Integrated Resource Plan (IRP)	A comprehensive and systematic blueprint developed by a supplier, distributor, or end-user of energy who has evaluated demand-side and supply-side resource options and economic parameters and determined which options will best help them meet their energy goals at the lowest reasonable energy, environmental, and societal cost.	*Energy*
Integrated Pest Management, (IPM)	The USDA defines IPM as socially acceptable, environmentally responsible and economically practical crop protection from pests. Emphasis is on substituting biological controls such as natural predators for chemical controls of pests and diseases that attack plants grown for food or fiber. IPM doesn't necessarily eliminate the need for chemicals, but where it cannot eliminate them, it functions to reduce the amount of chemical required to control pests and diseases.	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Integrating Process	With these loops, making a small change in the controller output, will cause the process variable to ramp until it hits a limit. The larger the change, the faster the ramp. Also the smaller the integral time the faster it will move. It is a common misconception that integral time in the controller is not required to hold setpoint with an integrating process. Most control loops are self-regulating. Self-regulating means that with a change in the controller output, the process variable will move and then settle. Integrating loops are also described as non-self-regulating. The most common example of an integrating processes is Tank Level.	*Process Control Engineering*
Integration of renewable energy	Feeding electricity from intermittent sources of energy such as wind and solar into the power network without causing any disturbance to the power supply.	*Electrical*
Integration	Representation inversely related to time rate of change. Example: integrating velocity yields displacement. In a computer, this is accomplished by dividing the velocity signal by jΩ, where Ω is frequency multiplied by 2Π.	*Reliability Engineering*
Integrator	Circuitry which converts an acceleration signal to a velocity signal or a velocity signal to a displacement signal.	*Reliability Engineering*
Intel Mobile Voltage Positioning	A technology in which the processor voltage (VCC) is dynamically adjusted, based on the processor activity, to reduce processor power. It allows higher processor clock speed at a given power consumption; or lower consumption at a given clock frequency.	*Electrical Engineering*
Intel Mobile Voltage Positioning	A technology in which the processor voltage (VCC) is dynamically adjusted, based on the processor activity, to reduce processor power. It allows higher processor clock speed at a given power consumption; or lower consumption at a given clock frequency.	*Electrical Engineering*
Intellectual Property	Intellectual Property Creations of the intellect such as trade knowledge, technical information, and literary or artistic work, including patents, copyrights, and trademarks.	*Electrical Engineering*
Intellectual Property	Intellectual Property Creations of the intellect such as trade knowledge, technical information, and literary or artistic work, including patents, copyrights, and trademarks.	*Electrical Engineering*
Intelligence Tests	examinations or batteries of tests which attempt to measure an individual's capacity or potential.	*Industrial Relations*
Intelligent well	An oil or gas well equipped with monitoring equipment and completion components that allow for automatic or remote optimization of production.	*Petroleum Drilling*
Intensifier	A device which converts low pressure fluid power into higher pressure fluid power.	*Oil Analysis*
Intensifier	A device which converts low pressure fluid power to higher pressure fluid power.	*Mechanical, Process, and Operations*
Intensity	The amount of a quantity per unit floor space. This method adjusts either the amount of energy consumed or expenditures spent, for the effects of various building characteristics, such as size of the building, number of workers, or number of operating hours, to facilitate comparisons of energy across time, fuels, and buildings.	*Energy*
Intensity per hour	Total consumption of a particular fuel(s) divided by the total floor space of buildings that use the fuel(s) divided by total annual hours of operation.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Intensive grazing	the practice of rotating livestock between pastures to reduce overgrazing	*Agriculture*
Intent	a rather commonly used term in labor-management relations particularly in the application of the provisions of the collective bargaining agreement.	*Industrial Relations*
Intention to treat analysis	A method for data analysis in a randomized clinical trial in which individual outcomes are analyzed according to the group to which they have been randomized, even if they never received the treatment they were assigned. By simulating practical experience it provides a better measure of effectiveness. (versus efficacy)	*Analysis*
Interaction	the effects on underground workings from old workings either above or below due to the re-distribution of stress in the ground.	*Mining*
Interburden	Material of any nature that lies between or separates coal seams. Term is primarily used in surface mining.	*Energy*
Intercept, y-intercept	The place at which a line on a graph intersects the axis. In regression analysis, this statistic refers specifically to the y-intercept, a.	*Quality*
Interchange (Electric utility)	**T**he agreement among interconnected utilities under which they buy, sell and exchange power among themselves. This can, for example, provide for economy energy and emergency power supplies.	*Energy*
Interchange (electric)	Energy transfers that cross Balancing Authority boundaries. NERC definition	*Energy*
Interchange authority (electric)	The responsible entity that authorizes implementation of valid and balanced Interchange Schedules between Balancing Authority Areas, and ensures communication of Interchange information for reliability assessment purposes. NERC definition	*Energy*
Interchange energy	Kilowatt hours delivered to or received by one electric utility or pooling system from another. Settlement may be payment, returned in kind at a later time, or accumulated as energy balances until the end of the stated period.	*Energy*
Interchange transaction (electric)	An agreement to transfer energy from a seller to a buyer that crosses one or more Balancing Authority Area boundaries. NERC definition	*Energy*
Interchangeability	Interchangeability is the ability, in an open system, to swap instruments on a network without losing functionality.	*Control Engineering*
Interchangeability Error	A measurement error that can occur if two or more probes are used to make the same measurement. It is caused by a slight variation in characteristics of different probes.	*General Engineering*
Intercity bus	A bus designed for high speed, long distance travel; equipped with front doors only, high backed seats, and usually restroom facilities.	*Energy*
Intercity Differential	an existing or established wage differential between cities.	*Industrial Relations*
Interconnected Porosity	A network of pores in and extending to the surface of a coating.	*Paint and Coatings*
Interconnected system	A system consisting of two or more individual power systems normally operating with connecting tie lines.	*Energy*
Interconnection	Two or more electric systems having a common transmission line that permits a flow of energy between them. The physical connection of the electric power transmission facilities allows for the sale or exchange of energy.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Interconnection (Electric utility)	The linkage of transmission lines between two utility, enabling power to be moved in either direction. Interconnections allow the utilities to help contain costs while enhancing system reliability.	*Energy*
Intercooler	A device which cools a gas between the compressive steps of a multiple stage compressor.	*Lubrication*
Interdepartmental	the term is often used to apply to transfers or promotions between departments or units of a company.	*Industrial Relations*
Interdepartmental sales	Includes amounts charged by the electric department at tariff or other specified rates for electricity supplied by it to other utility departments.	*Energy*
Interdepartmental Service (Electric)	Amounts charged by the electric department at specified rates for electricity supplied by other utility departments.	*Energy*
Interdepartmental service (electric)	Interdepartmental service includes amounts charged by the electric department at tariff or other specified rates for electricity supplied by it to other utility departments.	*Energy*
Interdependence of Labor	the extent to which, in a mechanized society with a high degree of specialization, workers are dependent on each other not only for the completion of a particular job, but also for providing the basic services needed to maintain a city or community.	*Industrial Relations*
Interest coverage ratio	The number of times that fixed interest charges were earned. It indicates the margin of safety of interest on fixed debt. The times-interest-earned ratio is calculated using net income before and after income taxes; and the credits of interest charged to construction being treated as other income. The interest charges include interest on long-term debt, interest on debt of associated companies, and other interest expenses.	*Energy*
Interface	The means by which two systems or devices are connected and interact with each other.	*General Engineering*
Interface	a common boundary between electronic systems, or parts of a single system.	*Electrical Engineering*
Interface Circuit	A circuit that links one type of device with another. It's function is to produce the required current and voltage levels for the next stage of circuitry from the previous stage.	*Electrical Engineering*
Interfacial strength	Strength of the bonding between a composite matrix and its reinforcing phase.	*Material Process*
Interfacial tension (IFT)	The energy per unit area present at the boundary of two immiscible liquids. It is usually expressed in dynes/cm (ASTM Designation D 971.)	*Oil Analysis*
Interference	The condition occurring when the area of influence of a water well comes into contact with or overlaps that of a neighboring well.	*Petroleum Engineering*
Interference	an employer unfair labor practice under the Taft-Hartley Act.	*Industrial Relations*
Interference experiment	A method validation experiment which estimates the systematic error resulting from interference and lack of specificity. One test sample is prepared by adding the suspected interferer to a sample containing the analyte of interest. A second aliquot of the original sample is diluted by the same amount, then both samples are analyzed by the test method. The average difference of replicate measurements and the average difference for a group of interference samples provide an estimate of constant systematic error.	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Interference, Common Mode	A form of interference which appears between measuring circuit terminals and ground. Note: May also be referred to as interference, longitudinal, however interference, common mode is the preferred term.	*Process Control*
Interference, Differential Mode	See interference, normal mode.	*Process Control*
Interference, Electrical	Any spurious voltage or current arising from external sources and appearing in the circuits of a device.	*Process Control*
Interference, Electrostatic Field	A form of interference induced in the circuits of a device due to the presence of an electrostatic field. Note: It may appear as common mode or normal mode interference in the measuring circuits.	*Process Control*
Interference, Longitudinal	See interference, common mode.	*Process Control*
Interference, Magnetic Field	A form of interference induced in the circuits of a device due to the presence of a magnetic field. Note: I may appear as common mode	*Process Control*
Interference, Normal Mode	A form of interference which appears between measuring circuit terminals. Note: May also be referred to as interference, differential mode or interference, transverse, however interference, normal mode is the preferred term.	*Process Control*
Intergovernmental Panel on Climate Change (IPCC)	A panel established jointly in 1988 by the World Meteorological Organization and the United Nations Environment Program to assess the scientific information relating to climate change and to formulate realistic response strategies.	*Energy*
Intergranular	between the individual grains in a rock or sediment.	*Chemical*
Intergranular corrosion	Intergranular corrosion is the attack concentrated at the grain boundaries without appreciable corrosion evident on the grains themselves. Localized attack at the grain boundaries of a metal or alloy is called intergranular corrosion.	*Material Process*
Interim Agreement	a collective bargaining agreement which is designed to maintain temporary truce or to maintain conditions of employment pending the settlement of a dispute or pending the signing of the final contract.	*Industrial Relations*
Interim analysis	Analysis comparing intervention groups at any time before the formal completion of a trial, usually before recruitment is complete. Often used with stopping rules so that a trial can be stopped if participants are being put at risk unnecessarily. Timing and frequency of interim analyses should be specified in the protocol.	*Quality Engineering*
Interim Grievance Procedure	a rather infrequent procedure set up prior to the negotiation of a first contract.	*Industrial Relations*
Interior Region (with Gulf Coast)	Consists of Arkansas, Illinois, Indiana, Kansas, Louisiana, Mississippi, Missouri, Oklahoma, Texas, and Western Kentucky.	*Energy*
Interleave	To organize the data sectors on a computer hard disk, so the read/write heads can access information faster.	*Electrical Engineering*
Interleave	To organize the data sectors on a computer hard disk, so the read/write heads can access information faster.	*Electrical Engineering*
Interlocking directorates	The holding of a significant position in management or a position on the corporate board of a utility while simultaneously holding a comparable position with another utility, or with a firm doing business with the utility.	*Energy*

Term	Definition	*Industry*
Intermediary outcomes	See Surrogate endpoints	*Quality Engineering*
Intermediate	1) An organic chemical produced because it is a necessary intermediate stage in the manufacture of one or usually more ultimate end-products such as dyes, drugs, etc. 2) An oxide whose structural role in a glass is between that of a network former and a network modifier.	*Material Process*
Intermediate compound	A chemical compound formed between two components in a binary system.	*Material Process*
Intermediate Bed	A middle section of conveyor not containing the drive or tail assemblies.	*Manufacturing*
Intermediate Frequency	Radio communications systems modulate a carrier frequency with a baseband signal in order to achieve radio transmission. In many cases, the carrier is not modulated directly. Instead, a lower IF signal is modulated and processed. At a later circuit stage, the IF signal is converted up to the transmission frequency band.	*Electrical Engineering*
Intermediate grade gasoline	A grade of unleaded gasoline with an octane rating intermediate between "regular" and "premium." Octane boosters are added to gasolines to control engine pre-ignition or "knocking" by slowing combustion rates.	*Energy*
Intermediate load (electric system)	The range from base load to a point between base load and peak. This point may be the midpoint, a percent of the peak load, or the load over a specified time period.	*Energy*
Intermediate Load (Electric Systems)	Range from base load to a point between that and peak load.	*Energy*
Intermediate Report	prior to September 3rd, 1963, this was the recommended order handed down by a trial examiner for the NLRB following hearings in a complaint case involving charges of unfair practices under the Taft-Hartley Act.	*Industrial Relations*
Intermediate rock	An igneous rock containing 52% to 66% quartz.	*Mining*
Intermediate section	A term used in belt and chain conveyor network to designate a section of the conveyor frame occupying a position between the head and foot sections.	*Mining*
Intermetallic	A compound of two metals that has a distinct chemical formula. The bonds in intermetallic compounds are often partly ionic.	*Engineering Physics*
Intermittent Affairs of Unions	those activities which involve the relationship of the union to its members and the local union to its international organization.	*Industrial Relations*
Intermittent electric generator or intermittent resource	An electric generating plant with output controlled by the natural variability of the energy resource rather than dispatched based on system requirements. Intermittent output usually results from the direct, non-stored conversion of naturally occurring energy fluxes such as solar energy, wind energy, or the energy of free-flowing rivers (that is, run-of-river hydroelectricity).	*Energy*
Intermittent Industry	sometimes referred to as a noncontinuous industry.	*Industrial Relations*
Intermittent Resources	Resources whose output depends on some other factory that cannot be controlled by the utility e.g. wind or sun. Thus, the capacity varies by day and by hour.	*Energy*
Intermittent Worker	a person who normally works only a small number of days during a work period or season.	*Industrial Relations*
Intermodal	Use of more than one mode of transportation to move product from shipper to receiver; e.g., placing truck trailers loaded with commodities on rail flatcars for cross country movement.	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Intermodulation	A process whereby signals mix together in a circuit and nonlinearities in the circuit create undesired output frequencies that are not present at the input.	*Electrical Engineering*
Intermodulation Distortion	When two signals mix in non-linear circuits or devices, new frequency components are created that are not in the original signal. The resulting signal error is called intermodulation distortion, or IMD.	*Electrical Engineering*
Intermodulation Distortion	When two signals mix in non-linear circuits or devices, new frequency components are created that are not in the original signal. The resulting signal error is called intermodulation distortion, or IMD.	*Electrical Engineering*
Internal Collector Storage (ICS)	A solar thermal collector in which incident solar radiation is absorbed by the storage medium.	*Energy*
Internal combustion plant	A plant in which the prime mover is an internal combustion engine. An internal combustion engine has one or more cylinders in which the process of combustion takes place, converting energy released from the rapid burning of a fuel-air mixture into mechanical energy. Diesel or gas-fired engines are the principal types used in electric plants. The plant is usually operated during periods of high demand for electricity.	*Energy*
Internal Diameter	The diameter of a circle coinciding with the topes of the teeth of an internal gear.	*Mechanical Engineering*
Internal force	Forces which hold an object together when external forces or other loads are applied. Internal forces are sometimes called resisting forces since they resist the effects of external forces. Internal hinge: see pin connection.	*Engineering Physics*
Internal Gear	Gear: A gear with teeth on the inner cylindrical surface.	*Mechanical Engineering*
Internal House Organ	a company publications designed primarily for public relations purposes and directed to employees for stockholders of the company	*Industrial Relations*
Internal Oxidation	The formation of isolated particles of corrosion products beneath the surface of the metal or coating. (This occurs as a result of preferential oxidation of certain alloy constituents by inward diffusion of oxygen, nitrogen, sulfur, etc.)	*Paint and Coatings*
Internal pressure relief	A self relieving feature in non-independent seating valves that automatically relieves excessive internal body pressure caused by sudden changes in line pressures. By means of the piston effect principal the excessive body pressure will move the seat away from its seating surface and relieve it to the lower pressure side.	*Mechanical*
Internal Reference	An on-chip voltage reference.	*Electrical Engineering*
Internal Reference Electrode (Element)	The reference electrode placed internally in a glass electrode.	*General Engineering*
Internal stress	also known as residual stress, stress present in a steel member or fabrication that is free of external forces or thermal gradients	*Materials Process*
Internal Thread	A screw thread which is formed in holes, such as in nuts.	*Maintenance*
Internal validity	The extent to which the design and conduct of a study are likely to have prevented bias. Variation in quality can explain variation in the results of studies included in a systematic review. More rigorously designed (better quality) trials are more likely to yield results that are closer to the truth. (Also called methodological quality but better thought of as relating to bias prevention.) See also: Bias prevention, External validity, Validity Also called: Methodological quality	*Quality Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Internal venting	holes on the inside of enclosed fabrications that allow cleaning solutions, zinc, and any gases to freely flow throughout the structure	*Materials Process*
Internally Lubricated	Wire rope or strand having all of its wire components coated with lubricants.	*Wire Rope & Cable*
International bunker fuels	See Bunker fuels.	*Energy*
International Confederation of Free Trade Unions	the Confederation is the largest international organization of free trade unions in the world.	*Industrial Relations*
International Labor Organization	an organization founded during the peace conference following World War I and established as part of the League of Nations.	*Industrial Relations*
International Labor Review	the official monthly Journal of the ILO it contains articles, reports, and statistical series on working conditions and standards of member countries.	*Industrial Relations*
International Standards Organisation	('ISO') this standards organization has formed a partnership with the American Petroleum Institute to establish equipment and quality standards and specifications. ISO and API have reciprocal cross-referenced and dual standards.	*Petroleum Engineering*
International Telecommunication Union	An international organization under the UN that is concerned with telecommunications.	*Electrical Engineering*
International Union	the term applied to most unions in the United States which have affiliated locals in the United States and some in other countries, mostly Canada.	*Industrial Relations*
International Workingman's Association	the international workingman's association sometimes known as the "first international" which had been formed in Europe in 1864 moved its headquarters to New York in 1872 and dissolved in 1875	*Industrial Relations*
Internationale	a revolutionary song adopted by a socialist movement and sometimes by labor organizations which had strong socialist leanings	*Industrial Relations*
Internet Protocol	Standard method for data transfer used on the Internet. Also known as IP or TCP/IP.	*Electrical Engineering*
Internet Service Provider	Company that offers connection to the Internet.	*Electrical Engineering*
Internet Service Provider	Company that offers connection to the Internet.	*Electrical Engineering*
internode	A section of stem between nodes.	*Agriculture*
Interoperability	Interoperability is the ability to plug instruments or other elements produced by more than one manufacturer into a fieldbus network and still have them able to communicate with each other and the control system(s). They may, however, have different levels of functionality.	*Control Engineering*
Interpass Temperature	In a multiple-pass weld, the minimum or maximum temperature of the deposited weld metal before the next pass is started.	*Maintenance and Repair*
Interplanar spacing	Distance between the centers of atoms in two adjacent crystal planes.	*Material Process*
Interplant	between plants	*Industrial Relations*
Interpolate	To compute intermediate values.	*Manufacturing*
Interpretative Bulletin	and explanatory publication setting out the official interpretations of a government agency about the meaning of the particular statue which is has the responsibility of enforcing.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Interpreter	A system program that converts and executes each instruction of a high-level language program into machine code as it runs, before going onto the next instruction.	*General Engineering*
Inter-rater reliability	The degree of stability exhibited when a measurement is repeated under identical conditions by different raters. Reliability refers to the degree to which the results obtained by a measurement procedure can be replicated. Lack of inter-rater reliability may arise from divergences between observers or instability of the attribute being measured. See also: Intra-rater reliability	*Quality Engineering*
Interrogate (Gate)	A function usually performed by gating light source-photoreceiver pair; asking (interrogating) whether a certain condition has been met (for example, proper fill level in boxes moving along a conveyor), and thereby enabling or disabling inspect light source-photoreceiver pair (which will count only full boxes).	*Electrical Engineering*
Interrupt	To stop a process in such a way that it can be resumed.	*General Engineering*
Interrupted Welding	Interruption of welding and preheat by allowing the weld area to cool to room temperature as generally permitted on carbon-steel and on chrome-moly alloy-steel piping after sufficient weld passes equal to at least one-third of the pipe wall thickness or two weld layers, whichever is greater, have been deposited.	*Maintenance and Repair*
Interrupted time series	A research design that collects observations at multiple time points before and after an intervention (interruption). The design attempts to detect whether the intervention has had an effect significantly greater than the underlying trend.	*Quality Engineering*
Interruptible gas	Gas sold to customers with a provision that permits curtailment or cessation of service at the discretion of the distributing company under certain circumstances, as specified in the service contract.	*Energy*
Interruptible load	This Demand-Side Management category represents the consumer load that, in accordance with contractual arrangements, can be interrupted at the time of annual peak load by the action of the consumer at the direct request of the system operator. This type of control usually involves large-volume commercial and industrial consumers. Interruptible Load does not include Direct Load Control.	*Energy*
Interruptible load or interruptible demand (electric)	Demand that the end-use customer makes available to its Load-Serving Entity via contract or agreement for curtailment NERC definition	*Energy*
Interruptible Loads	Loads that can be interrupted in the event of capacity or energy deficiencies on the supplying system.	*Energy*
Interruptible or curtailable rate	A special electricity or natural gas arrangement under which, in return for lower rates, the customer must either reduce energy demand on short notice or allow the electric or natural gas utility to temporarily cut off the energy supply for the utility to maintain service for higher priority users. This interruption or reduction in demand typically occurs during periods of high demand for the energy (summer for electricity and winter for natural gas).	Energy
Interruptible power	Power and usually the associated energy made available by one utility to another. This transaction is subject to curtailment or cessation of delivery by the supplier in accordance with a prior agreement with the other party or under specified conditions.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Interruptible Power	This refers to power whose delivery can be curtailed by the supplier, usually under some sort of agreement by the parties involved.	*Energy*
Interruptible Rate	A special utility rate given to certain industrial customer who agrees to have their service reduced or temporarily stopped as part of an agreement with their electric provider.	*Energy*
Interruptible Rates	These provide power at a lower rate to large industrial and commercial customers who agree to reduce their electricity use in times of peak demand.	*Energy*
Interstate Commerce	refers to trade or traffic between or among the states	*Industrial Relations*
Interstate companies	Natural gas pipeline companies subject to Federal Energy Regulatory Commission (FERC) jurisdiction.	*Energy*
Interstate pipeline	Any person engaged in natural gas transportation subject to the jurisdiction of Federal Energy Regulatory Commission (FERC) under the Natural Gas Act.	*Energy*
Interstate pipeline purchase	Any gas supply contracted from and volumes purchased from other interstate pipelines, overland natural gas import purchases, and LNG, SNG, or coal gas purchases from domestic or foreign sources. Purchases from intrastate pipelines to section 311 (b) of the NGPA of 1978 and from independent producers are not included with interstate pipelines purchase.	*Energy*
Interstitial solid solution	An atomic scale combination of more than one kind of atom, with a solute atom located in an interstice of the solvent crystal structure.	*Material Process*
Interstitialcy	Atom occupying an interstitial site not normally occupied by an atom in the perfect crystal structure or an extra atom inserted into the perfect crystal such as that two atoms occupy position close to a singly occupied atomic site in the perfect structure.	*Material Process*
Inter-Symbol Interference	A form of interference that occurs when echoes of a radio-signal interfere with the original signal. ISI can reduce the effective data rate of wireless LAN transceivers.	*Electrical Engineering*
Inter-Union Dispute	a conflict between two unions over membership of employees or over the work or job opportunities.	*Industrial Relations*
Interval Metering	The process by which power consumption is measured at regular intervals in order that specific load usage for a set period of time can be determined.	*Energy*
Interveinal	Between veins.	*Forestry*
Intervention	The process of intervening on people, groups, entities or objects in an experimental study. In controlled trials, the word is sometimes used to describe the regimens in all comparison groups, including placebo and no-treatment arms. See also: Control, Experimental intervention, Treatment	*Quality Engineering*
Intervention (scheduled/ planned)	Action taken systematically in a period of time independent of machine condition. The time period may be fixed (calendar based) or measured according to machine utilization (running hours based).	*Maintenance*
Intervention group	A group of participants in a study receiving a particular health care intervention. Parallel group trials include at least two intervention groups.	*Quality Engineering*
Intervention study	See Clinical trial	*Quality Engineering*
Interview (employment)	a technique used in the selection of employees usually after preliminary tests and other measures have been completed by the applicant.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Interviewer bias	Systematic error due to interviewer's subconscious or conscious gathering of selective data.	*Analysis*
Intimidation	efforts to interfere with the right of workers to self-organization by coercion or intimidation is prohibited under federal law.	*Industrial Relations*
Intracol	Trade mark for a series of long chain fatty acid amides and their acid salts, used as emulsifiers, dispersing agents and textile lubricants.	*Material Process*
Intramural	Within (the walls or boundaries of) a community or institution (e.g. a university). Used to distinguish from 'external' (extramural) sources of support (such as funding).	*Quality Engineering*
Intranet	A secure, internal, corporate Internet-based network.	*Quality*
Intransit deliveries	Redeliveries to a foreign country of foreign gas received for transportation across U.S. territory, and deliveries of U.S. gas to a foreign country for transportation across its territory and redelivery to the United States.	*Energy*
Intransit receipts	Receipts of foreign gas for transportation across U.S. territory and redelivery to a foreign country, and redeliveries to the United States of U.S. gas transported across foreign territory.	*Energy*
Intra-rater reliability	The degree of stability exhibited when a measurement is repeated under identical conditions by the same rater. Reliability refers to the degree to which the results obtained by a measurement procedure can be replicated. Lack of intra-rater reliability may arise from divergences between instruments of measurement, or instability of the attribute being measured. See also: Inter-rater reliability	*Quality Engineering*
Intrastate Commerce	trade, traffic, or communication wholly within the state and subject to regulation by the state.	*Industrial Relations*
Intrastate companies	Companies not subject to Federal Energy Regulatory Commission (FERC) jurisdiction.	*Energy*
Intrastate pipeline	Any person engaged in natural gas transportation (not including gathering) that is not subject to the jurisdiction of the Commission under the Natural Gas Act (other than any such pipeline that is not subject to the jurisdiction of the Commission solely by reason of Section 1(c) of the Natural Gas Act).	*Energy*
Intraveinal	Associated along or within veins.	*Forestry*
Intrinsic gettering	The capture of oxygen in a silicon device by heat treating the silicon wafer to form SiO2 precipitates below the surface region where the integrated circuit is being developed.	*Material Process*
Intrinsic permeability	a measure of the relative ease with which a permeable medium can transmit a fluid (liquid or gas). Intrinsic permeability is a property only of the medium and is independent of the nature of the fluid.	*Chemical*
Intrinsic Safety	Intrinsic safety is intended for products in which the level of electrical energy circulating or stored in the product is insufficient to ignite a surrounding explosive atmosphere even under fault conditions.	*Reliability Engineering*
Intrinsic safety	A set of standards that ensures a particular device is unable to create enough energy to ignite a flammable gas-rich environment.	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Intrinsic semiconductor	Material with semiconducting behavior independent of any impurity additions.	*Material Process*
Intrinsic semiconductors	pure materials having a conductivity range between that of insulators and conductors	*Physics*
Intrinsically Safe	Refers to equipment or wiring which is incapable of releasing sufficient electrical or thermal energy under either abnormal or normal conditions to cause ignition of a specific hazardous atmospheric mixture in its most easily ignited concentration.	*Electrical Engineering*
Intrinsically Safe	Limits electrical/thermal energy to levels incapable of causing ignition. External barriers are required.	*Electrical Engineering*
Intrusive	A body of igneous rock formed by the consolidation of magma intruded into other rocks, in contrast to lavas, which are extruded upon the surface.	*Mining*
Intrusive Rocks	Igneous rocks formed from magma injected beneath the earth's surface. These rocks have large crystals caused by slow cooling.	*Petroleum Engineering*
Inulin (C6H10O5)n (alant starch, menyanthin)	Horny, colorless, amorphous lumps or white powder, hygroscopic. Soluble in water. It is used in diabetic bread and manufacture of fructose.	*Material Process*
In-use (vehicles)	Implies that a vehicle is:	*Energy*
Invariant Point	A point on a binary phase diagram at which three phases are in equilibrium.	*Engineering Physics*
Invariant point	Point in a phase diagram that has zero degrees of freedom.	*Material Process*
Inventoriable Costs	Synonym for product costs.	*Procurement*
Inventory	a list of current goods that you have or own	*Agriculture*
Inventory	Quantitative method used to estimate the actual volume, composition, and market value of standing timber.	*Forestry*
Inventory Management	The process by which inventory is controlled. Typically this includes: Tracking usage of stock items	*Maintenance*
Inventory Management	The formal management of the timing and quantities of goods to be ordered and stocked by an organization in order that demand can always be satisfied without excess expenditure.	*Reliability Engineering*
Inventory of Employee Skills	a compilation or listing of the ability or training or individual employees.	*Industrial Relations*
Inventory turn rate	A measure of asset management capability (see "annual total inventory turns").	*Quality*
Inverse Multiplexing over ATM	An MGX card module that supports T3 or E3 inverse multiplexing on up to eight T1 or E1 lines.	*Electrical Engineering*
Inverse power law	An accelerated life testing model commonly used when the accelerating factor is a single, non-thermal stress.	*Reliability Engineering*
Inverse spinel	Compound crystal structure associated with ferrimagnetic ceramics and a variation of the spinel structure.	*Material Process*
Inverse Voltage (PIV) or Peak Reverse Voltage (PRV)	Refers to the maximum voltage a diode or other device can withstand in the reverse-biased direction before breakdown. Also may be called Reverse Breakdown Voltage.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Inverse Voltage (PIV) or Peak Reverse Voltage (PRV)	refer to the maximum voltage a diode or other device can withstand in the reverse-biased direction before breakdown. Also may be called Reverse Breakdown Voltage.	*Electrical Engineering*
Invert sugar	A mixture of 50% glucose and 50% fructose obtained by the hydrolysis of sucrose. It absorbs water readily, and is usually only handled as a syrup. Invert sugar is often incorporated in products where loss of water must be avoided. Commercially it is obtained from the inversion of a 96% cane sugar solution. It is used in food industry, brewing industry and medicine.	*Material Process*
Invertase (sucrose, invertin)	Enzyme produced by yeast, white powder, soluble in water. Catalyzes the conversion of sucrose (ordinary sugar) to glucose and levulose (fructose) during fermentation of sugars, and in production of invert sugar for syrups and candy.	*Material Process*
Inverter	An electrical device for converting direct current (DC) into alternating current (AC). (See also Rectifier.)	*Electrical*
Inverting Switching Regulator	A switch-mode voltage regulator in which output voltage is negative with respect to its input voltage.	*Electrical Engineering*
Investment of municipality	The investment of the municipality in its utility department, when such investment is not subject to cash settlement on demand or at a fixed future time. Include the cost of debt-free utility plant constructed or acquired by the municipality and made available for the use of the utility department, cash transferred to the utility department for working capital, and other expenditures of an investment nature.	*Energy*
Investments and advances to unconsolidated affiliates	The balance sheet account representing the cost of investments and advances to unconsolidated affiliates. Generally, affiliates that are less than 50-percent owned by a company may not be consolidated into the company's financial statements.	*Energy*
Investor-owned utility (IOU)	A privately-owned electric utility whose stock is publicly traded. It is rate regulated and authorized to achieve an allowed rate of return.	*Energy*
Investor-Owned Utility (IOU)	An IOU is a form of electric utility owned by a group of investors. Shares of IOUs are traded on public stock markets.	*Energy*
Invoice	A bill for goods or service being purchased that includes pertinent information with respect to the quantity, price, terms, and nature of delivery.	*Procurement*
Involuntary Check-off	a form of dues deduction by the employer in which the employee has no choice.	*Industrial Relations*
Involute	The curve formed by the path of a point on a straight line, called the generatrix, as it rolls along a convex base curve. (The base curve is usually a circle.) This curve is generally used as the profile of gear teeth.	*Mechanical Engineering*
Iodamine	Trade mark for betaine hydroiodide. White odorless crystals, soluble in water, in alkalies and in organic solvents. Insoluble in fats and oil.	*Material Process*
Iodargyrite (AgI)(iodyrite)	A natural silver iodide. Color yellow or yellowish green, luster resinous to adamantine, streak shining yellow.	*Material Process*
Iodesin (C20H8I4O5) (tetraiodofluorescein)	Red power	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Iodesin ($C_{20}H_8I_4O_5$) (tetraiodofluorescein) Red power	Iodesin ($C_{20}H_8I_4O_5$) (tetraiodofluorescein) Red power soluble in dilute alkalies, slightly soluble in alcohol and ether, insoluble in water. It is used as indicator in analytical chemistry.	*Material Process*
Iodine cyanide (ICN) (cyanogen iodide)	Iodine cyanide (ICN)(cyanogen iodide) Colorless needles, very pungent odor, acrid taste, violent poison, soluble in water, alcohol, and ether. Poison class B, poison labeled.	*Material Process*
Iodine number	The percentage of iodine absorbed into chemical combination by oils, waxes, and resins containing unsaturated compounds. The iodine number is fairly definite for each type of material and is used to specify or identify products of a given quality.	*Material Process*
Iodine tincture	A solution of iodine and potassium iodide or sodium iodide in alcohol A reddish brown liquid having the odors of iodine and alcohol. Contains from 44-50% by volume of alcohol and 2g of iodine per 100 cubic cm3.	*Material Process*
Iodine tincture, colorless	A solution of iodine and potassium iodide in an aqueous solution of sodium thiosulfate.	*Material Process*
Iodinemonobromide (IBr) (bromine iodide)	Crystalline, purplish-black mass. Soluble in water, alcohol and ether.	*Material Process*
Iodinemonochloride (ICl)	Reddish brown, oily liquid, two solid forms, alpha and beta. Soluble in alcohol, water, and dilute hydrochloric acid. Corrosive liquid, white label.	*Material Process*
Iodoacetophenone ($C_6H_5COCH_2I$)	alfa-iodoacetophenone ($C_6H_5COCH_2I$) Crystals, soluble in alcohol, benzene, ether, insoluble in water.	*Material Process*
Iodoalphionic acid (C6H5CH(COOH) CH2C6H2I2 OH)	Iodoalphionic acid (C6H5CH(COOH)CH2C6H2I2 OH) White crystals or as white or faintly yellowish powder, having a faint, characteristic odor and taste. Insoluble in water, readily soluble in alcohol and ether. Slightly soluble in benzene and chloroform. Soluble in both alkali carbonate and hydroxide solutions.	*Material Process*
Iodocresol (C6H3I(CH3) OH) (cresol iodide)	Reddish-violet, amorphous powder, odorless. Contains 55% iodine. Soluble in chloroform, alkaline solutions, difficulty soluble in ether, insoluble in water, alcohol, and acids. It derivates by interaction of potassium iodide solution and a cresol-water emulsion.	*Material Process*
Iodoform (CHI3) (triiodomethane)	Small, greenish yellow or lustrous crystals or powder, characteristic penetrating odor. Soluble in alcohol, glycerol, chloroform, carbon disulfide and ether. Insoluble in water. It is used in medicine, external.	*Material Process*
Iodozen (C6H2I2 (COOCH3)ONa)	Yellowish-white powder. Insoluble in water.	*Material Process*
IO-Link	IO-Link is a 24-volt, three-wire, half-duplex, point-to-point sensor and actuator communication interface. Remote configuration, diagnostics, event triggering and process data readout are made possible from a PLC via a three layer protocol stack. IO-Link can be used for simple binary sensors and smart sensors.	*Electrical Engineering*
IO-Link	IO-Link is a 24-volt, three-wire, half-duplex, point-to-point sensor and actuator communication interface. Remote configuration, diagnostics, event triggering and process data readout are made possible from a PLC via a three layer protocol stack. IO-Link can be used for simple binary sensors and smart sensors.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Iomag	Trade mark for a potassium iodide mixture containing 90% potassium iodide and made free-flowing with 8% magnesium carbonate and 2% potassium hydroxide.	*Material Process*
Ion	An element or compound that has gained or lost an electron so it is no longer neutral electrically.	*Petroleum Engineering*
Ion Charged species due to an electron(s) added to, or removed from, a neutral atom	Ion Charged species due to an electron(s) added to, or removed from, a neutral atom. 1. In solutions, an electrically charged atom or group of atoms. 2. In gases electrically charged molecules. Ions may be either positively or negatively charged, indicating that the atom has either lost or gained one electron.	*Material Process*
Ion exchange	Reversible exchange of ions adsorbed on a mineral or synthetic polymer surface with ions in solution in contact with the surface. A chemical process used for recovery of uranium from solution by the interchange of ions between a solution and a solid, commonly a resin.	*Energy*
Ion Exchange	A transfer of ions between two electrolytes or between an electrolyte solution and a complex. The term normally denotes the processes of purification, separation and decontamination of aqueous and other ion-containing solutions with an insoluble (usually resinous) solid.	*Lubrication*
Ion exchange resins	Synthetic resins containing active groups (usually sulfonic, carboxylic, phenol, or substituted amino groups) that give the resin the property of combining with or exchanging ions between the resin and a solution. Thus a resin with active sulfonic groups can be converted to the sodium form and will then exchange its sodium ions with the calcium ions present in hard water. Amberlite' resins are of this type.	*Material Process*
Ion exchange	An exchange of ions in a crystal with irons in a solution. Used as a method for recovering valuable metals, such as uranium, from solution.	*Mining*
Ion Implantation	A process whereby impurity ions are accelerated to a specific energy level and impinged upon the silicon wafer. The energy level determines the depth to which the impurity ions penetrate the silicon. Impingement time determines the impurity concentration. Thus, it is possible to independently control these parameters, and buried piezoresistors are easily produces. Ion implantation is increasingly used throughout the semiconductor industry to provide a variety of products with improved performance over those produced by diffusion.	*Electrical Engineering*
Ion Nitriding	Also called plasma nitriding. A vacuum glow discharge technique of nitriding. See Nitriding.	*Paint and Coatings*
Ion Plating	A process in which positive ions produced in a glow discharge are attracted to the substrate which is connected as the cathode. The ions are typically made by evaporation.	*Paint and Coatings*
Ionac	Trade mark for a line of cation and anion exchangers.	*Material Process*
Ionac	Trade mark for a line of cation and anion exchangers.	*Material Process*
Ionic bond	Primary, chemical bond involving electron transfer between atoms.	*Material Process*
Ionic Bonding	the simplest type of bonding between atoms, the donation of an electron from an electropositive material to an adjacent electronegative material	*Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Ionic concentration cell	Electrochemical cell in which the corrosion and associated electrical current are due to a difference in ionic concentration.	*Material Process*
Ionic Mobility	Defined similarly to the mobility of nonelectrolytic particles, viz., as the speed that the ion obtains in a given solvent when influenced by unit power.	*Electronic Process*
Ionic packing factor (IPF)	The fraction of the unit cell volume for a ceramic occupied by the various cations and anions.	*Material Process*
Ionic Strength	The weight concentration of ions in solution, computed by multiplying the concentration of each ion in solution (C) by the corresponding square of the charge on the ion (Z) summing this product for all ions in solution and dividing by 2: ionic strength - 1/2_Z2 C.	*General Engineering*
Ionic Strength	The weight concentration of ions in solution, computed by multiplying the concentration of each ion in solution (C) by the corresponding square of the charge on the ion (Z) summing this product for all ions in solution and dividing by 2 - ionic strength - 1/2_Z2 C.	*Electronic Process*
Ion-Implantation	A process in which a beam of positive ions is projected towards and into the surface. It is carried out in partial vacuum and the ions diffuse into the surface layer of the substrate. Typically this is carried out with nitrogen giving a nitrided effect.	*Paint and Coatings*
Ionization	The separation or dissociation of the atoms of a molecule in solution. Some compounds, called electrolytes, dissociate readily in water sodium chloride and hydrochloric acid, for example. Molecules of a gas can also be ionized by passing through an electric field.	*Material Process*
Ionized gas	If a material is exposed to high temperatures or an electrical field, it can become ionized, i.e., its particles can become electrically charged. Also known as plasma, ionized gases can enable an electric current to jump across a gap in an electric circuit. To avoid this problem, circuit breakers are equipped with various insulators that inhibit arc formation. See also Circuit breaker.	*Electrical*
Ionizing radiation	Any electromagnetic or particle radiation capable of producing ions as a direct or indirect result of passing through matter.	*Material Process*
IOU	See Investor-Owned Utility	*Energy*
IP	Institute of Petroleum (UK)	*Petro-Chemical Abbreviations*
IP	European environmental ratings similar to USA NEMA ratings.	*Electrical Engineering*
IP Rate	The Initial Production rate of a well refers to the amount of oil and natural gas initially produced as the well is flowed back (see flowback.) While IP rates can be indicative of how productive the well can be, high IP rates may not translate to sustained long term production or high EUR.	*Petroleum Drilling*
IP Rating	The ingress protection rating of electronic equipment, such as barcode scanners.	*Gears*
IPIECA	International Petroleum Industry Environmental Conservation Association	*Petro-Chemical Abbreviations*
IPM	Integrated Pest Management.	*Agriculture*
IPP	See Independent Power Producer	*Energy*

Please see the Appendix for further illustration

Term	Definition	Industry
IPTO	independent power take-off	*Petro-Chemical Abbreviations*
IPTS-48	International Practical Temperature Scale of 1948. Fixed points in thermometry as specified by the Ninth General Conference of Weights and Measures which was held in 1948.	*Electrical*
IPTS-68	International Practical Temperature Scale of 1968. Fixed points in thermometry set by the 1968 General Conference of Weights and Measures.	*Electrical*
IPTS-68	International Practical Temperature Scale of 1968. Fixed points in thermometry set by the 1968 General Conference of Weights and Measures.	*Electronic Process*
IR	A portion of the spectrum of light which is not visible (wavelengths which extend beyond 770nm).	*Electrical Engineering*
Iran (1960-present)	Iran (1960-present)	*Energy*
Iraq (1960-present)	Iraq (1960-present)	*Energy*
IRED	Infrared: Emitting Diode: a diode capable of emitting radiant energy in the infrared region of the spectrum.	*Electrical Engineering*
Iridic bromide (IrBr4) (iridium bromide, iridium tetrabromide)	Hygroscopic powder, soluble in alcohol and water.	*Material Process*
Iridic chloride (IrCl4) (iridium chloride, iridium tetrachloride)	Brownish black mass, and hygroscopic. Soluble in water and alcohol.	*Material Process*
Iridite	Trade mark for chromate conversion coatings for zinc, cadmium, copper, bronze, brass, aluminum, magnesium and silver surfaces.	*Material Process*
Irisone	Trade mark for a series of compounds consisting of alpha – and beta-ionones. Available in several grades of purity and used in perfume, soaps, and pharmaceuticals especially for a violet odor. Also, used for chemical synthesis and in some flavors.	*Material Process*
Iron	wrought Highly purified iron that has been uniformly admixed with a small proportion of slag, the mixing occurring while the iron is in a pasty stage somewhat below its melting point. This was the normal product of early iron forges because of the relatively low temperatures reached in such equipment. Wrought iron is now made from pi iron by special purification and mixing procedures referred to as pudding and shotting. A typical composition is carbon 0.1% manganese, 0.1% phosphorus 0.08 to 0.16% (about half of this is in the slag), up to 0.035% sulfur, and 0.1 to 0.2% silicon (all in the slag, which itself is form 1 to 4% of the whole). Higher percentages of carbon and manganese generally indicate contamination with steel. Wrought iron is relatively soft and malleable, has a fibrous structure due to the admixed slag, and shows great resistance to progressive corrosion.	*Material Process*
Iron acetate liquor (iron liquor, black mordant, iron pyrolignite)	Intensely black liquor, sometimes containing copper or tanin. Absorb oxygen from the air. It is used for mordant, especially for alizarine and nitroso dyes, and for dyeing and printing logwood.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Iron and steel industry	Steel Works, Blast Furnaces (Including Coke Ovens), and Rolling Mills Establishments primarily engaged in manufacturing hot metal, pig iron, and silvery pig iron from iron ore and iron and steel scrap; converting pig iron, scrap iron, and scrap steel into steel; and in hot-rolling iron and steel into basic shapes, such as plates, sheets, strips, rods, bars, and tubing.	*Energy*
Iron bacteria	Oxidative bacteria that cause taste, staining, and odor problems in water. The precipitation of iron by the bacteria can build up in piping and heat exchangers to restrict water flow. Although they are not a direct cause of corrosion, differential aeration cells will form under deposits and localized corrosion will appear.	*Chemical Engineering*
Iron balls	ironstone nodules.	*Mining*
Iron black	Fine black powder. It is derivated by the action of zinc upon an acid solution of an antimony salt, a black antimony being precipitated as a fine powder.	*Material Process*
Iron blues	Iron blues are prepared by precipitating a solution of a soluble ferrocyanide salt with iron sulfate, thereby forming a ferrous ferrocyanide which is then oxidized to a ferric ferrocyanide. An ammonium salt is used with sodium ferrocyanide because the blue made from straight sodium ferrocyanide does not have satisfactory pigment properties. It is used for blue ink, laundry blue, paint pigment dyeing paper, and ingredient of fertilizer mixtures.	*Material Process*
Iron buff (Nankin yellow)	Ferric hydroxide dyed on cotton or cotton goods by steeping the latter in a solution of ferrous sulfate, basic ferric sulfate or ferric nitrate and precipitating the hydroxide on the fiber by means of calcium hydroxide solution, sodium hydroxide solution or soda ash.	*Material Process*
Iron cast	Any iron-carbon alloy that contains more than 1.7% carbon, and usually between 2 and 4%. Such iron usually also contains 0.1 to 0.2% sulfur, 0.5-3% silicon, 0.5 to 1% manganese and up to 1% phosphorus. Cannot shaped by hammering, rolling, or pressing.	*Material Process*
Iron ductile	A malleable cast iron produced by the addition of sufficient magnesium and/or cerium to the melt to cause graphite to precipitate as spherulites rather than flakes. It has superior strength, ductility, toughness, machinability and corrosion resistance as compared to gray cast iron and has better castability, finish, and machinability than cast steel.	*Material Process*
Iron Law of Wages	according to economist David Ricardo, wages tend to remain at the subsistence level, the natural price of labor.	*Industrial Relations*
Iron ore cement	Cements in which ferric oxide replaces large part of the alumina. There must be some alumina present, however. Iron-ore cement is rather slow setting and hardening, but is more resistant to sea water than is portland cement. It is light to chocolate brown in color and has a specific gravity higher than portland cement.	*Material Process*
Iron oxide black (FeO Fe2O3) (ferrosofferic oxide, iron oxide, magnetic, iron ethiops, black rouge)	Reddish-black, amorphous powder, soluble in acids, insoluble in water, alcohol and ether. a) It is derivated a) by action of air, steam or carbon dioxide on iron, b) occurs in nature as the mineral magnetite. It is used in metallurgy, medicine, pigment polishing compound, etc.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Iron oxide brown (iron subcarbonate, iron carbonate, precipitated)	Reddish brown powder, containing ferric carbonate with ferric hydroxide Fe(OH)3, and ferrous hydroxide in Fe(OH)2, varying quantities. It is not true oxide. Soluble in acids, insoluble in water and alcohol. It is derivated by the interaction of solution of ferrous sulfate and sodium carbonate. Using as the paint pigment.	*Material Process*
Iron oxide process	A process for the removal of sulfides from a gas by passing the gas through a mixture of iron oxide, Fe2O3, and wood shaving. the iron oxide is converted to iron sulfide and can be regenerated by allowing the iron sulfide to contact air.	*Material Process*
Iron potassium tartrate (Fe2(C4H4O6)3 K2O3 C4H4O6 H2O) (tartrated iron, tartar, chalybeated, boules de Nancy, ferric-potassium tartrate)	Thin transparent scales deep garnet color, sweetish taste, astringent, arsenic limit 5 parts per million. Soluble in water, sparingly in alcohol. It is used in medicine.	*Material Process*
Iron pyrophosphate (Fe4(P2O7)3)(ferric pyrophosphate)	White powder, soluble in acids and carbonated water, insoluble in ordinary water.	*Material Process*
Iron red	A name given to red varieties of ferric oxide that are used as pigment.	*Material Process*
Iron reduced (ferrum reductum)	Elementary iron obtained by chemical process in powdered form. grayish black, amorphous, fine granular powder with no more than a slight luster. Stable in dry air. It is used in medicine and organic synthesis.	*Material Process*
Iron sponge	Finely divided porous form of iron made by reducing an iron oxide at such low temperatures that melting does not occur, usually by mixing iron oxide and coke and applying limited increase in temperature. It is used for precipitating copper or lead from solutions of their salts, removing sulfur compounds from coke-oven gas, and in electrical-furnace steel operations.	*Material Process*
Iron timbers	a term used by older miners for steel supports when they were introduced into mining.	*Mining*
Iron, wrought	Highly purified iron that has been uniformly admixed with a small proportion of slag, the mixing occurring while the iron is in a pasty stage somewhat below its melting point. This was the normal product of early iron forges because of the relatively low temperatures reached in such equipment. Wrought iron is now made from pi iron by special purification and mixing procedures referred to as pudding and shotting. A typical composition is carbon 0.1% manganese, 0.1% phosphorus 0.08 to 0.16% (about half of this is in the slag), up to 0.035% sulfur, and 0.1 to 0.2% silicon (all in the slag, which itself is form 1 to 4% of the whole). Higher percentages of carbon and manganese generally indicate contamination with steel. Wrought iron is relatively soft and malleable, has a fibrous structure due to the admixed slag, and shows great resistance to progressive corrosion.	*Material Process*
Ironclad Agreement (Contract)	sometimes referred to as an anti-union or yellow-dog contract.	*Industrial Relations*
Irone (C14H19O)	Colorless oil, violet odor. Soluble in alcohol, insoluble in water. It is derivated from a ketone found in oil of orris. Used in perfumery (artificial cassia).	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Iron-nickel alloys (nickel-alloys)	Alloys of iron and nickel which are entirely austenitic in character at room temperature are properly called iron-nickel alloys, otherwise they considered nickel-steels. All alloys containing over 34% nickel are austenitic at all temperatures. With lower nickel content the heat treatment helps determine classification as an alloy or a steel. The iron-nickel system has a peculiar range of properties of thermal expansion, thermo-elasticity, and magnetic characteristics. Tremendous variations in magnetic properties are possible. Iron-nickel alloys (austenitic) of nickel content below 30% are non magnetic at ordinary and at high temperatures. The iron-nickel alloys are not heat-hardenable, but addition of aluminum and titanium develops tempering characteristics.	*Material Process*
Iron-nickel alloys (nickel-alloys)	Alloys of iron and nickel which are entirely austenitic in character at room temperature are properly called iron-nickel alloys, otherwise they considered nickel-steels. All alloys containing over 34% nickel are austenitic at all temperatures. With lower nickel content the heat treatment helps determine classification as an alloy or a steel. The iron-nickel system has a peculiar range of properties of thermal expansion, thermo-elasticity, and magnetic characteristics. Tremendous variations in magnetic properties are possible. Iron-nickel alloys (austenitic) of nickel content below 30% are non magnetic at ordinary and at high temperatures. The iron-nickel alloys are not heat-hardenable, but addition of aluminum and titanium develops tempering characteristics.	*Material Process*
Irons, stainless	Alloys containing 3 to 28% chromium, with or without traces of nickel, essentially magnetic and ferritic in character. High chromium irons are brittle after welding. Most popular composition for fabrication is 15 .-18% chromium, 0.1% carbon.	*Material Process*
Irradiated nuclear fuel	Nuclear fuel that has been exposed to radiation in the reactor core at any power level.	*Energy*
Irradiation	The exposure of a material to high energy emissions. In insulations for the purpose of favorably altering the molecular structure. Excessive exposure can be detrimental to the physical and electrical properties.	*Electrical*
Irrathene	Trade mark for a thermosetting form of polyethylene formed by irradiation of polyethylene with high energy cathode rays (electrons). The product does not melt up to 250 °C (482°F) but oxidizes rapidly at elevated temperatures unless protected by an inhibitor. Its resistance to acids, alkalies, and solvents is superior to that of polyethylene and it has excellent electrical properties, even at 200 °C (392 °F). It is available in films and tapes used for packing and electrical insulation.	*Material Process*
Irregular Powder	Particles lacking symmetry.	*Paint and Coatings*
IS	See Intrinsic Safety.	*Maintenance*
ISA	Instrument Society of America.	*Control Engineering*
Isethionic acid (HOCH2CH2HSO3)	A liquid, very soluble in water, insoluble in alcohol. It is used for detergents and surfactants.	*Material Process*
Isinglass	A form of gelatin derived from the swimming bladders of fishes used as an adhesive and clarifier.	*Material Process*
ISO	See Independent System Operator	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
ISO (International Standards Organization)	An organization which sets minimum international standards for a wide variety of items manufactured and used in pipeline services.	*Mechanical*
ISO 14000	International standards for environmental management systems set by the International Standards Organization.	*Electrical*
ISO 14001	International environmental management system (EMS) standard developed by the International Standards Organization. The standard is designed to address all facets of an organization's operations, products and services. It covers environmental policy, resources, training, operations, emergency response, audits, measurement, and management views. It contains five major elements that an organization must satisfy to be registered or certified. These elements are policy, planning, implementation and operations, checking and corrective action, and management review.	*Maintenance*
ISO 9000	International standards for quality assurance set by the International Standards Organization. It includes some 20 elements of quality process performance, and is a prerequisite for delivering predictable, quality products to customers.	*Electrical*
ISO Solid Contaminant Code (ISO 4406)	A code assigned on the basis of the number of particles per unit volume greater than 5 and 15 micrometers in size. Range numbers identify each increment in the particle population throughout the spectrum of levels.	*Oil Analysis*
ISO Standard 4021	The accepted procedure for extracting samples from dynamic fluid lines.	*Oil Analysis*
ISO viscosity grade	A number indicating the nominal viscosity of an industrial fluid lubricant at 40°C (104°F) as defined by ASTM Standard Viscosity System for Industrial Fluid Lubricants D 2422. Essentially identical to ISO Standard 3448.	*Oil Analysis*
ISO International Organization for Standardization	A network of national standards institutes from 140 countries working in partnership with international organizations, governments, industry, business and consumer representatives. The source of ISO 9000 and more than 13,000 international standards for business, government and society. Click here to view the Foreign Specification & ASTM Cross-Reference Chart.	*Materials Process*
Isoamyl alcohol	Solvent-alcohol.	*Material Process*
Isoamyl butyrate (C5H11COOC3H7)	Practically water white. Soluble in alcohol and ether, very slightly soluble in water. It is obtained by treating isoamyl alcohol with butyric acid. Flavoring extracts, solvent and plasticizer for cellulose acetate.	*Material Process*
Isoamyl chloride	Any of several compounds or mixtures thereof may be referred to by this name, since numerous isomers are possible. Colorless liquid , insoluble in water, soluble in alcohol and ether. It is obtained by isoamyl alcohol and hydrogen chloride, or chlorination of isopentane. It is used in mixtures, usually also containing normal amyl chloride, solvent for nitrocellulose, varnishes, lacquers, neoprene, in rotogravure inks, and for soil fumigation, also for organic compounds.	*Material Process*
Isoamyl isovalerate	See isoamyl valerate.	*Material Process*
Isoamyl salicilate (C6H4OHCOOC5H11)	Isoamyl salicilate (C6H4OHCOOC5H11) A water white liquid sometimes having a faint yellow tinge which should not be pink or red. Has a flowerly orchid like odor. Should not give a red ring when superimposed on a layer of sulfuric acid (indicating free amyl alcohol). Soluble in alcohol, insoluble in water and glycerol. It is obtained by esterifying salicylic acid with amyl alcohol. The ordinary article of commerce is the isoamyl ester. Used as an ingredient in perfumes and in perfuming soap. Formerly used medicinally.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Isoamyl valerate (C4H9CO2C5H11)(apple essence, apple oil, isoamyl isovalerate, amyl valeriana, amyl valerate)	Clear liquid, odor of apples when diluted with alcohol, soluble in alcohol and ether, slightly soluble in water. Derivated from amyl alcohol and valeric acid in the presence of catalysts. Subsequent recovery by distillation. It used in medicine, fruit essences.	*Material Process*
Isoamylacetate (CH3COOCH2CH2 CH(CH3) 2)	Colorless liquid, slightly soluble in water, miscible with alcohol and ether. It is used as solvent, perfumes etc..	*Material Process*
Isobars	Isobars 1. Lines on a weather map connecting points with the same atmospheric pressure. Constant pressure lines on any type of graph. 2. Atoms or elements with the same atomic weight but different chemical properties, such as nitrogen 14 and carbon 14.	*Material Process*
Isobars	1) Lines on a weather map connecting points with the same atmospheric pressure. Constant pressure lines on any type of graph. 2) Atoms or elements with the same atomic weight but different chemical properties, such as nitrogen 14 and carbon 14.	*Material Process*
Isobutane (C_4H_{10})	A branch-chain saturated (paraffinic) hydrocarbon extracted from both natural gas and refinery gas streams, which is gaseous at standard temperature and pressure. It is a colorless gas that boils at a temperature of 11 degrees Fahrenheit.	*Energy*
Isobutyl acetate	Solvent-ester.	*Material Process*
Isobutyl acetate (C4H9OOCCH3)	Colorless, neutral liquid, fruit like odor. soluble in alcohol, ether, and hydrocarbons, immiscible with water. It is derivated by reacting isobutyl alcohol with acetic acid in the presence of catalysts. It is used as a solvent for nitrocellulose and lacquers.	*Material Process*
Isobutyl alcohol	Solvent-alcohol.	*Material Process*
Isobutylene Colorless, volatile liquid, b.p. 22 °F (-5.55 °C)	Derived from petroleum. Raw material for butyl rubber and several plastics. Also, important in the manufacture of 100 octane aviation gasoline.	*Material Process*
Isobutylene (C_4H_8)	A branch-chain olefinic hydrocarbon recovered from refinery or petrochemical processes, which is gaseous at standard temperature and pressure. Isobutylene is used in the production of gasoline and various petrochemical products.	*Energy*
Isobuyl amine (CH3)2CHCH2 NH2)	Colorless liquid, amine odor, strongly caustic. Soluble in water, alcohol, ether, and hydrocarbons. Flammable liquid, used in organic synthesis and insecticides.	*Material Process*
Isohexane (C_6H_{14})	A saturated branch-chain hydrocarbon. It is a colorless liquid that boils at a temperature of 156.2 degrees Fahrenheit.	*Energy*
Isolation	The reduction of the capacity of a system to respond to an external force by use of resilient isolating materials.	*General Engineering*
Isomerisation	The chemical process by which a compound is transformed into any of its isomers i.e., forms with the same chemical composition but with different structure or configuration and, generally different physical and chemical properties	*Chemical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Isomerization	A refining process that alters the fundamental arrangement of atoms in the molecule without adding or removing anything from the original material. Used to convert normal butane into isobutane (C_4), an alkylation process feedstock, and normal pentane and hexane into isopentane (C_5) and isohexane (C_6), high-octane gasoline components.	*Energy*
Isomers	Compound having the same kind and number of atoms but with different molecular structures and properties.	*Material Process*
Isomorphism	The condition in which two or more entirely different substances have closely similar crystal structures, lattice dimensions, and chemical composition.	*Material Process*
Iso-octane	A hydrocarbon molecule (2,2,4-trimethylpentane) with excellent antiknock characteristics on which the octane number of 100 is based.	*Petroleum Engineering*
Isopach	A line on a map drawn through points of equal thickness of a designated unit (such as a coal bed).	*Energy*
Isopentane	A saturated branched-chain hydrocarbon (C_5H_{12}) obtained by fractionation of natural gasoline or isomerization of normal pentane.	*Energy*
Isophorone	Solvent- ketone.	*Material Process*
Isopotential Point	A potential which is not affected by temperature changes. It is the pH value at which dE/dt for a given electrode pair is zero. Normally, for a glass electrode and SCE reference, this potential is obtained approximately when immersed in pH 7 buffer.	*General*
Isoprene	Natural rubber is polymerized isoprene plus some modifying agents which science has not yet been able to identify.	*Material Process*
Isopropyl ether	Solvent–ether.	*Material Process*
Isopropyl benzene	Solvent-hydrocarbon.	*Material Process*
Isostrain	Loading condition for a composite in which the strain on the matrix and dispersed phase are the same.	*Material Process*
Isostress	Loading condition for a composite in which the stress on the matrix and dispersed phase are the same.	*Material Process*
Isotactic	A type of polymer chain configuration wherein all side groups are positioned on the same side of the chain molecule.	*Engineering Physics*
Isotactic	Pertaining to a type of polymeric molecular structure containing a sequence of regularly spaced asymmetric atoms arranged in like configurations in a polymer chain, usually used in reference polypropylenes.	*Engineering Physics*
Isotherm	Constant temperature line used on climatic maps or in graphs of thermodynamic relations, particularly the graph of pressure-volume relations at constant temperature.	*Material Process*
Isothermal	A process or area that is a constant temperature. Joule: The basic unit of thermal energy.	*Electrical*
Isotope	Atoms of the same element having the different masses.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Isotopes	Forms of the same chemical element that differ only by the number of neutrons in their nucleus. Most elements have more than one naturally occurring isotope. Many isotopes have been produced in reactors and scientific laboratories.	*Energy*
Isotropic	Having properties that do not vary with direction.	*Material Process*
isotropic	the condition in which hydraulic properties of an aquifer are equal when measured in any direction.	*Chemical*
ISP	This is the standard abbreviation for the Interoperable Systems Project, which a number of companies are hoping will produce an international fieldbus. The main industry backers are Fisher-Rosemount, Yokogawa and Siemens.	*Control Engineering*
ISRS	Inside screw, rising stem - common term for any valve design in which the stem threads are exposed to the fluid below the packing and the stem rises up through the packing when the valve is opened.	*Mechanical*
ISRS	Inside screw, rising stem - common term for any valve design in which the stem threads are exposed to the fluid below the packing and the stem rises up through the packing when the valve is opened.	*General Mechanical*
ISTEA	Intermodal Surface Transportation Act (US)	*Petro-Chemical Abbreviations*
Italian red	Red pigment consisting essentially of ferric oxide.	*Material Process*
Itch	Sometimes called glass itch or lace itch. An automotive sound caused by metal sliding on glass.	*Reliability Engineering*
Iterative closed loop	control precalculates drive signals but then modifies those signals based upon resulting motion, in order to better match measured with desired motions. Evaluation and modifications take place after each excitation, repeating until the match is acceptable.	*Reliability Engineering*
Itinerant Worker	a worker who is not attached to a specific community and moves from job to job.	*Industrial Relations*
IVD	intake valve deposit	*Petro-Chemical Abbreviations*
IVDT	intake valve deposit test	*Petro-Chemical Abbreviations*
IVHS	Intelligent Vehicle Highway System	*Petro-Chemical Abbreviations*
IWRC	Independent Wire Rope Core.	*Wire Rope & Cable*
IZA	International Zinc Association	*Materials Process*
Izod Impact	A test for shock loading wherein a notched sample bar is held at one end and broken by striking.	*Engineering Physics*
Izod Impact Test	One of two tests that may be used to measure the impact energy of standard notched specimen.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
J	J	*Mining*
Jabber	a pneumatic pick. (Lancs.).	*Mining*
Jabez	inferior hard coal near the top of the Swallow Wood Seam. (Yorks.).	*Mining*
jack	A male donkey.	*Agriculture*
Jack Davy lamp or Jack lamp	a Davy lamp with the addition of a glass cylinder outside the gauze.	*Mining*
Jack engine	the engine for raising men, waste and materials in a sinking pit. (N. East).	*Mining*
Jack holes	a short connecting roadway or a 'slit' (N. Staffs).	*Mining*
Jack of All Trades	a person who claims ability to perform a variety of jobs, but is not an expert at any of them.	*Industrial Relations*
Jack pit	a shallow pit shaft in a mine connecting with an overcast or at a fault. Also called a 'Jackey Pit'. (N. East) –see also Jacky Pit.	*Mining*
Jack roll	a windlass that was worked by hand and used in sinking to moderate depths both underground and on the surface. Known in West Durham as 'Row and Stoches'. -see also Roll.	*Mining*
Jackanapes	a succession of frames with pulleys or 'sheaves' suspended from them to carry an overhead rope. The small guide pulleys of a 'whim'.	*Mining*
Jack-bate	time to eat. i.e.. Jack-bit time. (Lancs.).	*Mining*
Jack-bit, food	see also Snap and Snap-time.	*Mining*
Jack-catch	safety catch in the track to stop the running back of tubs on inclines, i.e. a tub arrester.	*Mining*
Jacket	The enclosure on a water heater, furnace, or boiler.	*Energy*
Jacket	A material covering over a wire insulation or an assembly of components, usually an extruded plastic or elastomer.	*Electrical*
Jacket	The lower section, or "legs", of an offshore platform.	*Petroleum Drilling*
Jackleg	A percussion drill used for drifting or stopping that is mounted on a telescopic leg which has an extension of about 2.5 m. The leg and machine are hinged so that the drill need not be in the same direction as the leg.	*Mining*
Jack-legs or Jack legging, temporary props. (Leics.), (Scot.)	Jack-legs or Jack legging, temporary props. (Leics.), (Scot.).	*Mining*
Jack-prop	a wood or steel prop used as a temporary support when setting permanent supports.-see also Derrick and Warwick.	*Mining*
Jackrock	A caltrop or other object manufactured with one or more rounded or sharpened points, which when placed or thrown present at least one point at such an angle that it is peculiar to and designed for use in puncturing or damaging vehicle tires. Jackrocks are commonly used during labor disputes.	*Mining*
Jacks	large fissures or cracks in the roof. (N. East); or wood wedges; or inferior cannel coal.	*Mining*

Term	Definition	*Industry*
Jacks, Jay, Jays Johnnies or Jay coal	see Geyes.	*Mining*
Jacksonville Wage Agreement	an agreement signed by the United Mine Workers and Union Coal Operators extending the basic $7.50 a day wage from April 01924 to April 1927.	*Industrial Relations*
Jacky Pit	another name for a Staple Pit, or a small shallow mine at the surface (S. Staffs.)—see also Blind Pit.	*Mining*
Jacobs	very lean ironstone in the Red Mine Ironstone (blackband) (N. Staffs).	*Mining*
Jag	the last trip on the main haulage, e.g. 'That's the last jag for today'. (Lancs).	*Mining*
Jailer	a small tub or box in which water was transported in the mine. The water was taken into the working places to damp down the 'binching' to soften it over night making it easier to work the following day. (Som.). - see also Goose.	*Mining*
Jam Nuts	See LOCKNUT	*Maintenance*
Jam out	to cut out, or knock away, the 'spurns' in holing. (S. Staffs.).	*Mining*
JAMA	Japan Automobile Manufacturers Association Inc.	*Mechanical, Process, and Operations*
JAN	Japanese Article Number	*Gears*
Janusol	Trade mark for a mixture of lauryl and myristil esters containing both primary amino and sulfated groups. tan paste, readily soluble in water, effective under certain conditions as anionic or cationic surface - active agent, stable in highly alkaline solutions, peroxide solutions, and hypochlorite solutions.	*Material Process*
Japan wax	A soft wax obtained from sumac bushers growing in Japan, m.p. 127 °F (52.77 °C).	*Material Process*
Japanese Labor	Recent interest in labor management relations in Asian and other countries suggests that some entries in the Dictionary be devoted to literature in the field of labor management relations in these countries and source references will be found under those headings.	*Industrial Relations*
JARI	Japanese Automotive Research Institute	*Petro-Chemical Abbreviations*
JASO	Japanese Automotive Standards Organization	*Petro-Chemical Abbreviations*
JAST	Japanese Society of Tribologists	*Petro-Chemical Abbreviations*
Jaw crusher	A machine in which rock is broken by the action of steel plates.	*Mining*
Jaw crusher	A machine in which the rock is broken by the action of moving steel jaws.	*Mining*
Jawck	hard stone occurring within a coal seam. It can run the entire length of the face. (Scot.).	*Mining*
Jay, roof coal. (Derbys.)	see also Jacks.	*Mining*
Jazz	a collier's name for shaker pans.	*Mining*
Jazz rails	a safety device consisting of rails with a very sharp bend in them. Slow moving tubs can negotiate the bend, but runaway tubs would be thrown off the rails. (Scot.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
JC	Joint Commission for Accreditation of Healthcare Organizations	*Quality*
JCAP	Japan Clean Air Program	*Petro-Chemical Abbreviations*
JD	John Deere	*Petro-Chemical Abbreviations*
Jeelateen or Jelly box	a powder box or powder can. Used for carrying explosives into the mine. (Scot.).	*Mining*
Jencks Case	case in which the U.S. Supreme Court reversed the conviction of a union official of violating the False Information Act by filing a false non-Communist affidavit with the NLRB pursuant to section 9 of the Taft-Hartley Act.	*Industrial Relations*
Jenkin	see Fast jenkin.	*Mining*
Jenking or Jenkin	a narrow roadway driven through a pillar of coal; or an opening cut into, or a work place formed by taking a slice off a pillar, from 6 to 8 feet in width, alongside the bord, in the 'bord and pillar' system of working, also known as a 'judd', or 'lift',	*Mining*
jenny	Female donkey.	*Agriculture*
Jerk	The rate of change of acceleration with time.	*Reliability Engineering*
Jersey	A breed of cattle that originated on the Isle of Jersey, in the British Isles. It is light brown with a pronounced bone structure. The Jersey is noted for production of milk with a rich butter fat content. Their popularity in the United States has fallen.	*Agriculture*
Jet	a compact coaly substance found in isolated masses in shales, capable of taking a high polish. It is thought to have been formed from individual logs of driftwood.	*Mining*
Jet A	A civil grade of kerosene type aviation turbine fuel only supplied for operations in the United States. It has a freezing point of -40oC max which differs from JET A-1 (-47oC).	*NATO Fuel*
Jet action	A value design type in which flow effect is controlled by the relative position of a nozzle and a receiver.	*Mechanical, Process, and Operations*
Jet B	A civil grade of wide cut type aviation turbine fuel which has a different freezing point (-50oC) from F-40 (-58oC) and does not normally contain FSII.	*NATO Fuel*
Jet fuel	A refined petroleum product used in jet aircraft engines. It includes kerosene-type jet fuel and naphtha-type jet fuel.	*Energy*
Jet molding	Type of automatic injection molding for thermosetting materials in which composition is preheated in controlled cycles.	*Material Process*
Jet molding	Jet molding Type of automatic injection molding for thermosetting materials in which composition is preheated in controlled cycles.	*Material Process*
Jetting	Propulsion of water under high pressure into sandy aquifers to create a hole for a well point.	*Petroleum Engineering*
Jetting	Turbulence in the resin melt flow caused by undersized gate, an abrupt change in cavity volume, or low melt temperature.	*Engineering Physics*
Jewel coal	a high grade coal with a clear shining surface. (Scot.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Jewelry Workers' Union; International (AFL-CIO)	originally established in 1900 but gave up its charter in 1912. It reorganized in 1916.	*Industrial Relations*
Jib-In	to perform the operation of starting to cut by swinging in the jib of the coal cutter, (while the chain is cutting) from the front of the face to the full cutting position. –see Sump in.	*Mining*
JIC	See: Joint Industrial Council	*Industrial Relations*
Jig	A piece of milling equipment used to concentrate ore on a screen submerged in water, either by the reciprocating motion of the screen or by the pulsation of water through it.	*Mining*
JIG	An apparatus used in milling to concentrate ore on a screen submerged in water, either by a reciprocating motion of the screen or by the pulsation of water through it.	*Mining*
Jig chain	a chain fastened to the back of a 'skip' and passed around a prop to hold back its progress on a steep roadway (S. Staffs.).	*Mining*
Jig or Gig	a type of shaker conveyor; or a self-acting incline haulage system worked by a drum or wheels, with hemp or wire ropes. -see also Brake; or a steeply inclined underground roadway.	*Mining*
Jig pin	a pin used to lock the pulley at the top of a self-acting incline. (Derbys.).	*Mining*
Jig runner	the man who worked the brake on the pulley at the top of the jig road. (York.). Also known in some areas as a 'jinney tenter'.	*Mining*
Jigger	a type of coupling hook that was used when working on an incline. (Scot.); or another name for the 'onsetter'. (Leics.); or a steel conveyor consisting of a number of steel trays, troughs or pans, each about 4ft long, bolted together. The motion of the troughs was of 'jigging' or 'shoveling', i.e. an upwards and forwards motion, making the material on the conveyor slide along, also called a 'Shaker Conveyor'.	*Mining*
Jigger stick	a long piece of timber used in a 'twin-way' to lift loaded carriages back onto the rails. (Som.).	*Mining*
Jigging	clipping tubs onto the haulage chain or rope on a self-acting incline. (Lancs.); or washing coal in a jig.	*Mining*
Jim Crow Laws	laws directed in some way to restrict the rights of Negroes.	*Industrial Relations*
Jim crow or Jimmy	an appliance used for putting the bend in tub rails. Known as a 'Jimmy' in Scotland. A rail bender.	*Mining*
Jinny	a large wheel placed beneath the wheelhouse used to lower men into the pit. Also known as a 'horse drum'. Also another name for a Jig or self-acting incline.	*Mining*
JIS	Japanese Industrial Standards	*Petro-Chemical Abbreviations*
JIT	Just In Time. A manufacturing process that produces products just in time to meet orders, not for stock.	*Control Engineering*
JIT	Just-In-Time	*Gears*
JIT delivery	Delivery of parts and materials in small lots - and on a frequent basis - timed to the needs of the production system.	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
JIT/continuous-flow production	Implementation of "just-in-time" techniques to reduce lot sizes, reduce setup times, slash work-in-process inventory, reduce waste, minimize non-value-added activities, improve throughput, and reduce manufacturing cycle time. JIT production typically involves use of "pull" signals to initiate production activity, in contrast to work-order ("push") systems in which production scheduling typically is based on forecasted demand rather than actual orders. In many pull systems, a customer order/shipment date triggers final assembly, which in turn forces replenishment of component WIP inventory at upstream stages of production.	*Quality*
Jitter	The slight movement of a transmission signal in time or phase that can introduce errors and loss of synchronization. More jitter will be encountered with longer cables, cables with higher attenuation, and signals at higher data rates. Also, called phase jitter, timing distortion, or intersymbol interference.	*Electrical Engineering*
Jitty	a short slit between two roadways, along which empties, horses or men travelled. (Leics.). -see also Cut-through and Snicket.	*Mining*
JMT	See: Job Methods Training	*Industrial Relations*
Job	in general usage it includes all of the factors which go into a person's activities, responsibilities, and operations in the performance of his work.	*Industrial Relations*
Job Action	See: Direct Action	*Industrial Relations*
Job Analysis	a complete investigation or study of a particular job or position in order to determine the facts about a job including the methods or procedures of work, tools, responsibilities, supervision, the standards of output, and other data concerning the technical nature of the work.	*Industrial Relations*
Job Analyst	an individual whose function and responsibility are to prepare specifications and descriptions of specific jobs to analyze them, and to classify and grade all jobs or occupations.	*Industrial Relations*
Job Assignment	the allotting or assigning of specific duties and responsibilities to a person.	*Industrial Relations*
Job Breakdown	the basic elements of a particular job divided into separate units, so that a complex job can be divided and broken down into simpler operations and the less complex operations performed by the less skilled worker.	*Industrial Relations*
Job Card	See Work Order.	*Maintenance*
Job Classifications	a method of arranging jobs into various categories or classes in a particular company or industry.	*Industrial Relations*
Job Content	includes all of the functions, requirements, and duties of a given job.	*Industrial Relations*
Job Control	applies to the efforts by an organization to have the right to consulted about employees working in an occupation, company, or industry.	*Industrial Relations*
Job Description	a written record summarizing the main features or characteristics of the job.	*Industrial Relations*
Job Enlargement	the procedure of broadening the core, and assigning additional responsibilities to a job in order assure, among other things, greater satisfaction to the employee who is performing the it or to give him a wider sense of the significance of the particular operation.	*Industrial Relations*
Job Environment	those factors which surround an employee while performing his work.	*Industrial Relations*

Term	Definition	*Industry*
Job Evaluation	a systematic method of determining the value of each job in relation to the other jobs in the plant.	*Industrial Relations*
Job Evaluation Plans	sometimes referred to as job evaluation systems; the broad classifications used in the setting up of a job evaluation program.	*Industrial Relations*
Job Factor	an element or characteristic of the job which has important bearing on the relative worth or value of the job among the major elements or job factors.	*Industrial Relations*
Job Family	a grouping of jobs having similar skill, experience, or other factors in common, such as training and aptitude.	*Industrial Relations*
Job Grades	setting job grades is sometimes considered the last stage or step in job classification when the relationship of jobs one to the other has been established.	*Industrial Relations*
Job Grading	the procedure in setting or establishing the various classes of jobs in relation or according to their relative importance.	*Industrial Relations*
Job Instruction Training (J.I.T.)	a program which received special attention during World War II mainly through the efforts of the Training-Within-Industry program of the War Manpower Commission designed to teach foremen and other supervisory employees the techniques of imparting information to workers.	*Industrial Relations*
Job Instructor	the individual assigned the job of showing workers, particularly new or transferred workers, how to perform their jobs.	*Industrial Relations*
Job Methods Training	a job methods training program was developed and accelerated during World War II as part of the Training-Within-Industry program.	*Industrial Relations*
Job Open for Bid	the phrase refers to the existence of a job opening and the opportunity for employees who feel they are qualified to perform the job to request that they be considered for the job opening.	*Industrial Relations*
Job Opening	an available or vacant position which is to be filled through the employment or transfer of an individual.	*Industrial Relations*
Job Pattern	See: Manning Table	*Industrial Relations*
Job Placement	one of the major functions of the personnel office is to recruit employees and, through various methods of testing and interview, place these individuals in positions for which they are best qualified.	*Industrial Relations*
Job Protection	a somewhat loosely used term to cover various efforts of a union to protect its members.	*Industrial Relations*
Job Questionnaire	a form filled in by the employee with specific information on his job, on the basis of which a job analysis is made.	*Industrial Relations*
Job Ranking	See: Job Grading	*Industrial Relations*
Job Rate	the lowest or minimum rate paid to a qualified or experienced worker for a particular job.	*Industrial Relations*
Job Rating	comparison of information on each job or position against the rating scales already established.	*Industrial Relations*
Job Relations Training (J.R.T.)	the training is concerned with methods of obtaining increased production by getting the supervisor to understand better the people who work for him, to appreciate their basic differences.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Job Rotation	a method used in some plants to provide an opportunity for employees to become familiar with a variety of operations in the company.	*Industrial Relations*
Job Safety Analysis (J.S.A.)	A job breakdown that gives a safe, efficient job procedure.	*Mining*
Job Safety Training	training given to employees and supervisors to reduce the hazards in certain occupations and to provide safer working conditions.	*Industrial Relations*
Job Satisfaction	those outward or inner manifestations which give the individual a sense of enjoyment or accomplishment in the performance of his work.	*Industrial Relations*
Job Scarcity	a limited opportunity for employment which may be due to economic or business recession or seasonality of work or special problems in connection with production in a particular industry.	*Industrial Relations*
Job Security	a sense or feeling of security in the particular work which the employee is performing.	*Industrial Relations*
Job Selling	a procedure one quite widespread in the form of kickbacks or payment of fees for obtaining employment.	*Industrial Relations*
Job Specification	this is sometimes referred to as a man-job specification or job description or personnel specification.	*Industrial Relations*
Job Splitting	the breaking up of a job into its various components so that those parts requiring the least skill can be performed by individuals who are not highly skilled and the specialized work done by skilled employees.	*Industrial Relations*
Job Study	an attempt to collect full and complete information concerning a particular job and its content.	*Industrial Relations*
Job Tenure	the term is used to denote a situation in which barring special considerations, and so long as the employee performs his job efficiently and funds are available, he will be retained and permitted to continue his employment.	*Industrial Relations*
Job Title	the name or other designation which is used to identify the particular work such as carpenter, painter, pipe fitter, dye maker, etc.	*Industrial Relations*
Job Training	various methods and procedures directed toward providing an opportunity for unskilled or semi-skilled workers to qualify for jobs of a higher skill or greater complexity.	*Industrial Relations*
Job Turnover	See: Labor Turnover	*Industrial Relations*
Job Turnover Rate	See: Net Labor Turnover Rate	*Industrial Relations*
Job Work	usually work for which an employee is paid a fixed amount after the work is completed.	*Industrial Relations*
Jobber	steel tool for drawing props out of the waste.	*Mining*
Jobs Sent Out	in certain industries or operations, it occasionally is necessary to send out work or subcontract.	*Industrial Relations*
Jock	an iron rod, usually pronged, attached to the rear tub on a run being drawn up an incline. (Scot.). -see also Devil, Drag and Cow.	*Mining*
Jockey or Jockeying	riding out-bye on the tubs. (Lancs.); or a self-acting apparatus carried on the front tub of a set, for releasing the tub from the haulage rope at a certain point. (Mids.). Also called a 'monkey'.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Joey	a man employed to set the timbers in a stall during the 'turn'. He was a butty, and was not paid for doing the work. He took his turn with the other butties working in the stall. (Mids.).	*Mining*
John Hopkins University Studies (in Historical and Political Science) on American Trade Unionism	some of the studies are listed.	*Industrial Relations*
Johnstown Citizens Committee	this was a special group of "citizens" organized in 1937 during the Little Steel Strike.	*Industrial Relations*
Joint Council Board	an organization or group of delegates who represent a number of locals of the same national on international union in a particular locality or region.	*Industrial Relations*
Joint Wage Review Committee	during World War II procedures sometimes were adopted whereby joint committees of labor and management would review the work of employees after their probationary period.	*Industrial Relations*
Joint	A connection between two lengths of pipe or between a length of pipe and a fitting.	*Maintenance and Repair*
Joint Penetration	The minimum depth a groove weld extends from its face into a joint, exclusive of reinforcement.	*Maintenance and Repair*
Joint – Blast	(Blast Joint) For tubing strings in oil wells, 'Blast Joint' means to a piece of heavy walled specifically manufactured tubing joint, run in the tubing string and positioned along side a perforated zone section to resist external erosion caused by high velocity production fluid entering from that zone, thereby resisting wear.	*Petroleum Engineering*
Joint Agreement	sometimes used interchangeably with the term "Collective Bargaining Agreement" or with the term "Industry Wide Agreement". Generally, it is a contract signed by several unions with one employers, or several employers with one union, or several unions and several employers.	*Industrial Relations*
Joint and Survivor Annuity	an annual income which begins at retirement and continues for life with a provision that should the employee die while his annuitant is still living, predetermined payments or a predetermined rate will continue to the annuitant for life.	*Industrial Relations*
Joint Congressional Committee on the Economic Report	under the terms of the Full Employment Act of 1946, a special committee of Senators and Representatives is required to review the President's Annual Economic Report and report to the Congress.	*Industrial Relations*
Joint Control Tightening	See YIELD CONTROLLED TIGHTENING	*Maintenance*
Joint Electron Device Engineering Council	A JFET, or junction field-effect transistor, or JUGFET, is a FET in which the gate is created by reverse-biased junction (as opposed to the MOSFET which creates a junction via a field generated by conductive gate, separated from the gate region by a thin insulator). Example: A p-channel JFET would consist of a bar of p-type silicon with the "drain" at one end and the "source" at the other. Between these two terminals is some n-type material connected to a "gate". A positive voltage applied to the gate creates a "depletion field" which restricts current flow between the source and drain.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Joint Electron Device Engineering Council	A JFET, or junction field-effect transistor, or JUGFET, is a FET in which the gate is created by reverse-biased junction (as opposed to the MOSFET which creates a junction via a field generated by conductive gate, separated from the gate region by a thin insulator). Example - A p-channel JFET would consist of a bar of p-type silicon with the "drain" at one end and the "source" at the other. Between these two terminals is some n-type material connected to a "gate". A positive voltage applied to the gate creates a "depletion field" which restricts current flow between the source and drain.	*Electrical Engineering*
Joint Hiring Hall	Essentially, a central hiring or employment office which is administered by the union and employer or unions' and employers' organizations.	*Industrial Relations*
Joint Implementation (JI)	Agreements made between two or more nations under the auspices of the Framework Convention on Climate Change (FCCC) whereby a developed country can receive "emissions reduction units" when it helps to finance projects that reduce net emissions in another developed country (including countries with economies in transition).	*Energy*
Joint Industrial Council	sometimes known as work councils or Whitley Councils, named after a special British parliamentary committee known as the Whitley Committee, which made recommendations in 1917 leading to the establishment of joint consultation committees.	*Industrial Relations*
Joint Label	where more than one labor organization has taken part in the production of a particular commodity or product and a union label indicates the names of those labor organizations, it is generally known as a joint label.	*Industrial Relations*
Joint Production Committees	these are labor-management committees concerned primarily with increasing production during periods of emergency or war.	*Industrial Relations*
Joint Time Study	generally refers to efforts in time and motion study where both union and company representatives take part in timing the operation or job.	*Industrial Relations*
Joint	A divisional plane or surface that divides a rock and along which there has been no visible movement parallel to the plane or surface.	*Mining*
Joint, Rotary	A joint connecting lines which rotate in relation to each other. JOINT, SWIVEL - A joint which permits variable operational positioning of lines.	*Mechanical, Process, and Operations*
Joint-use facility	A multiple-purpose hydroelectric plant. An example is a dam that stores water for both flood control and power production.	*Energy*
Jointy-bass	shale possessing the same cleat as the underlying coal (N. Staffs).	*Mining*
Joist	Supports for fan decking, or for film fill modules.	*Facility Engineering*
Joist man	an old term for a man whose job was controlling the movement of tubs. (Mids.).	*Mining*
Jominy end-quench test	Standardized experiment for comparing the hardenability of different steels.	*Material Process*
Jones and Laughlin Steel Case	See: NLRB v. Jones & Laughlin Steel Co.	*Industrial Relations*
Josephson junction	Device consisting of a thin layer of insulator between superconducting layers.	*Material Process*

Term	Definition	*Industry*
Jost Effect	The name given to the reduction in the frictional resistance that occurs in a direction different to that in which slip is occurring. This effect is used in many applications including the removal of corks from bottles. If the cork is first rotated the force needed to pull the cork from the bottle is significantly reduced. It is also the fundamental reason why threaded fasteners experience self-loosening. Frictional resistance is first overcome in the transverse direction by slip occurring on the joint resulting in the frictional resistance in the circumferential direction reducing to a small value. The torque acting on the fastener in the loosening direction (as a result of its preload) that when coupled with the Jost Effect results in self-loosening occurring. The term is named after the Institute that completed research into this effect, the Jost Institute of Tribotechnology at the University of Central Lancashire in the UK.	*Maintenance*
Jostler	a hand-held device for slowing down tubs. (Mids.).	*Mining*
Joug or Jugg	an iron collar, fixed by a short chain to a wall, which was fastened around the neck of a disobedient miner as a form of punishment. 17th century. (Scot.).	*Mining*
Joule	A measurement of energy or work. In mechanical systems, it is the force of one Newton, moving an object a distance of one meter. In electronics, it's the same amount of energy, in electrical units. One joule is one watt of power, applied for one second (a watt-second); or a coulomb of electrical charge raised to a potential of one volt.	*Electrical Engineering*
Joule	A unit of work, energy, or heat. 1J (joule)=1 Nm) (Newton meter).	*Lubrication*
Joule (J)	The meter-kilogram-second unit of work or energy, equal to the work done by a force of one Newton when its point of application moves through a distance of one meter in the direction of the force; equivalent to 107 ergs and one watt-second.	*Energy*
Joule heating	Heating of a material due to the resistance to electrical current flow. A source of energy loss in ferromagnetic materials.	*Material Process*
Joule's Law	The rate of heat production by a steady current in any part of an electrical circuit that is proportional to the resistance and to the square of the current, or, the internal energy of an ideal gas depends only on its temperature.	*Energy*
Journal	A journal is that part of a rotor that is in contact with or supported by a bearing in which it revolves.	*General Engineering*
Journal	That part of a shaft or axle that rotates or angularly oscillates in or against a bearing or about which a bearing rotates or angularly oscillates.	*Lubrication*
Journal Bearing	A sliding type of bearing having either rotating or oscillatory motion and in conjunction with which a journal operates. In a full or sleeve type journal bearing, the bearing surface is 360¦ in extent. In a partial bearing, the bearing surface is less than 360¦ in extent, i.e., 150¦, 120¦, etc.	*Lubrication*
Journey	a train or set of tubs, dans or mine cars, all coupled together running on the haulage road.	*Mining*
Journeyman	a qualified, skilled tradesman who has completed a special apprenticeship program and mastered a specific skill or craft.	*Industrial Relations*
Journeyman Pay (Rate)	the wages or rate of pay given to a skilled craftsman or journeyman.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Journeymen Barbers, Hairdressers, Cosmetologists and Proprietors' International Union of America (AFL-CIO)	See: Barbers, Hairdressers, Cosmetologists and Proprietors' International Union of America; Journeymen (AFL-CIO)	*Industrial Relations*
Journeymen Horseshoers of the United States and Canada (AFL-CIO)	See: Horseshoers of the United States and Canada; International Union of Journeymen (AFL-CIO)	*Industrial Relations*
Journeymen Stone Cutters Association of North America (AFL-CIO)	See: Stone Cutters Association of North America; International Union of Journeymen (AFL-CIO)	*Industrial Relations*
Jowin in the shank	the action of a cage that either descends or stops too quickly causing the rope to stretch and spring back. The cage lurches and bounces in the shaft until the motion of the rope settles. (Scot.).	*Mining*
Jowl or Jowell	the noise made when beating on the face of the coal to test the thickness of the coal between two headings that are about to meet or checking the roof to see if it is safe by tapping it. (N East). Also called 'chap'.	*Mining*
Jowling	a sort of tattoo beaten with a hammer on the faces of two places or drifts that are near to holing or intending to hole into each other. (N. East)	*Mining*
Joy Silk Mills Case	case in which NLRB ordered an employer to bargain with a union even though the union lost a consent representation election conducted by the Board.	*Industrial Relations*
Joyce v. Great Northern Railway Case	a decision of the Supreme Court of Minnesota holding constitutional a law forbidding the use of the blacklist.	*Industrial Relations*
JPI	Japanese Petroleum Institute	*Petro-Chemical Abbreviations*
JRT	See: Job Relations Training	*Industrial Relations*
JSA	See: Stone Cutters Association of North America; Journeymen (AFL-CIO)	*Industrial Relations*
JSAE	Japanese Society of Automotive Engineers	*Petro-Chemical Abbreviations*
JST	Job Safety Training	*Industrial Relations*
Jud or Judd	a portion of the seam kirved, nicked, and ready for blasting, also called a 'vatish', 'vantage', 'advantage' or a 'lift'. Also a portion of a pillar in the course of being worked; or a work place. –see Jenkin.	*Mining*
Judge	a long 'L' shaped staff used for measuring the depth of a holing under the coal. The longest arm of the staff was pushed under the coal and the shorter arm was held vertically against the coalface.	*Mining*
Judicial Procedure of Unions	See: Internal Affairs of Unions	*Industrial Relations*
Jummer	see Tub (N. Staffs.).	*Mining*
Jump, Jump-up or Jump-down	the sudden up-throw or down-throw of a fault, or to raise boring-rods in a borehole and allow then to fall under their own weight thereby cutting their way through the strata; or to bore by hand, using a 'jumper'.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Jumper	A short length of conductor used to make a connection between terminals, around a break in a circuit, or around an instrument.	*Electrical*
Jumper dirt or Jumping muck	the dirt between the Black Bands and Lime Coal in the Stanley Main Seam, (Yorks.).	*Mining*
Jumper, Jumper drill or Jumping bar	a long iron bar (approx. 5ft long and ¾ inch diameter) with a chiseled shaped end used for boring holes for blasting. The bar could be used on its own without a hammer, the borer using the weight of the jumper to give it momentum, or one end could be struck with a sledge hammer when drilling in harder ground	*Mining*
Jumping a Claim	Relocating a claim on which the required work has been done.	*Mining*
Jumping switch	a self-acting switch in the rails that lifted the hutches up and over a small hitch in the roadway. (Scot.).	*Mining*
Junction	A region of transition between semiconductor layers, such as a p/n junction, which goes from a region that has a high concentration of acceptors (p-type) to one that has a high concentration of donors (n-type).	*Energy*
Junction Diode Sensor	The use of a PN junction on a silicon die for determining die temperature.	*Electrical Engineering*
Junk Batteries	This term usually refers to spent automotive lead-acid batteries, which are purchased by secondary lead smelters. The standard form of shipment is in the whole and undrained state to meet environmental regulations. Lead metal constitutes around half the weight of a junk battery. Other parts, including the plastic case, also are recycled.	*Metallurgy*
Junking	a passage through a pillar of coal. (N. East).	*Mining*
Jurisdiction, Union	the authority claimed by a union to represent certain groups of workers either in a specific type of work or occupation in a particular industry or industries or in a certain geographic area.	*Industrial Relations*
Jurisdictional Agreement	an understanding or pact between two or more organizations indicating some agreement as to the employees which each should have the authority to organize.	*Industrial Relations*
Jurisdictional Dispute	a disagreement, controversy, or conflict between two or more unions concerning the assignment of, or the right to perform, certain types of work.	*Industrial Relations*
Jurisdictional Guide, NLRB	a booklet prepared by the Division of Information of the National Labor Relations Board offering guidance to labor and management and other parties who may want to use the processes of the Act.	*Industrial Relations*
Jurisdictional Strike	a work stoppage resulting from a dispute over jurisdictional claims by two competing unions.	*Industrial Relations*
Jurisdictional utilities	Utilities regulated by public laws.	*Energy*
Jurisdictional	Utilities, ratepayers and regulators (and impacts on those parties) that are subject to state regulation in a state considering restructuring.	*Energy*
Jury Leave	See: Paid Jury Leave	*Industrial Relations*
Just a Bunch of Disks	An array of hard disks without a controller.	*Electrical Engineering*
Just In Time (JIT)	Used to describe a manufacturing process in which materials arrive as close as possible to the time required. Implementation of "just in time" techniques to reduce lot sizes, reduce setup times, slash work-in-process inventory, reduce waste, minimize non-value-added activities, improve throughput, and reduce	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	manufacturing cycle time. JIT production typically involves use of "pull" signals to initiate production activity, in contrast to work-order ("push") systems in which production scheduling typically is based on forecasted demand rather than actual orders. In many "pull" systems, a customer order/shipment date triggers final assembly, which in turn forces replenishment of component inventory at upstream stages of production.	
Just Wage	See: Living Wage, Standard of Living, Fair Day's Pay	*Industrial Relations*
Justiciable Arbitration	See: Arbitration, Justiciable	*Industrial Relations*
Just-in-Time	Also known as JIT. It is an inventory strategy that is employed to increase efficiency and decrease waste by receiving goods only as they are needed.	*Reliability Engineering*
Jute	Fiber of Corchorus, used to make twine and as fiber for certain plastics.	*Material Process*
JWU	Jewelry Workers' Union; International (AFL-CIO)	*Industrial Relations*
K	1. Kilo: Metric unit representing 1000. E.g.: 1kHz is a 1 kilohertz (1000 Hertz). Note that the k is always lowercase. In digital systems, "K" or "k" is often used to mean 210, that is, 1024. This is not well-standardized but it's usually apparent from context. On the Maxim site, we use upper-case K to mean 1024 and lower-case k to mean 1000. This standard is applied to new documents but older documents may use "k".	*Electrical Engineering*
K	1. Kilo - Metric unit representing 1000. E.g. - 1kHz is a 1 kilohertz (1000 Hertz). Note that the k is always lowercase. In digital systems, "K" or "k" is often used to mean 210, that is, 1024. This is not well-standardized but it's usually apparent from context. On the Maxim site, we use upper-case K to mean 1024 and lower-case k to mean 1000. This standard is applied to new documents but older documents may use "k".	*Electrical Engineering*
K Factor	The factor in the torque tightening equation: T=KDF where T is the fastener tightening torque in Newton meters, D is the fastener diameter in meters, F is the fasteners preload in Newtons and K is a factor whose value is often taken as 0.2. The formula gives the approximate tightening torque for standard fasteners used under normal conditions. The K factor is also known as the nut factor and the torque coefficient.	*Maintenance*
Kain coal	coal that was claimed by the coal owner as part, or whole, of the rent of the mine. (Scot.).	*Mining*
Kaizen	The systematic, organized improvement of processes by those who operate them, using straightforward methods of analysis. It is a "do-it-now" approach to continuous improvement.	*Quality*
Kaizen	A Japanese term that has been adopted into English over the past two decades. It refers to a philosophy or practices focusing on continuous improvement in manufacturing activities, business activities in general, and even life in general. The object is to continually seek perfection and to remove waste.	*Reliability Engineering*
Kaizen event	A concentrated effort, typically spanning three to five days, in which a team plans and implements a major process change or changes to quickly achieve a quantum improvement in performance. Participants generally represent various functions and perspectives and may include non-plant personnel.	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Kaizen Method	A term originating from Japanese industry relating to a philosophy for continual quality improvement (CQI). Individuals and teams feel empowered to take personal steps toward minimization of: Defective finished products and inventory (zero defects).	*Maintenance*
Kanal+	Kanal+ support allows a VCR to record audio and video signals captured by both the set top box (STB) and the television, without changing SCART connections on the back of the TV, STB, and VCR.	*Electrical Engineering*
Kanal+	Kanal+ support allows a VCR to record audio and video signals captured by both the set top box (STB) and the television, without changing SCART connections on the back of the TV, STB, and VCR.	*Electrical Engineering*
Kanban signal	A method of signaling suppliers or upstream production operations when it is time to replenish limited stocks of components or subassemblies in a just-in-time system. Originally a card system used in Japan, kanban signals now include empty containers and even electronic messages.	*Quality*
Kanch or Kench	see also Canch, Brushing and Ripping lip.	*Mining*
Kank	a twist or snarl in a rope. (Mids.); or another way of spelling 'Cank'. (Lancs.).	*Mining*
Kansas Court of Industrial Relations	until the passage of compulsory arbitration statutes by various state legislatures in 1947, the only prior state experience in the United States with compulsory arbitration was in the state of Kansas.	*Industrial Relations*
Kansas State Federation of Labor (AFL-CIO)	located at 503 New England Building, Topeka, Kansas.	*Industrial Relations*
Kaolin	An linear natural white pigment, also called Chine clay, consisting of hydrated aluminum silicate.	*Material Process*
Kaolinite	Silicate crystal structure.	*Material Process*
Kaplan turbine	A type of turbine that that has two blades whose pitch is adjustable. The turbine may have gates to control the angle of the fluid flow into the blades.	*Energy*
Kaplan-Meier Estimator	This is an estimator used as an alternative to the median ranks method for calculating the estimates of the unreliability for probability plotting purposes. It is also used to determine reliability estimates for nonparametric data analysis	*Reliability Engineering*
Karl Fischer Reagent Method	The standard laboratory test to measure the water content of mineral base fluids. In this method, water reacts quantitatively with the Karl Fischer reagent. This reagent is a mixture of iodine, sulfur dioxide, pyridine, and methanol. When excess iodine exists, electric current can pass between two platinum electrodes or plates. The water in the sample reacts with the iodine. When the water is no longer free to react with iodine, an excess of iodine depolarizes the electrodes, signaling the end of the test.	*Lubrication*
Karst Topography	Water moving through fractures in limestone, dissolving the rock, enlarging fractures, and creating caverns. Characterized by sinkholes, caves, and underground drainage.	*Petroleum Engineering*
Kauri	A fossil resin from New Zealand, the most used hard gum in high quality varnishes. The supply is diminishing and the price rising yearly.	*Material Process*
KBS	A Knowledge Based System is a system which attempts to use a database to solve problems by inference. These are sometimes called expert systems.	*Control Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Keeker	an inspector in charge of the hewers or other workmen underground, or an inspector at the pit top who examined the coal coming out of the pit. (N. East).	*Mining*
Keel	a vessel used to carry coals from the Staiths above the old bridge on the Tyne, and above the shipping berths on the Wear, to the ships. A keel is a broad flat vessel (on the Tyne sharp at both ends) carrying 8 Newcastle chaldrons or 21 tons 4 cwt.	*Mining*
Keep-Out Zone	The area on or near a CPU or GPU processor that the circuit board layout design cannot use, due to thermal management components, cooling, and mounting constraints.	*Electrical Engineering*
Keep-Out Zone	The area on or near a CPU or GPU processor that the circuit board layout design cannot use, due to thermal management components, cooling, and mounting constraints.	*Electrical Engineering*
Keeps	see Keps.	*Mining*
Kelf	the vertical height at the back of the under-cutting or holing at any time during the process of holing a stint.	*Mining*
Kelly	Hollow steel bar that is the main section of drill string to which the power is directly transmitted from the rotary table to rotate the drill pipe and bit.	*Petroleum Engineering*
Kelve	to beat out gas from a working place using a jacket or piece of cloth. (Ire.).	*Mining*
Kelvin	Temperature scale. Zero K is defined as absolute zero. 273.15K is 0 degrees C. Note that temperatures on the kelvin scale are called kelvins, not "degrees kelvin." The K symbol is uppercase and used without a degree symbol. The word "kelvin" in this context is not capitalized.	*Electrical Engineering*
Kelvin	Temperature scale. Zero K is defined as absolute zero. 273.15K is 0 degrees C. Note that temperatures on the kelvin scale are called kelvins, not "degrees kelvin." The K symbol is uppercase and used without a degree symbol. The word "kelvin" in this context is not capitalized.	*Electrical Engineering*
Kema plough	a scraper box type of plough used on longwall faces.	*Mining*
Kemp, et al. v. Division No. 241	a court case affecting employees of the Chicago Railway Company and the Amalgamated Association of Street and Electrical Railway Employees of America.	*Industrial Relations*
Kennel	a collier's name for cannel coal. (Lancs.) and (Mids.).	*Mining*
Kennell	the signal to finish work; or the time indicated by the signal.	*Mining*
Kenner	an expression meaning 'It is time to knock off working'. (N. East).	*Mining*
Kentlidge	additional weight applied to a 'free falling' shaft lining, during sinking, to overcome the friction between the lining and the strata.	*Mining*
Kentucky State	AFL-CIO - address 312 Armory Place, Louisville, Kentucky. Its weekly publication is the Kentucky Labor News	*Industrial Relations*
Kentucky Whip and Collar Co. v. Illinois Central Railway	the Ashurst–Sumners Act of 1935 provided that an effort should be made to limit the shipment and sale of prison-made goods.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Kentucky, Eastern	All mines in the following counties in Eastern Kentucky: Bell, Boyd, Breathitt, Carter, Clay, Clinton, Elliot, Estill, Floyd, Greenup, Harlan, Jackson, Johnson, Knott, Knox, Laurel, Lawrence, Lee, Leslie, Letcher, Lewis, Magoffin, Martin, McCreary, Menifee, Morgan, Owsley, Perry, Pike, Powell, Pulaski, Rockcastle, Rowan, Wayne, Whitley, and Wolfe.	*Energy*
Kentucky, Western	All mines in the following counties in Western Kentucky: Breckinridge, Butler, Caldwell, Christian, Crittenden, Daviess, Edmonson, Grayson, Hancock, Hart, Henderson, Hopkins, Logan, McLean, Muhlenberg, Ohio, Todd, Union, Warren, and Webster.	*Energy*
Kep	a level or gently sloping roadway, close to the shaft, on which the full tubs stood waiting to be wound up the shaft.	*Mining*
Keps	A pre-assembled nut and washer assembly (the washer is attached to the nut so that it won't fall off)- a trademark of ITW Shakeproof. The origin of the word came from ShaKEProof. The s on the end being acquired due to them being purchased in quantities usually greater than one.	*Maintenance*
Keps or Keeps	supports for the cage on it arriving at the surface or shaft bottom and at intermediate loading places, if there are any. Also called Cage props, Catches, Fans, Fallers or Shuts.	*Mining*
Kerf	the cut under the coal in mechanical coal-cutting.	*Mining*
Kerf	The undercut of a coal face.	*Mining*
Kernel	the seed of a grain plant	*Agriculture*
KernPrint. Engineering	The central area of any horizontal section of a wall, column, etc., within which the resultant forces of all compressive loads must pass if there is to be only compression at that point.	*Civil Engineering*
Kerosene	A light petroleum distillate that is used in space heaters, cook stoves, and water heaters and is suitable for use as a light source when burned in wick-fed lamps. Kerosene has a maximum distillation temperature of 400 degrees Fahrenheit at the 10-percent recovery point, a final boiling point of 572 degrees Fahrenheit, and a minimum flash point of 100 degrees Fahrenheit. Included are No. 1-K and No. 2-K, the two grades recognized by ASTM Specification D 3699 as well as all other grades of kerosene called range or stove oil, which have properties similar to those of No. 1 fuel oil. Also see Kerosene-type jet fuel.	*Energy*
Kerosene-type jet fuel	A kerosene-based product having a maximum distillation temperature of 400 degrees Fahrenheit at the 10-percent recovery point and a final maximum boiling point of 572 degrees Fahrenheit and meeting ASTM Specification D 1655 and Military Specifications MIL-T-5624P and MIL-T-83133D (Grades JP-5 and JP-8). It is used for commercial and military turbo jet and turbo prop aircraft engines.	*Energy*
Ketone	A compound containing the carbonyl group (CO) united with the carbon atoms of two hydrocarbon radicals.	*Material Process*
Ketone-alcohol (cyclohexanol)	An oily, colorless, hygroscopic liquid with a camphor-like odor. Used in soap making, dry cleaning, plasticizers, insecticides, and germicides.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Kettle	a barrel in which men used to ride in the shaft. (Scot.); or an iron or wooden barrel used to wind dirt or waste in shaft sinking. -see also Hoppit and Kibble.	*Mining*
Kettle	molten zinc-filled tank where the metallurgical bonding of zinc and steel takes place	*Materials Process*
Kettle bottom	A smooth, rounded piece of rock, cylindrical in shape, which may drop out of the roof of a mine without warning. The origin of this feature is thought to be the remains of the stump of a tree that has been replaced by sediments so that the original form has been rather well preserved.	*Mining*
Kettle Heat Exchanger	Steam circulating within a jacket transfers heat through the wall of the vessel.	*Industrial*
Kevils	the weight of coals sent out by the hewers over a specified period. (N. East).	*Mining*
Kevlar	A brand name for a certain type of carbon fiber, used in everything from driver's helmets to bodywork to bulletproof vests used by police. A very strong, expensive and lightweight material.	*NASCAR*
Key Job (or Key Personnel)	a general term to designate individuals in the plant operations who are responsible for the overseeing of operations or whose particular jobs are such that others are dependent on them.	*Industrial Relations*
Key performance indicator (KPI)	A measurable objective used by organizations to monitor progress towards a specific goal. Such measures are commonly used to define and evaluate an organization's performance against internal benchmarks or those of peer organizations.	*Electrical*
Key Performance Indicators	A Select Number Of Key Measures That Enable Performance Against Targets To Be Monitored.	*Plant Engineering*
Key Performance Indicators (KPI)	A select number of key measures that enable performance to be monitored against targets. The KPI will indicate how well the business is doing at attaining its goals. In a manufacturing quality scenario, this may be the amount of scrap or rework that gets metered. In a service quality scenario, such as an insurance company, this may be the open inventory of unprocessed claims. In brand management, market share in itself and in comparison with competing brands is sure to be relevant. In logistics, on-time deliveries, empty return loads, or missing items are candidate indicators.	*Maintenance*
Key prop	an adjustable rigid prop with a wedge-shaped key which was hammered in to tighten it. Known by the trade name of the manufacturer 'Bathgate', or colloquially as the 'thumb buster' or 'finger trapper'. The prop was also called the 'duckbill.	*Mining*
Key Stop	A method of restricting the travel of a ball valve from fully open to fully closed. The stem key bears against the ends of an arc machined in the adaptor plate.	*Mechanical*
Key words	A string of words attached to an article to be used to index or code the article in a database. See also: MEDLINE, MeSH headings (Medical Subject Headings)	*Quality Engineering*
Keyboard Video Mouse	Defacto standard for the three cables used on a typical cpr—One for the keyboard; one for the monitor (video); one for the mouse. Also - A	*Electrical Engineering*
Keyphasor	A signal used in rotating machinery measurements, generated by a sensor that observes a once-per-revolution event. Used in phase measurements for analysis and for balancing. Bentley-Nevada trade name.	*Reliability Engineering*

Term	Definition	Industry
Keyway	A depression or slot carved into rock to provide a bond or anchorage for a structure, as a dam.	*Civil Engineering*
kg	Kilograms	*Oil Analysis*
kHz	Thousand Hertz (cycles per second)	*Oil Analysis*
Kibble	Iron Cornish bucket used to hoist ore and miners to the surface.	*Mining*
Kibble, a wooden or metal tub	The early ones were usually barreled shaped to prevent them tipping while being wound in the shaft. In later years they were of a square box shape with a capacity of about 20 gallons, used in conveying waste and water. Also used in shaft sinking. -see also Hoppit, Kettle and Bowk.	*Mining*
Kibbles	small coal (S. Staffs.).	*Mining*
Kick	An intrusion of pressurized gas into the wellbore that causes drilling fluid to be displaced. It can be the precursor to a blowout.	*Petroleum Drilling*
Kick	When the formation pressure exceeds the pressure exerted by the mud column.	*Petroleum Drilling*
Kick	A well is said to "kick" if the formation pressure exceeds the pressure exerted by the mud column.	*Petroleum Drilling*
Kickback	a form of extortion which may be perpetrated either by labor leaders or by employers.	*Industrial Relations*
Kickoff	A planned deviation from vertical, executed at the bottom of the wellbore.	*Petroleum Drilling*
Kick-ups	a hand operated tippler for emptying tubs. -see Tumblers.	*Mining*
Kiding	holing or under-cutting the coal. (N. East).	*Mining*
Kieselguhr	See Diatomaceous earth.	*Material Process*
Kilkenny	see Anthracite.	*Mining*
Kill	If a well is experiencing a kick, or the early stages of a blowout, the company may need to "kill the well" This may involve pumping heavier drilling mud down the hole or other measures to achieve a balanced mud situation again.	*Petroleum Drilling*
Kill	In drilling, to control a kick by taking preventative measures. In production, to stop a well from producing oil and gas in order to recondition the well.	*Petroleum Drilling*
Kill (a well)	To prevent the threatened blowout of a well or to stop a blowout in progress, usually accomplished by the pumping of heavy fluids under pressure into the wellbore to overbalance (exceed) the formation pressure.	*Petroleum Engineering*
Kilo	Thousand	*Oil Analysis*
Kilogram - meter per second	See Newton.	*Mechanical, Process, and Operations*
Kilopascals (kPa)	Unit of air pressure; in metric terms it takes 6.895 kPa to equal 1 psi.	*Mechanical Engineering*
Kilopond	A unit of force used in Germany and equal to I KG(f) (kilogram, force).	*Mechanical, Process, and Operations*
Kilovolt ampere (kVA)	The practical unit of apparent power, which is 1,000 volt-amperes. The volt-amperes of an electric circuit are the mathematical products of the volts and amperes of the client.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Kilovolt amperes (kva)	1000 volt amps.	*Electrical*
Kilovolt-Ampere (kVa)	A unit of apparent power, equal to 1,000 volt-amperes; the mathematical product of the volts and amperes in an electrical circuit.	*Energy*
Kilowatt (kw)	Equivalent to 1000 watts.	*Electronic Process*
Kilowatt (kW)	The electrical unit of power equal to 1,000 watts.	*Energy*
Kilowatt Hour (kwh)	1000 watt hours. Kilovolt amperes (kva): 1000 volt amps.	*General Engineering*
Kilowatt Hour (kwh)	1000 watthours. Kilovolt amperes (kva) - 1000 volt amps.	*Electronic Process*
Kilowatt-electric (kWe)	One thousand watts of electric capacity.	*Energy*
Kilowatt hour (kWh)	A measure of electricity defined as a unit of work or energy, measured as 1 kilowatt (1,000watts) of power expended for 1 hour. One kWh is equivalent to 3,412 Btu.	*Energy*
Kilowatt-hour (kWh)	The standard unit of measure for electricity. The total number of kilowatt-hours charged to your bill is determined by your electricity use. Specifically, a Kilowatt Hour is defined as the unit of energy that is expended in one hour by one kilowatt of power.	*Energy*
Kilowatt-Hour (kWh)	The basic unit of electric energy equal to one kilowatt of power supplied to or taken from an electric circuit for one hour.	*Energy*
Kimberlite	A variety of peridotite; the most common host rock of diamonds.	*Mining*
Kind	a term meaning soft or easily dug or drilled.	*Mining*
Kinematic Viscosity	Measure of a fluid's resistance to flow under gravity at a specific temperature (usually 40°C or 100°C).	*Lubrication*
Kinematic viscosity	the ratio of dynamic viscosity to mass density. Kinematic viscosity is a measure of a fluid's resistance to gravity flow - the lower the kinematic viscosity, the easier and faster the fluid will flow.	*Chemical*
Kinetic energy	Energy available as a result of motion that varies directly in proportion to an object's mass and the square of its velocity.	*Energy*
Kinetic energy	Energy that a substance or body has by virtue of its mass (weight) and velocity. L	*Mechanical, Process, and Operations*
Kinetics	Science of time dependent transformations.	*Material Process*
Kingle	a very hard, often limey (calcareous) sandstone; ferruginous kingle is a hard irony sandstone. Also called 'Kennel'. (Scot.).	*Mining*
Kink	A unique deformation of a wire rope caused by a loop of rope being pulled down tight. It represents irreparable damage to and an indeterminate loss of strength in the rope.	*Wire Rope & Cable*
Kip	a bucket used in the shaft for lowering bulky or odd-shaped material, which would not fit in the cage. (Mids.); or a level or gently sloping roadway running outbye at the end of a haulage road. Here the full tubs would stand so that they could be run down to the shaft bottom under gravity to be loaded into the cage. Also known as a 'kep'.	*Mining*
Kirf or Kirv	to hole. (N. East).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Kirner	a hand jumper or boring bar for boring shot holes. (Scot.).	*Mining*
Kirning	boring a shot hole with a kirner. (Scot.).	*Mining*
Kirving	the holing or wedge shaped excavation made at the bottom of the coal by the hewer. Kirving was the same as holing. (N. East). This term was generally applied to undercutting shorter undercuts in pillar and stall working. –see also Nick.	*Mining*
Kirvings	small coal and dust produced when under-cutting the coal by hand or machine.	*Mining*
Kislar-aga	A high-ranking eunuch (under sultan and grand vizier) in the Ottoman Empire	*Breakroom*
Kist	a workman's tool box, also a meeting place. (N. East); or a cabin in the pit. (Lancs.), (N. East); or a wooden water tank mounted on wheels. (Scot.).	*Mining*
Kit	a wooden vessel of any size used for carrying water in the mine. (Derbys.).	*Mining*
Kitchens	coal prepared and sold expressly for cooking purposes in ranges, stoves etc.	*Mining*
Kittle	dangerous or risky. (Scot.).	*Mining*
Kitty	a length of straw about 4 inches long filled with gunpowder used as a fuse in blasting. It was placed in the 'pricker hole', which was open to the cartridge or shot. The end of the kitty nearest to the cartridge was closed, with the outer end open. When a light was applied to the kitty it would move along the pricker hole like a miniature rocket and ignite the powder. (N. East).	*Mining*
Kitty litter	This term describes two things: the absorbent powder used to soak up fluid spills on the track (often real kitty litter) and the gravel runoff areas on the outside of many road course turns that help slow cars that go off the track.	*NASCAR*
KM	See Knowledge Management.	*Maintenance*
Knee Brace	A structural brace at an angular position to another structural component for the purpose of providing support and/or stability of the conveyor frame.	*Equipment*
Knife Claims	Minerals dug from crevices with knife, or spoon.	*Mining*
Knife Coating	An adjustable knife or blade controls.	*Engineering Physics*
Knights of Labor	The Noble Order of the Knights of Labor had its origin in Philadelphia in 1869 through the efforts of Uriah Smith Stevens, a tailor, who organized the Garment Cutters in Philadelphia.	*Industrial Relations*
Knights of Saint Crispin	an organization of skilled craftsmen in the shoe industry organized in large part to protest the introduction of shoe making equipment which would lead to the loss of their jobs.	*Industrial Relations*
Knob	a small support for the roof (S. Staffs.).	*Mining*
Knobber	one who gets knobs of coal off a face with a view to straightening it for efficient machine coal cutting.	*Mining*
Knock	to signal, as for example with bell signals.	*Mining*
Knock on	to give a signal for the haulage rope to start. (Lancs.).	*Mining*
Knock out	to give a signal for the haulage rope to stop. (Lancs.).	*Mining*
Knocked Off	the colloquial for being discharged or sometimes referred to as being "canned"	*Industrial Relations*
Knocker	another name for the 'onsetter'. (Lancs.), (Wales).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Knockings	signals made by knocking on the coal (S. Wales).	*Mining*
Knocking-up	When the banksman beats on the 'runner', the boards that cover the shaft, to signal the men below it is time to come up (S. Staffs.).	*Mining*
Knock-off	the point on the haulage road where the train or set was disconnected from the rope, or where a jockey was set.	*Mining*
Knockout Bar	A bar which holds and actuates ejector pins(s) in mold. Used in ejection of molded piece from mold.	*Engineering Physics*
Knockout drum	A vessel wherein suspended liquid is separated from gas or vapor.	*Petroleum Engineering*
Knockout Pin	A pin that ejects a molded piece the amount of coating material laid down on a moving from the mold web.	*Engineering Physics*
Knowledge Management (KM)	The whole of initiatives and instruments that support creation and flow of knowledge through an organization. This includes initiatives from human resources, information technology, and quality processes. Examples are job rotation, partnering, yellow pages, best practice databases, etc.	*Maintenance*
Knowledge-Based Systems (KBS)	A wide range of software systems that support decision making for knowledge intensive tasks (i.e. failure diagnosis). The system is based on knowledge that resides in heuristic rules, cases, empirical test results, or partly physical models.	*Reliability Engineering*
Knudsen cell	See Effusion cell.	*Material Process*
Knurl Thumb Adj. Nut	A nut used on accumulating conveyors to adjust the pressure required to drive the product, may be turned with-out the use of tools.	*Manufacturing*
Koepe	a system of winding that dispenses with winding drums and has pulleys only. Only one winding rope is used, which is attached to both cages.	*Mining*
kow	see octanol/water partition coefficient.	*Chemical*
KPI	See Key Performance Indicators	*Management*
ksi	(Abbreviation) One thousand pounds per square inch used to indicate material (i.e. steel) strength can also	*Petroleum Engineering*
Kuder Preference Record	one of the interest tests used in personnel counseling.	*Industrial Relations*
Kuwait (1960-present)	Kuwait (1960-present)	*Energy*
kVa	See Kilovolt-Ampere	*Energy*
KVA	Kilovolt amperes (1000-volt amps).	*Electronic Process*
KVM switch	A switch box used to connect one KVM to multiple computers.	*Electrical Engineering*
KVM, Keyboard Video Mouse	Defacto standard for the three cables used on a typical cpr: One for the key-board; one for the monitor (video); one for the mouse. Also: A	*Electrical Engineering*
kw	Kilowatt	*Electrical Engineering*
kWe	See kilowatt-electric	*Energy*
kWh	See kilowatt hour	*Energy*
whir	Kilowatt hour	*Electrical Engineering*
Kevil	a specific work place. (N. East).	*Mining*

Term	Definition	*Industry*
Kyevilin day	changing the place of work, usually by lottery or an order, on a certain day. (N. East). –see Cavills.	*Mining*
Kyle, a coil of rope. (Scot.).	Kyle, a coil of rope. (Scot.).	*Mining*
Kyoto Protocol	The result of negotiations at the third Conference of the Parties (COP-3) in Kyoto, Japan, in December of 1997. The Kyoto Protocol sets binding greenhouse gas emissions targets for countries that sign and ratify the agreement. The gases covered under the Protocol include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons (HFCs), per fluorocarbons (PFCs) and sulfur hexafluoride.	*Energy*
L	L	*Forestry*
--L--	--L--	*Petroleum Drilling*
L7, L7M	ASTM specification for bolting, A320 Grade L7, specified in API Spec 6A for low temperature bolting. L7M is L7 bolting modified with controlled hardness in the (impact tested) (and a GR4M nut) for sour service (NACE) exposed bolts.	*Petroleum Engineering*
Labe plot	A scatter plot of the risk in the experimental group against the risk in the control group. Ideally the size of the plotting symbols should be proportional to the size of the trials. Trials in which the experimental treatment had a higher risk than the control will be in the upper left of the plot, between the y axis and the line of equality. If experimental is no better than control then the point will fall on the line of equality, and if the control treatment has a higher risk than the experimental treatment then the point will be in the lower right of the plot, between the x axis and the line of equality.	*Quality Engineering*
Label Trades	those occupations which generally use the union label on their products.	*Industrial Relations*
Label, Union	See: Union Label	*Industrial Relations*
Labels	Labels can come in all widths, sizes and colors. They can also be made out of different materials such as wax, resin and Valero. This allows the label to be used in different environments such as humid climates, exterior warehouses and low level lighted areas. In order to purchase labels, it is a good idea to know the "core" size and the inches between each label. Labels are purchased per case.	*Gears*
Labor	this is the generic term which refers to the human effort or exertion applied to the production of goods and services toward an economic end and for which some compensation or payment is received.	*Industrial Relations*
Labor Attaches	these are special agents of the State Department whose functions parallel in part those of the commercial attache.	*Industrial Relations*
Labor Agreement	the phrase is generally used as the equivalent of the collective bargaining agreement, the collective agreement, the union contract, or the labor-management contract.	*Industrial Relations*
Labor Arbitration	See: Arbitration, Labor	*Industrial Relations*
Labor Attorney	the term generally applied to a lawyer who specializes in industrial and labor legislation and who works for either the union or an employer in handling cases before the various labor agencies, such as the National Labor Relations Board or the state labor agencies.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Labor Audit	a term which is not used widely today, but in the early part of the century referred to the general review of the personnel policy of a particular company or organization.	*Industrial Relations*
Labor Banking	during the early 1920's more specifically from 1920 to 1926, there was widespread interest in the establishment of labor banks, that is, banks owned or controlled by a union or cooperating unions.	*Industrial Relations*
Labor Bureau	essentially an agency designed to reduce unnecessary unemployment resulting essentially from lack of information about the labor market.	*Industrial Relations*
Labor Camp	in current usage applies to those facilities made available by some labor unions for vacation opportunities and camps where labor union officials, union members and their families can take vacations, and where it frequently is possible for them to get together to discuss various problems.	*Industrial Relations*
Labor Code	the term is generally applied to the total collection of laws on the statute books as well as administrative regulations dealing with industrial relations.	*Industrial Relations*
Labor Conscription	generally refers to an action or law which requires compulsory labor service.	*Industrial Relations*
Labor Content	a measure designed to determine the relative amount of the cost of the product which is allocable to labor as between overhead plant costs of machinery and equipment and the costs actually allocated for the payment of labor.	*Industrial Relations*
Labor Contract	sometimes referred to as a labor or collective bargaining agreement, which results from the negotiation or collective bargaining process.	*Industrial Relations*
Labor Convention	this is generally a meeting of the elected delegates of local unions of a national union throughout the country held annually or biennially to determine the policy for the union for the ensuing year or years.	*Industrial Relations*
Labor cooperation	the generally refers to efforts by labor and management to cooperate in meeting various problems within the plant.	*Industrial Relations*
Labor Costs	this term generally applies to the total bill, sometimes divided between direct labor costs, wages, and other payments, and indirect costs which apply throughout the plant but which may not be specifically allocable.	*Industrial Relations*
Labor Coupon	a form of exchange designed for certain socialist communities which would utilize it instead of the normal gold or monetary exchange.	*Industrial Relations*
Labor Day	this is a legal holiday celebrated the first Monday of September in almost all of the states of the United States in honor and interest of working men and women.	*Industrial Relations*
Labor Department, U.S.	one of the executive departments of the United States government headed by a Secretary who is a member of the President's Cabinet.	*Industrial Relations*
Labor Dispute	the term generally involves any controversy dealing with the terms, tenure, or conditions or employment, or those concerning the association or representation of persons in negotiating, fixing, maintaining or changing the terms and conditions of employment regardless of "whether the disputants stand in the proximate relation of employer and employee".	*Industrial Relations*
Labor Disunity	a general term which seeks to describe the difficulties within the labor union movement leading to discord and difficulty.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Labor Economics	a division of the general area of economics which is concerned primarily with the employment situation and the relation of the worker and his job.	*Industrial Relations*
Labor Education	this term is generally applied to the area of worker education which in its early application was designed to provide the workers with knowledge and additional skills which might be directed toward a particular vocational program or in the development of an apprenticeship program, or in immigrant or foreign communities, directed toward citizenship programs and greater understanding of American political and social institutions.	*Industrial Relations*
Labor Efficiency	See: Efficiency of Labor	*Industrial Relations*
Labor Espionage	See: Espionage, Anti-Union Practices, LaFollette Committee. Pinkerton Detective Agency.	*Industrial Relations*
Labor Exchange	this is sometimes known as an employment agency.	*Industrial Relations*
Labor Exchange Notes	these are sometimes referred to as labor coupons. They were designed as a form a currency in cooperative societies and were suggested, by Robert Owen among others, in 1829.	*Industrial Relations*
Labor Flux	this term is the equivalent of the term more frequently used in American parlance, namely, labor turnover.	*Industrial Relations*
Labor Flux Rate	this is the same as the labor turnover rate and is measured by the addition of accessions plus separations divided by the full time working force.	*Industrial Relations*
Labor Force	this term is the one generally used by the census and defines by it for each of the censuses taken.	*Industrial Relations*
Labor Force Time Lost	an attempt to measure the man hours not used or utilized because or unemployment and involuntary part-time work.	*Industrial Relations*
Labor Gazette	the official publication of the Canadian Department of Labour published since 1900.	*Industrial Relations*
Labor Government	a reference generally to a labor party which is broadly representative of the labor movement or trade union movement in the country which has obtained political control of the government.	*Industrial Relations*
Labor Grade	in a job evaluation or wage analysis procedure, it is generally necessary after reviewing the job content, skill, experience, education and other job requirements, to place occupations, or groups which have approximately equal value into the same labor grade or job class.	*Industrial Relations*
Labor History	the term generally applied to any systematic recording of developments which have taken place during the history of the labor movement.	*Industrial Relations*
Labor Hour	a term designed to describe the amount of work actually performed by an individual during one-hour period.	*Industrial Relations*
Labor Immobility	this is an attempt to explain the lack of mobility or the unwillingness and sometimes inability of an individual to move from one labor market area to another which might possibly provide better terms and conditions of employment.	*Industrial Relations*
Labor Injunction	See: Injunction, Anti-Injuction Act	*Industrial Relations*
Labor Inspection	a procedure in which individuals, usually attached to a labor enforcement agency within a state or elsewhere, determine whether or not certain conditions established under state safety or other laws are being carried out.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Labor Inspector	generally, the individual who has the responsibility for determining whether or not provisions of a particular statute or regulation are being properly enforced in a plant or other place of work.	*Industrial Relations*
Labor Institute	a term frequently used to describe either a particular center where industrial relations programs are carried out or directed in large part toward the trade unions and toward labor leadership.	*Industrial Relations*
Labor Journalism	refers generally to the labor press and the program of individual unions concerned with procedures for presenting their stories to the community.	*Industrial Relations*
Labor Law Journal	a monthly publication issued by the Commerce Clearing House, which is devoted entirely to articles dealing with the developing problems in labor law and legislation.	*Industrial Relations*
Labor Leader	a designation usually assigned to an individual who is devoting his full time to the labor movement, or one who has achieved prominence as a person active in leading either a major local union. A national union, or a person active as a leader of a parent organization.	*Industrial Relations*
Labor Legislation	See: Labor Law	*Industrial Relations*
Labor Lobby	a term applied to those groups of trade unionists or individuals assigned to the state or federal legislatures to attempt to influence action and support of special labor legislation or members of their organization.	*Industrial Relations*
Labor Lobbying	the activities by those assigned to state and federal legislatures to work with legislators, or attempts to obtain legislation favorable to the welfare of labor unions or their members.	*Industrial Relations*
Labor Maintenance	the activities by those applied to procedures or policies designed to maintain a stable labor force.	*Industrial Relations*
Labor Management	this term is sometimes used as the equivalent of personnel management or the activity involved in the operation of a personnel department which generally covers the areas to selection, assignment, training, and the most effective utilization of the labor force.	*Industrial Relations*
Labor Management Conference (1945)	although other conferences have been held involving labor and management, the one which is generally known as the Labor-Management Conference applies to the one convened in November 1945 by President Truman, following the end of the National War Labor Board.	*Industrial Relations*
Labor Manager	the labor manager or personnel director generally has the prime responsibility for the organization and direction of the working force.	*Industrial Relations*
Labor Market	a concept used in labor economics to indicate the relation or interplay between the supply and demand for labor in a particular area.	*Industrial Relations*
Labor Market Area	the "market" is generally considered to be an area or region where the supply and demand for a particular commodity or for a given grade of commodity prevail.	*Industrial Relations*
Labor Mobility	Labor mobility is occasionally referred to as "labor flux" of "labor turnover".	*Industrial Relations*
Labor Monopoly	the term applied to the control which labor unions have over the supply of labor and the labor market in order to obtain wages and working conditions favorable to a particular group of employees.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Labor Motivation	those factors or incentives which have th capacity to bring out the greatest productive effort or the greatest service from those engaged in production or service.	*Industrial Relations*
Labor Movement	this is a generally inclusive term designed to bring within its scope the variety or organized group action, essentially economic in its nature but which may also include political activity.	*Industrial Relations*
Labor Organization	a group of workers in a voluntary association combined for the common purpose of protecting or advancing that wages, hours, and working conditions of their members.	*Industrial Relations*
Labor Organizer	a person generally on the payroll of a union, usually the international union, who is assigned to a particular plant or region to attempt to bring employees of a particular company or region into a labor union.	*Industrial Relations*
Labor Peace	See: Industrial Peace	*Industrial Relations*
Labor Per Product (LPP/LPU)	Also known as Labor Per Unit, is calculated using vague estimates of material, Direct Labor, and overhead cost. The cost per unit is normally used for external reporting only, not management decision. Example: Direct labor (operator) X 30% fringe benefits = LPP = LPU.	*Maintenance*
Labor Piracy	sometimes referred to as labor pirating. This is a procedure followed by some employers who steal from other employers, generally in the same field of work, highly skilled individuals and technical staff.	*Industrial Relations*
Labor Turnover Rate	A measure of a plant's ability to retain workers, expressed as a percentage of the production workforce that departs annually-or an annualized rate of employee departures. High turnover rates often indicate employee dissatisfaction with either working conditions or compensation.	*Maintenance*
Labor, Common	the term refers to individuals who usually perform unskilled, manual work which involves relatively simple duties and which can be learned within a short period of time and also does not require substantial judgment or special skills.	*Industrial Relations*
Labor, Dilution of	the term generally applies to the breaking down of skilled or semi-skilled jobs into separate operations which dilute the particular skill and permit the job to be performed by individuals who are less skilled.	*Industrial Relations*
Labor, Horizontal Movement of	a term used to describe the shift or movement of individuals from one company one from one employer or firm to another, but continuing to perform the same type or class of work.	*Industrial Relations*
Labor, Indirect	See: Indirect Labor	*Industrial Relations*
Laboring	An engine that is struggling to keep turning due to lack of revs. or the use of too high of a gear.	*Mechanical Engineering*
Labor-Management Citizens Committee	this usually refers to a tripartite group consisting of public representatives and representatives of labor and management whose prime function is directed toward the handling of labor-management disputes.	*Industrial Relations*
Labor-Management Committee	the committee which generally consists of the representatives of management and employees whose prime concern is with the most effective use of materials and manpower in the plant.	*Industrial Relations*
Labor-Management Cooperation	this involves, essentially, joint efforts by labor and management to develop areas of agreement.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Labor-Management Dispute	See: Labor Dispute, Industrial Disputes, Work Stoppage, Anti-Injunction Act	*Industrial Relations*
Labor-Management Production Committees	production was one of the key contributing factors in the winning of the Second World War.	*Industrial Relations*
Labor-Management Relations	See: Industrial Relations	*Industrial Relations*
Labor-Management Relations Act of 1947	this is the formal title of the act that is popularly known as the Taft–Harley Act	*Industrial Relations*
Labor-Management Relations Committee	the term is generally applied to the committee provided by the Labor-Management Relations Act of 1947, known as the Congressional Joint Committee on Labor-Management Relations.	*Industrial Relations*
Labor-Management Reporting and Disclosure Act of 1959	this statute also is known as the Landrum-Griffin Act.	*Industrial Relations*
Labor-Management Understanding	See: Labor-Management Cooperation	*Industrial Relations*
Labor Notes	See: Labor Coupon	*Industrial Relations*
LabView	A programming language (National Instruments) for developing data acquisition software.	*Reliability Engineering*
LAC	lowest additive concentration	*Petro-Chemical Abbreviations*
Lac	A resin of which shellac is the commercial form.	*Material Process*
Lacing	Means used to attach the ends of a belt segment together.	*Manufacturing*
Lacings	split posts secured horizontally between vertical posts to strengthen and tie them together (N. Staffs.); or strips or light bars of wrought iron bent over at the ends and wedged tight between the bars and the roof. In place of wooden bars or headpieces, wrought-iron railway rails were used.	*Mining*
Lacquer	A liquid composition containing cellulose esters or ethers as the basic film forming ingredients. Lacquer driers rapidly by solvent evaporation.	*Material Process*
Lactic acid (CH3CHOHCOOH)	Colorless hygroscopic syrup. Reacts with glycerol to form an alkyl resin used as a catalyst for the polymerization of vinyls added with glycerin to phenolics to aid hardening and transparency.	*Material Process*
Ladder	Typical rung-and-rail device providing access on outside or inside of the tower.	*Facility Engineering*
Ladder cage	Protective cage parallel with and connecting to a vertical access ladder.	*Facility Engineering*
Ladder pit	a shallow mine to which access is gained by ladder/s fastened to the side of the shaft.	*Mining*
Ladle Metallurgy Furnace (LMF)	An electric arc furnace to melt scrap under highly-basic oxidizing slag. To control residue levels, all charge and melting parameters are computer calculated.	*Steel*
Lag	1. A time delay between the output of a signal and the response of the instrument to which the signal is sent. 2. A time relationship between two waveforms where a fixed reference point on one wave occurs after the same point of the reference wave.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Lag Time	Lag time is the amount of time after the dead time that the process variable takes to move 63.3% of its final value after a step change in valve position. Lag time is also called a capacity element or a first order process. Very few real processes are pure lag. Almost all real processes contain some dead time.	*Process Control*
Lagged Pulley	A pulley having the surface of its face crowned with a material to provide for greater friction with the belt.	*Equipment*
Lagging	Lagging insulation is usually a fiberglass or other rugged sleeving fabric with a built in adhesive. It is used as a thermal protection on steam pipes and in other high heat environments. Pipe lagging is usually protected from physical damage by cylindrical steel muffs. See also Insulation.	*Industrial*
Lagging, Lagging boards and Lags	long pieces of timber, closely fitted together and fastened to the oak curbs to form part of a drum, used when sinking through soft ground; or to secure the roof and sides behind the main timber or steel supports with short lengths of timber (also called 'Slabs' if placed behind posts or 'Runners' if behind roof bars (N. Staffs.); or the secondary support by (corrugated) steel sheets, or concrete slabs between the main roadway supports.	*Mining*
Lagoon	An artificial pool for storage and treatment of polluted or excessively hot sewage, industrial waste, etc.	*Civil Engineering*
Laid-in	When a colliery had ceased working and was being dismantled it was said to be 'laid-in'. (N. East).	*Mining*
Laid-out	tubs of coal forfeited by the hewer as having excess stone or shale content. (N. East).	*Mining*
Laigh	a low roof in a seam. (Scot.).	*Mining*
Laigh doors	the lowest of two or more landings in a shaft. (Scot.).	*Mining*
Light scaffold	an area at the surface level where men and materials are loaded. (Scot.).	*Mining*
Lam or Lamb	a kind of fireclay. (Wales).	*Mining*
Lambskin	a type of inferior anthracite sold under the name 'Lambskin' in the Swansea area of South Wales.	*Mining*
Lameskirting	widening, by cutting off coal from the side of the roadways in order to gain more room. Also a method of gaining a tub or two of easily worked coal. An action classed as fraud by the owners. (N. East). -see also Pillar robbing.	*Mining*
Laminar Flow	Fluid flow in a pipe is usually considered laminar if the Reynolds number is less than 2000. Depending upon many possible varying conditions, the flow may be laminar at a Reynolds number as low as 1200 or as high as 40,000; however, such conditions are not experienced in normal practice.	*Maintenance and Repair*
Laminar (flow)	A condition where the fluid particles move in continuous parallel paths. Stream-line flow.	*Mechanical, Process, and Operations*
laminar composites	composites that are made by altering the layering of different materials	*Physics*
Laminar Flow	Streamlined flow of a fluid where viscous forces are more significant than inertial forces, generally below a Reynolds number of 2000.	*Electronic Process*

Term	Definition	*Industry*
Laminar Flow	The movement of one layer of fluid past or over another layer without the transfer of matter from one to the other. Laminar flow in injection molding is achieved by solidifying the layer in contact with the mold surface. This acts as an insulating tube through which material can flow to fill remainder of cavity. This process is essential to mold surface duplication.	*Engineering Physics*
Laminar particles	Particles generated in rolling element bearings which have been flattened out by a rolling contact.	*Oil Analysis*
Laminate	To unite sheets of material by a binder, usually with heat and pressure. Fiber reinforced composite structure in which woven fabric is layered with the matrix.	*Material Process*
Laminated wood	Term frequently misused, sometimes interchange ably with plywood. In general, however, the distinction is that in laminated wood the grain of the adjacent layers is parallel, in plywood, adjacent layers have cross grains.	*Material Process*
Lamination	Any layer in a stack of sheet materials.	*Material Process*
Lamings	the collier's name for accidents of any description to men or lads working in or about the mine. (N. East).	*Mining*
Lamp	A term generally used to describe artificial light. The term is often used when referring to a "bulb" or "tube."	*Energy*
Lamp cabin	- see also Lamp station and Lamp room.	*Mining*
Lamp station	a designated place underground in a safety lamp mine, usually in the intake airway. The lamp stations are the only places underground where a flame safety lamp can be opened and relit.	*Mining*
Lampman	The man employed at the mine to clean and maintain the colliers' lamps. He is usually responsible for booking the time the men enter and leave the mine. Also called the 'Lamp-keeper'. (N. East).	*Mining*
Lamproom	The surface building at a mine where the electric and flame safety lamps are stored, charged and maintained. Also known as the 'Lamp Cabin'.	*Mining*
Lamprophyre	An igneous rock, composed of dark minerals, that occurs in dykes; sometimes contains diamonds.	*Mining*
LAN	Local Area Networks are used to link up computers. The best known protocol for LANs is Ethernet.	*Control Engineering*
Lanara	The generic term for casein fiber.	*Material Process*
Lancashire Method	a method of working coal that was used to work moderately inclined seams. A panel was split into pillars by driving roadways to the boundary then the pillars would be extracted on the retreat by a longwall face.	*Mining*
Land	The portion of a mold which provides the separation or cutoff of the flash from the molded piece.	*Material Process*
Land	1. The horizontal bearing surface of a semipositive or flash mold by which excess material escapes. 2. The bearing surface along the top of the flights of a screw in a screw extruder. 3. The surface of an extrusion die parallel to the direction of melt flow. 4. The mating surfaces of any mold, adjacent to the cavity depressions, which prevent the escape of material.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Land use	The ultimate uses to be permitted for currently contaminated lands, waters, and structures at each Department of Energy installation. Land-use decisions will strongly influence the cost of environmental management.	*Energy*
Land weight	the pressure of the surface ground caused by subsidence. (Lancs.).	*Mining*
Lander	the man who worked at the top of a sinking shaft to unload the kibble. Another name for 'banksman'.	*Mining*
Landfill	A low area of land that is built up from deposits of solid refuse in layers covered by soil.	*Civil Engineering*
Landfill gas	Gas that is generated by decomposition of organic material at landfill disposal sites. The average composition of landfill gas is approximately 50 percent methane and 50 percent carbon dioxide and water vapor by volume. The methane percentage, however, can vary from 40 to 60 percent, depending on several factors including waste composition (e.g. carbohydrate and cellulose content). The methane in landfill gas may be vented, flared, combusted to generate electricity or useful thermal energy on-site, or injected into a pipeline for combustion off-site.	*Energy*
Landing	A horizontal flooring, designed to provide offset clearances for stairways, ladders, or other access arrangements.	*Facility Engineering*
Landing shaft	the pit shaft that was used for winding coal (S. Wales).	*Mining*
Landings	the amount of coal drawn from the pit (S. West).	*Mining*
Landman	A land leasing agent who typically works for an oil and gas company. Landmen research county records and locate mineral rights owners, which they may then offer and oil and gas lease to on behalf of an exploration company.	*Petroleum Drilling*
Lands	The circumferential areas between the grooves of a piston.	*Lubrication*
Landsale	coals sold to carters at the colliery for direct delivery. Sometimes sold in bags or sacks to be carried away on horses; or a colliery without a railway, tramway or canal access was known as a 'landsale' or 'landsale pit'.	*Mining*
Landside	the highest working point or heading in steep inclined seam. (Som.).	*Mining*
Land-use restrictions	Constraints placed upon mining by societal policies to protect surface features or entities that could be affected by mining. Because laws and regulations may be modified or repealed, the restrictions, including industrial and environmental restrictions, are subject to change.	*Energy*
Langelier's Index	A formula for predicting whether water will tend to dissolve or precipitate calcium carbonate.	*Chemical Engineering*
Langley	A unit or measure of solar radiation; 1 calorie per square centimeter or 3.69 Btu per square foot.	*Energy*
Lantern Ring	A rigid spacer used in the packing, with packing above and below it. The lantern ring is used to allow lubrication to the packing or allow access to a leak off connection. On some new fugitive emission packing systems, it also acts as a stem guide.	*Industrial Engineering*
Lantern ring	See "Chevron Packing."	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Lantern ring (seal cage)	A ring in line with a port in a gland to introduce a lubricant or a coolant to the packing or stuffing box.	*Mechanical, Process, and Operations*
Lanthanides	Commonly referred to as 'Rare Earth' metals. Examples: Neodymium, Lanthanum and Ytrrium.	*Metallurgy*
LAP	Laboratory Accreditation Program	*Quality*
Lap Weld	Weld along a longitudinal seam in which one part is overlapped by the other. A term used to designate pipe made by this process.	*Maintenance and Repair*
Lap Splice	A permanent joint formed in a short overlapping region of two parallel conductors or tapes. Also called parallel splice.	*Electrical*
Lapped Joint	A type of pipe joint made by using loose flanges on lengths of pipe whose ends are lapped over to give a bearing surface for a gasket or metal-to-metal joint.	*Maintenance and Repair*
Lapping	A term that describes a procedure for reducing the leakage rate on metal-to-metal seated valves. The plug and seat are lapped together with the aid of an abrasive compound in an effort to establish a better seating surface than would normally be achieved by means of machining.	*Industrial Engineering*
Large coal	coal that was handpicked and loaded underground. One of the three main sizes used to grade coal. Included in this grading were large screened coals, trebbles and cobbles. Large coals had no upper size limit, but in some instances had a lower size limit of 1½-2in. In some areas it was a term used for coal over 8 inches in dimensions.	*Mining*
Large passenger car	A passenger car with more than 120 cubic feet of interior passenger and luggage volume.	*Energy*
Large pickup truck	A pickup truck weighing between 4,500-8,500 lbs gross vehicle weight (GVW).	*Energy*
Large Scale Integration (LSI)	The combining of about 1,000 to 10,000 circuits on a single chip. Typical examples of LSI circuits are memory chips and microprocessor.	*General Engineering*
Large Scale Integration (LSI)	The combining of about 1,000 to 10,000 circuits on a single chip. Typical examples of LSI circuits are memory chips and microprocessor.	*Electronic Process*
LARVA (plural = larvae)	The immature instars, between the egg and pupal stages, in an insect having a complete metamorphosis (egg, larva, pupa, adult). Larvae feed and grow but cannot fly, nor can they reproduce.	*Forestry*
Laser	An acronym for light amplification by stimulated emission of radiation.	*Engineering Physics*
Laser Alloying	The application of a powder to a surface followed by fusing and alloying into the surface via the heat from an impinging laser.	*Paint and Coatings*
Laser Driver	An IC that supplies modulated current to a laser diode in response to an input serial-data stream.	*Electrical Engineering*
Laser Etchers	Burn image into media or burn protective coating off of media to form image.	*Gears*
Laser Glazing	The melting and quenching of a surface to form a fine grained structure or 'glaze'.	*Paint and Coatings*
Laser Hardening	The localized surface heating of a medium carbon steel by an incident laser so that the temperature is raised above 900oC. The part is quenched (or self-quenches by virtue of the remaining cool bulk of the component) and tempered to produce a hard martensitic structure at the surface.	*Paint and Coatings*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Laser Radio Terminal (LRT)	35-46 keys, hand held scanner. When a barcode is scanned, it is instantly sent to a specific location (real time tracking).	*Gears*
Laser Trimming (Automated)	A method for adjusting the value of thick film resistors using a computer: controlled laser system.	*Electrical Engineering*
Lashing chains	chains used on a moving endless rope haulage.	*Mining*
Last tow	the last run of the cages for men before they are used for winding coal. (Scot.).	*Mining*
Lastic	A synthetic material with physical properties similar to those of rubber. Also elastomer.	*Material Process*
Latch	to make an underground survey with a dial and chain, or to mark out on the surface the position of the workings underground.	*Mining*
Latcher	see 'Dialer'.	*Mining*
Latching Logic	A signal modification that causes the output to be energized and remain energized (maintain output). Latched output may be immediate or delayed. Usually, the latch is released by closing a circuit between the reset (RS/D) terminal and ground.	*Electrical Engineering*
Latent defect	A flaw (in a part or assembly) and/or workmanship that is dormant, not immediately apparent visually or by electrical test, yet can result in failure. See Patent Defect.	*Reliability Engineering*
Latent Defect/Fault	An existing fault which is not immediately apparent or that has not yet been detected.	*Reliability Engineering*
Latent Fault	An existing fault that has not yet been detected.	*Maintenance*
Latent Heat	Expressed in BTU per pound. The amount of heat needed (absorbed) to convert a pound of boiling water to a pound of steam.	*General Engineering*
Latent solvent	In paint coatings, an organic thinner that dissolves the nonvolatile constituents only when activated by admixture with a true solvent.	*Material Process*
Lateral canal	A canal running parallel to a stream that is inconvenient or impossible to navigate. One of a number of irrigation canals distributing water from a main canal.	*Civil Engineering*
Lateral canal	A canal running parallel to a stream that is inconvenient or impossible to navigate.	*Civil Engineering*
Lateral header	A pipe or flume distributing water from the distribution header to nozzles, or from other points of discharge to the filling area.	*Facility Engineering*
Lateral sensitivity	See transverse sensitivity.	*Reliability Engineering*
Laterite	A residual soil, usually found in tropical countries, out of which the silica has been leached. May form ore bodies of iron, nickel, bauxite and manganese.	*Mining*
Latex	A water emulsion of a synthetic rubber or plastic obtained by polymerization and used especially in coatings, paints and adhesives.	*Chemical*
Lathe or Laith	a call meaning 'lower the cage down' or 'lower more rope'. (Mids.).	*Mining*
Latitude and longitude	The distance on the earth's surface measured, respectively, north or south of the equator and east or west of the standard meridian, expressed in angular degrees, minutes, and seconds.	*Energy*
Lattice	The regular geometrical arrangement of points in crystal space.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Lattice constant	Length of unit cell edge and/or angle between crystalographic axes.	*Material Process*
Lattice direction	Direction in a crystallographic lattice.	*Material Process*
Lattice girder	A trusslike girder having the upper and lower chords connected by latticing.	*Civil Engineering*
Lattice Parameter	The combination of unit cell edge lengths and interaxial angles that defines the unit cell geometry.	*Engineering Physics*
Lattice parameter	See lattice constant.	*Material Process*
Lattice plane	Plane in a crystalographic lattice.	*Material Process*
Lattice point	One of a set of theoretical points that are disturbed in a periodic fashion in three dimensional space.	*Material Process*
Lattice position	Standard notation for a point in a crystalographic lattice.	*Material Process*
Lattice translation	Vector connecting equivalent positions in adjacent unit cells.	*Material Process*
Laue camera	Device for obtaining an x-ray diffraction pattern of a single crystal.	*Material Process*
Launder	A chute or trough for conveying pulp, water or powdered ore in the milling process.	*Mining*
Launder	A chute or trough for conveying pulp, water or powdered ore in a mill.	*Mining*
Lava	A general name for the molten rock ejected by volcanoes.	*Mining*
Law of the wall	Semi-empirical expression for the anisotropic flow close to a solid surface used in turbulence models. Often based on negligible variations in pressure gradient in the direction tangential to the surface.	*Chemical*
Lay	a) The manner in which the wires in a strand or the strands in a rope are helically laid, or b) the distance measured parallel to the axis of the rope (or strand) in which a strand (or wire) makes one complete helical convolution about the core (or center). In this connection, lay is also referred to as LAY LENGTH or PITCH.	*Wire Rope & Cable*
Lay	The distance along a cable occupied by one complete helix of a strand or conductor. The direction of lay (left or right hand) is the direction of the helix looking away from an observer. Also to arrange the wires or members of a conductor either by twisting them or by forming them into one or more layers helically applied.	*Electrical*
Lay barge	A barge that is specially equipped to lay submarine pipelines.	*Petroleum Drilling*
Lay Types	Right Lay: The direction of strand or wire helix corresponding to that of a right hand screw thread. Left Lay: The direction of strand or wire helix corresponding to that of a left hand screw thread. Cross Lay: Rope or strand in which one or more operations are performed in opposite directions. A multiple operation product is described according to the direction of the outside layer. Regular Lay: The type of rope wherein the lay of the wires in the strand is in the opposite direction to the lay of the strand in the rope. The crowns of the wires appear to be parallel to the axis of the rope. Lang Lay: The type of rope in which the lay of the wires in the strand is in the same direction as the lay of the strand in the rope. The crowns of the wires appear to be at an angle to the axis of the rope. Alternate Lay: Lay of a wire rope in which the strands are alternately regular and lang lay. Alberts Lay: An old, rarely used term for lang lay. Reverse Lay: Another term for alternate lay. Spring Lay: This is not definable as a unique lay; more properly, it refers to a specific wire rope construction.	*Wire Rope & Cable*

Please see the Appendix for further illustration

Term	Definition	Industry
Laying down pipe	The operation of pulling drill pipe or tubing from the hole and laying it down on the pipe rack.	*Petroleum Drilling*
Layoff	Excess capacity of a generating unit, available for a limited time under the terms of a sales agreement.	*Energy*
Layout	The design or pattern of the main roadways and workings. The proper layout of mine workings is the responsibility of the manager aided by the planning department.	*Mining*
Lazy back	the place at the surface where the coals were stacked and loaded for sale (S. Staffs.).	*Mining*
Lazy balk	a balk of timber across the top of a screen or hopper against which the top of the tub was thrown to prevent it from going over when being emptied.	*Mining*
lb	Pound	*General*
lb per cu ft	Pounds per cubic foot	*General*
lb per hr	Pounds per hr*	*General*
L-Band	The group of radio frequencies extending from 390MHz to 1550MHz. The GPS carrier frequencies (1227.6MHz and 1575.42MHz) are in the L-band.	*Electrical Engineering*
LCC	See Life Cycle Costing.	*Maintenance*
LCO	light cycle oil	*Petro-Chemical Abbreviations*
LD Ratio	The ratio of the length (L) to diameter (D) of an extruder or injection molding machine. This ratio can be expressed based on barrel length or screw flighted length.	*Engineering Physics*
LDC	See Local Distribution Company.	*Energy*
LDC	See: Laundry and Dry Cleaning International Union (AFL-CIO)	*Industrial Relations*
LDT	light duty truck	*Petro-Chemical Abbreviations*
LDV	light duty vehicle	*Petro-Chemical Abbreviations*
Lea stone	laminated sandstone with ironstone balls (nodules). (Lancs.).	*Mining*
Leach	To dissolve a substance out of another by percolation.	*Material Process*
Leachable	Extractable by chemical solvents.	*Mining*
Leachate	The liquid that has percolated through the soil or other medium.	*Energy*
Leaching	A process in which metal is extracted from mined ore by means of adding a soluble substance. Commonly used in gold mining.	*Metallurgy*
Lead	The distance a screw thread advances axially in one turn.	*Fastening*
Lead acid battery	An electrochemical battery that uses lead and lead oxide for electrodes and sulfuric acid for the electrolyte.	*Energy*
Lead alloy	Metal alloy composed of predominantly lead.	*Material Process*
Lead Chrome Pigments	A series of inorganic pigments including yellows, oranges, and greens, used in polyolefins and other plastics.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Lead Line	That part of a rope tackle leading from the first, or fast, sheave to the drum.	*Wire Rope & Cable*
Lead Naphthenate	A lead soap of naphthenic acids, the latter occurring naturally in petroleum.	*Oil Analysis*
Lead Time	The time that elapses from placement of an order until receipt of the order, including time for order transmittal, processing, preparation, and shipping.	*Procurement*
Leaded Chip Carrier	Leaded Chip Carrier also called PLCC or Plastic Leaded Chip Carrier: A square surface mount chip package in plastic with leads (pins) on all four sides. Example: Maxim 20-pin PLCC diagram (PDF)	*Electrical Engineering*
Leaded Chip Carrier	also called PLCC or Plastic Leaded Chip Carrier - A square surface mount chip package in plastic with leads (pins) on all four sides. Example - Maxim 20-pin LCC diagram (PDF)	*Electrical Engineering*
Leaded gasoline	A fuel that contains more than0.05 gram of lead per gallon or more than 0.005 gram of phosphorus per gallon.	*Energy*
Leaded premium gasoline	Gasoline having an antiknock index (R+M/2) greater than 90 and containing more than 0.05 grams of lead or 0.005 grams of phosphorus per gallon.	*Energy*
Leaded regular gasoline	Gasoline having an antiknock index (R+M/2) greater than or equal to 87 and less than or equal to 90 and containing more than 0.05 grams of lead or 0.005 grams of phosphorus per gallon.	*Energy*
Leader	a carter of coals. (Scot.); or the slip of a fault. (Som.); or the man in charge of sinking boreholes. (Scot.); or a cast or wrought-iron ring or shoe bolted to the outside at the bottom of a brick or wrought iron cylinder or wooden drum which was used when sinking a shaft through soft ground. It would be allowed to sink under its own weight, or a fissure in a coal seam. Also known as a 'back'. (N. East); or a constant bed or band of coal or ironstone to be found in a coal seam that was used as a datum line by the surveyor; or a thin band of coal or coaly shale which serves as a guide to finding a seam which has been displaced by a fault.	*Mining*
Leading edge	In reference to a wind energy conversion system, the area of a turbine blade surface that first comes into contact with the wind.	*Energy*
Leading heading	see Advanced heading.	*Mining*
Leadless Ceramic Chip Carrier	Leadless Ceramic Chip Carrier or Leadless Chip Carrier: An IC package, usually ceramic, that has no leads (pins). It instead uses metal pads at its outer edge to make contact with the printed circuit board. Example: Maxim 20-pin LCC diagram (PDF)	*Electrical Engineering*
Leadless Ceramic Chip Carrier	Leadless Ceramic Chip Carrier or Leadless Chip Carrier - An IC package, usually ceramic, that has no leads (pins). It instead uses metal pads at its outer edge to make contact with the printed circuit board. Example - Maxim 20-pin LCC diagram (PDF)	*Electrical Engineering*
Lead-time bias	If prognosis study patients are not all enrolled at similar, well-defined points in the course of their disease, differences in outcome over time may merely reflect differences in duration of illness.	*Analysis*
Leaf	A section of a drawbridge.	*Civil Engineering*
Leaflet, Collaboration	A concise overview of The Cochrane Collaboration's aims and activities. It can be downloaded from the Collaboration web site.	*Quality Engineering*

Term	Definition	*Industry*
Leakage	An unfortunate result of sampling with finite intervals. Results in smearing of frequency components. Improved by windowing (e.g., Hanning).	*Reliability Engineering*
Leakage Classification	A term used to describe certain standardized testing procedures for control valves with a flow coefficient greater than 0. 1 (Cv). These procedures are outlined in ANSI Standard B16.104-1976, which gives specific tests and tolerances for six seat leakage classifications. It should be remembered that these tests are used to establish uniform acceptance standards for manufacturing quality and are not meant to be used to estimate leakage under actual working conditions. Nor should anyone expect these leakage rates to be maintained after a valve is placed in service.	*Industrial Engineering*
Leakage Current	The small current flowing through or leaking from the output device in the Off state due to semiconductor characteristics.	*Electrical Engineering*
Leakage Inductance	Leakage inductance in a transformer is an inductive component that results from the imperfect magnetic linking of one winding to another. In an ideal transformer, 100% of the energy is magnetically coupled from the primary to the secondary windings. Imperfect coupling reduces the signal induced in the secondary windings. The electrical equivalent is some self-inductance in series with the primary windings that are properly coupled. This series inductance is the "leakage inductance."	*Electrical Engineering*
Leakage Inductance	Leakage inductance in a transformer is an inductive component that results from the imperfect magnetic linking of one winding to another. In an ideal transformer, 100% of the energy is magnetically coupled from the primary to the secondary windings. Imperfect coupling reduces the signal induced in the secondary windings. The electrical equivalent is some self-inductance in series with the primary windings that are properly coupled. This series inductance is the "leakage inductance."	*Electrical Engineering*
Leakage intake system	a method of ventilating a face using two intake roadways. This method can only be used where there is a strong air current.	*Mining*
Leakage Rate	The maximum rate at which a fluid is permitted or determined to leak through a seal.	*Electrical*
Leakage Rate	The maximum rate at which a fluid is permitted or determined to leak through a seal. The type of fluid, the deferential pressure across the seal, the direction of leakage, and the location of the seal must be specified.	*Electrical Engineering*
Lean	thin coal, or poor coal, or ironstone of inferior quality.	*Mining*
Lean Manufacturing	The systematic identification and elimination of waste to reduce manufacturing or operating costs.	*Maintenance*
Lean Manufacturing	Also known simply as "lean", it is a philosophy that considers the expenditure of resources for any goal other than the creation of value for the end customer to be wasteful, and thus a target for elimination. The seven wastes that are targeted by lean are: overproduction, unnecessary transportation, inventory, motion, defects, over-processing and waiting. The tools, techniques and practices are derived from the Toyota Production System.	*Reliability Engineering*
Lean oil	Absorbent oil fed to absorption towers in which gas is to be stripped. After absorbing the heavy ends from the gas, it becomes fat oil. When the heavy ends are subsequently stripped, the solvent again becomes lean oil.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Leap	the direction of throw of a fault, e.g. leap-ups or leap-downs. It could also be quoted as 'up-leaps' or 'down-leaps'.	*Mining*
Lear, empty. (Som.).	Lear, empty. (Som.).	*Mining*
Lease	A legal document conveying the right to drill for oil and gas, or the tract of land on which a lease has been obtained where the producing wells and production equipment are located.	*Petroleum Engineering*
Lease and plant fuel	Natural gas used in well, field, and lease operations (such as gas used in drilling operations, heaters, dehydrators, and field compressors) and as fuel in natural gas processing plants.	*Energy*
Lease Bonus	The amount typically paid to a landowner (per acre) for the right to lease land for oil and gas exploration for a specific period of time (often 2 to 3 years.) This is separate from royalty, which is a percentage of revenue from production that may be paid to a landowner if a productive well is made.	*Petroleum Drilling*
Lease equipment	All equipment located on the lease except the well to the point of the "Christmas tree."	*Energy*
Lease fuel	Natural gas used in well, field, and lease operations, such as gas used in drilling operations, heaters, dehydrators, and field compressors.	*Energy*
Lease operations	Any well, lease, or field operations related to the exploration for or production of natural gas prior to delivery for processing or transportation out of the field. Gas used in lease operations includes usage such as for drilling operations, heaters, dehydraters, field compressors, and net used for gas lift.	*Energy*
Lease rates	How much a company pays for land or mineral rights. These are typically executed in five-year increments.	*Petroleum Drilling*
Lease separation facility	A facility installed at the surface for the purpose of (a) separating gases from produced crude oil and water at the temperature and pressure conditions set by the separator and/or (b) separating gases from that portion of the produced natural gas stream that liquefies at the temperature and pressure conditions set by the separator.	*Energy*
Lease separator	A facility installed at the surface for the purpose of separating the full well stream volume into two or three parts at the temperature and pressure conditions set by the separator. For oil wells, these parts include produced crude oil, natural gas, and water. For gas wells, these parts include produced natural gas, lease condensate, and water.	*Energy*
Lease	The instrument by which a leaseholder or working interest is created in minerals.	*Petroleum Drilling*
Leasehold Production	Natural gas liquids produced, extracted, and credited to a company's interest.	*Energy*
Leasehold Reserves	Natural gas liquid reserves corresponding to leasehold production defined above.	*Energy*
Least Squares Line	The straight line for which the sum of the squares of the residuals (deviations) is minimized. This method is used to calculate B.F.S.L. linearity.	*Electrical Engineering*
Least-significant bit	In a binary number, the LSB is the least weighted bit in the number. Typically, binary numbers are written with the MSB in the left-most position; the LSB is the furthest-right bit.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Least-significant bit	In a binary number, the LSB is the least weighted bit in the number. Typically, binary numbers are written with the MSB in the left-most position; the LSB is the furthest-right bit.	*Electrical Engineering*
Least-squares Line	The straight line for which the sum of the squares of the residuals (deviations) is minimized.	*General Engineering*
Leather bed	the clayey material along a fault face, sometimes a term also applied to a soft parting in a coal seam.	*Mining*
Leathery	Mechanical behavior associated with a polymer near its glass transition temperature.	*Material Process*
Led	a word meaning 'spare'.	*Mining*
LED	Light Emitting Diode	*Gears*
LED (Light Emitting Diode)	A solid state light source that emits variable light, or (in MICRO SWITCH modulated LED controls) invisible, infrared radiation.	*Electrical Engineering*
Ledge	A vein or lode.	*Mining*
Leery	a lamp. (Scot.).	*Mining*
Lefthand Thread	A screw thread that is screwed in by rotating counterclockwise.	*Maintenance*
Leg	a single prop to support the roof on the coalface; or the lower part of steel arch road support - a pair of legs and a crown forming a 'ring' - see also Prop and Support.	*Mining*
Legume	any plant that grows seeds in a pod such as peas and beans	*Agriculture*
Legume	A member of the Fabaceae family (pea family). Also the fruit or pod of this family of plants. This family includes many plants grown for food or livestock forage. Leguminous plants commonly grown by U.S. farmers include forage crops such as alfalfa and clover, and food crops such as beans and peas.	*Agriculture*
Length	see Stint.	*Mining*
Length of Action	of Action: The distance on an involute line of action through which the point of contact moves during the action of the tooth profile.	*Mechanical Engineering*
Length Of Engagement	The axial distance over which an external thread is in contact with an internal thread.	*Maintenance*
Length of Lay	The axial length of one turn of the helix of a wire or member.	*Electrical*
Lens	Generally used to describe a body of ore that is thick in the middle and tapers towards the ends.	*Mining*
Lensing	Is a term which refers to a film defect which causes undesirable elongated thin voids in an extruded film. Are sometimes referred to as windows or air pockets.	*Engineering Physics*
Lenticular	A deposit having roughly the form of a double convex lens.	*Mining*
Leon	Maxwell Performance Equation: The selection standard index related to the appropriated performance standard where LMn = C*LN((Iv^a) / (Dv^b)). Where C is an indexing constant, as is a and b and Iv signifies one or more values where increased value equals performance and Dv equals one or more values where the lowest value results in increased performance. The overall value resulting in an LMn of 100 is the highest achievable value	*Procurement*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Lesion	A wound; a well-marked, but limited, diseased area; a break or rupture through a tissue, especially a surface tissue.	*Forestry*
Lessee	An independent marketer who leases the station and land and has use of tanks, pumps, signs, etc. A lessee dealer typically has a supply agreement with a refiner or distributor and purchases products at dealer tank-wagon prices. The term "lessee dealer" is limited to those dealers who are supplied directly by are finer or any affiliate or subsidiary of the reporting company. "Direct supply" includes use of commission agent or common carrier delivery.	*Energy*
LEV	low-emission vehicle	*Petro-Chemical Abbreviations*
Levee	An embankment designed to prevent the flooding of a river. Example: to levee a treacherous stream.	*Civil Engineering*
Levee	An embankment designed to prevent the flooding of a river. Example - to levee a treacherous stream.	*Civil Engineering*
Level	The horizontal openings on a working horizon in a mine; it is customary to work mines from a shaft, establishing levels at regular intervals, generally about 50 meters or more apart.	*Mining*
Level	A tunnel cut on the vein from the main tunnel. A drift.	*Mining*
Level free	drained by means of an adit or free level.	*Mining*
Level Translator	A device which translates a logic signal from one type to another. Example: ECL to TTL	*Electrical Engineering*
Level Translator	A device which translates a logic signal from one type to another. Example -	*Electrical Engineering*
Levelized	A lump sum that has been divided into equal amounts over period of time.	*Energy*
Levelized cost	The present value of the total cost of building and operating a generating plant over its economic life, converted to equal annual payments. Costs are levelized in real dollars (i.e., adjusted to remove the impact of inflation).	*Energy*
Leveller	The transfer bar is rolled to a final gauge in the 4Hi Finishing Mill which is equipped with front and back coiler furnaces. The automatic gauge control includes an x-ray thickness gauge feedback.	*Steel*
Lever	An operating device for quarter-turn valves.	*General Mechanical*
Lever Rule	Mathematical expression whereby the relative phase amounts in a two-phase alloy at equilibrium may be computed.	*Engineering Physics*
Leverage	A gain in output force over input force by sacrificing the distance moved. Mechanical advantage or force multiplication.	*Mechanical, Process, and Operations*
Leverage ratio	A measure that indicates the financial ability to meet debt service requirements and increase the value of the investment to the stockholders. (i.e., the ratio of total debt to total assets).	*Energy*
Levey-Jennings control chart	A commonly used control chart in which individual control measurements are plotted directly on a control chart with limit lines drawn either as mean ± 2s or mean ± 3s. Time is displayed on the x-axis usually in terms of days or runs.	*Quality*
LEVP	Low Emissions Vehicle Program.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Leys	a term for shales. (Lancs.).	*Mining*
LFE	See: Locomotive Firemen and Enginemen; Brotherhood of (AFL-CIO)	*Industrial Relations*
LGPN	See: Leather Goods, Plastic and Novelty Workers' Union; International (AFL-CIO)	*Industrial Relations*
LHV	Lower Heating Value.	*Energy*
LIA	See: Insurance Agents; International Union of Life (Ind)	*Industrial Relations*
Liability	An amount payable in dollars or by future services to be rendered.	*Energy*
Libya (1962-present)	Libya (1962-present)	*Energy*
Licensed site capacity	Capacity (number of assemblies) for which the site is currently licensed.	*Energy*
Licensees	Entity that has been granted permission to engage in an activity otherwise unlawful (i.e., hydropower project).	*Energy*
Licht barrier	a light stone-dust barrier situated close to the coalface. (Scot.).	*Mining*
Lid	a flat piece of timber inserted between the top of a prop and the roof to prevent splitting in the case of timber props and to increase friction in the case of steel props. -see also Biscuit, Bonnet, Crown piece, Cap and Pad; or a piece of timber about 1foot long placed on top of a prop to support the roof.	*Mining*
Lie on	to work an extra shift. To work overtime. (Scot.).	*Mining*
Lie or Lye	a 'pass-by', or shunt. A storage or by-pass arrangement in haulage track; or the reference to the dip in the strata.	*Mining*
Lien	Funds are encumbered (liened) when the purchase order is opened and invoicing has not yet occurred.	*Procurement*
Life	That Strange Experience You Have All Day, Every Day. In A Maintenance Context, You May Want To Look At Equipment Life.	*Plant Engineering*
Life Cycle	The minimum number of pressure cycles the transducer can endure and still remain within a specified tolerance.	*General Engineering*
Life cycle assessment (LCA)	A cradle to grave evaluation of environmental and energy impacts of a given product design.	*Material Process*
Life Cycle Assessment LCA	the most detailed method of analyzing the life cycle of a material	*Physics*
Life Cycle Cost	The total cost of a piece of equipment or system over its entire lifetime; the total of all costs generated or forecasted to be generated during the design, development, production, operation, maintenance, and support processes. Life cycle costs include direct, indirect, recurring, non recurring costs such as acquisition, installation, operating, maintenance, upgrades, and removal or disposal costs.	*Maintenance*
Life Cycle Costing (LCC)	A process of estimating and assessing the total costs of ownership, operation, maintenance, and disposal costs of a piece of equipment during its projected equipment life. LCC is typically used to compare alternative equipment design or purchase options to select the most appropriate option. LCC is the practice of obtaining over their lifetime the best use of the physical assets at the lowest cost to the entity. This is achieved through a combination of management, financial, engineering and other disciplines. Life Cycle Costing is sometimes referred to as "Terotechnology" but terotechnology is really the 'science' of life cycle	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	costing; it is concerned more with the analysis of component data and derivation of the appropriate component life cycles than with application. Terotechnology is a more common term in manufacturing industry where it is applied to analyzing the life spans of relatively short lived plant and equipment rather than longer lived infrastructure assets.	
Life cycle history	A time history of events and conditions associated with an item of equipment from its release from manufacturing to its removal from service. The life cycle should include the various phases that an item will encounter it its life, such as: handling, shipping and storage prior to use; mission profiles while in use; phases between missions, such as standby time or storage, transfer to and from repair sites and alternate locations; and geographical locations of expected deployment.	*Reliability Engineering*
Life Cycle Testing	Subjecting units, components or systems to stresses similar to those anticipated in real life service while extracting engineering data related to life expectancy, reliability, specification compliance or improvements, which is usually aimed at determining the units', components' or systems' meantime between failures.	*Reliability Engineering*
Life data analysis	The statistical analysis of failure and usage data performed in order to be able to mathematically model the reliability and failure characteristics of a system	*Reliability Engineering*
Life Distribution	A mathematical model that describes the probability of failures occurring over time. Also known as the probability density function, this function is integrated to obtain the probability that the failure time takes a value in a given time interval. This function is the basis for other important reliability functions, including the reliability function, the failure rate function and the mean life.	*Reliability Engineering*
Life extension	Restoration or refurbishment of a plant to its original performance without the installation of new combustion technologies. Life extension results in 10 to 20 years of plant life beyond the anticipated retirement date, but usually does not result in larger capacity.	*Energy*
Life units	A measure of use duration applicable to the item. Measures include time, cycles, distance, rounds fired, attempts to operate, etc.	*Reliability Engineering*
Lift	The force that pulls a wind turbine blade, as opposed to drag.	*Energy*
LIFT	The height of a column or body of fluid below a given point expressed in linear units.	*Mechanical, Process, and Operations*
Lift bridge	A bridge having a section that can be lifted vertically to permit passage of boats beneath. Also called "vertical lift bridge."	*Civil Engineering*
Lifting costs	The costs associated with the extraction of a mineral reserve from a producing property.	*Energy*
Lifting lugs	Lugs provided on large ball, gate, and check valves, for lifting and positioning valves. Also called lifting eyes.	*Mechanical*
Lifting points	connectors (sometimes temporary) directly on the steel article that aid the galvanizer in handling the article throughout the galvanizing process	*Materials Process*
Light bulbs	A term generally used to describe a man-made source of light. The term is often used when referring to a "bulb" or "tube".	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Light emitting diode (LED)	An electro-optical device.	*Material Process*
Light Ends	Low-boiling volatile materials in a petroleum fraction. They are often unwanted and undesirable, but in gasoline the proportion of light ends deliberately included are used to assist low-temperature starting.	*Lubrication*
Light gas oils	Liquid petroleum distillates heavier than naphtha, with an approximate boiling range from 401 degrees to 650 degrees Fahrenheit.	*Energy*
Light obscuration	The degree of light blockage as reflected in the transmitted light impinging on the photodiode.	*Oil Analysis*
Light Operated (L.O.)	The control operating mode in which the output is energized when the light beam is not blocked (retro/thru scan), or object is present (diffuse) the photosensor is illuminated.	*Electrical Engineering*
Light rail	An electric railway with a "light volume" traffic capacity compared to "heavy rail." Light rail may use exclusive or shared rights-of-way, high or low platform loading, and multi-car trains or single cars. Also known as "street car," "trolley car," and "tramway."	*Energy*
Light trucks	All single unit two-axle, four-tire trucks, including pickup trucks, sports utility vehicles, vans, motor homes, etc. This is the Department of Transportation definition. The Energy Information Administration defined light truck as all trucks weighing 8,500 pounds or less.	*Energy*
Light water	Ordinary water (H_2O), as distinguished from heavy water or deuterium oxide (D_2O).	*Energy*
Light water reactor (LWR)	A nuclear reactor that uses water as the primary coolant and moderator, with slightly enriched uranium as fuel.	*Energy*
Light-duty vehicles	Vehicles weighing less than 8,500 lbs (include automobiles, motorcycles, and light trucks).	*Energy*
Light-Emitting Diode	A semiconductor device that emits light (usually visible or infrared) when forward-biased. The application note, "Driving LEDs in Battery-Operated Applications: Controlling Brightness Power Efficiently" has a good explanation of how LEDs work, especially with regard to current vs. LED brightness and schemes for matching brightness when driving multiple LEDs.	*Electrical Engineering*
Light-Emitting Diode	A semiconductor device that emits light (usually visible or infrared) when forward-biased. The application note, "Driving LEDs in Battery-Operated Applications - Controlling Brightness Power Efficiently" has a good explanation of how LEDs work, especially with regard to current vs. LED brightness and schemes for matching brightness when driving multiple LEDs.	*Electrical Engineering*
Lighting conservation feature	A building feature or practice designed to reduce the amount of energy consumed by the lighting system.	*Energy*
Lighting Demand-Side Management (DSM) program	ADSM program designed to promote efficient lighting systems in new construction or existing facilities. Lighting DSM programs can include: certain types of high-efficiency fluorescent fixtures including T-8 lamp technology, solid state electronic ballasts, specular reflectors, compact fluorescent fixtures, LED and electroluminescent Emergency Exist Signs, High Pressure Sodium with switchable ballasts, Compact Metal Halide, occupancy sensors, and daylighting controllers.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Lighting equipment	These are light bulbs used to light the building's interior, such as incandescent light bulbs, fluorescent light bulbs, compact fluorescent light bulbs, and high-intensity discharge (HID) lights.	*Energy*
Lightning Arrestor	This protects lines, transformers, and equipment from lightning surges by carrying the charge to the ground. Lightning arrestors serve the same purpose on a line as a safety valve on a steam boiler.	*Energy*
Lights	All of the light bulbs controlled by one switch are counted as one light. For example, a chandelier with multiple lights controlled by one switch is counted as one light. A floor lamp with two separate globes or bulbs controlled by two separate switches would be counted as two lights. Indoor and outdoor lights were counted if they were under the control of the householder. This would exclude lights in the hallway of multi-family buildings.	*Energy*
Lights-out factory	An automated factory that requires no light because no people work in it.	*Electrical*
Lignin	One component of the matrix of the wood microstructure. A phenol-propane network polymer. (See hemicellulose).	*Material Process*
Lignite	The lowest rank of coal, often referred to as brown coal, used almost exclusively as fuel for steam-electric power generation. It is brownish-black and has a high inherent moisture content, sometimes as high as 45 percent The heat content of lignite ranges from 9 to 17 million Btu per ton on a moist, mineral-matter-free basis. The heat content of lignite consumed in the United States averages 13 million Btu per ton, on the as-received basis (i.e. containing both inherent moisture and mineral matter).	*Energy*
LIHEAP	Low-Income Home Energy Assistance Program.	*Energy*
Likelihood Function	This function represents the joint probability of all points in a data set. For complete data, the likelihood function consists of the product of the pdf for each data point; for data sets that also include suspended or censored data, the likelihood function is more complex. Maximum likelihood estimation techniques maximize this function in order to determine the best parameter estimates.	*Reliability Engineering*
Likelihood of Failure (Lof)	See probability of failure	*Reliability Engineering*
Likelihood ratio	Ratio of the probability that a given diagnostic test result will be expected for a patient with the target disorder rather than for a patient without the disorder.	*Analysis*
LILACS (Latin American and Caribbean Health Sciences Literature)	An electronic database based on a regional database of medical and science literature. It is compiled by the Latin American and Caribbean Centre for Health Science Information, a unit of the Pan American Health Organisation.	*Quality Engineering*
Lilleycock, (Lillicock or Lillycock), the signal for the end of the shift (S. Derbys.).	see also Loosit.	*Mining*
Lill-head	the winding gear at the top of the shaft (S. Mids.). This might derive from the company name, The Lilleshaw Co. Ltd., who manufactured headgears.	*Mining*
Limbers	see Limmer.	*Mining*
Lime	An insoluble mineral deposit found in water.	*Chemistry*
Lime coal	small coals riddled and graded to be sold for lime burning. -see also Pan coal.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Limestone	A sedimentary rock consisting chiefly of calcium carbonate, primarily in the form of the mineral calcite.	*Petroleum Engineering*
Limestone	A bedded, sedimentary deposit consisting chiefly of calcium carbonate.	*Mining*
Limit of Blank (LoB)	Highest measurement result that is likely to be observed (with a stated probability) for a blank sample; typically estimated as a 95% one-sided confidence limit by the mean value of the blank plus 1.65 times the SD of the blank. [CLSI]	*Quality*
Limit of Detection (LoD)	Lowest amount of analyte in a sample that can be detected with (stated) probability, although perhaps not quantified as an exact value; estimated as a 95% one-sided confidence limit by the mean of the blank plus 1.65 times the SD of the blank plus 1.65 times the SD of a low concentration sample. [CLSI]	*Quality*
Limit of draw	the point on the surface beyond which there are no effects of subsidence caused by underground working.	*Mining*
Limit of Quantification (LoQ)/Lower limit of quantification	Lowest amount of analyte that can be quantitatively determined with stated acceptable precision and trueness, under stated experimental conditions; the analyte concentration at which the 95% limit of total error, i.e., bias plus 2*SD, meets the required or stated goal for allowable error. [CLSI]	*Quality*
Limit order	An order made by a client to a broker to buy or sell shares at a specified price or better.	*Mining*
Limit Switch	A mechanical device which, when activated, opens or closes contacts to alter the control circuit.	*Equipment*
Limit switch	An electrical device providing a signal to a remote observation station indicating when the valve is in the fully open or fully closed position. Usually a component of a valve operator.	*Mechanical*
Limits of Error	Error: A tolerance band for the thermal electric response of thermocouple wire expressed in degrees or percentage defined by ANSI specification MC-96.1 (1975).	*Electrical*
Limmer	the shafts by which the horse or pit pony draws the tubs. Also known as 'limbers'; or the shaft-like projections of the rolley on which the driver sits. (N. East).	*Mining*
Limonite	A brown, hydrous iron oxide.	*Mining*
Limousin	A French breed of beef cattle. In the United States they are used to produce beef.	*Agriculture*
lin ft	Linear foot	*General*
Lin, Linsay, Linsey, Linstey, Lin and Wood	all terms for more or less finely interbedded shale and sandstone or striped shales. (derived from mixed linen and woolen fabrics 'Linsey-woolsey'). (Lancs.).	*Mining*
Lincoln	A breed of sheep believed to be the result of crossing the Leicester and the coarse native sheep of Lincolnshire. First imported into the United States at the close of the eighteenth century, the Lincoln has been more popular in Canada. In the United States, it has been most important in the centralized states and in Idaho and Oregon .	*Agriculture*
Lincoln Red	A breed of beef cattle developed in Lincolnshire, England.	*Agriculture*
Lindol	Trade name for tricresyl phosphate, used as a plasticizer for lacquers and plastics.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Line	A line is a system of poles, conduits, wires, cables, transformers, fixtures, and accessory equipment used for the distribution of electricity to the public.	*Energy*
Line	A pipe, tube or hose for conducting fluids.	*Mechanical*
Line cutting	Straight clearings through the bush to permit sightings for geophysical and other surveys.	*Mining*
Line loss	Electric energy lost because of the transmission of electricity. Much of the loss is thermal in nature.	*Energy*
Line of Action	The line of action of a force is the infinite line defined by extending along the direction of the force from the point where the force acts.	*Engineering Physics*
Line Pipe	(LP) Pipe generally for use in the oil and gas industry for the transmission of oil and gas under pressure, or for a variety of process flow applications. Common specifications API Spec 5L and API Spec 5LX. See Carbon Steel Pipe Dimensions at this web site.	*Petroleum Engineering*
Line Regulation	The ability of a power-supply voltage regulator to maintain its output voltage despite variations in its input voltage.	*Electrical Engineering*
Line Regulation	The ability of a power-supply voltage regulator to maintain its output voltage despite variations in its input voltage.	*Electrical Engineering*
Line thermal monitoring (LTM)	Process that measures average power-line temperature and detects temperature changes in power lines. It is important because heat causes wires to expand and sag, resulting in short circuits, fires and blackouts if they contact treetops etc. (See also Wide-Area Monitoring System.)	*Electrical*
Line valve mounting	The valve is mounted directly to system valves.	*Mechanical, Process, and Operations*
Line, Drain	A line returning drain fluid independently to the reservoir or vented manifold.	*Mechanical, Process, and Operations*
Line, Exhaust	A line returning power or control fluid back to the reservoir or atmosphere.	*Mechanical, Process, and Operations*
Line, Pilot	A line which conducts control fluid.	*Mechanical, Process, and Operations*
Line, Suction	A supply line at sub-atmospheric pressure to a pump, compressor, or other component.	*Mechanical, Process, and Operations*
Line	This is the quickest way around a race circuit, taking advantage of braking, cornering and acceleration. For example, the line for a typical right-handed corner would begin by lining up on the left side of the approaching straight, braking hard, turning in all the way across the track to the inside curb, and then unwinding the steering wheel on the exit to release the friction of the turn, which takes the car back across the track to the outside again. The idea is to use the maximum amount of arc possible to maintain the greatest speed through the corner. The line is often visible due to the rubber laid down by cars, and interestingly is not the shortest way around the track, just the fastest.	*NASCAR*
Lineal	in direct line of decent.	*Petroleum Drilling*

Term	Definition	*Industry*
Lineal deviation	the components of Technical Hole Deviation that address differences between actual and planned lineal (linear; relating to lines) well bore properties; includes msVD, RCVD, msHD, and RCHD.	*Petroleum Drilling*
Linear	Having the property that the output is proportional to the input. Example: VOUT = k*VIN ; where k is a constant.	*Electrical Engineering*
Linear	Having the property that the output is proportional to the input. Example -	*Electrical Engineering*
Linear (Output)	Output that is a continuous amplified version of its input. That is, the output is a predetermined variation of its input.	*Electrical Engineering*
Linear actuator	A device for converting hydraulic energy into linear motion -- a cylinder or ram.	*Mechanical, Process, and Operations*
Linear coefficient of thermal expansion	Material parameter indicating dimensional change as a function of increasing temperature.	*Material Process*
Linear defect	One dimensional disorder in a crystalline structure, associated primarily with mechanical deformation. See also, dislocation.	*Material Process*
Linear density	The number of atoms per unit length along a given direction in a crystal structure.	*Material Process*
Linear Elastic	A force-displacement relationship which is both linear and elastic. For a structure, this means the deformation is proportional to the loading, and deformations disappear on unloading. For a material, the concept is the same except strain substitutes for deformation, and stress substitutes for load.	*Engineering Physics*
Linear Feedback Shift Register	A shift register in which some of its outputs are connected to the input through some logic gates (typically, an exclusive-or (XOR)). A wide variety of bit patterns can be generated inexpensively, including pseudo-random sequences. Can be used as a noise generator. Example: DC-to-DC Converter Combats EMI:	*Electrical Engineering*
Linear Feedback Shift Register	A shift register in which some of its outputs are connected to the input through some logic gates (typically, an exclusive-or (XOR)). A wide variety of bit patterns can be generated inexpensively, including pseudo-random sequences. Can be used as a noise generator.	*Electrical Engineering*
Linear Flow Characteristic	A characteristic where flow capacity or (Cv) increases linearly with valve travel. Flow is directly proportional to valve travel. This is the preferred valve characteristic for a control valve that is being used with a distributive control system (DCS) or programmable logic controller (PLC).	*Industrial Engineering*
Linear growth rate law	An expression for the buildup an unprotective oxide coating.	*Material Process*
Linear Low-Density Polyethylene	See Linear Polymer. Includes polyethylenes ranging in density from 0.95 to 0.935.	*Engineering Physics*
Linear Mode	Uses a linear-pass element (BJT or FET) to control/regulate the charging voltage/current.	*Electrical Engineering*
Linear molecular structure	Polymeric structure associated with bifunctional mer.	*Material Process*
Linear molecule, or long molecule	A straight chain molecule.	*Material Process*
Linear Polymer	A polymer in which the monomeric units are linked together in linear fashion with little or no long chain branching. Examples are linear low-density polyethylene and high-density polyethylene.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Linear regression analysis, least-squares analysis, ordinary regression analysis	A statistical technique for estimating the best linear relationship between two variables. The estimated line has the property that the sum of the squares of the deviations from the line is a minimum, hence the name least-squares analysis. This statistical technique is commonly applied to the data from a comparison of methods experiment, taking the test method values as the y-variable and the comparison method values as the x variable. The statistics calculated usually include the slope (b), y intercept (a), and standard deviation about the regression line, also termed the standard error of the regression line (sy/x) and also called the standard deviation of residuals (sres). These statistics provide information about the proportional, constant, and random errors between the methods, respectively.	*Quality*
Linear Regulator	A voltage regulator that is placed between a supply and the load and provides a constant voltage by varying its effective resistance.	*Electrical Engineering*
Linear scale	A scale that increases in equal steps. In a linear scale on a RevMan forest plot, the distance between 0 and 5 is the same as the distance between 5 and 10, or between 10 and 15. A linear scale may be used when the range of numbers being represented is not large, or to represent differences. See also: Logarithmic scale	*Quality Engineering*
Linear scale reticule	An optical glass having a straight scale marked to permit measurement or estimation of distance or length.	*Mechanical, Process, and Operations*
Linear system	A system is linear if its magnitude of response is directly proportional to its magnitude of excitation, for every part of the system.	*Reliability Engineering*
Linear Valve	Another name for a globe valve. It refers to the linear or straight-line movement of the plug and stem.	*Industrial Engineering*
Linearity	The closeness of a calibration curve to a specified straight line. Linearity is expressed as the maximum deviation of any calibration point on a specified straight line during any one calibration cycle.	*General Engineering*
Linearity	The closeness of a calibration curve to a specified straight line. Linearity is expressed as the maximum deviation of any calibration point on a specified straight line during any one calibration cycle.	*Electronic Process*
Linearity (End Point)	see Terminal Base Linearity	*Electrical Engineering*
Linearity (Linearity Error)	The deviation of the sensor output curve from a specified straight line. Linearity error is usually expressed as a percent of full scale output.	*Electrical Engineering*
Linearity (Terminal Base)	see Terminal Base Linearity.	*Electrical Engineering*
Line-miles of seismic exploration	The distance along the Earth's surface that is covered by seismic surveying.	*Energy*
Liners	a bar set between two other bars to support the roof. Usually erected to reinforce a set that is beginning to collapse under roof weight. (Leics.); or a foot piece put under a prop to stop in sinking into a soft floor.	*Mining*
Lines	lengths of string 2 to 3ft long, weighted and hung from small hooks screwed into the roof of a heading. Not less than two sometimes as many as four lines are used to take a sight using an oil-lamp. The original line is set by the surveyor. A white line is painted on the roof between the lines and on the face of the heading. In this way the heading is kept on a true course.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Lines	Narrow waves which extend a considerable distance in a straight line so that the reflection from the surface appears as a line. See, also Air locks.	*Material Process*
Lineshaft Conveyor	A roller conveyor with carrying rollers individually powered by drive belts from a rotating shaft.	*Equipment*
Linesman	a member of the colliery survey team. –see Lines.	*Mining*
Lining	brick, concrete, cast-iron or steel casing supports for roadways or shafts; or surveying underground, (N. East); or clay ironstone in beds or bands. (Derbys.).	*Mining*
Lining mark	a drill hole in the roof with a wooden plug driven into it to show where the next lining is to commence. The plug is for the purpose of inserting a small fork from which a plumb-line was hung, behind which was held a candle or lamp forming a back-sight. The fore-sight was also fixed by a temporary plumb-line suspended from a piece of clay stuck to the roof.	*Mining*
Linoleum	Trade name for a semiflexible sheet which may be made by coating canvas with hot oxidized linseed oil, rosin, powdered cork, and pigments.	*Material Process*
Linoleum	A flooring material composed of binders, oxidized oil and resinous material that is mixed with ground cork or wood flour and pigment. The composition is applied to a backing of felt, fabric or burlap.	*Chemistry*
Linseed oil	A yellow to brown liquid pressed from seeds of the flax plant, used in the manufacture of paints and varnishes.	*Material Process*
Linters	Short fiber adhering to the cotton seeds after ginning used as a filler material for plastics, and a base for the manufacture of cellulose derivatives.	*Material Process*
Lip	the top part of a roadway close to the coalface that is taken down by ripping. -see also Canch, Caunch, Kench and Rip, or the edge of a fault slip.	*Mining*
Lip of shaft	the bottom edge of a shaft circle where open to the seam workings.	*Mining*
Lip seal	A circular seal ring of "U" shaped cross section encompassing an elastomeric O-ring which provides resiliency and ensures a seal at the inner and out lips of the "U."	*Mechanical*
Lip Seal	An elastomeric or metallic seal that prevents leakage in dynamic and static applications by a scraping or wiping action at a controlled interference between itself and the mating surface.	*Lubrication*
Lipid	Generic term for a large class of organic molecules. Fats and oils are commonly known lipids.	*Agriculture*
Lipizzan	A breed of horse that represents more than 400 years of select breeding, dating to 1580 when Archduke Charles II established the stud farm in Lipizza (Lipica). The breed is rare, with fewer than 3,000 purebred Lipizzans in the world today. The breed is used in dressage and driving, as well as continuing to be the ultimate mount for classical horsemanship. The first privately owned Lipizzans in the United States were imported in 1937. Today there are an estimated 600 in the United States. Disneyland owns a number of Lipizzan mares and the Marine Corps uses them in their Color Guard.	*Agriculture*
Lipped	see Notched (N. Staffs.).	*Mining*
Lipper	another term for a 'ripper'.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Liquefaction	the process of converting coal into liquid fuel.	*Mining*
Liquefaction	The process of converting coal into a synthetic fuel, similar in nature to crude oil and/or refined products, such as gasoline.	*Mining*
Liquefied natural gas (LNG)	Natural gas (primarily methane) that has been liquefied by reducing its temperature to -260 degrees Fahrenheit at atmospheric pressure.	*Energy*
Liquefied Natural Gas (LNG)	Oilfield or naturally occurring gas, chiefly methane, liquefied for transportation.	*Petroleum Drilling*
Liquefied natural gas (LNG)	Oilfield or naturally occurring gas, chiefly methane, liquefied for transportation.	*Petroleum Drilling*
Liquefied Natural Gas (LNG)	Natural gas that has been liquefied by lowering its temperature to negative 260 degrees Fahrenheit.	*Energy*
Liquefied Petroleum Gas (LPG)	Light hydrocarbon material, gaseous at atmospheric temperature and pressure, held in the liquid state by pressure to facilitate storage, transport and handling. Commercial liquefied gas consists essentially of either propane or butane, or mixtures thereof.	*Petroleum Drilling*
Liquefied petroleum gas (LPG)	Light hydrocarbon material, gaseous at atmospheric temperature and pressure, held in the liquid state by pressure to facilitate storage, transport and handling. Commercial liquefied gas consists essentially of either propane or butane, or mixtures thereof.	*Petroleum Drilling*
liquefied petroleum gas (propane)	liquefied petroleum gas (propane)	*Energy*
Liquefied petroleum gases (LPG)	A group of hydrocarbon gases, primarily propane, normal butane, and isobutane, derived from crude oil refining or natural gas processing. These gases may be marketed individually or mixed. They can be liquefied through pressurization (without requiring cryogenic refrigeration) for convenience of transportation or storage. Excludes ethane and olefins. **Note: In some EIA publications, LPG includes ethane and marketed refinery olefin streams, in accordance with definitions used prior to January 2014.**	*Energy*
Liquefied refinery gases (LRG)	Hydrocarbon gas liquids produced in refineries from processing of crude oil and unfinished oils. They are retained in the liquid state through pressurization and/or refrigeration. The reported categories include ethane, propane, normal butane, isobutane, and refinery olefins (ethylene, propylene, butylene, and isobutylene).	*Energy*
Liquid	The state in which a substance exhibits a characteristic readiness to flow with little or no tendency to disperse and relatively high incompressibility. See also Gas.	*Industrial*
Liquid Penetrant Examination or Inspection	This is a nondestructive examination method for finding discontinuities that are open to the surface of solid and essentially nonporous materials. This method is based on capillary action or capillary attraction by which the surface of a liquid in contact with a solid is elevated or depressed. A liquid penetrant, usually a red dye, is applied to the clean surface of the specimen. Time is allowed for the penetrant to seep into the opening. The excess penetrant is removed from the surface. A developer, normally white, is applied to aid in drawing the penetrant up or out to the surface. The red penetrant is drawn out of the discontinuity, which is located by the contrast and distinct appearance of the red penetrant against the white background of the developer.	*Maintenance and Repair*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Liquid collector	A medium-temperature solar thermal collector, employed predominantly in water heating, which uses pumped liquid as the heat-transfer medium.	*Energy*
Liquid crystal display (LCD)	An optical device in which a liquid crystal, composed of rod shaped polymeric molecules, is used to create visible characters by voltage produced disruption of the molecular orientation.	*Material Process*
Liquid erosion failure	A special form of wear damage in which a liquid is responsible for the removal of material.	*Material Process*
Liquid fuels	All petroleum including crude oil and products of petroleum refining, natural gas liquids, biofuels, and liquids derived from other hydrocarbon sources (including coal to liquids and gas to liquids). Not included are liquefied natural gas (LNG) and liquid hydrogen. See petroleum and other liquids.	*Energy*
Liquid Impingement Erosion	Progressive loss of material from a solid surface due to continue exposure to impacts by liquid drops or jets.	*Paint and Coatings*
Liquid Junction Potential	The potential difference existing between a liquid-liquid boundary. The sign and size of this potential depends on the composition of the liquids and the type of junction used.	*General Engineering*
Liquid Junction Potential	The potential difference existing between a liquid-liquid boundary. The sign and size of this potential depends on the composition of the liquids and the type of junction used.	*Electronic Process*
Liquid limit (LL)	the lower limit for viscous flow of a soil.	*Chemical*
Liquid metal embitterment	A form of degradation in which a material loses some ductility or fractures below its yield stress in conjunction with surface wetting by a lower melting point liquid metal.	*Material Process*
Liquid metal fast breeder reactor	A nuclear breeder reactor, cooled by molten sodium, in which fission is caused by fast neutrons.	*Energy*
Liquid penetrant inspection	A nondestructive method of detecting the presence of surface cracks and imperfections through use of a special red dye. Abbreviated as LPI or PT.	*General Mechanical*
Liquid penetrant inspection	A nondestructive method of detecting the presence of surface cracks and imperfections through use of a special red dye. Abbreviated as LPI or PT.	*Mechanical*
Liquid penetrant testing	A type of nondestructive testing in which surface defects are observed by the presence of a high visibility liquid that has previously penetrated into the defects and is subsequently drawn out the capillary action of a fine powder.	*Material Process*
Liquidation	In commodities market parlance, selling long positions to counterbalance previous buying.	*Metallurgy*
Liquidity index (LI)	quantitative value used to assess whether a soil will behave as a brittle solid, semisolid, plastic, or liquid. LI is equal to the difference between the natural moisture content of the soil and the plastic limit (PL) divided by the plasticity index (PI).	*Chemical*
Liquids	produced at natural gas processing plants are excluded. Crude oil is refined to produce a wide array of petroleum products, including heating oils; gasoline, diesel and jet fuels; lubricants; asphalt; ethane, propane, and butane; and many other products used for their energy or chemical content.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Liquidus	In a phase diagram, the line above which a single liquid phase will be present.	*Material Process*
List	thin bed or dirt band, also a weak laminated shale; or fusainous coal; or a bed of hard coal at the base of the Deep Hard Seam (Notts.).	*Mining*
Listing	fine shale or clay with glossy surfaces (slickensides), often associated with faulting. (Lancs.).	*Mining*
Liter	A unit of volume, 3.785 liters = 1 U.S. gallon. LITERS PER MINUTE - A unit of volumetric flow rate. LITER PER REVOLUTION - A unit of volumetric capacity.	*Mechanical, Process, and Operations*
Lith	the width of barren ground between those two portions of a coal seam that are separated by a fault of low hade (N. Staffs.).	*Mining*
Litharge	A fused form of lead monoxide, yellow lead oxide, used as a drier.	*Material Process*
Lithium batteries	Lithium batteries are typically coin-shaped and are used to power items such as Maxim's non-volatile static RAM (NV SRAM) and timekeeping circuits (such as real-time clocks). Lithium batteries for low-power, high-reliability, long-life applications such as non-volatile memory and timekeeping (typically in coin-shaped cells) use a variety of lithium-based chemistries (as differentiated from lithium-ion).	*Electrical Engineering*
Lithium batteries	Lithium batteries are typically coin-shaped and are used to power items such as Maxim's non-volatile static RAM (NV SRAM) and timekeeping circuits (such as real-time clocks).	*Electrical Engineering*
Lithium Grease	The most common type of grease today, based on lithium soaps.	*Lubrication*
Lithography	Print making technique applied to the processing of integrated circuits.	*Material Process*
Lithology	the gross physical character of a rock or rock types in a stratigraphic section.	*Chemical*
Lithology	The character of a rock described in terms of its structure, color, mineral composition, grain size, and arrangement of its component parts; all those visible features that in the aggregate impart individuality of the rock. Lithology is the basis of correlation in coal mines and commonly is reliable over a distance of a few miles.	*Mining*
Lithopone	An equimolecular mixture of zinc sulfide and barium sulfate prepared by coprecipitation.	*Material Process*
Lithosphere	The solid portion of the earth, as compared with the atmosphere and the hydrosphere. It includes the crust and part of the upper mantle.	*Petroleum Engineering*
Little Demon	a magneto-type exploder for firing single shots.	*Mining*
Little Giant	A movable nozzle attached to hydraulic pipes.	*Mining*
Live coal	coal that can be easily won from the face because of a favorable distribution of rock stresses within the enclosing strata, or by virtue of the gas emission from the seam.	*Mining*
Live Loading	Normally associated with valve packing. It designates the packing is spring loaded to maintain constant tension on the packing rings.	*Industrial Engineering*
Live Roller Conveyor	A series of rollers over which objects are moved by the application of power to all or some of the rollers. The power transmitting medium is usually belting or chain.	*Equipment*

Term	Definition	Industry
Livestock	any animals raised on the farm	*Agriculture*
Lloyd-Lipow Model	A reliability growth model based on the number of trials and successes at each stage of product development	*Reliability Engineering*
LMOA	Locomotive Maintenance Officers Association	*Petro-Chemical Abbreviations*
LN_2	Liquid nitrogen, often used for rapid cooling of environmental test chambers.	*Reliability Engineering*
LNC	lean NOX catalyst	*Petro-Chemical Abbreviations*
LNG	See Liquefied Natural Gas.	*Energy*
LNG	Liquefied natural gas. Natural gas becomes a liquid at a temperature of minus 258 degrees F and may be stored and transported in the liquid state.	*Petroleum Drilling*
LNT	lean NOX trap	*Petro-Chemical Abbreviations*
LOA	Linear alphaolefin	*Petro-Chemical Abbreviations*
Load	The electrical demand of a process expressed as power (watts), current (amps) or resistance (ohms).	*Electrical*
Load (electric)	An end-use device or customer that receives power from the electric system. Source: Glossary of Terms Used in NERC Reliability Standards.	*Energy*
Load Building	Programs aimed at increasing use of existing electric equipment or the addition of new equipment.	*Energy*
Load Cell	A device which produces an output signal proportional to the applied load.	*Equipment*
Load Centers	A limited geographical area where large amounts of power are used by customers.	*Energy*
Load control program	A program in which the utility company offers a lower rate in return for having permission to turn off the air conditioner or water heater for short periods of time by remote control. This control allows the utility to reduce peak demand.	*Energy*
Load Current	Is units = Amps/milliamps (DC) or Amps RMS/milliamps RMS (AC). The maximum amount of current that a proximity sensor will switch through its load. Load current for a particular device can be calculated by dividing the load voltage by the load resistance. Attempting to switch a higher load current than the sensor is rated for will result in sensor failure.	*Electrical Engineering*
Load curve	The relationship of power supplied to the time of occurrence. Illustrates the varying magnitude of the load during the period covered.	*Energy*
Load Diversity	The condition that exists when the peak demands of a variety of electric customers occur at different times. This is the objective of "load molding" strategies, ultimately curbing the total capacity requirements of a utility.	*Energy*
Load Dividing Pressure Control Valve	A pressure control valve used to proportion pressure between two pumps in series.	*Mechanical, Process, and Operations*
Load Duration Curve	A curve that displays load values on the horizontal axis in descending order of magnitude against percent of time (on the vertical axis) the load values are exceeded.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Load Factor	The ratio of the average load supplied to the peak or maximum load during a designated period. Load factor, in percent, also may be derived by multiplying the kWh in a given period by 100, and dividing by the product of the maximum demand in kW and the number of hours in the same period.	*Energy*
Load following	Regulation of the power output of electric generators within a prescribed area in response to changes in system frequency, tie line loading, or the relation of these to each other, so as to maintain the scheduled system frequency and/or established interchange with other areas within predetermined limits.	*Energy*
Load Forecast	Estimate of electrical demand or energy consumption at some future time.	*Energy*
Load Impedance	The impedance presented to the output terminals of a transducer by the associated external circuitry.	*Electronic Process*
Load Impedance	The impedance presented to the output terminals of a sensor by the associated external circuitry.	*Electrical Engineering*
Load leveling	Any load control technique that dampens the cyclical daily load flows and increases base load generation. Peak load pricing and time-of-day charges are two techniques that electric utilities use to reduce peak load and to maximize efficient generation of electricity.	*Energy*
Load loss (3 hours)	Any significant incident on an electric utility system that results in a continuous outage of 3 hours or longer to more than 50,000 customers or more than one half of the total customers being served immediately prior to the incident, whichever is less.	*Energy*
Load management	Controlling loads in a utility system to limit peak demand, reduce costs, improve load factor, or in some other way improve the stability and reliability of electrical power distribution.	*Electrical*
Load management technique	Utility demand management practices directed at reducing the maximum kilowatt demand on an electric system and/or modifying the coincident peak demand of one or more classes of service to better meet the utility system capability for a given hour, day, week, season, or year.	*Energy*
Load Management	Influencing the level and shape of demand for electrical energy so that demand conforms to present supply situations and long-run objectives and constraints.	*Energy*
Load on equipment	One hundred percent load is the maximum continuous net output of the unit at normal operating conditions during the annual peak load month. For example, if the equipment is capable of operating at 5% over pressure continuously, use this condition for 100% load.	*Energy*
Load Profile	Measurement of a customer's electricity usage over a period of time that shows how much and when a customer uses electricity. Load profiles can be used by REPs and transmission system operators to forecast electricity supply.	*Energy*
Load Profile	Information on a customer's usage over a period of time, sometimes shown as a graph.	*Energy*
Load Ratio Share	Ratio of a transmission customer's network load to the provider's total load calculated on a rolling twelve-month basis.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Load reduction request	The issuance of any public or private request to any customer or the general public to reduce the use of electricity for the reasons of maintaining the continuity of service of the reporting entity's bulk electric power supply system. Requests to a customer(s) served under provisions of an interruptible contract are not a reportable action unless the request is made for reasons of maintaining the continuity of service of the reporting entity's bulk electric power supply.	*Energy*
Load Regulation	Load regulation refers to circuitry that compensates for changes in load. Most commonly: Circuits that keep voltage constant as load varies.	*Electrical Engineering*
Load Shape	A curve on a chart showing power (kW) supplied (on the horizontal axis) plotted against time of occurrence (on the vertical axis), and illustrating the varying magnitude of the load during the period covered.	*Energy*
Load shedding	Intentional action by a utility that results in the reduction of more than 100 megawatts (MW) of firm customer load for reasons of maintaining the continuity of service of the reporting entity's bulk electric power supply system. The routine use of load control equipment that reduces firm customer load is not considered to be a reportable action.	*Energy*
Load Shifting	A load shape objective that involves moving loads from peak periods to off-peak periods. If a utility does not expect to meet its demand during peak periods but has excess capacity in the off-peak periods, this strategy might be considered.	*Energy*
Load tap changer (LTC)	load tap changers are devices used to adjust the performance of transformers. Adjusting the tap changes the voltage of the transformer's input or output.	*Electrical*
Load Upset	An upset to the process (that is not from changing the set-point). A simple example: you are taking a shower and someone flushes the toilet. The temperature suddenly changes on you, the controller. Another example: you are injecting steam into flowing cold water to get lukewarm water, and the inlet cold water changes temperature.	*Process Control*
Load	The amount of electric power delivered or required at any specified point or points on a system. Load originates primarily at the power consuming equipment of the customer.	*Energy*
Load, Regulation	The change in output (usually speed or voltage) from no-load to full-load (or other specified limits).	*Process Control*
Load-carrying capacity	Property of a lubricant to form a film on the lubricated surface, which resists rupture under given load conditions. Expressed as maximum load the lubricated system can support without failure or excessive wear.	*Oil Analysis*
Loader gate	see main gate.	*Mining*
Loading machine	is used in conventional mining to scoop broken coal from the working area and load it into a shuttle car, which hauls the coal to mine cars or conveyors for delivery to the surface.	*Energy*
Loading machine	Any device for transferring excavated coal into the haulage equipment.	*Mining*
Loading pocket	Transfer point at a shaft where bulk material is loaded by bin, hopper, and chute into a skip.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Loading Pressure	The pressure used to position a pneumatic actuator. It is the pressure that is actually applied to the actuator diaphragm or piston. It can be the instrument pressure if a valve positioner is not used or is bypassed.	*Industrial Engineering*
Loading Time	The available time is derived by subtracting the planned downtime from the available time per day or week, etc.	*Maintenance*
Load-serving entity (electric)	Secures energy and transmission service (and related Interconnect Operations Services) to serve the electrical demand and energy requirements of its end-use customers. See NERC definition.	*Energy*
Load-wear Index (LWI)	Measure of the relative ability of a lubricant to prevent wear under applied loads; it is calculated from data obtained from the Four Ball EP Method. Formerly called mean Hertz load.	*Lubrication*
Lobbing on	shoveling or loading out coal onto a belt (N. Staffs.).	*Mining*
Local	items produced within a specified local region. Not a well defined term, definitions range from being produced within 100 miles to being produced within a day's drive from your home.	*Agriculture*
Local Preheating	Preheating of a specific portion of a structure.	*Maintenance and Repair*
Local Stress-Relief Heat Treatment	Stress-relief heat treatment of a specific portion of a weldment. This is done extensively with induction coils, resistance coils, or propane torches in the field erection of steel piping.	*Maintenance and Repair*
Local distribution company (LDC)	A legal entity engaged primarily in the retail sale and/or delivery of natural gas through a distribution system that includes main lines (that is, pipelines designed to carry large volumes of gas, usually located under roads or other major right-of-ways) and laterals (that is, pipelines of smaller diameter that connect the end user to the mainline). Since there structuring of the gas industry, the sale of gas and/or delivery arrangements may be handled by other agents, such as producers, brokers, and marketers that are referred to as "non-LDC."	*Energy*
Local Distribution Company (LDC)	A business entity that obtains its primary revenues from the operations of a local retail gas distribution system and operates no transportation system other than connections within its own system or to the system of another company. Most often, an LDC is a utility.	*Energy*
Local Interconnect Network (LIN)	Defined by the LIN-BUS consortium, a LIN is a low data-rate, single-wire communications system, used in automotive and heavy vehicle applications.	*Electrical Engineering*
Local temperature	The temperature measured on the die of the temperature-measuring integrated circuit.	*Electrical Engineering*
Local Temperature Sensor	An element or function of an integrated circuit that measures its own die temperature.	*Electrical Engineering*
Localized Corrosion	Corrosion at discrete sites, for example, pitting, crevice corrosion, and stress corrosion cracking.	*Paint and Coatings*
Locate	To establish the possessory right to a mining claim.	*Mining*
Locating Ring	Device which aligns nozzle of injection molding machine with the sprue bushing and the mold with the stationary platen.	*Engineering Physics*
Locavore	a person committed to eating a diet produced within a specific area	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Lock	An enclosed chamber in a canal, dam, etc., with gates at each end, for raising or lowering vessels from one level to another by admitting or releasing water. To furnish with locks, as a canal.	*Civil Engineering*
Lock bay	A broadened section of a canal before the gates of a lock.	*Civil Engineering*
Lock Nut	There are two common usage's of this term: 1. A nut which provides extra resistance to vibration loosening by either providing some form of prevailing torque, or, in free spinning nuts, by deforming and/or biting into mating parts when fully tightened. 2. The term is sometimes used for thin (or jam) nuts used to lock a thicker nut. When used in this way the thin nut should be adjacent to the joint surface and tightened against the thick nut. If placed on top of the thick nut the thin nut would sustain loads it was not designed to sustain.	*Maintenance*
Lock up pressure	The differential pressure required to produce tight shutoff in a regulator. It is usually a few PSI.	*Mechanical*
Lockage	The construction, use, or operation of locks, as in a canal or stream.	*Civil Engineering*
Locked Coil Strand	Smooth-surfaced strand ordinarily constructed of shaped, outer wires arranged in concentric layers around a center of round wires.	*Wire Rope & Cable*
Locker dobber	the man who stood by the side of the road pushing lockers between the spokes of the tubs to slow down their progress. (Mids). Also called 'Bob a locker'. -see also Snibbler.	*Mining*
Locker, Lolly or Sprag	a piece of timber or iron placed between the spokes of a tub's wheels to stop it from moving. Also called 'Dregs'. (N. East) and 'Scotches'. -see also Snibble.	*Mining*
Locking device	Any valve attachment whose purpose is to prevent the operation of the valve by unauthorized persons.	*General Mechanical*
Lockout/Tagout	Also referred to as LOTO. It is a safety procedure to ensure that dangerous machines are properly shut off and not started again prior to the completion of maintenance work. It requires that power sources be "isolated and rendered inoperative" before any repair procedure is started. LOTO works in conjunction with a lock usually locking the device or the power source with the hasp, and placing it in such a position that no hazardous power sources can be turned on. The procedure requires that a tag be affixed to the locked device indicating that it should not be turned on.	*Reliability Engineering*
Lock-outs	electrical isolation boxes located at intervals by the side of conveyors enabling the conveyor motor to be switched off to allow work to be carried out safely on or around the conveyor. Also called a 'latch'.	*Mining*
lockup	may occur, the electro-Hydraulic Control Unit (EHCU) is activated. The EHCU then modulates the brake pressure in the appropriate brake lines by means of the solenoid-operated valves. This is intended to prevent wheel lockup and help the vehicle maintain directional stability during potentially hazardous braking situations.	*Mechanical Engineering*
Lock-Up Valve	A special type of regulator that is installed between the valve positioner and the valve actuator, where it senses the supply air pressure. If that pressure falls below a certain level, it locks or traps the air loaded into the actuator causing the valve to fail-in-place.	*Industrial Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Loco level	the main level going inbye from the shaft along which the locomotives haul the coal, men and materials.	*Mining*
Lode	A mineral deposit in solid rock.	*Mining*
Lode	A metallic vein.	*Mining*
Lodge	a reservoir situated near to the winding engine house to collect water pumped out of the pit. The water would be used to fill the boilers to raise steam for the winding engine, or a sump or 'lodge room' situated at the lowest point in a mine to collect water ready to be pumped out of the mine. Also called a 'lodgement'.	*Mining*
Lodge, lodged, lodging	Permanent bending over of a stem. Often, but not always, associated with root diseases.	*Agriculture*
Lofting or Lofting	timbers, wood, usually old refuse, used as packing above and behind roof supports. (Scot.).	*Mining*
Log	Logarithm (common)	*Oil Analysis*
Log Sheet	A document on which brief details of minor activities and repairs are recorded.	*Reliability Engineering*
Logarithmic Scale	A method of displaying data (in powers of ten) to yield maximum range while keeping resolution at the low end of the scale.	*General Engineering*
Logging	The process of recording geological observations of drill core either on paper or on computer disk.	*Mining*
Logging	Well logging refers to using either wireline based instruments, which are lowered down the hole, or MWD - LDW (Measure - Logging While Drilling) equipment to analyze the rock formation being drilled through. Logging tools record properties of rock, such as gamma ray output from the formation, resistivity, conductivity and other factors to create a paper or digital "log" of the well, showing what kind of formation the wellbore penetrated. LWD or logging while drilling is used in the Eagle Ford Shale to help people well on track and in the shale zone instead of above or below it. LWD technology is essential for the horizontal drilling process since it gives the directional driller real-time information that he can use to keep the well inside the pay zone.	*Petroleum Drilling*
Logic	Sound thinking, thinking that makes sense	*Management Discussion*
Logic	The modification of an input signal that produces delayed, pulsed, latched. or other output response. Logic circuitry is sometimes an integral part of the control, but more often, a separate plug: in card or module.	*Electrical Engineering*
Logic devices	The general category of components which perform logic functions; for example AND, NAND OR and NOR. They can permit or inhibit signal transmission with certain combinations of control signals.	*Mechanical, Process, and Operations*
Logic state	Signal levels in logic devices are characterized by two stable states, the logical 1 (one) state and the logical 0 (zero) state. The designation of the two states is chosen arbitrarily. Commonly the logical 1 state represents an "on" signal and the 0 state represents an "off" signal.	*Mechanical, Process, and Operations*
Logistic regression	A form of regression analysis that models an individual's odds of disease or some other outcome as a function of a risk factor or intervention. It is widely used for dichotomous outcomes, in particular to carry out adjusted analysis. See also: Meta-regression	*Quality Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Logistic Support Analysis (LSA)	A Methodology For Determining The Type And Quantity Of Logistic Support Required For A System Over Its Entire Lifecycle. Used To Determine The Cost Effectiveness Of Asset Based Solutions.	*Plant Engineering*
Logitudinal cell	Tubelike microstructural feature of wood aligned with the vertical axis of the tree.	*Material Process*
LOGMARS	Logistics Application of Automated Marking and Reading Symbols	*Gears*
Lognormal distribution	A lifetime statistical distribution that is often used to model products in which physical fatigue is the prominent contributor to the primary failure mode.	*Reliability Engineering*
Log-odds ratio	The (natural) log of the odds ratio. It is used in statistical calculations and in graphical displays of odds ratios in systematic reviews.	*Quality Engineering*
Logos	Logic	*Management Discussion*
LOLER	This is an acronym for the Lifting Operations and Lifting Equipment (LOLER) Regulations came into force in 1998 in the United Kingdom. They cover all operations and equipment which involve lifting people and goods at work. They cover such equipment as cranes, lifts, hoists, chains, ropes, slings, hooks, shackles, eyebolts, rope and pulley systems, and forklift trucks. They also cover second-hand and leased equipment, e.g. companies hiring out cranes retain duties over how the equipment is used and maintained by their customers. They apply to all workplaces - building sites, offices, hospitals, farms, factories, etc. All the requirements of the Provision and Use of Work Equipment 1998 Regulations apply to lifting equipment	*Reliability Engineering*
Lommy	wetted mudstone or fireclay. Also known as 'sloom'; or a layer of soft material in the roof of the coal seam. (Notts.).	*Mining*
London fix	The twice-daily bidding session held by five dealing companies to set the gold price. There are also daily London fixes to set the prices of other precious metals.	*Mining*
London Metals Exchange	A major bidding market for base metals, which operates daily in London.	*Mining*
Long	In commodities market parlance, buying more futures contracts than you sell.	*Metallurgy*
Long Haul	A network that spans distances larger than a local area network (LAN). Because electrical and optical transmissions fade over distance, long-haul networks are difficult and expensive to implement.	*Electrical Engineering*
Long position	Securities owned outright or carried on margin.	*Mining*
Long range order	A structural characteristics of crystals, and not glasses.	*Material Process*
Long Range Ultrasonic Testing (LRUT)	See Guided Wave testing	*Reliability Engineering*
Long Term Evolution	Proposed next-generation, wireless, broadband network. LTE is presently a project within 3GPP, the Third Generation Partnership Project.	*Electrical Engineering*
Long Tom	Similar to a sluice box, but longer and skinnier.	*Mining*
Long ton	Long ton: 2,240 pounds. Used mainly in England.	*Energy*
long ton	2,240 pounds. For many commodities this is the standard measure for international trade. However, domestic shipments usually are reported in short tons (2000 pounds).	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Longitudinal	Always measured parallel to air intakes and perpendicular to air flow.	*Facility Engineering*
Longitudinal or Compressional or Axial Vibration	is in the same direction as the transfer of energy. Transverse Vibration is perpendicular to that direction.	*Reliability Engineering*
Longnormal Distribution	A lifetime statistical distribution that is often used to model products in which physical fatigue is the prominent contributor to the primary failure mode	*Reliability Engineering*
Long-term debt	Debt securities or borrowing shaving a maturity of more than one year.	*Energy*
Long-term purchase	A purchase contract under which at least one delivery of material is scheduled to occur during the second calendar year after the contract-signing year. Deliveries also can occur during the contract-signing year, during the first calendar year thereafter, or during any subsequent calendar year.	*Energy*
Longwall mining	An automated form of underground coal mining characterized by high recovery and extraction rates, feasible only in relatively flat-lying, thick, and uniform coalbeds. A high-powered cutting machine is passed across the exposed face of coal, shearing away broken coal, which is continuously hauled away by a floor-level conveyor system. Longwall mining extracts all machine-minable coal between the floor and ceiling within a contiguous block of coal, known as a panel, leaving no support pillars within the panel area. Panel dimensions vary over time and with mining conditions but currently average about 900 feet wide (coal face width) and more than 8,000 feet long (the minable extent of the panel, measured indirection of mining). Longwall mining is done under movable roof supports that are advanced as the bed is cut. The roof in the mined-out area is allowed to fall as the mining advances.	*Energy*
Longwall mining machine	shears coal from a long straight coal face (up to about 700 feet) by working back and forth across the face under a movable, hydraulic-jack roof-support system. The broken coal is transported by conveyor. Longwall machines can mine coal at the rate of 1,000 tons per shift. Mine locomotive, operating on tracks, is used to haul mine cars containing coal and other material, and to move personnel in specially designed "mantrip" cars. Large locomotives can haul more than 20 tons at a speed of about 10 miles per hour. Most mine locomotives run on electricity provided by a trolley wire; some are battery-powered.	*Energy*
Longwall Mining	One of three major underground coal mining methods currently in use. Employs a steal plow, or rotation drum, which is pulled mechanically back and forth across a face of coal that is usually several hundred feet long. The loosened coal falls onto a conveyor for removal from the mine.	*Mining*
Longwall	a method of working coal using long straight coal faces. The more modern method involves the progressive extraction of rectangular blocks or panels of a coal seam by means of a straight face.	*Mining*
Longwork	a system of modified longwall working in which a pair of slants are driven to the full dip with level headings at right angles. Also called 'Long-wall' or 'Long-way'. (N. East).	*Mining*
LonWorks	Local Operating Networks is another fieldbus, used by about 2,000 companies. The chips are made by Toshiba and Motorola for the German Echelon. They are then sold onto to various manufacturers.	*Control Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Loop	Each DCS controls a number of loops. These consist of a measurement device, a controller and a valve. Each loop is composed of devices to control the flow of liquid at a particular point.	*Control Engineering*
Loop flow	The movement of electric power from generator to load by dividing along multiple parallel paths; it especially refers to power flow along an un intended path that loops away from the most direct geographic path or contract path.	*Energy*
Loop flow	Inadvertent transmission of power through an unnecessary diversion in the transmission network. It is undesirable because it serves no purpose and incurs losses.	*Electrical*
Loop Resistance	The total resistance of a thermocouple circuit caused by the resistance of the thermocouple wire. Usually used in reference to analog pyrometers which have typical loop resistance requirements of 10 ohms.	*Electrical*
Loop Resistance	The total resistance of a thermocouple circuit caused by the resistance of the thermocouple wire. Usually used in reference to analog pyrometers which have typical loop resistance requirements of 10 ohms.	*Electronic Process*
Loop, Closed (Feedback Loop)	A signal path which includes a forward path, a feedback path and a summing point, and forms a closed circuit.	*Process Control*
Loop, Endless	see Endless Loop	*Electrical Engineering*
Loop, Open	A signal path without feedback	*Process Control*
Looper	A caterpillar in which some or all of the middle abdominal prolegs are wanting and which moves by placing the posterior part of the abdomen next to the thorax, forming a loop of the intervening segments, then extending the anterior part of the body forward.	*Forestry*
Loop-powered	A loop-powered device draws its power from the system and does not require a separate power supply.	*Mechanical*
Loose	to stop or finish. –see also Loose-it.	*Mining*
Loose coal	Coal fragments larger in size than coal dust.	*Mining*
Loose place	a place where coal is easily won. (N. East).	*Mining*
Loose side	the side of the face not supported by the coal, i.e. the waste side.	*Mining*
Loose	Same as Oversteer. Typically describes a cornering condition where the rear tires lose adhesion before the front tires, resulting in a car that feels like it wants to spin easily. This is one of the most unpleasant sensations for a driver because once the car goes, it is almost impossible to catch. Solutions include adjustments to tire pressure, increasing the angle of the rear wing for more rear downforce, adjusting the rear anti-roll bar setting or spring rates in order to provide more grip, and reducing grip at the front by reducing the front wing angle or stiffening the front anti-roll bar setting or spring rates. Here is an easy way to remember whether a car is loose (oversteer) or tight (understeer): If the front end hits the wall, it was understeer. If the rear end hits the wall, it was oversteer.	*NASCAR*
Loose-end	the corner of a pillar or the place where two faces at right angles meet.	*Mining*
Loose-it	the end of the shift (N. Staffs.)—see Lowse.	*Mining*

Please see the Appendix for further illustration

Term	Definition	Industry
Loss Coefficient	the fraction of mechanical energy lost in a stress strain cycle. The loss coefficient for each material is a function of the frequency of the cycle. A high loss coefficient can be desirable for damping vibrations while a low loss coefficient transmits energy more efficiently. The loss coefficient is also an important factor in resisting fatigue failure. If the loss coefficient is too high, cyclic loading will dissipate energy into the material leading to fatigue failure.	*Metallurgy*
Loss Factor	The product of the power factor and the dielectric constant.	*Material Process*
Loss of Load Probability (LOLP)	A measure of the probability that system demand will exceed capacity during a given period; this period is often expressed as the expected number of days per year over a long period, frequently taken as ten consecutive years. An example of LOLP is one day in ten years.	*Energy*
Loss Of Revenues	Term derived by calculating total revenues lost minus direct avoided cost of production.	*Reliability Engineering*
Loss of service (15 minutes)	Any loss in service for greater than 15 minutes by an electric utility of firm loads totaling more than 200 MW, or 50 percent of the total load being supplied immediately prior to the incident, whichever is less. However, utilities with a peak load in the prior year of more than 3000 MW are only to report losses of service to firm loads totaling more than 300 MW for greater than 15 minutes. (The DOE shall be notified with service restoration and in any event, within three hours after the beginning of the interruption.)	*Energy*
Loss prevention	Limitation of the loss of the damage and injury caused if an incident occurs, pressure relief, plant layout, provision of fire fighting equipment.	*Material Process*
Loss to follow up	See Attrition	*Quality Engineering*
Losses	The general term applied to energy (kWh) and capacity (kW) lost in the operation of an electric system. Losses occur principally as energy transformations from kWh to waste-heat in electrical conductors and apparatus. This waste-heat in electrical conductors and apparatus. This power expended without accomplishing useful work occurs primarily on the transmission and distribution system.	*Energy*
Losses	in an electricity distribution system depend on the length of the cable (the longer the cable, the greater the losses); the conductivity of the material (higher resistance means greater losses); the square of the current (at twice the current, there will be four-times the losses); and the cross-sectional area of the cable. Therefore, to minimize losses, power should be transmitted at the highest practical voltage. This reduces the current and therefore the amount of power lost in transmission. Most electrical transmission systems are alternating current at voltages between 110 and 800 kV. (See also HVDC.)	*Electrical*
Lost Circulation	The result of drilling fluid escaping from the borehole into the formation by way of crevices or porous media.	*Petroleum Engineering*
Lot number	"An alphanumeric and/or symbolic identification placed on the label by the manufacturer that enables the manufacturing history of the product to be traced." [CLSI]	*Quality*
Loudness	The human ranking of an auditory sensation, usually in terms ranging from soft to loud, expressed in sones (not in deciBels).	*Reliability Engineering*

Term	Definition	*Industry*
Loup	a slip or a fault. (Scot.).	*Mining*
Louvers	Members installed horizontally in a tower wall to provide openings through which the air enters the tower while also containing the falling water within the tower. Usually installed at an angle to the direction of air flow to the tower.	*Facility Engineering*
Low alloy steel	Ferrous alloy with less than 5 wt % noncarbon additions.	*Material Process*
Low Alloy Steel	An iron based metal alloy with small amounts of other elements added which is to produce a desired response to heat treatment cycles and to achieve targeted mechanical properties.	*Petroleum Engineering*
Low Btu gas	A fuel gas with a heating value between 90 and 200 Btu per cubic foot.	*Energy*
Low Density Polyethylene (LDPE) And Linear Low Density Polyethylene (LLDPE)	LDPE offers a unique combination of properties: toughness and high-impact strength, high gloss and clarity, good heat stability and chemical resistance, low permeability to water, outstanding electrical properties, and great flexibility and processibility. Linear low density polyethylene (LLDPE) adds extra toughness. Properties: Strong but lightweight, LDPE is easy to process, use and seal (including heat seal). It has excellent insulating properties, and provides a good barrier to water, moisture and most organic chemicals (except ones with aromatic or chlorine content). It's also a fair gas barrier. Although not as stiff and strong as some resins, LDPE is very flexible and offers good impact resistance. LDPE is opaque except in the thinner films. Applications: LDPE is used to shrink or stretch wrap thousands of consumer products and make various foils, trays and bags — the soft kind that do not crackle — for both food (milk pouches, bread, sandwich and frozen food bags, boil-in bags, and bags-in-a-box) and non-food items (most soft plastic shopping bags, as well as dry cleaning, mattress and trash bags, and can liners). It is also used in bubble packaging, envelope film, industrial liners, shipping sacks and overwrap, and agricultural and construction films. The resin is also used as a protective coating on paper, textiles and other plastics (for example, in milk cartons), as a chemically resistant lining, and as insulation in wire/cable and electrical/electronic applications.	*Engineering Physics*
Low Drop Out	A linear voltage regulator that will operate even when the input voltage barely exceeds the desired output voltage.	*Electrical Engineering*
Low Drop Out	A linear voltage regulator that will operate even when the input voltage barely exceeds the desired output voltage.	*Electrical Engineering*
Low E glass	Low-emission glass reflects up to 90% of long-wave radiation, which is heat, but lets in short-wave radiation, which is light. Windows are glazed with a coating that bonds a microscopic, transparent, metallic substance to the inside surface of the double-pane or triple-pane windows.	*Energy*
Low Energy Circuit	A qualitative term having no exact definition. It usually refers to a circuit having such low voltage and current that there are no significant thermal effects at the contact interface.	*Electrical Engineering*
Low flow showerheads	Reduce the amount of water flow through the showerhead from 5 to 6 gallons a minute to 3 gallons a minute.	*Energy*
Low flush toilet	A toilet that uses less water than a standard one during flushing, for the purpose of conserving water resources.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Low Grade Ore	Ore which runs below twenty ounces of silver to the ton, fifty per cent of the ton being lead.	*Mining*
Low head	Vertical difference of 100 feet or less in the upstream surface water elevation (headwater) and the downstream surface water elevation (tailwater) at a dam.	*Energy*
Low Heat Value (LHV)	The low or net heat of combustion for a fuel assumes that all products of combustion, including water vapor, are in a gaseous state.	*Energy*
Low Income Home Energy Assistance Program (LIHEAP)	The purpose of LIHEAP is to assist eligible households to meet the cost of heating or cooling in residential dwellings. The Federal government provides the funds to the States that administer the program.	*Energy*
Low or Lowe	a pit candle, or more generally, a flame or light.	*Mining*
Low power testing	The period of time between a plant's nuclear generating unit's initial fuel loading date and the issuance of its operating (full-power) license. The maximum level of operation during this period is 5 percent of the unit's thermal rating.	*Energy*
Low Pressure	A processing unit operating at less than 225 pounds per square inch gauge (PSIG) measured at the outlet separator.	*Energy*
Low pressure molding	A method of distributing a relatively uniform low pressure over a prearranged, resin bearing, fibrous assembly of cellulose, glass or asbestos, with or without the application of heat from some external source, to form a coherent, laminated structure possessing definite physical properties.	*Material Process*
Low Recovery Valve	A valve design that dissipates a considerable amount of flow stream energy due to turbulence created by the contours of the flow path. Consequently, pressure downstream of the valve vena contracta recovers to a lesser percentage of its inlet value than a valve with a more streamlined flow path. The conventional globe style control valve is in this category.	*Industrial Engineering*
Low sulfur diesel (LSD) fuel	Diesel fuel containing more than 15 but less than 500 parts per million (ppm) sulfur.	*Energy*
Low temperature collectors	Metallic or nonmetallic collectors that generally operate at temperatures below 110 degrees Fahrenheit and use pumped liquid or air as the heat transfer medium. They usually contain no glazing and no insulation, and they are often made of plastic or rubber, although some are made of metal.	*Energy*
Low volatile bituminous coal	See Bituminous Coal.	*Energy*
Low voltage	Up to and including 660 volts by federal standards.	*Mining*
Low-Density Polyethylene	This term is generally considered to include polyethylenes ranging in density from about 0.915 to 0.925. In low density polyethylenes, the ethylene monomeric units are linked in random fashion, with the main chains having long and short side branches. This branching prevents the formation of a closely knit patter, resulting in material that is relatively soft, flexible and tough, and which will withstand moderate heat.	*Engineering Physics*
lower explosive limit (LEL)	the concentration of a gas below which the concentration of vapors is insufficient to support an explosion. LELs for most organics are generally 1 to 5 percent by volume.	*Chemical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Lower limit of detection, LLD	Older term that was commonly used to refer to an estimate of detection limit calculated from replicate measurements of a blank sample. Typically the estimate is given as the mean of the blank sample plus 2 SD of the variation observed for the blank sample.	*Quality*
Lower yield point	The onset of general plastic deformation in a low carbon steel.	*Material Process*
Lowest Point of Single Tooth Contact	The smallest diameter on a spur gear at which a single tooth of one gear is in contact with its mating gear. Often referred to as LPSTC. Gear set contact stress is determined with a load placed at this point on the pinion.	*Mechanical Engineering*
Low-line or Low-pressure gas	Low-pressure (5 psi) gas from atmospheric and vacuum distillation recovery systems that is collected in the gas plant for compression to higher pressures.	*Petroleum Engineering*
Low-pressure sodium lamp	A type of lamp that produces light from sodium gas contained in a bulb operating at a partial pressure of 0.13 to 1.3 Pascal. The yellow light and large size make them applicable to lighting streets and parking lots.	*Energy*
Lowse or Loose	to cease work. -see Loose-it.	*Mining*
Low-Side	An element connected between the load and ground. Low-side current sensing applications measure current by looking at the voltage drop across a resistor placed between the load and ground.	*Electrical Engineering*
Low-sulfur coal	generally contains 1 percent or less sulfur by weight. For air quality standards, "low sulfur coal" contains 0.6 pounds or less sulfur per million Btu, which is equivalent to 1.2 pounds of sulfur dioxide per million Btu.	*Energy*
Low-temperature boiler	Low-temperature boilers operate with infinitely variable temperature control. As a result, they operate with distinctly lower heating water temperatures than used to be the case with constant-temperature boilers. Since the flue gas loss and the heat lost through the boiler surface are distinctly lower, these low-temperature boilers achieve standard efficiency values of 92 % to 96 %.	*Thermal Management*
LP	See Line Pipe.	*Petroleum Engineering*
LP Thread	Line Pipe Thread (NPT).	*Petroleum Engineering*
LPG	See Liquefied Petroleum Gases.	*Energy*
LPPS	See 'Vacuum or Low Pressure Plasma Spraying.'	*Paint and Coatings*
LRG	LRG:	*Energy*
LRI	Lubricant Review Institute	*Petro-Chemical Abbreviations*
LS	limited slip	*Petro-Chemical Abbreviations*
LSA	See Logistic Support Analysis	*Plant Engineering*
LSAR files	Acronym for Logistics support analysis records which contain reliability and maintenance data for a system and its modifications. They are text files that conform to MIL-STD-1388 2B	*Reliability Engineering*
LSC	Lubricant Standards Committee	*Petro-Chemical Abbreviations*
LSD	low sulfur diesel	*Petro-Chemical Abbreviations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
LSD (Least-Significant Digit)	The rightmost active (non-dummy) digit of the display.	*General Engineering*
LSD (Least-Significant Digit)	The rightmost active (non-dummy) digit of the display.	*Electronic Process*
LSE	Load Serving Entity	*Energy*
LSR	light straight run gasoline	*Petro-Chemical Abbreviations*
LSRD	low sulfur road diesel	*Petro-Chemical Abbreviations*
LS-TTL Compatible	For digital input circuits, a logic 1 is obtained for inputs of 2.0 to 5.5 V which can source 20 ¦ÌA, and a logic 0 is obtained for inputs of 0 to 0.8 V which can sink 400 ¦ÌA. For digital output signals, a logic 1 is represented by 2.4 to 5.5 V with a current source capability of at least 400 ¦ÌA, and a logic 0 is represented by 0 to 0.6 V with a current sink capability of at least 16 MA. ¡°LS¡± stands for Low-power Schottky.	*Electrical*
LS-TTL Compatible	For digital input circuits, a logic 1 is obtained for inputs of 2.0 to 5.5 V which can source 20 µA, and a logic 0 is obtained for inputs of 0 to 0.8 V which can sink 400 µA. For digital output signals, a logic 1 is represented by 2.4 to 5.5 V with a current source capability of at least 400 µA; and a logic 0 is represented by 0 to 0.6 V with a current sink capability of at least 16 MA. “LS” stands for low-power Schottky.	*Electronic Process*
LS-TTL Unit Load	A load with LS-TTL voltage levels, which will draw 20 ¦ÌA for a logic 1 and ¨C400 ¦ÌA for a logic 0.	*Electrical*
LTCD	Light Truck Clean Diesel	*Petro-Chemical Abbreviations*
LTFT	low temperature flow test	*Petro-Chemical Abbreviations*
Lubricant	A friction reducing substance. A substance, typically oil or grease, applied to a surface to reduce friction between moving parts.	*Maintenance*
Lubricant	A substance which when interposed between parts or particles tends to make surfaces slippery, reduce friction, and prevent sticking between the lubricated surfaces. Lubricants are added to plastics to assist flow in extrusion, assist in knitting and wetting of the resin in mixing and milling operations, and impart lubricity to finished products.	*Engineering Physics*
Lubricant Analysis	See oil analysis.	*Maintenance*
Lubricant bloom Irregular	cloudy, greasy exudation on the surface of a plastic.	*Material Process*
Lubricants	Substances used to reduce friction between bearing surfaces, or incorporated into other materials used as processing aids in the manufacture of other products, or used as carriers of other materials. Petroleum lubricants may be produced either from distillates or residues. Lubricants include all grades of lubricating oils, from spindle oil to cylinder oil to those used in greases.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Lubricate	Swabbing or spraying the dies with lubricant to assist in initial flow and to facilitate ejection of the forging.	*Metallurgy*
Lubricating Grease	A solid to semifluid dispersion of a thickening agent in a liquid lubricant containing additives (if used) to impart special properties.	*Lubrication*
Lubrication	Control of friction and wear by the introduction of a friction-reducing film between moving surfaces in contact. May be a fluid, solid, or plastic substance. (See Boundary Lubrication, Elastohydrodynamic Lubrication, Hydrodynamic Lubrication.)	*Lubrication*
Lubrication	The control of friction and wear by the introduction of a friction-reducing film between moving surfaces in contact. The lubricant used can be a fluid, solid, or plastic substance.	*Lubrication*
Lubrication Management	Lubrication management at a production facility includes all activities related to the lubrication of machinery. Included, but not limited to, are the following activities: Establishing a lubrication strategy "where to go, in what period".	*Maintenance*
Lubrication System	Components that work together in order to distribute oil between the moving parts of machinery and keep them from rubbing together.	*Reliability Engineering*
Lubricator	A device which adds controlled or metered amounts of lubricant into a pneumatic system.	*Mechanical, Process, and Operations*
Lubricator Adaptor	Top Connector (same, see below definition)	*Petroleum Engineering*
Lubricity	Ability of an oil or grease to lubricate; also called film strength.	*Lubrication*
Lucite	A trade name for methyl methacrylate plastics material.	*Material Process*
Lug (foot)	A mounting device consisting of a block extending past the basic cylinder profile. The block usually has a tapped or through mounting hole at right angles to the cylinder axis.	*Mechanical, Process, and Operations*
Lum	a chimney built on top of an upcast shaft for purpose of lengthening it to create a stronger draught of air.	*Mining*
Lumarith	A trade name for cellulose acetate plastic.	*Material Process*
Lumen	An empirical measure of the quantity of light. It is based upon the spectral sensitivity of the photosensors in the human eye under high (daytime) light levels. Photometrically it is the luminous flux emitted with a solid angle (1 steradian) by a point source having a uniform luminous intensity of 1 candela.	*Energy*
Lumens/Watt (lpw)	A measure of the efficacy (efficiency) of lamps. It indicates the amount of light (lumens) emitted by the lamp for each unit of electrical power (Watts) used.	*Energy*
Luminescence	The remission of photons of visible light in association with photon absorption.	*Material Process*
Lump coal	a term used to describe coal in the range 1 to 5 inches.	*Mining*
Lump sum	The sale of specified timber on a specified area whereby the buyer assumes responsibility for determining timber volume and the seller guarantees ownership and boundaries.	*Forestry*
Luncart or lunker	an ironstone nodule or ball that is more ovoid than round. (Scot.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Luster	Reflected light intensity from a grease; its sheen or brilliance. Luster is either: Bright — reflects light with a relatively strong intensity. Dull — reflects light with a relatively weak intensity. A high water content or certain thickeners and fillers may give a grease a characteristic dull luster.	*Lubrication*
Luster	Term used to describe the gloss, shine, or brightness of a finished surface.	*Material Process*
LVI	Low Viscosity Index, typically below 40 VI units.	*Lubrication*
LWD	Logging While Drilling equipment (see logging above) refers to equipment placed in the drilling assembly, near the mud motor and bit, to analyze the rock formation being drilled. LWD equipment can tell the directional driller what type of rock (such as sandstone or shale) they are drilling in, so that the well can stay in the desired payzone.	*Petroleum Drilling*
LWIU	See: Laundry, Dry Cleaning and Dye House Workers International Union (Ind)	*Industrial Relations*
LWR	See Light Water Reactor.	*Energy*
LWU	See: Leather Workers International Union of America (AFL-CIO)	*Industrial Relations*
Lype	a break in the strata having a slickensided or polished face.	*Mining*
M	Mega; one million. When referring to memory capacity, two to the twentieth power (1,048,576 in decimal notation).	*Electrical*
--M--	--M--	*Petroleum Drilling*
M.S.P.	Maximum Service Pressure.	*Petroleum Engineering*
M	Thousand	*Energy*
MAAC	Mid-Atlantic Interconnected Network	*Energy*
MAAG	Monitoring Agency Advisory Group (CMA)	*Petro-Chemical Abbreviations*
MAC Address	Media Access Control Address (maca, MAC): A hardware address that uniquely identifies each node of a network, as in IEEE-802 (Ethernet) networks. The MAC layer interfaces directly with the network medium.	*Electrical Engineering*
Macadam	A macadamized road or pavement. The broken stone used in making such a road.	*Civil Engineering*
Macadam	A macadamized road or pavement. The broken stone used in making such a road.	*Civil Engineering*
Macadamize	To pave by laying and compacting successive layers of broken stone, often with asphalt or hot tar.	*Civil Engineering*
Macadamize	To pave by laying and compacting successive layers of broken stone, often with asphalt or hot tar.	*Civil Engineering*
Machine availability rate	The percentage of time that production equipment is available for use, divided by the maximum time it would be available if there were no downtime for repair or unplanned maintenance.	*Quality*
Machine Crowned Pulley	A pulley in which the crown or vertex has been produced by an automatic, usually computer driven, machine.	*Manufacturing*

