (reciprocal)
 - ii. ‘to tie crosswise (certain components of house frames)’ (lexicalisation)
 - iii. ‘to oppose, thwart sb’ (causative, not unlike the notion expressed by the French idiom *mettre des bâtons dans les roues*).

- (95) *taka* ‘shoe; to walk’ → *fe-taka-’aki* which means:
- i. ‘to walk about *together*’ (sociative)
 - ii. ‘to come, to go around *often*’ (habitual)
 - iii. ‘to wear the *same* shoe size’ (reciprocal, deriving from the nominal sense of the base term).
- (96) *’uluga* ‘pillow; to rest (head on a pillow)’ → *fe-’uluga-’aki* ‘to share the same pillow’ (sociative).

4. Expression of reciprocal arguments

A reciprocal derivative cannot have more than one argument, which must be in the absolutive case. In terms of grammatical class, this argument may be a dual or plural pronoun, a collective noun (e.g., *le fenua* ‘people’), or an unbroken coordinate phrase composed of two terms connected by *mo* ‘and, with’, denoting both the agent and the patient of the same action. Genitive noun phrase arguments in reciprocal constructions have been described in 3.3.1.2.

4.1 Pronoun argument

The participants in the reciprocal relationship can be denoted by dual or plural pronouns. It will be recalled that there are two sets of pronouns in Futunan, one of which is postposed to the verb, as in (97a), while the other is preposed, as in (97b):

- (97) a. *e fe-māsau-’aki a mātou.*
 IPFV REC-talk-REC ABS 1PL.EXC
 ‘We are talking to each other.’
- b. *e lotou fe-loi-’aki.*
 IPFV 3PL REC-lie-REC
 ‘They are lying to each other.’

4.2 Noun argument

There can only be one noun argument, and it must denote a plurality of individuals:

- (98) *ko fenua e fe-fuā-’aki.*
 TOP people IPFV REC-jealous-REC
 ‘People, they are jealous of each other.’

4.3 Coordinate noun phrase with the connector *mo*

The grammatical morpheme *mo* has a variety of functions. It can coordinate two terms of the same grammatical class as in (99a) or introduce a comitative phrase with two different arguments as in (99b):

- (99) a. *ko le fā 'ula'ula mo le gā tuna.*
 TOP ART CLF prawn and ART CLF eel
 'These are a prawn and a small eel.'
- b. *ti ano loa a ia mo sana matātagata.*
 then go SUC ABS 3SG with one.of.his sentry
 'Then he leaves with one of his sentries.'

When one of the arguments denotes the speaker, there are two ways of expressing the comitative:

1) with the 1st person singular pronoun:

- (100) a. *na kau vusu i nānafi mo Paulo.*
 PAST 1SG fight OBL yesterday with P.
 'I fought with Paulo yesterday.'

2) With a 1st person dual pronoun, this inclusive construction being more common despite its ambiguity (the following sentence could also mean 'the two of us fought together against Petelo'):

- b. *na mā vusu i nānafi mo Paulo.*
 PAST 1DU.EXC fight OBL yesterday with P.
 'Paulo and I fought yesterday.'

When the term introduced by *mo* is not in a coordinate construction, it can be separated from the term which is its syntactic partner. When a derived verb has a reciprocal meaning, *mo* coordinates the two participants in the reciprocity relationship, which form a single grammatical argument in the absolutive case. The components of the coordinate phrase cannot be disjoined:

- (101) *e fe-tio-'aki le toe mo lona tinana.*
 IPFV REC-see-REC ART child and his mother
 'The child and his mother are looking at each other.'
- (102) *e fe-vaku-'aki a Petelo mo Paulo.*
 IPFV REC-scratch-REC ABS P. and P.
 'Petelo and Paulo are scratching each other.'

4.4 The conditions required for expressing reciprocity

In terms of the arguments involved, a reciprocal meaning is only possible when both the following conditions hold:

1. There is only one argument and it is in the absolutive case.
2. This argument denotes at least two participants.

The verb cannot have a reciprocal meaning when it takes two grammatical arguments. The derived verb in (103), for example, which has one argument (*le toe*) in the absolutive and a second (*ki lona tinana*) in the oblique case, cannot under any circumstances be a reciprocal. In this case, it happens to be diversative:

- (107) *sola* ‘to flee’:
 → *fe-sola-’aki* ‘to flee from place to place’ (iterative)
 → *fe-sola-ki* ‘to flee together’ (sociative)
 → *fe-sola-taki* ‘to help sb flee and go with him’ (causative)
 → *fe-sola-faki* ‘to help sb flee by himself’ (causative).
- (108) *tolo* ‘to be dragged’:
 → *tolo-kaki* ‘to drag’ (transitive)
 → *fe-tolo* ‘to push and shove all at once’ (sociative)
 → *fe-tolo-’aki* ‘to push and shove each other’ (reciprocal)
 → *fe-tolo-fi* ‘to teem (as ants)’ (diversative + lexicalisation).

6. Causatives and reciprocals

The causative suffix *faka-* can be combined with the complex *fe-...-(C)aki*. The primary derived meaning is either reciprocal or causative.

6.1 Causatives derived from reciprocals (patient-oriented reciprocals)

If the causative prefix is the first element in the derivative, it transitivises the verb which had become intransitive through affixation of *fe-...-(C)aki*. The latter’s reciprocal meaning is retained and the secondary derivative means ‘to get two people to act on *each other*’. Let us compare the three sentences in (109):

In (109a), the verb *’u’uti* ‘to bite’ is transitive, non-derived, and not reciprocal. There are two arguments, *le toe* in the absolutive (marked \emptyset) and *le kulī* in the ergative (marked *e*).

In (109b), the verb is derived by affixing *fe-...-(C)aki* and there is only one grammatical argument denoting two participants, and the derivative has a reciprocal meaning.

In (109c), the verb *faka-fe-’u’uti-’aki* is a secondary derivative. The reciprocal meaning attributed to the complex *fe-...-(C)aki* is retained, but the new derivative now takes two arguments (one in the absolutive, the other in the ergative case), owing to the causative prefix *faka-*.

- (109) a. *na ’u’uti le toe e le kulī.* (non-reciprocal, vt)
 PAST bite ART child ERG ART dog
 ‘The dog bit the child.’
- b. *na fe-’u’uti-’aki a le sā kulī.* (reciprocal, vi)
 PAST REC-bite-REC ABS ART CLF dog
 ‘The two dogs bit each other.’
- c. *na faka-fe-’u’uti-’aki a le sā kulī e le toe.* (causative reciprocal, vt)
 PAST CAUS-REC-bite-REC ABS ART CLF dog ERG ART child
 ‘The child *made* the two dogs bite each other.’

Here is another example with the “middle” verb *māsau* ‘to speak, talk’:

- (110) a. *e kau māsau mo le Pātele kiate koe.*
 IPFV 1SG talk with ART Father OBL 2SG
 ‘The Father and I are talking to/about you.’
- b. *e fe-māsau-’aki a mātou.*
 IPFV REC-talk-REC ABS 1PL.EXC
 ‘We are talking to each other.’
- c. *na faka-fe-māsau-’aki e Petelo a Malia mo Atonio.*
 PAST CAUS-REC-talk-REC ERG P. ABS M. and A.
 ‘Petelo *made* Atonio and Malia talk to each other.’

6.2 Reciprocals derived from causatives

If, on the other hand, *fe-...-(C)aki* is affixed after causative derivation, the ultimate derivative must take a single argument and have a reciprocal meaning. Derivation proceeds by three stages, starting from the non-derived base verb.

1. The non-derived verb may be intransitive, as *gakulu* in (111a); causative derivation transitivity the base verb (in 111b). A secondary derivative is obtained by affixing *fe-...-(C)aki*, resulting in:

(a) a reciprocal meaning if there is only one argument denoting more than one participant, as in (111c),

(b) a non-reciprocal meaning if there are two grammatical arguments: in (111d), the derivation yields an iterative meaning, there being two grammatical arguments, one in the absolutive and the other in the ergative.

- (111) a. *e gakulu le fale i le afā.* (non-reciprocal, vi)
 IPFV move.slightly ART house OBL ART hurricane
 ‘The house sways slightly due to the hurricane.’
- b. *e faka-gakulu le nofo’aga o le fenua e le tu’ēkelesia.* (non-reciprocal, causative vt)
 church.guard
 ‘The church guards *make* people move slightly.’
- c. *e fe-faka-gakulu-’aki a le sā toe.* (reciprocal, vi)
 IPFV REC-CAUS-move.slightly-REC ABS ART CLF child
 ‘The two children make *each other* move away slightly.’
- d. *e fe-faka-gakulu-’aki le nono’a o le puaka e loku tamana.* (non-reciprocal, vt)
 father
 ‘My father *makes* the knot move slightly around (the feet of) the pig.’

2. The verb *lava* is transitive and means ‘to put on (clothing)’. The causative derivative in (112b) *faka-lava* means ‘to clothe, dress sb’ and is a bitransitive verb; in (112c) the meaning is reciprocal, as there is only one argument denoting more than one participant, and *fe-faka-lava-’aki* means ‘to clothe each other’:

- (112) a. *e kau lava loku gā kie.* (non-reciprocal, vt)
 IPFV 1SG put.on my CLF cloth
 ‘I put on my loin-cloth.’
- b. *e faka-lava se gā kie e loku māsaiki kiate*
 IPFV CAUS-put.ON ART CLF cloth ERG my aunt OBL
au. (non-reciprocal, causative bitransitive)
 1SG
 ‘My aunt provides me with a loin-cloth.’
- c. *e fe-faka-lava-’aki a le tau fe’au’aki.* (reciprocal, vi)
 IPFV REC-CAUS-put.ON-REC ABS ART couple fiancés
 ‘The fiancés are being dressed’ (by each other’s family, as is usually done in Futuna).

7. Nominalisation of reciprocals

The noun/verb contrast is weak in the Polynesian languages and results essentially from grammatical contextualisation. A derivative may thus be used as a noun like any other lexical form. Its meaning as a noun is, however, generally copied from its meaning as a verb. Thus, the derivative *fe-tuli* ‘to chase each other’ has a reciprocal meaning involving two participants, and can be used without formal change as a noun meaning ‘chasing, pursuit’, as long as it is preceded by the specific singular article (Moyse-Faurie 2005):

- (113) *ko le sā fili e ga’ega’e i le lā fe-tuli.*
 TOP ART CLF enemy IPFV be.tired OBL ART their REC-chase
 ‘The two enemies are tired of chasing each other.’

Any verb, whether derived or not, thus has the same ability to appear as a noun:

- (114) a. *na fualoa lomā tio ki le vaka i le ava.*
 PAST last.long our see OBL ART boat OBL ART channel
 ‘We watched the boat in the channel for a long time’ (*lit.* our looking at the boat in the channel lasted long).
- b. *na fualoa lomā fe-tio-’aki ka na le’ese mafai ke mā*
 PAST last.long our REC-see-REC when PAST not possible that 1DU.EXC
fe-māsau-’aki.
 REC-talk-REC
 ‘We looked at each other for a long time without speaking’ (*lit.* ‘our looking at each other lasted long before we were able to speak to each other’).

In one case, however, a verb, ‘*au*’ ‘to come, to arrive’ has given rise to a derivative, *fe’au’aki*, which has become strongly lexicalised as a noun meaning ‘fiancés’ (see example (112c)). As a verb, it means ‘to see each other regularly (in courtship)’.

8. The preverb *fetau* ‘simultaneously’ as a reciprocal marker

Preverbs are lexical tense/aspect modifiers which are preposed to the verb phrase. The preverb *fetau* ‘at the same time’ is undoubtedly composed of the prefix *fe-* discussed above and the preverb *tau*, which has an iterative meaning ‘from time to time, often’.

8.1 Incompatibility of the preverb *fetau* with the complex *fe-...-(C)aki* in the reciprocal meaning

The preverb *fetau* is incompatible with the reciprocal meaning of *fe-...-(C)aki* derivation, but can itself confer this meaning on the verb. This is only possible, however, when it modifies a transitive verb with only one grammatical argument. If the verb is intransitive, or if it is transitive and has two grammatical arguments (one in the absolutive and the other in the ergative), *fetau* can only make an aspectual contribution:

1) with an intransitive verb:

- (115) a. *na fetau ano a lāua.*
 PAST at.the.same.time go ABS 3DU
 ‘They both left *at the same time*.’

2) With a transitive verb taking two grammatical arguments:

- b. *e fetau ave e lāua a le puaka.*
 IPFV at.the.same.time take.away ERG 3DU ABS ART pig
 ‘They take away the pig *at the same time*.’

The preverb *fetau* can only bring about a reciprocal meaning when it modifies a non-derived verb with a single grammatical argument denoting more than one participant. (116a) contains *fetau* and differs only in an adverbial way from (116b), which has a reciprocal *fe-...-’aki* derivative: *fetau* seems to add an element of simultaneity:

- (116) a. *na fetau ’u ’uti a kulī.*
 PAST at.the.same.time bite ABS dog
 ‘Dogs have bitten each other *simultaneously*.’
 b. *na fe-’u ’uti-’aki a kulī.*
 PAST REC-bite-REC ABS dog
 ‘Dogs have bitten each other.’

The preverb *fetau* is still not often used to express a reciprocal meaning. Its use in this way is just as rare as that of the prefix *fe-* with the same reciprocal meaning (see 3.1.1).

8.2 Compatibility of the preverb *fetau* with the complex *fe-...-(C)aki* in a non-reciprocal meaning

The preverb *fetau* is compatible with derivation by *fe-...-(C)aki* when this complex results in a meaning other than the reciprocal. In such case, however, *fetau* has only the adverbial

sense of simultaneity. (117) shows this use of *fetau* with an adverbial sense, together with a derived verb having an alternative sense:

- (117) *e fetau fe-ano-'aki a fenua.*
 IPFV at.the.same.time REC-GO-REC ABS people
 'People go *hither and thither* at the same time.'

9. The adverbial phrase *ki loto* 'among themselves'

The expression *ki loto* <OBL inside> is generally used in locative modifying phrases to mean 'inside, within':

- (118) *e fafa'o e le fenua a 'ufi ki loto o le vaka.*
 IPFV load ERG ART people ABS yam OBL inside POSS ART boat
 'People are loading the yams onto the boat.'

The adverbial use of the expression *ki loto* alone (i.e., without a following possessive marker *o* and a modifier) can be associated with verb derivation by *fe...-(C)aki* to reinforce the sense of reciprocity and mutual involvement of the participants:

- (119) *e fe-māsau-'aki le kau aliki ki loto ke ma'ua se tonu.*
 IPFV REC-talk-REC ART CLF chief OBL inside in.order.to find ART idea
 'Chiefs are talking *together* to each other in order to find a solution.'

The adverbial phrase *ki loto* can also be used to reinforce the reciprocal meaning obtained by the use of the prefix *fe-* alone:

- (120) *e fe-poko a le sā toe ki loto.*
 IPFV REC-push (for play) ABS ART CLF child OBL inside
 'The two children are pushing each other for fun.'

