Crafts for Kids Who Are

WILD ABOUT OUTER SPACE

The Millbrook Press Brookfield, Connecticut

For Greyson, who has always liked his space!—K.R. For my mother, who gave me space—S.L.H.

Library of Congress Cataloging-in-Publication Data

Ross, Kathy (Katharine Reynolds), 1948-

Crafts for kids who are wild about outer space / Kathy Ross ; illustrated by Sharon Lane Holm. p. cm.

Summary: Provides instructions for twenty projects, creating such things as a planet mobile, constellation tack board, space helmet, moon buggy, pop-up alien puppet, and rocket pin. ISBN 0-7613-0054-6 (lib. bdg.) ISBN 0-7613-0176-3 (pbk.)

Robot Hideaway 46

Whether you are just learning about outer space or have been dazzled by the mysteries of space for a long time, you will have fun with this book. You can make stars and planets, spaceships and astronauts, and even a few aliens and a robot. Let your imagination soar into space with these ideas

Pom-Pom Planet Mobile

Here is what you need:

wire hanger black construction paper sticker stars blue glue gel scissors blue yarn pipe cleaner pen

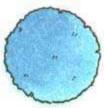

pom-poms for each of the planets:

Mercury: 1/2-inch (1.3-cm) gray

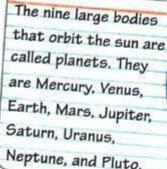

Venus: 1-inch (2.6-cm) yellow

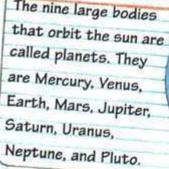

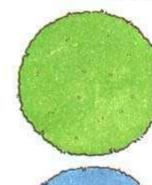

Earth: 1-inch (2.6-cm) blue

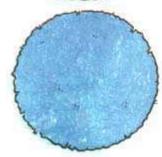

Mars: 1-inch (2.6-cm) red

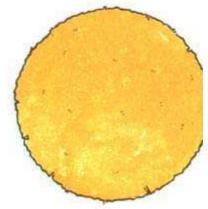

Uranus: 1 1/2-inch (4-cm) green

Neptune: 1 1/2-inch (4-cm) blue

Saturn: 2-inch (5-cm) yellow

Jupiter:

orange

2-inch (5-cm)

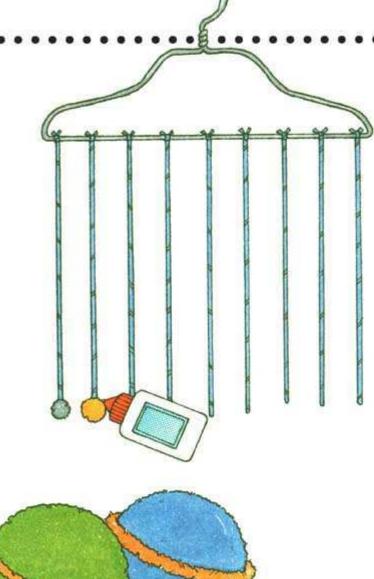

Pluto: 1/2-inch (1.3-cm) gray

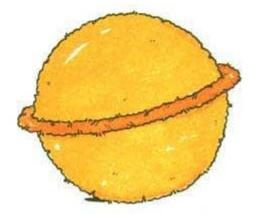

Here is what you do:

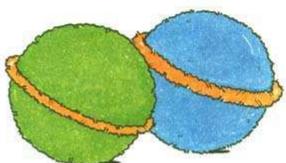

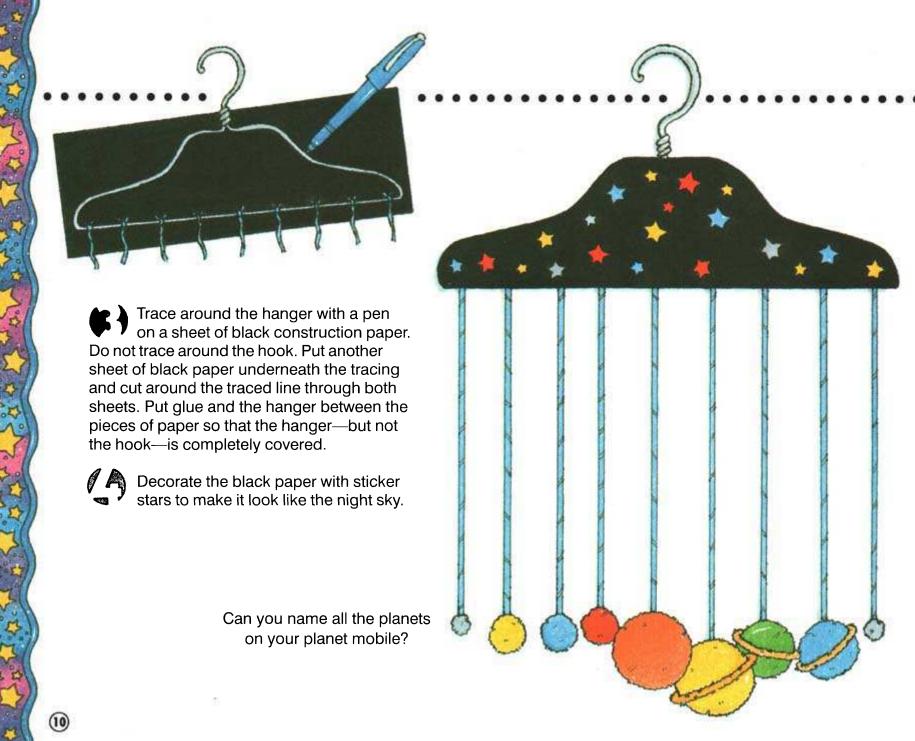

Cut nine pieces of yarn 14 inches (36 cm) long. Tie one end of each piece of yarn along the bottom of the coat hanger.

Starting at the left end of the hanger, glue a pom-pom planet to the end of each piece of yarn. Glue the planets in the order listed above, so that Mercury is at the far left of the hanger and Pluto is at the far right. This is the order of the planets from the sun. Glue a pipe-cleaner ring around Saturn, Uranus, and Neptune (although these planets have more than one ring). Let the glue dry.

Comet Ball

Here is what you need:

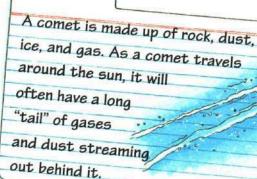

aluminum foil thin Mylar ribbon other colored ribbons scissors

Here is what you do:

Tear off a large square of aluminum foil. Squeeze the foil together in the middle.

Tie four or five 30-inch-long (76-cm) pieces of ribbon around the foil so that the ends of each ribbon hang down to form the comet's tail.

Squeeze the foil on each side of the ribbon where the ribbon is tied to the foil. Keep wrapping and squeezing layers of aluminum foil around the ball until it is the size you want the comet to be. A ball that is about 2 inches (5 cm) in diameter seems to "fly" well.