Term	Definition	*Industry*
Machine drive (motors)	The direct process end use in which thermal or electric energy is converted into mechanical energy. Motors are found in almost every process in manufacturing. Therefore, when motors are found in equipment that is wholly contained in another end use (such as process cooling and refrigeration), the energy is classified there rather than in machine drive.	*Energy*
Machine Language	Instructions that are written in binary form that a computer can execute directly. Also called object code and object language.	*General Engineering*
Machine runner	see Runner.	*Mining*
Machine vision	Optical systems in which video equipment is used to guide robotic or automated equipment during production operations; also, computerized visual inspection systems used for quality control.	*Quality*
Machine Welding	Welding with equipment which performs the welding operation under the observation and control of an operator. The equipment may or may not perform the loading and unloading of the work.	*Maintenance and Repair*
Machined surfaces	surfaces cleaned or otherwise altered by a power-driven machine	*Materials Process*
Machinery health monitoring (MHM)	See Condition Monitoring	*Reliability Engineering*
Machines, electric	Motors and generators are collectively referred to as "machines" or "electric machines." Motors are machines that convert electrical energy into mechanical work in the form of a rotating shaft, while generators convert the mechanical work of a rotating shaft into electricity.	*Electrical*
Machine-to-machine	Machine-to-mobile communications via wireless technologies such as cell phone network technologies, WLAN, Bluetooth, and RFID (radio frequency identification). Applications include automatic meter reading, fleet management, vending, monitoring and control, security and alarms, and telemedicine.	*Electrical Engineering*
Machine-to-machine	Machine-to-mobile communications via wireless technologies such as cell phone network technologies, WLAN, Bluetooth, and RFID (radio frequency identification). Applications include automatic meter reading, fleet management, vending, monitoring and control, security and alarms, and telemedicine.	*Electrical Engineering*
Machinists; International Association of (AFL-CIO)	the Machinists grew out of an organization originally formed in Atlanta, Georgia, on May 5, 1888, and which was known as the United Machinists and Mechanical Engineers of America.	*Industrial Relations*
Macnamaras	during the early part of the 20th century, the relations between the Bridge and Structural Iron Workers and the American Bridge Company became strained.	*Industrial Relations*
Macrohardness	The hardness of a coating as measured on a macroscopic scale, which shows the coatings bulk properties.	*Paint and Coatings*
Macromolecule	A huge molecule made up of thousands of atoms.	*Engineering Physics*
MACT	maximum achievable control technology	*Petro-Chemical Abbreviations*
MAD	mileage accumulation dynamometer	*Petro-Chemical Abbreviations*
Mad Cow Disease	Bovine spongiform encephalopathy.	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Made available (vehicle)	A vehicle is considered "Made available" if it is available for delivery to dealers or users, whether or not it was actually delivered to them. To be "Made available", the vehicle must be completed and available for delivery; thus, any conversion to be performed by an original equipment manufacturer (OEM) Vehicle Converter or Aftermarket Vehicle Converter must have been completed.	*Energy*
Made Work	applied generally to attempts by government to provide employment for individuals, who are unemployed or on relief rolls, for the purpose not only of retaining their skills but also to maintain their self respect through the performance of work and services useful to the community.	*Industrial Relations*
Mafic	Igneous rocks composed mostly of dark, iron- and magnesium-rich minerals.	*Mining*
Maggie	an inferior or stoney coal; or an inferior sandy ironstone. (Scot.).	*Mining*
Maggie blaes	an inferior sulfurous ironstone. (Scot.).	*Mining*
Magma	Naturally occurring molten rock, generated within the earth and capable of intrusion and extrusion, from which igneous rocks are thought to have been derived through solidification and related processes. It may or may not contain suspended solids (such as crystals and rock fragments) and/or gas phases.	*Energy*
Magmatic segregation	An ore-forming process whereby valuable minerals are concentrated by settling out of a cooling magma.	*Mining*
Magna Carta	a code, document, or other pronouncement which is designed to provide security and protection for the freedoms of groups.	*Industrial Relations*
Magnehelic gauge	a sensitive differential pressure or vacuum gauge manufactured by Dwyer Instrument Co. that uses a precision diaphragm to measure pressure differences. This gauge is manufactured in specific pressure or vacuum ranges such as 0 to 2 inches of water column. Magnehelic gauges are typically used to measure SVE system vacuums.	*Chemical*
Magnesia	Magnesium oxide, MgO, a light earthy white substance made usually by heating magnesium hydroxide or carbonate, used as a filler.	*Material Process*
Magnesium (MgCO3)	Triagonal white crystals. A filler or modifier for phenolic resins and synthetic rubber.	*Material Process*
Magnesium alloy	Metal alloy composed of predominantly magnesium.	*Material Process*
Magnetic	A separator that uses a magnetic field to attract and hold ferromagnetic particles.	*Oil Analysis*
Magnetic ceramic	See ceramic magnet.	*Material Process*
Magnetic Blow-Out Switch	A switch that contains a small permanent magnet which provides a means of switching high DC loads. The magnet deflects arc to quench it.	*Electrical Engineering*
Magnetic Brake	A brake usually mounted on a motor shaft with means to engage automatically when the electric current is cut off or fails.	*Equipment*
Magnetic dipole	North south orientation of a magnet.	*Material Process*
Magnetic field	Region of physical attraction produced by an electrical current.	*Material Process*
Magnetic Field Strength	The intensity of an externally applied magnetic field.	*Engineering Physics*
Magnetic filter	A filter element that, in addition to its filter medium, has a magnet or magnets incorporated into its structure to attract and hold ferromagnetic particles.	*Oil Analysis*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Magnetic Flux Density	The magnetic field produced in a substance by an external magnetic field.	*Engineering Physics*
Magnetic flux line	Representation of the magnetic field.	*Material Process*
Magnetic gradient survey	A geophysical survey using a pair of magnetometers a fixed distance apart, to measure the difference in the magnetic field with height above the ground.	*Mining*
Magnetic Induction	See Magnetic Flux Density	*Engineering Physics*
Magnetic moment	Magnetic dipole associated with electron spin.	*Material Process*
Magnetic Particle Examination or Inspection	This is a nondestructive examination method to locate surface and subsurface discontinuities in ferromagnetic materials. The presence of discontinuities is detected by the use of finely divided ferromagnetic particles applied over the surface. Some of these magnetic particles are gathered and held by the magnetic leakage field created by the discontinuity. The particles gathered at the surface form an outline of the discontinuity and generally indicate its location, size, shape, and extent.	*Maintenance and Repair*
Magnetic particle inspection	A nondestructive method of detecting the presence of surface cracks and imperfections through use of fine iron particles in an electrical field. Abbreviated as MPI or MT.	*General Mechanical*
Magnetic particle testing	A type of nondestructive testing in which defects are observed by the presence of a fine powder of magnetic particles attracted to the magnetic leakage flux around the surface or near surface discontinuities.	*Material Process*
Magnetic plug	Strategically located in the flow stream to collect a representative sample of wear debris circulating in the system: for example, engine swarf, bearing flakes, and fatigue chunks. The rate of buildup of wear debris reflects degradation of critical surfaces.	*Oil Analysis*
Magnetic Seal	A seal that uses magnetic material (instead of springs or a bellows) to provide the closing force that keeps the seal faces together.	*Lubrication*
Magnetic separation	A process in which a magnetically susceptible mineral is separated from gangue minerals by applying a strong magnetic field; ores of iron are commonly treated in this way.	*Mining*
Magnetic Starter	An electrical device which controls the motor and also provides overload protection to the motor.	*Equipment*
Magnetic Stripe	Technology allowing the encoding of information on special labels with magnetism.	*Gears*
Magnetic survey	A geophysical survey that measures the intensity of the Earth's magnetic field.	*Mining*
Magnetic Susceptibility	The proportionality constant between the magnetization M and the magnetic field strength H.	*Engineering Physics*
Magnetic susceptibility	A measure of the degree to which a rock is attracted to a magnet.	*Mining*
Magnetism	The physical phenomenon associated with the attraction of certain materials, such as ferromagnets.	*Material Process*
Magnetite	The historically important ferrous compound (Fe3O4) with magnetic behavior.	*Material Process*
Magnetite	Black, magnetic iron ore, an iron oxide.	*Mining*
Magnetization	The total magnetic moment per unit volume of material. Also, a measure of the contribution to the magnetic flux by some material within an H field.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Magnetization	Parameter associated with the induction of a solid.	*Material Process*
Magnetometer	An instrument used to measure the magnetic attraction of underlying rocks.	*Mining*
Magnetoplumbite	Ceramic that is magnetically hard. Its hexagonal crystal structure and chemical composition are similar to those of the mineral of the same name.	*Material Process*
Magnetostriction	Slight changes in the dimensions of iron or steel components resulting from changes in the magnetic fields acting on these components.	*Reliability Engineering*
Magnetron Sputtering	See Sputtering. In this PVD process, the sputtering action is enhanced by intense magnetic fields.	*Paint and Coatings*
Magnitude	A scalar value having physical units.	*Engineering Physics*
Maiden country	an area of unworked coal, or an area of unexplored coal-bearing country side. (Som.), also maiden field and maiden ground. –see Virgin ground.	*Mining*
Mail Ballots	a procedure for conducting an election by governmental or private agencies such as the NLRB and State Labor Relations Boards where the membership of the union is not a single plant but is geographically distributed.	*Industrial Relations*
Main	A principal pipe or duct in a system used to distribute water, gas, etc.	*Civil Engineering*
Main and tail	a double drum reversible haulage system, the main rope pulls the loaded journey outbye with the tail rope attached to the rear. To take the empties inbye the roles are reversed (S. Staffs.).	*Mining*
Main bord gate	a heading that was driven to the rise side of the shaft. It was usually larger than an ordinary bord gate. (Yorks.).	*Mining*
Main buntons	strong buntons for hanging pumps in the shaft or for scaffolding.	*Mining*
Main entry	A main haulage road. Where the coal has cleats, main entries are driven at right angles to the face cleats.	*Mining*
Main fan	the principal mechanical ventilator installed at the surface usually exhausting air out of the mine via the upcast shaft. Sometimes ventilation was effected by blowing air in.	*Mining*
Main fan	A mechanical ventilator installed at the surface; operates by either exhausting or blowing to induce airflow through the mine roadways and workings.	*Mining*
Main gate	the principal roadway from a longwall face and main access to the face, along which coal is usually transported and is the intake roadway for the ventilation of the face. Also sometimes called the 'mother gate' or 'Loader gate'.	*Mining*
Main heating equipment	Equipment primarily used for heating ambient air in the housing unit.	*Energy*
Main heating fuel	The form of energy used most frequently to heat the largest portion of the floorspace of a structure. The energy source designated as the main heating fuel is the source delivered to the site for that purpose, not any subsequent form into which it is transformed on site to deliver the heat energy (e.g., for buildings heated by a steam boiler, the main heating fuel is the main input fuel to the boiler, not the steam or hot water circulated through the building.) Note: In commercial buildings, the heating must be to at least 50 degrees Fahrenheit.	*Energy*
Main mine	the main underground haulage road. (Scot.).	*Mining*
Main roads	see Winning headings.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Main suit	a large feeder of water (S. West.).	*Mining*
Maine-Anjou	A breed of beef cattle that originated in southern France. It is red with white spots. Registry is by the American Maine-Anjou Association.	*Agriculture*
Mainer	a set of runaway tubs. (Leics.).	*Mining*
Mains	A system of pipes for transporting gas within a distributing gas utility's retail service area to points of connection with consumer service pipes.	*Energy*
Maintainability	Maintainability is the probability that a failed component of system will be restored or repaired to a specified condition within a period of time when maintenance is performed according with prescribed procedures. The prescribed maintenance procedures include not only the manner in which repair is to be performed but also the availability of maintenance resources (people, spare parts, tools, and manuals), the preventive maintenance program, skill levels of personnel, and the number of people assigned to the maintenance crew. Restoration times are commonly characterized by the log normal distribution.	*Maintenance*
Maintainability Engineering	The Set Of Technical Processes That Apply Maintainability Theory To Establish System Maintainability Requirements, Allocate These Requirements Down To System Elements And Predict And Verify System Maintainability Performance.	*Plant Engineering*
Maintainability Improvement	A maintenance engineering activity that looks at the root cause of breakdowns and maintenance problems and designs a repair that prevents future breakdowns. Maintainability improvement places an emphasis on making equipment easier to maintain.	*Maintenance*
Maintainability Prediction	This is the measure of the ability of an item to be retained or restored to a specified condition when skilled personnel perform the maintenance.	*Reliability Engineering*
Maintained Contact Switch	A switch designed for applications requiring sustained contact after plunger has been released, but with provision for resetting.	*Electrical Engineering*
Maintenance	Maintenance in a steam system is critical to continued performance of the plant. For maintenance, plate heat exchangers need to be dissembled and cleaned periodically. Tubular heat exchangers can be cleaned by such methods as acid cleaning, sandblasting, high-pressure water jet, bullet cleaning, or drill rods. In large-scale cooling water systems for heat exchangers, water treatment such as purification, addition of chemicals, and testing, is used to minimize fouling of the heat exchange equipment. Other water treatment is also used in steam systems for power plants, etc. to minimize fouling and corrosion of the heat exchange and other equipment.	*Industrial*
Maintenance Activity	Maintenance activities are the specific actions defined in a Computerized Maintenance Management System (CMMS), taken to prevent or reduce the consequences of failure. For example, component replacement, lubricant analysis, or vibration monitoring are maintenance activities.	*Maintenance*
Maintenance Categories	Maintenance categories describe the primary function of the maintenance activity. Maintenance categories include the following: inspection, condition monitoring, non-destructive testing, overhauls, and fault finding.	*Maintenance*
Maintenance Contractor Expenses	Cost of labor and material for contracted maintenance services. This does not include contract labor for capital projects.	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Maintenance Cost	All direct and indirect costs regarding maintenance activities. Direct costs are costs charged to a maintenance budget as fixed costs (e.g. personnel, materials, subcontractors, and overhead). Indirect costs are related to loss of revenue due to unavailability.	*Reliability Engineering*
Maintenance Engineering	A staff function whose primary responsibility is to ensure maintenance techniques are effective, equipment is designed and modified to improve maintainability, ongoing maintenance technical problems are investigated, and appropriate corrective and improvement actions are taken. Maintenance engineering is often used interchangeably with plant engineering or reliability engineering.	*Maintenance*
Maintenance expenses	That portion of operating expenses consisting of labor, materials, and other direct and indirect expenses incurred for preserving the operating efficiency and/or physical condition of utility plants used for power production, transmission, and distribution of energy.	*Energy*
Maintenance Job Plans or Procedures	A job plan is a detailed description of how to implement or undertake a maintenance activity. The term "procedure" is often used to describe job plans, and is commonly used within CMMS's to describe the individual instructions combined to form a maintenance task.	*Maintenance*
Maintenance Labor Expenses	Direct pay for maintenance labor including overtime premium.	*Maintenance*
Maintenance Management	All activities of the management that determine the maintenance objectives, strategies, and responsibilities, and implement them by means, such as maintenance planning, maintenance control and supervision, improvement of methods in the organization, including economical, environmental, and safety aspects (UTEK, 13306:1998 E).	*Maintenance*
Maintenance Material Expenses	All materials, spare parts, supplies, etc., consumed for maintaining equipment and facility including materials purchased for maintenance by contractors and excluding materials for capital projects.	*Maintenance*
Maintenance Objectives	Targets assigned and accepted for maintenance activities. Targets may include availability, cost reduction, product quality, environmental preservation, safety, etc.	*Maintenance*
Maintenance of boiler plant (expenses)	The cost of labor, material, and expenses incurred in the maintenance of a steam plant. Includes furnaces; boilers; coal, ash-handling, and coal-preparation equipment; steam and feed water piping; and boiler apparatus and accessories used in the production of steam, mercury, or other vapor to be used primarily for generating electricity. The point at which an electric steam plant is distinguished from an electric plant is defined as follows:	*Energy*
Maintenance of Dues	a proviso in a union contract which requires the check-off of union dues during the entire period of the agreement.	*Industrial Relations*
Maintenance of Membership	a form of union security devised by the public members of the National War Labor Board to resolve the conflict between the opposing positions of the labor and industry members of the Board.	*Industrial Relations*
Maintenance of structures (expenses)	The cost of labor, materials, and expenses incurred in maintenance of power production structures. Structures include all buildings and facilities to house, support, or safeguard property or persons.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Maintenance Plan	Structured set of tasks that include the activities, procedures, resources, and time scale required to carry out maintenance. See Maintenance Schedule.	*Maintenance*
Maintenance Policy	A Statement Of Principle Used To Guide Maintenance Management Decision Making	*Plant Engineering*
Maintenance Record	Part of maintenance documentation that contains all failures, faults, and maintenance information related to an asset. This record may also include maintenance cost, asset availability or uptime, and any other data where relevant.	*Maintenance*
Maintenance Schedule	A list of planned maintenance tasks to be performed during a given time period, together with the expected start times and durations of each task. Schedules apply to different time periods (e.g. daily schedule, weekly schedule, etc.), or to specific plant items (e.g. a machine manufacturer may supply a maintenance schedule with a new machine, related to which is a condition of warranty).	*Maintenance*
Maintenance Strategy	Management method that covers all aspects of maintenance activities, including firm action plans for achieving maintenance objectives.	*Maintenance*
Maintenance Strategy Review (MSR)	A systematic review of plant or equipment, evaluating the manner in which it fails within a given operational context, the consequences of failure and the identification of technically feasible and cost effective maintenance strategies to minimize the consequences and or frequency of failure.	*Maintenance*
Maintenance supervision and engineering expenses	The cost of labor and expenses incurred in the general supervision and direction of the maintenance of power generation stations. The supervision and engineering included consists of the pay and expenses of superintendents, engineers, clerks, other employees, and consultants engaged in supervising and directing the maintenance of each utility function. Direct supervision and engineering of specific activities, such as fuel handling, boiler room operations, generator operations, etc., are charged to the appropriate accounts.	*Energy*
Maintenance/Reliability Engineers	Employees with primary functions of analyzing and resolving maintenance problems, preventive and predictive maintenance, inspection and/or equipment reliability support.	*Reliability Engineering*
Mainway, the main passage or gate. (Yorks.)	Mainway, the main passage or gate. (Yorks.).	*Mining*
Major accident prevention document (MAPD)	This is a document used to demonstrate that the safety management system for a pipeline is adequate. It show s the risk assessment for the pipeline and also sates the hazards identified.	*Reliability Engineering*
Major Diameter	The largest diameter of a screw thread.	*Fastening*
Major Disputes	these are disputes under the Railway Labor Act which have to do with new or revised contract provisions.	*Industrial Relations*
Major electric utility	A utility that, in the last 3 consecutive calendar years, had sales or transmission services exceeding one of the following (1) 1 million megawatt hours of total annual sales; (2) 100 megawatt hours of annual sales for resale; (3) 500 megawatt hours of annual gross interchange out; or (4) 500 megawatt hours of wheeling (deliveries plus losses) for others.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Major energy sources	Fuels or energy sources such as electricity, fuel oil, natural gas, district steam, district hot water, and district chilled water. District chilled water is not included in any totals for the sum of major energy sources or fuels; all other major fuels are included in these totals.	*Energy*
Major fuels	Fuels or energy sources such as: electricity, fuel oil, liquefied petroleum gases, natural gas, district steam, district hot water, and district chilled water.	*Energy*
Major interstate pipeline company	A company whose combined sales for resale, including gas transported interstate or stored for a fee, exceeded 50 million thousand cubic feet in the previous year.	*Energy*
Major Union Contracts	the phrase applies to the list of important contracts, generally covering a thousand or more employees each, which are of prime interest in determining important changes in wages, hours, and working conditions.	*Industrial Relations*
Majority Rule	the NLRB and state labor relations acts, provide for holding elections to determine who should represent employees of a particular employer or group of employers for the purpose of collective bargaining.	*Industrial Relations*
Make Whole	the process of undoing a wrong against an individual who has been discriminated against by an employer, as through an unfair labor practice, such as discharge because of union membership.	*Industrial Relations*
Make-before-break	In a switching device, a configuration in which the new connection path is established before the previous contacts are opened. This prevents the switched path from ever seeing an open circuit. Example : That use relays or manual switches	*Electrical Engineering*
Make-before-break	In a switching device, a configuration in which the new connection path is established before the previous contacts are opened. This prevents the switched path from ever seeing an open circuit. Example - That use relays or manual switches	*Electrical Engineering*
Make-Ready Activities	preliminary or preparatory activities of employees prior to the performance of the actual job.	*Industrial Relations*
Make-up	Water added to the circulating water system to replace water lost from the system by evaporation, drift, blow-down, and leakage.	*Facility Engineering*
Make-up air	Air brought into a building from outside to replace exhaust air.	*Energy*
Make-Up Pay	generally applies to the procedure by which an employer pays a piece worker the difference between the amount he actually earned on piecework and the actual earnings to which he is entitles either under a statutory minimum.	*Industrial Relations*
Make-Work Practices	generally applies to those activities of unions or individual workers who either limit their production or create unnecessary work or jobs frequently in order to take up a slack in employment or to spread available work.	*Industrial Relations*
Making hole	Drilling.	*Petroleum Drilling*
Makings	small coals made when kirving or nicking. (N. East).	*Mining*
Malamine-Formaldehyde	Malamine-formaldehyde is used in many household goods, including dinnerware. This plastic is very easy to color and is very hard.	*Material Engineering*
Male thread	The external thread on pipe, fittings or valves used in making a connection with mating female (internal) threaded parts.	*Mechanical*

Term	Definition	*Industry*
Maleic anhydride	Colorless rhombic needles from chloroform. Reacts with polyhydric alcohols to form an alkyl resin. Also, used as an hardener in ureas, phenolics, alkyds, etc.	*Material Process*
Malleable Iron	Cast iron which has been heat-treated in an oven to relieve its brittleness. The process somewhat improves the tensile strength and enables the material to stretch to a limited extent without breaking.	*Maintenance and Repair*
Malleable iron	A traditional form of cast iron with modest ductility. It is first cast as white iron and then heat-treated to produce modular graphite precipitates.	*Material Process*
Malthusianism	this refers to the theory of the political economist T. R. Malthus that population tends to increase more rapidly than its means of subsistence can be made to do.	*Industrial Relations*
Man Camp	These are typically portable housing, RVs and travel trailers set up in a camp style arrangement for oilfield workers to live in. A shortage of housing in Eagle Ford Shale has led some oil and gas and construction companies to house their workers and temporary "man camps."	*Petroleum Drilling*
Man dook	a road used for transporting men. A travelling road. (Scot.).	*Mining*
Man hudge	a fore-runner of the cage. The man hudge was specifically designed for winding men in the shaft. Similar to the coal hudge the man hudge had a cover to protect the men from anything falling down the shaft and there was a hole cut in the side to allow the men to get in and out. (Som.), (Gloucs.).	*Mining*
Man lock	An air lock serving as a decompression chamber for workers.	*Civil Engineering*
Man trip	A carrier of mine personnel, by rail or rubber tire, to and from the work area.	*Mining*
Management	See Steam Trap Management	*Industrial*
Management	the term when used as a noun applies to an employer or to executives of a corporation who are accountable and responsible for the administration and direction of an enterprise and the functions of leadership.	*Industrial Relations*
Management Clause	a provision in the collective bargaining agreement which sets out the scope of management rights, functions, and responsibilities.	*Industrial Relations*
Management Development	an organized program for management personnel, usually at the top or middle level for the purpose of developing and improving managerial functions, including planning, organizing, motivating, and controlling the activities of an organization.	*Industrial Relations*
Management of change (MOC)	Management of change (MOC) Management to repair faults.	*Material Process*
Management oversight and risk tree	Management oversight and risk tree	*Material Process*
Management Prerogatives	sometimes referred to as management or employer rights or functions.	*Industrial Relations*
Managing Editor (previously known as Review Group Co-ordinator (RGC))	The key person in managing and supporting a Cochrane Review Group (CRG) on a day-to-day basis. Most CRGs have a full-time Managing Editors working in an editorial base. Responsibilities of a Managing Editor include: co-ordinating the activities of the CRG; fostering liaison and communication between editors and reviewers; setting up and maintaining a trials register; producing newsletters; providing reviewers with the relevant software (RevMan), manuals, and support to do their reviews; submitting reviews for inclusion in the Cochrane Database of Systematic Reviews. See also: Adminors Also called: Administrator (of a Cochrane Review Group)	*Quality Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Manchester Data Encoding	Manchester encoding is a form of binary phase-shift keying (BPSK) that has gained wide acceptance as a modulation scheme for low-cost radio-frequency (RF) transmission of digital data. Its key characteristic is that it encodes data in a way that insures there will never be long strings of continuous zeros or ones. The guaranteed transitions means that the clock can be derived from the transmitted data, allowing the link to function with variable signal strengths from transmitters with imprecise, low-cost, data-rate clocks.	*Electrical Engineering*
Man-Days Idle	a term used in work stoppage statistics and applied to workers who are made idle for one shift or longer in the establishment or plant directly involved in a work stoppage.	*Industrial Relations*
Mandrel	1. Core around which fiberglass impregnated with plastic resin is wound as in filament winding. 2. The portion of an extrusion die that forms the hollow centre in an extruded tube.	*Metallurgy*
Mandrel (Balancing Arbor)	An accurately machined shaft on which work is mounted for balancing.	*General Engineering*
Mandrel (Balancing Arbor)	An accurately machined shaft on which work is mounted for balancing.	*Electronic Process*
Mandril	see Pike.	*Mining*
MANE-VU (Mid-Atlantic/ Northeast Visibility Union)	An organization formed by the Mid-Atlantic and Northeastern states, tribes, and federal agencies to coordinate planning activities to reduce haze (air pollution) in the region. The organization encourages a coordinated approach to meeting the requirements of EPA's Regional Haze Rules and reducing visibility impairment in major national parks and wilderness areas in the Northeast and Mid-Atlantic regions. http://www.otcair.org/manevu/aboutus.asp.	*Energy*
Manganese	a grayish white, usually hard and brittle metallic element found in steel that resembles iron but is not magnetic	*Materials Process*
Manhattan Project	The U.S. Government project that produced the first nuclear weapons during World War II. Started in 1942, the Manhattan Project formally ended in 1946. The Hanford Site, Oak Ridge Reservation, and Los Alamos National Laboratory were created for this effort. The project was named for the Manhattan Engineer District of the U.S. Army Corps of Engineers.	*Energy*
Manhole	A hole, usually with a cover, through which a person may enter a sewer, drain, steam boiler, etc., esp. one located in a city street.	*Civil Engineering*
Manhole	A safety hole constructed in the side of a gangway, tunnel, or slope in which miner can be safe from passing locomotives and car. Also called a refuge hole.	*Mining*
Man-Hour	this is a standard unit utilized quite widely in labor statistics and is equal to one person working for one hour.	*Industrial Relations*
Manifest	List of passengers or invoice of cargo.	*Agriculture*
Manifold	a pipe with several apertures for making multiple connections.	*Chemical*
Manifold	A filter assembly containing multiple ports and integral relating components which services more than one fluid circuit.	*Lubrication*
Manifold (Header)	A common pipe or chamber having several lateral outlets.	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Manifold filter	A filter in which the inlet and outlet port axes are at right angles, and the filter element axis is parallel to either port axis.	*Oil Analysis*
Manifold valve mounting	The valve is mounted to a plate which provides multiple connection ports for one or more valves.	*Mechanical, Process, and Operations*
Manifold, Vented	A manifold which is open to the atmosphere and returns fluid to the reservoir. MANOMETER - An instrument (as a pressure gage) for measuring the pressure or fluids.	*Mechanical, Process, and Operations*
Manila resins or Manila copal	Natural gum resins obtained in the East Indies, including soft, semifossil, and fossil resin. They are spirit soluble, and used in varnishes.	*Material Process*
Manit	a contraction of "man minutes" which has been applied to various incentive programs.	*Industrial Relations*
Manned Hours	The manned hours represent the hours a production line is manned and planned to be open for production. In case the production is stopped because of unplanned breakdown, operator illness, etc., the hours are still to be counted as manned hours since it was planned to be run. In the case production is done in batches, also the time needed for resetting the production channels may be referred to as manned hours. For example, within SKF, the time needed to reset the bearing manufacturing channels is included in the manned hours planning.	*Maintenance*
Manning Scale	the system for determining the number of officers and men to be assigned to a ship.	*Industrial Relations*
Manning Table	the manning table concept was developed by the War Manpower Commission during World War II.	*Industrial Relations*
Man-of-war-pillars	small extra pillars of coal left in place when working a thick seam, usually where the coal is heavily faulted (S. Staffs.).	*Mining*
Manometer	an instrument for measuring fluid pressure. Typically a U-shaped tube in which opposing fluid pressures reach an equilibrium. The pressure is equal to the differences in the levels of the fluid on either side of the tube.	*Chemical*
Manpower	the term is generally applied to the human resources and skills of a people.	*Industrial Relations*
Manpower Administration, Department of Labor	Secretary of Labor W. Willard Writz on February 19, 1963, issued an administrative order creating a Manpower Administration within the Department of Labor.	*Industrial Relations*
Manpower Control	the control of the labor force may be achieved through limitations on emigration, freezing of employees to jobs, or requiring individuals to take only certain jobs.	*Industrial Relations*
Manrider	a locomotive or rope hauled train or conveyor belt used for transporting men.	*Mining*
Man-riding	men riding on the front tub of a set of tubs; or men riding in or out of the pit in a purpose-built train; or men riding on a conveyer belt to and from the face. At each end there would be a 'man-riding station'. When the cage is being used to wind men as opposed to coal it was said to be 'man riding'.	*Mining*
Manual Welding	Welding wherein the entire welding operation is performed and controlled by hand.	*Maintenance and Repair*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Manual and Motor Skill Tests	special aptitude tests which are designed to measure an individual's dexterity, his ability to coordinate, his speed of reaction, and other muscular skills.	*Industrial Relations*
Manual control	A control actuated by the operator, regardless of the means of actuation. Example; Lever or foot pedal control for directional valves.	*Mechanical, Process, and Operations*
Manual Dexterity	the ability to perform work with the hands.	*Industrial Relations*
Manual dimmer switches	These are like residential-style dimmer switches. They are not generally used with fluorescent and high-intensity discharge (HID) lamps.	*Energy*
Manual Mode	In manual mode, the user sets the output. See Mode.	*Process Control*
Manual Override	A button that allows the valve's state to be changed manually.	*General Mechanical*
Manual override	A means of manually actuating an automatically controlled device.	*Mechanical, Process, and Operations*
Manual Reset (Adjustment)	The adjustment on a proportioning controller which shifts the proportioning band in relationship to the set point to eliminate droop or offset errors.	*General Engineering*
Manual Reset (Adjustment)	The adjustment on a proportioning controller which shifts the proportioning band in relationship to the set point to eliminate droop or offset errors.	*Electronic Process*
Manual Reset (Switch)	The switch in a limit controller that manually resets the controller after the limit has been exceeded.	*General Engineering*
Manual Start Switch	A simple one direction switch used to turn the conveyor on or off.	*Manufacturing*
Manual Worker	applies generally to semi-skilled and unskilled workers who use their physical rather than their mental ability in the performance of certain jobs.	*Industrial Relations*
Manufactured gas	A gas obtained by destructive distillation of coal or by the thermal decomposition of oil, or by the reaction of steam passing through a bed of heated coal or coke. Examples are coal gases, coke oven gases, producer gas, blast furnace gas, blue (water) gas, carbureted water gas. Btu content varies widely.	*Energy*
Manufacturer's Tolerance	The maximum variation from standard allowed by the manufacturer between products with the same catalog listing.	*Electrical Engineering*
Manufacturing	An energy-consuming subsector of the industrial sector that consists of all facilities and equipment engaged in the mechanical, physical, chemical, or electronic transformation of materials, substances, or components into new products. Assembly of component parts of products is included, except for that which is included in construction.	*Energy*
Manufacturing Cost	Includes quality-related costs, direct and indirect labor, equipment repair and maintenance, other manufacturing support and overhead, and other costs directly associated with manufacturing operations. It typically does not include purchased-materials costs or costs related to sales and other non-production functions.	*Maintenance*
Manufacturing cycle time	The time of actual production from when a customer order is released to the plant floor for a particular product through to the completion of all manufacturing, assembly, and testing for that specific product. (Does not include front-end order-entry time or engineering time spent on customized configuration of nonstandard items, or time in finished goods inventory.)	*Quality*

Term	Definition	*Industry*
Manufacturing division	One of 10 fields of economic activity defined by the Standard Industrial Classification Manual. The manufacturing division includes all establishments engaged in the mechanical or chemical transformation of materials or substances into new products. The other divisions of the U.S. economy are agriculture, forestry, fishing, hunting, and trapping; mining; construction; transportation, communications, electric, gas, and sanitary services; wholesale trade; retail trade; finance, insurance, and real estate; personal, business, professional, repair, recreation, and other services; and public administration. The establishments in the manufacturing division constitute the universe for the MECS (an EIA survey).	*Energy*
Manufacturing establishment	An economic unit at a single physical location where mechanical or chemical transformation of materials or substances into new products are performed.	*Energy*
Manufacturing execution system (MES)	A software-based system that provides a link between planning and administrative systems and the shop floor. It can link MRP II-generated production schedules to direct process-control software. An element of computer-integrated manufacturing, MES encompasses such functions as planning and scheduling, production tracking and monitoring, equipment control, maintaining product histories (verifying and recording activities at each stage of production), and quality management.	*Quality*
Manufacturing Overhead	All costs associated with manufacturing except direct materials and direct labor.	*Procurement*
Manufacturing Process	The sequence of operations that are necessary to complete the manufacturing of a part or product.	*Reliability Engineering*
Manufacturing Resources Planning (MRP)	Software-based Manufacturing Resources Planning systems that translate forecasts into master production schedules, maintain bills of material (lists of product components), create work orders for each step in the production routing, track inventory levels, coordinate materials purchases with production requirements, generate "exception" reports identifying expected material shortages or other potential production problems, record shop-floor data, collect data for financial reporting purposes, and other tasks depending on the configuration of the software.	*Maintenance*
Manure	animal waste from stables or barnyards	*Agriculture*
Manway	An entry used exclusively for personnel to travel form the shaft bottom or drift mouth to the working section; it is always on the intake air side in gassy mines. Also, a small passage at one side or both sides of a breast, used as a traveling way for the miner, and sometimes, as an airway, or chute, or both.	*Mining*
MAOP	Maximum allowable operating pressure. Determined in accordance with piping codes, DOT regulations, etc.	*Mechanical*
Map of the PADD districts	Map of the PADD districts	*Energy*
MAPP	Mid-Continent Area Power Pool	*Energy*
Map-staking	A form of claim-staking practiced in some jurisdictions whereby claims are staked by drawing lines around the claim on claim maps at a government office.	*Mining*
MARAMA (Mid-Atlantic Regional Air Management Association, Inc.)	A voluntary, non-profit association of ten Mid-Atlantic state and local air pollution control agencies. http://www.marama.org/about-us.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Marble	A metamorphic rock derived from the recrystallization of limestone under intense heat and pressure.	*Mining*
Marbles	Bits of rubber scrubbed off of tires while cornering. These small balls collect on the outside of the turn, and if a car goes wide (into the marbles, or "the gray", referring to the lighter appearance of an area covered with marbles), then much adhesion is lost. In addition, this rubber debris will stick to the hot tires and cause poor traction for the next few corners until they are rubbed off the tire.	*NASCAR*
Marblette	A trade name for cast phenolic plastics.	*Material Process*
MaRC	See Monitoring and Registration Committee (MaRC)	*Quality Engineering*
Marcellus Shale	Shale is one of the most prolific types of sedimentary rock whose density and impermeability provide tight stores for hydrocarbon reserves below. Marcellus Shale is a rock formation running through about two-thirds of Pennsylvania, and areas of New York and West Virginia. Geologists estimate that there is a large enough natural gas reserve within the shale to power the United States for one to eight years.	*Petroleum Drilling*
March	a boundary. A line marking the limit of the workings underground. It could be a wall, a hedge or any other feature on the landscape. It was usual to follow the line of a fault, or it could be an imaginary line drawn on a map. (Scot.).	*Mining*
Margin	Cash deposited with a broker as partial payment of the purchase price for any type of listed stock. The stock is held by the broker as security for the loan.	*Mining*
Marginal cost	The change in cost associated with a unit change in quantity supplied or produced.	*Energy*
Marginal Cost	The cost to the utility or providing the next (marginal) kilowatt-hour of electricity, irrespective of sunk costs.	*Energy*
Marginal deposit	An orebody of minimal profitability.	*Mining*
Marginal land	Land that does not consistently produce a profitable crop because of infertility, drought, or other physical limitations such as shallow soils.	*Forestry*
Marginal Productivity Theory of Wages	part of the general theory of value applied to the four factors of production: land, labor, capital, and business enterprise.	*Industrial Relations*
Marginal well	A well that, for reasons of depletion or natural low productivity, is nearing the limits of viable production and profitability.	*Petroleum Engineering*
Marginal Worker	a worker the value of whose production equals his actual wage.	*Industrial Relations*
Margining	Margining is a test procedure that determines the "safety margin." A parameter is varied to determine the device's sensitivity or ability to perform given a range of inputs. A large number of parts can be characterized to determine a safe range for the specification, to guarantee performance and yield.	*Electrical Engineering*
Margining	Margining is a test procedure that determines the "safety margin." A parameter is varied to determine the device's sensitivity or ability to perform given a range of inputs. A large number of parts can be characterized to determine a safe range for the specification, to guarantee performance and yield.	*Electrical Engineering*
Marine Band	a distinctive thin layer or stratum with fossils of a marine affinity, used by mining geologists to correlate the coal measures.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Marine freight	Freight transported over rivers, canals, the Great Lakes, and domestic ocean waterways.	*Energy*
Maritime Labor Board	an agency established by Congress in 1938 to mediate labor disputes between companies and organized seamen and longshoremen, as well as to develop a general maritime labor policy.	*Industrial Relations*
Maritime Trades Department	one of the AFL-CIO trade and industrial union departments.	*Industrial Relations*
Marker Tape	A narrow strip of fabric, paper or plastic laid longitudinally within a cable; it bears printed information such as the specification to which the cable was made and the name of the cable's manufacturer.	*Electrical*
Marker Threads	Colored strings laid parallel and adjacent to the strands of an insulated conductor to reveal information such as the conductor's manufacturer, the specification to which it was made, or its thermal capability.	*Electrical*
Market	where products are sold and exchanged	*Agriculture*
Market clearing price	The price at which supply equals demand for the Day-ahead or hour-ahead markets.	*Energy*
Market Eligibility	The percentage of equipment still available for retrofit to the demand-side management measure. For example, if 20 percent of customers where demand controllers are feasible have already purchased demand controllers, then the eligible market eligibility factor is 80 percent.	*Energy*
Market order	An order to buy or sell at the best price available. In absence of any specified price or limit, an order is considered to be "at the market".	*Mining*
Market Participants	Any parties or agents who participate in the electrical energy marketplace through either the buying or selling of electrical energy or services.	*Energy*
Market Power	When one company owns a sufficiently large percentage of generation, transmission, or distribution capabilities in a region to allow it to influence the price of electricity by forcing the purchase of its own power.	*Energy*
Market price contract	A contract in which the price of uranium is not specifically determined at the time the contract is signed but is based instead on the prevailing market price at the time of delivery. A market price contract may include a floorprice, that is, a lower limit on the eventual settled price. The floorprice and the method of price escalation generally are determined when the contract is signed. The contract may also include a price ceiling or a discount from the agreed-upon market price reference.	*Energy*
Market price settlement (uranium)	The price paid for uranium delivery under a market-price contract. The price is commonly (but not always) determined at or sometime before delivery and may be related to a floor price, ceiling price, or discount.	*Energy*
Marketable coke	See Petroleum coke, marketable.	*Energy*
Market-based pricing	Prices of electric power or other forms of energy determined in an open market system of supply and demand under which prices are set solely by agreement as to what buyers will pay and sellers will accept. Such prices could recover less or more than full costs, depending upon what the buyers and sellers see as their relevant opportunities and risks.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Market-Based-Price	A price set by the mutual decisions of many buyers and sellers in a competitive market.	*Energy*
Marketed energy	An energy source that is commercially traded. Typically, this energy is sold by a producer, such as a petroleum refiner, through a transmission and distribution network (e.g., pipelines and trucks) to an end-use consumer (e.g., gasoline sold at the pump).	*Energy*
Marketed production	Gross withdrawals less gas used for repressuring, quantities vented and flared, and nonhydrocarbon gases removed in treating or processing operations. Includes all quantities of gas used in field and processing plant operations.	*Energy*
Marketer	An agent for generation projects who markets power on behalf of the generator. The marketer may also arrange transmission, firming or other ancillary services as needed. Though a marketer may perform many of the same functions as a broker, the difference is that a marketer represents the generator while a broker acts as a middleman.	*Energy*
Marketing	The selling of timber or other forest resources based on skillful negotiation, knowledge of timber markets, and the aid of a competent broker or consultant.	*Forestry*
Marketing or Selling Costs	All costs necessary to secure customer orders and get the finished product or service into the hands of the customer.	*Procurement*
Marking	The physical process of selecting trees to be cut or left during a harvest accomplished normally by spraying a spot of bright paint on a prominent part of the tree.	*Forestry*
Marl	beds of hardened clay, frequently thick and unlaminated, free from calcareous matter, and specially suitable for brick and tile manufacture.	*Mining*
Marlhole	a quarry for the working of marl (N. Staffs.).	*Mining*
Marline Spike	Tapered steel pin used in splicing wire rope.	*Wire Rope & Cable*
Marrow or Marra	a mate, a butty or a partner. Pronounced 'marra'. (N. East).	*Mining*
Marsaut lamp	a lockable safety lamp made by Richard Johnson, Clapham and Morris.	*Mining*
Marsh Funnel Viscosity	Commonly called the funnel viscosity. It's reported as the number of seconds required for one quart of a given fluid to flow through the Marsh funnel.	*Petroleum Engineering*
Martempering	Heat treatment of a steel involving a slow cool through the martensitic transformation range to reduce stresses associated with that crystallographic change.	*Material Process*
Martensite	a metastable Fe-C composition consisting of supersaturated carbon in iron that is the product of a diffusionless (athermal) transformation from austenite.	*Metallurgy*
Martensite	Iron-carbon solid solution phase with an acicular, or needlelike, microstructure produced by a diffusionless transformation associated with the quenching of austenite.	*Material Process*
Martensitic stainless steel	Corrosion resistant ferrous alloy with a predominant martensitic phase.	*Material Process*
Martensitic transformation	Diffusionless transformation most commonly associated with the formation of martensite by the quenching of austenite.	*Material Process*
Martix	term used to describe the metal bond in diamond blades and bits.	*Petroleum Drilling*
Marxism	the doctrine or system developed around the theories of Karl Marx.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mash	a double-headed or two faced hammer used for setting props or breaking coal or stone. (Scot.).	*Mining*
Mash axe	a double-headed hammer with one side of the head forged into an axe. The mash axe was used for chopping out broken timber props on the coalface. -see also Radge. (Scot.).	*Mining*
Masking	using a material to produce intentionally ungalvanized areas, typically used in areas that are to be welded, on faying surfaces, or areas where the galvanized coating is not necessary for uniform corrosion protection	*Materials Process*
Masonite	A trade name for a lignin-type.	*Material Process*
Masonry	A general term covering wall construction using masonry materials such as brick, concrete block, stone, and tile that are set in mortar; also included is stucco. The category does not include concrete panels because concrete panels represent a different method of constructing buildings. Concrete panels are reported separately.	*Energy*
Masonry stove	A type of heating appliance similar to a fireplace, but much more efficient and clean burning. They are made of masonry and have long channels through which combustion gases give up their heat to the heavy mass of the stove, which releases the heat slowly into a room. Often called Russian or Finnish fireplaces.	*Energy*
Mass	A property of an object measured by the degree that it resists acceleration.	*Engineering Physics*
Mass	The property of a body that is a measure of its inertia, that is commonly taken as a measure of the amount of material it contains and causes it to have weight in a gravitational field, and that along with length and time constitutes one of the fundamental quantities on which all physical measurements are based. (See Kilogram.)	*Mechanical, Process, and Operations*
Mass balance	Method for calculating the relative amounts of the two or more systems. For example, method for calculating the relative amounts of the two phases in a binary microstructure.	*Material Process*
Mass burn facility	A type of municipal solid waste (MSW) incineration facility in which MSW is burned with only minor presorting to remove oversize, hazardous, or explosive materials.	*Energy*
Mass Flow Rate	Volumetric flowrate times density, i.e. pounds per hour or kilograms per minute.	*General Engineering*
Mass Flow Rate	Volumetric flowrate times density, i.e. pounds per hour or kilograms per minute.	*Electronic Process*
Mass Picketing	picketing is the procedure generally followed by workers during a strike.	*Industrial Relations*
Mass Production	modern production methods which require a highly developed use of machine technology and permit production of standardized products at low cost.	*Industrial Relations*
Mass spectrometer	An instrument used for sorting streams of electrified particles in accordance with their different masses by means of deflecting fields. The instrument can produce a photographic or graphic record of each compound and the percentage of the compound. Most commonly used in analyzing petroleum and steel products.	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mass Storage	A device like a disk or magtape that can store large amounts of data readily accessible to the central processing unit.	*General Engineering*
Mass.	A physical property, dynamically computed as acceleration divided by force. Statically computed as W (which can be measured on a butcher scale) divided by the acceleration due to gravity. Ordinary structures are not pure masses as they contain reactive elements, *i.e*. springs and damping.	*Reliability Engineering*
Massachusetts Choice of Procedures	refers to legislation for the handling of labor-management disputes adopted in the state of Massachusetts.	*Industrial Relations*
MAST	Fruits or nuts used as a food source by wildlife.	*Forestry*
Master	A standard mold or pattern used for duplicating die cavities.	*Metallurgy*
Master	a master, whether he be a master mechanic or master electrician or master plumber, is a worker who has completed a full apprenticeship programs.	*Industrial Relations*
Master Modules	The master is set over the "slave" module, i.e. is able to control it. These are sometimes called "parent" modules.	*Control Engineering*
Master's coal	coal mined by a man who was paid by time as opposed to by the ton or the score.	*Mining*
Masterbatch	A concentrated blend of pigment, additives, filler, etc. in a base polymer. Masterbatch is added in small amounts to large volume of material (the same as or compatible with the base polymer) to produce the desired formulation.	*Engineering Physics*
Master-metering	Measurement of electricity or natural gas consumption of several tenants or housing units using a single meter. That is, one meter measures the energy usage for several households collectively.	*Energy*
Masterpiece	a piece of work submitted by a journeyman who wanted to qualify as a master under the guild system during the Middle Ages.	*Industrial Relations*
Master-Servant Relationship	a form of relationship between employers and employees developed during the industrial period, developed during the industrial period, generally between an apprenticeship and his master or between indentured servant and his master.	*Industrial Relations*
Mastic	A compound usually made up of asphalt and asbestos fiber with suitable solvents and fillers which can be used to seal joints and cracks against leakage of water.	*Facility Engineering*
Mat bonded	A sheet of fibers held together with a bonding agent. formaldehyde.	*Material Process*
Match	a piece of touch paper or lamp cotton twisted straight and oiled, fixed to one end of a straw or squib to light a blasting charge.	*Mining*
Matching	[In a case-control study:] Choosing one or more controls with particular matching attributes for each case. Researchers match cases and controls according to particular variables that are thought to be important, such as age and sex.	*Quality Engineering*
Material	to reduce corrosion often means isolating the metallic surface from the corrosive environment.	*Material Process*
Material Factor (MF)	Material factor is characteristic the heat of combustion of the main process material.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Material property dependency	the atoms present, the bonding between atoms, and the three-dimensional arrangement of atoms within the material	*Physics*
Material Safety Data Sheet (MSDS)	A publication containing health and safety information on a hazardous product (including petroleum). The OSHA Hazard Communication Standard requires that an MSDS be provided by manufacturers to distributors or purchasers prior to or at the time of product shipment. An MSDS must include the chemical and common names of all ingredients that have been determined to be health hazards if they constitute 1% or greater of the product's composition (0.1% for carcinogens). An MSDS also included precautionary guidelines and emergency procedures.	*Lubrication*
Material science and engineering	Methods for the materials studying and applications, and new materials production. General, label for the branch of engineering dealing with material.	*Material Process*
Material Science, 1st Fundamental Tenets of Material Science	The principles governing the behavior of materials are grounded in science and are understandable	*Physics*
Material Science, 2nd Fundamental Tenet of Material Science	The properties of a given material are determined by its structure. Processing can alter that structure in specific and predictable ways.	*Physics*
Material Science, 3rd Fundamental Tenet of Material Science	The properties of all materials change over time with use and exposure to environmental conditions.	*Physics*
Material Science, 4th Fundamental Tenet of Material Science	When selecting a material for a specific application, sufficient and appropriate testing must be performed to ensure that the material will remain suitable for its intended application throughout the reasonable life of the product.	*Physics*
Material Test Reports	Certificates provided by the steel manufacturer indicating the chemical analysis and mechanical properties of a specific batch of steel traced by sequentially assigned heat numbers or codes.	*Mechanical*
Material Test Reports	Certificates provided by the steel manufacturer indicating the chemical analysis and mechanical properties of a specific batch of steel traced by sequentially assigned heat numbers or codes.	*General Mechanical*
Material well	Space provided in a compression or transfer mold to provide for bulky molding materials.	*Material Process*
Materials in Solid Waste	Materials found in the various components of the solid waste stream. Generally, solid waste has several components, such as municipal solid waste (MSW), construction and demolition debris (C&D), and nonhazardous industrial waste. Under RCRA Section 6002, EPA considers materials recovered from any component of the solid waste stream when designating items containing recovered materials.	*Environmental Engineering*
Materials selection	Decision that is a critical component of the overall engineering design process.	*Material Process*
Materiel Manager	Director of Business Services, official responsible for Materiel Management functions, which generally includes purchasing, receiving, storehouse operations, and equipment management. As used in this guide the term includes Director of Materiel Management and designees of a Materiel Manager.	*Procurement*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Maternity Leave	applies to the period of time generally granted by an employer for employees to undergo and recuperate from childbirth.	*Industrial Relations*
Matrix	The body constituent of a composite or two-phase alloy that completely surrounds the dispersed phase and gives the body its bulk form.	*Metallurgy*
Matrix	The portion of a composite material in which a phase is embedded. reinforcing, dispersed.	*Material Process*
Matte	Dull finish.	*Material Process*
Matter	the material which makes up something	*Agriculture*
Mature tree	A tree that has reached a desired size or age for its intended use.	*Forestry*
Maul or Mell	a large hammer. (N. East); or wedges for breaking up stone or hard rock in shaft sinking.	*Mining*
Maxim Tiny Network Interface	Formerly called TINI is Maxim's trademark for the industry's smallest web server. The MxTNI platform consists of a microcontroller that includes the facilities necessary to connect to the Internet. The platform is a combination of broad based I/O, a full TCP/IP stack and an extensible Java runtime environment that simplifies development of network-connected equipment.	*Electrical Engineering*
Maximum Allowable Operating Pressure (MAOP)	This refers to the wall strength of a pressurized cylinder such as a pipeline or storage tank and how much pressure the walls may safely hold in normal operation	*Reliability Engineering*
Maximum Allowable Working Pressure (MAWP)	The maximum gauge pressure permissible at the top of a vessel for a designated temperature. This is sometimes called the design pressure	*Reliability Engineering*
Maximum Bulk/Use Temperature	All fluids have a maximum recommended temperature to which they can be heated. Heating a fluid beyond this point will result in thermal degradation or "cracking." This is characterized by low boilers (or "light ends") coming off, lowering of flashpoint, increased vapor pressure and carbon build up.	*Lubrication*
Maximum Credible Accident Scenario (MCAS)	Maximum Credible Accident Scenario is used to evaluate failures (accidents) scenarios in a process system. The procedure introduces the concept of maximum credible scenarios as an alternative to current methodology based on the worst case scenario as recommended by many regulatory agencies. The developed failure scenarios are then screened to shortlist the ones that are more relevant to the system at hand. MCAS provides the criteria for this.	*Reliability Engineering*
Maximum deliverability	The maximum rate natural gas can be withdrawn from or injected into a storage field when filled to maximum capacity.	*Energy*
Maximum demand	The greatest of all demands of the load that has occurred within a specified period of time.	*Energy*
Maximum Demand	Highest demand of the load occurring within a specified period of time.	*Energy*
Maximum dependable capacity, net	The gross electrical output measured at the output terminals of the turbine generator(s) during the most restrictive seasonal conditions, less the station service load.	*Energy*
Maximum Elongation	The strain value where a deviation of more than ±5% occurs with respect to the mean characteristic (diagram of resistance change vs strain).	*General Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Maximum Elongation	The strain value where a deviation of more than ±5% occurs with respect to the mean characteristic (diagram of resistance change vs strain).	*Electronic Process*
Maximum established site capacity (reactors)	The maximum established spent fuel capacity for the site is defined by DOE as the maximum number of intact assemblies that will be able to be stored at some point in the future (between the reporting date and the reactor's end of life) taking into account any established or current studies or engineering evaluations at the time of submittal for licensing approval from the NRC.	*Energy*
Maximum Excitation	The maximum value of supply voltage or current that can be applied to the sensor at room conditions without causing damage or performance degradation beyond specified tolerances.	*Electrical Engineering*
Maximum excursion	The maximum pressure deviation from the operating pressure after an abrupt disturbance.	*Mechanical, Process, and Operations*
Maximum Film Temperature	Heating elements and pipe walls get much hotter than the maximum bulk/use temperature of a system. A fluid's film temperature is always higher than its max bulk temperature and if exceeded will thermally degrade the fluid.	*Lubrication*
Maximum generator nameplate capacity	The maximum rated output of a generator, prime mover, or other electric power production equipment under specific conditions designated by the manufacturer.	*Energy*
Maximum hourly load	This is determined by the interval in which the 60-minute integrated demand is the greatest.	*Energy*
Maximum inlet pressure	The maximum rated pressure applied to the inlet port of a device.	*Mechanical, Process, and Operations*
Maximum Likelihood Estimation (MLE)	A method of parameter estimation involving the maximization of the likelihood equation. The best parameter estimates are obtained by determining the parameter values that maximize the value of the likelihood equation for a particular data set.	*Reliability Engineering*
Maximum Load Current	The maximum amount of current that can flow through a sensor and not cause sensor failure.	*Electrical Engineering*
Maximum Operating Temperature	The maximum temperature at which an instrument or sensor can be safely operated.	*Electrical*
Maximum Power Rating	The maximum power in watts that a device can safely handle.	*Electrical*
Maximum pressure valve	See relief valve.	*Mechanical, Process, and Operations*
Maximum streamflow	The maximum rate of water flow past a given point during a specified period.	*Energy*
Maximum Wage Laws	this phrase has little current usage. During the early colonial period, provision was found in some of the Massachusetts laws which prohibited excessive rates for workers.	*Industrial Relations*
Maxwell-Boltzmann distribution	Description of the relative distribution of molecular energies in a gas.	*Material Process*
Maxwell-Stefan equations	Set of equations that describe the diffusion of solutes and solvent in a concentrated solution. In such a solution, the solutes interact with each other and with the solvent.	*Chemical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Maxwell-Stefan equations	Set of equations that describe the diffusion of solutes and solvent in a concentrated solution. In such a solution, the solutes interact with each other and with the solvent.	*Chemical Engineering*
MB	Mercedes-Benz	*Petro-Chemical Abbreviations*
MBF	Abbreviation denoting one thousand board feet that is a typical unit of volume for saw logs and manufactured wood products.	*Forestry*
mboe	Million Barrels Oil Equivalent	*Petroleum Drilling*
MBOE	The M when used as a prefix for abbreviations such as "Barrels Of Oil Equivalent" refers to thousands, not millions of some people think. One barrel of oil is generally accepted to contain the same amount of energy content as 6,000 cubic feet of natural gas. The abbreviation MBOE is used by some oil companies and their investor reports to make it seem like wells are producing more oil than they really are, when in fact MBOE refers to a combination of oil, natural gas and natural gas liquids or NGL's.	*Petroleum Drilling*
mboe	Million Barrels Oil Equivalent.	*Petroleum Drilling*
MBOED	million barrels of oil equivalent per day	*Energy*
McClellan Committee	the popular name for the special Senate Select Committee on Improper Activities in the Labor or Management Field under the chairmanship of Senator John L. McClellan.	*Industrial Relations*
Mcf	one thousand cubic feet	*Energy*
Mcf	This abbreviation typically refers to 1000 cubic feet of natural gas. Again, because of the M, some people confuse this with 1,000,000 ft.^{3}. One million cubic feet would be abbreviated as MMCF. You could add "/d" to either of these abbreviations to indicate how much natural gas was being produced per day.	*Petroleum Drilling*
MCF	One thousand (1000) cubic feet.	*Petroleum Drilling*
MCP	Market Clearing Price	*Energy*
MCPE	Market Clearing Price for Energy	*Energy*
MCS	Management Command System. A kind of HMI.	*Control Engineering*
MD*	the measured depth along the planned well path that coincides with the point along the planned well path that minimizes the 3D distance between where the bottom hole location actually is, and where it is thus preferred. (feet or meters)	*Petroleum Drilling*
MDR	Acronym for Motorized Drive Roller.	*Equipment*
MDS	Material Data Sheet - The material data sheet defines the minimum requirements for the required materials, i.e., chemical requirements, manufacturing, qualification of supplier, mechanical testing and properties, non destructive examination, repair, marking, and certification.	*Mechanical*
Mealtime	the time set aside, frequently by contract, during which the employee is to take his food, whether lunch or dinner.	*Industrial Relations*
Mealy	soft and friable, as in 'a mealy roof'.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mean	The arithmetic average of a set of values. A measure of central tendency of the distribution of a set of replicate results. Often abbreviated by an x with a bar over it.	*Quality*
Mean Cycles Before Failure (MCBF)	Mean Cycles Between Failures; the average number of equipment cycles between failures; total equipment cycles divided by the total number of failures during those cycles (includes both product and non-product cycles).	*Maintenance*
Mean difference	[In meta-analysis:] A method used to combine measures on continuous scales (such as weight), where the mean, standard deviation and sample size in each group are known. The weight given to the difference in means from each study (e.g. how much influence each study has on the overall results of the meta-analysis) is determined by the precision of its estimate of effect and, in the statistical software in RevMan and the Cochrane Database of Systematic Reviews, is equal to the inverse of the variance. This method assumes that all of the trials have measured the outcome on the same scale. See also: Standardized mean difference Also called: Weighted mean difference, WMD	*Quality Engineering*
Mean Downtime	The average time a system is unavailable for use, for example due to a failure. Mean downtime includes the mean repair time plus all delay time associated with a repairman arriving with the appropriate replacement parts.	*Reliability Engineering*
Mean filtration rating	A measurement of the average size of the pores of a filter medium.	*Mechanical, Process, and Operations*
Mean free path	The average distance that an electron wave can travel without deflection.	*Material Process*
Mean indoor temperature	The "usual" temperature. If different sections of the house are kept at different temperatures, the reported temperature is for the section where the people are. A thermostat setting is accepted if the temperature is not known.	*Energy*
Mean Ionic Activity Coefficient	See Activity coefficient.	*Electronic Process*
Mean ionic activity coefficient (f±) or the activity of a salt	on the other hand, can be measured by a variety of techniques such as freezing point depression and vapor pressure as well as paired sensing electrodes. It is the geometric mean of the individual ionic activity coefficients - f± = (f+n+f-n-)1/n	*Electronic Process*
Mean Life	This is a reliability measure that represents the expected value of the failure times for a failure distribution, also known as the average or central life value. While this represents a useful representative value of a distribution of failure times, it is often over-used as the sole reliability metric.	*Reliability Engineering*
Mean operating hours	The arithmetic average number of operating hours per building is the weighted sum of the number of operating hours divided by the weighted sum of the number of buildings.	*Energy*
Mean power output (of a wind turbine)	The average power output of a wind energy conversion system at a given mean wind speed based on a Raleigh frequency distribution.	*Energy*
Mean square feet per building	The arithmetic average square feet per building is the weighted sum of the total square feet divided by the weighted sum of the number of buildings.	*Energy*
Mean Temperature	The average of the maximum and minimum temperature of a process equilibrium.	*General Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mean Temperature	The average of the maximum and minimum temperature of a process equilibrium.	*Electronic Process*
Mean Time Between Critical Failure (MTBCF)	A measure of system reliability, which includes the effects of any fault tolerance that exist. The average time between failures that cause a loss of a system function defined as "critical" by the customer.	*Maintenance*
Mean time between equipment failure	The mean (or average) time in hours expected between failures of a given device.	*Quality*
Mean Time Between Failure	The mean time expected between failures for repairable or replaced items, typically measured in hours. MTBF is meant to be the mean over an infinite period of time. It is the inverse of the failure rate. Mean time between failures is calculated from the total accumulated operating time divided by the number of failures during the same period	*Reliability Engineering*
Mean Time Between Failures	A Measure Of Equipment Reliability. Equal To The Number Of Failures In A Given Time Period, Divided By The Total Equipment Uptime In That Period.	*Plant Engineering*
Mean Time Between Failures (MTBF)	Mean time between failures is calculated from the total accumulated operating time divided by the number of failures during the same period. See also Mean Time To Failure (MTTF) for examples.	*Maintenance*
Mean Time Between Failures (MTBF)	An average time between machinery breakdowns.	*Reliability Engineering*
Mean Time Between Maintenance (MTBM)	A basic measure of reliability for repairable fielded systems. The average time between all system maintenance actions. Maintenance actions are for repair or preventive purposes.	*Reliability Engineering*
Mean time to failure	This is the mean time expected for the first failure of an item. Mean time to failure is calculated from the total elapsed time divided by the total number of failures. While MTBF excludes time that the equipment is not available or in use, MTTF includes the full period of time regardless of actual operation time. It is common for these two terms to be confused or misunderstood. Failure rates reported or collected from maintenance management systems tend to be in terms of MTTF	*Reliability Engineering*
Mean Time to Failure (MTTF)	Mean time to failure is calculated from the total elapsed time divided by the total number of failures. While MTBF excludes time that the equipment is not available or in use, MTTF includes the full period of time regardless of actual operation time. It is common for these two terms to be confused or misunderstood. Failure rates reported or collected from maintenance management systems tend to be in terms of MTTF.	*Maintenance*
Mean Time to Prepare (MTTP)	MTTP is the duration required to prepare for equipment restoration in the event of failure. This time should include all activities and preparations that can be carried out before physical repair activities begin, such as scaffolding, drawing spares from stores, locating tools, spares, and equipment at the job site. Preparation time should not include lead times required for ordering spares from suppliers. Spare part ordering lead times should be recorded separately to facilitate spares holding policy analysis and the easy identification of long lead times. Although closely related, spares analysis and evaluation is a distinctly different activity to maintenance strategy analysis.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mean Time To Repair	A Measure Of Maintainability. Equal To The Total Equipment Downtime In A Given Time Period, Divided By The Number Of Failures In That Period.	*Plant Engineering*
Mean Time to Repair (MTTR)	MTTR refers to the average total time duration required to physically repair or replace the failed item and to reinstate the operational functionality. Part of the system downtime may be due to time delays (spares, resources), which are not included in the MTTR.	*Maintenance*
Mean Time To Repair (MTTR)	After a machinery breakdown, it is the average time to repair that machine back to acceptable operating conditions.	*Reliability Engineering*
Mean Time to Restore (MTR)	MTR refers to the average (unplanned) system downtime including delays for maintenance and supply resources. This is an appropriate measure when maintenance and supply resources are included as requirement for the maintainability.	*Maintenance*
Mean Velocity of Flow	Under steady state of flow, the mean velocity of flow at a given cross section of pipe is equal to the rate of flow Q divided by the area of cross section A. It is expressed in feet per second or meters per second. where v = mean velocity of flow, in feet per second, ft/s (meters per second, m/s). Q = rate of flow, in cubic feet per second, ft3/s (cubic meters per second, m3/s) Q = rate of flow, in cubic feet per second, ft3/s (cubic meters per second, m3/s). A = area of cross section, in square feet, ft2 (square meters, m2)	*Maintenance and Repair*
Meanshift	The difference in tightening torque values produced by the same tightening tool on hard and soft joints. A hard joint typically gives a higher torque value than a soft joint. Generally speaking, the lower the meanshift of a tightening tool, the better it will be in achieving a specified torque value irrespective of the joint condition.	*Maintenance*
Mean-Time-Between-Failure (MTBF)	A basic measure of reliability for repairable items: The mean number of life units during which all parts of the item perform within their specified limits, during a particular measurement interval under stated conditions.	*Reliability Engineering*
Mean-Time-To-Failure	A basic measure of reliability for non-repairable items: The total number of life units of an item divided by the total number of failures within that population, during a particular measurement interval under stated conditions.	*Reliability Engineering*
Measurand	A physical quantity, property, or condition which is measured.	*General Engineering*
Measurand	A physical quantity, property or condition which is measured (e.g., pressure, acceleration).	*Electrical Engineering*
Measure head	a short heading or drift. -see also Crut.	*Mining*
Measure Life	The length of time that the demand-side management technology will last before requiring replacement. The measure life equals the technology life. These terms are used synonymously.	*Energy*
Measured coal resources	Coal for which estimates of the rank, quality, and quantity have been computed from sample analyses and measurements from closely spaced and geologically well-known sample sites, such as outcrops, trenches, mine workings, and drill holes. The points of observation and measurement are so closely spaced and the thickness and extent of coals are so well defined that the tonnage is judged to be accurate within 20 percent of true tonnage. Although the spacing of the points of observation necessary to demonstrate continuity of the coal differs from region to region according to the character of the coal beds, the points of observation are no greater than ½ mile apart. Measured coal is projected to extend as a ¼-mile wide belt from the outcrop or points of observation or measurement.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Measured Day Work	this is sometimes referred to as measured day rate.	*Industrial Relations*
Measured heated area of residence	The floor area of the housing unit that is enclosed from the weather and heated. Basements are included whether or not they contain finished space. Garages are included if they have a wall in common with the house. Attics that have finished space and attics that have some heated space are included. Crawl spaces are not included even if they are enclosed from the weather. Sheds and other buildings that are not attached to the house are not included. "Measured" area means the measurement of the dimensions of the home, using a metallic, retractable, 50-foot tape measure. "Heated area" is that portion of the measured area that is heated during most of the season. Rooms that are shut off during the heating season to save on fuel are not counted. Attached garages that are unheated and unheated areas in the attics and basements are also not counted.	*Energy*
Measured reserves	See Proved energy reserves.	*Energy*
Measured resources, coal	Coal resources for which estimates of the rank, quality, and quantity have been computed, within a margin of error of less than 20 percent, from sample analyses and measurements from closely spaced and geologically well known sample sites. Measured resources are computed from dimensions revealed in outcrops, trenches, mine workings, and drill holes. The points of observation and measurement are so closely spaced and the thickness and extent of coals are so well defined that the tonnage is judged to be accurate within 20 percent. Although the spacing of the points of observation necessary to demonstrate continuity of the coal differs from region to region, according to the character of the coalbeds, the point of observation are no greater than 1/2 mile apart. Measured coal is projected to extend as a belt 1/4 mile wide from the outcrop or points of observation or measurement.	*Energy*
Measurement	Same as "process variable."	*Process Control Engineering*
Measurement Systems Analysis	A method for ensuring product test measurements are reliable, robust, and of good statistical merit.	*Electrical Engineering*
Measures	strata of different kinds.	*Mining*
Measures of reliability	These are several calculated values used when performing reliability prediction analysis. They include; availability, mean time between failures, failure rates and reliability.	*Reliability Engineering*
Measuring Junction	The thermocouple junction referred to as the hot junction that is used to measure an unknown temperature.	*Electrical*
Measuring Junction	The thermocouple junction referred to as the hot junction that is used to measure an unknown temperature.	*Electronic Process*
MECA	Manufacturers of Emission Controls Association	*Petro-Chemical Abbreviations*
Mechanical Aptitude Tests	examinations for the purpose of measuring an individual's mechanical ability.	*Industrial Relations*
Mechanical Bonding	Usually represented by mechanical interlocking of the deposited particles with the rough heights on the substrate surface produced during grit blasting.	*Paint and Coatings*
Mechanical cleaning	removing residues or impurities from steel using mechanical force such as grinding or sand blasting	*Materials Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mechanical control	Any control actuated by linkages, gears, screws, cams or other mechanical elements.	*Mechanical, Process, and Operations*
Mechanical draft water-cooling tower	A tower through which air movement is effected by one or more fans. There are two main types: Forced draft with fans located at the air inlet; Induced draft with fans located at the air exhaust.	*Facility Engineering*
Mechanical drivetrain	In the wind power industry, this term refers to the combination of the turbine's main rotor shaft and bearings, gearbox (if used) and generator.	*Electrical*
Mechanical equipment support	Members, which comprise the primary support for the fan, drive assembly. Normally steel or concrete.	*Facility Engineering*
Mechanical Failure	A malfunction consisting of cracking, excessive displacement, misalignment, loosening, etc	*Reliability Engineering*
Mechanical Hysteresis	The difference of the indication with increasing and decreasing strain loading, at identical strain values of the specimen.	*General Engineering*
Mechanical Hysteresis	The difference of the indication with increasing and decreasing strain loading, at identical strain values of the specimen.	*Electronic Process*
Mechanical impedance	The ratio of force to velocity, where the velocity is a result of that force only. Its reciprocal is called mobility.	*Reliability Engineering*
Mechanical integrity	An injection well has mechanical integrity if: (1) there is no significant leak in the casing, tubing, or packer (internal mechanical integrity) and (2) there is no significant fluid movement into an underground source of drinking water through vertical channels adjacent to the injection wellbore (external mechanical integrity).	*Petroleum Drilling*
Mechanical Integrity Test (MIT)	The act of setting a packer or retrievable bridge plug above the perforations in a wellbore and applying pressure to the annulus in order to ensure soundness of the casing.	*Petroleum Drilling*
Mechanical Integrity Test	The act of setting a packer or retrievable bridge plug above the perforations in a wellbore and applying pressure to the annulus in order to ensure soundness of the casing.	*Petroleum Drilling*
Mechanical Joint	A joint for the purpose of mechanical strength or leak resistance or both, where the mechanical strength is developed by threaded, grooved, rolled, flared, or flanged pipe ends or by bolts, pins, and compounds, gaskets, rolled ends, caulking, or machined and mated surfaces. These joints have particular application where ease of disassembly is desired.	*Maintenance and Repair*
Mechanical Life	The life of a switch with no (or a negligible) electrical load, and a specified combination of actuation, environment and criterion of failure. Mechanical life usually is limited by the life of the switch's flexing parts and bearing surfaces.	*Electrical Engineering*
Mechanical Pacing	usually refers to the operations of an assembly line, where the speed at which the machine is set determines the pace at which the individual operates.	*Industrial Relations*
Mechanical properties	the properties of a material that reveal its elastic and inelastic behavior when force is applied, thereby indicating its suitability for mechanical applications; for example, elasticity, tensile strength, elongation, hardness, and fatigue limit	*Materials Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mechanical seal	In a valve, a shut off that is accomplished by a mechanical means rather than with fluid or line pressure. The wedging action of a gate against the seats or the seat springs pushing the seat against the ball or gate are examples of mechanical seals in a valve.	*Mechanical*
Mechanical Seal	A device which works to join together systems or mechanisms in order to prevent leakage, contain pressure or exclude contamination.	*Reliability Engineering*
Mechanical stress	A source of corrosion in metals.	*Material Process*
Mechanization	a term of very broad meaning, but essentially dealing with changes in the processes of production which result in the displacement of human labor and human skills by machine operation.	*Industrial Relations*
Meco-Moore cutter loader	a coal cutter with an undercutting jib and a mechanically operated loader combined. The prototype was installed in 1934 in Chisnall Hall Colliery, Wigan Coal Corporation.	*Mining*
MECS	Manufacturing Energy Consumption Survey	*Energy*
Media	The substance that flows through the tubing, either a gas, liquid, powder or slurry.	*General Mechanical*
Media Compatibility	Ability to operate with a specified media carrying pressure (e.g., salt water).	*Electrical Engineering*
Media Independent Interface	A parallel digital bus used for 10Mbps and 100Mbps Ethernet.	*Electrical Engineering*
Media migration	Material passed into the effluent stream composed of the materials making up the filter medium.	*Oil Analysis*
Media Pressure	The pressure of the media inside the tubing.	*Mechanical*
Median	The middle number of a data set when the measurements are arranged in ascending (or descending) order.	*Energy*
Median Ranks	Measures used to obtain estimates of the unreliability. Median ranks are the values that the true probability of failure should have the jth failure out of a sample of N units, at a 50% confidence level, or the best estimate for the unreliability. This estimate is based on a solution of the binomial equation.	*Reliability Engineering*
Median streamflow	The middle rate of flow of water past a given point for which there have been several greater and lesser rates of flow occurring during a specified period.	*Energy*
Median water condition	The middle precipitation and run-off condition for a distribution of water conditions that have happened over a long period of time. Usually determined by examining the water supply record of the period in question.	*Energy*
Mediation	in current usage the terms "conciliation" and "mediation" are often used interchangeably.	*Industrial Relations*
Mediation Board	a group generally established to affect a settlement between labor and management in a particular dispute.	*Industrial Relations*
Mediator	the person who is a conciliator or mediator.	*Industrial Relations*
Medical Care	refers to particular plans in or subject to a collective bargaining agreement pr in a statement of company policy in non-union plants setting forth the specific health insurance or service program for the individuals covered under a plan.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Medical Care Plan	group insurance or service plans which generally provide hospital, surgical, and medical benefits on a group basis.	*Industrial Relations*
Medical decision level, decision level, Xc	A concentration of analyte where medical interpretation is critical for patient care. There may be several different medical decision levels for a particular analyte. Xc should provide guidance for selecting relevant estimates of stable imprecision, stable inaccuracy, and matrix inaccuracy. This is analogous to identifying a critical Target Value (TV) for assessing test performance and validating QC design.	*Quality*
Medical Examination	an evaluation of the medical condition of an individual.	*Industrial Relations*
Medically important errors	Used here to indicate errors that, when added to the inherent imprecision and inaccuracy of a measurement procedure, cause the quality requirement to be exceeded. Medically important random errors are those increases in the standard deviation of the measurement procedure that cause the error distribution to exceed the quality requirement (see critical random errors). Medically important systematic errors are those shifts in the mean of the error distribution that cause the error distribution to exceed the quality requirement (see critical systematic error).	*Quality*
Medium	The porous material that performs the actual process of filtration. The plural of this word is "media".	*Oil Analysis*
Medium Effect (f m)	For solvents other than water the medium effect is the activity coefficient related to the standard state in water at zero concentration. It reflects differences in the electrostatic and chemical interactions of the ions with the molecules of various solvents. Solvation is the most significant interaction.	*General Engineering*
Medium Effect (f m)	For solvents other than water the medium effect is the activity coefficient related to the standard state in water at zero concentration. It reflects differences in the electrostatic and chemical interactions of the ions with the molecules of various solvents. Solvation is the most significant interaction.	*Electronic Process*
Medium pressure	For valves and fittings, implies that they are suitable for working pressures between 125 to 175 pounds per square inch.	*Energy*
Medium range order	Structural ordering occurring over the range of a few nanomaterials in an otherwise noncrystalline material.	*Material Process*
Medium-temperature collector	A collector designed to operate in the temperature range of 140 degrees to 180 degrees Fahrenheit, but that can also operate at a temperature as low as 110 degrees Fahrenheit. The collector typically consists of a metal frame, metal absorption panels with integral flow channels (attached tubing for liquid collectors or integral ducting for air collectors), and glazing and insulation on the sides and back.	*Energy*
MEDLINE	An electronic database produced by the United States National Library of Medicine (NLM). It indexes millions of articles in selected journals, available through most medical libraries, and can be accessed on the Internet. See also: Key words	*Quality Engineering*
MeerKat	An Access-based database system (written for The Cochrane Collaboration) that can be used to manage a study-based register of trials.	*Quality Engineering*
Meet	the point in the shaft where cages pass each other or the place in a roadway where tubs pass (S. Staffs.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Meetings	another word for underground roadway junctions; or where the cages pass in the shaft, or the tubs pass on a haulage.	*Mining*
Mega	Million	*Oil Analysis*
MegaBaud	RS-232 logic-level compatible data rates that are 1Mbps or higher.	*Electrical Engineering*
MegaBaud	RS-232 logic-level compatible data rates that are 1Mbps or higher.	*Electrical Engineering*
Megachips per Second	In a Direct-Sequence Spread Spectrum signal, a "chip" is an encoding element. Mcps is a measure of the speed at which chips can be generated by a circuit.	*Electrical Engineering*
Megachips per Second	In a Direct-Sequence Spread Spectrum signal, a "chip" is an encoding element. Mcps is a measure of the speed at which chips can be generated by a circuit.	*Electrical Engineering*
Megahertz	Measurement of frequency -- million cycles per second.	*Electrical Engineering*
Megasamples per second	A measure of speed in digitizing systems, samples per second dictates the maximum frequencies that can be accurately captured.	*Electrical Engineering*
Megavar (MVAr)	One million VAr (volt-ampere reactive).	*Electrical*
Megavoltampere (MVA)	One million VA (volt-ampere).	*Electrical*
Megavoltamperes (MVA)	Millions of voltamperes, which are a measure of apparent power. (See definition for apparent power.)	*Energy*
Megawatt (MW)	One million watts of electricity.	*Energy*
Megawatt (MW)	One million watts. One megawatt would be needed to light 10,000 one-hundred-watt light bulbs. If those bulbs were powered for 1 hour, 1 MWh of electrical power would be used. (See also Watt and Watt hour.)	*Electrical*
Megawatt electric (MWe)	One million watts of electric capacity.	*Energy*
Megawatt	One million watts.	*Energy*
Megawatt hour (MWh)	One thousand kilowatt-hours or 1million watt-hours.	*Energy*
Megawatt-hour (mWh)	1 million watts used for one hour. If you purchased a megawatt-hour of energy for a nickel per kilowatt-hour, it would cost you 1,000 nickels, or $50. Using a kWh your could burn one 100-watt incandescent for 24 hours a day for about 14 months, or 3 hours a day for over 9 years.	*Energy*
Megawatt-hour (MWh)	One thousand kilowatt-hours or one million-watt hours.	*Energy*
Mehaden oil	Fish oil.	*Material Process*
Melamine	which can be condensed with formaldehyde to form thermosetting resinous products, somewhat resembling urea resins. Can be produced easily from dicyanodiamide.	*Material Process*
Melamine plastics	Thermosetting plastics formed by melamine and formaldehyde.	*Material Process*
Melt	A thermoplastic stock which is in a molten state due to temperature.	*Metallurgy*
Melt Fracture	Is a phenomenon of melt extrudate in which the surface appears rough or wavy upon exit from the die. Melt fracture may appear uniformly or in certain sections only.	*Metallurgy*
Melt Index	The number of grams, of a thermoplastic resin which can be forced through a 0.0825 inch orifice when subjected to 2160 grams force in 10 minutes of 190°C.	*Metallurgy*

Please see the Appendix for further illustration

Term	Definition	Industry
Melt Instability	An instability in the melt flow through a die that causes irregularities in the finished part.	*Metallurgy*
Melt Strength	The elastic strength of a polymer in the molten state.	*Metallurgy*
Melting Point	The temperature at which a solid substance changes to liquid state	*Chemical*
Melting point	Temperature at which a solid-to-liquid transformation occurs upon heating.	*Material Process*
Member System	An eligible customer operating as part of an agency composed exclusively of other eligible customers.	*Energy*
Membership in Good Standing	the term generally applies to individuals who are or have applied for membership in the union or who have come into the union through a union security provision in the collective bargaining agreement.	*Industrial Relations*
Membrane	The pH-sensitive glass bulb is the membrane across which the potential difference due to the formation of double layers with ion-exchange properties on the two swollen glass surfaces is developed. The membrane makes contact with and separates the internal element and filling solution from the sample solution.	*General Engineering*
Membrane Filtration	Membrane filtration is a pressure driven process that uses a semi-permeable (porous) membrane to separate particulate matter from soluble components in the carrier fluid such as water.	*Contamination Control*
Memorandum Of Understanding	A Memorandum of Understanding (MOU) may express mutual understanding of an issue without implying commitments by parties to the understanding.	*Procurement*
MEMS	Micro Electromechanical Structures. Extremely small devices utilizing both electrical and mechanical properties.	*Reliability Engineering*
Men-of-war	small additional coal pillars left to support the roof where necessary in 'square work' in the S. Staffs. Thick Coal.	*Mining*
Men's Jobs	the term has relatively little current use but on occasion has been applied to certain jobs which are either traditionally or frequently only performed by men.	*Industrial Relations*
Mensuration	The measurement and calculation of volume, growth, and development of individual trees or stands.	*Forestry*
Mer	The group of atoms that constitutes a polymer chain repeat unit.	*Engineering Physics*
Mercaptan	An organic chemical compound that has a sulfur like odor that is added to natural gas before distribution to the consumer, to give it a distinct, unpleasant odor (smells like rotten eggs). This serves as a safety device by allowing it to be detected in the atmosphere, in cases where leaks occur.	*Energy*
Merchant coke plant	A coke plant where coke is produced primarily for sale on the commercial (open) market.	*Energy*
Merchant facilities	High-risk, high-profit facilities that operate, at least partially, at the whims of the market, as opposed to those facilities that are constructed with close cooperation of municipalities and have significant amounts of waste supply guaranteed.	*Energy*
Merchant Gilds	trade groups active in the Middle Ages which attempted to control trade through regulations limiting the number of individuals entering the trade and keeping the group to a small but effective regulatory trade agency.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Merchant MTBE plants	MTBE (methyl tertiary butylether) production facilities primarily located within petrochemical plants rather than refineries. Production from these units is sold under contract or on the spot market to refiners or other gasoline blenders.	*Energy*
Merchant oxygenate plants	Oxygenate production facilities that are not associated with a petroleum refinery. Production from these facilities is sold under contract or on the spot market to refiners or other gasoline blenders.	*Energy*
Merchantable height	The maximum stem length above which no other commercially valuable wood product can be manufactured.	*Forestry*
Mercon	Ford ATF specification	*Petro-Chemical Abbreviations*
Mercury Poisoning	a form of industrial disease frequent among workers in the period or early industrial development, particularly in the handling of chemical compounds.	*Industrial Relations*
Mercury vapor lamp	A high-intensity discharge lamp that uses mercury as the primary light-producing element. Includes clear, phosphor coated, and self-ballasted lamps.	*Energy*
Merger	A combining of companies or corporations into one, often by issuing stock of the controlling corporation to replace the greater part of that of the other.	*Energy*
Meridian	A surveying term that establishes a line of reference. The bearing is used to designate direction. The bearing of a line is the acute horizontal angle between the meridian and the line. Azimuths are angles measured clockwise from any meridian.	*Mining*
Merit	a term to reflect and measure the effectiveness of an individual's work performance on his job.	*Industrial Relations*
Merit Increase	a voluntary pay increase to an individual employee because of the quality of his work, or improved efficiency, or as a reward for increased production or improvement in attitude or quality of performance.	*Industrial Relations*
Merit Rating	a system used to measure periodically this relative work performance of employees.	*Industrial Relations*
Merit Review	the procedure set up unilaterally by the employers or under the terms of a contract to provide for an examination at regular intervals of the rating of the employees.	*Industrial Relations*
Merit System	the mechanism established to measure the efficient performance of individuals, usually for the purpose of effecting a promotion or transfer.	*Industrial Relations*
Merit Wage Adjustment	the adjustment following a merit review which shows that the subject employee has increased his efficiency or increased the quality of his performance.	*Industrial Relations*
Merrick Multiple-Piece Rate Plan	an incentive plan similar to that used by Frederick W. Taylor, known as the Taylor Differential Piece Rate Plan, which was established at the Midvale Steel Company.	*Industrial Relations*
Merry-go-round trains	trains specifically designed to deliver coal directly to the power stations from the coalmines. Some were loaded and unloaded automatically.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
MES	Management Execution System. By monitoring labor resources, process history and machine usage and failures, a MES will help various features such as preventive maintenance, employee time and attendance, quantity maintenance and operator data.	*Control Engineering*
Mesh	Size and number of openings in a screen , 4-mesh means, 4 openings from the center of a wire to the center of a wire 1 inch, from that point, ¼ inch mesh (the fractional part of an inch) means that the space between the wires is ¼ inch.	*Material Process*
MeSH headings (Medical Subject Headings)	Terms used by the United States National Library of Medicine to index articles in Index Medicus and MEDLINE. The MeSH system has a tree structure in which broad subject terms branch into a series of progressively narrower subject terms. See also: Key words	*Quality Engineering*
Mesityl oxide	A solvent –ether.	*Material Process*
Mesocoloid	A polymer intermediate between a hemicolloid and eucolloid, between degrees of polymerization of 100 and 1000.	*Material Process*
Messenger Wire	A metallic supporting member either solid or stranded which may also perform the function of a conductor.	*Electrical*
Met	An approximate unit of heat produced by a resting person, equal to about 18.5 Btu per square foot per hour.	*Energy*
Meta system	The meta system manages the selection, operation and communication of the integrated intelligent systems which have large knowledge environment and consist of several symbolic reasoning systems and numerical computation packages.	*Material Process*
Meta-analysis	The use of statistical techniques in a systematic review to integrate the results of included studies. Sometimes misused as a synonym for systematic reviews, where the review includes a meta-analysis.	*Quality Engineering*
Meta-anthracite	See Anthracite.	*Energy*
Metabolism	a term that encompasses all of the diverse reactions by which a cell processes food material to obtain energy and the compounds from which new cell components are made.	*Chemical*
Metacrylates	Term applied to polymerized esters of metacrylic acid, transparent, colorless, thermoplastic resins.	*Material Process*
Metacrylates	Metacrylates Term applied to polymerized esters of metacrylic acid, transparent, colorless, thermoplastic resins	*Material Process*
Metal	Brit. to pave or surface (a road) with broken stone.	*Civil Engineering*
Metal	Electrically conducting solid with characteristic metallic bonding.	*Material Process*
Metal Deactivators	Some metals used in the construction of heat transfer systems can actually react with the oil, causing premature breakdown. Metal deactivators ensure compatibility with any system, even those with copper lines, heat exchangers or fittings.	*Lubrication*
Metal drift	a heading driven in stone as opposed to coal. (Lancs.).	*Mining*
Metal halide lamp	A high-intensity discharge lamp type that uses mercury and several halide additives as light-producing elements. These lights have the best Color Rendition Index (CRI) of the high-intensity discharge lamps. They can be used for commercial interior lighting or for stadium lights.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Metal man	a man who repaired underground roadways. (Lancs.).	*Mining*
Metal matrix composite	Composite material in which the reinforcing phase is dispersed in the metal.	*Material Process*
Metal or Metal-stone	claystone and shale.	*Mining*
Metal Oxide Varistor	A Metal Oxide Varistor (MOV, or surge-suppressor) is a discrete electronic component that diverts excessive voltage to the ground and/or neutral lines.	*Electrical Engineering*
Metal Oxide Varistor	A Metal Oxide Varistor (MOV, or surge-suppressor) is a discrete electronic component that diverts excessive voltage to the ground and/or neutral lines.	*Electrical Engineering*
Metal Oxides	Oxidized ferrous particles which are very old or have been recently produced by conditions of inadequate lubrication. Trend is important.	*Lubrication*
Metal ridge or Metal rig	the floor of a mine forced up by the action of creep. (N. East).	*Mining*
Metal Trades Department	one of the AFL-CIO trade and industrial union departments.	*Industrial Relations*
Metalization	The metal pattern deposited on the sensor chip (usually outside the diaphragm area) to permit electrical connections to be made to the chip. Aluminum is usually used, but has potential contamination problems (known as the "purple plague"), if not protected. MICRO SWITCH uses gold, which is impervious to almost everything.	*Electrical Engineering*
Metalizing	forming a metallic coating by atomized spraying with molten zinc or by vacuum deposition; also called spray metalizing; applying an electrically conductive metallic layer to the surface of another material	*Materials Process*
Metallic	The metallic material composition of the collector's absorber system.	*Energy*
Metallic bond	Primary, chemical bond involving the nondirectional sharing of delocalized electrons.	*Material Process*
Metallic Bonding	the sharing of electrons among atoms in a metal, which gives excellent conducting properties because the electrons are free to move about the electron cloud around the atoms	*Physics*
Metallic magnet	Metal alloy with an engineering application predominantly based on its magnetic properties.	*Material Process*
Metallic soap	The compound of any metal with an organic acid such as naphthenic acids, or stearic acid used as driers, lubricants, etc..	*Material Process*
Metallocene Resins	The structure of the metallocene catalyst molecule and the environment around its catalytic site can be changed to build different polymeric structures with specific properties. Each metallocene catalyst consists of identical molecules, which behave in the same way, resulting, in polymer consistency because each polymer chain produced in uniform.	*Metallurgy*
Metallurgical	relating to the study of metals and their properties in bulk at the atomic level	*Materials Process*
Metallurgical bond	the bonding of iron/zinc intermetallic layers to the base steel	*Materials Process*
Metallurgical Bonding	Produced by diffusion or chemical bonding between the coating and substrate.	*Paint and Coatings*
Metallurgical coal	Coking coal and pulverized coal consumed in making steel.	*Energy*
Metallurgical coal	Coal used to make steel.	*Mining*
Metallurgical coal (or coking coal)	meets the requirements for making coke. It must have a low ash and sulfur content and form a coke that is capable of supporting the charge of iron ore and limestone in a blast furnace. A blend of two or more bituminous coals is usually required to make coke.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Metallurgy	The study of extracting metals from their ores.	*Mining*
Metals	electropositive elements that usually have a shiny surface, are generally good conductors of heat and electricity, and can be melted or fused, hammered into this sheets, or drawn into wires; materials possessing atoms that share delocalized electrons	*Physics*
Metal-to-metal seal	The seal produced by metal-to-metal contact between the sealing face of the seat ring and the closure element, without benefit of a synthetic seal.	*Mechanical*
Metalworking Lubricant	Any lubricant, usually petroleum-based, that facilitates the cutting or shaping of metal. Basic types of metalworking lubricants are: cutting and tapping fluids, drawing compounds, etc.	*Lubrication*
Metamorphic Rocks	Any rock derived from preexisting rocks by mineralogical, chemical, and/or structural changes in response to marked changes in temperature, pressure, shearing stress, and chemical environment, generally at depth in the earth's crust.	*Petroleum Engineering*
Metamorphic rocks	Rocks which have undergone a change in texture or composition as the result of heat and/or pressure.	*Mining*
Metamorphism	A pronounced change in the constitution of rock effected by pressure, heat, and water that results in a more compact and more highly crystalline condition.	*Mining*
Meta-regression	[In meta-analysis:] A technique used to explore the relationship between study characteristics (e.g. concealment of allocation, baseline risk, timing of the intervention) and study results (the magnitude of effect observed in each study) in a systematic review. See also: Logistic regression	*Quality Engineering*
Metastable	Nonequilibrium state that may persist for a very long time	*Engineering Physics*
Metastable	A state that is stable with time, although it does not represent true equilibrium.	*Material Process*
Metastyrene	Another name for polystyrene resin.	*Material Process*
Meter	A unit of length, 1 meter=39.37 inches. METER - To regulate the amount or rate of fluid flow.	*Mechanical, Process, and Operations*
Meter Belts	One or more in-line conveyors used to provide controlled material discharge.	*Equipment*
Meter Constant	This represents the ratio between instrument transformers (CTs, PTs) and the meter. It is used as a multiplier of the difference between meter readings to determine the kWh used. The meter constant is also used as a multiplier of the demand reading to determine the actual demand.	*Energy*
Meter prover	A system used to check or "prove" a flow meter. A close fitting sphere is launched into a pipe of known inside diameter. The flow medium pushes the sphere thru a measured length of pipe between two sphere detection devices. Knowing the transit time and the exact volume between the two stations, a flow rate is calculated and compared with the meter reading.	*Mechanical*
Meter run	A section of pipeline in which a meter is installed to measure the volume of fluid passing thru the line.	*Mechanical*
Meter, Flow	A device which indicates either flow rate, total flow, or a combination of both. METER-IN - To regulate the amount of fluid flow into an actuator system.	*Mechanical, Process, and Operations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Metered data	End-use data obtained through the direct measurement of the total energy consumed for specific uses within the individual household. Individual appliances can be submetered by connecting the recording meters directly to individual appliances.	*Energy*
Metered peak demand	The presence of a device to measure the maximum rate of electricity consumption per unit of time. This device allows electric utility companies to bill their customers for maximum consumption, as well as for total consumption.	*Energy*
Metering Zone	The final zone of an extruder barrel, in which the melt is conveyed at a uniform rate to the breaker plate or die.	*Metallurgy*
Meter-out	To regulate the flow of the discharge fluid from an actuator or system.	*Mechanical, Process, and Operations*
Meters	see Instrumentation.	*Electrical*
Methane	The most prevalent and common component of most natural gas produced in British Columbia.	*Petroleum Engineering*
Methane (CH4)	A colorless, flammable, odorless hydrocarbon gas which is the major component of natural gas. It is also an important source of hydrogen in various industrial processes. Methane is a greenhouse gas. See also Greenhouse gases.	*Energy*
Methane drainage	the capture and drainage of gas out of the mine by means of boreholes and suction.	*Mining*
Methane monitor	An electronic instrument often mounted on a piece of mining equipment, that detects and measures the methane content of mine air.	*Mining*
Methane or Marsh gas (CH4)	Colorless gas. The simplest aliphatic hydrocarbon, starting point for many organic syntheses.	*Material Process*
Methane	A potentially explosive gas formed naturally from the decay of vegetative matter, similar to that which formed coal. Methane, which is the principal component of natural gas, is frequently encountered in underground coal mining operations and is kept within safe limits through the use of extensive mine ventilation systems.	*Mining*
Methanogenic	referring to the formation of methane by certain anaerobic bacteria during the process of anaerobic fermentation.	*Chemical*
Methanogens	Bacteria that synthesize methane, requiring completely anaerobic conditions for growth.	*Energy*
Methanol	methanol	*Energy*
Methanol (CH_3OH)	A light, volatile alcohol eligible for gasoline blending.	*Energy*
Methanol blend	Mixtures containing 85 percent or more (or such other percentage, but not less than 70 percent) by volume of methanol with gasoline. Pure methanol is considered an "other alternative fuel."	*Energy*
Methanometer	a hand-held instrument for testing for methane, firedamp.	*Mining*
Methanotrophs	Bacteria that use methane as food and oxidize it into carbon dioxide.	*Energy*

Term	Definition	*Industry*
Method development	Refers to the process of formulating the materials, conditions, and protocol for measuring an analyte. Method development is mainly carried out by industry. Laboratories may make minor modifications to methods to improve performance, in which case, the modified methods should be subject to more rigorous testing and evaluation by the laboratory.	*Quality*
Method of Correction	A procedure whereby the mass distribution of a rotor is adjusted to reduce unbalance, or vibration due to unbalance, to an acceptable value. Corrections are usually made by adding material to, or removing it from, the rotor.	*General Engineering*
Method selection	The process of defining the laboratory requirements and choosing an analytical method which has the desired characteristics. Application and methodology characteristics must be carefully considered when selecting the method.	*Quality*
Method Study	the term is occasionally used interchangeably with th emotion study.	*Industrial Relations*
Method validation	The process of testing a measurement procedure to assess its performance and to validate that performance is acceptable. The magnitudes of the analytical errors are experimentally determined and their acceptability for the application of the method is judged versus defined requirements for quality in the form of maximum allowable errors.	*Quality*
Methodological quality	See Bias prevention	*Quality Engineering*
Methodology characteristics	Those properties of a method which in principle should contribute to the best analytical performance in the measurement of the analyte of interest. Characteristics such as the specificity of the chemical reaction, optimization of the reaction conditions, etc.	*Quality*
Methodology expert	A person who assists reviewers in conducting systematic reviews by using their statistical or other methodological expertise.	*Quality Engineering*
Methods Analysis	essentially this is the same as the motion and time study, being concerned with the various techniques and methods for increasing production.	*Industrial Relations*
Methods Group (MG) (formerly known as Methods Working Group [MWG])	Develop methodology and advise The Cochrane Collaboration on how the validity of Cochrane Reviews can be improved. In addition to conducting methodological research, they provide policy advice, training, and support. They help to monitor the quality of systematic reviews prepared within the Collaboration, and serve as a forum for discussion.	*Quality Engineering*
Methoxy ethyl oleate (C8H17CH (CH2)7 COOC2H4OCH3)	A plasticizer. Also, called Kapsol, Methyl Cellosolve oleate.	*Material Process*
Methyl aceto-acetate	A solvent ester.	*Material Process*
Methyl n-amyl ketone	A solvent ketone.	*Material Process*
Methyl acetate	A solvent ester. A colorless liquid.	*Material Process*
Methyl acrylate (CH2CHCOOCH3)	Colorless liquid. A monomer which polymerizes to a clear, colorless, light, tough, thermoplastic resin.	*Material Process*
Methyl alcohol	A solvent-alcohol.	*Material Process*
Methyl chloroform (trichloroethane)	An industrial chemical (CH_3CC_{l3}) used as a solvent, aerosol propellant, and pesticide and for metal degreasing.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Methyl cyclohexanol	A solvent – alcohol.	*Material Process*
Methyl dioxolane	A solvent – ether.	*Material Process*
Methyl ethyl ketone	A solvent – ketone.	*Material Process*
Methyl formate	A solvent – ester.	*Material Process*
Methyl isobutyl ketone	A solvent – ketone.	*Material Process*
Methyl lactae	A solvent ester.	*Material Process*
Methyl phthalyl ethyl glycolate (CH 3OCOC6H4 COOCH2COOC2H5)	Methyl phthalyl ethyl glycolate (CH 3OCOC6H4COOCH2COOC2H5) Colorless liquid. An important plasticizer. Also called Santicizer M-17.	*Material Process*
Methylene chloride	A colorless liquid, nonexplosive and practically nonflammable. Used as a refrigerant in centrifugal compressors, a solvent for organic materials, and a component in nonflammable paint removers.	*Energy*
Methyl-o-benzyl benzoate (C6 H5CO (C6 H4COOCH3)	A plasticizer.	*Material Process*
Metric conversion factors (for floorspace)	Floorspace estimates may be converted to metric units by using the relationship, 1 square foot is approximately equal to .0929 square meters. Energy estimates may be converted to metric units by using the relationship, 1 Btu is approximately equal to 1,055 joules. One kilowatt hour is exactly 3,600,000 joules. One gigajoule is approximately 278 kilowatt hours (kWh).	*Energy*
Metric system	A decimal system based on the meter and kilogram, which varies somewhat between countries (See SI Metric System).	*Mechanical, Process, and Operations*
Metric ton	2,204.6 pounds. For many commodities this is the standard measure for international trade. It is commonly used in FAS reports. However, domestic shipments usually are reported in short tons.	*Agriculture*
Metric Ton	Equivalent to 1000 kilos, 2204.61 lbs.; 7.5 barrels.	*Petroleum Drilling*
Metric ton (mt)	A unit of weight equal to 2,204.6 pounds.	*Energy*
Metric ton	Equivalent to 1000 kilos, 2204.61 lbs.; 7.5 barrels.	*Petroleum Drilling*
Metrics	Things to measure in order to better understand performance levels.	*Reliability Engineering*
Metropolitan	Located within the boundaries of a metropolitan area.	*Energy*
Metropolitan area	A geographic area that is a metropolitan statistical area or a consolidated metropolitan statistical area as defined by the U.S. Office of Management and Budget.	*Energy*
Metropolitan statistical area (MSA)	A county or group of contiguous counties (towns and cities in New England) that has (1) at least one city with 50,000 or more in habitants; or (2) an urbanized area of 50,000 inhabitants and a total population of 100,000 or more inhabitants (75,000 in New England). These areas are defined by the U.S. Office of Management and Budget. The contiguous counties or other jurisdictions to be included in an MSA are those that, according to certain criteria, are essentially metropolitan in character and are socially and economically integrated with the central city or urbanized area.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
MGO	Manual Gear Operator - A gear operator that is operated manually (with a handwheel). See illustration, pages 34 & 35.	*Mechanical*
Mica	A transparent mineral used as window material in high-temperature ovens.	*Electrical*
Mica	A transparent mineral used as window material in high-temperature ovens.	*Electronic Process*
Mica specks	Small mica like spots on the surface of a plastic due to presence of volatile matter during injection.	*Material Process*
Micarta	A trade name for phenolic laminated material.	*Material Process*
Micro	Millionth	*Oil Analysis*
Micro Energy Cell	A Micro Energy Cell (MEC) is a small, rechargeable, very long life, energy storage device used in energy harvesting applications. An example is the THINERGY MEC from Infinite Power Solutions.	*Electrical Engineering*
Micro Motion Study	a refinement of time and motion study which utilizes the facilities of a motion picture camera which is able to show very small or microscopic motion.	*Industrial Relations*
Micro Switch	A type of digital position sensor that is mechanically linked to a valve.	*Mechanical*
Microaerophilic	obligate aerobes that function best under conditions of low oxygen concentration.	*Chemical*
Microamp	One millionth of an ampere, 10-6 amps, μA.	*General Engineering*
Microcircuit	Microscopic scale electrical circuit produced on a semiconductor substrate by controlled diffusion.	*Material Process*
Microcomputer	A computer which is physically small. It can fit on top of or under a desk; based on LSI circuitry, computers of this type are now available with much of the power currently associated with minicomputer systems.	*General Engineering*
Microcosm	a diminutive, representative system analogous to a larger system in composition, development, or configuration. As used in biodegradation treatability studies, microcosms are typically constructed in glass bottles or jars.	*Chemical*
Microcrystalline wax	Wax extracted from certain petroleum residues having a finer and less apparent crystalline structure than paraffin wax and having the following physical characteristics penetration at 77 degrees Fahrenheit (D1321)-60 maximum; viscosity at 210 degrees Fahrenheit in Saybolt Universal Seconds (SUS); (D88)-60 SUS (10.22 centistokes) minimum to 150 SUS (31.8 centistokes) maximum; oil content (D721)-5 percent minimum.	*Energy*
Microelectromechanical systems	Systems that combine mechanical and electrical components and are fabricated using semiconductor fabrication techniques. Common examples are pressure and acceleration sensors which combine the sensor and amplification or conditioning circuitry. Other applications include switches, valves, and waveguides.	*Electrical Engineering*
Microfiltration (MF)	A size-exclusion, pressure-driven membrane process that operates at ambient temperature. It is usually considered an intermediate between ultrafiltration and multi-media granular filtration. It is an effective barrier for particles, bacteria and protozoan cysts. The systems operate at pressures between 5 and 45 pounds per square inch.	*Contamination Control*
Micrograph	Produced when a section of the coating is taken, polished to show the particulate layers and then photographed through a microscope.	*Paint and Coatings*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Microgrid	A microgrid is a small-scale power network that comprises generating units and consumers. Often including renewable power sources such as wind turbines and solar panels, microgrids may also be connected to the larger-scale grids from which they can draw power if locally generated supplies fail to meet demand.	*Electrical*
Microgroove	A small groove scribed into the surface of a solar photovoltaic cell which is filled with metal for contacts.	*Energy*
Microhardness	The hardness of a coating as measured on a microscopic scale. Can show the hardness of individual phases within the coating and avoid the effects of porosity.	*Paint and Coatings*
Microinch	One millionth of an inch, 0.000001".	*Paint and Coatings*
MicroLAN	A 1-Wire network. A low-cost network in which PCs or microcontrollers communicate digitally over twisted-pair cable using 1-Wire components.	*Electrical Engineering*
Micrometer (μm)	One millionth of a meter, 0.001 mm.	*Paint and Coatings*
Micrometer (or Micron)	One-millionth of a meter. It can also be expressed as 10-6 meter.	*Energy*
Micrometer	See Micron.	*Lubrication*
MicroMonitor	A device that monitors three conditions vital to processor-controlled systems: power supply, software execution, and external override.	*Electrical Engineering*
MicroMonitor	A device that monitors three conditions vital to processor-controlled systems - power supply, software execution, and external override.	*Electrical Engineering*
Micron	One millionth of a meter, 10¨C6 meters.	*Electrical*
Micron	A unit of length equal to .001 millimeter (0.00003937 inch).	*Engineering Physics*
Microorganism	An organism that is too small to be studied without the aid of a microscope.	*Chemical Engineering*
Microorganisms	tiny living things that can only be seen with a microscope	*Agriculture*
Microorganisms	microscopic organisms including bacteria, protozoans, yeast, fungi, mold, viruses, and algae.	*Chemical*
Microphone	An instrument which converts a relatively small dynamic pressure change into an electrical signal. See **transducer.**	*Reliability Engineering*
Microporous Membrane	A thin film that has pores passing through it. The size of these holes is related to the pore size rating of the membrane (0.01 μm to 10 μm). Membranes can be used in the separation or filtration of suspended matter from liquids and gases.	*Contamination Control*
Microprocessor Supervisor	A device that monitors a host microprocessor or microcontroller's supply voltage and, in some cases, its activity. It monitors for a fault condition and takes appropriate action, usually issuing a reset to the microprocessor.	*Electrical Engineering*
Microscope Method	A method of particle counting which measures or sizes particles using an optical microscope.	*Oil Analysis*
Microscopic -	Particles whose diameter is below the threshold of normal vision, below forty micrometers for most individuals.	*Mechanical, Process, and Operations*
Microscopic-scale-architecture	Microscopic-scale-architecture Structural arrangement of the various phases in an engineering material.	*Material Process*

Term	Definition	*Industry*
Microsoft Access	general database software that ships with Professional (or better) Editions of Microsoft Office.	*Petroleum Drilling*
Microsoft Excel	general spreadsheet software that ships with Professional (or better) Editions of Microsoft Office.	*Petroleum Drilling*
Microstructural development	Changes in the composition and distribution of the phases in a material's microstructure as a result of thermal history.	*Material Process*
Microstructure	The structural features of an alloy that are subject to observation under a microscope.	*Engineering Physics*
Microtrack	A device for measuring powder particle size distributions.	*Paint and Coatings*
Microturbine	A small turbine generator of 30 - 250 kilowatts (kW) generating capacity, which can be located near a customer load.	*Electrical*
Microvolt	One millionth of a volt, 10¨C6 volts.	*Electrical*
Microvolt	One millionth of a volt, 10-6 volts.	*Electronic Process*
Microwave oven	A household cooking appliance consisting of a compartment designed to cook or heat food by means of microwave energy. It may also have a browning coil and convection heating as additional features.	*Energy*
Mid stone	a layer of stone separating two coal seams, often so thin that the two seams could be classed as one.	*Mining*
Middle Atlantic	New Jersey, New York, and Pennsylvania;	*Energy*
Middle distillates	A general classification of refined petroleum products that includes distillate fuel oil and kerosene.	*Energy*
Middle Management	a term used to describe a group of company officers whose position is between top management and the front line supervisors.	*Industrial Relations*
Middle sets	props set down the middle of a roadway for additional support. Also called 'catch props'.	*Mining*
Middles	In a compound seam of coal or ironstone consisting of three separate portions, the middle layer is usually termed the 'middles'.	*Mining*
Middlings	In coal preparation, this material called mid-coal is neither clean nor refuse; due to their intermediate specific gravity, middlings sink only partway in the washing vessels and are removed by auxiliary means.	*Energy*
Middorsal	In the middle of the upper side or dorsum.[1]	*Forestry*
Midgies	an open-flame lamp used in restricted areas of the mine. (N. East).	*Mining*
Midgrade gasoline	Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 88 and less than or equal to 90. Note: Octane requirements may vary by altitude.	*Energy*
Mid-size passenger car	A passenger car with between 110 and 119 cubic feet of interior passenger and luggage volume.	*Energy*
Midwest	Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.	*Energy*
Midwest Region	Consists of the Illinois and Michigan Coal Basins. The following comprise the Midwest Region: Illinois, Indiana, Michigan, and western Kentucky.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Migmatite	Rock consisting of thin, alternating layers of granite and schist.	*Mining*
Migration	When manufacturers produce new products they usually provide a migration path whereby their existing clients can upgrade their systems without total replacement. Rival manufacturers also provide migration paths away from the systems of others' in order to gain market share.	*Control Engineering*
Migration	The loss of plasticizer from a plastic, usually due to heat or aging. It is undesirable since it will make the plastic hard and brittle. It is also called leaching.	*Electrical*
Migration, Contact Material	A net transfer of material from one contact to the mating contact as a result of switching an electrical load. It usually takes the form of a needle, cone or mound or one contact face and a corresponding pit in the surface of the mating contact.	*Electrical Engineering*
Migratory Worker	the term is used almost exclusively to describe an individual processing work who moves or "migrates" with the job opportunities available to him.	*Industrial Relations*
Mil	One thousandth of an inch (0.001").	*General Engineering*
Mil	Unit of measure equal to 1/1000 of an inch.	*Electrical*
Miles per gallon (MPG)	A measure of vehicle fuel efficiency. Miles per gallon or MPG represents "Fleet Miles per Gallon. "For each subgroup or "table cell," MPG is computed as the ratio of the total number of miles traveled by all vehicles in the subgroup to the total number of gallons consumed. MPGs are assigned to each vehicle using the EPA certification files and adjusted for on-road driving.	*Energy*
MIL-HDBK	States Military Handbook	*Plant Engineering*
Military	Kerosene-type jet fuel intended for use in military aircraft.	*Energy*
Military Leave	a provision incorporated into a collective bargaining agreement or statement of company personnel policy protecting an employee's seniority and other rights while in military service and providing for his reinstatement upon his return from the service.	*Industral Relations*
Military use	Includes sales to the Armed Forces, including volumes sold to the Defense Fuel Supply Center (DFSC) for use by all branches of the Department of Defense (DOD).	*Energy*
Milk Stone	Calcium deposits on dairy or ice cream equipment.	*Chemistry*
Milk Wagon Drivers' Case	a case involving the milk wagon drivers and the Meadow-Moor Dairies, Inc. of Illinois.	*Industrial Relations*
Milk	Consumers buy milk by the pint, quart or gallon, but farmers sell it by the pound, usually expressed in hundredweight. A gallon of milk weighs approximately 8.6 pounds.	*Agriculture*
Milking	Sometimes called IRONING, it is the progressive movement of strands along the axis of the rope, resulting from the rope's movement through a restricted passage such as a tight sheave.	*Wire Rope & Cable*
Mill	a machine used to grind grain for food	*Agriculture*
Mill capital	Cost for transportation and equipping a plant for processing ore or other feed materials.	*Energy*

Term	Definition	*Industry*
Mill certificates	Certificates, provided by the steel mill, indicating the chemical analysis and physical properties of a specific batch of steel. "Mill Certs" are usually required only for pressure containing parts and the customer's need for such "Certs" must be made known at the time an order is first placed, otherwise traceability of a vale part, back to the mill, is not possible. See "Heat Analysis."	*Mechanical*
Mill feed	Uranium ore supplied to a crusher or grinding mill in an ore-dressing process.	*Energy*
Mill heads	The average grade of ore fed into a mill.	*Mining*
Mill lacquer	organic protective coating applied to steel parts, usually pipes or tubes, to protect the parts during shipping; this material cannot be removed by the usual galvanized cleaning methods	*Materials Process*
Mill Run	A test of quality of ore after reduction.	*Mining*
Mill scale	a heavy, imbedded iron oxide layer formed during hot fabrication or heat-treatment of steels	*Materials Process*
Mill tests	All tests required by the material specification. Usually includes both the heat analysis (chemical) and the physical properties. Sometimes also impact tests.	*Mechanical*
Mill	One mill is equal to one-thousandth of a dollar.	*Energy*
Milldam	A dam built in a stream to furnish a head of water for turning a mill wheel.	*Civil Engineering*
Miller Act	a statute passed in August 1935 which applies to contracts over $2,000 for the construction, alteration, or repair of any public building or public work in the United States.	*Industrial Relations*
Miller Bravais indices	Four digit set of integers used to characterize a crystalline plane in the hexagonal system.	*Material Process*
Miller indices	Set of integrals used to characterized a crystalline plane.	*Material Process*
Miller-Bravis Indices	A set of four integers that designate crystallographic planes in hexagonal crystals.	*Metallurgy*
Milli	Thousandth	*Oil Analysis*
Milliamp	One thousandth of an amp, 10¨C3 amps, symbol mA.	*Electrical*
Millimeter	One thousandth of a meter, symbol mm.	*Electrical*
Millimeter	One thousandth of a meter, symbol mm.	*Electronic Process*
Milling	The grinding or crushing of ore, concentration, and other beneficiation, including the removal of valueless or harmful constituents and preparation for market.	*Energy*
Milling capacity	The maximum rate at which a mill is capable of treating ore or producing concentrate.	*Energy*
Milling of uranium	The processing of uranium from ore mined by conventional methods, such as underground or open-pit methods, to separate the uranium from the undesired material in the ore.	*Energy*
Milling ore	Ore that contains sufficient valuable mineral to be treated by milling process.	*Mining*
Milling ore	Ore that contains sufficient valuable mineral to be treated by milling process.	*Mining*
Million British Thermal Units	MMBtu. See Btu.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Millivolt	Unit of electromotive force. It is the difference in potential required to make a current of 1 milliampere flow through a resistance of 1 ohm; one thousandth of a volt, symbol mV.	*Electrical*
Millivolts	A measure of the voltage of an electric current, specifically, one-thousandth of a volt.	*Mining*
Millpond	A pond for supplying water to drive a mill wheel.	*Civil Engineering*
Millrace	The channel in which the current of water driving a mill wheel flows to the mill.	*Civil Engineering*
Millrace	The channel in which the current of water driving a mill wheel flows to the mill.	*Civil Engineering*
MIL-STD	States Military Standard	*Plant Engineering*
MIL-STD-721C offers	(1) The duration or probability of failure-free performance under stated conditions. If you want to be complete, add (2) The probability that an item can perform its intended function for a specified interval under stated conditions. (For non-redundant items this is equivalent to definition (1). For redundant items this is equivalent to definition of mission reliability.)	*Reliability Engineering*
Mimicking symptoms	Symptoms similar to those caused by pollutants but induced by other abiotic or biotic causal agents.[1]	*Forestry*
Mimosa	Machinery Information Management Open Systems Alliance. MIMOSA advocates open exchange of equipment condition related information between condition assessment, process control and maintenance information systems through published, consensus, conventions. This to gain greatest value by combining vital condition information from multiple sources for collective evaluation, reaching accurate determinations of current condition and projected lifetime and communicating results in a useful, understandable form. MIMOSA is committed to preserving the advantages, effectiveness and rich detail contained in specialized applications such as vibration, temperature, lubricating oil and electric motor monitoring and analysis systems within an integrated enterprise information structure. See: http://www.mimosa.org	*Maintenance*
Minable	Capable of being mined under current mining technology and environmental and legal restrictions, rules, and regulations.	*Energy*
Minable reserves	Ore reserves that are known to be extractable using a given mining plan.	*Mining*
Mine capital	Cost for exploration and development, pre-mining stripping, shaft sinking, and mine development (including in-situ leaching), as well as the mine plant and its equipment.	*Energy*
Mine car	a modern version of the old coal tubs with a capacity up to 6 tons. The mine car is usually hauled underground by a locomotive.	*Mining*
Mine count	The number of mines, or mines collocated with preparation plants or tipples, located in a particular geographic area (state or region). If a mine is mining coal across two counties within a state, or across two states, then it is counted as two operations. This is done so that EIA can separate production by state and county.	*Energy*
Mine development	The term employed to designate the operations involved in preparing a mine for ore extraction. These operations include tunneling, sinking, cross-cutting, drifting, and raising.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mine dust	The fine dust or powder of calcined ironstone which is left on the calcining ground and which cannot be used in the blast-furnace unless briquetted or otherwise solidified (N. Staffs.).	*Mining*
Mine earth	an early term used for ironstone (N. Staffs.).	*Mining*
Mine mouth electric plant	A coal burning electric-generating plant built near a coal mine.	*Mining*
mine or adit	Day hole, a drift mine or adit, especially one driven into a hillside. Also called a 'Tail end' in Yorks. Also known as a 'day drift' or a 'grove'.	*Mining*
Mine rucks	heaps of raw ironstone, (usually 200 feet by 100 feet by 6½ feet high), prepared on the surface for calcination in the open air (N. Staffs.).	*Mining*
Mine Type	See Surface Mine and Underground Mine.	*Energy*
Miner	One who is engaged in the business or occupation of extracting ore, coal, precious substances, or other natural materials from the earth's crust.	*Mining*
Miner	The larval stage of an insect which makes galleries or burrows between the upper and lower surfaces of leaf tissue.	*Forestry*
Mineral	Any of the various naturally occurring in organic substances, such as metals, salt, sand, stone, sulfur, and water, usually obtained from the earth. Note For reporting on the Financial Reporting System the term also includes organic non-renewable substances that are extracted from the earth such as coal, crude oil, and natural gas.	*Energy*
Mineral	A naturally occurring homogeneous substance having definite physical properties and chemical composition and, if formed under favorable conditions, a definite crystal form.	*Mining*
Mineral lease	An agreement wherein a mineral interest owner (lessor) conveys to another party (lessee) the rights to explore for, develop, and produce specified minerals. The lessee acquires a working interest and the lessor retains a non-operating interest in the property, referred to as the royalty interest, each in proportions agreed upon.	*Energy*
Mineral oil	Oil derived from a mineral source, such as petroleum, as opposed to oils derived from plants and animals.	*Oil Analysis*
Mineral resin	Term sometimes applied to such mineral to such mineral resin like materials as gilsonite.	*Material Process*
Mineral rights	The ownership of the minerals beneath the earth's surface with the right to remove them. Mineral rights may be conveyed separately from surface rights.	*Energy*
Mineral Seal Oil	A distillation fraction between kerosene and gas oil, widely used as a solvent oil in gas adsorption processes, as a lubricant for the rolling of metal foil, and as a base oil in many specialty formulations. Mineral seal oil takes its name – not from any sealing function – but from the fact that it originally replaced oil derived from seal blubber for use as an illuminant for signal lamps and lighthouses.	*Lubrication*
Mineral-insulated Thermocouple	A type of thermocouple cable which has an outer metal sheath and mineral (magnesium oxide) insulation inside separating a pair of thermocouple wires from themselves and from the outer sheath. This cable is usually drawn down to compact the mineral insulation and is available in diameters from 0.375 to 0.010 inches. It is ideally suited for high temperature and severe-duty applications.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mineral-insulated Thermocouple	A type of thermocouple cable which has an outer metal sheath and mineral (magnesium oxide) insulation inside separating a pair of thermocouple wires from themselves and from the outer sheath. This cable is usually drawn down to compact the mineral insulation and is available in diameters from .375 to .010 inches. It is ideally suited for high-temperature and severe-duty applications.	*Electronic Process*
Mineralization	the release of inorganic chemicals from organic matter in the process of aerobic or anaerobic decay.	*Chemical*
Mineralized Water	Water containing in excess of 6000 milligrams per liter total dissolved solids, or 500 milligrams per liter chlorides, or 500 milligrams per liter sulfates.	*Petroleum Engineering*
Mineral-matter-free basis	Mineral matter in coal is the parent material in coal from which ash is derived and which comes from minerals present in the original plant materials that formed the coal, or from extraneous sources such as sediments and precipitates from mineralized water. Mineral matter in coal cannot be analytically determined and is commonly calculated using data on ash and ash-forming constituents. Coal analyses are calculated to the mineral matter free basis by adjusting formulas used in calculations in order to deduct the weight of mineral matter from the total coal.	*Energy*
Miners' Prospecting	1880s Vein - Aggregations of mineral matter in fissures of rocks.	*Mining*
Minge or Mingy coal	coal of a tender nature or friable; or dirty coal, often fusainous.	*Mining*
Mingles	an old name for the framework that carried the pulleys of the headgear (Scot.).	*Mining*
Minimization	A method of allocation used to provide comparison groups that are closely similar for several variables. The next participant is assessed with regard to several characteristics, and assigned to the treatment group that has so far had fewer such people assigned to it. It can be done with a component of randomisation, where the chance of allocation to the group with fewer similar participants is less than one. Minimization is best performed centrally with the aid of a computer program to ensure concealment of allocation. See also: Stratified randomisation	*Quality Engineering*
Minimum Ignition Energy (MIE)	Minimum ignition energy is just sufficient to ignite the most readily ignitable dust-air mixture at atmospheric pressure and room temperature.	*Material Process*
Minimum Ignition Temperature (MIT)	The minimum ignition temperature is the lowest temperature of a hot surface at which a dust-air mixture is ignited on contact.	*Material Process*
Minimum Life	An exact term only when applied to a specific group of tested switches. It then means the lowest life figure obtained from the test of that group of switches.	*Electrical Engineering*
Minimum Plant Rate	the lowest hourly rate paid for unskilled work at a plant.	*Industrial Relations*
Minimum Pressure Accumulating Conveyor	A type of conveyor designed to minimize build-up of pressure between adjacent packages or cartons. (138-ACC - 190-ACC)	*Manufacturing*
Minimum Pressure Accumulation Conveyor	A type of conveyor designed to minimize build-up of pressure between adjacent packages or cartons.	*Equipment*
Minimum Rates	the two most frequently used minimum rates are those which apply to the job and those that apply to the plant.	*Industrial Relations*
Minimum streamflow	The lowest rate of flow of water past a given point during a specified period.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Minimum Wage	the term generally applies to the wage rate set under the Fair Labor Standards Act of 1938, although minimum wages are established not only through law, as under the Fair Labor Standards Act, but through the collective bargaining process.	*Industrial Relations*
Minimum Wage Determination	the Secretary of Labor is authorized under the Walsh-Healey Public Contracts Act to determine prevailing minimum wages in an industry on the basis of standards provided in the Act.	*Industrial Relations*
Minimum Work	generally referred to as minimum call-in pay.	*Industrial Relations*
Mining	An energy-consuming subsector of the industrial sector that consists of all facilities and equipment used to extract energy and mineral resources.	*Energy*
Mining Cable	A flame retardant cable especially constructed to withstand rough handling and exposure to moisture for underground use in the environment of a mine or tunnel, or surface use where exposed to sunlight and extremes of temperature.	*Electrical*
Mining Engineer	A person qualified by education, training, and experience in mining engineering. A trained engineer with knowledge of the science, economics, and arts of mineral location, extraction, concentration and sale, and the administrative and financial problems of practical importance in connection with the profitable conduct of mining.	*Mining*
Mining operation	One mine and/or tipple at a single physical location.	*Energy*
Minings	very soft coal. (Lancs.).	*Mining*
Minivan	Small van that first appeared with that designation in 1984. Any of the smaller vans built on an automobile-type frame. Earlier models such as the Volkswagen van are now included in this category.	*Energy*
Minnesota Plan	in 1933 during the height of the depression, most unemployment benefit plans were depleted.	*Industrial Relations*
Minor crops	The most frequent use of this term is in the context of registration of pesticides that may be used on them. Most crops grown in America are classified as minor crops for this purpose. Combined, minor crops account for more than $31 billion in annual sales. But individually, they don't generate enough sales of pesticides to make it profitable for chemical companies to do the research necessary to obtain Environmental Protection Agency registration for the application of chemicals to them. Wheat, corn, cotton, rice, soybeans and oats are the only crops classified as major.	*Agriculture*
Minor Diameter	The smallest diameter of a screw thread.	*Fastening*
Minor Disputes	disputes involving the interpretation or application of existing contract provisions.	*Industrial Relations*
Minor Scale Division	On an analog scale, the smallest indicated division of units on the scale.	*General Engineering*
Minority Business Enterprise (MBE)	Any legal entity, organized to engage in commercial transactions, that is at least 51 percent owned and controlled by one or more minority persons. Ownership interest in the firm must be real, substantial, and continuing.	*Procurement*
Minority carrier	A current carrier, either an electron or a hole, that is in the minority in a specific layer of a semiconductor material; the diffusion of minority carriers under the action of the cell junction voltage is the current in a photovoltaic device.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Minority Groups	although the term has broad and general implications in the sociological and political field, its usage here is primarily to groups which constitute less than a majority in a particular company or bargaining unit and to their rights under the collective bargaining agreement.	*Industrial Relations*
Minority Representation	in the political field this term applies to various forms of proportional representation in which efforts are made to provide representation to all points of view in roughly the proportion of the number of supporters which each group has in the community.	*Industrial Relations*
Minority Union	by definition, a union which does not enjoy exclusive bargaining or majority status.	*Industrial Relations*
Minus Sieve	The portion of a powder sample which passes through a standard sieve of specified number e.g. -140 mesh +325 mesh. (See plus sieve)	*Paint and Coatings*
MIRA	Motor Industry Research Association (UK)	*Petro-Chemical Abbreviations*
Miracle, a fossils	Miracle, a fossils.	*Mining*
MIS	Management Information System	*Control Engineering*
Miscellaneous petroleum products	Includes all finished products not classified elsewhere (e.g., petrolatum lube refining by products (aromatic extracts and tars), absorption oils, ram-jet fuel, petroleum rocket fuels, synthetic natural gas feed stocks, and specialty oils).	*Energy*
Miscellaneous reserves	A supply source having not more than 50 billion cubic feet of dedicated recoverable salable reserves and that falls within the definition of Supply Source.	*Energy*
Miscible	Mutually soluble.	*Material Process*
Misfire	The complete or partial failure of a blasting charge to explode as planned.	*Mining*
Mismatch	Misalignment of forging at flash line caused by die or cavity positioning. (Mismatch should not exceed allowable tolerances.)	*Metallurgy*
Miss the tow	to be late in getting to the shaft and missing the last man riding draw before the beginning of coal winding time. If a man arrived late at the pit he would be sent home and lose a day's work.	*Mining*
Missile	The missile is comprised of a low-pressure side and a high pressure side, and is the manifold through which the frac fluid flows to the pressurization trucks, and into the wellbore to frac the rock.	*Petroleum Drilling*
Missile Sites Commission	a tripartite commission established in 1961 by executive order of the President, headed by the Secretary of Labor.	*Industrial Relations*
Mission Profile	A time-phased description of the events and environments an item experiences from initiation to completion of a specified mission, to include the criteria or mission success or critical failures.	*Reliability Engineering*
Mission reliability	The measure of the ability of an item to perform its required function for the duration of a specified mission profile. Mission reliability defines the probability that the system will not fail to complete the mission, considering all possible redundant modes of operation.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mission Statement	"The Cochrane Collaboration is an international organization that aims to help people make well-informed decisions about health care by preparing, maintaining, and promoting the accessibility of systematic reviews of the effects of healthcare interventions. It is a not-for-profit organization, established as a company, limited by guarantee, and registered as a charity in the UK (number 1045921)."	*Quality Engineering*
Missionary	a term used in the labor relations field assigned to a "spy: whose primary work is to spread anti-union propaganda or to lay the foundation for anti-strike action.	*Industrial Relations*
Mistress	a cover for the sinkers in a wet shaft; or a cover for a sinkers lamp when working in a wet shaft. (Scots); or an oblong box with the upper half of the front opened. There was a round hole in the base for a candle. The candle could then be raised as it burned down. The mistress allowed the candle to be carried in a strong current of air. (N. East).	*Mining*
MIT	Mechanical Integrity Test	*Petroleum Drilling*
MITE(S)	Small, often minute, arthropods in the order Acarina of the class Arachnida, which includes spiders, scorpions, and related forms. Mites have four pairs of legs vs. three pairs in insects.	*Forestry*
Miter	Two or more straight sections of pipe matched and joined on a line bisecting the angle of junction so as to produce a change in direction.	*Maintenance and Repair*
Mitergate	In a canal or the like, a lock gate having two leaves so made as to close at an angle pointing upstream.	*Civil Engineering*
MITI	Ministry of International Trade and Industry (Japan)	*Petro-Chemical Abbreviations*
Mitochondria	The location in cells where respiration occurs. Mitochondria are surrounded by two membranes.	*Agriculture*
Mixed bond character	Having more than one type of atomic bonding, for example, covalent and secondary bonding in polyethylene.	*Material Process*
Mixed Dislocation	a dislocation that has both edge and screw components.	*Metallurgy*
Mixed dislocation	Dislocation with both edge and screw character.	*Material Process*
Mixed Film	A type of lubrication that features a combination of full-film and thin-film elements.	*Lubrication*
Mixed load	Shipping two or more commodities, or two or more types of packages, in one truck or railcar. In some shipping districts, a premium is charged for mixed loads.	*Agriculture*
Mixed stand	A timber stand in which less than 80 percent of the trees in the main canopy are of a single species.	*Forestry*
Mixed waste	Waste containing both radioactive and hazardous constituents.	*Energy*
Mixed Weibull Distribution	A variation of the Weibull distribution used to model data with distinct subpopulations that may represent different failure characteristics over the lifetime of a system. Each subpopulation has separate Weibull parameters calculated and the results are combined in a mixed Weibull distribution to represent all the subpopulations in one function.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
MM Million (106)	**MM:** Million (10^6).	*Energy*
MMbbl/d	One million (10^6) barrels of oil per day.	*Energy*
MMBOE	Two letter M's, from Roman numerals, refer to one million. In this case "MMBOE" refers to one million barrels of oil equivalent.	*Petroleum Drilling*
MMBtu	One million (10^6) British thermal units.	*Energy*
MMBTU or MBTU	These can both mean 1 million BTUs. (MBTU can also stand for 1000 BTUs, so context is important.) A BTU is the British Thermal Unit. It is the amount of heat needed to increase the temperature of a pint of water by one degree Fahrenheit. An MMBTU is roughly comparable to 1000 cubic feet of natural gas.	*Petroleum Drilling*
MMcf	One million (10^6) cubic feet.	*Energy*
MMCF	One million cubic feet.	*Petroleum Drilling*
mmcfd	Millions of cubic feet per day (of gas).	*Petroleum Drilling*
mmcfd	Millions of cubic feet per day (of gas).	*Petroleum Drilling*
MMgal/d	One million (10^6) gallons per day.	*Energy*
MMI	Man-Machine Interface. Also known as Human Machine Interface (HMI).	*Control Engineering*
MMmt	One million (10^6) metric tons.	*Energy*
MMst	One million (10^6) short tons.	*Energy*
MMT	methylcyclopentadienyl manganese tricarbonyl	*Petro-Chemical Abbreviations*
MO	Motor Operated - See "Power Operator"; "EMO."	*Mechanical*
MOA	memorandum of agreement	*Petro-Chemical Abbreviations*
Moat	to puddle, to make a seal using wet clay.	*Mining*
Moat or Mote	a straw filled with black powder and used as a fuse.	*Mining*
Mobby	a leather girdle and chain used by the drawer for pulling the tubs. (Staffs).	*Mining*
Mobile	On-Road Emission Factor Model (EPA-US)	*Petro-Chemical Abbreviations*
Mobile home	A housing unit built on a movable chassis and moved to the site. It may be placed on a permanent or temporary foundation and may contain one room or more. If rooms are added to the structure, it is considered a single-family housing unit. A manufactured house assembled on site is a single-family housing unit, not a mobile home.	*Energy*
Mobile substation	A substation that can be transported, usually by truck, to temporarily replace equipment at the site of a failure or in the event of planned maintenance.	*Electrical*
MOD	Ministry of Defense (UK)	*Petro-Chemical Abbreviations*
Modal analysis	The process of breaking complex structural motion into individual vibration modes. Resembles frequency domain analysis that breaks complex vibration down to component frequencies.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mode	Auto, manual, or remote. In auto mode the controller calculates the output based its calculation using the error signal (difference between setpoint and PV). In manual mode, the user sets the output. In remote, the controller is actually in auto but gets its setpoint from another controller.	*Process Control*
Model	Brass, wood, plaster, etc., form which serves as a pattern for cutting the die.	*Metallurgy*
Model	Model is a symbol which is similar phenomena which is considered. In science, models have logical and epistemiological functions.	*Material Process*
Model Agreement	a collective bargaining agreement sometimes recommended or initiated by an employer organization or an international union to serve as a standard or pattern for a geographic area or industry.	*Industrial Relations*
Model predictive control (MPC)	The online control of an industrial process (such as oil refining) that uses a virtual model of the process, which allows a computer to predict appropriate control settings.	*Electrical*
Model Work Order	A Work Order Stored In The CMMS Which Contains All The Necessary Information Required To Perform A Maintenance Task. (See Also Standard Job)	*Plant Engineering*
Modeling	Modeling is the bridge between real system and a model. Modeling method started with system, and their interrelations definition according to goal state	*Material Process*
Modem	Modulator/Demodulator. A device that transforms digital signals into audio tones for transmission over telephone lines, and does the reverse for reception.	*General Engineering*
Moderate complexity tests	A CLIA category of tests that includes about 75% of all tests performed by healthcare laboratories, including most automated analytical systems. This category has more stringent requirements than for "waived tests" or "provider performed microscopy."	*Quality*
Moderator	A material, such as ordinary water, heavy water, or graphite, used in a reactor to slow down high-velocity neutrons, thus increasing the likelihood of further fission.	*Energy*
Modification	Any Activity Carried Out On An Asset Which Increases The Capability Of That Asset To Perform Its Required Functions.	*Plant Engineering*
Modified Cash Refund Annuity	a contract which provides that an individual will receive an annual income which begins at retirement and continues for life.	*Industrial Relations*
Modified Closed Shop	any contract which requires a closed shop but exempts certain groups of employees from the union membership requirement.	*Industrial Relations*
Modified Gompertz Model	A reliability growth model that models based on variation of the Gompertz model.	*Reliability Engineering*
Modified Parabolic	A flow characteristic that lies somewhere between linear and equal percentage. It provides fine throttling at low flow capacity and an approximately linear characteristic at higher flow capacities.	*Industrial Engineering*
Modified Union Shop	any union-shop agreement which deviates from the general standard requiring that all employees become members of the union after a certain period of time following their employment.	*Industrial Relations*
Modified-atmosphere packaging	A sealed package injected with an atmospheric mix of gases that provides optimal storage for the packaged commodity. Technique is used to slow ripening.	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Modulated Light Source (MLS) Control	A photoelectric control that operates on modulated (pulsed) infrared radiation, and responds only to that frequency rather than steady light intensity. Modulated LED controls offer a high rejection of troublesome ambient light.	*Electrical Engineering*
Modulation	The process, or result of the process, whereby some characteristic of one wave is varied in accordance with some characteristic of another wave.	*Process Control*
Module	Ration of the pitch diameter to the number of teeth. Ordinarily, module is understood to mean ration of pitch diameter in millimeters to the number of teeth. The English Module is a ratio of the pitch diameter in inches to the number of teeth.	*Mechanical Engineering*
Module Manager (ModMan)	Software developed by The Cochrane Collaboration to allow Collaborative Review Groups to assemble and manage their edited Protocols and Cochrane Reviews. ModMan also contains information about the Collaborative Review Group. ModMan is used by Managing Editors to edit and update modules that are submitted, at quarterly intervals, for publication in The Cochrane Library.	*Quality Engineering*
Modules	Photovoltaic cells or an assembly of cells into panels (modules) intended for and shipped for final consumption or to another organization for resale. When exported, incomplete modules and unencapsulated cells are also included. Modules used for space applications are not included.	*Energy*
Modulus of elasticity	The proportional constant between stress and strain for material with linear elastic behavior: calculated as stress divided by strain. Modulus of elasticity can be interpreted as the slope of the stress-strain graph. It is usually denoted as E, sometimes known as Young's Modulus Y, or E-Modulus.	*Engineering Physics*
Modulus of elasticity	The quotient obtained by dividing the stress per squares inch by the elongation in 1 inch caused by this stress. Slope of the stress strain curve in the elastic region.	*Material Process*
Modulus of elasticity in bending	See Flexural modulus.	*Material Process*
Modulus of elasticity (coefficient of elasticity)	The ratio between a force per unit area (stress) which acts to deform a body and the corresponding fractional deformation (strain) produced by the stress.	*Mechanical*
Modulus of Elasticity E (static)	The initial slope of the stress vs strain curve, where Hooke's Law applies, before the elastic limit is reached. Typical values are 30,000,000 pounds/square inch for steel and about 10,000,000 for aluminum.	*Reliability Engineering*
Modulus of rigidity	See Shear modulus	*Material Process*
Modulus of rupture	See Flexural strength.	*Material Process*
MOE	Ministry of Energy (UK)	*Petro-Chemical Abbreviations*
Moggies	In Lancashire 'moggies' was the miners name for mice that infested the mines.	*Mining*
Moh's scale	A scale of hardness devised by Moh's, being a relative measure of the hardness of surface by resistance to the scratching of various minerals having increasing degrees of hardness as follows: Talc, Gypsum, Calcite, Fluorite, Opatite, Orthoclase, Quartz, Topaz, Corundum, Diamond.	*Material Process*
Mohawk Valley Formula	an elaborate plan developed by the Remington Road Corporation and its then president, James H. Rand, Jr., to combat union organizational efforts in a number of plants.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Moist (coal) basis	Moist coal contains its natural inherent or bed moisture, but does not include water adhering to the surface. Coal analyses expressed on a moist basis are performed or adjusted so as to describe the data when the coal contains only that moisture that exists in the bed in its natural state of deposition and when the coal has not lost any moisture due to drying.	*Energy*
Moisture absorption	The percentage by weight of water absorbed by a sample impressed in water. The rate of absorption depends on the relationship of weight and area.	*Material Process*
Moisture Absorption	The amount of water that an insulation or jacket, which is initially dry, will absorb under specified conditions. It is expressed as the percentage ration of the absorbed water's weight to the weight of the jacket or insulation alone.	*Electrical*
Moisture content	the amount of water lost from a soil upon drying to a constant weight, expressed as the weight per unit weight of dry soil or as the volume of water per unit bulk volume of the soil. For a fully saturated medium, moisture content equals the porosity.	*Chemical*
Moisture Vapor Transmission	The rate of permeation of water through a material at a specific temperature and relative humidity rate.	*Metallurgy*
MOL	Ministry of Labor (Japan)	*Petro-Chemical Abbreviations*
Molality	A measure of concentration expressed in mols per kilogram of solvent.	*General Engineering*
Molality	A measure of concentration expressed in mols per kilogram of solvent.	*Electronic Process*
Mold	Metal or hard substance with impressions for forming plastics articles.	*Material Process*
Mold	A woolly growth, produced by a fungus.	*Chemistry*
Mold (release) Lubricant	A compound, often of petroleum origin, for coating the interiors of molds for glass and ceramic products. The mold lubricant facilitates removal of the molded object from the mold, protects the surface of the mold, and reduces or eliminates the need for cleaning it.	*Lubrication*
Mold marks	A defect in the mold imparted to the material.	*Material Process*
Mold Shrinkage	The immediate shrinkage of a molded article when removed from a mold and cooled down to room temperature.	*Material Process*
Molding	The shaping of a plastic in a mold, by the application of pressure, and usually of heat.	*Material Process*
Molding cycle	The complete time including the heating, curing, and discharge of the mold in making a piece.	*Material Process*
Mole	A massive structure, esp. of stone, set up in the water, as for a breakwater or a pier. An anchorage or harbor protected by such a structure.	*Civil Engineering*
Mole	A massive structure, esp. of stone, set up in the water, as for a breakwater or a pier. An anchorage or harbor protected by such a structure.	*Civil Engineering*
Mole	Avogadro's number of atoms or irons in the compositional unit of a compound, for example, mole of Al2O3 contains 2 moles Al3+ ions and 3 moles of O2-ions.	*Material Process*
Molecular beam epitaxy (MBE)	A highly controlled ultrahigh-vacuum deposition process.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	Industry
Molecular diffusion	process whereby molecules of various gases tend to intermingle and eventually become uniformly dispersed.	*Chemical*
Molecular length	Length of polymeric molecule expressed in one of two ways.	*Material Process*
Molecular weight	the amount of mass in one mole of molecules of a substance as determined by summing the masses of the individual atoms which make up the molecule.	*Chemical*
Molecular Weight (MW)	The sum of the atomic weights of all atoms in a molecule.	*Metallurgy*
Molecular Weight Cutoff (MWCO)	Referred to as the molecular weight above which a certain percentage (e.g., 90 percent) of the solute in the feed solution is retained by the membrane, it is typically expressed in units called Daltons and used as a measure of the nominal pore size of ultrafiltration and nanofiltration membranes.	*Contamination Control*
Molecular Weight Distribution (MWD)	The relative amounts of polymers of different molecular weights (MW that makes up a specific polymer.	*Metallurgy*
Molecule	The smallest unit or particle into which a substance can be divided and still retain all of the chemical identity of that substance. Group of atoms joined by primary bonding, usually covalent.	*Material Process*
Molluscicide	A material that will kill molluscs.	*Chemical Engineering*
Molly Maguires	a secret ring of workers which flourished in the anthracite coal field during the 1860's and 1870's.	*Industrial Relations*
Molt	To cast off the outgrown skin or cuticle in the process of insect development; changing from one instar to the next.	*Forestry*
Moly	Molybdenum disulfide, a solid lubricant and friction reducer, colloidally dispersed in some oils and greases.	*Lubrication*
Molybdenium oxide (Mo2O3)	Black crystals. A catalyst.	*Material Process*
Molybdenum Disulfide	A black, lustrous powder (MoS2) that serves as a dry-film lubricant in certain high-temperature and high-vacuum applications. It is also used in the form of pastes to prevent scoring when assembling press-fit parts, and as an additive to impart residual lubrication properties to oils and greases. Molybdenum disulfide is often called moly or molysulfide.	*Lubrication*
Molybdenum Disulphide (Moly)	A solid lubricant that acts as a high pressure resistant film. Can be used by itself as a dry lubricant as well as in with other solid lubricants and in oils and greases. Used in threads, such lubricants act as a separating film to prevent corrosion formation on the thread surface (even under adverse temperature and environmental conditions) ensuring the release of the threaded connection. Such films can also act as friction stabilizers.	*Maintenance*
Moment	The resultant of a system of forces causing rotation without translation. A moment can be expressed as a couple	*Engineering Physics*
Moment of inertia	Moment of inertia has two distinct but related meanings: 1) it is a property of a an object relating to the magnitude of the moment required to rotate the object and overcome its inertia. 2) A property of a two dimensional cross section shape with respect to an axis, usually an axis through the centroid of the shape. Moment Release: see pin connection. Moment resisting-connection: see fixed connection.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Moment Resisting-Connection	see fixed connection.	*Metallurgy*
Momentary Short Circuit Protection	Output circuit protection designed to protect the output device from damage due to a temporary (1-3 sec.) short circuit or until an external fuse can interrupt current.	*Electrical Engineering*
MON	motor octane number	*Petro-Chemical Abbreviations*
Money Wage	same as nominal wage.	*Industrial Relations*
Monitor	An apparatus fitted with a nozzle and used to direct water under high pressure in order to remove overburden or to break down gold-bearing gravels in order to sluice them. Also known as a "giant".	*Mining*
Monitoring	Monitor Service - A field procedure whereby two valves – usually regulators – are installed in series and adjusted in such a manner that, should the primary regulator fail, the standby regulator will automatically take over at a slightly higher pressure setting.	*Mechanical*
Monitoring and Registration Committee (MaRC)	Monitoring and Registration Committee (MaRC) - The Monitoring and Registration Committee (MaRC) is a sub-group of the Cochrane Collaboration Steering Group. It is responsible for establishing and implementing processes for monitoring and registering entities, and for making recommendations to the full Steering Group about de-registration of an entity. Also called: MaRC	*Quality Engineering*
Monkey	Any of various mechanical devices, as the ram of a pile driver.	*Civil Engineering*
Monkey clip	a clip with a tongue that bites on the haulage rope. It has a screw with a pin that is used to tighten the screw onto the rope. This prevents the tubs from slipping back or running away. It was used on overhead haulage ropes in conjunction with a dog clip. The dog clip was at the front of a run and the 'monkey clip' was at the rear. (Scot.).	*Mining*
Monkeyboard	Platform several meters above the rig floor where the Derrickhand works. *	*Petroleum Drilling*
Monkeyboard	A working platform for the derrickhand in the derrick or mast.	*Petroleum Drilling*
monoaromatic	aromatic hydrocarbons containing a single benzene ring.	*Chemical*
Monobutyl diamyamine	A solvent – amine.	*Material Process*
Monochlorbenzene	A solvent halogenated compound. Monoethanol amine A solvent – amine.	*Material Process*
Monochromatic	A single wave length of radiation.	*Material Process*
Monocoque	A type of boat, aircraft, or rocket construction in which the shell carries most of the stresses.	*Civil Engineering*
Monocoque	A type of boat, aircraft, or rocket construction in which the shell carries most of the	*Civil Engineering*
Monocot	Seeds that have one cotyledon.	*Agriculture*
Monoculture	planting the same crop in a field year after year with no crop rotation	*Agriculture*
Mono-isopropanolamine	A solvent – amine.	*Material Process*
Monolithic reactor	Catalytic reactor made of one single piece of solid material. Incorporates a catalytic structure in its often porous structure.	*Chemical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Monomer	A molecule consisting of a single mer.	*Engineering Physics*
Monomer	A single molecule which can join with another monomer or molecule to form a polymer or molecular chain.	*Engineering Physics*
Monopoly	The only seller with control over market sales.	*Energy*
Monopsony	The only buyer with control over market purchases.	*Energy*
Monotomy	a state during work in which the employee's interest is low and during which he manifests listlessness and boredom.	*Industrial Relations*
Monotonic	A sequence increases monotonically if for every n, Pn + 1 is greater than or equal to Pn. Similarly, a sequence decreases monotonically if for every n, Pn + 1 is less than or equal to Pn.	*Electrical Engineering*
Monovalent	An ion with a single positive or negative charge (H+, C1-).	*General Engineering*
Montan wax	A natural wax from peat and brown coal, used as a die lubricant in admixture with plastics composition.	*Material Process*
Monte Carlo Simulation	A method of generating values from a known distribution for the purpose of experimentation. This is accomplished by generating uniform random variables and using them in an inverse reliability equation to produce failure times that would conform to the desired input distribution	*Reliability Engineering*
Montreal protocol	The Montreal Protocol on Substances that Deplete the Ozone Layer (1987). An international agreement, signed by most of the industrialized nations, to substantially reduce the use of chlorofluorocarbons (CFCs). Signed in January 1989, the original document called for a 50-percent reduction in CFC use by 1992 relative to 1986 levels. The subsequent London Agreement called for a complete elimination of CFC use by 2000. The Copenhagen Agreement, which called for a complete phase out by January 1, 1996, was implemented by the U.S. Environmental Protection Agency.	*Energy*
Moon pool	An air-filled chamber open to the water below.	*Petroleum Drilling*
Mooney-Billings Case	a famous case in the history of labor warfare which is resulted from the 1916 San Francisco Preparedness Day bombings.	*Industrial Relations*
Moonpool	An aperture in the center of a drillship or semi-submersible drilling rig, through which drilling and diving operations can be conducted.	*Petroleum Drilling*
Moonpool	An aperture in the center of a drillship or semi-submersible drilling rig, through which drilling and diving operations can be conducted.	*Petroleum Drilling*
Moore's law	During much of the history of the integrated circuit, the number of transistors produced in a single chip has roughly doubled every two years.	*Material Process*
Mooring Lines	Galvanized wire rope, usually 6x12, 6x24, or 6x37 class for holding ships to dock.	*Wire Rope & Cable*
Mopping	the burring or fuzzing of the ends of tapered props due to the strata pressure.	*Mining*
Moraine	A mound, ridge, or other distinct accumulation of unsorted, unstratified glacial drift, or till, consisting of clay, sand, gravel, and boulders intermingled; deposited chiefly by direction action of glacier ice.	*Petroleum Engineering*
Morale Survey	a procedure used by some companies, sometimes with the assistance of qualified industrial psychologists or personnel men, to determine the morale within a particular group of employees in the plant.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Morality Table	a statistical table based on actual experience of individuals of certain common characteristics such as occupational groups, sex, and so on, showing how many individuals beginning as of a certain age will be alive at each succeeding age.	*Industrial Relations*
Morbidity	Illness or harm. See also: Comorbidity	*Quality Engineering*
More Favorable Terms Agreement	these are collective bargaining agreements generally with employer associations where the union agrees that it will not sign contracts with other employers under more favorable terms.	*Industrial Relations*
Morehead v. Tipaldo	a case involving the New York Minimum Wage statute passed in 1933.	*Industrial Relations*
Morgan	A breed of horse that originated in West Springfield, Massachusetts, in 1789. The Morgan was popular with pioneers as a multi-purpose saddle, driving and light work horse. Morgans were used to pull stages and city freight wagons, once were popular harness racing horses and were prized during the Civil War as dependable cavalry mounts and artillery horses. U. S. General Philip Sheridan's famous charger, Winchester, was a Morgan.	*Agriculture*
Morpholine ethanol ethyl ether	A solvent- amine.	*Material Process*
Morphology	Pertaining to structure and form.	*Lubrication*
MORT	Operation management over a risk tree.	*Material Process*
Mortality	Death.	*Quality Engineering*
MOSAIC	A diseased condition where different portions of a leaf vary in amounts of chlorophyll, thus giving the leaf a mottled appearance; usually caused by viruses.	*Forestry*
MOSFET	Metal-oxide-silicon field effect transistor, an integrated circuit element.	*Engineering Physics*
Mosh	to crumble, to break down. Coal which was nesh or tender was liable to 'mosh down' if treated roughly during transportation, or left exposed to the weather. (Leics.).	*Mining*
Moss box	a cast iron open-topped box or ring which was set in water-logged ground when sinking a shaft using the 'Kind-Chaldron' system of sinking. The box filled with dry moss was lowered into the pit with, or suspended from the tubbing. The weight of the tubbing settled down and compressed the moss to form a perfect watertight seal. Mother of coal, a smutty, spongy, soft type of coal usually found underlying the coal on top of the seatearth. Known in Somerset as 'motheram' and in the North East as 'dant'. Mother of coal could be used for polishing tin and burnishing copper and brass.	*Mining*
Most-Favored-Customer Clause	Price protection clauses in a contract which specify that the seller will not offer a lower price to other buyers unless seller agrees to extend such lower price to buyer.	*Procurement*
Most-significant bit	In a binary number, the MSB is the most weighted bit in the number. Typically, binary numbers are written with the MSB in the left-most position; the LSB is the furthest-right bit.	*Electrical Engineering*
Most-significant bit	In a binary number, the MSB is the most weighted bit in the number. Typically, binary numbers are written with the MSB in the left-most position; the LSB is the furthest-right bit.	*Electrical Engineering*
MOT	Ministry of Transport (UK)	*Petro-Chemical Abbreviations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mother Jones	a very colorful campaigner for social justice and an active and frequent participant in numerous strikes in the United States.	*Industrial Relations*
Mother Lode	Where the gold is trapped inside veins of quartz on mountain sides. The erosion of land causes the gold to break away from this source and eventually wash down into the river.	*Mining*
Motherboard	The pc board of a computer that contains the bus lines and edge connectors to accommodate other boards in the system. In a microcomputer, the motherboard contains the microprocessor and connectors for expansion boards.	*General Engineering*
Mothergate	the continuation of the rolleyway beyond the flat into the workings. At a later time these could be converted into a rolleyway. (N. East). -see also Double unit face and Main gate.	*Mining*
Motherlode	The starting place or origin of a metal. A vein which contains the original metal "in place".	*Mining*
Motion Economy	a technique used in motion study to obtain increases in output through reduction of the number of motions required to perform and single task.	*Industrial Relations*
Motion Study	the study and observation of the movements of machinery and materials as they relate to the actual motion of the individual worker.	*Industrial Relations*
Motivation	in the positive sense, those factors and forces, whether physical, psychological, or other, which influences or encourage individuals to act, to undergo hardship, or to choose more difficult tasks which permit them to achieve their particular goals or objectives.	*Industrial Relations*
Motor	A machine which transforms electric energy into mechanical energy. Standard motors are dual voltage and operate at 1725 RPM.	*Manufacturing*
Motor	A device which converts fluid power into mechanical force and motion. It usually provides rotary mechanical motion.	*Lubrication*
Motor (hydraulic)	A device for converting fluid energy into mechanical force and motion - usually rotary motion. Basic design types include gear, vane, and piston units.	*Mechanical, Process, and Operations*
Motor Bearing	A bearing which supports the crankshaft in an internal-combustion engine. It is a support or guide by means of which a moving part is positioned with respect to the other parts of a mechanism.	*Lubrication*
Motor Carriers Act	a statute passed by Congress in 1935 which brings commercial motor vehicles operating in interstate and foreign commerce within scope of the interstate.	*Industrial Relations*
Motor gasoline (finished)	A complex mixture of relatively volatile hydrocarbons with or without small quantities of additives, blended to form a fuel suitable for use in spark-ignition engines. Motor gasoline, as defined in ASTM Specification D 4814 or Federal Specification VV-G-1690C, is characterized as having a boiling range of 122 to 158 degrees Fahrenheit at the 10 percent recovery point to 365 to 374 degrees Fahrenheit at the 90 percent recovery point. Motor Gasoline includes conventional gasoline; all types of oxygenated gasoline, including gasohol; and reformulated gasoline, but excludes aviation gasoline. Note: Volumetric data on blending components, such as oxygenates, are not counted in data on finished motor gasoline until the blending components are blended into the gasoline.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Motor gasoline blending	Mechanical mixing of motor gasoline blending components, and oxygenates when required, to produce finished motor gasoline. Finished motor gasoline may be further mixed with other motor gasoline blending components or oxygenates, resulting in increased volumes of finished motor gasoline and/or changes in the formulation of finished motor gasoline (e.g., conventional motor gasoline mixed with MTBE to produce oxygenated motor gasoline).	*Energy*
Motor gasoline blending components	Naphthas (e.g., straight-run gasoline, alkylate, reformate, benzene, toluene, xylene) used for blending or compounding into finished motor gasoline. These components include reformulated gasoline blend stock for oxygenate blending (RBOB) but exclude oxygenates (alcohols, ethers), butane, and pentanes plus. Note Oxygenates are reported as individual components and are included in the total for other hydrocarbons, hydrogens, and oxygenates.	*Energy*
Motor Oil	Oil that is used to lubricate the moving components of an internal-combustion engine.	*Lubrication*
Motor rated horsepower	Horsepower rating inscribed on name-plate of the motor driving the fan. (See Rated Horsepower.) Unit: hp.	*Facility Engineering*
Motor speed	The number of revolutions that the motor turns in a given time period (i.e. revolutions per minute, rpm).	*Energy*
Motorized Drive Roller	A hollow roller with a brushless DC motor inside.	*Equipment*
Motorized Pulley	A drive unit consisting of a motor, gears, pulley and shaft combination wherein the pulley face (rim) is the rotating member. The shaft is stationary and the gears and motor windings are within the pulley enclosure.	*Equipment*
Motorman	Responsible for maintaining all equipment on the rig to ensure smooth operation and minimal downtime.	*Petroleum Drilling*
Mottle	Desired or accidental mixture of colors or shades of a color giving more or less distinct or complicated pattern on specks, spots, or streaks of color.	*Material Process*
Mottle	Irregular, diffuse patterns of chlorotic areas interspersed with normal green leaf tissue.	*Forestry*
Motty	a pay 'check' or token. (Lancs.), (Yorks.). -see Check, Tally and Token.	*Mining*
MOU	memorandum of understanding	*Petro-Chemical Abbreviations*
MOU/MOA	Memorandums Of Understanding/Agreement	*Petroleum Drilling*
MOU/MOA	Memorandums Of Understanding/Agreement	*Petroleum Drilling*
MOU Municipally Owned Utility	MOU: Municipally Owned Utility	*Energy*
Mountain	Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming;	*Energy*
Mountain Pacific Case	a decision of the United States Supreme Court involving Local 357 of the Teamsters Union and the Los Angeles-Seattle Motor Express which set aside the NLRB Mountain Pacific Case rule of 1958 on hiring-hall agreements which do not contain the Board-prescribed safeguards.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mountaintop mining	sometimes considered a variation of contour mining, refers to the mining of a coalbed that underlies the top of a mountain. The overburden, which is the mountaintop, is completely removed so that all of the coal can be recovered. The overburden material is later replaced in the mined-out area. This method leaves large plateaus of level land.	*Energy*
Mounting (dis-)	Fixing, setting, arranging a component in its intended position. Trained maintenance personnel generally use special, professional equipment for mounting. The mounting tools are based on mechanical, hydraulic, or (induction) heating methods. Dismounting refers to removing the component from its position.	*Maintenance*
Mounting Error	The error resultant from installing the transducer, both electrical and mechanical.	*General Engineering*
Mounting kit	A mechanical bracket that attaches a positioner to an actuator. The mounting kit is a vital part of the valve assembly because the position of the positioner relative to the actuator directly affects the performance of the system.	*Mechanical*
Mounting Position	The position of a device relative to physical surroundings.	*Process Control*
Mousehole	A hole drilled under the rig floor and temporarily cased. This hole is used to hold the next joint of pipe that will be added to the drill string. *	*Petroleum Drilling*
Mousehole	Shallow bores under the rig floor, usually lined with pipe, in which joints of drill pipe are temporarily suspended for later connection to the drill string.	*Petroleum Drilling*
Mouth	the surface opening of a shaft, adit or drift.	*Mining*
Mouthing	an entrance to a seam partway down a shaft.	*Mining*
Movable Platen	The large back platen of an injection molding machine to which the back half of the mold is secured during operation. This platen is moved either by a hydraulic ram or a toggle mechanism.	*Metallurgy*
Moving Allowances	provisions in collective bargaining agreements or company policy which provide funds to permit employees to offset some or all of their costs of transportation, either to a new company site or to another facility when a particular plant is shut down.	*Industrial Relations*
MPG	See Miles Per Gallon	*Energy*
MPG shortfall	The difference between actual on-road MPG and EPA laboratory test MPG. MPG short fall is expressed as gallons per mile ratio (GPMR).	*Energy*
mph	Miles per hour	*General*
MRO	Maintenance, Repair, and Operations (MRO) products.	*Maintenance*
MRO Supplier Alliances	Formal negotiated agreements with vendor to supply additional services such as reduced prices, timely delivery, vendor stocking, quality standards, etc.	*Maintenance*
MRP	Material Requirements Planning	*Gears*
MRP II	Software-based Manufacturing Resources Planning systems that translate forecasts into master production schedules, maintain bills of material (lists of product components), create work orders for each step in the production routing, track inventory levels, coordinate materials purchases with production requirements, generate "exception" reports identifying expected material shortages or other potential production problems, record shop-floor data, collect data for financial reporting purposes, and other tasks depending on the configuration of the MRP II package.	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
MRP II	Manufacturing Resource Planning	*Gears*
MRPII	Manufacturing Resource Planning 2.	*Control Engineering*
MSA	See Metropolitan Statistical Area	*Energy*
msAD	abbreviation for azimuthal deviation; see table. (degrees)	*Petroleum Drilling*
MSAT	mobile source air toxic	*Petro-Chemical Abbreviations*
MSD (Most-Significant Digit)	The leftmost digit of the display.	*General Engineering*
MSDS	material safety data sheet	*Petro-Chemical Abbreviations*
MSHA	Mine Safety and Health Administration	*Energy*
MSHA ID number	Seven (7)-digit code assigned to a mining operation by the Mine Safety and Health Administration.	*Energy*
MSHA	Mine Safety and Health Administration; the federal agency which regulates coal mine health and safety.	*Mining*
msHD	abbreviation for horizontal deviation; see table. (feet or meters)	*Petroleum Drilling*
msID	abbreviation for inclinational deviation; see table. (degrees)	*Petroleum Drilling*
MSS	Manufacturers Standardization Society of the Valve and Fitting Industry - A technical association of valve, fitting and actuator manufacturers that writes standards and practices for the valve and fittings industry. Recommendations of this society are advisory only.	*Mechanical*
msVD	abbreviation for vertical deviation; see table. (feet or meters)	*Petroleum Drilling*
MSW	See Municipal Solid Waste	*Energy*
MT	metric ton	*Petro-Chemical Abbreviations*
MTAC	Multiple Test Acceptance Criteria	*Petro-Chemical Abbreviations*
MTBCF	See Mean Time Between Critical Failure.	*Maintenance*
MTBE	Methyl Tertiary Butyl Ether	*Energy*
MTBE (methyl tertiary butyl ether) (CH3)3COCH3	An ether intended for gasoline blending as described in **"Oxygenates."**	*Energy*
MTBF	See Mean Time Between Failures	*Plant Engineering*
MTBF	Abbreviation for Mean (or average) time between failures.	*Reliability Engineering*
MTBM	See Mean Time Between Maintenance.	*Maintenance*
MTTF	See Mean Time To Failure.	*Maintenance*
MTTP	See Mean Time To Prepare.	*Maintenance*
MTTR	See Mean Time To Repair.	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
MTU	Master Telemetry Unit	*Control Engineering*
Muck sample	A representative piece of ore that is taken from a muck pile and then assayed to determine the grade of the pile.	*Mining*
Muck	Ore or rock that has been broken by blasting.	*Mining*
Muck-Raker	a general term applied to writers and other publicists who call attention to social and economic conditions which are offensive and unsocial in order to bring about social change or legislation.	*Industrial Relations*
Mud	Slang term for drilling fluid. A "mud man" is the drilling fluids technician responsible for formulating the mud, while a "mud logger" checks mud cuttings from the drill bit for traces of rock or oil and gas that provide a picture of conditions downhole.	*Petroleum Drilling*
Mud	Liquid that is circulated through the wellbore in rotary drilling and workover operations.	*Petroleum Drilling*
Mud cap	A charge of high explosive fired in contact with the surface of a rock after being covered with a quantity of wet mud, wet earth, or sand, without any borehole being used. Also termed adobe, dobie, and sandblast (illegal in coal mining).	*Mining*
Mud Cross	Refer to 'Drilling Spool'.	*Petroleum Engineering*
Mud or drilling mud	Also referred to as drilling fluid, drilling mud is the oil- or water-based liquid compound used to lubricate and cool working drills. The specific ingredients vary according to company and drill site. As with fracking fluids, exploration and production companies are not required to publish the ingredients or their specific formulas.	*Petroleum Drilling*
Mud Pit	An open pit dug into the ground to hold drilling fluid or waste materials discarded after mud drilling treatment.	*Petroleum Drilling*
Mud Tank	An open tank generally made of steel plate through which the drilling mud is cycled to remove sand and other sediments.	*Petroleum Drilling*
Mud	A mixture of base substance and additives used to lubricate the drill bit and to counteract the natural pressure of the formation.	*Petroleum Drilling*
Muda	A Japanese term for something that is wasteful, unproductive and does not add value.	*Reliability Engineering*
Mudds	small nails used for pinning brattice cloth. (N. East).	*Mining*
Mudstone	claystone and siltstone.	*Mining*
Mueller Bridge	A high-accuracy bridge configuration used to measure three-wire RTD thermometers.	*Electrical*
Mueller Bridge	A high-accuracy bridge configuration used to measure three-wire RTD thermometers.	*Electronic Process*
Muffler	A device for reducing gas glow noise. Noise is decreased by back pressure control of gas expansion.	*Mechanical, Process, and Operations*
Muffs	Cylindrical steel sleeves used for the physical protection of lagging insulation around steam pipelines.	*Industrial*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Mule	A hybrid animal resulting from crossing a mare (female horse) and a jack (male donkey). All male mules and most female mules are sterile. Although mules aren't a breed, the American Donkey and Mule Society registers mules through one of its three books, the American Mule Registry, The American Racing Mule Registry or the Zebra/Exotic Bloodstock & Hybrid Registry. Registry helps keep track of progeny for breeding stock. Mules must be registered to compete in sanctioned mule races.	*Agriculture*
Muller v. Oregon	a decision of the Supreme Court of the United States in 1908 which upheld the Constitutionality of the Oregon Ten Hour Law as a health measure.	*Industrial Relations*
Multi-arm trial	A trial with more than two arms.	*Quality Engineering*
Multicentre trial	A trial conducted at several geographical sites. Trials are sometimes conducted among several collaborating institutions, rather than at a single institution - particularly when very large numbers of participants are needed.	*Quality Engineering*
Multi-Craft Union	a labor organization which has within its jurisdiction more than one craft or occupation.	*Industrial Relations*
Multi-Employer Units	collective bargaining units in which a single union deals with a number employer units.	*Industrial Relations*
Multigrade Oil	Engine or gear oil that meets the requirements of more than one SAE viscosity grade classification, and that can be used over a wider temperature range than a single grade oil.	*Lubrication*
Multipass or recirculation test	Filter performance tests in which the contaminated fluid is allowed to recirculate through the filter for the duration of the test. Contaminant is usually added to the test fluid during the test. The test is used to determine the Beta-Ratio (q.v.) of an element.	*Oil Analysis*
Multipath	In radio transmission, multipath refers to the simultaneous reception of two copies of the signal, that arrive via separate paths with different delays. A common example is when a signal bounces off a building or other object and is received along with the direct (unbounced) signal. In television reception, this causes "ghosting" -- one sees a faded echo on the screen horizontally displaced from the main image. Another common example is in radio (especially AM radio), where the signal bounces off the ionosphere and one receives that delayed signal along with the directly transmitted signal.	*Electrical Engineering*
Multi-Plant Bargaining	collective bargaining between an employer and a union representing workers and a union representing workers in more than one of the plants of that employer.	*Industrial Relations*
Multi-Plant Unit	a bargaining unit which includes a number of plants of a single employer.	*Industrial Relations*
Multiple comparisons	The performance of multiple analyses on the same data. Multiple statistical comparisons increase the probability of making a Type I error, i.e. attributing a difference to an intervention when chance is a reasonable explanation. See also: Sub-group analysis	*Quality Engineering*
Multiple completion well	A well equipped to produce oil and/or gas separately from more than one reservoir. Such wells contain multiple strings of tubing or other equipment that permit production from the various completions to be measured and accounted for separately. For statistical purposes, a multiple completion well is reported	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	as one well and classified as either an oil well or a gas well. If one of the several completions in a given well is an oil completion, the well is classified as an oil well. If all of the completions in a given well are gas completions, the well is classified as a gas well.	
Multiple cropping	A system of growing several crops on the same field in one year.	*Energy*
Multiple Input, Multiple Output	A Multiple Input, Multiple Output (MIMO) system has multiple antennas and multiple radios. It takes advantage of multipath effects, where a transmitted signal arrives at the receiver through a number of different paths. Each path can have a different time delay, and the result is that multiple instances of a single transmitted symbol arrive at the receiver at different times. Usually multipath is a source of interference, but MIMO systems use the fact that data will arrive at the receiver at different times through different paths to improve the quality of the data link. Example: Rather than relying on a single antenna path to receive an entire message, the message can be pieced together based on fragments received at the various antennas. This can act to either increase the data rate at a given range, or increase system range for a given data rate.	*Electrical Engineering*
Multiple Input, Multiple Output	A Multiple Input, Multiple Output (MIMO) system has multiple antennas and multiple radios. It takes advantage of multipath effects, where a transmitted signal arrives at the receiver through a number of different paths. Each path can have a different time delay, and the result is that multiple instances of a single transmitted symbol arrive at the receiver at different times. Usually multipath is a source of interference, but MIMO systems use the fact that data will arrive at the receiver at different times through different paths to improve the quality of the data link. Example - Rather than relying on a single antenna path to receive an entire message, the message can be pieced together based on fragments received at the various antennas. This can act to either increase the data rate at a given range, or increase system range for a given data rate.	*Electrical Engineering*
Multiple Management	a technique developed in the early 1930's as a means of strengthening communication between middle management and top management through the establishment of various junior boards of directors.	*Industrial Relations*
Multiple purpose project	The development of hydroelectric facilities to serve more than one function. Some of the uses include hydroelectric power, irrigation, water supply, water quality control, and/or fish and wildlife enhancement.	*Energy*
Multiple purpose reservoir	Stored water and its usage governed by advanced water resource conservation practices to achieve more than one water control objective. Some of the objectives include flood control, hydroelectric power development, irrigation, recreation usage, and wilderness protection.	*Energy*
Multiple Shift	a working arrangement or schedule which utilizes more than one shift or tour in the plant.	*Industrial Relations*
Multiple-age stand	A forest stand composed of trees of different ages and sizes.	*Forestry*
Multiple-use Management	Management of land or forest for more than one purpose.	*Forestry*
Multiplex	A technique which allows different input (or output) signals to use the same lines at different times, controlled by an external signal. Multiplexing is used to save on wiring and I/O ports.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Multiplicative model	A statistical model in which the combined effect of several factors is the product of the effects produced by each in the absence of the others. For example, if one factor multiplies risk by a% and a second factor by b%, the combined effect of the two factors is a multiplication by (a x b)%. See also: Additive model	*Quality Engineering*
Multiplied Strike	a labor dispute which involves individuals who walk out in sympathy with the individuals on strike and thereby multiply the number of individuals already engaged in striking.	*Industrial Relations*
Multiplier, Theory of	a theory of economic analysis which is designed to establish a relationship between changes in investment and changes in total production.	*Industrial Relations*
Multi-rule quality-control procedure	A control procedure that uses two or more control rules for testing control measurements and determining control status. At least one rule is chosen for its ability to detect random errors and one to detect systematic errors.	*Quality*
Multitasking	The ability of a computer to handle more than two programs at the same time.	*Control Engineering*
Multiterminal	An HVDC transmission with more than two stations, which enables either to tap off power in a station (or stations) in the middle or to feed in more power in the middle of the transmission link.	*Electrical*
Multi-Union Bargaining	collective bargaining in which the employer negotiates and bargains with more than one union.	*Industrial Relations*
Multivariate analysis	Measuring the impact of more than one variable at a time while analyzing a set of data, e.g. looking at the impact of age, sex, and occupation on a particular outcome. Performed using regression analysis.	*Quality Engineering*
Municipal Electric Utility	A power utility system owned and operated by a local jurisdiction.	*Energy*
Municipal solid waste	Residential solid waste and some nonhazardous commercial, institutional, and industrial wastes.	*Energy*
Municipal Solid Waste	A Biomass resource that can be used to produce energy by the process of incineration.	*Energy*
Municipal Utility	Also known as a municipally owned electric system) A provider of utility services owned and operated by a municipal government. A municipal utility is owned and operated by a city. In most cases, municipal utility rates are set at the city level, either by the municipal administration or by a local utility board or commission. In some limited circumstances, state-level regulations apply. Municipal utilities often have access to low-cost power from federal hydroelectric projects and can obtain low interest loans, and they are exempt from income and other taxes at the federal and state levels. These factors contribute to lower financing costs for plant and equipment. Municipal utilities serve roughly 14 percent of the nation's electric customers.	*Energy*
Municipal waste	As defined in the Energy Security Act (P.L. 96-294; 1980) as "any organic matter, including sewage, sewage sludge, and industrial or commercial waste, and mixtures of such matter and inorganic refuse from any publicly or privately operated municipal waste collection or similar disposal system, or from similar waste flows (other than such flows which constitute agricultural wastes or residues, or wood wastes or residues from wood harvesting activities or production of forest products)."	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Municipal waste to energy project or plant	A facility that produces fuel or energy from municipal solid waste.	*Energy*
Municipality	A village town, city, county, or other political subdivision of a State.	*Energy*
Municipalization	The process by which a municipal entity assumes responsibility for supplying utility service to its constituents. In supplying electricity, the municipality may generate and distribute the power or purchase wholesale power from other generators and distribute it.	*Energy*
Municipally Owned Utility (Muni)	A non-profit utility that is owned and operated by the municipality it serves.	*Energy*
Muriatic	Commercial name given to hydrochloric acid.	*Chemistry*
Murray Grey	A breed of beef cattle that originated in Australia from the cross of a Shorthorn cow and a Black Angus bull, which produced a silver-grey animal.	*Agriculture*
Mush	the crumbled, crushed or weathered fragments of shale beds (N. Staffs.).	*Mining*
Mushy coal	a soft, sooty type of coal; or when the coal is crushed. (Lancs.); or soft and friable coal and shale found near a fault. (N. East).	*Mining*
Music at Work	a phrase which describes the efforts by some employers to introduce a degree of relaxation and variety at the plant.	*Industrial Relations*
Mussel band or bed	a band containing, or chiefly composed of, mussel-like shells. The mussel bands give valuable information in the correlation of the Coal Measures, or strata. –see Cockle bed.	*Mining*
Mussels	typically brackish-water lamellibranches of the genera: Carbonicola, Anthracomya and Naiadites. – see 'Mussel band'.	*Mining*
Must be held well below the yield strength of the material	must be held well below the yield strength of the material.	*Mechanical*
Mustang	A word derived from the Spanish word 'mesteno,' which means stray or wild. Not a distinct breed of horse.	*Agriculture*
Mutual Benefit Associations	associations frequently sponsored by employers in which both employer and employees seek to set up fraternal organization to provide relief for disability, death, or sickened not protected under state laws.	*Industrial Relations*
Mutual Strike Aid	sometimes referred to as employer strike insurance. A procedure developed by a number of industries, mostly in the public service area, including the airlines, in which efforts are made to share the impact of a strike.	*Industrial Relations*
Mutual Survival	a theory developed by Dr. E. Wright Bakke which holds that in th long run industrial relations will be more highly developed when parties recognize the need to understand and respect each other's survival needs.	*Industrial Relations*
Mutualism	a social theory which advocates the organization of groups based on common ownership and effort and designed to support mutual help and brotherhood.	*Industrial Relations*
MUX	Multiplexer. A device that selects multiple inputs into an aggregate signal.	*Reliability Engineering*
MVEG	Motor Vehicle Emissions Group	*Petro-Chemical Abbreviations*

Term	Definition	Industry
MVMA	Motor Vehicle Manufacturers Association	*Petro-Chemical Abbreviations*
MW	See Megawatt	*Energy*
MWD	Measure While Drilling equipment uses "real time" sensing equipment that is placed near the drill bit in the drilling assembly. It monitors the angle and azimuth (compass direction) that the well is being drilled in. MWD technicians can take periodic surveys (usually when a connection is made) to give the directional driller information on how the well is being directed.	*Petroleum Drilling*
Mwe	See Megawatt electric	*Energy*
MWh	See Megawatt hour	*Energy*
MWP	Maximum Working Pressure or CWP (Cold Working Pressure) - The maximum working pressure (pounds per square inch) at which a valve can be operated. The maximum working pressures for various pressure classes.	*Mechanical*
MY	model year	*Petro-Chemical Abbreviations*
MY	Model year - the year of manufacture for the vehicle.	*Mechanical, Process, and Operations*
Mycelium	A mass or aggregate of hyphae; vegetative stage of fungi.	*Forestry*
Mysteries of the Craft	the ancient craft guilds were frequently known as "mysteries".	*Industrial Relations*
--N--	--N--	*Petroleum Drilling*
n	the number of periods.	*Energy*
N of 1 randomized trial	A randomized trial in an individual to determine the optimum treatment for that individual. The individual is given repeated administrations of experimental and control interventions (or of two or more experimental treatments), with the order of the treatments being randomized.	*Quality Engineering*
N*	planned well bore North (+) / South (-) Cartesian coordinate at MD*. (feet or meters)	*Petroleum Drilling*
N/C (No Connection)	A connector point for which there is no internal connection.	*General Engineering*
n-1 (n minus one)	is the operating standard to which European transmission system operators are obliged to work. It refers to a system that can maintain normal operations despite the loss of any single component. In the case of a power network, a component may be a transmission line, a generating unit of a power station, etc.	*Electrical*
N_2O	Nitrous Oxide	*Energy*
NAAQS	National Ambient Air Quality Standards	*Energy*
Nabarro-Herring Creep	a form of diffusion controlled creep. In N-H creep atoms diffuse through the lattice causing grains to elongate along the stress axis. For Nabarro-Herring creep k is related to the diffusion coefficient of atoms through the lattice, Q = Qself diffusion, m=1, and b=2. Therefore N-H creep has a weak stress dependence and a moderate grain size dependence, with the creep rate decreasing as grain size is increased.	*Metallurgy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
NACE	National Association of Corrosion Engineers.	*Industrial Engineering*
NACE MR-01 75	A standard produced by the 'National Association of Corrosion Engineers' (N.A.C.E) defining the chemistry, hardness and microstructure of Materials used to make equipment to contain or control well production and transmission line fluids that include specified levels of hydrogen sulfide.	*Petroleum Engineering*
NAFTA	North American Free Trade Agreement	*Petro-Chemical Abbreviations*
Nagar	a term used in the Bristol area for a hand drill or 'jumper'.	*Mining*
Nagative Strikes	strikes to maintain standards, wages, hours, or working conditions, where the employer is attempting to have employees give up conditions which previously that have enjoyed.	*Industrial Relations*
NAICS	The North American Industry Classification System (NAICS) is a coding system of the U.S., Mexican, and Canadian governments that identifies specific economic sectors. It replaces the U.S. Standard Industrial Classification (SIC) system. Coding for most manufacturers encompasses the 6-digit subsets of numbers 31 through 33.	*Quality*
NAICS (North American Industry Classification System)	A coding system developed jointly by the United States, Canada, and Mexico to classify businesses and industries according to the type of economic activity in which they are engaged. NAICS replaces the Standard Industrial Classification (SIC) codes.	*Energy*
Naked	Larva devoid of body hairs or setae; pupa not enclosed in a cocoon or other covering.[1]	*Forestry*
Naked lights	an unprotected light. An open oil lamp or a candle.	*Mining*
Name plate	A metal tag attached to a machine or appliance that contains information such as brand name, serial number, voltage, power ratings under specified conditions, and other manufacturer supplied data.	*Energy*
Name plate capacity	See Generator name plate capacity (installed).	*Energy*
NAMVECC	North American Motor Vehicle Emissions Control Conference	*Petro-Chemical Abbreviations*
n-Amyl acetate or banana oil CH3 COO(CH2) CH3	A colorless, fragrant liquid, solvent for nitrocellulose. Used extensively in lacquers.	*Material Process*
n-Amyl alcohols	The amyl alcohols are colorless liquid occurring in fusel oil.	*Material Process*
NAND DEVICE	A control device which has its output in the logical 0 state if and only if all the control signals assume the logical 1 state.	*Mechanical, Process, and Operations*
Nannies	natural cracks, joints or slips, in the coal measures. (Yorks.).	*Mining*
Nanofiltration	Filtration that removes both particles and small dissolved molecules and ions. Finer than ultrafiltration, not as fine as reverse osmosis.	*Contamination Control*
Nanotesla	The international unit for measuring magnetic flux density.	*Mining*
Nanovolt	Unit of measure. A billionth of a volt.	*Electrical Engineering*
Naphtha	A generic term applied to a refined or partially refined petroleum fraction with an approximate boiling range between 122 degrees and 400 degrees Fahrenheit.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Naphtha	less than 401 degrees Fahrenheit: See Petrochemical feedstocks.	*Energy*
Naphthalene (C10H8)	Colorless monoclinic crystals. A coal-tar product from which a resin can be prepared. Naphthalene may also be used as a plasticizer and as a modifier or active ingredient in various synthetic resins or rubber compositions.	*Material Process*
Naphthas	Refined or partly refined light distillates with an approximate boiling point range between 122 and 400 degrees Fahrenheit. Blended further or mixed with other materials, they make high-grade motor gasoline or jet fuel. Also, used as solvents, petrochemical feedstocks, or as raw materials for the production of town gas.	*Energy*
Naphtha-type jet fuel	A fuel in the heavy naphtha boiling range having an average gravity of 52.8 degrees API, 20% to 90% distillation temperatures of 290 degrees to 470 degrees Fahrenheit, and meeting Military Specification MIL-T-5624L (Grade JP-4). It is used primarily for military turbojet and turboprop aircraft engines because it has a lower freeze point than other aviation fuels and meets engine requirements at high altitudes and speeds. Note: Beginning with January 2004 data, naphtha-type jet fuel is included in Miscellaneous Products.	*Energy*
Naphthenes	Hydrocarbons (cycloalkanes) with the general formula CnH2n, in which the carbon atoms are arranged to form a ring.	*Petroleum Engineering*
Naphthenic	A type of petroleum fluid derived from naphthenic crude oil, containing a high proportion of closed-ring methylene groups.	*Lubrication*
Nappling	large lumps of coal left over after screening.	*Mining*
Naps	calcareous nodules occurring in the red Etruria Marl (N. Staffs.).	*Mining*
Narrow board	an excavation of the same length as a wide board, but driven two yards wide.	*Mining*
Narrow work	a stall 3yds. in width or under was classed as 'narrow work' for which an extra price per yard above the hewing rate would be paid. The system was used extensively, but not exclusively, in Yorkshire to prevent roof weight from crushing the pillars before they could be worked. A modified pillar and stall system applied to seams with a tender roof.	*Mining*
Narrows	see Head-ways.	*Mining*
NARUC	See National Association of Regulatory Utility Commissioners.	*Energy*
NAS	National Aerospace Standard	*Lubrication*
NASA	National Aeronautics and Space Administration	*Lubrication*
Nash "Golden Rule"	for many years the A. Nash Clothing Company of Cincinnati maintained a form of unionization similar to the company union.	*Industrial Relations*
NASS	National Agricultural Statistics Service, an agency of the USDA.	*Agriculture*
NATC	net additive treat cost	*Petro-Chemical Abbreviations*
Natch	a 'sneck' or joint in the tub rails; or a small 'hitch' or fault in the strata. (Scot.).	*Mining*
National Union	Generally, the organization which brings together many local unions within an industry or craft.	*Industrial Relations*
National Academy of Arbitrators	a private organization consisting of individuals actively engaged in the arbitration process or supporting the use of arbitration in the field of labor-management relations.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
National Agricultural Statistics Service, (NASS)	An agency of the USDA. In addition to the national office, NASS maintains state agricultural statistics services in cooperation with state departments of agriculture.	*Agriculture*
National and International Unions	a complete listing of all of the National and International Unions to be found.	*Industrial Relations*
National Association for Labor Legislation	this was an organization consisting of a number of European countries who is prime purpose was to hold meetings and to establish working conditions by agreements among the various countries	*Industrial Relations*
National Association of Regulatory Utility Commissioners (NARUC)	An affiliation of the public service commissioners to promote the uniform treatment of members of the railroad, public utilities, and public service commissions of the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, and the territory of the Virgin Islands.	*Energy*
National Board of Jurisdictional Awards	an organization established in 1919 by the Building Trades Department of the AFL, contractors, and architects to resolve jurisdictional disputes.	*Industrial Relations*
National Child Labor Committee	following the growth of trade unions toward the end of the 19th century and the public concern over labor by children under the age of 14, substantial public opinion was mobilized for federal and state legislation.	*Industrial Relations*
National Consumers League	an organization which was largely responsible for obtaining the first minimum wage law in the United States, in the state of Massachusetts in 1912.	*Industrial Relations*
National Defense Authorization Act	The federal law, enacted in 1994 and amended in 1995, that required the Secretary of Energy to prepare the Baseline Report.	*Energy*
National Defense Mediation Board	by executive order the President on March 19, 1941, created a National Defense Mediation Board whose prime concern was the resolution of disputes in defense industries.	*Industrial Relations*
National Emergency Provisions	refers to the language in the Railway Labor Act and the Taft-Hartley Act which established procedures to be followed when an emergency is deemed to exist under either of the statutes.	*Industrial Relations*
National Emergency Strikes	what constitutes a national emergency strike depends on the determination of the court in its application of Sections 206-210 of the Taft-Hartley Act.	*Industrial Relations*
National Erectors' Association	an organization formed in 1903 which has been considered one of the belligerent employers associations because of its campaigns in opposition to organized labor.	*Industrial Relations*
National Founders' Association	an employer organization established in the machine foundry industry whose major function was to eliminate strikes or, where they occurred, to assist the employer in dealing with them.	*Industrial Relations*
National Income	an index developed and published by the United States Department of Commerce to assist in business forecasting and budgeting.	*Industrial Relations*
National Independent Union Council	an independent labor federation.	*Industrial Relations*
National Industrial Conference Board	a private organization established in 1916 by a number of anti-union employer associations.	*Industrial Relations*
National Industrial Recovery Act	a major piece of legislation under the Roosevelt Administration, designed to establish self-government of industry through codes of fair competition.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
National Industrial Recovery Act, Section 7a	the section which gave trade unions the basis for organizing and declared the right of employees to form unions of their own choosing.	*Industrial Relations*
National Institute of Labor Education	(NILE) a private organization concerned with labor education, including off-campus programs with an emphasis on a liberal education.	*Industrial Relations*
National Labor Board	an agency established by Presidential order in August 1933 to interpret and apply Section 7a of the National Industrial Recovery Act.	*Industrial Relations*
National Labor Relations Act	this statute, also known as the Wagner-Connery Act, but generally as the Wagner Act, was passed July 5, 1935, approximately two months after the United States Supreme Court declared unconstitutional the National Industrial Recovery Act and Section 7a which protected the rights of employees to organize without employer interference.	*Industrial Relations*
National Labor Relations Board	the tribunal provided for under the Act, whose members are appointed by the President with the consent of the Senate.	*Industrial Relations*
National Labor Union	an organization formed in 1866.	*Industrial Relations*
National Labor-Management Panel	a group of 12 members appointed by the President, six from management and six from labor, with three year terms, whose function it is to advise the Director of the Federal Mediation and Conciliation Service on the voluntary adjustment of controversies affecting the general welfare of the country.	*Industrial Relations*
National Mediation Board	an independent agency in the executive branch of the government, established in June 1934, to implement the Railway Labor Act amendments which abolished the Board of Mediation, assigned those functions of to the National Mediation Board, and established the responsibilities of the National Board of Mediation.	*Industrial Relations*
National priorities list	The Environmental Protection Agency's list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The list is based primarily on the score a site receives from the Environmental Protection Agency Hazard Ranking System. The Environmental Protection Agency is required to update the National Priorities List at least once a year.	*Energy*
National Railroad Adjustment Board	the agency which, under the Railway Labor Act, has the responsibility to decide grievances arising out of interpretation or application of agreements entered into between employers and unions in so-called minor disputes.	*Industrial Relations*
National Recovery Administration	the administrative agency established under the National Industrial Recovery Act.	*Industrial Relations*
National Right to Work Committee	a national organization of individuals and groups which opposes "compulsory unionism" that is, the requirement--as under the union-shop contract--that in order to continue employment a worker must join a union.	*Industrial Relations*
National Rural Electric Cooperative Association (NRECA)	A national organization dedicated to representing the interests of cooperative electric utilities and the consumers they serve. Members come from the 46 states that have an electric distribution cooperative.	*Energy*
National Safety Council	a private cooperative association of employers established prior to WWI to promote safety procedures and the dissemination of safety information, not only in the plant, but also at home.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
National Steel Labor Relations Board	a board established by Executive Order of President Roosevelt on June 28, 1934, in order to avert a strike by the Amalgamated Association of Iron, Steel and Tin Workers (AF of L).	*Industrial Relations*
National Uranium Resource Evaluation (NURE)	A program begun by the U.S. Atomic Energy Commission (AEC) in 1974 to make a comprehensive evaluation of U.S. uranium resources and continued through 1983 by the AEC's successor agencies, the Energy Research and Development Administration (ERDA), and the Department of Energy (DOE). The NURE program included aerial radiometric and magnetic surveys, hydrogeochemical and stream sediment surveys, geologic drilling in selected areas, geophysical logging of selected bore holes, and geologic studies to identify and evaluate geologic environments favorable for uranium.	*Energy*
National Urban League	an organization started in 1918 which is interested primarily in finding solutions to problems of the Negro worker.	*Industrial Relations*
National Wage Stabilization Board	during the period of the Korean War 1950-1952, Congress provided in the Defense Production Act for the control of wages and salaries.	*Industrial Relations*
National War Labor Board	the title applies both to the agency established in 1918 during WWI and the one established in January 1942 during WWII.	*Industrial Relations*
National Women's Trade Union League	an organization developed prior to WWI, which as early as 1914 created leadership schools for women workers.	*Industrial Relations*
National Youth Administration	an agency established in June 1935 in the Works Progress Administration (WPA) and later put under the jurisdiction of the Federal Security Agency.	*Industrial Relations*
Native Americans	American Indians, Eskimos, Aleuts, and native Hawaiians.	*Procurement*
Native gas	Gas in place at the time that a reservoir was converted to use as an underground storage reservoir in contrast to injected gas volumes.	*Energy*
Native load (electric)	The end-use customers that the Load-Serving Entity is obligated to serve. NERC definition	*Energy*
Native Load Customers	The wholesale and retail customers on whose behalf the Transmission Provider, by statute, franchise, regulatory requirements, or contract, has undertaken an obligation to construct and operate the Transmission Provider's system to meet the reliable electric needs of such customers.	*Energy*
Native Load Customers	Wholesale and retail customers that the transmission provider constructs and operates a system to provide electric needs.	*Energy*
Native metal	A metal occurring in nature in pure form, uncombined with other elements.	*Mining*
Nattle, a slightly increased action of creep. -see Fissle	Nattle, a slightly increased action of creep. -see Fissle.	*Mining*
Natural	For meat and poultry products, "natural" signifies that a product contains no added colorings nor artificial ingredients and was minimally processed. "Natural does not mean organic and is not a USDA certified standard for produce.	*Agriculture*
Natural draft water-cooling tower	One in which air movement is dependent upon the difference in density between the entering air and internal air. As the heat of the water is transferred to the air passing through the tower, the warmed air tends to rise and draw in fresh air at the base of the tower. (See Hyperbolic Tower.)	*Facility Engineering*

Term	Definition	*Industry*
Natural environments	Conditions occurring in nature, not caused by any equipment; effects are observed whether an equipment is at rest or in operation.	*Reliability Engineering*
Natural frequency	The frequency of an undamped system's free vibration; also, the frequency of any of the normal modes of vibration.	*Reliability Engineering*
Natural gas	natural gas	*Energy*
Natural Gas	Gas, occurring naturally, and often found in association with crude petroleum.	*Petroleum Drilling*
Natural gas field facility	A field facility designed to process natural gas produced from more than one lease for the purpose of recovering condensate from a stream of natural gas; however, some field facilities are designed to recover propane, normal butane, pentanes plus, etc., and to control the quality of natural gas to be marketed.	*Energy*
Natural gas gross withdrawals	Full well-stream volume of produced natural gas, excluding condensate separated at the lease.	*Energy*
Natural gas hydrates	Solid, crystalline, wax-like substances composed of water, methane, and usually a small amount of other gases, with the gases being trapped in the interstices of a water-ice lattice. They form beneath permafrost and on the ocean floor under conditions of moderately high pressure and at temperatures near the freezing point of water.	*Energy*
Natural gas lease production	Gross withdrawals of natural gas minus gas production injected on the lease into producing reservoirs, vented, flared, used as fuel on the lease, and nonhydrocarbon gases removed in treating or processing operations on the lease.	*Energy*
Natural Gas Liquids	Hydrocarbons found in natural gas which may be extracted or isolated as liquefied petroleum gas and natural gasoline.	*Petroleum Drilling*
Natural Gas Liquids (NGL)	A group of hydrocarbons including ethane, propane, normal butane, isobutane, and natural gasoline. Generally include natural gas plant liquids and all liquefied refinery gases except olefins.	*Energy*
Natural gas liquids production	The volume of natural gas liquids removed from natural gas in lease separators, field facilities, gas processing plants, or cycling plants during the report year.	*Energy*
Natural gas marketed production	Gross withdrawals of natural gas from production reservoirs, less gas used for reservoir repressuring, nonhydrocarbon gases removed in treating and processing operations, and quantities vented and flared.	*Energy*
Natural gas marketer	A company that arranges purchases and sales of natural gas. Unlike pipeline companies or local distribution companies, a marketer does not own physical assets commonly used in the supply of natural gas, such as pipelines or storage fields. A marketer may be an affiliate of another company, such as a local distribution company, natural gas pipeline, or producer, but it operates independently of other segments of the company. In States with residential choice programs, marketers serve as alternative suppliers to residential users of natural gas, which is delivered by a local distribution company.	*Energy*
Natural gas plant liquids (NGPL)	Those hydrocarbons in natural gas that are separated as liquids at natural gas processing, fractionating, and cycling plants. Products obtained include ethane, liquefied petroleum gases (propane, normal butane, and isobutane), and natural gasoline. Component products may be fractionated or mixed. Lease	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	condensate and plant condensate are excluded. **Note: Some EIA publications categorize NGPL production as field production, in accordance with definitions used prior to January 2014.**	
Natural gas plant liquids (NGPL) production	The extraction of gas plant liquids constituents such as ethane, propane, normal butane, isobutane, and natural gasoline, sometimes referred to as extraction loss. Usually reported in barrels or gallons, but may be reported in cubic feet for purposes of comparison with dry natural gas volumes.	*Energy*
Natural Gas Policy Act of 1978 (NGPA)	Signed into law on November 9, 1978, the NGPA is a framework for the regulation of most facets of the natural gas industry.	*Energy*
Natural Gas Policy Act Of 1978	Enacted on November 9, 1978 and became effective December 1, 1978. The Act has been amended, and it replaced or amended the Natural Gas Act. Refer to 15USC 3301-3432.	*Petroleum Drilling*
Natural gas processing plant	Facilities designed to recover natural gas liquids from a stream of natural gas that may or may not have passed through lease separators and/or field separation facilities. These facilities control the quality of the natural gas to be marketed. Cycling plants are classified as gas processing plants.	*Energy*
Natural gas production	See Dry natural gas production.	*Energy*
Natural Gas Used for Injection	Natural gas used to pressurize crude oil reservoirs in an attempt to increase oil recovery or in instances where there is no market for the natural gas. Natural gas used for injection is sometimes referred to as repressuring.	*Energy*
Natural gas utility demand-side management (DSM) program sponsor	A DSM (demand-side management) program sponsored by a natural gas utility that suggests ways to increase the energy efficiency of buildings, to reduce energy costs, to change the usage patterns, or to promote the use of a different energy source.	*Energy*
Natural gas	Gas, occurring naturally, and often found in association with crude petroleum.	*Petroleum Drilling*
Natural gas or gas	A naturally occurring mixture of hydrocarbon and non-hydrocarbon gases in porous formations beneath the Earth's surface, often in association with petroleum. The principal constituent is methane.	*Petroleum Drilling*
Natural gas, "dry"	See Dry natural gas.	*Energy*
Natural Gas, Dry	The marketable portion of natural gas production, which is obtained by subtracting extraction losses, including natural gas liquids removed at natural gas processing plants, from total production.	*Energy*
Natural Gas, Wet	A mixture of hydrocarbon compounds and small quantities of various nonhydrocarbons existing in the gaseous phase or in solution with crude oil in porous rock formations at reservoir conditions. The principal hydrocarbons normally contained in the mixture are methane, ethane, propane, butane, and pentanes. Typical non-hydrocarbon gases that may be present in reservoir natural gas are water vapor, carbon dioxide, helium, hydrogen sulfide, and nitrogen. Under reservoir conditions, natural gas and the liquefiable portions occur either in a single gaseous phase in the reservoir or in solution with oil and are not distinguishable at the time as separate substances.	*Energy*
Natural gasoline	A commodity product commonly traded in NGL markets that comprises liquid hydrocarbons (mostly pentanes and hexanes) and generally remains liquid at ambient temperatures and atmospheric pressure. Natural gasoline is equivalent to pentanes plus.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Natural Gasoline and Isopentane	A mixture of hydrocarbons, mostly pentanes and heavier, extracted from natural gas, that meets vapor pressure, end-point, and other specifications for natural gasoline set by the Gas Processors Association. Includes isopentane which is a saturated branch-chain hydrocarbon, (C_5H_{12}), obtained by fractionation of natural gasoline or isomerization of normal pentane.	*Energy*
Natural levee	A deposit of sand or mud built up along, and sloping away from, either side of the flood. Plain of a river or stream. Also called "levee."	*Civil Engineering*
Natural Monopoly	A natural monopoly arises when there are very large "economies of scale", so that the larger the quantity that a single factory produces, the cheaper the average costs per unit get. This might occur when production requires extremely large initial capital investments to enter the market but additional output requires only very modest additional outlays beyond the fixed initial investment. Under such circumstances, the firm with the largest share of the market is in a position to price its output at a level below its competitors' costs of production and still make a profit while driving them out of the business - and the larger its market share gets, the lower its unit costs become, until a monopoly position is finally obtained. (It is often argued that local telephone service, natural gas supply, and electrical power distribution fall into this category because of the heavy initial investments in networks of telephone lines, electrical lines and gas lines that are involved.). According to economic theory, a public monopoly governed by regulation is justified when an industry exhibits natural monopoly characteristics.	*Energy*
Natural parting	a plane in layers of coal or between the coal and the floor or roof, or in the strata, where they will separate easily, also called an 'easy parting'.	*Mining*
Natural regeneration	A stand of trees grown from natural seed fall or sprouting.	*Forestry*
Natural reservoir pressure	The energy within an oil or gas reservoir that causes the oil or gas to rise (unassisted by other forces) to the earth's surface when the reservoir is penetrated by an oil or gas well. The energy may be the result of "dissolved gas drive," "gas cap drive," or "water drive." Regardless of the type of drive, the principle is the same: the energy of the gas or water, creating a natural pressure, forces the oil or gas to the well bore.	*Energy*
Natural resins	Resins produced directly by or from the products of plants or animals.	*Material Process*
Natural streamflow	The rate of flow of water past a given point of an uncontrolled stream or regulated streamflow adjusted to eliminate the effects of reservoir storage or upstream diversions at a set time interval.	*Energy*
Natural uranium	Uranium with the U-235 isotope present at a concentration of 0.711 percent (by weight), that is, uranium with its isotopic content exactly as it is found in nature.	*Energy*
Natural ventilation	Ventilation of a mine without the aid of fans or furnaces.	*Mining*
Natural work team	A team of employees, often hourly personnel, who share a common workspace and have responsibility for a particular process or process segment.	*Quality*
Naturally occurring radioactive materials	All radioactive elements found in the environment, including long-lived radioactive elements such as uranium, thorium, and potassium and any of their decay products, such as radium and radon.	*Petroleum Drilling*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Naturally-Developed Well	A well in which the screen is placed in direct contact with the aquifer materials. No filter pack is used.	*Petroleum Engineering*
Navier–Stokes equations	Equations for the momentum balances coupled to the equation of continuity for a Newtonian incompressible fluid.	*Chemical*
NBS	National Bureau of Standards.	*Electrical*
n-Butanol or Butyl alcohol $CH_3 (CH_2)_2$	n-Butanol or Butyl alcohol $CH_3 (CH_2)_2$	*Material Process*
NC	Numerical Controller	*Control Engineering*
NCAT	non-catalyst equipped vehicle	*Petro-Chemical Abbreviations*
NCDT	New Category Development Team (API/EMA)	*Petro-Chemical Abbreviations*
NCET	New Category Evaluation Team (API/EMA)	*Petro-Chemical Abbreviations*
N-channel metal-oxide semiconductor	nMOS transistor is one in which n-type dopants are used in the gate region (the "channel"). A positive voltage on the gate turns the device on.	*Electrical Engineering*
N-channel metal-oxide semiconductor	nMOS transistor is one in which n-type dopants are used in the gate region (the "channel"). A positive voltage on the gate turns the device on.	*Electrical Engineering*
NCM	National Comite Motorproeven (Netherlands)	*Petro-Chemical Abbreviations*
NCP	Non-Conformance Penalties	*Petro-Chemical Abbreviations*
NCRP	National Cooperative Research Program	*Petro-Chemical Abbreviations*
NCWM	National Conference on Weights and Measures	*Petro-Chemical Abbreviations*
NDE	Non-Destructive Examination. A collective term used to describe non-intrusive examination techniques such as radiographic and ultrasonic examination.	*Industrial Engineering*
NDE	Non-Destructive Examination - See "Non-Destructive Tests."	*Mechanical*
NDOCP	non-dispersant olefin copolymer	*Petro-Chemical Abbreviations*
NDT	See Non-Destructive Testing	*Plant Engineering*
NDTC	net delivered treat cost	*Petro-Chemical Abbreviations*
Near-month contract for energy futures	The near-month contract, a term used in energy futures and options trading and other transactions, is the active contract with the shortest time to maturity. It is the contract that will expire first (often, but not always, within the next month). The near month is also called the prompt month, the front month, the lead month, and the first nearby.	*Energy*
Near-net-shape processing	Material processing with the goal of minimizing any final shaping operation.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
NEB	National Environmental Board (Thailand)	*Petro-Chemical Abbreviations*
Neb, break (N. East)	Neb, break (N. East).	*Mining*
NEC	National Electric Codes.	*Electrical*
Neck-In	In extrusion coating, the difference between the width of the extrusion die opening and the width of the coating on the substrate.	*Metallurgy*
Necking	The localizing reduction in cross-section which may occur in a material when deformed. (ASTM D-883-65T). This phenomenon can occur in extrusion under certain conditions as the extrudate leaves the die, but the term most often refers to the cold drawing of fibers at temperatures below their melting points. Fibers of crystalline and some crystalline thermopolastics, e.g. polyethylene, exhibit necking at a critical stress near the yield point.	*Metallurgy*
NEDO	New Energy and Technology Development Organization (Japan)	*Petro-Chemical Abbreviations*
Needle	to set one end of a wooden bar into the coal face as a temporary support.	*Mining*
Needle Bearing	A rolling type of bearing containing rolling elements that are relatively long compared to their diameter.	*Lubrication*
Needle Blow	A specific blow molding technique where the blowing air is injected into the hollow article through a sharpened hollow needle which pierces the parison.	*Metallurgy*
Needle coal	see Lignite.	*Mining*
Needle valve	A type of small valve, used for flow metering, having a tapered needle-point plug or closure element and a seat having a small orifice. See illustration page 49.	*Mechanical*
Needs Test	a determination, by welfare officials, that a person or family does not have adequate private resources to meet his needs or the needs of his family.	*Industrial Relations*
NEFI	New England Fuel Institute	*Petro-Chemical Abbreviations*
Negative charge carrier	Charge carrier with a negative electrical charge.	*Material Process*
Negative association	See Association	*Quality Engineering*
Negative Crowned Pulley	A pulley with raised areas set equally in from each end. This crown is used on tail pulleys 24 in. OAW and wider and aids in belt tracking.	*Manufacturing*
Negative predictive value	[In screening/diagnostic tests:] A measure of the usefulness of a screening/diagnostic test. It is the proportion of those with a negative test result who do not have the disease, and can be interpreted as the probability that a negative test result is correct. It is calculated as follows: NPV = Number with a negative test who do not have disease/Number with a negative test.	*Quality Engineering*
Negative study	A term often used to refer to a study with results that either do not indicate a beneficial effect of treatment or that have not reached statistical significance. The term can generate confusion because it can refer to either statistical significance or the direction of effect. Studies often have multiple outcomes, the criteria for classifying studies as 'negative' are not always clear and, in the case of studies of risk or undesirable effects, 'negative' studies are ones that do not show a harmful effect.	*Quality Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Negative Temperature Coefficient	A decrease in resistance with an increase in temperature.	*General Engineering*
Negotiating Ranges	the negotiating range is the minimum and maximum set by the bargainers and within which the bargaining takes place.	*Industrial Relations*
Negotiation	the process whereby the representatives of employees and the employer meet for the purpose of reaching agreement on wages, hours and conditions of employment for those in the appropriate bargaining unit, and methods for administering the agreement.	*Industrial Relations*
Negotiator	a person who has the responsibility to represent an employer or union in reaching a collective bargaining agreement.	*Industrial Relations*
"Neither" Vote	the National Labor Relations Act establishes procedures for workers to determine the organization they want to represent them. In order to provide an opportunity for the employee to indicate opposition to any organization where two organizations are listed, provision is made for a "neither" vote where the employee may reject both of the organizations.	*Industrial Relations*
NEMA	National Electrical Manufacturers Association	*Oil Analysis*
NEMA	National Electrical Manufacturers Association - An association which has set up guidelines for the manufacture of electrical equipment. Generally applicable to specifications for switches, etc., for electric operators.	*Mechanical*
NEMA Ratings	National Electrical Manufacturers Association ratings of an enclosure's ability to provide a degree of protection against contact with equipment and against specified environmental conditions.	*Electrical Engineering*
NEMA Standards	Property values adopted as standard by the National Electrical Manufacturers Association.	*Electrical*
NEMA-12	A standard from the National Electrical Manufacturers Association, which defines enclosures with protection against dirt, dust, splashes by non-corrosive liquids, and salt spray.	*Electrical*
NEMA-4	A standard from the National Electrical Manufacturers Association, which defines enclosures intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water, and hose-directed water.	*Electrical*
NEMA-7	A standard from the National Electrical Manufacturers Association, which defines explosion-proof enclosures for use in locations classified as Class I, Groups A, B, C or D, as specified in the National Electrical Code.	*Electrical*
NEMA-Size Case	An older US case standard for panel meters, which requires a panel cutout of 3.93 x 1.69 inches.	*Electronic Process*
Neoprene	A trade name for a rubber substitute prepared from chloroprene.	*Material Process*
Neoprene	Trade name for polychloroprene, used for jacketing (See Polychloroprene).	*Electrical*
Nepotism	an employment practice whereby relatives are hired in preference to other job applicants and receive special favors because of their familial connections.	*Industrial Relations*
NERC	See North American Electric Reliability Corporation.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nernst Equation	A mathematical description of electrode behavior: E is the total potential, in millivolts, developed between the sensing and reference electrodes; Ex varies with the choice of electrodes, temperature, and pressure: 2.3RT/nF is the Nernst factor (R and F are constants, n is the charge on the ion, including sign, T is the temperature in degrees Kelvin), and ai is the activity of the ion to which the electrode is responding.	*General*
Nernst Equation	A mathematical description of electrode behavior - E is the total potential, in millivolts, developed between the sensing and reference electrodes; Ex varies with the choice of electrodes, temperature, and pressure - 2.3RT/nF is the Nernst factor (R and F are constants, n is the charge on the ion, including sign, T is the temperature in degrees Kelvin), and ai is the activity of the ion to which the electrode is responding.	*Electronic Process*
Nernst Factor (S, Slope)	The term 2.3RT/nF is the Nernst equation, which is equal (at T = 25°C) to 59.16 mV when n = 1 and 29.58 mV when n - 2, and which includes the sign of the charge on the ion in the term n. The Nerst factor varies with temperature.	*Electronic Process*
Nernst-Planck equation	Equation that describes the flux of an ion through diffusion, convection, and migration in an electric field. The equation is valid for diluted electrolytes.	*Chemical*
Nerve	Tendency of a distorted sample of rubber or elastomer to return to its original shape when the distorting force is removed.	*Material Process*
NESCAUM	Northeast States for Coordinated Air Use Management	*Petro-Chemical Abbreviations*
Nesh, very fragile (N. Staffs.)	Nesh, very fragile (N. Staffs.).	*Mining*
Nest plate	Retainer plate with a depressed area for cavity blocks used in injection molding.	*Material Process*
Net	Gross acreage adjusted to reflect the percentage of ownership in the working interest in the acreage.	*Energy*
Net actual interchange (electric)	The algebraic sum of all metered interchange over all interconnections between two physically Adjacent Balancing Authority Areas. NERC definition	*Energy*
Net Additive Treating Cost (NATC)	The cost of additive in one unit of finished product including base fluid credit, but not shipping costs.	*Lubrication*
Net calorific value	The net calorific value indicates the amount of heat that is released when the fuel is burned without taking into account the heat that is released as water vapor together with the flue gases.	*Thermal Management*
Net Capability	Maximum load carrying ability of the equipment, excluding station use.	*Energy*
Net cell shipments	Represents the difference between cell shipments and cell purchases.	*Energy*
Net Delivered Treating Cost (NDTC)	The cost of additive in one unit of finished product including base fluid credit and shipping costs.	*Lubrication*
Net Earnings	in determining back pay awards to employees discriminatorily discharged, the NLRB seeks to make the employees “whole”.	*Industrial Relations*
Net effective volume	That portion of the total structural volume with in which the circulating water is in intimate contact with the air flow through the tower. Unit: ft.3.	*Facility Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Net electricity consumption	Consumption of electricity computed as generation, plus imports, minus exports, minus transmission and distribution losses.	*Energy*
Net energy for load	Net generation of main generating units that are system-owned or system-operated, plus energy receipts minus energy deliveries.	*Energy*
Net energy for load (electric)	Net Balancing Authority Area generation, plus energy received from other Balancing Authority Areas, less energy delivered to Balancing Authority Areas through interchange. It includes Balancing Authority Area losses but excludes energy required for storage at energy storage facilities. NERC definition	*Energy*
Net energy for system	The sum of energy an electric utility needs to satisfy their service areas, including full and partial requirements consumers.	*Energy*
Net Generation	Gross generation minus plant use.	*Energy*
Net head	The gross head minus all hydraulic losses except those chargeable to the turbine.	*Energy*
Net income	Operating income plus other income and extraordinary income less operating expenses, taxes, interest charges, other deductions, and extraordinary deductions.	*Energy*
Net interstate flow of electricity	The difference between the sum of electricity sales and losses within a state and the total amount of electricity generated within that state. A positive number indicates that more electricity (including associated losses) came into the state than went out of the state during the year; conversely, a negative number indicates that more electricity (including associated losses) went out of the state than came into the state.	*Energy*
Net Lift	The net vertical distance through which material is moved against gravity by a conveyor.	*Manufacturing*
Net module shipments	Represents the difference between module shipments and module purchases. When exported, incomplete modules and unencapsulated cells are also included.	*Energy*
Net operable capacity	Total owned capacity less in operable capacity.	*Energy*
Net photovoltaic module shipment	The difference between photovoltaic module shipments and photovoltaic module purchases.	*Energy*
Net profit interest	A portion of the profit remaining after all charges, including taxes and bookkeeping charges, such as depreciation, have been deducted.	*Mining*
Net profits interest	A contractual arrangement under which the beneficiary, in exchange for consideration paid, receives a stated percentage of the net profits. That type of arrangement is considered a nonoperating interest, as distinguished from a working interest, because it does not involve the rights and obligations of operating a mineral property (costs of exploration, development, and operation). The net profits interest does not bear any part of net losses.	*Energy*
Net Receipts	The difference between total movements into and total movements out of each PAD District by pipeline, tanker, and barge.	*Energy*
Net smelter return	A share of the net revenues generated from the sale of metal produced by a mine.	*Mining*
Net Spendable Average Weekly Earnings	a special statistical series developed by the Bureau of Labor Statistics, U.S. Department of Labor, which shows the gross average weekly earnings for workers with a fixed number of dependents, less Social Security, and federal income taxes.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Net summer capacity	The maximum output, commonly expressed in megawatts (MW), that generating equipment can supply to system load, as demonstrated by a multi-hour test, at the time of summer peak demand (period of June 1 through September 30). This output reflects a reduction in capacity due to electricity use for station service or auxiliaries.	*Energy*
Net winter capacity	The maximum output, commonly expressed in megawatts (MW), that generating equipment can supply to system load, as demonstrated by a multi-hour test, at the time of peak winter demand (period of December 1 through February 28). This output reflects a reduction in capacity due to electricity use for station service or auxiliaries.	*Energy*
Net working interest	The reporting company's working interest is not including any basic royalty or overriding royalty interests.	*Energy*
Net worth	The difference between total assets and total liabilities.	*Mining*
Netback purchase	Refers to a crude oil purchase agreement wherein the price paid for the crude is determined by sales prices of the types of products that are derivable from that crude as well as other considerations (e.g., transportation and processing costs). Typically, the price is calculated based on product prices extant on or near the cargo's date of importation.	*Energy*
Nether coal	the lower sections of a thick coal seam. (Mids.).	*Mining*
Nether roof	the roof strata for a short distance above any underground excavation.	*Mining*
Net-shape-processing	Material processing that does not require a subsequent shaping operation.	*Material Process*
Network	A system of transmission and distribution lines cross-connected and operated to permit multiple power supply to any principal point on it. A network is usually installed in urban areas. It makes it possible to restore power quickly to customers by switching them to another circuit.	*Energy*
Network control	Network control systems monitor and control the electricity network to keep power flowing and to preserve the balance between power generation and consumption.	*Electrical*
Network copolymer	Alloylike combinations of polymers with an overall network, rather than linear, structure.	*Material Process*
Network Customers	Customers receiving service under the terms of the Transmission Provider's Network Integration Tariff.	*Energy*
Network former	Oxides that form oxide polyhedra, leading to network structure formation in a glass.	*Material Process*
Network Integration Transmission Service	A service that allows the customer to integrate, plan, dispatch, and regulate its Network Resources.	*Energy*
Network Load	Designated load of a transmission customer.	*Energy*
Network management	A system that uses network control and asset management to oversee all aspects (operational and maintenance) of a network.	*Electrical*
Network modifier	Oxides that do not form oxide polyhedra and, therefore, break up the network structure in a glass.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Network molecular structure	Polymeric structure associated with a polyfunctional mer.	*Material Process*
Network Polymer	A polymer composed of trifunctional mer units that form three-dimensional molecules.	*Engineering Physics*
Networks	See Field	*Quality Engineering*
Neural Network	A neural network is a computer network designed to function in a similar way to natural neural structures such as a human brain.	*Control Engineering*
Neutral axis	An imaginary line in the cross section of a beam, shaft, or the like, along which no stresses occur.	*Civil Engineering*
Neutral Cleaner	Non-alkaline, non-acid cleaner. The pH of mild neutral cleaners may be as high as 10 and not contain harsh alkalis.	*Chemistry*
Neutral Oil	The basis of most commonly used automotive and diesel lubricants, they are light overhead cuts from vacuum distillation.	*Lubrication*
Neutralization Number	A measure of the acidity or alkalinity of an oil. The number is the mass in milligrams of the amount of acid (HCl) or base (KOH) required to neutralize one gram of oil.	*Lubrication*
Neutralizer	Chemical to change the pH of a surface so that residues will not interfere with floor coating adhesion.	*Chemistry*
Neutron	Subatomic particle without a net charge and located in the atomic nucleus.	*Material Process*
New Deal	a phrase generally applied to the first and second administrations of Franklin D. Roosevelt with their broad legislative programs and the provision for the rights of employees to bargain collectively.	*Industrial Relations*
New England	Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont;	*Energy*
New England Power Exchange (NEPEX)	This is the operating arm of the New England Power Pool.	*Energy*
New England Power Pool (NEPOOL)	A regional consortium of 98 utilities who coordinate, monitor and direct the operations of major generation and transmission facilities in New England.	*Energy*
New Escape Period	provisions incorporated into awards issued by the National War Labor Board to provide the opportunity for employees covered under maintenance-of-membership agreements to have a period following contract expiration during which they could withdraw from membership.	*Industrial Relations*
New field	A field discovered during the report year.	*Energy*
New field discoveries	The volumes of proved reserves of crude oil, natural gas, and/or natural gas liquids discovered in new fields during the report year.	*Energy*
New Harmony	a colony founded by the wealthy English manufacturer Robert Owen, about 1825 at New Harmony, Indiana, where he attempted to carry out his plan for a cooperative industrial society.	*Industrial Relations*
New Lanark	a textile town located above Glasgow, Scotland where Robert Owen established his cotton mills.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
New Negro Alliance v. Sanitaty Grocery Company	a case decided by the United States Supreme Court March 28, 1938, which related to the definition of the term "labor dispute" under the Norris-LaGuardia Act.	*Industrial Relations*
New reservoir	A reservoir discovered during the report year.	*Energy*
New Unionism	a term variously used but generally applied to efforts by labor for more cooperative working relationship with management and development of such programs as worker education, labor housing, insurance plans, etc., rather than constant emphasis on the building up of militant and political aims of trade unions.	*Industrial Relations*
New York Central Railway Co. v. White	a major decision of the U.S. Supreme Court in 1917 which upheld the constitutionality of the New York Compulsory Workmen's Compensation law which provided compensation for disability or death of an employee resulting from an accidental personal injury.	*Industrial Relations*
New York Transit Labor Board	a board established by Mayor Robert F. Wagner in 1961.	*Industrial Relations*
Newlands Act	a statute passed by Congress July 15, 1913, after the repeal of the Erdman Act.	*Industrial Relations*
NEWT	The standard unit of kinematic viscosity in the English system. It is expressed in square inches per second.	*Mechanical, Process, and Operations*
NEWTON	A unit of force based on the unit of mass, Kg (kilogram) multiplied by the acceleration, M/S2 (meters per second) which produces KGM/S2, called the Newton.	*Mechanical, Process, and Operations*
Newtonian Liquid	A liquid is called Newtonian if its viscosity is unaffected by the kind and magnitude of motion or agitation to which it may be subjected, as long as the temperature remains constant. Water and mineral oil are examples of Newtonian liquids.	*Maintenance and Repair*
Newtonian Behavior	A lubricant exhibits Newtonian behavior if its shear rate is directly proportional to the shear stress. This constant proportion is the viscosity of the liquid.	*Lubrication*
Newtonian flow	Flow characterized by a constant viscosity or a viscosity that is independent of the shear rate in the fluid.	*Chemical*
Newtonian Flow	A flow characteristic evidenced by viscosity that is independent of shear rate, that is the rate of shear is directly proportional to the shearing stress. Water and thin mineral oils are examples of Newtonian fluids.	*Engineering Physics*
Newtonian Fluid	A fluid with a constant viscosity at a given temperature regardless of the rate of shear. Single-grade oils are Newtonian fluids. Multigrade oils are NON-Newtonian fluids because viscosity varies with shear rate.	*Lubrication*
NEWTON-METER	A unit of torque. NIPPLE - A short length of pipe or tube.	*Mechanical, Process, and Operations*
NFPA	National Fluid Power Association	*Oil Analysis*
NGL	See Natural gas liquids.	*Energy*
NGL	An abbreviation for Natural Gas Liquids. These include components of natural gas such as ethane, propane, butane and ethane which can be liquefied at low temperature and which are typically more valuable than methane when sold to refineries.	*Petroleum Drilling*

Please see the Appendix for further illustration

Term	Definition	*Industry*
NGLs	Natural gas liquids. Liquid hydrocarbons found in association with natural gas.	*Petroleum Drilling*
NGPA	See Natural Gas Policy Act of 1978.	*Energy*
NGPA	SEE: Natural Gas Policy Act of 1978.	*Petroleum Drilling*
NGPL	Natural Gas Plant Liquids	*Energy*
NGV	Natural Gas Vehicle	*Energy*
NGVA	Natural Gas Vehicle Association	*Petro-Chemical Abbreviations*
NHPP	NHPP stands for non-homogeneous Poisson process, which is a simple parametric model used to represent events with a non-constant failure recurrence rate. This type of model is often used to model reliability growth and the reliability of repairable units.	*Reliability Engineering*
NHSEED	A database within The Cochrane Library, the NHS Economic Evaluation Database containing structured abstracts of articles describing the economic evaluation of healthcare interventions. Compiled by the NHS Centre for Reviews and Dissemination.	*Quality Engineering*
NHTSA	National Highway Traffic Safety Administration	*Petro-Chemical Abbreviations*
NHTSA	National Highway Traffic Safety Administration - controls matters relating to safety on North American highways. Also responsible for regulation of CAFE (fuel economy) standards.	*Mechanical, Process, and Operations*
Nibble	One half of a byte.	*General Engineering*
Nibbling	a term used infrequently applied to the practice of some employers who, when they shifted to incentive pay and found that employees were earning 50 percent or more over their hourly rates, sought to remove some of this increase reducing piece rates.	*Industrial Relations*
Niche ring	winding drum for flat wire ropes.	*Mining*
Nick, Nicking	to cut the coal vertically from floor to roof next to the side of the place; or to undercut the seam similar to kirving, preparatory to taking down the 'jud'. (N. East). Also known as 'slotting'. In Scotland it was called 'shearing'.	*Mining*
Nicked Threads	Nicks or indentations in threads can occur during the manufacturing process and during fastener transportation. In general, nicked thread problems tend to increase as the thread diameter increases and for fine pitches. There are acceptance tests for nicked threads that involve measuring the maximum torque required to drive a GO gauge down the thread. Examples of acceptance tests are SAE J123 and the Ford Motor specification WA990 1993. Nicks and indentations in threads are sometimes referred to as gouges.	*Maintenance*
Nickel	common element found in the galvanizing kettle to suppress the reactivity of silicon and phosphorus in the steel	*Materials Process*
Nickel alloy	Metal alloy composed of predominantly nickel.	*Material Process*
Nickel aluminum superalloy	Nonferrous alloy with exceptional high temperature strength and corrosion resistance.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nickel metal hydride	A rechargeable-battery technology.	*Electrical Engineering*
Nickel Plating	The electrolytic deposition of nickel to form a corrosion barrier or to reclaim a worn part. Can also include hard ceramic particles to from a wear resistant composite coating.	*Paint and Coatings*
Nickings	the small coal made when nicking. (N. East).	*Mining*
Nicks	notched sticks used for reckoning. (Yorks.).	*Mining*
Nicrosil/Nisil	A nickel chrome/nickel silicone thermal alloy used to measure high temperatures. Inconsistencies in thermoelectric voltages exist in these alloys with respect to the wire gage.	*General Engineering*
Nigeria (1971-present)	Nigeria (1971-present)	*Energy*
Night Shift	generally defined as either the second or the third shift which works a substantial part of all of its time after sundown.	*Industrial Relations*
Night Work	early efforts by states to provide protective legislation for women and children led to legislation forbidding night work for women in factories as far back as 1890 in the state of Massachusetts.	*Industrial Relations*
Nip	The V-shaped gap between a pair of calendar rolls where incoming material is nipped and drawn between the rolls.	*Engineering Physics*
Nip or Nip-out	when the strata come together and meet, nipping-out the coal seam. A drift would be driven forward though the 'nip-out' to find the coal on the other side. Also called a 'check-out' or 'want', or to cut grooves at the end of roof bars to make a better fit; or the effect produced upon the coal pillars by creep, a crush or squeeze.	*Mining*
Nip Point Guard	A guard placed to eliminate points or areas on the conveyor where injuries might occur.	*Manufacturing*
Nip Rolls	In film blowing, a pair of rolls situated at the top of the tower which close the blown film envelope, seal air inside of it, and regulate the rate at which the film is pulled away from the extrusion die. One roll is usually covered with a resilient material, the other being bare metal.	*Engineering Physics*
Nip	Device at the end of the trailing cable of a mining machine used for connecting the trailing cable to the trolley wire and ground.	*Mining*
Nipple	A pipe nipple is a length of straight pipe with male threads on both ends. It is a connector, or a coupling, threaded on both ends. Nipples are used to allow pipes and fittings to be inter-connected, and are used to fit straight end hose or pipe. Types of pipe nipples include Barrel, Weld, Swage, and Hexagon nipples. See also Pipe Fittings.	*Industrial*
Nipple	A short length of small size pipe, threaded on both ends. Used on end connections of screwed-end valves and in small size piping systems.	*Mechanical*
Nipple, Swage	A pipe fitting that reduces from a larger size to a smaller size. Can be threaded or weld ends. Swage 'Nipples' are male both ends. See 'Cross over' for male X female, see 'Reducing coupling' for female X female.	*Petroleum Engineering*
NIST	National Institute of Standards and Technology (US)	*Petro-Chemical Abbreviations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nitch wheels	a drum or 'pirm' that was used when a winding engine was fitted with a wood-chain (S. Staffs.),	*Mining*
Nitrates	The introduction of the nitro group, NO2 into an organic compound.	*Material Process*
Nitration	The process whereby nitrogen oxides attack petroleum fluids at high temperatures, often resulting in viscosity increase and deposit formation.	*Lubrication*
Nitric acid	A monobasic acid HNO3 used in the manufacture of dyes, celluloid. A strong mineral acid used in the preparation of cellulose nitrate and other nitrates and dyes and to a limited extent as a catalyst. Colorless, corrosive, poisonous liquid.	*Material Process*
Nitriding	The diffusion of nitrogen into alloy steel to form hard nitrides in the surface layer (typically 250μm). Performed at between 500 and 750oC from a gas, salt bath or plasma glow discharge.	*Paint and Coatings*
Nitrile Resins	Nitrile resins were first developed in the late 1960s. They are resistant to flavor, aroma, and the transmission of gas. Therefore, they are ideal for packaging.	*Material Engineering*
Nitrile Rubber	A rubbery copolymer of butadiene and acrylonitrile. It is usually compounded and vulcanized.	*Electrical*
Nitrobenzene (C6H5NO2)	Used to some extent as a homogenizing agent and in organic synthesis. It is a solvent for vinyl resins and is used in alkyl resin production.	*Material Process*
Nitrobutane	A solvent – nitro hydrocarbons.	*Material Process*
Nitrocarburising	The diffusion of nitrogen and carbon into alloy steel or mild steel to form hard nitrides in the surface layer (typically 250μ). Performed at between 500 and 750oC from a gas, salt bath or plasma glow discharge.	*Paint and Coatings*
Nitrocellulose	Any of the esters formed by the reaction of nitric acid upon cellulose.	*Material Process*
Nitroethane	A solvent-nitro hydrocarbons.	*Material Process*
Nitrogen	A gaseous chemical element, which makes up 78 percent of the earth's atmosphere, by volume. In agricultural reporting it usually refers to fertilizer. There are many various formulations and names. Anhydrous ammonia is commonly used by wheat growers and other farmers.	*Agriculture*
Nitrogen (N2)	Diatomic gas. Used as a primary and secondary gas in plasma spraying. Inert to most materials, with some exceptions like titanium.	*Paint and Coatings*
Nitrogen dioxide	A compound of nitrogen and oxygen formed by the oxidation of nitric oxide (NO) which is produced by the combustion of solid fuels.	*Energy*
Nitrogen fixation	The biological conversion of atmospheric nitrogen to a form that can be used by plants for their growth.	*Agriculture*
Nitrogen oxides (NO_x)	Compounds of nitrogen and oxygen produced by the burning of fossil fuels.	*Energy*
Nitrogen/helium test	A pressure test conducted using nitrogen or helium (inert gases) instead of air, water, or other gases to prevent any dangers of fires or explosions. Generally specified by the purchaser when buying a valve or regulator product.	*Mechanical*
Nitromethane	A solvent nitrohydrocarbons.	*Material Process*
Nitropropane	A solvent nitro hydrocarbon.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nitrous Oxide	A chemical compound made up of nitrogen and oxygen, N2O. It is a liquid that turns into a gas when injected into an engine.	*Lubrication*
Nitrous oxide (N_2O)	A colorless gas, naturally occurring in the atmosphere. Nitrous oxide has a 100-year Global Warming Potential of 310.	*Energy*
Nixonoid	A trade name for cellulose nitrate plastic.	*Material Process*
NLEV	national low-emission vehicle	*Petro-Chemical Abbreviations*
NLGI	National Lubricating Grease Institute. A trade association whose main interest is grease and grease technology. NLGI is best known for its system of rating greases by penetration.	*Lubrication*
NLGI Automotive Grease Classifications	Automotive lubricating grease quality levels established jointly by SAE, ASTM and NLGI. There are several categories in two classifications: Chassis Lubricants and Wheel bearing Lubricants. Quality or performance levels within each category are defined by ASTM tests.	*Lubrication*
NLGI Consistency Grades	Simplified system established by the National Lubricating Grease Institute (NLGI) for rating the consistency of grease.	*Lubrication*
NLGI Number	A scale for comparing the consistency (hardness) range of greases (numbers are in order of increasing consistency). Based on the ASTM D 217 worked penetration at 25°C (77°F).	*Lubrication*
NLRB Procedure	the term may apply to the procedure involving the holding of employee elections and the determination of bargaining units under the NLRB rules and regulations.	*Industrial Relations*
NMHC	non-methane hydrocarbons	*Petro-Chemical Abbreviations*
NMMA	National Marine Manufacturers Association	*Petro-Chemical Abbreviations*
NMOG	non-methane organic gases	*Petro-Chemical Abbreviations*
n-Monoamyl aniline	A solvent amine.	*Material Process*
NMR	The ability of a panel meter to filter out noise superimposed on the signal and applied across the SIG HI to SIG LO input terminals. Normally expressed in dB at 50/60 Hz.	*General*
NMR (Normal-Mode Rejection)	The ability of a panel meter to filter out noise superimposed on the signal and applied across the SIG HI to SIG LO input terminals. Normally expressed in dB at 50/60 Hz.	*Electronic Process*
NNH	See Number needed to treat to harm	*Quality Engineering*
NNT	See Number needed to treat to benefit	*Quality Engineering*
No man's land	A roughly 10 to 20 foot wide strip between the track and the spectators where only officials and media personnel with credentials may stand while the cars are on the track. Usually it's between fences and behind barriers, but it varies from track to track and at different sections of the track.	*NASCAR*

Please see the Appendix for further illustration

Term	Definition	*Industry*
No Schedule Maintenance	An Equipment Maintenance Strategy, Where No Routine Maintenance Tasks Are Performed On The Equipment. The Only Maintenance Performed On The Equipment Is Corrective Maintenance, And Then Only After The Equipment Has Suffered A Failure. Also Described As A Run-To-Failure Strategy.	*Plant Engineering*
No Scheduled Maintenance	An equipment maintenance strategy, where no routine maintenance tasks are performed on the equipment. The only maintenance performed on the equipment is corrective maintenance after the equipment has suffered a failure in the event that a fault becomes apparent (e.g. oil leak, running hot, etc.). Also related to "throwaway maintenance" and "run-to-failure" strategy.	*Maintenance*
No till	a method of growing grain when the farmer does not plow the field before planting	*Agriculture*
No. 1 diesel fuel	A light distillate fuel oil that has a distillation temperature of 550 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 975. It is used in high speed diesel engines generally operated under frequent speed and load changes, such as those in city buses and similar vehicles. See No. 1 distillate.	*Energy*
No. 1 Diesel Fuel	A light distillate fuel oil that has distillation temperatures of 550 degrees Fahrenheit at the 90-percent point and meets the specifications defined in ASTM Specification D 975. It is used in high-speed diesel engines, such as those in city buses and similar vehicles. See No. 1 Distillate.	*Energy*
No. 1 distillate	A light petroleum distillate that can be used as either a diesel fuel (see No. 1 diesel fuel) or a fuel oil (see No. 1 fuel oil).	*Energy*
No. 1 fuel oil	A light distillate fuel oil that has distillation temperatures of 400 degrees Fahrenheit at the 10-percent recovery point and 550 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 396. It is used primarily as fuel for portable outdoor stoves and portable outdoor heaters. See No. 1 Distillate.	*Energy*
No. 2 diesel fuel	A distillate fuel oil that has a distillation temperature of 640 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 975. It is used in high-speed diesel engines that are generally operated under uniform speed and load conditions, such as those in railroad locomotives, trucks, and automobiles. See No. 2 Distillate.	*Energy*
No. 2 distillate	A petroleum distillate that can be used as either a diesel fuel (see No. 2 diesel fuel) or a fuel oil (see No. 2 fuel oil).	*Energy*
No. 2 fuel oil (heating oil)	A distillate fuel oil that has distillation temperatures of 400 degrees Fahrenheit at the 10-percent recovery point and 640 degrees Fahrenheit at the 90-percent recovery point and meets the specifications defined in ASTM Specification D 396. It is used in atomizing type burners for domestic heating or for moderate capacity commercial/industrial burner units. See No. 2 Distillate.	*Energy*
No. 2 fuel oil and No. 2 diesel sold to consumers for all other end uses	Those consumers who purchase fuel oil or diesel fuel for their own use including commercial/institutional buildings (including apartment buildings), manufacturing and nonmanufacturing establishments, farms (including farm houses), motor vehicles, commercial or private boats, military, governments, electric utilities, railroads, construction, logging or any other nonresidential end-use purpose.	*Energy*

Term	Definition	*Industry*
No. 2 fuel oil sold to private homes for heating	Private household customers who purchase fuel oil for the specific purpose of heating their home, water heating, cooking, etc., excluding farm houses, farming and apartment buildings.	*Energy*
No. 4 Diesel Fuel and No. 4 Fuel Oil	See No. 4 Fuel.	*Energy*
No. 4 Fuel	A distillate fuel oil made by blending distillate fuel oil and residual fuel oil stocks. It conforms with ASTM Specification D 396 or Federal Specification VV-F-815C and is used extensively in industrial plants and in commercial burner installations that are not equipped with preheating facilities. It also includes **No. 4 diesel fuel** used for low- and medium-speed diesel engines and conforms to ASTM Specification D 975.	*Energy*
No. 4 fuel oil	A distillate fuel oil made by blending distillate fuel oil and residual fuel oil stocks. It conforms with ASTM Specification D 396 or Federal Specification VV-F-815C and is used extensively in industrial plants and in commercial burner installations that are not equipped with preheating facilities. It also includes No. 4 diesel fuel used for low- and medium-speed diesel engines and conforms to ASTM Specification D 975.	*Energy*
No. 5 Residual fuel oil	A residual fuel oil of medium viscosity, used in steam-powered vessels in government service and power plants, which is also known as "Navy Special" and is defined in Military Specification MIL-F-859E, including Amendment 2 (NATO Symbol F-770). See residual fuel oil.	*Energy*
No. 6 Residual fuel oil	Includes Bunker C fuel oil and is used for the production of electric power, space heating, vessel bunkering, and various industrial purposes. See residual fuel oil.	*Energy*
NOAA	National Oceanic and Atmospheric Administration.	*Energy*
NOAA division	One of the 345 weather divisions designated by the National Oceanic and Atmospheric Administration (NOAA) encompassing the 48 contiguous states. These divisions usually follow county borders to encompass counties with similar weather conditions. The NOAA division does not follow county borders when weather conditions vary considerably within a county; such is likely to happen when the county borders the ocean or contains high mountains. A state contains an average of seven NOAA divisions; a NOAA division contains an average of nine counties.	*Energy*
Noble	an employer lieutenant of strike operations, usually in charge of detachment of guards or sluggers.	*Industrial Relations*
Noble Metal	A metal that does not readily tend to furnish ions, and therefore does not dissolve readily, nor easily enter into such reactions as oxidation, etc. The opposite of base metal.	*Paint and Coatings*
Noble Tending	to be reduced in an electrochemical cell.	*Material Process*
Noddy	a peg board, either circular or straight, in shape used to keep a tally of the amount of puts or carriages each drawer brought out of the workings. (Som.).	*Mining*
Node	A portion of a stem at which leaf sheaths, petioles, or flowers are attached. They usually are slightly enlarged.	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nodger or Noger	a boring bar or jumper. (Derbys.).	*Mining*
Nodular Powder	Irregular particles having Knotted, rounded, or similar shapes.	*Paint and Coatings*
Nodule	Swelling of the root cortex of legumes, containing nitrogen fixing bacteria.	*Agriculture*
Nog, Holing nog or Sprag,	special wedge shaped wood or steel wedge used in undercutting or holing to support the coal after cutting, placed in the cut at regular intervals along the face (usually not greater than 6 feet). -see also Cog and Chock; the term Nog is also used for a collier's tally placed on a tub leaving the pit. (Bacup, Lancs.), or for a wooden chock used to build packs. (Derbys.).	*Mining*
Noise	May arise from vibration, cavitation or aerodynamic flow through the valve.	*Industrial Engineering*
Noise	In process instrumentation, an unwanted component of a signal or variable. Noise may be expressed in units of the output or in percent of output span.	*Electrical Engineering*
Noise Floor	The minimum discernible signal that can be detected by a receiver.	*Reliability Engineering*
Noise, Electrical	The noise results from the presence of undesirable electrical voltages or current. It causes devices to operate erratically (if the noise is on the supply line to a device), or produces false information on erratic operation if present on wires carrying signals from the output of a device to the load. Noise can be present in the supply or picked up on lines in many ways. Pick: up from noisy adjacent wires or metal parts is possible. Good wiring practice and/or additional parts can be used to diminish the effects of noise.	*Electrical Engineering*
Noise, Fluidic	RMS of random pressure variations with respect to the operating pressure defined in terms of a signal-to-noise ratio.	*Mechanical, Process, and Operations*
Noload loss	Power and energy lost by an electric system when not operating under demand.	*Energy*
No-Man's Land	a phrase used to express the lack of clearly defined jurisdiction in industrial relations between the federal and state governments.	*Industrial Relations*
Nomex	A fire- and heat-resistant material used to make driving suits, gloves, shoes, helmet liners, balaclavas and underwear. Divers wear four or five layers of Nomex, including long underwear for complete fire protection. When combined with fuel bladders that are resistant to breaking open in a crash, the risk of fire has been greatly reduced over the last 20 years. Much of this technology was developed for the military.	*NASCAR*
Nominal	A designation to prefix a suffix such as 'bore' (i.e. Nominal bore). It indicates an approximate or variable size or dimension which may require further definition, (for example by also nominating a 'schedule' (See- 'schedule').	*Petroleum Engineering*
Nominal	Name or identifying value of a measurable property by which a conductor or component or property of a conductor is identified, and to which tolerances are applied.	*Electrical*
Nominal Diameter (DN)	A dimensionless designator of pipe in metric system. It indicates standard pipe size when followed by the specific size designation number without the millimeter symbol (for example, DN 40, DN 300).	*Maintenance and Repair*
Nominal Pipe Size (NPS)	A dimensionless designator of pipe. It indicates standard pipe size when followed by the specific size designation number without an inch symbol (for example, NPS 1½, NPS 12).	*Maintenance and Repair*

Term	Definition	*Industry*
Nominal Thickness	The thickness given in the product material specification or standard to which manufacturing tolerances are applied.	*Maintenance and Repair*
Nominal Diameter	The diameter equal to the external diameter of the threads.	*Maintenance*
Nominal dollars	A measure used to express nominal price.	*Energy*
Nominal filtration rating	An arbitrary micrometer value indicated by the filter manufacturer. Due to lack of reproducibility, this rating is depreciated.	*Mechanical, Process, and Operations*
Nominal Filtration Rating	An arbitrary micrometer value indicated by a filter manufacturer. Due to lack of reproducibility this rating is deprecated.	*Lubrication*
Nominal Pipe Size	Used to describe standard sizes for pipe from 1/8 - 12 inches. The nominal size is specified on the basis of the inside diameter. Depending on the wall thickness, the inside diameter may be less thank or greater than, the number indicated.	*Petroleum Engineering*
Nominal price	The price paid for a product or service at the time of the transaction. Nominal prices are those that have not been adjusted to remove the effect of changes in the purchasing power of the dollar; they reflect buying power in the year in which the transaction occurred.	*Energy*
Nominal Sensing Distance	An approximate dimension value measured from the face of the sensor to the nearest point of the target. It does not take into consideration manufacturer's tolerance or operational variables. Also known as the operating point.	*Electrical Engineering*
Nominal tower dimensions	Width and length measured from and to column centerline or walls; height measured from basin curb to top of fan deck (counterflow design) or to top of distribution basin (crossflow design). Unit: ft.	*Facility Engineering*
Nominal Workweek	the total number of hours scheduled for a department or a plant for a one week period.	*Industrial Relations*
Non Return to Zero	A binary encoding scheme in which ones and zeroes are represented by opposite and alternating high and low voltages, and where there is no return to a zero (reference) voltage between encoded bits. That is, the stream has only two values: low and high.	*Electrical Engineering*
Non Chlorine Bleach	A laundry product containing peroxygen compounds, which release active oxygen in wash water. This type product produces gentler bleaching action than chlorine bleach.	*Chemistry*
Non-aqueous phase liquid (NAPL)	contaminants that remain as the original bulk liquid in the subsurface (see also free product).	*Chemical*
Nonassociated natural gas	Natural gas that is not in contact with significant quantities of crude oil in the reservoir. See natural gas.	*Energy*
Nonattainment area	Any area that does not meet the national primary or secondary ambient air quality standard established by the Environmental Protection Agency for designated pollutants, such as carbon monoxide and ozone.	*Energy*
Non-basic Service	Any category of service not related to basic services (generation, transmission, distribution and transition charges).	*Energy*
Non-biomass waste	Material of non-biological origin that is a byproduct or a discarded product. "Non-biomass waste" includes municipal solid waste from non-biogenic sources, such as plastics, and tire-derived fuels.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nonbranded product	Any refined petroleum product that is not a branded product.	*Energy*
Non-bypassable Wires Charge	A charge generally placed on distribution services to recover utility costs incurred as a result of restructuring (stranded costs - usually associated with generation facilities and services) and not recoverable in other ways.	*Energy*
Non-certified Vendor	sellers of processed and prepared foods allowed in limited numbers in a non-certified portion of the market.	*Agriculture*
Noncoincident demand	Sum of two or more demands on individual systems that do not occur in the same demand interval.	*Energy*
Noncoincidental peak load	The sum of two or more peak loads on individual systems that do not occur in the same time interval. Meaningful only when considering loads within a limited period of time, such as a day, week, month, a heating or cooling season, and usually for not more than 1 year.	*Energy*
Noncoincidental Peak Load	The sum of two or more peak loads on individual systems, not occurring in the same time period.	*Energy*
Non-Combustible	A material which will not ignite, burn or support combustion when subjected to heat or fire.	*Chemical*
Non-Communist Affidavit	the affidavit formerly required under the Taft-Hartley Act provided statements that the officers were not members of the Communist Party or affiliated with it.	*Industrial Relations*
Non-Complying Union	an organization which failed to meet the filing requirements of the Taft-Hartley Act.	*Industrial Relations*
Non-contact	A slang expression referring to a defective condition in which a supposedly closed switch lacks electrical continuity.	*Electrical Engineering*
Non-Continuous Process	plant operations or production where the service or process may be interrupted and which are not scheduled on a continuous or round-the-clock basis.	*Industrial Relations*
Non-Contributory Pension Plans	pension plans which are entirely financed by employer contributions.	*Industrial Relations*
Nonconventional plant (uranium)	A facility engineered and built principally for processing of uraniferous solutions that are produced during in situ leach mining, from heap leaching, or in the manufacture of other commodities, and the recovery, by chemical treatment in the plant's circuits, of uranium from the processing solutions.	*Energy*
Noncrystalline	The solid state wherein there is no long-range atomic order. Sometimes used synonymously with the terms amorphous, glassy and vitreous.	*Engineering Physics*
Noncrystalline	Atomic arrangement lacking in long range order.	*Material Process*
Noncrystalline solid	Solid lacking in long range structural order.	*Material Process*
Nondedicated vehicle	A motor vehicle capable of operating on an alternative fuel and/or on either gasoline or diesel.	*Energy*
Non-Destructive Evaluation	(NDE) also referred to as Non-Destructive Examination. It refers to a means of Non-Destructive Testing, a group of activities using various methods to find, measure, locate or determine numerous facets of about Material or equipment, that allows an inspector to decide (in accordance with required standards) if any identified characteristics or conditions constitute flaws.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nondestructive Examination or Inspection	Inspection by methods that do not destroy the item, part, or component to determine its suitability for use.	*Maintenance and Repair*
Non-Destructive Testing	Testing Of Equipment, Which Does Not Destroy The Equipment, To Detect Abnormalities In Physical, Chemical Or Electrical Characteristics. For Some Reason Which Escapes Me, Vibration Analysis And Tribology Are Not Generally Considered To Be Ndt Techniques, Even Though They Meet The Above Criteria. Techniques Which Are Considered To Be Ndt Techniques Are Ultrasonic Thickness Testing, Dye Penetrant Testing, X-Raying, And Electrical Resistance Testing.	*Plant Engineering*
Nondestructive testing	The evaluation of engineering materials without impairing, their usefulness.	*Material Process*
Non-Destructive Testing (NDT)	A wide group of analysis techniques used in science and industry to evaluate the properties of a material, component or system without causing damage	*Reliability Engineering*
Non-destructive tests	Those inspection tests which are not destructive to the valve structure or function. See "Radiography," "Dye Penetrant," "Magnetic Particle" and "Ultrasonic Testing."	*Mechanical*
Non-Disabling Injury	an injury which does not result in the loss of working time or in the disability of th employee.	*Industrial Relations*
Non-experimental study	See Observational study	*Quality Engineering*
Nonferrous alloy	Metal alloy composed predominantly of an element(s) other than iron.	*Material Process*
Non-Financial Incentives	benefits accruing to individuals which are not measured in terms of dollars and cents.	*Industrial Relations*
Nonfirm power	Power or power-producing capacity supplied or available under a commitment having limited or no assured availability.	*Energy*
Non-Firm Power	Power supplied or available under terms with limited or no assured availability.	*Energy*
Non-Firm Transmission Service	Point-to-point transmission service that is reserved and/or scheduled on an as-available basis and is subject to interruption. Non-firm Transmission Service is available on a stand-alone basis as either Hourly Non-firm Transmission Service or Short-Term Non-firm Transmission Service.	*Energy*
Non-Firm Transmission Service	Point-to-point service reserved and/or scheduled on an as-available basis.	*Energy*
Non-flowing Artesian Well	Occurs when the pressure is not great enough to force the water out of the well.	*Petroleum Engineering*
Nonfuel components	Components that are not associated with a particular fuel. These include, but are not limited to, control spiders, burnable poison rod assemblies, control rod elements, thimble plugs, fission chambers, primary and secondary neutron sources, and BWR (boiling water reactor) channels.	*Energy*
Nonfuel use (of energy)	Use of energy as feedstock or raw material input.	*Energy*
Nonfungible product	A gasoline blend or blendstock that cannot be shipped via existing petroleum product distribution systems because of incompatibility problems. Gasoline/ethanol blends, for example, are contaminated by water that is typically present in petroleum product distribution systems.	*Energy*
Nongraded	An engineering term pertaining to a soil or an unconsolidated sediment consisting of particles essentially the same size.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Non-homogeneous Poisson process (NHPP)	This is a simple parametric model used to represent events with a non-constant failure recurrence rate. This type of model is often used to model reliability growth and reliability of repairable units	*Reliability Engineering*
Nonhydrocarbon gases	Typical nonhydrocarbon gases that may be present in reservoir natural gas, such as carbon dioxide, helium, hydrogen sulfide, and nitrogen.	*Energy*
Nonincendive	Inability under normal operation to ignite a hazardous mixture.	*Electrical Engineering*
Non-inferiority trial	A trial designed to determine whether the effect of a new treatment is not worse than a standard treatment by more than a pre-specified amount. A one-sided version of an equivalence trial. See also: Equivalence trial	*Quality Engineering*
Non-Interruptive Task List	A preventive maintenance task list where all tasks can safely be done without interrupting production.	*Maintenance*
Non-jurisdictional	Utilities, ratepayers and regulators (and impacts on those parties) other than state-regulated utilities, regulators and ratepayers in a jurisdiction considering restructuring. Examples include utilities in adjacent state and non-state regulated, publicly owned utilities within restructuring states.	*Energy*
Non-Lien	Funds are encumbered only when invoices have been received against the blanket order.	*Procurement*
Nonlinearity	The deviation from a best fit straight line of true output vs. actual value being measured.	*Reliability Engineering*
Nonmethane volatile organic compounds (NMVOC)	Organic compounds, other than methane, that participate in atmospheric photochemical reactions.	*Energy*
Non-modulated Controls	The controls designed for indoor applications subject to neither bright ambient light nor extreme vibration. Usually incandescent lamp controls, scanners and light source-photoreceiver pairs.	*Electrical Engineering*
Non-Newtonian Behavior	The property of some fluids, and many plastic solids (including grease), of exhibiting a variable relationship between shear stress and shear rate.	*Lubrication*
Non-Newtonian Fluid	Fluid, such as a grease or a polymer-containing oil (e.g., multi-grade oil), in which shear stress is not proportional to shear rate.	*Lubrication*
Non-Occupational Injury	similar to non-industrial injury. An injury or accident which results in the loss of time but does not occur on the employer's premises.	*Industrial Relations*
Nonoperating interest	Any mineral lease interest (e.g., royalty, production payment, net profits interest) that does not involve the rights and obligations of operating a mineral property.	*Energy*
Non-Operating Union	a phrase applied to railroad unions of workers who are not directly engaged in the operation of the train or engine service.	*Industrial Relations*
Non-Operational Consequences	A Failure Has Non-Operational Consequences If The Only Impact Of The Failure Is The Direct Cost Of The Repair (Plus Any Secondary Damage Caused To Other Equipment As A Result Of The Failure.	*Management*
Nonoxide ceramic	Ceramic material composed predominantly of a compound(s) other than an oxide.	*Material Process*
Nonoxidizing biocide	A biocide whose effectiveness depends on some property other than its ability to oxidize organic material (i.e., systematic poisons and surface activity).	*Chemical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nonparametric Analysis	A method of analysis that allows the user to characterize failure data without assuming an underlying failure distribution. This avoids the potentially large errors brought about by making incorrect assumptions about the distribution. The confidence bounds that are associated with this analysis are usually much wider than those calculated via parametric analysis. Additionally, predictions outside the range of the observations are not possible.	*Reliability Engineering*
Non-Point Source Contamination or Pollution	Pollution discharges over a wide land area, not from one specific location. Non-point source pollution is contamination that occurs when rainwater, snowmelt, or irrigation washes off plowed fields, city streets, or backyards. As this runoff moves across the land surface, it picks up soil particles and pollutants, such as nutrients and pesticides.	*Petroleum Engineering*
Nonpolar	interaction in which the electron density around adjacent atoms is symmetric	*Physics*
Non-Preformed	Rope or strand that is not preformed. See PREFORMED STRANDS and PREFORMED ROPE.	*Wire Rope & Cable*
Nonprimitive	Crystal structure having atoms at unit cell positions in addition to the unit cell corners.	*Material Process*
Nonprimitive unit cell	See Nonprimitive.	*Material Process*
Nonproducing reservoir	Reservoir in which oil and/or gas proved reserves have been identified, but which did not produce during the report year to the owned or contracted interest of the reporting company regardless of the availability and/or operation of production, gathering, or transportation facilities.	*Energy*
Non-Production Bonus	compensation or money paid to individual workers which does not depend on the production or output of the individual worker or the group.	*Industrial Relations*
Non-randomized study	Any quantitative study estimating the effectiveness of an intervention (harm or benefit) that does not use randomisation to allocate units to comparison groups (including studies where 'allocation' occurs in the course of usual treatment decisions or peoples' choices, i.e. studies usually called 'observational'). To avoid ambiguity, the term should be substantiated using a description of the type of question being addressed. For example, a 'non-randomized intervention study' is typically a comparative study of an experimental intervention against some control intervention (or no intervention) that is not a randomized controlled trial. There are many possible types of non-randomized intervention study, including cohort studies, case-control studies, controlled before-and-after studies, interrupted-time-series studies and controlled trials that do not use appropriate randomisation strategies (sometimes called quasi-randomized studies).	*Quality Engineering*
Nonrecurring engineering	One-time engineering costs associated with a project.	*Electrical Engineering*
Nonrecurring engineering	one-time engineering costs associated with a project.	*Electrical Engineering*
Nonrenewable fuels	Fuels that cannot be easily made or "renewed," such as oil, natural gas, and coal.	*Energy*
Nonrequirements consumer	A wholesale consumer (unlike a full or partial requirements consumer) that purchases economic or coordination power to supplement their own or another system's energy needs.	*Energy*
Non-Resident Employee	a person working for a company who does not reside within the geographic unit or area where the employer's plant is located.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nonresidential building	A building used for some purpose other than residential. Nonresidential buildings comprise three groups commercial, manufacturing/industrial, and agricultural.	*Energy*
Nonrigid plastic	Plastics material that has a stiffness or apparent modulus of elasticity not over 50000 psi (3.44738 105 KPa) at 25 °C (77 °F), when determined according to ASTM D-747-43T.	*Material Process*
Non-rising stem	A gate valve having its stem threaded into the gate. As the stem turns, the gate moves, but the stem does not rise. Stem threads are exposed to line fluids.	*Mechanical*
Nonroad alternative fuel vehicle (nonroad AFV)	An alternative fuel vehicle designed for off-road operation and use for surface/air transportation, industrial, or commercial purposes. Nonroad AFVs include forklifts and other industrial vehicles, rail locomotives, self-propelled electric rail cars, aircraft, airport service vehicles, construction vehicles, agricultural vehicles, and marine vessels. Recreational AFVs (golf carts, snow mobiles, pleasure watercraft, etc.) are excluded from the definition.	*Energy*
Non-Rotating Cylinder	A cylinder in which relative rotation of the cylinder housing and the piston and piston rod, plunger or ram, is not recommended.	*Mechanical, Process, and Operations*
Non-Rotating Wire Rope	Term, now abandoned, referring to 19 x 7 or 18 x 7 rope.	*Wire Rope & Cable*
Non-Routine Maintenance	Any maintenance task not performed at a regular, pre-determined frequency.	*Maintenance*
Non-Scheduled Time	A period of time when the equipment is not scheduled to be used in production, such as un-worked shifts, weekends, and holidays.	*Maintenance*
Non-Scheduled Work	Work that is not planned or scheduled. Work falls into three categories: 1) emergency, 2) Do It Now (DIN), 3) routine.	*Maintenance*
Non-seat	a chain attached to the winding rope for lowering and raising men in the shaft. (Mids.).	*Mining*
Nonsilicate glass	Glass composed predominantly of a compound(s) other than silica.	*Material Process*
Nonsilicate oxide ceramic	Ceramic material composed predominantly of an oxide compound(s) other than silica.	*Material Process*
Non-Soap Thickener	Specially treated or synthetic materials (not including metallic soaps) dispersed in liquid lubricants to form greases. Sometimes called Synthetic Thickener, Inorganic Thickener, or Organic Thickener.	*Lubrication*
Nonspinning reserve	The generating capacity not currently running but capable of being connected to the bus and load within a specified time.	*Energy*
Non-Spinning Wire Rope	See ROTATION RESISTANT ROPE.	*Wire Rope & Cable*
Nonstochiometric compound	Chemical compound in which variations in ionic charge lead to variations in the chemical elements, for example, Fe1-xO.	*Material Process*
Non-Union Employee	generally an individual who does not belong to the particular union which exists at his place of work.	*Industrial Relations*
Non-Union Goods or Material	products or services which are produced or performed by non-union workers or under non-union conditions.	*Industrial Relations*
Non-Union Shops	in general usage, a place of employment without a recognized collective bargaining agent.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nonutility generation	Electric generation by end-users, or small power producers under the Public Utility Regulatory Policies Act, to supply electric power for industrial, commercial, and military operations, or sales to electric utilities.	*Energy*
Non-utility Generator	Independent power producers, exempt wholesale generators and other companies in the power generation business that have been exempted from traditional utility regulation.	*Energy*
Nonutility power producer	A corporation, person, agency, authority, or other legal entity or instrumentality that owns or operates facilities for electric generation and is not an electric utility. Nonutility power producers include qualifying cogenerators, qualifying small power producers, and other nonutility generators (including independent power producers). Non-utility power producers are without a designated franchised service area and do not file forms listed in the Code of Federal Regulations, Title 18, Part 141	*Energy*
Nonutility Power Producer	A legal entity that owns electric generating capacity, but it not an electric utility.	*Energy*
Nonvolatile	NoM is memory which retains its stored value when power is removed.	*Electrical Engineering*
Non-waived tests	Used in the Final CLIA Rule as a category of tests that encompasses both moderate complexity and high complexity tests. QC regulations in the Final CLIA Rule are the same for all non-waived tests, whereas earlier drafts provided different QC requirements for the classes of moderate and highly complex tests.	*Quality*
Non-Workers	a term which has relatively little meaning but may be used for classification purposes to distinguish between work classifications and non-work classifications.	*Industrial Relations*
Nonwoven medium	A filter medium composed of a mat of fibers.	*Oil Analysis*
Nook or Neuk	a corner of a working place at the face. (Lancs.); or the corner of a pillar of coal. (N. East).	*Mining*
Nooper	a large pick used for dressing or straightening the coalface. (Leics.) -see also Dresser and Noper.	*Mining*
Noper	a mandrill or loading pick. (Derbys.), (Leics.).	*Mining*
NOPR	Notice of Proposed Rulemaking	*Energy*
NOR device	A control device which has its output in the logical 1 state if and only if all the control signals assume the logical 0 state.	*Mechanical, Process, and Operations*
NORA	National Oil Recyclers Association	*Petro-Chemical Abbreviations*
No-Raiding Agreement	a pact signed between the American Federation of Labor and the Congress of Industrial Organizations June 9, 1954, in which they pledged they would not attempt to organize or represent employees when "an established bargaining relationship" existed between an employer and another union.	*Industrial Relations*
Nordel	Du Pont trademark for EPDM synthetic rubber.	*Electrical*
Norite	A coarse-grained igneous rock that is host to copper/nickel deposits in the Sudbury area of Ontario.	*Mining*
Normal (axial) Stress	The force per unit area on a given plane within a body a = F/A	*General*

