

Simply put, this is a volume that has always intended to convey the key features of world history.

—[Preface to the Sixth Edition.](#)

# The Encyclopedia of World History

## Ancient, Medieval, and Modern

### Sixth Edition

Renowned historian Peter N. Stearns and thirty prominent historians have combined their expertise over the past ten years to perfect this comprehensive chronology of more than 20,000 entries that span the millennia from prehistoric times to the year 2000.

## I. [Prehistoric Times](#)

### A. [Introduction](#)

#### 1. [History and Prehistory](#)

Human beings have flourished on Earth for at least 2.5 million years. The study of history <sup>1</sup> in its broadest sense is a record of humanity and its accomplishments from its earliest origins to modern times. This record of human achievement has reached us in many forms, as written documents, as oral traditions passed down from generation to generation, and in the archaeological record—sites, artifacts, food remains, and other surviving evidence of ancient human behavior. The earliest written records go back about 5,000 years in the Near East, in Mesopotamia, and the Nile Valley. Elsewhere, written history begins much later: in Greece, about 3,500 years ago; in China, about 2,000 years ago; and in many other parts of the world, after the 15th century C.E. with the arrival of Western explorers and missionaries. Oral histories have an even shorter compass, extending back only a few generations or centuries at the most.

**History**, which remains primarily though not exclusively the study of written documents, <sup>2</sup> covers only a tiny fraction of the human past. **Prehistory**, the span of human existence before the advent of written records, encompasses the remainder of the past 2.5 million years. **Prehistorians**, students of the prehistoric past, rely mainly on archaeological evidence to study the origins of humanity, the peopling of the world by humans, and the beginnings of agriculture and urban civilization.

**Archaeology** is the study of the human past based on the material remains of human <sup>3</sup> behavior. These remains come down to us in many forms. They survive as archaeological sites, ranging from the mighty pyramids of Giza built by ancient Egyptian pharaohs to insignificant scatters of stone tools and animal bones abandoned by very early humans in East Africa. Then there are caves and rock shelters adorned with ancient paintings and engravings, and human burials that can provide vital information, not only on biological makeup but also on ancient diet and disease and social rankings.

Modern scientific archaeology has three primary objectives: to study the basic culture <sup>4</sup> history of prehistoric times, to reconstruct ancient lifeways, and to study the processes by which human cultures and societies changed over long periods of time. Archaeology is

unique among all scientific disciplines in its ability to chronicle human biological and cultural change over long periods of time. The development of this sophisticated approach to the human past ranks as one of the major scientific achievements of this century.

Archaeology, by its very nature, is concerned more with the material and the environmental. It is basically an anonymous science, dealing with generalities about human cultures derived from artifacts, buildings, and food remains rather than with the individuals who appear in many of the historians' archives. But by using complex theoretical models and carefully controlled analogies from living societies, it is sometimes possible for the archaeologist to gain insights into prehistoric spiritual and religious life, and into the great complexities of ancient human societies living in worlds remote from our own.

## **2. The Study of Prehistory**

### **a. Archaeology as Anthropology and History**

In contrast to classicists and historians, prehistoric archaeologists deal with an enormous time scale of human biological and cultural evolution that extends back at least 2.5 million years. Prehistoric archaeology is the primary source of information on 99 percent of human history. Prehistoric archaeologists investigate how early human societies all over the world came into being, how they differed from one another, and, in particular, how they changed through time. 1

No one could possibly become an expert in all periods of human prehistory. Some specialists deal with the earliest human beings, working closely with geologists and anthropologists concerned with human biological evolution. Others are experts on stone toolmaking, the early peopling of the New and Old Worlds, or on many other topics, such as the origins of agriculture in the Near East. All of this specialist expertise means that archaeologists, whatever time period they are working on, draw on scientists from many other disciplines—botanists, geologists, physicists, zoologists. 2

Prehistoric archaeologists consider themselves a special type of anthropologist. Anthropologists study humanity in the widest possible sense, and archaeological anthropologists study human societies of the past that are no longer in existence. Their ultimate research objectives are the same as those of anthropologists studying living societies. Instead of using informants, however, they use the material remains of long-vanished societies to reach the same general goals. Prehistorians also share many objectives with historians, but work with artifacts and food remains rather than documents. In some parts of the world, such as tropical Africa, for example, prehistoric archaeology is the primary way of writing history, since oral traditions extend back only a few centuries, and in many places written records appear no earlier than the 19th century C.E. 3

## **b. Culture and Context**

Anthropology, and archaeology as part of it, is unified by one common thread, the concept of **culture**. Everyone lives within a cultural context—middle-class Americans, Romans, and Kwakiutl Indians of northwestern North America. Each culture has its own recognizable cultural style, which shapes the behavior of its members, their political and judicial institutions, and their morals. 1

Human culture is unique because much of its content is transmitted from generation to generation by sophisticated communication systems. Formal education, religious beliefs, and daily social intercourse all transmit culture and allow societies to develop complex and continuing adaptations to aid their survival. Culture is a potential guide to human behavior created through generations of human experience. Human beings are the only animals that use culture as their primary means of adapting to the environment. While biological evolution has protected animals like the arctic fox from bitterly cold winters, only human beings make thick clothes in cold latitudes and construct light thatched shelters in the Tropics. 2

Culture is an adaptive system, an interface between ourselves, the environment, and other human societies. Throughout the long millennia of prehistory, human culture became more elaborate, for it is our only means of adaptation and we are always adjusting to environmental, technological, and societal change. 3

The great Victorian anthropologist Sir Edward Tylor described culture as “that complex whole which includes knowledge, belief, art, morals, law, custom, and any other capabilities and habits acquired by man as a member of society.” Prehistoric archaeologists prefer to define culture as the primary nonbiological means by which people adapt to their environment. They consider it as representing the cumulative intellectual resources of human societies, passed down by the spoken word and by example. 4

Human cultures are made up of many different parts, such as language, technology, religious beliefs, ways of obtaining food, and so on. These elements interact with one another to form complex and ever-changing cultural systems, systems that adjust to long- and short-term environmental change. 5

Archaeologists work with the tangible remains of ancient cultural systems, typically such <sup>6</sup> durable artifacts as stone tools or clay pot fragments. Such finds are a patterned reflection of the culture that created them. Archaeologists spend much time studying the linkages between past cultures and their archaeological remains. They do so within precise contexts of time and space.

## c. [Time and Space](#)

Archaeologists date the past and study the ever-changing distributions of ancient cultures across the world by studying the context of archaeological finds, whether sites, food remains, or artifacts, in time and space. This is the study of **culture history**, the description of human cultures as they extend back thousands of years. <sup>1</sup>

### 1. Time

Human prehistory has a time scale of more than 2.5 million years and a vast landscape of archaeological sites that were occupied for long and short periods of time. Some, like the Aztec capital, Tenochtitlán, in the Valley of Mexico, were occupied for a few centuries. Others, like Olduvai Gorge in East Africa, were visited repeatedly over hundreds of thousands of years. The chronology of prehistory is made up from thousands of careful excavations and many types of dating tests. These have created hundreds of local sequences of prehistoric cultures and archaeological sites throughout the world. <sup>2</sup>

Historical records provide a chronology for about 5,000 years of human history in Egypt and Mesopotamia, less time in other regions. For earlier times, archaeologists rely on both relative and absolute dating methods to develop chronological sequences. <sup>3</sup>

**Relative dating** is based on a fundamental principle of stratigraphic geology, the Law of Superposition, which states that underlying levels are earlier than those that cover them. Thus any object found in a lower level is from an earlier time than any from upper layers. Manufactured artifacts are the fundamental data that archaeologists use to study human behavior. These artifacts have changed in radical ways with passing time. One has only to look at the simple stone choppers and flakes made by the first humans and compare them with the latest luxury automobile to get the point. By combining the study of changes in artifact forms with observations of their contexts in stratified layers in archaeological sites, the prehistorian can develop relative chronologies for artifacts, sites, and cultures in any part of the world. <sup>4</sup>

The story of prehistory has unfolded against a backdrop of massive world climatic change <sup>5</sup>

during the Great Ice Age (See [Prehistory and the Great Ice Age](#)). Sometimes, when human artifacts come to light in geological strata dating to the Ice Age, one can place them in a much broader geological context. But in such cases, as with relative chronologies from other archaeological sites, determining the actual date of these sites and artifacts in years is a matter of guesswork, or of applying absolute dating methods.

**Absolute chronology** is the process of dating in calendar years. A whole battery of chronological methods have been developed to date human prehistory, some of them frankly experimental, others well established and widely used. The following are the best known ones.

6

### a. Historical Records and Objects of Known Age

Historical documents can sometimes be used to date events, such as the death of an ancient Egyptian pharaoh or the Spanish conquest of Mexico in 1519–21 C.E. Clay tablet records in Mesopotamia and ancient Egyptian papyri provide dates going back to about 3000 B.C.E. The early Near Eastern civilizations traded many of their wares, such as pottery or coins with precise dates, over long distances. These objects can be used to date sites in, say, temperate Europe, far from literate civilization at the time.

## **d. Finding and Digging up the Past**

The finding and excavating of archaeological sites is a meticulous process of uncovering and recording the finite archives that make up the archaeological record. The sites, large and small, that make up this record are finite resources. Once destroyed and the context of their artifact contents disturbed, they are gone forever. 1

Although the destruction wrought by early archaeologists and treasure hunters was devastating, that of modern industrial development, deep plowing, professional looters, and amateur pothunters has been far worse. In some parts of North America, experts estimate that less than 5 percent of the archaeological record of prehistoric times remains intact. In recent years, massive efforts have been made to stem the tide of destruction and to preserve important sites using federal and state laws and regulations. While some progress has been made in such **cultural resource management**, the recent archaeological record of human prehistory is a shadow of its former self and in many parts of the world is doomed to near-total destruction. 2

### **1. Finding Archaeological Sites**

Many archaeological sites come to light by accident: during highway or dam construction, through industrial activity and mining, or as a result of natural phenomena such as wind erosion. For example, the famous early human sites at Olduvai Gorge in Tanzania, East Africa, were exposed in the walls of the gorge as a result of an ancient earthquake that cut a giant fissure through the surrounding plains. Well-designed archaeological field surveys provide vital information on ancient settlement patterns and site distributions. 3

Increasingly, archaeologists are relying on **remote sensing techniques**, such as aerial photography, satellite imagery (digital images of the earth recorded by satellites), or side-scan radar (airplane-based radar used to penetrate ground cover). These allow them to identify likely areas, even to spot sites without ever going into the field. The latest approach involves the use of **Geographic Information Systems** (mapping systems based on satellite imagery that inventory environmental data). The combination of satellite 4

imagery with myriad environmental, climatic, and other data provides a backdrop for interpreting distributions of archaeological sites. For instance, in Arkansas, archaeologists have been able to study the locations of river valley farming villages and establish that they were founded close to easy routes to the uplands, where deer could be hunted in winter.

## **e. Analysis and Interpretation**

For every month of excavation there is at least six months' laboratory analysis—a long process of classifying, analyzing, and interpreting the finds from the dig. Such finds come in many forms. Stone tools, clay potsherds, and other artifacts tell us much about the technology of our forebears. Broken animal bones, seeds, shells, and other food remains, even desiccated human feces, are a mine of information on ancient subsistence, and sometimes diet. All of these finds are combined to produce a reconstruction of human behavior at the site. <sup>1</sup>

### **1. Analysis of Artifacts**

Human artifacts come in many forms. The most durable are stone tools and clay vessels, while those in wood and bone often perish in the soil. Archaeologists have developed elaborate methods for classifying artifacts of all kinds, classifications based on distinctive features like the shapes of clay vessels, painted decoration on the pot, methods of stone flaking, and so on. Once they have worked out a classification of artifact types, the experts use various arbitrary units to help order groups of artifacts in space and time. <sup>2</sup>

These units include the **assemblage**, which is a diverse group of artifacts found in one site that reflect the shared activities of a community. Next is the **component**, a physically bounded portion of a site that contains a distinct assemblage. The social equivalent of an archaeologist's component is a **community**. Obviously a site can contain several components, stratified one above another. The final unit is the **culture**, a cultural unit represented by like components on different sites or at different levels of the same site, although always within a well-defined chronological bracket. <sup>3</sup>

Archaeological “cultures” are concepts designed to assist in the ordering of artifacts in time and space. They are normally named after a key site where characteristic artifacts of the culture are found. For instance, the Acheulian culture of early prehistory is named after the northern French town of St. Acheul, where the stone hand axes so characteristic of this culture are found. <sup>4</sup>

## **f. Subdividing Prehistoric Times**

The 2.5 million years of human prehistory have seen a brilliant diversity of human societies, both simple and complex, flourish at different times throughout the world. Ever since the early 19th century, archaeologists have tried with varying degrees of success to subdivide prehistory into meaningful general subdivisions. 1

The most durable subdivisions of the prehistoric past were devised by Danish archaeologist Christian Jurgensen Thomson in 1806. His **Three Age System**, based on finds from prehistoric graves, subdivided prehistory into three ages based on technological achievement: the **Stone Age**, the **Bronze Age**, and the **Iron Age**. This scheme has been proven to have some general validity in the Old World and is still used as a broad label to this day. However, the term Stone Age has little more than technological significance, for it means that a society does not have the use of metals of any kind. Stone Age has no chronological significance, for although societies without metal vanished in the Near East after 4000 B.C., some still flourish in New Guinea to this day. We only use the Three Age System in the most general way here. 2

Sometimes, the three ages are subdivided further. The Stone Age, for example, is conventionally divided into three periods: the **Palaeolithic**, or Old Stone Age (Greek: from *palaios*, old; and from *lithos*, stone), which applies to societies who used chipped-stone technology; the **Mesolithic** (Middle Stone Age), which is a transitional period; and the **Neolithic** (New Stone Age), when people used polished stone artifacts and were farmers. However, only the term Palaeolithic remains in common use, as Mesolithic and Neolithic have proved increasingly meaningless, even if they occasionally appear in specialist and popular literature. 3

New World archaeologists have never used the Three Age System, largely because in the Americas, metallurgy of any kind had limited distribution. They tend to use more local terms, defined at intervals in these pages. 4

In recent years, archaeologists have tried to classify prehistoric societies on the basis of political and social development. They subdivide all human societies into two broad categories: **prestate** and **state-organized societies**. 5

Prestate societies are invariably small-scale, based on the community, band, or village. 6

Many prestate societies are **bands**, associations of families that may not exceed 25 to 60 people, the dominant form of social organization for most hunter-gatherers from the earliest times up to the origins of farming. Clusters of bands linked by clans, groups of people linked by common ancestral ties, are labeled **tribes**. **Chiefdoms** are societies headed by individuals with unusual ritual, political, or entrepreneurial skills, and are often hard to distinguish from tribes. Such societies are still kin-based, but power is concentrated in the hands of powerful kin leaders responsible for redistributing food and other commodities through society.

Chiefdoms tend to have higher population densities and vary greatly in their elaboration. 7  
For example, Tahitian chiefs in the Society Islands of the South Pacific presided over elaborate, constantly bickering chiefdoms, frequently waging war against their neighbors.

State-organized societies operate on a large scale, with a centralized political and social organization, distinct social and economic classes, and large food surpluses created by intensive farming, often employing irrigation agriculture. Such complex societies were ruled by a tiny elite class, who held monopolies over strategic resources and used force and religious power to enforce their authority. Such social organization was typical of the world's **preindustrial civilizations**, civilizations that functioned with technologies that did not rely on fossil fuels like coal. 8

## **g. Theoretical Approaches to Prehistory**

Archaeologists study human prehistory within broad theoretical frameworks. Such theoretical approaches are a means for looking beyond the facts and material objects from archaeological sites for explanations of cultural developments and changes that took place during the remote past. 1

Two broad theoretical approaches dominate interpretative thinking: 2

### **1. Culture History**

Culture-historical approaches are based on systematic descriptions of sites, artifacts, and entire cultural sequences. Culture history is based on studies of archaeological context in time and space. Such studies are the backbone of all archaeological research and provide us with the chronology of human prehistory. They also give us data on the broad distributions of human cultures through the Old and the New World over more than 2.5 million years. No more sophisticated theoretical approaches can exist without this culture-historical background. 3

## **B. Prehistory and the Great Ice Age**

The biological and cultural evolution of humankind unfolded against a complex backdrop of constant climatic change. For most of geological time, the world's climate was warmer and more homogeneous than it is today. The first signs of glacial cooling occurred in Antarctica about 35 million years ago. There was a major drop in world temperatures between 14 and 11 million years ago, and another about 3.2 million years ago, when glaciers first formed in northern latitudes. Then, just as humans first appeared, about 2.5 million years ago, the glaciation intensified and the earth entered its present period of constantly fluctuating climate. <sup>1</sup>

Humans evolved during the period of relatively minor climatic oscillations. Between 4 and 2 million years ago, the world climate was somewhat warmer and more stable than it became in later times. The African savanna, where humans originated, supported many mammal species, large and small, including a great variety of the order Primates, to which we belong. <sup>2</sup>

About 1.6 million years ago, at the beginning of the **Pleistocene** (commonly called the **Great Ice Age**), the world's climatic changes intensified. Global climates constantly fluctuated between warm and intensely cold. For long stretches of time, the northern parts of both Europe and North America were mantled with great ice sheets, the last retreating only some 15,000 years ago. While glaciers covered northern areas, world sea levels fell as much as 300 feet below modern shorelines, joining Alaska to Siberia, Britain to the Continent, and exposing vast continental shelves off ocean coasts. The glacial periods brought drier conditions to tropical regions. The Sahara and northern Africa became very arid, and rain forests shrunk. <sup>3</sup>

Fluctuations of warm and cold temperatures were relatively minor until about 800,000 years ago. Since then, periods of intense cold have recurred about every 90,000 years, perhaps triggered by long-term changes in Earth's orbit around the Sun. Core samples taken from the sea floor tell us that there have been at least nine cold periods in the last 800,000 years, each of them characterized by a gradual cooling that took tens of thousands of years and a subsequent rapid warming up that saw glaciers retreat and world sea levels rise with remarkable speed. <sup>4</sup>

Few of these oscillations are well documented, except for the last interglacial and glacial cycle, which began about 128,000 years ago. During the last interglacial, Europe, Eurasia, and North America were warmer than today. But a gradual cooling set in about 118,000 years ago, as the last glaciation, **Würm**, set in. (The term Würm comes from a river in the Alps where the glaciation was first identified.) Glacial conditions were especially intense about 75,000 years ago, when the archaic Neanderthal people were flourishing in Europe and when the Americas were still uninhabited. After a brief milder interval about 40,000 years ago, the cold intensified again, peaking about 18,000 years ago. A rapid amelioration began about 15,000 years ago, and the world's climate reached near-modern conditions by 6000 B.C.E. 5

By using **pollen analysis**, microscopic and statistical analyses of fossilized plant pollens found in geological deposits, scientists have chronicled dramatic changes in the world's environment during the Würm glaciation, changes that also took hold much earlier in the Ice Age. During the height of the Würm, most of western and central Europe and Eurasia was open steppe-tundra, while Scandinavia and much of Britain were under ice. The Balkans were joined to Turkey, the Sahara was extremely arid, and snow levels on the world's mountains were hundreds of feet lower. Rain forests shrank, and the Southeast Asian mainland was joined to the offshore islands. Only narrow straits separated the mainland from New Guinea and Australia, which formed a single landmass. Alaska and Siberia were joined by a low-lying land bridge. Most of Canada and the United States were covered with vast ice sheets, as far south as Seattle, the Great Lakes, and Nova Scotia. The 90,000 years of the Würm glaciation witnessed dramatic changes in human life, which unfolded in a world very different from our own. 6

## **C. Human Origins (4 Million to 1.8 Million Years Ago)**

All humans are members of the order **Primates**. There are two suborders: **Anthropoids** (apes, humans, and monkeys) and Prosimians (lemurs, tarsiers, and other “premonkeys”). We also belong in the family **Hominidae**, which includes modern humans, earlier human subspecies, and their direct ancestors. Our closest primate relatives are the **Pongidae**, the so-called anthropoid apes, including the chimpanzee and the gorilla. The research of more than a century has shown that the many similarities in behavior and physical characteristics between Hominidae (hominids) and Pongidae can be explained by identical characteristics that each group inherited millions of years ago from a common ancestor. Nearly all scientists agree that tropical Africa was the cradle of humankind, simply because this is where our closest living primate relatives still live. 1

According to biochemists Vincent Sarich and Alan Wilson, apes and Old World monkeys diverged about 23 million years ago, and the chimpanzee, the gorilla, and humans last shared a common ancestor about 7 to 6 million years ago. Unfortunately, this divergence occurred at a moment in geological time for which fossil-bearing beds in Africa are very rare. There is what has been called a “black hole” in primate evolution between about 15 and 4 million years ago. But this was a critical time when the Africa forest and savanna were densely populated by many primate species. Some of these primates were flourishing in small groups, probably walking upright, and adopting daily behaviors different from their tree-dwelling relatives nearby. 2

To understand early human evolution means identifying the ecological problems faced by our earliest ancestors at a time of constant climatic change. The first humans were descended from a yet unidentified nonhuman primate, who lived both in forests and, increasingly, on the open African savanna. Early hominids adapted to open country not only by adopting a more mobile, wide-ranging lifeway, but also by walking upright. 3

An **upright posture** and **bipedal gait** are characteristic of hominids. Walking upright frees the hands for other tasks like toolmaking, while bipedalism favors endurance and the covering of long distances, vital for hominids living in open country. Our remote ancestors may have first “come down from the trees” about 10 million years ago. Relying as they now did on food supplies scattered over large areas, they not only became more mobile, but began scavenging meat from predator kills, even hunting down 4

small animals when the opportunity arose. Among mammal species, these characteristics are associated with a trend toward larger brain size.

The earliest fossil evidence for these anatomical and behavioral changes comes from the **Middle Awash** and **Hadar** areas of Ethiopia. Here physical anthropologists—Don Johanson, Tim White, and others—have uncovered primates dating back to close to the time, between 4 and 5 million years ago, when the ancestors of living apes and humans split off from one another. **Australopithecus ramidus**, from Hadar, was a small, upright-walking primate who displayed many apelike features and might have been the ancestor of later hominids. Another small primate, which Johanson and White nicknamed “Lucy,” lived during a somewhat later time than *ramidus*. She was between three and a half and four feet tall and was 19 to 21 years old when she died. A gracile, lightly built hominid, she was fully bipedal, with arms slightly longer than the arms of modern humans. Johanson and White also recovered the remains of other contemporary hominids. All had ape-shaped heads, brains the size of chimpanzees, and forward-thrusting jaws. Potassium-argon dates for the Hadar fossil beds are between 3.75 and 3 million years ago. Johanson and White believe that all the Hadar specimens are members of the species *Australopithecus afarensis* (“southern ape-man of the Afar”) and that they are the common ancestor of all later hominids, including the first humans. 5

*Australopithecus* (“southern ape-man”) was first identified by anatomist Raymond Dart in 1924, when he described the fossil skull of an immature primate from the Taung limestone quarry in South Africa. Dart realized that the Taung skull was not that of an ape; it had more humanlike teeth and other features that set it apart from chimpanzees. He named it *Australopithecus africanus*, a small, graceful creature that stood upright, and announced it was an ancestor of modern humans. Dart’s claim was greeted with derision by the fossil experts of the day. Only one scholar, Robert Broom, realized Dart was right. He found more *Australopithecus* fossils in caverns in northern South Africa. These included not only *Australopithecus africanus*, but also a much more robust form, massively built with a crested skull. Broom named this australopithecine *Australopithecus robustus*. The South African *Australopithecus* finds date to between 3 million and 800,000 years ago. 6

The South African finds showed there was great variability among early hominids, but no stone tools or other artifacts were found with these fossils. Most of them have come from the sites of ancient hyena kills. Who, then, was the ancestor of humanity? In 1959, Louis and Mary Leakey announced the discovery of an *Australopithecus robustus* fossil (named *Zinjanthropus boisei*) in the lowermost bed of **Olduvai Gorge** in northern Tanzania. 7

Olduvai is a great natural gash in the Serengeti Plain, where hundreds of feet of ancient lakebeds have been exposed by earthquake action. Olduvai transects the shores of a long-dried-up, shallow lake where game and hominids came to drink. The Leakeys found small scatters of stone tools and debris, also animal bones, in the lakebeds. The 8

robust australopithecine came from one such scatter and was potassium-argon dated to about 1.75 million years ago. A year later, the Leakeys found the skull bones of a much lighter, more human-looking hominid at a slightly lower level in the gorge, again associated with animal bones and flaked-stone artifacts. Louis Leakey did not believe this was an australopithecine, so he named it *Homo habilis* (“handy person”) and claimed that this was the earliest toolmaking human being.

Even earlier than Olduvai are the rich fossil beds at **East Turkana** in northern Kenya. They have yielded fragments not only of gracile and robust australopithecines, but also of *Homo habilis* as well. These discoveries showed that there was great variability among the hominid populations of eastern Africa between 4 and 2 million years ago. This complicates the study of early human evolution greatly, but makes it certain that there was no direct, linear progression from *Australopithecus afarensis* at Hadar to *Homo habilis* at East Turkana and Olduvai Gorge. Instead, it is best to think in terms of a branching bush, with numerous parallel and highly varied evolutionary lines that reflect a great diversity of hominid populations on the savanna between 4 and 1.5 million years ago.

Most likely, however, *Homo habilis* was the earliest toolmaking hominid, and, in general terms, the ancestor of all humankind. *Homo habilis* was a graceful, fairly human-looking primate that stood about 4 feet 3 inches tall and weighed about 80 pounds. *Homo habilis* looked less apelike around the face and skull, with a taller forehead and a large brain size. These hominids walked upright, but their upper and lower arm bones were of almost equal length and their powerful hands were more curved than ours. These features enabled them to grip branches and swing in the tress, a sign that our earliest ancestors spent considerable periods of time off the ground.

The earliest archaeological evidence for toolmaking, the appearance of rudimentary human culture, comes from the **Koobi Fora** area of East Turkana and is potassium-argon dated to about 2.5 million years ago. Excavations at both Koobi Fora and Olduvai Gorge give us a tantalizing portrait of very early human behavior, tantalizing because it is incomplete.

Originally, the Leakeys and others assumed that *Homo habilis* was a hunter and a plant food forager, who behaved just like today's hunter-gatherers. But microscopic examination of the stone artifacts and food remains from the scatters at Koobi Fora and Olduvai paint a picture of a much more apelike lifeway.

Archaeologist Nicholas Toth has replicated the simple **Oldowan** (named after Olduvai Gorge) stone technology used by *Homo habilis* so thoroughly that he has even been able to show that some of the toolmakers were left-handed. He discovered this was an opportunistic technology. The hominids could carry around convenient lumps of lava with them, then strike off simple stone flakes with a hammerstone when they needed them to split tough hide, to cut up an animal carcass, or to break open a bone for its marrow.

*Homo habilis* lived a highly mobile life, ranging over large territories in search of meat and plant foods. Undoubtedly, fruit, seeds, and tubers played a vital role in the diet, for they come into season on the savanna throughout the year. Our earliest ancestors also scavenged meat from the kills of lions and other predators, chasing away the animals, seizing limbs and other body parts, and running away. They may also have run down and killed some smaller antelope themselves. 14

Once the precious meat was in hand, they would find a convenient spot in the shade to butcher and eat the flesh and marrow. These places comprised the bone and stone scatters uncovered at Olduvai and Koobi Fora. One Koobi Fora band camped in a dry watercourse about 1.8 million years ago, where they found the carcass of a hippopotamus. Carrying in some of their tools from nearly 9 miles away, they gathered around and then removed bones and meat from the carcass with small stone flakes. 15

Much of this life is not that different from that of chimpanzees, who hunt small game and break open bones and nuts. Two important differences separated the first humans from their other primate relatives in Africa. First, they were fully bipedal, a posture far more efficient for carrying objects of all kinds. Second, they were adapted to savanna living, where they had to organize and cover far larger territories in open country than their relatives in the forest. At the same time, our ancestors became more and more dependent on technology and on one another, a development that led to better communication skills and, eventually and much later, to fully articulate speech. 16

By a million years ago, the hominid line had been pruned to the extent that one lineage, *Homo*, remained. Judging from the abundance of hominid fossils at Koobi Fora, these highly varied populations were about as common as baboons on the East African savanna. The adoption of a wider-based diet with a food-sharing social group would have placed many more acute demands on the hominids' ability to cope with the complex and unpredictable. They had to become more and more socially adept, living as they did in a world far more complex and demanding than that of *Australopithecus*. The increased complexity of human social interactions was a powerful force in the evolution of the hominid brain and led to the appearance of more advanced human forms after 1.8 million years ago. 17

## **D. *Homo Erectus* and the First Peopling of the World (1.8 Million to 250,000 Years Ago)**

By 1.8 million years ago, new, anatomically more advanced humans had evolved from earlier hominids in tropical Africa. These were the first of two waves of humans to move out of Africa and settle in other parts of the Old World. The second wave, modern humans, followed. 1

### **1. *Homo Erectus***

In the 1890s, Dutch physician Eugene Dubois discovered the remains of a primitive-looking human in the gravels of the **Solo River** in Java. He claimed that the bones were those of the so-called missing link between apes and humans. His claims were greeted with skepticism. It was not until the discovery of closely similar fossils in northern China in the 1920s that Dubois was vindicated. The Chinese and Javanese fossils are grouped under a general human form named **Homo erectus**. 2

Today, *Homo erectus* is known to have lived over a wide area of the Old World. The fossils from **Zhoukoudian Cave** in northern China provide a portrait of a very variable human form. These hominids had a brain capacity between 775 and 1,300 cc, showing much variation. Their vision was excellent, and they were probably capable of extensive thought. Their skulls were more rounded than those of earlier hominids, with conspicuous brow ridges and a sloping forehead. The jaw was massive. Limbs and hips were fully adapted to an upright posture but more robust than those of modern humans. 3

*Homo erectus* stood about 5 feet 6 inches tall and had hands fully capable of precision gripping and many kinds of toolmaking. Although we cannot be sure, it seems possible that *Homo erectus* had lost the dense hair covering characteristic of nonhuman primates. *Homo erectus* also had abundant sweat glands, and presumably, in common with most tropical primates and humans, relatively dark skin. These humans were certainly capable of a far more complex and varied life than their predecessors. 4

## 2. [Fire](#)

The earliest *Homo erectus* fossils come from East Africa and date to around 1.8 million years ago. By this time, the savanna was drier and human settlement intensified as *Homo erectus* developed efficient technologies and lifeways. *Homo erectus* now tamed fire, presumably by using brands from a natural conflagration. This discovery was a revolution in human history, for it enabled people to protect themselves against predators—they could move into more open country, where trees were much rarer, and camp in the open or in caves or rock shelters where hostile animals lurked. They could also increase their home range and cook food, as well as cope with harsh winters. It may be no coincidence that the first human settlement of Europe and Asia occurred after *Homo erectus* mastered fire. <sup>1</sup>

### 3. [Out of Africa](#)

There was a widespread interchange of mammals between Africa and Europe between a million and 700,000 years ago. Hippopotamuses, forest elephants, and other herbivores and carnivores migrated north, crossing the Sahara when rainfall was higher and the region could support animal life. Human predators shared many ecological characteristics with these mammals and radiated out of Africa with this familiar mammalian community. <sup>1</sup>

The earliest recorded human settlement of Europe and the Near East dates to about 700,000 years ago. By the same time, tiny *Homo erectus* populations were flourishing in south and Southeast Asia and were widespread by half a million years ago. Apparently, however, *Homo erectus* lacked the technology to settle in anything more than tropical and temperate latitudes, for it was not until the very end of the Ice Age that humans mastered arctic and periglacial environments in Europe and northern Asia, or ventured on boats to New Guinea and Australia. <sup>2</sup>

Half a million years ago, the world's population was no more than a few thousand people, scattered in temperate and tropical environments. In Africa, Europe, the Near East, and south Asia, *Homo erectus* exploited more open country, subsisting on plant foods and game of all sizes. The bands used simple tool kits that revolved around multipurpose stone axes and cleavers with sharp edges and points. They used such hand axes for butchering, digging up roots, and many other purposes, such as woodworking and fashioning fire-hardened spears. Their hunting methods were simple and involved not only scavenging predator kills, but also careful stalking of their prey to get close enough to kill or wound with a spear. Like their predecessors, *Homo erectus* hunted and foraged for plant foods, but in more effective ways than earlier hominids. At **Ambrona** and **Torralba** in central Spain, bands of hunters drove elephants into swamps, killed the mired animals, and butchered them where they lay. Similar kill sites have come from eastern and southern Africa, but we can be sure that wild plant foods were still of great importance in the diet. <sup>3</sup>

The dense tropical forests of Southeast and eastern Asia provided a quite different challenge, for game was rare. *Homo erectus* lived off small animals like monkeys and a multitude of plant foods. Instead of hand axes and cleavers, the bands relied on wooden <sup>4</sup>

tools and bamboo artifacts. They had no need of any stone tools other than crude flakes and choppers for woodworking.

For hundreds of thousands of years, archaic humans, loosely classified as *Homo erectus*,<sup>5</sup> lived in the tropical and temperate regions of the Old World. Except for an overall increase in brain size, *Homo erectus* remained remarkably stable in evolutionary terms for more than a million years, until less than 500,000 years ago. During these long millennia, they developed improved language and communication skills. With enhanced language skills and more advanced technology, it became possible for people to achieve better cooperation in foraging, storing food, and hunting. These people depended on cooperative activity by every individual in the band. The secret of individual success was group success.

## **E. Early *Homo Sapiens* (c. 250,000 to c. 35,000 Years Ago)**

Eventually, *Homo erectus* evolved into a more advanced form, known to anthropologists as **early *Homo sapiens***, but we do not know when or where the transition began or how it took place. Some researchers believe it took place more than 400,000 years ago; others believe it was much later, some time around or after 200,000 years ago. Throughout the Old World, there was a general evolutionary trend toward larger brain size and more enhanced intellectual capacities. Human populations displayed increased variability, partly in response to their adaptations to increasingly varied natural environments. Unfortunately, we still know little of early *Homo sapiens*, but there was great human variability throughout the Old World. <sup>1</sup>

### **1. The Neanderthals**

The best-known early *Homo sapiens* populations are the so-called **Neanderthals**, named after the **Neanderthal Cave** in Germany, where the first Neanderthal fossil came to light in 1856. Once dismissed as brutal, primitive savages—the cave people of popular cartoon fame—the Neanderthals are now recognized as being tough, adaptable people capable of flourishing in very harsh climates indeed. <sup>2</sup>

Neanderthals (***Homo sapiens neanderthalensis***) probably evolved from earlier *Homo sapiens* populations in Europe and Eurasia at least 150,000 years ago, perhaps earlier. They were nimble, squat people, standing about 5 feet high, with forearms that were somewhat shorter than those of modern people. Heavily built, beetle-browed hunter-gatherers, the Neanderthals of western Europe were robust men and women, well adapted to the arctic cold of the early Würm glaciation of 100,000 years ago. Their relatives in the Near East were more lightly built and displayed much more anatomical variation. <sup>3</sup>

The Neanderthals of Europe and Eurasia lived in caves and rock shelters during the winter months and ranged more widely during summer. They used a more specialized technology for hunting and foraging, one that made use of composite tools, with stone spearheads bound to wooden shafts. They made thousands of scrapers and woodworking tools using more or less standardized flakes struck off from carefully prepared stone <sup>4</sup>

blanks. This **Mousterian** technology, named after the Le Moustier cave in southwestern France, was highly versatile and used in various forms over a wide area of Europe, Eurasia, North Africa, and the Near East. The Neanderthals were expert foragers who were not afraid to hunt the largest animals, including bison. Success in the hunt meant expert stalking, enabling the hunter to thrust a spear into the prey's heart, a high-risk way of obtaining food. Somewhat similar technologies were used by early *Homo sapiens* populations throughout the western portions of the Old World after 150,000 years ago.

The Neanderthals were the first humans to bury their dead, and, presumably, to believe in an afterlife. Single burials are most common, usually accompanied by a few stone tools or some game meat. Group sepulchers are also known. Some western European groups engaged in elaborate rituals involving cave bears, the most formidable of all Ice Age prey. We find in the Neanderthals and their culture the first roots of our own complicated beliefs, societies, and religious sense. But they were an evolutionary dead end, supplanted in their homeland by more modern humans between 40,000 and 25,000 years ago. <sup>5</sup>

## **F. The Origins of Modern Humans (c. 150,000 to 100,000 Years Ago)**

*Homo sapiens sapiens* means “wise person.” We are the clever people, animals capable of intelligent thought, of manipulation, of subtlety. A great biological and cultural chasm separates us from archaic humans. This chasm comes from our ability to speak fluently, to pass on knowledge and ideas through the medium of language. Consciousness, self-awareness, foresight, and the ability to express one's emotions—all are the consequence of articulate speech. These qualities can be linked to our capacity for symbolic and spiritual thought. We modern humans are concerned not only with subsistence and technology, but with defining the boundaries of existence and the relationship between the individual, the group, and the universe. Fluent speech, the full flowering of human creativity expressed in art and religion, expert toolmaking—these are some of the hallmarks of anatomically modern humans. With these abilities, humankind eventually colonized not only temperate and tropical environments, but the entire globe. We are now concerned with people biologically identical to ourselves, with the same intellectual abilities and potential as ourselves.

One of the great controversies of archaeology surrounds the origins of *Homo sapiens sapiens*. One group of scholars believes that *Homo erectus* populations throughout the world evolved independently, first into early *Homo sapiens*, then into fully modern humans. Thus, the modern geographic populations (races) of the world would have been separated for a long time, perhaps a million years. Most experts take a diametrically opposite view. They hypothesize that *Homo sapiens sapiens* evolved in Africa sometime between 200,000 and 100,000 years ago, then spread to other parts of the Old World. Under this model, modern geographic populations are less than 100,000 years old.

These two models represent extremes, which pit advocates of anatomical continuity against those who believe there was population replacement. Each model is based on the minute study of human fossil remains, but the replacement theory also relies on studies of **mitochondrial DNA (mtDNA)**.

Molecular biologists like Alan Wilson and Rebecca Cann have studied the human family tree using this form of DNA, which is inherited through the female line without being diluted with paternal DNA. Thus, they argue, it provides a unique tool for studying ancestral populations. They compared mtDNA from Africans, Asians, Europeans, and

Southeast Asians and found that the differences between them were small. They formed two groups: one was the Africans, the other the remainder. Wilson and Cann concluded that all modern humans derive from a primordial African population, from which populations migrated to the rest of the Old World with little or no interbreeding with existing archaic human groups.

By calculating the rate of mtDNA mutations, they argue that archaic *Homo sapiens* evolved from *Homo erectus* in Africa by about 200,000 years ago. Then *Homo sapiens sapiens*, anatomically modern humans, appeared some 140,000 years ago. 5

Mitochondrial DNA is still controversial, but there is some archaeological evidence from Africa that supports the biologists' scenario. Highly varied, early *Homo sapiens* populations flourished in sub-Saharan Africa between 200,000 and 150,000 years ago, some of them displaying some anatomically modern features. At the **Klasies River Caves** on the Indian Ocean coast of South Africa, anatomically modern human remains date to between 125,000 and 95,000 years ago. They are associated with sophisticated, versatile tool kits that were, if anything, superior to those used by the Neanderthals in Europe at the time. 6

Many scientists believe that *Homo sapiens sapiens*, modern humans, did indeed evolve in tropical Africa sometime after 150,000 years ago, as the geneticists argue. Ecologist Robert Foley has theorized that modern humans evolved in a mosaic of constantly changing tropical environments, which tended to isolate evolving human populations for considerable periods of time. Some groups living in exceptionally rich areas may have developed unusual hunting and foraging skills, using a new technology so effective that they could prey on animals from a distance with finely made projectiles. With efficient technology, more planning, and better organization of both hunting and foraging, our ancestors could have reduced the risks of living in unpredictable environments in dramatic ways. And, when climatic conditions changed, and hitherto isolated populations mingled with others, the process of biological and cultural evolution accelerated. 7

## **G. The Spread of Modern Humans in the Old World (100,000 to 12,000 Years Ago)**

About 100,000 years ago, the Sahara was cooler and wetter than today and capable of supporting sparse hunter-gatherer populations. It may have been then that modern humans spread to North Africa and the Near East. We know they were living at **Qafzeh Cave** in Israel by 90,000 years ago. For the next 45,000 years, they flourished in the Near East alongside highly varied Neanderthal populations. Then, some 45,000 years ago, *Homo sapiens sapiens* hunted and foraged out of the Near East into south Asia and also much harsher northern environments. <sup>1</sup>

### **1. Europe**

As the Near East became increasingly dry and less productive during the Würm glaciation, some of the newcomers responded to population pressure and food shortages by moving across the wide land bridge that joined Turkey to southeastern Europe 45,000 years ago, spreading into the game-rich steppe-tundras of central and western Europe and Eurasia. <sup>2</sup>

The first anatomically modern Europeans were the robust **Cro-Magnons**, who showed no signs of having evolved from local Neanderthal populations. They lived alongside their predecessors for about 10,000 years, using a distinctive and highly specialized stone technology based on fine blades. Expert stoneworkers used carefully shaped cylindrical lumps of flint and antler, bone, or wood punches to produce dozens of standard stone blades. These long, parallel-sided, thin blades could be made into scrapers, woodworking tools, and, above all, fine graving tools. A good analogy is the Swiss Army Knife with its strong hinges, which allows one to carry around a variety of different blades for specific uses. <sup>3</sup>

The graving tool, or burin, was of critical importance, for it enabled people to cut strips of fresh reindeer antler to manufacture specialized tools. These included needles for tailoring fitted, layered clothing, essential for survival in the nine-month winters of the <sup>4</sup>

late Ice Age. Technological innovations like the needle enabled modern humans to master arctic environments for the first time, to expand and adapt into new landscapes.

By 30,000 years ago, the last Neanderthals had vanished from Europe and Eurasia. Over 5  
15,000 years, up to the end of the Ice Age, the Cro-Magnons enjoyed an increasingly elaborate hunting and foraging culture, wintering in deep river valleys in western and central Europe, following reindeer migrations in spring and fall. All manner of arctic game, many plant foods, and salmon were among the foods taken by these people.

By 30,000 years ago, the Cro-Magnons had developed elaborate art traditions, rock 6  
engravings and paintings. They also carved and engraved fine bone and antler artifacts. The artists painted naturalistic depictions of mammoth, bison, wild ox, and other now long-extinct animals, sometimes using natural protrusions on the rock to give relief to a figure. Experts believe that the art had a deeply symbolic meaning, connected with the intricate relationships between humans and the animal and spiritual worlds. But we cannot, at a distance of 18,000 years, hope to understand this symbolism. The Cro-Magnon paintings are among the earliest-known human art, but Australians and South Africans may have been painting at the same period.

## **2. Eurasia and Siberia**

To the east, other late Ice Age people adapted to life on the open steppe-tundra, relying on mammoth bones, skins, and sod to build dome-shaped, semisubterranean houses. The late Ice Age population of Eurasia, between central Europe and Lake Baikal in Siberia, was never large. Most bands lived on the edges of river valleys like the Dnepr and Don in the Ukraine, subsisting on mammoth and other gregarious big game, as well as fish and plant foods in the spring, summer, and fall. Eighteen thousand years ago, some bands along the Dnepr were trading raw materials and ornaments like seashells over distances of more than 100 miles. <sup>1</sup>

Perhaps as early as 30,000 years ago, and certainly by 20,000, late Ice Age bands were hunting and foraging to the east of Lake Baikal. But it was not until after 18,000 years ago that people ventured farther east, into extreme northeast Asia. <sup>2</sup>

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

### **3. South and Southeast Asia**

While the Cro-Magnons and other northern groups were mastering arctic climates, other modern humans moved into tropical south and Southeast Asia, probably by at least 45,000 years ago, if not earlier. For thousands of years, forest bands exploited small game and plant foods, using increasingly smaller and more specialized tool kits. At the time, the exposed continental shelf joined offshore islands like Borneo to the Asian mainland. This Ice Age land, known to geologists as **Sunda**, was separated from New Guinea and Australia (**Sahul**) by only a narrow strait of open water. <sup>1</sup>

*Homo sapiens sapiens* built rafts or canoes to cross deep water by at least 40,000 years ago, for artifacts of this age have been found in southern New Guinea. By 32,000 years ago, people were living on the islands of the Bismarck Archipelago in the southwestern Pacific, and by 28,000 years ago people had reached the Solomon Islands. Line-of-sight, island-to-island voyaging was all that was needed to colonize these landmasses. It was to be many thousands of years before the peoples of the southwestern Pacific developed the agriculture, outrigger canoes, and the navigation skills needed to reach islands much farther offshore. <sup>2</sup>

The first human settlement of Australia came at least 35,000 years ago, perhaps somewhat earlier: the dating is controversial. Hunter-gatherer groups, the ancestors of the modern aboriginal population, were dwelling as far south as Tasmania before 31,000 years ago. At the time, Tasmania was joined to the Australian mainland by a land bridge. Late Ice Age Tasmanians were hunting wallabies in an open landscape that became dense forest at least 20,000 years ago. <sup>3</sup>

These late Ice Age Australian populations continued to evolve without interruption into recent times, developing increasingly more elaborate cultures that are remarkable for their sophisticated art traditions, social organization, and ritual life. The highly diverse and sophisticated Australian aboriginal cultures encountered by Dutch and English explorers in the 17th and 18th centuries C.E. are the direct result of more than 30,000 years of continuous cultural evolution in an isolated, remote landmass. <sup>4</sup>

## **H. The First Settlement of the Americas (c. 15,000 Years Ago)**

Dental morphology, genetics, and archaeology show that the biological and cultural roots of the Native Americans lie in northern China and extreme northeast Asia. 1

We do not know when modern humans first settled in China. Although Chinese archaeologists claim that *Homo sapiens sapiens* evolved independently in the Far East, they have yet to put forward convincing evidence for such a hypothesis. Anatomically modern people were hunting and foraging in the Ordos area of Mongolia by 35,000 years ago. Ten thousand years later, a vast area between Mongolia in the west and the Pacific coast in the east supported a highly varied population of hunter-gatherers exploiting game and plant foods as well as coastal resources. As time went on, their tool kits became progressively smaller and more refined. They produced tiny stone blades used as lethal spear barbs and small scrapers; they also relied on artifacts made of wood and bone. This so-called microblade technology spread widely in northeast Asia, offshore to Japan, and north into Siberia. 2

The earliest human settlement of extreme northeast Siberia, from Lake Baikal eastward, took place late in the Ice Age. This was after the last glacial climax 18,000 years ago, when warmer conditions opened up hitherto uninhabited steppe-tundra. The first settlers were few in number, living off big game, plant foods, and perhaps fish and sea mammals. The middle Aldan River Valley began to support bands of late Ice Age people using microblade technology 15,000 years ago, perhaps earlier. These same people settled as far northeast as the Bering Strait. 3

A low-lying land bridge joined Siberia to Alaska during the entire Würm glaciation, from about 100,000 to 15,000 years ago. During glacial maxima, the land bridge was a wide, poorly drained plain, swept by arctic winds. The climate was dry and intensely cold, with only a two-month summer. Low scrub covered the landscape, except in shallow river valleys where some trees and lush grasses grew in spring and summer. During warmer intervals, sea levels rose, flooding much of the plain, leaving but an isthmus between Old World and New. This was the route by which humans settled the Americas. 4

Great controversy surrounds the first settlement of the New World. While everyone agrees that the first settlers crossed the Bering land bridge, some archaeologists believe the crossing dates to at least 40,000 years ago. Others favor a much later date, at the very end of the Ice Age, or soon afterward.

5

Claims of very early settlement are based on a series of cave and rock shelter finds in South America. There are affirmations of humans occupying **Boqueirao de Pedra Furada** in northeastern Brazil at least 40,000 years ago. Only a few scholars accept this claim or other much heralded occupations said to have occurred between 40,000 and 25,000 years ago.

6

The most widely accepted scenario has small numbers of hunter-gatherers from northeast Asia crossing into Alaska as the land bridge began to flood at the end of the Ice Age some 15,000 years ago. This was not a journey of exploration but rather part of an age-old hunter-gatherer lifeway that had people following migrating game and searching for new clumps of scarce plant foods.

7

The earliest archaeological evidence for human settlement in Alaska—nothing more than small scatters of stones and bones—dates to about 11,500 years ago. From that date onward, there has been continuous human occupation in the Arctic into modern times.

8

During the height of the Würm glaciation (called the **Wisconsin** in the New World), northern North America was mantled by two vast ice sheets that extended from Greenland to British Columbia. There may have been a narrow, ice-free corridor between them, but it would not have supported animal or plant life. Most likely, people from Alaska hunted and foraged their way south onto the Great Plains as the ice sheets receded rapidly after 13,000 years ago.

9

Despite occasional occurrences of 12,000-year-old artifacts in North America, the first widespread settlement of the Americas as a whole dates with great consistency to about 11,000 years ago (9000 B.C.E.). Within a few centuries, perhaps no more than 500 years, hunter-gatherer groups had colonized the entire Americas, from ice-free Nova Scotia in the north to Patagonia in the south.

10

The **Clovis** people (named after a site near Clovis, New Mexico) are best known for their characteristic stone projectile points, fluted at the base for mounting in a wooden shaft. These people preyed on game of every size and also foraged plant foods. They hunted large Ice Age animals like the mammoth, mastodon, and large steppe bison, sometimes camping close to a kill while they butchered the carcass. Clovis artifacts have been found throughout North America and deep into Central America, with variants on this culture farther south.

11

It appears that humans literally exploded into the New World, living off a fauna that was unused to such formidable predators. As a result, the human population rose rapidly, then stabilized, as people adapted to a great variety of natural environments, everything from rocky coasts to desert and dense rainforest.

12

By 8800 B.C.E., most large late Ice Age animals except for the bison were extinct, probably as a result of rapid climate change and drought. Some experts believe that human predators helped in the process of extinction by exploiting slow-breeding mammals like the mammoth and mastodon. Whatever the cause of extinction, the disappearance of big game fostered greater cultural diversity among Paleo-Indian groups. They adapted to a rapidly changing world that was not to stabilize to near-modern conditions until about 4000 B.C.E.

## **I. After the Ice Age: Holocene Hunter-Gatherers (12,000 Years Ago to Modern Times)**

Global warming began in earnest after about 15,000 years ago. The great ice sheets retreated irregularly from northern latitudes, ushering in **Holocene** times. Dramatic climatic and geographic changes ensued, as glaciers melted and sea levels rose irregularly toward modern levels. The Bering land bridge was severed by rising water, and the Baltic Sea and Scandinavia emerged from beneath vast ice sheets. The Southeast Asian islands were isolated from the nearby mainland. Thick temperate forests covered much of Europe, while familiar Ice Age animals like the mammoth became extinct by 9000 B.C.E. The Sahara enjoyed slightly higher rainfall and supported semiarid grasslands and shallow lakes, ending millennia of isolation for tropical Africans. 1

By this time, the world's human population numbered perhaps 5 million, scattered over the Old World and New. All hunter-gatherers were faced with the problem of adapting to constant climatic change and often acute environmental uncertainty. In response, they developed ever more specialized tool kits and intensified their food quest. They often specialized in a few resources, like fish and sea mammals on newly exposed Scandinavian coasts or annual nut harvests in the North American Midwest. 2

The intensification of hunting and foraging was marked by two long-term trends. The first was a gradual shrinking of tool kits; the second, the development of highly sophisticated artifacts and weapons designed for exploitation of specific food resources like acorns or sea mammals. Among these was the bow and arrow, first developed in Europe, Africa, and the Near East perhaps by 15,000 years ago. It enabled the hunter to shoot at his quarry from a distance. 3

As people adapted to the challenges of local environments, human culture became greatly diversified. Human populations were rising gradually, so the world's hunting and foraging grounds were filling up, given that only the most favored environments could support more than one human being per square mile. Reduced mobility, rising local populations, and new strategies for dealing with unpredictable climatic change—these problems were common to postglacial hunter-gatherers in every part of the world. A few of these societies, especially those living in areas with rich and diverse food resources that 4

included fish and sea mammals, achieved a high degree of social complexity, with, for the first time, some signs of social ranking.

## 1. African Hunter-Gatherers

For thousands of years during the Würm glaciation, sub-Saharan Africans lived in isolation from the rest of the late Ice Age world. The arid Sahara was uninhabitable for much of the Würm. African savannas and grasslands supported a rich mammalian fauna and many species of plant foods. The hunter-gatherers who subsisted on these diverse resources developed ever more efficient ways of hunting and foraging.

After the Ice Age, these cultures became more specialized, with the densest populations concentrated in large river valleys like the Zambezi, or near lakes, where fishing became of great importance. The Sahara now supported a sparse population of hunter-gatherers adapted to arid, open country. The people of the Nile Valley lived much of the year in permanent base camps, subsisting off a bounty of game, plant foods, and river fish. The ancestry of the **San** of the Kalahari Desert and other living African hunter-gatherer peoples can be traced back to extinct groups that flourished on the savanna thousands of years earlier in prehistory.

## 2. [Asian Hunter-Gatherers](#)

Intensely conservative hunter-gatherer cultures continued to flourish in Asia after the Ice Age. In the more open country of the north, the microblade traditions of millennia earlier continued to diversify into ever more specialized hunting and foraging economies, as well as into emerging seacoast economies. The peoples of the tropical forests of Southeast Asia continued to rely heavily on bamboo and wood technology, and their simple culture was little changed from much earlier times, except for a gradual trend toward more diminutive, specialized tool kits. These tool kits reflect much more varied adaptations by these peoples to local environments, adaptations subsumed under the archaeological label **Hoabhinian Tradition**. <sup>1</sup>

Offshore, in New Guinea and Australia, more specialized local cultures now appeared, many of them oriented toward the exploitation of specific foods like fish, sea mammals, and small game. In the New Guinea highlands, there are signs that people began to deliberately clear forests and plant wild yams after the Ice Age to enhance their food supplies as best they could. Human settlement was still confined to the islands of the extreme southwestern Pacific, for Asians still lacked the necessary boats and foods to navigate far offshore. <sup>2</sup>

### **3. Mesolithic Hunter-Gatherers in Europe**

European environments changed dramatically as Alpine and Scandinavian ice sheets retreated for the last time. Sea levels rose, flooding the North Sea, while the Baltic Sea formed at the foot of northern glaciers. Dense forests spread over formerly open country. Europeans now adapted to hunting and foraging in forest environments, camping in clearings and in more open woodland environments. Much human settlement was confined to riverbanks, lakeshores, and seacoasts. Here people found a bounty of fish, sea mammals, and bird life, supplementing this diet with plant foods and forest game. These **Mesolithic** cultures (*Mesolithic*, meaning “Middle Stone Age,” describes post-Ice Age European hunter-gatherers) achieved some degree of social complexity in Scandinavia, where richly decorated individuals were buried in cemeteries by 5500 B.C.E. These same cultures were the indigenous societies of Europe, farmers who first spread north and west across central Europe from the Balkans after 4500 B.C.E.

## **4. Near Eastern Hunters and Foragers**

In the Near East, the end of the Ice Age brought drier conditions, although the climate was somewhat wetter than today. The densest human settlement was confined to major river valleys, especially places where open steppe, woodland, and floodplain environments intersected. <sup>1</sup>

One such location was **Abu Hureyra**, by the Euphrates River in Syria, where a sedentary community of hunter-gatherers flourished between 10,500 and 9000 B.C.E. About 300 to 400 people lived in a small village settlement of pit dwellings with thatched roofs. Each spring, they killed thousands of migrating gazelle, a small desert antelope from the south. Eventually deteriorating climatic conditions and deforestation due to heavy firewood consumption caused abandonment of the settlement. Sedentary villages like these, located at the margins of several environmental zones, were the places where agriculture and animal domestication first took hold in the Near East, and, indeed, in the world. <sup>2</sup>

## **5. Paleo-Indian and Archaic North Americans**

Holocene times ushered in major climatic change in the Americas. As the ice sheets of the north retreated, more temperate vegetational zones spread north. Ice Age big game had vanished, except for the bison, which flourished on the short grass of the Great Plains. Here Paleo-Indian, and later, more sophisticated **Archaic** big-game hunting cultures diversified over a period of more than 10,000 years, right into modern times. First the bow and arrow, which arrived in the first millennium B.C.E., and then the horse, introduced by Spanish conquistadors in 1543 C.E., enriched Plains hunting cultures. They had already achieved a high degree of elaboration as a result of chronic warfare and competition when European settlers reached the Plains. 1

The West Coast and interior of North America became progressively drier, resulting in great environmental diversity. In the desert interior, Paleo-Indian and Archaic cultures developed a remarkable expertise with wild plant foods. These were highly mobile cultures, except in favored areas near lakes and marshes, where people preyed on waterfowl, freshwater fish, and plant foods for much of the year. 2

As Ice Age sea levels rose and flooded estuaries and bays, the Pacific coast of North America supported a great, and predictable, bounty of fish and sea mammals. These predictable food supplies supported sedentary hunter-gatherer cultures in southeast Alaska and the Pacific Northwest, in the San Francisco Bay area and interior, and along the southern California coast. 3

After about 4000 B.C.E., when sea levels stabilized, many of these societies enjoyed periods of remarkable social and political sophistication. In the Santa Barbara Channel region, for example, some **Chumash** people lived in settlements of more than 1,000 people headed by a hereditary chief. The famous **Ozette** whale-hunting settlement on Washington's Olympic Peninsula chronicles the history of an ancestral Makah Indian community from at least 1000 C.E. to the 18th century. 4

The first human settlement of the shores of the Arctic Ocean and of the Canadian Arctic Archipelago dates to about 2000 B.C.E. The **Pre-Dorset** and **Dorset** people were fisherfolk and caribou hunters, with the simplest of material culture. In the western Arctic, elaborate hunter-gatherer societies that can be attributed to ancestral Eskimo 5

developed after 1000 B.C.E. in the Bering Strait area. They became specialized sea mammal hunters, trading walrus ivory, iron, and other commodities between Asia and Alaska and farther south. The **Thule** people from the west colonized the Canadian Arctic Archipelago as far east as Greenland in about 1000 C.E., just as **Norse** voyagers were pressing west to Labrador.

The eastern woodlands of North America supported a great diversity of hunter-gatherer groups after 8000 B.C.E., many of them concentrated in large river valleys where plant foods and fish were abundant. Some of these societies, especially in the Midwest and Southeast, developed highly specialized cultures that exploited bountiful nut harvests and river fish. By 4000 B.C.E., many of them lived in permanent base camps and competed for floodplain land. This competition was one of the factors that led to food production in North America.

## **6. Central and South Americans**

We still know little of the postglacial hunter-gatherer societies of Central and South America, except for those of coastal Peru, where, in later millennia, important civilizations were to flourish. The **Paloma** site and other fishing settlements at the mouths of coastal rivers flourished from the remarkable bounty of the nearby Pacific after 8000 B.C.E. Offshore currents brought deep-water species inshore, while shoals of anchovies and other small fish provided sustenance year-round. The same communities also exploited plant foods nourished by coastal fogs. Such Archaic hunter-gatherer societies developed increasing complexity over many centuries. Fish and sea mammals remained a vital resource for coastal Peruvians long after agriculture developed along the coast after 2000 B.C.E. and civilizations prospered. 1

Elsewhere in Central and South America, late Paleo-Indian and Archaic hunter-gatherers adapted to every kind of Holocene environment imaginable, from cold, oceanic coastlines in the far south to the dense rain forest in the Amazon basin and high-altitude plateaux in the Andes Mountains. It was here, in the high Andes, that the inhabitants of **Guitarrero Cave** in Peru began the deliberate cultivation of beans as early as 8000 B.C.E. In doing so, they laid the foundation for the brilliant expertise of Native Americans with cultivated native plants of every kind in later millennia. 2

## **J. The Origins of Food Production**

For more than 99 percent of human existence, our forebears lived by hunting and foraging, tied to the season of plant foods and the movements of game, fish, and sea mammals. Food production, the deliberate cultivation of cereal grasses and edible root plants, is a phenomenon of the last 10,000 years of human existence. It is in large part responsible for the rapidly accelerating rates of population growth and culture change throughout the world during the past ten millennia. 1

The great Old World archaeologist Vere Gordon Childe (1892–1957) wrote of two great developments in prehistoric times, a **Neolithic Revolution** and an **Urban Revolution**. The Neolithic Revolution saw the development of agriculture and animal domestication in the Near East during a period of prolonged drought in the Near East. The Urban Revolution coincided with the appearance of the first cities, writing, and literate civilization in Mesopotamia and Egypt. Childe developed his revolution theory during the 1930s, when much less was known about world prehistory. 2

Child's theory is too simplistic, for it has long been surpassed by more sophisticated formulations, based on a much more detailed knowledge of ancient societies. In one respect, however, Childe was correct. The deliberate cultivation of the soil and the domestication of animals were not, in themselves, revolutionary developments, for every hunter-gatherer was familiar with the germination of seeds and the taming of animals. But the consequences of the new economies were indeed revolutionary, for they were the catalyst for lasting, and dramatic, culture changes. 3

Thanks to radiocarbon dating, we know that agriculture appeared in widely separated areas of the world over several thousand years: in the Near East, China, south and Southeast Asia, and the Americas. Modern theories are based on the realization that many postglacial hunter-gatherer societies were preadapted to food production before anyone started planting wild cereal grasses or penning animals. They were already exploiting such resources intensively, local populations were rising, and there were occasional food shortages in areas like the Near East, where the most favored areas were already at the limits of their carrying capacity. 4

Hunter-gatherers spend much of their time “managing” risk, the risk of starvation, of 5

drought, of sudden changes in animal migration habits. They do so by acting very conservatively, responding to different risks by either moving away or developing new storage technologies for fish, plants, and other foods, and by drying foods like pounded bison or salmon. A straightforward solution to rising populations, occasional food shortages, and unpredictable environments may have been to go one step further, to cultivate familiar plants and domesticate common prey so that people could draw on familiar “stored” resources in scarce months.

This process has been documented by archaeologist Kent Flannery at **Guila Naquitz** cave <sup>6</sup> in Mexico. A small group of hunters and foragers visited this small cave six times over a period of 2,000 years after 8750 B.C.E. Using a sophisticated computer model, Flannery and his colleagues have shown that the local people learned how to schedule foraging for different plant species over the seasons. They lived in an area with unpredictable rainfall, so collective memory based on experience was vital to them. The seeds found in the cave showed that the band used one set of seeds in wet years, another in dry. They tried to manage risk by experimenting with the planting of wild beans in wet years, when the chance of starvation was lower. When this strategy worked, they began planting every year. In time, they relied even more heavily on beans, maize, and squash for their subsistence, to the point where cultivation became more important than foraging.

The new food-producing economies proved dramatically successful. People cultivated an <sup>7</sup> extraordinary range of cereal and root crops, many of them for food, others for medicinal, even hallucinogenic purposes. They domesticated animals ranging in size from the ox and the camel to guinea pigs. Ten thousand years ago, virtually everybody in the world lived by hunting and gathering. By 2,000 years ago, most people were farmers or herders and only a minority were still hunter-gatherers.

The spread of food-producing economies throughout the world only took about 8,000 <sup>8</sup> years. It spread everywhere except where an environment with extreme aridity or heat or cold rendered agriculture or herding impossible, or where people chose to remain hunters and foragers. In some places, food production was the economic base for urbanization and literate civilization.

## **K. Early Food Production in the Old World (c. 10,000 B.C.E. and Later)**

### **1. First Farmers in the Near East**

In 10,000 B.C.E., most human settlement in the Near East was confined to the Levant (the easternmost Mediterranean shoreline) and to the Zagros Mountains of Iran and Iraq and their western foothills. Some locations, like the Jordan Valley and the Middle Euphrates Valley, were more densely populated, often by large hunter-gatherer communities located at the margins of several ecological zones. They foraged on wooded hill slopes for cereal grasses and nuts, hunting game on open grasslands and floodplains. <sup>1</sup>

One such settlement was at **Abu Hureyra** in the Middle Euphrates Valley, where a permanent hunter-gatherer base camp exploited gazelle migrations between 10,500 and 9000 B.C.E. About 8500 B.C.E., a new settlement appeared on the same site, this time a permanent village of rectangular mud-brick houses connected by narrow alleyways. At first the inhabitants hunted gazelle intensively. About 8000 B.C.E., they switched abruptly to domestic sheep and goats and to growing einkorn, pulses, and other cereal crops. <sup>2</sup>

Abu Hureyra was not, of course, unique. Contemporary farming settlements have come to light in Syria and the Levant, most of them on low ground close to fertile soils. By 6500 B.C.E., farming communities were trading with each other, passing such exotic materials as obsidian (fine-grained volcanic glass for toolmaking) from village to village over long distances. Obsidian contains distinctive trace elements, which have enabled archaeologists to track even tiny fragments of this much-prized volcanic glass back to sources in central Turkey and elsewhere. <sup>3</sup>

Some settlements, notably **Jericho** in the Jordan Valley, reached an impressive size. By 6500 B.C.E., Jericho covered nine acres, its small beehive-shaped houses clustered behind massive stone walls. It was a small town, perhaps in constant fear of marauders after its large grain stocks and stored trade goods, bartered from the coast and interior deserts. <sup>4</sup>

By 6000 B.C.E., farmers were living throughout the Zagros Mountains of Iran and Iraq in small permanent villages of mud-brick houses. Below, other cultivators dwelt by the edges of the low-lying plains of central and southern Mesopotamia. By at least 8000 B.C.E. some farmers settled at **Ali Kosh**, north of the confluence of the Tigris and Euphrates Rivers. As time went on, Ali Kosh grew until it became a substantial village, <sup>5</sup>

with wide lanes and rectangular houses. The people herded sheep and goats, perhaps driving them to the nearby highlands in the hot summer months. They relied on hunting and fishing in nearby marshes and were using irrigation to grow cereal crops by at least 6000 B.C.E. Such irrigation techniques were to prove of vital importance for early civilization in Mesopotamia (See [Economy, Technology, Society, and Culture](#)).

## 2. [Early European Farmers](#)

Near Eastern cereal grains like emmer and bread wheat and domesticated animals were introduced into southeastern Europe and Greece by at least 6000 B.C.E. The local people were already heavily dependent on wild cereal grasses and may have been planting some of them. The first farmers lived in compact villages on river floodplains, occupying the same sites for many generations. 1

After 4500 B.C.E. farming based on cattle herding combined with spring-sown crops like wheat and barley spread over enormous areas of continental Europe. The expansion of farming was a stop-and-go process, coinciding with favorable rainfall cycles and dependent on the distribution of lighter soils easily turned with stone and wood artifacts. These cultivators, known to archaeologists as the **Bandkeramik Complex**, lived in hamlets of rectangular houses, made of timber and thatch. As each settlement grew, companion villages were founded nearby, gradually filling in vacant land. 2

By 4000 B.C.E., cereal crops and domesticated animals were widely used throughout much of Europe, including Britain. Eventually, farmers settled on heavier soils, and indigenous hunter-gatherer groups gradually adopted the new economies. This was a time when more elaborate burial customs developed throughout Europe, as ancestor cults came into fashion, with their close ties to ancestral farming land. 3

In western Europe, groups of villages built communal stone tombs, often called **megaliths**, where important kin leaders and people with genealogical ties to kin group ancestors were buried. Those who supervised the building of shrines and communal tombs, and led the rituals conducted there, assumed increasing political and social power in new, nonegalitarian European societies. 4

### **3. Egypt and Sub-Saharan Africa**

The Nile Valley was a rich environment for hunter-gatherers throughout the late Ice Age and for many millennia afterward. Such was the bounty of game, fish, and plant foods that hunter-gatherer groups could live in permanent base camps for much of the year. It was not until as late as 6000 B.C.E. that wheat and barley were farmed along the Nile. 1

By this time, people living on the semiarid grasslands of the Sahara were herding both cattle and goats or sheep. Some experts believe that cattle were domesticated from wild oxen independently in North Africa or the Sahara as early as they were in the Near East. As the Sahara dried up after 6000 B.C., some of these nomadic herders moved into the Nile Valley and became absorbed into the indigenous population. 2

Two thousand years later, small farming villages flourished from the Nile Delta upstream as far as Aswan at the First Cataract and deep into Nubia (modern Sudan). The farmers took advantage of the annual Nile floods to grow winter crops, grazing their animals at water's edge. This indigenous farming tradition was the foundation of later Ancient Egyptian civilization (See [Economy, Technology, Society, and Culture](#)). 3

By 3500 B.C.E., cattle herders were grazing their herds far upstream, in what is now the Sudan. Fifteen hundred years later, some of these herders had moved as far southward as the East African highlands and are ultimately the ancestors of cattle-herding peoples like the Masai who live there today. This movement, and others to the west, were responses to the increasing aridity of the Sahara. Many of these groups cultivated summer rainfall crops domesticated from indigenous cereals like finger millet and sorghum, as did fisherfolk living by lakes and rivers. These crops were to become the staples of tropical African agriculture. 4

Cereal agriculture was practiced on the southern fringes of the Sahara by at least 2000 B.C.E. For thousands of years, peoples living at the fringes of the West and central African rain forests cut off the tops of wild yams and replanted them. This form of vegeculture gave way to more formal root agriculture in the West African forest by 2000 B.C.E., where people lived alongside riverbanks and in clearings. 5

Cereal agriculture did not spread to the savanna regions of east, central, and southern Africa until about 2,000 years ago. This event coincided with the spread of iron-using 6

farmers from West Africa across much of the continent. Iron technology enabled Africans to clear woodland on a large scale. Within a few centuries, iron-using farmers had crossed the Zambezi and Limpopo Rivers into southern Africa. Their distant descendants were still expanding southward when European farmers expanded into South Africa's eastern Cape Province in the 18th century C.E.

## 4. [Asian Farmers](#)

We do not know if cereal agriculture developed independently in India and Pakistan. Farmers were living at **Mehrgarh** west of the Indus River by 6000 B.C.E. Cereal crops, humped cattle, pig, and water buffalo were domesticated by local south Asian populations in this region. The new economies spread rapidly in northwest Pakistan and into other areas. By 5000 B.C.E., the Mehrgarh people were cultivating locally domesticated cotton, which became a vital trade commodity in later centuries, one of the foundations of later urban civilization in the Indus River Valley. 1

There are signs of intensive exploitation of wild plant foods in the Southeast Asian highlands, and perhaps even domestication of wild yams and other root plants as early as 8000 B.C.E., but the evidence is very controversial. The rices and Asian millets ancestral to modern rice were first domesticated somewhere between northeast India, Southeast Asia, and southern China. The initial process of domestication probably took place in an alluvial swamp area where there was plenty of seasonal flooding to stimulate crop growth. The earliest records of cultivated rice come from China's Middle Yangzi River Valley, dating from as early as 7000 B.C.E., but it is likely that similar early dates will come from the Ganges Plain and other regions in the future. 2

By 6500 B.C.E., Southeast Asians were moving from the hills onto river plains and into lowland areas, where intensive cultivation and irrigation permitted rice agriculture. Rice soon became the vital staple of farmers throughout southern and Southeast Asia, but its spread is not well documented. At **Homutu** in coastal southern China, a community of rice farmers lived in a marshy area between 5000 and 4000 B.C.E. Their village of beautifully made wooden houses was surrounded by forests and was close to a great diversity of food resources. The women of Homutu made a distinctive type of cord-decorated pottery, which was also widespread in Southeast Asia, Taiwan, and Japan. 3

North Chinese farmers relied not on rice, but on local cereals and seeded plants such as millets, sorghum, and the mulberry planted on river valley soils. Again, agriculture was a local development. The earliest farming villages date to about 5000 B.C.E., perhaps earlier. For the next 2,000 years, the **Yangshao** farming culture flourished in the Yellow River Basin, an area as large as the early centers of agriculture in Egypt or Mesopotamia. 4

Each Yangshao community was self-contained, overlooking a fertile river valley. By 3000 B.C.E., Yangshao people were enjoying a characteristic and thoroughly Chinese culture with its own naturalistic art style. The roots of Chinese cuisine and language may date from Yangshao times.

During these 2,000 years, many distinctive farming cultures developed throughout China. <sup>5</sup> They became the **Longshanoid** cultures, which were the founder societies of early Chinese civilization.

## **L. The Origins of Food Production in the Americas (c. 5000 B.C.E. and Later)**

The Native Americans were remarkable for their expertise with native plants. They domesticated not only staples like maize and beans, but also hundreds of varieties of potato, amaranth, and other crops that are now international staples. In contrast to the Old World, only a few animals were available for domestication, among them the guinea pig, llama, and turkey. Potential beasts of burden had become extinct at the end of the Ice Age. 1

As in the Old World, experimentation with native plants began early, especially in the Andean area of South America, where people strove constantly to expand the range of wild plants into marginal environments. In North America, hunter-gatherer societies in major Midwestern river valleys were planting such native plants as goosefoot and marsh elder to supplement wild stands as early as 2500 B.C.E. And the Guila Naquitz excavations in central Mexico show that hunter-gatherers in Central America also experimented with bean and squash cultivation as a means of surviving dry years in an unpredictable environment as early as 7000 B.C.E. 2

Maize (*Zea mays*) was the staple cereal crop for many Native American societies when Christopher Columbus landed in the New World in 1492. It was cultivated from Argentina and Chile northward to Canada, from sea level to high in the Andes, in low-lying swamp environments, and in arid lands. Hundreds of races of domesticated maize evolved over the millennia, each with a special adaptation to local conditions. The wild ancestor of maize is thought to be teosinte, a wild grass that grows over much of Central America. Teosinte was transformed into a primitive maize through human selection that was much easier to harvest. The earliest known maize cobs date to about 2750 B.C.E. in the **Tehuacán Valley** in southern Mexico and from the Valley of Mexico in the highlands. 3

By 1700 B.C.E., the inhabitants of the Tehuacán Valley were growing amaranth, gourds, and maize to the point that agriculture was the dominant part of the subsistence economy. Tehuacán is by no means unique, for many groups throughout Central America were turning to agriculture by this time. In time, a primitive form of domesticated maize with 4

kernels in eight rows was the ancestral crop, which spread thousands of miles from its original homeland after 2700 B.C.E.

In South America, people living in the Andean highlands of Peru were cultivating potatoes, maize, beans, and squash by 2500 B.C.E., some of these crops, especially potatoes, beans, and quinoa, much earlier. Llamas were domesticated by at least 2500 B.C.E. Maize agriculture probably spread south from Central America to the highlands, then to the arid Peruvian coast by 800 B.C.E., where maize was grown in large-scale irrigation schemes in river valleys. This intensive agriculture was the staple of the coastal civilizations that developed by the Pacific after 800 B.C.E.

Maize agriculture spread into the North American Southwest by about 1500 B.C.E., where cold winters and arid conditions made cereal agriculture difficult. Nevertheless, maize and bean agriculture became the basis of the sedentary **Pueblo Indian cultures** that developed in the Southwest after 2,000 years ago. The well-known **Anasazi**, **Hohokam**, and **Mogollon** cultural traditions of the Southwest were the ancestral foundations of modern Southwest Indian society. Between the 10th and 13th centuries C.E., some Anasazi pueblos, notably in **Chaco Canyon**, New Mexico, and **Mesa Verde**, Colorado, housed hundreds of people, especially during important seasonal ceremonials. Southwestern Pueblo societies were successful, highly flexible adaptations to unpredictable, semiarid environments. As such, they never achieved the degree of social complexity found further east in North America.

By 2500 B.C.E., hunter-gatherer societies in the eastern woodlands of North America were planting native plants on a regular basis. Maize crossed the southern Plains into eastern North America during the first millennium C.E., but did not become well established until after 800 C.E. By this time, many eastern societies were living in sizable, sedentary communities, presided over by powerful kin leaders.