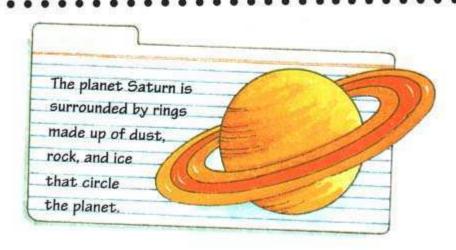

Flip-the-Rings-on-Saturn Game

Here is what you need:

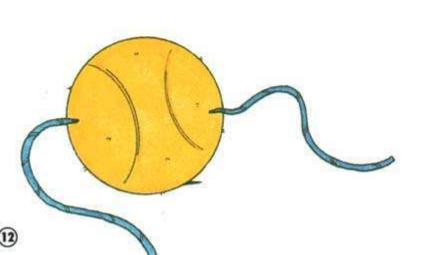

tennis ball
orange tissue paper
white glue
yarn
disposable plastic bowl and craft stick
two plastic containers as wide as you would
like your rings to be
Styrofoam tray
scissors
newspaper to work on

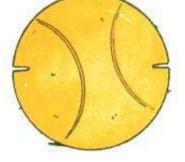

Here is what you do:

Ask an adult to cut a 1/2-inch (1.3-cm) slit on opposite sides of the tennis ball.

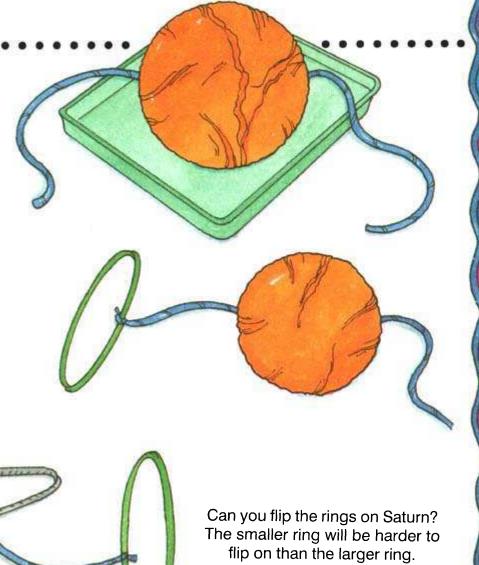

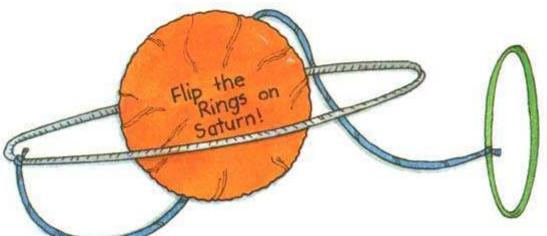

Cut a piece of yarn about 2 feet (61 cm) long. String the yarn through one slit in the tennis ball and out the other slit so that one end of the yarn hangs out of each side of the ball.

In the plastic bowl, mix about 2 ounces (58 ml) of glue with a small amount of water in the plastic bowl. Use the craft stick to stir the water into the glue.

Cut a piece of orange tissue paper large enough to cover the tennis ball. Dip the tissue in the watery glue and wrap it around the ball. Be sure to leave the two ends of the yarn free. Put the ball on the Styrofoam tray to dry.

Cut two rings for the ball from the rim of the two different-sized containers. Tie a ring to the end of each piece of yarn.

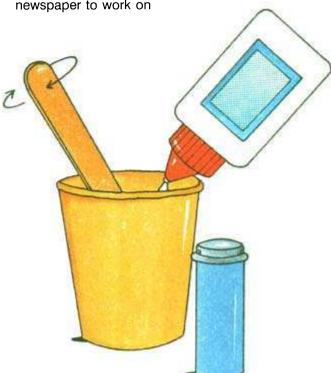

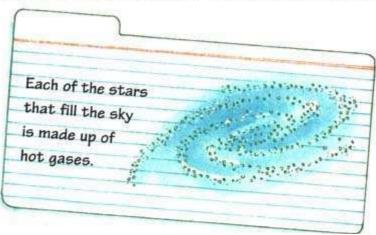

Starry-Sky Light Catcher

Here is what you need:

4-inch-diameter (10-cm) plastic lid white glue blue food coloring paper cup craft stick blue yarn aluminum foil star-shaped hole punch scissors gold glitter newspaper to work on

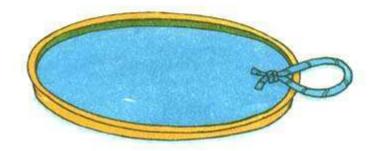

Here is what you do:

Pour about 4 ounces (118 ml) of glue into the paper cup. Add two or three drops of blue food coloring. Mix the glue and coloring well with the craft stick until the glue is an even color of blue.

Pour enough glue into the plastic lid to completely fill it.

Cut a 3-inch-long (8-cm) piece of yarn. Press the two ends of the yarn into the glue at the edge of the lid to make a hanger.

Punch stars from the aluminum foil and set them on top of the glue. (If you do not have a star punch, you can cut the stars with scissors or use packaged sticker stars.) Sprinkle gold glitter over the top of the stars and glue.

Let this project dry for several days on a flat surface. When it is completely dry, peel the glue out of the plastic lid.

Hang your starry sky in a sunny window.

Constellation Tack Board

Here is what you need:

three Styrofoam trays of the same size package of thumbtacks package of gold star stickers masking tape white glue white paper black marker scissors pictures of different constellations

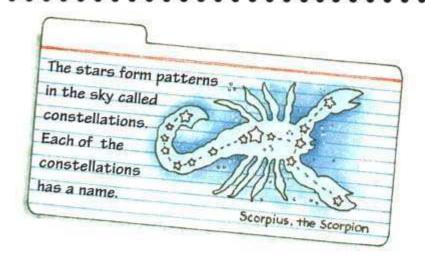

Here is what you do:

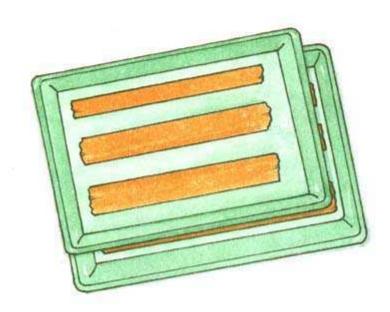

Stick a gold star on the head of about 20 thumbtacks.

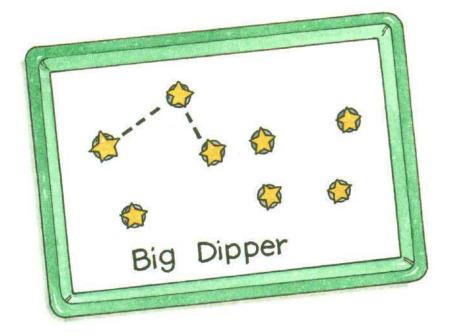

Put strips of masking tape on top of one tray and on the bottom of another. Put glue over the tape and press the trays together. Glue sticks more easily to masking tape than to Styrofoam.

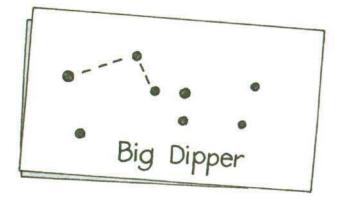

Put strips of masking tape and glue on the bottom of the third tray and on top of the top stacked tray. Glue the third tray to the stack.

Cut sheets of white paper so that they will fit inside the top tray. Draw the star pattern of a different constellation on each sheet of paper. Be sure to write the name of the constellation under each drawing.