Term	Definition	*Industry*
Normal butane (C_4H_{10})	A straight-chain saturated (paraffinic) hydrocarbon extracted from both natural gas and refinery gas streams, which is gaseous at standard temperature and pressure. It is a colorless gas that boils at a temperature of 31 degrees Fahrenheit.	*Energy*
Normal Contact Position	The normal contact position of a switch exits when no force is applied to the plunger.	*Electrical Engineering*
Normal distribution	A statistical distribution with known properties commonly used as the basis of models to analyze continuous data. Key assumptions in such analyses are that the data are symmetrically distributed about a mean value, and the shape of the distribution can be described using the mean and standard deviation.	*Quality Engineering*
Normal fault	a fault that hades or is angled towards the downthrown side.	*Mining*
Normal High	The state of a control in which the output is high (logic1) in voltage in the rest (Off) condition.	*Electrical Engineering*
Normal Hydrogen Electrode	A reversible hydrogen electrode (Pt) in contact with hydrogen gas at 1 atmosphere partial pressure and immersed in a solution containing hydrogen ions at unit activity.	*General*
Normal Paraffin	A hydrocarbon consisting of molecules in which any carbon atom is attached to no more than two other carbon atoms; also called straight chain paraffin and linear paraffin.	*Lubrication*
Normal Plane	A plane normal to the tooth surfaces at a point of contact, and perpendicular to the pitch plane.	*Mechanical Engineering*
Normal Retirement Age	generally the specific age established in any pension or retirement plan of a company which is used as a guide for the regular retirement program.	*Industrial Relations*
Normal strain	Strain measuring the intensity of deformation along an axis. Normal strain is usually denoted by	*Engineering Physics*
Normal stress	Stress acting perpendicular to an imaginary plane cutting through an object. Normal stress has two senses: compression and tension. Normal stress is often simply called stress.	*Engineering Physics*
Normal Unemployment	a phrase designed to describe that amount of unemployment which is presumed to be normal during any economic period.	*Industrial Relations*
Normal Work Area	a term generally used in the field of motion and time study to designate the limited area which is within easy access or reach by the worker while he is standing or seated at his normal job.	*Industrial Relations*
Normal Workweek	the established number of hours for the general operation of a plant, shift, or department for a one week period.	*Industrial Relations*
Normalization	The process of creating sensor interchangeability.	*Electrical Engineering*
Normalizing	A process in which a ferrous metal is heated to a suitable temperature above the transformation range and is subsequently cooled in still air at room temperature.	*Maintenance and Repair*
Normally Closed	See air-to-open	*Industrial Engineering*
Normally closed solenoid valve	An electrically operated valve whose inlet orifice is closed when the solenoid coil is not energized. Energize to open. See "Solenoid Valve."	*Mechanical*
Normally Low	The state of a control in which the output is low (logic 0) in voltage in the rest (Off) condition.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Normally Open	See air-to-close	*Industrial Engineering*
Normally-Closed (N/C) valve	A pinch valve that in which the tubing is pinched in the de-energized state.	*General Mechanical*
Normally-Open (N/O) valve	A pinch valve in which the tubing is not pinched in the de-energized state.	*Mechanical*
Normal-Mode Rejection Ratio	The ability of an instrument to reject interference usually of line frequency (50–60 Hz) across its input terminals.	*Electrical*
Normande	A breed of beef cattle. Registry is by the North American Normande Association.	*Agriculture*
North American Electric Reliability Corporation (NERC)	A nonprofit corporation formed in 2006 as the successor to the North American Electric Reliability Council established to develop and maintain mandatory reliability standards for the bulk electric system, with the fundamental goal of maintaining and improving the reliability of that system. NERC consists of regional reliability entities covering the interconnected power regions of the contiguous United States, Canada, and Mexico. See the North American Electric Reliability Corporation (NERC) Regions.	*Energy*
North American Electric Reliability Council (NERC)	Council formed by electric utility industry in 1968 to promote the reliability and adequacy of bulk power supply in utility systems of North America. NERC consists of ten regional reliability councils: Alaskan System Coordination Council (ASCC); East Central Area Reliability Coordination Agreement (ECAR); Electric Reliability Council of Texas (ERCOT); Mid-America Interconnected Network (MAIN); Mid-Atlantic Area Council (MAAC); Mid-Continent Area Power Pool (MAPP); Northeast Power Coordinating Council (NPCC); Southeastern Electric Reliability Council (SERC); Southwest Power Pool (SPP); Western systems Coordinating Council (WSCC).	*Energy*
North American Industry Classification System (NAICS)	A new classification scheme, developed by the Office of Management and Budget to replace the Standard Industrial Classification (SIC) System, that categorizes establishments according to the types of production processes they primarily use.	*Energy*
North/South	Technology factors are provided for North and South because some equipment and technologies are temperature sensitive. A North designation generally represents a utility that experiences cold winters and has average annual heating degree days of at least 5,000 (based on a 65 degree base). A South designation has relatively mild winters but a significant saturation of air conditioning. This geographical designation is very general, but it is intended to separate out areas that are warmer than others.	*Energy*
Northeast	Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.	*Energy*
Northeast Region	New England division and Middle Atlantic division	*Energy*
Northern	Chicago, IL, Detroit, MI, Duluth, MN, Minneapolis, MN, St. Louis, MO, Pembina, ND, Cleveland, OH, Milwaukee, WI.	*Energy*
Northern Appalachian Region	Consists of Maryland, Ohio, Pennsylvania, and Northern West Virginia.	*Energy*
North-South Wage Differentials	differences in wage rates, both by industry and job classification, which show variations by region and geography.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nose Roller	A small roller, used on power belt curve conveyors, to reduce the gap at the transfer points.	*Manufacturing*
Noseover	A section of conveyor with transition rollers placed in conveyor to provide transition from incline to horizontal or horizontal to incline.	*Manufacturing*
Nose-Over	Curved or segmented frame sections having rollers properly spaced to provide a transition from incline to level or from level to decline.	*Equipment*
No-Solicitation Rule	a rule or regulation adopted by employers which forbids solicitation of union membership or dues on company time or premises.	*Industrial Relations*
No-Strike Clause	a provision in collective bargaining agreements in which the union gives its promise that during the term of the contract the employees will not engage in activities that will result in a stoppage of work at the employer's plant.	*Industrial Relations*
No-Suit Clause	a provision in a contract whereby the employer not to file a suit against the union for actions which occur.	*Industrial Relations*
NOT device	A control device which has its output in the logical 1 state if and only if the control signal assumes the logical 0 state. The NOT device is a single input NOR device.	*Mechanical, Process, and Operations*
Notch	Minimum spectral value, at a natural frequency. Also, the deliberate reducing of a portion of a test spectrum (random vibration testing).	*Reliability Engineering*
Notch Sensitivity	Extent to which the sensitivity of a material to fracture is increased by the presence of a surface inhomogeneity, such as a notch.	*Engineering Physics*
Notched	in a support set where the posts are slightly let into the bars, they are said to be 'notched'. This was common in N. Staffs. Also called 'lipped' (N. Staffs.).	*Mining*
Notching	cutting out various shapes from the edge of a strip, blank or part	*Materials Process*
Note	The term "back-to-back connection" is also used to describe a test set-up for electrical devices where a motor and a generator are connected to the same shaft line.	*Electrical*
Note	Oxygenated gasoline excludes oxygenated fuels program reformulated gasoline (OPRG) and reformulated gasoline blendstock for oxygenate blending (RBOB). Data on gasohol that has at least 2.7 percent oxygen, by weight, and is intended for sale inside CO nonattainment areas are included in data on oxygenated gasoline. Other data on gasohol (for use outside of nonattainment areas) are included in data on conventional gasoline.	*Energy*
Notice of Proposed Rulemaking	A designation used by the Federal Energy Regulatory Commission for some of its dockets.	*Energy*
Novolak	A trade for a permanent fusible and soluble phenol aldehyde resin used principally in varnishes.	*Material Process*
Nox	See Nitrogen oxides	*Energy*
Noxious Fumes	A combination of inert and corrosive gases usually associated with exhaust fumes or industrial by-products gases which can cause corrosive effects on temperature and pressure sensors when exposed.	*Electrical Engineering*
Nozzle	A device for controlled distribution of water in a cooling tower. Nozzles are designed to deliver water in a spray pattern by pressure or by gravity flow.	*Facility Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nozzle	In injection of transfer molding, the orifice containing plug at the end of the injection cylinder or transfer chamber which contacts the mold sprue bushing and directs the molten resin into the mold. The nozzle is shaped to form a seal under pressure against the sprue bushing. Its orifice is shaped by tapering to maintain the desired flow of resin, and sometimes contains a check valve to prevent back flow, or an on-off valve to interrupt the flow at any desired point in the molding cycle.	*Engineering Physics*
NPCC	Northeast Power Coordinating Committee	*Energy*
n-Pentane (CH3(CH2)3CH3)	Colorless liquid. A petroleum hydrocarbon used as a starting point in various syntheses, as a solvent, etc.	*Material Process*
NPN	A transistor consisting of two N-type regions separated by a P-type region.	*Electrical Engineering*
NPRA	National Petrochemical & Refiners Association (US)	*Petro-Chemical Abbreviations*
NPRM	notice of proposed rule making (EPA)	*Petro-Chemical Abbreviations*
NPS	Nominal pipe size - dimensionless number used to indicate sizes of pressure pipe and valves - used interchangeably with valve size in inches.	*General Mechanical*
NPT	National Pipe Thread.	*General*
NRC	Natural Resources Canada	*Petro-Chemical Abbreviations*
NRCC	National Research Council of Canada	*Petro-Chemical Abbreviations*
NRCS	An agency of the USDA	*Agriculture*
NRECA	See National Rural Electric Cooperative Association	*Energy*
NREL	National Renewable Energy Laboratory	*Petro-Chemical Abbreviations*
NRS Non-rising stem	A gate valve having its stem threaded into the gate. As the stem turns the gate moves but the stem does not rise. Stem threads are exposed to the line fluid.	*General Mechanical*
NSPS	New Source Performance Standard	*Petro-Chemical Abbreviations*
NTSC	NTSC is the color television standard established by the National Television Standards Committee in the United States in 1953. The NTSC standard's distinguishing feature was that it added color to the original 1941 black and white television standard in such a way that black and white TVs continued to work.	*Electrical Engineering*
n-type semiconductor	Extrinsic semiconductor in which the electrical conductivity is dominated by negative charge carriers.	*Material Process*
Nubber	a block of wood about 12ins square used to throw runaway tubs off the rails on an incline haulage road. It was placed between the rails when a run of tubs had gone by. (Mids.).	*Mining*
Nuclear ceramic	Ceramic material with a primary engineering application in the nuclear industry.	*Material Process*
Nuclear Electric Power	Electricity generated by an electric power plant whose turbines are driven by steam generated in a reactor by heat from the fissioning of nuclear fuel.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nuclear electric power (nuclear power)	Electricity generated by the use of the thermal energy released from the fission of nuclear fuel in a reactor.	*Energy*
Nuclear Energy	Energy from the inner core or nucleus of the atom, as opposed to energy released in chemical processes, which derives from the electrons surrounding the nuclei. Nuclear fusion is the release of thermonuclear energy by the conversion of hydrogen nuclei to helium nuclei, in a continuing reaction in the sun and other stars. Nuclear fusion is the principle behind thermonuclear weapons. Attempts to harness fusion for commercial power production have so far not succeeded.	*Energy*
Nuclear fuel	Fissionable materials that have been enriched to such a composition that, when placed in a nuclear reactor, will support a self-sustaining fission chain reaction, producing heat in a controlled manner for process use.	*Energy*
Nuclear Magnetic Resonance (NMR)	Determinations of the number of hydrogen atoms in a complex molecule and the characteristic grouping in which they occur, conducted by placing the specimen in a strong constant magnetic field, then applying a perpendicular r.f. alternating magnetic field. At certain frequencies of the latter field, a hydrogen atom nucleus will absorb and emit energy, the frequency and amount of which are indicative of the characteristic grouping in which the atom is located – e.g., a CH3, CH2 or an –OH group.	*Engineering Physics*
Nuclear reactor	An apparatus in which a nuclear fission chain reaction can be initiated, controlled, and sustained at a specific rate. A reactor includes fuel (fissionable material), moderating material to control the rate of fission, a heavy-walled pressure vessel to house reactor components, shielding to protect personnel, a system to conduct heat away from the reactor, and instrumentation for monitoring and controlling the reactor's systems.	*Energy*
Nuclear Regulatory Commission	This is the federal agency responsible for the licensing of nuclear facilities. They oversee these facilities and make sure regulations and standards are followed.	*Energy*
Nucleate Initiate	a phase transformation.	*Material Process*
Nucleating Agent	Finely divided solid material added to semicrystalline polymers to modify the crystalline structure by providing sites for initiation of crystalline growth. A properly nucleated polymer will possess improved clarity, hardness, and tensile strength.	*Chemistry*
Nucleation	The initial stage in a phase transformation. It is evidenced by the formation of small particles (nuclei) of the new phase, which are capable of growing.	*Engineering Physics*
Nucleonic steering	automatic horizon control of a power loader by means of a radioactive sensor reacting against the roof or floor of the seam.	*Mining*
Nucleus	Central core of atomic structure, about which electrons orbit.	*Material Process*
NUG	Nonutility Generator	*Energy*
Nugget	A water-worn piece of precious metal, usually implying some size.	*Mining*
Nugget	A small mass of precious metal, found free in nature.	*Mining*
Null	A condition, such as balance, which results in a minimum absolute value of output.	*General*
Null	The condition when the pressure on each side of the sensing diaphragm is equal.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Null hypothesis	A hypothesis of the form: there is no difference between A and B. This form of the hypothesis is the basis for statistical tests of significance, such as the t-test and the F-test. In the t-test, A and B are mean values. In the F-test, A and B are variances (squares of standard deviations)	*Quality*
Null Offset	The electrical output present, when the pressure sensor is at null.	*Electrical Engineering*
Null Temperature Shift	The change in null output value due to a change in temperature.	*Electrical Engineering*
Nullification of Agreement	setting aside or abrogating the terms of an agreement.	*Industrial Relations*
Number Needed to Treat (NNT)	The number of patients who must be exposed to an intervention before the clinical outcome of interest occurred; for example, the number of patients needed to treat to prevent one adverse outcome. Equal to the inverse of the absolute risk reduction: NNT = 1/ARR = 1/CER-EER.	*Analysis*
Number needed to treat to benefit	An estimate of how many people need to receive a treatment before one person would experience a beneficial outcome. For example, if you need to give a stroke prevention drug to 20 people before one stroke is prevented, then the number needed to treat to benefit for that stroke prevention drug is 20. The NNTb is estimated as the reciprocal of the absolute risk difference. See also: Number needed to treat to harm Also called: NNT, NNTb, Number needed to treat	*Quality Engineering*
Number needed to treat to harm	A number needed to treat to benefit associated with a harmful effect. It is an estimate of how many people need to receive a treatment before one more person would experience a harmful outcome or one fewer person would experience a beneficial outcome. See also: Number needed to treat to benefit Also called: NNH, NNTh, Number needed to harm	*Quality Engineering*
Number of control measurements, N	Used here to indicate the total number of control measurements available for use in assessing the quality of an analytical run. We consider N to be the total number of control measurements available for inspection when using common Levey-Jennings type QC charts or multirule type QC procedures where it is possible to combine the measurements from different materials to accumulate a higher N (and higher error detection) for evaluating control status. These measurements may be replicates on one level or material, individual measurements on two or more materials, or replicate measurements on two or more materials. For example, if you assay a single material and make two measurements on that material, N is 2. If you assay two materials (as required by US CLIA regulations) and make single measurements on each, N is 2. If you assay two materials and make duplicate measurements on each, N is 4. If you assay three materials and make single measurements on each, N is 3. If you assay three materials and make duplicate measurements on each, N is 6. With the use of mean/range or cusum type of QC procedures where it is more difficult to combine the measurements from different control materials, N is more likely to be the number of replicates on an individual material.	*Quality*
Number of mines	The number of mines, or mines collocated with preparation plants or tipples, located in a particular geographic area (State or region). If a mine is mining coal across two counties within a State, or across two States, then it is counted as two operations. This is done so that EIA can separate production by State and county.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Number of mining operations	The number of mining operations includes preparation plants with greater than 5,000 total direct labor hours. Mining operations that consist of a mine and preparation plant, or a preparation plant only, will be counted as two operations if the preparation plant processes both underground and surface coal. Excluded are silt, culm, refuse bank, slurry dam, and dredge operations except for Pennsylvania anthracite. Excludes mines producing less than 10,000 short tons of coal during the year.	*Energy*
Number snatcher	Man responsible for the listing of numbers on incoming empty railway wagons and the recording of date and time received (N. Staffs.).	*Mining*
Number-Average Molecular Weight (MN)	The average molecular weight of a high polymer expressed as the first moment of a plot of the number of molecules in each molecular weight range against the molecular weight. In effect, this is the total molecular weight of all molecules dived by the number of molecules.	*Engineering Physics*
Numeric	Description of a symbology's character set which consists of only numerals.	*Gears*
NURE	See National Uranium Resource Evaluation	*Energy*
Nut Dilation	Under load, the wedging action of the threads causes dilation of the nut resulting in an increase in the minor diameter of the nut, and reducing the effective shear areas of both the external and internal threads.	*Maintenance*
Nut Runner	A torque control fastener tightening tool that is usually powered by compressed air. The design of the tool is such that attempts are made to ensure that the applied torque is independent of joint stiffness.	*Maintenance*
Nut shells	The horny outer case of such nuts as walnuts, ground and used for filler.	*Material Process*
NUTEK	Swedish National Board for Industrial and Technical Development	*Petro-Chemical Abbreviations*
Nutrients	nitrogen, phosphorous, potassium, and minerals that plants need to grow	*Agriculture*
Nutrients	Naturally occurring, soil elements essential for tree growth and reproduction.	*Forestry*
Nuts	small pieces of coal or re-screened small coal, smaller than stove coal and larger than pea coal. Also called 'chestnut coal'.	*Mining*
NVFEL	National Vehicle and Fuel Emissions Laboratory (US-EPA)	*Petro-Chemical Abbreviations*
NVFL	National Vehicle and Fuel Lab (EPA)	*Petro-Chemical Abbreviations*
NVH	Noise, Vibration and Harshness - A general term which covers undesirable noise and vibration experienced by vehicle occupants.	*Mechanical, Process, and Operations*
Nyloc Nut	A torque prevailing nut that uses a nylon patented insert to provide a locking feature. The nylon insert, it is claimed, helps to seal the bolt thread against seepage of water, oil, petrol, paraffin and other liquids. The nut is covered by UK patent 8028437 and European patent 81303450-1. Nyloc is a registered trade name of Forest Fasteners.	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Nylon	Generic name for all long-chain polymers which have recurring amide groups (-CONH-) as an integral part of the main polymer chain. Various types of nylons are described in subsequent listings, the numbers of which relate to the number of carbon atoms in the various reactants. Nylon first appeared in 1939 when its fiber was used in the production of nylon stockings. Nylon is found in more than just stockings, however, such as in electronics, automotive parts, and in packaging. The origin of the word nylon is arbitrary. The company credited with the invention, DuPont has stated that originally the name was intended to be No-Run (that is run as in the sense of the compound chain of the substance unraveling), but at the time there was no real justification for the claim, so it needed to be changed. It was the discoverer, Walter Carothers, who was responsible for that. He changed the name, letter by letter, until finally the management at DuPont accepted what he'd come up with – which was nylon was the explanation in 1978. Back in 1940, the company's John W. Eckelberry stated that the first three letters – the nyl – had no read meaning at all, whilst the on suffix was inspired by that used in other fibers.	*Material Engineering*
Nylon	A generic term for any long chain synthetic polymeric amide which has recurring amide groups as an integral part of the main polymer chain, and which is capable of being formed into a filament in which the structural elements are oriented in the direction of the axis.	*Material Process*
Nylon 66 Poly	hexamethylene adipamide, an important engineering polymer.	*Material Process*
Nymex	New York Mercantile Exchange	*Energy*
Nymph	The immature stage of insects, following hatching, which does not have a pupal stage, i.e., incomplete metamorphosis (egg, nymph, adult). Late instar nymphs may have nonfunctional rudimentary wings and/or genitalia.	*Forestry*
Nyquist	In A/D conversion, the Nyquist principle (derived from the Nyquist-Shannon sampling theorem) states that the sampling rate must be at least twice the maximum bandwidth of the analog signal in order to allow the signal to be reproduced. The maximum bandwidth of the signal (half the sampling rate) is commonly called the Nyquist frequency (or Shannon sampling frequency).	*Electrical Engineering*
O	O	*Forestry*
--O--	--O--	*Petroleum Drilling*
O	Oil.	*Petroleum Drilling*
O&G	Oil & Gas	*Petroleum Drilling*
O&G	Oil and Gas.	*Petroleum Drilling*
O&M	Operation and Maintenance.	*Energy*
O.D.	Outside Diameter - The measurement of the outermost diameter of a circular part.	*Mechanical*
O.E.M.	'Original Equipment Manufacturer'. A company which first designed and built parts or equipment.	*Petroleum Engineering*
O.M.S	Output per man-shift.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
O3	See Ozone.	*Energy*
OA	Optical Amplifier.	*Quality*
OAG	Open Application Group.	*Quality*
OASI	See: Old Age and Survivors' Insurance	*Industrial Relations*
Oaste	a name given to a person who went to Newcastle to buy coal. The coal vendor was called a 'hoastman'. (N. East).	*Mining*
OBD	on-board diagnostic	*Petro-Chemical Abbreviations*
OBD-II	on-board diagnostic II	*Petro-Chemical Abbreviations*
Objective Standards (NWLB)	the National War Labor Boards had numerous cases involving plants which had rate ranges for particular jobs. A major issue concerned the methods by which employees were to be placed and to progress within the rate ranges for these jobs.	*Industrial Relations*
Obligate aerobes	organisms that require the presence of molecular oxygen [O(2)] for their metabolism.	*Chemical*
Obligate anaerobes	organisms for which the presence of molecular oxygen is toxic. These organisms derive the oxygen needed for cell synthesis from chemical compounds.	*Chemical*
Obligated Producer	See Packaging Waste Regulations.	*Quality*
Obligation to Serve	The obligation of a utility to provide electric service to any customer who seeks that service, and is willing to pay the rates set for that service. Traditionally, utilities have assumed the obligation to serve in return for an exclusive monopoly franchise.	*Energy*
Obliteration	A synergistic phenomenon of both particle silting and polar adhesion. When water and silt particles co-exist in a fluid containing long-chain molecules, the tendency for valves to undergo obliteration increases.	*Lubrication*
Observable	a general term given to a system component for which there is no direct control thereof, but the value of such component provides pertinent information about the state of the system. For example, consider a heating and cooling system for an enclosed football stadium. The current temperature at various locations throughout the stadium is an observable.	*Petroleum Drilling*
Observation well	A non-producing well used to monitor pool pressure, usually included in annual pressure testing surveys.	*Petroleum Engineering*
Observational study	A study in which the investigators do not seek to intervene, and simply observe the course of events. Changes or differences in one characteristic (e.g. whether or not people received the intervention of interest) are studied in relation to changes or differences in other characteristic(s) (e.g. whether or not they died), without action by the investigator. There is a greater risk of selection bias than in experimental studies. See also: Randomized controlled trial Also called: Non-experimental study	*Quality Engineering*
Obsolescent Stock	Obsolescent Stock: see Stock (Obsolescent).	*Quality*
Obsolete Stock	Obsolete Stock: see Stock (Obsolete).	*Quality*

Term	Definition	*Industry*
Obsolete Store Items	Stock keeping units that have not had activity in three or more years and are not designated as safety stock.	*Maintenance*
Obstruction lights or Aviation warning lights	Warning lights required by FAA regulations, placed on the outside of the hyperbolic shell of a natural draft tower.	*Facility Engineering*
Obtuse	An angle that measures between 90° and 180°.	*Math*
OC Curve	In sampling, a sample plan is obtained from a published sampling table, and specifies the size (N) of an incoming lot of material, the quality (p%) required of this incoming lot, the size (n) of the sample to be taken, and the acceptance criterion c. Now, when such a sample plan is "operated" (i.e., used) in material receipt, an OC curve is a function or graph illustrating the probabilities of acceptance of the incoming lot of material over a successive range of possible incoming quality levels. For example, the OC curve will show: (1) the probability of acceptance of the incoming lot if the quality is 0.5% non-conforming; (2) the probability of acceptance of the lot (with the same sample plan) if the lot has 0.6% non-conforming; (3) the probability of acceptance of the lot if the lot has 0.7% non-conforming ... and so on. It is desirable that OC curves should be "steep" - that is, that they should show big differences in probabilities of acceptance from one incoming quality level to the next. In order for an OC curve to be steep, the sample plan chosen must specify a relatively large sample. See also Operating Characteristic and see sub-section 5.3 of the free on-line purchasing 'course' at this site.	*Quality*
OCA	Of site Consequences Analysis.	*Material Process*
OCAW	See: Oil, Chemical and Atomic Workers International Union (AFL-CIO)	*Industrial Relations*
Occlude	to cause to become obstructed or closed and thus prevent passage either into or from.	*Chemical*
Occupancy sensors	These are also known as "ultrasonic switchers." When movement is detected, the lights are turned on and remain on as long as there is movement in the room.	*Energy*
Occupation	the term usually is applied to a person's trade or vocation.	*Industrial Relations*
Occupation Analysis	the study of the content and requirements of specific occupations or occupational groups to determine whether similar job titles or occupation names or titles actually have the same content.	*Industrial Relations*
Occupational Deferment	deferment of-- in some cases, literally exemption from-- compulsory military service on the ground that an individual's continued pursuit of his civilian occupation contributes more to the country than his military service would.	*Industrial Relations*
Occupational Group	analyses of the labor force data as well as detailed classifications of occupations attempt to slot occupations into groups or sub-groups which are closely related.	*Industrial Relations*
Occupational Health	The prediction and prevention of work-related ill health, and of health issues associated with work.	*Quality*
Occupational History	See: Employment History	*Industrial Relations*
Occupational Immobility	See: Labor Mobility, Labor Immobility	*Industrial Relations*
Occupational Information	data and descriptive material prepared usually as a result of job analyses, questionnaires, and other materials which describe the salient features and characteristics of particular occupations, their requirements, and the industries in which they are found.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Occupational Injury	an accident or injury which is work connected.	*Industrial Relations*
Occupational Mobility	the extent to which individuals in a particular occupation move into work other than that other than that for which they were essentially trained.	*Industrial Relations*
Occupational Outlook	a publication of the Bureau of Labor Statistics in the U.S. Department of Labor which deals with the current developments in the employment opportunities in various occupation and industries. It is published four times a year.	*Industrial Relations*
Occupational Outlook Handbook	a publication, in the form of a handbook, issues by the Bureau of Labor Statistics, U.S. Department of Labor, in cooperation with the Veterans Administration.	*Industrial Relations*
Occupational Prescription	a term used in occupational therapy, either in the treatment of handicapped workers or those with other types of illness, including mental illness.	*Industrial Relations*
Occupational Pyramid	a phrase used in the social sciences, particularly in sociology, to indicate the structure of the working force.	*Industrial Relations*
Occupational Rate	a wage rate which is assigned to a specific occupation, either in a single plant, a geographic area, or an industry.	*Industrial Relations*
Occupational Safety and Health Administration (OSHA)	A division of the United States Department of Labor. The mission of the Occupational Safety and Health Administration (OSHA) is to save lives, prevent injuries and protect the health of America's workers. To accomplish this, federal and state governments must work in partnership with the more than 100 million working men and women and their six and a half million employers who are covered by the Occupational Safety and Health Act of 1970. (see also: http://www.osha.gov)	*Maintenance*
Occupational Seniority	a form of seniority whereby transfers or layoffs under a contract are based on the actual length of service of the individual in his occupation.	*Industrial Relations*
Occupational Shift	changes in the technology of industry as well as changes resulting from special circumstances, such as a shift from peacetime to a wartime economy or the reconversion from wartime economy to a peacetime one, which requires major shifts to the labor force and frequently also changes in the occupational economy.	*Industrial Relations*
Occupational Stratification	the phrase may apply to the actual arrangement of various occupations in the order of their status level.	*Industrial Relations*
Occupational Structure	the attempt to classify and code, frequently by the use of numerical arrangements, the various occupations within a particular economy or in a particular industry, or within a plant, from the highest to the lowest labor grade.	*Industrial Relations*
Occupational Survey	a procedure for studying the occupational groupings of a country, state or locality, plant, or industry.	*Industrial Relations*
Occupational Therapy	a method used to speed the recovery and work activity of an individual, handicapped by physical or mental disability, through some activity such as rug making, handicrafts, or other activities under the guidance of a therapist.	*Industrial Relations*
Occupational Wage Relationship	an attempt to show the inter-relation of wage rates in occupations which themselves show a range of responsibilities and skills.	*Industrial Relations*
OCD	Office of Community Development, a unit within the USDA.	*Agriculture*
Ocean energy systems	Energy conversion technologies that harness the energy in tides, waves, and thermal gradients in the oceans.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Ocean going	(US term) In transportation, shipping on the open sea (in UK English, deep sea.)	*Quality*
Ocean thermal energy conversion (OTEC)	The process or technologies for producing energy by harnessing the temperature differences (thermal gradients) between ocean surface waters and that of ocean depths. Warm surface water is pumped through an evaporator containing a working fluid in a closed Rankine-cycle system. The vaporized fluid drives a turbine/generator.	*Energy*
Ochre or Ochrey water	mine water stained orange-red by contamination with hydrated iron oxide.	*Mining*
OCMA	Oil Companies Materials Association - An association of British oil companies which has written a standard for "fire safe" testing of soft seated valves. See "Fire Safe."	*Mechanical*
OCP	olefin copolymer	*Petro-Chemical Abbreviations*
OCR	Optical Character Reader	*Gears*
OCS	Open Control System. This term is sometimes used to emphasize the lack of proprietary architecture. ABB include the term in their DCS brand name, Advant OCS.	*Control Engineering*
OCS	The Outer Continental Shelf. Generally the area outside the territorial boundaries of the coastal state over which the federal government exercises control.	*Petroleum Drilling*
Octagon Head	A bolt or screw whose head cross section is a regular polygon with 8 sides.	*Maintenance*
Octahedral position	The void space among closed-packed, hard sphere atoms or ions for which there are six nearest neighbors. An octahedron (double pyramid) is circumscribed by lines constructed from centers of adjacent spheres.	*Engineering Physics*
Octal	Pertaining to a base 8 number system.	*General*
Octane	A flammable liquid hydrocarbon found in petroleum. Used as a standard to measure the anti-knock properties of motor fuel.	*Energy*
Octane Number	A measure of a fuel's ability to prevent detonation in a spark ignition engine. Measured in a standard single-cylinder, variable-compression-ratio engine by comparison with primary reference fuels. Under mild conditions, the engine measures Research Octane Number (RON); under severe conditions Motor Octane Number (MON). Where the law requires posting of octane numbers on dispensing pumps, the Antiknock Index (AKI) is used. This is the arithmetic average of RON and MON, (R + M)/2. It approximates the Road Octane Number, which is a measure of how an "average" car responds to the fuel.	*Lubrication*
Octane number	A number indicating the relative antiknock characteristics of gasoline.	*Petroleum Engineering*
Octane rating	A number used to indicate gasoline's antiknock performance in motor vehicle engines. The two recognized laboratory engine test methods for determining the antiknock rating, i.e., octane rating, of gasolines are the Research method and the Motor method. To provide a single number as guidance to the consumer, the antiknock index (R + M)/2, which is the average of the Research and Motor octane numbers, was developed.	*Energy*
Octane Requirement (OR)	The lowest octane number reference fuel that will allow an engine to run knock-free under standard conditions of service. OR is a characteristic of each individual vehicle.	*Lubrication*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Octane Requirement Increase (ORI)	As deposits accumulate in the combustion chamber, the ORI of an engine increases, usually reaching an equilibrium value after 10,000 to 30,000 km. ORI is a measure of the increase, which may be in the range of three to ten numbers.	*Lubrication*
Octanol/water partition coefficient (Kow)	a coefficient representing the ratio of the solubility of a compound in octanol (a non-polar solvent) to its solubility in water (a polar solvent). The higher the Kow, the more non-polar the compound. Log Kow is generally used as a relative indicator of the tendency of an organic compound to adsorb to soil. Log Kow values are generally inversely related to aqueous solubility and directly proportional to molecular weight.	*Chemical*
Octave	The interval between two frequencies differing by exactly 2:1.	*Reliability Engineering*
Octene	A comonomer used in the production used in the production of linear low-density polyethylenes.	*Engineering Physics*
Octyl acetate	sec-Octyl acetate A solvent – ester.	*Material Process*
Octyl alcohol	sec-Octyl alcohol A solvent – alcohol.	*Material Process*
OD	The measurement of the outside diameter of a circular part.	*General Mechanical*
OD	The measurement of the outside diameter of a circular part.	*Mechanical*
Odd knobbing	breaking off the coal from the sides in the Thick Coal workings (S. Staffs.).	*Mining*
Odd lot	A block of shares that is less than a board lot.	*Mining*
Odds	A proportion in which the numerator contains the number of times an event occurs and the denominator includes the number of times the event does not occur.	*Analysis*
Odds ratio	The ratio of the odds of an event in one group to the odds of an event in another group. In studies of treatment effect, the odds in the treatment group are usually divided by the odds in the control group. An odds ratio of one indicates no difference between comparison groups. For undesirable outcomes an OR that is less than one indicates that the intervention was effective in reducing the risk of that outcome. When the risk is small, odds ratios are very similar to risk ratios. Also called: OR	*Quality Engineering*
Odds Ratio (Syn cross-product ratio, relative odds)	A measure of the degree of association; for example, the odds of exposure among the cases compared with the odds of exposure among the controls.	*Analysis*
ODI	oil drain interval	*Petro-Chemical Abbreviations*
OEAM	See Operational Equipment Asset Management.	*Maintenance*
OECA	Office of Enforcement and Compliance Assurance	*Petro-Chemical Abbreviations*
OECD	See Organization for Economic Cooperation and Development.	*Energy*
OED	(1) Outside exchange of dies - synonymous with external set-up time (qv); and (2) The Oxford English Dictionary, the prime reference to the vocabulary and usage of the English language (UK version), published in 13 volumes by Oxford University Press, and available in a 2 volume shorter edition (The Shorter OED).	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
OEE	Original Equipment Effectiveness, or Overall Equipment Effectiveness. The overall equipment effectiveness is the product of (1) equipment availability, (2) equipment performance and (3) equipment quality rate ... say (1) 80%, (2) 80% and (3) 80%, making an OEE of 0.8 x 0.8 x 0.8, = 0.512, or 51.2%.	*Quality*
OEIU	See: Office Employees International Union (AFL-CIO)	*Industrial Relations*
OEM	Original Equipment Manufacturer.	*Control Engineering*
OEM	Original Equipment Manufacturer - A company which produces passenger vehicles or major components of those vehicles such as the engines, transmissions, etc.	*Mechanical, Process, and Operations*
Of a material due to the stress concentration associated with a pre existing flaw	of a material due to the stress concentration associated with a pre existing flaw.	*Material Process*
Of full scale output or reading	of full scale output or reading.	*Electronic Process*
Of light in a vacuum to its velocity in the substance	of light in a vacuum to its velocity in the substance.	*Material Process*
Of water	of water.	*Civil Engineering*
OFA	Oxygenated Fuels Association	*Petro-Chemical Abbreviations*
OFAT (One Factor At A Time)	A method of experimentation for examining the effect of a number of possible causes. Contrast Full Factorial.	*Quality*
OFC	Open Fieldbus Consortium.	*Control Engineering*
Off	Device is powered off (power switch is off; no response to communications) - no data and function is available.	*Aeronautical Engineering*
Off Delay Logic	The adjustable delay (after input signal stops) before output is de: energized.	*Electrical Engineering*
Off peak	Period of relatively low system demand. These periods often occur in daily, weekly, and seasonal patterns; these off-peak periods differ for each individual electric utility.	*Energy*
Off peak gas	Gas that is to be delivered and taken on demand when demand is not at its peak.	*Energy*
Off State Current	The supply or bias current flowing into a solid state device when it is in the unactuated state (see Leakage Current).	*Electrical Engineering*
Off take rods	extra wooden rods at the top and bottom of a winding shaft that guided and steadied a cage during decking.	*Mining*
Off the Shelf Satisfaction	See First Pick Ratio.	*Quality*
Offal	the inedible parts of a butchered animal removed in dressing it	*Agriculture*
Off-camber	Some turns on road and street courses are actually banked outward, which can make them very tricky to negotiate. This is known as an off-camber turn.	*NASCAR*
Offer	An offer is an invitation to "come and do business with me on these terms". It is a promise made to the other party that if the terms proposed are satisfactory, there will be a contract. It is, in fact, a legal commitment to the other party to form a contract if that other party agrees.	*Procurement*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Offer (legal)	A proposal by a party to supply goods or service in exchange for money. The making of an offer is the first step in forming a contract.	*Quality*
Off-gas treatment system	refers to the unit operations used to treat (i.e. condense, collect, or destroy) contaminants in the purge gas from the thermal desorber.	*Chemical*
Off-gates	gob or goaf-roads in longwall working, usually about 150yds. apart. (N. East).	*Mining*
Off-highway use	Includes petroleum products sales for use in:	*Energy*
Off-hours equipment reduction	A conservation feature where there is a change in the temperature setting or reduction in the use of heating, cooling, domestic hot water heating, lighting or any other equipment either manually or automatically.	*Energy*
Office Employees International Union (AFL-CIO)	an organization of clerical and office employees.	*Industrial Relations*
Office of Community Development, (OCD)	A unit within the USDA.	*Agriculture*
Office of Education	an office within the U.S. Department of Health, Education, and Welfare.	*Industrial Relations*
Office of Manpower, Automation and Training (OMAT)	see: Manpower; Manpower Administration, Department of Labor	*Industrial Relations*
Office of Price Administration	the agency which administered the Price Control Act during World War II, parallel to efforts at wage stabilization and dispute settlement under the National War Labor Board.	*Industrial Relations*
Office of Vocational Rehabilitation	a decision within the U.S. Department of Health, Education, and Welfare concerned with the problems of vocational rehabilitation.	*Industrial Relations*
Office Worker	an individual generally engaged in work which includes such jobs as typing, secretarial work, filing, key-punching of cards, and other related clerical jobs in and around the office.	*Industrial Relations*
Official Collective Agreement	See: Agreement, Collective	*Industrial Relations*
Officious Bystander Test	A contract between the company and a supplier is comprised of express terms (i.e., written down) and implied terms (obvious terms implied by common-sense, and by custom and practice). To determine later whether some particular term X is implied or not, the company might imagine what reply would have been given by both parties while the contract was being drawn up to an officious bystander (i.e., a nosy passer-by) if he had asked them "Is X intended to be included?". If both parties would have replied in unison "Yes - the inclusion of X is obvious! X is essential from the business point of view!", then X is indeed an implied term. Note that X must be essential at the time the contract is being drawn up; it is not an implied term simply because it later seems reasonable, or on lengthy reflection seems a reasonable extension of the agreement.	*Quality*
Off-peak	Periods of relatively low system demands.	*Energy*
Off-Peak/On-Peak	Block of time when energy demand and price is low (off-peak) or high (on-peak).	*Energy*
Offset	Part of received data that is undesired, consisting of a random, time-invariant term added to a signal; Synonyms: bias; Compare: noise, signal.	*Aeronautical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Offset	Part of received data that is undesired, consisting of a random, time-invariant term added to a signal; Synonyms - bias; Compare - noise, signal.	*Aeronautical Engineering*
Offset Printing	The stress at which the strain exceeds by a specified amount (the offset) an extension of the initial proportional portion of the stress-strain curve. It is expressed in force per unit area, usually pounds per square inch.	*Engineering Physics*
Offshore	That geographic area that lies seaward of the coastline. In general, the coastline is the line of ordinary low water along with that portion of the coast that is in direct contact with the open sea or the line marking the seaward limit of inland water. If a state agency uses a different basis for classifying onshore and offshore areas, the state classification should be used (e.g., Cook Inlet in Alaska is classified as offshore; for Louisiana, the coastline is defined as the Chapman Line, as modified by subsequent adjudication).	*Energy*
Offshore reserves and production	Unless otherwise dedicated, reserves and production that are in either state or Federal domains, located seaward of the coastline.	*Energy*
Offsite-produced energy for heat, power, and electricity generation	This measure of energy consumption, which is equivalent to purchased energy includes energy produced off-site and consumed onsite. It excludes energy produced and consumed onsite, energy used as raw material input, and electricity losses.	*Energy*
Off-system	Any point not on or directly interconnected with a transportation, storage, and/or distribution system operated by a natural gas company within a state.	*Energy*
Off system (natural gas)	Natural gas that is transported to the end user by the company making final delivery of the gas to the end user. The end user purchases the gas from another company, such as a producer or marketer, not from the delivering company (typically a local distribution company or a pipeline company).	*Energy*
Off-take or Off-take drift	a raised section of the upcast shaft above the surface to carry off steam and smoke produced by the engines and the ventilation furnace underground; or a drift, driven from the surface, to the point in a pumping shaft where the pump discharges the water. This was usually where a mine had been sunk on a hillside. The drift would be driven from the hillside to the shaft. Also called an 'off-take level'. (Scot.). –see also Delivery drift.	*Mining*
ofhc	Oxygen-free high-conductivity copper. The industrial designation of the pure copper used in a Type T thermocouple.	*General*
OFT	Office of Fair Trading, a UK body which investigates alleged breaches of the Competition Act, and is empowered to take legal action as it deems fit.	*Quality*
Ohio AFL-CIO	the official weekly publication is News and Views.	*Industrial Relations*
Ohio State University-Labor and Research Service	Address: Labor Education and Research Service, Ohio State University, Columbus, Ohio.	*Industrial Relations*
Ohm	A measure of the electrical resistance of a material equal to the resistance of a circuit in which the potential difference of 1 volt produces a current of 1 ampere.	*Energy*
Ohm	Unit of electrical resistance. If a 1 volt source is connected to a wire with a resistance of 1 ohm, then 1 ampere of electric current will flow.	*Electrical*
Ohm	Unit of measure of electrical resistance.	*Energy*
Ohmeter	An instrument used to measure electrical resistance.	*Electronic Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Ohm's law	Relationship between voltage, current, and resistance in an electrical circuit.	*Material Process*
Ohm's Law	In a given electrical circuit, the amount of current in amperes is equal to the pressure in volts divided by the resistance, in ohms. The principle is named after the German scientist Georg Simon Ohm.	*Energy*
Oil	A mixture of hydrocarbons usually existing in the liquid state in natural underground pools or reservoirs. Gas is often found in association with oil. Also see Petroleum.	*Energy*
Oil	A liquid of vegetable, animal, mineral or synthetic origin that provides the basis for increased wear resistance as well as an income to those in the business of providing value.	*Lubrication*
Oil Analysis	The process of monitoring the condition of equipment through the analysis of oil properties and other lubricants. Typically, oil analysis is conducted through the measurement of particulates in the oil, or the chemical composition of the oil (spectrographic oil analysis). It is commonly used for monitoring the condition of large gearboxes, engines, and transformers. See Oil Monitoring, and Oil Debris Monitoring.	*Maintenance*
Oil Analysis	The routine activity of analyzing lubricant properties and suspended contaminants for the purpose of monitoring and reporting timely, meaningful and accurate information on lubricant and machine condition.	*Lubrication*
Oil bass or Oil shale	shale worked for oil.	*Mining*
Oil battery	A system or arrangement of tanks or other surface equipment or devices receiving the effluent of one or more wells for the purpose of separation and measurement prior to the delivery to market or other disposition.	*Petroleum Engineering*
Oil company use	Includes sales to drilling companies, pipelines or other related oil companies not engaged in the selling of petroleum products. Includes fuel oil that was purchased or produced and used by company facilities for the operation of drilling equipment, other field or refinery operations, and space heating at petroleum refineries, pipeline companies, and oil-drilling companies. Oil used to bunker vessels is counted under vessel bunkering. Sales to other oil companies for field use are included, but sales for use as refinery charging stocks are excluded.	*Energy*
Oil Consumption	The amount of lubricating fluid that is consumed by a machine, production line, plant or company over a given period of time.	*Lubrication*
Oil Consumption Ratio	Annual oil purchases divided by machine charge volume. For example, if you purchased 10,000 gallons of oil in one year and the total amount of oil that all of your machine holds is 4,200 gallons, your consumption ratio is 2.4.	*Lubrication*
Oil content (D721)-0.5	percent maximum;	*Energy*
Oil content (D721)-0.51	percent minimum to 15 percent maximum.	*Energy*
Oil Debris Monitoring	The analysis of metallic particles that collect in oil to gauge the degree of machine degradation. A variety of techniques may be employed, which include: Laboratory analysis of collected oil samples	*Maintenance*
Oil Drain	A large bolt or plug that secures the drain hole in the oil pan. It is generally fitted with a gasket or O-ring to prevent leakage.	*Lubrication*
Oil Field	A geographical area under which an oil reservoir lies.	*Petroleum Drilling*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Oil Field	An area which is underlain by one or more reservoirs containing oil.	*Petroleum Drilling*
Oil field	A geographic area under which an oil reservoir lies.	*Petroleum Drilling*
Oil Filter	A device which removes the inherent or introduced impurities from the oil that lubricates an internal-combustion engine.	*Lubrication*
Oil Flushing	A fluid circulation process that is designed to remove contamination and decomposition from a lubrication-based system.	*Lubrication*
Oil In Place	An estimated measure of the total amount of oil contained in a reservoir, and, as such, a higher figure than the estimated recoverable reserves of oil.	*Petroleum Drilling*
Oil in place	An estimated measure of the total amount of oil contained in a reservoir, and, as such, a higher figure than the estimated recoverable reserves of oil.	*Petroleum Drilling*
Oil marketer	A business dedicated to the development and marketing of lubricants for commercial and consumer equipment. Oil marketers and their additive company partners work closely with OEMs to develop lubricants which allow equipment to function.	*Mechanical, Process, and Operations*
Oil Mist	A method of lubricant delivery in which oil is piped throughout the machine to desired locations and dispensed with a spray nozzle. Oil mist systems are employed to cool and lubricate many machine parts at once.	*Reliability Engineering*
Oil Mist Lubrication	A method of lubricant delivery in which oil is piped throughout the machine to desired locations and dispensed with a spray nozzle. Oil mist systems are employed to cool and lubricate many machine parts at once.	*Lubrication*
Oil Mist System	A device which delivers lubricant to multiple machine parts at once via a setup that includes piping and a spray nozzle.	*Lubrication*
Oil Monitoring	Oil monitoring is the practice of regularly checking oil to assess the level of oil degradation to determine the oil's suitability for continued use as a lubricant, power transmission medium, or coolant. A variety of techniques are typically applied, which include: Subjective inspection	*Maintenance*
Oil Oxidation	Occurs when oxygen attacks petroleum fluids. The process is accelerated by heat, light, metal catalysts and the presence of water, acids, or solid contaminants. It leads to increased viscosity and deposit formation.	*Lubrication*
Oil Pool	An underground reservoir or trap containing oil.	*Petroleum Drilling*
Oil reservoir	An underground pool of liquid consisting of hydrocarbons, sulfur, oxygen, and nitrogen trapped within a geological formation and protected from evaporation by the overlying mineral strata.	*Energy*
Oil Ring	A loose ring, the inner surface of which rides a shaft or journal and dips into a reservoir of lubricant from which it carries the lubricant to the top of a bearing by its rotation with the shaft.	*Lubrication*
Oil Sampling	A procedure which involves the collection of a volume of fluid from lubricated or hydraulic machinery for the purpose of performing oil analysis. Samples are typically drawn into a clean bottle which is sealed and sent to a laboratory for analytical work.	*Reliability Engineering*
Oil sands	Naturally occurring mixture of bitumen (a heavy, viscous form of crude oil), water, sand and clay. Using hydroprocessing technology, bitumen can be refined to yield synthetic crude oil.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Oil shale	A sedimentary rock containing kerogen, a solid organic material.	*Energy*
Oil stocks	Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products.	*Energy*
Oil well	A well completed for the production of crude oil from at least one oil zone or reservoir.	*Energy*
Oil well (casing head) gas	Associated and dissolved gas produced along with crude oil from oil completions.	*Energy*
Oil Workers	refers to the Oil Workers International Union (CIO) which, after its merger with United Gas, Coke and Chemical Workers (CIO), adopted the name Oil, Chemical, and Atomic workers International Union (AFL-CIO)	*Industrial Relations*
Oil	A mixture of liquid hydrocarbons of different molecular weights.	*Petroleum Drilling*
Oil, Chemical, and Atomic Workers International Union (AFL-CIO)	in March 1955 the Oil Workers International Union (CIO) merged with the United Gas, Coke and Chemical Workers of America (CIO) to form the Organization.	*Industrial Relations*
Oiler	A device for once-through lubrication. Three common types of oilers are: drop-feed, wick-feed, and bottle-feed; all depend on gravity to induce a metered flow of oil to the bearing. The drop-feed oiler delivers oil from the bottom of a reservoir to a bearing one drop at a time; flow rate is controlled by a needle valve at the top of the reservoir. In a wick-feed oiler, the oil flows through a wick and drops from the end of the wick into the bearing; feed is regulated by chaining the number of strands, by raising or lowering the oil level, or by applying pressure to the wick. In a bottle-feed oiler, a vacuum at the top of the jar keeps the fluid from running out; as tiny bubbles of air enter, the vacuum is reduced and a small amount of oil enters the bearing or is added to a reservoir from wick the bearing is lubricated.	*Lubrication*
Oiliness	That property of a lubricant that produces low friction under conditions of boundary lubrication. The lower the friction, the greater the oiliness.	*Lubrication*
Oiliness Agent	A material which forms an adsorbed film to reduce friction. An additive, usually polar in nature, used to improve the lubricity of a mineral oil. Now usually called a boundary lubrication additive.	*Lubrication*
OIS	Operator Interface Station. A kind of HMI.	*Control Engineering*
OJT	See: On-the-Job Training	*Industrial Relations*
Oklahoma State AFL-CIO	address: 531 Commerce Exchange Building, Oklahoma City, Oklahoma.	*Industrial Relations*
Old Age	a term which is undergoing redefinition because of great advances in medical and other technology which have increased the life span of individuals.	*Industrial Relations*
Old Age and Survivors' Insurance (OASI)	income and benefit payments for retirement through social security legislation.	*Industrial Relations*
Old Age Assistance	a form of public assistance under the Social Security Act designed to assist individuals in need who through the years have not built up social insurance rights or where their needs are greater than those presently provided by social insurance benefits.	*Industrial Relations*
Old age Benefit Taxes	levies under the Federal Insurance Contributions Act which apply both to employees and employers, based on wages paid in certain covered employments.	*Industrial Relations*

Term	Definition	Industry
Old Age Insurance	generally refers to the provisions of the Social Security Act of 1935, which established a federal old-age insurance system.	*Industrial Relations*
Old Age Insurance Act	See: Old Age Insurance	*Industrial Relations*
Old field	A field discovered prior to the report year.	*Energy*
Old men	a reference to any previous generation of miners. Old workings were known as 'old men's workings'.	*Mining*
Old reservoir	A reservoir discovered prior to the report year.	*Energy*
Old workings	workings in coal made at some former time from the same or some other shaft.	*Mining*
Older Person	See: Older Worker	*Industrial Relations*
Older Worker	Older Worker - a term somewhat nebulous in meaning. From the employer's point of view it may imply that the individual has reached the age at which he no longer is sufficiently alert and efficient to shoulder the responsibilities and duties of his job.	*Industrial Relations*
Oldest Local Union in the Country	this honor apparently should be given to eh Columbia Typographical Union of Washington, D.C., which has been continuously in existence since 1815.	*Industrial Relations*
OLDHAM coupling	A double slider connection used to connect shafts which have only lateral misalignment.	*Mechanical*
OLE	Object Linking and Embedding, Microsoft's greatest contribution to industrial control, allows operators to link the same object in several different applications.	*Control Engineering*
Oleamide	An ivory-colored powder used as a slip additive in polyolefins.	*Engineering Physics*
O'Leary's Corollary	(To Murphy's Law) - Murphy was an optimist. (An alternative version states if everything seems to be going well, you have clearly overlooked something.)	*Quality*
Olefinic hydrocarbons (olefins)	Unsaturated hydrocarbon compounds with the general formula CnH2n containing at least one carbon-to-carbon double-bond. Olefins are produced at crude oil refineries and petrochemical plants and are not naturally occurring constituents of oil and natural gas. Sometimes referred to as alkenes or unsaturated hydrocarbons. Excludes aromatics.	*Energy*
Olefins	see alkenes.	*Chemical*
Olefins	The group of unsaturated hydrocarbons named after the corresponding paraffins by the addition of the "ene" and "ylene" to the stem. Examples are ethylene, propylene and butenes. Polymers of olefins and sometimes called olefin plastics or polyolefins.	*Engineering Physics*
Olefins	A family of unsaturated hydrocarbons with one carbon-carbon double bond and the general formula CnH2n.	*Petroleum Engineering*
Olefins (Akenes)	Unsaturated aliphatic hydrocarbons of the formula CnH2n, having one double bond.	*Material Process*
Oligomer	A polymer consisting of only a few monomer units such as a dimer, trimer, tetramer, etc. or their mixtures. Other definitions in the literature place the upper limit of repeating units in an oligomer at about ten.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Oligopoly	A market in which there are only a small number of suppliers, and no prospect of new ones, thus limiting competitive choice and, perhaps, presaging the emergence of a cartel (qv). Contrast Monopsony.	*Quality*
Oligopsony	a form of monopoly or control by a small number of buyers who are in a position to influence the demand for a particular commodity.	*Industrial Relations*
Olsen v. Nebraska	a decision of the United States Supreme Court in 1941 which upheld the right of the State of Nebraska to withhold a license from a private employment agency which had failed to limit fees for its services in line with the provisions in state law.	*Industrial Relations*
OMAT (Office of Manpower, Automation and Training)	See: Manpower; Manpower Administration, U.S. Dept. of Labor	*Industrial Relations*
OMB	Office of Management and Budget (US)	*Petro-Chemical Abbreviations*
Ombudsman	The role of the two Ombudsmen is to help resolve areas of conflict that arise between people or entities within The Cochrane Collaboration, for which the usual process of involving the Directors of the reference Cochrane Centre(s) has not been sufficient. The Ombudsmen are appointed by the CCSG (and must not be current members of the CCSG). They report to the CCSG every six months giving details of their activity during the period, but not identifying specific details if, in the opinion of the Ombudsmen, there is a need for these details to remain confidential. If the Ombudsmen are unable to resolve an issue, it can be referred to the CCSG.	*Quality Engineering*
OMEGA	An OMEGA receiver provides position information that can be used to update the aircraft navigation position. OMEGA is the least accurate method of obtaining position information.	*Aeronautical Engineering*
OMS	Office of Mobile Sources (EPA)	*Petro-Chemical Abbreviations*
On a horizontal surface	on a horizontal surface.	*Mining*
On bord	advancing at right angles to the line of main cleat.	*Mining*
On Delay Logic	An adjustable delay (after onset of input signal) before output is energized.	*Electrical Engineering*
On end	advancing in the same direction as the line of main cleat.	*Mining*
On the brushes	a place where boots were cleaned by rotating brushes, usually near to the entrance to the pithead baths. Also where grease could be applied to boots.	*Mining*
On the grind	when the roof is working and ready to fall. (Mids.).	*Mining*
On/off Controller	A controller whose action is fully on or fully off.	*Electronic Process*
On-Call Time Pay	a method of compensation whereby the individual is paid for the time during which he is "on call" or on standby, ready and able to go to work.	*Industrial Relations*
On-Condition Maintenance	See Condition Based Maintenance	*Plant Engineering*
Oncost men, another term for day-wage men	see also Dataller.	*Mining*

Term	Definition	*Industry*
Oncost work	see Backwork	*Mining*
One variation of this process utilizes autofrettage (hydraulic expansion) and heat treatment, above the recrystallization temperature of the material, to produce a wrought structure	One variation of this process utilizes autofrettage (hydraulic expansion) and heat treatment, above the recrystallization temperature of the material, to produce a wrought structure.	*Maintenance and Repair*
One Big Union	Refers to the movement started about 1903 by the Western Federation of Miners which attempted to join all workers of the United States and perhaps of the whole world into a single revolutionary organization.	*Industrial Relations*
One Hundred Percent Premium Plan	an incentive plan which is also referred to as a "standard hour" plan. The worker is paid in direct proportion to his output.	*Industrial Relations*
one or more flow passages to change condition	Removal of the signal allows the pressure sensing valve to reset.	*Mechanical, Process, and Operations*
One Piece Construction	Refers to integral flanged or other equipment made from a single piece of steel. Must not be welded or fabricated or assembled.	*Petroleum Engineering*
One Piece Flow	Another alias of Just-in-Time (qv).	*Quality*
One sun	Natural solar insulation falling on an object without concentration or diffusion of the solar rays.	*Energy*
One way	particular class of house coal (S. Staffs.).	*Mining*
One-Man Town	the term generally is used as the equivalent of a company town where a single company or corporation or large industrialist owns the plant facilities, the company store, the housing, and other facilities primarily because the plant is located in an isolated community.	*Industrial Relations*
One-shot Logic	see Pulsed Logic.	*Electrical Engineering*
One-sided test	See One-tailed test	*Quality Engineering*
One-tailed test	A hypothesis test in which the values for which we can reject the null hypothesis are located entirely in one tail of the probability distribution. Testing whether one treatment is better than another (rather than testing whether one treatment is either better or worse than another) would be a one-tailed test. See also: Two-tailed Also called: One-sided test	*Quality Engineering*
One-time fee	The fee assessed a nuclear utility for spent nuclear fuel (SNF) or solidified high-level radioactive waste derived from SNF, which fuel was used to generate electricity in a civilian nuclear power reactor prior to April 7, 1983, and which is assessed by applying industry-wide average dollar-per-kilogram charges to four distinct ranges of fuel burn up so that equivalent to an industry-wide average charge of 1.0 mill per kilowatt hour.	*Energy*
One-to-One Organization	a form of personnel structure in which supervision is direct supervision of one employee over the work of another employee.	*Industrial Relations*
On-highway use (diesel)	Includes sales for use in motor vehicles. Volumes used by companies in the marketing and distribution of petroleum products are also included.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Online order entry system	A computer-based system that enables distributors, field-sales representatives, and even customers to place orders directly, over the Internet or a corporate intranet, without intervention by an inside salesperson. An Internet-based transaction might be initiated by accessing a Web page, then choosing a sales-order-entry option. The software often includes a product configurator and pricing "engine," and may be linked to production scheduling systems.	*Quality*
On-peak	Periods of relatively high system demand. These periods often occur in daily, weekly, and seasonal patterns; these on-peak periods differ for each individual electric utility.	*Energy*
On-Peak Energy	Energy supplied during periods of relatively high system demand as specified by the supplier.	*Energy*
Onsetter	a person in charge of winding operations underground. He is stationed at the shaft bottom and gives signals to the winding engineman also the man who loads the cage at the shaft bottom or at another landing or stopping place within the shaft. Also called the 'hitcher', 'hooker' or 'hanger-on'; or men who put the full tubs in and take the empty tubs out of the cage at the shaft bottom, or at any other landing.	*Mining*
On-site Maintenance	Maintenance carried out at the location where the asset is used.	*Maintenance*
Onsite transportation	The direct nonprocess end use that includes energy used in vehicles and transportation equipment that primarily consume energy within the boundaries of the establishment. Energy used in vehicles that are found primarily offsite, such as delivery trucks, is not measured by the MECS (an EIA survey).	*Energy*
On-system	Any point on or directly interconnected with a transportation, storage, or distribution system operated by a natural gas company.	*Energy*
Onsystem (natural gas)	Natural gas that is sold (and transported) to the end user by the company making final delivery of the gas to the end user. Companies that make final delivery of natural gas are typically local distribution companies or pipeline companies.	*Energy*
On-system sales	Sales to customers where the delivery point is a point on, or directly interconnected with, a transportation, storage, and/or distribution system operated by the reporting company.	*Energy*
On-the-Job Training (OJT)	a procedure which utilizes the actual job or work site as the place at which an individual receives instruction while at the same time engaging in productive work.	*Industrial Relations*
On-time Delivery Rate	The percentage of time that ordered products are received by customers by the specified time or date. Some plants will base this calculation on the date "promised" to customers, but better facilities typically will calculate it against dates "requested" by customers.	*Maintenance*
OOP	Out of Production.	*Quality*
Ooster	clinker formed in the mine-hearths where blackband iron stone is calcined (N. Staffs.).	*Mining*
OPA	See: Office of Price Administration	*Industrial Relations*
Opacity	Total loss of image transmission.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Opacity	The characteristic of an object that prevents light from passing through. The opposite of translucent. Opaque objects are easy to detect since they block light almost entirely.	*Electrical Engineering*
Opalescence	Diffusion within a sheet of transparent plastic, or at its surface which interferes with the clarity of vision through the sheet at any angle.	*Material Process*
Opalon	A trade name for cast phenolic plastics.	*Material Process*
OPC	OLE for process control.	*Control Engineering*
OPCM	See: Plasterers' and Cement Masons' International Association of the United States and Canada; Operative (AFL-CIO)	*Industrial Relations*
OPEC	See Organization of Petroleum Exporting Countries.	*Energy*
OPEC (Organization of the Petroleum Exporting Countries)	An intergovernmental organization whose stated objective is to "coordinate and unify the petroleum policies of member countries." It was created at the Baghdad Conference on September 10-14, 1960. Current members (with years of membership) include:	*Energy*
Open access	A regulatory mandate to allow others to use a utility's transmission and distribution facilities to move bulk power from one point to another on a nondiscriminatory basis for a cost-based fee.	*Energy*
Open access (electric)	Federal Energy Regulatory Commission Order No. 888 requires public utilities to provide non-discriminatory transmission service over their transmission facilities to third parties to move bulk power from one point to another on a nondiscriminatory basis for a cost-based fee. Order 890 expanded Open Access to cover the methodology for calculating available transmission transfer capability; improvements that opened a coordinated transmission planning processes; standardization of energy and generation imbalance charges; and other reforms regarding the designation and undesignation of transmission network resources. See NERC definition.	*Energy*
Open Access Same-Time Information System (OASIS)	OASIS is a real-time information-sharing system that enables all buyers and sellers of electricity to access the transmission costs for all other buyers and sellers. This system is designed to ensure that transmission owners and their affiliates do not have an unfair advantage in using transmission to sell power.	*Energy*
Open access transmission tariff (electric)	Electronic transmission tariff accepted by the U.S. Federal Energy Regulatory Commission requiring the Transmission Service Provider to furnish to all shippers with non-discriminating service comparable to that provided by Transmission Owners to themselves. See NERC definition.	*Energy*
Open Access	Access to the electric transmission system by any legitimate market participant, including utilities, independent power producers, cogenerators, and power marketers.	*Energy*
Open bubble	Bubble which has broken partly through the surface of a plastic.	*Material Process*
Open bubble point (boil point)	The differential gas pressure at which gas bubbles are profusely emitted from the entire surface of a wetted filter element under specified test conditions.	*Oil Analysis*
Open center circuit	One in which pump delivery flows freely through the system and back to the reservoir in neutral.	*Mechanical, Process, and Operations*

Please see the Appendix for further illustration

Term	Definition	Industry
Open center system	A hydraulic system in which the control valves are open to continuous oil flow, even in neutral. Pressure in this system is varied, but flow remains constant.	*Mechanical, Process, and Operations*
Open Center Valve	A valve in which the inlet and outlet ports are open in the neutral position, allowing a continuous flow of oil from pump.	*Mechanical, Process, and Operations*
Open Circuit	The lack of electrical contact in any part of the measuring circuit. An open circuit is usually characterized by rapid large jumps in displayed potential, followed by an off-scale reading.	*Electrical*
Open clinical trial	There are at least three possible meanings for this term: 1. A clinical trial in which the investigator and participant are aware which intervention is being used for which participant (i.e. not blinded). Random allocation may or may not be used in such trials. Sometimes called an 'open label' design. 2. A clinical trial in which the investigator decides which intervention is to be used (non-random allocation). This is sometimes called an open label design (but some trials which are said to be 'open label', are randomized). 3. A clinical trial that uses an open sequential design.	*Quality Engineering*
Open Dies	Metal is not confined.	*Metallurgy*
Open Door Principle	the principle that is should be possible for any employee to speak to any of the employer's executives, including the chief executive or president, on any matter which is of concern to the employee, including the handling of his personal grievances.	*Industrial Relations*
Open End or Open Back Barrel	for use with expansion adapters.	*Petroleum Drilling*
Open end pillaring	A method of mining pillars in which no stump is left; the pockets driven are open on the gob side and the roof is supported by timber.	*Mining*
Open Gear	A gear that is exposed to the environment, rather than being housed in a protective gear box. Open gears are generally large, heavily loaded, and slow moving. They are found in such applications as mining and construction machinery, punch presses, plastic and rubber mills, tube mills, and rotary kilns. Open gears require viscous, adhesive lubricants that bond to the metal surfaces and resist run-off. Such lubricants are often called gear shields. Top-quality lubricants for such applications are specially formulated to protect the gears against the effects of water and other contaminants.	*Lubrication*
Open hole	Opencast working.	*Mining*
Open House	the procedure used by many companies in the 1930's and still used occasionally, which is a combination of a conducted tour, a reception, a party, and an opportunity for the community to become familiar with the particular plant.	*Industrial Relations*
Open Loop	Controller in manual mode. See Mode.	*Process Control*
Open Loop	control provides precomputed or preconceived drive signals to the exciter system without modifying or refining those signals based on observation of the resulting motion. See also **Closed Loop**.	*Reliability Engineering*
Open Market Coal	Coal sold in the open market (i.e., coal sold to companies other than in the reporting company's parent company or an operating subsidiary of the parent company).	*Energy*

Term	Definition	*Industry*
Open off	to begin mining coal from a new mine, or a new district within a mine, off headings that have been driven from the shaft into the seam.	*Mining*
Open Order (or Scheduled Receipt)	One of the three plan types in closed-loop MRP (along with the planned order and the firm plan), the open plan being a plan which has been released to the shop floor for work to start (*). Similarly, an open purchase order is a planned purchase in the MRP system which a supplier has committed to transit. When materials plans are assessed by the closed-loop MRP system with regard to their timeliness and the appropriateness of their quantities, open plans cannot be rescheduled to different dates if they are found to have due dates earlier or later than that those that are indicated by strict materials planning logic as being needed. Instead, the open plans are left with their existing dates (and quantities). However, messages are produced by the system commanding the planner, shop supervisor or buyer to reschedule the plans by direct manual intervention in the system. (*When planned or firm planned orders are "released to manufacture", usually by the planner in charge, the MRP system changes their status to that of being "open".) The open plan is also referred to as a scheduled receipt, which self obviously it is. The difference is purely semantic.	*Quality*
Open order	An order to buy or sell stock, which is good until cancelled by the client.	*Mining*
Open out	to drive headings out or commence working in the coal after sinking the shaft.	*Mining*
Open Pit	another name for opencast workings.	*Mining*
Open Pit Mine	Because of the danger associated with drifts, open pit mines are dug from the ground down and are never tunneled and are the most common form of hard rocking mining today.	*Mining*
Open pit	A mine that is entirely on surface. Also referred to as open-cut or open-cast mine.	*Mining*
Open Plan	See Open Order.	*Quality*
Open refrigeration unit	Refrigeration in cabinets (units) without covers or with flexible covers made of plastic or some other material, hung in strips or curtains (fringed material, usually plastic, that push aside like a bead curtain). Flexible covers stop the flow of warm air into the refrigerated space.	*Energy*
Open sequential design	A sequential trial where the decision to stop the trial rests on the size of effect in those studies, and there is no finite maximum number of participants in the study.	*Quality Engineering*
Open set	a 'cundie'; or an unfilled space between two packs. (Scot.).	*Mining*
Open Shop	a plant in which, in theory, workers are employed regardless of union affiliation.	*Industrial Relations*
Open Shop Drive	a campaign spearheaded by various major national employer associations to reduce union activity and to substitute the so-called "American Plan" which in effect was to keep the unions from obtaining any measure of strength within the plants.	*Industrial Relations*
Open Socket	A wire rope fitting that consists of a basket and two ears with a pin. See FITTING.	*Wire Rope & Cable*
Open State	The state a pinch valve is in when the tubing is not pinched.	*Mechanical*
Open System	Capable of automatic communication and information exchange without any proprietary or system specific, software links.	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Open Systems	Open systems are customarily defined as those systems that can be supplied by hardware components from multiple vendors, and whose software can be operated from different platforms. They are opposite to closed or proprietary systems.	*Control Engineering*
Open Trade	a condition in a particular job area or occupation or trade which does not limit entry.	*Industrial Relations*
Open Union	a labor organization which all qualified employees are permitted to join.	*Industrial Relations*
Open wheel	Refers to any type of racecar that does not have enclosed wheels. Formula 1 and CART are open-wheel cars. Stock cars and sports cars are typically based more closely on production cars, with the wheels enclosed within fenders.	*NASCAR*
Opencast	the working of coal at the surface outcrop by quarrying methods; or underground, a cutting in stone, coal, &c., usually in the bottom of a place where a ridge has been passed over, and where it is less expensive to cut down the whole of the ridge to make a uniform roadway or rolleyway than to drive a stone drift through it.	*Mining*
Open-End Clause (Open-End Wage Clause)	a provision in a collective bargaining agreement which, although fixed for a period of time, is still open for adjustments of wages under certain conditions.	*Industrial Relations*
Opening out of seams	the commencement of longwall working.	*Mining*
Openings	short headings, between two main headings, used for ventilation.	*Mining*
Open-pit coal mining	essentially a combination of contour and area mining methods and is used to mine thick, steeply inclined coalbeds. The overburden is removed by power shovels and trucks.	*Energy*
Operable capacity	The amount of capacity that, at the beginning of the period, is in operation; not in operation and not under active repair, but capable of being placed in operation within 30 days; or not in operation but under active repair that can be completed within 90 days. Operable capacity is the sum of the operating and idle capacity and is measured in barrels per calendar day or barrels per stream day.	*Energy*
Operable generators/units	Electric generators or generating units that are available to provide power to the grid or generating units that have been providing power to the grid but are temporarily shut down. This includes units in standby status, units out of service for an indefinite period, and new units that have their construction complete and are ready to provide test generation. A nuclear unit is operable once it receives its Full Power Operating License.	*Energy*
Operable nuclear unit (foreign)	A nuclear generating unit outside the United States that generates electricity for a grid.	*Energy*
Operable nuclear unit (U.S.)	A U.S. nuclear generating unit that has completed low-power testing and is in possession of a full-power operating license issued by the Nuclear Regulatory Commission.	*Energy*
Operable refineries	Refineries that were in one of the following three categories at the beginning of a given year in operation; not in operation and not under active repair, but capable of being placed into operation within 30 days; or not in operation, but under active repair that could be completed within 90 days.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Operable unit	A unit available to provide electric power to the grid. See definition for operating unit.	*Energy*
Operable utilization rate	Represents the use of the atmospheric crude oil distillation units. The rate is calculated by dividing the gross input to these units by the operable refining capacity of the units.	*Energy*
Operated	Exercised management responsibility for the day-to-day operations of natural gas production, gathering, treating, processing, transportation, storage, and/or distribution facilities and/or a synthetic natural gas plant.	*Energy*
Operated Contact Position	The position to which the contacts move when the plunger is traveled to the operating point or into the overtravel range.	*Electrical Engineering*
Operating band	The range of pressures above and below the operating pressure within which it is desired to keep the supply output.	*Mechanical, Process, and Operations*
Operating capacity	The component of operable capacity that is in operation at the beginning of the period.	*Energy*
Operating Characteristic	The probabilities of acceptance of incoming lots of parts of various quality levels, resulting from the employment of a given sample plan. The operating characteristics of a plan can be handily illustrated as a curve - see OC Curve. OC curves were at one time termed "probability of acceptance curves".	*Quality*
Operating Characteristics of a Switch	The commonly specified force, torque and linear or angular travel properties of a switch. Examples: operating or release force, operating point, differential, overtravel.	*Electrical Engineering*
Operating Conditions (such as ambient temperature, ambient pressure, vibration, etc.)	to which a device is subject, but not including the variable measured by the device.	*Process Control*
Operating Conditions, Normal	The range of operating conditions within which a device is designed to operate, and under which operating influences are usually stated.	*Process Control*
Operating Content	The Operational Situation Within Which An Asset Operates. For Example, Is It A Stand-Alone Piece Of Plant, Or Is It One Of A Duty-Standby Pair? Is It Part Of A Batch Manufacturing Process Or A Continuous Production Process? What Is The Impact Of Failure Of This Item Of Equipment On The Remainder Of The Production Process? The Operating Context Has Enormous Influence Over The Choice Of Appropriate Equipment Maintenance Strategies For Any Asset.	*Plant Engineering*
Operating day	A normal business day. Days when a company conducts business due to emergencies or other unexpected events are not included.	*Energy*
Operating equipment efficiency or effectiveness (OEE)	The percentage of time that equipment, when running or required for production, is producing good-quality products at an acceptable rate. It is the product of three ratios, availability, performance and quality. OEE equals machine availability as a percentage of scheduled uptime x quality yield percentage of all products for a given line x percentage of optimal production rate at which equipment operates.	*Quality*
Operating expenses	Segment expenses related both to revenue from sales to unaffiliated customers and revenue from intersegment sales or transfers, excluding loss on disposition of property, plant, and equipment; interest expenses and financial charges; foreign currency translation effects; minority interest; and income taxes.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Operating Force	The force which must be applied to the plunger to cause the moving contact to snap from the normal contact position to the operated contact position.	*Electrical Engineering*
Operating Hours	The (accumulated) length of time that an item of equipment is actually operating.	*Maintenance*
Operating income	Operating revenues less operating expenses. Excludes items of other revenue and expense, such as equity in earnings of unconsolidated affiliates, dividends, interest income and expense, income taxes, extraordinary items, and cumulative effects of accounting changes.	*Energy*
Operating Mode	Refers to the condition of the photosensor (dark or light illuminated) that energizes output. A mode selector switch determines the operating mode.	*Electrical Engineering*
Operating Point	That position of the plunger at which the contacts snap from the normal contact position to the operated contact position.	*Electrical Engineering*
Operating Pressure	The pressure at which a system is normally operated.	*Mechanical, Process, and Operations*
Operating revenues	Segment revenues both from sales to unaffiliated customers (i.e., revenue from customers outside the enterprise as reported in the company's consolidated income statement) and from intersegment sales or transfers, if any, of product and services similar to those sold to unaffiliated customers, excluding equity in earnings of unconsolidated affiliates; dividend and interest income; gain on disposition of property, plant, and equipment; and foreign currency translation effects.	*Energy*
Operating specifications (OPSpecs)	Used here to describe the imprecision and inaccuracy that are allowable and the QC that is necessary to assure, at a stated level, that a defined quality requirement will be achieved in routine operation.	*Quality*
Operating subsidiary	Company that operates a coal mining operation and is owned by another company (i.e., the parent company).	*Energy*
Operating System	A collection of programs that controls the overall operation of a computer and performs such tasks as assigning places in memory to programs and data, processing interrupts, scheduling jobs and controlling the overall input/output of the system.	*General*
Operating System	A collection of programs that controls the overall operation of a computer and performs such tasks as assigning places in memory to programs and data, processing interrupts, scheduling jobs and controlling the overall input/output of the system.	*Electronic Process*
Operating Temperature	The actual range over which sensors can be operated. Usage outside the temperature limits will result in loss of stability, change in operate point and possible permanent damage to the sensor. Nominal sensing distance is determined at 25 C.	*Electrical Engineering*
Operating time	The time required for a power operator to stroke the valve from the full open to full closed position, or vice-versa.	*Mechanical*
Operating unit	A unit that is in operation at the beginning of the reporting period.	*Energy*
Operating utilization rate	Represents the use of the atmospheric crude oil distillation units. The rate is calculated by dividing the gross input to these units by the operating refining capacity of the units.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Operation and Maintenance Expenses	Costs that relate to the normal operating, maintenance and administrative activities of a business.	*Energy*
Operation Compression	In order to reduce the leadtime of a multi-operation job, the job's wait and move activities may be controlled by a colored ticket system. For example, a red ticket may indicate the job is to be moved to the head of the queue, and given priority by shop floor materials handling staff. When the job is back on schedule, the ticket should be removed. The degree of catch-up to be expected must be estimated by a supervisor. The term is synonymous with window scheduling and, more correctly, interoperation time compression.	*Quality*
Operation Overlapping	In order to reduce the leadtime of a job involving the processing of many components, it may be possible to send some of the completed components ahead to the next operation before the first operation has finished, so that a start can be made on them. If the duration of the first operation is shorter than that of the second, calculation of the savings in leadtime is straightforward. If the first operation is longer than the second, however, calculation of the point at which to send the units ahead is slightly complex, since it is desirable that the arrival of the final units sent over should be synchronized with the completion of the units previously sent ahead to the second operation.	*Quality*
Operation Splitting	When a number of components are to be processed by a machine operation, the leadtime required to do so may be halved if 50% of the components are able to be processed by a second alternative machine. (Naturally, the operation splitting between the two machines requires that a second operator should be available, and a second set of tools.) It is noted that since there are now two works orders, each for half the original amount, planned quantities in the planning system must be corrected and an additional set of shop floor paperwork generated. It is also noted that a second set-up is required, casting doubt over the economics of splitting an operation between three machines. See also Split Batch.	*Quality*
Operational amplifier	The ideal op amp is an amplifier with infinite input impedance, infinite open-loop gain, zero output impedance, infinite bandwidth, and zero noise. It has positive and negative inputs which allow circuits that use feedback to achieve a wide range of functions.	*Electrical Engineering*
Operational amplifier	The ideal op amp is an amplifier with infinite input impedance, infinite open-loop gain, zero output impedance, infinite bandwidth, and zero noise. It has positive and negative inputs which allow circuits that use feedback to achieve a wide range of functions.	*Electrical Engineering*
Operational Consequences	A Failure Has Operational Consequences If It Has A Direct Adverse Impact On Operational Capability (Lost Production, Increased Production Costs, Loss Of Product Quality, Or Reduced Customer Service)	*Plant Engineering*
Operational Efficiency	Used In The Calculation Of Overall Equipment Effectiveness. The Actual Output Produced From An Asset In A Given Time Period Divided By The Output That Would Have Been Produced From That Asset In That Period, Had It Produced At Its Rated Capacity. Normally Expressed As A Percentage.	*Plant Engineering*
Operational Environment	The aggregate of all external and internal conditions either natural or man-made that influences the form, operational performance, reliability or survival of a system.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Operational environment	The aggregate of all external and internal conditions (such as temperature, humidity, radiation, magnetic and electric fields, shock vibration, etc.) either natural or man made, or self-induced, that influences the form, operational performance, reliability or survival of an item.	*Reliability Engineering*
Operational Equipment Asset Management (OEAM)	A comprehensive, fully integrated strategy, process, and culture used to gain the greatest lifetime effectiveness, value profitability, and return from assets.	*Reliability Engineering*
Operational Limit	The extremes beyond which a system is not expected to operate normally.	*Reliability Engineering*
Operational pH	The determination of sample pH by relating to pH measurements in a primary standard solution. This relationship assumes that electrode errors such as sensitivity and changes in asymmetry potential can be disregarded or compensated for, provided the liquid junction potential remains constant between standard and sample.	*General*
Operations	How well is equipment operating; Values - operational (all function and data is available), degraded (equipment has partially failed with some function or data unavailable and some available), failed (equipment has failed with no function or data available).	*Aeronautical Engineering*
Operations Research	See OR.	*Quality*
Operative	a spy employed by an agency. He may be a "hooked man" or a professional spy.	*Industrial Relations*
Operative Limits	The range of operating conditions to which a device may be subjected without permanent impairment of operating characteristics.	*Process Control*
Operator	The company that has legal authority to drill wells and undertake the production of hydrocarbons that are found. The Operator is often part of a consortium and acts on behalf of this consortium.	*Petroleum Drilling*
Operator	A device which converts manual, hydraulic, pneumatic or electrical energy into mechanical motion to open and close a valve. See "Power Operator"; "EMO"; "GO"; "HWO"; "MGO"; "MO."	*Mechanical*
Operator Based Maintenance	A philosophy derived from TPM, whereby basic maintenance tasks are performed by operations/production personnel. Typically such activities include cleaning and subjective inspection. Sometimes referred to as Operator Maintenance.	*Maintenance*
Operator Driven Reliability (ODR)	SKF's Operator Driven Reliability is defined as a company-wide, team-based process, which augments classic operator duties to optimize the operation of industrial production plants. ODR impacts equipment effectiveness by contributing to optimal production and financial return on investment. ODR incorporates operational, technical, and financial metrics, which are balanced to best meet the business plan of the Industrial enterprise.	*Maintenance*
Operator	The company that has legal authority to drill wells and undertake the production of hydrocarbons that are found. The Operator is often part of a consortium and acts on behalf of this consortium.	*Petroleum Drilling*
Operator, gas plant	The person responsible for the management and day-to-day operation of one or more natural gas processing plants as of December 31 of the report year. The operator is generally a working-interest owner or a company under contract to the working-interest owner(s). Plants shut down during the report year are also to be considered "operated" as of December 31	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Operator, oil and/or gas well	The person responsible for the management and day-to-day operation of one or more crude oil and/or natural gas wells as of December 31 of the report year. The operator is generally a working-interest owner or a company under contract to the working-interest owner(s). Wells included are those that have proved reserves of crude oil, natural gas, and/or lease condensate in the reservoirs associated with them, whether or not they are producing. Wells abandoned during the report year are also to be considered "operated" as of December 31.	*Energy*
Operator-Driven Reliability	Also known as Total Productive Maintenance or autonomous maintenance. It is maintenance tasks that are performed by the machine operator/operations crew/production department rather than the maintenance staff. It generally includes tasks such as lubricating and tightening machine parts, and changing filters or belts.	*Reliability Engineering*
Opinion Survey	a procedure widely used by personnel managers to obtain information about the basic attitudes of various groups of employees within the organization.	*Industrial Relations*
O-plate	O-plate, the hutches were turned at the junction of roadways. (Scot.).	*Mining*
Opportunity Cost	The potential benefit that is given up when one alternative is selected over another.	*Procurement*
Opposed Spins	Electrons with different fourth quantum numbers	*Physics*
Oppressive Child Labor	this has been generally defined under the Fair Labor Standards Act as work by children under 16 in "nonexcepted occupations" or work by minors under 18 years of age in "hazardous occupations".	*Industrial Relations*
Oppressive Labor Practices	activities of trade unions which, in cases of early organization and frequently during periods of serious strikes, involve violence, sabotage, and other coercive activities which go beyond the persuasion and peaceful picketing allowed by law.	*Industrial Relations*
OPRG	Oxygenated fuels Program Reformulated Gasoline is reformulated gasoline that is intended for use in an oxygenated fuels program control area during an oxygenated fuels program control period.	*Energy*
OPSpecs chart	A plot of the inaccuracy (on the y-axis) and the imprecision (on the x-axis) that are allowable for different QC procedures. The chart is prepared for a defined quality requirement and for a stated level of analytical quality assurance (AQA). Readily available in workbook format in the OPSpecs Manual and also easily prepared by the QC Validator computer program.	*Quality*
OPT	A manufacturing planning system originally written by Eliyahu Goldratt (see Theory of Constraints) for the resolution of planning difficulties in the presence of bottlenecked work centers. OPT first analyses master plan and material requirements in the normal way, and then, in a module called SPLIT, separates the products required by the plan into two lists, or divisions. (1) The first division comprises all those products for which the quantities required in the plan are in no way constrained or affected by the bottlenecks. These are known as "free products". Because they are unaffected by the bottlenecks, free products are scheduled and managed as they would be in a normal materials planning or MRP/CRP environment. (2) The second division comprises "bottlenecked products" - that is, products where the quantities required cannot be satisfied in full either because of direct capacity limitations of the equipment used in their manufacture or because components used in their manufacture cannot themselves be fully supplied because they (the components) are themselves	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	bottlenecked. The materials plans for the bottlenecked products, and all products directly or indirectly affected by them (i.e., because they are either ancestors or descendants of them), are calculated by the application of mixed integer programming, this being a variant of mathematical programming. What mathematical programming, or mathematical optimization, does is to produce a valid solution (i.e., here, a material plan), but a solution taking account of the stated capacity restrictions and in which there are consequently shortfalls in output. The shortfalls are (obviously) not decided arbitrarily. Instead, they are decided on by calculation, such that some particular, chosen measure of output (which we call an objective function) from the whole plan is optimized (i.e., either maximized or minimized). The module of OPT in which the optimization mathematics comes into play on the bottlenecked products' plans is called "The Brain of OPT". It is usually assumed in using OPT that the objective function that will be specified by the planner will be to maximize contribution (i.e., total sales revenue less cost). This, of course, is the fallacy at the centre of OPT: in the event of bottlenecked output, it must be Sales & Marketing who decide what is to be made and not made, based on the company's widest commercial interests, including an assessment of competing customer claims. Unfortunately, the application of OPT frequently falls into the hands of the company's IT experts, who are blinded by the power of mathematical optimization. The allocation of bottlenecked output cannot be made by a mathematical program based merely on maximum profit. See also Drum, Buffer, Rope for an OPT analogy. Note that the criticism of the allocation of output by mathematical means does not apply to output where Sales & Marketing - and customers - are indifferent as to the product mix, such as grades of petrol from a petroleum refinery.	
Optical and Instrument Workers of America; United (CIO)	charter withdrawn and locals become part of the International Union of Electrical, Radio, and Machine Workers (CIO), and the United Glass and Ceramic Workers of North America (CIO) in March 1954.	*Industrial Relations*
Optical Brightener	Substance that makes color appear brighter in the presence of sunlight and ultraviolet light.	*Chemistry*
Optical density	A method of expressing degree of contamination of a fluid by removal of contaminant by filtration and measuring change in optical transmission of the filter disc or fluid, or both.	*Mechanical, Process, and Operations*
Optical distortion	An apparent distortion of anything viewed through a transparent plastic, caused by the nonuniform optical character of the plastic, and not by its shape.	*Material Process*
Optical fiber	A small diameter glass fiber in which digital light pulses can be transmitted with low losses.	*Material Process*
Optical Isolation	Two networks which are connected only through an LED transmitter and photoelectric receiver with no electrical continuity between the two networks.	*Electrical*
Optical microscope	Instrument using visible light to produce images of the structure of materials at a scale greater than possible with the unaided eye.	*Material Process*
Optical Network Termination	ONT also called ONU (Optical Network Unit), refer to the consumer end equipment in an optical Fiber to the Home (FTTH) link. The ONT/ONU receives downstream data from the OLT (Optical Line Termination) through the passive optical splitters and provides video, voice, and broadband services to the consumer.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Optical Power	The power or intensity of the projected light available from a particular emitter; beam intensity.	*Electrical Engineering*
Optical property	Material characteristic relative to the nature of its interaction with light.	*Material Process*
Optical Throw	Least distance at which a scanner can read a bar code.	*Gears*
Optimization	The process of making a system as near to perfect or as effective as possible.	*Electrical*
Option	An agreement to purchase a property reached between the property vendor and some other party who wishes to explore the property further.	*Mining*
Option (on stock)	The right to buy or sell a share at a set price, regardless of market value.	*Mining*
Option Forecast	A term coined by John Proud in his book Master Scheduling to replace "production forecast (meaning (2))" used in two-level master scheduling.	*Quality*
Option Overplanning	See Over Planning.	*Quality*
Optional delivery commitment	A provision to allow the conditional purchase or sale of a specific quantity of material in addition to the firm quantity in the contract.	*Energy*
Options	A choice to buy or sell metal at an agreed-upon price for a specific date. You must pay a premium (See Put and Call).	*Metallurgy*
Options	Options are potential decisions over which a utility has a reasonable degree of control. One option might be to build a new coal-fired power plant; another option might be to refurbish an old power plant. Each option has one of more values to be specified. A specified option has a specified value such as year of implementation or size of plant. A plan is a set of specified options. A plan contains a set of decisions or commitments the utility can make, given the options available.	*Energy*
or	or	*Energy*
OR device	A control device which has its output in the logical 0 state if and only if all the control signals assume the logical 0 state.	*Mechanical, Process, and Operations*
OR Logic	An output is produced when any one or more inputs are present.	*Electrical Engineering*
or negative charge	A common ground rule in ionic compound formation.	*Material Process*
or normal mode	interference in measuring circuits.	*Process Control*
Oral Agreement (legal)	A legal contract between two parties that has been agreed verbally ("Oral contracts aren't worth the paper they're written on" - Samuel Goldwyn).	*Quality*
Orange Book, The	The name given to the book Production & Inventory Management in The Computer Age, by Oliver Wight, following its publication in 1974, on account of the color of its dust jacket. The Orange Book included the first published exposition of Closed-Loop MRP.	*Quality*
Orange Peel	An uneven surface texture of a plastic article or its finished coating somewhat resembles the surface of an orange, see Melt Fracture.	*Engineering Physics*
Orbit	The path of a shaft centerline during rotation. The orbit is usually observed on an oscilloscope connected to x- and y-axis displacement sensors. Sometimes called a Lissajous pattern.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Orbital shell	Set of electrons in a given orbital.	*Material Process*
Orbitals	Discrete energy levels in which electrons rotate around the nucleus of an atom	*Physics*
ORCB	See: Railway Conductors and Brakemen; Order of (AFL-CIO)	*Industrial Relations*
orchardist	A person who grows fruit trees.	*Agriculture*
ORD	octane requirement decrease	*Petro-Chemical Abbreviations*
Order	A ruling issued by a utility commission granting or denying an application in whole or in part. The order explains the basis for the decision, noting any dispute with the factual assertions of the applicant. Also applied to a final regulation of a utility commission.	*Energy*
Order (Customer)	See Customer Order.	*Quality*
Order fill rate	Annual sales orders filled completely divided by the total annual number of sales orders.	*Quality*
Order of Railroad Telegraphers; The (AFL-CIO)	See: Railway Telegraphers; The Order of (AFL-CIO)	*Industrial Relations*
Order of Railway Conductors and Brakesmen (Ind)	See: Railway Conductors and Brakemen; Order of (Ind)	*Industrial Relations*
Order of the Knights of St. Crispin	See: Knights of Saint Crispin	*Industrial Relations*
Order Point System (= Min/Max System)	A means of replenishing stock. A new replenishment of stock is requested from the supplier (or other replenishment source) when the company's current stock level falls to its calculated order point. The order point is calculated from three factors: (1) the forecast offtake of stock, expressed in units per time period (*); (2) the replenishment leadtime of a new delivery (*); and (3) the safety stock provided to cover forecast error. The order point is then calculated as the "lead-time demand", plus safety stock ... i.e., the offtake demand from stock forecast to occur during the replenishment leadtime, plus safety stock. Note that if the replenishment lot size is R, the average stock level is (R/2 + S). The order point system is also called the Min/Max System because the stock level swings between a minimum (the order point) and a maximum (R + S). If this is the meaning, however, the term is clearly wrong, since the minimum stock is S - the stock level S is reached after the new replenishment has been sent for and before it arrives. (* If the forecast is D units/month and the leadtime has been recorded in days, D must be converted to a forecast of so-many units per day by dividing the monthly forecast by the number of days in the month). Use of the order point system is valid only if the fall in stock level of the product concerned is gradual and even - as it may be, for example, for fuel or common consumables. It cannot be successfully applied in a materials planning environment, since falls in stock levels are lumpy due to lot sizing. It is also very difficult to see how it could be used in a practical way if multi-period sales forecasts were to be taken account of.	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Order Policy	The rule governing when a replenishment stock order is to be generated. In materials planning, the order policy will be to generate a new planned order when the projected stock balance falls to zero. While the same policy prevails in the course of master schedule management, the order policy during master schedule formulation, by contrast, is to generate a new plan requirement when the projected stock falls below the product's safety level. Under the order point system of replenishment, the order policy is to generate a replenishment order when stock falls to the order point.	*Quality*
Order Processing	See Sales Order Processing.	*Quality*
Order Quantity	When a replenishment order is generated by the materials planning system, the size of the order to cover the net requirements for the material will be determined by a planning rule applying to the particular product concerned. The order quantity is the amount specified according to the rule (for example, lots of 1000 units, lots of 1500 units, lot-for-lot (qv)).	*Quality*
Order tracking	Control of a computer's data sampling rate, such that display of vibrations at multiples of the shaft's rotating speed (x1, x2, x3, etc.) are enhanced and more easily.	*Reliability Engineering*
Ordered solid solution	Solid solution in which the solute atoms are arranged in a regular pattern.	*Material Process*
Order-to-delivery leadtime	The time from when a specific customer order is received by the plant until product is delivered to customer, including any warehousing, cross-docking and transportation time.	*Quality*
Order-to-shipment leadtime	The time from when a specific order is released to the shop floor until that order is shipped to the customer, including any storage time in finished goods inventory.	*Quality*
Ordinal data	Data that are classified into more than two categories which have a natural order; for example, non-smokers, ex-smokers, light smokers and heavy smokers. Ordinal data are often reduced to two categories to simplify analysis and presentation, which may result in a considerable loss of information.	*Quality Engineering*
Ordinal Number	A number denoting order or rank, such as first, second, third ... as opposed to a cardinal number (1, 2, 3 etc.).	*Quality*
Ordinary Shares	See shares—an ordinary share issued, face value may merely be £1, but if the company prospers, as we know, its value will be many times higher than its face value.	*Quality*
Ore	A mixture of ore minerals and gangue from which at least one of the metals can be extracted at a profit.	*Mining*
Ore pass	Vertical or inclined passage for the downward transfer of ore connecting a level with the hoisting shaft or a lower level.	*Mining*
Ore Reserves	The calculated tonnage and grade of mineralization which can be extracted profitably; classified as possible, probable and proven according to the level of confidence that can be placed in the data.	*Mining*
Ore-bearing	Rock that has some type of ore present in its composition.	*Mining*
Orebody	A natural concentration of valuable material that can be extracted and sold at a profit.	*Mining*
Oregon AFL-CIO	the official publication is the Oregon AFL-CIO Reports issued monthly	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Oregon Anti-Picketing Act	a law passed by Oregon in 1938 which was an extremely rigid and severe anti-picketing statute.	*Industrial Relations*
Oreshoot	The portion, or length, of a vein or other structure that carries sufficient valuable minerals to be extracted profitably.	*Mining*
Organic	a USDA standard that requires that crops are raised without the use of most conventional pesticides, petroleum or sewage-based fertilizers, or genetically engineered materials. There is an emphasis on using renewable resources and conservation. Animal products must come from animals that have been fed organic feed, had access to the outdoors, and received neither antibiotics nor growth hormones. Meat products must also be processed in an organic certified facility. The use of the term Organic is regulated by the USDA, and is only permissable by certified producers.	*Agriculture*
Organic Chemicals	Organic chemicals are based on carbon compounds.	*Chemical*
Organic contaminants	surface impurities (dirt, grease, oil, paint markings) that will hinder the formation of the galvanized coating, usually removed in the caustic cleaning stages of the galvanizing process	*Materials Process*
Organic content	The share of a substance that is of animal or plant origin.	*Energy*
Organic farming	producing foods without the use of laboratory made fertilizers, growth substances, or pesticides	*Agriculture*
Organic Light-Emitting Diode	An LED made with organic materials. The diodes in displays made with OLEDs emit light when a voltage is applied to them. The pixel diodes are selectively turned on or off to form images on the screen. This kind of display can be brighter and more efficient than current LCD displays.	*Electrical Engineering*
Organic Light-Emitting Diode	An LED made with organic materials. The diodes in displays made with OLEDs emit light when a voltage is applied to them. The pixel diodes are selectively turned on or off to form images on the screen. This kind of display can be brighter and more efficient than current LCD displays.	*Electrical Engineering*
Organic matter	the dead plants, animals and manure converted by earthworms and bacteria into humus	*Agriculture*
Organic maturation	The process of turning peat into coal.	*Mining*
Organic waste	Waste material of animal or plant origin.	*Energy*
Organism	Any individual animal, plant or bacterium.	*Chemistry*
Organization for Economic Cooperation and Development (OECD)	An international organization helping governments tackle the economic, social and governance challenges of a globalized economy. Its membership comprises about 30 member countries. With active relationships with some 70 other countries, non-governmental organizations (NGOs) and civil society, it has a global reach. For details about the organization, visit http://www.oecd.org.	*Energy*
Organization of the Petroleum Exporting Countries (OPEC)	Organization of Petroleum Exporting Countries.	*Energy*
Organization Structure	the organization structure is the general framework through which work is organized, responsibilities established, lines of communication, responsibility, and direction determined, and coordination of the activities so established as to permit the particular organization to accomplish its purposes.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Organizational Picketing	a form of picketing engaged in by a union whose purpose is to persuade the employer or organization to accept it as the bargaining agent for employees.	*Industrial Relations*
Organized Labor	a term frequently used to distinguish that segment of labor which is organized (unionized) rather than unorganized (non-union).	*Industrial Relations*
Organizers	in union parlance, organizers are individuals who are active in signing up employees in th union and getting workers in the plant to assist them in informing other employees of the union's goals and objectives.	*Industrial Relations*
Organizing	in union parlance, applies to the actual process used by organizers and their superiors in achieving their objectives.	*Industrial Relations*
ORI	octane requirement increase	*Petro-Chemical Abbreviations*
Orientation	Direction in reference to a coordinate frame.	*Aeronautical Engineering*
Orientation	The process of stretching a hot plastic article to align the molecules, thus altering mechanical properties. When the stretching force is applied in one direction, the process is called uniaxial orientation. When stretching is in two directions, the term biaxial origination is used. Upon reheating, an oriented film will shrink in the direction(s) of orientation. This property is useful in applications such as shrink packaging and for improving the strength of molded or extruded articles such as pipe and fibers.	*Engineering Physics*
Orientation order	Parallel or antiparallel alignment of structural units.	*Material Process*
Orifice	In extrusion, the opening in the die formed by the orifice bushing (ring) and mandrel.	*Engineering Physics*
Orifice plate	a flow measurement device for liquids or gases that uses a restrictive orifice plate consisting of a machined hole that produces a jet effect. Typically the orifice meter consists of a thin plate with a square edged, concentric, and circular orifice. The pressure drop of the jet effect across the orifice is proportional to the flow rate. The pressure drop can be measured with a manometer or differential pressure gauge.	*Chemical*
Original cost	The initial amount of money spent to acquire an asset. It is equal to the price paid, or present value of the liability incurred, or fair value of stock issued, plus normal incidental costs necessary to put the asset into its initial use.	*Energy*
Original equipment manufacturer (OEM)	A company that provides the original design and materials for manufacture and engages in the assembly of vehicles. The OEM is directly responsible for manufacturing, marketing, and providing warranties for the finished product.	*Energy*
Original Equipment Manufacturer (OEM)	Manufacturers who produce an end product such as automobiles, machines or switchboards, incorporating components from sub-suppliers, such as ABB.	*Electrical*
Original equipment manufacturer vehicle	A vehicle produced and marketed by an original equipment manufacturer (OEM), including gasoline and diesel vehicles as well as alternative-fuel vehicles. A vehicle manufactured by an OEM but converted to an alternative-fuel vehicle before its initial delivery to an end-user (for example, through a contract between a conversion company and the OEM) is considered to be an OEM vehicle as long as that vehicle is still covered under the OEM's warranty.	*Energy*
Original study	See Primary study	*Quality Analysis*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Originating Site	The factory site producing Material M, as described under Multi-Site Netting - qv. See also Consuming Site.	*Quality*
O-Ring	Polyurethane bands polyurethane used to transmit drive power from roller to roller or spool to roller. (138-SP, 190-SP, 2514-SP)	*Manufacturing*
O-ring	An elastomeric or synthetic seal ring of circular cross section.	*General Mechanical*
Orogeny	A period of mountain-building characterized by the folding of a portion of the earth's crust.	*Mining*
Orra man	a spare hand, a man who needs to be found work for the shift. (Scot.).	*Mining*
Orthogonal Frequency Division Multiplexing	A method for multiplexing signals which divides the available bandwidth into a series of frequencies known as tones. Flarion uses the 5GHz channel and divides each channel into 400 discrete tones (each at slightly different frequency). Orthogonal tones do not interfere with each other when the peak of one tone corresponds with the null. All frequencies fade but the rapid switching, frequency-hopping technique is intended to allow more robust data service.	*Electrical Engineering*
Orthogonal	The dictionary definition of orthogonal is perpendicular, or right angled. However, in manufacturing or quality experiments, orthogonal entries in a matrix are entries said to be balanced. For example, consider three factors in an experiment, A, B and C, which can be set for experimental purposes either high (+) or low (-). There are eight ways of varying A, B and C in relation to each other, and the results of the eight experiments on having done so might be set out in a matrix as follows: Run ... A....B....C ..1 .....-....-.... - ..2.....+....-....- ..3.....-....+....- ..4..... +...+ ...- ..5.....- ...- ...+ ..6 .....+ ...- ...+ ..7 .....- ...+ ...+ ..8 .....+ ...+ ...+ ..Effect .? ....? ...? The matrix is an example of an orthogonal array—i.e., a balanced array. For example, if we observe Column C, we see that when C is -, factors A and B contain an equal number of plusses and minuses, so that the effects of A and B on C cancel. Similarly, we see that when C is +, factors A and B also cancel each other. The value of orthogonality in experimental design is that it eliminates bias and correlation. There are other orthogonal schemes besides the one shown here - for example, those due to Taguchi and to Plackett–Burman.	*Quality*
OS	An OS is an abbreviation for an Operating System which is the basic computer system which makes all computers function.	*Control Engineering*
OS&D	Overage, shortage and damage, as they may relate to the delivery of materials from a supplier (contrast OTIF).	*Quality*
OS&Y	Outside Screw & Yoke - A valve in which the fluid does not come in contact with the stem threads. The stem sealing elements is between the valve body and the stem threads.	*Mechanical*
OS&Y Outside Screw & Yoke	A valve design in which the stem threads are above the packing gland or outside the valve body and there is a yoke to support the top or outer end of the stem.	*General Mechanical*
OSA	On Shelf Availability - a common and obvious customer service goal, which must normally be qualified by such statements as "for 99% of all orders" or "non-available items supplied within 3 days" etc., (There is also the question of the consequences of non-availability.)	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Oscar shovel	a large collier's shovel. Any man working with one was said to have been presented with an Oscar - the film award. (Mids.). –see also Pit pan.	*Mining*
Oscillation	Variation with time of a quantity such as force, stress, pressure, displacement, velocity, acceleration or jerk. Usually implies some regularity (as in sinusoidal or complex vibration).	*Reliability Engineering*
OSHA	Occupational Safety and Health Administration	*Petro-Chemical Abbreviations*
OSHA	Operation safety hazard analysis.	*Material Process*
OSHA-reportable incident rates	Should be calculated as the number of injuries (N) divided by total hours worked by all employees in a calendar year (EH) multiplied by 200,000 (base for 100 equivalent full-time employees working 40 hours per week, 50 weeks per year): (N divided by EH) x 200,000. A separate calculation must be made for more serious injuries and illnesses that result in employees taking time off from their jobs, being transferred to another job or doing lighter or restricted duties.	*Quality*
Ostler	a person responsible for the welfare of the colliery's horses. Also called a 'Horse fettler'	*Mining*
OTA	Office of Technology Assessment (DOE)	*Petro-Chemical Abbreviations*
OTAG	Ozone Transport Assessment Group	*Petro-Chemical Abbreviations*
OTAQ	Office of Transportation and Air Quality (US EPA)	*Petro-Chemical Abbreviations*
OTC	Ozone Transport Commission	*Petro-Chemical Abbreviations*
OTCR	On-Time delivery performance to Customer Request date ... in effect, the same as OTIF, qv.	*Quality*
OTEC	See Ocean Thermal Energy Conversion.	*Energy*
OTED	One Touch Exchange of Die - the goal of accomplishing a machine changeover in 100 seconds or less (see also SMED).	*Quality*
Other	The "other" category is defined as representing electricity consumers not elsewhere classified. This category includes public street and highway lighting service, public authority service to public authorities, railroad and railway service, and interdepartmental services.	*Energy*
Other +20 color, Saybolt minimum	other +20 color, Saybolt minimum.	*Energy*
Other capital costs	Costs for items or activities not included elsewhere under capital-cost tabulations, such as for and decommissioning, dismantling, and reclamation.	*Energy*
Other demand-side management (DSM) assistance programs	A DSM program assistance that includes alternative-rate, fuel-switching, and any other DSM assistance programs that are offered to consumers to encourage their participation in DSM programs.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Other end users	For motor gasoline, all direct sales to end users other than those made through company outlets. For No. 2 distillate, all direct sales to end users other than residential, commercial/institutional, industrial sales, and sales through company outlets. Included in the "other end users" category are sales to utilities and agricultural users.	*Energy*
Other energy operations	Energy operations not included under Petroleum or Coal. "Other energy" includes nuclear, oil shale, tar sands, coal liquefaction and gasification, geothermal, solar, and other forms of on conventional energy.	*Energy*
Other Film Resins	Other resins are used, either singly or as a blend in film products. These include polyvinylidene chloride (PVDC), ethylene vinyl alcohol (EVOH), nylon, and ethylene vinyl acetate (EVA). Properties: The properties exhibited will depend on the type or mix of resins used. PVDC has excellent moisture and gas barrier properties. EVOH also has great gas-barrier properties, but is often co-extruded with PE films to improve its moisture resistance. Nylon, with a relatively high melting point, is sometimes used in microwavable products. It also has good gas resistance. EVA offers excellent adhesion, and has good heat-sealing properties. Applications: PVDC is sold as a household wrap. It is also commonly laminated or co-extruded with other films to improve barrier properties. EVOH is commonly used in modified atmosphere packaging (where a special atmosphere is required inside the package to preserve the contents). Nylon films are often used to package cheese because they won't let oxygen in, but will allow carbon dioxide to escape out of the wrapping, thus giving the product a longer shelf life. EVA is often used in combination with other resins for bag-in-a-box applications, and is used to wrap meat, poultry and ice.	*Engineering Physics*
Other finished	Motor gasoline not included in the oxygenated or reformulated gasoline categories.	*Energy*
Other gas	Includes manufactured gas, coke-oven gas, blast-furnace gas, and refinery gas. Manufactured gas is obtained by distillation of coal, by the thermal decomposition of oil, or by the reaction of steam passing through a bed of heated coal or coke.	*Energy*
Other generation	Electricity originating from these sources biomass, fuel cells, geothermal heat, solar power, waste, wind, and wood.	*Energy*
Other Hydrocarbons	Materials received by a refinery and consumed as a raw material. Includes hydrogen, coal tar derivatives, gilsonite. Excludes natural gas used for fuel or hydrogen feedstock.	*Energy*
Other industrial plant	Industrial users, not including coke plants, engaged in the mechanical or chemical transformation of materials or substances into new products (manufacturing); and companies engaged in the agriculture, mining, or construction industries.	*Energy*
Other load management	Demand-Side Management (DSM) program other than Direct Load Control and Interruptible Load that limits or shifts peak load from on-peak to off-peak time periods. It includes technologies that primarily shift all or part of a load from one time-of-day to another and secondarily may have an impact on energy consumption. Examples include space heating and water heating storage systems, cool storage systems, and load limiting devices in energy management systems. This category also includes programs that aggressively promote time-of-use rates and other innovative rates such as real time pricing. These rates are intended to reduce consumer bills and shift hours of operation of equipment from on-peak to off-peak periods through the application of time-differentiated rates.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Other oils equal to or greater than 401 degrees Fahrenheit	Oils with a boiling range equal to or greater than 401 degrees Fahrenheit that are intended for use as a petrochemical feedstock.	*Energy*
Other operating costs	Costs for other items or activities not included elsewhere in operating-cost tabulations, but required to support the calculation of a cutoff grade for ore reserves estimation.	*Energy*
Other oxygenates	Other aliphatic alcohols and aliphatic ethers intended for motor gasoline blending (e.g., isopropylether (IPE) or n-propanol).	*Energy*
Other power producers	Independent power producers that generate electricity and cogeneration plants that are not included in the other industrial, coke and commercial sectors.	*Energy*
Other refiners	Refiners with a total refinery capacity in the United States and its possessions of less than 275,000 barrels per day as of January 1, 1982.	*Energy*
Other service to public authorities	Electricity supplied to municipalities, divisions or agencies of state or Federal governments, under special contracts or agreements or service classifications applicable only to public authorities.	*Energy*
Other single-unit truck	A motor vehicle consisting primarily of a single motorized device with more than two axles or more than four tires.	*Energy*
Other supply contracts	Any contracted gas supply other than owned reserves, producer-contracted reserves, and interstate pipeline purchases that are used for acts and services for which the company has received certificate authorization from FERC. Purchases from intrastate pipelines pursuant to Section 311(b) of the NGPA of 1978 are included with other supply contracts.	*Energy*
Other tests	include the determination of the ash softening temperature, the ash fusion temperature (the temperature at which the ash forms clinkers or slag), the free swelling index (a guide to a coal's coking characteristics), the Gray King test (which determines the suitability of coal for making coke), and the Hardgrove grindability index (a measure of the ease with which coal can be pulverized). In a petrographic analysis, thin sections of coal or highly polished blocks of coal are studied with a microscope to determine the physical composition, both for scientific purposes and for estimating the rank and coking potential.	*Energy*
Other trucks/vans	Those trucks and vans that weigh more than 8,500 lbs GVW.	*Energy*
Other unavailable capability	Net capability of main generating units that are unavailable for load for reasons other than full-forced outage or scheduled maintenance. Legal restrictions or other causes make these units unavailable.	*Energy*
OTIF	Relating to the delivery of goods from a supplier - on-time, in full. The presumption must also be that the delivery is 100% conforming to quality requirements—contrast OS&D! OTIF is but one of many possible customer service targets.	*Quality*
Out break coal	an old term for the outcrop of a coal seam.	*Mining*
Out stroke	the privilege of breaking through a barrier and working or transporting coal from an adjoining royalty or mine. (N. East).	*Mining*
Outage	The period during which a generating unit, transmission line, or other facility is out of service.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Outage	Time during which service is unavailable from a generating unit, transmission line, or other facility.	*Energy*
Outboard Rotor	A two-journal rotor which has its center of gravity between the journals.	*General Engineering*
Outburst	a sudden inrush of water or gas. -see Feeder. In the case of a gas outburst, often, large quantities of fine coal are forced out.	*Mining*
Outby; outbye	Nearer to the shaft, and hence farther from the working face. Toward the mine entrance. The opposite of inby.	*Mining*
Out-bye, Outbye	the direction from the workings out of the mine towards the shaft/s. The opposite of 'in-bye'.	*Mining*
Outcome	A component of a participant's clinical and functional status after an intervention has been applied, that is used to assess the effectiveness of an intervention. See also: Primary outcome, Secondary outcome Also called: Endpoint	*Quality Engineering*
Outcome variable	See Dependent variable	*Quality Engineering*
Outcrop	the place where rock beds or coal seams appear at the surface. -see also Basset, Basset edge and Crop.	*Mining*
Outcrop	An exposure of rock or mineral deposit that can be seen on surface, that is, not covered by soil or water.	*Mining*
Outcropping	working the coal at outcrop, often illegally.	*Mining*
Outer Continental Shelf	Offshore Federal domain.	*Energy*
Outer marker	Marker beacon located 5-7mi from the end of the runway; See Also: marker beacon.	*Aeronautical Engineering*
Outer marker	Marker beacon located 5-7mi from the end of the runway; See Also - marker beacon.	*Aeronautical Engineering*
Outer seat ring	The outer metal piece of a two-piece seat ring unit. See "Inner Seat Ring."	*Mechanical*
outer shell of a brake	The brake shoes press against the drum to slow or stop drum and wheel rotation for braking.	*Mechanical Engineering*
Outer Wires	Outer layer of wires.	*Wire Rope & Cable*
Outlaw Strike	a work stoppage or strike which has been forbidden by law or has been called without union authorization.	*Industrial Relations*
Outlet Connection	A connection on a Run. Used to inlet or outlet the flow fluid or gas into a Choke or Manifold.	*Petroleum Engineering*
Outlier	A data point that is greater than three standard deviations from the mean (to appreciate the "mean", see variance). See also Black Swan.	*Quality*
Outliers	Discrepant values. Values which do not agree with the pattern of the majority of other values. They may be due to mistakes or they may represent a significant finding. When outliers are suspected, it is best to calculate the data set with and without the outlier values. If their presence changes the conclusion drawn from the data, then the experimental results are not reliable. It is possible to apply a wide variety of statistical tests or rules for purposes of rejecting outliers, however, the choice of rules is always subject to argument. It is always better to inspect the data as it is collected during the experiment, identify discrepant values, and determine their cause.	*Quality Analysis*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Out-of-Line Rates	in operations which bear incentive or piece rates, it is possible for an individual rate to allow more than normal earnings for the particular job.	*Industrial Relations*
Out-of-Work Benefits	prior to the development of unemployment insurance it had been the practice of some unions to try to establish funds to assist members during periods of unemployment.	*Industrial Relations*
Output	The electrical signal which is produced by an applied input to the transducer.	*Electrical*
Output	The useful energy delivered by a circuit or device. Can mean energy produced at the output terminals of an amplifier: a source of energy.	*Electrical Engineering*
Output Impedance	The resistance as measured on the output terminals of a pressure transducer.	*Electrical*
Output Impedance	The impedance across the output terminals of a sensor presented by the sensor to the associated external circuitry.	*Electrical Engineering*
Output Noise	The RMS, peak-to-peak (as specified) AC component of a transducer's DC output in the absence of a measurand variation.	*Electrical*
Output Noise	The RMS peak: to: peak (as specified) AC component of a sensors DC output in the absence of a change in input pressure.	*Electrical Engineering*
Output Per Man-Hour	a measure of productivity established primarily by the U.S. Government and compiled regularly by the U.S. Bureau of Labor Statistics.	*Industrial Relations*
Output state	The final state of hydraulic amplification used in the servovalve. OXIDATION - The interaction of air and moisture on the surface of a substance.	*Mechanical, Process, and Operations*
Output to Input Ratio	The ratio between the sensed current and the output current of the amplifier.	*Electrical Engineering*
Output, Restriction of	See: Restriction of Output	*Industrial Relations*
Outset	the height of the pit head landing above the mouth of the shaft. (N. East); or a brick or stone walling built up within the tubbing in a shaft.	*Mining*
Outside Agitators	a term frequently applied to union organizers in early American labor history during organizational campaigns in anti-union or strongly non-union communities.	*Industrial Relations*
Outside Air Temperature (OAT)	The temperature just outside the aircraft; Symbols: T; Typical Units: deg; Dimensions: Temperature.	*Aeronautical Engineering*
Outside In	The quality view of a system, whereby basic procedures are considered broadly from the viewpoint of the customer.	*Quality*
Outside-mounted Seal	A mechanical seal with its seal head mounted outside the seal chamber that holds the fluid to be sealed. Outside seals have the pumped fluid's pressure at their I.D.	*Lubrication*
Outsourcing	Shifting of production work or support activities to an outside (third-party) supplier.	*Maintenance*
Outwan, outwards	towards the shaft. (Scot.).	*Mining*
Outwash	Stratified sand and gravel removed or washed out from a glacier by meltwater streams and deposited in front of, or beyond the end moraine, or margin of an active glacier. The coarser material is deposited nearer to the ice.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Oven	An appliance that is an enclosed compartment supplied with heat and used for cooking food. Toaster ovens are not considered ovens. The range stove top or burners and the oven are considered two separate appliances, although they are often purchased as one appliance.	*Energy*
Oven Cleaner	Usually a liquid in an aerosol container or pump-actuated bottle. To clean a cold oven a strong chemical is necessary. Usually the product is thick or foamy to promote clinging to vertical surfaces.	*Chemistry*
Over Cuts	where two lines intersect bordering the perimeter of an opening that is being saw cut. These overcuts are caused by the radius of the saw blade. In order for a blade to cut all the way through a wall or slab at the corners, there must be an overcut.	*Petroleum Drilling*
Over Planning	In two-level master scheduling (see Master Scheduling and also the Final Assembly Schedule), the quantities of the various option variants which are master scheduled are determined by forecasts derived from option preferences specified by customers in the past. In a particular month, however, the variants specified in actual orders are likely to differ from the forecast split. For example, the split of option variants may be forecast to be 50:50 between the red and blue types. In a particular month, it is expected to sell 500 assemblies. Instead of selling 250 blue types, however, the company is asked for 305 blues and 195 reds. An option overplan, therefore, is a safety stock placed on an option variant to help ensure that there are high levels of option availability even though the split of actual customer orders is different from forecast. In effect, option overplanning is the providing of safety stock of option variants. The overplan amounts should be set by calculation, not by hunch and guess. A useful quick calculation is available, however, avoiding the complexity of normal safety stock mathematics, and applicable if the number of super items to be final assembled is 50 or more: Thus: Safety Stock = k SQRT (S + ui x (1 - ui)), where k = the safety factor, S = the number of super items, and ui = the super bill usage of the ith option variant.	*Quality*
Over the entire area of abutting surfaces	over the entire area of abutting surfaces	*Maintenance and Repair*
Over Trading	A company is said to be over trading when the volume and extent of the business it has taken on is excessively large in relation to the capital it has to meet it. In these circumstances, the company may place excessive reliance on loan capital, overdrafts and supplier credit.	*Quality*
Overaging	Continuation of the age hardening process so long that the precipitates coalesce into a coarse dispersion, becoming a less effective dislocation barrier and leading to a drop in hardness.	*Material Process*
Overall Equipment Effectiveness	A Term Initially Coined In Connection With Total Productive Maintenance. It Provides A Measure Of Overall Asset Productivity. Is Generally Expressed As A Percentage, And Can Be Calculated By Multiplying Availability By Utilization By Operational Efficiency By Quality Rate.	*Management*
Overall Equipment Effectiveness (OEE)	A term initially coined in connection with Total Productive Maintenance (TPM). It provides a measure of overall asset productivity, and is generally expressed as a percentage. OEE is calculated by multiplying Availability, Operational Efficiency, and Quality Rate. For example: OEE = 90% availability * 80% operational efficiency * 90% quality performance = 65%. To get an idea of total efficiency, the overall equipment effectiveness is multiplied with system utilization.	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Overall Length	(OAL) The dimension outside of pulley to outside of pulley including belting or lagging, of any conveyor lengthwise.	*Manufacturing*
Overall tower dimensions	(a) Width: overall dimensions perpendicular to the tower's longitudinal axis; (b) length: overall dimension parallel to the air inlet louvers and the longitudinal axis; (c) total height: distance from basin curb to top of fan stack. Dimensions measured in feet.	*Facility Engineering*
Overall Width	(OAW) The dimension outside to outside of frame rails.	*Manufacturing*
Overboard Water	Another name for produced water or brine produced from oil and gas wells.	*Petroleum Drilling*
Overburden	Any material, consolidated or unconsolidated, that overlies a coal deposit.	*Energy*
Overburden ratio	Overburden ratio refers to the amount of overburden that must be removed to excavate a given quantity of coal. It is commonly expressed in cubic yards per ton of coal, but is sometimes expressed as a ratio comparing the thickness of the overburden with the thickness of the coalbed.	*Energy*
Overburden	Layers of soil and rock covering a coal seam. Overburden is removed prior to surface mining and replaced after the coal is taken from the seam.	*Mining*
Overcast	a ventilation air-crossing where the return airway is bridged over the intake airway and sealed to prevent short circuiting of the air flow, sometimes called an 'over crossing', 'overgate', 'overpass' or 'air bridge'. -see also Air-crossing.	*Mining*
Overcast (undercast)	Enclosed airway which permits one air current to pass over (under) another without interruption.	*Mining*
Overcure	A foggy surface resulting from too long a cure.	*Material Process*
Overcut	to cut by machine at or near roof level in a seam.	*Mining*
Overhaul	A comprehensive examination and restoration of an asset to an acceptable condition.	*Maintenance*
Overhead Position	The position of welding performed from the underside of the joint.	*Maintenance and Repair*
Overhead Drive	A drive assembly mounted over a conveyor which allows clearance for the product.	*Manufacturing*
Overlap	In pay structures and grading, overlap is the percentage of the scale of the bottom of a higher pay grade also covered by the scale at the top of the pay grade immediately lower in the pay structure.	*Quality*
Overlap, a reversed fault	Overlap, a reversed fault.	*Mining*
Overlapping surfaces	created when one area of a metal structure is covered by the surface of another metal structure	*Materials Process*
Overlay	A form of metal weld deposit covering a base metal surface. Typically a Corrosion Resistant Alloy (CRA) to prevent corrosion caused by well fluids (for example containing H2S).	*Petroleum Engineering*
Overload	The flow of electricity into conductors or devices when normal load exceeds capacity.	*Energy*
Overlooker or Overman	a mine official, between a deputy and undermanager, usually in charge of production in part of the mine, a shift or two or more deputied districts.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Overpass, -see Overcast	Overpass, -see Overcast.	*Mining*
Overpressure	The maximum specified pressure which may be applied to the sensing element of a sensor without causing a permanent change in the output characteristics.	*Electrical Engineering*
Overrange of a system or element	any excess value of the input signal above its upper range-value or below its lower range-value.	*Process Control*
Override	To alter selection made automatically by software.	*Aeronautical Engineering*
Overriding royalty	A royalty interest, in addition to the basic royalty, created out of the working interest; it is, therefore, limited in its duration to the life of the lease under which it is created.	*Energy*
Overrope	an endless haulage but with the rope running above the tubs (S. Staffs.).	*Mining*
Overrun Device	In mechanical safety, a device used in conjunction with a guard designed to prevent access to machinery parts which are moving by their own inertia after the power has been switched off. Examples are rotation sensing devices, timing devices and certain braking systems.	*Quality*
Overset, props set at an angle where the axis of the prop is on the gob side of the perpendicular	Overset, props set at an angle where the axis of the prop is on the gob side of the perpendicular.	*Mining*
Overshoot	The number of degrees by which a process exceeds the set point temperature when coming up to the set point temperature.	*Electrical*
Oversteer	See Loose.	*NASCAR*
Overtapping	Tapping of a thread following a plating operation so that the thread tolerances comply within specification allowing the internal and external threads to assemble. It is normal practice to overtap the internal rather than the external thread.	*Maintenance*
Overtapping	cutting female fastener threads of nuts or threaded holes larger than standard to account for the increased diameter of the galvanized (male) mating part	*Materials Process*
Overtime	the hours worked by an employee in excess of the standard established either by law, by the collective bargaining agreement, or by company policy.	*Industrial Relations*
Overtime Pay	the payment of a premium for hours generally worked in excess of eight hours in one day or 40 in one week.	*Industrial Relations*
Overtime Premium Pay	the term is synonymous with the phrase "actual overtime rate;" it denotes the payment of wages at a premium rate for hours worked beyond or outside the regular hours in the establishment- a arte set up either by law, industry practice, collective bargaining agreement, or employer policy.	*Industrial Relations*
Overtime Rate	the wage rates actually set by contract, by statute, or by company policy for hours work in excess of or outside the regularly scheduled work day, work week, shift, etc.	*Industrial Relations*
Overtime Work	the actual hours put in by an employee in excess of his regularly scheduled work time.	*Industrial Relations*
Overtime-on-Overtime	under the provisions of the Fair Labor Standards Act employees were entitled to receive overtime pay for hours in excess of 40 in one week.	*Industrial Relations*

Term	Definition	*Industry*
Overtravel	An operating characteristic of a switch, overtravel is the distance through which the plunger moves when traveled from the operating point to the full overtravel point. As a characteristic of the actuation applied to the switch, overtravel is the distance the plunger is driven past the operating point.	*Electrical Engineering*
Overturned	Where the oldest sedimentary rock beds are lying on top of a younger beds.	*Mining*
Overview, systematic	See Systematic review (synonym: systematic overview)	*Quality Engineering*
Overvoltage	A positive or negative change in electrochemical potential relative to a corrosion potential.	*Material Process*
Overvoltage Protection	Overvoltage Protector (OVP) refers to a circuit that protects downstream circuitry from damage due to excessive voltage. An OVP monitors the DC voltage coming from an external power source, such as an off-line power supply or a battery, and protects the rest of the connected circuitry using one of two methods: a crowbar clamp circuit or a series-connected switch.	*Electrical Engineering*
Overvoltage Protection	Overvoltage Protector (OVP) refers to a circuit that protects downstream circuitry from damage due to excessive voltage. An OVP monitors the DC voltage coming from an external power source, such as an off-line power supply or a battery, and protects the rest of the connected circuitry using one of two methods - a crowbar clamp circuit or a series-connected switch.	*Electrical Engineering*
Overwind	when the cage is raised too far above its landing level at the surface. A hooking device usually comes into operation to safely secure the cage.	*Mining*
Overwork	the limits on the physical or mental endurance of an individual in performing his job.	*Industrial Relations*
Overworkings	workings in seams above other current workings.	*Mining*
Oviposition	The act of depositing the eggs.	*Forestry*
Ovipositor	The egg-laying apparatus; the extended genitalia of a female insect.[1] Fin.Swe.	*Forestry*
Own Account	In distribution, a company's own fleet of vehicles.	*Quality*
Owned reserves	Any reserve of natural gas that the reporting company owns as a result of oil and gas leases, fee-mineral ownership, royalty reservations, or lease or royalty reservations and assignments committed to services under certificate authorizations by FERC. Company-owned recoverable natural gas in underground storage is classified as owned reserves.	*Energy*
Owned/rented	(As used in EIA's consumption surveys.) The relationship of a housing unit's occupants to the structure itself, not the land on which the structure is located. "Owned" means the owner or co-owner is a member of the household and the housing unit is either fully paid for or mortgaged. A household is classified "rented" even if the rent is paid by someone not living in the unit. "Rent-free" means the unit is not owned or being bought and no money is paid or contracted for rent. Such units are usually provided in exchange for services rendered or as an allowance or favor from a relative or friend not living in the unit. Unless shown separately, rent-free households are grouped with rented households.	*Energy*
Owner occupied	(As used in EIA's consumption surveys.) Having the owner or the owner's business represented at the site. A building is considered owner occupied if an employee or representative of the owner (such as a building engineer or	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	building manager) maintains office space in the building. Similarly, a chain store is considered owner occupied even though the actual owner may not be in the building but headquartered elsewhere. Other examples of the owner's business occupying a building include State-owned university buildings, elementary and secondary schools owned by a public school district, and a post office where the building is owned by the U.S. Postal Service.	
Owners equity	Interest of the owners in the assets of the business represented by capital contributions and retained earnings.	*Energy*
Ownership of building	(As used in EIA's consumption surveys.) The individual, agency, or organization that owns the building. For certain EIA consumption surveys, building ownership is grouped into the following categories Federal, State, or local government agency; a privately owned utility company; a church, synagogue, or other religious group; or any other type of individual or group.	*Energy*
Ownership (See Owned/rented.)	Ownership: (See Owned/rented.)	*Energy*
Ox	A male bovine. In some usages, the term implies a castrated male; but this isn't always the case.	*Agriculture*
Oxalyc acid (COOHCOOH 2H2O)	Colorless monoclinic crystals. A dibasic acid used in the production of alkyd resins, as an acid catalyst in polymerization reactions, and in the manufacture of dyes.	*Material Process*
OXCAT	oxidation catalyst	*Petro-Chemical Abbreviations*
Oxidation	The process of combining with oxygen. All petroleum products are subject to oxidation to some degree. The reaction increases with rise in temperature. Oxidation produces oil-insoluble oxidized materials, which result in viscosity increase and deposits. Occurs when oxygen attacks petroleum fluids. The process is accelerated by heat, light, metal catalysts and the presence of water, acids, or solid contaminants. It leads to increased viscosity and deposit formation.	*Lubrication*
Oxidation	To combine with oxygen. Slow oxidation is typified by the rusting of a metal.	*Chemistry*
Oxidation Inhibitor	A chemical additive that minimizes the formation of harmful acids and varnish forming compounds that form when a fluid is subjected to air at elevated temperatures.	*Lubrication*
Oxidation inhibitor	Substance added in small quantities to a petroleum product to increase its oxidation resistance, thereby lengthening its service or storage life; also called antioxidant.	*Mechanical, Process, and Operations*
Oxidation Stability	The resistance of lubricants to chemically react with oxygen. The absorption and reaction of oxygen may lead to deterioration of lubricants.	*Lubrication*
Oxidation	A chemical reaction caused by exposure to oxygen that results in a change in the chemical composition of a mineral.	*Mining*
Oxidation-reduction (redox)	a chemical reaction consisting of an oxidation reaction in which a substance loses or donates electrons, and a reduction reaction in which a substance gains or accepts electrons. Redox reactions are always coupled because free electrons cannot exist in solution and electrons must be conserved.	*Chemical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Oxidative Degradation	Oxidative degradation is the reaction of oxygen (in air) with the fluid by a free radical mechanism to form larger molecules which end up as polymers or solids. These thicken the fluid and increase its viscosity. A more viscous fluid will be more difficult to pump, have poorer heat transfer characteristics as well as an increased chance of coke formation. Oxidation is also accompanied by an increase in the acidity (TAN) of the fluid. As with all chemical reactions, oxidation occurs more rapidly as the temperature is increased. At room temperature, the reaction rate is hardly measurable. However, it can become a factor in the life of the fluid in certain styles of heat transfer systems. At temperatures encountered in systems in use in the plastics extrusion and die casting industries, as an example, oxidation is the main cause of fluid degradation.	*Lubrication*
Oxide	Compound between an element metal(s) and oxygen.	*Material Process*
Oxide glass	Noncrystalline solid in which the predominant component(s) is (are) an oxide(s).	*Material Process*
Oxidize	To chemically transform a substance by combining it with oxygen.	*Energy*
Oxidized	to combine with oxygen; make into an oxide	*Materials Process*
Oxidizing	An environment or material which promotes oxidation.	*Paint and Coatings*
Oxidizing Flame	An oxyfuel gas flame having an oxidizing effect caused by excess oxygen.	*Maintenance and Repair*
Oxyacetylene Cutting	An oxygen-cutting process in which metals are severed by the chemical reaction of oxygen with the base metal at elevated temperatures. The necessary temperature is maintained by means of gas flames obtained from the combustion of acetylene with oxygen.	*Maintenance and Repair*
Oxyacetylene Welding	A gas welding process in which coalescence is produced by heating with a gas flame or flames obtained from the combustion of acetylene with oxygen, with or without the addition of filler metal.	*Maintenance and Repair*
Oxyfuel Gas Welding (OFGW)	A group of welding processes in which coalescence is produced by heating with a flame or flames obtained from the combustion of fuel gas with oxygen, with or without the application of pressure and with or without the use of filler metal.	*Maintenance and Repair*
Oxygen	Dissolved oxygen and high temperatures together form a highly corrosive element for the materials and equipment used in steam systems. In order to prevent corrosion, oxygen in the make-up water must be removed through the use of scavenger chemicals and/or deaeration towers.	*Industrial*
Oxygen concentration cell	Electrochemical cell in which the corrosion and associated electrical current are due to a difference in gaseous oxygen concentrations.	*Material Process*
Oxygen Cutting (OC)	A group of cutting processes used to sever or remove metals by means of the reaction of oxygen with the base metal at elevated temperatures. In the case of oxidation-resistant metals, the reaction is facilitated by use of a chemical flux or metal powder.	*Maintenance and Repair*
Oxygen (O2)	Gas used to support combustion of fuel gases in combustion thermal spray processes. Achieves much higher flame temperatures than using air.	*Paint and Coatings*
Oxygen Bomb Test	A test to determine the ability of conductors and insulations to withstand physical and electrical change when immersed in pure oxygen gas of specified temperature and pressure for a specified time.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Oxygen Gouging	An application of oxygen cutting in which a chamfer or groove is formed.	*Maintenance and Repair*
Oxygenate	An oxygen containing, ashless organic compound, such as alcohol or ether, that can be used as a fuel or fuel supplement.	*Lubrication*
Oxygenated Fuels	Fuels for internal combustion engines that contain oxygen combined in the molecule, e.g. alcohols, ethers and esters. Term also applies to blends of gasoline with oxygenates, e.g. Gasohol, which contains 10% by volume anhydrous ethanol in unleaded gasoline.	*Lubrication*
Oxygenated gasoline	Finished motor gasoline, other than reformulated gasoline, having an oxygen content of 2.7percent or higher by weight and required by the U.S. Environmental Protection Agency (EPA) to be sold in areas designated by EPA as carbon monoxide (CO) nonattainment areas. See Nonattainment area.	*Energy*
Oxygenated gasoline (includes Gasohol)	Finished motor gasoline, other than reformulated gasoline, having an oxygen content of 1.8 percent or higher by weight. This includes gasohol irrespective of where it is consumed.	*Energy*
Oxygenates	Substances which, when added to gasoline, increase the amount of oxygen in that gasoline blend. Fuel ethanol, Methyl Tertiary Butyl Ether (MTBE), Ethyl Tertiary Butyl Ether (ETBE), and methanol are common oxygenates.	*Energy*
Ozokerite	A natural hydrocarbon wax of some flexibility, having a melting point of 140 - 200 °F (54 - 93.33 °C).	*Material Process*
Ozone (O_3)	Colorless gas or dark blue liquid.	*Material Process*
Ozone	A molecule made up of three atoms of oxygen. Occurs naturally in the stratosphere and provides a protective layer shielding the Earth from harmful ultraviolet radiation. In the troposphere, it is a chemical oxidant, a greenhouse gas, and a major component of photochemical smog.	*Energy*
Ozone & CO Nonattainment Areas	Any area of the continental U.S. that does not meet the 1990 Clean Air Act requirements for carbon monoxide or ground-level ozone pollutants.	*Lubrication*
Ozone Depletion	Chemical destruction of the stratospheric ozone layer over and above natural processes.	*Chemical*
Ozone precursors	Chemical compounds, such as carbon monoxide, methane, non methane hydrocarbons, and nitrogen oxides, which in the presence of solar radiation react with other chemical compounds to form ozone.	*Energy*
P	P	*Forestry*
--P--	--P--	*Petroleum Drilling*
P & ID	Process and Instrumentation Diagram	*Control Engineering*
P Controller	P Controller - A controller which produces proportional control action only.	*Electrical Engineering*
P value	The probability (ranging from zero to one) that the results observed in a study (or results more extreme) could have occurred by chance if in reality the null hypothesis was true. In a meta-analysis, the P value for the overall effect assesses the overall statistical significance of the difference between the intervention groups, whilst the P value for the heterogeneity statistic assesses the statistical significance of differences between the effects observed in each study.	*Quality Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
P.H.	See: Prentice-Hall, Ic.	*Industrial Relations*
P.M.	See: Premium Money (Push Money)	*Industrial Relations*
P1	Used to designate Inlet Pressure.	*Industrial Engineering*
P2	Used to designate Outlet Pressure.	*Industrial Engineering*
Pace Setter	See: Pacers	*Industrial Relations*
Pacers	Employees who are exceptionally fast workers and are used by the employer to set norms or production standards in incentive or piece rate systems.	*Industrial Relations*
Pacific	Alaska, California, Hawaii, Oregon, and Washington.	*Energy*
Pacific Coast Marine Firemen, Oilers, Watertenders and Wipers Association	See: Seafarers' International Union of North America; Pacific Coast Marine Firemen, Oilers, Watertenders and Wipers Association (AFL-CIO)	*Industrial Relations*
Pack	a form of permanent roof support in mines consisting of mine debris surrounded by vertical dry stone walls completed tightly to the roof. Often packs are built in continuous strips, a system which is called "strip packing". The packs are usually 3 to 6 yards wide and extend from the face props back into the waste. They are often spaced 5 to 15 yards apart along the face. The rocks of the roof between the packs and behind the temporary supports are allowed to collapse. At some faces all the gob, goaf or waste is filled with debris and this is known as "solid packing". Most packs are built by hand, but some are built by the method known as "pneumatic packing". In this method crushed rock is blown by compressed air through pipes into the place to be packed. If water is added then this is known as "hydraulic packing or stowing".–see also Roadside pack, Walled pack, Checker pack, Cushion pack and Cross pack.	*Mining*
Pack Parburizing	See Carburising.	*Paint and Coatings*
Pack Train	Pack trains were used to transport the bare necessities to miners and loggers in the 19th century. They usually consisted of 5 or more horses or mules and a few men.	*Mining*
Pack wall	a pack built at each side of a gob road to support the roadway and stow away the waste from the ripping.	*Mining*
Package	the term "package" is designed to describe the total benefits which the parties agree to in collective bargaining, including wages and other cost or monetary items in the form of fringe benefits such as insurance, paid vacations, and sick leave.	*Industrial Relations*
Package Stop	Any of various devices, either manual or mechanical, used to stop flow on a conveyor	*Manufacturing*
Packaged air conditioning units	Usually mounted on the roof or on a slab beside the building. (These are known as self-contained units, or Direct Expansion (DX). They contain air conditioning equipment as well as fans, and may or may not include heating equipment.) These are self-contained units that contain the equipment that generates cool air and the equipment that distributes the cooled air. These units commonly consume natural gas or electricity. The units are mounted on the roof top, exposed to the elements. They typically blow cool air into the building through	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	duct work, but other types of distribution systems may exist. The units usually serve more than one room. There are often several units on the roof of a single building. Also known as Packaged Terminal Air Conditioners (PTAC). These packaged units are often constructed as a single unit for heating and for cooling.	
Packaged manrider	a system which embodies a train of vehicles constructed for the dual role of men-and-materials transport, running on conventional rails. The train is permanently attached to one end of an otherwise endless rope; the other end of the rope terminates at a rope reserve or storage drum which forms part of, and travels with, the train. The system was usually used in gate roads.	*Mining*
Packaged units	Units built and assembled at a factory and installed as a self-contained unit to heat or cool all or portions of a building. Packaged units are in contrast to engineer-specified units built up from individual components for use in a given building. Packaged Units can apply to heating equipment, cooling equipment, or combined heating and cooling equipment. Some types of electric packaged units are also called "Direct Expansion" or DX units.	*Energy*
Packers	the best quality stone used to build packs.	*Mining*
Packing	(See Filling).	*Facility Engineering*
Packing	The deformable sealing material inserted into a valve stem stuffing box, which, when compressed by a gland, provides a tight seal about the stem. See "Gland"; "Stuffing Box."	*Mechanical*
Packing Box	The chamber located in the bonnet that surrounds the stem and contains the packing and other stem-sealing components.	*Industrial Engineering*
Packing Follower	A part that transfers a mechanical load to the packing from the packing flange or nut.	*Industrial Engineering*
Packing gland	See "Gland."	*Mechanical*
Packing List	An itemized listing of package contents which is prepared by the shipper.	*Procurement*
Packinghouse Workers of America; United (AFL-CIO)	See: Packinghouse, Food and Allied Workers; United (AFL-CIO)	*Industrial Relations*
Packinghouse Workers; National Brotherhood of (Ind)	the union's official publication is the National Brotherhood News, issued at irregular times.	*Industrial Relations*
Packinghouse, Food and Allied Workers; United (AFL-CIO)	the organization was previously known as the United Packinghouse Workers of America.	*Industrial Relations*
Pack-Off Adaptor	Used in a wellhead below the Tubing Head (Tubing Spool) to adapt between flange sizes or pressure ratings and provide a seal around a secondary casing string.	*Petroleum Engineering*
Packout	Total amount of commodity that is packed.	*Agriculture*
PAD Districts or PADD	See Petroleum Administration for Defense Districts.	*Energy*
PADD	Petroleum Administration for Defense District	*Petro-Chemical Abbreviations*

Term	Definition	*Industry*
PADD 1 (East Coast)	PADD 1 (East Coast):	*Energy*
PADD 1A (New England)	Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.	*Energy*
PADD 1B (Central Atlantic)	Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania.	*Energy*
PADD 1C (Lower Atlantic)	Florida, Georgia, North Carolina, South Carolina, Virginia, and West Virginia.	*Energy*
PADD 2 (Midwest)	Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, Oklahoma, South Dakota, Tennessee, and Wisconsin.	*Energy*
PADD 3 (Gulf Coast)	Alabama, Arkansas, Louisiana, Mississippi, New Mexico, and Texas.	*Energy*
PADD 4 (Rocky Mountain)	Colorado, Idaho, Montana, Utah, and Wyoming.	*Energy*
PADD 5 (West Coast)	Alaska, Arizona, California, Hawaii, Nevada, Oregon, and Washington.	*Energy*
Paddle	In a gate of a lock or sluice, a panel that slides to permit the passage of water.	*Civil Engineering*
Paddle	In a gate of a lock or sluice, a panel that slides to permit the passage of water.	*Civil Engineering*
Paddock	The area where the team transporters are parked, and where the teams work on cars between on-track sessions.	*NASCAR*
Paddy	an underground train for transporting men; or an open or non-safety lamp. (Yorks.).	*Mining*
Paddy light or Paddy lamp	the front or tail light on a man-riding train.	*Mining*
Paddy pan	a bucket or tub for lowering the horse's water on a swinging bont before the advent of the cage. (Leics.).	*Mining*
Padrone System	this system operated substantially as a contract as a contract labor arrangement. The leader, who did the recruiting, was known as the padrone.	*Industrial Relations*
Pads	pieces of timber placed between the tops of props and the roof-support timbers. (Mids.). -see also Biscuit.	*Mining*
PAG	Polyalkylene glycol	*Petro-Chemical Abbreviations*
PAG Synthetic Fluid	Polyalkaline glycol have excellent oxidative and thermal stability, very high VI, excellent film strength and an extremely low tendency to leave deposits on machine surfaces. The low deposit-forming tendency is really due to two properties – the oil's ability to dissolve deposits and the fact that the oil burns clean. So when they are exposed to a very hot surface or subjected to micro-dieseling by entrained air, PAGs are less likely to leave residue that will form deposits. PAGs may also be the only type of base oil with significantly lower fluid friction, which may allow for energy savings. The other unique property of PAGs is the ability to absorb a great deal of water and maintain lubricity. There are actually two different types of PAGs – one demulsifies and the other absorbs water. The most common applications for PAGs are compressors and critical gearing applications. The negatives of PAGs are their very high cost and the potential to be somewhat hydrolytically unstable.	*Lubrication*
Paid Holidays	See: Holiday Pay	*Industrial Relations*

Term	Definition	*Industry*
Paid Jury Leave	leave with pay granted to an employee to perform jury service during normal or regular working hours.	*Industrial Relations*
Paid Leave	a provision in contracts which provides for leave with pay for the individual employee for a stipulated period of time.	*Industrial Relations*
Paid Sick Leave	a provision in an agreement or company policy which permits employees to take leave without loss of seniority or employment rights, and with pay, for periods of illness.	*Industrial Relations*
Paid Vacation Plan	prior to unionization many companies had established vacation plans for their clerical and supervisory employees.	*Industrial Relations*
Painters, Decorators and Paperhangers of America; Brotherhood of (AFL-CIO)	the organization of painters was established at a meeting called by the Baltimore, Maryland, painters in March 1887.	*Industrial Relations*
Pair of gears	a pair of large wooden props with a timber roof bar spanning the roadway. (N. East), (Scot.).	*Mining*
Pair of timbers	a bar held against the roof spanning a roadway with a single prop under each end (S. Wales).	*Mining*
Paired design	A study in which participants or groups of participants are matched (e.g. based on prognostic factors). One member of each pair is then allocated to the experimental (intervention) group and the other to the control group.	*Quality Engineering*
Paired t-test	A form of the t-test where the data consist of pairs of observations on one set of samples, either before and after experimental treatment, or by two different methods of measurement. This statistical test is often used in analyzing the data from a comparison of methods experiment. Information about the systematic error is provided by the bias statistic; information about the random error between methods is provided by the standard deviation of the differences. These estimates will be reliable if proportional error is absent, or if the estimate of bias is only interpreted for a medical decision concentration that is close to the mean of the data. The t-value itself is a ratio of the systematic and random error terms and is useful only to assess whether sufficient data has been collected to conclude that a real difference exists. The t-value should not be interpreted as an indicator of method acceptability.	*Quality*
PAJ	Petroleum Association of Japan	*Petro-Chemical Abbreviations*
Paldie	a square piece of timber placed between the top of a prop and the roof bar. (Scot.). -see also Biscuit.	*Mining*
Pallet	A flat or shaped wheelless load carrier of a pallet conveyor.	*Equipment*
Palletization	Shipping goods on wooden or plastic pallets for greater handling efficiency.	*Agriculture*
Pan	To wash gravel, sand or crushed rock samples in order to isolate gold or other valuable metals by their higher density.	*Mining*
PAN	To wash gravel or rock that have been ground in a pan to separate gold.	*Mining*
Pan coal	small coal, which used to be sold to salt makers for the fires beneath the salt pans.	*Mining*

Term	Definition	*Industry*
Pan grader or Grader	during the move-up, the pan conveyor would be split into sections, moved over nearer to the coalface and rebuilt. The grader would then work his way along the face leveling the conveyor and ensuring that it was straight. (Scot.).	*Mining*
Pan hole	the track along the face along which the pan conveyor was rebuilt. (Scot.).	*Mining*
Pan or Panning	Usually to wash the dirt from the free gold with a pan, the pan resembles an ordinary milk-pan.	*Mining*
Pan run	a longwall face which used a pan conveyor to move the coal. (Scot.).	*Mining*
Penalty Rates	a term used interchangeably with premium rate or rates for overtime, Sunday, and holiday work, or for unpleasant, obnoxious, or hazardous work.	*Industrial Relations*
Pancaking	The effect of adding on charges as power moves through several transmission systems.	*Energy*
Pane	a lift or stint of coal (S. Staffs.).	*Mining*
Panel	a rectangular pillar of coal which would be worked using the panel system; or a district or section of the working-place that was separated by barriers of coal from other districts; or a district in Bord and Pillar workings; or any thin band or rib of hard rock. (Lancs.). In later years the term was used to describe a modern 'longwall face'.	*Mining*
Panel	A Plate or surface for mounting components.	*Mechanical, Process, and Operations*
Panel of Arbitrators	the American Arbitration Association and the Federal Mediation and Conciliation Service both maintain lists or panels of qualified arbitrators who have been screened by the two organizations to serve as arbitrators.	*Industrial Relations*
Panel point	A joint between two or more members of a truss. Also called "node."	*Civil Engineering*
Panel system	a system of working the coal, which came into use in the North of England, in about 1810, in an attempt to improve the ventilation. The colliery was divided into large squares or panels, separated and isolated by solid ribs of coal. Each panel would have its own boards and pillars fed by its own intake air supply and the return was carried straight to the upcast shaft.	*Mining*
Panel	A coal mining block that generally comprises one operating unit.	*Mining*
Panel mounting	A panel on which a number of components may be mounted.	*Mechanical, Process, and Operations*
Panes	the holing area between 'bunches' (N. Staffs.)—see Bunches.	*Mining*
Panic bar	A switch, in the shape of a bar, used to cut off power at the machine in case of an emergency.	*Mining*
Pans	originally shakerpans, which were used on longwall faces to move the coal. The name was extended at a later date to include bluebird scrapers and panzer face conveyors; or iron troughs bolted together and used in steep inclined seams. The coal was allowed to flow down under its own gravity.	*Mining*
Panzer or Panzer conveyor	see Armored Flexible Conveyor. AFC.	*Mining*
PAO	polyalphaolefin	*Petro-Chemical Abbreviations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
PAO Synthetic Fluid	Polyalphaolefins, often called synthetic hydrocarbons, are probably the most common type of synthetic base oil used today. They are moderately priced, provide excellent performance and have few negative attributes. PAO base oil is similar to mineral oil. The advantage comes from the fact that it is built, rather than extracted and modified, making it more pure. Practically all of the oil molecules are the same shape and size and are completely saturated. The potential benefits of PAOs are improved oxidative and thermal stability, excellent demulsibility and hydrolytic stability, a high VI, and very low pour point. Most of the properties make PAOs a good selection for temperature extremes – both high operating temperatures and low start-up temperatures. Typical applications for PAOs are engine oils, gear oils and compressor oils. The negative attributes of PAOs are the price and poor solubility. The low inherent solubility of PAOs creates problems for formulators when it comes to dissolving additives. Likewise, PAOs cannot suspend potential varnish-forming degradation by-products, although they are less prone to create such material.	*Lubrication*
Paper chromatography	A method which involves placing a drop of fluid on a permeable piece of paper and noting the development and nature of the halos, or rings, surrounding the drop through time. The roots of this test can be traced to the 1940s, when railroads used the "blotter spot" tests.	*Oil Analysis*
Paper Locals	local unions which frequently obtain charters, or are self-chartered or established, for the purpose primarily of obtaining payoffs from employers.	*Industrial Relations*
Paper Makers; International Brotherhood of (AFL-CIO)	the international Brotherhood of Papermakers was organized in May 1893 at Holyoke, Massachusetts.	*Industrial Relations*
Paperworkers of America; United (AFL-CIO)	the union merged with the International Brotherhood of Paper Makers (AFL-CIO) in March 1957 to form the United Papermakers and Paper Workers (AFL-CIO)	*Industrial Relations*
PAPTG	Product Approval Protocol Task Group - a committee from the American Chemistry Council (ACC) that reviews new lubricant test procedures and proposed performance limits. This group also administers the Product Approval Code of Practice.	*Mechanical, Process, and Operations*
Par value	The stated face value of a stock. Par value shares have no specified face value, but the total amount of authorized capital is set down in the company's charter.	*Mining*
Parabolic dish	A high-temperature (above 180 degrees Fahrenheit) solar thermal concentrator, generally bowl-shaped, with two-axis tracking.	*Energy*
Parabolic growth rate law An expression	An expression for the buildup of a protective oxide coating in which growth is limited by ionic diffusion.	*Material Process*
Parabolic trough	A high-temperature (above 180 degrees Fahrenheit) solar thermal concentrator with the capacity for tracking the sun using one axis of rotation.	*Energy*
Paracumarone	The name applied to the benzene-soluble resins obtained by the polymerization of cumarone.	*Material Process*
Paraelectric	Having a modest polarization with applied electrical field.	*Material Process*
Paraelectric growth rate law	An expression for the build up of a protective oxide coating in which growth is limited by ionic diffusion.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Paraffin	Any hydrocarbon identified by saturated straight (normal) or branched (iso) carbon chains; also called an alkane. The generalized paraffinic molecule can be symbolized by the formula CnH2n+2. Paraffins are relatively non-reactive and have excellent oxidation stability. In contrast to naphthenic oils, paraffinic lubricating oils have relatively high wax content and pour point, and generally have a high viscosity index (VI.). Paraffinic solvents are generally lower in solvency than naphthenic or aromatic solvents.	*Lubrication*
Paraffin (oil)	A light-colored, wax-free oil obtained by pressing paraffin distillate.	*Energy*
Paraffin (wax)	The wax removed from paraffin distillates by chilling and pressing. When separating from solutions, it is a colorless, more or less translucent, crystalline mass, without odor and taste, slightly greasy to touch, and consisting of a mixture of solid hydrocarbons in which the paraffin series predominates.	*Energy*
Paraffin oil	A mixture of liquid hydrocarbons, refined fraction of mineral oil. Used to some extent as a lubricant.	*Material Process*
Paraffin wax	A solid mixture of purified petroleum hydrocarbons melting between 40 - 60 °C (104 - 140°F).	*Material Process*
Paraffinic	A type of petroleum fluid derived from paraffinic crude oil and containing a high proportion of straight chain saturated hydrocarbons. Often susceptible to cold flow problems.	*Lubrication*
Paraffinic hydrocarbons	Saturated hydrocarbon compounds with the general formula C_nH_{2n+2} containing only single bonds. Sometimes referred to as alkanes or natural gas liquids.	*Energy*
Paraffins	A family of saturated aliphatic hydrocarbons (alkanes) with the general formula CnH2n+2.	*Petroleum Engineering*
Paraffins	see alkanes.	*Chemical*
Paraformaldehyde	A solid polymer of formaldehyde, used instead of formaldehyde in the production and cure of certain plastics such as phenolics. Solid polymers of formaldehyde are also called trioxymethylene and polyxymethylene.	*Material Process*
Paraformaldehyde (or polyoxymethylene) (CH2O)x	White needles sublimes. The solid, polymerized form of formaldehyde. Used like formaldehyde but especially in anhydrous condensations, as an anhydrous phenol-aldehyde condensation.	*Material Process*
Parallax	An optical illusion which occurs in analog meters and causes reading errors. It occurs when the viewing eye is not in the same plane, perpendicular to the meter face, as the indicating needle.	*Electrical*
Parallel	Electrical components that are connected in such a way that the flow of electricity can take multiple, or parallel, paths through the circuit are said to be connected “in parallel” or “in shunt,” as opposed to “in series.” If one of the components in a parallel circuit was to fail, the electricity would continue to flow through an alternative path. (See also Series.)	*Electrical*
Parallel Data	Data transmission where all data bits of a data word are processed at once.	*Electrical Engineering*
Parallel Circuit	A circuit in which current has two or more paths to follow. Two electrical elements are in parallel if both terminals of both elements are electrically connected.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	Industry
Parallel group trial	A trial that compares two groups of people concurrently, one of which receives the intervention of interest and one of which is a control group. Some parallel trials have more than two comparison groups and some compare different interventions without including a non-intervention control group. Also called: Independent group design	*Quality Engineering*
Parallel Lines	Straight lines, in the same plane, that do not meet.	*Math*
Parallel Path Flow	This refers to the flow of electric power on an electric system's transmission facilities resulting from scheduled electric power transfers between two other electric systems. (Electric power flows on all interconnected parallel paths in amounts inversely proportional to each path's resistance.)	*Energy*
Parallel Spins	Electrons with the same fourth quantum numbers	*Physics*
Parallel Systems	Lubrication systems where the dispensing devices are connected to the main line in parallel. Each dispensing device operates independent of any other in the system.	*Lubrication*
Parallel Transmission	Sending all data bits simultaneously. Commonly used for communications between computers and printer devices.	*Electrical*
Paramagnetism	A relatively weak form of magnetism that results from the independent alignment of atomic dipoles (magnetic) with an applied magnetic field.	*Engineering Physics*
Paramagnetism	Magnetic behavior in which a modest increase in induction, compared to that for a vacuum, occurs with applied magnetic field.	*Material Process*
Parameter	A quantity defining a theoretical model. Unlike variables, parameters do not relate to actual measurements or attributes of patients.	*Quality Engineering*
Parameter	A controllable or variable characteristic of a system or device, temporarily regarded as a constant, the respective values of which serve to distinguish the various specific states of a (the) system or device.	*Process Control*
Parapet wall	portion of any exterior wall that extends above the roofline.	*Petroleum Drilling*
Parasite	An organism which lives on or in another living organism and obtains part or all of its nutrients from that other living organism.	*Forestry*
Parent	A firm that is not directly or indirectly controlled by another entity.	*Energy*
Parent and Affiliated Firms	A parent and those firms that are its consolidated and/or unconsolidated entities.	*Energy*
Parent and its Consolidated Entities	A parent and those firms (if any) that are affiliated with the parent entity for purposes of financial statements prepared in accordance with Generally Accepted Accounting Principles (GAAP). An individual shall be deemed to control a firm that is directly or indirectly controlled by him/her or by his/her father, mother, spouse, children, or grandchildren. See firm.	*Energy*
Parent and its Consolidated Entities	A parent and those firms (if any) that are affiliated with the parent entity for purposes of financial statements prepared in accordance with Generally Accepted Accounting Principles (GAAP). An individual shall be deemed to control a firm that is directly or indirectly controlled by him/her or by his/her father, mother, spouse, children, or grandchildren.	*Energy*

Term	Definition	*Industry*
Parent company	An affiliated company that exercises ultimate control over a business entity, either directly or indirectly, through one or more intermediaries.	*Energy*
Parent Union	the union organization which has prime responsibility for its affiliates.	*Industrial Relations*
Pareto Principle	A business principle that holds that 80% of the impact of a problem will show up in 20% of its causes.	*Reliability Engineering*
Parison	A hollow tube of plastic melt extruded from die head of a blow molding machine and which is expanded within the mold cavity by air pressure to produce the molded part.	*Engineering Physics*
Parison Swell	Expansion of the parison as it leaves the die head.	*Engineering Physics*
Parity	A technique for testing transmitting data. Typically, a binary digit is added to the data to make the sum of all the digits of the binary data either always even (even parity) or always odd (odd parity).	*Electrical*
Parity	A technique for testing transmitting data. Typically, a binary digit is added to the data to make the sum of all the digits of the binary data either always even (even parity) or always odd (odd parity).	*Electronic Process*
Parliamentary pit	When it became a legal requirement for every mine to have a second shaft or outlet, the second shaft sunk at an existing colliery became known as a 'Parliamentary pit'. (Scot.).	*Mining*
Parliamentary Procedure	general rules or procedures which have been established to maintain order and to assist the normal and routine organization and conduct of the business of deliberative bodies.	*Industrial Relations*
Parlon	A trade name for a chlorinated rubber.	*Material Process*
Parrot coal	a variety of cannel coal. It was said to spit and crack with a chattering noise, like a parrot talking.	*Mining*
Part candles	where candles were used up to a point in a mine beyond which only safety lamps could be used then the mine was said to be 'part candles'.	*Mining*
Part Timer	a worker who is employed only part of the time in an establishment which also schedules employees on a full-time basis, or a domestic house hold employee who may work only part of the day and whose time may be divided among several households, either during the day or during the week.	*Industrial Relations*
Partial Load	An electrical demand that uses only part of the electrical power available.	*Energy*
Partial Penetration	When the intake portion of the well is less than the full thickness of the aquifer.	*Petroleum Engineering*
Partial pressure	the portion of total vapor pressure in a system due to one or more constituents in the vapor mixture.	*Chemical*
Partial requirements consumer	A wholesale consumer with generating resources insufficient to carry all its load and whose energy seller is a long-term firm power source supplemental to the consumer's own generation or energy received from others. The terms and conditions of sale are similar to those for a full requirements consumer.	*Energy*
Partial Strike	a cessation of work by a small group of the total organized group in a plant or industry.	*Industrial Relations*
Partially Funded Pension Plan	a pension plan which does not set up sufficient, actuarial reserve during the employees' working period to fund the pension completely upon retirement.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Partially stabilized zirconia (PSZ) ZrO2	Partially stabilized zirconia (PSZ) ZrO2 ceramic with a modest second component addition, for example, CaO, producing a two phase microstructure. Retention of some ZrO2 rich phase in PSZ allows for the mechanism of transformation toughening.	*Material Process*
Participant	An individual who is studied in a trial, often but not necessarily a patient.	*Quality Engineering*
Participating interest	A company's interest in a mine, which entitles it to a certain percentage of profits in return for putting up an equal percentage of the capital cost of the project.	*Mining*
Particle	A minute piece of matter with observable length, width, and thickness; usually measured in micrometers.	*Mechanical, Process, and Operations*
Particle Chemistry	The elements contained within the particles of a spray powder.	*Paint and Coatings*
Particle count	The number of particles present greater than a particular micron size per unit volume of fluid often stated as particles > 10 microns per milliliter.	*Oil Analysis*
Particle count blank	An allowance for the determinable background contamination. PASCAL - Unit of pressure in the metric (SI) system.	*Mechanical, Process, and Operations*
Particle Counter	An instrument that detects and counts particles found in a fluid such as oil.	*Lubrication*
Particle Counting	A microscopic technique that enables the visual counting of particles in a known quantity of fluid. The count identifies the number of particles present greater than a particular micron size per unit volume of fluid often stated as particles > 10 microns per milliliter.	*Lubrication*
Particle density	An important parameter in establishing an entrained particle's potential to impinge on control surfaces and cause erosion.	*Oil Analysis*
Particle erosion	Occurs when fluid-entrained particles moving at high velocity pass through orifices or impinge on metering surfaces or sharp angle turns.	*Oil Analysis*
Particle impingement erosion	A particulate wear process where high velocity, fluid-entrained particles are directed at target surfaces.	*Oil Analysis*
Particle size	The controlling lineal dimension of an individual particle as determined by analysis with sieves or other suitable means.	*Paint and Coatings*
Particle Size Distribution	The percentage by weight, or by number, of each fraction into which a powder sample has been classified with respect to sieve number or microns.	*Paint and Coatings*
Particulate	A small, discrete mass of solid or liquid matter that remains individually dispersed in gas or liquid emissions. Particulates take the form of aerosol, dust, fume, mist, smoke, or spray. Each of these forms has different properties.	*Energy*
Particulate composites	composites that contain large number of coarse particles, such as the cement and gravel found in concrete	*Physics*
Particulates	Particles made up of a wide range of natural materials (e.g., pollen, dust, resins), combined with man-made pollutant (e.g., smoke particles, metallic ash); in sufficient concentrations, particulates can be a respiratory irritant.	*Lubrication*
Particulates such as dust, pollen, mold, and bacteria from the air	particulates such as dust, pollen, mold, and bacteria from the air.	*Mechanical Engineering*
Particulate composite	Composite material with relatively large dispersed particles (at least several microns in diameter) and in concentration greater than 25 vol.%.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Parties to Agreement	collective bargaining agreements generally provide, at the end of the contract, room for the signature of the representatives of the company and the union.	*Industrial Relations*
Parting	A layer of rock within a coalbed that lies roughly parallel to the coalbed and has the effect of splitting the bed into two divisions.	*Energy*
Parting	(1) A small joint in coal or rock; (2) a layer of rock in a coal seam; (3) a side track or turnout in a haulage road.	*Mining*
Parting Line	The line where the dies come together and the flash is removed.	*Metallurgy*
Parting Line	The line formed by the mating surfaces of the mold halves.	*Engineering Physics*
Partition	An interior wall subdividing the tower into cells or into separate fan plenum areas.	*Facility Engineering*
Parts Conveyor	A conveyor used to catch and transport small parts, Stampings, or scrap away from production machinery to hoppers, drums, or other operations. (PC, PCA, PCL, PCX, PCH)	*Manufacturing*
Parts Per Million (PPM)	PPM is a way of stating the performance of a process in terms of actual or projected defective material.	*Reliability Engineering*
Part-Time Employment	the term may apply to part-time work, in which case it indicates that the individual may be employed for only a few hours during the day.	*Industrial Relations*
Part-Time Worker Rate	a rate received by temporary or contingent employees.	*Industrial Relations*
Part-two mine	a safety lamp mine which was regulated under Part 2 of the Coal Mines Act of 1911. (Scot.).	*Mining*
Pascal	Unit of pressure in the metric (SI) system.	*Lubrication*
Pascal's Law	A pressure applied to a confined fluid at rest is transmitted with equal intensity throughout the liquid and that pressure is considered to act at right angles to each surface contacted by the fluid.	*Lubrication*
Pass	A single progression of a welding or surfacing operation along a joint, weld deposit, or substrate. The result of a pass is a weld bead, layer, or spray deposit.	*Maintenance and Repair*
Passage	A machined or cored fluid conducting path which lies within or passes through a component.	*Mechanical, Process, and Operations*
Pass-byes	a siding in which two sets of tubs could pass each other.	*Mining*
Passenger-miles traveled	The total distance traveled by all passengers. It is calculated as the product of the occupancy rate in vehicles and the vehicle miles traveled.	*Energy*
Passing-Bablock regression	An alternate regression calculation that can be employed when ordinary linear regression may not be reliable. This technique is non-parametric and therefore makes fewer assumptions about the nature of the data. It depends on calculating the slopes of all possible pairs of points, ranking those slopes, and selecting a median value. The correlation coefficient is used as a practical measure of when alternate regression techniques should be applied. When r is less than 0.99 or 0.975, depending on the source of the recommendation, Deming regression or Passing-Bablock regression should be used instead of ordinary linear regression.	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Passivation	Passivation is the process of making a material resistant to corrosion, which is useful in severe steam conditions. Passivation is the spontaneous formation of a hard non-reactive surface film that prevents and inhibits further corrosion. This layer is usually an oxide or nitride that is a few molecules thick. Passivation is seen in materials such as aluminum, iron, zinc, magnesium, copper, stainless steel, titanium, and silicon.	*Industrial*
Passivation	changing chemically active metal surfaces to a much less reactive state (see phosphating and chromating)	*Materials Process*
Passivator	A type of inhibitor which appreciably changes the potential of a metal to a more noble (positive) value.	*Paint and Coatings*
Passive	The state of a metal surface characterized by low corrosion rates in a potential region that is strongly oxidizing for the metal.	*Paint and Coatings*
Passive optical network	A cost-effective way to provide high performance Fiber to the Home (FTTH) connectivity via shared optical fiber. PON connects up to 32 (or more) homes on the same network using passive optical components (splitters).	*Electrical Engineering*
Passive optical network	A cost-effective way to provide high performance Fiber to the Home (FTTH) connectivity via shared optical fiber. PON connects up to 32 (or more) homes on the same network using passive optical components (splitters).	*Electrical Engineering*
Passive solar heating	A solar heating system that uses no external mechanical power, such as pumps or blowers, to move the collected solar heat.	*Energy*
Passivity	The resistance to corrosion due to the formation of a thin, protective oxide film.	*Material Process*
Past Practice	a term found in collective bargaining agreements and one which has been the basis for many arbitration awards.	*Industrial Relations*
Past Service Benefits	retirement credits which are granted to employees for service in the company prior to the installation of a particular pension plan.	*Industrial Relations*
Past Service Funding	a procedure for paying up the cost of past service liabilities.	*Industrial Relations*
Past Service Liability	when a plan is funded it frequently is necessary to determine actuarially the amount necessary to pay for the cost of past service (prior to the inception of a funded plan) of employees to be covered.	*Industrial Relations*
Past status words	Status words that are logically combined over time (such as "and"ing or "or"ing) to provide history of what has been set in the past.	*Aeronautical Engineering*
Pastures	land or a plot of land used for the grazing of animals	*Agriculture*
Pat coal	the lowest seam of coal reached in a shaft. (Scot.).	*Mining*
Patch	A small placer claim.	*Mining*
Patch test	A method by which a specified volume of fluid is filtered through a membrane filter of known pore structure. All particulate matter in excess of an “average size,” determined by the membrane characteristics, is retained on its surface. Thus, the membrane is discolored by an amount proportional to the particulate level of the fluid sample. Visually comparing the test filter with standard patches of known contamination levels determines acceptability for a given fluid.	*Oil Analysis*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Patch test	Any method of evaluating fluid contamination wherein the sample is passed through a standardized laboratory filter, and the change in color, reflectivity, etc., of the laboratory filter is compared with previously established standards.	*Mechanical, Process, and Operations*
Patching	working the coal at an outcrop or by an early form of opencast.	*Mining*
Patent	The ultimate stage of holding a mineral claim, after which no more assessment work is necessary because all mineral rights have been earned.	*Mining*
Patent Assignment	an agreement between workers and their employer, where employees are engaged in research and development or highly specialized engineering or chemical or other research, that if new inventions are developed as a result of their research and development, the patent rights on the development will accrue to the company, not to the employee.	*Industrial Relations*
Patent Defect	See latent defect/fault	*Reliability Engineering*
Paternalism, Employer	a term, generally used in a derogatory sense, describing the "fatherly" interest of an employer in his workers.	*Industrial Relations*
Path integral gain (KINT)	A guidance control law parameter, generated by the lateral guidance modes.	*Aeronautical Engineering*
Path integral limit (INTLIM)	A guidance control law parameter, generated by the lateral guidance modes; Typical Units: rad.	*Aeronautical Engineering*
Path integral value (INTVAL)	A guidance control law parameter, generated by the lateral guidance modes; Typical Units: ft; Dimensions: Length.	*Aeronautical Engineering*
Pathogen	A disease-producing agent, usually applied to a living organism. Generally, any virus, bacteria, or fungi that cause disease.	*Petroleum Engineering*
Pathogen	Any disease producing organism.	*Chemistry*
Pathogen	Any agent of the environment capable of inciting disease.	*Forestry*
Pathogenic	Capable of causing disease.	*Petroleum Engineering*
Pathogenic	Disease producing.	*Chemistry*
Pathos	Emotion	*Management Discussion*
Path-Tracing Method	A method for determining the reliability of complex systems. With this method, every path from a starting point to an ending point is considered. Since systems success involves having at least one path available from one end of the reliability block diagram to the other, as long as at least one path is available, the system has not failed. The reliability of the system is simply the probability of the union of these paths.	*Reliability Engineering*
Patina	relatively insoluble zinc carbonate layer that forms as the galvanized coating weathers, providing added corrosion protection and abrasion resistance	*Materials Process*
Pattern	A duplicate, usually wooden, of a part to be cast. Used to form the mold into which molten metal is poured.	*Mechanical*
Pattern	A duplicate made of wood or metal of a part to be cast. Used to form the mold into which the molten metal is poured.	*General Mechanical*
Pattern Bargaining	a procedure in collective bargaining whereby a union seeks to obtain equal or identical terms from a group of employers in a particular industry based on an agreement already obtained from an important company.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pattern Makers' League of North America (AFL-CIO)	the Pattern Makers' League was organized in Philadelphia, Pennsylvania, in May 1887.	*Industrial Relations*
Patterns Of Failure	Failures manifest in one of four primary patterns. Wear out - constant hazard rate with a distinct wear out region	*Reliability Engineering*
Pauli exclusion principle	Quantum mechanical concept that no two electrons can occupy precisely the same state.	*Material Process*
Pauli Exclusion Principle	concept that no more than two electrons can fit in any orbital and that the two electrons must have opposed spins	*Physics*
Pavement	A paved road, highway, etc. A paved surface, ground covering, or floor. A material used for paving.	*Civil Engineering*
Pavement brushing	the taking up of the floor of a roadway to gain more headroom or compete against the action of creep. – see also Bate, Dint, Denting and Pocking.	*Mining*
Paving	The laying of a pavement.	*Civil Engineering*
Pay	A reservoir or portion of a reservoir containing hydrocarbons that can be economically produced, i.e. it is capable of "paying" an income. Also referred to as "pay sand" or the "pay zone".	*Petroleum Drilling*
Pay Day	the day on which employees receive their wages or salaries.	*Industrial Relations*
Pay for Grievance Time	provisions in collective bargaining agreements in which the employer agrees to compensate certain union officers for time spent in handling grievances.	*Industrial Relations*
Pay for Shop Stewards	this is the same as pay for grievance time but may make particular reference to shop stewards and other members of the executive staff of the union.	*Industrial Relations*
Pay for Time Spent on Union Business	provisions in agreements which go beyond the handling of grievances may make provision for time spent on other union business which relates to general plant operations for which the employer is willing to compensate.	*Industrial Relations*
Pay Period	the time between the beginning and end of a particular period for the purpose of computing the employee's pay.	*Industrial Relations*
Payables to municipality	The amounts payable by the utility department to the municipality or its other departments that are subject to current settlement.	*Energy*
Payback	The length of time it takes for the savings received to cover the cost of implementing the technology.	*Energy*
Payment in Kind	See: Income in Kind	*Industrial Relations*
Payment method for utilities	The method by which fuel suppliers or utility companies are paid for all electricity, natural gas, fuel oil, kerosene, or liquefied petroleum gas used by a household. Households that pay the utility company directly are classified as "all paid by household." Households that pay directly for at least one but not all of their fuels used and that has at least one fuel charge included in the rent were classified as "some paid, some included in rent." Households for which all fuels used are included in rent were classified as "all included in rent." If the household did not fall into one of these categories, it was classified as "other." Examples of households falling into the "other" category are (1) households for which fuel bills were paid by a social service agency or a relative, and (2) households that paid for some of their fuels used but paid for other fuels through another arrangement.	*Energy*

Term	Definition	*Industry*
Payment-by-Result	any method of wage payment which relates earnings of workers to the amount of output.	*Industrial Relations*
Payroll	generally the total wages earned by all of the named employees in a particular plant or establishment for a given payroll period.	*Industrial Relations*
Payroll Deductions	amounts withheld or deducted from individual's gross earning by his employer.	*Industrial Relations*
Payroll Period	See: Pay Period	*Industrial Relations*
Payroll Tax	taxes levied or imposed by the government.	*Industrial Relations*
Payzone	Rock in which oil and gas are found in exploitable quantities.	*Petroleum Drilling*
Payzone	Rock in which oil and gas are found in exploitable quantities.	*Petroleum Drilling*
PBA	polybutene amine	*Petro-Chemical Abbreviations*
PBR	Performance-Based Rates	*Energy*
PC	Personal Computer	*Control Engineering*
PC Card	Add-in cards that conform to the PC Card specification (formerly called PCMCIA). A PC Card is a removable device, approximately the size of a credit card, designed to plug into a matching slot.	*Electrical Engineering*
PCB	PolyChlorinated Biphenyl	*Energy*
PCB	Polychlorinated biphenyl, a class of synthetic chemicals consisting of a homologous series of compounds beginning with monochlorobiphenyl and ending with decachlorobiphenyl. PCBs do not occur naturally in petroleum, but have been found as contaminants in used oil. PCBs have been legally designated as a health hazard, and any oil so contaminated bust be handled in strict accordance with state and federal regulations.	*Lubrication*
PCD	PCD (Pitch Circle Diameter) is the diameter of the circle which passes through the centre of all the bolts, or drilling pattern holes on a valve, flange, or other pipe fitting.	*Industrial*
PCEO	passenger car engine oil	*Petro-Chemical Abbreviations*
PCEOCP	Passenger Car Engine Oil Classification Panel	*Mechanical, Process, and Operations*
PCFV	Partnership for Cleaner Fuels and Vehicles	*Petro-Chemical Abbreviations*
p-channel metal-oxide semiconductor	A p-channel metal-oxide semiconductor (pMOS) transistor is one in which p-type dopants are used in the gate region (the "channel"). A negative voltage on the gate turns the device on.	*Electrical Engineering*
PCIe electrical interface	The PCIe electrical interface - The PCIe electrical interface is also used in a variety of other standards, most notably the Express Card laptop expansion card interface.	*Electrical Engineering*
PCMO	passenger car motor oil	*Petro-Chemical Abbreviations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
PCTFE	Polychlorotrifluoroethylene	*Petro-Chemical Abbreviations*
PCV	positive crankcase ventilation	*Petro-Chemical Abbreviations*
PCV System	An abbreviation for "positive crankcase ventilation system". This is a system which prevents the vapors of a crankcase from being directly discharged into the atmosphere.	*Lubrication*
PCV Valve	A Positive Crankcase Ventilation (PCV) valve is a one-way valve that ensures the continual flow and evacuation of gases from the crankcase into the engine.	*Lubrication*
PD Controller	A controller which produces proportional plus	*Electrical Engineering*
PdM	See Predictive Maintenance.	*Maintenance*
PDS	product data sheet	*Petro-Chemical Abbreviations*
PDVSA	Petroleos de Venezuela	*Petro-Chemical Abbreviations*
PE	Pentaerythritol	*Petro-Chemical Abbreviations*
PEA	polyether amine	*Petro-Chemical Abbreviations*
Peaceful Persuasion	a term used frequently in the legal literature of industrial relations and particularly with reference to union activities on the picket line.	*Industrial Relations*
Peaceful Picketing	a form of picketing or marching to inform employees, or the public, that there is a labor dispute in existence or that a firm purchases or uses non-union materials or services.	*Industrial Relations*
Peacock coal	having an iridescent luster due to a film-deposit of pyrites.	*Mining*
Peak	Periods of relatively high system demands.	*Energy*
Peak Clipping	Peak clipping reduces a utility's system peak, reducing the need to operate peaking units with relatively high fuel costs. Peak clipping is typically pursued only for the days the system peak is likely to occur, and the resources are not expected to meet the impending load requirements.	*Energy*
Peak day withdrawal	The maximum daily withdrawal rate (Mcf/d) experienced during the reporting period.	*Energy*
Peak Demand	Maximum power used in a given period of time.	*Energy*
Peak kilowatt	One thousand peak watts.	*Energy*
Peak load month	The month of greatest plant electrical generation during the winter heating season (Oct-Mar) and summer cooling season (Apr-Sept), respectively.	*Energy*
Peak load plant	A plant usually housing old, low-efficiency steam units, gas turbines, diesels, or pumped-storage hydroelectric equipment normally used during the peak-load periods.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Peak Load Power plant	A power generating station that is normally used to produce extra electricity during peak load times.	*Energy*
Peak megawatt	One million peak watts.	*Energy*
Peak shaving	When daily usage of natural gas is charted on graphs, it will show high peaks (usage) during the winter months. These peaks can be "shaved" (averaged out) when the daily consumption is augmented with stand-by supplies of synthetic natural gas, propane, or methane.	*Mechanical*
Peak Water Demand	The highest rate of water use each day. Well capacities or storage facilities must be able to meet this demand.	*Petroleum Engineering*
Peak watt	A manufacturer's unit indicating the amount of power a photovoltaic cell or module will produce at standard test conditions (normally 1,000 watts per square meter and 25 degrees Celsius).	*Energy*
Peaking Capacity	Generating equipment normally operated only during the hours of highest daily, weekly, or seasonal loads; this equipment is usually designed to meet the portion of load that is above base load.	*Energy*
Peaking Unit	A power generator used by a utility to produce extra electricity during peak load times.	*Energy*
Peak-to-peak value	The algebraic difference between extreme values (as D = 2X).	*Reliability Engineering*
Pearl	very small coal almost 'dross'. (Scot.).	*Mining*
Pearl essence	A pasty preparation of fish scales (guanine) which is chemically treated and incorporated into cellulose derivative lacquers plastics.	*Material Process*
Pearlite	A two-phase microstructure found in some steels and cast irons. It results from the transformation of austenite of eutectoid compositions and consists of alternating layers of alpha-ferrite and cementite.	*Engineering Physics*
Pearsall Shale	A Cretaceous age geologic formation which lies approximately 2,000' below the Eagle Ford Shale in South Texas. The Pearsall shale is currently being explored by several companies, including EOG Resources and Chesapeake, who are drilling exploratory wells to determine if the formation holds similar potential to the Eagle Ford Shale in terms of producing oil and gas.	*Petroleum Drilling*
Peas or Pease	a descriptive term for small coal. Smaller than beans and also produced from 'duff'.	*Mining*
Peat	Peat consists of partially decomposed plant debris. It is considered an early stage in the development of coal. Peat is distinguished from lignite by the presence of free cellulose and a high moisture content (exceeding 70 percent). The heat content of air-dried peat (about 50 percent moisture) is about 9 million Btu per ton. Most U.S. peat is used as a soil conditioner. The first U.S. electric power plant fueled by peat began operation in Maine in 1990.	*Energy*
Peat	The partially decayed plant matter found in swamps and bogs, one of the earliest stages of coal formation.	*Mining*
Pebble	An uneven surface having very small uniform irregularities, somewhat similar to the beaded surface of a movie screen. It prevents specular reflection and seriously impairs clear vision through a transparent sheet. Term not recommended.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pebble mill	A grinding mill similar in construction and action as a ball mill, but in which the charge is made up of hard pebbles in place of the more conventional steel balls.	*Mining*
Peck	a collier's pick; or a measure of coal, i.e. the coal peck contains 41 gallons, 4.362 old Winchester measure, 8 pecks making 1 bole and 24 boles 1 chaldron. (N. East).	*Mining*
Pecking up	propping up with stone, brick, or any rubbish, which is at hand (S. Staffs.).	*Mining*
Pedal	A flight control operated by pushing with feet, primarily to control yaw via the rudder in fixed-wing aircraft or thrust to tail rotor in rotary-wing aircraft; pedals are automatically controlled in modern aircraft.	*Aeronautical Engineering*
Pedestals	Used as a transition from the cross struts to the foundation of a natural draft tower or fan mount in force draft towers.	*Facility Engineering*
Pee-dee	a lad employed on board a keel. (N. East).	*Mining*
Peel or Pills	lean ironstone (N. Staffs.).	*Mining*
Peel Test	A destructive method of examination that mechanically separates a lap joint by peeling.8	*Maintenance and Repair*
Peening	The mechanical working of metals by means of hammer blows.	*Maintenance and Repair*
Peer review	A refereeing process for checking the quality and importance of reports of research. An article submitted for publication in a peer-reviewed journal is reviewed by other experts in the area. See also: External peer reviewer (of a Cochrane Review)	*Quality Engineering*
Peerie	a surveyor's large brass plumb-bob. (Scot.).	*Mining*
Peeweet	a miner's singlet, usually of blue-grey flannel, like a lapwing's wing. (Scot.).	*Mining*
Peg Point	applies to a specific occupational rate for a key job in any of the major groupings within the wage structure-unskilled, semi-skilled, or skilled job.	*Industrial Relations*
Peggy	a pick. (Yorks.).	*Mining*
Pegmatite	A coarse-grained, igneous rock, generally coarse, but irregular in texture, and similar to a granite in composition; usually occurs in dykes or veins and sometimes contains valuable minerals.	*Mining*
Peg-top	an underground winding drum, driving one or more haulage roads. The winding drum was usually in a vertical position.	*Mining*
Peldon	hard and compact siliceous rock (S. Staffs.). -see also Cank.	*Mining*
Pellet	A marble-sized ball of iron ore fused with clay for transportation and use in steelmaking.	*Mining*
Pelletizing	The process of creating pellets by moving a melt flow through an extruder die with a number of uniform holes. As the molten extrudate moves through the holes, it is cut into pellets of uniform size and shape and then cooled.	*Engineering Physics*
Pellets	Pellets are pressed pieces of firewood, wood chips and untreated offal timber. They measure approx. 6 millimeters in diameter and 10 to 30 millimeters in length.	*Thermal Management*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pellets	Tablets of uniform size, consisting of resins or mixtures of resins with compounding additives which have been prepared for molding operations by shaping in a pelletizing machine or by extrusion and chopping into short segments.	*Engineering Physics*
Pelt	a coaly stone often found in coal seams. (Scot.).	*Mining*
Peltier Effect	When a current flows through a thermocouple junction, heat will either be absorbed or evolved depending on the direction of current flow. This effect is independent of joule I2 R heating.	*Electrical*
Pen	a narrow airway alongside the solid coal as opposed to an air road through the gob; or a covered-in water drain. (Scot.).	*Mining*
Penalty Cargo	cargoes in the shipping and longshoring industry which because of their obnoxious, disagreeable, or dangerous character are loaded at a premium (higher) rate of pay.	*Industrial Relations*
Pencil ganister	see Ganister.	*Mining*
Pending Work	Work issued to a mechanic or contractor that is unfinished. It is important to complete all pending work. Pending work may refer to equipment returned to service 'temporarily' where further work is required to restore and assure full form, fit, and function. Pending work forms part of backlog, but it is often necessary to segregate and track it separately when referring to temporary modifications.	*Maintenance*
Penetration	A measure of consistency (hardness) based on an inverse penetration measurement (the softer the consistency, the higher the penetration number). Based on ASTM D 217 (IP 50) and similar standardized methods.	*Lubrication*
Penetrometer	Instrument for measuring penetration of surfaces of solid bodies.	*Material Process*
Pennant rock	hard, strong sandstone (S. Wales).	*Mining*
Penning gate	A sluice gate that opens by lifting upward.	*Civil Engineering*
Pennington Case	case in which the United Mine Workers Union was held potentially subject to heavy treble damage claims under the Sherman Antitrust act.	*Industrial Relations*
Pennsylvania AFL-CIO	the official publication is the Pennsylvania AFL-CIO News, published monthly.	*Industrial Relations*
Pennsylvania Anthracite	All mines in the following counties: Carbon, Columbia, Dauphin, Lackawanna, Lebanon, Luzerne, Northumberland, Schuylkill, Sullivan, and Susquehanna. All anthracite mines in Bradford County.	*Energy*
Pennsylvania Bituminous	All mines located in the following counties: Allegheny, Armstrong, Beaver, Bedford, Butler, Cambria, Clarion, Clearfield, Elk, Fayette, Greene, Indiana, Jefferson, Lawrence, Lycoming, Somerset, Venango, Washington, and Westmoreland, and all bituminous mines in Bradford County.	*Energy*
Pennsylvania Greyhound Lines Case	See: NLRB v. Pennsylvania Greyhound Lines, Inc.	*Industrial Relations*
Pennsylvania Oil and Gas Act	State law that gives the Department of Environmental Protection regulatory and permitting authority over the oil and gas industry. DEP asserts that this law gives it primacy, even over local regulations, when it comes to permitting new wells, but the state Supreme Court has allowed local municipalities some authority regarding well zoning.	*Petroleum Drilling*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pennsylvania State University, The Department of Labor Education	Address: 316 Sparks Building, University Park, Pa.	*Industrial Relations*
Pennsylvania, University of-Labor Relations Council	located at Philadelphia 4, Pennsylvania.	*Industrial Relations*
Penny stones	bands of clay ironstone.	*Mining*
Penobel	permitted explosive.	*Mining*
Penrose fillings	Patterns that fill two dimensional space with a resulting fivefold symmetry.	*Material Process*
Pension	periodic payments of money usually on a monthly basis, to individuals who have been retired from the employ of a company after reaching a specified age, or period of service, or because of an accident, illness, or some other reason.	*Industrial Relations*
Pension Fund	a fund set aside to cover the costs of the particular pension plan established and maintained by an employer to provide retirement payments of fixed and determinable amounts to employees over a period of years.	*Industrial Relations*
Pension Plan	an organized program maintained by an employer, the purpose of which is to provide specific and determinable benefits to his employees to be paid over a period of years following the retirement of the employees.	*Industrial Relations*
Pension Planning	procedures adopted by those concerned with the problems of pensions and the study of various assumptions so that a pension plan will meet the objectives for which the particular pension is established.	*Industrial Relations*
Pensionable Age	the age specified under a particular pension program at which the employee either becomes eligible to receive retirement benefits on a voluntary basis, or the age at which he is required to retire and accept the pension under plans where there is a fixed or automatic age for mandatory retirement.	*Industrial Relations*
Pensioner	an individual who has retired and receives a pension from his employer for the performance of past services.	*Industrial Relations*
Penstock	A pipe conducting water from a head gate to a waterwheel. A conduit for conveying water to a power plant. A sluicelike contrivance used to control the flow of water.	*Civil Engineering*
Pentaerythritol tetra acetate	Pentaerythritol tetra acetate C(CH2OCOCH3)4 A plasticizer.	*Material Process*
Pentaerythritol tetra acetate	Pentaerythritol tetra acetate (C(CH2OCOCH3)4 A plasticizer.	*Material Process*
Pentane ($CH_3(CH_2)_3CH_3$)	n-Pentane ($CH_3(CH_2)_3CH_3$) Colorless liquid. A petroleum hydrocarbon used as a starting point in various syntheses, as a solvent, etc.	*Material Process*
Pentanes plus	A mixture of liquid hydrocarbons, mostly pentanes and heavier, extracted from natural gas in a gas processing plant. Pentanes plus is equivalent to natural gasoline.	*Energy*
Penthouse or Penthus	a wooden hut or covering at the bottom of a sinking pit to protect the sinkers.	*Mining*
Pentlandite	Nickel iron sulfide, the most common nickel ore.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Peon	generally a common laborer or one who performs work which is relatively unskilled.	*Industrial Relations*
Peonage	a form of involuntary service, generally under contract.	*Industrial Relations*
People Ex Rel Tipaldo v. Morehead	See: Morehead v. Tilpado	*Industrial Relations*
People Management	The utilization of human resources in order to achieve the organization's objectives.	*Reliability Engineering*
People v. Merlin	a decision of the Court of General Sessions in New York City in 1810, which indicted a group of striking shoemakers for engaging in a conspiracy.	*Industrial Relations*
People v. United Mine Workers	an important decision in Colorado in 1921 which upheld the right of the state to require publicity and the use of legislative investigations and mediation in handling disputes in essential industries, including coal mining.	*Industrial Relations*
People v. Wilzig	a case in New York which involved the application of the common-law doctrine of conspiracy.	*Industrial Relations*
Pepper	Very small pits which appear as an area of small specks.	*Material Process*
Peptide	A short chain of amino acids.	*Agriculture*
Per Capita Income	per capita means "for each person", so the per capita incomes in the United States would be the total income divided by the number of individuals.	*Industrial Relations*
Per Capita Tax	the dues payment made by a local union to the international union to which it is affiliated, or by an international union to its parent federation, based on the number of members in the local union.	*Industrial Relations*
Per protocol analysis	An analysis of the subset of participants from a randomized controlled trial who complied with the protocol sufficiently to ensure that their data would be likely to exhibit the effect of treatment. This subset may be defined after considering exposure to treatment, availability of measurements and absence of major protocol violations. The per protocol analysis strategy may be subject to bias as the reasons for non-compliance may be related to treatment. See also: Intention to treat analysis	*Quality Engineering*
Perbunan	Synthetic rubber produced by the copolymerization of butadiene and acrylonitrile. Formerly known as buna N.	*Material Process*
Percent difference	The relative change in a quantity over a specified time period. It is calculated as follows: the current value has the previous value subtracted from it; this new number is divided by the absolute value of the previous value; then this new number is multiplied by 100.	*Energy*
Percent Planned Work	The Percentage Of Total Work (In Labor Hours) Performed In A Given Time Period Which Has Been Planned In Advance.	*Plant Engineering*
Percent utilization	The ratio of total production to productive capacity, times 100.	*Energy*
Percentage extraction	The proportion of a coal seam which is removed from the mine. The remainder may represent coal in pillars or coal which is too thin or inferior to mine or lost in mining. Shallow coal mines working under townships, reservoirs, etc., may extract 50%, or less, of the entire seam, the remainder being left as pillars to protect the surface. Under favorable conditions, longwall mining may extract from 80 to 95% of the entire seam. With pillar methods of working, the extraction ranges from 50 to 90% depending on local conditions.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Percentage Permanent Viscosity Loss (PPVL)	Measure of the PVL related to the viscosities of the fresh oil; equals PVL divided by fresh oil viscosity, multiplied by 100. Difference between the viscosity of an oil measured at low and high shear stresses, divided by viscosity measured at low shear stress, multiplied by 100.	*Lubrication*
Percentage Shop	a procedure developed by the National War Labor Board during world War II in which a company was required to maintain a fixed percentage of union employees in relation to the total work force employed.	*Industrial Relations*
Perched Water	Unconfined groundwater separated from an underlying main body of groundwater by an unsaturated zone.	*Petroleum Engineering*
Perched Water Table	Occurs when a low-permeability material, located above the water table, blocks or intercepts the down	*Petroleum Engineering*
Percolate (Infiltration)	The movement or flow of water seeping or filtering through the pores of soil, usually downward, without a definite channel.	*Petroleum Engineering*
Percussion drill	A drill, usually air powered, that delivers its energy through a pounding or hammering action.	*Mining*
Perennial	Plants that live or grow for more than one year.	*Forestry*
Perfectly Balanced Rotor	A rotor is perfectly balanced when its mass distribution is such that it transmits no vibratory force or motion to its bearings as a result of centrifugal forces.	*General Engineering*
Perfectly Balanced Rotor	A rotor is perfectly balanced when its mass distribution is such that it transmits no vibratory force or motion to its bearings as a result of centrifugal forces.	*Electronic Process*
Perfluorocarbons (PFCs)	A group of man-made chemicals composed of one or two carbon atoms and four to six fluorine atoms, containing no chlorine. PFCs have no commercial uses and are emitted as a byproduct of aluminum smelting and semiconductor manufacturing. PFCs have very high 100-year Global Warming Potentials and are very long-lived in the atmosphere.	*Energy*
Perfluoromethane	A compound (CF4) emitted as a byproduct of aluminum smelting.	*Energy*
Perforate	Make holes through the casing and cement opposite the producing formation to allow gas to flow into the well.	*Petroleum Engineering*
Perforating	Processes by which plastic film or sheeting is provided with holes ranging from relatively large diameters for decorative effects (by means of punching or clicking) to very small, even invisible, sizes. The latter are attained by passing the material between rollers or plates, one of which is equipped with closely spaced fine needles or by spark erosion.	*Engineering Physics*
Perforating Gun	A device fitted with shaped charges or "bullets" that is lowered to the desired depth in a well and fired to create penetrating holes in casing, cement and formation.	*Petroleum Drilling*
Perforation	A hole made in the casing, cement and formation through which formation fluids enter a wellbore.	*Petroleum Drilling*
Perforations	Slits cut into the well casing to allow groundwater to enter. May be located at more than one level, to coincide with water-bearing strata in the earth.	*Petroleum Engineering*
Performance Appraisal	a systematic review of an individual employee's performance on his job to evaluate the effectiveness or adequacy of his work.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Performance Attributes	Performance attributes measure the quality of service and operating efficiency. Loss of load probability, expected energy curtailment, and reserve margin are all performance attributes.	*Energy*
Performance Based Contracting	In a performance-based contract, the fee paid to the contractor depends (at least partly) on the business results achieved within the contracted work. This means that apart from the quality, speed, etc., of the work itself, the results of positive and negative work achievements is shared. For example, in the case of maintenance contracts, the mutual goal may be reduced mechanical equipment downtime (increased uptime). The benefits are long-term relationship and confidence building, reduced amount of contractors, mutual goals, and sharing the risks of unknown events. Overall cost reductions are mentioned from 9% to 30%. A collection of ten success factors is described.	*Maintenance*
Performance Based Ratemaking (PBR)	Under performance-based ratemaking, rates for utility service would no longer be based on cost-of-service, but instead on performance standards and market indices. PBR allows a utility greater flexibility to manage the costs of its electric system and to price its power at competitive levels by taking the market risk for recovering the revenues.	*Energy*
Performance bias	Systematic differences between intervention groups in care provided apart from the intervention being evaluated. For example, if participants know they are in the control group, they may be more likely to use other forms of care. If care providers are aware of the group a particular participant is in, they might act differently. Blinding of study participants (both the recipients and providers of care) is used to protect against performance bias.	*Quality Engineering*
Performance characteristic	"A property of a test that is used to describe its quality." [CLSI] For a measurement procedure, the performance characteristics include reportable range, imprecision, inaccuracy or bias, interference, recovery, detection limit, and reference interval. Those properties that describe how well a procedure performs. For a control procedure, the performance characteristics are the probabilities for error detection and false rejection, or the average run lengths for rejectable and acceptable quality. For a measurement procedure, the performance characteristics include analytical range, precision, accuracy, interference, recovery, and also the frequency and duration of analytical errors.	*Quality*
Performance Rating	see: Efficiency Rating, Merit Rating	*Industrial Relations*
Performance Specification	A specification that details the functional performance criteria required for a particular material or product (as opposed to a design specification, which prescribes in detail the design characteristics and manufacturing methodology for the material or product).	*Procurement*
Performance standards	These are developed to define and detail the specific attributes of the safety systems to enable them meet the required goals. This is achieved by setting the goals for the SCE and by providing a mechanism to measure and validate their performance.	*Reliability Engineering*
Performance Tests	measures or tests which determine an individual's performance or proficiency in doing his job.	*Industrial Relations*
Performance-based requirements (specifications)	Requirements that describe what the product should do, how it should perform, the environment in which it should operate, and interface and interchangeability characteristics. They should not specify how the product should be designed or manufactured.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Peridotite	An intrusive igneous rock consisting mainly of olivine.	*Mining*
Perilla oil	An oil obtained from several species of perrila grown in China, Japan and India, used in certain types of varnishes.	*Material Process*
Period	Time of a periodic process; 1/f where f is the sampling frequency; Symbols: T; Typical Units: s; Dimensions: Time.	*Aeronautical Engineering*
Period Costs	Those costs that are taken directly to the income statement as expenses in the period in which they are incurred or accrued; such costs consist of selling (marketing) and administrative expenses.	*Procurement*
Period effect	[In a cross-over trial:] A difference in the measured outcomes from one treatment period to another. This could be caused, for instance, by all patients in a trial naturally healing over time. See also: Cross-over trial	*Quality Engineering*
Period of Analysis	The number of years considered in the study.	*Energy*
Periodic	A process that executes at a fixed rate; Compare: aperiodic.	*Aeronautical Engineering*
Periodic built-in-test (PBIT)	Self tests running internal to a device as part of normal operation; Compare: initiated built-in-test.	*Aeronautical Engineering*
Periodic Review	this term may apply to regular merit reviews of individual employees under company or collectively bargained programs for adjustments of individual rates within the rate range or possibly for promotion.	*Industrial Relations*
Periodic table	Systematic graphical arrangement of the elements indicating chemically similar groups.	*Material Process*
Periodic vibration	(See also **Deterministic vibration**.) An oscillation whose waveform regularly repeats. Compare with *probabilistic* vibration.	*Reliability Engineering*
Periodicals	applies generally to the regular union publications which are made available by the trade unions and which are helpful in an examination and evaluation of union programs over a period of time.	*Industrial Relations*
Peripheral	A device that is external to the CPU and main memory, i.e., printer, modem or terminal, but is connected by the appropriate electrical connections.	*Electrical*
Peripheral Component Interconnect	A standard interface used primarily on computer backplanes to connect interface cards and peripheral devices to the processor bus. PCI is often used for video display cards, network interfaces (e.g. Ethernet), and peripheral interfaces such as SCSI or USB.	*Electrical Engineering*
Peritectic diagram	Binary phase diagram with the peritectic reaction.	*Material Process*
Peritectic reaction	The transformation of a solid to a liquid and a solid of a different composition upon heating.	*Material Process*
Perithecium	A sexual fruiting structure of the Ascomycetes with an opening called the ostiole at or near its top.	*Forestry*
Permanent Arbitrator	an arbitrator who is appointed under the terms of a collective bargaining agreement for a specific period of time, generally the duration of the contract, which may be for a period of one, two, or three years.	*Industrial Relations*
Permanent dipole	Molecular structure with an inherent separation of centers of positive and negative charge.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Permanent Disability	the inability of an individual, as the result of an injury or accident, to perform his regular or normal work.	*Industrial Relations*
Permanent Employee	an employee who has met the requirements of the probationary period.	*Industrial Relations*
Permanent Injunction	injunctions granted by courts are generally of three categories: (1) restraining orders, (2) temporary injunctions, and (3) permanent injunctions.	*Industrial Relations*
Permanent magnet	Magnet, typically of a hard steel, that retains its magnetization once magnetized.	*Material Process*
Permanent Partial Disability	permanent partial disability is a disability which generally permits partial use of the affected member, such as a limb.	*Industrial Relations*
Permanent Piece Rate	a piece rate which is established after preliminary or temporary trial rates have been applied to a particular job or operation, and after conditions under which the job is to be run have been standardized.	*Industrial Relations*
Permanent Total Disability	a phrase used with reference to an employee who is considered permanently unable to perform his regular work.	*Industrial Relations*
Permanent Viscosity Loss (PVL)	Difference between the viscosity of fresh oil and that of the same oil after engine operation or special test conditions of polymer degradation.	*Lubrication*
Permanently discharged fuel	Spent nuclear fuel for which there are no plans for reinsertion in the reactor core.	*Energy*
Permeability	The ease with which fluid flows through a porous medium.	*Energy*
Permeability	a qualitative description of the relative ease with which rock, soil, or sediment will transmit a fluid (liquid or gas). Often used as a synonym for hydraulic conductivity or coefficient of permeability.	*Chemical*
Permeability	The property of a formation which quantifies the flow of a fluid through the pore spaces and into the wellbore.	*Petroleum Drilling*
Permeation	The passage or diffusion or a gas, vapor, liquid, or solid through a barrier without physically or chemically affecting it.	*Engineering Physics*
Permissible	That which is allowable or permitted. It is most widely applied to mine equipment and explosives of all kinds which are similar in all respects to samples that have passed certain tests of the MSHA and can be used with safety in accordance with specified conditions where hazards from explosive gas or coal dust exist.	*Mining*
Permissive Wage Adjustment	any provision or procedure which permits the reopening of wage negotiations during the life of the contract when certain conditions take place which require a review of the wages of the particular company.	*Industrial Relations*
Permit	As it pertains to mining, a document issued by a regulatory agency that gives approval for mining operations to take place.	*Mining*
Permit Fee	the charge made by a union for a permit card.	*Industrial Relations*
Permit Permit Card	a certificate or similar document issued by a union, for a fee, which allows or "permits" an individual who is not a member of the union (in some cases he may be in the process of becoming a member) to work on the job covered by the issuing union's contract.	*Industrial Relations*
Permittivity	The proportionality constant between the dielectric displacement D and the electric field E.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Perovskite	Compound crystal structure.	*Material Process*
Perquisites	additional compensation furnished by an employer, usually in goods or services over and above the general payment of wages or salaries.	*Industrial Relations*
Persian Gulf	The countries that surround the Persian Gulf are: Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates. Seehttp://www.eia.doe.gov/emeu/cabs/pgulf.html for more information.	*Energy*
Persistent Unemployment	a general description of a prolonged and sustained rate of unemployment which has continued even during periods of high employment and upward movement of the business cycle.	*Industrial Relations*
Person	An individual, a corporation, a partnership, an association, a joint-stock company, a business trust, or an unincorporated organization.	*Energy*
Personal Communications Service	An American generic term for a mass-market mobile phone service, emphasizing personal communication, independent of the technology used to provide it. PCS includes such digital cellular technologies as GSM 1900, CDMA and TDMA IS-136. 2G, CDMA, Digital, GSM, TDMA.	*Electrical Engineering*
Personal Communications Service	An American generic term for a mass-market mobile phone service, emphasizing personal communication, independent of the technology used to provide it. PCS includes such digital cellular technologies as GSM 1900, CDMA and TDMA IS-136. 2G, CDMA, Digital, GSM, TDMA.	*Electrical Engineering*
Personal computer	A microcomputer for producing written, programmed, or coded material; playing games; or doing calculations. Laptop and notebook computers are excluded for the purposes of EIA surveys.	*Energy*
Personal Computer Memory Card International Association	A standard for miniaturized laptop expansion cards for modems, storage, and other devices. The standard was officially renamed "PC card."	*Electrical Engineering*
Personal Computer Memory Card International Association	A standard for miniaturized laptop expansion cards for modems, storage, and other devices. The standard was officially renamed "PC card."	*Electrical Engineering*
Personal Problems Consultant	a counselor attached to the personnel department staff of a company.	*Industrial Relations*
Personal Property	Any movable item subject to ownership; material, but not real property.	*Procurement*
Personal Services	Infrequent, technical, or unique functions performed by an independent contractor. Personal services contracts almost always run to individuals rather than partnerships, firms, or corporations, and the services performed frequently are not the full-time occupation of the contractor. Example of personal services contracts include translation, technical editing, technical appraisal.	*Procurement*
Personality Inventory	a test or tests designed to measure personality traits particularly those traits which have a bearing on the person's effectiveness in handling particular jobs.	*Industrial Relations*
Personality Profile	the broad summary picture which results from personality inventory testing and interviews.	*Industrial Relations*
Personality Testing	See: Personality Inventory	*Industrial Relations*
Personnel	a term applied to all of the individuals engaged in any enterprise toward whom a personnel administration program is directed.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Personnel (History) Records	the folders, charts, and other materials brought together in the personnel department to provide a continuing record of employees and their activity and progress in the company.	*Industrial Relations*
Personnel Administration	the broad structure of a personnel program designed to obtain the most effective utilization of manpower, not only for more efficient production, but also for better utilization of facilities and equipment.	*Industrial Relations*
Personnel Audit (or Survey)	an annual personnel administration inventory which is an analysis and measurement of a company's personnel policies and practices to determine their effectiveness.	*Industrial Relations*
Personnel Department	the department of a company charged with responsibility for hiring employees.	*Industrial Relations*
Personnel Director	in general the manager of the personnel department, and the chief officer administering personnel policies.	*Industrial Relations*
Personnel Inventory	See: Personnel Inventory	*Industrial Relations*
Personnel Locating System (PLS)	A basic guidance mode, providing lateral guidance to a PLS transmitter from range and bearing inputs. Equipment that determines range and bearing to a personnel with a PLS transmitter; Provides range and bearing to locate ground personnel. Coded continuous or periodic interrogations of the portable ground radios are used to provide the information.	*Aeronautical Engineering*
Personnel Management	the function primarily concerned with utilization of the human resources in a particular company or organization in such a way that the individual employee is given an opportunity to make his maximum contribution under safe and congenial working conditions.	*Industrial Relations*
Personnel Policies Forum	The Bureau of National Affairs panel of personnel and industrial executives who are surveyed periodically on current or major personnel and industrial relations problems.	*Industrial Relations*
Personnel Policy	an organization's guiding principles with respect to employees, very often embodied in a statement (or in statements) by management which in varying degree specifies what actions are to be taken and the principles upon which these directions rest.	*Industrial Relations*
Personnel Relations	the activities of an employer in communicating or otherwise dealing with individual employees in order most effectively to utilize their qualifications and to develop their potentialities, as well as to promote their well being.	*Industrial Relations*
Personnel Services	a variety of facilities provided on a service basis by a company which may range from cafeteria and food services to recreational programs, or to first aid and educational and training facilities.	*Industrial Relations*
Person-year	One whole year, or fraction thereof, worked by an employee, including contracted man power. Expressed as a quotient (to two decimal places) of the time units worked during a year (hours, weeks, or months) divided by the like total time units in a year. For example: 80 hours worked is 0.04 (rounded) of a person-year; 8 weeks worked is 0.15 (rounded) of a person-year; 12 months worked is 1 person-year. Contracted manpower includes survey crews, drilling crews, consultants, and other persons who worked under contract to support a firm's ongoing operations.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Person-years	The average number of years that each participant is followed up for, multiplied by the number of participants.	*Quality Engineering*
Persuader	a large hammer, a 'mash'. (Scot.).	*Mining*
PERT	See: Program Evaluation and Review Technique	*Industrial Relations*
PERT Chart	See Project Evaluation & Review Technique (Pert) Chart	*Management*
Pest	Any unwanted organism that causes stress or mortality to a desired organism.	*Forestry*
Pesticide	a substance that kills any pest, including insects, fungi, and weeds	*Agriculture*
Pesticide	Agent which prevents, repels, destroys or mitigates pests. Types include insecticides, disinfectants and sanitizers, rodenticides, and herbicides.	*Chemistry*
Petering or Peter Out	The ore giving out.	*Mining*
Peto method	A way of combining odds ratios that has become widely used in meta-analysis. It is especially used to analyze trials with time to event outcomes. The calculations are straightforward and understandable, but this method produces biased results in some circumstances. It is a fixed-effect model.	*Quality Engineering*
Petrillo Act	See: Lea Act	*Industrial Relations*
Petrochemical	An organic compound that has been derived from petroleum or natural gas.	*Chemical*
Petrochemical	Any chemical substance derived from crude oil or its products, or from natural gas. Some petrochemical products may be identical to others produced from other raw materials such as coal and producer gas.	*Lubrication*
Petrochemical feedstocks	Chemical feedstocks derived from refined or partially refined petroleum fraction, principally for use in the manufacturing of chemicals, synthetic rubber, and a variety of plastics.	*Energy*
Petrochemicals	Organic and in organic compounds and mixtures that include but are not limited to organic chemicals, cyclic intermediates, plastics and resins, synthetic fibers, elastomers, organic dyes, organic pigments, detergents, surface active agents, carbon black, and ammonia.	*Energy*
Petroleum	A broadly defined class of liquid hydrocarbon mixtures. Included are crude oil, lease condensate, unfinished oils, refined products obtained from the processing of crude oil, and natural gas plant liquids. Note: Volumes of finished petroleum products include non hydrocarbon compounds, such as additives and detergents, after they have been blended into the products.	*Energy*
Petroleum Additives Panel	ACC group of active developers, manufacturers and marketers of performance enhancing chemicals for use in automotive and industrial lubricants.	*Mechanical, Process, and Operations*
Petroleum Administration for Defense District (PADD)	A geographic aggregation of the 50 States and the District of Columbia into five Districts, with PADD 1 further split into three subdistricts. The PADDs include the States listed below:	*Energy*
Petroleum and other liquids	All petroleum including crude oil and products of petroleum refining, natural gas liquids, biofuels, and liquids derived from other hydrocarbon sources (including coal to liquids and gas to liquids). Not included are liquefied natural gas (LNG) and liquid hydrogen. See liquid fuels.	*Energy*
Petroleum coke	See Coke (petroleum).	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Petroleum coke, catalyst	The carbonaceous residue that is deposited on the catalyst used in many catalytic operations (e.g., catalytic cracking). Carbon is deposited on the catalyst, thus deactivating the catalyst. The catalyst is reactivated by burning off the carbon producing heat and CO2. The carbonaceous residue is not recoverable as a product.	*Energy*
Petroleum coke, marketable	Those grades of coke produced in delayed or fluid cokers that may be recovered as relatively pure carbon. Marketable petroleum coke may be sold as is or further purified by calcining.	*Energy*
Petroleum consumption	See Products supplied	*Energy*
Petroleum imports	Imports of petroleum into the 50 states and the District of Columbia from foreign countries and from Puerto Rico, the Virgin Islands, and other U.S. territories and possessions. Included are imports for the Strategic Petroleum Reserve and withdrawals from bonded warehouses for onshore consumption, offshore bunker use, and military use. Excluded are receipts of foreign petroleum into bonded warehouses and into U.S. territories and U.S. Foreign Trade Zones.	*Energy*
Petroleum jelly	A semi-solid oily product produced from de-waxing lubricating oil base stocks.	*Energy*
Petroleum Labor Policy Board	one of the boards established during the National Recovery Administration and similar in function to those established in the textile, auto, and steel industries.	*Industrial Relations*
Petroleum play(or "play")	A group of oil prospects that are controlled by the same set of geological circumstances.	*Petroleum Drilling*
Petroleum products	Petroleum products are obtained from the processing of crude oil (including lease condensate), natural gas, and other hydrocarbon compounds. Petroleum products include unfinished oils, liquefied petroleum gases, pentanes plus, aviation gasoline, motor gasoline, naphtha-type jet fuel, kerosene-type jet fuel, kerosene, distillate fuel oil, residual fuel oil, petrochemical feedstocks, special naphthas, lubricants, waxes, petroleum coke, asphalt, road oil, still gas, and miscellaneous products.	*Energy*
Petroleum refinery	An installation that manufactures finished petroleum products from crude oil, unfinished oils, natural gas liquids, other hydrocarbons, and alcohol.	*Energy*
Petroleum Resins	Petroleum resins are used in printing inks, adhesives, surface coatings, and rubber compounding. It is obtained as the byproduct from distilled petroleum streams.	*Material Engineering*
Petroleum stocks, primary	For individual products, quantities that are held at refineries, in pipelines and at bulk terminals that have a capacity of 50,000 barrels or more, or that are in transit thereto. Stocks held by product retailers and resellers, as well as tertiary stocks held at the point of consumption, are excluded. Stocks of individual products held at gas processing plants are excluded from individual product estimates but are included in other oils estimates and total.	*Energy*
Petroleum Workers, Inc.; Independent Union of (Ind)	See: Petroleum Workers, Inc.; International Union of (Ind)	*Industrial Relations*
Petroleum Workers, Inc.; International Union of (Ind)	this union formerly known as the Independent Union of Petroleum Workers, Inc. (Ind).	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Petroleum	A generic name for hydrocarbons, including crude oil, natural gas liquids, natural gas and their products.	*Petroleum Drilling*
Petty Cash Purchase	A method of purchasing low-value items from a firm's cash on hand system. This is often combined with a C.O.D. approach.	*Procurement*
P-F Interval	A term used in reliability-centered maintenance. The time from when a potential failure (P) is first detected on an asset or component using a selected predictive maintenance task, until the asset or component has failed (F). Reliability-centered maintenance principles state that the frequency with which a predictive maintenance task should be performed is determined by the P-F Interval.	*Reliability Engineering*
PFA	A fluorocarbon polymer used for insulation of electrical wires (trademark of DuPont).	*Electrical*
PFCs	See Perfluorocarbons	*Energy*
PFD	Process Flow Diagram	*Control Engineering*
PFI	port fuel injection	*Petro-Chemical Abbreviations*
PFPE	Perfluoroalkylpolyether	*Petro-Chemical Abbreviations*
PGA	Purchased Gas Adjustment	*Energy*
PGC	Power Generation Company	*Energy*
PGW	See: Guard Workers of America; United Plant	*Industrial Relations*
pH	a value that indicates the acidity of the soil	*Agriculture*
pH	a measure of the acidity of a solution. pH is equal to the negative logarithm of the concentration of hydrogen ions in a solution. A pH of 7 is neutral. Values less than 7 are acidic, and values greater than 7 are basic.	*Chemical*
pH	potential Hydrogen ions. Acidity or alkalinity of the soil is measured by pH. Basically it measures the amount of lime (calcium) contained in your soil. Acid soils are most common in moist climates, alkaline soils are most common in dry climates. A soil with a pH of 7 is considered neutral. A soil with a pH lower than 7.0 is considered acidic, a pH rating above 7 indicates alkalinity.	*Agriculture*
pH Junctions	The Junction of a reference electrode or combination electrode is a permeable membrane through which the fill solution escapes (called the liquid junction).	*General*
pH(S) (Standard pH Scale)	The conventional standard pH scale established on the basis that an individual ionic activity coefficient can be calculated from the Debye-H¸ckel law for primary buffers.	*General Engineering*
PHA	Process hazard analysis.	*Material Process*
Phaneritic	A term used to describe the coarse-grained texture of some igneous rocks.	*Mining*
Phase	One of the characteristics of the electric service supplied or the equipment used. Practically all residential customers have single-phase service. Large commercial and industrial customers have either two-phase or three-phase service.	*Energy*
Phase	Chemically homogenous portion.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Phase alternate line	A television standard used in most of Europe. Similar to NTSC, but uses subcarrier phase alternation to reduce the sensitivity to phase errors that would be displayed as color errors. Commonly used with 626-line, 50Hz scanning systems, with a subcarrier frequency of 4.43362MHz.	*Electrical Engineering*
Phase angle monitoring (PAM)	A device that monitors power-network stresses caused by heavily loaded lines. This is part of the Wide-Area Monitoring System, which relies on a number of phasor measurement units (PMUs) to collect data from strategic positions in the grid. (See also Wide-Area Monitoring System and Phasor Measurement Units.)	*Electrical*
Phase Diagram	A graphical representation of the relationships between environmental constraints, composition, and regions of phase stability, ordinarily under conditions of equilibrium.	*Engineering Physics*
Phase Difference	The time expressed in degrees between the same reference point on two periodic waveforms.	*General*
Phase field	Region of phase diagram corresponding to the existence of a given phase.	*Material Process*
Phase l, ll, lll, IV trials	A series of levels of trials required of drugs before (and after) they are routinely used in clinical practice: Phase I trials assess toxic effects on humans (not many people participate in them, and usually without controls); Phase ll trials assess therapeutic benefit (usually involving a few hundred people, usually with controls, but not always); Phase III trials compare the new treatment against standard (or placebo) treatment (usually a full randomized controlled trial). At this point, a drug can be approved for community use. Phase IV monitors a new treatment in the community, often to evaluate long-term safety and effectiveness.	*Quality Engineering*
Phase Margin	The difference in phase at the frequency where the combined process and controller amplitude ratio is 0 is the PHASE MARGIN.	*Process Control*
Phase Proportioning	A form of temperature control where the power supplied to the process is controlled by limiting the phase angle of the line voltage.	*Electrical*
Phase Proportioning	A form of temperature control where the power supplied to the process is controlled by limiting the phase angle of the line voltage.	*Electronic Process*
Phase reference probe	A device for giving a once-per-shaft-revolution signal.	*Reliability Engineering*
Phase Transformation	a change in the number and/or character of the phases that constitute the microstructure of an alloy.	*Metallurgy*
Phase-locked loop	A phase-locked loop (PLL, or phase lock loop) is a control system that generates a signal that has a fixed relation to the phase of a "reference" signal. A phase-locked loop circuit responds to both the frequency and the phase of the input signals, automatically raising or lowering the frequency of a controlled oscillator until it is matched to the reference in both frequency and phase.	*Electrical Engineering*
Phase-shifting transformer (also known as a quadratic booster)	A specialized type of transformer used on 3-phase power grids (AC) to balance the active (real) and reactive power in the system (see Reactive power, Power factor correction and Three-phase power), preventing the loss of lines through physical overloading.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Phasor Measurement Units (PMUs)	Monitoring devices that are installed at critical nodes in a power network where they collect data on power flow. (See also Wide-Area Monitoring System, Line thermal monitoring.) Signals sent from the units via satellite to a central control room, enabling operators to identify and counteract any instabilities before they spread through the grid.	*Electrical*
Phenol	A white, crystalline compound (C6H5OH) derived from benzene, used in the manufacture of phenolic resins, weed killers, plastics, disinfectants; also used in solvent extraction, a petroleum refining process. Phenol is a toxic material; skin contact must be avoided.	*Lubrication*
Phenol (C6H5OH)	A compound which contains one or more hydroxyl groups attached to an aromatic nucleus. One of the principal ingredients in the production of phenol aldehyde thermosetting plastics. Also, specifically phenol carbolic acid, other phenols are cresol, resorcinol, naphthol, xylenol.	*Material Process*
Phenol formaldehyde resin	Thermosetting resin made by the reaction between phenol and formaldehyde.	*Material Process*
Phenolic	Phenolic plastics are thermosetting resins used in potting compounds, casting resins, and laminating resins. They can also be used for electrical purposes and are a popular binder for holding together plies of wood for plywood.	*Material Engineering*
Phenolic coating	A thermo-setting resin applied to valve interiors and/or exteriors to inhibit corrosion, A plastic material.	*Mechanical*
Phenolics	A generic designation for the entire group of phenol aldehyde plastics.	*Material Process*
Phenolics, Hindered	A group of primary antioxidants used to protect polyolefins against oxidation and thermal degradation.	*Engineering Physics*
Phenoloics	These thermosetting resins are credited with being the first commercialized wholly synthetic polymer or plastic. The basic raw material is usually formaldehyde and phenol. In the uncured and semicured condition, phenolic resins are used as adhesives, casting resins, potting compounds, and laminating resins. As molding powders, phenolic resins can be found in electrical uses.	*Engineering Physics*
Phenoplast	General term for phenol aldehyde resins.	*Material Process*
Phillips v. Rainey	a decision of the New York Court of Appeals which held that the law requiring prison goods to be labeled was invalid since it was in conflict with the commerce clause of the U.S. Constitution.	*Industrial Relations*
Phloem	Vascular plant tissue through which is transported dissolved food and other materials in plants.	*Agriculture*
Phonon	A single quantum of vibrational or elastic energy.	*Engineering Physics*
Phosphate Ester	Any of a group of synthetic lubricants having superior fire resistance. A phosphate ester generally has poor hydrolytic stability, poor compatibility with mineral oil, and a relatively low viscosity index (VI). It is used as a fire-resistant hydraulic fluid in high-temperature applications.	*Lubrication*
Phosphates	Inorganic ions comprised of phosphorous and oxygen.	*Chemical Engineering*
Phosphating	A conversion treatment to produce a thin phosphate-based layer on a steel surface, providing improved corrosion protection and good surface for painting.	*Paint and Coatings*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Phosphating	forming an adherent phosphate coating on a metal by immersion in a suitable aqueous phosphate solution, commonly used to promote better adhesion of paint to galvanized steel	*Materials Process*
Phosphite, Organic	A group of antioxidants used to protect polyolefins against oxidation and thermal degradation.	*Engineering Physics*
Phosphorescence	Luminescence in which photon emission occurs after more than about ten nanoseconds.	*Material Process*
Phosphoric Acid	The most common acid based on phosphorus sometimes called orthophosphoric acid. Used as a mild bowl acid and in formulations of light-duty detergents.	*Chemistry*
Phosphorous	A chemical element used extensively in motor oil additives to protect the engine. Volatile phosphorous which escapes from the engine into the emissions control system shortens its useful life. Improving emission system durability is an important part of GF-5 requirements. Ensuring phosphorous is retained in the engine is the subject of a new Sequence IIIG test.	*Mechanical, Process, and Operations*
Phosphorus	naturally occurring element commonly found in steel, particularly reactive in molten zinc metal	*Materials Process*
Phossy Jaw	an industrial disease in which there is an eating away of the bones. It used to occur in plants in which phosphorus was a major element in producing goods.	*Industrial Relations*
Photocell	A resistive, bulk effect type of photosensor, the type used when it is desirable to wire several photoreceivers in series or in parallel. The resistance decreases with increasing light intensity.	*Electrical Engineering*
Photoconductor	Semiconductor in which electron hole pairs are produced by exposure to photons.	*Material Process*
Photodegradation	Degradation of plastics due to the action of light. Most plastics tend to absorb high-energy radiation in the ultraviolet portion of the spectrum, which results in the formation of free radicals and causes oxidation, cleavage, and other degradative reactions.	*Engineering Physics*
Photoelasticity	Study of elastic strains by photographic measurements of strains sufficient to cause double refraction in a celluloid or glass model.	*Material Process*
Photo-Engravers' Union of North America; International (AFL-CIO)	an organization of workers which broke away from the International Typographical Union in 1900 and was chartered by the AFL in 1904.	*Industrial Relations*
Photoluminescence	Luminescence caused by photon.	*Material Process*
Photon	A quantum unit of electromagnetic energy.	*Engineering Physics*
Photon	The particle-like packet of energy corresponding to a given wavelength of electromagnetic radiation.	*Material Process*
Photonic material	Optical material in which signal transmission is by photons rather than by the electrons of electronic materials.	*Material Process*
Photoreceiver	A unit consisting of photosensor, focusing lens, and protective enclosure.	*Electrical Engineering*
Photoresist	Polymeric material used in the lithography process.	*Material Process*
Photosensor	A light sensitive portion of a photoelectric control that converts a light signal into an electrical signal. MICRO SWITCH uses photocells and phototransistors.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Photosynthesis	The process by which plants use light energy to make sugars from carbon dioxide and water.	*Agriculture*
Photo-thermal NDT	NDT technique for spayed coatings. A repeated pulse of heat, from a laser source, flows through the coating and substrate. The thermal signature is detected and related to the input signal thereby indicating coating thickness.	*Paint and Coatings*
Phototransistor	A type of photosensor. Typically used where speed of response is important or ambient temperature variations are great.	*Electrical Engineering*
Phototrophs	organisms that use light to generate energy (by photosynthesis) for cellular activity, growth, and reproduction.	*Chemical*
Photovoltaic and solar thermal energy (as used at electric utilities)	Energy radiated by the sun as electromagnetic waves (electromagnetic radiation) that is converted at electric utilities into electricity by means of solar (photovoltaic) cells or concentrating (focusing) collectors.	*Energy*
Photovoltaic cell (PVC)	An electronic device consisting of layers of semiconductor materials fabricated to form a junction (adjacent layers of materials with different electronic characteristics) and electrical contacts and being capable of converting incident light directly into electricity (direct current).	*Energy*
Photovoltaic cell net shipments	Represents the difference between photovoltaic cell shipments and photovoltaic cell purchases.	*Energy*
Photovoltaic Cells	Used to directly convert solar radiation into electricity. Materials called semiconductors, usually made from pure silicon, transfer light energy (photons) into electrical energy in a process known as the photoelectric effect.	*Energy*
Photovoltaic module	An integrated assembly of interconnected photovoltaic cells designed to deliver a selected level of working voltage and current at its output terminals, packaged for protection against environmental degradation, and suited for incorporation in photovoltaic power systems.	*Energy*
Photovoltaics	A technology that directly converts light into electricity. The process uses modules, which are usually made up of many cells (thin layers of semiconductors).	*Energy*
Phthalate	Phthalates, or phthalate esters are manufactured from methanol and are used as plasticizers to soften the plastic. They are also used in other non-PVC applications like paints, rubber products, adhesives and some cosmetics.	*Chemical*
Phthalic acid (C6H4 (COOH)2)	Colorless rhombic or monoclinic crystals from water. A dibasic acid used in the production of alkyd resins, plasticizers and dyes.	*Material Process*
Phthalic anhydride (C6H4(CO)2O)	Colorless rhombic needles. Used for the same purposes as phthalic acid.	*Material Process*
Physical Vapor Deposition	A term covering all the vapor deposition processes including Ion plating, It does not include CVD as this is chemical not physical.	*Paint and Coatings*
Physically Handicapped	individuals who have some physical incapacity or have limited use of their limbs which creates difficulty in the performance of work.	*Industrial Relations*
Physically Handicapped, Office of President's Committee on Employment of	the Committee is concerned with the problems of the physically handicapped and attempts to coordinate and establish programs throughout the country to utilize the handicapped as a national asset.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
PIB	polyisobutylene	*Petro-Chemical Abbreviations*
PIBA	PIB amine	*Petro-Chemical Abbreviations*
PIBSA	polyisobutyl succinic anhydride	*Petro-Chemical Abbreviations*
Pick	hand tool for loosening coal; or machine picks attached to the drum or a chain to cut the coal or stone.	*Mining*
Pick	Generally refers to the selection or choice of work assignments in the transportation industry.	*Industrial Relations*
Pick box	a component of a cutting unit that holds the cutter pick.	*Mining*
Pick lacing	the arrangement of picks in a cutting unit of a coal getting machine.	*Mining*
Picker	a pin used to trim the wick of an oil lamp. -see also Pricker; or a person employed to pick the stone and rubbish from the coal. - see also Crow picker and Batt picking.	*Mining*
Picket	an individual or person generally assigned by a union, and almost always a member of that organization, to stand or walk near the approaches to a place of work or the exits from which the employees leave the plant.	*Industrial Relations*
Picket Line	the group of pickets posted at plant entrances and gates or marching near the entrances and gates to notify employees of the existence of a labor dispute.	*Industrial Relations*
Picket line	A reference line, marked by pickets or stakes, established on a property for mapping and survey purposes.	*Mining*
Picketing	the actual patrolling at or near the employer's place of business during a strike or other dispute to give notice of the existence of a labor dispute, to publicize it, or to persuade workers to join the union and to discourage or prevent persons from entering or going to work.	*Industrial Relations*
Picketing at Common Site (Situs)	the most difficult cases under the Taft–Hartley Act's secondary-boycott provisions have been those in which a union has picketed a so-called common site or sites-one at which employees of both a struck employer and employees of neutral employers are working.	*Industrial Relations*
Picketing Circular	See: Circular Picketing	*Industrial Relations*
Picketing Informational	a form of publically picketing which has had a rather checkered career both before the National Labor Relations Board and the federal courts.	*Industrial Relations*
Picketing, Mass	See: Mass Picketing	*Industrial Relations*
Picketing, Organizational	See: Organizational Picketing	*Industrial Relations*
Picketing, Peaceful	See: Peaceful Picketing	*Industrial Relations*
Picketing, Secondary	See: Secondary Picketing	*Industrial Relations*
Picketing, Stranger	See: Stranger Picketing	*Industrial Relations*
Pick-face flushing, dust suppression	The spraying of water onto the cutting picks of a coal-cutting machine.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Picking table	a table, which either revolved or was of a long bench type. The coal was tipped onto the table to be cleaned and sorted by the pickers.	*Mining*
Pickle	The chemical or electrochemical removal of surface oxides. Following welding operations, piping is frequently pickled in order to remove mill scale, oxides formed during storage, and the weld discolorations.	*Maintenance and Repair*
Pickling	The liquid process of removing surface oxide and scale from metal which has been hot worked. Treating the surface of iron or steel with acid to remove scale, rust and dirt, preparatory to further processing such as cold rolling, tinning, galvanizing, polishing, etc.	*Metallurgy*
Pickling	Treatment of steel stock with mild acids to remove scale.	*Material Process*
Pick-to-ship cycle time	Pick-to-ship begins when an order is released to be picked from inventory and ends at the time the order is shipped.	*Quality*
Pickup	See **transducer**.	*Reliability Engineering*
Picric acid (NO2)3C6H2OH	Yellow rhombic leaflets from water. An acid catalyst and intermediate inorganic synthesis, as of dyes.	*Material Process*
Picture	a covering of sheet iron, or brattice deals, hung from the roof and shaft framing to protect the onsetters from dripping water at the shaft bottom. Also a similar cover to protect the hewer from water which falls from the roof in wet workings. (N. East).	*Mining*
PID	PID (Proportional, Integral, Derivative) Proportional means changing a variable in proportion to its difference from the set-point. Integral rectifies any small difference in the variable and the set-point. Derivative reduces the other oscillations.	*Control Engineering*
PID	Proportional, integral, derivative. A three mode control action where the controller has time proportioning, integral (auto reset) and derivative rate action.	*Electronic Process*
PID Controller	Controllers are designed to eliminate the need for continuous operator attention. Cruise control in a car and a house thermostat are common examples of how controllers are used to automatically adjust some variable to hold the process variable (or process variable) at the set-point. The set-point is where you would like the process variable to be. Error is defined as the difference between set-point and process variable. (error) = (set-point) - (process variable). The output of PID controllers will change in response to a change in process variable or set-point.	*Process Control*
Piece Rate	a predetermined amount paid to an employee under a wage incentive system for each unit of output.	*Industrial Relations*
Piecework	See: Piece Rate, Wage Payment Plans, Incentive Wage	*Industrial Relations*
Piedmontese	A breed of beef cattle that originated in Italy. Registry is by the Piedmontese Association of North America.	*Agriculture*
Pier	A structure built on posts extending from land out over water, used as a landing place for ships, an entertainment area, a strolling place, etc.; jetty. In a bridge or the like) a support for the ends of adjacent spans.	*Civil Engineering*
Pierhead	The outermost end of a pier or wharf.	*Civil Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Piezoelectric	A dielectric material in which polarization is induced by the application of external forces.	*Engineering Physics*
Piezoelectric coupling coefficient	Fraction of mechanical energy converted to electrical energy by a piezoelectric transducer.	*Material Process*
Piezoelectric effect	Production of a measurable voltage change across a material as a result of an applied stress.	*Material Process*
Piezoelectric (PE) transducer	One which depends upon deformation of its sensitive crystal or ceramic element to generate electrical charge and voltage. Many present-day accelerometers are PE.	*Reliability Engineering*
Piezoelectric Accelerometer	A transducer that produces an electrical charge in direct proportion to the vibratory acceleration.	*General*
Piezoelectricity	An electrical response to mechanical pressure application.	*Material Process*
Piezometric Surface	The water level surface defined from the mapping of water level elevations in wells tapping into a confined aquifer.	*Petroleum Engineering*
Piezoresistance	Resistance that changes with stress.	*Electrical*
Piezoresistance	A change in resistance in a semiconductor, caused by an applied stress to the diaphragm.	*Electrical Engineering*
Piezoresistive (PR) transducer	One whose electrical output depends upon deformation of its semiconductor resistive element, offering greater resistance change than does the wire of a strain-gage transducer, for a given deformation.	*Reliability Engineering*
Pig	A cleaning device placed that is used to scrape residues from the inner wall of oil pipelines. A pig is pushed through the pipeline by the pressure of the oil flowing past. Pipelines can be equipped with pig launch sites and pig traps. These are points at which pigs can be introduced or removed from the pipeline.	*Electrical*
Pig	A device, closely conforming to the pipe bore, which is forced thru a pipeline to clean the pipe of all foreign material and debris. The valves in a pipeline that will be pigged, must be thru-conduit, full port, otherwise the pig will not pass through them.	*Mechanical*
Pig iron	Crude, high-carbon iron produced by reduction of iron ore in a blast furnace.	*Energy*
Pig iron	Crude iron from a blast furnace.	*Mining*
Pigback	a gradual and local thinning of a coal seam due to a roll or irregularity of roof or floor (N. Staffs.).	*Mining*
piggyback	Moving a truck loaded with freight on a rail flatcar.	*Agriculture*
Piggy-back	A bridge conveyor.	*Mining*
Piggy-Back Trucking	a procedure for moving loaded truck trailers to various places on railroad flat cars rather than hauling them over the highway by trucks.	*Industrial Relations*
Pigment	A finely divided, insoluble material that imparts a color to the substance to which it is added, or makes it black, white or gray. Insoluble, colored additive for polymers.	*Material Process*
Pike	another name for a collier's pick. Also called a 'slitter' or a 'mandril'.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pilaster	An exterior column support, usually an integral part of the basin wall. Also known as External Pier. Used as a central point to establish the elevation of framework members.	*Facility Engineering*
Piles	Term used in structural engineering for the joint plates.	*Maintenance*
Pill	Term for perform, a firmly compacted mass of molding powder of predetermined weight made by application of high pressure without heat, and used for convenience in loading molds.	*Material Process*
Pillar	an area of stone or coal left in place, unworked, to support the roof. -see also Shaft pillar and Stoop; or an artificial pillar constructed from wooden chocks in-filled with rubble. (Scot.) -see also Chocks.	*Mining*
Pillar	A block of solid ore or other rock left in place to structurally support the shaft, walls or roof of a mine.	*Mining*
Pillar airing	see Coursing.	*Mining*
Pillar and stall	the method of extraction where pillars were left in to support the roof, compared with longwall working, where all the coal is extracted. Later in pillar and stall, the pillars were also extracted, leaving the roof to collapse. Also variously called Straight and pillar, Bord and pillar, Room and pillar, Post and bank and Stoop and room.	*Mining*
Pillar robbing	The systematic removal of the coal pillars between rooms or chambers to regulate the subsidence of the roof. Also termed "bridging back" the pillar, "drawing" the pillar, or "pulling" the pillar.	*Mining*
Pillar Set	A self-contained set of dies; one that does not depend upon the press for proper alignment.	*Metallurgy*
Pillar wood	waste timbers used to fill cavities above the roof supports.	*Mining*
Pillaring back	when a district or mine had been worked to a point were only the pillars were left, the pillars would be extracted and the roof allowed to collapse. The pillars would be extracted working back towards the shaft. Also known as 'drifting back' or 'pillaring out'.	*Mining*
Pillars	Guide posts used in a pillar set.	*Metallurgy*
Pilling Bedworth ratio	Ratio of oxide volume produced to the metal volume consumed in oxidation.	*Material Process*
Pillow Block	A bearing block or housing having a flat mounting surface offset, but parallel to the shaft.	*Equipment*
Pilot	A utility program offering a limited group of customers their choice of certified or licensed energy suppliers on a one year minimum trial basis.	*Energy*
Pilot	A spring loaded pressure regulator used to control the pressure and flow of other larger pressure regulators or instruments.	*Mechanical*
Pilot heading	a roadway driven ahead, sometimes on smaller dimensions, often for the purposes of exploration. Pilot shaft, an exploration shaft.	*Mining*
Pilot Hole	A test well.	*Petroleum Engineering*
Pilot line	A line conducting pilot fluid to a control device or devices.	*Mechanical, Process, and Operations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pilot pressure	Auxiliary pressure used to actuate or control hydraulic components.	*Mechanical, Process, and Operations*
Pilot Pressure	Auxiliary pressure used to actuate or control a component.	*Mechanical, Process, and Operations*
Pilot test	operation of a small-scale version of a larger system to gain information relating to the anticipated performance of the larger system. Pilot test results are typically used to design and optimize the larger system.	*Chemical*
Pilot Valve	A valve used to operate another valve or control.	*Mechanical, Process, and Operations*
Pilot valve	An auxiliary valve used to control the operation of another valve. The controlling stage of a 2-stage valve.	*Mechanical, Process, and Operations*
Pilot-operated regulator	A regulator which is controlled by a second small volume high accuracy regulator or pilot. This arrangement has the advantages of improving performance by minimizing the effects of unbalance and droop. The number of possible applications are also increased since a wide range of pilot configurations are feasible.	*Mechanical*
Pimple	Undesired, small, sharp, or conical elevation on the surface of a plastic whose form resembles a pimple in the common sense. See also Blister.	*Material Process*
PIMS	Process Information Management System	*Control Engineering*
Pin	a distinctive piece of wood about 14 in long used underground by the breakers as a token. One would be put in every full put to denote who had filled it.	*Mining*
Pin box	a long type of cupboard divided into several compartments, kept near the top of the shaft. As each full put came out of the pit and was emptied, the pin would be collected and put into its own pigeonhole in the pin box.	*Mining*
Pin connection	In two dimensions, a pin connection restrains two translation degrees of freedom but does not restrain rotation. Since the rotation degree of freedom is unrestrained at a pin connection, it transfers no moment.	*Engineering Physics*
Pin cracks	small breaks in the coal seam containing water or gas.	*Mining*
Pin Electronics	Electronic circuitry in an automated tester (ATE system) that connects to the device under test. Pin electronics can deliver signals, power, or precise voltages and currents, and can measure the pin's response, drive, and electrical characteristics.	*Electrical Engineering*
Pin number	a collier's number chalked on the side of a tub of coal. (Mids.).	*Mining*
Pin support	In two dimensions, a pin support restrains two translation degrees of freedom but does not restrain rotation. When considering reaction forces, a pin support is usually considered to have two force components: one each about the x and y axes respectively.	*Engineering Physics*
Pinch	A compression of the roof and floor of a coal seam so as to "squeeze" out the coal.	*Mining*
Pinch	A compression of the walls of a vein or the roof and floor of a coal seam so as to "squeeze" out the coal.	*Mining*
Pinch Force	The force exerted by the pinch valve on the tubing in the CLOSED state, usually enough to set a level high enough to occlude flow.	*General Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pinch Force	The force exerted by the pinch valve on the tubing in the CLOSED state, usually enough to set a level high enough to occlude flow.	*Mechanical*
Pinch Gap	The distance between opposed pinching surfaces when a pinch valve is closed.	*General Mechanical*
Pinch Gap	The distance between opposed pinching surfaces when a pinch valve is closed.	*Mechanical*
Pinch Off	Section of blow mold that seals the end of the parison by pinching off excess material.	*Engineering Physics*
Pinch valve	A device used to pinch and unpinch flexible tubing for the purpose of controlling flow.	*General Mechanical*
Pinch valve	A device used to pinch and unpinch flexible tubing for the purpose of controlling flow.	*Mechanical*
Pinching	the movement of the roof due to the action of weight (S. Mids.).	*Mining*
Pinching Surfaces	The surfaces of components in a pinch valve that pinch the tubing, usually the pinch ridge and plunger.	*Mechanical*
Pine Oil	An oil processed from the gum of pine trees. Used in hard surface cleaning and disinfecting, and distinguished by a characteristic aroma. As a disinfectant it is inactive against staphylococci.	*Chemistry*
Pine Oil Cleaner	A liquid hard-surface cleaner containing detergents and pine oil. Used to dissolve oil, fatty acids, paints and tars while disinfecting and sanitizing, and deodorizing with a pine scent.	*Chemistry*
Pinhole	Tiny but apparently very deep hole in the surface of, or through, a thin section of plastic, which usually is round and has a rounded edge.	*Material Process*
Pinhole	Tiny hole in cast, extrusion coating or extruded sheet or blow molded product.	*Engineering Physics*
Pinion	The smaller of two mating or meshing gears; can be either the driving or the driven gear.	*Lubrication*
Pinion shaft	The external input shaft of certain gear operators which drives internal reduction gearing. The pinion shaft can accept a handwheel or power operator.	*Mechanical*
Pinion shaft	The external input shaft of certain gear operators which drive the internal reduction gearing.	*General Mechanical*
Pinkeron Detective Agency	an organization established in the 1870's, best known in the past years for espionage on union activities and for strikebreaking services performed by employers.	*Industrial Relations*
Pinners	large pieces of stone used for building pack-walls underground (N. Staffs.); or small wedge-shaped pieces of wood (N. East).	*Mining*
Pinning	Roof bolting.	*Mining*
Pinnings	bratticing in a heading (N. Staffs.).	*Mining*
Pinpoint Gate	Gate in an injection mold which is approximately 0.030 inch in diameter. This small gate minimizes the size of the mark left on the molded part.	*Engineering Physics*
Pins	beds or layers of ironstone in the coal measures (S. Wales).	*Mining*
Pioneering cloud	the initial cloud of finely suspended coal dust that causes an explosion.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
PIP	Piping and Instrumentation Diagram.	*Material Process*
Pipage	Conveyance, as of water, gas, or oil, by means of pipes.	*Civil Engineering*
Pipe	To supply with pipes.	*Civil Engineering*
Pipe Alignment Guide	A restraint in the form of a sleeve or frame that permits the pipeline to move freely only along the axis of the pipe.	*Maintenance and Repair*
Pipe And Profile	Extrusion process by which heavy wall continuous profiles are produced. Die design determines shape of extrudate and designs range from a simple circular shape to complex window channels and moldings.	*Engineering Physics*
Pipe Fittings	Various pipe accessories for coupling pipes and equipment. Fittings include bends, caps, couplings, elbows, flanges, nipples, reducers, tees etc.	*Industrial*
Pipe Supporting Fixtures	Elements that transfer the load from the pipe or structural attachment to the support structure or equipment.	*Maintenance and Repair*
Pipe thread, Dryseal	Pipe threads in which sealing is a function of root and crest interference.	*Mechanical, Process, and Operations*
Pipe thread, Tapered	Pipe threads in which the pitch diameter follows a helical cone to provide interference in tightening.	*Mechanical, Process, and Operations*
Pipeline	A figurative, rather than literal, description of stock necessary in all inventory locations throughout a shipping channel to keep one product on the shelf available for consumer purchase. This includes surplus stock at the store, distributor's warehouse and at shipping point, including all goods in transit between any of these points. Envision this as all the cherries existing at one time from the packing shed to the produce department of a supermarket.	*Agriculture*
Pipeline or Transmission Line	A pipe installed for the purpose of transmitting gases, liquids, slurries, etc., from a source or sources of supply to one or more distribution centers or to one or more large-volume customers; a pipe installed to interconnect source or sources of supply to one or more distribution centers or to one or more large-volume customers; or a pipe installed to interconnect sources of supply.	*Maintenance and Repair*
Pipeline (natural gas)	A continuous pipe conduit, complete with such equipment as valves, compressor stations, communications systems, and meters for transporting natural and/or supplemental gas from one point to another, usually from a point in or beyond the producing field or processing plant to another pipeline or to points of utilization. Also refers to a company operating such facilities.	*Energy*
Pipeline (petroleum)	Crude oil and product pipelines used to transport crude oil and petroleum products, respectively (including interstate, intrastate, and intracompany pipelines), within the 50 states and the District of Columbia.	*Energy*
Pipeline freight	Refers to freight carried through pipelines, including natural gas, crude oil, and petroleum products (excluding water). Energy is consumed by various electrical components of the pipeline, including, valves, other, appurtenances attaches to the pipe, compressor units, metering stations, regulator stations, delivery stations, holders and fabricated assemblies.	*Energy*
Pipeline fuel	Gas consumed in the operation of pipelines, primarily in compressors.	*Energy*
Pipeline Integrity Management System	The collection of arrangements that collectively ensure the integrity of the pipeline	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pipeline purchases	Gas supply contracted from and volumes purchased from other natural gas companies as defined by the Natural Gas Act, as amended (52 Stat. 821), excluding independent producers, as defined in Paragraph 154.91(a), Chapter I, Title 18 of the Code of Federal Regulations.	*Energy*
Pipeline quality natural gas	A mixture of hydrocarbon compounds existing in the gaseous phase with sufficient energy content, generally above 900 British thermal units, and a small enough share of impurities for transport through commercial gas pipelines and sale to end-users.	*Energy*
Pipeline, distribution	A pipeline that conveys gas from a transmission pipeline to its ultimate consumer.	*Energy*
Pipeline, gathering	A pipeline that conveys gas from a production well/field to a gas processing plant or transmission pipeline for eventual delivery to end-use consumers.	*Energy*
Pipeline, transmission	A pipeline that conveys gas from a region where it is produced to a region where it is to be distributed.	*Energy*
Pipelines, rate regulated	FRS (Financial Reporting System Survey) establishes three pipeline segments: crude/liquid (raw materials); natural gas; and refined products. The pipelines included in these segments are all federally or State rate-regulated pipeline operations, which are included in the reporting company's consolidated financial statements. However, at the reporting company's option, intrastate pipeline operations may be included in the U.S. Refining/Marketing Segment if they would comprise less than 5 percent of U.S. Refining/Marketing Segment net PPE, revenues, and earnings in the aggregate; and if the inclusion of such pipelines in the consolidated financial statements adds less than $100 million to the net PPE reported for the U.S. Refining/Marketing Segment.	*Energy*
Piper	a feeder of gas. (Lancs.).	*Mining*
Piping	Pipes collectively; a system or network of pipes. Material formed into a pipe or pipes.	*Civil Engineering*
Piping	Washing gravel in a hydraulic claim by discharging water upon it through a nozzle.	*Mining*
Piping System	Interconnected piping subject to the same set or sets of design conditions.	*Maintenance and Repair*
Pirn	the drum of a flat rope winding engine.	*Mining*
Piston	A cylindrical part which moves or reciprocates in a cylinder and transmits or receives motion to do work.	*Mechanical, Process, and Operations*
Piston Actuator	A fluid-powered, normally pneumatic device in which the fluid acts upon a movable cylindrical member, the piston, to provide linear motion to the actuator stem. These units are spring or air opposed and operate at higher supply pressures than a spring return actuator.	*Industrial Engineering*
Piston corers	Advanced piston corer, extended core barrel systems	*Petroleum Drilling*
Piston effect	The sealing principle involved in utilizing line pressure to effect a seal across the floating seats of some valves.	*Mechanical*
Piston-Type Cylinder	A cylinder which uses a sliding piston in a housing to produce straight movement.	*Mechanical, Process, and Operations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pit	a colliery; or a circular, oval, square, or oblong vertical excavation descending from the surface. The term shaft is often used synonymously, being either a pit or only a portion of one; or the shaft at a colliery, or coal workings entered by a shaft, or all the underground workings of a colliery.	*Mining*
Pit	Small regular or irregular hole in the surface of a plastic, usually having somewhat like diameter and depth, and often dull or rough at the bottom. see also, Pinhole, short.	*Material Process*
Pit bank or Pitheap	the elevated stage around the top of the winding shaft upon which the tubs or mine-cars were delivered from the cages.	*Mining*
Pit barring	the wooden lining of a shaft.	*Mining*
Pit bottom	the marshalling area around the bottom of the shaft; or the lowest shaft inset to which access could be gained by winding; or the roadway network in the vicinity of an inset from which men and materials are normally wound.	*Mining*
Pit bottom stoop, (Scot.)	see Shaft pillar.	*Mining*
Pit bottomer	a man who worked in the area around the base of the coal-winding shaft e.g. shunting the tubs. Also known as 'bottomers'.	*Mining*
Pit boxes	another term for 'corves'.	*Mining*
Pit brow	see Pit bank.	*Mining*
Pit brow lassies	women and girls who worked at a myriad of tasks around the pit top e.g. loading and off-loading the cage, sorting the coal on the picking tables and in the screens, bagging coal etc.	*Mining*
Pit dirt	a miner was said to be in his 'pit dirt' immediately leaving the pit before washing himself.	*Mining*
Pit drawers	thin pants, shorts or knickers worn by colliers working on the coalface. (Lancs.).	*Mining*
Pit eye	in some areas the pit eye refers to the mouth of the shaft at the surface. In others it is the entrance to workings at the base of the shaft.	*Mining*
Pit eye pillar	the shaft pillar, the pillar of coal left in situ to support the shaft and the buildings of the colliery. (N. East).	*Mining*
Pit fettlers	shaftsmen, men who worked in, inspected and maintained the shaft (N. Staffs.).	*Mining*
Pit frame	the framework of wood or steel that supported the pulleys of the winding ropes over the shaft. (N. East). -see also Head frames, Headsticks and Headgear.	*Mining*
Pit gate	any place in the immediate area of a colliery where the colliers would meet during a dispute, a 'pit-gate meeting'. (Yorks.).	*Mining*
Pit head	the landing at the top of the shaft; or the colliery surface. Also called the 'pit top'.	*Mining*
Pit heap	see Spoil heap.	*Mining*
Pit pan	a miner's coal shovel, also called a Frying pan, Oscar or Durham (N.E & Yorks.).	*Mining*
Pit room	the extent of the underground workings in use or available to be worked.	*Mining*
Pit top	see Pit head.	*Mining*
Pitch	The angle of a rotor measured in the plane of rotation; Symbols: theta, Theta; Typical Units: rad, deg.	*Aeronautical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pitch	The same as a dip.	*Mining*
Pitch & lead	Pertaining to screw threads. The pitch refers to the measurement between adjacent threads. The lead refers to the distance the screw advances in one complete revolution. Worm gears of gear operators, are also identified by pitch and lead. Speed of operation and torque required are related to pitch and lead.	*Mechanical*
Pitch Circle	A circle the radius of which is equal to the distance from the gear axis to the pitch point.	*Gears*
Pitch cue	Flight director cue to control pitch; in fixed-wing aircraft, a yoke cue; in rotary-wing aircraft, a longitudinal cyclic cue.	*Aeronautical Engineering*
Pitch Diameter	The simple, effective diameter of screw thread. Approximately half way between the major and minor diameters.	*Fastening*
Pitch Line	An imaginary line that divides the upper and lower halves of gear teeth while in the contact area.	*Reliability Engineering*
Pitch Plane	In a pair of gears it is the plane perpendicular to the axial plane and tangent to the pitch surfaces. In a single gear it may be any plane tangent to its pitch surface.	*Gears*
Pitch Point	This is the point of tangency of two pitch circles (or of a pitch circle and a pitch line) and is on the line of centers. The pitch point of a tooth profile is at its intersection with the pitch circle.	*Gears*
Pitch rate	Rate of change of pitch; time derivative of pitch; Symbols: p; Symbols: theta dot; Typical Units: rad/s, deg/s; Dimensions: 1/Time.	*Aeronautical Engineering*
Pitchblende	An important uranium ore mineral. It is black in color, possesses a characteristic greasy luster and is highly radioactive.	*Mining*
Pitcheblende	Uranium oxide (U_3O_8). It is the main component of high-grade African or domestic uranium ore and also contains other oxides and sulfides, including radium, thorium, and lead components.	*Energy*
Pitchel	a long crook or iron bar used when fitting pumps and pumping pipes in a shaft. The pitchel was used to line up the holes in the flanges to allow a nut and bolt to be fitted. (Som.).	*Mining*
Pitchers	loaders or fillers on the coalface; or the men who took up and relayed the tub rails in the workings and along the longwall face. (N. East).	*Mining*
Pitcoal	a general term for the bituminous type of coal.	*Mining*
Pith	The central tissue in stems and roots.	*Agriculture*
Pitot tube	a device used to measure the total pressure of a fluid stream that is essentially a tube attached to a manometer at one end and pointed upstream at the other.	*Chemical*
Pit-rags	after the introduction of the pithead baths, and before the issue of protective clothing, the miners would wear any old clothing until it fell to pieces.	*Mining*
Pits	The area where cars come in for fuel, tires, adjustments and repairs during on-track sessions. The name originated from early racetracks, where the mechanics actually stood in a shallow pit where they could duck if an out-of-control car came their way. Today, mechanics are protected by concrete walls, and the pit lane is segregated from the actual racing surface.	*NASCAR*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pitted surfaces	areas of metal where small, sharp cavities exist, usually formed by corrosion	*Materials Process*
Pitter	a horse or pony suitable for underground work.	*Mining*
Pitting	Surface cavities; may be related to fatigue, overload or corrosion.	*Lubrication*
Pitting corrosion	Pitting corrosion is highly localized type of corrosion attack which occurs with a well defined loss of metal at anodic areas. While the overall corrosion is quite slight, perforation of the metal often occurs as a result of the pitting.	*Material Process*
Pitting—corrosion	Corrosion of a metal surface, cofined to a point or small area, that takes the form of cavities	*Paint and Coatings*
Pitting—tribology	A form of wear characterized by the presence of surface cavities the formation of which is attributed to processes such as fatigue, local adhesion, or cavitation.	*Paint and Coatings*
Pittsburgh Plate Glass Case	a decision in which the National Labor Relations Board determined that the appropriate bargaining unit should be all six plants of the Pittsburgh Plate Glass Company.	*Industrial Relations*
Pittsburgh Process	Glass making process developed in 1928 to reduce both cost and distortion	*Physics*
Pitwood	the timber used underground to support the roof.	*Mining*
Pit-Yakkor	a term of abuse applied to pit men (N. East)—see also Yakker.	*Mining*
Pivot Plate	The gusset which attaches the conveyor to the support leg.	*Manufacturing*
Pixel	Picture element. Definable locations on a display screen that are used to form images on the screen. For graphic displays, screens with more pixels provide higher resolution.	*Electrical*
Place in service	A vehicle is placed in service if that vehicle is new to the fleet and has not previously been in service for the fleet. These vehicles can be acquired as additional vehicles (increases the size of the company fleet), or as replacement vehicles to replace vehicles that are being retired from service (does not increase the size of the company fleet).	*Energy*
Place or Stall	the area in a pillar and stall system where the collier extracts the coal. Later extended to mean any place where a man worked the coal, or any job of work at a colliery above or below ground, or in Lancashire, any regular job wherever it may be, or another name for a cabin underground.	*Mining*
Placebo	An inactive substance or procedure administered to a participant, usually to compare its effects with those of a real drug or other intervention, but sometimes for the psychological benefit to the participant through a belief that she is receiving treatment. Placebos are used in clinical trials to blind people to their treatment allocation. Placebos should be indistinguishable from the active intervention to ensure adequate blinding.	*Quality Engineering*
Placer	An alluvial deposit of sand and gravel containing valuable minerals such as gold.	*Mining*
Placer	A deposit of sand and gravel containing valuable metals such as gold, tin or diamonds.	*Mining*
Placing work	the directions given by the overman as to the arrangements for work for the day; also an operation performed by the craneman for the purpose of ascertaining the proportion of the tubs or corves hewed, and from where each barrowman was to put. (N. East).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Plain Bearing	A relatively simple and inexpensive bearing typically made of two parts. A rotary plain bearing can be just a shaft running through a hole. A simple linear bearing can be a pair of flat surfaces designed to allow motion.	*Lubrication*
Plan	A map showing features such as mine workings or geological structures on a horizontal plane.	*Mining*
Plan for Progress	a program to reduce discrimination in employment, primarily discrimination against Negroes, particularly by companies holding large government contracts.	*Industrial Relations*
Planar defect	Two-dimensional disorder in a crystalline structure, for example, a grain boundary.	*Material Process*
Planar density	The number of atoms per unit area in a given plane in a crystal structure.	*Material Process*
Planck's Constant	A universal constant that has a value of 6.63 x 10-34 J.	*Engineering Physics*
Plane	a roadway along which men, coal and materials are transported by mechanical means or by gravity; or a working place or roadway driven at right-angles to or facing the 'plane joints' or cleat.	*Mining*
Plane course or On the plane	in the direction facing the 'plane joints'.	*Mining*
Plane joints	cracks or fractures in the strata. When they occur in a coal seam they are known as 'cleats or 'slynes'.	*Mining*
Plane of Rotation	Any plane perpendicular to a gear axis.	*Gears*
Plane Separation	Of a balancing machine, is the operation of reducing the correction plane interference ratio for a particular rotor.	*General*
Planetary albedo	The fraction of incident solar radiation that is reflected by the Earth-atmosphere system and returned to space, mostly by back scatter from clouds in the atmosphere.	*Energy*
Plank	strata drained of gas (S. Wales); or another word for a split bar or half bar (N. East).	*Mining*
Plank dam	a water-tight stopping fixed in a heading constructed from balks of fir placed one on top of the other and tightly wedged.	*Mining*
Plank tubbing	shaft lining of wooden planks driven down vertically behind wooden cribs all around the shaft with all the joints tightly sealed to keep back the water.	*Mining*
Planned analyses	Statistical analyses specified in the trial protocol; that is, planned in advance of data collection. In contrast to unplanned analyses. Also called: A priori analyses, Pre-specified analyses	*Quality Engineering*
Planned Downtime	The amount of time officially scheduled in the production plan, which includes, no orders, changeovers and planned maintenance. Planning and scheduling technologies. A variety of software-based advanced planning, scheduling, and optimization systems.	*Maintenance*
Planned Generator	Proposal to install generating equipment at an existing or planned facility or site.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Planned Maintenance	Any maintenance activity for which a pre-determined job procedure is documented, for which all labor, materials, tools, and equipment required to carry out the task are estimated, and their availability assured before commencement of the task. Planned Maintenance is a term commonly used to describe tasks carried out on a regular, scheduled basis. These tasks may be predictive in nature (routine subjective inspections and/or formal condition monitoring activities), or they may be preventative in nature (cleaning/changing filters, checking/adjusting clearances etc).	*Maintenance*
Planned Maintenance	Work can be completed with the least interruption to operations and the most efficient use of maintenance resources.	*Reliability Engineering*
Planned Repair Schedule Compliance	The number of planned repair work orders completed from the daily/weekly schedule divided by the total number of work orders on the schedule.	*Maintenance*
Planned well path	as a function of measured depth, the Cartesian coordinates, inclination, and azimuth that define the preferred spatial existence of a well bore. The planned well path can be piece-wise continuous, meaning it can change abruptly, typically as the result of new information acquired while drilling (e.g. fault crossing).	*Petroleum Drilling*
Planning	The process of determining the resources, methods, and processes needed to perform maintenance work efficiently and effectively.	*Maintenance*
Planning and scheduling technologies	A variety of software-based advanced planning, scheduling, and optimization systems.	*Quality*
Planning authority (electric)	The responsible entity that coordinates and integrates transmission facility and service plans, resource plans, and protection systems. NERC definition	*Energy*
Plant	A term commonly used either as a synonym for an industrial establishment or a generating facility or to refer to a particular process within an establishment.	*Energy*
Plant	A facility containing prime movers, electric generators, and other equipment for producing electric energy.	*Energy*
Plant condensate	Liquid hydrocarbons recovered at inlet separators or scrubbers in natural gas processing plants at atmospheric pressure and ambient temperatures. Mostly pentanes and heavier hydrocarbons.	*Energy*
Plant Engineering	A Staff Function Whose Prime Responsibility Is To Ensure That Maintenance Techniques Are Effective, That Equipment Is Designed And Modified To Improve Maintainability, That Ongoing Maintenance Technical Problems Are Investigated, And Appropriate Corrective And Improvement Actions Are Taken. Used Interchangeably With Maintenance Engineering And Reliability Engineering.	*Plant Engineering*
Plant hours connected to load	The number of hours the plant is synchronized to load over a time interval usually of 1 year.	*Energy*
Plant liquids	Those volumes of natural gas liquids recovered in natural gas processing plants.	*Energy*
Plant Migration	The movement of factories to a new location.	*Industrial Relations*
Plant Open House	See: Open House	*Industrial Relations*
Plant or gas processing plant	A facility designated to achieve the recovery of natural gas liquids from the stream of natural gas, which may or may not have been processed through lease separators and field facilities, and to control the quality of the natural gas to be marketed.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Plant pathology	The scientific discipline dealing with diseases of plants. Plant pathologists may be associated with departments of plant pathology, agronomy, crop sciences or botany.	*Agriculture*
Plant products	Natural gas liquids recovered from natural gas processing plants (and in some cases from field facilities), including ethane, propane, butane, butane-propane mixtures, natural gasoline, plant condensate, and lease condensate.	*Energy*
Plant Publications	See: Industrial Journalism, House Organ	*Industrial Relations*
Plant Relocation	See: Plant Migration	*Industrial Relations*
Plant Replacement Value (PRV)	See Estimated Replacement Value (ERV).	*Maintenance*
Plant Rules	generally the detailed working rules of an establishment.	*Industrial Relations*
Plant Tours	See: Open House	*Industrial Relations*
Plant Union	generally refers to an organization of employees within a single plant.	*Industrial Relations*
Plant Unit	a bargaining unit which consists of the employees within a single plant.	*Industrial Relations*
Plant use	The electric energy used in the operation of a plant. Included is the energy required for pumping at pump-storage plants.	*Energy*
Plant/Project Engineers	Employees with primary function of planning and executing on-site plant projects (capital and expense).	*Maintenance*
Plantation	Trees planted artificially in an ordered configuration such as equally spaced rows.	*Forestry*
Plant-use electricity	The electric energy used in the operation of a plant. This energy total is subtracted from the gross energy production of the plant.	*Energy*
Plaskon	A trade name for urea-formaldehyde molding plastics.	*Material Process*
Plasma Cutting	A group of cutting processes in which the severing or removal of metals is effected by melting with a stream of hot ionized gas.	*Maintenance and Repair*
Plasma Jet or Plasma Flame	A jet of highly ionized gas usually produced from a plasma torch. An electric arc is struck between a cathode and anode and is then blown through a nozzle to form the flame or jet.	*Paint and Coatings*
Plasma Nitriding	Also called Ion Nitriding. See Nitriding	*Paint and Coatings*
Plasma Spraying	A thermal spraying process in which the heat source is a plasma flame.	*Paint and Coatings*
Plasma Transferred Arc (PTA)	Similar to the plasma spray process in that powder is sprayed through a plasma, but instead of being heated via a neutral plasma (carrying no electric current) the arc is transferred to the substrate (made to be the anode). This is a hot process and produces coatings similar to fused or weld hardfacing coatings.	*Paint and Coatings*
Plastacele	A trade name for cellulose acetate plastics.	*Material Process*
Plaster of Paris	A material made by partially dehydrating gypsum or a natural hydrate form of calcium sulfate, after being mixed with water it sets to form a hard mass. It can be used as a filter.	*Material Process*
Plasterers' and Cement Finishers' International Association of the U.S. and Canada; Operative (AF of L)	See: Plasterers' and Cement Masons' International Association of the United States and Canada; Operative (AFL-CIO)	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Plasterers' and Cement Masons' International Association of the United States and Canada; Operative (AFL-CIO)	established in 1864 as the National Plasterers' Organization of the United States, in 1889 it changed its name to the Operative Plasterers' International Association of the United States and Canada.	*Industrial Relations*
Plastic	A solid material in the primary ingredient of which is an organic polymer of high molecular weight.	*Engineering Physics*
Plastic	Any solid material employing organic matter of a high molecular weight as a principal constituent, which can be shaped by heat and pressure during manufacturing or processing into a finished article.	*Electrical*
Plastic Deformation	Deformation that is permanent or non-recoverable after release of the applied load. Occurs when an object does not return to its original shape or size after pressure, stress or load is removed.	*Engineering Physics*
Plastic deformation	Permanent deformation associated with the distortion and reformation of atomic bonds.	*Material Process*
Plastic Dual Inline Package	A DIP package with a molded plastic body.	*Electrical Engineering*
Plastic Flow	Surface deformation of metal as a result of yielding under heavy load.	*Lubrication*
Plastic limit (PL)	the lower limit of the plastic state of a soil.	*Chemical*
Plastic Memory	The tendency of a thermoplastic material which has been stretched while hot to return to its unstretched shape upon being reheated.	*Engineering Physics*
Plastic Reinforcement	(example: inside a box section acting as a beam) raises local stiffness without adding much weight.	*Reliability Engineering*
Plastic soil	one that will deform without shearing (typically silts or clays). Plasticity characteristics are measured using a set of parameters known as Atterberg Limits.	*Chemical*
Plastic wood	A pasty mixture of cellulose nitrate, wood flour, plasticizers, resins, etc., dispersed in volatile solvents.	*Material Process*
Plasticate	To impart flexibility in a plastic through the input of heat and mechanical work as in the plasticating of the resin in an extruder or injection molding machine.	*Engineering Physics*
Plasticity	The ability of a solid material to permanently deform without rupturing under the application of force. (Plastic flow differs from fluid flow in that the shearing stress must exceed a yield point before any flow occurs).	*Lubrication*
Plasticity	That property of a material which determines its rate of deformation under standardized conditions.	*Material Process*
Plasticity index (PI)	the range of water content in which soil is in a plastic state. PI is calculated as the difference between the percent liquid limit and percent plastic limit.	*Chemical*
Plasticize	To soften a material and make it more plastic or more moldable.	*Material Process*
Plasticizer	A low molecular weight polymer additive that enhances flexibility and workability and reduces stiffness and brittleness. A substance incorporated into a material to increase its workability or flexibility. Oils are typically used but the best plasticizers are air pockets.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Plasticizer	A high boiling material, usually liquid, added to plastics to produce or increase their plastic flow.	*Material Process*
Plasticizer	Additive for the purpose of softening a polymer.	*Material Process*
Plastics	A broad classification covering a variety of non-metallic, synthetic or organic materials capable of being molded or formed into desired shapes. Typical materials include polyethylene, nylons and tetrafluoroethylenes such as DuPont's Teflon".	*General Mechanical*
Plastisol Coating	Poly-vinyl chloride (PVC) covering for roller tubes to prevent product damage or marking. Usually (#70 durometer) green or (#90 durometer) red in color.	*Manufacturing*
Plate	Wide, flat-rolled steel. It is now generally accepted that steel more than 3 mm (1/8 inch) thick is plate and less than 3 mm is sheet (See Sheet).	*Metallurgy*
Plate girder	An iron or steel beam built up from plates and shapes welded or riveted together, usually including a plate or plates for a web, four angle irons forming two flanges, and a pair of plates to reinforce the flanges.	*Civil Engineering*
Plate mark	A defect in the pressing plate, imparted to the molded material.	*Material Process*
Plate Printers', Die Stampers' and Engravers' Union of North America; International (AFL-CIO)	formed in Boston, Massachusetts, in 1892. The union's jurisdiction was extended over die stampers in 1920.	*Industrial Relations*
Plate tectonics	A geological theory which postulates that the Earth's crust is made up of a number of rigid plates which collide, rub up against and spread out from one another.	*Mining*
Platen	The steel plates on a molding machine to which the mold is attached. Two platens are generally used, one being stationary and the other movable and actuated hydraulically or mechanically to open and close the mold.	*Engineering Physics*
Platen	Mounting plates of a press to which the molding assembly is bolted.	*Material Process*
Plate-Out	The undesirable deposition of additives or pigments on machinery during processing of plastics.	*Engineering Physics*
Platform	Per *MIL-STD-810*, any vehicle, surface or medium that carries an equipment. For example, an aircraft is the carrying platform for internally-mounted avionics equipment and externally-mounted stores. The land is the platform for a ground radar set, and a man for a hand-carried radio.	*Reliability Engineering*
Platform	Structure used in offshore drilling on which the drilling rig, crew quarters and other related items are located.	*Petroleum Drilling*
Platform	An offshore structure that is permanently fixed to the seabed.	*Petroleum Drilling*
Platinel	A non-standard, high temperature platinum thermocouple alloy whose thermoelectric voltage nearly matches a Type K thermocouple (Trademark of Englehard Industries).	*Electrical*
Plating	Any thin metallic coating applied over a metallic substratum.	*Electrical*
Platinum	A noble metal which in its pure form is the negative wire of Type R and Type S thermocouples.	*General*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Platinum	A noble metal which in its pure form is the negative wire of Type R and Type S thermocouples.	*Electronic Process*
Platinum 10% Rhodium	The platinum-rhodium alloy used as the positive wire in conjunction with pure platinum to form a Type S thermocouple.	*Electrical*
Platinum 13% Rhodium	The platinum-rhodium alloy used as the positive wire in conjunction with pure platinum to form a Type R thermocouple.	*Electrical*
Platinum 30% Rhodium	The platinum-rhodium alloy used as the positive wire in conjunction with platinum 6% rhodium to form a Type B thermocouple.	*Electrical*
Platinum 6% Rhodium	The platinum-rhodium alloy used as the negative wire in conjunction with platinum-30% rhodium to form a Type B thermocouple.	*Electrical*
Platinum 6% Rhodium	The platinum-rhodium alloy used as the negative wire in conjunction with platinum-30% rhodium to form a Type B thermocouple.	*Electronic Process*
Platinum 67	To develop thermal emf tables for thermocouples, the National Bureau of Standards paired each thermocouple alloy against a pure platinum wire (designated Platinum 2 prior to 1973, and currently Platinum 67). The thermal emf's of any alloy combination can be determined by summing the "vs. Pt-67" emf's of the alloys, i.e., the emf table for a Type K thermocouple is derived from the Chromel vs. Pt-67 and the Alumel vs. Pt-67 values.	*Electrical*
Play	A set of known or postulated oil and gas accumulations sharing similar geologic, geographic, and temporal properties, such as source rock, migration pathway, timing, trapping mechanism, and hydrocarbon type. A play differs from an assessment unit; an assessment unit can include one or more plays. A play is often used to refer to a natural gas accumulation, i.e., a natural gas shale play. http://energy.cr.usgs.gov/WEcont/chaps/GL.pdf	*Energy*
Play-in	to begin opening out a coalface from the side of a heading. (Leics.).	*Mining*
PLC	A Programmable Logic Controller is a controller which stores instructions to command a device, such as a valve, to which it is connected to start up, operate and shut down.	*Control Engineering*
Pleated Filter	A filter element whose medium consists of a series of uniform folds and has the geometric form of a cylinder, cone, disc, plate, etc. Synonymous with "convoluted" and "corrugated".	*Lubrication*
Plenum	The enclosed space between the eliminators and the fan stack in induced draft towers or the enclosed space between the fan and the filling in forced draft towers.	*Facility Engineering*
Plesiochronous Digital Hierarchy	The time-division multiplexed network used by telecommunications companies to transport phone calls and data over copper cabling. The entire network shares a common frequency throughout its tree-like structure, although phase and time delay variations exists at various points along the edge of the network.	*Electrical Engineering*
Plexyglas	A trade name for methyl methacrylate plastics.	*Material Process*
Plotting paper	See Probability plotting paper	*Reliability Engineering*
Plough	a steel wedge device dragged along the face to shear off a slice (2 to 3 inches thick), or plough the coal; or a scraper cleaning device on a conveyor.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Plough packer	a packing device used on a face in which a moving blade ploughs dirt from a static platform and forms it into a gate-side pack.	*Mining*
Plow	to work the soil by turning over the top layer; the machine used to turn the top layer of soil	*Agriculture*
Plow Steel Rope	A specific grade of wire rope.	*Wire Rope & Cable*
Plowing	The formation of grooves by plastic deformation of the softer of two surfaces in relative motion.	*Paint and Coatings*
Plucking	bad surges of the haulage rope during operation.	*Mining*
Plug	A plug closes off the end of a pipe. It is similar to a cap but it fits inside the fitting it is mated to. In a threaded iron pipe steam system, plugs have male threads.	*Industrial*
Plug	A common name for a small offshoot from a large body of molten rock.	*Mining*
Plug	The rotating closure element of a plug valve. Also a threaded fitting used to close off and seal an opening into a pressure containing chamber, e.g., pipe plug.	*Mechanical*
Plug and feathers	multiple wedges used to break rock or bring down coal.	*Mining*
Plug boxes	wooden box channels used to drain water from the shaft sides during shaft lining to stop the cement being washed away from the brickwork.	*Mining*
Plug Flow Reactor	This may be thought of as a long pipe to which the reactants flow in, and the products flow out. In an ideal PFR, the components will be distributed axially, but will have uniform radial distribution.	*Chemical*
Plug Flow Reactor	This may be thought of as a long pipe to which the reactants flow in, and the products flow out. In an ideal PFR, the components will be distributed axially, but will have uniform radial distribution.	*Chemical Engineering*
Plug valve	A quarter turn valve whose closure element is usually a tapered plug having a rectangular port.	*Mechanical*
Plugged-back footage	Under certain conditions, drilling operations may be continued to a greater depth than that at which a potentially productive formation is found. If production is not established at the greater depth, the well may be completed in the shallower formation. Except in special situations, the length of the well bore from the deepest depth at which the well is completed to the maximum depth drilled is defined as "plugged-back footage." Plugged-back footage is included in total footage drilled but is not reported separately.	*Energy*
Plugging back from one zone to another	Plugging back from one zone to another	*Petroleum Drilling*
Plugging of Well	The sealing off of the fluids in the stratum penetrated by a well so that the fluid from one stratum will not escape into another or to the surface.	*Petroleum Drilling*
Plug-o-clay or Plug-o-stemming	a piece of clay used to stem a shothole. (Scot.). -see Stemming and Dolls.	*Mining*
Plum pit	another name for the engine pit. (South West).	*Mining*
Plum pitch	the line of full rise or dip of the strata. (Bris.).	*Mining*
Plumb hole	a hole or depression on the surface caused by subsidence due to undermining. (Scot.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Plumb Plan	a program named after Glenn E. Plumb, general counsel of the organized railroad workers in 1919. The program provided for nationalization of operating control through a 15-member board of directors.	*Industrial Relations*
Plumbing and Pipe Fitting Industry of the United States and Canada; International Association of Journeymen and Apprentices of the (AFL-CIO)	first organized in October 1889 and known as the International Association of Plumbers, Steam Fitters and Gas Fitters, which consisted of Knights of Labor locals and a few independent craft unions.	*Industrial Relations*
Plume	Visible exhaust from a cooling tower. (See Fogging.)	*Facility Engineering*
Plum-bulking	the full dip of a seam or the strata. (South West).	*Mining*
Plum-end	a heading that is driven on the end or end-on. (Yorks.).	*Mining*
Plum-hatching	the full rise of a seam or the strata. (South West).	*Mining*
Plunge	The vertical angle a linear geological feature makes with the horizontal plane.	*Mining*
Plunger	The component of a pinch valve that translates during a change of state and pinches the tubing.	*General Mechanical*
Plunger	A cylindrically shaped part which has only one diameter and is used to transmit thrust. A ram.	*Mechanical, Process, and Operations*
Plunger (RAM) Cylinder	A cylinder in which the piston has the same cross-sectional area as the piston rod.	*Mechanical, Process, and Operations*
Plus Sieve	The portion of a powder sample retained on a sieve of specified number. (See minus sieve.)	*Paint and Coatings*
Plutonic	Refers to rocks of igneous origin that have come from great depth.	*Mining*
Plutonium (Pu)	A heavy, fissionable, radioactive, metallic element (atomic number 94) that occurs naturally in trace amounts. It can also result as a byproduct of the fission reaction in a uranium-fuel nuclear reactor and can be recovered for future use.	*Energy*
Ply	A single thickness of steel forming part of a structural joint.	*Maintenance*
Ply	The number of single yarns twisted together to form a ply yarn. Also, the number of ply yarns twisted together to form of cord. The individual yarn in a ply yarn or cord. one of the several layers of fabric. A sheet of layer of veneer.	*Material Process*
Plywood	A product made up of layers of veneer bonded with glue, often bonded with synthetic resin. Alternate layers have grain at right angles to increase strength and to reduce the tendency to shrink and split.	*Material Process*
PM	Power Marketer	*Energy*
PM10	particulate matter less than 10 microns diameter	*Petro-Chemical Abbreviations*
PM2.5	particulate matter less than 2.5 microns diameter	*Petro-Chemical Abbreviations*
PMA	polymethacrylate	*Petro-Chemical Abbreviations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
PMAA	Petroleum Marketers Association of America	*Petro-Chemical Abbreviations*
PMI	Positive material identification - A method for cross checking the identity of a piece of material, often using a portable spectrometer, usually with x-rays (TN 9266, nuclear analyzer) or a welding arc (Arc Met 900, optical spectrometer).	*Mechanical*
PMI Positive material identification	a method for cross checking the identity of a piece of material, often using a portable spectrometer, usually with x-rays (TN 9266, nuclear analyzer) or a welding arc (Arc Met 900, optical spectrometer).	*General Mechanical*
PML	See: Pattern Makers' League of North America (AFL-CIO)	*Industrial Relations*
PMS	Process safety management.	*Material Process*
PN	A diode consisting of one N: type region and one P: type region.	*Electrical Engineering*
p-n junction	Boundary between adjacent regions of p-type and n-type material in a solid-state electronic device.	*Material Process*
PNA	polynuclear aromatic	*Petro-Chemical Abbreviations*
PNA (polynuclear aromatic)	Any of numerous complex hydrocarbon compounds consisting of three or more benzene rings in a compact molecular arrangement. Some types of PNA's are formed in fossil fuel combustion and other heat processes, such as catalytic cracking.	*Lubrication*
PNET	The Danish fieldbus. The Profibus organization is seeking to integrate this in the common Profibus PA protocol.	*Control Engineering*
Pneumatic	Pertaining to, or using, air or gas.	*Mechanical*
Pneumatic 3-Way Control Valve	Typically a 3-way solenoid valve used to send actuating air pressure to a pneumatic pinch valve.	*Mechanical*
Pneumatic device	A device moved or worked by air pressure.	*Energy*
Pneumatic packing	see Pack.	*Mining*
Pneumatic Pinch Valves	A type of pinch valve that uses pneumatic pressure to actuate the plunger.	*Mechanical*
Pneumatic test	A test in which a valve is tested with air - usually a seat closure test.	*General Mechanical*
Pneumatic test	A test in which a valve is tested with air - usually a seat closure test.	*Mechanical*
Pneumatic Valve	A valve for controlling gas flow or pressure.	*Mechanical, Process, and Operations*
Pneumatics	Engineering science pertaining to gaseous pressure and flow.	*Engineering Physics*
Pneumoconiosis	a chronic disease of the lungs arising from breathing in coal dust.	*Mining*
Pneumoconiosis	A chronic disease of the lung arising from breathing coal dust.	*Mining*
PNGV	Partnership for a New Generation of Vehicles (US)	*Petro-Chemical Abbreviations*
PO	Propylene oxide	*Petro-Chemical Abbreviations*
POC	Point Of Care	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pock mark	Definitely shaped indentation. Term not recommended. See Pit.	*Material Process*
Pock Marks	Imperfections on the surface of a blow molded article consisting of irregular contact of the blown parison with the mold surface. Contributory factors are insufficient blowing pressure, entrapment of air or gases, and condensation of moisture on the mold surface.	*Engineering Physics*
Pocket	A cavity filled with ore, or a rich deposit of precious metal.	*Mining*
Pockets	These are cavities in the earth, filled with ore, or a rich deposit of gold.	*Mining*
Point	Unit of value of a stock as quoted by a stock exchange. May represent one dollar, one cent or one-eighth of a dollar, depending on the stock exchange.	*Mining*
Point Defect	A crystalline defect associated with one or, at most, several atomic sites.	*Engineering Physics*
Point defect	Zero- dimensional disorder in a crystalline structure, associated primarily with solid-state diffusion.	*Material Process*
Point estimate	The results (e.g. mean, mean difference, odds ratio, risk ratio or risk difference) obtained in a sample (a study or a meta-analysis) which are used as the best estimate of what is true for the relevant population from which the sample is taken.	*Quality Engineering*
Point lattice	See Crystal (Bravais) lattice.	*Material Process*
Point Of Origin	The location where a transportation company receives a shipment from the shipper.	*Procurement*
Point Plan	the point plan or point system is one of the most frequently used in job evaluations. It requires the use of a point manual which contains a scale against which the specifications and the job are compared, factor by factor, in actual determination of their point values.	*Industrial Relations*
Point(s) of Delivery	Point(s) for interconnection on the Transmission Provider's System where capacity and/or energy are made available to the end user.	*Energy*
Point(s) of Receipt	Point(s) of connection to the transmission system where capacity and/or energy will be made available to the transmission providers.	*Energy*
Point-of-Load	Point-of-load (POL) power supplies solve the challenge of high peak current demands and low noise margins, required by high-performance semiconductors such as microcontrollers or ASICs, by placing individual power supply regulators (linear or DC-DC) close to their point of use.	*Electrical Engineering*
Point-Source Contamination or Point-Source Pollution	Water pollution from a single point.	*Petroleum Engineering*
Point-to-Point Transmission Service	Reservation and/or transmission of energy from point(s) of receipt to point(s) of delivery.	*Energy*
Poise	The standard unit of absolute viscosity in the c.g.s. (centimeter-gram-second) system. It is the ratio of the shearing stress to the shear rate of a fluid and is expressed in dyne seconds per square centimeter; 1 centipoise equals .01 poise.	*Mechanical, Process, and Operations*
Poise (absolute viscosity)	A measure of viscosity numerically equal to the force required to move a plane surface of one square centimeter per second when the surfaces are separated by a layer of fluid one centimeter in thickness. It is the ratio of the shearing stress to the shear rate of a fluid and is expressed in dyne seconds per square centimeter (DYNE SEC/CM2); 1 centipoise equals .01 poise.	*Oil Analysis*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Poise (P)	Measurement unit of a fluid's resistance to flow, i.e., viscosity, defined by the shear stress (in dynes per square centimeter) required to move one layer of fluid along another over a total layer thickness of one centimeter at a velocity of one centimeter per second. This viscosity is independent of fluid density, and directly related to flow resistance.	*Lubrication*
Poison, Industrial	See: Industrial Disease, Industrial Poison	*Industrial Relations*
Poisson distribution	A statistical distribution with known properties used as the basis of analysing the number of occurrences of relatively rare events occurring over time.	*Quality Engineering*
Poisson Ratio	The ratio between the strain of expansion in the direction of force and the strain of contraction perpendicular to that force v = -Et/E1.	*General*
Poisson's Ratio	For elastic deformation, the negative ratio of lateral and axial strains that result from an applied axial stress.	*Engineering Physics*
Poka Yoke	It is a Japanese term which translates roughly to mistake proofing. It is a manufacturing technique of preventing errors from occurring by designing the manufacturing process, equipment and tools in such a way that an operation literally cannot be performed incorrectly.	*Reliability Engineering*
Poka-yoke	"Fail-safing" techniques to eliminate errors or quality-related production defects as far upstream in the process as possible. Example: requiring completed components to pass through a customized opening to ensure that dimensions do not exceed tolerance limits. Also includes methods to check equipment operating conditions prior to making a part. A major objective is to minimize the need for rework.	*Quality*
Pokering	a term used for hand spraying in dust suppression – using sprays to direct water to specific sources of dust where the adjacent strata are adversely affected by wetting.	*Mining*
POL	Physician Office Laboratory	*Quality*
Poland China	A breed of hogs. Registry is with the Poland China Record Association.	*Agriculture*
Polar	interaction in which the electron density around adjacent atoms is asymmetric	*Physics*
Polar Compound	A chemical compound whose molecules exhibit electrically positive characteristics at one extremity and negative characteristics at the other. Polar compounds are used as additives in many petroleum products. Polarity gives certain molecules a strong affinity for solid surfaces; as lubricant additives (oiliness agents), such molecules plate out to form a tenacious, friction-reducing film. Some polar molecules are oil-soluble at one end and water-soluble at the other end; in lubricants, they act as emulsifiers, helping to form stable oil-water emulsions. Such lubricants are said to have good metal-wetting properties. Polar compounds with a strong attraction for solid contaminants act as detergents in engine oils by keeping contaminants finely dispersed.	*Lubrication*
Polar diagram	Plot of intensity of reflected light from a surface.	*Material Process*
Polar Molecule	A molecule in which there exists a permanent electric dipole moment by virtue of the asymmetrical distribution of positively and negatively charged regions.	*Engineering Physics*
Polarity	In electricity, the quality of having two oppositely charged poles, one positive one negative.	*Electronic Process*