## **M. Later Old World Prehistory (3000 B.C.E. and Afterward)**

### **1. State-Organized Societies**

Within 5,000 years of the appearance of farming villages in the Near East, state-organized societies developed in Egypt and Mesopotamia. Subsequently, other preindustrial civilizations of great complexity emerged—not only in the Near East, but also in south Asia, Southeast Asia, and China. They also flourished in Central America and the Andean region of South America (See [Mesoamerican Civilizations](#)) (See [Andean Civilizations](#)). Such state-organized societies operated on a large scale with centralized political and social organization. They were marked by class stratification, intensive agriculture, and were based on assumptions of social inequality. All had complex government bureaucracies and were often ruled by despotic leaders who governed as divine monarchs. 1

State formation was not a universal phenomenon. Many archaeologists theorize that states emerged because they were beneficial as a way of organizing both food supplies increased through intensified agriculture and trade, and external relations with neighbors. They believe states emerged in environmental settings with severe population problems or shortages of agricultural land. Effective, centralized management of trade monopolies, and of food production, through state-organized irrigation systems and other means, could bring ecological imbalance under control. For example, both Ancient Egyptian pharaohs and Aztec rulers in Mexico employed hundreds of officials to ensure that all available land was cultivated efficiently. 2

## **2. Webs of Relations**

For all their complexity and sophistication, the early civilizations ruled over relatively small geographical areas by modern standards. But their insatiable demands for exotic raw materials—for gold, copper, iron ore, even such prosaic items as timber or textiles—brought them into contact with dozens of prehistoric, nonliterate societies that lived on the margins of, or outside, their boundaries. The last 5,000 years of prehistory are remarkable for the ever-expanding tentacles of interconnectedness that linked hundreds of prehistoric societies with one another, and with more complex literate civilizations many miles away. 1

This web of relations began to expand as early as 7000 B.C.E. in the Near East, when the obsidian trade linked small farming settlements seeking fine toolmaking stone. In time, these small regional trading networks became well-traveled caravan routes that linked Mesopotamia with the Mediterranean and the Nile Valley to the Levant. 2

During the fourth millennium B.C.E., long-distance trade exploded throughout the Near East, linking societies all the way from the Indus Valley in Pakistan and Iran with Mesopotamia, the Levant, Anatolia, and the Nile Valley. This rapidly evolving “world system” transformed human life. A millennium later, it embraced not only the Near East, but Cyprus, the Aegean, and mainland Greece as well. It developed because of an insatiable demand for nonlocal raw materials in different ecological regions where societies were developing along very similar lines. The Sumerians of Mesopotamia, for example, lived in a largely treeless environment with no metals. Yet they produced large grain surpluses, which they traded for timber and metals with the highlands by boat and across the desert by donkey camels. Nowhere did this emerging world economic system have a greater impact than in Africa. 3

### 3. [Later African Prehistory](#)

#### a. [Egypt and Nubia](#)

Ancient Egyptian civilization began with the unification of Upper and Lower Egypt by the pharaoh Narmer in about 3100 B.C.E. This long-lived civilization was an entirely indigenous development, its homeland a favored river oasis surrounded by desert. But Ancient Egypt was far from isolated, for from early times the Nile Valley was part of interregional trade networks that linked Mesopotamia and the Levant with the Nile. These relationships involved not only commerce, but occasionally frontier wars in distant lands like Syria. Egypt's relationship with lands upstream was just as important. The pharaohs traded for vital raw materials outside the narrow confines of their kingdom. They prospected for gold in the Sinai and in Nubia, the **Land of Kush** upstream of the First Nile Cataract. Despite many centuries of trading and occasional military expeditions, Ancient Egypt's cultural contribution to later African history was probably negligible, if nothing else because of the realities of Nile geography. 1

Nubia provided Egypt with gold, copper, and ivory, with semiprecious stones and slaves, and with mercenaries for the royal armies. It was so vital to Egyptian interests that the Middle Kingdom pharaohs garrisoned Lower Nubia in about 1800 B.C.E., specifically so they could control the gold trade. 2

Nubia itself was ruled by black African chiefs, who became wealthy on the Egyptian trade. Although the pharaohs colonized Nubia for a while during the New Kingdom, they never fully controlled the long river reaches upstream. As Egypt weakened after 1000 B.C.E., the Nubians became more powerful. A dynasty of Nubian rulers from Napata far upstream actually ruled Egypt for a short time in the 8th century B.C.E. 3

The Nubian state controlled caravan routes along the Nile and across the Eastern Desert. About 6000 B.C.E., the Nubian rulers moved their capital from **Napata** far upstream to **Meroë**, on a fertile floodplain between the Nile and Atbara Rivers in what is now the Sudan. The Meroitic state flourished for nine centuries, ruled by African kings who imitated many of the customs of Egyptian pharaohs. Their capital lay at a strategic point on the Nile, where desert trading routes from the Red Sea to the east intersected with trails leading west along the southern margins of the Sahara and upstream along the Nile. 4

Meroë maintained at least sporadic contacts with the classical world but was never conquered by Rome, for the strategic obstacles were too great.

Meroë owed its prosperity to the gold, copper, iron, ivory, and slave trade, and even supplied war elephants for Roman armies. But, above all, its importance can be attributed to the introduction of the camel from Arabia in the closing centuries of the first millennium B.C.E. The Arabs called the camel “the ship of the desert,” an appropriate metaphor, for this tough beast of burden opened up the Sahara and tropical Africa to the outside world.

## **b. West African States**

The Roman colonies in North Africa were in constant conflict with the Berber nomads of the desert. But they never opened regular trading routes across the Sahara with the black people who lived on its southern margins. By the time the Arabs conquered North Africa in the 7th century C.E., camel caravans were crossing the desert regularly, bringing West African gold to the north in exchange for cake salt, mined in the heart of the Sahara. Salt was so prized by the salt-starved West Africans that they sometimes paid for it in its equivalent weight of gold. <sup>1</sup>

In the 7th century C.E., small towns devoted to the gold and salt trade ruled by entrepreneurial African chiefs dotted the southern margins of the western Sahara. The most important was the **Kingdom of Ghana**, which flourished well before the 8th century C.E. Ghana started as a network of smaller chiefdoms and rose to prominence because it controlled gold sources near the Senegal River. This state, and its successors, came into being as a result of both indigenous cultural developments and because of links with the growing web of relations that was drawing the western Sudan into a much wider commercial and political world. <sup>2</sup>

West Africa came into contact with Islamic merchants and religious reformists in the 11th century C.E. Islamic forces captured Ghana in 1076, and the kingdom soon dissolved into its constituent parts. From this time onward, the savanna regions south of the Sahara were part of the vast caravan routes that linked the Islamic world. Later, West African states such as Mali and Songhay were ruled by Islamic kings and were familiar to Arab geographers. <sup>3</sup>

### **c. East and Southern Africa**

Meroë was part of a vast trade network that linked Nubia with Arabia and the Mediterranean world. So was the kingdom of **Axum** on the Ethiopian highlands to the southeast. This state competed with Meroë, then overthrew it. Axum's Christian kings exchanged gold, ivory, and slaves for luxuries from the Mediterranean world, and from distant India throughout the late first millennium C.E. They were an outlying part of another great web of interconnected, and diverse, trading societies that extended not only to Arabia, but far across the Indian Ocean and beyond. 1

The catalyst for this trade was the monsoon winds of the Indian Ocean. They allowed downwind sailing vessels to travel from India to Africa and back in the course of a year. India had an insatiable demand for soft, easily carved African elephant ivory, and for gold. This ocean trade developed nearly 2,000 years ago, bringing foreign merchants not only to Arabia and the Red Sea, but to the East African coast. The same winds brought Islam to the Africans of the coast, their partners in the trade. By 1000 C.E., a string of small trading communities dotted the Kenya and Tanzanian coasts. They formed an indigenous trading culture linked both with the outside world and with suppliers of gold, ivory, and slaves in the far interior, especially up the Zambezi River. 2

The **Karanga** people living in the inland plateau south of the Zambezi were cattle herders and farmers, who controlled rich gold and copper outcrops. Their leaders ruled over small, volatile kingdoms and used their religious powers to monopolize the gold and ivory trade with the coast. In return, they received cotton cloth, glass beads, Chinese porcelain, glass vessels, and other cheap trinkets, which had high prestige value in the interior. The greatest Karanga chief lived at **Great Zimbabwe**, a complex of stone enclosures built between 1100 and 1550 C.E. 3

#### **4. Europe after 3500 B.C.E.**

By 3500 B.C.E., Europe was peopled by small, egalitarian Stone Age farming communities. They had cleared vast acreages of land and lived in highly organized landscapes of small hamlets, homesteads, and farmlands. By this time, copper and gold metallurgy were well established in the Balkans; indeed, metallurgy may have developed independently in this region. 1

Initially, copper and gold were used as decorative metals, fashioned into luxury ornaments that were traded throughout Europe. The same trade networks carried distinctive bell-shaped beakers throughout much of western Europe. By 2000 B.C.E., European smiths had learned how to alloy copper and tin to make bronze. The result was tough-edged artifacts that could be used to fell trees and work with wood. The trade in these weapons, as well as control of ore outcrops, lay in the hands of local chiefs. For the first time, European society showed signs of social ranking. Surplus food supplies were channeled into erecting majestic religious monuments, of which **Stonehenge** in southern Britain is best known. Important religious ceremonies took place at such shrines, perhaps at the winter and summer solstices. 2

The Bronze Age, the period when bronze technology came into use throughout Europe, was a period of political instability and intense competition for land. Now warrior chiefs presided over warlike tribes, as plows and more consolidated forms of agriculture produced higher crop yields. Some of these European groups raided the eastern Mediterranean world in about 1200 B.C.E., destroying **Mycenae** in Greece and overthrowing the **Hittite empire**. These were formidable fighters, who used horse-drawn vehicles and devastating slashing swords, far more effective than the cutting weapons of earlier centuries. 3

After 1000 B.C.E., iron technology spread rapidly across Europe. Ironworking originated in the Mitanni area of Anatolia in the mid-second millennium B.C.E. Hittite monarchs guarded the secret for some time, for they were well aware of the strategic advantages of iron. But mercenaries in their armies took the metallurgy home with them, and the secret was out. Europeans embraced the new technology with enthusiasm. By this time, the most coherent political unit was a loose confederacy of tribes formed in time of war, or 4

temporarily under a charismatic chieftain. This native form of government was to survive for centuries beyond Roman frontiers.

The **Hallstatt** people were expert bronze and iron workers who colonized former 5  
Urnfield areas of central and western Europe in the early first millennium B.C.E. Celtic speakers with a distinctive and highly sophisticated **La Tene** technology spread north from the Rhine and Danube Valleys into the Low Countries and Britain in the 4th century B.C.E. The Celts were formidable warriors, who built large hill forts and introduced the Romans to the short sword, sacking Rome itself in about 390 B.C.E.

The last three centuries C.E. saw the appearance of coinage and the founding of small 6  
states and fortified towns. These were the people defeated by Julius Caesar in Gaul in 56 B.C.E. And these were the warrior groups who eventually sacked Rome and sacked its provinces in later centuries.

## 5. [Eurasian Nomads](#)

To the east, the rolling grasslands from the Ukraine to China were unable to support high population densities. Nomadic herders settled there at an unknown date, domesticating the horse as early as 4000 B.C.E. They lived in felt tents and subsisted mostly on horse milk and cheese, also off game and plant foods. The **Pazyryk** burial mounds in Siberia contain the bodies of elaborately tattooed chiefs, who wore leather and woolen clothing and traveled in beautifully decorated horse-drawn chariots. <sup>1</sup>

**Scythian** nomads, descended from these earlier groups, menaced the northern frontiers of the Mediterranean world for many centuries, as sedentary colonists impinged on their lands and threatened a lifeway that required enormous areas of land for survival. Eurasian nomads continued to flourish during the closing centuries of prehistory. <sup>2</sup>

## 6. [Asia](#)

The later prehistory of Asia is still little known, especially that of humbler village societies rather than spectacular civilizations. 1

### a. [South Asia](#)

By about 3500 B.C.E., hundreds of small farming villages dotted the Indus floodplain in northwest Pakistan. Many of these settlements boasted of fortifications and planned streets. Many villages and small towns practiced intensive agriculture and were built just above river flood level. The stone and mud-brick houses of **Kot Diji** were clustered behind massive stone flood dikes and defense walls, for neighboring communities quarreled constantly about the control of prime agricultural land. As the valley population rose, so did pressure on the land. Forests were denuded for firewood used in brick making, sheep and goats stripped the natural vegetation. The need for communal irrigation and flood control works led to the emergence of the **Harappan Civilization** in the Indus Valley by 3000 B.C.E. The Harappans traded with Sumerian city-states and highland Iran over many centuries. 2

The Harappan Civilization declined after 2000 B.C.E., a development that led to a massive expansion of village settlement in Gujerat to the south. In about 1500 B.C.E., Aryan nomads swept south over India. A few centuries later, iron technology arrived in the subcontinent, enabling farmers to break up the hard soils of the Ganges plain in the east. This region was to become the heartland of later Indian empires. India was invaded by King Darius in 516 B.C.E. and by Alexander the Great two centuries later. 3

The period between 200 B.C.E. and 300 C.E. saw India linked by regular trading routes, not only to Arabia and the Red Sea, but also to Southeast Asia, as Buddhism and Hinduism spread over enormous areas of the eastern world. 4

## **[b. China](#)**

By 3000 B.C.E., agriculture had taken such a hold in China that population densities rose rapidly, as most available land was taken under cultivation. At the same time, rice agriculture expanded in lowland areas where irrigation was easy. Those villages fortunate enough to possess irrigable lands soon turned into larger, much more permanent settlements, often protected with earthen walls to guard against floods and marauding neighbors. Even these larger communities were part of a self-regulating folk society in which kinship loyalties and the extended family were all important and age was deeply revered. The family ancestors were the conduit to the gods who controlled the harmony of the world. 1

By this time, too, a new social order was coming into being. Important kin leaders became warrior rulers, often men of great spiritual authority who interceded with the ancestors. Soon they became the aristocratic nobility of early Chinese civilization, represented by the **Shang Civilization** of northern China and other states. But these political and social developments would never have been possible without the unswerving conservatism of the village farmer, who accepted the new and emerging social order that imposed an almost alien, wealthy, and very privileged society on their shoulders. They did so because of putative kin ties that obligated the farmer to provide food and labor for their rulers. 2

Early Chinese states rose and fell with rapidity for centuries, until the Emperor Shi Huangdi unified China in 221 B.C.E. In later centuries, Chinese trading activities in Southeast Asia played a pivotal role in the development of indigenous states there. The Chinese were also linked to the Indian Ocean trade, indeed sailed as far as the East African coast in the sixth century C.E. 3

[CONTENTS](#) · [SUBJECT INDEX](#) · [BIBLIOGRAPHIC RECORD](#)

### **c. Japan**

The later prehistory of Japan is dominated by the Jomon culture, a common cultural tradition that linked many ethnic groups in the archipelago and flourished from 10,500 B.C.E. to 300 C.E. Jomon people were hunters and fisherfolk, remarkable for their fine clay vessels, the earliest in the world. They developed an elaborate technology for processing and storing huge stocks of nuts, an activity that may have combined with the cultivation of milletlike plants. 1

The basis for what was to become traditional Japanese society was formed during the **Yayoi Period**, which began after 300 C.E., when large-scale rice agriculture and new technologies spread through the archipelago. Japan was unified into a single state in about 600 C.E., by which time stratified, complex societies were commonplace. 2

[CONTENTS](#) · [SUBJECT INDEX](#) · [BIBLIOGRAPHIC RECORD](#)

## **d. [Southeast Asia](#)**

Rice cultivators flourished throughout Southeast Asia by 3000 B.C.E. Bronze technology came into widespread use in about 1500 B.C.E. The **Dong Son** culture of Vietnam represents the culmination of bronze working and ironworking in prehistoric times. **Co Loa** near Hanoi was a fortified and moated settlement, ruled by local chieftains called **Lac Lords**, Keepers of the Drums. Intensive rice cultivation, use of the plow, and careful water control produced enormous food surpluses. The region became part of a Chinese protectorate in 43 C.E. 1

For centuries, Southeast Asia was dominated, at least tangentially, by two foreign presences—China to the north and India to the south. By the time of Christ, southerly towns were being incorporated into the oceanic trade routes that stretched from China in the east to the shores of the Red Sea and the east coast of Africa in the west. No one people controlled this vast trade, another nascent “world system,” like that of the Mediterranean and Classical worlds. 2

Beyond India, Indian merchants traded as far as the South China Sea and with tribal societies of the mainland and islands. Metal and spices were the big attractions. Within a few centuries, kingdoms appeared with governments run according to Hindu or Buddhist ideas of social order. Eventually, these tribal chieftains became divine kings. Expanding mercantile empires like **Funan** in Vietnam's Mekong Delta dominated long-distance trade between the 3rd and 6th centuries C.E. Funan was the first of the great Southeast Asian civilizations. 3

## **7. Offshore Settlement in the Pacific**

By 2000 B.C.E., a myriad of stone-using farming cultures flourished by Southeast Asian rivers and coasts. Canoes played a major role in intervalley trade. Commodities like clay vessels, stone axes, and toolmaking stone were exchanged through trade networks that linked small communities from Taiwan in the north to New Guinea and the southwestern Pacific islands in the south. 1

Yams and taro, both root crops, were cultivated in the New Guinea highlands by at least 7000 B.C.E. Agriculture became a staple throughout the southwestern Pacific by 2500 B.C.E. The new economies enabled offshore navigators to carry storable foods as well as cultigens, even edible dogs, chickens, and pigs, on long open-water voyages. 2

By 1500 B.C.E., the **Lapita people** of the Bismarck Archipelago in the southwestern Pacific had developed oceangoing, double-hulled canoes and mastered simple navigational techniques using the stars that enabled them to sail to islands far over the horizon. The Lapita people were expert traders. They voyaged as far east as Fiji, Tonga, and Samoa during the first millennium B.C.E. 3

From there, much longer distances entailed voyages of nearly 600 open-water miles. From Melanesia, canoes voyaged to Micronesia about 2,000 years ago. Polynesian culture originated in the west; then small groups settled the Marquesas by 400 C.E. and the Society Islands and Tahiti by 800 C.E. 4

By the time French and British explorers visited Tahiti in the mid-18th century, the Tahitians were ruled by a powerful hierarchy of chiefs and nobles. Canoes arrived on Hawaii before 700 C.E. and on Easter Island 200 years earlier. Finally, Polynesians voyaged southward to colonize New Zealand around 750 C.E. After 1400 C.E., Classic Maori culture developed, based on sweet potato agriculture and ruled by a flamboyant, warlike elite. 5

With the colonization of the Pacific Islands, the prehistoric human settlement of the Old World was complete. 6

## **N. Chiefdoms and States in the Americas (c. 1500 B.C.E.–1532 C.E.)**

When Europeans landed in the New World, they encountered an astounding diversity of Native American societies. Some, like the Inuit of the Canadian Arctic or the Shoshone of the Great Basin, were simple hunter-gatherers living in small bands. Some lived in small farming villages, others in elaborate pueblos or small towns that housed several hundred people. Then there was the Aztec capital, Tenochtitlán, a city of some 200,000 people with a market that rivaled that of Constantinople or Seville. Archaeologists believe that these great variations in cultural and social complexity were the result, in part, of local environmental conditions as well as technological innovation. It was only in a few areas of exceptional resource diversity like Mesoamerica and Peru that fully fledged preindustrial civilizations developed. 1

### **1. North American Chiefdoms**

Some of the most complex hunter-gatherer societies on Earth developed in North America. However, the climate was too harsh for the kinds of intensive maize and bean agriculture that would support urban civilizations. 2

By the time maize and beans reached eastern North America, local societies had been evolving toward more complexity for many centuries. After 2000 B.C.E., such societies developed a preoccupation with elaborate mortuary cults that celebrated the ancestors. Village kin groups erected large burial mounds and earthworks in which they interred kin leaders and other clan members, often adorned with badges of rank and fine heirlooms like soapstone pipes, acquired from afar. First the **Adena** culture developed in about 500 B.C.E. to be followed by the **Hopewell** complex two-and-a-half centuries later. These cults' rituals were reflected in prolonged burials. The Hopewell cult in particular developed great elaboration in the Ohio Valley and other parts of the Midwest. It involved, among other activities, complex gift exchanges that validated extensive long-distance trade. This brought commodities like obsidian from Yellowstone Park in the west to the Hopewell heartland. 3

The arrival of maize and bean agriculture transformed societies that relied heavily on 4

hunting and foraging, as well as on the cultivation of native plants. River valley populations rose rapidly, trading and religious activity intensified, and an ever-changing mosaic of complex **Mississippian** chiefdoms developed throughout the southern Midwest and the Southeast. The greatest Mississippian chiefdoms were based on **Cahokia**, near East St. Louis, and **Moundville**, Alabama. Both were large towns, with imposing sacred precincts of pyramids and plazas. The Mississippian was an indigenous North American culture that went into decline in the 15th century, just before the Spanish landed in Florida. Within two centuries of European contact, the southeastern Indians were decimated by disease, their chiefdoms in tatters.

## 2. [Mesoamerican Civilizations](#)

By 2000 B.C.E. sedentary village farmers were common in most of Mesoamerica. These societies became more complex as time passed, as groups of villages formed alliances and long-distance trade routes linked the lowlands and the Gulf of Mexico with the highlands inland. Small shrines appeared in larger villages, as social ranking became commonplace in Mesoamerican society. <sup>1</sup>

### a. [Olmec](#)

This trend toward social complexity took hold throughout the region, but the most famous of these newly more complex societies is that of the Olmec on the Mexican south Gulf Coast. Olmec culture flourished from about 1500 to 500 B.C.E., a society of tropical farmers who traded extensively with one another and peoples on the highlands. Major ceremonial centers at **La Venta** and **San Lorenzo** boasted of earthen mounds, temples, and plazas, and a distinctive art style of snarling jaguars and animal humans. <sup>2</sup>

Olmec society was a manifestation of a much more complex social and political order. It comprised a series of chiefdoms who maintained contacts with other lowland and highland societies. Art motifs, religious symbols, and ritual beliefs were shared with many other Mesoamerican peoples. This complex process of interaction over many centuries produced the complex and sophisticated traditions of Mesoamerican civilization in later centuries. <sup>3</sup>

## b. Teotihuacán

In the highlands, village populations rose sharply after 1000 B.C.E., leading to more intensive agriculture and increasingly sophisticated trade networks. By 200 B.C.E., the effects of this intensified economic activity led to the founding of the city of Teotihuacán in the Valley of Mexico. A century later, Teotihuacán expanded rapidly. Its streets, pyramids, and plazas covered eight square miles by 500 C.E. The city grew according to a master plan that was followed for six centuries. Bisected by the Avenue of the Dead, Teotihuacán was dominated by the 210-foot-high Pyramid of the Sun. At least 120,000 people lived in the city during its heyday, ruled by a tiny elite of powerful, militaristic nobles. It was the dominant economic and religious state over much of highland Mexico until 750 C.E., when it collapsed suddenly. The collapse may have resulted from a combination of many factors, among them overexploitation of the commoners by the elite and a series of drought cycles that may have forced the population to disperse into smaller communities. <sup>1</sup>

**Maya Civilization** developed in the Mesoamerican lowlands by 600 B.C.E. At **Nakbe** and **El Mirador**, the Maya erected elaborate ceremonial centers of stone and stucco buildings standing on pyramids and platforms. Even as El Mirador prospered, other important centers like **Tikal** and **Uaxactún** grew in importance, ushering in the Classic Period of Maya Civilization from 300 C.E. to 900. Maya life was governed by an intricate calendar system and a recently deciphered hieroglyphic script. Their writings tell us of a lowland civilization ruled by powerful lords, who presided over small city-states. Each state competed constantly with its neighbors, as different centers like Tikal, **Palenque**, and **Copán** vied for control of key trade routes and for political and religious prestige. <sup>2</sup>

Maya lords considered themselves intermediaries between the living and spiritual worlds. A small nobility controlled Maya society. Their power base gave way suddenly in about 900 C.E., probably as a result of partial ecological collapse as farmlands became exhausted. Nevertheless, Maya Civilization continued to flourish in the northern Yucatán until the Spanish Conquest in the 16th century C.E. <sup>3</sup>

In the highlands, the **Toltecs** held brief sway over the Valley of Mexico from about 900 C.E. to 1200, ruling their state from **Tula**, north of the valley. They may also have had <sup>4</sup>

some influence over lowland politics, for there is strong Toltec influence at **Chichén Itzá**, a great ceremonial center in the northern Yucatán. Political chaos followed the collapse of Toltec civilization in the 13th century. Eventually, the **Aztecs**, once nomadic farmers, rose to power in the Valley of Mexico.

### 3. [Andean Civilizations](#)

Andean states developed in every kind of environment imaginable, everything from mountain valleys high in the Andes to arid coastal plains. In this region, different ecological zones were “stacked” one above the other from sea level high into the mountains, and the inhabitants of each zone depended on others for vital resources. Thus, Andean civilization pursued many evolutionary paths, which came together in a remarkable mosaic of states that depended on one another for survival. 1

#### a. [Beginnings](#)

The introduction of maize and cotton to the coast in about 2000 B.C.E. was a catalyst for civilization. So was the existence of dense populations and sedentary settlements. The formation of states both on the coast and in the highlands was also fostered by continuous interchange between coast and interior. Highland farmers needed dried fish, salt, and seaweed, the latter to combat endemic goiter. Carbohydrate foods like oca, ullucu, and white potatoes could not be grown in the lowlands. The two regions became closely interdependent. 2

Andean Civilization began in about 1900 B.C.E., a time when large ceremonial centers first appeared on the coast. The oldest is **El Paraíso**, a U-shaped complex of square buildings surrounded by tiers of platforms. These centers reflected new religious beliefs that used smoke and water to bridge the layers of the cosmos, to establish communication with the spiritual world. 3

## **b. [Chavin](#)**

A thousand years later, an intricate religious iconography born at **Chavín de Huantar** in the Andes foothills of central Peru spread widely over the coast and highlands. Chavin itself was a revered shrine and trading center. The terraced temple was a honeycomb of narrow passages and rooms that led to a central chamber with a carving of a jaguarlike human. Chavin art is dominated by animal and human forms. Jaguar motifs predominate; humans, gods, and animals have jaguarlike fangs or limbs. Snakes flow from the bodies of many figures. The art reflects new religious beliefs and shamanistic practices that were to underpin centuries of Andean civilization. <sup>1</sup>

### c. [Moche](#)

In later centuries, the Andean region witnessed an extraordinary array of state-organized societies with great diversity of culture, art, organization, and religious beliefs. By 200 B.C.E., the Moche state had emerged in northern coastal Peru, flourishing for 800 years. The Moche were maize farmers and fisherfolk, skilled artisans and priests, who traded cotton textiles and other goods with the highlands. They were ruled by militaristic warrior-priests, part of a small, wealthy elite. The undisturbed Moche royal tombs at **Sipan** have revealed the burials of two warrior-priests, wearing golden masks, surrounded by sacrificial victims and clay pots, and wearing magnificent, finely crafted copper and gold ornaments. <sup>1</sup>

The Moche were expert metalworkers, who hammered and annealed gold and copper, the first Native Americans to master metallurgy. Their rulers taxed their subjects for labor, to build and maintain vast irrigation systems and vast monumental platforms and temples. <sup>2</sup>

## **d. [Tiwanaku](#)**

The Moche state was a multivalley kingdom, which collapsed in about 600 C.E. In the southern highlands, at the other end of the Andean world, Tiwanaku rose to power after 200 C.E. Tiwanaku itself was an important copper-working and trade center near Lake Titicaca. Its enclosures and platforms housed an important shrine to the creator god and nurtured a religious ideology that spread widely before Tiwanaku collapsed in about 1200 C.E. 1

## e. [Chimu](#)

On the north coast, the Chimu kingdom based on the Moche Valley filled the vacuum left <sup>1</sup> by collapsing Moche after 850 C.E. The Chimu capital, **Chan Chan**, at the mouth of the Chicama River, housed the adobe compounds of aristocratic rulers. Each enclosure became the burial place of its royal builder, for new rulers inherited the title, but not the material possessions, of their predecessors. Thus, it was incumbent on a new leader to acquire more land, extra subjects, and fresh wealth, by expanding the empire. The same institutions of split inheritance, of reverence for royal ancestors, were to fuel later Andean civilization. The Chimu state extended far south with each river valley linked by carefully maintained roads. But the empire was vulnerable to attack and fell to Inca invaders in the 1460s.

## **O. The End of Prehistory (1500 C.E. to Modern Times)**

The end of prehistory varied widely from one area to the next. It ended about 5,000 years ago in the Near East, with the Olmecs of 3,000 years ago, and then with the Mayans of 2,000 years ago in Central America, and with the Chimú of 650 years ago in the Andean region. Parts of central Africa and many remote Pacific islands did not come in contact with literate societies and emerge from what is technically prehistory until the late 19th century. <sup>1</sup>

Between the 15th and 19th centuries, the European age of discovery linked societies in all parts of the world in ever more intricate webs of relations, which resulted in major adjustments in human societies everywhere. Extensive contacts with Europeans brought catastrophic culture changes. Infectious diseases such as smallpox and influenza killed off millions of native Americans who had no resistance to Old World viruses. European colonists with their firearms and sophisticated technology took over tribal lands and pushed back indigenous peoples into marginal areas on all continents. The process of contact and colonization continues in remote areas of the Amazon basin and highland New Guinea, where rain forests are felled and age-old lifeways evaporate in the face of exploitative industrial civilization. Despite these centuries of sustained contact and disruption, much survives of indigenous culture, religious beliefs, and values, often blended with new elements introduced from outside. Humankind is as biologically and culturally diverse as it has always been. <sup>2</sup>

## **II. Ancient and Classical Periods, 3500 B.C.E.–500 C.E.**

### **A. Global and Comparative Dimensions**

#### **1. Origins of Civilizations, 4000–2000 B.C.E.**

In a few areas, **Neolithic** settlements grew in size and complexity, acquiring social organization commonly called **civilization**. This life is characterized by (1) large concentrations of people, usually cities, in central areas (even though the majority of settlements remained rural); (2) hierarchical social and political structures, usually with states and priesthoods; (3) economic specialization and organized societal division of labor; and (4) formal methods of permanent record keeping using some form of writing. <sup>1</sup>

##### **a. Emergence of First Civilizations**

The first known civilizations developed in three river valley systems in Eurasia: (1) **the Tigris-Euphrates Valley** (Mesopotamia); (2) **the Nile Valley** (Egypt); and (3) **the Indus Valley**. Changing environmental conditions, population pressures, and the evolution of available technologies are possible reasons for the emergence of civilized societies. Each society experienced a long transition during which techniques of maintaining large-scale societies were developed. Remains of **temples** and palaces reflect the emergence of priestly and political managerial classes. These societies utilized technologies of **irrigation** to manage water resources and skills in metallurgy made new materials like **bronze** available. <sup>2</sup>

The earliest civilization was in the region of **SUMER** in southern Mesopotamia. By 3000 B.C.E., the first cities controlled relatively large areas and built great temple structures called **ziggurats**. In **EGYPT**, the **protodynastic** unification of the northern and southern regions occurred by about 3000 B.C.E. **INDUS VALLEY** civilization began somewhat later, but by 2500 B.C.E., the two great cities of **Harappa** and **Mohenjo-Daro** were well established. <sup>3</sup>

## b. [Later Primary Civilizations](#)

In other regions, civilized societies developed independently but later than the early river valley civilizations. The origins of **CHINESE CIVILIZATION** are in the agricultural societies in the northern Chinese **YELLOW RIVER VALLEY**. The **loess soil** of the region provided a fertile basis for agriculture using labor-intensive methods of garden cultivation. Irrigation was not a major element, but flood control was a significant activity. Civilized life developed out of expanding Neolithic villages around 2500–2000 B.C.E. Chinese tradition describes this time as an era of rule by five Heavenly Emperors who were succeeded by the human rulers of the **Xia dynasty** (See [2357–2256 B.C.E.](#)). Scholars assume that some formal state existed by 2000 B.C.E., but little direct evidence of the Xia exists. The **Shang dynasty**, which controlled northern China by the 1500s B.C.E., is the first for which clear archeological evidence exists. Its capital, **Anyang**, was a major city by 1300 B.C.E.

**MESOAMERICAN CIVILIZATIONS** in the areas of modern Mexico and Guatemala and **ANDEAN CIVILIZATIONS** started in complex agricultural communities that developed possibly as early as 2500 B.C.E. Distinctive crops, especially corn, and, in the Andes, potatoes, along with the absence of major domesticated draft animals made the emerging civilizations quite different in character from those in the Eastern Hemisphere. The **OLMECS** created the first major Mesoamerican urban society by c. 1200 B.C.E., with large stone structures and statues and ceremonial centers with some urban functions (See [Olmec](#)). Olmec civilization disappears from the historical record by 400 B.C.E. but its heritage may have influenced the **MAYA CIVILIZATION** which flourished from c. 200–800 C.E., followed by a long decline (See [Teotihuacán](#)).

In the Andes region in Peru, the **Chavin** developed a powerful urban-based state by c. 1000 B.C.E. which flourished until c. 200 C.E. This was followed by division of the region into smaller states that were not brought together again until the **Inca Empire** in the 15th century C.E.

### c. [Early, Complex Nonurban Societies](#)

The development of agricultural productivity and complexity did not inevitably lead to the emergence of civilizations. In many areas, complex, hierarchically organized societies developed that did not create cities or develop formal writing systems. They are not formally identifiable as civilizations but are more developed than the simple Neolithic agricultural settlements. In Southeast Asia, in the **Khorat Plateau** region of modern Thailand, archeological evidence from **Ban Chiang** and **Non Nok Tha** shows that by c. 2000 B.C.E. villagers were producing sophisticated ceramics and cast bronze tools, as well as developing techniques of rice paddy cultivation, which may have influenced the later evolution of agriculture in Chinese civilization. <sup>1</sup>

In continental North America, large **mound builder societies** began by c. 1500 B.C.E. in the lower Mississippi Valley (See [North American Chiefdoms](#)). The great ceremonial center and cluster of villages at **Poverty Point**, in Louisiana, may have contained more than 5000 inhabitants by 1000 B.C.E. <sup>2</sup>

[CONTENTS](#) · [SUBJECT INDEX](#) · [BIBLIOGRAPHIC RECORD](#)

## d. [Comparisons](#)

Civilized societies show many similarities and differences. 1

**Civilizations and river valleys.** Origins of civilization were frequently identified with river valleys in early modern historical scholarship. Some scholars felt that irrigation was the necessary catalyst for creating a hierarchical society of dominant managers. While this may have been true for the cases of the three earliest civilizations, further study of early **Chinese civilization** shows that irrigation-based agriculture did not play a major role in developing hierarchical institutions, and the absence of major river valleys in **Mesoamerica** and the region of the **Andes civilization** brought an end to the old “river valley theory” of the origins of civilization. 2

**Cities** took different forms in ancient societies but were distinguished from the agricultural village. Cities were generally significantly larger and contained a cosmopolitan population consisting of more than a cluster of kinship-defined clans. The city had a clearly defined nucleus of settlement, often marked with a wall, that separated it from its related agricultural hinterland. It had institutions that are identified with the city as a unit, and these municipal institutions in ancient cities included temples and grand monuments, palaces, markets, and the defense structures like walls. Cities in **Sumer** and the **Indus Valley** most completely fit this definition, while the large population centers in ancient **Egypt** were more palace-temple complexes and had structures that were less clearly municipal. In **China**, there is no evidence of true cities until the **Shang dynasty** (See [2357–2256 B.C.E.](#)), but the Shang capital, Anyang, was a major city of the ancient world. In early **Mesoamerican** and **Andean civilizations**, the major population centers were similar to those in Egypt, being more ceremonial centers of power than true urban areas. At the extreme, clusters of villages around ceremonial monuments distinguished the early **mound builder societies** and showed their character as complex, nonurban societies. 3

**Agriculture** provided another area of diversity among the early civilizations, with each being associated with a distinctive cluster of products and methods. **Sumer, Egypt,** and the **Indus Valley** society were similar in terms of the basic crops grown, which were standard grains like wheat and barley, and the field method of cultivation using plows. 4

**Irrigation** in Sumer and the Indus Valley required utilization of canals and levees to control and distribute river waters that could otherwise cause significant damage. In Egypt, **basin irrigation** simply channeled water into fields because Nile floods were less violent and in cycle with the growing season. In **China**, the primary early crop was millet, with rice being introduced later. The basic method for garden cultivation did not include the use of a plow or draft animals and gave a distinctive tone to Chinese society. In the Western Hemisphere, the lack of available draft animals and cattle for domestication gave increased importance to distinctive crops like corn and potatoes. In Mesoamerica, water control involved creating fields from swamps by building raised plots or **chiampas**, and in the larger areas, older methods of slash-and-burn agriculture were continued.

## 2. [The Growth of Civilizations, 2000–300 B.C.E.](#)

**Periodization** of world history, after the formative period of agricultural civilizations, focuses mainly on the **integration of larger regional units**, based in turn on **commercial, cultural, and political interactions**. The stages of integration in the Eastern Hemisphere mark the main periods of ancient history from 2000 B.C.E. onward, culminating in the great classical empires. Subsidiary themes in periodization involve the main civilizations spreading influence and the major centers making commercial and cultural contacts from China to the Mediterranean. 1

### a. [The Creation of Regionally Unified Societies](#)

The civilizations in the Eastern Hemisphere interacted with their surrounding societies through **trade, conquest, and migrations of peoples**. Civilizations grew from smaller temple- or city-states into regional **empires**. Egypt (See [c. 3100–2686](#)) was unified by 3100 B.C.E. by the conquests of **Narmer**, and the state remained concentrated in the Nile Valley during the **Old Kingdom** (to 2200 B.C.E.) and **Middle Kingdom** (c. 2100–1800 B.C.E.). In the **New Kingdom** (c. 1570–1050 B.C.E.), however, Egyptian rulers expanded into Southwest Asia, as well as farther south into East Africa. In **Mesopotamia** around 2350 B.C.E., **Sargon I of Akkad** conquered the city-states of the Tigris-Euphrates Valley, creating a unified regional empire (See [2371–2190](#)). His empire was short-lived but others followed, maintaining broader regional unity under increasingly large and better organized empires. In the **Indus Valley** (See [South Asia, to 72 B.C.E.](#)), the political structure is not clear from the surviving evidence, but the similarities of the great cities of **Harappa** and **Mohenjo-daro** indicate significant cultural uniformity if not political unity. However, this regional society declined and collapsed as a result of natural changes and disasters and nomadic invasions in 1600–1200 B.C.E. The regional civilization was replaced by a society dominated by **ARYAN** herding peoples. They established a society with regional cultural unity under temples and a priestly **Brahman** class by c. 800 B.C.E. but did not achieve political unity. **SHANG** rulers established a regional empire in northern China (c. 1800–1122 B.C.E.), and expansion into southern China continued under 2

the early (western) **Zhou** dynasty (1122–c. 770 B.C.E.). Trade and movements of peoples also expanded the civilized lifestyle into new areas. The **MINOAN CIVILIZATION** (See [c. 3000–2200](#)) emerged on the island of Crete by c. 3000 B.C.E. as a result of contacts with Egypt and Mesopotamia. Its capital, **Knossos**, became the capital of a sea-based trade empire which brought civilization to the mainland of Greece and elsewhere in the Mediterranean.

## b. [Civilizations and Nonurban Societies](#)

Commercial and military contacts with surrounding peoples resulted in the formation of distinctive societies. “**Barbarians**” often successfully invaded civilized states, and this interaction was part of the expansion of civilization into new regions. <sup>1</sup>

### 1700–1300 B.C.E

**War Chariot invasions.** The development of the two-wheeled war chariot among “barbarians” around 1700 B.C.E. resulted in conquests of major civilized societies. <sup>2</sup>  
**HYKSOS** charioteers conquered Egypt (See [1786–1552](#)) and ruled it from 1730–1570 B.C.E. **Kassite** (See [c. 1700–1600](#)) charioteer invaders successfully invaded Mesopotamia around 1700 B.C.E. and formed the first of a series of **charioteer empires** there. In China, the **Shang dynasty** used war chariots as they established control. The **Aryan** invaders of India were also charioteers. The end of the Minoan civilization around 1400 B.C.E. opened the way for the chariot warriors of **Mycenae**, on the Greek mainland, to emerge as the dominant force in that region.

### c. 1000 B.C.E

**New migrations and conquests.** Charioteer dominance was broken by new peoples with new technologies in many areas. In the Middle East, often in association with the development of **iron tools and weapons**, new peoples conquered much of the region. <sup>3</sup>  
**Hittites** in Anatolia and groups like the **Philistines** in the eastern Mediterranean coastal areas established powerful states, while old centers of civilization in Egypt and Mesopotamia experienced repeated invasions. The climax came with the establishment by 665 B.C.E. of the new **ASSYRIAN EMPIRE** (See [668–627](#)). Many of these groups were **INDO-EUROPEAN**, coming from central Eurasia and migrating into Europe and South Asia as well as the Middle East. These included the **Aryans** in India and the

**Dorians** in Greece. The **Zhou** conquerors of China in the 11th century B.C.E. came from Central Asia, and may have been forced out by Indo-European migrations.

### c. [The Axial Period](#)

Increasing interregional trade, development of political institutions capable of ruling large areas, and emergence of new world-views transformed the ancient civilized societies of the Eastern Hemisphere. The result was the existence by 300 B.C.E. of distinctive regional civilizations in China, South Asia, the Middle East, and the Mediterranean basin. <sup>1</sup>

The transformation of ancient societies was accompanied by important redefinitions of world-views in the civilized regions. Thinkers created the “axes” around which philosophical and religious thought revolved for the next two thousand years. <sup>2</sup>

**Ethical monotheism** in the **Middle East** was developed especially by **ZARATHUSTRA** or **Zoroaster** in eastern Persia, probably about 600 B.C.E. but possibly earlier; Zoroastrianism (See [Economy, Technology, Society, and Culture](#)) spread in the **Persian Empire** starting in the 6th century B.C.E. Ethical monotheism also arose among the **HEBREW PROPHETS** in **Palestine** (See [c. 1020–1000](#)), starting in the 8th century B.C.E. and spreading as Jewish people migrated in later classical empires. <sup>3</sup>

**HINDU** traditions of belief and social organization developed in the emerging Aryan society of India, with the early sacred hymns or **Vedas** and the **Brahman** priesthood providing the foundations by 700–500 B.C.E. The composition in the 8th to the 4th centuries B.C.E. of the **Upanishads** (See [800–c. 550](#)) provided systematic interpretation of the Vedas and are the foundation for much of later Indian philosophical thought. <sup>4</sup>

**BUDDHISM** (See [550–321](#)) developed in India in these same centuries, beginning with the teaching career of **GAUTAMA SIDDHARTHA, the BUDDHA** (c. 542–483 B.C.E.), as a rejection of Brahman dominance and the caste system. The development of Hinduism and Buddhism created the distinctive world-views of Indian civilization by the end of the Axial era. <sup>5</sup>

**CONFUCIUS** (See [Confucianism](#)) lived during the 6th century B.C.E. in China, in a time of great political instability as the **Zhou dynasty's** control disintegrated. His teachings provided a philosophical base for social loyalty and obedience. At this same time, other world-view alternatives were defined. Among them were **DAOISM** (See [Daoism](#)), which is usually traced to the legendary teacher **Laozi** who lived around 600 B.C.E., the egalitarian teachings of **Mo-Zi** (c. 471–391 B.C.E.), and the authoritarian **LEGALISM**, <sup>6</sup>

most fully articulated by the later **Han Fei** (d. 233 B.C.E.).

**GREEK PHILOSOPHY** represents the intellectual culmination of the transformations in the eastern Mediterranean societies of the Mycenaeans and Dorians. **Socrates** (469–399 B.C.E.), **Plato** (427–327 B.C.E.), and **Aristotle** (384–322 B.C.E.) provided the basis for the main traditions of Greek philosophy emerging from the Axial age (See [Economy, Technology, Society, and Culture](#)).

### **3. Classical Civilizations, 300 B.C.E.–500 C.E.**

#### **300 B.C.E.–200 C.E**

**THE ECUMENE**, a continuous belt of urban societies and networks of trade and ideas, emerged in the Eastern Hemisphere. Important features of this ecumene were the great empires, which provided large, secure areas for trade and the wealth and power necessary for basic economic development and political stability. <sup>1</sup>

#### **300 B.C.E.–500 C.E**

**GREAT CLASSICAL EMPIRES.** Regional civilizations in the Eastern Hemisphere were politically unified by major imperial systems in the classical era. Commercial and technological developments had made such large political systems feasible, while shared cultures both facilitated and benefited from the empires. These empires provided a foundation in most regions for a sense of civilizational identity. <sup>2</sup>

### a. The Middle East

The Middle East was the first region to be brought under the control of a single empire, and a long imperial tradition of regional control was established. 1

#### 935–612 B.C.E

**ASSYRIAN EMPIRE** gained control of both Mesopotamia and Egypt by 665 B.C.E. 2

#### 550–330 B.C.E

**PERSIAN EMPIRE**, established by **Cyrus the Great** (556–530 B.C.E.), reestablished full regional control after the end of the Assyrian Empire. The empire was defeated by **Alexander the Great** (356–323 B.C.E.), whose conquests laid the foundations for a number of imperial states in Greece, the Middle East, and central Asia. 3

#### 330–30 B.C.E

**ALEXANDER'S SUCCESSOR STATES.** The **Seleucid** successors to Alexander's generals controlled most of the Middle East, except for Egypt from 305–64 B.C.E. Egypt was ruled by the descendants of Alexander's general, **PTOLEMY** (367–283 B.C.E.), until the Roman victory in 30 B.C.E. 4

#### 312 B.C.E.–651 C.E

**PERSIAN EMPIRES.** 5

## 312 B.C.E.–226 C.E

**Parthian Empire** (See [247, 238?–211](#)) was established in the eastern regions of the Middle East after the death of Alexander the Great; it expanded until it controlled most of the region except for Egypt and the Mediterranean coastal societies, which by the end of the 1st century B.C.E. had come under Roman control. 6

## 226–651 C.E

**Sassanid Empire** (See [Economy, Society, and Culture](#)) replaced the declining Parthian state and reestablished effective regional control until falling to the **Muslim** conquests in the 7th century. 7

### **[b. The Mediterranean Basin](#)**

Imperial unification of the Mediterranean basin came gradually and was associated with a single imperial system. <sup>1</sup>

The **ROMAN EMPIRE** (See [Geography and Climate](#)) began as a republican city-state in Italy around 500 B.C.E. By the end of the 2nd century B.C.E. it had gained control of all of Italy, Greece, and the Iberian Peninsula. By the 1st century C.E. it controlled all of the Mediterranean basin and much of western Europe. This unity lasted until the fall of Rome to nomadic invaders in the fifth century, although this invasion had been preceded by a long period of loss of control in many areas and a formal division of the Empire into eastern and western sections. The tradition of Roman unity provided a strong sense of identity to western civilization but also contributed to ideas of empire in eastern Europe. <sup>2</sup>

### **c. [Chinese Imperial Unity](#)**

In 221 B.C.E., **Shi Huangdi** of the **QIN** dynasty conquered all of the rival states that had emerged in the later **Zhou Empire**. Qin control did not survive Shi Huangdi's death, but imperial unification was reestablished in 202 B.C.E. by the **HAN dynasty**. By the time the Han Empire disintegrated in the 3rd century C.E., a clear sense of Chinese unity had been established, and it survived nearly four centuries of division until the reunification of China under the **SUI dynasty** in 589 C.E. <sup>1</sup>

## d. [Indian Empires](#)

**Hinduism** (See [Hinduism](#)) provided a strong basis for the social order in India that was less identified with imperial political structures than in the other regional civilizations. Temple organizations and the **caste system** were effective alternatives to the control of kings. However, India did experience major imperial unifications (See [327–325](#)). <sup>1</sup>

### 322–184 B.C.E

**MAURYAN EMPIRE.** The defeat of local states by Alexander in 327–324 B.C.E. opened the way for unification of northern India by imperial conquest. <sup>2</sup>

### 322–298 B.C.E

**CHANDRAGUPTA MAURYA** conquered much of northern India, creating the basis for the Mauryan Empire. <sup>3</sup>

### 268–232 B.C.E

**REIGN OF ASHOKA,** Chandragupta's grandson, represented the high point of Mauryan power and a time of official support for Buddhism. After Ashoka's death, dynastic rivalries, civil unrest, and a revival of Hinduism led to five centuries of political disunity. <sup>4</sup>

### 78–180 C.E

**KUSHAN EMPIRE** was the strongest state in the era of instability. Based in central Asia and modern Afghanistan, it controlled northern India under **Kanishka** (r. 78–96 C.E.), who aided the expansion of **Buddhism** in central Asia.

5

### 320–535 C.E

**GUPTA EMPIRE** (See [South Asia, 72 B.C.E.–500 C.E.](#)) revived Indian imperial unity. Gupta rulers gave support to Brahmans and Hinduism. The empire disintegrated in the face of invasions from central Asia, especially in 500–535 C.E.

## e. [Expansion of the Ecumene](#)

The zone of urban societies, trade networks, and large states expanded beyond the core regions of the major civilizations in the classical era. Some of this was the result of imperial conquests, but more was the result of expanding trade networks and the growing communities based on the great religions of the Axial era. <sup>1</sup>

### 1. Africa

#### 1000–591 B.C.E

**KUSH.** New Kingdom Egyptian expansion south in the Nile Valley created the Nubian state of Kush. Kush became independent around 950 B.C.E. and then conquered Egypt where Kushites ruled as the **25th Dynasty** (751–656 B.C.E.). After the Assyrian conquest of Egypt, the Kushite Empire continued in Nubia, developing a distinctive culture and urban society with its capital in **Napata**. <sup>2</sup>

#### 591 B.C.E.–350 C.E

**MEROË** (See [591 B.C.E.–350 C.E.](#)), the successor to Napata, was the center of a state which engaged actively in trade with the Mediterranean world and was a major producer of iron implements in a developing trade in Africa. <sup>3</sup>

### 1st to 6th Centuries C.E

**KINGDOM OF AXUM** (See [591 B.C.E.–350 C.E](#)) developed in the Ethiopian highlands. <sup>4</sup>  
Trade with India and Mediterranean areas and Greek and Arabian cultural influences created a prosperous state which conquered Meroë. The conversion of the king to Christianity around 350 C.E. laid the basis for the long-lasting Ethiopian Christian culture.

#### **4. The Spread of Religions, 300 B.C.E.–500 C.E.**

Many of the world-views that emerged during the Axial period spread across the boundaries of civilizations, creating new communities with shared ideals. These new-style communities combined urban and herding societies and spread throughout the Eastern Hemisphere, providing new bases for interregional relations. 1

##### **a. The Spread of Hellenism**

Hellenism's spread outward from the Greek city-states received a major impetus from the conquests of **Alexander the Great** (See [336](#)) late in the 4th century B.C.E. From the Mediterranean basin to northern India, Alexander's forces aided the spread of Hellenistic ideas, urban structures, and political concepts. For three centuries, the successor states to Alexander's empire developed Hellenistic institutions and ideas in the Middle East, making them an important part of the general cultural framework in that region. In northern India and central Asia, Greek themes blended with local traditions creating distinctive cultural syntheses. This blend, which was reflected in art and sculpture, reached a high point in the Buddhist sculpture of **Gandhara** in the 1st century C.E. Hellenistic artistic influence has been traced as far east as China. 2

##### **509–44 B.C.E**

The **ROMAN REPUBLIC** emerged as the dominant force in the Mediterranean basin. Roman culture was strongly influenced by Hellenism, especially after the Roman conquest of Greece in the 2nd century B.C.E. In general terms, the Roman Empire was a distinctive but clearly Hellenistic society by the 1st century B.C.E. Hellenism provided at least some important artistic and cultural themes for societies all across the Eastern Hemisphere. 3

## b. Buddhism

Buddhism (See [South India](#)) spread both north and south from India. Official support from the Mauryan ruler **Ashoka** in the 3rd century B.C.E. and the active sending of missionaries encouraged the spread of Buddhism. 1

### 200 B.C.E.–500 C.E

**THERAVADA BUDDHISM** was the early Buddhist form, and it spread to southern India, Sri Lanka, and ultimately to the mainland territories and islands of Southeast Asia. 2

### 1st Century C.E

**MAHAYANA BUDDHISM** developed as a distinctive form of the faith in central Eurasia and later China (See [200](#)). Buddhist merchants and teachers interacted with Greeks and Persians in central Asia and the Middle East, and Buddhism spread through diaspora communities of merchants in many regions along the **Silk Roads**. It was brought to China by the 1st century C.E., gradually winning converts and becoming very powerful following the collapse of the Han dynasty. By 500 C.E., Buddhism was an important force throughout more than half of the Eastern Hemisphere. 3

### c. [Hinduism](#)

Hinduism successfully transformed itself in the face of social change in India and competition from other world-views, especially Buddhism. By 500 C.E. Hinduism was the dominant world-view in India (See [c. 274–c. 236](#)). Although it was not formally a missionary religion, its concepts and rituals spread with Indian merchants into Southeast Asia where by 500 C.E. it became an important part of the world-views of royal courts in Cambodia, Java, and elsewhere in the region (See [Southeast Asia, c. 500 B.C.E.–500 C.E.](#)).

### d. [The Expansion of Christianity](#)

Christianity began in the eastern Mediterranean at the heart of the Hellenistic world among Jewish communities and in the context of the **Roman Empire**. It spread throughout the Mediterranean basin and in Roman western Europe, competing with a variety of other popular religions. As Christianity spread, it took a number of distinctive forms.

1

#### 312–395 C.E

**ROMAN WESTERN CHRISTIANITY** received official toleration and support from emperors, leading to the Roman Empire becoming formally Christian. The Western Church was centered in **Rome** where the Bishop of Rome as **Pope** claimed authority over all Christians. The Roman-led Church expanded into western Europe and became the dominant world-view in the whole region by the 7th to 8th centuries.

2

#### 330–451 C.E

**EASTERN ORTHODOX CHRISTIANITY** developed in the older cities in the eastern Mediterranean and had its center in Constantinople, proclaimed the capital of the **Eastern Roman Empire** in 330 C.E. The Eastern Church did not accept the primacy of the Bishop of Rome and developed doctrinally distinctive positions. It was the official church of the Byzantine Empire and spread through missionary activity into the Middle East and the Balkans. By the 6th century C.E. the Eastern Church was the dominant church in those regions.

3

#### 451 C.E

**NESTORIAN CHURCH** emerged as the independent tradition after the **Council of Chalcedon**. This was part of the development of distinctive Christian church traditions in Egypt and Ethiopia in Africa, in the territories of the Sassanid Empire, and eventually in central Eurasia.

4

## 200 C.E.–500 C.E

**THE CLASSICAL ECUMENE** developed as an interacting set of empires, religious communities, trade networks, and migrating peoples. Although imperial systems collapsed in many areas by 500 C.E., the broader ecumene continued to expand.

## **B. Kingdoms of Western Asia and Africa, to 323 B.C.E.**

### **1. Periodization**

The early civilizations of western Asia and northeast Africa took shape in the 4th millennium B.C.E. Two major centers arose in Mesopotamia and Egypt, each with quite different characteristics but recurrent contacts in war, trade, and culture. Mesopotamian history was marked by recurrent invasions plus the formation of new empires and smaller kingdoms; societies in contact with this civilization center fanned out in North Africa (Carthage) and Asia Minor. The long period in the histories of both western Asia and Egypt extends from the formation of civilizations to the conquests first of the **Persians**, then of **Alexander the Great**. 1

## [2. Mesopotamia, c. 3500–539 B.C.E.](#)

### [a. Geography](#)

**Mesopotamia** lay between and around the Euphrates and Tigris Rivers. The region reaches from the **Taurus Mountains** to the Persian Gulf and from the Syrian Desert to the **Zagros Mountains** and splits into Upper and Lower Mesopotamia at the point where the rivers come closest together, near ancient Babylon and modern Baghdad. **Upper Mesopotamia** is a large piedmont zone flanked by semiarid highlands. In the west, the **Balikh** and the **Khabur** flow south to the Euphrates, and in the east, the **Great Zab** and the **Little Zab** flow west from the Zagros into the Tigris. **Lower Mesopotamia** is an alluvial plain, and the Tigris and Euphrates form frequent lakes and marshes. The ancient shoreline of the **Persian Gulf** probably lay farther north than at present. 1

[The Encyclopedia of World History, Sixth edition.](#) Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

[CONTENTS](#) · [SUBJECT INDEX](#) · [BIBLIOGRAPHIC RECORD](#)

## **[b. Economy, Technology, Society, and Culture](#)**

The **staple crops** in Mesopotamia were wheat and barley, along with the date palm. Drainage canals and irrigation works made the interior plain of Lower Mesopotamia **highly productive**, but irrigation led to **salinization** of the soil and decreased arable land. In Upper Mesopotamia the rivers flow through deep valleys, and irrigation of the interior was not possible. Agriculture was confined to the river valleys, and the interior was used primarily for **pastoralism** (See [First Farmers in the Near East](#)). The region had few natural resources, except **bitumen**, but finished goods, such as textiles and metalwork, were exported. Originally, economic activity centered around **temples**, but eventually, kings and private individuals engaged in large-scale agriculture and trade. 1

Technological advances in Mesopotamia during the early civilization period (by 3000–2500 B.C.E.) included the **use of bronze** for tools and weapons. Copper had been introduced earlier, but mixing it with tin for bronze created much stronger equipment; bronze use also prompted wider trade relations to gain access to metal ores. The **introduction of plows** increased crop yields. The **wheel** was probably imported by migrants from central Asia like the early Hurrians (See [c. 1700–1500](#)). The **potter's wheel**, invented by 6000 B.C.E., was further improved, an early sign of craft specialization. 2

**Architecture** was sophisticated, but since most building was done in **mud-brick**, examples have not survived as well as stone counterparts in Egypt and Greece. Immense **ziggurats** (stepped temple platforms) and large palaces were built, and even private houses had drainage systems. **Writing** first developed in Mesopotamia. Its origins lay in **clay tokens**, used to count cattle as early as the 8th millennium. True writing (as opposed to pictographs) appeared around 3500 B.C.E. Writing was done on clay with sharp reeds, producing the wedgelike **cuneiform** script. Originally used to write Sumerian, cuneiform was later adapted to Akkadian, Elamite, Hittite, Hurrian, Eblaite, Ugaritic (Canaanite), and Old Persian. Many Sumerian and Akkadian myths survive, the best known being the **Gilgamesh Epic**, describing the legendary exploits of a king of Uruk, fragments of which go back to the early second millennium. The **King Lists** provide important historical material, running, with some gaps, from around 2700 down to the 1st century B.C.E. Economic and legal texts, letters, and scholarly works such as dictionaries, grammar 3

books, and mathematical texts also survive. Mathematical texts contain tables of cube roots, exponential functions, and **Pythagorean numbers**. The Sumerians and Akkadians normally used a **sexagesimal** numbering system, the basis of our division of the hour and minute into 60 units.

Mesopotamian society was organized around **city-states**. In early Sumerian times, a priest-king (*en*) ruled as a representative of the city's god, assisted by an assembly of citizens or elders. Later, as multicity states formed, a king (Sumerian *lugal*, Akkadian *sharrum*) reigned, and each individual city was administered by a governor (*ensi* or *ishiakkum*). Sumerian and Akkadian religion eventually formed a **common pantheon**, and most gods had both a Sumerian and an Akkadian name. **An** (Akkadian **Anu**) was the first king of the gods, later replaced by the Lord of the Air, **Enlil**, and ultimately by **Marduk**, the city god of Babylon. Other major gods were **Enki (Ea)**, god of wisdom; **Ninmah**, mother of all life; **Nanna (Sin)** the moon; **Utu (Shamash)** the sun; **Inanna (Ishtar)** the star Venus; her husband, the shepherd god **Dumuzi (Tammuz)**; and **Ninurta (Adad)**, the god of war. During the five-day New Year's festival (Sumerian *zagnuk*, Akkadian *akitu*), a **sacred marriage** was performed between Enlil (later Marduk), in the person of the king, and a priestess representing Inanna/Ishtar, ensuring fertility and the return of spring.

## c. [The Sumerians and the Akkadians](#)

### c. 3500–2900

#### THE PROTOLITERATE PERIOD.

1

### c. 3500–3100

**THE URUK CULTURE.** It is uncertain whether the **Sumerians** were native to Mesopotamia or if they migrated into the region from the east or south sometime after 4000 B.C.E. In any case, **Semitic** (Akkadian) elements in the earliest texts suggest an early mixing of ethnic groups. In the **Uruk period**, the population of Sumer was probably several hundred thousand, with some settlements large enough to be called cities (over 10,000 in population). The stepped temple platform (**ziggurat**) and **cylinder seals** so characteristic of Mesopotamian culture developed. The **first known writing**, a small limestone tablet, comes from Kish and is dated to c. 3500. At Uruk several hundred clay tablets have been found, most dating to c. 3200–3100. These, like the tablet from Kish, are too primitive to be read, but appear to be **economic documents**.

2

### c. 3100–2900

**THE JEMDET NASR CULTURE (Early Bronze Age).** Tablets from Jemdet Nasr sites are clearly written in **Sumerian**, and almost all are economic texts. **Bronze** was first utilized in Mesopotamia and there is evidence of **extensive overseas trade**. Mesopotamian influence appeared in predynastic Upper Egypt, the so-called **Mesopotamian Stimulation** (See [c. 3500–3100](#)).

3

### c. 2900–2370

## THE EARLY DYNASTIC PERIOD.

4

### 2900–2700

**EARLY DYNASTIC I.** The **Sumerian King List** names eight antediluvian kings who reigned for tens of thousands of years, but it is not known if these names have any **historical basis**. The **royal tombs of Ur** contain the graves of **Meskalamdug** and **Akalamdug**, among others, which probably date to this period.

5

### 2700–2600

**EARLY DYNASTIC II.** According to the King Lists, the first dynasty after the Great Flood (recorded in the **Gilgamesh Epic**) was the **1st Dynasty of Kish**. The last two kings, **Enmebaragesi** and his son **Agga**, are the first rulers attested in contemporary inscriptions. According to the King List, “kingship” (*namlugal*) then passed to the **1st Dynasty of Uruk**, which included **Enmerkar**, **Lugalbanda**, and **Gilgamesh**, heroes of epic tradition, and finally to the **1st Dynasty of Ur**. Epigraphic evidence, however, shows that these dynasties (and a dynasty at Mari) were all contemporary and date to c. 2700–2600 B.C.E. Many rulers known from contemporary inscriptions are not found in the King Lists.

6

### 2600–2370

**EARLY DYNASTIC III.** The King Lists record eleven more dynasties before **Sargon of Akkad**, but, except for the **3rd dynasty of Uruk**, little is known of them, and many were probably contemporaneous. The **1st Dynasty of Lagash** (Telloh) is well known from inscriptions, though not mentioned in the King List. It started with **Mesilim** (c. 2600), but it was **Eannatum** (c. 2500) who conquered much of Sumer, extending Lagash's power into Elam and Mari. **Uru-inim-gina** of Lagash (2378–2371) was the earliest known social reformer: he established “**freedom**” (*amargi*) in the land, the first recorded use of the term in a political sense. The **3rd Dynasty of Uruk** had only one king: **Lugal-zagesi** (2371–2347). Beginning his career as Governor (**ensi**) of Umma, he defeated Lagash and took the title **King of Uruk**. Lugal-zagesi claimed to rule from the Persian Gulf to the Mediterranean, though this is doubtful. Under his rule, Akkadians began to rise to high positions in government. The **population of Mesopotamia** probably reached half a million in this period.

7

## 2371–2190

**THE DYNASTY OF AKKAD.** **Sargon the Great** (Sharru-kin, 2371–2316) rose from obscure origins to become cupbearer to **Ur-zababa**, king of Kish. Rebellious, he built the city of Agade or **Akkad** (whose site has not been located) and proclaimed himself king. After defeating **Lugal-zagesi of Uruk** (c. 2347), he conquered the rest of Sumer. Sargon installed his daughter **Enheduanna** as high priestess at Ur. Enheduanna's hymns to Inanna have survived, making her history's **first known author**. Sargon went on to conquer Upper Mesopotamia, the **Amorites** (Amurru or “Westerners”) in Syria, Elam, and Subartu (Assyria). Later legends fancifully describe conquests of Anatolia and Crete, but Sargon's empire certainly ranged from the Persian Gulf to the Mediterranean. Sargon's sons **Rimush** (2315–2307) and **Manishtushu** (2306–2292) faced constant revolts: both died in palace coups. **Naram-Sin** (2291–2255) brought the kingdom of Akkad to its zenith. He was the first Mesopotamian king to claim divinity, as well as the first to be called “**King of the Four Quarters**” (that is, the World). Defeating the powerful state of **Ebla** in Syria, he extended his empire to Anatolia. Under **Shar-kali-sharri** (2254–2230), **Gutian tribes** from the Zagros began raiding into Mesopotamia. Shar-kali-sharri was assassinated, and after him came a period of anarchy. An independent **4th Dynasty of Uruk** broke away and ruled parts of Lower Mesopotamia. Around 2190, Akkad fell to the Gutians.

8

## c. 2230–2114

**THE GUTIANS.** The King List records 21 Gutian kings, though most of them were probably local chiefs with only limited authority. Some cities, such as **Lagash** and **Uruk**, became independent, though their rulers retained the title of governor (*ensi*). **Gudea** of Lagash left inscriptions which contain the most important texts in **classical Sumerian**. Around 2114, **Utu-Hegal** of Uruk (2120–2114), drove the Gutians out of Sumer but died soon after.

9

## 2113–2004

**3rd DYNASTY OF UR: The Sumerian Renaissance.** **Ur-nammu** (2113–2096) of Ur proclaimed himself king and soon conquered all of **Sumer and Akkad**. He built and renovated many public buildings, including the enormous **temple of Nanna** at Ur, best preserved of Mesopotamian ziggurats. Ur-nammu, whose stated purpose was to establish “**justice in the land,**” is best known for his law code. The reestablishment of central control led to a rise in **population**: Mesopotamia probably had about one million

10

inhabitants at the beginning of the second millennium. **Shulgi** (2095–2048) brought the empire of Ur III to its height. He conquered Elam and Upper Mesopotamia and, like the Akkadian kings, he proclaimed himself the divine “**King of the Four Quarters.**” **Shu-Sin** (2038–2030) built a 150-mile-long wall between the rivers to defend against the encroaching **Amorites**. Nevertheless, in the reign of **Ibbi-Sin** (2029–2006) the Amorites invaded and established independent states in Lower Mesopotamia. In 2025, **Larsa** became autonomous under Naplanum, and in 2017 Ishbi-Erra established a dynasty at **Isin**. Eshnunna and Elam also broke away. In 2004, the Elamites attacked and destroyed Ur (See [2230–c. 1925](#)).

## **d. [The Amorite Kingdoms](#)**

**2004–1763**

**THE ISIN-LARSA PERIOD.**

1

**2017–1794**

**THE DYNASTY OF ISIN.** Late in his reign, **Ishbi-Erra** (2017–1985), king of Isin, drove the Elamites from Ur. **Ishme-Dagan** (1953–1935) was a social reformer, and **Lipit-Ishtar** (1934–1924) left behind an important early **law code**. After nine more kings, **Damiq-ilishu** (1816–1794) ruled as the last king of Isin.

2

**2025–1763**

**THE DYNASTY OF LARSA.** **Naplanum** was king of Larsa from 2025–2005, but it was **Samium** (1976–1942) who established Larsa as a rival power to Isin. After a dynasty of ten more kings, **Rimsin** (1822–1763) brought Larsa to its largest extent, defeating Damiq-ilishu of Isin and **unifying Lower Mesopotamia**.

3

**c. 2000–1763**

**Amorite and Elamite Dynasties.** While not mentioned in the King List, inscriptions show an **independent dynasty at Eshnunna**, some with Elamite names. Indeed, under **Naram-Sin** (c. 1830), Eshnunna and Assyria may have been united. Other independent Amorite dynasties ruled in Kazallu, Sippar, Uruk, Kish, Marad, and, most importantly, **Babylon**.

4

## c. 1900–1741

### OLD ASSYRIAN PERIOD.

5

## c. 1900–1813

**THE DYNASTY OF PUZUR-ASHUR.** The Assyrians probably originated as a nomadic tribe. The city of **Ashur** (Qalat Sharquat) is first mentioned in the reign of Sargon of Akkad (c. 2350). Around 1950 **Puzur-Ashur I** built the city's wall, and c. 1900, an Assyrian **trading colony** (*karum*) was established at **Kanesh** in Anatolia, where tens of thousands of cuneiform tablets have been discovered. The Assyrian king **Naram-Sin** (c. 1830) may be the same as a contemporaneous king **Naram-Sin of Eshnunna**, and the two kingdoms may have united under him. In any case, Naram-Sin expanded Assyria's rule to the west. In 1813, an Amorite prince, **Shamshi-Adad**, overthrew Erishum II (c. 1814) to become king of Assyria.

6

## 1813–1741

**THE DYNASTY OF SHAMSHI-ADAD.** Shamshi-Adad I (1813–1781) conquered **Mari** and expanded Assyrian power to the west. His son, **Ishme-Dagan** (1780–1741), invaded Babylonia, in alliance with Elam, Eshnunna, and the Gutians but was defeated by **Hammurapi the Great**. After Ishme-Dagan's death came a series of usurpations, and Assyria declined into **400 years of obscurity**.

7

## 1830–1531

**1ST DYNASTY OF BABYLON (Old Babylonian Empire).** The **1st Dynasty of Babylon** was established under **Sumu-abum** (1894–1881). By the reign of **Sin-muballit** (1812–1793) the city controlled a region running for 60 miles along the Euphrates. **Hammurapi the Great** (1792–1750) took Uruk and Isin soon after his accession to the throne. For over 20 years, he concentrated on building and irrigation projects, organized a centralized administration, and issued the famous **Law Code of Hammurapi**. In 1764, Babylon was attacked by a coalition of Elam, Assyria, the Gutians, and Eshnunna, but Hammurapi defeated the coalition, annexed Eshnunna and Elam, and **expanded the empire** to the borders of Assyria and the Zagros. The Babylonian king then took **Larsa**, made it his southern capital, and in 1759 defeated **Mari** and tore down its walls. In

8

1757–1755, Hammurapi defeated another **Assyrian invasion**, and when Eshnunna revolted it was destroyed. Hammurapi now controlled all of Mesopotamia, with the exception of Assyria. In this period the Amorites completely **assimilated** into Akkadian culture, adopting their language, religion, and culture. Two dialects of Akkadian were spoken, **Babylonian** in the south, and **Assyrian** in the north—Sumerian survived only in **scholarly writing**. **Marduk**, god of Babylon, replaced Enlil as king of the gods. The Marduk temple complex in Babylon was expanded, including the great ziggurat **E-temen-an-ki** (“House of the Foundation of Heaven and Earth”): the biblical **Tower of Babel** (Gen. 11:1–9).

## 1749–1595

**Decline of the Babylonian Empire.** In the reign of **Samsuiluna** (1749–1712), the **Kassites** (Kassu) made their first inroads into Babylonia, and the **Sealands** (the coastal region on the Persian Gulf) broke away from the empire. Under Abieshu` (1711–1684) and Ammiditana (1683–1647), the Kassites again attacked Babylon, but were driven off. **Ammisaduqa** (1646–1626) made internal reforms, forgiving debt and freeing debt-slaves. **Samsuditana** (1625–1595) ruled for 30 years in relative peace, but in 1595 the Hittite King **Mursilis** marched into Mesopotamia and captured and plundered Babylon (See [c. 1680–1500](#)). The Hittites did not remain, but Babylonian authority was broken, allowing the **Kassite seizure of power**.

## e. [The Kassites, the Hurrians, and the Arameans](#)

### c. 1700–1600

**KASSITE INVASIONS.** In the 17th century, the **Kassites** (*Kassu*) gradually moved into Babylonia from the northeast. After the Hittite raid on Babylon in 1595, the Kassites took the city. <sup>1</sup>

### 1595–1150

**THE KASSITE DYNASTY.** **Burnaburiash I** (c. 1500) signed a treaty with **Puzur-Ashur III** (1521–1498) of Assyria, fixing their common boundaries. From this time, Upper Mesopotamia was known as **Assyria** and Lower Mesopotamia as **Babylonia**. **Ulamburiash** (c. 1450) took over the **Sealands** and **Kurigalzu I** (c. 1400), the strongest of the Kassites, conquered Elam and entered into an alliance with **Amenophis III** of Egypt (See [1402–1364](#)). During the reign of **Kashtiliash IV** (1242–1235), Babylonia was conquered by the Assyrians, but after seven years, its independence was recovered. In 1160, the Assyrians conquered the Lower Zab region, and the Elamites took Babylon itself, carrying off spoils, including the **Code of Hammurapi** to Susa. Enlil-nadin-ahhi (1159–1139) was the last Kassite king of Babylon. <sup>2</sup>

### 1156–1025

**2nd DYNASTY OF ISIN.** After the Kassite defeat, a new dynasty arose in Isin under **Marduk-kabit-ahheshu** (1156–1139) which eventually retook Babylon. **Nebuchadnezzar I** (Nabu-kudduri-usur, 1124–1103) even conquered Elam. **Tiglath-Pileser I** of Assyria defeated Marduk-nadin-ahhe (1098–1081) and conquered Babylonia (See [1365–1078](#)). By the end of the second millennium, the population of Mesopotamia was probably around 1.25 million. <sup>3</sup>

## c. 1700–1500

**THE HURRIAN INVASION.** The **Hurrians** had lived in Mesopotamia in small numbers from the late 3rd millennium, but the major Hurrian invasion of the region began around 1700. By 1500, they had penetrated into all of Mesopotamia, as well as Syria-Palestine and eastern Anatolia. There are indications that they had been influenced by **Aryans** somewhere outside the Near East. The Hurrians worshipped gods later associated with the Iranians and Indians (such as **Mithra** and **Varuna**) (See [Economy, Technology, Society, and Culture](#))—the names of some Hurrian rulers and certain technical expressions in Hurrian texts (particularly in connection with the chariot) are **Indo-European**. The Hurrians adopted Mesopotamian religion and culture, utilizing Babylonian as an administrative language and cuneiform script to write the Hurrian language. Despite the large number of surviving texts, the Hurrian language remains undeciphered. 4

## c. 1550–1250

**THE KINGDOM OF MITANNI.** **Sudarna I** (c. 1550) created the Hurrian **Kingdom of Mitanni** with its capital at **Washukanni** on the Khabur River. **Saustatar** (c. 1500) expanded the kingdom, and eventually, the kings of Mitanni ruled all of Upper Mesopotamia and much of Syria, from the Orontes to the Little Zab. In 1475, **Tuthmosis III** conquered Syria and pillaged Mitanni, but Egyptian control did not extend east of the Euphrates (See [1490–1426](#)). Both **Artadama I** (c. 1450) and **Sudarna II** (c. 1400) made marriage alliances with the Egyptians. After Sudarna's death, a civil war broke out between his two sons, **Tushratta** (c. 1390–1370) and **Artadama II**, and was continued by their sons **Matiwaza** and **Sudarna III**. This infighting, and the **plundering of Washukanni** by the Hittites (See [c. 1680–1500](#)), led to the kingdom's decline. Finally, Ashur-uballit I of Assyria attacked Mitanni and pillaged it. Shalmeneser I defeated the last Hurrian king, **Shattuara II**, and the Hurrians were absorbed into the Assyrian Empire around 1270. 5

## 1365–1078

**THE MIDDLE ASSYRIAN EMPIRE.** **Ashur-uballit I** (1365–1330) expanded the Assyrian domain to the north and west and corresponded with **Amenophis IV** (Akhenaten) of Egypt as an equal (See [1402–1364](#)). **Adad-Nirari I** (1307–1275) defeated the Babylonians and conquered the Hurrian city-states. **Shalmaneser I** (1275–1245) continued his predecessors' energetic campaigns of conquest, fighting in the far north 6

against Urartu and again crushing the Hurrians, annexing their lands. He conquered the lands up to Carchemish, but an **Egyptian-Hittite** treaty signed in 1283, which divided Syria between them, frustrated the Assyrians' westward movement. **Tukulti-Ninurta I** (1244–1208), the biblical **Nimrod** (Gen. 10:8–12), conquered Babylon, but only held it for seven years. Tukulti-Ninurta also promulgated the **Middle Assyrian law-code**, a continuation of the Sumerian and Babylonian legal tradition and built a new capital, **Kar-Tukulti-Ninurta** (Tulul el-Aqir), across the Tigris from Ashur. Tukulti-Ninurta was murdered by his son in a palace coup, and Assyria entered into an 85-year **period of weakness**. When the invasion of the Sea Peoples around 1200 destroyed the Hittite Empire and pushed the Egyptians out of Asia, and created a power vacuum in the region, **Tiglath-Pileser I** (Tukulti-apal-esser, 1115–1077) quickly took advantage of the situation. In a series of campaigns, he conquered **a large empire** from the Zagros to the Mediterranean, and from Babylon north to Urartu. Tiglath-Pileser initiated the policy of ruthless warfare, mass executions, and the deportation of civilian populations, which became characteristic of Assyrian conquest.

## 1078–977

**THE ARAMEAN INVASIONS.** In the 11th century, Aramean tribes from the Syrian desert, including the **Chaldeans** (Kaldu), invaded Mesopotamia. The Assyrians were driven back into Assyria proper, and Babylonia was overrun and broken up into **small tribal states**. The coastal region retained its independence from 1024–1004 under the **2nd Sealand Dynasty**, but subsequently this area was conquered by the Chaldeans, who ruled southernmost Babylonia.