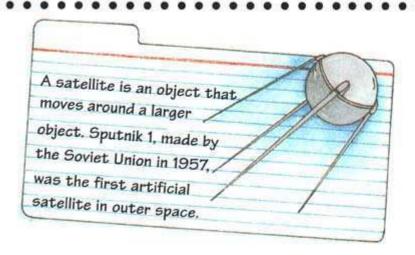

Choose one of the constellation pictures and place it on top of the stacked trays.

Push star tacks into the drawing to make the stars in the constellation. With this tack board and your pictures of the different constellations, you will quickly learn the star patterns so that you can recognize them in the sky.

Orbiting Sputnik

Here is what you need:

heavy 10-inch (25-cm) paper plate cereal-box cardboard brown construction paper blue poster paint and a paintbrush paper fastener white glue masking tape 1-inch (2.5-cm) Styrofoam ball four toothpicks aluminum foil newspaper to work on

Here is what you do:

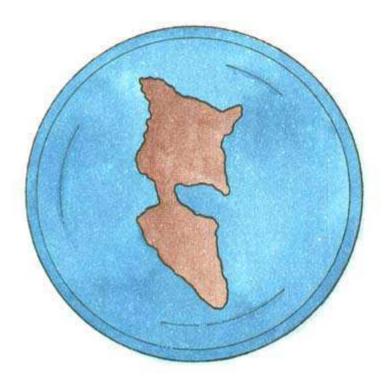

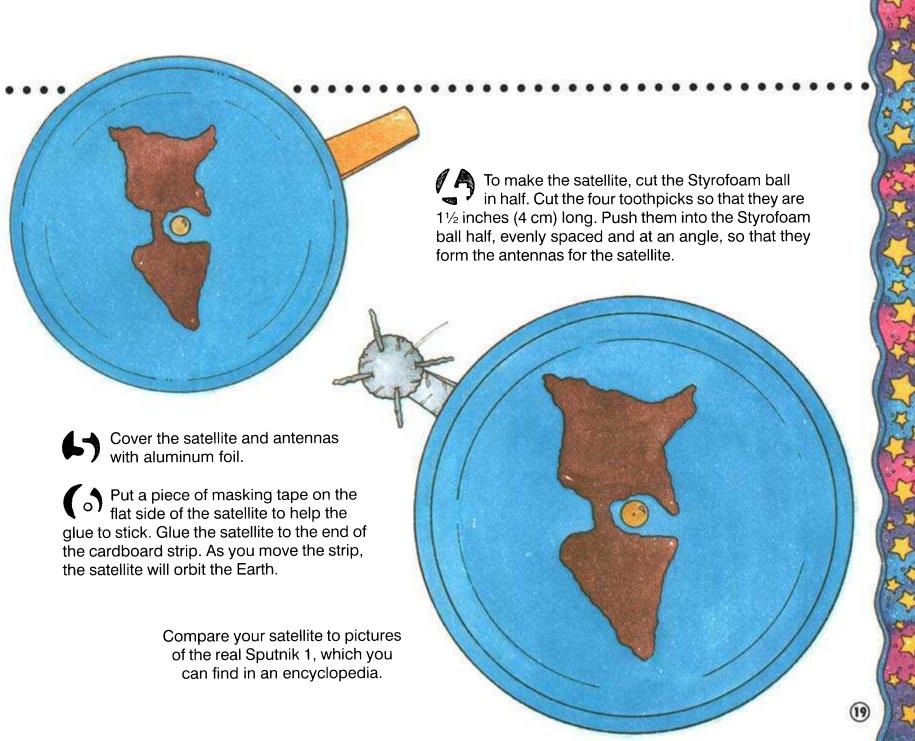

Paint the bottom of the plate blue and let it dry completely.

Cut shapes of the continents from the brown paper and glue them on the blue plate. The plate will now look like the planet Earth.

Cut an 8-inch-long (20-cm) strip of cardboard. Make the strip about 2 inches (5 cm) wide at one end and about 1/2 inch (1.3 cm) wide at the other end. Attach the wide end to the center of the unpainted side of the plate with a paper fastener. The strip should spin freely around the plate when you push it with your finger.

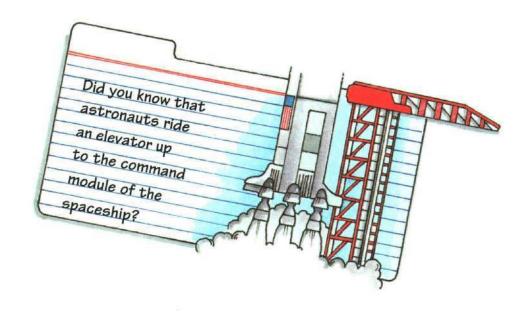

Astronaut-into-the-Spaceship Puppet

Here is what you need:

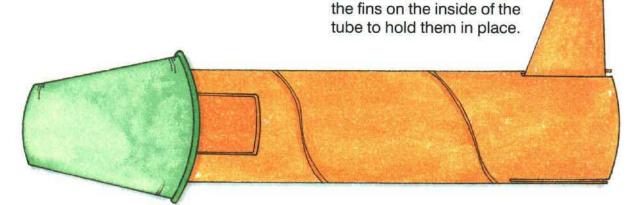

cardboard paper-towel tube bathroom-size paper cup blue yarn white paper white glue markers masking tape yarn, rickrack, and ribbon scissors aluminum foil cereal-box cardboard cellophane tape red and blue sticker stars

Here is what you do:

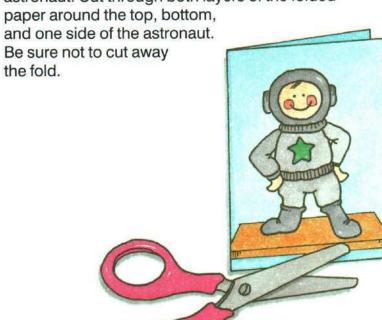

In one end of the tube, cut out a piece of cardboard 1 inch (2.5 cm) wide and 4 inches (10 cm) long. Tape the paper cup over the cut end of the tube to make the top of the rocket ship, leaving a small cutout opening.

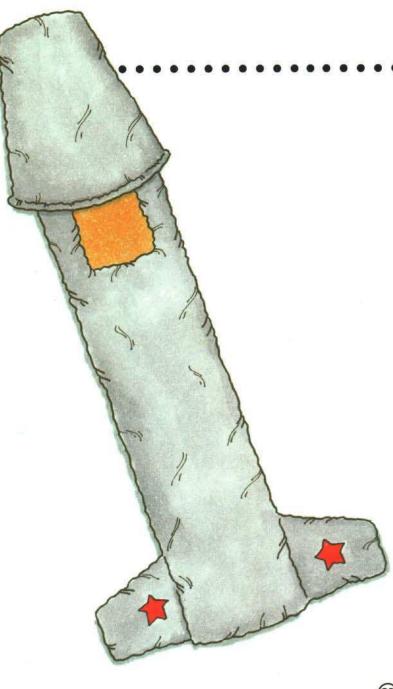

Cut two fins of the same shape and size for the bottom of the rocket. Cut a slit on each side of the bottom of the tube. Slide each fin into one of the slits so that the fins stick out on each side of the rocket. Tape

Cover the entire rocket ship with aluminum foil.
Decorate the rocket with sticker stars. If you want to glue ribbon and other trims to the rocket, too, first place masking tape on the foil so the glue will stick.

Fold a sheet of white paper in half. Draw an astronaut about 1½ inches (4 cm) tall on the fold of the paper. Draw a little platform under the astronaut. Cut through both layers of the folded paper around the top, bottom, and one side of the astronaut.