10. Etymology of the reciprocal markers

The Polynesian languages have inherited the Proto-Oceanic (POC) prefix **paRi-*, which regularly gives *vei-* in Fijian (Dixon 1988), the Melanesian language most closely related to Polynesian. This prefix, which can be reconstructed as **fe-* in Proto-Polynesian (PPN), has retained its primary sociative meaning in all the daughter languages, although it appears under a variety of labels such as the collective in Fijian, the plural marker for certain verbs in Samoan (Mosel & Howdhaugen 1992), or, sporadically, the dual-only reciprocal marker in Futunan. This prefix can also be found throughout the Oceanic subgroup in combination with either of two suffixes: **-(C)i* reconstructed for POC or **-(C)aki* reconstructed for Proto-Central-Pacific (Pawley 1973). Combining the prefix **paRi-* with one or the other of these suffixes produces meanings including the reciprocal. Thus, in Fijian, *vei...-(C)i* conveys a reciprocal meaning (as in *vei-loma-ni* 'to love each other'), while *vei...-(C)aki* commonly confers a dispersive or alternative meaning on verbs of motion ('all

over the place', 'hither and thither', 'back and forth'), e.g., *vei-toso-yaki* 'to move here and there all over the place', *vei-voce-yaki* 'to paddle back and forth'. It would seem, however, that in the western Polynesian languages *fe-...-(C)aki* alone expresses not only the reciprocal but the iterative, dispersive, alternative, and other related senses as well. The sense of *fe-...-(C)i* is essentially sociative, a meaning originally expressed by the *fe-* prefix alone. With its range of meanings, the complex *fe-...-(C)aki* can be applied to verbs taking one, two, or three arguments. In his Tongan grammar, Churchward (1953) calls such derivatives *reciprocatives* (with the meaning 'hither and thither') when they are obtained from intransitive verbs, and *reciprocals* (in the usual sense) when they come from "middle" or transitive verbs.

1. Introduction

To'aba'ita is a member of the Oceanic subgroup of Austronesian languages. It is spoken by approximately 13,000 people in the northern tip of the island of Malaita in the south-east Solomon Islands. The present account of the language is based on the data collected between 1980 and the present.¹

To'aba'ita has a variety of means to encode reciprocal situations, that is situations where two (or more) participants stand in identical relations to each other: A to B and B to

1. I am grateful to a number of speakers of To'aba'ita for providing me with the data on which this study is based, in particular to Lawrence Foanaota and Reuel Riianoa. Since this paper was originally written, new information on reciprocals in the language has come to hand, which, however, I have not been able to incorporate here.

A. And as is commonly the case cross-linguistically, the elements used to express reciprocal situations are polysemous: they have other, non-reciprocal uses. Before investigating in detail the properties of the To'aba'ita reciprocal constructions it is necessary to discuss briefly the relevant aspects of To'aba'ita grammar.

2. Some aspects of To'aba'ita grammar

To'aba'ita is an accusative SVO language. Subjects are indexed by preverbal elements that also mark tense (factive vs. non-factive) or sequentiality:²

- (1) 'O *thaofa?*
 2SG.FACT be.hungry
 'Are you hungry?'
 (2) ... *to'a 'e-ki keka tha'a.*
 people that-PL 3PL.SEQ flee
 '...(and) the people fled.'

Direct objects other than 3rd person are indexed by means of independent personal pronouns:

- (3) *Nia e³ kwa'e nau 'ana alafolo.*
 3SG 3SG.FACT hit 1SG INST k.o.club
 'He hit me with an alafolo club.'

In the case of 3rd person pronominal objects, there are two strategies available. One is to use the independent personal pronoun:

- (4) 'O *riki kera?*
 2SG.FACT see 3PL
 'Did you see them?'

The other is to use the object-marking suffix:

- (5) 'O *riki-da?*
 2SG.FACT see-3PL.OBJ
 'Did you see them?'

If the direct object participant is encoded by a lexical NP, the verb carries the object-marking suffix *-a* regardless of the grammatical number of the object; cf. (6) and (7):

- (6) *Nau ku rongo-a kini 'eri.*
 1SG 1SG.FACT hear-3.OBJ woman that
 'I heard the woman.'

2. The factative subject markers have non-future reference; the non-factive markers have future reference, and they are also used to express the imperfective aspect with dynamic verbs. The main function of the sequential markers is to express sequences of situations.

3. The 3rd person singular factative subject marker has two free variants, *e* and *'e*; cf. (3) and (40b).

- (7) *Nau ku rongo-a kini 'e-ki.*
 1SG 1SG.FACT hear-3.OBJ woman that-PL
 'I heard the women.'

(Without a lexical NP, the suffix *-a* indexes only 3rd person singular objects; see (12c) below.)

The independent pronouns are invariable: the same forms are used regardless of syntactic position (subject, object, possessor); see, for example, the 3rd personal singular pronoun *nia* in (3) above and (8) below:

- (8) *Nau ku rongo nia.*
 1SG 1SG.FACT hear 3SG
 'I heard him.'

The various pronominal forms (the independent pronouns, the subject-tense markers, the object suffixes, and the possessive suffixes) distinguish three numbers: singular, dual, and plural. Example (9) shows the 3rd person dual independent pronoun *keero'a* in object position:

- (9) *'O riki keero'a?*
 2SG.FACT see 3DU
 'Did you see the two of them?'

Compare (4) above, which contains the 3rd person plural pronoun *kera*.

It should be noted though that with the exception of the independent pronouns the plural forms are not infrequently used in place of the corresponding dual forms. For example, in (10) the plural sequential subject marker is used instead of the dual marker (cf. *keko* in (29) below):

- (10) *Roo wane baa ki keka oli na'a faafi-a roo subi baa ki.*
 two man that PL 3PL.SEQ return PERF with-3.OBJ two k.o.club that PL
 'The two men went back with the two *subi* clubs.'

Three classes of transitive verbs can be distinguished in To'aba'ita on the basis of their form. One takes the transitive suffix *-Ca'i/-Cani*, where *C* is a variable consonant, including zero. The form *-Ca'i* is used with independent pronouns as direct object, while *-Cani* is used when an object-marking suffix is attached:

- (11) a. *futa*
 'be born'
 b. *futa-nga'i nau*
 give.birth.to-TR 1SG
 'give birth to me'
 c. *futa-ngani-a wela.*
 give.birth.to-TR-3.OBJ child
 'give birth to a child.'

The second type takes the transitive suffix *-Ci*, regardless of the type of direct object:

- (12) a. *ngata*
 'speak'
 b. *ngata-fi nia*
 scold-TR 3SG
 'scold him/her'
 c. *ngata-fi-a*
 scold-TR-3.SG.OBJ
 'scold him/her.'

The third type of transitive verb takes neither *-Ca'i/-Cani* nor *-Ci*:

- (13) a. *rongo*
 'hear, listen'
 b. *rongo 'oe*
 hear 2SG
 'hear you'
 c. *rongo-da*
 hear-3PL.OBJ
 'hear them.'

With some verbs, the relation between the intransitive and the corresponding transitive verb is causative, as in (11) above, while with others it is applicative, as in (12). This is true of all three derivational processes exemplified above. And as examples (12a–c) show, the semantic relation between the source verb and the derived verb need not be fully predictable ('speak' vs. 'scold').

Besides the derivational processes just discussed, there is another way to form causative transitive verbs, and that is by means of the prefix *fa'a*-:

- (14) a. *kuukuru*
 'be.short'
 b. *fa'a-kuukuru-a*
 CAUS-be.short-3SG.OBJ
 'shorten it, make it short(er).'

We can now turn to the various ways of encoding reciprocal situations.

3. Lexical reciprocals

Before considering the various types of reciprocal construction, I will briefly discuss lexical reciprocals, that is verbs whose reciprocal interpretation is not signalled in any overt way. Such verbs are, or may be, semantically transitive, that is, the event is or may be directed at another participant, and they do have formally transitive variants, but they can be used intransitively to encode reciprocal situations. Since lexical reciprocals do not overtly signal the reciprocal nature of a situation, they may be ambiguous between a reciprocal and a non-reciprocal interpretation, the degree of ambiguity being dependent on the meaning of the verb.

Lexical reciprocals are found both with symmetrical and with non-symmetrical predicates. The first set of examples below illustrates a symmetrical predicate. To'aba'ita has a verb *o'e* 'to copulate, have sex', which can be used both transitively and intransitively, as in (15) and (16) respectively:

- (15) *Wane e o'e-a kini.*
 man 3SG.FACT copulate.with-3.OBJ woman
 'The man copulated with the woman.'
- (16) *Wane e o'e faafi-a kwai-na.*
 man 3SG.FACT copulate against-3.OBJ spouse-3SG.POSS
 'The man committed adultery against his wife.'

The verb can also be used intransitively with a non-singular subject to express a reciprocal situation:

- (17) *Keero'a kero o'e.*
 3DU 3DU.FACT copulate
 'The two of them copulated (with each other).'

Even though (17) could in principle encode a non-reciprocal situation (each of the two people copulating with some other person), the normal interpretation is reciprocal.

Examples (20) and (21) further below show that non-symmetrical predicates also can encode reciprocal situations without any overt marking of reciprocity. Here too it is the intransitive variants of the verbs that are used. To'aba'ita has an intransitive-transitive pair of verbs *to'o* (vi) 'to hit (sth), hit/impact with a bang/thud' and *to'e* (vt) 'to hit sb/sth, nudge sb', with different vowels in the second syllable. Example (18) demonstrates the use of the intransitive variant to encode a non-reciprocal situation, and (19) illustrates the transitive variant:

- (18) *Te'e fa niu e to'o.*
 one CLF coconut 3SG.FACT impact
 'A coconut fell (to the ground from a tree) with a thud.'
- (19) *Wane e to'e nau.*
 man 3SG.FACT nudge 1SG
 'The man nudged me.'

And as sentence (20) shows, the intransitive variant *to'o* can be used with a non-singular subject to express a reciprocal situation:

- (20) *Roo tarake kere⁴ to'o.*
 two truck 3PL.FACT impact
 '(The) two trucks collided.'

The meaning of (20) is more likely to be reciprocal than non-reciprocal ('The two trucks hit something').

4. The 3rd person plural factative subject marker has two free variants, *kere* and *kera*; cf. (20) and (23).

On the other hand, the next example is vague as to whether the situation being encoded is a reciprocal or a non-reciprocal one, very much like its English counterpart.

- (21) *Roo wane kere ngalungalu.*
 two man 3PL.FACT speak.angrily.RED
 ‘The two men spoke angrily.’

Compare:

- (22) *ngalu-fi-a*
 speak.angrily-TR-3SG.OBJ
 ‘speak angrily to sb, berate.’

There is a way of making it explicit that the activity of speaking angrily is reciprocal; see example (26) in Section 4.

To summarize: in To’aba’ita, both symmetrical and non-symmetrical predicates can function as lexical reciprocals. With lexical reciprocals, the participants in a reciprocal situation are encoded only once, as subjects. As will be seen in the next section, To’aba’ita has a reciprocal construction where the relevant participants are encoded exclusively as subject.

4. Morphological reciprocals

To’aba’ita has a morphological reciprocal construction formed by means of the prefix *kwai-*, accompanied, under certain conditions, by the suffix *-i*. The suffix *-i*, used only in conjunction with *kwai-*, is used with most (but not all) verb stems of two morae; it is not used with stems of more than two morae, excluding the causative prefix *fa’a*; see (55) in Section 8.1.1. (To’aba’ita lexical morphemes are at least bimoraic.) For example:

- (23) *Roo wela kera kwai-kwa’e-i.*
 two child 3PL.FACT REC-hit-REC
 ‘The two children hit each other.’
- (24) *Kini bia wane kera kwai-’oli-i.*
 woman and man 3PL.FACT REC-embrace-REC
 ‘The woman and the man embraced.’
- (25) *Roo wela kero kwai-ili-fa’i.*
 two child 3DU.FACT REC-imitate-TR
 ‘The two children imitated each other.’
- (26) *Roo wane kere kwai-ngalu-fi.*
 two man 3PL.FACT REC-berate-TR
 ‘The two men spoke angrily to each other.’

Compare (26), which contains a morphological reciprocal, and (21) in the preceding section, where the intransitive, non-reciprocal form *ngalungalu* is used to (non-explicitly) encode the same type of reciprocal situation.

The morphological reciprocal construction is used not only with non-symmetrical predicates, as in the examples above, but also with symmetrical predicates:

- (27) *Roo wane kera kwai-toda-i.*
 two man 3PL.FACT REC-meet-REC
 'The two men met.'

Although a reciprocal situation typically consists of two relations (A to B, and B to A), this is not necessarily the case. The situation encoded in (28) consists of more than two reciprocal relations:

- (28) *To'a fuu kera firu keka kwai-kwa'e-i.*
 people that.down 3PL.FACT fight 3PL.SEQ REC-hit-REC
 'The people down there are fighting, hitting each other.'

The morphological reciprocal construction appears restricted to use with transitive non-reciprocal verbs. However, clauses with morphological reciprocals are syntactically intransitive: the relevant participants are encoded only as subject; there is no direct object.

Further examples of morphological reciprocals will be given in Section 7.

5. Pronominal means of expressing reciprocity

To'aba'ita has another way of expressing reciprocal situations which may, but need not, employ an explicit marker of reciprocity. This construction uses a pronominal form in non-subject position that is co-referential with the (non-singular) subject. For convenience, I will refer to this way of encoding reciprocal situations as the "pronominal reciprocal construction". Note that the term "pronominal reciprocal construction" does not identify a construction that encodes exclusively reciprocal situations; as discussed in what follows, the same construction may be used to encode non-reciprocal situations. In the context of the present discussion, the term "pronominal" subsumes the independent personal pronouns and the possessive suffixes.

In example (29), the 3rd person dual independent pronoun co-referential with the subject occurs in direct object position:

- (29) *Keero'a keko thathami keero'a 'a-fa bongi 'eri.*
 3DU 3DU.SEQ like 3DU at-CLF day that
 'The two of them liked each other on that day.'

In the context in which sentence (29) occurs (in a text), the situation being encoded is reciprocal (see (39) in Section 7); however, out of context the object pronoun *keero'a* could be non-coreferential with the subject pronoun ('they_i liked them_j'), or it could be co-referential with the subject, but the situation being encoded would be reflexive rather than reciprocal ('they liked themselves'). Following is another example:

- (30) *Roo wane kere ilama-ta'i keero'a.*
 two man 3PL.FACT spite-TR 3DU
 'The two men spite each other.'

Sentence (30) could also be given a non-reciprocal interpretation: ‘The two men spite them.’

The various types of reciprocal construction will be compared in Section 7, but some remarks on the differences between morphological and pronominal reciprocals are in order at this point. As mentioned in Section 4, morphological reciprocals are restricted to use with transitive verbs, that is to cases where the relevant participants would be the subjects and the direct objects in the corresponding non-reciprocal sentences. Pronominal reciprocals are not restricted in this way: a pronominal form co-referential with the subject may occur not only in direct object position, as in (29) and (30) above, but also in other positions. In (31), the independent pronoun functions as object of the preposition *uri*:

- (31) *Wane na'i bia thaari na'i kero 'onionga uri keero'a ka tootoo*
 man this and girl this 3DU.FACT tease toward 3DU 3SG.SEQ stay.RED
bana.
 only
 ‘The man and the girl keep teasing each other.’