## f. [The Neo-Assyrians and the Neo-Babylonians](#)

### 934–824

**THE ESTABLISHMENT OF THE NEO-ASSYRIAN EMPIRE.** **Ashurdan II** <sup>1</sup> (934–912) built up a new Assyrian Empire. Further conquests were carried out by **Adad-nirari II** (911–890), **Tukulti-Ninurta II** (890–884), and **Ashur-nasir-apli II** (883–859), by which time the Assyrians again ruled from the Tigris to the Mediterranean, and from Lake Van to the borders of Babylonia. **Ashur-nasir-apli** was the chief architect of the Neo-Assyrian Empire, developing its centralized bureaucracy and building **Kalah** (Nimrud) as a capital. Its palaces and temples combined traditional Mesopotamian mud-brick architecture with monumental stone sculptures and wall-reliefs.

### 858–824

**THE REIGN OF SHALMENESER III.** **Shalmeneser III** <sup>2</sup> began integrating conquered areas into the empire as provinces. Vassals, who could not yet be wholly subjugated, paid tribute. Shalmeneser moved west to conquer the Aramean kingdoms of Syria. Though initially stopped at the **Battle of Qarqar** (853) by a coalition of Hamath, Damascus, and Israel, in 842 Shalmeneser captured Damascus and received tribute from Tyre and from Israel (See [885–841](#)). He defeated **Kizzuwatna** (Cilicia) and **Urartu**, “washing his weapons” in Lake Van. After Shalmeneser's death, there was a civil war between two of his sons, which led to a period of **Urartian domination**.

### 824–745

**URARTIAN DOMINATION OF ASSYRIA.** **Shamshi-Adad V** (823–811) took the <sup>3</sup> throne after defeating his brother, though parts of the empire were lost. He was succeeded by his minor son, **Adad-nirari III** (810–783). For the first four years of the

child's reign, his mother **Sammuramat** (Greek **Semiramis**) ruled as regent. Adad-nirari briefly reimposed tribute on the western states, including Israel, but increasingly Assyria retreated before Urartu. Commagene and Melitene in southern Anatolia and Carchemish in Syria came under Urartian control, and Assyria became practically a **vassal of Urartu**.

## 745–626

### THE HEIGHT OF THE NEO-ASSYRIAN EMPIRE.

4

## 744–727

**THE REIGN OF TIGLATH-PILESER III.** The youngest son of Adad-nirari III, **Tiglath-Pileser III** introduced the last and greatest period of the Neo-Assyrian Empire. In the years 743–738, the Urartians and their Neo-Hittite allies were defeated at the **Battle of Arpad**, as was a coalition of Aramean kings under the leadership of Judah. In 735, Tiglath-Pileser III defeated the Urartians again and annexed the region around Lake Urmia. He then subdued **Damascus** and **Israel**, annexing all of Damascus's territory and the Israelite provinces of Gilead and Galilee, all of which were made into Assyrian provinces (See [752–722](#)). In 731, a revolt broke out in Babylonia, and after crushing it, Tiglath-Pileser named himself **king of Babylon**.

5

## 726–705

**SHALMENESER V AND SARGON II.** Upon taking the throne, **Shalmeneser V** (726–722) was immediately faced with a new rebellion in the west. Both Tyre and Samaria, the capital of Israel, were besieged. Samaria fell late in 722 after a three-year siege (shortly before the death of Shalmeneser), but Tyre held out. When **Sargon II** (721–705) mounted the throne, another revolt broke out in Babylon under **Merodach-Baladan II**, which Sargon failed to quell initially. In 720, Sargon moved west, reconquering Hamath, Samaria, Ekron, and Gaza. **King Ahaz of Judah** paid tribute and Tyre finally capitulated after a five-year siege (See [768–715](#)). In 717–716, Sargon took and annexed **Carchemish** and defeated the Egyptians at Raphia, the farthest west the Assyrians had yet penetrated. Urartu was again crushed in 714, and in 712 the Assyrians took Ashdod and annexed Philistia. Finally, in 709, the revolt in Babylon was suppressed, and Merodach-Baladan went into exile in Elam. Sargon built a new capital, which he named **Dur-Sharrukin** (Khorsabad).

6

## 704–681

**The REIGN OF SENNACHERIB (Sin-ahhi-eriba).** In 703 **Merodach-Baladan II** again seized power in Babylon, and though Sennacherib quickly put down the revolt, resistance continued for the next 13 years. Sennacherib campaigned to the north, taking tribute from the Medes, then west, defeating the Egyptians at the **Battle of Elteqeh** in 701. Next it was Judah's turn and Sennacherib besieged **Jerusalem**. But when King Hezekiah paid tribute, the Assyrians broke off the siege (See [715–640](#)). In 689, Babylon revolted again, with Elamite assistance, but was sacked and burnt to the ground. Sennacherib transformed **Nineveh**, on the east bank of the Tigris, into a city of unparalleled splendor, and it remained the Assyrian capital until the end of the empire. In the 7th century, the **population of Mesopotamia** reached a height (until modern times) of around 2 million inhabitants. Sennacherib's eldest son had died before him, so he designated his youngest son **Esarhaddon** as heir. This led to a revolt by his older sons, and the king's assassination.

7

## 680–669

**THE REIGN OF ESARHADDON.** With the active assistance of his mother, **Naqia** (Greek **Nitocris**), Esarhaddon put down the revolt by his brothers. He then rebuilt Babylon and made one of his sons **Shamash-shum-ukin** its king; he gave another son, **Ashurbanipal**, the title king of Assyria. While Scythian and Cimmerian tribes appeared on Assyria's northern border, Esarhaddon was preoccupied with plans to **conquer Egypt**. The first Assyrian invasion of Egypt (674–673) was unsuccessful, but Esarhaddon struck with full force in 671, routed the Pharaoh Taharka, and took Memphis (See [747–656](#)). In 669, Esarhaddon went to Egypt to prepare for an invasion of Ethiopia, but he fell sick and died.

8

## 668–627

**THE REIGN OF ASHURBANIPAL.** **Ashurbanipal** was both a great military commander and a patron of arts and letters. His palace reliefs are among the finest examples of Assyrian art, and he gathered a great library of tablets, which remains one of our main sources for knowledge of Sumero-Akkadian literature. The king boasted he could read and write the cuneiform script. Ashurbanipal attacked Egypt and, in two campaigns (667–666 and 664–663), defeated **Pharaoh Taharka** and his son

9

**Tenuatamun** and extended Assyrian power as far south as Thebes (See [747–656](#)). In 652, Shamash-shuma-ukin tried to overthrow his brother with Elamite help, and civil war raged until 648, when Shamash-shuma-ukin finally surrendered in Babylon. **Susa** was taken and sacked in 639, but the civil wars had revealed Assyria's weakness to its enemies.

## 626–609

**THE LAST DAYS OF ASSYRIA.** The Assyrian Empire collapsed quickly. There was apparently a revolt on Ashurbanipal's death, and his son **Ashur-etil-ilani** (626) ruled only a few months. The usurper, **Sin-shum-lishar** (626), also kept the throne only a short period. At this point, the Chaldean **Nabopolassar** declared himself king of Babylon. **Sin-shar-ishkun** (626–612), another son of Ashurbanipal, took back the throne of Assyria and stabilized the internal situation. Soon, however, **Cyaxares, king of the Medes**, and the **Babylonian king, Nabopolassar**, joined forces to attack Assyria. After a protracted struggle, **Nineveh fell** in 612 and was completely destroyed. An Assyrian noble, **Ashur-uballit II** (611–609) proclaimed himself king at Harran in Syria. The Babylonians took Harran in 610, however, and an attempt by the Assyrians, now allied to the Egyptians, to retake the city failed. Ashur-uballit died in obscurity. 10

## 977–626

**8TH AND 9TH DYNASTIES OF BABYLON.** After a period of political confusion, **Nabu-mukin-apli** (977–942) reestablished an 8th Dynasty of Babylon, though his rule did not extend far beyond the city itself. While unimportant politically, Babylon continued to be a cultural and intellectual center. Under **Nabonassar** (Nabu-nasir, 747–734) an important **calendar reform** was instituted in which the monthly lunar cycle was reconciled with the solar year, a standard system still used in the Jewish calendar. In 731 an Aramean dynasty came to power under **Nabu-mukin-zeri** (731–729), and the **first use of Aramaic** is attested in Babylonian documents. The Assyrians conquered Babylon in 728, but the Chaldean King **Merodach-Baladan II** (Marduk-apal-iddina) drove them out. From 710 to 626, Chaldean kings, often supported by Elam, alternated with Assyrian rulers (See [c. 820–640](#)). 11

### **3. Egypt, c. 3500–332 B.C.E.**

#### **a. Geography**

**EGYPT** consisted of two parts: Upper (southern) and Lower (northern) Egypt. **Upper Egypt** was made up of a long and narrow strip of land, no more than 13 miles wide, on both banks of the Nile River. It stretched for 750 miles from Lake Moeris and the Fayum Depression upriver to the **First Cataract** (waterfall), the border with Nubia. The major cities of Upper Egypt were Nennusu (**Heracleopolis**), Khmun (**Hermopolis**), **Abydos**, and **Thebes**. A dry riverbed, the **Wadi Hammamat**, extended overland from Upper Egypt to the Red Sea. **Lower Egypt** was the Nile Delta formed by the seven branches of the river which flowed into the Mediterranean. The Delta contained two-thirds of Egypt's arable land and was where most of the principal cities of Lower Egypt lay: **Avaris**, **Tanis** (later Pi-Ramesses), **Sais**, and **Bubastis**. Lower Egypt did contain a small portion of the Nile itself, including the cities of On (**Heliopolis**) and **Memphis**. 1

## **b. Economy, Technology, Society, and Culture**

Egypt receives virtually no rainfall, and agriculture depended on **the annual flood of the Nile**, which deposited fertile mud on the fields and provided water for irrigation. This ensured a large and fairly constant surplus of crops, though famines were not unknown. The main staple was barley, which provided both bread and beer. A wide variety of fruits and vegetables were raised, and flax was grown to produce linen, while cattle and sheep furnished meat. **Mines in the Sinai** provided copper, those in Nubia gold, and marble was quarried in the Eastern Desert. The Nile provided **easy communication**, both with the Mediterranean and along the length of the country; the Wadi Hammamat connected the country with the Red Sea. As a result, Egypt was an entrepôt for trade to and from East Africa, Arabia, the eastern Mediterranean, and western Asia. <sup>1</sup>

**Public architecture** was in stone from an early period, but most houses were built of mud-brick. The earliest examples of Egyptian **hieroglyphic** writing, recently discovered, date to 3300–3200 B.C.E. Starting in the Middle Kingdom, a cursive form of writing was developed called **hieratic**. In the late period an even more cursive writing came into use, called **demotic**, or “popular” writing. Much of **Egyptian writing** survives carved or painted on the walls of tombs, but the dry climate has also preserved texts on **papyrus**. In addition to administrative documents and letters, considerable Egyptian literature has survived: quasi historical tales (such as the **Tale of Sinuhe**), mythological and religious works, books of prophecy and wisdom literature, mathematical and scientific texts, even pornography. Historical texts include both monumental inscriptions and king lists, such as the **Palermo Stone** and the **Turin Canon**. In addition, a continuous, though not always accurate, **king list** is provided by **Manetho**, who wrote a history of Egypt in Greek around 250 B.C.E. It was Manetho who divided the kings into “dynasties.” <sup>2</sup>

Egyptian government was **highly centralized** and society **strictly hierarchical**: proper order in the kingdom, expressed by the term *ma`at*, was thought to ensure national well-being. The Egyptian king was considered the link between the gods and his people. The king was identified with the god Horus (and had a **Horus name** in addition to his personal name), but when he died became the god **Osiris**, lord of the underworld. By the 5th Dynasty, the king was also considered the son of Ra, the sun god. The title “*pharaoh*” only came to refer to the Egyptian king in the New Kingdom. Although the <sup>3</sup>

institution of the monarchy was divine, **popular literature** often portrayed the king in an irreverent way. The king technically owned all the land in Egypt, and the palace administered the economy as well as political affairs. The **vizier**, a sort of prime minister, headed a vast bureaucracy which administered the country down to the village level. Upper and Lower Egypt each had their own governors, and the land was further subdivided into **nomes** or districts: 20 in Lower Egypt and 22 in Upper Egypt. Wealth and power were generally hereditary, though commoners could rise in the **scribal bureaucracy** and the army. **Egyptian women** had a very high degree of independence compared to other ancient societies: they could own property, make contracts, and divorce their husbands by a simple act of repudiation.

**Religion** was also centrally organized and headed by an “**Overseer of all the Prophets of the Gods**,” a post sometimes held by the vizier and sometimes by the High Priest of Amun. **The temples** controlled large tracts of land and were important economic centers. Each region had its own patron deity, but eventually the Egyptians placed local gods in a hierarchy and developed a common religion. Religion was closely tied to politics: when **Memphis** was the capital, its god **Ptah** was paramount; the rising importance of **Heliopolis** gave **Ra** his importance; and finally, the ascendancy of **Thebes** is reflected in the New Kingdom emphasis on **Amun**. Egyptian gods commonly had mixed human and animal form: the ibis-headed god **Thoth**, falcon-headed god **Horus**, and jackal-headed god **Anubis** are examples. Under Amenophis IV, who renamed himself **Akhenaten**, the sun disk **Aten** was worshipped as the only god, but this **solar monotheism** was abandoned soon after Akhenaten's death. The worship of **Isis**, originally the deified throne, but later a mother-goddess, became popular only in the Late Dynastic Period.

## **c. The Old Kingdom and the First Intermediate Period (1st–11th Dynasties)**

### **c. 3500–3100**

**THE GERZEAN CULTURE.** Gerzean sites are found in both Lower and Upper Egypt <sup>1</sup> (See [Egypt and Sub-Saharan Africa](#)). Both copper and pottery were in common use, and tomb wall paintings appear for the first time. **Irrigation-based agriculture** was introduced, and this is reflected in a dramatic **growth in population:** from approximately 200,000 at the beginning of the period to over a million at its end. **Egyptian art, architecture, and hieroglyphic writing** developed in their earliest forms. These advances were influenced, to some extent, by contacts with the Sumerian culture—the **Mesopotamian Stimulation** (See [c. 3100–2900](#)). At the beginning of the period, the various nomes were probably independent states, but by the end there were two kingdoms: **Lower Egypt** with a capital at **Pe** in the northwest Delta and **Upper Egypt** ruled either from **Nekhen** (Hierakonpolis) or **This** (near Abydos). At some point, **King Scorpion** of Upper Egypt conquered part of the Delta region.

### **c. 3100–2686**

## **THE PROTODYNASTIC PERIOD.**

<sup>2</sup>

### **c. 3100–2890**

**1st Dynasty.** **Menes**, whose Horus name was **Narmer**, was the king of Upper Egypt <sup>3</sup> who conquered Lower Egypt, **united the two lands** and built the city of **Memphis**, near the border, as his capital. A **palace bureaucracy** developed, and artists and craftsmen were employed by the royal court. Other 1st Dynasty kings were **Djer**, **Djet**, **Den**, **Aha** (who invaded Nubia), and a queen, **Merneith**.

### c. 2890–2686

**2nd Dynasty.** Virtually nothing is known of this dynasty except the names of its kings, and it is unclear what divided it from the previous dynasty. **Hetep** was the first king of the 2nd Dynasty, and **Khasekhemwy** was the last. The latter was the first king to have a **stone burial chamber** in his tomb.

4

### c. 2686–2181

## THE OLD KINGDOM.

5

### c. 2686–2613

**3rd Dynasty.** What divided the 2nd and 3rd Dynasties is also unclear—the 3rd Dynasty's first king **Nebka** may have been related to the previous rulers. Inscriptions of Nebka have been found at **Byblos** in Phoenicia, indicating overseas trade (See [Geography](#)). The most famous king of this dynasty was **Djoser**, who built the famous **Step Pyramid at Saqqara**. The architect of this edifice was **Imhotep**, who was later worshipped as a god. The kings of the 3rd Dynasty campaigned in the **Sinai**, defeating the nomadic chieftains who ruled there.

6

### c. 2613–2494

**4th Dynasty.** **Snefru** fought successful wars against the Nubians and Libyans, further developed the **sea trade in cedar** with Byblos, and began the serious exploitation of turquoise from the Sinai. His successor, Khufu (**Cheops**) is best known for building the **Great Pyramid** at Giza. Originally 481.4 ft. high, it covered an area of about 13 acres and contained 2,300,000 blocks of stone, each weighing an average of 2.5 tons. Khafre (**Chephren**) built the second pyramid at Giza (473.5 ft. high), as well as the enormous human-headed lion, the **Sphinx**, called **Herakhte** (“Horus of the Horizon”) by the Egyptians. Menkaure (**Mycerinus**) built the third pyramid of Giza (219.5 ft. high). In the 3rd and 4th Dynasties the idea of **divine kingship** developed, as did the classical Egyptian canons of art and architecture. There were remarkable advances in **mathematics** and **medicine**, the latter including diagnostic techniques and systematic treatment. In the Old Kingdom the **population of Egypt** was between 1.5 and 2 million.

7

### c. 2494–2345

**5th Dynasty.** The 5th Dynasty witnessed the rise of the **Heliopolitan priesthood of Ra:** its nine kings regularly assumed the title “son of Ra” and built obelisk temples dedicated to the sun god. **Sahurre** defeated the Libyans and organized **trading expeditions** to **Punt** (Somalia) and the “Turquoise Land” in **the Sinai**. Under **Unas**, the last king of the dynasty, the first **Pyramid Texts** appear, although they contain much earlier material, some dating from predynastic times. 8

### c. 2345–2181

**6th Dynasty.** **Uni**, a general of **Pepy I**, campaigned in Palestine, perhaps as far north as Mount Carmel (See [c. 3100–2000](#)), and **Merenre I** took the homage of Nubian chiefs south of the **First Cataract**. Especially after the reign of **Pepy II**, the rulers of the nomes assumed more independence and often ruled as **feudal lords**. The eighth and last ruler of the dynasty was **Queen Nitokerti (Nitocris)**, the sister and widow of Merenre II. 9

### c. 2181–2133

**THE FIRST INTERMEDIATE PERIOD.** According to Manetho, the **7th Dynasty** (c. 2181–2173) had 70 kings in 70 days, obviously a fiction but representative of the unstable conditions of the **First Intermediate Period**. For much of this period there was strife between nobles of **Heracleopolis** (Nennesu) in Lower Egypt and **Thebes** (Waset) in Upper Egypt. The **8th Dynasty** (c. 2173–2160), comprised of six kings, still ruled from Memphis. In the **9th Dynasty** (c. 2160–2130), the capital moved to Heracleopolis, although the kings were still buried at Memphis. Toward the end of the 9th Dynasty, the country was divided in two, the **10th Dynasty** (c. 2130–2040) ruling in Heracleopolis and the **11th Dynasty** (c. 2133–1191) in Thebes. **Central authority was weak**, banditry became common, and commerce with overseas interrupted. Despite the civil unrest, literature flourished: notable are the *Admonitions of Ipuwer*, and the *Instructions for King Merikare*. The idea of a **life after death** began to include persons other than the royal family. 10

## **d. The Middle Kingdom and the Second Intermediate Period (11th–17th Dynasties)**

**2040–1786**

### **THE MIDDLE KINGDOM.**

1

**c. 2133–1991**

**11th Dynasty.** The fifth ruler of the 11th Dynasty, **Mentuhotep II** (2060–2010), defeated Heracleopolis around 2040 and **reunited Upper and Lower Egypt**. A powerful ruler, Mentuhotep suppressed the power of the nobles; reinstated a strong central government; campaigned in Libya, Nubia, and western Asia; and extended Egypt's boundaries. Under **Mentuhotep III** (2009–1998), trade with the Red Sea via the Wadi Hammamat was resumed. **Mentuhotep IV** (1997–1991) was a weak ruler, and on his death his vizier, **Amenemhet**, took the throne.

**1991–1786**

**12th Dynasty.** **Amenemhet I** (1991–1962) was a commoner who attributed his rise to the god **Amun**. This deity rose in national prominence. Amenemhet built a new royal capital, **Itj-towy** (site unidentified), near the border of Upper and Lower Egypt. He also conquered **Lower Nubia** and undertook a punitive campaign against the **Asiatic nomads**. Amenemhet made his eldest son, **Sesostris** (Senusret) his coregent, a practice which persisted through the dynasty. **Sesostris I** (1971–1928) extended Egyptian rule to the Second Cataract, and it is during his reign that the quasi-historical **Story of Sinuhet** is set. **Sesostris II** (1897–1878) began irrigation and land reclamation operations in the Fayum Depression west of the Nile. **Sesostris III** (1878–1843) marched into central Palestine, but made no attempt to establish permanent control (See [c. 2100–1800](#)).

**Amenemhet III** (1842–1797) completed the Fayum irrigation project and expanded turquoise mining in the Sinai. Amenemhet built the enormous palace and mortuary temple later called the **Labyrinth**. In addition to the **Story of Sinuhe**, Middle Kingdom literature includes the **Instructions of King Amenemhet**, the **Tale of the Shipwrecked Sailor**, and the **Coffin Texts**, giving instructions for obtaining eternal life.

## 1786–1552

**SECOND INTERMEDIATE PERIOD.** The **13th Dynasty** (1786–1633) was a period of **declining power** for Egypt, and increasing pressure by invaders from western Asia. The sixty kings of this dynasty ruled a disintegrating kingdom from Memphis and Itjtowy. Already in the beginning of the period, the kings of the **14th Dynasty** (1786–c. 1603) ruled an independent state from **Xois** (Sakha) in the western Delta. Some of these Xoian rulers had Semitic names and may have been Amorites or Canaanites. Under **Dudimose I** (Tutimaios, c. 1674) of the 13th Dynasty, most of Egypt fell to the **Hyksos** (from Egyptian **Heqa-Khoswe**, “chiefs of the foreign lands”) who invaded from Syria-Palestine. The Hyksos were probably Amorites or Canaanites from Syria-Palestine (See [c. 1900–1759](#)). They introduced the horse, chariot, and compound bow into Egypt and are said to have worshipped Seth, who apparently represented the god **Baal**. The **15th Dynasty** (1674–1552) was made up of Hyksos who established control over Lower Egypt, with their capital at **Avaris** in the eastern Delta. The remaining kings of the 13th Dynasty were their vassals. Hyksos rule reached its height under **Apophis I**, who ruled more than 40 years. The **16th Dynasty** (c. 1684–1552), contemporary to the 14th and 15th, was made up of independent Hyksos chieftains who had established themselves somewhere in the Delta. The **17th Dynasty** (c. 1650–1552) was originally the Egyptian vassal kings in Thebes, who gradually won their independence from the Hyksos. One of these Theban kings, **Seqenenre Tao II**, is the hero of a folk tale, “**The Contending of Apophis and Seqenenre**.” His successor, **Kamose**, left a stele (an upright slab with an inscribed surface) describing wars with the Hyksos king **Apophis II**.

[PREVIOUS](#)

[NEXT](#)

## e. [The New Kingdom and the Third Intermediate Period \(18th–24th Dynasties\)](#)

Note: For the 18th to 20th Dynasties, there is a high and a low chronology, differing by some 10 to 20 years. The low chronology is used here. <sup>1</sup>

### 1567–1320

**18th Dynasty. Amosis** (Ahmose, 1552–1527) drove the **Hyksos** out of the country and reestablished the power of the central government. Rather than remaining in a single capital, the 18th-Dynasty kings divided their time between Thebes and Memphis. The worship of the **Theban god Amun** became increasingly important, and the priesthood of Amun became a political force. **Amenophis I** (Amenhotep, 1527–1506) secured the Nubian and Libyan borders. Nubia was administered by a viceroy called the “**King's Son of Kush.**” **Tuthmosis I** (Tuthmose, 1506–1494) and **Tuthmosis II** (1494–1490) both fought successful campaigns in Nubia and Syria-Palestine (See [Geography](#)). <sup>2</sup>

### 1490–1426

**THE REIGNS OF HATSHEPSUT AND TUTHMOSIS III.** **Tuthmosis II** associated his wife (and half-sister), **Hatshepsut**, (1490–1468) with him in his reign, and when he died at an early age, Hatshepsut seized power. At first she acted as regent of **Tuthmosis III** (1490–1436), but in 1489 Hatshepsut proclaimed herself “king” and thereafter depicted herself as a man. Meanwhile, Tuthmosis grew up in the army. In 1468 he took power: the fate of Hatshepsut is unknown. Tuthmosis immediately invaded Syria-Palestine, and at the first **Battle of Megiddo** (1468) defeated a coalition of Canaanite states under the leadership of the king of Qadesh (See [640–609](#)). In a further series of campaigns, Tuthmosis III established an empire stretching to the Euphrates. He even <sup>3</sup>

crossed the river and pillaged **Washukanni**, the capital of the Hurrian kingdom of Mitanni (See [c. 1550–1250](#)). In **Nubia**, he moved the border to the Fourth Cataract and founded a fortified town at Napata (See [747–656](#)). The title **pharaoh** (*per`o*, “Great House”), previously used to refer to the royal palace, was now used to refer to the king himself.

### 1402–1364

**THE REIGN OF AMENOPHIS III.** Under **Amenophis III** Egypt enjoyed **unparalleled wealth and peace**. Amenophis built an enormous mortuary temple at Thebes, including two enormous statues of himself, the **Colossi of Memnon** (65.6 ft. high). He also built the gigantic temple to Amun at **Luxor** and founded a new city in Nubia called Gematen (“finding Aten”), which reflected the rising importance of this god. Although Amenophis made diplomatic marriages with two daughters of Mitannian kings, his chief wife was **Queen Tiy**, the daughter of a Nubian general.

4

### 1364–1347

**THE REIGN OF AMENOPHIS IV (AKHENATEN).** **Amenophis IV** and his wife, **Nefertiti**, introduced an anomalous Egyptian **monotheism**. The god of the solar disk, **Aten**, was now worshipped as the only deity. The king changed his name to **Akhenaten** (“Pleasing to Aten”) and built a new capital at **Akhetaten** (“Horizon of Aten,” modern **Tell al-‘Amarna**), halfway between Memphis and Thebes. Here were found the **Amarna letters**, correspondence with the kings of Babylonia, Mitanni, the Hittites, and others written on clay tablets in Akkadian, the *lingua franca* of the period. **Egypt's empire began to disintegrate**. Some areas of Syria-Palestine broke away, and others were taken over by the Hittites (See [c. 1375–1345](#)).

5

### 1347–1305

**THE END OF THE 18TH DYNASTY.** After Akhenaten's death, his son-in-law **Tutankhaten** (1347–1337) abandoned the Aten cult, changed his name to **Tutankhamen**, and moved the government back to Memphis and Thebes. He is chiefly known for this tomb, which yielded fantastic treasures when discovered in 1922 C.E. The last king of the 18th Dynasty was a usurper, **Horemheb** (1333–1305), who had worked his way up from a scribe to become chief commander of the army. A capable ruler, Horemheb took steps to suppress graft and corruption, particularly in tax collection,

6

restored the temples of Amun, and undertook a campaign in Asia, which reached **Carchemish** in Syria (See [Geography](#)).

## 1305–1186

**19th Dynasty.** Horemheb was succeeded by another military man, **Ramses I** (1305–1303), whose family came from Tanis. His son, **Seti I** (1303–1289) set out to reconquer western Asia. He was successful in Palestine and southern Syria, extending control as far as **Qadesh on the Orontes** (See [c. 1344–1250](#)). Seti built a great temple at Abydos and continued work on the great Hypostyle Hall in **Karnak**.

7

## 1289–1224

**THE REIGN OF RAMSES THE GREAT.** **Ramses II** spent much of his reign on military campaigns. In **Libya** he defeated the Tehenu and built a series of fortifications guarding the western frontier. He also subdued the **Nubian tribes** and built a temple at **Abu Simbel** between the First and Second Cataracts, which included colossal statues 70 ft. high. The main military activity of Ramses II was a long struggle with the Hittite Empire. In 1286 he fought the **Battle of Qadesh** against **King Muwatallis**—the Egyptians claimed victory, but the Hittites actually won (See [c. 1344–1250](#)). Further fighting ensued, until in 1270 Ramses signed a peace treaty with the new Hittite king, **Hattusilis**. Tanis was rebuilt as a new capital and called **Pi-Ramses**, the biblical “store-city of Ramses” (Exodus 1:11). Ramses II completed the **Hypostyle Hall** at Karnak.

8

## 1224–1186

**THE END OF THE 19TH DYNASTY.** **Merneptah** (1224–1204) defeated an incursion of Libu (Libyans) and **Sea Peoples** at the **Battle of Piyer** (1220). Some of these Sea Peoples, who had destroyed the Hittite Empire and ravaged the Near East, might be identified with later Mediterranean peoples: the Akiyawash (Achaean), Turush (Etruscans), Luku (Lycians), and Sharden (Sardinians). The **Merneptah Stele** records a successful campaign in Palestine which defeated, among others, the **people of Israel**, their first datable mention in history. The 19th Dynasty ended in a series of short, confused reigns. The final ruler was a woman, **Queen Tawosre** (1194–1186), who took the throne with the name **Sitre** (“Daughter of Ra”).

9

## 1186–1069

**20th Dynasty.** After a short interregnum, order was restored by a military figure, **Sethnakhte** (1186–1184), whose son took the name **Ramses III** (1184–1153). Ramses III defeated the Libyans and in his 8th year overcame another coalition of Sea Peoples: Peleset (Philistines), Tjeker (Sicels?), Danuna (Danaoi?), Sharden (Sardinians), Weshwesh, and Shakrusha. The scenes of Ramses III's victory are shown on the walls of the mortuary temple at **Medinet Habu**. In general, Egypt was stable and prosperous under Ramses III, but in the closing years of his reign there were signs of unrest, including the **first known strike in history**, by funerary artisans in Thebes. After the death of Ramses III, there was a **series of weak kings**, Ramses IV–XI (1153–1069), and the central government declined into impotence. In the time of **Ramses XI** (1099–1069), **Herihor**, the high priest of Amun-Ra at Karnak, ruled Upper Egypt from Thebes. Much of the Delta was controlled by a local official, **Smendes** (Nesbenebdeb). The **Tale of Wenamun**, another quasi-historical story, reflects the unsettled conditions of Egypt, and its lack of international stature. During the New Kingdom, **the cult of the dead** and the availability of the afterlife extended even to relatively minor officials and private persons. **Tomb paintings** show naturalistic scenes of everyday life. While drawing on earlier material, the **Book of the Dead** was compiled during this period. By the end of the New Kingdom, **the population of Egypt** had risen to some 4.5 million.

10

## 1069–715

### THIRD INTERMEDIATE PERIOD.

11

## 1069–945

**21st (Tanite) Dynasty.** After the death of Ramses XI, **Smendes** (Nesbenebdeb, 1069–1043) claimed the kingship and ruled from **Pi-Ramses** (Tanis). The hereditary **high priests of Amun-Ra**, descendants of **Herihor**, governed Upper Egypt as a theocracy, and the viceroy of Nubia (**King's Son of Kush**) (See [1506–1069](#)) ruled independently in the south, although both recognized the 21st Dynasty pharaohs as titular rulers. The rise of the Kingdom of Israel created a powerful state in Palestine. It was probably **Siamun** (978–959) who married his daughter to King Solomon (1 Kings 11:1). **The Instruction of Amunemope**, one of the most famous of Egyptian books of wisdom, was written around this time. The Book of Proverbs quotes a number of its precepts (Prov. 15:16, 17:1, 22:17–24:22).

## f. [The Late Dynastic Period \(25th–31st Dynasties\)](#)

### 747–656

**25th (Kushite) Dynasty.** The **25th Dynasty** began as a line of Kushite kings, operating from their capital at **Napata** (See [1490–1426](#)). **Piankhy** (751–716) sacked Memphis, but did not establish permanent control of Egypt. His brother **Shabako** (716–702) defeated the last king of the 22nd Dynasty, **Osorkon IV**; of the 23rd, **Sheshonq IV** (720–715); of the 24th, **Bakenref** (Bochchoris, 720–715); and reunited the country. Shabako established his capital at Thebes. The next king, **Taharka** (690–664) defeated an invading Assyrian army led by Esarhaddon (674), but in 672, the Assyrians returned and captured Memphis. Esarhaddon set up **Necho I** (672–664), the governor of Sais, as a client king, establishing the **26th Dynasty**. When Taharka died, his son **Tenuatamun** (664–656) continued the resistance to the Assyrians, but in 663 **Ashurbanipal** finally defeated Tenuatamun and drove him back to Napata (See [1490–1426](#)). <sup>1</sup>

### 664–525

**26th (Saite) Dynasty.** After the final defeat of Tenuatamun, the Assyrians placed **Psammetichus I** (Psamtek, 664–610) on the throne. The family of Psammetichus stemmed from Sais, but he made Memphis the capital. Toward the end of his long reign, the collapse of the Assyrian Empire allowed Psammetichus to establish his independence and reassert central authority. He used **Greek and Carian mercenaries** sent by Gyges of Lydia to suppress local dynasts (See [685–547](#)). Political independence produced the **Saite revival** in painting, architecture, literature, and religion, a nostalgic attempt to recreate the forms and styles of the Old Kingdom. **Necho II** (610–595) marched north to aid the last remnant of the Assyrians, fighting in Syria against the Babylonians. On his way, he defeated King Josiah at the second **Battle of Megiddo** (609), and Judah became an Egyptian vassal (See [640–609](#)). Later, Necho II suffered a crushing defeat at the Battle of Carchemish (605) at the hands of Nebuchadnezzar. The Egyptians were driven from Syria-Palestine, but in 601 they stopped the Babylonians at the border of Egypt (See <sup>2</sup>

604–562). Herodotus describes **the successful circumnavigation of Africa** by Phoenician sailors sent by Necho. **Apries** (589–570, biblical Hophra) attempted unsuccessfully to drive the Babylonians from Judah and was defeated by the Greeks in Cyrene when he attempted to aid his Libyan allies. Apries was deposed by **Amasis** (ʿ Ahmose-si-neit, 570–526), a commoner from the Delta who had risen in the military. Amasis allied himself with Babylonia and Lydia against **the rising power of the Persians**, but saw his allies defeated in turn by Cyrus the Great. Psammetichus III (526–525) ruled only for six months, before the Persians invaded (See c. 530–521).

## 525–404

**27th (Persian) Dynasty.** The Persians defeated the Egyptians at the **Battle of Pelusium** (525). The Persian King **Cambyses** (525–521) ruled Egypt as pharaoh. Although Herodotus says he suppressed Egyptian religion, according to hieroglyphic inscriptions Cambyses carried out the pharaoh's ritual functions. **Darius I** (521–485) certainly treated the Egyptians with respect and had **Egyptian law codified**, both in demotic and Aramaic. He assigned a priest, **Udjahorresenet**, to reestablish the **Houses of Life**, which copied sacred writings. Darius placed Egypt, along with Libya and Cyrenaica, in the **sixth satrapy** (province) with the satrap (governor) at Memphis. The Egyptians revolted in the last years of Darius, and the uprising was not suppressed until the reign of **Xerxes** (485–464). Persian rule became harsher after the revolt. **Greek and Jewish minorities** grew considerably in the Persian period. Around 450, Herodotus visited the country. When Darius II (423–404) died, there was another revolt, this time successful (See c. 522–486). 3

## 404–399

**28th Dynasty.** **Amyrtaeus** (404–399), probably a Libyan, ruled the entire country but was the 28th Dynasty's only king. 4

## 399–380

**29th (Mendesian) Dynasty.** **Nepherites** (Nefʿ aurud, 399–393) from Mendes (Djed) in Lower Egypt formed an alliance with the **Spartans**, the most powerful state in the eastern Mediterranean (See 386). In 386, Persia and Sparta signed a peace accord, and **Artaxerxes II** invaded Egypt (385–383). **Achoris** (Hakor, 393–380) allied himself with Evagoras, king of Salamis in Cyprus, and defeated the Persians (See c. 586–330). His 5

son, **Nepherites II** (380) ruled only four months before being overthrown by Nectanebo.

### 380–343

**30th (Sebennytic) Dynasty.** **Nectanebo I** (Nakhtnebef, 380–362) from Tjeb-neter (**Sebennytus**) drove off a Persian invasion (371) and built and restored many monuments throughout Egypt. His son, **Teos** (Djeho, 362–360) attempted an invasion of Phoenicia and Syria but was defeated. The army rebelled and replaced Teos with his son **Nectanebo II** (Nakhthorhebe, 369–342), the last native pharaoh. In 343–342, **Artaxerxes III** led a successful invasion, Nectanebo fled to Ethiopia, and Egypt was again made a Persian satrapy.

6

### 343–332

**31st (Persian) Dynasty.** The second period of Persian rule lasted only ten years. In 332, **Alexander the Great** entered the country, and the satrap Mazaces surrendered the country to him without resistance (See [Persian Asia Minor](#)). (See [Ptolemaic Egypt to the Roman Conquest](#))

## 4. [East Africa, c. 2000–332 B.C.E.](#)

### a. [Geography](#)

**Nubia**, or **Kush**, began at the Nile's **First Cataract** (waterfall), where the island of Elephantine (Yeb) was located, although the political boundary was often farther upriver. As one moved upriver, the Nile flowed over six more cataracts, before the river split into the **White and Blue Niles**. Between these two points lay the massive Egyptian temples at **Abu Simbel**, now inundated by the Aswan Dam, as well as the three capitals of the region: **Kerma**, **Napata**, and **Meroë**. Around 500,000 people lived in the area of modern Sudan around 2000 B.C.E., and nearly 1 million by 1500, though Kush comprised only a portion of this region. The region between the Nile and the Red Sea was not heavily populated before the 5th century B.C.E. The Somalian and Eritrean coast, however, was an important center for trade, known to the Egyptians as **Punt**. <sup>1</sup>

## **b. Economy, Technology, Society, and Culture**

From c. 7000–3500, a common material culture existed from Nubia to Middle Egypt, but after 3500, **Nubian and Egyptian cultures diverge**. Nubia remained primarily pastoral, but traded with Egypt, exporting gold, ivory, ebony, and exotic animals. Kerma period architecture is autochthonous, but Kush came under increasing **Egyptian influence**. After the Egyptians gained control of the region, they began exploiting its mineral resources. Under Napata and Meroë, a syncretistic architectural style developed. From the 8th century the Nubians utilized Egyptian hieroglyphics. It is not until 170 B.C.E. that the native language, **Meroitic**, was written. Meroitic has not yet been deciphered, and its relation to other African languages is unknown. <sup>1</sup>

## c. [Kush and Punt](#)

### c. 2000–1069

#### KUSH.

1

### c. 2000–1506

**THE KINGDOM OF KUSH** arose around 2000 and was centered around **Kerma**, near the Third Cataract. It flourished during Egypt's Second Intermediate Period (1786–1552) (See [1786–1552](#)). Kerma contains the remains of a **brick palace** and large *tumuli* or **burial mounds**. Hieroglyphic inscriptions are found only on Egyptian imports, and none of the Kushite kings of this period is known.

2

### 1506–1069

**EGYPTIAN KUSH.** Tuthmosis I conquered Nubia past the Fourth Cataract (See [1490–1426](#)). The Egyptians built large temple complexes in Nubia, for example at **Buhen** (Hatshepsut) and at **Abu Simbel** (Ramses II). **Amenophis III** built the city of **Gematen**, opposite modern Dongola, and **Thutmose III** founded **Napata**, on the Fourth Cataract. Nubia was administered by an elaborate bureaucracy headed by the viceroy (“King's Son of Kush”). Local chiefs were also used in the administration, and an **ongoing Egyptianization** occurred. The **population of Egyptian Kush** was probably around 100,000. After the reign of **Ramses XI** (See [1186–1069](#)) nothing is known of Kush until the 8th century.

3

### c. 2500–1150

**THE LAND OF PUNT.** From the 5th Dynasty (c. 2494–2345) the Egyptians sent ships

4

to **Punt** to obtain the **myrrh** grown there and the **frankincense** from south Arabia. The expedition of **Queen Hatshepsut** is the best known. No reference to Punt survives after the reign of **Ramses III**. The introduction of camel caravans in Arabia around 1000 probably ended the Puntine trade (See [Economy, Technology, Society, and Culture](#)).

## d. The Kingdoms of Napata and Meroë

### c. 780–591

**THE KINGDOM OF NAPATA.** **Alara** (c. 780–760) founded an independent Kushite dynasty with its capital at **Napata**. Under **Piankhy** (or **Peye**, 747–716) the Kushites sacked Memphis, and **Shabako** (716–702) conquered Egypt, founding the 25th (Kushite) Dynasty (747–656), which ruled from the Sixth Cataract to the Mediterranean (See [747–656](#)). **Taharka** (690–664) did extensive building at Napata and campaigned as far east as Palestine. **Tenuatamum** (664–656) was driven from Egypt by the Assyrians, but the dynasty continued to rule in Napata. **Anlamani** (623–593) campaigned against the nomadic Blemmyes and was succeeded by **Aspelta** (593–568). In 591, Psamtek II (595–589) invaded Kush and captured Napata (See [747–656](#)), and Aspelta moved the capital south to Meroë, near the Sixth Cataract. <sup>1</sup>

### 591 B.C.E.–350 C.E

**THE KINGDOM OF MEROË.** Between 591 and 270 B.C.E. **Meroë** became the political capital, but Meroitic rulers continued to be buried at **Napata** (which was recaptured) to the end of the fourth century. The Kushites worshipped Amun in the form of the lion god **Apedemak**. Stone temples, pyramids, and obelisks were built, and a native Meroitic building style developed. The **kingdom's population** was probably around 500,000. Around 525 B.C.E., Cambyses unsuccessfully attempted to conquer the kingdom (See [525–404](#)). In the fourth century three kings left inscriptions: **Ammannoteyeriké**, **Harsiotef**, and **Nastasen**. The kingdom finally collapsed in the third century C.E. under the assault of the nomadic Blemmyes and by the fourth century had been absorbed by the newer kingdom of Axum. (See [Africa, 500–1500](#)) <sup>2</sup>

## [5. Syria-Palestine, c. 3500–323 B.C.E.](#)

### [a. Geography](#)

**Syria-Palestine** has three geographic zones: a **coastal area** along the Mediterranean, a **desert fringe** along the Syrian Desert, and a double mountain chain from the **central steppe**, which divides the other two zones. In the third millennium the major cities were **Mari** (Tell Hariri), located where the Euphrates met the road to the Mediterranean, and **Ebla** (Tell Mardikh) near the Orontes River. The second millennium saw the development of Canaanite cities: **Ugarit**, **Byblos**, **Sidon**, and **Tyre** along the coast; **Damascus**, **Aleppo (Halab)**, **Carchemish**, **Yamhad**, **Qatna**, and **Qadesh** in the central steppe; and **Hazor**, **Gezer**, and **Shechem** (among others) in Palestine. After 1200, the region is divided into **Palestine** (Philistia, Israel, and Judah), **Aram** (Syria), and **Phoenicia** (discussed separately). The **population of Syria-Palestine** rose from approximately 250,000 in 3000 B.C.E. to about 800,000 by 1000 B.C.E. <sup>1</sup>

[The Encyclopedia of World History, Sixth edition.](#) Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## b. [Economy, Technology, Society, and Culture](#)

Syria-Palestine was originally **heavily forested**, and home to panthers, lions, and even elephants. Deforestation and overgrazing, however, destroyed much of the woodland even in antiquity, though the **cedars of Lebanon** were a valuable item of trade. The desert fringe was the home to **pastoralists**, who used donkeys for transport until the domestication of the camel around 1000 B.C.E. In the steppe region wheat, barley, olives, and grapes were grown. The coastal area relied on **trade**: routes from Anatolia, Mesopotamia, and Arabia led to the Mediterranean coast and were linked by ship to Cyprus, Greece, and Egypt. The coastal cities also produced a famous **purple dye** made from the *murex* sea-mollusk. <sup>1</sup>

Cuneiform texts from **Ebla** are the earliest writing in Syria and included historical texts, lexicons (including a massive Eblaite-Sumerian dictionary), mathematical texts, administrative documents, and letters, as well as literary and mythological texts. By 1400 B.C.E. scribes at **Ugarit** (Ras Shamra) developed a cuneiform alphabet in which is preserved Canaanite literature, including legal, historical, religious, and mythological texts. It is unclear whether the alphabet known as “Phoenician” developed before or after Ugaritic, but it was sometime in the mid-second millennium. Around 750 the Greeks borrowed this **alphabet** from the Phoenicians (See [Geography](#)). <sup>2</sup>

At Ebla and Mari the main deity was **Dagan**—other gods were **Ishtar**, **Baal**, **Rasap**, and **Adad**. The chief gods of the Canaanite pantheon were **El** (God), creator of heaven and earth; **Asherah**, El's consort and the mother-goddess; their son **Baal Haddu** (or Lord Storm); **Anat**, goddess of love and war; and **Dagan**, a grain god. The course of the development of the **monotheistic worship of Yahweh** by the Israelites is problematic. Some scholars see monotheism as an early element of Hebrew religion; others think it a much later development from an earlier polytheism. A Hebrew inscription of the 9th century suggests **Yahweh** had a consort named **Asherah**. <sup>3</sup>

## c. [Ebla and Mari](#)

### c. 3500–1600

#### **EBLA.**

1

### c. 3500–2400

**EARLY EBLA.** **Urban culture** began around the same time as the Mesopotamian Uruk Culture (3500–3100), but the first large palace dates to c. 2700–2400. **Eblaite** was a west Semitic language, possibly an early version of **Canaanite**. 2

### c. 2400–2000

**THE KINGDOM OF EBLA.** At its height **Ebla** controlled the region, from the Orontes to Mari as far north as Carchemish, and held hegemony over a much larger area, from Kanesh in Anatolia to the northern border of Palestine. Ebla's king (*malikum*), was originally **the elected head of an oligarchy** made up of the provincial governors, who were the real power in the land. **Ibrium** (c. 2300) instituted a hereditary, and apparently absolute, monarchy. The kingdom had a **sophisticated economy** controlled by an elaborate palace bureaucracy. Women enjoyed a high position and a freedom unusual in ancient societies. **Sargon of Akkad** campaigned against Ebla, and his grandson, **Naram-Sin** destroyed the city (See [2371–2190](#)). Ebla recovered, although little is known of its history except that it suffered another destruction around 2000. 3

### 2000–1600

**AMORITE EBLA.** After a period of subservience to the kings of Ur III (2112–2004), **Ibbit-Lim** founded the **2nd (Amorite) Dynasty**. Amorite Ebla was much reduced from 4

its third millennium height, but it was still the most important city in northern Syria. The Eblaites traded with **the Assyrian colony at Kanesh** (See [c. 1900–1813](#)). The city was finally destroyed between 1700 and 1600, probably by the Hittites.

### c. 2900–1759

## MARI.

5

### c. 2900–2370

**EARLY DYNASTIC MARI.** Mari flourished in the Early Dynastic Period (2900–2370),<sup>6</sup> and the **1st Dynasty of Mari** is cataloged in the Sumerian King Lists. At some point Mari became tributary to **Ebla**, but when that city fell it recovered its independence.

### c. 1900–1759

**AMORITE MARI.** In the early 19th century, Mari was ruled by an Amorite, **Yaggid-Lim**, who was succeeded by his son, **Yahdun-Lim**. The Assyrian Shamshi-Adad I (1813–1781) conquered Mari and made his son Yasmah Addu its ruler (See [1813–1741](#)). **Zimri-Lim**, (c. 1791–1759), a descendant of Yahdun-Lim, drove out the Assyrians. The **palace at Mari** covered eight acres and contained a library of some 20,000 cuneiform tablets, almost all in Akkadian. Mari was destroyed by Hammurapi in 1759 (See [1813–1741](#)), but continued to be a city-state. It was abandoned in the 8th century.<sup>7</sup>

## d. [The Land of Canaan](#)

### c. 3100–2000

**EARLY BRONZE AGE CANAAN.** City-states developed in Syria-Palestine around **3100**, serving as mediators between the protoliterate culture of Mesopotamia and the Gerzean culture of Egypt. In the mid-third millennium the region was dominated by **Ebla**. Egyptian inscriptions begin at Byblos with **Nebka** c. 2686, and there are close trade relations throughout the period. Around 2300, **Uni**, a general of Pepy I, led an expedition which may have reached Mt. Carmel (See [c. 2345–2181](#)). Mesopotamian culture also exerted influence, and **Sargon the Great** (2370–2316) conquered parts of northern Syria, reaching the Mediterranean (See [2371–2190](#)). <sup>1</sup>

### c. 2100–1800

**FIRST PERIOD OF EGYPTIAN DOMINATION.** The **Amorite invasion** into Syria-Palestine, c. 2000, caused much dislocation, a decline in urbanism, and a return to nomadism in the Transjordan and parts of the central steppe. The **Execration Texts** from the Middle Kingdom Period (2040–1786) establish that **Egypt exercised political control** over southern Syria-Palestine, ruling through local vassal kings at Ashkelon, Beth-Shean, Shechem, Akko, Hazor, and Jerusalem. An inscription of **Sesostris III** (1878–1843) records a campaign which reached Shechem (See [1991–1786](#)). <sup>2</sup>

### c. 1800–1450

**THE GOLDEN AGE OF CANAAN.** By the 18th century, urban culture was reestablished and the Canaanite cities, many with Amorite rulers, **prospered through trade**. Yantinnammu ruled in an affluent **Byblos**; **Ugarit** rose in prominence; and **Hazor**, **Qatna**, and **Aleppo** were great centers of power. The rise of the **Hyksos**, apparently Amorites or Canaanites, is obscure, but in the 17th century they began building an <sup>3</sup>

**empire in the west.** Hyksos sites are characterized by enormous fortifications of earthen-work (*terre pisée*). The Hyksos 15th Dynasty (1650–1552) in Egypt exercised feudal authority in both Palestine and Egypt (See [1786–1552](#)). In the 16th century **Hurrians** (biblical **Horites**) migrated into Palestine. By the end of the period, the Amorites had completely assimilated.

### c. 1450–1365

**SECOND PERIOD OF EGYPTIAN DOMINATION.** Tuthmosis III (See [1490–1426](#))<sup>4</sup> reestablished Egyptian political control over Syria, placing a garrison in Ugarit. Egyptian power loosened under **Akhnaten** (1364–1347), and the Hittite Empire exerted increasing control on the region. The **Amarna Letters**, written by vassal kings in Palestine to the Egyptian pharaohs, give some information on political and social history. The society was **feudal**, with a nobility of chariot warriors and serfs beneath. One segment of the population became outlaws and mercenaries, the so-called **Hapiru**, who often attacked and even took over Canaanite cities. A connection with the later **Hebrews** is possible, but problematic. In the late 14th century, the **Akhlamu**, possible forerunners of the **Arameans**, began to enter Syria (See [1364–1347](#)). In 1270, Egypt and the Hittites divided Syria by treaty, with the boundary at the **Eleutheris River** (Nahr el-Kebir) (See [1289–1224](#)).

### c. 1200

**THE INVASION OF THE SEA PEOPLES.** Around 1200, after having demolished the Hittite Empire, the **Sea Peoples** entered the region, and destroyed Ugarit and Tyre (See [1224–1186](#)).<sup>5</sup> Around 1180, one of the Sea Peoples, the **Philistines** (Peleset), settled on the coastal plain of Palestine. They formed a **league of five city states** (Gaza, Gath, Ashkelon, Ashdod, and Ekron), each governed by a 'tyrant' (*seren*). After the fall of the Hittite Empire, Hittites and Luwians moved into northern Syria and formed the **Neo-Hittite Kingdoms**. There was a northern group under the hegemony of **Carchemish** and a southern group consisting of Ya'diya, Hattina, Arpad, Til Barsip, and Hamath. **Neo-Hittite art and architecture** is a mix of their traditional style with Hurrian, Assyrian, and Aramean traditions. A number of **Canaanite enclaves** (such as the Jebusites at Jerusalem) remained in the interior, but most of the Canaanites retreated to the narrow strip of coastal land from Tyre northward to Arvad. This region is subsequently called **Phoenicia** (See [Geography](#)).

## e. [Israel and Judah](#)

### c. 1300–1020

#### ISRAELITE TRIBAL PERIOD.

1

### c. 1300–1200

**THE CONQUEST OF CANAAN.** The biblical tradition traces the tribes of Israel back to the time of the **patriarchs** (Abraham, Isaac, and Jacob), who came from Mesopotamia to Canaan, living there as seminomads. Some scholars place the patriarchs in the context of the **Amorite invasions** in the 19th and 18th centuries, others in the **Aramean migrations** of the 14th to 11th centuries. Another biblical tradition details the migration of the Israelites from serfdom in the eastern Delta of Egypt under **Moses** and **Aaron**. The relationship of these two traditions to each other, and to the archaeological record, is problematic, and the history of Israel obscure, until the **Conquest of Canaan** sometime in the 13th century. It is unclear if the Israelite conquest was a **sudden invasion** or a **gradual infiltration**. In any case, the Israelites adopted the local Canaanite language, and to some extent, religion and customs. The first dated attestation of the People of Israel in Canaan is the **Merneptah Stele** (c. 1220) (See [1224–1186](#)).

2

### c. 1200–1020

**THE PERIOD OF THE JUDGES.** The Book of **Judges** records a story of conflicts between the Israelites and the surrounding Canaanites, Midianites, and Ammonites, in which the **Israelite tribes** joined together under a judge (*shopet*), primarily a military position. In the course of the 11th century, the **Philistines united** under the king of Gath and began an aggressive campaign of conquest against Israel. These attacks culminated around 1050, when the central shrine of the Israelites at Shiloh was destroyed and the **Ark of the Covenant** taken as booty. Around 1020, the last of the judges, **Samuel**, was

3

anointed **Saul** as king of Israel in order to better resist the Philistines.

### c. 1020–930

#### THE UNITED KINGDOM OF ISRAEL.

4

### c. 1020–1000

**THE REIGN OF KING SAUL.** Saul's kingship was limited, and his main title was not *melech* "king" but *nagid* "military commander." Saul's authority was more **charismatic** than **institutional**, and the tribal elders and the prophets (*nabi'im*) sometimes opposed him. Saul was successful for a time in his wars against the Philistines but was defeated and killed by them at the **Battle of Gilboa** (c. 1000). Saul's son **Ishbaal** ruled for a short period but was then assassinated, perhaps at the instigation of the next king, **David**.

5

### c. 1000–965

**THE REIGN OF KING DAVID.** A minor noble from the tribe of Judah, **David** fought in Saul's army but quarreled with the king and withdrew with his clan into the Judean desert. There he operated as a **bandit-chief** and eventually became a **vassal** of the Philistine king of Gath. After the death of Saul, he ruled **Judah** from Hebron for seven years, and when Ishbaal was assassinated, David was elected **king of Israel** by a tribal assembly. Conquering **Jerusalem** from the Jebusites, David made it both a **religious center**, transferring the Ark of the Covenant there, and the **royal residence**. A royal bureaucracy was developed. The **cult of Yahweh was centralized** and used to support the validity of his dynasty. David conquered the northern and Transjordanian tribes, incorporating them into Israel. The Philistines and the Aramean state of Zobah to the north were defeated and made vassals. He entered into a treaty with **Hiram**, king of Sidon and Tyre (969–936). **The earliest Hebrew writings**, including some **Psalms** and historical annals, possibly date to the reign of David.

6

### c. 965–931

**THE REIGN OF KING SOLOMON.** After David's death, Solomon killed his rival half-brother **Adonijah** and took power. With Phoenician help, Solomon built a **Temple** to Yahweh, as well as a magnificent palace and a citadel, in Jerusalem. Solomon

7

reorganized the **administration** and expanded the royal **bureaucracy** and the **standing army**. Diplomatic marriages were made with surrounding powers, including one to the daughter of Pharaoh **Siamun** of Egypt. In partnership with **Hiram of Tyre**, Solomon organized **shipping** for trade in the Mediterranean and on the Red Sea; with Cilicia and Egypt, he developed a cartel in horses and chariots; and he arranged with the **Queen of Sheba** (Saba) for trade in **frankincense and myrrh** from south Arabia (See [c. 1000–420](#)). The population of Solomon's kingdom was probably between 300,000 and 500,000. On Solomon's death, his son **Rehoboam** took the throne, but a revolt broke out under **Jeroboam I** who became king of the bulk of the country. **Rehoboam** retained only Jerusalem and Judah.

## 931–722

### THE (NORTHERN) KINGDOM OF ISRAEL.

8

## 931–909

**THE DYNASTY OF JEROBOAM.** Jeroboam I (931–910) established Israel's political capital at **Shechem** and fought a five-year war with Judah, which ended only with the invasion of Pharaoh **Sheshonq I** (Shishak) in 926 (See [945–715](#)). The Egyptians devastated much of Israel. Jeroboam's son **Nadab** (910–909) was assassinated by a general, **Baasha**.

9

## 909–885

**THE DYNASTY OF BAASHA.** **Baasha** (909–886) fought both with Judah and Damascus. **Ben Hadad I** of Damascus defeated Israel and annexed Bashan, north of the Yarmuk River (See [900–806](#)). Apparently in response to this, Baasha moved the capital to **Tirzah**, whose site is not known. Baasha's son **Elah** (886–885) ruled only two years before he was assassinated by one of his generals. A three-year civil war broke out in which another general, **Omri**, was finally successful.

10

## 885–841

**THE DYNASTY OF OMRI.** Omri (885–874) established a new capital at Samaria, which he fortified, and married his son Ahab to **Jezebel**, daughter of **King Ittobaal of**

11

**Tyre.** Omri attacked and subdued Moab in the Transjordan and also fought against the Judeans, but without much success. **Ahab** (874–853) made peace with Judah, marrying his daughter **Athaliah** to Jehoram, son of Jehoshaphat. In the **Battle of Qarqar** in 853, Ahab, along with the kings of Damascus and Hamath, temporarily stopped the Assyrians (See [858–824](#)). The coalition did not last, and Ahab lost his life fighting against Damascus. Jezebel attempted to **suppress the worship of Yahweh**, in favor of Baal, but was boldly resisted by the prophet **Elijah the Tishbite**. On Ahab's death he was succeeded by his two sons **Ahaziah** (853–852) and **Jehoram** (Joram, 852–841).

## f. [The Land of Aram \(Syria\)](#)

### 1300–1200

**EARLY ARAMEAN MOVEMENTS.** The **Akhlamu**, mentioned in late 14th-century cuneiform records, may be the forerunners of the Arameans. It is certain that **two major movements of Aramaic speakers**, one west into Syria and another into Upper Mesopotamia and Babylonia (the Chaldeans), occurred in the course of the 12th century. <sup>1</sup>

### 1000–900

**EARLY ARAM.** By 1000, the Arameans had become dominant in the region of **Damascus** and **Zobah** (the valleys of the Anti-Lebanon, south of modern Homs). These **southern Aramean states** were already in conflict with Saul. Hadadezer, king of Zobah, led a **coalition of Aramean kings** into the Transjordan, but was defeated by David. David later counterattacked, and Zobah came under **Israelite domination** (See [c. 1000–965](#)). One of Hadadezer's general's, **Rezon**, set up a kingdom north of Zobah and continued resistance to Israel. In the course of the 10th century, the Arameans took over and replaced some of the **Neo-Hittite states** in Syria. Til Barsip became known as **Bit Adini** around 1000, Sam'al became Ya'diya around 920, and Arpad turned into Bit Argusi around 900. These, with Qarqar, Hamath, and others, became the **northern Aramean states**. The population of Aram was probably around 600,000 in 1000 B.C.E. <sup>2</sup>

### 859–855

**THE ASSYRIAN CONQUEST OF NORTHERN ARAM.** Shalmeneser III engaged a **coalition of northern Aramean kings**, Khayan of Ya'diya (Sam'al) and Akhuni of Bit Adini, and the Hittite states of Carchemish and Khattina. At the **Battle of Lutibu** (858) the Aramean-Hittite forces were defeated but not broken. In a second series of campaigns (857–855) Shalmeneser III conquered Bit Adini, the strongest of the northern Aramean <sup>3</sup>

states and turned it into an **Assyrian province** (See [858–824](#)).

## 900–806

**THE RISE OF DAMASCUS.** Damascus became the major Aramean state under the long reign of **Ben Hadad I** (also called Hadadezer, 880–842). In 878, Ben Hadad **defeated Israel** and annexed the territory of Bashan north of the Yarmuk. Ben Hadad again invaded Israel around 855 but was defeated by Ahab at the **Battle of Aphek**. When Shalmeneser, having broken the northern coalition, turned south, Ben Hadad allied himself with Ahab and King Ikhuleni of Hamath. At the **Battle of Qarqar** (853), the Aramean-Israelite coalition defeated Shalmeneser, who retired to Assyria. Ben Hadad subsequently absorbed all the small southern Aramean states. The **Assyrians returned**, however, and in a series of four campaigns Shalmeneser defeated Ben Hadad and took Damascus (842) (See [858–824](#)). Ben Hadad was murdered and a commoner, **Hazael** (842–806), seized the throne. The Assyrians did not remain in the region, and Hazael was left free to pursue his imperial ambitions. He **subjugated Israel** and much of Philistia and **laid tribute on Judah**. 4

## 806–732

**THE DECLINE OF ARAM.** Hazael's son, **Ben Hadad II** (806–750) was unable to hold together the Aramean Empire. Early in his reign he attacked Zakir, king of Hamath, but failed to subdue him. Joash of Israel fought free of Damascene control; indeed under Jeroboam II, Damascus as well as Hamath may have been annexed by Israel. With the **decline of Damascus**, the northern Aramean state of **Arpad** (Bit Argusi) came to the fore. In 755, King Matiel of Arpad allied himself with Urartu (See [744–727](#)) against the Assyrians, but they were defeated by Tiglath-Pileser III in 743. After a three-year siege, **Arpad itself fell**. Rezin, the son of Ben Hadad II, allied himself with Israel in an anti-Assyrian coalition. In 732 Tiglath-Pileser defeated the Aramean-Israelite coalition, and Aram, including Damascus, was divided into **Assyrian provinces**, collectively known as **Aram Naharain** (See [744–727](#)). This was the effective end of Aram as a political entity, although the Aramaic language subsequently became the **lingua franca** of western Asia and replaced Hebrew as the spoken language in Palestine. 5

## **6. Phoenicia, Carthage, and the Phoenician Colonies, c. 1200–322 B.C.E.**

### **a. Geography**

**Phoenicia** is the long narrow strip of land along the Mediterranean from the mouth of the Orontes in the north to Mount Carmel in the south. Its eastern boundary, the Lebanon chain, is rarely more than 12 miles from the coast. The most important cities were **Arvad**, Gubal or **Byblos**, **Sidon**, and **Tyre**; other cities were Marathus, Berytus (Beirut), and Ecdippa. By an arbitrary change of terminology, the Canaanites are called **Phoenicians** after 1200.

## **b. Economy, Technology, Society, and Culture**

The **arable land** around the Phoenician cities was fertile, but limited, and wheat, grapes, figs, and date palms were staple crops. The Carthaginians developed a highly **systematized agriculture** in North Africa and wrote technical manuals on the subject. The main industry of Phoenicia was the manufacture of purple dye from the *murex* sea-mollusk, but weaving, glassmaking, metalworking, and ivory-working were also important. The famous **cedars of Lebanon** were exported to Egypt and elsewhere. The Phoenicians were famous **traders** and traveled widely from an early period all over the Mediterranean, and eventually as far as West Africa and Britain. <sup>1</sup>

The **Phoenician script** reached its completed form around 1200 B.C.E. Though some inscriptions exist, little Phoenician literature survives, mainly a few translated fragments of the historian **Dius** and the philosopher **Sanchuniathon**. The Phoenicians created a **synthesis** of Egyptian and Mesopotamian culture and were the agents for passing much of Near Eastern civilization on to the Greeks. <sup>2</sup>

The **Phoenician city-states** generally controlled only a small territory around them and rarely attempted to enlarge their land holdings. Generally, the city-states were ruled by hereditary kings assisted by advisory councils of nobles. **Carthage** also originally had a monarchy, but by the fourth century, the government was republican, with two annually elected magistrates (**sufetes**), a senate of 300 (which served for life), and a Council of 104, which had some sort of executive function. It is unclear when the republic replaced the monarchy: Carthaginian leaders are often called “kings,” which might be meant literally or as a translation of *sufet*, literally “judge.” In their late period other Phoenician cities were ruled by elected **sufetes** and senates. <sup>3</sup>

The chief god of Tyre and its colonies was **Melqart**, and Sidon's main deity was **Eshmun**. Both worshipped Resheph (Apollo), Dagon, Astarte, and Tanit. The Phoenicians also worshipped Egyptian deities, especially Isis and Bes. The Carthaginians worshipped **Baal Hammon**, an assimilation of Baal with the Egyptian Amun, perhaps in a Libyan form. Archaeological evidence has confirmed that the Phoenicians and Carthaginians practiced child sacrifice. <sup>4</sup>

### c. [Phoenicia](#)

#### 1200–627

#### THE SIDONIAN STATE.

1

#### 1200–1000

**The Rise of Sidon.** **Sidon** and **Byblos** were the chief city-states at the beginning of the 12th century. **Tyre** had been destroyed by the Sea Peoples but was refounded by Sidonians in the 12th century. It was **well protected**, located on an island off the coast, and became the capital of the Sidonian state, which by 1000 dominated Phoenicia. By this time the population of Phoenicia had reached approximately 200,000.

2

#### 1000–888

**The Dynasty of Abibaal.** Under **Abibaal** (c. 1000), Tyre was transformed into a superb harbor and Abibaal's son **Hiram I** (969–935) entered into an alliance with David of Israel, which continued in the time of Solomon (See [c. 1000–965](#)). Phoenician artisans designed and built the temple of Solomon, and joint Phoenician-Israelite fleets sailed in the Mediterranean and the Indian Ocean. Hiram I unified all of Phoenicia from Mount Carmel to Arvad, though vassal dynasties continued to rule at Byblos and Arvad under Sidonian suzerainty. Little is known of Hiram's successors other than their names and dates: Baalmazzar I (935–919), Abd`ashtart (918–910), Ashtart (909–898), and `Astartrom (897–889). The last king of Abibaal's dynasty, Pilles (888) was assassinated by the high priest of Astarte, Ittobaal, who founded a new dynasty.

3

#### 887–627

**The Dynasty of Ittobaal.** **Ittobaal** (887–856) married his daughter Jezebel to Ahab, the son of Omri of Israel, and may also have linked his house by marriage to Ben Hadad I of Damascus. **Baalmazzar II** (849–830) paid tribute to Shalmeneser in 842 and was succeeded by Mittin (829–821) and then by Pu`mayton (**Pygmalion**, 821–774). Pygmalion's sister **Elissa** or **Dido** is credited with founding the city of **Carthage** in 814. **Hiram II** (774–c. 730) paid tribute to Tiglath-Pileser III in 738, but his successor **Luli** (c. 730–701) joined with the Egyptians and Judah in an unsuccessful rebellion against the Assyrians and fled to Cyprus. Sennacherib appointed **Ittobaal II** as king. The next Assyrian vassal king, 'Abdmilkot, rebelled against Esarhaddon, who defeated the Phoenicians, razed Sidon to the ground, and built a new city opposite it called Kar-Esarhaddon. 'Abdmilkot was executed and what was left of Sidon became an Assyrian province.

### 627–573

**THE ASCENDANCE OF TYRE.** The destruction of Sidon left Tyre as the leading city of Phoenicia. **Baalu** (c. 680) rebelled in the reign of Esarhaddon but soon capitulated: his mainland territories were taken from him, and he paid tribute. After the decline of the Assyrian Empire, the Phoenicians enjoyed a brief period of independence, though they never regained their former position, as Greek colonization had ended their near monopoly of trade in the Mediterranean (See [c. 800](#)).

### 573–332

#### **BABYLONIAN AND PERSIAN PHOENICIA.**

### 573–539

**Babylonian domination.** Nebuchadnezzar (See [626–604](#)) invested Tyre in 587, during the reign of Ittobaal III. The siege lasted 13 years; the city probably surrendered in 573. At first, Tyre was ruled by judges (*sufetes*) under Babylonian domination, but after a short time the monarchy was restored.

### 539–332

**Phoenicia under Persian Rule.** When Cyrus came to power in Babylon (539) Phoenicia

was bloodlessly absorbed into the Persian Empire (See [556–530](#)). It was designated as the fifth satrapy, but vassal kings continued to rule in Sidon, Tyre, Arvad, and Byblos. Phoenician fleets played an important part in Persia's wars against Greece. In c. 350, **Tennes** led a revolt against the Persians in Sidon, which was crushed by Artaxerxes III with great loss of life. When Alexander invaded Phoenicia, Tyre was the only city to resist under its last king, **Azemilkos**. The siege lasted from January to August 332. Alexander built an enormous mole across to the island city, which permanently connected it to the mainland. (See [The Persian Empire](#))

## **d. Carthage and the Western Phoenician Colonies**

### **1100–600**

**The Foundation of the Western Colonies.** The Phoenicians founded merchant colonies <sup>1</sup> as early as the 11th century (at Hazor and Gaza in Palestine, Memphis in Egypt, and Kition (Latarkia) in Cyprus), but these were all quarters within established cities rather than separate settlements. Literary sources place the foundation of Phoenician colonies at **Lixus** (on the Atlantic coast of Africa), **Gades** (on the Atlantic coast of Spain), and **Utica** (in North Africa) at around 1100, but these dates have not been confirmed archaeologically. These three early colonies were probably settled by late 10th or early 9th centuries. Around 850, the settlement at Kition moved out of the native town and established itself as an independent town called Qart Hadasht—New City. The next Phoenician colony to be founded became the most famous—**Carthage**. The city's Phoenician name was the same as Kition's: **Qart-Hadasht** (Greek **Carchedon** and Latin **Carthago**). Several versions of its founding exist: one has **Elissa** (Dido) fleeing from Tyre and founding the city of Carthage in the 7th year of Pu`mayton (814), but another source gives the foundation date as 751. No archaeological remains have been uncovered at Carthage before the 8th century, but both dates remain possible. The colony of **Sexi** in Spain was also founded in the 8th century, probably in response to a growing Greek colonization movement. In the 7th century, the Tyrians established settlements at **Lepcis Magna** and Hadrumetum in North Africa; **Motya** in Sicily; and Sulcis, Caralis, Nora, and Tharros in Sardinia. Around the same time, **Mogador** was founded on an island on the West African coast, 450 miles south of the Strait of Gibraltar. Carthage established **Ibiza**, off the east coast of Spain, 160 years after its own founding, in 654 or 591.

### **600–322**

**The Rise of Carthage.** Around 600, Carthage tried unsuccessfully to prevent the <sup>2</sup> Phocaeans from founding Massilia (Marseilles) (See [600](#)), and in the 6th century, open war broke out between the Greeks and an alliance of the Etruscans and

Carthaginians. The Carthaginians under **Malchus** defeated the Greeks in Sicily around 550. In 535, the Carthaginian-Etruscan alliance crushed the Phocaeans in the sea **Battle of Alalia** in Corsica. From the mid-sixth to fourth centuries, **Mago** and his descendants dominated Carthage, either as monarchs or as political strongmen. By this time, the population of Carthage was probably around half a million—about 20 percent Phoenician and the rest native Berbers. In 508, the Carthaginians signed a treaty with the new Roman state. While Xerxes was invading Greece, in 480 (See [c. 586–330](#)), the Carthaginians invaded Sicily but were defeated at the **Battle of Himera** by the forces of Syracuse and Agrigento. Around this time the Carthaginians turned inland, taking over the city's fertile Libyan hinterland. In the fifth century the **voyage of Hanno** occurred down the African coast, as far as Sierra Leone and perhaps Nigeria, as well as the **voyage of Himilco**, which may have reached Britain or Ireland. Around 409, war broke out again between Syracuse and Carthage: in a seesaw struggle Dionysius sacked Motya in 398 and the Carthaginians besieged Syracuse unsuccessfully in 396. The Syracusans ultimately won this war, but fighting between the Carthaginians and Syracusans continued through much of the fourth century. In 348, a second treaty was signed with Rome, and the subsequent history of Carthage is part of Roman history (See [344 \(348\)](#)).

## [7. Asia Minor, c. 3000–333 B.C.E.](#)

### [a. Geography](#)

**Asia Minor**, or Anatolia, is a peninsula stretching westward from the Armenian mountains to the Aegean Sea, with the Black Sea to the north and the Mediterranean to the south. **Western Anatolia** contained four fertile river valleys, was called Arzawa and Assuwa in Hittite times, and later contained Troas, Mysia, and Lydia. In the southern part of the peninsula lay the Lukka Lands (Lycia) and to the east Kizzuwatna, later Cilicia. The northern Pontic coast was home of the warlike Kaska peoples. Most of Asia Minor is dominated by the **central plateau**. In its western part was Phrygia; in the center, south of the great Salt Lake (Tuz Göl), was the fertile Konya plain; and to the east of the Halys river was Hatti, the center of the Hittite Empire. In the southeast of the peninsula, Cappadocia was located in the **Anti-Taurus range**. In easternmost Anatolia, the mountains rise to the high peaks of Armenia. It was the most populous region of ancient western Asia, with a **population** of some 3 million through the Bronze Age.

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## **b. Economy, Technology, Society, and Culture**

In the fertile valleys of the west, as well as the Konya valley and Cilicia, grain, olives, and grapes were grown. Raising stock was important in the more mountainous regions. Both the Taurus and southwest Anatolia had mines, which provided copper, silver, iron, and gold. Since the peninsula lay on the land bridge to Europe and was the sea route from the Mediterranean to the Black Sea, trade was always a large part of the economy. The earliest writings in Asia Minor are 19th-century B.C.E. records of the Assyrian merchant colony at Kanesh in Cappadocia (See [c. 1900–1813](#)). In a later period, both **Hattic** and **Hittite** were written in cuneiform. After the fall of the Hittite Empire, so-called **hieroglyphic** Hittite was used to write inscriptions in the Luwian language. The Phrygians used an alphabet borrowed from the Phoenicians, but their language remains untranslatable. 1

The Hittite Empire adopted the palace bureaucracy of the Mesopotamian kingdoms along with the cuneiform script. Although the Hittite king was called the Sun and served as military leader, high priest, and judge, the Hittite state was not centralized, but feudal. Chariot-riding nobility were allotted serfs for their support in exchange for military service. The city-states of the west and south generally were ruled by kings, and some regions, like the Pontic coast, remained tribal in organization. 2

The Hattians worshipped the sun goddess Wurusemu and the storm god Taru; the Hurrians, Teshup and Hapat; and the Luwians, Tarkhunt. The **Hittite religion** was peculiarly syncretistic and mixed Hattic, Hurrian, Luwian, Akkadian, and Sumerian gods with native Hittite deities such as the sun goddess Arinna. The chief deities of the Phrygians were **Cybele** (or **Ma**, the Great Mother) and **Attis**, a god who died and was resurrected. Little is known about the religion of the Lydians: the gods **Santas** and **Baki** (Bacchus) were named in their inscriptions. 3

## c. [The Hattians and the Hittites](#)

### c. 3000–2000

**THE HATTIANS AND THE LUWIANS.** The **Hattians** inhabited central Asia Minor <sup>1</sup> in the third millennium. Their language, known from Hittite religious texts, is without known affinities. They appear to have been absorbed by the Hittites. Sometime after 2300, the **Luwians**, an Indo-European-speaking people, settled in southern Anatolia.

### c. 2000–1200

**THE HITTITES.** <sup>2</sup>

### 2000–1700

**THE HITTITE INVASION OF ASIA MINOR.** The Indo-European-speaking Hittites <sup>3</sup> migrated into central Anatolia from Europe sometime around 2000. Around 1800, the Hittite King **Pitkhana** of Kussara and his successor **Anitta** defeated the Hattic rulers of Hattusas and Kanesh. They sacked **Hattusas**, but used **Kanesh** as the capital of a Hittite state.

### c. 1680–1500

**THE OLD KINGDOM.** **Labarnas I** (c. 1680–1610) founded what is known as the Old <sup>4</sup> Hittite Kingdom or **Hatti**. **Hattusilis I** (c. 1660–1620) moved the capital to Hattusas (modern Boghazköy), located in the bend of the Halys River. He conquered the area of the Konya plain, which became the center of the Hittite empire, then overcame Alalakh in northern Syria and campaigned against Arzawa in the far west. His successor **Mursilis I** (c. 1620–1595) defeated a Hurrian army, destroyed Aleppo, and then boldly marched

south into Mesopotamia. The Hittites took Babylon, pillaged it, and brought down the 1st Dynasty of Babylon (1595) (See [1749–1595](#)). Political disturbances brought Mursilis back to Hattusas where he was assassinated in a coup d'état. After his death a series of petty kings ruled, and the Old Kingdom declined in power. The Hurrians (See [1749–1595](#)) took the North Syrian region, which they named **Hanigalbat** and Cilicia, now called **Kizzuwatna**. When **Telepinus** (c. 1520) came to the throne he halted the kingdom's decline of Hatti, pushing back the Hurrians. Telepinus issued an edict on the law of succession that stabilized the crown. The Hittite law code also dates from this general period.