Term	Definition	*Industry*
Polarization	The inability of an electrode to reproduce a reading after a small electrical current has been passed through the membrane. Glass pH electrodes are especially prone to polarization errors caused by small currents flowing from the pH meter input circuit and from static electrical charges built up as the electrodes are removed from the sample solution, or when the electrodes are wiped.	*General*
Polarization	The inability of an electrode to reproduce a reading after a small electrical current has been passed through the membrane. Glass pH electrodes are especially prone to polarization errors caused by small currents flowing from the pH meter input circuit and from static electrical charges built up as the electrodes are removed from the sample solution, or when the electrodes are wiped.	*Electronic Process*
Polarization (electronic)	For an atom, the displacement of the center of the negatively charged electron cloud relative to the positive nucleus, which is induced by an electric field.	*Engineering Physics*
Polarization (ionic)	Polarization as a result of the displacement of anions and cations in opposite directions.	*Engineering Physics*
Polarization (orientation)	Polarization resulting from the alignment (by rotation) of permanent electric dipole moments with an applied electric field.	*Engineering Physics*
Polarized light	The phenomenon whereby light rays are limited to one plane of vibration.	*Material Process*
Polarized Photoelectric Controls	The controls that emit a visible LED beam and use a special lens which filters the beam of light so that it is projected in one plane only. The control responds only to the de: polarized reflected light from corner: cube type reflectors (FE: RR1) or special polarized reflective tape.	*Electrical Engineering*
Pole	The number of completely separate circuits that can pass through a switch at one time. A single pole switch can control only one circuit at a time. A double pole switch can control two independent circuits (such as a 120 volt AC heater and a 6 volt DC lamp) at the same time. The number of poles is completely independent of the number of throws and number of breaks.	*Electrical Engineering*
Pole	This historic term refers to the driver who starts at the front of the field on the inside of the front row by virtue of the fastest qualifying time. The term originated at horse tracks, where many of the original races were held on dirt. The finish and distance markers of a horse track are marked by poles set on the inside edge of the track.	*NASCAR*
Pole/Tower type	The type of transmission line supporting structure.	*Energy*
Pole-mile	A unit of measuring the simple length of an electric transmission/distribution line/feeder carrying electric conductors, without regard to the number of conductors carried.	*Energy*
Pole timber	Trees from 5 to 7 inches in diameter at breast height.	*Forestry*
Poling	building gob walls or packs using old propwood and debris to support the roadway through the gob in longwall working; or a temporary support built to protect the rippers until the permanent road support is put into place, a 'horse head'—see also Lofting. Also another term for 'Runners'. (N. Staffs.).	*Mining*
Poling boards	boards slotted behind roof supports to hold back loose ground. The boards can be impregnated with flame suppressive chemicals.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Polishing	The finishing of metal surfaces with a compound impregnated in the surfaces of a hard fabric faced wheel which rotates at high speed. Also see "BUFFING"	*Metallurgy*
Polishing (Bore)	Excessive smoothing of the surface finish of the cylinder bore or cylinder liner in an engine to a mirror-like appearance, resulting in depreciation of ring sealing and oil consumption performance.	*Lubrication*
Polishing pond	The last in a series of settling ponds through which mill effluent flows before being discharged into the natural environment.	*Mining*
Political Action, Union	activities of a union directed to electing pro-union individuals to political office-federal, state, or local-and to effect the adoption of legislation opposed by unions.	*Industrial Relations*
Political Education, Union	basically, a term of art. It does involve "educating" union members in mechanics of using their franchise, that is, how to register and how to vote, but the thrust of such education is the election of political candidates who will support legislation desired by organized labor (or its leaders) and opposes legislation that labor opposes.	*Industrial Relations*
Poll tomahawk	see Dresser.	*Mining*
Polled	The term simply means to cut off or shorten a growth. As applied to cattle in contemporary use, the term usually means naturally hornless cattle. Some breeds, such as Hereford, may be either horned, or polled. Polled Herefords are considered, however, a separate breed.	*Agriculture*
Pollinate	to fertilize by transferring pollen from the anther to the stigma of a flower	*Agriculture*
Pollution	When contamination concentration levels restrict the use of groundwater.	*Petroleum Engineering*
Poly pak stem seal	An O-ring energized lip-seal which replaces O-ring stem seals in certain gate valves. Also used for stem seals in some ball valves.	*Mechanical*
Polyalkylene Glycol	Mixtures of condensation polymers of ethylene oxide and water. They are any of a family of colorless liquids with high molecular weight that are soluble in water and in many organic solvents. They are used in detergents and as emulsifiers and plasticizers. PAG-based lubricants are used in diverse applications where petroleum oil-based products do not provide the desired performance – and because they are fire-resistant and will not harm workers or the environment.	*Lubrication*
Polyamide-Imide	Polyamide-imide is used in the automotive, aerospace, and heavy equipment industries.	*Material Engineering*
Polyaromatic hydrocarbon	aromatic hydrocarbons containing more than one fused benzene ring. Polyaromatic hydrocarbons are commonly designated PAH.	*Chemical*
Polyarylates	Polyarylates are used in appliance, automotive, and electrical applications such as outdoor lighting because they are resistant to heat.	*Material Engineering*
Polybutenes	The family of polymers of isobutene, butene-1, and butene-2. Depending on molecular weight, they range from oils through tacky waxes, crystalline waxes, and rubbery solids.	*Engineering Physics*
Polybutylene	Polybutylene is a thermoplastic that is resistant to creep, chemicals, and cracking, while being very flexible. It is typically used in packaging film and pipe.	*Material Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Polycarbonate	Polycarbonate is a thermoplastic that was first developed in 1957. It was originally created as a means of competing against die-cast metals. Polycarbonates are tough, strong, and rigid, yet ductile. They can be maintained over a wide range of loading rates and temperatures and are excellent electrical insulators. They are transparent and, therefore, are often used in the creation of water bottles. They are also used for electrical purposes, glazing, and appliances. In addition, they can be processed in numerous ways, including extrusion, injection molding, rotational molding, and blow molding.	*Material Engineering*
Polycarbonate	Polymers derived from the direct reaction between aromatic and aliphatic dihydroxy compounds with phosgene, or by the ester exchange reaction with phosgene-derived precursors. When the aromatic dihydroxy is bisphenol A, the resulting polycarbonate is thermoplastic—the most commonly used form. Such polycarbonates have high impact strength, good heat resistance, low water absorption, and good electrical properties. They are transparent, and may be injection molded, extruded, thermoformed, and blow molded.	*Engineering Physics*
Polychloroprene	A polymer of chlorobutadiene, the latter prepared from acetylene and hydrogen chloride.	*Material Process*
Polychloroprene	Chemical name for neoprene A rubber-like compound used for jacketing where wire and cable will be subject to rough usage, moisture, oil, greases, solvents and chemicals.	*Electrical*
Polycrystalline	Referring to crystalline materials that are composed of more than one crystal or grain.	*Engineering Physics*
Polyester	A condensation polymer formed by the interaction of polyhydric alcohols and polybasic acids. They are used in some coatings and the manufacture of glass-fiber products. See Alkyd resin.	*Paint and Coatings*
Polyester Resins	A family of polyesters in which the polyester backbones are saturated and hence unreactive. The most common commercial types are polyethylene terephthalate (PET), a thermoplastic which may be extruded, injection or blow molded. Unsaturated Unsaturated polyesters thermoset and used in the reinforced plastics industry for applications such as boats, auto components, etc.	*Engineering Physics*
Polyethylene	Polyethylene came to the forefront during World War II, when it was used for underwater cable coating. It was then used as an insulating material for other military purposes, such as radar cable. After the war was over, it was put to commercial use and has become one of the most popular forms of plastic. In fact, it was the first plastic in the United States to sell more than billion pounds a year. It remains the most popular plastic in the country, being found in drums, containers, pipe, toys, housewares, shopping bags, trash bags, garment bags, packaging films, gasoline tanks, and coatings.	*Material Engineering*
Polyethylene	A thermoplastic material composed of polymers of ethylene.	*Electrical*
Polyethylene Terephthalate	Since its development in the 1940s, PET's excellent tensile, thermal, mechanical, optical and electrical properties have continued to earn it new markets. Properties: Transparent and strong, tough and stiff, PET offers both excellent gas and moisture barrier properties, and is resistant to heat, mineral oils, solvent and acids (but not bases). PET is widely used in fibers, soft drink and other beverage bottles and films. Applications: Most commonly associated with	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	bottles, PET is used also in a number of non-packaging film applications, including photographic and x-ray films, audio and video tapes, solar control films, and business card laminations. It is also used in metalized packages for potato chips and similar foods, and sterile medical wraps. Good heat resistance means it can be used in oven-proof films, microwaveable food trays and boil-in bags.	
Polyforming	The thermal conversion of naphtha and gas oils into high-quality gasoline at high temperatures and pressure in the presence of recirculated hydrocarbon gases.	*Petroleum Engineering*
Polyfunctional	Polymer with more than two reaction sites for each mer, resulting in a network molecular structure.	*Material Process*
Polyglycols	Polymers of ethylene or propylene oxides used as a synthetic lubricant base. Properties include very good hydrolytic stability, high viscosity index (VI), and low volatility. Used particularly in water emulsion fluids.	*Lubrication*
Polyhydric alcohol	An alcohol that contains more than one hydroxyl group, e.g., CH2OH–CH2OH.	*Material Process*
Polyimides	Polymides are a thermoset plastic that first appeared in the 1960s. They are typically used in laminates, enamels, gears, adhesives, bushings, covers, valve seats, piston rings, and solutions such as laminating varnish.	*Material Engineering*
Polyisobutylene	See Polybutene.	*Engineering Physics*
Polymer	When individual molecules (monomers) link up in a chain-like fashion, they form a polymer. The chemical reaction that forms a polymer is called polymerization.	*Chemical*
Polymer	When individual molecules (monomers) link up in a chain-like fashion, they form a polymer. The chemical reaction that forms a polymer is called polymerization.	*Chemical Engineering*
Polymer Process Aid (PPA)	Additives incorporated into plastics as a modifier to aid in the extrusion of film, pipe, sheet, etc.	*Engineering Physics*
Polymerization	The reaction by which single molecules are linked to form large molecules without change in fundamental chemical composition. Chemical process in which individual molecules (monomers) are converted to large molecular weight molecules (polymers).	*Material Process*
Polymerization	A chemical reaction in which the molecules of a simple substance (monomer) are linked together to form large molecules whose molecular weight is a multiple of that of the monomer.	*Engineering Physics*
Polymerize	The property of certain organic chemicals to undergo a change, in which the individual molecules combine to form larger and heavier molecules, and the substance becomes rubbery or plastic. The six chemicals listed below all have this quality. Some polymerize spontaneously, others require the aid of a catalyst. Six chemical are butadiene, styrene, acrylonitrile, isobutylene, chloroprene, isoprene.	*Material Process*
Polymers	Naturally occurring or synthetic compounds consisting of large molecules made up of a linked series of repeated simple monomers covalently bonded together, covalently bonded chains of molecules with the small monomer units repeated from end to end	*Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Polymers Between Contacts	The compounds having long: chain molecular structure, formed from simple organic contaminants on contacts, under the influence of contact wipe and the catalytic effect of the contact material.	*Electrical Engineering*
Polymorphism	The ability of a solid material to exist in more than one form or crystal structure.	*Engineering Physics*
Polynuclear aromatic hydrocarbon	synonymous with polyaromatic hydrocarbon. Designated PNA.	*Chemical*
Polyol Ester	A synthetic lubricant base, formed by reacting fatty acids with a polyol (such as a glycol) derived from petroleum. Properties include good oxidation stability at high temperatures and low volatility. Used in formulating lubricants for turbines, compressors, jet engines, and automotive engines.	*Lubrication*
Polyolefin	A polymer derived by polymerization of relatively simple olefins. Polyethylene and polyisoprene are important polyolefins.	*Lubrication*
Polyolefins	The class of polymers made by polymerizing relatively simple olefins, including ethylene, propylene, butenes, isoprenes, and pentenes.	*Engineering Physics*
Polyphenylene Oxide	Polyphenylene Oxide is an engineered thermoplastic used in business machine parts, automotive parts, appliances, and electronics.	*Material Engineering*
Polyphenylene Sulfide	Polyphenylene sulfide is heat and chemical resistant. It also has a good retention of mechanical properties at high temperatures and are very stiff. Therefore, they are often used in automotive and electronic parts.	*Material Engineering*
Polypropylene	Polypropylene is a highly used thermoplastic that was first developed in Europe and brought to the United States in 1957. It is fairly rigid, has a low density, excellent chemical resistance, electrical properties, and has a heat distortion temperature of 150 to 200 degrees Fahrenheit. In addition, it is very simple to process. It is most often used in automotive parts, packaging, carpeting, and appliances.	*Material Engineering*
Polypropylene	A thermoplastic polymer of propylene.	*Electrical*
Polyproylene	A tough; lightweight, rigid-plastic made by the polymerization of high-purity propylene gas in the presence of an organometallic catalyst at relatively low pressures and temperatures.	*Engineering Physics*
Polystyrene	A polymer of styrene that is a rigid, transparent thermoplastic with good physical and electrical insulating properties, used in molded products, foams, and sheet materials.	*Energy*
Polystyrene	A thermoplastic synthetic resin, polymer of styrene.	*Material Process*
Polysulfide	A polysulfide is a compound of some other chemical with four or more (many) sulfur molecules.	*Material Process*
Polythene	Hydrocarbon resin resulting from the polymerization of ethylene.	*Material Process*
Poly-Tier Support	Supporting members capable of supporting more than one level of conveyor at a time. Each tier has vertical adjustment for leveling the conveyor.	*Manufacturing*
Polyurethanes	Polyurethanes have been around since 1954 and are very versatile. In fact, they are available in rubbers, adhesives, sealants, coatings, and flexible or rigid foams. Most are considered to be thermosets, though some are thermoplastics. The foam version is created by reacting polyols and isocyanates, which are then introduced to a blowing agent. The foams can be made to be rigid, flexible,	*Material Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	or tough, depending on the purpose. Polyurethanes also have protective qualities, making them great for use as coatings for metals, wood, rubber, concrete, leather, paper, and plastic. Their toughness and resistance to abrasion also make them ideal for gaskets and seals, printing rolls, drive and conveyor belts, cable insulation, and solid tires.	
Polyvinil acetal	Products derived from polyvinyl esters in which part or all of the acid groups have been replaced by acetal and hydroxyl groups, available in several types depending on the aldehyde or aldehydes used, e.g., Formwar, Alwar, Butwar, etc..	*Material Process*
Polyvinyl Acetate	A thermoplastic material composed of polymers of vinyl acetate in the form of a colorless solid. Used extensively in adhesives for paper and fabric coatings.	*Engineering Physics*
Polyvinyl Acetate (PVAc) and Other Vinyls	Polyvinyl acetate, which is a thermoplastic, is used to create solid vinyl acetate. It is typically used in paints, adhesives, coatings, and packaging.	*Material Engineering*
Polyvinyl Alcohol	A thermoplastic material composed of polymers of the hypothetical vinyl alcohol.	*Engineering Physics*
Polyvinyl Chloride	Polyvinyl Chloride, commonly referred to as PVC or vinyl, was first invented in Germany around 1910. It didn't become a useful product in the United States, however, until the late 1920s. It became particularly useful during World War II when it was used as a substitute for rubber, which was in short supply. Polyvinyl Chloride is resistant to abrasion and is both weather and chemical resistant. Today, it is commonly found in upholstery, wall coverings, flooring, siding, pipe, and even apparel. In fact, vinyl is perhaps the best known of all plastics.	*Material Engineering*
Polyvinyl Chloride	Thermoplastic compounds formed by polymerization or copolymerization of vinyl or vinylidene chlorides and vinyl esters.	*Engineering Physics*
Polyvinyl chloride (PVC)	A polymer of vinylchloride. Tasteless, odorless, insoluble in most organic solvents. A member of the family vinyl resin, used in soft flexible films for food packaging and in molded rigid products, such as pipes, fibers, upholstery, and bristles.	*Energy*
Polyvinyl Chloride (PVC)	A thermoplastic material composed of polymers of vinyl chloride, which may be rigid or elastomeric, depending on specific formulation.	*Electrical*
POMH	See: Post Office and Postal Transportation Service Mail Handlers, Watchman and Messengers; National Association of (AFL-CIO)	*Industrial Relations*
Pom-Pom	the nickname for the Siskel coal-cutter, one of the earliest coal-cutting machines.	*Mining*
POMV	See: Post Office Motor Vehicle Employees; National Federation of (AFL-CIO)	*Industrial Relations*
Pondage	The amount of water stored behind a hydroelectric dam of relatively small storage capacity; the dam is usually used for daily or weekly control of the flow of the river.	*Energy*
Pontianac	A dark fossilized natural resin from New Caledonia, used in the manufacture of varnishes.	*Material Process*
Pontoon	A float for a derrick, landing stage, etc.	*Civil Engineering*

Please see the Appendix for further illustration

Term	Definition	Industry
Pontoon bridge	A bridge supported by pontoons.	*Civil Engineering*
Pony	A small horse; i.e., one that remains small as an adult. There is no precise size. Each breed association has its own size standard.	*Agriculture*
Pony of the Americas	A recent breed that traces to birth of a foal in 1954. It was from an Arab/Appaloosa mare accidentally bred to a Shetland stallion. The colt had unique color markings (white with black paint smears all over his body) and other striking features. The characteristics proved to be heritable and a breed association was formed. To be registered as a Pony of the Americas, the pony has to be between 46 and 56 inches tall. The head was to be small and dished as the Arab. Body has to be muscled as a Quarter Horse; and the coloring has to be that of an Appaloosa, visible at 40 feet. The breed is prized as a first horse on which children can gain experience and confidence.	*Agriculture*
Pony truss	A through bridge truss having its deck between the top and bottom chords and having no top lateral bracing.	*Civil Engineering*
Pony truss	A through bridge truss having its deck between the top and bottom chords and having no top lateral bracing.	*Civil Engineering*
Pooching	Pooching is a term sometimes used to describe the effect of the area immediately surrounding a tapped hole being raised up as a result of the tension from the stud. Tapped holes are often bored out for the first couple of threads to eliminate this problem.	*Maintenance*
Pool	In general, a reservoir. In certain situations, a pool may consist of more than one reservoir.	*Energy*
Pool leader	the man in charge of a team of men. (Scot.).	*Mining*
Pool or Poil	to hole or undercut. (Scot.).	*Mining*
Pool Purchase	A purchase involving two or more locations which provides that definite or guaranteed minimum quantities of specified items be purchased at fixed prices during a stated period. Pool purchases normally are made on a regularly scheduled basis one or more times a year.	*Procurement*
Pool site	One or more spent fuel storage pools that has a single cask loading area. Each dry cask storage area is considered a separate site.	*Energy*
PoolCo	This will serve as a model for the restructured electric industry that combines the functions of an ISO and a Power Exchange. In its least flexible form, a PoolCo also prohibits direct transactions between buyers and sellers (i.e. all producers selling to the Pool and all consumers buy from the Pool.)	*Energy*
Pooling or land pooling	A legal process that allows exploration and production companies to compel unwilling land and mineral rights holders to lease or sell their land and/or mineral rights for exploration, drilling, or pipeline installation if enough of their neighbors have already agreed. Government agencies require a minimum number of acres of land before granting a well permit; with pooling, companies can collect smaller tracts of land that will accumulate to this total minimum acreage. Pooling is not a law in Pennsylvania, but there are legal proposals to make it so.	*Petroleum Drilling*
Pooling shares	See escrowed shares.	*Mining*

Term	Definition	Industry
POP	population of vehicles	*Petro-Chemical Abbreviations*
Pop-Out Roller	A special load carrying roller mounted in such a manner as to pop out when foreign objects are introduced between the belt and the roller.	*Equipment*
Poppet	That part of certain valves which prevents flow when it closes against a seat.	*Mechanical, Process, and Operations*
Poppet head	a small head gear used over a shallow pit.	*Mining*
Poppet Valve	A valve design in which the seating element autopops open to obtain free flow in one direction and immediately reseats, when flow reverses.	*Mechanical, Process, and Operations*
Population	[In research:] The group of people being studied, usually by taking samples from that population. Populations may be defined by any characteristics e.g. geography, age group, certain diseases.	*Quality Engineering*
Population-weighted Degree Days	Heating or cooling degree days weighted by the population of the area in which the degree days are recorded. To compute national population-weighted degree days, the Nation is divided into nine Census regions comprised of from three to eight states that are assigned weights based on the ratio of the population of the region to the total population of the Nation. Degree day readings for each region are multiplied by the corresponding population weight for each region, and these products are then summed to arrive at the national population weighted degree day figure.	*Energy*
Porcelain Enamel	A coating of ceramic-type material that is fired or fused to a steel base and used in sinks, bathtubs, etc. This differs from the vitreous china used in toilets.	*Chemistry*
Porcelan	A ceramic formed from baked clay glazed with a fusible substance.	*Material Process*
Porcelan enamel	Silicate glass coating on a metal substrate for the purpose of shielding the metal from a corrosive environment.	*Material Process*
Porch	the arching at the pit bottom. The inset. (Yorks.).	*Mining*
Pore	A small channel or opening in a filter medium which allows passage of fluid.	*Oil Analysis*
Pore Rating/Nominal/ Absolute	Expressed as microns and/or Daltons, membrane filters are given pore ratings to provide the end user with an indication of their filtering capabilities. Nominal Rating is arbitrary describing particulate size ranges for which a filter manufacturer claims some percentage removal. Absolute Rating is the diameter of the largest hard spherical particle that will pass through a filter under specified test conditions. Comparisons of filters should not be based upon nominal ratings that vary from manufacturer to manufacturer, but upon absolute ratings which are based on the largest opening in the filter medium.	*Pollution Engineering*
Pore size distribution	The ratio of the number of effective holes of a given size to the total number of effective holes per unit area expressed as a percent and as a function of hole size.	*Oil Analysis*
Pore size distribution	The ratio of the number of holes of a given size to the total number of holes per unit area expressed as a percent and as a function of hole size.	*Mechanical, Process, and Operations*
Pore space	The open spaces or voids of a rock taken collectively. It is a measure of the amount of liquid or gas that may be absorbed or yielded by a particular formation.	*Energy*

Term	Definition	*Industry*
Pore volume	(1) the total volume of pore space in a given volume of rock or sediment. Pore volume usually relates to the volume of air or water that must be moved through contaminated material in order to flush the contaminants. (2) the volume of water (or air) that will completely fill all of the void space in a given volume of porous matrix. Pore volume is equivalent to the total porosity. The rate of decrease in the concentration of contaminants in a given volume of contaminated porous media is directly proportional to the number of pore volumes that can be exchanged (circulated) through the same given volume of porous media.	*Chemical*
Pork bellies	meat from the belly area of a pig; used for bacon	*Agriculture*
Pork Chopper	an old term, now used mostly in good humored banter. Originally, it may have been limited to a union organizer, or union staff member who had organizing as one of his duties, since in pointing out the benefits of unionization he emphasized the tangiable results included more money to buy food (pork chops).	*Industrial Relations*
Porosity	A defect found in castings or welds consisting of gas bubbles or voids in the solidified metal.	*General Mechanical*
Porosity	the volume fraction of a rock or unconsolidated sediment not occupied by solid material but usually occupied by water and/or air.	*Chemical*
Porosity	The percentage of void in a porous rock compared to the solid formation.	*Petroleum Drilling*
Porosity (void fraction)	The ratio of pore volume to total volume to a filter medium expressed as a percent.	*Mechanical, Process, and Operations*
Porphyry	Any igneous rock in which relatively large crystals, called phenocrysts, are set in a fine-grained groundmass.	*Mining*
Porphyry	A rock consisting of a compact base from which which crystals of feldspar are disseminated.	*Mining*
Porphyry copper	A deposit of disseminated copper minerals in or around a large body of intrusive rock.	*Mining*
Port	a town or city where ships are loaded with products to be shipped overseas	*Agriculture*
Port	A signal input (access) or output point on a computer.	*Electronic Process*
Port Lines	See Spider Lines	*Metallurgy*
Portable Conveyor	Any type of transportable conveyor, usually having supports which provide mobility.	*Manufacturing*
Portable Data Terminal (PDT)	Handheld terminal, 35-46 keys, scanner. Information is kept within the terminal as you scan the item. When done, terminal is put in a cradle. Than the information is exported to a PC.	*Gears*
Portable electric heater	A heater that uses electricity and that can be picked up and moved.	*Energy*
Portable fan	Box fans, oscillating fans, table or floor fans, or other fans that can be moved.	*Energy*
Portable kerosene heater	**A** heater that uses kerosene and that can be picked up and moved.	*Energy*
Portable Support	Supporting members which provides conveyor mobility by use of casters or wheels.	*Manufacturing*
Portal	The surface entrance to a tunnel or adit.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Portal	The structure surrounding the immediate entrance to a mine; the mouth of an adit or tunnel.	*Mining*
Portal bus	Track-mounted, self-propelled personnel carrier that holds 8 to 12 people.	*Mining*
Portal-to-Portal Pay	payments for time actually spent by an employee-originally on coal mine company premises-from the time of his entrance at the gate to the time he returned to the gate, which therefore included the time it took to reach the face of the mine and return as well as the time actually worked at the face.	*Industrial Relations*
Portal-to-Portal Pay Act	the statute passed by Congress in 1947 to limit the liabilities under the Wage and Hour law based on portal-to-portal pay claims.	*Industrial Relations*
Porters; Bortherhood of Sleeping Car (AFL-CIO)	an organization of sleeping car porters.	*Industrial Relations*
Portfolio	A list of financial assets.	*Mining*
Port-Guided	A valve plug or cage where the flow control orifice is in the shape of a slot or port.	*Industrial Engineering*
Portland cement	Calcium aluminosilicate used as matrix for aggregate in concrete.	*Material Process*
Position	Location, usually in fixed earth coordinates such latitude and longitude; location, either scalar or vector, often with subscripts such as ENU or XYZ to denote source or coordinate frame; time integral of velocity; Symbols: p,P,x,y,z; Typical Units: ft,nmi; Dimensions: Length.	*Aeronautical Engineering*
Position	a specific office or job.	*Industrial Relations*
Position indicator	Any external device which visually indicates the open and closed position of valve.	*General Mechanical*
Position Sensing	Using electronic sensors to monitor the valve's position and provide electronic feedback indicating the valve's position to a human user or computer.	*Mechanical*
Position Switch	A switch that is normally fitted on the actuator to detect extremes of valve travel. The switch is normally electric.	*Industrial Engineering*
Position Transmitter	A device that is mechanically connected to the valve stem and will generate and transmit either a pneumatic or electric signal that represents the valve stem position.	*Industrial Engineering*
Position update	To cause navigation sensors, devices, or algorithms to reset position to value known to be more accurate due to inaccuracies and drift in the devices and algorithms.	*Aeronautical Engineering*
Positioner	A device used to position a valve with regard to a signal. The positioner compares the input signal with a mechanical feedback link from the actuator. It then produces the force necessary to move the actuator output until the mechanical output position feedback corresponds with the pneumatic signal value. Positioners can also be used to modify the action of the valve (reverse-acting positioner), alter the stroke or controller input signal (split-range positioner), increase the pressure to the valve actuator (amplifying positioner) or alter the control valve flow characteristic (characterised positioner).	*Industrial Engineering*
Positioning Weld	A weld made in a joint which has been so placed as to facilitate the making of the weld.	*Maintenance and Repair*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Positive charge carrier	Charge carrier with a positive electrical charge.	*Material Process*
Positive Crankcase Ventilation (PCV)	System for removing blow-by gases from the crankcase and returning them through the carburetor intake manifold to the combustion chamber where the recirculated hydrocarbons are burned. A PC valve controls the flow of gases from the crankcase to reduce hydrocarbon emissions.	*Lubrication*
Positive Crowned Pulley	A pulley which tapers equally from both ends toward the center, the diameter being the greatest at the center. The crown aids in belt tracking.	*Manufacturing*
Positive displacement	A characteristic of a pump or motor which has the inlet positively sealed from the outlet so that fluid cannot recirculate in the component.	*Mechanical, Process, and Operations*
Positive mold	One designed to have total applied pressure to the piece being molded, and permitting little or no escape of material.	*Material Process*
Positive predictive value	[In screening/diagnostic tests:] A measure of the usefulness of a screening/diagnostic test. It is the proportion of those with a positive test result who have the disease, and can be interpreted as the probability that a positive test result is correct. It is calculated as follows: PPV = Number with a positive test who have disease/Number with a positive test. [In trial searching:] See also: Precision	*Quality Engineering*
Positive Strike	a work stoppage which takes place on the basis of specific desires and demands of the employees for change.	*Industrial Relations*
Positive study	A study with results indicating a beneficial effect of the intervention being studied. The term can generate confusion because it can refer to both statistical significance and the direction of effect; studies often have multiple outcomes; the criteria for classifying studies as negative or positive are not always clear; and, in the case of studies of risk or undesirable effects, 'positive' studies are ones that show a harmful effect.	*Quality Engineering*
Positive Temperature Coefficient	An increase in resistance due to an increase in temperature.	*Electrical*
POSM	See: Post Office and General Services Maintenance Employees; National Association of (Ind)	*Industrial Relations*
Possible Reserves	Those reserves which at present cannot be regarded as 'probable' but are estimated to have a significant but less than 50% chance of being technically and economically producible.	*Petroleum Drilling*
Possible reserves	Valuable mineralization not sampled enough to accurately estimate its tonnage and grade, or even verify its existence. Also called "inferred reserves."	*Mining*
Possible reserves	Those reserves which at present cannot be regarded as 'probable' but are estimated to have a significant but less than 50% chance of being technically and economically producible.	*Petroleum Drilling*
Possum Belly	On a drilling rig, an open tank where drilling fluid and cuttings return to after coming up from downhole. From the possum belly the fluid enters the shale shakers, which remove the cuttings so the fluid can be re-circulated again.	*Petroleum Drilling*
Post	The vertical member of a timber set.	*Mining*
Post and bank	see Pillar and stall.	*Mining*

Term	Definition	*Industry*
Post and Stall	a method of pillar and stall working which was used in moderately thick seams. The stall was driven with a narrow opening off the heading and then widened out. In this way a post or pillar of coal was left to support the junctions. (Yorks.).	*Mining*
Post Guide	Normally associated with top and bottom-guided valves where the upper and lower sections of the plug, the post, are guided in the valve by a guide bush.	*Industrial Engineering*
Post Office and General Services Maintenance Employees; National Association of (Ind)	an independent organization of general service maintenance employees, formerly known as the National Association of Post Office Maintenance Employees (Ind).	*Industrial Relations*
Post Office and Postal Transportation Service Mail Handlers, Watchmen and Messengers; National Association of (AFL-CIO)	the union formerly was known as the National Association of Post Office and Railway Mail Service Mail Handlers (AF of L)	*Industrial Relations*
Post Office Clerks; National Association of (Ind)	See: Post Office Craftsmen; United National Association of (Ind)	*Industrial Relations*
Post Office Craftsmen; United National Associatin of (Ind)	the organization merged with the National Federation of Post Office Clerks (AFL-CIO) to form the United Federation of Post Office Clerks (AFL-CIO).	*Industrial Relations*
Post Office Motor Vehicle Employees; National Federation of (AFL-CIO)	formerly unaffiliated, the union received its AFL-CIO charter in June 1958.	*Industrial Relations*
Post Pffcie Clerks; National Federation of (AFL-CIO)	organized in Chicago in August 1906 and chartered by the AF of L.	*Industrial Relations*
Post Weld Heat Treatment	(PWHT) Heat treating process used after welding. It involves heating the weld deposit and base metal area affected to a nominated temperature long enough to reduce residual stress. This process, may also serve to satisfy NACE MR-0175 requirements for equipment used in H2S Service.	*Petroleum Engineering*
Postal Clerks Union; National (Ind)	See: Postal Union; National (Ind)	*Industrial Relations*
Postal Clerks; United Federation of (AFL-CIO)	the consolidated organization which includes the former National Federation of Post Office Clerks (AFL-CIO), the United National Association of Post Office Craftsmen (Ind), and the National Postal Transport Association (AFL-CIO)	*Industrial Relations*
Postal Employees; National Alliance of (Ind)	an independent organization or postal employees.	*Industrial Relations*
Postal Supervisors; National Association of (Ind)	an organization of postal supervisors.	*Industrial Relations*
Postal Transport Association; National (AFL-CIO)	one of the organizations which merged in 1961 to form the United Federation of Postal Clerks (AFL-CIO).	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Postal Union; National (Ind)	Name was formerly the National Postal Clerks Union (Ind).	*Industrial Relations*
Postconsumer Materials	A material or finished product that has served its intended use and has been diverted or recovered from waste destined for disposal, having completed its life as a consumer item. Postconsumer materials are part of the broader category of recovered materials.	*Environmental Engineering*
Post-Employment Questionnaire	an employee questionnaire used at any time subsequent to actual hiring of the individual.	*Industrial Relations*
Posterior	Hind or hindmost; opposite of anterior.	*Forestry*
Posterior distribution	The outcome of Bayesian statistical analysis. A probability distribution describing how likely different values of an outcome (e.g. treatment effect) are. It takes into account the belief before the study (the prior distribution) and the observed data from the study.	*Quality Engineering*
Postheating	The application of heat to a fabricated or welded section subsequent to a fabrication, welding, or cutting operation. Postheating may be done locally, as by induction heating; or the entire assembly may be postheated in a furnace.	*Maintenance and Repair*
Posting	extracting posts or pillars in post and stall working. (Yorks.).	*Mining*
Posting	the practice in manufacturing plants of calling attention to jobs which may be vacant or to which transfers or promotions may be available.	*Industrial Relations*
Posting holes	a short, narrow heading between two main headings. (Yorks.). Also called a 'Cut-through'. -see also Bolt.	*Mining*
Posting of Notices	See: Bulletin Boards, Posting	*Industrial Relations*
Postmasters of the United States; National League of (Ind)	and organization of independent postmasters, formerly known as the National League of District Postmasters of the United States (Ind).	*Industrial Relations*
Post-mining emissions	Emissions of methane from coal occurring after the coal has been mined, during transport or pulverization.	*Energy*
Post-treatment	subjecting the steel to specific processes after it has been galvanized (see quenching, phosphating, and chromating)	*Materials Process*
Postweld Heat Treatment	Any heat treatment subsequent to welding.5	*Maintenance and Repair*
Pot coal	see Pat coal.	*Mining*
Potable	Suitable for drinking.	*Filtration*
Potable Water	Water fit for human consumption. Conforms to the drinking water standards of federal, state, and local authorities for human consumption.	*Petroleum Engineering*
Potash	Potassium compounds mined for fertilizer and for use in the chemical industry.	*Mining*
Potential consumption	The total amount of consumption that would have occurred had the intensity of consumption remained the same over a period of time.	*Energy*
Potential Energy	Energy related to the position or height above a place to which fluid could possibly flow.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Potential Failure	A Term Used In Reliability Centered Maintenance. An Identifiable Condition Which Indicates That A Functional Failure Is Either About To Occur, Or In The Process Of Occurring.	*Management*
Potential peak reduction	The potential annual peak load reduction (measured in kilowatts) that can be deployed from Direct Load Control, Interruptible Load, Other Load Management, and Other DSM Program activities. (Please note that Energy Efficiency and Load Building are not included in Potential Peak Reduction.) It represents the load that can be reduced either by the direct control of the utility system operator or by the consumer in response to a utility request to curtail load. It reflects the installed load reduction capability, as opposed to the Actual Peak Reduction achieved by participants, during the time of annual system peak load.	*Energy*
Potentiometer	1. A variable resistor often used to control a circuit. 2. A balancing bridge used to measure voltage.	*Electrical*
Potentiometer	1. A variable resistor often used to control a circuit. 2. A balancing bridge used to measure voltage.	*Electronic Process*
Potentiometric Surface	An imaginary surface representing the total head of groundwater in a confined aquifer defined by the level to which water will rise in a well.	*Petroleum Engineering*
Pothead	An insulator used in making a sealed joint between an underground cable and an overhead line.	*Electrical*
Pothole	A hole formed in pavement, as by excessive use or by extremes of weather.	*Civil Engineering*
Potters; International Brotherhood of Operative (AFL-CIO)	first organized in East Liverpool, Ohio, in December 1890, the union was formerly known as the National Brotherhood of Operative Potters (AF of L).	*Industrial Relations*
Pottery	Burned clayware ceramic.	*Material Process*
Potting	Applying a hydrostatic seal and mechanical reinforcement by means of a thermosetting liquid, which cures either at room temperature or at a slightly elevated temperature.	*Electrical*
Pounce	see Bump.	*Mining*
Pound hole	catchment or tank from which water was pumped.	*Mining*
Pounds (district heat)	A weight quantity of steam, also used to denote a quantity of energy in the form of steam. The amount of usable energy obtained from a pound of steam depends on its temperature and pressure at the point of consumption and on the drop in pressure after consumption.	*Energy*
Pounson	dense soft clay underlying coal seams (N. Wales). –see also Warrant.	*Mining*
Pour Point	The lowest temperature at which a liquid will pour under specified conditions.	*Lubrication*
Pour point	The lowest temperature at which a fluid will flow under specific conditions.	*Mechanical, Process, and Operations*
Pour Point Depressant	Additive used to lower the pour point or low-temperature fluidity of a petroleum product.	*Lubrication*

Please see the Appendix for further illustration

Term	Definition	Industry
Pour Stability	The ability of a pour depressed oil to maintain its original ASTM pour point when subjected to long-term storage at low temperature approximating winter conditions.	*Lubrication*
Pour-Point Suppressants	Prevent insoluble wax molecules in oil from building a honeycomb (lattice-like structure) at colder temperatures. Particularly useful for paraffinic oils. Gives useful ability to pour at lower temperatures.	*Lubrication*
Pout, Punch or Puncher	a tool, a type of long-handled pick, used when withdrawing timber out of a dangerous place.	*Mining*
Powder	a general term for explosives used in the mine.	*Mining*
Powder Coating	A polymeric coating deposited via electrostatic attraction	*Paint and Coatings*
Powder Injection Angle	The angle from which the powder is injected into the plasma jet in plasma spraying.	*Paint and Coatings*
Powder metallurgy	Processing technique	*Material Process*
Powder monkey	an assistant to the shotfirer, usually a young boy who carried the powder box and kept a tally of how much powder was being used. He would also make the dolls or plugs of stemming for the shot holes.	*Mining*
Powder River Basin	Consists of the Montana counties of Big Horn, Custer, Powder River, Rosebud, and Treasure and the Wyoming counties of Campbell, Converse, Crook, Johnson, Natrona, Niobrara, Sheridan, and Weston.	*Energy*
Powder room	a store for explosives on the surface also known in Scotland as the 'ammo' store.	*Mining*
Power	The rate of producing, transferring, or using energy, most commonly associated with electricity. Power is measured in watts and often expressed in kilowatts (kW) or megawatts (mW). Also known as "real" or "active" power. See Active Power, Apparent Power, Reactive Power, Real Power	*Energy*
power	Work per unit time. Measured in horsepower (hp) or watts (Joules per second).	*Mechanical, Process, and Operations*
Power	The rate at which energy is transferred.	*Energy*
Power (electrical)	An electric measurement unit of power called a voltampere is equal to the product of 1 volt and 1 ampere. This is equivalent to 1 watt for a direct current system, and a unit of apparent power is separated into real and reactive power. Real power is the work-producing part of apparent power that measures the rate of supply of energy and is denoted as kilowatts (kW). Reactive power is the portion of apparent power that does not work and is referred to as kilovars; this type of power must be supplied to most types of magnetic equipment, such as motors, and is supplied by generator or by electrostatic equipment. Voltamperes are usually divided by 1,000 and called kilovoltamperes (kVA). Energy is denoted by the product of real power and the length of time utilized; this product is expressed as kilowatt hours.	*Energy*
Power Added Efficiency	In an RF power amplifier, power added efficiency (PAE) is defined as the ratio of the difference of the output and input signal power to the DC power consumed.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Power amplifier	An amplifier used to drive significant power levels. An audio amplifier that drives a loudspeaker and the final stage of a transmitter are common examples.	*Electrical Engineering*
Power ascension	The period of time between a plant's initial fuel loading date and its date of first commercial operation (including the low-power testing period). Plants in the first operating cycle (the time from initial fuel loading to the first refueling), which lasts approximately 2 years, operate at an average capacity factor of about 40 percent.	*Energy*
Power Belt Curve	A curve conveyor which utilizes a belt, driven by tapered pulleys.	*Equipment*
Power beyond	An adapting sleeve which opens a passage from once circuit to another. Often installed in a valve port which is normally plugged.	*Mechanical, Process, and Operations*
Power Capacity	**Power capacity** - In terms of generation, the capacity of a power plant is the maximum power that installation is capable of producing. It does not account for periods of inactivity due to maintenance work, for example. Nuclear power stations have low maintenance requirements and few shutdowns (as do all "baseload" power plants), which enable them to achieve about 90 percent productivity. Gas-fired power stations, which are more expensive to run, often operate well below capacity, ramping up to full productivity only during periods of high demand. This means that their productivity may be only 20 - 30 percent of the plant's actual capacity. The relationship between capacity and output is known as the "capacity factor," where 100 percent is the theoretical maximum. As an example, the hydropower station on the Itaipu dam in Brazil has a total generating capacity of 14,000 megawatts and could therefore theoretically produce 122,640,000 megawatt-hours of electricity per year (14,000 MW x 8,760 hours = 122.6 million MWh). The Itaipu dam actually produced 91,651,808 MWh of electricity in 2009. The actual production divided by the theoretical maximum production gives Itaipu a capacity factor of 74.7 percent. (See also Base-load power plant.)	*Electrical*
Power Circuit Fault Zone	The system of conductors and connections running from the point of origin of testing to connections at the motor.	*Reliability Engineering*
Power Consumption	The maximum wattage used by a device within its operating range during steady-state signal condition.	*Process Control*
Power Conveyor	Any type of conveyor which requires power to move its load.	*Equipment*
Power curve	A line on a power function graph that describes the performance of a certain control rule and N.	*Quality*
Power Dissipation	The units = Watts/milliwatts (DC) or Volt: Amps (AC). The amount of power that is consumed and converted to heat in normal operation. Supply Voltage (max) x Supply Current	*Electrical Engineering*
Power Exchange	This is a commercial entity responsible for facilitating the development of transparent spot prices for energy capacity, and/or ancillary services.	*Energy*
Power exchange generation	Generation scheduled by the power exchange. See definition for power exchange.	*Energy*
Power exchange load	Load that has been scheduled by the power exchange and is received through the use of transmission or distribution facilities owned by participating transmission owners.	*Energy*

Term	Definition	*Industry*
Power factor	The ratio of real power (kilowatt) to apparent power kilovolt-ampere for any given load and time.	*Energy*
Power factor	Power factor is a measure of an electrical circuit's effectiveness in doing useful work on a scale of zero (lowest) to 1 (highest). It reflects how much the waveforms of voltage and current are in phase, usually measured at the customer's load. When the voltage and current are significantly out of phase, as is common in industrial environments with many electric motors, the current will be high even at relatively low power levels. The economic result of this low power factor is expensive electrical losses on the circuit and underutilization of the circuit's power transfer capability. In these cases the customer or the electric utility may deploy additional capacitor banks near the customer load, restoring the power factor to or near unity and improving system utilization. (See also Power factor correction.)	*Electrical*
Power factor correction (reactive power compensation)	Depending on the type of equipment a consumer connects to the electricity supply (whether there is a net consumption or generation of reactive power), power factor varies. Unless this variation is corrected, higher currents are drawn from the grid, leading to grid instability, higher costs and reduced transmission capacity. Most utilities impose penalties on consumers who fail to correct errant power factors. (See also Power factor.)	*Electrical*
Power Fail	A feature in a microprocessor supervisory circuit that provides early warning to the microprocessor of imminent power failure.	*Electrical Engineering*
Power Generation Company	A competitive company that operates and maintains existing generation plants. The company may own the generation plants or may interact with the short-term market for electric power on behalf of plant owners.	*Energy*
Power Grid	A network of power lines and associated equipment used to transmit and distribute electricity over a geographic area.	*Energy*
Power loader	a machine for cutting (shearing) and loading coal, more commonly any longwall cutter loader or shearer.	*Mining*
Power loss	The difference between electricity input and output as a result of an energy transfer between two points.	*Energy*
Power losses	This term generally refers to electrical energy that is lost to inefficiencies in transmission, distribution, or in the use of electricity. As electricity flows through a conductor, individual electrons collide with the atoms of the conductor and transfer energy to them, causing them to heat up. This heat is lost to the atmosphere in the form of thermal radiation. Some power is also lost to electromagnetic radiation.	*Electrical*
Power Marketer	An entity, such as a supply coordinator or broker, that obtains energy from any source or combination of sources, including independent generators, utility system power or spot purchases, for delivery to a utility or end user.	*Energy*
Power marketers	Business entities engaged in buying and selling electricity. Power marketers do not usually own generating or transmission facilities. Power marketers, as opposed to brokers, take ownership of the electricity and are involved in interstate trade. These entities file with the Federal Energy Regulatory Commission (FERC) for status as a power marketer.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Power Marketers	Entities engaged in buying and selling electricity.	*Energy*
Power operator	Powered valve operators are of the following general types - Electric Motor, Pneumatic or Hydraulic Motor, Pneumatic or Hydraulic Cylinder. Operators can either be adapted directly to the valve stem or side mounted on existing gear or scotch-yoke operators.	*Mechanical*
Power pack	the main hydraulic pumping unit that supplied the powered roof supports along the coalface.	*Mining*
Power pack	An integral power supply unit usually containing a pump, reservoir, relief valve and directional control.	*Mechanical, Process, and Operations*
Power Plant	A generating station where electricity is produced.	*Energy*
Power Pool	Two or more interconnected electric systems that agree to coordinate operations.	*Energy*
Power production plant	All the land and land rights, structures and improvements, boiler or reactor vessel equipment, engines and engine-driven generator, turbo generator units, accessory electric equipment, and miscellaneous power plant equipment are grouped together for each individual facility.	*Energy*
Power Purchase Agreement	This refers to a contract entered into by an independent power producer and an electric utility. The power purchase agreement specifies the terms and conditions under which electric power will be generated and purchased. Power purchase agreements require the independent power producer to supply power at a specified price for the life of the agreement. While power purchase agreements vary, their common elements include: specification of the size and operating parameters of the generation facility; milestones in-service dates, and contract terms; price mechanisms; service and performance obligations; dispatchability options; and conditions of termination or default.	*Energy*
Power shovel	removes overburden and loads coal by means of a digging bucket mounted at the end of an arm suspended from a broom. The shovel digs by pushing the bucket forward and upward. It does not dig below the level at which it stands.	*Energy*
Power spectral density or PSD	Describes the power of random vibration intensity, in mean-square acceleration per frequency unit, as g^2/Hz or m^2/s^3. Acceleration spectral density or ASD is preferred abroad.	*Reliability Engineering*
Power Supply	Supply: A separate unit or part of a circuit that supplies power to the rest of the circuit or to a system.	*Electrical*
Power transfer limit	The maximum power that can be transferred from one electric utility system to another without overloading any facility in either system.	*Energy*
Power unit	A combination of pump, pump drive, reservoir, controls and conditioning, components which may be required for its application.	*Oil Analysis*
Power unit, hydraulic	A combination of components to facilitate fluid storage and condition- ing, and delivery of the fluid under conditions of controlled pressure and flow to the discharge port of the pump, including maximum pressure controls and sensing devices when applicable. Circuitry components, although sometimes mounted on the reservoir, are not considered part of the power unit.	*Mechanical, Process, and Operations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
PowerCap	A special surface-mount package with access to the internal cavity via an openable top. This packaging scheme allows easy upgrade of NV RAMs without having to change the PCB hardware layout. The user can simply open the lid and swap out the IC.	*Electrical Engineering*
Powered Feeder	A driven length of belt conveyor, normally used to move product horizontally onto an incline conveyor.	*Equipment*
Powered supports	the hydraulically powered supports on the modern coalface, also called 'chocks' or 'shields'.	*Mining*
Power-function graph	A graphical presentation of the performance characteristics of QC procedures that describes the probability for rejection (on the y-axis) versus the size of analytical error occurring (on the x-axis) for stated control rules and numbers of control measurements.	*Quality*
Powerhouse	A structure at a hydroelectric plant site that contains the turbine and generator.	*Energy*
Power-over-Ethernet	A means for delivering power to a remote device using the same cable lines used to deliver Ethernet data.	*Electrical Engineering*
Powt	a long iron rod that is a combination of a battering ram and a hook, used for withdrawing props.	*Mining*
PPD	pour point depressant	*Petro-Chemical Abbreviations*
PPDSE	See: Plate Printers', Die Stampers' and Engravers' Union of North America; International (AFL-CIO)	*Industrial Relations*
PPE	See: Protection Employees; Independent Union of Plant (Ind)	*Industrial Relations*
PPE	Personal Protective Equipment refers to protective clothing, eye-wear, shoes, gloves and other items worn by workers in the oil field to protect them from injury. The typical PPE which is required of all employees on a modern drilling rig consist of ANSI approved safety glasses, steel toe boots, flame retardant clothing, ear plugs and a hard hat.	*Petroleum Drilling*
PPE, additions to	The current year's expenditures on property, plant, and equipment (PPE). The amount is predicated upon each reporting company's accounting practice. That is, accounting practices with regard to capitalization of certain items may differ across companies, and therefore this figure in FRS (Financial Reporting System) will be a function of each reporting company's policy.	*Energy*
PPF	See: Plumbing and Pipe Fitting Industry of the United States and Canada; United Association of Journeymen and Apprentices of the (AFL-CIO)	*Industrial Relations*
PPG	See Publishing Policy Group (PPG)	*Quality Analysis*
PPI	Producer Price Index	*Energy*
PPM	Abbreviation for "parts per million," sometimes used to express temperature coefficients. For instance, 100 ppm is identical to 0.01%.	*Electrical*
PPO	Polyphthalamide	*Petro-Chemical Abbreviations*
PRA	See Probability Risk Assessment.	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pragmatic trial	A trial that aims to test a treatment policy in a 'real life' situation, when many people may not receive all of the treatment, and may use other treatments as well. This is as opposed to an explanatory trial, which is done under ideal conditions and is trying to determine whether a therapy has the ability to make a difference at all (i.e. testing its efficacy). See also: Explanatory trial	*Quality Analysis*
PRBS	Pseudorandom binary (bit) sequence	*Electrical Engineering*
PRBS (Pre-Bias Soft Start)	A power-supply feature that prevents discharging of the output capacitor when the power supply starts up. Discharging the output capacitor could create either start up oscillation problems at cold start or large voltage disturbances on the output voltage bus at hot plug-in. Pre-bias soft start is an important feature in redundant power-supply systems, parallel power supply modules, battery back-up voltage buses, and other applications where multiple power sources supply one node.	*Electrical Engineering*
Pre Soak	A soaking operation, to remove stains, that precedes the regular laundering process.	*Chemistry*
Pre Spot	Removal of stains before more extensive carpet cleaning.	*Chemistry*
Pre-alloyed Powder	A powder composed of two or more elements which are alloyed in the powder manufacturing process and in which the particles are of the same nominal composition throughout.	*Paint and Coatings*
Preamble Clause	a section of a collective bargaining agreement which precedes the substantive terms and which suggests that the parties, in consideration of the mutual promises made, will maintain certain basic attitudes and conditions in order to carry out on the terms of the agreement.	*Industrial Relations*
Precambrian Shield	The oldest, most stable regions of the earth's crust, the largest of which is the Canadian Shield.	*Mining*
Precautionary Statement	Warnings on product labels to alert users to potential harmful hazards associated with using the product.	*Chemistry*
Precedent Value	in courts of law, the precedent value of a decision is measured by the degree to which it is followed or sanctioned in subsequent cases involving the same or similar issues.	*Industrial Relations*
Precharge Pressure	The pressure of compressed gas in an accumulator prior to the admission of liquid.	*Mechanical, Process, and Operations*
Precious metal	Generally corrosion resistant metal or alloy, such as gold, platinum, and their alloys.	*Material Process*
Precipitate	Particles separated from a fluid as a result of a chemical or physical change. PRECIPITATION NUMBER - The number of milliliters of precipitate formed when 10 ml. of lubricant	*Mechanical, Process, and Operations*
Precipitate n	A solid substance thrown out of solution as the result of chemical change effected by the addition of a reagent. v. To separate a substance from solution by chemical action of a reagent.	*Material Process*
Precipitation hardened stainless steel	Corrosion resistant ferrous alloy that has been strengthened by precipitation hardening.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Precipitation Hardening	Hardening and strengthening of a metal alloy by extremely small and uniformly dispersed particles that precipitate from a supersaturated solid solution.	*Engineering Physics*
Precipitation hardening	Development of obstacles to dislocation motion, and thereby, increased hardness, by the controlled precipitation of a second phase.	*Material Process*
Precision	Measure of exactness, possibly expressed in number of digits, for example, computed to the nearest millimeter; Compare: accuracy.	*Aeronautical Engineering*
Precision Snap Acting Switch	An electromechanical switch having predetermined and accurately controlled characteristics and having a spring loaded quick make and break contact action.	*Electrical Engineering*
Preconsumer Materials	Materials generated in manufacturing and converting processes, such as manufacturing scrap and trimmings/cuttings.	*Environmental Engineering*
Precure	A rough surface in molding, caused by the resin setting up before proper pressure is applied to the mold. Term not recommended. See Short.	*Material Process*
Pre-cutting	the process of using a coal-cutter in advance of a cutter-loader in machine mining. The process was sometimes found necessary when working hard coal.	*Mining*
Predictive maintenance	A type of condition-based maintenance emphasizing early prediction of failure using non-destructive techniques such as vibration analysis, thermography, and wear debris analysis.	*Oil Analysis*
Predictive Maintenance (PdM)	A maintenance process based on machinery inspection, monitoring, and prediction. Machine stops for maintenance are planned depending on the predictions (condition-based). The terms Condition Based Maintenance, On-Condition Maintenance and Predictive Maintenance are often used interchangeably. See Condition-Based Maintenance.	*Maintenance*
Predictive Maintenance (PdM)	An equipment maintenance strategy based on measuring the condition of equipment in order to assess whether it will fail during some future period, and then taking appropriate action to avoid the consequences of that failure. Equipment condition can be measured through a variety of methods, including condition monitoring technologies/techniques, statistical process control or through the human senses.	*Reliability Engineering*
Predictive value	In screening and diagnostic tests, the probability that a person with a positive test is a true positive (i.e., does have the disease), or that a person with a negative test truly does not have the disease. The predictive value of a screening test is determined by the sensitivity and specificity of the test, and by the prevalence of the condition for which the test is used.	*Analysis*
Prediscovery costs	All costs incurred in an extractive industry operation prior to the actual discovery of minerals in commercially recoverable quantities; normally includes prospecting, acquisition, and exploration costs and may include some development costs.	*Energy*
Predisposition	The weakening of an organism by some factor(s) of either the physical or biotic environment so as to render the organism more susceptible to a pathogen.	*Forestry*
Predrying	Drying the molding compound to remove moisture, before charging the mold.	*Material Process*
Preece Test	A recognized standard of testing the galvanized coating on a wire.	*Wire Rope & Cable*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Preemption, Doctrine of	the doctrine of federal preemption in the relations affecting interstate commerce has been spelled out in a series of more than 20 decisions handed down by the U.S. Supreme Court since the passage of the Taft-Hartley Act in 1947.	*Industrial Relations*
Preexponential constant	Temperature independent term that appears before the exponential term of the Arrhenius equation.	*Material Process*
Preferential Hiring	a form of union security under which the employer agrees to give first preference to individuals who are members of the union or made available by the union, so long as the union is able to supply the necessary employees, both as to number and quality.	*Industrial Relations*
Preferential Shop	a company or shop which by agreement with the union gives preference in hiring to union members as against equally qualified or competent non-union members.	*Industrial Relations*
Preferred numbers	A numerical series derived from a geometric progression, frequently used to select and standardize sizes for a series of things. It is sometimes referred to as the "R" series in favor of its developer, Col. Charles Renard, a French engineer.	*Mechanical, Process, and Operations*
Preferred orientation	Alignment of a given crystallographic direction in adjacent grains of a microstructure as the result of cold rolling,	*Material Process*
Preferred shares	Shares of a limited liability company that rank ahead of common shares, but after bonds, in distribution of earnings or in claim to the company's assets in the event of liquidation. They pay a fixed dividend but normally do not have voting rights, as with common shares.	*Mining*
Preferred-orientation microstructure	Grain structure in a polycrystalline material in which the grains tend to have a common crystallographic orientation.	*Material Process*
Prefill Valve	A valve which permits full flow from a tank to a "working" cylinder during the advance portion of a cycle, permits the operating pressure to be applied to the cylinder during the working portion of the cycle, and permits free flow from the cylinder to the tank during the return portion of the cycle.	*Mechanical, Process, and Operations*
Pre-flux	the process of fluxing steel before it enters the galvanizing kettle as opposed to using a top-flux layer, which would be located on top of the molten zinc in the kettle	*Materials Process*
Preform	Powder cold pressed into a pellet to facilitate mold loading.	*Material Process*
Preform	The formation of an intermediate part to be formed into the final part.	*Engineering Physics*
Preformed Strands	Strand in which the wires are permanently formed during fabrication into the helical shape they will assume in the strand.	*Wire Rope & Cable*
Preformed Wire Rope	Wire rope in which the strands are permanently formed during fabrication into the helical shape they will assume in the wire rope.	*Wire Rope & Cable*
Pregnant solution	A solution containing dissolved extractable mineral that was leached from the ore; uranium leach solution pumped up from the underground ore zone though a production hole.	*Energy*
Pregwood Proprietary name. See	Pregwood Proprietary name. See	*Material Process*
Preheater	Exchanger used to heat hydrocarbons before they are fed to a unit.	*Petroleum Engineering*

Term	Definition	*Industry*
Preheating	The application of heat to a base metal immediately prior to a welding or cutting operation.	*Maintenance and Repair*
Preignition	Ignition of the fuel/air mixture in a gasoline engine before the spark plug fires. Often caused by incandescent fuel or lubricant deposits in the combustion chamber, it wastes power and may damage the engine.	*Lubrication*
Preliminary permit (hydroelectric power)	A single site permit granted by the FERC (Federal Energy Regulatory Commission), which gives the recipient priority over anyone else to apply for a hydroelectric license. The preliminary permit enables the recipient to prepare a license application and conduct various studies for economic feasibility and environmental impacts. The period for a preliminary permit may extend to 3 years.	*Energy*
Preload	The tension created in a fastener when first tightened. Reduces after a period of time due to embedding and other factors.	*Maintenance*
Premise	A proposition helping to support a conclusion	*Management Discussion*
Premium	Cost of an option and/or an amount added to a base price for a material, i.e. added cost beyond the base Comex, LME and/or producer and manufacturer prices.	*Metallurgy*
Premium freight	Air or other expedited shipment method that increases the standard cost of filling a customer order.	*Quality*
Premium gasoline	Gasoline having an antiknock index (R+M/2) greater than 90. Includes both leaded premium gasoline as well as unleaded premium gasoline.	*Energy*
Premium Money (Push Money)	a form of incentive payment to sales people in the retail trades.	*Industrial Relations*
Premium Pay	sometimes referred to as penalty pay. An extra rate which is paid to the individual for holiday and Sunday work, for work on late shifts, for overtime, or for specially hazardous, dangerous, or unpleasant work.	*Industrial Relations*
Premium Wage System	any incentive wage system which provides a bonus or premium for work in excess of the norm or for extra exertion and effort.	*Industrial Relations*
Prentice Hall, Inc.	one of the major private labor information services in the United States.	*Industrial Relations*
Prepaid Freight	Transportation charges are paid by the supplier at the point of shipment.	*Procurement*
Preparation plant	A mining facility at which coal is crushed, screened, and mechanically cleaned.	*Energy*
Prepayment Plan	a wage plan under the Wage and Hour Law which provides for constant wages form pay period to pay period.	*Industrial Relations*
Prepreg	Continuous fiber reinforcement pre-impregnated with a polymer resin which is then partially cured.	*Engineering Physics*
Preproduction costs	Costs of prospecting for, acquiring, exploring, and developing mineral reserves incurred prior to the point when production of commercially recoverable quantities of minerals commences.	*Energy*
Preretirement Education	programs established for workers who are close to retirement or who are anticipating early retirement.	*Industrial Relations*
Prerogative	See: Management Prerogatives	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Prescribed or controlled burn	The use of fire under specific environmental conditions to achieve forest management objectives such as reducing hazardous fuels or controlling unwanted vegetation.	*Forestry*
Present use valuation	Property tax relief classification based on the land's productivity for agriculture, horticulture, or forestry production rather than for market value.	*Forestry*
Present Value	The amount of money required to secure a specified cash flow on a future date at a given rate of return.	*Energy*
Present Worth Factor	The adjustment factor that discounts a sum of future dollars back to the current year.	*Energy*
Preservation	Maintaining forests in an undisturbed, unmanaged state.	*Forestry*
Presidential Advisory Committee on Labor Management Policy	by Executive Order 10918 issued February 16, 1961, President Kennedy established the Presidential Advisory Committee on Labor Management Policy.	*Industrial Relations*
Presidential Railroad Commission	the 15-man commission appointed by President Eisenhower to study the general problem of the need for rule changes and the efficient operation of the railroads.	*Industrial Relations*
Presidential Seizure	the authority of the President as Commander and Chief to seize certain properties when necessary to protect the national interest.	*Industrial Relations*
President's Committee on Employment of Physically Handicapped	See: Physically Handicapped, Office of the President's Committee on Employment of	*Industrial Relations*
President's Committee on Equal Employment Opportunity	a committee established by Executive Order 10925 issued on March 6, 1961, by President Kennedy.	*Industrial Relations*
President's Committee on Youth Employment	See: Youth Employment, President's Committee on	*Industrial Relations*
President's Council of Economic Advisers	See: Council of Economic Advisers	*Industrial Relations*
Press against a rotating drum-shaped part called a brake drum	press against a rotating drum-shaped part called a brake drum.	*Mechanical Engineering*
Press polish	Finish for sheet stock produced by contact, under heat and pressure, with a very smooth metal that gives plastic a high sheet.	*Material Process*
Pressing	See "HOT PRESS FORGING"	*Metallurgy*
Pressure	Pressure is a similar idea to stress, the force intensity at a point, except that pressure means something acting on the surface of an object rather than within the material of the object. When discussing the pressure within a fluid, the meaning is equivalent to stress.	*Engineering Physics*
Pressure	The force applied to, or distributed over a surface expressed in terms of force to area ratio.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pressure Angle	The angle between a tooth profile and a radial line at its pitch point. In involute teeth, pressure angle is often described as the angle between the line of action and the line tangent to the pitch circle. Standard Pressure Angles are established in connection with standard gear-tooth proportions. A given pair of involute profiles will transmit smooth motion at the same velocity ratio even when the center distance is changed. Changes in center distance, however, in gear design and gear manufacturing operations, are accompanied by changes in pitch diameter, pitch, and pressure angle. Different values of pitch diameter and pressure angle therefore may occur in the same gear under different conditions. Usually in a gear design, and unless otherwise specified, the pressure angle is the standard pressure angle at the standard pitch diameter, and is standard for the hob or cutter used to generate teeth. The Operating Pressure Angle is determined by the center distance at which a pair of gears operates. The Generating Pressure Angle is the angle at the pitch diameter in effect when the gear is generated. Other pressure angles may be considered in gear calculations. In gear cutting tools and cutters, the pressure angle indicates the direction of the cutting edge as referred to some principal direction. In oblique teeth, that is helical, spiral, etc., the pressure angle may be specified in the transverse, normal, or axial plane. For a spur gear or a straight bevel gear, in which only one direction of cross-section needs to be considered, the general term pressure angle may be used without qualification to indicate transverse pressure angel. In spiral bevel gears, unless otherwise specified, pressure angle means normal pressure angle at the mean cone distance.	*Gears*
Pressure class	A pressure rating expressed as a dimensionless number. The class rating charts give actual pounds per square inch maximum allowable pressure at a given temperature.	*Mechanical*
Pressure Control Valve	A pressure control valve whose primary function is to limit system pressure.	*Lubrication*
Pressure Cooker Test	A Pressure Cooker Test (PCT) tests a part under high temperature, humidity, and pressure conditions. Also called an Autoclave Test or Pressure Pot Test (PPOT).	*Electrical Engineering*
Pressure core sampler	A tool designed to retrieve a sediment core sample from depth under pressure. [4]	*Petroleum Drilling*
Pressure Drop	Resistance to flow created by the element (media) in a filter. Defined as the difference in pressure upstream (inlet side of the filter) and downstream (outlet side of the filter).	*Oil Analysis*
Pressure drop	The decrease in pressure along the direction of flow in a piping system, caused by fluid friction, restrictions, and by change-of-direction fittings. Pressure drop is related to velocity, specific gravity, viscosity and to the size and roughness of the pipe interior. See "Differential Pressure."	*Mechanical*
Pressure gradient	a pressure differential in a given medium (e.g., water or air) which tends to induce movement from areas of higher pressure to areas of lower pressure.	*Chemical*
Pressure Grouting	A process confining grout within the borehole or casing by using retaining plugs in packers and applying pressure to drive grout slurry into the annular space or zone to be grouted.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pressure Head	From the definition of pressure, the expression p/w is the pressure head. It can be defined as the height of the fluid above a point, and it is normally measured in feet.	*Maintenance and Repair*
Pressure line filter	A filter located in a line conducting working fluid to a working device or devices.	*Oil Analysis*
Pressure Load	Pressure necessary to produce a forging, generally expressed in tons.	*Metallurgy*
PRESSURE OVERRIDE	The difference between the cracking pressure of a valve and the pressure reached when the valve is passing full flow.	*Mechanical, Process, and Operations*
Pressure pads	Reinforcement **of** hardened	*Material Process*
Pressure plate	A side plate in a vane pump or motor cartridge on the pressure port side.	*Mechanical, Process, and Operations*
Pressure Range	The pressure limits over which the pressure sensor is calibrated or specified.	*Electrical Engineering*
Pressure reducing regulator	Regulator designed to control downstream pressure. See "REGULATOR."	*Mechanical*
Pressure Reducing Valve	A pressure control valve which limits outlet pressure.	*Mechanical, Process, and Operations*
Pressure Roll	In extrusion coating, a roll used to apply pressure to consolidate the substrate and the plastic film with which it has been coated.	*Engineering Physics*
Pressure Roller	A roller used for holding the driving belt in contact with the load carrying rollers in a belt drive live roller conveyor.	*Equipment*
Pressure Sealed Bonnet	A type of bonnet design where the fluid pressure is used to produce the seal between the body and bonnet.	*Industrial Engineering*
Pressure Sensing Valve	A device similar to an electrical pressure switch, in which a signal to be sensed enters a control point, and actuates a mechanism which, at the proper pressure level, causes	*Mechanical, Process, and Operations*
Pressure Sensor	A device that converts an input pressure into an electrical output.	*Electrical Engineering*
Pressure Sequence Valve	A pressure control valve which directs flow in a preset sequence	*Mechanical, Process, and Operations*
Pressure Supply	The pressure at the supply port of the device.	*Process Control*
Pressure switch	A switch (usually electric) activated by a rise or drop in pressure. A transducer.	*Mechanical*
Pressure Switch	An electric switch operated by fluid pressure.	*Lubrication*
Pressure test	A test using specified pressures of liquid or gases, which can be used to check sealing, integrity, design standards, etc. of a particular product.	*Mechanical*
Pressure, absolute	The sum of atmospheric and gage pressures.	*Oil Analysis*
Pressure, Absolute	The pressure measured relative to absolute zero pressure (perfect vacuum). The output of the absolute sensor will change as a result of barometric pressure change. Thus it can be used as a barometer.	*Electrical Engineering*
Pressure, Ambient	The pressure of the medium surrounding a device.	*Process Control*
Pressure, burst	The pressure which creates loss of fluid through the component due to the fracture of the component.	*Mechanical, Process, and Operations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pressure, Charge	The pressure at which replenishing fluid is forced into a fluid power system. PRESSURE, CRACKING - The pressure at which a pressure operated valve begins to pass fluid.	*Mechanical, Process, and Operations*
Pressure, Differential	The pressure between two points of measurement.	*Electrical Engineering*
Pressure, Gage	The pressure measured relative to ambient pressure. The output of a gage pressure sensor, contrasted to an absolute pressure sensor, does not change with a change of barometric pressure.	*Electrical Engineering*
Pressure, Process	The pressure of the process medium at the sensing element.	*Process Control*
Pressure, rated	The qualified operating pressure which is recommended for a component or a system by the manufacturer.	*Oil Analysis*
Pressure, Reference	The pressure relative to which a differential sensor measures pressure. Ambient pressure is a specific case of reference pressure.	*Electrical Engineering*
Pressure, Static	The average pressure on the inputs of a differential pressure sensor (sometimes referred to as common mode or working pressure).	*Electrical Engineering*
Pressure, system	The pressure which overcomes the total resistances in a system. It includes all losses as well as useful work.	*Oil Analysis*
Pressure, Working	'Maximum Service Pressure' the maximum pressure that specific units of equipment such as spools, valves, wellheads etc. should experience in use. API 6A specifies that the Maximum Service Pressure be marked on all equipment (the pressure rating limited by the lowest pressure connector on the equipment).	*Petroleum Engineering*
Pressure-regulating valve	A valve that releases or holds process-system pressure (that is, opens or closes) either by preset spring tension or by actuation by a valve controller to assume any desired position between fully open and fully closed.	*Petroleum Engineering*
Pressure-Temperature Ratings	The maximum allowable working pressures at specified temperatures. For steel valves, the ratings are defined by "classes" and found in ASME B16.34. For iron and bronze valves, the ratings are defined in the applicable MSS specifications.	*Mechanical*
Pressure-Temperature Ratings	The maximum allowable working pressures at specified temperatures. For steel valves, the ratings are defined by "classes" and found in ASME B16.34. For iron and bronze valves, the ratings are defined in the applicable MSS specifications.	*General Mechanical*
Pressurized-water reactor (PWR)	A nuclear reactor in which heat is transferred from the core to a heat exchanger via water kept under high pressure, so that high temperatures can be maintained in the primary system without boiling the water. Steam is generated in a secondary circuit.	*Energy*
Prestressed concrete	An aggregate composite (concrete) in which steel bars have been embedded prior to the setting of the cement. Release of tension on the bars after the concrete hardens places the material under a residual, compressive stress. The material is a more crack resistant as a result.	*Material Process*
Prestressing	An incorrect reference to PRESTRETCHING.	*Wire Rope & Cable*
Prestretching	Subjecting a wire rope or strand to tension prior to its intended application, for an extent and over a period of time sufficient to remove most of the CONSTRUCTIONAL STRETCH.	*Wire Rope & Cable*
Pretravel	The distance through which the plunger moves when traveled from the free position to the operating point.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pre-treatment	subjecting steel to specific processes before galvanizing	*Materials Process*
Prevailing Torque	The torque required to run a nut down a thread on certain types of nuts designed to resist vibration loosening. The resistance can be provided by a plastic insert or a noncircular head.	*Maintenance*
Prevailing Torque Nut	A type of lock nut which has a prevailing torque to assist in preventing self loosening. There are two main categories of prevailing torque nuts, all metal and nylon insert. All metal torque prevailing nuts generally gain a prevailing torque by distorting the threads at the top of the nut by some means. Nylon insert torque prevailing nuts ultilize a nylon (or other polymer) insert to achieve a prevailing torque.	*Maintenance*
Prevalence	The proportion of persons with a particular disease within a given population at a given time.	*Analysis*
Prevalence study	A type of cross-sectional study that measures the prevalence of a characteristic.	*Quality Analysis*
Prevention and Protection (P&P)	Minimum preventive and protective measures covers measures which should be considered in addition to the basic measures, but which may, or may not, be specified, depending on the designer's assessment of the risks and the magnitude of the resulting fire and explosion.	*Material Process*
Preventive Maintenance	A maintenance process based on preventing unexpected events from occurring by employing proper maintenance procedures, clean environment, etc. Maintenance is mostly done during planned machine stops (fixed intervals). Emphasis is placed on replacing, overhauling, or remanufacturing an item at a fixed interval, regardless of its condition at the time. Scheduled restoration tasks and scheduled discard tasks are both examples of Preventive Maintenance tasks.	*Maintenance*
Preventive Maintenance (PM)	An equipment maintenance strategy that is based on replacing, overhauling, repairing or remanufacturing an item at a fixed interval, regardless of its condition at the time. The impetus is to perform the work as a way to avert mechanical failures and avoid unscheduled downtime.	*Reliability Engineering*
Preventive Maintenance Optimization (PMO)	A methodology which focuses on improving maintenance effectiveness and efficiency through the review and/or rationalization of programs or tasks. Through such work, from one-third to two-thirds of planned maintenance procedures can be eliminated or combined.	*Reliability Engineering*
Preventive maintenance program for heating and/or cooling equipment	**A** HVAC conservation feature consisting of a program of routine inspection and service for the heating and/or cooling equipment. The inspection is performed on a regular basis, even if there are no apparent problems.	*Energy*
Preventive Maintenance Schedule Compliance	The number of preventive maintenance work orders completed from the daily/weekly schedule divided by the total number of preventive maintenance work orders on the schedule.	*Maintenance*
Preventive/Predictive Work	Scheduled, preplanned preventive and predictive (condition-based) inspections and work orders.	*Maintenance*
Price	The amount of money or consideration-in-kind for which a service is bought, sold, or offered for sale.	*Energy*
Price Cap	Situation where a price has been determined and fixed.	*Energy*
Price Schedules	Agreements designated as optional for supply of goods or services to the University. Such agreements are not used in lieu of securing competition.	*Procurement*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Price to Beat	Retail Electric Providers affiliated with pre-existing investor-owned utilities are required to offer residential and small commercial customers in its former service area a "price to beat." This is a price that is 6% lower than the rate charged by its affiliated electric utility on January 1, 1999. The Retail Electric Provider cannot adjust this price until either (a) 36 months after retail competition is introduced or (b) 40% of the customers in its affiliated Transmission and/or Distribution Service Provider area have switched to another retailer.	*Energy*
Price Transparency	Market prices for generation and transmission service made available to the public so that customers know how much they will pay for power supply and transportation in a deregulated market.	*Energy*
Price-to-earnings ratio	The current market price of a stock divided by the company's net earnings per share for the year.	*Mining*
Prick	a pick. (Scot.); or to hole by hand in a layer of soft fireclay beneath the coal seam.	*Mining*
Pricker	a pointed brass or copper rod about 3 feet long, the point was inserted into the powder cartridge, then the cartridge and pricker were inserted into the shot hole; or a tool for trimming the wick on an oil lamp. -see also Picker; or a long iron rod or poker used to loosen and bring down the top coal in the Staffordshire Thick Coal (S. Staffs.); or a holing pick.	*Mining*
Pricking or Pricking dirt	a thin layer of soft shale often found between the bottom of a seam and the floor. It was used to prick in when undercutting. A great advantage to the hewer. –see Holing dirt.	*Mining*
Primary Bond	Interatomic bonds that are relatively strong and for which bonding energies are relatively large.	*Engineering Physics*
Primary bond	Relatively strong bond between adjacent atoms resulting from the transfer or sharing of outer orbital electrons.	*Material Process*
Primary Circuit	This is the distribution circuit (less than 69,000 volts) on the high voltage side of the transformer.	*Energy*
Primary coal	All coal milled and, when necessary, washed and sorted.	*Energy*
Primary deposits	Valuable minerals deposited during the original period or periods of mineralization, as opposed to those deposited as a result of alteration or weathering.	*Mining*
Primary Device	Part of a flowmeter which is mounted internally or externally to the fluid conduit and produces a signal corresponding to the flowrate and from which the flow may be determined.	*General Engineering*
Primary Device	Part of a flowmeter which is mounted internally or externally to the fluid conduit and produces a signal corresponding to the flowrate and from which the flow may be determined.	*Electronic Process*
Primary Element	The system element that quantitatively converts measured variable energy into a form suitable for measurement.	*Process Control*
Primary energy	Energy in the form that it is first accounted for in a statistical energy balance, before any transformation to secondary or tertiary forms of energy. For example, coal can be converted to synthetic gas, which can be converted to electricity; in this example, coal is primary energy, synthetic gas is secondary energy, and electricity is tertiary energy. See Primary energy production and Primary energy consumption.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Primary energy consumption	Consumption of primary energy. (Energy sources that are produced from other energy sources, e.g., coal coke from coal, are included in primary energy consumption only if their energy content has not already been included as part of the original energy source. Thus, U.S. primary energy consumption does include net imports of coal coke, but not the coal coke produced from domestic coal.) The U.S. Energy Information Administration includes the following in U.S. primary energy consumption: coal consumption; coal coke net imports; petroleum consumption (petroleum products supplied, including natural gas plant liquids and crude oil burned as fuel); dry natural gas excluding supplemental gaseous fuels consumption; nuclear electricity net generation (converted to Btu using the nuclear plants heat rates); conventional hydroelectricity net generation (converted to Btu using the fossil-fuels plant heat rates); geothermal electricity net generation (converted to Btu using the fossil-fuels plant heat rates), and geothermal heat pump energy and geothermal direct use energy; solar thermal and photovoltaic electricity net generation (converted to Btu using the fossil-fuels plant heat rates), and solar thermal direct use energy; wind electricity net generation (converted to Btu using the fossil-fuels plant heat rates); wood and wood-derived fuels consumption; biomass waste consumption; fuel ethanol and biodiesel consumption; losses and co-products from the production of fuel ethanol and biodiesel; and electricity net imports (converted to Btu using the electricity heat content of 3,412 Btu per kilowatt hour).	*Energy*
Primary energy consumption expenditures	Expenditures for energy consumed in each of the four major end-use sectors, excluding energy in the form of electricity, plus expenditures by the electric utilities sector for energy used to generate electricity. There are no fuel-associated expenditures for associated expenditures for hydroelectric power, geothermal energy, photovoltaic and solar energy, or wind energy. Also excluded are the quantifiable consumption expenditures that are an integral part of process fuel consumption.	*Energy*
Primary energy demand	The annual primary energy demand is the key figure in the German Energy Savings Directive (EnEV) and the energy performance certificate. It indicates how many kWh of energy need to be obtained from an energy source e.g. coal or natural gas to cover a building 's heating and hot water requirements.	*Thermal Management*
Primary energy production	Production of primary energy. The U.S. Energy Information Administration includes the following in U.S. primary energy production: coal production, waste coal supplied, and coal refuse recovery; crude oil and lease condensate production; natural gas plant liquids production; dry natural gas excluding supplemental gaseous fuels production; nuclear electricity net generation (converted to Btu using the nuclear plant heat rates); conventional hydroelectricity net generation (converted to Btu using the fossil-fuels plant heat rates); geothermal electricity net generation (converted to Btu using the fossil-fuels plant heat rates), and geothermal heat pump energy and geothermal direct use energy; solar thermal and photovoltaic electricity net generation (converted to Btu using the fossil-fuels plant heat rates), and solar thermal direct use energy; wind electricity net generation (converted to Btu using the fossil-fuels plant heat rates); wood and wood-derived fuels consumption; biomass waste consumption; and biofuels feedstock.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Primary Failure	A failure not caused either directly or indirectly by another failure or fault.	*Reliability Engineering*
Primary flight control system (PFCS)	The most basic part of the flight controls operated by a pilot, including wheel (fixed wing), yoke (fixed wing), cyclic (rotary wing), pedals (fixed wing and rotary wing), throttle (fixed wing), and collective (rotary wing).	*Aeronautical Engineering*
Primary fuels	Fuels that can be used continuously. They can sustain the boiler sufficiently for the production of electricity.	*Energy*
Primary Function	A Term Used In Reliability Centered Maintenance. The Primary Functionality Required Of An Asset - The Reason The Asset Was Acquired. For Example It Is Likely That The Primary Function Of A Pump Is To Pump A Specified Liquid At A Specified Rate Against A Specified Head Of Pressure.	*Plant Engineering*
Primary metropolitan statistical area (PMSA)	A component area of a Consolidated metropolitan statistical area consisting of a large urbanized county or cluster of counties (cities and towns in New England) that demonstrate strong internal economic and social links in addition to close ties with the central core of the larger area. To qualify, an area must meet specified statistical criteria that demonstrate these links and have the support of local opinion.	*Energy*
Primary or Primitive Rocks	Consist of the various kinds of slate, quartz, serpentine, granite and gneiss; they are the lowest group of rocks, are irregularly crystallized, and contain a few animal relics. Prospecting- Hunting for mineral lodes or placers.	*Mining*
Primary outcome	The outcome of greatest importance. See also: Outcome	*Quality Engineering*
Primary recovery	The crude oil or natural gas recovered by any method that may be employed to produce them where the fluid enters the well bore by the action of natural reservoir pressure (energy or gravity).	*Energy*
Primary recovery	Recovery of oil or gas from a reservoir purely by using the natural pressure in the reservoir to force the oil or gas out.	*Petroleum Drilling*
Primary roof	The main roof above the immediate top. Its thickness may vary from a few to several thousand feet.	*Mining*
Primary Standard (NBS)	The standard reference units and physical constants maintained by the National Bureau of Standards upon which all measurement units in the United States are based.	*Electrical*
Primary standard material	"Substance of known chemical composition and sufficient purity to be used in preparing a primary standard solution" [IFCC]. "Solution used as calibration standard in which the concentration is determined solely by dissolving a weighed amount of primary standard material in an appropriate solvent, and making a stated volume or weight" [IFCC].	*Quality*
Primary Standards	Aqueous pH buffer solutions established by the National Bureau of Standards within the 2.5 to 11.5 pH range of ionic strength less than 0.1 and which provide stable liquid junction potential and uniformity of electrode sensitivity.	*General*
Primary study	'Original research' in which data are collected. The term primary study is sometimes used to distinguish it from a secondary study (re-analysis of previously collected data), meta-analysis, and other ways of combining studies (such as economic analysis and decision analysis). Also called: Original study	*Quality Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Primary transportation	Conveyance of large shipments of petroleum raw materials and refined products usually by pipeline, barge, or ocean-going vessel. All crude oil transportation is primary, including the small amounts moved by truck. All refined product transportation by pipeline, barge, or ocean-going vessel is primary transportation.	*Energy*
Primary units	A standard set of four units to which all units can be resolved; primary units are Mass(M), Length(L), Time(theta), and Temperature(T); for example, standard units for velocity might be kt (nmi/hr), ft/s, m/s, mph, but primary are always Length/Theta; sometimes written with negative subscripts.	*Aeronautical Engineering*
Prime Cost	Direct materials cost plus direct labor cost.	*Procurement*
Prime Mover	A device such as an engine or water wheel that drives an electric generator.	*Energy*
Prime radius of curvature	Radius of the earth in the east/west direction at a given position; Synonyms: earth radius east/west; Symbols: rho sub P; Typical Units: ft; Dimensions: Length.	*Aeronautical Engineering*
Prime supplier	A firm that produces, imports, or transports selected petroleum products across State boundaries and local marketing areas, and sells the product to local distributors, local retailers, or end users.	*Energy*
Primer (booster)	A package or cartridge of explosive which is designed specifically to transmit detonation to other explosives and which does not contain a detonator.	*Mining*
Primitive	Crystal structure having atoms located at unit cell corners only.	*Material Process*
Principal Axes	The axes of maximum and minimum normal stress.	*General*
Principal Quantum Number (n)	Describes the major shell in which the electron is located	*Physics*
Principle Reference Planes	These are a pitch plane, axial plane, and transverse plane, all intersecting at a point and mutually perpendicular.	*Gears*
Print Contrast	Ratio of the difference of reflected light between the bars and spaces of a bar code. Print Contrast equals Space Reflectance minus Bar Reflectance divided by Space Reflectance.	*Gears*
Printed Circuit Board	A printed circuit board, or PC board, or PCB, is a non-conductive material with conductive lines printed or etched. Electronic components are mounted on the board and the traces connect the components together to form a working circuit or assembly.	*Electrical Engineering*
Printers	In order to create a barcode for an item, it must be produced by a printer. All printers have a media width, amount of speed and duty cycle. Below are the two main types of printers.	*Gears*
Prior Approval	Approval to commit may be delegated to an operating department by buyer or supervisor with the assurance that the appropriate paper work will follow.	*Procurement*
Priority	The relative importance of a job. A safety problem has a higher priority than an energy improvement job.	*Maintenance*
Priority Flow Divider Valve	A valve which directs oil to one circuit at a fixed rate and dumps excess flow into another circuit.	*Mechanical, Process, and Operations*
Private fueling facility	A fueling facility which normally services only fleets and is not open to the general public.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Private Mobile Radio	Radio bands generally for use within a defined user group, such as the emergency services or by the employees of a mining project.	*Electrical Engineering*
Private placement	Sale of shares to individuals or corporations outside the normal market, at a negotiated price. Often used to raise capital for a junior exploration company.	*Mining*
Privately owned electric utility	A class of ownership found in the electric power industry where the utility is regulated and authorized to achieve an allowed rate of return.	*Energy*
Pro Forma Invoice	A document prepared in advance of a sale to provide evidence of the final form and amount of invoice.	*Procurement*
Pro rata	In proportion, usually to ownership, income or contribution.	*Mining*
Proactive	Action before a stimulus (opposite of reactive). A proactive maintenance department acts before a breakdown.	*Maintenance*
Proactive environmental practices	The efforts of plant management to adopt, at its own fiscal and chronological pace, leading-edge environmental practices that reduce pollutants, emissions, etc., prior to regulatory actions that necessitate these actions.	*Quality*
Proactive Maintenance	The combination of operator-performed maintenance, preventive maintenance, and predictive maintenance activities whereby maintenance is conducted to prevent, eliminate, delay or reduce maintenance before failure [McKenna, T. and Oliverson, R., "Glossary Of Maintenance And Reliability Terms", Gulf Publishing Company, ISBN 0-88415-360-6 (1997)]. The application of analytical methods, tools, and techniques to eliminate failures, extend component life, mitigate consequences, minimize downtimes, and optimize all resources. It consists of systematic identification and elimination of potential problems in all aspects of reliability, availability and maintainability [Hansen, R.C., "Overall Equipment Effectiveness - A Powerful Production/Maintenance Tool For Increased Profits", Industrial Press, ISBN 0-8311-3138-1 (2001)].	*Maintenance*
Proactive Maintenance	A maintenance strategy for stabilizing the reliability of machines or equipment. Its central theme involves directing corrective actions aimed at failure root causes, not active failure symptoms, faults, or machine wear conditions. A typical proactive maintenance regiment involves three steps: (1) setting a quantifiable target or standard relating to a root cause of concern (e.g., a target fluid cleanliness level for a lubricant), (2) implementing a maintenance program to control the root cause property to within the target level (e.g., routine exclusion or removal of contaminants), and (3) routine monitoring of the root cause property using a measurement technique (e.g., particle counting) to verify the current level is within the target.	*Lubrication*
Proactive Reliability Maintenance TM (PRM)	A strategy that addresses failures and implements the processes necessary to prevent recurrence. At the process foundation is a systematic method to benchmark asset productivity and implement corrective actions that reduce total life cycle costs. In short, PRM enables an organization to take complete control over what is happening on the plant floor. The Proactive Reliability process is based on four key steps: (1) Predictive Maintenance, (2) Diagnostics and Root Cause Analysis, (3) Key Performance Indicators, and (4) Operational Review. In industry, PRM is partly compared to design-out maintenance. For example, reactive maintenance only takes action when a pump breaks down, and in a preventive maintenance setting, the pump is cleaned, re-lubricated, etc.,	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	at regular intervals (x operating hours). In a predictive maintenance setting, the pump may be monitored on-line. When vibration levels increase, maintenance actions are initiated. Applying design-out maintenance means the pump is "redesigned" with a different type of lubricant or bearing.	
Probabalistic Risk Assessment	A "Top-Down" Approach Used To Apportion Risk To Individual Areas Of Plant And Equipment, And Possibly To Individual Assets So As To Achieve An Overall Target Level Of Risk For A Plant, Site Or Organization. These Levels Of Risk Are Then Used In Risk-Based Techniques, Such As Reliability Centered Maintenance And Hazop, To Assist In The Development Of Appropriate Equipment Maintenance Strategies, And To Identify Required Equipment Modifications.	*Management*
Probabalistic Safety Assessment	Similar To Probabalistic Risk Assessment, Except Focused Solely On Safety Related Risks.	*Management*
Probabilistic Risk Assessment (PRA)	A "top-down" approach used to apportion risk to individual areas of plant and equipment, and possibly to individual assets to achieve an overall target level of risk for a plant, site, or organization. These levels of risk are then used in risk-based techniques, such as reliability-centered maintenance, risk-based maintenance, and Hazop, to assist the development of appropriate equipment maintenance strategies, and to identify required equipment modifications.	*Reliability Engineering*
Probabilistic vibration	(As compared to **Deterministic vibration**), one whose magnitude at any future time can only be predicted on a statistical basis.	*Reliability Engineering*
Probability	The chance or risk of something happening.	*Quality Engineering*
Probability density function (pdf)	A mathematical model that describes the probability of events occurring over time. This function is integrated to obtain the probability that the event time takes a value in a given time interval. In life data analysis, the event in question is a failure, and the pdf is the basis for other important reliability functions, including the reliability function, the failure rate function and the mean life.	*Reliability Engineering*
Probability distribution	The function that gives the probabilities that a variable equals each of a sequence of possible values. Examples include the binomial distribution, normal distribution and Poisson distribution. See also: Distribution	*Quality Engineering*
Probability for error detection, Ped	A performance characteristic of a QC procedure that describes how often an analytical run will be rejected when results contain errors in addition to the inherent imprecision of the measurement procedure. Ideally, Ped should be 1.00 for errors that are medically significant. In practice, we generally aim for a Ped of 0.90 when selecting and designing QC procedures.	*Quality*
Probability for false rejection, Pfr	A performance characteristic of a QC procedure that describes how often an analytical run will be rejected when there are no errors occurring, except for the inherent imprecision of the measurement procedure. Ideally, Pfr should be 0.00. In practice, we generally aim for a Pfr of 0.05 or less.	*Quality*
Probability plot	A type of plot that linearizes a distribution's cdf, allowing the user to manually plot failure time vs. estimated unreliability. Provided that the plotted points fall on a relatively straight line (thus indicating that the chosen distribution is a good fit), the parameter estimates can be obtained from scales on the plot. This is a crude, time-consuming method of fitting a distribution to failure data, but it was practically the only method available prior to the widespread use of computers.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Probability plotting paper	A specially designed type of graph paper that allows the user to plot failure time vs. unreliability as a linear function. Plotting paper constructions varies from distribution to distribution. Probability plotting papers that have been generated by ReliaSoft's software are available on the Web athttp://www.weibull.com/GPaper/index.htm.	*Reliability Engineering*
Probability, p	The likelihood an event will occur, usually stated as a decimal fraction between 0 and 1, 0 meaning that the event will never occur and 1 meaning that the event will always occur. For example, p = 0.05 means there is a 5% chance that an event will occur. Commonly used in quality control to describe the chance that a run will be rejected.	*Quality*
Probable (indicated) reserves, coal	Reserves or resources for which tonnage and grade are computed partly from specific measurements, samples, or production data and partly from projection for a reasonable distance on the basis of geological evidence. The sites available are too widely or otherwise in appropriately spaced to permit the mineral bodies to be outlined completely or the grade established throughout.	*Energy*
Probable energy reserves	Estimated quantities of energy sources that, on the basis of geologic evidence that supports projections from **proved reserves**, can reasonably be expected to exist and be recoverable under existing economic and operating conditions. Site information is insufficient to establish with confidence the location, quality, and grades of the energy source. Note: This term is equivalent to "Indicated Reserves" as defined in the resource/reserve classification contained in the U.S. Geological Survey Circular 831, 1980. Measured and indicated reserves, when combined, constitute **demonstrated reserves**.	*Energy*
Probable Reserves	Those reserves which are not yet proven but which are estimated to have a better than 50% chance of being technically and economically producible.	*Petroleum Drilling*
Probable reserves	Valuable mineralization not sampled enough to accurately estimate the terms of tonnage and grade. Also called "indicated reserves."	*Mining*
Probable reserves	Those reserves which are not yet proven but which are estimated to have a better than 50% chance of being technically and economically producible.	*Petroleum Drilling*
Probe	A generic term that is used to describe many types of temperature sensor.	*Electrical*
Probe	A generic term that is used to describe many types of temperature sensors.	*Electronic Process*
Problem-solving methodologies	A variety of approaches to problem solving, including the Deming Circle (Plan-Do-Check-Act), used by all persons working in the same team or organization. Considered fundamental to teamwork.	*Quality*
Procaryotes	a cellular organism in which the nucleus has no limiting membrane.	*Chemical*
Procedure Qualification Record	(PQR) A document detailing the testing program undergone to validate the Welding Procedure Specification (WPS). The PQR contains records of the performance of all factors called out in the 'WPS' including the test results of all, volumetric, mechanical, and surface tests made test welds performed to prove that production welds carried out in conformance with the 'WPS' meet the specified requirements. Example specification:- ASME SEC. IX QW-200.2.	*Petroleum Engineering*
Process	The collective functions performed in and by the equipment in which the variable(s) is (are) to be controlled.	*Process Control*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Process	The assembly of series of operation.	*Material Process*
Process analysis	Process analysis is the scientific methods to the recognition and definition of process systems and the development of methods for their solution.	*Material Process*
Process Analytical Technology (PAT)	as defined by the United States Food and Drug Administration, PAT is a mechanism to design, analyze, and control pharmaceutical manufacturing processes through the measurement of critical process parameters, which affect critical quality attributes. The concept actually gains a clearer understanding of processes by defining and monitoring their critical process parameters, in order to improve productivity by enhancing consistency and minimizing rejects.	*Electrical*
Process automation	The term process automation is used to refer to an automation system, the principal purpose of which is to automate or support the operator of a manufacturing process. Such a process can be the manufacturing or treatment of any goods made in a continuous or quasi-continuous manner such as fuel, paper, cement, steel, chemicals, food.	*Electrical*
Process capability	An industrial term used to describe how the inherent variability of a production process under stable operation compared to the allowable variation. SEcrit is an index of process capability for an analytical testing process.	*Quality*
Process Control	A General term that refers to the control of any process (i.e. a chemical process).	*Maintenance*
Process control monitoring systems	Process control monitoring systems responds to conditions in which one or more process variables are outside the normal operating range, but there is no safety reason to discontinue operation	*Material Process*
Process control operating system	Process control operating system is used in specified operation of the plant in its normal operating range.	*Material Process*
Process control safety system	Process control safety system monitors a process safety variable and take actions if the variable goes outside the admissible error range.	*Material Process*
Process cooling and refrigeration	The direct process end use in which energy is used to lower the temperature of substances involved in the manufacturing process. Examples include freezing processed meats for later sale in the food industry and lowering the temperature of chemical feedstocks below ambient temperature for use in reactions in the chemical industries. Not included are uses such as air-conditioning for personal comfort and cafeteria refrigeration.	*Energy*
Process Failure Mode and Effects Analysis (PFMEA)	A methodology for assessing the weaknesses of production processes and the potential effects of process failures on the product being produced.	*Electrical Engineering*
Process flow diagram (PFD)	Block flow diagram or simplified process flow diagram.	*Material Process*
Process fuel	All energy consumed in the acquisition, processing, and transportation of energy. Quantifiable process fuel includes three categories natural gas lease and plant operations, natural gas pipeline operations, and oil refinery operations.	*Energy*
Process heating or cooling demand-side management (DSM) program	A DSM program designed to promote increased electric energy efficiency applications in industrial process heating or cooling.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Process heating or cooling waste heat recovery	An energy conservation system whereby some space heating or water heating is done by actively capturing byproduct heat that would otherwise be ejected into the environment. In nonresidential buildings, sources of waste heat include refrigeration/air-conditioner compressors, manufacturing or other processes, data processing centers, lighting fixtures, ventilation exhaust air, and the occupants themselves. Not to be considered is the passive use of radiant heat from lighting, workers, motors, ovens, etc., when there are no special systems for collecting and redistributing heat.	*Energy*
Process historian	A process historian is a mechanism for storing data relating to a particular process. The data stored by modern historians typically include time-stamped information from a variety of traceable sources. The data are used for modeling, optimization and auditing purposes.	*Electrical*
Process Industry	an industry in which raw materials are treated and converted into products by means of a series of stages (or processes). Process industries include oil and gas refining, pharmaceutical and chemical production, water and sewerage treatment etc.	*Electrical*
Process information, and/or actuate	process information, and/or actuate.	*Mechanical, Process, and Operations*
Process Manufacturing	The manufacturer of products such as chemicals, gasoline, beverages and food products that typically are produced in "batch" quantities rather than discrete units. Many process operations require inputs such as heat, pressure, and time (for thermal or chemical conversion).	*Maintenance*
Process Meter	A panel meter with sizeable zero and span adjustment capabilities, which can be scaled for readout in engineering units for signals such as 4–20 mA, 10–50 mA and 1–5 V.	*Electrical*
Process model	Process model is a symbolic represent of the process with its inputs-process-outputs states.	*Material Process*
Process modeling	Process modeling is an inductive process for tasks such as design, control and optimization or in explaining the behavior of the process.	*Material Process*
Process Oil	An oil that serves as a temporary or permanent component of a manufactured products. Aromatic process oils have good solvency characteristics; their applications include proprietary chemical formulations, ink oils, and extenders in synthetic rubbers. Naphthenic process oils are characterized by low pour points and good solvency properties. Paraffinic process oils are characterized by low aromatic content and light color.	*Lubrication*
Process operation and hazards	Process operation and hazards	*Material Process*
Process operation and hazards	a procedure for the systematic, critical, examination of the operability of a	*Material Process*
Process parameter	A property of the process and its environment, that can be assigned arbitrary numerical values.	*Material Process*
Process simulation	The study of a process or its part by mathematical model or its physical model.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Process stability	Used here to characterize the performance of the measurement procedure in terms of the frequency of analytic runs having medically important errors (f) that invalidate the medical usefulness.	*Quality*
Process system	The assemblage of elements which are tied together by common flows of materials and/or information.	*Material Process*
Process Variable	An aspect of the processed product which changes during processing, e.g. temperature. Some variables can be measured, but in some processes some variables can only be judged by dead reckoning.	*Control Engineering*
Process	process.	*Material Process*
Processed gas	Natural gas that has gone through a processing plant.	*Energy*
Processing	Uranium-recovery operations whether at a mill, an in situ leach, byproduct plant, or other type of recovery operation.	*Energy*
Processing	Treatment of a material into a form convenient for engineering applications.	*Material Process*
Processing gain	The volumetric amount by which total output is greater than input for a given period of time. This difference is due to the processing of crude oil into products which, in total, have a lower specific gravity than the crude oil processed.	*Energy*
Processing loss	The volumetric amount by which total refinery output is less than input for a given period of time. This difference is due to the processing of crude oil into products which, in total, have a higher specific gravity than the crude oil processed.	*Energy*
Processing of uranium	The recovery of uranium produced by nonconventional mining methods, i.e., in situ leach mining, as a byproduct of copper or phosphate mining, or heap leaching.	*Energy*
Processing plant	A surface installation designed to separate and recover natural gas liquids from a stream of produced natural gas through the processes of condensation, absorption, adsorption, refrigeration, or other methods and to control the quality of natural gas marketed and/or returned to oil or gas reservoirs for pressure maintenance, repressuring, or cycling.	*Energy*
ProCite	A software package designed to manage bibliographic references.	*Quality Engineering*
Procurement	Procurement includes such duties as specification development, value analysis, supplier market research, negotiation, buying activities, contract administration, and perhaps inventory control, traffic, receiving, and stores.	*Procurement*
Procurement Card (Or Purchasing Card)	A payment method whereby requisitioners are empowered to deal directly with suppliers for low-dollar, high-frequency, typically MRO-type purchases, by using a card issued by a bank or major credit card provider. The cards reduce paperwork and enable purchasing and accounts payable personnel to focus on more value-added activities.	*Procurement*
Procurement Cycle Time	Total elapsed time from the initiation of a parts requisition until receipt of the part on-site.	*Reliability Engineering*
Procuring Agency	Any Federal agency, or any state agency or agency of a political subdivision of a state, that is using appropriated Federal funds for procurement.	*Environmental Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Produced by the original vehicle manufacturer	produced by the original vehicle manufacturer.	*Mechanical Engineering*
Produced water	After the drilling and fracturing of the well are completed, water is produced along with the natural gas. Some of this water is returned fracturing fluid and some is natural formation water. These produced waters move back through the wellhead with the gas.	*Petroleum Drilling*
Produced Water	Water that comes up a well with the oil and gas. Produced water is usually high in salinity. It is often the force that drives the oil and gas to the surface. After leaving the well, the produced water is separated from the oil and gas. Also referred to as overboard water, formation water, saltwater and oilfield brine.	*Petroleum Drilling*
Producer	A company engaged in the production and sale of natural gas from gas or oil wells with delivery generally at a point at or near the wellhead, the field, or the tailgate of a gas processing plant. For the purpose of company classification, a company primarily engaged in the exploration for, development of, and/or production of oil and/or natural gas.	*Energy*
Producer and distributor coal stocks	Producer and distributor coal stocks consist of coal held in stock by producers/distributors at the end of a reporting period.	*Energy*
Producer contracted reserves	The volume of recoverable salable gas reserves committed to or controlled by the reporting pipeline company as the buyer in gas purchase contracts with the independent producer as seller, including warranty contracts, and which are used for acts and services for which the company has received certificate authorization from the Federal Energy Regulatory Commission.	*Energy*
Producer cost of service allowance	An allowance against royalties to cover the costs of gathering and processing natural gas for sale, and the costs of conserving conservation gas.	*Petroleum Engineering*
Producer	A farmer, rancher or orchardist. The term usually is preceded by an adjective that describes the nature of the operation, such as potato producer.	*Agriculture*
Producing property	A term often used in reference to a property, well, or mine that produces wasting natural resources. The term means a property that produces in paying quantities (that is, one for which proceeds from production exceed operating expenses).	*Energy*
Product Analysis	The chemical analysis of a material done on a finished component to show compliance with the material specifications. Usually has tolerances defined for each element to allow for differences in the completed product compared to the molten metal.	*General Mechanical*
Product Costs	All costs that are involved in the purchase or manufacture of goods. In the case of manufactured goods, these costs consist of direct materials, direct labor, and manufacturing overhead. Also see Inventoriable costs.	*Procurement*
Product Data Management (PDM)	Software-based systems that link, manage, and organize product-related data from various sources-both internally and externally (from suppliers)-across various computer platforms, divisions, departments, and geographic locations. PDM incorporates CAD files, manufacturing data, and documents to reduce engineering design times; ensures timely access to consistent up-to-date product information; and improves information flow, cross-functional communications, and support services.	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Product Footprint	The surface of the product that comes in contact with the belt, rollers, or wheels of the conveyor.	*Manufacturing*
Product Stop	A mechanical barrier to interrupt the flow of product on an active conveyor, that is, without shutting down the conveyor. Typically, a product stop is pneumatically actuated. Also known as Case Stop.	*Equipment*
Product supplied	Approximately represents consumption of petroleum products because it measures the disappearance of these products from primary sources, i.e., refineries, natural gas-processing plants, blending plants, pipelines, and bulk terminals. In general, product supplied of each product in any given period is computed as follows field production, plus refinery production, plus imports, plus unaccounted-for crude oil (plus net receipts when calculated on a PAD District basis) minus stock change, minus crude oil losses, minus refinery inputs, and minus exports.	*Energy*
Product-development cycle	Sometimes called "time to market," this is the period of time from the start of design/development work to commercial product availability.	*Quality*
Production	The act or process of generating electric energy.	*Energy*
Production capacity	The amount of product that can be produced from processing facilities.	*Energy*
Production Costing	A method used to determine the most economical way to operate a given system of power resources under given load conditions.	*Energy*
Production costs	Costs incurred to operate and maintain wells and related equipment and facilities, including depreciation and applicable operating costs of support equipment and facilities and other costs of operating and maintaining those wells and related equipment and facilities. They become part of the cost of oil and gas produced. The following are examples of production costs (sometimes called lifting costs): costs of labor to operate the wells and related equipment and facilities; repair and maintenance costs; the costs of materials, supplies, and fuels consumed and services utilized in operating the wells and related equipment and facilities; the costs of property taxes and insurance applicable to proved properties and wells and related equipment and facilities; the costs of severance taxes. Depreciation, depletion, and amortization (DDA) of capitalized acquisition, exploration, and development costs are not production costs, but also become part of the cost of oil and gas produced along with production (lifting) costs identified above. Production costs include the following subcategories of costs: well workers and maintenance; operating fluid injections and improved recovery programs; operating gas processing plants; ad valorem taxes; production or severance taxes; other, including overhead.	*Energy*
Production expenses	Costs incurred in the production of electric power that conform to the accounting requirements of the Operation and Maintenance Expense Accounts of the FERC Uniform System of Accounts.	*Energy*
Production Part Approval Process	Used by automotive industry for acceptance of new products for release and use on automobiles.	*Electrical Engineering*
Production payments	A contractual arrangement providing a mineral interest that gives the owner a right to receive a fraction of production, or of proceeds from the sale of production, until a specified quantity of minerals (or a definite sum of money, including interest) has been received.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Production plant liquids	The volume of liquids removed from natural gas in natural gas processing plants or cycling plants during the year.	*Energy*
Production Shutdown Mode	A term that describes the mode in which a production process shuts down after a malfunction. Delayed shutdown: the production shuts down or produces off specification, completely or partially, after a specific time (Production Shutdown Delayed Time, PSDT). Immediate shutdown: the production shuts down or produces off specification, completely or partially, immediately after the failure occurs.	*Maintenance*
Production, crude oil	The volumes of crude oil that are extracted from oil reservoirs. These volumes are determined through measurement of the volumes delivered from lease storage tanks or at the point of custody transfer, with adjustment for (1) net differences between opening and closing lease inventories and (2) basic sediment and water. Crude oil used on the lease is considered production.	*Energy*
Production, lease condensate	The volume of lease condensate produced. Lease condensate volumes include only those volumes recovered from lease or field separation facilities.	*Energy*
Production, natural gas	The volume of natural gas withdrawn from reservoirs less (1) the volume returned to such reservoirs in cycling, repressuring of oil reservoirs, and conservation operations; less (2) shrinkage resulting from the removal of lease condensate; and less (3) nonhydrocarbon gases where they occur in sufficient quantity to render the gas unmarketable. Volumes of gas withdrawn from gas storage reservoirs and native gas, which has been transferred to the storage category, are not considered production. Flared and vented gas is also considered production. (This differs from "Marketed Production" which excludes flared and vented gas.)	*Energy*
Production, natural gas liquids	Production of natural gas liquids is classified as follows:	*Energy*
Production, natural gas, dry	The volume of natural gas withdrawn from reservoirs during the report year less:	*Energy*
Production, natural gas, wet after lease separation	The volume of natural gas withdrawn from reservoirs less (1) the volume returned to such reservoirs in cycling, repressuring of oil reservoirs, and conservation operations; less (2) shrinkage resulting from the removal of lease condensate; and less (3) nonhydrocarbon gases where they occur in sufficient quantity to render the gas unmarketable. Note: Volumes of gas withdrawn from gas storage reservoirs and native gas that has been transferred to the storage category are not considered part of production. This production concept is not the same as marketed production, which excludes vented and flared gas.	*Energy*
Production, oil and gas	The lifting of oil and gas to the surface and gathering, treating, field processing (as in the case of processing gas to extract liquid hydrocarbons), and field storage. The production function shall normally be regarded as terminating at the outlet valve on the lease or field production storage tank. If unusual physical or operational circumstances exist, it may be more appropriate to regard the production function as terminating at the first point at which oil, gas, or gas liquids are delivered to a main pipeline, a common carrier, a refinery, or a marine terminal.	*Energy*
Production, wet after lease separation	See production, natural gas, wet after lease separation.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Productive capacity	The maximum amount of coal that a mining operation can produce or process during a period with the existing mining equipment and/or preparation plant in place, assuming that the labor and materials sufficient to utilize the plant and equipment are available, and that the market exists for the maximum production.	*Energy*
Productive Time	A period of time when the equipment is performing its intended function. This includes regular production (including loading and unloading of product), rework, work for third parties, and engineering runs done in conjunction with production.	*Maintenance*
Productivity	The primary definition here is annual dollar value of shipments per employee.	*Maintenance*
Productivity	The ratio of measured outputs over measured inputs.	*Reliability Engineering*
Productivity change	The plant-wide change in annual value-added per employee, based on total employment in the plant, not just direct labor. Value-added should be calculated by subtracting cost of purchased materials, components, and services from value of shipments. The Best Plants entry form also includes a secondary calculation, which many manufacturers prefer to use: "increase in sales per employee."	*Quality*
Proeutectic	Phase that forms by precipitation in a temperature range above the eutectic temperature.	*Material Process*
Proeutectoid	Phase that forms by solid state precipitation in a temperature	*Material Process*
Professional Services	Infrequent, technical, and/or unique functions performed by independent contractors whose occupation is the rendering of such services. While not limited to licentiates, the services are considered "professional," and the contract may run to partnerships, firms, or corporations as well as individuals.	*Procurement*
Profibus	The German fieldbus, not to be confused with the common European fieldbus Profibus PA.	*Control Engineering*
Profibus PA	This is the name agreed on a common European Fieldbus for process automation, still disputed by mainly American companies. Its main pusher in the industry is Siemens.	*Control Engineering*
Proficiency sample	"A specimen containing analytes of unknown concentration or identification that is sent to laboratories participating in testing programs in order to independently verify the laboratory technical competency." [CLSI]	*Quality*
Proficiency testing criteria for acceptable performance, PT criteria	Defined limits about a target value (TV) that are used to classify analytical performance as acceptable or not. CLIA defines PT criteria for about 80 regulated analytes, using a format of TV ± a stated %, TV ± a fixed concentration, or TV ± 3 SD, where the SD is usually a group standard deviation from a PT survey. These PT criteria should be interpreted as total error criteria because only single measurements can be made on PT specimens and the test result is subject to both random and systematic errors.	*Quality*
Proficiency testing, PT	"A program in which multiple specimens are periodically sent to members of a group of laboratories for analysis and/or identification; in which each laboratory's results are compared with those of other laboratories in the group and/or with an assigned value, and reported to the participating laboratory and others." [CLSI]	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Profit	The income remaining after all business expenses are paid.	*Energy*
Profit and loss statement	The income statement of a company detailing revenues minus total costs to give total profit.	*Mining*
Prognosis	The possible outcomes of a disease or condition and the likelihood that each one will occur.	*Analysis*
Prognostic factor	Demographic, disease-specific, or co-morbid characteristics associated strongly enough with a condition's outcomes to predict accurately the eventual development of those outcomes. Compare with risk factors. Neither prognostic or risk factors necessarily imply a cause and effect relationship.	*Analysis*
Prognostics Preventive Maintenance Clock	The parameter that initiates the Preventive Maintenance (PM) task list for scheduling (usually buildings and assets in regular use). Assets that are used irregularly may use other production measures such as pieces, machine hours, or cycles. The ability to predict or forecast the future condition of a component, or system of components in terms of failures or degraded condition to satisfactorily conform to operational requirements.	*Reliability Engineering*
Program	A list of instructions that a computer follows to perform a task.	*Electrical*
Program cost	Utility costs that reflect the total cash expenditures for the year, reported in nominal dollars, that flowed out to support DSM (demand-side management) programs. They are reported in the year they are incurred, regardless of when the actual effects occur.	*Energy*
Program Life	The length of time that the utility will be actively involved in promoting a demand-side management program (i.e. financing the marketing activities and the incentives of the program.)	*Energy*
Program Maturity	The time it takes for the full benefits of a demand-side management measure or program to be realized.	*Energy*
Programmable Logic Controller (PLC)	A device that is pre-programmed to accept relay ladder logic instructions and perform these instructions to control the equipment operation.	*Equipment*
Programmable logic controller (PLC, or programmable controller)	These are electronic devices used to control equipment, especially in automation. They are small, programmable units that can receive information from output devices, such as sensors in a control system, and transmit signals to input devices, such as actuators, that can effect changes in the control system.	*Electrical*
Programmable Logic Controller (PLC, or Programmable Controller)	is a ruggedized, microprocessor-based system which provides factory or plant automation by monitoring sensors and controlling actuators in real time.	*Electrical Engineering*
Progressive dipping	the act of dipping steel more than once in cleaning solutions and molten zinc metal in order to produce a coating that covers the entire surface of the steel; commonly done when the steel article/fabrication is too large to fit entirely into the kettle in one dip	*Materials Process*
Project Evaluation & Review Technique (PERT) Chart	Scheduling Tool Which Shows In Flow Chart Format The Interdependencies Between Project Activities.	*Management*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Project Financing	This is the most commonly used method to finance the construction of independent power facilities. Typically, the developer pledges the value of the plant and part or all of its expected revenues as collateral to secure financing from private lenders.	*Energy*
Project hazard analysis	Project process hazard analysis is one part of comprehensive project safety program that will include pilot-plant safety reviews, preliminary hazard analysis, pre-process hazard analysis, implementation of management of change, confirmation of the as built status for piping and equipment, procurement and construction quality assurance, pre-startup safety reviews and possibly a follow-up process hazard analysis before plant startup.	*Material Process*
Proleg	Any process or appendage that serves the purpose of a leg; specifically, the fleshy, unjointed, ventral abdominal projections of caterpillars and certain sawfly larvae.[1] Fin.Swe.	*Forestry*
Prom	A magical experience for many high school aged adolescents providing an opportunity to explore the very nature of the universe and all things good as well as an occasion which brings about much angst to parents of said teens. Reluctantly also a time when young men wear garish suits and young women appear ultra provocative (See Gypsy Wedding).	*Breakroom*
PROM (Programmable Read-Only Memory)	A device with information placed into it during manufacture that cannot be altered by the computer. It can, however, be reprogrammed using special equipment.	*Electrical Engineering*
Proof Load	The proof load of a nut is the axially applied load the nut must withstand without thread stripping or rupture. The proof load of a bolt, screw or stud is the specified load the product must withstand without permanent set.	*Maintenance*
Proof of screen	A process aimed at showing that a screen is effective in identifying existing defects in a product. The screen must not damage good products.	*Reliability Engineering*
Proof pressure	A hydrostatic test pressure, usually 1 ½ times the rated working pressure, applied to an assembled valve to verify the structural integrity of the pressure containing parts. Synonymous with hydrostatic shell test. (Table 5.1, API-6D).	*Mechanical*
Proof Pressure	The specified pressure which may be applied to the sensing element of a transducer without causing a permanent change in the output characteristics.	*General*
Proof Pressure	see Overpressure.	*Electrical Engineering*
Prop	A stick, rod, pole, beam, or other rigid support.	*Civil Engineering*
Prop drawer	a tool designed for withdrawing roof supports from a safe distance. Over the years there have several different types in use, e.g. the 'puncher' or 'pout', the 'ringer and chain' and the most universally used being the 'Sylvester', which was also known as the 'gab lock'; or the man employed to draw out timber for re-use; or to allow the roof of the waste to cave in. Also called a 'prop maul', (N. East).	*Mining*
Prop key	a key or prop spanner used for pumping up and lowering hydraulic props.	*Mining*
Prop maul	see Prop drawer.	*Mining*
Prop	Coal mining term for any single post used as roof support. Props may be timber or steel; if steel--screwed, yieldable, or hydraulic.	*Mining*

Term	Definition	Industry
Propane (C3 H8)	Aliphatic hydrocarbon gas used as a fuel gas in thermal spray processes.	*Paint and Coatings*
Propane (C_3H_8)	A straight-chain saturated (paraffinic) hydrocarbon extracted from natural gas or refinery gas streams, which is gaseous at standard temperature and pressure. It is a colorless gas that boils at a temperature of -44 degrees Fahrenheit. It includes all products designated in ASTM Specification D1835 and Gas Processors Association specifications for commercial (HD-5) propane.	*Energy*
Propane air	A mixture of propane and air resulting in a gaseous fuel suitable for pipeline distribution.	*Energy*
Propane, consumer grade	A normally gaseous paraffinic compound (C_3H_8), which includes all products covered by Natural Gas Policy Act Specifications for commercial and HD-5 propane and ASTM Specification D 1835. Excludes: feedstock propanes, which are propanes not classified as consumer grade propanes, including the propane portion of any natural gas liquid mixes, i.e., butane-propane mix.	*Energy*
Propellant	An agent used to expel contents from an aerosol under pressure.	*Chemistry*
Property	Observable characteristic of a material.	*Material Process*
Property averaging	Determination of the overall property, such as elastic modulus, of a composite material as the geometrical average of the properties of the individual phases.	*Material Process*
Property Class	A designation system which defines the strength of a bolt or nut. For metric fasteners, property classes are designated by numbers where increasing numbers generally represent increasing tensile strengths. The designation symbol for bolts consists of two parts: 1. The first numeral of a two digit symbol or the first two numerals of a three digit symbol approximates 1/100 of the minimum tensile strength in MPa. 2. The last numeral approximates 1/10 of the ratio expressed as a percentage between minimum yield stress and minimum tensile stress. Hence a fastener with a property class of 8.8 has a minimum tensile strength of 800 MPa and a yield stress of 0.8x800=640 MPa. The designation system for metric nuts is a single or double digit symbol. The numerals approximate 1/100 of the minimum tensile strength in MPa. For example a nut of property class 8 has a minimum tensile strength of 800 MPa. A bolt or screw of a particular property class should be assembled with the equivalent or higher property class of nut to ensure that thread stripping does not occur.	*Maintenance*
Prop-free front	on a longwall machine operated face where the roof supports are concentrated on the gob side of the conveyor, there are no supports between the conveyor and the coalface, this area between coalface and the last row of roof supports is called the 'prop free front'. This system is necessary where armored-flexible-conveyors are used to carry a power-loader machine or shearer.	*Mining*
Proportional Band	The "P" of PID controllers. With proportional band, the controller output is proportional to the error or a change in process variable. Proportional Band = 100/Gain.	*Process Control*
Proportional Band	The change in the controller error signal required to produce a full range change in output due to proportional control action. It is the reciprocal of gain expressed as a percentage - PB(%) = 100/k.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	Industry
Proportional Control	A mode of control using an algorithm which causes the output of a controller to change in a linear fashion as the error signal (process variable—setpoint difference) changes. See also "Control Action, Proportional."	*Electrical Engineering*
Proportional Flow Divider Valve	A valve which directs oil to all its circuits at all times.	*Mechanical, Process, and Operations*
Proportional Gain	This is the "P" part of the PID controller. See gain. (of the controller). (Proportional gain)=100/(Proportional Band).	*Process Control*
Proportional hazards model	[In survival analysis:] A statistical model that asserts that the effect of the study factors (e.g. the intervention of interest) on the hazard rate (the risk of occurrence of an event, such as death, at a point in time) in the study population is multiplicative and does not change over time. Also called: Cox model	*Quality Engineering*
Proportional Integral Derivative	These are variable parameters used in a thermal chamber control system.	*Reliability Engineering*
Proportional Integrative Differential (PID) Control	Proportional Integrative Differential (PID) control is a straightforward, common automatic control method. The name refers to the manipulation of the signal used for feedback. For example, a temperature measurement signal is fed back to a heater. Simpler alternatives are P, PI or PD control.	*Maintenance*
Proportional interest in investee reserves	The proportional interest at the end of the year in the reserves of investees that are accounted for by the equity method.	*Energy*
Proportional Limit	The point on a stress-strain curve at which the straight line proportionality between stress and strain ceases.	*Engineering Physics*
Proportional Limit	The greatest stress which a material is capable of sustaining without deviation from proportionality of stress and strain (Hooke's law). It is expressed in force per unit area, usually pounds per square inch.	*Engineering Physics*
Proportionial flow	In a filter, the condition in which part of the flow passes through the filter element in proportion to pressure.	*Mechanical, Process, and Operations*
Proportioning Band	A temperature band expressed in degrees within which a temperature controller's time proportioning function is active.	*Electrical*
Proportioning Control Mode	A time proportioning controller where the amount of time that the relay is energized is dependent upon the system's temperature.	*Electrical*
Proportioning Control plus Derivative Function	A time proportioning controller with a derivative function. The derivative function senses the rate at which a system's temperature is either increasing or decreasing and adjusts the cycle time of the controller to minimize overshoot or undershoot.	*Electrical*
Proportioning Control plus Integral	A two-mode controller with time proportioning and integral (auto reset) action. The integral function automatically adjusts the temperature at which a system has stabilized back to the set point temperature, thereby eliminating droop in the system.	*Electrical*
Proportioning Control plus Integral	A two-mode controller with time proportioning and integral (auto reset) action. The integral function automatically adjusts the temperature at which a system has stabilized back to the setpoint temperature, thereby eliminating droop in the system.	*Electronic Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Proportioning Control with Integral and Derivative Function	Three mode PID controller. A time proportioning controller with integral and derivative functions. The integral function automatically adjusts the system temperature to the set point temperature to eliminate droop due to the time proportioning function. The derivative function senses the rate of rise or fall of the system temperature and automatically adjusts the cycle time of the controller to minimize overshoot or undershoot.	*General*
Proposal	An offer made by one party to another as a basis for negotiations, prior to the creation of a contract.	*Procurement*
Proposed rates	New electric rate schedule proposed by an applicant to become effective at a future date.	*Energy*
Proposition	a statement expressing the topic of the debate (resolution)	*Management Discussion*
Proppant	Typically fine to medium grained quartz sand or a synthetic material. This is pumped into Eagle Ford Shale wells during the hydraulic fracturing or fracing process. Proppant stays in the formation to hold tiny cracks and channels open and allows oil and gas to flow out around the material. Frac sand is hauled to the Eagle Ford Shale from as far away as Minnesota, where it is mined from stratas of sand which have the ideal properties required for use in oil and gas wells, namely resistance to crushing at extreme pressure and a spherical shape. The two main types of frac sand used in the Eagle Ford Shale are Brady Brown (from the hill country of Texas) and Ottawa White, from states such as Minnesota.	*Petroleum Drilling*
Proppant/propping agent	A granular substance (sand grains, aluminum pellets, or other material) that is carried in suspension by the fracturing fluid and that serves to keep the cracks open when fracturing fluid is withdrawn after a fracture treatment.	*Petroleum Drilling*
Propping agent	An additive to the frack fluid, often sand or other granular substance, that props open micro-fractures of the shale, allowing gas to seep into the well bore.	*Petroleum Drilling*
Props	individual straight support members set between the roof and floor as a support. Also called 'Trees'.	*Mining*
Props and bars	pit props and steel bars used to support the roof on the face. –see also Arms.	*Mining*
Propylene (C3 H6)	Hydrocarbon gas used as a fuel gas in thermal spray processes. Higher flame temperature than hydrogen and propane.	*Paint and Coatings*
Propylene (C_3H_6)	An olefinic hydrocarbon recovered from refinery or petrochemical processes, which is gaseous at standard temperature and pressure. Propylene is an important petrochemical feedstock.	*Energy*
Prorated Bills	The computation of a bill based upon proportionate distribution of the applicable billing schedule. A prorated bill is less than 25 days or more than 38 days.	*Energy*
Proration	The restriction of production by a state regulatory commission, usually on the basis of market demand. In Louisiana the proration of natural gas is allowed to prevent physical and economic waste and to protect correlative rights.	*Petroleum Drilling*
Prospect	A mining property, the value of which has not been proved by exploration.	*Mining*
Prospect	A mining property, the value of which has not been determined by exploration.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Prospecting	The search for an area of probable mineralization; the search normally includes topographical, geological, and geophysical studies of relatively large areas undertaken in an attempt to locate specific areas warranting detailed exploration. Prospecting usually occurs prior to the acquisition of mineral rights.	*Energy*
Prospecting costs	Direct and indirect costs incurred to identify areas of interest that may warrant detailed exploration. Such costs include those incurred for topographical, geological, and geophysical studies; rights of access to properties in order to conduct such studies, salaries, equipment, instruments, and supplies for geologists, including geophysical crews, and others conducting such studies; and overhead that can be identified with those activities.	*Energy*
Prospective study	Study design where one or more groups (cohorts) of individuals who have not yet had the outcome event in question are monitored for the number of such events which occur over time.	*Analysis*
Prospectus	A document filed with the appropriate securities commission detailing the activities and financial condition of a company seeking funds from the public through the issuance of shares.	*Mining*
Prosthesis	Device for replacing a missing body part.	*Material Process*
Protecting of corrosion Protecting the	Protecting of corrosion Protecting the	*Material Process*
Protection Head	An enclosure usually made out of metal at the end of a heater or probe where connections are made.	*Electrical*
Protection Tube	A metal or ceramic tube, closed at one end into which a temperature sensor is inserted. The tube protects the sensor from the medium into which it is inserted.	*General*
Protective coating	A barrier between a metal and its corrosive environment. Protective coating are probably the most widely used and, at the same time, the most controversial material employed for minimizing corrosion of steel and certain other materials.	*Material Process*
Protective Device	Devices And Assets Intended To Eliminate Or Reduce The Consequences Of Equipment Failure. Some Examples Include Standby Plant And Equipment, Emergency Systems, Safety Valves, Alarms, Trip Devices, And Guards.	*Management*
Protective sleeves	A circular "pipe like" sleeve inserted in place of the ball and seats of a top entry ball valve. This protective sleeve remains in place inside the valve during valve installation and ultimate pigging of a pipeline to clear debris from the line before placing the pipeline into service. Once the pipeline has been purged of all debris, the protective sleeve is removed entirely from the ball valve cavity and operating trim (i.e. ball and seats) is then installed for normal service conditions.	*Mechanical*
Protein	A long chain or chains of amino acids linked by peptide bonds.	*Agriculture*
Protein	Complex nitrogenous compounds found in living organisms, and made up of amino acids. The molecular weight varies from 30,000 to over 15,000,000.	*Material Process*
Proto	a type of self contained breathing apparatus used in mines rescue.	*Mining*
Protocol	A set of rules to govern system-to-system use. For example, a protocol might specify communication method, transmission rate, data format or error check method.	*Control Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Protocol	A formal definition that describes how data is to be exchanged.	*Electronic Process*
Proton	Positively charged subatomic particle located in the atomic nucleus.	*Material Process*
Proton induced x-ray emission (PIXE)	Chemical analysis by the use of characteristic x-ray photons produced by exposure to high energy protons.	*Material Process*
Proton precession magnetometer	A geophysical instrument which measures magnetic field intensity in terms of vertical gradient and total field.	*Mining*
Protozoa	single-celled, eucaryotic microorganisms without cell walls. Most protozoa are free-living although many are parasitic. The majority of protozoa are aerobic or facultatively anaerobic heterotrophs.	*Chemical*
Protractor	An instrument used for measuring the size of an angle.	*Math*
Prove	to ascertain the position of a seam of coal when it has been thrown down or up by a fault, or the nature of the strata in a district by boring or sinking.	*Mining*
Proved (measured) reserves, coal	Reserves or resources for which tonnage is computed from dimensions revealed in outcrops, trenches, workings, and drill holes and for which the grade is computed from the results of detailed sampling. The sites for inspection, sampling, and measurement are spaced so closely and the geologic character is so well defined that size, shape, and mineral content are well established. The computed tonnage and grade are judged to be accurate within limits that are stated, and no such limit is judged to be different from the computed tonnage or grade by more than 20 percent.	*Energy*
Proved energy reserves	Estimated quantities of energy sources that analysis of geologic and engineering data demonstrates with reasonable certainty are recoverable under existing economic and operating conditions. The location, quantity, and grade of the energy source are usually considered to be well established in such reserves. Note: This term is equivalent to "Measured Reserves" as defined in the resource/reserve classification contained in the U.S. Geological Survey Circular 831, 1980. Measured and indicated reserves, when combined, constitute demonstrated reserves.	*Energy*
Proven Field	An oil and/or gas field whose physical extent and estimated reserves have been determined.	*Petroleum Drilling*
Proven field	An oil and/or gas field whose physical extent and estimated reserves have been determined.	*Petroleum Drilling*
Proven Reserve	The quantity of oil or gas that is proven to be technically and economically feasible to recover.	*Petroleum Engineering*
Proven Reserves	Those reserves which on the available evidence are virtually certain to be technically and economically producible, such as those having a better than 90% chance of being produced.	*Petroleum Drilling*
Proven reserves	Reserves that have been sampled extensively by closely spaced diamond drill holes and developed by underground workings in sufficient detail to render an accurate estimation of grade and tonnage. Also called "measured reserves."	*Mining*
Proven reserves	Those reserves which on the available evidence are virtually certain to be technically and economically producible (i.e. having a better than 90% chance of being produced).	*Petroleum Drilling*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Provide improved recovery systems	Provide improved recovery systems.	*Energy*
Provider of Last Resort	A legal obligation (traditionally given to utilities) to provide service to a customer where competitors have decided they do not want that customer's business.	*Energy*
Provider performed microscopy, PPM	A special subset of moderately complex tests that may be performed by physicians, dentists, nurse practitioners and midwives, and physician assistants as part of a patient examination.	*Quality*
Proving road	a heading driven in advance to prove a coal seam or in search of old workings.	*Mining*
Proximate analysis	determines, on an as-received basis, the moisture content, volatile matter (gases released when coal is heated), fixed carbon (solid fuel left after the volatile matter is driven off), and ash (impurities consisting of silica, iron, alumina, and other incombustible matter). The moisture content affects the ease with which coal can be handled and burned. The amount of volatile matter and fixed carbon provides guidelines for determining the intensity of the heat produced. Ash increases the weight of coal, adds to the cost of handling, and can cause problems such as clinkering and slagging in boilers and furnaces.	*Energy*
Proximity sensor	Usually a displacement sensor for measuring the varying distance between a housing and a rotating shaft.	*Reliability Engineering*
Proximity Sensor	A sensor with the ability to detect the presence of a metal target, within a specified range, and without making physical contact.	*Electrical Engineering*
Proximity Switch	A switch actuated by the presence of an object near its operating head.	*Equipment*
Proxy	A power of attorney given by the shareholder so that his stock may be voted by his nominee(s) at shareholders' meetings.	*Mining*
Prussian blue	Any of several complex cyanogen compounds of ferric and ferrous iron, used as coloring agent in plastics.	*Material Process*
Prying	The amplification of an external force acting on a bolt by a lever action which can occur when that force is an eccentric tensile load.	*Maintenance*
PSA	See Probabalistic Safety Assessment	*Management*
PSD	Power Spectral Density. The power of random vibration intensity in mean-square acceleration per frequency unit, as g^2/Hz or m^2/s^3.	*Reliability Engineering*
Pseudoplastic Fluid	A pseudoplastic fluid is one whose apparent viscosity or consistency decreases instantaneously with increase in rate of shear i.e., an initial relatively high resistance to stirring decreases abruptly as the rate of stirring is increased.	*Engineering Physics*
psi	pounds per square inch (of pressure) rpm - revolutions per minute	*Mechanical, Process, and Operations*
PSI	Process Safety Information.	*Material Process*
psi (pounds per square inch)	a unit of pressure or pressure drop across a flow resistance. One psi is equivalent to the pressure exerted by 2.31 feet of water column.	*Chemical*
PSI (psi)	Pounds Per Square Inch - Force per unit area exerted against a resisting body.	*Mechanical*
PSI Pounds per square inch	the force per unit area exerted against a	*General Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
PSIA	Pounds per square inch absolute. Pressure referenced to a vacuum.	*Electrical*
PSID	Pounds per square inch differential. Pressure difference between two points.	*Electronic Process*
PSIG	Pound per square inch gage. Pressure referenced to ambient air pressure.	*Electronic Process*
psig (pounds per square inch (gauge))	0 psig = 14.696 psia (psi absolute) = 1.0 atmosphere.	*Chemical*
PSIP	Periodic Smoke Inspection Program	*Petro-Chemical Abbreviations*
PSIS	Pounds per square inch standard. Pressure referenced to a standard atmosphere.	*Electrical*
PSL	'Product Specification Level.' As specified in API Spec 6A. A tiered progression of testing and inspection requirements for materials and equipment prescribing different levels of service.	*Petroleum Engineering*
PSL-1	'Product Specification Level 1'. The minimum level of testing and inspection required for material and equipment as described in API Spec 6A.	*Petroleum Engineering*
PSL-2	'Product Specification Level 2'. A level of testing and inspection for material and equipment alternate to (higher and more stringent) and in addition to PSL 1 requirements as described in API Spec 6A.	*Petroleum Engineering*
PSL-3	'Product Specification Level 3'. A level of testing and inspection for material and equipment alternate (higher and more stringent) to and in addition to PSL 1 and 2 requirements as described in API Spec 6A.	*Petroleum Engineering*
PSL-3G	'Product Specification Level 3G.' A level of testing and inspection for material and equipment described in API Spec 6A as PSL 3, with the addition requirement of gas testing.	*Petroleum Engineering*
PSL-4	'Product Specification Level 4.' Includes the API 6A as well as requirements for PSL 3G, additional restrictions on material qualification and heat treating, as well as the prohibition of welding (except for overlay/inlay of corrosion resistant material).	*Petroleum Engineering*
PSPMW	See: Pulp, Sulfite and Paper Mill Workers; International Brotherhood of (AFL-CIO)	*Industrial Relations*
PSSR	Pre-Startup Safety Review.	*Material Process*
Psychrometer	An instrument used primarily to measure the wet-bulb temperatures. Either a sling or a mechanically aspirated type of psychrometer is acceptable provided the instrument is properly shielded from radiation and the air across the wick is limited to approximately 1,000 ft./min.	*Facility Engineering*
Psychrometer, sling	A psychrometer, containing matched dry- and wet-bulb thermometers suitable mounted for swinging through the atmosphere, for simultaneously indicating dry- and wet-bulb temperatures. The thermometer shall be so mounted as to act independently and to face the air current during swinging. See recording hygrometer.	*Material Process*
PT	Proficiency Testing	*Quality*
PTA	See: Postal Transport Association; National (AFL-CIO)	*Industrial Relations*
PTB	pounds per 1000 barrels	*Petro-Chemical Abbreviations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
PTFE	PTFE, Polytetrafluoroethylene, is a synthetic fluoropolymer of tetrafluoroethylene which finds numerous applications. PTFE has one of the lowest coefficients of friction against any solid. Because of its chemical inertness, PTFE cannot be cross-linked like an elastomer. Therefore it has no "memory" and is subject to creep. This is advantageous when used as a seal, because the material creeps a small amount to conform to the mating surface. It is widely used as a thread seal tape in plumbing applications, largely replacing paste thread dope.	*Material Engineering*
PTIT	Petroleum Technical Institute of Thailand	*Petro-Chemical Abbreviations*
PTO	Power take-off	*Petro-Chemical Abbreviations*
PTT	Petroleum Authority of Thailand	*Petro-Chemical Abbreviations*
p-type Semiconductor	A semiconductor for which the predominant charge carriers responsible for electrical conduction are holes. Normally, acceptor impurity atoms give rise to the excess holes.	*Engineering Physics*
p-type semiconductor	Extrinsic semiconductor in which the electrical conductivity is dominated by positive charge carriers.	*Material Process*
Public authorities	Electricity supplied to municipalities, divisions, or agencies of state and Federal governments, usually under special contracts or agreements that are applicable only to public authorities.	*Energy*
Public Authority Service to Public Authorities	Electric services supplied to public entities such as municipalities or divisions of state or federal governments.	*Energy*
Public Key Infrastructure	A combination of standards, protocols, and software that creates, edits, and revokes digital public key certificates.	*Electrical Engineering*
Public street and highway lighting	Electricity supplied and services rendered for the purpose of lighting streets, highways, parks, and other public places; or for traffic or other signal system service, for municipalities or other divisions or agencies of State or Federal governments.	*Energy*
Public Utilities Commission	The state regulatory agency that governs retail utility rates and practices and, in many cases, issues approvals for the construction of new generation and transmission facilities. On average, roughly 90 percent of a utility's operations are regulated by the state commission.	*Energy*
Public utility	Enterprise providing essential public services, such as electric, gas, telephone, water, and sewer under legally established monopoly conditions.	*Energy*
Public Utility	A utility operated by a non-profit governmental or quasi-governmental entity. Public utilities include municipal utilities, cooperatives, and power marketing authorities.	*Energy*
Public Utility Commissions	State regulatory agencies that provide oversight, policy guidelines and direction to electric public utilities.	*Energy*
Public utility district	Municipal corporations organized to provide electric service to both incorporated cities and towns and unincorporated rural areas.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Public Utility Holding Company Act of 1935 (PUHCA)	This act prohibits acquisition of any wholesale or retail electric business through a holding company unless that business forms part of an integrated public utility system when combined with the utility's other electric business. The legislation also restricts ownership of an electric business by non-utility corporations.	*Energy*
Public Utility Holding Company Act of 1935 (PUHCA)	PUHCA was enacted by the U.S. Congress to regulate the large interstate holding companies that monopolized the electric utility industry during the early 20th century.	*Energy*
Public Utility Regulatory Policies Act of 1978	The Public Utility Regulatory Policies Act of1978, passed by the U.S. Congress. This statute requires States to implement utility conservation programs and create special markets for co-generators and small producers who meet certain standards, including the requirement that States set the prices and quantities of power the utilities must buy from such facilities.	*Energy*
Public Utility Regulatory Policies Act of 1978 (PURPA)	PURPA promotes energy efficiency and increased use of alternative energy sources by encouraging companies to build cogeneration facilities and renewable energy projects using wind power, solar energy, geothermal energy, hydropower, biomass, and waste fuels.	*Energy*
Public Utility Regulatory Policies Act of 1978 (PURPA)	The federal act outlines requirements for state utility commissions, electric utilities, independent power producers and certain federal regulatory agencies to encourage the use of alternative energy sources in the generation of electric power. The act created a market for independent power producers called qualifying facilities (QFs), requiring utilities to buy power from certain power providers.	*Energy*
Public Utility Regulatory Policies Act (PURPA) of 1978	One part of the National Energy Act, PURPA contains measures designed to encourage the conservation of energy, more efficient use of resources, and equitable rates. Principal among these were suggested retail rate reforms and new incentives for production of electricity by cogenerators and users of renewable resources. The Commission has primary authority for implementing several key PURPA programs.	*Energy*
Public water system	A system for providing the public with water for human consumption (through pipes or other constructed conveyances) that has at least 15 service connections or regularly serves at least 25 individuals.	*Petroleum Drilling*
Publication Arbiter	The role of the Publication Arbiter relates specifically to the publication of Cochrane Reviews, and was established to help people to reach agreement in areas of dispute between the editorial teams of Cochrane Review Groups (i.e. of the appropriate home for a specific Cochrane Review), and between reviewers and their editorial team (e.g. when reviewers are unwilling to make changes suggested by the editors). The Publication Arbiter does not replace The Cochrane Collaboration's Ombudsman, whose role is to help with disputes and conflict more generally. Also called: Arbiter, Publication	*Quality Engineering*
Publication bias	See Reporting bias	*Quality Engineering*
Publicly owned electric utility	A class of ownership found in the electric power industry. This group includes those utilities operated by municipalities and State and Federal power agencies.	*Energy*
Publicly Owned Utilities	Municipal utilities (utilities owned by branches of local government) and/or co-ops (utilities owned cooperatively by customers).	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Publishing Policy Group (PPG)	The Publishing Policy Group (PPG) is a sub-group of the CCSG. It is responsible for providing advice on the contents of the Collaboration's products and setting the principles for the pricing, distribution, and marketing arrangements for Cochrane products. Where principles have been established, day-to-day management of these issues may be delegated to The Cochrane Collaboration's Chief Executive Officer (CEO). Also called: PPG	*Quality Engineering*
PubMed	A free access Internet version of MEDLINE also including records from before 1966 (old MEDLINE), some very recent records and some other life science journals.	*Quality Engineering*
Pucking or Pucks	the lifting of the floor due to the pressure or weight of the strata (S. Wales).	*Mining*
PUD	See Public Utility District	*Energy*
Puddle	Clay or the like mixed with water and tempered, used as a waterproof lining for the walls of canals, ditches, etc. To make (clay or the like) into puddle.	*Civil Engineering*
Puddle	Clay or the like mixed with water and tempered, used as a waterproof lining for the	*Civil Engineering*
Puddock	cast iron plate forming the crossing of flanged hutch rails. (Scot.).	*Mining*
Puffing Up	a swelling of the floor of the mine due to the action of creep.	*Mining*
Puffler	a man in charge of a coal face. (War.), (S. Staffs.).; or a senior haulage man (Haydock, Lancs.).	*Mining*
Pug	crushed strata or clay; or the coal left sticking to the floor by the longwall coal-cutting machine. (Scot).	*Mining*
Pugmill	a chamber in which water and soil are mixed together. Typically mixing is aided by an internal mechanical stirring/kneading device.	*Chemical*
Pugs	a layer of hard coal in a free coal seam. Found in the Main coal seam of Lanarkshire. (Scot.).	*Mining*
PUHCA	See Public Utility Holding Company Act of 1935	*Energy*
PUL	premium unleaded gasoline	*Petro-Chemical Abbreviations*
Pull back	Device to bring the press platen to the open position by operation of hydraulic cylinder. Also used to operate injection devices.	*Material Process*
Pull or draw	the area affected by subsidence at the surface beyond the edges of the workings.	*Mining*
Pull system	A system for controlling work flow and priorities whereby the processes needing materials (or attention) draw them from the feeding processes or storage areas as needed, typically using "kanban" signals - in contrast to "push" systems in which material is processed, then pushed to the next stage whether or not it is really needed.	*Quality*
Pull up	Delaminating of laminated material when fabricated by punching.	*Material Process*
Pull-Down Resistor	A resistor connected across the output of a device or circuit to hold the output equal to or less than the zero input level. Also used to lower output impedance of digital or analog devices. Usually connected to a negative voltage or ground.	*Electrical Engineering*
Puller	'Sylvester' prop withdrawer.	*Mining*

Term	Definition	*Industry*
Pulley	A wheel, usually cylindrical, but polygonal in cross section with its center bored for mounting on a shaft.	*Manufacturing*
Pulley brae	a self-acting incline, a 'cousie'. (Scot.).	*Mining*
Pulley-frame	see Headgear.	*Mining*
Pulleying	Overwinding by drawing the cage or kibble into the headgear.	*Mining*
Pulleys	the wheels placed above a pit over which the ropes for drawing coals, etc., are passed.	*Mining*
Pull-In Voltage	Refers to the power required to overcome internal forces in the solenoid valve (spring and friction) and to reach a latched condition. Latching is achieved when the plunger (or moving core) has moved through its stroke as a result of the solenoid field and becomes magnetically latched to the pole (or fixed core). The time it takes to move the plunger is called the pulse duration, which is a high power (40-70 W) spike for a short period of time (200-500 ms).	*Mechanical*
Pull-out	Pull-out occurs when particles are plucked from the coating during machining or grinding. Also occurs during metallographic preparation. It is sometimes confused with porosity.	*Paint and Coatings*
Pullulate	To teem or swarm, or to breed or bud	*Breakroom*
Pull-Up Resistor	A resistor connected across the output of a device or circuit to hold the output voltage equal to or greater than the input transition level of a digital device. Usually connected to the positive voltage or plus supply.	*Electrical Engineering*
PULP	A name for gold in the mining process.	*Mining*
Pulp	Fibrous cellulosic mass into which wood or vegetable products may be converted by prolonged cooking to remove noncellulosic matter.	*Material Process*
Pulp chips	Timber or residues processed into small pieces of wood of more or less uniform dimensions with minimal amounts of bark.	*Energy*
Pulp wood	Roundwood, whole-tree chips, or wood residues.	*Energy*
Pulping liquor (black liquor)	The alkaline spent liquor removed from the digesters in the process of chemically pulping wood. After evaporation, the liquor is burned as a fuel in a recovery furnace that permits the recovery of certain basic chemicals.	*Energy*
Pulp wood	Wood used in the manufacture of paper, fiberboard, or other wood fiber products.	*Forestry*
Pulsation	Rhythmical throbbing or vibrating. In pipelines, flow or pressure oscillation which is identically repeated in every fixed time interval. Pulsation is an inherent characteristic of reciprocating gas compressors and reciprocating liquid pumps. Pressure and flow pulsations interact with piping systems to cause vibration, metering errors, and potential equipment damage.	*Mechanical*
Pulse	A momentary sharp change in current, voltage, or other quantity that is normally constant. A pulse is characterized by a rise and fall and has a finite duration.	*Electrical Engineering*
Pulse	A food legume; also the seed of a food legume.	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pulse and Hold	A technique for increasing performance of solenoid valves by minimizing power consumption and heat generation. The valve is opened with a pulse of DC power and held open at reduced power	*Mechanical*
Pulse Width Modulation	An output in the form of duty cycle which varies as a function of the applied measurand.	*Electrical*
Pulse-Code Modulation (PCM)	The conversion of an analog signal (e.g. audio) into digital, binary (0 or 1), coded pulses, decreasing noise susceptibility. PAM, PFM and PWM are examples of PCM methods.	*Electrical Engineering*
Pulse-Code Modulation (PCM)	is the conversion of an analog signal (e.g. audio) into digital, binary (0 or 1), coded pulses, decreasing noise susceptibility. PAM, PFM and PWM are examples of PCM methods.	*Electrical Engineering*
Pulsed Logic	A signal modification that produces output independently of input signal duration. Pulse duration (dwell) is usually adjustable. Also referred to as one-shot logic. Pulsed logic may be immediate or delayed.	*Electrical Engineering*
Pulse-Frequency Modulation	A pulse modulation technique in which the frequency is varied with the input signal amplitude. The duty cycle of the modulated signal does not change. Because it is always a square wave with changing frequency, PFM is also referred to as square-wave FM.	*Electrical Engineering*
Pulse-Frequency Modulation	A pulse modulation technique in which the frequency is varied with the input signal amplitude. The duty cycle of the modulated signal does not change. Because it is always a square wave with changing frequency, PFM is also referred to as square-wave FM.	*Electrical Engineering*
Pulverized coal	is a coal that has been crushed to a fine dust in a grinding mill. It is blown into the combustion zone of a furnace and burns very rapidly and efficiently.	*Energy*
Pumice	An abrasive powder made from a porous volcanic stone, pumice stone.	*Material Process*
Pump	A rotary or reciprocating device using mechanical energy to propel liquids thru pipelines or to draw liquids from tanks or sumps by suction.	*Mechanical*
Pump control valve	A ball valve that is not meant for on-off service, but whose specific function is to control flow and prevent cavitation in pumps on liquid pipelines.	*Mechanical*
Pump tree	the pipes containing the pumping rods in a shaft sinking pump. Usually made of cast iron with flanges. Called 'pump trees' as they were originally made by boring out the trunks of trees.	*Mining*
Pump, variable displacement	A pump in which the displacement per cycle can be varied.	*Oil Analysis*
Pumpability	The low temperature, low shear stress-shear rate viscosity characteristics of an oil that permit satisfactory flow to and from the engine oil pump and subsequent lubrication of moving components.	*Lubrication*
Pumped storage	see Electricity storage.	*Electrical*
Pumped-storage hydroelectric plant	A plant that usually generates electric energy during peak load periods by using water previously pumped into an elevated storage reservoir during off-peak periods when excess generating capacity is available to do so. When additional generating capacity is needed, the water can be released from the reservoir through a conduit to turbine generators located in a power plant at a lower level.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Pumper	An oilfield gauger who checks on producing wells and maintains production equipment. Gaugers or pumpers prepare oil for sale by removing sediment and water (BS&W), keep pumpjacks, compressors and other equipment running and file production reports on the amount of oil and natural gas produced by each well they are responsible for. Contract pumpers are self employed and do contract gauging work for oil and gas companies, while other pumpers work as direct employees of oil companies.	*Petroleum Drilling*
Pumping station or Compression station	These pump natural gas through pipelines at a rate of about 700 million cubic feet per day. They tend to be situated 50 to 100 miles apart.	*Petroleum Drilling*
Pumping System	Includes pump and electrical lines.	*Petroleum Engineering*
Pumping Test	Test conducted to determine aquifer or well characteristics.	*Petroleum Engineering*
Pumping Water Level	The water level in a well during pumping, usually measured from the ground surface.	*Petroleum Engineering*
Punch	Generally the upper member of a tool set which develops the design of the top side of the forging.	*Metallurgy*
Punch	To puncture or perforate a material by forcing a tool or die through it.	*Material Process*
Punch and thirl	a type of pillar and stall system of working the coal (S. Staffs.).	*Mining*
Punch mine	a type of small drift mine used to recover coal from strip-mine high walls or from small, otherwise uneconomical, coal deposits. A shaft mine is driven vertically to the coal deposit. A slope mine is driven at an angle to reach the coal deposit.	*Energy*
Punch props	short props placed at the front of an undercut to protect the hewer when working. In later years it became a short prop used for any purpose.	*Mining*
Puncheon	a large prop.	*Mining*
Punching	Fabrication of parts from sheets by use of punching dies.	*Material Process*
Punching	Method of producing components, particularly electrical parts, from flat sheets of rigid or laminated plastics by punching out shapes by means of a die and punch.	*Metallurgy*
Punching stock	A special flexible material for punching operations.	*Material Process*
Pupa	The resting, inactive, nonfeeding instar in all holometabolous insects; the stage intermediate between the larva and the adult.	*Forestry*
Purchase Order	The Prime Document Raised By An Organization, And Issued To An External Supplier, Ordering Specific Materials, Parts, Supplies, Equipment Or Services.	*Management*
Purchase Requisition	The Prime Document Raised By User Departments Authorizing The Purchase Of Specific Materials, Parts, Supplies, Equipment Or Services From External Suppliers.	*Plant Engineering*
Purchase Requisition (See Also Requisitioner)	A written or computerized request to the purchasing department authorizing a request for the purchase of goods or services from suppliers.	*Procurement*
Purchase-contract imports of uranium	The amount of foreign-origin uranium material that enters the United States during a survey year as reported on the "Uranium Industry Annual Survey (UIAS), Form EIA-858, as purchases of uranium ore, U_3O_8, natural UF_6, or enriched UF_6. The amount of foreign-origin uranium materials that enter the country during a survey year under other types of contracts, i.e., loans and exchanges, is excluded.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Purchased	Receipts into transportation, storage, and/or distribution facilities within a state under gas purchase contracts or agreements whether or not billing or payment occurred during the report year.	*Energy*
Purchased power	Power purchased or available for purchase from a source outside the system.	*Energy*
Purchased Power Adjustment	A clause in a rate schedule that provides for adjustments to a bill when energy from another system is acquired.	*Energy*
Purchases of fuel	Purchases of fuel	*Energy*
Purchasing	One of the major business functions of any organization. The function typically is responsible for acquisition of required materials, services, and equipment used in the organization	*Procurement*
Pure oxide	Ceramic compound with relatively low impurity level, typically less than 1 wt%.	*Material Process*
Pure pumped-storage hydroelectric plant	A plant that produces power only from water that has previously been pumped to an upper reservoir.	*Energy*
Pure stand	A timber stand in which at least 75 percent of the trees in the main crown canopy are of a single species.	*Forestry*
Purging	The displacement during welding, by an inert or neutral gas, of the air inside the piping underneath the weld area in order to avoid oxidation or contamination of the underside of the weld. Gases most commonly used are argon, helium, and nitrogen (the last is principally limited to austenitic stainless steel). Purging can be done within a complete pipe section or by means of purging fixtures of a small area underneath the pipe weld.	*Maintenance and Repair*
Purging	In extrusion of injection molding, the cleaning of one color or type of material from the machine by forcing it out with the new color or material to be used in subsequent production, or with another compatible purging material.	*Engineering Physics*
Purification	Water purification is important for continued efficiency and for protecting your valuable equipment. Deposits can accumulate in a very short time when steam purity is poor. These deposits, often rough or uneven at the surface, increase resistance to the flow of steam. Distortion of steam passages alters steam velocities and pressure drops, reducing the capacity and efficiency of the steam system. Evaporation in a boiler can cause impurities to concentrate, which hinders heat transfer and may cause hot spots. See also Maintenance.	*Industrial*
PURPA	See Public Utility Regulatory Policies Act of 1978	*Energy*
Push	Same as Understeer or Tight. Typically describes a cornering condition where the front tires lose adhesion before the rear tires, resulting in a car that feels like it wants to go straight. Solutions include adjustments to tire pressure; increasing the angle of the front wings to press the tires harder to the ground; softening the front anti-roll bar setting or spring rates in order to provide more grip; or by making changes to reduce grip at the rear. such as reducing the rear wing angle or stiffening the rear anti-roll bar setting or spring rates. Here is an easy way to remember whether a car is loose (oversteer) or tight (understeer): If the front end hits the wall, it was understeer. If the rear end hits the wall, it was oversteer.	*NASCAR*
Push Button Station	An electrical enclosure which houses Push Button.	*Equipment*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Push-Down-To-Close	A term used to describe a linear or globe style valve that uses a direct acting plug and stem arrangement. The plug is located above the seat ring. When the plug is pushed down, the plug contacts the seat and the valve closes. Note: Most control valves are of this type.	*Industrial Engineering*
Push-Down-To-Open	A term used to describe a linear or globe style valve that uses a reverse acting plug and stem arrangement. The plug is located below the seat ring. When the plug is pushed down, it moves away from the seat and the valve opens.	*Industrial Engineering*
Pusher	A powered mechanical device mounted on or adjacent to a conveyor that, when activated, will transfer material handled from or to the conveyor.	*Equipment*
Pusher	See Toolpusher.	*Petroleum Drilling*
Pusher seal	A mechanical seal in which the secondary seal is pushed along the shaft or sleeve to compensate for misalignment and face wear.	*Lubrication*
Pussywood	prop ends and other off-cuts of timber taken home for firewood.	*Mining*
Put	An option, but not an obligation to sell. Nonferrous metal producers often buy puts to lock in a price for their metal. It is akin to a price insurance policy. For example, if a producer uses put options to lock in a price of 90 cents per pound and the price falls to 85 cents per pound, he would continue to make 90 cents per pound (See Options and Call).	*Metallurgy*
Put	An option to sell a stock at an agreed upon price within a specified time. The owner can present his put to the contracting broker at any time within the option period and compel him to buy the stock.	*Mining*
Putter	man or boy who conveyed the tubs to and from the workings and the main haulage level. A young Putter was called a 'foal'. (N. East).	*Mining*
Put-up, Put-down,	upthrow and downthrow faults (N. Staffs.).	*Mining*
PUWER	Acronym for Provision and Use of Work Equipment Regulations 1998 (PUWER) which came into force on 5 December 1998 in the late afternoon while most were focused on other activities and a few were having coffee and bisquits.	*Reliability Engineering*
PV	Photovoltaic	*Energy*
PV or Process Variable	What you are trying to control: temperature, pressure, flow, composition, pH, etc. Also called the measurement.	*Process Control*
PV Tracking	An option on many controllers. When a control loop is in MANUAL, with PV Tracking turned on, the controller setpoint will follow the PV. When the loop is returned to AUTO, there is no sudden movement of the process, because the PV is already at setpoint. If PV Tracking is turned off, returning to AUTO will drive the loop to its previous setpoint.	*Process Control*
PVC	See Photovoltaic Cell; polyvinyl chloride	*Energy*
PVCs that convert sunlight directly into energy	A method for producing energy by converting sunlight using photovoltaic cells (PVCs) that are solid-state single converter devices. Although currently not in wide usage, commercial customers have a growing interest in usage and, therefore, DOE has a growing interest in the impact of PVCs on energy consumption. Economically, PVCs are competitive with other sources of electricity.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
PVD	See Physical Vapor Deposition	*Paint and Coatings*
PVL	permanent viscosity loss	*Petro-Chemical Abbreviations*
PWA	See: Public Works Administration	*Industrial Relations*
PWR	See Pressurized-Water Reactor	*Energy*
Pycnial stage (pycnium)	A flaskshaped spore stage of the rust fungi; oozes out spores in a sticky matrix. [1]	*Forestry*
Pycnidium	An open-pored, flaskshaped fruiting structure in which asexual spores called conidia are produced.	*Forestry*
Pylon	A steel tower or mast carrying high-tension lines, telephone wires, or other cables and lines.	*Civil Engineering*
Pyralin	A trade name for nitrocellulose plastics.	*Material Process*
Pyramiding	The use of increased buying power to increase ownership arising from price appreciation.	*Mining*
Pyridine (N CHCH CHCH CH) Colorless liquid	A useful catalyst for such reactions as urea aldehyde or phenol aldehyde condensations.	*Material Process*
Pyrite	A hard, heavy, shiny, yellow mineral, being a sulfide of iron. It is sometimes called "fools gold".	*Mining*
Pyrite	A hard, heavy, shiny, yellow mineral, FeS2 or iron disulfide, generally in cubic crystals. Also called iron pyrites, fool's gold, sulfur balls. Iron pyrite is the most common sulfide found in coal mines.	*Mining*
Pyrolysis	The thermal decomposition of biomass at high temperatures (greater than 400° F, or 200° C) in the absence of air. The end product of pyrolysis is a mixture of solids (char), liquids (oxygenated oils), and gases (methane, carbon monoxide, and carbon dioxide) with proportions determined by operating temperature, pressure, oxygen content, and other conditions.	*Energy*
Pyrolysis	The decomposition of a complex organic substance to one of simpler structure by means of heat in the absence of others. Some polymers will depolymerize in the presence of excessive temperatures, either to polymers of lower molecular weight, or, in some cases, back to the monomers from which they were derived.	*General*
Pyrolysis gasoline	A by-product from the manufacture of ethylene by steam cracking of hydrocarbon fractions such as naphtha or gas oil.	*Petroleum Engineering*
Pyrometer	An instrument for measuring heat. The type most widely used in plastics processing equipment consists of a thermocouple and a millivoltmeter for measuring the voltage, which is proportional to the temperature of the junction.	*Engineering Physics*
Pyrophoric iron sulfide	A substance typically formed inside tanks and processing units by the corrosive interaction of sulfur compounds in the hydrocarbons and the iron and steel in the equipment. On exposure to air (oxygen) it ignites spontaneously.	*Petroleum Engineering*
Pyroxylin	Nitrocellulose of the types used in plastics, films, and coatings. Loosely used to designate pyroxylin plastics.	*Material Process*
Pyrrhotite	A bronze-colored, magnetic iron sulfide mineral.	*Mining*

Please see the Appendix for further illustration

Term	Definition	Industry
PZEV	Partial zero emitting vehicle	*Petro-Chemical Abbreviations*
PZT	Piezoelectric transducer is a lead—zirconate–titanate ceramic.	*Material Process*
Q	The name "Q" applies to all other individuals of the Q Continuum.	*Break Room*
QAG	See Quality Advisory Group (QAG)	*Quality Engineering*
Qatar	(1961-present)	*Energy*
QC acceptability criteria	The term used by CLIA to indicate the decision criteria or control rules used to monitor test performance during a run of patient specimens.	*Quality*
QC planning process, QC Design, quality planning process	The steps to be followed to select control rules, N, and a Total QC strategy that are appropriate for the quality needed and the imprecision and inaccuracy observed for a laboratory test.	*Quality*
QC, Quality control	A generic term that refers to the monitoring and assessment of laboratory testing processes to identify problems and maintain performance.	*Quality*
QF	See Qualifying Facility	*Energy*
QPL	Qualified Products List (US Military)	*Petro-Chemical Abbreviations*
QS 9000	A common quality certification program for auto industry suppliers that includes ISO 9000 as a base-line.	*Quality*
QSE	Qualified Scheduling Entity	*Energy*
Quad	Quadrillion Btu 10^{15} Btu.	*Energy*
Quad	A structural unit employed in cables, consisting of four separately insulated conductors twisted together.	*Electrical*
Quad	A quadrillion of BTU's. This unit of measurement is used in connection with energy consumption. A barrel of crude oil contains 5.8 million BTU's. Natural gas contains about one million BTU's per MCF.	*Petroleum Drilling*
Quadragesimo Anno	the title of an encyclical letter of Pope Pius XI dealing with the reconstruction of the social order. The encyclical dealt not only with the criticism of socialism by the church but also condemned laissez faire capitalism.	*Industrial Relations*
Quadrature motion	(Or s*ide* or *lateral* motion or *crosstalk*), any motion perpendicular to the reference axis. Shakers are supposed to have zero quadrature motion.	*Reliability Engineering*
Quadrature sensitivity	(Or s*ide* or *lateral* motion or *crosstalk* sensitivity) of a vibration sensor is its sensitivity to motion perpendicular to the sensor's principal axis. Commonly expressed in % of principal axis sensitivity.	*Reliability Engineering*
Quadrillion	The quantity 1,000,000,000,000,000 (10 to the 15th power).	*Energy*
Qualification test	An investigation, independent of a purchasing function, that is performed on a product to determine whether or not the product conforms to all of the requirements of a particular specification. This is generally done by a third independent party to qualify a product for a specific application.	*Mechanical*
Qualifications	the natural fitness, ability, or endowments a person has, or demonstrates, for a particular office or job.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Qualified Welder	Also referred to as 'Certified Welder'. A person performing welding in accordance with a given Welding Procedure Specification. A sample weld has passed all required examinations required for acceptance. Welder qualification requires that the welder perform welding, using the procedure methods and equipment within specified time periods, and maintains required records of this performance. Example specification:- ASME SEC. IX ART. III QW-304 and QW-305.	*Petroleum Engineering*
Qualified Welding	A defined Welding Procedure Specification, referencing the 'Procedure Qualification Record' which proves that the procedure results in the desired properties in the weld metal, heat area zone and base metal after any post weld heat treatment is performed.	*Petroleum Engineering*
Qualifying Facility	A cogeneration of small production facility that meets criteria established by the Federal Energy Regulatory Commission.	*Energy*
Qualifying facility (QF)	A cogeneration or small power production facility that meets certain ownership, operating, and efficiency criteria established by the Federal Energy Regulatory Commission (FERC) pursuant to the Public Utility Regulatory Policies Act (PURPA).	*Energy*
Qualifying	Qualifying determines starting positions, based on each driver's best lap time during the qualifying session or sessions. Each car is timed, and the starting grid is determined by the order of fastest cars.	*NASCAR*
Qualitative reasoning	Qualitative reasoning is a relatively new field of study stemming from fundamental research in qualitative process theory, qualitative physics, common sense knowledge and naive physics	*Material Process*
Quality	The totality of characteristics of an entity that bear on its ability to satisfy stated and implied needs. Degree to which product characteristics conform to the requirements placed upon that product. Quality most assuredly refers to a system or product that is consistent in mission, fit and form. This includes reliability, maintainability, and safety. The totality of features and characteristics of a product or service that bear on its ability to satisfy given needs; fitness for use; degree of variation from the target (nominal) value; and conformance to requirements. The term has been used referring to the non-quantifiable point-level excellence of a system or process. While sometimes used interchangeably with the term reliability, quality refers to the characteristics of a product at one point in time, while reliability refers to the characteristics of a product over its entire lifetime.	*Quality*
Quality Advisory Group (QAG)	The Quality Advisory Group is an advisory group to the CCSG. Its remit is to co-ordinate activities aimed at improving the quality of Cochrane Reviews; to identify and follow up issues of quality relevant to Cochrane Reviews; to provide advice on the development of standards and tools for assessing the quality of Cochrane Reviews; to suggest priorities for quality activities relevant to Cochrane Reviews; and to help facilitate quality activities. Also called: QAG	*Quality Engineering*
Quality assessment	CLIA's term for the overall system for assuring the quality of laboratory test results. Includes the monitoring and assessment of general laboratory systems, as well as pre-analytic, analytic, and post-analytic systems, with the objective of identifying problems, making corrections, and improving the quality of testing services.	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Quality assurance	Planned and systematic activities to provide adequate confidence that requirements for quality will be met. [CLSI, ISO]	*Quality*
Quality assurance	Planned regular and/or preventive actions which are used to ensure that materials, products, or services will meet specified requirements.	*Mechanical*
Quality Bonus	a bonus or reward paid to individuals based on the quality of their work.	*Industrial Relations*
Quality Control	All aspects of the control of the spraying process including the surface preparation, spraying, control of thickness deposited and the oxide and porosity levels, surface finish and NDE checks as specified.	*Paint and Coatings*
Quality Control	Measures such as inspection, testing and engineering which are used to oversee and positively influence quality.	*Reliability Engineering*
Quality function deployment (QFD)	A customer-focused approach to quality improvement in which customer needs (desired product or service characteristics) are analyzed at the design stage and translated into specific product- and process-design requirements for the supplier organization. Targeted customer needs may include product features, cost, durability, and other product characteristics.	*Quality*
Quality management	All activities of the overall management function that determine quality policy objectives and responsibilities; and implement them by means such as quality planning, quality processes, quality control, quality assessment, and quality improvement within the quality system. [CLSI, ISO]	*Quality*
Quality or grade (of coal)	An informal classification of coal relating to its suitability for use for a particular purpose. Refers to individual measurements such as heat value, fixed carbon, moisture, ash, sulfur, major, minor, and trace elements, coking properties, petrologic properties, and particular organic constituents. The individual quality elements may be aggregated in various ways to classify coal for such special purposes as metallurgical, gas, petrochemical, and blending usages.	*Energy*
Quality planning model	Term used to describe an equation that shows the additive effects of different factors that influence the variation of a test result. The analytical model relates the imprecision and inaccuracy of the measurement procedure and the sensitivity of the control procedure to the total analytical error that is allowable. The clinical model includes the analytical components plus pre-analytical components, such as within-subject biological variation, etc., and relates them to the clinical decision interval or gray zone for interpreting a test result.	*Quality*
Quality Rate	Used In The Calculation Of Overall Equipment Effectiveness. The Proportion Of The Output From A Machine Or Process Which Meets Required Product Quality Standards. Normally Specified As A Percentage.	*Plant Engineering*
Quality score	A value assigned to represent the validity of a study either for a specific criterion, such as concealment of allocation, or overall. Quality scores can use letters (A, B, C) or numbers. See also: Bias prevention	*Quality Engineering*
Quality system	The organizational structure, resources, processes, and procedures needed to implement quality management. [CLSI, ISO]	*Quality*
Quantity Discount	A discount in unit price determined by either purchase quantity or dollar amount.	*Procurement*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Quantity wires charge	A fee for moving electricity over the transmission and/or distribution system that is based on the quantity of electricity that is transmitted.	*Energy*
Quantum dot	Semi conducting material with three thin dimension of the scale associated with a quantum well.	*Material Process*
Quantum Mechanics	The science governing the behavior of extremely small particles such as electrons	*Physics*
Quantum Numbers	Four numbers used to classify individual electrons based on their energy, cloud shape, orientation of cloud, and spin	*Physics*
Quantum well	Thin layer of semiconducting material in which the wavelike electrons are confined within the layer thickness.	*Material Process*
Quantum wire	Semiconducting material with two thin dimensions of the scale associated with quantum well.	*Material Process*
Quarter horse	See American Quarter Horse.	*Agriculture*
Quartz	A mineral occurring naturally as hexagonal crystals, commonly colorless and transparent, silicon dioxide. It is used ground as a filler.	*Material Process*
Quartz	**C**ommon rock-forming mineral consisting of silicon and oxygen.	*Mining*
Quartzite	A metamorphic rock formed by the transformation of a sandstone by heat and pressure.	*Mining*
Quasicrystal	Material with a structural sate intermediate between traditional crystalline and noncrystalline solids.	*Material Process*
Quasi-random allocation	Methods of allocating people to a trial that are not random, but were intended to produce similar groups when used to allocate participants. Quasi-random methods include: allocation by the person's date of birth, by the day of the week or month of the year, by a person's medical record number, or just allocating every alternate person. In practice, these methods of allocation are relatively easy to manipulate, introducing selection bias. See: Random allocation, Randomisation	*Quality Engineering*
Quaternary Ammonium Compounds	A class of chemicals used as disinfectant, antistat and softening agents (Quats).	*Chemistry*
Quaternion	A system of representing attitude by measuring angle of aircraft center line with respect to three orthogonal axes plus rotation about centerline; quaternions are used over Euler angles (pitch, roll, yaw) when pitch can approach 90deg because of a singularity on Euler angles at 90deg; discrete-time computations using quaternions can run more slowly than those with Euler angles while producing results of the same accuracy.	*Aeronautical Engineering*
Queen's University-Industrial Relations Centre	Industrial Relations Centre, Queen's University, Dunning Hall, Kingston, Ontario, Canada.	*Industrial Relations*
Quench	A process of shock cooling thermoplastic materials from the molten state.	*Engineering Physics*
Quench oil	Oil injected into a product leaving a cracking or reforming heater to lower the temperature and stop the cracking process.	*Petroleum Engineering*
Quenching	Rapid cooling of a heated metal.	*Maintenance and Repair*

Term	Definition	*Industry*
Quenching Oil	(Also called heat treating oil) a high-quality, oxidation-resistant petroleum oil used to cool metal parts during their manufacture, and is often preferred to water because the oil's slower heat transfer lessens the possibility of cracking or warping of the metal. A quenching oil must have excellent oxidation and thermal stability, and should yield clean parts, essentially free of residue. In refining terms, a quenching oil is an oil introduced into high temperature vapors of cracked (see cracking) petroleum fractions to cool them.	*Lubrication*
Quick Condition	Condition of soil in which an increase in pore-water pressure decreases particle-to-particle attraction and reduces the soil's bearing capacity.	*Petroleum Engineering*
Quick Coupling	Quick couplers are used to quickly connect lines without losing steam, fluid or pressure. All couplings consist of two mating halves: the plug (male) half and the coupler (female) half. Quick couplers can be used under a variety of pressure and temperature conditions. Quick-action couplers are ideal for use in applications where steam/fluid loss during connection or disconnection is undesirable. Typical applications include systems where tools or other devices are routinely connected and disconnected to a central pressure supply. See also Pipe Fittings.	*Industrial*
Quick disconnect	A coupling which can quickly join or separate a fluid line without the use of tools or special devices.	*Mechanical, Process, and Operations*
Quick Disconnect Coupling	A coupling which can quickly join or separate a fluid line without the use of tools or special devices.	*Lubrication*
Quick Opening	A flow characteristic that provides maximum change in flow rate at low travels. The curve is basically linear through the first 40% of travel. It then flattens out indicating little increase in flow rate as travel approaches the wide open position. This decrease occurs when the valve plug travel equals the flow area of the port. This normally happens when the valve characteristic is used for on/off control.	*Industrial Engineering*
Quick Start Reliability (QSR)	For facilities organized in a classically reactive structure or hierarchy, often with absent or sub-optimized Maintenance/Reliability engineering capabilities, A basic first step in the evolution of maturity of an operation to the more advanced maturity phases of the complete AEO process, Quick Start Reliability is:	*Quality*
Quick-changeover methods	A variety of techniques, such as SMED (single-minute exchange of dies), that reduce equipment setup time and permit more frequent setups, thus improving flexibility and reducing lot sizes and leadtimes.	*Quality*
Quickie Stoppage or Strike	generally a spontaneous and short-lived work stoppage with no advance notice to the employer or possibly, even to the officials of the union.	*Industrial Relations*
Quiescent current	A direct current that is present in each servovalve coil when using a differential coil connection, the polarity of the current in the coils being in opposition such that no electrical control power exists.	*Mechanical, Process, and Operations*
Quiescent Supply Current	The supply current being drawn when the pressure sensor is at null.	*Electrical Engineering*
Quiet Zone	Area leading or trailing a bar code with no encoded information.	*Gears*
Quit	the voluntary termination or resignation from employment which is initiated by the employee.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Quit Rate	a statistical term indicating the number of quits per hundred employees computed on a monthly or other periodic basis.	*Industrial Relations*
Quitting Time	the hour or hours at which employees generally leave their shift to go home.	*Industrial Relations*
Quorum	the number of individuals, or percent of the group, who must be present at a meeting in order to transact business.	*Industrial Relations*
Quota	the amount of production or work which an individual workman of average ability must turn out in a specified period of time in order to earn base pay.	*Industrial Relations*
Quota Ruled	the regulations of a union which establish the number of workers who are to be employed on a particular job within the union's jurisdiction.	*Industrial Relations*
Quota-Bonus Plan	a method of wage payment for sales personnel, which requires the employee to go beyond a fixed sales volume before special commissions or bonuses are earned.	*Industrial Relations*
Quotidian	Commonplace, or recurring daily (comp. "quartan")	*Breakroom*
R	Range (cooling range)	*Facility Engineering*
--R--	--R--	*Petroleum Drilling*
R & O (Rust and Oxidation Inhibited)	A term applied to highly refined industrial lubricating oils formulated for long service in circulating lubrication systems, compressors, hydraulic systems, bearing housing, gear boxes, etc. The finest R&O oils are often referred to as turbine oils.	*Lubrication*
R" Cases	cases coming from the National Labor Relations Board which involve representation questions.	*Industrial Relations*
R&O	rust and oxidation	*Petro-Chemical Abbreviations*
R. O. M.	see Run-of-mine.	*Mining*
R.O.L.F.	Remotely operated longwall face. Rollers, originally made from hardwood, metal rollers fitted between the rails to lift the haulage rope and avoid friction between the rope and the sleepers or the road surface. Also to guide the rope preventing it becoming trapped beneath the sleepers; and rollers on a conveyor acting as a guide and support for the belt, also called 'idlers'	*Mining*
Ra	Abbreviation for "arithmetic average roughness height" - the measure of the roughness of a surface expressed in microns. The higher the number, the rougher the surface. Used to designate the desired surface finish for end flange raised faces.	*General Mechanical*
Rabatage	a method of working steep inclined thick seams (N. Staffs.).	*Mining*
RAC	Refiners' Acquisition Cost.	*Energy*
Race	An artificial channel leading water to or from a place where its energy is utilized. The current of water in such a channel.	*Civil Engineering*
Race Differential	differences in rates of pay to workers of different races even though all of the employees are doing similar or identical work.	*Industrial Relations*

Term	Definition	*Industry*
Racecourse	A current of water, as a millrace.	*Civil Engineering*
Rachet drive	A shaft or valve that is operated by means of a ratchet mechanism. The ratchet delivers an intermittent stepped rotation through a gear in one direction only.	*Mechanical*
Racial Discrimination	any policy or procedure which discriminates in hiring, promotion, layoff, etc., because of the race or color of the employee.	*Industrial Relations*
Racing	a term used when tubs were in short supply. The tub would be loaded above the level of the rim by stacking large coals around the side and filling in the centre with small coals (S. Wales).	*Mining*
Rack	A gear with teeth spaced along a straight line, and suitable for straight line motion. A Basic Rack is one that is adopted as the basis of a system of interchangeable gears. Standard gear-tooth proportions are often illustrated on an outline of the basic rack. A Generating Rack is a rack outline used to indicate tooth details and dimensions for the design of a required generating tool, such as a hob or gear-shaper cutter.	*Gears*
Rack sales	Wholesale truckload sales or smaller of gasoline where title transfers at a terminal.	*Energy*
Racketeering	labor racketeering, like other forms of racketeering, is the practice of unethical and extortionate use of power or the threat of violence to obtain money, either from employers, for protection presumably against labor union and labor violence, or from employees, who are presumably to be protected by the strong-arm men.	*Industrial Relations*
Racketeering Unionism	See: Racketeering, Labor Racketeer	*Industrial Relations*
Racking	The distortion of a rectangular shape to a skewed parallelogram.	*Engineering Physics*
Racking	the process of arranging articles on a rack in order to transport them more efficiently through the galvanizing process	*Materials Process*
RACT	reasonably available control technology	*Petro-Chemical Abbreviations*
RADALT	Radar Altimeter.	*Aeronautical Engineering*
Radar altimeter (RADALT)	Measures height above terrain. The altitude is monitored to provide a low altitude warning during TF operations and landing operations. It can also be used as input to the Terrain Reference Navigation algorithm for position updates.	*Aeronautical Engineering*
Radar altitude	Height with respect to the terrain below (distance above closest dirt); Synonyms: above ground level; Symbols: h sub r; Typical Units: ft; Dimensions: Length.	*Aeronautical Engineering*
Radar altitude select (RALT SEL)	A basic guidance mode, providing vertical guidance to an operator selected radar altitude.	*Aeronautical Engineering*
Raddle balls	ironstone nodules usually found beneath the seatearth or in the fireclay on which the coal seam rests. (Mids) & (Lancs.).	*Mining*
Raddle or Ruddle	ironstone or rock that is iron-stained. (Lancs.).	*Mining*
Radge	a pick with one of the blades forged into an axe. The radge was used by the striker to chop broken props when drawing the timber out of the gob on a longwall face.	*Mining*
Radial	A direction perpendicular to a shaft's centerline.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Radial cell	Wood cell extending readily out from the center of the tree trunk.	*Material Process*
Radial error probability (REP)	A probability that a percentage of one-dimension measurements will lie on a radial (line) of given length, with the origin centered at truth or mean of the measurements; used to specify test cases for measurement errors of sensors of one dimension, such as vertical velocity; Compare: circular error probability, spherical error probability.	*Aeronautical Engineering*
Radial Flow	The flow of water in an aquifer toward a vertical well.	*Petroleum Engineering*
Radiant barrier	A thin, reflective foil sheet that exhibits low radiant energy transmission and under certain conditions can block radiant heat transfer; installed in attics to reduce heat flow through a roof assembly into the living space.	*Energy*
Radiant ceiling panels	Ceiling panels that contain electric resistance heating elements embedded within them to provide radiant heat to a room.	*Energy*
Radiant energy	Energy that transmits away from its source in all directions.	*Energy*
Radiation	See Infrared	*Electronic Process*
Radiation	Various photons and scale particles that can be a source of environmental damage to materials.	*Material Process*
Radiation damage	Radiation damage can considered as a chemical reaction between materials and their environments.	*Material Process*
Radiation Heating	Heat energy that is radiated or transmitted in the form of rays or waves or particles. See also Convection Heating	*Industrial*
Radiative forcing	A change in average net radiation at the top of the troposphere (known as the tropopause) because of a change in either incoming solar or exiting infrared radiation. A positive radiative forcing tends on average to warm the earth's surface; a negative radiative forcing on average tends to cool the earth's surface. Greenhouse gases, when emitted into the atmosphere, trap infrared energy radiated from the earth's surface and therefore tend to produce positive radiative forcing. Also see Greenhouse gases.	*Energy*
Radiatively active gases	Gases that absorb incoming solar radiation or outgoing infrared radiation, affecting the vertical temperature profile of the atmosphere. Also see Radiative forcing.	*Energy*
Radiator	A heating unit usually exposed to view within the room or space to be heated; it transfers heat by radiation to objects within visible range and by conduction to the surrounding air, which in turn is circulated by natural convection; usually fed by steam or hot water.	*Energy*
Radical	A group of atoms existing in a molecule, which is capable of remaining, unchanged through many chemical reactions.	*Engineering Physics*
Radical Unionism	although the term "radical" is itself a changing and flexible concept, depending upon the position of the person who examines	*Industrial Relations*
Radice v. New York	see: Night Work	*Industrial Relations*
Radio and Television Directors Guild (AFL-CIO)	this organization and the Screen Directors Guild of America, Inc. (Ind) merged on January 1, 1960 to form the Directors Guild of America, Inc. (Ind).	*Industrial Relations*

Term	Definition	*Industry*
Radio Association; American (AFL-CIO)	a union which represent radio operators aboard ship.	*Industrial Relations*
Radio navigation	Navigation relative to radio station, providing, for example, of relative bearing, range, lateral deviation, and glide slope; Examples include VOR, TACAN, and PLS. Radio navigation differs from other navigation in that the transmitter signals often dropout for a long period of time, like minutes. This can occur because of natural obstructions, or because the transmitter was shut down intentionally. In hostile territory, a PLS can locate a downed pilot, who would be foolhardy to be continuously transmitting, but would transmit infrequently with small bursts of data. The Radio-Navigation system accommodates this phenomenon by simulating range and bearing to the fixed site when it is not transmitting. After reacquiring a mobile transmitter, the mobile station's position is re-determined. The navigation component supports wash-out filters on output data.	*Aeronautical Engineering*
Radio Propagation	In radio broadcast (especially AM radio), where the signal bounces off the ionosphere and one receives that delayed signal along with the directly transmitted signal.	*Electrical Engineering*
Radioactive waste	Materials left over from making nuclear energy. Radioactive waste can destroy living organisms if it is not stored safely.	*Energy*
Radioactivity	The spontaneous emission of radiation from the nucleus of an atom. Radionuclides lose particles and energy through this process.	*Energy*
Radioactivity	The property of spontaneously emitting alpha, beta or gamma rays by the decay of the nuclei of atoms.	*Mining*
Radiographic Examination or Inspection	Radiography is a nondestructive test method which makes use of short-wavelength radiations, such as X-rays or gamma rays, to penetrate objects for detecting the presence and nature of macroscopic defects or other structural discontinuities. The shadow image of defects or discontinuities is recorded either on a fluorescent screen or on photographic film.	*Maintenance and Repair*
Radiographic inspection	A nondestructive inspection method using x-rays to locate internal flaws in castings, fabricated parts and welds. Abbreviated as RT.	*General Mechanical*
Radioisotope	A radioactive isotope.	*Energy*
Radium Poisoning	an industrial disease which results from the use of radium in materials handled by employees.	*Industrial Relations*
Radius ratio	The radius of a smaller ion divided by the radius of a larger one. This ratio establishes the number of larger ions that can be adjacent to the smaller one.	*Material Process*
Radius Clause	a provision occasionally to be found in training programs where by an individual employee agrees that he will not seek employment, particularly with a competitor or join a competitive organization, for a specified period of time and within a specified geographic area.	*Industrial Relations*
Radius of influence	the maximum distance away from an air injection or extraction source that is significantly affected by a change in pressure and induced movement of air.	*Chemical*
Radon	A naturally occurring radioactive gas found in the United States in nearly all types of soil, rock, and water. It can migrate into most buildings. Studies have linked high concentrations of radon to lung cancer.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Radon survey	A geochemical survey technique which detects traces of radon gas, a product of radioactivity.	*Mining*
RAF	reactivity adjustment factor	*Petro-Chemical Abbreviations*
Raff yard	a walled-in yard on the surface in which the smiths, wrights, carpenters etc. worked, or an enclosed area for storing coal. (N. East).	*Mining*
Raffinate	The product resulting from a solvent extraction process and consisting mainly of those components that are least soluble in the solvents. The product recovered from an extraction process is relatively free of aromatics, naphthenes, and other constituents that adversely affect physical parameters.	*Petroleum Engineering*
Rag	thin-bedded or flaggy sandstone.	*Mining*
Rag pump or Rag wheel pump	a pump used in early coal mining for lifting water by manual labor from shallow depths. It consisted of a pipe with an endless chain with discs of iron and leather attached to it at short distances apart, which when moving upwards lifted the water.	*Mining*
Ragging	a handgot method of hewing coal employed generally in the thicker seams. The faces are set out on 'long awn' and the miner uses a tool, roughly five feet in length, similar to a large crowbar, known as a 'ringer', which he inserts in the cleavage planes (cleat) and levers off the coal.	*Mining*
Ragging off	trimming loose pieces of coal off the face before starting work. –see also Hewer.	*Mining*
Ragging up	putting on top clothes ready for the journey out of the pit at the end of the shift.	*Mining*
Raggling	a channel cut in the side of a roadway and covered with boarding to act as a ventilation tube. (Scot.).	*Mining*
Raiding	a term which describes the efforts of a union to bring into its organization individuals who are already members of another union.	*Industrial Relations*
Rail (method of transportation to consumers)	Shipments of coal moved to consumers by rail (private or public/commercial). Includes coal hauled to or away from a railroad siding by truck.	*Energy*
Railroad Adjustment Board	see: National Railroad Adjustment Board	*Industrial Relations*
Railroad and railway electric service	Electricity supplied to railroads and interurban and street railways, for general railroad use, including the propulsion of cars or locomotives, where such electricity is supplied under separate and distinct rate schedules.	*Energy*
Railroad Brotherhoods	this term encompasses the major labor units in the railroad industry.	*Industrial Relations*
Railroad Labor Board	the Board set up under Title 3 of the Transportation Act of 1920, which was authorized to hear and decide disputes involving grievances, rules, or working conditions.	*Industrial Relations*
Railroad locomotive	Self-propelled vehicle that runs on rails and is used for moving railroad cars.	*Energy*
Railroad Retirement Act	the first such act was established in 1934 and declared unconstitutional by the U.S. Supreme Court in Railroad Retirement Board v. Alton Railroad Company.	*Industrial Relations*
Railroad Signalmen; Brotherhood of (AFL-CIO)	the Brotherhood was organized in 1901 as an independent organization and in 1908 was able to effect a merger with a number of the other existing organizations of railroad signalmen.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Railroad Telegraphers; The Order of (AFL-CIO)	the Brotherhood of Telegraphers of the United States was known originally as District 45 of the Knights of Labor and was organized in 1882.	*Industrial Relations*
Railroad Trainmen; Brotherhood of (AFL-CIO)	the organization was established as the Brotherhood of Railroad Brakemen of the Western Hemisphere in September 1883 at Oneonta, New York.	*Industrial Relations*
Railroad Unemployment Insurance Act	a statute passed in June 1938 which provides for the payment of unemployment and sickness benefits to qualified railroad employees under a uniform nation-wide system.	*Industrial Relations*
Railroad use	Sales to railroads for any use, including that used for heating buildings operated by railroads.	*Energy*
Railroad Yardmasters of America (AFL-CIO)	organized in December 1918 when various groups or yardmasters met in Cincinnati, Ohio.	*Industrial Relations*
Railway and Airline Supervisors Association; the American (AFL-CIO)	formerly known as the American Railway Supervisors Association (AFL-CIO).	*Industrial Relations*
Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; Brotherhood of (AFL-CIO)	the organization was established at Sedalia, Missouri, in 1898 and was known as the Order of Railway Clerks of America.	*Industrial Relations*
Railway Audit and Inspection Co.	one of a group of agencies which at various times during labor organizational drives provided professional espionage services to employers throughout the country.	*Industrial Relations*
Railway Brotherhoods	see: Railroad Brotherhoods	*Industrial Relations*
Railway Carmen of America; Brotherhood (AFL-CIO)	organized in 1891 in Colorado, absorbing the Brotherhood of Railway Car Repairers, the Carmen's Mutual Aid Association, and the Brotherhood of Railway Carmen.	*Industrial Relations*
Railway Conductors and Brakemen; Order of (Ind)	organized in July 1868 at Mendota, Illinois.	*Industrial Relations*
Railway Employees; International Association of (Ind)	the official publication is the Quarterly Bulletin.	*Industrial Relations*
Railway Employees' Department	one of the AFL-CIO trade and industrial departments.	*Industrial Relations*
Railway Labor Act	a federal statute enacted in 1926, based on a proposal by representatives of labor and management, to resolve labor disputes on the railroads by mediation and voluntary arbitration, with special provisions for emergency disputes.	*Industrial Relations*
Railway Labor Executives' Association	an organization, established following the passage of the 1926 Railway Labor Act, whose prime objective was to achieve cooperative action "to develop constant interpretations and utilization of all the privileges of (the Railway Labor) Act".	*Industrial Relations*
Railway Pension Act	see: Railroad Retirement Act	*Industrial Relations*
Railway Retirement Act	see: Railroad Retirement Act	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Railway Supervisors Association; the American (AFL-CIO)	see: Railway and Airline Supervisors Association; the American (AFL-CIO)	*Industrial Relations*
Railway Trainmen and Locomotive Firemen; Association of (Ind)	formerly known as the Association of Colored Railway Trainmen and Locomotive Firemen, Inc. (Ind)	*Industrial Relations*
Rain tires	Treaded tires used on a wet track. Also referred to as "Wets."	*NASCAR*
Raise	A secondary or tertiary inclined opening, vertical or near-vertical opening driven upward form a level to connect with the level above, or to explore the ground for a limited distance above one level.	*Mining*
Raise	A vertical or inclined underground working that has been excavated from the bottom upward.	*Mining*
Raised Face	(RF) that section of the face of a flange (near the I.D.) raised above the face of the flange providing sealing surface for a flat (CNAF or spiral wound) gasket or a ring groove (RTJ) to provide a seal with a Ring Gasket. (API Spec. 6A flanges only use ring gaskets). Only 6BX Open Face Flanges (API 10 10,000 and 15,000 psi) must have a raised face, generally 1/16″ or (1/8″ minimum height), API Spec. 6A permits the omission of raised faces on all other flange connectors. ANSI (ASME) Flanges do specify a raised face in class 150 to 2500	*Petroleum Engineering*
Raised faced (RF)	The raised area of a flange face which is the gasket sealing surface between mating flanges. Defined in ASME B16.5. Class 150 and 300 valves have 0.06" RF and Classes 600 and up have a 0.25" RF.	*Mechanical*
Raised faced (RF)	The raised area of a flange face which is the gasket sealing surface between mating flanges. Defined in ASME B16.5. Class 150 and 300 valves have 0.06" RF and Class 600 and up have a 0.25" RF.	*General Mechanical*
Raising	excavating a steep tunnel, or shaft, upwards, from below ground to the surface, or between two seams underground. -see also Staple shaft.	*Mining*
Rake	The trend of an ore body along the direction of its strike.	*Mining*
Rake	The trend of an orebody along the direction of its strike.	*Mining*
Rakes	another term for a set or journey of tubs. (Scot.).	*Mining*
RALT SEL	Radar altitude select.	*Aeronautical Engineering*
RAM	A single-acting cylinder with a single diameter plunger rather than a piston and rod. The plunger in a ram-type cylinder.	*Mechanical, Process, and Operations*
RAM (Random Access Memory)	Memory which contains no pre-programmed information but is loaded and/or altered by the computer system. It is of a "volatile" nature in that all the contents are lost when electrical power is removed. RAM memories are usually provided with battery backup power systems, making it "non volatile."	*Electrical Engineering*
Ram car or shuttle ram	a rubber-tired haulage vehicle that is unloaded through the use of a movable steel plate located at the back of the haulage bed.	*Energy*
Ram packer	a packing device used at the ripping of a face that employs an hydraulically driven ram to move and compact ripping dirt into a gate-side pack.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Ram's head	a hand-held, electric or compressed air drill used for boring shot holes. It took its name from its distinctive shape. Also known in some areas as a 'bull's head' or a 'pig's head'.	*Mining*
Ramble	also called 'following stone'. A thin layer of shale or sandstone found lying immediately above the coal. It would be brought down with the coal when it was fired; or loose stone lying above the coal. (N. East); or any loose rock at or near the surface. (Yorks.), also called Ratchel.	*Mining*
Rambouillet	A breed of sheep that resulted from crossing Spanish Merino sheep with native French sheep, beginning about 1800. Blood lines also trace to German Merino sheep.	*Agriculture*
Ramie	A tough, natural fiber used as a filler material.	*Material Process*
Rammer	see Shotstick.	*Mining*
Ramming	the material used for closing a shot hole behind the charge. Various substances have been used. -see Stemming.	*Mining*
Ramp	An increase or decrease of a variable at a constant rate of change with respect to time.	*Electrical Engineering*
Ramp plate	an inclined plate fixed to the face side of an armored flexible conveyor; or an inclined plate used to assist loading.	*Mining*
Ramp Rate	The rate at which you can increase load on a power plant. The ramp rate for a hydroelectric facility may be dependent on how rapidly water surface elevation on the river changes.	*Energy*
Ramp Up (Supply Side)	Increasing load on a generating unit at a rate called the ramp rate.	*Energy*
Ramp	A secondary or tertiary inclined opening, driven to connect levels, usually driven in a downward direction, and used for haulage.	*Mining*
Ramp-Up (Demand-Side)	Implementing a demand-side management program over time until the program is considered fully installed.	*Energy*
Rams	Various types of rams are used in mining. Rams are used extensively on the machine-operated coalface for moving forward the conveyor system and drawing forward the hydraulic roof supports. Rams are also used for loading and offloading mine cars from the cage. Ram are usually hydraulically operated but pneumatic (compressed air) and steam operated rams have also been used.	*Mining*
Rance	a long narrow pillar or stoop left unworked to support the roof; or a small prop set to support the coal as it is being undercut. (Scot.). -see also Nogs.	*Mining*
Ranch	Narrowly defined as an establishment for raising livestock on range. However, common usage in the American West also applies the term to a large farm devoted mainly to raising a single crop or kind of animal. In this use, it is proper to refer to an apple ranch, a wheat ranch, etc. The term ranch would only be properly applied to large-scale operations.	*Agriculture*
Rancher	A person who owns or operates a ranch.	*Agriculture*
Rand Award	the arbitration award handed down in 1946 by Justice I. C. Rand of the Canadian Supreme Court in a dispute between the Ford Motor Company and its employees.	*Industrial Relations*
Rand Formula	care must be observed in using the phrase "Rand Formula" since it applies to two different and unrelated situations.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rand School of Social Science	social studies school with labor orientation located at 7 East 15th Street, New York.	*Industrial Relations*
Random	Governed by chance. See also: Randomisation	*Quality Engineering*
Random Access Memory (RAM)	Memory that can be both read and changed during computer operation. Unlike other semi-conductor memories, RAM is volatile if power to the RAM is disrupted or lost, all the data stored is lost.	*Electrical*
Random Access Memory (RAM)	Memory that can be both read and changed during computer operation. Unlike other semi-conductor memories, RAM is volatile-if power to the RAM is disrupted or lost, all the data stored is lost.	*Electronic Process*
Random allocation	A method that uses the play of chance to assign participants to comparison groups in a trial, e.g. by using a random numbers table or a computer-generated random sequence. Random allocation implies that each individual or unit being entered into a trial has the same chance of receiving each of the possible interventions. It also implies that the probability that an individual will receive a particular intervention is independent of the probability that any other individual will receive the same intervention. See also: Quasi-random allocation, Randomisation	*Quality Engineering*
Random Copolymer	A polymer in which two different mer units are randomly distributed along the molecular chain.	*Engineering Physics*
Random error	Error due to the play of chance. Confidence intervals and P values allow for the existence of random error, but not systematic errors (bias).	*Quality Engineering*
Random error, RE	An error that can be either positive or negative, the direction and exact magnitude of which cannot be exactly predicted. In contrast, systematic errors are always in one direction.	*Quality*
Random network theory	Statement that a simple oxide glass can be described as the random linkage of building blocks, such as the silica tetrahedron.	*Material Process*
Random permuted blocks	A method of randomisation that ensures that, at any point in a trial, roughly equal numbers of participants have been allocated to all the comparison groups. Permuted blocks should be used in trials using stratified randomization. Also called: Block randomisation	*Quality Engineering*
Random Rates	individualized or personalized rates of pay.	*Industrial Relations*
Random sample	A group of people selected for a study that is representative of the population of interest. This means that everyone in the population has an equal chance of being approached to participate in the survey, and the process is meant to ensure that a sample is as representative of the population as possible. It has less bias than a convenience sample: that is, a group that the researchers have more convenient access to. Randomized trials are rarely carried out on random samples.	*Quality Engineering*
Random solid solution	Solid solution in which the solute atoms are arranged in an irregular fashion.	*Material Process*
Random vibration	(See Probabilistic vibration.) One whose instantaneous magnitudes cannot be predicted. Adjective "Gaussian" applies if they follow the Gaussian distribution. May be broad-band, covering a wide, continuous frequency range, or narrow band, covering a relatively narrow frequency range. No periodic or deterministic components.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Random walk	Atomistic migration in which the direction of each step is randomly selected from among all possible orientations.	*Material Process*
Random-effects model	[In meta-analysis:] A statistical model in which both within-study sampling error (variance) and between-studies variation are included in the assessment of the uncertainty (confidence interval) of the results of a meta-analysis. See also fixed-effect model. When there is heterogeneity among the results of the included studies beyond chance, random-effects models will give wider confidence intervals than fixed-effect models.	*Quality Engineering*
Randomisation	The process of randomly allocating participants into one of the arms of a controlled trial. There are two components to randomisation: the generation of a random sequence, and its implementation, ideally in a way so that those entering participants into a study are not aware of the sequence (concealment of allocation). See also: Quasi-random allocation, Random, Random allocation	*Quality Engineering*
Randomized clinical trial	See Randomized controlled trial	*Quality Engineering*
Randomized controlled trial	An experiment in which two or more interventions, possibly including a control intervention or no intervention, are compared by being randomly allocated to participants. In most trials one intervention is assigned to each individual but sometimes assignment is to defined groups of individuals (for example, in a household) or interventions are assigned within individuals (for example, in different orders or to different parts of the body). See also: Observational study Also called: Randomized clinical trial, RCT	*Quality Engineering*
Randomized controlled trial	Study design where treatments, interventions, or enrollment into different study groups are assigned by random allocation rather than by conscious decisions of clinicians or patients. If the sample size is large enough, this study design avoids problems of bias and confounding variables by assuring that both known and unknown determinants of outcome are evenly distributed between treatment and control groups.	*Analysis*
Range	Standard aviation term Synonyms: distance; Symbols: r; Typical Units: ft,nmi - method of measurement dependent on use; Dimensions: Length.	*Aeronautical Engineering*
Range	The measurand values over which the sensor is intended to measure, specified by the upper and lower limits.	*Electrical Engineering*
Range top	The range burners or stove top and the oven are considered two separate appliances. Counted also with range tops are stand-alone "cook tops."	*Energy*
Range, Elevated-Zero	A range where the zero value of the measured variable, measured signal, etc., is greater than the lower range-value. Note: The zero may be between the lower and upper range values, at the upper range value, or above the upper range value. Note 2: Terms suppression, suppressed range or suppressed span is frequently used to express the condition in which the zero of the measured variable is greater than the lower range value. The term range, elevated zero is preferred.	*Process Control*
Range, Suppressed-Zero	A range where the zero value of the measured variable is less than the lower range value. Zero does not appear on the scale.	*Process Control*
Rangeability	The ratio of the maximum flowrate to the minimum flowrate of a meter.	*Electrical*
Range-Limit, Lower	The lowest quantity that a device can be adjusted to measure.	*Process Control*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Range-Limit, Upper	The highest quantity that a device can be adjusted to measure.	*Process Control*
Ranging	Act of determining a range.	*Aeronautical Engineering*
Ranging drum shearer	a shearer with a drum (or drums) fitted on an arm (ranging arm) that can be moved up and down to cut a thick seam.	*Mining*
Raning	searching for coal by means of shallow pits along the line of the outcrop. (Scot.).	*Mining*
Rank	the degree of coalification or maturity of the coal; or a standard distance of 60 to 80 yards (54m to 73m) called the first 'rank', upon which a standard price was paid for 'putting' or 'drawing a 'score' of coals.	*Mining*
Rank and File	the term in the vernacular means "the working people." Actually the term applies to individual union members who have no specials status either as officers or shoop stewards in the plant.	*Industrial Relations*
Rankine (°R)	An absolute temperature scale based upon the Fahrenheit scale with 180° between the ice point and boiling point of water. 459.67°R = 0°F.	*General*
Rankine cycle	The thermodynamic cycle that is an ideal standard for comparing performance of heat-engines, steam power plants, steam turbines, and heat pump systems that use a condensable vapor as the working fluid. Efficiency is measured as work done divided by sensible heat supplied.	*Energy*
Rankine cycle engine	The Rankine cycle system uses a liquid that evaporates when heated and expands to produce work, such as turning a turbine, which when connected to a generator, produces electricity. The exhaust vapor expelled from the turbine condenses and the liquid is pumped back to the boiler to repeat the cycle. The working fluid most commonly used is water, though other liquids can also be used. Rankine cycle design is used by most commercial electric power plants. The traditional steam locomotive is also a common form of the Rankine cycle engine. The Rankine engine itself can be either a piston engine or a turbine.	*Energy*
Ranking Plan	a system of job evaluation which some claim to be the easiest and simplest way to classify jobs within a plant.	*Industrial Relations*
Ranks of coal	The classification of coal by degree of hardness, moisture and heat content. "Anthracite" is hard coal, almost pure carbon, used mainly for heating homes. "Bituminous" is soft coal. It is the most common coal found in the United States and is used to generate electricity and to make coke for the steel industry. "Subbituminous" is a coal with a heating value between bituminous and lignite. It has low fixed carbon and high percentages of volatile matter and moisture. "Lignite" is the softest coal and has the highest moisture content. It is used for generating electricity and for conversion into synthetic gas. In terms of Btu or "heating" content, anthracite has the highest value, followed by bituminous, subbituminous and lignite.	*Mining*
Rap	a sudden breaking, or settling down, of the roof under weight (S. Wales); or a bell signal to a machinery operator, (winding engineman, haulage driver etc.).	*Mining*
Rapid prototyping	A variety of techniques for quick conversion of CAD-generated product designs into useful, accurate physical models, typically using computer-controlled systems. In the stereolithography approach, controls based on CAD designs guide laser beams that create precise plastic models by polymerizing and fusing liquid resins into a laminated composite of very thin slices.	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rapid solidification	Processing technique for cooling a melt below its melting point at a high quench rate (e.g. 106 °C/s) resulting in the possibility of forming an amorphous structure or metastable crystalline phases.	*Material Process*
Rapidly solidified alloy	Metal alloy formed by a rapid solidification process.	*Material Process*
Rapper wire	a mechanical bell signaling system incorporating a lever at one end and a hammer at the other connected by wire.	*Mining*
Rapping	tapping the roof to see if it is safe.	*Mining*
RAR	See Reasonable Assured Resources.	*Energy*
Rare earth elements	Relatively scarce minerals such as niobium and yttrium.	*Mining*
Rashing	coal that is breaking away from the coalface. (Mids.); or loose dirt or shaley beds of rock (S. Wales).	*Mining*
Rasping	A type of feeding by insects which rub or grate the leaf surfaces with their mouthparts to obtain particles for consumption.	*Forestry*
Rat	a derogatory and derisive slang expression frequently applied to individuals who were members of the union but who become strikebreakers and turn on their working "brothers".	*Industrial Relations*
Rat Hole - Rathole	This term can refer to a couple of things. It can mean a storage place for the Kelly which has been made in the rig floor using heavy piece of steel pipe or casing. It can also mean an extra length of hole drilled at the end of the well to allow logging tools to be able to fully analyze all of the wellbore and for other reasons related to well completion.	*Petroleum Drilling*
Ratch	a section of the coalface that a man would work in a shift (S. Derbys.), (Leics.)—see Stint; or a device used by a miner to lock up his tools. (War.).	*Mining*
Ratchel	cross-bedded, weathered sandstone.- see also Ramble.	*Mining*
Ratcher	a coal getter or collier (Leics.), (S. Derbys.).	*Mining*
Ratches	lifts (slices) taken off a coal pillar in pillar and stall working (Lancs.).	*Mining*
Rate	the sides of a gate road falling off and blocking the road (S. Staffs.).	*Mining*
Rate Action	The derivative function of a temperature controller.	*Electrical*
Rate base	The value of property upon which a utility is permitted to earn a specified rate of return as established by a regulatory authority. The rate base generally represents the value of property used by the utility in providing service and may be calculated by any one or a combination of the following accounting methods: fair value, prudent investment, reproduction cost, or original cost. Depending on which method is used, the rate base includes cash, working capital, materials and supplies, deductions for accumulated provisions for depreciation, contributions in aid of construction, customer advances for construction, accumulated deferred income taxes, and accumulated deferred investment tax credits.	*Energy*
Rate Base	Value of property upon which a utility is permitted to earn a specific rate of return.	*Energy*
Rate base (electric)	The value of property, upon which, a utility is permitted to earn a specified rate of return as established by a regulatory authority. See FERC definition.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rate case	A proceeding, usually before a regulatory commission, involving the rates to be charged for a public utility service.	*Energy*
Rate Class	A group of customers identified as a class and subject to a rate different from the rates of other groups.	*Energy*
Rate Cutting	generally applies to the arbitrary reduction by an employer of an incentive rate where there has been no change in the job content.	*Industrial Relations*
Rate features	Special rate schedules or tariffs offered to customers by electric and/or natural gas utilities.	*Energy*
Rate for the Job	generally the same as the standard or basic rate which has been established in a particular plant for a particular occupation.	*Industrial Relations*
Rate gyro	A kind of gyroscope that measures rotational velocity (degrees or radians per second) around a fixed axis.	*Reliability Engineering*
Rate limiter	A filter that passes the input as the output, except that rate of change of the output is limited to a maximum absolute value; Compare: limiter.	*Aeronautical Engineering*
Rate limiting step	Slowest step in a process involving sequential steps. The overall process rate is, thereby, established by that one mechanism.	*Material Process*
Rate of return	The ratio of net operating income earned by a utility is calculated as a percentage of its rate base.	*Energy*
Rate of return on rate base	The ratio of net operating income earned by a utility, calculated as a percentage of its rate base.	*Energy*
Rate of shear	The difference between the velocities along the parallel faces of a fluid element divided by the distance between the faces.	*Oil Analysis*
Rate of Wages	the compensation or amounts of money paid to an individual per hour, per week, per month or, if on a piece or incentive rate, per unit of output.	*Industrial Relations*
Rate Range	the spread between the predetermined minimum and maximum rate for individuals performing a specific job.	*Industrial Relations*
Rate schedule (electric)	The rates, charges, and provisions under which service is supplied to the designated class of customers. See FERC definition.	*Energy*
Rate Setting	the process or procedure used by management or jointly by management and labor to set the rates for jobs in a particular plant or company.	*Industrial Relations*
Rate Structure	The design and organization of billing charges by customer class to distribute the revenue requirement among customer classes and rating period.	*Energy*
Rate Time	The time interval over which the system temperature is sampled for the derivative function.	*Electrical*
Rate time	the time interval over which the system temperature is sampled for the derivative function.	*Electronic Process*
Rate-Basing	The practice by utilities of allotting funds invested in utility Research Development Demonstration and Commercialization and other programs from ratepayers, as opposed to allocating these costs to shareholders.	*Energy*
Rated Capacity	The load which a new wire rope or wire rope sling may handle under given operating conditions and at an assumed DESIGN FACTOR.	*Wire Rope & Cable*