Cut a piece of blue yarn about 2 feet (60 cm) long. String the yarn through the opening in the top of the rocket and out the bottom. Tie the ends of the yarn together so that it forms a loop.

Open the folded astronaut picture, wrap it around the yarn, and glue the front and back of the picture together.

Pull the yarn to lift the astronaut up and into the spaceship.

Stars-in-a-Jar Shaker

Here is what you need:

small clear jar with screw-top lid corn syrup aluminum foil star-shaped hole punch masking tape thin blue ribbon blue food coloring water

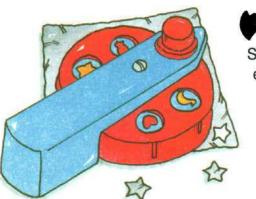

Here is what you do:

Fill the jar almost to the top with corn syrup. Add a few drops of blue food coloring.

Punch eight or more stars from aluminum foil with a star-shaped hole punch. If you do not have a star punch, use a round hole punch. These "stars" will look pretty, too, but punch more of them because they are smaller. Put the stars in the corn syrup.

Add water to the jar to fill it. Put the lid tightly on the jar. Shake the jar to color the syrup evenly. Tape around the edge of the jar with masking tape.

Cover the lid with aluminum foil. Tie a blue ribbon around the rim of the jar.

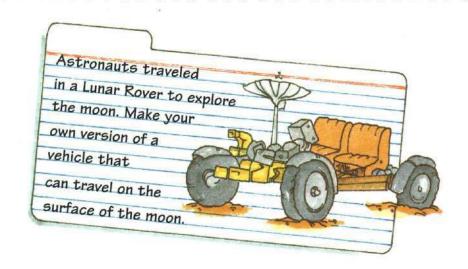

Shake and turn the jar and watch the stars float slowly in outer space.

Moon Buggy

Here is what you need:

old toy car about 6 inches (15 cm) long cardboard egg carton aluminum foil masking tape cellophane tape white glue plastic flexi-straw pry-off bottle cap two thumbtacks foil cupcake wrapper

Here is what you do:

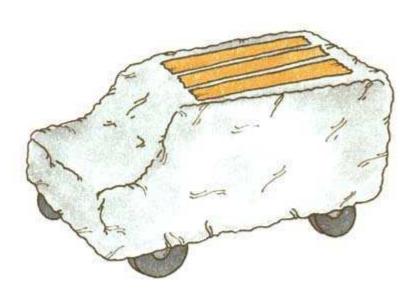

Cut the egg carton in half. Each half should have two rows of three cups. One half of the carton will be the top of the buggy. Cut two egg cups out of the other half and set the rest aside. Glue the two cups to one end of the first half egg carton. Let the glue dry and cover the half carton with aluminum foil.

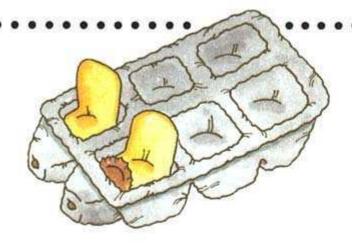

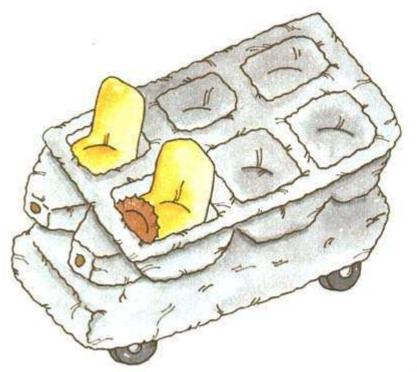

Push a thumbtack in each of the two bumps at the front of the buggy to make the headlights.

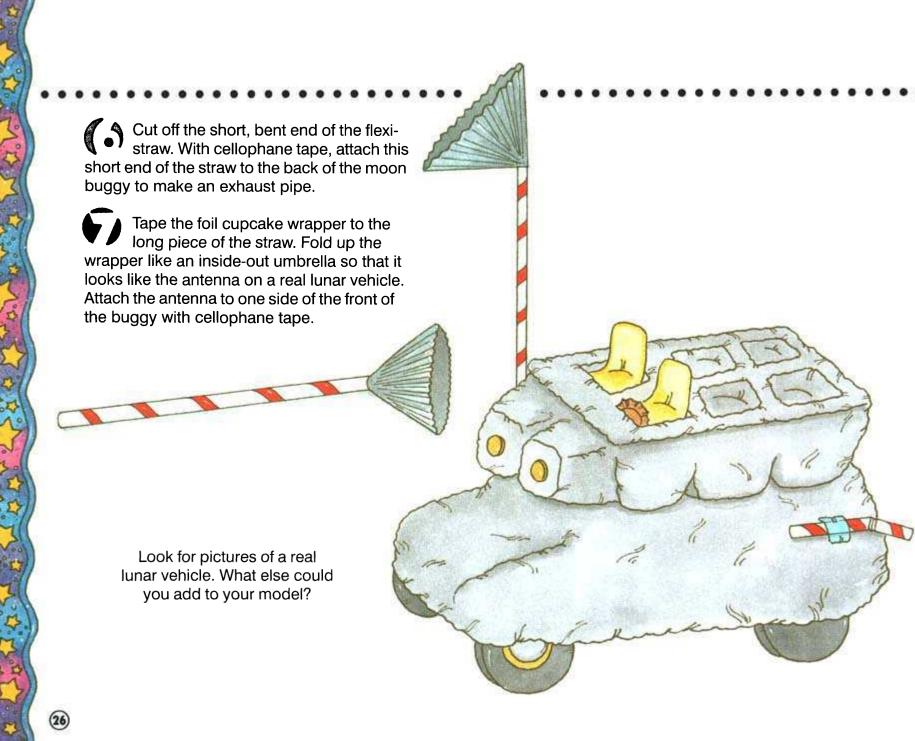

Cut two cups from the other half of the egg carton. Cut a piece out of the sides of each cup to make seats. Put the seats in the two cups behind the headlights. Put masking tape over the foil to help the glue stick, then glue the seats in place. Put masking tape on the top of the bottle cap and on the foil in front of one of the seats. To make the steering wheel, glue the cap to the tape-covered foil in front of the seat.

Cover the top of the toy car with aluminum foil. Put strips of masking tape and glue on the top of the car and on the bottom of the moon buggy. Glue the car and buggy together. Now the buggy has wheels and can roll around.

Straw Rocket

Here is what you need:

plastic drinking straw sheet of typing paper scissors cellophane tape marker white glue

Here is what you do:

Cut the typing paper so that it fits around the straw. Wrap the paper loosely around the straw and tape it in place. The paper should slide on and off the straw easily.

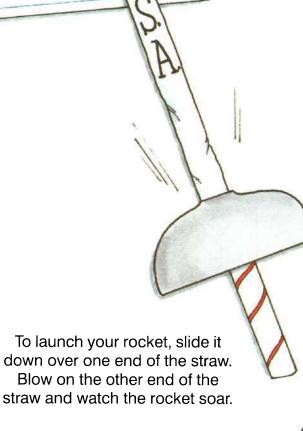

Slide the paper off the straw. Fold one end of the paper tube into a point to form the nose of the rocket. Hold the point in place with tape.

Here is a rocket to

make and launch yourself.