### c. 1420–1200

#### THE HITTITE EMPIRE.

5

### c. 1420–1375

**THE EARLY KINGS. Tudhaliyas II** (c. 1420) established a new dynasty, but in the reigns of Arnuwandas I (c. 1425), Hattusilis II (c. 1400), and Tudhaliyas III (c. 1420–1375), the Hittite state was almost destroyed. The Hurrian kingdom of Mitanni attacked on the east, and Arzawa, now important enough to correspond with the Egyptian pharaoh, pressed from the west. The Kaska tribes from the north succeeded in taking and sacking Hattusas. The Hittites faced a desperate situation, when Tudhaliyas's son, who had served as commander of the army, took the throne.

6

### c. 1375–1345

**THE REIGN OF SUPPILULIUMAS. Suppiluliumas** rebuilt Hattusas, expanding the city and fortifying it with a four-mile-long wall of stone and brick. He also reorganized the home territories and then marched against the Hurrians. His first encounter with Tushratta of Mitanni resulted in a severe defeat for the Hittites, but, with the help of Artadama II, the rival to Tushratta for the throne of Mitanni, Suppiluliumas was able to conquer the capital Washukkani and Mitanni was turned into a vassal (See [c. 1550–1250](#)). The Hittites then attacked the Amorite kingdoms of northern Syria, and the two largest, Aleppo and Carchemish, were taken and given Hittite princes as kings (See [1365–1078](#)). The wealthy coastal city-state of Ugarit paid tribute. Suppiluliumas also campaigned against the Kaska peoples, keeping them under control. Suppiluliumas fell victim to a plague, and his son, Arnuwandas II (1345–1344), died after only a year.

7

## c. 1344–1250

**THE HEIGHT OF THE HITTITE EMPIRE.** In the early part of the reign of **Mursilis II** (1344–c. 1310), Ashur-Uballit I took Mitanni and annexed it to Assyria. Mursilis had more success against Arzawa in the west, defeating and killing its king. A revolt in Carchemish was pacified, and for many years he fought almost annual campaigns against the Kaska. **Muwatallis** (c. 1310–1280) inherited a powerful, well-organized empire from his father, but Ramses II was ambitious to regain Egypt's Syrian possessions and the inevitable battle was fought at **Qadesh on the Orontes** in 1286 (See [1305–1186](#)). Ramses claimed a victory but probably falsely, as Muwatallis continued his advance as far as Damascus, and the Hittites retained firm control of northern Syria. During the king's absence in Syria, the **Kaska** again sacked Hattusas, and, perhaps as a result, Muwatallis moved his official residence to **Tarhuntassa**, somewhere in the Taurus Mountains. **Urhiteshup** (c. 1280), Muwatallis's oldest son by a royal concubine, was shortly deposed by his uncle **Hattusilis III** (c. 1280–1250). In 1270, Hattusilis signed an important treaty with Ramses II, setting a boundary between the Hittite and Egyptian Empires. The treaty was probably made to counter the growing threat of Assyria under Shalmeneser I (See [1365–1078](#)). Hattusilis married Puduhepa, the daughter of a Hurrian priest from Kizzuwatna, and the couple issued edicts jointly. Hurrian influence appears in sculpture, particularly on the **reliefs of Yazilikaya**, with their enormous processions of gods.

## c. 1250–1200

**THE FALL OF THE HITTITE EMPIRE.** **Tudhaliyas IV** (c. 1250–1225) was almost continuously at war in western Anatolia: fighting the kings of Arzawa, as well as the **Ahhiyawa** (probably Achaeans from the Greek mainland). He conquered the island of Cyprus (Alashiya) to obtain control of its copper deposits. In the reign of Arnuwandas III (c. 1225–1220), the situation in the western provinces abruptly worsened, and in the reign of Suppiluliumas II (c. 1220–1200) the final waves of the **Sea Peoples** (See [1224–1186](#)) and Phrygians destroyed the empire.

## **d. The Phrygians and the Lydians**

### **c. 1200–1000**

**THE PHRYGIAN INVASION.** The Indo-European-speaking Phrygians came from Thrace about 1200 and occupied the whole of Asia Minor from the Sea of Marmara to the border of Assyria. They were divided into two groups of tribes, **Mushki** (biblical Meshech, perhaps the Mysians) and **Tabal** (biblical Tubal). 1

### **c. 1000–700**

**THE KINGDOM OF PHRYGIA** arose in the western part of the central plateau, with its capital at Gordium, not far from modern Ankara. Since the Phrygian inscriptions cannot be read, almost nothing is known of their history. Greek legend speaks of a King **Midas** of the Phrygians, whose touch turned objects to gold, but, ironically, a royal burial that was discovered unlooted in 1955, while quite elaborate, contained no gold whatsoever. **Midas** might be the individual called Mita of Mushku mentioned in the inscriptions of Sargon II (c. 715). The **Cimmerians** invaded Phrygia and devastated the kingdom, but the Phrygian nation remained independent until its conquest by Cyrus in 547 (See [556–530](#)). 2

### **c. 800–685**

**THE LYDIAN KINGDOM.** Little is known about the early history of the Lydian kingdom. Its capital Sardis was located on the Magnesia River between the Ionian cities of the coast and Phrygia. Lydia survived the devastation of the Cimmerians c. 695, which destroyed Phrygia. Herodotus relates the story of King Candaules' overthrow by his closest friend and advisor, Gyges. 3

## 685–547

**THE DYNASTY OF THE MERMNADAE.** Gyges (680–652) was the founder of the Mermnadae dynasty and defeated the nomadic Cimmerian tribes, extending the borders of his kingdom. A tablet recording an embassy of Gyges to Ashurbanipal of Assyria survives, but Gyges sent Carian and Ionian mercenaries to aid Psammetichus I in driving the Assyrians out of Egypt (See [664–525](#)). In 652, the Cimmerians renewed their attack on Lydia, and Gyges fell in battle. Gyges' successor **Ardys** (652–625) overcame the Cimmerian menace and then turned to fight the Greek cities along the coast of Asia Minor. The **Lydians invented coinage** in the 7th century using **electrum**, a natural alloy of gold and silver.

4

## 609–560

**THE REIGN OF ALYATTES.** Under Alyattes, the Greek cities of the coast (except Miletus) were conquered. In 590, **Alyattes** began a war with Cyaxares of Media which lasted for five years. After a battle, which can be dated by a solar eclipse to May 28, 585, a treaty was signed. Alyattes' daughter married Astyages, son of the Median king. The enormous tumulus tomb of Alyattes was described by Herodotus and is still to be seen near the ruins of Sardis.

5

## 560–546

**THE REIGN OF CROESUS.** Croesus brought the Lydian kingdom to its height. He controlled all of Asia Minor west of the Halys except Cilicia and Lycia. Under Croesus, pure gold coins were minted for the first time. In 547, Croesus went to war with Cyrus of Persia (See [556–530](#)) but was completely outmaneuvered. The Persians routed the Lydians in a pitched battle at Sardus, and Croesus was taken prisoner. A Lydian noble named Pactyas took the throne and continued resistance but was defeated.

### **e. [Persian Asia Minor](#)**

Asia Minor was divided into four satrapies. Lydia and Mysia, plus all of the cities along the western coast, were ruled from Sardis. A second province, Phrygia, with its capital at Daskylion, extended to the Halys River. The satrapy of Cilicia was ruled from Adana, and that of Cappadocia from Mazaca. The Royal Road connected Sardis to Susa, 1677 miles away. By this time the population of Asia Minor was probably around 4 million, including some 250,000 Greeks. The Greek cities revolted against the Persians from 499–494, and in 498, Sardis was burnt by the Ionians and Athenians. The army that Xerxes sent to Greece gathered somewhere in Cappadocia and wintered in Sardis from 481–480. In 407, Cyrus, the brother of Artaxerxes III, was appointed satrap of all Asia Minor. From there he planned and organized the revolt which culminated in his death at the **Battle of Cunaxa** (401). Asia Minor was the first part of the Persian Empire invaded by Alexander the Great (See [336](#)). He defeated the Persians in decisive battles in the region, first at **Granicus** (334), near the Sea of Marmara, then at Issus in **Cilicia**. From here he went on to conquer all the Persian Empire. <sup>1</sup>

## 8. [Armenia, c. 1300–331 B.C.E.](#)

### a. [Geography](#)

**Armenia** is a mountainous region lying between the Black and Caspian Seas. The mountains of Kurdistan separate it from Mesopotamia, and its northern border is the Kura River. The region contains three great lakes: Van, Urmia, and Sevan. In the Urartian period, the main cities were **Tushpa**, **Erebuni**, and **Rusahinili**. The only major city in the Armenian period under discussion was **Armavir**. 1

[The Encyclopedia of World History, Sixth edition](#). Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## **b. Economy, Technology, Society, and Culture**

Farming was excellent in the fertile river valleys, and fine wine was produced. Husbandry<sup>1</sup> was also highly developed: Urartian cattle and sheep were famous for their high quality, and superb horses were raised. At its height, the **Kingdom of Urartu** had a technology and culture equivalent to any in western Asia. Urartian architecture is noteworthy for the quality of its masonry, and its mountain-fortresses are impressive feats of construction. The Urartians also built formidable **hydraulic works**: an aqueduct brought fresh water 47 miles to Tushpa. After the invasion of the Armenians in the 6th century, the material culture regressed considerably and little survived of the Urartian civilization. In the Urartian period, a native hieroglyphic script was used alongside cuneiform. In Persian Armenia, Iranian written with Aramaic characters was utilized. The chief Urartian deity was **Haldi**, a warrior god; the storm god was **Teisheba** (Hurrian Teshup) and his wife was **Huba** (Hebat). After the Armenians arrived in the region, they adopted the **Zoroastrian** religion of the Persians (See [Economy, Technology, Society, and Culture](#)). (See [Economy, Technology, Society, and Culture](#))

## **c. Urartu (Van)**

### **c. 1300–c. 850**

**THE EARLY HISTORY OF URARTU.** The Urartians were related to the Hurrians and moved into the region sometime in the second millennium. In the time of Shalmeneser I (1275–1246), the region was divided into a number of small kingdoms and subsequently became tributary to the Assyrians. The Aramean invasions of the 11th century drove the Assyrians back to their homeland (See [1078–977](#)), and at some point afterward the kingdom of Urartu was established around Lake Van, with its capital at **Tushpa**. <sup>1</sup>

### **c. 850–584**

**THE KINGDOM OF URARTU (VAN).** Shalmeneser III defeated the first known king of Urartu, **Aramu** in 856. Sarduri I (c. 834) and Ishpuini (c. 822) also fought the Assyrians. **Menua** (c. 800) increased Urartian power, occupying the entire Armenian highland area, and built the walls and aqueduct of Tushpa. Argishti I (786–764) built the city of Erebuni as a royal capital. **Sarduri II** (764–735) reorganized the army along Assyrian lines and extended Urartian power as far as northern Syria. In 743, however, Tiglath-Pileser III defeated the Urartians and reestablished Assyrian control over north Syria. The Assyrians attacked Urartu itself in 735, annexed Urmia, and besieged Tushpa (unsuccessfully). In 714 Sargon II launched a carefully planned attack against **Rusa I** (735–714) and defeated the Urartian army. Although defeated by marauding Cimmerians in 707, **Argishti II** (714–685) kept the Assyrians at bay and built a number of new fortresses and irrigation works. Such projects were continued by his son **Rusa II** (685–645), who completed a new capital **Rusahinili** (Toprakkale). After the death of Rusa II, the Urartian kingdom declined. Sometime after 584, the Medes defeated King Rusa IV and destroyed Rusahinili. <sup>2</sup>

## d. [Armenia](#)

### 612–559

**ARMENIA UNDER MEDIAN RULE.** Around the time that the Medians took over <sup>1</sup>Urartu, the Armenians arrived in the region. The Armenians spoke an Indo-European language, but their origins are obscure. They may have originated in Phrygia, or even farther west, or may have arrived with Iranian tribes north of the Black Sea.

### 559–331

**ARMENIA UNDER PERSIAN RULE.** When Cyrus took over Astyages' kingdom in <sup>2</sup>559, the region was absorbed into the Persian Empire. Darius I (522–486) (See [c. 522–486](#)) made Armenia the 13th satrapy of his reorganized empire. It is in an inscription of Darius that the Armenians are first explicitly mentioned (519). In 401, Xenophon and the Ten Thousand arrived in the region, fleeing from the Persians (See [c. 586–330](#)). The satrap of Armenia at the time was Orontes I (c. 401–366). His son and successor, Orontes II (366–331) was killed fighting Alexander the Great at Arbela (See [331](#)). Alexander appointed Orontes II's son, **Mithanes**, to be the satrap. The dynasty, the **Orontids**, eventually became kings and ruled Armenia until 200 B.C.E.

## 9. [Iran, c. 2700–330 B.C.E.](#)

### a. [Geography](#)

**Iran**, or Persia, extends from the Zagros Mountains to the Indus Valley, and from the Persian Gulf to the Caspian Sea. The southwestern region was the site of the Elamite cities **Anshan** (Malyan), **Simashki** and **Susa**, and later the homeland of the Persians. The highland area was urbanized very late; the Median cities of **Ecbatana** (Hamadan) and **Rhagae** and the Persian **Persepolis** and **Parsargadae** were built only in the first millennium. In 1000 B.C.E. the population was around 2 million. 1

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## **[b. Economy, Technology, Society, and Culture](#)**

In the southwest urban life based around the temple and the royal palace flourished from an early period, but groups in the highlands usually remained tribal in organization. A hieroglyphic script (**Proto-Elamite**) was used as early as 2900 B.C.E., but around 2230 the Elamites adopted the cuneiform script, which was used as late as the Persian period. Though a large number of tablets have been found, Elamite still cannot be translated. The Persians also used cuneiform to write their language in monumental inscriptions. <sup>1</sup>

The religion of Elam, like Mesopotamia, had an organized priesthood and ziggurat temples. The main gods of the Elamites were **Humban**, the sun god **Nahhunte**, and **Inshushinak**, the god of Susa, but Sumerian deities such as Inanna and Nanna were also worshipped. The original religion of the Medes and Persians was similar to that of the Vedic Indians, with many gods, including **Mithra** and **Varuna**, in common. The Median religious reformer **Zoroaster** (Zarathustra, c. 630–550) introduced monotheism. **Zoroastrianism** banned the sacrifice of animals and the use of intoxicants and introduced the idea of individual salvation through the free choice of God (**Ahura Mazda**) over the Spirit of Evil (Angro-mainyu or **Ahriman**). The priests of the religion were known as **Magi**, originally a Median tribe. <sup>2</sup>

## c. [The Elamites](#)

### c. 2700–2230

#### EARLY DYNASTIC ELAM.

1

### c. 2700–2550

**THE FIRST DYNASTY OF AWAN** was contemporary to the Mesopotamian Early Dynastic Period, though none of the kings are known. The first mention of Elam is in the Sumerian King List: Enmebaragesi (c. 2700) “carried off the arms of the land of Elam as booty.” Eannatum of Lagash also raided Elam, and temple records from Lagash (c. 2300) speak of an Elamite raid on Sumer. A state of more or less constant warfare existed between Sumer and Elam throughout the 3rd millennium (See [2113–2004](#)).

2

### c. 2550–2230

**THE SECOND DYNASTY OF AWAN** was founded by **Peli** and ruled from Susa. The king ruled through a viceroy, often the king's brother, and the monarchy appears to have been elective. The provincial governors had considerable independence. Sargon of Akkad (2371–2316) defeated **Hishap-Resher** and sacked Susa. Under Naram-Sin (2291–2255) a treaty (the earliest known) was made with the king of Elam who was made a vassal. The last king of the dynasty **Kutik-inshushinak** (c. 2240–2230) threw off the yoke of Akkad and took the title “King of the Four Quarters.” He did a great deal of building in the sacred acropolis at Susa. The Dynasty of Awan, like that of Akkad, fell victim to Gutian incursions (See [2371–2190](#)).

3

### 2230–c. 1400

## THE OLD ELAMITE KINGDOM.

4

### 2230–c. 1925

**THE DYNASTY OF SIMASHKI.** Shulgi of Ur (2095–2048) conquered Susa, where he did considerable building, including a temple to Inshushinak. The Sumerians set up a frontier force made up of mercenary Elamites, commanded by a *sukkal-mah*, or Great Regent. Independent kings ruled in **Simashki** to the north of Susa. In 2021, the fifth king of Simashki, **Enpi-luhhan** attacked Elam and took Susa. Ibbi-Sin of Ur counterattacked and captured the Elamite king, but despite another invasion in 2017, the Sumerians were unable to maintain control of Elam. Soon afterwards, in alliance with tribes from the Zagros, the new king of Elam, probably **Hutran-tempti**, attacked and destroyed Ur itself. Royal succession in the Simashki dynasty was through the king's sister (and wife), who was called the “reverend mother” (*amma hashtuk*). In 1993, Ishbi-Erra (2017–1985) drove the Elamites from Ur, but the kings of Simashki continued to rule Elam. The end of the dynasty is obscure; its last certain king was **Indattu II** (c. 1925).

5

### c. 1925–1400

**THE DYNASTY OF EPARTI** began around the same time the Awan dynasty ended. Its kings styled themselves “Great Regent,” after the military title of the Ur III period, as well as “King of Anshan and Susa.” The dynasty reached its height under **Kutur-Nahhunte I** (c. 1752) who conquered southern Babylonia. Texts from Elam indicate large Akkadian and Amorite minorities in the country. Kurigalzu I, the Kassite king of Babylonia, conquered Elam around 1400 (See [1595–1150](#)).

6

### c. 1350–1110

## THE MIDDLE ELAMITE KINGDOM.

7

### c. 1350–c. 1200

**THE DYNASTY OF IGI-HALKI.** Elam regained its independence in the 14th century under Igi-Halki, who took the title “King of Elam.” Untash-napir-risha (c. 1250) founded a new capital **Dur-Untash** (Tchogha-Zambil), with a large ziggurat temple. The last king of this dynasty was Kiten-Hutran.

8

## c. 1200–1110

**THE DYNASTY OF HULLUTUSH-INSHUSHINAK.** Around 1200, Hullutush-Inshushinak I founded a new dynasty. Around 1160, **Shutruk-nahhunte** invaded Mesopotamia and took Babylon. He brought back spoils, including the Code of Hammurapi, to Susa and placed his son, Kutir-Nahhunte III, on the throne of Babylon. On his father's death, Kutir-Nahhunte III (1155–1150) became king of Elam but lost Babylon. **Shilak-Inshushinak I** (c. 1150–1120), one of the greatest kings of Elam, conquered large areas in the highlands and parts of Mesopotamia, but Hutelush-Inshushinak (c. 1120–1110) lost Anshan to Nebuchadnezzar I of Babylon (See [1156–1025](#)). After his reign, records cease and the end of the kingdom is obscure.

9

## c. 820–640

**THE NEO-ELAMITE KINGDOM.** Early in the 9th century, Humban-Tahrah founded a new dynasty, with its capital at Susa. Humban-nikash (743–717) joined forces with Merodoch-Baladan II and defeated Sargon II at the **Battle of Der** (721). The next king, **Shutruk-Nahhunte II** (717–699), conquered a considerable area to the northwest. Hallushu-Inshushinak (699–693) deposed his brother, raided Mesopotamia, and carried off Sennacherib's son, who was reigning as king of Babylon. Humban-numena (692–687), allied with the Arameans and Persians, defeated Sennacherib at the **Battle of Halule** (691). There was further fighting between Elam and Assyria over the next 40 years. Ashurbanipal defeated and killed **Tempt-Humban-Inshushinak** (Tuemman, 663–653) and made Elam an Assyrian vassal. The Assyrians invaded again in 647 and sacked Susa (See [668–627](#)). Humban-haltash II (648–644) fled but was turned over to Ashurbanipal and executed. Elam regained its independence but was absorbed into the Persian Empire in 538.

[NEXT](#)

## d. [The Medes and the Persians](#)

### c. 1500–559

#### THE MEDES.

1

### c. 1500–850

**THE ARYAN INVASION OF IRAN.** The Medes were an **Aryan** (Indo-Iranian) people who entered the Iranian plateau around 1500 along with the Persians, Parthians, Bactrians, and Arachosians, while other Aryan tribes went on to conquer northern India. The Medes themselves were divided into six tribes (one of which was called the **Magi**). Nothing certain is known of Median history until their first mention in the Assyrian records of Shalmeneser III (859–825) (See [858–824](#)).<sup>2</sup>

### 701–625

**MEDIA UNDER ASSYRIAN RULE.** Sometime during the 8th century B.C.E., the Medes established a capital at **Ecbatana** (Hamadan) on the mountainous eastern fringes of Babylonia. The Dahyauka mentioned in Assyrian sources as a Median chieftain around 715 might be **Deioces**, who Herodotus says founded the Median dynasty. **Sennacherib** (705–682) made the Medes tributary in 701, but a revolt broke out in 674 under Khshathrita (possibly Herodotus's **Phraortes**), who ruled an independent Media for some time. Zoroaster (c. 630–550) introduced his religious reforms in Media. After a period of Scythian domination, **Cyaxares** (Huvakhshtara, 624–585) became king of Media and reorganized the army along Assyrian lines. The Medians took and sacked Ashur in 614. Cyaxares then allied himself to Nabopolassar of Babylon and, in 612 the Medians and Babylonians destroyed the Assyrian capital Nineveh (See [626–609](#)). Cyaxares and Nabopolassar divided the Assyrian Empire between them. In 609, the Medes conquered Urartu. Between 590 and 585, Cyaxares fought a war with the Lydians, which ended with<sup>3</sup>

a marriage alliance. Little is known of the subsequent history of the empire until its fall under **Astyages** (Arshit-vega, 584–549).

### c. 850–549

**THE RISE OF THE PERSIANS.** Sometime in the 9th century, another Aryan tribe, the **Persians**, settled in Anshan to the south of Susa. In the early 7th century, one of their chiefs, Achaemenes (Hakhamanish) founded a dynasty, the **Achaemenids**, and won independence from the Neo-Elamite kings. His son, **Teispes** (Chishpish), took the title “King of Anshan” and allied himself with the Elamites in their war against Sennacherib. When Ashurbanipal sacked Susa in 646, **Cyrus I** (Kurush) became an Assyrian vassal. After the rise of Cyaxares, Persia became a Median dependency. Around 560, the Median King Astyages arranged for his daughter to marry the Persian King Cambyses I. Their son Cyrus II served as a commander in the Median army.

## e. [The Persian Empire](#)

### 556–530

**THE REIGN OF CYRUS THE GREAT.** On the death of his father, Cyrus II became the king of the Persians. In 553, Cyrus led a revolt against his grandfather Astyages. Although he suffered some early defeats, the Median army eventually went over to Cyrus, and he took Ecbatana in 549. Cyrus now ruled the entire Median Empire. In 546 Cyrus conquered Lydia, adding much of Asia Minor to his realm. Cyrus then defeated King Nabonidus, entered Babylon in 539, and took over all the Babylonian Empire: Mesopotamia, Phoenicia, and Syria-Palestine. <sup>1</sup>

### c. 530–521

**THE REIGN OF CAMBYSES.** Cyrus was succeeded by **Cambyses** (Kambujiya) who, to ensure the throne, had his brother **Smerdis** (Bardiya) killed. Cambyses defeated Psammetichus III and by the summer of 525 had taken control of all of Egypt, but he was unsuccessful in an attempt to conquer the Kushite kingdom of Meroë (See [591 B.C.E.–350 C.E.](#)). In 522, a pretender named Gaumata seized the throne, claiming to be the dead Smerdis. Cambyses died on his way to deal with the revolt. <sup>2</sup>

### c. 522–486

**THE REIGN OF DARIUS I.** A member of another branch of the Achaemenid family, **Darius I** (Darayavaush) defeated Gaumata's revolt as well as other revolts in Babylonia and the eastern provinces. Darius's commemoration of his achievements, the **Behistun inscription**, written in Old Persian, Elamite, and Akkadian, became the key to the modern decipherment of cuneiform. Darius later added the Indus Valley and Libya to his empire, now the largest the world had ever known. He reorganized the administration and divided the empire into 20 **satrapies**, as well as introducing a standard gold coinage, the <sup>3</sup>

**daric**. At its height, the Persian Empire probably contained around 15 to 16 million inhabitants, with some 4 million in Persia proper. There were royal residences at Susa, Persepolis, Ecbatana, and Babylon, and good roads, with stations for royal messengers, which made possible regular communications within the vast realm. After 513, Darius started expanding into Europe and led an expedition which crossed the Danube. In 499, the Ionian Greeks in Asia Minor revolted but were suppressed after a six-year war. The Athenians had aided the rebels, and to punish them Darius sent the expedition which was defeated at the **Battle of Marathon** (490) (See [490](#)).

### c. 586–330

**THE DECLINE AND FALL OF THE PERSIAN EMPIRE.** The next king, **Xerxes I** (Khshayarsa, 486–465), undertook a major invasion of Greece but was defeated at sea in the **Battle of Salamis** (480) and on land at **Plataea** and **Mycale** (479). After Xerxes' murder in a palace coup, **Artaxerxes I Longimanus** (Rtaxshaca, 465–424) took the throne. Athens took the offensive against Persia by sending troops to aid a revolt in Egypt (456–454) and by attacking Cyprus (450), but finally readied a peace agreement with Persia in 448 (See [448](#)). The empire suffered a series of coups d'état: **Xerxes II** (424–404) was assassinated by his brother Sogdianus (424), who in turn fell at the hands of **Darius II Nothus** (424–404). **Artaxerxes II Mnemon** (404–358) faced the rebellion of his brother Cyrus, who raised an army in Anatolia which included ten thousand Greek mercenaries. The rebel army won the **Battle of Cunaxa** (401) near Babylon, but Cyrus was killed. The Greeks marched back to the Black Sea under the leadership of Xenophon, who wrote the **Anabasis** (“March Upcountry”) about the experience. Another insurrection broke out in Asia Minor under Datames, the satrap of Cappadocia, and spread to the western satrapies (366–360). Egypt won its independence in 404. **Artaxerxes III Ochus** (358–338) succeeded through energetic measures in reconstituting the empire but faced the growing power of **Philip of Macedon**, who had unified the Greeks under his rule (See [338](#)). Both Artaxerxes III and his weak son, Arses (338–336), were assassinated, and it was **Darius III Codomannus** (336–330) who met the invasion of Philip's son, **Alexander the Great**. Alexander defeated the Persians at the battles of Granicus (334), Issus (333), and Gaugamela, near Arbela (331). The next year, Darius, fleeing from the Macedonians, was killed by some of his nobles (See [330](#)). (See [The Neo-Persian Empire of the Sassanians, 223–651 C.E.](#))

## 10. [Arabia, c. 850–332 B.C.E.](#)

### a. [Geography](#)

**Arabia** is divided into northern and southern regions. The north is mainly flat desert dotted by oases, while in the southwest the Sarat Mountains rise up to 10,000 feet and receive generous rainfall. The main trade route ran through **Yathrib** (Medina), with a western branch running through Dedan to Ma`in to Gaza and an eastern branch through **Teima** to **Qedar** (Duma) to Mesopotamia. The population was around 100,000 in 2000 B.C.E., rising to around 500,000 by the end of the second millennium. 1

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## **[b. Economy, Technology, Society, and Culture](#)**

The **domestication of the camel**, around 1000 B.C.E., made possible a Northern Arabian nomadic culture based on goat-herding and shepherding. Some oases supported permanent settlements, which combined stock raising with date cultivation. The use of the camel also led to overland trade with South Arabia. In South Arabia, the mountainous terrain was cultivated on a network of terraces. Arabia controlled the long-distance trade in spices and raw silk from the Far East and, in addition, produced **frankincense and myrrh**, resins used in religious rituals throughout the Mediterranean world. The frankincense tree grew only in Dhofar (in modern Oman) and myrrh was harvested around the peninsula (especially in Ma`in). <sup>1</sup>

In this period Aramaic was the written language of North Arabia, but native **Sabean and Minean scripts** developed in the south. The polytheistic religion of Northern Arabia lacked a structure or priesthood, but Southern Arabian religion was temple-based. Each Southern Arabian tribal state was under the patronage of a god, but there was a common pantheon. Major deities were **Athtar, Ilmaqa, and Wadd**. <sup>2</sup>

## c. [Northern Arabia](#)

### c. 850–700

**NORTHERN ARAB TRIBES.** Tiglath-Pileser III (745–727) received 30,000 camels as tribute from Samsi, an Arabian queen, and Sennacherib (704–681) defeated a Queen Iati'e of the Arabs (See [704–681](#)). These “Queens” were probably tribal leaders, and the Assyrians did not establish political control in the region. Tribes such as the **Abdeel** and **Nebaioth** roamed near Palestine. <sup>1</sup>

### c. 700–400

**THE KINGDOM OF QEDAR.** The Qedarites were the most organized of the Northern Arabian tribes, and at its height in the 6th century, the organization controlled a large region from the Persian Gulf to the Sinai. Ashurbanipal allied himself with the King **Yauta`** (676–652), though he later helped depose him in favor of **Abiyate** (652–644). After this, nothing is known of Qedar until the 5th century, when an Aramaic inscription names Geshem and Qainu as kings. The “Geshem the Arab” mentioned in the Book of Nehemiah is possibly this person (Neh. 2:19, 6:1). <sup>2</sup>

### c. 550–332

**BABYLONIAN AND PERSIAN DOMINATION.** It was Nabonidus (555–539) who first conquered Northern Arabia (See [561–539](#)). The purpose behind his mysterious ten-year sojourn in the oasis of Teima is unknown, but he subdued most of Northern Arabia during his stay. The region was peacefully absorbed into the Persian Empire in 539, and units of Arabs on camels took part in Xerxes' campaign in 480. After Alexander defeated the Persians, Northern Arabia regained its independence. <sup>3</sup>

## d. [Southern Arabia](#)

### c. 1000–420

**THE SOUTHERN ARABIAN KINGDOMS.** From about 1000, the **Hadrami** tribe ruled the Wadi Hadramaut from Shabwa and controlled the production of frankincense. The **Mineans** lived along the eastern foothills of the Sarat Mountains, with a capital at **Ma`in**. Minean edicts were issued in the name of both their king (*malik*) and a council of nobles and priests. **Saba** was the wealthiest and most advanced of the South Arabian kingdoms. At its capital **Marib**, as well as at Sirwah, Yithil, and Sana, there were palaces and temples to the tribal god Ilmaqa. The king had more power than at Ma`in, although there was a tribal council. Some scholars connect the **Queen of Sheba** (1 Kings 10:1–13) with a Saba in the north, but the consensus is that she came from Southern Arabia. Sargon II (721–706) received tribute from King **Ita'amra** and Sennacherib from **Karib'il** (685). 1

### c. 420–332

**THE SABEAN EMPIRE.** The greatest Sabean king was **Karib'il Watar** (c. 420), who conquered Ma`in, Hadramaut, Awsan, and Qataban and took the title *mukarrib*, something like “emperor.” The succeeding *mukarribs* engaged in massive building projects, like the stone dam at Mar'ib, which distributed the waters of the Wadi Dhana for agriculture. The Sabean kingdom declined in the 3rd century and control over the desert trade shifted north to the Kingdom of Nabatea. (See [The Middle East and North Africa, 500–1500](#)) 2

## **C. Early Civilizations and Classical Empires of South and East Asia**

### **1. South Asia, to 72 B.C.E.**

An early urban civilization in the Indus Valley produced the polished stone, metals, incised seals, and pictographs excavated since 1920 at Harappa and Mohenjo-Daro. Harappan civilization began in the middle of the third millennium B.C.E. It generated a writing system that has yet to be deciphered. It was anchored in two great cities along the Indus River, Harappa itself and Mohenjo-Daro, each carefully laid out in a gridlike pattern. Extensive building suggests a strong governing elite capable of organizing forts, city walls, and extensive urban sewage systems. Trade was conducted with the Middle East, China and Southeast Asia, but military technology lagged, with scant use of bronze. Priests figured prominently in a polytheistic religion, with abundant artistic expression of goddesses and sacred animals. The civilization declined by the second millennium B.C.E. and was thereafter open to nomadic invasions. 1

A good deal more is known about the civilization that emerged much later with invasion from the Iranian plateau by **Aryans** of uncertain antecedents, who gradually conquered, pushed back, or absorbed the earlier **Dravidian** and Austro-Asiatic **Munda** populations. The conquest is variously placed at 2000–1200 B.C.E. 2

#### **1200–c. 800**

The Indian Aryans worshiped nature-gods. The chief gods were **Indra**, god of the air and of the storm; **Agni**, the sacrificial fire; and **Soma**, the intoxicant used for libations. **Varuna** was worshiped as guardian of cosmic regularity, including individual human acts. The oldest sacrificial hymns, composed in north India west of the Ganges (perhaps 1200), are contained in the *Rigveda*, which dates from c. 1000 B.C.E., possibly two centuries prior to the related *Gathas* in the *Avesta* of Iran; the *Samaveda*, which contains antiphonal selections from the Rig; the *Yajurveda*, hymns and sacrificial prose; and the *Atharvaveda*, a repertory of magical formulae. The *Rigveda* reveals an Indo-European hieratic literary language remarkable for clarity of structure and wealth of inflection, 3

which was originally transmitted orally. This normative text depicts a patriarchal society, engaged in cattle raising and agriculture, characterized by usual monogamy, adult marriage, and normal widowhood. The Aryan tribes were frequently at war among themselves and with indigenous tribes. Their attitude toward life was vigorous and objective; the doctrine of reincarnation and the correlated aspiration to release are absent.

### 800–c. 550

A transition period during which the Aryans expanded eastward through Magadha (modern Bihar) is known chiefly from the *Brahmanas*, prose commentaries upon the *Vedas* (c. 800–600), and the earlier *Upanishads* or confidential teachings (c. 600–300). These texts include the first religious justifications for a hierarchical structuring of society, asserting the Vedic division of Aryan society into three honorable classes: priests (*brahman*), noble warriors (*kshatriya*), and commonalty (*vaisya*), including both farmers and artisans. These “twice-born” castes were augmented by a fourth group, the slaves (*sudra*), consisting of non-Aryans with whom the twice-born classes had no ritual community. Progressive **evolution of the concept of caste** in these normative texts may be traced to desire of priest and noble to perpetuate supremacy, to diversification of specialized occupation, to indigenous rules of endogamy, and to absorption of the sudras, many of whom improved their servile status. The relationship between normative prescriptions and actual social practice is, however, debatable. It is clear that successful military campaigns brought to power men with varied social antecedents who then claimed kshatriya status. Significant social mobility made the textual definition of the caste hierarchy more theoretical than real. Continual elaboration by the priesthood of an already laborious ritual had become devoid of religious significance. The doctrine of continuous rebirth (*samsara*), conditioned by the inescapable results of former acts (*karma*), was first expressed in the early *Upanishads* (c. 600–550). The *Upanishads*, too, teach that the soul may escape from the suffering inherent in individual existence only by the realization of its identity with an impersonal cosmic soul. Union with the latter is possible through knowledge, but not through Brahman ritual.

4

### 550–321

The north Indian area was divided among many petty states. These divisions suggest a much larger pattern characteristic of the subcontinent throughout much of its history: an ongoing tension between localized rule (increasingly clustered around distinct regional cultures) and larger kingdoms or empires. Sixteen small states are enumerated in an early list. **Kosala** (King Prasenajit, contemporary of the Buddha) was the largest,

5

extending from Nepal to the Ganges, including modern Oudh. **Magadha** was its small neighbor on the east, south of the Ganges. The King of Avanti ruled at Ujjain. The capital of the Vamsas (King Sedayama) was at Kosambi (on the Jumna below Agra). Ten tribal republics are named in the oldest Pali records.

A general estimate of **population** at the end of the 4th century B.C.E. puts it around 100 million, a figure calculated partly from the size of the Indian army as described in Greek sources discussing Alexander of Macedon's campaign in north India. (Another estimate for the early 17th century C.E. uses the same figure, suggesting relatively little absolute population growth before the modern period, although there would have been important ebbs and flows in the intervening centuries, brought on by famine, drought, and disease and countered during periods of good trade and agrarian production, as well as immigration patterns.)

**Dissent from Brahmanism**, to abolish authority of its scriptures and rites, was found in many schools, among them the **Jains**, followers of the Jina (“Victorious”); Vardhamana Mahavira (?540–468?), who elaborated the doctrines of an earlier prophet **Parsya**; and in Magadha under Kings Bimbisara (?543–491?) and his parricide son Ajatasatru (?491–459?). Parsya had enjoined four vows: to injure no life, to be truthful, not to steal, and to possess no property. **Mahavira** added chastity and rigid asceticism as a means to a free man's immortal soul from bondage to the material world.

**BUDDHISM** was founded in the same period and region by **Siddhartha** (?563–483?) of the clan of Gautama and the hill tribe of Sakya, who attained “illumination” (*bodhi*) at Bodh-Gaya after he had convinced himself that Brahman doctrine and asceticism were alike ineffective. He taught the means of escape from the world of suffering and rebirth to **Nirvana**, a state of peaceful release from rebirth, through a twofold way of life, withdrawal for meditation and personal religious experience, combined with strict morality and self-sacrificial altruism. Shortly after the Buddha's death, 500 disciples met at Rajagriha to rehearse together his doctrine (*dharma*) and his code of discipline (*sangha*) which he founded. That community served as the instrument for propagation of his religion, which, like Christianity, offers salvation to all who accept the simple doctrine and ethics and seek for personal religious experience. A second **council at Vaisali** a century after the Buddha's death was concerned with the *vinaya*. About this time were formed the four *Nikayas*, earliest extant anthologies from more primitive collections (*Pratimoksa*, and so on).

**Darius I** of Achaemenid Persia seized Gandhara from the disunited Aryans and sent his Greek admiral Skylax to explore the Indus. *Kharoshthi* script, used in northwestern India (5th century), is based on Aramaic of the Persian scribes. It remained confined to the northwest. 9

The *Sutras* (c. 6th–2nd century B.C.E.), “Threads” through the **Brahmanas**, compendious manuals designed to be learned by heart, prescribe rules of conduct of various Vedic schools, regions, and periods, for sacrifice and incidentally, for daily life and describe a society in which plural marriage is permitted and child marriage recommended, while numerous taboos mark the beginning of an elaborate theory of caste defilement. **Panini** (c. 400) gives in his *Sutra* the earliest extant Sanskrit grammar, with a wealth of illustration which is augmented by the *Varttikas* or supplementary rules of Katyayana (c. 180) and the rich *Mahabhashya* (Great Commentary) of Patanjali (c. 150). 10

### 327–325

**Alexander the Great** (See [325](#)) invaded the Punjab, crossed the Indus (Feb. 326), was welcomed to the rich and cultured city of Takshasila (Taxila), won a battle on the banks of the Jhelum, and withdrew on demand of his troops, sending Nearchus with a fleet by sea. Important **cultural contacts** took place between Hellenistic and Indian civilizations. 11

### c. 321–c. 184

The **MAURYA DYNASTY** was founded by **Chandragupta** (c. 321–c. 297), who first united north India from Herat to the Ganges Delta with his capital at Pataliputra (Patna) and who defended it against Seleucus Nicator (c. 305). The emperor ruled with aid of a privy council and an elaborate official hierarchy, paid army, and secret service. Administration of public works embraced highways and irrigation, important underpinnings for the expanded trade characteristic of this period. 12

A Jain high priest **Bhadrabahu** led a portion of his community south into the Carnatic to escape a 12-year famine in Bengal. On their return (c. 300) the still resident monks in church council at Pataliputra undertook to collect the Jain scriptures but were unable to record some of the older *purvas*. The canon of the Svetambara sect, the *Siddhanta*, written in its present form at the council of Valabhi (5th or early 6th century C.E.), is consequently incomplete. The returning monks maintained a stricter rule, avoided the council, and, as the **Digambara sect**, have steadily maintained that the true canon is lost. The **Jain** community had then already begun a westward migration to Ujjain and Mathura. 13

Despite the vagaries of political rule, a continuity of strong **trading relationships** 14

provided coherence and consistency for society. In particular, merchants became increasingly wealthy, powerful, and influential. Indeed, it was merchant patronage that ensured the expansion of both Jainism and Buddhism in this period. **Merchant guilds** shaped much of urban life, influencing public opinion and organizing production.

**Artisans**, too, participated in guilds that set standards for quality and rules for work. The guilds had to be registered in the locality; some of the leading guilds including potters, metalworkers, and carpenters. (Given the fact that sons usually followed the trade of their fathers, guilds also became associated with caste. If an occupation underwent a transition, however, this triangulated relationship between work, social status, and economic organization was disrupted.) <sup>15</sup>

### c. 274–c. 236

**ASHOKA'S EMPIRE**, extended by conquest of Kalinga (Orissa with the Circars, c. 262), embraced two-thirds of the peninsula. As a devout convert he ruled at home and abroad in accordance with Buddhist law. This ideological connection between kingship and religion also served Ashoka well in positioning his kingdom to support trade and merchants, and the strong political support he received from traders was an important aspect of his rule. <sup>16</sup>

Besides many pious foundations, he engraved on rocks and pillars throughout his empire in true Achaemenid-style edicts in vernacular Prakrit exhorting respect for animal life, reverence, and truth, and appointed censors to enforce these injunctions. He sent Buddhist missions to Syria, Egypt, Cyrene, Macedonia, and Epirus, and with much greater success to Burma and Ceylon (c. 251–246; Aryan conquest of Ceylon, traditional date 485 B.C.E.). The Punjab and Gandhara became a stronghold of the liberal Mahasanghikas, who developed a canonical tradition enriched by legends to bring the life of the Buddha into that region. The canon was then or in the 2nd century expanded in Kausambhi, Sanchi, and Malwa and fixed in Pali to form the *Tripitaka* (“Three Baskets”): *stura* (doctrine), *vinaya* (monastic code), and *abhidharma* (philosophical discussion). The Pali tradition, which was carried to Ceylon and there preserved intact, says a third church council was held at Pataliputra under Ashoka. <sup>17</sup>

The west remained the chief stronghold of **Brahman doctrine** which now reasserted itself. The gradual absorption of substratum cults within the formal brahmanistic framework under the tutelage of the Brahmans gave rise to the complex system of beliefs and practices, characterized as the two main sects of **Saivism** (worship of Siva) and **Vaishnavism** (worship of Visnu and his avatars or incarnations). Major gods arose: **Siva**, personification of cosmic forces of destruction and reproduction implicit in all change; **Vishnu**, god of the sacrifice who was recognized as incarnate in **Krishna**, a hero presented by popular legend at Mathura as romantic lover of cowherd-girls, and on <sup>18</sup>

the west coast as a somber warrior. A second avatar or reincarnation of Vishnu was **Rama**, symbol of conjugal devotion. To Vishnu as Preserver and Siva as Destroyer was added **Brahma** the Creator, a personification of the Brahman principle of the *Upanishads*.

The *Mahabharata*, an epic poem composed by several generations of bards, seems to have taken form about the 4th century B.C.E., although probably revised early in our era. The original 9,000 verses were swelled to 100,000 by later accretions, including myths, legends, popular philosophy, and moralizing narratives. It recounts a feud between the wily Kurus and the fierce Pandus. Krishna takes prominent part in the struggle as counselor of Arjuna, the Pandu chief. Noteworthy within the epic is the *Bhagavadgita* (“Song of the Lord”), which first urges personal love and devotion (*bhakti*) to Krishna. The *Ramayana*, although traditionally ascribed to Valmiki (?6th century B.C.E.), is, in its present form, later than the *Mahabharata*. It recounts the trials of Rama in rescuing, with an army of apes, his wife, Sita, from a fiend. Both epics are composed in a popular form of Sanskrit.

The **increasing prosperity and resulting influence of merchants** suggests a society that departed from the normative theories put forward in these texts. Indeed, Ashoka's pleas for social harmony suggest that those labeled *vaisyas* and placed third in the hierarchy persistently challenged Brahmins and *kshatriya* through their patronage of the heterodox sects of Buddhism and Jainism and through their support of the ruler. Social and economic tension undoubtedly was mirrored in religious life.

One way to ease this tension lay in giving the king increasing power by seeing him as the connecting point for various communities in the realm. Ashoka elaborated this connection through a new interpretation of *dhamma* (or **dharma**), which assigned to the king the duty of enabling each caste to fulfill its own *dharma*. The polity thus was seen as a congeries of distinct groups, each with its own duties or social responsibilities to fulfill, integrated by the figure of the king. To effect such a political theory, Mauryan government created a centralized **bureaucracy**, dependent especially on the treasurer and chief (tax revenue) collector; Mauryan fiscal accounts were carefully kept. Ashoka also traveled extensively to stay in touch with, and to influence, public opinion. He elaborated, as well, the use of spies into an **espionage system** that brought him regular news of his far-flung empire.

## 206

**Antiochus III** of Syria occupied Gandhara but shortly lost it to the Greek (Yavana) King Demetrius of Bactria, who (c. 185) seized the Punjab also. Eastward expansion of the Yavanas was halted (after c. 162) by civil war between the houses of Euthydemus, represented especially by the warrior-philosopher Menander, and Eucratides.

## c. 184–c. 72

The **SUNGA DYNASTY** was founded in the Ganges Valley and in Malwa by **Pushyamitra**, who overthrew the Maurya and repulsed the Yavanas under Menander, and by a Brahman reaction that may have stimulated Buddhist emigration to Bharhut, Sanchi, and Mathura. The dynasty in its later years was overshadowed if not actually displaced by its line of Brahman advisers, the **Kanvas**.

23

At the same time (c. 100 B.C.E.–50 C.E.) flourished in Gandhara a school of sculpture which created a Buddha image based on the Greek Apollo. Only a few decadent monuments (mostly 1st century C.E.) bear dates (318, 356, 384 with coin of Kadphises, 399) by reference to a Mauryan era (?322 B.C.E.) or more probably the Seleucid era of 312 B.C.E. Stylistic influence of the art of Gandhara was exerted chiefly in Afghanistan (frescoes of Bamiyan and Dukhtar-i-Nushirwan), where it was fused with Sassanian influences, eastern Turkestan, China of the North Wei dynasty, and Japan. But its iconographic formulae were accepted by the entire Buddhist world. Meanwhile, in western India (near Bombay) were cut in rocky cliffs Buddhist *chaityas* or temple halls, of which the earliest (c. 125–100 B.C.E.) are at Bhaja, Kondane, Pitalkhora, and Ajanta (cave 10); the largest, finest, and latest (1st century C.E.) at Karli. Jain caves in the Udayagiri hills of Orissa are of similar date.

## 2. [South Asia, 72 B.C.E.–500 C.E.](#)

By the end of this period, the **rule of the Guptas** (c. 300–700 C.E.) over much of north India provided an integrative pattern taken by later historians as representative of a “classical civilization.” The characteristics of Gupta rule, in which some centralization and some rise in the standard of living (especially for elite groups) took place, were taken as establishing certain norms for a broad-based empire ruling over much of the subcontinent. At the same time, and in tension with this characterization of a political “norm,” a series of regional politico-cultural clusters began to solidify that provided alternative bases for state formations. In particular, based on the very different geographical and agrarian patterns in the north and south, these halves of the subcontinent tended to foster different sizes and forms of polities. (See [South Asia, 500–1199](#)) <sup>1</sup>

### a. [North India: Punjab and the Gangetic Plain](#)

#### 1st Century B.C.E

Dating of the known Saka rulers, the “**Great King Moga**” or Maues, Azes, and Azilises, raises a complex chronological problem affecting the whole epoch from 100 B.C.E. to 200 C.E. It springs from multiplicity of eras, which are hardly ever explicitly identified. <sup>2</sup>

The **Pahlavas** (Parthians closely related to the Scythians) under Vonones and his brother Spalirises became independent in eastern Iran with the title of “King of Kings” sometime (c. 30? B.C.E.) after the death of Mithridates II (88 B.C.E., supposed by L. de la Vallée Poussin to begin a Pahlava era). **Azes II**, son of Spalirises, succeeded the Sakas in the Punjab. Pacores was the last to rule as suzerain, although others probably continued as satraps. <sup>3</sup>

The Kushana **Kujula Kadphises** forcibly united the five tribes of Yüeh-chih in Bactria (end 1st century B.C.E.) and seized from the Pahlavas the Kabul Valley and adjacent regions. His son **Vima Kadphises** conquered northwestern India and ruled it by deputy till his death at 80. An inscription near Panjtar speaks of a “Gushana Great King” under <sup>4</sup>

date “122” which is 64 or 34 C.E. by the Azes or Pahlava systems. The inscriptions of “136” similarly belong to 78 or 48 C.E.

### c. 78–176+ C.E

A second **Kushana dynasty** was founded by

5

### c. 78–96+ C.E

**KANISHKA**, who extended his rule from Benares and Kabul to the Vindhyas, and established his capital at Peshawar. Whether or not the era he founded is the “Saka” era of 78 C.E., he probably came to the throne near that date.

6

Kanishka appears to have been tolerant in religion and built a great stupa at Peshawar over relics of the Buddha. A fourth church council, unknown to the Pali sources, was apparently convoked at Jalandhara in the Punjab by the powerful Sarvastivadin, a realist sect of the conservative **Theravada** (Hinayana, (See [2nd Century C.E](#))). It probably supervised translation into Sanskrit of the canon which had been fixed in Prakrit in Mathura, the Punjab, and Kashmir in the last centuries B.C.E. The earliest and most vigorous classical Sanskrit is found in Asvaghosha's *Saundarananda* (“Conversion of Nanda”) and the *Buddhacharita*, an artistic versified life of the Buddha, together with a work long supposed to be his *Sutralamkara*, which is now identified as the *Kalpanamanditika* of Kumaralata, a junior contemporary.

7

### 2nd Century C.E

Kanishka's successors with their inscriptions (dated in terms of his reign) are: his son Vasishka (24, 28, 29); the latter's son Kanishka II (41); his younger brother Huvishka (29 or 33–60); Vasushka, son of Kanishka II (68, 74); and Vasudeva (76–98).

8

Ujjayini (Ujjain) became a center of Sanskrit learning and was taken as meridian by Indian astronomers. At Mathura, where sculpture early resembled that of Bharhut and San̄chi, and later imitated the forms of Gandhara, the heavy drapery of the Hellenistic school was rendered transparent and schematized in decorative ridges, creating the so-called *Udayana Buddha* carried to China and Japan.

9

The Buddhist community was now divided between two means to salvation: the **Hinayana**, or Lesser Vehicle, which retained much of the primitive simplicity of the *Dharma*, “Law” by which Buddhism was then named; and the **Mahayana**, or Great

10

Vehicle, which emphasized personal devotion to Sakyamuni and exalted **Bodhisattva** (future Buddhas) as saviors. Although practically deified in the *Lalitavistara* (2nd century ?, Chinese trans. 308) and *Saddharma-pundarika-sutra*, “Lotus of the Good Law” (Chinese trans., 265–316), Buddha is regarded as but the human representative (*manushi-buddha*), for the current epoch, of an infinite series of buddhas. Popular bodhisattvas are Avalokitesvara (*Lotus Sutra*, ch. 24), Manjusri (*Avatamsaka-sutra*, 2nd–3rd centuries, Chinese trans. 317–420), Samantabhadra, and Kshitigarbha, all of whom have deferred their own illumination to succor struggling mankind. The goal of effort is no longer sainthood or final absorption in nirvana, but direct attainment of buddhahood or rebirth to indefinite residence in a celestial paradise. Nagarjuna (2nd century), founder of the *Madhyamika Sutra*, teaches that all sensory and mental experience is illusion and comments on the *Prajñāpāramitā*, “*Perfect Wisdom*” (Chinese trans. 160), which consists in recognition of the Buddhist law as sole reality.

Already before this era Indian writers recognized and wrote treatises about three phases of human existence: **dharmā**, religious and moral duty; **artha**, politics and practical life; and **kama**, love. The *Artha-sastra* (compounded from earlier materials c. 300–330) aims to teach a prince the whole science of successful rule according to accepted principles. It assumes autocratic monarchy, justification of all means by the end (personal aggrandizement), and chronic war. It advocates use of spies in all quarters; deception, intimidation, false witness, and confiscation to obtain money; cunning; and assassination. Virtuous rule is described because it is desirable to win affection of a conquered people. The *Kamasutra* (“Laws of Love”) by Vatsyayana Mallanaga (c. 4th century or later) imitates the *Artha-sastra* in both form and morals. 11

### 320–c. 535

The **GUPTA DYNASTY** united north India after five centuries' division. 12

### 320–c. 330

**Chandragupta I** ruled from Pataliputra (Patna), having strengthened his position by marriage into the ancient Lichchavi tribe. 13

### c. 330–c. 375

**Samudragupta**, his son, completed the conquest of the north (Aryavarta) and won glory by traversing Telugu lands to force homage of the Pallava. He claimed to receive tribute 14

from southeastern Bengal; Assam; and Nepal; with presents from the Kushan “son of Heaven and king of kings” (now actually vassal of the Sassanids) in Kabul-Kapisa-Gandhara; the satrap of Ujjain; and the King Meghavanna (352–379) of Ceylon (who founded a monastery at Gaya for his subjects). He revived the Vedic horse-sacrifice which sanctified claim to the title of “universal monarch.” He was a patron of poetry and music.

### c. 375–c. 415

**Chandragupta II Vikramaditya** (on throne in 379) ended the satrapy of Ujjain by conquest of Malwa, Gujerat, and Surashtra (between 388 and 401). He moved his capital to Ayodhya (in Awadh) and then to Kausambi on the Jumna. 15

### c. 415–455

**Kumaragupta I** probably founded the monastic community at Nalanda which was the principal Buddhist seminary till it burned c. 988. 16

### 455–c. 467

**Skandagupta** repulsed the White Huns, as heir apparent and as emperor (455). 17

## b. [The Deccan](#)

The **DECCAN** was dominated (from c. 100 B.C.E. to c. 225 C.E.) by a dynasty called **Andhra** by the late *Puranas* but **Satavahana** or **Satakani** in their own Prakrit inscriptions. Founded by Simuka on the ruins of the Sunga-Kanva power, with its capital at Pratishthana (Paithan) on the upper Godavari, its early conquests to the north and northwest were appropriated by the Saka satraps. A Saka satrap **Bhumaka** established Scythian power on the northwest coast (c. 70 C.E.). Nahapana, junior to him, ruled many years over Surashtra (Kathiawar) and the adjacent coast with a capital probably at Junnar, east of Bombay. Named Mambanos in the *Periplus* (c. 89), his inscriptions are dated “41–46” (?119–124 C.E.), probably with reference to the Saka era of 78. <sup>1</sup>

### c. 109–132+

**Gotamiputa Siri Satakani** conquered Surashtra from Nahapana and in an inscription at Nasik (18th year of his reign, c. 126) claimed not only the Deccan from the Vindhya to Banavasi, but less probably Malwa as well. Very likely by this epoch the Satakani had extended control over the properly Andhra Teluga (Dravidian) lands of the Godavari and Kistna deltas. The Prakrit poems of the *Sattasai* in part date from this time. Liberal toward all religions, the Satakani especially exalted the Brahmins. <sup>2</sup>

Sculptures about the great Buddhist stupa of Amaravati on the lower Kistna reveal union of Hindu traditional style with its crowding and naturalism, already more refined than at Bharhut and Sanchi, with Greco-Buddhist motifs which were borrowed from Gandhara and in turn transmitted to Malaya, Sumatra-Java, Cambodia, and Champa. <sup>3</sup>

### c. 120–c. 395

A **DYNASTY OF WESTERN SATRAPS** of Ujjain in Malwa was founded by Bhumaka's son Chashtana (Tiastanes of Ptolemy, c. 150). <sup>4</sup>

## c. 170

**Rudradaman**, Chashtana's grandson, in a Sanskrit inscription at Girnar in Kathiawar, records repair of a dam which broke in 150 C.E., defeat of northern tribesmen, and repeated rout of the southern Satakani. (See [Deccan and Western India](#)) 5

### c. [South India](#)

The whole Indian peninsula south of the Vindhyas, save for a part of Maharashtra (Nasik and Pratihthana) easily accessible from Malwa and already Aryanized, was occupied by **Dravidians**: Canarese-speakers on the northwest, Telugu-speakers on the east, and Tamil-speakers in the Carnatic. Jainism, brought to Sravana Belgola in Mysore under Chandragupta (end 4th century B.C.E.), flourished in the Digambara, “naked clergy,” form which the north rejected. Buddhism with its stupas and sculpture was brought to Amaravati and Mysore under Ashoka. Sanskrit culture and Hindu culture were carried from the south to Cambodia about the opening of our era. Sanskrit influence is clear in the early Tamil grammar *Tolkappiyam* and in the *Kural* of Tiruvalluvar, lofty songs of a priest of pariahs (2nd–3rd centuries C.E.). Brahman colonies with Saivite and Vaishnava sectarianism and the caste system were at various periods imported from the Ganges Valley and endowed by local rulers, as was done also in Bengal. 1

The south, however, placed its own impress on what it received and developed linga-worship, *bhakti* devotion to Vishnu and Siva, organization of Saiva monasteries and laymen, occasional violent religious intolerance, especially between adherents of Vishnu and Siva, and municipal and corporate life with a sacrificial spirit of personal loyalty. 2

In search of the great profits on spices sold to the Romans, merchants on west and south coasts began to sail eastward to Java, Sumatra, and Bali. Their sharply increased wealth helped to fund expanding urbanism and the spread of Buddhism and Jainism. 3

**2nd century C.E.** Ashoka's inscriptions name three **Tamil states** in the Carnatic: Pandya (extreme south), Chola (southeast), and Chera or Kerala (southwest coast, chief port Muziris). These competed with Maesolia at the mouth of the Kistna and especially with the rich western port of Barygaza (Broach) in thriving trade with the Roman Empire. An embassy to Augustus (c. 22 B.C.E.) was sent by a king “Pandion” who may have been a Pandya. Strabo (d. 21 C.E.) speaks of fleets of 120 ships from Egypt to India, and Pliny (23–79) values annual imports from India at 50 million sesterces. 4

**King Karikalan** of early Tamil poems is credited with construction of a great irrigation dam on the Kaveri River, east of Trichinopoly. 5

**c. 225**

Breakup of the Satakani Empire led to establishment, in Maharashtra near Nasik, of a 6

**c. 250–c. 500**

**Traikutaka dynasty**, probably founded by chiefs of the pastoral Abhira tribe. 7

**c. 300–888**

The **Pallava warrior dynasty** of foreign (Pahlava?) origin, using Prakrit and later Sanskrit, held from Kanchi (near Madras) hegemony of the Deccan, which it disputed with the Chalukyas of Vatapi (550–753), the Rashtrakutas of Malkhed (753–973), and the Chalukyas of Vengi (611–1078). 8

**c. 300–c. 500**

**The Vakatakas**, extended their power from the fortress of Gawilgarh in northern Berar to Nagpur, Bundelkhand, and Kuntala, probably limiting Gupta expansion to the south. 9  
Farther south the **Chutu branch of the Satakani**, called Andhrabhrityas in the Puranas, ruled at Banavasi (c. 200–c. 250) where they were succeeded by 10

**c. 350–c. 500**

The **Kadamba dynasty**, founded by a Brahman rebel from the Pallava. His great-grandson **Kakutsthavarman** (c. 435–475) married his daughters to a Gupta, a Vakataka (445), and a Ganga of Mysore. 11

In the Telugu lands, the Andhras were succeeded by the **Ikshvaku dynasty** (3rd century), notable for donations to a Buddhist stupa on the Nagarjunikonda (hill), on the Kistna above Amaravati; by the 12

**c. 300–450**

**Salankayana of Vengi;** and by the 13

**c. 400–611**

**Vishnukundins**, a dynasty of at least ten kings at the same place. (See [South India](#)) 14

### d. [Ceylon \(Sri Lanka\)](#)

Ceylon traditionally received Buddhism from Ashoka under 1

**?247–?207 B.C.E**

**Devanampiya Tissa**, who founded the Mahavihara or Great Monastery at his capital Anuradhapura. The Pali *Tripitaka*, which reflects Theravadin tradition, was written under 2

**89 B.C.E.–40 C.E. or 29 B.C.E.–?17 C.E**

**Vattagamani**, who founded the rival Abhayagiri Monastery. His epoch is supported by the geography (c. 90–200 C.E.) of the *Mahaniddesa*, a commentary admitted late to the Canon. 3

**412–434**

**Mahanaman**, Buddhaghosha of Magadha, author of the *Visuddhimagga* or “Way of Purity,” recorded in Pali Sinhalese traditions. (See [Ceylon](#)) 4

### **3. Southeast Asia, c. 500 B.C.E.–500 C.E.**

For both the Malay Archipelago and the mainland areas of Southeast Asia, the main characteristic during this period was of scattered centers of civilization with widely divergent linguistic patterns (See [Japan](#)). What has been called the *mandala* pattern organized space and the polities within it (often this meant an unstable political situation in a vaguely definable geographical area without fixed boundaries; these boundaries expanded and contracted regularly); within these mandalas would reside several tributary rulers. Typical of the entire Southeast Asia area, between the 3rd and the 13th centuries C.E., was the appearance of hundreds of Indic kingdoms (*negara*), in which rulers adopted the Indic models of kingship and social order. 1

**Demography.** Characteristic of this period, in areas where there was surplus food production—resulting primarily from the development of wet rice production—there would be a tendency to have **more dense population growth**, but this increase in population was offset by patterns of warfare and plunder during this period. The scarcity of labor in relation to available land meant a pattern of competition for resources in which additional labor was more valued than additional land. As different centers of power vied for control, an area would be stripped of its inhabitants and they would be forced to relocate to the territory of the victorious ruler. This pattern of warfare, though not particularly high in casualties, severely disrupted agricultural patterns so that sustained population growth patterns did not occur until after the 1500s. 2

Around 500 B.C.E. beginning with the establishment of wet rice cultivation, socially stratified villages relatively autonomous from one another developed. Common to most lowland areas was cognatic kinship (descent reckoned equally through males and females) and, thus, the downgrading of the importance of lineage. The development of town life and, especially, the emergence of entrepôts (established to facilitate the growing trade between India and China) were among the greatest changes. The entrepôts became centers for the spread of Indian civilization in Southeast Asia, a process of cultural synthesis often referred to as the “Indianization” of the states of mainland Southeast Asia, or the “Hinduizing” of belief systems, beginning about 200 B.C.E. 3

These early civilizations centered around the major river valleys and the Great Lake of 4

Cambodia. At the same time, the emergence of peasant societies underscored the increasing differentiation between hill (tribal cultures) and lowland peoples. Hill peoples became incorporated into social systems dominated by lowland peoples, a relationship symbolized by various ceremonials in which the hill peoples paid tribute, often situated in gift exchanges.

This period witnessed the expansion of trade between China and India via Southeast Asia. Accompanying this expansion was the movement of Brahman priestly specialists, Buddhist monks, and other scholars. The Southeast Asian rulers played a leading role in the Indianization of their societies. (See [Southeast Asia, 500–900](#))

5

### a. Funan

The polity termed by the Chinese “Funan” is the first known polity to emerge in Southeast Asia, usually dated in the **1st century C.E.**, with its capital near present-day Ba Phnom in Cambodia's province of Prei Veng. Because of its location on the then-existent trade route, which included an overland segment, and its access to sufficient agricultural production to support the needs of traders, it greatly benefited from the growth of maritime trade, which resulted during the century when Roman demand for Asian goods increased dramatically.

6

### By the 2nd or 3rd Century

Funan was a center with Indians, Chinese, Persian Gulf, and Malay traders. Its fortunes of wealth and power appear to have peaked in the **4th century**.

7

### By the 5th Century

, competition from the Malay traders and the competition of an all-sea route from India to China that went through the Straits of Melaka undermined its position.

8

### By the 6th Century

, its position had been so undermined that it was taken over by the **Khmer** people who lived in the middle sections of the Mekong River.

## **b. [Champa](#)**

The peoples of Champa, located in the region between the Mekong Delta and the Hue, are ethnolinguistically Malay. The Cham monarchs during this era evidently did not have access to a broad plain providing enough wet rice production to support an elaborate political structure or power base and could not maintain dominance over other Cham monarchs for any extended period of time. As a result, the center or capital of Cham authority would shift over time to various locations as one Cham ruler would lose his dominance to other rulers. As a result of the failure to have a secure economic base either through agricultural production or trade activities, the Cham ruler relied on plunder from raids on neighboring areas, including Khmer territories to the west and Vietnamese territories to the north. In addition, the Cham rulers used local and Indian cultural symbols and their spiritual relationship with the ancestors as defined by religious cults. Also part of the ideological mix were Indian traditions of the king's divinity as the basis for their authority. (See [The Malay Archipelago and Peninsula](#)) <sup>1</sup>

### **c. Burma (Pagan)**

From early times Burma came under Indian influence. By the **3rd century C.E.**,  
expanding Hindu peoples had established commercial settlements on the Tenasserim  
coast and at the principal river mouths, which developed small kingdoms in contact with  
the Tibeto-Burman tribes of the Irrawaddy Valley. Commercial relations with China were  
less influential, although an embassy from a Burmese state reached Ch'ang An in 802.  
(See [Burma \(Pagan\)](#))

1

#### 4. [China, to 221 B.C.E.](#)

The Chinese people are now considered part of the larger Mongoloid race. The Chinese language is related to Thai and Vietnamese, all of which are part of the larger Sino-Tibetan group. The importance of family to Chinese society and culture dates far back into Chinese prehistory. Family organization and family names are extremely old in China, and families were unified by worship of common ancestors. The “Chinese,” or Han people, began in the north China plain and then spread south. Early people of the south include the Man and the Tai. Southerners were linguistically and racially kin, though in the north people were racially kin but linguistically diverse. 1

**Periodization.** Early Chinese history is derived from archaeological evidence and (with due caution) later legend. More systematic history begins with the Shang and particularly the Zhou dynasties. This early political period, vital in Chinese cultural development, ends in 221 B.C.E. with the establishment of a more powerful state. 2

**Legendary rulers.** Chinese texts speak of three great rulers and three sage kings, all mythical, of high antiquity. The former include: 3

##### 2852–2737 B.C.E

**Reign of Fuxi** who domesticated animals and instituted the family. 4

##### 2737–2697 B.C.E

**Reign of Shennong** who invented farm tools and sedentary agriculture. 5

##### 2697 B.C.E.–?

**Reign of Huangdi, the Yellow Emperor**, who created Chinese writing, silk cloth, and the bow and arrow—he was a heroic figure as well.

6

The latter three include:

7

### 2357–2256 B.C.E

**Reign of YAO**, who is credited with the calendar for managing agriculture, for beginning centralized government, and for using ritual to foster morality. He sagaciously ignored his own incompetent son to pass the reigns of state to **SHUN** (r. 2255–2205 B.C.E.), a poor peasant but a filial son. Shun similarly passed the throne to **YU** (r. 2205–2198 B.C.E.), because the latter had controlled China's flood waters by dredging to the sea, thus creating north China's major river systems. Yu picked an able successor, but the people allegedly opted instead for his son and so was instituted the **XIA dynasty** (trad. 2205–1966). The last ruler of the Xia was the evil Jie, who was deposed by Tang, who founded the **SHANG dynasty** (1766–1122). Details of the Xia from historical and literary texts are difficult to corroborate. It was probably in present-day Shanxi Province.

8

The oldest Chinese **archaeological evidence** comes from Zhoukoudian (near Beijing); between 200,000 and 500,000 years old, **Beijing Man (Peking Man)** (See *Homo Erectus*) of the Old Stone Age was found here with certain Mongoloid characteristics. Mongoloid *homo sapiens* appear c. 20,000 years ago, using Stone Age techniques. Agriculture and ceramics emerge in China c. 12,000 years ago (in the transition from paleolithic to neolithic eras) in the Yellow River region. There is also archaeological evidence for rice agriculture in the Yangzi Valley from prehistoric times. Neolithic or **Yangshao** culture is associated with painted clay pottery; people lived in small villages, mainly harvested millet, hunted with bows and arrows, domesticated pigs and dogs, used numerous tools made of stone and bone, engaged in fertility rites, and showed respect for their dead through burial. This culture reached its apex c. 3000 B.C.E. and was gradually replaced by **Longshan** culture, characterized by black, unpainted pottery crafted on wheels. Longshan society was less mobile, more sedentary than before, with walled communities. People harvested rice and millet, domesticated cows and sheep (as well as dogs and pigs), had more buildings and agricultural implements, used a more stratified system of professions and for burial rites, practiced ancestor worship, and divined by means of “**oracle bones.**” It reached its apex c. 2000 B.C.E.

9

Shang rulers, about thirty in all, came from one branch of Longshan culture centered in present-day Henan province. They covered from the Yellow River plain in the west to as far as Shandong in the east. There were numerous capitals, the last of which was at **Yin** (or **Anyang**) where the last twelve kings ruled from c. 1395 B.C.E. The Shang is thus often called the Yin. Capital cities were unprecedentedly large in scale. There were developments in bronze technology and the emergence of horse-drawn chariots. Also

10

new was the **earliest form of written ideographic Chinese**: oracle bones (made of turtle shells and the clavicles of oxen) were inscribed, placed in a fire, and the cracks were read by diviners. Shang also used elaborate, inscribed bronzes for ceremonies.

**Shang state and society** witnessed the origins of the patrilineal family and ancestor worship, as well as increasing differentiation in social and status roles from earlier times. There were three principal classes in Shang times: hereditary nobles and their families, commoners, and slaves (often sacrificially buried) who were largely war captives. The Shang state was a centralized monarchy. While Shang times saw the further development of settled agriculture, hunting remained important. 11

### c. 1133 B.C.E

King Wu, son of King Wen who hatched a plot to break with their erstwhile ally, the Shang, came to power. He erected a new capital at Hao (near present-day Xi'an) and invaded Shang unsuccessfully in 1124 B.C.E. 12

### 1122?–771 B.C.E

The **WESTERN ZHOU** was, like the Shang, descended from Longshan civilization and settled in the Wei River valley of Shaanxi. 13

### 1122 B.C.E

The second attack defeated the Shang under the rule of the last “evil” Shang king, Shou. According to tradition, Wen was a wise, kind ruler, while Wu was a strong and tough one. 14

### 1116 B.C.E

Wu died at Hao. Tradition has it that he had wanted to sack Yin but was prevailed upon by his brother, the **Duke of Zhou**, who is credited (as regent to the boy ruler Cheng) with giving the Zhou longevity and a firm institutional basis, especially after crushing a rebellion of the last Shang heir and bringing the Yellow River plain under Zhou hegemony. The Duke of Zhou was later revered. Zhou built a city at Luoyang on the opposite side of the Yellow River plain to balance Hao. Yin was destroyed. Cheng died in 1079 B.C.E. by which point Zhou institutions were soundly in place. 15

## 771 B.C.E

King You (r. 781–771) was killed and Hao pillaged by northern border peoples. Hao was thereafter abandoned by Zhou descendants for the new capital at Luoyang. End of western Zhou. 16

The **state system of the western Zhou** was less centralized with small city-states and graded (feudal) rankings. Zhou lords and vassals were unified via bonds of kinship or marriage. The Zhou king was simultaneously the political leader and the paterfamilias of a large extended family. Over time the ties of the regional states to the Zhou loosened, and they acquired characteristics of their own. By the 8th century B.C.E., there were about 200 such states. There were also non-Zhou peoples on the borders and in the large **state of Chu** south of the Zhou in the Yangzi Delta. From the 9th century, there were interstate troubles and clashes with border peoples increasingly. 17

**Western Zhou culture, religion, and society** showed marked developments. Two major works describe this era, though both were written much later: *Zhouli (Rites of Zhou)*, traditionally believed to depict state organization, and *Yili (Propriety and Rites)*, depicting proper behavior for the cultivated gentleman. The *Zhouli* pictures a centralized feudal system with fiefs (or states) probably centered on walled towns where the lords lived, the surrounding terrain falling to their control. The “central states” (later the term for “China”) were considered the most culturally advanced. Lords paid personal homage to the Zhou king, offered military support, had their heir confirmed by the king, paid taxes, and kept local order. The king was responsible for peace in the entire realm, maintained through garrison forces throughout the land. There were countless bureaucratic titles which are now difficult to understand. Originally tied to Zhou religious beliefs, the idea of a “**mandate of heaven**” emerges; omnipotent heaven rules through the men upon whom it confers its mandate, and it can withdraw same. Victory over a dynasty in battle was used *ex post facto* to prove a change in heaven's will. Rulers were rigorously obliged to listen to able ministers, for governments ruled to keep peace and social order and for the welfare of the common people. To ignore the latter's feelings was conceived of as tantamount to betraying heaven. While Zhou elite society was organized around common ancestors, commoners lived in nuclear families. From early on, government service was considered the highest calling; **scholarship was revered and early became an avenue into public service**. Farmers were esteemed in theory as the basic producers. Social mobility in the western Zhou is still a moot point, but there was less “slavery” than in the Shang. The economy was based on settled agriculture of a manorial sort. Barter exchange remained, and hunting declined. There was also population growth through expansion and greater stress on agriculture. 18

## 770–256 B.C.E

The **EASTERN ZHOU** marked the end of centralized control by the Zhou king and the commencement of increasingly strong regional powers. The **state of Qin**, initially a semi-Sinic state like Chu, was given control over northern Shaanxi, homeland of the Zhou, and gradually became extremely strong in the west. The states of Jin in the north and Qi in the east (Shandong) were also quite powerful. 19

## c. 700 B.C.E

Qin, Jin, Qi, and the semi-Sinic state of Chu in the south were the most important regimes. Honors continued to be paid by all to the Zhou in Luoyang, but the latter had little real power. 20

## a. Schools of Classical Chinese Thought

In response to the chaotic, changing world of the late Spring and Autumn period and Warring States period, many schools (frequently dubbed the “Hundred Schools”) emerged usually surrounding an individual, an itinerant thinker seeking to offer advice to the feudal lords. The following schools are among the most famous: <sup>1</sup>

### 1. Confucianism

Confucians shared a belief in a heaven that guided all matters in the cosmos and that men were most happy when they were ruled in accordance with the **Way** (*dao*). To live a moral, virtuous life was to live in harmony with the *dao*. **Rites** (*li*) were manifestations of proper conduct. Proper behavior required wisdom gained through rigorous study, which all were capable of acquiring, by learning from the sage kings and through the lessons of history. All humankind and human society itself was perfectible. Each of the **five human relationships**—father-son, ruler-subject, brother-brother, husband-wife, and friend-friend—was nurtured by a distinct virtue, and all bonds were reciprocal. <sup>2</sup>

#### a. Confucius (551–479 B.C.E.)

Born Kong Qiu in the state of Lu (in Shandong), Confucius taught students about proper behavior in government and life, traveling widely to get a hearing at regional states but without success. His *Lunyu* (**Analects**), compiled by his disciples, is a collection of his thoughts and didactic stories usually in question-answer form with the disciples. Human beings were central to his thinking. He argued that people should seek to be the best they could, for goodness itself was its own reward. He stressed the role of the **gentleman** (*junzi*) or moral exemplar who should rule. He also placed emphasis on ritual as the embodiment of proper behavior. **The Way** was the correct sociomoral manner in which human life and politics need be conducted, and the *junzi* lived in full accord with it. “Do <sup>3</sup>

not do to others what you would not want others to do to you.” His government would be one ruled by moral men, not abstract laws; he was a self-proclaimed transmitter of the institutions and practices of the Duke of Zhou, not their creator.

## 5. [China, 221 B.C.E.–589 C.E.](#)

The year 221 B.C.E. marked the emergence of East Asia's first unified empire, that of the Qin in China, followed soon thereafter by the Han. Han expansionism in all directions, but especially to the northeast, south, and southeast, brought Chinese civilization to what is now Korea and Vietnam. There was still, at this time, minimal contact with Japan. The notion of an East Asian or Sinitic sphere began to take shape. Despite the breakup of the Han Empire in 220 C.E., this East Asian region continued to retain its overall form, and, in the subsequent Three Kingdoms period in China, Japan established contact with the state of Wei. The Period of Division from 220 C.E. through reunification of China in 589 marked the major second subdivision of the larger period. By the late 6th century, East Asia as a unit was firmly in place. <sup>1</sup>

### 221–206 B.C.E

**QIN DYNASTY** (or Qin Empire). Originally a feudal state to the west of the ruling Zhou house, the Qin had weathered a long history of military conflicts with non-Sinic tribes along its borders. In the process, it developed an ironhanded political tradition. It was the first truly unified Chinese dynasty to control a region all of which was considered to be “China.” Although the size and shape of “China” would change over the subsequent centuries, Qin laid the foundations of a government structure and bureaucratic administration for all later dynasties. <sup>2</sup>

### 247–210 B.C.E

The **reign of SHI HUANGDI**, “China's first unifier,” was an era in which the very idea of a Chinese dynasty as such came into being. The “feudal” decentralized form of the Zhou was transformed into a centralized governmental structure with a bureaucracy; former feudal states were abolished and incorporated into the new regime. The political <sup>3</sup>

map of China was redrawn into a system of districts and prefectures for levels of local administration with a strict chain of command. Precedents for this system can be found in the work of Guan Zhong (7th cent. B.C.E., state of Qi), Shen Buhai (d. 337 B.C.E., Han), and Long Shang (d. 338 B.C.E., Qin). Qin standardized weights, measures, coins, wheel-axle widths, even variant Chinese writing in an effort to overcome the plethora of regional systems in use till then. Qin also sought to standardize thought by ending the philosophical debates popular in the late Zhou, so as to forestall criticism of the Qin state and its tough policies.