Term	Definition	*Industry*
Rated current	The specified servovalve input current of either polarity to produce rated flow. Rated current must be specified for a particular coil connection differential, series, or parallel, and does not include null bias current.	*Mechanical, Process, and Operations*
Rated Fatigue Pressure	The pressure that a pressure containing component is represented to sustain 10 million times without failure.	*Mechanical, Process, and Operations*
Rated Flow	The maximum flow that the power supply system is capable of maintaining at a specific operating pressure.	*Lubrication*
Rated horsepower	Nameplate horsepower of fan drivers. Unit: hp.	*Facility Engineering*
Rated Pressure	The operating pressure which is recommended for a component or a system by the manufacturer.	*Mechanical, Process, and Operations*
Rated Static Pressure	The pressure that a component can withstand without failure. Static Pressure - The pressure in a fluid at rest. (A form of "potential energy".) Suction Pressure - The absolute pressure of the fluid at the inlet side of the pump.	*Mechanical, Process, and Operations*
Ratee	the individual whose work or abilities are being rated.	*Industrial Relations*
Ratemaking Authority	The utility commission's authority as designated by a State or Federal legislature to fix, modify, and/or approve rates.	*Energy*
Rate-of-Return Rates	Rates set to the average cost of electricity as an incentive for regulated utilities to operate more efficiently at lower rates where costs are minimized.	*Energy*
Ratepayer	This is a retail consumer of the electricity distributed by an electric utility. This includes residential, commercial and industrial users of electricity.	*Energy*
Rater	the individual who actually determines the rate.	*Industrial Relations*
Rates	The authorized charges per unit or level of consumption for a specified time period for any of the classes of utility services provided to a customer.	*Energy*
Rathole	Rathole	*Petroleum Drilling*
Rating	A manufacturer's guaranteed performance of a machine, transmission line, or other electrical apparatus, based on design features and test data. The rating will specify such limits as load, voltage, temperature, and frequency. The rating is generally printed on a nameplate attached to equipment and is commonly referred to as the nameplate rating or nameplate capacity.	*Energy*
Ratio estimate	The ratio of two population aggregates (totals). For example, "average miles traveled per vehicle" is the ratio of total miles driven by all vehicles, over the total number of vehicles, within any subgroup. There are two types of ratio estimates those computed using aggregates for vehicles and those computed using aggregates for households.	*Energy*
Ratio of Gearing	Ratio of the numbers of teeth on mating gear. Ordinarily the ratio is found by dividing the number of teeth on the larger gear by the number of teeth on the smaller gear or pinion. For example, if the ratio is 2 or "2 to 1," this usually means that the smaller gear or pinion makes two revolutions to one revolution of the larger mating gear.	*Mechanical Engineering*
Ratiometric (Ratiometricity Error)	At a given supply voltage, sensor output is a proportion of that supply voltage. Ratiometricity error is the change in this proportion resulting from any change to the supply voltage. Usually expressed as a percent of full scale output.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Ratiometric Measurement	A measurement technique where an external signal is used to provide the voltage reference for the dual slope A/D converter. The external signal can be derived from the voltage excitation applied to a bridge circuit or pick-off supply, thereby eliminating errors due to power supply fluctuations.	*Electrical*
Ratiometric Measurement	A measurement technique where an external signal is used to provide the voltage reference for the dual-slope A/D converter. The external signal can be derived from the voltage excitation applied to a bridge circuit or pick-off supply, thereby eliminating errors due to power supply fluctuations.	*Electronic Process*
Rational	Wise, judicious, not absurd or foolish (consistent with logic)	*Management Discussion*
Ratoon crop	A crop cultivated from the shoots of a perennial plant.	*Energy*
Rattle	A sound exemplified by shaking a steel can full of steel nuts and bolts.	*Reliability Engineering*
Rattle Chains	flat chains used for winding, about 3 to 4 inches wide with consecutive long and short links – no doubt making a rattling noise as they were used (S. Staffs.).	*Mining*
Rattle-jack or rattler	carbonaceous shale, also hoo cannel (Mids.)—see also Geyes.	*Mining*
Rattler	inferior gas coal, or sandy shale. (Scot.).	*Mining*
Rattlers	cannel coal. (Yorks.).	*Mining*
RAV	Replacement Asset Value.	*Maintenance*
Ravel	Of a road surface, to lose aggregate.	*Civil Engineering*
Ravens	an inferior, sometimes pyritous, coal at the top of the Top Beeston Seam, (Yorks.).	*Mining*
Raw	Data taken directly from the sensor; Compare: derived, estimated, filtered, measured, selected, smoothed.	*Aeronautical Engineering*
Raw Coal	Coal that has received no preparation other than possibly screening.	*Energy*
Raw Materials	Any materials that go into the final product.	*Procurement*
Raw Water	Raw water comprises the input source of water for your steam system. Raw water, whether from surface, ground, municipal, ocean or other, requires treatment before the it can be utilized. Water treatment systems can include various methods to remove color, suspended and dissolved solids, and other contaminants harmful to steam equipment. See also Water Treatment.	*Industrial*
Raw-Materials Turn Rate	A measure of asset management that typically is calculated by dividing the value of total annual shipments at plant cost (for the most recent full year) by the average raw-material value at plant cost. Plant cost includes material, labor, and plant overhead.	*Maintenance*
Rayleigh frequency distribution	A mathematical representation of the frequency or ratio that specific wind speeds occur within a specified time interval.	*Energy*
Rayon	A generic term for filaments made from various solutions of modified cellulose by pressing or drawing the cellulose solution through an orifice and solidifying it in the form of a filament. Rayon is marketed in two forms: continuous filament yarn and staple fibers of spinnable length.	*Material Process*
RBC	Rural Business-Cooperative, an organization within the USDA.	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	Industry
RBD	see Block diagram	*Reliability Engineering*
RBM	See Risk-based Maintenance.	*Maintenance*
RBOB	Reformulated Gasoline Blendstock for Oxygenate Blending.	*Energy*
RBOT	rotating bomb oxidation test	*Petro-Chemical Abbreviations*
Rc	Recirculation percent	*Facility Engineering*
RCAD	abbreviation for relative change in azimuthal deviation; see table. (degrees)	*Petroleum Drilling*
RCHD	abbreviation for relative change in horizontal deviation; see table. (feet or meters)	*Petroleum Drilling*
RCIA	See: Retail Clerks International Association (AFL-CIO)	*Industrial Relations*
RCID	abbreviation for relative change in inclinational deviation; see table. (degrees)	*Petroleum Drilling*
RCM	See Reliability-Centered Maintenance.	*Maintenance*
RCRA Section 6002	Section 6002 of the Resource Conservation and Recovery Act (RCRA) of 1976, as amended, directs EPA to designate items that are or can be produced with recovered materials and to recommend practices for buying these items. Among other things, RCRA Section 6002 also provides criteria for EPA to consider when selecting items for designation, and requires procuring agencies to establish affirmative procurement programs for designated items.	*Environmental Engineering*
RCVD	abbreviation for relative change in vertical deviation; see table. (feet or meters)	*Petroleum Drilling*
RDF	See Refuse-Derived Fuel.	*Energy*
RDWW	See: Roofers, Damp and Waterproof Workers Association; United Slate, Tile and Composition (AFL-CIO)	*Industrial Relations*
RE	A term that describes a change in random error from the stable imprecision of the method (smeas). A value of 2.0 indicates a doubling of the original method standard deviation, whereas a value of 1.0 represents the original stable standard deviation. Used in our quality planning models or error budget equations to indicate the increase in random error that can be detected by a control procedure. REcrit is a special case that represents the increase in random error that needs to be detected to maintain a defined quality requirement.	*Quality*
REA	See Rural Electrification Administration.	*Energy*
REA	Rural Electrification Administration, a former USDA agency that administered loan programs for electrification and telephone service in rural areas. It was created in 1935 by executive order as an independent federal bureau and incorporated in USDA in 1939. The administration was abolished in 1994. It's functions are now performed by the Rural Utilities Service in USDA.	*Agriculture*
Reach	A level portion of a canal, between locks.	*Civil Engineering*
Reactance	A phenomenon associated with AC power characterized by the existence of a time difference between voltage and current variations.	*Energy*
Reaction	A reaction is a force exerted by a support on an object: sometimes called support reaction. Using this definition, a reaction is an external force.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Reactive Maintenance	Maintenance Strategy to equipment malfunctions or break downs after they occur. Maintenance is mainly performed during irregular non-planned stops. It may be undertaken where equipment is knowingly assigned a Run-To-Failure (RTF) strategy, or No Scheduled Maintenance strategy. See Run To Failure, Breakdown Maintenance, and No Scheduled Maintenance.	*Maintenance*
Reactive power	The portion of electricity that establishes and sustains the electric and magnetic fields of alternating-current equipment. Reactive power must be supplied to most types of magnetic equipment, such as motors and transformers. Reactive power is provided by generators, synchronous condensers, or electrostatic equipment such as capacitors and directly influences electric system voltage. It is a derived value equal to the vector difference between the apparent power and the real power. It is usually expressed as kilovolt-amperes reactive (KVAR) or megavolt-ampere reactive (MVAR). See Apparent Power, Power, Real Power.	*Energy*
Reactive power	It is a concept that describes the loss of power in a system resulting from the production of electric and magnetic fields in it. Reactive loads in a power system drop voltage and draw current, which creates the impression that they are using up power, when they are not. This "imaginary power" or "phantom power" is called reactive power, and is measured in Volt-Amps-Reactive (VAR). Reactive power is significant because it must be provided and maintained to ensure continuous, steady voltage on transmission networks. Reactive power is produced for maintenance of the system, and not for end-use consumption. If elements of the power grid cannot get the reactive power they need from nearby sources, they will pull it across transmission lines and destabilize the grid. In this way, poor management of reactive power can cause major blackouts.	*Electrical*
REACTOR	The vessel in which chemical reactions take place during a chemical conversion type of process.	*Petroleum Engineering*
Read Only Memory (ROM)	Memory that contains fixed data. The computer can read the data, but cannot change it in any way.	*Electrical*
Read Only Memory (ROM)	Memory that contains fixed data. The computer can read the data, but cannot change it in any way.	*Electronic Process*
Reader	A bar code scanner and decoder.	*Gears*
Ready Line	See Go Line.	*Maintenance*
Reagent	a substance or solution used in a chemical reaction, especially those used in laboratory work to detect, measure, or produce other substances.	*Chemical*
Real dollars	These are dollars that have been adjusted for inflation.	*Energy*
Real Power	The component of electric power that performs work, typically measured in kilowatts (kW) or megawatts (MW)--sometimes referred to as Active Power. The terms "real" or "active" are often used to modify the base term "power" to differentiate it from Reactive Power and Apparent Power. See Apparent Power, Power, Reactive Power.	*Energy*
Real price	A price that has been adjusted to remove the effect of changes in the purchasing power of the dollar. Real prices, which are expressed in constant dollars, usually reflect buying power relative to a base year.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Real time	Time in a computational process which runs at the same rate as a physical process; for example, algorithms designed to run a fixed period t (filter time constants at set for t) and actually execute with frequency 1/t execute in real time; Avionics systems must run in real time.	*Aeronautical Engineering*
Real-time closed loop control	resembles **iterative closed loop control** but continuously modifies drive signals throughout the test.	*Reliability Engineering*
Real-time engineering simulation (rtes)	A simulator designed to test avionics algorithms with a pilot in the loop, consisting of a simulated cockpit, an aircraft model, sensor models, and algorithms to be tested; rtes is often used during development to check algorithms, such as the navigation, radio navigation, guidance and flight director, prior to full-scale software development; rtes gives systems engineers early insight in human factors problems, pilot complaints, algorithm bugs, instability in the algorithms, expected performance (accuracy), and pilot-machine interaction; Synonyms: piloted simulation; Compare: built-in simulation.	*Aeronautical Engineering*
Real-time feedback	Instantaneous (or nearly instantaneous) communication of electronically captured data (typically quality data) to process operators or equipment to enable rapid or automated adjustments that keep production processes operating within quality parameters.	*Quality*
Real-time Pricing	The instantaneous pricing of electricity based on the cost of the electricity available for use at the time the electricity is demanded by the customer.	*Energy*
Ream	Layers of nonhomogeneous material parallel to the surface in a transparent or translucent elastic.	*Material Process*
Reaming shell	A component of a string of rods used in diamond drilling, it is set with diamonds and placed between the bit and the core barrel to maintain the gauge (or diameter) of the hole.	*Mining*
Reaming shell	A component of a string of rods used in diamond drilling; it is set with diamonds, and placed between the bit and the core barrel to maintain the gauge of the hole.	*Mining*
Rearer coal or Rearers	steeply inclined strata, where the coal is said to 'rear up'.	*Mining*
Reason	A rational motive for a belief or action (sound judgment)	*Management Discussion*
Reasonable Price	A price that does not exceed that which would be incurred by a prudent person in the conduct of a competitive business. Reasonable price can be established by market test, price or cost analysis, or the experience and judgment of the Director of Business Services. Such judgment considers total value to the University. There is value to the University in purchases which meet the University's needs, such as those involving quality, quantity, delivery and service; and those which further the University's outreach goals. A reasonable price need not be the lowest price available, but is one which offers the highest total value to the University. For transactions above $50,000, reasonable price is established through competition sufficient to ensure an adequate market test, or set by applicable law or regulation, or supported by an appropriate price or cost analysis.	*Procurement*
Reasonableness	A test to determine if data is reasonable, for example, radar altitude must be positive, and two devices should return similar data within known limits of each other.	*Aeronautical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Reasonably assured resources (RAR)	Uranium that occurs in known mineral deposits of such size, grade, and configuration that it could be recovered within the given production cost ranges, with currently proven mining and processing technology. Estimates of tonnage and grade are based on specific sample data and measurements of the deposits and on knowledge of deposit characteristics. *Note*: **RAR** corresponds to DOE's uranium reserves category.	*Energy*
Reasoning	forming conclusions, judgments or inferences	*Management Discussion*
Reasoning by Analogy	Drawing conclusion from similar situations	*Management Discussion*
Rebar	a steel rod with ridges for use in reinforced concrete.	*Petroleum Drilling*
Rebate program	A utility company-sponsored conservation program whereby the utility company returns a portion of the purchase price cost when a more energy-efficient refrigerator, water heater, air conditioner, or other appliance is purchased.	*Energy*
Reboiler	An auxiliary unit of a fractionating tower designed to supply additional heat to the lower portion of the tower.	*Petroleum Engineering*
Rebound	In shock absorbers, a rebound adjustment is a change to the dampening of the shock on the expansion stroke. Without rebound dampening, the car would tend to bounce as it passes over bumps on the track. Rebound adjustments can also affect how the weight of the car shifts around during braking, acceleration and cornering.	*NASCAR*
Reburn	An advanced co-firing technique using natural gas to reduce pollution from electric power plants.	*Energy*
Rebuttal	Overcoming your opponents arguments, continuing to build and reexplain your case	*Management Discussion*
REC	Renewable Energy Credit	*Energy*
Recalcitrant	unreactive, nondegradable; refractory.	*Chemical*
Recall	[In trial searching:] See also: Sensitivity	*Quality Engineering*
Recall bias	Systematic error due to the differences in accuracy or completeness of recall to memory of past events or experiences.	*Analysis*
Receipts	**Receipts:**	*Energy*
Receivables from municipality	All charges by the utility department against the municipality or its other departments that are subject to current settlement.	*Energy*
Received	Gas (and other fuels) physically transferred into the responding company's transportation, storage, and/or distribution facilities.	*Energy*
Receivers	see Spears.	*Mining*
Receiving	The function of receiving and processing incoming materials.	*Procurement*
Receiving Party	Entity receiving the capacity and/or energy transmitted by the transmission provider to the point(s) of delivery.	*Energy*
Recharge	Water added to an aquifer. For example, rainwater seeping through the ground. Recharge may occur artificially through injection wells or by spreading water over groundwater reservoirs. Commonly expressed as a rate or volume (i.e. inches per year).	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Recharge Area	An area where permeable soil or rock allows water to seep into the ground to replenish an aquifer. Also referred to as a recharge zone or watershed.	*Petroleum Engineering*
Recharge Basin	A basin or pit excavated for the purpose of allowing water to soak into the ground quicker than naturally-occurring recharge rates.	*Petroleum Engineering*
Recharge Boundary	An aquifer system boundary that adds water to the aquifer. Streams and lakes are typical recharge boundaries.	*Petroleum Engineering*
Recharge Rate	The quantity of water per unit of time that replenishes or refills an aquifer. Recharge rates can be influenced by factors such as soil, plant cover, water content of surface materials, and rainfall intensity.	*Petroleum Engineering*
Reciprocating (Piston) Pump	A pump in which a motor sitting above the well moves a piston up and down inside a pipe in the well casing. Working the same way as a hand pump, on the upstroke, water is pulled into the pipe. A check valve at the foot of the pipe prevents water from flowing out on the downstroke.	*Petroleum Engineering*
Reciprocating Screw	Extruder system in which the rotating screw is pushed backwards by the molten polymer collecting in front of the screw. When sufficient material has been collected, the screw moves forward and forces the material through the head and die at a high speed.	*Engineering Physics*
Reciprocation	Back-and-forth straight line motion or oscillation. REDUCED PRESSURE RANGE - The adjustment range of the regulator.	*Mechanical, Process, and Operations*
Recirculation	This term describes a condition in which a portion of the discharge air enters the tower along with the fresh air. The amount of recirculation is determined by tower design, tower placement, and atmospheric conditions. The effect is generally evaluated on the basis of the increase in the entering wet-bulb temperature compared to the ambient.	*Facility Engineering*
Reck	rubbish and debris used for packing behind roof supports. (Lancs.).	*Mining*
Reclamation	Process of restoring surface environment to acceptable pre-existing conditions. Includes surface contouring, equipment removal, well plugging, revegetation, etc.	*Energy*
Reclamation expenses	In the context of the coal operation statement of income, refers to all payments made by the company attributable to reclamation, including taxes.	*Energy*
Recloser	A circuit breaker designed to interrupt short-circuit current and reconnect the circuit after interruption.	*Electrical*
Recomplete	An operation involving any of the following:	*Petroleum Drilling*
Recomplete	An operation involving any of the following: (1) Deepening from one zone to another zone. (2) Completing well in an additional zone. (3) Plugging back from one zone to another zone. (4) Sidetracking to purposely change the location of the bottom of the well, but not including sidetracking for the sole purpose of bypassing obstructions in the borehole. (5) Conversion of a service well to an oil or gas well in a different zone. (6) Conversion of an oil or gas well to a service well in a different zone.	*Petroleum Drilling*
Reconnaissance	A preliminary survey of ground.	*Mining*
Record	A collection of unrelated information that is treated as a single unit.	*Electronic Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Record date	The date by which a shareholder must be registered on the books of a company in order to receive a declared dividend, or to vote on company affairs.	*Mining*
Recording hygrometer or psychrometer	Any approved type of hygrometer or psychrometer equipped with automatic clocking and recording device capable of making a continuous time relative humidity autograph, or time-wet- and dry-bulb temperature autograph.	*Material Process*
Recording Number	A four digit alpha-numeric that represents the location, account, fund, sub of a department's account(s).	*Procurement*
Recover Rate	Rate at which groundwater refills the casing after the level is drawn down. Term used to specify the production rate of a well.	*Petroleum Engineering*
Recoverability	In reference to accessible coal resources, the condition of being physically, technologically, and economically minable. Recovery rates and recovery factors may be determined or estimated for coal resources without certain knowledge of their economic minability; therefore, the availability of recovery rates or factors does not predict recoverability.	*Energy*
Recoverable coal	Coal that is, or can be, extracted from a coal bed during mining.	*Energy*
Recoverable proved reserves	The proved reserves of natural gas as of December 31 of any given year are the estimated quantities of natural gas which geological and engineering data demonstrates with reasonable certainty to be recoverable in the future from known natural oil and gas reservoirs under existing economic and operating conditions.	*Energy*
Recoverable reserves	That proportion of the oil and/gas in a reservoir that can be removed using currently available techniques.	*Petroleum Drilling*
Recoverable Resources of Coal	The sum of measured resources plus indicated resources.	*Energy*
Recovered Energy	Reused heat or energy that otherwise would be lost. For example, a combined cycle power plant recaptures some of its own waste heat and reuses it to make extra electric power.	*Energy*
Recovered Materials	Waste materials and byproducts that have been recovered or diverted from solid waste, but does not include materials and byproducts generated from, and commonly reused within, an original manufacturing process.	*Environmental Engineering*
Recovery	The amount of feed flow that is converted into filtrate flow by a membrane filtration system.	*Filtration*
Recovery	Initial state of annealing in which atomic mobility is sufficient to allow some softening of the material without a significant microstructure change.	*Material Process*
Recovery	The proportion or percentage of coal or ore mined from the original seam or deposit.	*Mining*
Recovery experiment	A method validation experiment performed to estimate proportional systematic error. A test sample is prepared by adding a standard solution of the analyte of interest to an aliquot of a patient specimen. A baseline sample is prepared by adding an equal amount of diluent or solvent to the same patient specimen. The two samples are analyzed and recovery estimated from the difference observed between the two samples divided by the amount added.	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Recovery Factor	That proportion of the oil and/gas in a reservoir that can be removed using currently available techniques.	*Petroleum Drilling*
Recovery factor (coal)	The percentage of total tons of coal estimated to be recoverable from a given area in relation to the total tonnage estimated to be in the demonstrated reserve base. The estimated recovery factors for the demonstrated reserve base generally are 50 percent for underground mining methods and 80 percent for surface mining methods. More precise recovery factors can be computed by determining the total coal in place and the total recoverable in any specific locale.	*Energy*
Recovery percentage (coal)	The percentage of coal that can be recovered from the coal deposits at existing mines.	*Energy*
Recovery Time	The length of time which it takes a transducer to return to normal after applying a proof pressure.	*Electrical*
Recrystallization	Nucleation and growth of a new stress-free microstructure from a cold worked microstructure.	*Material Process*
Recrystallization	the formation of a new set of strain-free grains within a previously cold-worked material; normally an annealing heat treatment is necessary.	*Metallurgy*
Recrystallization temperature	The temperature at which atomic mobility is sufficient to affect mechanical properties as a result of recrystallization. The temperature is approximately one third to one half times the absolute melting point.	*Material Process*
RECS	See Residential Energy Consumption Survey.	*Energy*
Rectifier	A device for converting alternating current to direct current.	*Energy*
Rectifier	An electrical device used to convert alternating current (AC) into direct current (DC). (See also Inverter.)	*Electrical*
Rectifier	See Diode.	*Material Process*
Recycle gas	High hydrogen-content gas returned to a unit for reprocessing.	*Petroleum Engineering*
Recycled feeds	Feeds that are continuously fed back for additional processing.	*Energy*
Recycling	The process of converting materials that are no longer useful as designed or intended into a new product.	*Energy*
Red and yellow flag	This striped flag is displayed by corner workers to signify debris (oil, sand, water or some other substance) on the track.	*NASCAR*
Red Angus	See Angus.	*Agriculture*
Red ash	the result of colliery spoil catching fire through spontaneous combustion.	*Mining*
Red dog	A nonvolatile combustion product of the oxidation of coal or coal refuse. Most commonly applied to material resulting from in situ, uncontrolled burning of coal or coal refuse piles. It is similar to coal ash.	*Mining*
Red flag	When displayed at the start/finish line, a red flag signifies an immediate halt of the session due to a dangerous condition such as a flooded track or a car blocking the track. Corner workers around the track will display black flags when this happens, and all cars are required to stop racing and slowly return to the pits. The lap in progress is discarded, and the field reverts to the order of	*NASCAR*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	the previous lap when racing resumes. If the race has run more that 50 percent of the laps, the chief steward has the option to declare a complete race if track conditions are not expected to improve. If a race has run less than 50 percent, it will be concluded on another date.	
Red horse	decomposed ferruginous coal measures sandstone, or masses of red clay in the Magnesium Limestone, (Yorks.).	*Mining*
Red oxide	Red iron oxide, used as filler. See also Rouge.	*Material Process*
Redd	rubble and debris usually from a roof fall. Also called 'redding', or waste and stone left over after the coal has been cleaned; or to rip or take down the roof of a roadway; or to mine pillars of coal. (Scot.).	*Mining*
Redding	clearing up, shifting and tidying up. (N. East).	*Mining*
Reddsmen	the men employed to keep the roadway open and clear of redd. (Scot.).	*Mining*
Redesign	A Term Which, In Reliability Centered Maintenance, Means Any One-Off Intervention To Enhance The Capability Of A Piece Of Equipment, A Job Procedure, A Management System Or People's Skills	*Management*
Redistribution basin	An elevated basin installed between the hot and cold water basins in a crossflow tower to maintain correct water distribution throughout the entire height of the fill.	*Facility Engineering*
Redox	short for oxidation-reduction.	*Chemical*
Redox (oxidation-reduction) reaction	A chemical reaction involving transfer or electrons from one element to another.	*Petroleum Drilling*
Redox potential	A measurement of the state of oxidation of a system.	*Energy*
Redrill footage	Occasionally, a hole is lost or junked and a second hole may be drilled from the surface in close proximity to the first. Footage drilled for the second hole is defined as "redrill footage." Under these circumstances, the first hole is reported as a dry hole (explanatory or developmental) and the total footage is reported as dry hole footage. The second hole is reported as an oil well, gas well, or dry hole according to the result. The redrill footage is included in the appropriate classification of total footage, but is not reported as a separate classification.	*Petroleum Drilling*
Reduce	to remove oxygen from (a compound)	*Materials Process*
Reduced crude	A residual product remaining after the removal by distillation of an appreciable quantity of the more volatile components of crude oil.	*Petroleum Engineering*
Reduced port	A valve port opening that is smaller than the line size or the valve end connection size.	*General Mechanical*
Reduced port	A valve port opening that is smaller than the line size or the valve end connection size.	*Mechanical*
Reduced Shank Bolt	A bolt whose shank diameter is smaller than the nominal diameter of the bolt (normally the shank diameter of such a bolt is approximately equal to the effective diameter of the thread).	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Reduced Trim	Is an undersized orifice. A reduced or restricted capacity trim is used for several reasons. (1) It adapts a valve large enough to handle increased future flow requirement with trim capacity properly sized for present needs. (2) A valve with adequate structural strength can be selected and still retain reasonable travel vs. capacity relationships. (3) A valve with a large body using restricted trim can be used to reduce inlet and outlet fluid velocities. (4) It can eliminate the need for pipe reducers. (5) Errors in over sizing can be corrected by use of restricted capacity trim.	*Industrial Engineering*
Reduced use-off hours	A conservation feature consisting of manually or automatically reducing the amount of heating or cooling produced during the hours a building is not in full use.	*Energy*
Reducer	A connector having a smaller line size at one end than the other.	*General*
Reducers	Concentric and eccentric reducers. See also Pipe Fittings.	*Industrial*
Reducing Agent	A substance that cases reduction, thereby itself becoming oxidized.	*Paint and Coatings*
Reducing	Separating from foreign substances; the reduction of ores consists in extracting from them the metals they contain.	*Mining*
Reduction	A reaction in which electrons are added to the reactant. More specifically, the addition of hydrogen or the abstraction of oxygen.	*Paint and Coatings*
Redundancy	The capacity to switch from primary equipment to standby equipment automatically without affecting the process under control.	*Control Engineering*
Reed	joints or the cleavage plane in the strata and coal. (Scot.).	*Mining*
Reed Technology	Technology where the reed contacts are designed to be actuated by a magnet. When a magnetic field is brought close to the reed contacts, the contacts are drawn together to make the circuit.	*Electrical Engineering*
Reek	smoke, as in the smoke produced from a blast using powder.	*Mining*
Reel	a windlass or turn beam fixed at the top of a gug to draw up the coal, or a roller, drum or pulley at the top of an incline around which the haulage rope or chain passes. (Som.).	*Mining*
Reengineering	A one time fundamental rethinking and business process redesign to achieve dramatic improvements in performance and/or maintainability.	*Maintenance*
Reenter	To enter a previously abandoned well.	*Petroleum Drilling*
Reeve	To pass a rope through a hole or around a system of sheaves.	*Wire Rope & Cable*
Referee	Referees provide feedback to reviewers on the content and design of their Protocols and reviews. They are provided with checklists to guide and assist them in this. See also: Review	*Quality Engineering*
Referee process	System by which a review goes out to editors and external parties with content, methodological, or user expertise. These people are sometimes called external peer reviewers or referees. See also: Editorial process, Review	*Quality Engineering*
Reference	What must be achieved in order to match a plan; Synonyms: desired.	*Aeronautical Engineering*
Reference	What must be achieved in order to match a plan; Synonyms - desired.	*Aeronautical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Reference acceleration (REFACC)	A guidance control law parameter, generated by the longitudinal guidance modes; Typical Units - ft/s-squared, g; Dimensions - Length/Time-squared.	*Aeronautical Engineering*
Reference acceleration gain (KLA)	A guidance control law parameter, generated by the longitudinal guidance modes; Typical Units: s; Dimensions: Time.	*Aeronautical Engineering*
Reference acceleration gain (KLA)	A guidance control law parameter, generated by the longitudinal guidance modes; Typical Units - s; Dimensions - Time.	*Aeronautical Engineering*
Reference Change Value (RCV)	An uncertainty term that expresses the difference that must be observed before a change of patient values should be considered clinically important. Defined by Fraser as a function of the analytical variation and the within-subject biologic variation.	*Quality*
Reference interval	A particular statistical range, rather than the entire range of observed reference values. Commonly used to characterize the range of test results expected for a defined group of people.	*Quality*
Reference interval experiment	A method evaluation experiment in which specimens are collected from selected individuals in defined states of health in order to characterize the expected range of test values for that population.	*Quality*
Reference Junction	The cold junction in a thermocouple circuit which is held at a stable, known temperature. The standard reference temperature is 0°C (32°F). However, other temperatures can be used.	*Electrical*
Reference Junction	The cold junction in a thermocouple circuit which is held at a stable known temperature. The standard reference temperature is 0°C (32°F). However, other temperatures can be used.	*Electronic Process*
Reference Manager	A software package designed to manage bibliographic references. Sometimes confusingly referred to as RefMan (see RevMan). Examples of other similar packages are Papyrus and ProCite.	*Quality Engineering*
Reference Mark	Any diagnostic point or mark which can be used to relate a position during rotation of a part to its location when stopped.	*Electronic Process*
Reference material, RM	"A material or substance, one or more of whose property values are sufficiently homogeneous and well established to be used for the calibration of an apparatus, the assessment of a measurement method, or for assigning values to materials." [CLSI] See also certified reference material.	*Quality*
Reference method	"A thoroughly investigated method, in which exact and clear descriptions of the necessary conditions and procedures are given for the accuracy determined of one or more property values, and in which documented accuracy and precision of the method are commensurate with the method's use for assessing the accuracy of other methods for measuring the same property values, or for assigning reference method values to reference materials." [CLSI]	*Quality*
Reference month	The calendar month and year to which the reported cost, price, and volume information relates.	*Energy*
Reference Performance	Performance attained under reference operating conditions. Note: Performance includes such things as accuracy, dead band, repeatability, hysteresis, linearity, etc.	*Process Control*

Please see the Appendix for further illustration

Term	Definition	Industry
Reference Plane	Any plane perpendicular to the shaft axis to which an amount of unbalance is referred.	*Electronic Process*
Reference population	The population that the results of a study can be generalized to. See also: External validity	*Quality Engineering*
Reference values	All of the values observed for a particular determination when sampling a population of individuals in defined states of health.	*Quality*
Reference year	The calendar year to which the reported sales volume information relates.	*Energy*
Referral filter bias	The sequence of referrals that may lead patients from primary to tertiary centers raises the proportion of more severe or unusual cases, thus increasing the likelihood of adverse or unfavorable outcomes.	*Analysis*
Refined coal	A coal product that is created when impurities and/or moisture are removed to improve heat content and reduce emissions. Includes any coal that meets the IRS definition of refined coal (Notice 2010-54 or any superseding IRS notices). Does not include coal processed by coal preparation plants.	*Energy*
Refined petroleum products	Refined petroleum products include but are not limited to gasolines, kerosene, distillates (including No. 2 fuel oil), liquefied petroleum gas, asphalt, lubricating oils, diesel fuels, and residual fuels.	*Energy*
Refiner	A firm or the part of a firm that refines products or blends and substantially changes products, or refines liquid hydrocarbons from oil and gas field gases, or recovers liquefied petroleum gases incident to petroleum refining and sells those products to resellers, retailers, reseller/retailers or ultimate consumers. "Refiner" includes any owner of products that contracts to have those products refined and then sells the refined products to resellers, retailers, or ultimate consumers.	*Energy*
Refiner acquisition cost of crude oil	The cost of crude oil, including transportation and other fees paid by the refiner. The composite cost is the weighted average of domestic and imported crude oil costs. Note: The refiner acquisition cost does not include the cost of crude oil purchased for the Strategic Petroleum Reserve (SPR).	*Energy*
Refinery	An installation that manufactures finished petroleum products from crude oil, unfinished oils, natural gas liquids, other hydrocarbons, and oxygenates.	*Energy*
Refinery and blender net inputs	Raw materials, unfinished oils, and blending components processed at refineries, or blended at refineries or petroleum storage terminals to produce finished petroleum products. Included are gross inputs of crude oil, natural gas plant liquids, other hydrocarbon raw materials, hydrogen, oxygenates (excluding fuel ethanol), and renewable fuels (including fuel ethanol). Also included are net inputs of unfinished oils, motor gasoline blending components, and aviation gasoline blending components. Net inputs are calculated as gross inputs minus gross production. Negative net inputs indicate gross inputs are less than gross production. Examples of negative net inputs include reformulated gasoline blendstock for oxygenate blending (RBOB) produced at refineries for shipment to blending terminals, and unfinished oils produced and added to inventory in advance of scheduled maintenance of a refinery crude oil distillation unit.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Refinery and blender net production	Liquefied refinery gases, and finished petroleum products produced at a refinery or petroleum storage terminal blending facility. Net production equals gross production minus gross inputs. Negative net production indicates gross production is less than gross inputs for a finished petroleum product. Examples of negative net production include reclassification of one finished product to another finished product, or reclassification of a finished product to unfinished oils or blending components.	*Energy*
Refinery capacity utilization	Ratio of the total amount of crude oil, unfinished oils, and natural gas plant liquids run through crude oil distillation units to the operable capacity of these units.	*Energy*
Refinery fuel	Crude oil and petroleum products consumed at the refinery for all purposes.	*Energy*
Refinery gas	Still gas consumed as refinery fuel.	*Energy*
Refinery input, crude oil	Total crude oil (domestic plus foreign) input to crude oil distillation units and other refinery processing units (cokers, etc.).	*Energy*
Refinery input, total	The raw materials and intermediate materials processed at refineries to produce finished petroleum products. They include crude oil, products of natural gas processing plants, unfinished oils, other hydrocarbons and oxygenates, motor gasoline and aviation gasoline blending components and finished petroleum products.	*Energy*
Refinery losses and gains	Processing gain and loss that takes place during the refining process itself. Excludes losses that do not take place during the refining process, e.g., spills, fire losses, and contamination during blending, transportation, or storage.	*Energy*
Refinery olefins	Subset of olefinic hydrocarbons (olefins) produced at crude oil refineries, including ethylene, propylene, butylene, and isobutylene.	*Energy*
Refinery output	The total amount of petroleum products produced at a refinery. Includes petroleum consumed by the refinery.	*Energy*
Refinery production	Petroleum products produced at a refinery or blending plant. Published production of these products equals refinery production minus refinery input. Negative production will occur when the amount of a product produced during the month is less than the amount that is reprocessed (input) or reclassified to become another product during the same month. Refinery production of unfinished oils and motor and aviation gasoline blending components appear on a net basis under refinery input.	*Energy*
Refinery yield	Refinery yield (expressed as a percentage) represents the percent of finished product produced from input of crude oil and net input of unfinished oils. It is calculated by dividing the sum of crude oil and net unfinished input into the individual net production of finished products. Before calculating the yield for finished motor gasoline, the input of natural gas liquids, other hydrocarbons and oxygenates, and net input of motor gasoline blending components must be subtracted from the net production of finished aviation gasoline.	*Energy*
Refinery	The facility where the characteristics of petroleum or petroleum products are changed.	*Petroleum Drilling*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Refinery-grade butane	A refinery-produced hydrocarbon product that is composed predominantly of normal butane and/or isobutane, and may also contain propane and/or natural gasoline. This product may also contain significant volumes of olefinic hydrocarbons.	*Energy*
Refining	Series of processes to convert crude oil and its fractions into finished petroleum products, including thermal cracking, catalytic cracking, polymerization, alkylation, reforming, hydrocracking, hydroforming, hydrogenation, hydrogen treating, Hydrofining®, solvent extraction, dewaxing, de-oiling, acid treating, clay filtration and deasphalting.	*Lubrication*
Refining	A series of processes for converting crude oil and its fractions to finished petroleum products. Following distillation, a petroleum fraction may undergo one or more additional steps to purify or modify it. These refining steps include; thermal cracking, catalytic cracking, polymerization, alkylation, reforming, hydrocracking, hydroforming, hydrogenation, hydrogen treating, hydrofining, solvent extraction, dewaxing, deoiling, acid treating, clay filtration, and deasphalting. Refined lubricating oils may be blended with other lube stocks, and additives may be incorporated, to impart special properties.	*Lubrication*
Refinishing	To apply a new coat of wax or floor finish to a floor.	*Chemistry*
Reflectance	Fraction of light reflected at an interface.	*Material Process*
Reflection	Deflection of a light beam at the interface between two media.	*Engineering Physics*
Reflection rules	Summary of which crystal planes in a given structure cause x-ray diffraction.	*Material Process*
Reflective film	Transparent covering for glass that helps keep out heat from the sun.	*Energy*
Reflective Scan	A scanning technique in which the light source is aimed at a reflective surface to illuminate the photosensor. Retroreflective, specular, diffuse scan and convergent beam are all reflective scan techniques.	*Electrical Engineering*
Reflectivity	The ratio of the energy carried by a wave after reflection from a surface to its energy before reflection.	*Energy*
Reflectivity	Amount of light reflected back by the surface upon which the bar code is printed.	*Gears*
Reflex	An angle that measures between 180° and 360°.	*Math*
Reflux	The portion of the distillate returned to the fractionating column to assist in attaining better separation into desired fractions.	*Petroleum Engineering*
Reforestation	Replanting of forests on lands that have recently been harvested or otherwise cleared of trees.	*Energy*
Reformate	An upgraded naphtha resulting from catalytic or thermal reforming.	*Petroleum Engineering*
Reforming	The thermal or catalytic conversion of petroleum naphtha into more volatile products of higher octane number. It represents the total effect of numerous simultaneous reactions such as cracking, polymerization, dehydrogenation, and isomerization.	*Petroleum Engineering*
Reformulated blendstock for oxygenate blending (RBOB)	Motor gasoline blending components intended for blending with oxygenates to produce finished reformulated gasoline.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Reformulated gasoline	Finished gasoline formulated for use in motor vehicles, the composition and properties of which meet the requirements of the reformulated gasoline regulations promulgated by the U.S. Environmental Protection Agency under Section 211(k) of the Clean Air Act. It includes gasoline produced to meet or exceed emissions performance and benzene content standards of federal-program reformulated gasoline even though the gasoline may not meet all of the composition requirements (e.g. oxygen content) of federal-program reformulated gasoline. Note: This category includes Oxygenated Fuels Program Reformulated Gasoline (OPRG). Reformulated gasoline excludes Reformulated Blendstock for Oxygenate Blending (RBOB) and Gasoline Treated as Blendstock (GTAB).	*Energy*
Refraction	Bending of a light beam upon passing from one medium into another.	*Engineering Physics*
Refractive Index	The ratio of the velocity of light in a vacuum to the velocity of light in some medium.	*Engineering Physics*
Refractive index Fundamental optical property. The ratio of the velocity of light in a vacuum to its velocity in the substance. It is also the ratio of the sine of the angle of incidence to the sine of the angle of refraction	Refractive index Fundamental optical property. The ratio of the velocity of light in a vacuum to its velocity in the substance. It is also the ratio of the sine of the angle of incidence to the sine of the angle of refraction.	*Material Process*
Refractory	a metal or ceramic that may be exposed to extremely high temperatures without deteriorating rapidly or without melting.	*General Engineering*
Refractory	High temperature resistant material, such as many of the common ceramic oxides.	*Material Process*
Refractory index	a measure of the ability of a substance to be biodegraded by bacterial activity. The lower the refractory index, the greater the biodegradability.	*Chemical*
Refractory metal	Metals and alloys, such as molybdenum, that are resistant to high temperatures.	*Material Process*
Refractory Metal Thermocouple	A class of thermocouples with melting points above 3600°F. The most common are made from tungsten and tungsten/rhenium alloys, Types G and C. They can be used for measuring high temperatures up to 2200°C (4000°F) in non-oxidizing, inert, or vacuum environments.	*Electrical*
Refractory Metal Thermocouple	A class of thermocouples with melting points above 3600°F. The most common are made from tungsten and tungsten/rhenium alloys Types G and C. They can be used for measuring high temperatures up to 4000°F (2200°C) in non-oxidizing, inert, or vacuum environments.	*Electronic Process*
Refractory ore	Ore that resists the action of chemical reagents in the normal treatment processes and which may require pressure leaching or other means to effect the full recovery of the valuable minerals.	*Mining*
Refrigeration Compressor	A special type of compressor typically used for refrigeration, heat pumping and air conditioning. They are made to turn low-pressure gases into high-pressure and high-temperature gases. The three main types of refrigeration compressors are screw compressors, scroll compressors and piston compressors.	*Lubrication*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Refrigeration unit	Lowers the temperature through a mechanical process. In a typical refrigeration unit, electricity powers a motor that runs a pump to compress the refrigerant to maintain proper pressure. (A "refrigerant" is a substance that changes between liquid and gaseous states under desirable temperature and pressure conditions.) Heat from the compressed liquid is removed and discharged from the unit and the refrigerant then evaporates when pressure is reduced. The refrigerant picks up heat as it evaporates and it returns to the compressor to repeat the cycle. A few refrigeration units use gas (either natural gas or LPG) in an absorption process that does not use a compressor. The gas is burned to heat a chemical solution in which the refrigerant has been absorbed. Heating drives off the refrigerant which is later condensed. The condensed refrigerant evaporates by a release of pressure, and it picks up heat as it evaporates. The evaporated refrigerant is then absorbed back into the chemical solution, the heat is removed from the solution and discharged as waste heat, and the process repeats itself. By definition, refrigerators, freezers, and air-conditioning equipment all contain refrigeration units.	*Energy*
Refrigerator Oil	The lubricant added to the working fluid in an expansion-type cooling unit which serves to lubricate the pump mechanism.	*Lubrication*
Refuge holes	see Manholes.	*Mining*
Refunding	Retirement of one security issue with proceeds received from selling another. Refunding provides for retiring maturing debt by taking advantage of favorable money market conditions.	*Energy*
Refuse bank	A repository for waste material generated by the coal cleaning process.	*Energy*
Refuse mine	A surface mine where coal is recovered from previously mined coal. It may also be known as a silt bank, culm bank, refuse bank, slurry dam, or dredge operation.	*Energy*
Refuse recovery	The recapture of coal from a refuse mine or the coal recaptured by that process. The resulting product has been cleaned to reduce the concentration of noncombustible materials.	*Energy*
Refuse-derived fuel (RDF)	A fuel produced by shredding municipal solid waste (MSW). Noncombustible materials such as glass and metals are generally removed prior to making RDF. The residual material is sold as-is or compressed into pellets, bricks, or logs. RDF processing facilities are typically located near a source of MSW, while the RDF combustion facility can be located elsewhere.	*Energy*
Regeneration	In a catalytic process the reactivation of the catalyst, sometimes done by burning off the coke deposits under carefully controlled conditions of temperature and oxygen content of the regeneration gas stream.	*Petroleum Engineering*
Regeneration cut	A cutting strategy in which old trees are removed in order to reestablish a new stand of seedlings.	*Forestry*
Regenerative braking	A braking method that is used to recoup some of the energy lost as vehicles slow down or brake against an incline (downhill). It exploits the ability of electric motors to work as generators during breaking. This enables the mechanical energy from the load to be converted into electric energy and returned to the electricity supply systems for use either by other vehicles, or by the braking vehicle at a later time if onboard energy storage systems such as batteries or super-capacitors are available. The method can be used to improve the energy efficiency of cranes and elevator systems, trains and hybrid cars.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Regenerative circuit	A circuit in which pressure fluid discharged from a component is re-turned to the system to reduce flow input requirements. Often used to speed up the action of a cylinder by directing discharged oil from the rod end to the piston end.	*Mechanical, Process, and Operations*
Regenerative energy	Energy that is not obtained from fossil energy carriers but from renewable resources such as wood or from water power or solar radiation.	*Thermal Management*
Regional metamorphism	Metamorphism caused by both the heat of igneous processes and tectonic pressure.	*Mining*
Regional Power Exchange	An entity established to coordinate short-term operations to maintain system stability and achieve least-cost dispatch. The dispatch provides back-up supplies, short-term excess sales, reactive power support, and spinning reserve. The pool may own, manager and/or operate the transmission lines or be an independent entity that manages the transactions between entities.	*Energy*
Regional processor	A company that processes and packages fresh produce at a regional location, usually for markets beyond the local area.	*Agriculture*
Regional Reliability Councils	Regional organizations charged with maintaining system reliability even during abnormal bulk power conditions such as outages and unexpectedly high loads.	*Energy*
Regional reserves, regional reserve estimates (coal)	Same as reserves; alternative wording is used by EIA to distinguish regional reserves, which are derived by factoring (downward) from a demonstrated reserve base for one or more study areas or regions, from reserves at active mines, which are aggregated (upward) from reserve estimates reported by individual mines on Form EIA-7A.	*Energy*
Regional Transmission Group	An organization approved by a Commission to coordinate transmission planning (and expansion), operation, and use on a regional basis.	*Energy*
Re-girder	to re-open a roadway that has closed due to roof weight and reset new supports or girders. –see also Resetting.	*Mining*
Register	A storage device with a specific capacity, such as a bit, byte or word.	*General Engineering*
Register of controlled trials	See Specialized register	*Quality Engineering*
Registered lands	A permit-only hunting program in which land is registered with and patrolled by the Wildlife Resources Commission.	*Forestry*
Regression analysis	A statistical modeling technique used to estimate or predict the influence of one or more independent variables on a dependent variable, e.g. the effect of age, sex, and educational level on the prevalence of a disease. Logistic regression and meta-regression are types of regression analysis.	*Quality Engineering*
Regression equation	The equation for the line obtained in linear regression calculations (Y = a + bX). This equation is used to calculate the amount of systematic error from the comparison of methods experiment. For a concentration where medical interpretation of the test value is critical (called a medical decision level, Xc), the corresponding value by the test method can be calculated from the regression equation (Yc = a + bXc). The amount of systematic error, SE, is the difference between Yc and Xc.	*Quality*
Regression statistics	Used here to refer to the terms that are commonly calculated, i.e., the slope, y-intercept, and standard deviation about the regression line.	*Quality*

Term	Definition	*Industry*
Regrind	Waste material such as sprues, runners, excess parison material and reject parts from injection molding, blow molding and extrusion operations, which has been reclaimed by shredding or granulating. Regrind is usually mixed with virgin compound at a predetermined percentage for reprocessing.	*Engineering Physics*
Regular gasoline	Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 85 and less than 88. Note Octane requirements may vary by altitude.	*Energy*
Regular port valve	A term usually applied to plug valves. The "regular" port of such a valve is customarily about 40% of the line pipe area. Hence, it corresponds to a venture or reduced bore valve of like nominal pipe size. Venturi ball valves are often a logical alternative to plug valves with advantages in price, torque, and low maintenance.	*Mechanical*
Regulated entity	For the purpose of EIA's data collection efforts, entities that either provide electricity within a designated franchised service area and/or file forms listed in the Code of Federal Regulations, Title 18, part 141 are considered regulated entities. This includes investor-owned electric utilities that are subject to rate regulation, municipal utilities, federal and state power authorities, and rural electric cooperatives. Facilities that qualify as cogenerators or small power producers under the Public Utility Regulatory Power Act (PURPA) are not considered regulated entities.	*Energy*
Regulated streamflow	The rate of flow past a given point during a specified period that is controlled by reservoir water release operation.	*Energy*
Regulation	The governmental function of controlling or directing economic entities through the process of rulemaking and adjudication.	*Energy*
Regulation %	The ratio of voltage extremes due to loading or line fluctuations. The process of holding constant a quantity such as voltage by means of a system that automatically corrects errors. For example, as more current is drawn from a battery or power supply, the output voltage tends to decrease (load regulation). With a power supply derived from AC, the DC output voltage can vary with the variation in AC voltage (line regulation).	*Electrical Engineering*
Regulation	An activity of government to control or direct economic entities by rulemaking and adjudication.	*Energy*
Regulation, procedures, and practices	A utility commission carries out its regulatory functions through rulemaking and adjudication. Under rulemaking, the utility commission may propose a general rule of regulation change. By law, it must issue a notice of the proposed rule and a request for comments is also made; the Federal Energy Regulatory Commission publishes this in the Federal Register. The final decision must be published. A utility commission may also work on a case-by-case basis from submissions from regulated companies or others. Objections to a proposal may come from the commission or intervenors, in which case the proposal must be presented to a hearing presided over by an administrative law judge. The judge's decision may be adopted, modified, or reversed by the utility commissioners, in which case those involved can petition for a rehearing and may appeal a decision through the courts system to the U.S. Supreme Court.	*Energy*
Regulator	A throttling valve which exercises automatic control over some variable (usually pressure). Not an on-off valve.	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Regulator	Device (wall, door) used to control the volume of air in an air split.	*Mining*
Regulator, Air line pressure	A regulator which transforms a fluctuating air pressure supply to provide a constant lower pressure output.	*Mechanical, Process, and Operations*
Regulatory Compact	Under this compact, utilities are granted service territories in which they have the exclusive right to serve retail customers. In exchange for this right, utilities have an obligation to serve all consumers in that territory on demand.	*Energy*
Reheat Blow Molding	In reheat blow molding, parisons are stretched axially by an external gripper or an internal stretch rod, and then stretched radially by blow air to form the finished product. This process orients the molecules biaxially resulting in the improved barrier properties.	*Engineering Physics*
Reheating coils	A part of some air-conditioning systems. Electric coils in air ducts used primarily to raise the temperature of circulated air after it was over-cooled to remove moisture. Some buildings have reheating coils as their sole heating source.	*Energy*
Reid Vapor Pressure (RVP)	An indirect measure of the rate at which petroleum liquids evaporate. It is the absolute vapor pressure of a crude oil, or of single or mixed liquid petroleum products, as measured by the Reid Method (ASTM Method D 323).	*Energy*
Reimbushment	Reversing one's course along previous tracks (e.g. in snow)	*Breakroom*
Reinforced Plastic	Molded, formed, filament wound, or shaped plastic parts consisting of resins to which reinforcing fibers, mats, fabrics, etc., have been added before the forming operation. Strength properties are improved.	*Engineering Physics*
Reinforcement	In branch connections, reinforcement is material around a branch opening that serves to strengthen it. The material is either integral in the branch components or added in the form of weld metal, a pad, a saddle, or a sleeve. In welding, reinforcement is weld metal in excess of the specified weld size.	*Maintenance and Repair*
Reinforcement Weld	Weld metal on the face of a groove weld in excess of the metal necessary for the specified weld size.5	*Maintenance and Repair*
Reinforcing steel	steel embedded in concrete to increase the concrete's load strength	*Materials Process*
Reinjected	The forcing of gas under pressure into an oil reservoir in an attempt to increase recovery.	*Energy*
Reinserted fuel	Irradiated fuel that is discharged in one cycle and inserted in the same reactor during a subsequent refueling. In a few cases, fuel discharged from one reactor has been used to fuel a different reactor.	*Energy*
Reinsertion	The process of returning nuclear fuel that has been irradiated and then removed from a reactor back into a reactor for further irradiation. Reinserted assemblies are assemblies that have been irradiated in a cycle, were not in the core in the prior cycle (cycle N), and which are in the core in the current cycle (cycle N+1).	*Energy*
Reject	To disallow a position update, usually by an operator; Compare: accept.	*Aeronautical Engineering*
Relative	Applies to measurements, in a non-standard, moving reference, as opposed to fixed reference; Compare: absolute.	*Aeronautical Engineering*
Relative	Applies to measurements, in a non-standard, moving reference, as opposed to fixed reference; Compare - absolute.	*Aeronautical Engineering*

Term	Definition	Industry
Relative bearing	Angle from aircraft center line to bearing of the destination; Symbols: B sub R; Typical Units: rad, deg.	*Aeronautical Engineering*
Relative change in azimuthal deviation	quantifies how azimuthal deviation is changing. Same as RCAD. (degrees/100 feet, or degrees/30.48 meters)	*Petroleum Drilling*
Relative change in horizontal deviation	quantifies how horizontal deviation is changing, and leads msHD considerably. Same as RCHD. (feet/1000 feet, or meters/304.8 meters)	*Petroleum Drilling*
Relative change in inclinational deviation	quantifies how inclinational deviation is changing. Same as RCID. (degrees/100 feet, or degrees/30.48 meters)	*Petroleum Drilling*
Relative change in vertical deviation	quantifies how vertical deviation is changing, and leads msVD considerably. Same as RCVD. (feet/1000 feet, or meters/304.8 meters)	*Petroleum Drilling*
Relative Humidity	The ratio of the mole fraction of water vapor present in the air to the mole fraction of water vapor present in saturated air at the same temperature and barometric pressure.	*Facility Engineering*
Relative humidity	Ratio of actual density or pressure, of existing moisture vapor, to maximum possible density, or pressure, at the same temperature, expressed as a percentage.	*Material Process*
Relative Losses	The production deferred or lost due to the specified element or system, as a percentage of the total deferment or losses.	*Maintenance*
Relative Magnetic Permeability	The ratio of the magnetic permeability of some medium to that of a vacuum.	*Engineering Physics*
Relative permeability	The magnetic permeability of a solid divided by the permeability of a vacuum.	*Material Process*
Relative risk	See Risk ratio	*Quality Engineering*
Relative risk (RR, or risk ratio)	The ratio of the probability of developing, in a specified period of time, an outcome among those receiving the treatment of interest or exposed to a risk factor, compared with the probability of developing the outcome if the risk factor or intervention is not present (i.e., the ratio of risk in the treated group to the risk in the control group: RR = EER/CER)	*Analysis*
Relative risk reduction	The proportional reduction in risk in one treatment group compared to another. It is one minus the risk ratio. If the risk ratio is 0.25, then the relative risk reduction is 1-0.25 = 0.75, or 75%.	*Quality Engineering*
Relative risk reduction (RRR)	The extent to which a treatment reduces a risk, in comparison with patients not receiving the treatment of interest (i.e., the percent reduction in events in treated compared to controls: RRR = [(CER-EER)/CER]).	*Analysis*
Relaxation	The loss of clamping force in a bolt that occurs typically without any nut rotation occurring. Commonly occurs as a result of embedment but can also be due to gasket creep, metal creep (at elevated temperatures), differential thermal expansion and stress relaxation.	*Maintenance*
Relaxation time	The time necessary for the stress on a polymer to fall to 0.37(=1/e) of the initial applied stress.	*Material Process*
Relay (Mechanical)	An electromechanical device that completes or interrupts a circuit by physically moving electrical contacts into contact with each other.	*Electrical*
Relay (Solid State)	A solid state switching device which completes or interrupts a circuit electrically with no moving parts.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Relays	1. A switch that can be operated remotely. 2. Control and protection relays are switches used to signal and control the operation of electrical equipment and systems. They include electronic and electromechanical relays and components; high-voltage protection, substation control and communications; automated substation components; and distribution relays.	*Electrical*
Release Force	The level to which force on the plunger must be reduced to allow the contacts to snap from the operated contact position to the normal contact position.	*Electrical Engineering*
Release mark	A surface irregularity in a molded piece, usually occurring at the corners which are the final point of release for the mold. See also Air locks.	*Material Process*
Release Travel	An operating characteristic of a switch, release travel is the distance through which the plunger moves when traveled from the release point to the free position. As a characteristic of the actuation applied to the switch, release travel is the distance the plunger is released past the release point.	*Electrical Engineering*
Relevant Range	The range of activity within which assumptions about variable and fixed cost behavior are valid.	*Procurement*
Reliability	Electric system reliability has two components - adequacy and security. Adequacy is the ability of the electric system to supply the aggregate electric demand and energy requirements of the customers at all times, taking into account scheduled and unscheduled outages of system facilities. Security is the ability of the electric system to withstand sudden disturbances such as electric short circuits or unanticipated loss of system facilities.	*Energy*
Reliability (electric system)	A measure of the ability of the system to continue operation while some lines or generators are out of service. Reliability deals with the performance of the system under stress.	*Energy*
Reliability analysis	A method of analysing a system design evaluating reliability related issues with the aim of improving the field reliability of the system. (See Life Data Analysis)	*Reliability Engineering*
Reliability Block Diagram	A pictorial representation of the logical interdependencies (parallel or series paths) required for the system under analysis to function correctly.	*Maintenance*
Reliability Calculations	These are calculations performed in order to quantify the reliability of a system prior to its design, development and production.	*Reliability Engineering*
Reliability Centered Maintenance	A Structured Process, Originally Developed In The Airline Industry, But Now Commonly Used In All Industries To Determine The Equipment Maintenance Strategies Required For Any Physical Asset To Ensure That It Continues To Fulfill Its Intended Functions In Its Present Operating Context. A Number Of Books Have Been Written On The Subject, But None Better Than Moubray's Book, Rcm Ii.	*Plant Engineering*
Reliability coordinator (electric)	The entity that is the highest level of authority who is responsible for the reliable operation of the Bulk Electric System, has the Wide Area view of the Bulk Electric System, and has the operating tools, processes and procedures, including the authority to prevent or mitigate emergency operating situations in both next-day analysis and real-time operations. The Reliability Coordinator has the purview that is broad enough to enable the calculation of Interconnection Reliability Operating Limits, which may be based on the operating parameters of transmission systems beyond any Transmission Operators vision. See NERC definition.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Reliability Councils	Regional reliability councils were organized after the 1965 northeast blackout to coordinate reliability practices and avoid or minimize future outages. They are voluntary organizations of transmission-owning utilities and in some cases power cooperatives, power marketers, and non-utility generators. Membership rules vary from region to region. They are coordinated through the North American Electric Reliability Council.	*Energy*
Reliability Engineering	See Maintenance Engineering.	*Maintenance*
Reliability Engineering	Deals with the longevity and dependability of parts, products and systems. More specifically it is about controlling risk. It incorporates a wide variety of analytical techniques designed to help engineers understand the failure modes and patterns of parts, products and systems.	*Reliability Engineering*
Reliability Enhancement Test (RET)	A term sometimes used to describe a range of design validation and accelerated life testing processes.	*Reliability Engineering*
Reliability growth	The analysis of the change in reliability over time, usually applied to products under development. Reliability growth analysis provides the means by which the reliability, mean life or failure rate is tracked over time, allowing the user to predict future reliability values based on the current rate of growth of the reliability measurement of interest.	*Reliability Engineering*
Reliability importance	See Importance measure	*Reliability Engineering*
Reliability life data analysis	See Life data analysis	*Reliability Engineering*
Reliability test design	The process of designing plans for reliability testing.	*Reliability Engineering*
Reliability testing	Testing units to failure in order to obtain raw failure time data for life data analysis.	*Reliability Engineering*
Reliability-Centered Maintenance (RCM)	A structured process, originally developed in the airline industry, to determine the equipment maintenance strategies required for any physical asset to ensure that it continues to fulfill its intended functions in its present operating context. The assets are decomposed, extensively analyzed and described, failure modes and effects analyses (FMEA) are made for the most critical components, and the maintenance organization and processes are carefully (re) defined.	*Reliability Engineering*
Relief Annealing	See "ANNEALING"	*Metallurgy*
Relief lines	Parallel scratches or projecting ridges distributed over a considerable area of sheet, and usually produced during a slicing operation. See Sheeter lines.	*Material Process*
Relief valve	A quick acting, spring loaded valve that opens (relieves) when the pressure exceeds the spring setting. Often installed on the body cavity of ball and gate valves to relieve thermal overpressure in liquid services. See "B.R.V." and Section 2.	*Mechanical*
Relieve	Process of reducing dimensions so that one part will fit another.	*Metallurgy*
Relocation of tailings	Relocation of tailings is sometimes necessary if the pile poses a threat to inhabitants or the environment, for example, through being situated too close to populated areas, on top of aquifers or other sources of water, or in unstable areas such as flood plains or faults near earthquake zones.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Remaining (resources/ reserves) (coal)	The amount of coal in the ground after some mining, excluding coal in the ground spoiled or left in place for which later recovery is not feasible.	*Energy*
Remaining Useful Life	An opinion (based on data, observations, history, records, exposure, etc.) of the number of years before a fluid, system or component will require replacement or reconditioning.	*Lubrication*
Remanent induction	The induction (of a feromagnetic material) remaining after the applied magnetic field is removed.	*Material Process*
Remanent polarization	The polarization (of a feromagnetic material) remaining after the applied magnetic field is removed.	*Material Process*
Remediation	Containment, treatment, or removal of contaminated groundwater. May include treatment, containment, or removal of contaminated soil above the water table.	*Petroleum Engineering*
Remote	Not hard-wired; communicating via switched lines, such as telephone lines. Usually refers to peripheral devices that are located at a site away from the CPU.	*Electrical*
Remote	A hydraulic function such as a cylinder which is separate from its supply source. Usually connected to the source by flexible hoses.	*Mechanical, Process, and Operations*
Remote control	The operation of a valve or other flow control device from a point at a distance from the device being controlled. Can be accomplished by electrical, pneumatic or hydraulic means.	*Mechanical*
Remote Maintenance	Maintenance carried out without physical access of the personnel to the asset.	*Maintenance*
Remote terminal (RT)	Term defining role of a device on a MIL-STD-1553 bus as being a slave; Compare: bus controller.	*Aeronautical Engineering*
Remote Terminal Unit	Signal Data Converter.	*Aeronautical Engineering*
Remote Terminal Unit (RTU)	Remote terminal units collect data from points around a power transmission and distribution network and transmit the information to a central location. They are typically used to control and monitor power networks, and are components of supervisory control and data acquisition (SCADA) systems.	*Electrical*
Remote-mount	An installation in which a positioner is not mounted directly on the actuator, but in a location some distance away. This can be done for convenience or to protect the electronics of the device from harsh conditions, such vibration or radiation.	*Mechanical*
Renard series	See Preferred Numbers.	*Mechanical, Process, and Operations*
Rendering plant	a place where lard, tallow, and oil are extracted from animal parts	*Agriculture*
Rendezvous	To meet with another aircraft in the air, for refueling or other mission objectives.	*Aeronautical Engineering*
Rendezvous approach	To approach a planned rendezvous point.	*Aeronautical Engineering*
Renewable diesel fuel (other)	Diesel fuel and diesel fuel blending components produced from renewable sources that are coprocessed with petroleum feedstocks and meet requirements of advanced biofuels. **Note:** This category "other" pertains to the petroleum supply data system.	*Energy*
Renewable Energy	Electricity generated from sources such as solar, wind, and geothermal power rather than from fossil fuels.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Renewable Energy	Energy that is capable of being renewed by the natural ecological cycle.	*Energy*
Renewable energy resources	Energy resources that are naturally replenishing but flow-limited. They are virtually inexhaustible in duration but limited in the amount of energy that is available per unit of time. Renewable energy resources include biomass, hydro, geothermal, solar, wind, ocean thermal, wave action, and tidal action.	*Energy*
Renewable fuels (other)	Fuels and fuel blending components, except biomass-based diesel fuel, renewable diesel fuel, and fuel ethanol, produced from renewable biomass. **Note:** This category "other" pertains to the petroleum supply data system.	*Energy*
Renk	see Rank.	*Mining*
Rennet	The milk coagulating enzyme of the stomach.	*Material Process*
Rennet casein	Casein coagulated from skim milk with rennet, used in the manufacture of casein plastics.	*Material Process*
Rent	cleavage in the coal that has a smooth parting, usually with sooty coal in it. (Scot.).	*Mining*
REP	Retail Electric Provider	*Energy*
Repair	The process of physically restoring a nonconformance to a condition such that an item complies with the applicable requirements, including the code requirements.	*Maintenance and Repair*
Repair	performing finishing work after galvanizing in order to meet standards or specifications, or coating areas of steel that have been exposed due to post-galvanizing fabrication, installation, or extremely rough handling	*Materials Process*
Repair distribution	A mathematical model that describes the probability of repairs occurring over time.	*Reliability Engineering*
Repairable system	A system that can be restored to operating condition after a failure by the repair or replacement of one or more components.	*Reliability Engineering*
Repeatability	The ability of a transducer to reproduce output readings when the same measurand value is applied to it consecutively, under the same conditions, and in the same direction. Repeatability is expressed as the maximum difference between output readings.	*Electrical*
Repeatability (of results of measurements)	Closeness of agreement between the results of successive measurements of the same measurand carried out under the same conditions of measurement. NOTE: Formerly, the term within-run prediction was used. [CLSI EP15-A2]	*Quality*
Repeatability conditions	Conditions where independent test results are obtained with the same method on identical test material in the same laboratory by the same operator using the same equipment within a short interval of time. [CLSI EP15-A2]	*Quality*
Repetitive shock machine	A platform to which products (to be tested or screened) are attached. Often this platform forms the bottom surface of a thermal test chamber. Pneumatic vibrators are attached to the bottom of the platform, causing it to vibrate, usually simultaneously in several axes.	*Reliability Engineering*
Replacement Asset Value (RAV)	Replacement asset value is the market cost for asset replacement.	*Maintenance*
Replacement Asset Value (RAV)	Also referred to as estimated replacement value (ERV). This is the dollar value that would be required to replace the production capability of the present assets in the plant.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Replacement energy source for primary heating	For the CBECS (an EIA consumption survey), the heating energy source to which the building could switch within one week without major modifications to the main heating equipment, without substantially reducing the area heated, and without substantially reducing the temperature maintained in the heated area.	*Energy*
Replacement Maintenance (RM)	Replacement/Rehabilitation/Remodel Maintenance. All activity designed to bring an asset back into good shape, upgrade an asset to current technology, or make an asset more productive.	*Maintenance*
Replacement ore	Ore formed by a process during which certain minerals have passed into solution and have been carried away, while valuable minerals from the solution have been deposited in the place of those removed.	*Mining*
Replacement vehicle	A vehicle which is acquired in order to take the place of a vehicle which is being retired from service. These acquisitions do not increase the size of the company fleet.	*Energy*
Replacements	The substitution of a unit for another unit generally of a like or improved character.	*Energy*
Replenish	To add fluid to maintain a full hydraulic system.	*Mechanical, Process, and Operations*
Replicate/reproduce	Do the same thing to other people in order to achieve the same outcomes that occurred in a study. Also, repeating the circumstances of a study to test whether the results and outcomes are similar in another sample or population. See also: Reproducible	*Quality Engineering*
Replication	Testing that reproduces a specified desired motion history (time domain) or waveform.	*Reliability Engineering*
Replication experiment	A method validation experiment that estimates the random analytical error. It is performed by making measurements on a series of aliquots of a test solution within a specified time period, usually within the time of an analytical run (within-run imprecision), within a day (within-day imprecision), and over a period of at least 20 days (day-to-day or total imprecision).	*Quality*
Report State	The State, including adjacent offshore continental shelf areas in the Federal domain, in which a company operated natural gas gathering, transportation, storage, and/or distribution facilities or a synthetic natural gas plant covered by the individual report.	*Energy*
Report week	A calendar week beginning at 12:01a.m. on Sunday and ending at midnight on Saturday.	*Energy*
Report year (calendar)	The 12-month period, January 1 through December 31	*Energy*
Report year (fiscal)	A 12-month period for which an organization plans the use of its funds. The fiscal year is designated by the calendar year in which it ends.	*Energy*
Reportable range	The range of concentration of the substance in the specimen for which method performance is reliable and test results can be reported.	*Quality*
Reported	Data from a device.	*Aeronautical Engineering*
Reporting	The average number of Btu per cubic foot of gas at 60 degrees Fahrenheit and 14.73 psia delivered directly to consumers. Where billing is on a thermal basis, the heat content values used for billing purposes are to be used to determine the annual average heat content.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Reporting bias	A bias caused by only a subset of all the relevant data being available. The publication of research can depend on the nature and direction of the study results. Studies in which an intervention is not found to be effective are sometimes not published. Because of this, systematic reviews that fail to include unpublished studies may overestimate the true effect of an intervention. In addition, a published report might present a biased set of results (e.g. only outcomes or sub-groups where a statistically significant difference was found. Also called: Publication bias	*Quality Engineering*
Repowered Plant	This is an existing power facility that has been substantially rebuilt to extend its useful life.	*Energy*
Repowering	Refurbishment of a plant by replacement of the combustion technology with a new combustion technology, usually resulting in better performance and greater capacity.	*Energy*
Repressuring	The injection of gas into oil or gas formations to effect greater ultimate recovery.	*Energy*
Reprocessing	Synonymous with chemical separations.	*Energy*
Reproducibility	The closeness of agreement among repeated measurements of the output for the same value of input, made under the same operating conditions over a period of time, approaching from both directions. Note 1: It is usually measured as a non-reproducibility and expressed as reproducibility in percent of span for a specified time period. Normally, this implies a long period of time, but under certain conditions, the period may be a short time during which drift may not be included. Note 2: Reproducibility includes hysteresis, drift and repeatability.	*Process Control*
Reproducibility (Repeatability, Reliability)	The results of a test or measure are identical or closely similar each time it is conducted.	*Analysis*
Reproducible	Able to be done the same way elsewhere. See also: Replicate/reproduce	*Quality Engineering*
Reproduction	The process by which young trees grow to become the older trees of the future forest that occurs through natural sprouting or seeding, or by the planting of seedlings.	*Forestry*
Repulsive force	Force due to the like charge repulsion of both (negative) electron orbitals and (positive) nuclei of adjacent atoms.	*Material Process*
Request For Information (RFI)	Is usually submitted for planning purposes, including development of a bid solicitation. Vendors are advised that an award will not be forthcoming.	*Procurement*
Request For Proposal (RFP)	Is a request for a bid submittal which requires each seller to submit their plan for meeting the bid requirements. The award decision is based on evaluation of proposals in determining which proposal has the lowest overall cost and takes into consideration a quality assessment in addition to price.	*Procurement*
Request For Quotation (RFQ)	Is a request for bid submittal awarded on the basis of lowest price meeting a minimum specification.	*Procurement*
Requirements power	The firm service needs required by designated load plus losses from the points of supply.	*Energy*
Requisitioner	One who initiates a purchase requisition.	*Procurement*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rerefining	A process of reclaiming used lubricant oils and restoring them to a condition similar to that of virgin stocks by filtration, clay adsorption or more elaborate methods.	*Lubrication*
Reregulation	The design and implementation of regulatory practices to be applied to the remaining regulated entities after restructuring of the vertically-integrated electric utility. The remaining Regulated entities would be those that continue to exhibit characteristics of a natural monopoly, where imperfections in the market prevent the realization of more competitive results, and where, in light of other policy considerations, competitive results are unsatisfactory in one or more respects. Reregulation could employ the same or different regulatory practices as those used before restructuring.	*Energy*
Resale (wholesale) sales	Resale or wholesale sales are electricity sold (except under exchange agreements) to other electric utilities or to public authorities for resale distribution. (This includes sales to requirements and nonrequirements consumers.)	*Energy*
Research and development (RD)	Basic and applied research in the sciences and engineering and the design and development of prototypes and processes, excluding quality control, routine product testing, market research, sales promotion, sales service, research in the social sciences or psychology, and other non-technological activities or technical services.	*Energy*
Reseller	A firm (other than a refiner) that is engaged in a trade or business that buys refined petroleum products and then sells them to a purchaser who is not the ultimate consumer of those refined products.	*Energy*
Resellers	Companies that purchase utility service from a wholesaler and resell it to consumers.	*Energy*
Resembling asphalt	resembling asphalt.	*Material Process*
Reserve	That portion of the demonstrated reserve base that is estimated to be recoverable at the time of determination. The reserve is derived by applying a recovery factor to that component of the identified coal resource designated as the demonstrated reserve base.	*Energy*
Reserve	That portion of the identified coal resource that can be economically mined at the time of determination. The reserve is derived by applying a recovery factor to that component of the identified coal resource designated as the reserve base.	*Mining*
Reserve additions	The estimated original, recoverable, salable, and new proved reserves credited to new fields, new reservoirs, new gas purchase contracts, amendments to old gas purchase contracts, or purchase of gas reserves in-place that occurred during the year and had not been previously reported. Reserve additions refer to domestic in-the-ground natural gas reserve additions and do not refer to interstate pipeline purchase agreements; contracts with foreign suppliers; coal gas, SNG, or LNG purchase arrangements.	*Energy*
Reserve Capacity	Capacity in excess of that required to carry peak load.	*Energy*
Reserve cost categories of $15, $30, $50, and$100 per pound U_3O_8	Classification of uranium reserves estimated by using break-even cut-off grades that are calculated based on forward-operating costs of less than $15, $30, $50, and $100 per pound U_3O_8.	*Energy*

Please see the Appendix for further illustration

Term	Definition	Industry
Reserve Generating Capacity	The amount of power that can be produced at a given point in time by generating units that are kept available in case of special need. This capacity may be used when unusually high power demand occurs, or when other generating units are off-line for maintenance, repair or refueling.	*Energy*
Reserve Margin	The percentage of installed capacity exceeding the expected peak demand during a specified period.	*Energy*
Reserve margin (operating)	The amount of unused available capability of an electric power system (at peak load for a utility system) as a percentage of total capability.	*Energy*
Reserve revisions	Changes to prior year-end proved reserves estimates, either positive or negative, resulting from new information other than an increase in proved acreage (extension). Revisions include increases of proved reserves associated with the installation of improved recovery techniques or equipment. They also include correction of prior year arithmetical or clerical errors and adjustments to prior year-end production volumes to the extent that these alter reserves estimates.	*Energy*
Reserve Strength	The strength of a rope exclusive of the outer wires.	*Wire Rope & Cable*
Reserved Word	A word that has a defined function in the language, and cannot be used as a variable name.	*General*
Reserved Word	A word that has a defined function in the language, and cannot be used as a variable name.	*Electronic Process*
Reserves changes	Positive and negative revisions, extensions, new reservoir discoveries in old fields, and new field discoveries that occurred during the report year.	*Energy*
Reserves, coal	Quantities of unextracted coal that comprise the demonstrated base for future production, including both proved and probable reserves. Also see Proved energy reserves; Probable energy reserves; Energy reserves; Proved (measured) reserves, coal; and Probable (indicated) reserves, coal.	*Energy*
Reserves, net	Includes all proved reserves associated with the company's net working interests.	*Energy*
Reservoir	A porous and permeable underground formation containing an individual and separate natural accumulation of producible hydrocarbons (crude oil and/or natural gas) which is confined by impermeable rock or water barriers and is characterized by a single natural pressure system.	*Energy*
Reservoir	A container for storage of liquid in a fluid power system.	*Lubrication*
Reservoir	A porous and permeable sedimentary rock containing commercial quantities of oil and gas. Three types of reservoirs are encountered including structural traps, stratigraphic traps and combination traps.	*Petroleum Drilling*
Reservoir	The underground formation where oil and gas has accumulated. It consists of a porous rock to hold the oil or gas, and a cap rock that prevents its escape.	*Petroleum Drilling*
Reservoir (sump) filter	A filter installed in a reservoir in series with a suction or return line.	*Oil Analysis*
Reservoir capacity	The present total developed capacity (base and working) of the storage reservoir, excluding contemplated future development.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Reservoir Filter	A filter installed in a reservoir in series with a suction or return line. Also known as sump filter.	*Lubrication*
Reservoir repressuring	The injection of a pressurized fluid (such as air, gas, or water) into oil and gas reservoir formations to effect greater ultimate recovery.	*Energy*
Reset	Same as the integral or "I" part of PID controllers.	*Process Control*
Reset Rate	The inverse of integral time; usually expressed as "repeats per minute."	*Electrical Engineering*
Reset Windup	With a simple PID controller, integral action will continue to change the controller output value (in voltage, air signal or digital computer value) after the actual output reaches a physical limit. This is called reset (integral) windup. For example, if the controller is connected to a valve which is 100% open, the valve cannot open farther. However, the controller's calculation of its output can go past 100%, asking for more and more output even though the hardware cannot go past 100%. Most controllers use an "anti-reset windup" feature that disables integral action using one of a variety of methods when the controller hits a limit.	*Process Control*
Resetting	the re-setting or renewing of roof supports which may have moved due to the action of roof weight.	*Mining*
Residence Time	The period of time groundwater remains in an aquifer.	*Petroleum Engineering*
Residential building	A structure used primarily as a dwelling for one or more households.	*Energy*
Residential consumers	Consumers using gas for heating, air conditioning, cooking, water heating, and other residential uses in single and multi-family dwellings and apartments and mobile homes.	*Energy*
Residential energy consumption survey (RECS)	A national multistage probability sample survey conducted by the Energy End Use Division of the Energy Information Administration. The RECS provides baseline information on how households in the United States use energy. The Residential Transportation Energy Consumption Survey (RTECS) sample is a subset of the RECS. Household demographic characteristics reported in the RTECS publication are collected during the RECS personal interview.	*Energy*
Residential heating oil price	The price charged for home delivery of No. 2 heating oil, exclusive of any discounts such as those for prompt cash payment. Prices do not include taxes paid by the consumer.	*Energy*
Residential propane price	The "bulk keep full" price for home delivery of consumer-grade propane intended for use in space heating, cooking, or hot water heaters in residences.	*Energy*
Residential sector	An energy-consuming sector that consists of living quarters for private households. Common uses of energy associated with this sector include space heating, water heating, air conditioning, lighting, refrigeration, cooking, and running a variety of other appliances. The residential sector excludes institutional living quarters. Note: Various EIA programs differ in sectoral coverage.	*Energy*
Residential type central air conditioner	There are four basic parts to a residential central air-conditioning system (1) a condensing unit, (2) a cooling coil, (3) ductwork, and (4) a control mechanism such as a thermostat. There are two basic configurations of residential central systems (1) a "split system" where the condensing unit is located outside and the other components are inside, and (2) a packaged-terminal air-encased in one unit and is usually found in a "utility closet."	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Residential vehicles	Motorized vehicles used by U.S. households for personal transportation. Excluded are motorcycles, mopeds, large trucks, and buses. Included are automobiles, station wagons, passenger vans, cargo vans, motor homes, pickup trucks, and jeeps or similar vehicles. In order to be included (in the EIA survey), vehicles must be (1) owned by members of the household, or (2) company cars not owned by household members but regularly available to household members for their personal use and ordinarily kept at home, or (3) rented or leased for 1 month or more.	*Energy*
Residential well	A pumping well that serves one home or is maintained by a private owner.	*Petroleum Drilling*
Residential/commercial (consumer category)	Housing units, wholesale or retail businesses (except coal wholesale dealers); health institutions (hospitals, social and educational institutions (schools and universities); and Federal, state, and local governments (military installations, prisons, office buildings, etc.). Excludes shipments to Federal power projects, such as TVA, and rural electrification cooperatives, power districts, and state power projects.	*Energy*
Residual	"The difference between a given data point and its predicted value." [CLSI]	*Quality*
Residual (Final) Unbalance	Residual unbalance is that unbalance of any kind that remains after balancing.	*Electronic Process*
Residual chlorine	(See chlorine, free) the amount of available chlorine present in water at any specified period, subsequent to the addition of chlorine.	*Chemical Engineering*
Residual dirt capacity	The dirt capacity remaining in a service loaded filter element after use, but before cleaning, measured under the same conditions as the dirt capacity of a new filter element.	*Mechanical, Process, and Operations*
Residual fuel oil	A general classification for the heavier oils, known as No. 5 and No. 6 fuel oils, that remain after the distillate fuel oils and lighter hydrocarbons are distilled away in refinery operations. It conforms to ASTM Specifications D 396 and D 975 and Federal Specification VV-F-815C. No. 5, a residual fuel oil of medium viscosity, is also known as Navy Special and is defined in Military Specification MIL-F-859E, including Amendment 2 (NATO Symbol F-770). It is used in steam-powered vessels in government service and inshore power plants. No. 6 fuel oil includes Bunker C fuel oil and is used for the production of electric power, space heating, vessel bunkering, and various industrial purposes.	*Energy*
Residual Monomer	The unpolymerized monomer that remains incorporated in a polymer after the polymerization reaction is completed.	*Engineering Physics*
Residual Saturation	Saturation below which fluid drainage will not occur.	*Petroleum Engineering*
Residual stand	Trees left in a stand to grow until the next harvest.	*Forestry*
Residual stress	The stress remaining within a structural material after all applied loads are removed.	*Material Process*
Residue	contaminants (oil, grease, dirt, rust, mill scale) that unless removed, will prevent complete galvanizing of the steel surface	*Materials Process*
Residue gas	Natural gas from which natural gas processing plant liquid products and, in some cases, nonhydrocarbon components have been extracted.	*Energy*
Residuum	Residue from crude oil after distilling off all but the heaviest components, with a boiling range greater than 1,000 degrees Fahrenheit.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Resilient seat	A valve seat containing a soft seal such as an o-ring or plastic to assure tight shut-off.	*General Mechanical*
Resilient seat	A valve seat containing a soft seal, such as an o-ring, to assure tight shut-off.	*Mechanical*
Resilient Tile	Tile that will withstand shock without permanent damage; includes rubber, cork, asphalt, linoleum, vinyl, vinyl asbestos. This tile will give under impact and certain loads, and then return to its original form after the load is removed.	*Chemistry*
Resin	A solid or semisolid amorphous organic compound or mixture of such compounds, with no definite melting point and no tendency to crystallize. Resins may be of vegetable or animal origin (e.g. shellac) or may be synthetic. Natural resins are distinguished from gums in that the resins are insoluble in water, but certain synthetic water soluble materials are referred to as resins or resin stages.	*Material Process*
Resin	An organic substance of natural or synthetic origin characterized by being polymeric in nature. Most resins, though not all, are of high molecular weight and consist of long chain or network molecular structure. Usually resins are more soluble in their lower molecular weight forms.	*Engineering Physics*
Resin bolting	A method of permanent roof support in which steel rods are grouted with resin.	*Mining*
Resin flake	Cured thermosetting resin flakes remolded in a plastic.	*Material Process*
Resinate	A metallic soap in which the organic acid constituent is obtained from rosin.	*Material Process*
Resinoid	Generic term for thermosetting resins. The name is also applied to cured synthetic resins.	*Material Process*
Resinosis	Resin flow through bark or from wounds or cankers on conifers.	*Forestry*
Resinox	A trade name for phenol-formaldehyde and molding plastic.	*Material Process*
Resistance	The resistance to the flow of electric current measured in ohms (.). For a conductor, resistance is a function of diameter, resistivity (an intrinsic property of the material) and length.	*Electrical*
Resistance	Property of a conductor that opposed the current flow produced by a given difference of potential. The ohm is the practical unit of resistance.	*Electrical Engineering*
Resistance Weld	Method of manufacturing pipe by bending a plate into circular form and passing electric current through the material to obtain a welding temperature.	*Maintenance and Repair*
Resistance Ratio Characteristic	For thermistors, the ratio of the resistance of the thermistor at 25°C to the resistance at 125°C.	*Electrical*
Resistance Temperature Characteristic	A relationship between a thermistor's resistance and the temperature.	*Electrical*
Resistance Temperature Characteristic	A relationship between a thermistor's resistance and the temperature.	*Electronic Process*
Resistance Welding	by the heat obtained from resistance to	*Maintenance and Repair*
Resisting body	resisting body.	*General Mechanical*
Resisting force	See internal force.	*Engineering Physics*
Resistivity	The reciprocal of electrical conductivity, and a measure of a material's resistance to the passage of electric current.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Resistivity survey	A geophysical technique used to measure the resistance of a rock formation to an electric current.	*Mining*
Resistor	A resistor is any electrical component that resists the flow of electrical current. Resistors can be used to control current and therefore protect a circuit from overload. Resistors are also an important component in instrumentation and are used together with capacitors in power filters to eliminate unwanted harmonics.	*Electrical*
Resite A	C-stage phenol-aldehyde resin.	*Material Process*
Resitol A	B-stage phenol-aldehyde resin.	*Material Process*
Resolution	The smallest detectable increment of measurement. Resolution is usually limited by the number of bits used to quantize the input signal. For example, a 12-bit A/D can resolve to one part in 4096 (2 to the 12 power equals 4096).	*Electrical*
Resolution	The magnitude of output step changes as the pressure is continuously varied over the range. This term applies primarily to potentiometric sensors. Resolution is best specified as average and maximum resolution. Usually expressed in percent of full scale output.	*Electrical Engineering*
Resolved shear	Stress operating on a slip system.	*Material Process*
Resonance	Forced vibration of a true SDoF system causes resonance when the forcing frequency equals the natural frequency, when any forcing frequency change decreases system response. (See also critical frequency) Therefore resonance represents maximum sprung mass response, if forcing frequency is varied while input force is held constant. More complex systems have many resonances.	*Reliability Engineering*
Resonant Frequency	The measurand frequency at which a transducer responds with maximum amplitude.	*Electrical*
Resorcinol (C6H4(OH)2)	Colorless rhombic tablets from water or benzene. Reacts with many substances to form synthetic resins. Also, used in the manufacture of dyes.	*Material Process*
Resource	The calculated amount of material in a mineral deposit, based on limited drill information.	*Mining*
Resources	Concentrations of coal in such forms that economic extraction is currently or may become feasible. Coal resources broken down by identified and undiscovered resources. Identified coal resources are classified as demonstrated and inferred. Demonstrated resources are further broken down as measured and indicated. Undiscovered resources are broken down as hypothetical and speculative.	*Mining*
Resources (Coal)	Naturally occurring concentrations or deposits of coal in the Earth's crust, in such forms and amounts that economic extraction is currently or potentially feasible.	*Energy*
Respirable dust	very fine coal and stone particles, which breathed in can damage the lungs.	*Mining*
Respirable dust	Dust particles 5 microns or less in size.	*Mining*
Respirable dust sample	A sample collected with an approved coal mine dust sampler unit attached to a miner, or so positioned as to measure the concentration of respirable dust to which the miner is exposed, and operated continuously over an entire work shift of such miner.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Respondent	A company or individual who completes and returns a report or survey form.	*Energy*
Response	The vibratory motion or force that results from some mechanical input.	*Reliability Engineering*
Response signal	The signal from a "response sensor" measuring the mechanical response of a mechanical system to an input vibration or shock.	*Reliability Engineering*
Response Time	The length of time required for the output of a transducer to rise to a specified percentage of its final value as a result of a step change of input.	*Electrical*
Response Time	The time it takes for a device to respond to an input signal. The sum of the sensor, amplifier, and output response is the total response time.	*Electrical Engineering*
Response Time (time constant)	The time required by a sensor to reach 63.2% of a step change in temperature under a specified set of conditions. Five time constants are required for the sensor to stabilize at 100% of the step change value.	*Electrical*
Response Time (time constant)	The time required by a sensor to reach 63.2% of a step change in temperature under a specified set of conditions. Five time constants are required for the sensor to stabilize at 600 of the step change value.	*Electronic Process*
Response, Dynamic	The behavior of the output of a device as a function of the input, both with respect to time.	*Process Control*
Response, Ramp	The total (transient plus steady-state) time response resulting from a sudden increase in the rate of change in the input from zero to some finite value.	*Process Control*
Response, Step	The time response of an instrument when subjected to an instantaneous change in input from one steady-state value to another.	*Process Control*
Responsible Bidder	A business entity (company) which has the capability in all respects to fully perform the contract requirements and whose integrity and reliability will assure good faith performance. Factors considered in evaluating responsibility may include: financial resources, past performance, delivery capability, experience, organization, personnel, technical skills, operations controls, equipment, and facilities. A business entity (company) determined by the Director of Business Services/designee to be in substantial conformance with the specifications, delivery requirements and conditions prescribed in the request for quotation, free of material mistake or errors.	*Procurement*
Restoration	Any Activity Which Returns The Capability Of An Asset That Has Not Failed To A Level Of Performance Equal To, Or Greater Than, That Specified By Its Functions, But Not Greater Than Its Original Maximum Capability. Not To Be Confused With A Modification Or A Repair.	*Plant Engineering*
Restoration time	The time when the major portion of the interrupted load has been restored and the emergency is considered to be ended. However, some of the loads interrupted may not have been restored due to local problems.	*Energy*
Restraint	A structural attachment, device, or mechanism that limits movement of the pipe in one or more directions.	*Maintenance and Repair*
Restricted Gate	A very small orifice between runner and cavity in an injection or transfer mold. When the piece is ejected this gate breaks cleanly, simplifying separation of runner from piece.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Restricted-universe census	This is the complete enumeration of data from a specifically defined subset of entities including, for example, those that exceed a given level of sales or generator nameplate capacity.	*Energy*
Restriction	A reduced cross-sectional area in a line or passage which normally causes a pressure drop. (Examples: pinched lines or clogged passages, or an orifice designed into a system.)	*Mechanical, Process, and Operations*
Restrictor	A device which reduces the cross sectional flow area.	*Mechanical, Process, and Operations*
Restrictor Ring	A ring-shaped part protruding from the torpedo surface which provides increase of pressure in the mold to improve, e.g. welding of two streams.	*Engineering Physics*
Restrictor, orifice	A restrictor, the length of which is relatively small with respect to its cross-sectional area. The orifice may be fixed or variable.	*Mechanical, Process, and Operations*
Restructuring	The process of replacing a monopoly system of electric utilities with competing sellers, allowing individual retail customers to choose their electricity supplier but still receive delivery over the power lines of the local utility. It includes the reconfiguration of the vertically-integrated electric utility.	*Energy*
Restructuring	The reconfiguration of the vertically-integrated electric utility. Restructuring usually refers to separation of the various utility functions into individually-operated and -owned entities.	*Energy*
Rests	an old name for the keps. (N. East).	*Mining*
Resuing	A method of stopping in narrow-vein deposits whereby the wallrock on one side of the vein is blasted first and then the ore.	*Mining*
Resultant	The resultant of a system of forces is a single force or moment whose magnitude, direction, and location make it statically equivalent to the system of forces.	*Engineering Physics*
Retail	Sales of electric energy to the ultimate customer.	*Energy*
Retail Company	A company that is authorized to sell electricity directly to industrial, commercial and residential end-users.	*Energy*
Retail Competition	A system under which more than one electric provider can offer to sell to retail customers, and retail customers are allowed to choose more than one provider from whom to purchase their electricity.	*Energy*
Retail Customers	Customers, including residences and businesses, who themselves use the electricity they purchase; also referred to as end-use customers.	*Energy*
Retail Electric Provider (REP)	An entity that sells electric energy to retail customers in Texas. A retail electric provider may not own or operate generation assets.	*Energy*
Retail Market	A market in which electricity and other energy services are sold directly to the end-use customer.	*Energy*
Retail motor gasoline prices	Motor gasoline prices calculated each month by the Bureau of Labor Statistics (BLS) in conjunction with the construction of the Consumer Price Index.	*Energy*
Retail sales (electric)	Sales made directly to the customer that consumes the energy product.	*Energy*
Retail Transaction	The sale of electric power from a generating company or wholesale entity to the customer.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Retail Wheeling	This refers to the ability of end-use customers of any size to purchase electric capacity, energy or both from anyone other than the local electric utility by moving or wheeling such power over the local utility's transmission and/or distribution lines.	*Energy*
Retailer	A firm (other than a refiner, reseller, or reseller/retailer) that carries on the trade or business of purchasing refined petroleum products and reselling them to ultimate consumers without substantially changing their form.	*Energy*
Retained earnings	The balance, either debit or credit, of appropriated or unappropriated retained earnings of the utility department arising from earnings.	*Energy*
Retainer plate	Plate on which demountable pieces such as mold cavities, ejector pins, guide pins and bushings are mounted during molding. Usually drilled for steam and water.	*Material Process*
Retainer Plate	In injection molding, a plate which reinforces the cavity block against the injection pressure, and also serves as an anchor for the cavities, ejector pins, guide pins, and bushings. The retainer plate is usually cored for circulating water or steam for cooling and heating.	*Engineering Physics*
Retaining Pin	A pin on which an insert is placed and located prior to molding.	*Engineering Physics*
Retardation	preferential retention of contaminant movement in the subsurface resulting from adsorptive processes or solubility differences.	*Chemical*
Retarder	A substance added to a reacting	*Material Process*
Reticulation	Literally: An arrangement resembling a net or network. Reticulation in a steam system refers to the consistent and continued distribution and conservation of the hot water and steam, which cycles continuously. This begins with the formation of steam from the water heater, and follows with the successful recovery of condensate created by the heat exchange process.	*Industrial*
Retire from service	A vehicle is retired from service if that vehicle is placed out of service and there are no future plans to return that vehicle to service.	*Energy*
Retired hydropower plant sites	The site of a plant that formerly produced electrical or mechanical power but is now out of service. Includes plants that have been abandoned, damaged by flood or fire, inundated by new reservoirs, or dismantled.	*Energy*
Retort	A vessel in which substances are distilled or decomposed by heat.	*Mining*
Retreat	to work the coal away from the furthest inbye point, back in the direction of the shafts. Also called to 'work home'; or a system of mining in which the roads are driven to pre-determined boundaries and panels or pillars are extracted in the contrary direction.	*Mining*
Retreat face	see Face.	*Mining*
Retreat mining	A system of robbing pillars in which the robbing line, or line through the faces of the pillars being extracted, retreats from the boundary toward the shaft or mine mouth.	*Mining*
Retroreflective Scan	The reflective scan technique that uses a special reflector (retroreflector) to return light along the same path it was sent.	*Electrical Engineering*
Retrospective study	Study design in which cases where individuals who had an outcome event in question are collected and analyzed after the outcomes have occurred (see also Case-control study).	*Analysis*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Return	The air or ventilation that has passed through all the working faces of a split.	*Mining*
Return airway or Return	a road in a mine along which used air is conducted away from the workings to the upcast shaft.	*Mining*
Return current path	the path through which the current in an electric cell returns to the source	*Materials Process*
Return flow temperature	The return flow temperature is the temperature of the heating water when it returns to the boiler.	*Thermal Management*
Return gate	see Tail gate.	*Mining*
Return Idler	A roller which supports the return run of the belt.	*Manufacturing*
Return idler	The idler or roller underneath the cover or cover plates on which the conveyor belt rides after the load which it was carrying has been dumped at the head section and starts the return trip toward the foot section.	*Mining*
Return Line	A location in a line conducting fluid from working device to reservoir.	*Lubrication*
Return Line Filtration	Filters located upstream of the reservoir but after fluid has passed through the system's output components (cylinders, motors, etc.).	*Lubrication*
Return On Assets (ROA)	See Return On Net Assets (RONA).	*Maintenance*
Return On Capital Employed (ROCE)	The capital employed in the business is the sum of the business assets and the operating capital required to support the enterprise. Return on Capital Employed (ROCE) is the ratio between after tax operating profit (Business Operating Income, BOI) and capital employed.	*Maintenance*
Return on common equity	The net income less preferred stock dividends, divided by the average common stock equity.	*Energy*
Return on common stock equity	An equity's earnings available for common stockholders calculated as a percentage of its common equity capital.	*Energy*
Return On Equity (ROE)	Profit divided by corporate equity.	*Maintenance*
Return on invested capital (ROIC)	A measure of how effectively a company uses the money (borrowed or owned) invested in its operations. ROIC = net operating profit after taxes (NOPAT) divided by capital invested (total assets less excess cash minus non-interest-bearing liabilities). Total assets = fixed assets + current assets + intangible assets + investments. For plants that are cost centers, net operating profits after taxes = annual value of shipments - direct costs, indirect costs, depreciation and taxes.	*Quality*
Return On Investment (ROI)	The profit gained from an investment divided by the monetary value of the investment.	*Maintenance*
Return on Investment (ROI)	A measure of the financial gain (or loss) of a project in relation to its cost. It is calculating by taking: Financial Gain or Loss – Project Cost/Project Cost) X 100.	*Reliability Engineering*
Return On Net Asset (RONA)	The ratio between after tax operating profit, and the net assets value of the enterprise. Net assets comprise the land, building, and equipment owned by the company.	*Maintenance*
Return on Net Assets	RONA simply calculates how well a company converts assets to sales, and therefore income. (The simple calculation is sales minus expenses divided by net assets.)	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rev limiter	Modern engines are controlled by electronic "mapping" software that controls things such as fuel consumption and ignition timing. Rev limiting is used for two purposes: to keep the engine from exceeding its maximum rotational speed and exploding into bits of very expensive shrapnel, and to adhere to speed limit rules in the pit lane. Maximum rev limits are set by the engine manufacturer, while the pit lane rev limiter is controlled by a pushbutton on the steering wheel.	*NASCAR*
Revealed (Overt) Failure	A component or system failure that is automatically brought to light on occurrence.	*Reliability Engineering*
Revenue - (electricity)	The total amount of money received by an entity from sales of its products and/or services; gains from the sales or exchanges of assets, interest, and dividends earned on investments; and other increases in the owner's equity, except those arising from capital adjustments.	*Energy*
Revenue requirement	The total revenue that the utility is authorized an opportunity to recover, which includes operating expenses and a reasonable return on rate base.	*Energy*
Reverberatory furnace	A long, flat furnace used to slag gangue minerals and produce a matte.	*Mining*
Reverse Acting	This term has several deferent meanings depending upon the device it is describing. A reverse-acting actuator is one in which the actuator stem retracts with an increase in diaphragm pressure. A reverse-acting valve is one with a push-down-to-open plug and seat orientation. A reverse-acting positioner or a reverse-acting controller outputs a decrease in signal in response to an increase in set point.	*Industrial Engineering*
Reverse Bend	Reeving a wire rope over sheaves and drums so that it bends in opposing directions.	*Wire Rope & Cable*
Reverse bias	Orientation of electrical potential to provide a minimal flow of charge carriers in a rectifier.	*Material Process*
Reverse fault	an overlap fault that hades, or is inclined, away from the downthrown side.	*Mining*
Reverse Flow	Flow of fluid in the opposite direction from that normally considered the standard direction. Some rotary valve are considered to be bi-directional although working pressure drop capabilities may be lower and leakage rates may be higher in reverse flow.	*Industrial Engineering*
Reverse Osmosis	Forcing a liquid through a nonporous membrane, removing particles, along with dissolved molecules and ions. The finest form of membrane separation and is used to desalinate water for drinking, and in the preparation of ultrapure water for various industries.	*Contamination Control*
Reverse piezoelectric effect	Production of a thickness change in a material as a result of an applied voltage.	*Material Process*
Reverse Polarity	The arrangement of direct-current arc welding leads with the work as the negative pole and the electrode as the positive pole of the welding arc; a synonym for direct-current electrode positive.8	*Maintenance and Repair*
Reverse Polarity Protection	The circuitry, usually a diode which prevents current from flowing into the control in case of accidental mis-wiring of the plus (+) or minus (–) terminals, preventing damage to the unit.	*Electrical Engineering*
Reversible	A conveyor which is designed to move product in either direction.	*Manufacturing*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Reversible turbine	A hydraulic turbine, normally installed in a pumped-storage plant, which can be used alternatively as a pump or as an engine, turbine, water wheel, or other apparatus that drives an electrical generator.	*Energy*
Reversing Mill	Any rolling mill in which the direction of rotation of the rolls can be reversed at will. Heavy primary mills for bloom and slab rolling are the most common, but others, including some cold-rolling mills, are also made to reverse.	*Metallurgy*
Reversing valve	A four-way directional valve used to reverse a double-acting cylinder or reversible motor.	*Mechanical, Process, and Operations*
Review	1. A systematic review. 2. A review article in the medical literature which summarizes a number of different studies and may draw conclusions about a particular intervention. Review articles are often not systematic. Review articles are also sometimes called overviews. 3. To referee a paper. See also: External peer reviewer (of a Cochrane Review), Referee, Referee process	*Quality Engineering*
Review Group Co-ordinator (RGC)	Former title of the Managing Editor (previously known as Administrator)	*Quality Engineering*
Review Manager	See RevMan (Review Manager)	*Quality Engineering*
Review Protocol	See Protocol	*Quality Engineering*
Reviewer/Author	Somebody responsible for preparing and, in the case of Cochrane Reviews, keeping up-to-date a systematic review. The term 'reviewer' is also sometimes used to refer to an external peer reviewer, or referee. Between 2004 and 2006, a phased approach will be used to move from using the word 'reviewer' (of a Cochrane Review) to 'author'. Also called: Author/Reviewer	*Quality Engineering*
Revisions and additions (gross change in reserves)	**T**he difference (plus or minus) between the year-end reserves plus production for a given year and the year-end reserves for the previous year.	*Energy*
RevMan (Review Manager)	Software developed for The Cochrane Collaboration to assist reviewers in preparing Cochrane Reviews. Reviewers enter their Protocols and reviews into RevMan, from which they are exported and sent to a Managing Editor to be considered for inclusion in the Cochrane Database of Systematic Reviews. Also called: Review Manager	*Quality Engineering*
RevMan Advisory Group (RAG)	A sub-group of the Information Management System Group (IMSG), which advises on development of RevMan. Also called: RAG	*Quality Engineering*
Revolution	An angle that measures 360°. One complete turn or rotation.	*Math*
Rework	All work that has to be redone. Rework indicates a problem in materials, skills, or scope of the original job.	*Maintenance*
Reyn	The standard unit of absolute viscosity in the English system. It is expressed in pound-seconds per square inch.	*Mechanical, Process, and Operations*
Reynold's number	A numerical ratio of the dynamic forces of mass flow to the shear stress due to viscosity. Flow usually changes from laminar to turbulent between Reynold's numbers 2,000 and 4,000.	*Mechanical, Process, and Operations*
Reynold's Number	A numerical ratio of the dynamic forces of mass flow to the shear stress due to viscosity. Flow usually changes from laminar to turbulent between Reynold's Number 2,000 and 4,000.	*Lubrication*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Reynold's Number	A number which characterizes flow. If the Reynold's number is low (under approximately 1800) then the flow is said to be laminar. This may be thought of as the fluid flowing in layers. If the Reynold's number is high (over approximately 2300) then the flow is said to be turbulent. Turbulent flow is considered to be well mixed.	*Chemical*
Reynolds Number	The ratio of inertial and viscous forces in a fluid defined by the formula Re = rVD/μ, where: r = Density of fluid, μ = Viscosity in centipoise (CP), V = Velocity, and D = Inside diameter of pipe.	*General*
Reynolds Number	The ratio of inertial and viscous forces in a fluid defined by the formula Re = rVD/μ, where - r = Density of fluid, μ = Viscosity in centipoise (CP), V = Velocity, and D = Inside diameter of pipe.	*Electronic Process*
RF (RAISED FACE)	The raised area of a flange face which affords a seal with a mating flange face by means of a flat gasket of the same diameter as the raised face.	*Mechanical*
RFA	Renewable Fuels Association	*Petro-Chemical Abbreviations*
RFG	See Reformulated Gasoline.	*Energy*
RFI	Radio frequency interference.	*Electrical*
RFI Shielding	Thermal spray coatings of electrically conductive metals such as zinc, aluminum and copper are used on non-conducting composite casing materials to shield sensitive electronic devices from radio frequency electromagnetic interference.	*Paint and Coatings*
RFWN	See: 'WNRF'	*Petroleum Engineering*
RH	Relative humidity	*General*
Rheology	The deformation and/or flow characteristics of grease in terms of stress, strain, temperature and time (commonly measured by Penetration and Apparent Viscosity).	*Oil Analysis*
Rheology	The study of the behavior of materials as they are deformed.	*Engineering Physics*
Rheostat	A variable resistor.	*Electrical*
Rhizome	Horizontal, underground stem.	*Agriculture*
Rhizomorph	A thread- or cordlike fungal structure made up of hyphae.	*Forestry*
Rhodium plating	The electro-deposition of rhodium for oxidation resistance combined with surface hardness.	*Paint and Coatings*
Rhones	rectangular wooden ducts for conveying ventilation air into the workings not usually ventilated by the main current; or wooden channels for conveying water. (Scot.).	*Mining*
RHS	Rural Housing Service, an agency of the USDA.	*Agriculture*
Rhuma	another term for Parrot; or locally coaly blaes in districts of Fife. (Scot.).	*Mining*
Rhunes	bituminous shale. (Scot.).	*Mining*
Rhyolite	A fine-grained, extrusive igneous rock which has the same chemical composition as granite.	*Mining*
RIA	See: Research Institute of America	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rib	The side of a pillar or the wall of an entry. The solid coal on the side of any underground passage. Same as rib pillar.	*Mining*
Rib	Configuration designed into a plastic part to provide lateral, horizontal, or other structural support.	*Engineering Physics*
Rib and pillar	a pillar and stall system worked in the Staffordshire Thick Coal (S. Staffs.).	*Mining*
Rib samples	Ore taken from rib pillars in a mine to determine metal content.	*Mining*
Rib side	the sides of a heading or roadway driven in the solid coal; or the edge of solid coal at each end of a longwall face.	*Mining*
Ribbing	enlarging a heading or drift. (Lancs.).	*Mining*
Ribbon Blenders	Mixing devices comprising helical ribbon-shaped blades rotating close to the edge of a U-shaped vessel. They are used for relatively high-viscosity fluids and dry blends such as PVC caldendering and extrusion compounds.	*Metallurgy*
Ribbon silicon	Crystalline silicon that is used in photovoltaic cells. Ribbon silicon is fabricated by a variety of solidification (crystallization) methods that withdraw thin silicon sheets from pools of relatively pure molten silicon.	*Energy*
Ribonucleic acid	Is involved in transfer of a growing protein chain in or on the ribosome.	*Agriculture*
Ribside gate	a roadway or gate in longwall working which has solid coal on one side and the waste pack on the other.	*Mining*
Ribside pack	a pack formed by working the coal along the rib side of a roadway and utilizing the space for packing the waste.	*Mining*
Rice	small pieces of timber interlaced above and behind the main timbers supporting a roadway. They were used when the ground is soft or shaley and has a tendency to run. (Som.), (Bris.). -see also Lacing, Lagging and Lofting.	*Mining*
Ricinoleic acid (CH3 (CH2)5CHOHCH2 CH CH(CH2)7COOH)	Colorless liquid or crystalline mass. Acid obtained by the hydrolysis of castor oil (glyceryl ester). Used as plasticizer or softening agent, especially for phenol aldehyde plastics.	*Material Process*
Ricket or Ricketing	a narrow brattice, or a channel cut along the floor to drain off water. (Mids.).	*Mining*
Rickety	a hand-driven ratchet-drilling machine used for boring shot holes. Also known as a 'worm and stand'.	*Mining*
Rickle	part coal and part shale. (Oldham, Great Mine Seam, Lancs.).	*Mining*
Rid	see Drive.	*Mining*
Ridding	the clearing and removing of loose material after a heavy roof-fall. (N. East).	*Mining*
Ridding or pucking	digging up the floor of a roadway after it has been lifted by the action of creep (S. Wales).	*Mining*
Ride height	Height of the chassis above the ground. Because of the relationship between the height of the ground-effect tunnels and their performance, maintaining optimum ride height is an important facet of car setup and design. However, it is hard to manage since the faster a car goes, the more the aerodynamic effects press it to the ground. Many very complex methods are used to maintain a consistent ride height.	*NASCAR*
Ride or Riding	ascend or descend the shaft in the cage; or travel on a manriding belt conveyor; or travel to and from the work place on manriding cars.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rider	a fault, sometimes called a 'hitch', where the edge of a fracture in the coal slipped against another. They were often separated by mineral matter such as soft clayey shale called the rider, also called the 'gowk' of the trouble; or a man in charge of an underground train. (Mids.); or anyone in transit in the cage. (Mids.); or a guide-frame or rope guides to steady the bowk or hoppit in a sinking-shaft; or a lad who rode out on the tubs on the haulage road (S. Wales); or a thin coal seam over-lying a thicker one.	*Mining*
Rider	A thin seam of coal overlying a thicker one.	*Mining*
Ridge Lines	Points of higher ground that separate two adjacent streams or watersheds. Also known as divides.	*Petroleum Engineering*
Ridging	In gear teeth, a form of plastic flow characterized by a rippled appearance on the surface.	*Lubrication*
Riff	the roof immediately above the coal seam. (Scot.).	*Mining*
Riflemen	small cogs, generally 18 inches to 2ft 6in square but sometimes larger, made of pieces of stone (ironstone) or oil shale, topped with pieces of timber to ease the pressure (N. Staffs.).	*Mining*
Rifler	a mixture of hard and soft coal of good quality overlying the 'main hards' in the Top Hard Seam. (Notts.). Also used as an alternate name for the Top Hard.	*Mining*
Rifling	working the upper section of a coal seam over the waste or gob of the lower section, which has already been worked out (N. Staffs.).	*Mining*
Rig	The structures and equipment used in drilling an oil and gas well including the derrick, engine, engine house and other equipment.	*Petroleum Drilling*
Rig floor	The area immediately around the rotary table and extending to each corner of the derrick. Floorhands and Motorhands work on the rig floor (Derrickhands work on the Monkeyboard, which is above the rig floor).	*Petroleum Drilling*
Right Angle	An angle that measures 90°.	*Math*
Right of way	Land covered by a public road.	*Civil Engineering*
Right of way	Land covered by a public road.	*Civil Engineering*
Righthand Thread	A screw thread that is screwed in by rotating clockwise. The majority of screw threads are right handed.	*Maintenance*
Right-of-way	The land and legal right to use and service the land along which a transmission line is located. Transmission line right-of-way is usually acquired in widths that vary with the kilovolt (kV) size of the line.	*Energy*
Right-of-way (electric)	A corridor of land on which electric lines may be located. The Transmission Owner may own the land in fee, own an easement, or have certain franchise, prescription, or license rights to construct and maintain lines. See NERC definition.	*Energy*
Rights	In finance, a certified right to purchase treasury shares in stated quantities, prices and time limits; usually negotiable at a price which is related to the prices of the issue represented; also referred to as warrants. Rights and warrants can be bought and sold prior to their expiry date because not all shareholders wish to exercise their rights.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rigid	An idealized concept meaning something which does not deform under loading. In fact, all objects deform under loading, but in modeling it can be useful to idealize very stiff objects as rigid.	*Engineering Physics*
Rigid	Mechanical behavior associated with a polymer below its glass transition temperature.	*Material Process*
Rigid conductors	wood or iron rails fitted in the shaft to buntons or cross pieces fixed across the shaft to act as guides to the cage. Also called 'Guides'.	*Mining*
Rigid Rotor	A rotor is considered rigid when it can be corrected in any two (arbitrarily selected) planes [see "Correction (Balancing) Plane"] and after that correction, its unbalance does not significantly exceed the balancing tolerances (relative to the shaft axis) at any speed up to maximum operating speed and when running under conditions which approximate closely to those of the final supporting system.	*General*
Rill	An irrigation term for a small stream of water turned onto the surface of a field. (The term also has a non-agricultural use.)	*Agriculture*
RILU	See: Red International of Labor Unions	*Industrial Relations*
Rim pull	The force required at the edge of the handwheel to generate the required torque at the center of the handwheel.	*General Mechanical*
Rim pull	The force required at the edge of the handwheel to generate the required torque at the center of the handwheel.	*Mechanical*
Ring Beam	Footing that carries the loads from the shell of a Natural Draft Tower.	*Facility Engineering*
Ring Gate	An annular opening for entrance of material into the cavity of an injection or transfer mold.	*Engineering Physics*
Ring Lubrication	A system of lubrication in which the lubricant is supplied to the bearing by an oil ring.	*Lubrication*
Ring or Ring crib	a crib laid in a pit shaft to collect water. -see also Garland; or a circular piece of wrought-iron, about 8ins. deep, which was placed on top of a skip of coal to increase the load (S. Staffs.); or a wooden crib built around the wall of a shaft to which the cage guides were fixed.	*Mining*
Ring Sticking	Freezing of a piston ring in its groove in a piston engine or reciprocating compressor due to heavy deposits in the piston ring zone.	*Lubrication*
Ring Type Joint (RTJ)	A type of flange seal that is produced by compressing a solid metal ring into a machined groove in a matching flange face.	*Industrial Engineering*
Ring type joint (RTJ)	A flange connection using a specially shaped soft metal ring as a gasket. Generally used on high pressure valves. May be the body and bonnet connection and/or the end flange connection.	*Mechanical*
Ring, "O"	A ring which has a round cross-section usually used for sealing. RING, SCRAPER - A ring which removes material by a scraping action.	*Mechanical, Process, and Operations*
Ring, Wiper	A ring which removes material by a wiping action.	*Mechanical, Process, and Operations*
Ringer	a long iron or steel crowbar used for breaking down loose stone; or a tool, roughly five feet in length, similar to a large crowbar, used to lever off coal from the coalface using the cleat or the ripping canch after shot firing. (Mids.); or a hammer for driving wedges. (Derbys.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Ringer and Chain	a large iron bar with a chain attached used for withdrawing props. Also known as a 'dog and chain'. (Mids.).	*Mining*
Ringes	a large iron barrel attached to the winding rope for lifting water out of the sump. (N. East). -see also Cowl.	*Mining*
Ringgeared mill drives (RMD)	a system used to drive (rotate) a mill. The RMD itself is comprised of motor(s) (synchronous or asynchronous), a frequency converter, transformers and control equipment. As opposed to gearless mill drives, the motor in RMD is mechanically connected to the mill via a coupling, pinion(s) and ringgear.	*Electrical*
Ringing	Continued oscillation after an external force or excitation is removed, as after a guitar string is plucked.	*Reliability Engineering*
Ring-laser gyro (RLG)	A gyroscope based on a laser beam instead of a rotating mass, providing to same data as a gyroscope.	*Aeronautical Engineering*
Ringmotor	also called wrap-around motor, a ringmotor is a very large synchronous motor. The poles of the motor are directly flanged on the driven equipment. (See also Machine).	*Electrical*
Rings	Circular metallic elements that ride in the grooves of a piston and provide compression sealing during combustion. Also used to spread oil for lubrication.	*Lubrication*
Ring shake	Peripheral cracks in woody tissues of stems. The pattern of damage is concentric with the annual rings.	*Forestry*
Ring spot	A circular area of chlorosis with a green center.[1]	*Forestry*
Rinse Agent	A wetting agent used in the last rinse during dishwashing to improve the draining of the water from dishes and utensils.	*Chemistry*
Rinse Aids	Surfactants that aid in the rinsing property of water by lowering its surface tension.	*Chemistry*
Rinsing	removing any active solution from the surface of steel by immersion in water Rust -* corrosion product consisting of hydrated iron oxides; this term is applicable only to ferrous (iron-containing) alloys	*Materials Process*
RIO Bus	Remote Input/Output bus. This is a communication bus used to connect a field control unit with remote I/O points or nodes.	*Control Engineering*
Rip	to blast or bring down the roof of a roadway to gain headroom and improve the ventilation; or the strata forming the upper part of the face of a roadway from where the coal has been removed below.	*Mining*
Rip rap	Cobblestone or coarsely broken rock used for protection against erosion of embankment or gully.	*Energy*
Riparian	Relating to or living or located on the bank of a natural watercourse (as a river) or sometimes of a lake or a tidewater.	*Petroleum Engineering*
Riparian forest or riparian buffers	Vegetative areas along a body of water containing a complex assemblage of vegetation, typical of a riparian system.	*Forestry*
Ripe or Rype	to search, usually for contraband. A process carried out at all safety lamp mines at the beginning of each shift as the men queue up to descend the shaft.	*Mining*
Ripper	A coal extraction machine that works by tearing the coal from the face.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rippers	men employed to rip. They remove the rock left from above the coal seam and set arches (rings) as the face advances.	*Mining*
Ripping	a section of roof or roadway that has to be removed by blasting or machine; or to blast or bring down the roof of a roadway.	*Mining*
Ripping lip	see Canch and Kench.	*Mining*
Ripple	A periodic variation of the pressure above and below the operating pressure. It is defined as a percentage of the operating pressure in terms of the maximum peak-to-peak value obtained at the point of rating.	*Mechanical, Process, and Operations*
Ripple	The alternating component of voltage from a rectifier or generator. A slight fluctuation in the intensity of a steady current.	*Electrical Engineering*
Rise	Workings going 'to the rise' are going up the inclination or slope, or dip, of the seam.	*Mining*
Rise rate	The ratio of pressure rise to time.	*Mechanical, Process, and Operations*
Rise road	a road driven to the rise, uphill, up dip. (Scot.).	*Mining*
Rise split	the ventilation air that is directed to the 'rise side' of a mine when split ventilation is used.	*Mining*
Rise Time	The time required for a sensor or system to respond to an instantaneous step function, measured from the 10% to 90% points on the response waveforms.	*General*
Rise workings	workings on the rise side of the mine, above the level of the seam at the base of the shaft.	*Mining*
Riser	Piping which connects the circulating water supply line from the level of the base of the tower to the supply header of the tower inlet connection.	*Facility Engineering*
Riser (drilling)	A pipe between a seabed BOP and a floating drilling rig.	*Petroleum Drilling*
Riser (production)	The section of pipework that joins a seabed wellhead to the Christmas tree.	*Petroleum Drilling*
Rising branch	a stone-drift being driven towards the rise side. (South West).	*Mining*
Rising main	the main column of pipes in a shaft.	*Mining*
Rising stem	A valve stem which rises as the valve is opened.	*Mechanical*
Rising stem ball valve	A single seated ball valve that is designed to seal by using the valves stem to mechanically wedge the valves ball into a stationary seat effecting a bubble tight seal. The valves stem operates through a guide sleeve assembly that guides the stem through a quarter turn of rotation as the stem is raised or lowered by a handwheel (or actuator). The mechanical action of the stem moves the ball away from the seat prior to the 90° rotation of the ball. This design provides lower operating torques and longer seat life while assuring bubble tight shut off.	*Mechanical*
Risk	The Potential For The Realization Of The Unwanted, Negative Consequences Of An Event. The Product Of Conditional Probability Of An Event, And The Event Outcomes.	*Management*
Risk	Risk is an uncertain, possible event, and as regard safety, often involves damage.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Risk Analysis	The analysis of risk includes two phases, risk assessment and risk management. The risk assessment phase deals with the identification of initiating events towards the construction of the risk curves. The so-called quantitative Probability Risk Assessment (PRA) methodology is often used. PRA can include well-known techniques like preliminary risk analysis, failure modes and effects analysis, criticality analysis, hazards and operability study, event tree analysis, and fault tree analysis. The risk management phase deals with making trade-offs between alternatives influencing the risk scenarios and curves. Each alternative for actively or passively controlling the risk creates a specific risk curve. The curves are evaluated and decisions are made accordingly taking the cost of alternatives as trade-off. A risk-free alternative is often used as a reference point in evaluating alternatives.	*Reliability Engineering*
Risk characterization	Risk characterization estimates the incidence of expected adverse health effects in exposed populations.	*Material Process*
Risk difference	The difference in size of risk between two groups. For example, if one group has a 15% risk of contracting a particular disease, and the other has a 10% risk of getting the disease, the risk difference is five percentage points. Also called: Absolute risk difference, Absolute risk reduction	*Quality Engineering*
Risk factor	An aspect of a person's condition, lifestyle or environment that affects the probability of occurrence of a disease. For example, cigarette smoking is a risk factor for lung cancer.	*Quality Engineering*
Risk factor	Characteristics or factors associated with an increased probability of developing a condition or disease in the first place. Compare with prognostic factors. Neither risk or prognostic factors necessarily imply a cause and effect relationship.	*Analysis*
Risk ratio	The ratio of risks in two groups. In intervention studies, it is the ratio of the risk in the intervention group to the risk in the control group. A risk ratio of one indicates no difference between comparison groups. For undesirable outcomes, a risk ratio that is less than one indicates that the intervention was effective in reducing the risk of that outcome. Also called: Relative risk, RR	*Quality Engineering*
Risk-Based Inspection (RBI)	Risk Based Inspection (RBI), as the name suggests, employs similar RBM risk assessment techniques, but differs significantly from RBM in terms of its basis and scope. Risk Based Inspection is concerned primarily with pressure and containment systems including (but not restricted to): Vessels and boilers Pressurized and refrigerated storage tanks Compressors and pumps Associated pipe work and valves. Protective devices associated with such systems are also usually included. Risk Based Inspection has an integrity focus. It therefore concerns itself primarily with mitigation of safety and environmental risks.	*Reliability Engineering*
Risk-Based Maintenance (RBM)	A maintenance improvement program whereby the maintenance processes and procedures are planned based on (failure) risks, effects, and calculated cost. This is a financially based analysis technique which focuses on establishing the relative worth of maintenance. It was originally developed as a means of reviewing existing maintenance programs, and in this mode it works well as a continuous improvement tool. RBM defines opportunities for incremental improvement through the elimination of tasks of low value and the introduction of tasks which address high commercial risk areas. As such, RBM is also valuable in transferring knowledge from existing installations to provide a baseline for new builds.	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rits	vertical cuttings in the shaft for receiving boxes to convey the water from the rings. (N. East).	*Mining*
River (method of transportation to consumers - coal)	Shipments of coal moved to consumers via river by barge. Shipments to Great Lakes coal loading docks or Tidewater pier or coastal points are not included.	*Energy*
Riverbed Claims	Minerals found in river beds accessed by turning the river from its natural course.	*Mining*
RLCA	See: Letter Carriers' Association; National Rural (Ind)	*Industrial Relations*
RMAN	Recovered Materials Advisory Notices (RMANs) provide purchasing guidance and recommend recovered and postconsumer material content levels for designated items. RMAN recommendations are guidance and therefore are not codified in the Code of Federal Regulations.	*Environmental Engineering*
RME	rapeseed methyl ester	*Petro-Chemical Abbreviations*
RMS or Root-Mean-Square value	The square root of the time-averaged squares of a series of measurements. Refer to a textbook on electrical engineering. In the exclusive case of a sine wave, s, the RMS value, is 0.707 the peak value.	*Reliability Engineering*
RMS Responding	A measurement equal to the rms value of the input signal for all waveforms within the specified frequency range and crest factor limit.	*Reliability Engineering*
RNA - Ribonucleic acid	RNA - Ribonucleic acid.	*Agriculture*
Roache or Roche	a hard or coarse sandstone, usually many feet thick (N. Staffs.).	*Mining*
Road	an underground passage, a roadway, tunnel or gate in a mine, e.g., 'raveling road', 'dummy road' etc. driven and maintained to provide access to the coal and for haulage, ventilation and travelling; or a working place. (Scot.); or the iron rails, e.g. the tub road.	*Mining*
Road box	A concrete or metal box with a removable cover, enclosing and providing access to valves installed in buried lines alongside roads or streets. The valves are operated by removing the box cover and inserting a long handled "tee" wrench which engages a 2" square nut attached to the valve stem or to the pinion shaft of geared valves.	*Mechanical*
Road cod	Man responsible for main roadways and the track, and to get materials in and out efficiently (N. Staffs.). Also called a 'roadman'.	*Mining*
Road headers	machines that drive underground roadways or headings, usually comprising a fixed or telescopic boom carrying a rotating cutting head that excavates the full cross-section of the roadway.	*Mining*
Road oil	Any heavy petroleum oil, including residual asphaltic oil used as a dust palliative and surface treatment on roads and highways. It is generally produced in six grades, from 0, the most liquid, to 5, the most viscous.	*Energy*
Road roller	Any machine for rolling road materials flat.	*Civil Engineering*
Roadhead	in longwall working the end of the roadway at the coalface. -see also Gate-end.	*Mining*
Roadman	see Road cod.	*Mining*
Roadside pack	pack built of stone flanking a roadway.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Roan	A dark-colored horse with white sprinkles.	*Agriculture*
Rob	to strip coal from a pillar, 'robbing'. –see also Broken working.	*Mining*
Rob	To extract pillars of coal previously left for support.	*Mining*
Robbed out area	Describes that part of a mine from which the pillars have been removed.	*Mining*
Robbed out	worked out, of old abandoned working.	*Mining*
Robble	a fault, or where the coal seam varies considerably in thickness or quality in a short distance.	*Mining*
Robbley	faulted ground, full of slips (N. Staffs.).	*Mining*
Robinson–Patman Act	A federal law that requires a supplier engaged in interstate commerce to sell the same item to all customers at the same price (assuming like terms). Exceptions are permitted. A lower price is permitted: (1) for a larger purchase quantity, providing the seller can justify the lower price through lower costs; (2) to move obsolete or distressed merchandise; or (3) to meet the lower price of local competition in a certain geographic region. It is illegal for a buyer to knowingly induce or accept a discriminatory price.	*Procurement*
Robo test	An oil oxidation bench test for assessing the low temperature viscosity of the oil after it has been "aged".	*Mechanical, Process, and Operations*
Robot, industrial	An industrial robot is defined by ISO 8373 as an automatically controlled, reprogrammable, multipurpose, manipulator, programmable in three or more axes, which may be either fixed in place or mobile for use in industrial automation applications. Typical robot applications include welding, painting, assembly, pick and place, packaging and palletizing, product inspection, and testing, all accomplished with high endurance, speed, and precision. ABB developed the first commercially available electric robot almost 40 years ago.	*Electrical*
Roburite	an early flameless explosive used without water cartridges for shot firing in dry and dusty conditions comprising 86% ammonium nitrate and 14% chlorinated dinitrobenzol. A 'third class' explosive which could only be exploded by a special detonator obviating the risks from explosion by heat or sparks or by any ordinary shock. Invented by Carl Roth of Berlin and was found to be about three times as powerful as gunpowder. It was a potentially poisonous substance which required careful handling and effective stemming to ensure full burning.	*Mining*
Robust	A loop that is robust is relatively insensitive to process changes. A less robust loop is more sensitive to process changes. See a presentation on Loop Stability, The Other Half of the PID Tuning Story	*Process Control*
Rock	Any natural combination of minerals; part of the earth's crust.	*Mining*
Rock and rig	sandstone full of little shreds and patches of coal (S. Staffs.).	*Mining*
Rock bind	strong sandy shale.	*Mining*
Rock burst	The sudden failure of walls or pillars in a mine caused by the weight of pressure of the surrounding rocks, and accompanied by a violent release of energy.	*Mining*
Rock drivage	a roadway or heading driven in non-coal strata.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rock factor	The number of cubic meters of a particular rock type required to make up one ton of the material. One ton of a highly siliceous ore may occupy 0.40 cubic meters, while a ton of dense sulfide ore may occupy only 0.25 cubic meters.	*Mining*
Rock head/heading	a tunnel driven entirely in rock.	*Mining*
Rock mechanics	The study of the mechanical properties of rocks, which includes stress conditions around mine openings and the ability of rocks and underground structures to withstand these stresses.	*Mining*
Rockbolting	The act of consolidating roof strata by means of anchoring and tensioning steel bolts in holes especially drilled for the purpose.	*Mining*
Rockbolting	The act of supporting openings in rock with steel bolts anchored in holes drilled especially for this purpose.	*Mining*
Rockburst	A violent release of energy resulting in the sudden failure of walls or pillars in a mine, caused by the weight or pressure of the surrounding rocks.	*Mining*
Rocker Box or Cradle	Like a sluice box, the rocker box has riffles in it to trap the gold. It was designed to be used in areas with less water than a sluice box. The process involves pouring water out of a small cup and then rocking the small sluice box like a cradle, thus the name rocker box or cradle	*Mining*
Rockhead	the top of the first solid rock stratum reached when boring or sinking. Also called 'stone head'.	*Mining*
Rockwell B Hardness	Hardness of metallic materials measured by pressing an indenter against a surface with a specific force. The depth of the indention is also measured to provide a numerical value for that depth. The Rockwell 'B scale' provides more accuracy than HRC 20.	*Petroleum Engineering*
Rockwell C Hardness	A hardness rating of steel or Alloys, measured by pressing an indenter against a surface with a nominated force. Indention also measures the depth of the depth of indention is also measured to provide a numerical value for that depth. The numerical value relates to Tensile Strength. NACE Standard MR-0175 references hardness in determining steel's suitability for use in 'H2S Service'.	*Petroleum Engineering*
Rockwell hardness	A test for hardness similar to the Brinell in which a hardness steel ball (B scale), or a diamond cone (C scale), is pressed against the material to be tested. See Hardness.	*Material Process*
Rockwell hardness	Common mechanical parameter.	*Material Process*
Rockwell hardness no.	A numerical expression of the hardness of a metal as determined with a Rockwell Hardness Tester. There are several hardness scales. The most commonly used are the Rockwell "B" scale for soft metals and the Rockwell "C" scale for hard materials.	*Mechanical*
Rod	Rolled steel or steel with a circular cross section can be a bar, a rod or a round, and there is no generally accepted firm dividing line. Broadly, a rod is from 3/16 to ½ inch in diameter. Rods today are usually rolled in long lengths and coiled.	*Metallurgy*
Rod mill	A rotating cylindrical mill which employs steel rods as a grinding medium.	*Mining*
Rodding	fitting or repairing wooden cage guides in the shaft.	*Mining*
Rod-harkening	an early system of signaling on a haulage incline involving a boy who would listen (harken) for the signals struck on steel rods below ground. (Lancs.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rodlet or GAD basket	An open garbage and debris (GAD) basket that may have contain pieces of fuel rods, disassembled fuel rods, and other fuel and nonfuel components.	*Energy*
Rodney	a platform constructed from old rails to hold a large fire. The Rodney was used to light the pit bank around the top of the shaft on a winter's night. (Staffs.).	*Mining*
Rods	cage guide rods in the shaft; or lengths of timber bolted together which formed a link from the pumping engine to the barrel of the pump; or long iron hand-held boring bars for making blasting holes in coal or rock. - see also Jumper.	*Mining*
ROG	reactive organic gases	*Petro-Chemical Abbreviations*
Rogging or Rogging out	clearing out the gummings from under the cut made by a coal-cutting machine (Mids.).	*Mining*
Roll	an undulation in the roof or floor of a coal seam; or the drum of the winding engine (S. Wales); or a sudden break or movement of the roof due to the action of weight.	*Mining*
Roll	(1) A high place in the bottom or a low place in the top of a mine passage, (2) a local thickening of roof or floor strata, causing thinning of a coal seam.	*Mining*
Roll Angle	The angle subtended at the center of a base circle from the origin of an involute to the point of tangency of the generatrix from any point on the same involute. The radian measure of this angle is the tangent of the pressure angle of the point on the involute.	*Mechanical Engineering*
Roll cue	Flight director cue to control roll; in fixed-wing aircraft, a wheel cue; in rotary-wing aircraft, a lateral cyclic cue.	*Aeronautical Engineering*
Roll front	A type of uranium deposition localized as a roll or interface separating an oxidized interior from a reduced exterior. The reduced side of this interface is significantly enriched in uranium.	*Energy*
Roll Mill	An apparatus for mixing a plastic material with compounding ingredients, comprising two rolls placed in close proximity to one another. The rolls turn at different speeds to produce a shearing action to the materials being compounded.	*Engineering Physics*
Roll protection	A framework, safety canopy, or similar protection for the operator when equipment overturns.	*Mining*
Roll rate	Rate of change of roll; time derivative of roll; Symbols—q; Symbols—phi dot; Typical Units—rad/s, deg/s; Dimensions—1/Time.	*Aeronautical Engineering*
Roll rate (2)	Rate of change of roll; time derivative of roll; Symbols: q; Symbols: phi dot; Typical Units: rad/s, deg/s; Dimensions: 1/Time.	*Aeronautical Engineering*
Rolled Pipe	Pipe produced from a forged billet which is pierced by a conical mandrel between two diametrically opposed rolls. The pierced shell is subsequently rolled and expanded over mandrels of increasingly large diameter. Where closer dimensional tolerances are desired, the rolled pipe is cold- or hot-drawn through dies and then machined. One variation of this process produces the hollow shell by extrusion of the forged billet over a mandrel in a vertical, hydraulic piercing press.	*Maintenance and Repair*
Rolled Thread	Threads are cold formed by squeezing the blank between reciprocating serrated dies. This acts to increase the major diameter of the thread over and above the diameter of unthreaded shank (if any), unless an extruded blank is used.	*Fastening*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rolled-throughput yield	Also known as "multiple-point yield," this measure is calculated by multiplying together quality yield values at various points in a production process, not only at the end of the line. The purpose is to make problem areas within a process more visible.	*Quality*
Roller	A round part free to revolve about its outer surface. The face may be straight, tapered or crowned. Rollers may also serve as the rolling support for the load being conveyed.	*Equipment*
Roller	A shipment (usually a truckload or carload) that has been shipped, but not yet sold; e.g., a carlot of California peaches may be loaded and set off for New York without having been sold to anyone there. Shippers may be motivated by hopes that the price of peaches will increase by the time the roller arrives and it will be sold for a higher profit.	*Agriculture*
Roller Bearing	An antifriction bearing comprising rolling elements in the form of rollers.	*Lubrication*
Roller Bed	A series of rollers used to support a conveying medium.	*Equipment*
Roller Centers	The distance measured along the carrying run of a conveyor from the center of one roller to the center of the next roller.	*Manufacturing*
Roller Conveyor	A series of rollers supported in a frame over which objects are advanced manually, by gravity or by power. Links: see Gravity Roller Conveyor or Power Roller Conveyor.	*Manufacturing*
Roller support	In two dimensions, a roller support restrains one translation degree of freedom.	*Engineering Physics*
Rollers	Relatively small-diameter cylinders, or wide-faced sheaves, that serve as support for ropes.	*Wire Rope & Cable*
Rolley	a large horse drawn carriage, which was loaded with 2 to 3 'corves'. The rolley had large wheels that ran on round topped rails. Used for transporting the tubs or corves from the crane to the shaft, (N. East).	*Mining*
Rolleyway	a main haulage road. (Lancs.); or principal horse road (N. East). Often the upper of two. Also called a 'way gate'.	*Mining*
Rolling and Peening	In gear teeth, a form of plastic flow that gives the surface a hammered appearance; metal may be rolled over the teeth tips.	*Lubrication*
Rolling Blackouts	A controlled and temporary interruption of electrical service. These are necessary when a utility is unable to meet heavy peak demands because of an extreme deficiency in power supply.	*Energy*
Rolling element (anti-friction) bearings	A shaft rotates on rollers or balls.	*Reliability Engineering*
Rolling Element Bearing	A friction-reducing bearing that consists of a ring-shaped track that contains free-revolving metal balls. A rotating shaft or other part turns against such a bearing.	*Reliability Engineering*
Rolling Oil	An oil used in hot- or cold-rolling of ferrous and non-ferrous metals to Facilitate feed of the metal between the work rolls, improve the plastic deformation of the metal, conduct heat from the metal, and extend the life of the work rolls. Because of the pressures involved, a rolling oil may be compounded or contain EP additives. In hot rolling, the oil may also be emulsifiable.	*Lubrication*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Roll-off cleanliness	The fluid system contamination level at the time of release from an assembly or overhaul line. Fluid system life can be shortened significantly by full-load operation under a high fluid contamination condition for just a few hours. Contaminant implanted and generated during the break-in period can devastate critical components unless removed under controlled operating and high performance filtering conditions.	*Oil Analysis*
ROM (Read-Only Memory)	Memory with information placed into it during manufacture that cannot be altered. Serial Communications - Sending bits of information in succession along a single circuit (pair of wires).	*Electrical Engineering*
RON	research octane number	*Petro-Chemical Abbreviations*
Ronk-thing	a slip in the coal whose direction is opposite to that prevailing in the locality (N. Staffs.).	*Mining*
Roof (coal)	The rock immediately above a coal seam. The roof is commonly a shale, often carbonaceous and softer than rocks higher up in the roof strata.	*Energy*
Roof bolt	A long steel bolt driven into the roof of underground excavations to support the roof, preventing and limiting the extent of roof falls. The unit consists of the bolt (up to 4 feet long), steel plate, expansion shell, and pal nut. The use of roof bolts eliminates the need for timbering by fastening together, or "laminating," several weaker layers of roof strata to build a "beam."	*Mining*
Roof bolting	a system of roof support incorporating steel bolts (roof bolts) that are fixed into holes (usually with resin) bored up into the roof.	*Mining*
Roof brushing, (Scot.)	see Ripping.	*Mining*
Roof coal	coal left in situ to form a solid roof. This is done when the strata above the coal is shaley or unstable. Called 'roofers' in Lancashire.	*Mining*
Roof fall	A coal mine cave-in especially in permanent areas such as entries.	*Mining*
Roof insulation	Insulating materials placed underneath the roof or on the roof (building).	*Energy*
Roof jack	A screw- or pump-type hydraulic extension post made of steel and used as temporary roof support.	*Mining*
Roof or ceiling insulation	A building shell conservation feature consisting of insulation placed in the roof (below the waterproofing layer) or in the ceiling of the top floor in the building.	*Energy*
Roof or ceiling insulation, insulation in exterior walls	Any material that when placed between the interior surface of the building and the exterior surface of the building, reduces the rate of heat loss to the environment or heat gain from the environment. Roof or ceiling insulation refers to insulation placed in the roof or ceiling of the top occupied floor in the building. Wall insulation refers to insulation placed between the exterior and interior walls of the building.	*Energy*
Roof or Top	the strata immediately above the coal seam; or the top (ceiling) of a roadway. Also called the 'roof stone'.	*Mining*
Roof pond	**A** solar energy collection device consisting of containers of water located on a roof that absorb solar energy during the day so that the heat can be used at night or that cools a building by evaporation at night.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Roof sag	The sinking, bending, or curving of the roof, especially in the middle, from weight or pressure.	*Mining*
Roof stress	Unbalanced internal forces in the roof or sides, created when coal is extracted.	*Mining*
Roof support	Posts, jacks, roof bolts and beams used to support the rock overlying a coal seam in an underground mine. A good roof support plan is part of mine safety and coal extraction.	*Mining*
Roof support and mine ventilation	are paramount in all underground mining operations. Roof bolting is the principal method of supporting the mine roof. In roof bolting, long bolts, 2 to 10 feet long with an expansion shell or with resin grouting are placed in the mine roof. The bolts reinforce the roof by pulling together rock strata to make a strong beam or by fastening weak strata to strong strata. Mine ventilation, accomplished with fans, is essential to supply fresh air and to remove gases and dust from the mine. To reduce the possibility of coal dust explosions, rock dust is sprayed in an underground coal mine. Rock dust is a very fine noncombustible material (pulverized limestone).	*Energy*
Roof supports	anything used to support the roof, e.g. bolts, arches, rings, powered supports, chocks, timber or hydraulic props.	*Mining*
Roof trusses	A combination of steel rods anchored into the roof to create zones of compression and tension forces and provide better support for weak roof and roof over wide areas.	*Mining*
Roof	The stratum of rock or other material above a coal seam; the overhead surface of a coal working place. Same as "back" or "top."	*Mining*
Roof-bolting machine, or roof bolter	is used to drill holes and place bolts to support the mine roof. Roof bolting units can be installed on a continuous mining machine.	*Energy*
Roofers	see Roof coal. (Lancs.).	*Mining*
Roof-framy	a framy roof is a roof which when allowed to fall, breaks down in large blocks or 'frames' of stones.	*Mining*
Roofing	when the top of a loaded skip became wedged against the roof of a roadway (S. Staffs.).	*Mining*
Room air conditioner	Air-conditioning units that typically fit into the window or wall and are designed to cool only one room.	*Energy*
Room and pillar mining	A method of underground mining in which approximately half of the coal is left in place to support the roof of the active mining area. Large "pillars" are left while "rooms" of coal are extracted.	*Mining*
Room and rance	a method of room and pillar working similar to double stall, practiced in Scotland. The pillar or rance left to support the roof was very narrow as opposed to the normal wide pillars. This system could only be used where there was a very strong roof.	*Mining*
Room Conditions	Ambient environmental conditions under which transducers must commonly operate.	*Electrical*
Room Conditions	The ambient environmental conditions under which sensors must commonly operate, which have been established as follows: (a) Temperature: 25 +- 10 %C (77 +- 18 degrees F). (b) Relative humidity: 90% or less. (c) Barometric pressure: 26 to 32 inches Hg. Note: Tolerances closer than shown are frequently specified for sensor calibration and test environments.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Room heater burning gas, oil, and kerosene	Any of the following heating equipment: circulating heaters, convectors, radiant gas heaters, space heaters, or other nonportable room heaters that may or may not be connected to a flue, vent, or chimney.	*Energy*
Room neck	The short passage from the entry into a room.	*Mining*
Room, a working place	A heading or short stall in room and pillar or room and rance working. (Scot.). -see also Pillar and stall.	*Mining*
Room-and-pillar mining	The most common method of underground mining in which the mine roof is supported mainly by coal pillars left at regular intervals. Rooms are places where the coal is mined; pillars are areas of coal left between the rooms. Room-and-pillar mining is done either by conventional or continuous mining.	*Energy*
Room-and-pillar mining	A method of mining flat-lying ore deposits in which the mined-out area, or rooms, are separated by pillars of approximately the same size.	*Mining*
Roondy coal	large lumps of coal (4-8 inches). (N. East).	*Mining*
Root Edge	A root face of zero width.	*Maintenance and Repair*
Root Face	That portion of the groove face adjacent to the root of the joint. This portion is also referred to as the root land.	*Maintenance and Repair*
Root of Joint	That portion of a joint to be welded where the members to be joined come closest to each other. In cross section, the root of a joint may be a point, a line, or an area.	*Maintenance and Repair*
Root Opening	The separation, between the members to be joined, at the root of the joint.	*Maintenance and Repair*
Root Penetration	The depth which a groove weld extends into the root of a joint as measured on the centerline of the root cross section. Sometimes welds are considered unacceptable if they show incomplete penetration.	*Maintenance and Repair*
Root Reinforcement	Weld reinforcement at the side other than that from which the welding was done.	*Maintenance and Repair*
Root Surface	The exposed surface of a weld on the side other than that from which the welding was done.	*Maintenance and Repair*
Root Cause	A source or origin of an event, failure or defect.	*Reliability Engineering*
Root Cause Analysis	An analysis carried out to determine what actually caused a failure, as opposed to what appears to have been the cause.	*Reliability Engineering*
Root Cause Analysis	Also referred to as RCA. It is a series of problem-solving methods or actions that are aimed at determining the base reason(s) for problems or failure. The stewardship of this process is usually a function of reliability engineering.	*Reliability Engineering*
Root Cause Failure Analysis (RCFA)	Generally stands for a systematic procedure to investigate the root causes of asset failures (failure diagnosis). The diagnosis results are used in maintenance tasks as a proactive way to prevent repetitive failures.	*Reliability Engineering*
Root Circle	A circle coinciding with or tangent to the bottoms of the tooth spaces.	*Gears*
Root collar	The transition zone between stem and root at the ground line of a tree or seedling.	*Forestry*
Root Diameter	Diameter of the root circle.	*Gears*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Root mean square (RMS)	A statistical measure of data; the root of the mean of the square; for variables with mean of zero, the standard deviation is equal to the rms; Compare: root sum square.	*Aeronautical Engineering*
Root sum square (RSS)	A statistical measure of data; the root of the sum of the square; for a vector, its length is equal to the RSS of its scalar elements; Compare: root mean square.	*Aeronautical Engineering*
Root–mean-square-length	Separation distance between the ends of a randomly coiled polymeric molecule.	*Material Process*
Rope	steel cable attached to the cage, or steel cable or chain used in haulage, originally hemp ropes were used.	*Mining*
Rope capel	the fixing mechanism of a winding rope to the top of a cage. -see Cap.	*Mining*
Rope guides	vertical ropes suspended in the shaft to act as guides to the cage. When the guides are girders, they are called 'rigid guides'.	*Mining*
Rope haulage, haulage by ropes	see also Direct rope, Endless rope, Main and tail, Self-acting and Surface driven endless rope	*Mining*
Rope Lay conductor	Conductor constructed of bunch-stranded or concentric-stranded member or members, as a central core, around which are laid one or more helical layers of such members.	*Electrical*
Rope roll	the drum of the winding engine. (N. East).	*Mining*
Rope sheave	see Sheave.	*Mining*
Rosin	A vegetable resin, the molten resinous residue remaining in the still after the distillation of spirits of turpentine from crude turpentine obtained from living pine trees. The molten resin is strained, and solidifies to form a solid rosin.	*Material Process*
Rosin ester	The reaction product of rosin and glycerin. See Ester gum.	*Material Process*
Rotable	A Term Often Used In The Maintenance Of Heavy Mobile Equipment. A Rotable Component Is One Which, When It Has Failed, Or Is About To Fail, Is Removed From The Asset And A Replacement Component Is Installed In Its Place. The Component That Has Been Removed Is Then Repaired Or Restored, And Placed Back In The Maintenance Store Or Warehouse, Ready For Re-Issue.	*Plant Engineering*
Rotary actuator	A device for converting hydraulic energy into rotary motion -- a hydraulic motor.	*Mechanical, Process, and Operations*
Rotary cut	The cutting of veneers from a log by turning it against a broad cutting knife.	*Material Process*
Rotary Cylinder	A cylinder in which fluid force can be applied to the movable element in only one direction.	*Mechanical, Process, and Operations*
Rotary Directional Valve	A valve designed in cylindrical shape. When the valve is turned, it open and closes drilled passages to direct oil.	*Mechanical, Process, and Operations*
Rotary drill	A machine that drills holes by rotating a rigid, tubular string of drill rods to which is attached a bit. Commonly used for drilling large-diameter blastholes in open-pit mines.	*Mining*
Rotary Drilling	In rotary drilling, a drill bit is attached to a length of connected drill pipe. The drill bit, made of tough metal, will grind up rock as the drill is rotated. The broken pieces (cuttings) are flushed upward and out of the hole by circulating a drilling fluid (drilling mud) down through the drill pipe and back to the surface.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rotary Drilling (Air)	With this method, air acts as the drilling fluid and excavation is accomplished the same way as conventional rotary drilling. The bit cuts and breaks up the formation. Air is forced through the drilling pipe and out through holes at the bottom of the rotary bit. A stream of water is often introduced into the air system to help cool the drill bit and control dust. The cuttings move up in the annular space between the drill pipe and the wall of the hole, and collected at the top.	*Petroleum Engineering*
Rotary Drilling (Reverse)	In this technique, the process is reversed. Instead of circulating drilling fluid through the drill pipe and up the outside of the pipe, fluid is fed through the space between the wall of the hole and the drill pipe. It is then pumped up with the cuttings through the hollow part of the drill pipe, and out through a discharge pipe.	*Petroleum Engineering*
Rotary Line	On a rotary drilling rig, it is the wire rope used for raising and lowering the drill pipe, as well as for controlling its position.	*Wire Rope & Cable*
Rotary rig	A machine used for drilling wells that employs a rotating tube attached to a bit for boring holes through rock.	*Energy*
Rotary Seal	A mechanical seal which rotates with a shaft and is used with a stationary mating ring.	*Lubrication*
Rotary steerable	a directional drilling system comprising a downhole-adjustable tool located within the bottom hole assembly, which allows for lateral force (magnitude and orientation) control close to the drill bit while drilling and while rotating the drill string.	*Petroleum Drilling*
Rotary Valve	A valve style in which the flow closure member is rotated in the flow stream to modify the amount of fluid passing through the valve.	*Industrial Engineering*
Rotating Cylinder	A cylinder in which relative rotation of the cylinder housing and the piston and piston rod, plunger or ram, is recommended.	*Mechanical, Process, and Operations*
Rotating Equipment	Equipment that moves liquids, solids or gases through a system of drivers (turbines, motors, engines), driven components (compressors, pumps), transmission devices (gears, clutches, couplings) and auxiliary equipment (lube and seal systems, cooling systems, buffer gas systems).	*Lubrication*
Rotating Pressure Vessel Oxidation Test (RPVOT)	The Rotating Pressure Vessel Oxidation Test measures an oil's oxidation stability. The oil sample is placed in a vessel containing a polished copper coil. The vessel is then charged with oxygen and placed in a bath at a constant temperature of 150 degrees Celsius. Stability is expressed in terms of the time it takes to achieve a pressure drop of 25.4 pounds per square inch (psig) pressure drop from maximum pressure.	*Lubrication*
Rotation	the changing of the specific fields used for one crop year to year	*Agriculture*
Rotation	The number of years required to establish and grow trees to a specified size, product, or level of maturity.	*Forestry*
Rotational Molding	In rotational molding, or rotomolding, a product is formed from fine powder within a closed mold, which is rotated in a heating chamber and then a cooling chamber. While the mold is slowly turning and tumbling, it is heated by forced hot air in an oven. As the mold wall heats, the resin begins to stick to the inside of the mold forming a hollow part.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Rotation-Resistant Rope	A wire rope consisting of an inner layer of strand laid in one direction covered by a layer of strand laid in the opposite direction. This has the effect of counteracting torque by reducing the tendency of finished rope to rotate.	*Wire Rope & Cable*
Rotche or Roche	a soft, friable sandstone (S. Staffs.).	*Mining*
Rotor	A rotor is a rotating body whose journals are supported by bearings.	*Electronic Process*
Rouge	A red powder consisting of ferric oxide, usually prepared by calcining ferrous sulfate, used as a pigment and for polishing.	*Material Process*
Rough Top Belt	A belt cover intentionally made with irregular ridges or projection to produce a broken surface for greater traction or carrying abilities. Used for inclined service.	*Equipment*
Rough Weight	Gross Weight.	*Metallurgy*
Roughneck	A worker on a drilling or workover rig whose primary work station is the rig floor. Also referred to as floorhand, floorman or rig crew member.	*Petroleum Drilling*
Roughneck	Drill crew members who work on the derrick floor, screwing together the sections of drill pipe when running or pulling a drillstring.	*Petroleum Drilling*
Round	Planned pattern of drill holes fired in sequence in tunneling, shaft sinking, or stopping. First the cut holes are fired, followed by relief, lifter, and rib holes.	*Mining*
Round coals	best large coal, from which the smalls have been screened. (N. East).	*Mining*
Round ree	an area close to the pit bottom where the bearers stocked the coal they had carried from the workings until they had accumulated enough to fill a creel. (Scot.).	*Mining*
Round test mesh	A sieving screen with round holes, the dimensions of which are of specific sizes to allow certain sizes of coal to pass through while retaining other sizes.	*Energy*
Rounder	an tool resembling a beche externally, used for breaking or cutting off any projection which may have occurred in a borehole or shothole.	*Mining*
Round-Wire Track Strand	Strand composed of concentric layers of round WIRES, used as TRACK CABLE.	*Wire Rope & Cable*
Roundwood	Wood cut specifically for use as a fuel.	*Energy*
Roustabout	Any unskilled manual laborer on the rigsite. Roustabouts are commonly hired to ensure that the skilled personnel that run an expensive drilling rig are not distracted by peripheral tasks, ranging from cleaning up the location to cleaning threads to digging trenches to scraping and painting rig components.	*Petroleum Drilling*
Roustabout	Drill crew members who handle the loading and unloading of equipment and assist in general operations around the rig.	*Petroleum Drilling*
Roustabout	A common laborer around a drilling or a producing well.	*Petroleum Drilling*
Roustabout	Drill crew members who handle the loading and unloading of equipment and assist in general operations around the rig.	*Petroleum Drilling*
Route Maintenance	A mechanic's established route through a facility to fix the small problems. The route mechanic is usually very well equipped so he/she can deal with most small problems. Route maintenance and preventive maintenance activity are sometimes combined.	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	Industry
Routine Maintenance Task	Any maintenance task performed at a regular, predefined interval.	*Maintenance*
Routine Work	Work done on a routine basis where the work and material content is well known and understood (for example, daily or weekly line start-ups).	*Maintenance*
Row	the last trip on a man-haulage system. (Lancs.); or a ridge in the roof or in the pavement. (Scot.); or a fault. (Scot.); or a seam or bed, e.g. the Row-hurst, the Two Row seams of North Staffordshire.	*Mining*
Row crops	Crops planted in rows far enough apart to be mechanically cultivated during their early growing period. Common examples are carrots, onions, potatoes, tomatoes, and commercially grown flowers.	*Agriculture*
Row Dividers	the large points on the end of a combine used to pick-up corn	*Agriculture*
Royalties	The amount exploration and production companies pay to the mineral rights owners of a producing well. Pennsylvania state law requires this rate be no less than 12% of the market price per 1000 cubic feet of gas on the day that gas comes out of the ground. Often mineral rights owners have negotiated higher royalties. It has also been common for E&P companies to deduct well production expenses from these royalties.	*Petroleum Drilling*
Royalties (coal)	Payments from a lessee to the lessor, for the use of the lessor's coal resources. Payments are made in money or in for a stated share of production from the lessor's mineral deposits. Royalty rates may be expressed as an established minimum, a sliding-scale, or a step-scale. A step-scale royalty rate increases by steps as the average production on the lease increases. A sliding-scale royalty rate is based on average production and applies to all production from the lease.	*Energy*
Royalty	A contractual arrangement providing a mineral interest that gives the owner a right to a fractional share of production or proceeds there from, that does not contain rights and obligations of operating a mineral property, and that is normally free and clear of exploration, developmental and operating costs, except production taxes.	*Energy*
Royalty	An amount of money paid at regular intervals by the lessee or operator of an exploration or mining property to the owner of the ground. Generally based on a certain amount per ton or a percentage of the total production or profits. Also, the fee paid for the right to use a patented process.	*Mining*
Royalty - Royalties Does not refer to new "shaleionaires" but rather the percentage of proceeds from the sale of oil and gas from a well that the mineral rights owner receives Royalty percentages in some South Texas oil leases are as high as 27%	Royalty - Royalties Does not refer to new "shaleionaires" but rather the percentage of proceeds from the sale of oil and gas from a well that the mineral rights owner receives. Royalty percentages in some South Texas oil leases are as high as 27%.	*Petroleum Drilling*

Term	Definition	*Industry*
Royalty cost A share of the profit or product reserved by the grantor of a mining lease, such as a royalty paid to a lessee	Royalty cost: A share of the profit or product reserved by the grantor of a mining lease, such as a royalty paid to a lessee.	*Energy*
Royalty interest (including overriding royalty) These interests entitle their owner(s) to a share of the mineral production from a property or to a share of the proceeds there from. They do not contain the rights and obligations of operating the property and normally do not bear any of the costs of exploration, development, and operation of the property	Royalty interest (including overriding royalty): These interests entitle their owner(s) to a share of the mineral production from a property or to a share of the proceeds there from. They do not contain the rights and obligations of operating the property and normally do not bear any of the costs of exploration, development, and operation of the property.	*Energy*
Royalty interest An interest in a mineral property provided through a royalty contract	Royalty interest: An interest in a mineral property provided through a royalty contract.	*Energy*
Royalty payment	The cash or kind paid to the owner of mineral rights.	*Petroleum Drilling*
rpm	Revolutions per minute	*General*
RPU	See: Railway Patrolmen's International Union (AFL-CIO)	*Industrial Relations*
RS	Rising stem - A valve stem with threads arranged so that as the stem turns, the threads engage a stationary threaded area and lift the stem along with the closure element attached to it.	*Mechanical*
RS Rising stem	A valve stem with threads arranged so that as the stem turns, the threads engage a stationary threaded area and lift the stem along with the closure element attached to it.	*General Mechanical*
RSE	Relative Standard Error	*Energy*
RSI	Registration Systems, Incorporated (CMA monitoring agency)	*Petro-Chemical Abbreviations*
RT	Real Time	*Energy*
RTD	Resistance temperature detector.	*Electrical*
RTDG	See: Radio and Television Directors Guild (AFL-CIO)	*Industrial Relations*
RTIF	See: Railway Trainmen and Locomotive Firemen; Association of (Ind)	*Industrial Relations*
RTJ	'Ring Type Joint'. Also see RTJ Flanges.	*Petroleum Engineering*
RTJ or R.T.J.	Ring Type Joint - A flange connection using a specially shaped soft metal ring as a gasket. Generally used on high pressure valves and not widely used in the pipeline industry.	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	Industry
RTJWN	See 'WN-RTJ'	*Petroleum Engineering*
RTU	Remote Terminal Unit	*Control Engineering*
Rubber	A material that is capable of recovering from large deformations quickly and forcibly, and can be, or already is, modified to a state in which it is essentially insoluble (but can swell) in boiling solvent.	*Electrical*
Rubbers	wooden blocks for pump rods to slide on. (Scot.); or lengths of timber used to guide hutches around curves. (Lancs.), (Scots.).	*Mining*
Rubbing guides	guide ropes suspended in the centre of the shaft to safeguard against the cages coming into contact with one another when passing	*Mining*
Rubbing surface	The total area (top, bottom, and sides) of an airway.	*Mining*
Rubbish	another name for firedamp (N. Staffs.); or debris left in old workings (Lancs.).	*Mining*
Rubbish jigs	jigs driven specifically to act as roadways for the transfer of debris for stowage.	*Mining*
Rubble	screened coal. (Som.); or slack or small coal (S. West).	*Mining*
Rucks or Rooks	colliery spoil heaps.	*Mining*
Rudder	A control surface on fixed-wing aircraft, usually mounted at aft end of the fuselage sticking up (like a dorsal fin), that controls yaw (heading), and is controlled by the pedals; Symbols: delta sub R; Typical Units: rad, deg.	*Aeronautical Engineering*
Rudding	pit rubbish or debris. (N. East).	*Mining*
RUL	regular unleaded gasoline	*Petro-Chemical Abbreviations*
Rulemaking (regulations)	The authority delegated to administrative agencies by Congress or State legislative bodies to make rules that have the force of law. Frequently, statutory laws that express broad terms of a policy are implemented more specifically by administrative rules, regulations, and practices.	*Energy*
Rumen	the first large compartment of the stomach of a bovine; its bacteria and protozoa break down cellulose	*Agriculture*
Run	The portion of a fitting having its end in line, or nearly so, as distinguished from branch connections, side outlets, etc.	*Maintenance and Repair*
Run	a mine, to cut or drive a mine. (Scot.).	*Mining*
Run off	That portion of the precipitation that flows over the land surface and ultimately reaches streams to complete the water cycle. Melting snow is an important source of this water as well as all amounts of surface water that move to streams or rivers through any given area of a drainage basin.	*Energy*
Run rider	a lad who accompanied the train of tubs along the haulage road.	*Mining*
Run the tow	sliding down the shaft on the winding rope. A common practice in shallow mines, usually at the weekend or at night, if there was no engine man in attendance, or to run empty cages in the shaft after coal winding prior to winding the men. This was done to test the winding ropes, as a safety measure. (Scots.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Run-in period	A period before randomisation when participants are monitored but receive no treatment (or they sometimes all receive one of the study treatments, possibly in a blind fashion). The data from this stage of a trial are only occasionally of value but can serve a valuable role in screening out ineligible or non-compliant participants, in ensuring that participants are in a stable condition, and in providing baseline observations. A run-in period is sometimes called a washout period if treatments that participants were using before entering the trial are discontinued.	*Quality Engineering*
Runner	In a mold, the groove that connects the cavity with the gate through which the plastics composition flows.	*Material Process*
Runner	In an injection or transfer mold, the feed channel, usually of circular cross section, that connects the sprue with the cavity gate. The term is also used for the plastic piece formed in this channel.	*Engineering Physics*
Runner-on	the man who loaded tubs at the bottom of the shaft.	*Mining*
Running a mine	driving a drift entirely in the coal in a steep inclined seam. (Scot.).	*Mining*
Running amain	the breaking and running of the winding rope down the shaft. (Scot.).	*Mining*
Running and Quick-Start Capability	Generally refers to generating units that can be available for load within a 30-minute period.	*Energy*
Running balk	a balk set in the direction of a drift, at the side, as opposed to a cross it, to form a support for the cross balks. A common method of timbering through an old board or place were the roof had fallen heavily.	*Mining*
Running bridge	see Banking wagon.	*Mining*
Running gug	a self-acting incline.	*Mining*
Running measures or Running ground	sand and gravel, which contain large amounts of water. e.g. running sand or other incohesive material through which an excavation can only be maintained by means of complete peripheral support.	*Mining*
Running the brae	hauling tubs up an incline using a winch. (Scot.).	*Mining*
Running the drum	lowering a drum or cylinder through soft ground to support the top section of a sinking shaft.	*Mining*
Runoff	Precipitation flowing over land to surface streams, rivers, and lakes. Runoff may be classified according to speed of appearance after rainfall or melting snow as direct runoff or base runoff; and according to source as surface runoff, storm interflow, or groundwater runoff.	*Petroleum Engineering*
Run-of-mine	Raw material as it exists in the mine; average grade or quality.	*Mining*
Run-of-mine	A term used loosely to describe ore of average grade.	*Mining*
Run-of-mine coal	Coal as it comes from the mine prior to screening or any other treatment.	*Energy*
Run-of-river hydroelectric plant	A low-head plant using the flow of a stream as it occurs and having little or no reservoir capacity for storage.	*Energy*
Runout Table	The shear allows plate to be cut to customer specifications in thicknesses up to 1.250".	*Steel*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Run-to-Failure	No Scheduled Maintenance - An Equipment Maintenance Strategy, Where No Routine Maintenance Tasks Are Performed On The Equipment. The Only Maintenance Performed On The Equipment Is Corrective Maintenance, And Then Only After The Equipment Has Suffered A Failure. Also Described As A No Scheduled Maintenance Strategy.	*Management*
Run-To-Failure (RTF)	An equipment maintenance strategy, where no routine maintenance tasks are performed on the equipment. The only "planned" maintenance performed on the equipment is corrective maintenance after the equipment has suffered a failure. Run-To-Failure is a conscious decision as opposed to break down maintenance. Also related to "throwaway maintenance" (Run to failure followed by replacement), and "no scheduled maintenance". See also No Scheduled Maintenance and Break Down Maintenance	*Maintenance*
Rupture	Failure that is accompanied by significant plastic deformation.	*Engineering Physics*
Rupture	In the breaking strength or tensile strength tests the point at which a material physically comes apart as opposed to yield strength, elongation, etc.	*Electrical*
Rupture disc (blow-out disc)	An emergency over-pressure relief device, employing a relatively thin diaphragm, designed to burst at a specified pressure. Cannot be reset – must be replaced after rupture event.	*Mechanical*
Rural Business-Cooperative, (RBS)	An organization within the USDA.	*Agriculture*
Rural Electric Cooperative	A nonprofit, customer-owned electric utility that distributes power in a rural area.	*Energy*
Rural Electric Cooperative (Co-op) (also called a cooperatively owned electric utility)	In the United States, a rural electric cooperative is a customer-owned utility created to transmit and distribute power in rural areas. Rural electric cooperatives benefit from below-market financing from the Rural Utilities Service (formerly the Rural Electrification Administration), as well as low-cost power from federal hydroelectric projects. In addition, most do not pay state or federal income taxes. Typically, a board of directors sets the rates for rural electric cooperatives elected from among the cooperative's members. Today, rural electric cooperatives serve about 11 percent of U.S. electric customers.	*Energy*
Rural Electrification Administration	REA, a former USDA agency that administered loan programs for electrification and telephone service in rural areas. It was created in 1935 by executive order as an independent federal bureau and incorporated in USDA in 1939. The administration was abolished in 1994. It's functions are now performed by the Rural Utilities Service in USDA.	*Agriculture*
Rural Electrification Administration (REA)	A lending agency of the U. S. Department of Agriculture, the REA makes self-liquidating loans to qualified borrowers to finance electric and telephone service to rural areas. The REA finances the construction and operation of generating plants, electric transmission and distribution lines, or systems for the furnishing of initial and continued adequate electric services to persons in rural areas not receiving central station service.	*Energy*
Rural Utilities Service, (RUS)	An agency of the USDA. Helps rural utilities expand and keep their technology up to date, and to establish such new services as distance learning and telemedicine.	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	*Industry*
RUS	Rural Utilities Service, an agency of the USDA. Helps rural utilities expand and keep their technology up to date, and to establish such new services as distance learning and telemedicine.	*Agriculture*
Rush	the sudden weighting of a strong roof when the pillars were being worked out. (Scot.).	*Mining*
Rusk	small slack. The next grade above dust or dead small. (N. East).	*Mining*
Rust	black shale stained by ochre.	*Mining*
Rust	corrosion product consisting of hydrated iron oxides; this term is applicable only to ferrous (iron-containing) alloys	*Materials Process*
Rust Inhibitor	A type of corrosion inhibitor used in lubricants to protect surfaces against rusting.	*Lubrication*
Rust Preventative	Compound for coating metal surfaces with a film that protects against rust. Commonly used to preserve equipment in storage.	*Lubrication*
Rust prevention test (turbine oils)	A test for determining the ability of an oil to aid in preventing the rusting of ferrous parts in the presence of water.	*Oil Analysis*
Rust staining	reaction between exposed intermetallic layers (specifically the iron portion of the layers) with oxygen, that cause mild red or brown staining.	*Materials Process*
Rusting	A common corrosion process for ferrous alloys.	*Material Process*
Rusty coal	coal with a high proportion of pyrites, which has changed color due to the effect water or oxidation. (N. East)—see also Brassy coal.	*Mining*
Ruttles	heavily faulted and shattered ground running roughly parallel to the plane of the fault. (Yorks.).	*Mining*
R-value	A measure of a material's resistance to heat flow in units of Fahrenheit degrees x hours x square feet per Btu. The higher the R-value of a material, the greater its insulating capability. The R-value of some insulating materials is 3.7 per inch for fiber glass and cellulose, 2.5 per inch for vermiculite, and more than 4 per inch for foam. All building materials have some R-value. For example, a 4-inch brick has an R-value of 0.8, and half-inch plywood has an R-value of 0.6. The table below converts the most common "R" values to inches. For other "R" values, divide the "R" value by 3 to get the number of inches.	*Energy*
RVP	See Reid Vapor Pressure.	*Energy*
RWD	rear-wheel drive	*Mechanical*
RWDSU	See: Retail, Wholesale and Department Store Union (AFL-CIO)	*Industrial Relations*
RX	A prefix for API Spec. 6A self energizing ring gasket seal rings. RX ring gaskets will fit all R ring grooves in API-6B flanges and only RX ring gaskets fit 'SR' ring grooves in API Spec. 16A hubs. RX gaskets are supplied in low alloy cad plated carbon steel, stainless steel and all open grades of steel.	*Petroleum Engineering*
RYA	See: Railroad Yardmasters of America (AFL-CIO)	*Industrial Relations*
RYNA	See: Railroad Yarmasters of North America, Inc. (Ind)	*Industrial Relations*
Ryznar Index	An empirical method, often used in combination with the Langelier's Index, to predict the scaling tendencies of water. It is based on a study of operating results with water of various saturation indices.	*Chemical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
S	S	*Forestry*
--S--	--S--	*Petroleum Drilling*
Sabbaticals	a term referring to the periodic time off for research or study for professional people and, especially, teachers in universities.	*Industrial Relations*
Sabotage	direct action by employees to injure or destroy an employer's income or property.	*Industrial Relations*
Sacrificial anode	Use of a less noble material to protect a structural metal from corrosion.	*Material Process*
Sacrificial Coating	A coating that provides corrosion protection wherein the coating material corrodes in preference to the substrate, thereby protecting the latter from corrosion.	*Paint and Coatings*
Saddle back	a roll or undulation in the roof or pavement of a roadway. (Scot.) -see Roll, or an anticline or up-fold in the strata.	*Mining*
Saddle Flange	Also known as tank flange or boiler flange. A curved flange shaped to fit a boiler, tank, or other vessel and to receive a threaded pipe. A saddle flange is usually riveted or welded to the vessel.	*Maintenance and Repair*
Saddles	cast iron fittings confining the tram and tub on the rolley. (N. East).	*Mining*
SAE	Society of Automotive Engineers	*Petro-Chemical Abbreviations*
SAE	Society of Automotive Engineers (sets standards for many hydraulic components)	*Mechanical, Process, and Operations*
SAE Port	A straight thread port used to attach tube and hose fittings. It employs an "O" ring compressed in a wedge-shaped cavity. A standard of the Society of Automotive Engineers J514 and ANSI/B116.1.	*Mechanical, Process, and Operations*
SAE Port	A straight thread port used to attach tube and hose fittings. It employs an "O" ring compressed in a wedge-shaped cavity. A standard of the Society of Automotive Engineers J514 and ANSI/B116.1	*Lubrication*
SAE Viscosity	The viscosity classification of a motor oil according to the system developed by the Society of Automotive Engineers and now in general use. "Winter" grades are defined by viscosity measurements at low temperatures and have "W" as a suffix, while "Summer" grades are defined by viscosity at 100° C and have no suffix. Multigrade oils meet both a winter and a summer definition and have designations such as SAE 10W-30, etc.	*Lubrication*
Safe Drinking Water Act	Federal law that regulates drinking water quality.	*Petroleum Drilling*
Safe Working Load	This term is potentially misleading and is, therefore, in disfavor. Essentially, it refers to that portion of the nominal rope strength that can be applied either to move or sustain a load. It is misleading because it is only valid when the rope is new and equipment is in good condition. See RATED CAPACITY.	*Wire Rope & Cable*
Safe Yield	The amount of groundwater that can be taken from an aquifer without depleting the aquifer beyond its ability to be replenished or lowering the water table.	*Petroleum Engineering*
Safety	[of an intervention:] Refers to serious adverse effects, such as those that threaten life, require or prolong hospitalization, result in permanent disability, or cause birth defects. Indirect adverse effects, such as traffic accidents, violence, and damaging consequences of mood change, can also be serious.	*Quality Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Safety	efforts by management, labor and government to prevent, an eliminate the causes of accidents.	*Industrial Relations*
Safety Appliance	any device or other protection designed to cover dangerous parts of machinery or equipment, particularly moving parts.	*Industrial Relations*
Safety Campaigns	organized programs instituted by companies or jointly by companies and unions to educate employees to adopt a positive attitude towards safety ward practices.	*Industrial Relations*
Safety Case	A safety case is a structured argument that presents evidence that is intended to demonstrate that a system is safe. More specifically, a safety case aims to show that specific safety claims are met.	*Reliability Engineering*
Safety Clause	a clause found in some collective bargaining agreements which provides for safety committees, either joint committees or union committees working with the company for the purpose of investigating situations which are unsafe.	*Industrial Relations*
Safety Clothing	personal apparel or protective equipment worn by the worker in order to reduce hazards of the job and to prevent accidents.	*Industrial Relations*
Safety Committee	a group generally designated by labor and management which has as its prime function the review and encouragement of safety practices within the plant.	*Industrial Relations*
Safety Consequence	A Failure Has Safety Consequences If It Causes A Loss Of Function Or Other Damage That Could Hurt Or Kill Someone.	*Management*
Safety Critical Element (SCE)	These are physical measures put in place to prevent potential hazards becoming events and subsequently escalating to create uncontrollable situation. Each SCE should have an associated performance standard against which its performance should be measured to ensure it fulfills the required criteria.	*Reliability Engineering*
Safety Department	that unit in the plant responsible for the prevention of accidents, and the administration of safety in th establishment.	*Industrial Relations*
Safety Education	all of the activities which in any way relate to the prevention of accidents and safe operation on the job.	*Industrial Relations*
Safety Engineer	the person in the plant, generally included in the personnel department, who has the prime responsibility of seeing to it that the plant operates with a minimum of accidents and with the optimum conditions for safe operations.	*Industrial Relations*
Safety Factor	See DESIGN FACTOR.	*Wire Rope & Cable*
Safety fuse	A train of powder enclosed in cotton, jute yarn, or waterproofing compounds, which burns at a uniform rate; used for firing a cap containing the detonation compound which in turn sets off the explosive charge.	*Mining*
Safety glass	A product made by cementing two sheets of glass together with a sheet of transparent, colorless plastics material between to render it shatterproof.	*Material Process*
Safety handrail	Railing around top of tower, platforms, and stairways; usually composed of top handrail, kneerail, and toeboard. (See Handrail.)	*Facility Engineering*
Safety Harness	A harness, made of synthetic material, to protect a person in the event of a fall. The harness system should allow a worker to free fall no more than two feet.	*Petroleum Engineering*
Safety Instrumented Function (SIF)	A safety function with a specified safety integrity level which is necessary to achieve functional safety. A Safety Instrumented Function can be either a safety instrumented protection function, or a safety instrumented control function.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Safety Instrumented System (SIS)	A function to be implemented by a SIF, or other technology safety related system, or external risk reduction facilities, which is intended to achieve or maintain a safe state for the process, with respect to a specific hazardous event. The terms SIS and SIF are often used almost interchangeably. It should be noted, though, that a Safety Instrumented System is a combination of one or more Safety Instrumented Functions.	*Reliability Engineering*
Safety Integrity Level (SIL)	The Safety Integrity Level (SIL) of a process is a measure of its safety, in terms of the extent to which a user may expect that process to perform safely, and in the case of failure to fail in a safe manner.	*Reliability Engineering*
Safety lamp	A lamp with steel wire gauze covering every opening from the inside to the outside so as to prevent the passage of flame should explosive gas be encountered.	*Mining*
Safety Measure	any policy, action, pr device for the purpose of safeguarding the welfare of the individual in reducing accidents or protecting and remedying health and safety conditions.	*Industrial Relations*
Safety Movement	a broad program, generally of an educational nature or sometimes dealing with legislation, to convince employers and employees as well as legislators about the importance of protecting security and safety for individuals on the job.	*Industrial Relations*
Safety pit, A 'Safety Lamp Mine'	A gassy mine and one in which safety lamps must be used. (Scot.).	*Mining*
Safety PLC	A PLC specifically designed to be reliable through the device of redundancy. It could be used either for safety reasons or to minimize the commercial impact of a serious failure.	*Control Engineering*
Safety Programs	any organized set of plans designed to meet safety problems in a plant.	*Industrial Relations*
Safety Regulations	those state laws and regulations dealing specifically with the health and safety conditions of employees.	*Industrial Relations*
Safety Rope	Plastic rope used to secure a pump in case of pipe breakage.	*Petroleum Engineering*
Safety valve	A quick opening, pop action valve used for fast relief of excessive pressure.	*Mechanical*
Safety-Improvement Programs	Practices intended to constantly improve safety within a plant or across a company, including, but not limited to, safety teams, safety awareness programs and communications, safety "days," safety training, and setting of continuous-improvement goals targeting safety metrics, such as OSHA reportable or lost-workday rates.	*Reliability Engineering*
Sagger, Segger, Sagre or Seggar clay	a type of fireclay.	*Mining*
Salable coal	The shippable product of a coal mine or preparation plant. Depending on customer specifications, salable coal may be run-of-mine, crushed-and-screened (sized) coal, or the clean coal yield from a preparation plant.	*Energy*
Salable natural gas	Natural gas marketed under controlled quality conditions.	*Energy*
Salami Tactics	a term used in political parlance; a method which Matyas Rakosi, the dictator of Hungary, advocated in order to attain objectives.	*Industrial Relations*
Salaried Employee	generally a worker who is not on an hourly or an incentive rate.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Salary	the compensation actually received by an employee, white collar or executive, for a period of time rather than for actual hours of work.	*Industrial Relations*
Salary and Commission	personnel engaged in sales frequently receive compensation on the basis of a percentage of total sales.	*Industrial Relations*
Salary Rate	the actual annual, monthly, or weekly rate for a particular type of salaried employment.	*Industrial Relations*
Salers	A French breed of beef cattle.	*Agriculture*
Sales	See Energy sales.	*Energy*
Sales for Resale	Energy supplied to other utilities and agencies for resale.	*Energy*
Sales for resale (electric)	A type of wholesale sales covering energy supplied to other electric utilities, cooperatives, municipalities, and Federal and state electric agencies for resale to ultimate consumers. FERC definition	*Energy*
Sales to end users	Sales made directly to the consumer of the product. Includes bulk consumers, such as agriculture, industry, and utilities, as well as residential and commercial consumers.	*Energy*
Sales type	Sales categories of sales to end-users and sales for resale.	*Energy*
Sales volume (coal)	The reported output from Federal and/or Indian lands, the basis of royalties. It is approximately equivalent to production, which includes coal sold, and coal added to stockpiles.	*Energy*
Salesmen's Compensation	procedures used by various companies to compensate salesmen for their effort.	*Industrial Relations*
Salesmen's Training	the procedures used by companies to supervise and train their salesmen in order to increase their effectiveness and to analyze and improve the marketing procedures of the company.	*Industrial Relations*
Salicylic ester acid (HOC6H4COOH)	Monoclinic colorless needles from water. An acid catalyst used as an accelerator or hardener in phenolics, ureas, alkyds, and various coatings.	*Material Process*
Salinization	Condition where the salt content of soil accumulates above normal levels; occurs in parts of the world where water containing high salt concentrations evaporates from fields irrigated with standing water.	*Petroleum Engineering*
Sally, Sylveste	prop with-drawer. (Scot.).	*Mining*
Salt Bridge	The salt bridge of a reference electrode is that part of the electrode which contains the filling solution to establish the electrolytic connection between reference internal cell and the test solution. Auxiliary Salt Bridge: A glass tube open at one end to receive intermediate electrolyte filling solution, and the reference electrode tip and a junction at the other end to make contact with the sample.	*General Engineering*
Salt Bridge	The salt bridge of a reference electrode is that part of the electrode which contains the filling solution to establish the electrolytic connection between reference internal cell and the test solution. Auxiliary Salt Bridge—A glass tube open at one end to receive intermediate electrolyte filling solution, and the reference electrode tip and a junction at the other end to make contact with the sample.	*Electronic Process*
Salt Effect (fx)	The effect on the activity coefficient due to salts in the solution.	*General Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Salt gradient solar ponds	These consist of three main layers. The top layer is near ambient and has low salt content. The bottom layer is hot, typically 160° F to 212° F (71° C to 100° C), and is very salty. The important gradient zone separates these zones. The gradient zone acts as a transparent insulator, permitting the sunlight to be trapped in the hot bottom layer (from which useful heat is withdrawn). This is because the salt gradient, which increases the brine density with depth, counteracts the buoyancy effect of the warmer water below (which would otherwise rise to the surface and lose its heat to the air). An organic Rankine cycle engine is used to convert the thermal energy to electricity.	*Energy*
Salt Tablets	sodium chloride which is administered in tablet form or in a solution as a means of preventing heat exhaustion.	*Industrial Relations*
Salt water	water with high concentrations of sodium chloride or other salts	*Materials Process*
Salting	The act of introducing metals or minerals into a deposit or samples, resulting in false assays. Done either by accident or with the intent of defrauding the public.	*Mining*
Salting a Mine	Placing mineral or ore in barren places to swindle.	*Mining*
Salvage cut	The harvesting of dead or damaged trees or of trees in danger of being killed by insects, disease, flooding, or other factors.	*Forestry*
SAMA	Scientific Apparatus Makers Association. An association that has issued standards covering platinum, nickel, and copper resistance elements (RTD's).	*Electrical*
SAMA	Scientific Apparatus Makers Association. An association that has issued standards covering platinum, nickel, and copper resistance elements (RTDs).	*Electronic Process*
Sammy	ironstone nodules found in the strata. (Mids.); or an easy job (S. Mids).	*Mining*
Sample	A small portion of rock or a mineral deposit taken so that the metal content can be determined by assaying.	*Mining*
Sample	A small portion of rock or mineral deposit, usually taken for the purpose of being assayed to determine possible content of valuable elements.	*Mining*
Sample (coal)	A representative fraction of a coalbed collected by approved methods, guarded against contamination or adulteration, and analyzed to determine the nature; chemical, mineralogic, and (or) petrographic composition; percentage or parts-per-million content of specified constituents; heat value; and possibly the reactivity of the coal or its constituents.	*Energy*
Sample Interval	The rate at which a controller samples the process variable, and calculates a new output. Ideally, the sample interval should be set between 4 and 10 times faster than the process dead time. See a presentation on What Sample Interval Should I Use?	*Process Control*
Sample Piping	All piping, valves, and fittings used for the collection of samples of gas, steam, water, oil, etc.	*Maintenance and Repair*
Sample preparation	Fluid factors that can enhance the accuracy of the particulate analysis. Such factors include particle dispersion, particle settling, and sample dilution.	*Oil Analysis*
Samples	The wellbore drill cuttings obtained at definite depth intervals during drilling. These cuttings can be examined to determine the rock type, the formation being drilled, and indications of gas content.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Sampling	Cutting a representative part of an ore (or coal) deposit, which should truly represent its average value.	*Mining*
Sampling frequency	Rate of a periodic process; 1/T where T is the period; Symbols: f sub s; Typical Units: Hz; Dimensions: 1/Time.	*Aeronautical Engineering*
Sampling Period	The time interval between observations in a periodic sampling control system.	*Process Control*
Sampling rate	The number of readings an A/D converter takes per second or per minute.	*Reliability Engineering*
Samson block	two girders in the shape of a 'T'. The cross of the 'T' is pivoted and should a hutch run away on an incline the girder is tripped by a wire and falls blocking the road. -see also Warwick.	*Mining*
Sand King	These consist of hoppers, conveyor belts and other equipment that handle frac sand that is brought to the well location by truck. Frac sand is used as a "prop-pant" in hydraulic fracturing. It helps keep the tiny fractures which are created by high-pressure water open, so that oil and gas can seep out.	*Petroleum Drilling*
Sand Line	In well drilling, it is the wire rope that operates the bailer that removes water and drill cuttings.	*Wire Rope & Cable*
Sandarac	A hard but natural resin from Africa. It has an odor somewhat like turpentine, and a sharp balsamic taste, and is used in varnishes.	*Material Process*
Sandstone	A sedimentary rock consisting of quartz sand united by some cementing material, such as iron oxide or calcium carbonate.	*Mining*
Sandstone	A sedimentary rock consisting of grains of sand cemented together.	*Mining*
Sanitary Protection	Includes grout in the annular space around the casing, seals between concrete tiles, or at the point of entry of water and electrical lines, sanitary well caps, and well seals.	*Petroleum Engineering*
Sanitizer	An agent that reduces the number of bacteria to a safe level, but does not completely eliminate them, as judged by public health requirements. Usually in foodservice areas.	*Chemistry*
Sanitizing	The destruction of pathogenic and other kinds of microorganisms. See Sterilizing.	*Industrial*
Santa Gertrudis	A beef breed developed on the King Ranch in Texas. Genetically, it is 3/8 Brahman and 5/8 Shorthorn. Registry is maintained by Santa Gertrudis Breeders International.	*Agriculture*
Santicizer	A trade name for a series of plasticizers for lacquers and plastics.	*Material Process*
Santolite	A trade name for sulfonamide- aldehyde resins, used with plasticizers in plastics.	*Material Process*
Sapling	A small tree, usually between 2 and 4 inches diameter at breast height.	*Forestry*
Saponification	The formation of a metallic salt (soap) due to the interaction of fatty acids, fats, or esters generally with an alkali.	*Lubrication*
Saponification	The process of converting a fat into soap by treating it with an alkali. Also, the process used by some cleaners to remove grease and oil.	*Chemistry*
Saponification number	The number of milligrams of potassium hydroxide required to neutralize all the acid in one gram of resin or other substance.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	Industry
Saponification Number	The number of milligrams of potassium hydroxide (KOH) that combine with one gram of oil under conditions specified by test method ASTM D 94. Saponification number is an indication of the amount of fatty saponifiable material in compounded oil. Caution must be used in interpreting test results if certain substances - such as sulfur compounds or halogens - are present in the oil, since these also react with KOH, thereby increasing the apparent Saponification number.	*Lubrication*
Saprophyte	An organism living on dead organic matter.	*Forestry*
Saran	Trade name for thermoplastics consisting of polymers of vinylidene chloride or copolymers of same with lesser amounts of other unsaturated compounds.	*Engineering Physics*
Sargol	A special type of joint in which a lip is provided for welding to make the joint fluid tight, while mechanical strength is provided by bolted flanges. The Sargol joint is used with both Van Stone pipe and fittings.	*Maintenance and Repair*
Sarlun	An improved type of Sargol joint.	*Maintenance and Repair*
Sash	sulfated ash	*Petro-Chemical Abbreviations*
Satin	A plastic finish having a satin or velvety appearance.	*Material Process*
Saturated	Pores filled with water.	*Petroleum Engineering*
Saturated Steam	Once boiling point is reached, and the pressure remains constant, additional heating will not cause a rise in temperature, yet turns the water into saturated steam. As the temperature in the system remains constant, the energy potential per unit mass is increased in the steam.	*Industrial*
Saturated Thickness	Total water-bearing thickness of an aquifer.	*Petroleum Engineering*
Saturated zone	the zone in which all the voids in the rock or soil are filled with water at greater than atmospheric pressure. The water table is the top of the saturated zone in an unconfined aquifer.	*Chemical*
Saturation induction	The apparent maximum value of induction for a ferromagnetic material under the maximum applied field.	*Material Process*
Saturation Level	The amount of water that can dissolve in a fluid.	*Lubrication*
Saturation polarization	Polarization of a ferroelectric material due to maximum domain growth.	*Material Process*
Saturation range	Temperature range over which conductivity in a p-type semiconductor is relatively constant due to the fact that all acceptor levels are saturated with electrons.	*Material Process*
Saturation Voltage	The voltage drop appearing across a control device that is fully turned On.	*Electrical Engineering*
Saudi Arabia	(1960-present)	*Energy*
Savings Fraction	The percentage of consumption from using the old technology that can be saved by replacing it with the new, more efficient demand-side management technology. For example, if a 60-watt incandescent lamp were replaced with a 15-watt compact fluorescent lamp, the savings fraction would be 75 percent because the compact fluorescent lamp uses only 25 percent of the energy used by the incandescent lamp.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Sawlog or Sawtimber	A log or tree that is large enough (usually 10 to 12 inches in diameter) to be sawed into lumber.	*Forestry*
Sawney	to lower full tubs down an inclined road or face using a rope or chain wrapped around a prop to act as a brake. (Mids.).	*Mining*
Saybolt Universal Viscosity (SUV) or Saybolt Universal Seconds, (SUS)	The time in seconds required for 60 cubic centimeters of a fluid to flow through the orifice of the Standard Saybolt Universal Viscometer at a given temperature under specified conditions. (ASTM Designation D 88.)	*Oil Analysis*
SBE	severity bias estimate	*Petro-Chemical Abbreviations*
SBX	A Ring Gasket the same as BX gasket but drilled with a vent hole for subsea use.	*Petroleum Engineering*
Scabbit parting	a rough parting or break in the roof. (Scot.).	*Mining*
Scabby	sticky.	*Mining*
Scabby roof	a rough sandstone roof to which the coal has a tendency to stick. The coal had then to be hacked down with the pick. (Scot.).	*Mining*
SCADA	Supervisory Control And Data Acquisition software.	*Control Engineering*
SCADA (supervisory control and data acquisition)	A SCADA system is a computer system that gathers and analyses data on equipment and processes in industrial processing plants such as pulp and paper mills, oil refineries and water treatment facilities. It may perform other functions in power networks, such as load management, load curtailment and restoration, distribution automation, and facilities management functions.	*Electrical*
SCADA Supervisory Control And Data Acquisition	SCADA system refers to the combination of telemetry and data acquisition. It consists of collecting information, transferring it back to a central site, carrying out necessary analysis and control, and then displaying this data on a number of operator screens. The SCADA system is used to monitor and control a plant or equipment. Control may be automatic or can be initiated by operator commands. SCADA system incorporates both hardware and software and provides central monitoring and control of plant and facilities. SCADA typically consist of a "master" terminal unit (MTU) and one or more "remote" terminal units (RTU).	*Reliability Engineering*
Scaffold	a wooden platform fixed across a shaft. In the case of a permanently abandoned pit, where it is not filled up from the bottom, a scaffold was sometimes put in, a short distance from the top, above which the pit was filled up.	*Mining*
Scalar	A mathematical entity which has a numeric value but no direction (in contrast to a vector).	*Engineering Physics*
Scale	The deposition on heat transfer surfaces of material normally in solution, as opposed to fouling, which is deposition of material normally in suspension.	*Chemical Engineering*
Scale	Calcium or mineral deposits in steam boilers and in steam and water pipes.	*Chemistry*
Scale Dipping	The process of removing scale prior to a "Bright Dip."	*Metallurgy*
Scale or Skail	a current of air that is purposely allowed to take a short cut to rejoin the main current. Often used in sections of the mine off the main ventilation current, or an air leakage finding its way back into the return airway thereby reducing the amount of air getting to the workings.	*Mining*
Scaling	Heavy surface oxidation on metals caused by heating in air or in other oxidizing atmospheres.	*Metallurgy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Scallop or Skelp	to pull down and hew the coal using only a pick. i.e. without kirving, nicking and wedging or bringing it down with powder. (N. East).	*Mining*
Scaly	Showing a flaked surface appearance.	*Material Process*
Scammed	sooty. (N. East).	*Mining*
Scamy or Scammy post	soft, jointy freestone in thin layers mixed with mica. (N. East).	*Mining*
Scan Technique	A method of scanning objects. The two general categories are through and reflective scan.	*Electrical Engineering*
Scanner	Bar code device which produces a signal representing the bars and spaces of a bar code.	*Gears*
Scanning electron microscope (SEM)	Instrument for obtaining microstructural images using a scanning electron beam.	*Material Process*
Scanning tunneling microscope (STM)	An instrument capable of providing direct imager of atomic packing patterns by monitoring the quantum mechanical tunneling of electrons near the sample surface.	*Material Process*
SCAQM	South Coast Air Quality Management (California)	*Petro-Chemical Abbreviations*
Scares	thin layers of pyrites or spar inter-stratified in coal seams, or similar layers of coal found in sandstone or shale.	*Mining*
Scarifying	The removal of the top litter layer of soil in order to prepare a site for planting.	*Forestry*
Scarp	An escarpment, cliff or steep slope along the margin of a plateau, mesa or terrace.	*Mining*
Scars	clinker. (N. East).	*Mining*
Scatter	a rumbling or falling noise in the shaft. (Yorks.).	*Mining*
SCE	Saturated calomel electrode.	*General*
SCF	speed correction factors	*Petro-Chemical Abbreviations*
scfm	Standard cubic feet per minute*	*General*
Schaffler	a small Austrian made shot firer.	*Mining*
Schedule	A statement of the pricing format of electricity and the terms and conditions governing its applications.	*Energy*
Schedule	A system for indicating the wall thickness of pipe. The higher the schedule number, the thicker the wall for a certain pipe size.	*General Mechanical*
Schedule Compliance	One Of The Key Performance Indicators Often Used To Monitor And Control Maintenance. It Is Defined As The Number Of Scheduled Work Orders Completed In A Given Time Period (Normally One Week), Divided By The Total Number Of Scheduled Work Orders That Should Have Been Completed During That Period, According To The Approved Maintenance Schedule For That Period. It Is Normally Expressed As A Percentage, And Will Always Be Less Than Or Equal To 100%. The Closer To 100%, The Better The Performance For That Time Period.	*Management*
Schedule Numbers	Approximate values of the expression 1000P/S, where P is the service pressure and S is the allowable stress, both expressed in pounds per square inch.	*Maintenance and Repair*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Schedule of Cost of Goods Manufactured	A schedule showing the direct materials, direct labor, and manufacturing overhead costs incurred for a period and assigned to Work in Process and completed goods.	*Procurement*
Scheduled Discard Task	A Maintenance Task To Replace A Component With A New Component At A Specified, Pre-Determined Frequency, Regardless Of The Condition Of The Component At The Time Of Its Replacement. An Example Would Be The Routine Replacement Of The Oil Filter On A Motor Vehicle Every 6,000 Miles. The Frequency With Which A Scheduled Discard Task Should Be Performed Is Determined By The Useful Life Of The Component.	*Management*
Scheduled Downtime	A period of time when the equipment is not available to perform its intended function due to planned downtime events. These include maintenance delay (delay after an interrupt is reported, but before anyone arrives to repair it); production test; preventive maintenance; change of consumables; setup; and facilities-related downtime.	*Maintenance*
Scheduled Maintenance	Any maintenance work that is planned and included on an approved maintenance schedule.	*Maintenance*
Scheduled Operating Time	The Time During Which An Asset Is Scheduled To Be Operating, According To A Long-Term Production Schedule.	*Plant Engineering*
Scheduled Outage	An outage that results when a component is deliberately taken out of service at a selected time, usually for the purposes of construction, maintenance, or testing.	*Energy*
Scheduled Restoration Task	A Maintenance Task To Restore A Component At A Specified, Pre-Determined Frequency, Regardless Of The Condition Of The Component At The Time Of Its Replacement. An Example Would Be The Routine Overhaul Of A Slurry Pump Every 1,000 Operating Hours. The Frequency With Which A Scheduled Restoration Task Should Be Performed Is Determined By The Useful Life Of The Component.	*Management*
Scheduled Work	Work written up after an inspection and known about for a fixed period of time (e.g. 1 day) in advance. A maintenance scheduler or planner inputs the work into the schedule. Sometimes the inspection yields work that must be done immediately which becomes emergency or DIN. Scheduled work is part of a planned maintenance or corrective maintenance program.	*Maintenance*
Scheduled Work Order	A Work Order That Has Been Planned And Included On An Approved Maintenance Schedule.	*Management*
Scheduling	The process of determining what maintenance jobs gets worked on, when, and by whom based on the priority and resource/equipment availability. This process should take place before the job is executed.	*Maintenance*
Scheduling coordinators	Entities certified by the Federal Energy Regulatory Commission (FERC) that act on behalf of generators, supply aggregators (wholesale marketers), retailers, and customers to schedule the distribution of electricity.	*Energy*
Scheduling Coordinators	Entities certified by the Federal Energy Regulatory Commission that act as a go-between with the Independent System Operator on behalf of generators, supply aggregators (wholesale marketers), retailers, and customers to schedule the distribution of electricity.	*Energy*
Schinkage mark	A series of a short creases or wrinkles in a plastic, believed to be caused by shrinkage before complete hardening.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Schist	A foliated metamorphic rock the grains of which have a roughly parallel arrangement; generally developed by shearing.	*Mining*
Schottky defect	A pair of oppositely charged ion vacancies.	*Material Process*
Science	Science is connecting previous knowledge (old knowledge), known scientific facts, scientific laws and hypothesis, such as, from they can be derived new knowledge in given domain.	*Material Process*
Science Citation Index	A database of reports of studies that also enables the user to identify which reports have cited a specific report of a study. Often used to identify most recent research in a field.	*Quality Engineering*
Scintillation counter	An instrument used to detect and measure radioactivity by detecting gamma rays; more sensitive than a Geiger counter.	*Mining*
Sclit	slaty coal or coaly blaes, cf slate. (Scot.).	*Mining*
Scobbed	when a hutch was filled by using large flat pieces to block off the bottom and then filling on top of them.	*Mining*
Sconcing	a method of ventilating part of the workings where the full force of the air current is used.	*Mining*
Scoop	a rubber-tired haulage vehicle used in thin coalbeds.	*Energy*
Scoop	A rubber tired-, battery- or diesel-powered piece of equipment designed for cleaning runways and hauling supplies.	*Mining*
Scoop loading	An underground loading method by which coal is removed from the working face by a tractor unit equipped with a hydraulically operated bucket attached to the front; also called a front-end loader.	*Energy*
Scope Of Work	The purpose is to provide bidders with a clear, accurate, and complete description of the work to be performed, including inspection, test and acceptance (see Statement of Work).	*Procurement*
Scorch	Appearing as if tissues were burned by heat; usually affecting marginal portions of leaves.	*Forestry*
Scoring	Scratching of the surface of a mold.	*Material Process*
Scoring	Distress marks on sliding metallic surfaces in the form of long, distinct scratches in the direction of motion. Scoring is an advanced stage of scuffing.	*Lubrication*
Scoring size	A particulate whose dimensions are such that it is capable of entering a working clearance.	*Mechanical, Process, and Operations*
Scotch	a wooden wedge used to brake vehicles; or a steel or iron rod often shaped like a shepherds crook placed in the spokes of tub wheels to brake them on an incline. (Lancs.) – see Locker; or a compressed air brake used to control the speed of mine cars; or a piece of stone or dirt (S. Mids.); or the lower lift or section of a thick seam which was wedged up when driving a heading (Leics.).	*Mining*
Scotch Tape Test	A method for evaluating the adhesion of a coating to a substrate. The scotch tape is adhered to the coating and then pulled away. The degree to which the coating peels away from the substrate with the tape indicates its adhesion.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Scotch yoke Operator (Used on quarter turn valves)	A quarter turn operator using a scotch yoke mechanism rather than gears. The "Scotch Yoke" has a torque output at the beginning and ending of its stroke that is generally twice the magnitude of the torque output in the center of its stroke.	*Mechanical*
Scour	to drive a heading or roadway (a gob road or scouring) through the waste. (Mids.).	*Mining*
Scour	Remove grease, dirt, and other extraneous matter from wool.	*Material Process*
Scovens	forks for filling coal into tubs (S. Staffs.).	*Mining*
Scowl	a brow, to drive a heading or roadway by guesswork. (F. of D.).	*Mining*
SCOWT	sprig clutch overrunning wear test	*Petro-Chemical Abbreviations*
SCPI	Sequential Central Port Injector	*Petro-Chemical Abbreviations*
SCR	Silicon controlled rectifier.	*Electrical*
SCR	Silicone controlled rectifier.	*Electronic Process*
Scrap	All products of a processing operation which are not present in the primary finished articles. This includes flash, runners, sprues, excess parison, trimmings from film conveying operations, and reject articles. Scrap from operations can usually be reclaimed for reuse in the processor's plant or for sale to a commercial reclaimer.	*Engineering Physics*
Scrap/rework costs	Parts or materials wasted in the production process, plus the cost of fixing defective products so that they pass final inspection.	*Quality*
Scraper	a tool with a flat turned up end made of wood, brass or copper and used for cleaning and stemming shotholes; or a scraper chain conveyor, a steel conveyor comprising chains and steel bars running in pans; or the man who clears away the cuttings while a coal cutter machine is working.	*Mining*
Scraper box loading	a method of transporting coal along a face in which a series of box-like structures moves to and fro gathering the coal and moving it to the gate end.	*Mining*
Scraper loader	a mechanical device for loading or packing broken material by which an open-ended bucket is drawn to and fro through the material using main and tail ropes. –see Slusher.	*Mining*
Scratch	Shallow mark, groove, furrow, or channel.	*Material Process*
Scratching	Fine abrasive furrows in the direction of sliding.	*Lubrication*
Screen	(See Shield.)	*Electrical*
Screening	The process of stressing products so that defective units can be identified, then repaired or replaced. A winnowing out.	*Reliability Engineering*
Screenings	The undersized coal from a screening process, usually one-half inch or smaller.	*Energy*
Screens	various types of mechanical apparatus used for sorting the coal into different sizes such as bars of iron various distances apart or metal plates with holes; or a cloth brattice or curtain hung across a roadway to direct the ventilation current. Also called 'Traps'. (N. East).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Screen-trapper	a screen attendant. (N. East).	*Mining*
Screw	A headed threaded fastener that is designed to be used in conjunction with a pre formed internal thread or alternatively forming its own thread. Historically, it was a threaded fastener with the thread running up to the head of the fastener that has no plain shank. However this definition has largely been superseded to avoid confusion over the difference between a bolt and a screw.	*Maintenance*
Screw	In extrusion, the shaft provided with helical grooves, which conveys the material from the hopper outlet through the barrel and forces it out through the die.	*Engineering Physics*
Screw dislocation	Linear defect with the Burgers vector parallel to the dislocation line.	*Material Process*
Screw Flight	The helical metal thread of a screw in an extruder or injection molding machine.	*Engineering Physics*
Screw Speed	The rate of revolution (in rpm) of an extruder or injection molding machine screw.	*Engineering Physics*
Screw Thread	A ridge of constant section which is manufactured so that a helix is developed on the internal or external surface of a cylinder.	*Maintenance*
Screw Tip	In molding, the tip of the reciprocating screw is the ram face that pushes the melt into the mold, and it contains the shutoff valve (nonreturn valve) which prevents the melt from sliding backward along the flights of the screw.	*Engineering Physics*
Screw, Cone	Cone - Pointed end, this type generates the highest torsional holding power and is typically used for a permanent connection.	*Maintenance*
Screw, Cup	Cup - Hollowed end, is the most commonly used point style. Used when the digging in of the point is not undesirable.	*Maintenance*
Screw, Dog	Dog - Flat end with the threads stopping short of the end with the end fitting into a hole.	*Maintenance*
Screw, Flat	Flat - Cause little damage to the shaft and are used when frequent adjustment is required.	*Maintenance*
Screw, Oval	Oval - Rounded end that is typically used when frequent adjustment is required. The oval end prevents/reduces indentation.	*Maintenance*
Screw, Set	A set screw is a threaded fastener that is typically used to hold a sleeve, collar or gear on a shaft to prevent relative motion. It is a threaded member that normally does not have a head. Unlike most other threaded fasteners it is basically a compression device normally used to generate axial thrust. Various socket types are provided to allow the set screw to be rotated. These types include hexagon socket, fluted socket, screwdriver slot and square head. Various point designs are available (the part of the set screw that rotates against the shaft being secured) and include:	*Maintenance*
Screw, Shank	That portion of a bolt between the head and the threaded portion.	*Maintenance*
Screwed ends	Internally threaded end connections supplied on some valves. Usually tapered pipe threads (NPT).	*Mechanical*
Scrin	irregular ironstone nodules. (Derbys.).	*Mining*
Scroll	To move all or part of the screen material up to down, left or right, to allow new information to appear.	*General*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Scroll drum	a conical winding drum.	*Mining*
Scronge	loose and broken strata created by working underneath (S. Wales).	*Mining*
Scrubbed Tires	Also known as Scuffed Tires, which have a few laps on them to remove the outer sheen and provide more consistent traction. See Heat Cycles.	*NASCAR*
Scrubber	Any of several forms of chemical/physical devices that remove sulfur compounds formed during coal combustion. These devices, technically know as flue gas desulfurization systems, combine the sulfur in gaseous emissions with another chemical medium to form inert "sludge," which must then be removed for disposal.	*Mining*
Scrubbing	very thin layers of soft matter such as clay, sooty coal etc. (Leics.); or iron pyrites embedded in the coal. (Mids.).	*Mining*
Scud	inferior coal, often close to the top of a seam where it is left up to form the roof. (Yorks.); occasionally seatearth.	*Mining*
Scuffing	Abnormal engine wear due to localized welding and fracture. It can be prevented through the use of antiwear, extreme-pressure and friction modifier additives.	*Oil Analysis*
Scuffing particles	Large twisted and discolored metallic particles resulting from adhesive wear due to complete lubricant film breakdown.	*Oil Analysis*
Scuft	to throw dirt back.	*Mining*
Scufting shovel	a shovel with a flat blade used for cleaning up 'gummings'.	*Mining*
Scuftings	see Gummings.	*Mining*
Scutch or Scutch out	to make a vertical cut down each side of a face prior to bringing down the coal by wedging or blasting. -see also Knicking, Kirving and Shearing. (Scot.).	*Mining*
Scutcheon	a piece of coal or blaes left in the roof. (Scot.).	*Mining*
Scuvin	fork used to load lump coal on the face to separate it from the slack (S. Staffs.).	*Mining*
Scythe	a blade with a long handle used to cut grass, grain, and other crops	*Agriculture*
SD	Standard deviation, also abbreviated s	*Quality*
SE	See Standard error	*Quality Engineering*
SEA	Selective Enforcement Audit	*Petro-Chemical Abbreviations*
Sea coal or sea cole	originally coal gathered from the beaches of the North East coast. The term sea coal was used for coal mined inland to differentiate it from charcoal.	*Mining*
Seal	A device designed to prevent the movement of fluid from one area to another, or to exclude contaminants.	*Lubrication*
Seal Assembly	A group of parts, or a unitized assembly, that includes sealing surfaces, provisions for initial loading, and a secondary sealing mechanism that accommodates the radial and axial movement necessary for installation and operation.	*Lubrication*
Seal Chamber	The area between the seal chamber bore and a shaft in which a mechanical seal is installed.	*Lubrication*
Seal compatibility	Ability of a lubricant formulation to not influence the physical dimensions and/or properties of any elastomer seals it comes in contact with.	*Mechanical, Process, and Operations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Seal Contact Area	The areas that gaskets seal against in any type connection.	*Petroleum Engineering*
Seal Face	It is either of the two lapped surfaces in a mechanical seal assembly forming the primary seal.	*Lubrication*
Seal Face Width	The radial distance from the inside edge to the outside edge of the sealing face.	*Lubrication*
Seal Swell (rubber swell)	The swelling of rubber (or other elastomers) gaskets, or seals when exposed to petroleum, synthetic lubricants, or hydraulic fluids. Seal materials vary widely in their resistance to the effect of such fluids. Some seals are designed so that a moderate amount of swelling improves sealing action.	*Lubrication*
Seal weld	A weld that does not contribute anything to the mechanical integrity of an assembly, made purely to seal or prevent leakage from, for instance, a threaded joint.	*General Mechanical*
Seal weld	A weld that does not contribute anything to the mechanical integrity of an assembly, but is made purely to seal or prevent leakage from, for instance, a threaded joint.	*Mechanical*
Seal, Dynamic	A sealing element used between parts that have relative motion, i.e., stem seals, seat seal o-rings, etc.	*Mechanical*
Seal, Pressure activated	A sealing device in which sealing action is aided by fluid pressure.	*Mechanical, Process, and Operations*
Seal, Static	A sealing element used as a gasket between two non-moving parts, i.e. valve bonnet o-ring, ball valve body o-ring, flange gasket.	*Mechanical*
Sealant	Refers to a slurry consisting of clean water and at least 20 percent bentonite solids, or other material equivalent to a slurry with the ability to form a permanent, watertight barrier.	*Petroleum Engineering*
Sealant, Sealer	A preparation of resin or wax type materials for sealing the porosity in coatings.	*Paint and Coatings*
Seale	The name for a type of strand pattern that has two adjacent layers laid in one operation with any number of uniform sized wires in the outer layer, and with the same number of uniform but smaller sized wires in the inner layer.	*Wire Rope & Cable*
Sealed Motor Bearing	These bearings have rubbing seals that seal against recesses in the inner ring shoulder. They are lubricated for life. Under extreme conditions, their life can be short.	*Reliability Engineering*
Sealer	A coating designed to penetrate and provide the initial protection to a floor surface by filling the tiny holes. Also, a product which prevents color bleeding.	*Chemistry*
Sealing	A process which, by absorption of a sealer into thermal spray coatings, seals porosity and increases resistance to corrosion of the underlying substrate material.	*Paint and Coatings*
Seal-welding	a weld used primarily to obtain tightness and prevent the flow of cleaning solutions and zinc into otherwise enclosed areas, to prevent flash steaming that causes localized ungalvanized areas	*Materials Process*
Seam	A bed of coal lying between a roof and floor. Equivalent term to bed, commonly used by industry.	*Energy*
Seamless Pipe	A wrought tubular product made without a welded seam. It is manufactured by hot-working steel or, if necessary, by subsequently cold-finishing the hot-worked tubular product to produce the desired shape, dimensions, and properties.	*Maintenance and Repair*

Please see the Appendix for further illustration

Term	Definition	Industry
Search pattern	Basic guidance mode; provides lateral steering guidance to fly an expanding square search pattern, creeping line search pattern, or sector search pattern.	*Aeronautical Engineering*
Search strategy	1. The methods used by a Cochrane Review Group (CRG) to identify trials within the CRG's scope. This includes handsearching relevant journals, searching electronic databases, contacting drug companies, other forms of personal contact and checking reference lists. CRGs must describe their search strategy in detail in the CRG's module. Authors can refer to the CRG's search strategy when preparing a Cochrane Review, and if necessary supplement this with a description of their own additional searches. 2. The methods used by a reviewer to locate relevant studies, including the use of a CRG's trials register. 3. The combination of terms used to identify studies in an electronic database such as MEDLINE.	*Quality Engineering*
Searchers	the men who carry out the search for contraband when men are going into the mine at the beginning of a shift.	*Mining*
Seasonal energy efficiency ratio (SEER)	Ratio of the cooling output divided by the power consumption. It is the Btu of cooling output during its normal annual usage divided by the total electric energy input in watt hours during the same period. This is a measure of the cooling performance for rating central air conditioners and central heat pumps. The appliance standards required a minimum SEER of 10 for split-system central air conditioners and for split-system central heat pumps in 1992. (The average heat pump or central air conditioner sold in 1986 had an SEER of about 9.)	*Energy*
Seasonal pricing	A special electric rate feature under which the price per unit of energy depends on the season of the year.	*Energy*
Seasonal rates	Different seasons of the year are structured into an electric rate schedule whereby an electric utility provides service to consumers at different rates. The electric rate schedule usually takes into account demand based on weather and other factors.	*Energy*
Seasonal units	Housing units intended for occupancy at only certain seasons of the year. Seasonal units include units intended only for recreational use, such as beach cottages and hunting cabins. It is not likely that this type of unit will be the usual residence for a household, because it may not be fit for living quarters for more than half of the year.	*Energy*
Seasoned wood	Wood, used for fuel, that has been air dried so that it contains 15 to 20 percent moisture content (wet basis).	*Energy*
Seat	That part of a valve against which the closure element (gate, ball) effects a tight shut-off. In many ball valves and gate valves, it is a floating member containing a soft seating element (usually an o-ring).	*Mechanical*
Seat	The part of a valve against which the closure element effects a tight shut-off.	*General Mechanical*
Seat Load	The contact force between the seat and the valve plug. When an actuator is selected for a given control valve, it must be able to generate enough force to overcome static, stem and dynamic unbalance with an allowance made for seat load.	*Industrial Engineering*
Seat or Seating	floor of a coal seam. (Lancs.).	*Mining*
Seat Ring	A part of the flow passageway that is used in conjunction with the closure member to modify the rate of flow through the valve.	*Industrial Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Seatearth	the floor or 'fireclay' beneath the coal seam. Also known in Derbyshire as 'sole'.	*Mining*
Sebacic acid (COO(CH2)8COOH)	Thin colorless leaflets, A dibasic acid used in the production of alkyd resins and Nylons.	*Material Process*
sec	Second	*General*
sec-Octyl alcohol	A solvent – alcohol.	*Material Process*
Second means of egress	the alternative roadways or route from the working areas of the mine that would be used if an emergency arose and the usual means of exit from the mine were blocked or impassable.	*Mining*
Second Quantum Number (λ)	Describes the shape of the electron cloud	*Physics*
Second working	the partial or total extraction of coal pillars in bord and pillar mining.	*Mining*
Secondary bond	Atomic bond without electron transfer or sharing.	*Material Process*
Secondary bonds	weak interactions of molecules formed by bonded atoms	*Physics*
Secondary Damage	Any Additional Damage To Equipment, Above And Beyond The Initial Failure Mode, That Occurs As A Direct Consequence Of The Initial Failure Mode.	*Management*
Secondary Device	A part of the flowmeter which receives a signal proportional to the flowrate, from the primary device, and displays, records and/or transmits the signal.	*General*
Secondary enrichment	Enrichment of a vein or mineral deposit by minerals that have been taken into solution from one part of the vein or adjacent rocks and redeposited in another.	*Mining*
Secondary Failure	A failure caused either directly or indirectly by another failure or fault.	*Reliability Engineering*
Secondary Function	A Term Used In Reliability Centered Maintenance. The Secondary Functionality Required Of An Asset - Generally Not Associated With The Reason For Acquiring The Asset, But Now That The Asset Has Been Acquired, The Asset Is Now Required To Provide This Functionality. For Example A Secondary Function Of A Pump May Be To Ensure That All Of The Liquid That Is Pumped Is Contained Within The Pump (i.e., The Pump Does not Leak). An Asset May Have Tens Or Hundreds Of Secondary Functions Associated With It.	*Management*
Secondary heating equipment	Space-heating equipment used less often than the main space-heating equipment.	*Energy*
Secondary heating fuel	Fuels used in secondary space-heating equipment.	*Energy*
Secondary Insulation	Any extremely high resistance material which is placed over primary insulation to protect it from abrasion.	*Electrical*
Secondary outcome	An outcome used to evaluate additional effects of the intervention deemed a priori as being less important than the primary outcomes. See also: Outcome	*Quality Engineering*
Secondary Recovery	Recovery of oil or gas from a reservoir by artificially maintaining or enhancing the reservoir pressure by injecting gas, water or other substances into the reservoir rock.	*Petroleum Drilling*
Secondary recovery	Recovery of oil or gas from a reservoir by artificially maintaining or enhancing the reservoir pressure by injecting gas, water or other substances into the reservoir rock.	*Petroleum Drilling*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Secondary roof	The roof strata immediately above the coalbed, requiring support during the excavating of coal.	*Mining*
Secondary Standard	pH buffer solutions which do not meet the requirements of primary standard solutions but provide coverage of the pH range not covered by primary standards. Used when the pH value of the primary standard is not close to the sample pH value.	*General Engineering*
Secondary study	A study of studies: a review of individual studies (each of which is called a primary study). A systematic review is a secondary study.	*Quality Engineering*
Second-order filter	A smoothing filter in which the output follows the input, only more slowly; It is usually implemented in software as a difference equation of period T. When the second-order filter is used in avionics, it is commonly to smooth data, and to wash out transients at mode change. Usually, a first-order filter suffices, and it being less expensive, is chosen over a second-order filter. Typical values for omega sub n, a, and b are 0.1-2 rad/s, and zeta 0.1-0.9. It should also be noted that two first-order filters can be chained together to form a second-order filter that is critically damped or overdamped. When implementing a second-order filter on normalized variables, such as angles, the discontinuities require special treatment.	*Aeronautical Engineering*
Secretariat	Former name of the administrative office of The Cochrane Collaboration, based in Oxford, England. It is now called the Cochrane Operations Unit (COU). See also: Cochrane Operations Unit (COU)	*Quality Engineering*
Sec-Tetradecyl alcohol	A solvent - alcohol.	*Material Process*
Section	A portion of the working area of a mine.	*Mining*
Section Modulus	A property of a cross sectional shape, which depends on shape, and orientation. Section modulus is usually denoted S, and S = I/c, where I = moment of inertia about an axis through the centroid, and c is the distance from the centroid to the extreme edge of the section.	*Engineering Physics*
Section view	same as directional vertical section view.	*Petroleum Drilling*
Sector	See Energy-use sectors	*Energy*
Sector search	A pattern of concentric arcs followed for searching the ground from an aircraft; Compare: creeping line search, expanding square search.	*Aeronautical Engineering*
Securite	an early flameless explosive composed of 80% ammonium nitrate, 17% dinitrobenzol and 3% ammonium oxalate. Invented by a German, Mr. Schoenewez. It was made from the bye-products of coke ovens and gas works. Said to be about four time as forcible as blasting powder. It was exploded by detonator and could not be exploded by ordinary concussions or blows, nor by a burning or a glowing body.	*Mining*
Securitization	The act of pledging assets to a creditor through a note, lien or bond. This is a mechanism to allow a utility to recover stranded costs up front in a single lump sum payment. Under a securitization scheme, the legislature or utility commission orders customers to pay a surcharge as part of their electric bill. That surcharge must be paid within the utility's original service territory, regardless of who supplies the electricity to customers.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Securitize	To aggregate contracts into one pool, which then offers shares for sale in the investment market. This strategy diversifies project risks from what they would be if each project were financed individually, thereby reducing the cost of financing.	*Energy*
Sediment	Solid particles of organic or inorganic material, generally from weathered rock.	*Filtration*
Sedimentary Rock	Rocks from the consolidation of loose sediment accumulated in layers.	*Petroleum Engineering*
Sedimentary rocks	Secondary rocks formed from material derived from other rocks and laid down under water. Examples are limestone, shale and sandstone.	*Mining*
Sedimentation	The deposition or settling of soil particles suspended in water.	*Forestry*
Seebeck Coefficient	The derivative (rate of change) of thermal EMF with respect to temperature, normally expressed as millivolts per degree.	*Electrical*
Seebeck Effect	When a circuit is formed by a junction of two dissimilar metals and the junctions are held at different temperatures, a current will flow in the circuit caused by the difference in temperature between the two junctions.	*Electrical*
Seebeck effect	The development of an induced voltage in a simple electrical circuit as the result of a temperature differential.	*Material Process*
Seebeck EMF	The open circuit voltage caused by the difference in temperature between the hot and cold junctions of a circuit made from two dissimilar metals.	*Electrical*
Seebeck potential	Induced voltage due to a dissimilar metal thermocouple between two different temperatures.	*Material Process*
Seed tree cut	A harvesting method in which a few scattered trees are left in the area to provide seed for a new forest stand.	*Forestry*
Seed year	A year in which a given species produces a large seed crop over a sizable area.	*Forestry*
Seedling	A tree, usually less than 2 inches diameter at breast height.	*Forestry*
Seepage	The slow movement of water through small cracks or pores. The loss of water by infiltration into the soil from a body of water or a field.	*Petroleum Engineering*
SEER	See Seasonal Energy Efficiency Ratio	*Energy*
Seg	to bend down in the middle, to sag, as in roof bending. (N. East).	*Mining*
Seggar or Sagre	clay, fireclay, clunch or spavin.	*Mining*
Segmented Flanges	Also called "Dual" or "5 Bolt" flanges. Used to connect valves and tubing head adaptors on Christmas Trees where 2 producing tubing strings hang inside a single cased well bore. A 'dual completion' they have a special eccentric configuration that allows the producing tubing to have a small clearance profile.	*Petroleum Engineering*
Segregation	A close succession of parallel, rather narrow and sharply defined, wavy lines of color on the surface of a plastic differing in shade from surrounding areas, and creating the impression that components of the plastic have separated.	*Material Process*
Segregation coefficient	Ratio of the saturation impurity concentrations for the solid and liquid solution phases.	*Material Process*
Seismic	Having to do with earth motion, as earthquakes. A kind of sensor that depends upon the inertia of an internal mass to generate a signal, as an accelerometer or velocity pickup.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Seismic line	Linear corridor created to position geophones to facilitate recording geophysical information.	*Petroleum Engineering*
Seismic prospecting	A geophysical method of prospecting, utilizing knowledge of the speed of reflected sound waves in rock.	*Mining*
Seismic Survey	This refers to a geophysical survey in which vibrations are produced on the surface using specialized equipment and explosive charges. Those vibrations are then recorded using geo-phones which are placed over a large area of ground and connected by seismic cables. The recordings from these vibrations are then analyzed by geoscientists who use them to create a 3-D model of underground rock formations and pockets of oil and gas. Most seismic surveys done nowadays utilized three-dimensional or 3-D technology which gives petroleum geologists a better picture of underground oil and gas reservoirs.	*Petroleum Drilling*
Seize	To make a secure binding at the end of a wire rope or strand with SEIZING WIRE or SEIZING STRAND.	*Wire Rope & Cable*
Seizer	an 'L'-shaped iron arrester device used at the bottom of an incline, mounted between the rails, to hold the chain whilst the empties are attached.	*Mining*
Seizing Strand	Small strand usually of 7 wires made of soft annealed wire.	*Wire Rope & Cable*
Seizing Wire	Soft annealed wire.	*Wire Rope & Cable*
Selected	Measured data picked from one of many sensors; Selecting is the process of choosing the "best" parameter from multiple copies of that parameter, from multiple, identical devices or similar devices. Compare: derived, estimated, filtered, measured, raw, smoothed.	*Aeronautical Engineering*
Selection Bias	A bias in assignment or a confounding variable that arises from study design rather than by chance. These can occur when the study and control groups are chosen so that they differ from each other by one or more factors that may affect the outcome of the study.	*Analysis*
Selective absorber	A solar absorber surface that has high absorptance at wavelengths corresponding to that of the solar spectrum and low emittance in the infrared range.	*Energy*
Selective cutting	The periodic removal of individual trees or groups of trees to improve or regenerate a stand.	*Forestry*
Selective mining	The object of selective mining is to obtain a relatively high-grade mine product; this usually entails the use of a much more expensive stopping system and high exploration and development costs in searching for and developing the separate bunches, stringers, lenses, and bands of ore.	*Mining*
Selector Valve	A valve which selects one of two or more circuits in which to direct oil, usually operates manually.	*Mechanical, Process, and Operations*
Selenium (Se8)	Amorphous red powder. Used as a catalyst, and also as a filler for fireproofing compounds and giving good electrical insulating properties.	*Material Process*
Self	Ability of a symbology to guard against undetected errors.	*Gears*
Self advancing support	see Powered supports.	*Mining*
Self Heating	Internal heating of a transducer as a result of power dissipation.	*General*
Self Heating	Internal heating of a transducer as a result of power dissipation.	*Electronic Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Self Loosening	Threaded fasteners can come loose on occasions without human intervention. This loosening can be due to creep, embedding, stress relaxation or the fastener self-rotating (which is often called vibration loosening). Creep, embedding and stress relaxation will generally not completely loosen a fastener, these loosening mechanisms occur without the nut rotating relative to the bolt. The term self loosening is sometimes used for the nut rotating relative to the bolt without human intervention. It is know that the fastener can self rotate under the action of transverse joint movement that can completely loosen a tightened fastener such that the nut will become detached from the bolt.	*Maintenance*
Self propagating high temperature synthesis (SHS)	Material processing involving the heat evolved by certain chemical reactions to sustain the reaction and produce the final product.	*Material Process*
Self relieving	The process whereby excessive internal body pressure, in some valves, is automatically relieved either into the upstream or downstream line by forcing the seats away from the closure element.	*Mechanical*
Self rescuer	a self-contained small breathing device, worn on the belt of the miner, which, in the event of an explosion underground, when used by the miner, gives him a limited time to walk into an area of fresh air. The device is primarily a filter containing a compound (hopcolite) to absorb harmful carbon monoxide together with a mouth piece and nose clip.	*Mining*
Self Contained Control	A photoelectric control in which all three phases of control: sensing, signal conditioning, and output: occur in a single device.	*Electrical Engineering*
Self-Contained Sensor	A proximity sensor in which all three phases of control, sensing, signal conditioning, and output, occur in a single device.	*Electrical Engineering*
Self-acting incline	an inclined roadway down which coal was transported by means of a rope travelling around a pulley or a drum at the top of the incline. The weight of the loaded wagon was sufficient to draw up the empty ones attached to the other end of the rope on a second parallel track. –see also Jig.	*Mining*
Self-bonding Coatings	A name given to thermal spray coatings that are capable of bonding to clean smooth surfaces. Bond and "one-step" coatings are normally in this group. These are particularly important where grit blasting or surface roughening processes must be omitted.	*Paint and Coatings*
Self-contained breathing apparatus	A self-contained supply of oxygen used during rescue work from coal mine fires and explosions; same as SCSR (self-contained self rescuer).	*Mining*
Self-diffusion	Atomic scale migration of a species in its own phase.	*Material Process*
Self-directed natural work teams	Nearly autonomous teams of empowered employees, including hourly workers, that share a common workspace and/or responsibility for a particular process or process segment. Typically such teams have authority for day-to-day production activities and many supervisory responsibilities, such as job assignments, production scheduling, maintenance, materials acquisition, training, quality assurance, performance appraisals, and customer service. Often called "self-managed" work teams. All self-directed teams are empowered.	*Quality*
Self-Generation	A generation facility dedicated to serving a particular retail customer, usually located on the customer's premises. The facility may either be owned directly by the retail customer or owned by a third party with a contractual arrangement to provide electricity to meet some or all of the customer's load.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Self-Generator	A plant whose primary product is not electric power, but does generate electricity for its own use or for sale on the grid; for example, industrial combined heat and power plants.	*Energy*
Self-induced vibration	Also called self-excited vibration, results from conversion of non-oscillatory energy into vibration, as wind exciting telephone wires into mechanical vibration.	*Reliability Engineering*
Self-potential	A technique, used in geophysical prospecting, which recognizes and measures the minute electric currents generated by sulfide deposits.	*Mining*
Self-relieving	The process by which excessive internal body cavity pressure is automatically relieved either into the upstream or downstream line generally found in ball valves	*General Mechanical*
Self-rescuer	A small filtering device carried by a coal miner underground, either on his belt or in his pocket, to provide him with immediate protection against carbon monoxide and smoke in case of a mine fire or explosion. It is a small canister with a mouthpiece directly attached to it. The wearer breathes through the mouth, the nose being closed by a clip. The canister contains a layer of fused calcium chloride that absorbs water vapor from the mine air. The device is used for escape purposes only because it does not sustain life in atmospheres containing deficient oxygen. The length of time a self-rescuer can be used is governed mainly by the humidity in the mine air, usually between 30 minutes and one hour.	*Mining*
Selftest	A test internal to a device.	*Aeronautical Engineering*
Seller type	Categories of major refiners and other refiners and gas plant operators.	*Energy*
SEM	Scanning electron microscope.	*Lubrication*
Semi Conductor	A solid material characterized by comparatively high resistivities.	*Electrical*
Semianthracite	See Anthracite	*Energy*
Semi-autogenous grinding (SAG)	A method of grinding rock into fine powder whereby the grinding media consist of larger chunks of rocks and steel balls.	*Mining*
Semiautomatic Arc Welding	Arc welding with equipment which controls only the filler metal feed. The advance of the welding is manually controlled.	*Maintenance and Repair*
Semi-automatic press	A press in which the mold parts are secured directly to the top and bottom of the press with facilities for automatically parting the mold and ejecting the pieces. Mechanical or hydraulic means are necessary to open the press and mold.	*Material Process*
Semi-circle	A measure of angle, 1 semi-circle = pi rad = 190 deg; angles from physical devices are often reported in semi-circles in order to compress data.	*Aeronautical Engineering*
Semiconductor	A semiconductor is a material whose electrical properties can be significantly influenced by physical factors (mostly electrical conditions, but also pressure, temperature, light, etc). This means that a semiconductor will behave either as an insulator or a conductor of electricity, depending on the conditions to which it is exposed. They are a fundamental component of electronic devices. Because of their ability to respond to external conditions, semiconductors are commonly used in sensor systems.	*Electrical*
Semiconductor	Material with a level of electrical conductivity intermediate between that for an insulator and a conductor, for example, a conductivity between 10-4 W-1 m-1 and 10+4 W-1 m-1.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Semiconductors	materials having a conductivity range between that of conductors and insulators	*Physics*
Semi-Finished Steel	Steel shapes, for example blooms, billets or slabs, that later are rolled into finished products such as beams, bars or sheet.	*Metallurgy*
Semigloss	A plastics surface finish having a reflectivity between satin and gloss.	*Material Process*
Semipositive mold	A modified flash mold which at the last 1/32 inch to 1/16 inch of travel becomes positive.	*Material Process*
Semisolid	Any substance having the attributes of both a solid and a liquid. Similar to semiliquid but being more closely related to a solid than a liquid. More generally, any substance in which the force required to produce a deformation depends both on the magnitude and on the rate of the deformation.	*Oil Analysis*
Semisteel	A high grade of cast iron made by the addition of steel scrap to pip iron in a cupola or electric furnace. More correctly described as high-strength gray iron.	*Maintenance and Repair*
Sems	A screw and washer assembly. A screw or bolt which has a captive washer. The washer is frequently loose on the plain shank of the fastener, the shank diameter being equal to the effective diameter of the thread; the thread being rolled from this diameter. The origin of the word is a frequent question. In the 1930's E. C. Crowther was a representative for a company that sold both shakeproof washers and screws. He came up with the idea of placing the washer on the screw before it was thread rolled. The major diameter of the screw being larger than the washer hole prevents it from coming off. The Illinois Tool Works made machines that produced these patented pre-assembled washers and screws. The s at the end of SEMs is thought to have been subsequently picked up because they are not usually purchased individually. In spite of the original patents and trademarks the word SEMS is generally recognized as a generic term applicable to screw and washer assemblies.	*Maintenance*
Senescence	Aging of tissues; growing old.	*Forestry*
Sensing Distance	The maximum recommended distance between the sensor and standard target at which sensor will effectively and reliably detect the target.	*Electrical Engineering*
Sensing Element	That part of a transducer which reacts directly in response to input.	*Electrical*
Sensing Element	That part of the transducer which reacts directly in response to the input.	*Electronic Process*
Sensitivity	The minimum change in input signal to which an instrument can respond.	*Electrical*
Sensitivity (of a diagnostic test)	The proportion of truly diseased persons, as measured by the gold standard, who are identified as diseased by the test under study.	*Analysis*
Sensitivity analysis	An analysis used to determine how sensitive the results of a study or systematic review are to changes in how it was done. Sensitivity analyses are used to assess how robust the results are to uncertain decisions or assumptions about the data and the methods that were used.	*Quality Engineering*
Sensitivity Shift	A change in slope of the calibration curve due to a change in sensitivity.	*Electrical*
Sensitivity, analytical sensitivity	The ability of an analytical method to detect small quantities of the measured component. It has no numerical value. See detection limit.	*Quality*
Sensor	A device that measures, receives, or generates data, for example, an INS, a FLIR, a map. See Also: Data Source Object.	*Aeronautical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Sensor	A device that is used to detect the value (or the change of value) of a physical quantity or parameter and then converts that value into a signal for an indicating or recording instrument.	*Reliability Engineering*
Sensor Fusion/Correlation (SFC)	Measure of convergence of sensor data.	*Aeronautical Engineering*
Sentinel well	a groundwater monitoring well situated between a sensitive receptor downgradient and the source of a contaminant plume upgradient. Contamination should be first detected in the sentinel well which serves as a warning that contamination may be moving closer to the receptor. The sentinel well should be located far enough upgradient of the receptor to allow enough time before the contamination arrives at the receptor to initiate other measures to prevent contamination from reaching the receptor, or in the case of a supply well, provide for an alternative water source.	*Chemical*
Separate metering	Measurement of electricity or natural gas consumption in a building using a separate meter for each of several tenants or establishments in the building.	*Energy*
Separative work unit (SWU)	The standard measure of enrichment services. The effort expended in separating a mass F of feed of assay xf into a mass P of product assay x_p and waste of mass W and assay x_w is expressed in terms of the number of separative work units needed, given by the expression $SWU = WV(x_w) + PV(x_p) - FV(x_f)$, where V(x) is the "value function," defined as $V(x) = (1 - 2x)\ 1n((1 - x)/x)$.	*Energy*
Separator	A Steam separator, also known as a moisture separator, is a device for separating water droplets from steam. A separator is necessary as wet steam reduces thermal efficiency, and water droplets in high velocity steam can cause erosion within the system.	*Industrial*
Separator	A special tank used to separate gas from oil in some crude oil gathering systems.	*Mechanical*
Separator, Absorbent	A separator that retains certain soluble and insoluble contaminants by molecular adhesion.	*Mechanical, Process, and Operations*
Separator, Centrifugal	A separator that removes nonmiscible fluid and solid contaminants that have a different specific gravity than the fluid being purified by accelerating the fluid in a circular path and using the radial acceleration component to isolate these contaminants.	*Mechanical, Process, and Operations*
Separator, Coalescing	A separator that divides a mixture or emulsion of two nonmiscible fluids using the interfacial tension between the two liquids and the difference in wetting of the liquids on a particular porous medium.	*Mechanical, Process, and Operations*
Separator, Magnetic	A separator that uses a magnetic field to attract and hold ferromagnetic particles.	*Mechanical, Process, and Operations*
Separator, Vacuum	A separator that utilizes subatmospheric pressure to remove certain gases and liquids from another liquid because of their difference in vapor pressure.	*Mechanical, Process, and Operations*
Septa fitting	a special fitting used to seal vials (a liner for a threaded cap) or gas chromatographs (GCs) to provide closure. Septas can be manufactured in single, double, or triple layers of silicone rubber and other plastic materials. A syringe with a measured quantity of contaminant can be injected through a septa closure and into a GC column for separation analysis.	*Chemical*

Please see the Appendix for further illustration

Term	Definition	Industry
Septic tank	A tank in which the solid matter of continuously flowing sewage is disintegrated by bacteria.	*Energy*
Sequence	1. The order of a series of operations or movements. 2. To divert flow to accomplish a subsequent operation or movement.	*Mechanical, Process, and Operations*
Sequence iiig test	A standardized engine test for measurement of the high temperature performance of engine oils.	*Mechanical, Process, and Operations*
Sequence Valve	A valve whose primary function is to direct flow in a predetermined sequence.	*Mechanical, Process, and Operations*
Sequence valve	A pressure operated valve which, at its setting, diverts flow to a secondary line while holding a predetermined minimum pressure in the primary line.	*Mechanical, Process, and Operations*
Sequence vid test	A standardized engine test under development for measurement of the fuel efficiency effects of engine oils.	*Mechanical, Process, and Operations*
Sequential Access	An access mode in which records are retrieved in the same order in which they were written. Each successive access to the file refers to the next record in the file.	*Electrical*
Sequential testing	A testing methodology in which test units are tested consecutively instead of simultaneously.	*Reliability Engineering*
Sequential trial	A randomized trial in which the data are analyzed after each participant's results become available, and the trial continues until a clear benefit is seen in favor of one of the comparison groups, or it is unlikely that any difference will emerge. The main advantage of sequential trials is that they are usually shorter than fixed size trials when there is a large difference in the effectiveness of the interventions being compared. Their use is restricted to conditions where the outcome of interest is known relatively quickly. In a group sequential trial, a limited number of interim analyses of the data are carried out at pre-specified times during recruitment and follow up, say 3–6 times in all. See also: Stopping rule	*Quality Engineering*
Sequester	to undergo sequestration.	*Chemical*
Sequestration	the inhibition or stoppage of normal ion behavior by combination with added materials, especially the prevention of metallic ion precipitation from solution by formation of a coordination complex with a phosphate.	*Chemical*
Serial Transmission	Sending one bit at a time on a single transmission line. Compare with Parallel Transmission.	*Electrical*
Series	See Flange Series	*Petroleum Engineering*
Series	Electrical components that are connected in an unbranched line are said to be "in series," as opposed to "in parallel" or "in shunt." If any one of the components in a series circuit was to fail, the circuit would be broken and no electricity would flow. (See also Parallel.)	*Electrical*
Series capacitor	See FACTS.	*Electrical*
Series Circuit	A circuit in which current has only one path to follow.	*Electrical Engineering*
Series connection	A way of joining photovoltaic cells by connecting positive leads to negative leads; such a configuration increases the voltage.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Series resistance	Parasitic resistance to current flow in a cell due to mechanisms such as resistance from the bulk of the semiconductor material, metallic contacts, and interconnections.	*Energy*
Serpentine	A greenish, metamorphic mineral consisting of magnesium silicate.	*Mining*
Serve	gas, which issued regularly from a fault or break was said to 'serve'. (N. East).	*Mining*
Serve	Any helical wrapping applied over a wire or cable core. It may consist of wires, fibers, yarns or tapes.	*Electrical*
Served Wire Shield	A barrier to the passage of interference formed by a helical wrapping of wires over a cable core. It is also called spiral shield.	*Electrical*
Service	Used to denote the suitability of equipment for use in a particular environment Example:- High Temperature, service.	*Petroleum Engineering*
Service Agreement	an agreement entered into by the transmission customer and transmission provider.	*Energy*
Service Area	The territory a utility system is required or has the right to supply electric service to ultimate customers.	*Energy*
Service Drop	The lines running to a customer's house. Usually a service drop is made up of two 120 volt lines and a neutral line, from which the customer can obtain either 120 or 240 volts of power. When these lines are insulated and twisted together, the installation is called triplex cable.	*Energy*
Service Fitting	A street ell or street tee having a male thread at one end.	*Maintenance and Repair*
Service Life	The length of time a piece of equipment can be expected to perform at its full capacity.	*Energy*
Service Obligation	Refers to the duties a regulated public utility must perform for its customers. Service obligation includes the duty to serve all prospective customers, to provide adequate, reliable service and to render safe, efficient and nondiscriminatory service.	*Energy*
Service Pressure 10M	10,000 psi (pounds per square inch) Maximum Service Pressure.	*Petroleum Engineering*
Service Pressure 15M	Indicates a maximum service pressure of 15,000 pounds per square inch (psi).	*Petroleum Engineering*
Service Pressure 20M	20,000 psi (pounds per square inch) Maximum Service Pressure.	*Petroleum Engineering*
Service Pressure 30M	30,000 psi (pounds per square inch) Maximum Service Pressure.	*Petroleum Engineering*
Service pressure 3M	3,000 psi (pounds per square inch) Maximum Service Pressure.	*Petroleum Engineering*
Service Pressure 5M	Indicates a maximum service pressure of 5,000 pounds per square inch (psi).	*Petroleum Engineering*
Service provider	See Energy service provider	*Energy*
Service Territory	This is the state, area or region served exclusively by a single electric utility.	*Energy*
Service well	A well drilled, completed, or converted for the purpose of supporting production in an existing field. Wells of this class also are drilled or converted for the following specific purposes: gas injection (natural gas, propane, butane or fuel-gas); water injection; steam injection; air injection; salt water disposal; water supply for injection; observation; and injection for in-situ combustion.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Service-life	anticipated length of time zinc will protect steel; the amount of time until enough of the galvanized coating is consumed and 5% of the substrate steel surface area shows signs of rust	*Materials Process*
Servo	When a controller changes a process variable to move the process variable in response to a setpoint change, it is called a servo.	*Process Control*
Servo mechanism (Servo)	A mechanism subjected to the action of a con trolling device which will operate as if it were directly actuated by the controlling device, but capable of supplying power output many times that of the controlling device, this power being derived from an external and independent source.	*Mechanical, Process, and Operations*
Servo valve/Servovalve	1. A valve which modulates output as a function of an input command. 2. A follow valve.	*Mechanical, Process, and Operations*
Servovalve	A valve which modulates output as a function of an input command.	*Lubrication*
Servovalve, Electrohydraulic	A servovalve which is capable of continuously controlling hydraulic output as a function of an electrical input.	*Mechanical, Process, and Operations*
Servovalve, Null	The condition where the servovalve supplies zero control flow at zero load pressure drop.	*Mechanical, Process, and Operations*
Servovalve, Overlap	The lap condition which results in a decreased slope of the normal flow curve in the null region.	*Mechanical, Process, and Operations*
Servovalve, Underlap	The lap condition which results in an increased slope of the normal flow curve in the null region.	*Mechanical, Process, and Operations*
SES	abbreviation for Stoner Engineering Software.	*Petroleum Drilling*
SES.MDE	the SES run-time file. To run SES, double-click this file (or a Windows Shortcut thereto), or open it from within Microsoft Access. You may download SES by clicking here.	*Petroleum Drilling*
SESOIL	a one-dimensional model for estimating pollutant distribution in an unsaturated soil column. SESOIL results are commonly used to estimate the source term for groundwater transport modeling of the saturated zone.	*Chemical*
SESSILE	Attached or fastened; incapable of moving from place to place.[1] Fin.	*Forestry*
Set	a number or group of tubs on their way to the shaft. -see also Journey or Rake; or a group of colliers on a longwall face; or a column of pumps in a pumping shaft; or to fill a tub unfairly – see Set-out. The large coals were built up around the side of the tub leaving a hollow in the middle this was then covered over. Also to get the sides off and trim up a heading (S. Staffs.); or to erect a prop; or the natural giving way of an unsupported roof. (N. East). If set square to the dip a prop is said to be 'fully on the set' (N. Staffs.).	*Mining*
Set coal	coal from nearby old workings, which had a hard dead nature. (Leics.).	*Mining*
Set High	Vertical spacing which allows the rollers to be mounted above the frame rails.	*Manufacturing*
Set Low	Vertical spacing which allows the roller to be mounted below the top of the frame rails.	*Manufacturing*
Set Point	The temperature at which a controller is set to control a system.	*Electrical*
Set up	To harden, as in polymerizing or curing.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
SETA (plural = setae)	Slender, hairlike or bristly projections arising from the epidermal layer on any part of the body of an insect.	*Forestry*
Set-out	tubs or corves of coal deficient in weight or measure. (N. East).	*Mining*
Setpoint	The desired value at which a process variable is to be controlled.	*Electrical Engineering*
Set-point	A desired level for a process variable. The systems seeks to correct the variable when it deviates from this standard.	*Control Engineering*
Setpoint (Command)	An input variable which sets the desired value of the controlled variable.	*Process Control*
Sett	a column of pumps in a pumping shaft; or an area of mines worked by a colliery company; or a length along the face of a stall, usually from 6 to 10ft; or setting up a dial to take a bearing or sight; or a sales yard for coal. In some areas several collieries would share the same sett.	*Mining*
Setters	large pieces of coal. They were set or piled around the sides of the landsale cart and built up. The centre was then filled with the smaller coals. (N. East).	*Mining*
Setting timber	to erect supports to control the roof, traditionally timber props, later steel and hydraulic props.	*Mining*
Settle boards or Saddle boards	the portion of the heapstead at the top of the shaft, and between it and the screens, covered with iron or metal sheets.	*Mining*
Settling Tank	A tank in which liquid is stored until particles suspended in the liquid sink to the bottom.	*Lubrication*
Settling Time	The time taken for the display to settle within one digit final value when a step is applied to the meter input.	*Electronic Process*
Setup	There are a huge number of variable adjustments to the suspension, tires, gears, engine, wings, brakes and virtually every other piece of the car that can be moved or electronically altered. The idea is to improve the handling and performance by making a car conform to a particular track, temperature and even weather condition. The driver with the best setup is in a good position to win. A driver with a less-than-perfect setup can sometimes "hustle the car" and compensate for the deficiency, but most drivers perform at their utmost only when the car is comfortable.	*NASCAR*
Setup Time	Term used within SKF defining the time that is needed for resetting the channel (production line) from one product type to another. It is measured as the lost production between the start of the reset and running normal production rate for the new type. It is expressed in % of manned hours.	*Maintenance*
Seven Wastes	Taken from the Toyota Production System, these are non-value-added activities that should be reduced and/or eliminated. The seven wastes are: overproduction, unnecessary transportation, inventory, motion, defects, over-processing and waiting.	*Reliability Engineering*
Severance	The separation of a mineral interest from other interests in the land by grant or reservation. A mineral dead or grant of the land reserving a mineral interest, by the landowner before leasing, accomplishes a severance as does his execution of a mineral lease.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Severance Tax	A tax on the removal of minerals from the ground. The tax can be levied either as a tax on volume or a tax on value. In Louisiana oil is taxed at 12.5 percent of value. Natural gas is taxed at 7 cents per MCF with the rate adjusted annually to reflect the changes in the spot market price of gas sold in Louisiana.	*Petroleum Drilling*
Severe Sliding	Large ferrous particles which are produced by sliding contacts. Trend is important to determine whether abnormal wear is taking place.	*Lubrication*
Sexual stage	Reproductive stage of the life cycle of an organism.	*Forestry*
SF6	See Sulfur hexafluoride	*Energy*
SFC	Sequence Function Chart. An IEC1131-1 programming/configuration language.	*Control Engineering*
Shab or Top shab	a thin layer of dirty coal lying immediately above the coal seam. The shab would usually come down with the coal.	*Mining*
Shackle	a system used before rope capping. The shackle was a machined bar of iron. The long, flattened and shaped ends were riveted or collared onto the end of the winding rope. This was then turned back and the swelled end of the rope formed an eye by which it was then attached to the cage chains, or a short steel or wrought iron chain for coupling mine cars together.	*Mining*
Shade or Shead	see 'Floor' (N. Staffs.).	*Mining*
Shade-intolerant trees	Trees that cannot thrive in the shade of larger trees.	*Forestry*
Shaft	A bar, usually of steel and usually round, to support rotating parts or to transmit power.	*Equipment*
Shaft	A vertical or inclined excavation for purpose of prospecting or working mines.	*Mining*
Shaft bottom	see Pit bottom.	*Mining*
Shaft guides	see guides.	*Mining*
Shaft mine	A mine that reaches the coal bed by means of a vertical shaft.	*Energy*
Shaft pillar	an area of coal left unworked around the shaft to protect the shaft and the buildings on the surface from the effects of subsidence.	*Mining*
Shaft tunnels	levels or cruts driven from the shaft across the coal measures to intersect rearer seams (N. Staffs.).	*Mining*
Shaftsman	a man employed to work within the shaft on inspection and maintenance. –see Pit fettlers.	*Mining*
Shaker conveyor	see Jigger.	*Mining*
Shaker screen	This screen filters out impurities in milling of gold.	*Mining*
Shaker Table	Like a giant gold pan, an engine drives a belt that vibrates a huge bucket.	*Mining*
Shakes/shingles	Flat pieces of weather proof material laid with others in a series of overlapping rows as covering for roofs and sometimes the sides of buildings. Shakes are similar to wood shingles, but instead of having a cut and smoothly planed surface, shakes have textured grooves and a rough or "split" appearance to give a rustic feeling.	*Energy*
Shale	A rock formed by consolidation of clay, mud, or silt, having a laminated structure and composed of minerals essentially unaltered since deposition.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Shale basin	An underground deposit of shale (pdf link), often in a layer that extends along a plane at a certain depth under the surface. There are many different types of shale, each with certain defining characteristics. Shale gas: Natural gas trapped in a shale formation.	*Petroleum Drilling*
Shale cuttings	Small pieces of rock that break away during the drilling process. Cuttings are screened out of the liquid mud by using shale shakers, or screens that allow the liquid to pass through but filter out the bits of rock.	*Petroleum Drilling*
Shale Gas	Natural gas produced from wells that are open to shale formations. Shale is a fine-grained, sedimentary rock composed of mud from flakes of clay minerals and tiny fragments (silt-sized particles) of other materials. The shale acts as both the source and the reservoir for the natural gas. See natural gas.	*Energy*
Shallow pitting	Testing a potential mineral deposit by systematically sinking small shafts into the earth and analyzing the material recovered.	*Energy*
Shank	a pit shaft. (Scot.); or to sink, as in a shaft (Scot.); or a shallow shaft underground. - see Staple.	*Mining*
Shanker	another term for a shaft sinker. (Scot.).	*Mining*
Shareholder-Owned Electric Utilities	U.S. public utilities owned by shareholders, organized as corporations, and regulated by Federal Energy Regulatory Commission and state public utilities commissions. About three-quarters of all Americans receive electric service from shareholder-owned electric utilities.	*Energy*
Sharkskin	A surface irregularity of a blow molded container of film during extrusion. See Melt Fracture.	*Engineering Physics*
Sharp	Gas was said to be 'sharp' when it was at its most explosive.	*Mining*
Sharp Practice	Indirect misrepresentation, unscrupulous shrewdness, deceit or trickery, just short of actual fraud. Such actions are usually designed for short-term gain, but typically act to the detriment of good long-term supplier relations based on honesty, truth, and respect.	*Procurement*
Sharp stone	fine grained sandstone breaking into angular fragments.	*Mining*
Shave	The process of pushing a forging through a cuffing die to form or size some dimension more accurately.	*Metallurgy*
Shear	the act of cutting hair or wool	*Agriculture*
Shear	Shear is the product of shear rate and resistance time. It is often used to describe the degree of mixing experienced by a material.	*Engineering Physics*
Shear Heating	Heat generated within the plastic melt as the polymer is sheared. It is caused by viscous dissipation of work.	*Engineering Physics*
Shear modulus	The ratio of shear stress divided by the corresponding shear strain in a linear elastic material.	*Engineering Physics*
Shear modulus	Elastic modulus under pure shear loading.	*Material Process*
Shear or shearing	The deformation of rocks by lateral movement along innumerable parallel planes, generally resulting from pressure and producing such metamorphic structures as cleavage and schistosity.	*Mining*
Shear or shearing stress	A force which operates in a plane of an area or in a parallel plane, and tends to cause the plane of the area to slide on the adjacent planes.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Shear Rate	The rate of slip within a flowing substance. See ASTM D-1092.	*Lubrication*
Shear Rate	Rate of change of velocity across the flow channel.	*Engineering Physics*
Shear Stability	The resistance of a grease to changes in consistency (hardness) during mechanical working.	*Lubrication*
Shear Stability Index (SSI)	The measure of a viscosity modifier's contribution to an oil's percentage kinematic viscosity loss, when the oil is subjected to engine operation or special test conditions.	*Lubrication*
Shear strain	Strain measuring the intensity of racking in the material. Shear strain is measured as the change in angle of the corners of a small square of material.	*Engineering Physics*
Shear stress	Stress acting parallel to an imaginary plane cut through an object.	*Engineering Physics*
Shear Stress	Stress developed in a polymer melt where a material is sheared.	*Engineering Physics*
Shear zone	A zone in which shearing has occurred on a large scale.	*Mining*
Shearer	A mining machine for longwall faces that uses a rotating action to "shear" the material from the face as it progresses along the face.	*Mining*
Shearer or Shearer loader	modern coal cutting and loading machine with rotating drum (or drums) fitted with picks that break the coal, and vanes that throw the coal on to the conveyor on which it travels along the face. A modern machine used to cut and load the coal on a longwall face.	*Mining*
Shearing	Relative slipping or sliding between one part of a substance and an adjacent part. Shearing in a solid involves cutting or breaking of the crystal structure; in a fluid or plastic, shearing does not necessarily destroy the continuous nature of the substance.	*Lubrication*
Shearing Strain	A measure of angular distortion also directly measurable, but not as easily as axial strain.	*Electronic Process*
Sheath	Lower part of a monocot leaf. Usually it wraps around the stem.	*Agriculture*
Sheath	The material, usually an extruded plastic or elastomer, applied outermost to a wire or cable. Very often referred to as a jacket, or an impervious metal covering usually lead.	*Electrical*
Sheath Thermocouple	A thermocouple made out of mineral-insulated thermocouple cable which has an outer metal sheath.	*General*
Sheave	A wheel with a grooved rim used with ropes, cables, belts, etc.	*Equipment*
Sheave wheel	A large, grooved wheel in the top of a headframe over which the hoisting rope passes.	*Mining*
Shed	a thin, smooth parting in the strata with both sides polished (a shear plane or slip), or a very thin layer of coal.	*Mining*
Sheep breeds	sheep breeds:	*Agriculture*
Sheet	Wide, flat-rolled steel. It is generally accepted that steel less than 3 mm thick is sheet and more than 3 mm (1/8 inch) thick is plate (See Plate).	*Metallurgy*
Sheeter lines	Parallel scratches or projecting ridges distributed over a considerable area of a plastic sheet, such as might be produced during a slicing operation. Also called relief lines.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Sheeting	Sheets are distinguished from films in the plastics and packaging industry only according to the thickness. A web under 10 mils (0.010 inch) thick is usually called a film, whereas a web 10 mils and over in thickness is usually called a sheet. Sheeting is most commonly made by extrusion, casting and calendering.	*Engineering Physics*
Shelf Life	The length of time over which a product will remain fit for use during storage under specific conditions.	*Engineering Physics*
Shell diameter	Diameter of the shell in a natural draft tower at the top of the curb, measured from inside of cross struts to inside of cross struts.	*Facility Engineering*
Shell door	a temporary door, usually constructed from brattice cloth.	*Mining*
Shell height	Dimension from top of curb to top of the hyperbolic shell in a natural draft tower.	*Facility Engineering*
Shell storage capacity	The design capacity of a petroleum storage tank which is always greater than or equal to working storage capacity.	*Energy*
Shellac	An animal resins, produced by insects parasitic on certain trees in India and southern Asia. It is used for varnishes and molding powders and as a modifier for synthetic resins.	*Material Process*
Shelterwood cut	Removing trees on the harvest area in a series of two or more cuttings so new seedlings can grow from the seed of older trees.	*Forestry*
Shem	the main fissure or slip-line of a fault (N. Staffs.).	*Mining*
Shet	the roof of the mine when it has collapsed (S. Staffs.).	*Mining*
Sheth	to course the air to ventilate the workings (N. East).	*Mining*
Sheth door	a ventilation door (N. East).	*Mining*
Shetland Pony	An ancient breed of small horse. A pony that looks very much like the modern Shetland existed at least 2,000 years ago on the Shetland islands. Hair from Shetland ponies provided the raw materials for fishing nets and lines. Fishing was the basis of the main diet for most islanders. The breed has been used as pack and saddle animals for most of their history. About the middle of the 19th century, the Shetland was introduced as a draft animal in England's mines.	*Agriculture*
Sheugh	a drainage channel cut in the floor of a roadway. Pronounced 'shuch'; or a shaft of a coal pit. (Scot.).	*Mining*
Shield	Any barrier to the passage of interference : causing electrostatic or electromagnetic fields, formed by a conductive layer surrounding a cable core. It is usually fabricated from a metallic braid, foil or wire serving.	*Electrical*
Shield Coverage	The amount of cable core surface area which is covered by a shield. It is expressed as a percentage of the cable core's total surface area. It is also called braid coverage when applied to a braided shield.	*Electrical*
Shielded Metal Arc Welding (SMAW)	An arc welding process in which coalescence is produced by heating with an electric arc between a covered metal electrode and the work. Shielding is obtained from decomposition of the electrode covering. Pressure is not used, and filler metal is obtained from the electrode.	*Maintenance and Repair*
Shielded Sensor	A sensor which "senses" only to the front of its face and ignores metals to its side. The presence of such side metal, however, may cause a slight shift in operating characteristics.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Shielding	The practice of confining the electrical field around a conductor to the primary insulation of the cable by putting a conducting layer over and/or under the insulation. (External shielding is a conducting layer on the outside of the insulation. Strand or internal shielding is a conducting layer over the conductor itself).	*Electrical*
Shift	a fault; or a period of work.	*Mining*
Shift	The number of hours or the part of any day worked.	*Mining*
Shifter	a man who repaired and kept open the roadways, or an underground laborer on shift work, (N. East); or another name for the 'bottomer' or 'runner on', -see Wasteman.	*Mining*
Shifting-up	moving the trackway for the tubs closer to the face after a strip of coal has been removed (N. Staffs.).	*Mining*
Shim (shimming)	a wedge or strip of metal used to fill in or bring one part level with another.	*Petroleum Drilling*
Shingley coal	very small coals, free from dust (N. East).	*Mining*
Ship-to-shore connection	see HVSC	*Electrical*
Shirt it	to stop work at the end of the shift. (Mids.).	*Mining*
Shivery	easily broken up.	*Mining*
Shoat	a young hog, usually less than a year old.	*Agriculture*
Shock	a pile of grain that is set up like a cone	*Agriculture*
Shock Chlorination	Adding a large amount of chlorine to water in a well and pumping it through the system. The chlorinated water is left in the system long enough to ensure complete disinfection.	*Petroleum Engineering*
Shock machine	Or shock test machine, a device for subjecting a system to controlled and reproducible mechanical shock pulses.	*Reliability Engineering*
Shock pulse	An event that transmits kinetic energy into a system in a relatively short interval compared with the system's greatest natural period. A natural decay of oscillatory motion follows. The event is usually displayed as a time history, as on an oscilloscope.	*Reliability Engineering*
Shock pulse, classical	Classical shock pulses (mechanical shock machine). Unless the procedure requires the use of a classical shock pulse, the use of such a pulse is not acceptable unless it can be demonstrated that measured data is within the tolerances of the classical shock pulses. Only two classical shock pulses are defined for testing in the method – the terminal peak sawtooth pulse, and the trapezoidal pulse. The terminal peak sawtooth pulse along with its parameters and tolerances are provided on Figure 516.6-10, and is an alternative for testing in Procedure I - Functional Shock and Procedure V - Crash Hazard Shock Test.	*Reliability Engineering*
Shock pulse, haversine	A practical variation on the obsolete half-sine pulse, whose abrupt transitions at beginning and end cannot be achieved in test labs. Practical testing requires some rounding, and the result in called a haversine pulse. Another definition: an inverted cosine offset by half its amplitude. A continuous haversine resembles a sine wave.	*Reliability Engineering*
Shock response spectrum (or SRS)	A plot of maximum responses of imagined SDoF systems vs. their natural frequencies, as they respond to an applied shock.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	Industry
Shock wave	A pressure wave front which moves at a sonic velocity.	*Mechanical, Process, and Operations*
Shock, Mechanical	A short pulse of acceleration, usually lasting only a few milliseconds. A typical shock test pulse is a half: sine acceleration wave having 100g peak and .007 second duration.	*Electrical Engineering*
Shoot	A concentration of mineral values; that part of a vein or zone carrying values of ore grade.	*Mining*
Shooting fast	blowing down coal with gunpowder without nicking the sides of the working place.	*Mining*
Shooting the gob	working out the pillars by blasting in the steep rearer seams (N. Staffs.).	*Mining*
Shop-floor data collection	Automated collection of data on factory-production activities, including units produced, labor hours per unit or customer order, time and date of specific production activities, and maintenance and quality data.	*Quality*
Shore scleroscope hardness	The height of rebound (proportional to the hardness) of a diamond pointed hammer falling by its own weight and under standardized conditions on the object to be tested for hardness.	*Material Process*
Shorn	to cut with a pick.	*Mining*
Short	Incompletely filled out condition in a molding which may be quite obvious, or only evident through absence of surface film in tiny or larger areas, or as lighter, infused particles of material showing through a covering surface film, accompanied possibly by peculiar thin skinned blisters. With Thermosetting materials, it is important to note whether the short occurs only after a period of prewarming the mold charge, or a delay in closing the mold.	*Material Process*
Short circuit	An electric current taking a shorter or different path than intended.	*Energy*
Short circuit	An electric contact between parts of an electric circuit, which causes a very high current, increases in temperature and potentially fire, if the circuit is not properly protected. This can occur if two live wires come into contact with each other, perhaps because of worn insulation. The term is also used when defining the safe operating conditions for electrical devices. If a device is said to have a short-circuit resilience of 400 amps (A), that means that it can be subjected to up to 400 A before it will shut itself down.	*Electrical*
Short circuit current	The current flowing freely through an external circuit that has no load or resistance; the maximum current possible.	*Energy*
Short circuiting	the entry of ambient air into an extraction well (used for SVE and bioventing) without first passing through the contaminated zone. Short circuiting may occur through utility trenches, incoherent well or surface seals, or layers of high permeability geologic materials.	*Chemical*
Short finish	A dull surface finish on a plastic.	*Material Process*
Short gate	A gate valve whose seat rings contact the gate only in the closed position. Such valves are not through conduit, as the gate is completely withdrawn from the flow area in the open position.	*Mechanical*
Short pattern valve	A valve whose face-to-face dimension is less than the API-6D standard.	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Short purchases	A single shipment of fuel or volumes of fuel purchased for delivery within 1 year. Spot purchases are often made by a user to fulfill a certain portion of energy requirements, to meet unanticipated energy needs, or to take advantage of low-fuel prices.	*Energy*
Short range order	Local building block structure of a glass, comparable to the structural unit in a crystal of the same composition.	*Material Process*
Short Repairs	Repairs that a preventive maintenance or route person can complete in less than 30 minutes with the tools and materials that he/she carries.	*Maintenance*
Short selling	The borrowing of stock from a broker in order to sell it in the hope that it may be purchased at a lower price later on.	*Mining*
Short Shot	In injection molding, failure to fill the mold completely. It results in voids in the article, unfused particles showing through a surface covering, or possibly thin-skinned blisters.	*Engineering Physics*
Short term sales	Any short-term purchase covering a time period of 2 years or less. Purchases from intrastate pipelines pursuant to Section 311(b) of the NGPA of 1978 are classified as short-term sales, regardless of the stated contract term.	*Energy*
Short ton	2000 pounds. For many agricultural commodities, this is the standard measure for domestic trade. However, international trade usually is reported in long tons (2240 pounds).	*Agriculture*
Short ton (st)	A unit of weight equal to 2,000 pounds.	*Energy*
Shorthorn	A breed of cattle, raised in the United States primarily for beef. However, there are milking shorthorns. Shorthorns originated in England about 1600 and spread to Scotland and then to America in 1783. When first brought to Virginia, it was called the Durham. Shorthorns were popular with America's early settlers who valued its meat and milk. In addition, Shorthorns provided willing power for the wagon and plow. Many pioneer wagons were pulled by teams of Shorthorns. The breed's use for meat production was stimulated when Midwestern farmers began importing them directly from Scotland in 1854. Polled Shorthorns were developed from mutations, beginning around 1881 in Minnesota. Both horned and polled Shorthorns are known for adaptability, mothering ability, reproductive performance, good disposition, feed conversion and longevity. At least 45 different breeds of cattle include Shorthorn genetics. Both horned and polled Shorthorns are registered in the same breed book, maintained by the American Shorthorn Association.	*Agriculture*
Short-term debt or borrowings	Debt securities or borrowings having a maturity of less than one year.	*Energy*
Short-term purchase	A purchase contract under which all deliveries of materials are scheduled to be completed by the end of the first calendar year following the contract-signing year. Deliveries can be made during the contract year, but deliveries are not scheduled to occur beyond the first calendar year thereafter.	*Energy*
Shortwall	An underground mining method in which small areas are worked (15 to 150 feet) by a continuous miner in conjunction with the use of hydraulic roof supports.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Shortwall mining	system generally refers to the room-and-pillar mining in which the working face is wider than usual but smaller (less than 150 feet) than that in longwall mining.	*Energy*
Shortwall mining machine	generally is a continuous-mining machine used with a powered, self-advancing roof support system. It shears coal from a short coal face (up to about 150 feet long). The broken coal is hauled by shuttle cars to a conveyor belt.	*Energy*
Shot	The yield from one complete injection molding cycle.	*Engineering Physics*
Shot Blasting	Mechanical removal of surface oxides and scale on the pipe inner and outer surfaces by the abrasive impingement of small steel pellets.	*Maintenance and Repair*
Shot fast	a section of coal that contains an unfired or fast shot.	*Mining*
Shot Peening	The bombardment of a component surface with steel or ceramic shot. Produces a residual compressive stress in the surface and improves fatigue and stress corrosion performance.	*Paint and Coatings*
Shot-blasting	abrasive blasting steel with metal shot, usually to remove deposits or mill scale more rapidly or more effectively than can be done by sand-blasting or chemical cleaning	*Materials Process*
Shotfirer, or shotlighter	a man qualified and appointed by the manager to use explosives underground.	*Mining*
Shotholes	Small holes in a leaf caused by feeding activity and giving the appearance of injury via a shotgun.[1]	*Forestry*
Shotstick or Shotfiring pole	thin wooden pole used to ram explosives and clay into drill holes. Also called a 'rammer'.	*Mining*
Shoulder Screws	A threaded fastener with a plain, precision machined, shank that is used for location purposes. They are typically used for pulleys and linkages.	*Maintenance*
Shoulders	slices of coal taken off during the working of coal pillars in 'rearers' working (N. Staffs.).	*Mining*
Show	the pale blue "top," or flame that appears above the ordinary flame of a candle when it is burning in an atmosphere mixed with fire-damp.	*Mining*
shp	Shaft horsepower	*General*
Shrink Film	A term sometimes used for prestretched or oriented film used in shrink packaging.	*Engineering Physics*
Shrink Packaging	An item or group of items packaged by wrapping in a film or bag which, when heated, fits tightly around the contained article.	*Engineering Physics*
Shrinkage	The volume of natural gas that is transformed into liquid products during processing, primarily at natural gas liquids processing plants.	*Energy*
Shrinkage	The decrease in dimension of a molded part through cooling or getting out of a pool or the ocean.	*Engineering Physics*
Shrinkage stoping	A stoping method which uses part of the broken ore as a working platform and as support for the walls of the stope.	*Mining*
Shrinkage Stress	The residual stress in a coating caused by shrinkage during processing or being seen unclad after leaving cold water.	*Paint and Coatings*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Shrinkage	The loss of product as it moves through the market system. Losses may be due to damage during shipment, product trimming, theft or moisture loss.	*Agriculture*
Shrinking Allowance	The dimensional allowance which must be made in molds to compensate for shrinkage of the plastics compound on cooling. Also the acceptance of just coming out of the pool or ocean.	*Engineering Physics*
Shropshire	A breed of sheep that originated in the counties of Shropshire and Staffordshire in central western England. The breed became known by its present name beginning in 1848. First imported into the United States in about 1855.	*Agriculture*
Shroud	A gaseous and/or mechanical or physical barrier placed around the spraying process designed to reduce the ingress of air into the system and so reduce oxidation of the of the materials being sprayed.	*Paint and Coatings*
Shunt	see Parallel.	*Electrical*
Shunt back	a table or platform incorporated in the tub or mine car track with a hinge at one end and a power cylinder at the other. The tub or mine car runs onto the platform, the power cylinder raises one end and the tub runs off in the opposite direction.	*Mining*
Shut in	Closed temporarily; wells and mines capable of production may be shut in for repair, cleaning, in accessibility to a market, etc.	*Energy*
Shut In	To close down a producing well temporarily for repairs, cleaning out, building up reservoir pressure, lack of market, etc.	*Petroleum Drilling*
Shut In Well	A well which is capable, but not presently producing.	*Petroleum Drilling*
Shut In Well	A well which is capable of producing but is not presently producing. Reasons for a well being shut in may be lack of equipment, market or other.	*Petroleum Drilling*
Shut or Shutt	the crushed and broken roof above a seam of coal; or another term for old workings (S. Staffs.).	*Mining*
Shutdown	To cease normal operations.	*Aeronautical Engineering*
Shutdown	A production hiatus during which the platform ceases to produce while essential maintenance work is undertaken.	*Petroleum Drilling*
Shutdown date	Month and year of shutdown for fuel discharge and refueling. The date should be the point at which the reactor became subcritical.	*Energy*
Shutdown Maintenance	Maintenance that is only performed while equipment is shutdown.	*Maintenance*
Shut-in royalty	A royalty paid by a lessee as compensation for a lessor's loss of income because the lessee has deferred production from a property that is known to be capable of producing minerals. Shut in may be caused by a lack of a ready market, by a lack of transportation facilities, or by other reasons. A shut-in royalty may or may not be recoverable out of future production.	*Energy*
Shutoff Valve	A valve which operates fully open or fully closed.	*Mechanical, Process, and Operations*
Shut-off valve	A valve designed only for on/off service. Not a throttling valve. Sometimes referred to as a "block valve."	*Mechanical*
Shuts	another name for the keps. (Scot.).	*Mining*