In the next example, it is the possessive suffix on the direct object that is co-referential with the subject:

- (32) *Kero musu-a babali-daro'a.*
 3DU.FACT kiss-3.OBJ cheek-3DU.POSS
 ‘The two of them kissed each other on the cheek.’
 lit. ‘The two of them kissed their cheeks.’

And in (33), the same possessive suffix, co-referential with the subject, is attached to the recipient preposition *a*:⁵

- (33) *Roo kini kero tonafale i a-daro'a.*
 two woman 3DU.FACT give.present to RECIP-3DU.POSS
 ‘The two women gave presents to each other.’

Since the pronominal forms, of themselves, do not mark reciprocalness, pronominal reciprocals may be ambiguous between a reciprocal and one or more non-reciprocal interpretations. This is true of all the examples above. So (32) could also mean ‘They_i kissed them_j on the cheeks.’ (For obvious reasons a reflexive interpretation is not available here.) To make it explicit that the situation being encoded is reciprocal, the pronominal construction may be used in an explicitly reciprocal periphrastic construction, which is discussed in the next section.

5. The so-called “possessive” suffixes are used in possessive as well as some other types of construction; see (36) for another use of the possessive suffix.

6. Periphrastic reciprocals

There are two subtypes of the periphrastic reciprocal construction, depending on the marker used. One subtype, the more common of the two, employs the element *kwailiu* after the pronominal form co-referential with the subject. *Kwailiu* consists of the intransitive verb *liu* 'to walk past/around, pass (by), roam (about)' and the prefix *kwai-*, which is also used to form morphological reciprocals. (Even though *liu* is bimoraic, *kwailiu* does not take the suffix *-i*.) The next set of sentences contains periphrastic reciprocal constructions using *kwailiu* with the pronominal forms in direct object positions (see (34) and (35)) and an oblique object position (see (36)). For the sake of simplicity, *kwailiu* is written as a single form.

- (34) *Roo wane kera ngata-fi keero'a kwailiu.*
 two man 3PL.FACT berate-TR 3DU REC
 'The two men berated each other.'
- (35) *Kamare'a mere 'adomi kamare'a kwailiu tai si manga.*
 1DU(EXC) 1DU(EXC).FACT help 1DU(EXC) REC some CLF time
 'We help each other sometimes.'
- (36) *Keko thathamia-a u'unu 'a-daro'a⁶ bii keero'a kwailiu.*
 3DU.SEQ like-3.OBJ converse BEN-3DU.POSS COM 3DU REC
 'The two of them liked to chat with each other.'

Note that even though *kwailiu* is derived from a verb, the *kwailiu* reciprocal construction does not involve verb serialisation because, unlike in verb serialisation in To'aba'ita, an oblique object may intervene between the semantically main verb and *kwailiu*.

The other subtype of the periphrastic reciprocal construction uses the reversive ('back and forth') marker *olili*, which is a reduplication of the intransitive verb *oli* 'to return, move back' (see also Section 8.2.2 below). *Olili* follows the semantically main verb in a serial verb construction:

- (37) *Roo kini kero fale olili 'ani keero'a.*
 two woman 3DU.FACT give REVERS to 3DU
 'The two women gave [presents] to each other.'

The periphrastic reciprocals are typically used in conjunction with pronominal reciprocals (because the latter are not explicitly reciprocal), but they can be used in conjunction with the morphological reciprocal construction:

- (38) *Botho kera kwai-'ala kwailiu.*
 pig 3PL.FACT REC-bite REC
 'The two pigs bit each other.'

The semantic contribution of the periphrastic reciprocal markers is discussed in the next section.

6. The possessive suffix on 'a is co-referential with the subject, but it does not mark reciprocalness here.

7. The various types of reciprocal constructions compared

As we have seen, To'aba'ita has three basic types of reciprocal construction: morphological reciprocals, which use the prefix *kwai-*, sometimes in combination with the suffix *-i*, on the verb, pronominal reciprocals, and periphrastic reciprocals with *kwailiu* or *olili*. The periphrastic construction is used in conjunction with the pronominal construction and – less commonly – with the morphological construction.

Morphological reciprocals on the one hand and pronominal reciprocals on the other are different in that in the former the relevant participants are encoded only once, as subject, while in the latter they are encoded twice, once as subject and once as non-subject. In a non-reciprocal situation, such as that encoded in 'X hit Y', there are two participants in a non-symmetrical relation to each other: they play different roles in the situation (agent vs. patient). On the other hand, in a reciprocal situation, such as that encoded in 'X and Y hit each other', there are (typically) two participants that play identical pairs of roles in the situation (agent and patient). On account of that, the two participants in a reciprocal situation are less distinct from each other than the two participants in a non-reciprocal situation. (For the notion of distinctness of participants see Langacker & Munro (1975), Langacker (1976), Hopper & Thompson (1980), and for its relevance to To'aba'ita reciprocals Lichtenberk (1991a)).

The morphological and the pronominal constructions are motivated by the nature of reciprocal situations in different ways. Morphological reciprocals, where the participants are encoded only once, reflect the relatively low degree of distinctness of the two participants: the participants are treated as being involved in the situation in the same way. On the other hand, pronominal reciprocals, where the two participants are encoded (at least) twice, reflect the fact that the overall reciprocal situation consists of a pair of relations, and that in each relation the two participants occupy different roles. In other words, the two participants in a reciprocal situation can be viewed from different perspectives: as playing the same pair of roles in the overall situation, which motivates single encoding; or as playing distinct roles in the relations that constitute the overall situation, which motivates double encoding. (For more detailed discussion of the motivatedness of the two types of reciprocal constructions in To'aba'ita and in general see Lichtenberk (1991a) and (1994), respectively.) It is the double encoding of the participants that gives the pronominal construction greater flexibility relative to the morphological construction: the relevant participants need not correspond to the subject and the direct object participants in the corresponding non-reciprocal situations.

In some cases, one and the same reciprocal situation may be encoded in more than one way. In the next example taken from a text, a reciprocal situation is encoded three times in three different ways: first by means of two separate clauses, each one encoding one of the relations that constitute the overall situation, followed by a non-explicit pronominal reciprocal construction, which is then followed by a pronominal construction with a periphrastic reciprocal:

- (39) *Thaari 'eri ka thathami-a tha wela 'eri ma wela 'eri mena ka*
 girl that 3SG.FACT like-3.OBJ ART child that and child that CONTR 3SG.SEQ
thathami-a la'u bo'o thaari 'eri. Keero'a keko thathami keero'a 'a-fa bongi
 like-3.OBJ also INTS girl that 3DU 3DU.SEQ like 3DU at-CLF day
'eri. Keero'a keko kani-a ruanaa. Keko thathami keero'a kwailiu.
 that 3DU 3DU.SEQ tie-3.OBJ friendship 3DU.SEQ like 3.DU REC
 'The girl liked the boy (lit. 'child'), and the boy, too, liked the girl. They liked each other
 on that day. They formed a friendship. They liked each other.'

In Section 6 it was said that the form *kwailiu* can be used to explicitly identify a situation encoded in a clause as reciprocal. While this is true, in (39) *kwailiu* is used in the last sentence even though the reciprocalness of the situation is made explicit in the first sentence. Here the subsequent use of *kwailiu* serves not to disambiguate but rather to emphasise the reciprocalness of the relations.

In the next pair of examples, taken from the same text as (39), a pronominal reciprocal construction (40a) and a morphological reciprocal construction (40b) refer to the same instance of meeting:

- (40) a. ... *keero'a keko 'olo-a fa thato na keero'a keki toda*
 3DU 3DU.SEQ agree.on-3.OBJ CLF day REL 3DU 3DU.NFACT meet
keero'a...
 3DU
 '... they [the boy and the girl] agreed on a day when they would meet...'
 b. ...'e *lae ura kula baa nia toda-a thaari baa ma keero'a*
 3SG.FACT go to place that 3SG meet-3.OBJ girl that and 3DU
keko 'olo 'i ei keki kwai-toda-i.
 3DU.SEQ agree at there 3DU.NFACT REC-meet-REC
 '... he went to the place where he had met the girl and where they had agreed to meet.'

The next pair of examples shows a morphological reciprocal (41a) and a periphrastic reciprocal (41b) used with the verbs 'to swear (at)', transitive and intransitive respectively, without any obvious difference in meaning:

- (41) a. *Roo wane kera kwai-kwala-ngi.*
 two man 3PL.FACT REC-SWEAR.at-TR
 'The two men swore at each other.'
 b. *Roo wane kera kwala olili 'ani keero'a.*
 two man 3PL.FACT swear REVERS to 3DU
 'The two men swore at each other.'

Examples (39)–(41) demonstrate that one and the same reciprocal situation can be expressed in more than one way. However, there are also cases where the different reciprocal constructions are not fully synonymous. The difference in meaning has to do with the temporal configurations of the relations that constitute a reciprocal situation vis-à-vis each other. The relations may be sequential or more or less simultaneous (with various degrees of overlap). In some cases, a reciprocal construction treats the reciprocal situation as a unified whole, disregarding the nature of the temporal configuration of the constitutive relations (see Lichtenberk (1991a) for more discussion). To indicate that the

relations are sequential, To'aba'ita may use a periphrastic reciprocal. For example, in (42) the implication is that first one child hit the other and then the latter retaliated:

- (42) *Roo wela kera kwa'e keero'a kwailiu.*
 two child 3DU.FACT hit 3DU REC
 'The two children hit each other.'

On the other hand, in (43), with a morphological reciprocal, there is no indication of the temporal configuration of the instances of hitting. Even though the blows are more likely to be sequential than simultaneous, the morphological reciprocal construction presents the situation as a unified whole:

- (43) *Roo wela kera kwai-kwa'e-i.*
 two child 3PL.FACT REC-hit-REC
 'The two children fought (exchanged punches, blows).'

Similarly in the next pair of examples: sentence (44) encodes a situation where first one pig attacks the other and the latter then attacks the former, while sentence (45) is silent about the temporal configurations of the subevents:

- (44) *Botho kera kwai-'ala kwailiu.*
 pig 3PL.FACT REC-bite REC
 'The two pigs bit each other.'
- (45) *Botho kera kwai-'ala.*
 pig 3PL.FACT REC-bite
 'The two pigs were biting each other.'

In the next pair of examples, the first one implies that there was more than one instance of embracing, with person A embracing person B, and person B then embracing person A:

- (46) *Kera 'oli keero'a kwailiu.*
 3PL.FACT embrace 3DU REC
 'They embraced each other.'

On the other hand, if the two people were engaged in one mutual embrace, it would be sentence (47) that would be appropriate:

- (47) *Kera kwai-'oli-i.*
 3PL.FACT REC-embrace-REC
 'They embraced.'

For an example of the reverse marker *olili* encoding a sequential reciprocal situation see (92) in Section 8.2.2.

As pointed out in Section 5, the pronominal reciprocal construction is syntactically more flexible than the morphological construction in that it is not restricted to transitive non-reciprocal verbs. On the other hand, the pronominal construction may be ambiguous between a reciprocal and a non-reciprocal interpretation. To avoid ambiguity, a periphrastic reciprocal marker may be used. With at least one verb, the morphological and the pronominal constructions may, but need not be, combined, and there is a difference in meaning between a sentence with a combined morphological-and-pronominal

reciprocal and a corresponding sentence with only the morphological reciprocal. In (48), the two types of construction co-occur, and the meaning is that of the two participants helping each other on different occasions (A helping B on some occasions, B helping A on other occasions):

- (48) *Kera kwai-'adomi ngado ba-daro'a 'ani keero'a.*
 3PL.FACT REC-help always just-3DU.POSS to 3DU
 'The two of them always help each other.'

Sentence (49), on the other hand, contains only the morphological reciprocal, and the meaning is that of a collective action, the participants co-operating, working in unison:

- (49) *Kulu kwai-'adomi 'ana na'are-laa.*
 1PL REC-help with cook-NR
 'Let's do the cooking together', 'Let's co-operate in the cooking.'

The morphological reciprocal in (49) is used when the roles of the participants are non-distinct. On the other hand, the presence of the pronominal construction individuates the participants and highlights the fact that they stand in asymmetrical relations to each other in the subevents that make up the total situation encoded in (48).

Not only is the pronominal construction syntactically more flexible than the morphological construction, it is also more productive. Some verbs cannot form a morphological reciprocal, and in such cases the pronominal construction must be used, with or without a periphrastic reciprocal marker. *Lukata'i* 'to leave, abandon' is one such verb:

- (50) *Kera {luka-ta'i keero'a kwailiu / *kwai-luka-ta'i}.*
 3PL.FACT leave-TR 3DU REC REC-leave-TR
 'They left each other', i.e. 'They got divorced.'

There are also verbs that may occur in the *kwai*-...(-i) construction, but the situation that is being encoded is not reciprocal. This brings us to the topic of polysemy of the reciprocal markers.

8. Other uses of the reciprocal markers

8.1 The morphological reciprocal

8.1.1 *Depatientives*

The construction *kwai*-...(-i) is used with some other functions besides encoding reciprocal situations. Of these, the most prominent one is what I refer to as the "depatientive" function. Just as morphological reciprocals, clauses with verbs in the depatientive construction are syntactically intransitive. However, while with morphological reciprocals the subject encodes jointly the subject and the direct object of the source verb, this is not the case with depatientive verbs. The subject of a depatientive verb corresponds to the subject of the source verb; the direct object of the source verb is not encoded at all. Consider the

next set of examples. In (51) the verb *labata'i* 'to harm, affect sb/sth in a bad way' is used transitively:

- (51) *Wane e labata'i nau.*
 man 3SG.FACT harm-TR 1SG
 'The man harmed me.'

In (52), with the prefix *kwai-*, the verb *labata'i* is used depatientively: the subject of (52) corresponds only to the subject of (51) rather than to the union of the subject and the object. Unlike reciprocal verbs, depatientive verbs may have a (semantically) singular subject:

- (52) *Wane baa 'e kwai-laba-ta'i.*
 man that 3SG.FACT DEPAT-harm-TR
 'The man harms people, damages, destroys things.'

With depatientive verbs, the patient (or another type of participant encoded as the direct object of the source verb) is backgrounded, not expressed. Typically, the depatientive construction is used when the identity of the patient (etc.) is not relevant. It expresses a type of situation rather than a specific occurrence of that type of situation. The patient is general; the activity encoded by the verb is directed not at a specific participant but at a certain type of entity. The sentence is primarily a statement about the agent; it characterises the agent, attributes a certain property to him, her, it. Thus, (52) above says that the man is a certain type of person: he is in the habit of harming people, damaging things.

In fact, the verb *labata'i* cannot be used in the morphological reciprocal construction. In the next example, even though the subject is non-singular, the interpretation is depatientive, not reciprocal:

- (53) *Roo wane kero kwai-laba-ta'i.*
 two man 3DU.FACT DEPAT-harm-TR
 'The two men harm people, etc.'; not *'The two men harm each other.'

To express a reciprocal situation, the verb *labata'i* must occur in the pronominal construction, with or without a periphrastic reciprocal marker:

- (54) *Roo wane kero laba-ta'i keero'a.*
 two man 3DU.FACT harm-TR 3DU
 'The two men harm each other.'

Following is another example of the depatientive construction expressing a characteristic of the referent of the subject:

- (55) *Oomea 'eri 'e kwai-fa'a-ma'u-i 'asia na'a.*
 enemy that 3SG.FACT DEPAT-CAUS-be.afraid-DEPAT very
 'The enemy is very frightening.'