### 221, 219, 213 B.C.E

Former great families and their dependents (numbering in the tens of thousands) were removed to the capital where they could be watched.

4

### 213 B.C.E

The **great book burning** proscribed all writings other than official state documents, texts on agriculture and medicine, and some writings on divination.

5

### 212 B.C.E

The **execution of 460 scholars** was ordered by the emperor in a draconian effort to standardize thought as he was doing with weights and measures. A new palace was constructed in the rebuilt capital at Xi'an, and Shi Huangdi made grand tours throughout his realm. He also began construction on his own huge tomb. He undertook massive public works projects: a network of uniform-width roads, better waterways, a canal linking the Yangzi River to south China so as to facilitate the movement of goods to armies in the south, and a linking of the walls built by some of the northern states along the northern border into the first **Great Wall of China**. All of these projects cost many lives. Harsh Qin laws, inspired by Legalism, supported these labor drives and the forced labor of criminals. There was also continued fighting with states south of the core Zhou homeland.

6

### 210 B.C.E

By the time of Shi Huangdi's death, Qin conquests in the south reached as far as the

7

Hanoi area of Vietnam. In the process, all former city walls were destroyed; all weapons were seized and melted down for the Qin imperial palace. Late in life, Shi Huangdi sought a Daoist elixir to attain immortality, and **Li Si** took over affairs of state. Shi Huangdi had earlier banished his eldest son and heir, leaving a will that he succeed him, but Li Si hid the will after the emperor's death, forged an edict demanding this son commit suicide, and placed the second son on the Qin throne.

### 208 B.C.E

Li Si was imprisoned by a fellow schemer and executed.

8

### 207 B.C.E

The weak second Qin emperor was poisoned.

9

### 206 B.C.E

Qin surrendered to rebel forces.

10

**Qin state and society** were built on a strict brand of Legalism. While this enabled the regime to rise rapidly, it ultimately undid it as well. In an effort to abolish the Zhou social order and nobility, Qin eliminated heredity as grounds for bureaucratic recruitment; only service to the state mattered, and only rewards and punishments were meted out. Qin also began using eunuchs more extensively than earlier as the emperor's personal attendants to watch over the harem. Conflicts between regional bureaucrats and eunuchs became endemic. Merchants were particularly despised, and many were banished to the far south. Legalism was respected at the expense of almost all other schools of Zhou thought.

11

### 207–206 B.C.E

The many rebellious groups that arose in late Qin boiled down to **Xiang Yu** (232–202 B.C.E.) of Chu noble stock and **Liu Bang** (c. 256–195 B.C.E.) of poor peasant stock. They had worked together to bring down the Qin. After the Qin capital surrendered, Xiang destroyed it, angering Liu who had accrued a popular following among the rebels for his evenhandedness. Xiang, a brilliant strategist, lost out in the struggle and committed suicide.

12

## 202 B.C.E.–9 C.E

The **FORMER OR WESTERN HAN DYNASTY** was founded by Liu Bang (posthumous temple name (Han) **Gaozu**, r. 202–195 B.C.E.), who had been Prince of Han since 206 B.C.E., the first time a peasant rose all the way to become emperor. He relied on advisers for civil and military matters and rewarded them accordingly; he relaxed Qin authoritarian controls of state, so that government could serve the populace. He realized that one “can conquer the realm on horseback, but one must dismount to rule.” Taxes were lowered on farmers. While the basic Qin bureaucratic structure was retained, Gaozu gave to his major supporters hereditary fiefs in the eastern half of the Han Empire, realizing that he could not maintain the Qin centralization and keep order.

## 6. [Korea, to 540 C.E.](#)

Korea is a mountainous peninsula 100–150 miles wide and about 400 miles long, extending southward from Manchuria toward the western tip of Japan. High mountains and the frigid Sea of Japan have inhibited the development of the east coast, but the milder climate and more suitable terrain of the west coast facing China and the south coast opposite Japan have made these regions the natural centers of Korean history. The **Yalu River** in the north forms a natural border with China. 1

Since prehistoric times, the people seem to have been closely related racially, linguistically, and culturally to the ancient peoples of Manchuria and Siberia as well as to Japan, but post-Neolithic civilization came in large measure from China. The oldest **Paleolithic** (c. 50,000–40,000 B.C.E.) remains from dig sites reveal that the people were cave dwellers and built homes, using fire for food and warmth. They were hunters and gatherers and fishermen and used stone tools. The earliest **Neolithic** remains (c. 4000 B.C.E.) indicate that the people had pottery and polished stone implements. The Korean Peninsula (c. 3000 B.C.E.) had numerous settlements. Its pottery was gray in color with “comb pattern” markings on the outside, similar to pottery in the Russian Maritime Province, in the Amur and Sungari River basins of Manchuria, and in Mongolia. Another pottery culture emerged with painted designs, from Manchuria (c. 1800 B.C.E.). 2

People lived near waterways and later lived inland in pit dwellings. They hunted and ate fish they caught. Later there was some agriculture, too. There may have been a settled, community life in small villages. Society was organized by clans, each with a clan totem (an animal), headed by a chief; and each clan community was autonomous in its own terrain. Extra-clan bonds were formed through marriage and contiguous territory. They had animistic religious beliefs; nature's objects were revered, some even deified. Most important was the Sun, which figured prominently in Korean myths of human births from eggs following exposure to it. 3

**Bronze** was first used with subsequent regional variations (c. 9th–8th cent.–4th cent. B.C.E.). Dolmen burial, bronze daggers, and mirrors have been excavated from the Korean bronze age. People lived on higher ground than in the Neolithic age. Rice agriculture was practiced alongside fishing and hunting. Bronze was employed as 4

weaponry and helped in the conquest of Neolithic communities. Walled-town states emerged as Bronze Age culture developed, and some community chiefs became more powerful than others, the embryos of Korean statelets.

In the 4th century B.C.E., six small states by river basins became sufficiently prominent that they were known even in China. The most prominent among them was **Old Chos**

**ŏn** in the basins of the Liao and Taedong Rivers (a major Bronze Age site) in northwest Korea. Rulers of Old Chos **ŏn** combined political and religious affairs, claiming descent from a sun deity. Old Chos **ŏn** later merged with other walled states into a “kingdom,” designating its leader a “king,” a clear Chinese borrowing. The use of **iron** came to northern Korea from Manchuria and was employed for plows and other farming tools, leading to the domestication of animals and increased agricultural production. Iron was also used for weaponry and horse-drawn vehicles, largely for the elite. People lived in pit dwellings. The influence of Chinese metal culture is evident from numerous Chinese coins unearthed at dig sites.

### c. 300 B.C.E

The Chinese state of Yan invaded and conquered Old Chos **ŏn**. It was subsequently taken over by the Qin.

### 206 B.C.E

Old Chos **ŏn** conquered by Liu Bang, rebellion followed.

### 194–180 B.C.E

Power was taken back by **Wiman**, a Chinese refugee forced to flee to Korea during the tumult of the time. Wiman established the state of **Chos** **ŏn** (or **Wiman Chos** **ŏn**) which was highly Sinified but not a Chinese colony.

### 109 B.C.E

As Chosŏn continued to conquer other Korean statelets, the Han dynasty under Wudi, beginning to fear a Chosŏn-Xiongnu alliance, launched an attack.

9

### 108 B.C.E

The Chosŏn capital at present-day P'yŏngyang fell, and the Han established three commanderies on former Chosŏn terrain: Luolang (Nangnang), Zhenpan (Chinbŏn), and Lintun (Imdun).

10

### 107 B.C.E

A fourth commandery at Xuantu (Hyŏndo) was established. Zhenpan and Lintun were dissolved in 82 B.C.E. and linked, respectively, with Luolang and Xuantu. Luolang, near P'yŏngyang, became effectively an outpost of Han civilization with Chinese civil and military officials and Chinese colonists. Other Korean states also acquired Chinese culture artifacts through Luolang.

11

Some of the other more important states along the Korean Peninsula follow. Puyŏ (Chinese: Fuyu), in the Sungari River basin of Manchuria, was first mentioned in the 4th century B.C.E. and then often from the 1st century C.E. It was seen as a threat to Wang Man's Xin dynasty. By 49 C.E. the Puyŏ ruler was calling himself "king," implying control over a confederated kingdom. Puyŏ sent emissaries to China with whom it was on good terms. It was later conquered by Koguryŏ. Koguryŏ is traditionally said to have been founded by Chumong in 37 B.C.E., south of Puyŏ. It was in the region of the Xuantu Commandery, but in 75 B.C.E. the latter was moved farther to the west into Manchuria due to local resistance and Koguryŏ's emergence as a confederated kingdom. It was led by a warrior aristocracy frequently at odds with the Chinese, and it thus acquired more through warfare than productive work, unlike Puyŏ. It began expanding in the early 1st century C.E. and fought against Wang Mang (12 C.E.); under King T'aejo (53–146?) it continued to spread south. Later in the 1st century it attacked also to the north. The **Chin** state was in the southern part of the peninsula, and it first appeared in records in the 2nd century B.C.E. It attempted contacts with Han China but was cut off from doing so by Wiman Chosŏn. Many Chinese refugees with knowledge of metalwork escaped to Chin. The use of iron in the south was important to social and

12

cultural development, for example, in the greater use of rice agriculture. Chin was eventually subdivided into three statelets: Mahan, Chinhan, and Puy<sup>!</sup>nhan (known collectively as Samhan or the “three Hans”).

In **society** at the time, agriculture was most important, supplemented by the raising of livestock and the domestication of animals. Kogury<sup>!</sup> retained much hunting. The village communities lived off farming and paid heavy taxes but were forbidden from participation in the military. The elite lived in walled towns apart from these peasant communities. The confederated kingdoms developed from the merging of these walled-town states. Kingship was hereditary from at least the late 2nd to early 3rd century C.E. in Puy<sup>!</sup> and Kogury<sup>!</sup>. Aristocratic relatives controlled the political and economic affairs of the states; the richer ones had large retinues of household slaves. Through this process, the confederated kingdoms became centralized aristocratic states.

There was a separation over time between **religion** and politics. The chief of ritual practice emerged with powers in his own quarters; shamanism continued to be practiced; there were various seasonal rituals; and festivals were open to all classes of populace. Royal burials were extravagant, and the numerous burial objects imply that ancestor worship was strong.

### c. 210 C.E

The **Gongson** family of southern Manchuria gained control over Luolang.

### c. 238

The **Wei dynasty** (one of the Three Kingdoms in China) captured Luolang.

### 244

Wei attacked Kogury<sup>!</sup> and took its capital; when it attacked again the next year, the Kogury<sup>!</sup> king fled.

### 313–668

**THE THREE KINGDOMS PERIOD** began after Koguryŏ under King Michŏn destroyed the Luolang Commandery (313), ending four centuries of Chinese control, and took the Taedong River area to its south, before confronting the rising state of **Paekche** in the southwest. The third state, **Silla**, was in the southeast. 18

## 342

The Xianbei state of **Yan** attacked Koguryŏ from the north, invaded the capital, took thousands of hostages, and burned down the imperial palace. 19

## 7. [Japan, to 527 C.E.](#)

### a. [Geography](#)

Japan proper consists of a group of islands running eastward from south of the Korean Peninsula for about 700 miles and then turning abruptly to the north for about the same distance, approaching the Asian mainland once more off the coast of the Russian Maritime Province. It is the most geographically isolated of the principal four East Asian countries. Although, like England, Japan is an island country off the coast of a continent, Japan's closest point to the mainland at the Straits of Tsushima is 115 miles, while the English Channel is only 21 miles. The cold Sea of Japan enclosed by this island chain gives the inner side of the archipelago a cold, damp climate, but because of the current from the Pacific Ocean off the southwest coast, that part of Japan enjoys a warm, temperate climate. 1

The four main islands of Japan are: **Honshu**, the largest; **Hokkaido**, the second largest and northernmost; **Kyushu**, at the southwestern extremity; and **Shikoku**, east of Kyushu. Among the many lesser islands, Tsushima and Iki are the most significant, for they lie in the straits between Japan and Korea. The three main plains are: **Kinai** (500 sq. mi.) at Osaka Bay, with Kyoto and Nara forming part of this area; the plain (600 sq. mi.) at **Ise Bay**; and the **Kanto** plain (5,000 sq. mi.) by Tokyo Bay. The Inland Sea, as an artery of communications, and northern and western Kyushu, which face the Asian mainland, are also important regions. 2

The rivers are short and shallow. Mountains cover almost the entire area and are especially high in central Honshu. Many are volcanic, and eruptions and earthquakes are frequent. The climate is generally temperate throughout the country, and rain is plentiful. Rice has been the principal crop since antiquity. 3

## **b. Ethnology**

The origin of the Japanese people is still debated. Archaeology and physical anthropology<sup>1</sup> indicate a close connection with the Koreans and Tungusic peoples of northeastern Asia. Linguistic evidence, also hotly debated, tends to support this. There may have been a land bridge connecting Japan with Korea in high antiquity, which would help explain the connections. The Japanese are a mixed Mongoloid race, similar to Chinese and Koreans, perhaps with some Southeast Asian contributions as well; the Ainu (a Caucasoidlike people) originally inhabited the northeastern half of Japan and possibly contributed to the racial mix of Japanese today.

### c. [Religion](#)

The early religion of Japan was a simple worship of the manifold manifestations of the powers of nature combined with a system of ritualistic observances, notable among which was an insistence on physical and ritual purity. The deities tended to become anthropomorphic and often merge with memories of past heroes. The Japanese were also affected by attempts to explain the origins of mankind and society in mythical terms. This eventually led to an organized mythology centering around the **Sun Goddess (Amaterasu mikami)** and her descendants, the imperial family. After the introduction of Buddhism, this combination of nature worship, ritualistic observances, and ancestor-honoring mythology was given the name of **Shint **.

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

### d. Early Civilization

Archaeological evidence indicates that in the Palaeolithic era the Japanese were hunters and gatherers and used some stone implements. The **Jōmon** (“cord script”) era (c. 10,500–300 B.C.E.), with various subdivisions, acquired its name from the designs on unearthed pottery datable to 10,000 B.C.E. The Jōmon people hunted, fished, and ate vegetables. They lived in sunken pit dwellings and perhaps in villages. Rice only began to be planted in Kyūshū late in the Jōmon era. Archaeologists have uncovered Jōmon sites from Hokkaidō all the way south to the Ryūkyū chain. Jōmon pot designs indicate magical religious beliefs and a variety of cults. Unearthed earrings and ornaments are similar to those discovered in Korea. <sup>1</sup>

### e. Japanese Historical Mythology

The first verifiable historical accounts of Japan occur in the Chinese dynastic histories of the 3rd century C.E. and picture western Japan, if not all Japan, as divided among a large number of small political units, among which feminine rule may not have been uncommon. Some of these statelets had direct relations with the Chinese colonies in Korea, and embassies from Japanese states to the Chinese capital are recorded from 57 to 266. However, Japanese mythology commences with a creation myth in which the brother-sister pair of deities, Izanagi and Izanami, descend to Earth, create the islands of Japan, and give birth to subsequent gods with various powers. These include Amatera-su and Susano- (the storm god). The latter two in turn copulate to produce more gods. Ninigi (grandson of the Sun Goddess) comes to Earth and settles in Kyushu, whence he also brings the **three sacred imperial regalia**: a bronze mirror (symbol of the sun), an iron sword, and a jeweled necklace. His grandson subsequently conquers as far north as the Kinki plain; there he creates the **Yamato state** in 660 B.C.E., taking the throne as **Emperor Jimmu**. The mythology hints at a successful battle for supremacy of the imperial clan with another clan in **Izumo** on the Sea of Japan. The Izumo clan apparently had a distinctive culture and rather close ties with Korea.

### c. 3rd Cent. B.C.E.–250 C.E

**Yayoi era.** Yayoi replaced Jomon, beginning in Kyushu and moving toward the Kantō plain where it arrived by the end of the 1st century B.C.E. Yayoi had more refined pottery, settled agriculture (with rice cultivation using sophisticated irrigation techniques), and use of bronze and iron implements. Bronze was employed mainly for symbolic items, such as mirrors, bells, and elegantly thin (ornamental) weapons. The technology to make these items probably came from China and Korea. The discovery of Former Han coins in Yayoi dig sites indicates contact with the mainland. Yayoi pottery was similar in certain ways to Korean pottery, but it also continued Jomon styles. By

the late Yayoi period, a new society altogether had come into existence. Rice paddy cultivation spread from Ky<sup>!</sup>sh<sup>!</sup> east, and there it needed more sophisticated irrigation methods because of the higher terrain. This emphasis on rice production probably affected social organization, bringing about more intensive farming, increasing wealth, population growth, and geographic expansion.

### c. 239 C.E

With the accession of the tenth ruler of Yamato, **Sujin**, Japanese records began to contain material of probable historical accuracy.

3

### c. 250–552

**Kofun (tumulus) era.** This was an extension of Yayoi culture, as Yayoi people began building huge tombs, traditionally considered to be for “emperors.” The largest and most elaborate tomb (120 ft. high) was for **Nintoku** (trad. r. 395–427) near present-day <sup>!</sup>saka. The tombs were often in a keyhole shape, some with moats. Buddhism later gradually eroded the tomb culture, which was eventually abandoned. Close ties between the state of **Kaya** (in Japanese, **Mimana**) in southeastern Korea and Kofun peoples of southwestern Japan continued until **Silla** conquered Kaya in 562.

4

Clay tomb figurines, known as *haniwa*, of human beings, houses, and animals were placed outside the tombs. Some figures of warriors on horseback with bronze or iron weapons indicate that this kind of warfare was engaged in. These are similar to Korean figurines of the time. The figurines depict daily life, including some female shamans. According to Chinese sources, the first queen, **Pimiko** (or Himiko, mid-3rd century), ruled the **state of Yamatai** with magic and was buried in a large tomb. There is still no conclusive evidence, however, for the location of Yamatai.

5

### c. 360

**Queen Jing**<sup>!</sup>, ruling in the name of her deceased husband and later in the name of her son, is traditionally believed to have led and won military victories over Korea. There probably were Japanese campaigns on the peninsula at this time, which is corroborated by Korean records. A Korean inscription of 391 indicates the presence of Japanese armies. From this time considerable Japanese influence in the Korean state of Kaya can be dated, but recent archaeological research indicates that Japan was probably not

6

receiving tribute from Kaya. Japanese influence in the state of **Paekche** also was growing. With the emerging strength of Silla, Japanese clout on the Korean Peninsula was on the wane. Via these Korean contacts, Japan opened her doors to continental culture and Chinese civilization. This also enabled direct contacts with China, initiated in 413.

**Society** in the Kofun era was organized around a social elite in *uji* lineages (tribal in structure), each of whom claimed common ancestry and worshipped a deity (*kami*) which fostered *uji* solidarity. *Uji* were led by a hereditary chief (*uji no kami*) who claimed direct descent from the *kami* and ruled as both priest and secular head. The chief and his immediate family often bore one of seven hereditary titles (*kabane*), which in time came to be grouped hierarchically. Beneath the *uji* were commoners or *be*, agricultural tillers who lived in villages and were organized by occupations (e.g., weavers, fishers, cloth weavers). The *uji* used the *be*, the economic fundament of the *uji* system. At the bottom of the social order were domestic servants and slaves. These *uji* communities may correspond to the large number of political groupings mentioned in the early Chinese sources about 3rd-century Japan. The Yamato state emerged from this structure through conquest and the like (c. 5th cent., although perhaps later), either in Ky sh  or in the Kinki area.

Over the course of time, a ranking order developed among *uji*, with the most powerful one claiming its *kami* to be descendant directly from the Sun Goddess. This is thought to be the origin of the **imperial clan**, at first little more than hegemon among the various *uji*. Its chief was the “emperor,” and its rule over the country very loose. The clans with the two most important hereditary titles, *omi* and *muraji*, were controlled through the  *omi* (great *omi*) and  *muraji* (great *muraji*).

The **importation of continental culture** came hand in hand with a large influx of Korean refugees to Japan and seriously shook the *uji* system. About the end of the 4th century, scribes able to read and write Chinese came to Japan from the Korean state of Paekche. This development indicates the official **adoption of Chinese writing**, though not the first knowledge of it in Japan. Although writing spread slowly, it was used early on for historical records. In imitation of China, there developed a greater centralization of power in the hands of the imperial *uji* and its ministers. Imperial lands were gradually extended, and imperial authority grew apace, eventually leading to a thorough political and economic reorganization of Japan on the China model.

A serious revolt in Ky<sup>!</sup>sh<sup>!</sup> prevented the crossing of an army to Korea to aid Kaya. Dissension among the Japanese and treachery among some officers on the peninsula reduced Japanese prestige there and opened the way for Silla's subsequent conquest of Kaya. (See [Japan, 552–1185](#))

## **D. Classical Greece and the Hellenistic World**

### **1. The Bronze Age, 3000–1200 B.C.E.**

#### **a. Geography**

**Greece** (ancient **Hellas**) is the extension of the mountain ranges of the Balkan Peninsula, with the **Ionian Sea** to the west and the **Aegean Sea** to the east. In antiquity, **northern Greece** comprised **Epirus**, **Amphilochia**, and **Acarnania** in the west, and **Macedonia**, the **Chalcidice** (whose three peninsulas jutted into the Aegean Sea), and **Thessaly** in the east. Central Greece began at the **Thermopylae Pass** and contained **Aetolia**, **Locris**, and **Phocis** in the west; **Boeotia** in the center; and **Attica** to the east, with the large island of **Euboea** lying off its eastern coast. After the narrow **Isthmus of Corinth** lay the **Peloponnese** or “Island of Pelops.” It had six main regions: the **Argolis**, just south of the Isthmus, **Achaea** along the Gulf of Corinth in the north, **Elis** in the west, **Messene** in the southwest, **Laconia** (or **Lacedaimon**) along the eastern coast, and **Arcadia** in its mountainous center. Off the west coast of Greece lay the **Ionian Islands: Corcyra** (Corfu), **Cephalonia**, and **Zacynthos**. The Aegean Sea was dotted with islands: in the north **Scyros**, **Lemnos**, and **Imbros** (between the Hellespont and Euboea), and **Thasos** and **Samothrace** off the Thracian coast; a string of islands along the coast of Asia Minor, of which the most important were **Lesbos**, **Chios**, **Samos**, and **Rhodes**; and the **Cyclades**, stretching southeast from Attica and Euboea and including **Melos**, **Delos**, **Paros**, **Naxos**, and **Thera**. Some fifty miles southeast of the Peloponnese lay **Crete**, the largest of the Aegean islands and its southern boundary. <sup>1</sup>

The climate of Greece is temperate. Rainfall sometimes exceeds forty inches per year in the west but is only about sixteen inches in the east, making drought a constant menace. It rarely freezes, and in the summer the midday heat can exceed 100° F. Only 18 percent of the land surface is arable, and over large areas of the country, the soil is thin and rocky, making the cultivation of grain difficult, though olives and grapes ripen well in the rainless summers. Ancient Greece was more heavily wooded and more fertile than today, as the country has suffered from severe deforestation and erosion of the topsoil. The mountainous terrain in Greece promoted the development of numerous small city-states. There were some large cities, but most Greeks lived in towns and big villages, walking <sup>2</sup>

out to their fields, rather than staying in small isolated hamlets. Since many areas had to import grain, seaborne commerce developed at an early stage. But the civilization of ancient Greece at no time depended primarily on manufacture or trade and was always basically agrarian.

## **b. [The Minoan Civilization](#)**

### **c. 3000–2200**

**EARLY MINOAN.** Around 2700 the Bronze Age began in Greece, apparently connected with an immigration from Asia Minor. Pottery was still hand-shaped, and settlement size was small. In the mid-third millennium a rapid rise in culture occurred; towns and cities emerged, as well as the first palaces. **There was contact with Egypt**, and the **votive double axes**, characteristic of later Minoan religion, appeared. An indigenous **Hieroglyphic Script** survives on seals and pottery, but it has not yet been deciphered. This earliest civilization in Crete is called **Minoan** after the legendary King Minos of Knossos. 1

### **c. 2200–1700**

**MIDDLE MINOAN I and II: The Rise of Crete.** The great palaces at **Knossos**, **Phaistos**, and **Mallia** were constructed during this period. These stone palaces, built asymmetrically around a large open court, contained large living quarters, storerooms for goods and products, and toilets superior to any in Europe before modern times. A road system connected Knossos with the plain of Phaestus. Wheel-thrown pottery was perfected, and fine examples were made as thin as an eggshell. A new script called **Linear A** replaced the Hieroglyphic Script, but except for the numeral system and a few pictographic signs, it cannot be read. Conclusions about Minoan culture, particularly government and religion, are necessarily conjectures based on archaeology and later Greek legends. The king was evidently the chief figure in religious worship, and the palace, a seat of religious cults. What appears to be a **Mother Goddess**, associated with snakes, is widely represented. To judge from wall paintings, the Minoans were devoted to sports, including hazardous bull jumping. Scenes of war are rare, and the towns were at all times unwallled. The Minoan palaces were almost all destroyed toward the end of the period, but whether the destruction occurred through war or natural causes (such as an earthquake) is unknown. 2

### c. 1700–1450

MIDDLE MINOAN III–LATE MINOAN I: **The “Thalassocracy” of Minos.** The art of Minoan Crete reached a high point in this period, and the earliest wall frescoes appear at this time. In the 18th and 17th centuries, Crete had extensive trade relations with Ugarit in Syria and Byblos in Phoenicia. After 1600, this trade declined, but Minoan influence strengthened over the Cyclades, and there was close contact with Egypt. To what extent these changing trade patterns reflect political events is unknown, but legend has Crete's **King Minos** founding a sea empire (**thalassocracy**). Both public and private building reflects great wealth. At the end of this period there was another widespread destruction throughout Crete. <sup>3</sup>

### c. 1450–1125

**Late Minoan III: Mycenaean Crete.** Knossos was the only Cretan palace to be rebuilt, and it was now ruled by Greek-speaking Mycenaeans. Remains in graves and pottery indicate considerable numbers of Greeks moved to Crete. Clay tablets were inscribed with a new type of script, obviously derived from Linear A and known as **Linear B**. In 1952, **Michael Ventris** proved that the Linear B texts were written in Greek. They revealed a highly bureaucratic state centered in the palace of Knossos. A rapid decline in Mycenaean Crete came at the same time as that on the mainland. <sup>4</sup>

## **c. Mainland Greece: The Early and Middle Helladic Periods**

### **c. 2800–2500**

**Early Helladic I.** Around 2800, Greece, like Crete, seems to have been invaded from northwest Asia Minor. The beginning of the Bronze Age corresponds roughly with this invasion. Probably the immigrants were the **Pre-Hellenic** population of Greece who left the non-Indo-European place names in Greece and elsewhere ending in *-ssos* (e.g., Knossos and Parnassos), and in *-inth* (Corinth). New villages sprang up throughout Greece, and there is evidence of trade with the Aegean Islands and especially Crete. Northern Greece and Thessaly were not as advanced in material culture as the southern mainland. 1

### **c. 2500–2200**

**Early Helladic II.** Houses in this period were larger and some contained large storage facilities for grain. At Lerna there are remains of what may have been a palace (**House of Tiles**), indicating some sort of central authority. Large settlements at Zygouries and Tiryns, with gold and silver jewelry buried in tombs, suggest a rising prosperity. 2

### **c. 2200–1900**

**Early Helladic III.** Signs of massive destruction are present at almost all Early Helladic period III sites. A new material culture was introduced, characterized by **Minyan Ware** (also called Orchomenos ware), a fine, wheel-made pottery. Whether the break in material culture represents the invasion of **Greek-speakers** into the region is debated. Scholars date the intrusion of the Greeks from as early as 2200 to as late as 1500 B.C.E., though most agree that the Greeks seem to have settled for some time in Thessaly before moving into the rest of the peninsula. In classical times, Greek was divided into three dialect groups: **Aeolian**, **Ionian**, and **Dorian**. Originally thought to predate the Greek 3

invasion, some scholars believe the dialect division occurred after the Greeks took over the peninsula.

### c. 1900–1600

**Middle Helladic.** A rapid rise in wealth and sophistication is associated with a palace-based civilization, which developed under Minoan influence. Kings and other royal persons were buried in shaft graves within a sacred precinct. One such grave at Mycenae, called **Circle B**, contained gold and silver objects on a small scale. In this period, Mycenaean culture was centered in the eastern Peloponnese and central Greece.

## **d. The Late Helladic Period: The Mycenaean Age**

### **c. 1600–1500**

**Late Helladic I: The Rise of Mycenaean culture.** The shaft-grave culture continued but became wealthier. The shaft graves in **Circle A** (found earlier but dating later than Circle B) contained a remarkable 80 pounds of gold objects. Mycenaean architecture, called **Cyclopean**, is characterized by use of enormous stones. The rectangular **megaron** was now the typical private building, consisting of a portico (*aithousa*), vestibule (*prodomos*), and main room (*domos*). The largest and most important settlements were **Mycenae** and **Tiryns**. Major centers existed at **Orchomenos** and **Thebes** in Boeotia. Lake Copais, which covered a large area of western Boeotia, was drained during the Mycenaean period, providing fertile land. The fortress at Gla was built to protect the region. **Athens** was an important city and Cyclopean fortifications were built on the Acropolis. **Pylos** was one of the few early Mycenaean sites in western Greece. <sup>1</sup>

### **c. 1500–1400**

**Late Helladic II: The “Tholos-Tomb” Dynasty.** Around 1500 the Mycenaean burial style changed from the shaft grave to circular rock-lined chambers cut out of hillsides: so-called **tholoi** or “beehive” tombs. After c. 1450, the Mycenaeans conquered Crete and established themselves at Knossos. Evidence of Mycenaean presence is found in the Cyclades, Rhodes, Sicily, and Italy, although where political control ended and trade began is unknown. The prosperity of Mycenaean Greece was due largely to an expansion of trade: Egypt, Babylonia, Assyria, and the Hittite Empire were all ruled by wealthy palace-based governments, which fostered international exchange. <sup>2</sup>

### **c. 1400–1200**

**Late Helladic III: The Height of the Mycenaean Age.** After 1400, the Mycenaean <sup>3</sup>

culture spread throughout Greece, eventually penetrating virtually the entire mainland. The fine pottery found even in nonroyal tombs suggests a general prosperity, and the most impressive Mycenaean architecture dates to the 14th century. Around 1350, the citadel at **Mycenae** was enlarged, and an immense 23-foot-thick wall was constructed of Cyclopean blocks, which included the famous **Lion Gate**. The royal palace at the summit of the acropolis contained a throne room, living apartments, and a shrine. Its walls were covered with painted frescoes showing military scenes. Similar large palaces from this period were found at **Tiryns** and **Pylos**. The largest beehive tombs date to after 1300: the so-called “Treasuries” of Atreus at Mycenae and Minyas at Orchomenos. (The buildings have no connection to these mythical characters.) **Linear B** tablets have been found at Pylos, Mycenae, and Thebes on the mainland, as well as at Knossos in Crete. While limited to accounts and inventories, they give important information on Mycenaean language, government, economy, and religion. The king, or **wanax**, exercised supreme authority, followed by the *lawagetas*, or Leader of the People (or Army). There were a series of lower officials, including the *basileus*, later the Greek word for king. A special class of priests existed (unlike in the Classical period), as well as a palace economy with a complex division of labor, with numerous slaves. The names of later Greek gods, such as Zeus, Hera, Poseidon, Hermes, and Athena, were already present. After 1300 Mycenaean trade with Egypt and Syria declined, although the reasons for this are unclear.

### c. 1200–1100

**Late Helladic C: The Decline of Mycenae.** Around 1230 most of the large Mycenaean cities, with the exception of Athens and Mycenae itself, were destroyed. Texts from Pylos, written just before the city's destruction, discuss military dispositions against an apparent invasion. Around the same time, the export of Mycenaean pottery to Syria and Egypt ceased completely. A number of factors probably brought Mycenaean culture to an end, but a major one was probably the movement of the **Sea Peoples**, which affected the Middle East at the same time (See [c. 1200](#)).

## **e. The Greeks in Asia Minor**

### **c. 1500–1200**

**The Ahhiyawa.** Hittite records mention the **Ahhiyawa**, who lived in, or raided, western Asia Minor. Some scholars have connected the Ahhiyawa with the Achaeans, Homer's name for the Greeks. Attacks on Cyprus by Attarissyas the Ahhiyawan, reported by the Hittites, may refer to the activities of Atreus, the father of Agamemnon, referred to in Greek mythology. <sup>1</sup>

### **c. 1200**

**The Trojan War.** **Troy**, located where the Aegean meets the Hellespont, was inhabited after 2000 by people who shared cultural characteristics with the population on the Greek mainland. There are nine levels of habitation, from the Early Bronze Age to Roman times, numbered I to IX. Around 1300 Troy VI was destroyed by an earthquake and replaced by Troy VIIa, generally identified with the city of the Trojan War celebrated in Greek mythology. Troy VIIa was destroyed by fire c. 1200. <sup>2</sup>

## **2. The Dark Ages, 1200–800 B.C.E.**

### **a. Economy, Technology, Society, and Culture**

The Greek **Dark Ages** were characterized by a gradual, though severe, decline in material culture. Mycenaean pottery styles were gradually replaced by proto-Geometric ware, cremation supplanted burial, and the appearance of **long pins** and **spectacle-fibula** suggest a new style of dress. International trade, monumental building, and the size of the Greek population declined considerably from Mycenaean times. There is no evidence for writing, and cities dramatically shrank in size. The new technology introduced in the Dark Ages was mainly military: iron weapons and tools appeared, and the slashing sword and throwing spear were introduced. In the 11th or 10th century, cavalry replaced the chariots of the Bronze Age. The later Greeks saw this period as a **Heroic Age**, and much of our information about Greek society and culture in the Dark Ages comes from legends preserved in later literature. The exploits of these heroes formed three “cycles”: The **Theban Cycle**, supposedly occurring two generations before the Trojan War and concerning **Oedipus** and his family; the **Cycle of Heracles** and his sons, the **Heraclidae**; and, the **Trojan Cycle**, the war of the Achaeans against Troy, led by **Agamemnon**, **Achilles**, and **Odysseus**. These legends are preserved in Attic drama of the fifth century B.C.E. and in the epic poems called the *Iliad* and the *Odyssey*. The epics were ascribed to the blind poet, **Homer**, who probably lived sometime between 850 and 650 B.C.E. Both works may have been composed by the same individual, but it is more likely that the *Iliad* predates the *Odyssey* by about a century. The poems contain some reliable traditions dating back to the Mycenaean Age: the use of chariots and bronze weapons, large royal palaces, and the **Catalog of Ships** (*Iliad* 2.484 ff), which reflects the importance of Mycenaean, not Dark Age, states. Other elements clearly belong to the 10th and 9th centuries: the use of the dipylon or “figure 8” shield, the ritual gift of tripods, and the cremation of the dead. In both epics, the Mycenaean world and the Dark Ages are blended together, and it is difficult to distinguish the date of various elements of the poems.

In the Dark Ages, Greek states were considerably smaller and less wealthy than in Mycenaean times, though the basic unit is already the walled *polis* or city-state. Social

organization was tribal: Ionians, for example, were grouped into four tribes. Within the tribes there were “brotherhoods” (*phratriai*) composed of members sufficiently related to each other to certify legitimate birth and citizenship. The landless day-laborers (*thetes*) were at the bottom of the social ladder, below even slaves. Most of the people (*demos*) were free peasants, who might be convened in the assembly place (*agora*) to listen to their superiors but expressed their wishes only by silence or applause. There was no voting and it was not normal for a commoner to speak in the assembly. **An aristocratic warrior class**, based on birth, wealth, and military prowess, formed clans (*gene*), which maintained relations with each other through arranged marriages and guest-friendship (*xenia*), involving the ritual exchange of gifts. The leaders of the aristocratic clans met in a council (*boule*) and advised the king, now called a **basileus** instead of **wanax**. Royal powers were not absolute but depended on the consent of the nobles and clan leaders. Religion was family-based and centered around the *hestia*, or hearth. Zeus was the king of the gods, but the other gods sat in council, gave advice, and even sometimes opposed Zeus. The gods had local associations: Hera with Argos, Sparta, and Mycenae; Athena with Athens and Troy; Aphrodite with Paphos in Cyprus; and Ares with Thrace.

## **b. The Dorian Invasion**

In the 12th century, the power vacuum created by the decline of Mycenaean civilization was filled by Greeks speaking the **Dorian** dialect, who invaded the peninsula from the north. Greek tradition characterized this movement as the “return” of the sons of Heracles (**Heraclidae**): Hyllus, Dymas, and Pamphylas, who were the eponymous founders of the three Dorian tribes. The Dorians originally came from southern Macedonia, though the Greeks derived their name from the city of **Doris** in central Greece. It may be that the Dorians settled there for some time before moving into the **Peloponnese**. The Argolis, Lacedaemon, and Messenia were conquered, and the Achaeans and Arcadians pushed into corners of the peninsula. Other Dorian groups attacked the Aegean Islands, and conquered Thera, Melos, and the central portion of Crete. A few cities in Asia Minor (principally, Halicarnassus and Cnidos) were founded or cofounded by Dorians. The Dorian invasion corresponded with the start of the **Iron Age** in Greece, but despite the introduction of this superior metal, culture as a whole declined in Greece as a result of the Dorian invasion. <sup>1</sup>

### **c. The Aeolian and Ionian Migrations and the Greek Renaissance**

#### **GREEK CITY STATES (MAP)**

The speakers of the Aeolian and Ionian dialects were pushed out of their original territories by the Dorian invaders. The Aeolians settled on the northwest coast of Asia Minor and on the islands of Tenedos and Lesbos. This **Aeolian migration** seems to have started around 1130 and to have lasted until 1000 or even later. Athens resisted the Dorians, though in the 11th and 10th centuries there were changes in Athenian burial customs, dress, and pottery style, which suggests the arrival of new peoples. These were probably Ionian and perhaps Mycenaean refugees fleeing the Dorians. Athens also formed a base for an **Ionian migration** to the east. The Ionians invaded the western coast of Asia Minor, which was subsequently called **Ionia**, taking over the existing cities of Colophon, Miletus, Smyrna, Myus, Priene, Ephesus, Phocaea, and others. The Cyclades were also settled by Ionians in this period. The spread of **proto-Geometric** pottery from Athens to all over the Aegean world in the 10th century is probably connected to this Ionian migration. The Ionians shared common religious festivals, particularly the **Panionium** and Delian festival of Apollo.

1

#### **900–800 B.C.E. the Greek Renaissance**

After 900, eastern (“orientalizing”) influence resulted in the development of the **proto-Corinthian** and **proto-Attic** pottery styles. The stiffness of geometric design gave way to lively representations of humans and animals: color reappeared; ornament, often symmetrical, was vigorous. A whole new set of vase shapes was invented. Spread by the growing trade with distant places, then by colonies, proto-Corinthian became the luxury pottery of the Mediterranean world. Grave sites at Athens indicate a remarkably high rate

2

of population increase in the 9th century.

### **3. The Archaic Period, 800–510 B.C.E.**

#### **a. Economy, Technology, Society, and Culture**

The Greek diet was simple: bread, cheese, vegetables, olive oil, wine, and occasionally fish or pork. Beef was seldom eaten, and sheep and goats were kept mainly for hides, wool, and milk. Most farms were small, and slave labor was apparently rarely used in agriculture in the Archaic period. By 800 the **classical polis** was beginning to emerge, the city-state with its own central palace, territory, government, and loyal citizens (along with many noncitizen inhabitants). Many cities, including Athens, were dependent on the **importation of grain**, particularly from the Black Sea region. The main centers for **manufacture** were Athens, famous for its painted vases; Corinth; Sicyon; Argos and Chalcis, noted for metal-work; and Miletus and Samos, which made furniture and textiles. **Mining** was extensive: marble came from Mt. Pentelicus and Paros; silver, from Mt. Laurium and Mt. Pangaeus; gold, from Mt. Pangaeus and Thasos; iron, from Laconia; and copper, from Cyprus. Rough terrain and poor roads made overland travel difficult, so most **commerce** was by sea. The introduction of **coined money** from Lydia in the 7th century facilitated trade and capital investment but also increased debt. The two prominent standards of currency were the **Euboean** and the **Aeginetan**. By c. 750 B.C.E. the Greeks had borrowed the **Phoenician alphabet**, adapted certain letters to represent vowels, and added others for sounds found only in Greek. Marble temples appeared, and the three architectural orders—**Doric, Ionic, and Aeolic**—developed. **Sculpture** began representing the human body in the nude. Marble statues were generally painted in lifelike colors. Early Greek painting is known mainly from decorated pottery: red-figured vases replaced black-figured c. 500 B.C.E. 1

In the early Archaic period, **aristocratic oligarchies** generally replaced Dark Age monarchies, except in Sparta and Macedonia. Later, ambitious individuals overthrew the constituted governments of many cities and established themselves as **tyrants**. Beginning c. 760 B.C.E., Greek cities started founding colonies, which eventually occupied much of the coastline of both the Mediterranean and Black Seas. Colonists, led by a founder, or **oikistes**, generally adopted the religious cults and constitution of the “mother city” (**metropolis**) but were politically independent. In the 7th century, **hoplite warfare** 2

developed. Hoplites were citizen soldiers who provided their own equipment: a round bronze shield (*hoplon*), a bronze helmet with cheek and nose guards, and a nine-foot spear. They fought in a **phalanx**, shoulder-to-shoulder in line, facing the enemy with a wall of shields and spears and marching in step to the music of flutes. **Athletics** was an important element of Greek culture. There were major international festivals which involved athletic contest, such as the **Pythian Games** at Delphi and the **Olympian Games**, starting (traditionally) in 776 and held every four years.

The Boeotian poet **Hesiod** (c. 700) wrote the **Theogony**, on the genealogy of the gods, and the **Works and Days**, giving advice on proper living. Other early poets included the Ionian **Archilochus** (c. 700), the Aeolians **Alcaeus** and **Sappho** (c. 600), and the Dorians **Stesichorus** (630–555) and **Arion** (c. 600). **Lyric poetry** was exemplified by **Alcman** (c. 654–611), **Anacreon** (born c. 570), **Simonides** (c. 556–468), **Pindar** (518–442), and **Bacchylides** (c. 480). Tragic drama grew out of cultic songs, originally performed by a chorus at religious festivals. The poet **Thespis** first introduced a speaking actor into a tragedy in 534 B.C.E. Greek philosophy began with **Thales** (c. 600), who was said, probably falsely, to have predicted a solar eclipse in 585 B.C.E. **Anaximenes** (c. 600) and **Anaximander** (c. 610–540) and other early philosophers started to seek knowledge for its own sake and to develop rational explanations for natural phenomena. The so-called **logographoi** wrote local histories, the best example being **Hecataeus** of Miletus (c. 500).

The normal age for **marriage** in Greece was 30 for men and 15–16 for women. Most marriages were arranged. **Women took little part in public life and, in some cases, had no more legal rights than slaves.** Most citizen women spent their lives secluded in women's quarters. Spartan women were the exception and received the same physical training as men. At least one woman poet wrote in the Archaic period: **Sappho of Lesbos.**

## **b. Asia Minor and the Aegean Islands**

### **c. 800–680**

**Rise of the Ionian cities.** The Ionian cities of Asia Minor were the wealthiest and most advanced Greek city-states in Archaic times and served as conduits for Near Eastern technology and culture entering Greece. The Ionian cities, particularly Miletus and Phocaea, were also leaders in the colonization movement. 1

#### **757**

Miletus colonized **Cyzicus** on the southern shore of the Propontus. 2

#### **680–652**

**Beginnings of Lydian Conflict.** King Gyges turned Lydia into the leading power in Asia Minor. He frequently attacked the Ionian cities but was unable to conquer them. 3

#### **675**

The Milesians send a colony to **Abydos** on the Hellespont. 4

#### **630**

The southern Aegean island of Thera colonized **Cyrene** in North Africa. 5

## 610

With permission of the Pharaoh **Psammetichus I**, Miletus founded a trading post in the Nile Delta, which developed into the Greek city of **Naucratis** (See [Economy, Society, and Culture](#)). 6

## 609–560

**Alyattes** of Lydia conquered Smyrna, but Miletus and Clazomenae continued to resist. Ionian culture reached its height, particularly in **philosophy: Thales, Anaximenes, and Anaximander** were all active at Miletus. 7

## 600

Phocaea settled **Massalia** (Marseilles) on the southern coast of Gaul. 8

## 560–546

The Lydian king **Croesus** conquered Ionia, though Miletus maintained its privileged position. Tyrants ruled most of the cities and paid tribute to Lydia. 9

## 546–499

**Persian rule.** **Cyrus** defeated Croesus in 546. The Persian general Harpagus subdued Ionia and installed pro-Persian tyrants. Miletus continued to enjoy a favored status. The Ionian cities were placed together with Lydia and Mysia in a single satrapy and ruled from **Sardis**. 10

## c. [Sparta and the Peloponnese](#)

### c. 900–700

**The Rise of Sparta.** In the 9th century, four or five Laconian villages joined to form the city of **Sparta**, with two royal dynasties, the **Agiads** and the **Eurypontids**, reigning jointly. Between 800 and 730, Sparta conquered the rest of Laconia. Around the same time, the Spartans reorganized their constitution, introducing lifelong military training, a rigid oligarchic government, and a code of absolute obedience and austerity. At the age of seven, boys were taken from their parents for military training. Men of military age lived away from their wives in barracks and ate at common messes (*syssitia*). Five tribes replaced the three Dorian ones, each providing a regiment (*lochos*) for the army. A council (**Gerousia**) composed of 28 elders and the two kings proposed legislation, which was then approved by the assembly (**Apella**), made up of adult male citizens (**spartiates**). The chief magistrates (**ephors**), eventually five in number, had wide powers. The non-Spartan Laconians, called **Perioikoi**, tithed to the Spartans and were drafted into the army but had no vote in the assembly. The introduction of this constitution was later ascribed to **Lycurgus**, though some scholars doubt his existence. <sup>1</sup>

### c. 735–715

**The First Messenian War.** Sparta, led by **King Theopompus** (c. 720–675), defeated Messenia and divided it into allotments (*klaroi*), rent which supported the individual Spartiates, leaving them free to train for war. The Spartans turned the Messenians into serfs (*helots*) who worked the land for them. <sup>2</sup>

Corinth, ruled by an oligarchy under the **Bacchiadae** clan, founded two colonies: one at **Syracuse** in Sicily and another on the island of Corcyra (modern Corfu) in northwestern Greece. 3

728

The Megarians colonized **Megara Hyblaea** in Sicily. 4

720

Achaea and Troezen jointly founded a colony at **Sybaris** in southern Italy, which became proverbial for its wealth and opulence. 5

c. 710

Achaea settled the colony of **Croton** on the “toe” of Italy. 6

706

Sparta founded its only colony, **Taras** (Tarentum), in southern Italy (See [706](#)). 7

c. 680

King **Pheidon of Argos** defeated Sparta and Tegea in the **Battle of Hysiae** (669). He later overcame Epidaurus and Athens, and Argos became the leading Greek power. Pheidon may have introduced coinage into mainland Greece, perhaps with a mint at Aegina. 8

676

Megara colonized **Chalcedon** on the Asiatic side of the Hellespont. It was called “the city of the blind,” because the settlers missed a better site at Byzantium on the European shore. 9

## 660

Megara founded a colony at **Byzantium**.

10

## 657

**The Cypselid Tyranny in Corinth.** Cypselus (657–625) overthrew the Bacchiad oligarchy and made himself tyrant of Corinth.

## d. [Athens](#)

### c. 800–680

Athens gradually unified Attica by conquest and by **synoecism**, the process of merging with smaller towns. The Athenians were divided into four tribes (*phylai*) made up of phratries. Each phratry was divided into two groups: the clansmen (*gennetai*), made up of the aristocratic *eupatridae*, and the guildsmen (*orgeones*), who practiced trade and manufacture. Where poor farmers and serfs (*hektemoroi*) were enrolled is unclear. For administrative purposes, each tribe was divided into 12 *naucrariai*, each providing one ship for the navy. The army was provided by two of three classes: the knights (**hippeis**), wealthy aristocrats who made up the cavalry, and the hoplite class (**zeugitai**) who provided their own arms and made up the infantry. The **thetes**, who had no property, did no military service. The **Medonidae** ruled as kings, but during the 8th and 7th centuries, the aristocrats gradually usurped royal power. The king's military functions were absorbed by the war archon (**polemarch**) and his civil duties were absorbed by a civil archon (*archon eponymos*) after whom the year was named. The kingship retained only religious significance. <sup>1</sup>

### 683

Athens abolished the monarchy completely. The king's religious duties were now performed by a king archon (*archon basileus*). Six *thesmothetai* were created to be judges and interpreters of law, and these officials along with the civil archon, the king archon and the polemarch were known as the **Nine Archons**. They were chosen each year from among the aristocracy by the **Areopagus**, the council of ruling aristocrats, which ran the state. The important priesthoods were hereditary in aristocratic families. The **Ecclesia**, or assembly of citizens, had little power. <sup>2</sup>

### 623

**Cylon** attempted to establish a **tyranny** in Athens, but the people did not support him. Cylon himself escaped, but many of his followers were massacred by Megacles and the aristocratic Alcmaeonid clan while in a religious sanctuary. This impious slaughter gave rise to the so-called “**Curse of the Alcmaeonidae.**”

3

## 628–620

According to tradition, **Draco**, one of the *thesmothetai*, issued Athens' first written laws. The “Draconian” penalties were most severe—death in most cases.

4

## c. 600

Athens seized **Sigeum** from Mytilene. The resulting war was arbitrated around 590 by the tyrant **Periander** of Corinth in Athens' ofavor.

5

## 594–591

**THE REFORMS OF SOLON.** The introduction of **coined money**, and high rates of interest, led to increased indebtedness. Debt slavery in turn brought civil unrest. To solve the crisis, **Solon** was made sole archon in 595, with special legislative powers. In 592, he was appointed “reformer of the constitution.” His **Seisachtheia** (“shaking-off-of-burdens”) canceled all debts on land, banned debt slavery, and freed all debt slaves. Those who had been sold abroad were redeemed at state expense. Solon replaced Draco's laws, except those on homicide, with a milder code. A popular court, the **heliaea**, was created, to which the citizens could appeal the decisions of the magistrates. Solon created a Council (*boule*) of 400 (100 from each tribe), which proposed laws to the assembly (*ecclesia*). The assembly could still only accept or reject the council's proposals but now elected all the magistrates. The Areopagus council continued, but in a reduced capacity. Four classes of citizens, based on wealth, were established: (1) the **pentacosimedimnoi** had annual revenues of 500 bushels (*medimnoi*) of grain or measures (*metretai*) of wine or olive oil, (2) the *hippeis*, with revenues of 300 bushels or measures, (3) the *zeugitai*, with 200, and (4) the *thetes* who made up the rest of the citizen body. At some later date, these classes were redefined in terms of money and based on property rather than income. Every member of the first two classes was eligible for the archonships. Since ex-archons automatically joined the Areopagus council, it ceased to be exclusively aristocratic. The first three property classes could run for the

6

lower magistracies, but the fourth class, the lowest and largest, could participate only in the *heliaea* court and the assembly. Solon's reforms were important but did not solve the underlying class tensions, perhaps because no provision was made to supply freed slaves with land or to relieve the burdens of the serfs (*hektemoroi*, “sixth-parters”). Unlike other contemporary political leaders, Solon did not try to become a tyrant. After making his reforms, he left Athens for ten years, traveling around the Mediterranean. Factional fighting broke out immediately after Solon's departure between two parties: the rich aristocrats of the plain (*pediakoi*) led by **Lycurgus**, and the merchants and craftsmen (*paralioi*) headed by **Megacles** the Alcmaeonid.

### c. 565

**Peisistratus**, a relative of Solon, acquired fame by conquering the island of Salamis from Megara. He organized a new party, the *diakrioi*, based in the hill country of north Attica, made up of small farmers, shepherds, artisans, and the poor.

7

### 561–510

#### THE TYRANNY OF THE PEISISTRATIDS.

8

### 561–527

**The Rule of Peisistratus.** In 561, Peisistratus made himself tyrant of Athens but shortly thereafter was driven out of the city by Megacles and Lycurgus. In 560/559, allying himself with Megacles, he was restored to power, only to be expelled again in 556. Peisistratus spent some years in Thrace, gaining wealth from mines he owned there. In 546, he was again made tyrant with help from Thessaly and from **Lygdamis**, the tyrant of Naxos. Peisistratus exiled his opponents, confiscated their lands, and distributed them to the poor, so that the **hektemoroi** now became landowners. Peisistratus encouraged industry and trade and introduced the popular **cult of Dionysus**, which reduced the power of the aristocrats' hereditary priesthods. He sent **Miltiades** to establish a tyranny over the Thracian Chersonese, which controlled the passage between Europe and Asia. Peisistratus also “purified” the island of Delos, the center of an Ionian religious league, which extended his political control into the Cyclades. At home, Peisistratus kept the form of the Solonian constitution, while holding all real power.

9

## 527

Upon Peisistratus's death, his sons **Hippias** and **Hipparchus** succeeded to the tyranny. <sup>10</sup>

## 519

Athens defeated Thebes and prevented it from forcing **Plataea** into the Boeotian League. <sup>11</sup>

## **e. Central and Northern Greece**

### **c. 800**

**Chalcis** and **Eretria**, the two largest cities on **Euboea**, were major powers in the Archaic period, and Euboean coinage, weights, and measures were used throughout the Greek world. 1

### **c. 775**

Chalcis, Eretria, and the Aeolian city of Cyme jointly settled a colony on the island of **Pithecusae** (Ischia) in the Bay of Naples. 2

### **757**

These same cities, along with the Pithecusans, established a colony at **Cumae** on the Italian mainland. 3

### **c. 730**

Eretria settled colonies at **Mende** in the Chalcidice and at **Methone** and **Dicaea** in Macedonia. 4

### **c. 720**

Chalcidian colonists established **Rhegium** in southern Italy. 5

### c. 710

Chalcis colonized **Torone** in the Chalcidice and subsequently founded some 30 small colonies on the peninsula.

6

### c. 700–500

**THE TAGEIA OF THESSALY.** Before 700, Thessaly was organized into four **tetrads**, each ruled by a **tetrarch**. In the 7th century, Aleuas of Larissa organized the **Thessalian League** and led it as **tagos**, or general. The *tagos* was an elected office but generally held by a member of the **Aleuadae** clan. A federal assembly levied taxes and troops, and until the 6th century the Thessalian League possessed the strongest army in Greece. The League's loose organization, however, prevented Thessaly from playing a leading political role, though it dominated the **Amphictyony of Anthela**, a religious league which, by 600, included all the city-states of central Greece.

7

### c. 700

Chalcis, supported by Corinth, Samos, and Thessaly, fought the **Lelantine War** against Eretria, Aegina, Miletus, and Megara, over the rich Lelantine plain. Chalcis and its allies were victorious.

8

### c. 640

Perdiccas I of the Argead dynasty conquered the Macedonian plain and established a capital at Aegae (Vergina). Macedon was inhabited by a variety of ethnic groups, including Greeks, Illyrians, and Thracians. Whether the Macedonians themselves spoke a dialect of Greek or a separate language is a hotly debated subject. The royal family and the aristocracy, in any case, became increasingly Hellenized.

9

### c. 590

**THE FIRST SACRED WAR.** **Crisa**, in whose territory Delphi lay, started levying tolls on visitors to the shrine of Apollo. The **Amphictyony of Anthela**, under Thessaly's leadership, and with help from Sicyon and Athens, declared war. Crisa was defeated and

10

demolished. The Amphictyony took over the administration of Delphi and moved its headquarters there. Athens and the Peloponnesian Dorians were admitted as members.

### c. 550

**THE BOEOTIAN LEAGUE.** Thebes formed the **Boeotian League** and began subordinating the smaller states in the region. After a long struggle, the city of **Orchomenos** was defeated and forced to join the league.

## f. [Sicily and Magna Graecia](#)

c. 800

Before the Greeks arrived, **Sicans**, **Sicels**, and **Elymi**, along with **Phoenician colonists**,<sup>1</sup> inhabited Sicily. Sicels also lived in south Italy, along with other native peoples such as the **Messapii** and **Apuli**.

c. 775

**Pithecusae** (Ischia) was settled from Chalcis, Eretria, and Cyme on an island in the Bay<sup>2</sup> of Naples. A very early Greek inscription (c. 730) was found there.

757

**Cumae** was established by Pithecusan colonists, Chalcidians and Eretrians. Southern<sup>3</sup> Italy came to be known as Greater Greece (**Magna Graecia**).

735

**Thucles**, the *oikistes* for a group of Chalcidians, established **Naxos**, the first Greek<sup>4</sup> colony in Sicily. Subsequent Greek colonization drove the Phoenicians from most of Sicily. Only three Phoenician cities remained: **Motya**, **Panormus**, and **Solus**, all on the west coast.

c. 734

Corinth founded **Syracuse**, which grew to be the preeminent city in Sicily. 5

**c. 729**

Thucles, leading a party of Naxian colonists, founded **Leontini** in Sicily. Around the same time another group of Naxians, under **Evarchus**, settled **Catana**. 6

**728**

The Megarians, failing at colonizing Trotilon and Thapsos, succeeded at **Megara Hyblaea**, 14 miles north of Syracuse. 7

**c. 720**

Chalcis settled **Rhegium**, in Italy, just across the strait of Messene from Sicily. 8

**c. 710**

The Achaeans established **Croton** on the toe of Italy, which became a leading city in Magna Graecia. 9

**706**

Sparta established its sole colony, **Taras** (Tarentum), in southern Italy. The colonists, lead by Phalanthus, were **Partheniae**, children of Spartan men and helot women. 10

**688**

**Gela** on the southern coast of Sicily was founded by Cretans and Rhodians. 11

## **4. The Classical Age, 510–323 B.C.E.**

### **a. Economy, Technology, Society, and Culture**

In this period, **crop rotation** was introduced, dramatically increasing agricultural production. Large estates that were worked by slave labor emerged, though small farms owned by free citizens remained the rule. **Slavery became more important in Greek economy.** Slaves were employed mainly in domestic service and mining, but also in manufacture and agriculture. The ruling class in all Greek cities, including democracies, depended on unfree labor both for income and personal services. War and piracy were the main sources of slaves, and slavery was never confined to any particular ethnic group. Slaves were often freed, or **manumitted**, and eventually their descendants merged with the free population. By the 5th century, Athenian **coinage** became the predominant medium of exchange in the Greek world, though after the Peloponnesian War, the Rhodian standard replaced it in Ionia. Temples continued to serve as depositories of money, but c. 500 B.C.E., **private bankers** (*trapezitai*) took over most of the business of exchanging and lending money. **Bottomry loans** (*nautika*) developed, repayable only if a cargo safely reached its destination; often given by groups of investors, such loans spread out risk and encouraged trade. Around the same time, the Athenians developed a new kind of colony, the **cleruchy**. Each settler received an allotment (*kleros*) but retained Athenian citizenship. The **financial system** of most Greek cities was highly developed. Cities generally covered the costs of some sort of police force or night watch, the military (except equipment provided by the hoplites themselves), fortifications, sacrifices and religious festivals, public buildings, salaries for officials and jurors, and pensions for orphans and crippled soldiers. Food and money were also distributed to the population under certain circumstances. **Direct taxes** were unusual, and paid mainly by resident aliens (*metics*), freed slaves, and those employed in certain low-class crafts and trades. Most state income was provided by **indirect taxes**, excise duties, and assessments, such as court fees and fines, gate tolls, auction taxes, sales taxes, harbor dues, fees for fishing rights and pasturage, and duties for using public scales and temple precincts. Many cities had income from **state property**, such as mines, quarries, and state-owned land. Hegemonic states received **tribute** from allies and subject states. Compulsory contributions by wealthy citizens, called **liturgies**, helped with certain large expenditures

such as equipping warships. In peacetime, cities were able to amass cash reserves, usually deposited in temples. But during famine or war, regular revenues were not always sufficient to meet expenditures. In such cases, direct property taxes (*eisphora*) were sometimes introduced, state property and political rights were sold, and public loans were raised, often on a compulsory basis. Some cities debased their coinage to raise cash. Public finance in **Sparta** remained simple: it had no regular taxes at all except a small contribution in kind to the kings. Administration and the army were provided by the Spartiates, financially supported by their helots.

The best examples of 5th-century architecture were erected on the **Acropolis** at Athens: the **Parthenon** (447–432), the **Propylaea** (437–432), and the **Erechtheum** (420–408). In the mid-4th century, the center of architecture shifted to Ionia, with masterpieces such as the tomb of Mausolus (**Mausoleum**) in Caria, and the **Temple of Artemis** at Ephesus. By the 5th century the Greek sculpture was representing the body very accurately, reaching its height in the works of **Myron** (c. 480–445) and **Polyclitus** (c. 430) of the Argive School and **Phidias** (c. 490–431). Phidias is best known for his colossal **chryselephantine** (gold and ivory) statue of Athena in the Parthenon and of Zeus at Olympia, but he also designed the architectural sculptures of the Parthenon (**Elgin Marbles**). From 500 to 415, Attic painters of red-figured vases developed line drawing in a series of exquisite styles. **Polygnotus** (c. 490–447) mastered the technique of large-scale painting, and **Agatharchus** of Samos (c. 430) was the first to use perspective on a large scale.

The level of literacy in the classical period is controversial. Probably only a minority of even the citizen body could read and write, but the proportion had clearly increased dramatically from archaic times. The number of teachers and schools grew, though there was no public education in the classical period. The culture remained essentially oral, but written works now became more common. **Aeschylus** (525–456) introduced a second actor into tragic drama, and by the time of **Sophocles** (c. 496–405) there could be up to four. **Euripides** (480–406) developed tragedy to its height. Plots were usually mythological, but sometimes reflected current events, for example, Aeschylus's *Persians*. **Aristophanes** (c. 448–385) was the acknowledged master of the **Old Comedy**. Comic plots were fantastic, often took off on contemporary events, and held important people up to ridicule. The little-known **Middle Comedy** was replaced by **New Comedy**, in which plays became less vulgar and plots more sentimental. Its most outstanding playwright was **Menander** (342–c. 280).

The first true historian in the Western world, **Herodotus** of Halicarnassus (484–425), wrote a lengthy account of the Persian War. **Thucydides** (471–c. 400) perfected the writing of history in his *Peloponnesian War*. **Xenophon** (431–354) continued Thucydides' history from 410 to 362, in addition to writing other prose works. Instruction in rhetoric was given by professional teachers, called **Sophists**, such as **Gorgias** (c. 485–380), who came from Sicily to Athens in 427; **Protagoras** (c. 485–415); **Prodicus**

(c. 430); and **Hippias** (c. 400). The best-known Attic orators were **Lysias** (c. 459–380), **Demosthenes** (384–322), and the advocate of Pan-Hellenism, **Isocrates** (436–338).

The philosopher **Heraclitus** of Ephesus (c. 550–480) envisioned a universe in constant flux governed by universal law (**Logos**). **Parmenides** of Elea (c. 515–445) and the **Eleatic School** argued that what is real is motionless and made the distinction between belief and knowledge. **Empedocles** in Sicily (c. 500–430) developed the idea of the **four elements** (fire, air, water, and earth). **Leucippus** (c. 450) and his student **Democritus** of Abdera (c. 460–370) advanced the **atomic theory**: the universe was made up of indivisible units (**atoms**) whose motion created the sensible world. **Anaxagoras** of Miletus (c. 500–425), the first philosopher to live in Athens, argued that the world was made up of “elements” (*homoeomeries*) organized by the cosmic mind (*nous*). Anaxagoras strongly influenced **Socrates** (469–399), the key figure in Greek philosophy. Socrates emphasized ethics over physics and was known for his morality, personal courage, and relentless pursuit of the truth by means of dialectic inquiry (the **Socratic Method**). His greatest pupil, **Plato** (427–347) founded the **Academy**, the most important philosophical school in Greece. Plato reconciled reason and observation, arguing that while perception is flawed, everything is a reflection of a perfect form (**idea**). True knowledge is obtained by recollecting the ideas our souls knew before they were imprisoned in our bodies. Plato's antidemocratic political ideas are set out in the *Republic* and the *Laws*. Another of Socrates' students, Antisthenes (c. 445–360) inspired **Diogenes** (c. 400–325), the founder of Cynicism, a philosophy which rejected all unnatural conventions. **Aristotle** (384–322) studied under Plato, became the teacher of Alexander the Great, and upon returning to Athens in 335 B.C.E. founded the **Lyceum** or **Peripatetic School**. Aristotle ultimately rejected the idea of forms and felt that flaws in perception could be overcome by careful categorization of reality. In medicine **Hippocrates of Cos** (born c. 460) founded a school combining common sense, natural medicine, and personal hygiene. In the classical period women continued to lead very limited lives. Most women remained under the guardianship of a man, generally their father or husband, their entire life. Women could not inherit, witness in court, or own property. While divorce was theoretically easy to obtain, the woman's case had to be brought by a male third party. Most citizen women remained at home, but poor women worked in the fields and in the cities as washerwomen, woolworkers, vendors (mostly of food or flowers), nurses, and midwives. Women did not participate in the government in any direct way, though **Aspasia**, the mistress of Pericles, wielded considerable political power. Women did play an important role in religion as priests and seers. Many prostitutes were slaves, but the free ones, while they had to register with the state and pay taxes, had control over their own money.

## **b. The Rise of Athenian Democracy and the Persian Wars**

### **510**

Enlisting Spartan aid, the Alcmaeonidae returned to Athens. They overthrew Hippias, who fled to Persia and was made the tyrant of Sigeum. A struggle ensued between the aristocrats, led by **Isagoras**, and the common people, headed by the Alcmaeonid **Cleisthenes**. The latter won and a democratic reform of the constitution was instituted. <sup>1</sup>

### **508**

**THE REFORMS OF CLEISTHENES.** To end regional divisions, Cleisthenes created over 140 townships (*demes*), which replaced the phratries as the basis of citizenship. Ten tribes (*phylai*) were created, and Attica divided into three regions: the city of Athens, the coast, and the interior. Several demes comprised a “third” (*trittys*) and ten trittys formed a region. Each tribe was made up of one trittys from each region, so had members in all parts of Attica. A Council of 500, with 50 men chosen by lot from each of the tribes, replaced the Solonian Council of 400. The army was organized into ten tribal regiments. Some scholars believe that an early form of **ostracism**, a milder form of banishment, was introduced under Cleisthenes. <sup>2</sup>

### **507**

Isagoras invited the Spartans to invade Attica. King Cleomenes expelled Cleisthenes and restored the aristocracy. The Athenian people rose up, however, drove out the Spartans, and restored Cleisthenes. <sup>3</sup>

### **506**

A second Spartan expedition failed. The Athenians crushed the Boeotians and Euboeans and annexed part of the territory of Chalcis. When the Persian king Darius I demanded the restoration of Hippias as tyrant, the Athenians disregarded his ultimatum. 4

## 501

The general (*strategos*) of each of the ten tribal regiments was now elected annually. 5

## 499–494

The Ionian cities of Asia Minor revolted against the Persians (See [c. 522–486](#)), led by **Aristagoras** of Miletus. In 498, Aristagoras traveled to mainland Greece, soliciting aid. Athens responded with 20 ships and Eretria with five. The rebels captured and burned Sardis, the satrapy's capital, but were defeated in the naval **Battle of Lade** in 494. Persian control of the sea enabled them to take and sack Miletus, which ended the revolt. One of the rebel leaders, **Miltiades** (c. 550–489), the tyrant of Chersonese, fled to Athens and, despite the opposition of the Alcmaeonidae, rose to political prominence. 6

## c. 494

The Spartans under King Cleomenes defeated Argos in the **Battle of Sepeia** and forced it into the Peloponnesian League. Cleomenes tried to punish Aegina for supporting Persia but was blocked by the other king, Demaratus. 7

## 493

In Athens, **Themistocles**, leader of the anti-Persian party, was selected as archon. He began fortifying the Piraeus. 8

## 492

**First Persian Expedition.** Darius I sent **Mardonius** to punish Athens and Eretria for aiding the Ionian cities in their revolt. The Persian fleet was destroyed in a storm while rounding the Chalcidice. Mardonius did not advance further, but Thrace and Macedonia remained under Persian domination.

9

## 491

Cleomenes deposed Demaratus as Eurypontid king on a charge of illegitimacy, despite the opposition of the ephors, and replaced him with the more compliant **Leotychides II** (491–469).

10

## c. 490

Traditionally, Cleomenes went mad, was imprisoned, and committed suicide. He may in fact have been arrested and executed by the ephors. Cleomenes' half-brother **Leonidas** (c. 490–480) succeeded him as Agiad king.

### c. [The Rise of the Athenian Empire](#)

487

**REFORM OF THE ATHENIAN CONSTITUTION.** A series of reforms made the constitution more democratic. The nine archons were now chosen by lot from some 500 candidates elected by the demes. Subsequently ten preliminary candidates were elected from each tribe. Later these preliminary candidates were also chosen by lot. The military functions of the polemarch were taken over by the ten elected generals (*strategoï*), who were now assigned to command expeditionary armies. A general-in-chief (*strategos autocrator*) was sometimes promoted over the others. The anti-Persian party regained power with a noble faction led by **Aristides** and a common wing by **Themistocles**. <sup>1</sup>

487

The first known **ostracism** was conducted, that of **Hipparchus**, a relative of the tyrant, who was suspected of being pro-Persian. At a special assembly, citizens cast potsherds or *ostraca* with an individual's name written on it as ballots. If 6,000 ballots were submitted against a particular man, he was obliged to leave Athens for a period of ten years, although he retained his property and remained a citizen. <sup>2</sup>

486

**Xerxes** succeeded to the Persian throne and demanded earth and water (i.e., submission) from the Greek states, most of which refused. The Alcmaeonid leader Megacles was ostracized. <sup>3</sup>

483

A rich new vein of silver was discovered at the state mines at Mt. Laurium. Themistocles convinced the assembly to use the money to build a fleet of 200 **triremes**, a type of warship. **Aristides** was ostracized for his opposition to this measure.

4

## 481

The Greek states, led by Sparta and Athens, set up the Hellenic League to resist the coming Persian invasion. Themistocles was elected *strategos autocrator* at Athens and became its most powerful political figure.

5

## 480

**Third Persian Expedition.** The Persian king Xerxes personally led an expedition which marched into Greece through Thrace and Macedonia. Herodotus says the Persian army had 5 million men (including camp followers): modern estimates range from 100,000–500,000. The Persian fleet included from 600–1200 ships. A Greek army of 7,000 hoplites occupied the pass at Thermopylae, and a fleet of 270 ships stationed itself at the nearby Gulf of Artemisium. Unable to take the pass by direct assault, the Persians took a side path and turned the Greek position. Most of the Greeks withdrew, but King **Leonidas** with 300 Spartans and 700 Thespians refused to retreat, and at the **BATTLE OF THERMOPYLAE** they were surrounded and annihilated. The Persian navy suffered heavy damage from storms, losing half their ships, but they still outnumbered the Greeks. The **Battle of Artemisium** was indecisive, but the Greeks withdrew after Thermopylae was taken. The Boeotians, Phocians, and Locrians went over to the Persians (**medized**). The Greek army retreated to the Peloponnese and built a wall across the Isthmus of Corinth. The fleet moved to the Saronic Gulf between Athens and Salamis. Unable to defend their city, the Athenians fled and the Persians occupied Attica and destroyed Athens. In **THE BATTLE OF SALAMIS**, the Persians attacked the Greek fleet in the narrow strait, losing their advantage of numbers, and were decisively defeated. Xerxes, probably fearful for his supply lines, returned to Asia Minor with a third of his army, leaving another third with Artabazus in Thrace, and the rest in Boeotia under Mardonius.

6

## 480

In Sicily, **Terillus**, the tyrant of Himera, appealed to Carthage for help against Theron of Acragas and Gelon of Syracuse. Hamilcar led a Carthaginian army onto the island, but it was decisively defeated by Theron and Gelon at the **Battle of Himera**. 7

### 479

The Persians under Mardonius again invaded Attica. The Greek forces, led by the Spartan king **Pausanias**, defeated the Persians at the **BATTLE OF PLATAEA**. Mardonius was killed and his camp plundered. The Greeks took Thebes by siege, abolished the oligarchy, and instituted a democracy. 8

### 479

**The Battle of Mycale.** King **Leotychides II** of Sparta led a small Greek fleet to guard the Cyclades against Persia. The Samians and Chians convinced him to attack the Persians, who had drawn their ships up on the beach at Mycale near Samos. In the ensuing battle the Persian fleet was destroyed. 9

### 479–478

**The Siege of Sestos.** The Ionian cities in Asia Minor and several of the island cities (Samos, Lesbos, and Chios) revolted from the Persians. The allied Greek fleet laid siege to Sestos, a Persian stronghold in the Thracian Chersonese. The Spartans returned home in the fall, but the Athenians and Ionians succeeded in reducing Sestos during the winter. 10

### 478

**Pausanias**, leading the allied Greek fleet, reduced Cyprus and Byzantium. Suspected of treasonous negotiations with the Persians, the Spartan ephors recalled him. He was tried for treason, but acquitted, and sent back to Byzantium. 11

### **d. The First Peloponnesian War**

460

**The First Peloponnesian War** broke out between the Athenians and Peloponnesians, caused in part by Athen's alliance with Megara and Argos. In the same year, the Athenians sent a fleet of some 200 ships to Egypt to aid its revolt against the Persians. The Athenians defeated a Persian fleet on the Nile and besieged a Persian army in the citadel of Memphis. 1

c. 459/8

The Athenians were defeated at **Haliëis** by the Corinthians and Epidaurians, but their fleet won a victory at **Cecryphaleia**. 2

458

The Aeginetans joined the Peloponnesian alliance, but their combined fleet was defeated by the Athenians in the **Battle of Aegina**. The Athenians, under the command of Leosthenes, landed on the island of Aegina and besieged the city. The Corinthians invaded Attica, trying to force the Athenians to raise the siege, but were defeated by a reserve force of old men and boys under **Myronides**. A second force of Corinthians was surrounded and annihilated in the Megarid. 3

457

The Aeginetans surrendered, turned their fleet over to the Athenians, and joined the Delian League. **Sparta** then entered the war, sent an army across the Corinthian Gulf, and restored the Boeotian League under the hegemony of Thebes. The Athenians were 4

defeated at the **Battle of Tanagra**, but the Spartans then returned home, and the Athenians then defeated the Boeotians at the **Battle of Oenophyta**. Athens then enrolled all the Boeotian cities except Thebes in the Delian League; Phocis and Opuntian Locris also joined.