Term	Definition	*Industry*
Shuttle car	a rubber-tired haulage vehicle that is unloaded by a built-in conveyor.	*Energy*
Shuttle car	A self-discharging truck, generally with rubber tires or caterpillar-type treads, used for receiving coal from the loading or mining machine and transferring it to an underground loading point, mine railway or belt conveyor system.	*Mining*
Shuttle Valve	A connective valve which selects one of two or more circuits because flow or pressure changes between the circuits.	*Mechanical, Process, and Operations*
Shuttles	natural cracks running at right angles to the dip in the strata; or cleavages (or cleats) in the coal. (Lancs.).	*Mining*
SI	System Internationale. The name given to the standard metric system of units.	*Electrical*
SI/TA	Shut In/Temporarily Abandoned	*Petroleum Drilling*
SI/TA	Shut In/Temporarily Abandoned	*Petroleum Drilling*
SIB	sulfurized isobutylene	*Petro-Chemical Abbreviations*
SIC	See Standard Industrial Classification	*Energy*
Siddle	the inclination of a coal seam. (N. East).	*Mining*
Side abutment	see Abutment.	*Mining*
Side bars	Loose pieces used to carry one or more molding plus, and operated from outside the mold.	*Material Process*
Side basset	where the dip of the seam crosses a roadway (S. Staffs.).	*Mining*
Side Channels	Members which support the rollers on the side of the conveyor.	*Manufacturing*
Side draw pins	Projections used to core a hole in a direction other than the line of closing a mold, and which must be withdrawn before the part is ejected.	*Material Process*
Side effect	Any unintended effect of an intervention. Side effects are most commonly associated with pharmaceutical products, in which case they are related to the pharmacological properties of the drug at doses normally used for therapeutic purposes in humans. See also: Adverse effect	*Quality Engineering*
Side laning	in 'square work', widening of a drivage by taking slices of coal off the solid, i.e., 'breasting forward the rib' (S. Staffs.).	*Mining*
Side Lines	The lines which bound the sides of a claim.	*Mining*
Side Mounted Drive	A drive assembly mounted to the side of the conveyor, normally used when minimum elevations are required.	*Manufacturing*
Side of work	a panel or working area of coal in 'Square Work' (S. Staffs.).	*Mining*
Side roll	A type of sprinkler system in which long sections of pipe are supported on wheels, which allow it to be rolled sideways from setting to setting. They usually are powered by a gasoline engine in the center, which can roll the entire unit at one time.	*Agriculture*
Side Tables	Steel tables attached to either side of conveyor bed to provide working surface close to conveyor.	*Manufacturing*
Side wavers	the loose sides of a drift or roadway that would, if unsupported, soon fall. They generally occur when a crush is taking place.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Side-over	short roadway driven at right angles to, and bisecting a 'jenkin' in bord and pillar working. (N. East).	*Mining*
Siderite	Iron carbonate, which when pure, contains 48.2% iron; must be roasted to drive off carbon dioxide before it can be used in a blast furnace. Roasted product is called sinter.	*Mining*
Sidetrack	A wellbore segment extending from a wellbore intersection along a wellbore path to a different wellbore bottomhole from any previously existing wellbore bottomholes.	*Petroleum Drilling*
Sidetrack	A wellbore segment extending from a wellbore intersection along a wellbore path to a different wellbore bottomhole from any previously existing wellbore bottomholes.	*Petroleum Drilling*
Sidetrack drilling	This is a remedial operation that results in the creation of a new section of well bore for the purpose of (1) detouring around junk, (2) redrilling lost holes, or (3) straightening key seats and crooked holes. Directional "side-track" wells do not include footage in the common bore that is reported as footage for the original well.	*Energy*
Sidetracking	The well activity of drilling a new wellbore segment from a wellbore intersection to a new wellbore bottomhole or target.	*Petroleum Drilling*
Sidetracking	The well activity of drilling a new wellbore segment from a wellbore intersection to a new wellbore bottomhole or target.	*Petroleum Drilling*
SIDI	spark ignition direct injection	*Petro-Chemical Abbreviations*
Siding	An exterior wall covering material made of wood, plastic (including vinyl), or metal. Siding is generally produced in the shape of boards and is applied to the outside of a building in overlapping rows.	*Energy*
Sieve Analysis	Determination of the particle-size distribution of a soil, sediment, or rock by measuring the percentage of particles that will pass through standard sieves of various sizes.	*Petroleum Engineering*
Sieve Classification	That portion of a powder sample which passes through a standard sieve of specified number and is retained by some finer sieve of specified number.	*Paint and Coatings*
SIGMA	Society of Independent Gasoline Marketers of America	*Petro-Chemical Abbreviations*
Sigma metric	A numeric value that characterize method performance in terms of the number of standard deviations or sigmas that fit within the tolerance limit or quality requirement of a test. For analytic processes, calculated as Sigma = [(%TEa – %bias)/%CV], where TEa is the allowable total error or CLIA PT criterion for acceptable performance, %bias represents the observed inaccuracy or systematic error of the method, and %CV represents the observed imprecision or random error of the method.	*Quality*
Sign	The actual presence of the causal organism in association with the disease symptoms.[1]	*Forestry*
Signal	Part of received data that is desired; Compare: noise, offset.	*Aeronautical Engineering*
Signal	Part of received data that is desired; Compare - noise, offset.	*Aeronautical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Signal Conditioner	A circuit module which offsets, attenuates, amplifies, linearizes and/or filters the signal for input to the A/D converter. The typical output signal conditioner is +2 V dc.	*Electrical*
Signal Conditioning	To process the form or mode of a signal so as to make it intelligible to, or compatible with, a given device, including such manipulation as pulse shaping, pulse clipping, compensating, digitizing, and linearizing.	*Electrical*
Signal Data Converter (SDC)	A device that converts unique signals to a standard protocol, usually MIL-STD-1553B; Synonyms: Remote Terminal Unit.	*Aeronautical Engineering*
Signal Output	A signal delivered by a device, element or system.	*Process Control*
Signal Ratio	1) broadly, the comparison of light seen by a photosensor when the beam is blocked to the light seen when the beam is not blocked; 2) More specifically, the comparison of photocell resistance when sensor is dark to when it is illuminated. Proper control application involves establishing a large dark: to: light ratio.	*Electrical Engineering*
Signal to Noise Ratio	Ratio of signal amplitude to noise amplitude.	*Process Control*
Signal Transducer (Signal Converter)	A transducer, which converts one standardized transmission signal to another.	*Process Control*
Signal, Error	In a closed loop, the signal resulting from subtracting a particular return signal from its corresponding input signal.	*Process Control*
Signal, Feedback	That return signal which results from a measurement of the directly controlled variable.	*Process Control*
Signal, Input	A signal applied to a device, element or system.	*Process Control*
Signal, Measured	The electrical, mechanical, pneumatic, or other variable applied to the input of a device. It is the analog of the measured variable produced by a transducer (when such is used).	*Process Control*
Signal, Reference-Input	One external to a control loop which serves as the standard of comparison for the directly controlled variable.	*Process Control*
Signal, Return	In a closed loop, the signal resulting from a particular input signal, and transmitted by the loop and to be subtracted from the input signal.	*Process Control*
Signal-to-noise ratio (SNR,S/N)	A ratio of magnitude of a desired signal to the magnitude of the noise received with it; Typical Units: dB.	*Aeronautical Engineering*
SIL (Safety integrity level)	The safety integration level (SIL rating) of a system indicates the level of risk associated with it. It is a measure of its ability to perform safely and, in the event of failure, to fail safely. There are four SIL levels, with level 4 indicating the highest performance.	*Electrical*
Silage	Livestock feed produced by acid-producing fermentation of feed stuffs. Corn silage is a common feed for dairy cattle in the United States. When made from grass or alfalfa, it often is called haylage.	*Agriculture*
Silencer	A device used to reduce noise generated by flowing gases.	*Industrial Engineering*
Silencer	A device for reducing gas flow noise. Noise is decreased by tuned resonant control of gas expansion.	*Mechanical, Process, and Operations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Silica	Silicon dioxide, or silica anhydride, SiO2, occurring naturally in crystalline form as quartz.	*Material Process*
Silica	Naturally occurring silica occurs in the deposits which are 99 percent silicon dioxide. The hardness provides both mechanical strength and abrasion resistance. Silicas are an economical extender-filler, which is thermally stable, pure, low in ionic impurities, and hard. They are often used as antiblocking agents in polyolefins.	*Engineering Physics*
Silicate	Ceramic compound with SiO2 as a major constituent.	*Material Process*
Silicate glass	Noncrystalline solid with SiO2 as a major constituent.	*Material Process*
Siliceous	A rock containing an abundance of quartz.	*Mining*
Silicon	A semiconductor material made from silica, purified for photovoltaic applications.	*Energy*
Silicon	Element 14 and an important semiconductor.	*Material Process*
Silicon-killed steel	steel treated with silicon as an oxidizing agent in order to reduce the oxygen content to such a level that no reaction occurs between carbon and oxygen during solidification	*Materials Process*
Silk Screen Printing	A printing process widely used on plastic bottles and other articles, which employs a taut woven fabric secured in a frame as a stencil. The fabric is coated in selected areas with a masking material, which is not affected by the ink being used. The stencil fabric is commonly called a silk screen.	*Engineering Physics*
Sill	An intrusive sheet of igneous rock of roughly uniform thickness that has been forced between the bedding planes of existing rock.	*Mining*
Silt	Waste from Pennsylvania anthracite preparation plants, consisting of coarse rock fragments containing as much as 30 percent small-sized coal; sometimes defined as including very fine coal particles called silt. Its heat value ranges from 8 to 17 million Btu per short ton. Synonymous with culm.	*Energy*
Silt	Contaminant particles 5 ¦m and less in size.	*Lubrication*
Silt	Muddy deposits of fine sediment usually found on the bottoms of lakes.	*Mining*
Silt, culm, refuse bank, or slurry dam mining	A mining operation producing coal from these sources of coal.	*Energy*
Silting	A failure generally associated with a valve which movements are restricted due to small particles that have wedged in between critical clearances (e.g., the spool and bore.)	*Oil Analysis*
Siltstone	a rock intermediate between a shale and a sandstone, also known as 'stone-bind', 'rock-bind', or 'clift-cwar'.	*Mining*
Silver Plating	The electro-deposition of silver for electrical, decorative or anti-fretting properties.	*Paint and Coatings*
Silviculture	The art, science, and practice of establishing, tending, and reproducing forest stands of desired characteristics.	*Forestry*
Simetric system	A modernized and internationally standardized version of the metric system based on the meter, second, kilogram, ampere, degree Kelvin, and candela.	*Mechanical, Process, and Operations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Simmental	The Simmental is among the oldest and most widely distributed of all breeds in the world, but a relative newcomer to the United States. This red and white breed originated in Switzerland's Simme Valley. Apparently the first Simmental arrived in the United States before 1900, perhaps as early as 1887. The breed died out, however, and was re-introduced with semen imported from France in 1967. The breed also is known as "Fleckvieh" in Germany, "PieRouge", "Montbeliard", and "Abondance" in France; and "Peseta Rosa" in Italy. Registry is with the American Simmental Association.	*Agriculture*
Simon-strings	septarian cracks in ironstone concretions.	*Mining*
Simple harmonic motion	Periodic vibration that is a sinusoidal function of time.	*Reliability Engineering*
Simulation	Simulation is operation on the model or its parts.	*Material Process*
Simultaneous decking	see Decking.	*Mining*
Singing coal	a seam of coal, which makes a hissing sound as it gives off gas.	*Mining*
Singing lamp	a type of early safety lamp which when there was gas present in the atmosphere made a sound or note which rose in pitch the greater the amount of gas present.	*Mining*
Single acting cylinder	A cylinder in which hydraulic energy can produce thrust or motion in only one direction. (May be mechanically or gravity returned.)	*Mechanical, Process, and Operations*
Single blind	(Also called single masked.) See also: Blinding	*Quality Engineering*
Single crystal silicon	An extremely pure form of crystalline silicon produced by dipping a single crystal seed into a pool of molten silicon under high vacuum conditions and slowly withdrawing a solidifying single crystal boule (rod) of silicon. The boule is sawed into thin silicon wafers and fabricated into single-crystal photovoltaic cells.	*Energy*
Single crystal silicon (Czochralsky)	Silicon cells with a well-ordered crystalline structure consisting of one crystal (usually obtained by means of the Czochralsky growth technique and involving ingot slicing), composing a module. Ribbon silicon is excluded.	*Energy*
Single Minute Exchange of Dies (SMED)	A lean tool whose procedures aim to reduce changeover time.	*Reliability Engineering*
Single mode fiber	Optical fiber with a narrow core in which light travels largely parallel to the fiber axis.	*Material Process*
Single Phase Line	This carriers electrical loads capable of serving the needs of residential customers, small commercial customers, and streetlights. It carrier a relatively light load as compared to heavy duty three phrase constructs.	*Energy*
Single Precision	The degree of numeric accuracy that requires the use of one computer word. In single precision, seven digits are stored, and up to seven digits are printed. Contrast with Double Precision.	*Electrical*
Single purpose project	A hydroelectric project constructed only to generate electricity.	*Energy*
Single Rod Cylinder	A cylinder with a piston rod extending from one end.	*Mechanical, Process, and Operations*
Single Sourcing	The practice of using one source, among others in a competitive marketplace which, for justifiable reason, is found to be most advantageous for the purpose of fulfilling a given purchasing need.	*Procurement*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Single stage process	A process for making product in one step, for example, resin commonly applied to phenolics.	*Material Process*
Single stall	a semi-longwall method of working coal where short faces, 10-15 yards in length are developed on advance, to a predetermined boundary, leaving ribs or thin pillars of coal for support between adjacent faces. On reaching the boundary a drivage is made through the rib, which is extracted on retreat. A haulage road is carried on one side only with an airway on the other side of the face. On retreating, the men from a given face work out the adjacent rib. –see also Double stall.	*Mining*
Single Studded Adaptor	A flange with a bore and a ring groove on each side, with a drilled 'through bolt' circle the same as an Open Face Flange on its larger side and a drilled and tapped bolt end studs circle on its smaller side.	*Petroleum Engineering*
Single unit	term applied to a longwall face having one conveyor along the face that delivers the coal at the gate end at one end of the face, as opposed to a 'double unit' that has two conveyors carrying the coal in opposite directions and delivering it to a loader or conveyor gate end at or near the middle of the unit. This gate usually served as the intake airway.	*Mining*
Single Window	Single window refers to the ability to provide multiple displays via a single terminal.	*Control Engineering*
Single-circuit line	A transmission line with one electric circuit. For three-phase supply, a single circuit requires at least three conductors, one per phase.	*Energy*
Single-Ended Input	A signal-input circuit where SIG LO (or sometimes SIG HI) is tied to METER GND. Ground loops are normally not a problem in AC-powered meters, since METER GND is transformer-isolated from AC GND.	*Electrical*
Single-family housing unit	See housing structure/housing unit, specifically under Residential Sector heading.	*Energy*
Single-flow water-cooling tower	A crossflow tower having a fill section on one side of the plenum chamber only.	*Facility Engineering*
Single-pass test	Filter performance tests in which contaminant which passes through a test filter is not allowed to recirculate back to the test filter.	*Oil Analysis*
Single-Plane (Static) Balancing Machine	A single plane balancing machine is a gravitational or centrifugal balancing machine that provides information for accomplishing single plane balancing.	*General*
Single-Pole Double-Throw (SPDT)	The switch which may either make or break a circuit, depending on how it is wired.	*Electrical Engineering*
Single-Pole Single-Throw (SPST)	A switch with only one moving and one stationary contact. Available either normally open (N.O.) or normally closed (N.C.).	*Electrical Engineering*
Singles	a small size grade of coal, generally around 1 inch in dimensions.	*Mining*
Single-Welded Butt Joint	A butt joint welded from one side only.	*Maintenance and Repair*
Singulation Mode	Mode where packages are automatically separated while traveling down the conveyor.	*Equipment*
Sink	To cut an impression in a die.	*Metallurgy*
Sink Mark	A shallow depression or dimple on the surface of an injection molded article caused by local internal shrinkage after the gate seals or by a short shot.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Sinkers	the men employed in sinking shafts.	*Mining*
Sinkhole	A depression in the earth's surface caused by dissolving underground limestone, salt, or gypsum.	*Petroleum Engineering*
Sinking	The process by which a shaft is driven.	*Mining*
Sinking bucket	see Hoppit, Kibble and Bowk.	*Mining*
Sinking drum	cast iron tubbing used in sandy or water bearing ground as a type of shield. The ground is mucked out inside the tubbing, which is allowed then to sink under its own weight. Earlier, square wooden frames were used, afterwards replaced by round masonry drums, then thin sheet iron cylinders.	*Mining*
Sink-mark	Dimple like depression in the surface of a molding where it has retracted from the mold, and which has well rounded edges, and in which there is no absence of surface film.	*Material Process*
Sinks	depressions at the surface due to subsidence.	*Mining*
Sinter	A chemical sedimentary rock deposited by precipitation from mineral waters, especially siliceous sinter and calcareous sinter.	*Energy*
Sinter	Fine particles of iron ore that have been treated by heat to produce blast furnace feed.	*Mining*
Sintered	A metallic or non-metallic filter medium processed to cause diffusion bonds at all contacting points.	*Mechanical, Process, and Operations*
Sintered Medium	A metallic or nonmetallic filter medium processed to cause diffusion bonds at all contacting points.	*Lubrication*
Sintering	Bonding of powder particles by solid-state diffusion.	*Material Process*
Sip system	A combination of families of crystallographic planes and directions corresponding to dislocation motion.	*Material Process*
SIP(s)	State Implementation Plan(s)	*Petro-Chemical Abbreviations*
Sisal	A long vegetable fiber being used considerably with phenolic and urea resins for molding forms which have long drafts.	*Material Process*
Sit	the collapse of pillars, coal, or roof supports after the coal has been undercut, or the collapse of pillars due to the action of crush; or a depression in the ground on the surface due to subsidence. (Scot.). -see also Sinks; or a coalface or buttock, which fails to fall or break up when the spraggs are knocked clear but merely cracks off and hangs until it is pulled over. (Mids.).	*Mining*
Site characterization	An onsite investigation at a known or suspected contaminated waste or release site to determine the extent and type(s) of contamination.	*Energy*
Site energy	The Btu value of energy at the point it enters the home, sometimes referred to as "delivered" energy. The site value of energy is used for all fuels, including electricity.	*Energy*
Site energy consumption	The Btu value of energy at the point it enters the home, building, or establishment, sometimes referred to as "delivered" energy.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Site index	A relative measure of forest site quality based on the height (in feet) of the dominant trees at a specific age (usually 25 or 50 years, depending on rotation length).	*Forestry*
Site preparation	Preparing an area of land for planting, direct seeding, or natural reproduction by burning, chemical vegetation control, or by mechanical operations.	*Forestry*
Site-specific information DSM program assistance	ADSM (demand-side management) assistance program that provides guidance on energy efficiency and load management options tailored to a particular customer's facility; it often involves an on-site inspection of the customer facility to identify cost-effective DSM actions that could be taken. They include audits, engineering design calculations on information provided about the building, and technical assistance to architects and engineers who design new facilities.	*Energy*
Situational awareness	Situational awareness provides the pilots with information relative to the current surroundings, such as other aircraft or threats in the immediate area.	*Aeronautical Engineering*
Six Sigma	A program that originated at Motorola where the objective is customer satisfaction through continuous improvement in quality. Six Sigma means products and processes will experience only 3.4 defects per million opportunities or 99.99966% good.	*Quality*
Six Sigma	A business management strategy and measure of quality that strives for near perfection. It employs a data-driven methodology for identifying and eliminating defects in products and processes. Achievement of Six Sigma generally denotes a failure rate of 3.4 parts per million opportunities, or 99.9997% perfection. The philosophy was originally implemented by Motorola.	*Reliability Engineering*
Six Sigma Quality Program	Introduced by Motorola in 1988, six sigma stands for an extensive quality improvement program, with the goal to improve customer satisfaction through reducing and eliminating defects. The six sigma target is a 3.4 part per million defect rate, which is perceived as world class performance. As comparison, three sigma stand for 66.8 defects per million.	*Quality*
Size	A liquid coating composition, usually transparent, for sealing a porous surface preparatory to application of finishing coats.	*Material Process*
Size of Weld	For a groove weld, the joint penetration, which is the depth of chamfering plus the root penetration.	*Maintenance and Repair*
Size Analysis	Analysis of the size of the particles being deposited by spraying processes.	*Paint and Coatings*
Size Distribution	The distribution of sizes within a size analysis. The distribution may be normal or skewed in some way due to the powder manufacturing process.	*Paint and Coatings*
Skarn	Name for the metamorphic rocks surrounding an igneous intrusive where it comes in contact with a limestone or dolostone formation.	*Mining*
Skatewheel Conveyor	A type of wheel conveyor making use of series of skatewheels mounted on common shafts or axles, or mounted on parallel spaced bars on individual axles.	*Manufacturing*
Skate-wheel Conveyor	A type of wheel conveyor making use of series of skate-wheels mounted on common shafts or axles, or mounted on parallel spaced bars on individual axles.	*Equipment*
Skeleton Braid	A braid of widely separated wires or fibers, used to reinforce a jacket, bind a cable core, or prevent the passage of electrostatic or electromagnetic fields.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Skeletonizer(S)	Insects which consume leaf tissue, often from the lower side of the leaf, leaving the upper epidermis and vascular tissues intact.[1]	*Forestry*
Skelp	A piece of plate prepared by forming and bending, ready for welding into pipe. Flat plates when used for butt-welded pipe are called skelp.	*Maintenance and Repair*
Skep	a coal tram or box (S. Staffs.). -see also Skip.	*Mining*
Skerry	thin bed, or group of thin beds, of compact, fine-grained sandstone interstratified with red marls (Keuper, Triassic).	*Mining*
Skid	A track-mounted vehicle used to hold trips or cars from running out of control. Also it is a flat-bottom personnel or equipment carrier used in low coal.	*Mining*
Skid plates	plates and pans for channeling coal down a steep coalface. The coal travelled under gravity.	*Mining*
Skidmore Bolt Tension Calibrator	The Skidmore-Wilhelm bolt tension calibrator is a hydraulic load cell used to determine the tension in a bolt or other threaded fastener. The tension in the bolt compresses fluid in a hydraulic cylinder, a pressure gauge connected to the cylinder is then calibrated to read in terms of force rather than pressure.	*Maintenance*
Skilled Labor	Labor with a high level of skill or human capital.	*Reliability Engineering*
Skim	Streaks of dense seeds or pits appearing on a plastics surface.	*Material Process*
Skimmings (ash)	galvanizing byproduct comprised mainly of zinc oxides; skimmings are recyclable	*Materials Process*
Skin Packaging	A variation of the thermoforming process in which the article to be packaged serves as the mold. The article is usually placed on a printed card prepared with an adhesive coating or mechanical surface treatment to seal the plastic film to the card.	*Engineering Physics*
Skip	A car being hoisted from a slope or shaft.	*Mining*
Skip	A self-dumping type of bucket used in a shaft for hoisting ore or rock.	*Mining*
Skip-welding	alternating the weld so that it is not continuous or complete	*Materials Process*
Skirting	a working place formed by taking a slice (lift) off a pillar alongside a 'wall'.	*Mining*
Skirting Jenkin	the first slice taken from the side of a pillar of coal, also known as the 'first judd' or 'first lift'.	*Mining*
Skirtings or skutches	small roadways re-driven through roof falls along the sides of pillars to re-establish ventilation.	*Mining*
Skitter	small pieces of dirt or coal falling from the roof, often giving warning of an imminent fall. (Scot.).	*Mining*
Skutch	a scotch for slowing down tubs. (Mids.).	*Mining*
Slab	A semi-finished, hot-rolled section of flat-rolled steel, prepared for rolling down to plate or sheet. It is generally more than 1 ½ inches thick and more than twice as wide as it is thick.	*Metallurgy*
Slab gate	A gate having flat, finely finished, parallel faces – as opposed to a wedge gate. Such a closure element slides across the seats and does not depend on stem force to achieve tight shut off.	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Slab posts	barriers, formed from posts and cross pieces, erected on the waste side in steep seam working to the dip to protect the face men from coal falling debris from inside the waste (N. Staffs.).	*Mining*
Slab-bar	a plank of timber used as a temporary support when holing in the top of a seam with a weak roof. (N.Staffs.).	*Mining*
Slabs	see Lagging and Runners (N.Staffs.).	*Mining*
Slack	Small coal; the finest-sized soft coal, usually less than one inch in diameter.	*Mining*
Slack coal	usually refers to bituminous coal one-half inch or smaller in size.	*Energy*
Slack or Sleck	very small pieces of coal, or coal almost in a powder or coal-dust state, having small pieces of coal mixed with it. Size is generally less than 1 inch down to dust.	*Mining*
Sladder	an iron or wooden lined chute, often used in inclined workings (N. Staffs.).	*Mining*
Slag	a) The non-metallic material forming a molten layer on top of the molten steel in a steel furnace. It is made by charging suitable materials and plays an important role in the refining of the steel. b) Loosely applied to any waste material drawn off in molten form.	*Metallurgy*
Slag Inclusion	Nonmetallic solid material entrapped in weld metal or between weld metal.	*Maintenance and Repair*
Slam retarder	A device designed to prevent the clapper of a check valve from slamming as it closes upon flow reversal. Hydraulic damping cylinders, rotary vanes, and torsional springs are all used for this purpose.	*Mechanical*
Slamming	Switching a customer's electric provider without authorization.	*Energy*
Slant	a roadway following the dip or an inclined roadway.	*Mining*
Slant or Slaunt	the main haulage road. (Lancs.).	*Mining*
Slant range	Direct line distance, not along the ground.	*Aeronautical Engineering*
Slap	small coal or slack. (Som.).	*Mining*
Slar	to slide or slip (N. Staffs.).	*Mining*
Slash	Tree tops, branches, bark, or other residue left on the ground after logging or other forestry operations.	*Forestry*
Slat and Slatting	the coal that is removed at the front of the holing to make room for the shoulders of the holer and thus permit him to deepen the holing (N. Staffs.).	*Mining*
Slat Conveyor	A conveyor which uses steel or wooden slats mounted on roller chain to transport the product.	*Manufacturing*
Slate	A miner's term for any shale or slate accompanying coal. Geologically, it is a dense, fine-textured, metamorphic rock, which has excellent parallel cleavage so that it breaks into thin plates or pencil-like shapes.	*Mining*
Slate	A metamorphic rock; the metamorphic equivalent of shale.	*Mining*
Slate bar	The proper long-handled tool used to pry down loose and hazardous material from roof, face, and ribs.	*Mining*
Slate coal	a hard, dull variety of coal similar to cannel but without the shine. –see also Lignite.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Slate flour	A grayish, amorphous powder, sp. gr. 2.6 to 3.3 used as a filler.	*Material Process*
Slats	A control surface on fixed-wing aircraft, usually mounted to the aft edge of the wings, that extends the wing to provide added lift at low speeds; Compare: flaps; Symbols: delta sub S; Typical Units: rad, deg.	*Aeronautical Engineering*
Slaty blaes	firm and fissile shale and mudstone. (Scot.).	*Mining*
Slaty stone	cross-bedded flags or stone bind, breaking up into thin laminae.	*Mining*
Slatyband	a fissile ironstone consisting of alternating clayband and blackband laminae. (Scot.).	*Mining*
Slaughterhouse	a place where animals marketed for meat are killed humanely	*Agriculture*
Slave Drive	A conveyor drive powered from another conveyor instead of having its own prime power source.	*Manufacturing*
Slave Modules	Slave modules are distributed modules that report back to a central Master. Despite the name, they have their own processing ability. Another name for them is "child" modules.	*Control Engineering*
SLC	Soft Logic Control.	*Control Engineering*
Sleck	see Slack (N. Staffs.).	*Mining*
Sledge	flat wooden vehicle for carrying coal, the first used; prior to this coal was carried on peoples' backs.	*Mining*
Sleeper hole	a depression in the roadway, sometimes deep and filled with water, between the sleepers of the rail track.	*Mining*
Sleeve Bearing	A journal bearing, usually a full journal bearing.	*Lubrication*
Slew	a basin or natural swillie in a coal seam (Derbys.); or a bend in the coalface.	*Mining*
Slew rate	The maximum rate at which an instrument's output can change by some stated amount.	*Reliability Engineering*
Slickenside	A smooth, striated, polished surface produced on rock by friction.	*Mining*
Slicks	smooth partings in the strata.	*Mining*
Slicks	A racing tire with no tread. There is a misconception that the tread pattern of a tire provides traction. This is true in dirt, snow or on wet pavement, but on dry pavement the maximum amount of "contact patch" is desirable.	*NASCAR*
Slide	a fault.	*Mining*
Slide-By	The condition whereby the target approaches the sensing face of the proximity sensor in such a direction that its center will cross the axis of the sensing face at right angles.	*Electrical Engineering*
Slider Bed	A stationary surface on which the carrying run of a belt conveyor slides.	*Equipment*
Slides	upright rails of wood or metal fixed in a shaft for the purpose of guiding the cages. –see also Guides.	*Mining*
Sliding deals or Striking deals	deals placed diagonally from the balk placed across the top of a sinking pit to guide the tubs on to the pit top.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Slime	A deposit build-up directly related to the excessive growth of microorganisms that secrete or form thick, sticky material. These slimes cause tube pluggage, reduce heat transfer, entrap migratory suspended solids and can result in underdeposit corrosion.	*Chemical Engineering*
Slimes	The finest of the crushed ore and gangue from mills.	*Mining*
Slines, Slymes or Slynes	smooth partings, slips or joints in the coal, or potholes in the roof. (Mids.).	*Mining*
Sling, Braided	A flexible sling, the body of which is made up of two or more WIRE ROPES braided together. See SLINGS.	*Wire Rope & Cable*
Sling, Wire Rope	An assembly fabricated from WIRE ROPE which connects the load to the lifting device.	*Wire Rope & Cable*
Slip	A fault. A smooth joint or crack where the strata have moved on each other.	*Mining*
Slip Agent	Provides surface lubrication following the processing of plastics. Compounded into the plastic, the additive gradually migrates to the surface where it reduces the coefficient of friction.	*Engineering Physics*
Slip bedding	another term meaning slumped bedding.	*Mining*
Slip casting	Processing method for ceramics in which a powder-water mixture (slip) is poured into a porous mold.	*Material Process*
Slip Dyke	see Fault.	*Mining*
Slip plane	Plane within a transparent plastic, visible in reflected light, because of poor welding and shrinkage on cooling.	*Material Process*
Slipper or Slipper-lock	a lock fitted under the wheels of a tub. (Lancs.).	*Mining*
Slippers	metal shoes fastened on to the cage that run along the cage guides fixed in the shaft.	*Mining*
Slippy	a term applied to partings in coal or roof meaning the same as 'easy'.	*Mining*
Slippy backs	vertical planes of cleavage, occurring every four or five inches in a coal seam. (N. East).	*Mining*
Slips	joints or laminations in the strata; the term is also used to denote very inferior, dirty coal (N. Staffs.).	*Mining*
Slipstream	See Drafting.	*NASCAR*
Slit	a short heading connecting two main headings.	*Mining*
Slitter	a pick. Also called a 'Pike' or 'Mandril'.	*Mining*
Slitting	The conversion of a given width of plastic film, tube, or sheeting to several various widths by means of knives.	*Engineering Physics*
Slobbin	board supports used behind timber or rings (N. Staffs.)—see Slobs	*Mining*
Slobs	planks of wood used to line arch girders. (S. Staffs.).	*Mining*
Sloom or Sloome	wetted fireclay. i.e. soft seatearth.	*Mining*
Slope	Primary inclined opening, connection the surface with the underground workings.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Slope (Electrode Sensitivity, Span)	See Nernst factor.	*General Engineering*
Slope brae	a brae without a haulage system down which the hutches had to be man-handled. (Scot.).	*Mining*
Slope dook	a dook driven at less than right angles to the main level rather than following the full dip of the coal seam. (Scot.).	*Mining*
Slope heading	a heading driven at an angle rather than following the full rise of the coal seam. (Scots.).	*Mining*
Slope mine	A mine that reaches the coal bed by means of an inclined opening.	*Energy*
Slope mine	An underground mine with an opening that slopes upward or downward to the coal seam.	*Mining*
Slope, b	"The relationship between the change in y and the change in x between any two points along a line." [NCCLS] Used here to refer to a statistic that is calculated as part of linear regression analysis. Commonly calculated for the data from a comparison of methods experiment in a method validation study. The ideal value for the slope is 1.000. Deviations from this value are taken as estimates of proportional systematic error. For example, a slope of 0.950 would indicate a proportional error of 5.0%.	*Quality*
Slot	A physical position in a rack in a storage pool that is intended to be occupied by an intact assembly or equivalent (that is, a canister or an assembly skeleton).	*Energy*
Slotters	cannel like shale in the Aldwalton Stone Seam, (Yorks.).	*Mining*
Slotting	see Nicking.	*Mining*
Slotting coal	the lowest division of the Barnsley Seam in which undercutting was often done. (Yorks.).	*Mining*
Slottings	coal produced while under-cutting. (Yorks.).	*Mining*
Sloughing	The slow crumbling and falling away of material from roof, rib, and face.	*Mining*
Sloughing off	The release of contaminant from the upstream side of a filter element to the upstream side of the filter enclosure.	*Mechanical, Process, and Operations*
Sludge	A dense, slushy, liquid-to-semifluid product that accumulates as an end result of an industrial or technological process designed to purify a substance. Industrial sludges are produced from the processing of energy-related raw materials, chemical products, water, mined ores, sewerage, and other natural and man-made products. Sludges can also form from natural processes, such as the run off produced by rain fall, and accumulate on the bottom of bogs, streams, lakes, and tidelands.	*Energy*
Sludge	Particulate contaminant or a mixture of particulate and liquid contaminant separated from a fluid in an unconsolidated state.	*Mechanical, Process, and Operations*
Sludgers	a cylindrical boring tool with a clack near the bottom, used when a borehole is so wet that the borings would, unless retained by a clack or some such device, be washed out of the cylinder in being drawn to the surface. The sludger was also useful in boring through a seam of coal, in bringing up samples of coal when cut by the chisel.	*Mining*
Slug	The blank, cut from wrought material, from which a forging is made, see "BILLET."	*Metallurgy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Slug Mode	Allows all packages to be released simultaneously.	*Manufacturing*
Sluice Box	Boxes or troughs through which gold-bearing gravel is washed. It was the most commonly used tool in mining other than the pan and shovel.	*Mining*
Sluice Claims	A claim worked with sluices.	*Mining*
Slum, Slums or Slumbs	a black slippy indurated clay (N. Staffs.); or a soft clayey or shaley seam of coal (N. Staffs.).	*Mining*
Slumpability	(see Feedability)	*Lubrication*
Slurry	A viscous liquid with a high solids content.	*Energy*
Slurry dam	A repository for the silt or culm from a preparation plant.	*Energy*
Slurry service	An application involving a flow medium consisting of small solid particles suspended in a liquid. Coal slurry consisting of about equal parts of coal and water, is transported by pipeline from coal mines to power plants where the coal is de-watered and burned.	*Mechanical*
Slurry wall	non-structural barriers that are constructed underground to impede groundwater flow	*Petroleum Drilling*
Slush molding	A process for molding hollow castings with a accelerated thermoplastic phenolic resins or other casting liquids, in which the liquid is poured into the mold, allowed to set where it touches the mold, and then poured out, leaving a solidified shell.	*Material Process*
Slusher	a scraper-type bucket used for filling the waste with dirt, a scraper loader.	*Mining*
Slyne	another word for 'cleat' or the main cleat. –see Cleat.	*Mining*
Slype	a sled used for drawing coal from the workings to the haulage road. The slype was still in use after the introduction of the hutch for drawing coal in steep inclined coal seams. (Scots.).	*Mining*
Small Business Enterprise (SBE)	An independently owned and operated concern certified, or certifiable, as a small business by the Federal Small Business Administration (SBA). (A general rule of thumb is that a concern with not more than 500 employees may be considered a small business. Size standards by Standard Industrial Classification codes may be found in the Federal Acquisition Regulations, Section 19.102. The University may rely on written representation by the vendors regarding their status.)	*Procurement*
Small grain	barley, oats, rye, triticale and wheat.	*Agriculture*
Small mines	another name for Licensed Mines.	*Mining*
Small pickup truck	A pickup truck weighing under 4,500 lbs GVW.	*Energy*
Small Power Producer	Refers to a producer that generates at least 75% of its energy from renewable sources.	*Energy*
Small power producer (SPP)	Under the Public Utility Regulatory Policies Act (PURPA), a small power production facility (or small power producer) generates electricity using waste, renewable (biomass, conventional hydroelectric, wind and solar, and geothermal) energy as a primary energy source. Fossil fuels can be used, but renewable resource must provide at least 75 percent of the total energy input. (See Code of Federal Regulations, Title 18, Part 292.)	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Smallest Bending Radius	The smallest radius that a strain gage can withstand in one direction, without special treatment, without suffering visible damage.	*General*
Smallman clip	a haulage clip used for clipping tubs to the rope haulage, 'Smallman' was the trade name of the manufacturer.	*Mining*
Smalls or Washed smalls	small coal, gravel size or smaller, (12.5mm to zero).	*Mining*
Smart	Refers to the intelligence of a digital positioner that is capable of assessing the health of the control valve it is controlling and providing diagnostic information to the end-user.	*Mechanical*
Smart Device	A device with intelligence, i.e. capable of monitoring itself.	*Control Engineering*
Smart fire	a severe but small explosion. (N. East).	*Mining*
Smart grid	Smart grids are modern power transmission and distribution systems, capable of accepting power of any quality from any source and delivering it to consumers of all kinds via a bidirectional supply system. They are an evolutionary development of traditional grids, which are based mainly on centralized generating plants, supplying power via long-established, unidirectional transmission and distribution systems whenever consumers request it. Smart grids are being developed in response to rising demand for power and the increasing need to incorporate renewable or distributed, less predictable generation into the grid. ABB's smart grid concept is of an observable and controllable system, based on industry-wide standards, providing a stable, secure, efficient and environmentally sustainable network. The system will cross national and international borders. It must be able to detect and react automatically to disturbances and changes in supply and demand, re-establishing balance and maintaining the stability demanded by both end-users and government legislation. This is achieved by an automation and information technologies infrastructure integrating the whole supply chain from production to consumption, based on an infrastructure of enabling smart grid components. Thus smart grids also accommodate customer response management systems that allow utilities to optimize the performance of the grid and to integrate consumption into balancing load and generation. Many of the technologies and standards needed to establish smart grids on a large scale have been the subject of research and development at ABB for some years and many are already in use.	*Electrical*
Smart material	An engineered material with the ability to perform both sensing and responding function.	*Material Process*
Smart-money	sums paid to those unable to work as a result of a colliery accident. (N. East).	*Mining*
SMD	See Standardized mean difference	*Quality Engineering*
Smears	Blotches of surface haze in a plastics surface.	*Material Process*
Smelter	Facility is used to extract metal concentrates found inside mined ore. The ore will often contain more than one kind of metal concentrate and this facility also separates them.	*Metallurgy*
Smelting	Reducing the ores in furnaces to metals.	*Mining*
Smiddy coal	small coals that gave off little smoke and were of a low sulfur content, used by the smith in the forge.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Smift	a primitive fuse made from a sliver of paper or wood, the wick of a candle or cotton which had been dipped in melted sulfur. The smift would be attached to the end of a train of gunpowder by using a piece of clay or candle grease. This gave the collier time to retire before the main charge exploded.	*Mining*
Smithems or Smythems	fine slack, or clay or shale forming a parting in a coal seam, also called 'smudge'. (Mids.).	*Mining*
Smits	worthless earthy coal. (Yorks.).	*Mining*
Smokey pit	an upcast shaft where furnace ventilation was in use. (Mids.).	*Mining*
Smooth heads	the polished surface of a fault. (Yorks.).	*Mining*
Smoothed	Data that is the result of conditioning a signal with a simple filter; Compare: derived, estimated, filtered, measured, raw, selected; smoothing is usually less sophisticated than filtering.	*Aeronautical Engineering*
Smooth-Faced Drum	Drum with a plain, ungrooved surface. See DRUM.	*Wire Rope & Cable*
Smoothing filter	A filter to reduce quick changes of a signal by attenuating high frequencies; See Also: first-order filter, second-order filter, wash-out filter.	*Aeronautical Engineering*
Smooths	more or less vertical planes of cleavage in the coal (S. Wales).	*Mining*
SMR	Svenska Mekanisters Riksforenig	*Petro-Chemical Abbreviations*
Smush	inferior coal met with at faults : also those thin layers, so common in coal seams, of black, soft, silky or fibrous material resembling charcoal and often called 'mother of coal' or 'mineral charcoal' (N. Staffs.).	*Mining*
Smut	dark earth, the result of coal weathering, often the only trace of a coal seam at outcrop. Also found where coal has been stacked and exposed to the weather; or soft powdery or friable coal or highly carbonaceous shale. (Lancs.).	*Mining*
Smuth	a very inferior coal.	*Mining*
S-N Diagram	This is a plot of stress (S) against the number of cycles (N) required to cause a failure of similar specimen in a fatigue test. Data for each curve on an S-N diagram are obtained by determining fatigue life of a number of specimen subjected to various amounts of fluctuating stress. The stress axis can represent stress amplitude, maximum or minimum stress.	*Quality*
Snab	the brow of a steep road. A short and steep section on an incline. (Scots.).	*Mining*
Snake	to move an armored flexible conveyor (AFC) forward, section by section, without dismantling, by the use of power operated rams.	*Mining*
Snap Action	In strict terms, snap action is a property of a switch such that the moving contact accelerates without added travel of the plunger beyond that travel which was required to separate the contacts. National Electrical Manufacturers Association defines snap action as "a rapid motion of the contacts from one position to another position, or their return. This action is relatively independent of the rate of travel of the actuator." The word "relatively" is important. In actual fact, the acceleration of the moving contact is partially dependent upon the velocity of the plunger. The important point is that, once the plunger reaches the operating or release point, the movable contact immediately transfers to its opposite position without further travel of the plunger. A non: snap acting switch lacks this feature.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Snap clip	a clamp used to connect tubs to an endless haulage rope.	*Mining*
Snap or Snapping	a meal taken underground by the miner. -see Bait; or a small pointed pick used on the screens for chipping brasses, stone or band from large coal. (N. East).	*Mining*
Snap tin	the container for a person's snap.	*Mining*
Snap-In Tube Loading	A feature of Acro pinch valves that allows tubing to be installed in the valve without requiring a free end; the middle of the tubing "snaps in" the body.	*Mechanical*
Snaps	a type of haulage clip. (Mids.).	*Mining*
Snap-time or Snapping time	the name given to the break for food underground.	*Mining*
Snatch	a small chimney about 6 to 8ft high used to ventilate a small mine by means of a single shaft (S. Staffs.).	*Mining*
Sneak circuit analysis	An analytical procedure for identifying latent paths that cause occurrence of unwanted functions or inhibit desired functions, assuming all components are operating properly.	*Reliability Engineering*
Sneck	a junction between two lengths of rails underground (Lancs.); or points at the crossings of a hutch road. (Scot.); or another name for the keps. (Scot.); or an air-way along the side of the gob between the solid coal and a pack wall. (Yorks.).	*Mining*
SNG	See Synthetic Natural Gas	*Energy*
Snibble	a bar of wood or iron pushed through the spokes of a hutch or wagon to act as a break. (Scot.).	*Mining*
Snicket	see Snigget.	*Mining*
Snig	to man-handle materials along a roadway (N. Staffs.).	*Mining*
Snigget or snicket	a short connecting roadway.	*Mining*
SNPRM	supplemental notice of proposed rule making (EPA)	*Petro-Chemical Abbreviations*
SNR	Signal-to-Noise Ratio. The ratio of the amplitude of the desired signal to the amplitude of noise signals at a given point in time. The larger the number the better.	*Reliability Engineering*
Snub Idler	Any rollers used to increase the arc of contact between a belt and drive pulley.	*Manufacturing*
Snubbing	Used to describe the process of installing pipe into a pressurized well bore, using specialized equipment such as 'Blowout Preventers'.	*Petroleum Engineering*
Snug Torque	The torque required to pull plates together so that direct contact occurs; often used in angle control tightening. The snug torque ensures that metal to metal contact occurs at all the interfaces within the joint. It is only at this point that the required angle of rotation start in order that the bolt is tightened sufficiently. The snug torque is usually determined experimentally on the actual joint.	*Maintenance*
Snugging	The process of pulling parts of a joint together, most of the input turn during this process is absorbed in the joint with little tension being given to the bolt.	*Maintenance*
Snut	one hour overtime (S. Staffs.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
SNV	Schweizeische Normenvereiniung	*Petro-Chemical Abbreviations*
SO2	See Sulfur Dioxide.	*Energy*
Soames or Soams	the straps or harness used by drawers, often women and children, when drawing tubs, generally a pair of cords about 3 feet in length used by foals and half marrows for pulling the trams. (N. East).	*Mining*
Soap	(See Thickener, Complex Soap, Saponification)	*Lubrication*
Soap	A natural cleaning agent produced by the reaction of a fat or oil and an alkali.	*Chemistry*
Soapstone	fine unlaminated shale (claystone), smooth to the touch. (Lancs.).	*Mining*
Soapy blaes	smooth fine grained bind.	*Mining*
Socket	Generic name for a type of wire rope fitting.	*Wire Rope & Cable*
Socket end	An end connection in which a pipe or tube is inserted into a counterbored hole and then brazed or fillet welded.	*Mechanical*
Socket Head Cap Screw	A screw with a round head, usually with a hexagon indentation in the head for tightening purposes. Used on machine parts and is typically made from high strength steel (grade 12.9 in metric).	*Maintenance*
Socket Weld	Fillet-type seal weld used to join pipe to valves and fittings or to other sections of pipe. Generally used for piping whose nominal diameter is NPS 2 (DN 50) or smaller.	*Maintenance and Repair*
Socket Weld	A connection made by entering a pipe into a matching socket in the end of a valve fitting, and welding the two together.	*Industrial Engineering*
Socket weld end (SWE)	The end connection of a valve suitably prepared for socket welding to a connecting pipe.	*Mechanical*
Socketweld end (SW)	The end connection of a valve suitably prepared for Socket welding to a connecting pipe.	*General Mechanical*
Soda Ash	Sodium carbonate in a powdery white form used to increase the pH level of hard water, thus making it easier to mix bentonite and polymers into the drill fluid.	*Petroleum Engineering*
Soda-lime-silica-glass	Noncrystalline solid composed of sodium, calcium, and silicon oxides. The majority of windows and glass containers are in this category.	*Material Process*
Sodium acetate (NaC2H3O2)	White powder A salt used as a condensation catalyst for phenolics and ureas.	*Material Process*
Sodium carbonate (Na2CO3)	White hygroscopic powder. A salt used as a catalyst for phenolic resins and others.	*Material Process*
Sodium chloride	Simple compound crystal structure.	*Material Process*
Sodium cyanide	A chemical used in the milling of gold ores to dissolve gold and silver.	*Mining*
Sodium formate (NaCHO2)	Monoclinic colorless deliquescent crystals. A salt used as a catalyst.	*Material Process*
Sodium hydroxide (NaOH)	White deliquescent solid. A basic catalyst and useful regent.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	Industry
Sodium Hypochlorite	Bleaching and disinfecting agent.	*Chemistry*
Sodium lights	A type of high intensity discharge light that has the most lumens per watt of any light source.	*Energy*
Sodium peroxide (Na2O2)	Yellow powder, an oxidizing catalyst.	*Material Process*
Sodium silicate	A grey-white powder soluble in alkali and water, insoluble in alcohol and acid. Used to fireproof textiles, in petroleum refining and corrugated paperboard manufacture, and as an egg preservative. Also referred to as liquid gas, silicate of soda, sodium metasilicate, soluble glass, and water glass.	*Energy*
Sodium tripolyphosphate	A white powder used for water softening and as a food additive and texturizer.	*Energy*
Sods	the clay beneath a coal seam. (Leics.).	*Mining*
SOF	soluble organic fraction	*Petro-Chemical Abbreviations*
Soffitt	The underside of the lintel beam in a natural draft tower forming the bottom part of the hyperbolic shell. Generally it is thick at the base and is the first portion of the shell above the diagonals or columns, which carry the shell.	*Facility Engineering*
Soft air	When the ventilation current was almost at a standstill it was said to be 'soft air'. (Scot.).	*Mining*
Soft Carbonate	Silver-bearing mineral so soft that it can be readily taken out with a pick and shovel. It is usually sand impregnated with mineral, the mineral having been carbonated or oxidized.	*Mining*
Soft coal	coal full of slips and joints which was friable and easily worked.	*Mining*
Soft Failure	A system under test ceases to operate correctly, but resumes correct operation when the stressing environment is eased. This is also known as intermittent failure.	*Reliability Engineering*
Soft Foot	A condition in which one of the machine feet does not sit flat on the base. The foot or the base may have been damaged, worn or warped. When you tighten the bolt on the foot, the machinery will distort.	*Maintenance*
Soft Joint	A joint in which the plates and material between the nut and bolt bearing surfaces have a low stiffness when subjected to compression by the bolt load. In such a joint, the bolt (or nut) typically has to be tightened by two or more complete turns, after it has been torqued to the snug condition, before the full tightening torque is achieved. Often the placement of a gasket in a joint results in a soft joint.	*Maintenance*
Soft Logic	A PC operating system used for soft control. It allows a PC to replace a PLC.	*Control Engineering*
Soft magnet	Magnet with relatively mobile domain walls.	*Material Process*
Soft Seated	A term used to describe a valve trim with an elastomeric or plastic material used either in the value plug or seat ring to provide tight shutoff with a minimal amount of actuator force. A soft-seated valve will usually provide CLASS VI seat leakage capability.	*Industrial Engineering*
Soft sphere	Atomic or ionic model that acknowledges that the outer orbital electron density does not terminate at a fixed radius.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Soft Torque	An alternative name, used by some manufacturers, for snug torque.	*Maintenance*
Soft Wire	Wire that has been drawn or rolled to final size and then heated to remove the effects of cold working.	*Electrical*
Softener	A material added to a plastics mix to produce a soft, pliable end-product. A softener may or may not be a plasticizer.	*Material Process*
Softening point	Temperature at which a glass has a viscosity of 107.6 P, corresponding to the lower end of the working range. The temperature at which a plastic becomes readily distorted, for a given material the value reported will depend upon the method of test.	*Material Process*
Softs	coal which is easily worked. (Mids.).	*Mining*
Software	Generally, programs loaded into a computer from external mass storage but also extended to include operating systems and documentation.	*Electrical*
Software	Computer's program, routine, subroutine, package, module, simulator, expert system or other programming products.	*Material Process*
Software Shell	Simulates keyboard entry of bar code signals.	*Gears*
Softwood	Relatively low-strength wood from evergreen trees.	*Material Process*
Softwood (conifer)	Trees that are usually evergreen, bear cones, and have needles or scale-like leaves such as pine, spruce, fir, and cedar.	*Forestry*
Soil Conservation	careful preservation or protection of soil	*Agriculture*
soil moisture	the water contained in the pore spaces in the unsaturated zone.	*Chemical*
Soil texture	The feel or composition of the soil (sand, silt, or clay) as determined by the size of the soil particles.	*Forestry*
Soil type	Soils that are alike in all characteristics, including texture of the topsoil.	*Forestry*
Soil Vacuum	Also referred to as Soil Vapor Extraction, or Soil Venting. Extraction wells used to deliver a vacuum in the subsurface, pulling toxic vapors to the surface, then treated by an incineration, catalytic, or an absorptive process.	*Petroleum Engineering*
Soil Vapor Extraction	See *Soil Vacuum*.	*Petroleum Engineering*
Soil Venting	See *Soil Vacuum*.	*Petroleum Engineering*
Sol	A general term for liquid colloidal dispersions, as distinguished from true solutions.	*Material Process*
Solar cell	See Photovoltaic cell	*Energy*
Solar collectors	Solar collectors convert the short-wave radiation from the sun into long-wave thermal radiation. A special heat transfer liquid in the collector absorber is heated by the captured sunlight and transported to the solar storage tank, where the transfer liquid releases its heat and is returned to the collector.	*Thermal Management*
Solar constant	The average amount of solar radiation that reaches the earth's upper atmosphere on a surface perpendicular to the sun's rays; equal to 1353 Watts per square meter or 492 Btu per square foot.	*Energy*

Term	Definition	*Industry*
Solar cooling	The use of solar thermal energy or solar electricity to power a cooling appliance. There are five basic types of solar cooling technologies absorption cooling, which can use solar thermal energy to vaporize the refrigerant; desiccant cooling, which can use solar thermal energy to regenerate (dry) the desiccant; vapor compression cooling, which can use solar thermal energy to operate a Rankine-cycle heat engine; and evaporative coolers ("swamp" coolers), and heat-pumps and air conditioners that can be powered by solar photovoltaic systems.	*Energy*
Solar declination	The apparent angle of the sun north or south of the earth's equatorial plane. The earth's rotation on its axis causes a daily change in the declination.	*Energy*
Solar dish	See Parabolic dish	*Energy*
Solar energy	The radiant energy of the sun, which can be converted into other forms of energy, such as heat or electricity.	*Energy*
Solar inverters or Photovoltaic (PV) inverters	convert the variable DC output of the modules into a utility frequency AC current that can be fed into the commercial electrical grid (see Inverter). Solar inverters are categorized into off-grid and grid feeding inverters. Grid feeding inverters are categorized into central inverters, multi-string inverters and string inverters.	*Electrical*
Solar pond	A body of water that contains brackish (highly saline) water that forms layers of differing salinity (stratifies) that absorb and trap solar energy. Solar ponds can be used to provide heat for industrial or agricultural processes, building heating and cooling, and to generate electricity.	*Energy*
Solar power (photovoltaic)	Photovoltaic solar power is generated when the sun's radiation is "harvested" by specially designed panels, which absorb the radiation and emit electrons. Unlike thermal solar plants, photovoltaic power plants generate direct current. This means that before it can be fed into the local grid, photovoltaic power must be converted into alternating current using an inverter. (See also Inverter).	*Electrical*
Solar power (thermal or concentrating solar power)	Solar power is electricity generated using sunlight as its primary energy source. In the case of thermal solar power, the sun's heat is used to heat water, either directly or via a heat-conducting fluid, and generate steam. The steam is then used to generate electricity in the same way as it is used in conventional thermal power stations. Thermal solar power is suitable for large-scale generating plants (e.g., Desertec) and can be used in combination with conventional generation (e.g., gas-fired).	*Electrical*
Solar power tower	A solar energy conversion system that uses a large field of independently adjustable mirrors (heliostats) to focus solar rays on a near single point atop a fixed tower (receiver). The concentrated energy may be used to directly heat the working fluid of a Rankine cycle engine or to heat an intermediary thermal storage medium (such as a molten salt).	*Energy*
Solar radiation	A general term for the visible and near visible (ultraviolet and near-infrared) electromagnetic radiation that is emitted by the sun. It has a spectral, or wavelength, distribution that corresponds to different energy levels; short wavelength radiation has a higher energy than long-wavelength radiation.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Solar spectrum	The total distribution of electromagnetic radiation emanating from the sun. The different regions of the solar spectrum are described by their wavelength range. The visible region extends from about 390 to 780 nanometers (a nanometer is one billionth of one meter). About 99 percent of solar radiation is contained in a wavelength region from 300 nm (ultraviolet) to 3,000 nm(near-infrared). The combined radiation in the wavelength region from280 nm to 4,000 nm is called the broadband, or total, solar radiation.	*Energy*
Solar storage tanks	Bivalent hot water storage tanks, combination storage tanks and buffer storage tanks are used, depending on the purpose to which the generated heat is to be put. Bivalent hot water storage tanks are normally used for solar heating of the domestic water, while buffer storage tanks are used as solar support for the heating system. The combination storage tanks are used for combined heating of the domestic water and support of the heating system.	*Thermal Management*
Solar string inverters	are devices for converting DC to AC power that are designed for high voltage DC inputs. Using a string inverter, the solar panel array with panels typically rated at 12V, 24V or 48V are wired in series, rather than in parallel, i.e., the panels are arrayed in a "string" to produce the same amount of total power, but at higher voltages (typically 200-800V). This means a lower current flows allowing a lighter weight inverter construction [Volts (V) x Amps (A) = Watts (W) or power].	*Electrical*
Solar thermal collector	A device designed to receive solar radiation and convert it to thermal energy. Normally, a solar thermal collector includes a frame, glazing, and an absorber, together with appropriate insulation. The heat collected by the solar collector may be used immediately or stored for later use. Solar collectors are used for space heating; domestic hot water heating; and heating swimming pools, hot tubs, or spas.	*Energy*
Solar thermal collector, high temperature	A collector that generally operates at temperatures above 180 degrees Fahrenheit.	*Energy*
Solar thermal collector, low-temperature	A collector that generally operates at temperatures below 110 degrees Fahrenheit. Typically, it has no glazing or insulation and is made of plastic or rubber, although some are made of metal.	*Energy*
Solar thermal collector, medium-temperature	A collector that generally operates at temperatures of 140 degrees F to 180 degrees Fahrenheit, but can also operate at temperatures as low as 110 degrees Fahrenheit. Typically, it has one or two glazings, a metal frame, a metal absorption panel with integral flow channels or attached tubing (liquid collector) or with integral ducting (air collector) and insulation on the sides and back of the panel.	*Energy*
Solar thermal collector, special	An evacuated tube collector or a concentrating (focusing) collector. Special collectors operate in the temperature range from just above ambient temperature (low concentration for pool heating) to several hundred degrees Fahrenheit (high concentration for air conditioning and specialized industrial processes).	*Energy*
Solar Thermal Electric	A process that generates electricity by converting incoming solar radiation to thermal energy.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Solar thermal panels	A system that actively concentrates thermal energy from the sun by means of solar collector panels. The panels typically consist of fat, sun-oriented boxes with transparent covers, containing water tubes of air baffles under a blackened heat absorbent panel. The energy is usually used for space heating, for water heating, and for heating swimming pools.	*Energy*
Solar thermal parabolic dishes	A solar thermal technology that uses a modular mirror system that approximates a parabola and incorporates two-axis tracking to focus the sunlight onto receivers located at the focal point of each dish. The mirror system typically is made from a number of mirror facets, either glass or polymer mirror, or can consist of a single stretched membrane using a polymer mirror. The concentrated sunlight may be used directly by a Stirling, Rankine, or Brayton cycle heat engine at the focal point of the receiver or to heat a working fluid that is piped to a central engine. The primary applications include remote electrification, water pumping, and grid-connected generation.	*Energy*
Solar thermal systems	Solar thermal systems convert solar energy into useful thermal energy for heating the domestic water and to support the heating system. see Solar collectors see Solar accumulators	*Thermal Management*
Solar trough or solar parabolic trough	See Parabolic trough	*Energy*
Soldering	A metal-joining process in which coalescence is produced by heating to a suitable temperature and by using a nonferrous alloy fusible at temperatures below that of the base metals being joined. The filler metal is distributed between closely fitted surfaces of the joint by capillary action.	*Maintenance and Repair*
Soldering coal	caking coal; coal which on being heated has the property of fusing together (N. Staffs.).	*Mining*
Sole	see Seatearth. (Derbys.).	*Mining*
Sole Sourcing	The only supplier capable of meeting University requirements within the time available, including emergency and other situations which preclude conventional planning and processing.	*Procurement*
Solecism	A violation of etiquette in manner of grammar	*Breakroom*
Solenoid	An electro-magnetic device which positions a hydraulic valve.	*Mechanical, Process, and Operations*
Solenoid Controller (Pulse and Hold)	A programmable device designed to be part of the control circuit in a fluid control system. This device is capable of enhancing solenoid performance; including long on times, high cycle rates, power and heat reduction.	*General Mechanical*
Solenoid Controller (Pulse and Hold)	A programmable device designed to be part of the control circuit in a fluid control system. This device is capable of enhancing solenoid performance; including long on times, high cycle rates, power and heat reduction.	*Mechanical*
Solenoid Pinch Valves	A type of pinch valve that employs electrical energy and a solenoid to actuate the plunger.	*Mechanical*
Solenoid valve	A small electrically operated valve used in the control piping of powered by hydraulic or pneumatic cylinder operators.	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Soles	pieces of timber placed under props to prevent them from sinking into the soft floor when they come under pressure. Also called 'sole pieces'.	*Mining*
Sol-gel processing	Method for forming ceramics and glasses of high density at a relatively low temperature by means of an organometallic solution.	*Material Process*
Solicitation	The document requesting potential suppliers to make offers or submittals to the buyer. Solicitations are also referred to as bid requests or submittal requests. Solicitations at UC Berkeley are generally formatted as a request for information (RFI), request for proposal (RFP) or a request for quotation (RFQ).	*Procurement*
Solid	Mineral that has not been undermined, sheared out, or otherwise prepared for blasting.	*Mining*
Solid Phase Forming	Technique in which a sheet or block of plastic is reshaped under heat and pressure. Forming temperature is below the melt temperature of the plastic.	*Engineering Physics*
Solid solution	Atomic scale intermixing of more than one atomic species in the solid state.	*Material Process*
Solid tubbing or Curbs	circular solid wood tubbing made up of segments of wood 6-8 inched square of oak or elm with joints lined with endways-slit deal.	*Mining*
Solid working	see First working.	*Mining*
Solid-state sensor	One which has no moving parts.	*Reliability Engineering*
Solidus	In a phase diagram, the line below which only a solid phase (s) is (are) present.	*Material Process*
Sollade	a term used by the Somerset miner to mean 'gently'.	*Mining*
Solubility	the amount of mass of a compound that will dissolve in a unit volume of solution.	*Chemical*
Soluble	susceptible of being dissolved in a fluid; capable of solution; as, some substances are soluble in alcohol which are not soluble in water	*Materials Process*
Solute	Species dissolving in a solvent to form a solution.	*Material Process*
Solute Transport	Net flux (amount flowing through a unit area per unit time) of solute through a hydrogeologic unit, controlled	*Petroleum Engineering*
Solute Transport Model	Mathematical model used to predict the movement of solutes in an aquifer through time.	*Petroleum Engineering*
Solution	Uniformly dispersed mixture of the solvent and the solute. The solvent can be water or any other fluid and solute is the dissolved substance.	*Chemical*
Solution gas	For the purposes of BC Oil and Gas Commission guidelines, solution gas is all gas that is separated from oil production.	*Petroleum Engineering*
Solution hardening	Mechanical strengthening of a material associated with the restriction of plastic deformation due to solid solution formation.	*Material Process*
Solution Heat Treatment	Heating an alloy to a suitable temperature, holding at that temperature long enough to allow one or more constituents to enter into solid solution, and then cooling rapidly enough to hold the constituents in solution.	*Maintenance and Repair*
Solution treatment	Heating of a two phase microstructure to a single phase region.	*Material Process*
Solutions	Liquid mixtures that are uniform throughout.	*Chemical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Solvation	Ions in solution are normally combined with at least one molecule of solvent. This phenomenon is termed solvation.	*Electronic Process*
Solvency	Ability of a fluid to dissolve inorganic materials and polymers, which is a function of aromaticity.	*Oil Analysis*
Solvent	A solvent is a liquid that has the ability to dissolve, suspend or extract other materials, without chemical change to the material or solvent. Solvents make it possible to process, apply, clean or separate materials. Water is an inorganic solvent. Organic solvents include hydrocarbon solvents, oxygenated solvents and chlorinated solvents.	*Chemical*
Solvent	A material with a strong capability to dissolve a given substance. The most common petroleum solvents are mineral spirits, xylene, toluene, hexane, heptane, and naphthas. Aromatic-type solvents have the highest solvency for organic chemical materials, followed by naphthenes and paraffins. In most applications, the solvent disappears, usually by evaporation, after it has served its purpose. The evaporation rate of a solvent is very important in manufacture.	*Lubrication*
Solvent Cement Joint	A joint made in thermoplastic piping by the use of a solvent or solvent cement which forms a continuous bond between the mating surfaces.	*Maintenance and Repair*
Solvent extraction	The separation of materials of different chemical types and solubilities by selective solvent action.	*Petroleum Engineering*
Solvent Extraction	A refining process used to separate components (unsaturated hydrocarbons) from lube distillates in order to improve the oil's oxidation stability, viscosity index, and response to additives. The oil and the solvent extraction media are mixed in an extraction tower, resulting in the formation of two phases: a heavy phase consisting of the undesirable unsaturates dissolved in the solvent. And a lighter phase consisting of a high quality oil with some solvent dissolved in it. The phases are separated and the solvent recovered from each by distillation.	*Lubrication*
Solvent extraction-electrowinning (SX-EW)	A metallurgical technique, so far applied only to copper ores, in which metal is dissolved from the rock by organic solvents and recovered from solution by electrolysis.	*Mining*
Solvent Refined Coal (SRC)	A tar-like fuel produced from coal when it is crushed and mixed with a hydrocarbon solvent at high temperature and pressure.	*Energy*
Solvent Refining	A process for extracting lubricant base stocks from stripped heavy gas oil or other heavy, stripped crude stream using selective solvents such as furfural or phenol.	*Lubrication*
SOM	State Operations Manual	*Quality*
Sonde	Electronic device that fits inside the drill head and transmits a signal. Also referred to as a *Transmitter* or *Probe*.	*Petroleum Engineering*
Sone	A unit of loudness.	*Reliability Engineering*
Sonic Velocity	The local speed of sound in the fluid.	*Industrial Engineering*
Soof	see Sough.	*Mining*
Soot	see Smut. (Lancs.).	*Mining*
Sooty coal	dull, danty, soft coal often found near a fault.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
SOP	Standard operation procedure.	*Material Process*
Sorbent canisters	gas-tight canisters typically filled with activated carbon (charcoal) for collection and transport of vapor samples. In the laboratory the vapors are desorbed and analyzed to identify the organic compounds and quantify their concentration.	*Chemical*
Sorbent tubes	glass tubes filled with a sorbent material that reacts chemically with specific organic compounds. Based on the nature of the sorbent and the extent of the chemical reaction, organic compounds can be identified and their concentration quantified.	*Chemical*
Sorbitol (C5H14O6 ½ H2O)	Colorless needles, a polyhydric alcohol used in alkyd resins and phenol-aldehyde resins.	*Material Process*
Sorption	The process to remove solutes from the fluid phase and concentrate them on the solid phase of a medium; used to encompass absorption and adsorption.	*Petroleum Engineering*
Sorption	a general term used to encompass the processes of absorption, adsorption, ion exchange, and chemisorption.	*Chemical*
Sortation Conveyor	Conveyor which is able to sort different packages or products to specific take-away lines.	*Equipment*
Sos	to sink into the floor under great pressure from weight (S. Staffs.).	*Mining*
Sough or Soof	pronounced 'suff'; a water level for draining a mine. (Lancs.); or a wooden trough or channel used for draining water. -see also Adit.	*Mining*
Sound	(1.) An oscillation in pressure, capable of evoking the sensation of hearing. (2.) The sensation of hearing	*Reliability Engineering*
Sound intensity	In a specified direction, the average rate of sound energy flow through a unit area perpendicular to that direction.	*Reliability Engineering*
Sound level	The quantity in dB measured by a standardized Sound Level Meter. The reading is 20 $\log_{10}$ of the ratio between a given sound pressure and 20 micropascals.	*Reliability Engineering*
Sounding	Knocking on a roof to see whether it is sound and safe to work under.	*Mining*
Sour	Natural gas or Crude oil contaminated with sulfur, especially hydrogen sulfide (H2S).	*Petroleum Engineering*
Sour gas	Natural gas containing significant amounts of hydrogen sulfide (H2S). Requires special material treatments to avoid valve failures from sulfide corrosion cracking.	*General Mechanical*
Source	Region in a field-effect transistor that provides charge carriers.	*Material Process*
Source Code	A non-executable program written in a high-level language. A compiler or assembler must translate the source code into object code (machine language) that the computer can understand and process.	*Electrical*
Source Energy	All the energy used in delivering energy to a site, including power generation and transmission and distribution losses, to perform a specific function, such as space conditioning, lighting, or water heating. Approximately three watts (or 10.239 Btus) of energy is consumed to deliver one watt of usable electricity.	*Energy*
Source follower	A device for converting a high impedance electrical signal to low impedance. Also referred to as an "impedance converter." Generally has a voltage gain of unity.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Source Impedance	The combination of resistance and reactance that a source presents to the input terminals of a measuring instrument.	*Reliability Engineering*
Source material	The term "source material" means (1) uranium, thorium, or any other material that is determined by the Atomic Energy Commission pursuant to the provisions of section 61 of the Atomic Energy Act of 1954, as amended, to be source material; or (2) ores containing one or more of the foregoing materials, in such concentration as the Commission may by regulation determine from time to time.	*Energy*
Source Nipple	A short length of heavy-walled pipe between high-pressure mains and the first valve of bypass, drain, or instrument connections.	*Maintenance and Repair*
Source Rock	Sedimentary rock, such as shale, which has a high TOC (Total Organic Content) is believed to be the "mother rock" or source of hydrocarbons found in most of the world's major oilfields. The Eagle Ford Shale is believed to be the "source rock" for much of the oil found in South and Eastern Texas.	*Petroleum Drilling*
Source water	Operators may withdraw water from surface or ground water sources themselves or may purchase it from suppliers.	*Petroleum Drilling*
Sourdough	A highly experienced miner who has prospected for many years.	*Mining*
South	Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.	*Energy*
South Atlantic	Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia;	*Energy*
South Devon	were brought to the United States in 1969. South Devons are available both horned and polled.	*Agriculture*
South Devon	A distinct breed of beef cattle in England dating to the 16th century. The first	*Agriculture*
South Region	South Atlantic division, East South Central division and West South Central division	*Energy*
Southdown	A breed of sheep developed in Sussex, England during the late 1700 and early 1800s'. First imported to the United States (Pennsylvania) in 1824.	*Agriculture*
Southern	Mobile, AL, Savannah, GA, Miami, FL, Tampa, FL, New Orleans, LA, Wilmington, NC, San Juan, PR, Charleston, SC, Dallas-Fort Worth, TX, El Paso, TX, Houston-Galveston, TX, Laredo, TX, Virgin Islands.	*Energy*
Southern Appalachian Region	Consists of Alabama, and the Tennessee counties of: Bledsoe, Coffee, Franklin, Grundy, Hamilton, Marion, Rhea, Sequatchie, Van Buren, Warren, and White.	*Energy*
Sow	Adult female swine.	*Agriculture*
Sow back	a ridge in the roof or the floor of a mine. (Scot.).	*Mining*
Soybeans	Seeds of bean plants, originally Asiatic, is used as a source of a semidrying oil and a meal of high protein content.	*Material Process*
sp gr	Specific gravity	*General*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Space heating	The use of energy to generate heat for warmth in housing units using space-heating equipment. The equipment could be the main space-heating equipment or secondary space-heating equipment. It does not include the use of energy to operate appliances (such as lights, televisions, and refrigerators) that give off heat as a byproduct.	*Energy*
Spacer Spool	Pressure control equipment having end connections and an extended body, used to raise or space apart blowout preventers or even wellheads and choke manifolds.	*Petroleum Engineering*
Spad	A spad is a flat spike hammered into a wooden plug anchored in a hole drilled into the mine ceiling from which is threaded a plumbline. The spad is an underground survey station similar to the use of stakes in marking survey points on the surface. A pointer spad, or sight spad, is a station that allows a mine foreman to visually align entries or breaks from the main spad.	*Mining*
Spall	A flake or chip of metal; removed from one of the races of a rolling-element bearing. That bearing is nearing the end of its useful life.	*Reliability Engineering*
Spalling	Severe damage characterized by large pits, cavities and related cracks; related to overload and fatigue.	*Lubrication*
Spalling (concrete)	the complete failure of concrete due to the expansive forces caused by the formation of corrosion products on unprotected reinforcement bars	*Materials Process*
Span	The difference between the upper and lower limits of a range expressed in the same units as the range.	*Electrical*
Span	The algebraic difference between limits of the pressure range.	*Electrical Engineering*
Span Adjustment	The ability to adjust the gain of a process or strain meter so that a specified display span in engineering units corresponds to a specified signal span. For instance, a display span of 200°F may correspond to the 16 mA span of a 4–20 mA transmitter signal.	*Electrical*
Span Adjustment	The ability to adjust the gain of a process or strain meter so that a specified display span in engineering units corresponds to a specified signal span. For instance, a display span of 200°F may correspond to the 16 mA span of a 4-20 mA transmitter signal.	*Electronic Process*
Span beam	a long wooden beam that supported the top axle pivot of a gin drum.	*Mining*
Spangle	the characteristic crystalline form exhibited by the solidified, hot-dipped zinc coating	*Materials Process*
Spare	A connector point reserved for options, specials, or other configurations. The point is identified by an (E#) for location on the electrical schematic.	*General Engineering*
Spare face	a face kept in reserve in case of production shortfalls in other parts of the colliery.	*Mining*
Spare Part	Any component or equipment intended to restore a corresponding one in order to restore the original required function of the component or equipment.	*Maintenance*
Spare Part Management	See Inventory Management.	*Maintenance*
Spares	wooden wedges driven up behind the backing deals, to produce side pressure and tighten the whole shaft support structure. -see also Baff-ends.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Spares provisioning	The stocking of spare units or components based on the anticipated number of failures for a given mission or length of operation.	*Reliability Engineering*
Sparge	injection of air below the water table to strip dissolved volatile organic compounds and/or oxygenate the groundwater to facilitate aerobic biodegradation of organic compounds.	*Chemical*
Spark spread	A measurement of the difference between the price that a generator can obtain from selling one megawatt hour (MWh) of electricity and the cost of the natural gas needed to generate the MWh of electricity. Spark spread is a measure of potential profit for generating electricity on a particular day.	*Energy*
Spark Test	A test designed to locate pin-holes in an insulated wire by application of an electrical potential across the material for a very short period of time while the wire is drawn through an electrode field.	*Electrical*
Sparky	a large electric hand lamp introduced into the mines about 1910. The lamp was heavy and cumbersome and was replaced by the electric cap lamp. (Scots.).	*Mining*
Spatter	In arc and gas welding, the metal particles expelled during welding that do not form part of the weld.	*Maintenance and Repair*
Spatter Loss	Difference in weight between the amount of electrode consumed and the amount of electrode deposited.	*Maintenance and Repair*
Spavin	clunch or the under-clay beneath the coal seam. (Yorks.).	*Mining*
SPC	Statistical Process Control.	*Control Engineering*
SPDT	Single-Pole, Double-Throw - See definition of SPST.	*Mechanical*
Spear wedges	long vertical tapered wedges, usually of pitch pine, driven down between the rock and the back of tubbing at the joints and centers of the segments to assist in centralizing.	*Mining*
Spears or Sliding spears	the ridged guide rails for the cage. (Leics.), (N. East); or wooden rods used to suspend pumps in the shaft during sinking. A Spear is also a wooden pumping rod.	*Mining*
Special Class	A term applied to a Class designated threaded or weld end valve, where the body and cover have been subjected to non-destructive examination (NDE) and any defects removed. This allows the valve to have a higher pressure capacity than a standard class valve.	*Industrial Engineering*
Special contract rate schedule	An electric rate schedule for an electric service agreement between a utility and another party in addition to, or independent of, any standard rate schedule.	*Energy*
Special naphthas	All finished products within the naphtha boiling range that are used as paint thinners, cleaners, or solvents. These products are refined to a specified flash point. Special naphthas include all commercial hexane and cleaning solvents conforming to ASTM Specification D1836 and D484, respectively. Naphthas to be blended or marketed as motor gasoline or aviation gasoline, or that are to be used as petrochemical and synthetic natural gas (SNG) feedstocks are excluded.	*Energy*
Special nuclear material	The term "special nuclear material" means (1) plutonium, uranium enriched in the isotope 233 or in the isotope 235, and any other material that the Atomic Energy Commission, pursuant to the provisions of section 51 of the Atomic Energy Act of 1954, as amended, determines to be special nuclear material, but does not include source material; or (2) any material artificially enriched by any of the foregoing, but does not include source material.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Special purpose rate schedule	An electric rate schedule limited in its application to some particular purpose or process within one, or more than one, type of industry or business.	*Energy*
Specialized register	In The Cochrane Collaboration this is a database of bibliographic references to studies relevant to a Cochrane Review Group or Field, that is maintained at the editorial base. Software such as ProCite, or Reference Manager is used to manage the database. Once a relevant report of a study is identified, it is coded and entered onto the register. Wherever possible, relevant study reports are downloaded directly into the register from an electronic database such as MEDLINE. Information about unpublished and ongoing studies is also included in these registers. When specialized registers only contain reports of controlled trials (such as randomized controlled trials, or controlled clinical trials), they are sometimes referred to as trials registers. Also called: Register of controlled trials, Trials register	*Quality Engineering*
Specialty Steel	Steels such as electrical, alloy or stainless steels. These generally are produced in smaller volumes to meet the specific needs of customers.	*Metallurgy*
Species	a group of living things that share common biological characteristics	*Agriculture*
Species	A group of related organisms having common characteristics.	*Forestry*
Specific Capacity	Rate of water discharge from the well divided by the drawdown within the well.	*Petroleum Engineering*
Specific Dielectric Strength	The dielectric strength per millimeter of thickness of an insulating material.	*Electrical*
Specific Discharge	Volume of water flowing through a cross-sectional area of an aquifer	*Petroleum Engineering*
Specific Drawdown	Drawdown within a well, divided by the discharge rate of water from the well (inverse of specific capacity).	*Petroleum Engineering*
Specific gravity	the dimensionless ratio of the density of a substance with respect to the density of water. The specific gravity of water is equal to 1.0 by definition. Most petroleum products have a specific gravity less than 1.0, generally between 0.6 and 0.9. As such, they will float on water--these are also referred to as LNAPLs, or light non-aqueous phase liquids. Substances with a specific gravity greater than 1.0 will sink through water--these are referred to as DNAPLs, or dense non-aqueous phase liquids.	*Chemical*
Specific gravity	The weight of a substance compared with the weight of an equal volume of pure water at 4 degrees Celsius.	*Mining*
Specific Gravity	The ratio of the weight of a given volume of a substance to that of an equal volume of water at the same temperature. The temperature selected varies among industries, 15°C (60°F) being the usual standard.	*Engineering Physics*
Specific gravity (liquid)	The ratio of the weight of a given volume of liquid to the weight of an equal volume of water. Specific Gravity = Centistokes	*Oil Analysis*
Specific gravity, Liquid	The ratio of the weight of a given volume of liquid to the weight of an equal volume of water.	*Mechanical, Process, and Operations*
Specific Heat	The ratio of thermal energy required to raise the temperature of a body 1° to the thermal energy required to raise an equal mass of water 1°.	*General*
Specific Heat	The amount of heat required to raise a specified mass by one unit of a specified temperature, usually expressed as Btu/lb/°F. or cla/g/°C.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Specific Inductance Capacitance	That property of a dielectric material which determines how much electrostatic energy can be stored per unit volume when unit voltage is applied.	*Electrical*
Specific or Unique Rating	The design pressure and temperature conditions of a piping system do not fall within the pressure-temperature ratings of above-described rating systems, the designer may assign a specific rating to the piping system. Examples of such applications include main steam or hot reheat piping of a power plant, whose design pressure and design temperature may exceed the pressure-temperature rating of ASME B16.5 Class 2500 flanges. It is normal to assign a specific rating to the piping. This rating must be equal to or higher than the design conditions. The rating of all pressure-containing components in the piping system must meet or exceed the specific rating assigned by the designer.	*Maintenance and Repair*
Specific Resistance	The resistance of a unit conductor having a length of one foot and a cross-sectional area of one circular mil.	*Electrical*
Specific Retention	The ratio of the volume of water a particular body of rock or soil will hold, against the pull of gravity to the volume of the body itself; usually expressed as a percentage.	*Petroleum Engineering*
Specific Storage	Amount of water released from or taken into storage, per unit volume of a porous medium per unit change in head.	*Petroleum Engineering*
Specific strength	Strength per unit density.	*Material Process*
Specific surface area	Internal surface area of a porous structure given in area per unit volume, which yields the unit one over unit length. Often used to characterize the structure of porous catalysts.	*Chemical*
Specific Volume	The volume of a unit mass of a fluid is its specific volume, and it is measured in cubic feet per pound mass (ft3 /lbm).	*Maintenance and Repair*
Specific Yield	Volume of water that a saturated rock or soil will yield by gravity (synonym for effective porosity or storage coefficient of unconfined aquifers).	*Petroleum Engineering*
Specification	A document that defines the requirements that a finished product must conform to - may include chemical and mechanical properties, tolerances, marking, shipping, etc.	*Mechanical*
Specifications	Documents (the USA military service once had as many as 28,000 specifications) that describe products or services, for the purpose of procurement. Differs from standards.	*Reliability Engineering*
Specificity	1. [In screening/diagnostic tests:] A measure of a test's ability to correctly identify people who do not have the disease. It is the proportion of people without the target disease who are correctly identified by the test. It is the complement of the false positive rate (FPR=1-specificity). It is calculated as follows: Specificity = Number without disease who have a negative test/Number without disease. 2. [In trial searching:] There is no equivalent concept in trial searching, as we do not know the total number of irrelevant articles in existence. The concept of precision is usually used instead.	*Quality Engineering*
Specificity (of a diagnostic test)	The proportion of truly nondiseased persons, as measured by the gold standard, who are so identified by the diagnostic test under study.	*Analysis*
Specimen	"Material available for analysis." [IFCC]	*Quality*
Spectral Filter	A filter which allows only a specific band width of the electromagnetic spectrum to pass, i.e., 4 to 8 micron infrared radiation.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Spectral map	A three-dimensional plot of amplitude (Z axis) vs. time (or shaft speed) (Y axis) vs. frequency (X axis)	*Reliability Engineering*
Spectral width	A range of wave lengths.	*Material Process*
Spectrographic analysis	Determines the concentration of elements represented in the entrained fluid contaminant.	*Oil Analysis*
Spectrographic Oil Analysis Program (SOAP)	Procedures for extracting fluid samples from operating systems and analyzing them spectrographically for the presence of key elements.	*Oil Analysis*
Spectrum	The resolving of overall vibration into amplitude components as a function of frequency.	*General*
Spectrum Analysis	Utilizing frequency components of a vibration signal to determine the source and cause of vibration.	*General*
Spectrum analyzer	An instrument which displays the frequency spectrum of an input signal, usually amplitude vertical vs. frequency horizontal.	*Reliability Engineering*
Specular reflection	Light reflection relative to the average surface.	*Material Process*
Specular reflectors	Specular reflectors have mirror like characteristics (the word "specular" is derived from the Greek word meaning mirror). The most common materials used for ballasts, the devices that turn on and operate Fluorescent tubes, are aluminum and silver. Silver has the highest reflectivity; aluminum has the lowest cost. The materials and shape of the reflector are designed to reduce absorption of light within the fixture while delivering light in the desired angular pattern. Adding (or retrofitting) specular reflectors to an existing light fixture is frequently implemented as a conservation measure.	*Energy*
Specular Scan	A reflective scan technique in which reflection from a shiny surface illuminates the photosensor, which must be precisely positioned to receive the reflected light. The angle of incidence equals the angle of reflection.	*Electrical Engineering*
Speculative resources (coal)	Undiscovered coal in beds that may occur either in known types of deposits in a favorable geologic setting where no discoveries have been made, or in deposits that remain to be recognized. Exploration that confirms their existence and better defines their quantity and quality would permit their reclassification as identified resources.	*Energy*
Speculative resources (SR)	Uranium in addition to **EAR** that is thought to exist, mostly on the basis of indirect evidence and geological extrapolations, in deposits discoverable with existing exploration techniques. The location of deposits in this category can generally be specified only as being somewhere within given regions or geological trends. The estimates in this category are less reliable than estimates of **RAR** and **EAR**. *Note*: **SR** corresponds to the combination of DOE's possible potential resources and speculative potential resources categories.	*Energy*
Speculative resources (uranium)	Uranium in addition to Estimated Additional Resources (EAR) that is thought to exist, mostly on the basis of indirect evidence and geological extrapolations, in deposits discoverable with existing exploration techniques. The locations of deposits in this category can generally be specified only as being somewhere within given regions or geological trends. The existence and size of such deposits are speculative. The estimates in this category are less reliable than estimates of EAR. SR corresponds to DOE's Possible Potential Resources plus Speculative Potential Resources categories.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Speed	Scalar velocity.	*Aeronautical Engineering*
Speed cue	Flight director cue to control speed; in fixed-wing aircraft, a throttle cue; in rotary-wing aircraft, a longitudinal cyclic cue.	*Aeronautical Engineering*
Speed error	A basic output from guidance to flight director, indicating the difference between actual speed and desired speed; Symbols: DELTA V; Typical Units: ft/s, kt; Dimensions: Length/Time.	*Aeronautical Engineering*
Speed For Printers	How many labels it prints per seconds. May be measured by how many centimeters the printer prints per second.	*Gears*
Speed of a Synchronous Machine	The rate at which its shaft rotates, is dictated by the frequency of electricity in the grid to which it is connected. The speed of a synchronous machine is accurately predictable. This means that it maintains its speed irrespective of the load placed on it. Because synchronous motors can maintain a particular speed with extreme accuracy, they are used in performance-critical applications such as mechanical clocks and DVD drives. Synchronous generators are commonly used in power plants, where their predictable, consistent performance helps to maintain the quality and reliability of power supplies. The speed of an asynchronous machine is slightly slower than the frequency of the electricity it consumes or generates. Asynchronous motors slow down as their load increases and asynchronous generators change speed with the torque (rotational force) that is applied to their rotors. A synchronous machines are also referred to as induction motors/generators.	*Electrical*
Speed Reducer	A power transmission mechanism designed to provide a speed for the driven equipment less than that of the prime mover. Speed reducers may have either constant speed or adjustable speed. They are generally totally enclosed to retain lubricant	*Equipment*
Spelter	The zinc of commerce, more or less impure, cast from molten metal into slabs or ingots.	*Mining*
Spent fuel	Irradiated fuel that is permanently discharged from a reactor. Except for possible reprocessing, this fuel must eventually be removed from its temporary storage location at the reactor site and placed in a permanent repository. Spent fuel is typically measured either in metric tons of heavy metal (i.e., only the heavy metal content of the spent fuel is considered) or in metric tons of initial heavy metal (essentially, the initial mass of the fuel before irradiation). The difference between these two quantities is the weight of the fission products.	*Energy*
Spent fuel disassembly hardware	The skeleton of a fuel assembly after the fuel rods have been removed. Generally, SFD hardware for PWR assemblies includes guide tubes; instrument tubes, top and bottom nozzles; grid spacers; hold-down springs; and attachment components, such as nuts and locking caps. For BWR fuel assemblies, SFD hardware includes the top and bottom tie plates, compression springs for individual fuel rods, grid spacers, and water rods.	*Energy*
Spent liquor	The liquid residue left after an industrial process; can be a component of waste materials used as fuel.	*Energy*
Sperm or Spurn	a knob of coal left in under the holing (N. Staffs.).	*Mining*
Sphalerite	A zinc sulfide mineral; the most common ore mineral of zinc.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Spherical error probability (SEP)	A probability that a percentage of three-dimension measurements will lie within a sphere of given radius, with the sphere centered at truth or mean of the measurements; SEP specifies test cases for measurement errors of sensors of three dimensions, such as velocity east, north, and vertical. Compare: circular error probability, radial error probability.	*Aeronautical Engineering*
Spherulites	A rounded aggregate of radiating crystal lamella. Spherulites are present in most semicrystalline plastics. They originate from a nucleus such as particle of contaminant, catalyst residue, or a chance fluctuation in density. They may grow through stages: first needles, then bundles and sheaflike aggregates, and finally the spherulites. Spherulites may range in diameter from a few tenths of a micron to several millimeters.	*Engineering Physics*
Spider	1. In a molding press, that part of an ejector mechanism, which operates the ejector pins. 2. In extrusion, term used to denote the arms supporting a mandrel within the head and die assembly. 3. In rotational molding, the gridwork of metallic members supporting cavities in a multi-cavity mold.	*Engineering Physics*
Spider Lines	In blow molding or film extrusion, vertical marks on the parison molded part of film caused by improper welding of several melt flow fronts formed by the legs with which the torpedo is fixed in the extruder head.	*Engineering Physics*
Spiles	see Piles. Spile wedges are half wedges driven into the packing behind a wedging crib after it has received as many full-sized wedges as can be driven in.	*Mining*
Spill plates	metal plates on the side of face conveyors to stop coal spillage.	*Mining*
Spillway	A passage for surplus water to flow over or around a dam.	*Energy*
Spin	a theoretical concept that enable individual electrons within sublevels to be distinguished from each other	*Physics*
Spin Resistant	An abandoned term referring to a ROTATION-RESISTANT rope of the 8 x 19 classification.	*Wire Rope & Cable*
Spindle oil	A light-bodied oil used principally for lubricating textile spindles and for light, high-speed machinery.	*Oil Analysis*
Spinel	Compound crystal structure.	*Material Process*
Spinneret	A metal plate with holes through which plastics material passes into a solidifying medium, to form filaments or fibers.	*Material Process*
Spinning Reserve	Reserve generating capacity running at zero load.	*Energy*
Spin-on Filter	A throw-away type bowl and element assembly that mates with a permanently installed head.	*Lubrication*
Spiral drum	see Scroll drum.	*Mining*
Spiral Flow Test	A method for determining the flow properties of a thermoplastic or thermosetting resin based on the distance it will flow under controlled conditions of pressure and temperature along a spiral runner of constant cross section. The test is usually performed with a test mold, which the material is fed at the center of the spiral cavity.	*Engineering Physics*
Spiral Groove	A continuous helical groove that follows a path on and around a drum face, similar to a screw thread. See DRUM.	*Wire Rope & Cable*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Spiral Mold Cooling	A method of cooling injection molds or similar molds wherein the cooling medium flows through a spiral cavity in the body of a mold. In injection molds, the cooling medium is introduced at the center of the spiral, near the sprue section, as more heat is localized in this section.	*Engineering Physics*
Spiral Wound Gasket	A type of gasket that is made by winding V-section metal strip and a softer filler material together. Support or retaining rings, inside and/or outside the spiral, improve the gasket's handling and fitting. The filler material used is typically graphite or PTFE. The metal strip and retaining rings being typically made from stainless steel.	*Maintenance*
Spiral Wrap	A term given to describe the helical wrap of a tape or thread over a core.	*Electrical*
Spiral-Riveted	A method of manufacturing pipe by coiling a plate into a helix and riveting together the overlapped edges.	*Maintenance and Repair*
Spiral-Welded	A method of manufacturing pipe by coiling a plate into a helix and fusion-welding the overlapped or abutted edges.	*Maintenance and Repair*
Spiral-Welded Pipe	Pipe made by the electric-fusion-welded process with a butt joint, a lap joint, or a lock-seam joint.	*Maintenance and Repair*
Spires	a dull, hard, slaty coal that was hard to work, breaking into vertical columns or spires.(Leics.).	*Mining*
Spirey coal	dull, finely banded coal, sometimes breaking into vertical columns. (Yorks.).	*Mining*
S-plane	Continuous complex frequency plane; S-plane is used in control systems engineering in the design of control laws See Also: Laplace transform.	*Aeronautical Engineering*
Splash bar	Horizontal component of a fill deck, which constitutes the principal splash surface.	*Facility Engineering*
Splash line	straight line painted or chalked on the roof of a roadway or the face to aid in aligning machinery.	*Mining*
Splash lubrication	A system of lubrication in which parts of a mechanism dip into and splash the lubricant onto themselves and/or other parts of the mechanism.	*Lubrication*
Splash Seals	Internal plunger seal and external mounting seal guard against spills and debris, prevent contaminants from entering valve, and allow for cleaning without disassembly.	*Mechanical*
Splasher or Splash plate	Used in a gravity distribution system to receive water from a down spout and effect uniform spreading of the water over the wetted area of the tower.	*Facility Engineering*
Splice	A joint used for connecting two lengths of conductor or cable with good mechanical strength as well as good conductivity.	*Electrical*
Splint coal	hard gray coal with a slatey structure and uneven cross-fracture that burns away to a powdery ash without caking, similar to cannel. Sometimes called 'splent' coal. Suitable for blast furnaces. (Scot.); and utilized in steam engines. (N. East).	*Mining*
Split	The shareholder-approved division of a company's outstanding common shares into a larger number of new common shares.	*Mining*
Split	Any division or branch of the ventilating current. Also, the workings ventilated by one branch. Also, to divide a pillar by driving one or more roads through it.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Split bar	see Half bar.	*Mining*
Split Body	A valve whose body is split. This design allows for easy plug and seat removal. Split-bodied valves are made in both the straight-through and angle versions.	*Industrial Engineering*
Split Cavity Mold	A mold cavity designed with sections.	*Engineering Physics*
Split chase mold or split ring mold	A mold in which the chase contains an assembly of two or more parts to form undercuts in a molded piece. These parts are removed from the chase with the piece and then separated from the piece.	*Material Process*
Split die	A type of die construction where the two pieces are split vertically to make possible the forging of shapes with cavities or undercut details.	*Metallurgy*
Split ring mold	A mold in which a split cavity block is assembled in a chase to permit the forming of undercuts in a molded piece.	*Material Process*
Split Ring Mold	A mold in which a split cavity block is assembled in a chase to permit the forming of undercuts in a molded piece. These parts are ejected from the mold and then separated from the piece.	*Engineering Physics*
Split system	When applied to electric air-conditioning equipment, it means a two-part system--an indoor unit and an outdoor unit. The indoor unit is an evaporator coil mounted in the indoor circulating air system, and the outdoor unit is an air-cooled condensing unit containing an electric motor-driven compressor, a condenser fan, and a fan motor.	*Energy*
Split tails	Use of one tails assay for transaction of enrichment services and a different tails assay for operation of the enrichment plant. This mode of operations typically increases the use of uranium, which is relatively inexpensive, while decreasing the use of separative work, which is expensive.	*Energy*
Split-Ranging	Action in which two or more final control elements are actuated by a single controller output. For example, in a heating circuit, 0-50% of the controller output operates a primary heat source and the 50-100% portion of the controller output operates a secondary heat source.	*Electrical Engineering*
Split-the-savings	The basis for settling economy-energy transactions between utilities. The added cost of the supplier are subtracted from the avoided costs of the buyer, and the difference is evenly divided.	*Energy*
Spoil	stone, shale, bad coal, dirt and any other rubbish sent out of the mine; or a stratum of mixed coal and dirt.	*Mining*
Spoil heap or Spoil bank	the colliery waste tip. Also called a 'tip', 'waste tip', 'waste heap', dirt tip', 'dirt heap', 'pit heap', 'pit tip', 'spoil heap' or a 'bing' in Scotland.	*Mining*
Spoiler	A control surface on fixed-wing aircraft, usually mounted to the wings, that provides roll control and lift; Symbols: delta sub S; Typical Units: rad, deg.	*Aeronautical Engineering*
Spoiler	A control surface on fixed-wing aircraft, usually mounted to the wings, that provides roll control and lift; Symbols - delta sub S; Typical Units - rad, deg.	*Aeronautical Engineering*
Spongiosis	also known as graphitization is a form of corrosion found only in gray cast iron.	*Material Process*
Spontaneous polarization	Spontaneous polarization A sharp rise in polarization in a ferroelectric material, due to a modest field application.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Spontaneous Combustion or Spon Com	see Heatings, Also known as 'breeding fire' in South Staffordshire.	*Mining*
Spontaneous combustion, or self-heating, of coal	A naturally occurring process caused by the oxidation of coal. It is most common in low-rank coals and is a potential problem in storing and transporting coal for extended periods. Factors involved in spontaneous combustion include the size of the coal (the smaller sizes are more susceptible), the moisture content, and the sulfur content. Heat buildup in stored coal can degrade the quality of coal, cause it to smolder, and lead to a fire.	*Energy*
Spool	A term loosely applied to almost any moving cylindrically shaped part of a hydraulic component which moves to direct now through the component.	*Mechanical, Process, and Operations*
Spool – Blast	(Blast Spool) A term applied to Choke Manifolds, a specially manufactured spool attached directly to the outlet connection of a Drilling Choke to provide protection from the effects of high velocity fluid erosion.	*Petroleum Engineering*
Spool Conveyor	A conveyor where power to the rollers is accomplished by o-rings driven by spools on a rotating shaft. (138-SP, 190-SP, 2514-SP)	*Manufacturing*
Spool Directional Valve	A valve designed as a spool which slides in a bore, opening and closing passages.	*Mechanical, Process, and Operations*
Spool piece	See "Adapter Spool"	*Mechanical*
Spore	A special hard, shell-like cell structure of a rod-shaped bacteria which has an inactive form, and is the most resistant of all living things to heat, chemicals and drying. Can only be destroyed by sterilization.	*Chemistry*
Spore	A specialized structure consisting of one or few cells and serving any or all of the following three functions: (i) reproduction, (ii) dissemination. (iii) survival.	*Forestry*
Spores	Reproductive cell.	*Agriculture*
Sporophore	A spore-producing or supporting structure.	*Forestry*
Spot Market	Short-term purchases of electricity from surpluses available for a short time.	*Energy*
Spot market (natural gas)	A market in which natural gas is bought and sold for immediate or very near-term delivery, usually for a period of 30 days or less. The transaction does not imply a continuing arrangement between the buyer and the seller. A spot market is more likely to develop at a location with numerous pipeline interconnections, thus allowing for a large number of buyers and sellers. The Henry Hub in southern Louisiana is the best known spot market for natural gas.	*Energy*
Spot market (uranium)	Buying and selling of uranium for immediate or very near-term delivery. It typically involves transactions for delivery of up to 500,000 pounds U_3O_8 within a year of contract execution.	*Energy*
Spot material	Metal or finished products available for prompt delivery.	*Metallurgy*
Spot price	The price for a one-time open market transaction for near-term delivery of a specific quantity of product at a specific location where the commodity is purchased at current market rates. See also spot market terms associated with specific energy types.	*Energy*
Spot price	Current delivery price of a commodity traded in the spot market.	*Mining*
Spot Purchases	Single shipment of fuel purchased for delivery within 1 year.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Spot Size	The diameter of the circle formed by the cross section of the field of view of an optical instrument at a given distance. Spurious Error: Random or erratic malfunction.	*Electrical*
Spot-market price	See spot price.	*Energy*
Spotter	A carpet stain remover.	*Chemistry*
Spotters	Teams on an oval track will usually have crew members on top of the grandstand where they can see the entire track and warn drivers of an accident or advise them where to go in traffic.	*NASCAR*
Spout	a short heading in the Thick Coal connecting the main road with the air road (S. Staffs.).	*Mining*
Spout road	a cundie, a roadway so steep that the coal could slide down it from the upper workings to the main haulage road to be loaded into hutches. (Scot.).	*Mining*
SPP	See Small Power Producer	*Energy*
SPR	See Strategic Petroleum Reserve.	*Energy*
Sprag	a support placed in the undercut part of a seam and in front of the coal to support it. -see Nogs; or a wedge placed under the wheel of a tub; or a short piece of wood or iron put between the spokes of the wheel of a tub to stop it from moving or to slow its progress when going down an incline. Pronounced 'spreg' in Somerset.	*Mining*
Spray Buff	An intermediate floor care procedure that cleans, removes black marks and shines the wear areas of a floor. Utilizes a sprayed solution, a floor machine and a synthetic floor pad.	*Chemistry*
Spray Chamber	A chamber in which the spraying process is carried out. It may merely be an acoustic chamber for plasma spraying or a vacuum chamber for vacuum plasma spraying.	*Paint and Coatings*
Spray Dried Powder	Powder formed by the spray drying process.	*Paint and Coatings*
Spray nozzle	Device used in a distribution system to break up the flow of the circulating water into droplets and effect uniform spreading of the water over the wetted area of the tower.	*Facility Engineering*
Spray-filled water-cooling tower	A tower, which has no fill, and water to air contact depends entirely on the break-up of the water by means of pressure spray nozzles.	*Facility Engineering*
Spray-fused Coatings	A process in which the coating material is deposited by flame spraying and then fused into the substrate by the addition of further heat. This can be applied by flame, induction heating or by laser.	*Paint and Coatings*
Sprays	the pit head baths. (Scot.); or water jets used to suppress dust when cutting coal, or stone and shale, with machines. Also used over the delivery end of a conveyor belt.	*Mining*
Spread	The amount of resin or glue applied in producing plywood or similar laminated materials. Usually expressed in pounds (dry glue basis) per thousand square feet.	*Material Process*
Spreading	Flow of filler and resin of a thermosetting plastic during curing.	*Material Process*
Spring wheat	Wheat that is planted in the spring and harvested the following summer.	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Spring wheat	Wheat that is planted in the spring and harvested in late summer. (In some areas with mild winters, spring wheat may be planted in the fall, but it differs from winter wheat in not having a requirement for cold temperatures to produce seed.)	*Agriculture*
Sprocket	A wheel with suitably shaped and spaced cogs or teeth to engage with the links of a chain.	*Equipment*
SPRT	SPRT stands for sequential probability ratio test. This is a type of accept/reject sequential testing in which accept/reject boundaries are defined by the user and units are sequentially tested until either the accept boundary or the reject boundary have been reached, and a decision is made about the suitability of the units.	*Reliability Engineering*
Sprue	In an injection or transfer mold, the main feed channel that connects the mold filling orifice with the runners leading to each cavity gate. The term is also used for the piece of plastic material formed in this channel.	*Engineering Physics*
Sprue Bushing	A hardened steel insert in an injection mold, which contains the tapered sprue, hole and has a suitable seat for the nozzle of the injection cylinder. Sometimes called an adapter.	*Engineering Physics*
Sprue Gate	A passageway through which molten resin flows from the nozzle to the mold cavity.	*Engineering Physics*
Sprue Gates	runners formed of molding material during the molding operation.	*Material Process*
Sprue Puller	A pin having a Z-shaped slot undercut in its end, by means of which it serves to pull the sprue out of the sprue bushing.	*Engineering Physics*
SPST	Single-Pole, Single Throw - Refers to the function of an electrical switch often used in the control system of electric valve operators.	*Mechanical*
Spudding In	The first boring of the hole in the drilling of an oil well.	*Petroleum Drilling*
Spud-in	The operation of drilling the first part of a new well.	*Petroleum Drilling*
Spud-in	The operation of drilling the first part of a new well.	*Petroleum Drilling*
Spunney or Spunney brow	a haulage incline or 'jinney'. (Lancs.).	*Mining*
Spur	A gravity or powered conveyor section to switch unit loads to and from the main line.	*Equipment*
Spur gear	The simplest of gears - in a gear set, the pinion and ring gear are aligned on parallel shafts. Can be added to another gear operator to further increase the mechanical advantage afforded by the gear.	*General Mechanical*
Spur Gear	The simplest variation of gear. It consists of a cylinder or disk, with the teeth projecting radially. Each tooth edge is straight and aligned parallel to the axis of rotation. Such gears can be meshed together correctly only if they are fitted to parallel axles.	*Lubrication*
Spur or Spurring	a pillar of uncut coal left in place to support the coalface when holing or undercutting. The spur would be hacked out to allow the main body of coal to fall. (Scot.).	*Mining*
Spurious Error	Random or erratic malfunction.	*General*
Spurns	when kirving, cutting a groove down each side of a block of coal, the hewer would leave in place small ties, called spurns, connecting the block of coal to the main body of coal. This would insure against any sideways movement, when he began under-cutting the coal (S. Staffs.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Sputtering	This is a glow discharge process whereby bombardment of a cathode releases atoms from the surface which then deposit onto a nearby target surface to form a coating.	*Paint and Coatings*
sq ft	Square foot	*General*
Square operating nut	A nut, usually 2" x 2", which is attached to a valve stem or the pinion shaft of a gear operator allowing use of wrenches to quickly operate the valve.	*Mechanical*
Square set	A set of timbers used for support in underground mining, consisting of cap, girt and post.	*Mining*
Square Set	A set of timbers used for support in underground mining.	*Mining*
Square sets	straight girders used at road junctions to support the roof.	*Mining*
Square work	a system of working by cutting the district into square blocks or pillars, i.e. pillar and stall working; or an old system of working the Staffordshire Thick Coal that consists of initially driving two roads from a pair of levels in the lower portion of the seam followed by simultaneously getting down the top coal and the extraction of square areas of coal, resulting in what was called a 'side of work'.	*Mining*
Square-Groove Weld	A groove weld in which the pipe ends are not chamfered. Square-groove welds are generally used on piping and tubing of wall thickness no greater than $\frac{1}{8}$ in (3 mm).	*Maintenance and Repair*
Squat Lads	Before the advent of the safety lamp and adequate ventilation, flare ups of gas and explosions were quite common. The cry 'Squat lads!' would send the men diving to the floor in the hope that the blast and flame would pass over them.	*Mining*
Squeak	A sound resembling that of an unlubricated hinge. A sound made by PVC or other material rubbing on glass, i.e. a windshield.	*Reliability Engineering*
Squeegee	An instrument used to spread a thin film of plastic coating over an article.	*Material Process*
Squeeze	The settling, without breaking, of the roof and the gradual upheaval of the floor of a mine due to the weight of the overlying strata.	*Mining*
Squeeze Film Lubrication	The development of fluid pressure sufficient to support a load between surfaces thickly coated or flooded with lubricant and rapidly moving toward each other. Because of viscosity (or apparent viscosity), the lubricant cannot immediately flow away from the area of contact. Squeeze-film lubrication occurs between gear teeth and between wrist pins and their bushings, for example.	*Lubrication*
Squib	see Straw fuse.	*Mining*
SR	Speculative Resources (Coal)	*Energy*
SRCM®	SRCM® - Streamlined Reliability-Centered Maintenance. This enhanced version of RCM focuses on the dominant failure modes of equipment and the significant effects of those failures such as production losses, personnel safety, environmental releases, etc. A key benefit of an SRCM program is developing the understanding of plant personnel on the value of a modern-based maintenance strategy. As such, SRCM is particularly appropriate where a major change in the maintenance culture within the enterprise needs to be made, which also makes it a good option for new builds.	*Maintenance*
SRX	A RX Ring Gasket drilled with a vent hole for subsea use.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
SS Flanges	API Spec 17D specifies these for up to 11″ flanges in 5,000 psi working pressure with BX ring grooves, in either full stainless steel or inlayed with Corrosion Resistant Material.	*Petroleum Engineering*
SSIV (SUB SEA ISOLATION VALVE)	A valve used underwater, generally in a manifold that will close and isolate a particular pipeline or process in an emergency.	*Mechanical*
SSR	Solid state relay. See Relay, Solid State	*Electrical*
SSU	Saybolt Universal Seconds (or SUS), a unit of measure used to indicate viscosity, e.g., SSU @ 100° F	*Oil Analysis*
Stability	The ability of an instrument or sensor to maintain a consistent output when a constant input is applied.	*Electrical*
Stability (electric)	The ability of an electric system to maintain a state of equilibrium during normal and abnormal conditions or disturbances. NERC definition	*Energy*
Stability coordinates	Coordinates referenced to the air mass; Compare: body coordinates, earth coordinates.	*Aeronautical Engineering*
Stability of an Operating Characteristic	The extent to which an operating characteristic such as operating point remains constant during a specified number of cycles of switch operation, under specified conditions of actuation, electrical loading and environment. Most clearly expressed as a graph of the characteristic versus cycles of switch operation.	*Electrical Engineering*
Stabilization	A process for separating the gaseous and more volatile liquid hydrocarbons from crude petroleum or gasoline and leaving a stable (less-volatile) liquid so that it can be handled or stored with less change in composition.	*Petroleum Engineering*
Stabilization lagoon	A shallow artificial pond used for the treatment of wastewater. Treatment includes removal of solid material through sedimentation, the decomposition of organic material by bacteria, and the removal of nutrients by algae.	*Energy*
Stabilizer	A control surface, usually mounted at aft end of the fuselage parallel to the wings, that provides pitch stability, some aircraft have an adjustable stabilizer; Symbols: delta sub H; Typical Units: rad, deg.	*Aeronautical Engineering*
Stabilizer	Any ingredient added to plastics to preserve their physical and chemical properties.	*Electrical*
Stable	an area forming a buttock cut in advance at each end of a longwall face to allow certain types of conveyor mounted cutting machines to enter prior to commencing their next run. Also called the 'stable hole'.	*Mining*
Stable elimination	any system of working at the end of a longwall face that obviates the need for stables.	*Mining*
Stable hole	see Stable.	*Mining*
Stable Prices	Prices that do not vary greatly over short time periods.	*Energy*
Stablemen	a team of usually four men who bored, fired and filled the coal to keep the stable hole in advance of the coalface.	*Mining*
Stack	A tall, vertical structure containing one or more flues used to discharge products of combustion to the atmosphere.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Stack Mold	Two-level mold (two sets of cores and cavities stacked one above the other) for increased part production rates. Effectively doubles the parts per hour a machine can make.	*Engineering Physics*
Stack out	to dam off or close up the entrance to the waste by building a wall of stone or coal. (Mids.).	*Mining*
Stacker	a butty employed on the surface by the coal-getters to empty the boxes or tubs and grade the coal. (Leics.).	*Mining*
Stadium (plural = stadia)	The period of time between two successive molts.	*Forestry*
Staffordshire Ripping	an old term used in the Midlands for baiting or dinting.	*Mining*
Stag	short for 'Nystagmus'.	*Mining*
Stage	A hydraulic amplifier used in a servovalve. Servovalves may be single stage, two stage, three stage, etc.	*Mechanical, Process, and Operations*
Stage loader	a short chain conveyor at the end of the face, loading onto the gate conveyor.	*Mining*
Stage	One of the successive principal divisions in the life cycle of an insect, e.g., egg, nymph, larva, prepupa, pupa, adult.	*Forestry*
Staghead	Death of limbs and main branches of a tree in the upper crown, giving the appearance of antlers.	*Forestry*
Stagnation Point	A point in a groundwater flow field where the groundwater is not moving. The magnitude of vectors of hydraulic head at the point are equal but opposite in direction.	*Petroleum Engineering*
Stagnation pressure	Total pressure.	*Aeronautical Engineering*
Stainless Steel	Stainless steel is a universal name given to a number of different steels used primarily for their anti-corrosive element. Stainless steel has been developed to be resistant to extremely corrosive environments. Made using chromium, which improves the corrosion resistance by forming a chromium oxide film on the steel. This very thin layer can be self-repairing when placed under the right conditions. Stainless steel is also an earth friendly material, as it can be melted down, recycled, and made into something else. See also Galvanised.	*Industrial*
Stainless steel	Any of a number of types of iron alloy with chrome, nickel, or other elements that does not oxidize in free air.	*General Mechanical*
Stainless Steel Rope	Wire rope made up of corrosion resistant steel wires.	*Wire Rope & Cable*
Stair or Steer	highly inclined beds are said to be very 'stair' or 'steer'—see Rearers (N. Staffs.).	*Mining*
Stair pit	a pit or shaft in which there was a built-in stairway or ladders. Used as a secondary or escape pit. Also known as a ladder pit. Staker, a sprag. The name was also used for a 'bull prop'. (Mids.). Also called a 'stell prop'.	*Mining*
Stairway	Typical tread-and-riser device providing angular access to and from the top of the structure.	*Facility Engineering*
Staith	the place where coals are shipped by a spout or machine into wagons, a place where coal is loaded at the river side. (N. East).	*Mining*
Stakeholder	Stakeholders are people who may be affected by a project or who can influence it.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Stall	Stall is when the operating differential pressure between the inlet and outlet of the steam trap is so disparate that condensate is not discharged from the trap, and instead tends to pool inside the heat exchanger. Stall can cause ruptured equipment, water hammer, and can prevent consistent heating.	*Industrial*
Stallage boards	a platform suspended in front of the rip to support men when drilling shot holes and setting arches. (N. East).	*Mining*
Stallion	An intact male horse; i.e., one that hasn't been castrated.	*Agriculture*
Stamen	Male reproductive structure of a flower. It is composed of a filament and an anther.	*Agriculture*
Stamp	a hole made with a pick point in the coal in which a wedge is fixed or driven with the maul.	*Mining*
Stamp or Stamp Mill	Machines for crushing ores.	*Mining*
Stamping	a general term covering almost all press operations, including blanking, shearing, hot-forming, cold-forming, drawing, bending, coining	*Materials Process*
Stanch air	a term used in Somerset for chokedamp.	*Mining*
Stanchion	a large prop used to support the roof in the Thick Coal—see also Puncheon (S. Staffs.).	*Mining*
Stand	An easily defined area of the forest that is relatively uniform in species composition or age and can be managed as a single unit.	*Forestry*
Stand – off	The distance between Made-up connections faces utilizing ring gaskets, measured near the ring groove.	*Petroleum Engineering*
Standage	a section of old, or excavated, workings on the dip side of the engine pit, built as a reservoir for mine water whenever the pumping engine was stood idle; or a place set apart for holding accumulations of water in the pit until pumped out. (N. East). –see Sump.	*Mining*
Stand-alone generator	A power source/generator that operates independently of or is not connected to an electric transmission and distribution network; used to meet a load(s) physically close to the generator.	*Energy*
Standard	see Stool.	*Mining*
Standard	A document or an object for physical comparison, for defining product characteristics, products, or processes: prepared by a consensus of a properly constituted group of those substantially affected and having the qualifications to prepare the standard for voluntary use.	*Mechanical, Process, and Operations*
Standard air	Dry air having a density of 0.075 lbs./ft.3 at 70oF and 20.92" Hg.	*Facility Engineering*
Standard bred	The world's top harness race horse. Ninety-nine percent of Standard breds are said to trace back to Hambletonian, who sired more than 1330 offspring between 1851 and 1875. The breed's name derives from the fact that while it was still young, horses were only allowed to enter the registry if they could run the mile under a certain time.	*Agriculture*
Standard contract	The agreement between the Department of Energy (DOE) and the owners or generators of spent nuclear fuel and high-level radioactive waste, under which DOE will make available nuclear waste disposal services to those owners and generators.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Standard deviation	A measure of the spread or dispersion of a set of observations, calculated as the average difference from the mean value in the sample.	*Quality Engineering*
Standard deviation index, SDI	Generally used in reports from proficiency testing (PT) survey to describe how far a PT result is from the target value (TV). An SDI of +2.0 means that the laboratory's reported result is 2 standard deviations of the group above the target value or mean of the group.	*Quality*
Standard deviation of the differences, sd, sdiff	A statistic calculated as part of paired t-test analysis. It is the standard deviation of the individual differences between pairs of values (xi, yi), after those differences have been corrected for any systematic error or bias between the methods. When applied to data from a comparison of methods experiment, its properties are similar to those of the standard deviation about the regression line, except that the presence of proportional error contributes to sdiff and invalidates its quantitative interpretation.	*Quality*
Standard deviation of the intercept, sa	Indicates the dispersion or spread of values for the estimate of the y-intercept in linear regression analysis.	*Quality*
Standard deviation of the slope, sb	Indicates the dispersion or spread of values for the estimate of the slope in linear regression analysis.	*Quality*
Standard deviation of y about the regression line, sy/x	Also known as standard error about the regression line and standard deviation of the residuals (sres). A statistic calculated as part of linear regression analysis. It is the standard deviation of the differences yi-Yi, where yi is the observed value corresponding to xi and Yi is the value calculated from the regression equations (Yi = a + bxi). This statistic measures the dispersion or spread of the data points about the regression line. In the comparison of methods experiment, its ideal value would be zero. Values greater than zero describe the random error between the methods, which is composed of the random error or imprecision from both the test and comparison methods, as well as any matrix interferences that vary from sample to sample.	*Quality*
Standard deviation, s	A statistic that describes the dispersion or spread of a set of measurements about the mean value of a gaussian or normal distribution. Calculated from the equation: where n is the number of measurements, and xi is an individual measurement.	*Quality*
Standard Dimension Ratio (SDR)	The ratio of outside pipe diameter to wall thickness of thermoplastic pipe. It is calculated by dividing the specified outside diameter of the pipe by the specified wall thickness in inches.	*Maintenance and Repair*
Standard efficiency	The standard efficiency indicates the percentage relation between the utilizable thermal energy and the energy consumed according to a standardized measuring system. The standard efficiency enables a comparison between different boiler types and between the products of different manufacturers. See Annual efficiency	*Thermal Management*
Standard Electrode Potential (E0)	The standard potential E0 of an electrode is the reversible emf between the normal hydrogen electrode and the electrode with all components at unit activity.	*General*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Standard error	The standard deviation of the sampling distribution of a statistic. Measurements taken from a sample of the population will vary from sample to sample. The standard error is a measure of the variation in the sample statistic over all possible samples of the same size. The standard error decreases as the sample size increases. Also called: SE	*Quality Analysis*
Standard error of the mean, sx	A statistic which indicates the dispersion or spread of values for a mean of a set of measurements. Standard deviation index, SDI. Generally used in reports from proficiency testing (PT) surveys to describe how far a PT result is from the target value (TV). An SDI of +2.0 means that the laboratory's reported result is 2 standard deviations of the group above the target value or mean of the group.	*Quality*
Standard fluorescent	A light bulb made of a glass tube coated on the inside with fluorescent material, which produces light by passing electricity through mercury vapor causing the fluorescent coating to glow or fluoresce.	*Energy*
Standard Industrial Classification (SIC)	Replaced with North American Industry Classification System. See NAICS.	*Energy*
Standard Industrial Classification (SIC) code	A coding system of the U.S. government used to identify specific economic sectors. Coding for manufacturers encompasses the two-digit numbers of 20 through 39.	*Maintenance*
Standard Job	A Work Order Stored In The CMMS Which Contains All The Necessary Information Required To Perform A Maintenance Task. (See Also Model Work Order)	*Management*
Standard Job Plan	A standard job plan is a generic template for a job that will be done repetitively. Their purpose is to facilitate speedy production of job plans for specific maintenance jobs. The Standard Job Plans approach is in particular applied in the maintenance environment.	*Maintenance*
Standard laboratory atmosphere	Standard laboratory atmosphere Whenever materials are to be tested which are sensitive to variations in temperatures and/or moisture, standard laboratory atmosphere should be considered as consisting of 50% relative humidity and a temperature of 77°	*Material Process*
Standard Mechanical Variable Speed Ratios	0.250694444	*Manufacturing*
Standard Operating Procedure (SOP)	Established or prescribed methods to be followed routinely for the performance of designated operations or in designated situations. Standard Operating Procedures widely used in the production/operations environment.	*Maintenance*
Standard Rate	The basic rate customers would take service under if they were not on real-time pricing.	*Energy*
Standard Target	An object used for making comparative measurements of operating distance. A square of mild steel, 1mm thick. The length of the side of the square is equal to either: A: the diameter of the circle inscribed on the active surface of the sensitive face of the sensor, or B: three times the rated operating distance, whichever is the greater.	*Electrical Engineering*
Standard treatment	See Conventional treatment	*Quality Engineering*
Standard uncertainty	Uncertainty of the results of a measurement expressed as a standard deviation. [ISO]	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Standard units	Units commonly encountered for a particular quantity.	*Aeronautical Engineering*
Standard Weight	(STD) – A designation of ASME pipe wall thickness. Equal to schedule 40 up to 250NB (10″). Over this size schedule 40 is heavier.	*Petroleum Engineering*
Standard Work	The most efficient method to perform a task, broken down into elements which are sequenced, organized and repeatedly followed.	*Reliability Engineering*
Standardized mean difference	The difference between two estimated means divided by an estimate of the standard deviation. It is used to combine results from studies using different ways of measuring the same concept, e.g. mental health. By expressing the effects as a standardized value, the results can be combined since they have no units. Standardized mean differences are sometimes referred to as a d index. See also: Effect size, Mean difference Also called: SMD	*Quality Engineering*
Standardization	A process of equalizing electrode potentials in one standardizing solution (buffer) so that potentials developed in unknown solutions can be converted to pH values.	*General Engineering*
Standards	Documents (the USA military services had as many as 1,700 standards) that prescribe engineering disciplines, impose particular management practices, reporting and auditing requirements. Differ from specification.	*Reliability Engineering*
Standby charge	A charge for the potential use of a utility service, usually done by an agreement with another electric utility service. These services include system backup support and other running and quick-start capabilities.	*Energy*
Standby electricity generation	Involves use of generators during times of high demand on utilities to avoid extra "peak-demand" charges.	*Energy*
Standby Facility	A facility that supports a system and generally running under no load.	*Energy*
Standby heat loss	A term used to describe heat energy lost from a water heater tank.	*Energy*
Standby Redundancy	Redundancy in which some or all of the redundant items are not operating continuously but are activated only upon failure of the primary item performing the function(s).	*Reliability Engineering*
Standby service	Support service that is available as needed to supplement a customer, a utility system, or another utility if a schedule or an agreement authorizes the transaction. The service is not regularly used.	*Energy*
Standby Time	A period of time, other than non-scheduled time, when the equipment is in a condition to perform its intended function, facilities are available, but it is not operated. This includes time when no operator is available, time when no product is available (no boards or components), and waiting on upstream or downstream equipment.	*Maintenance*
Standing bobby	a shot that blew out the stemming without moving the coal or stone. Also known as a 'fast shot' or 'blow out'. (N. East).	*Mining*
Standing fire	where the solid coal has become ignited, and the only means of extinguishing it is by barring it off with air tight stoppings or dams.	*Mining*
Standing set	when sinking a shaft with pumps, when the sinking set has become of sufficient length, the top standing set is placed in a cistern which stands on a strong oak bunton or iron girder set across the pit, and pumps to the bank the water delivered into it by the sinking set continued downwards with the sinking.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Standing wave	A wave that is characterized by lack of vibration at certain points (nodes), between which are areas of maximum vibration (antinodes). Standing waves are produced at certain forcing frequencies when the resulting resonant vibratory response is confined within boundaries, as in the vibrating string of a musical instrument or the wing of an airplane or the whip antenna on your automobile. Also called "stationary wave".	*Reliability Engineering*
Standing Work Order	A Work Order That Is Left Open Either Indefinitely Or For A Pre-Determined Period Of Time For The Purpose Of Collecting Labor Hours. Costs And/Or History For Tasks For Which It Has Been Decided That Individual Work Orders Should Not Be Raised. Examples Would Include Standing Work Orders Raised To Collect Time Spent At Safety Meetings, Or In General Housekeeping Activities.	*Plant Engineering*
Standing/Blanket Work	Small and/or routine and repetitive tasks covered on standing or blanket work orders. Work orders used to cover routine tasks that typically require less than 60 minutes to complete.	*Maintenance*
Stank	a water-tight or air-tight stopping or dam. (Mids.).	*Mining*
Stanking	to stop off a gob fire by excluding air from it, usually by means of air tight stoppings or injection of cement-like materials.	*Mining*
Staple, Staple pit or Staple shaft	a shaft that does not communicate with the surface, usually sunk or bored between two seams or major horizons in the same mine. Also known as a 'blind pit' or a 'drop staple' –see also Jacky Pit.	*Mining*
STAPPA	State and Territorial Air Pollution Program Administration	*Petro-Chemical Abbreviations*
Stapping	bringing down the coal face using wedges. (Scot.).	*Mining*
Star clip	a device used to attach tubs or trams to an endless haulage system. Similar to a Smallman clip but the movement of the wedges is produced by rotating a wheel or star carrying threaded blocks. Also called a 'wheel clip'.	*Mining*
Starch (C6H10O6) x	White amorphous powder. Used as a dispersing agent in the gelation of rubber and for various plastics such as ureas and phenolics.	*Material Process*
Start And Stop Characters	Character which tells a scanner or reader when a bar code begins and ends. SUBSTITUTION ERROR RATE-The ratio of the number of incorrect characters to the total number of entered characters.	*Gears*
Startup test phase of nuclear power plant	A nuclear power plant that has been licensed by the Nuclear Regulatory Commission to operate but is still in the initial testing phase, during which the production of electricity may not be continuous. In general, when the electric utility is satisfied with the plant's performance, it formally accepts the plant from the manufacturer and places it in commercial operation status. A request is then submitted to the appropriate utility rate commission to include the power plant in the rate base calculation.	*Energy*
Start-up time	The period of time needed to reach a steady state condition within the operating band starting from a long term off condition.	*Mechanical, Process, and Operations*
Startup/flame stabilization fuel	Any fuel used to initiate or sustain combustion or used to stabilize the height of flames once combustion is underway.	*Energy*

Please see the Appendix for further illustration

Term	Definition	Industry
Starvation	A lack of oil in vital areas of a system. Often caused by plugged filters, etc. STRAINER - A coarse filter.	*Mechanical, Process, and Operations*
State	One of the 50 States, including adjacent outer continental shelf areas, or the District of Columbia.	*Energy*
State data	Data that defines aircraft parameters, such as position, velocity, attitude; Some standard terms for state data include: Groundspeed vector, wind speed vector, true airspeed vector, true bearing, true track, ground track angle, relative bearing, sideslip angle, drift angle, true heading, magnetic variation, grivation. Earth speed vector, vertical velocity, air mass flight path angle, earth-referenced flight path angle, angle of attack, pitch, radar altitude, barometric altitude, earth radius, glide slope, gravity vector, lift vector, lateral acceleration vector, bank angle.	*Aeronautical Engineering*
State Operations Manual, SOM	CMS's official document that provides guidelines for interpreting the CLIA regulations, as well as suggest probes for inspectors to use when reviewing a laboratory.	*Quality*
State permit/license/mine number	Code assigned to a mining operation by the state in which the operation is located.	*Energy*
State severance taxes	Any severance, production, or similar tax, fee, or other levy imposed on the production of crude oil, natural gas, or coal by any State, local government acting under authority of State law, or by an Indian tribe recognized as eligible for services by the Secretary of the Interior.	*Energy*
Statement Of Work	The statement of work (SOW) describes the specific requirement applicable to a particular item or service being purchased. It outlines the specific services a contractor is expected to perform, generally indicating the type, level, and quality of service, as well as the time schedule required.	*Procurement*
State-space model	A mathematical relationship of a system in time using state variables, inputs, outputs, and constants; The state-space model is composed of n state variables (x sub 1, x sub 2, ..., x sub n), m input variables (u sub 1, u sub 2, ..., u sub m), k output variables (y sub 1, y sub 2, ..., y sub k), and four constants a, b, c, and d. Alternatively, a state-space model can be expressed with matrices. Compare: continuous-time equation, difference equation, differential equation, discrete-time equation, Laplace transform, Z transform.	*Aeronautical Engineering*
State-space model	A mathematical relationship of a system in time using state variables, inputs, outputs, and constants; The state-space model is composed of n state variables (x sub 1, x sub 2, ..., x sub n), m input variables (u sub 1, u sub 2, ..., u sub m), k output variables (y sub 1, y sub 2, ..., y sub k), and four constants a, b, c, and d. Alternatively, a state-space model can be expressed with matrices. Compare - continuous-time equation, difference equation, differential equation, discrete-time equation, Laplace transform, Z transform.	*Aeronautical Engineering*
Static	Electrical discharges in the atmosphere such as lightning, corona, etc.	*Electrical*
Static Calibration	A calibration recording pressure versus output at fixed points at room temperature.	*General*
Static Calibration	A calibration recording pressure versus output at fixed points at room temperature.	*Electronic Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Static Eliminators	Mechanical devices for removing electrical static charges from plastics articles. Types of static eliminators include static bars, ionizing blowers, and air guns.	*Engineering Physics*
Static Equilibrium	Equilibrium which does not include inertial forces.	*Metallurgy*
Static Error Band	The error band applicable at room temperature.	*General Engineering*
Static fatigue	For certain ceramics and glasses, a degradation in strength that occurs without cycle loading.	*Material Process*
Static Friction	Friction at rest; a force is required to initiate relative movement between two bodies - static friction is the force that resists such relative movement. Sometimes referred to as stiction.	*Maintenance*
Static Friction	The force just sufficient to initiate relative motion between two bodies under load. The value of the static friction at the instant relative motion begins is termed break-away friction.	*Lubrication*
Static haulage chain	a stationary chain situated on a longwall face along which a power loader hauls itself.	*Mining*
Static modulus of elasticity	Modulus of elasticity for a polymer obtained from the slope of the initial, incremental load-deflection plot of an overall measurement of dynamic elastic properties.	*Material Process*
Static pressure	A measure of barometric pressure as if the sensor were not moving with respect to the air; Compare: total pressure; Symbols: p sub s; Typical Units: psi, lbf/in-squared; Dimensions: Mass / Time-squared * Length.	*Aeronautical Engineering*
Static Seal	A seal between two surfaces which have no relative motion.	*Lubrication*
Static Unbalance	Static unbalance is that condition of unbalance for which the central principal axis is displayed only parallel to the shaft axis	*General Engineering*
Static var (volt amperes reactive) compensator (SVC)	A device that provides fast-acting reactive power compensation (see Power factor and Power factor correction) in high-voltage electricity networks. Cheaper to build and maintain than rotating compensation devices, such as synchronous compensators (see also FACTS), SVC has no rotating parts (it is static). It compensates for fluctuations in the voltage and current of an electric grid, thereby allowing more power to flow through the network while maintaining safety margins, increasing network stability.	*Electrical*
Static Water Level	Level of water in a well not being affected by withdrawal of groundwater.	*Petroleum Engineering*
Statically Cast Pipe	Pipe formed by the solidification of molten metal in a sand mold.	*Maintenance and Repair*
Statically determinate	A statically determinate structure is one where there is only one distribution of internal forces and reactions which satisfies equilibrium. In a statically determinate structure, internal forces and reactions can be determined by considering nothing more than equations of equilibrium.	*Engineering Physics*
Statically equivalent	Two force systems are statically equivalent when their resultants are equal. Physically, this means that the force systems tend to impart the same motion when applied to an object; note that the distribution of resulting internal forces in the object may be different.	*Engineering Physics*
Statically indeterminate	A statically indeterminate structure is one where there is more than one distribution of internal forces and/or reactions which satisfies equilibrium.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	Industry
Station	A structure on the ground, perhaps containing VOR or TACAN.	*Aeronautical Engineering*
Station	An enlargement of a shaft made for the storage and handling of equipment and for driving drifts at that elevation.	*Mining*
Station	An enlargement of a shaft made of the level horizon used primarily for the storage and handling of equipment.	*Mining*
Station (electric)	A plant containing prime movers, electric generators, and auxiliary equipment for converting mechanical, chemical, and/or nuclear energy into electric energy.	*Energy*
Station use	Energy that is used to operate an electric generating plant. It includes energy consumed for plant lighting, power, and auxiliary facilities, regardless of whether the energy is produced at the plant or comes from another source.	*Energy*
Stationarity	A property of probabilistic vibration if the PSD (or ASD) and the probability distribution remain constant.	*Reliability Engineering*
Stationary Platen	In an injection molding machine, the large front plate to which the front plate of the mold is secured. This platen does not normally move.	*Engineering Physics*
Stationary Seal	A mechanical seal in which the flexible members do not rotate with the shaft.	*Lubrication*
Statistical control limits	As used with Levey-Jennings and Westgard multirule types of QC procedures, these are the lines drawn on control charts to define the range of results expected due to the random error of the method. The limits are often obtained from a group of 20 or more measurements on a particular control material by calculating the mean and standard deviation, then using multiples such as the mean plus/minus 3s, 2s, or 1s to establish rejection limits for different control rules.	*Quality*
Statistical power	See Power	*Quality Engineering*
Statistical process control	A general term used to describe those aspects of a control system in which statistics are applied to determine whether observed measurements fall within the range expected due to the random variation of the process. Industrial process control procedures provided the basis for introduction of statistical control in healthcare laboratories, however, industrial process control procedures often use the mean and range of a group of control measurements (e.g., Shewhart mean and range charts), whereas healthcare applications tend towards the use individual measurements or individual-value control charts, such as the Levey-Jennings chart.	*Quality*
Statistical process control (SPC)	Use of variation analysis, with manual or computerized control charts, to detect non-normal variations in a process as quickly as possible. Often, SPC charts display upper and lower limits for part characteristics or process parameters and show trends over time, indicating when the limits were exceeded or approached and corrective actions were needed. In some closed-loop systems, adjustments are made automatically when readings indicate that a control limit is being approached.	*Quality*
Statistical Process Control (SPC)	The use of control charts to track and eliminate variables in repetitive manufacturing processes, in order to ensure that the product is of consistent and predictable quality. If a chart reveals only chance variations that are inherent in the system, the process is said to be in a state of "statistical control". If the chart reveals variations traceable to changes in equipment, procedures or workers, the process is said to be "out of control". Statistical process control differs from statistical quality control in that the former monitors manufacturing process parameters and the latter monitors product quality parameters.	*Lubrication*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Statistical quality control	Those aspects of quality control in which statistics are applied, in contrast to the broader scope of quality control which includes many other procedures, such as preventive maintenance, instrument function checks, and performance validation tests. Statistical QC procedures are often used to monitor routine performance of a method and to alert the laboratory when the performance of a method changes.	*Quality*
Statistically significant	A result that is unlikely to have happened by chance. The usual threshold for this judgment is that the results, or more extreme results, would occur by chance with a probability of less than 0.05 if the null hypothesis was true. Statistical tests produce a p-value used to assess this.	*Quality Engineering*
Statistically significant, statistically significant difference	A conclusion that the difference observed is larger than that expected due to chance (or the uncertainty or random error in the experimental data). The statement usually includes a probability level, such as "statistically significant at p = 0.05", which means there is only a 5 percent chance that the difference observed could be due to the uncertainty in the experimental data (or chance as it is often called).	*Quality*
Statistics	The branch of mathematics that deals with the collection, organization, analysis and interpretation of data.	*Reliability Engineering*
Status	An indicator of how well a system or subsystem is working.	*Aeronautical Engineering*
Status indicator	An binary indicator of a particular aspect of a device; status indicators are independent of each other; status indicators listed in this dictionary are derived from existing programs. See Also: off, warning, operations, communications, usability, initialization, test, maintenance, unknown.	*Aeronautical Engineering*
Status words	Data words reported by devices to indicate status; Each bit is defined on a device-by-device basis. The number of words vary from device to device. Status words are used by maintenance personnel and maintenance software. Present, past, and test status words are reported.	*Aeronautical Engineering*
Stay	an extra wooden bar placed below the roof bar, between the two posts of a support set, to counteract side pressure (N. Staffs.).	*Mining*
std	Standard	*General*
Steady Flow	A flow rate in the measuring section of a flow line that does not vary significantly with time.	*General Engineering*
Steady state diffusion	Mass transport that is unchanging with time.	*Material Process*
Steady state pressure regulation	A band indicating maximum and minimum pressure or a single curve with maximum deviation indicated in percent of operating pressure, all as a function of flow.	*Mechanical, Process, and Operations*
Steady State Vibration	That condition of vibration induced by an unchanging continuing periodic force.	*General Engineering*
Steady-State	The condition when all process properties are constant with time, transient responses having died out. Supervisory Control - A method of computer control	*Electrical Engineering*
Steam	Water in vapor form; used as the working fluid in steam turbines and heating systems. Also see District heat.	*Energy*
Steam (purchased)	Steam, purchased for use by a refinery, that was not generated from within the refinery complex.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Steam boiler	A type of furnace in which fuel is burned and the heat is used to produce steam.	*Energy*
Steam coal	refers to coal used in boilers to generate steam to produce electricity or for other purposes.	*Energy*
Steam electric power plant (conventional)	A plant in which the prime mover is a steam turbine. The steam used to drive the turbine is produced in a boiler where fossil fuels are burned.	*Energy*
Steam expenses	The cost of labor, materials, fuel, and other expenses incurred in production of steam for electric generation.	*Energy*
Steam for heating/cooling	Steam produced at a combined heat and power plant for the purpose of heating and/or cooling space, such as district heating systems.	*Energy*
Steam from other sources	Steam purchased, transferred from another department of the utility, or acquired from others under a joint-facility operating agreement.	*Energy*
Steam Injection	Steam injection is when a series of steam bubbles is pumped into a cooler liquid. The steam bubbles condense and give up their heat to the surrounding liquid.	*Industrial*
Steam jet	a mode of ventilation invented by Mr. Goldsworthy Gurney, and first applied to the ventilation of collieries by Mr. T. E. Forster, in 1848, by which an air current was produced by the escape of high pressure steam through small orifices; the mode of action being similar to that of the blast pipe in a locomotive engine. (N. East).	*Mining*
Steam or hot water radiators or baseboards	A distribution system where steam or hot water circulates through cast-iron radiators or base boards. Some other types of equipment in the building may be used to produce the steam or hot water or it may enter the building already heated as part of a district hot water system. Hot water does not include domestic hot water used for cooking and cleaning.	*Energy*
Steam or hot-water system	Either of two types of a central space-heating system that supplies steam or hot water to radiators, convectors, or pipes. The more common type supplies either steam or hot water to conventional radiators, baseboard radiators, convectors, heating pipes embedded in the walls or ceilings, or heating coils or equipment that are part of a combined heating/ventilating or heating/air-conditioning system. The other type supplies radiant heat through pipes that carry hot water and are held in a concrete slab floor.	*Energy*
Steam plate	Mounting plate for molds. Usually cored for circulation of steam and water.	*Material Process*
Steam Tables	Steam tables are thermodynamic data tables for water/steam, used by engineers in design maintenance and operation of equipment where thermodynamic cycles involving steam are used.	*Industrial*
Steam Tempering	The production of a stable oxide on steel parts by treatment in steam at about 300oC. Improves corrosion performance and reduces friction.	*Paint and Coatings*
Steam transferred-credit	The expenses of producing steam are charged to others or to other utility departments under a joint operating arrangement.	*Energy*
Steam Trap	Steam traps are used to discharge condensate and non condensable gases with a negligible loss of live steam from the pipeline. If condensate is not rapidly removed from the system, it has the potential to cool down the working steam and form more condensate, hence loss of energy. Some steam traps are as basic as automatic valves, opening and closing, or modulating automatically.	*Industrial*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Steam Trap Management	Steam trap surveys are necessary in order to see which traps are operational, and which need servicing. A steam trap survey is a useful way to accurately measure the performance of a steam based system.	*Industrial*
Steam turbine	A device that converts high-pressure steam, produced in a boiler, into mechanical energy that can then be used to produce electricity by forcing blades in a cylinder to rotate and turn a generator shaft.	*Energy*
Steam Turbine	A mechanical device that extracts thermal energy from pressurized steam. The energy is converted into a rotary motion that drives a device.	*Reliability Engineering*
Steaming	The rate, usually expressed in Lbs/Hr or KG/Hr, at which a boiler produces steam.	*Industrial*
Stearamide	A slip additive used in polyolefins.	*Engineering Physics*
Stearates	Metallic salts of stearic acid, usually calcium, aluminum, or zinc, used in molding powders as die lubricants.	*Material Process*
Stearic acid (CH3(CH2)16COOH)	Colorless monoclinic leaflets. A lubricant, used either in the mold or incorporated in the plastic.	*Material Process*
Stearin pitch	Pitch obtained as a residue in the distillation of fatty acids, specific gravity sp. gr. 0.9 to 1.1 used in paints and as a plastics modifier.	*Material Process*
Stearine or glycerol tristearate ((C17H35 COO)3(CH2)16C3H5)	Colorless crystals from ether. A lubricant.	*Material Process*
Steel	A ferrous alloy with up to approximately 2.0 wt% carbon.	*Material Process*
Steel Alloy 4130	A low alloy steel containing molybdenum and chromium for strengthening. The carbon content is nominally 0.30% and with this low carbon content the alloy is excellent for weldability. The alloy can be hardened by heat treatment. Typically used for weld end components.	*Petroleum Engineering*
Steel Alloy 4140	Chromium, manganese, molybdenum low alloy steel providing toughness, good torsional strength good fatigue strength characteristics once heat treated. The carbon content of 0.40% makes this steel less suitable for welding than 4130. Typically used for integral spools, threaded and flanged components not requiring welding.	*Petroleum Engineering*
Steel Hardness 22 RC	22 RC, 99 RB, 237 HBW and 248 HV represent the most important upper hardness limit for non- austenitic steel for H2S service applications specified in NACE MR-O175 referenced in API Spec 6A.	*Petroleum Engineering*
Steel or Steel mill	a hand-held device, used before the invention of the safety lamp, for producing sparks for lighting underground, which included a revolving steel-rimmed wheel against which flint was pressed. Invented by Spedding of Whitehaven about 1730. Also known as a 'Flint mill'.	*Mining*
Steel tree	a steel prop. (Scot.).	*Mining*
Steel Yield Strength 35K	35,000 psi, minimum Yield Strength relates to carbon steel line pipe, not API6A material.	*Petroleum Engineering*
Steeply inclined	Said of deposits and coal seams with a dip of from 0.7 to 1 rad (40 degrees to 60 degrees).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Steer	a bull that has been castrated for better meat production	*Agriculture*
Steer	A castrated male bovine. Bull calves not kept for breeding are castrated while still young and raised for beef. Castration makes them easier to handle and produces better-flavored meat.	*Agriculture*
Steering Group	The board of trustees of The Cochrane Collaboration. See Cochrane Collaboration Steering Group (CCSG).	*Quality Engineering*
Stell	to underpin the roof or to set an anchor prop, a stell prop, e.g., for a conveyor belt or a coal cutting machine etc.	*Mining*
Stell, (Scot.)	Bullseye, early type of hand held electric lamp with a bulbous lens.	*Mining*
Stellite	Also called Stellite 6 or Alloy 6. A material used in a valve trim known for its hardness, wear and corrosion resistance. Stellite is available as a casting, bar-stock material and may be applied to a softer material such as 316 stainless steel by means of spray coating or welding.	*Industrial Engineering*
Stem	The rod or shaft transmitting motion from an operator (handwheel or gear operator) to the closure element of the valve.	*General Mechanical*
Stem	A rod or shaft used to transmit motion from an operator to the closure element of a valve.	*Mechanical*
Stem Guide	A guide bushing closely fitted to the valve stem and aligned with the seat. Good stem guiding is essential to minimize packing leakage.	*Industrial Engineering*
Stem indicator (VPI – Visible Position Indicator)	A position indicating rod supplied with gate valves. It extends from the top of the valve stem and serves to indicate the relative position of the gate.	*Mechanical*
Stem nut	A one or two-piece nut which engages the stem threads of a valve and transmits torque from an operator to the valve stem.	*Mechanical*
Stem nut (yoke nut)	The threaded nut that surrounds a reciprocating valve stem and causes the stem to move when the nut is rotated.	*General Mechanical*
Stemmer	an iron bar or copper rod used to ram clay into a shot hole, or to stem the hole, to make it water-tight; or a wooden rod used by the shotfirer for inserting the explosive cartridges and stemming materials in the shot holes.	*Mining*
Stemming	The noncombustible material used on top or in front of a charge or explosive.	*Mining*
Stemming or Ramming	the act of packing a shot hole behind the explosive charge; or the material used to plug a drill hole after blasting charges had been set. Material includes clay or molded plugs of sand called 'core plugs'.	*Mining*
Stenciling	the process by which lettering or a design through which a substance (ink, paint, or metallic powder) is forced onto a surface to be printed; commonly used to mark steel fabrications but generally does not remain after the galvanizing process	*Materials Process*
Stenting	a temporary ventilation crossgate between two headings. (N. East).	*Mining*
Stenton	a roadway driven between two coal headings.	*Mining*
Stenton wall	the pillar of coal between two winning headways. (N. East).	*Mining*
Step growth	Polymerization process involving individual chemical reactions between pairs of reactive monomers.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Step index fiber	Optical fiber with a sharp step down in index of refraction at core/cladding interface.	*Material Process*
Step Potential	Describes the electrical voltage differential between two points.	*Petroleum Engineering*
Step stressing	Increasing stresses in a series of preselected increments.	*Reliability Engineering*
Step-Lock Bolt (SLB)	The Step-Lock Bolt (SLB) is a thread form that has been modified to resist vibration loosening. The thread has several horizontal portions (i.e. no lead angle) whose purpose is to prevent torsion being developed in the bolt as a result of the loosening purpose. It is these horizontal portions that are known as steps. Published literature indicates that the thread form performs well when tested on a transverse vibration test machine. However manufacturing difficulties may prevent its widespread adoption.	*Maintenance*
Step-out drilling	Holes drilled to intersect a mineralization horizon or structure along strike or down dip.	*Mining*
Stepped longwall	a longwall system with each working place along the face being in advance of the next one to it. Known as 'step banks' in S. Wales and 'stepping' in the N. East.	*Mining*
Stepped sine testing	Sine shaking in a series of dwells. Frequency is incrementally increased or decreased.	*Reliability Engineering*
Steriles	see Dirt.	*Mining*
Sterilization	The process of killing all forms of microbial life, including vegetative bacteria, fungi, viruses and spores.	*Chemistry*
Sterilizing	In microbiology laboratories, and similar environments, an autoclave, which uses steam under pressure, is used for sterilizing.	*Industrial*
Sterlie	the drum or pulley on a self-acting incline. (Scot.).	*Mining*
Stewardship	an individual's responsibility to exercise care over possessions entrusted to him or her	*Agriculture*
Stewardship forest	A forest tract that exhibits integrated forest management to protect and enhance wildlife, timber, recreation, natural beauty, and soil and water quality.	*Forestry*
STEWARDSHIP INCENTIVE PROGRAM (SIP)	A cost-sharing program available to forest landowners who have a multi resource forest stewardship plan.	*Forestry*
Stey	steep, highly inclined. (Scot.).	*Mining*
Stickers	A brand new tire, with the manufacturer's sticker still on the "tread."	*NASCAR*
Sticking coal or sticky coal	the coal that remains stuck to the roof or floor after the main body of the seam had been blasted or picked away. Also called 'sticky tops'.	*Mining*
Stick-slip Motion	Erratic, noisy motion characteristic of some machine ways, due to the starting friction encountered by a machine part at each end of its back-and-form (reciprocating) movement. This undesirable effect can be overcome with a way lubricant, which reduces starting friction.	*Lubrication*
Sticky limit	the limit at which a soil loses its ability to adhere to a metal blade.	*Chemical*
Stiffener	a door for regulating the ventilation (S. Wales).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Stiffness	This is a general term which may be applied to materials or structures. When a force is applied to a structure, there is a displacement in the direction of the force; stiffness is the ratio of the force divided by the displacement. High stiffness means that a large force produces a small displacement. When discussing the stiffness of a material, the concept is the same, except that stress substitutes for force, and strain substitutes for displacement; see modulus of elasticity.	*Engineering Physics*
Stiffness	The capacity of a material to resist strain where stressed.	*Engineering Physics*
Stiffnut	A term used to describe a lock nut which has a prevailing torque.	*Maintenance*
Stifle	noxious gas resulting from an underground fire, stink damp. (Scot.).	*Mining*
Still gas	Any form or mixture of gases produced in refineries by distillation, cracking, reforming, and other processes. The principal constituents are methane and ethane. May contain hydrogen and small/trace amounts of other gases. Still gas is typically consumed as refinery fuel or used as petrochemical feedstock. Still gas burned for refinery fuel may differ in composition from marketed still gas sold to other users.	*Energy*
Stilling	the walling of a shaft within the tubbing from the rockhead to the surface. (N. East).	*Mining*
Stimple	small timbers used as packing above and behind the main supporting timbers (S. Wales), or a short wooden prop. (Som.).	*Mining*
Stimulation	A variety of operations performed on a well to improve productivity.	*Petroleum Drilling*
Stinkdamp	the gaseous products of spontaneous combustion, including carbon monoxide and hydrogen sulfide. In coalmines hydrogen sulfide is produced by the bacterial decay of animal or vegetable matter containing sulfur, from pyrites (iron sulfide), from the exhausts of diesel engines or from the use of explosives containing sulfur.	*Mining*
Stinking coal	an impure type of coal that burns with a strong sulfurous smell.	*Mining*
Stint	the amount of work to be undertaken by one man in a shift, or a collier's task defined in terms of length of face to be hewed and loaded in the shift by a single filler or a filler and his assistant. Also called a 'length'.	*Mining*
Stip and thirl	an old name for the stoop and room method of connecting two workings.	*Mining*
Stipple	Pigmented spots up to a few millimeters in diameter, often on the upper surface of leaves.[1]	*Forestry*
Stitch Drilling (or Line Drilling)	stitch drilling is usually utilized when over cuts are not permitted or when a small opening in needed in a relatively thick slab or wall. A series of round holes are core drilled and the excess is then chipped away.	*Petroleum Drilling*
STLE	Society of Tribologist and Lubrication Engineers, formerly ASLE, American Society of Lubrication Engineers.	*Oil Analysis*
Stobb and feathers	a long narrow steel wedge, the stobb, was driven between two other wedges already inserted in the shot hole, the feathers. This method of bringing down the coal was usually used in fiery mines where it was dangerous to use explosives. A system used throughout the British coalfields under various other names such as 'Fox wedge', 'Stook and coil', 'Stook and feather' and 'Plug and feather'.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Stock change	The difference between stocks at the beginning of the reporting period and stocks at the end of the reporting period. Note: A negative number indicates a decrease (i.e., a drawdown) in stocks and a positive number indicates an increase (i.e., a buildup) in stocks during the reporting period.	*Energy*
Stock exchange	An organized market concerned with the buying and selling of common and preferred shares and warrants by stockbrokers who own seats on the exchange and meet membership requirements.	*Mining*
Stock Keeping Units	Number of storeroom line items with a planned stock level or one of more units. (See SKU)	*Procurement*
Stock pile	Broken ore accumulated in a heap on the surface, pending treatment or shipment.	*Mining*
Stocking	A description of the number of trees, basal area, or volume per acre in a forest stand compared with a desired level for balanced health and growth.	*Forestry*
Stocking dirt	stiff clay or soil that requires picks for its excavation (N. Staffs.).	*Mining*
Stocking end	the far end of a heading, a short distance from which there is a depression or lum in the seam filled with water causing the ventilation to be cut off from the back. (Lancs.); or a name given to the 'Geordie' safety lamp. (Leics.).	*Mining*
Stockpile	Broken ore heaped on surface, pending treatment or shipment.	*Mining*
Stocks	A supply of fuel accumulated for future use.	*Energy*
Stoke	The standard unit of kinematic viscosity in the CGS (centimeter-gram-second) system. It is expressed in square centimeters per second; 1 centistoke equals. 0.1 stoke.	*Mechanical, Process, and Operations*
Stoke (St)	Kinematic measurement of a fluid's resistance to flow defined by the ratio of the fluid's dynamic viscosity to its density.	*Oil Analysis*
Stoker coal	refers to coal that has been crushed to specific sizes (but not powdered) for burning on a grate in automatic firing equipment.	*Energy*
stolon	Horizontal, above ground stem.	*Agriculture*
Stomp	to set a prop or sprag with one end let into a hole cut in the floor or roof to receive it. (Mids.); or a wooden plug fixed in the roof from which the surveyors' lines are hung.	*Mining*
Stone	a general term used for any rock other than coal.	*Mining*
Stone age	The time when our human ancestors, or hominids, chipped stones to form weapons for hunting.	*Material Process*
Stone bind	sandy shale, (intermediate between 'bind' and 'rock').	*Mining*
Stone clunch or stone spavin	hard seatearth.	*Mining*
Stone coal	an early term for mineral coal as opposed to charcoal. -see Sea coal; or anthracite in S. Wales. Also other varieties of hard coal. A term applied to impure coal approaching carbonaceous shale in Yorks.	*Mining*
Stone drift	a drift in stone from seam to seam, perhaps driven through a fault. Also called a 'crut' or 'hard heading'.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Stone dust barriers	elevated platforms in the roof of the gate, some distance from the face, piled with stone dust (powdered limestone). In the event of an explosion on the face, these would fall, distributing a cloud of stone dust into the air preventing the propagation of a coal dust explosion.	*Mining*
Stone head	see Rockhead.	*Mining*
Stone Sawing Strand	A plurality of round or shaped wires helically laid about an axis.	*Wire Rope & Cable*
Stone spavin	a stone bind or sandstone with rootlets, (Yorks.).	*Mining*
Stone tubbing	stone walling backfilled with cement to form a waterproof lining to a shaft. –see also Tubbing.	*Mining*
Stonedust	powdered limestone used in stone dust barriers, or as a general dilutant to coal dust. Periodically roadways would be liberally dusted with stonedust (stone-dusting) to dilute the build up of coal dust and make it less of a hazard should there be an explosion.	*Mining*
Stoneman	see Drifter.	*Mining*
Stoner Engineering LLC	authors of makinhole.com, SES, and the inventors of Technical Hole Deviation Technology.	*Petroleum Drilling*
Stones	Any opaque or translucent inclusions embedded in a transparent or translucent plastic. See Hard spot.	*Material Process*
Stook	a small block or pillar of coal left to support the headways course during the taking of a jud or lift in pillar working.	*Mining*
Stool or Standard	the connecting piece between adjacent pans on a face conveyor.	*Mining*
Stoop	a pillar of coal or stone; or to extract a pillar. -see also Rance and Pillar; or a large prop or 'puncheon'. (Mids.).	*Mining*
Stoop and Room	a pillar and stall method of working, -see also Pillar and stall.	*Mining*
Stoop and Thirl	an old name used in Scotland for the stoop and room method of working.	*Mining*
Stooping	working the pillars. (Scot.).	*Mining*
Stop Bit	A signal following a character or block that prepares the receiving device to receive the next character or block.	*General Engineering*
Stop collar	The collar on a ball valve which restricts the ball to 90º of rotation from the fully open to the fully closed position. See Key Stop.	*Mechanical*
Stope	A step-like excavation formed by the removal of ore from around a mine shaft.	*Mining*
Stope	An excavation in a mine from which ore is being or has been extracted.	*Mining*
Stoping	The act of breaking down a stope and excavating it with a pick.	*Mining*
Stop-loss order	An arrangement whereby a client gives his broker instructions to sell a stock if and when its price drops to a specified figure on the market.	*Mining*
Stopper	a stopping (S. Staffs.).	*Mining*
Stopping	a solid wall built from timber, stone, bricks, blocks or puddled clay across a roadway or entrance to old workings to restrict access of air into the waste to prevent spontaneous combustion and to prevent water and/or gas entering the mine workings, or to alter the ventilation current.	*Mining*

Please see the Appendix for further illustration

Term	Definition	Industry
Stopping rule	A procedure that allows interim analyses in clinical trials at predefined times, whilst preserving the Type I error at some pre-specified level. See also: Sequential trial	*Quality Engineering*
Stopple (stop off)	A procedure used in the repair of a pipeline to isolate a section of line in the absence of a shut-off valve. After welding a flanged saddle to the pipe, the line is "hot-tapped" and an expanding resilient plug is inserted into the pipe bore. When repair is completed, the plug is withdrawn and a valve, installed on the saddle flange, is closed.	*Mechanical*
Stops	see Blocks.	*Mining*
Storage	the area where galvanized articles are staged for pick-up or delivery	*Materials Process*
Storage agreement	Any contractual arrangement between the responding company and a storage operator under which gas was stored for, or gas storage service was provided to, the responding company by the storage operator, irrespective of any responding company ownership interest in either the storage facilities or stored gas.	*Energy*
Storage capacity	The amount of energy an energy storage device or system can store.	*Energy*
Storage hydroelectric plant	A hydroelectric plant with reservoir storage capacity for power use.	*Energy*
Storage safety	Storage safety concerns about material, location and climatic conditions.	*Material Process*
Storage site	Spent nuclear fuel storage pool or dry cask storage facility, usually located at the reactor site, as licensed by (or proposed to be licensed by) the Nuclear Regulatory Commission (NRC).	*Energy*
Storage Temperature Range	The minimum and maximum specified temperature which may be applied to the pressure sensor without causing a permanent change in the output characteristics.	*Electrical Engineering*
Storativity	A dimensionless term representing the volume of water an aquifer releases from or takes into storage per unit surface area of the aquifer per unit change in head. It is equal to the product of specific storage and aquifer thickness.	*Petroleum Engineering*
Storeroom Inventory	Average value of stores stock carried on plant's book to support maintenance operations (includes capital spares maintained as safety stock). Also referred to as Stores Investment.	*Procurement*
Storeroom Inventory Fill Rate	The total number of storeroom issue requests filled 100% divided by the total number of storeroom issue requests.	*Procurement*
Storeroom Inventory Turnover	Annual value of storeroom materials used divided by the average storeroom inventory.	*Procurement*
Stores Investment	This term stands for the amount of capital invested in spares, strategic parts, and consumables used for maintenance.	*Procurement*
Stores Issue	The Issue And/Or Delivery Of Parts And Materials From The Store Or Warehouse.	*Plant Engineering*
Stores Requisition	The Prime Document Raised By User Departments Authorizing The Issue Of Specific Materials, Parts, Supplies Or Equipment From The Store Or Warehouse.	*Plant Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Storm door	A second door installed outside or inside a prime door creating an insulating air space. Included are sliding glass doors made of double glass or of insulating glass such as thermopane and sliding glass doors with glass or Plexiglas placed on either the outside or inside of the door to create an insulating airspace. Not included are doors or sliding glass doors covered by plastic sheets or doors with storm window covering on just the glass portion of the door.	*Energy*
Storm or multiple glazing	A building shell conservation feature consisting of storm windows, storm doors, or double- or triple-paned glass that are placed on the exterior of the building to reduce the rate of heat loss.	*Energy*
Storm window	A window or glazing material placed outside or inside a window creating an insulating air space. Plastic material over windows is counted as a storm window if the same plastic material can be used year after year or if the plastic is left in place year-round and is in good condition (no holes or tears). If the plastic material must be put up new each year, it is not counted as a storm window. It is counted as "plastic coverings." Glass or Plexiglas placed over windows on either the interior or exterior side is counted as storm windows.	*Energy*
STOU	super tractor oil universal	*Petro-Chemical Abbreviations*
Stow	to pack rubbish away underground rather than incur the expense of hauling it out of the pit.	*Mining*
Stow bords	roadways in which rubbish or other debris can be stored.	*Mining*
Stowces or Stowses	a small windlass, sometimes called a 'drawing stowces'.	*Mining*
Stowing	the action of stowing or packing away mine waste and rubble into the space that has been created by removing the coal. The benefits were two-fold, the pack helped to support the roadways which ran through the gob, and the saving in on-costs in not having to transport the waste out of the mine.	*Mining*
Straight	An angle that measures 180°.	*Math*
Straight coal	a room or stall excavated in the Thick Coal having solid coal on three sides (S. Staffs.).	*Mining*
Straight ends and walls	a method of working similar to board and pillar.	*Mining*
straight load	A shipment consisting of a single product; i.e., only potatoes, or only apples.	*Agriculture*
Straight Mineral Oil	Petroleum oil containing no additives. Straight mineral oils include such diverse products as low-cost once-through lubricants and thoroughly refined white oils. Most high-quality lubricants, however, contain additives.	*Lubrication*
Straight oil	A mineral oil containing no additives.	*Lubrication*
Straight Polarity	The arrangement of direct-current arc welding leads in which the work is the positive pole and the electrode is the negative pole of the welding arc; a synonym for direct-current electrode negative.	*Maintenance and Repair*
Straight-run gasoline	Gasoline produced by the primary distillation of crude oil. It contains no cracked, polymerized, alkylated, reformed, or visbroken stock.	*Petroleum Engineering*
Straights	drivages along the strike (S. Wales).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Straightwork or Strait work	terms used for narrow work.	*Mining*
Strain	The intensity of deformation at a point in an object. See normal strain and shear strain.	*Engineering Physics*
Strain	In tensile testing, the ratio of the elongation to the gauge length of the test specimen, that is, the change in length per unit of original length. The term is also used in a broader sense to denote a dimensionless number that characterizes the change in dimensions of an object during a deformation of flow process.	*Engineering Physics*
Strain Gage	A measuring element for converting force, pressure, tension, etc., into an electrical signal.	*General Engineering*
Strain Gage	A sensing device providing a change in electrical resistance proportional to the level of applied stress.	*Electrical Engineering*
Strain gauge	An instrument used to measure small or minute distortions caused by stress forces in mechanical components.	*Mechanical*
Strain hardening	The strengthening of a metal alloy by deformation (due to the increasing difficulty for dislocation motion through the increasingly dense array of dislocations).	*Material Process*
Strain-age embrittlement	the loss in ductility accompanied by an increase in hardness and strength that occurs when low-carbon steel (especially rimmed or capped steel) is aged following plastic deformation; the degree of embrittlement is a function of aging time and temperature, occurring in a matter of minutes at the galvanizing temperature but requiring a few hours to years at room temperature	*Materials Process*
Strainer	A pipe strainer is a filter device used to mechanically remove solids from steam and fluids, by means of a perforated or wire mesh straining element. A Steam Strainer is a cost effective way of protecting downstream equipment such as heat exchangers, pumps, compressors, meters, spray nozzles, turbines, steam traps, etc. from possible damages due to debris such as rust, pipe scale, sediment, and/or other solids.	*Industrial*
Strainer	A coarse filter element (pore size over approximately 40 ¦m)	*Lubrication*
Strain-gage transducer	A changing-resistance sensor whose signal depends upon sensitive element deformation. In an unbonded wire strain-gage accelerometer, inertia affects a mass supported by nichrome wires; the wires change resistance in proportion to acceleration. The term may include piezoresistive accelerometers.	*Reliability Engineering*
Strain-hardening exponent	The slope of a log-log plot of true stress versus true strain between the onset of plastic deformation of a metal alloy and the onset of necking. This parameter is an indicator of the alloy's ability to be deformed.	*Material Process*
Strait	a narrow stall, room or roadway in the solid coal.	*Mining*
Strand	Usually a 3-wire strand used in quarrying stone or slate.	*Wire Rope & Cable*
Strand	One of the wires of any stranded conductor.	*Electrical*
Strand Lay	The distance of advance of one strand of a spirally stranded conductor, in one turn, measured axially.	*Electrical*
Stranded Benefits	Special collection programs, renewable energy and demand side management programs, lifeline rates and other utility resources funded by a monopoly utility that may not be funded if the utility's competition does not have smaller costs.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Stranded Commitment	Assets and contracts associated with shifting to competition which are above market prices and result in non-competitive conditions for the utility.	*Energy*
Stranded Conductor	A conductor composed of a group of wires, usually twisted, or of any combination of such groups of wires.	*Electrical*
Stranded costs	Costs incurred by a utility which may not be recoverable under market-based retail competition. Examples include undepreciated generating facilities, deferred costs, and long-term contract costs.	*Energy*
Stranded Costs/Stranded Assets	Costs incurred by a utility that may not be recoverable under market-based retail competition. Examples are undepreciated generating facilities, deferred costs, and long-term contract costs. They represent a utility's capital investments that are unrecoverable because of the transition to competition. The rationale for allowing stranded cost recovery is that utilities have made large investments in facilities under a regulatory system that allowed cost recovery of all prudent investments.	*Energy*
Stranded Investments or Stranded Costs	The difference between the book value of generation facilities under a regulated system, and what those facilities would be worth on the open market. In a traditional regulated rate of return system, electric utilities could recover the costs of building generation facilities, over time, on customers' bills.	*Energy*
Stranded Investments/ Costs	Utility investments in facilities built to serve customers under traditional regulation may become unrecoverable or "stranded" if those assets are deregulated and their cost of generation exceeds the actual price of power in a competitive market. These include prior investments allowed by regulators that are currently being recovered through regulated rates.	*Energy*
Stranded/Strandable Costs	These are costs inherent in the existing electric utility industry rendered potentially unrecoverable in a competitive market.	*Energy*
Strander	A machine that lays wires together helically to form a strand.	*Wire Rope & Cable*
Strap	a length of timber placed against the roof, supported by a prop at each end; or a length of corrugated steel used for supporting the roof, supported by two trees or held in place by roof bolts; or old iron rails put up between the coal face and the first row of props in longwall stalls to support a bad roof. (Mids.).	*Mining*
Strapdown inertial sensor	Accelerometers mounted to a platform fixed to the aircraft; Compare: gimbaled inertial sensor.	*Aeronautical Engineering*
Strapdown inertial sensor	Accelerometers mounted to a platform fixed to the aircraft; Compare - gimbaled inertial sensor.	*Aeronautical Engineering*
Strata	Layers of deposited rock, soil, etc. which are distinguishable from each other.	*Petroleum Engineering*
Strata	A series of beds of rock.	*Mining*
Strata bolts	see Roof bolts.	*Mining*
Strategic Conservation	Strategic conservation results from load reductions occurring in all or nearly all time periods. This strategy can be induced by price of electricity, energy-efficient equipment, or decreasing usage of equipment.	*Energy*
Strategic Load Growth	A form of load building designed to increase efficiency in a power system. This load shape objective can be induced by the price of electricity and by the switching of fuel technologies (from gas to electric).	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Strategic Petroleum Reserve (SPR)	Petroleum stocks maintained by the Federal Government for use during periods of major supply interruption.	*Energy*
Strategic Plan	The Cochrane Collaboration's elected Steering Group (CCSG) developed a strategic plan to guide The Cochrane Collaboration's evolution. The initial plan was updated in May 2003: see the Collaboration web site.	*Quality Engineering*
Stratification	Division into groups. Stratification may also refer to a process to control for differences in confounding variables, by making separate estimates for groups of individuals who have the same values for the confounding variable.	*Analysis*
Stratified randomisation	A method used to ensure that equal numbers of participants with a characteristic thought to affect prognosis or response to the intervention will be allocated to each comparison group. For example, in a trial of women with breast cancer, it may be important to have similar numbers of pre-menopausal and post-menopausal women in each comparison group. Stratified randomisation could be used to allocate equal numbers of pre- and post-menopausal women to each treatment group. Stratified randomisation is performed by performing separate randomisation (often using random permuted blocks) for each strata. See also: Minimization	*Quality Engineering*
Stratigraphic test well	A geologically directed drilling effort to obtain information pertaining to a specific geological condition that might lead toward the discovery of an accumulation of hydrocarbons. Such wells are customarily drilled without the intention of being completed for hydrocarbon production. This classification also includes tests identified as core tests and all types of expendable holes related to hydrocarbon exploration.	*Energy*
Stratigraphy	Strictly, the description of bedded rock sequences; used loosely, the sequence of bedded rocks in a particular area.	*Mining*
Stratosphere	The region of the upper atmosphere extending from the tropopause (8 to 15 kilometers altitude) to about 50 kilometers. Its thermal structure, which is determined by its radiation balance, is generally very stable with low humidity.	*Energy*
Stratum	a horizontal layer of geologic material of similar composition, especially one of several parallel layers arranged one on top of another.	*Chemical*
Straw fuse	a straw filled with powder to act as a fuse for igniting a blasting charge. If paper was used it was called a 'paper squib', 'squib' or 'Germans'.	*Mining*
Streak	A diagnostic characteristic of minerals, where scratching a sample on a piece of unglazed porcelain leaves powder of a characteristic color.	*Mining*
Streak, Streek or Streatch	all terms used in Scotland for the strike of a coal seam.	*Mining*
Streaks	Narrow strips or bands of surface haze.	*Material Process*
Stream	A general term for a body of flowing water; natural water course containing water at least part of the year. In hydrology, it is generally applied to the water flowing in a natural channel as distinct from a canal.	*Petroleum Engineering*
Streamflow	The water discharge occurring in a natural channel. A more general term than runoff, streamflow may be applied to discharge whether or not it is affected by diversion or regulation.	*Petroleum Engineering*
Stream-flow	The rate at which water passes a given point in a stream, usually expressed in cubic feet per second.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Streamline flow	(See laminar flow.)	*Mechanical, Process, and Operations*
Streamline-diffusion stabilization	A numerical technique for stabilization of the numeric solution to a convection-dominated PDE by artificially adding diffusion in the direction of the streamlines.	*Chemical*
STREAMSIDE MANAGEMENT ZONE (SMZ)	An area adjacent to a stream in which vegetation is maintained or managed to protect water quality.	*Forestry*
Street certificate	A certificate representing ownership in a specified number of shares that is registered in the name of some previous owner who has endorsed the certificate so that it may be transferred to a new owner without referral to transfer agent.	*Mining*
Street ell	A 90º pipe fitting with male thread and female threaded or socket weld ends.	*Mechanical*
Street timbering	the setting of additional posts, sprags and longitudinal bars to reinforce the prop and bar supports in a roadway. Also called 'double timbering'.	*Mining*
Strength	A very general term that may be applied to a material or a structure. In a material, strength refers to a level of stress at which there is a significant change in the state of the material, e.g., yielding or rupture. In a structure, strength refers to a level of level of loading which produces a significant change in the state of the structure, e.g., inelastic deformations, buckling, or collapse.	*Engineering Physics*
Strength Grade	See PROPERTY CLASS	*Maintenance*
Strength of Inference	The likelihood that an observed difference between groups within a study represents a real difference rather than mere chance or the influence of confounding factors, based on both p values and confidence intervals. Strength of inference is weakened by various forms of bias and by small sample sizes.	*Analysis*
Strength-to-weight ratio	See Specific strength.	*Material Process*
Stress	The intensity of internal force acting at a point in an object. Stress is measured in units of force per area. See shear stress and normal stress.	*Engineering Physics*
Stress	The force producing or tending to produce deformation divided by the area over which the force is applied. As generally defined in tensile testing (engineering stress), stress is the ratio of applied load to the original cross-sectional area. True stress (instantaneous stress) is applied load per instantaneous cross-sectional area.	*General Engineering*
Stress Area	The effective cross sectional area of a thread when subjected to a tensile force. It is based upon a diameter which is the mean of the pitch (or effective) and the minor (or root) diameters of the thread. The use of this diameter stems from the work of E. M. Slaughter in the 1930's. He completed carefully controlled tests using various sizes of standard threads and compared their strength with machined bars made from the same bar of material. He found that this mean diameter gave results that agreed with the tensile test results to within about 3%. The error on the minor and pitch diameters was about 15%. Tests completed subsequent to these by other investigators have also shown that the stress diameter is a reasonable approximation to a thread's tensile strength. (Reference: 'Tests on Thread Sections Show Exact Strengthening Effect of Threads.' by E. M. Slaughter, Metal Progress, vol 23, March 1933 pp. 18-20)	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Stress cell	An electrochemical cell in which corrosion can occur due to the presence of variations in the degree of mechanical stress within a metal sample.	*Material Process*
Stress Concentration	The amplification of the level of an applied stress in the region of a notch, void, or inclusion.	*Engineering Physics*
Stress Cone	A conical section built up of insulating tapes or a pennant to relieve the stress at the terminal end of the cable.	*Electrical*
Stress corrosion	Stress corrosion is the failure by cracking when a metal is under stress and exposed to a corrosive environment is called stress corrosion. Stress corrosion cracking phenomenon occurs as a result of the combined effects of the residual or applied stresses plus corrosion.	*Material Process*
Stress Corrosion Cracking	A cracking process that requires the simultaneous action of a corrodent and sustained tensile stress.	*Paint and Coatings*
Stress intensity factor	Parameter indicating the greater degree of mechanical stress at the tip of a pre-existing crack in a material under a mechanical load.	*Material Process*
Stress Relaxation	A significant problem with bolting at high temperatures is a phenomenon known as stress relaxation. Creep occurs when a material is subjected to high temperature and a constant load. Stress relaxation occurs when a high stress is present that is relieved over time; the stress is relaxed with a subsequent reduction in the bolt's preload. The only way to minimize the effects of stress relaxation is to use materials that have an adequate resistance to it at the product's operating temperature. The effect of bolt stress relaxation is to reduce the clamp force provided by the bolts; this phenomena alone will not fully loosen a joint.	*Maintenance*
Stress Relief	See 'Post Weld Heat Treatment'	*Petroleum Engineering*
Stress Relieving	Uniform heating of a structure or portion thereof to a sufficient temperature to relieve the major portion of the residual stresses, followed by uniform cooling.	*Maintenance and Repair*
Stress resultant	A system of forces which is statically equivalent to a stress distribution over an area.	*Engineering Physics*
Stress Screening	A modern electronics production tool for precipitating latent defects such as poorly-soldered connections. Utilizes random vibration + rapid temperature ramping.	*Reliability Engineering*
Stress testing	Testing units at stresses higher than what would be encountered during normal operating conditions, usually to induce failures.	*Reliability Engineering*
Stress-corrosion-cracking	A combined	*Material Process*
Stress-corrosion-cracking	A combined mechanical and chemical failure mechanism in which a noncyclic tensile stress leads to the initiation and propagation of fracture in a relatively mild chemical environment.	*Material Process*
Stress-relieving	heating to a suitable temperature, holding long enough to reduce residual stresses and then cooling slowly enough to minimize the development of new residual stresses	*Materials Process*
Stress-rupture-failure	See Creep-rupture failure.	*Material Process*
Stress-strength interference	A method by which the probability of failure of an item is calculated by superimposing the distribution of the item's strength with the distribution of the stress it will encounter during normal usage.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	Industry
Stret or Stretch places	a term used for straight work (N. Staffs.); or meaning solid, close or compact, e.g., gobbed stret, packed stret (Mids.).	*Mining*
Stretch	The elongation of a wire rope under load.	*Wire Rope & Cable*
Stretcher	a prop or a sprag set in a horizontal or near horizontal position.	*Mining*
Striae Surface	internal threadlike inhomogeneities in a transparent plastic.	*Material Process*
Striations	Prominent parallel scratches left on bedrock by advancing glaciers.	*Mining*
Strike	A find; a valuable mineral development made in an unexpected manner.	*Mining*
Strike	The direction, or bearing from true north, of a vein or rock formation measure	*Mining*
Strike Alert	A warning system on all NAVIGATORs set off by contact with an electrical power source.	*Petroleum Engineering*
Strike face	a face advancing in the direction of the line of strike.	*Mining*
Striking	originally the withdrawing of timber roof supports from the waste. The name was carried on to cover the work of the men who moved forward the hydraulic roof supports on a machine loaded face; or the digging up of the floor of a roadway to make more headroom. (Som.).	*Mining*
String	A sequence of characters.	*General*
String test	In a string test, a complete drive train, comprising a frequency converter, a motor and an application, such as a pump or a compressor, are tested in a factory situation that simulates site conditions. String tests are performed prior to delivery to verify the performance and functionality of the equipment and to ensure that the units comply with specifications under the working conditions of the destination plant. String tests are time consuming and expensive but often reduce time spent on erection and commissioning on the customer's premises.	*Electrical*
String-Based Preventive Maintenance	Usually, this refers to simple preventive maintenance tasks that are strung together on several machines. Examples of string PM's include lubrication, filter change, or vibration routes.	*Maintenance*
Stringer	A narrow vein or irregular filament of a mineral or minerals traversing a rock mass.	*Mining*
Stringer Bead	A type of weld bead made by moving the electrode in a direction essentially parallel to the axis of the bead. There is no appreciable transverse oscillation of the electrode. The deposition of a number of string beads is known as string beading and is used extensively in the welding of austenitic stainless-steel materials. See also Weave Bead.	*Maintenance and Repair*
Stringing deals	see Cribs.	*Mining*
Strip	Steel rolled out into long, thin, flat strips. Steel up to about 24 inches wide is strip or narrow strip; above this, wide strip. The dividing line is sometimes said to be 18 inches, but 24 inches is more generally accepted.	*Metallurgy*
Strip mine	An open cut in which the over burden is removed from a coal bed prior to the removal of coal.	*Energy*
Strip mining	See Opencast.	*Mining*

Term	Definition	*Industry*
Strip mining (surface)	A method used on flatter rain to recover coal by mining long strips successively; the material excavated from the strip being mined is deposited in the strip previously mined.	*Energy*
Strip or stripping ratio	The amount of overburden that must be removed to gain access to a unit amount of coal. A stripping ratio may be expressed as (1) thickness of overburden to thickness of coal, (2) volume of overburden to volume coal, (3) weight of overburden to weight of coal, or (4) cubic yards of overburden to tons of coal. A stripping ratio commonly is used to express the maximum thickness, volume, or weight of overburden that can be profitably removed to obtain a unit amount of coal.	*Energy*
Strip packing	building pack walls of limited width at intervals in the waste at right angles to the face in an attempt to reduce subsidence at the surface.	*Mining*
Stripper	Specially formulated detergent that breaks the bond of floor wax and finish when used as directed, without damaging flooring material.	*Chemistry*
Stripper plate	A plate that strips a molded piece from core pins or force plugs, operated by the opening of the mold.	*Material Process*
Stripper Production	The final stage of production in the life of an oil well or oil field. This stage is characterized by low rates of production, sometimes no more than a barrel of oil per day.	*Petroleum Drilling*
Stripper well	An oil or gas well that produces at relatively low rates. For oil, stripper production is usually defined as production rates of between 5 and 15 barrels of oil per day. Stripper gas production would generally be anything less than 60 thousand cubic feet per day.	*Energy*
Stripper-Plate	A plate that strips a molded piece from core pins or force plugs. The plate is actuated by the opening of the mold.	*Engineering Physics*
Stripping	Removal of molded pieces from a die or mold, also the removal of special fractions from mixed liquids through distillation.	*Material Process*
Stripping ratio	The ratio of tons removed as waste relative to the number of tons of ore removed from an open-pit mine.	*Mining*
Stroke	See travel.	*Industrial Engineering*
Stroke	The distance the plunger translates during a change in state.	*Mechanical*
Strouhal Number	A nondimensional parameter important in vortex meter design defined as - s = Fh/V where f = frequency, V = velocity, and h = a reference length	*Electronic Process*
Structural	steel member of specific cross-sectional dimensions used in fabrication and/or construction, (e.g. H-beam, angle, I-beam, W-flange)	*Materials Process*
Structural Attachments	Brackets, clips, lugs, or other elements welded, bolted, or clamped to the pipe support structures, such as stanchions, towers, building frames, and foundation. Equipment such as vessels, exchangers, and pumps is not considered to be pipe-supporting elements.	*Maintenance and Repair*
Structural biomaterial	material designed to bear loads and provide support for a living organism, such as bones	*Physics*

Term	Definition	*Industry*
Structural Bolt	A structural bolt is a heavy hexagon head bolt having a controlled thread length intended for use in structural connections and assembly of such structures as buildings and bridges. The controlled thread length is to enable the thread to stop before the joint ply interface to improve the fastener's direct shear performance. This term is used in civil and structural engineering but is not frequently used in mechanical engineering.	*Maintenance*
Structural composite	See Honeycomb structure.	*Material Process*
Structural Failure	the loss of the load-carrying capacity of a component or member within a structure or of the structure itself. Structural failure is initiated when the material is stressed to its strength limit, thus causing fracture or excessive deformations. The ultimate failure strength of the material, component or system is its maximum load-bearing capacity. When this limit is reached, damage to the material has been done, and its load-bearing capacity is reduced permanently, significantly and quickly. In a well-designed system, a localized failure should not cause immediate or even progressive collapse of the entire structure. Ultimate failure strength is one of the limit states that must be accounted for in structural engineering and structural design.	*Metallurgy*
Structural material	Engineering material used primarily for its mechanical properties relative to a structural application.	*Material Process*
Structural model	An idealization for analysis purposes of a real or conceived structure. A structural model includes boundaries limiting the scope of the analysis. Supports occur at these boundaries, representing things which hold the structure in place.	*Engineering Physics*
Structural steel shape	piece of steel of any specific design accepted as standard by the structural branch of the steel industry	*Materials Process*
Structured Text	An IEC1131-1 programming/configuration language.	*Control Engineering*
Strum	the length of the face. (Scot.).	*Mining*
Strut	a wooden board, prop or steel tube placed between steel arched roof supports to keep them at an even distance apart and stop sideways movement.	*Mining*
Stubbin	the digging up of the floor to mine the fireclay or to make more headroom along the roadways. (Lancs.) -see also Dinting, Beating up and Pavement brushing.	*Mining*
Stubbs	see Hubbs. Stud, the last few yards of a pillar to be stripped out. (Lancs.).	*Mining*
Stud	A fastener which is threaded at both ends with an unthreaded shank in between. One end (which often has a thread tolerance which results in more thread interference) is secured into a tapped hole, the other is used with a nut. (See M. Holloway)	*Maintenance*
Stud	A bolt, threaded on both ends, often used in bolting together bodies and bonnets or bodies and closures.	*General Mechanical*
Stud	A male horse kept for breeding.	*Agriculture*
Stud Bolts	Stud bolts for Open Face Flanges that are fully threaded end to end (with no bolt head).	*Petroleum Engineering*
Student's t-test	See t test	*Quality Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Stuffing box	The annular chamber provided around a valve stem in a sealing system into which deformable packing is placed. Sometimes called packing chamber.	*General Mechanical*
Stuffing box	The annular chamber provided around a valve stem in a sealing system into which deformable packing is introduced. See "Packing", "Gland".	*Mechanical*
Stugg	to break down the coal using only a pick. (Scot.).	*Mining*
Stull	Platforms of timbers between levels for strengthening the mine by supporting the walls, and for storing ore and depositing wall rock and waste material.	*Mining*
Stull Timbers	The large timbers placed across the vein or lode from one wall to another, to support the lagging upon which the ore or waste is placed.	*Mining*
Stump	Any small pillar.	*Mining*
Stumpage	Trees as they stand uncut in the woods (on the stump).	*Forestry*
Stumping	a type of pillar and stall working. (Lancs.).	*Mining*
Style Guide, Cochrane	A guide to issues of style arising in the preparation of Cochrane Reviews.	*Quality Engineering*
Stylet	A small, stiff, needlelike tube inserted into a food source to obtain liquid food. [1]	*Forestry*
Styrene	A colorless, toxic liquid with a strong aromatic aroma. Insoluble in water, soluble in alcohol and ether; polymerizes rapidly; can become explosive. Used to make polymers and copolymers, polystyrene plastics, and rubber.	*Energy*
Styrene Acrylonitrile	Styrene Acrylonitrile is typically used in housewares and in the interior trim and instrument panels of automobiles. Styrene Butadiene Latexes and Other Styrene Copolymers. Styrene Butadiene Latexes are commonly found in coatings, paints, and floor polishes. Styrene Butadiene Latexes are commonly found in coatings, paints, and floor polishes.	*Material Engineering*
Styrene or vinylbenzene (C6H5CH CH2)	Colorless liquid b. p. 290 ° F (143.33 ° C). Derived from coal or natural gas. One of the raw materials for synthetic rubber for tires. Monomer for polystyrene plastics.	*Material Process*
Styrene-Acrylonitrile Copolymer (SAN)	Copolymers of about 70 percent styrene and 30 percent acrylonitrile, with higher strength, rigidity, and chemical resistance than straight polystyrene. They may be blended with butadiene, either as terpolymer or by grafting onto the butadiene, to make ABS resins.	*Engineering Physics*
Stythe	an old term for afterdamp or chokedamp.	*Mining*
Subaward	A subaward is issued to a sub-recipient (e.g. co-proposer, junior partner) performing a portion of a University research project or program that is funded by a Sponsoring Agency. Performance and compliance requirements are akin to those under the Prime Agreement, however the award comes not from the Sponsoring Agency but from the University as a "pass-through." The University's Sponsored Projects Office has been delegated the authority to prepare and negotiate all subawards for collaborative research.	*Procurement*
Subbituminous	Coal of a rank intermediate between lignite and bituminous.	*Mining*
Subbituminous coal	A coal whose properties range from those of lignite to those of bituminous coal and used primarily as fuel for steam-electric power generation. It may be dull, dark brown to black, soft and crumbly, at the lower end of the range, to	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	bright, jet black, hard, and relatively strong, at the upper end. Subbituminous coal contains 20 to 30 percent inherent moisture by weight. The heat content of subbituminous coal ranges from 17 to 24 million Btu per ton on a moist, mineral-matter-free basis. The heat content of subbituminous coal consumed in the United States averages 17 to 18 million Btu per ton, on the as-received basis (i.e., containing both inherent moisture and mineral matter).	
Sub-bituminous	A black coal, intermediate between lignite and bituminous.	*Mining*
Sub-cavity molds	A mold having a common loading cavity for a multiple number of pieces.	*Material Process*
Subcompact/compact passenger car	A passenger car containing less than 109 cubic feet of interior passenger and luggage volume.	*Energy*
Subcontract	A purchase contract issued to a for-profit entity under a federal prime contract or extramural grant to implement or procure research or other work necessary to perform the prime award requirements or scope of work. Subcontracts contain special terms and conditions and flowdown provisions, as required by the extramural prime award, which are unique and appropriate to the individual project.	*Procurement*
Subdivision	A prescribed portion of a given State or other geographical region.	*Energy*
Sub-division	a piece of land to be divided into smaller lots, typically for housing	*Agriculture*
Sub-group analysis	An analysis in which the intervention effect is evaluated in a defined subset of the participants in a trial, or in complementary subsets, such as by sex or in age categories. Trial sizes are generally too small for sub-group analyses to have adequate statistical power. Comparison of sub-groups should be by test of interaction rather than by comparison of p-values. Sub-group analyses are also subject to the multiple comparisons problem. See also: Interaction, Multiple comparisons, Stratification	*Quality Engineering*
Subharmonic	A sinusoidal quantity having a frequency that is an integral submultiple (′1/2, ′1/3, etc.) of a fundamental (′1) frequency.	*Reliability Engineering*
Sublevel	A level or working horizon in a mine between main working levels.	*Mining*
Sublimation	The change of state of a materiel from solid to vapor and back to solid without going through a liquid state.	*Electrical Engineering*
Submarine Gate	Gate where the opening from the runner into the mold is located below the parting line or mold surface; as opposed to conventional edge gating, where the opening is machined into the surface of the mold. With submarine gates, the item is broken from the runner system on ejection.	*Engineering Physics*
Submerged Arc Welding (SAW)	An arc welding process that produces coalescence of metals by heating them with an arc or arcs drawn between a bare metal electrode or electrodes and the base metals. The arc is shielded by a blanket of granular fusible material. Pressure is not used, and filler metal is obtained from the electrode and sometimes from a supplementary welding rod, flux, or metal granules.	*Maintenance and Repair*
Submersible Pump	Long, narrow pumps that fit into the well and sit below water level. They are connected to the surface	*Petroleum Engineering*
Submersible service	Underwater or subsea installation. Valves require special treatment to protect against corrosion and external seawater pressure.	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Submetered data	End-use consumption data obtained for individual appliances when a recording device has been attached to the appliance to measure the amount of energy consumed by the appliance.	*Energy*
Submetering	Metering of individual units in multi-unit properties.	*Electrical*
Sub-plate (back plate)	An auxiliary mounting for a hydraulic component providing a means of connecting piping to the component.	*Mechanical, Process, and Operations*
Sub-plate valve mounting	The valve is mounted to a plate which provides straight through top and/or bottom ports.	*Mechanical, Process, and Operations*
Subsalt	Refers to oil prospects that lie below a salt layer.[5]	*Petroleum Drilling*
Subsea	Oilfield wellhead equipment used offshore and below the surface of the water.	*Petroleum Engineering*
Subsidence	The gradual sinking, or sometimes abrupt collapse, of the rock and soil layers into an underground mine. Structures and surface features above the subsidence area can be affected.	*Mining*
Subsidiary	An entity directly or indirectly controlled by a parent company which owns 50% or more of its voting stock.	*Energy*
Subsidiary company	A company in which the majority of shares (a controlling position) is held by another company.	*Mining*
Substation	Substations are key installations in the power grid. They house equipment for the protection and control of electrical power transmission and distribution, including power transformers, switchgear and measuring equipment. (See also Reactive power, Power factor correction, Circuit breaker and Switchgear.)	*Electrical*
Substation automation	The various technologies, methods and equipment used for the automatic operation of substations. This includes control and protection functions.	*Electrical*
Substitutional solid solution	An atomic scale combination of more than one kind of atom, with a solute atom substituting for a solvent atom at an atomic lattice site.	*Material Process*
Substrate	The parent or base material to which the coating is applied.	*Paint and Coatings*
Subsurface	Earth material (as rock) near but not exposed at the surface of the ground.	*Petroleum Drilling*
Subsychronous	Components of a vibration signal whose frequency is less than 1x shaft speed.	*Reliability Engineering*
Subsystem Criticality	A list of all the subsystems within a model, ranked according to the severity of their individual effect on the performance of the system. Each subsystem contains several events, grouped into a common system.	*Reliability Engineering*
Subtransmission	A set of transmission lines of voltages between transmission voltages and distribution voltages. Generally, lines in the voltage range of 69 kV to 138 kV.	*Energy*
Succession	The natural sequence of plant community replacement beginning with bare ground and resulting in a final, stable community in which a climax forest is reached.	*Forestry*
Succinic acid (COOH(CH2)2COOH)	Colorless needles from alcohol. Used in much the same way as succinic acid.	*Material Process*
Succinic anhydride (CH2CO)2O	Colorless needles from alcohol. Used in much the same way as succinic acid.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Suck Back	Technique used to partially clear the resin from the injection nozzle after the injection cycle by pulling the screw rearward, thus drawing the resin back into the injector.	*Engineering Physics*
Sucking insects	Insects that insert their mouthparts into plant tissues and withdraw nutrients and fluids through stylets.[1] Fin.	*Forestry*
sucrose	Glucose linked to fructose. It is the sugar that is translocated in the phloem of most plants.	*Agriculture*
Sucrose or cane sugar (C12H22O11)	Colorless monoclinic crystals, a modifier incorporated in some plastics to reduce brittleness, increase transparency, etc..	*Material Process*
Suction filter	A pump intake-line filter in which the fluid is below atmospheric pressure.	*Oil Analysis*
Suction line	The hydraulic line connecting the pump inlet port to the reservoir or sump. SUMP - A reservoir.	*Mechanical, Process, and Operations*
Sudden Failure	A failure that could not be anticipated by previous examination or monitoring.	*Reliability Engineering*
Suffolk	Suffolk	*Agriculture*
Suffolk	A breed of sheep developed by crossing Southdown rams on Norfolk Horned ewes.	*Agriculture*
Suitable Sealant	A sealant that is compatible with the quality of water found in the well.	*Petroleum Engineering*
SULEV	super ultra-low emission vehicle	*Petro-Chemical Abbreviations*
Sulfated ash	The ash content of fresh, compounded lubricating oil as determined by ASTM Method D 874. Indicates level of metallic additives in the oil.	*Oil Analysis*
Sulfate-reducing bacteria	Group of anaerobic bacteria capable of reducing sulfates to sulfides, especially hydrogen sulfide, a very corrosive gas.	*Chemical Engineering*
Sulfonamide	An amide of sulfonic acids. in combination, such as a mixture of o-toluene with p-toluene sulfonamide, used as plasticizers for protein products.	*Material Process*
Sulfonate	A hydrocarbon in which a hydrogen atom has been replaced with the highly polar (SO2OX) group, where X is a metallic ion or alkyl radical. Petroleum sulfonates are refinery by-products of the sulfuric acid treatment of white oils. Sulfonates have important applications as emulsifiers and chemical intermediates in petrochemical manufacture, and substituted sulfonates are widely used as corrosion inhibitors. Synthetic sulfonates can be manufactured from special feedstocks rather than from white oil base stocks.	*Lubrication*
Sulfone Polymers	Sulfone Polymers are found in automotive parts and electronics. The foam polyurethanes have excellent thermal insulating properties and, therefore, are used in building insulation. In addition, they have good dimensional stability and compressive strength, making them ideal for use in trucks, refrigerators, and boats for floatation purposes. They can also be very cushiony with energy-absorbing properties and durability. Therefore, they are also used as carpet underlay, in furniture, in automobile seating, in bedding, in packaging, and as safety padding.	*Material Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Sulfur	A yellowish nonmetallic element, sometimes known as "brimstone." It is present at various levels of concentration in many fossil fuels whose combustion releases sulfur compounds that are considered harmful to the environment. Some of the most commonly used fossil fuels are categorized according to their sulfur content, with lower sulfur fuels usually selling at a higher price. Note: No. 2 Distillate fuel is currently reported as having either a 0.05 percent or lower sulfur level for on-highway vehicle use or a greater than 0.05 percent sulfur level for off-highway use, home heating oil, and commercial and industrial uses. Residual fuel, regardless of use, is classified as having either no more than 1 percent sulfur or greater than 1 percent sulfur. Coal is also classified as being low-sulfur at concentrations of 1 percent or less or high-sulfur at concentrations greater than 1 percent.	*Energy*
Sulfur	A common natural constituent of petroleum products. While certain sulfur compounds are commonly used to improve the EP, or load-carrying, properties of an oil, high sulfur content in a petroleum product may be undesirable as it can be corrosive and create an environmental hazard when burned. For these reasons, sulfur limitations are specified in the quality control of fuels, solvents, etc.	*Lubrication*
Sulfur dioxide (SO_2)	A toxic, irritating, colorless gas soluble in water, alcohol, and ether. Used as a chemical intermediate, in paper pulping and ore refining, and as a solvent.	*Energy*
Sulfur hexafluoride (SF_6)	A colorless gas soluble in alcohol and ether, and slightly less soluble in water. It is used as a dielectric in electronics. It possesses the highest 100-year Global Warming Potential of any gas (23,900).	*Energy*
Sulfur oxides (SO_x)	Compounds containing sulfur and oxygen, such as sulfur dioxide (SO_2) and sulfur trioxide (SO_3).	*Energy*
Sulfuric acid	solution used in the cleaning stages of the galvanizing process that consists of two hydrogen ions and one sulfate ion (chemical formula: h2SO4) in a water mixture	*Materials Process*
Sulfuric acid (H2SO4)	Colorless oily liquid or hexagonal crystals. An acid catalyst and a reagent used in preparing dyes and other compounds to be used in plastics.	*Material Process*
Sulfuric acid treating	A refining process in which unfinished petroleum products such as gasoline, kerosene, and lubricating oil stocks are treated with sulfuric acid to improve their color, odor, and other characteristics.	*Petroleum Engineering*
Sulfurization	Combining sulfur compounds with petroleum lubricants.	*Petroleum Engineering*
Sulfurized Oil	Oil to which sulfur or sulfur compounds have been added.	*Lubrication*
Sulfidation	The reaction of a metal or alloy with a sulfur containing species to produce a sulfur compound that forms on or beneath the surface of the metal or alloy.	*Paint and Coatings*
Sulfide dust explosions	An underground mining hazard involving the spontaneous combustion of airborne dust containing sulfide minerals.	*Mining*
Sulfide	A compound of sulfur and some other element.	*Mining*
Sulfur dioxide	A gas liberated during the smelting of most sulfide ores; either converted into sulfuric acid or released into the atmosphere in the form of a gas.	*Mining*
Sulfuret	Combination of sulfur with a metallic, earthy or alkaline base.	*Mining*
Summer and winter peaking	Having the annual peak demand reached both during the summer months (May through October) and during the winter months (November through April).	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Summer Peak	The greatest load on an electric system during any prescribed demand interval in the summer.	*Energy*
Summing Point	Any point at which signals is added algebraically.	*Process Control*
Sump	a pit or depression where liquids drain, collect, or are stored.	*Chemical*
Sump	An underground excavation where water accumulates before being pumped to surface.	*Mining*
Sump in	to break into the solid coal with a cutter jib prior to cutting along the face. Also called 'to jib in'.	*Mining*
Sump or Sumph	a lodgement for accumulating water in a mine prior to pumping it to the surface, usually at the base of a shaft; or that part of the shaft below the lowest landing, the bottom of the shaft. –see also Back end.	*Mining*
Sump or Sumph	A pit sunk at the bottom of a mine to collect the water. It can be the bottom of a shaft.	*Mining*
Sumpers	shotholes drilled, usually inclined, in the centre of the shaft during sinking. Also called 'sumping holes'.	*Mining*
Sumping	To force the cutter bar of a machine into or under the coal. Also called a sumping cut, or sumping in.	*Mining*
Sumping drum	a shearer drum fitted with additional picks on its face side to enable it to be advanced into the coal to the required depth of web.	*Mining*
Sunk cost	Part of the capital costs actually incurred up to the date of reserves estimation minus depreciation and amortization expenses. Items such as exploration costs, land acquisition costs, and costs of financing can be included.	*Energy*
Sunk Cost	Any cost that has already been incurred and that cannot be changed by any decision made now or in the future.	*Procurement*
Super Cooling	The cooling of a liquid below its freezing temperature without the formation of the solid phase.	*General*
Super Heating	1. The heating of a liquid above its boiling temperature without the formation of the gaseous phase. 2. The heating of the gaseous phase considerably above the boiling-point temperature to improve the thermodynamic efficiency of a system.	*Electronic Process*
Superalloy	Broad class of metals with especially high strength at elevated temperatures.	*Material Process*
Supercharge	(See charge)	*Mechanical, Process, and Operations*
Superclean	10 particles >10 micron per milliliter	*Oil Analysis*
Superconducting magnet	Magnet made from a superconducting material.	*Material Process*
Superconductivity	The abrupt and large increase in electrical conductivity exhibited by some metals as the temperature approaches absolute zero.	*Energy*
Superconductor	Material that is generally a poor conductor at elevated temperature but, upon cooling below a critical temperatures, has zero resistivity. 1-2-3 superconductor The material YBa2Cu3O7, the material which is the most commonly studied ceramic superconductor and whose name is derived from the three metal ion subscripts.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Superconductor	Superconductor Material that is generally a poor conductor at elevated temperature but, upon cooling below a critical temperatures, has zero resistivity. 1-2-3 superconductor The material YBa2Cu3O7, the material which is the most commonly studied ceramic superconductor and whose name is derived from the three metal ion subscripts.	*Material Process*
Super-conductors	under special conditions, offer no electrical resistance, so electricity can flow indefinitely. More generally, a conductor refers to a material that can transmit electricity, heat or sound.	*Electrical*
Supercritical power plant	A supercritical power plant is a thermal electricity generating station that uses steam at extremely high temperature and pressure to generate electricity with improved efficiency. Above 374°C and 22.064 MPa (the "critical" point of water), water simply exists as super-heated steam, which can be used to drive the turbines of a generator more efficiently than steam at a lower (subcritical temperature). Operating under such conditions requires the use of extremely robust equipment. The specifications for products used in supercritical plants are higher than those used in subcritical plants.	*Electrical*
Supergrid	Trademarked by Airtricity in 2006, the term Supergrid refers to a pan-European subsea power grid. The term is widely used in the context of renewable energy. The Desertec project, for example would rely on a supergrid for the transmission of offshore wind power from European coastlines, solar power from northern Africa and southern Europe, together with hydro power from northern Europe.	*Electrical*
Superheated Steam	Steam that has been imparted with extra heat whilst heating it from a dry saturated condition. Also the corresponding rise in temperature.	*Industrial*
Superplastic forming	Method for forming complex shaped metal parts from certain fine grained alloys at elevated temperatures.	*Material Process*
Supervisory Control and Data Acquisition (electric)	A system of remote control and telemetry used to monitor and control the transmission system. NERC definition	*Energy*
Supplement	The angle that needs to be added to a given angle to give 180°.	*Math*
Supplemental gas	Any gaseous substance introduced into or commingled with natural gas that increased the volume available for disposition. Such substances include, but are not limited to, propane-air, refinery gas, coke-oven gas, still gas, manufactured gas, biomass gas, or air or inerts added for Btu stabilization.	*Energy*
Supplemental gaseous fuels supplies	Synthetic natural gas, propane-air, coke oven gas, refinery gas, biomass gas, air injected for Btu stabilization, and manufactured gas commingled and distributed with natural gas.	*Energy*
Supplemental Steel	Structural members that frame between existing building framing steel members and are significantly smaller than the existing steel.	*Maintenance and Repair*
Supplementary	Two angles that add up to 180°.	*Math*
Supplier	A person or corporation, generator, broker, marketer, aggregator or any other entity, that sells electricity to customers, using the transmission or distribution facilities of an electric distribution company.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Supplier Evaluation	Objective analysis of either existing suppliers by evaluating past performance, or as a preliminary assessment of potential new suppliers. Suppliers typically are evaluated on the basis of their technical quality, production capabilities, delivery, service, cost, and managerial capabilities.	*Procurement*
Supplier JIT deliveries	See "JIT delivery."	*Quality*
Supplier partnerships	Agreements with suppliers whereby operations are linked together, information is openly shared, problems and issues are commonly solved, and joint performance is mutually approved. They usually include multiyear purchase agreements.	*Quality*
Supplies	anything such as rings, timber, stonedust, lagging boards, chock wood, props etc. needed in the mine.	*Mining*
Supply	The components of petroleum supply are field production, refinery production, imports, and net receipts when calculated on a PAD District basis.	*Energy*
Supply Chain	The system of organizations, people, technologies, activities, information and resources that are involved in moving (or transforming) a product or service from its basic form to its finished or end form.	*Reliability Engineering*
Supply Chain Management	Supply chain management deals with the management of materials, information, and financial flows in a network consisting of suppliers, manufacturers, distributors, and customers. The coordination and integration of these flows within and across companies are critical in effective supply chain management. The ultimate goal is to manage effectively and efficiently the activities of design, manufacturing, distribution, service, and recycling of their products and services to their customers. (From Stanford University)	*Procurement*
Supply current	The typical current that must be supplied to a sensor (along with the supply voltage) to make it function properly.	*Reliability Engineering*
Supply Current	The units = Amps or milliamps. The amount of current necessary to maintain operation of a photoelectric control, proximity sensor or control base. Sometimes referred to as Current Consumption.	*Electrical Engineering*
Supply gate	the roadway at the opposite end of a longwall face to the Main gate. Used for taking supplies to the face, it is also usually the return airway. -see also Return gate and Tailgate.	*Mining*
Supply Header	Portion of the water supply system, which contains the valves and distribution boxes in a crossflow tower or the lateral pipes in a counterflow tower.	*Facility Engineering*
Supply Pressure	The pressure at the supply port of a device such as a controller, positioner or transducer. Common values of control valves supply pressure are 20 psig. for a 3-15 psig. output and 35 psig. for a 6-30 psig. output.	*Industrial Engineering*
Supply source	May be a single completion, a single well, a single field with one or more reservoirs, several fields under a single gas-purchase contract, miscellaneous fields, a processing plant, or a field area; provided, however, that the geographic area encompassed by a single supply source may not be larger than the state in which the reserves are reported.	*Energy*
Supply Voltage	The units + Volts. The range of power required to maintain proper operation of a photoelectric control, proximity sensor or control base. The difference in potential (or range of difference in potential) necessary to operate the unit.	*Electrical Engineering*

Term	Definition	*Industry*
Supply, petroleum	A set of categories used to account for how crude oil and petroleum products are transferred, distributed, or placed into the supply stream. The categories include field production, refinery production, and imports. Net receipts are also included on a Petroleum Administration for Defense (PAD) District basis to account for shipments of crude oil and petroleum products across districts.	*Energy*
Supply-chain/logistics systems	A class of manufacturing software designed to optimize scheduling and other activities throughout the supply chain - or "value chain" - including transportation and distribution functions.	*Quality*
Supply-Side	Technologies that pertain to the generation of electricity.	*Energy*
Support	A support contributes to keeping a structure in place by restraining one or more degrees of freedom. In a structural model, supports represent boundary entities which are not included in the model itself, e.g., foundations, abutments, or the earth itself. For each restrained translation degree of freedom at a support, there is a corresponding reaction force; for each restrained rotation degree of freedom, there is a reaction moment.	*Engineering Physics*
Support	The all-important function of keeping the mine workings open. As a verb, it refers to this function; as a noun it refers to all the equipment and materials--timber, roof bolts, concrete, steel, etc.--that are used to carry out this function.	*Mining*
Support equipment and facilities	These include, but are not limited to, seismic equipment, drilling equipment, construction and grading equipment, vehicles, repair shops, warehouses, supply points, camps, and division, district, or field offices.	*Energy*
Supporting structure	The main supporting unit (usually a pole or tower) for transmission line conductors, insulators, and other auxiliary line equipment.	*Energy*
Surface	Oilfield wellhead equipment used on land or above the waterline in offshore applications.	*Petroleum Engineering*
Surface analysis	Method such as Auger's electron spectroscopy in which the first few atomic layers of the material's surface are chemically analyzed.	*Material Process*
Surface blush	See surface haze.	*Material Process*
Surface break	a break in the ground at the surface caused by subsidence.	*Mining*
Surface casing	The first string of casing put into a well; it is cemented into place and serves to shut out shallow water formations and as a foundation for well control.	*Petroleum Engineering*
Surface condition	state of the surface of the steel	*Materials Process*
Surface defect	Exterior planar boundary of a solid that can be considered a defect structure.	*Material Process*
Surface diffusion	Enhanced atomic flow along the relatively open structure of a material's surface.	*Material Process*
Surface drift	a drift or inclined tunnel starting at the surface and usually connecting with the existing mine workings. Surface drifts were equipped with conveyors to convey the coal directly out of the mine, thus bypassing the shafts.	*Mining*
Surface drilling expenses (uranium)	These include drilling, drilling roads, site preparation, geological and other technical support, sampling, and drill-hole logging costs.	*Energy*
Surface fatigue wear	Wear occurring during repeated sliding or rolling of a material over a track.	*Material Process*
Surface Filtration	Filtration which primarily retains contaminant on the influent surface.	*Lubrication*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Surface force	A force applied to the surface of an object.	*Engineering Physics*
Surface gloss	A condition of specular, rather than diffuse, reflection from a given surface.	*Material Process*
Surface haze	A hazy appearance of the surface due to microscopically small surface imperfections.	*Material Process*
Surface lease	Includes all leases, easements, and rights-of way that may be required for a well site, access road, pipeline, camp, workspace, sump, borrow pit and/or any other area related to oil and gas production.	*Petroleum Engineering*
Surface Location	The location of a well; its measurement point	*Petroleum Drilling*
Surface Location	The location of a well or facility/measurement point.	*Petroleum Drilling*
Surface mine	A coal-producing mine that is usually within a few hundred feet of the surface. Earth above or around the coal (overburden) is removed to expose the coal-bed, which is then mined with surface excavation equipment, such as draglines, powers hovels, bulldozers, loaders, and augers. It may also be known as an area, contour, open-pit, strip, or auger mine.	*Energy*
Surface mining equipment	Surface mining equipment:	*Energy*
Surface mining methods	Surface mining methods:	*Energy*
Surface preparation	stages of cleaning that prepare the steel for finishing (galvanizing)	*Materials Process*
Surface Reclamation	A restoration of the surface for productivity.	*Petroleum Drilling*
Surface Reclamation	A restoration of the surface as for productivity or usefulness.	*Petroleum Drilling*
Surface rights	Fee ownership in surface areas of land. Also used to describe a lessee's right to use as much of the surface of the land as may be reasonably necessary for the conduct of operations under the lease.	*Energy*
Surface tension	The contractile surface force of a liquid by which it tends to assume a spherical form and to present the least possible surface. It is expressed in dynes/cm or ergs/cm2.	*Oil Analysis*
Surface Tension	A fluid in contact with a surface exhibits phenomena, due to molecular attractions, which appears to arise from a tension in the surface of the fluid. It may be expressed a dynes per centimeter or as ergs per square centimeter.	*Engineering Physics*
Surface Topography	The geometrical detail of a surface, relating particularly to microscopic variations in height.	*Paint and Coatings*
Surface water	All water naturally open to the atmosphere (rivers, lakes, reservoirs, ponds, streams, impoundments, seas, estuaries, etc.).	*Petroleum Drilling*
Surfacing	The application of a coating or cladding to a surface to impart a change in its surface behavior.	*Paint and Coatings*
Surfactant	Surfactants are products used as detergents, dispersing agents, emulsifiers, wetting agents, foaming or anti-foam agents, and solubilizers. They also constitute the raw material for the formulation of household products such as fabric detergents, shampoos, housecleaning products, as well as industrial auxiliary products for facilitating work in the manufacture of textile, flotation agents for ore, metal working, etc. They are used in other sectors of industry such as food processing, metallurgy, pharmaceuticals and public works.	*Chemical*

Please see the Appendix for further illustration

Term	Definition	Industry
Surfactant	Surface-active agent that increases the emulsifying, foaming, dispersing, spreading and wetting properties of a product.	*Chemistry*
Surfeit	the pressure exercised by pent up gas of any kind easing itself off with some force, frequently affecting the roof, sides, or floor of the seam. (N. East).	*Mining*
Surge	To rise suddenly to an excessive or abnormal value; a transient sudden rise of pressure in a pipeline. Pipeline surges can be positive or negative and are caused most frequently by the sudden closure of a block valve or emergency shutdown of a pump. Surge pressures in excess of the rated capacity of a pipeline can cause ruptures of the piping system. See Section 2.	*Mechanical*
Surge	A momentary rise of pressure in a circuit.	*Lubrication*
Surge Current	A current of short duration that occurs when power is first applied to capacitive loads or temperature dependent resistive loads such as tungsten or molybdenum heaters—usually lasting not more than several cycles.	*Electrical*
Surge pressure	The pressure changes caused in a circuit from a rapidly accelerated column of oil. The "surge" includes the span of these changes, from high to low.	*Mechanical, Process, and Operations*
Surge protector	Also known as a surge arrester, this is a device used to protect equipment from damage caused by high-voltage power surges. These can occur when substations are hit by lightning or as a result of switching operations in high-voltage transmission.	*Electrical*
Surge reliever	A valve designed to relieve pressure surges in liquid pipelines, thus preventing line rupture due to transient pressures exceeding design limits of the pipe. A special flexible tube type valve can function as a fast acting surge reliever. See Section 2.	*Mechanical*
Surging	In extrusion, an unstable pressure buildup leading to variable output and waviness of the surface of the extrudate. In extreme cases, the flow of extrudate may even cease momentarily at intervals.	*Engineering Physics*
Surplus	Excess firm energy available from a utility or region for which there is no market at the established rates.	*Energy*
Surplus energy	Energy generated that is beyond the immediate needs of the producing system. This energy may be supplied by spinning reserve and sold on an interruptible basis.	*Energy*
Surrogate endpoints	Outcome measures that are not of direct practical importance but are believed to reflect outcomes that are important; for example, blood pressure is not directly important to patients but it is often used as an outcome in clinical trials because it is a risk factor for stroke and heart attacks. Surrogate endpoints are often physiological or biochemical markers that can be relatively quickly and easily measured, and that are taken as being predictive of important clinical outcomes. They are often used when observation of clinical outcomes requires long follow-up. Also called: Intermediary outcomes, Surrogate outcomes	*Quality Engineering*
Survey	Steam trap survey's are a means of accurately determining how effectively your steam traps are operating.	*Industrial*
Survey station	same as directional survey station.	*Petroleum Drilling*
Survivability	A survivability subsytem detects and counters hostile actions.	*Aeronautical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Survival analysis	The analysis of data that measure the time to an event e.g. death, next episode of disease. See also: Time to event	*Quality Engineering*
Survival curve	A graph of the number of events occurring over time or the chance of being free of these events over time. The events must be discrete and the time at which they occur must be precisely known. In most clinical situations, the chance of an outcome changes with time. In most survival curves the earlier follow-up periods usually include results from more patients than the later periods and are therefore more precise.	*Analysis*
SUS	Saybolt Universal Second (same as SSU)	*Petro-Chemical Abbreviations*
SUS (SSU)	Saybolt Universal Seconds. A measure of lubricating oil viscosity in the oil industry. The measuring apparatus is filled with specific quantity of oil or other Fluid and its flow time through standardized office is measured in Seconds. Fast flowing fluids (low viscosity) will have low value; Slow flowing fluids (high viscosity) will have high value.	*Lubrication*
Suscept	Any organism that can be attacked by a biotic pathogen.[1]	*Forestry*
Suspended data	See Censored data	*Reliability Engineering*
Suspended rates	New rates that have been accepted for review by a utility commission. When these rates are suspended, they do not go into effect for a designated period of time. Charges under the new rate may be refunded after the resolution of the rate proceeding.	*Energy*
Suspended Sediment	Very fine soil particles remaining in suspension in water for a considerable period of time without contacting the bottom.	*Petroleum Engineering*
Suspended solids	Insoluble particles suspended in water	*Chemical Engineering*
Suspended Well	A well that has been temporarily capped off.	*Petroleum Drilling*
Suspended well	A well that has been capped off temporarily.	*Petroleum Drilling*
Suspended-Sediment Concentration	Ratio of the mass of dry sediment in a water-sediment mixture to the mass of water-sediment mixture.	*Petroleum Engineering*
Suspended-Sediment Discharge	Quantity of suspended sediment passing a point in a stream over a specific period of time.	*Petroleum Engineering*
Suspension	Dispersion of a solid in a fluid.	*Material Process*
Suspension Agent	Some fluids develop carbon and other particulate matter after years of use. Even new systems have things like weld slag and metal shavings that can become trapped in instrument lines or cause problems in other areas. Suspension agents help ensure particulate is held in suspension and easily filtered or caught in strainers.	*Lubrication*
Suspension Effect	The source of error due to varied reference liquid junction potential depending upon whether the electrodes are immersed in the supernatant fluid or deeper in the sediment. Normally encountered with solutions containing resins or charged colloids.	*General Engineering*
Susquehanna River Basin Commission (SRBC)	Regulatory body that governs water withdrawals from the Susquehanna River, but it does not have regulatory control over what flows into the river.	*Petroleum Drilling*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Sustainability	the length of time a material will remain adequate for use; meeting needs of the present generation without compromising the ability of future generations to meet their needs. Examining methods of conserving energy and water resources; look for opportunities for reuse or recycling of existing materials; select renewable resources when practical; consider the end use of the material as part of the design process	*Physics*
Sustainable Agriculture	an approach that encompasses a wide variety of methods of farming and ranching with the common goals of providing more farm profits, achieving greater environmental stewardship, and benefiting their families and communities. Some common practices include protecting and improving soil quality, reducing dependence on fuel, synthetic fertilizers and pesticides, and minimizing adverse impacts on wildlife, water quality and other environmental resource.	*Agriculture*
Sustainable agriculture	There is no commonly agreed upon definition of sustainable agriculture. The concept has been, and continues to be, surrounded by controversy. At Washington State University the term is used to describe agricultural management practices that are profitable, environmentally sound and socially acceptable. Broadly speaking, the movement to promote this type of agriculture arose from the negative effects of changes in agriculture that were brought about by vast and rapid technological changes introduced with the application of mechanization and chemicals to farming and ranching.	*Agriculture*
Sustainable development	Industrial development that does not detract from the potential of the natural environment to provide benefits to future generations.	*Mining*
Sustainable forestry	A holistic, conservation ethic based on environmental balance and health that helps ensure forests will be managed in ways that have the potential to meet the social, physical and economic needs of the present while ensuring similar options for the future.	*Forestry*
Sustainably managed forest	A forest that is managed using sustainable forestry principles and criteria. Such management can be confirmed through certification.	*Forestry*
Sustained yield	Management of forestland to produce a relatively constant amount of wood products, revenue or wildlife.	*Forestry*
Sutler	A merchant who accompanies an army and sells the soldiers provisions	*Breakroom*
SUV	sport utility vehicle	*Petro-Chemical Abbreviations*
Swad	a thin layer of stone or inferior coal at the base of a coal seam. (N. East).	*Mining*
Swage	The most common use of swaging is to attach fittings to steam pipes; the parts loosely fit together, and a mechanical or hydraulic tool compresses and deforms the fitting, creating a permanent joint. Pipe flaring machines are another example. Flared pieces of pipe are sometimes known as "swage nipples," "pipe swages," "swedge nipples," or "reducing nipples."	*Industrial*
Swage Nipple	See Nipple Swage	*Petroleum Engineering*
Swaged Fitting	Fitting into which wire rope can be inserted and then permanently attached by cold pressing (swaging) the shank that encloses the rope.	*Wire Rope & Cable*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Swaging	Reducing the ends of pipe and tube sections with rotating dies which are pressed intermittently against the pipe or tube end.	*Maintenance and Repair*
Swallow	a ridge in the roof or floor of a mine. (Scot.).	*Mining*
Swally, Swilley, Swelly or Swilly	a short dip in the coal seam, or in a roadway, often associated with the thickening out of the seam over a limited area.	*Mining*
Swamp coolers (evaporative coolers)	Air-conditioning equipment that removes heat by evaporating water. Evaporative cooling techniques are most commonly found in warm, dry climates such as in the Southwest, although they are found throughout the country. They usually work by spraying cool water into the air ducts, cooling the air as the spray evaporates.	*Energy*
Swarf	The cuttings, and grinding fines that result from metal working operations.	*Lubrication*
Swash plate	A stationary canted plate in an axial type piston pump which causes the pistons to reciprocate as the cylinder barrel rotates.	*Mechanical, Process, and Operations*
Swashplate	A device to control the pitch of rotors; on rotary-wing aircraft, the swashplate is controlled by a collective and a cyclic;	*Aeronautical Engineering*
Sweating	Exudation of small drops of liquid, usually a plasticizer or softener, on the surface of a plastic part.	*Material Process*
Sweep	direction or departure of a curve, a road, an arch, or the like, away from a rectilinear line	*Materials Process*
Sweep plates or Swapes	curved plates for laying barrow-way round a turn. (N. East).	*Mining*
Sweet	Crude oil or natural gas without appreciable amounts of sulfur, i.e. 'Standard Service'.	*Petroleum Engineering*
Sweet Gas	Natural gas with no measurable quantities of hydrogen sulfide (H2S).	*Petroleum Engineering*
Sweet gas	Natural gas having no significant hydrogen sulfide content.	*Mechanical*
Sweetening	Processes that either remove obnoxious sulfur compounds (primarily hydrogen sulfide, mercaptans, and thiophens) from petroleum fractions or streams, or convert them, as in the case of mercaptans, to odorless disulfides to improve odor, color, and oxidation stability.	*Petroleum Engineering*
Swelling	see 'Roll' (N. Staffs.).	*Mining*
Swept-sine testing	Sine shaking whose frequency is smoothly and continuously varied. Commonly required for sequentially identifying resonances. By contrast, see stepped sine testing.	*Reliability Engineering*
Swine	A domesticated member of the species Sus scrofa.	*Agriculture*
Swine breeds	that may be encountered by American journalists:	*Agriculture*
Swing check valve	A check valve in which the closure element is a hinged clapper which swings or rotates about a supporting shaft.	*General Mechanical*
Swint or Swinting	a tunnel driven at an angle off the main road. (Lancs.).	*Mining*
Switch	(1) Any device for connecting two or more contiguous package conveyor lines; (2) An electrical control device.	*Manufacturing*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Switch function	Conditional function that gives a smooth onset of a variable, for example from 0 to 1 or from 1 to 0. Often used for phase changes or saturation.	*Chemical*
Switch loading	The loading of a high static-charge retaining hydrocarbon (i.e., diesel fuel) into a tank truck, tank car, or other vessel that has previously contained a low-flash hydrocarbon (gasoline) and may contain a flammable mixture of vapor and air.	*Petroleum Engineering*
Switch, Float	An electrical switch which is responsive to liquid level.	*Mechanical, Process, and Operations*
Switch, Flow	An electric switch operated by a fluid flow. SWITCH, PRESSURE - An electric switch operated by fluid pressure.	*Mechanical, Process, andOperations*
Switch, Pressure Differential	An electric switch operated by a difference in pressure.	*Mechanical, Process, and Operations*
Switches or Sidings	passing places in the underground rail transport system attended by switch-keepers. (N. East). A switch can also be a rail junction or points. Switches can also refer to a bank of electrical panels.	*Mining*
Switchgear	Equipment used to control, protect, and regulate the flow of electrical power in a transmission or distribution network. It is often located in substations, but can be associated with any electrical equipment that might need to be isolated for fault correction (e.g., if a voltage drop occurred in one part of the grid, it might be necessary to shut off the affected section to prevent the fault spreading), or for maintenance purposes. The main components of switchgear are circuit breakers, which interrupt high-voltage current to protect electrical equipment from excessive current. The terms gas- and air-insulated switchgear (GIS and AIS) refer to switchgear equipped with gas- and air-insulated circuit breakers. The gas-insulated variety is more costly than the air, but it takes up less space and is therefore the preferred option when installing switchgear in urban environments (the substations can be one fifth the size of a conventional AIS substation).	*Electrical*
Switching Frequency	The actual number of targets to which the sensor can respond in a given time period, usually expressed as Hertz (cycles per second).	*Electrical Engineering*
Switching Station	Facility used to connect two or more electric circuits through switches.	*Energy*
Switch-keepers	see Switches.	*Mining*
Swivel	Attaches between the back reamer and the product being pulled back to keep the product from twisting.	*Petroleum Engineering*
Swivel Joint	A joint which permits single-plane rotational movement in a piping system.	*Maintenance and Repair*
Swivel Union	Also known as a 'Chicksan', Swivel unions are a rotatable union used for drilling loops. They are available in various configurations. (These swivels are not designed for continuous rotating service).	*Petroleum Engineering*
SWOL	An acronym you may hear on the in-car audio, referring to the electronic "Shift With Out a Lift" device, which allows gear shifts without lifting off the throttle, making the shift faster.	*NASCAR*
Swom stuff	an old term for alluvial deposits met within the coal measure.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Sword capel	a special capel attached to the end of a winding rope and secured to the winding drum by bolts.	*Mining*
SWU	See Separative Work Unit	*Energy*
SY	Scotch Yoke - See "Scotch Yoke Operator"	*Mechanical*
Syenite	An intrusive igneous rock composed chiefly of orthoclase.	*Mining*
Syllogism	An argument made by a series of statements	*Management Discussion*
Sylvester	a hand operated turfer for removing props from the waste and moving other objects, consisting of a notched bar and lever operated ratchet, with chains attached at each end. During the late nineteenth century the commonest type of a fatal mine accident was a roof collapse caused by knocking out the pit props with a sledgehammer. In order to try and counter this problem, Walter Sylvester, who worked for a colliery in North Staffordshire, invented a ratcheted pulling device, which could be attached to the pit props by a long chain and used to haul them out without any danger to the operator. It could also be used for pulling trucks and other heavy items, and tightening-up cables. It was patented in 1895; known locally as a "Walter" it soon became widely used in mining and other industries as the "Sylvester".	*Mining*
Sylvite	potassium chloride, the principal ore of potassium mined for fertilizer manufacturing.	*Mining*
Symbol, Combination	A symbol which combines graphical cutaway, and pictorial representations.	*Mechanical, Process, and Operations*
Symbol, Cutaway	A symbol showing principal internal parts, controls, and actuating mechanisms, interconnecting lines, and functions of a component.	*Mechanical, Process, and Operations*
Symbol, Fluid Power	A representation of the characteristics of a fluid power component by means of lines on a flat surface.	*Mechanical, Process, and Operations*
Symbol, Graphical (Schematic)	A simplified symbol which indicates essential characteristics applicable to all similar components.	*Mechanical, Process, and Operations*
Symbol, Pictorial	A symbol showing the actual shape of a component according to the manufacturer's description.	*Mechanical, Process, and Operations*
Symmetrical Thread	A symmetrical thread is one which has both flanks of the thread profile inclined at the same angle.	*Maintenance*
Symptom	Visible or measurable manifestation that an organism is diseased; a change in the organism itself.	*Forestry*
Synchro	A rotary electromagnetic device generally used as an AC feedback signal generator which indicates position. It can also be used as a reference signal generator.	*Mechanical, Process, and Operations*
Synchronous	Vibration components (on rotating machinery) that are related to shaft speed.	*Reliability Engineering*
Synchronous Generators	also referred to as alternators.	*Electrical*
Synchronous machines	See Machines	*Electrical*
Synchronous sampling	Control of a computer's rate of data sampling to achieve order tracking.	*Reliability Engineering*
Syncline	A down-arching fold in bedded rocks.	*Mining*

Term	Definition	*Industry*
Syncrude	Unconventional crudes such as those derived from tar sands, oil shale and coal liquefaction.	*Lubrication*
Syndiotactic	Regular alteration of side groups along a polymeric molecule.	*Material Process*
Synergism	The condition existing where the effect of two or more materials added to water is greater than the sum of their individual effects	*Chemical Engineering*
Synergism	A phenomenon wherein the effect of a combination of two additives is greater than the effect that could be expected from the known performance of each additive used singly.	*Engineering Physics*
Syngenetic	A term used to describe when mineralization in a deposit was formed relative to the host rocks in which it is found. In this case, the mineralization was formed at the same time as the host rocks. (The opposite is epigenetic.)	*Mining*
Syntax	The rules governing the structure of a language.	*General Engineering*
Synthetic fluid	Fluid which has been artificially compounded for use in a fluid power system.	*Mechanical, Process, and Operations*
Synthetic fluid, Halogenated	A fluid composed of halogenated organic materials. It may contain additives.	*Mechanical, Process, and Operations*
Synthetic fluid, Organic ester	A fluid composed of esters which are compounds of carbon, hydrogen, and oxygen only. It may contain additives.	*Mechanical, Process, and Operations*
Synthetic fluid, Phosphate ester base	A fluid which contains a phosphate ester as one Of the major components.	*Mechanical, Process, and Operations*
Synthetic fluid, Polyglycol	A nonaqueous fluid composed of polyglycol derivatives. It may contain additives.	*Mechanical, Process, and Operations*
Synthetic fluid, Silicate Ester	A fluid composed of organic silicates. It may contain additives.	*Mechanical, Process, and Operations*
Synthetic fluid, Silicone	A fluid composed of silicones. It may contain additives. SYSTEM - One or more series of component parts connected to each other. Often made up of two or more "circuits."	*Mechanical, Process, and Operations*
Synthetic Grease	A grease that contains a liquid lubricant that is not a mineral oil.	*Lubrication*
Synthetic hydrocarbon	Oil molecule with superior oxidation quality tailored primarily out of paraffinic materials.	*Oil Analysis*
Synthetic Lubricant	Lubricating fluid made by chemically reacting materials of a specific chemical composition to produce a compound with planned and predictable properties. A lubricant produced by chemical synthesis rather than by extraction or refinement of petroleum to produce a compound with planned and predictable properties.	*Lubrication*
Synthetic natural gas (SNG)	(Also referred to as substitute natural gas) A manufactured product, chemically similar in most respects to natural gas, resulting from the conversion or reforming of hydrocarbons that may easily be substituted for or interchanged with pipeline-quality natural gas.	*Energy*
Synthetic Oils	Oils produced by synthesis (chemical reaction) rather than by extraction or refinement. Many (but not all) synthetic oils offer immense advantages in terms of high temperature stability and low temperature fluidity, but are more costly than mineral oils. Major advantage of all synthetic oils is their chemical uniformity.	*Lubrication*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Synthetic resin	resins prepared by chemical means.	*Material Process*
Synthetic rubber	Any of several synthetic materials resembling rubber which can be used as rubber substitutes.	*Material Process*
System	Applied to measurements, means the best value that the system can determine.	*Aeronautical Engineering*
System (Electric)	Physically connected generation, transmission, and distribution facilities operating as a single unit.	*Energy*
System (gas)	An interconnected network of pipes, valves, meters, storage facilities, and auxiliary equipment used in the transportation, storage, and/or distribution of natural gas or commingled natural and supplemental gas.	*Energy*
System 800xA	An Industrial IT-compatible control system that provides a means of achieving measurable productivity and profitability improvements. The full name is Extended Automation System 800xA, and it is used in many industry sectors to oversee and control a wide range of processes. It extends the scope of traditional control systems to include all automation functions within a single operations and engineering environment. This enables plants to perform in a more intelligent and cost-effective way, and to improve productivity.	*Electrical*
System effectiveness	(a) For repairable systems and items: the probability that a system can successfully meet an operational demand within a given time when operated under specified conditions. (b) For "one-shot" devices and non-repairable items: the probability that the system will operate successfully when called upon to do so under specified conditions.	*Reliability Engineering*
System engineering	That engineering approach which deals with the design and integration of multiple components and controls into an assembled piping complex to accomplish a specified function or functions. The skid mounted Arcron Surge Relieve is an example of system engineering. See Section 2.	*Mechanical*
System interconnection	A physical connection between two electric systems that permits the transfer of electric energy in either direction.	*Energy*
SYSTEM INTERNATIONALE d' UNITES	See SI Metric System.	*Mechanical, Process, and Operations*
System of Forces	One or more forces and/or moments acting simultaneously.	*Engineering Physics*
System operator (electric)	An individual at a control center (Balancing Authority, Transmission Operator, Generator Operator, Reliability Coordinator) whose responsibility it is to monitor and control that electric system in real time. NERC definition	*Energy*
System Peak Demand	The highest demand value that has occurred during a specified period for the utility system.	*Energy*
System reliability	The reliability of an entire system, as opposed to the reliability of its components. The system reliability is defined by the reliability of the components as well as the way the components are arranged reliability-wise.	*Reliability Engineering*
System, Directly-Controlled	The body, process, or machine directly guided or restrained by the final controlling element to achieve a prescribed value of the directly-controlled variable.	*Process Control*
System, Indirectly-Controlled	That portion of the controlled system in which the indirectly controlled variable is changed in response to changes in the controlled variable.	*Process Control*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Systematic error, SE	An error that is always in one direction and is predictable, in contrast to random errors that may be either positive or negative and whose direction cannot be predicted.	*Quality*
Systematic Preventive Maintenance	Maintenance that is planned and programmed in a fixed period of time independent of equipment condition.	*Maintenance*
Systematic review (synonym systematic overview)	A review of a clearly formulated question that uses systematic and explicit methods to identify, select, and critically appraise relevant research, and to collect and analyze data from the studies that are included in the review. Statistical methods (meta-analysis) may or may not be used to analyze and summarize the results of the included studies. See also: Cochrane Review Also called: Overview, systematic	*Quality Engineering*
Systems Benefits Charge	This is a per-customer charge intended to recover the costs of utility demand-side management reach and development, renewable resources or low-income programs.	*Energy*
--T--	--T--	*Petroleum Drilling*
t	tenth	*Energy*
t distribution	A statistical distribution describing the distribution of the means of samples taken from a population with unknown variance.	*Quality Engineering*
t test	A statistical hypothesis test derived from the t distribution. It is used to compare continuous data in two groups. Also called: Student's t-test	*Quality Engineering*
T&D Losses	Transmission Losses & Distribution Losses	*Energy*
TAAF	Acronym for Test, Analyze and Fix	*Reliability Engineering*
Tab Gate	A small removable tab of approximately the same thickness as the molded item, usually located perpendicularly to the item. The tab is used as a site for edge gate location, usually on items with large flat areas	*Engineering Physics*
Tablets	A firmly compacted mass of molding powder of predetermined weight made by application of high pressure without heat.	*Material Process*
TAC	toxic air contaminant	*Petro-Chemical Abbreviations*
TACAN Point-to-Point (TCNP)	A basic guidance mode, providing lateral guidance to a point relative to a TACAN station by specified range and bearing.	*Aeronautical Engineering*
Tachometer	A device for measuring angular velocity.	*Aeronautical Engineering*
Tack	That property of a rubber or compounded stock which causes two layers of stock, which have been pressed together, to adhere firmly.	*Material Process*
Tack	The stickiness of an adhesive, measurable as the force required to separate an adherent from it by viscous or plastic flow of the adhesive.	*Engineering Physics*
Tack Weld	A small weld made to hold parts of a weldment in proper alignment until the final welds are made.	*Maintenance and Repair*
Tackifier	A substance such as a resin ester which is added to synthetic resins or elastomeric adhesives to improve the initial and extended tackiness of the film.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Tackler skip	a type of box used to wind men and material (S. Staffs.)—see also Paddy pan and Man hudge.	*Mining*
Tacklers or Tucklers	four lengths of chain with hooks on the end joined together at the other end by a ring, used to tackle up a skip for winding up the shaft (S. Staffs.); or small chains fastened round a loaded corve to give it strength when winding.	*Mining*
Tacks	When driving a heading in a fiery mine a series shot holes would be drilled then the area between the shot holes, the 'tacks' would be forced down by using wedges. (N. East).	*Mining*
Tacky	Sticky or adhesive.	*Material Process*
Tacky	A descriptive term applied to lubricating oils and greases which appear particularly sticky or adhesive.	*Lubrication*
Taconite	A highly abrasive iron ore.	*Mining*
Tactical Air Navigation (TACAN)	A basic guidance mode, providing lateral guidance to a TACAN station; Equipment that determines range and bearing to a radio station with a TACAN transmitter.	*Aeronautical Engineering*
Tadge	see Radge.	*Mining*
Tadger	an electric drill used for drilling shotholes for explosives and holes for roof bolts etc.	*Mining*
Tag	This is a number given to individual DCS control units so that the system can identify them.	*Control Engineering*
Tag Line	A small wire rope used to prevent rotation of a load.	*Wire Rope & Cable*
Tagg	Day-wage work. Usually on the underground haulage. Also called 'datalling' or 'odd-working'. (Mids.).	*Mining*
Tague	a metal plate fitted with guides to direct the wheels of a tram off the plate and onto the rails.	*Mining*
Taigle	the cleek, to interfere with the working of the pit (Scot.)—see also Steg the cleek.	*Mining*
Tail End	Usually the end of a conveyor nearest loading point.	*Manufacturing*
Tail gas	The lightest hydrocarbon gas released from a refining process.	*Petroleum Engineering*
Tail gate	the roadway at the opposite end of a longwall face to the Main gate. Usually the return airway and secondary access to the face. Also known as the 'Supply gate' when it is used to take materials to the face. Also called the 'Return' or 'Return gate'.	*Mining*
Tail in	to begin working 'open-off stalls' from the side of a heading. (Mids.); or to terminate a length of stall face against a buttock after measuring off the holing stints. (Mids.).	*Mining*
Tail Pulley	A pulley mounted at the tail end of a conveyor, its purpose is to return the belt.	*Manufacturing*
Tail rope	the return rope of a main & tail haulage system.	*Mining*
Tail runner	a haulage hand who accompanied the set of tubs on their journey to and from the shaft, or the guard on the man-riding bogies. (Scot.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Tail section	A term used in both belt and chain conveyor work to designate that portion of the conveyor at the extreme opposite end from the delivery point. In either type of conveyor it consists of a frame and either a sprocket or a drum on which the chain or belt travels, plus such other devices as may be required for adjusting belt or chain tension.	*Mining*
Tail sheave	also known as the 'return sheave'. The pulley around which the tail rope of the main and tail haulage or a scraper loader passes.	*Mining*
Tailgate	The outlet of a natural gas processing plant where dry residue gas is delivered or re-delivered for sale or transportation.	*Energy*
Tailing out	the gradual nip-out of a coal seam.	*Mining*
Tailings	The remaining portion of a metal-bearing ore consisting of finely ground rock and process liquid after some or all of the metal, such as uranium, has been extracted.	*Energy*
Tailings pond	A low-lying depression used to confine tailings, the prime function of which is to allow enough time for heavy metals to settle out or for cyanide to be destroyed before water is discharged into the local watershed.	*Mining*
Tailoring	Selecting or altering test procedures, conditions, values, tolerances, measures of failure, etc., to simulate or exaggerate the environmental effects of one or more forcing functions.	*Reliability Engineering*
Tailor-Made Test	tests specifically signed (tailor-made) to meet a particular situation when recruiting for a person of highly specialized skills or requirements.	*Industrial Relations*
Tailpiece	Also known as foot section pulley. The pulley or roller in the tail or foot section of a belt conveyor around which the belt runs.	*Mining*
Take	the extent or area of a lease often covering several thousand acres; or the reserves area of the colliery in which the colliery is permitted to work; or to show or reveal the presence of gas. (Lancs.). Also called the 'taking' (S. Wales).	*Mining*
Take a look	A driver following closely behind another car may dart momentarily to the inside at the entry to a corner, pretending to attempt a pass in order to disrupt the concentration of the driver in front and hopefully cause a small mistake, setting up a subsequent passing attempt.	*NASCAR*
Take the air	to test the ventilation by using an anemometer.	*Mining*
Take-Home Pay	the net amount of money which a worker receives in his pay check after all of the required deductions are made.	*Industrial Relations*
Take-Off	The mechanism for drawing extruded or calendered material away from the extruder or calendar.	*Engineering Physics*
Take-Up	The assembly of the necessary structural and mechanical parts which provide the means to adjust the length of belt and chain to compensate for stretch, shrinkage or wear and to maintain proper tension.	*Manufacturing*
Take-up Belt Tension	The actual amount of tension in each of the two runs of conveying medium approaching and leaving the take-up.	*Equipment*
Take-up Pulley	A pulley mounted on the take-up shaft.	*Equipment*
Taking of props	drawing the timber out of the waste. (Lancs.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Takt time	The optimum frequency at which product should be produced to meet customer demand, calculated by dividing available work time per shift by actual customer demand. For example, an 8-hour, one-shift operation might have 435 minutes of available time (480 minutes minus two 15-minute breaks and a 15-minute cleanup period). If daily demand is 1,305 products, then the takt time of the operation would be 20 seconds.	*Quality*
Takt Time	The rate that a completed product needs to be finished in order to meet customer demand.	*Reliability Engineering*
Talc	A flaky or fibrous form of hydrated magnesium silicate used as a filler and pigment.	*Material Process*
Talc	A natural hydrous magnesium silicate, used frequently as a filler such as steatite, talcum, mineral graphite.	*Engineering Physics*
Tale	a day's work; or the amount of coal raised in a day. (Som.).	*Mining*
Tall oil	The oily mixture of rosin acids, fatty acids, and other materials obtained by acid treatment of the alkaline liquors from the digesting (pulping) of pine wood.	*Energy*
Tallies	means of identification that were sent out of the pit with each tub of coals, or later, the name for the brass and aluminum small, round or square, uniquely numbered tokens, two of which were given to the collier before going underground. One was handed to the banksman on entering the cage and the other on returning again to the surface. Various names were used for them throughout the coalfields. -see Cuts, Checks and Pins.	*Mining*
Tally	a count of ballots in a National Labor Relations Board or state election.	*Industrial Relations*
Tally lamp	a small coffee-pot-shaped container made of tin, fixed to the miner's cap and lit by tallow and a wick. In the 1920s it was replaced by the carbide lamp.	*Mining*
Talus	A heap of broken, coarse rock found at the base of a cliff or mountain.	*Mining*
TAME	See Tertiary Amyl Methyl Ether.	*Energy*
TAN (Total Acid Number)	Acids are formed when a fluid comes in contact with oxygen, TAN levels are a means to show the extent of which a fluid has been oxidized. New fluids typically have a TAN less than 0.05, most fluids should be changed at and have a condemning limit of a TAN of 1.0. The rate of oxidation is minimal under 200F however as the temperature climbs the effects of oxidation are exponential. It is an industry accepted standard to assume the rate of oxidation doubles for each 15 degree increase above 200F.	*Lubrication*
Tandem Cylinder	Two or more cylinders With interconnected rod and piston assemblies.	*Mechanical, Process, and Operations*
Tandem Increases	adjustments or increases to certain employees or groups which correspond to increases granted to related employees.	*Industrial Relations*
Tandem pits	A pair of shafts, with one cage in each, both shafts being worked by one winding engine. The word 'tandem' can also refer to a place where one belt conveyor loads onto another.	*Mining*
Tangent	Straight portion after a curve conveyor.	*Manufacturing*
Tangent Plane	A plane tangent to the tooth surfaces at a point or line of contact.	*Mechanical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Tangential Flow Filtration (TFF)	Filtration in which liquid flows tangential to (along) the surface of the membrane. Synonymous to the term crossflow. The sweeping action of fluid acts to minimize gel layer formation and surface fouling. Contrast with direct flow filtration.	*Contamination Control*
Tangers	timbers set to support the sides of headings in shifting or very soft ground (S. Wales); or roof bars used as forward support between the last row of props and the coal face.	*Mining*
Tangible development costs	Costs incurred during the development stage for access, mineral-handling, and support facilities having a physical nature. In mining, such costs would include tracks, lighting equipment, ventilation equipment, other equipment installed in the mine to facilitate the extraction of minerals, and supporting facilities for housing and care of work forces. In the oil and gas industry, tangible development costs would include well equipment (such as casing, tubing, pumping equipment, and well heads), as well as field storage tanks and gathering systems.	*Energy*
Tank	The reservoir or sump; container for the storage of fluid in a fluid power system. TANK, AIR-OIL - A tank in which pressurized air is used to force oil into the outlet port. TANK, VACUUM - A tank for storing gas at less than atmospheric pressure.	*Mechanical, Process, and Operations*
Tank	container for chemicals used in the galvanizing process; steel is dipped sequentially in solution-containing tanks	*Materials Process*
Tank battery	A group of tanks that are connected to receive crude oil production from a well or a producing lease. A tank battery is also called a battery. In the tank battery, the oil volume is measured and tested before pumping the oil into the pipeline system.	*Petroleum Drilling*
Tank farm	An installation used by trunk and gathering pipeline companies, crude oil producers, and terminal operators (except refineries) to store crude oil.	*Energy*
Tank Test	A voltage dielectric test where the specimen to be tested is submerged in a liquid (usually water) and a voltage potential applied between the conductor and the liquid as ground.	*Electrical*
Tanker and barge	Vessels that transport crude oil or petroleum products. Note: Data are reported for movements between PAD Districts; from a PAD District to the Panama Canal; or from the Panama Canal to a PAD District.	*Energy*
Tape	A recording medium for data or computer programs. Tape can be in permanent form, such as perforated paper tape, or erasable, such as magnetic tape. Generally, tape is used as a mass storage medium, in magnetic form, and has a much higher storage capacity than disk storage, but it takes much longer to write or recover data from tape than from a disk.	*Electrical*
Tape Wrap	A term denoting a spirally or longitudinally applied tape material wrapped around the wire, either insulated or uninsulated, used as an insulation or mechanical barrier.	*Electrical*
Tapered Roller	A conveyor roller for use in a curve with end and intermediate diameters proportional to their distance from the center of the curve.	*Equipment*
Tapered Roller Curve	A curved section of roller conveyor having tapered rollers.	*Manufacturing*