(For co-occurrence of the prefixes *kwai-* and *faqa-* see Section 9.)

Depatientive verbs are also used in noun phrases as modifiers of the head noun to express a characteristic of the referent of the noun phrase (which corresponds to the subject of the depatientive verb). The depatientive verb is linked to the head noun by the particle *ni*:

- (56) *wane ni kwai-laba-ta'i.*
 man PRTL DEPAT-harm-TR
 'man who harms others, etc.'

Examples (57) and (59) also contain noun phrases with depatientive verbs as modifiers:

- (57) ... *to'a ni kwai-tole-i.*
 people PRTL DEPAT-lead-DEPAT
 '(political, religious) leaders'; compare:
- (58) ... *ma wane 'eri ka tole-a wela 'eri ...*
 and man that 3SG.SEQ lead-3.OBJ child that
 '... and the man led the child ...'
- (59) *wane ni kwai-'olo-fi.*
 man PRTL DEPAT-give.false.promise-TR
 'man of false promises'; compare:
- (60) *Wane 'e 'olo-fi nau.*
 man 3SG.FACT give.false.promise-TR 1SG
 'The man gave me a false promise.'

Although depatientive verbs are typically used to encode types of situations and to attribute properties or characteristics to participants, they may be used to refer to specific occurrences of events; but here too the patient is backgrounded, suppressed. What is relevant is a participant's performance of the activity, not the identity of the patient:

- (61) *Nau ku kwai-amasi 'e a'i ta wane si fula.*
 1SG 1SG.FACT DEPAT-call.sb.for.help 3SG.FACT NEG.VB some man NEG arrive
 'I called for help, (but) nobody came'; compare:
- (62) *amasi-a to'a.*
 call.sb.for.help-3.OBJ people
 'call people to (come and) help.'

The next example also encodes a unique situation. Here the subject of the depatientive verb is inanimate and non-agentive:

- (63) *Anunu e thaungi-a Diabana ka kwai-talo-fi.*
 earthquake 3SG.FACT hit-3.OBJ J. 3SG.SEQ DEPAT-spread.through-TR
 'The news of the earthquake in Japan spread, became known.'
 lit. 'An earthquake hit Japan, and it [the news about it] spread.'

The meaning of the transitive verb *talofi* is 'to spread/resound/be heard throughout a place (about a sound, news)', with the place encoded as the direct object:

- (64) *O'o e talo-fi-a fanua.*
 drum 3SG.FACT spread.through-TR-3SG.OBJ place
 'The (sound of the) drum was heard throughout the place.'

In (65) a nominalised form of *'adomi* 'to help' is used depatientively:

- (65) ... 'i laa kwai-'adomi-a na God o ili-a i a-mili'a.
 in inside DEPAT-help-NR REL God 2SG.FACT do-3.OBJ for BEN-1PL.POSS
 '... in the help that you, God, give us' (lit. 'do for us').

Examples (48) and (49) in Section 7 above demonstrate that the form *kwai-'adomi* can also function as a morphological reciprocal.

The depatientive and the reciprocal functions are related in two ways. One is the backgrounding of one of the core roles in a transitive situation (Lichtenberk 1991a). In a reciprocal situation, the two participants are relatively non-distinct from each other because they both play identical pairs of roles in the situation: the agent-patient opposition (for example) is not salient. Recall that with morphological reciprocals the two participants are encoded only once, in subject, agent position; there is no overt encoding of the patient. Prominence is given to the agent roles: two or more participants are involved in performing the same event. The fact that those same participants are also patients is signalled only by the form of the verb. And with depatientives, it is only the agent that is relevant; the exact identity of the patient is not relevant, and the patient is backgrounded, not expressed.

The other factor is plurality of relations of the same type that constitute an overall situation. In reciprocal situations, there is plurality of relations: A to B, and B to A. And depatientive verbs typically encode types of events that take place habitually, frequently, even though there may be just a single participant involved in the performance of those events. As will be seen in what follows, the factor of plurality of relations is relevant to other types of polysemy involving reciprocals (see Lichtenberk (1997) for general discussion of the notion of plurality of relations). The use of the depatientive construction to encode unique events is most likely an extension from the function of encoding habitual, customary events.

8.1.2 Chaining situations

In a chaining situation, a number of participants are involved in the same type of relation, but not reciprocally: A to B, B to C, C to D, etc. (see Lichtenberk 1985). To encode chaining situations, To'aba'ita uses the form *kwaisuli*. *Kwaisuli* derives historically from a transitive verb ***suli* 'to follow' (Lichtenberk 1991b) and the prefix *kwai-* used in morphological reciprocals.⁷ *Kwaisuli* can be used to refer to a spatial or a temporal configuration of the relations; see (66) and (67) respectively:

- (66) *Tini-na kofe e⁸ too kwaisuli.*
 tin-3SG.POSS coffee 3SG.FACT be.located CHAIN
 'The tins of coffee are lined up.'

7. In present-day To'aba'ita, *suli* functions as a prolative preposition 'along, following', 'during', 'about' and as a conjunction 'because', 'until'.

8. The singular subject marker is used here to refer to the collectivity of the tins rather than conceptualising them individually.

- (67) *Wela kera futa kwaisuli.*
 child 3PL.FACT be.BORN CHAIN
 'The children (siblings) were born in quick succession.' (This could be said about children born to the same parents in successive years.)

Chaining relations also are characterised by plurality of relations of the same kind.

8.1.3 *Non-reciprocal middles*

The *kwai*...(-*i*) construction is also used with a few verbs to impart to them a meaning reminiscent of some of the functions of the middle voice found in a number of Indo-European languages. As is the case with morphological reciprocals and with deponentives, clauses with (non-reciprocal) middle-like meanings are intransitive. In some cases, the referent of the subject acts on himself, herself, or for his or her own benefit:

- (68) ... *thaina-na bia maka nia kera kwai-thathai na'a na ni*
 mother-3SG.POSS and father 3SG 3PL.FACT MID-make.ready PERF COMP ART
keero'a sifo 'i maa-na uusia.
 3DU descend to place-3SG.POSS market
 '... his mother and father had got (themselves) ready to go down to the market.'

Without *kwai*-, *thathai* can function as an intransitive verb 'to be ready' and as a transitive verb 'to make ready, provide sb (with sth)'. Unlike intransitive *thathai*, which signifies being in a state, *kwai-thathai* signifies assuming, entering a state (getting ready).

The notion of change of state is also present in the next example. To'aba'ita has an intransitive verb *karangi* 'to be close' and a transitive variant *karangi* 'to be close to'. The latter can take the prefix *kwai*- to signify a change of state: 'to move close(r), approach':

- (69) *Kera kwai-karangi na-mai.*
 3PL.FACT MID-approach PERF-hither
 'They have moved closer.'

The middle form *kwai-karangi* is also used, in free variation with the transitive variant *karangi-a* 'to be close to it', to encode imminent events:

- (70) *Wane 'e {kwai-karangi / karangi-a} kai oli na'a.*
 man 3SG.FACT MID-approach be.close.to-3SG.OBJ 3SG.NFACT return PERF
 'The man is about to go back.'

The verb *kwai-karangi* 'to move close(r), approach' encodes what Kemmer (1993) terms 'translational motion'. According to Kemmer, translational motion is not infrequently encoded by the middle-voice construction in languages where the middle voice is well developed. In To'aba'ita the non-reciprocal middle-like function of *kwai*...(-*i*) is not very common; *kwai-karangi* is the only middle-verb form encoding translational motion I am aware of.

The non-reciprocal middle uses of *kwai*...(-*i*) are different from the deponentive function: with deponentives, the event is directed from one participant (encoded as subject) to another, different participant (not encoded); while with the middles such as the ones in (68) and (69), the participant both performs and undergoes the event.

8.1.4 Examples of other verbal uses of *kwai-*

In addition to the types of extension of the morphological reciprocal construction discussed above, there are also a number of cases where, today at least, the motivation for the extension is not obvious. (All of the cases I am aware of contain only the prefix *kwai-*, not the suffix *-i*.) The source verbs are transitive, and most, though not all, of the derived verbs are intransitive; they do not take direct objects. Following is a small selection.

To'aba'ita has a transitive verb *kulufa'i/kulufani* 'to hang, suspend sth' (cf. *kulu* 'to hang (vi), be suspended'). The form *kwai-kulufa'i* is used to characterize physical infirmity of old people, as in (71), and to describe a kind of weather, as in (72):

- (71) *Wane e ara'i ka kwaikulufa'i na'a.*
 man 3SG.FACT be.old 3SG.SEQ be.infirm PERF
 'He is an old man and has become infirm (can walk, move only with difficulty).'
- (72) *Fanua 'e kwaikulufa'i.*
 place 3SG.FACT be.overcast
 'It's a "heavy", dull day, overcast with no breeze.'

There is a reflexive transitive verb *taofa'i* 'to trip, stumble over sth', whose object must be co-referential with the subject; for example:

- (73) *Nau ku tao-fa'i nau 'ana fau.*
 1SG 1SG.FACT stumble-TR 1SG over stone
 'I tripped, stumbled over a stone.'

The derived form *kwaitaofa'i* is used with the meaning 'to cause bad blood (among people)'. The people affected are encoded as an oblique object; that is, *kwaitaofa'i* is not used depatientively. For example:

- (74) *Botho e kwaitaofa'i i ma'aluta-da.*
 pig 3SG.FACT cause.bad.blood in among-3PL.POSS
 'The pig (affair) is causing bad blood among them.' (One family's pig keeps rooting up the soil around the village.)

There is a transitive verb *kookodo* 'to carry sth on a stick over one's shoulder, the load being suspended from one end of the stick (the rear end)' (cf. *kodo* 'stick'). And there is *kwaikodo*, also a transitive verb, which refers to carrying two loads on a stick over one's shoulder, the two loads being suspended from the opposite ends of the stick, one at the front, one at the back; see (75) and (76) respectively:

- (75) *Nau kwai kookodo-a baeke-'e koukou.*
 1SG 1SG.NFACT carry.on.stick-3.OBJ bag-of cocoa
 'I'll carry the bag of cocoa seeds on a stick.'
- (76) *Nau kwai kwaikodo-a roo baeke-'e koukou.*
 1SG 1SG.NFACT carry.on.stick-3.OBJ two bag-of cocoa
 'I'll carry the two bags of cocoa seeds on a stick.'

Notice that the verb *kwaikodo* has a direct object (indexed on the verb by means of the suffix *-a*), which is never the case with morphological reciprocals.

8.1.5 A variant of the reciprocal prefix used with nouns

To'aba'ita has a prefix *wai-*, which is historically a doublet of *kwai-* (see further below). *Wai-* is used as a derivational prefix with some kinship terms. With certain of those kinship terms, the structure of the derived noun is *wai-N-na*, where N is a kinship term, and *-na* is a suffix that elsewhere functions as the 3SG possessive marker (see (77) and (79) below). In such derived kinship terms, *-na* does not have a possessive-marking function; it does not contrast with any of the other possessive suffixes there. Some of the derived terms signify a collection of people in a reciprocal, symmetrical kinship relation. Compare (77) and (78), and (79) and (80):

- (77) *do'ora-na*
sibling.of.the.same.sex-3SG.POSS
'his brother', 'her sister.'
- (78) *wai-do'ora-na*
'siblings (of the same or opposite sex).'
- (79) *kwai-na*
spouse-3SG.POSS
'his/her spouse.'
- (80) *roo wai-kwai-na*
two spouses
'married couple.'

Also included here is the term for 'friend, trading partner' *ruana*. *Ruana* takes the prefix *wai-*, but not the suffix *-na*, most likely because the noun is historically complex, consisting of *rua* 'two' and the 3SG possessive suffix *-na*. (The 3SG possessive suffix is added to cardinal numerals to form ordinal forms; i.e. a friend is one's second (person).) In the example below, *wai-ruana* occurs in the predicate:

- (81) *Kamare'a roo kini mere wai-ruana.*
IDU two woman IDU.FACT friends
'The two of us, women, are friends, trading partners.'

The terms for 'mother' and 'father' also can occur in the *wai-N-na* construction to form collective nouns. However, here the relations between the members of the set are converse rather than symmetrical: the source noun identifies one of the relations, while the other, converse relation is only implied. Compare (82) and (83), and (84) and (85):

- (82) *thaina-na*
mother-3SG.POSS
'his/her mother'
- (83) *wai-thaina-na*
'mother's group'; i.e. mother and her child(ren), (but not her husband).

If the husband/father is included in the group (whether his wife is present or not), the term *wai-maka-na* must be used:

- (84) *Wai-maka-na baa ki kere tatha na'a.*
 father's.group that PL 3PL.FACT pass PERF
 'The man and his family have gone by'; compare:
- (85) *maka nia*
 father 3SG
 'his/her father.'

The derived kinship terms exemplified above take the suffix *-na* even in those cases where the source noun does not take possessive suffixes. To'aba'ita has two types of possessive construction. One takes possessive suffixes to index the possessor (in addition, the possessor may be encoded by means of a lexical NP); see (82) above. The other type does not take possessive suffixes; the possessor is expressed only by means of an NP (pronominal or lexical); see (85).

The prefix *wai-* is also optionally added to some other kinship terms by itself, without the suffix *-na*. The base form and the derived form are synonymous; the derived form does not have a collective significance:

- (86) (*wai-*)*di'i nau*
 cross.cousin 1SG
 'my cross-cousin.'
- (87) (*wai-*)*funga nau*
 parent.in.law 1SG
 'my father-in-law', 'my mother-in-law.'

Although *wai-* and *kwai-* are phonologically different (*w* is a labio-velar glide /w/, while *kw* represents a labio-velar stop /kp/), historically they are doublets, as consideration of data from other Oceanic languages, more or less closely related to To'aba'ita, reveals. The 'Are'are language, which is closely related to To'aba'ita, has the form *hai* (Geerts 1970), used to form morphological reciprocals: *hai-raputa'i* 'to beat one another'. *Hai* is also used to form kinship terms in a way analogous to that found in To'aba'ita: *rua hai mama-na* 'father and child' (*rua* 'two', *mama* 'father' *-na* 3SG possessive suffix). And the language also has the form *hai-riu* 'here and there, around, about, scattered; reciprocally' (*riu* 'to pass; spread (of epidemics), travel), which corresponds to the To'aba'ita periphrastic reciprocal marker *kwailiu*. Fijian, more distantly related to To'aba'ita, has the prefix *vei-* (Milner 1972), used, sometimes in combination with the suffix *-i*, to form morphological reciprocals: *vei-kila-i* 'to know each other'. The prefix is also used with some kinship terms, again in a way analogous to that found in To'aba'ita: *vei-taci-ni* 'siblings (of same or opposite sex)' (*taci* 'younger sibling of same sex'), *vei-tama-ni* 'man and his family, man and his children' (*tama* 'father'). And in Futunan, also a fairly distant relative of To'aba'ita, *fe-* is used to form morphological reciprocals and it is also found with at least one kinship term: *fe-taina* 'siblings' (*taina* 'sibling') (see Moyses-Faurie, Ch. 35 on East Futunan).