#### 457

**Pericles** made the *zeugitai* class eligible for the archonship. The *thetes*, though never legally eligible, were soon permitted to hold the office. 5

#### 456

A Persian force under **Megabyzus** defeated the Athenians at the citadel of Memphis. The Athenians were in turn besieged on the island of Prosopitis in the Nile Valley. 6

#### 455

The Athenian general **Tolmides** sailed around the Peloponnese, raiding the coast, burning the Spartan naval base at Gytheum, and recruiting Achaea into the Delian League. 7

#### 454

An Athenian force led by **Pericles** landed in Sicyon and defeated the Sicyonians. Joined by Achaeans, Pericles unsuccessfully tried to take Oeniadea on the Corinthian Gulf, before returning to Athens. After an eighteen-month siege, the Athenians besieged on Prosopitis in Egypt were defeated, and all but a few killed or captured. A relief expedition of 50 ships was also destroyed by the Persians. Due to this defeat, the treasury of the Delian League was moved to Athens. 8

#### 453

In Sicily, the towns of **Segesta** and **Halicystae** started a war with **Selinus** and approached Athens for an alliance, which was granted. 9

## 451

After three years of inactivity, **Cimon** returned from exile and negotiated a five years' truce with Sparta. Argos, losing Athenian protection, was forced to make a thirty years' peace with Sparta. 10

## 451

At Athens, pay was instituted for the *dicasts* or jurors of the popular courts, which made it possible for the poorest citizens to serve. In the same year, Pericles passed a law restricting Athenian citizenship to those having two Athenian parents (repealed in 429, reenacted in 403). 11

e. [\*\*The Second \(Great\) Peloponnesian War\*\*](#)

435

Corcyra, in northwestern Greece, objected to Corinth's interference with their joint colony, **Epidamnus**. Corcyra defeated the much more powerful Corinth but, fearing reprisal, called on Athens for help, and the Corinthians backed down. The Athenians then sought to break Corinthian influence over **Potidaea**, a colony of Corinth but a subject of Athens. 1

432

Potidaea revolted against Athens, with the tacit support of the Peloponnesian League. Athens then retaliated with the **Megarian decree**, barring the Megarians from Athenian harbors and markets. Outraged and fearful of further Athenian action, Megara, Corinth, and Aegina pressured a reluctant Sparta to take action. Over **King Archidamus's** opposition, the ephor Sthenelaïdas convinced the Spartan assembly to declare the Thirty Years' Peace broken. 2

## f. The Spartan Hegemony

### 404

**The Tyranny of the Thirty at Athens.** The Athenian oligarchic party, supported by Lysander and the Spartans and led by Theramenes, set up a **Commission of Thirty** which was to make a few immediate reforms and then devise a new constitution. Instead, the commission, with Critias at their head, seized power and ruled as the **Thirty Tyrants**. They executed their colleague Theramenes when he advocated a more moderate course. Finally, 3,000 of the richest citizens were nominally enfranchised but never given any real power. Many citizens were exiled or fled to Argos and Thebes. These cities now feared the excessive power of Sparta. In the autumn Thrasybulus led back some exiles, who occupied Phyle and then the Piraeus. <sup>1</sup>

### 403

In the beginning of the year, the Athenians deposed the Thirty, who fled to Eleusis, and elected a **Government of Ten**. These, instead of bringing in the democrats from the Piraeus, asked for help from Sparta, which sent Lysander. The anti-Lysander party in Sparta replaced him with King Pausanias, who brought about a settlement. The democracy was restored in Athens, and a general amnesty decreed, with only a few exceptions. The Spartan decarchies in the former Athenian allies were soon abolished. <sup>2</sup>

### 403–400

Dionysius I of Syracuse conquered Catana (403), Naxos, and Leontini (400) and extended his control over the Sicels. <sup>3</sup>

### 400

The Persian satrap **Tissaphernes** besieged Cyme, and the Spartans sent Thibron to hire a mercenary army and liberate the Ionians from Persia. 4

### 399–397

**Dercyllidas** took over the command of Spartan forces in Asia Minor. He played one satrap, Tissaphernes, against another, Pharnabazus, and conquered nine cities in eight days in the Aeolus. He then, against the orders of the ephors, made a truce with the Persians. The truce held, but Artaxerxes built up his fleet, putting the renegade Athenian Conon in command. 5

### 399

**THE DEATH OF SOCRATES.** Socrates was convicted in the assembly of introducing strange gods and corrupting the youth. He was sentenced to death, but although given an opportunity, refused to flee into exile. Socrates was given poisonous **hemlock** to drink and died. 6

### 398–392

**Dionysius I** of Syracuse fought a war with Carthage but failed to drive the Carthaginians out of Sicily. 7

### 396/5

King Agesilaus II (399–360) succeeded Dercyllidas as commander in Asia Minor. He campaigned in Phrygia, beating Tissaphernes' army, but was unable to defeat the Persian fleet. Persia sent **Timocrates of Rhodes** to bribe the leaders of Athens, Thebes, Corinth, and Argos to attack Sparta. 8

### 395

Athens made defensive alliances with Boeotia, Corinth, Argos, Megara, and Euboea. <sup>9</sup>  
The **Corinthian War** (395–387) against Sparta broke out.

### 394

Agesilaus returned to Greece from Asia Minor with most of his force. The Spartans beat <sup>10</sup>  
the Greek allies at the **Battles of the Nemea and Coronea**, but the Spartan fleet was  
annihilated by the Persians, under Conon, at the **Battle of Cnidus**. Persia granted  
autonomy to the Greek cities of Asia Minor and withdrew its garrisons. The Ionians then  
revolted from Sparta and established democracies.

### 393

**Conon** returned to Athens and began rebuilding the Long Walls. Athens recovered <sup>11</sup>  
Lemnos, Imbros, Scyros, and Delos, and made alliances with Chios, Mitylene, Rhodes,  
Cos, and Cnidus.

### **g. [The Theban Hegemony](#)**

**371**

A **general peace settlement** was reached between the allies and Sparta in the summer, but the Theban leader **Epaminondas** withdrew when he was not permitted to sign on behalf of all Boeotia. Sparta immediately sent King Cleombrotus to chastise Thebes, but the Spartan army was crushed by Epaminondas at the **Battle of Leuctra**. This defeat shattered Spartan military prestige and ended its hegemony over Greece. Thebes withdrew from the Athenian League, along with the cities in Acarnania, Euboea, and the Chalcidice. 1

**370**

An **Arcadian League** was formed under Theban protection as a counterweight to Sparta, and Mantinea was restored as a city. The government of the Arcadian League consisted of a general assembly (**the Ten Thousand**), made up of all freeborn citizens, with sovereignty in matters of war and peace. A council of *damiurgoi* gave proportional representation to the member cities, and a college of generals (*strategoi*) served as a civil and military executive. There was a standing mercenary army (*eparittoi*). The Theban army, under Epaminondas, liberated Messenia from Sparta, and the city of **Messene** was built. 2

**369**

Athens and Sparta made an alliance on equal terms. The Arcadians founded **Megalopolis** as a federal capital. In the following years, Thebes secured the union of all Thessaly except Pherae under a single ruler (*archon*). 3

### 367/6

Dionysius I died in the course of another war with Carthage. He was succeeded by his weak son **Dionysius II**, under the regency of his uncle **Dion** who immediately made peace. 4

### 366/5

Dion brought **Plato** to Syracuse in order to educate Dionysius as a “**philosopher king.**” 5  
The attempt failed, and both Dion and Plato were driven out of Syracuse.

### 365

The pro-Spartan party of **Callistratus** in Athens was replaced in power by the party of Timotheus. Peace was made with Thebes on the basis of the *status quo*. Breaking its promise, Athens sent a cleruchy to garrison its ally Samos. 6

### 364

The Thebans defeated Alexander, the tyrant of Pherae, in the **Battle of Cynoscephalae** 7  
but their commander, Pelopidas, was killed in action.

### 363

**Epaminondas** led a Theban army into Thessaly and again defeated Alexander of Pherae. 8  
Athens subjected its allies Ceos and Naxos to Athenian jurisdiction.

### 362

The Arcadian League broke up, and oligarchs took control of many of its cities. 9

### 362

In the **Second Battle of Mantinea** the Thebans beat the Spartans, but Epaminondas was killed in the battle. A general peace was made but not accepted by Sparta, which refused to recognize the independence of Messenia. 10

## 361

Athens sent a cleruchy to occupy Potidaea. 11

## **h. The Macedonian Empire**

### **336**

**ALEXANDER THE GREAT.** **Alexander III** (336–323) succeeded to the Macedonian throne and immediately invaded Illyria and Thrace. <sup>1</sup>

### **335**

Inspired by a rumor that Alexander had died while on campaign, Thebes, Athens, Arcadia, Elis, and Aetolia revolted against Macedonian hegemony. Alexander swiftly moved south, took Thebes, destroyed it, and enslaved its inhabitants. The other revolting states submitted. <sup>2</sup>

### **334**

In the spring, Alexander left Antipater as governor in Greece and crossed the Hellespont with an army of 32,000 infantry and 5,000 cavalry. The army was supported by a navy of 160 ships, mostly made up of Greek allies. Memnon of Rhodes, the commander of Greek forces in the Persian service, advised a tactical retreat, but the satraps insisted on fighting. The Persians were completely defeated by Alexander at the **Battle of Granicus**. <sup>3</sup>

### **334–330**

**Alexander I of Epirus** (342–330) was called in to assist the Italiote League which was fighting the Lucanians in southern Italy. He won a series of victories and concluded a treaty with Rome. But the Italiote League broke up, and when Alexander was killed in battle (330) the Epirotes left Italy. 4

### 334–333

Most of the Greek cities of Ionia revolted against the Persians. Memnon died and Darius withdrew the Greek mercenaries into Syria, where he gathered a large army. 5

### 333

Alexander subdued Caria and Cilicia, then advanced into Syria. He again defeated the Persian army, under the personal command of Darius III, at the **Battle of Issus**. After this defeat, Darius offered to give up all of Asia west of the Euphrates and to pay 10,000 talents, but Alexander demanded unconditional surrender. After Issus, all of Phoenicia except Tyre submitted to Alexander. 6

### 332

After a difficult siege of seven months, Tyre was captured. The provinces of Galilee, Samaria, and Judah surrendered to Alexander. When he approached Egypt, its satrap turned the richest province of the Persian Empire over to Alexander without a fight. 7

### 332–331

During a year-long stay, Alexander founded **Alexandria** on the coast of Egypt and visited the **oracle of Ammon** at the oasis of Siwa in the Western Desert, where he was proclaimed the son of a god. 8

### 331

Leaving Egypt during the spring, Alexander marched into Mesopotamia. In October he met and defeated another Persian army under Darius in the **Battle of Gaugamela**. Babylonia and Susa soon surrendered. One of the Persian capitals, Persepolis, was looted and burned, ostensibly in revenge for the destruction of Athens in 480. 9

### 331

**Sparta** under King Agis III (338–331), aided by Persian money and in alliance with Elis, Achaea, and part of Arcadia, defeated a Macedonian force and besieged Megalopolis. Antipater marched into the Peloponnese with a greatly superior force and crushed the Spartans and their allies. 10

### 330

In the spring, Alexander pursued Darius through Media. Finally, the Persian king was murdered by the satrap **Bessus**. Alexander subdued the Caspian region and then marched southward. Once Parmenio's son Philotas had been executed for complicity in a plot, Alexander sent messengers who murdered Parmenio in Media: Alexander feared a revolt and Parmenio was too powerful to be discharged. 11

## **5. The Hellenistic World, to 30 B.C.E.**

### **a. Economy, Society, and Culture**

**The Hellenistic Age began with a century of large-scale Greco-Macedonian emigration** into the territories conquered by Alexander. The consequent spread of Hellenic civilization brought about changes both in the expanded Greek world and among the native populations of Asia and Egypt. The economy of the Hellenistic world, however, continued to be overwhelmingly agricultural. **Colonial settlement was urban in character in Seleucid Asia, but predominantly rural** in Ptolemaic Egypt. Traditional patterns of land tenure predominated in Asia, where large tracts of royal land were worked by peasants tied to it. Much of this land was assigned to prominent individuals, to temple estates, or to cities. The economy of the numerous Seleucid cities, however, followed the **Greek model, with land owned by citizens who worked it with the help of slave labor**. In Egypt, urban settlements were rare. Outside of the three cities of Naucratis, Ptolemais, and Alexandria, all land was theoretically owned by the king, divided into districts (*nomes*), and administered by both traditional civic officials—*nomarch*, royal scribe, *komarch*—and by newly created financial officers—the *dioiketes* in the capital, and the *oikonomos* and his underlings in the nome. In addition, military officials—*strategos*, *hipparchos*, and *hegemon*—oversaw the *nomes*. **Royal land** was also assigned to individuals, to temple estates, and especially to small-holder soldiers (*klerouchoi*, later called *katoikoi*) who initially held the land in return for military service, but whose tenure eventually became permanent and hereditary. All land seems to have been worked by native peasants attached to it, chattel slavery being relatively rare in Ptolemaic Egypt. **Ptolemaic policy was to increase agricultural production**, and innovations in farming were largely the result of royal patronage. We are particularly well informed by the mid-third-century archive of Zenon about large-scale reclamation in the Fayyûm, where new crops and techniques were introduced. **But most innovations, in both Egypt and Asia, were directed toward luxury items and, with the exception of new strains of wheat, had little effect on traditional agriculture**. In Seleucid Asia the major challenge for agriculture was to feed the numerous new cities, in Egypt to feed the metropolis of Alexandria and to supply the grain used in Ptolemaic diplomacy. In the Greek homeland, established forms of agriculture continued. **In most areas, free citizens**

**farmed with the help of a slave or two**, while other traditional forms of dependent labor also persisted—helots in Sparta, serfs in Crete. Changes did occur in the pattern of land tenure, with land being accumulated by the wealthy at the expense of marginal farmers.

Although **most trade in the Hellenistic Age was local**—between villages and nearby urban centers—Alexander's opening of Achaemenid stores of precious metals, together with the establishment of new cities, caused an increase in trade and an initial boom. The amount of coined money in circulation increased greatly, and a monetary economy spread to many cities of Asia. There was a marked increase in maritime trade, especially in grain and slaves, but chronic piracy was a hindrance. Cities favored by trade or royal munificence became rich and competed in the splendor of their festivals and public buildings. Industry flourished in some cities, but its organization continued on a small scale: a proprietor and a few slaves, with rare exceptions. The new prosperity did not, however, affect most cities of old Greece, where c. 250 a serious economic decline occurred, marked by inflation and debt. Extreme concentration of wealth at Sparta caused military decline, which led to the attempts of Kings Agis (242–241) and Cleomenes (227–222) to redistribute land and cancel debt.

Alexander's conquests had opened up vast areas to **GREEK IMMIGRATION**, which continued on a large scale until about 250. Kings encouraged potential administrators and especially soldiers to settle in new Seleucid cities and in the Egyptian countryside, where land was granted in exchange for service. The policy had mixed success for the Seleucids, who relied heavily on native forces. Ptolemaic military requirements were met primarily by soldier settlers until the late third century, after which native troops were recruited together with Jews, Galatians, and Mysians. Hellenistic royal armies were large, sometimes comprising 60,000 or even 100,000 men. In the colonial areas some intermarriage occurred between early settlers and native women, but **the Greco-Macedonian colonists rigorously excluded natives from military and civic institutions and all positions of power and wealth**. Although small numbers of native aristocrats became Hellenized, the social pattern for most was set by village life, where native languages, religions, and attitudes prevailed. In Asia the economic and political focus was provided by the estates of native aristocrats or temple priests, in Egypt by royal officials. The exclusionary policy changed in Egypt after the Battle of Raphia (217), where Ptolemy IV employed 20,000 Egyptians in his victory over Antiochus III. Economic and social pressures caused more power to be granted to Egyptian priesthods, land to be assigned to native soldiers, and Egyptians to be admitted into the administration. In the second century Greeks married Egyptian women and took up native religious practices. **The influence of non-Greeks on Greeks was carried out by the movements of peoples and ideas**. There was a major **diaspora of Jews**, and Egyptian cults of **Sarapis** and **Isis**, as well as **Babylonian astrology**, gained great popularity among Greeks. Both non-Greek and Greek populations continued traditional religious practices. Among the latter, new developments included the elevation of Fortune (*Tyche*) to a major deity and practices associated with Hellenistic monarchs: patron deities,

dynastic cults, and ruler cults in which sacrifice was made both for and to living rulers.

Colonization provided an outlet for overpopulation in the Greek homeland for about a century. The depopulation noted by literary sources reflects elite behavior and concerns. The average family was small—one or two children—and infanticide (especially of females) by exposure was common. Outside of the royal courts, the position of women remained largely unchanged, the ambiguous evidence of comedy, mimes, and sculpture notwithstanding. **Women remained tied to the domestic sphere** and lived under the control of father, husband, or male agnate. Unmarried free women were rare. **In Egypt some women had greater freedom of movement**, others the right to divorce without the permission of a male relative. A new form of marriage contract to which the wife was party (the traditional contract was between father and husband) also appeared.

Cities came to be dominated by the upper classes—small groups of families or enormously wealthy individuals on whom the cities became increasingly dependent. Monarchy became a dominant form of political organization, while the importance of the city-state declined. The military resources of the individual *polis* were dwarfed by those of the monarchies and of federal leagues, whose protection was sought. Citizenship was no longer as exclusive as it had been. Honorary privileges and even citizenship itself were frequently granted to individual benefactors as well as to entire communities. Municipal administration reached a high level. Public institutions, such as gymnasia, were endowed by wealthy benefactors, often royal, and supervised by public officials. By the late third century foundations were being established to subsidize elementary education for boys and sometimes for girls.

**Cultural and intellectual life flourished in various cities.** Writers of Middle Comedy—**Eubolis** (c. 405–335), **Alexis** (c. 375–275)—and New Comedy—Diphilus (c. 360–300), Philemon (c. 360–263), and **Menander** (c. 342–289)—kept the dramatic arts alive in Athens, while wide enthusiasm for Athenian-style plays helped make the theater a characteristically Hellenistic building type. Athens remained the center for philosophy. The Academy continued the Platonic tradition with increased emphasis on skepticism, and the Peripatetics concentrated on scientific and historical studies. The shift away from metaphysics to practical ethics was fostered by two new schools. **Epicurus of Samos** (342–270) founded Epicureanism around a closed community that included slaves and women. Members sought pleasure by attaining a state of imperturbability (*ataraxia*). Adopting Democritus's atomic theory, and subscribing to the indifference of the gods and the universe, Epicureans denied the afterlife and eschewed emotion and politics. Migrating from Cyprus, **Zeno of Citium** (336–264) founded **STOICISM**, teaching in the Painted Porch (*stoa poikile*). Stoics believed that the universe was governed by reason (*logos*—God, nature, providence) and that virtue consisted of understanding and being in harmony with it, everything else being at best indifferent. The capital cities became great centers of intellectual life, with royal patrons competing for the talents of scholars, poets, and scientists. The establishment of the Museum (a research institute) and the Library

made Alexandria preeminent. Here scholars such as Zenodotus of Ephesus (c. 325–c. 260), Aristophanes of Byzantium (257–180), and Aristarchus of Samothrace (217–145) collected and edited the “classics” of earlier Greek literature. Here contemporary literature also thrived. “Alexandrianism”—short, highly refined, esoteric poetry—was fashioned by Callimachus (c. 360–240) and Theocritus (c. 300–260? from Syracuse), while Apollonius of Rhodes (c. 295–214) revived the epic.

**Alexandria was also the home for scientific research. Herophilus of Chalcedon and Erasistratos of Ceos** (at Antioch?) made great advances in anatomy, physiology, and pathology. Astronomical measurements were made by **Aristarchus of Samos**; Eratosthenes of Cyrene (275–194) computed Earth's circumference; and **Euclid** (c. 300) systematized mathematics, while in Syracuse the wide-ranging **Archimedes** (287–212) made startling advances in mathematics and physics. With the exception of lifting devices, such as Archimedes' screw, technological discoveries in the Hellenistic Age were primarily curiosities. **General lack of interest and support for the application of technology was overcome only in military science**, where advances in siege-craft and fortification were made by Ctesipius of Alexandria (fl. c. 270) and Archimedes. Competitive and cosmopolitan patronage, both royal and private, also stimulated innovations in art and architecture. Hellenistic architecture is marked by the relaxing of classical canons and the introduction of new building types and construction techniques. Public building saw the proliferation of secular structures (stoas, theatres, council-halls, arsenals), as well as of religious sanctuaries. Wealthier citizens resided in more elaborate private houses built around a colonnaded court (*peristyle*). Innovations in construction included the vault and the use of architectural drawings. Hellenistic sculpture is distinguished from classical by a wider range and greater complexity of style and subjects. Genre types, royal portraiture, and a baroque style in historical and mythological group scenes were some of the innovations of the period.

## **b. The Wars of the Diadochi**

### **322–315**

After **Perdiccas** became regent for Philip III Arrhidaeus, the other generals—Antigonus, Antipater, Craterus, and Ptolemy—formed a coalition against him. Perdiccas's general Eumenes defeated and killed Craterus in Asia Minor, but Perdiccas was himself assassinated while campaigning against Ptolemy in Egypt (320). At Triparadeisus in northern Syria, **Antigonus**, **Ptolemy**, and **Antipater** agreed that the latter should be regent. Antigonus then defeated and besieged Eumenes in Cappadocia. Antipater died (319) leaving Polyperchon as regent. This was unacceptable to Antigonus, to Ptolemy, and to Antipater's son **Cassander**. After negotiating his release, Eumenes promptly accepted Polyperchon's offer to oppose Antigonus in Asia. Meanwhile Cassander seized Piraeus and left Demetrius of Phaleron in command of Athens (317). He then drove Polyperchon from Macedon, executed Olympias, who had earlier killed Philip Arrhidaeus, and imprisoned Roxana and her son Alexander IV, both of whom he put to death in 310. Antigonus pursued Eumenes into central Iran and, after the indecisive **Battle at Paraetacene**, surprised him as he was wintering in Gabiene and executed him (316). Antigonus then drove **Seleucus** from Babylon to Egypt, where he sought refuge with Ptolemy and where the two, together with Cassander and **Lysimachus**, who ruled Thrace, formed a coalition against Antigonus.

### **315–307**

Antigonus, after besieging and capturing Tyre (314–313), took Syria from Ptolemy. Fighting went on in the Aegean, the Peloponnese, and Asia Minor (313–312). Demetrius, Antigonus' son, was defeated at Gaza (312), and Seleucus recaptured Babylon (311). Cassander consolidated his position in Macedon. Antigonus sent Demetrius to Athens, whence he expelled Demetrius of Phaleron (307).

## 306

Demetrius won a great naval victory over Ptolemy at Salamis in Cyprus after which both **ANTIGONUS I MONOPHTHALMOS** (“one-eyed”) and **Demetrius I Poliorcetes** (“besieger”) took the title of king. **Ptolemy** assumed the royal title in 304, followed immediately by **Seleucus, Lysimachus, and Cassander**. Alexander's empire was thus officially dissolved. Demetrius failed to reduce Rhodes by a year's siege (305–304) but relieved Athens from the **Four Years' War** waged by Cassander (307–304). He then revived the **Hellenic League of Philip II** (302). In 302 Lysimachus, Seleucus, Ptolemy, and Cassander formed an alliance against Antigonus and Demetrius. <sup>3</sup>

## 301

**BATTLE OF IPSUS** (in Phrygia). The armies of Lysimachus and Seleucus, but not Ptolemy, defeated and killed the eighty-one-year-old Antigonus. Demetrius escaped and continued hostilities, dominating the Aegean with his fleet. Of Antigonus's possessions, Seleucus received Syria and Lysimachus central Asia Minor. Cassander kept Macedon, and his brother Pleistarchus was allotted Cilicia. Ptolemy seized Coele-Syria from Seleucus. <sup>4</sup>

## 299

Aided by Seleucus, Demetrius expelled Pleistarchus from Cilicia. Cassander died in 298 and his two young sons, Antipater and Alexander V, ruled jointly in Macedon but soon quarreled. <sup>5</sup>

## 295–294

Demetrius besieged and recovered Athens. He then killed Alexander V, expelled his brother, and ruled Macedon (294). He conquered northeastern and central Greece except for Aetolia. <sup>6</sup>

## 288

A coalition was formed against Demetrius, and Lysimachus and **King Pyrrhus** of Epirus <sup>7</sup> drove him from Macedon. Demetrius then attempted to campaign in Asia Minor but was eventually captured by Seleucus in Cilicia (286).

## 283

Demetrius died in captivity, leaving a son, Antigonus, in Greece. <sup>8</sup>

## 281

Lysimachus, who ruled Macedon, Thrace, and Asia Minor, was defeated and killed at the Battle of Corupedium in Lydia by Seleucus, who became master of Asia Minor. <sup>9</sup> When he tried to seize Macedon, however, he was treacherously assassinated by the disinherited son of Ptolemy, Ptolemy Ceraunus, who then ruled Macedon until he was killed opposing the Celtic invasion in 279.

## 279

The Celts ravaged Macedon, defeated the Greeks at Thermopylae, and were turned back <sup>10</sup> at Delphi. Celtic rule was then established in Thrace, lasting until 210. In central Asia Minor the Celtic kingdom of Galatia was established.

## 277–276

Meanwhile Demetrius's son, Antigonus Gonatas, recovered Macedon from the Celts and <sup>11</sup> established the **Antigonid dynasty** which lasted until 168.

[PREVIOUS](#)

[NEXT](#)

**c. [Macedon and Greece, to 146 B.C.E.](#)**

**290**

Emergence of the **Aetolian League**, a military federation in western Greece. It had a council with proportional representation and a semiannual assembly. Affairs were handled by a committee of 100 *apokletoi* and a single general (*strategos*) in wartime. The league expanded into Phocis (254) and Boeotia (245) and dominated Greece from sea to sea. It also included Elis and part of Arcadia (245) and made an alliance with Messene, thus separating Sparta from the Achaean League.

1

**280**

Formation of the **Achaean League**, consisting of twelve towns in the northern Peloponnese. It had a general (two until 255), a board of ten *demiourgoi*, and a federal council with proportional representation of members. There was also an annual assembly of all free citizens. After 251, **Aratus of Sicyon** dominated its policy, and after 245 he was *strategos* in alternate years. With Ptolemaic backing he opposed Macedonian and Aetolian power, extending Achaean influence in the Peloponnese and taking Corinth from Macedon in 243.

2

**276–239**

**ANTIGONUS II GONATAS** (“knock-kneed”?) was driven from Macedon by Pyrrhus of Epirus (274). Pyrrhus was then called into Greece by Cleonymus, pretender to the Spartan kingship. After Pyrrhus was killed in Corinth (272), Antigonus returned to rule Macedon. He established control over Greece by garrisoning the cities of Demetrius in Thrace, Chalcis in Euboea, and Corinth; by supporting pro-Macedonian tyrants in several cities of the Peloponnese; and by making peace with the Aetolian League.

3

## 268–262?

**Ptolemy II of Egypt** stirred up Athens and Sparta to wage the **Chremonidean War** (from Chremonides, an Athenian leader) against Antigonus. When Ptolemy failed to give energetic aid, Athens was obliged to surrender after a two-year siege (262). Antigonus garrisoned several strong points of Attica and imposed a moderate oligarchy on Athens.

4

## 261 (256?)

Antigonus defeated Ptolemy in a naval **battle off Cos** and took the Cyclades, though he had to reconquer them later in the **Battle of Andros** (245).

5

## c. 249

Antigonus's governor of the Peloponnese, Alexander, revolted and held the peninsula until his death (c. 245).

6

## 251

**Aratus of Sicyon** recovered that city from Antigonus's tyrant and then joined the Achaean League, which he soon dominated.

7

## 245–235

**Sparta** had fallen into a serious economic crisis because of the excessive concentration of land and wealth in the hands of a few. Coined money had been introduced by King Areus. The number of full citizens who could contribute to their mess-tables (*syssitia*) had fallen to 700. When **King Agis IV** (244–240) tried to redistribute the land into 4,500 equal lots, the great landowners executed him. **Cleomenes III**, who married Agis's widow, became king (235).

8

## 239–229

**Demetrius II** succeeded his father, Antigonus. He protected Epirus against Aetolia, so that the latter broke with Macedon and made an alliance with Achaea. Demetrius attacked it in the **War of Demetrius** (238–229) but was recalled by invasions from the north (233). Argos expelled the pro-Macedonian tyrant Aristomachus and joined the Achaean League (229), while Athens asserted its independence. 9

### 229–221

**Antigonus III Doson** (“going to give,” i.e., always promising) succeeded his cousin Demetrius as guardian of the latter's eight-year-old son, Philip, whom he deposed in 227 to become king himself. He made peace with Aetolia and drove the northern tribes out of Macedon. 10

### 228–227

**Cleomenes** defeated the Achaeans under Aratus. He then seized the power in Sparta, redivided the land, enfranchised 4000 *perioikoi*, and abolished the *ephorate*. With an increased citizen army, he reduced Aratus to appeal to Antigonus (225). 11

## **d. The Seleucids and Pergamum**

### **304–281**

**SELEUCUS I Nicator** (“conqueror”), after securing Babylon (311–308) and assuming the royal title (304), ceded northwestern India to Chandragupta (Sandrocottus) (303). He failed to reduce Mithridates I of Pontus but gained control of Asia Minor on the defeat of Lysimachus (281). 1

### **281–261**

**ANTIOCHUS I Soter** (“savior”) succeeded upon the murder of his father Seleucus. He fought and defeated the Galatians (275, 270?). In the First War of Succession (280–279) and First Syrian War (274–271), he lost Miletus, Phoenicia, Cilicia, Pamphylia, and Lycia to Ptolemy II. 2

### **263–241**

**Eumenes I** made himself virtually independent of Antiochus as ruler of **Pergamum**, where his uncle, **Philetaerus**, had ruled as governor, first for Lysimachus and then semi-independently for the Seleucids. 3

### **261–246**

**Antiochus II Theos** (“god”), son of Antiochus I, secured the support of Antigonus II and Rhodes against Egypt in the **Second Syrian War** (260–253?). The succeeding peace restored to Antiochus Ionia (including Miletus), Coele-Syria, Cilicia, and Pamphylia (253). 4

## 250–230

**Diodotus I** declared himself independent king of Bactria. In 248–247, Arsaces I founded the **Parthian Kingdom**. 5

## 246–226

**SELEUCUS II CALLINICUS** (“gloriously victorious”), son of Antiochus II by his divorced wife, Laodice I, succeeded. As a result **Berenice II**, daughter of Ptolemy II, whom Antiochus had married in 253, provoked the Syrian War in favor of her infant son. 6

## 246–241

Berenice II provoked the **Third Syrian War** (“Laodicean War” or “War of Berenice”). Though she and her son were murdered in Antioch, her brother, Ptolemy III, invaded Asia and Mesopotamia, and ultimately forced Seleucus to surrender the coasts of Syria and southern Asia Minor (241). 7

## 241–197

**Attalus I Soter** (“savior”), who succeeded his father's cousin Eumenes I as ruler of Pergamum, took advantage of Seleucus's difficulties to secure for himself western Asia Minor by crushing the Galatians near Pergamum (230), after which he took the title “king.” 8

## 240–236

Seleucus attacked **Antiochus Hierax** (“falcon”), whom he in 241 had recognized as ruler of Asia Minor. Hierax secured the aid of Mithridates II of Pontus and the Galatians. The Galatians crushed Seleucus at Ancyra (240–239?). 9

## 229–226

Attalus I of Pergamum drove Hierax out of Asia Minor (229–228), after which Seleucus <sup>10</sup> drove him out of Syria (227) to Thrace, where he was killed. Seleucus died and was succeeded by his son (226).

## 226–223

**Seleucus III Soter** or Ceraunus (“thunderbolt”), son of Seleucus II, was murdered <sup>11</sup> during a war with Attalus I (224–221).

## **e. [Parthia](#)**

### **247, 238?–211**

**Arsaces I** founded the **kingdom of Parthia**, including at first only Parthia and Hyrcania, <sup>1</sup> between the Seleucid kingdom in the west and the Bactrian kingdom in the east. Parthian society was hierarchical and dominated by elite orders of priests and nobles. The king's power rested on the support of the leading nobles who supplied soldiers and tribute from their estates. Zoroastrianism was the religion of the Parthians. In 238 Arsaces was expelled by Seleucus II but returned when the latter withdrew to deal with a revolt in Syria.

### **211–c. 190**

**Arsaces II** withstood the attacks of Antiochus III, the Great, in 209; he was followed by <sup>2</sup> Arsaces III (Priapatius, 190–176) and Arsaces IV (Phraates I, 176–c. 171).

### **c. 171–138**

**Mithridates I** conquered Babylonia and Media from the Seleucids (c. 147); later he <sup>3</sup> added to his kingdom Elam, Persia, and parts of Bactria, thus founding the Parthian Empire. Ctesiphon-Seleucia became the capital. He captured Demetrius II in 139.

### **138–128**

**Phraates II** (138–127) defeated Antiochus VII in Media (129), and as a result the <sup>4</sup> Seleucids were permanently excluded from the lands east of the Euphrates; but he died in battle fighting the Tochari (the Scythians or *Sacae* of the Greeks), a tribe driven out of central Asia by the Yuezhi. The kingdom was devastated and Artabanus I (128–124) fell

likewise fighting against the Tochari.

### 124–87

**Mithridates II, the Great**, defeated the Scythians and also Artavasdes, king of Armenia Major. He stabilized the eastern boundaries of the kingdom. <sup>5</sup>

### 87–70

Parthia suffered a collapse and was greatly reduced in territory by Tigranes I of Armenia (c. 100–56). <sup>6</sup>

### 70–57

**Phraates III** restored order but was not strong enough to resist the Roman advance, led by Lucullus and Pompey. <sup>7</sup>

### 57–37

**Orodes II** defeated Crassus at **Carrhae** (53) and regained Mesopotamia. His son, Pacorus, unsuccessfully invaded the Roman province of Syria in 51 and again in 40. <sup>8</sup>

### 37–20

**Phraates IV** defeated Antony in 36 but could not prevent him from conquering Armenia in 34. In 20 he returned the standards of Crassus and Antony to Augustus, while a line of kings (the **Arcasids**) persisted in Armenia. Parthia itself was badly divided for almost two centuries after 77 C.E. Rome conquered further Parthian territory, including Armenia, by 117 C.E.. (See [113–117](#)) <sup>9</sup>

## f. [Bactria](#)

### 323–302

After Alexander's death, Greek auxiliaries mutinied and were crushed by **Perdiccas**.<sup>1</sup> Control over Bactria, frequently nominal, passed from Perdiccas (d. 319), to Eumenes (d. 316), to Antigonus, and to Seleucus, who campaigned in the eastern provinces (311–302).

### c. 250–210?

**Diodotus**, the satrap of Bactria, made himself independent and conquered Sogdiana. He<sup>2</sup> founded a dynasty that withstood the attacks of the Seleucids.

### 210?

**Euthydemus** overthrew Diodotus II (c. 210?) and withstood a two-year siege at Bactra<sup>3</sup> by Antiochus III before making an alliance (208–206?). After the defeat of Antiochus at Magnesia (190), Euthydemus and his son Demetrius began to expand into the Indus Valley. But while Demetrius was campaigning in the Punjab, Eucratides made himself king of Bactria (c. 170). **Menander** (c. 155–130) then became king of Bactria and extended his power into India. About 100 the Yuezhi crossed the Oxus River, breaking Bactrian Greek power and confining their territory to the Hindu Kush and the upper Indus and Swat Valleys. They were then overcome by the Sakas and Scytho-Parthians.

(See [343–332](#))

## **g. Ptolemaic Egypt to the Roman Conquest**

### **304–283**

**PTOLEMY I SOTER** (“savior”), the son of Lagus (hence the “Lagid” house), had been <sup>1</sup> governor of Egypt since 323 and king since 304. He had seized Coele-Syria in 301 and acquired from Demetrius, Pamphylia and Lycia (296–295) and Caria and the island of Cos (286).

### **285–246**

**PTOLEMY II PHILADELPHUS** (“loving his sister”) was co-regent for two years and <sup>2</sup> revived an old Pharaonic practice by marrying his sister Arsinoe II (276?). He explored the upper Nile and extended his power along the Red Sea and into northern Arabia (278) for commercial purposes.

### **280–272**

In the **First War of Succession** (280–279) and **First Syrian War** (274–271), Ptolemy II <sup>3</sup> secured Miletus, Phoenicia, western Cilicia, Pamphylia, and Lycia. He subsidized Pyrrhus against Antigonus (274) and aided Athens and Sparta in the Chremonidean War (268–262?). He incited Eumenes of Pergamum to revolt from Antiochus (263) and supported the seizure of Ephesus (262–259) by his own son, Ptolemy. These activities brought Antiochus II, Antigonus II, and Rhodes together to wage the Second Syrian War.

## 260–250

During the **Second Syrian War** (260–253?), Antigonus defeated Ptolemy in the **Battle of Cos** (261 or 256). Though by the resulting peace he lost Cilicia and western Pamphylia (255), he later recovered the Cyclades (250) and also Cyrene (c. 248), which had become independent in 274.

4

## 246–221

**Ptolemy III Euergetes** (“benefactor”) supported his sister Berenice II in the **Third Syrian War** (246–241) and acquired the coasts of Syria and southern Asia Minor, as well as some Aegean ports. But he lost the Cyclades to Antigonus through the **Battle of Andros** (246?). This was the height of the Ptolemaic power.

5

## 221–203

**Ptolemy IV Philopator** (“loving his father”) was a weak monarch, dominated by his minister, Sosibius. In the **Fourth Syrian War** (221–217) he at first lost much of the Syrian coast to Antiochus III, but the victory of **Raphia** (217) brought the recovery of all, save the port of Seleucia.

6

## 203–181

**Ptolemy V Epiphanes** (“god manifest”), a young boy, succeeded his father. While the Egyptian natives revolted in the Delta (201–200), Antiochus III attacked him in the Fifth Syrian War.

7

## 202–195

**The Fifth Syrian War** (202–200?) saw the defeat of Ptolemy at **Panium** (200). He retained only Cyprus of his Asiatic possessions. When he came of age (195), he succeeded in suppressing the native revolts.

8

## 181–145

**Ptolemy VI Philometor** (“loving his mother”) followed Ptolemy V under the regency of his mother Cleopatra I. In consequence of Ptolemy's cowardice during the **Sixth Syrian War** with Antiochus IV (170–168), the people of Alexandria forced him to associate his brother, **Ptolemy VII**, in his rule. Rome prevented Antiochus from completing his victory over Egypt (168). When Ptolemy VI was expelled by his brother (164), the Roman Senate restored him and gave Cyrene and Cyprus to Ptolemy VII, who, however, secured only Cyrene (163). Ptolemy supported Alexander Balas against Demetrius I (153–150) but then switched his support from Alexander to Demetrius II. Ptolemy and Alexander Balas were killed in this war (147–45). <sup>9</sup>

### 145–116

**Ptolemy VII Euergetes II** (“benefactor”) or Physcon (“fat-bellied”) reunited the empire after his brother's death and restored order. At his death, he left Cyrene separately to his son Apion, who willed it to Rome in 96, though it was not actually annexed until 75. Another son, Ptolemy IX, received Cyprus, which was ultimately bequeathed to Rome and annexed in 58. <sup>10</sup>

### 116–47

**Ptolemy VIII Soter II** or Lathyrus (“chick-pea”), son of Ptolemy VII, was eventually expelled by his brother **Ptolemy IX Alexander I** (108–88). The people of Alexandria, however, slew Ptolemy IX and restored Ptolemy VIII (88–80). **Ptolemy X Alexander II**, son of Ptolemy IX, succeeded but was at once slain by the people of Alexandria (80), who set up an illegitimate son of Ptolemy VIII, **Ptolemy XI Auletes** (“flute-player”) or **Neos** (“new”) **Dionysos**. Though expelled in 58, he bribed the “first triumvirate” to send Gabinius to restore him (55). On his death in 51, he left his throne jointly to his children, **Cleopatra VII** and **Ptolemy XII** (51–47). When Ptolemy expelled his sister, Caesar forced her restoration (48) and, since Ptolemy died during the fighting about Alexandria (48–47), Caesar joined with Cleopatra a younger brother, **Ptolemy XIII** (47–44), whom Cleopatra murdered on Caesar's death (44). <sup>11</sup>

(See [354–347](#))

## **[h. Sicily](#)**

### **316–289**

**AGATHOCLES** made himself tyrant of Syracuse in consequence of a civil war (c. 323–316) in which, as a democratic leader, he had executed and expelled the Syracusan oligarchs, dividing their property among the poor. He established Syracusan suzerainty over eastern Sicily. <sup>1</sup>

### **311**

The exiled oligarchs appealed to Carthage whose general, Hamilcar, defeated Agathocles at the Himera River and besieged Syracuse. In 310 Agathocles slipped across to Africa and attacked Carthage. The siege of Syracuse was lifted, and Agathocles maintained himself in Africa until 307, when his army, under his sons, was annihilated during his absence. <sup>2</sup>

### **304**

Agathocles came to terms with Carthage and the oligarchs and took the title of king. In the meantime, the Tarentines had made peace with the Samnites (c. 320) but were attacked by the Lucanians and eventually called in Agathocles for help. <sup>3</sup>

### **302**

Agathocles arrived in Italy (c. 300), established his power in Bruttium, but was called back to Syracuse, where he died in 289. He bequeathed freedom to the Syracusans, who restored the democracy. A certain group of the Campanian mercenaries of Agathocles, calling themselves Mamertines (“sons of Mars”), seized Messana.

4

## 282–275

The Tarentines, angered by Roman occupation of towns in southern Italy, sunk four Roman ships that had violated a treaty by sailing into Tarentine waters. They then drove a Roman garrison from Thurii. When Rome declared war, they called in Pyrrhus (280). After victories over the Romans, Pyrrhus campaigned against the Carthaginians in Sicily (279–276). He returned to Italy, was defeated by the Romans, and departed (275), leaving southern Italy under the Romans and much of Sicily under the Carthaginians.

5

## 275–215

**Hiero II** made himself tyrant of Syracuse, defeated the Mamertines, and took the title of king (270). He joined the Carthaginians in attacking the Roman force which occupied Messana in 264. When he was defeated and besieged in Syracuse, he made peace with Rome (263). At the end of the **First Punic War** (241) (See [264–241](#)), Hiero's kingdom encompassed about a quarter of Sicily; most of the rest became Rome's possession. Denied the possibility of expansion by Rome, Hiero pursued a peaceful policy and Sicily prospered for a quarter century. He died in 215 and was succeeded by his grandson Hieronymus. (See [The Punic Wars](#))

## **E. Rome**

### **1. The Monarchy and the Early Republic, 334 (338)–264 B.C.E.**

#### **a. Geography and Climate**

*(Note on dates:* Virtually all precise dates for early Rome are antiquarian reconstructions. <sup>1</sup>  
The conventional (Varronian) dates for Roman events before the late 4th century are high  
by four years due to the insertion of the fabricated “dictator-years”—333, 324, 309, and  
301. In what follows, the conventional dates will appear in square brackets.)

Rome's site on the **Tiber River** lies where the foothills of the Apennines, the mountain <sup>2</sup>  
chain that dominates central and southern Italy, come down to the central plain. The  
Tiber, like the other navigable rivers of antiquity, was a vital channel of trade. **Latium**,  
the region to the east and south of **Rome**, was bounded to the north by  
Etruria—distinguished by mineral deposits which were heavily exploited from the 8th  
century B.C.E.—and to the south by **Campania**, with good farmland and harbors. Italy  
itself was a geographical unit long before it was a political one; it came to include  
northern Italy only in the 2nd to 1st centuries B.C.E. and never included Sicily or Sardinia.  
The climate of peninsular Italy in antiquity was not very different from that of today,  
except that extensive deforestation in some regions has caused a decrease in rainfall.

## **b. [The Peoples of Italy](#)**

The wide diffusion of Indo-European tongues—Latin, Osco-Umbrian, Venetic, and Messapian—spoken in Italy at the beginning of the historical period, together with the general continuity of prehistoric cultures attested by archaeology, show that the **introduction of Indo-European languages** into Italy was a long and complicated process stretching back to the late Neolithic age. The great cultural units of historical Italy—Etruscan, Latin, Sabellian, and Iapygian in Apulia; Venetic in Venetia—were formed in the 9th and 8th centuries. 1

During the 7th century B.C.E., the non-Indo-European **ETRUSCANS** became the dominant people of central Italy. Their homeland corresponds roughly to modern Tuscany. The rise of the Etruscans coincided with intensified trade with Greeks in search of metals in the 8th century. Greek imports, increased use of metals, greater division of labor, the adoption of writing (from the Chalcidian alphabet of Cumae), and urbanization were all part of the rapid social and economic transformation in southern and coastal Etruria. Etruscan power, though never unified, was extended through migration, colonization, and conquest. Etruscans founded cities in the Po Valley and in Campania and subjugated various Latin communities, Rome among them. The Etruscan cities were loosely united in a religious league of 12 but were politically independent with independent artistic traditions. The economy was based on agriculture, maritime trade and piracy, and exploitation of minerals. Tomb paintings portray a luxurious upper-class existence, while literary sources tell of a class of peasants tied to the land, comparable to Spartan helots. Etruscan hegemony ended in the 5th century with their expulsion from Latium and the loss of the sea to Greeks, of Campania to the Sabelli, and of the Po Valley to the Gauls. From the 4th through the 1st centuries, Roman conquest, colonization, and co-optation caused Etruscan civilization to decline and finally end. The Etruscans influenced Roman institutions in various ways, and in spite of the fact that many of their gods were different from those of Rome, they had a reputation at Rome for religious expertise. They were also renowned for luxury, because women were relatively free by the standards of classical Greece. 2

The **LATINS** lived on the western (Tyrrhenian) coastal plain—**Latium**—that stretches from the Tiber in the north to Monte Circeo 65 miles to the south. Northern Latium is 3

enclosed on the east by the foothills of the Apennines; further south, the Lepini Mountains mark the eastern boundary. Traditionally there were 50 small Latin communities which were united by common Latin cults and by the common Latin rights of intermarriage, contractual dealing, and intermigration. By the 7th century, contacts with Etruscans and Greeks had influenced the Latins to organize themselves into about a dozen communities resembling Greek *poleis*. Although still tied to each other by intercommunal rights and common cults, these Latin “city-states” became increasingly independent and competitive. By the late 6th century several of them had formed a **political league** centered around Aricia, at the time when Etruscan Rome was pursuing an aggressive policy. Roman preeminence in Latium ended abruptly with the expulsion of Etruscan kings in the late 6th century. Soon after this the **Latin League** was formed, and a military alliance was made with Rome to defend the homeland against invading Aequi and Volsci. A century of war left Latium free of invaders, but Rome was again poised to dominate the other Latins. This was achieved by a Roman victory in the Latin War, 337–334 (343–338).

In the historical period the Apennines were inhabited by Sabellian peoples who spoke a variety of Osco-Umbrian languages and who periodically raided and sometimes conquered the fertile plains around them. In historical times the **Sabines** had moved into Latium where they are said to have exerted a formative influence on early Rome. The territories of the **Umbrians** extended from the highlands east of the Arno and Tiber to the Adriatic coast between Rimini and Ancona. Another Osco-Umbrian-speaking people from the central Apennines were the **Aequi**, who invaded Latium c. 500 B.C.E. The central Apennines were also home to the Umbrian-speaking Marsi. Further east, Oscan speakers—the Paeligni, Vestini, and Marrucini—held sway; to the southeast, along the Adriatic coast, the Oscan-speaking Frentani dominated. Inhabiting the south-central Apennines were the **SAMNITES**, who spoke an Oscan language and by the 4th century were united in a loose but formidable confederation. During the late 5th and early 4th centuries, Oscan-speaking peoples moved into Campania, Lucania, and Bruttium, where they came to be known as Campani, Lucani, and Bruttii, respectively.

**GREEK COLONIZATION** (See [c. 800](#)) had a major influence on all the peoples of Italy and Sicily. The first Greek colony was established at Cumae in 750, and Greeks continued founding colonies in Campania, Apulia, and eastern Sicily (**Magna Graecia**) for the following two centuries.

The advent of **CELTIC** peoples into the Alpine regions of Italy occurred during the historical period. Since their movements were nomadic and they mixed with previous inhabitants of regions, it is difficult to date the earlier Celtic presence, but by the 5th century they had begun to displace the Etruscans in the **Po Valley**.

### c. [Economy, Society, and Culture](#)

The economy of early Rome was **agrarian**, and most citizens were farmers working privately owned land. Their diet centered on hulled wheat or emmer (*far*) consumed as porridge (*puls*) rather than bread, together with garden vegetables. Cultivation of grapes seems to have begun in central Italy in the 8th century B.C.E., and the olive was introduced in the 6th; both became staples. Meat played a greater role in the diet of ancient Romans than in that of Greeks, and while sheep and larger stock animals were raised by wealthier Romans, the major source of meat in Rome was the ubiquitous pig. That a significant number of Roman farmers were relatively affluent in the mid-sixth century is shown by their organization into a force of hoplite soldiers who provided their own armor. The majority, however, worked plots too small to allow farming above near-subsistence levels, which had to be supplemented with labor on land that was either public or belonged to the wealthy. 1

The importance of **trade** and **small-scale industry** for the economy of archaic Rome is suggested by its site on the Tiber River at the point of a natural ford (Tiber Island). Commercial activity is confirmed by archaeological evidence. By the mid-sixth century local Roman industry was producing fine pottery and bronze work, as well as public and domestic buildings decorated with high-quality terra-cotta ornaments. From the earliest times, however, **economic well-being at Rome was dependent on military success**. Increases in population during the 7th and 6th centuries, and the overall Roman prosperity during the 6th century was a function of expansion under Etruscan rule. Conversely, 5th-century military setbacks coincide with economic decline, which continued until the end of the century when conquered land was distributed to poor Romans. The pattern recurs in the 4th century, with decades of economic dislocation and social unrest following the Gallic sack of Rome in 386 (390), ending with Roman victories midcentury. Great victories over the Samnites, Etruscans, and Greeks in the late 4th and early 3rd centuries placed the economy of Rome on a higher level. Large numbers of Romans were granted land both in the greatly enlarged Roman territory (*ager Romanus*) and in the **Latin colonies** established in more distant parts of Italy. War captives increased the numbers of rural and urban slaves, and, to meet the needs of the city's swelling population, aqueducts, the *Aqua Appia* in 310 (312) and the *Aqua Anio* 2

*Vetus* in 272, were constructed. The technology for Rome's first aqueducts was probably modeled on earlier drainage tunnels. Public buildings paid for by war booty, especially temples, were erected at an unprecedented rate. Pottery made in Rome began to be exported in quantity, and Roman artisans produced sculpture in terra cotta, stone, and bronze. In the early 3rd century state-issued coinage was introduced. The Etruscans had introduced **technological advances** to archaic Rome in the form of drainage projects, both urban and rural, and impressive public buildings. The conquest of **Veii** in 392 (396) gave Rome access to a superior building material, *Grotta Oscura* tufa. Rome's monumental stone wall, begun in 374 (378), was constructed principally of this stone, which remained the city's chief building material for almost two centuries. By the end of the 4th century the first of Rome's major roads had been built, the *Via Appia* to Capua 310 (312).

From early times the Roman family was governed by the principle of *patria potestas*.<sup>3</sup> This was the power held by the oldest surviving male ascendant (*paterfamilias*) over the property, conduct, and survival of his agnatic descendants—sons, unmarried daughters, grandchildren by sons, married daughters in *sine manu* relationships, and daughters-in-law if married with *manus*, plus slaves (these together constituted the *familia*). All these remained under the power of the *paterfamilias* until his death, at which time each son became a *paterfamilias* and head of his own *familia*, while daughters gained limited independence under the supervision of a male guardian (*tutor*) and slaves together with other property were passed on through inheritance. Inherited property, including land, was equally divided among heirs. From at least the mid-fifth century, there were two forms of marriage at Rome; under one, the wife passed into the *manus* (authority) of the head of her husband's family, while under the other she did not.

Beyond the *familia*, the larger social unit was the **gens** (clan), whose development is reflected in early onomastic practices. The gens consisted of those who shared a *nomen* (family name), who were sometimes thought to descend from a common clan ancestor. Men had personal names (*praenomina*), women did not. The division of large clans into subgroups came to be denoted by a third name, the *cognomen*, which was certainly in use by the 4th century. Sometime during the regal period a group of *gentes*, called **patricians**, secured for themselves certain political and religious privileges to the exclusion of other **plebeian** *gentes*. Various theories try to explain the basis for the distinction—native vs. immigrant; patron vs. client; cavalry vs. infantry—but none is entirely convincing. A characteristic feature of Roman life was **patronage** (*clientela*). This extralegal relationship that occurred at a variety of social levels involved mutual obligations between a free Roman citizen of inferior status (*cliens*) and a more powerful citizen (*patronus*). Its origin, stability, extension through society, and political function are obscure and debated, but its importance is undeniable. **Slavery** is mentioned in the mid-fifth century Twelve Tables but must have been practiced on a relatively small scale in the Archaic period. At that time the need for labor on the estates of wealthy Romans would have been met by citizens who had fallen into **debt-bondage**, *nexum*, which is also

mentioned in the Twelve Tables. Enslavement of defeated enemies was the principal source of slaves, and the military successes of the 4th century increased the supply greatly. It is not coincidental that debt-bondage was formally abolished at the beginning of a major war in 323 (326). The institution of a tax on manumissions in 353 (357) attests to a substantial number of slaves. A Roman slave on being manumitted was called a **freedman** (*libertinus*) and became a citizen.

The cultural life of archaic Rome was heavily affected by **Etruscan and Greek** influences, the latter either direct or mediated through the Etruscans. The presence in 6th-century Rome of the Italic (Etruscan) temple and the Latin alphabet (adapted from the Etruscan, which in turn was adapted from Greek) reflects Etruscan variations on Greek forms. Direct Greek influence is attested in the 6th century by a votive inscription to the Greek gods Castor and Pollux at the pan-Latin sanctuary at Lavinium, by the syncretization in Rome of native and Greek deities, and by early 5th-century Roman temples dedicated to Greek deities. Political revolution, foreign invasion, and internal unrest brought on a century of decline that ended with the cultural advances produced by late 4th-century military successes and prosperity. Rome was once again open to foreign, particularly Greek, influences, which can be seen in the renewed production of pottery and bronze work. The “publication” of the civil law by **Cn. Flavius** in 303 (304) shows that writing, though still limited to relatively small numbers of citizens, had gained a new importance. The capture of cities of Magna Graecia in the early 3rd century brought substantial numbers of Greek slaves to Rome. The Tarentine **Livius Andronicus** worked as a teacher and poet, but other captive Greeks were employed in a variety of occupations throughout the city. The process of “Hellenization,” therefore, was taking place in the streets as well as the salons of Rome long before the 2nd-century conquest of Greece.

[PREVIOUS](#)

[NEXT](#)

#### d. The Regal Period

The history of early Rome rests on a highly dubious literary tradition, based mostly on oral tradition, and a sketchy archaeological record. The latter suggests that Rome's first residents were herdsmen living in seasonal settlements on Rome's various hills (**Palatine, Esquiline, Quirinal**) and using the low-lying areas for burials (both inhumation and cremation). The chronology is disputed, but permanent settlements on these hills seem to have been established by the 10th century B.C.E. The early importance of the Tiber ford as the crossroads of the two principal trade routes of central Italy is suggested by the presence of 8th-century Greek geometric pottery in the adjacent area—the later Forum Boarium. By the early 7th century settlements began to move down from the hills to the eastern fringes of the **Roman Forum**. Around 625, the central area of the Roman Forum was drained and paved. During the second half of the 6th century, an enormous Etruscan-style temple (with three rooms or *cellae*) was built on the Capitoline hill; in the *Forum Boarium* remains of a large temple have been found with an Etruscan inscription nearby. <sup>1</sup>

Roman tradition said that **Romulus** founded **Rome**, and antiquarians later fixed the date at 753. Tradition also said that early Rome was ruled by seven kings—**Romulus, Numa Pompilius, Tullius Hostilius, Ancus Marcius, Tarquinius Priscus, Servius Tullus,** and **Tarquinius Superbus**. The latter was supposed to have been expelled in 505 (509). The last three rulers represent a foreign, Etruscan dynasty responsible for major building projects, among them the construction of a great drainage sewer (*cloaca maxima*) and the temple of Jupiter Optimus Maximus on the Capitol. The tradition also says that the **political organization** of regal Rome was originally based on three tribes and 30 *curiae* (wards), and that the kingship was elective not hereditary. The king was advised by a **senate** of 100 elders (*patres*). The penultimate king, **Servius Tullius**, reputed to be of Latin servile descent, is credited with a reorganization of the army (hoplite reform) that divided citizens into five classes and 193 centuries determined by wealth. <sup>2</sup>

### e. [The Early Republic](#)

The Republic was founded in 505 (509), according to tradition, when the last king, **Tarquinius Superbus**, was expelled by a revolt of native Roman aristocrats led by **L. Junius Brutus**. The dominant tradition states that the Republic was led from the beginning by two annual, eponymous officials called **consuls**, but some scholars think that until 363 (367) they were known as praetors (the latter then became the second tier of officials). The consuls exercised *imperium*, which gave them absolute power (including over life and death and in war), while in the city they exercised the power of *coercitio*, a sort of summary police power. The consuls were elected by the *comitia centuriata*, a plutocratically organized assembly of the male citizens, but their *imperium* continued to be conferred by the *comitia curiata* (*lex curiata*). Assisting the consuls were two financial officials called *quaestors* who were originally appointed by the chief officials and after 443 (447) were elected. Two plebeian quaestors seem to have been added in 418 (421) to administer the state treasury (*aerarium*) in Rome. In either 439 (443) or 431 (435), the job of counting Roman citizens was transferred from the consuls to two censors, nonmilitary but prestigious officials. Every four years the censors, holding office for a maximum of 18 months, made up the citizen lists for tax and military purposes (the census), enrolled senators (*lectio senatus*) and cavalrymen (*recognitio equitum*), and examined public morals (*regimen morum*). A third magistrate with *imperium*, the *praetor urbanus*, was created in 363 (367) to relieve the consuls of some judicial responsibilities. In a time of crisis the senate could establish unity of command by instructing the consuls to appoint a **dictator**, who appointed his own assistant as a master of the cavalry (*magister equitum*). The dictator had *imperium* and absolute power in all fields but had to resign when his task was completed, and in no case could he remain in office for more than six months. All magistrates with *imperium*, and also the censors, were elected by the military assembly, *comitia centuriata*. Other officials were elected by the *comitia tributa*, which passed the great majority of laws (*leges*).

**Religious power** was closely intertwined with political power. The relationship between the Roman people and the divine, which had once been controlled by the king and by priests of specific deities, was taken over under the Republic by three boards or colleges

1

2

of religious officials who were experts in, and managers of, the various methods of communication between the community and the gods. The three priestly colleges were (1) the augurs (originally three? in number, raised to nine by 300), who were expert advisers in determining whether the gods approved courses of action; (2) the *decemviri sacris faciundis*, a committee of ten (earlier, fewer in number), who supervised the Sibylline Books and the few other oracular documents recognized at Rome; and (3) the *pontifices* (priests, originally three?, raised to nine by 300), who exercised a general supervision over the religious life of the Romans. Members of these colleges were selected by co-optation and were originally limited to patricians. Plebeians were admitted to the college of *decemviri sacris faciundis* in 364 (367), of priests and augurs in 300. But members of the three colleges were always drawn from the best senatorial families, be they patrician or plebeian, and individual augurs, *decemviri*, and priests pursued full political and military careers like other Roman aristocrats.

The internal political history of the early Republic centers on the STRUGGLE OF THE ORDERS—the campaign by **plebeians** to break the political and religious monopoly of the **patricians** and to relieve the economic distress of poor citizens. In the early 5th century, the plebeians organized their own assembly, the *concilium plebis*, whose resolutions, called *plebiscita*, were binding only on plebeians. The plebs elected their own officials, *tribuni plebis* (plebeian tribunes), and two *aediles plebis* (plebeian aediles), who handled fines imposed by the tribunes or the *concilium*. The plebeian tribunes at first numbered either two, four, or five but by sometime in the 5th century had reached their canonical number of ten. They were elected by and presided over the *concilium plebis* and, in order to carry out their mandate to defend the lives and property of plebeians against patrician magistrates, they exercised a veto (*intercessio*) over laws, elections, and the acts of magistrates. The plebeians swore an oath binding themselves to avenge any injury done to the tribunes and making their persons inviolate.

### 505 (509)

L. Junius Brutus and L. Tarquinius Collatinus were supposedly the first pair of consuls.

### 504 (508)

A very early treaty between Carthage and the new Republic, confirming Rome's dominant position in Latium, was later attributed to this year. Tradition said that shortly after Tarquinius's expulsion, **Lars Porsenna**, the king of Etruscan Clusium, attacked Rome; he may well have captured it. Later he was apparently defeated by the Latins at the Battle of Aricia (504).

### 495 (499) or 492 (496)

On this antiquarian date the dictator A. Postumius defeated the Latins in the **Battle of Lake Regillus**.

6

### 491 (495) or 489 (493)

On this antiquarian date Sp. Cassius supposedly negotiated the treaty named after him (*foedus Cassianum*) with the Latin League, establishing a defensive alliance to combat the invasion of Latium by the **Aequi** and **Volsci**. Rome and the Latin League agreed to conduct joint annual campaigns with command alternating between Roman and Latin generals, to distribute booty equally, and to establish joint colonies on reconquered territories.

7

### 490–489 (494–493)

The antiquarian date the office of plebeian tribune and the plebeian assembly were created. These events were supposed to have happened when the plebeians, oppressed by debt, moved to the Sacred Mount to return only after patrician concessions.

8

### 473 (477)

On this antiquarian date the Fabian *gens*, fighting as a unit on behalf of Rome against the Etruscan city of Veii, was annihilated on the **Cremera** (a tributary of the Tiber).

9

### 454 (458)

On this antiquarian date **L. Quinctius Cincinnatus** was called from his farm to become dictator and then defeated the Aequi.

10

### c. 447 (451)

**Agitation of the plebs** for the codification of law led to the creation of **ten patrician decemviri** in the place of consuls and tribunes. The first decemviri published ten tables of laws that proved insufficient, so new decemviri created in 446 (450) added two more tables. The **TWELVE TABLES** set out the basic rules for civil law, confirming the privileges of patricians. This was the last codification of Roman law until the 3rd century C.E. Shortly after the writing of the Twelve Tables there was a plebeian protest, supposedly in 445 (449). 11

### 445 (449)

**The Second Secession** of the plebs supposedly occurred, followed by the election of tribunes and then of patrician consuls L. Valerius and M. Horatius. The latter passed a series of **Valerio-Horatian** laws, whose provisions are obscure, though important. They perhaps established *provocatio*, the right of appeal of magisterial decisions, and affirmed the inviolability of the tribunes and also the aediles. 12

### 441 (445)

On this antiquarian date, the **lex Canuleia** took effect, which allowed marriage between patricians and plebeians, with children inheriting the father's status. 13

### 440 (444)

Two patrician **censors** were created. Either as a compromise in the face of plebeian agitation that the consulship be opened to plebeians, or as a measure to meet increased military commands, **military tribunes with consular power**, who might be plebeians, were created. These alternated irregularly with consuls until 363 (367). 14

## f. [The Conquest of Italy](#)

### 334 (338)

**The Latin League was dissolved**, and its former members forfeited an independent foreign policy, being bound to Rome by the various methods discussed below. 1

### 323 (326) or 310 (313)

The **lex Poetelia** abolished *nexum* (debt-bondage). 2

### 323–303 (326–304)

**THE SECOND SAMNITE WAR** began when Rome violated a treaty by establishing a Latin colony across the Liris River at Fregellae. The war was fought principally in Samnium. After initial successes from 323–320 (326–322), a Roman army was trapped at the **Caudine Forks** in 319 (321), and Rome was forced to negotiate an unfavorable peace. Rome resumed hostilities in 314 (316), suffered a defeat at Lautulae 313 (315), but soon reversed its fortunes. In 304 (305) the Samnites were decisively defeated and forced to sign a peace in 303 (304), giving sole hegemony of Campania to Rome. 3

### 310 (312)

**Appius Claudius** (later Caecus, “the blind”) as censor distributed freedmen among the rural tribes (in 302 (304) freedmen were confined once again to the four urban tribes). 4

### 298–290

The **THIRD SAMNITE WAR** was the final effort by the Samnites—aided by the Etruscans, Umbrians, and Gauls—to halt Roman domination. In 295 a large force of Samnites and Gauls was defeated at Sentinum, where a second Decius Mus was reputed to have secured a Roman victory by a *devotio*—that is, by seeking death in battle in exchange for divine assurance of Roman victory. The Gauls scattered, the Etruscans sued for peace in 294, and the Samnites finally surrendered in 290. Samnite land was taken, and Latin colonies were established on it. In 290 the Sabines were given Latin rights.

5

### 287

After a period of violence and the Third Secession of the plebs to the Janiculum, the dictator Q. Hortensius passed the **lex Hortensia**. It made *plebiscita* passed by the *concilium plebis* binding on all Romans. This marked the legal end to the Struggle of the Orders and the formation of a **joint patrician-plebeian nobility**.

6

### 284–283

The Romans defeated a Gallic army at Lake Vadimon in Etruria and then annexed the land of the Senones (the *ager Gallicus*) along the Adriatic.

7

### 282–272

**WAR WITH PYRRHUS** arose from Roman occupation of Thurii, a Greek city of Magna Graecia. The Tarentines sunk four Roman ships that had violated a treaty by sailing into Tarentine waters and expelled a Roman garrison from Thurii. Rome declared war, and the Tarentines called in **King Pyrrhus** of Epirus. In 280, with a professional Hellenistic army of 25,000 and 20 elephants, Pyrrhus suffered heavy casualties but won a “Pyrrhic victory” over the Romans at **Heraclea** in Lucania. The Bruttii, Lucani, and Samnites joined Pyrrhus, but the Roman senate, rallied by the blind ex-censor Ap. Claudius, rejected the peace offer of Cineas, Pyrrhus's ambassador. In 279 Pyrrhus won a hard-fought victory at **Ausculum**.

8

### 279–276

Pyrrhus campaigned in Sicily (See [282–275](#)) and returned to Italy to be defeated by Rome at Beneventum in 275. He went back to Greece, leaving his general, Milo, to surrender Tarentum to the Romans in 272. Rome garrisoned Tarentum and other Italiot Greek cities; reduced the Bruttii, Lucani, and Samnites; and took Rhegium from the Mamertines in 270. Minor rebellions in Etruria occurred until 264.

9

Rome's aggressive foreign policy had won it domination of all Italy south of the Po Valley. In its relationships with other communities, Rome denied them an independent foreign policy but customarily permitted local autonomy. Italian communities outside the *ager Romanus* (Roman territory immediately around Rome), fell into the following main categories:

10

(1) *Municipia* or *praefecturae*. These were states, such as Capua and Cumae, whose governments managed their own internal affairs, subject to the supervision of a Roman official called *praefectus Capuam Cumas*. Their aristocrats were full Roman citizens, while others were *cives sine suffragio* (Roman citizens without the vote).

11

(2) *Old Latin states*. States such as Tibur and Praeneste, defeated in the Latin War, retained autonomous governments by the treaty of 338. They passed their own laws, managed their internal affairs, and retained the Latin rights of *ius migrationis*, by which citizens could move to Rome and become Roman citizens. They were obliged to provide soldiers for Rome, but not tribute.

12

(3) *Colonies of Roman citizens*. These were established for defensive purposes, usually on land taken from conquered peoples, and comprised about 300 Roman citizens. They did not have independent local governments. Eight of these had been founded by 264, all coastal.

13

(4) *Latin colonies*. These were established as military outposts on conquered land and usually had 2,500–4,000 settlers drawn from Rome or Latin communities. The colonists had the status of Latins, and their governments, modeled on that of Rome, passed their own laws and managed their internal affairs. They were obliged to provide soldiers for Rome, but not tribute.

14

(5) *Civitates foederatae, socii* (allied states). The great majority of Italic states fell into this category. Most had been defeated by Rome and had suffered confiscation of land which became *ager publicus* of Rome. Their governments passed their own laws and managed internal affairs, subject to interference from Rome. They had to contribute troops to Rome, but did not pay tribute.

15

## 2. [The Republic, 264–70 B.C.E.](#)

### a. [Geography and Climate](#)

During this period Rome acquired a Mediterranean empire that comprised the following areas: 1

(1) Sicily's eastern end is mountainous and dominated by Etna. Farther west, a central plateau recedes into a coastal plain toward the south. There were fine harbors at Syracuse on the east, at Panormus on the north, and at Drepana on the west. Sicily's major rivers were navigable in antiquity, and its mountains were heavily forested. Excellent volcanic soil produced an extraordinary yield and a variety of crops; by the mid-third century, Sicily was the major exporter of grain in the Mediterranean. The hills of the interior contained good summer grazing land and made Sicily a major exporter of wool, as well as the home of outstanding horses and livestock. Sicily's climate follows the Mediterranean pattern and, except for a longer summer's drought lasting four months, is like that of peninsular Italy. Before the Romans, eastern Sicily was held by the **Greeks**; Phoenicians inhabited the west; and Sicels lived in isolated communities in the interior. 2

(2) Located in the Po Valley, **Cisalpine Gaul** had a continental climate with summers that were cooler, and winters that were harsher, but not as wet as those of peninsular Italy. Although rainfall was well distributed over the seasons, melting snow caused frequent flooding and permanent swamps, especially in the east. The region was covered with dense forests that provided timber as well as a home to large herds of pigs. Forest clearing and drainage made Cisalpine Gaul into an enormously fertile land, producing prodigious yields of grain and, in the southern regions, abundant wine harvests. Good grazing land provided a wide variety of fine wools. Once drained, the flat plain facilitated road building and overland trade, while navigation on the Po River was possible as far as Turin. The Po Valley was inhabited by three principal Celtic tribes: the **Boii** in the south, the **Cenomani** in the center, and the **Insubres** in the north. To the east in Venetia lived the Veneti, and to the west in the Apennines lived the Ligurians, both non-Celtic peoples. 3

(3) The **Spanish peninsula** comprises an elevated central plateau whose climate is continental and whose sparse rainfall makes it suitable for pasturage rather than agriculture. On the north and south are high mountains, forested in antiquity—the 4

Pyrenees and Sierra Nevada, respectively. Lower interior mountains border fertile river valleys—Baetis (Guadalquivir) and Ebro—that lead down to fertile coastal plains. Spanish agriculture was noted for its cereals, wines, and especially olive oil, while flax was a specialty of the Ebro Valley. Spain's mountains were particularly abundant in minerals—copper, iron, and, in the Sierra Morena, prodigious amounts of silver. There were good harbors on the southern coast at Gades and Carthago Nova. **Celtiberians** inhabited the north-central plateau, to the west were **Lusitanians**, and throughout the rest of the peninsula lived some 20 other independent peoples. (For the other area of the empire—the Balkan Peninsula, Asia Minor, Syria, and North Africa (See [Foreign Invasion and Internal Disarray](#)))

## **b. Economy, Society, and Culture**

In 225, Roman citizens living in all parts of Italy numbered about 280,000; the free population was between 3,000,000 and 3,500,000; and slaves brought the total population to over 5 million. Foreign wars of the 3rd century brought significant numbers of slaves to Italy, and during the 2nd century the number of war captives vastly increased. Between 225 B.C.E. and 14 C.E., the population of Italy seems to have increased by 50 percent, slaves accounting for most of the increase. The economy of Italy was consequently transformed by the **slave labor**, which was fundamental to the creation of *latifundia*—large, scattered estates devoted in part to the production of grapes and olives. The upper classes invested wealth newly acquired from conquests in these estates. To facilitate such investments, **small citizen farmers**, many of whom were also burdened by extended military service, were pressured to **leave their land** and emigrate to Rome. The consequent **economic dislocation** led to chronic social and political problems. The devastation during the Hannibalic War of large stretches of Italian land, particularly in the south, also contributed to the growth of *latifundia*, as well as that of large-scale sheep farming. Much of this land was confiscated by Rome and rented as *ager publicus* to wealthy citizens. To meet the needs of a city swelled by immigrants and slaves, as well as those of Rome's armies, **grain was imported** on a large scale, primarily from Sicily. Sometime before the mid-third century, wheat (*triticum*) had displaced emmer (*far*), allowing bread to replace porridge as the staple of the diet, although Greeks continued to refer to Romans as “porridge eaters.” Public bakeries were said to have been introduced in Rome c. 170. After the disruptions of the Pyrrhic and First Punic wars, **trade** revived. Grain, metals, slaves, and wines were imported into Italy, and beginning with the second half of the 3rd century, wines of Latium, Campania, and Etruria began to be exported to the Adriatic, and later, to southern France. The 2nd-century conquests of Spain and Cisalpine Gaul, and then of the Aegean, opened up markets which were fully exploited by Roman and Italian businessmen who brought wealth to the towns of Italy, as well as to the capital. The earliest Roman money was minted in bronze, beginning in the 4th century. The first silver coinage was produced c. 300, and what would become the standard silver coin—the *denarius*—was first issued in 211. Like all ancient states, Rome produced coinage to facilitate the collection of taxes and state payments, not to encourage

trade. A **technological revolution** occurred when the traditional method of building in stone was replaced by stronger, more flexible, and cheaper **concrete construction**, with the discovery of *pozzolana* mortar made from volcanic stone. Cement's first use was purely functional, that is, the building of the warehouse—the *Porticus Aemilia*, in Rome's new dockyards (193). By the century's end cement was being fully exploited in the construction of vaulted and terraced sanctuaries, such as that at Praenestae, and in high-rise urban tenements.

The **Roman family** had become nuclear and smaller by the 2nd century, and most **marriages** seem to have been *sine manu* (without authority). **Restrictions on women** were legislated—the **lex Voconia** (169) limited the amount a woman could inherit by will. But by the 1st century these and other restrictions could be circumvented by various legal dodges, and a woman who was *sui iuris* (independent) could acquire considerable freedom—to transfer property and to divorce—through a legal device which permitted her to select her own guardian. Educated Greeks began working as teachers in the early 3rd century, and Rome's first **elementary school** opened in 234. By the mid- to late 2nd century most upper-class Romans knew some Greek; literacy in Latin existed among the elite, and, to a lesser degree, among skilled craftsmen. With the ending of the Struggle of the Orders, a **new nobility** of office-holding families, both patricians and plebeians, grew up. A man without office-holding ancestors was called a **novus homo**, or “new man,” and required the help of a nobleman to obtain high office.

A major **social change** that occurred during the 3rd and 2nd centuries was the growing **disparity of wealth**, owing to the unequal distribution of riches acquired from foreign conquests. The traditional aristocratic practice of spending on public building was augmented by private spending and public largess. Viewed as *luxuria*, such conduct raised opposition expressed in the form of censorial reprimands, **sumptuary laws** (in 215, 181, 161, and 115), and numerous speeches. This prompted the wealthy to seek the pleasures of a Hellenic private life in **suburban villas** or, beginning in the 170s, in villas in **Greek Campania**.

From the 3rd century on, the major **cultural phenomena** were **Hellenism** and, beginning in the mid-second century, the articulation of a Roman culture that attempted to define itself, first in literature then in art, in opposition to Hellenism. **Latin literature** began formally in 240 with the translation of a Greek play by **Livius Andronicus**, a Greek freedman who had been captured at Tarentum in 272 and who also translated Homer's *Odyssey*. Before Livius, Latin poetry consisted of hymns and drinking songs. Greek culture continued to exercise its influence as seen in the Latin epic on the First Punic War, *Bellum Punicum*, by **Cn. Naevius** (c. 270–200), who also composed dramas. Enormously popular Latin comedies modeled on Greek originals were written by **T. Maccius Plautus** (?–184). **Q. Ennius** wrote in many genres and produced the national epic, the *Annales*, in a Greek meter (dactylic hexameter). The comic tradition was carried on by the highly regarded **P. Terentius Afer** (194–159), **Caecilius Statius** (fl. 179), and

**L. Afranius** (c. 160–120). Tragedies were written by **M. Pacuvius** (220–131), a nephew of Ennius who was also a noted painter, and by **L. Accius** (170–87). It was **C. Lucilius** who invented the Roman genre of satire. Rome's earliest historians, **Q. Fabius Pictor**, **L. Alimentus**, **A. Postumius Albinus**, and **C. Acilius**, composed in Greek. The first to write a history in Latin was the “new man” from Tusculum, **M. Porcius Cato** (234–149), whose *Origines* was about Rome and Italy. Cato also wrote a treatise on agriculture and numerous influential speeches. He was a critic of Greek culture. In 173 and 161, Greek philosophers were banished from Rome. Noted Roman orators included **C. Sempronius Gracchus** (154–121), **M. Antonius** (c. 140–87), and **L. Licinius Crassus** (140–91). **Q. Mucius Scaevola** (c. 140–82) wrote to organize Roman civil law by Greek logical categories. Beginning with the 3rd century, **Roman art** celebrated victory, its principal manifestations being representations of battles or triumphant generals and the decoration of Rome with **art plundered** from major Hellenistic capitals—Syracuse and Tarentum, and later, Corinth and Carthage. By the mid-second century, Rome's wealth was attracting artists from all over the Greek world. The result was that **eclecticism** became a fundamental element of Roman art. It was in **portrait sculpture** that Roman art sought to define itself against Greek models by stressing hard-headed maturity, warts and all (realism), over beauty and youth. **Architecture** remained conservative in the 3rd century, continuing to produce traditional Italic temples, along with aqueducts—the *Anio Vetus* (272), and roads—the *Via Aurelia* (241) and the *Via Flaminia* (c. 220). The **basilica**, a building type with multiple civic functions, was introduced to Rome in the early 2nd century. The first stone bridge, the *Pons Aemilia*, was begun in 179; in 144 a large new aqueduct, the *Aqua Marcia*, was constructed, followed by the *Aqua Tepula* (125). In religious architecture, distinctively **Greek influences** began to appear both in plan and building material (e.g., the round temple in the *Forum Boarium*, c. 146 or 125, which in form resembles a Greek *tholos* and which was built with imported Attic Pentelic marble). **Private architecture** was marked by the addition of the Greek **peristyle** garden to the Italic atrium house and by the construction of large luxury villas outside of Rome. Romans followed the Greek fashion of decorating their houses with painting. The **First or “Masonry” Style** initiated marble architectural decoration in single-dimensional painted walls.

### **c. The Punic Wars**

#### **264–241**

The **FIRST PUNIC WAR** arose from the Roman decision to accept the appeal of the **Mamertines**—Campanian mercenaries in Messana—to aid them against King Hiero of Syracuse and the Carthaginians (See [275–215](#)). In 264 Ap. Claudius Pulcher defeated the Carthaginians and Hiero and besieged Syracuse; Hiero shifted his alliance to Rome. 1

#### **262**

After sacking Agrigentum, the Romans decided to expel the Carthaginians entirely from Sicily. 2

#### **260**

The Romans under C. Duilius won the **naval victory of Mylae**. 3

#### **256**

A Roman army under M. Atilius Regulus landed in Africa. Carthage rejected Regulus's stringent terms and continued resistance under the Spartan mercenary Xanthippus. 4

#### **255**

**Xanthippus captured Regulus** and part of his army. 5

## 254

Rome seized **Panormus** and, in 250, began an unsuccessful nine-year siege of **Lilybaeum**.