Please see the Appendix for further illustration

Term	Definition	Industry
Tapered Wage Increases	a wage stabilization technique devised by the World War II War Labor Board to maintain wage structure differentials when eliminating standard conditions.	*Industrial Relations*
Tapering & Welding	Reducing the diameter of the end of a wire rope and welding it to facilitate reeving.	*Wire Rope & Cable*
Tapped End Studs	Stud bolts threaded on each end, with an unthreaded portion on the body center diameter (or cab be all threaded). The thread length dimension on one end controls the depth of engagement of that end into a tapped hole.	*Petroleum Engineering*
Tapping and Alloy Addition	Desulfurizing reagents and alloys such as manganese, aluminum and silicon are added to the molten stream during tapping from the furnace to the ladle.	*Steel*
Tar sands	Naturally occurring bitumen-impregnated sands that yield mixtures of liquid hydrocarbon and that require further processing other than mechanical blending before becoming finished petroleum products.	*Energy*
Tardiness	a form of absenteeism; lack of punctuality in arriving at the place of work.	*Industrial Relations*
Target	Object or point pointed by FLIR or radar.	*Aeronautical Engineering*
Target	The part or piece being detected.	*Electrical Engineering*
Target area	Predefined area in a gas spacing area where wells can be located without incurring a penalty on production for impacting adjacent spacing areas.	*Petroleum Engineering*
Target cursor	A symbol on a display, moved by a track handle or similar device, to select objects on the display.	*Aeronautical Engineering*
Target Market	A specific group of people or geographical area that has been identified as the primary buyers of a product or service.	*Energy*
Target measurement uncertainty	Measurement uncertainty formulated as a goal and decided on the basis of a specific intended use of measurement results.	*Quality*
Target value, TV	Used in proficiency testing to designate the correct value, usually estimated by the mean of all participant responses, after removal of outliers, or by the mean established by definitive or reference methods.	*Quality*
Tariff	A document, approved by the responsible regulatory agency, listing the terms and conditions, including a schedule or prices, under which utility services will be provided.	*Energy*
Tars	A term applied to pyrogenous residues obtained in the destructive distillation of organic materials.	*Material Process*
Task	One line on a task list that gives the inspector specific instruction to do one thing.	*Maintenance*
Task	a term used to describe a unit of work or effort exerted to achieve a specific purpose, such as setting up a machine to perform a certain job.	*Industrial Relations*
Task List	In a maintenance inspection context, a task list provides directions about what to look for during an inspection. Tasks include inspecting, cleaning, tightening, adjusting, lubricating, replacing, etc. Tasks are specific, complete, and have a performance standard. Avoid 'ticks' as the only feedback that a task is completed.	*Maintenance*
Task Time	the determination of the time required for the average worker to perform a job according to the prescribed standard.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Taut line	Basic guidance mode; provides vertical guidance to maintain a taut line for a dipping sonar, or other such device.	*Aeronautical Engineering*
Tax Credits	Credits established by the federal and state government to assist the development of the alternative energy industry.	*Energy*
Tax-cost	A deduction (allowance) under U.S. Federal income taxation normally calculated under a formula whereby the adjusted basis of the mineral property is multiplied by a fraction, the numerator of which is the number of units of minerals sold during the tax year and the denominator of which is the estimated number of units of unextracted minerals remaining at the end of the tax year plus the number of units of minerals sold during the tax year.	*Energy*
Tax-percentage (for Statutory)	A deduction (allowance) allowed to certain mineral producers under U.S. Federal income taxation calculated on the basis of a specified percentage of gross revenue from the sale of minerals from each mineral property not to exceed the lesser of 50 percent of the taxable income from the property computed without allowance for depletion. (There are also other limits on percentage depletion on oil and gas production.) The taxpayer is entitled to a deduction representing the amount of tax-cost depletion or percentage (statutory) depletion, whichever is higher.	*Energy*
Tayloresque	a term describing either scientific management or the differential piece rate system sponsored by Frederick W. Taylor.	*Industrial Relations*
Taylor-Forge Method	A method developed by four engineers of the Taylor-Forge Company in Chicago in the 1930's that subsequently formed the basis of the ASME code for flanged joint design. The assumptions made by the method are now generally regarded as too simplistic. This method gives rise to the m and y gasket factors.	*Maintenance*
TBA	See Tertiary Butyl Alcohol	*Energy*
TBC	Total Business Concept	*Gears*
TBD	Thousand barrels a day	*Petro-Chemical Abbreviations*
TBI	throttle body injection	*Petro-Chemical Abbreviations*
TBN	total base number	*Petro-Chemical Abbreviations*
TBN	(Total) base number	*Lubrication*
TCF	temperature correction factors	*Petro-Chemical Abbreviations*
tcf	Trillion Cubic Feet (of gas)	*Petroleum Drilling*
tcf	Trillion Cubic Feet (of gas).	*Petroleum Drilling*
TCW-3	water cooled 2-cycle engine oil specification	*Petro-Chemical Abbreviations*
TDC	top dead center	*Petro-Chemical Abbreviations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
TDS	Total dissolved solids. These solids are in molecular, ionized or microgranular form and can pass through a two-micron filter.	*Filtration*
TDSP	Transmission and/or Distribution Service Provider	*Energy*
TE	Total Error	*Quality*
Tea	Something which is not coffee	*Breakroom*
Teamsters, Chauffeurs, Warehousemen and Helpers of America	International Brotherhood of (Ind) - organized in 1899 as the Team Drivers' International Union.	*Industrial Relations*
Tear drop	Surface blemishes of a scaly appearance usually caused by a nonuniform temperature of a charge as it flows into the mold. Term not recommended. See Fish-eye.	*Material Process*
Tear Propagation Resistance	Resistance of a material to a force acting to propagate an initiated tear in the material.	*Engineering Physics*
Tear Resistance	Resistance of material to a force acting to initiate and then propagate a failure at the edge of a test specimen.	*Engineering Physics*
Tear Strength	The force required to initiate or continue a rip in a jacket or other insulation under specified conditions.	*Electrical*
Technical Ceramic	A ceramic that exhibits a high degree of industrial efficiency through carefully designed microstructures and superb dimensional precision.	*Engineering Physics*
Technical Hole Deviation Technology	a general term that refers to using Technical Hole Deviation to rationalize directional tool settings while drilling, to monitor directional progress as a directional well is drilled, or to evaluate driller or service company directional control performance.	*Petroleum Drilling*
Technical Hole Deviation	a quantitative description of how a directional well bore trajectory differs from its planned trajectory; mathematically ties a directional well plan to its actual well path. Eight variables collectively define technical hole deviation. Not to be confused with general "hole deviation", which attempts to explain/model why a well bore can't economically be drilled in a continuously-straight direction. Most of technical hole deviation is undefined if a preferred well path is vertical. See table.	*Petroleum Drilling*
Technical Implementation Advisory Group (TIAG)	A sub-group of the Information Management System Group (IMSG), the TIAG advises the Information Management System Group on technical issues.	*Quality Engineering*
Technocracy	a theory of economic and social organization in which industrial management would be scientifically controlled by engineers.	*Industrial Relations*
Technological Change	changes in production methods which involve the use of new machinery and equipment for the purpose of increasing productivity.	*Industrial Relations*
Technological Unemployment	unemployment which results from changes in techniques of production that reduce the amount of labor required to produce an article.	*Industrial Relations*
Technology	instruments, tools or inventions developed through research to increase efficiency	*Agriculture*
Technology	Technology is a assembly procedures for producing something. In refer to a process, technology is fix.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Tedlar bags	gas-tight bags constructed of non-reactive material (Tedlar) for the collection and transport of gas/vapor samples.	*Chemical*
Tee	A tee is used to either combine or split a steam or fluid flow. Most common are tees with the same inlet and outlet sizes, but reducing tees are also widely used. See also Pipe Fittings.	*Industrial*
Tee Joint	A welded joint between two members located approximately at right angles to each other in the form of a T.	*Maintenance and Repair*
Teem bye	to empty the coals over the resting coal stock or heap when there are no wagons available. (N. East).	*Mining*
Teem or Tem	to tip rubbish on the spoil bank.	*Mining*
Teeming trough	a cistern into which the water was pumped out of the mine. (Lancs.).	*Mining*
Teeth work	working the coal end on or against the cleat. (Scot.).	*Mining*
Teflon	A fluorocarbon polymer used for insulation of electrical wires (trademark of DuPont Company).	*General Engineering*
Teflon	Dupont's trademark covering all of its fluorocarbon resins, including PTFE, FEP, and various copolymers.	*Engineering Physics*
Tego	Proprietary term describing a paper film coated on both sides with phenol-formaldehyde resin.	*Material Process*
TEL	tetraethyl lead	*Petro-Chemical Abbreviations*
Telecommunication	Synonym for data communication. The transmission of information from one point to another.	*Electrical*
Telegraphers' Union; The Commercial (AFL-CIO)	organized in 1903 as an amalgamation of two competing organizations, the International Union of Commercial Telegraphers and the Order of Commercial Telegraphers.	*Industrial Relations*
Telemetring (electric)	The process by which measurable electrical quantities from substations and generating stations are instantaneously transmitted to the control center, and, by which, operating commands from the control center are transmitted to the substations and generating stations. NERC definition	*Energy*
Telemetry	A technique which permits a measured quantity to be transmitted and interpreted at a distance from the measuring location. Form, or types of telemetry include analog, digital, frequency, and pulse.	*Electrical Engineering*
Telemetry	Data acquisition transmitted wirelessly while the car is on the track.	*NASCAR*
Telescoping Cylinder	A cylinder with nested multiple tubular rod segments which provide a long working stroke in a short retracted envelope.	*Mechanical, Process, and Operations*
Telial stage (telium)	A stage of the rust fungi; a fruiting structure usually appearing as fine, hairlike projections from lower surfaces of infected leaves.	*Forestry*
Telluride	A chemical compound consisting of the element tellurium and another element, often gold or silver.	*Mining*
temp	Temperature	*General*

Please see the Appendix for further illustration

Term	Definition	*Industry*
TEMPCO	Abbreviation for "temperature coefficient": the error introduced by a change in temperature. Normally expressed in %/°C or ppm/°C.	*General*
TEMPCO	Abbreviation for "temperature coefficient" - the error introduced by a change in temperature. Normally expressed in %/°C or ppm/°C.	*Electronic Process*
Temperature	The range of ambient temperatures, given by their extremes, within which the transducer may be operated. Exceeding compensated range may require recalibration.	*General*
Temperature coefficient of resistivity	The coefficient that indicates the dependence of a metal's resistivity on temperature.	*Material Process*
Temperature coefficient (of a solar photovoltaic cell)	The amount that the voltage, current, and/or power output of a solar cell changes due to a change in the cell temperature.	*Energy*
Temperature Error	The maximum change in output, at any measurand value within a specified range, when the transducer temperature is changed from room temperature to specified temperature extremes.	*Electrical*
Temperature Error	The maximum change in output, at any measurand value within the specified range, when the transducer temperature is changed from room temperature to specified temperature extremes.	*Electronic Process*
Temperature range	The temperatures between which a sensor will operate accurately.	*Reliability Engineering*
Temperature Range, Compensated	The range of ambient temperatures within which all tolerances specified for Thermal Zero Shift and Thermal Sensitivity Shift are applicable (temperature error).	*Electrical*
Temperature Range, Operable	The range of ambient temperatures, given by their extremes, within which a transducer may be operated. Exceeding compensated range may require recalibration.	*Electrical*
Temperature Rating	The maximum temperature at which a given insulation or jacket may be safely maintained during continuous use, without incurring any thermally induced deterioration.	*Electrical*
Temperature, Ambient	The temperature of the medium surrounding a device. Note: allowable ambient temperature limits are based on the assumption that the device in question is not exposed to significant radiant energy sources.	*Process Control*
Temperature, Process	The temperature of the process medium at the sensing element.	*Process Control*
Temperature-humidity model	An accelerated life testing model used when the two accelerating factors are temperature and humidity.	*Reliability Engineering*
Temperature-non-thermal model	An accelerated life testing model used when the two accelerating factors are temperature and another non-thermal stress factor.	*Reliability Engineering*
Tempered	Metal is reheated after quenching for the purpose of making it more stress-free, crack-free, distortion-free, and slightly softening it.	*Petroleum Engineering*
Tempered glass	A strengthened glass involving a heat treatment that serves to place the exterior surface in a residual compressive state.	*Material Process*
Tempered martensite	An a+Fe3C microstructure produced by heating the more brittle martensite phase.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Tempering	A process of heating a normalized or quench-hardened steel to a temperature below the transformation range and, from there, cooling at any rate desired. This operation is also frequently called stress relieving.	*Maintenance and Repair*
Temporal sequence	The sequence of events in time, used as one of the criteria in evaluating causation – the exposure or intervention must have occurred before the outcome to be a plausible cause of the outcome.	*Quality Engineering*
Temporarily Abandoned	The act of isolating the completed interval or intervals within a wellbore from the surface by means of a cement retainer, cast iron bridge plug, cement plug, tubing and packer with tubing plug, or any combination thereof.	*Petroleum Drilling*
Temporarily discharged fuel	Fuel that was irradiated in the previous fuel cycle (cycle N) and not in the following fuel cycle (cycle N+1) and that will be irradiated in a subsequent fuel cycle.	*Energy*
Temporary Arbitrator	an individual who handles a single case for the parties in dispute.	*Industrial Relations*
Temporary bracing	metal that is attached to a fabrication prior to galvanizing in order to provide added support so that the steel does not change shape during heating and cooling; temporary bracing is removed after galvanizing.	*Materials Process*
Temporary Disability	an injury resulting in the temporary incapacity to perform work.	*Industrial Relations*
Temporary Employee	a worker hired for a limited time only, frequently to meet a peak demand or special rush job.	*Industrial Relations*
Temporary Extended Unemployment Compensation	unemployment insurance provided by federal law to provide additional unemployment compensation to those who had exhausted their rights under the existing state law.	*Industrial Relations*
Temporary Layoff	a separation from employment at the instigation of the employer but without fault on the employee's part, usually of a temporary nature.	*Industrial Relations*
Temporary Shear Stability Index (TSSI)	The measure of the viscosity modifier's contribution to an oil's percentage viscosity loss under high shear conditions. Temporary shear loss results from the reversible lowering of viscosity in high shear areas of the engine, an effect that can positively influence fuel economy and cold cranking speed.	*Lubrication*
Temporary Viscosity Loss (TVL)	Measure of decrease in dynamic viscosity under high shear rates compared to dynamic viscosity under low shear.	*Lubrication*
Temporary Wetland	A type of wetland in which water is present for only part of the year, usually during wet or rainy seasons; also known as vernal pools.	*Petroleum Engineering*
Ten	a measure of coal, usually consisting of 440 bolls of 8 pecks each, but varied within the range of from 418 to 440 bolls; it could, however, be as high as 550 bolls. As the weight of a boll of coal was 2.35284 cwts., the weight of the ten of 440 bolls is 51.76428 tons. Sometimes it was fixed at 50 tons.	*Mining*
Ten (j)	a provision in the Taft-Hartley Act which permits the National Labor Relations Board to obtain injunctive relief when "there is reasonable cause to believe that the charges filed were true" and that injunctive relief in necessary to effectuate the policies of the Act.	*Industrial Relations*
Ten mile long flume, Twin Springs, Idaho Flume	A boxing or piping for carrying water. Similar to sluice boxes, but they do not have riffles and are used solely to transport water in areas where a ditch would be impossible such as cliff sides and rocky hillsides.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Tenant	a person who pays rent to live on someone else's land	*Agriculture*
Tender bind	soft shale or mudstone, (Yorks.).	*Mining*
Tenite I	A trade name for cellulose acetate plastic.	*Material Process*
Tenite II	A trade name for cellulose acetate butyrate plastic.	*Material Process*
Tennessee Valley Authority	established by congress in the Tennessee Valley Authority Act of 1933, the first major program for comprehensive river valley development in the United States.	*Industrial Relations*
Tennessee Valley Authority (TVA)	A federal agency established in 1933 to develop the Tennessee river valley region of the southeastern U.S.	*Energy*
Tennessee Walking Horse	AKA, Tennessee Walker. The breed evolved from the Narragansett Pacer, Canadian, Morgan, Standardbred, Thoroughbred and American Saddlebred. It takes its name from the place most associated with its development, the middle Tennessee bluegrass region. Prized for its smooth-riding gait. But a hundred years ago the breed was a utility animal used for all type of farm work. Recognized as a breed only since formation of the Tennessee Walking Horse Breeders' Association of America in 1935.	*Agriculture*
Tensile strength	The maximum engineering stress experienced by a material during a tensile test.	*Material Process*
Tensile strength	The highest tensile stress that a material can withstand before failure or rupture occurs - the force being applied in a direction tending to elongate the material.	*General Mechanical*
Tensile Strength	The longitudinal stress required to break a specimen of prescribed dimension divided by the original cross-sectional area at the point of rupture (usually expressed in pounds per square inch).	*Electrical*
Tensile Stress	Axial forces per unit area applied to a body that tend to extend it.	*Mechanical*
Tensile test	A destructive test performed on a specially machined specimen taken from material in its delivered condition to determine mechanical properties, such as tensile strength, yield strength, and percent elongation.	*Mechanical*
Tensiometer	The instrument used for measuring the capillary pressure in an unsaturated zone.	*Petroleum Engineering*
Tension	The act of stretching.	*Mining*
Tension Leg Platform	A type of platform generally used in deep waters. Instead of a stationary platform attached to the ocean floor, the surface platform is tethered to a template on the ocean floor by flexible steel tendons.	*Petroleum Drilling*
Tension test	Same as "Tensile Test"	*Mechanical*
Tension Washers	A general name given to spring washers, curved washers, Belleville washers and disc springs. This type of washer provides a relatively low stiffness (compared to the joint stiffness) and can be used to act as a spring take-up with a bolt to prevent movement between parts.	*Maintenance*
Tentale	the tonnage rent upon coals drawn, the rent paid to the lessor for a ten of coals. (N. East).	*Mining*
Tenter	the man who ran the engine or jig; or the engineer (Yorks.); or the person who looked after the horses in the pit.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Tenure	Tenure is a time-limited ownership of the subsurface petroleum and natural gas (PNG) rights, and confers the right to apply to access, explore and develop oil and gas according to applicable statutory requirements.	*Petroleum Engineering*
Teost	A bench test for assessing the tendency of an oil to form high temperature deposits.	*Mechanical, Process, and Operations*
Terawatt hour	One trillion watt hours.	*Energy*
Term	Definition	*Discipline*
Term agreement	Any written or unwritten agreement between two parties in which one party agrees to supply a commodity on a continuing basis to a second party for a price or for other considerations.	*Energy*
Terminal	An input/output device used to enter data into a computer and record the output.	*Electrical*
Terminal Base Linearity T.B.L. (End Point Linearity)	A method of defining linearity. The maximum deviation of any data point on a sensor output curve from a straight line drawn between the end data points on that output curve. (T.B.L. is approximately twice the magnitude of B.F.S.L.).	*Electrical Engineering*
Terminal electron acceptor (TEA)	a compound or molecule that accepts an electron (is reduced) during metabolism (oxidation) of a carbon source. Under aerobic conditions molecular oxygen is the terminal electron acceptor. Under anaerobic conditions a variety of terminal electron acceptors may be used. In order of decreasing redox potential, these TEAs include nitrate, manganic manganese, ferric iron, sulfate, and carbon dioxide. Microorganisms preferentially utilize electron acceptors that provide the maximum free energy during respiration. Of the common terminal electron acceptors listed above, oxygen has the highest redox potential and provides the most free energy during electron transfer.	*Chemical*
Terminal Line	A theoretical slope for which the theoretical end points are normalized at 0 and 100% of both measurand and output. Interchangeability error is referenced to this line.	*Electrical Engineering*
Terminal location	The physical location of one end of a transmission line segment.	*Energy*
Termination	the severing of an employee's relationship with his employer.	*Industrial Relations*
Termination	1). The load connected to the output end of a transmission line. 2). The provisions for ending a transmission line and connecting to a bus bar or other terminating device.	*Electrical*
Terminator	Chemical species that ends a chain growth polymerization mechanism.	*Material Process*
Terms of Service	Content of the agreement between a customer and a REP.	*Energy*
Terotechnology	The application of managerial, financial, engineering, and other skills to extend the operational life of, and increase the efficiency of, equipment and machinery. "A combination of management, financial, engineering, and other practices applied to physical assets in pursuit of economic life-cycle costs (LCC). Its practice is concerned with specification and design for reliability and maintainability of plant machinery, equipment, buildings, and structures with their installation, commissioning, maintenance, modification, and replacement, and with feedback of information on design, performance, and costs" (from the definition endorsed by the British Standards Institute).	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
TERP	Texas Emissions Reduction Program	*Petro-Chemical Abbreviations*
Terpene	Any of series of isomeric hydrocarbons, C10H16, obtained by the distillation of plants, especially the conifers.	*Material Process*
Terpolymer	The product of copolymerization of three different monomers, or of the grafting of one monomer to the copolymer of two different monomers. An example of a terpolymer is ABS resin, derived from acrylonitrile, butadiene, and styrene.	*Engineering Physics*
Terrain	The contour of the earth.	*Aeronautical Engineering*
Terrain avoidance (TA)	Flight such that the aircraft maintains a constant barometric altitude but flies around obstacles; Compare: obstacle avoidance, threat avoidance.	*Aeronautical Engineering*
Terrain following (TF)	A basic guidance mode, providing vertical guidance to maintain an operator selected radar altitude above the terrain. Flight such that the aircraft tries to maintain a constant height above the terrain, usually in the range of 100-1,000 ft; Uses a g-command from the Multi-Mode Radar to generate a flight director cue. This controls the aircraft flight path so that the set clearance altitude is achieved over major high points in the terrain with zero flight path angle. Compare: nap-of-the-earth flight.	*Aeronautical Engineering*
Terrain Referenced Navigation (TRN)	A navigation mode based on comparison of barometric altitude and radar altitude with a map; Kalman filters correlate the terrain data and the altitudes. A primary navigation data source. TRN combines INS with map references. It is most accurate over rough terrain. Does not give accurate data while over flat areas or water. See Also: Digital Map Generator.	*Aeronautical Engineering*
Terrazzo	A non-resilient floor material composed of marble and Portland cement.	*Chemistry*
Terrestrial sequestration	Biotic sequestration of carbon in above- and below-ground biomass and soils.	*Energy*
Tertiary	Treatment of water to remove nutrients such as phosphorus and nitrogen	*Filtration*
Tertiary	Lateral or panel openings (e.g., ramp, crosscut).	*Mining*
Tertiary amyl methyl ether - $(CH_3)_2(C_2H_5)COCH_3$	An oxygenate blend stock formed by the catalytic etherification of isoamylene with methanol.	*Energy*
Tertiary butyl alcohol - $(CH_3)_3COH$	An alcohol primarily used as a chemical feedstock or a solvent or feedstock, for isobutylene production for MTBE (methyl tertiary butyl ether) and produced as a co-product of propylene oxide production or by direct hydration of isobutylene.	*Energy*
Test	any device or questionnaire, written or oral, for the purpose of measuring a person's abilities.	*Industrial Relations*
Test certificates	Documents provided by a manufacturer certifying that required tests were performed.	*Mechanical*
Test complexity	Refers to the CLIA system of classifying tests into categories on the basis of the difficulty of measurement and interpretation. Categories include waived, provider performed microscopy, moderate complexity, and high complexity.	*Quality*
Test Flange	A blind flange, usually with a lead filled cavity used to cushion and minimize the wear caused by erosion from high velocity and abrasive fluids.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Test Hands	employees used in motion study in order to determine the proper sequence of job operations to eliminate waste effort.	*Industrial Relations*
Test hole	A well drilled to shallow depths for evaluation purposes. It can be drilled deeper in formations with BC Oil and Gas Commission approval and without the requirement of holding subsurface rights.	*Petroleum Engineering*
Test method	The method which is selected for experimental testing to validate its performance characteristics.	*Quality*
Test of association	A statistical test to assess whether the value of one variable is associated (i.e. varies with) the value of another variable, or whether the presence or absence of a factor is more likely when a particular outcome is present. See also: Correlation	*Quality Analysis*
Test status words	Status words reported at the conclusion of a test. Values: test in progress, not tested, normal, redundant, degraded, failed.	*Aeronautical Engineering*
Test well contribution	A payment made to the owner of an adjacent or nearby tract who has drilled an exploratory well on that tract in exchange for information obtained from the drilling effort.	*Energy*
Testing	An element of verification for the determination of the capability of an item to meet specified requirements by subjecting the item to a set of physical, chemical, environmental, or operating conditions.	*Maintenance and Repair*
Testing flame	the lowered flame of the flame safety lamp when the lamp is being used to test for firedamp.	*Mining*
Tether	Braided Kevlar double strap bolted to the wheel on one end and to the chassis on the other to keep the wheel attached to the chassis in case of an accident.	*NASCAR*
Tetra ethylene glycol	A solvent - glycol.	*Material Process*
Tetrahedral position	Site in a crystallographic structure at which an atom or ion would be surrounded by four neighboring atoms or ions.	*Material Process*
Tetrachlorethane	1,2,2,2-Tetrachlorethane A solvent chlorinated hydrocarbons.	*Material Process*
Tetradecyl alcohol	A solvent - alcohol.	*Material Process*
Tetrahedral	Involving fourfold coordination.	*Material Process*
Tetrahydrofurfuryl alcohol	A solvent-furan.	*Material Process*
Texas and New Orleans Railway v. Brotherhood of Railway and Steamship Clerks	a case which resulted from an action by the Railway Clerks in 1927 under Section 2 of the Railway Labor Act seeking an injunction against the Texas and New Orleans Railway Company.	*Industrial Relations*
Texas Longhorn	A breed of beef cattle. They are registered by the Texas Longhorn Breeders Association of America.	*Agriculture*
Textile Workers of America; United (AFL-CIO)	organized in Washington, D.C., in November 1901.	*Industrial Relations*
Textile Workers Union of America (AFL-CIO)	a union which developed out of the activities in the late 1930's of the Textile Workers Organizing Committee.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Texture	The texture of a grease is observed when a small portion of it is pressed together and then slowly drawn apart. Texture can be described as: Brittle — ruptures or crumbles when compressed Buttery — separates in short peaks with no visible fibers. Long Fibers — stretches or strings out into a single bundle of fibers. Resilient — withstands a moderate compression without permanent deformation or rupture. Short Fibers — short break-off with evidence of fibers. Stringy — stretches or strings out into long fine threads, but with no evidence of fiber structure	*Lubrication*
Textured microstructure	Microstructure	*Material Process*
Textured microstructure	Textured microstructure Microstructure associated with preferred orientation.	*Material Process*
TFB	Swedish Transport Research Board	*Petro-Chemical Abbreviations*
TFMO	abbreviation for tool force magnitude and orientation. (lbf @ degrees)	*Petroleum Drilling*
TFOUT	thin film oxygen uptake test	*Petro-Chemical Abbreviations*
TGF	top groove fill	*Petro-Chemical Abbreviations*
THD	Total Harmonic Distortion. For a signal, the ratio of the sum of the powers of all harmonic frequencies above the fundamental frequency to the power of the fundamental frequency.	*Reliability Engineering*
THD	abbreviation for Technical Hole Deviation.	*Petroleum Drilling*
THD Technology	abbreviation for Technical Hole Deviation Technology.	*Petroleum Drilling*
THD well log	either the Vertical THD Log or the Horizontal THD Log.	*Petroleum Drilling*
The Collaboration Trading Company, Limited	A wholly owned subsidiary of The Cochrane Collaboration, the registered charity.	*Quality Engineering*
The English Suffolk Society	was formed in 1886 to provide a registry service and to promote the breed. First imported to the United States (New York) in 1888. The breed didn't make its way to the western states until 1919.	*Agriculture*
The following coal-producing States are split in origin of coal, as defined by	The following coal-producing States are split in origin of coal, as defined by:	*Energy*
The Frack Act	The Fracturing Responsibility and Awareness of Chemicals Act seeks to reverse some of the policies enacted in the 2005 energy policy and compel full disclosure of the chemicals, and specifically the concentrations of the chemicals used in hydraulic fracturing. Currently, the amount of each chemical is considered proprietary information. Democratic Senator Bob Casey (Pennsylvania) and Congresswoman Diana DeGette (Colorado) are the primary sponsors of the bill.	*Petroleum Drilling*
The PCIe electrical interface	The PCIe electrical interface is also used in a variety of other standards, most notably the Express Card laptop expansion card interface.	*Electrical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
The Stag	term used for Nystagmus, an eye disease caused by working in low light conditions.	*Mining*
The term derate can also refer to discounting a portion of a generating units capacity for planning purposes	The term derate can also refer to discounting a portion of a generating units capacity for planning purposes.	*Energy*
Theoretical critical shear stress	High stress level associated with the sliding of one plane of atoms over an adjacent plane in a defect free crystal.	*Material Process*
Therblig	an element of motion first classified by Frank G. Gilbreth. He classified the 17 basic types by setting out a symbol for each movement.	*Industrial Relations*
There are of two types of conveyor systems	There are of two types of **conveyor systems**:	*Energy*
Therm	One hundred thousand (100,000) Btu.	*Energy*
Thermal activation	Atomic scale process in which an energy barrier is overcome by thermal energy.	*Material Process*
Thermal Barrier Coating	A coating forming an insulating barrier to a heat source to protect the substrate.	*Paint and Coatings*
Thermal capacity	The number of gallons per minute (GPM) a cooling tower will handle for a specified range, wet-bulb temperature, and approach. Also simply known as Capacity.	*Facility Engineering*
Thermal coal	Coal burned to generate the steam that drives turbines to generate electricity.	*Mining*
Thermal Coefficient of Resistance	The change in resistance of a semiconductor per unit change in temperature over a specific range of temperature.	*Electrical*
Thermal Conductivity	The ability of a material to conduct heat in the form of thermal energy.	*Electrical*
Thermal Conductivity	Ability of material to conduct heat.	*Electrical*
Thermal conversion factor	A factor for converting data between physical units of measure (such as barrels, cubic feet, or short tons) and thermal units of measure (such as British thermal units, calories, or joules); or for converting data between different thermal units of measure. See Btu conversion factor.	*Energy*
Thermal cracking	A refining process in which heat and pressure are used to break down, rearrange, or combine hydrocarbon molecules. Thermal-cracking includes gas oil, visbreaking, fluid coking, delayed coking, and other thermal cracking processes (e.g., flexicoking).	*Energy*
Thermal cycling	Subjecting a product to predetermined temperature changes, between hot and cold extremes.	*Reliability Engineering*
Thermal Decomposition	Decomposition resulting from action by heat. It occurs at a temperature at which some components of the material are separating or reacting together, with a modification of the macro or microstructure.	*Engineering Physics*
Thermal Degradation	Thermal degradation or thermal cracking is the breaking of carbon - carbon bonds in the fluid molecules by heat to form smaller fragments which are free radicals. The reaction may either stop at that point, in which case smaller molecules than previously existed are formed, or, the fragments may react with each other to form polymeric molecules larger than previously existed in the fluid.	*Lubrication*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	In heat transfer terminology, the two types of degradation products are known as "low boilers" and "high boilers." If thermal degradation occurs at extreme temperatures greater than 400°C (752°F), the effect is not only to break carbon - carbon bonds but to separate hydrogen atoms from carbon atoms and form coke. In this case, fouling of the heat transfer surfaces is very rapid and the system will soon cease to operate. The effect of the low boilers is to decrease the flash point and viscosity of the fluid as well as to increase its vapor pressure. The effect of the high boilers is to increase the viscosity of the fluid as long as they remain in solution. However, once their solubility limit is exceeded, they begin to form solids which can foul the heat transfer surfaces.	
Thermal desorber	describes the primary treatment unit that heats petroleum-contaminated materials and desorbs the organic materials into a purge gas or off-gas.	*Chemical*
Thermal desorption system	refers to a thermal desorber and associated systems for handling materials and treated soils and treating offgases and residuals.	*Chemical*
Thermal Diffusivity	The measure of the transient heat flow through a material.	*Metallurgy*
Thermal Direct Printer	Forms images by pressing heated areas of printing head against heat-sensitive paper. (No ribbon is needed)	*General*
Thermal Drift Chart	A chart illustrating sensor operating variance due to changes in temperature.	*Electrical Engineering*
Thermal efficiency	A measure of the efficiency of converting a fuel to energy and useful work; useful work and energy output divided by higher heating value of input fuel times 100 (for percent).	*Energy*
Thermal emf	See Seebeck emf	*Electrical*
Thermal Endurance	The time in hours at a selected temperature for an insulating material or system of material or system of materials to deteriorate to some predetermined level of electrical, mechanical, or chemical performance under prescribed conditions of test.	*Electrical*
Thermal energy storage	The storage of heat energy during utility off-peak times at night, for use during the next day without incurring daytime peak electric rates.	*Energy*
Thermal Expansion	An increase in size due to an increase in temperature expressed in units of an increase in length or increase in size per degree, i.e. inches/inch/degree C.	*General Engineering*
Thermal expansion	the process by which steel becomes larger upon heating	*Materials Process*
Thermal Expansion (Coefficient of)	The fractional change in length (sometimes volume) of a material for a unit change in temperature.	*Electrical*
Thermal Expansion Coefficient	The amount a material will change in dimension with a change in temperature. It is the amount of strain due to thermal expansion per degree Kelvin expressed in units of K-1.	*Metallurgy*
Thermal Gradient	The distribution of a differential temperature through a body or across a surface.	*Electrical*
Thermal Gradient	The distribution of a differential temperature through a body or across a surface.	*Electronic Process*
Thermal limit	The maximum amount of power a transmission line can carry without suffering heat-related deterioration of line equipment, particularly conductors.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Thermal Pollution	A reduction in water quality caused by increasing its temperature, often due to disposal of waste heat from industrial or power generation processes. Thermally-polluted water can harm the environment because plants and animals have a hard time adapting to it.	*Petroleum Engineering*
Thermal Rating	The maximum and/or minimum temperature at which a material will perform its function without undue degradation.	*Electrical*
Thermal rating (electric)	The maximum amount of electrical current that a transmission line or electrical facility can conduct over a specified time period before it sustains permanent damage by overheating or before it sags to the point that it violates public safety requirements. NERC definition	*Energy*
Thermal Relief Valve	A valve which limits the pressure in a system caused by heat expansion of oil.	*Mechanical, Process, and Operations*
Thermal resistance (R-Value)	This designates the resistance of a material to heat conduction. The greater the R-value the larger the number.	*Energy*
Thermal Sensitivity Shift	The sensitivity shift due to changes of the ambient temperature from room temperature to the specified limits of the compensated temperature range.	*General Engineering*
Thermal shock	The fracture of a material as the result of a temperature change, usually a sudden cooling.	*Material Process*
Thermal Shock Resistance	The measure of how large a change in temperature a material can withstand without damage. Thermal shock resistance is very important to most high temperature designs. Measurements of thermal shock resistance are highly subjective because it is extremely process dependent. Thermal shock resistance is a complicated function of heat transfer, geometry and material properties. The temperature range and the shape of the part play a key role in the material's ability to withstand thermal shock. Tests must be carefully designed to mimic anticipated service conditions to accurately assess the thermal shock resistance of a material.	*Metallurgy*
Thermal spraying	A process in which coating material is heated and accelerated from a spray torch towards the work piece. The deposited material forms a coating on the surface.	*Paint and Coatings*
Thermal Spring	Heated groundwater naturally flowing to the land surface.	*Petroleum Engineering*
Thermal Stability	Ability of a polymer to maintain its initial physical and chemical properties at elevated temperature.	*Engineering Physics*
Thermal storage	Storage of heat or heat sinks (coldness) for later heating or cooling. Examples are the storage of solar energy for night heating; the storage of summer heat for winter use; the storage of winter ice for space cooling in the summer; and the storage of electrically-generated heat or coolness when electricity is less expensive, to be released in order to avoid using electricity when the rates are higher. There are four basic types of thermal storage systems: ice storage; water storage; storage in rock, soil or other types of solid thermal mass; and storage in other materials, such as glycol (antifreeze).	*Energy*
Thermal Transfer Printer	Forms images by pressing heated areas of printing head against heat-sensitive ribbon which presses against media.	*Gears*
Thermal vibration	Periodic oscillation of atoms in a solid at a temperature above absolute zero.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Thermal Zero Shift	An error due to changes in ambient temperature in which the zero pressure output shifts. Thus, the entire calibration curve moves in a parallel displacement.	*General*
Thermistor	A temperature-sensing element composed of sintered semiconductor material which exhibits a large change in resistance proportional to a small change in temperature. Thermistors usually have negative temperature coefficients.	*Electrical*
Thermochemically Formed Coatings	A painted, dipped or sprayed chromium oxide based coating consolidated by repeated deposition and curing cycles (about 500oC).	*Paint and Coatings*
Thermocouple	The junction of two dissimilar metals which has a voltage output proportional to the difference in temperature between the hot junction and the lead wires (cold junction) (refer to Seebeck emf).	*Electrical*
Thermocouple	A device which uses a circuit of two wires of dissimilar metals or alloys, the two junctions of which are at different temperatures. A net electromotive force (emf) occurs as a result of differences in conductivity. The minute electromotive force or current, is sufficient to drive a galvanometer or potentiometer.	*Engineering Physics*
Thermodynamic	characteristics of or resulting from the conversion of heat into other forms of energy	*Materials Process*
Thermodynamics	A study of the transformation of energy from one form to another, and its practical application.	*Energy*
Thermoelectric Power Water Use	Water used in the process of the generation of thermoelectric power. Power plants that burn coal and oil are examples of thermoelectric-power facilities.	*Petroleum Engineering*
Thermoforming	The process of forming a thermoplastic sheet into a three dimensional shape by clamping the sheet in a frame, heating it to render it soft, then applying differential pressure to make the sheet conform to the shape of the mold or die positioned below the frame.	*Engineering Physics*
Thermography	The process of monitoring the condition of equipment through the measurement and analysis of heat. Thermography is typically conducted through the use of infrared cameras and associated software. It is commonly used for monitoring the condition of high voltage insulators and electrical connections, which includes refractory in furnaces and boilers, and other applications.	*Maintenance*
Thermogravimetric Analysis	The measurement of changes in weight of a specimen as it is heated. Some tests are conducted in air and some in other atmospheres. The resulting data reveals information about the materials thermal stability and polymerization processes.	*Engineering Physics*
Thermophilic	A type of bacteria that thrives in very high temperatures.	*Chemical Engineering*
Thermophotovoltaic cell	A device where sunlight concentrated onto a absorber heats it to a high temperature, and the thermal radiation emitted by the absorber is used as the energy source for a photovoltaic cell that is designed to maximize conversion efficiency at the wavelength of the thermal radiation.	*Energy*
Thermopile	An arrangement of thermocouples in series such that alternate junctions are at the measuring temperature and the reference temperature. This arrangement amplifies the thermoelectric voltage. Thermopiles are usually used as infrared detectors in radiation pyrometry.	*Electrical*
Thermoplastic	A plastic which is capable of being repeatedly softened by increase of temperature and hardened by decrease of temperature.	*Maintenance and Repair*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Thermoplastic	A classification of resin that can be readily softened and reformed by heating and be rehardened by cooling.	*Electrical*
Thermoplastic elastomer	Composite like polymer with rigid, elastomeric domains in a relatively soft matrix of crystalline, thermoplastic polymer.	*Material Process*
Thermoplastic polymer	See thermoplastic.	*Material Process*
Thermoplastic Polyster (Saturated)	Thermoplastic Polyster compounds were introduced in the 1970s and are hard, crystalline, strong, and tough. They are commonly used in soda bottles, as well as in magnetic tape for video, audio, and computers. They are also used in X-ray film, strapping, labels, and packaging.	*Material Engineering*
Thermoplastics	Resins or plastic compounds which, in their final state as finished articles, are capable of being repeatedly softened by an increase of temperature and hardened by a decrease of temperature.	*Engineering Physics*
Thermoset	polymer that cannot be repeatedly melted and reformed because of strong covalent bonding between chains	*Physics*
Thermoset	1). To cure through chemical reaction by heat to a point of not being resoftened by subsequent heating. 2). A resin which cures by chemical reaction.	*Electrical*
Thermosets	Resins or plastic compounds which in the final state as finished articles are substantially infusible and insoluble. Thermosetting resins are often liquids at some stage in their manufacture or processing, and are cured by heat, catalysis, or other chemical means. After being fully cured, thermosets cannot be resoftened by heating.	*Engineering Physics*
Thermosetting	A plastic which when cured under application of heat or chemical means changes into a substantially infusible or insoluble product. Polymer that becomes hard and rigid upon heating.	*Material Process*
Thermosetting Plastic	Plastic which is capable of being changed into a substantially infusible or insoluble product when cured under application of heat or chemical means.	*Maintenance and Repair*
Thermosiphon system	A solar collector system for water heating in which circulation of the collection fluid through the storage loop is provided solely by the temperature and density difference between the hot and cold fluids.	*Energy*
Thermosiphon systems	Thermosiphon systems are simple solar thermal systems which are only used to heat the domestic water. They comprise a solar collector and an storage tank above the collector Radiation from the sun heats the solar liquid in the collector; the liquid becomes lighter and rises through the piping to the storage tank above. Thermosiphon systems are simple solar thermal systems which are only used to heat the domestic water. They comprise a solar collector and an storage tank above the collector Radiation from the sun heats the solar liquid in the collector; the liquid becomes lighter and rises through the piping to the storage tank above.	*Thermal Management*
Thermostat	A device that adjusts the amount of heating and cooling produced and/or distributed by automatically responding to the temperature in the environment.	*Energy*
Thermotechnology	The term thermotechnology refers to all technologies for the generation of space heat and hot water.	*Thermal Management*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Thermowell	A closed-end tube designed to protect temperature sensors from harsh environments, high pressure, and flows. They can be installed into a system by pipe thread or welded flange and are usually made of corrosion-resistant metal or ceramic material, depending upon the application.	*Electrical*
They built a temporary dike of sandbags to keep the river from flooding the town. A bank of earth formed of material being excavated. A causeway. To furnish or drain with a dike. To enclose, restrain, or protect by a dike - Example - to dike a tract of land	They built a temporary dike of sandbags to keep the river from flooding the town. A bank of earth formed of material being excavated. A causeway. To furnish or drain with a dike. To enclose, restrain, or protect by a dike - Example - to dike a tract of land.	*Civil Engineering*
THF	tractor hydraulic fluid	*Petro-Chemical Abbreviations*
Thickener	The structure within a grease of extremely small, uniformly dispersed particles in which the liquid is held by surface tension and/or other internal forces.	*Lubrication*
Thickener	A large, round tank used in milling operations to separate solids from liquids; clear fluid overflows from the tank and rock particles sink to the bottom.	*Mining*
Thick-Film Technology	Technology using silk screened pastes to form conductor, resistor, thermistors, and insulator patterns; screened onto the substrate (usually ceramic) and cured by firing at elevated temperatures.	*Electrical Engineering*
Thill	the floor directly beneath a coal seam. –see also Warrant and Pavement.	*Mining*
Thimble	Grooved metal fitting to protect the eye, or fastening loop of a wire rope.	*Wire Rope & Cable*
Thimbles	loops on the sides of the cages through which the guide ropes pass.	*Mining*
Thin Film Lubrication	A condition of lubrication in which the film thickness of the lubricant is such that the friction between the surfaces is determined by the properties of the surfaces as well as by the viscosity of the lubricant.	*Lubrication*
Thin out	a seam which becomes nipped or narrows to a point where it is unprofitable to work.	*Mining*
Thin-Film Technology	A technology using vacuum deposition of conductors and dielectric materials onto a substrate (frequently silicon) to form an electrical circuit.	*Electrical Engineering*
Thing	a straight facing or cleat from the floor to the roof that was often many yards in length (N. Staffs.), or a fault slip. (Mids.).	*Mining*
Thinning	This refers to the finished wall of a blow molded container or the corners of a thermoformed part. The wall thickness has thinned out in some areas due to improper blowing or excessive stretching.	*Engineering Physics*
Thin-seam miner	resembles an auger machine but has a drum-type cutting head that cuts a rectangular cross section.	*Energy*
Thiokol	A trade name for synthetic rubber made from a polysulfide base.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Thiourea (NH2CSNH2)	Rhombic prisms from alcohol. Sometimes used with or instead of urea in urea –aldehyde plastics.	*Material Process*
Third Order Input Intercept Point	The point at which the power in the third-order product and the fundamental tone intersect, when the amplifier is assumed to be linear. IIP3 is a very useful parameter to predict low-level intermodulation effects.	*Electrical Engineering*
Third Party Services	Services performed by any person or firm other than the buyer and supplier. Examples include transportation, public warehousing, brokerage services, rate auditing firms, and third-party network services in EDI data transmission.	*Procurement*
Third Quantum Number (Mλ)	Number representing the orientation of the electron cloud; can have any integer value (including zero) from -λ to +λ	*Physics*
Third Round Increases	general demands for wage adjustments following the end of World War II.	*Industrial Relations*
Third-party DSM program sponsor	An energy service company (ESCO) which promotes a program sponsored by a manufacturer or distributor of energy products such as lighting or refrigeration whose goal is to encourage consumers to improve energy efficiency, reduce energy costs, change the time of usage, or promote the use of a different energy source.	*Energy*
Third-party transactions	Third-party transactions are arms-length transactions between non affiliated firms. Producing country-to-company transactions are not considered to be third-party transactions.	*Energy*
Thirl or Thurl	a drift connecting two rooms or working places; an end; or to cut through, to make a connection; a 'cross-heading'.	*Mining*
Thirling, Thurling or sometime Thol	to cut away the last web of coal that separates two roadways driven from separate points to meet each other; or the connecting of underground roadways or shafts.	*Mining*
Thirty-Hour Week	a move in the early 1930's to reduce the daily hours of work to six in order to stimulate recovery from economic depression.	*Industrial Relations*
Thixotropic Liquid	If the viscosity of a liquid decreases as agitation is increased at constant temperature, the liquid is called thixotropic. Examples include glues, greases, paints, etc.	*Maintenance and Repair*
Thixotropy	Thixotropy of a lubricating grease is manifested by a decrease in consistency (softening) as a result of shearing and an increase in consistency after shearing is stopped. That property of a lubricating grease which is manifested by a softening in consistency as a result of shearing followed by a hardening in consistency starting immediately after the shearing is stopped.	*Lubrication*
Thomson Effect	When current flows through a conductor within a thermal gradient, a reversible absorption or evolution of heat will occur in the conductor at the gradient boundaries.	*Electrical*
Thoracic	Belonging or attached to the thorax.[1] Fin.	*Forestry*
Thorax	The body region behind the head, which bears wings and true (jointed) legs if present.	*Forestry*
Thorium	An element that is a byproduct of the decay of uranium.	*Energy*
THOT	turbo hydramatic oxidation test	*Petro-Chemical Abbreviations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Thousand-Hour Clause	the provision in Section 7(b) of the Fair Labor Standards Act which permits the employment of individuals up to 12 hours a day and 56 hours a week without overtime penalty if the employer and the union have entered into an agreement to the effect that no worker would be employed for more than 1,000 hours in any period of 26 consecutive weeks.	*Industrial Relations*
Thread	the cleat in a seam; or the straight line of stall faces without any loose ends, fast ends or steps. (Mids.).	*Mining*
Thread Compound	Used to lubricate the thread and shoulder area of the drill joint. Suitable thread compound should have a zinc base of 40-60% by weight to withstand the pressures and torque applied to the drill stem joints. Sometimes mistakenly referred to as grease.	*Petroleum Engineering*
Thread Crest	The top part of the thread. For external threads, the crest is the region of the thread which is on its outer surface, for internal threads it is the region which forms the inner diameter.	*Maintenance*
Thread Flank	The thread flanks join the thread roots to the crest.	*Maintenance*
Thread Height	This is the distance between the minor and major diameters of the thread measured radially.	*Maintenance*
Thread Length	Length the portion of the fastener with threads.	*Maintenance*
Thread plug	A part of a mold that shapes an internal thread and must be un screwed from the finished piece.	*Material Process*
Thread Root	The thread root is the bottom of the thread, on external threads the roots are usually rounded so that fatigue performance is improved.	*Maintenance*
Thread Runout	The portion at the end of a threaded shank which is not cut or rolled to full depth, but which provides a transition between full depth threads and the fastener shank or head.	*Maintenance*
Threaded parts	parts such as bolts and rods that allow nuts to be screwed on to one or both ends	*Materials Process*
Threadlocker	Can be a term used for a number of vibration resistant products but is now usually reserved for threadlocking adhesives. Specifically, a liquid anaerobic adhesive applied to nut or bolt thread, once hardened it fills the inner spaces between the threads to produce a solid plastic of a known shear strength.	*Maintenance*
Threat avoidance (ThA)	Flight cues designed to avoid enemy threats, such as anti-aircraft artillery and aircraft; Compare: obstacle avoidance, terrain avoidance.	*Aeronautical Engineering*
Threatened species	Condition that occurs when a species exhibits declining or dangerously low populations but still has enough members to maintain or increase numbers.	*Forestry*
Three Phase Line	This is capable of carrying heavy loads of electricity, usually to larger commercial customers.	*Energy*
Three Piece Expansion Adapter	used with open-end bits.	*Petroleum Drilling*
Three Position Plan	a procedure combining both training and promotion. It provides that every individual in the plant shall have three functions or three positions within the over-all group.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Three-body Abrasion	A particulate wear process by which particles are pressed between two sliding surfaces.	*Lubrication*
Three-phase power	Power generated and transmitted from generator to load on three conductors.	*Energy*
Three-phase power	A form of electricity used to supply heavy loads (power-hungry electrical equipment) such as industrial air conditioning units, grinding machines etc. Almost all power is generated as three-phase and, with the exception of HVDC, most transmission lines are three-phase. Three-phase is a more efficient way of delivering heavy loads and the three-phase motors it supplies are more efficient, smaller and cheaper to build than their single-phase counterparts. Wiring is simplified because no neutral return path is provided. Residential premises, however, are supplied with single-phase power.	*Electrical*
Thresh	to beat out a grain or seed from a stalk by treading, rubbing or striking with a flail, or with a machine	*Agriculture*
Threshold	The smallest change in a measured variable that gives a measurable change in output signal.	*Reliability Engineering*
Threshold Response	A control type that responds to the change in input signal level. Plug: in amplifiers are either threshold or transition responsive.	*Electrical Engineering*
Thrift Plans	programs promoted or sponsored by employers to educate employees in financial matters and to promote saving.	*Industrial Relations*
Throat diameter	Diameter of the shell in a natural draft tower at its narrowest point.	*Facility Engineering*
Throat of a Weld	A term applied to fillet welds. It is the perpendicular distance from the beginning of the root of a joint to the hypotenuse of the largest right triangle that can be inscribed within the fillet-weld cross section.	*Maintenance and Repair*
Throttle	A flight control operated by moving fore or aft with hands, primarily to control thrust (speed) in fixed-wing aircraft.	*Aeronautical Engineering*
Throttle cue	A longitudinal flight director cue for fixed-wing aircraft, primarily to control speed, by changing power; Compare: longitudinal cyclic cue; Symbols: Gamma sub LONG; Typical Units: percent, in.	*Aeronautical Engineering*
Throttling	The intentional restriction of flow by partially closing or opening a valve.	*General Mechanical*
Through coal	coal as it left the mine without any attempt at grading it into different sizes, run-of-the-mine coal. In South Wales it is sometimes called 'thro and thro' coal.	*Mining*
Through ventilation	the normal ventilation throughout a mine as opposed to ventilation produced by auxiliary fans for local ventilation such as in a blind heading.	*Mining*
Througher or Thrower	a room driven between two levels or main roads to win the coal and improve the ventilation. (Scot.).	*Mining*
Throughput	The quantity or amount of product moved on a conveyor at a given time.	*Manufacturing*
Throughput	Output or production measured over a period of time.	*Reliability Engineering*
Through-steel	A system of dust collection from rock or roof drilling. The drill steel is hollow, and a vacuum is applied at the base, pulling the dust through the steel and into a receptacle on the machine.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Throw	The number of circuits that each individual pole of a switch can control. The number of throws is completely independent of the number of poles and number of breaks. A single: pole double: throw single: break switch connects the common terminal of the switch to the normally closed terminal when the plunger is free, but connects the common terminal to the normally open terminal when the plunger is depressed. A single: pole single: throw single: break switch has a common terminal and either a normally open terminal or a normally closed terminal but not both.	*Electrical Engineering*
Throw	the vertical displacement on a fault, either a down-throw or an up-throw.	*Mining*
Throwaway Maintenance	This represents a variation on the Run-to-Failure approach. It differs in that the decision is made in advance that the corrective action on failure will always be replacement rather than repair. This is a very common approach to maintenance of electronic components, which often exhibit random failure rates, and for which no repair is feasible.	*Maintenance*
Throwing	breaking out the spurns from the cuttings and knocking out the nogs from the under-cut ready to bring down the main body of coal.	*Mining*
Thru Scan	A scanning technique in which the emitter (light source) is aimed directly at the receiver. Also called direct scan and transmitted scan, since light is transmitted directly, not reflected to the sensor. Presently, it is the only scanning technique commonly used to scan distances greater than 40 feet.	*Electrical Engineering*
Thru-conduit	An expression characterizing valves when in the open position, wherein the bore presents a smooth uninterrupted interior surface across seat rings and thru the valve port, thus affording minimum pressure drop. There are no cavities or large gaps in the bore between seat rings and body closures or between seat rings and ball/gate. Consequently, there are no areas that can accumulate debris to impede pipeline cleaning equipment or restrict the valve's motion.	*Mechanical*
Thrust	Force, created by engines and rotors, acting in the direction of the engine; Symbols: T; Typical Units: lbf, kip; Dimensions: Mass * Length / Time-squared.	*Aeronautical Engineering*
Thrust	The net force applied to a part in a particular direction - e.g., on the end of a valve stem.	*Mechanical*
Thrust Bearing	An axial-load bearing.	*Equipment*
Thrust position	Location in direction of a shaft centerline. See axial position.	*Reliability Engineering*
Thrusters	children who pushed the corves with their hands and heads from the headings to the shaft. (Yorks.).	*Mining*
Thrutcher	a person who pushed tubs, a drawer or putter; or a bag filled with a soft material e.g. cork dust, worn inside a flat cap to protect the head when pushing tubs. (Lancs.).	*Mining*
Thwarting	short branches or roads, where the seam was almost vertical, driven through the rock from one seam to the other. (Som.).	*Mining*
Thyristor	A thyristor is a semiconductor device used in electrical systems, such as HVDC installations, as a high-speed, high-power switch, capable of turning power supplies of many megawatts on within a split second. Thyristors are a component used in inverters and rectifiers. (See also Inverter and Rectifier).	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Thyristor-controlled series capacitor	see Capacitor	*Electrical*
Tich	a hand-held drilling machine for boring shot-holes. (Mids.).	*Mining*
Tidewater piers and coastal ports (method of transportation to consumers)	Shipments of coal moved to tidewater piers and coastal ports for further shipments to consumers via coastal water or ocean.	*Energy*
Tie Bars	Bars which provide structural rigidity to the clamping mechanism often used to guide platen movement.	*Engineering Physics*
Tie line	A transmission line connecting two or more power systems.	*Energy*
Tie line (electric)	A circuit connecting two Balancing Authority Areas. Also, describes circuits within an individual electrical system. NERC definition	*Energy*
Tie rod	An axial external cylinder rod which traverses the length of the cylinder. It is prestressed at assembly to hold the ends of the cylinder against the tubing. Tie rod extensions can be a mounting device.	*Mechanical, Process, and Operations*
Tight	See Push.	*NASCAR*
Tight gas	Natural gas found in reservoirs with low porosity and low permeability. It can be compared to drilling a hole into a concrete driveway–the rock layers that hold the natural gas are very dense, therefore the gas doesn't flow easily.	*Petroleum Drilling*
Tight oil	Oil produced from petroleum-bearing formations with low permeability such as the Eagle Ford, the Bakken, and other formations that must be hydraulically fractured to produce oil at commercial rates. Shale oil is a subset of tight oil.	*Energy*
Tight sands	A geological formation consisting of a matrix of typically impermeable, nonporous tight sands.	*Petroleum Drilling*
Till	Predominantly unsorted layered drift. Generally unconsolidated, deposited directly by and underneath a glacier without subsequent reworking by meltwater, and consisting of a mixture of clay, silt, sand, gravel, and boulders ranging widely in size and shape.	*Petroleum Engineering*
Tiller Rope Cable	A very flexible operating rope, commonly made by laying six 6x7 ropes around a fiber core resulting in a 6x42 construction. As well as, a 3/32 inch 7x7 galvanized cable coated to an outside diameter of 3/16 inch with vinyl or nylon.	*Wire Rope & Cable*
Tilt boundary	Grain boundary associated with the tilting of a common crystallographic direction in two adjacent grains.	*Material Process*
Tilt rotor	An aircraft with tilting rotors for fixed-wing flight or rotary-wing flight.	*Aeronautical Engineering*
Tim yin	empty tubs. (Scot.).	*Mining*
Timber	A collective term for underground wooden supports.	*Mining*
Timber cruise	A survey of forestland to locate timber and estimate its quantity by species, products, size, quality, or other characteristics.	*Forestry*
Timber set	A timber frame to support the roof, sides, and sometimes the floor of mine roadways or shafts.	*Mining*
TIMBER STAND IMPROVEMENT (TSI)	Improving the quality of a forest stand by removing or deadening undesirable species to achieve desired stocking and species composition.	*Forestry*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Timbering	The setting of timber supports in mine workings or shafts for protection against falls from roof, face, or rib.	*Mining*
Time and a Half Pay	overtime or premium compensation of one and one-half times the regular rate for time worked as overtime under the Fair Labor Standards Act.	*Industrial Relations*
Time and Motion Study	the analysis of motions and measurement of time required to perform a specific job with specified materials and equipment.	*Industrial Relations*
Time Basis	applies to wages received by employees on an hourly, weekly, or other time basis.	*Industrial Relations*
Time clocks or timed switches	Time clocks are automatic controls, which turn lights off and on at pre determined times.	*Energy*
Time constant	Constant for a first-order filter determining time at which the output of the filter reaches nearly 0.6321 percent of a step input; Symbols: tau; Typical Units: s; Dimensions: Time.	*Aeronautical Engineering*
Time constant	Constant for a first-order filter determining time at which the output of the filter reaches nearly 0.6321 percent of a step input; Symbols - tau; Typical Units - s; Dimensions - Time.	*Aeronautical Engineering*
Time Delay Before Availability	Also know as False Pulse Protection. Outputs are turned Off when power is first applied during this time period.	*Electrical Engineering*
Time Limits	may apply to many areas of collective bargaining but most frequently to the time limits set forth in the grievance procedure.	*Industrial Relations*
Time Lost on Grievances	provisions in many contracts require pay to shop stewards or grievance committee members for the time necessarily spent in handling grievances during working hours.	*Industrial Relations*
Time of Travel (TOT)	The time required for a contaminant to move in the saturated zone from a specific point to a well.	*Petroleum Engineering*
Time of use (TOU) Rates	The pricing of electricity based on the estimated cost of electricity during a particular time block, either time-of-day or by season.	*Energy*
Time Rules	The amount of time given to each part of the debate	*Management Discussion*
Time Study	the attempt to make an accurate stop-watch study of each individual job to determine the best way or performing it.	*Industrial Relations*
Time Study Analyst	an individual who makes a detailed analysis of the time required for an average operator to perform a particular job.	*Industrial Relations*
Time Study Engineer	a person who specializes and has been trained in motion and time study and has a proper background in engineering.	*Industrial Relations*
Time to event	A description of the data in studies where the analysis relates not just to whether an event occurs but also when. Such data are analyzed using survival analysis. (Also called survival data.) See also: Survival analysis	*Quality Engineering*
Time to Re-instate (TTR)	Time required to re-instate equipment back into production at full speed.	*Maintenance*
Time Wages	a fixed wage based on an hour, day, week, or month paid for a specific job or occupation.	*Industrial Relations*
Time, Dead	The interval of time between initiation of an input change or stimulus and the start of the resulting response.	*Process Control*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Time, Ramp Response	The time interval by which an output lags an input, when both are varying at a constant rate.	*Process Control*
Time, Rise	The time required for the output of a system (other than first order) to make the change from a small specified percentage (often 5 or 10) of the steady-state increment to a large specified percentage (often 90 to 95), either before or in the absence of overshoot.	*Process Control*
Time, Settling	The time required, following the initiation of a specified stimulus to a system, for the output to enter and remain within a specified narrow band centered on its steady-state value.	*Process Control*
Time, Step	Response Of a system or an element, the time required for an output to make the change from an initial value to a large specified percentage of the final steady-state value either before or in the absence of overshoot, as a result of a step change to the input.	*Process Control*
Timed Availability	Available for unrestricted operation during a period of time in which operation is required. Sometimes referred to as Total Available Time (be careful total available time is also sometimes referred to as the total number of installed hours, basically being the number of hours in a year).	*Maintenance*
Time-of-day lock-out or limit	A special electric rate feature under which electricity usage is prohibited or restricted to a reduced level at fixed times of the day in return for a reduction in the price per kilowatt hour.	*Energy*
Time-of-day pricing	A special electric rate feature under which the price per kilowatt hour depends on the time of day.	*Energy*
Time-of-day rate	The rate charged by an electric utility for service to various classes of customers. The rate reflects the different costs of providing the service at different times of the day.	*Energy*
Time-off Plan	a plan or system for paying a fixed or constant wage to workers who work fluctuating work weeks by giving them time off to offset the overtime work.	*Industrial Relations*
Time-of-Use Rates	Electricity prices that vary depending on the time periods in which the energy is consumed. In a time-of-use rate structure, higher prices are charged during utility peak-load times. Such rates can provide an incentive for consumers to curb power use during peak times.	*Energy*
Time-Work Contracts	agreements whereby payment is made by the hour without regard to amount of production.	*Industrial Relations*
Timing differences	Differences between the periods in which transactions affect taxable income and the periods in which they enter into the determination of pretax accounting income. Timing differences originate in one period and reverse or "turn around" in one or more subsequent periods. Some timing differences reduce income taxes that would otherwise be payable currently; others increase income taxes that would otherwise be payable currently.	*Energy*
Timken EP Test	Measure of the extreme-pressure properties of a lubricating oil. The test utilizes a Timken machine, which consists of a stationary block pushed upward, by means of a lever arm system, against the rotating outer race of a roller bearing, which is lubricated by the product under test. The test continues under increasing load (pressure) until a measurable wear scar is formed on the block.	*Lubrication*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Timken OK Load	The heaviest load that a test lubricant will sustain without scoring the test block in the Timken Test procedures, ASTM Methods D 2509 (greases) and D 2782 (oils).	*Oil Analysis*
Timothy hay	A grass hay popular as horse feed. Timothy hay typically is a very clean hay, free of dust and mould, which is important because of potential respiratory problems in horses. Japan is a primary market for timothy hay grown in Washington.	*Agriculture*
Timps	small wedges of wood filling in irregularities between the roof bars and the roof.	*Mining*
Tin/Zinc Alloy Electroplating	Tin/zinc alloy coatings (typically 70% tin and 30% zinc) are applied to threaded fasteners to provide a corrosion resistant coating. One of the advantages of such coatings is that bimetallic corrosion will not occur when placed into contact with such metals as aluminum or steel.	*Maintenance*
Tin-can Davy	a Davy lamp enclosed in a protective container for testing for gas in mines with increased velocities of air currents.	*Mining*
Tinned Wire	Wire coated with tin.	*Wire Rope & Cable*
Tinned Wire	Copper wire that has been coated during manufacture with a layer of tin or solder to prevent corrosion or facilitate soldering.	*Electrical*
Tinplate	Thin steel sheet with a very thin coating of metallic tin. Used primarily in can-making.	*Metallurgy*
Tins	corrugated iron sheets used for lining/covering the roadway behind the arches.	*Mining*
Tinted or reflective glass or shading films	Types of glass or a shading film applied to glass that, when installed on the exterior of a building, reduces the rates of solar penetration into the building. Includes Low E Glass.	*Energy*
Tip	colliery waste heap, pit tip. –see Bing and Spoil heap etc.	*Mining*
Tip	a gratuity given to an employee by a customer in recognition of the satisfactory performance of personal service.	*Industrial Relations*
Tip Relief	An arbitrary modification of a tooth profile whereby a small amount of material is removed near the tip of the gear tooth.	*Gears*
Tipper or Tippler	an apparatus for emptying tubs of coal onto the screens or down a chute into a wagon or boat. –see also Tumblers.	*Mining*
Tipping Fee	A credit received by municipal solid waste companies for accepting and disposing of solid waste.	*Energy*
Tipple	A central facility used in loading coal for transportation by rail or truck.	*Energy*
Tirfor	a hand operated device used for dragging equipment into position.	*Mining*
TISI	Thailand Industrial Standards Institute	*Petro-Chemical Abbreviations*
Titanium alloy	Metal alloy composed of predominantly titanium.	*Material Process*
Titanium Dioxide	A white powder available in tow crystalline forms, the anatase and rutile types. Both are widely used as opacifying pigments in thermosets and thermoplastics.	*Engineering Physics*
Titanium pigments	Pigments prepared from or including titanium oxide, a white compound.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
TL 9000	A quality system certification program developed by the Quality Excellence for Suppliers of Telecommunications Leadership Forum for the telecommunications industry. The requirements include the ISO 9000 family of standards as a base-line but add specific performance metrics and a formal benchmarking mechanism.	*Quality*
TLEV	transitional low-emission vehicle	*Petro-Chemical Abbreviations*
TLF	Transmission Loss Factor	*Energy*
TMA	Truck Manufacturers Association	*Petro-Chemical Abbreviations*
TMC	Test Monitoring Center (ASTM)	*Petro-Chemical Abbreviations*
TME	tall methyl ester	*Petro-Chemical Abbreviations*
TMR	In safety PLCs, Triple Modular Redundancy is the provision of three micro processors instead of one in situations where continuing functioning has to be ensured.	*Control Engineering*
TO-2/4	Caterpillar transmission oil specification	*Petro-Chemical Abbreviations*
Toadback marl	unlaminated marl with a lumpy fracture, in contrast with 'Beachleaf Marl'. (Lancs.).	*Mining*
Tobacco Workers International Union (AFL-CIO)	organized in Missouri in 1895 and affiliated with the AF of L.	*Industrial Relations*
Toe	the base of the coal, or the base of the overburden in opencast workings, or a small pillar of coal left in place to support the coal during undercutting. - see also Spurn.	*Mining*
Toe of Weld	The junction between the face of a weld and the base metal. 8 See	*Maintenance and Repair*
TOG	total organic gases	*Petro-Chemical Abbreviations*
Toggle	A mechanism that exerts pressure developed by applying force on a knee joint. It is used to close and exert pressure on a mold in a press.	*Engineering Physics*
Token	a small piece of leather with a collier's number or mark stamped into it, which he sent out of the pit with each tub of coal. (N. East). -see also Checks, Tallies and Pins.	*Mining*
Token hanger	the person who attaches the tokens to the corves to indicate the hewer.	*Mining*
Toledo Industrial Peace Board (Toledo Plan)	a tripartite citizens board concerned primarily with mediation and conciliation of labor disputes within the Toledo, Ohio area.	*Industrial Relations*
Tolerability	[of an intervention:] usually refers to medically less important (that is, without serious or permanent sequelae), but unpleasant adverse effects of drugs. These include symptoms such as dry mouth, tiredness, etc, that can affect a person's quality of life and willingness to continue the treatment. As these adverse effects usually develop early on and are relatively frequent, randomized controlled trials may yield reliable data on their incidence.	*Quality Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Tolerance	The amount by which any characteristic, such as dimensional, chemical, physical or mechanical properties, may vary from that specified.	*Metallurgy*
Tolerance	A specified allowance for error from a standard or given dimension, weight or property.	*Electrical*
Tolerance Class	A combination of tolerance grade and a fundamental deviation which is given to an internal or external thread. A tolerance class for an internal thread when combined with the tolerance class for an external thread gives the class of fit for the mating threads.	*Maintenance*
Tolerance Grade	The difference between maximum and minimum metal conditions for a tolerance applied to a screw thread. For metric threads the tolerance grade is given a number.	*Maintenance*
Tolerances	Allowed error in measurements.	*Aeronautical Engineering*
Tolerant species	A species of tree that has the ability to grow in the shade of other trees and in competition with them.	*Forestry*
Tolling	a form of job selling or kicking back (somewhat similar to fee-splitting) engaged in by supervisors and superintendents in days passed.	*Industrial Relations*
Tolling arrangement	Contract arrangement under which a raw material or intermediate product stream from one company is delivered to the production facility of another company in exchange for the equivalent volume of finished products and payment of a processing fee.	*Energy*
Toluene sulfonamide (CH3C6H4 SO2 NH2)	o-and p- Toluene sulfonamide (CH3C6H4 SO2 NH2) Colorless crystals, a plasticizer also, called Santicizer.	*Material Process*
Toluene ($C_6H_5CH_3$)	Colorless liquid of the aromatic group of petroleum hydrocarbons, made by the catalytic reforming of petroleum naphthas containing methyl cyclohexane. A high-octane gasoline-blending agent, solvent, and chemical intermediate, and a base for TNT (explosive).	*Energy*
Toluene (C6H5CH3)	Colorless liquid, solvent hydrocarbon and raw material, and intermediate in the synthesis of materials used in plastics.	*Material Process*
Toluene ethyl sulfonamide (CH3C6H4 SO2 NHC2H5)	o-and p- Toluene ethyl sulfonamide (CH3C6H4 SO2 NHC2H5) A plasticizer, called Santicizer.	*Material Process*
Tomahawk	large sort of wedge with a handle for raising or lifting heavy blocks of stone that are sent up the shaft in slings during shaft sinking.	*Mining*
Tommy or Truck	a method of payment-in-kind by way of tokens for mining work done. The tokens could only be exchanged for overpriced and sometimes poor quality goods in the 'Tommy Shop' owned and run by the Butty.	*Mining*
Tommy-bag, Tommy-box and Tommy-tin	a bag or tin used to carry food into the pit. –see Snap tin and Bait.	*Mining*
Tommy-can	a cylindrical shaped can in which the butty man received his pay and from which he in turn would pay the men working under him.	*Mining*
Tommyhawk	18th & 19th Century tool, part axe, part hammer, used for timbering.	*Mining*

Term	Definition	*Industry*
Ton	Tons come in both weight and volume. In weight, a short ton, the common measure in the United States, is 2,000 pounds. A long ton, the common measure in Great Britain, is 2,240 pounds. U.S. journalists would encounter this measure only rarely. A metric ton, the standard used for maritime shipments of agricultural products, is 2,204.6 pounds.	*Agriculture*
Ton	A short or net ton is equal to 2,000 pounds; a long or British ton is 2,240 pounds; a metric ton is approximately 2,205 pounds.	*Mining*
Ton mile	The product of the distance that freight is hauled, measured in miles, and the weight of the cargo being hauled, measured in tons. Thus, moving one ton for one mile generates one ton mile.	*Energy*
Ton, Gross	2,240 pounds. Standard measurement in steel scrap pricing.	*Metallurgy*
Ton, Long	2,240 pounds.	*Metallurgy*
Ton, Metric	2,204.6 pounds. It is often spelled "tonne" to distinguish it from other standard ton measures.	*Metallurgy*
Ton, Short	2,000 pounds. Often called a net ton.	*Metallurgy*
Tongs	Large wrenches used for turning when making up or breaking out drill pipe, casing, tubing or other pipe. Also called casing tongs or rotary tongs.	*Petroleum Drilling*
Tons-per-vertical-meter	Common unit used to describe the amount of ore in a deposit; ore length is multiplied by the width and divided by the appropriate rock factor to give the amount of ore for each vertical meter of depth.	*Mining*
Tool Maintenance Time	a time allowance permitted individual workers for the repair, overhauling, and maintenance of their tools.	*Industrial Relations*
Tool setting	refers to directly controllable settings of a directional drilling tool located in a bottomhole assembly; for example, the net pressure-area force acting at a specified angle in a rotary-steerable adjustable stabilizer.	*Petroleum Drilling*
Tool steel	Ferrous alloy used for cutting, forming, or otherwise shaping another material.	*Material Process*
Tool Steels	Steels that are hardened for the use in the manufacture of tools and dies.	*Metallurgy*
Toolhand	Refers to a third party (down hole services provider) service representative or field service supervisor with "tools" to be run and operated in a well.	*Petroleum Drilling*
Tooling-Up Period	procedures in highly mechanized mass production such as automobile production in which the equipment and production machinery are tooled for the production of a new model.	*Industrial Relations*
Toolpush	You'll want to know this one. This is a reference to the Rig Manager – the top dog on a rig and your new boss.	*Petroleum Drilling*
Toolpusher	An employee of the drilling contractor who is in charge of the drilling crew and rig. Also referred to as a rig superintendent, drilling foreman or rig supervisor.	*Petroleum Drilling*
Toolpusher	Second-in-command of a drilling crew under the drilling superintendent. Responsible for the day-to-day running of the rig and for ensuring that all the necessary equipment is available.	*Petroleum Drilling*
Toom or Tume	a word meaning empty. (N. East).	*Mining*
TOP	TOP	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Top caunch	see Rip.	*Mining*
Top Connector	The Top Connector of a Christmas Tree also referred to as a 'tree cap' that allows full bore access to the bore of the valves. Usually a flange bottom and union top (ACME thread) with a cap. The cap normally is LP tapped to facilitate a needle valve & test gauge. Referred to as a Bottom Hole Test Adaptor.	*Petroleum Engineering*
Top cut	a machine cut made along the top of a coal seam. -see Over cut.	*Mining*
Top entry	The design of a particular valve or regulator where the unit can be serviced or repaired by leaving its body in the line, and its internals can be accessed by removing a top portion of the unit.	*Mechanical*
Top gate	a roadway at the upper end of an inclined longwall face.	*Mining*
Top heads	narrow passages or headings driven into the upper section of the Thick Coal to drain off the gas while the lower sections of the seam was being worked (S. Staffs.).	*Mining*
Top leaf	the uppermost division of a thick seam. Also called 'top ply' and 'tops'.	*Mining*
Top-Down Contract	an agreement between an employer or employer group with th officer or head of the union without the participation of the rank and file.	*Industrial Relations*
Top-holes. Pronounced 'topple'	An early system of step-working a steeply inclined seam. The top-holes would be driven to the full rise and the face-line would be stepped. The loose coal was allowed to gravitate down the face to be loaded into tubs.	*Mining*
Topping	The amount of coal loaded up and above the normal capacity of a tub.	*Mining*
Topping cycle	A boiler produces steam to power a turbine-generator to produce electricity. The steam leaving the turbine is used in thermal applications such as space heating and/or cooling or delivered to other end user(s).	*Energy*
Topple height	roadways driven on small dimensions e.g. about 4 ft high. (Som.).	*Mining*
Tops	sticking coal which remains stuck to the roof after the coal has been brought down; or coal left up to support a weak roof. -see Sticking coal and Top leaf.	*Mining*
Topsides	The superstructure of a platform.	*Petroleum Drilling*
Topsides	The superstructure of a platform.	*Petroleum Drilling*
Torbanite	a tough, dark brown or black carbonaceous substance, rich in oil algae. –see Boghead Coal.	*Mining*
Toricellps theorem	The liquid velocity at an outlet discharging into the free atmosphere is proportional to the square root of the head.	*Mechanical, Process, and Operations*
Tornesit	A trade name for a chlorinated rubber used principally in paints. See Parlon.	*Material Process*
Torpedo	A streamlined metal block placed in the path of flow of the plastic material in the heating cylinder of extruders and injection molding machines, to spread it into thin layers, thus forcing it into intimate contact with the heating areas.	*Engineering Physics*
Torque	The rotational force imposed on or through a shaft, usually expressed in foot-pounds.	*General Mechanical*
Torque	The turning effort required to operate a valve. Usually expressed in "pound-feet" and referred to the stem nut, handwheel or operator pinion shaft.	*Mechanical*

Term	Definition	*Industry*
Torque Converter	A rotary fluid coupling that is capable of multiplying torque.	*Mechanical, Process, and Operations*
Torque Motor	A type of electromechanical transducer having rotary motion used in the input stages of servo valves.	*Mechanical, Process, and Operations*
Torque Multiplier	A gearbox used to increase the torque produced by a small hand wrench.	*Maintenance*
Torque Switch	An electrical device on a motor operator which cuts off power to the operator when allowable torque is exceeded, thus preventing damage to the valve and/or the operator.	*Mechanical*
Torque Wrench	A manual wrench which incorporates a gauge or other method to indicate the amount of torque transferred to the nut or bolt.	*Maintenance*
Torque wrench	A wrench that indicates, as on a dial, the amount of torque (in units of foot-pounds) exerted in tightening a roof bolt.	*Mining*
TORR	A unit of absolute pressure less than atmospheric pressure, equivalent to 1 mm Hg. It is used primarily to describe a vacuum of 25 mm. Hg. absolute or less.	*Mechanical, Process, and Operations*
Torsional spring	A coiled spring which exerts a force by twisting about its axis rather than by compression or elongation. The spring in a check valve slam retarder which is restrained at one end and fastened to the clapper shaft on the other end. As the clapper opens, the spring resists the motion creating a closing force. During a rapid decrease in flow rate, the clapper is urged toward the closed position and is virtually closed just prior to the instant of actual flow reversal – thus slamming is avoided. See "Slam Retarder."	*Mechanical*
Tortuosity	TORTUOSITY - The ratio of the average effective flow path length to minimum theoretical flow path length (thickness) of a flow medium.	*Mechanical, Process, and Operations*
ToSS	See Total System Support	*Management*
TOST	turbine oxidation stability test	*Petro-Chemical Abbreviations*
Total Acid Number (TAN)	The quantity of base, expressed in milligrams of potassium hydroxide, that is required to neutralize all acidic constituents present in 1 gram of sample. (ASTM Designation D 974.)	*Oil Analysis*
Total Asset Management	An integrated approach to Asset Management that incorporates elements such as reliability-centered maintenance, total productive maintenance, design of maintainability, design for reliability, value engineering, life cycle costing, probabilistic risk assessment, etc., to arrive at the optimum cost-benefit-risk asset solution to meet any given production requirements.	*Maintenance*
Total Base Number (TBN)	The quantity of acid, expressed in terms of the equivalent number of milligrams of potassium hydroxide that is required to neutralize all basic constituents present in 1 gram of sample. (ASTM Designation D 974.)	*Oil Analysis*
Total Base Number (TBN)	The quantity of acid, expressed in terms of the equivalent number of milligrams of potassium hydroxide that is required to neutralize all basic constituents present in 1 gram of sample. (ASTM Designation D 974.) See Base Number.	*Lubrication*

Term	Definition	*Industry*
Total Chlorine (new)	The total amount of all types of chlorine compounds present. This includes Cl2, hypochlorous acid, hypochlorite ion, and all the chloramine compounds. Free Chlorine + Combined Chlorine = Total Chlorine.	*Chemical Engineering*
Total cost of quality	The aggregate cost of poor quality or product failures - including scrap, rework, and warranty costs - as well as expenses incurred to prevent or resolve quality problems (including the cost of inspection).	*Quality*
Total discoveries	The sum of extensions, new reservoir discoveries in old fields, and new field discoveries, that occurred during the report year.	*Energy*
Total Dissolved Solids	The sum of the organic and inorganic materials dissolved in water.	*Chemical Engineering*
Total Dissolved Solids (TDS)	The amount of salt and minerals that are suspended in water. TDS occur naturally in groundwater, but at high concentrations, TDS can be corrosive, and can cause ground (drinking) water to be classified as contaminated. New Pennsylvania Department of Environmental Protection rules on TDS discharges will take effect in January 2011, and will require discharges into Pennsylvania waterways to meet stricter standards of 500 parts per million.	*Petroleum Drilling*
Total DSM Cost	Total utility and nonutility costs.	*Energy*
Total Effective Equipment Productivity (TEEP)	The ratio between the actual amount of "in-specification product" produced in a given total time period and the output theoretically available in the same period if the machine operates at its designed operating rate. The product of Asset Utilization, quality rate, and operating speed rate. Irrespective of the definition used, TEEP measurement takes account of machine availability (with respect to total rather than loading time), quality rate, and performance rate. Therefore, it represents a modified view of OEE based on total time rather than loading time, and arguably provides a more holistic measure of overall effective asset utilization. Inversely, it may be considered as a modified view of asset utilization rate, factored to take account of actual machine performance.	*Maintenance*
Total error requirement	See allowable total error.	*Quality*
Total error, TE	The net or combined effect of random and systematic errors.	*Quality*
Total Face Width	The actual width dimension of a gear blank. It may exceed the effective face width, as in the case of double-helical gears where the total face width includes any distance separating the right-hand and left-hand helical teeth.	*Mechanical Engineering*
Total gas in storage	The sum of base gas and working gas.	*Energy*
Total imprecision	The random error observable over a period of many runs and many days.	*Quality*
Total Incentives	The incentive a utility offers is expressed as a percentage of the technology cost. The utility can assume any level between 0 and 100 percent. A value greater than 100 percent is possible if the utility decides to pay for all the equipment and give a rebate as an additional incentive. You can calculate the required incentive by setting the participant test to one by using the following formula: Total Incentives = (Technology Costs - Bill Reductions)/2.	*Energy*
Total liquid hydrocarbon reserves	The sum of crude oil and natural gas liquids reserves volumes.	*Energy*
Total Load	Amount of weight distributed over the entire length of a conveyor.	*Manufacturing*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Total logistics costs	Total costs for inbound delivery and storage of material and parts, plus the total cost to store, transport and deliver (and possibly set up) product to the customer following final manufacture and assembly. That a manufacturer calculates and monitors such a measure indicates that management is not only focused on improving efficiencies within the walls of the factory, but also on the total order-fulfillment process.	*Quality*
Total Man Hours	the cumulative or aggregate number of hours worked by a group of employees in a particular period.	*Industrial Relations*
Total Mixed Ration	a feed combination of hay, corn, barley, field grasses, cotton seed, and bakery or grocery by-products	*Agriculture*
Total Natural Gas Storage Field Capacity (Design Capacity)	The maximum quantity of natural gas (including both base gas and working gas) that can be stored in a natural gas underground storage facility in accordance with its design specifications, the physical characteristics of the reservoir, installed compression equipment, and operating procedures particular to the site. Reported storage field capacity data are reported in thousand cubic feet at standard temperature and pressure.	*Energy*
Total Nonutility Costs	Cash expenditures incurred through participation in a DSM program that are not reimbursed by the utility.	*Energy*
Total Opening	The distance between opposed pinching surfaces when a pinch valve is open. The total of pinch gap and stroke.	*Mechanical*
Total operated basis	The total reserves or production associated with the wells operated by an individual operator. This is also commonly known as the "gross operated" or "8/8ths" basis.	*Energy*
total petroleum hydrocarbons (TPH)	a measure of the concentration or mass of petroleum hydrocarbon constituents present in a given amount of air, soil, or water. The term total is a misnomer, in that few, if any, of the procedures for quantifying hydrocarbons are capable of measuring all fractions of petroleum hydrocarbons present in the sample. Volatile hydrocarbons are usually lost in the process and not quantified. Additionally, some non-petroleum hydrocarbons may be included in the analysis.	*Chemical*
Total pressure	A measure of barometric pressure in the moving air; Synonyms: dynamic pressure, Pitot pressure, stagnation pressure; Compare: static pressure; Symbols: p sub t; Typical Units: psi, lbf/in-squared; Dimensions: Mass / Time-squared * Length.	*Aeronautical Engineering*
Total pressure	A measure of barometric pressure in the moving air; Synonyms - dynamic pressure, Pitot pressure, stagnation pressure; Compare - static pressure; Symbols - p sub t; Typical Units - psi, lbf/in-squared; Dimensions - Mass / Time-squared * Length.	*Aeronautical Engineering*
Total Productive Maintenance	A Company-Wide Equipment Management Program, With Its Origins In Japan, Emphasizing Production Operator Involvement In Equipment Maintenance, And Continuous Improvement Approaches. Numerous Books Have Been Written On The Subject, Including Nakajima'S Authoritative Introduction, And A More Recent Western Hemisphere Update By Willmott.	*Plant Engineering*
Total productive maintenance (TPM)	A comprehensive program to maximize equipment availability in which production operators are trained to perform routine maintenance tasks on a regular basis, while technicians and engineers handle more specialized tasks. The scope of TPM programs includes unscheduled maintenance prevention (through	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	design or selection of easy-to-service equipment), equipment improvements, preventive maintenance, and predictive maintenance (determining when to replace components before they fail).	
Total Productive Maintenance (TPM)	Also known as autonomous maintenance or operator-driven reliability. It is maintenance tasks that are performed by the machine operator/operations crew/production department rather than the maintenance staff. It generally includes tasks such as lubricating and tightening machine parts, and changing filters or belts.	*Reliability Engineering*
Total pumping head	The total head of water, measured above the basin curb, required to deliver the circulating water through the distribution system. (See Tower Pumping Head.) Units: ft.	*Facility Engineering*
Total QC strategy	The balance of the efforts expended on statistical QC, preventive maintenance, instrument function checks, method performance tests, and quality improvement.	*Quality*
Total Quality Management (TQM)	A multifaceted, company-wide approach to improving all aspects of quality and customer satisfaction-including fast response and service, as well as product quality. TQM begins with top management and diffuses responsibility to all employees and managers who can have an impact on quality and customer satisfaction. It uses a variety of quality tools such as QFD, Taguchi methods, SPC, corrective-action response teams, cause-and-effect analysis, problem-solving methodologies, and fail-safe-ing (or "poka-yoke" methods).	*Maintenance*
Total Quality Management (TQM)	Also referred to as TQM. It is a philosophy that embraces all activities through which the needs and expectations of the customer (both internal and external) and the community, and the objectives of the organization, are satisfied in the most efficient and cost-effective way possible by maximizing the potential of all employees in a continuous drive for improvement.	*Reliability Engineering*
total recoverable petroleum hydrocarbons (TRPH)	an EPA method (418.1) for measuring total petroleum hydrocarbons in samples of soil or water. Hydrocarbons are extracted from the sample using a chlorofluorocarbon solvent (typically Freon-113) and quantified by infrared spectrophotometry. The method specifies that the extract be passed through silica gel to remove the non-petroleum fraction of the hydrocarbons.	*Chemical*
Total Resource Cost (TRC) Test	A ratio used to assess the cost effectiveness of a demand-side management program. Although this economic desirability test provides information about the relative merits of different DSM programs, several important issues are not addressed in this analysis. First, this cost-effectiveness test does not indicate the level of program participation that will be achieved. Second, the most cost-effective mix of DSM technologies is not determined by this test because this methodology only evaluates one specific measure at a time. Finally, these tests are static; they do not include a feedback mechanism to account for changes in demand due to the DSM program. The TRC Test measures the ratio of total benefits to the costs incurred by both the utility and the participant. The TRC test is applicable to conservation, load management, and fuel substitution technologies. For fuel substitution technologies, the test compares the impact from the fuel not selected to the impact of the fuel that is chosen as a result of implementing the technologies. The TRC Test includes benefits occurring to both participants and nonparticipants. Benefits include avoided supply costs (i.e. transmission, distribution, generation, and capacity costs). Costs include those incurred by both the utility and program participant.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
TOTAL STATISTICAL COUNT	The raw count multiplied by a counting calibration factor.	*Mechanical, Process, and Operations*
Total System Support (ToSS)	The Composite Of All Considerations Needed To Assure The Effective And Economical Support Of A System Throughout Its Programmed Life-Cycle.	*Management*
Total testing process	CLIA's term for the entire testing process that includes pre-analytic, analytic, and post-analytic steps and procedures.	*Quality*
Total Time	All time during the period being measured (at the rate of 24 hours per day, seven days per week.) Also equal to the sum of time spent in all six equipment time categories.	*Maintenance*
Total Travel	The distance from the plunger free position to the full overtravel point.	*Electrical Engineering*
Total Utility Costs	Total direct and indirect utility costs.	*Energy*
Totality of Conduct	a policy or doctrine determined by the National Labor Relatins Board prior to the Taft–Hartley amendments that statements that may be non-coercive when standing alone may be found coercive when considered along with the employer's background of anti-union history.	*Industrial Relations*
Total-Productive Maintenance (TPM)	A Japanese maintenance improvement program used to change the maintenance processes and culture to increase productivity. It particularly focuses on aspects such as attitude, motivation, responsibilities, and performance of the workforce. Thus, everyone in the company must understand that their job performance impacts the performance of the asset. It empowers operators to take over maintenance tasks. The results are measured by the OEE rate. TPM is a company wide management program that emphasizes production operator involvement in equipment maintenance, and continuous improvement approaches	*Reliability Engineering*
TOU	tractor oil universal	*Petro-Chemical Abbreviations*
Tough Tom	The soft tenacious clay floor of seams, or roads, which sticks to the shoes in walking and renders travelling more laborious.	*Mining*
Toughness	A property of plastics which can be expressed numerically when judged in terms of the area beneath the tensile stress strain curve from the beginning of the moment of failure.	*Material Process*
Tour	A 'tower' refers to a worker's shift. A drilling crew typically works a 12 hour tour every day until they have finished their hitch.	*Petroleum Drilling*
Tour	a term not frequently used although "tour of duty" is familiar. The term "shift" is used as its equivalent.	*Industrial Relations*
Tow	the winding rope. Before the introduction of steel winding ropes or winding chains, the winding rope made of hemp or tow, or the journey in the cage up and down the shaft e.g., 'to catch the last tow', was to catch the last 'wind' before coal winding began. Also called 'the last rope'; or a dark, tough, earthy clay or shale. (Leics.).	*Mining*
Tower	A steel structure found along transmission lines which is used to support conductors.	*Energy*
Tower dimension	(See Nominal or Overall Tower Dimensions).	*Facility Engineering*

Please see the Appendix for further illustration

Term	Definition	Industry
Tower pumping head	That part of the "total pumping head" for which the design of the tower and the piping furnished with it are responsible. It is expressed as the head of water above the basin curb measured at the center of the inlet connecting the tower distribution system with the riser, and consists of the total pressure at the centerline of the inlet plus the vertical distance between the inlet centerline and the basin curb. Unit: ft.	*Facility Engineering*
Towt	a piece of old rope used, when lit, to provide light when working in a shaft. (N. East).	*Mining*
TO-X	heavy-duty diesel engine oil specification	*Petro-Chemical Abbreviations*
Toxicity	The state of being poisonous. Toxic effect of chemicals may be caused by reversible and irreversible interactions in the organism. For example, benzene and formaldehyde are toxic.	*Material Process*
Toxicity	The degree of which a substance is poisonous. Although most pure resins and polymers are relatively nontoxic, compounding additives such as stabilizers, colorants, and plasticizers must be carefully selected when products are to be used for food packaging or other applications involving body contact.	*Engineering Physics*
Toyota Production System	Toyota's vehicle production system is sometimes referred to as a "lean manufacturing system" or a "just-in-time (JIT) system," and has come to be well known and studied worldwide. This production control system has been established based on many years of continuous improvements, with the objective of "making the vehicles ordered by customers in the quickest and most efficient way, in order to deliver the vehicles as quickly as possible." TPS was established based on two concepts. The first is called "jidoka" (loosely translated as "automation with a human touch"), which means that when a problem occurs, the equipment stops immediately, preventing defective products from being produced. The second is the concept of JIT, in which each process produces only what is needed by the next process in a continuous flow.	*Reliability Engineering*
TPI	Threads per Inch.	*Petroleum Engineering*
TPM	See Total Productive Maintenance	*Management*
TPR	A trade name of Uniroyal Inc. for their thermoplastic rubber.	*Electrical*
TQC	Total Quality Control	*Gears*
Traceability	"A property of the result of a measurement or the value of a standard whereby it can be related to stated references, usually national or international standards, through an unbroken chain of comparison, all having stated uncertainties." [CLSI]	*Quality*
Track (TRK)	A basic guidance mode, providing lateral guidance to an operator selected ground track.	*Aeronautical Engineering*
Track Cable	On an aerial system it is the suspended wire rope or strand along which the carriers move.	*Wire Rope & Cable*
Track handle	A device to move a cursor in two axes on a display, much like a mouse.	*Aeronautical Engineering*
Tracking	Tracking is performed by the TRN.	*Aeronautical Engineering*
Tracking filter	A narrow bandpass filter whose center frequency follows an external synchronizing signal.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Traction motor	A traction motor is typically used to power the driving wheels of a railroad locomotive, a tram or an electric train, like a subway or light rail vehicle. There is usually one traction motor on each driven axle. Traction motors differ from other motors in the scale of their design. They must be extremely compact, because of the limited space available on the locomotives, and highly reliable as there is no room for any backup systems. (See also Traction transformer.)	*Electrical*
Traction Rope	On an aerial conveyor or haulage system it is the wire rope that propels the carriages.	*Wire Rope & Cable*
Traction substation	A substation used to feed power into railway electrification systems.	*Electrical*
Traction transformer	This is a fundamental component of a rail locomotive's traction chain. It adapts the catenary (overhead) voltage to the various low voltage levels needed by the train, mainly for traction, but also for lighting, heating and ventilation, passenger information and safety systems such as door blocking, brakes, signaling and communication. The traction transformer is the unique energy transfer point between high voltage (HV) and low voltage (LV) and therefore must achieve the highest availability and reliability levels to guarantee uninterrupted train service.	*Electrical*
Tractor	A battery-operated piece of equipment that pulls trailers, skids, or personnel carriers. Also used for supplies.	*Mining*
Trade Union	an association of workers in a particular trade or craft organized to promote a common interest and to further that interest through negotiations of wages, hours, and other conditions of employment.	*Industrial Relations*
Trade Union Educational League	with the demise of the I.W.W. at the end of World War I, there remained no union with a revolutionary philosophy in the country. In 1920, William Z. Foster, a communist leader, established an organization, the Trade Union Educational League, for the purpose of training leaders and propagandizing for the promotion or revolutionary unionism in the United States.	*Industrial Relations*
Trade Union Publications	Trade Union Publications, a three-volume index of the journals and convention proceedings of 50 selected unions from the time of their origin unit 1941.	*Industrial Relations*
Trade Union Unity League	the Trade Union Unity League attempted to establish new industrial unions of groups which had previously been under the jurisdiction of the AF of L.	*Industrial Relations*
Trades Council	a group of trade unions in a locality or geographic region which organizes usually for the purpose of dealing with an employers' association and to promote activities of mutual benefit to the members.	*Industrial Relations*
Tradesperson	Alternative To Craftsperson. A Skilled Maintenance Worker Who Has Typically Been Formally Trained Through An Apprenticeship Program.	*Management*
Trading floor	the area of a stock exchange building where shares are bought and sold.	*Mining*
Trading post	An area on the trading floor of a stock exchange where current stock prices are listed and where the floor traders (representatives of brokerage firms) meet to buy or sell the stocks listed at that particular post.	*Mining*
Traffic Cop	A mechanical or electrical mechanism to prevent collision of objects as they merge from two conveyor lines into a single line.	*Manufacturing*
Trail jud	When driving a wideboard, a narrow jud was driven 3 to 4 yards in advance and then a trail jud was cut off to the side to take the board to its correct width. (N. East).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Trailer	a jock which was fastened to the last hutch being hauled up an incline. (Scot.); or a putter, a lad who pushed the tubs. (N. East).	*Mining*
Trailerload, Truckload	quantities of commodities, including primary and secondary metals, that amount to as much as 44,000 pounds each, which is the standard weight limit on U.S. highways.	*Metallurgy*
Trailing cable	a flexible cable designed to be moveable whilst in use, such as a heavily insulated electrical cable used to bring power to an machine such as a Dosco roadheader. The cable trails along the ground from a power point.	*Mining*
Trainee	an employee who is assigned to a prescribed training program to fit him to perform adequately the normal operations of a specified job.	*Industrial Relations*
Training - systematic	instruction and programs of activities and learning for the purpose of acquiring skills for particular jobs.	*Industrial Relations*
Training Within Industry	Also referred to as TWI. It is a program which uses a learn-by-doing approach, teaching essential skills for supervisors and team leaders. Its four core elements are: Job Relations, Job Instruction and Job Methods. Its roots go back to the Training Within Industry service created by the U.S. Department of War in 1940.	*Reliability Engineering*
trajectory	same as well path, either actual or planned; the traverse that defines the actual or preferred existence of a well bore via spatial properties.	*Petroleum Drilling*
Tram	Used in connection with moving self-propelled mining equipment. A tramming motor may refer to an electric locomotive used for hauling loaded trips or it may refer to the motor in a cutting machine that supplies the power for moving or tramming the machine.	*Mining*
TRAM	To haul cars of ore or waste in a mine.	*Mining*
Tramming	controlling the tubs along the face to the gate end.	*Mining*
Tramp iron	metal objects such as coal-cutter picks, nuts and bolts etc. that have become mixed with the run-of--mine coal. To avoid damage to machinery in the coal preparation plant various types of magnet are suspended above the conveyor system to remove the tramp iron.	*Mining*
Tramping Committee	similar to walking delegates or union functionaries who check on activities of individuals, particularly during strikes, to make sure that no scabbing takes place.	*Industrial Relations*
Tramway	An aerial conveying system for transporting multiple loads.	*Wire Rope & Cable*
Transceivers	A device that receives and transmits.	*Aeronautical Engineering*
Transducer	A device (or medium) that converts energy from one form to another. The term is generally applied to devices that take physical phenomena (pressure, temperature, humidity, flow, etc.) and convert them to electrical signals.	*Electrical*
Transducer	A fully packaged, signal conditioned, compensated and calibrated sensor.	*Electrical Engineering*
TRANSDUCER (or feedback transducer)	An element which measures the results at the load and sends a signal back to the amplifier.	*Mechanical, Process, and Operations*
Transducer (or *pickup* or *sensor*)	A device which converts some mechanical quantity into an electrical signal. Less commonly, the reverse conversion.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Transducer Vibration	Generally, any device which converts movement, either shock or steady state vibration, into an electrical signal proportional to the movement; a sensor.	*General Engineering*
Transfer	A device or series of devices, usually mounted inside a conveyor section, which uses belts, chains, o-rings, rollers, or skate-wheels, to move products at right angles to adjacent or parallel conveyor lines.	*Equipment*
Transfer	the shifting or movement of an employee from one job to another.	*Industrial Relations*
Transfer	**Transfer** : To move electric energy from one utility system to another over transmission lines.	*Energy*
Transfer capability	The overall capacity of interregional or international power lines, together with the associated electrical system facilities, to transfer power and energy from one electrical system to another.	*Energy*
Transfer molding	Processing technique for thermosetting polymers.	*Material Process*
Transfer molding	A type of molding similar to injection molding but applied to thermosetting plastics.	*Material Process*
Transfer point	Location in the materials handling system, either haulage or hoisting, where bulk material is transferred between conveyances.	*Mining*
Transfer price	The monetary value assigned to products, services, or rights conveyed or exchanged between related parties, including those occurring between units of a consolidated entity.	*Energy*
Transferred Arc	In a plasma torch the plasma jet is emitted from the torch and the current flows from the internal cathode to the internal anode represented by the nozzle of the torch. When the jet is carried to another anode with it being electrically favorable to do so the current will then transfer to the second anode, usually the work piece and the arc is said to be transferred.	*Paint and Coatings*
Transformation Range	A temperature range in which a phase change is initiated and completed.	*Maintenance and Repair*
Transformation Temperature	A temperature at which a phase change occurs.	*Maintenance and Repair*
Transformation Toughening Mechanism	A Mechanism for enhanced fracture toughness in a partially stabilized zirconium ceramic involving a stress-induced phase transformation of tetragonal grains to the monoclinic structure.	*Material Process*
Transformer	A transformer is a device used to transfer energy from one AC circuit to another and to increase (step up) or reduce (step down) voltage as required. Transformers are an essential component in an electrical grid. Electricity generated in a power station must be stepped up to the appropriate voltage for transmission (between 100 and 800 kV) and then stepped down again to the distribution voltage (110 - 230 V), which is delivered to homes. Note that the voltage of DC cannot be transformed in the same way as it can for AC. (See Alternating current.)	*Electrical*
Transient Protection	The circuitry to guard against spikes induced on the supply lines by inductive sources such as heavy motors or solenoids turning On and Off.	*Electrical Engineering*
TRANSIENT RECOVERY TIME	The period of time required for ail abrupt change in the power supply output pressure to dampen out to within the operating band.	*Mechanical, Process, and Operations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Transient Vibration	A temporary vibration or movement of a mechanical system.	*General Engineering*
Transient vibration	Short-term vibration of a mechanical system.	*Reliability Engineering*
Transient-free switch	A switch with a wash-out filter so that the output contains no transients (steps) at switch time.	*Aeronautical Engineering*
Transients	An unwanted, temporary, large increase or decrease in a current or supply voltage that only occurs occasionally. Almost always due to reactive components during rapid changes in voltage or current.	*Electrical Engineering*
Transistor	A solid state amplifier.	*Material Process*
Transition Charge	A charge on every customer's bill designed to recover an electric utility's transition or stranded costs as determined by a Public Utility Commission.	*Energy*
Transition Costs	Costs incurred by electric utilities to meet obligations, which required the utilities to meet current and future load demand. The utilities ensured sufficient power generating capacity by building additional power plants, whose debts are currently recovered through a regulated rate of return that would not continue in a competitive marketplace. They could be recovered with a special charge during the transition to competition.	*Energy*
Transition metal	Element in a region of the periodic table associated with a gradual shift from the strongly electropositive elements of groups IA and IIA to the more electronegative elements of groups IB and IIB.	*Material Process*
Transition metal ion	Charged species formed from a transition metal atom.	*Material Process*
TRANSITION PIECE	A length of pipe that is welded to a valve hub or closure. Generally provided by the customer, it serves as a transition from the customer's piping to the valve to compensate for differences in material or size.	*Mechanical*
Transition Responsive	A control type that responds to the rate of change in light intensity rather than the level change. Used to detect fast moving objects that cause little change in light intensity level.	*Electrical Engineering*
Transition Section	In an extruder, the section of the screw that contains material in both the solid and molten state.	*Engineering Physics*
Transition Temperature	The temperature at which a polymer changes from (or to) a viscous or rubbery condition to (or from) a hard and relatively brittle one.	*Engineering Physics*
Transitional	before being considered eligible for organic certification, any given piece of land must be free of prohibited substances for three years. Many farmers use the term "transitional" during those three years to indicate they are using organic management practices but have not yet fulfilled the time requirement for certification.	*Agriculture*
Transitional Flow	Flow between laminar and turbulent flow, usually between a pipe Reynolds number of 2000 and 4000.	*General Engineering*
Transitional work program	A transitional work program offers various options to assist an injured worker in progressively performing the duties of a targeted job.	*Quality*
Translation	Motion of an object where the path of every point is a straight line.	*Engineering Physics*
Translucency	Transmission of a diffuse image.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Translucent	Allows light to pass through. Detecting translucent objects is often best done with retroreflective scan, during which the light must pass through the object twice, thereby causing more of a signal change (larger signal ratio).	*Electrical Engineering*
Transmembrane Pressure (TMP)	The force which drives liquid flow through a crossflow membrane. In tangential flow devices, the TMP is calculated as an average related to the pressures of the inlet, outlet and permeate ports. The TMP can be expressed as: TMPavg = (Pin + Pout)/2 – Permeate	*Pollution Engineering*
Transmissibility	The principle stating that a force has the same external effect on an object regardless of where it acts along its line of action.	*Engineering Physics*
Transmission	The act or process of transporting electric energy in bulk.	*Energy*
Transmission (electric)	An interconnected group of lines and associated equipment for the movement or transfer of electric energy between points of supply and points at which it is transformed for delivery to customers or is delivered to other electric systems. NERC definition	*Energy*
Transmission (electric) (verb)	The movement or transfer of electric energy over an interconnected group of lines and associated equipment between points of supply and points at which it is transformed for delivery to consumers or is delivered to other electric systems. Transmission is considered to end when the energy is transformed for distribution to the consumer.	*Energy*
Transmission and distribution (T&D)	The term refers to the transport of electricity from the power station to the end user. Transmission is the movement of power at high voltage (above ca. 50 kV), usually over long distances. Raising the voltage allows power to be transmitted more efficiently (i.e., with fewer losses - at lower voltages, more electrical power is converted to heat and lost to the atmosphere) over a wide area. Distribution is the transport of electricity at medium voltage (between ca. 1 and 50 kV) over shorter distances to industrial, commercial and residential areas. Transformers are generally, though not always, housed in substations.	*Electrical*
Transmission and Distribution (T&D) Losses	Losses the result from the friction that energy must overcome as it moves through wires to travel from the generation facility to the customer. Because of losses, the demand produced by the utility is greater than the demand that shows up on the customer bills.	*Energy*
Transmission and Distribution (T&D) System	An interconnected group of electric transmission lines and associated equipment for the movement or transfer or electric energy in bulk between points of supply and points at which it is transformed for delivery to the ultimate customers.	*Energy*
Transmission and Distribution Company	The regulated affiliate of a former monopoly electric utility that owns and may construct and maintain wires used to transmit wholesale electric power. It is regulated by the Public Utility Commission to provide nondiscriminatory connections, comparable service, and cost recovery. May also be referred to as the "wires company".	*Energy*
Transmission and distribution loss	Electric energy lost due to the transmission and distribution of electricity. Much of the loss is thermal in nature.	*Energy*
Transmission Charge	Part of the basic service charges on every customer's bill for transporting electricity from the source of supply to the electric distribution company. Public Utility Commissions regulate retail transmission prices and services. The charge will vary with source of supply.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Transmission Charges	Part of the basic service charges on every customer's bill for transporting electricity from the generation facility over transmission lines.	*Energy*
Transmission circuit	A conductor used to transport electricity from generating stations to load.	*Energy*
Transmission constraint (electric)	A limitation on one or more transmission elements that may be reached during normal or contingency system operations. NERC definition	*Energy*
Transmission electron microscope (TEM)	Instrument for obtaining microstructural images using electron transmission in a design similar to a conventional optical microscope.	*Material Process*
Transmission line	A set of conductors, insulators, supporting structures, and associated equipment used to move large quantities of power at high voltage, usually over long distances between a generating or receiving point and major substations or delivery points.	*Energy*
TRANSMISSION LINE	A main pipeline transporting oil or gas from wells or storage fields to refineries, loading docks or distribution companies. Generally, the pipeline is bigger than 6" and the pressure greater than 150 psi.	*Mechanical*
Transmission line (electric)	A system of structures, wires, insulators and associated hardware that carry electric energy from one point to another in an electric power system. Lines are operated at relatively high voltages varying from 69 kV up to 765 kV, and are capable of transmitting large quantities of electricity over long distances. NERC definition	*Energy*
Transmission Lines	Heavy wires that carry large amounts of electricity over long distances from a generating station to places where electricity is needed. Transmission lines are held high above the ground on tall towers called transmission towers.	*Energy*
Transmission network	A system of transmission or distribution lines so cross-connected and operated as to permit multiple power supply to any principal point.	*Energy*
Transmission operator (electric)	The entity responsible for the reliability of its localized transmission system, and that operates or directs the operations of the transmission facilities. NERC definition	*Energy*
Transmission owner (electric)	The entity that owns and maintains transmission facilities. NERC definition	*Energy*
Transmission Service Provider (electric)	The entity that administers the transmission tariff and provides Transmission Service to Transmission Customers under applicable transmission service agreements. NERC definition	*Energy*
Transmission system (electric)	An interconnected group of electric transmission lines and associated equipment for moving or transferring electric energy in bulk between points of supply and points at which it is transformed for delivery over the distribution system lines to consumers or is delivered to other electric systems.	*Energy*
Transmission type (engine)	The transmission is the part of a vehicle that transmits motive force from the engine to the wheels, usually by means of gears for different speeds using either a hydraulic "torque-converter" (automatic) or clutch assembly (manual). On front-wheel drive cars, the transmission is often called a "transaxle." Fuel efficiency is usually higher with manual rather than automatic transmissions, although modern, computer-controlled automatic transmissions can be efficient.	*Energy*
Transmissivity	A measure of the capability of the entire thickness of an aquifer to transmit water. Also known as coefficient of transmissivity.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Transmitter	A device that converts a process measurement (pressure, flow, level, temperature, etc.) into an electrical or pneumatic signal suitable for use by an indicating or control system.	*Electrical Engineering*
Transmitter	A transducer with a current loop output, typically 4 to 20 mA, enabling transmission of a signal over a longer distance.	*Electrical Engineering*
Transmitter (Two-Wire)	A device which is used to transmit temperature data from either a thermocouple or RTD via a two-wire current loop. The loop has an external power supply and the transmitter acts as a variable resistor with respect to its input signal.	*Electrical*
Transmitting Utility	This is a regulated entity which owns, and may construct and maintain, wire used to transmit wholesale power. It may or may not handle the power dispatch and coordination functions. It is regulated to provide non-discriminatory connections, comparable service and cost recovery. Any electric utility, qualifying cogeneration facility, qualifying small power production facility, or Federal power marketing agency which owns or operates electric power transmission facilities which are used for the sale of electric energy at wholesale.	*Energy*
Transparent Price	The most recent price contract available to any buyer or seller in the market.	*Energy*
Transpassive	The increase in corrosion rate at a relative high potential due to the breakdown of the passive surface film.	*Material Process*
Transpiration	The process by which water absorbed by plants (usually through the roots) is evaporated into the atmosphere from the plant surface (principally from the leaves).	*Petroleum Engineering*
Transponder	Small blue electronic transmitter mounted to the chassis. When the car crosses a wire embedded in the track, it sends a signal to the timing computer for lap and lap segments timing. Each car has a specific code so the computer can keep track of the individual cars.	*NASCAR*
Transport	Movement of natural, synthetic, and/or supplemental gas between points beyond the immediate vicinity of the field or plant from which produced except (1) for movements through well or field lines to a central point for delivery to a pipeline or processing plant within the same state or (2) movements from a city gate point of receipt to consumers through distribution mains.	*Energy*
Transportation agreement	Any contractual agreement for the transportation of natural and/or supplemental gas between points for a fee.	*Energy*
Transportation energy expenditures	See Vehicle fuel expenditures.	*Energy*
Transportation sector	An energy-consuming sector that consists of all vehicles whose primary purpose is transporting people and/or goods from one physical location to another. Included are automobiles; trucks; buses; motorcycles; trains, subways, and other rail vehicles; aircraft; and ships, barges, and other waterborne vehicles. Vehicles whose primary purpose is not transportation (e.g., construction cranes and bulldozers, farming vehicles, and warehouse tractors and forklifts) are classified in the sector of their primary use. *Note:* Various EIA programs differ in sectoral coverage.	*Energy*
Transported gas	Natural gas physically delivered to a building by a local utility, but not purchased from that utility. A separate transaction is made to purchase the volume of gas, and the utility is paid for the use of its pipeline to deliver the gas. Also called "Direct-Purchase Gas," "Spot Market Gas," "Spot Gas," "Gas for the Account of Others", and "Self-Help Gas."	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Transporter	The party or parties, other than buyer or seller, owning the facilities by which gas or LNG is physically transferred between buyer and seller.	*Energy*
Transshipment	A method of ocean transportation whereby ships off-load their oil cargo to a deep water terminal, floating storage facility, temporary storage, or to one or more smaller tankers from which or in which the oil is then transported to a market destination.	*Energy*
Transversal	A line that crosses two or more other lines.	*Math*
Transverse	Always measured perpendicular to air intakes.	*Facility Engineering*
Transverse Plane	A plane perpendicular to the axial plane and to the pitch plane. In gears with parallel axes, the transverse plane and the plane of rotation coincide.	*Gears*
Transverse sensitivity	The unfortunate sensitivity of a sensor (or pickup or transducer) in a direction perpendicular to the advertised or stated sensitive axis. Also called cross-axis or lateral sensitivity.	*Reliability Engineering*
Trap	See Steam Trap	*Industrial*
Trap door	another word for 'air door'.	*Mining*
Trap stage	the stage of the pit's mouth to rest the corves on. (Yorks.).	*Mining*
Trap-down	a downthrow fault. (Bris.). Also trap-up, an upthrow fault.	*Mining*
Trapper boys	young boys employed to operate the ventilation doors.	*Mining*
Traps	lids for wooden props. (Som.); or the ventilation doors in the gates. (Yorks.).	*Mining*
Trash Conveyor	A conveyor, normally a belt conveyor, equipped with high side guards, used in transporting empty cardboard boxes and paper trash away from working areas.	*Manufacturing*
Trasher	a box-like structure placed under the tub wheels to assist breaking on steep inclines. (Burnley, Lancs.).	*Mining*
Travel	The distance the plug or stem moves to go from a fully closed to a fully open position. Also called stroke.	*Industrial Engineering*
Travel Allowance	an allowance, usually for transportation expenses, to a worker who is required to travel on company business.	*Industrial Relations*
travel time	the time it takes a contaminant to travel from the source to a particular point downgradient.	*Chemical*
Travelling belts	see manriding.	*Mining*
Travelling road	a road used by the men to walk to and from the shaft to the workings.	*Mining*
Traverser	a flat platform running on special rails laid at right angles to and below the tub or minecar track, powered by hydraulics and used to move tubs or mine cars sideways from one track to another. Turntables were used to perform this operation.	*Mining*
TRC	Transportation Research Center	*Petro-Chemical Abbreviations*
Treacle stage	Liquid form of a thermosetting resin, particularly those which are cast.	*Material Process*
Tread Plates	Diamond top steel filler plates used to fill the gap between rollers on roller conveyor.	*Manufacturing*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Treasury shares	The unissued shares in a company's treasury.	*Mining*
Treater	The head supervisor on a hydraulic fracturing crew. Leads operations execution on location in conjunction with feedback from other supervisors, equipment operators, field engineers, and customers.	*Petroleum Drilling*
Treater	Equipment used for preparing resin-impregnated reinforcements including means for the delivery of a continuous web or strand to a resin tank, controlling the amount of resin pickup, drying, or partially curing the resin, and rewinding the impregnated reinforcement. Term also used to refer to equipment and process used to render a surface of inert plastics, such as polyethylene more receptive to inks, adhesives, or coatings.	*Engineering Physics*
Treating plant	A plant designed primarily to remove undesirable impurities from natural gas to render the gas marketable.	*Energy*
Treatment	The process of intervening on people with the aim of enhancing health or life expectancy. Sometimes, and particularly in statistical texts, the word is used to cover all comparison groups, including placebo and no treatment arms of a controlled trial and even interventions designed to prevent bad outcomes in healthy people, rather than cure ill people. See also: Aggregate data, Control, Experimental intervention, Intervention	*Quality Engineering*
Treatment effect	See Estimate of effect	*Quality Engineering*
Trebles	a size or grade of coal, usually between 2 and 4 inches in dimensions.	*Mining*
Tree	a wooden prop. (Scot.). (Staffs.). –see Props.	*Mining*
Tree Cap	See Top Connector	*Petroleum Engineering*
TREE FARM	A privately owned forest or woodland in which timber crop production is a major management goal.	*Forestry*
TREE SPACING	The distance between trees, which is most often regulated at the time of planting or during a harvest or thinning operation.	*Forestry*
Tree Top	See Top Connector	*Petroleum Engineering*
Tremie Pipe	A device carrying materials to a designated depth in a drill hole or annular space.	*Petroleum Engineering*
Trench	A long, narrow excavation dug through overburden, or blasted out of rock, to expose a vein or ore structure.	*Mining*
Trend	1. A consistent movement across ordered categories, e.g. a change in the effect observed in studies grouped according to, for instance, intensity of treatment. 2. Used loosely to refer to an association or possible effect that is not statistically significant. This usage should be avoided.	*Quality Engineering*
Trend	The direction, in the horizontal plane, of a linear geological feature, such as an ore zone, measured from true north.	*Mining*
Trepanner	an early type of shearer with a large barrel shaped cutting head to produce large coal.	*Mining*
Trepanning	The removal by destructive means of a small section of piping (usually containing a weld) for an evaluation of weld and base-metal soundness. The operation is frequently performed with a hole saw.	*Maintenance and Repair*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Threshold limit value of toxicity (TLVT)	Threshold limit over than producing damage.	*Material Process*
TRI	Toxic Release Inventory (US)	*Petro-Chemical Abbreviations*
Tri-n-butyl tricarballylate ((C4H9OCOCH2)2 CHCOOC4H9)	Tri –n-butyl tricarballylate ((C4H9OCOCH2)2 CHCOOC4H9)	*Material Process*
Triac	A solid state switching device used to switch alternating current wave forms.	*Electrical*
Triad	Any grouping of three conductors or three assemblages of conductors, generally twisted together and found within a cable.	*Electrical*
Trial Examiner	the official charged by the National Labor Relations Board to conduct hearings following issuance of a complaint by the General Counsel alleging that an employer or union has violated the Taft-Hartley Act by the commission of unfair labor practices.	*Industrial Relations*
Trial Examiner's Decision	since September 3, 1963, the NLRB trail examiners have issued decisions which are not reviewed by the Board unless exceptions to the decision are filed by a party or parties to a case involving charges of unfair labor practices.	*Industrial Relations*
Trial Period	the initial or probationary period for a new employee on the job.	*Industrial Relations*
Trialist	Used to refer to a person conducting or publishing a controlled trial.	*Quality Engineering*
Trials Search Co-ordinator (TSC)	Member of the editorial team of a Cochrane Review Group (CRG), or member of a Cochrane Centre or Field. Their role is to co-ordinate trial identification by handsearching and electronic means and to make reports of trials they identify accessible through the Cochrane Central Register of Controlled Trials (CENTRAL). TSCs of CRGs and Fields establish a specialized register of studies falling within the scope of their entity and submit this to CENTRAL. TSCs of CRGs also provide listings of studies to Cochrane reviewers/authors to conduct and update their reviews. In some CRGs, the Managing Editor also fulfils the responsibilities of the TSC, but most CRGs have a dedicated TSC.	*Quality Engineering*
Triboelectric Noise	The generation of electrical charges caused by layers of cable insulation. This is especially troublesome in high impedance accelerometers.	*General*
Triboelectric Noise	The generation of electrical charges caused by layers of cable insulation. This is especially troublesome in high impedance accelerometers.	*Electronic Process*
Tribology	Science of the interactions between surfaces moving relative to each other, including the study of lubrication, friction, and wear.	*Lubrication*
Trichlorobenzene	A solvent-halogenated compound.	*Material Process*
Trichloroethane	1,1,2 Trichloroethane A solvent-chlorinated compound.	*Material Process*
Trichloroethylene	1,1,2 Trichlorethylene A solvent-chlorinated compound.	*Material Process*
Trick	generally considered as synonymous with shift or tour.	*Industrial Relations*
trickle irrigation	A system for irrigating crops by delivering water to the root zone through small, plastic pipes equipped with emitters. This technology conserves water and eliminates soil erosion from irrigation water runoff. Also called drip irrigation.	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Tricresyl phosphate ((CH3C6H4O)3 PO)	An important plasticizer and fire retardant for cellulose nitrate and other cellulose derivatives. Also, called Kronitex A Lindol. Used also, as extreme pressure lubricants, and for vinyl chloride plastics.	*Material Process*
Triethanolamine	A solvent-amine.	*Material Process*
Triethylene glycol	A solvent glycol.	*Material Process*
Triethylene glycol dipropionate (CH2OCH2 CH2OCOC2H5)2	A plasticizer.	*Material Process*
Triethylenetetramine	A solvent-amine.	*Material Process*
Trig	a piece of timber laid across the tracks under the wheels of a wagon to stop it moving. (Scot.).	*Mining*
Trigger	see Bar-hook.	*Mining*
Trillion Btu	Equivalent to 1,000,000,000,000 or 10 to the 12th power Btu.	*Energy*
Trim	Includes all the parts that are in flowing contact with the process fluid except the body, bonnet and body flanges and gaskets. The plug, seats, stem, guides, bushings and cage are some of the parts included in the term trim.	*Industrial Engineering*
Trim And Shave	See "CLIP AND SHAVE"	*Metallurgy*
Trim tab	A secondary control surface, usually mounted to primary control surface such as aileron, elevator, rudder, or stabilizer, that controls the position of the primary control surface, and is controlled by the an operator or an autopilot; Symbols: delta sub T; Typical Units: rad, deg.	*Aeronautical Engineering*
Trimethyl phosphate ((CH3O)3PO)	A plasticizer.	*Material Process*
Trimmer	a tool used to clean the wick of an oil lamp. -see also Pricker; or men who filled the holds of coal vessels and trimmed or leveled the load; or a man who filled tubs at the end of a conveyor belt; or a person who spreads the coal in the wagons or carriages.	*Mining*
Trip	A train of mine cars.	*Mining*
Trip chocks	chocks erected at the entrance to the waste or gob to prevent the roof in the waste breaking down too far towards the face.	*Mining*
Tripartite Boards	a board composed of representatives of labor, management, and the public.	*Industrial Relations*
Triphenyl phosphate ((C6H5O)3PO)	An important plasticizer and fire retardant.	*Material Process*
Triping	originally run-of-mine coal, uncleaned or unsorted. Triping then became coal which had all of the large lumps taken out. The run-of-mine coal was then known as 'cleek coal'. (Scot.).	*Mining*
TRIPLE ECCENTRIC (Butterfly Valves)	A particular design of a butterfly valve where the stem is located behind the disc, below the centerline of the disc, and its cone axis is offset from the centerline of the disc. This particular design is capable of a very tight shutoff at temperatures well above 100°F.	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Triple Extra Strong	See XXXS Also, See XXXH, (XXXS) also referred to as triple extra heavy (XXXH) a super heavy wall pipe schedule 3 times thicker than XS pipe. Generally custom ordered and manufactured.	*Petroleum Engineering*
Triple Point	The temperature and pressure at which solid, liquid, and gas phases of a given substance are all present simultaneously in varying amounts.	*General*
Triple Point (Water)	The thermodynamic state where all three phases, solid, liquid, and gas may all be present in equilibrium. The triple point of water is .01°C.	*General*
Triplet	a tipper for emptying tubs. (N. East).	*Mining*
Triplex	Three single conductors twisted together, usually three single conductor cables twisted without overall covering. Do not use for three conductors laid parallel on a reel.	*Electrical*
Tripod Support	Three legged stand for small roller and skatewheel conveyor. Usually easily moved or aligned to maintain elevation of the conveyor.	*Manufacturing*
Tripoli	A porous siliceous earth resulting from the natural decomposition of siliceous sandstone, used as an abrasive, polishing powder, and filler.	*Material Process*
tripolyphosphates	Salts with P(3)O(10)[-5 charge] anion. Most common is sodium tripolyphosphate [Na(5)P(3)O(10)].	*Chemical*
Tripping	The operation of hoisting the drill string out of and then returning it to the well bore.	*Petroleum Drilling*
Trochoid	The curve formed by the path of a point on the extension of a radius of a circle as it rolls along a curve or line. It is also the curve formed by the path of a point on a perpendicular to a straight line as the straight line rolls along the convex side of a base curve. By the first definition the trochoid is derived from the cycloid; by the second definition it is derived from the involute.	*Mechanical Engineering*
Trolley	a low, flat truck used for man-riding; or a basin in the strata from which the seam rises in opposite directions (S. West); or a small tram (S. Wales).	*Mining*
Trommel	to avoid breaking coal during the process of grading and sorting.	*Mining*
Tront	a long sprag set diagonally to support the coalface. (Mids.).	*Mining*
Troposphere	The inner layer of the atmosphere below about 15 kilometers, within which there is normally a steady decrease of temperature with increasing altitude. Nearly all clouds form and weather conditions manifest themselves within this region. Its thermal structure is caused primarily by the heating of the earth's surface by solar radiation, followed by heat transfer through turbulent mixing and convection.	*Energy*
Trot	an endless rope. Also a system of double haulage way (running side by side) called the rolleyway that takes the full tubs of coal to the shaft and the empty tubs inbye. (N. East).	*Mining*
Trouble	see Fault or Hitch.	*Mining*
Trouble Men	individuals who repair and service equipment.	*Industrial Relations*
Trough	High-temperature (180+) concentrator with one axis-tracking.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Trough fault	two faults between which the strata has been lowered forming a trough.	*Mining*
Troughed Bed	A belt conveyor designed with a deep trough used for carrying broken glass, cans, wood chips, stampings, etc. Also used in recycling operations. (Model TR is a typical troughed bed conveyor.)	*Manufacturing*
Troughing Attachments	Angles used on belt conveyors to cup the edge of the belt.	*Manufacturing*
Troughing idlers	The idlers, located on the upper framework of a belt conveyor, which support the loaded belt. They are so mounted that the loaded belt forms a trough in the direction of travel, which reduces spillage and increases the carrying capacity of a belt for a given width.	*Mining*
Trounters	a sprag set against the coal face. (Mids.). -see also Tront.	*Mining*
Trow or Trows	a rectangular wooden pipe for conveying water down the sides of a shaft to the garland. They were also used for directing ventilation air into headings etc. (Leics.), or a wooden trough used for channeling water.	*Mining*
Trowhole or Trowroad	a cundie, a steep road, down which coal is shot instead of being loaded into hutches. (Scot.).	*Mining*
TROY OUNCES	A type of measurement for gold. A troy is different than an ounce.	*Mining*
Truax v. Corrigan	a decision of the United States Supreme Court in which the Court decision set aside an Arizona Supreme Court decision upholding the anti-injunction law passed by that state.	*Industrial Relations*
Truck	see Tommy.	*Mining*
truck lot	A truckload of product.	*Agriculture*
Truck machine	another name for a weighbridge (N. Staffs.).	*Mining*
Truck System	a form of barter system whereby employees were paid their wages in goods or in scrip to be used at a store owned by the employer.	*Industrial Relations*
TRUE (value)	Best available estimate, such as true airspeed; referenced to true north, such as true heading.	*Aeronautical Engineering*
True Accident	a phrase used in handling employee liability or accident cases to describe an accident for which no one is to blame.	*Industrial Relations*
True airspeed (TAS)	Airspeed corrected for instrumentation errors and air density; See Also: airspeed; Symbols: V sub 'TAS'; Typical Units: kt, ft/s; Dimensions: Length / Time.	*Aeronautical Engineering*
True bearing	Symbols: B sub T; Typical Units: rad, deg.	*Aeronautical Engineering*
True Downtime Cost (TDC)	A method of recording and analyzing all significant cost metrics associated with equipment downtime in a building or manufacturing facility. TDC provides a way to assign time and/or monetary value to previously considered "non-tangible" cost of downtime. Also TDC includes downtime factors commonly overlook to arrive at a more true value for the cost of downtime.	*Maintenance*
True Fracture Strength	the load at fracture divided by the cross sectional area of the sample. Like the ultimate tensile strength the true fracture strength can help an engineer to predict the behavior of the material but is not itself a practical strength limit. Because the tensile test seeks to standardize variables such as specimen geometry, strain rate and uniformity of stress it can be considered a kind of best case scenario of failure.	*Metallurgy*

Please see the Appendix for further illustration

Term	Definition	Industry
True heading	Heading of the aircraft relative to true north; Symbols: psi sub T; Typical Units: rad, deg.	*Aeronautical Engineering*
True heading	Heading of the aircraft relative to true north; Symbols - psi sub T; Typical Units - rad, deg.	*Aeronautical Engineering*
True Involute Form Diameter	The smallest diameter on the tooth at which the involute exists. Usually this is the point of tangency of the involute tooth profile and the fillet curve. This is usually referred to as the TIF diameter.	*Gears*
True RMS	The true root-mean-square value of an AC or AC-plus-DC signal, often used to determine power of a signal. For a perfect sine wave, the RMS value is 1.11072 times the rectified average value, which is utilized for low-cost metering. For significantly nonsinusoidal signals, a true RMS converter is required.	*Electrical*
True RMS	The true root-mean-square value of an AC or AC-plus-DC signal, often used to determine power of a signal. For a perfect sine wave, the RMS value is 1.11072 times the rectified average value, which is utilized for low-cost metering. For significantly non-sinusoidal signals, a true RMS converter is required.	*Electronic Process*
True track	Ground track angle; Symbols: T sub T; Typical Units: rad, deg.	*Aeronautical Engineering*
True value	Generally used to indicate that this is the correct analytical concentration or result.	*Quality*
Trueness (of measurement)	Closeness of agreement between the average value obtained from a large series of test results and an accepted reference value. NOTE: The measurement of trueness is usually expressed in terms of bias. [CLSI EP15-A2]	*Quality*
Trumpet lamp	the miners' term for the 'Mueseler' or Belgian Safety Lamp. (N. East).	*Mining*
Trumpeting	a channel cut behind, or built into, the walling of a shaft to divert the water down to the sump so that it could be pumped out of the pit. -see also Garland; or a system of bratticing a roadway to split the ventilation.	*Mining*
Truncheon	a wooden sleeper to which the tub rails were nailed. (Som.)	*Mining*
Trunk	a wooden box or sled for hauling the debris out of the heading in low seams; or winding in a staple shaft. (Mids.); or a wooden pipe for conveying air into the workings (S. West); or a kibble. (Yorks.).	*Mining*
Trunk line	A main pipeline.	*Energy*
Trunkwire	A trunkwire will be possible for a series of digital devices. Such a series will be able to use a single wire, rather than the multiplicity of wires used on analogue devices which all require separate wiring.	*Control Engineering*
Trunnion	The part of a ball valve which holds the ball on a fixed vertical axis and about which the ball turns.	*General Mechanical*
TRUNNION	That part of a ball valve which holds the ball on a fixed vertical axis and about which the ball turns. The torque requirement of a trunnion mounted ball valve is significantly less than that for a floating ball design.	*Mechanical*
Trusteeing	the practice of attaching, through a court order, the wages of a debtor and collecting it directly from his employer.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Trusteeship, Union	a trusteeship is a method of supervision or control whereby a labor organization suspends the autonomy of a subordinate group or body, under the constitution or bylaws of the organization.	*Industrial Relations*
Trying the candle	testing for firedamp using a candle before the advent of the safety lamp.	*Mining*
TSP	Transmission Service Provider	*Energy*
TSS	Total suspended solids. Generally solids that can be captured by a filter with a filtration degree.	*Filtration*
TTC	Transportation Technology Center (AAR)	*Petro-Chemical Abbreviations*
t-test	Often called Student's t-test. A statistical test of significance in which the difference between two mean values is tested. The null hypothesis is that there is no difference between the two means. The test is carried out by calculating a t-value, then comparing the calculated t-value with a critical t-value which is obtained from a statistics table. If the calculated t-value is greater than the critical t-value, the null hypothesis is rejected; this means that a statistically significant or real difference exists between the mean values being compared. If the calculated t-value is less than the critical t-value, the null hypothesis stands, therefore no difference has been observed between the two mean values.	*Quality*
TTL	A form of solid state logic which uses only transistors to form the logic gates.	*Electrical*
TTL Compatibility	TTL (transistor: transistor: logic) requires NPN (current sinking) input signals. Reliable operation demands maximum input sensor voltage drop of 0.8 V. Most TTL compatible interface devices have voltage drops of less than 0.7V.	*Electrical Engineering*
TTL Unit Load	A load with TTL voltage levels, which will draw 40 μA for a logic 1 and –1.6 mA for a logic 0.	*Electrical*
TTL Unit Load	A load with TTL voltage levels, which will draw 40 μA for a logic 1 and -1.6 mA for a logic 0.	*Electronic Process*
TTL-Compatible	For digital input circuits, a logic 1 is obtained for inputs of 2.0 to 5.5 V which can source 40 μA, and a logic 0 is obtained for inputs of 0 to 0.8 V which can sink 1.6 mA. For digital output signals, a logic 1 is represented by 2.4 to 5.5 V with a current source capability of at least 400 μA, and a logic 0 is represented by 0 to 0.6 V with a current sink capability of at least 16 mA.	*Electrical*
TTL-Compatible	For digital input circuits, a logic 1 is obtained for inputs of 2.0 to 5.5 V which can source 40 μA, and a logic 0 is obtained for inputs of 0 to 0.8 V which can sink 1.6 mA. For digital output signals, a logic 1 is represented by 2.4 to 5.5 V with a current source capability of at least 400 μA; and a logic 0 is represented by 0 to 0.6 V with a current sink capability of at least 16 mA.	*Electronic Process*
Tub	originally an open topped box constructed from wood or iron attached to a tram, used for transporting coal. A tub constructed to hold twenty-four 'pecks' of coal had an inside measurement of 36ins. x 30ins. x 26ins. Tubs were manufactured in all sizes and shapes and also had various names in the different coalfields. -see also Boxes, Dram, Hutch, Tram and Put; or a complete section of timber or metal tubbing including the wedging crib upwards to the mouth of the shaft.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Tub thumper	man employed on repair of pit wagons (Tubs or jummers) (N. Staffs.).	*Mining*
Tubbing	a casing built into a pit shaft to keep back water or free running deposits such as mud or sand. Formerly constructed from planking with dressed joints, brick, stone, or later from cast-iron or concrete. When made with brick or stone it is often called 'coffering'. –see also Stone Tubbing	*Mining*
Tubbing curbs	cast iron curbs used as a foundation for tubbing. Also called 'wedging curbs'.	*Mining*
Tubbing plates	the cast iron segments making up the tubbing.	*Mining*
Tube	The terms "pipe" and "tube" are almost interchangeable, although minor distinctions exist — generally, a tube has tighter engineering requirements than a pipe. Both pipe and tube imply a level of rigidity and permanence, whereas a hose is usually portable and flexible. See also Pipe.	*Industrial*
Tube Bending Formula	a policy (formulated by the NLRB) which held that certain expressions of employers in opposition to unionism are not coercive or threatening and do not constitute improper interference within the meaning of the National Labor Relations Board Act.	*Industrial Relations*
Tube bundle	a bundle of small diameter tubing from the surface to underground, where the individual tubes split off the main bundle and were directed to different parts of the mine. Used in an automatic air sampling system.	*Mining*
Tube Detection	A sensor technique for determining the presence of tubing within a pinch valve. By using an analog hall sensor capable of multi-position output, various valve states are established. Typical states are; Tube Out-Valve Closed, Tube In-Valve Closed and Tube In-Valve Open.	*General Mechanical*
TUBE MILL	A piece of milling equipment consisting of a revolving cylinder half filled with steel rods or balls and into which crushed ore is fed for fine grinding; the material to be ground is mixed with water or other solution and comes out as a slurry.	*Mining*
Tube mill	An apparatus consisting of a revolving cylinder about half-filled with steel rods or balls and into which crushed ore is fed for fine grinding.	*Mining*
Tube or Core Barrel	The main body of the bit. Should always be tested for being in round.	*Petroleum Drilling*
Tube Slot	A slot in the side of the body for tubing to pass through.	*Mechanical*
tube tomatoes	A container holding three or four tomatoes, to be sold to consumers as a single unit.	*Agriculture*
Tuberculation	Localized attack typified by the formation of inverted pliable conical structures. In water systems, tuberculation is more commonly associated with localized corrosion of iron and the conical structures are predominately made up of several oxidation states of iron (Fe2O3, Fe3O4, etc.). Pitting is normal result.	*Chemical Engineering*
Tubing	Pipe suspended in a well bore, inside the annulus of the casing, used to produce fluid or gas from the well. Used as the production spring.	*Petroleum Engineering*
Tubing Head	(Tubing Spool) Equipment attached above the Casing Spool and, used to suspend and seal the production Tubing string.	*Petroleum Engineering*
Tubing Head Adaptor	'Adaptor Flange' Attached above the Tubing Head, used to attach the Christmas Tree onto the tubing head.	*Petroleum Engineering*
Tucklers	short chains used for lowering and raising men in the shaft. Three men usually rode in them at one time. (Leics.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Tued	meaning fatigued or tired. (N. East).	*Mining*
Tuff	Rock composed of fine volcanic ash.	*Mining*
TUFT	Bunching of twigs or needles.	*Forestry*
Tumblers	catches fitted to the deck of a cage to hold the tubs in place during winding. (N. East); or a tipper for emptying tubs, also known as a 'Tumbling Tom' (Scot.); or a quadrant for altering the direction of pumping rods. (Som.); or an apparatus fitted at the top of the shaft and at the entrance to levels within the shaft. By pulling a lever two lengths of timber would fall forward to support the cage as it was being loaded and unloaded. A forerunner of the modern day keps. Also called a tippler or kick-up.	*Mining*
Tumbling	A process of polishing, creating a smooth finish, or applying an even coating of some material on small plastics objects by placing them in a tumbling barrel with various finishing or polishing compounds and wooden pegs or other similar objects. Slow turning of the barrel causes the pieces to rub against each other and against the pegs. Many articles can be finished at once this way.	*Material Process*
Tume	see Toom.	*Mining*
Tumps	rubbish disposed of in the waste in rough packs with intervening spaces. (Som.).	*Mining*
Tune	To set the operating frequency or channel for a device.	*Aeronautical Engineering*
Tung oil	A yellow oil obtained from the fruit of Aleurites cordata used in the manufacture of quick drying varnishes and as a modifier or lubricant for plastics.	*Material Process*
TUNNEL	A horizontal underground passage that is open at both ends; the term is loosely applied in many cases to an adit, which is open at only one end.	*Mining*
Tunnel	A horizontal, or near-horizontal, underground passage, entry, or haulage way, that is open to the surface at both ends. A tunnel (as opposed to an adit) must pass completely through a hill or mountain.	*Mining*
Tunnel Claims	Gold bearing earth taken out of tunnels and subsequently washed.	*Mining*
Tunnel-boring-machine	A machine used to excavate a tunnel through soil or rock by mechanical means as opposed to drilling and blasting.	*Mining*
Tunnels	Ground-effect-generating venturi underneath the side pods of a Champ Car. See Aerodynamics.	*NASCAR*
Tunphy	coaly fireclay. (Scot.).	*Mining*
Tup	In early times there used to be a fortnight's holiday at the end of the year, when stock used to be taken and no coals drawn. It was the custom to cover with lighted candles the last corf of coals sent to bank, which was called "sending away the tup." (N. East)	*Mining*
Turbidity	The interference to light transmission caused by suspended solids usually colloidal in nature.	*Chemical Engineering*
Turbine	A propeller-like device that is turned by a stream of hot gas (steam in a conventional thermal power station), water (in a hydro plant), gas (in a gas power plant - here the gas burns in the turbine and exhaust gases cause it to rotate); or wind (as in a wind farm). The rotation of the turbine drives the generator that converts the mechanical rotation into electrical power. (See also Generator.)	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Turbine Oil	A top-quality rust- and oxidation-inhibited (R&O) oil that meets the rigid requirements traditionally imposed on steam-turbine lubrication. Quality turbine oils are also distinguished by good demulsibility, a requisite of effective oil-water separation. Turbine oils are widely used in other exacting applications for which long service life and dependable lubrication are mandatory. Such compressors, hydraulic systems, gear drives, and other equipment. Turbine oils can also be used as heat transfer fluids in open systems, where oxidation stability is of primary importance.	*Lubrication*
turbine wheel	a rotor designed to convert fluid energy into rotational energy. Hydraulic turbines are used to extract energy from water as the water velocity increases due to a change in head or kinetic energy at the expense of the potential energy as the water flows from a higher elevation to a lower elevation. The fluid velocity tangential component contributes to the rotation of the rotor in a turbomachine.	*Chemical*
Turbinizing	Mechanical removal of scale from the inside of the pipe by means of air-driven centrifugal rotating cleaners. The operation is performed on steel pipe bends after hot bending to remove loose scale and sand.	*Maintenance and Repair*
Turbocharger	An air compressor that is used to boost the oxygen intake of a motor. In an internal combustion engine, a mixture of fuel and air is pumped into the confined space of a piston cylinder and ignited by a spark. When it ignites, the fuel burns, using the oxygen in the air, and the remaining gasses expand almost instantly, releasing a huge amount of energy. This expansion pushes the piston out, turning the crankshaft that drives the engine. The amount of fuel that can be ignited in the cylinder, and therefore the power generated, is limited by the amount of oxygen present. If there is too little oxygen, not all the fuel will burn. By compressing the air that is fed into the cylinder, more oxygen is made available for the combustion process, allowing more fuel to be burned, more completely, leading to more power obtained at higher efficiency and "cleaner" exhaust-emissions.	*Electrical*
TURBOCHARGER	A mechanical device on the engine for boosting the intake air volume and therefore the power output of the engine.	*Mechanical, Process, and Operations*
Turbogenerator	a collective term referring to a turbine and the generator to which it is connected.	*Electrical*
Turbulent Flow	When forces due to inertia are more significant than forces due to viscosity. This typically occurs with a Reynolds number in excess of 4000.	*General*
Turbulent Flow	Flow in which the velocity at any point varies on an erratic basic. It occurs when flow velocity exceeds a limiting value or when tube configuration irregularities preclude laminar flow.	*Lubrication*
TURBULENT FLOW (TURBULENCE)	A condition where the fluid particles move in random paths rather than in continuous parallel paths.	*Mechanical, Process, and Operations*
Turbulent flow sampler	A sampler that contains a flow path in which turbulence is induced in the main stream by abruptly changing the direction of the fluid.	*Oil Analysis*
Turn	another term for a curve in a rail track.	*Mining*
Turn again	a change in the direction of the dip of the strata (N. Staffs.).	*Mining*
Turn In	As a car reaches a corner, this is the moment at which a driver actually begins to turn the wheel. The timing of this action and the car's response to it are crucial for setting fast lap times.	*NASCAR*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Turn Of The Nut Method	See Angle Controlled Tightening	*Maintenance*
Turn pulley	the return wheel or pulley for an endless haulage or tail-rope on a haulage road. (Mids.).	*Mining*
Turnaround	A stop, or full or substantial interruption of plant production. Generally turn-around is considered to be a period longer than 24 hours.	*Maintenance*
Turnbuckle	A link with a screw thread at both ends, used for tightening the rod, normally used in cross-bracing.	*Manufacturing*
Turndown	A term used to describe the ratio between the minimum and maximum flow conditions seen in a particular system. For example, if the minimum flow were 10 G.P.M. and the maximum flow were 100 G.P.M. the turndown would be 10:1. See rangeability.	*Industrial Engineering*
Turning Wheel	Wheel mounted on an adjustable bracket to help insure proper package orientation.	*Manufacturing*
Turnkey project	A turnkey project is one in which the contractor will design, engineer, deliver and commission an installation, taking responsibility for all aspects of the work. A lump-sum turnkey project is one in which the contractor undertakes a turn-key project for a set fee, agreed by the contractor and the customer before the work has begun.	*Electrical*
Turnover	moving the conveyors on the face from one track to another as the seam is worked out forwards, taking off the belts and pans then moving the engine to the new track (S. Staffs.)—see also Web.	*Mining*
Turns to operate	The number of complete revolutions of a handwheel or the pinion shaft of a gear operator required to stroke a valve from fully open to fully closed or vice versa.	*General Mechanical*
Turntable	Horizontal, rotatable conveyor mechanism used for transferring objects between conveyors which are in angular relation to one another.	*Equipment*
Turpentine	An oil obtained by distilling the extracted sap obtained by wounding living pine trees used as a solvent for paints and varnishes.	*Material Process*
Tut	a drinking vessel (S. Staffs.).	*Mining*
TUV	Technischer überwachungs Verien	*Petro-Chemical Abbreviations*
TVA	See Tennessee Valley Authority	*Energy*
t-value, t	A statistic from the t-test. It is a ratio of a systematic error component divided by a random error component [bias/(sdiff/N1/2)].	*Quality*
TVD	Refers to True Vertical Depth, or the actual depth of any part of the wellbore. (TVD is usually measured from the rig's RKB or rotary kelly bushing elevation.)	*Petroleum Drilling*
TVD*	planned well bore True Vertical Depth Cartesian coordinate at MD*. (feet or meters)	*Petroleum Drilling*
TVL	temporary viscosity loss	*Petro-Chemical Abbreviations*
TWD	total weighted demerit	*Petro-Chemical Abbreviations*
TWh	See Terawatt hour	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Twin boundary	A planar defect separating two crystalline regions that are, structurally, mirror images of each other.	*Material Process*
Twinway	two branch roads running on either side, out of a main road to the stalls on a stall face through which the 'twin boys' pushed the trams (S. West).	*Mining*
TWO INCH SQUARE OPERATING NUT	A nut attached to the valve stem or to the pinion shaft of a gear operator. Valves so equipped are usually situated below grade in road boxes and are operated by long handled "T" wrenches.	*Mechanical*
Two sided	See Two-tailed	*Quality Engineering*
Two stage process	Method of making phenol-formaldehyde resins in which less than the required amount of aldehyde is reacted with phenol in the first stage, more being added later.	*Material Process*
Two-, Three-, Four-, or Six-Way Valve	A valve having 2,3, 4, or 6 ports for direction of oil flow.	*Mechanical, Process, and Operations*
Two-by-Two (2x2) Table	A contingency table with two rows and two columns. It arises in clinical trials that compare dichotomous outcomes, such as death, for an intervention and control group or two intervention groups.	*Manufacturing*
Two-Platoon System	similar to a two-shift operation.	*Industrial Relations*
Two-Pulley Hitch	A special transition section for moving product from horizontal to incline.	*Manufacturing*
Two-Stage Injection	The two-stage plasticator injector unit utilizes two separate stages to perform its function. The first, or plasticating stage, is devoted to the melting and mixing of the plastic melt by utilizing long, rotating screws. This screw conveys the processed plastic forward where, by means of a diverter valve, it is transferred into the injection or holding cylinder. When a sufficient quantity of melt has been plasticated and transferred into the injection cylinder, the diverter valve shifts to create a flow path from the injection cylinder to the mold runner system, and the second stage or injection stage, now begins. The melted plastic is forced out of the injection cylinder by a hydraulically driven piston or plunger. After injecting the melt into the mold, the diverter valve again shifts to connect the flow path from the rotating screw to the injection cylinder to transfer more plasticated material into the cylinder for the next cycle. During injection the plasticating screw continues to rotate and reciprocate to build up a change in front of it for the next cycle.	*Engineering Physics*
Two-tailed	A hypothesis test in which the values for which we can reject the null hypothesis are located entirely in both tails of the probability distribution. Testing whether one treatment is either better or worse than another (rather than testing whether one treatment is only better than another) would be a two-tailed test. See also: One-tailed test Also called: Two sided	*Quality Engineering*
Two-Thousand Hour Clause	same as the thousand hour clause under th Fair Labor Standards Act, except that under the two thousand hour clause, overtime provisions do not apply up to 12 hours per day and 56 hours per week.	*Industrial Relations*
Two-tone	Two shades of its nominal color more or less entirely covering adjacent areas on a molding with a more or less sharp line demarcation between.	*Material Process*
Two-tone	Two shades of its nominal color more or less entirely covering adjacent areas on a molding with a more or less sharp line demarcation between.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
TWO-WAY SPHERE-LOK	A Sphere-Lok with two ports. See "Sphere-Lok."	*Mechanical*
Two-Year Rule	a rule established by the NLRB holding that the first two years of a collective bargaining agreement shall be considered a reasonable period during which claims by rival unions will not be generally considered.	*Industrial Relations*
TYLOSIS	Outgrowth of a cell membrane from a ray or axial parenchyma cell through a pit in a xylem vessel wall into the vessel, partially or completely blocking the lumen of the vessel.[1]	*Forestry*
Tymp	a cap or lid for the top of a prop, usually 12 to 15 inches in length.	*Mining*
Type I error	A conclusion that a treatment works, when it actually does not work. The risk of a Type I error is often called alpha. In a statistical test, it describes the chance of rejecting the null hypothesis when it is in fact true. (Also called false positive.) See also: False positive Also called: Alpha	*Quality Engineering*
Type ll error	A conclusion that there is no evidence that a treatment works, when it actually does work. The risk of a Type II error is often called beta. In a statistical test, it describes the chance of not rejecting the null hypothesis when it is in fact false. The risk of a Type II error decreases as the number of participants in a study increases. (Also called false negative.)See also: False negative Also called: Beta	*Quality Engineering*
Type of drive (vehicle)	Refers to which wheels the engine power is delivered to, the so-called "drive wheels." Rear-wheel drive has drive wheels on the rear of the vehicle. Front-wheel drive, a newer technology, has drive wheels on the front of the vehicle. Four-wheel drive uses all four wheels as drive wheels and is found mostly on Jeep-like vehicles and trucks, though it is becoming increasingly more common on station wagons and vans.	*Energy*
Typical	Error is within plus or minus one standard deviation (±1%) of the nominal specified value, as computed from the total population.	*General Engineering*
Typical	Can refer to the target value or where a range is given, represents an estimate of where 2/3 of the total population of several production runs would be.	*Electrical Engineering*
Typographical Union; International (AFL-CIO)	a union organized in 1852 which claimed jurisdiction over most of the crafts in the printing trade.	*Industrial Relations*
U	U	*Forestry*
U Bolt	A U shaped fastener threaded at both ends used primarily in suspension and related areas of vehicles.	*Maintenance*
U.S. Department of Energy (DOE)	The DOE managers programs of research, development and commercialization for various energy technologies, and associated environmental, regulatory and defense programs. DOE announces energy policies and acts as a principal advisor to the President on energy matters.	*Energy*
U.S. Environmental Protection Agency (EPA)	The EPA administers federal environmental policies, enforces environmental laws and regulations, performs research, and provides information on environmental subjects. The agency also acts as chief advisor to the President on U.S. environmental policy and issues.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
U.S. refiner acquisition cost of imported crude oil	The average price paid by U.S. refiners for imported, that is, non-U.S., crude oil booked into their refineries in accordance with accounting procedures generally accepted and consistently and historically applied by the refiners concerned. The refiner acquisition cost of imported crude oil includes transportation and other fees paid by the refiner.	*Energy*
U.S.S.R.	See Union of Soviet Socialist Republics (U.S.S.R.).	*Energy*
U3O8	See Uranium oxide.	*Energy*
UCC	Uniform Code Council	*Gears*
U-CUP (Ring-Packing)	A "U" cross-section ring located on the tail end of certain ball valve seats to retain the grease in an emergency seat seal system.	*Mechanical*
Udged	sounding hollow or unsound when the roof is tested by tapping with a hammer, it was said to 'knock udged'. (Derbys.).	*Mining*
UEIL	Union Européenne des Indépendants en Lubrifiants	*Petro-Chemical Abbreviations*
UEL	Upper Explosion limit.	*Material Process*
UF6	See Uranium hexafluoride.	*Energy*
UFE	Unaccounted For Energy	*Energy*
Uformite	A trade name for aqueous dispersions of urea-formaldehyde resins used as adhesive and for the manufacture of laminated material.	*Material Process*
UHF/VHF Automatic Direction Finding (U/V ADF)	An Automatic Direction Finder that determines relative bearing to a transmitter to which it is tuned, in either the UHF band or VHF band.	*Aeronautical Engineering*
UIC	Underground Injection Control	*Petroleum Drilling*
Uinta Basin	Consists of the Colorado counties of Delta, Garfield, Gunnison, Mesa, Moffat, Pitkin, Rio Blanco, Routt and the Utah counties of Carbon, Duchesne, Emery, Grand, Sanpete, Sevier, Uintah, Utah, and Wasatch.	*Energy*
UKPIA	UK Petroleum Industry Association	*Petro-Chemical Abbreviations*
UL	Underwriters Laboratories, Inc. An independent laboratory that establishes standards for commercial and industrial products.	*Electronic Process*
ULCC	Ultra Large Crude Carrier.	*Energy*
ULEV	ultra low-emission vehicle	*Petro-Chemical Abbreviations*
ULSD	ultra low sulfur diesel	*Petro-Chemical Abbreviations*
Ultimate analysis	determines the amount of carbon, hydrogen, oxygen, nitrogen, and sulfur. Heating value is determined in terms of Btu, both on an as received basis (including moisture) and on a dry basis.	*Energy*
Ultimate customer	A customer that purchases electricity for its own use and not for resale.	*Energy*
ULTIMATE STRENGTH	That stress at which a material will fail. See "Tensile Test", "Burst Pressure."	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Ultimate Strength	The maximum stress developed in a tensile-compression specimen.	*Engineering Physics*
Ultimate Tensile Strength	a value calculated by dividing the maximum load on a material experienced during a tensile test by the initial cross section of the test sample. When viewed in light of the other tensile test data the ultimate tensile strength helps to provide a good indication of a material's toughness but is not by itself a useful design limit. Conversely this can be construed as the minimum stress that is necessary to ensure the failure of a material.	*Metallurgy*
Ultra Violet Degradation	The degradation caused by long time exposure of a material to sunlight or other ultraviolet rays containing radiation.	*Electrical*
Ultraclean	1 particle >10 micron per milliliter	*Lubrication*
Ultrafiltration (UF)	Membrane systems retain particles, bacteria, protozoa, viruses and organic molecules greater than their rated molecular weight cut-off. They operate at pressures between 10 and 50 psi.	*Contamination Control*
Ultrahigh voltage (UHV)	This term refers to voltages in excess of 800 kilovolts (kV). UHV transmission using alternating current (AC) has been possible for several decades, and it is now also possible to transmit power this way using direct current (DC). DC transmission has lower losses and requires fewer overhead lines than AC transmission. Ultrahigh-voltage DC links will make it viable to produce electricity in remote regions and transmit it to centers of demand via energy "superhighways." The efficient transmission of electricity at 800 kV DC power transmission is now feasible over distances as far as 3,000 km. UHVDC systems are cheaper, smaller and more efficient than comparable AC transmission systems.	*Electrical*
Ultrahigh Voltage Transmission	Transporting electricity over bulk-power lines at voltage greater than 800 kilovolts.	*Energy*
Ultra-low sulfur diesel (ULSD) fuel	Diesel fuel containing a maximum 15 parts per million (ppm) sulfur.	*Energy*
Ultrasonic	An NDE technique which relies on an ultrasonic beam passing through a coating and substrate and providing a signal from the back wall which is then detected. The height of this backwall echo depends on the discontinuity in impedance from the sprayed coating to the substrate. Bonding flaws can be easily seen by the weakening of the back wall echo.	*Paint and Coatings*
Ultrasonic Examination or Inspection	A nondestructive method in which beams of high-frequency sound waves that are introduced into the material being inspected are used to detect surface and subsurface flaws. The sound waves travel through the material with some attendant loss of energy and are reflected at interfaces. The reflected beam is detected and analyzed to define the presence and location of flaws.	*Maintenance and Repair*
Ultrasonic Extensometer	An instrument which can measure the change in length of a fastener ultrasonically as the fastener is tightened or measure the length before and after it is tightened.	*Maintenance*
Ultrasonic inspection	An inspection procedure using high frequency sound waves to detect wall thickness or flaws throughout the thickness of metal parts. Abbreviated as UT.	*General Mechanical*
ULTRASONIC INSPECTION	An inspection procedure using high frequency sound waves to detect voids and imperfections throughout the thickness of metal parts.	*Mechanical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Ultrasonic testing	A type of nondestructive testing in which defects are detected using high frequency acoustical waves.	*Material Process*
Ultraviolet	Electromagnetic radiation in the wavelength range of 4 to 400 nanometers.	*Energy*
Ultraviolet light	Light having a shorter wave length than the violet rays in the spectrum. It is invisible but produces chemical changes in many plastics.	*Material Process*
Ultraviolet (UV) Stabilizer	Chemical agents which absorb or screen out radiation beyond the violet end of the spectrum of electromagnetic radiation. Such radiation has sufficient energy to initiate reactions leading to the degradation of many plastics. These agents are often combined with other additives, e.g. heat stabilizers and antioxidants, with which they act in synergistic fashion. UV stabilizers can be UV absorbers or radical scavengers.	*Engineering Physics*
UL-Underwriters Laboratory	An impartial testing laboratory concerned with the safety of electrical components. Products surviving the tests are included on a certified listing of products by manufacturer. This does not imply UL approval.	*Mechanical*
Umpire	the term is synonymous with arbitrator.	*Industrial Relations*
Umpire sample or assay	An assay made by a third party to provide a basis for settling disputes between buyers and sellers of ore.	*Mining*
UMTRA	See Uranium Mill Tailings Radiation Control Act of 1978.	*Energy*
UN	National Coarse threads, in form and pitch, but outside the Unified System (UNC), up to e.g. 1″ x 8 TPI threads fall within the UNC System, 1-1/8″ x 8 TPI threads and all larger bolts threaded 8 TPI fall outside the Unified System, and are classified under 8UN.	*Petroleum Engineering*
Unaccounted for (crude oil)	Represents the arithmetic difference between the calculated supply and the calculated disposition of crude oil. The calculated supply is the sum of crude oil production plus imports minus changes in crude oil stocks. The calculated disposition of crude oil is the sum of crude oil input to refineries, crude oil exports, crude oil burned as fuel, and crude oil losses.	*Energy*
Unaccounted for (natural gas)	Represents differences between the sum of the components of natural gas supply and the sum of components of natural gas disposition. These differences may be due to quantities lost or to the effects of data reporting problems. Reporting problems include differences due to the net result of conversions of flow data metered at varying temperatures and pressure bases and converted to a standard temperature and pressure base; the effect of variations in company accounting and billing practices; differences between billing cycle and calendar-period time frames; and imbalances resulting from the merger of data reporting systems that vary in scope, format, definitions, and type of respondents.	*Energy*
Unaffiliated Union	a local or national union which is not affiliated with AFL-CIO.	*Industrial Relations*
Unapproved Wage Increase	under wartime stabilization laws, a wage increase which, although not illegal, could not be used by the employer as a basis for requesting adjustments in prices.	*Industrial Relations*
Unauthorized Strike	a strike which does not have the approval of a union and is in violation of the no-strike provision of the collective bargaining agreement.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Unbalance	That condition which exists in a rotor when vibratory force or motion is imparted to its bearings as a result of centrifugal forces.	*General*
Unbalance (imbalance)	Unequal mass distribution on a rotor. The mass centerline does not coincide with the rotation or geometric centerline.	*Reliability Engineering*
Unbalance Tolerance	The unbalance tolerance with respect to a radial plane (measuring plane or correction plane) is that amount of unbalance which is specified as the maximum below which the state of unbalance is considered acceptable.	*General*
Unbalanced Seal	A mechanical seal arrangement wherein the full hydraulic pressure of the seal chamber acts to close the seal faces.	*Lubrication*
Unbundled Service	This is electric service broken down into its basic components. Each component is priced and sold separately. For example, generation, transmission and distribution could be unbundled.	*Energy*
Unbundling	Disaggregating electric utility service into its basic components and offering each component separately for sale with separate rates for each component. For example, generation, transmission and distribution could be unbundled and offered as discrete services.	*Energy*
UNC	Unified National Coarse (UNC) is a thread form with a 60 degree flank angle rounded roots and flat crests. For a given diameter it has a larger thread pitch than an equivalent diameter UNF thread. The unified thread is based on inch sizes and was first standardized in 1948 unifying the Whitworth and American standard thread forms.	*Maintenance*
Uncertainties	Uncertainties are factors over which the utility has little or no foreknowledge, and include load growth, fuel prices, or regulatory changes. Uncertainties are modeled in a probabilistic manner. However, in the Detailed Workbook, you may find it is more convenient to treat uncertainties as "unknown but bounded" variables without assuming a probabilistic structure. A specified uncertainty is a specific value taken on by an uncertainty factor (e.g. 3 percent per year for load growth). A future uncertainty is a combination of specified uncertainties (e.g. 3 percent per year load growth, 1 percent per year real coal and oil price escalation, and 2.5 percent increase in housing starts).	*Energy*
Uncompleted wells, equipment, and facilities costs	The costs incurred to (1) drill and equip wells that are not yet completed, and (2) acquire or construct equipment and facilities that are not yet completed and installed.	*Energy*
Unconfined	Conditions in which the upper surface of the zone of saturation forms a water table under atmospheric pressure.	*Petroleum Engineering*
unconfined aquifer	an aquifer in which there are no confining beds between the capillary fringe and land surface, and where the top of the saturated zone (the water table) is at atmospheric pressure.	*Chemical*
Unconfounded comparison	A comparison between two treatment groups that will give an unbiased estimate of the effect of treatment due to the study design. For a comparison to be unconfounded, the two treatment groups must be treated identically, apart from the randomized treatment. For instance, to estimate the effect of heparin in acute stroke, a trial of heparin alone versus placebo would provide an unconfounded comparison. However, a trial of heparin alone versus aspirin alone provides a confounded comparison of the effect of heparin. See also: Confounded comparison	*Quality Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Unconsolidated Aquifer	An aquifer made up of loose material, such as sand or gravel, not having undergone lithification (conversion of loose sediment into solid sedimentary rock).	*Petroleum Engineering*
Unconsolidated entity	A firm directly or indirectly controlled by a parent but not consolidated with the parent for purposes of financial statements prepared in accordance with generally accepted accounting principles. An unconsolidated entity includes any firm consolidated with the unconsolidated entity for purposes of financial statements prepared in accordance with generally accepted accounting principles historically and consistently applied. An individual shall be deemed to control a firm that is directly or indirectly controlled by him or by his father, mother, spouse, children, or grandchildren.	*Energy*
Unconsolidated Entity	A firm that is affiliated with a parent entity but not consolidated with the parent entity for purposes of financial statements prepared in accordance with Generally Accepted Accounting Principles (GAAP). An individual shall be deemed to control a firm that is directly or indirectly controlled by him/her or by his/her father, mother, spouse, children, or grandchildren.	*Energy*
Uncontrolled trial	A clinical trial that has no control group.	*Quality Engineering*
Unconventional gas	Natural gas resources which require greater than industry-standard levels of technology or investment to harvest. The three most common types of unconventional gas resources are tight sands, coalbed methane (CBM), and shale gas.	*Petroleum Drilling*
Unconventional oil and natural gas production	An umbrella term for oil and natural gas that is produced by means that do not meet the criteria for conventional production. See Conventional oil and natural gas production. Note: What has qualified as "unconventional" at any particular time is a complex interactive function of resource characteristics, the available exploration and production technologies, the current economic environment, and the scale, frequency, and duration of production from the resource. Perceptions of these factors inevitably change over time and they often differ among users of the term. For these reasons, the scope of this term will be expressly stated in any EIA publication that uses it. For example, see *International Energy Outlook*, Table E4 for the list it currently uses for unconventional oil and natural gas production.	*Energy*
Uncut value	The actual assay value of a core sample as opposed to a cut value which has been reduced by some arbitrary formula.	*Mining*
Under-balanced drilling	Drilling under conditions where the pressure being exerted inside the wellbore (from the drilling fluids) is less than the pressure of the oil or gas in the formation.	*Petroleum Engineering*
Underbead Crack	A crack in the heat-affected zone or in previously deposited weld metal paralleling the underside contour of the deposited weld bead and usually not extending to the surface.	*Maintenance and Repair*
Undercast or Under-gate	an air-course or 'wind-road' carried beneath another roadway. -see also Air crossing and Air bridge.	*Mining*
Under-clays	a bed of fireclay or clunch found immediately beneath a coal seam. The underclays are the remains of the soil in which the vegetation that formed the coal seam grew and often contain the fossilized remains of plant roots.	*Mining*
Undercure	A dull surface or pale color on a thermosetting plastics piece due to insufficient resin in the molding composition.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Undercut	A condition in generated gear teeth when any part of the fillet curve lies inside of a line drawn tangent to the working profile at its lowest point. Undercut may be deliberately introduced to facilitate finishing operations, as in preshaving.	*Gears*
Undercut	An indentation or protuberance in a mold that tends to impede withdrawal of a molded part from the mold. Articles of soft materials such as flexible vinyls can be removed from molds with severe undercuts, but undercuts must be avoided in molds for rigid materials. Slight undercuts are sometimes deliberately formed in one half of a mold to cause the article to remain in a desired half until ejected.	*Engineering Physics*
Undercut	To cut below or undermine the coal face by chipping away the coal by pick or mining machine. In some localities the terms "undermine" or "underhole" are used.	*Mining*
Underemployed	a part time worker of one who is earning an income just sufficient to keep him at subsistence level, and seeking employment at a higher level of earnings, or if partially employed, seeking full time employment.	*Industrial Relations*
Underemployment	a condition sometimes existing in the economy in which there is inadequate utilization of available existing manpower.	*Industrial Relations*
Underground Injection Control (UIC)	A program required in each state by a provision of the Safe Drinking Water Act (SDWA) for the regulation of Injection Wells, including a permit system. An applicant must demonstrate that the well has no reasonable chance of adversely affecting the quality of an underground source of drinking water before a permit is issued.	*Petroleum Drilling*
Underground Injection Control	A program required in each state by a provision of the Safe Drinking Water Act (SDWA) for the regulation of Injection Wells, including a permit system. An applicant must demonstrate that the well has no reasonable chance of adversely affecting the quality of an underground source of drinking water before a permit is issued.	*Petroleum Drilling*
Underground injection well	A steel- and concrete-encased shaft into which hazardous waste is deposited by force and under pressure.	*Petroleum Drilling*
Underground mine	A mine where coal is produced by tunneling into the earth to the coalbed, which is then mined with underground mining equipment such as cutting machines and continuous, longwall, and shortwall mining machines. Underground mines are classified according to the type of opening used to reach the coal, i.e., drift (level tunnel), slope (inclined tunnel), or shaft (vertical tunnel).	*Energy*
Underground mining equipment	**Underground mining equipment:**	*Energy*
Underground mining methods	**Underground mining methods:**	*Energy*
Underground natural gas storage	The use of sub-surface facilities for storing natural gas for use at a later time. The facilities are usually hollowed-out salt domes, geological reservoirs (depleted oil or gas fields) or water-bearing sands (called aquifers) topped by an impermeable cap rock.	*Energy*
Underground natural gas storage injections	Natural gas put (injected) into underground storage reservoirs.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Underground source of drinking water (USDW)	An aquifers currently being used as a source of drinking water or capable of supplying a public water system. USDWs have a TDS content of 10,000 milligrams per liter or less, and are not "exempted aquifers."	*Petroleum Drilling*
Underground station	An enlargement of an entry, drift, or level at a shaft at which cages stop to receive and discharge cars, personnel, and material. An underground station is any location where stationary electrical equipment is installed. This includes pump rooms, compressor rooms, hoist rooms, battery-charging rooms, etc.	*Mining*
Underground storage	The storage of natural gas in underground reservoirs at a different location from which it was produced.	*Energy*
UNDERGROUND STORAGE	The storage of natural gas or other fluids underground.	*Mechanical*
Underground storage withdrawals	Natural gas removed from underground storage reservoirs.	*Energy*
Underlooker	a man employed to supervise the underground workings of a mine. He was responsible directly to the manager or the owner. (Lancs.).	*Mining*
Undermanager	usually the person in charge of underground mining operations, possessing at least a second class certificate of competency and is next in authority to a manager or deputy manager. An earlier name for such a person was 'Underviewer'.	*Mining*
Underset	props set at angles towards the face or away from the dip, i.e. other than the perpendicular. –see also Overset.	*Mining*
Undershoot	The difference in temperature between the temperature a process goes to, below the set point, after the cooling cycle is turned off and the set point temperature.	*General*
Underside Bed Cover	Sheet metal used to cover the underneath side of a conveyor.	*Manufacturing*
Underside Take-Up	A take-up section located beneath the bed of a belt conveyor.	*Manufacturing*
Undersized Shank	Equal approximately to pitch diameter of thread. Produced by roll threading a non-extruded blank. Characteristic of machine screws.	*Fastening*
UNDERSTORY	The layer formed by the crowns of smaller trees in a forest.	*Forestry*
Understudy	a form of on-the-job training where an individual acts as an assistant to the full-fledged journeyman who is engaged in the trade which the understudy is learning.	*Industrial Relations*
Undertrussing	Members forming a rigid framework underneath the conveyor, used for supporting the conveyor.	*Manufacturing*
Underviewer	see Undermanager.	*Mining*
Underwrite	A firm commitment made by a broker or other financial institution to purchase a block of shares at a specified price.	*Mining*
Underwriter's Laboratories (UL)	A non-profit organization that establishes, maintains and operates laboratories for the examination and testing of devices, systems and materials primarily for safety.	*Electrical Engineering*
Undifferentiated/ unspecified reserves and production	Reserves and production that are not separable by FERC production areas or by states. Undifferentiated and unspecified reserves consist only of company-owned gas in underground storage.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Undiscovered recoverable reserves (crude oil and natural gas)	Those economic resources of crude oil and natural gas, yet undiscovered, that are estimated to exist in favorable geologic settings.	*Energy*
Undiscovered resources (coal)	Unspecified bodies of coal surmised to exist on the basis of broad geologic knowledge and theory. Undiscovered resources include beds of bituminous coal and anthracite 14 inches or more thick and beds of sub bituminous coal and lignite 30 inches or more thick that are presumed to occur in unmapped and unexplored areas to depths of 6,000 feet. The speculative and hypothetical resource categories comprise undiscovered resources.	*Energy*
UNEF	Unified National Extra Fine (UNEF) is a Unified thread form with a very fine (small) pitch that are typically used on instruments and parts requiring a fine adjustment.	*Maintenance*
Unemployable	a term which seeks to identify individuals who cannot fit into the labor market and are unable to find employment.	*Industrial Relations*
Unemployed	a person 14 years of age or over who is without a job and is looking for work.	*Industrial Relations*
Unemployment	attempts to define "employment" and "unemployment" have proved difficult and in a report issued by the U.S. Department of Labor from the office of Manpower, Automation, and Training, it is suggested that "the definitions of unemployment and employment are to a large extent determined by the sources of data used in developing the measures."	*Industrial Relations*
Unemployment Benefits	weekly dollar amounts available to unemployed workers under state unemployment compensation laws.	*Industrial Relations*
Unemployment Compensation	payments made under state laws when individuals are unemployed through no fault of their own.	*Industrial Relations*
Unemployment Data	information dealing with the problem of unemployment.	*Industrial Relations*
Unemployment Insurance	the program set up under the Social Security Act of 1935 proving a federal-state program.	*Industrial Relations*
UNEP	United Nations Environment Programme	*Petro-Chemical Abbreviations*
UNEVEN-AGED MANAGEMENT	The practice of managing a forest by periodically selecting and harvesting individual trees or groups of trees from the stand while preserving its natural appearance.	*Forestry*
UNF	Unified National Fine (UNF) is a thread form with a 60 degree flank angle rounded roots and flat crests. For a given diameter it has a smaller thread pitch than an equivalent diameter UNC thread.	*Maintenance*
Unfair Employer	an employer who is guilty of an unfair labor practice under federal or state law or an employer who refuses to recognize a union, or emplore its members.	*Industrial Relations*
Unfair Goods	products or goods not produced under union conditions.	*Industrial Relations*
Unfair Labor Practice Proceeding	a proceeding under federal or state labor laws to determine whether an employer or union is guilty of an unfair labor practice.	*Industrial Relations*
Unfair Labor Practice Strike	a work stoppage cause or prolonged, in whole or in part, by actions of the employer which are held to be unfair labor practices under the state or federal law.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Unfair Labor Practices	actions of employers or unions that are prohibited as unfair labor practices under the federal or state labor relations statuses.	*Industrial Relations*
Unfair Lists	lists of either firms or products considered by a labor organization to be unfair to the union.	*Industrial Relations*
Unfilled	Term applied to a plastics piece due to insufficient resin in the molding composition.	*Material Process*
Unfilled requirements	Requirements not covered by usage of inventory or supply contracts in existence as of January 1 of the survey year.	*Energy*
Unfinished oils	All oils requiring further processing, except those requiring only mechanical blending. Unfinished oils are produced by partial refining of crude oil and include naphthas and lighter oils, kerosene and light gas oils, heavy gas oils, and residuum.	*Energy*
Unfractionated streams	Mixtures of unsegregated natural gas liquid components, excluding those in plant condensate. This product is extracted from natural gas.	*Energy*
Unfunded	a pension fund for which there has been no advance funding and from which payments are made when actual needs arise to pay the pensioners.	*Industrial Relations*
Unglazed solar collector	A solar thermal collector that has an absorber that does not have a glazed covering. Solar swimming pool heater systems usually use unglazed collectors because they circulate relatively large volumes of water through the collector and capture nearly 80 percent of the solar energy available.	*Energy*
Ungrounded Junction	A form of construction of a thermocouple probe where the hot or measuring junction is fully enclosed by and insulated from the sheath material.	*Electrical*
Unholed	boardgates or headings which come to a dead end and are not driven through or thirled into an adjoining roadway. (Yorks.). A blind heading.	*Mining*
Unidirectional conductor	Conductor constructed with a central core surrounded by more than one layer of helically laid wire, all layers having a common direction of lay, with increase in length of lay for each successive layer. (See Concentric lay Conductor.)	*Electrical*
Unidirectional Differential Pressure Sensor	A differential pressure sensor requiring the greater input pressure to be applied to a specified pressure port.	*Electrical Engineering*
Uniform Commercial Code (UCC), Article 2	A codification of law which clarifies and regulates the rights and obligations of buyer and sellers engaging in commercial transactions. It has been adopted by all states except Louisiana.	*Procurement*
Uniform corrosion	Uniform corrosion or over all general attack occurs when anodic and cathodic areas keep shifting so that corrosion takes place more or less uniformly over the entire exposed surface. The metal becomes thinner and fails.	*Material Process*
Uniform system of accounts	Prescribed financial rules and regulations established by the Federal Energy Regulatory Commission for utilities subject to its jurisdiction under the authority granted by the Federal Power Act.	*Energy*
Unilateral Action	action by one of the parties to a collective bargaining relationship independently of the desires or wishes of the other, without notice or consultation.	*Industrial Relations*
Unilay conductor	Conductor constructed with a central core surrounded by more than one layer of helically laid wires, all layers having a common length and direction of lay. (See Concentric:lay Conductor.)	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Union	A form of pipe fitting where two extension pipes are joined at a separable coupling.	*General*
Union bonnet	A type of valve construction in which the bonnet is held on by a union nut with threads on the body.	*General Mechanical*
UNION CONNECTION	A small 3-piece fitting used to join two lengths of pipe. A female piece is installed on each of the two pipe ends and the connection is mechanically sealed by an external nut.	*Mechanical*
Union Discipline	the procedures and powers unions exercise over their constituent bodies and members.	*Industrial Relations*
Union Elections	procedures established by union constitutions and bylaws to govern the election of union officials.	*Industrial Relations*
Union Housing	provision of housing accommodations by unions for their members.	*Industrial Relations*
Union Label	the emblem attached to or printed on an article to indicate that it has been made by union labor or under union conditions.	*Industrial Relations*
Union Label Agreement	a procedure used to obtain standardized agreements with a degree of uniformity in wage and other working conditions through union label agreements which permits the employer to use the label is he agrees to the working conditions prescribed in the agreement.	*Industrial Relations*
Union Label Goods	goods produced under union conditions.	*Industrial Relations*
Union Label Trades	international unions which encourage the use of the union label in their trades.	*Industrial Relations*
Union Labor	workers organized in trade unions.	*Industrial Relations*
Union Labor Party	a political organization established in 1888 consisting of various remnants of the Greenback Party, some farm groups, and labor unions to take an active part in the Presidential election of 1888.	*Industrial Relations*
Union Leadership	the individuals in th labor movement who have responsibility for guiding and directing the programs of their organizations, and give direction and inspiration to trade union enterprises and new developments generally.	*Industrial Relations*
Union Membership	all of those individuals who are members of a union.	*Industrial Relations*
Union Membership Drive	activities designed to obtain additional union members.	*Industrial Relations*
Union Membership Eligibility	the rules defining eligibility to membership in a particular union generally are spelled out in the union constitution or bylaws.	*Industrial Relations*
Union of Soviet Socialist Republics (U.S.S.R.)	A political entity that consisted of 15 constituent republics: Armenia, Azerbaijan, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan. The U.S.S.R. ceased to exist as of December 31, 1991	*Energy*
Union Officers	the officers of trade unions.	*Industrial Relations*
Union Participation in Management	procedures to fulfill the concept of "partners in production."	*Industrial Relations*
Unique Products And Proprietary Services	A product or service the characteristics and functions or features of which are such that only a single product, particular feature, or service will properly satisfy the University's needs and all other products or services will be unacceptable for such needs.	*Procurement*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Unit	The asset the task list is written for in a preventive maintenance system. The unit is a machine, system, or component of a large machine.	*Maintenance*
Unit Cell	The basic structural unit of a crystal structure.	*Engineering Physics*
Unit cell	Structural unit that is repeated by translation in forming a crystalline structure.	*Material Process*
Unit Energy Consumption (UEC)	The annual amount of energy that is used by the electrical device or appliance.	*Energy*
Unit functions	A collection of functions used as standard test cases in control systems engineering; The primary unit functions of interest in avionics are the unit impulse, the unit step, and the unit ramp. Symbols: u sub k (t).	*Aeronautical Engineering*
Unit impulse (2)	A function used as a standard test case in control systems engineering; a spike of "area" one at time t = 0; Synonyms: impulse; See Also: unit functions; Symbols: u sub <0> (t), delta (t).	*Aeronautical Engineering*
Unit of analysis error	An error made in statistical analysis when the analysis does not take account of the unit of allocation. In some studies, the unit of allocation is not a person, but is instead a group of people, or parts of a person, such as eyes or teeth. Sometimes the data from these studies are analyzed as if people had been allocated individually. Using individuals as the unit of analysis when groups of people are allocated can result in overly narrow confidence intervals. In meta-analysis, it can result in studies receiving more weight than is appropriate.	*Quality Engineering*
Unit price	Total revenue derived from the sale of product during the reference month divided by the total volume sold; also known as the weighted average price. Total revenue should exclude all taxes but include transportation costs that were paid as part of the purchase price.	*Energy*
Unit ramp	A function used as a standard test case in control systems engineering; a line of slope 1 starting at zero at time t = 0; Synonyms: ramp; See Also: unit functions; Symbols: u sub <-2> (t).	*Aeronautical Engineering*
Unit step	A function used as a standard test case in control systems engineering; a step from zero to one at time t = 0; Synonyms: step; See Also: unit functions; Symbols: u sub<-1>(t), u(t).	*Aeronautical Engineering*
Unit train	A long train of between 60 and 150 or more hopper cars, carrying only coal between a single mine and destination.	*Mining*
Unit value, consumption	Total price per specified unit, including all taxes, at the point of consumption.	*Energy*
Unit value, wellhead	The wellhead sales price, including charges for natural gas plant liquids subsequently removed from the gas; gathering and compression charges; and state production, severance, and/or similar charges.	*Energy*
United Arab Emirates	(1967-present) and	*Energy*
United States	The 50 States and the District of Columbia. *Note*: The United States has varying degrees of jurisdiction over a number of territories and other political entities outside the 50 States and the District of Columbia, including Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, Johnston Atoll, Midway Islands, Wake Island, and the Northern Mariana Islands. EIA data programs may include data from some or all of these areas in U.S. totals. For these programs, data products will contain notes explaining the extent of geographic coverage included under the term "United States."	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Unitless	No units, such as ratios; a quantity with standard units of 1; a quantity with primary units of 1; Synonyms: dimensionless.	*Aeronautical Engineering*
Units	A standard quantity, such as ft or mi; Synonyms: dimension.	*Aeronautical Engineering*
Universal coal cutter	A type of coal cutting machine which is designed to make horizontal cuts in a coal face at any point between the bottom and top or to make shearing cuts at any point between the two ribs of the place. The cutter bar can be twisted to make cuts at any angle to the horizontal or vertical.	*Mining*
Universal Service	Electric service sufficient for basic needs (an evolving bundle of basic services) available to virtually all members of the population regardless of income.	*Energy*
Universal Transverse Mercator (UTM)	A system of fixed earth coordinates, sometimes used instead of latitude and longitude, accurate relative to others close by, such as ground troops.	*Aeronautical Engineering*
Unleaded midgrade gasoline	See Gasoline grades.	*Energy*
UNLOAD	To release flow (usually directly to the reservoir), to prevent pressure being imposed on the system or portion of the system.	*Mechanical, Process, and Operations*
Unloading	The release of contaminant that was initially captured by the filter medium.	*Oil Analysis*
Unloading Valve	A valve which allows a pump to operate at a minimum load by dumping the pump's excess oil at a low pressure.	*Mechanical, Process, and Operations*
Unplanned analyses	Statistical analyses that are not specified in the trial protocol, and are generally suggested by the data. In contrast to planned analyses. Also called: Data derived analyses, Post hoc analyses	*Quality Engineering*
Unplanned Maintenance	Any maintenance activity for which a pre-determined job procedure is not documented, or for which all labor, materials, tools, and equipment required to carry out the task are not estimated, and their availability assured before commencement of the task.	*Maintenance*
Unprocessed gas	Natural gas that has not gone through a processing plant.	*Energy*
UNR	Unified National (UN) thread form with a rounded root contour, applies only to external threads. (The UN thread form has a flat, or optionally, a rounded root contour.) The majority of fasteners with a Unified thread form have a rounded root contour i.e. are UNR threads.	*Maintenance*
Unregulated Entity	For the purpose of EIA's data collection efforts, entities that do not have a designated franchised service area and that do not file forms listed in the Code of Federal Regulations, Title 18, Part 141, are considered unregulated entities. This includes qualifying cogenerators, qualifying small power producers, and other generators that are not subject to rate regulation, such as independent power producers.	*Energy*
Unrevealed (Covert) Failure	A failure of a component or system that remains undetected until revealed by either proof testing or, more critically, once a demand is placed on the item to function as intended.	*Reliability Engineering*
unsaturated	the characteristic of a carbon atom in a hydrocarbon molecule that shares a double bond with another carbon atom.	*Chemical*
Unsaturated Flow	Movement of water in a porous medium, in which the pore spaces are not completely filled with water.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Unsaturated Polyester	Unsaturated Polyesters are very different from saturated thermoplastic polyester. These thermosets are found in fiberglass reinforced plastics and were first used in the United States during World War II. They are also used in fishing poles, luggage, and in electrical applications.	*Material Engineering*
unsaturated zone	the zone between land surface and the capillary fringe within which the moisture content is less than saturation and pressure is less than atmospheric. Soil pore spaces also typically contain air or other gases. The capillary fringe is not included in the unsaturated zone.	*Chemical*
Unscheduled Downtime	A period of time when the equipment is not available to perform its intended function due to unplanned downtime events. These include maintenance delay, repair, change of consumables, out-of-spec input, and facilities-related downtime.	*Maintenance*
Unscheduled Maintenance	Any maintenance work not included on an approved maintenance schedule prior to its commencement. Note: this is not necessarily a breakdown, rather a break in the schedule of maintenance.	*Maintenance*
Unscheduled outage service	Power received by a system from another system to replace power from a generating unit forced out of service.	*Energy*
Unserved or Unmet Energy	The average energy that will be demanded but not served during a specified period due to inadequate available generating capacity.	*Energy*
Unshielded Sensor	a sensor with limited side and front sensing capabilities.	*Electrical Engineering*
Up time	The amount of time a repairable unit is operating per design.	*Reliability Engineering*
Up-brow	an inclined plane worked to the rise. (Lancs.).	*Mining*
UPC	Universal Product Code; standard symbology used by the grocery and retail industries.	*Gears*
Upcast or Upcast shaft	the shaft up which the air returns to the surface after having ventilated the workings of a mine.	*Mining*
Upcast shaft	A shaft through which air leaves the mine.	*Mining*
Update	A process by which position is reset with a known better position; updates occur at the data source level or at the physical device level, depending upon specific implementation of the device and the data source (choice of implementation is transparent above the data source); all updates are operator initiated, but the new position may be derived from other sources such as FLIR, MMR, or radio navigation; a basic control to a data source from controls and displays for updating a device Compare: aiding.	*Aeronautical Engineering*
Upper yield point	Distinct break from the elastic region in the stress curve for a low carbon steel.	*Material Process*
Upgrade	Replacement or addition of electrical equipment resulting in increased generation or transmission capability.	*Energy*
upgradient	it the direction of increasing potentiometric (piezometric) head.	*Chemical*
Up-leap	an upthrow fault. (Mids.).	*Mining*
Uprate	An increase in the rating or stated measure of generation or transfer capability.	*Energy*
Upset	a short working place that is driven to the rise; or a bolthole or heading put through between two levels in steep inclined edge coal seams. (Scots.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Upstanding	a term used in stoop and room working where the pillars are sound and the roof is safe. (Scot.).	*Mining*
Upstream	The oil industry term "upstream" refers to oil and natural gas exploration and extraction activities. See also Downstream.	*Electrical*
Upstream	Activities in the oil and gas industry which take place close to the supply. This normally includes exploration and production activities.	*Petroleum Drilling*
Uptime	The time that an item of equipment is in service and can perform its intended function, assuming that the external resources, if required, are provided. Notice that uptime may not be the same as operating time, which is the time that the equipment is performing its intended function. The period of time in which a machine, production line or plant is functioning and available for use. As a metric, it is defined as Operating Time divided by Scheduled Time.	*Reliability Engineering*
Uraninite	A uranium mineral with a high uranium oxide content. Frequently found in pegmatite dykes.	*Mining*
Uranium	A radioactive, silvery-white, metallic element.	*Mining*
Uranium (U)	A heavy, naturally radioactive, metallic element (atomic number 92). Its two principally occurring isotopes are uranium-235 and uranium-238. Uranium-235 is indispensable to the nuclear industry because it is the only isotope existing in nature, to any appreciable extent, that is fissionable by thermal neutrons. Uranium-238 is also important because it absorbs neutrons to produce a radioactive isotope that subsequently decays to the isotope plutonium-239, which also is fissionable by thermal neutrons.	*Energy*
Uranium concentrate	A yellow or brown powder obtained by the milling of uranium ore, processing of in situ leach mining solutions, or as a byproduct of phosphoric acid production.	*Energy*
Uranium deposit	A discrete concentration of uranium mineralization that is of possible economic interest.	*Energy*
Uranium endowment	The uranium that is estimated to occur in rock with a grade of at least 0.01 percent U_3O_8. The estimate of the uranium endowment is made before consideration of economic availability of any associated uranium resources.	*Energy*
Uranium hexafluoride (UF_6)	A white solid obtained by chemical treatment of U_3O_8 and which forms a vapor at temperatures above 56 degrees Centigrade. UF_6 is the form of uranium required for the enrichment process.	*Energy*
Uranium importation	The actual physical movement of uranium from a location outside the United States to a location inside the United States.	*Energy*
Uranium mill	A plant where uranium is separated from ore taken from mines.	*Energy*
Uranium mill tailings	The sand-like materials left over from the separation of uranium from its ore. More than 99 percent of the ore becomes tailings.	*Energy*
Uranium Mill Tailings Radiation Control Act (UMTRA) of 1978	The act that directed the Department of Energy to provide for stabilization and control of the uranium mill tailings from in active sites in a safe and environmentally sound manner to minimize radiation health hazards to the public. It authorized the Department to undertake remedial actions at 24 designated inactive uranium-processing sites and at an estimated 5,048 vicinity properties.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Uranium ore	Rock containing uranium mineralization in concentrations that can be mined economically, typically one to four pounds of U_3O_8 per ton or 0.05 percent to 0.2 percent U_3O_8.	*Energy*
Uranium oxide	Uranium concentrate or yellowcake. Abbreviated as U_3O_8.	*Energy*
Uranium property	A specific piece of land with uranium reserves that is held for the ultimate purpose of economically recovering the uranium. The land can be developed for production or undeveloped.	*Energy*
Uranium reserves.	Estimated quantities of uranium in known mineral deposits of such size, grade, and configuration that the uranium could be recovered at or below a specified production cost with currently proven mining and processing technology and under current law and regulations. Reserves are based on direct radiometric and chemical measurements of drill holes and other types of sampling of the deposits. Mineral grades and thickness, spatial relationships, depths below the surface, mining and reclamation methods, distances to milling facilities, and amenability of ores to processing are considered in the evaluation. The amount of uranium in ore that could be exploited within the chosen forward-cost levels are estimated in accordance with conventional engineering practices.	*Energy*
Uranium resource categories (international)	Three categories of uranium resources defined by the international community to reflect differing levels of confidence in the existence of the resources. Reasonably assured resources (RAR), estimated additional resources (EAR), and speculative resources (SR) are described below.	*Energy*
Urbanization	the growth of the city into rural areas	*Agriculture*
Urea (NH2CONH2)	Colorless tetra hedral crystals. One of the principal raw materials for the light –colored thermosetting urea-formaldehyde plastics.	*Material Process*
Urea-Formaldehyde	Developed in 1929, Urea-Formaldehyde is scratch resistant, chemical resistant, heat resistant, hard, and contains good electrical qualities. The molding compounds of Urea-Formaldehyde are used in rigid decorative and electrical products, while the liquid resins are used in laminates and in chemically resistant coatings.	*Material Engineering*
Ureas	Common term for urea plastics, light colored, thermosetting resins usually filled with alpha cellulose	*Material Process*
UREDIAL STAGE (uredium)	A stage of the rust fungi; a fruiting structure usually appearing as a pustule bearing the repeating spore stage that leads to disease increase. Fin. Swe.	*Forestry*
Usable Sensing Distance	The sensing distance after temperature range tolerance and manufacturers tolerance are taken into account.	*Electrical Engineering*
USACE (sometimes shortened to USCE in EIA tables)	U.S. Army Corps of Engineers.	*Energy*
USBR	United States Bureau of Reclamation.	*Energy*
USCAR	United States Council for Automotive Research	*Petro-Chemical Abbreviations*
USDA	United States Department of Agriculture, a Federal agency involved in all phases of agriculture	*Agriculture*

Please see the Appendix for further illustration

Term	Definition	Industry
USDA	United States Department of Agriculture. Acronym may be used in first reference if readers are familiar with agriculture. It includes the following agencies and units: Foreign Agricultural Service; Food Safety and Inspection Service; Forest Service; National Resources Conservation Service; Rural Business-Cooperative; Food and Nutrition Service; Center for Nutrition Policy and Promotion; Agricultural Marketing Service; Animal & Plant Health Inspection Service; Grain Inspection, Packers and Stockyards Administration; Agricultural Research Service; Office of Community Development; Rural Housing Service; Rural Utilities Service; Cooperative State Research Education & Extension Service; Economic Research Service; and National Agricultural Statistics Service.	*Agriculture*
Use Dilution	The final concentration at which a product is used.	*Chemistry*
Usage agreement	Contracts held by enrichment customers that allow feed material to be stored at the enrichment plant site in advance of need.	*Energy*
Used and useful	A concept used by regulators to determine whether an asset should be included in the utility's rate base. This concept requires that an asset currently provide or be capable of providing a needed service to customers.	*Energy*
Used Beverage Cans (UBCS)	scrap aluminum beverage cans, although sometimes applied to steel cans as well (steel has a microscopic share of the beverage can market in America but a much larger share in Europe and elsewhere).	*Metallurgy*
Useful Life	The maximum length of time that a component is left in service before it starts to experience a rapidly increasing probability of failure. The Useful Life determines the frequency with which a Scheduled Restoration or a Scheduled Discard task should be performed. For Useful Life to hold true, components must, at some consistent point in time, experience a rapidly increasing probability of failure. Research in the airline industry shows that this is only true for 11% of the components in modern aircraft.	*Reliability Engineering*
Useful thermal output	The thermal energy made available in a combined-heat-and-power system for use in any industrial or commercial process, heating or cooling application, or delivered to other end users, i.e., total thermal energy made available for processes and applications other than electrical generation.	*Energy*
User Maintenance (UM)	This is any maintenance request primarily driven by a user. It includes breakdown, routine requests, and DIN jobs.	*Maintenance*
Users of reviews	People using a review to make practical decisions about health care, and researchers conducting or considering further research.	*Quality Engineering*
USS	Uniform Symbology Specifications	*Gears*
UST	Underground storage tanks used for the storage of fuels and other liquids.	*Petroleum Engineering*
UTF	universal tractor fluid	*Petro-Chemical Abbreviations*
Utility	A regulated entity which exhibits the characteristics of a natural monopoly. For the purposes of electric industry restructuring "utility" refers to the regulated, vertically-integrated electric company. "Transmission utility" refers to the regulated owner/operator of the transmission system only. "Distribution utility" refers to the regulated owner/operator of the distribution system which serves retail customers.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Utility demand-side management costs	The costs incurred by the utility to achieve the capacity and energy savings from the Demand-Side Management (DSM) Program. Costs incurred by consumers or third parties are to be excluded. The costs are to be reported in nominal dollars in the year in which they are incurred, regardless of when the savings occur. The utility costs are all the annual expenses (labor, administrative, equipment, incentives, marketing, monitoring and evaluation, and other) incurred by the utility for operation of the DSM Program, regardless of whether the costs are expensed or capitalized. Lump-sum capital costs (typically accrued over several years prior to start up) are not to be reported. Program costs associated with strategic load growth activities are also to be excluded.	*Energy*
Utility distribution companies	The entities that will continue to provide regulated services for the distribution of electricity to customers and serve customers who do not choose direct access. Regardless of where a consumer chooses to purchase power, the customer's current utility, also known as the utility distribution company, will deliver the power to the consumer.	*Energy*
Utility generation	Generation by electric systems engaged in selling electric energy to the public.	*Energy*
Utility or Utility Distribution Companies	The entities that continue to provide regulated services for the distribution of electricity to customers and serve customers who do not choose direct access. Regardless of where a consumer chooses to purchase power, the customer's current utility, also known as the utility distribution company, will deliver the power to the consumer's home or business.	*Energy*
Utility-Earned Incentives	Costs paid to a utility for achieving consumer participation in DSM programs.	*Energy*
Utility-sponsored conservation program	Any program sponsored by an electric and/or natural gas utility to review equipment and construction features in buildings and advise on ways to increase the energy efficiency of buildings. Also included are utility-sponsored programs to encourage the use of more energy-efficient equipment. Included are programs to improve the energy efficiency in the lighting system or building equipment or the thermal efficiency of the building shell. Also see Demand-side management.	*Energy*
Utilization	The proportion of available time that an item of equipment is operating. Utilization is calculated by dividing equipment operating hours by equipment available hours, and is generally expressed as a percentage.	*Reliability Engineering*
Utilization Factor	The ratio of the maximum demand of a system or part of a system to the rated capacity of the system or part of the system.	*Energy*
UTTO	universal tractor transmission oil	*Petro-Chemical Abbreviations*
UUT	Acronym for unit under test	*Reliability Engineering*
V	See Volt	*Energy*
--V--	--V--	*Petroleum Drilling*
Vacancy	A normally occupied lattice site from which an atom or ion is missing.	*Engineering Physics*
Vacancy	Unoccupied atom site in a crystal structure.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Vacancy migration	Movement of vacancies in the course of atomic diffusion without significant crystal structure distortion.	*Material Process*
Vacating an Award	procedure for setting aside an arbitration award.	*Industrial Relations*
Vacation Pay	pay for specified periods of time off work, under either contract provisions or company policy.	*Industrial Relations*
Vacations	specific periods during which employees are relieved of job obligations without loss of any benefit or privilege of employment, and usually with pay.	*Industrial Relations*
Vacuum	Any pressure less than atmospheric pressure.	*General*
Vacuum Degassing	A process by which the amount of carbon in the steel is reduced by exposing liquid steel to a very low vacuum environment. Carbon combines in the process with oxygen to form carbon monoxide, which is removed in the process. The result is a steel that contains lower levels of carbon and thus, has higher formability.	*Metallurgy*
Vacuum distillation	Distillation under reduced pressure (less the atmospheric) which lowers the boiling temperature of the liquid being distilled. This technique with its relatively low temperatures prevents cracking or decomposition of the charge stock.	*Energy*
Vacuum Distillation	A distillation method which involved reducing the pressure above a liquid mixture to be distilled to less than its vapor pressure (usually less than atmospheric pressure). This causes evaporation of the most volatile liquid(s) - those with the lowest boiling points. This method works on the principle that boiling occurs when a liquid's vapor pressure exceeds the ambient pressure. It can be used with or without heating the solution.	*Lubrication*
vacuum draft tube	a narrow tube lowered into an extraction well through which a strong vacuum is pulled via a suction pump at ground surface. Fluids (gas, water, and/or free product) are drawn into the draft tube and conveyed to the surface for treatment or disposal. Depending upon the configuration of the extraction system, the inlet of the draft tube may be either above or below the static level of the liquid in the well.	*Chemical*
Vacuum interrupter	A vacuum interrupter is a device that uses a vacuum to extinguish the arc formed when a circuit breaker is opened. It also insulates the contacts after the arc has been interrupted. Vacuum interruption is seen as the ideal switching technology for medium-voltage applications. Excellent switching capabilities, combined with high reliability and a compact design, provide economical switching solutions with virtually no maintenance requirements. Vacuum interruption offers the lowest environmental impact of all medium-voltage switching technologies over the entire product life cycle. Vacuum interrupters are comprised of materials that are environmentally benign and safe to handle during periodic out-of-service maintenance and at end-of-life disposal. The devices perform well in all medium-voltage switching applications required in modern power systems. They have exceptionally long life and are virtually maintenance free.	*Electrical*
Vacuum or Low Pressure Plasma Spraying	Plasma spraying carried out in a chamber which has been evacuated to a low partial pressure of oxygen. It is then usually partially backfilled with argon to avoid the possibility of forming a glow discharge.	*Paint and Coatings*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Vacuum Pump	A device that is used to extract gas or vapor from an enclosed space, leaving behind a partial vacuum in the container.	*Lubrication*
vadose zone	the zone between land surface and the water table within which the moisture content is less than saturation (except in the capillary fringe) and pressure is less than atmospheric. Soil pore spaces also typically contain air or other gases. The capillary fringe is included in the vadose zone.	*Chemical*
Valence	Electronic charge of an ion.	*Material Process*
Valence band	A range of electron energies in a solid associated with the valence electrons of an isolated atom.	*Material Process*
Valence electron	Outer orbital electron that takes part associated with the valence electrons of an isolated atom.	*Material Process*
Validation	The process of determining the degree to which a model is an accurate representation of the real world from the perspective of the intended uses of the model.	*Petroleum Engineering*
Validity	The extent to which a variable or intervention measures what it is supposed to measure or accomplishes what it is supposed to accomplish.	*Analysis*
Validity, External	Validity, External of a study refers to the appropriateness by which its results can be applied to non-study patients or populations.	*Analysis*
Validity, Internal	Validity, Internal of a study refers to the integrity of the experimental design.	*Analysis*
Valley Filling	Valley filling is a form of load management that increases or builds, off-peak loads. This load shape objective is desirable if a utility has surplus capacity in the off-peak hours. If this strategy is combined with time-or-use rates, the average rate for electricity can be lowered.	*Energy*
Valuation	The act or process of valuing or of estimating the value or worth; appraisal.	*Mining*
Value (of shipments)	The value received for the complete systems at the company's net billing price, freight-on-board factory, including charges for cooperative advertising and warranties. This does not include excise taxes, freight or transportation charges, or installation charges.	*Energy*
Value Added	The value added to a product or service at each stage of its production and distribution, based on its increased value at that stage.	*Procurement*
Value added by manufacture	A measure of manufacturing activity that is derived by subtracting the cost of materials (which covers materials, supplies, containers, fuel, purchased electricity, and contract work) from the value of shipments. This difference is then adjusted by the net change in finished goods and work-in-progress between the beginning- and end-of-year inventories.	*Energy*
Value Engineering	A Systematic Approach To Assessing And Analyzing The User'S Requirements Of A New Asset, And Ensuring That Those Requirements Are Met, But Not Exceeded. Consists Primarily Of Eliminating Perceived "Non-Value-Adding" Features Of New Equipment.	*Plant Engineering*
Value-added per employee	Calculate by subtracting cost of purchased materials, components, and services from value of shipments divided by number of employees. See "productivity change."	*Quality*

Term	Definition	*Industry*
Valve	Pipe fittings that ensure one-way flow of steam or fluid through a pipe system., used to regulate the flow of steam. Stop valves are used to shut off, or partially shut off the flow of fluid/steam. Stop valves are controlled by the movement of the valve stem. Stop valves can be divided into four general categories: globe, gate, butterfly, and ball valves. Plug valves and needle valves may also be considered stop valves. See also Pipe Fittings.	*Industrial*
Valve	A device used to control the flow of fluid contained in a pipe line.	*Mechanical*
VALVE ACTUATOR	The valve part(s) through which force is applied to move or position flow-directing elements.	*Mechanical, Process, and Operations*
Valve Body	See body.	*Industrial Engineering*
Valve Flow Coefficient	See Cv.	*Industrial Engineering*
Valve Lifter	Sometimes called a "cam follower," a component in engine designs that use a linkage system between a cam and the valve it operates. The lifter typically translates the rotational motion of the cam to a reciprocating linear motion in the linkage system.	*Lubrication*
VALVE SIGNATURE	The graphical representation of a valve's performance. This includes, but is not limited to, friction, travel, actuator pressure, and such errors as hysteresis, overshoot and linearity.	*Mechanical*
Valve, by-pass	A valve whose primary function is to provide an alternate flow path.	*Oil Analysis*
VALVEMOUNTING	The mounting characteristic of a valve.	*Mechanical, Process, and Operations*
VALVESTACK	A series of control valves in a stack with common end plates and a common oil inlet and outlet.	*Mechanical, Process, and Operations*
van der Waals Bond	A secondary interatomic bond between adjacent molecular dipoles, which may be permanent or induced.	*Engineering Physics*
Van der Waals bonds	Atomic bonds without electron transfer or sharing.	*Material Process*
Van Der Waals Forces	Forces that exist between molecules of a substance after all of the primary valences within covalent molecules are saturated. Also called secondary valence forces or intermolecular forces.	*Engineering Physics*
Van Der Waals Forces/ Dispersion Forces	caused by temporary dipole interactions that result from momentary concentration variations in the electron clouds of adjacent molecules	*Physics*
Van Stoning	Hot upsetting of lapping pipe ends to form integral lap flanges, the lap generally being of the same diameter as that of the raised face of standard flanges.	*Maintenance and Repair*
Vane-Type Cylinder	A cylinder which uses a turning vane in a circular housing to produce rotary movement.	*Mechanical, Process, and Operations*
Vapor	As most frequently used, the term vapor describes a substance which, although present in the gaseous phase, generally exists as a liquid or solid at room temperature.	*Engineering Physics*
Vapor Pressure	The pressure exerted by the gaseous form, or vapor, of liquid. When the pressure above a liquid equals its vapor pressure, boiling occurs. If the pressure at any point in the flow of a liquid falls below the vapor pressure or becomes equal to the vapor pressure, the liquid flashes into vapor. This is called cavitation.	*Maintenance and Repair*

Please see the Appendix for further illustration

Term	Definition	*Industry*
	The vapor thus formed travels with the liquid and collapses where the pressure is greater than vapor pressure. This could cause damage to piping and other components.	
VAPOR	The gaseous phase of a substance that is a liquid at normal temperature and pressure.	*Petroleum Engineering*
Vapor Barrier	A layer of material through which water vapor will not pass readily or at all.	*Engineering Physics*
vapor density	the amount of mass of a vapor per unit volume of the vapor.	*Chemical*
Vapor deposition	Processing technique for semiconductor devices involving the buildup of material from the vapor phase.	*Material Process*
Vapor displacement	The release of vapors that had previously occupied space above liquid fuels stored in tanks. These releases occur when tanks are emptied and filled.	*Energy*
Vapor Pressure	Most liquids form vapors as they're heated. As temperature increases, so too does a fluid's vapor pressure. Fluids boil when their vapor pressure equals the pressure of the surrounding gas. Knowing your fluid's vapor pressure is important when specifying circulation pumps and piping. A low vapor pressure helps prevent boiling and pump cavitation. It's also an indication of how quickly a liquid evaporates; a fluid with high vapor pressure could require frequent topping up. Vapor also doesn't transfer heat as efficiently as fluid.	*Lubrication*
vapor pressure	the force per unit area exerted by a vapor in an equilibrium state with its pure solid, liquid, or solution at a given temperature. Vapor pressure is a measure of a substance's propensity to evaporate. Vapor pressure increases exponentially with an increase in temperature.	*Chemical*
Vapor Pressure-Reid (RVP)	Measure of the pressure of vapor accumulated above a sample of gasoline or other volatile fuel in a standard bomb at 100°F (37.8°C). Used to predict the vapor locking tendencies of the fuel in a vehicle's fuel system. Controlled by law in some areas to limit air pollution from hydrocarbon evaporation while dispensing.	*Oil Analysis*
Vapor Recovery Unit	A system at a drilling site to recover vapors formed inside completely sealed crude oil or condensate tanks. The vapors are sucked through a scrubber, where the liquid trapped is returned to the liquid pipeline system or to the tanks, and the vapor recovered is pumped into gas lines.	*Petroleum Drilling*
Vapor retarder	A material that retards the movement of water vapor through a building element (walls, ceilings) and prevents insulation and structural wood from becoming damp and metals from corroding. Often applied to insulation batts or separately in the form of treated papers, plastic sheets, and metallic foils.	*Energy*
Vapor-dominated geothermal system	A conceptual model of a hydrothermal system where steam pervades the rock and is the pressure-controlling fluid phase.	*Energy*
Vapor Pressure	Vapor evaporates at the surface of a liquid. The pressure it exerts is known as vapor pressure. The higher the temperature the greater the vapor pressure.	*Chemical*
Variable	Directly Controlled In a control loop that variable whose value is sensed to originate a feedback signal.	*Process Control*
Variable air volume (VAV) system on the heating and cooling system	A means of varying the amount of conditioned air to a space. A variable air volume system maintains the air flow at a constant temperature, but supplies varying quantities of conditioned air in different parts of the building according to the heating and cooling needs.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Variable Cost	A cost that varies, in total, in direct proportion to changes in the level of activity. A variable cost is constant per unit.	*Procurement*
Variable Costs	Costs, such as fuel costs, that depend upon the amount of electric energy supplied.	*Energy*
Variable Displacement Pump	A pump in which the output per cycle can be varied.	*Mechanical, Process, and Operations*
Variable Frequency Drive (VFD)	A method of controlling the rotating speed of an electric motor.	*Maintenance*
Variable fuel vehicle	See Flexible fuel vehicle.	*Energy*
Variable Length	Description of a symbology which allows bar codes of varying numbers of characters.	*Gears*
VARIABLE ORIFICE	A small variable profile valve put in a flow line and used with a pilot to restrict the flow into the pilot and make the pilot more or less sensitive to changing conditions.	*Mechanical*
Variable Price	A price that can change by the hour, day or month.	*Energy*
Variable Prices	Prices that vary frequently. Prices that are not stable.	*Energy*
Variable Speed	A drive or power transmission mechanism that includes a speed changing device.	*Manufacturing*
Variable-speed wind turbines	Turbines in which the rotor speed increases and decreases with changing wind speed, producing electricity with a variable frequency.	*Energy*
Variance	The standard deviation squared. If there are independent sources of errors, the variance of the total error is the sum of the variances due to the individual sources of error.	*Quality*
Varnish	A thin, insoluble, nonwipeable film occurring on interior engine parts. Can cause sticking and malfunction of close-clearance moving parts. Called lacquer in diesel engines. When applied to lubrication, a thin, insoluble, nonwipeable film deposit occurring on interior parts, resulting from the oxidation and polymerization of fuels and lubricants. Can cause sticking and malfunction of close-clearance moving parts. Similar to, but softer, than lacquer.	*Lubrication*
Varnish	A liquid composition which is converted to a transparent or translucent solid film after application as a thin layer.	*Material Process*
VAWT	See Vertical-Axis Wind Turbine	*Energy*
V-Belt	A belt with a trapezoidal cross section for operation in grooved sheaves permitting wedging contact between the belt sides and groove sides.	*Manufacturing*
V-Door	An opening at floor level in a side of a derrick or mast, opposite the draw works and used as an entry to bring in drill pipe, casing and other tools from the pipe rack.	*Petroleum Drilling*
VDS	Valve Data Sheet - A data sheet defining the minimum level of a valve design, including the materials, testing, inspection, and certification requirements.	*Mechanical*
Veal or Voan	a box or chest, usually mounted on wheels, for transporting water. (Scot.).	*Mining*
Vector	A mathematical entity having a magnitude and a direction in space.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Veerer	the banksman who unloaded the hudge using a crane. By using the crane he could move the hudge by veering it from side to side, hence his name. (Som.).	*Mining*
Vehicle	The liquid portion of a paint.	*Material Process*
Vehicle (paint)	Anything that is dissolved in the liquid portion of a paint is part of the vehicle.	*Material Process*
Vehicle fuel consumption	Vehicle fuel consumption is computed as the vehicle miles traveled divided by the fuel efficiency reported in miles per gallon (MPG). Vehicle fuel consumption is derived from the actual vehicle mileage collected and the assigned MPGs obtained from EPA certification files adjusted for on-road driving. The quantity of fuel used by vehicles.	*Energy*
Vehicle fuel efficiencies	See Miles per gallon.	*Energy*
Vehicle fuel expenditures	The cost, including taxes, of the gasoline, gasohol, or diesel fuel added to the vehicle's tank. Expenditures do not include the cost of oil or other items that may have been purchased at the same time as the vehicle fuel.	*Energy*
Vehicle identification number (VIN)	A set of codes, usually alphanumeric characters, assigned to a vehicle at the factory and inscribed on the vehicle. When decoded, the VIN provides vehicle characteristics. The VIN is used to help match vehicles to the EPA certification file for calculating MPGs.	*Energy*
Vehicle importer	An original vehicle manufacturer (of foreign or domestic ownership) that imports vehicles as finished products into the United States.	*Energy*
Vehicle miles traveled (VMT)	The number of miles traveled nationally by vehicles for a period of 1 year. VMT is either calculated using two odometer readings or, for vehicles with less than two odometer readings, imputed using a regression estimate.	*Energy*
VEIN	A fissure, fault or crack in a rock filled by minerals that have travelled upwards from some deep source.	*Mining*
Veize, Vees and Viese	a type of soft earth found in the line of fracture of a fault or hitch. (Scot.). -see also Leather bed.	*Mining*
Velocity	Rate of change of location, either scalar or vector, often with subscripts such as ENU or XYZ to denote the coordinate frame; time derivative of position; time integral of acceleration; Symbols: v, V; Typical Units: kt, ft/s; Dimensions: Length/Time.	*Aeronautical Engineering*
Velocity	The rate at which the position of a moving object is changing. Velocity has two characteristics: magnitude (speed) and direction.	*Electrical Engineering*
Velocity	Rate of airflow in lineal feet per minute.	*Mining*
Velocity east	Aircraft velocity in true east direction; Symbols: V sub E; Typical Units: kt, ft/s; Dimensions: Length/Time.	*Aeronautical Engineering*
Velocity east	Aircraft velocity in true east direction; Symbols - V sub E; Typical Units - kt, ft/s; Dimensions - Length/Time.	*Aeronautical Engineering*
Velocity error scale factor (KVSF)	A guidance control law parameter, generated by the longitudinal guidance modes.	*Aeronautical Engineering*
Velocity north	Aircraft velocity in true north direction; Symbols: V sub N; Typical Units: kt, ft/s; Dimensions: Length/Time.	*Aeronautical Engineering*

Term	Definition	*Industry*
Velocity, Average Interstitial	Average rate of groundwater flow in interstices expressed as the product of hydraulic conductivity and hydraulic gradient (specific discharge) divided by the effective porosity.	*Petroleum Engineering*
Velocity, Fluid	The speed, that fluid passes through the inside of a pipe, tube or valve.	*Petroleum Engineering*
Vena Contracta	The location where the cross-sectional area of the flow stream is at its minimum size, where fluid velocity is at its highest level, and where fluid pressure is at its lowest level. The vena contracta normally occurs just downstream of the actual physical restriction in a control valve.	*Industrial Engineering*
Vend	the proportion of saleable coal in the run-of-mine.	*Mining*
Vendor	A seller. In the case of mining companies, the consideration paid for properties purchased is often a block of treasury shares. These shares are termed vendor shares and are normally pooled or escrowed.	*Mining*
Vendor-managed inventory	Materials, components or subassemblies managed and replenished by on-site vendors "resident suppliers" with whom the plant has prearranged purchasing agreements. The supplier takes responsibility for the availability of supplies.	*Quality*
Veneer	A thin sheet of wood either sliced or rotary cut. Thickness may vary from 1/100 to 1/4 inch.	*Material Process*
Vent	A small hole or shallow channel in a mold which allows air or gas to exit as the stock enters.	*Engineering Physics*
Vent	**Vent** Shallow channel that permits the escape of entrapped gasses.	*Material Process*
VENT PLUG	(Vent Plug Assembly) – (Safety Vent Plug) - A special pipe plug having a small Allen-wrench operated vent valve. These special plugs are located at the bottom of most ball valves. With the line valve closed (and under pressure) the body cavity pressure can be vented thru this small valve to check tightness of seat seals or to make minor repairs. Having vented the body pressure, the vent plug may be removed to blow out debris and foreign material or to flush the body cavity. On some gate valves, the vent plug is installed on the bonnet for the sole purpose of venting the body. Such valves have separate drain valves. See "Block and Bleed"; "Drain Valve."	*Mechanical*
Vent Valve	Installed at the opposite end of the supply valve, float and thermostatic vent valves let air escape from the heating unit under pressure, but closes against the passage of steam and condensate. See also Air Vent.	*Industrial*
Vented	Natural gas that is disposed of by releasing to the atmosphere.	*Energy*
Vented Barrel	Port in extruder barrel through which volatiles can be removed.	*Engineering Physics*
Vented natural gas	See vented.	*Energy*
Vented Screw	Two-stage screw with vent in second stage to remove volatiles from the screw core.	*Engineering Physics*
Vented/Flared	Gas that is disposed of by releasing (venting) or burning (flaring).	*Energy*
Ventilation	The provision of a directed flow of fresh and return air along all underground roadways, traveling roads, workings, and service parts.	*Mining*
Ventilation door	a wooden or steel door to direct the flow of air.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Ventilation system	A method for reducing methane concentrations in coal mines to non-explosive levels by blowing air across the mine face and using large exhaust fans to remove methane while mining operations proceed.	*Energy*
Venting	The intentional controlled release of un-combusted gases directly to the atmosphere. The practice is restricted primarily to short-term testing, well workovers or exceedingly rare emergency situations.	*Petroleum Engineering*
Venting	providing holes in fabrications to be galvanized to allow entrapped, heated liquids and gases to escape as pressure increases	*Materials Process*
venturi	a short tube with a constricted throat for determining fluid pressures and velocities by measuring differential pressures generated at the throat as a fluid traverses the tube.	*Chemical*
VENTURI VALVE	A reduced bore valve. A valve having a bore smaller in diameter than the inlet or outlet. For example, an 8" x 6" x 8" ball valve has 8" inlet and outlet connections while the ball and seats are 6". The flow through a venture valve will be reduced because of the smaller port. Venturi valves can often be economically substituted for plug valves.	*Mechanical*
Verification	The examination of the numerical technique in the computer code to ascertain that it truly represents the conceptual model and there are no inherent problems with obtaining a solution.	*Petroleum Engineering*
Versatility Training	a form of training in which workers are given a wide variety of tasks and trained in a number of related jobs.	*Industrial Relations*
Vertex	The point where the two arms of an angle meet.	*Math*
Vertical	Reference to earth radial, for example, vertical velocity is velocity along earth radial.	*Aeronautical Engineering*
Vertical acceleration	Aircraft acceleration in earth vertical direction; Symbols: A sub V; Typical Units: ft/s-squared, g; Dimensions: Length/Time-squared.	*Aeronautical Engineering*
Vertical cue	A cue to control altitude; See Also: yoke cue, collective cue.	*Aeronautical Engineering*
vertical deviation	defines how "high" or "low" the actual well path is relative to the planned well path location and orientation; is easily-visualized with a sketch, and matches directional driller common sense. Same as msVD.	*Petroleum Drilling*
Vertical flash ring	The clearance between the force plug and the vertical wall of the cavity in a positive or semipositive mold. Also the ring of excess material that escapes from the cavity into the clearance.	*Material Process*
Vertical guidance	Calculations for the vertical axis, rather than the longitudinal axis. The control law vertical axis input data are: Desired Altitude, Altitude Integral, Altitude Integral Gain, Altitude Integral Limit, Altitude Error Scale Factor, Magnitude limit for delta altitudes. The major output from Vertical Guidance is the altitude error for the selected vertical guidance mode.	*Aeronautical Engineering*
Vertical Integration	An arrangement whereby the same company owns all the different aspects of making, selling, and delivering a product or service. In the electric industry, it refers to the historically common arrangement whereby a utility would own its own generating plants, transmission system, and distribution lines to provide all aspects of electric service.	*Energy*

Please see the Appendix for further illustration

Term	Definition	Industry
Vertical Movement (Promotion)	the advancement or promotion of individuals from a lower to a higher grade.	*Industrial Relations*
Vertical Opposite Angles	These are equal angles, formed when two straight lines intersect.	*Math*
Vertical Position	With respect to pipe welding, the position in which the axis of the pipe is vertical, with the welding being performed in the horizontal position. The pipe may or may not be rotated.	*Maintenance and Repair*
vertical section	the horizontal distance (departure) of a well path projected to a vertical plane of specific azimuth. The specific azimuth typically is equal to the final target azimuth.	*Petroleum Drilling*
Vertical speed hold (VERT SPD)	A basic guidance mode, providing vertical guidance to maintain an operator selected vertical speed.	*Aeronautical Engineering*
Vertical THD Log	a hole deviation log that includes the components of Technical Hole Deviation that address hole deviation in the vertical sense, namely, msVD, RCVD, msID, and RCID.	*Petroleum Drilling*
Vertical velocity	Aircraft velocity in earth vertical direction; Symbols: V sub V; Typical Units: ft/s; Dimensions: Length/Time.	*Aeronautical Engineering*
Vertical wells	Traditional gas and oil well technique (pdf link) that bores straight down into a reserve. Vertical wells may be cheaper to develop, but are considered to have a larger environmental footprint.	*Petroleum Drilling*
Vertical-axis wind turbine (VAWT)	A type of wind turbine in which the axis of rotation is perpendicular to the windstream and the ground.	*Energy*
verts	an electrical current signal to a proportional pneumatic signal for the purpose of interfacing electronic and pneumatic parts of a control system. A typical I/P transducer might convert a 4-20 milliamp signal from an electronic controller to a 20-100 kPa signal to actuate a pneumatic valve.	*Electrical Engineering*
Vessel	A ship used to transport crude oil, petroleum products, or natural gas products. Vessel categories are as follows: Ultra Large Crude Carrier (ULCC), Very Large Crude Carrier (VLCC), Other Tanker, and Specialty Ship (LPG/LNG). See Tanker and Barge.	*Energy*
Vessel bunkering	Includes sales for the fueling of commercial or private boats, such as pleasure craft, fishing boats, tugboats, and ocean-going vessels, including vessels operated by oil companies. Excluded are volumes sold to the U.S. Armed Forces.	*Energy*
Vestibule Training	training done in a vestibule school.	*Industrial Relations*
Vestry	refuse, colliery waste. (N. East).	*Mining*
Veteran's Preference	advantages in employment and promotion both in the civil service and private employment to veterans of the armed forces who are honorably discharged.	*Industrial Relations*
VGO	Vacuum gas oil	*Petro-Chemical Abbreviations*
VGRA	viscosity-grade read across	*Petro-Chemical Abbreviations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
VHF Omnirange (VOR)	Equipment that determines bearing to a radio station with a VOR transmitter; VOR transmitters usually contain ILS transmitters in addition to VOR; A basic guidance mode, providing lateral guidance to a VOR station. A VOR/ILS/MB. radio receiver provides a VHF Omni-Direction Range (VOR) function and Instrument Landing System with Marker Beacon (MB) function. VOR provides bearings to a fixed point (Localizer function); ILS/MB provides course (localizer function) and glideslope deviations (Glide Slope (G/S) function) during approach to a runway, along with marker beacon indications. If VOR is collocated with a TACAN (VOR-TAC, or VORTAC), bearing and range information is provided.	*Aeronautical Engineering*
VI	viscosity index	*Petro-Chemical Abbreviations*
Vibrating	the process of removing excess zinc by rapidly shaking galvanized articles	*Materials Process*
Vibration	Mechanical oscillation or motion about a reference point of equilibrium.	*Reliability Engineering*
Vibration Analysis	A detailed study of the individual characteristics of a machine's vibrations, with the intention of diagnosing specific machinery faults, usually at an early stage of development. This is typically achieved by studying vibration data in the frequency domain (see FFT) and may also include the study of time domain (time waveform) data. Such analysis may be undertaken routinely as an integral part of a vibration based Predictive Maintenance program. It may also be undertaken for ad-hoc analysis of suspect rotating machinery, irrespective of the machine's inclusion in a formal monitoring program.	*Maintenance*
Vibration Error	The maximum change in output of a transducer when a specific amplitude and range of frequencies are applied to a specific axis at room temperature.	*General*
Vibration Error Band	The error recorded in output of a transducer when subjected to a given set of amplitudes and frequencies.	*General Engineering*
Vibration Error Band	The error recorded in output of a transducer when subjected to a given set of amplitudes and frequencies.	*Electronic Process*
Vibration machine (or *exciter* or *shaker*)	A device which produces controlled and reproducible mechanical vibration for the vibration testing of systems, components and structures.	*Reliability Engineering*
Vibration meter	An apparatus (usually an electronic amplifier, detector and readout meter) for measuring electrical signals from vibration sensors. May display displacement, velocity and/or acceleration.	*Reliability Engineering*
Vibration Monitoring	Regular monitoring of machinery vibrations undertaken as part of a Predictive Maintenance Program. Readings are compared with past levels, with significant change as an indicator of developing machinery faults. The objective is to provide valuable lead-time for maintenance planning. A comprehensive monitoring program usually includes vibration analysis.	*Maintenance*
Vibratory Feeders	Devices for conveying dry materials from storage hoppers to processing machines, comprising a tray or tube vibrated by mechanical or electrical pulses. The frequency or amplitude of the vibrations controls the rate of flow.	*Engineering Physics*
Vibromyography	Also called mechanomyography or acoustic myography. The measurement of muscle vibration when a muscle contracts.	*Reliability Engineering*

Please see the Appendix for further illustration

Term	Definition	Industry
Vicat Softening Point	The temperature at which a flat-ended needle of 1 square millimeter circular or square cross section will penetrate a thermoplastic specimen to a depth of 1mm under a specified load using a uniform rate of temperature rise. (ASTM D-1525-58T).	*Engineering Physics*
Viewer or Coal viewer	an early term for the general manager or mining engineer of one or more collieries.	*Mining*
VII	viscosity index improver	*Petro-Chemical Abbreviations*
VIN	See Vehicle Identification Number	*Energy*
VIN (vehicle identification number)	A set of about 17 codes, combining letters and numbers, assigned to a vehicle at the factory and inscribed on a small metal label attached to the dashboard and visible through the windshield. The VIN is a unique identifier for the vehicle and therefore is often found on insurance cards, vehicle registrations, vehicle titles, safety or emission certificates, insurance policies, and bills of sale. The coded information in the VIN describes characteristics of the vehicle such as engine size and weight.	*Energy*
Vinsol	A trade name for synthetic silk-like fiber, prepared from vinyl polymers.	*Material Process*
Vinyl Acetate	A colorless liquid obtained by the reaction of ethylene and acetic anhydride in the presence of a catalyst. It is the monomer for polyvinyl acetate, and a comonomer and intermediate for many members of the vinyl plastics family.	*Engineering Physics*
Vinyl acetate (CH2 CHOCOCH3)	A reaction product of acetylene and acetic acid in the presence of a catalyst. Polymerizes to a thermoplastic resin.	*Material Process*
Vinyl alcohol (CH2 CHOH)	Vinyl alcohol does not exist as such, appearing always as the keto form, acetaldehyde. For this reason polyvinyl alcohol cannot be prepared by the polymerization of the monomer, but must be made by the hydrolysis of an ester.	*Material Process*
Vinyl chloride (CH2 CHCl)	Colorless gas. The gaseous product of the reaction of acetylene with hydrochloric acid in the presence of suitable catalysts. Polymerizes to form a colorless thermoplastic resin.	*Material Process*
Vinyl Film	Vinyl resins are among the most versatile, in terms of both application and processing, of any of the major resin groups. They are equally at home on the construction site and the operating theatre. Vinyl can be compounded with a large variety of additives to form products such as flexible cable insulation. Properties: Shiny, tough and moderately strong, vinyl plastics are available in clear, translucent and opaque forms. Vinyl film has good cling. Exceptionally resistant to grease, oil and most chemicals (although not all solvents), vinyl is reasonably stable and stands up well to the weather, especially when formulated with certain additives. It is also semi-permeable to gases. Chemically inert and nonflammable, it has good UV resistance, but has a limited operational temperature range and starts to decompose at 100° C. Flexible vinyl products are available through the addition of softeners. Applications: Vinyl is used in clear, food packaging (such as the packaging of fresh red meat), adhesive tape, blood bags and medical tubing, wire and cable insulation, shower curtains, pool liners and other sheeting products, coatings, synthetic leathers and vinyl furniture covering, and many, many more product lines.	*Engineering Physics*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Vinylidene chloride or 1,1 dichlorethylene (CH2 CCl2)	Monomeric form of polyvinylidene chloride resins, which can be plasticized to form transparent, tough, elastic, rubberlike materials.	*Material Process*
Violation	The breaking of any state or federal mining law.	*Mining*
Violence in Labor Disputes	physical force applied to persons and property.	*Industrial Relations*
Virgin	Unworked; untouched; often said of areas where there has been no coal mining.	*Mining*
Virgin coal	Coal that has not been accessed by mining.	*Energy*
Virgin Material	Any plastic compound or resin that has not been subjected to use or processing other than that required for its original manufacture.	*Engineering Physics*
Virginia Railway Co. v. Systems Federation No. 40	a decision of the United States Supreme Court which upheld the provisions of the Railway Labor Act as applied to a ruling of the National Mediation Board certifying an outside union for collective bargaining.	*Industrial Relations*
Virtual Effective Diameter	The effective diameter of a thread but allowing for errors in pitch and flank angles.	*Maintenance*
Virucide	A chemical agent that kills viruses.	*Chemistry*
Viruses	Submicroscopic disease-causing organisms that grow only inside living cells.	*Petroleum Engineering*
Visbreaking	A thermal cracking process in which heavy atmospheric or vacuum-still bottoms are cracked at moderate temperatures to increase production of distillate products and reduce viscosity of the distillation residues.	*Energy*
Viscoelastic deformation	Mechanical behavior involving both fluid like (viscous) and solid like (elastic) characteristics.	*Material Process*
Viscoelasticity	A type of deformation exhibiting the mechanical characteristics of viscous flow and elastic deformation.	*Engineering Physics*
Viscoelasticty	The tendency of plastics to respond to stress as if they were a combination of elastic solids and viscous fluids. This property possessed by all plastics to some degree, dictates that while plastics have solid-like characteristics such as elasticity, strength, and form-stability, they also have liquid-like characteristics such as flow depending upon time, temperature, rate, and amount of loading.	*Engineering Physics*
Viscometer or Viscosimeter	An apparatus for determining the viscosity of a fluid.	*Oil Analysis*
Viscose	A syrup, highly viscous, colloidal solution consisting of cellulose xanthate and dilute caustic soda, used in making rayon.	*Material Process*
viscosity	a measure of the internal friction of a fluid that provides resistance to shear within the fluid. The greater the forces of internal friction (i.e. the greater the viscosity), the less easily the fluid will flow.	*Chemical*
viscosity	at 210 deg. F(D88)-59.9 SUS (10.18centistokes) maximum;	*Energy*
Viscosity Grade	Any of a number of systems which characterize lubricants according to viscosity for particular applications, such as industrial oils, gear oils, automotive engine oils, automotive gear oils, and aircraft piston engine oils.	*Lubrication*
VISCOSITY INDEX	A measure of the viscosity temperature characteristics of a fluid as referred to that of two arbitrary reference fluids. (ASTM Designation D2270-64).	*Mechanical, Process, and Operations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Viscosity Index (VI)	Relationship of viscosity to temperature of a fluid. High viscosity index fluids tend to display less change in viscosity with temperature than low viscosity index fluids.	*Lubrication*
Viscosity Index Improvers	Additives that increase the viscosity of the fluid throughout its useful temperature range. Such additives are polymers that possess thickening power as a result of their high molecular weight and are necessary for formulation of multi-grade engine oils.	*Lubrication*
Viscosity Modifier	Lubricant additive, usually a high molecular weight polymer, that reduces the tendency of an oil's viscosity to change with temperature.	*Lubrication*
Viscosity, absolute	The ration of the shearing stress to the shear rate of a fluid. It is usually expressed in centipoise.	*Oil Analysis*
VISCOSITY, ABSOLUTE	The ratio of the shearing stress to the shear rate of a fluid. It is usually expressed in centipoise.	*Mechanical, Process, and Operations*
Viscosity, kinematic	The absolute viscosity divided by the density of the fluid. It is usually expressed in centistokes.	*Oil Analysis*
VISCOSITY, SAE NUMBER	The Society of Automotive Engineers arbitrary numbers for classifying fluids according to their viscosities. The numbers in no way indicate the viscosity index of the fluids.	*Mechanical, Process, and Operations*
VISCOSITY, SUS	Saybolt Universal Seconds (SUS) which is the time in seconds for 60 milliliters of oil to flow through a standard orifice at a given temperature (ASTM Designation D88-56). Often abbreviated SSU.	*Mechanical, Process, and Operations*
Viscosity-temperature Relationship	The manner in which the viscosity of a given fluid varies inversely with temperature. Because of the mathematical relationship that exists between these two variables, it is possible to predict graphically the viscosity of a petroleum fluid at any temperature within a limited range if the viscosities at two other temperatures are known. The charts used for this purpose are the ASTM Standard Viscosity-Temperature Charts for liquid Petroleum Products, available in 6 ranges. If two know viscosity-temperature points of a fluid are located on the chart and a straight line drawn through them, other viscosity-temperature values of the fluid will fall on this line; however, values near or below the cloud point of the oil may deviate from the straight-line relationship.	*Lubrication*
Viscous	Having resistance to flow.	*Chemical*
Viscous	Mechanical behavior associated with a polymer near its melting point.	*Material Process*
Viscous deformation	Liquid-like mechanical behavior associated with glasses and polymers above their glass transition temperatures.	*Material Process*
Viscous Flow	A type of fluid movement in which all particles of the fluid flow in a straight line parallel to the axis of a containing pipe or channel, with little or no mixing or turbidity.	*Engineering Physics*
Visibility systems	Visual systems on the plant floor and design areas and elsewhere that enable anyone familiar with the work to understand its status and condition at a glance, or to respond to work priorities. This can be done with standard layouts, signal lights, kanban systems, or other methods. The distinguishing feature is that communication is rapidly executed by line of sight.	*Quality*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Visible gold	Native gold which is discernible, in a hand specimen, to the unaided eye.	*Mining*
Visible light	The portion of the electromagnetic radiation spectrum that can be perceived by the human eye, the wavelength range of 400 to 700 nm.	*Material Process*
Vision statement	Healthcare decision-making throughout the world will be informed by high quality, timely research evidence. The Cochrane Collaboration will play a pivotal role in the production and dissemination of this evidence across all areas of health care.	*Quality Engineering*
Vision System	Vision systems digitize an object's image so that it can be understood by a computer.	*Gears*
Vistanex	A trade name for a polymerized unsaturated hydrocarbon having properties intermediate between those of rubber and those of plastics (polymerized isobutylene).	*Material Process*
Visual Aids	devices to accelerate the learning process which utilize the sense of sight.	*Industrial Relations*
Visual Inspection	Visual inspection refers to subjective inspection of machinery, and employs only the human senses. Sometimes it is referred to as "look-listen-feel" checks.	*Reliability Engineering*
Visual Workplace	A work environment that is clean, well organized and efficient. It is a key element of lean manufacturing. Organization involves the use of photographs and signage to convey information related to standard work instructions, safety instructions and maintenance procedures.	*Reliability Engineering*
Vitiated air	foul air after it has been circulated around the mine workings. Also called 'return air'.	*Mining*
Vitrain	the bright jet-like layers of coal with a high luster, which are brittle and break with a conchoidal fracture, consisting mainly of coalified woody material.	*Mining*
Vitreous silica	Commercial glass that is nearly pure SiO_2.	*Material Process*
VLCC	Very Large Crude Carrier	*Energy*
VMT	See Vehicle Miles Traveled	*Energy*
Vn	the value for the n th period.	*Energy*
VOC	See Volatile Organic Compound	*Energy*
Vocation	a person's business, profession, or occupation.	*Industrial Relations*
Vocational Counselor	an individual who helps a worker, student, or applicant for a position to choose, prepare for, and enter an occupation.	*Industrial Relations*
Vocational Diagnosis	the analysis by a vocational technician or counselor of an individual's aptitudes, experience, interests, and education in order to assist him in making a vocational choice.	*Industrial Relations*
Vocational Education	programs to teach people the fundamentals of particular skills.	*Industrial Relations*
Vocational Guidance	programs and activities designed to assist individuals and direct them toward proper vocational choice.	*Industrial Relations*
Vocational Rehabilitation	programs designed for and directed to the thousands of individuals who become physically disabled each year and who need to be retrained and prepared for new jobs.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Vocational Training	activities and programs, including curriculum and actual training and operations, to give a person the skill needed to perform a particular vocation.	*Industrial Relations*
VOCs	Volatile organic compounds, typically with a high vapor pressure and a tendency to evaporate rapidly.	*Petroleum Engineering*
VOF	volatile organic fraction	*Petro-Chemical Abbreviations*
Voice recognition/ response	Computerized systems capable of recognizing or synthesizing human voices. Such systems capture verbalized data for quality-control or inventory-tracking purposes (often when operators' hands are busy), recognize spoken commands that activate equipment, and convert computer data into audible information.	*Quality*
Void	1. An unfilled space in a cellular plastic substantially larger than the characteristic individual cells. 2. An empty space in any material or medium.	*Engineering Physics*
Void	A general term for pore space or other reopenings in rock. In addition to pore space, the term includes vesicles, solution cavities, or any openings either primary or secondary.	*Mining*
Volatile	Capable of being driven off as a vapor at room or slightly elevated temperatures.	*Engineering Physics*
Volatile Content	The percent of volatiles, which are driven off as, vapor from a plastic or impregnated reinforcement.	*Engineering Physics*
Volatile Loss	The loss in weight of substance caused by vaporization of a constituent.	*Engineering Physics*
Volatile matter	Those products, exclusive of moisture, given off by a material as gas or vapor. Volatile matter is determined by heating the coal to 950 degrees Centigrade under carefully controlled conditions and measuring the weight loss, excluding weight of moisture driven off at 105 degrees Centigrade.	*Energy*
Volatile matter	The gaseous part, mostly hydrocarbons, of coal.	*Mining*
Volatile Oil Window	Area of the Eagle Ford Shale, (located updip from deeper dry gas zone) between dry gas zone and heavy or "black oil" window of the play which is productive of "volatile oil." Light oil and condensate, which typically has an API gravity of 45-60 Degrees, is considered to be "volatile oil."	*Petroleum Drilling*
Volatile organic compounds (VOCs)	Organic compounds that participate in atmospheric photochemical reactions.	*Energy*
Volatile solids	A solid material that is readily decomposable at relatively low temperatures.	*Energy*
Volatility	The tendency or ability of a liquid to pass into the vapor phase; liquids such as alcohol or gasoline, because of their tendency to evaporate rapidly, are called volatile liquids.	*Chemical*
Volatilization	The transfer of a chemical from liquid to the gas phase.	*Petroleum Engineering*
volatilization	the process of transfer of a chemical from the aqueous or liquid phase to the gas phase. Solubility, molecular weight, and vapor pressure of the liquid and the nature of the gas-liquid interface affect the rate of volatilization.	*Chemical*
Volcanic rocks	Igneous rocks formed from magma that has flowed out or has been violently ejected from a volcano.	*Mining*
Volcanogenic	A term used to describe the volcanic origin of mineralization.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Volt	The (electrical) potential difference between two points in a circuit. The fundamental unit is derived as work per unit charge— (V = W/Q). One volt is the potential difference required to move one coulomb of charge between two points in a circuit using one joule of energy.	*Electrical*
Volt	standard unit of electrical "pressure" in a circuit. (See also Voltage.)	*Electrical*
Volt (V)	The volt is the International System of Units (SI) measure of electric potential or electromotive force. A potential of one volt appears across a resistance of one ohm when a current of one ampere flows through that resistance. Reduced to SI base units, 1 V = 1kg times m^2 times s^{-3} times A^{-1} (kilogram meter squared per second cubed per ampere).	*Energy*
Volt Unit of electromotive force	It is the difference of potential required to make a current of one ampere flow through resistance of one ohm.	*Electrical*
Voltage	An electrical potential which can be measured in volts.	*Electrical*
Voltage (potential difference)	The voltage between two points in an electrical circuit is a measure of the potential difference, or the force, that is pushing electrons between these two points. It is analogous to water pressure in a water system. Voltage is measured in volts, and is directly proportional to the current and resistance of a circuit - V=IR, where V = potential difference in volts, I = current in amperes (amps) and R = resistance in ohms. This is Ohm's law.	*Electrical*
Voltage Drop	The voltage developed between the terminals of a circuit component by the flow of current through the resistance or impedance of that part.	*Electrical*
Voltage rating	The maximum voltage that can be applied to an electronic device.	*Electrical*
Voltage Rating	The maximum voltage at which a given cable or insulated conductor may be safely maintained during continuous use in a normal manner. It is also called working voltage.	*Electrical*
Voltage reduction	Any intentional reduction of system voltage by 3 percent or greater for reasons of maintaining the continuity of service of the bulk electric power supply system.	*Energy*
Volt-amperes	The volt-amperes of an electric circuit are the mathematical products of the volts and amperes of the client.	*Energy*
Voltmeter	An instrument used to measure voltage.	*Electrical*
VOLUME	The amount of fluid flow per unit time. Usually given as gallons per minute (gmp).	*Mechanical, Process, and Operations*
Volume bulk diffusion	Atomic flow within a material's crystal structure by means of some defect mechanism.	*Material Process*
Volume Control Valve	A valve which controls the rate of flow. Includes flow control valves, flow divider valves, and bypass flow regulators.	*Mechanical, Process, and Operations*
Volume Flow Rate	Calculated using the area of the full closed conduit and the average fluid velocity in the form, Q = V x A, to arrive at the total volume quantity of flow. Q = volumetric flowrate, V = average fluid velocity, and A = cross sectional area of the pipe.	*General Engineering*
Volume resistivity	The resistance in ohms between opposite faces of a centimeter cube of the material.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Volumes of gas	withdrawn from gas storage reservoirs and native gas, which has been transferred to the storage category, are not considered production. This is not the same as marketed production, because the latter also excludes vented and flared gas, but contains plant liquids.	*Energy*
Volumetric Examination	A non-destructive method of examining the volume of Material for the purpose of detecting any internal Discontinuities that may require evaluation and Acceptance according to certain Criteria.	*Petroleum Engineering*
Volumetric wires charge	See Quantity wires charge.	*Energy*
Voluminous	having great volume, fullness, or size	*Materials Process*
Voluntarism	Hebert Harris Suggests that "voluntarism" is to labor what "laiseez-faire" is to business.	*Industrial Relations*
Voluntary Association	a group of individuals who join together to develop and extend their common interests.	*Industrial Relations*
Voluntary Check-Off	a form of check-off which requires the individual employee to authorize his employer to make such deductions from his pay.	*Industrial Relations*
Voluntary Union Membership	membership which individuals are free to undertake and free to give up.	*Industrial Relations*
VORTAC	Collocation of VOR and TACAN providing distance and bearing to station; a basic guidance mode, providing lateral guidance to a set of a VOR station and a TACAN station that are collocated.	*Aeronautical Engineering*
Vortex	An area of revolving compressed air. The most obvious examples are the vortices that are visible coming off the rear wing in humid conditions. These vortices are always there but only visible in certain conditions.	*NASCAR*
Voting Laws	with reference to employees, state laws which require employers to allow workers time off during the day in order to cast their ballots.	*Industrial Relations*
Voting Procedure (NLRB)	procedures followed by the NLRB in conducting employee elections.	*Industrial Relations*
Voting right	The stockholder's right to vote in the affairs of the company. Most common shares have one vote each. Preferred stock usually has the right to vote when preferred dividends are in default.	*Mining*
VPI	Visible Position Indicator - See "Stem Indicator"	*Mechanical*
VTEC	variable valve timing and lift electronic control	*Petro-Chemical Abbreviations*
VTWT	valve train wear test	*Petro-Chemical Abbreviations*
Vug	A small cavity in a rock, frequently lined with well-formed crystals. Amethyst commonly forms in these cavities.	*Mining*
Vulcanization	Nonreversible chemical reaction involving sulfur or other suitable agent wherein cross-links are formed between molecular chains in rubber materials.	*Engineering Physics*
Vulcanization	An irreversible process during which a rubber compound through a change in its chemical structure (for example, cross-linking), becomes less plastic and more resistant to swelling by organic liquids and elastic properties are conferred, improved, or extended over a greater range of temperature.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Vulcanized fiber	A product made by the action of zinc chloride on cellulose very resistant to mechanical action.	*Material Process*
Vulcanized rubber	Natural rubber stabilized by chemical reaction with sulfur or sulfur compounds.	*Material Process*
VVT	variable valve timing	*Petro-Chemical Abbreviations*
Vye dams	dirt dams or stoppings constructed of a barrier of fine dirt held up at the back by building up a pile of rocks or other suitable material. Fine sand is then piled up in front (S. Staffs.).	*Mining*
W	See Watt	*Energy*
--W--	--W--	*Petroleum Drilling*
W.O.	Wrench Operated - The operation of a valve by means of a handle or lever. Used on smaller size and lower pressure class valves.	*Mechanical*
WACOG	Weighted Average Cost of Gas	*Energy*
Wafer	A thin sheet of semiconductor (photovoltaic material) made by cutting it from a single crystal or ingot.	*Energy*
Waffler	an arc wall cutter that uses the chain for both cutting and loading.	*Mining*
wagon, (N. East)	wagon, (N. East).	*Mining*
Wagyu	The word Wagyu refers to all Japanese beef cattle. Wa means Japanese or Japanese-style and gyu means cattle. The Wagyu breed was developed from Brown Swiss, Shorthorn, Devon, Simmental, Ayrshire, Holstein and Angus breeds and some Korean cattle that were imported by Japan by 1887. Black Wagyu strains predominate, but red Wagyus with strong Korean breed influence are part of the breed. Wagyu first came to the United States in 1976. Both black and red lines exist in U.S.-bred Wagyus. Wagyu cattle are known for their even development of intramuscular fat marbling, which results in uncommonly tender and flavorful meat. It is in special demand for high-temperature Japanese cooking. Purebred animals are registered by the American Wagyu Association.	*Agriculture*
Wailers	boys employed in the wagons or at the pit head to pick out any stone or pyrites that had passed through the screens. (N. East).	*Mining*
Waisted Shank Bolt	A bolt whose diameter is less than the minor diameter of the thread. Frequently the shank of the bolt is 0.9 times the root diameter.	*Maintenance*
Waived tests	A specific category of tests defined by CLIA, such as dipstick tests, fecal occult blood, urine pregnancy tests, erythrocyte sedimentation rates, blood glucose monitoring devices, etc., which are subject to the lowest level of regulation. The main requirement for QC is to follow the manufacturer's directions.	*Quality*
Walk-in refrigeration units	Refrigeration/freezer units within a building that are large enough to walk into. They may be portable or permanent, such as a meat storage locker in a butcher store. Walk-in units may or may not have a door, plastic strips, or other flexible covers.	*Energy*
Walking Beam	A means of conveying steel bars, billets, slabs, etc., across a cooling bed or through a furnace. The material to be conveyed rests on a metal grid and a second grid is arranged to lift up and move forward between the stationary grid, thus lifting the material and "walking" it forward, before returning to make another stroke.	*Metallurgy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
walking dragline	A walking dragline is equipped with large outrigger platforms, or walking beams, instead of crawler tracks. It "walks" by the alternate movement of the walking beams.	*Energy*
Wall	a communication or holing cut at right angles between two bords. The wall is therefore a heading driven along the direction of the main cleat. (these were also called 'ends', or 'endways'). Several walls in a line formed a 'headways course'; or another name for a longwall face; or a rib of solid coal between two bords.	*Mining*
Wall bars	slabs of timber set against the roof, close to the face, to prevent the roof breaking along the line of the face.	*Mining*
Wall coal	the middle division of three in a coal seam, the others being the 'top coal' and the 'ground coal'. (Scot.).	*Mining*
Wall cutting	shearing or kirving a section of solid coal ready to break it down. (Scots); or trimming the sides of a sinking pit ready for putting in the tubbing, coffering or walling.	*Mining*
Wall insulation	Insulating materials within or on the walls between heated areas of the building and unheated areas or the outside. The walls may separate air-conditioned areas from areas not air-conditioned.	*Energy*
Wall rocks	Rock units on either side of an orebody. The hanging wall and footwall rocks of an orebody.	*Mining*
Wall thickness	The thickness of the wall of the pressure vessel or valve. For steel valves, minimum thickness requirements are defined in ASME B16.34, API 600, and API 602.	*Mechanical*
Walled pack	loose dirt with the sides supported by stone walls, forming a pack.	*Mining*
Walling	the built-in lining of a shaft irrespective of what material was used; or the sides of a roadway lined with stone (S. Staffs.).	*Mining*
Walling curb	a wood or metal foundation ring set in the shaft during sinking for the walling (shaft lining) to be built on and carried upwards.	*Mining*
Walling scaffold	see Walling stage.	*Mining*
Walling stage	wooden platform with a central trap door to allow the hoppit or kibble to pass through, suspended in the shaft during sinking to aid in the placement of the shaft lining. It also, acts as a protective cover for the sinkers. Also called a 'walling scaffold' or 'cradle'.	*Mining*
Wallow	a hand winch. (Mids.).	*Mining*
Walls	The sides next to the lode.	*Mining*
Wandering coal	an irregular coal seam that has been broken up by movement of the strata over an extensive area.	*Mining*
Want	the barren ground separating the seam from one side of a fault to the other.	*Mining*
Waps	tramway or tubway points.	*Mining*
Warewashing	Washing of dishes, utensils, glassware, pots, pans, etc. in the institutional market.	*Chemistry*
Wark	a road driven through the coal at an angle to the grain or cleat. Rossendale, (Lancs.).	*Mining*
Wark batch	the colliery waste tip. (Som.).	*Mining*
Warm-air furnace	See Furnace.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Warm-Up Period	The time required after energizing a device before its rated performance characteristics apply.	*Process Control*
Warners	a general term given to a variety of instruments that were used to test for firedamp in the mine atmosphere.	*Mining*
Warning	A signal which alerts the operator to a dangerous condition requiring immediate action (from MIL-STD-1472D); an annunciator that is the most critical (more than an advisory or a caution); Also, an indicator of potential failure soon; Values: none, hot, low-power, high-power, other. Warning, Caution, Advisory (WCA). See: warning, caution, advisory, annunciator, alert.	*Aeronautical Engineering*
Warning Time	Warning time is considered equivalent to the P-F interval. See P-F interval.	*Maintenance*
Warp	Dimensional distortion in a plastics object after molding or other fabrication. See also Dished, Domed.	*Material Process*
Warp	Dimensional distortion in a plastic object after molding or other fabrication due to the release of molded in stresses.	*Engineering Physics*
Warping	twisting or curving of steel originally flat or straight	*Materials Process*
Warrant	exceptionally hard rock; or the floor directly beneath the coal seam.	*Mining*
Warrant	See Rights.	*Mining*
Warranty analysis	The analysis of warranty and return data for the purpose of determining the reliability characteristics of a product.	*Reliability Engineering*
Warranty contracts	Gas purchase agreements for the sale of natural gas by a producer to a pipeline company wherein the producer warrants it will have available sufficient gas supplies to meet its commitments over the life of the contract. Generally, the producer does not dedicate gas reserves underlying any specific acreage, lease, or fields to the agreement. Substitution of various sources of gas supply may be permitted according to the terms of the contract. Warranty contracts, by their terms, may vary from the above.	*Energy*
Warranty, Express	A specific assurance made by the seller concerning the performance, quality, or character of the goods or services sold. An express warranty often delineates the rights and obligations of the parties in the event of defective items or services. The term is sometimes used interchangeably with "guarantee."	*Procurement*
Warren or Warren	earth, bind or clunch beneath the coal seam. (Lancs.).	*Mining*
Warrington	The name for a type of strand pattern that is characterized by having one of its wire layers (usually the outer) made up of an arrangement of alternately large and small wires.	*Wire Rope & Cable*
Warwick	a moveable girder set at an angle between the roof and the floor in an inclined roadway to stop any tubs which may have runaway. Also called a 'Drop Warwick'.	*Mining*
Wash	The first geological formation, being composed of earth, sand, gravel, and other mineral "washed" down from the mountains during a long series of ages.	*Mining*
Wash box	see Coal jig.	*Mining*
Wash Out	Wear of dies caused by metal flow.	*Metallurgy*
Washed smalls	see Smalls.	*Mining*
Washout	where a section of the seam has been removed and replaced by other rocks, usually sandstone, as a result of peat-scouring by river action in the original coal swamp. Also known as a 'dumb fault', 'horseback' or 'rock fault'.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Wash-out filter	A filter to smooth a transition due to change of input source, such as when changing modes; See Also: transient-free switch.	*Aeronautical Engineering*
Washout period/phase	[In a cross-over trial:] The stage after the first treatment is withdrawn, but before the second treatment is started. The washout period aims to allow time for any active effects of the first treatment to wear off before the new one gets started.	*Quality Engineering*
Waste	See Biomass waste and Non-biomass waste.	*Energy*
Waste	Rock containing no ore but removed in the course of mining operations.	*Mining*
Waste coal	Usable material that is a byproduct of previous coal processing operations. Waste coal is usually composed of mixed coal, soil, and rock (mine waste). Most waste coal is burned as-is in unconventional fluidized-bed combustors. For some uses, waste coal may be partially cleaned by removing some extraneous noncombustible constituents. Examples of waste coal include fine coal, coal obtained from a refuse bank or slurry dam, anthracite culm, bituminous gob, and lignite waste.	*Energy*
Waste drawing or drawing	recovering the props and bars from the waste for re-use.	*Mining*
Waste energy	Municipal solid waste, landfill gas, methane, digester gas, liquid acetonitrile waste, tall oil, waste alcohol, medical waste, paper pellets, sludge waste, solid byproducts, tires, agricultural byproducts, closed loop biomass, fish oil, and straw used as fuel.	*Energy*
Waste heat boiler	A boiler that receives all or a substantial portion of its energy input from the combustible exhaust gases from a separate fuel-burning process.	*Energy*
Waste heat recovery	Any conservation system whereby some space heating or water heating is done by actively capturing byproduct heat that would otherwise be ejected into the environment. In commercial buildings, sources of water-heat recovery include refrigeration/air-conditioner compressors, manufacturing or other processes, data processing centers, lighting fixtures, ventilation exhaust air, and the occupants themselves. Not to be considered is the passive use of radiant heat from lighting, workers, motors, ovens, etc., when there are no special systems for collecting and redistributing heat.	*Energy*
Waste materials	Otherwise discarded combustible materials that, when burned, produce energy for such purposes as space heating and electric power generation. The size of the waste may be reduced by shredders, grinders, or hammermills. Noncombustible materials, if any, may be removed. The waste may be dried and then burned, either alone or in combination with fossil fuels.	*Energy*
Waste oils and tar	Petroleum-based materials that are worthless for any purpose other than fuel use.	*Energy*
Wasteman	a man who travels all the wastes or old workings, clears away falls and attends especially to any obstructions of the ventilation. The 'Shifter' is his assistant. (N. East).	*Mining*
Waste-to-Energy	This is a technology that uses refuse to generate electricity. In mass burn plants, untreated waste is burned to produce steam, which is used to drive a steam turbine generator. In refuse-derived fuel plants, refuse is pre-treated, partially to enhance its energy content prior to burning.	*Energy*
Waste-to-energy plant	A waste-to-energy plant produces energy, either heat or electricity using waste as a fuel. Their furnaces cannot easily be ramped up or down and so the plants are not used for peak-load generation. Due to the highly variable composition of the plants' fuel, stringent environmental standards are imposed and waste-to-energy plants use sophisticated flue-gas cleaning devices and monitoring devices to ensure emission control.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Wastewater	Water that has been used in homes, industries, and businesses not for reuse unless it is treated.	*Petroleum Engineering*
Wastewater - Treatment Return Flow	Water returned to the environment by wastewater-treatment facilities.	*Petroleum Engineering*
Wastewater, domestic and commercial	Wastewater (sewage) produced by domestic and commercial establishments.	*Energy*
Wastewater, industrial	Wastewater produced by industrial processes.	*Energy*
Wastings	old workings. (Scot.).	*Mining*
Watchers	experienced colliers, usually a butty, who took it in turns to go down the pit with a deputy on Sunday to examine the whole of the workings on behalf of the men. (Leics.).	*Mining*
Water absorption	Gain in weight, calculated to percentage, of a conditioned plastics test piece after immersion in distilled water at room temperature for 24h.	*Material Process*
Water Absorption	The ratio of the weight of water absorbed by a given material under specified conditions, to the weight of that material when dry. It is generally expressed as a percentage.	*Electrical*
WATER BAR	A diagonal ditch or hump in a trail that diverts surface water runoff to minimize soil erosion.	*Forestry*
Water bed heater	An appliance that uses an electric resistance coil to maintain the temperature of the water in a water bed at a comfortable level.	*Energy*
Water box	a large, usually metal, box slung under the cage to wind water from the sump with each wind. Usually self-filling and emptying.	*Mining*
Water Budget	An evaluation of all the sources of supply and corresponding discharges with respect to an aquifer or drainage basin.	*Petroleum Engineering*
Water Conditioner	A material that improves the quality of water for a given application or use.	*Chemistry*
Water conditions	The status of the water supply and associated water in pondage and reservoirs at hydroelectric plants.	*Energy*
WATER CONTROL	Management of water to maintain plant growth, water quality, wildlife habitat, and fire control.	*Forestry*
Water Cycle	The circuit of water movement from the oceans to the atmosphere, and to the earth, and return to the atmosphere through various stages or processes.	*Petroleum Engineering*
Water Gauge (standard U-tube)	Instrument that measures differential pressures in inches of water.	*Mining*
WATER GLYCOL FLUID	A fluid whose major constituents are water and one or more glycols or polyglycols.	*Mechanical, Process, and Operations*
Water Hammer	Shock waves generated in a pipework system caused by a valve closing too quickly.	*Industrial Engineering*
Water Hardness	A measure of the amount of metallic salts found in water. Hard water can inhibit the action of some surfactants and reduce the effectiveness of the cleaning process.	*Chemistry*
Water heated in furnace	Some furnaces provide hot water as well as heat the home. The water is heated by a coil that is part of the furnace. There is no separate hot water tank.	*Energy*
Water heater	An automatically controlled, thermally insulated vessel designed for heating water and storing heated water at temperatures less than 180 degrees Fahrenheit.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Water heating DSM programs	These are demand-side management (DSM) programs designed to promote increased efficiency in water heating, including water heater insulation wraps.	*Energy*
Water heating equipment	Automatically controlled, thermal insulated equipment designed for heating and storing heated water at temperatures less than 180 degrees Fahrenheit for other than space heating purposes.	*Energy*
Water kist	a water chest, usually mounted on wheels, used to transport water for spraying on dust or to soften the fireclay. Originally constructed from timber, in later years iron tubs were also used. (Scot.). -see also Goose.	*Mining*
Water lane	a term used in Lancashire, c1600, for an adit or sough.	*Mining*
Water mark	Exposed fiber, a mark caused by the presence of water, occurring specially in thermosetting plastics.	*Material Process*
Water pollution abatement equipment	Equipment used to reduce or eliminate water borne pollutants, including chlorine, phosphates, acids, bases, hydrocarbons, sewage, and other pollutants. Examples of water pollution abatement structures and equipment include those used to treat thermal pollution; cooling, boiler, and cooling tower blowdown water; coal pile runoff; and fly ash waste water. Water pollution abatement excludes expenditures for treatment of water prior to use at the plant.	*Energy*
Water pumping	Photovoltaic modules/cells used for pumping water for agricultural, land reclamation, commercial, and other similar applications where water pumping is the main use.	*Energy*
Water Quality	A term used to describe the chemical, physical, and biological characteristics of water, usually in respect to its suitability for a particular purpose.	*Petroleum Engineering*
Water reservoir	A large inland body of water collected and stored above ground in a natural or artificial formation.	*Energy*
Water Resistance	The resistance of a lubricating grease to adverse effects due to the addition of water to the lubricant system. Water resistance is described in terms of resistance to washout due to submersion (see ASTM D 1264) or spray (see ASTM D 4049), absorption characteristics and corrosion resistance (see ASTM D 1743).	*Lubrication*
Water Softener	Substance that removes or counteracts the hardness of water.	*Chemistry*
Water source heat pump	A type of (geothermal) heat pump that uses well (ground) or surface water as a heat source. Water has a more stable seasonal temperature than air thus making for a more efficient heat source.	*Energy*
water table	the water surface in an unconfined aquifer at which the fluid pressure in the pore spaces is at atmospheric pressure.	*Chemical*
Water Table Aquifer	An aquifer in which the water table forms the upper boundary.	*Petroleum Engineering*
Water Treatment	Water treatment for feedwater and wastewater for reuse and disposal is essential. Water treatment involves chemical intervention, and treatment benefits include lower operating costs, improved reliability, lower waste and disposal costs, better environmental compliance, and increased process efficiency. See also Purification.	*Industrial*
Water Treatment Plant	A facility that treats water to remove contaminants for safe use.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Water turbine	A turbine that uses water pressure to rotate its blades; the primary types are the Pelton wheel, for high heads (pressure); the Francis turbine, for low to medium heads; and the Kaplan for a wide range of heads. Primarily used to power an electric generator.	*Energy*
Water vapor	Water in a vaporous form, especially when below boiling temperature and diffused (e.g., in the atmosphere).	*Energy*
Water Vapor Transmission	The amount of water vapor passing through a given area and thickness of a plastic sheet or film in a given time, when the sheet or film is maintained at a constant temperature and when its faces are exposed to certain different relative humidities. The result is usually expressed as grams per 24 hours per square meter.	*Engineering Physics*
Water well	A well drilled to (1) obtain a water supply to support drilling or plant operations, or (2) obtain a water supply to be used in connection with an improved recovery program.	*Energy*
Water wheel	A wheel that is designed to use the weight and/or force of moving water to turn it, primarily to operate machinery or grind grain.	*Energy*
Waterfall	A circulation of air through a mine produced by allowing water to fall down one of the shafts.	*Mining*
Waterfall plot	A series of spectral maps taken at regular intervals of time, regularly spaced shaft speeds, etc. Early maps move down the display, followed by later maps, something like the flow of a waterfall.	*Reliability Engineering*
Water-formed deposit	Any accumulation of insoluble material derived from water or formed by the reaction of water upon surfaces, including scale, sludge, foulants, sediments, corrosion products or biological deposits.	*Chemical Engineering*
Water-gate	a roadway or gate driven for the purpose of draining a mine, or the lower of two parallel main roadways connecting the workings with the shafts. Also known as a 'drain'.	*Mining*
Watershed	The land area where water drains to a particular stream, river, or lake.	*Petroleum Engineering*
WATERSHED	An area where all water running off the land drains to a specific location. Sometimes called basin.	*Forestry*
WATER-SOAKED	A dull green coloration of diseased tissues due to membrane leaking of cellular contents into intercellular spaces.	*Forestry*
Waterway	A river, channel, canal, or other navigable body of water used for travel or transport.	*Energy*
Waterways	slots across the face of the bit allowing water to remove cuttings.	*Petroleum Drilling*
Watt	A unit of electric power equal to a current of one ampere flowing across an electrical circuit with a potential of one volt. A kilowatt is a unit of power equal to 1,000 watts.	*Energy*
Watt	The electric unit of power or rate of doing work. One horsepower is equivalent to approximately 746 watts.	*Energy*
WATT	A unit of power.	*Mechanical, Process, and Operations*
Watt (W)	Standard unit of electrical power (1 watt = 1 amp at 1 volt). The watt is also a general unit of power. One watt = 1 joule per second.	*Electrical*