Blust (forthcoming) has reconstructed ***payi-* for Proto-Eastern-Malayo-Polynesian as a prefix of reciprocal and collective action, while Ross (1988) has reconstructed the forms ***payi-* and ***pa(k)i-* for Proto-Oceanic (a descendant of Proto-Eastern-Malayo-Polynesian). The expected reflex in To'aba'ita is **fai-*. For some reason, in the proto-

language from which To'aba'ita and a few other very closely related languages are descended the prefix underwent an irregular change of earlier ***f* to ***w*. Later on in the history of these languages, ***w* changed to *kw* (Lichtenberk 1988), but inexplicably, the prefix ***wai-* did not undergo the change in its kinship-term function. Whatever the Proto-Oceanic form(s) may have been, the use of 'Āre'āre *hai-*, Fijian *vei-*, Futunan *fe-*, and To'aba'ita *kwai-/wai-* with verbs to form morphological reciprocals and with kinship terms is clearly the same basic pattern.

It is not difficult to see the connection between the reciprocal and the kinship-term functions. Kinship terms are inherently relational, and most of the forms derived by means of the prefix *wai-* are collective, semantically plural. That is, there is plurality of relations: two or more participants in a reciprocal/converse relation to each other.

8.2 The periphrastic reciprocals

8.2.1 *Dispersive situations*

In a dispersive situation, as the term is used here, there are multiple occurrences of an event, each instance of the event being characterised by a different directionality from a common point of origin. Dispersive situations are encoded by means of the form *kwailiu*. As mentioned in Section 6, *kwailiu* consists of the verb *liu* 'to walk past/around, pass (by), roam (about)' and the prefix *kwai-*. Following are a few examples of the dispersive function of *kwailiu*:

- (88) *Kera oli kwailiu.*
 3PL.FACT return DISPERS
 'They went back their own ways, to their respective places, homes'
- (89) *Keka ngali kwailiu bo-na'a 'ani-a uri si kula kera ki.*
 3PL.SEQ take DISPERS INTS-PERF with-3SG.OBJ to CLF place 3PL PL
 'They took them to their respective places.'

The subject of a verb encoding a dispersive situation may be singular:

- (90) *'Osi 'uu kwailiu 'ana ta'erau!*
 2SG.NEG throw DISPERS with rubbish
 'Don't throw the rubbish all over the place!'

Even if the subject is singular, as in (90), there is plurality of subevents/relations of basically the same kind in the overall situation.

8.2.2 *Reversive situations*

A reversive situation consists of two or more subevents of the same type with reversed directionalities: 'back and forth'. Reversive situations are encoded by means of the form *olili*, which is a reduplication of the verb *oli* 'return, move back'. To encode a reversive situation, *olili* occurs in a serial verb construction where the first verb encodes the subevents. As example (91) shows, the subject of the verb encoding a reversive situation may be singular:

- (91) *Gwau-na 'ai e lae olili.*
 head-3SG.POSS tree 3SG.FACT go REVERS
 'The top of the tree swayed back and forth.'

Reciprocal situations, specifically those where the relations are sequential to each other, are in fact a subtype of the reversive situation: two (or more) participants alternately acting on each other:

- (92) *Roo wela kere nangasi olili 'ani keero'a 'a-fa bolo.*
 two child 3PL.FACT throw REVERS to 3DU with-CLF ball
 'The two children tossed the ball back and forth to each other.'

9. Co-occurrence of the morphological reciprocal marker with other verbal morphology

To'aba'ita is not rich in derivational morphology. Other than the morphological reciprocal marker *kwai-...(-i)*, verbs may carry a transitive suffix, and the causative prefix (see Section 2 for examples). The reciprocal marker freely co-occurs with the transitive suffixes; see examples (25) and (26) in Section 4. (Even though reciprocal verbs may carry a transitive suffix, they are intransitive syntactically in the sense that they do not take direct objects.) On the other hand, I have come across no cases of co-occurrence of the causative prefix *fa'a-* and the morphological reciprocal marker when a reciprocal situation is to be encoded (but see further below). No forms **faqa-kwai-...(-i)* or **kwai-faqa-...(-i)* encoding reciprocal situations have been found in spite of attempts to elicit such forms. Verbs with the causative prefix have been found to occur only in the pronominal reciprocal construction. For example:

- (93) a. *Roo wela kera fa'a-ma'u keero'a kwailiu.*
 two child 3PL.FACT CAUS-be.afraid 3DU REC
 'The two children frighten each other.'

not:

- b. **roo wela kera kwai-fa'a-ma'u(-i).*

However, the causative prefix *fa'a-* and the prefix *kwai-* (with or without *-i*) may co-occur when the meaning is other than reciprocal. Depending on the verb, the order of the prefixes is *kwai-fa'a-* or *fa'a-kwai-* with a difference in meaning. For example, there is an intransitive verb *maruki* 'to be alive', a causative transitive verb *fa'a-maruki* 'to save sb's life, bring (back) to life', and there is also a depatientive intransitive verb *kwai-fa'a-maruki* 'to save lives, bring (people) back to life':

- (94) *wane ni kwai-fa'a-maruki.*
 man PRTL DEPAT-CAUS-be.alive
 'Saviour' (lit. 'man who saves lives').

There is also a depatientive verb *kwai-fa'a-ma'u-i* 'to frighten (people), be frightening'; cf. *ma'u* (vi) 'to be afraid' and *fa'a-ma'u* (vt) 'to frighten sb':

- (95) *Oomea 'eri 'e kwai-fa'a-ma'u-i 'asia na'a.*
 enemy that 3SG.FACT DEPAT-CAUS-be.afraid-DEPAT very
 'The enemy is very frightening.'

Notice that the form *kwai-fa'a-ma'u-i* can be used with a depatientive force but not a reciprocal force (see (93b) above).

There is a transitive verb *karangi* 'to be close to', an intransitive middle verb *kwai-karangi* 'to move close(r)' (see example (69) in 8.1.3), and there is also a causative transitive verb *fa'a-kwai-karangi* 'to cause sth to be close(r)':

- (96) *Kulu fa'a-kwai-karangi-a ba-kulu'a faafangaa na'i.*
 1PL(INC) CAUS-MID-be.close.to-3.OBJ just-1PL(INC).POSS feast this
 'Let's move the (time of the) feast closer (to now).'

There do not appear to be many verbs that can take both prefixes, in either order.

10. Summary and conclusions

To'aba'ita has two types of construction that explicitly identify a situation being encoded as reciprocal: morphological reciprocals using *kwai-...(-i)*, and periphrastic reciprocals using *kwailiu* or *olili*. The periphrastic reciprocal markers are used in conjunction with pronominal means of expressing reciprocalness and, less frequently, in conjunction with the morphological reciprocal construction.

As is typically the case cross-linguistically, the markers of reciprocal situations in To'aba'ita are polysemous. There are a number of factors that underlie, motivate the polysemies. The primary one is plurality of relations (as discussed in Lichtenberk 1997). This is true of the reciprocal, depatientive, chaining, kinship-term, dispersive and reversion uses of the forms. Another is the relative non-distinctness of the core participants in the relations that make up a reciprocal situation, by virtue of each of the participants playing the same pair of roles. Of the two roles, it is the one encoded in subject position that is the more prominent one, e.g. agent as opposed to patient. It is the backgrounding of the roles otherwise encoded in object position (e.g. patient) coupled with the plurality of relations that unite the reciprocal, chaining, depatientive, and the other middle-like uses of *kwai-...(-i)*.

The use of *kwailiu* to encode reciprocal situations is most likely a back-extension from the use of the element as a dispersive-situation marker, the dispersive-marking function being united with the reciprocal-marking function through the factor of plurality of relations. Similarly, the use of *olili* to encode reciprocal situations is an extension from the reversion function: the motivating factor is, once again, plurality of relations together with reverse directionalities of the subevents.

A number of motivating factors have been mentioned in the course of this paper as underlying the development of the polysemies. It needs to be stressed, however, that in the absence of historical and comparative evidence these suggestions, albeit not implausible, can only remain hypotheses.

The To'aba'ita elements used to encode reciprocal situations are polysemous, but it does not follow that the polysemies are a To'aba'ita-internal development. Although the possibility of independent developments in To'aba'ita and related languages cannot be discounted (as the studies included in this volume demonstrate, some such polysemies are found in other language families), it is very likely that at least some of the polysemies developed early in the history of the language. An example is the use of historically the same prefix to derive morphological reciprocals and collective kinship terms.

In many languages of the world, the reciprocal function is a later extension from a reflexive (or a more general middle) function. This is not so in the case of To'aba'ita and its relatives. A prefix marking, among other things, reciprocal situations can be reconstructed to a pre-Proto-Oceanic stage: Blust (forthcoming) has reconstructed ***payi-* for Proto-Eastern-Malayo-Polynesian as a prefix of reciprocal and collective action. I have suggested elsewhere (Lichtenberk 1997) that the reciprocal function of *kwai-* in To'aba'ita (and its cognates in other Oceanic languages) is one aspect of a more general earlier function, that of marking of plurality of relations of the same basic type that constitute an overall situation.

The origin of the proto-form from which To'aba'ita *kwai-* is descended is unknown, but there is no reason to assume that its function of marking plurality of relations, including reciprocalness, was an extension from an earlier reflexive function. This suggests that in languages that do have polysemies uniting reflexive and reciprocal meanings with other meanings of the kinds discussed here, the latter may be more closely connected to the reciprocal function than to the reflexive function.⁹

9. For example, Geniušienė (1987) considers the deponentive function (which she calls 'absolute') to be (ultimately) an extension from the reflexive function in languages with a reflexive-reciprocal deponentive polysemy. However, as the To'aba'ita case demonstrates, deponentives may be related to reciprocals without being related to reflexives.

1. Introduction

1.1 The Mundari language

Mundari, which belongs to the Munda language family, is spoken in the state of Tharkhand and the northern areas of the state of Orissa in India. According to the census of India 1981, the number of speakers of Mundari is 752,683. But in the same census the number of speakers of Munda is also recorded as 348,839. The names Munda and Mundari seem to be confused. It is likely that the census officer did not have the perfect criteria for naming the languages in India. There is actually no difference between the Munda language and the Mundari language linguistically. Thus the total number of the speakers of Mundari may be more than one million. From the linguistic point of view, the designation of Munda is used for the language family. Mundari, on the other hand, refers to an individual language, namely the language of Munda people.

The Munda languages are divided into two groups: North Munda and South Munda. The North Munda language group comprises Korku and the Kherwarian languages which include Mundari, Ho, Santali, Korwa, Asuri, Birhor and Turi. The South Munda language group consists of Kharia, Juang, Gutob, Remo, Gtaʔ, Gorum, Juray and Sora.

The genetic relationship between Munda and Mon-Khmer was proposed by W. Schmidt (1906). He suggested an “austroasiatischer Sprachstamm” which comprises the Munda languages, the Khasi and Nicobarese languages in South Asia, the Palaung-Wa, Mon-Khmer and Malacca languages in Southeast Asia. W. Schmidt also advanced the “Austic theory”, that Austroasiatic is genetically related to Austronesian. The latter connection, however, remains unproved.

Mundari has four dialects: Hasadaʔ, Naguri, Tamaria and Keraʔ. Among these, Hasadaʔ is considered to be the standard language, and the description presented here is based on the data from this dialect.

1.2 Overview

The Mundari language uses morphological derivation to code the reciprocal meaning, viz. the infix *-pV-*. The reciprocal infix, which is productive, can be attached to transitive verbs only. Thus,

- (1) a. *Soma=ñ lel-ki-ʔ-i-a.*
 S.=1SG.SBJ see-COMPL-TR-3SG.OBJ-PRED
 ‘I saw Soma.’
- b. *Soma ad añ do=ling le-pe-l-ke-n-a.*
 S. and I TOP=1.DU.EXC.SBJ see-REC-see-COMPL-INTR-PRED
 ‘Soma and I saw each other.’

The infix *-pV-* is the only means of expressing the reciprocal meaning. In addition to this, reduplication of the personal pronoun is sometimes used for emphasizing or contrasting the actors of a reciprocal action (see 3.1.1). Apart from this, there are no pronominal expressions like *each other*.

Reciprocal verbs form all the three diathesis types of subject-oriented constructions, and object-oriented constructions are formed with causative operator verbs. When combined with verbs, the reciprocal marker is monosemous, i.e. it has no other meanings, while in combination with non-verbal stems it may also have the intensifying meaning and meanings connected with plurality.

2. Grammatical notes

2.1 Word classes

For Mundari there has been a lengthy discussion of the difficulties in categorizing words into classes in terms of the traditional definitions of the parts of speech (see Evans & Osada (2005) for details). A prototypical lexical verb can be used as a noun without any morphological change, while a prototypical noun can only be verbalized by attaching verbal endings. For example,

- (2) a. *buru* i. ‘mountain’
 ii. ‘to heap up’
- b. *jom* i. ‘to eat’
 ii. ‘food.’

However, in the given sense, it is easy to define the word class membership of lexemes. Thus nouns can be morphologically marked for certain grammatical categories such as noun class (animate/inanimate) and number (singular/dual/plural).

The verb can be marked for grammatical features such as aspect and mood. Secondly, it can take affixes for voice and transitivity which are related to grammatical functions such as subject and object. The verb agrees with subject and object in person and number which are marked by a personal suffix.

In addition to noun and verb we set up the following word classes: pronoun, adjective, postposition, adverb, numeral, conjunction, particle, interjection and expressive.

2.2 Word order

Mundari NPs do not inflect for case: both the subject and object of a sentence are morphologically unmarked. The subject and object of a sentence are determined by word order. The unmarked word order is as follows: **S + O + Verb**. Examples are given as in (3a) and (3b).

- (3) a. *pusi-ko seta-ko=ko jom-ke-d-ko-a.*
 cat-PL dog-PL=3PL.SBJ eat-COMPL-TR-3PL.OBJ-PRED
 ‘The cats ate the dogs.’
 b. *seta-ko pusi-ko=ko jom-ke-d-ko-a.*
 dog-PL cat-PL=3PL.SBJ eat-COMPL-TR-3PL.OBJ-PRED
 ‘The dogs ate the cats.’

In addition to two arguments a postpositional phrase or adverb denoting location or time can be inserted in any position before the verb, as illustrated in (3c). (Note here that the italic capital letters *T*, *D*, *R* and *N* denote retroflex phonemes according to the style of *Indian Linguistics*).

- c. *setaʔ-re seta-ko maNDi=ko jom-ke-d-a.*
 morning-in dog-PL food=3PL.SBJ eat-COMPL-TR-PRED
 ‘In the morning the dogs ate the food.’

Furthermore, the beneficiary can be positioned in between object and verb. We will discuss the beneficiary in 2.6.3. When ambiguity is clearly excluded on semantic grounds the subject and object of a sentence can change places.

2.3 The noun

2.3.1 Noun classes

Nouns are divided into animate and inanimate in terms of the system of concord between subject, object and verb. When an animate noun is acting as subject the personal pronominal suffix is placed in the preverbal slot or at the end of a verb (we will see it in 2.4.2). When an animate noun is acting as object the personal pronominal suffix occupies the slot before the predicator *-a* after the transitive marker *-d* in non-future indicative sentences. In the case of an inanimate noun as a subject or object, such suffixes do not appear at all. Examples (4a) and (4b) illustrate subject agreement, and (3b) and (3c) object agreement.