6

## 244

The Romans failed to dislodge the Carthaginian general **Hamilcar Barca** from the promontory of Eryx.

7

## 241

At the **Aegates Islands** C. Lutatius Catulus destroyed the Carthaginian fleet. Carthage eventually negotiated peace on the condition of the surrender of Sicily and a payment of 3,200 talents over ten years. At Rome the final two **voting tribes** were created, making a total of 35 in the tribal assembly. Sometime between 241 and 217, the *comitia centuriata* was reorganized to make it partially correspond to the tribal system. The reform was democratic to the extent that it reduced the number of voting units (centuries) of the wealthiest first class from 80 to 70, to produce a multiple of the 35 tribes of the more egalitarian tribal assembly, and that it transferred the right of first vote from the elite equestrian centuries to those of the first class.

8

## 237 (238?)

Carthage, weakened in the recent **Mercenary War** (241–238), was blackmailed by the threat of war into surrendering **Sardinia** to Rome and paying an additional 1,200 talents.

9

## 237–228

Hamilcar Barca established a Carthaginian dominion in southern and southeastern Spain.

10

## 229–228

**The First Illyrian War.** To suppress Illyrian pirates, Rome sent a large army and fleet, <sup>11</sup> defeated Queen Teuta, and established “friendship” with the Greek cities of Illyria.

## d. Conquest of the Mediterranean

### 201–190

Annual campaigns were conducted in **Cisalpine Gaul** against the Cenomani, Insubres, and Boii until 190. 1

### 200–197

The **SECOND MACEDONIAN WAR**. Encouraged by Pergamum, Rhodes, and Athens, the senate resolved to make war on **Philip V** of Macedon and frightened an unwilling *comitia centuriata* into declaring war by visions of a renewed invasion of Italy. **T. Quinctius Flaminius**, supported by both the Aetolian and Achaean Leagues, finally (197) defeated Philip at **Cynoscephalae** in Thessaly and forced him to make peace (196) on the following terms: surrender of all cities in Greece; payment of 1,000 talents in 10 years; reduction of his navy to five ships; promise not to declare war without permission of Rome. At the ensuing Isthmian Games, Flaminius proclaimed the **independence of the Greek cities**. 2

### 197–180

**Regulation** of the *cursus honorum* (succession of offices). After 197, candidates for the consulship had to have held the praetorship. In 180, the *lex Villia annalis* established minimum ages for magistracies. 3

### 197–155

Roman armies invaded **Liguria** almost yearly until 172. The region was not conquered until 155.

4

### 197–175

Two provinces were created in 197—Nearer Spain (*Hispania Citerior*) in the Ebro Valley, and Farther Spain (*Hispania Ulterior*) in the Baetis Valley. The Romans began war with the Celtiberians in 195, and with the Lusitanians in 193, and campaigned until victory in 175.

5

### 192–189

**THE SYRIAN WAR** (See 192–189). Failed negotiations with Rome over Greece and Asia led Antiochus III, invited by the Aetolians, to invade Greece, but M. Acilius Glabrio routed his forces at Thermopylae (191).

6

### 190

The Roman army, under **L. Cornelius Scipio** (later *Asiaticus*) and his brother Scipio Africanus, crossed the Hellespont and defeated Antiochus in the **Battle of Magnesia**. By the **Treaty of Apamea** (189), Antiochus was obliged to surrender all European and Asiatic possessions north of the Taurus Mountains, and pay 15,000 talents in 12 years. Rome divided the Anatolian territory of Antiochus between Pergamum and Rhodes and aided Eumenes II of Pergamum against the Galatians (189). In Greece, Rome subjected the Aetolians but left the other cities free.

7

### 171–167

The **THIRD MACEDONIAN WAR**. Uneasy over the dealing in Greece of Philip's successor Perseus, and encouraged by Pergamum, Rome declared war. After several unsuccessful campaigns, the Romans placed L. Aemilius Paullus in command.

8

### 168

**Battle of Pydna.** Paullus defeated Perseus and brought him back to Rome in a triumphal procession. So great was the booty and tribute that Roman citizens were thereafter relieved of direct taxation. Macedonia was broken up into four wholly distinct confederacies. Illyria was reduced to three tributary confederacies, and Epirus was devastated. From the Achaean cities 1,000 of the chief citizens were taken as hostages and kept in Italy for 16 years. Rome likewise dictated to Eumenes of Pergamum, to Rhodes, and to Antiochus IV, who was prevented by the ambassador C. Popilius Laenas from making war on the Ptolemies of Egypt. <sup>9</sup>

## 154–133

A major rebellion broke out in Spain. The Celtiberians were brought to terms in 151; the Lusitanians, under Viriathus, fought on until 139. The city of Numantia was taken by **P. Cornelius Scipio Aemilianus** in 133. <sup>10</sup>

## 149

The tribune L. Calpurnius Piso enacted a *lex Calpurnia* which set up a permanent commission of senators to hear the suits of provincials to recover from governors money unjustly collected (*quaestio de rebus repetundis*). Decisions were motivated not by justice but by class selfishness. <sup>11</sup>

### e. Domestic Strife

Foreign conquests engendered domestic changes and problems. Among them were: (1) the growth of large estates and slave labor in Italian agriculture; (2) the flight of citizen farmers from the land; (3) consequent shortages of military manpower, since military service was based on a property qualification that could no longer be met; (4) the danger of slave revolt; (5) increased aristocratic competition for high office, and the growing rift between the interests of senators and *equites*; (6) a swelling poor urban population; (7) and, behind it all, the desire of the Italian allied states to have Roman citizenship. During the 2nd century, these problems were manifested in various ways; they came to a head with the tribunate of Tiberius Gracchus in 133. <sup>1</sup>

#### 133

**Ti. Sempronius Gracchus** as plebeian tribune proposed an **agrarian law** that limited holding of public land to 500 *iugera* (312 acres) per person, with an additional 250 *iugera* for each son, thereby threatening the wealthy and certain Italian cities. The measure was vetoed by another tribune, but Tiberius had him deposed, and the bill passed. A commission of three began to confiscate land held in violation of the law and to **distribute lots** of 30 *iugera* to **landless Romans**. To finance his program, Tiberius proposed that Attalus's bequest of Pergamum be used, intruding on a senatorial prerogative in foreign affairs. Violating custom, Tiberius stood for a second tribunate. During the voting, Tiberius and 300 followers were murdered by conservative senators. <sup>2</sup>

#### 129

The kingdom of Pergamum was organized into the **province of Asia**. <sup>3</sup>

#### 123–122

The **Tribunates of C. Sempronius Gracchus**. Gaius Gracchus proposed a more extensive program aimed to win wider support against conservative opposition. He reaffirmed his brother's **agrarian law** and legislated for founding **colonies** at Tarentum, Capua, and Carthage. For the urban poor he passed a **grain bill** that subsidized prices. He transferred membership on **extortion juries** from senators to equestrians, giving the latter power over senatorial governors. He also won equestrian support by giving the right of collecting the **taxes of the province of Asia** to Roman *publicani*. He proposed that **Roman citizenship** be given to Latin communities and that Latin rights be given to the Italian allies. Conservative senators divided Gaius's support by playing to the plebeian unwillingness to share the citizenship. Gaius was defeated in his bid for a third tribunate.

4

## 121

When conservatives attempted to annul Gaius's colony bill, riots ensued. The senate passed the *senatus consultum ultimum*—**SCU**—which permitted the consuls to execute without trial any citizen deemed to be a danger to the Republic. Gaius and 3,000 of his supporters were then attacked and killed in the city. The Gracchan crisis caused a divide in subsequent Roman politics between **optimates**, conservatives who opposed the Gracchan approach, and **populares** who supported it.

5

## 125–118

Roman armies campaigned in Transalpine Gaul in 125–124. The **province of Gallia Narbonensis** was created in 121(?), and the colony of **Narbo** founded in 118.

6

## 111–105

The **Jugurthine War** resulted when the kingdom of Numidia was usurped by **Jugurtha**, who eventually had to fight Q. Caecilius Metellus (Numidicus). The latter won victories but failed to end the war.

7

## 107

**Gaius Marius**, a new man, while Metellus's legate and against senatorial opposition, won the consulship and the Jugurthine command. Refused funds for an army, Marius enlisted **volunteers** without the requisite **property qualification**. The Roman legion was reformed, the **cohort** replacing the **maniple** as the tactical unit. 8

## 107–105

Marius ended the Jugurthine War and triumphed in Rome. 9

## 105

German tribes—**Cimbri** and **Teutones**—had been defeating Roman armies in the north since 113. In 105 they wiped out two consular armies at Arausio (Orange). 10

## 104–100

**Marius** was elected consul for five consecutive years to combat the German threat. 11

## 102

Marius followed the Teutoni to **Aquae Sextiae** (*Aix en Provence*) and annihilated them. 12

[PREVIOUS](#)

[NEXT](#)

**f. War and Politics, to 70 B.C.E.**

**91–87**

**THE SOCIAL WAR** (War of the Allies). Italian allied states formed their own republic, <sup>1</sup>  
**Italia**, and declared war on Rome. Latin communities, together with Etruscans and  
Umbrians, remained loyal.

**90**

The *lex Iulia* extended **Roman citizenship to all Italians**, thus undermining Italian <sup>2</sup>  
solidarity. The new citizens, however, were enrolled in only eight tribes, severely  
limiting their voting power.

**89–88**

Roman victories effectively ended the war, though it dragged into 87. Before it was <sup>3</sup>  
over, 50,000 had died on each side and Italy was devastated.

**88–84**

**First Mithridatic War.** Taking advantage of the Social War and Greek hatred of Rome, <sup>4</sup>  
**Mithridates VI Eupator** of Pontus invaded Bithynia and the province of Asia. **L.**  
**Cornelius Sulla**, a successful optimate general in the Social War and consul in 88,  
received the command against Mithridates.

**88–82**

**CIVIL WAR** broke out in Rome when a *popularis* tribune, **P. Sulpicius Rufus**, passed laws distributing new Italian citizens through the 35 tribes and transferring the Mithridatic command to Marius. Sulla **marched his army on Rome**, killed his opponents (Sulpicius among them—Marius escaped), passed conservative laws, and then left to fight in the east as proconsul of 87. 5

### 87–84

The *popularis* consul of 87, **L. Cornelius Cinna**, went to war with his optimate colleague and captured Rome with the support of Marius, who then began slaughtering his optimate enemies. Cinna and Marius became consuls for 86, but Marius soon died. Cinna's attempts to negotiate with Sulla were fruitless, and he died in a mutiny in 84. Meanwhile, Sulla had defeated Mithridates' generals in Greece (86–85) and driven Mithridates from Asia; then, eager to return to Italy, he made peace (85). Sulla demanded the enormous sum of 20,000 talents from the cities of Asia. 6

### 83–81

The **Second Mithridatic War** resulted from a Roman invasion of Cappadocia. Peace was made on the terms of 84. 7

### 83–82

Sulla landed at Brundisium, attracting talented young commanders—**M. Licinius Crassus** and **Cn. Pompeius** (Pompey). He routed his opponents in the field and in Rome “proscribed” his enemies by listing those whose lives and property were forfeited; over 2,000 died. Eighty thousand **Sullan veterans** were settled in 20 **military colonies** founded on confiscated Italian land. 8

### 82–79

Sulla was appointed **dictator for restoring the Republic**. He passed a legislative program that included: (1) increasing the senate from 300 to 600 by adding new equestrian members; (2) severely limiting the powers of plebeian tribunes and forbidding tribunes to hold further office; (3) regulating the provincial system by 9

increasing praetors to eight, quaestors to 20, and forbidding governors to lead armies outside their provinces; (4) establishing seven additional permanent courts, in which juries were exclusively senatorial. Sulla retired in 79 and died the following year. He had tried to ensure senatorial rule and optimate supremacy against the challenges of tribunes and generals like himself.

### 78–77

**M. Aemilius Lepidus**, consul of 78, sought to undo Sulla's reform. He raised an army but was defeated in 77 by his optimate colleague, Q. Lutatius Catulus, and Pompey. <sup>10</sup>

### 82–72

The Marian leader **Q. Sertorius** held optimate generals at bay in Spain. Pompey arrived in 77, but was not victorious until Sertorius's assassination in 72. <sup>11</sup>

### **3. Civil War and Renewal, 70 B.C.E.–14 C.E.**

#### **a. Economy, Society, and Culture**

In 70 B.C.E., Rome's empire comprised most of the lands bounding the Mediterranean. By 14 B.C.E., it had been extended to include, in the west, large areas of **continental Europe** (France, the low countries, and the lands bordering the Rhine and Danube Rivers), and, in the east, substantial parts of **Anatolia**, plus **Syria**, **Judaea**, and **Egypt**. Although the **economy** continued to be characterized by **small-scale industry**, and by **agriculture and trade** that were predominantly **local**, a substantial **Mediterranean-wide commerce** was conducted between cities united by river and maritime communications, a common material culture, and a common coinage. The potential benefits were hampered by the frequently rapacious treatment of provincial resources, by piracy, and, above all, by war. Some 200,000 Italian men were killed in the wars of 90–81; those of 49–31 claimed perhaps another 100,000. Italian agriculture was devastated by pillaging and the large-scale reallocation of land. The result was debt, lawlessness, social unrest, and economic disarray. During all this time the provincial economies were being ruthlessly exploited by Roman armies. The great achievement of the **emperor Augustus** was to end war within the Empire. <sup>1</sup>

The growing complexity of economic life made the traditional system of Roman **civil law** untenable. By recognizing the praetor's *formulae*, the *lex Aebutia* (c. 150?) officially liberated the *ius civile* from the constraints of the highly formalistic and narrow rules of the legal procedure called the *legis actio* system, which had been established in the Twelve Tables. Under the new **formulary system**, the praetor “interpreted” as actionable circumstances not strictly covered by the traditional “actions,” thereby greatly extending the protection of the law. The **praetor's edict** defined what *formulae* would be employed. These edicts were passed on to succeeding praetors, creating a body of “praetorian” law, which became the chief authority for civil law. The edicts, and the innovative interpretations they embodied, were not, however, the work of the praetors themselves, but of legal scholars (*jurisconsults*) who advised the praetors. **Criminal law** evolved from the Twelve Tables' regulation of private vengeance to a more active concern for public safety and order. Criminal actions were initiated by either magistrates or private <sup>2</sup>

citizens, and trials traditionally were conducted before one of the popular assemblies. Around 200, the senate entrusted certain cases to special courts, *quaestiones extraordinariae*, composed of senators and presided over by a consul or praetor. Sulla's legislation defined other types of crimes and established permanent courts to adjudicate them. Under Augustus, these permanent courts continued, but emphasis began to shift to a more expedient procedure, the *cognitio extraordinaria*, wherein a magistrate appointed by the emperor, the *praefectus urbi*, conducted trials and rendered decisions without the aid of a jury.

The late Republic was a time of great **social upheaval. Slaves continued to flood into Italy**. The slave population of Italy in 14 C.E. has been estimated at around 3 million out of a free population of about 7,500,000. Hundreds of thousands of Italian peasants were conscripted into armies to wage civil wars. For those who survived, land had to be found, and the resultant confiscations produced great numbers of dispossessed, many of whom immigrated to Rome where living conditions were worsening. Debt and violence brought about social discontent in both city and countryside, which led to the call for revolution by such men as Catiline. The **composition** of the governing **aristocracy changed**. A generation after receiving the Roman citizenship, Italian aristocrats began entering the Roman senate in numbers. The process was accelerated by civil wars, which killed off many of the old Roman nobility and provided opportunity for advancement to the capable and unscrupulous. Competition for office led aristocrats to finance ever more **spectacular public entertainment**—dramas, mimes, public banquets, and gladiatorial contests. Augustus's attempts to curb public aristocratic display were successful, but his programs to put an end to private *luxuria* failed utterly. By the late Republic, women had acquired the ability to divorce independently and to force the consent of a male guardian (tutor). Augustus **curbed the relaxing of traditional restrictions on upper-class women but released women from guardians if they had three children (four for freed women)**. The numbers and influence of freedmen grew significantly; some of them gained great wealth and considerable indirect power. The primary avenue of social mobility for the Roman citizens remained the army, the vast majority of whose members came from the peasantry.

If the 1st century B.C.E. was a period of political turmoil, it was also a time of extraordinary **cultural activity**. Elite education included pursuing advanced studies in the Greek east. **Latin literature** entered its golden age. **Cicero's** (106–43) works in oratory and philosophy transformed the language. **Julius Caesar's** (100–44) masterly **commentaries** on the Gallic and Civil wars combined rapid narrative with political propaganda. **C. Sallustius Crispus** (Sallust, c. 86–c. 35) wrote two classic historical monographs—the *Catilinarian Conspiracy* and the *Jugurthine War*, as well as a major history (lost). Latin biography was composed by **Cornelius Nepos** (c. 99–c. 24), while the polymath **M. Terentius Varro** (116–27) wrote on a wide variety of subjects, including etymology, antiquities, farming, and satire; most of his work is lost. Latin poetry displayed tremendous vigor and range. **T. Lucretius Carus** (c. 94–55) penned an

epic, *De Rerum Natura* (On the Nature of Things), elucidating the philosophical doctrines of Epicurus, while **C. Valerius Catullus** (87–54?) used Alexandrian models to produce an elegant and personal poetry. The vigor of late republican Latin carried over into the Age of Augustus, where it was harnessed by the patronage of the imperial court, most effectively by **C. Maecenas**, friend and adviser of Augustus. **P. Vergilius Maro** (Vergil, 70–19) wrote the pastoral *Eclogues*, then the didactic poem, *Georgics*, and finally Rome's national epic, the *Aeneid*. **Q. Horatius Flaccus** (Horace, 65–8) mastered a wide range of genres (satire, ode, and epode), while the composition of Catullan love elegies was continued by **Sextus Propertius** (c. 50–15) and **Albius Tibullus** (c. 55–19). **P. Ovidius Naso** (Ovid, 43 B.C.E.–17 C.E.) wrote elegies and a distinctively light didactic and epic poetry. **T. Livius** (Livy, 64 B.C.E.–12 C.E.) capped the annalistic tradition by writing a monumental history of Rome from its origin. In **public architecture** military dynasts of the late Republic drove less wealthy aristocrats from the field of competition and transformed the political centers of the Republic to reflect their glory. Julius Caesar and then Augustus recast the **Roman Forum** with the new Curia Iulia, the Basilica Iulia, the temple of Divus Iulius, the Portico of Gaius and Lucius, and the triumphal arches of Augustus. In addition, Caesar and Augustus built completely new fora—the Forum Iulium and the Forum of Augustus—dedicated to their personal achievements. Rome's other political center, the **Campus Martius**, was altered, first by Pompey with the erection of Rome's first stone theater in 55, then by Caesar who remodeled the *Saepta* (voting stalls). In the late Republic, works of **Greek art** continued to accumulate in Rome and Italy as a result of being brought there as war booty and of being purchased or stolen to satisfy the elite obsession with “collecting.” Old masterworks were joined with copies of Greek originals to decorate private villas. Meanwhile, in public art, Roman military leaders increasingly disregarded traditional republican constraints and were portrayed in the manner of Hellenistic kings—as nudes or in equestrian statues. In wall painting the **Second Style** (60–20) created the illusion of depth, both in architectural features and in framed tableaux using theatrical and other decorative conventions from Hellenistic art. The Augustan court created a center of patronage which affected architecture and art, no less than literature. A self-consciously new architectural style—**Roman Corinthian**—was introduced, which intentionally distanced itself from its Greek predecessors (Ionic and Doric). Augustus and Agrippa changed the Campus Martius from a voting center into an area for public amenities and entertainment by building theaters, an amphitheater, a public bath, temples, and museums. The Augustan program of rebuilding and renewal made greater use of travertine and introduced Italian Carrara marble. In sculpture, official portrait types moved away from the realism of the Republic to **ideal types** (the Prima Porta Augustus). In private art, the extravagance of developed Second Style wall painting was succeeded by the **Third Style** (20 B.C.E.–20 C.E.), which abandoned the illusion of depth and emphasized the solidity of the wall. Architectural decoration in this style was intricate and fanciful rather than grand.

## b. Military Dynasts and Civil Wars

The years 70 to 31 witnessed the **collapse of the Roman Republic** and its replacement by military dictatorships. After Sulla, the inability of the senatorial oligarchy to find generals led to the creation of extended **special commands**, and to the **new imperialism** of Lucullus, Pompey, and Caesar. 1

### 102–67

The menace of **Mediterranean piracy** had prompted sporadic Roman responses with commands in 102, 78, 74, and 68. In 67 the *lex Gabinia* conferred an **extraordinary three-year command on Pompey**. In three months Pompey cleared the sea of pirates and pacified their homeland of Cilicia. 2

### 74–64

**The Third Mithridatic War.** Mithridates' opposition to the Roman annexation of Bithynia led him to attack the Roman province of Asia. The consul of 74, **L. Licinius Lucullus**, drove Mithridates out of Asia and Bithynia, and in 73 he invaded Pontus without permission of the senate. In 69 Lucullus, again on his own initiative, invaded Armenia and defeated Tigranes I, the son-in-law of Mithridates, who had been expanding into Cappadocia, Cilicia, Phoenicia, and Syria. But Lucullus's armies mutinied in 68 and 67, he failed to capture Mithridates, and he had antagonized the *publicani* by reducing the debt of Asian cities. 3

### 66–63

The *lex Manilia*, spoken for by Cicero, transferred **command of the Mithridatic War to** 4

**Pompey.** Pompey defeated Mithridates, then Tigranes, pursuing the former to the Crimea where he committed suicide in 63. Pompey proceeded to march through the former Seleucid domains and **reorganize the east** (65–63), with Roman provinces in Asia, Cilicia, Bithynia-Pontus, and Syria, and with client kingdoms in Pontus, Cappadocia, Galatia, Lycia, and Judaea (See [63](#)). His settlement vastly **increased** both the **revenues of the Roman state** (from 50 million to 135 million denarii) and his own **personal wealth**.

## 64–63

**Conspiracy of Catiline.** The oppressed and discontented classes at Rome—debtors, veterans, ruined nobles, and those proscribed by Sulla—found a leader in the aristocrat **L. Sergius Catilina**, who proposed a program of debt cancellation (*novae tabulae*). Disgruntled over setbacks and defeats in the consular elections of 66 and 64, Catilina turned to armed revolt. As consul in 63, Cicero uncovered the conspiracy and in a series of speeches (**the Catilinarians**) convinced the senate to pass the **SCU**. Catilina's associates were arrested and executed without trial. Catilina himself died bravely in battle.

5

## 62–61

Pompey returned to Italy, disbanded his army, and triumphed. But the optimate senate, led by **M. Porcius Cato**, refused to ratify his eastern settlement and blocked a land bill for his veterans.

6

## 60

**The First Triumvirate.** The frustrated military hero **Pompey** then formed a political alliance with **M. Licinius Crassus**, who had the support of the *publicani*, and the patrician **C. Julius Caesar**, a *popularis* politician and favorite of the people.

7

## 59

**Caesar, as consul**, employed Pompey's veterans to overcome violently optimate opposition. He passed a land bill and ratification of his eastern settlement for Pompey, had an unfavorable tax contract remitted for Crassus's *publicani*, and secured for

8

himself, by the *lex Vatinia*, the provinces of Cisalpine Gaul and Illyricum for five years. Later the province of Gallia Narbonensis was added.

## 58–51

**THE CONQUEST OF GAUL.** Using Narbonensis as a base, Caesar subjugated Gaul in a series of annual campaigns. In 55 he invaded Britain (See 55 B.C.E.–c. 450 C.E) but soon withdrew; in 54 he made a demonstration across the Rhine. **Vercingetorix** led a serious national revolt in 52 but was defeated by Caesar, who suppressed the rebellion by 51. With his Gallic victories, Caesar equaled or surpassed the military reputation and personal wealth of Pompey. <sup>9</sup>

## 58–57

In Rome the tribune **P. Clodius** pursued a *popularis* program (e.g., free grain), thwarting optimate opposition with gangs of thugs organized under the guise of legitimate *collegia* (clubs). His opponents retaliated by having the optimate tribune T. Annius Milo organize his own band of thugs. In 57 a shortage of grain prompted the senate to grant a **special command to Pompey** for supervision of the grain supply—*cura annonae*. <sup>10</sup>

## 56

Worried by growing dissension between Pompey and Crassus, Caesar called for a meeting at **Luca** on the southern border of Cisalpine Gaul, where reconciliation and future plans were arranged between the three. <sup>11</sup>

## 55

Pursuant to the arrangement, **Pompey and Crassus were consuls** and carried the following measures by force. Caesar's command was extended for another five years, and Crassus and Pompey were given matching **five-year proconsular commands**—Crassus in Syria, Pompey in the two Spanish provinces. Crassus departed for his province, while Pompey, contrary to custom, remained near Rome and governed Spain through *legati*. <sup>12</sup>

### c. [Augustus and the Principate](#)

#### [THE ROMAN EMPIRE UNDER AUGUSTUS \(MAP\)](#)

The Roman Republic had fallen, a victim of its own success. The post-Sullan nobility had proved incapable of governing a Mediterranean empire, while some, such as Caesar, succumbed to the temptation of personal power. In addition, the **enfranchisement of millions of Italians** had overwhelmed a political system designed for a citizen body of about 300,000. Finally, the **development of a professional army** necessary for an overseas empire had presented the new problem of who was going to pay for it. Because the governing classes had been unwilling to foot the bill, the loyalty of landless soldiers had shifted from the government to generals who promised land after service. The force that used soldiers to acquire that land helped to bring the Republic down. Augustus solved these problems by effectively **putting an end to free elections and aristocratic competition; by opening up the government to equestrians and Italians; by continuing the policy, initiated by Caesar, of extending the Roman citizenship beyond Italy to the provinces; and by securing the loyalty of the armies by taxing the upper classes** and using the proceeds to finance a regular program of payment for veterans. <sup>1</sup>

### 30–29

On returning from Egypt, Octavian's first task was to control the military. He reduced the legions from about 60 to 29, and between the years 30 and 29 settled some 57,000 veterans in colonies. He eventually established a system of **28 legions** (about 150,000 men), wherein legionaries received regular pay and retired after 20 years with land or a monetary bonus. Complementing this was an equal number of noncitizen **auxiliary soldiers** who, after 25 years, received Roman citizenship on retirement. <sup>2</sup>

## 27

The Senate bestowed on Octavian the title **Augustus**, chosen by himself. Augustus then gave up all extraordinary powers, ostensibly **restoring the Republic** by returning it to the “senate and people.” But he was careful to retain exclusive control of the army by **dividing the provinces between the senate and himself**. “Senatorial provinces” were those that required few troops and were governed by regular senatorial proconsuls serving for one year. Augustus retained for himself as “imperial provinces” all those provinces where large armies were stationed. These he governed by carefully chosen legates—*legati Augusti pro praetore*—who tended to have longer terms of office. All provincial governors were salaried. Augustus also excluded independently minded senators from power by employing **equestrians** in military positions and administrators—prefects or procurators. The most important of these equestrian positions were the *praefectus annonae*, who was in charge of Rome's grain supply; the *praefectus vigilum*, who oversaw the city's fire brigade; the *praefectus Aegypti*, who governed Egypt as Augustus's private holding; and the *praefectus praetorio*, who controlled the **praetorian guard**—nine cohorts scattered over Italy. Augustus's vast private wealth was organized into an imperial treasury—the *fiscus*—distinct from the senatorial treasure—the *aerarium*. 3

## 23

From 31, Augustus had held the consulship every year; then in 23 Augustus resigned the consulship and arranged a **new settlement** whereby he received *tribunicia potestas*—the power of a tribune—giving him the authority to initiate and veto legislation and convene the senate. He and all subsequent emperors would number their reigns by tribunician years. He retained control of the military by a grant of **imperium maius**, a “command greater” than that of other magistrates. To control elections, Augustus exercised the right to nominate and commend candidates of his choice. Thus, without holding office, and merely as first man (*princeps*), Augustus controlled the Roman state. 4

## 20

A **diplomatic settlement** of Rome's eastern frontier was struck with **Parthia**, whereby Rome recovered the standards lost by Crassus and Antony, while a compromise candidate governed Armenia, the strategic high road between Parthia and Roman Syria. Augustus otherwise followed a policy of **military expansion**. 5

## 19

Agrippa subdued **northwest Spain**. Gaul had been organized into three provinces, and beginning in 12, Roman armies extended Roman territory **across the Rhine** (abandoned after a disaster in 9 C.E.). Augustus's armies also fought along the **Danube**, creating four provinces: **Raetia** was formed by 16, **Noricum** in 16, **Pannonia** in 13, and **Moesia** by 6 C.E.

6

## 18

Augustus used his tribunician power to pass the *lex Iulia de maritandis ordinibus*, which regulated marriages between the various social orders, and the *lex Iulia de adulteriis coercendis* (18?), which made adultery a crime. This was the beginning of Augustus's **program of social improvement**, which he continued with legislation restricting the manumission of slaves—the *lex Fufia Caninia* of 2 C.E. and the *lex Aelia Sentia* of 4 C.E.—and a law, the *lex Papia Poppaea* (9 C.E.), to encourage marriages.

7

## 12

**Agrippa died** in Pannonia. Since 18 he had shared *tribunicia potestas* and since 21 had been married to Augustus's daughter, **Julia**, the union producing two sons, **Gaius** (b. 20) and **Lucius** (b. 17), whom Augustus adopted as his sons. In 11, Julia was married to **Tiberius Claudius Nero** (Tiberius), the son, along with **Nero Claudius Drusus** (Drusus), of **Livia** by her first husband.

8

## 12–9

Drusus led Roman armies **across the Rhine** to the Elbe, while Tiberius campaigned in Pannonia. Drusus died in 9 and was replaced by Tiberius, who campaigned in Germany until 7.

9

## 6

**Tiberius**, after receiving *tribunicia potestas* for five years, suddenly renounced public life and **retired to Rhodes**. 10

## 2 B.C.E.–4 C.E

Augustus's daughter, **Julia**, was banished for adultery in 2. In 2 C.E., Augustus's grandson Lucius died in Spain. In 4 C.E. his other grandson, Gaius, died in the east. Left with no heirs, **Augustus adopted his stepson, Tiberius**, who had returned to Rome in 2 C.E. 11

## 4–6

Tiberius campaigned in Germany, until he was called to suppress a serious **revolt in Pannonia** in 6. 12

## **4. The Roman Empire, 14–284 C.E.**

### **a. Geography and Climate**

During this period Rome organized the provinces of Gallia Transalpina, Britannia, Raetia, Noricum, Pannonia, Moesia, Dacia, Mauretania, Cyrenaica, Egypt, Thrace, Syria, Judaea, Mesopotamia, Bithynia et Pontus, Galatia, Cilicia, and Lycia et Pamphylia. **The Roman world therefore encompassed an enormous area centering around the Mediterranean but extending, significantly in places, into continental Europe, Asia, and Africa.** It can be conveniently divided into several climatic and geographic zones. Provinces circling the Mediterranean enjoyed mild rainy winters and summers which were moderate on the northern coasts and warmer and drier on the southern. Agricultural productivity depended on exploiting the winter rains and working soil which, except for volcanic regions, was comparatively light. In lands such as Greece, where rocky soil is common, the typically Mediterranean combination of olive trees and grapevines predominated. These crops were combined with intensive cultivation of cereals in the more fertile areas of North Africa (modern Tunisia) and Sicily, and to a lesser degree in Italy, in the valleys of Anatolia, and southwestern Spain. The land of Egypt was uniquely fertile, since it depended not on rainfall, but on the regular flooding of the Nile. In most Mediterranean countries, however, rivers that were navigable year-round were uncommon; cities therefore tended to cluster along the coasts or in nearby valleys and plains. The climate of northern European provinces was characterized by seasons that were more extreme and by rainfall that was more evenly distributed than in Mediterranean countries. Agricultural development was impeded by various factors. The soil was fertile but heavy and consequently more difficult to work. In addition, a climate that was generally more humid resulted in wide belts of heavy forests, many of which were also swampy. Highlands made for excellent pasturage, while mountains were frequently rich in minerals of various kinds. Navigable rivers were the principal avenues of communication and trade, and it was on these that cities were founded. Few cities of the Roman Empire had populations of more than 20,000 persons. Larger ones, like Pergamum, reached 100,000, while a few, such as Alexandria and Antioch, approached 500,000. The city of Rome was unique in having about one million inhabitants. The population of the Roman Empire is estimated to have been between fifty and sixty million

persons in 14 C.E. The southern boundaries of the Roman world were **desert country**. Here irrigation extended agriculture and urban life into regions where pasturage and nomadic life prevailed.

The Romans had a clear idea of the **frontiers** (*limes*) of their empire and had armies to guard them. But these borders were very permeable, and the function of soldiers was as much to monitor the movements of persons and goods across the frontier as it was to defend them. The Roman world, in fact, extended beyond the borders of Roman provinces to trans-Danubian areas where overland commerce was constant, as well to the Indian Ocean, where long-distance, seasonal maritime trade was conducted. The true boundaries of the Roman world were not marked by frontiers. Roman civilization was urban, and it was delimited by deserts and mountains both outside and inside its imperial borders. 2

The ancient Roman view was of a spherical world, the inhabited region of which (the *oikoumene*) was surrounded by oceans, and this world centered around the Mediterranean. It was bordered on the west by the Atlantic Ocean and on the east by the mouth of the Ganges River. The southern extent of the African continent and the northern expanses of the land masses of Europe and Asia were vastly underestimated. 3

## b. Economy, Society, and Culture

With the *Principate* came a long period of civic peace (*pax Romana*), which greatly benefited the **economy of the Roman Empire**. Older areas devastated by war, such as Italy and Asia, returned to their former prosperity, while recently conquered regions underwent population increases, urbanization, and intensified agricultural cultivation. **Increased agricultural productivity** was a response to the consumer needs of growing and newly founded cities and of the provincial armies, though in some respects Roman technology, as opposed to engineering, lagged behind eastern and southern Asia. The wheeled plow was introduced in Gaul, in order to till the heavier earth. Other innovations included an improved scythe and a mechanical reaper. From the 1st through the 3rd centuries, **the overall trend in the agrarian labor force was a change from slavery to tenancy**. How this occurred is very unclear, but it was certainly a long and slow process; slaves were still regularly employed in agriculture in the 2nd and 3rd centuries. The major source of slaves, foreign conquest, did slow down, but the wars of Claudius, Vespasian, and Trajan brought in large numbers of slaves, while other sources—the exposure of unwanted infants, as well as slave breeding—continued to provide slaves in substantial numbers. Few figures are available, but in the mid-2nd century slaves totaled 40,000, or one-third of the adult population of the Asian city of Pergamum. In Roman Egypt, the slave population was lower, making up less than one-tenth. **The proliferation of cities** was a major development of the imperial period. Most of the newly founded cities were in the western empire, especially in south and central Gaul, in the lowlands of Spain, and in the fertile valleys and coasts of North Africa. Many cities relied on local production for their food. When intensified cultivation made regions productive, however, their surpluses were sent to large cities which required imports. The grain of North Africa and Egypt surpassed that of Sicily as Rome's major source, while olive oil from Spain and wine from many regions were imported into the capital. Industry remained small-scale, but trade of the local, interprovincial, and extraprovincial types was very significant by a scale of preindustrial societies. Produce, large amounts of timber, metals, and textiles were carried primarily by a sophisticated system of water transport but also by much used overland routes.

The Roman government was committed to founding cities as centers of civic and judicial

1

2

administration, and of tax collecting. Archaeology testifies to the great number of cities that prospered during the high empire, although food shortages and financial and administrative difficulties were chronic problems which required outside assistance and which came increasingly from Rome. Cities were largely autonomous and governed by local elites, who resided in the cities and drew rents from their rural properties. Annual magistrates (*duoviri, archontes, strategoi, grammateis*) drawn from the body of municipal senators (*decuriones, bouleutai*) were responsible for maintaining law and order and ensuring municipal as well as imperial taxes. They also supported the cities' essential services and amenities through largess, giving their money and services in exchange for public recognition and status. Much of the space in a Roman city was taken up by public buildings and the large houses and gardens of the rich. For the nonelite, urban living conditions were crowded and, by modern standards, unsanitary, so life was lived outdoors during daylight hours. Most private dwellings were not connected to the public sewers, and few had running water. Although public baths were inexpensive and often sumptuous, they were also unhygienic, since the water was infrequently changed.

A major trend in the imperial period was the **extension of Roman citizenship**. Under Julius Caesar and the triumvirs, whole regions—Cisalpine Gaul, Sicily, along with Romanized provincial cities in the west—had received citizenship, while in more recently conquered areas, and in the Greek-speaking east, citizenship had been rewarded to prominent individuals. The establishment of Roman citizen colonies around the Empire, which had been greatly favored by Caesar and Augustus, slackened during the first century but was continued under Trajan and Hadrian. Citizenship status—either Roman or Latin—was granted to communities and whole regions. Latin status was granted to the Alpine provinces by Claudius and Nero, and to all of Spain by Vespasian. Roman citizenship was also extended by the auxiliary units of the army, where after 25 years of service noncitizen provincial soldiers received the citizenship for themselves and, until c. 140, their families. By the early 3rd century, every province of the Empire had large numbers of Roman citizens. In 212 the distinction between citizen and noncitizen was eliminated by the *constitutio Antoniniana*, which granted Roman citizenship to virtually all free male inhabitants of the Empire. As Roman citizenship became more common, its privileges diminished, and two legal statuses developed. One status included Roman citizens of the upper classes—senators, equestrians, and local magistrates, who were called *honestiores*. Everyone else, Roman citizen or not, fell into the class of *humiliores* and were subject to harsh punishments—crucifixion, burning, the arena, chained labor—which had previously been associated with servile punishments. Another function of the spread of Roman citizenship was the opening up of the equestrian order and, later, the senatorial order to **upper-class provincials**. The number of easterners in imperial equestrian service began to rise from about 100 C.E. In the Roman senate, old Roman noble families died out and were replaced by Italians. Wishing to exploit their wealth and energy, emperors then began to appoint wealthy provincials to the senate. Finally, emperors were chosen from provincial families. Trajan and Hadrian were descendants of

old families of Roman settlers in Spain; Septimius Severus came from North Africa. The upwardly mobile freedman class was of great importance to the urban society and economy of the Empire. Beginning with Augustus, the energies and wealth of freedmen were officially recognized and channeled into government service. In Rome, freedmen became ward leaders (*magistri vici*), while in the municipalities of Italy and the west, they served the imperial cult as honorary officials (*seviri Augustales*). Women remained subordinate. Their legal status changed little, but a **significant reform came when Claudius abolished guardianship** (*tutela*) for adult women of free birth. And for a time, starting with Augustus, the husband lost the right to kill an adulterous wife. In the upper classes women received a literary education. Outside of the elite, many worked—most as fieldworkers, with others in a wide variety of urban occupations. Almost all women married. In the upper classes, women on average had their first child at 15. Family size was limited through infanticide, by exposure to the elements; by effective, if dangerous, forms of artificial birth control; and by equally dangerous abortions. Life expectancy for males at birth was between 20 and 30 years.

**In law** the formulary system was replaced by juristic interpretation and various forms of imperial intervention. After the praetor's edict was codified under Hadrian, the pronouncements of the emperor (*constitutiones principis*), in the form of edicts, decrees, and rescripts, became the principal source of law. By the 2nd century C.E. **the culture of the upper classes of the Roman Empire had become truly Greco-Roman**. The ruling classes of Greek cities learned Latin in order to participate in the Roman imperial government, while in Rome and Italy, the upper classes had been Hellenized since the late Republic. Roman elite education was centered on rhetoric and included the study of both Greek and Latin literature. Romans also took up the various schools of Greek philosophy—Platonism, Epicureanism, and Stoicism—the latter becoming dominant during the imperial period and counting among its chief exponents the senator **Seneca** (c. 1–65), the slave **Epictetus** (c. 55–c. 135), and the emperor **Marcus Aurelius** (122–180). A **moderate rise in literacy** is indicated by, among other things, the great increase in inscriptions, the production of Greek papyrus texts, and the expansion of the Roman Empire into less advanced areas. While Greek and Latin became international languages, vernacular languages continued to be spoken by many populations in many parts of the Empire.

**Latin literature entered its so-called Silver Age**, characterized by its penchant for rhetoric. The Roman satirical tradition was continued by **A. Persius Flaccus** (34–62) and mastered by **D. Iunius Iuvenalis** (Juvenal, c. 55–138). Prose satire was cultivated in the picaresque novel *Satyricon* by **Petronius Arbiter** (d. 66), probably Nero's friend. Under Tiberius, **Valerius Maximus** composed *Facta et dicta memorabilia*, nine books of historical examples of virtues and vices. Spain was home to a noted literary family which flourished in Rome. **Lucius Annaeus Seneca**, the rhetorician (c. 55 B.C.E.–c. 40 C.E.), wrote *declamationes* (set speeches). His son, **L. Annaeus Seneca** (c. 1–65), wrote **Stoic philosophical treatises** as well as tragedies; this man's nephew, **M. Annaeus Lucanus**

(Lucan, 39–65), composed the historical epic *Pharsalia*. **M. Valerius Martialis** (Martial, c. 40–104) of Spain wrote satirical epigrams in Rome, as did the noted teacher of rhetoric and author of *Institutio Oratoria*, **M. Fabius Quintilianus** (c. 35–c. 100). The provinces were also the birthplace of the historian **Cornelius Tacitus** (c. 56–118?), author of *Dialogus de oratoribus*, the biography *Agricola*, the ethnological *Germania* and his historical works, the *Historiae* and *Annales*. In science, **Galen** of Pergamum (c. 130–200) furthered the Greek scientific tradition with prolific writings on medicine. **Ptolemy** (c. 85–165) wrote on astronomy, furthering the Hellenistic belief in an Earth-centered universe. **C. Plinius Caecilius Secundus** (Pliny, c. 61–c. 113) was a noted political and literary figure, who composed elegant *Epistulae*; his prolific uncle, **C. Plinius Secundus** (c. 23–79) wrote, among other works, the encyclopedic but uncritical *Historia Naturalis*. Another prolific author was **C. Suetonius Tranquillus** (c. 69–121?), whose biographies, *De Vita Caesarum*, extended from Caesar through Domitian. Under Hadrian and the Antonines began a revival of interest in pre-Ciceronian Latin, and a school of florid Latin writers emerged. Its exponents were the orator and writer **M. Cornelius Fronto** (c. 100–c. 166), whose correspondence with his student Marcus Aurelius survives, and the author of *Metamorphoses*, **L. Apuleius** (c. 124–170?), both from North Africa. **Aulus Gellius** (c. 130–c. 180) wrote the literary miscellany, *Noctes Atticae* (*Attic nights*), and the emperor **Marcus Aurelius** penned his stoical *Meditations* in Greek.

In early imperial architecture, concrete vaulting was increasingly exploited to create novel spatial effects (the *Domus Aurea*). **Brick** became the preferred facing material for concrete construction during Tiberius's reign. By the Flavian period, a new type of vaulting (the groin vault) was introduced (the Colosseum). In the 2nd century, the old canons were being rethought to create a new sumptuousness. Novelties included the broken pediment (first seen in Trajanic Rome) and the aedicular facades (the library of Celsus at Ephesus). In the **city of Rome**, architectural sophistication and daring reached its zenith under Hadrian in the 150-foot-wide concrete dome of the **Pantheon** and the large and radical Temple of Venus and Roma, whose top-heavy proportions evoked older temple types and marked a deliberate break with the Augustan Corinthian canon. Afterwards, creative experimentation in architecture increasingly shifted from the capital to the provinces (e.g., Leptis Magna in North Africa, Baalbek in Syria, and Ephesus in Asia Minor). In Roman state art, historical relief came into prominence. In Augustan reliefs the emperor had been consistently portrayed as first among equals in a realistic context (*Ara Pacis*), but in the course of the 1st century new conventions (such as the juxtaposition of real and allegorical figures, divinizing attributes, and apotheosis) made their way into the representations of rulers in state art (e.g., the Flavian Arch of Titus and Cancellaria reliefs). In the early 2nd century, emperors began to be portrayed showing imperial virtues in increasingly varied and elaborate, but essentially realistic, contexts in both peace and war. In portrait sculpture the realistic-looking portraiture of the late Republic continued to be employed. Imperial portraits of the Julio-Claudian dynasty adapted various ages and physiognomies to the ageless Augustan model. Under the

Flavians a literal element was introduced into imperial portraiture. Portraits of Hadrian broke from tradition by showing the emperor wearing a beard, which reflected military fashion, philosophical phil-Hellenism, or both. A trend was introduced in the 3rd century by Caracalla, whose portrait types sported the close-cropped hair and beard, and became the canonical style of the 3rd-century soldier emperors. In **Roman painting**, the **Fourth Style**, introduced about 62, combined Third Style panel painting motifs with Second Style representations of architecture in depth.

### c. The Julio-Claudians

#### JULIAN-CLAUDIAN HOUSE

#### 14–37

**TIBERIUS Claudius Nero** (b. 42 B.C.E.) became emperor, when the senate conferred on <sup>1</sup> him the powers and titles of Augustus. He transferred the elections from the assemblies to the senate. Already the passage of laws in the assemblies had become a formality.

#### 14–16

The **revolt of the Pannonian legions** was suppressed by Tiberius's son, the younger <sup>2</sup> Drusus. The son of Tiberius's brother Drusus, who is known by his father's title, **Germanicus**, and whom Augustus had forced Tiberius to adopt as a possible successor, suppressed the German mutiny and campaigned in Germany with some successes. He defeated Arminius, and recovered the eagles of Varus's legions. He was, however, recalled, probably not because Tiberius begrudged his victories, but because he found them too costly.

#### 17

On the death of their kings, Cappadocia and Commagene became a province. <sup>3</sup>

#### 17–19

**Germanicus**, sent to install a king in Armenia, conducted himself in a high-handed manner both in Syria and in Egypt. When he died in Syria, however, the enemies of Tiberius rallied about his wife Agrippina.

4

## 21

**A revolt against Rome broke out in Gaul** among the Treveri, led by Julius Florus, and the Aedui, led by Julius Sacrovir. Although suppressed, it showed that anti-Roman feeling was still strong in Gaul.

5

## 23–31

Tiberius fell increasingly under the influence of the ambitious equestrian prefect of the guard **L. Aelius Sejanus** who quartered the praetorian cohorts in one camp in Rome. He encouraged the gathering of information against those hostile to Tiberius by informers (*delatores*) and the prosecution of the accused under the law of treason (*lex de maiestate imminuta*). When such trials involved senators or important equestrians, they were heard by the senate, which came increasingly to act as a court under the presidency of the emperor or the consuls. In 23, Sejanus probably poisoned Tiberius's son Drusus, in order to plot his own succession.

6

## 26

Tiberius retired from an increasingly hostile Rome and eventually settled on **Capreae** (Capri).

7

## 29

**Livia**, accused of attempting to dominate the Empire after Augustus's death, died. Sejanus secured the exile of **Agrippina**, wife of Germanicus (she died in 33), and the arrest of his two eldest sons, Nero (d. 31) and a third Drusus (d. 33).

8

## 31

The plots of Sejanus finally came to the notice of Tiberius, who engineered his arrest and execution. Tiberius remained in seclusion in Capreae. 9

### 36

**Artabanus, king of Parthia**, made peace with Rome. 10

### 37

**Tiberius**, dying at Misenum (Mar. 16), indicated as his successors his young grandson, **Tiberius Gemellus**, and the twenty-four-year-old surviving son of Germanicus, **Gaius Caesar**, nicknamed *Caligula* (“Bootsy”). Gaius soon put Gemellus to death. 11

#### d. [Early Christianity](#)

By the 1st century B.C.E., **JUDAISM** had been diffused in the Roman Empire, with **Jews** residing mainly in Palestine and in the cities of the east. Palestine itself, however, was by no means wholly Jewish; it had a substantial population of non-Jewish Semites as well as Greeks. The area was consequently home to an amalgam of beliefs, and to religious contention. The god of the Jews was Yahweh; his worship was centered around the cult of his temple in Jerusalem, which was run by a hereditary high priesthood, and around his law, which was preserved in Hebrew scriptures. By the 1st century, however, observant Jews were divided into three principal sects, each of which regarded the others as ritually unclean: upper-class **Saducees**, who were devoted to ritual sacrifice at the temple; **Pharisees**, whose worship was organized around the synagogue and the rabbi, rather than the temple and the priesthood; and a number of ascetic sects, the most important being the **Essenes**, whose strict observance of the law led them to live in isolated monastic communities. The kingdom of Judaea was annexed by Rome in 6 C.E. and placed under a procurator; the other areas of Palestine—Galilee, Samaria, Peraea, Idumaea, and Batanaea—were ruled intermittently by vassals (the descendants of **Herod the Great**, king of Judaea 37–4 B.C.E.); all of Palestine became a Roman province in 44 C.E. But foreign rule engendered the belief in a national liberator called the **Messiah**, who would restore political freedom; in some versions the liberation would be accompanied by an apocalyptic reckoning. **CHRISTIANITY** originated as a Jewish sect. Its founder, **JESUS**, was a Jew born in Palestine, somewhere within eight or ten years of 1 C.E.; he grew up in Galilee. When he was about 30, he was baptized by John the Baptist. He then formed his own group and began his public career as a teacher and miracle man, practicing principally in Galilee. Jesus's historical teachings are obscure, but included some form of freedom from the Jewish law, the promise of salvation after death, immediate salvation for the chosen, and the claim that he was the son of the Jewish god. On visiting Jerusalem, Jesus gained notoriety by attacking the temple priesthood. He was arrested, then tried and convicted, probably for sedition, by the Roman prefect Pontius Pilate (26–36 C.E.), and was crucified. After his death, his followers began to preach in Jerusalem that Jesus had been resurrected and that he was the Messiah (Christ). The early Christian community comprised poor Jews and Greeks and was led by **Peter**, who

seemed to have espoused a doctrine of freedom from Jewish law, which quickly led to violent reactions by observant Jews. **Paul of Tarsus**, a devoted Pharisee, at first persecuted Christians but was later converted. Against the opposition of some Christian leaders, Paul went on missions (48–51 and 52–55) to convert non-Jews, founding Christian communities in Asia Minor and Greece. Paul's brand of Christianity taught freedom from Jewish law for gentiles and salvation with baptism. In Jerusalem, persecution of Christians ended when leadership passed from Peter to James, the brother of Jesus, who was a strict observer of the Jewish law and on good terms with the Pharisees. But James was executed by the Saducees in 62; after the destruction of the temple by the Romans in 70, a reconstituted Pharisee leadership excluded Christians from their worship. The center of Christianity then passed from Jewish Jerusalem to gentile Christian communities around the Empire.

## e. [The High Empire](#)

### 1. Civil War and a New Settlement

#### 68–69

Servius Sulpicius **GALBA** (b. 5 or 3 B.C.E.). The senate's acquiescence to the army's proclamation of Galba as emperor in 68 had exposed what Tacitus called the great secret of the empire—“that emperors could be made elsewhere than at Rome.” The power of the praetorian guard in choosing an emperor had already been demonstrated. In 69, **the year of the emperors** (Galba, Otho, Vitellius, and Vespasian), the provincial armies asserted their powers in a civil war, which ended with the victory of Vespasian, and the establishment of the **Flavian dynasty**. 1

#### 69, Jan. 1

The eight legions on the **Rhine** refused allegiance to Galba, and on Jan. 3 the four in lower Germany saluted as emperor their legate **Aulus Vitellius** (b. 15). He was also accepted by the four legions of upper Germany. Galba had reached Rome, where he adopted as his successor the aristocrat L. Piso Licinianus. 2

Thereupon, **M. Salvius Otho** (b. 32), the friend of Nero, secured the support of the praetorians and had Galba and Piso murdered (Jan. 15). The helpless senate then recognized him. 3

Meanwhile, the troops of Vitellius approached Italy in two divisions under Valens and Caecina. They met in the plain of the Po Valley and defeated the forces of Otho (Apr. 19) in the **First Battle of Bedriacum** (near Cremona), whereupon **Otho**, to avert further bloodshed, committed suicide. The senate immediately recognized Vitellius, who presently reached Rome himself. 4

In the meantime (July 1) the prefect of Egypt, Tiberius Julius Alexander, proclaimed as emperor **Vespasian**, legate in Judaea. Mucianus, legate of Syria, lent his support. Antonius Primus, commander of the seventh legion in Pannonia, rallied all the Danubian 5

legions to Vespasian and moved rapidly into northern Italy. There he defeated the forces of Vitellius in the **Second Battle of Bedriacum** and sacked Cremona (late Oct.). When Antonius approached Rome, Vespasian's brother seized the Capitol, which was burnt in the ensuing struggle. The Vitellians fought bitterly in the city streets, but Vitellius was finally slain (Dec. 20). The senate immediately recognized Vespasian. After his proclamation as emperor, Vespasian left his son, **Titus**, to complete the siege of Jerusalem. In 70 Titus sacked the city, destroyed the temple, and installed a garrison. He celebrated a triumph in 71, which is commemorated on the Arch of Titus in Rome.

## 69–79

**Titus Flavius VESPASIANUS** (b. 9) was the son of a tax collector from the Italian municipality of Reate. The Augustan system had survived the idiosyncrasies of its rulers because the administration of the Empire had been separated from the politics of the palace and senate at Rome. But the civil war of 69 had shown the need to control the Empire and its armies more closely, and so the extravagance and self-indulgence of the Julio-Claudians were replaced by the hands-on work ethic of the Flavians. Vespasian oversaw a careful and frugal administration of the Empire, in which the frontiers and finances were reorganized and the armies and upper classes monitored. Respectful to the senate, Vespasian nevertheless insisted on establishing dynastic succession, and he and his son Titus were consular colleagues in every year of his reign except 73 and 78. To reorganize the senate, Vespasian felt compelled to revive the censorship with Titus in 73, instead of tacitly assuming the right of enrollment (*adlectio*) exercised by his predecessors. In 74 he granted Latin rights to all of Spain.

6

## 69–71

The revolt of some Batavian auxiliaries under their native commander, Julius Civilis, won the support of some of the legions of Germany. This inflamed the Gallic Treveri under Julius Classicus and Julius Tutor and the Lingones under Julius Sabinus. Petillius Cerealis crushed the revolt piecemeal. Thereafter auxiliaries were not employed in the country of their origin, and the corps soon came to be composed of recruits of different nationalities. By this time the praetorian guards alone were recruited in Italy; the legions drew from Roman settlers in the provinces or Romanized provincials, to whom citizenship was often granted to secure their enlistment. Thus the army had become less Italian, more provincial.

7

## 70–75

Vespasian consolidated the eastern frontier against Armenia and Parthia.

8

## 71

Titus, though a senator, was made praetorian prefect, a post hitherto equestrian. He also received both proconsular imperium and tribunician power. He ruthlessly suppressed senatorial opposition to his father.

9

## 71–84

**Further Conquest in Britain.** Under the Flavian commander Petillius Cerealis (71–74), Sextus Iulius Frontinus (74–78), and Cn. Julius Agricola (78–84), Roman conquest advanced into Wales and Scotland (See [78–142](#)).

10

## 73–74

Vespasian began the conquest of the territory east of the upper Rhine and south of the Main, the later *agri decumates* (or *decumathes*; the meaning is uncertain). He furthermore reorganized the defenses of the upper and lower Danube.

11

## 73

At about this time Vespasian banished Helvidius Priscus, son-in-law of Thrasea and his successor as leader of the Stoic opposition to the Empire. He also banished the professors of philosophy, perhaps because their doctrines encouraged disloyalty.

12

## 79–81

**TITUS Flavius Vespasianus**, who was co-ruler with his father, succeeded on the death of Vespasian (June 23). His hostility toward the senate ceased, and he won popularity by his largess.

## **f. [The Third Century](#)**

### **1. Civil War and the Severans**

Augustus had created a system whereby a large empire was defended by a limited use of force, and at a relatively small cost to the upper classes. **Soldiers, numbering about 300,000, were disposed judiciously along the frontiers and were moved to meet changing threats.** A second element in the defense of the frontiers was **client states**—peoples living just outside the Empire whom the Romans controlled through diplomacy and money. These states helped protect the borders and provided soldiers for units of the Roman army. It was the movements of peoples from northern and eastern Europe beginning in the latter 2nd century which upset the balance. The **Marcomannic War**, which was a revolt of the client peoples along the Rhine and Danube, signaled the end of diplomacy as an effective and inexpensive method of defending the northern borders. The only alternative was more soldiers, but this entailed greater expense. As a “good emperor,” Marcus Aurelius was unwilling to tax the wealthy. The result was a drawn-out war which seriously strained the Empire's resources. Subsequent emperors felt less compunction about expropriating the wealth of the upper classes to pay for the armies. The civil war which followed the murder of Commodus exacerbated the trend, and its ultimate victor, Septimius Severus, ruthlessly exposed the military basis of imperial power and made the upper classes pay for it. The political reality of the 3rd century is summarized in the dying Septimius's advice to his sons—“Enrich the soldiers, despise everyone else.” <sup>1</sup>

## **193**

**Publius Helvetius PERTINAX**, a sixty-six-year-old senator, who had risen from obscurity as an officer under Marcus Aurelius, was chosen emperor by the senate. His strict and frugal rule led to his murder (Mar. 23) by the praetorian guard, who then auctioned off the Empire to **M. Didius Julianus**, who promised to pay them the highest donative. The provincial armies reacted by nominating their own candidates; the British <sup>2</sup>

legions proclaiming the legate **D. Clodius Albinus**; the Syrian army, **C. Pescennius Niger**; and the Pannonian legions, **L. Septimius Severus**. Severus marched to Rome, where the senate deposed and executed Julianus.

## 193–211

**Lucius SEPTIMIUS SEVERUS** (b. 146, at Leptis in Africa), emperor. He dissolved the existing praetorian cohorts, composed of recruits from Italy, and enrolled new ones from legionary veterans. He kept Albinus quiet by recognizing him as Caesar (i.e., heir). He then defeated Niger in **Battles at Cyzicus and Nicaea** and at **Issus** (the Cilician Gates) and put him to death near Antioch (194). Albinus, who now claimed full equality, was defeated and slain (197, Feb. 19) at Lugdunum (Lyons), which was also sacked and which never recovered its prosperity. Severus executed the supporters of Albinus in Gaul and Italy. 3

**Severus** created three new legions, one of which was quartered near the Alban Lake in Italy, hitherto free from the presence of legionary troops. He appointed equestrians to command these legions, contrary to the Augustan rule, and also put the new province of Mesopotamia under an equestrian. He thus initiated the replacement of senators by equestrians in military posts which culminated under Gallienus. Military marriages were recognized, auxiliaries were settled on public land in return for military service, and the legionary pay was raised. Severus gave the jurisdiction over Rome and the area within 100 miles to the prefect of the city and over the rest of Italy to the praetorian prefect, who also exercised jurisdiction on appeal from the provinces. The emperor began the subdivision of provinces into smaller units, which culminated under Diocletian, and extended the organization of municipalities as the basis of tax collecting even to Egypt, which shows how valueless municipal status had become. He created a new treasury in addition to the *fiscus* (the original imperial treasury) and the *patrimonium Caesaris* (originally the ruler's private property, then crown property), namely the *res privata*, his personal funds, which were swelled by confiscations. He reduced the state senatorial treasury (*aerarium*) to a municipal treasury of Rome. He depreciated the silver content of the *denarius* to below 60 percent. Extensive and magnificent building programs were carried out in Rome, Africa, and Syria. 4

## 197–199

In a successful **Parthian war** Severus advanced as far as Ctesiphon and reconstituted the province of Mesopotamia under an equestrian governor with two legions. 5

## 205–211

A recurrence of **troubles in Britain** required the presence of Septimius himself to fight the Caledonians. He definitely withdrew from the wall of Antoninus to that of Hadrian, which he rebuilt. He died at Eboracum (York) on Feb. 4, 211.

6

## 211–217

**CARACALLA** (properly Caracallus), so named from a Gallic cloak which he wore, began to rule. He was the oldest son of Septimius and had been associated with him as Augustus (198). To strengthen the bond between the Severi and the Antonines he had changed his name from Septimius Bassianus to Marcus Aurelius (Severus) Antoninus (197). Upon his accession, he murdered his colleague (since 209) and younger brother, P. (originally L.) Septimius (Antoninus) Geta (b. 189), along with the jurist Papinian and many others. He increased the pay of the troops. To meet the consequent deficit he issued a new coin, the **antoninianus**, with a face value of two *denarii* but a weight of only one and two-thirds. He erected at Rome the vast **Baths of Caracalla** (*thermae Antoninianae*).

7

## 212

The **EDICT OF CARACALLA** (*constitutio Antoniniana*) extended Roman citizenship to all free inhabitants of the Empire save a limited group, perhaps including the Egyptians. Citizenship now meant so little that this step was a natural culmination of the leveling down of distinctions that had been continuous throughout the Empire. Caracalla's motive has been much disputed; he probably hoped to extend to all inhabitants the inheritance tax paid by Roman citizens.

8

## 213–217

Caracalla successfully defended the northern frontier against the Alamanni in southern Germany and the Goths on the lower Danube (214), and in the east he annexed Armenia (216). But as he was preparing an invasion of Parthia, he was murdered by a group of his officers (217, Apr. 8).

9

## 217–218

**Marcus Opellius (Severus) MACRINUS** (b. 164?), emperor. He was a Mauretanian who had risen from the ranks to be praetorian prefect and was the first equestrian emperor. He surrendered Caracalla's eastern gains and sought to reduce the pay of the troops, who set up as a rival (218, May 16) at Emesa in Syria Bassianus, a grandnephew of Julia Domna, the Syrian wife of Septimius. Macrinus was assassinated on June 8, 218.

10

## 218–222

The young Bassianus, surnamed **ELAGABALUS** (Heliogabalus, b. c. 205), came to power. He derived his cognomen from the Emesa god, whose priest he was. To legitimize his rule, he changed his name from (Varius) Avitus to Marcus Aurelius Antoninus and claimed to be a son of Caracalla. While Elagabalus surrendered himself to license and introduced the worship of his god to Rome, the Empire was really ruled by his forceful mother, **Julia Maesa**. She obliged him to adopt his cousin (Gessius) Bassianus (Alexianus?), son of her sister, Julia Mamaea. The praetorians murdered Elagabalus (222, March 11).

11

## 222–235

**Marcus Aurelius SEVERUS ALEXANDER** (b. c. 208), emperor. He was the adopted son of Elagabalus and was dominated by his mother, Mamaea. She established a regency committee of senators and used the advice of the jurists Paulus and Ulpian.

### **g. [The Rise of Christianity](#)**

The principal characteristic of **early Christianity** was its **plurality**. A wide variety of **divergent and competing doctrines**—gnostic, libertine, observant—were practiced, all claiming the authority of Jesus Christ. The “orthodox” church—it was only after the Roman government had given its support to one sect that the terms “orthodox” and “heretical” became official—eventually accepted **four Gospels**—Mark (c. 64–70), Matthew (c. 80–90), Luke (c. 70–90), and John (c. 95–115)—the book of **Acts**, fifteen **Pauline letters** (only six are certainly by Paul), and a few other works as canonical. Other, “heretical” texts were burned. The success of the form of Christianity that would eventually prevail was a function of its superior organization. Paul had formed his communities (c. 48–60) with overseers (bishops), and ministers (deacons), and had stressed obedience. In the writings of the **Apostolic Fathers**—the martyred bishops Clement of Rome (d. 96), Ignatius of Antioch (d. 98–117), and Polycarp of Smyrna (d. 155)—we find churches organized around the three-fold ministry of bishops, presbyters (councils of elders), and deacons; these writings also put the same emphasis on discipline and authority. By the mid-second century, this disciplined Christian sect began to attract educated converts—Justin Martyr (d. 160?), Athenagoras (fl. 176–177), Irenaeus (fl. 177), Tertullian (c. 160–240), and Minucius Felix (fl. 200–240), and the bishops Theophilus of Antioch (d. 180), Melito of Sardis (fl. 175), Clement of Alexandria (fl. 190–203), and Origen (c. 185–254)—who wrote Apologies defending the Christian faith against calumnies and official persecutions. In Rome, Christians were executed under Nero, Domitian, and Marcus Aurelius; in the provinces **persecutions of Christians** were equally sporadic. Whether Christianity was illegal per se or whether Christians were persecuted for alleged criminal behavior is problematic. Well-organized Christian communities provided its members with benefits both social—burial; care for orphans, the sick, and the poor—and psychological—institutional identity and protections from demons. Their successes in urban centers around the Empire left these Christian churches poised to assume more important social roles when the civic institutions of the Roman Empire were shaken by the crisis of the 3rd century.

## **5. The Later Empire, 284–527 C.E.**

### **a. Economy, Society, and Culture**

The **economy** of the Empire continued to be troubled. **Land went out of cultivation** because of war, the flight or revolt of hard-pressed peasants, and an overall decline in population. In an effort to maintain agricultural production, the **settling of barbarians inside the Empire**, which had become regular in the 3rd century, assumed a grand scale in the 4th century. **The number of slaves continued to decline**, but slavery by no means disappeared. In agriculture, the labor of slaves tended to be replaced by that of *coloni* (tenant-farmers), whose status was originally free but fell over time to that of being tied to the land. By 400, the legal codes refer to *coloni* as *servi terrae* (slaves of the land). The **power of landowners grew** correspondingly, and those in the west became independent of the imperial government, even raising private armies. In the east, where the imperial presence in Constantinople assured a strong central administration, wealthy landholders were less independent. Another reflection of the decreasing need for slaves is the dramatic decline in freedmen, both in and outside of the imperial service. In the late Empire, freedmen were replaced by freeborn bureaucrats, as the imperial bureaucracy, together with the army, became the principal avenue of social mobility. The economic focus, and increasingly the cultural focus, of the Empire shifted from cities to large estates, particularly in the west. **Municipal office** had lost most of its authority and independence to imperial officials, and from the time of Diocletian and Constantine it was a **hereditary duty**. Laws forbidding municipal aristocrats to escape the ruinous burdens of office were regularly circumvented or ignored, and many of the **urban elite retreated to their countryside estates**, which had always been their sources of wealth. In the east, however, where the institution of the city-state had a longer tradition, and where proximity to Constantinople and imperial armies afforded protection, cities remained prosperous until the 6th century. Not all areas of the Empire were equally affected by economic decline. The Danubian provinces and large parts of Gaul suffered from foreign invasion (See [Foreign Invasion and Internal Disarray](#)), but Sicily enjoyed continuing prosperity, and Africa remained prosperous until it was taken by the Vandals (429–39) (See [429–534](#)). The eastern provinces, which were less affected by foreign invasion, remained relatively prosperous. **Interprovincial trade** in grain and other

articles of mass consumption revived under Diocletian and lasted, though at a reduced rate, through the 4th century. It was the **invasions of the 5th century** that brought about irreversible decline.

**Trade** was to a great degree subordinated to **imperial needs**. By the end of the 3rd century, members of *collegia*, who had originally been partners in independent business associations, were legally tied to their occupations. By the 4th century all trades and occupations were organized into hereditary **collegia**, which were bound to provide services for the state. Compensation was paid at a fixed rate, which became lower over time, and was accompanied by increased regulations. The economic troubles of the 3rd century had led to a **severe debasement of the coinage**, but although the monetary element of the economy was severely curtailed, it never disappeared. Diocletian's attempt to reestablish the currency with the issuing of the new gold *aureus* and silver *argenteus* failed, and bronze and silver coins continued to decline in value; silver coins ceased to be minted altogether by the 5th century. Stability was established by Constantine's new gold coin—the *solidus*—which remained the standard coinage of the Eastern Empire until 1070.

The **emperor** was now the **sole source of Roman law**. But the extension of the Roman citizenship to virtually all free inhabitants of the Empire had affected the practice of law in the provinces, which became a mixture of debased Roman law and local practice. An example of this “vulgar law” is the *lex Romana Visigothorum* issued in 506 by Alaric II, king of the Visigoths (See [419–507](#)). Classical Roman law was continued in the east by the law schools of Beirut and Constantinople. The problem of codifying the enormous body of earlier law was met by the publication of the *codex Theodosianus* in 438, which continued to be used in the west. The greatest work of legal compilation was carried out under **Justinian** (See [527–65](#)) by the jurist Tribonian and encompassed the publication (between 530 and 534) of the *Digest* (or *Pandects*), the *Institutes*, the *Codex Justinianus*, and the *Novellae Constitutiones* (the *Novels*), which together make up the *Corpus Iuris Civilis*, as it was later called.

As a function of urbanism, **literacy**, together with schools and the production of books, underwent a general if uneven decline beginning in the mid-third century. A cultural disjuncture grew up among the governing classes between administrators who continued to be highly educated and less-literate military men. It was for the latter that the numerous epitomes of the lengthier works of classical literature were now produced. The rise of Christianity affected a change in the pattern of literacy but did not cause an overall increase. For while literacy was important for church leaders, most Christians heard rather than read holy scripture. Christians were in the forefront of the **replacement of the book scroll by the codex**. The majority of non-Christian texts began to be affected by the change only in the 4th and 5th centuries.

The relative peace established by Diocletian and Constantine led to a revival of literature, but with a number of significant changes. As the Empire had been administratively

divided between east and west, so too was its culture. Knowledge of Greek became rarer in the west, and Latin literature no longer drew so heavily on Greek models. The focus of Latin literature moved away from Rome, as centers of literary patronage shifted to other imperial capitals. To varying degrees authors began to use the classical tradition in writing about Christian themes. Latin poetry was continued by Decimus Magnus **Ausonius** (310–394), who became tutor to young Gratian and composed a great number of poems in a variety of genres. Claudius **Claudianus** (Claudian, c. 370–404) was born in Alexandria and became court poet at Milan, where he wrote panegyric and historical and mythological epics. Aurelius **Prudentius** Clemens (348–405), born in Spain, wrote lyric poems on Christian themes. Gaius Sollius Apollinaris **Sidonius** (c. 431–486), who eventually became a bishop, was from a Gallic family of distinguished imperial officials. Dividing his life and his work between politics and leisured retirement, he wrote light poems (*nugae*), verse panegyrics, and letters, which give a vivid description of Romans and barbarians in fifth-century Gaul. Latin biography was continued in the form of the 4th-century collection of imperial lives (Hadrian to Numerianus) called the *Historia Augusta*. **Ammianus Marcellinus** (c. 330–395), an army officer from Syria, wrote the last great history in Latin (*Res Gestae*), which treated the years 96–378 (only the parts covering 353–378 survive). The letters and speeches of Quintus Aurelius **Symmachus** portray the life of a distinguished Roman senator who revived and fought for classical literature and traditional culture. The antiquarian **Macrobius** Ambrosius Theodosius (fl. 430) preserved a vast amount of earlier learning in his *Saturnalia*, while **Martianus Capella** (fl. 420) wrote *The Marriage of Mercury and Philosophy*, an allegorical potpourri of classical learning.

Concrete and brick **architecture** reached truly **grandiose proportions**. In Rome, Diocletian surpassed the great *thermae* of Caracalla, with his own enormous **bath complex**, while Maxentius began, and Constantine completed, the equally enormous **Basilica Nova** on the Via Sacra. Imperial complexes which combined **palaces** and circuses, and sometimes mausolea, were built in or near most imperial capitals—Rome, Milan, Thessalonica, Antioch, and Trier, while Diocletian built a grand palace at Salona (Split) on the Dalmatian coast. With Constantine's conversion to Christianity, imperial largess went to building **great churches**. Public and private buildings were decorated with varieties of imported marbles, wall paintings, and mosaic work (e.g., Santa Costanza in Rome). The sculptural programs of late Roman imperial monuments witness not a degeneration of technique, but an expansion of the repertoire of styles to include the traditional and new (the arches of Diocletian and Constantine in Rome). In official portraiture, the tetrachs continued to be presented in the style of third-century military emperors (the Venice Tetrarchs). After 312 Constantine, wishing to distance himself from his predecessors, adopted a new image which was civilian and youthful. After 324 the diadem and the upward gaze were added, evoking both contemporary religiosity and the image of Hellenistic kingship.

## b. Diocletian and the House of Constantine

The **advent of Diocletian** saw a thoroughgoing administrative reform of the Empire. Since it is difficult to distinguish which innovations were due to Diocletian and which to Constantine, a general summary will be given here. **Senatorial governors of provinces** had been first relegated to solely civic functions, then **virtually eliminated in favor of equestrians** by Diocletian. At Rome, the power of the senate and of magistrates waned when the emperor and his court moved to cities closer to the theaters of war. The **function of the Roman senate was limited** to governing the city of Rome. Meetings, presided over by the urban prefect, were often unattended, most senators preferring to remain on their estates. But the prestige of the Roman senate was sufficiently high in the 4th century for Constantine to establish a **second senate at his new capital of Constantinople**. Over the course of the 3rd century, the duties of most traditional Roman magistracies had been either eliminated or absorbed by equestrian officials appointed by the emperor. **The consulship survived as a largely honorary office**. In the 3rd century its prestige declined, but it was revived in the 4th, when Constantine established two annual consuls in Constantinople to match the pair in Rome. Thereafter, in the west the consulship became the prerogative of a narrow circle of aristocratic Roman families, while in the east the office tended to be monopolized by emperors, or used by them to reward both military and civic service. The emperor was chosen by the army and ruled absolutely. Beginning with Diocletian, **the pomp and ceremony of the Persian court was adopted**. The emperor was lord (*dominus*), and everything surrounding him sacred (*sacrum*). He wore a diadem, purple and gold robes, and jeweled slippers. Subjects prostrated themselves in his presence. The imperial court (*comitatus*) comprised great numbers of officials which included a large domestic staff headed by a eunuch, various offices (*officia*), and a *magister memoriae* (master of records), all supervised to one degree or another by the *magister officiorum*. In addition, there was the imperial guard (*scholae*), from which 40 men were selected to be the emperor's bodyguard (called *candidati* after their white uniforms). Also present at court was the officer training corps (*protectores*), in which promising officers served for a few years before being posted to high office. At court, protocol ruled.

The Empire was divided for administrative purposes into two spheres, eastern and

1

2

western. Instituted by Diocletian, the division was in effect sporadically during the 4th century and became permanent with Arcadius and Honorius (395). Under Diocletian's tetrarchic system, there were two co-ruling senior emperors (*Augusti*), one in the east, the other in the west. Each Augustus chose an assistant and successor (*Caesar*). Imperial edicts were issued in the names of all four. There were four praetorian prefects who served under each of the four rulers and administered the four prefectures—Gaul, Italy, Illyricum, and the east. Each prefecture was divided into several dioceses under *vicarii* (vicars). In 312 Constantine disbanded the praetorian guard; and the prefects, together with their subordinate vicars, lost all military functions which were transferred to a *magister militum*. The dioceses were subdivided into provinces, which had themselves been divided so that their number doubled. Provinces were under the supervision of equestrian governors called *praesides*. Italy assumed the status of a province, its districts supervised by senatorial *correctores*.

In the late Empire, the **military** was wholly **separated from the civilian administration**, with the army bureaucracy usurping many administrative functions. The imperial armies of the high Empire had been tied to the defense of particular provinces. The system had proved inadequate during the third-century invasions, and so two distinct types of armies had developed. In the provinces, stationed along the borders, were the **frontier armies** made up of resident soldiers (*limitanei*) and commanded by a *dux*. A larger, better trained, and more mobile field army (*comitatenses*) was under the command of masters of infantry and cavalry (*magistri peditum, equitum*). Auxiliary troops were mostly foreign soldiers commanded by their own leaders, some of whom became very influential. Under Constantine a large part of the field army stayed with the emperor. Another contingent was permanently stationed on the eastern frontier under a *magister equitum et peditum per Orientem*, while the west was defended by another field army stationed in Gaul and commanded by a *magister equitum et peditum per Galliam*. Smaller units of the field army, stationed in Illyricum and Thrace, were commanded by officers called *comites rei militaris*. The size of all these units is controversial. Diocletian seems to have increased the numbers of legions of the frontier army from about 40 to 60. Under Constantine the field army might have reached 200,000 men. The Roman armies of the 4th century have been estimated at between 500,000 and 730,000 men.

Diocletian attempted to create a **more efficient tax system**. He established a regular system of requisitioning food and transport, and his taxes were based both on the *iugum* (a unit of land) and the *caput* (a unit of labor) and included Italy. Annual estimates were made for the imperial costs for the army, administration, and city of Rome, and a budget was produced to which taxes were adjusted. To facilitate the reform, a new census was conducted. Diocletian's attempt to control inflation by fixing prices and maximum wages in his **Edict on Prices** (301) resulted in goods being withdrawn from market and in violence, while prices continued to rise.