Please see the Appendix for further illustration

Term	Definition	Industry
Watt Density	The watts emanating from each square inch of heated surface area of a heater. Expressed in units of watts per square inch.	*Electrical*
Watt hour (Wh)	1 watt hour is the amount of electrical energy consumed by a 1 watt load over a period of one hour. For example, a 100 watt light bulb (a 100 watt load) uses 100 watt-hours of energy every hour. Rather confusingly, watt-hours are sometimes used to describe "power." This is incorrect. Watt-hours are a measure of energy transferred, i.e., the product of power (kW) x time (hours). Confusion can also arise when describing electricity generation. For example, a wind farm described as "150 MW" has a peak power output of 150 MW. If the farm was 100 percent efficient, it would transfer 150 MW x 24 hours = 3600 MWh to the electricity grid every day. Because of various inefficiencies and the fact that wind blows erratically, wind turbines are actually only about 30 percent efficient. This means that 150 MW (theoretical maximum) x 24 h (number of hours in a day) x 30 percent (efficiency) = 1080 MWh will be produced each day. Cables can also be described as, for example, 350 MW. This is the capacity of the cable, i.e., the maximum amount of power it can carry. In an hour, a 350 MW cable could (theoretically) deliver 350 MWh of electricity.	*Electrical*
Watt hour (Wh)	The electrical energy unit of measure equal to one watt of power supplied to, or taken from, an electric circuit steadily for one hour.	*Energy*
Watt-hour (Wh)	An electrical energy unit of measure equal to 1 watt of power supplied to, or taken from, an electric circuit steadily for 1 hour.	*Energy*
Watt-Hour	One watt of power expended for one hour.	*Energy*
Wattmeter	A device for measuring power consumption.	*Energy*
Wave	Nature's mechanism for transporting energy without transporting matter.	*Reliability Engineering*
Waveform	A presentation or display of the instantaneous amplitude of a signal as a function of time, as on an oscilloscope or oscillograph. In the time domain.	*Reliability Engineering*
Wavelet	as used for shock testing on shakers, are half-sine windowed (amplitude modulated) sinusoids of specific frequencies, with the window chosen so the resulting waveforms have an odd number of half cycles. Usually, ten to thirty wavelets, each with different basis frequencies, e.g., 10 Hz to 2000 Hz, and different numbers of half cycles, e.g., three to 31 or so, are superimposed to synthesize a transient oscillatory signal (pulse) with a prescribed Shock Response Spectrum that can be used as a reference waveform for a shaker shock test.	*Reliability Engineering*
Waviness, internal	An appearance of waviness seen in a transparent plastic.	*Material Process*
Waviness, surface	Wave-like unevenness, or out-of-plane, in the surface of a plastic.	*Material Process*
Wax	A solid or semi-solid material consisting of a mixture of hydrocarbons obtained or derived from petroleum fractions, or through a Fischer-Tropsch type process, in which the straight-chained paraffin series predominates. This includes all marketable wax, whether crude or refined, with a congealing point (ASTM D 938) between 100 and 200 degrees Fahrenheit and a maximum oil content (ASTM D 3235) of 50 weight percent.	*Energy*
Wax	A natural protective coating for hard surfaces.	*Chemistry*
Wax dam	a wall or dam packed with clay. (Leics.).	*Mining*
Wax walls	a thin lining of puddle clay, 9 inches to 1ft thick, on the sides of roadways or for sealing pack walls to prevent spontaneous combustion. (S. Derbys.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Way	a working district underground. (N. East).	*Mining*
Way	Longitudinal surface that guides the reciprocal movement of a machine part.	*Lubrication*
Way cleaner	a boy who clears the dust etc. from the rails along which the putters push the trams. (N. East).	*Mining*
Way dirt	the slack, dust, and any odd lumps of coal that had fallen from the tubs along the roads from the workings to the shaft.	*Mining*
Way end	the junction of the coal face and the conveyor roadway (S. Staffs.).	*Mining*
Way gate	see Rolleyway.	*Mining*
Way head	the end of a gate or road at the face. (Mids.).	*Mining*
Way Lubricant	Lubricant for the sliding ways of machine tools such as planers, grinders, horizontal boring machines, shapers, jig borers, and milling machines. A good way lubricant is formulated with special frictional characteristics designed to overcome the stick-slip motion associated with slow-moving machine parts.	*Lubrication*
Waypoint (WYPT)	A point on the ground, predefined as a point of interest for the flight; a basic guidance mode, providing lateral guidance to a waypoint, either by course or by direct (operator selectable).	*Aeronautical Engineering*
Waypoint approach	To approach a waypoint.	*Aeronautical Engineering*
Waz	a tool used by platelayers for the insertion and removal of doggins (S. Staffs.).	*Mining*
WBT	Wet bulb temperature	*Facility Engineering*
WCA	Warning, Caution, Advisory.	*Aeronautical Engineering*
WE or W.E.	Weld End - The end connection of a valve which is to be installed by welding into the line. To prepare the end bevel, it is necessary to know the wall thickness and specified minimum yield strength of the connecting pipe. See "End Bevel."	*Mechanical*
Wear	Damage resulting from the removal of materials from surfaces in relative motion. Wear is generally described as: Abrasive — removal of materials from surfaces in relative motion by a cutting or abrasive action of a hard particle (usually a contaminant) Adhesive — removal of materials from surfaces in relative motion as a result of surface contact (galling and scuffing are extreme cases). Corrosive — removal of materials by chemical action.	*Lubrication*
Wear (abrasive)	Abrasive wear (often referred to as wear) is the progressive removal of material, which results from the ingress, and presence of (foreign) particles (three-body wear). The surfaces become dull to varying degrees. In the case of very fine particles (dust), the surface may become shiny (polished).	*Maintenance*
Wear (adhesive)	Adhesive wear (also referred to as smearing, skidding, galling) is defined as the transfer of component surface material from a location on one contacting surface to a location on the other contacting surface. The process requires surface-parallel motion (sliding) in the contact, and is often accompanied with high friction heat. Little, or bad lubrication, increases the probability of adhesive wear.	*Maintenance*
Wear Bushing	A removable sacrificial and protective insert used inside a Casing Spool or Head during drilling to prevent damage to casing suspension and sealing surfaces.	*Petroleum Engineering*
Wear coefficient	Mechanical property representing the probability that an adhesive wear fragment will be formed.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Wear Debris	Particles that are detached from machine surfaces as a result of wear and corrosion. Also known as wear particles.	*Lubrication*
Wear failure	Surface related damage phenomena, such as wear debris on sliding contact surfaces.	*Material Process*
Wear Inhibitor	An additive which protects the rubbing surfaces against wear, particularly from scuffing, if the hydrodynamic film is ruptured.	*Lubrication*
WEAR TEST	Verification of a components resistance under specific wear conditions.	*Mechanical*
WEATHER PROOF	Describes a valve operator or other device that is protected against intrusion of water, sand, dust, or other atmospheric contamination.	*Mechanical*
Weather stripping or caulking	Any of several kinds of crack-filling material around any windows or doors to the outside used to reduce the passage of air and moisture around moveable parts of a door or window. Weather stripping is available in strips or rolls of metal, vinyl, or foam rubber and can be applied on the inside or outside of a building.	*Energy*
weathering	the process during which a complex compound is reduced to its simpler component parts, transported via physical processes, or biodegraded over time.	*Chemical*
Weathering steel	corrosion-resistant steel that initially corrodes; the presence of corrosion products then limits the further oxidation of the metal	*Materials Process*
Weatherometer (WOM)	An instrument, which is used to subject articles to accelerated weathering conditions, e.g., rich UV source and water spray.	*Engineering Physics*
Weave Bead	A type of weld bead made with oscillation of the electrode transverse to the axis of the weld. Contrast to string bead.	*Maintenance and Repair*
Weavewire	A screen constructed of interlaced wire, yielding uniformly square pores.	*Filtration*
Weawk	an undercut road from the face to the main roadway. (Bacup Lancs).	*Mining*
Web	The thin section of metal remaining at bottom of a cavity or depression in a forging. The web may be removed by piercing or machining.	*Metallurgy*
Web	1. A thin sheet in process in a machine. In extrusion coating, the molten web is that which issues from the die, and the substrate web is the material being coated. 2. A continuous length of sheet material handled in roll form as contrasted with the same material cut into sheets.	*Engineering Physics*
Web Inspection	In the paper industry cameras are inserted to monitor the sheet for visual defects.	*Control Engineering*
Web inspection system (WIS)	Web inspection systems are used by the pulp and paper industry to inspect the surface of the paper as it is being produced. The systems can detect and report many types of defects, including holes, spots and streaks.	*Electrical*
Wedding	the accidental collision between a loaded and empty corf in the pit shaft working with a swinging bont. It was not unusual for a full corf or skip to arrive at the surface with an empty corf entangled with it. (Derbys.).	*Mining*
Wedge	A piece of wood tapering to a thin edge and used for tightening in conventional timbering.	*Mining*
WEDGE	As used in diamond drilling, refers to the placing of a wedge at some point in the hole for the purpose of deflecting the bit in another direction.	*Mining*
Wedge capel	see Capel.	*Mining*

Term	Definition	*Industry*
WEDGE GATE	A gate whose seating surfaces are inclined to the direction of closing thrust so that mechanical force on the stem produces tight contact with the inclined seat rings.	*Mechanical*
Wedge Reader	Converts bar code signal into a keyboard signal which the computer is able to read. WIDE-TO-NARROW RATIO - Ratio of the wide bars to the narrow bars in a symbology.	*Gears*
Wedge Socket	Wire rope fittings wherein the rope end is secured by a wedge.	*Wire Rope & Cable*
Wedging crib or curb	a ring of wood or iron, which encircles a shaft, bedded on the rock, and on which the tubbing rested.	*Mining*
Wedging out	a coal seam which is thinning or cropping out.	*Mining*
Weed	any unwanted plant, especially those that crowd out more desirable plants	*Agriculture*
Weepage	the leaching out of trapped liquid solutions in galvanized structures, primarily through pinholes or gaps in welds that were not sealed over by zinc	*Materials Process*
Weibull distribution	A statistical distribution frequently used in life data analysis. Developed by Swedish mathematician Waloddi Weibull, this distribution is widely used due to its versatility and the fact that the Weibull pdf can assume different shapes based on the parameter values.	*Reliability Engineering*
Weibull Distribution (or Weibull analysis)	Originally developed by Wallodi Weibull, a Swedish mathematician, Weibull analysis is a versatile distribution employed by reliability engineers. While it is called a distribution, it is actually a tool that enables the reliability engineer to first characterize the probability density function (failure frequency distribution) of a set of failure data to characterize the failures as early life, constant (exponential) or wear out (Gaussian or log normal) by plotting time to failure data on a special plotting paper with the log of the times/cycles/miles to failure plotted on a log scaled X-axis vs. the cumulative percent of the population represented by each failure on a log-log scaled Y-axis.	*Reliability Engineering*
Weight	The force on an object resulting from gravity.	*Engineering Physics*
Weight on wheels (WOW)	Indication of whether the aircraft has weight on its wheels, meaning airborne or on the ground; weight on wheels can be detected by a sensor on the wheels, computed from other state data, or a combination.	*Aeronautical Engineering*
Weight or weighting	A settling and subsidence of the roof after the coal had been worked and removed caused by the pressure exerted by the overlying strata.	*Mining*
Weight-Average Molecular Weight (MW)	The first moment of a plot of the weight of the polymer in each molecular weight range against molecular weight. The value of MW can be estimated by light scattering or sedimentation equilibrium measurements.	*Engineering Physics*
Weighted least squares regression	[In meta-analysis:] A meta-regression technique for estimating the parameters of a regression model, wherein each study's contribution to the sum of products of the measured variables (study characteristics) is weighted by the precision of that study's estimate of effect.	*Quality Engineering*
Weighted mean difference	See Mean difference	*Quality Engineering*
Weighting	Emphasis or attenuation applied to sound measurements at certain frequencies. C weighting is essentially flat. A weighting attempts to compensate for the non-constant sensitivity of human hearing at certain frequencies. See **Equal Loudness Curves.**	*Reliability Engineering*

Term	Definition	*Industry*
Weir	A dam in a waterway over which water flows and that serves to raise the water level or to direct or regulate flow.	*Energy*
Weld	A localized coalescence of material produced either by heating to suitable temperatures, with or without the application of pressure, or by application of pressure alone, with or without the use of filler material.	*Maintenance and Repair*
Weld Bead	A weld deposit resulting from a pass.	*Maintenance and Repair*
Weld beads	deposits of filler metal from a welding pass	*Materials Process*
Weld flux	material used to prevent the formation of, or to dissolve and facilitate removal of, oxides and other undesirable substances	*Materials Process*
Weld Line	A flaw on a molded plastic article or blown film caused by the incomplete fusion of two flow fronts which meet during the molding or extrusion operation.	*Engineering Physics*
Weld mark	Mark formed by the incomplete union of two or more streams of plastic flowing together.	*Material Process*
Weld Metal	That portion of a weld which has been melted during welding. The portion may be the filler metal or base metal or both.	*Maintenance and Repair*
Weld Metal Area	The area of the weld metal as measured on the cross section of a weld.	*Maintenance and Repair*
Weld Neck	An extended prolongation on a flange or fitting with a 'buttweld' bevel connection to match with mating pipe with a similar bevel.	*Petroleum Engineering*
WELD NECK FLANGE	A flanged piping element with a weld neck used in pipeline construction to provide a companion flange for installation of flanged valves. Also used to convert weld end valves to flanged valves or vice versa.	*Mechanical*
Weld Penetration	See Joint Penetration and Root Penetration.	*Maintenance and Repair*
Weld Point	The lowest applied load in kilograms at which the rotating ball in the Four Ball EP test either seizes and welds to the three stationary balls, or at which extreme scoring of the three balls results	*Lubrication*
WELD REDUCERS	A reducing fitting used on weld end piping components to adapt from a large sized pipe to a smaller diameter pipe, or vice versa.	*Mechanical*
Weld Reinforcement	Weld material in excess of the specified weld size.	*Maintenance and Repair*
Weld residue	impurities left from the welding process; weld residue will inhibit localized formation of the galvanized coating.	*Materials Process*
Weld slag	material resulting from the combination of weld material and weld flux; weld slag will inhibit localized formation of the galvanized coating	*Materials Process*
Weldability	The ability of a metal to be welded under the fabrication conditions imposed into a specific, suitably designed structure and to perform satisfactorily in the intended service.	*Maintenance and Repair*
Welded Joint	A localized union of two or more members produced by the application of a welding process.	*Maintenance and Repair*
Welder	One who is capable of performing a manual or semiautomatic welding operations. 8	*Maintenance and Repair*
Welder Performance Qualification	Demonstration of a welder's ability to produce welds in a manner described in a welding procedure specification that meets prescribed standards.	*Maintenance and Repair*
Welding	Joining of metal parts by local melting in the vicinity of the join.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Welding Contact	One of several conditions that may cause switch contacts to fail to separate at the intended point of plunger travel. As the name implies, the contacts literally are welded together as a result of the electrical and thermal effects at the contact interface	*Electrical Engineering*
Welding Current	The current which flows through the electric welding circuit during the making of a weld.	*Maintenance and Repair*
Welding Fittings	Wrought- or forged-steel elbows, tees, reducers, and similar pieces for connection by welding to one another or to pipe. In small sizes, these fittings are available with counterbored ends for connection to pipe by fillet welding and are known as socket-weld fittings. In large sizes, the fittings are supplied with ends chamfered for connection to pipe by means of butt welding and are known as butt-welding fittings.	*Maintenance and Repair*
Welding Generator	The electric generator used for supplying welding current.	*Maintenance and Repair*
Welding Machine	Equipment used to perform the welding operation.	*Maintenance and Repair*
Welding Operator	One who operates a welding machine or automatic welding equipment.8	*Maintenance and Repair*
Welding Procedure	The detailed methods and practices involved in the production of a weldment.	*Maintenance and Repair*
Welding Procedure Qualification Record	Record of welding data and test results of the welding procedure qualifications, including essential variables of the process and the test results.	*Maintenance and Repair*
Welding Procedure Specification	A (WPS) document outlining necessary parameters and specifications for field welds meeting specified requirements. Refer to Procedure Qualification Record (PQR). Reference ASME SEC. IX ART. II	*Petroleum Engineering*
Welding Procedure Specification (WPS)	The document which lists the parameters to be used in construction of weldments in accordance with the applicable code requirements.	*Maintenance and Repair*
Welding Process	The joining of materials by the application of heat or friction. Usually involves the localized fusion of both contacting surfaces.	*Paint and Coatings*
Welding Rod	Filler metal, in wire or rod form, used in gas welding and brazing procedures and those arc welding processes where the electrode does not furnish the filler metal.	*Maintenance and Repair*
Welding Sequence	The order of making the welds in a weldment.	*Maintenance and Repair*
Weldment	An assembly whose component parts are to be joined by welding.	*Maintenance and Repair*
Weld-Prober Sawing	Removal of a boat-shaped sample from a pipe weld for examination of the weld and its adjacent base-metal area. This operation is usually performed in graphitization studies.	*Maintenance and Repair*
Weldwood	Term applied by U.S. Plywood Corp. to phenolic resin bonded plywood.	*Material Process*
Well	A hole drilled in the earth for the purpose of:	*Energy*
Well	A mark formed by the incomplete union of two or more streams of plastic s material.	*Material Process*
Well	A hole drilled in the earth for the purpose of finding or producing crude oil or natural gas or providing services related to the production of crude oil or natural gas.	*Petroleum Drilling*
Well (Water)	An artificial excavation put down by any method for the purpose of withdrawing water from the underground aquifers.	*Petroleum Engineering*
Well bore	The hole made by a drill bit.	*Petroleum Drilling*
Well casing	Steel or cement containment that is installed on the inside of the well bore intended to keep gas or oil from seeping out of the wells into the surrounding ground.	*Petroleum Drilling*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Well Closure	The process of sealing a well that is no longer being used to prevent groundwater contamination and harm to people and animals.	*Petroleum Engineering*
Well density	The concentration of wells on the land surface (per unit area).	*Petroleum Engineering*
Well Field	An area in which productive wells are drilled.	*Petroleum Engineering*
Well Interference	The condition occurring when the area of influence of a water well (the cone of depression) overlaps that	*Petroleum Engineering*
Well Log	A record of geological formation penetrated during drilling, including technical details of the operation.	*Petroleum Drilling*
Well log	A record of geological formation penetrated during drilling, including technical details of the operation.	*Petroleum Drilling*
Well logging	The practice of making a detailed record (well log) of the geologic formations penetrated by a borehole. Also known as borehole logging. Wireline logging is the practice of measuring formation properties using electrically powered instruments to infer properties and make decisions about drilling and production operations.	*Petroleum Drilling*
well path	actual or planned trajectory defined by Cartesian coordinates, and by angular orientations/properties.	*Petroleum Drilling*
Well Screen	A filtering device used to permit the flow of liquid or air but prevents the passage of sediment or backfill particles.	*Petroleum Engineering*
Well servicing	The maintenance work performed on a well to maintain or improve production levels. Examples include: repairs to pumps, valves, and tubing.	*Petroleum Engineering*
Well Siting	Location of a well placed to best protect water quality, access adequate water quality, and allow for inspection and maintenance of the well.	*Petroleum Engineering*
Well spacing	The distance between wells producing from the same reservoir. Spacing is often expressed in terms of area and is usually established by regulatory agencies.	*Petroleum Engineering*
Well water for cooling	A means of cooling that uses water from a well drilled specifically for that purpose. The subterranean temperature of the water stays at a relatively constant temperature. Where water is abundant, it provides a means of getting 55-degree Fahrenheit water with no mechanical cooling. Used usually for heat rejection in a water source heat pump.	*Energy*
Well Yield	The volume of water discharged from a well per unit time.	*Petroleum Engineering*
Wellbore	A borehole; the hole drilled by the bit.	*Petroleum Drilling*
Wellhead	The point at which the crude (and/or natural gas) exits the ground. Following historical precedent, the volume and price for crude oil production are labeled as "wellhead," even though the cost and volume are now generally measured at the lease boundary. In the context of domestic crude price data, the term "wellhead" is the generic term used to reference the production site or lease property.	*Energy*
wellhead	the area immediately surrounding the top of a well, or the top of the well casing.	*Chemical*
Wellhead price	The value at the mouth of the well. In general, the wellhead price is considered to be the sales price obtainable from a third party in an arm's length transaction. Posted prices, requested prices, or prices as defined by lease agreements, contracts, or tax regulations should be used where applicable.	*Energy*
Wellhead Protection Area	The surface and subsurface area surrounding a water well field, supplying a public water system, through which contaminants are likely to move toward and reach such water well or well field.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Wellhead Revenues	The total dollar value of crude oil and natural gas at the wellhead. Wellhead revenues are calculated, based on the production volumes of crude oil and natural gas, multiplied by their respective average wellhead price.	*Petroleum Drilling*
Welsh Pony	The Welsh Pony roamed the hills and valleys of Wales before the Roman invasion. It pulled chariots in the sport arena, worked in coal mines, on ranches, and on postmen's routes. It has worked on the farms of the poor and been pampered by royalty. The Welsh Pony was imported to the United States as early as the 1880s.	*Agriculture*
West	Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.	*Energy*
West North Central	Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota;	*Energy*
West Region	Mountain division and Pacific division	*Energy*
West South Central	Arkansas, Louisiana, Oklahoma, and Texas;	*Energy*
West Texas Intermediate (WTI - Cushing)	A crude stream produced in Texas and southern Oklahoma which serves as a reference or "marker" for pricing a number of other crude streams and which is traded in the domestic spot market at Cushing, Oklahoma.	*Energy*
West Virginia, Northern	All mines in the following counties (formerly defined as Coal-Producing Districts 1, 3): Barbour, Brooke, Braxton, Calhoun, Doddridge, Gilmer, Grant, Hancock, Harrison, Jackson, Lewis, Marion, Marshall, Mineral, Monongalia, Ohio, Pleasants, Preston, Randolph, Ritchie, Roane, Taylor, Tucker, Tyler, Upshur, Webster, Wetzel, Wirt, and Wood.	*Energy*
West Virginia, Southern	All mines in the following counties (formerly Defined as Coal-Producing Districts 7): Boone, Cabell, Clay, Fayette, Greenbrier, Kanawha, Lincoln, Logan, Mason, McDowell, Mercer, Mingo, Nicholas, Pocahontas, Putnam, Raleigh, Summers, Wayne, and Wyoming.	*Energy*
Western	Anchorage, AK, Nogales, AZ, Los Angeles, CA, San Diego, CA, San Francisco, CA, Honolulu, HI, Great Falls, MT, Portland, OR, Seattle, WA.	*Energy*
Western Region	Consists of the Northern Rocky, Southern Rocky, West Coast Coal Basins and Western Interior. The following comprise the Western Region: Alaska, Arizona, Arkansas, California, Colorado, Idaho, Iowa, Kansas, Louisiana, Missouri, Montana, New Mexico, North Dakota, Oklahoma, Oregon, Texas, South Dakota, Utah, Washington, and Wyoming.	*Energy*
Westgard rules, Westgard multi-rule control procedure	A control procedure that uses a series of control rules to test the control measurements. A 12s rule is used as a warning, followed by use of 13s, 22s, R4s, 41s, and 10x as rejection rules.	*Quality*
Westphalite	an early flameless explosive.	*Mining*
Wet bag	a waterproof bag used to keep explosives dry in wet conditions.	*Mining*
Wet bottom boiler	Slag tanks are installed usually at the furnace throat to contain and remove molten ash.	*Energy*
Wet galvanizing	using a liquid flux layer floated on top of the molten zinc; in the galvanizing process, final cleaning occurs as the material passes through the flux blanket before entering the molten zinc bath	*Materials Process*
Wet gas	Natural gas that contains natural gas liquids, which are heavier than gaseous methane. Some of these, such as propane, butane, pentane, hexane, and heptane, may come out of the well in liquid form or may need to be processed. The Marcellus shale gas in Washington County has been described as a wet gas. Natural gas liquids are considered valuable by-products of natural gas processing.	*Petroleum Drilling*

Please see the Appendix for further illustration

Term	Definition	*Industry*
WET GAS	A gas containing a relatively high proportion of hydrocarbons that are recoverable as liquid.	*Petroleum Engineering*
Wet Gas	Natural gas containing liquid hydrocarbons in solution, which may be removed by a reduction of temperature and pressure or by a relatively simple extraction process.	*Petroleum Drilling*
Wet line	a chit from the fireman that allows a man to go up the pit early because he has been working in wet conditions. (Scot.). Sometimes called a 'wet paper' or 'wet note' in other areas.	*Mining*
Wet Mopping	Applying a liberal amount of cleaning solution. Used in disinfecting, thorough cleaning, scrubbing and stripping. Requires removing excess solution.	*Chemistry*
Wet natural gas	A mixture of hydrocarbon compounds and small quantities of various non hydrocarbons existing in the gaseous phase or in solution with crude oil in porous rock formations at reservoir conditions. The principal hydrocarbons normally contained in the mixture are methane, ethane, propane, butane, and pentane. Typical nonhydrocarbon gases that may be present in reservoir natural gas are water vapor, carbon dioxide, hydrogen sulfide, nitrogen and trace amounts of helium. Under reservoir conditions, natural gas and its associated liquefiable portions occur either in a single gaseous phase in the reservoir or in solution with crude oil and are not distinguishable at the time as separate substances. *Note*: The Securities and Exchange Commission and the Financial Accounting Standards Board refer to this product as **natural gas**.	*Energy*
Wet storage stain	white surface oxide and hydroxide that forms on newly galvanized steel when excessive moisture is present in poorly ventilated storage	*Materials Process*
Wetbulb temperature	The temperature indicated by the wet-bulb thermometer of standard sling psychrometer or its equivalent. Theoretically, temperature at which the atmosphere would become saturated by evaporation of water without loss or grain in total heat content of the air and vapor.	*Material Process*
Wetlands	Lands where water saturation is the dominant factor in determining the nature of soil development and the types of plant and animal communities.	*Petroleum Engineering*
Wetted	Any part of a valve or pressure control equipment that has contact with well fluid.	*Petroleum Engineering*
Wetting Agent	A substance reducing surface tension of a liquid, causing the liquid to spread across or penetrate the surface of a solid more easily.	*Petroleum Engineering*
Wetting Agent	A chemical that reduces surface tension of water, allowing it to spread more freely.	*Chemistry*
WGS72	World Geodetic Survey 1972.	*Aeronautical Engineering*
WGS94	World Geodetic Survey 1994.	*Aeronautical Engineering*
Wh See Watt hour	Wh: See Watt hour	*Energy*
Wharr or Wharl	a type of slide or sled for drawing corves in low workings (N. East).	*Mining*
Wheatstone Bridge	A network of four resistances, an emf source, and a galvanometer connected such that when the four resistances are matched, the galvanometer will show a zero deflection or "null" reading.	*Electrical*
Wheel	A flight control operated by turning with hands in fixed-wing aircraft, primarily to control roll (heading) via the ailerons; wheel is connected to yoke.	*Aeronautical Engineering*
Wheel	a brae. to operate the brake on a cousie, or self acting incline' a wheel brae. (Scot.).	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Wheel clip	see Star clip.	*Mining*
Wheel cue	A lateral flight director cue for fixed-wing aircraft, primarily to control heading, by changing roll; Compare: lateral cyclic cue; Symbols: Gamma sub 'LAT' ; Typical Units: percent, in.	*Aeronautical Engineering*
Wheel holes	coal headings kept a yard or two in advance at either end of a face to allow disc coal cutting machines to start cutting.	*Mining*
Wheel machine	a colliers' name for the early disc coal-cutting machine.	*Mining*
Wheel tree	a large prop to which the pulley of the self acting incline was fastened. (Scot.). Whetstones, inferior coal, often forming the roof of the Middleton Main Coal, (Yorks.).; or a term applied to a quartzitic siltstone sometimes used as a honing material.	*Mining*
Wheel-abrading	mechanical cleaning method used to remove small amounts of residues found on steels by means of a rough, rotating wheel	*Materials Process*
Wheeling	The use of the transmission facilities of one system to transmit power for another system.	*Energy*
Wheeling charge	An amount charged by one electrical system to transmit the energy of, and for, another system or systems.	*Energy*
Wheeling service	The movement of electricity from one system to another over transmission facilities of interconnecting systems. Wheeling service contracts can be established between two or more systems.	*Energy*
Where V0	the value for the base period.	*Energy*
whereby a computer or master station provides setpoints to individual controllers which independently perform the actual control algorithms	whereby a computer or master station provides setpoints to individual controllers which independently perform the actual control algorithms.	*Electrical Engineering*
Whim	A winding machine used for hoisting ore out of a shaft.	*Mining*
Whim Gin	a horse gin consisting of a cylinder 15 – 20 feet in diameter moving horizontally on its axis having two starts or levers to which one or more horses are attached (N. East).	*Mining*
Whin	an igneous intrusion; formerly loosely used for any hard rock.	*Mining*
Whirley	a hutch or tub. (Scot.).	*Mining*
Whisker Small single	crystal fiber with a nearly perfect crystalline structure that serves as a high-strength composite reinforcing phase.	*Material Process*
White and red flag	Used by the starter, this white flag with a diagonal red stripe indicates that an emergency or service vehicle is on the track, and extreme caution should be used.	*NASCAR*
White cast iron	A hard, brittle form of cast iron with a characteristic white, crystalline fracture surface.	*Material Process*
White damp	Carbon monoxide, CO. A gas that may be present in the afterdamp of a gas- or coal-dust explosion, or in the gases given off by a mine fire; also one of the constituents of the gases produced by blasting. Rarely found in mines under other circumstances. It is absorbed by the hemoglobin of the blood to the exclusion of oxygen. One-tenth of 1% (.001) may be fatal in 10 minutes.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
White flag	When waved by the starter, this signifies the start of the last lap of the race. When waved by a corner worker, it signifies that a slow-moving vehicle is on the track.	*NASCAR*
White Oil	Highly refined lubricant stock used for specialty applications such as cosmetics and medicines.	*Lubrication*
White random vibration	That broad-band random vibration in which the PSD (ASD) is constant over a broad frequency range.	*Reliability Engineering*
White rust	white, sticky substance comprised of basic zinc carbonate; forms when galvanized surfaces are constantly covered by water or water containing sulfides or chlorides	*Materials Process*
White spirit	A highly refined distillate with a boiling point range of about 150 degrees to 200 degrees Centigrade. It is used as a paint solvent and for dry-cleaning purposes.	*Energy*
Whitedamp	another name for afterdamp.	*Mining*
Whiteware	Commercial fired ceramic with a typically white and fine grained microstructure. Examples include tile, china and pottery.	*Material Process*
Whol or Whurl	the pulleys or wheels on top of the headgear over which the winding rope passes. (Scot.).	*Mining*
Whole coal	a tract of solid coal that has not been entered by any mine workings, also known as 'virgin coal'.	*Mining*
Whole cradle	a platform or scaffold almost the same diameter as the shaft hung on chains attached to a crab rope from the surface. The platform was situated several feet above the base of a sinking shaft with a trap door in the centre to allow the kibble to pass trough. It was kept in position to protect the men working below from any falling objects.	*Mining*
Whole Depth	The total depth of a tooth space, equal to addendum plus dedendum, also equal to working depth plus clearance.	*Gears*
Whole flat	a district or panel in the whole working system. (N. East).	*Mining*
Whole or Whole mine	virgin coal being worked by driving headings. (N. East), or working the whole with headings or stall before taking out the pillars which was known as 'working the broken'.	*Mining*
Whole stalls	two or more stalls with their faces in line or on thread with one another (S. Wales).	*Mining*
Whole working	the first stage of bord and pillar working, i.e. driving the bords and headways. –see also Broken working.	*Mining*
Wholed	when the cage was over-wound and was taken into the headgear. (Scot.).	*Mining*
Whole-house cooling fan	A mechanical/electrical device used to pull air out of an interior space; usually located in the highest location of a building, in the ceiling, and venting to the attic or directly to the outside.	*Energy*
Wholesale Bulk Power	Very large electric sales for resale from generation sources to wholesale market participants and electricity marketers and brokers.	*Energy*
Wholesale Competition	A system whereby a distributor of power would have the option to buy its power from a variety of power producers, and the power producers would be able to compete to sell their power to a variety of distribution companies.	*Energy*
Wholesale Customer	Any entity that purchases electricity at the wholesale level, including municipal utilities, private utilities, rural electric cooperatives or government-owned utility districts. Wholesale customers purchase electricity from other wholesale suppliers to resell to their own retail customers.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Wholesale electric power market	The purchase and sale of electricity from generators to resellers (retailers), along with the ancillary services needed to maintain reliability and power quality at the transmission level.	*Energy*
Wholesale Power Market	The purchase and sale of electricity from generators to resellers (who sell to retail customers) along with the ancillary services needed to maintain reliability and power quality at the transmission level.	*Energy*
Wholesale price	The rack sales price charged for No. 2 heating oil; that is, the price charged customers who purchase No. 2 heating oil free-on-board at a supplier's terminal and provide their own transportation for the product.	*Energy*
Wholesale sales	Energy supplied to other electric utilities, cooperatives, municipals, and Federal and state electric agencies for resale to ultimate consumers.	*Energy*
Wholesale Transition	The sale of electric power from an entity that generates electricity to a utility or other electric distribution system through a utility's transmission lines.	*Energy*
Wholesale transmission services	The transmission of electric energy sold, or to be sold, in the wholesale electric power market.	*Energy*
Wholesale Transmission Services	The transmission of electric energy sod, or to be sold, at wholesale in interstate commerce.	*Energy*
Wholesale wheeling	An arrangement in which electricity is transmitted from a generator to a utility through the transmission facilities of an intervening system.	*Energy*
Wi	Withheld to avoid disclosure of individual company data.	*Energy*
Wichet or Wicket	a working place in the form of a wide heading or board, often 60 to 70 feet wide. (N. Wales)—see also Stall.	*Mining*
Wickerbill	See Gurney Flap.	*NASCAR*
Wicket work	a pillar and stall system of working with pillars up to 15 yds. and stalls or wickets up to 24 yds. wide. Very similar to 'single road stall' working, the main difference being that two roadways were generally carried up each wicket. This method could only be used where there was a good roof (N. Wales).	*Mining*
Wicking	The vertical absorption of a liquid into a porous material by capillary forces.	*Oil Analysis*
Wid	wood, collective name for props, bars, chocks, sprags etc. (Scot.).	*Mining*
Wid road	a road used primarily for transporting materials. (Scot.).	*Mining*
Wide bank system	an old method of working used in South Yorkshire. A series of short stalls or banks, 7 to 8 yds. wide with a small pillar 3 to 4 ft. thick between each bank, would be driven to the rise. Each series of' banks would be about 60 yds. wide. Also known as 'wide work'.	*Mining*
Wide-area monitoring system (WAMS)	WAMS is an advanced early-warning technology for power grids that helps operators prevent system instabilities and overloads, as well as cascade tripping that leads to power blackouts. It comprises a series of phasor measurement units, set up in strategic positions around the grid. These monitor stresses (loads and temperatures) on the power lines and send data back to a central control station via a GPS satellite link. This allows operators to identify problems at an early stage and prevent widespread disruption of the grid (ultimately rolling blackouts). WAMS is used in conjunction with phase shifting transformers to protect and stabilize power grids.	*Electrical*
Width	Measurement of the narrowest element of a bar code. Same as "X" dimension.	*Gears*
Width	The thickness of a lode measured at right angles to the dip.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Wild	as applied to coal, blackband, shale etc., means an irregular and inferior seam. (Scot.).	*Mining*
Wild fire	an old miner's term for firedamp.	*Mining*
Wildcat	Well drilled in unproven territory. Denotes definition from CAODC	*Petroleum Drilling*
Wildcat Well	A well drilled in an unproven area. Also known as an exploration well.	*Petroleum Drilling*
Wildcat Well	An exploratory well being drilled in unproven territory, that is, in a horizon from which there is no production in the general area.	*Petroleum Drilling*
Wildcat well	A well drilled in an unproven area. Also known as an "exploration well". [The term comes from exploration wells in West Texas in the 1920s. Wildcats were abundant in the locality, and those unlucky enough to be shot were hung from oil derricks.]	*Petroleum Drilling*
WILDLIFE	A broad term that includes non domesticated vertebrates, especially mammals, birds, and fish.	*Forestry*
WILDLIFE MIXTURE	A mixture of seed such as lespedeza, cowpea, and soybeans that is beneficial to wildlife.	*Forestry*
WILT	A common symptom of disease due to a loss of turgor and resulting in subsequent drooping and collapse of the foliage or succulent tissues.	*Forestry*
Wilting Point	The soil-moisture content below which plants are unable to withdraw soil moisture.	*Petroleum Engineering*
Wimble	an auger-like drilling tool used for boring in shales.	*Mining*
Win	A seam of coal is 'won' when a shaft being sunk or a drift being driven reaches the seam; or to extract coal by mining (winning the coal); or to open out a district which has been cut off by a fault or some other barrier.	*Mining*
Wind	to raise coal etc. by means of a winding engine; or a single journey of a cage in the shaft; or the ventilation current circulating in a mine.	*Mining*
Wind bearing	Symbols: B sub W; Typical Units: rad, deg.	*Aeronautical Engineering*
Wind bore	the bottom pipe of a shaft 'pumping tree', which has a rounded end perforated with holes, It rests on the ground (base of the shaft) standing in water.	*Mining*
Wind energy	Kinetic energy present in wind motion that can be converted to mechanical energy for driving pumps, mills, and electric power generators.	*Energy*
Wind Energy Conversion	A process that uses energy from the wind and converts it into mechanical energy and then electricity.	*Energy*
Wind energy conversion system (WECS) or device	An apparatus for converting the energy available in the wind to mechanical energy that can be used to power machinery (grain mills, water pumps) and to operate an electrical generator.	*Energy*
Wind farm	See Wind power plant.	*Energy*
Wind gate or Windway	an underground roadway used specifically for ventilation.	*Mining*
Wind holes	ventilation shafts, often sunk well away from the main colliery shaft, to provide extra ventilation to the mine. (N. East).	*Mining*
Wind power plant	A group of wind turbines interconnected to a common utility system through a system of transformers, distribution lines, and (usually) one substation. Operation, control, and maintenance functions are often centralized through a network of computerized monitoring systems, supplemented by visual inspection. This is a term commonly used in the United States. In Europe, it is called a generating station.	*Energy*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Wind road or wind way	a ventilation road underground.	*Mining*
Wind speed	Symbols: V sub W; Typical Units: kt, ft/s; Dimensions: Length/Time.	*Aeronautical Engineering*
Wind turbine	Wind energy conversion device that produces electricity; typically three blades rotating about a horizontal axis and positioned up-wind of the supporting tower.	*Energy*
Windblown coal	see Set Coal and Winded coal (N. Staffs.).	*Mining*
Winded coal	coal which has lost its gas.	*Mining*
Winder	the engine that raises or lowers the cage in the shaft; or the man who operates the winding engine.	*Mining*
Winders or Winding man	a person who operates the winding engine. Also called 'winding enginemen'.	*Mining*
Winding	the process of moving the cages or skips up and down in the shaft.	*Mining*
Winding rope sheave	see Sheave	*Mining*
Windlass	A device, smaller than a whim, used to raise ore from a shaft.	*Mining*
Windless	a place in the mine where the air is bad or in short supply, also airless. (Derbys.).	*Mining*
Window	In computer graphics, a defined area in a system not bounded by any limits; unlimited "space" in graphics.	*Electrical*
windrow	a low, elongated row of material left uncovered to dry. Windrows are typically arranged in parallel.	*Chemical*
WINDTHROW	Trees uprooted by excessive wind.	*Forestry*
Windy driver	the man who drives a compressed air engine. (Wales).	*Mining*
Windy pick	a compressed air operated percussive pick.	*Mining*
Wing Unions	See Hammer Unions.	*Petroleum Engineering*
Winged pillar	a pillar which has been reduced in size. (Scot.).	*Mining*
Winning	The excavation, loading, and removal of coal or ore from the ground; winning follows development.	*Mining*
Winning headings	the main arterial roadways of the mine forming the main intakes and returns, main haulage roads and main travelling roads. Also called 'Main roads'.	*Mining*
Winter Peak	The greatest load on an electric system during any prescribed demand interval in the winter season or months.	*Energy*
winter wheat	Wheat that is planted in the fall and harvested the following summer. In areas where this practice may be followed, winter wheat normally is preferred because yields are higher than for spring wheat. In some areas with mild winters, spring wheat may be planted in the fall. Although produced during the winter, it differs from winter wheat in not having a requirement for cold temperatures to produce seed.	*Agriculture*
Winze	An internal shaft.	*Mining*
Winze	Secondary or tertiary vertical or near-vertical opening sunk from a point inside a mine for the purpose of connecting with a lower level or of exploring the ground for a limited depth below a level.	*Mining*
WINZE	A vertical or inclined opening sunk from a point inside a mine. Similar to a shaft, but the latter starts at the surface.	*Mining*
Winze or Wizen	A shaft sunk from one level to the other.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
WIP Turn Rate	A measure of the speed at which work-in-process moves through a plant. Typically calculated by dividing the value of total annual shipments at plant cost (for the most recent full year) by the average WIP value at plant cost.	*Maintenance*
Wire	the haulage rope. (Wales).	*Mining*
Wire (Round)	A single, continuous length of metal, with a circular cross-section that is cold-drawn from rod.	*Wire Rope & Cable*
Wire Drawing	A form of erosion on a valve seat caused by high-velocity flow. It appears in the form of smooth grooves, as though cut by wire.	*Industrial Engineering*
Wire Gage	Any of several standard systems for designating wire sizes. As an example, see American Wire Gage.	*Electrical*
Wire Rope	A plurality of wire strands helically laid about an axis.	*Wire Rope & Cable*
Wire rope	A steel wire rope used for winding in shafts and underground haulages. Wire ropes are made from medium carbon steels. Various constructions of wire rope are designated by the number of strands in the rope and the number of wires in each strand. The following are some common terms encountered: airplane strand; cable laid rope; cane rope; elevator rope; extra-flexible hoisting rope; flat rope; flattened-strand rope; guy rope; guy strand; hand rope; haulage rope; hawser; hoisting rope; lang lay rope; lay; left lay rope; left twist; nonspinning rope; regular lay; reverse-laid rope; rheostat rope; right lay; right twist; running rope; special flexible hoisting rope; standing rope; towing hawser; transmission rope.	*Mining*
Wire Spraying	A thermal spray process whereby the supply for the coating material is fed into the gun in the form of a continuous wire.	*Paint and Coatings*
Wire Strand Core (WSC)	A wire strand used as the axial member of a wire rope. Alberts Lay: An old, rarely used term for lang lay.	*Wire Rope & Cable*
Wire Thread Insert	A threaded insert that is typically used for tapped hole repair or to improve the thread stripping strength of softer metals such as zinc and aluminum. The inserts are assembled into a previously tapped hole using a special driving tool. A thread locking compound is frequently used to secure the insert if the assembly is subject to vibration.	*Maintenance*
Wireless	In maintenance context, wireless units are defined wireless when they require neither power nor other data wiring. For example, wireless condition monitoring is applied where sensor and communication/analysis module cannot be located at the same place.	*Maintenance*
WIRELESS HART MODULE	A wireless adaptor used in conjunction with digital positioners, particularly in wired analog (4-20mA) systems. The module uses HART communication to extract from the positioner diagnostics and process data that would otherwise be trapped in a wired analog system.	*Mechanical*
Wires Charge	A broad term which refers to charges levied on power suppliers or their customers for the use of the transmission or distribution wires.	*Energy*
WITCHES' BROOM	A massed proliferation of the branches of a woody plant.	*Forestry*
with small, spirited Welsh Ponies. Ninety-five percent of all Hackneys in the United States are ponies	with small, spirited Welsh Ponies. Ninety-five percent of all Hackneys in the United States are ponies.	*Agriculture*
Withdrawal	Water removed from a surface or groundwater source for use.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Within-laboratory precision	Precision over a defined time and operators, calibration and reagents may vary within the same facility and using the same equipment. NOTE: Formerly, the term total precision was used. [CLSI EP15-A2]	*Quality*
Within-run imprecision	The random error observable within the time period of a single analytical run.	*Quality*
Witness post	A claim post placed on a claim line when it cannot be placed in the corner of a claim because of water or difficult terrain.	*Mining*
WN	'Weld Neck' the beveled neck of a Flange prepared for welding to pipe. (Refer to WNRF and UNRTJ below)	*Petroleum Engineering*
WNRF	(RFWN) when applied to flanges, this means: Weld Neck Raised Face.	*Petroleum Engineering*
WNRTJ	(RTJWN) when applied to flanges, this means: Weld Neck Ring Type Joint.	*Petroleum Engineering*
WOBBLE PLATE	A rotating canted plate in an axial type piston pump which pushes the pistons into their bores as it "wobbles."	*Mechanical, Process, and Operations*
WOG	Water-oil-gas - A rating designation generally used for small valves chiefly in low ratings. Indicates maximum working pressure at ambient + 32° F to +100° F. Also called Nonshock Rating.	*General Mechanical*
WOG	(Water – Oil – Gas) - Used in connection with a pressure rating. Thus - 100 WOG indicates the rated pressure is 100 psi in water, oil, or gas service, at normal ambient temperatures.	*Mechanical*
Wood	A natural, fiber reinforced composite.	*Material Process*
Wood and Water leaders	boys who carry props and wood to the various parts of the pit and also remove water from the horseways and other parts of the pit and assist the deputies. (N. East).	*Mining*
Wood chain	a winding chain used in South Staffordshire, which was five flat iron links in width with small blocks of hard wood filling the spaces between the links.	*Mining*
Wood coal	coal with a fibrous or woody appearance.	*Mining*
Wood conversion to Btu	Converting cords of wood into a Btu equivalent is an imprecise procedure. The number of cords each household reports having burned is in exact, even with the more precise drawings provided, because the estimate requires the respondent to add up the use of wood over a 12-month period during which wood may have been added to the supply as well as removed. Besides errors of memory inherent in this task, the estimates are subject to problems in definition and perception of what a cord is. The nominal cord as delivered to a suburban residential buyer may differ from the dimensions of the standard cord. This difference is possible because wood is most often cut in lengths that are longer than what makes a third of a cord (16 inches) and shorter than what makes a half cord (24 inches).	*Energy*
Wood energy	Wood and wood products used as fuel, including round wood (cord wood), limb wood, wood chips, bark, saw dust, forest residues, charcoal, pulp waste, and spent pulping liquor.	*Energy*
Wood flour	Finely ground wood, usually spruce or pine, used as a filler in plastics molding.	*Material Process*
Wood pellets	Saw dust compressed into uniform diameter pellets to be burned in a heating stove.	*Energy*
Wood pulp	Wood from which the noncellulosic constituents have been more or less completely separated used in the manufacture of paper and as a source of cellulose for the manufacture of derivatives.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Woodmeal	Wood flour filler.	*Material Process*
Wood-rosin-colophony	An amorphous solid resin extracted from longleaf pine wood, m.p. 70°-85 °C (158°-185 °F).	*Material Process*
Wool	sandy shale or shaley flagstone with irregular curly bedding. (Lancs.).	*Mining*
Word	Number of bits treated as a single unit by the CPU. In an 8-bit machine, the word length is 8 bits; in a sixteen bit machine, it is 16 bits.	*General*
Word, Computer	A group of bits treated as a unit and capable of being stored in one computer location. Some common word lengths are 8 bits, 16 bits, and 32 bits.	*Electrical Engineering*
WORK	Exerting a force through a definite distance. Work is measured in units of force multiplied by distance; for example, pound-foot.	*Mechanical, Process, and Operations*
Work box	a box or tub for transporting coal. (Leics.).	*Mining*
Work ethic	qualities of character believed to be promoted by work	*Agriculture*
Work Hardening	The increased stiffness and brittleness accompanying plastic deformation of metal.	*Electrical*
Work home	another phrase meaning 'to work on retreat'.	*Mining*
Work Order	The Prime Document Used By The Maintenance Function To Manage Maintenance Tasks. It May Include Such Information As A Description Of The Work Required, The Task Priority, The Job Procedure To Be Followed, The Parts, Materials, Tools And Equipment Required To Complete The Job, The Labor Hours, Costs And Materials Consumed In Completing The Task, As Well As Key Information On Failure Causes, What Work Was Performed Etc.	*Management*
Work Order (WO)	Written authorization to proceed with a repair or other activity to preserve a building or asset. Sometimes referred to as a Job Card.	*Maintenance*
Work Overs	Operations on a producing well to restore or increase production. A typical work over is cleaning out a well that has sanded up.	*Petroleum Drilling*
Work Penetration	The penetration of a sample of lubricating grease immediately after it has been brought to 77F and then subjected to 60 stokes in a standard grease worker. This procedure and the standard grease worker are described in ASTM Method D 217.	*Lubrication*
Work Request	A Formal request to have work done. Work requests are usually tie/date stamped.	*Maintenance*
Worked out	a term applied to an area or mine from where all the economic coal has been extracted.	*Mining*
Working	When a coal seam is being squeezed by pressure from roof and floor, it emits creaking noises and is said to be "working". This often serves as a warning to the miners that additional support is needed.	*Mining*
Working capital	The liquid resources a company has to meet day-to-day expenses of operation; defined as the excess of current assets over current liabilities.	*Mining*
Working Depth	The depth of engagement of two gears, that is, the sum of their addendums. The standard working distance is the depth to which a tooth extends into the tooth space of a mating gear when the center distance is standard.	*Gears*
Working dust	see 'Holing Dirt' (N. Staffs.).	*Mining*
Working face	Any place in a mine where material is extracted during a mining cycle.	*Mining*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Working gas	The quantity of natural gas in the reservoir that is in addition to the cushion or base gas. It may or may not be completely withdrawn during any particular withdrawal season. Conditions permitting, the total working capacity could be used more than once during any season. Volumes of working gas are reported in thousand cubic feet at standard temperature and pressure.	*Energy*
Working gas capacity	The amount of total natural gas storage capacity that can used to store natural gas available for withdrawal.	*Energy*
Working interest	An interest in a mineral property that entitles the owner of that interest to all of share of the mineral production from the property, usually subject to a royalty. A working interest permits the owner to explore, develop, and operate the property. The working-interest owner bears the costs of exploration, development, and operation of the property and, in return, is entitled to a share of the mineral production from the property or to a share of the proceeds there from. It may be assigned to another party in whole or in part, or it may be divided into other special property interests.	*Energy*
Working place	From the outby side of the last open crosscut to the face.	*Mining*
Working pressure	The pressure (pounds per square inch) at which a valve is designed to operate.	*General Mechanical*
Working pressure	The pressure (pounds per square inch) at which a valve is designed to operate.	*Mechanical*
Working range	Temperature range in which glass product shapes are formed (corresponding to viscosity	*Material Process*
Working range	The range in which glass product shapes are formed (corresponding to viscosity range of 10^4 to 10^8 P).	*Material Process*
Working section	From the faces to the point where coal is loaded onto belts or rail cars to begin its trip to the outside.	*Mining*
Working Standard	A standard of unit measurement calibrated from either a primary or secondary standard which is used to calibrate other devices or make comparison measurements.	*General*
Working storage capacity	The difference in volume between the maximum safe fill capacity and the quantity below which pump suction is ineffective (bottoms).	*Energy*
Workings	The entire system of openings in a mine for the purpose of exploitation.	*Mining*
Work-In-Process inventory (WIP)	The amount or value of all materials, components, and subassemblies representing partially completed production; anything between the raw material/purchased component stage and finished-goods stage.	*Maintenance*
Workload	The Amount Of Labor Hours Required To Carry Out Specified Maintenance Tasks.	*Management*
Workover	Remedial work to the equipment within a well, the well pipework, or relating to attempts to increase the rate of flow.	*Petroleum Drilling*
Workover	Remedial work to the equipment within a well, the well pipework, or relating to attempts to increase the rate of flow.	*Petroleum Drilling*
Workplace Safety	A responsibility for ensuring the health and well-being of the populace of a workplace. This populace includes company employees, on-site workers not employed by the company, vendors, visitors, etc.	*Reliability Engineering*
World FIP	The fieldbus adopted in France. FIP stands for factory instrument protocol. The Profibus organization is seeking to integrate this with the common European Profibus PA protocol	*Control Engineering*

Please see the Appendix for further illustration

Term	Definition	Industry
World Geodetic Survey 1972 (WGS72)	A standard model for computing earth data.	*Aeronautical Engineering*
World-class manufacturer	A somewhat arbitrary designation that can be supported by performance results related to various manufacturing metrics. (World-class metrics may vary from one industry to another.) Typically, it denotes "best-in-class" producers on a worldwide basis. In the broadest sense, world-class manufacturers are those perceived to deliver the greatest value at a given price level.	*Quality*
Worm	An inexperienced oilfield worker that is not yet a "hand".	*Petroleum Drilling*
Worm Gear	A gear that is in the form of a screw. The screw thread engages the teeth on a worm wheel. When rotated, the worm pulls or pushes the wheel, causing rotation.	*Lubrication*
WORM GEARS	Gears used to transmit motion or power between right angle shafts when a high-ratio reduction is necessary. The worm is the small gear which drives the larger ring gear. Worm threads resemble screw threads and are available in various leads and pitches.	*Mechanical*
Worm gears	A gear set in which the input shaft is offset from and perpendicular to the output shaft, and driving gear is very small and perpendicular to the driven gear. Worm gear operators are used on ball valves.	*General Mechanical*
Worm	A new oilfield employee with little or no experience under their belt.	*Petroleum Drilling*
Woven fabric	Composite reinforcing fiber configuration.	*Material Process*
WOW	Weight on wheels.	*Aeronautical Engineering*
WP	Working Pressure - The pressure (pounds per square inch) at which a valve is designed to operate. Same as "operating pressure rating."	*Mechanical*
Wrap test	A test to send data to a device having it sent back unaltered.	*Aeronautical Engineering*
Wreaths	four short lengths of hemp rope which were looped around the legs of a pony and fastened together over its back to suspend it from the winding rope when lowering or raising the animal in the shaft. (Leics.).	*Mining*
Wrench Time	A primary measure of workforce efficiency (craft utilization), and of the effectiveness of planning and scheduling functions. It represents time spent actually "performing" maintenance. Surveys consistently show that wrench time (craft utilization) within a reactive, fire fighting maintenance environment is within the range of 30 to 40 percent. A proper planning in the maintenance organization can greatly improve the efficiency of the maintenance execution, generally specified as the wrench time.	*Maintenance*
Wrinkle	A surface imperfection in plastic films that has the appearance of a crease or wrinkle.	*Engineering Physics*
Write	To record data in a storage device or on a data medium.	*Electronic Process*
Writeoffs	Amounts deducted from a company's reported profit for depreciation or preproduction costs. Writeoffs are not an out-of-pocket expense, but reduce the amount of taxable profit.	*Mining*
Wrong thing	see 'Ronk thing' (N. Staffs.).	*Mining*
Wrought alloy	Metal alloy that has been rolled or forged into a final, relatively simple shape following an initial casting operation.	*Material Process*
Wrought Iron	Iron refined in a plastic state in a puddling furnace. It is characterized by the presence of about 3 percent of slag irregularly mixed with pure iron and about 0.5 percent carbon and other elements in solution.	*Maintenance and Repair*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Wrought Pipe	The term wrought pipe refers to both wrought steel and wrought iron. Wrought in this sense means "worked," as in the process of forming furnace-welded pipe from skelp or seamless pipe from plates or billets. The expression wrought pipe is thus used as a distinction from cast pipe. Wrought pipe in this sense should not be confused with wrought-iron pipe, which is only one variety of wrought pipe. When wrought-iron pipe is referred to, it should be designated by its complete name.	*Maintenance and Repair*
Wrought process	Rolling or forging of an alloy into a final, relatively simple shape following an initial casting step.	*Material Process*
WSIM	water separation index modified	*Petro-Chemical Abbreviations*
WSPA	Western States Petroleum Association	*Petro-Chemical Abbreviations*
WSSD	World Summit on Sustainable Development	*Petro-Chemical Abbreviations*
WTI	West Texas Intermediate	*Energy*
WTI	West Texas Intermediate is a grade of crude oil, along with LLS (Light Louisiana Sweet) and Brent Crude. Eagle Ford Shale oil typically trades at a price somewhere between WTI and LLS. WTI prices do not necessarily reflect the quality of crude oil, but rather reflect the "landlocked" nature of oil which is produced in areas such as the Permian Basin, far from coastal shipping and refining areas.	*Petroleum Drilling*
WYPT	Way-point.	*Aeronautical Engineering*
X	X	*Material Process*
X Dimension	Measurement of the narrowest element of a bar code. Same as width.	*Gears*
Xanthate	Xanthogenate, a salt of xanthic acid of the general type MO CS Set or MO CSSR, where M is a metal and R an alkyl radical.	*Material Process*
Xenolith	A fragment of country rock enclosed in an intrusive rock.	*Mining*
Xeriscaping	An environmentally-friendly method of landscaping which uses a variety of indigenous and drought-tolerant plants, shrubs, and ground cover adapted to the local area.	*Petroleum Engineering*
XH	Extra Heavy. See Extra Strong (XS).	*Petroleum Engineering*
X-radiation	The portion of the electromagnetic spectrum with a wavelength on the order of 1 nanometer. X-ray photons are produced by inner orbital electron transitions.	*Material Process*
X-radiography	A type of nondestructive testing in which defects are inspected using the attenuation of x-rays.	*Material Process*
X-RAY	See "Radiographic Inspection"	*Mechanical*
X-ray diffraction	The reinforced scattering of x-ray photons by an atomic structure. Bragg's law indicates the structural information available from this phenomenon.	*Material Process*
X-ray fluoroscence (XRF)	Chemical analysis by the use of characteristic x-ray photons produced by exposure to x-ray photons.	*Material Process*

Please see the Appendix for further illustration

Term	Definition	*Industry*
X-ray photoelectron spectroscopy (XPS)	X-ray photoelectron spectroscopy (XPS)	*Material Process*
XS	Extra Strong, a designation of pipe wall thickness The same as schedule 80 up to 200NB (8″), but schedule 80 is heavier over 200NB (8″).	*Petroleum Engineering*
XTKD	Crosstrack deviation.	*Aeronautical Engineering*
XTKR	Crosstrack deviation rate	*Aeronautical Engineering*
XXH	Double Extra Heavy – See Double Extra Strong (XXS).	*Petroleum Engineering*
XXS	Double Extra Strong, a designation of pipe wall thickness	*Petroleum Engineering*
XXXH	Triple Extra Heavy. See Triple Extra Strong (XXXS).	*Petroleum Engineering*
XXXS	Triple Extra Strong, a designation of pipe wall thickness	*Petroleum Engineering*
Xylan	Fluoropolymer Coating, typically used on stud bolts – off shore specification.	*Petroleum Engineering*
Xylene (C6H4(CH3)2)	One of tree isomeric liquid hydrocarbons (o-, m-, p-) immiscible with water, occurring in coal tar, used as solvent. Colorless liquid, hydrocarbon.	*Material Process*
Xylene ($C_6H_4(CH_3)_2$)	Colorless liquid of the aromatic group of hydrocarbons made the catalytic reforming of certain naphthenic petroleum fractions. Used as high-octane motor and aviation gasoline blending agents, solvents, chemical intermediates. Isomers are metaxylene, orthoxylene, paraxylene.	*Energy*
Xylenol	Any of six isomeric crystalline compounds of the phenol type, (CH3)2C6H3OH, derived from the xylenes and found in coal tar.	*Material Process*
Xylol	Xylene, especially commercial.	*Material Process*
XYZ	A standard aircraft coordinate frame and sign convention, where nose, right wing, and down are positive X, Y, and Z, respectively; often used as subscripts; Compare: east-north-up.	*Aeronautical Engineering*
Y	Y	*Electronic Process*
Yakker	A pit yakker. A term once used by pitmen to describe themselves. It was also used by others in the way of an insult. Similar to calling a farm worker a country yokel.	*Mining*
Yankee bonnet	a canvas bonnet with metal lamp-holder used before the introduction of the safety helmet. (Scots.).	*Mining*
Yark	to jerk the winding or haulage rope. (Derbys.).	*Mining*
Yarn	A generic term for an assemblage of fibers or filaments, either natural or manufactured, twisted or laid together to form a continuous strand suitable for use in weaving, knitting or otherwise intertwining to form textile fabrics. Varieties include single yarn, ply yarn, cord, twine, sewing thread, etc..	*Material Process*
Yaw	Angle of heading; Symbols: psi, Psi; Typical Units: rad, deg.	*Aeronautical Engineering*
Yaw rate	Rate of change of yaw; time derivative of yaw; Symbols: r; Symbols: psi dot; Typical Units: rad/s, deg/s; Dimensions: 1/Time.	*Aeronautical Engineering*
Year Book of Labor Statistics	annual publication of the International Labour Office which contains a wide variety of statistical data.	*Industrial Relations*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Yed	a head or heading. (Mids.).	*Mining*
Yellow Dog Contract	an agreement (either written or oral) between an employer and a worker which provides that as a condition of employment that worker will refrain from joining a union, or if he is a member, will leave the organization.	*Industrial Relations*
Yellow flag	If displayed by a corner worker, this means the subsequent section of the track has a problem that requires that drivers slow down and not make any passes. Usually this is because a car has crashed and is in a dangerous position. If the starter displays two yellow flags, it signifies a full-course caution, which prompts the pace car to enter the track and lead the cars around at reduced speed.	*NASCAR*
Yellowcake	A natural uranium concentrate that takes its name from its color and texture. Yellowcake typically contains 70 to 90 percent U_3O_8 (uranium oxide) by weight. It is used as feedstock for uranium fuel enrichment and fuel pellet fabrication.	*Energy*
Yellowness Index	A measure of the tendency of plastics to turn yellow upon long-term exposure to light or heat.	*Engineering Physics*
Yep hole	the place where landsale coal was stored in the pit yard. (Bacup, Lancs.).	*Mining*
Yield	the amount of a crop produced in a given time or from a given place	*Agriculture*
Yield Controlled Tightening	A fastener tightening method which allows a fastener to be tightened to yield. The angle of rotation of the fastener is measured relative to the applied torque, yield being assessed when the slope of the relationship changes to below a certain value. Sometimes called joint controlled tightening.	*Maintenance*
Yield improvement	Defined as the percentage reduction in rejects within a five-year period. Example: If yield improves from 95% to 98%, that means rejects have been reduced by 60% - from 5% to 2%. Therefore, yield improvement equals 60%.	*Quality*
Yield point	See upper yield point.	*Material Process*
Yield Point	In tensile testing, yield point is the first point on the stress-strain curve at which an increase in strain occurs without an increase in stress. This is the point of which permanent deformation of the stressed specimen begins to take place.	*Engineering Physics*
Yield Point (Yield Value or Yield Stress)	The minimum shear stress producing flow of a plastic material.	*Lubrication*
Yield Strain	A material deformed beyond its yield strain, no longer exhibits linear elastic behavior. See yield stress.	*Engineering Physics*
Yield Strength	The stress required to produce a very slight yet specified amount of plastic strain.	*Engineering Physics*
Yield Strength	The lowest stress at which a material undergoes plastic deformation. Below this stress, the material is elastic; above it, viscous.	*Electrical*
Yield Strength 36K	36,000 psi, minimum Yield Strength for Material.	*Petroleum Engineering*
Yield Strength 45K	API Spec 6A abbreviation for 45,000 psi minimum yield strength Material. Typically used for welding flanges and fittings utilized in conjunction with carbon steel line pipe.	*Petroleum Engineering*
Yield Strength 60K	API Spec 6A abbreviation for 60,000 psi, minimum yield strength for Material, such as flanges, casing pipe, spools etc.	*Petroleum Engineering*
Yield Strength 75K	Denotes:- API Spec 6A 75,000 psi, minimum yield strength for Material.	*Petroleum Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Yield Stresses	A material loaded beyond its yield stress, no longer exhibits linear elastic behavior. Metals, particularly mild steel, generally have a very well defined yield stress compared to other materials. Yield stress is sometimes called yield strength.	*Engineering Physics*
Yield value	The lowest pressure at which a plastic will flow, at a specified temperature.	*Material Process*
Yield	The current annual dividend rate expressed as a percentage of the current market price of the stock.	*Mining*
YIG	Yttrium iron garnet, a ferromagnetic ceramic.	*Material Process*
Yoke	A flight control operated by pushing and pulling with hands in fixed-wing aircraft, primarily to control pitch (altitude) via the elevators; yoke is mounted on a column between the operator's legs, positioned much like a steering wheel in a car; yoke control is achieved by pushing and pulling the wheel to move the column (yoke) fore and aft.	*Aeronautical Engineering*
YOKE	That part of a gate valve which serves as a spacer between the bonnet and the operator or actuator	*Mechanical*
Yoke cue	A vertical flight director cue for fixed-wing aircraft, primarily to control altitude, by changing pitch; Compare: collective cue; Symbols: Gamma sub VERT; Typical Units: percent, in.	*Aeronautical Engineering*
Yokes	short lengths of timber placed in a shaft to support the pump trees. -see also Chogs.	*Mining*
Yoking	when two sets of wagons approaching each other on the same line come in to collision. (N. East).	*Mining*
Yolk coal or Yolks	a soft or free coal. Also called 'apple coal'. (Scot.).	*Mining*
Young Workers	individuals who have just entered the labor market and are either seeking employment are starting on their first jobs.	*Industrial Relations*
Young's Modulus	See Modulus of Elasticity the ratio of stress to strain when deformation is totally elastic.	*Engineering Physics*
Youngstown Sheet and Tube Company v. Sawyer	decision of the United States Supreme Court holding that the President has no power to order the seizure of the basic steel industry's plants during peacetime and in the absence of congressional authorization.	*Industrial Relations*
Youth Employment Opportunities Act of 1961	a law enacted to assist younger workers to find employment.	*Industrial Relations*
Youth Employment; President's Committee on	on November 15, 1961, the President appointed a special committee on youth employment for the purpose of formulating policies for education, training, and guidance, with particular reference to enlargement of employment opportunities for young people.	*Industrial Relations*
--Z--	--Z--	*Petroleum Drilling*
Z transform	A mathematical relationship to model a discrete function in the complex frequency domain (Z-plane); Z transforms are commonly used by systems engineers to describe avionics systems; Compare - continuous-time equation, difference equation, differential equation, discrete-time equation, Laplace transform, state-space model; See Also - first-order filter, second-order filter, unit functions.	*Aeronautical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Zachariasen model	Visual definition of the random network theory.	*Material Process*
Zadeh, Lotfi	the inventor of Fuzzy sets; professor at the University of California, Berkeley. [Zadeh, Lotfi A. 1965. Fuzzy sets. Information and Control, vol. 8 (June): 338-353.]	*Petroleum Drilling*
Zanzibar	A very hard, fossil resin obtained from Zanzibar and formerly used extensively in the manufacture of high-grade varnishes.	*Material Process*
ZDDP	An antiwear additive found in many types of hydraulic and lubricating fluids. Zinc dialkyldithiophosphate.	*Lubrication*
ZDP/ZDTP	zinc dithiophosphate	*Petro-Chemical Abbreviations*
Zebra mule	Archaic term for offspring of a zebra and a donkey.	*Agriculture*
Zebrass	Offspring of a zebra and a donkey (ass).	*Agriculture*
Zebroid	Offspring of a zebra stallion and a horse mare.	*Agriculture*
Ze-donk	Offspring of a zebra and a donkey.	*Agriculture*
Zein	Corn protein, used to produce protein-aldehyde plastics somewhat resembling casein plastics.	*Material Process*
Zero	Elevation For an elevated-zero range, the amount the measured variable zero is above the lower range-value. It may be expressed either in units of the measured variable or in percent of span.	*Process Control*
Zero Adjustment	The ability to adjust the display of a process or strain meter so that zero on the display corresponds to a non-zero signal, such as 4 mA, 10 mA, or 1 V dc. The adjustment range is normally expressed in counts.	*Electrical*
Zero Energy Building (ZEB)	An energy-efficient building where, on a source energy basis, the actual annual delivered energy is less than or equal to the on-site renewable exported energy.	*Energy*
Zero Offset	(1) The difference expressed in degrees between true zero and an indication given by a measuring instrument. (2) See Zero Suppression	*General Engineering*
Zero Point	The electrical zero point where zero millivolts would be displayed. Used in conjunction with the slope control to provide a narrower range calibration.	*General*
Zero Power Resistance	The resistance of a thermistor or RTD element with no power being dissipated.	*Electrical*
Zero Pressure Accumulation Conveyor	A type of conveyor designed to eliminate build-up of pressure between adjacent packages or cartons.	*Equipment*
Zero Shift	Any parallel shift of the input-output curve.	*Process Control*
Zero Suppression	The span of an indicator or chart recorder may be offset from zero (zero suppressed) such that neither limit of the span will be zero. For example, a temperature recorder which records a 100° span from 400° to 500° is said to have 400° zero suppression.	*Electrical*
Zero Suppression	For a suppressed-zero range, the amount the measured variable zero is below the lower range-value. It may be expressed either in units of the measured variable or in percent of span.	*Process Control*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Zero Voltage Switching	The making or breaking of circuit timed such that the transition occurs when the voltage wave form crosses zero voltage; typically only found in solid state switching devices. Thermocouple Type Material (ANSI Symbol), J Iron/Constantan, K CHROMEGA®/ALOMEGA®, T Copper/Constantan, E CHROMEGA/Constantan, R Platinum/Platinum 13% Rhodium, S Platinum/Platinum 10% Rhodium, B Platinum 6% Rhodium/Platinum 30% Rhodium, G* Tungsten/Tungsten 26% Rhenium, C* Tungsten 5% Rhenium/Tungsten 26% Rhenium, D* Tungsten 3% Rhenium/Tungsten 25% Rhenium, *Not ANSI symbols	*Electrical*
Zero-G drift	The amount that a sensor's no-acceleration signal shifts over some temperature range.	*Reliability Engineering*
Zero-G output	The accelerometer output that is read when the sensor is not accelerating.	*Reliability Engineering*
Zero-to-peak	See peak, as in peak value. Half of the peak-to-peak value.	*Reliability Engineering*
ZEV	zero emission vehicle	*Petro-Chemical Abbreviations*
ZF	German gear manufacturer ZF Friedrichshafen (Zed F)	*Petro-Chemical Abbreviations*
Ziegler Catalysts	A large group of catalysts made by reacting a compound of a transition metal chosen from groups IV through VII of the periodic table with an alkyl, hydride, or other compound of a metal from groups I through III. A typical example is the reaction product of an aluminum alkyl with titanium tetrachloride or titanium trichcloride. These catalysts were first developed by the German scientist Karl Ziegler for the polymerization of ethylene. Subsequent work by G. Natta showed that these and similar catalysts are useful for preparing stereoregular polyolefins. Thus, the family of catalysts is sometimes called Ziegler-Natta catalysts.	*Metallurgy*
Zinc	major element found in the galvanizing kettle that provides both barrier and cathodic protection for steel	*Materials Process*
Zinc (ZDP)	Commonly used name for zinc dithiophosphate, an antiwear/oxidation inhibitor chemical.	*Lubrication*
Zinc (Zn)	Thermal spray coatings of zinc or zinc alloys (e.g., Zn/Al, Zn/Sn) provide galvanic corrosion protection.	*Paint and Coatings*
Zinc alloy	Metal alloy composed of predominantly zinc.	*Material Process*
Zinc ammonium chloride	typical component of the flux solution used in the cleaning phase of the galvanizing process	*Materials Process*
Zinc blende	Compound crystal structure.	*Process*
Zinc carbonate patina	relatively insoluble zinc carbonate layer that forms as the galvanized coating weathers, providing added corrosion protection and abrasion resistance	*Materials Process*
Zinc Electroplating	Zinc electroplating is a common way to protect threaded fasteners from the effects of corrosion. Zinc electroplating can be completed in acid chloride, alkaline or cyanide baths. Supplemental coatings are frequently applied to zinc electroplating. These coatings, such as zinc phosphate or chromate conversion, provide a protective passivation layer on the zinc which assists in reducing the corrosion rate.	*Maintenance*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Zinc Galvanizers' Dross	A grade of scrap that can either be top dross or bottom dross, generated at electro-galvanizing and continuous hot-dip plants serving the steel industry.	*Metallurgy*
Zinc hydroxide	corrosion product formed in response to the presence of moisture on galvanized articles	*Materials Process*
Zinc oxide	basic corrosion product formed almost instantaneously on freshly galvanized articles after withdrawal from the molten zinc metal	*Materials Process*
Zinc Oxide	An amorphous white or yellowish powder, used as a pigment in plastics. It is said to have the greatest ultra-violet light absorbing power of all commercially available pigments.	*Metallurgy*
Zinc oxide (ZnO)	White or yellowish amorphous powder. A white pigment and filler used in plastic and rubber compositions.	*Material Process*
Zinc Phosphate Conversion Coating	A zinc phosphate conversion coating is frequently added to zinc electroplated parts, such as bolt threads, to improve corrosion resistance. This type of chemical conversion coating provides a protective passivation layer on the zinc improving its corrosion resistance.	*Maintenance*
Zinc Plating	The electro-deposition of zinc or zinc alloys (e.g. Zn/Ni, Zn/Sn) to provide galvanic corrosion protection.	*Paint and Coatings*
Zinc solder	material used to touch-up and/or repair hot-dip galvanized surfaces	*Materials Process*
Zinc Stearate	A white powder used as a lubricant and antioxidant synergist.	*Metallurgy*
Zinc/Cobalt Alloy Electroplating	This coating is similar to zinc electroplating completed in an acid chloride bath - a small amount of cobalt (typically about 1%) is added to increase the plating speed.	*Maintenance*
Zinc-iron alloy layers	inner layers of the galvanized coating formed from interdiffusion reactions between iron in the base steel and molten zinc metal, (e.g. Delta, Gamma, Zeta)	*Materials Process*
Zinc-rich paint	(also called "cold galvanizing") material used to touch-up and or repair hot-dipped galvanized surfaces, providing barrier protection and some cathodic protection (if the concentration of zinc is above 94% in dry film thickness)	*Materials Process*
Zipper Frac	Also called "Simul-Frac". Adjacent wells are fraced either simultaneously or alternating, in sequence. By applying pressure on the formation in an adjacent well while the other is fraced, more impact is seen from the frac job on the desired rock.	*Petroleum Drilling*
Z-Mill	Common name for a Senzimir multiple-backup cluster mill used for cold-rolling stainless and carbon steel sheet or strip to very precise dimensions and fine finishes.	*Metallurgy*
Zone	An area of distinct mineralization.	*Mining*
ZONE LINE	Narrow brown or black lines in decayed or decaying wood.[1]	*Forestry*
Zone of Aeration	A region in the earth above the water table. Water in the zone of aeration is under atmospheric pressure and will not flow into a well.	*Petroleum Engineering*
Zone of Capture	Area surrounding a pump well encompassing all areas or features supplying groundwater recharge to the well.	*Petroleum Engineering*
Zone of confusion (ZOC)	A circular area centered at a TACAN station in which bearing is extremely noisy.	*Aeronautical Engineering*

Please see the Appendix for further illustration

Term	Definition	*Industry*
Zone of Contribution	The area surrounding a pumping well encompassing all areas or features that supply groundwater recharge to the well.	*Petroleum Engineering*
Zone of Influence	The area surrounding a pump within which the water table or potentiometric surfaces have been changed due to groundwater withdrawal.	*Petroleum Engineering*
Zone of oxidation	The upper portion of an orebody that has been oxidized.	*Mining*
Zone of Saturation	The space below the water table in which all pore spaces are filled with water. Water in the zone of saturation is called groundwater.	*Petroleum Engineering*
Zone of Transport	The area surrounding a pump well, bounded by an isochrone and/or isoconcentration contour, through which a contaminant may travel and reach the well.	*Petroleum Engineering*
Zone refining	Technique for purifying materials by passing an induction coil along a bar of the material and using principles of phase equilibrium.	*Material Process*
Zone, Dead	A zone in which no value of the output exists.	*Process Control*
Zooming	sIn computer graphics, causing an object to appear smaller or larger by moving the window and specifying various window sizes.	*Electronic Process*
Zorse	A term sometimes applied to the offspring of a zebra stallion and a horse mare.	*Agriculture*
Z-plane	Discrete complex frequency plane; Z-plane is used in control systems engineering in the design of control laws See Also: Z transform. (Also an announcement that Tattoo would make to signal the arrival of some halfwits to Fantasy Island)	*Aeronautical Engineering*
z-score, z-value	A calculated number that tells how many standard deviations a control result is from its mean value, e.g., a control result of 112 on a material having a mean of 100 and a standard deviation of 5 has a z-score of +2.4, i.e., it is 2.4 standard deviations above its mean.	*Quality*
Zwicker loudness	A sound measurement methodology. Loudness is measured in linear units called sones as opposed to decibels.	*Reliability Engineering*

Please see the Appendix for further illustration

LAWS OF THE NATURAL UNIVERSE

Law of Mechanical Repair:
After your hands become coated with grease, your nose will begin to itch or you'll have to pee.

Law of the Workshop:
Any tool, when dropped, will roll to the least accessible corner.

Law of Probability:
The probability of being watched is directly proportional to the stupidity of your act.

Law of the Telephone:
If you dial a wrong number, you never get a busy signal.

Law of the Alibi:
If you tell the boss you were late for work because you had a flat tire, the very next morning you will have a flat tire.

Variation Law:
If you change lines (or traffic lanes), the one you were in will start to move faster than the one you are in now (works every time).

Law of the Bath:
When the body is fully immersed in water, the telephone rings.

Law of Close Encounters:
The probability of meeting someone you know increases when you are with someone you don't want to be seen with

Law of the Result:
When you try to prove to someone that a machine won't work, it will.

Law of Biomechanics:
The severity of the itch is inversely proportional to the reach.

Law of the Theatre:
At any event, the people whose seats are furthest from the aisle arrive last.

Law of Coffee:
As soon as you sit down to a cup of hot coffee, your boss will ask you to do something which will last until the coffee is cold.

Murphy's Law of Lockers:
If there are only two people in a locker room, they will have adjacent lockers.

Law of Rugs/Carpets:
The chances of an open-faced jelly sandwich landing face down on a floor covering are directly correlated to the newness and cost of the carpet/rug.

Law of Location:
No matter where you go, there you are.

Law of Logical Argument:
Anything is possible if you don't know what you are talking about.

Brown's Law:
If the shoe fits, it's ugly.

Oliver's Law:
A closed mouth gathers no feet.

Wilson's Law:
As soon as you find a product that you really like, they will stop making it.

Membrane Filtration

Cast Iron

Cast iron is defined as an iron alloy with more than 2% carbon as the main alloying element. In addition to carbon, cast irons must also contain from 1 to 3% silicon which combined with the carbon give them excellent castability. Cast iron has a much lower melting temperature than steel and is more fluid and less reactive with molding materials. However, they do not have enough ductility to be rolled or forged.

The precipitation of carbon (as graphite) during solidification is the key to cast iron's distinctive properties. The graphite provides excellent machinability (even at wear-resisting hardness levels), damps vibration, and aids lubrication on wearing surfaces (even under borderline lubrication conditions).

Steels and cast irons are both primarily iron with carbon (C) as the main alloying element. Steels contain less than 2% and usually less than 1% C, while all cast irons contain more than 2% C. About 2% is the maximum C content at which iron can solidify as a single phase alloy with all of the C in solution in austenite. Thus, the cast irons by definition solidify as heterogeneous alloys and always have more than one constituent in their microstructure.

In addition to C, cast irons also must contain appreciable silicon (Si), usually from 1–3%, and thus they are actually iron-carbon-silicon alloys. The high C content and the Si in cast irons make them excellent casting alloys.

Range of Compositions for Typical Unalloyed Cast Irons (Values in Percent (%))

Type of Iron	Carbon	Silicon	Manganese	Sulfur	Phosphorus
Gray	2.5 - 4.0	1.0 - 3.0	0.2 - 1.0	0.02 - 0.25	0.02 - 1.0

Malleable (Cast White)	2.0 - 2.9	0.9 - 1.9	0.15 - 1.2	0.02 - 0.2	0.02 - 0.2
White	1.8 - 3.6	0.5 - 1.9	0.25 - 0.8	0.06 - 0.2	0.06 - 0.2

Carbon Steel

Carbon steel is a malleable, iron-based metal containing less than 2% carbon (usually less than 1%), small amounts of manganese, and other trace elements. Steels can either be cast to shape or wrought into various mill forms from which finished parts are formed, machined, forged, stamped, or otherwise shaped. Carbon steels are specified by chemical composition, mechanical properties, method of deoxidation, or thermal treatment.

Steel Alloy Designation System

AISI-SAE Designation Number	Type and Description
Carbon steels	
10xx	Plain Carbon (Mn. 1.00% max.)
11xx	Resulfurized
12xx	Resulfurized and rephosphorized
15xx	Plain Carbon (max. Mn. range 1.00-1.65%)

Alloy Steel

Steels that contain specified amounts of alloying elements -- other than carbon and the commonly accepted amounts of manganese, copper, silicon, sulfur, and phosphorus -- are known as alloy steels. Alloying elements are added to change mechanical or physical properties. A steel is considered to be an alloy when the maximum of the range given for the content of alloying elements exceeds one or more of these limits: 1.65% Mn, 0.60% Si, or 0.60% Cu; or when a definite range or minimum amount of any of the following elements is specified or required within the limits recognized for constructional alloy steels: aluminum, chromium (to 3.99%), cobalt, columbium, molybdenum, nickel, titanium, tungsten, vanadium, zirconium or other element added to obtain an alloying effect. Technically, then, tool and stainless steels are alloy steels.

Steel Alloy Designation System

AISI-SAE Designation Number	Type and Description
Carbon steels	
10xx	Plain Carbon (Mn. 1.00% max.)
11xx	Resulfurized
12xx	Resulfurized and rephosphorized
15xx	Plain Carbon (max. Mn. range 1.00-1.65%)

xxLxx	L denotes leaded steels

Stainless Steel

Stainless steel is the generic name for a number of different steels used primarily for their resistance to corrosion. The one key element they all share is a certain minimum percentage (by mass) of chromium: 10.5%. Although other elements, particularly nickel and molybdenum, are added to improve corrosion resistance, chromium is always the deciding factor. The vast majority of steel produced in the world is carbon and alloy steel, with the more expensive stainless steels representing a small, but valuable niche market.

Stainless steels are commonly divided into five groups:

1. martensitic stainless steels
2. ferritic stainless steels
3. austenitic stainless steels,
4. duplex (ferritic-austenitic) stainless steels
5. precipitation-hardening stainless steels

Martensitic stainless steels, typified by types 410/420/440, containing about 12Cr and 0.1C wt% as the basic composition. They are not as corrosion resistant as the other classes, but are extremely strong and tough as well as highly machineable, and can be hardened by heat treatment. They contain 11.5 to 18% chromium and significant amounts of carbon. Some grades include additional alloying elements in small quantities.

Ferritic stainless steels contain larger amounts of Cr which stabilizes the ferritic phase. Ferritic stainless steels are highly corrosion resistant, but far less durable than austenitic grades and cannot be hardened by heat treatment. They contain between 10.5% and 27% chromium and very little nickel, if any. Typical applications may include appliances, automotive and architectural trim (i.e., decorative purposes), as the cheapest stainless steels are found in this family (type 409).

Austenitic stainless steels, such as type 304 typically contain 18Cr and 8Ni wt% (aka 18/8 stainless).. Austenitic stainless steels comprise over 70% of total stainless steel production. They contain a maximum of 0.15% carbon, a minimum of 16% chromium and sufficient nickel and/or manganese to retain an austenitic structure at all temperatures from the cryogenic region to the melting point of the alloy. Other standard grades have different preferred applications; for example, type 316 which contains up to 3 wt% Mo, offers an improved general and pitting corrosion resistance, making it the material of choice for marine applications and coastal environments.

Duplex stainless steels are two-phase alloys based on the Fe-Cr-Ni system. The specific advantages offered by duplex stainless steels over conventional 300 series stainless steels are strength (approximately twice that of austenitic stainless steels), improved toughness and ductility (compared to ferritic grades), and a superior chloride SCC resistance and pitting resistance. The high yield strength offers designers the use of thin-wall material (which can lead to major reductions in weight) with adequate pressure-containing and load-bearing capacity. Duplex stainless steels have found widespread use in a range of industries, particularly the oil and gas, petrochemical, and pulp and paper industries.

Specialist grades include the precipitation hardened or oxide dispersion strengthened alloys.

Tool Steels

Tool Steels' defining properties include resistance to wear, stability during heat treatment, strength at high temperatures, and toughness. To develop these properties, tool steels are always heat treated. Because the parts may distort during heat treatment, precision parts should be semifinished, heat treated, then finished. Tool steels are classified into several broad groups, some of which are further divided into subgroups according to alloy composition, hardenability, or mechanical similarities.

- **Type W** - Water-hardening, or carbon, tool steels rely on carbon content for their useful properties.
- **Type S** - Shock-resisting tool steels are strong and tough, but not as wear resistant as many other tool steels.
- **Types O, A, and D** Cold-work tool steels include oil and air-hardened types are often more costly but can be quenched less drastically than water-hardening types. Type O steels are oil hardening; Type

A and D steels are air hardening (the least severe quench), and are best suited for applications such as machine ways, brick mold liners, and fuel-injector nozzles. The air-hardening types are specified for thin parts or parts with severe changes in cross section -- parts that are prone to crack or distort during hardening. Hardened parts from these steels have a high surface hardness; however, these steels should not be specified for service at elevated temperatures.

- **Type H** - Hot-work steels serve well at elevated temperatures.
- **Types T (tungsten alloy) and M (molybdenum alloy)** - High-speed tool steels make good cutting tools because they resist softening and maintain a sharp cutting edge at high service temperatures.
- **Type L** - A special-purpose, low-cost, low-alloy, tool steel often specified for machine parts when wear resistance combined with toughness is important.
- **Type F** - Carbon-tungsten alloys (Type F) are shallow hardening and wear resistant, but are not suited for high temperatures or for shock service.
- **Type P** - A mold steel are designed specifically for plastic-molding and zinc die-casting dies.

HSLA Steel -

High-Strength Low-Alloy (HSLA) steels have a higher strength-to-weight ratio than conventional low-carbon steels for only a modest price premium. Because HSLA alloys are stronger, they can be used in thinner sections, making them particularly attractive for transportation-equipment components where weight reduction is important. HSLA steels are usually low-carbon steels with up to 1.5% manganese, strengthened by small additions of elements, such as columbium, copper, vanadium or titanium and sometimes by special rolling and cooling techniques.

Non-Ferrous Metals

Non-ferrous metals are metals that do not contain iron. There are two groups of metals; ferrous and non-ferrous. Ferrous metals contain iron, for example carbon steel, stainless steel (both alloys; mixtures of metals) and wrought iron. Non-ferrous metals don't contain iron, for example aluminium, brass, copper (which can be remembered as ABC) and titanium. You can also get non-ferrous metals as alloys eg, brass is an alloy of copper and zinc.

Nonferrous metals are specified for structural applications requiring reduced weight, higher strength, nonmagnetic properties, higher melting points, or resistance to chemical and atmospheric corrosion. They are also specified for electrical and electronic applications.

Non-Ferrous Metals include:

Non - Ferrous Metals

Aluminum	Beryllium	Copper	Lead	Magnesium	Nickel	Precious Metals	Refractory Metals	Tin	Titanium	Zinc

Aluminum

Pure aluminum is a silvery-white metal with many desirable characteristics. It is light, nontoxic (as the metal), nonmagnetic and nonsparking. It is easily formed, machined, and cast. Pure aluminum is soft and lacks strength, but alloys with small amounts of copper, magnesium, silicon, manganese, and other elements have very useful properties. Aluminum is an abundant element in the earth's crust, but it is not found free in nature. The Bayer process is used to refine aluminum from bauxite, an aluminum ore. Because of aluminum's mechanical and physical properties, it is an extremely convenient and widely used metal.

Back to Materials Index

Aluminum and its alloys are divided into two broad classes, castings and wrought (mechanically worked products). The latter is sub-divided into heat-treatable and non-heat-treatable alloys, and into various forms produced by mechanical working.

Wrought Aluminum Alloys

Series	Main Alloy	Alloy Properties
1xxx	None (99% alu)	Unalloyed aluminum is highly corrosion resistant, low strength, workable, conductive. Non-heat-treatable.
2xxx	Copper	Gives strength, hardness, machinability. Heat-treatable.
3xxx	Manganese	Adds moderate strength, good workability. Non-heat-treatable.
4xxx	Silicon	
5xxx	Magnesium	Moderate to high strength. Corrosion resistant. Non-heat-treatable.
6xxx	Magnesium & Silicon	Increases strength, formability, corrosion resistance. Heat-treatable.
7xxx	Zinc	For greatest strength. Heat treatable. Other alloying elements such as copper, magnesium, chromium and zirconium may be specified.
8xxx	Tin, Lithium & Other elements.	Effects vary.
9xxx	N/A	(This series is unused presently).

Casting Alloys

Series	Main Alloy	Alloy Notes
1xx.x	None (99% alum.)	Unalloyed aluminum.
2xx.x	Copper	Used extensively for applications where excellent strength and hardness at high temperatures are required. Heavy-duty pistons; motorcycle, diesel and aircraft pistons; aircraft generator housings; and air-cooled cylinder heads are typical applications.
3xx.x	Silicon	Other alloying elements such as copper and magnesium are specified. Typical applications are airframe castings, machine parts, truck chassis parts, aircraft and missile components, and structural parts requiring high strength.
4xx.x	Silicon	
5xx.x	Magnesium	Alloys possess a high and stable combination of strength, shock resistance and ductility. It is ideally suited for parts in instruments and computing devices where dimensional stability is of major importance.
6xx.x	N/A	(This series is unused presently).
7xx.x	Zinc	Employed when a combination of good mechanical properties without heat treatment is needed. It also shows good shock and corrosion resistance and good machinability and dimensional stability.
8xx.x	Tin	
9xx.x	N/A	(This series is unused presently).

Aluminum Temper Designations

F	As fabricated. No control over the amount of strain hardening.
H	Strain-hardened (wrought products only) to increase strength.
H1	Strain-hardened only. Products are strain-hardened to achieve the strength desired without additional thermal treatment.
H1x,H2x,H3x	The second digit following the designations H1, H2, H3 indicate the final degree of strain hardening. The number 8 has been assigned to tempers having a final degree of strain-hardening equivalent to that resulting from approximately 75 % reduction in area. Tempers between that of the 0 Temper (annealed) and 8 (full hard) are designated by the numbers 1 through 7. A number 4 (which is halfway between 0 and 8) designation is considered half-hard; number 2 is considered quarter-hard; and the number 6 is three-quarter hard. When the number is odd, the limits of ultimate strength are exactly halfway between those of the even numbered tempers.
Hxxx	The third digit indicates a variation of the two digit H temper. It is used when the degree of temper is close to the 2 digit H temper.
H111	Applies to alloys which are strain-hardened less than the amount required for a controlled H11 temper.
H112	Applies to alloys that acquire some temper from shaping processes which do not have special control over the amount of strain-hardening or thermal treatment, but for which there are mechanical property limits.
H2	Strain-hardened and partially annealed. Applies to alloys which are strain-hardened more than the desired final amount and then reduced in strength to the desired level by partial annealing. For alloys that soften with age at room temperature, the H2 tempers have the same minimum tensile strength as the corresponding H3 tempers. For other alloys, the H2 tempers have the same minimum tensile strength as the corresponding H1 tempers and slightly higher elongation.
H3	Strain-hardened and stabilized. Applies to alloys that are strain-hardened and whose mechanical properties are stabilized by a low temperature thermal treatment that results in slightly lowered tensile strength and improved ductility. This designation is applicable only to those alloys that unless they are stabilized, will gradually soften with age at room temperature.
H311	Applies to alloys which are strain-hardened less than the amount required for a controlled H31 temper.
H321	Applies to alloys which are strain-hardened less than the amount required for a controlled H32 temper.
H323	Applies to products which are fabricated to have good resistance to stress corrosion cracking.
H343	Applies to products which are fabricated to have good resistance to stress corrosion cracking.
O	Annealed, recrystallized (wrought products only). Applies to wrought alloys which are annealed to obtain the softest temper, and to cast alloys which are annealed to improve ductility and dimensional stability.
T	Thermally treated to produce stable tempers other than F, O or H.
T1	Naturally aged. Product is cooled from an elevated temperature shaping process and naturally aged to a substantially stable condition.
T2	Annealed (cast products only). Applies to alloys which are cold worked to improve strength after cooling from an elevated temperature shaping process, or in which the effect of cold work in flattening or straightening is significant in mechanical property limits.
T3	Solution heat-treated, cold worked and naturally aged to a substantially stable condition to improve strength.
T4	Solution heat-treated and naturally aged to a substantially stable condition.
T5	Cooled from an elevated temperature shaping process and the artificially aged.

(*Continued*)

Aluminum Temper Designations (*Continued*)

T51	Stress relieved by stretching. Applies to the following products when stretched the indicated amounts after solution heat-treatment or cooled from a high temperature shaping process: Plate—1.5-3% permanent set; Rod, bar, shapes, and extruded tubes—1-3% permanent set; Drawn tubes—1.5-3% permanent set. Applies directly to plate, and rolled or cold finished rod and bar which receive no further straightening after stretching. Applies to extruded rod, bar, shapes, tubing, and to drawn tubing when designated as follows: T510 Products that receive no further straight ending after stretching; T511 Products that may receive minor straightening after stretching to comply with standard tolerances.
T52	Stress-relieved by compressing. Applies to alloys which are stress-relieved by compressing after solution heat-treatment, or cooled from a high temperature shaping process to produce a permanent set of 1 to 5%.
T54	Stress-relieved by combined stretching and compressing. Applicable to die forging which are stress-relieved by restring cold in the finish die.
T6	Solution heat-treated and then artificially aged. T62 indicates material is solution heat-treated from the O or F temper to demonstrate response to heat-treatment, and artificially aged.
T7	Solution heat-treated and then stabilized to carry them beyond the point of maximum strength to provide control of some special property.
T8	Solution heat-treated, cold worked, and then artificially aged.
T9	Solution heat-treated, artificially aged, and then cold worked.
T10	Artificially aged and then cold worked.
T42	(Wrought products only). Applicable to products solution heat-treated and naturally aged which have mechanical properties different from those of the T4 temper.
T62	(Wrought products only). Applicable to products solution heat-treated and artificially aged which have mechanical properties different from those of the T6 temper.
W	Solution heat treated. An unstable temper applied only to alloys which spontaneously age at room temperature after solution heat-treatment.

Properties of Aluminum Alloys

Tabulated in accordance with the Unified Numbering System for Metals and Alloys (UNS), Society of Automotive Engineers, Warrendale, Pa., 1975. This reference contains the cross reference numbers for AISI, ASTM, FED, MIL SPEC, and SAE specifications. These are typical properties for sizes of about 1/2 inch. A typical value may be neither the mean nor the minimum. It is a value which can be obtained when the purchase specifications are carefully written and with continuous inspection and testing. The values given for fatigue strength, S_f, correspond to 50e7 cycles of completely reversed stress. Aluminum alloys do not have an endurance limit. The yield strength is 0.2% offset value. Multiply strength in kpsi by 6.89 to get strength in MPa.

Thermoplastics

Thermoplastic materials are melt processable, that is they are formed when the are in a melted or viscous phase. This generally means they are heated, formed, then cooled in their final shape. Depending upon their chemistry, thermoplastics can be very much like rubber, or as strong as aluminum. Some high temperature thermoplastic materials can withstand temperature extremes of up to 600 F, while others retain their properties at -100 F. Thermoplastics do not oxidize and some materials have no known solvents at room temperature. Most thermoplastic materials are excellent electrical and thermal insulators. On the other hand thermoplastic composites can be made to be electrically conductive with the addition of carbonor metal fibers.

In general the combination of light weight, high strength, and low processing costs make thermoplastics well suited to many applications. The most common methods of processing thermoplastics are injection molding, extrusion, and thermoforming.

Thermoplastics include:

ABS (Acrylanitrile Butadiene Styrene)
ABS Polycarbonate Alloy
Acetal
Acrylic
ASA (acrylic-styrene-acrylonitrile) Alloys
Cellulose Butyrate
ETFE (Tefzel)
EVA Ethylene Vinyl Acetate
LCP (Polyester Liquid Crystal Polymer)
Nylon 6
Nylon 4-6
Nylon 6-6
Nylon 11
Nylon 12
Nylon amorphous
Nylon impact modified
Polyallomer
PBT Polyester (Polybutylene Terepthalate)
Polycarbonate
PEEK Polyetheretherkeytone
PEI Polyetherimid (Ultem)
Polyethersulfone
Polyethylene High Density
Polyethylene Low Density
Polyethylene Medium Density
PET Polyester (Polyethylene Terepthalate)
Polyimide Thermoplastic (Aurum)
Polypropylene
PPA Polyphthalamide (Amodel)
PPO Modified Polyphenylene Oxide (Noryl)
PPS Polyphenylene Sulfide
Polystyrene Crystal
Polystyrene High Impact HIPS
Polystyrene Medium Impact MIPS
Polysulfone
Polyurethane
PVC Polyvinyl Chloride Rigid

PVC Flexible
PVDF Polyvinylidene Fluoride (Kynar)
SAN Styrene Acrylonitrile
TPE Thermoplastic Elastomers
TPR Thermoplastic Rubbers

Thermoset Plastics

Thermoset plastics such as amino, epoxy, phenolic, and unsaturated polyesters, are so named because they experience a chemical change during processing and become "set", hard solids. Thermosets are highly cross-linked polymers that have a molecular mesh or network of polymer chains like a three-dimensional version of a net. Thermosets undergo a chemical as well as a phase change when they are heated. Once cured they cannot be melted or remolded and are resistant to solvents - that is once they are formed they are 'set' (hence the name).

Thermoset plastics, because of their tightly crosslinked structure, resist higher temperatures and provide greater dimensional stability than do most thermoplastics. Thermosets are tough, durable with high temperature performance, and have found applications in a wide variety of fields including electronic chips, fibre-reinforced composites, polymeric coatings, spectacle lenses and dental fillings.

Alkyds/Polyester - Thermosetting polyester resins are commonly used as casting materials, fiberglass laminating resins, and non-metallic auto-body fillers. Polyester is used for car body panels and fender walls (SMC - sheet molding compound), tool housings (BMC - bulk molding compound) brackets, and industrial equipment housings.

Urea formaldehyde (UF) thermosets are strong, glossy, and durable. They are not affected by fats, oils esters, ether, petrol, alcohol or acetone, nor by detergents or weak acids, and they exhibit good resistance to weak alkalis. Their high mechanical strength, heat and fire resistance, and good electrical arc and tracking resistance make them an ideal plastic for numerous industrial and household applications, from doorknoobs and toilet seats to electrical components and cosmetics enclosures.

Melamine formaldehyde (MF) thermoset plastics are similar to urea molding compounds, but melamine has even better resistance to heat, chemicals, moisture, electricity and scratching.UFs and MF plastics that have high surface hardness and gloss, brilliant and precise colors, and light fastness. Melamine formaldehyde (MF) thermosets are ideal for dinnerware, kitchen utensils, bathroom accessories, and electrical components. Some uses include electrical breakers, receptacles, closures, knobs and handles, appliance components, adhesives, coatings and laminates. Melamine was formerly used for dishware.

Epoxy - excellent electrical, thermal, and chemical resistance. Their strength can be further increased with fibrous reinforcement or mineral fillers. There is a huge variety of combinations of epoxy resins and reinforcements which allows a wide range of possible properties in the finished molded parts.

Generally, parts molded from epoxy are hard, rigid, relatively brittle, and have excellent dimensional stability over a broad temperature range. The combination of high mechanical strength and excellent electrical properties make them ideal for electrostructural applications. Coatings, casting compounds, encapsulating for electrical components, laminates, and adhesives.

Phenolic (Bakelite) --
History - The first truly synthetic plastic was invented by Leo Baekeland - a Belgium chemist living in New York. Baekeland was already very rich as he had invented the first commercially successful photographic paper and sold it to George Eastman in 1898 for $1 million. With such money, Baekeland could engage himself in whatever research he decided to do.

In 1905, he found that when he combined formaldehyde and phenol, he produced a material that bound all types of powders together. He called this material Bakelite - after himself - and it was the first thermosetting plastic in the world. This was a material that once it set hard would not soften under heat. It had so many uses and so many potential uses, that it was called "the material of a thousand uses".

Bakelite was water and solvent resistant; could be used as an electrical insulator; was rock hard but could be cut by a knife and was used in 78 rpm records and telephones. It was a naturally brittle material in pure form, but it could be strengthened with fillers such as wood pulp and cellulose. PF was used in early consumer electronic products such as telephones, radios, records. Phenolics are little used in general consumer products today due to the cost and complexity of production and their brittle nature. An exception to the overall decline is the use in small precision-shaped components where their specific properties are required, such as molded disc brake cylinders, saucepan handles, electrical plugs and switches, and electrical iron parts. Today, Bakelite is manufactured under various commercial brand names such as Micarta. Micarta is produced in sheets, rods and tubes for hundreds of industrial applications in the electronics, power generation and aerospace industries.

Polyimide --
When compared to most other organic or polymeric materials, polyimides exhibit an exceptional combination of thermal stability (>500°C), mechanical toughness and chemical resistance. In addition, they have excellent dielectric properties. Used a lot in wear applications, machined gears, bushings and bearings, aerospace and aircraft parts, ring seals, thrust washers, wear strips. Also, because of their high degree of ductility and inherently low CTE, polyimides can be readily implemented into a variety of microelectronic applications. Multilayer thin and thick film applications on large silicon or ceramic substrates can be readily achieved.

Polyurethane --
Polyurethanes are widely used in flexible and rigid foams, durable elastomers and high performance adhesives and sealants, fibers, seals, gaskets, condoms, carpet underlayment, and hard plastic parts. Polyurethane products are often called "urethanes". Over three quarters of the consumption of polyurethane products is in the form of foams, with flexible and rigid types being roughly equal in market size. Polyurethane materials are also used in coatings and varnishes used in furniture manufacture, carpentry or woodworking. Polyurethane is also used as an adhesive, especially as a woodworking glue. Its main advantage over more traditional wood glues is its water resistance. It is also used in making solid tires. Modern roller blading and skateboarding became economical only with the introduction of tough, abrasion-resistant polyurethane parts.

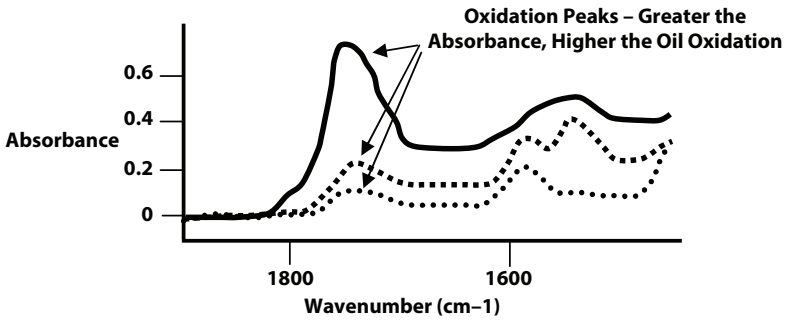
Silicone --
Silicones are odorless, colorless, water resistant, chemical resistant, oxidation resistant, stable at high temperature, and have weak forces of attraction, low surface tension, low freezing points and do not conduct electricity. They find many uses in oils, greases, and rubberlike materials. Silicone oils are very desirable since they do not decompose at high temperature and do not become viscous. Silicones are use for lubricants, adhesives, sealants, gaskets, pressure compensating diaphragms for drip irrigation emitters, dishware, Silly Putty, and many other products. Silicones have a number of medical applications (e.g. breast implants) because they are chemically inert. Other silicones are used in hydraulic fluids, electrical insulators and moisture proofing agent in fabrics.

Elastomers

Elastomers and rubber are differentiated from polymers by the mechanical property of returning to their original shape after being stretched to several times their length. The rubber industry differentiates between the terms "elastomer" and "rubber" on the bases of how long a deformed material sample requires to return to its approximate original size after a deforming force is removed, and of its extent of recovery. Synthetic materials such as neoprene, nitrile, styrene butadiene (SBR), and butadiene rubber are now grouped with natural rubber. These materials serve engineering needs in fields dealing with shock absorption, noise and vibration control, sealing, corrosion protection, abrasion protection, friction production, electrical and thermal insulation, waterproofing, confining other materials, and load bearing.

As with almost any material, selecting a rubber for an application requires consideration of many factors, including mechanical or physical service requirements, operating environment, a reasonable life cycle, manufacturability of the part, and cost.

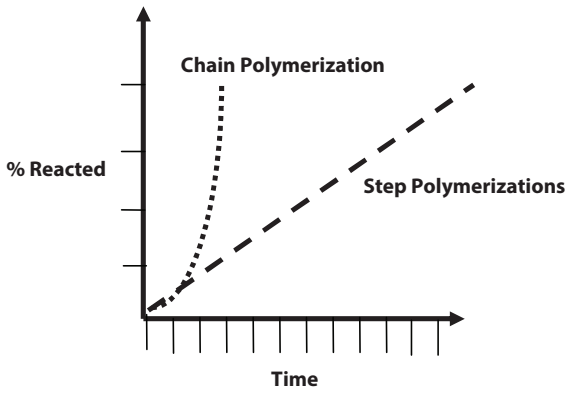
Manufacturing rubber parts is accomplished in one of three ways: transfer molding, compression molding, or injection molding. The choice of process depends on a number of factors, including the size, shape, and function of the part, as well as anticipated quantity, type, and cost of the raw material.



Oil Oxidation IR Spectra

1 PETE	Polyethylene Terephalate Ethylene PETE goes into soft drink, juice, water, detergent, and cleaner bottles. Also used for cooking and peanut butter jars.	5 PP	Polypropylene PP goes into caps, disks, syrup bottles, yogurt tubs, straws, and film packaging.
2 HDPE	High Density Polyethylene High Density Polyethylene HDPE goes into milk and water jugs, bleach bottles, detergent bottles, shampoo bottles, plastic bags and grocery sacks, motor oil bottles, household cleaners, and butter tubs.	6 PS	Polystyrene PS goes into meat trays, egg cartons, plates, cutlery, carry-out containers, and clear trays.
3 PVC	Polyvinyl Cloride PVC goes into window cleaner, cooking oils, and detergent bottles. Also used for peanut butter jars and water jugs.	7 OTHER	Other Includes resins not mentioned above or combinations of plastics.
4 LDPE	Low Density Polyethylene LDPE goes into plastic bags and grocery sacks, dry cleaning bags, flexible film packaging, and some bottles.		

Plastic Recycling Guide



Polymerization

American Chemistry Council

Plastic Packaging Resins

Resin Codes	Descriptions	Properties	Product Applications	Product Made with Recycled Content*
1 PET	**Polyethylene Terephthalate (PET, PETE).** PET is clear, tough, and has good gas and moisture barrier properties. This resin is commonly used in beverange bottles and many injection-molded consumer product containers. Cleaned, recycled PET flakes and pellets are in great demand for spinning fiber for carpet yarns, producing fiberfill and geo-textile. Nickname: Polyester.	• Clear and optically smooth surfaces for oriented films and bottles • Excellent barrier to oxygen, water, and carbon dioxide • High impact capability and shatter resistance • Excellent resistance to most solvents • Capability for hot-filling	Plastic bottles for soft drinks, water, juice, sports drinks, beer, mouthwash, catsup and salad dressing. Food jars for peanut butter, jelly, jam and pickles. Ovenable film and microwavable food trays. In addition to packaging, PET's major uses are textiles, monofilament, carpet, strapping, films, and engineering moldings.	Fiber for carpet, fleece jackets, comforter fill, and tote bags. Containers for food, beverages (bottles), and non-food items. Films and sheet. Strapping.
2 HDPE	**High Density Polyethylene (HDPE).** HDPE is used to make many types of bottles. Unpigmented bottles are translucent, have good barrier properties and stiffness, and are well suited to packaging products with a short shelf life such as milk. Because HDPE has good chemical resistance, it is used for packaging many household and industrial chemicals such as detergents and bleach. Pigmented HDPE bottles have better stress crack resistance than unpigmented HDPE.	• Excellent resistance to most solvents • Higher tensile strength compared to other forms of polyethylene • Relatively stiff material with useful temperature capabilities	Bottles for milk, water, juice, cosmetics, shampoo, dish and laundry detergents, and household cleaners. Bags for groceries and retail purchases. Cereal box liners. Reusable shipping containers. In addition to packaging, HDPE's major uses are in injection molding applications, extruded pipe and conduit, plastic wood composites, and wire and cable covering.	Bottles for non-food items, such as shampoo, conditioner, liquid laundry detergent, household cleaners, motor oil and antifreeze. Plastic lumber for outdoor decking, fencing and picnic tables. Pipe, floor tiles, buckets, crates, flower pots, garden edging, film and sheet, and recycling bins.
3 PVC	**Polyvinyl Chloride (PVC, Vinyl).** In addition to its stable physical properties, PVC has good chemical resistance, weatherability, flow characteristics and stable electrical properties. The diverse slate of vinyl products can be broadly divided into rigid and flexible materials.	• High impact strength, brilliant clarity, excellent processing performance • Resistance to grease, oil and chemicals	Rigid packaging applications include blister packs and clamshells. Flexible packaging uses include bags for bedding and medical, shrink wrap, deli and meet wrap and tamper resistance. In addition to packaging, PVC's major uses are rigid applications such as pipe, siding, window frames, fencing, decking and railing. Flexible applications include medical products such as blood bags and medical tubing, wire and cable insulation, carpet backing, and flooring.	Pipe, decking, fencing, paneling, gutters, carpet backing, floor tiles and mats resilient flooring, mud flaps, cassette trays, electrical boxes, cables, traffic cones, garden hose, and mobile home skirting. Packaging, film and sheet, and loose-leaf binders.
4 LDPE	**Low Density Polyethylene (LDPE).** LDPE is used predominately in film applications due to its toughness, flexibility and relative transparency, making it popular for use in applications where heat sealing is necessary. LDPE also is used to manufacture some flexible lids and bottles as well as in wire and cable applications. Includes Linear Low Density Polyethylene (LLDPE).	• Excellent resistance to acids, bases and vegetable oils • Toughness, flexibility and relative transparency (good combination of properties for packaging applications requiring heat-sealing)	Bags for dry cleaning, newspapers, bread, frozen foods, fresh produce, and household garbage. Shrink wrap and stretch film. Coating for paper milk cartons and hot and cold beverage cups. Container lids. Toys. Squeezable bottles (e.g., honey and mustard). In addition to packaging, LDPE's major uses are in injection molding applications, adhesives and sealants, and wire and cable coverings.	Shipping envelope, garbage can liners, floor tile, paneling, furniture, film and sheet, compost bins, trash cans, landscape timber, and outdoor lumber.
5 PP	**Polypropylene (PP).** PP has good chemical resistance, is strong, and has a high melting point making it good for hot-fill liquids. This resin is found in flexible and rigid packaging, fibers, and large molded parts for automotive and consumer products.	• Excellent optical clarity in biaxially oriented films and stretch blow molded containers • Low moisture vapor transmission • Inertness toward acids, alkalis and most solvents	Containers for yogurt, margarine, takeout meals, and deli foods. Medicine bottles. Bottle caps and closures. Bottles for catsup and syrup. In addional to packaging, PP's major uses are in fiber, appliances and consumer products, including durable applications such as automotive and carpeting.	Automobile applications, such as battery cases, signal lights, battery cables, brooms and brushes, ice scrapers, oil funnels, and bicycle racks. Garden rakes, storage bins, shipping pallets, sheeting, trays.
6 PS	**Polystyrene (PS).** PS is a versatile plastic that can be rigid or foamed. General purpose polystyrene is clear, hard and brittle. It has a relatively low melting point. Typical applications include protective packaging, foodservice packaging, bottles, and food containers. PS is often combined with rubber to make high impact polystyrene (HIPS) which is used for packaging and durable applications requiring toughness, but not clarity.	• Excellent moisture barrier for short shelf life products • Excellent optical clarity in general purpose form • Significant stiffness in both foamed and rigid forms. • Low density and high stiffness in foamed applications • Low thermal conductivity and excellent insulation properties in foamed form	Food service items, such as cups, plates, bowls, cutlery, hinged takeout containers (clamshells), meat and poultry trays, and rigid food caontainers (e.g., yogurt). These items may be made with foamed or non-foamed PS. Protective foam packaging for furniture, electronics and other delicate items. Packing peanuts, known as "loose fill." Compact disc cases and aspirin bottles. In addition to packaging, PS's major uses are in agricultural trays, electronic housings, cable spools, building insulation, video cassette cartridges, coat hangers, and medical products and toys.	Thermal insulation, thermometers, light switch plates, vents, desk trays, rules, and license plate frames. Cameras or video cassette casings. Foamed foodservice applications, such as egg shell cartons. Plastic mouldings (i.e., wood replacement products). Expandable polystyrene (EPS) foam protective packaging.
7 OTHER	**Other.** Use of this code indicates that a package is made with a resin other than the six listed above, or is made of more than one resin and used in a multi-layer combination.	Dependent on resin or combination of resins	Three- and five-gallon reusable water bottles, some citrus juiceand catsup bottles. Oven-baking bags, barrier layers, and custom packaging.	Bottles and plastic lumber applications.

***Recycling may not be available in all areas. Check to see if plastics recycling is available in your community.**

Metal Casting Processes

Foundry Process	Process	Pros/Cons
Green Sand Molding	The green sand process utilizes a mold made of compressed or compacted moist sand packed around a wood or metal pattern. A metal frame or flask is placed over the pattern to produce a cavity representing one half of the casting. The sand is compacted by either jolting or squeezing the mold. The other half of the mold is produced in like manner and the two flasks are positioned together to form the complete mold. If the casting has hollow sections, cores consisting of hardened sand (baked or chemically hardened) are used. ***High-Density Molding (High Squeeze Pressure/ Impact)*** Large air cylinders, hydraulics, and innovative explosive methods have improved the sand compaction around the pattern, improving the standards of accuracy and finish which can be achieved with certain types of castings.	**Advantages** • Most ferrous/non-ferrous metals can be used. • Low Pattern & Material costs. • Almost no limit on size, shape or weight of part. • Adaptable to large or small quantities • Used best for light, bench molding for medium-sized castings or for use with production molding machines. **Disadvantages** • Low design complexity. • Lower dimensional accuracy.
No-Bake Molding	Chemical binders (furan or urethane) are mixed with sand and placed in mold boxes surrounding the pattern halves. At room temperature, the molds become rigid with the help of catalysts. The pattern halves are removed and the mold is assembled with or without cores.	**Advantages** • Most ferrous/non-ferrous metals can be used. • Adaptable to large or small quantities • High strength mold • Better as-cast surfaces. • Improved dimensional repeatability • Less skill and labor required then in conventional sand molding. • Better dimensional control. **Disadvantages** • Sand temperatures critical. • Patterns require additional maintenance.

(*Continued*)

Metal Casting Processes (*Continued*)

Foundry Process	Process	Pros/Cons
Resin Shell Molding	Resin-bonded silica sand is placed onto a heated pattern, forming shell-like mold halves. Pattern halves are bonded together with or without cores. Probably the earliest, most automated and most rapid of mold (and coremaking) processes was the heat-curing technique known as the shell process. Ejector pins enable the mold to be released from the pattern and the entire cycle is completed in seconds depending upon the shell thickness desired. The two halves of the mold, suitably cored, are glued and clamped together prior to the pouring of the metal. Shell molds may be stored for long periods if desired. Because of pattern costs, this method is best suited to higher volume production.	**Advantages** • Adaptable to large or medium quantities • Most ferrous/non-ferrous metals can be used. • Rapid production rate. • Good dimensional casting detail and accuracy. • Shell molds are lightweight and may be stored almost indefinitely. **Disadvantages** • Since the tooling requires heat to cure the mold, pattern costs and pattern wear can be higher. • Energy costs are higher. • Material costs are higher than those for green sand molding.
Permanent Mold	Permanent molds consist of mold cavities machined into metal die blocks and designed for repetitive use. Currently, molds are usually made of cast iron or steel, although graphite, copper and aluminum have been used. Permanent mold castings can be produced from all of the metals including iron and copper alloys, but are usually light metals such as zinc-base, magnesium and aluminum. ***Gravity Permanent Mold*** -The flow of metal into a permanent mold using gravity only is referred to as a gravity permanent mold. There are two techniques in use: static pouring, where metal is introduced into the top of the mold through downsprues similar to sand casting; and tilt pouring, where metal is poured into a basin while the mold is in a horizontal position and flows into the cavity as the mold is gradually tilted to a vertical position. Normally, gravity molding is used because it is more accurate than shell molding. It is preferred almost exclusively to shell molding for light alloy components. ***Low-Pressure Permanent Mold*** - Low-pressure permanent mold is a method of producing a casting by using a minimal amount of pressure (usually 5-15 lb/sq in.) to fill the die. It is a casting process that helps to further bridge the gap between sand and pressure diecasting.	**Advantages** • Superior mechanical properties. • Produces dense, uniform castings with high dimensional accuracy. • Excellent surface finish and grain structure. • The process lends itself very well to the use of expendable cores and makes possible the production of parts that are not suitable for the pressure diecasting process. • Repeated use of molds. • Rapid production rate with low scrap loss. **Disadvantages** • Higher cost of tooling requires a higher volume of castings. • The process is generally limited to the production of somewhat small castings of simple exterior design, although complex castings such as aluminum engine blocks and heads are now commonplace.

(*Continued*)

Metal Casting Processes (*Continued*)

Foundry Process	Process	Pros/Cons
Die Casting	This process is used for producing large volumes of zinc, aluminum and magnesium castings of intricate shapes. The essential feature of diecasting is the use of permanent metal dies into which the molten metal is injected under high pressure (normally 5000 psi or more). The rate of production of diecasting depends largely on the complexity of design, the section thickness of the casting, and the properties of the cast metal. Great care must be taken with the design and gating of the mold to avoid high-pressure porosity to which this process is prone.	**Advantages** • Cost of castings is relatively low with high volumes. • High degree of design complexity and accuracy. • Excellent smooth surface finish. • Suitable for relatively low melting point metals (1600F/871C) like lead, zinc, aluminum, magnesium and some copper alloys. • High production rates. **Disadvantages** • Limits on the size of castings - most suitable for small castings up to about 75 lb. • Equipment and die costs are high.
Investment Casting (Lost Wax)	***Investment Casting*** is the process of completely investing a three-dimensional pattern in all of its dimensions to produce a one-piece destructible mold into which molten metal will be poured. A refractory slurry flows around the wax pattern, providing excellent detail. The wax patterns are assembled on a "tree" and invested with a ceramic slurry. The tree is then immersed into a fluidized bed of refractory particles to form the first layer of the ceramic shell. The mold is allowed to dry and the process repeated with coarser material until sufficient thickness has been built up to withstand the impact of hot metal. When the slurry hardens, the wax pattern is melted out and recovered and the mold or ceramic shell is oven cured prior to casting. Most materials can be cast by this process but the economics indicate that fairly high volume is necessary and the shape and complexity of the castings should be such that savings are made by eliminating machining.	**Advantages** • Excellent accuracy and flexibility of design. • Useful for casting alloys that are difficult to machine. • Exceptionally fine finish. • Suitable for large or small quantities of parts. • Almost unlimited intricacy. • Suitable for most ferrous/non-ferrous metals. • No flash to be removed or parting line tolerances. **Disadvantages** • Limitations on size of casting. • Higher casting costs make it important to take full advantage of the process to eliminate all machining operations.

Metal Casting Processes (*Continued*)

Foundry Process	Process	Pros/Cons
Expandable Pattern Casting (Lost Foam)	Also known as Expanded Polystyrene Molding or Full Mold Process, the EPC or Lost Foam process is an economical method for producing complex, close-tolerance castings using an expandable polystyrene pattern and unbonded sand. The EPC process involves attaching expandable polystyrene patterns to an expandable polystyrene gating system and applying a refractory coating to the entire assembly. After the coating has dried, the foam pattern assembly is positioned on several inches of loose dry sand in a vented flask. Additional sand is then added while the flask is vibrated until the pattern assembly is completely embedded in sand. A suitable downsprue is located above the gating system and sand is again added until it is level to the top of the sprue. Molten metal is poured into the sprue, vaporizing the foam polystyrene, perfectly reproducing the pattern. Gases formed from the vaporized pattern permeate through the coating on the pattern, the sand and finally through the flask vents. In this process, a pattern refers to the expandable polystyrene or foamed polystyrene part that is vaporized by the molten metal. A pattern is required for each casting.	**Advantages** • No cores are required. • Reduction in capital investment and operating costs. • Closer tolerances and walls as thin as 0.120 in. • No binders or other additives are required for the sand, which is reusable. • Flasks for containing the mold assembly are inexpensive, and shakeout of the castings in unbonded sand is simplified and do not require the heavy shakeout machinery required for other sand casting methods. • Need for skilled labor is greatly reduced. • Casting cleaning is minimized since there are no parting lines or core fins. **Disadvantages** • The pattern coating process is time-consuming, and pattern handling requires great care. • Good process control is required as a scrapped casting means replacement not only of the mold but the pattern as well.

(*Continued*)

Metal Casting Processes (*Continued*)

Foundry Process	Process	Pros/Cons
Vacuum ("V") Process Molding	This adaptation of vacuum forming permits molds to be made out of free-flowing, dry, unbonded sand without using high-pressure squeezing, jolting, slinging or blowing as a means of compaction. The V-process is dimensionally consistent, economical, environmentally and ecologically acceptable, energy thrifty, versatile and clean. The molding medium is clean, dry, unbonded silica sand, which is consolidated through application of a vacuum or negative pressure to the body of the sand. The patterns must be mounted on plates or boards and each board is perforated with vent holes connected to a vacuum chamber behind the board. A preheated sheet of highly flexible plastic material is draped over the pattern and board. When the vacuum is applied, the sheet clings closely to the pattern contours. Each part of the molding box is furnished with its own vacuum chamber connected to a series of hollow perforated flask bars. The pattern is stripped from the mold and the two halves assembled and cast with the vacuum on.	**Advantages** • Superb finishes. • Good dimensional accuracy. • No defects from gas holes. • All sizes and shapes of castings are possible • Most ferrous/non-ferrous metals can be used. **Disadvantages** • The V-process requires plated pattern equipment.
Centrifugal Molding	The Centrifugal Casting process consists of a metal or graphite mold that is rotated in the horizontal or vertical plane during solidification of the casting. Centrifugal force shapes and feeds the molten metal into the designed crevices and details of the mold. The centrifugal force improves both homogeneity and accuracy of the casting. This method is ideally suited to the casting of cylindrical shapes, but the outer shape may be modified with the use of special techniques.	**Advantages** • Rapid production rate. • Suitable for Ferrous/Non-ferrous parts. • Good soundness and cleanliness of castings. • Ability to produce extremely large cylindrical parts. **Disadvantages** • Limitations on shape of castings. Normally restricted to the production of cylindrical geometric shapes.

Sheet Metal Gauges

NOTE: These are **theoretical** gauge thicknesses. Actual thickness will vary depending on the mill it was rolled at, batch number, etc.

Also, note that nonferrous gauges (aluminum) are ***not*** the same as ferrous gauges (steel & stainless).

Welding Processes

The AWS definition for a welding process is "a materials joining process which produces coalescence of materials by heating them to suitable temperatures with or without the application of pressure or by the application of pressure alone and with or without the use of filler material".

AWS has grouped the processes together according to the "mode of energy transfer" as the primary consideration. A secondary factor is the "influence of capillary attraction in effecting distribution of filler metal" in the joint. Capillary attraction distinguishes the welding processes grouped under "Brazing" and "Soldering" from "Arc Welding", "Gas Welding", "Resistance Welding", "Solid State Welding", and "Other Processes."

This table shows the official groupings and also shows the letter designation for each process. The letter designation assigned to the process can be used for identification on drawings, tables, etc.

Welding Processes and Letter Designations

Group	Welding Process	Letter Designation
Arc welding	Carbon Arc	CAW

9/16	12	18	-	-	-
5/8	11	18	-	-	-
3/4	10	16	-	-	-

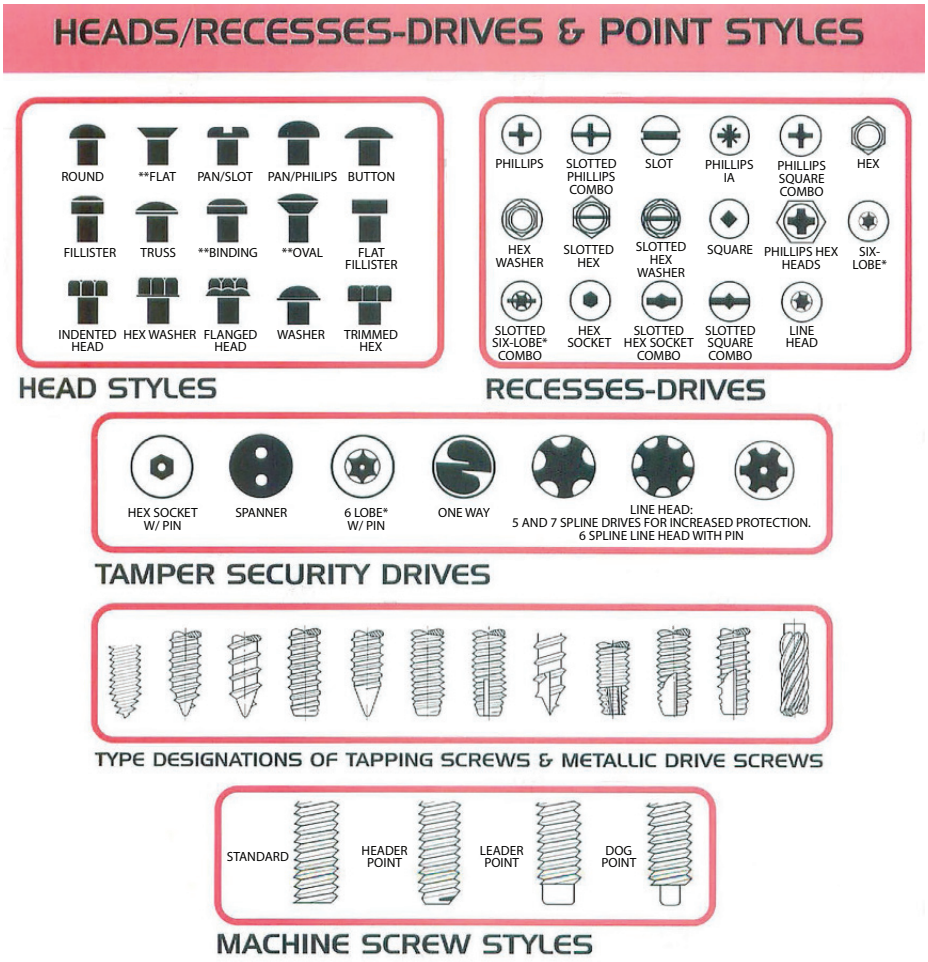
This chart lists the coarse thread and fine thread for each diameter bolt and machine screws.

Metric Thread Pitch			
Bolt Diameter	Standard Thread Pitch (mm)	Fine Thread Pitch (mm)	Extra Fine Thread Pitch (mm)
4mm	0.70	-	-
5mm	0.80	-	-
6mm	1.00	-	-
7mm	1.00	-	-
8mm	1.25	1.00	-
10mm	1.50	1.25	1.00
12mm	1.75	1.50	1.25
14mm	2.00	1.50	-
16mm	2.00	-	-
18mm	2.50	-	-
20mm	2.50	-	-
24mm	3.00	-	-

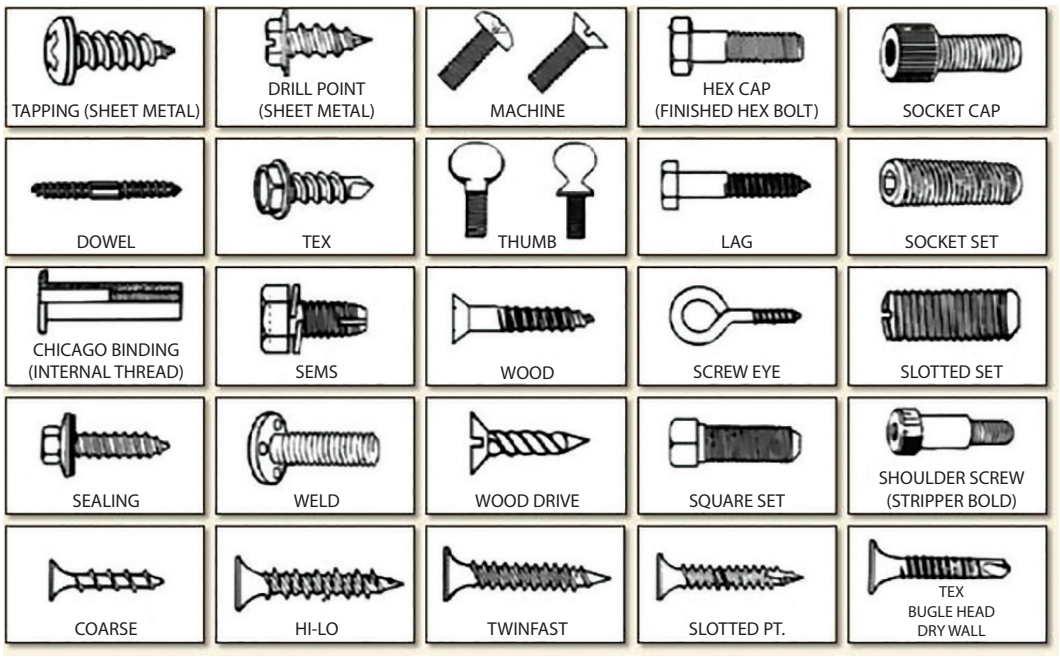
Size Identification: Metric bolts are written down as an 'M' followed by 3 numbers. For example M10×1.25×35 The first number is the diameter, the second the thread pitch, and the third the length all in millimeters. The example is therefore a 10mm diameter fine thread bolth 35mm long.

Thread pitch: The distance from one thread to the next, measured down the length of the fastener.

Screw Thread Chart



Screw%20selection%20chart



Screws types

Nuts

Types of Nuts

Your choices are...	
Acorn	An acorn nut is a domed nut which seals the threads inside the nut. This helps to protect the threads from corrosion.
Anchor	An anchor nut expands a portion of its body to press tightly against the hole in which it is located. The expansion is caused by a bolt that tightens down on the nut.
Cage	A cage nut contains a captive nut that can float in its cage to allow for misalignment and design variations.
Castle	A castle nut has a series of slots on one end and is held in place with a pin. Castle nuts are used in applications where vibration or motion could undo the nut. Castle nuts are also called slotted nuts.
Coupling	A coupling nut has a long, hexagonal body and is used to hold a threaded rod or machine screw at each end.
Cylinder	A cylinder nut is similar to a coupling nut, but has a cylindrical body. Coupling nuts have hexagonal bodies.
Finger	A finger nut is sometimes called a fly nut or thumb nut.
Flange	A flange is a type of locking nut where a ring is inserted into the threads.
Hex	A hex nut or hexagonal nut is a six-sided nut.
Jam	A jam nut resembles a hex nut, but has a smaller profile. Jam nuts are used to lock hex nuts in place by applying torque or force to the hex nut.
Kep	Hex nuts typically have an attached or captive star-type locking washer. Usually, the washer is able to move freely.
Lock	Lock nuts are used to prevent another nut or threaded component from loosening. A lock nut typically has a nylon or plastic insert in the threads that captures and holds the screw or bolt.
Nylon Insert	A nylon insert nut uses a plastic insert to capture the bolt or screw. Nylon insert nuts are used in applications where vibration or motion could loosen or undo the nut.
Pallet	A pallet nut is a captive nut that digs into the pallet material to hold fast. Pallet nuts have a large flange. A portion of the body near the flange is larger in diameter than the regular threaded section. Pallet nuts can be pressed into place or drawn in as the bolt is tightened.
Push	A push nut is a non-threaded fastener that is pushed onto an axle or other non-threaded rod. These fasteners push on easily, but are difficult to remove.
Round	Round nuts are shaped like cylinders and can be tightened in several different ways. They can be tightened with a wrench that fits into parallel slots on the outside wall, an Allen key that fits into one end of the nut, or a wrench that fits a nut's hex-shaped sides.
Self-Clinching	A self-clinching nut is pressed into a hole and holds fast against the wall by the force exerted upon it. Self-clinching nuts are used in applications where the sheet metal is too thin to be tapped for threads. Self-clinching nuts are sometimes called press nuts.
Speed	A speed nut has an arched spring body that acts like a thread lock. Speed nuts are also called self-retaining nuts and self-locking nuts.

Types of Nuts

Your choices are...	
Square	A square nut is a four-sided fastener.
Tee	A tee nut is a threaded barrel with a pronged flange at one end. The prongs embed themselves into the surface that is held as force is applied to the nut. Tee nuts are also called blind nuts.
U-Type	U-type nuts are specialty nuts used on rack-mounted equipment. The nut is integral with the mounting and has a tight U-shaped clip that presses on thin sheet metal.
Washer	Washer nuts attach to a free-spinning or fixed washer.
Weld	Weld nuts have projections or tabs that are used to attach the nut to the substrate. Weld nuts can be square, hexagonal, or round.
Wing	A wing nut has two tabs or wings that extend outwards from the center and allow the user to tighten the nut by hand.
Other	Other unlisted, specialized or proprietary types of nuts.

Metric	
Your choices are...	
M1.6	M1.6 fasteners have an inner diameter of 1.6 mm.
M2	M2 fasteners have an inner diameter of 2.0 mm.
M2.5	M2.5 fasteners have an inner diameter of 2.5 mm.
M3	M3 fasteners have an inner diameter of 3.0 mm.
M3.5	M3.5 fasteners have an inner diameter of 3.5 mm.
M4	M4 fasteners have an inner diameter of 4.0 mm.
M5	M5 fasteners have an inner diameter of 5.0 mm.
M6	M6 fasteners have an inner diameter of 6.0 mm.
M8	M8 fasteners have an inner diameter of 8.0 mm.
M1	M10 fasteners have an inner diameter of 10.0 mm.
M12	M12 fasteners have an inner diameter of 12.0 mm.
M14	M14 fasteners have an inner diameter of 14 mm.
M16	M16 fasteners have an inner diameter of 16 mm.
M18	M18 fasteners have an inner diameter of 18 mm.
M20	M20 fasteners have an inner diameter of 20 mm.
M22	M22 fasteners have an inner diameter of 22 mm.
M24	M24 fasteners have an inner diameter of 24 mm.
M25	M25 fasteners have an inner diameter of 25 mm.
M26	M26 fasteners have an inner diameter of 26 mm.
M27	M27 fasteners have an inner diameter of 27 mm.
M28	M28 fasteners have an inner diameter of 28 mm.
M30	M30 fasteners have an inner diameter of 30 mm.
M32	M32 fasteners have an inner diameter of 32 mm.
M33	M33 fasteners have an inner diameter of 33 mm.
M35	M35 fasteners have an inner diameter of 35 mm.
M36	M36 fasteners have an inner diameter of 36 mm.
M38	M38 fasteners have an inner diameter of 38 mm.
M40	M40 fasteners have an inner diameter of 40 mm.

M42	M42 fasteners have an inner diameter of 42 mm.
M48	M48 fasteners have an inner diameter of 48 mm.
M56	M56 fasteners have an inner diameter of 56 mm.
M64	M64 fasteners have an inner diameter of 64 mm.
Other	Other, unlisted metric sizes.
Search Logic:	Products with the selected attribute will be returned as matches. Leaving or selecting "No Preference" will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Material/Finish

Your choices are...	
Aluminum	Aluminum is a bluish, silver-white, malleable, ductile, light, trivalent, metallic element that has good electrical and thermal conductivity, high reflectivity, and resistance to oxidation. Aluminum is lighter than steel, but not as strong.
Brass	Brass provides good strength, excellent high-temperature ductility, reasonable cold ductility, good conductivity, excellent corrosion resistance, good bearing properties and low magnetic permeability.
Bronze/Copper Base Alloy	A copper base alloy is a metal with copper as the main alloying metal and one or more other metals, such as tin, zinc, or phosphorus. Silicon bronze is a typical fastener alloy.
Copper	Copper is a common, reddish, metallic element that is both ductile and malleable. Copper is one of the best conductors of heat and electricity. It also exhibits good corrosion resistance.
Inconel®/Incoloy®	Inconel® and Incoloy® (Special Metals Corporation) provide good strength and excellent resistance to oxidation and carbonization in high temperatures environments, and in many aqueous environments. These proprietary materials are used in process piping, heat exchangers, heating element sheathing and nuclear steam generator tubing. Typically, Inconel and Incoloy are used at service temperatures below 650° C (1200° F).
Monel®	Monel® (Special Metals Corporation) is a proprietary, high-strength material that offers resistance to a range of corrosive media such as seawater, hydrofluoric and sulfuric acids, and alkalis.
Steel	Steel is a commercial iron that contains carbon in any amount up to about 1.7 percent as an essential alloying constituent. Many grades of carbon and alloy steels are used as fastener materials. Steel may require coating for protection against corrosion.
Hardened Steel	Steel can be hardened in a number of ways. Methods include quenching techniques in oil and water, and passing the steel through induction chambers. During processing, the rapid cooling of steel freezes, traps and packs the carbon atoms inside the shrunken iron crystals. The resulting steel is very hard and brittle. Hardened steel is strong, but cannot absorb much shock or impact without breaking.
Stainless Steel	Stainless steel is chemical and corrosion resistant and can have relatively high stress ratings. Many grades are used in fasteners. Often, stainless steel does not require an anti-corrosion coating; however, most stainless steels cannot be hardened to the same degree as carbon steels.

Titanium	Titanium is a hard, lustrous, silvery element that is relatively abundant in the Earth's crust. It is valued for its lightness, strength, and corrosion resistance. Titanium is used widely in the aerospace industry and in medical products such as replacement joints. When alloyed with other metals, especially steel, titanium adds strength and oxidation resistance.
Other	Other unlisted, specialized, or proprietary metallic materials.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Non-Metallic	
Your choices are...	
Plastic	Products are made of thermoplastic materials.
FRP	Fiber-reinforced plastic (FRP) or fiber-reinforced polyurethane is a composite material with reinforcing fibers. It is stronger than many plastics which do not contain reinforcing additions. When made with polyurethane, FRP is a tough and wear-resistant material.
Nylon	Nylon is a tough, resistant, general-purpose material. It comprises several grades of polyamides and has good pressure ratings. Nylon 6/6 is commonly used with fasteners.
PVC	Polyvinyl chloride (PVC) is a widely used material that has good flexibility, a smooth surface, and nontoxic qualities. Some grades are used in food and chemical processes because of PVC's inert nature and good resistance to chemicals such as acids and alcohols. PVC brand names include ACP® and Dural® (Alpha Gary), Geon® (Geon), Benvic® (Solvay), and Flexalloy® (Teknor Apex).
PVDF	Polyvinylidene fluoride (PVDF) is a melt-processable fluropolymer. PVDF has similar properties to other fluropolymers, but provides better strength and lower creep. PVDF also offers good wear resistance and excellent chemical resistance; however, it does not perform well at elevated temperatures. Brand names include Kynar® (Elf AtoChem).
PTFE	Polytetrafluoroethylene (PTFE) is an insoluble compound that exhibits a high degree of chemical resistance and a low coefficient of friction. It is sometimes marketed in proprietary classes of materials such as Teflon®, a registered trademark of DuPont Dow Elastomers.
Rubber	Synthetic rubber includes grades such as neoprene, silicone, and Norprene® (Norton Co.). Rubber fasteners are used in specialized applications for vibration damping and silencing.
Other	Other unlisted, specialized, or proprietary non-metallic materials.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Finish	
Your choices are...	
Anodize	Anodizing is a process for finishing aluminum alloys that uses the electrolytic oxidation of the aluminum surface to produce a protective oxide coating. The anodic coating consists of hydrated aluminum oxide and is resistant to corrosion and abrasion. Conventional coatings are 0.1 to 1.0 mils thick and are mostly transparent, but may be colored. Anodizing preserves the natural luster and texture of the metal. Anodized coatings are hard, durable, will never peel, and, under normal conditions, will never wear through. Standard and decorative colors are available. This category includes hard-coat anodizing.
Black Oxide	Black oxide is a conversion coating that causes virtually no dimensional change. It is a uniform, continuous conversion of the existing metal to a black form of rust. Black oxide is used on components where tight tolerances are needed. It is used mostly as a decorative coating.
Chrome	Chrome finish is an electroplated coating that is applied for purposes of lubricity, wear resistance, and decoration. Chrome provides a bright and highly reflective finish.
Galvanized	Galvanizing immerses clean, oxide-free iron or steel into molten zinc in order to apply a zinc coating that is metallurgically bonded to the iron or steel surface. The zinc coating protects the surface against corrosion in two ways. First, it shields the base metal from the atmosphere. Second, because zinc is more electronegative than iron or steel, the coating reacts with corroding agents, providing a longer service life for the part.
Gold	Gold plating provides total resistance to oxidation and corrosion. It is electrically conductive and can be alloyed with cobalt to produce a wear-resistant finish.
Phosphate	Phosphate coatings are applied via the chemical or electrochemical treatment of a metal's surface. These corrosion-resistant coatings provide a surface for the improved adhesion of primers and paints.
Nickel Plated	Nickel plating is a common form of electrolytic deposition.
Silver	Silver is the most electrically conductive plating finish. It is used in electronic fasteners for electrical conductivity and signal transmittance. Silver oxidizes rapidly, but resists corrosion.
Tin	Tin plating is applied to electronic fasteners that are made of brass.
Zinc Plated	Zinc plating is a common form of plating that provides corrosion resistance.
Zinc Chromate (Yellow)	Fasteners have a yellow zinc chromate finish.
Other	Other unlisted finish.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Fastener Standards

Fastener Standards	
Your choices are...	
AIA/NAS	Dimensional and material standards for aircraft fasteners are developed by the Aerospace Industries Association (AIA) and/or its National Aerospace Standards Committee (NASC). All drawings and specifications have a NAS or NASM prefix. NAS is an acronym for National Aerospace Standards. NASM is an acronym for National Aerospace Standards, Metric.
AN/MS	Dimensional standards for aircraft fasteners are developed by the Aeronautical Standards Group. All drawings have a prefix of AN or MS. Products are suitable for army, navy, or air force use.
ASME/ANSI	The American Society of Mechanical Engineers (ASME) B18 standard specifies all ASME B18 fastener products with a single 18-digit PIN code system. Approved by the American National Standards Institute (ANSI) and adopted by the U.S. Department of Defense, the ASME B18.24 PIN system is a self-contained code that covers 788 unique B18 fastener types from 72 ASME B18 source documents. The PIN code system is fully parametric, uniform across all fastener types, and is intended as a digital alternative to the traditional plain text fastener product callout prescribed in the "Designation" or "Ordering" section of the applicable source document.
BS	Dimensional and material standards developed by the British Standards Institution. Standards are designated with a BS prefix. The British Standards International (BSI) Kitemark indicates that products are tested regularly against the requirements of an appropriate BSI standard, and that the manufacturer's quality system is assessed at least twice a year to ensure continued quality production.
DIN	DIN is an acronym for Deutsches Institut für Normung (DIN), a German national organization for standardization. Most metric fasteners are manufactured according to DIN standards. Although DIN predates the International Standards Organizations (ISO), DIN standards are being revised to more closely match ISO standards. Ordering DIN fasteners requires three pieces of information: the DIN identifier, which defines the style of the fastener; the material (e.g., 8.8 Steel, 316 Stainless, Hastelloy C276); and the coating or plating (if any).
ISO	The International Standards Organization (ISO) is a worldwide federation of national standards organizations from over 100 countries. ISO's mission is to facilitate the international exchange of goods and services, and to foster cooperation in the spheres of intellectual, technological, and economic activity. ISO standards for metric fasteners are gaining recognition rapidly. They will probably become global standards.
JIS	Japanese Industrial Standard (JIS) is largely based on DIN; however, some standards have been modified to meet the needs of the Japanese market. Most of the fasteners used in electronic equipment manufactured in Japan comply with the JIS standard.
SAE	Fasteners meet standards developed by the Society of Automotive Engineers (SAE), a worldwide organization that establishes industry standards for the testing, measurement, and design of automobiles and their components.
Other	Other unlisted, specialized, or proprietary fastener standards.

Screws

Screw Type

Screw Type	
Your choices are...	
Cap Screw	Cap screws are fasteners for machine parts. They are designed to be threaded into tapped holes. There are many different head styles for cap screws. Flat head, socket head, round head, and hex head styles are the most common types. Cap screws have a fairly wide shoulder for holding fast to an object, but may not be threaded over their full body length.
Dry Wall Screw	Dry wall screws are flat headed, coarse threaded screws used to hold sheet rock to wall studs.
Lag Screw	Lag screws have square or hexagon heads for driving with a wrench and a course-pitch threaded body. They are designed for fastening wood and similar materials and producing their own screw thread when tightened. They are also referred to as lag bolts.
Machine Screw	Machine screws are fully threaded small caliber screws for joining metal parts. They either are screwed into pre-threaded holes or can also be fitted with a nut. They are also referred to as machine bolts.
Sheet Metal Screw	Sheet metal screws are used to fasten sheets of thin metal together. They also used to fasten wood or plastic to metal. Sheet metal screws are fully threaded from the point to the head.
Self Drilling/Thread Cutting Screw	A self-drilling or thread-cutting screw has a point like a drill bit and bores its own hole, eliminating the need for a pre-drilled hole.
Set Screw	A set screw is a small, threaded rod that is used to fix a device such as a pulley to a rotating shaft. Set screws are available with socket and slotted drive types.
Shoulder Screw	A shoulder screw has an unthreaded shank that is long in comparison to its threaded portion, which is located under the head. Shoulder screws are used to attach one machine part to another, or as a plain bearing in places where rotary or sliding motion is required. Precision shoulder screws are manufactured with varying diameters and shoulder length tolerances. Shoulder screws are also referred to as shoulder bolts or stripper bolts.
Tamperproof Screw	Tamperproof screws are designed so they can be tightened, but not loosened. Special tools are required to drive them. Typically, tamperproof screws are used in areas where security is important.
Thumb Screw	A thumbscrew is a hand-tightened fastener used in applications where there is frequent fastening and unfastening. They are not suitable for high-tension applications.
Wood Screw	Wood screws are fully-threaded, tapered fasteners. They have oval, round or flat heads.
Other	Other, unlisted, or proprietary screw types.

Screw Diameter

Inch	
Your choices are...	
# 0000	# 0000 fasteners have an inner diameter of 0.021 in.
# 000	# 000 fasteners have an inner diameter of 0.034 in.
# 00	# 00 fasteners have an inner diameter of 0.047 in.
# 0	# 0 fasteners have an inner diameter of 0.060 in.
# 1	# 1 fasteners have an inner diameter of 0.073 in.
# 2	# 2 fasteners have an inner diameter of 0.086 in.
# 3	# 3 fasteners have an inner diameter of 0.099 in.
# 4	# 4 fasteners have an inner diameter of 0.112 in.
# 5	# 5 fasteners have an inner diameter of 0.125 in.
# 6	# 6 fasteners have an inner diameter of 0.138 in.
# 7	# 7 fasteners have an inner diameter of 0.151 in.
# 8	# 8 fasteners have an inner diameter of 0.164 in.
# 9	# 9 fasteners have an inner diameter of 0.177 in.
# 10	# 10 fasteners have an inner diameter of 0.190 in.
# 12	# 12 fasteners have an inner diameter of 0.216 in.
# 14	# 14 fasteners have an inner diameter of 0.242 in.
1/4”	1/4” fasteners have an inner diameter of .250 in.
# 16	# 16 fasteners have an inner diameter of 0.268 in.
# 18	# 18 fasteners have an inner diameter of 0.294 in.
5/16”	5/16” fasteners have an inner diameter of .3125 in.
# 20	# 20 fasteners have an inner diameter of 0.320 in.
# 24	# 24 fasteners have an inner diameter of 0.372 in.
3/8”	3/8” fasteners have an inner diameter of .375 in.
7/16”	7/16” fasteners have an inner diameter of .4375 in.
1/2”	1/2” fasteners have an inner diameter of .500 in.
5/8”	5/8” fasteners have an inner diameter of .625 in.
3/4”	3/4” fasteners have an inner diameter of .750 in.
7/8”	7/8” fasteners have an inner diameter of .875 in.
1”	1” fasteners have an inner diameter of 1.000 in.
1 1/8”	1 1/8” fasteners have an inner diameter of 1.125 in.
1 1/4”	1 1/4” fasteners have an inner diameter of 1.250 in.

1 3/8”	1 3/8” fasteners have an inner diameter of 1.375 in.
1 1/2”	1 1/2” fasteners have an inner diameter of 1.500 in.
1 3/4”	1 3/4” fasteners have an inner diameter of 1.750 in.
2”	2” fasteners have an inner diameter of 2.000 in.
2 1/4”	2 1/4” fasteners have an inner diameter of 2.250 in.
2 1/2”	2 1/2” fasteners have an inner diameter of 2.500 in.
2 3/4”	2 3/4” fasteners have an inner diameter of 2.750 in.
3”	3” fasteners have an inner diameter of 3.000 in.
Other	Other, unlisted inch sizes.

Metric	
Your choices are...	
M1.6	M1.6 fasteners have an inner diameter of 1.6 mm.
M2	M2 fasteners have an inner diameter of 2.0 mm.
M2.5	M2.5 fasteners have an inner diameter of 2.5 mm.
M3	M3 fasteners have an inner diameter of 3.0 mm.
M3.5	M3.5 fasteners have an inner diameter of 3.5 mm.
M4	M4 fasteners have an inner diameter of 4.0 mm.
M5	M5 fasteners have an inner diameter of 5.0 mm.
M6	M6 fasteners have an inner diameter of 6.0 mm.
M8	M8 fasteners have an inner diameter of 8.0 mm.
M10	M10 fasteners have an inner diameter of 10.0 mm.
M12	M12 fasteners have an inner diameter of 12.0 mm.
M14	M14 fasteners have an inner diameter of 14 mm.
M16	M16 fasteners have an inner diameter of 16 mm.
M18	M18 fasteners have an inner diameter of 18 mm.
M20	M20 fasteners have an inner diameter of 20 mm.
M22	M22 fasteners have an inner diameter of 22 mm.
M24	M24 fasteners have an inner diameter of 24 mm.
M25	M25 fasteners have an inner diameter of 25 mm.
M26	M26 fasteners have an inner diameter of 26 mm.
M27	M27 fasteners have an inner diameter of 27 mm.

M28	M28 fasteners have an inner diameter of 28 mm.
M30	M30 fasteners have an inner diameter of 30 mm.
M32	M32 fasteners have an inner diameter of 32 mm.
M33	M33 fasteners have an inner diameter of 33 mm.
M35	M35 fasteners have an inner diameter of 35 mm.
M36	M36 fasteners have an inner diameter of 36 mm.
M38	M38 fasteners have an inner diameter of 38 mm.
M40	M40 fasteners have an inner diameter of 40 mm.
M42	M42 fasteners have an inner diameter of 42 mm.
M48	M48 fasteners have an inner diameter of 48 mm.
M56	M56 fasteners have an inner diameter of 56 mm.
M64	M64 fasteners have an inner diameter of 64 mm.
Other	Other, unlisted metric sizes.
Search Logic:	Products with the selected attribute will be returned as matches. Leaving or selecting "No Preference" will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Length

Length	The length of the fastener.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Head Type

Head Type	
Your choices are...	
Binding Head	A binding head has a rounded top surface with slightly tapered sides and a flat bearing.
Button Head	A button head has a rounded top surface with cylindrical sides and a flat bearing surface.
Fillister Head	A fillister head has a slightly convex top surface with cylindrical sides and a flat bearing surface. An alternate, older term for fillister head is cheese head.
Five-sided	A five-sided head is shaped like a pentagon. These fasteners are tightened and loosened with special wrenches and are designed for specialized applications, such as the valves of fire hydrants.
Flat Head	A flat head has a flat top surface and a conical bearing surface.
Hexagon Head	A hexagonal head has six equal sides, a flat top, and a flat bearing surface. Fasteners with this head type are designed to be tightened and loosened with a wrench.
Oval Head	An oval head has a rounded top surface and a conical bearing surface, usually with an included angle of 82°.

Pan Head	A pan head has a flat top, cylindrical sides, and a flat bearing surface. A recessed pan head fastener has a rounded top, cylindrical sides and a flat bearing surface.
Round Head	A round head has a rounded, elliptical top surface and a flat bearing surface.
Socket Head Cap	Socket head cap screws have a cylindrical head, a hexagonal socket drive, and a flat bearing surface.
Square Head	A square head has four equal sides, a flat top, and a flat bearing surface. Square head fasteners are designed to be tightened and loosened with a wrench.
Truss Head	A truss head has a low head height, a rounded top surface, and a flat bearing surface.
Washer Head	Washer head screws have a washer-like bearing surface that distributes the load over a larger area.
Other	Other, unlisted head types.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Drive Type

Drive Type	
Your choices are...	
12-Point	Drives have 12 points of contact and are tightened and loosed with a special wrench.
Bristol Spline	Bristol spline drives are recessed drives with four to six splines that prevent wrenches from camming out. Most products have six splines; however, two smaller-sized models have only four spines.
Clutch	Clutch drives are recessed and shaped like a bowtie.
Hex Socket/Allen	Hex socket drives or Allen drives are six-sided. They are turned with a hexagonal wrench or an Allen wrench.
Philips/Frearson	Philips is a recessed, cross-drive system that was designed originally for aluminum screws. During tightening, the mating Phillips screwdriver will slip before the drive strips. Frearson drives are a cross-drive system more commonly known as ANSI Type II. Frearson drives have a sharper point (73° included angle) than Phillips drives (123° included angle).
Posidriv®	Posidriv® (Phillips Screw Company) is a recessed drive called ANSI Type 1A. It is similar to a standard Phillips drive, but has an additional cross-recess at 90°. Posidriv fasteners are well-suited for applications that require high tightening torque because the driver will not slip upon tightening.
Slotted	A slotted drive has a standard, slotted recess. This is one of the oldest drive types.
Square/Robertson	Square drives or Robertson drives are four-sided, recessed drives. Square drives do not cam out when tightened and allow for four different driver positions.
Supadriv®	Supadriv® (Trifast Plc.) is a recessed drive that resembles a Phillips cross-drive, but has a smaller square drive in the center. A Supadriv driver will turn a Posidriv fastener.
Torx®	Torx® is a six-pointed, lobed or star-pattern recess with straight walls. Torx is a registered trademark of the Camcar Corporation, a division of Textron Industries.
Other	Other, unlisted, or proprietary drive types.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Material

Material	
Your choices are...	
Aluminum	Aluminum is a bluish, silver-white, malleable, ductile, light, trivalent, metallic element that has good electrical and thermal conductivity, high reflectivity, and resistance to oxidation. Aluminum is lighter than steel, but not as strong.
Brass	Brass provides good strength, excellent high-temperature ductility, reasonable cold ductility, good conductivity, excellent corrosion resistance, good bearing properties and low magnetic permeability.
Bronze/Copper Base Alloy	A copper base alloy is metal composed of copper as the main alloying metal and one or more other metals, such as tin, zinc, or phosphorus. Silicon bronze is one typical fastener alloy.
Copper	Copper is a common, reddish, metallic element that is both ductile and malleable. Copper is one of the best conductors of heat and electricity. It also exhibits good corrosion resistance.
Molybdenum	Molybdenum is a chemical element with the symbol Mo and an atomic number of 42. Molybdenum has a very high melting point (the sixth highest of any element) and is commonly used in high-strength steel alloys.
Plastic	Products are made of thermoplastic materials.
Steel	Steel is a commercial iron that contains carbon in any amount up to about 1.7 percent as an essential alloying constituent. Many grades of carbon and alloy steels are used as fastener materials. Steel may require coating for protection against corrosion.
Hardened Steel	Steel can be hardened in a number of ways. Methods include quenching techniques in oil and water, and passing the steel through induction chambers. During processing, the rapid cooling of steel freezes, traps and packs the carbon atoms inside the shrunken iron crystals. The resulting steel is very hard and brittle. Hardened steel is strong, but cannot absorb much shock or impact without breaking.
Stainless Steel	Stainless steel is chemical and corrosion resistant and can have relatively high stress ratings. Many grades are used in fasteners. Often, stainless steel does not require an anti-corrosion coating; however, most stainless steels cannot be hardened to the same degree as carbon steels.
Superalloy	Superalloys are high-performance alloys that exhibit the following features: mechanical strength, good surface stability, resistance to corrosion and oxidation, and resistance to creep at high temperatures. Common superalloys include Hastelloy®, Inconel®, Incoloy®, and Monel®. The attributes of Hastelloy® alloys include high resistance to uniform attack and localized corrosion resistance. It also provides stress corrosion cracking resistance, and ease of welding and fabrication. Hastelloy is a registered trademark of Haynes International, Inc. Inconel® and Incoloy® (Special Metals Corporation) provide good strength and excellent resistance to oxidation and carbonization in high temperatures environments, and in many aqueous environments. These proprietary materials are used in process piping, heat exchangers, heating element sheathing and nuclear steam generator tubing. Typically, Inconel and Incoloy are used at service temperatures below 650° C (1200° F). Monel® (Special Metals Corporation) is a proprietary, high-strength alloy that offers resistance to a range of corrosive media, including seawater, hydrofluoric and sulfuric acids, and alkalis.
Titanium	Titanium is a hard, lustrous, silvery element that is relatively abundant in the Earth's crust. It is valued for its lightness, strength, and corrosion resistance. Titanium is used widely in the aerospace industry and in medical products such as replacement joints. When alloyed with other metals, especially steel, titanium adds strength and oxidation resistance.

Other	Other unlisted, specialized, or proprietary metallic materials.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Fastener Standards

Fastener Standards	
Your choices are...	
AIA/NAS	Dimensional and material standards for aircraft fasteners are developed by the Aerospace Industries Association (AIA) and/or its National Aerospace Standards Committee (NASC). All drawings and specifications have a NAS or NASM prefix. NAS is an acronym for National Aerospace Standards. NASM is an acronym for National Aerospace Standards, Metric.
AN/MS	Dimensional standards for aircraft fasteners are developed by the Aeronautical Standards Group. All drawings have a prefix of AN or MS. Products are suitable for army, navy, or air force use.
ASME/ANSI	The American Society of Mechanical Engineers (ASME) B18 standard specifies all ASME B18 fastener products with a single 18-digit PIN code system. Approved by the American National Standards Institute (ANSI) and adopted by the U.S. Department of Defense, the ASME B18.24 PIN system is a self-contained code that covers 788 unique B18 fastener types from 72 ASME B18 source documents. The PIN code system is fully parametric, uniform across all fastener types, and is intended as a digital alternative to the traditional plain text fastener product callout prescribed in the "Designation" or "Ordering" section of the applicable source document.
BS	Dimensional and material standards developed by the British Standards Institution. Standards are designated with a BS prefix. The British Standards International (BSI) Kitemark indicates that products are tested regularly against the requirements of an appropriate BSI standard, and that the manufacturer's quality system is assessed at least twice a year to ensure continued quality production.
DIN	DIN is an acronym for Deutsches Institut für Normung (DIN), a German national organization for standardization. Most metric fasteners are manufactured according to DIN standards. Although DIN predates the International Standards Organizations (ISO), DIN standards are being revised to more closely match ISO standards. Ordering DIN fasteners requires three pieces of information: the DIN identifier, which defines the style of the fastener; the material (e.g., 8.8 Steel, 316 Stainless, Hastelloy C276); and the coating or plating (if any).
ISO	The International Standards Organization (ISO) is a worldwide federation of national standards organizations from over 100 countries. ISO's mission is to facilitate the international exchange of goods and services, and to foster cooperation in the spheres of intellectual, technological, and economic activity. ISO standards for metric fasteners are gaining recognition rapidly. They will probably become global standards.
JIS	Japanese Industrial Standard (JIS) is largely based on DIN; however, some standards have been modified to meet the needs of the Japanese market. Most of the fasteners used in electronic equipment manufactured in Japan comply with the JIS standard.
SAE	Fasteners meet standards developed by the Society of Automotive Engineers (SAE), a worldwide organization that establishes industry standards for the testing, measurement, and design of automobiles and their components.
Other	Other unlisted, specialized, or proprietary fastener standards.

Rivets

Rivet Type

Rivet Type	
Your choices are...	
Belt	A belt rivet is a large-diameter, countersunk, headed rivet specifically designed to fasten belting material.
Blind	Blind rivets are used where the rivet is not accessible from both sides. They have an integral mandrel that permits the formation of an upset on the blind end of the rivet. As the mandrel is pulled into or against the body being riveted, it breaks at or near the intersection of the mandrel shank and its upset end. Blind rivets are often used as an alternative to solid rivets. They are sometimes called breakstem or POP® rivets. POP is a registered trademark of Emhart Teknologies.
Brake and Clutch	Brake and clutch products are manufactured to dimensional and technical standards in solid, semi-tubular or fully tubular form. They are made from a variety of materials, including aluminum, steel, copper and brass. Products include rivets for brake linings, clutch facings, and disc brake pads.
Collar	Collar rivets are a variation of shoulder rivets. A collar rivet does not have a head. Instead, the rivet has features to captivate on both sides of a center shoulder.
Compression	Compression rivets are comprised of two members: a tubular female half and a solid male rivet. The two pieces are placed in a pre-drilled hole with the solid male rivet on one side and the female tubular half on the other. The diameter of the solid rivet is matched to the diameter of the hole in the tubular rivet so that a compression or press fit is formed when the two halves are squeezed together.
Drive	Drive rivets have a center pin that when driven in flush with the rivet head, causes the rivet to expand on the back side and secure. Drive rivets are also called drive pin rivets.
N-type	N-type rivets have a break mandrel and a semi-filled core. They are often used to tack light sheets together where minimal stresses are exerted. N-type rivets are also called N rivets or nail rivets.
Panel	Panel rivets are one of many types of rivets used to secure panels.
Plastic	Plastic rivets are ideal for non-conductive and non-corrosive environments. They can be used to fasten plastic to plastic, metal, or fiberglass. Brand names for plastic rivets include Uni-Tap®, a registered trademark of U.S.E. Diamond, Inc.
Push	Push rivets are reusable rivets that are designed for fixing panels or joining components together. Push rivets are easy to install and do not require tooling.
Q-type	The Q-type rivet features a break mandrel and filled core. It is similar to the N-type rivet, but has a mandrel neck that is knurled to lock the mandrel in the rivet body and assist in creating a seal. The mandrel breaks relatively flush with the rivet head in midgrip, increasing shear strength. Q-type rivets are used in applications that require shear strength greater than that provided by N-type rivets.
Ratchet	A ratchet rivet is a two-part fastener that attaches panels by pressing the head into the shaft. The head can then be unscrewed to dismantle the panels. Ratchet rivets have a finished head on both sides. They are usually made of plastic.
Rivet Nut	Rivet nuts are internally-threaded fasteners that are designed to be used as a rivet from one side of a workpiece or assembly, and to provide threads for a screw or bolt to be used in the assembly of a mating part.

Self Piercing	Self-piercing rivets do not require pre-drilled holes. Instead, the rivet shaft pierces both materials before the connection is made. Because a self-piercing rivet must penetrate the material, the strength of the materials to be joined must be limited with respect to the rivet.
Semi-tubular	Semi-tubular rivets have a coaxial, cylindrical or tapered hole in the end opposite the head, the depth of which does not exceed 112% of the mean shank diameter. Semi-tubular rivets are similar to solid rivets, but require much less insertion force, allowing longer rivets to be used without causing the rivet shank to buckle. Semi-tubular rivets are used in impact riveting applications. Upon impact, the rivet end flares outward and follows the shape of the tool, until it rolls up against the surface of the workpiece.
Shoulder	A shoulder rivet has an integral shoulder surface below the rivet head.
Snap	Snap rivets are two-piece rivets that snap together.
Solid	Solid rivets have completely solid shafts with no internal cavities. Bending, hammering, or twisting the protruding end creates a strong, secure connection. Solid rivets are more difficult to attach than other types of rivets. They must be inserted with powered machinery. Variations of solid rivets include products with round heads and products with flat heads.
Split	Split rivets have two shanks that are spread apart once the rivet has been inserted. Split rivets are also called bifurcated rivets.
Tinners'	Tinners' rivets are small fasteners with the same style head as flat head rivets. They are larger in diameter than flat head rivets and are used in sheet metal work.
T-type	The T-type or peel rivet features a break mandrel and filled core. During installation, knife action between the mandrel head and rivet shank splits the rivet into three petals that draw the sheets together. A T-type rivet mandrel breaks nearly flush with the rivet head in maximum grip. Because they are insensitive to hole size, T-type rivets work in oversized or elliptical holes.
Tubular	Tubular rivets have a coaxial, cylindrical hole in the headless end that exceeds 112% of the rivet shank diameter. They are designed for securing by splaying the end. Tubular rivets are used in self-piercing applications, where a pre-drilled hole is not required. Tubular rivets are also used in a wide variety of manufacturing areas, including industrial, aerospace and automotive applications.
Other	Other unlisted, specialized, or proprietary rivet type.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Head Style

Head Style	
Your choices are...	
Brazier	Brazier or modified brazier rivets have an oval-shaped head. They are used in standard applications.
Cone/Pan	Cone or pan head rivets have a high profile. A cone head has a flat bearing surface and a flat top surface that rounds into a cylindrical side surface.
Countersunk	Countersunk rivets should be specified whenever a flush surface is required. They are sometimes called flush head rivets.
Dome/Button	Dome head rivets or buttonheads are the most versatile and most commonly specified head style. This type of fastener features a low profile and a neat appearance. The dome head has twice the diameter of the rivet body, providing enough bearing surface to retain all but extremely soft or brittle materials.

Flat	Rivets have a flat head and a conical bearing surface. Flat head rivets may be countersunk or flush.
Large Flange	Large flange rivets have twice the underhead bearing surface of dome head rivets. Typically, large flange rivets are used in applications where soft or brittle materials must be joined to a rigid backing material.
Mushroom	Rivets have a mushroom-shaped head with a large, underhead footprint to distribute the load on softer materials.
Oval	Rivets have an oval-shaped head.
Round/Snap	The cross-sectional shape of the rivet head is round. Round rivets are sometimes called snap head rivets.
Truss	Truss head rivets are used in applications where a low profile head is desired. In comparison to the fastener size, the diameter of the truss head is larger than the diameter of the corresponding round head.
Universal	Universal rivets have an oval-shaped head. Some manufactures refer to universal rivets as mushroom, brazier, oval or truss head rivets.
Other	Other unlisted, specialized, or proprietary head style.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Dimensions

Body Diameter	Body diameter is the diameter of the rivet. The clearance between the rivet and the hole in which the rivet is inserted should be about 1/32 in. or less. For example, the hole for a 1/4 in. rivet should be no more than 9/32 in. Rivet size capabilities may vary with rivet type and material. Consult manufacturers for details.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Grip Length	Grip length is the minimum and maximum thickness of all of the materials or parts that a fastener is designed to secure when assembled.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Shear Strength	Shear strength is resistance to transverse loading. It is usually defined as force in Newtons (N) or pounds (lbs).
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Material/Finish

Material	
Your choices are...	
Aluminum	Aluminum is a bluish, silver-white, malleable, ductile, light, trivalent, metallic element that has good electrical and thermal conductivity, high reflectivity, and resistance to oxidation. Aluminum is lighter than steel, but not as strong.
Brass	Brass provides good strength, excellent high-temperature ductility, reasonable cold ductility, good conductivity, excellent corrosion resistance, good bearing properties and low magnetic permeability.
Bronze/Copper Base Alloy	A copper base alloy is a metal with copper as the main alloying metal and one or more other metals, such as tin, zinc, or phosphorus. Silicon bronze is a typical fastener alloy.
Copper	Copper is a common, reddish, metallic element that is both ductile and malleable. Copper is one of the best conductors of heat and electricity. It also exhibits good corrosion resistance.
Inconel®/Incoloy®	Inconel® and Incoloy® (Special Metals Corporation) provide good strength and excellent resistance to oxidation and carbonization in high temperatures environments, and in many aqueous environments. These proprietary materials are used in process piping, heat exchangers, heating element sheathing and nuclear steam generator tubing. Typically, Inconel and Incoloy are used at service temperatures below 650° C (1200° F).
Monel®	Monel® (Special Metals Corporation) is a proprietary, high-strength material that offers resistance to a range of corrosive media such as seawater, hydrofluoric and sulfuric acids, and alkalis.
Plastic	Products are made of thermoplastic materials.
Rubber	Synthetic rubber includes grades such as neoprene, silicone, and Norprene® (Norton Co.). Rubber fasteners are used in specialized applications for vibration damping and silencing.
Steel	Steel is a commercial iron that contains carbon in any amount up to about 1.7 percent as an essential alloying constituent. Many grades of carbon and alloy steels are used as fastener materials. Steel may require coating for protection against corrosion.
Hardened Steel	Steel can be hardened in a number of ways. Methods include quenching techniques in oil and water, and passing the steel through induction chambers. During processing, the rapid cooling of steel freezes, traps and packs the carbon atoms inside the shrunken iron crystals. The resulting steel is very hard and brittle. Hardened steel is strong, but cannot absorb much shock or impact without breaking.
Stainless Steel	Stainless steel is chemical and corrosion resistant and can have relatively high stress ratings. Many grades are used in fasteners. Often, stainless steel does not require an anti-corrosion coating; however, most stainless steels cannot be hardened to the same degree as carbon steels.
Titanium	Titanium is a hard, lustrous, silvery element that is relatively abundant in the Earth's crust. It is valued for its lightness, strength, and corrosion resistance. Titanium is used widely in the aerospace industry and in medical products such as replacement joints. When alloyed with other metals, especially steel, titanium adds strength and oxidation resistance.

Other	Other unlisted, specialized, or proprietary metallic materials.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Finish	
Your choices are...	
Anodize	Anodizing is a process for finishing aluminum alloys that uses the electrolytic oxidation of the aluminum surface to produce a protective oxide coating. The anodic coating consists of hydrated aluminum oxide and is resistant to corrosion and abrasion. Conventional coatings are 0.1 to 1.0 mils thick and are mostly transparent, but may be colored. Anodizing preserves the natural luster and texture of the metal. Anodized coatings are hard, durable, will never peel, and, under normal conditions, will never wear through. Standard and decorative colors are available. This category includes hard-coat anodizing.
Black Oxide	Black oxide is a conversion coating that causes virtually no dimensional change. It is a uniform, continuous conversion of the existing metal to a black form of rust. Black oxide is used on components where tight tolerances are needed. It is used mostly as a decorative coating.
Chrome	Chrome finish is an electroplated coating that is applied for purposes of lubricity, wear resistance, and decoration. Chrome provides a bright and highly reflective finish.
Galvanized	Galvanizing immerses clean, oxide-free iron or steel into molten zinc in order to apply a zinc coating that is metallurgically bonded to the iron or steel surface. The zinc coating protects the surface against corrosion in two ways. First, it shields the base metal from the atmosphere. Second, because zinc is more electronegative than iron or steel, the coating reacts with corroding agents, providing a longer service life for the part.
Gold	Gold plating provides total resistance to oxidation and corrosion. It is electrically conductive and can be alloyed with cobalt to produce a wear-resistant finish.
Nickel Plated	Nickel plating is a common form of electrolytic deposition.
Phosphate	Phosphate coatings are applied via the chemical or electrochemical treatment of a metal's surface. These corrosion-resistant coatings provide a surface for the improved adhesion of primers and paints.
Silver	Silver is the most electrically conductive plating finish. It is used in electronic fasteners for electrical conductivity and signal transmittance. Silver oxidizes rapidly, but resists corrosion.
Tin	Tin plating is applied to electronic fasteners that are made of brass.
Zinc Plated	Zinc plating is a common form of plating that provides corrosion resistance.
Zinc Chromate (Yellow)	Fasteners have a yellow zinc chromate finish.
Other	Other unlisted finish.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Fastener Standards

Fastener Standards	
Your choices are...	
AIA/NAS	Dimensional and material standards for aircraft fasteners are developed by the Aerospace Industries Association (AIA) and/or its National Aerospace Standards Committee (NASC). All drawings and specifications have a NAS or NASM prefix. NAS is an acronym for National Aerospace Standards. NASM is an acronym for National Aerospace Standards, Metric.
AN/MS	Dimensional standards for aircraft fasteners are developed by the Aeronautical Standards Group. All drawings have a prefix of AN or MS. Products are suitable for army, navy, or air force use.
ASME/ANSI	The American Society of Mechanical Engineers (ASME) B18 standard specifies all ASME B18 fastener products with a single 18-digit PIN code system. Approved by the American National Standards Institute (ANSI) and adopted by the U.S. Department of Defense, the ASME B18.24 PIN system is a self-contained code that covers 788 unique B18 fastener types from 72 ASME B18 source documents. The PIN code system is fully parametric, uniform across all fastener types, and is intended as a digital alternative to the traditional plain text fastener product callout prescribed in the "Designation" or "Ordering" section of the applicable source document.
BS	Dimensional and material standards developed by the British Standards Institution. Standards are designated with a BS prefix. The British Standards International (BSI) Kitemark indicates that products are tested regularly against the requirements of an appropriate BSI standard, and that the manufacturer's quality system is assessed at least twice a year to ensure continued quality production.
DIN	DIN is an acronym for Deutsches Institut für Normung (DIN), a German national organization for standardization. Most metric fasteners are manufactured according to DIN standards. Although DIN predates the International Standards Organizations (ISO), DIN standards are being revised to more closely match ISO standards. Ordering DIN fasteners requires three pieces of information: the DIN identifier, which defines the style of the fastener; the material (e.g., 8.8 Steel, 316 Stainless, Hastelloy C276); and the coating or plating (if any).
ISO	The International Standards Organization (ISO) is a worldwide federation of national standards organizations from over 100 countries. ISO's mission is to facilitate the international exchange of goods and services, and to foster cooperation in the spheres of intellectual, technological, and economic activity. ISO standards for metric fasteners are gaining recognition rapidly. They will probably become global standards.
JIS	Japanese Industrial Standard (JIS) is largely based on DIN; however, some standards have been modified to meet the needs of the Japanese market. Most of the fasteners used in electronic equipment manufactured in Japan comply with the JIS standard.
SAE	Fasteners meet standards developed by the Society of Automotive Engineers (SAE), a worldwide organization that establishes industry standards for the testing, measurement, and design of automobiles and their components.
Other	Other unlisted, specialized, or proprietary fastener standards.

Electrical Wire

Conductor Type

Your choices are...	
Solid	A single solid metal piece drawn into a conductor.
Stranded	Several small conductors twisted together to form one flexible conductor.
Flat Strap	A single solid metal piece drawn into a flat conductor.
Flat Braid	Several small conductors braided together to form one flexible flat conductor.
Other	Any other conductor type not listed.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Cable Conductor:	A wire or combination of wires not insulated from one another, suitable for carrying electric current.
Your choices are...	
Aluminum and Aluminum Alloys	Aluminum is a metal characterized by high resistance to corrosion, good electrical and thermal conductivity, and a density which is about one-third or less that of steel, copper, or nickel. Aluminum can be used as a power conductor, or for wire and cable shielding.
Aluminum Clad Steel	Wires with a steel core to which an outer shell of aluminum is fused.
Copper Clad Steel	Wires with a steel core to which an outer shell of copper is fused.
Copper and Copper Alloys	On a volume basis, copper has the conductivity of common (non-precious) metals. Copper and copper alloys offer excellent corrosion resistance, high thermal conductivity, and ease of fabricating, joining and forming. The strength-to-weight ratio of copper is relatively low. It lose strength at elevated temperatures. Copper is the most widely used electrical conductor in wires and cables.
Other	Other unlisted cable conductors.
Search Logic:	Products with the selected attribute will be returned as matches. Leaving or selecting “No Preference” will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Conductor Size

North American (AWG)	American wire gauge (AWG) is a U.S. standard for non-ferrous wire conductor sizes. Non-ferrous materials include copper and aluminum. The term "gauge" refers to the wire's diameter. The higher the gauge number, the smaller the diameter and the thinner the wire. Thicker wire carries more current because it has less electrical resistance over a given length. Typical household wiring is AWG 12 or 14. Telephone wire is usually AWG 22, 24, or 26.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
AWG 2/0, 3/0, 4/0 or Larger?	AWG 2/0, 3/0, and 4/0 are also referred to as 00, 000 and 0000, respectively. Sizes larger than 4/0 are measured in circular mils (CM) or thousand circular mils (MCM).
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
International (mm^2)	Outside of North America, wire conductor sizes are measured in square millimeters (mm^2).
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Number of Strands:	Conductors are composed of one or more groups of wires. Typically, the wires in a stranded conductor are twisted or braided together. Stranding makes wires more flexible.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Flat Conductor Size

Width:	The width of the flat conductor.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Thickness:	The thickness of the flat conductor.

Lighting

Lamp Type

Your choices are...	
Fluorescent	Products are designed for fluorescent lamps.
Halogen	Products are designed for halogen lamps.
Incandescent	Products are designed for incandescent lamps.
LED	Products are designed for light-emitting diode (LED) lamps.
Mercury	Products are designed for mercury lamps.
Metal Halide	Products are designed for high-intensity discharge lamps such as metal halide lamps.
Sodium	Products are designed for sodium lamps.
Xenon	Products are designed for xenon lamps.
Other	Other unlisted lamp types.

Lamp Type

Your choices are...	
Fluorescent Lamps	Fluorescent lamps are high-efficiency lamps that use electrical discharge through low-pressure mercury vapor to produce ultraviolet (UV) energy, which is then transformed into visible light.
Halogen Lamps	Halogen lamps are high pressure incandescent lamps containing halogen gases such as iodine or bromine, which allow the filaments to be operated at higher temperatures and higher efficacies.
Heat Lamps	Heat lamps are also known as infrared emitters, infrared bulbs, infrared tubes, or infrared lamps. Heat lamps differ from illuminating lamps in their low filament temperature, resulting in much less light and more infrared radiation.
High Intensity Discharge Lamps	High intensity discharge lamps (HID) contain compact arc tubes, which enclose various gases and metal salts, operating at relatively high pressures and temperatures. HID lamps are often used as UV light sources.
Incandescent Lamps	Incandescent lamps generate light by passing an electric current through a thin filament wire (usually of tungsten) until the wire is extremely hot.
LED Lamps	LED lamps are light emitting diode arrays with traditional lamp ballasts.
Projection Lamps	Projection lamps use a built-in reflector to concentrate light in a particular direction. They are used in applications such as slide projection, microfilm, overhead projection, movies, medical/scientific instruments, airport runways, and others.
Spectral Lamps	Spectral lamps radiate line spectra of various gases and metal vapors with high brightness and spectral purity.

Stage Lamps	Stage lamps are used for stage, studio, or television lighting.
Other	Any other lamp type not listed.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Flash Lamp?	A flash lamp is a high-intensity discharge lamp for pulsed operation.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Performance

Lamp Power	Lamp power is the wattage of the lamp.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Rated Average Life	Rated average life is the lamp-burning hours to median life expectancy.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Maximum Overall Length	The maximum overall length of the lamp.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Color Temperature	Color temperature is a measure of the visual "warmth" or "coolness" of the light from the lamp. The higher the value, the whiter or "cooler" the light appears.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Mean Lumens	Mean lumens is the average lamp output over a designated amount of time, usually 40 to 50 % of rated lamp life. A lumen is the standard international (SI) unit of luminous flux or quantity of light.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Lamp features

Compact	A compact fluorescent lamp is sized so that it screws into a regular incandescent light bulb socket.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Reflector	The infrared lamp has a built-in reflector to increase light intensity in the desired direction.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Shatterproof	The lamp is coated to prevent shattering.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Twin Tube	The infrared lamp has two tubes with filaments for higher intensity emission.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Water Cooled	The lamp is water cooled for better performance.

Incandescent

Performance

Lamp Power	Lamp power is the wattage of the lamp.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Rated Average Life	Rated average life is the lamp-burning hours to median life expectancy.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Color Temperature	Color temperature is a measure of the visual "warmth" or "coolness" of the light from the lamp. The higher the value, the whiter or "cooler" the light appears.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Mean Lumens	Mean lumens is the average lamp output over a designated amount of time, usually 40 to 50 % of rated lamp life. A lumen is the standard international (SI) unit of luminous flux or quantity of light.

Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Maximum Overall Length	The maximum overall length of the lamp.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Light Center Length	The distance between the center of the filament and the light center length reference plane of the lamp.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Lamp features

Compact	A compact fluorescent lamp is sized so that it screws into a regular incandescent light bulb socket.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Reflector	The infrared lamp has a built-in reflector to increase light intensity in the desired direction.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Shatterproof	The lamp is coated to prevent shattering.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Twin Tube	The infrared lamp has two tubes with filaments for higher intensity emission.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Water Cooled	The lamp is water cooled for better performance.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Lamp Bases

Your choices are...	
1" Ribbon Leads	1" ribbon leads.
4" Leads	4" Leads.
6" Flex Leads	6" flexible leads.
2-Pin	2 Pins make the connection for the lamp.
4-Pin (Circling)	Circling is a four-pin connection.
Ad medium	Ad medium is halfway between a medium based and a mogul screw base.
Ad medium Skirted	Ad medium is halfway between a medium based and a mogul screw base. The term "skirted" means that the base flares out at the top.
Base Restricted Mogul	Movement of the base is restricted. The restricted mogul base is used for many mercury, metal halide, and sodium lamps. It also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Bi-Pin T-5	Bi-pin T-5 uses a miniature-sized, two-pin connection.
Bi-Pin T-8	Bi-pin T-8 uses a small, two-pin connection.
Bi-Pin T-10	Bi-pin T-10 uses a medium-sized, two-pin connection.
Bi-Pin T-12	Bi-pin T-12 uses a large, two pin connection.
Candelabra	Candelabra bases are used mostly for decorative lighting such as chandeliers. 15/32 inch.
Candelabra Refocus	Used for decorative lighting, chandeliers. 15/32 inch. No screw, refocus.
Double Contact Bayonet	No screw, two bayonets on bottom make contact.
Double Contact Bayonet Candelabra	The candelabra base has a double bayonet connection instead of a screw connection.
Extended Mogul End Prong	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base.
G-12	G-12 is a bi-pin base.
Intermediate	Intermediate bases are used for decorative lighting such as chandeliers. 21/32 inch.
Medium	The medium base is the standard household base for lamps up to about 300 W. Medium bases are also used for a few mercury and sodium lamps under 100 W.
Medium IPost	Standard household lamp base for lamps up to about 300 watts also used for a few mercury and sodium lamps under 100 watts. No screw, IPost connection.
Medium Refocus	Standard household lamp base for lamps up to about 300 watts also used for a few mercury and sodium lamps under 100 watts. No screw, Refocus.

Medium Skirted	The medium base is the standard household base for lamps up to about 300 W. Medium bases are also used for a few mercury and sodium lamps under 100 W. The term "skirted" means that the base flares out at the top.
Miniature Bi-Pin	Two pin connection.
Miniature Candelabra	Miniature candelabra bases are used mostly for flashlight lamps and instrument panel lamps, typically under 30 V.
Miniature Screw	A small screw base.
Mogul	Mogul bases are used for most mercury, metal halide, and sodium lamps. They are also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Mogul End Prong	Bases are used for most mercury, metal halide, and sodium lamps. They are also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base. The base has prongs instead of threads.
Mogul IPost	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base. No screw, iPost connection.
Mogul Refocus	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base. The base has two prongs as opposed to thread.
Mogul End Prong	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base. No screw, end prong connection.
PG-12	PG-12 is smaller than a G-12 base, but still a bi-pin base.
Position Oriented Mogul	The lamp has a particular orientation determined by the base. The position-oriented mogul base is used for many mercury, metal halide, and sodium lamps. It is also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Recessed Double Contact T-8	Recessed double-contact T-8 uses a small, recessed, two-pin connection.
Recessed Double Contact T-12	Recessed double-contact T-12 uses a large, two-pin connection.
Recessed Single Contact	The lamp base has a recessed single contact.
Screw Terminals	Screws are used to fix and tighten connection.
Single Contact Bayonet Candelabra	The candelabra base has a single bayonet connection instead of screw connection.
Single Pin T-6	Single-pin T-6 uses a small, single-pin connection.
Single Pin T-8	Single-pin T-8 uses a medium-sized, single-pin connection.
Single Pin T-12	Single-pin T-12 uses a large, single-pin connection.

Three Contact Medium	The medium base is the standard household base for lamps up to about 300 W. Medium bases are also used for a few mercury and sodium lamps under 100 W. The three-contact medium base has thicker threads than an ordinary medium base.
Three Contact Mogul	Mogul bases are used for most mercury, metal halide, and sodium lamps. They are also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Other Lamp Bases	Other unlisted lamp bases.
Search Logic:	Products with the selected attribute will be returned as matches. Leaving or selecting "No Preference" will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Filament Designation

Filament Type	Filament designations starting with the letter "C" indicate a coiled wire filament. The letters or numbers after the C indicate the positioning of the filament.
Your choices are...	
C-1	The filament is a coiled filament wire designated C-1.
C-2R	The filament is a coiled filament wire designated C-2R. Short, coiled curbed filament requiring no support.
C-2V	The filament is a coiled filament wire designated C-2V. Short, coiled filament requiring support.
C-5	The filament is a coiled filament wire designated C-5. Concentrated filament for small light sources.
C-6	The filament is a coiled filament wire designated C-6. Short, coiled filament requiring little or no support.
C-6F	The filament is a coiled filament wire designated C-6F.
C-6 Oval	The filament is a coiled filament wire designated C-6 Oval.
C-7A	The filament is a coiled filament wire designated C-7A. Long filament supported at the top and at the base for universal usage.
C-8	The filament is a coiled filament wire designated C-8. Coiled filament mounted in lamp axis. Can be extended like Lemoine lamps.
C-9	The filament is a coiled filament wire designated C-9. Average length filament mounted in the bulb axis.
C-11	The filament is a coiled filament wire designated C-11. Average length, concentrated filament. Well supported, "M" Shape.
C-11V	The filament is a coiled filament wire designated C-11V.

C-13	The filament is a coiled filament wire designated C-13. Flat, very concentrated filament for projection equipment.
C-13D	The filament is a coiled filament wire designated C-13D.
C-17	The filament is a coiled filament wire designated C-17.
C-17A	The filament is a coiled filament wire designated C-17A.
C-22	The filament is a coiled filament wire designated C-22.
C-130	The filament is a coiled filament wire designated C-130.
2CC-8	The filament is a coiled coil filament wire designated 2CC-8. Two short, double-coiled filaments mounted in the bulb axis.
CC-2V	The filament is a coiled coil filament wire designated CC-2V.
CC-6	The filament is a coiled coil filament wire designated CC-6.
CC-8	The filament is a coiled coil filament wire designated CC-8.
CC-11	The filament is a coiled coil filament wire designated CC-11.
CC-13	The filament is a coiled coil filament wire designated CC-13. Flat, very concentrated double-coiled filament for projection equipment.
BP	The filament is designated BP.
FF	The filament is designated FF.
M	The filament is designated M.
MP	The filament is designated MP.
SC	The filament is designated SC.
Other Filament Types	Any other filament type not listed.

Fluorescent

Performance

Lamp Power	Lamp power is the wattage of the lamp.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Rated Average Life	Rated average life is the lamp-burning hours to median life expectancy.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Initial Lumens	Initial lumens are the initial light output. A lumen is the standard international (SI) unit of luminous flux or quantity of light.

Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Mean Lumens	Mean lumens is the average lamp output over a designated amount of time, usually 40 to 50 % of rated lamp life. A lumen is the standard international (SI) unit of luminous flux or quantity of light.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Maximum Overall Length	The maximum overall length of the lamp.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Color Rendering Index	Color rendering index is an indication of a lamp's ability to render object colors in a normal, natural way. A higher number indicates better color appearance. Numbers range from 0 to 100.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Color Temperature	Color temperature is a measure of the visual "warmth" or "coolness" of the light from the lamp. The higher the value, the whiter or "cooler" the light appears.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Lamp features

Compact	A compact fluorescent lamp is sized so that it screws into a regular incandescent light bulb socket.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Reflector	The infrared lamp has a built-in reflector to increase light intensity in the desired direction.

Shatterproof	The lamp is coated to prevent shattering.

Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Twin Tube	The infrared lamp has two tubes with filaments for higher intensity emission.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Water Cooled	The lamp is water cooled for better performance.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Lamp Bases

Your choices are...	
1" Ribbon Leads	1" ribbon leads.
4" Leads	4" Leads.
6" Flex Leads	6" flexible leads.
2-Pin	2 Pins make the connection for the lamp.
4-Pin (Circling)	Circling is a four-pin connection.
Ad medium	Ad medium is halfway between a medium based and a mogul screw base.
Ad medium Skirted	Ad medium is halfway between a medium based and a mogul screw base. The term "skirted" means that the base flares out at the top.
Base Restricted Mogul	Movement of the base is restricted. The restricted mogul base is used for many mercury, metal halide, and sodium lamps. It also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Bi-Pin T-5	Bi-pin T-5 uses a miniature-sized, two-pin connection.
Bi-Pin T-8	Bi-pin T-8 uses a small, two-pin connection.
Bi-Pin T-10	Bi-pin T-10 uses a medium-sized, two-pin connection.
Bi-Pin T-12	Bi-pin T-12 uses a large, two pin connection.
Candelabra	Candelabra bases are used mostly for decorative lighting such as chandeliers. 15/32 inch.
Candelabra Refocus	Used for decorative lighting, chandeliers. 15/32 inch. No screw, refocus.
Double Contact Bayonet	No screw, two bayonets on bottom make contact.
Double Contact Bayonet Candelabra	The candelabra base has a double bayonet connection instead of a screw connection.

Extended Mogul End Prong	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base.
G-12	G-12 is a bi-pin base.
Intermediate	Intermediate bases are used for decorative lighting such as chandeliers. 21/32 inch.
Medium	The medium base is the standard household base for lamps up to about 300 W. Medium bases are also used for a few mercury and sodium lamps under 100 W.
Medium IPost	Standard household lamp base for lamps up to about 300 watts also used for a few mercury and sodium lamps under 100 watts. No screw, IPost connection.
Medium Refocus	Standard household lamp base for lamps up to about 300 watts also used for a few mercury and sodium lamps under 100 watts. No screw, Refocus.
Medium Skirted	The medium base is the standard household base for lamps up to about 300 W. Medium bases are also used for a few mercury and sodium lamps under 100 W. The term "skirted" means that the base flares out at the top.
Miniature Bi-Pin	Two pin connection.
Miniature Candelabra	Miniature candelabra bases are used mostly for flashlight lamps and instrument panel lamps, typically under 30 V.
Miniature Screw	A small screw base.
Mogul	Mogul bases are used for most mercury, metal halide, and sodium lamps. They are also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Mogul End Prong	Bases are used for most mercury, metal halide, and sodium lamps. They are also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base. The base has prongs instead of threads.
Mogul IPost	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base. No screw, iPost connection.
Mogul Refocus	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base. The base has two prongs as opposed to thread.
Mogul End Prong	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base. No screw, end prong connection.
PG-12	PG-12 is smaller than a G-12 base, but still a bi-pin base.
Position Oriented Mogul	The lamp has a particular orientation determined by the base. The position-oriented mogul base is used for many mercury, metal halide, and sodium lamps. It is also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Recessed Double Contact T-8	Recessed double-contact T-8 uses a small, recessed, two-pin connection.
Recessed Double Contact T-12	Recessed double-contact T-12 uses a large, two-pin connection.

Recessed Single Contact	The lamp base has a recessed single contact.
Screw Terminals	Screws are used to fix and tighten connection.
Single Contact Bayonet Candelabra	The candelabra base has a single bayonet connection instead of screw connection.
Single Pin T-6	Single-pin T-6 uses a small, single-pin connection.
Single Pin T-8	Single-pin T-8 uses a medium-sized, single-pin connection.
Single Pin T-12	Single-pin T-12 uses a large, single-pin connection.
Three Contact Medium	The medium base is the standard household base for lamps up to about 300 W. Medium bases are also used for a few mercury and sodium lamps under 100 W. The three-contact medium base has thicker threads than an ordinary medium base.
Three Contact Mogul	Mogul bases are used for most mercury, metal halide, and sodium lamps. They are also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Other Lamp Bases	Other unlisted lamp bases.

Halogen

Performance

Lamp Power	Lamp power is the wattage of the lamp.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Rated Average Life	Rated average life is the lamp-burning hours to median life expectancy.

Maximum Overall Length	The maximum overall length of the lamp.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Mean Lumens	Mean lumens is the average lamp output over a designated amount of time, usually 40 to 50 % of rated lamp life. A lumen is the standard international (SI) unit of luminous flux or quantity of light.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Lamp features

Compact	A compact fluorescent lamp is sized so that it screws into a regular incandescent light bulb socket.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Reflector	The infrared lamp has a built-in reflector to increase light intensity in the desired direction.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Shatterproof	The lamp is coated to prevent shattering.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Twin Tube	The infrared lamp has two tubes with filaments for higher intensity emission.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Water Cooled	The lamp is water cooled for better performance.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Lamp Bases

Your choices are...	
1" Ribbon Leads	1" ribbon leads.
4" Leads	4" Leads.
6" Flex Leads	6" flexible leads.
2-Pin	2 Pins make the connection for the lamp.
4-Pin (Circling)	Circling is a four-pin connection.
Ad medium	Ad medium is halfway between a medium based and a mogul screw base.
Ad medium Skirted	Ad medium is halfway between a medium based and a mogul screw base. The term "skirted" means that the base flares out at the top.
Base Restricted Mogul	Movement of the base is restricted. The restricted mogul base is used for many mercury, metal halide, and sodium lamps. It also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Bi-Pin T-5	Bi-pin T-5 uses a miniature-sized, two-pin connection.

Bi-Pin T-8	Bi-pin T-8 uses a small, two-pin connection.
Bi-Pin T-10	Bi-pin T-10 uses a medium-sized, two-pin connection.
Bi-Pin T-12	Bi-pin T-12 uses a large, two pin connection.
Candelabra	Candelabra bases are used mostly for decorative lighting such as chandeliers. 15/32 inch.
Candelabra Refocus	Used for decorative lighting, chandeliers. 15/32 inch. No screw, refocus.
Double Contact Bayonet	No screw, two bayonets on bottom make contact.
Double Contact Bayonet Candelabra	The candelabra base has a double bayonet connection instead of a screw connection.
Extended Mogul End Prong	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base.
G-12	G-12 is a bi-pin base.
Intermediate	Intermediate bases are used for decorative lighting such as chandeliers. 21/32 inch.
Medium	The medium base is the standard household base for lamps up to about 300 W. Medium bases are also used for a few mercury and sodium lamps under 100 W.
Medium IPost	Standard household lamp base for lamps up to about 300 watts also used for a few mercury and sodium lamps under 100 watts. No screw, IPost connection.
Medium Refocus	Standard household lamp base for lamps up to about 300 watts also used for a few mercury and sodium lamps under 100 watts. No screw, Refocus.
Medium Skirted	The medium base is the standard household base for lamps up to about 300 W. Medium bases are also used for a few mercury and sodium lamps under 100 W. The term "skirted" means that the base flares out at the top.
Miniature Bi-Pin	Two pin connection.
Miniature Candelabra	Miniature candelabra bases are used mostly for flashlight lamps and instrument panel lamps, typically under 30 V.
Miniature Screw	A small screw base.
Mogul	Mogul bases are used for most mercury, metal halide, and sodium lamps. They are also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Mogul End Prong	Bases are used for most mercury, metal halide, and sodium lamps. They are also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base. The base has prongs instead of threads.
Mogul IPost	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base. No screw, iPost connection.
Mogul Refocus	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base. The base has two prongs as opposed to thread.
Mogul End Prong	Used for most mercury, metal halide, sodium lamps, and also incandescent lamps over 300 watts. Lamps requiring more than 200 volts are more likely to have a mogul (or larger) base rather than a medium base. No screw, end prong connection.

PG-12	PG-12 is smaller than a G-12 base, but still a bi-pin base.
Position Oriented Mogul	The lamp has a particular orientation determined by the base. The position-oriented mogul base is used for many mercury, metal halide, and sodium lamps. It is also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Recessed Double Contact T-8	Recessed double-contact T-8 uses a small, recessed, two-pin connection.
Recessed Double Contact T-12	Recessed double-contact T-12 uses a large, two-pin connection.
Recessed Single Contact	The lamp base has a recessed single contact.
Screw Terminals	Screws are used to fix and tighten connection.
Single Contact Bayonet Candelabra	The candelabra base has a single bayonet connection instead of screw connection.
Single Pin T-6	Single-pin T-6 uses a small, single-pin connection.
Single Pin T-8	Single-pin T-8 uses a medium-sized, single-pin connection.
Single Pin T-12	Single-pin T-12 uses a large, single-pin connection.
Three Contact Medium	The medium base is the standard household base for lamps up to about 300 W. Medium bases are also used for a few mercury and sodium lamps under 100 W. The three-contact medium base has thicker threads than an ordinary medium base.
Three Contact Mogul	Mogul bases are used for most mercury, metal halide, and sodium lamps. They are also used for incandescent lamps over 300 W. Lamps requiring more than 200 V are more likely to have a mogul (or larger) base instead of a medium base.
Other Lamp Bases	Other unlisted lamp bases.
Search Logic:	Products with the selected attribute will be returned as matches. Leaving or selecting "No Preference" will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Filament Designation

Filament Type	Filament designations starting with the letter "C" indicate a coiled wire filament. The letters or numbers after the C indicate the positioning of the filament.
Your choices are...	
C-1	The filament is a coiled filament wire designated C-1.
C-2R	The filament is a coiled filament wire designated C-2R. Short, coiled curbed filament requiring no support.
C-2V	The filament is a coiled filament wire designated C-2V. Short, coiled filament requiring support.

C-5	The filament is a coiled filament wire designated C-5. Concentrated filament for small light sources.
C-6	The filament is a coiled filament wire designated C-6. Short, coiled filament requiring little or no support.
C-6F	The filament is a coiled filament wire designated C-6F.
C-6 Oval	The filament is a coiled filament wire designated C-6 Oval.
C-7A	The filament is a coiled filament wire designated C-7A. Long filament supported at the top and at the base for universal usage.
C-8	The filament is a coiled filament wire designated C-8. Coiled filament mounted in lamp axis. Can be extended like Lemoine lamps.
C-9	The filament is a coiled filament wire designated C-9. Average length filament mounted in the bulb axis.
C-11	The filament is a coiled filament wire designated C-11. Average length, concentrated filament. Well supported, "M" Shape.
C-11V	The filament is a coiled filament wire designated C-11V.
C-13	The filament is a coiled filament wire designated C-13. Flat, very concentrated filament for projection equipment.
C-13D	The filament is a coiled filament wire designated C-13D.
C-17	The filament is a coiled filament wire designated C-17.
C-17A	The filament is a coiled filament wire designated C-17A.
C-22	The filament is a coiled filament wire designated C-22.
C-130	The filament is a coiled filament wire designated C-130.
2CC-8	The filament is a coiled coil filament wire designated 2CC-8. Two short, double-coiled filaments mounted in the bulb axis.
CC-2V	The filament is a coiled coil filament wire designated CC-2V.
CC-6	The filament is a coiled coil filament wire designated CC-6.
CC-8	The filament is a coiled coil filament wire designated CC-8.
CC-11	The filament is a coiled coil filament wire designated CC-11.
CC-13	The filament is a coiled coil filament wire designated CC-13. Flat, very concentrated double-coiled filament for projection equipment.
BP	The filament is designated BP.
FF	The filament is designated FF.
M	The filament is designated M.
MP	The filament is designated MP.
SC	The filament is designated SC.
Other Filament Types	Any other filament type not listed.

Electric Motors

DC Motors

Performance Specifications

Shaft Speed:	No-load rotational speed of output shaft at rated terminal voltage.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Terminal Voltage:	Design DC motor voltage.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Continuous Current:	Continuous current is the maximum rated current that can be supplied to the motor windings without overheating.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Continuous Torque:	Output torque capability of the motor under constant running conditions.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Continuous Output Power:	Mechanical power provided by the motor output.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Motor Construction

Motor Construction	
Your choices are...	
Permanent Magnet	Permanent magnets (PM) are embedded into the rotor assembly. The rotor aligns itself with the rotating magnetic field of the stator windings. PM motors exhibit constant speed with varying load (zero slip) and provide relatively high torque, good efficiency, and lower current draw than comparable synchronous motors.
Shunt Wound	Shunt wound motors exhibit minimum speed variation through load range and can be configured for constant horsepower over an adjustable speed range. Frequent applications include machine tools, fans, and blowers.

Series Wound	Series wound motors exhibit high starting torques for permanently attached loads. These motors are frequently used in heavy industrial applications.
Compound Wound	Compound wound motors are designed with both a series and shunt field winding. They are often used where the primary load requirement is heavy starting torque, and adjustable speed is not required. They can exhibit speed variation from no-load to full-load. Applications include elevators, hoists, and industrial shop equipment.
Disc Armature	Disc armatures are flat, pancake-shaped rotors that are driven by an axially, rather than radially, aligned magnetic field. The thin construction of these armatures can result in low inertia with resulting high acceleration.
Coreless/Slotless	Coreless and slotless motors incorporate a cylindrical winding that is physically outside of a set of permanent magnets. The winding is not held by a slotted iron cage but is laminated together. In a slotless motor, the magnets attached to the rotor rotate. In a coreless motor, the windings rotate around the permanent magnet stator.
Other	Unlisted motor construction.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Commutation	
Your choices are...	
Brush	Brush motors have the armature windings on the rotor. The magnetic fields are commutated via direct contact of brushes with the rotor commutator.
Brushless	Brushless motors have their armature windings on the stator and the field on the rotor. They rely on internal noncontact sensing devices to activate external commutating electronics.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Gearmotor/Gearhead Options

Motor Configuration:	
Your choices are...	
Motor Only	Motor does not have a gearbox of any kind.
Gearmotor	This category includes units with single integral gearheads, or replaceable/interchangeable gearhead options.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Gearing (if applicable):	
Your choices are...	
Spur	Spur gear heads include one or more sets of pinion-gear sets, in which one pinion drives one gear. These sets can be stacked or cascaded to achieve higher reduction ratios.
Planetary	Planetary gear heads involve several gears per stage rather than one pinion-gear set. A "sun gear" drives multiple planet or satellite gears, which then mesh on the inside of an internal or annular gear to provide relatively high torque and power transmission ratings.
Harmonic	Harmonic drives are an extremely precise speed reduction system that transmits power via a rotating elliptical element that engages a flexible cup that then engages an internal gear, which is typically fixed. This power transmission delivers precise angular position in very high input-to-output ratio (50:1 & up) applications.
Worm	Right-angle drive in which a worm drives a wheel coupled to the output shaft or shafts. This arrangement is used for high reduction and compact right-angle power transmission.
Bevel	Bevel gear sets have intersecting axes that are commonly, but not always, perpendicular. They mate via teeth on angled edges.
Other	Unlisted or specialized gearing arrangement.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Gearbox Ratio:	Gearbox ratio is the ratio of input speed to output speed. A ratio greater than one indicates speed reduction, while a ratio less than one indicates speed increase.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Gearbox Efficiency:	Efficiency is the percentage of power or torque that is transferred through the gearbox. Losses occur due to factors such as friction and slippage inside the gearbox.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Feedback

Feedback	
Your choices are...	
Integral Encoder	Integral encoders are attached for angular position signal. These encoders may include absolute or incremental encoders and a number of different encoder signal types.
Integral Resolver	Integral Resolvers indicate angular position. Resolvers often rely on magnetic fields and are typically very robust; they are sometimes specified for harsh environments.
Integral Tachometer	Tachometers produce an output indicating rotational speed of motor.
Other	Unlisted or specialized feedback signal.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Shaft Options

Orientation/Type	
Your choices are...	
In-line	Output shaft axis is in-line with axis of motor rotation.
Offset/Parallel	Output shaft is parallel with, but not concentric to, the axis of motor rotation.
Right Angle	Output shaft axis is perpendicular to motor rotation axis, intersecting or nonintersecting.
Hollow	Hollow output shafts have a hole or bore that can accept a shaft. Outputs with collets for tool bits are one example.
Other	Unlisted shaft angle or configuration.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Number of Shafts	
Your choices are...	
Single-ended	One output shaft.
Double-ended	Two output shafts. This may be one coming out the front and one coming out the back, or two coming out from a transverse gearbox.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Housing/Enclosure

Design Units:	Refers to the base units for specifications such as diameter, length, and threading. Combinations are possible and this information is not known for some products.
Your choices are...	
English	Base units such as inches or fractions of an inch for primary dimensions as the shaft size, mounting geometry, etc.
Metric	Metric units such as millimeters or centimeters are used for primary dimensions as the shaft size, mounting geometry, etc.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Motor Shape:	
Your choices are...	
Cylindrical Body	Cylindrical motor body cross-sections are round.
Square Body	Square motor bodies have a square or rectangular shape.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Diameter/Width:	Diameter of cylindrical motors or width/height of square motors. This is for the motor body only and does not include flanges.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Housing Length:	Housing length is the length of the motor body, not including shaft.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
NEMA Frame Size:	NEMA frame sizes conform to a standard size and mounting configuration identified by the National Electrical Manufacturers Association (NEMA). Only numerical sizes are searchable in this field.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Enclosure Options	
Your choices are...	
Open Frame/Frameless	Open-frame of frameless enclosures have minimal or frame-like support, but no overall casing.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Features & Options

DC Servomotor?	DC servomotors have an output shaft that can be positioned by sending a coded signal to the motor. As the input to the motor changes, the angular position of the output shaft changes as well. Servomotors are generally small and powerful for their size, and easy to control. Common types of DC servomotors include brushless or gearmotor types.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Integral Driver Electronics?	Integral driver electronics are on-board or attached drivers or amplifier electronics.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Integral Brake?	Integral brake can be mechanical or electronic.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Integral Clutch?	Integral clutches engage and disengage the motor.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Brake/Clutch Combination?	Integral combination of brake and clutch.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Environment Full required ranged of ambient operating temperature.

Operating Temperature:	Full required range of operating temperature.
Search Logic:	User may specify either, both, or neither of the limits in a "From - To" range; when both are specified, matching products will cover entire range. Products returned as matches will meet all specified criteria.
Shock Rating:	Shock rating is the maximum shock the motor can withstand and still meet operating specifications.
Search Logic:	All matching products will have a value greater than or equal to the specified value.
Vibration Rating:	Vibrating rating is the maximum vibration the motor can withstand and still meet operating specifications.
Search Logic:	All matching products will have a value greater than or equal to the specified value.
Totally Enclosed	Totally enclosed motors have an enclosure that prevents free exchange of air between the inside and the outside of the enclosure. Common ratings are TEFC (fan-cooled) and TENV (non-ventilated); this is not an airtight rating. These motors are most frequently used in potentially contaminated environments.

Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Dust-proof	Dust-proof motors protect against dust infiltration with features such as total enclosure and labyrinth seals for shafts. The IP (Ingress Protection) rating for dust-proof motors is IP6x.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Drip-proof	Drip-proof motors contain ventilation openings that are designed so that drops of liquid or solid particles falling from any angle within 15 degrees of vertical cannot enter the motor. Motors with an IP rating of IPx1 through IPx9 are considered drip-proof.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Waterproof	There are several degrees of waterproofing applicable to motors and they are reflected in the IP rating for the motor: IPx1: Protection against vertically falling drops of water (drip-proof). IPx2: Protection against direct sprays of water up to 15 degrees from vertical. IPx3: Protection against direct sprays of water up to 60 degrees from vertical. IPx4: Protection against water sprayed from all directions. IPx5: Protected against low pressure jets of water from all directions. IPx6: Protected against high pressure jets of water from all directions. IPx7: Protected against the effects of immersion up to 1 meter. IPx8: Protected against long periods of immersion under pressure.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Special/Extreme Environments	
Your choices are...	
Clean Room Use	Clean rooms are classified by particulate size and density in the ambient air. One such rating method classifies rooms according to number of particles larger than 0.5 micron in one cubic foot of air. There are various governmental, metric, and international standards. Motors rated for suitability in a clean room will identify the particular standard for which they are rated.
Cryogenic Use	Motors with a cryogenic rating are constructed for extremely low ambient temperatures such as 20 K and below.
Explosion-proof	Explosion-proof motors have totally enclosed housings that are constructed to withstand internal explosion of a specified gas, vapor, or dust. Should such an explosion occur, the enclosure would prevent the ignition or explosion of the gas or vapor surrounding the motor enclosure. Several explosion-proof ratings are governed by Underwriter's Laboratories (UL).
Radiation-hardened	Radiation-hardened motors are constructed of materials designed to withstand high-energy gamma radiation. Ratings are expressed in units such as permissible RADs in total accumulated dose (TAD).
Vacuum Use	Vacuum-rated motors incorporate features such as lubricant vapor pressure below rated ambient vacuum and construction techniques.

AC Motors

AC Motor Specifications

AC Voltage & Frequency:	
Your choices are...	
115/120V 60 Hz	115/120V is standard residential or commercial voltage for 60Hz power (North America).
208-230/240V 60 Hz	These are for 60Hz power (North America).
460/480V 60 Hz	These are for 60Hz power (North America).
575/600V 60 Hz	These are for 60Hz power (North America).
50 Hz/International Power	International voltage levels, such as those common in Asia and Europe, and includes all 50Hz power.
400 Hz/Aerospace	Motors and other components using 400Hz power are primarily used for aerospace applications.
Other	Unlisted voltage/frequency motor.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Phase	
Your choices are...	
Single-phase	Standard commercial and residential power is single-phase, meaning one sinusoidal or other alternating voltage pattern.
Three-phase	Three-phase power contains three simultaneous sinusoidal or other alternating voltage patterns, typically 120° out of phase with each other. Higher power efficiency and smoothness of operation is possible with three-phase operation. Three-phase power is most typically used for industrial or high power motors.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Shaft Speed:	No-load rotational speed of output shaft at rated terminal voltage.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Continuous Output Power:	Mechanical power provided by the motor output.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Continuous Torque:	Output torque capability of the motor under constant running conditions.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

AC Motor Type

Motor Type:	
Your choices are...	
Induction	Induction motors derives its name from the fact that current is induced into the rotor windings without any physical connection with the stator windings (which are directly connected to an AC power supply). Induction motors are adaptable to many different environments and capable of providing considerable power as well as variable speed control. Typically there is "slip," or loss of exact speed tracking with induction motors.
Synchronous	Synchronous motors operate at constant speed up to full load. The rotor speed is equal to the speed of the rotating magnetic field of the stator; there is no slip. Reluctance and permanent magnet are the two major types of synchronous motors. A synchronous motor is often used where the exact speed of a motor must be maintained.
AC Servomotors	AC servomotors are typically permanent magnet, synchronous motors that can often have low torque-to-inertia ratios for high acceleration ratings.
Universal	Universal motors can operate at approximately the same speed and output on either DC or single-phase AC power. Universal motors are also known as an AC/DC motors.
Other	Unlisted or specialized AC motor construction.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Multi-speed?	Motor speed can be continuously adjusted or set at discrete speeds within the operating range.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Reversible?	Motor can be run in both clockwise and counterclockwise directions with approximately the same operating characteristics.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Gearmotor/Gearhead Options

Motor Configuration:	
Your choices are...	
Motor Only	Motor does not have a gearbox of any kind.
Gearmotor	This category includes units with single integral gearheads, or replaceable/interchangeable gearhead options.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Gearing (if applicable):	
Your choices are...	
Spur	Spur gear heads include one or more sets of pinion-gear sets, in which one pinion drives one gear. These sets can be stacked or cascaded to achieve higher reduction ratios.
Planetary	Planetary gear heads involve several gears per stage rather than one pinion-gear set. A "sun gear" drives multiple planet or satellite gears, which then mesh on the inside of an internal or annular gear to provide relatively high torque and power transmission ratings.
Harmonic	Harmonic drives are an extremely precise speed reduction system that transmits power via a rotating elliptical element that engages a flexible cup that then engages an internal gear, which is typically fixed. This power transmission delivers precise angular position in very high input-to-output ratio (50:1 & up) applications.
Worm	Right-angle drive in which a worm drives a wheel coupled to the output shaft or shafts. This arrangement is used for high reduction and compact right-angle power transmission.
Bevel	Bevel gear sets have intersecting axes that are commonly, but not always, perpendicular. They mate via teeth on angled edges.
Other	Unlisted or specialized gearing arrangement.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Gearbox Ratio:	Gearbox ratio is the ratio of input speed to output speed. A ratio greater than one indicates speed reduction, while a ratio less than one indicates speed increase.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Gearbox Efficiency:	Efficiency is the percentage of power or torque that is transferred through the gearbox. Losses occur due to factors such as friction and slippage inside the gearbox.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Feedback

Feedback	
Your choices are...	
Integral Encoder	Integral encoders are attached for angular position signal. These encoders may include absolute or incremental encoders and a number of different encoder signal types.
Integral Resolver	Integral Resolvers indicate angular position. Resolvers often rely on magnetic fields and are typically very robust; they are sometimes specified for harsh environments.
Integral Tachometer	Tachometers produce an output indicating rotational speed of motor.
Other	Unlisted or specialized feedback signal.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

AC Motor Shaft Options

Orientation/Type	
Your choices are...	
In-line	Output shaft axis is in-line with axis of motor rotation.
Offset/Parallel	Output shaft is parallel with, but not concentric to, the axis of motor rotation.
Right Angle	Output shaft axis is perpendicular to motor rotation axis, intersecting or nonintersecting.
Hollow	Hollow output shafts have a hole or bore that can accept a shaft. Outputs with collets for tool bits are one example.
Other	Unlisted shaft angle or configuration.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Number of Shafts	
Your choices are...	
Single-ended	One output shaft.
Double-ended	Two output shafts. This may be one coming out the front and one coming out the back, or two coming out from a transverse gearbox.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

AC Motor Housing

Design Units:	Refers to the base units for specifications such as diameter, length, and threading. Combinations are possible and this information is not known for some products.
Your choices are...	
English	Base units such as inches or fractions of an inch for primary dimensions as the shaft size, mounting geometry, etc.
Metric	Metric units such as millimeters or centimeters are used for primary dimensions as the shaft size, mounting geometry, etc.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Motor Shape:	
Your choices are...	
Cylindrical Body	Cylindrical motor body cross-sections are round.
Square Body	Square motor bodies have a square or rectangular shape.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Diameter/Width:	Diameter of cylindrical motors or width/height of square motors. This is for the motor body only and does not include flanges.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Housing Length:	Housing length is the length of the motor body, not including shaft.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
NEMA Frame Size:	NEMA frame sizes conform to a standard size and mounting configuration identified by the National Electrical Manufacturers Association (NEMA). Only numerical sizes are searchable in this field.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Enclosure Options	
Your choices are...	
Open Frame/ Frameless	Open-frame of frameless enclosures have minimal or frame-like support, but no overall casing.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

AC Motor Options

Integral Driver Electronics?	Integral driver electronics are on-board or attached drivers or amplifier electronics.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Integral Brake?	Integral brake can be mechanical or electronic.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Integral Clutch?	Integral clutches engage and disengage the motor.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Brake/Clutch Combination?	Integral combination of brake and clutch.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Environment Full required ranged of ambient operating temperature.

Operating Temperature:	Full required range of operating temperature.
Search Logic:	User may specify either, both, or neither of the limits in a "From - To" range; when both are specified, matching products will cover entire range. Products returned as matches will meet all specified criteria.
Shock Rating:	Shock rating is the maximum shock the motor can withstand and still meet operating specifications.
Search Logic:	All matching products will have a value greater than or equal to the specified value.
Vibration Rating:	Vibrating rating is the maximum vibration the motor can withstand and still meet operating specifications.
Search Logic:	All matching products will have a value greater than or equal to the specified value.
Totally Enclosed	Totally enclosed motors have an enclosure that prevents free exchange of air between the inside and the outside of the enclosure. Common ratings are TEFC (fan-cooled) and TENV (non-ventilated); this is not an airtight rating. These motors are most frequently used in potentially contaminated environments.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Dust-proof	Dust-proof motors protect against dust infiltration with features such as total enclosure and labyrinth seals for shafts. The IP (Ingress Protection) rating for dust-proof motors is IP6x.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Drip-proof	Drip-proof motors contain ventilation openings that are designed so that drops of liquid or solid particles falling from any angle within 15 degrees of vertical cannot enter the motor. Motors with an IP rating of IPx1 through IPx9 are considered drip-proof.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Waterproof	There are several degrees of waterproofing applicable to motors and they are reflected in the IP rating for the motor: IPx1: Protection against vertically falling drops of water (drip-proof). IPx2: Protection against direct sprays of water up to 15 degrees from vertical. IPx3: Protection against direct sprays of water up to 60 degrees from vertical. IPx4: Protection against water sprayed from all directions. IPx5: Protected against low pressure jets of water from all directions. IPx6: Protected against high pressure jets of water from all directions. IPx7: Protected against the effects of immersion up to 1 meter. IPx8: Protected against long periods of immersion under pressure.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Special/Extreme Environments	
Your choices are...	
Clean Room Use	Clean rooms are classified by particulate size and density in the ambient air. One such rating method classifies rooms according to number of particles larger than 0.5 micron in one cubic foot of air. There are various governmental, metric, and international standards. Motors rated for suitability in a clean room will identify the particular standard for which they are rated.
Cryogenic Use	Motors with a cryogenic rating are constructed for extremely low ambient temperatures such as 20 K and below.
Explosion-proof	Explosion-proof motors have totally enclosed housings that are constructed to withstand internal explosion of a specified gas, vapor, or dust. Should such an explosion occur, the enclosure would prevent the ignition or explosion of the gas or vapor surrounding the motor enclosure. Several explosion-proof ratings are governed by Underwriter's Laboratories (UL).
Radiation-hardened	Radiation-hardened motors are constructed of materials designed to withstand high-energy gamma radiation. Ratings are expressed in units such as permissible RADs in total accumulated dose (TAD).
Vacuum Use	Vacuum-rated motors incorporate features such as lubricant vapor pressure below rated ambient vacuum and construction techniques.

Stepper Motors

Performance Specifications	
Shaft Speed:	No-load rotational speed of output shaft at rated terminal voltage.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Terminal Voltage:	Design DC motor voltage.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Current per Phase:	This refers to the maximum rated current per phase or winding for a stepper motor.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Continuous Output Power:	Mechanical power provided by the motor output.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Static/Holding Torque:	Static or holding torque is the maximum torque a motor can develop to hold its rotor in a stationary position.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Motor Type

Motor Type:	
Your choices are...	
Permanent Magnet	The motor uses permanent magnet on the rotor. Step angles range from 1.5 to 30 degrees. Permanent magnet motors are the most common and versatile stepper motor; this includes both unipolar (bifilar) and bipolar types.
Variable Reluctance	Variable reluctance motors have a free-moving rotor. No residual torque is produced due to the lack of a permanent magnet. The rotor is instead composed of a soft iron metal. The rotor is also composed of its own very prominent poles, tending to stick out more than a rotor found on the PM version. Step angles: 7.5 to 30 degrees single power source required (like a bifilar PM motor). Variable reluctance motors are the least expensive stepper motor.
Hybrid	Hybrid motors consist of a heavily toothed PM rotor and toothed stators, plus prominent rotor poles like a VR rotor. These motors have very fine step angles: 0.5 to 15 degrees. Hybrid motors have high-speed capability (less chance of a stall) and higher available torque than PM or VR stepper motors. Hybrids are the most effective but most expensive stepper motor type.
Other	Unlisted or specialized stepper motor construction.

Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Step Angle:	The degrees per step of the motor.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Number of Leads:	Stepper motor configurations can have different numbers of leads depending on the specific winding wiring. For example, bipolar PM motors can have 4, 5, or 6 leads. Unipolar PM motors can commonly have 5 or 6 leads (two windings with two ends plus center taps, which may or may not be tied together). Hybrid motors frequently contain 8 leads, and multiphase motors can have different lead configurations (for example, a motor wired for 5-phase power could have 5 or 10 leads). Consult with manufacturer for specific winding, wiring, and lead information.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Gearmotor/Gearhead Options

Motor Configuration:	
Your choices are...	
Motor Only	Motor does not have a gearbox of any kind.
Gearmotor	This category includes units with single integral gearheads, or replaceable/interchangeable gearhead options.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Gearing (if applicable):	
Your choices are...	
Spur	Spur gear heads include one or more sets of pinion-gear sets, in which one pinion drives one gear. These sets can be stacked or cascaded to achieve higher reduction ratios.
Planetary	Planetary gear heads involve several gears per stage rather than one pinion-gear set. A "sun gear" drives multiple planet or satellite gears, which then mesh on the inside of an internal or annular gear to provide relatively high torque and power transmission ratings.
Harmonic	Harmonic drives are an extremely precise speed reduction system that transmits power via a rotating elliptical element that engages a flexible cup that then engages an internal gear, which is typically fixed. This power transmission delivers precise angular position in very high input-to-output ratio (50:1 & up) applications.
Worm	Right-angle drive in which a worm drives a wheel coupled to the output shaft or shafts. This arrangement is used for high reduction and compact right-angle power transmission.

Bevel	Bevel gear sets have intersecting axes that are commonly, but not always, perpendicular. They mate via teeth on angled edges.
Other	Unlisted or specialized gearing arrangement.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Gearbox Ratio:	Gearbox ratio is the ratio of input speed to output speed. A ratio greater than one indicates speed reduction, while a ratio less than one indicates speed increase.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Gearbox Efficiency:	Efficiency is the percentage of power or torque that is transferred through the gearbox. Losses occur due to factors such as friction and slippage inside the gearbox.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Feedback

Feedback	
Your choices are...	
Integral Encoder	Integral encoders are attached for angular position signal. These encoders may include absolute or incremental encoders and a number of different encoder signal types.
Integral Resolver	Integral Resolvers indicate angular position. Resolvers often rely on magnetic fields and are typically very robust; they are sometimes specified for harsh environments.
Integral Tachometer	Tachometers produce an output indicating rotational speed of motor.
Other	Unlisted or specialized feedback signal.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Shaft Options

Orientation/Type	
Your choices are...	
In-line	Output shaft axis is in-line with axis of motor rotation.
Offset/Parallel	Output shaft is parallel with, but not concentric to, the axis of motor rotation.
Right Angle	Output shaft axis is perpendicular to motor rotation axis, intersecting or nonintersecting.
Hollow	Hollow output shafts have a hole or bore that can accept a shaft. Outputs with collets for tool bits are one example.
Other	Unlisted shaft angle or configuration.

Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Number of Shafts	
Your choices are...	
Single-ended	One output shaft.
Double-ended	Two output shafts. This may be one coming out the front and one coming out the back, or two coming out from a transverse gearbox.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Housing/Enclosure

Design Units:	Refers to the base units for specifications such as diameter, length, and threading. Combinations are possible and this information is not known for some products.
Your choices are...	
English	Base units such as inches or fractions of an inch for primary dimensions as the shaft size, mounting geometry, etc.
Metric	Metric units such as millimeters or centimeters are used for primary dimensions as the shaft size, mounting geometry, etc.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Motor Shape	
Your choices are...	
Cylindrical Body	Cylindrical motor body cross-sections are round.
Square Body	Square motor bodies have a square or rectangular shape.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Diameter/Width:	Diameter of cylindrical motors or width/height of square motors. This is for the motor body only and does not include flanges.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Housing Length:	Housing length is the length of the motor body, not including shaft.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
NEMA Frame Size:	NEMA frame sizes conform to a standard size and mounting configuration identified by the National Electrical Manufacturers Association (NEMA). Only numerical sizes are searchable in this field.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Enclosure Options	
Your choices are...	
Open Frame/ Frameless	Open-frame of frameless enclosures have minimal or frame-like support, but no overall casing.
Totally Enclosed	Totally enclosed motors have an enclosure that prevents free exchange of air between the inside and the outside of the enclosure. Common ratings are TEFC (fan-cooled) and TENV (non-ventilated); this is not an airtight rating. These motors are most frequently used in potentially contaminated environments.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Features & Options

Integral Driver Electronics?	Integral driver electronics are on-board or attached drivers or amplifier electronics.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Integral Brake?	Integral brake can be mechanical or electronic.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Integral Clutch?	Integral clutches engage and disengage the motor.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Brake/Clutch Combination?	Integral combination of brake and clutch.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Environment Full required ranged of ambient operating temperature.

Dust-proof	Dust-proof motors protect against dust infiltration with features such as total enclosure and labyrinth seals for shafts. The IP (Ingress Protection) rating for dust-proof motors is IP6x.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Drip-proof	Drip-proof motors contain ventilation openings that are designed so that drops of liquid or solid particles falling from any angle within 15 degrees of vertical cannot enter the motor. Motors with an IP rating of IPx1 through IPx9 are considered drip-proof.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Waterproof	There are several degrees of waterproofing applicable to motors and they are reflected in the IP rating for the motor: IPx1: Protection against vertically falling drops of water (drip-proof). IPx2: Protection against direct sprays of water up to 15 degrees from vertical. IPx3: Protection against direct sprays of water up to 60 degrees from vertical. IPx4: Protection against water sprayed from all directions. IPx5: Protected against low pressure jets of water from all directions. IPx6: Protected against high pressure jets of water from all directions. IPx7: Protected against the effects of immersion up to 1 meter. IPx8: Protected against long periods of immersion under pressure.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Special/Extreme Environments	
Your choices are...	
Clean Room Use	Clean rooms are classified by particulate size and density in the ambient air. One such rating method classifies rooms according to number of particles larger than 0.5 micron in one cubic foot of air. There are various governmental, metric, and international standards. Motors rated for suitability in a clean room will identify the particular standard for which they are rated.
Cryogenic Use	Motors with a cryogenic rating are constructed for extremely low ambient temperatures such as 20 K and below.
Explosion-proof	Explosion-proof motors have totally enclosed housings that are constructed to withstand internal explosion of a specified gas, vapor, or dust. Should such an explosion occur, the enclosure would prevent the ignition or explosion of the gas or vapor surrounding the motor enclosure. Several explosion-proof ratings are governed by Underwriter's Laboratories (UL).
Radiation-hardened	Radiation-hardened motors are constructed of materials designed to withstand high-energy gamma radiation. Ratings are expressed in units such as permissible RADs in total accumulated dose (TAD).
Vacuum Use	Vacuum-rated motors incorporate features such as lubricant vapor pressure below rated ambient vacuum and construction techniques.

Gear Motors

Motor Type	
Your choices are...	
DC Motor	Class of motors that use direct current (DC). DC motors are most commonly used in variable speed and torque applications.
AC Motor	Class of motors that use alternating current (AC). AC motors include a variety of types including synchronous, induction, AC servomotors, and single and multiphase motors.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
DC Servomotor?	DC servomotors have an output shaft that can be positioned by sending a coded signal to the motor. As the input to the motor changes, the angular position of the output shaft changes as well. Servomotors are generally small and powerful for their size, and easy to control. Common types of DC servomotors include brushless or gearmotor types.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Stepper Motor	Stepper motors provide incremental motion, or steps, in response to pulses of current that alternately change the polarity of the stator poles. Step motors do not require feedback and are sometimes used in "Open Loop," or no-feedback applications.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Performance Specifications

Shaft Speed:	No-load rotational speed of output shaft at rated terminal voltage.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Continuous Torque:	Output torque capability of the motor under constant running conditions.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Continuous Current:	Continuous current is the maximum rated current that can be supplied to the motor windings without overheating.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Continuous Output Power:	Mechanical power provided by the motor output.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

AC Motor Specifications

Voltage & Frequency:	
Your choices are...	
115/120V 60 Hz	115/120V is standard residential or commercial voltage for 60Hz power (North America).
208-230/240V 60 Hz	These are for 60Hz power (North America).
460/480V 60 Hz	These are for 60Hz power (North America).
575/600V 60 Hz	These are for 60Hz power (North America).
50 Hz/International Power	International voltage levels, such as those common in Asia and Europe, and includes all 50Hz power.
400 Hz/Aerospace	Motors and other components using 400Hz power are primarily used for aerospace applications.
Other	Unlisted voltage/frequency motor.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Phase	
Your choices are...	
Single-phase	Standard commercial and residential power is single-phase, meaning one sinusoidal or other alternating voltage pattern.
Three-phase	Three-phase power contains three simultaneous sinusoidal or other alternating voltage patterns, typically 120° out of phase with each other. Higher power efficiency and smoothness of operation is possible with three-phase operation. Three-phase power is most typically used for industrial or high power motors.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
AC Motor Construction:	
Your choices are...	
Induction	Induction motors derives its name from the fact that current is induced into the rotor windings without any physical connection with the stator windings (which are directly connected to an AC power supply). Induction motors are adaptable to many different environments and capable of providing considerable power as well as variable speed control. Typically there is "slip," or loss of exact speed tracking with induction motors.
Synchronous	Synchronous motors operate at constant speed up to full load. The rotor speed is equal to the speed of the rotating magnetic field of the stator; there is no slip. Reluctance and permanent magnet are the two major types of synchronous motors. A synchronous motor is often used where the exact speed of a motor must be maintained.
AC Servomotors	AC servomotors are typically permanent magnet, synchronous motors that can often have low torque-to-inertia ratios for high acceleration ratings.

Universal	Universal motors can operate at approximately the same speed and output on either DC or single-phase AC power. Universal motors are also known as an AC/DC motors.
Other	Unlisted or specialized AC motor construction.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

DC Motor Specifications

DC Terminal Voltage:	Design DC motor voltage.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
DC Motor Construction	
Your choices are...	
Permanent Magnet	Permanent magnets (PM) are embedded into the rotor assembly. The rotor aligns itself with the rotating magnetic field of the stator windings. PM motors exhibit constant speed with varying load (zero slip) and provide relatively high torque, good efficiency, and lower current draw than comparable synchronous motors.
Shunt Wound	Shunt wound motors exhibit minimum speed variation through load range and can be configured for constant horsepower over an adjustable speed range. Frequent applications include machine tools, fans, and blowers.
Series Wound	Series wound motors exhibit high starting torques for permanently attached loads. These motors are frequently used in heavy industrial applications.
Compound Wound	Compound wound motors are designed with both a series and shunt field winding. They are often used where the primary load requirement is heavy starting torque, and adjustable speed is not required. They can exhibit speed variation from no-load to full-load. Applications include elevators, hoists, and industrial shop equipment.
Disc Armature	Disc armatures are flat, pancake-shaped rotors that are driven by an axially, rather than radially, aligned magnetic field. The thin construction of these armatures can result in low inertia with resulting high acceleration.
Coreless/Slotless	Coreless and slotless motors incorporate a cylindrical winding that is physically outside of a set of permanent magnets. The winding is not held by a slotted iron cage but is laminated together. In a slotless motor, the magnets attached to the rotor rotate. In a coreless motor, the windings rotate around the permanent magnet stator.
Other	Unlisted motor construction.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Commutation	
Your choices are...	
Brush	Brush motors have the armature windings on the rotor. The magnetic fields are commutated via direct contact of brushes with the rotor commutator.
Brushless	Brushless motors have their armature windings on the stator and the field on the rotor. They rely on internal noncontact sensing devices to activate external commutating electronics.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Gearmotor/Gearhead Options

Gearing Arrangement:	
Your choices are...	
Spur	Spur gear heads include one or more sets of pinion-gear sets, in which one pinion drives one gear. These sets can be stacked or cascaded to achieve higher reduction ratios.
Planetary	Planetary gear heads involve several gears per stage rather than one pinion-gear set. A "sun gear" drives multiple planet or satellite gears, which then mesh on the inside of an internal or annular gear to provide relatively high torque and power transmission ratings.
Harmonic	Harmonic drives are an extremely precise speed reduction system that transmits power via a rotating elliptical element that engages a flexible cup that then engages an internal gear, which is typically fixed. This power transmission delivers precise angular position in very high input-to-output ratio (50:1 & up) applications.
Worm	Right-angle drive in which a worm drives a wheel coupled to the output shaft or shafts. This arrangement is used for high reduction and compact right-angle power transmission.
Bevel	Bevel gear sets have intersecting axes that are commonly, but not always, perpendicular. They mate via teeth on angled edges.
Other	Unlisted or specialized gearing arrangement.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Gearbox Ratio:	Gearbox ratio is the ratio of input speed to output speed. A ratio greater than one indicates speed reduction, while a ratio less than one indicates speed increase.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Gearbox Efficiency:	Efficiency is the percentage of power or torque that is transferred through the gearbox. Losses occur due to factors such as friction and slippage inside the gearbox.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Feedback

Feedback	
Your choices are...	
Integral Encoder	Integral encoders are attached for angular position signal. These encoders may include absolute or incremental encoders and a number of different encoder signal types.
Integral Resolver	Integral Resolvers indicate angular position. Resolvers often rely on magnetic fields and are typically very robust; they are sometimes specified for harsh environments.
Integral Tachometer	Tachometers produce an output indicating rotational speed of motor.
Other	Unlisted or specialized feedback signal.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Shaft Options

Orientation/Type	
Your choices are...	
In-line	Output shaft axis is in-line with axis of motor rotation.
Offset/Parallel	Output shaft is parallel with, but not concentric to, the axis of motor rotation.
Right Angle	Output shaft axis is perpendicular to motor rotation axis, intersecting or nonintersecting.
Hollow	Hollow output shafts have a hole or bore that can accept a shaft. Outputs with collets for tool bits are one example.
Other	Unlisted shaft angle or configuration.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Number of Shafts	
Your choices are...	
Single-ended	One output shaft.
Double-ended	Two output shafts. This may be one coming out the front and one coming out the back, or two coming out from a transverse gearbox.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Housing/Enclosure

Design Units:	Refers to the base units for specifications such as diameter, length, and threading. Combinations are possible and this information is not known for some products.
Your choices are...	
English	Base units such as inches or fractions of an inch for primary dimensions as the shaft size, mounting geometry, etc.
Metric	Metric units such as millimeters or centimeters are used for primary dimensions as the shaft size, mounting geometry, etc.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Motor Shape:	
Your choices are...	
Cylindrical Body	Cylindrical motor body cross-sections are round.
Square Body	Square motor bodies have a square or rectangular shape.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Diameter/Width:	Diameter of cylindrical motors or width/height of square motors. This is for the motor body only and does not include flanges.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Housing Length:	Housing length is the length of the motor body, not including shaft.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
NEMA Frame Size:	NEMA frame sizes conform to a standard size and mounting configuration identified by the National Electrical Manufacturers Association (NEMA). Only numerical sizes are searchable in this field.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Enclosure Options	
Your choices are...	
Open Frame/ Frameless	Open-frame of frameless enclosures have minimal or frame-like support, but no overall casing.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.

Features & Options

Multi-speed?	Motor speed can be continuously adjusted or set at discrete speeds within the operating range.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Reversible?	Motor can be run in both clockwise and counterclockwise directions with approximately the same operating characteristics.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Integral Driver Electronics?	Integral driver electronics are on-board or attached drivers or amplifier electronics.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Integral Brake?	Integral brake can be mechanical or electronic.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Integral Clutch?	Integral clutches engage and disengage the motor.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Brake/Clutch Combination?	Integral combination of brake and clutch.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Environment. Full required ranged of ambient operating temperature.

Operating Temperature:	Full required range of operating temperature.
Search Logic:	User may specify either, both, or neither of the limits in a "From - To" range; when both are specified, matching products will cover entire range. Products returned as matches will meet all specified criteria.
Shock Rating:	Shock rating is the maximum shock the motor can withstand and still meet operating specifications.
Search Logic:	All matching products will have a value greater than or equal to the specified value.
Vibration Rating:	Vibrating rating is the maximum vibration the motor can withstand and still meet operating specifications.
Search Logic:	All matching products will have a value greater than or equal to the specified value.
Totally Enclosed	Totally enclosed motors have an enclosure that prevents free exchange of air between the inside and the outside of the enclosure. Common ratings are TEFC (fan-cooled) and TENV (non-ventilated); this is not an airtight rating. These motors are most frequently used in potentially contaminated environments.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Dust-proof	Dust-proof motors protect against dust infiltration with features such as total enclosure and labyrinth seals for shafts. The IP (Ingress Protection) rating for dust-proof motors is IP6x.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Drip-proof	Drip-proof motors contain ventilation openings that are designed so that drops of liquid or solid particles falling from any angle within 15 degrees of vertical cannot enter the motor. Motors with an IP rating of IPx1 through IPx9 are considered drip-proof.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Waterproof	There are several degrees of waterproofing applicable to motors and they are reflected in the IP rating for the motor: IPx1: Protection against vertically falling drops of water (drip-proof). IPx2: Protection against direct sprays of water up to 15 degrees from vertical. IPx3: Protection against direct sprays of water up to 60 degrees from vertical. IPx4: Protection against water sprayed from all directions. IPx5: Protected against low pressure jets of water from all directions. IPx6: Protected against high pressure jets of water from all directions. IPx7: Protected against the effects of immersion up to 1 meter. IPx8: Protected against long periods of immersion under pressure.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Special/Extreme Environments	
Your choices are...	
Clean Room Use	Clean rooms are classified by particulate size and density in the ambient air. One such rating method classifies rooms according to number of particles larger than 0.5 micron in one cubic foot of air. There are various governmental, metric, and international standards. Motors rated for suitability in a clean room will identify the particular standard for which they are rated.
Cryogenic Use	Motors with a cryogenic rating are constructed for extremely low ambient temperatures such as 20 K and below.
Explosion-proof	Explosion-proof motors have totally enclosed housings that are constructed to withstand internal explosion of a specified gas, vapor, or dust. Should such an explosion occur, the enclosure would prevent the ignition or explosion of the gas or vapor surrounding the motor enclosure. Several explosion-proof ratings are governed by Underwriter's Laboratories (UL).
Radiation-hardened	Radiation-hardened motors are constructed of materials designed to withstand high-energy gamma radiation. Ratings are expressed in units such as permissible RADs in total accumulated dose (TAD).
Vacuum Use	Vacuum-rated motors incorporate features such as lubricant vapor pressure below rated ambient vacuum and construction techniques.

Linear Motors

Motor Type & Specifications

Linear Motor Type:	
Your choices are...	
Moving Coil	Coil moves and the magnet is fixed, such as an audio speaker.
Moving Magnet	Magnet moves and the coil is fixed.
AC Switched Reluctance Design	Types of AC synchronous motors.
AC Synchronous Design	Class of motors that operate at constant speed up to full load. The rotor speed is equal to the speed of the rotating magnetic field of the stator; there is no slip. Reluctance and permanent magnet are the two major types of synchronous motors. A synchronous motor is often used where the exact speed of a motor must be maintained.
AC Induction or Traction Design	Class of motors that derives its name from the fact that current is induced into the rotor windings without any physical connection with the stator windings (which are directly connected to an AC power supply); adaptable to many different environments and capable of providing considerable power as well as variable speed control. Typically there is "slip," or loss of exact speed tracking with induction motors. Typically rolled flat version of rotary AC induction motors.
Linear Stepping Design	A stepper motor uses a magnetic field to move a rotor in small angular steps or fractions of steps. Stepper motors provide precise positioning and ease of use, especially in low acceleration or static load applications.

DC Brushed Design	Brush motors have the armature windings on the rotor. The magnetic fields are commutated via direct contact of brushes with the rotor commutator.
DC Brushless Design	Brushless motors have their armature windings on the stator and the field on the rotor. They rely on internal noncontact sensing devices to activate external commutating electronics.
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Rated Continuous Thrust Force:	Maximum rated current that can be supplied to the motor windings without overheating.
Search Logic:	All matching products will have a value greater than or equal to the specified value.
Peak Force:	Maximum force of the linear motor.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Maximum Speed:	Maximum speed of the linear motor.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Maximum Acceleration:	Maximum acceleration of the linear motor.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Nominal Stator Length:	The length of the fixed magnet or coil.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Slider or Carriage Travel:	The range of travel of the moving coil or magnet.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Slider or Carriage Width:	The maximum width of the moving coil or magnet.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Slider or Carriage Length:	The maximum length of the moving coil or magnet.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Electrical Properties

Continuous Current (AC or DC):	
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Rated Current per Phase (Stepper):	Maximum rated current per phase or winding for a stepper motor.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Motor Force Constant:	
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Number of Leads:	Unipolar = 6 leads, bi-polar = 4
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.

Mechanical Properties

Design Units:	
Your choices are...	
English	
Metric	
Search Logic:	All products with ANY of the selected attributes will be returned as matches. Leaving all boxes unchecked will not limit the search criteria for this question; products with all attribute options will be returned as matches.
Linear Stepper Resolution:	Units are typically in 'distance per step' or 'steps per unit distance'.
Search Logic:	User may specify either, both, or neither of the "At Least" and "No More Than" values. Products returned as matches will meet all specified criteria.
Maximum Coil Temperature:	
Search Logic:	All matching products will have a value less than or equal to the specified value.

Features

Forced Air Cooling?	Active fan or other air-moving device.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Water Cooling?	Water cooling provices more heat dissipation than convection or forced air cooling.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Balanced Design?	No magnetic attraction
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Integral Position Feedback?	Encoder, resolver, or other feedback signal.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.
Modular Stator?	Allows for unlimited length of travel.
Search Logic:	"Required" and "Must Not Have" criteria limit returned matches as specified. Products with optional attributes will be returned for either choice.

Environment

Operating Temperature:	The temperature range over which the device must operate.
Search Logic:	User may specify either, both, or neither of the limits in a "From - To" range; when both are specified, matching products will cover entire range. Products returned as matches will meet all specified criteria.
Maximum Shock:	The maximum shock you require the device to survive. Items that are 'typical' may not explicitly give their Max Shock value, so it is a good idea to use this only when working with extremes.
Search Logic:	All matching products will have a value greater than or equal to the specified value.
Maximum Vibration:	The maximum vibration you require the device to survive. Items that are 'typical' may not explicitly give their Max Vibration value, so it is a good idea to use this only when working with extremes.