Cut two triangle-shaped fins for the bottom of the rocket. Put the paper rocket between the fins and glue them together.

Use a marker to write the name of your rocket down one side.

Rocket Pin

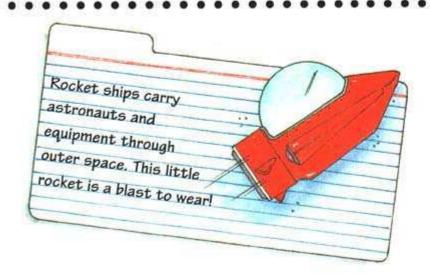

Here is what you need:

old necktie gold rickrack gold trim alphabet pasta blue glue gel safety pin

Here is what you do:

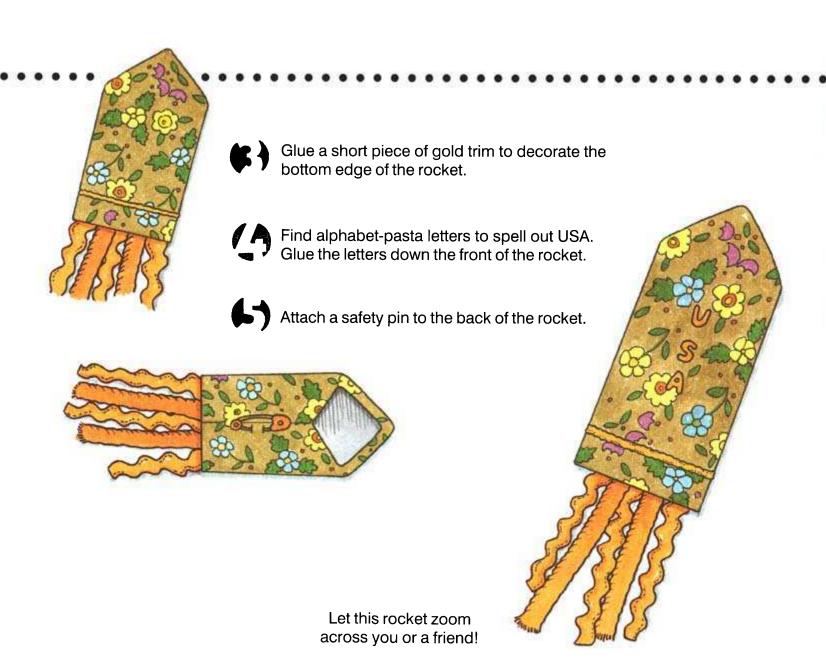

Cut a 3-inch-long (7.7-cm) piece off the thin, pointed end of the necktie. This piece will be the rocket.

Cut three pieces of gold rickrack and two pieces of gold trim about 2½ inches (6 cm) long. Glue the ends of the rickrack inside the cut end of the tie. They will look like fiery fuel coming out of the rocket.

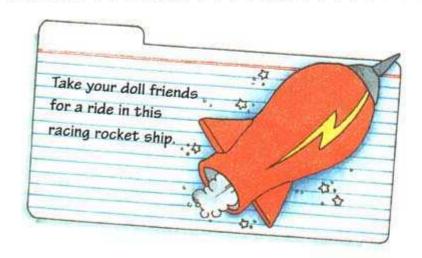

Racing Rocket

Here is what you need:

large-size oatmeal box blue 6-inch-wide (15-cm) plastic bowl plastic drinking straw cellophane tape blue yarn aluminum foil hole reinforcers permanent markers orange tissue paper stickers of people or animals

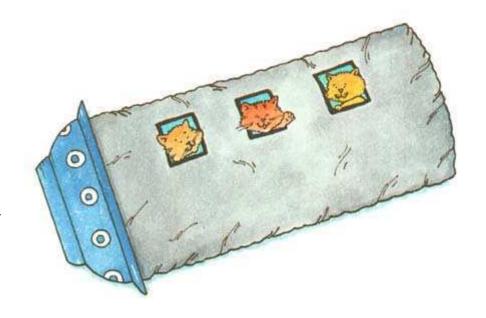

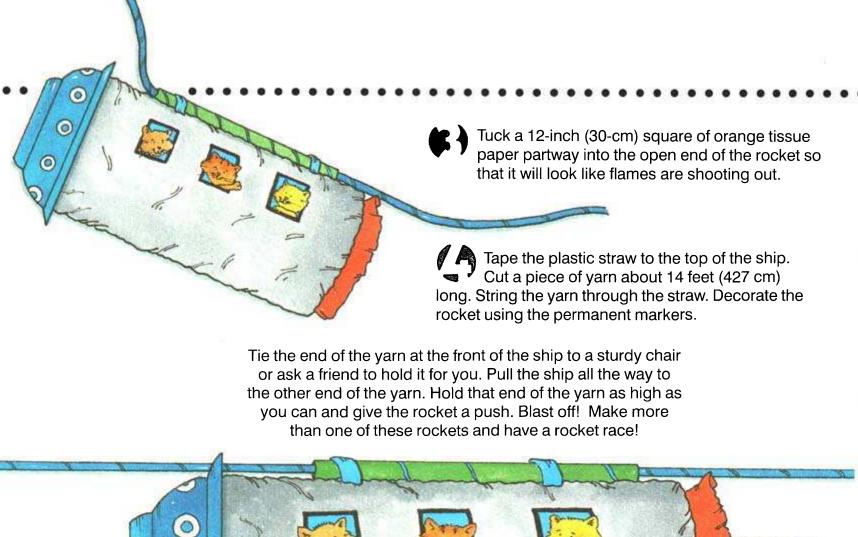

Here is what you do:

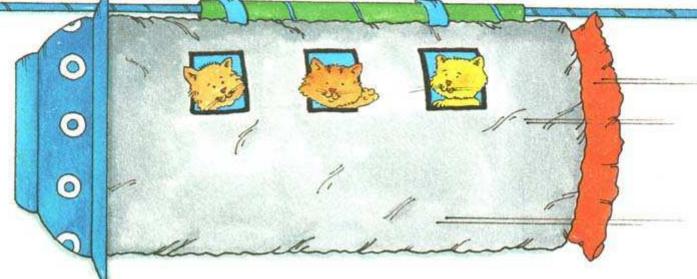

Cover the outside of the oatmeal box with aluminum foil to make the rocket ship. Tape the blue bowl to the bottom of the box to make the nose of the ship. Stick hole reinforcers around the sides of the bowl so that they look like portholes.

Use the black marker to draw windows on each side of the rocket.

Put stickers of faces in the windows so that a passenger peeks out of each window.

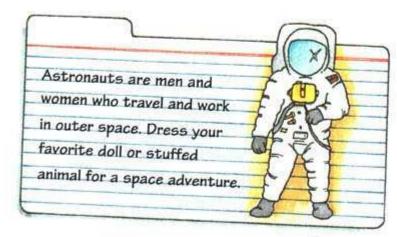

Doll Friend Space Suit

Here is what you need:

small doll or stuffed animal willing to travel aluminum foil paper cup or cardboard tube that fits over the doll's head plastic wrap black pipe cleaners small jewelry box paper fasteners scissors cellophane tape red and blue sticker stars

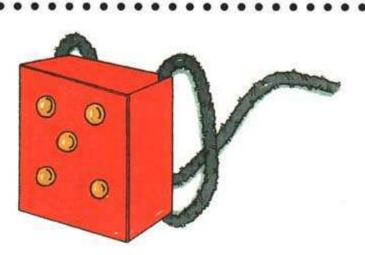

Here is what you do:

Make a helmet for the doll by cutting a face hole in the cup or cardboard tube. If you are using a cardboard tube, you may need to cut it so that it is short enough to fit over just the doll's head. Cut a small piece of plastic wrap. Tape it inside the helmet to cover the face hole and make a clear face mask.