- (4) a. *bonga-ko=ko senoʔ-ja-n-a.*
 god-PL=3PL.SBJ GO-INGR-INTR-PRED
 ‘The gods have gone.’
 b. *samae senoʔ-ja-n-a.*
 time GO-INGR-INTR-PRED
 ‘The time has gone.’

2.3.2 Number

The number marking system for nouns in Mundari has three values, i.e. singular-dual-plural. Singular is unmarked, and the dual and plural markers are *king* and *ko* respectively. Countable nouns are marked for number irrespective of their animacy. Thus,

- (5) a. *hon* 'a child' – *hon-king* 'two children' – *hon-ko* 'children.'
 b. *kitab* 'a book' – *kitab-king* 'two books' – *kitab-ko* 'books.'

2.3.3 Case relations

Case relations in Mundari are mainly marked by postpositions. Thus, instrumental is expressed by the postposition *te* following a noun or pronoun. Comitative is expressed by postposing *lo?* after a noun or pronoun.

The possessive is coded by the suffixes *-a?*, *-rea?/-ra?* and *-ren*. The possessive suffix *-a?* denotes alienable possession by an animate noun, while *-rea?/-ra?* and *-ren* indicate alienable possession by an inanimate noun. The distinction between *-rea?/-ra?* and *-ren* is made on account of the animacy of the head noun. We demonstrate it in the following chart.

(6)			Possessed	
			animate	inanimate
Possessor	animate	<i>-a?</i>	<i>-a?</i>	
	inanimate	<i>-ren</i>	<i>-rea?/-ra?</i>	

2.4 The verb

2.4.1 Verbal structure

The verbal morphology of Mundari is very complicated. The basic verbal structure may be described in terms of an order element formula as follows:

- (7) (NP=S) Verb base + (ASP marker) + (-*n*) + -*a* (=S)
 + (-*d*/-?) (+O)

Note the following: (a) *-n* is an intransitive marker, *-d* a transitive marker, *-?* stands for its morphological variants; (b) the transitive marker and the intransitive marker only appear when an aspect marker is present; (c) the suffix *-a* (predicator) is used to indicate the main verb of the clause, excepting certain imperative forms.

A verbal base is formed by affixing to a verbal stem. Verbal bases can be simple or complex; complex bases are formed by reduplication or serializing of the verbal stem. Verbal stems may be either transitive, or intransitive, or diffuse (i.e. transitive-intransitive, like the English *break*). Intransitive verbs are few in number (here belong, *inung* 'to play', *ang* 'to dawn', *DoNDo* 'to be foolish', and the like). The intransitive or transitive use of diffuse verbs is distinguished by means of intransitive and transitive suffixes, *-n* and *-d* respectively (see 2.6.2).

2.4.2 Agreement

The following personal pronominal suffixes are used for subject-object agreement:

(8)		SG	DU	PL
	1st (INC)	- <i>n̄</i>	- <i>lang</i>	- <i>bu</i>
	(EXC)		- <i>ling</i>	- <i>le</i>
	2nd	- <i>m</i>	- <i>ben</i>	- <i>pe</i>
	3rd	- <i>e/-i/-eʔ/ -iʔ</i>	- <i>king</i>	- <i>ko</i>

The same forms are used for subject and object, but they occupy different slots. The subject agreement element is attached either to the end of the verb or as a clitic to the preverbal NP which may be not only the subject (see (9)) but also a non-subject (see (13a) and (14a) where it is attached to the direct object). The object agreement element occurs before the predicator *-a* after the transitive marker *-d* in non-future indicative sentences. In the future tense, it occurs between a verbal base or an aspect marker and the predicator *-a*.

2.5 Valency decreasing means

2.5.1 Reflexive

It is expressed by the suffix *-en* after consonants or *-n* after vowels; e.g.:

- (9) *Soma=eʔ lel-en-ta-n-a.*
 S.=3SG.SBJ see-REFL-PROGR-INTR-PRED
 ‘Soma is looking at himself.’

The reciprocal marker is monosemous and never attached to non-verbal stems.

2.5.2 Reciprocal

As we demonstrated in 1.2, the reciprocal decreases verb valency. Thus a reciprocal verbal base takes only the intransitive marker *-n* even with ditransitive verbs (see 3.1.2).

2.5.3 Passive

Passive verbal bases can be formed by suffixing *-oʔ* to a verbal stem. The passive suffix can be attached to either transitive or intransitive verbs. The passive may imply the potential sense.

- (10) a. *ayum* ‘to hear’ → *ayum-oʔ* ‘to be audible’
 b. *lel* ‘to see’ → *lel-oʔ* ‘to be visible’
 c. *duRum* ‘to sleep’ → *duRum-oʔ* ‘to feel sleepy.’

Some verbs cannot be passivized due to the implication of volitionality, e.g. *coʔ* ‘to kiss’ → **cog-oʔ*.

2.6 Valency increasing means

2.6.1 Causative

It is expressed by the unproductive prefix *a-*:

- (11) a. *jom* ‘to eat’ → *a-jom* ‘to feed’
 b. *nu* ‘to drink’ → *a-nu* ‘to give to drink.’

2.6.2 Conjugation change

This procedure concerns diffuse verbs (see 2.4.1). For convenience we shall consider the transitive use of diffuse stems as causativization. Here are examples:

- | | | | |
|---------|-------------|-----|--|
| (12) a. | <i>dub</i> | i. | ‘to sit’ (with the intransitive marker <i>-n</i>) |
| | | ii. | ‘to cause to sit’ (with the transitive marker <i>-d</i>) |
| b. | <i>bolo</i> | i. | ‘to enter’ (with the intransitive marker <i>-n</i>) |
| | | ii. | ‘to cause to enter’ (with the transitive marker <i>-d</i>). |

2.6.3 Benefactive

The benefactive suffix *-a* (always followed by the beneficiary agreement marker) indicates not only a beneficiary added to two-place transitive but also (optionally) an indirect object of ditransitives, and in this case both forms may coincide. Although the benefactive suffix increases valency when added to a two-place transitive, the benefactive verbal base takes the intransitive marker *-n* only. This may be the reason why reciprocals cannot be derived from them. Compare:

- | | | |
|---------|---------------|------------------------------------|
| (13) a. | <i>daru=m</i> | <i>maʔ-ke-d-a.</i> |
| | tree=2SG.SBJ | cut-COMPL-TR-PRED |
| | | ‘You cut the tree.’ |
| b. | <i>daru=m</i> | <i>mag-a-ñ-ke-n-a.</i> |
| | tree=2SG.SBJ | cut-BEN-1SG-COMPL-INTR-PRED |
| | | ‘You cut the tree <i>for me</i> .’ |

2.7 Tense and aspect

The tense system is represented by future (unmarked) and non-future (marked). In the future tense, the transitive and intransitive markers are not used. The non-future (covering present and past) is indicated by an aspect marker placed after the transitive or intransitive marker. The aspect markers are classified into perfective and imperfective.

3. Diathesis types of reciprocal constructions

3.1 Subject-oriented diatheses

A reciprocal verbal base can take only the intransitive marker. A reciprocal construction requires a dual or plural form of the subject. The reduplicated personal pronoun with the emphatic particle *ge* is sometimes used as a subject for the emphatic or contrastive purpose (see (15b)). This is a simple reciprocal construction; i.e. the arguments are expressed by the subject.

Simple reciprocal constructions can be homogeneous and heterogeneous (see Section 8). The comitative marker *-loʔ* can also introduce an object, in which case the verb does not agree with it, while in (17b) we observe agreement. In “possessive” reciprocal constructions a heterogeneous subject with the comitative marker is obligatory.

3.1.1 “Canonical” reciprocals: Subject symmetrical with direct object

The basic means of forming reciprocals is illustrated by the following examples:

- (14) a. *hora-re hon-ko=ñ ad-ke-d-ko-a.*
 way-in child-PL=1SG.SBJ miss-COMPL-TR-3PL.OBJ-PRED
 ‘I missed the children on the way.’
 b. *hora-re=le a-pa-d-ke-n-a.*
 way-in=1PL.EXC.SBJ miss-REC-miss-COMPL-INTR-PRED
 ‘We missed each other.’
- (15) a. *am DaNDaʔ-te=ñ dal-ke-d-me-a.*
 you stick.by=1SG.SBJ hit-COMPL-TR-2SG.OBJ-PRED
 ‘I hit you with a stick.’
 b. *ako-ako ge DaNDaʔ-te=ko da-pa-l-ke-n-a.*
 they-they EMPH stick.by=3PL.SBJ hit-REC-hit-COMPL-INTR-PRED
 ‘It is they that hit each other with sticks.’
 c. *ako-loʔ=le da-pa-l-ke-n-a.*
 they-with=1PL.EXC.SBJ hit-REC-hit-COMPL-INTR-PRED
 ‘We and they hit each other.’

3.1.2 “Indirect” reciprocals: Subject symmetrical with indirect object

In this case the subject of the underlying construction is symmetrical with the indirect object, therefore the latter is omitted in the reciprocal construction. The valency decreases but the direct object is retained. Nevertheless, the transitive marker is replaced, surprisingly enough, by the intransitive marker, as on “canonical” reciprocals.

- (16) a. *Soma seta hon-ko=eʔ om-ki-ʔ-i-a.*
 S. dog child-PL=3SG.SBJ give-COMPL-TR-3SG.OBJ-PRED
 ‘Soma gave the dog to the children.’
 b. *seta-ko=le o-po-m-ta-n-a.*
 dog-PL=1PL.EXC.SBJ give-REC-give-PROGR-INTR-PRED
 ‘We are giving the dogs to each other.’

As is mentioned above, the benefactive and the reciprocal markers do not co-occur. In other words, a reciprocal construction with the meaning ‘We cut trees for each other’ cannot be derived from the sentence given in (13b).

3.1.3 “Possessive” reciprocals: Inalienable possession only

They are formed from two-place transitive constructions with a possessive attribute to the direct object denoting inalienable possession. The symmetrical relation holds between the underlying subject and possessive attribute. Therefore the latter is deleted, the direct object being retained. As a result, the valency does not decrease but the transitive marker is also surprisingly replaced by the intransitive marker, as in the case of “indirect” reciprocals.

The peculiar feature of “possessive” reciprocals is that the subject is (as is mentioned in 3.1) obligatorily heterogeneous, i.e. consisting of two nominals of which the first is unmarked and the other takes the postposition *-loʔ* ‘with’; e.g.:

- (17) a. *Soma hon-ko-a? ub=e? laTab-ke-d-a.*
 S. child-PL-POSS hair=3SG.SBJ cut-COMPL-TR-PRED
 ‘Soma cut the children’s hair.’
- b. *Soma ay-a? hon-lo? ub=king la-pa-Tab-ja-n-a.*
 S. he-POSS child-with hair=3DU.SBJ cut-REC-CUT-INGR-INTR-PRED
 ‘Soma and his child have cut each other’s hair.’

There are no reciprocal constructions of the alienable “possessive type”. Thus the following sentence is not attested in Mundari:

- (18) **Soma ay-a? hon-lo? kagoj=king la-pa-Tab-ja-n-a.*
 S. he-POSS child-with paper=3DU cut-REC-CUT-INGR-INTR-PRED
 ‘Soma and his child have cut each other’s paper.’

3.2 Object-oriented diathesis: Causatives from subject-oriented reciprocals only

There are no non-causative object-oriented reciprocal constructions in Mundari. It is, however, possible to causativize reciprocals. Constructions of this type involve serial verbs with the operator verb (see 5.2) *rika* ‘to cause’ following the reciprocal verbal base. For instance:

- (19) a. *seta-king hora-re=king go-po-y-ta-n-a.*
 dog-DU street-on=3DU.SBJ kill-REC-kill-PROGR-INTR-PRED
 ‘Two dogs are fighting each other on the street.’
- b. *hon-ko hora-re seta-king=ko go-po-y-rika-ke-d-king-a.*
 child-PL street-on dog-DU=3PL.SBJ kill-REC-kill-cause-COMPL-TR-3DU.OBJ-PRED
 ‘The children caused two dogs to fight each other on the street.’

4. Passives and reflexives from reciprocals

As is mentioned in 2.5.3, the passive in Mundari implies non-volitionality and/or potentiality. Thus, (20a) with the passive form of the reciprocal *a-pa-d-* ‘to miss each other’ (← *ad-* ‘to miss sb’) describes a situation when the participants missed each other for some external reason, e.g. because of the fog:

- (20) a. *a-pa-d-o?-ta-n-a=le.*
 miss-REC-miss-PASS-PROGR-INTR-PRED=1PL.EXC.SBJ
 ‘We are almost missing each other.’

Reciprocals are rarely, if at all, reflexivized, but of course in a meaning different from that in 2.5.1. According to my informant, reflexive marking on a reciprocal verb amounts to emphasizing or contrasting the reciprocal situation. Therefore it is unacceptable to use reflexive marking in the context implied by (20a). In (20b) the exact meaning of *a-pa-d-* ‘to miss each other’ is emotional:

- b. *a-pa-d-en-ta-n-a=le.*
 miss-REC-miss-REFL-PROGR-INTR-PRED=1PL.EXC.SBJ
 ‘We are making ourselves miss each other.’

5. Reciprocal constructions with serial verbs

5.1 Serial verbs

A serial verb is a bound complex of two verbal stems with one set of inflectional suffixes for both. There are two types of serial verbs: type A comprised of two main verbs and type B comprised of the main verb and operator (a kind of semi-auxiliary).

Type A: both verbs are as a rule semantically related (they may be synonyms or antonyms):

- (21) a. *hatu-re=ko jom-nu-ke-d-a.*
 village-in=3PL.SBJ eat-drink-COMPL-TR-PRED
 ‘They ate and drank in the village (= they had dinner in the village).’
 b. *ne gaRa gaRi-te-ko har-parom-ke-d-a.*
 this river car-by-3PL.SBJ drive-CROSS-COMPL-TR-PRED
 ‘They drove the car and crossed the river.’

Type B: the operator indicates completion, causativity, permission, etc. of the action or process expressed by the main verb. The meaning of an operator is sometimes different from its meaning as a main verb, cf. *jom* ‘to eat’ (main verb) vs. ‘to do for one’s benefit’ (operator; see (21c)):

- c. *giti?-jom-a-bu.*
 sleep-for.one’s.benefit-PRED-1PL.INC.SBJ
 ‘We will sleep for our benefit.’

5.2 Reciprocal use

Let us consider the reciprocal use of both types of serial verbs.

Type A. In this type the reciprocal marker can be attached to both stems of a serial verb. In other words, a serial verb in this case is comprised of two reciprocals. (22) illustrates a complete derivational chain of this type of reciprocal serial verb:

- (22) a. *hoRo-ko=m ma?-ke-d-ko-a.*
 people-PL=2SG.SBJ cut-COMPL-TR-3PL.OBJ-PRED
 ‘You cut the people with an axe.’
 b. *hoRo-ko=m goy-ke-d-ko-a.*
 people-PL=2SG.SBJ kill-COMPL-TR-3PL.OBJ-PRED
 ‘You killed the people.’
 c. *hoRo-ko=m ma?-goy-ke-d-ko-a.*
 people-PL=2SG.SBJ cut-kill-COMPL-TR-3PL.OBJ-PRED
 ‘You killed the people with an axe.’
 d. *hoRo-ko piRi-re=ko ma-pa-?-ta-n-a.*
 people-PL field-in=3PL.SBJ cut-REC-cut-PROGR-INTR-PRED
 ‘The people are cutting each other with axes in the field.’
 e. *hoRo-ko piRi-re=ko go-po-y-ta-n-a.*
 people-PL field-in=3PL.SBJ kill-REC-kill-PROGR-INTR-PRED
 ‘The people are killing each other in the field.’