Cover the helmet and the body of the doll with aluminum foil to make the space suit. Be sure not to cover the face hole.

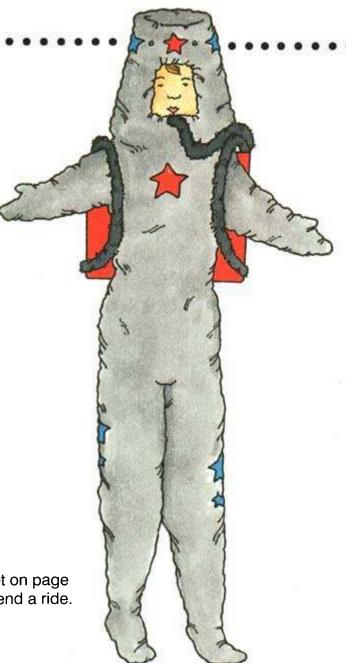

Next, make an air pack for the astronaut to carry. On each side of the box, thread a piece of pipe cleaner through the top and bottom to make shoulder straps. Put paper fasteners into the lid of the box to make knobs on the air pack. Put the air pack on the doll. Put one end of another pipe cleaner inside the box and the other end in front of the face mask to make an air hose for your astronaut to breathe through.

Decorate the astronaut suit with red and blue sticker stars.

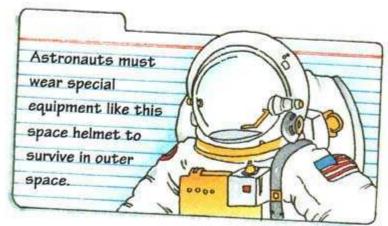

Make the Racing Rocket on page 30 and give your doll friend a ride.

Space Helmet

Here is what you need:

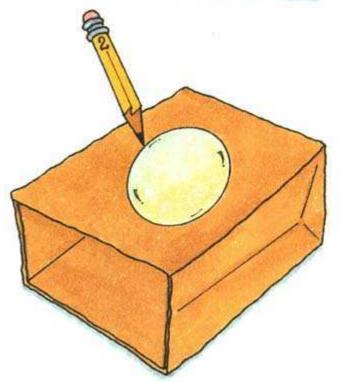

two large brown grocery bags clear plastic deli container white poster paint and a paintbrush scissors white glue masking tape plastic gallon milk jug white paper pencil markers newspaper to work on

Here is what you do:

Put one of the grocery bags inside the other to make a double bag. Cut enough off the ends of the bags so that they fit over your head and rest on your shoulders like a helmet. The bottoms of the bags rest on the top of your head.

To make the clear face mask in the helmet, you can use either a round or rectangular plastic container. Near the top of one of the wide sides of the bags, trace around the bottom of the plastic container with the pencil. Carefully cut through the two bags to cut out the traced shape. Slide the plastic container

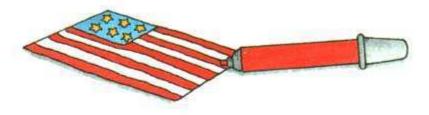

between the two bags. The bottom of the container should stick out to form the front of the face mask. The edges of the container should be between the two bags. Tape the edges to hold them in place. Rub glue in between the two bags to hold them together and keep the face mask in place.

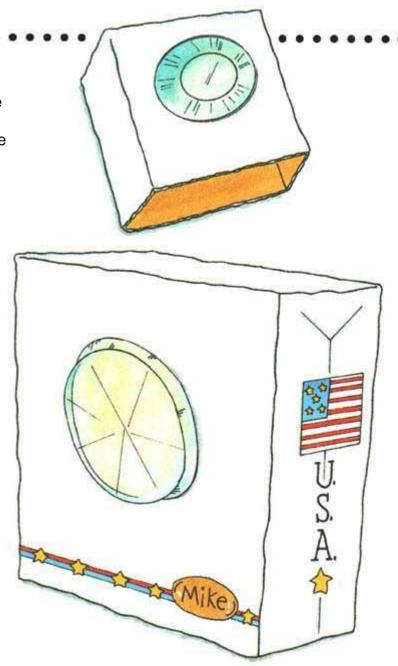

Paint the outside of the bags white. Place the helmet over a plastic jug to dry.

When the helmet is dry, draw an American flag on white paper and cut it out. Glue the flag to one side of the helmet.

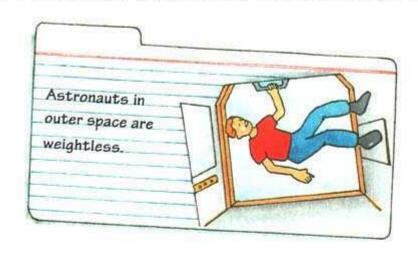

You can add the letters USA or the letters of your name to decorate your space helmet, too.

Weightless Box

Here is what you need:

cardboard box with a clear plastic lid aluminum foil masking tape black permanent marker blue yarn cardboard egg carton white glue four Styrofoam packing peanuts a tissue

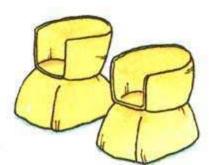

Here is what you do:

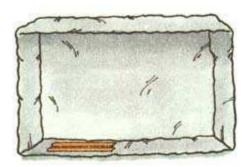

Cover the entire inside and outside of the box with aluminum foil. The inside of the box is the inside of a spaceship.

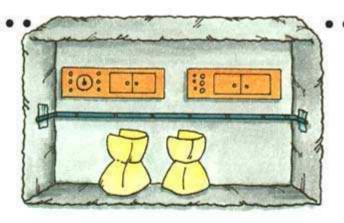

Cut four cups from the cardboard egg carton. Cut the sides off two of the cups.
Glue the bottom of one cut cup to the bottom of an uncut cup to make a chair. Make two chairs.

Stand the box on its side. Put two strips of masking tape along the bottom edge and glue the two chairs to the tape.

Tape a yarn railing across the box, above and behind the chairs. When the astronauts are weightless, they will need the railing to hold on to and to pull themselves around the cabin of the ship.

Put strips of masking tape around the walls of the cabin. Draw control panels on the tape with the black marker.

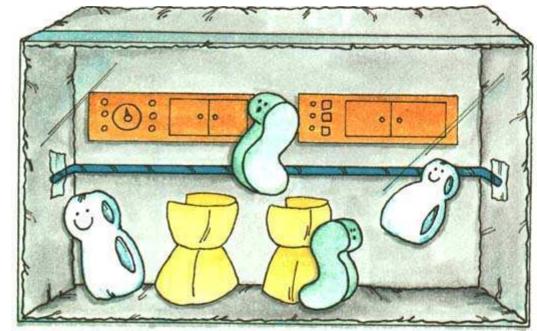

Draw a face on each of the four Styrofoam peanuts. (I used two white ones for astronauts and two green ones for Martian passengers.) You can put as many passengers as you want in your rocket ship.