- f. *hoRo-ko piRi-re=ko ma-pa-ʔ-go-po-y-ta-na-ko.*
 people-PL field-in-3PL.SBJ cut-REC-cut-kill-REC-kill-PROGR-INTR-3PL.SBJ
 ‘They are fighting each other with axes.’

Note here that *ma-pa-ʔ-goy* and *maʔ-go-po-y* do not exist.

Type B. In this type, the main verb alone can acquire the reciprocal marker. In other words, two principal cases of the use of reciprocals in serial formations can be distinguished: (Type A) reciprocal + reciprocal, and (Type B) reciprocal + operator.

- (23) a. *Soma seta-ko=eʔ lel-ruRa-ke-d-ko-a.*
 S. dog-PL=3SG.SBJ see-again-COMPL-TR-3PL.OBJ-PRED
 ‘Soma saw the dogs again.’
 b. *Soma-loʔ=le le-pe-l-ruRa-ke-n-a.*
 S.-with=1PL.EXC.SBJ see-REC-see-again-COMPL-INTR-PRED
 ‘I/we with Soma (EXC = and nobody else) saw each other again.’

6. Simultaneity and succession

The interpretation of reciprocal actions as simultaneous or successive may be determined by the lexical meaning of the underlying verb. For instance, the reciprocal *a-pa-d-* ‘to miss each other’ (← *ad-* ‘to miss sb’) denotes simultaneous actions of both participants (see (14b)), whereas the reciprocal *la-pa-Ta-b-* ‘to cut each other’s (hair)’ (← *laTab-* ‘to cut (with scissors)’) implies successive actions (see (17b)).

7. Productivity and restrictions on reciprocal formation

The reciprocal infix is basically productive. The restrictions on reciprocal formation are rather trivial and common to many languages with productive reciprocal markers. It is worth noting that even newly borrowed verbs can take the reciprocal marker:

- (24) a. *suri* (← English *sorry*) ‘to feel sorry for sb’
 b. *su-pu-ri* ‘to feel sorry for each other.’

8. Means of expressing symmetrical actants

The subject of a reciprocal construction must be marked for plurality. There are two principal ways of expressing it:

1) the subject is expressed by the plural or dual number of a noun phrase followed by a pronominal clitic (see (19a)), or by a pronominal clitic alone implying it (see (14b), (16b));

2) the subject is expressed by two noun phrases (followed by a pronominal clitic) connected either by a coordinative conjunction (see (1b)) or by a comitative postposition

(see (17b)). In the latter case the first noun phrase can be omitted (see (23b)). As was mentioned, the peculiarity of “possessive” reciprocals is the use of comitative connection only (see 3.1.3).

9. The reciprocal marker with other than verbal stems

9.1 Reciprocal meaning in locative adverbs

Adverbs of place are formed from nouns denoting location by means of the postposition *-re*: *japaʔ-re* ‘near’ (← *japaʔ* ‘short distance’), *sangin-re* ‘far’ (← *sangin* ‘distance’). These two adverbs are lexical reciprocals and, interestingly, they take the reciprocal infix. When both (all) symmetrical participants are expressed by the subject, we obtain a subject-oriented reciprocal construction, and an object-oriented construction if they are expressed by the object:

- (25) a. *baba aRi-japaʔ-re=ko roa-ke-d-a.*
 rice edge-near-in=3PL.SBJ transplant-COMPL-TR-PRED
 ‘They transplanted the rice seedlings near the edge (of the rice field).’
 b. *baba ja-pa-paʔ-re=ko roa-ke-d-a.*
 rice near-REC-near-in=3PL.SBJ transplant-COMPL-TR-PRED
 ‘They transplanted the rice seedlings which were near each other.’

9.2 Non-reciprocal meanings

The reciprocal marker occurs in a number of adjectives, nouns and numerals, though in non-reciprocal meanings. All of them are unproductive.

9.2.1 Intensive meaning in adjectives

The adjective in Mundari has much in common with the verb. Thus *marang* ‘big, great’ when used predicatively can be marked for aspect, mood, voice and (in)transitivity like a predicate verb. It might be said that one word class covers two semantically different classes, i.e. adjectives and verbs.

A number of adjectives take the reciprocal marker but they do not acquire the reciprocal meaning ‘each other’ (which is but natural as these adjectives are one-place words). Instead, they acquire the intensive meaning ‘very’ (this is the sole test justifying us in setting up adjectives as a distinct word class). It is interesting to note that the head noun modified by an adjective with the reciprocal marker takes the plural marker though it may be either singular or plural in meaning:

- (26) a. *en marang hoRo*
 ‘that great person’
 b. *en ma-pa-rang hoRo-ko*
 that great-REC-great person-PL
 i. ‘that very great person’ ii. ‘those very great persons.’

At least seven adjectives denoting size, shape and the like take the reciprocal infix, because of semantic limitations on intensification:

- | | | | |
|------|----------------------------|---|-------------------------------------|
| (27) | <i>marang</i> ‘big, great’ | → | <i>ma-pa-rang</i> ‘very big, great’ |
| | <i>huRing</i> ‘small’ | → | <i>hu-pu-Ring</i> ‘very small’ |
| | <i>jiling</i> ‘long’ | → | <i>ji-pi-ling</i> ‘very long’ |
| | <i>salangi</i> ‘tall’ | → | <i>sa-pa-langi</i> ‘very tall’ |
| | <i>Dingae</i> ‘short’ | → | <i>Di-pi-ngae</i> ‘very short’ |
| | <i>cakar</i> ‘wide’ | → | <i>ca-pa-kar</i> ‘very wide’ |
| | <i>moTo</i> ‘fat’ | → | <i>mo-po-To</i> ‘very fat.’ |

It is noteworthy that some pronouns: demonstrative (e.g. *naminung*, etc. ‘this much (more than one expects)’), interrogative (*cimunung*, etc. ‘how much’) and indefinite (*jaiminung*, etc. ‘to any extent, whatever be’), when modifying an intensive adjective also acquire the reciprocal infix (by way of a kind of “pleonastic agreement”):

- | | | |
|------|----|---|
| (28) | a. | <i>naminung marang hoRo-ko ka=ñ lel-aka-d-ko-a.</i> |
| | | this.much big person-PL NEG=1SG.SBJ see-CONT-TR-3PL.OBJ-PRED |
| | | ‘I have never seen so many big person(s).’ |
| | b. | <i>nam-p-inung ma-pa-rang hoRo-ko ka=ñ</i> |
| | | this.much-REC-this.much big-REC-big person-PL NEG=1SG.SBJ |
| | | <i>lel-aka-d-ko-a.</i> |
| | | see-CONT-TR-3PL.OBJ-PRED |
| | | ‘I have never seen all so big (but more than one’s expectation) person(s).’ |
| (29) | | <i>cim-p-unung hu-pu-Ring tai-ke-n-a.</i> |
| | | how.much-REC-how.much small-REC-small remain-COMPL-INTR-PRED |
| | | ‘How small was it?’ |
| (30) | | <i>jaim-p-unung ji-pi-ling-re-o ka=ñ suku-a.</i> |
| | | whatever-REC-whatever long-REC-long-in-also NEG=1SG.SBJ like-PRED |
| | | ‘Anything that is too long I don’t like.’ |

9.2.2 Collective meaning in nouns

Generally speaking, the reciprocal marker does not commonly occur with nouns. There are only a few instances of the reciprocal marker with the total reduplication of the verb stem, these formations being usually used as nouns with a kind of collective meaning. We have found only two nouns of this kind:

- | | | | | | |
|------|----|---------------------------------|----|--------------------------|------------------|
| (31) | a. | <i>jom</i> | i. | ‘to eat’, ii. | ‘food’ (cf. (2)) |
| | b. | <i>jom-jom</i> | | ‘to eat up (completely)’ | |
| | c. | <i>jom-jo-po-m-ko=ñ</i> | | <i>lel-aka-d-a.</i> | |
| | | eat-eat-REC-eat-PL-1SG.SBJ | | see-CONT-TR-PRED | |
| | | ‘I have seen something to eat.’ | | | |
| (32) | a. | <i>om</i> | | ‘to give’ | |
| | b. | <i>om-om</i> | | ‘to give repeatedly’ | |
| | c. | <i>om-o-po-m</i> | | ‘something to exchange.’ | |

This type of formation is also found in the following noun:

- (33) a. *hon* 'child'
 b. *hon-ho-po-n* 'descendant, offspring.'

As far as I know, this is the only noun that takes the reciprocal marker. According to Pinnow (1966:184), there is the same infix for the formation of abstract terms, and pluralization in Khmer. The archaic formation with the *-p-* infix is still retained in these cases.

9.2.3 *Distributive meaning in numerals*

The relevant forms are given below in column 3 of (34). Here are the explanations of these data:

(a) in column 1, the cardinal numerals are given; two to ten contain the suffix *-ia/-ea* added after a consonant or *-a* after a vowel;

(b) in column 2, distributive forms are shown; all of them are derived by reduplication: partial in 'one' to 'six' and in 'ten', total in 'seven', 'eight' and 'nine';

(c) in column 3, there are only five distributive forms: the forms meaning 'one each', 'two each' and 'five each' are marked with the reciprocal infix (they are synonymous to the respective forms in column 2). The forms for 'four each' and 'five each' in column 3 (they are given in square brackets) coincide completely with the respective forms in column 2 but their morphemic structure is reanalyzed, and as a result a marker identical with the reciprocal marker comes to be distinguished. (It remains unclear whether analogous extension can be discerned in 'one', 'two' and 'five' or, which is more likely, the reciprocal infix with the distributive meaning is absent in these forms because reduplicated forms could be reanalyzed as containing this infix). Here are the forms in question (a few parallel forms are omitted here as irrelevant for our purposes).

(34) Cardinal numerals		Distributive numerals		
		reduplicated	infixd	
<i>miad</i>	'one'	<i>mi-mi-ad</i>	<i>mi-pi-ad</i>	'one each'
<i>bar-ia</i>	'two'	<i>ba-ba-r-ia</i>	<i>ba-pa-r-ia</i>	'two each'
<i>api-a</i>	'three'	<i>ap-ap-i-a</i>	[<i>a-pa-pi-a</i>]	'three each'
<i>upun-ia</i>	'four'	<i>up-up-un-ia</i>	[<i>u-pu-pun-ia</i>]	'four each'
<i>moNe-a</i>	'five'	<i>mo-mo-Ne-a</i>	<i>mo-po-ne-a</i>	'five each'
<i>turi-a</i>	'six'	<i>tu-tu-ri-a</i>	–	'six each'
<i>ee-a</i>	'seven'	<i>ee-a ee-a</i>	–	'seven each'
<i>iral-ia</i>	'eight'	<i>iral-ia iral-ia</i>	–	'eight each'
<i>are-a</i>	'nine'	<i>are-a are-a</i>	–	'nine each'
<i>gel-ea</i>	'ten'	<i>ge-ge-l-ea</i>	–	'ten each.'

10. Lexicalization

In the following pairs of underlying and derived verbs, the derived verb has undergone lexicalization, by way of losing its standard semantic reciprocal relationship with the base verb. Nevertheless, the derived verbs do have a reciprocal meaning and for this reason they are a specific subclass of lexical reciprocals, viz. that of marked lexical reciprocals.

- (35) *elang* ‘to scold’ → *e-pe-lang* ‘to quarrel’
bai ‘to make’ → *ba-pa-i* ‘to negotiate’
kaji ‘to say’ → *ka-pa-ji* ‘to quarrel’
ota ‘to press with hand’ → *o-po-ta* ‘to wrestle’
nam ‘to get’ → *na-pa-m* ‘to meet.’
- (36) a. *maNDi=ko nam-ke-d-a.*
 food=3PL.SBJ get-COMPL-TR-PRED
 ‘They got the food.’
 b. *Soma-lo?=le na-pa-m-ke-n-a.*
 S.-with=1PL.EXC.SBJ meet-REC-meet-COMPL-INTR-PRED
 ‘We and Soma (lit. ‘We with Soma’) met.’

The following noun derived from a reciprocal verb is also a lexical reciprocal: *kul* ‘to send’ → *ku-pu-l* ‘to send each other’ → *ku-pu-l* ‘a relative’ (If John is Mary’s relative, Mary is John’s relative too); compare also the noun *hon-ho-po-n* ‘descendant’ derived from *hon* ‘child’.

A specific case is the verb *goy* ‘to kill’. When used as an operator it has the intensifying meaning ‘to the utmost degree’: *rasika-goy* ‘to rejoice excessively’ (see Osada 1992: 112–5). As mentioned above, operators within serial verbs do not take the reciprocal infix (see Type B in 5.2), but this rule is violated in the following serial verb, the main verb being used metaphorically:

- (37) *goy-go-po-y=le kami-ja-n-a.*
 kill-kill-REC-kill=1PL.EXC.SBJ work-INGR-INTR-PRED
 ‘We have worked extremely hard’ (‘almost dying of fatigue’).

11. Etymological notes

The reciprocal infix is attested throughout the North Munda group; i.e. the Kherwarian languages which comprise Santali, Ho, Korwa, Asur, Birhor and Turi, and Korku, but it does not occur in the South Munda group.

The reciprocal construction in Santali, which is closely related to Mundari, is slightly different from that in Mundari. Bodding (1929) wrote on the reciprocal construction in his book on Santali Grammar. According to him, the reciprocal marker occurs with nouns in Santali. For example,

- (38) *raj* ‘kingdom’ → *rapaj* ‘a collective/number of kings’ (lit. ‘collection’).

Furthermore, the reciprocal base can take the transitive suffix and get the causative meaning like diffuse stems in Mundari, thus forming an object-oriented reciprocal construction:

- (39) *ne-pe-l-ke-t'-kin-a=ko.*
 see-REC-see-COMPL-TR-3DU.OBJ-PRED=3PL.SBJ
 ‘They made them see each other.’

Synchronic data on reciprocal constructions in the Kherwarian languages are not described well enough. Pinnow (1966: 184–5) writes about the origin of reciprocal marker in the following way: “Consequently, the reciprocal meaning in Kherwari seems to be of a secondary nature and to appear as a substitute for the (here) missing prefix **qəl-*”. As we mentioned in 9.2.2, there is the *-p-* infix for formation of abstract terms, pluralization in Khmer; e.g. *rien* ‘to learn’ → *rəpien* ‘study’ (Pinnow 1966: 184). Thus it seems to me that the *-p-* infix formation could go back to proto-Austroasiatic.

As for the origin of the plural infix and reciprocal infix, in the opinion of Zide & Anderson (2001: 520), “[the] infixed element of the reciprocal in Proto-Munda is likely an intrusion from another infix, possibly one originally used with nouns.”

Postscript

I wrote this paper in 1996. Since then I have slightly changed my terminology; e.g. indicative marker instead of predicator. But in this paper I preserve the former terms. For the new terminology Evans & Osada (2005) may be useful.