Place the lid on the box and tape it in place.

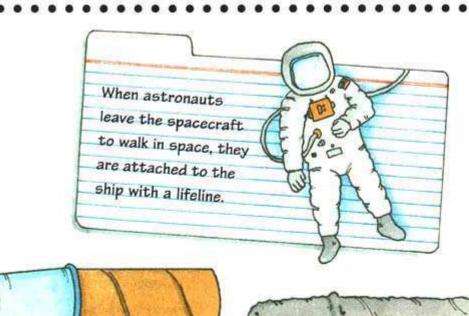

To make your astronauts and their passengers "weightless," rub the plastic quickly with a tissue. The static electricity this creates will make them float around in the spaceship cabin.

Magnetic Space Walk

Here is what you need:

shoebox
black poster paint and a paintbrush
magnet and magnetic bar
colored sticker stars
gray construction paper
black marker
cardboard toilet-tissue tube
bathroom-size paper cup
aluminum foil
white glue
masking tape
scissors
yarn
newspaper to work on

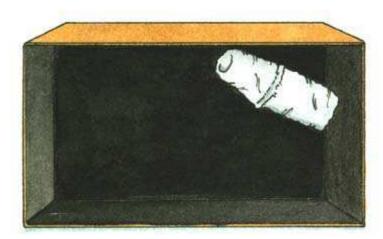

Here is what you do:

Paint the inside of the shoebox with the black paint and let it dry.

Tape the inside bottom of the cup to one end of the cardboard tube to make a rocket ship. Cover the rocket with aluminum foil. Decorate the ship with sticker stars. Put a strip of masking tape along one side of the ship. Glue the taped side of the ship at an angle pointed skyward to the inside of the black box.

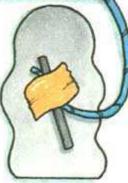

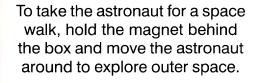

Put gold and silver sticker stars all over the inside of the box to make it look like outer space.

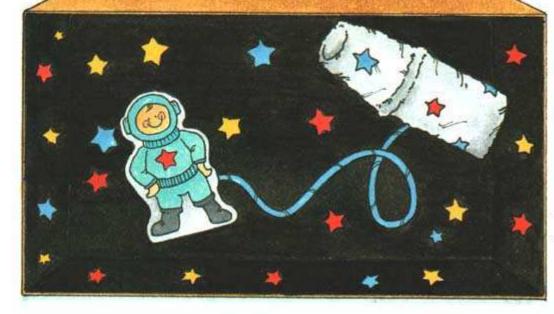

On the gray paper, draw an astronaut about 2 inches (5 cm) tall. Cut out the astronaut. Cut a 12-inch (30-cm) piece of yarn. Glue one end of the yarn behind the spaceship in the box. Tape the other end of the yarn to the back of the astronaut. Tape the magnetic bar to the back of the astronaut.

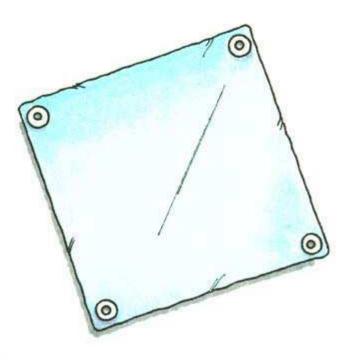

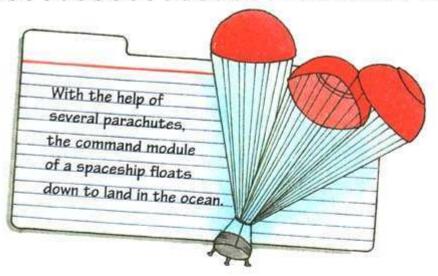

Command Module and Parachute

Here is what you need:

bathroom-size paper cup aluminum foil blue yarn star stickers scissors plastic grocery bag hole punch four hole reinforcers black permanent marker

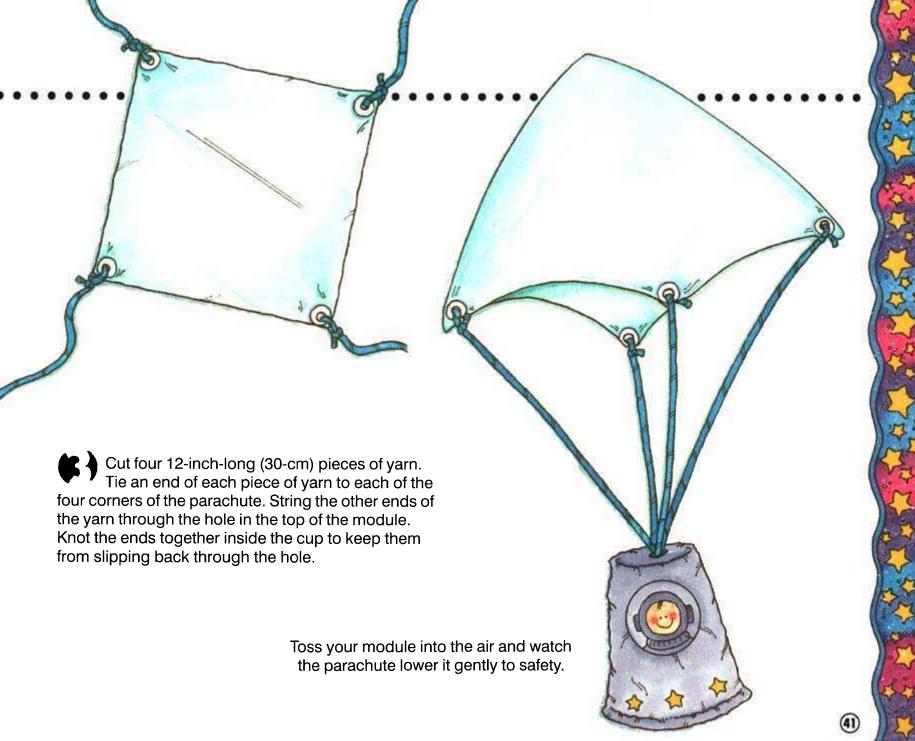

Here is what you do:

To make the parachute, cut a 12-inch (30-cm) square from the plastic grocery bag. Punch a hole in each corner of the square. Cover the outer edges of each hole with a reinforcer.

Cover the outside of the cup with aluminum foil. This will be the command module. Draw a window on the side of the module with the black marker. Add the face of an astronaut looking out. Decorate the module with some star stickers. Poke a hole in the top of the module.

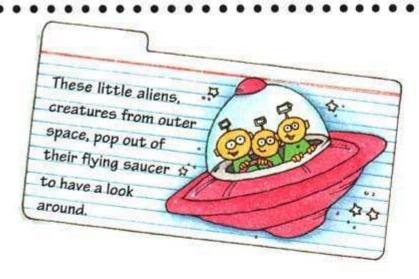

Pop-Up Alien Puppets

Here is what you need:

two 6-inch (15-cm) disposable plastic bowls two 12-inch (30-cm) pipe cleaners old knit glove masking tape scissors light-colored felt scrap sharp, black permanent marker blue glue gel hole punch

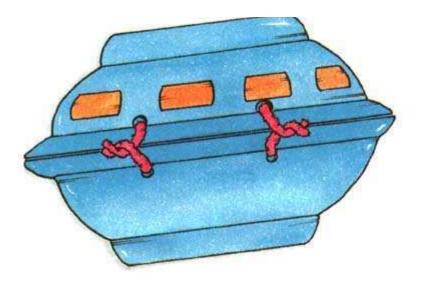

Here is what you do:

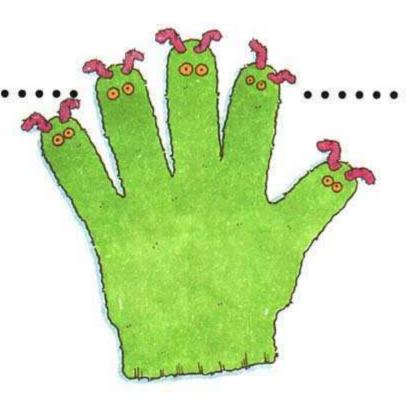

To make the flying saucer, put the rim of one bowl on top of the rim of the other bowl. Cut two pieces of pipe cleaner 3 inches (8 cm) long. Poke a hole in the rim of the top bowl. Then poke a hole in the rim of the bottom bowl directly below the top hole.

Thread one piece of pipe cleaner through both of the holes and twist the two ends together to form a hinge. Poke another set of holes about 2 inches (5 cm) away from the first set and make another pipe-cleaner hinge.

Cut the bottom out of the bottom bowl. Stick squares of masking tape around the sides of the top bowl of the saucer to make windows.

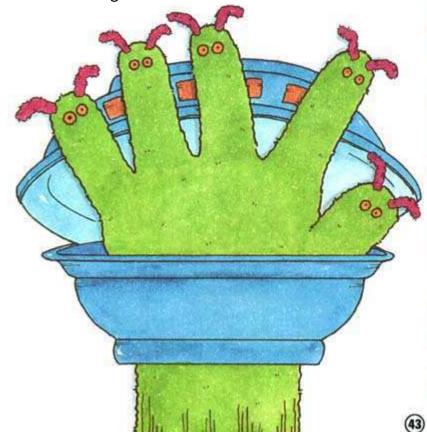

Put the glove on your hand and put your hand through the hole in the bottom of the saucer. Keep your fingers folded down. Push your hand upward and open your fingers to pop the aliens out of their flying saucer.

Each of the five fingers of the glove will be a little alien. Cut five 1½-inch-long (4-cm) pieces of pipe cleaner. Thread a piece through the tip of each finger of the glove. Bend the ends to make antennas for each alien.

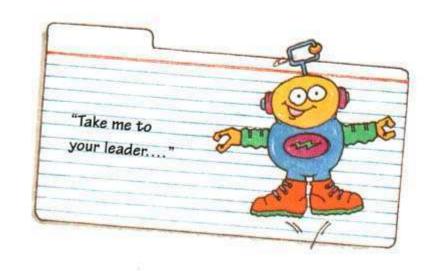

Punch ten holes from the felt to make eyes for the aliens. Make a pupil in the middle of each eye with the black marker. Glue a pair of eyes to the front of each finger.

Alien-in-a-Saucer Necklace

Here is what you need:

small twist-on flip-top from a toothpaste tube plastic or metal twist-on cap from a soda bottle cotton swab two tiny wiggle eyes yarn aluminum foil masking tape white glue scissors green poster paint Styrofoam tray

Here is what you do:

Dip one end of the cotton swab in green paint. Let it dry on the Styrofoam tray.

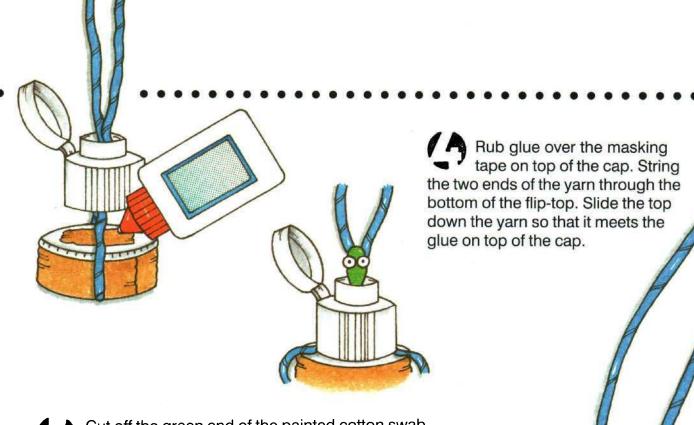

Cover the outside of the twist-on cap with masking tape. Cover the bottom edge of the flip-top with masking tape.

Cut a piece of yarn about 30 inches (76 cm) long to make the hanger for the necklace. Tie the yarn around the twist-on cap so that the ends are in the middle of the top of the cap. Tape the yarn on each side of the cap to hold it in place.

Cut off the green end of the painted cotton swab so that it is about 1 inch (2.5 cm) long. Dip the cut end in glue and slide it next to the yarn coming out of the top of the flip-top. Glue two tiny wiggle eyes to the front of the green swab. Let the project dry in the Styrofoam tray.

Cover the bottom and sides of the cap with a piece of aluminum foil, pressing it around the bottom edge of the flip-top.

Knot the two ends of the yarn together, and your alien friend is ready to wear around planet Earth.

Robot Hideaway

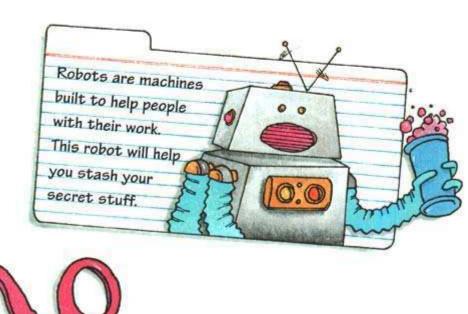

Here is what you need:

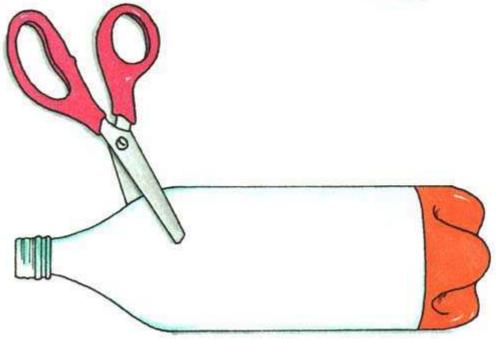

2-liter plastic soda bottle small coffee can scissors aluminum foil masking tape white glue nuts and bolts gold glitter

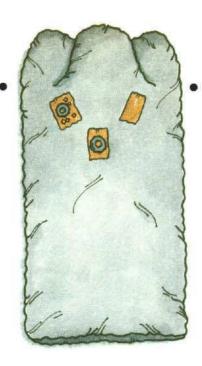

Here is what you do:

With scissors, cut the bottle at the top where it starts to slant. The bottom of the bottle will be the top of the robot, so turn the bottle over.

Cover the robot with aluminum foil, folding the edges inside the open end. The robot should slip easily over the coffee can.

Choose some nuts and bolts to use as facial features for the robot. Put a small piece of masking tape on the back of each metal piece and on the places on the robot where you wish to glue the metal. The

tape will provide a surface that the glue will stick to. If you have tape edges sticking out around the nuts and bolts, you can rub them with glue and sprinkle them with glitter.

Hide important things in the coffee can and slip the robot over the top of the can so that no one can find it.

The robot will never tell!