Acknowledgments

I would like to express sincere thanks to Vladimir Nadjalkov who, as the editor, took a lot of time and effort to edit my paper. I am also grateful to Nick Evans, Bill McGregor, Mathew Dryer for their helpful comments on the earlier drafts of this paper, and to my wife, Maki, for her help with the Mundari data. Needless to say, I alone am responsible for any errors and inadequacies.

1. Introduction

1.1 Evenki

Evenki belongs to the Tungusic family, widely considered to form a branch of the Altaic languages. This family comprises three subgroups, the Northern (or Siberian), the Southern (or Amur) and the Manchu. (There is another classification in which two subgroups are distinguished, the Northern group and the Southern group including Manchu.) The Northern subgroup includes Evenki (numbering 30,000 persons), Even (17,200), Negidal (640) and Solon (the Solons live in the north-eastern part of China; they may number several thousand (Kormushin 1990: 480)). The Southern group includes five languages, Nanai (12,000 persons), Ulcha (3,200), Udehe (2,000), Oroch (915), and Uilta (180) (see Tishkov (ed.) 1994). Manchu (4.3 million) and Sibo, or Xibo, or Colloquial Manchu (about 27,000 speakers from an official nationality of 83,700 in Xinjiang, north-western part of China) form the third subgroup of the Tungusic family. Only about 70 to 1,000 speakers of Manchu were reported in 1990 (see Bright 1992: 182). The founders of the powerful state of Tsing (Qing) which controlled all of the huge state of China between 1644 and 1911, have forgotten their language and now speak Chinese. The Manchu branch also includes the extinct Jurchen language (there are inscriptions and texts dated 12th–15th centuries). The speakers of this language founded a state (it existed between 1115 and 1234) which had the northern part of China under its rule.

The number of native speakers of Evenki in Russia does not exceed 15 thousand. Evenks live on vast territories in Siberia, Far East of Russia, and in the north of China and Mongolia (where they are called Oroqs or Orochons; about 12,000). There is the Evenki Autonomous Region with the territory of about 768 thousand square kilometres; its population is about 30,000 and only about 5,000 of them are Evenks. If we sum up all the territories of Siberia and the Far East of Russia inhabited by the Evenks, the total will equal the territory of at least one third of Russia. There is hardly another people in the world as small as the Evenks that is aboriginal to such a vast area, as they were a nomadic people.

Evenki is also remarkable for its number of dialects and subdialects, about 50 all in all. They are subdivided into three groups, Northern, Southern and Eastern. The Northern dialects of Evenki are spoken in the northern part of the Krasnojarsk and Irkutsk regions, and the Southern dialects around Lake Baikal and in Buryatia. The Eastern dialects are spoken in the Republic of Saha-Yakutia, in the Amur and Khabarovsk regions and on the Island of Sakhalin.

Description of reciprocals and sociatives in this chapter is based mainly on the data from the Vanavara dialect of the Evenki Autonomous Region (the capital is Tura) of the Krasnojarsk region. This dialect belongs to the Southern group of Evenki dialects which have formed a basis for the literary Evenki language since 1962. These dialects are spoken in the villages of Baikit, Poligus, Mutoraj, Strelka-Chunja and Vanavara. Further below, the data from other dialects (Northern and Eastern) are also used occasionally for comparison.

The Evenki language acquired its writing system in the early twenties of the 20th century. It was based on the Latin alphabet but later (in the early thirties) it was replaced by the Cyrillic alphabet. Nowadays, books and newspapers are published in Evenki.

1.2 Overview

Reciprocity is marked by the suffix *-maat/-meet/-moot* and, much less commonly, *-lda-maat*, with no semantic difference between them; e.g.:

- (1) a. *Asi hunat-wi iče-žere-n.*
 woman daughter-her see-PRES-3SG
 ‘The woman sees her daughter.’
 b. *Asa-l iče-meet-čere-Ø / iče-lda-meet-čere-Ø.*
 woman-PL see-REC-PRES-3PL see-REC-PRES-3PL
 ‘The women see each other.’

The reciprocal meaning may also be expressed by the reciprocal pronoun *memegil-wer* (2a) and by the reflexive pronoun *mer-wer* ‘self’ (2c); both may co-occur with a suffixed reciprocal verb form (see (2b) and (2d)),

- (2) a. *Asa-l memegil-wer iče-žere-Ø.*
 woman-PL each.other-their see-PRES-3PL
 ‘The women see each other.’
 b. *Asa-l memegil-wer iče-meet-čere-Ø.*
 woman-PL each.other-their see-REC-PRES-3PL
 (same translation).
 c. *Asa-l mer-wer iče-žere-Ø.*
 woman-PL self see-PRES-3PL
 i. ‘The women see *themselves*.’
 ii. ‘The women see *each other*.’
 d. *Asa-l mer-wer iče-meet-čere-Ø.*
 ‘The women see each other.’

The sociative and the comitative meanings are encoded by the suffix *-lda*, e.g.:

- (3) a. *Asi suru-re-n.*
 woman go.away-NFUT-3SG
 ‘The woman went away.’
 b. *Asa-l suru-lda-re-Ø.*
 woman-PL go.away-SOC-NFUT-3PL
 i. ‘The women went away/left together.’ (sociative)
 ii. ‘The women went away/left with someone else.’ (comitative)

The sociative suffix *-lda* can also express the reciprocal meaning (on about 30 verb bases), both subject-oriented (4a) and object-oriented (4b); the latter cannot be encoded by the reciprocal suffix *-maat*. There is a special marker *-lta/-lte* which derives reciprocal adverbs from a limited number of bases with spatial/locative meanings (4c).

- (4) a. *iče-* ‘to see’ → *iče-ldə-* ‘to see each other’
 b. *ulli-* ‘to sew sth (to sth)’ → *illi-ldə-* ‘to sew (two things) together joining them’
 c. *daga* ‘close, next to’ → *daga-lta* ‘next to each other’ (also ‘row’).

There seem to be no restrictions on reciprocal formation, with the exception of trivial ones.

1.3 Database

The material for this chapter has been mainly obtained from informants and from specialist literature (Konstantinova 1964; Lebedeva et al. 1985; Vasilevich 1958). The informants Yulija Sverchkova and Melidora Uvachan have provided important information on the northern Evenki dialects. Examples elicited from our informants are given without attribution. Examples borrowed from folklore texts and specialist literature are given with reference to the sources.

2. Grammatical notes

2.1 General characteristics. Sentence structure. Morphology

Evenki is an agglutinating (suffixal) language with no prefixes. It has non-rigid SOV word order, rich verbal morphology and predominantly participial and converbal syntax. Adjectives, demonstrative and possessive pronouns, and numerals always precede the head noun. Suffixes beginning with consonants /ɾ/, /v/, /d/, /g/ may change after stem-final voiceless and nasal consonants. For instance, the initial /w/ (e.g. of the definite accusative case, causative, passive and reflexive-possessive suffixes) changes into /m/ after the stem-final /n/. The letter *ž* indicates a voiced palatalized stop /d/ symmetrical to the voiceless stop indicated by *č*. Long vowels are rendered by geminated letters.

The reciprocal suffix *-maat* alternates with *-maači* in certain positions, e.g. when followed by the inchoative (*-l*) or the causative (*-wkan*) suffix. The suffixes containing vowels other than /ə/ or /i/ have vowel harmony variants – three at the most, namely, /a/, /e/ and /o/; e.g., the variants of the reciprocal suffix are *-maat/-meet/-moot*; further below, we give mostly one variant in the text, with the vowel /a/.

2.2 Case. Number. Possessivity

The Evenki noun has thirteen cases (the Comitative can also be viewed as a special non-case form):

- (5) Nominative – Ø (marks the subject)
 Accusative 1 – *-wa/...* (marks the definite direct object; is deleted when followed by a reflexive-possessive marker, e.g. in the reciprocal pronoun *memegil-Ø-wer*)

possessor: depending on the person of the subject it may mean ‘our’, ‘your(PL)’, or ‘their’. In the examples these markers are glossed as ‘my’, ‘your (SG)’, ‘his’, ‘her’, ‘our’, ‘your (PL)’ or ‘their’, depending on the person/number/gender of the possessor.

2.3 Tense/aspect system. Agreement

There are eight tenses; the markers are:

- (9) *-ra/∅* – non-future tense (*-ra* for 3SG and all plural forms, *∅* for 1SG and 2SG; with stative verbs it denotes present tense situations, and with other classes of verbs, recent past situations)
- žara/...* – present tense
- ča/...* – past tense
- žača/...* – imperfect
- ŋki* – iterative past
- ža/...* – future 1
- žaŋa/...* – future 2
- žalla/...* – future 3.

There are about ten aspectual markers. The most common are imperfective *-ža*, inchoative *-l*, and semelfactive *-sin*.

There are two types of agreement. The first one coincides with the personal possession nominal markers (see (7a)) and is used with tense forms which go back to (and coincide with) participles. The second type is the system of verbal agreement markers proper. Agreement markers of the finite verb forms are the following:

(10)	Nominal type		Verbal type	
	SG	PL	SG	PL
1st p.	<i>-w</i>	<i>-wun/-t</i>	<i>-m</i>	<i>-w/-p</i>
2nd p.	<i>-s</i>	<i>-sun</i>	<i>-nni</i>	<i>-s</i>
3rd p.	<i>-n</i>	<i>-tən</i>	<i>-n</i>	<i>-∅</i>

2.4 Non-finite verb forms

There are about fifteen converbs and ten participles. The most common are the habitual participle (marker *-wki*), the converb of anteriority (marker *-ksa*) and the temporal-conditional converb (in *-mi*).

2.5 Voice system. Means of valency change. Their combinability

There are five productive means of changing the valency and/or the number of participants, traditionally regarded as voices in Evenki grammar: causative, passive, stative-resultative, reciprocal, sociative and comitative. The marker *-ldə* when used in the sociative meaning does not change syntactic valency of the base verb but it changes the number of participants, and when used comitatively it increases valency (see (3b)). There is no specialized reflexive suffix in Evenki (reflexivity is expressed pronominally (70)). In

this respect Evenki, like other Tungusic languages, differs from the neighbouring Turkic languages and manifests similarity to the neighbouring Mongolic languages.

Below, the valency-changing means are illustrated (for details see Nedjalkov 1997: 226–31).

2.5.1 Causatives

a. Productive causatives

Causative derivation (suffix *-wkan/-pkan/-mukan*) increases the valency of the base verb by one (11a). The causative suffix is translated by means of the causative verbs ‘to make, order, let’, etc. Causatives are freely derived from all pure transitive and intransitive stems (i.e. stems with no other voice/valency suffixes) and also from sociatives and a few reciprocals. Causatives are not formed from passives proper.

- (11) a. *iče*- ‘to see sth’ → *iče-wken*- ‘to show sth to sb’ →
→ *iče-wken-meet*- ‘to show sth to each other.’

b. Non-productive causatives

Seven unproductive suffixes derive about 100 causatives from intransitive bases; e.g:

- (11) b. *aru*- ‘to come to life’ → *aru-w*- ‘to revive’ (about 50 pairs; see also (41))
deru- ‘to get tired’ → *deru-gi*- ‘to tire sb’ (about 20 pairs)
murdure- ‘to bend down’ → *murduree-n*- ‘to bend sth down’ (more than 10 pairs)
somna- ‘to stir’ → *somna-lbu*- ‘to stir sth (body part)’ (about 10 pairs)
baldəw- ‘to be brought up’ → *baldəw-ga*- ‘to bring sb up’ (less than 10 pairs).

The suffix *-w* also derives about 20 causatives from transitive bases (on the passive and anticausative usages of this remarkable suffix see 2.5.3 and 2.5.5 below); e.g.:

- (11) c. *uku*- ‘to suck the breast (of a baby)’ → *uku-w*- ‘to give a baby the breast’
bodo- ‘to follow sb’ → *bodo-w*- ‘to make sb follow.’

2.5.2 Sociative and comitative

Sociative derivation is possible from all pure verb stems and also from causatives, but not from reciprocals and passives. If in the case of the sociative meaning the valency is retained, in the comitative usage it increases as a comitative object is added (which is often omitted); cf. the translation ‘with someone else’ in (12ii):

- (12) *Asa-l žu-wa iče-wke-ldə-re-Ø.*
woman-PL house-ACC see-CAUS-SOC-NFUT-3PL
i. ‘The women showed the house [to someone else] *together*.’
ii. ‘The women showed the house [to someone else] *together with someone else*.’

See also (3b).

2.5.3 Passive and stative-resultative

Passive derivation (suffix *-w/-p/-mu*) is possible from all transitive stems including causatives (thus resulting in either personal or impersonal passive constructions), almost

all intransitives (resulting in impersonal passive constructions only) and seven intransitive “weather” verbs (resulting in personal adversative passives). As mentioned, the marker *-w* can also function as a non-productive causative suffix (see (11b) above). Passives are not derived from reciprocals and sociative stems (for an exception see (55c) where the suffix *-ldə* has a spatial reciprocal meaning).

- (13) a. *oo-* ‘to make’ → *oo-w-* ‘to be made’
 waa- ‘to kill’ → *waa-w-* ‘to be killed.’

The stative-resultative marker is the suffix *-ča*; e.g.:

- b. *loko-* ‘to hang sth’ → *loku-ča-* ‘to be hung’, ‘to hang’ (vi)
 uj- ‘to tie sth’ → *ui-če-* ‘to be tied to.’

2.5.4 Reciprocal

Reciprocal derivation is impossible from passive and sociative stems. The combination *-ldə-meet* is not a reciprocal marker on sociative bases but a complex reciprocal suffix (see section 4). Reciprocal derivation is possible with causative stems; cf.:

- (14) a. *Asa-l žu-l-war iče-wken-meet-te-Ø.*
 woman-PL house-PL-their see-CAUS-REC-NFUT-3PL.
 ‘The women showed their houses to each other.’
 b. *Nuŋartən eme-wken-meet-čere-Ø.*
 they come-CAUS-REC-PRES-3PL
 ‘They cause each other to come.’

2.5.5 Anticausative

Anticausatives with the suffix *-rga/-rge* are possible from verbs denoting destruction or change of state (about 20 derivatives). From a small group of verbs, anticausatives are formed by means of the passive suffix *-w/-p/-mu* (about 30 derivatives).

- (15) a. *kapu-* ‘to break sth’ → *kapu-rga-* ‘to break’ (vi)
 etə- ‘to tear sth’ → *etə-rge-* ‘to tear’ (vi)
 luk- ‘to untie sth’ → *luki-rga-* ‘to become untied’
 b. *das-* ‘to close sth’ → *dasi-w-* ‘to close’ (vi)
 sukča- ‘to break sth’ → *sukča-w-* ‘to break’ (vi)
 nii- ‘to open sth’ → *nii-w-* ‘to open’ (vi).

3. Reciprocals with the suffix *-maat*

3.1 Subject-oriented constructions only

This type of reciprocal constructions includes four diathesis types, “canonical”, “indirect”, “benefactive” and “possessive”. Two-diathesis reciprocals are lacking in Evenki, which distinguishes it from Even (see Malchukov, Ch. 39, §3.1.1.3).

3.1.1 “Canonical” reciprocals

“Canonical” reciprocals are derived from (1) two-place transitive stems; (2) two-place intransitive stems; (3) one-place intransitive stems.