## 284–305

**Gaius Aurelius Valerius DIOCLETIANUS** (Diocletian, b. 245, saluted as emperor Nov. 284). 5

## 285

Upon the defeat of Carinus, Diocletian chose as his colleague the Illyrian, M. Aurelius Valerius **Maximianus** (Maximian), who was given the title of **Caesar**. 6

## 286

After suppressing the peasant revolt of the **Baucaudae** in Gaul, Maximian was raised to the position of **Augustus**. Diocletian took up residence at Nicomedia in Bithynia, while Maximian lived mostly at Mediolanum (Milan). Diocletian assumed the title Jovius, and Maximian assumed that of Herculus. 7

## 288–292

Diocletian and Maximian waged constant war to hold the Empire together. Maximian was unable to oust M. Aurelius Mausaeus Carasius, who had seized the province of Britain and declared himself Augustus. 8

## 293, Mar 1

**Creation of the Tetrarchy.** Diocletian chose as his subordinate Caesar, **C. Galerius Valerius Maximianus** (b. c. 250). Galerius became Diocletian's son-in-law and governed most of the Balkan provinces; Diocletian governed the rest of the east. Maximian chose as his Caesar, Flavius Valerius **Constantius**, who divorced his wife **Helena** to marry Maximian's daughter. Constantius governed Gaul whence he drove Carasius to Britain, where he was killed and superseded by **Allectus**. 9

## 296

Constantius crossed to Britain, defeated and killed Allectus, and restored Britain to the Empire. Egypt revolted under Aurelius Achilleus, and L. Domitius **Domitianus** was proclaimed emperor. Diocletian put down the revolt in the winter of 296–7. 10

## 297

Narseh (Narses), the king of Persia, expelled the pro-Roman king of Armenia (See [297](#)). 11  
Galerius invaded Persia and was defeated but returned in the following year to crush the Persians. Narseh ceded Mesopotamia and other territories east of the Tigris to Rome.

## 298

Constantius returned to Gaul and defeated the Alamanni. 12

## 301

Diocletian's **Edict on Prices**. 13

## 303, Feb. 23

Galerius persuaded Diocletian to declare a **general persecution of the Christians**, 14  
which, however, Constantius did not fully enforce in his prefecture. The persecution was stopped in the entire west in 306 but raged in the east until 313.

## 305, May 1

**Diocletian and Maximian abdicated voluntarily; Galerius and Constantius became Augusti**; Diocletian and Galerius selected as Caesars **Flavius Valerius Severus** under Constantius, receiving the prefecture of Italy, and for Galerius his own nephew Galerius Valerius **Maximinus Daia**, who received Syria and Egypt. The hereditary claims of Maximian's son Maxentius and Constantius's son Constantine were neglected. 15

### **c. From the Death of Julian to the Death of Valentinian III**

#### **363–364**

**Flavius JOVIANUS** (b. c. 331) was elected emperor by Julian's soldiers. He surrendered Mesopotamia to the Persians and died soon after (364, Feb. 17). 1

#### **364–375**

**Flavius VALENTINIANUS I** (Valentinian, b. 321) was the next choice of the army. He ably defended the west against the barbarians and made his brother **Valens** co-Augustus in the east (364, Mar. 28). 2

#### **367**

Valentinian made his son, **Gratian**, co-emperor in the west. 3

#### **374**

Valentinian died on an expedition against the Quadi and Sarmatians (Nov. 17). 4

#### **375–383**

**Flavius GRATIANUS** (Gratian, b. 359) named his young half brother **Valentinian II** (b. 371) co-Augustus in the west. 5

## 376

The **Visigoths** (West Goths) crossed the Danube and wiped out Valens and his army at **Adrianople** (378, Aug. 9). The Goths continued to ravage the Balkan region. 6

## 379, Jan. 19

Gratian appointed as co-Augustus for the east, **Theodosius**, son of Valentinian's *magister equitum*. 7

## 379–395

**Flavius THEODOSIUS “THE GREAT”** (b. 346). He came to terms with the Goths by settling them as military allies (*federates*) in the Balkans. 8

## 383

The British legions proclaimed **Magnus Maximus**, who seized Gaul. Gratian was slain at Lugdunum (Aug. 25). Theodosius recognized Maximus. 9

## 387

When Maximus drove Valentinian II from Italy, Theodosius captured and executed Maximus at Aquileia (388, July 28). 10

## 392, May 15

The Frankish *magister militum* **Arbogast** murdered Valentinian II at Vienne and set up as emperor the non-Christian rhetorician **Eugenius**. 11

#### d. [Christians and Pagans](#)

Christian churches flourished in the third-century crisis that affected the civic institutions of the Empire (See [The Rise of Christianity](#)). The extent of Christian belief at the end of the century is controversial, however. While some Christians held positions in the government and army, and some were well-to-do, the great majority were uneducated, poor city-dwellers. Nevertheless, Christians were sufficiently conspicuous for them to be perceived as a threat and to be officially and systematically persecuted by Decius in 250, by Valerian in 257–260, and, finally, from 303 to 311 by Diocletian and Galerius. The persecutions, which entailed the burning of sacred books, the destruction and confiscation of church property, the loss of high status (*honestiores*) for Christians, and the arrest of the clergy, failed to curtail the growth of Christian communities. <sup>1</sup>

**Constantine**, whose mother, **Helena**, was a Christian, and who described himself as a Christian after 312, is the pivotal figure in Christianity's rise. As emperor he ended all persecution and restored church property, and in 313 with his **Edict of Milan**, he granted toleration and legal recognition to Christian churches. He also enforced the legitimacy of the particular Christian sect he supported by actively suppressing other “heretical” sects (e.g., the Donatists) and by insisting on compromise in doctrinal disputes within the “orthodox” church. The bitter controversy between **Arius** of Alexandria, who held that Christ was of a different substance—*heterousios*—than god, and Bishop Alexander (to be succeeded by **Athenaeus**), who held that they were of the same substance, was settled by the emperor at the **Council of Nicea** in 325, where the doctrine that Christ was consubstantial—*homoousios*—was sanctioned. (The dispute raged on until the reign of Theodosius I.) The conversion of Constantine did not, however, make Christianity the religion of the Roman state. Under Constantine and his successors, the Empire remained officially multireligious, and traditional polytheism continued to be openly practiced. But Constantine did turn the tide by shifting imperial largess away from the traditional Roman cults to Christian churches (the bishops of large cities became enormously wealthy due to imperial largess), by granting exemption and immunities to Christian clergy, and by favoring Christians in the army and administration. The gradual **conversion of the upper classes to Christianity** was accomplished, not by force or persuasion, but by the patronage and example of the imperial family. Constantine's sons, <sup>2</sup>

especially Constantius, were fervent Arians, and under them the cults of traditional Roman religion suffered from lack of government support, confiscation of land, and official indifference to organized Christian attacks, as well as from the actual closings of temples. The tide was briefly reversed by **Julian** (361–363), who attempted to restore the traditional religion by granting toleration to polytheists, by shifting imperial funding back to the old cults, by revoking privileges for the Christian clergy, by forbidding Christians to teach Greek and Latin literature, and by passively condoning attacks on Christian churches. The official revival of polytheism ended with Julian's premature death. That Julian's successors as emperor were all Christians shows how far the faith had penetrated the army. Yet Julian's reform was not entirely in vain, since it was almost 30 years before the vehement intolerance of Constantius was again official policy. On becoming emperor, Jovian issued an edict of general toleration, which was renewed by Valentinian and Valens, under whose reigns non-Christian temple lands were confiscated, although the temples remained open.

It was the growing numbers of powerful men who were entering the higher orders of the Church that effected a change. In 374, **Aurelius Ambrosius** (Ambrose, c. 339–397), the son of a praetorian prefect and himself consul of Aemilia, was elected bishop of Milan. In this position he exerted great influence, first over the emperor Gratian (who revoked the edict of toleration, dropped the title *pontifex maximus*, confiscated the revenues of the Vestal Virgins and other priesthoods in Rome, and removed the Altar of Victory from the senate house), then over Valentinian II (whose denial in 384 of **Symmachus's** request to restore the Altar of Victory was due to Ambrose), and finally over Theodosius. The aim of Ambrose and men like him to create a Christian state in which traditional Roman polytheism, Judaism, and Christian heresies (especially Arianism) would not be tolerated was accomplished during the reign of Theodosius. Christian letters were continued in Greek by such men as **Eusebius of Caesarea** (260–340), who among other things established the tradition of Christian chronography, and by the theologian **Gregory of Nazianzus** (329–89). Latin Christian writing was dominated by North Africans such as **Arnobius** (fl. 295) and **Lactatius** (c. 240–320). The preeminent figures of the late 4th century were **Jerome** (Hieronymus, 348–430), who composed a major revision of the Latin Bible (the Vulgate), and **Augustine** (354–430), whose Neo-platonic thinking revolutionized Christian theology in the west (See [c. 340](#)).

The subsequent religious history of the Christian Roman Empire is essentially that of doctrinal disputes. Under Theodosius II (408–450), **Nestorius**, the bishop of Constantinople, who argued for a sharp distinction between the divine and human nature of Christ, was condemned at the **Council of Ephesus** in 431. During the 5th and 6th centuries, the eastern Church was torn by the Monophysite heresy, whose doctrine was that Christ had a single nature. Although the doctrine was condemned at the **Council of Chalcedon** in 451, the eastern emperors on the whole were Monophysite. As imperial authority weakened in the west, the bishop of Rome became powerful and wielded political as well as religious power. A major development was **monasticism** which had a

long tradition in the east (Antony in Egypt, c. 285). The work of **Martin of Tours** (362) (See [c. 340](#)) spread monasticism in the west, culminating in the rule of **St. Benedict** (*regula Sancti Benedicti*), who founded his monastery at **Monte Cassino** in 529. The rule was adopted by **Cassiodorus** (480–575), secretary of Theodoric, who founded a monastery at Beneventum in 540. The closing of the philosophical schools in Athens by Justinian, the execution of **Boethius**, and the founding of the Benedictine monastery mark the transition from the classical to the medieval world. ## **e. The Later Fifth Century**

### **455–472**

A succession of puppet rulers in the west. In 455 Eudoxia, widow of Valentinian, set up **Petronius Maximus** at Rome. On his murder, in the same year, she called the Vandals from Africa. 1

### **455, June 2–16**

**Gaiseric and the Vandals sacked Rome.** 2

### **456**

**Avitus** advanced from southern Gaul to Rome but was deposed by his able general, the Suevian **Ricimer**. Ricimer retained power by securing the consent of the eastern emperors to his nominees, who were **Majorianus** (457–461), **Severus** (461–465), and, after a two-year interregnum, **Anthemius** (467–472) and **Olybrius** (472). When in 472 both Ricimer and Olybrius died, the eastern emperor, Leo I, appointed **Glycerius** (473) and **Julius Nepos** (473–475). 3

### **457–474**

**LEO I** (b. ?), a Thracian (?), succeeded Marcian as emperor of the east. To offset his master of the troops, the Alan Aspar, he married his daughter Ariadne to Zeno, an Isaurian from the mountains of southern Asia Minor (467) and made Zeno's son, Leo, his colleague (473). 4

## 474

**Leo II** succeeded on the death of Leo I. His father, Zeno, made himself his colleague. Leo died the same year. 5

## 474–491

**ZENO** (b. 426) disposed of the pretender Basiliscus, brother-in-law of Leo I (475). 6

## 475

The master of the troops, **Orestes**, removed Nepos in favor of his own son, whose name combined those of the founder of Rome and of the Empire. 7

## 475–476

**ROMULUS AUGUSTUS** (nicknamed *Augustulus*). 8

## 476, Sept. 4

After defeating and killing Orestes at Pavia, the Herulian **Odovacar** (*Odoacer*) deposed Romulus Augustulus, the last emperor of the west, at Ravenna. **Traditional end of the Roman Empire.** (See [Western Europe in the Early Middle Ages, 461–1000](#)) 9

The eastern emperor **Zeno** apparently recognized Odovacar as “patrician” (*patricius* had become the title of honor for barbarian commanders). Nepos retained titular claim as emperor until his death in 480, and after that date the Empire was theoretically reunited under the eastern emperors, but actually Odovacar ruled as an independent king in Italy. 10

## 481

On the death of Theodoric, the son of Strabo, Zeno recognized his rival as patrician and master of the troops. His people were established in Moesia as *foederati*. 11

**Theodoric**, ostensibly as **Zeno's** agent, invaded Italy.

## **F. The Neo-Persian Empire of the Sassanians, 223–651 C.E.**

### **a. Economy, Society, and Culture**

**The economy of the Sassanian Empire** was based on agriculture, and the great majority of its inhabitants were peasants. While most farming was done by free peasants, chattel slavery was employed in royal mines, in building, in the crafts, and in agriculture, particularly on temple estates. Sassanian rulers, especially **Shapur I** (240–270) and **Khusrau I** (531–579), undertook a great increase in irrigation and land under cultivation. Much of the empire's agricultural wealth was centered in Mesopotamia, especially in the south region of Asuristan, where extensive irrigation produced an abundance of wheat and barley. To the southeast and across the Tigris was **Khuzistan**, which also produced great harvests of wheat and barley, sesame and rice. The district of **Meshan** (modern Kuwait) was famous for its palm dates; it also controlled access to the Persian Gulf and trade with India. Commerce was predominantly local, but a lucrative international caravan trade followed the **royal road**, extending north to Merv, Samarkand, and then on the **silk road** to China. Syrian glass, dyed fabrics, and metals were exchanged for silk, which served a diplomatic as well as an economic function. The primary form of taxation under the Sassanians was a land tax and, for religious minorities, a poll tax. The reforms of Khusrau I made the land tax, which began to be calculated in monetary terms, more efficient and extended the poll tax to all inhabitants between the ages of 20 and 50. <sup>1</sup>

**Sassanian society was divided into the traditional Iranian estates:** priest (*magian*), noble (*azatan*), and farmer (*ram*); the last estate also included traders, craftsmen, and bureaucrats. The basic social unit was the extended family of three or four patrilineal generations. Members shared religious and secular obligations and rights, as well as joint family property. Beyond the agnatic family, the larger social group was the clan (*naf*, *toxum*, or *gohr*) which comprised several dozen families whose heads shared a common ancestor and within which endogamous marriage was the rule. A wife and her property entered into the family of her husband, he becoming her guardian. The exercise of full <sup>2</sup>

legal rights required membership in a recognized urban or rural community, which in turn was determined by membership in one of the clans which formed the community. Free persons who were not members of a community—aliens, illegitimate children, freed slaves—were semidependent and had restricted rights.

The Sassanian period saw an increase in **centralization**. The semi-independent kingdoms characteristic of the Parthian era gave way to a unified state administration. Independent city-states that flourished under the Parthians were replaced by “royal cities,” that is, military centers governed by state-appointed officials called *shahrabs*. Rural districts were under the jurisdiction of the city administration. In the late Sassanian period, the kingdom was divided into four large divisions headed by a military and civil authority. The numerous religions tolerated by the Parthians were replaced by the single state religion, **Zoroastrianism**, whose administration of temple lands throughout the empire by officials called *magupats* paralleled that of the civil and military administration. <sup>3</sup>

In Sassanian Persia, state and religion were twin sisters. By the mid-fourth century, thanks to the efforts of the priest **Kartir**, **Zoroastrianism** had become the official state religion, whose priesthood sometimes challenged the authority of the king. The ruler, the king of kings, was chosen by God and crowned by the chief priest (*mobadan-mobad*). All power and law devolved from the king, who ruled with the support of the priesthood and the nobility that monopolized high administrative and court positions. The court of the Sassanian king was famous for its elaborate protocol and hierarchy of officials in which the priests played an important role. Despite the intolerance of Zoroastrianism, a number of influential religious movements sprang up during the Sassanian period. **Mani** (216–277), the founder of **Manichaeism**, was born in Babylonia of an Arsacid priestly family. He gained the support of the upper levels of Iranian society and became a companion of Shapur I. His doctrine became especially strong in Parthia and central Asia. Mani eventually fell afoul of the powerful Zoroastrian priest, Kartir, and in 277 he was imprisoned and died. Manichaeism spread from Spain to China. Another new religion was **Mazdakism**. The gnostic-socialist offshoot of Zoroastrianism caused major social unrest during the reign of Kavad I (488–531), who initially supported it as a counterbalance to the power of the nobles and the priesthood. Its leader, Mazdak, son of Bamdad, preached a radical doctrine of redistribution of wealth and women which threatened the privileges and power of the upper classes. Mazdak was executed at the end of Kavad's reign, and the sect was persecuted and went underground. The official attitude toward previously established religions varied. The large Jewish population of Mesopotamia suffered sporadic persecution at the hands of Zoroastrian magi. Because of its connection with Rome, Christianity aroused the political as well as the religious opposition of the Sassanian state and church and was frequently persecuted. <sup>4</sup>

## **b. Ardashir I to Shapur II**

### **223, 226?–243**

**Ardashir I** (*Artaxerxes*, *Artashatr*), founder of the Sassanian dynasty. The son of Papak, a vassal king of the Parthians ruling in Persis (Fars), Ardashir revolted against Artabanus, the last king of the Arsacid dynasty of Parthia, defeating and killing him at **Hormuz** (Hormizdagan, c. 224). Ardashir ruled over the territories of the Parthian empire, received the submissions of the kings of the Kushans and of Turan (Pakistan and Baluchistan, respectively) in the east, and gained control of Merv in the northeast. <sup>1</sup>

### **230–243**

**War with Rome.** Ardashir besieged Nisibis in Roman Mesopotamia and raided Syria (230). In 232 his forces were repulsed by Alexander Severus, after whose murder in 235 Ardashir took Nisibis, Carrhae, and the strategic city of Hatra. <sup>2</sup>

### **243–270, 273?**

**Shapur I** (*Sapor*) had been co-ruler with his father, Ardashir, since 240. After conquering the peoples along the coast of the Caspian Sea, he had to defend his kingdom against Rome. <sup>3</sup>

### **242–244**

**SHAPUR I'S FIRST WAR WITH ROME.** The Roman emperor Gordian recaptured Carrhae and Nisibis and then defeated the Persians near Resaina. But Gordian was murdered, and his successor, Philip, losing a battle near Ctesiphon, was forced to sue for peace and pay a ransom. Having deprived Armenia of Roman support, Shapur <sup>4</sup>

engineered the assassination of its Arsacid king, Chosroes (c. 252). When the Armenian prince Tiridates was received by the Romans, Shapur attacked and began the second Roman war.

### 253, 256?–260

**SECOND ROMAN WAR.** A Roman army was defeated at Barbalissa, Syria was invaded, and Antioch was taken (256). When the Romans counterattacked, Shapur defeated and captured the emperor Valerian near Edessa (258, 259?); Valerian remained a captive until his death (265–66). Syria and Asia Minor were invaded by Persian forces, but no attempt was made to retain the conquered territories.

5

### 260–267

**Palmyra.** Roman territory was defended by Odenathus, the ruler of Palmyra, who chased the Persians back across the Euphrates and defeated Shapur (260). Soon after (262–267), he reconquered Mesopotamia, failed to take Ctesiphon, and was given the title of *imperator* by Gallienus. In 267 he was murdered and was succeeded by his widow, Zenobia.

6

Shapur devoted his remaining years to consolidating his power. He installed his sons as kings in Armenia, Mesene (southern Mesopotamia), Gilan (on the Caspian coast), and Sakas (in eastern Iran). In the north his kingdom extended to Iberia (Georgia); in the east to the borders of Sogdiana and central Asia. He built dams and a new city, Bishapur, in Persis. He also took an interest in the teachings of Mani, the founder of Manichaeism. Shapur was succeeded by his son, Hormizd I.

7

### 270, 273?–293

**Hormizd I** (*Hormisdas*, 270–271), son of Shapur, was killed in battle against the Sogdians and was followed by his brother, **Bahram I** (*Varahan*, 271–274). During his reign Aurelian defeated Zenobia of Palmyra and reestablished Roman rule in the east. Conservative Zoroastrian priests brought about the execution of Mani. Bahram was succeeded by his son, **Bahram II** (274–293). An eastern campaign against the Sakae was brought to an end by the Roman invasion of Persia under the emperor Carus, who conquered Mesopotamia and took Ctesiphon. The mysterious death of Carus ended the war (283). The new Roman emperor Diocletian installed **Tiridates III** in Armenia (c. 288). **Bahram III**, son of Bahram II, reigned for a few months and was deposed by his

8

uncle, Narseh.

## 293–302

**Narseh** (*Narses*) worsted his brother and rival, Hormizd, and drove Tiridates from Armenia (296). 9

## 297

**WAR WITH ROME.** A Roman army under Galerius (See [297](#)) was defeated near Carrhae and Narseh recaptured Mesopotamia (297). The following year, Galerius returned and crushed the Persians. Narseh surrendered to Rome Mesopotamia and other territories east of the Tigris, the western part of Media was ceded to Armenia, and Iberia became a Roman protectorate. The Romans and Persians then remained at peace for forty years. During the reign of Narseh, the king of Armenia was converted to Christianity. 10

## 302–309

**Hormizd II**, son of Narseh, was remembered as a just ruler. On the death of Hormizd his natural heir, Hormizd III, was set aside by the nobility, who elected his posthumous son, the child Shapur II. 11

### **c. Shapur II to the Reforms of Khusrau I**

#### **309–379**

**SHAPUR II**, the Great. 1

#### **337–350**

**FIRST WAR WITH ROME** (See [337–363](#)). Shapur invaded Mesopotamia, won some victories, but failed in three attempts to take Nisibis. In 350 he had to break off the war and go east to counter an invasion of the Chionites (Huns), whom he defeated and forced into an alliance (357). Beginning in 339 Christians began to be persecuted. Jews and Manichaeans also suffered. 2

#### **359–361**

**SECOND WAR WITH ROME**. Syria was invaded, and Amida was taken after a heroic defense (359). Singara and Bezabde were captured (360). Constantius attempted in vain to recapture Bezabde and died in the following year. His successor, Julian, invaded Persia, forced the passage of the Tigris, defeated the Persians north of Ctesiphon but retreated before investing that city, and was mortally wounded in a battle near Samarra (363). His successor, Jovian, made a treaty with Shapur in which Rome restored all the Mesopotamian territories ceded by Narseh, as well as Nisibis and Singara. Shapur was also given a free hand in Armenia, which he invaded and devastated in 365. He later made it and Iberia vassal states (378). 3

#### **371–376**

**THIRD WAR WITH ROME**. There were no decisive results, and an obscure peace 4

followed. Persian power was at its zenith at the death of Shapur II. His immediate successors, **Ardashir II** (379–383) and **Shapur III** (383–388), were weak, however. Shapur concluded a peace with Rome (384) whereby Armenia was partitioned between Rome and Persia. **Bahram IV** (388–399), probably the son of Shapur III, succeeded. He placed his brother on the throne of Armenia. Bahram was killed in a mutiny and was succeeded by his son, Yazdgird I.

### 399–420

**Yazdgird I, the Wicked**, was so called because of his conflict with the Zoroastrian priesthood. The persecution of Christians and Jews ended for a time. Under the patronage of Yazdgird, Sassanian Christians held the **Council of Seleucia** and adopted the anti-Arian creed of the Council of Nicaea. Near the end of Yazdgird's reign, toleration ceased when Christians began burning down Zoroastrian fire temples. In 409 Yazdgird struck a treaty with Rome and his rule was peaceful. He was succeeded by his son Bahram V.

5

### 420–438

**Bahram V**, known as the “wild ass,” was supported by the Arabs against his cousin, Khusrau, the choice of the nobles. He continued persecution of the Christians and declared war on Rome (421) when the Christians crossed the border seeking Roman protection. Bahram was defeated (422) and agreed to permit Persian Christians to seek refuge in the Roman empire and to halt persecution. The eastern Christian church declared itself independent at the **Council of Dadiso** (424). Persian Armenia was reduced to a satrapy (428). Bahram campaigned against the Hephthalites (of Turkish stock?), driving them out of Persia across the Oxus. Bahram was succeeded by his son Yazdgird II.

6

### 438–457

**Yazdgird II** declared war on Rome and concluded peace in the same year (440). He then campaigned successfully against the Hephthalites (443–451). Urged on by his minister, **Mihr-Narseh**, and the clergy, Yazdgird sought to impose Zoroastrianism on Armenia and Iberia (449). Strong Armenian opposition was crushed at the Battle of Avarair (451). Yazdgird's last years were spent fighting on the northern borders against the Hephthalites. He died in 457 without a decisive victory. His younger son, Hormizd,

7

seized the throne.

### 459–484

**Peroz**, the elder son of Yazdgird, defeated the usurper Hormizd with the help of the Hephthalites. His reign was marked by a severe famine and the renewed enmity of the Hephthalites who in 469? captured Peroz and forced him to give his son as hostage and to pay tribute. National resistance in Iberia and Armenia led to a revolt led by Vahan (481–483). Persian forces were withdrawn from Armenia to aid Peroz's campaign against the Hephthalites in which he was killed in 484. He was succeeded by his brother Balash.

8

### 484–488

**Balash**, Peroz's brother, was selected by the nobles. The Persians agreed to pay tribute to the Hephthalites. After Vahan had aided Balash in civil war, the king permitted Armenians to practice Christianity and ended Zoroastrian practice in the province. With royal approval, **Bar-Sauma** established **Nestorianism** (two natures of Christ) as the sole doctrine of the Persian Christian Church (484–489). Balash was assassinated and succeeded by the son of Peroz, Kavad.

9

### 488–496

**Kavad** (*Kabades*, first reign), son of Peroz, lived with the Hephthalites as a hostage and was supported by them. Kavad supported the religiosocialist movement of **Mazdak**, son of Bamdad. Mazdak seems to have been a Zoroastrian priest whose gnostic and egalitarian doctrine gained support among the common people but hostility from the nobles and the traditional priesthood. A conspiracy was formed against Kavad; he was arrested and replaced by his brother, **Zamasp**, who ruled from 496–498. Kavad escaped to the Hephthalites, who accompanied him back to Persia where Zamasp resigned.

10

### 498–531

**Kavad** (second reign) returned to power and withdrew official support for increasingly radical reforms demanded by Mazdak.

## **d. Hormizd IV to the Muslim Conquest**

**579–90**

**Hormizd IV.** War with Rome (Byzantium) continued. The Persians were defeated by Maurice at Constantia (581). In 589 the Romans took Martyropolis, while the Romans won an important victory near Nisibis. The war continued indecisively, weakening both sides. <sup>1</sup>

**589**

**Persia was invaded** by Arabs. The advance of the Turks constituted a real danger, but they were defeated by the Persian general **Bahram**. Bahram was ordered to invade Lazica but was met and defeated by the Romans on the Araxes. Superseded and insulted by the king, he rebelled. Hormizd was deposed and murdered; he was succeeded by his son, Khusrau. <sup>2</sup>

**590–628**

**KHUSRAU II PARVIZ** (“the victorious”). Challenged by Bahram, Khusrau sought help from Constantinople; Bahram then seized the throne and ruled as **Bahram VI** (590–591). Khusrau was restored with the help of the emperor Maurice. Bahram fled to the Turks, where he was assassinated. Under Khusrau the Sassanian empire reached its greatest extent but then suffered a precipitous decline. Khusrau initially tolerated Christianity and in the disputes between Nestorians and Monophysites favored the latter. At the end of his reign, persecution was resumed. <sup>3</sup>

**603–606**

The assassination of Maurice and his sons by **Phocas** (602) gave Khusrau the opportunity <sup>4</sup> to declare war against Constantinople. After defeating the forces of Phocas, Khusrau's armies invaded Armenia and Syria and ravaged Cappadocia; many cities were captured, including Dara (603), Amida, and Resaina (606). In 604 a Sassanian army had been defeated by the Arabs at the **Battle of Dhu Qar**.

### 610–619

After Phocas was overthrown, Khusrau continued the war against his successor, **Heraclius** (See [610–41](#)). The leading cities of Armenia and Cappadocia were taken <sup>5</sup> (610–611), and Persian armies captured Antioch, Damascus, and Tarsus (613). Jerusalem was occupied and the “true cross” taken to Ctesiphon (614). Anatolia was invaded, Chalcedon taken (615), and Constantinople endangered (616). In 619 Alexandria was taken, and Egypt came under Persian rule. Khusrau had restored the Achaemenid empire.

### 622–627

Heraclius counterattacked by invading Armenia, flanking and decisively defeating the <sup>6</sup> Persians, who then evacuated Asia Minor. Heraclius again invaded Armenia, defeated the Persians, and ravaged Azerbaijan (623–624). Persian forces invaded Anatolia and took Chalcedon but were prevented from aiding the Avars in their abortive siege of Constantinople (626). In 627 Heraclius swept down into Mesopotamia and defeated a Persian army near Nineveh. Khusrau fled, a revolt ensued, and Khusrau was murdered and succeeded by his son Shiroe, who ruled as Kavad II.

### 628–629

**Kavad II** made peace with Heraclius, agreeing to evacuate Egypt, Palestine, Syria, Asia <sup>7</sup> Minor, and western Mesopotamia and to restore prisoners and the true cross. Kavad died of the plague. The general **Shahrbaraz** (*Sarbaros*) usurped the throne and killed the infant son of Kavad, Ardashir III (628–629), but was himself murdered (629). Khusrau's daughter **Borandukht** (630–631) ruled for a year. On her death there was anarchy that seriously undermined the central authority of the monarchy (631–632).

### 632–651

**Yazdgird III**, the grandson of Khusrau, ascended the throne in 632 but did not receive the support of the Persian nobility in the face of the invasion to follow. 8

## 636–651

**Arab invasion of Persia** (See [632–750](#)). The Persian army under the general Rustam was defeated at Qadisiyya, near Hira (636). In 637 the armies of Islam occupied Ctesiphon. Yazdgir's appeal for Chinese aid went unanswered (638). The Arab army swept over the Iranian plateau and wiped out the imperial Sassanian army at Nihavand (642). Yazdgird fled to Merv, where he was murdered while hiding in a mill (651). Sassanian rule had ended, and the Persian provinces were incorporated into the caliphate. (See [The Global Picture](#)) 9

### **III. The Postclassical Period, 500–1500**

#### **A. Global and Comparative Dimensions**

##### **1. Periodization, 500–1000**

During the postclassical period, following the decline of the great classical empires of Asia and the Mediterranean, three major developments stand out in world history and the history of many individual societies: **the expansion of civilization to new areas**—in Asia, Africa, and Europe, this involved contact with and outreach from the older centers (China, India, the Middle East and North Africa, and Byzantium); **the spread of major world religions**, including the development of Islam, the most successful single religion during this period; and **the intensification of international contacts in the Eastern Hemisphere**. These themes were all established in the **first part of the postclassical period**, 500–1000. Changes in the Islamic world, the rise of new empires spreading from central Asia, new patterns of international contact (involving new policies in China and in Europe), and solidification of the major religions mark the **second phase of the postclassical period**, 1000–1500. In European history this period coincides with the Middle Ages (See [Europe, 461–1500](#)), and the resultant label “medieval” was formerly applied to world history more generally during the postclassical era. <sup>1</sup>

The regional civilizations of the Eastern Hemisphere were transformed in this period. The Eastern Hemisphere ecumene continued to expand through trade, the spread of religions, migrations of peoples, and conquests. In the Western Hemisphere, Mesoamerican and Andean civilizations emerged in a context of complex, nonurbanized societies. <sup>2</sup>

##### **a. Transformation of Regional Civilizations**

The major traditions of classical empires ended either through defeat and collapse or transformation. <sup>3</sup>

**CHINESE IMPERIAL EXPERIENCE.** The end of the **Han Empire** in 220 created an era of warfare among small rival states. This “period of the Six Dynasties” lasted until the reestablishment of imperial unity by the **SUI DYNASTY** (589–618) and the **TANG DYNASTY** (618–907) (See [618–907](#)). The new imperial system was more clearly based on the bureaucratic skills of the **scholar-gentry class**, with the aristocracy and military playing a less central role than in the classical system. This postclassical style of empire was confirmed by its continuation in the **SONG DYNASTY** in 960, following a time of instability after the fall of the Tang. 4

### 476–973

**POST-ROMAN WESTERN EUROPE.** When Roman rule collapsed in western Europe, a number of states were established by groups that had migrated into the region. The **Franks** (See [The Frankish Kingdom](#)), in the area of modern France and Germany, established a kingdom whose leader, Charles the Great, or **CHARLEMAGNE** (r. 768–814), was crowned **Holy Roman Emperor** by the pope in 800. The **Carolingian Empire** disintegrated, and the later efforts by a German king, **OTTO THE GREAT** (r. 936–73), also failed to reestablish regional imperial unity. The major sources of unity were the **ROMAN CATHOLIC CHURCH** and the teachings of **Latin Christianity**. 5

### 527–1025

**EASTERN ROMAN EMPIRE AND BYZANTIUM** (See [The Byzantine Empire](#)). Imperial rule continued in the eastern Roman Empire under the emperors in Constantinople. **JUSTINIAN** (r. 527–65) reconquered most of the Mediterranean areas of the Roman Empire (See [532](#)), but was unable to recreate broader Roman unity. The postclassical eastern Roman Empire gradually became a powerful **Greek imperial monarchy** known as the **BYZANTINE EMPIRE**, identified with the **ORTHODOX CHRISTIAN CHURCH**. Despite losses to invaders from central Eurasia in the north and to **Muslims**, it remained a major regional empire. The **MACEDONIAN DYNASTY** (867–1055) led a resurgence, but following the death of **Basil II** (1025), internal divisions and territorial losses reduced the empire to a minor state around Constantinople. 6

### 535–977

**POST-GUPTA INDIA.** The most successful effort to restore regional imperial unity in 7

India was made by **HARSHA** (r. 606–47) (See [606–47](#)). However, his empire collapsed at his death, and no later state assumed a dominant position until the end of the 10th century, when **Muslim military dynasties** from the northwest continued the Muslim conquest of India. **Hindu culture** provided the foundation for regional civilizational unity without political integration.

## 651–945

**EMERGENCE OF THE ISLAMIC MIDDLE EAST.** The rise of **ISLAM** (See [Continued Spread of Religions](#)) in the 7th century brought an end to the classical imperial systems of the Middle East. Islam was a continuation of **ethical monotheism** and is recorded as the revelation to the prophet **MUHAMMAD** (570–632). Muhammad's successors as leader of the Muslim community, called **caliphs**, conquered most of the Middle Eastern provinces of the Byzantine Empire in 634–43 and brought an end to the Sassanid Empire in 637. Civil wars brought the **UMAYYAD CALIPHATE** (661–750) and then the **ABBASID CALIPHATE** (750–1258) to power in an empire that initially continued classical Sassanid and eastern Roman structures. However, the Islamic world became a postclassical society unified by the faith and institutions of Islam. By the mid-10th century, the caliphate imperial structure was replaced by a new style of state based on commanders called **sultans** (See [Overview](#)), who initially gained titles and legitimacy by supporting the then-powerless caliphs.

## **b. [Comparisons](#)**

In all regional civilizations, new structures emerged that were significantly different from the classical imperial societies. In China, India, and the western Roman Empire, imperial traditions were interrupted, and only in China was a restoration possible. However, in China the restored empire emerged in a postclassical form dominated by the scholar-gentry. In eastern Rome and the Middle East, there was continuity of imperial unity, but the basic nature of the imperial community was transformed. In all regional civilizations, the basis of identity shifted from imperial unity to community identified by religion or cultural worldview. <sup>1</sup>

### c. [Interregional Relationships](#)

**MIGRATIONS.** In the Far Western region of the Eastern Hemisphere, the invasions of the **Huns** in the 4th century were followed by Germanic migrations and the arrival of additional peoples from the central Asian steppes, such as the **Avars** and **Bulgars** in the 6th and 7th centuries. Later invasions and migrations from **Scandinavia** laid the foundations for new states from the Volga River to England and Greenland. 1

On the frontiers of China, tribal federations continued to rise and fall, exhibiting increasing skill in managing large states. Some, like the **Khitans** (See [951–60](#)), who ruled much of Mongolia and Manchuria from 907 to 1123, integrated Chinese and nomadic elements. In central Asia, the **Uighars** became important in interregional trade and cross-cultural contacts. 2

**Turkish peoples** began to migrate into the Middle East during the Abbasid Caliphate; they became the dominant political and military force in a new-style Muslim society which was emerging by the 11th century. 3

**TRADE.** Commercial relations along the great **Silk Road** of Eurasia continued despite the rise and fall of imperial states. By 1000, Muslim traders, Indian merchants, and Chinese products and technologies were important elements in a growing hemispheric network. Maritime trade in the **Indian Ocean basin** and growing **trans-Saharan** trade in Africa, both dominated by Muslim merchants, opened vast regions to closer involvement in hemispheric networks. 4

#### **d. Continued Spread of Religions**

The communities identified by the major religions expanded far beyond the boundaries of the classical regional civilizations. <sup>1</sup>

**BUDDHISM** became firmly established in both the mainland and island societies of Southeast Asia, receiving support from rulers in **Srivijaya** on Sumatra, a major maritime power from the 7th to the 13th century. Central Asian societies, like that of the **Uighars**, also saw an increasing Buddhist influence. During the **SUI** and **TANG DYNASTIES** in China, Buddhism became a significant part of the broad synthesis of popular Chinese religion, enabling Buddhism to survive periods of official opposition (See [Political, Social, and Cultural Patterns](#)). In **JAPAN**, the emerging centralized monarchy in the 6th and 7th centuries supported Buddhism, which became an important part of Japanese life. <sup>2</sup>

**CHINESE WORLDVIEW** as a combination of cultural patterns, political concepts, and religion spread significantly in the postclassical era. Chinese interactions with central Asian societies continued, and peoples like the Khitans created effective political systems combining Chinese and local traditions. In **JAPAN** during the **Taika period** (645–710) (See [646–784](#)), major efforts were made to shape the developing centralized monarchy into one governed by a **Confucian**-style emperor. Aristocratic and warrior families and Buddhist leaders were able to limit the impact of Confucian political models, but the Chinese worldview in political, literary, and religious terms became a major component of Japanese society in the postclassical era. **KOREA** was unified as a centralized monarchy by the **Silla dynasty** (668–935) following Confucian models, and Korean society and culture became strongly **Sinified**. **VIETNAM** had been conquered by the **Han Empire** and later by the **Tang**. The **LE DYNASTY** (980–1009) (See [980](#)) brought independence, but the state was influenced by Chinese models, which provided a basis for expansion. Chinese commercial involvement in the whole Southeast Asian region as well as in central Asia in the postclassical era meant that Chinese influences on culture and worldview were very strong in a vast part of Asia. <sup>3</sup>

**CHRISTIANITY** spread significantly in the postclassical era. **CATHOLIC CHRISTIANITY** emerged as the major unifying force in western Europe after competition with other forms of Christianity, overcoming **Arian Christianity** among the <sup>4</sup>

Franks and **Celtic Christianity** in the British Isles in the 6th and 7th centuries. Spreading north and east, Catholic Christianity was adopted by rulers of **Bohemia** (9th century) and, in the 10th and 11th centuries, rulers in **Denmark, Norway, Sweden, Poland,** and **Hungary**. **ORTHODOX CHRISTIANITY** spread beyond the borders of the **Byzantine Empire**, with rulers of the **Bulgars** and early **Serbs** converting in the 9th and 10th centuries. The conversion of King **VLADIMIR I** (r. 980–1015) of Kiev (See [980–1015](#)) brought Russia into the Orthodox Christian world. **NESTORIAN CHRISTIANITY** (See [1315](#)) spread through a diaspora of traders and missionaries in central Asia and as far as China. It was an intellectual force in the ruling courts but did not succeed in winning mass support, and it lost many followers in the Middle East to **Islam** after the 7th century.

**ISLAM** was the major new religious force in the postclassical era. Although the Muslim community was identified in many ways with the **Umayyad** and **Abbasid** empires, social institutions of learned scholars, or *ulama*, and pious devotional teachers, as well as widely traveling Muslim merchants, provided vehicles for the expansion of Islam beyond the military boundaries of the Muslim Empires. By 1000, the majority of the populations throughout the Middle East were Muslims, having been converted by a long process of social and religious transformation (See [Overview](#)). Muslims represented diaspora communities of teachers, preachers, and merchants throughout Central, South, and Southeast Asia, as well as in many parts of Africa. 5

**ABSORBED WORLDVIEWS**. Some of the major classical worldviews ceased to have a separate existence by 1000 C.E., although they were still influential, as their major themes were absorbed into other religious traditions. **HELLENISM** disappeared as an independent worldview, but its concepts strongly influenced the development of **Judaism, Christianity,** and **Islam**. **ZOROASTRIANISM** all but disappeared following the end of the **Sassanid Empire**, but many of its major themes influenced Jewish, Christian, and Islamic thought. **MANICHAISM** declined after the fall of the classical empires (See [841–45](#)) but had some missionary success in central Asia and China, being declared the state religion for a time in the 8th century by the **Uighars**. Even though it disappeared as a separate religion, its concepts of conflict between good and evil shaped later thought, especially in Europe and the Middle East, and occasionally provided the foundations for counterestablishment religions. 6

## 1000

**RELIGIOUS CONTEXT**. The great **classical empires** had been replaced as the dominant features of the major societies in the Eastern Hemisphere by major interregional **religious communities**. In the Far West, there were the two emerging Christian worlds of **Catholic** and **Orthodox Christianity**; the **Islamic world** extended from Spain to central 7

Asia and south into Africa; in central and eastern Asia, **Buddhism**, either by itself or in conjunction with the **Confucian-based Chinese** worldview dominated the societies from Japan to Southeast Asia. **Hinduism** established itself as the culturally dominant force within the broad complexity of South Asian society.

### e. [The Global Picture](#)

The **EASTERN HEMISPHERE ECUMENE** expanded with continuing interaction between the great civilizations and the complex noncited societies. The distinction between the two types of societies and also among the civilizations became less clear as religions, trade, and the movements of people widened to create networks that included all but the most isolated societies of the Asian far north and African far south. The way was opened for expansion on a hemispheric and a global scale. 1

Entirely separate from the Eastern Hemisphere ecumene, **WESTERN HEMISPHERE** societies developed major temple-palace civilizations in the Mexican highlands around **Teotihuacán**, in the **MAYAN** areas of the Yucatán Peninsula, and in the Andes around great cities like **Tihuanaco**. These civilizations did not establish persistent dynamism or continuity over time, however, as they experienced significant eras of decline, followed by the emergence of new societies. By the year 1000, great “classical” periods in both Mesoamerica and the Andes had come to an end, and networks of smaller complex states existed. 2

**COMPLEX NONURBANIZED SOCIETIES** continued to develop in North America, building on the traditions of earlier mound builders. **HOPEWELL CULTURE** created large new centers in the Mississippi Valley (See [North American Chiefdoms](#)), like **Cahokia**, and in the southwestern desert areas, large settlements were built by such peoples as the **ANASAZI**. In the **PACIFIC OCEAN BASIN**, this was an era of movement for the **POLYNESIAN** peoples (See [The Pacific Islands in Pre-European Times](#)) who settled many of the islands and possibly facilitated interregional exchange of plants. 3

**LARGE INTERREGIONAL NETWORKS** in the Eastern Hemisphere and new contacts within the Western Hemisphere and in oceanic regions were developing by 1000, changing the picture of scattered but interacting separate societies and opening the way for the creation of even larger basic networks. 4

## 2. The High Postclassical Period, 1000–1500

The emerging networks involved different types of interactions, ranging from the exchange of scientific ideas and commercial goods to religious conversions and military conquests. These laid the foundations for more global integration by 1500.

**Improvements in navigation** facilitated some expansions. They included the **magnetic compass**, in use on Chinese ships by 1100 and on Arab ships soon after; and development of more **accurate maps** by the Arabs.

### a. Major Interregional Expansions

**INTERREGIONAL EURASIAN EMPIRES.** Central Asian peoples created a series of great conquest empires. The **SELJUK SULTANATE** emerged as a part of the migrations of Turkish peoples into the Middle East. Seljuks conquered the eastern provinces of the **Abbasid Caliphate** in the 11th century, proclaiming themselves the protectors of the caliphs and **Sunni Islam**, and following their victory over the **Byzantine Empire** at Manzikert in 1071 (See [1071](#)), they took control of Anatolia. Although the extended Seljuk Sultanate lasted only from 1037 to 1092, Turkish soldiers became the ruling elite in many Muslim lands.

The **MONGOL EMPIRE** was the largest of the central Asian empires. It began with the conquests of **Chinggis Khan** (c. 1170–1227) (See [1206](#)), and by the time of his grandsons' rule, it had become a network of large states. One grandson, **KHUBILAI KHAN** (r. 1260–94), established the **Yuan dynasty**, which controlled China until 1368, although expeditions to conquer **Japan** (1274 and 1280), Vietnam, and Java failed. A second grandson, **HULEGU** (r. 1256–65), established the **ILKHAN EMPIRE** (1256–1335) in the Middle East (See [1265–1335](#)) and brought an end to the **Abbasid Caliphate** with the conquest of Baghdad in 1258. Mongol expansion was stopped in Syria in 1260 by **MAMLUKS** from Egypt. The central Asian territories were under the control of **Djagatai** (d. 1241) and were the basis for later Mongol-Turkish states. In the Far West, most Russian states, including **Kiev** and **Moscow**, came under the control of

the khans of the **GOLDEN HORDE**, whose descendants ruled parts of Russia until the 18th century. Invasions of Poland and Hungary brought devastation but no permanent occupation. The fact that Mongols did not rule the Ukraine and the Baltic regions encouraged those areas to distinguish themselves from Russia. The khans of the Golden Horde converted to **Islam** in 1257, and the Ilkhan ruler **Ghazan Khan** became Muslim in 1295. For almost two centuries, Mongol rulers provided a vast domain within which trade flourished and ideas and technologies were exchanged across much of Asia and Europe. However, Mongol leaders were unable to create effectively centralized control, and the Mongol world gradually disintegrated.

**TIMUR-I LANG** (r. 1360–1405) (See [1398–99](#)) (See [1405](#)) created the last great central Asian conquest empire, which controlled most of the territories of the **Ilkhans** and Djagatai's successors. However, the empire collapsed with his death.

4

## 1000–1400

**EARLY EUROPEAN EXPANSIONS.** The postclassical states in Europe attempted a number of interregional expansion efforts. (Irish monks had discovered Iceland in 790, and **Erik the Red** discovered Greenland in 981.) **SCANDINAVIANS** made some of the earliest efforts to expand, across the North Atlantic. Permanent settlements were established in Iceland, and by the 11th century communities were established for a time in Greenland and some people had traveled even farther west.

5

## 1000

Leif Ericsson driven off course to Newfoundland (which he called Vinland).

6

## 1003–6

**Thorfinn Karlsefni**, with three ships, explored parts of the North American coast. Contacts definitely continued until 1189, perhaps until 1347, by which point Greenland's settlements were in decline (See [Scandinavia](#)).

7

**TEUTONIC KNIGHTS**, a Christian military order, provided leadership for an eastward expansion of warriors and farmers, changing the character of northeast Europe.

8

**THE RECONQUISTA** (reconquest) (See [1212, July 16](#)) of the Iberian Peninsula by Christians from the Muslims increased in intensity by the 11th century, and continued until the final Muslim defeat in 1492.

9

**THE CRUSADES** (1095–1291) were the efforts led by the Catholic Church to take the Middle East (See [The Crusades](#))—especially the Holy Land and Jerusalem—from Muslims. Although western European knights ruled Jerusalem for almost a century, after a number of formally proclaimed Crusades, Crusader control in the Holy Land came to an end in the 13th century. The Crusades had an important impact in that they intensified commercial and cultural contacts, but they did not reflect any distinctive European power. 10

**Isolated efforts to explore the Atlantic** were launched from Portugal, Spain, and Italy. 1270: the Portuguese began to explore the west coast of Africa. 1291: the Vivaldo brothers from Genoa sailed into the Atlantic seeking a western route to “the Indies”; did not return. 1340–41: the Portuguese rediscovered the **Canary Islands** (assigned to Spain after conflicts, by **Treaty of Alcaçovas**, 1480). 1351: Genoese sailors may have reached the Azores. 1360s: regular expeditions from Barcelona were made along the northwest African coast. Technological limits prevented further activity until after 1430. Other contacts with Africa: papal representatives sent to Ethiopia, 1316; Ethiopian delegations visited Venice, beginning in 1402, to discuss alliance against Muslims. 11

## 1368–1500

**CHINESE EXPANSION.** The Yuan (Mongol) dynasty was defeated by an antiforeign revolution that established the **MING DYNASTY** (1368–1644). Early Ming rulers worked to reestablish Chinese dominance in the areas of long-standing Chinese interests and influence, such as Korea, Vietnam, Tibet, and central Asia. In addition, in 1405–33, Ming rulers sponsored a series of major commercial expeditions led by **CHENG HO (Zheng He)** (See [1405–33](#)). Great Chinese fleets sailed as far as East Africa and the Middle East, establishing the potential for regular, Chinese-dominated trade throughout the Indian Ocean. However, the emperor ordered the halt of the expeditions by 1433. Nonofficial Chinese merchant activity continued in Southeast Asia, where Chinese commercial communities became an important force. 12

## 1000–1500

**ISLAMIC EXPANSION** continued throughout the Eastern Hemisphere. **Turkish peoples and sultanates** were important vehicles for this expansion. Although the **Seljuk sultans** were defeated, other sultanates were established, creating a belt of states controlled by mercenary military establishments identified with Islam. The **OTTOMAN SULTANATE** (See [The Ottoman Empire](#)), established in the thirteenth century, gained control over most of northern Africa, the eastern Arab world, Anatolia, and much of the 13

Balkan Peninsula by the early 16th century. The Muslim Mongol rulers in Russia and Persia confirmed the military-style Muslim state in those regions, and the **DELHI SULTANATE** (1206–1526) (See [1206–66](#)) was the major Muslim state in India. Non-Turkish sultanates developed as combinations of Muslim and local monarchical traditions throughout Southeast Asia.

**WEST AFRICAN MUSLIM STATES** followed the pattern of combining Islamic and local traditions. Islamic expansion in the region was confirmed by a sequence of major states, beginning with the conversion of the rulers of **Ghana** in the 10th century (See [500–800](#)), followed by **MALI** in the 13th century. The next state in the sequence was the **SONGHAY EMPIRE** (emerging in the 14th century and ending in 1591), whose leaders took the title of *askia*, or military commander. 14

**EXPANSION THROUGH MISSIONARIES AND TRADERS.** The major means by which Islam expanded beyond the ruling elites in societies outside of the Middle East was through the activities of **merchants**, who carried their faith abroad, along with their products. From the South China Sea and the India Ocean basin to sub-Saharan Africa, merchants were often the first contact between local peoples and Islam. An important means for combining local and Islamic traditions was the development of **SUFISM**, the Islamic form of mystical piety (See [950–1300](#)). Sufism provided the basis for **brotherhoods** that combined popular piety with organizations for social cohesion. Sufi teachers were the major missionary force in the Islamic frontier areas. Great commercial cities on the East African coast, in central Asia, and on the islands of Southeast Asia became special centers for the popular expansion of Islam. 15

The Islamic world more than doubled in size between the 10th-century decline of the Abbasid Caliphate and the early 16th century. This was largely the result of the activities of Sufis, Muslim merchants, and sultans. 16

## 1400–1550

**LATER EUROPEAN EXPANSIONS.** By 1439 **Portugal controlled the Azores** and granted land to colonists; Spain soon did the same in the Madeiras and (1480) the Canaries (previously, the islands were inhabited by hunter-gatherers). Both countries imported European plants, weapons, and diseases, set up **sugar plantations** for exports to Europe, and brought in **slaves from northwestern Africa** as workers, foreshadowing later developments in the Americas. 17

Western European states began larger efforts at expansion in the 15th century. The new national monarchies of **PORTUGAL** and **SPAIN** played leading roles in supporting maritime expeditions for commercial and crusading purposes. **Developing European naval technologies**, utilizing rigid hulls and multiple masts with adjustable sails, made transoceanic travel possible in the Atlantic. Such ships were also able to carry cannons 18

to give them extra firepower. Contacts with Asia gave Europeans knowledge of the **compass** and explosive powder. Motivation for expansions included fear of the new Ottoman Empire and the resultant desire to find independent trade routes, and an unfavorable balance of trade with Asia.

**PORTUGAL** began a major program of oceanic exploration and trade under the leadership of **PRINCE HENRY THE NAVIGATOR** (1394–1460).

19

### Portuguese Exploration

1418–19 Exploration of Madeira Islands.

1427–31 Definitive discovery of Azores by Diogo de Sevilla.

1433 After ten-year effort, Portuguese ships rounded Cape Bojador; increased slave raiding.

1444 Nuño Tristram reached Senegal River.

1445 Dinís Dias rounded Cape Verde; increased trade, Portugal–West Africa.

1455–57 Alvise da Cadamosto, Venetian serving Prince Henry, explored Senegal and Gambia Rivers, discovered Cape Verde Islands.

1470–71 João de Santarem and Pedro Escobar reached Mina on Gold Coast, set up Portuguese trading station (fort, 1482).

1472 Expeditions passed equator; Fernando Po discovered island that bears his name.

1482–84 Diogo Cão reached Congo River.

1487 Portuguese King John sent overland expedition (Pedro da Covilhã) to India and east coast of Africa.

Portuguese ships gradually moved along the African coast, with **Bartolomeu Dias** reaching the Cape of Good Hope in 1487 and **VASCO DA GAMA** sailing around Africa and entering the Indian Ocean in 1497. **PEDRO CABRAL** touched Brazil en route to India (1500); **regular Portuguese trade** to India began. Da Gama attempted to close the Red Sea to Arab trade (1501). Almeida defeated Muslim Indian Ocean fleet (1509). Within the next half century, Portuguese commercial and military bases were established throughout the Indian Ocean basin and in the South China Sea, in **Goa** (1510; governorship of **Alfonso de Albuquerque**), in **Malacca** (1511), and in **Macao** by 1557. **Jorge Alvarez** first reached China in 1513. In 1542 **Antonio de Mota** first reached Japan, after being blown off course.

20

**SPAIN** began building a major global empire after emerging as a national monarchy through the union of Aragon and Castile, beginning in 1469, and the completion of the

21

**Reconquista** in 1492. In that year, **QUEEN ISABELLA** provided support for the expedition of **Christopher Columbus** (See [1492](#)), who hoped to find a westward route to eastern Asia. He landed in the islands of the Western Hemisphere, and his trips were followed by other expeditions that established Spanish control in Mesoamerican and South American areas outside of those claimed by Portugal. Spanish expeditions conquered and effectively brought an end to the regional civilizations of the Western Hemisphere. **Hernando Cortés** destroyed the **AZTEC EMPIRE** of Mexico in 1518–21, and **Francisco Pizarro** conquered the **INCA EMPIRE** in Peru in 1531–36.

**Further European expeditions** opened the way for travel between the Atlantic and Pacific Oceans, with **Vasco Núñez de Balboa** sighting the ocean to be called the Pacific in 1513 and **Ferdinand Magellan** organizing the fleet supported by Spain that in 1519–22 was the first to sail around the world (See [1519–22](#)).

## b. [Interregional Exchanges](#)

**COMMERCIAL AND MATERIAL. Expansion** efforts involved increasing interregional exchanges of goods. Traveling merchants were often a major vehicle for creating broad interregional networks. 1

**Trade routes** in the great overland and oceanic networks increased in importance. The **Silk Road** of central Eurasia flourished in the era of Mongol power, but gradually declined in importance as other routes developed and security became less reliable following the breakup of the Mongol Empire. **Indian Ocean trade** increased, first under the leadership of local groups from southern Arabia, India, and Southeast Asia, and then outside groups, such as the **Chinese**, became involved. A trade network was established linking East African commercial city-states with the Middle East, India, and emerging commercial centers like **Malacca** in Southeast Asia. At the beginning of the 16th century, the **Portuguese** were able to dominate this system and link it directly, rather than through Mediterranean intermediaries, with Europe. Products exchanged continued to include **spices** from Southeast Asia and other expensive goods, but bulk goods, like sugar and textiles, were increasingly involved. **Trans-Saharan** trade continued to flourish between the Mediterranean lands and central Africa, but this was increasingly superseded by the coastal trade that developed with the emergence of the city-states of East Africa and especially with **Portuguese** expansion in the 15th century. The **SLAVE TRADE** came to be a major element in this commercial network as trade in the Atlantic developed. 2

**BUBONIC PLAGUE**, or **Black Death**, spread interregionally along trade routes through the exchange of bulk goods like grains. It began in the 1320s in the Gobi Desert, from which it spread to China. It began moving west in 1339; hit the Middle East and North Africa in 1347–48; reached Sicily in 1347, France in 1348, and western Russia in 1351. Major population losses occurred in China, India, the Middle East, and Europe. 3

### 1000–1500

**TECHNOLOGICAL AND SCIENTIFIC EXCHANGES.** New technologies were 4

exchanged relatively rapidly as they developed in the major societies. The **MAGNETIC COMPASS** was developed in China and was adopted as a navigational tool by western Europeans. This and other developments in navigation transformed the nature of oceanic travel. **GUNPOWDER** was originally developed in China around 1000, but it had limited use there until **Mongols** began to use “bombs” in sieges and the **Ming** military developed some form of cannon. Other states developed artillery and hand-carried weapons to give them military firepower. Cannons helped to defeat castle-based nobility and, by 1500, the more successful centralized states were “**gunpowder empires**” (See [Global and Comparative Dimensions](#)). These included the Ottoman and emerging Russian Empires as well as the European monarchies.

### c. [The Religious Context](#)

The interregional religious communities developed comprehensive articulations that became the standard for religious establishments in the regional civilizations. **NEO-CONFUCIANISM** in China, especially as presented in the writings of **Zhu Xi** (1130–1200) (See [Political, Social, and Cultural Patterns](#)), provided a comprehensive statement of the Confucian tradition that became basic for the scholar-gentry-dominated state. **CHRISTIAN SCHOLASTICISM** in western Europe was the product of a similar comprehensive definition by teachers like **Thomas Aquinas** (1225–74) (See [1270](#)), whose writings became fundamental for **Catholic Christianity**. **JUDAISM** received an influential and comprehensive presentation by **Maimonides**, or Moses ben Maimon (1135–1204). In **ISLAM**, a broad standard synthesis also emerged but was not as identified with a single person. In **SUNNI ISLAM**, four standard law schools developed, and **Sufism** was integrated into the broader canon by **al-Ghazali** (d. 1111) (See [1111](#)). In **HINDUISM**, teachers like **Sankara** (c. 800) and **Ramanuja** (1017–1137) created a comprehensive philosophical framework for the immense diversity of Hindu thought and practice. In this way, the major religious traditions experienced an important standardization and rearticulation of basic worldviews with roots in the earlier **Axial Age** (See [The Axial Period](#)). 1

The Encyclopedia of World History. 2001.

### **d. [The Global Picture](#)**

Great interregional networks of trade, conquests, and exchanges of ideas blurred the boundaries between the major societies in the Eastern Hemisphere, and oceanic travel opened the way for a fully global network. In this emerging global network, as Europeans began to cross the Atlantic, the older temple-palace civilizations of the Western Hemisphere were destroyed. Although the nomadic peoples of central Eurasia played a significant role in hemispheric interactions, by 1500 they had become peripheral peoples with little ability to influence major developments. The emerging great powers were the monarchical states of western Europe and the bureaucratic gunpowder empires in the rest of the Eastern Hemisphere. (See [Global and Comparative Dimensions](#))

## **B. The Middle East and North Africa, 500–1500**

### **1. The Rise and Expansion of Islam, 610–945**

#### **a. Overview**

In the early 7th century, Arab Muslim armies spread out from the Arabian Peninsula into the surrounding lands and, in a wave of expansion that lasted about a hundred years, conquered almost the entire Middle East and North Africa. The **Sassanian Empire** based in Iran and Iraq ceased to exist, while the **Byzantine Empire** to the west lost large territories around the Mediterranean basin, including Syria, Egypt, and North Africa (See [622–30](#)). The political map of the region was completely redrawn as a **new Islamic empire** established its dominion over lands stretching from Spain to central Asia. The conquerors were initially a small minority ruling a non-Muslim society, but they set in motion changes that in time reshaped the overall identity and fortunes of the region. <sup>1</sup>

The Arabs brought with them their newly founded faith of **Islam**. While they did not force conversion on the conquered population—mostly Christians, Jews, and Zoroastrians—the Muslims made the adoption of the new faith socially and economically advantageous. By the mid-10th century a sizable part of the population had converted, and while the region was not yet predominantly Muslim, **mass conversion** was well advanced, to be completed in the following three centuries or so. <sup>2</sup>

The **Arabic language**, which until the conquests was confined to Arabia, spread in the region together with Islam. In the lands from Iraq to Morocco the populations became essentially Arabic-speaking; other languages, such as **Greek, Aramaic, and Coptic**, steadily disappeared from common use, surviving mostly in liturgy and religious writings. In Iran, the **Persian language** held out against this process of Arabicization, but not without adopting the Arabic script and a vast vocabulary of Arabic words. <sup>3</sup>

The **Islamic religion** that arrived in the Middle East in the 7th century was rudimentary in form, consisting mostly of basic rituals, the divine revelation of the Qur'an, and the <sup>4</sup>

directives of the Prophet Muhammad. The period up to the mid-10th century marked the **formative stage** in which Islam elaborated its structures and established its **distinctive institutions**. Islamic law, theology, tradition, and mysticism took shape, to be developed to full maturity in the succeeding three or four centuries. A class of **Muslim religious leaders and scholars**, the *ulama*, emerged as the custodians and interpreters of the faith for the growing community. Their writings defined the terms of speculative thought and communal debate on the nature of Islam and its place in society.

During this formative phase, Islam, and **Arab-Islamic civilization** in general, were very much influenced by the Middle Eastern milieu in which they evolved. Greek philosophy and medicine, Iranian concepts of state, Byzantine administrative practice, Christian asceticism, Jewish and Zoroastrian codes of ritual purity, local architecture, cuisine, and popular lore—these and other elements of the **regional heritage** carried over into the Islamic period. Arab-Islamic civilization evolved as a synthesis of elements of different origins brought together in an original unity.

The **structure of politics** also underwent great changes. The Islamic empire was initially a unitary state ruled by a **caliph** and dominated by a **small Arab elite** that excluded non-Arab converts to Islam from an equal share in the benefits of power. By the mid-10th century the Abbasid Caliphate had been broken up into many virtually independent political entities. Struggles over succession gave rise to opposition and separatist movements, and to the greatest sectarian divide within Islam: that between **Sunnis** and **Shi'ites**. The Arabs lost their monopoly on power as the system was opened to all Muslims regardless of origin. The Abbasid caliphs became figureheads with little political authority, and the creation of an imperial **slave army** composed of imported Turks—an innovation of the period that remained a feature of Middle Eastern regimes until modern times—further transformed the political landscape, introducing a new power group that came to dominate the region's politics.

But while government became fragmented, the region evolved into a **thriving commonwealth**. A **single trading system** now linked the basins of the Mediterranean and the Indian Ocean. People, goods, and ideas moved freely within this vast sphere of interaction, relying on transport by water and caravans (**wheeled transport** having essentially disappeared in the region around the time of the Arab conquest, not to return until the 19th century). **Large cities**, foremost among them Baghdad, emerged as luxurious centers of culture, power, manufacturing, and consumption. In the agricultural countryside, where most of the population continued to live, a **“green revolution”** took place. **New crops**, including rice, sugarcane, cotton, oranges, and lemons, entered the region from China and India, and these, together with **new techniques** and investments in **irrigation**, improved both yields and diets. The **population** of the Middle East and North Africa may have experienced an **overall expansion** during the period, reaching a relatively high level of some 25 to 30 million in the 10th century.

## b. Muhammad and the Rise of Islam

On the eve of the rise of Islam, **Arabia** was a tribal, desert environment with no single political organization or faith. The majority of its inhabitants were **pastoral nomads** organized by tribe and clan, who fought with one another for access to precious resources such as water, herds, and land. Some Arabs were sedentary and farmed at oases, such as Yathrib, while at **Mecca** many of the inhabitants drew their livelihood from trade caravans between Yemen and Syria. 1

Around 100 B.C.E., the northern Arabs developed a new saddle that allowed them to gain greater **control over the camels** they rode. This breakthrough gave them the ability to use the camel for military purposes, which allowed them to control trade in Arabia and earn enough money from the transport and protection of goods to buy metal weapons. Although confined to a largely nomadic environment, many Arabs, especially those in the caravan trade, had **contact with the two major empires** to the north: the Byzantine Empire centered at Constantinople (324–1453) and the Zoroastrian Sassanian Empire (224–651), with its capital at Ctesiphon in Iraq. Both empires employed **Arab mercenaries** to protect their borders with Arabia. The Byzantines used the tribe of Ghassan, which converted to Christianity, while the Sassanians paid the Lakhmids, at al-Hira, for their military services. 2

Before the advent of Islam, most Arabs worshipped a variety of male and female deities. Only a minority, who were neither Christians nor Jews, were monotheists (*hanif*). Despite the vagaries of frequent feuds and raids (*ghazwa*), Arab tribes from surrounding areas journeyed to Mecca during truce months to worship at the **polytheist shrine of the Ka’ba**. The **tribe of Quraysh** in Mecca enjoyed special prestige as keepers of the Ka’ba, as well as political and economic prominence built on fortunes drawn from trade. 3

## 610

**FOUNDATION OF THE FAITH OF ISLAM.** The founder of Islam was **Muhammad ibn Abdallah**, a member of the tribe of Quraysh and the clan of Hashim who was born 4

in Mecca around the year 570. Orphaned at an early age, Muhammad found employment in the caravan company of a rich widow named **Khadija**, whom he later married. According to Islamic tradition, in 610 he received his first divine revelation. He was ordered to recite the words that the angel Gabriel conveyed to him in Arabic from Allah, the supreme and sole deity of the new faith of Islam. The **revelations** continued throughout his lifetime and formed the Qur'an ("recitation"), regarded by all Muslims as their divinely dictated scripture. As the Prophet of Allah, Muhammad's task, according to Muslims, was to deliver the final and perfect message from God to all humanity. Previous communications had been misunderstood or corrupted by the Jews and Christians. As the bearer of the true message, Muhammad was considered the "Seal of the Prophets," the last in a line of monotheistic messengers from Adam to Jesus.

The name of the religion, **Islam**, means submission to Allah, to be demonstrated by the **five pillars of the faith** defining the duties incumbent on all Muslims: *salat* (ritual prayer), *zakat* (almsgiving), *hajj* (the pilgrimage to Mecca), *sawm* (the fast during the month of Ramadan, when the Qur'an was first revealed), and the *shahada*, the recitation of faith that states, "There is no god but Allah, and Muhammad is His messenger."

The **Qur'an** consists of 114 chapters (*suras*) organized, after the first short opening chapter (the *fatiha*), from longest to shortest. Each chapter is divided into verses (*ayas*), the longest chapter containing 286. The text covers a multitude of themes, from descriptions of paradise and hell to social codes in matters of marriage and inheritance. The Qur'an was **not set down in writing** by the Prophet himself during his lifetime. He may have dictated parts of it to a secretary, but much of it remained scattered in written fragments and in the memory of men, not unusual in a society that favored oral tradition. The text was **collected and organized** in its definitive form around 644, some 12 years after the Prophet's death.

During Muhammad's lifetime and for many years to follow, the new faith remained rough and unformed. It took several centuries for Muslims to develop Islam's rich theological and legal traditions, including its elaborate code of laws (the *shari'a*).

## 613

**Muhammad began preaching Islam** publicly in Mecca. His early themes involved warnings about the end of the world and the Day of Judgment. Initially the Prophet met little opposition, because he was perceived as merely a poet or a soothsayer (*kahin*), but when he became insistent that there was only one god and that the Ka'ba must be reserved for Allah alone, **the response of the Meccans grew harsh**, even violent. They understood that Islam threatened their own beliefs, their prestige as the keepers of the sacred shrine, and the prominence of Mecca as a site for pilgrimage and trade. The earliest converts to Islam (*Muslims*) were members of Muhammad's family, young men

from weak Meccan clans, and outsiders, often of slave origin.

According to the Qur'an and later Islamic tradition, Muhammad made his famous **night journey and ascension to heaven** (*mi'raj*) during this period. The Prophet began his journey from Mecca or, according to many other traditions, from Jerusalem, on the winged mule named Buraq. He met the prophets who had preceded him, and in the highest level of heaven he appeared before the throne of Allah. 9

## 615

Emigration of a small group of Muslims to Ethiopia, in search of a new site in which to practice their faith peacefully. 10

## 619

Death of Abu Talib, Muhammad's uncle and chief protector in Mecca. Without Abu Talib's influence, life for Muhammad and his followers, a persecuted minority, became increasingly difficult. 11

Death of **Khadija bint Khuwaylid**, the first wife of Muhammad and the first convert to Islam. She supported Muhammad economically and stood by him when, as a prophet, he was reviled by the Meccans. Muhammad had remained in a monogamous union with Khadija, with whom he had many children. The only child to survive the Prophet was his daughter **Fatima** (d. 633), whose sons would play a major role in later Islamic history. None of Muhammad's sons by Khadija lived through infancy. 12

## 622, Sept

The *hijra*, or emigration, of Muhammad and his followers from Mecca to Medina. Forced to flee the threatening environment of Mecca, Muhammad was asked to arbitrate a bloody dispute between the rival Aws and Khazraj tribes at the oasis town of Yathrib, known thereafter simply as **Medina**, meaning “the city” (of the Prophet). He soon emerged as the local leader, establishing **the first Islamic theocratic community** (*umma*), with himself as both Prophet and political leader. 13

The Islamic polity at Medina included those Meccan Muslims who had followed the Prophet to Medina (*muhajirun*) and Medinan converts to Islam (*ansar*). Inhabitants of Medina who did not accept Muhammad as their spiritual leader acknowledged his political supremacy. These groups included three Medinan Jewish tribes (Banu 14

Qaynuqa', Banu al-Nadir, and Banu Qurayza) as well as non-Muslim Arabs. In an **effort to win the support of the Jews**, Muhammad initially incorporated Jewish observances, such as the fast of Yom Kippur, into Islamic ritual, and designated Jerusalem as the Muslim direction of prayer. The Jews, however, rejected Islam and opposed the Prophet's mission on religious grounds.

The *hijra* became the first year of **the Islamic calendar**, a lunar calendar of 354 days—twelve months of either 29 or 30 days. The Islamic calendar is not adjusted periodically to correspond with the seasons, and over time, religious holidays fall in all seasons of the solar year.

15

## 624

**The Battle of Badr.** The victory of a small Muslim force over more numerous troops protecting a Meccan caravan resulted in the strengthening of Muhammad's political and economic position. Many of those Medinans who doubted him (*munafiqun*) were silenced, and **the Jewish tribe of Banu Qaynuqa' was exiled.**

16

## 625, March

**The Battle of Uhud.** Meccan forces marched to the outskirts of Medina to take revenge for those slain at Badr, but the confrontation was inconclusive. The Jewish tribes avowed neutrality, but Muhammad accused the most wealthy of them, the **Banu al-Nadir**, of aiding the Meccans and expelled them from Medina.

17

## 627, March

**Battle of the Trench** (*al-Khandaq*). About 10,000 Meccan troops unsuccessfully besieged Medina. Muhammad and his 3,000 supporters dug a trench to prevent an attack on the city. The failure of the Meccans demonstrated that the Muslims of Medina had become a power to be reckoned with in western Arabia. After the battle, the Muslims accused the remaining Jewish tribe, the **Banu Qurayza**, of treason. The men were executed and the women and children sold into slavery. The Prophet now ruled a unified Medina and sought further influence among the tribes of western and northern Arabia.

18

## 628

**Treaty of Hdaybiyya.** The Meccans agreed to peace with Muhammad for ten years. 19

## 629

The Meccans vacated their city for three days to allow the Muslims to worship at the Ka'ba. All Muslims now focused on **Mecca as the direction of prayer** (*qibla*). 20

## 630, Jan

**Meccan capitulation to Muhammad.** The Muslims entered Mecca, cleared the Ka'ba of idols, and established the city as their religious center. Three weeks later the unified Muslim and Meccan forces defeated a confederation of beduin tribes from the nearby city of Ta'if, at the Battle of Hunayn. Muhammad's prestige was confirmed and the support of the Meccans cemented. 21

### c. [The Umayyad Caliphate](#)

#### [THE ARAB-MUSLIM EMPIRE 632 C.E.-750 C.E. \(MAP\)](#)

For a complete list of the [Umayyad caliphs](#), see [Appendix III](#).

1

#### 661–80

**MU'AWIYA I, THE FOUNDER OF THE UMAYYAD DYNASTY.** Mu'awiya established the first Arab-Islamic dynasty, with its **capital at Damascus**. He rested his state on the support of the **Arab tribes**, gathering around him a circle of tribal chieftains with whom he consulted regularly. While he ruled as a caliph, opponents defined his regime as a form of kingship (*mulk*), an un-Islamic departure from the precedent of the Rashidun caliphs.

2

Mu'awiya founded a **decentralized state** in which local governors, particularly in the most troublesome province of Iraq, were given free rein to collect taxes and punish rebels. The day-to-day administration of each province continued to be **run by Byzantine and Sassanid bureaucrats** who maintained pre-Islamic governmental divisions (*diwans*) and conducted official business in Greek and Pahlavi.

3

#### 667

Islamic forces crossed the Oxus River into central Asia, the northeastern boundary of the Islamic expansion.

4

#### 669

First Muslim attack on **Constantinople**.

5

### 670

The garrison city of **Qayrawan** in Tunisia was founded. It served as the base for the further expansion of Islam westward across North Africa.

6

### 671

Ziyad ibn Abihi, governor of Kufa, sent 50,000 troops to the Iranian oasis of Merv as part of a policy to **resettle Arabs** in the area. These soldiers eventually intermarried with the indigenous Zoroastrian-Iranian population, and their descendants played a major role in the 8th-century Abbasid revolution that overthrew the Umayyad dynasty.

7

### 672

The isle of **Rhodes** was taken by the Umayyads.

8

### 674

Arab forces captured **Crete**.

9

### 674–80

A series of unsuccessful campaigns against **Constantinople** (See [673–78](#)) as well as raids against **Armenia**.

10

### 680, Oct. 10

**Death of Husayn**, the son of Ali, grandson of the Prophet Muhammad and third leader (imam) of the Shi'ite Muslims. After Mu'awiya's death, Husayn had attempted to wrest political control from the Umayyad government. On his way to Kufa in search of

11

military support he and his followers were surrounded by Umayyad troops at Karbala and then killed after being deprived of water for days. The suffering and death of the Prophet Muhammad's grandson came eventually to be **commemorated by the Shi'ite community** as a martyrdom, in a yearly ritual of **communal mourning** (the *ashura*) held on the tenth day of the Islamic month of Muharram.

## 683

Umayyad forces reached **Tangier** and the Atlantic Ocean.

12

## 683–92

**SECOND CIVIL WAR.** The Umayyads put down several serious challenges to their rule, restoring their effective hold on power after almost a decade of rebellions. The most lengthy threat came from **Abdallah ibn al-Zubayr**, whose father, al-Zubayr, had risen against the fourth caliph, Ali, in 656. Ibn al-Zubayr demanded that the caliph be selected from among the tribe of Quraysh, not just the Umayyad clan. He claimed the office and raised a **revolt in Arabia and Iraq** that lasted till 692, when Umayyad forces killed him in Mecca.

13

Another challenge to the Umayyads came from the **Qays tribal confederation** based in northern Syria and Iraq. It threw its support behind Ibn al-Zubayr, but the **rival tribal confederation of Kalb** (based in southern Syria and Palestine) backed the Umayyads, and in a bloody battle in **Marj Rahit** (July 684) they defeated the Qaysis. The feud between the northern and southern tribal groups continued to fester, weakening the Umayyad base of political and military support.

14

In 685–87 the Umayyads also faced the revolt organized in Kufa by **al-Mukhtar** on behalf of **Muhammad ibn al-Hanafiyya**, a son of Ali by a concubine. The uprising tapped the support of the *mawali*, or non-Arab converts to Islam, who were emerging as an important social group with grievances against the regime for being treated as second-class Muslims and having to pay the taxes demanded of non-Muslims, despite their conversion. Al-Mukhtar proclaimed Ibn al-Hanafiyya as the Mahdi, the messianic redeemer who would come at the end of time to institute a reign of justice. (This was the first appearance of this idea, which became common in Islam, particularly in its Shi'ite forms.) The uprising was crushed in 687.

## d. [The Abbasid Caliphate and Its Breakup](#)

### [MUHAMMAD AND THE DESCENT OF THE CALIPHAL DYNASTIES](#)

For a complete list of the [Abbasid caliphs](#), see *Appendix III*.

1

#### 749–54

**ABU AL-ABBAS AL-SAFFAH, FOUNDER OF THE ABBASID DYNASTY.** The first Abbasid ruler, a descendant of the Prophet's uncle al-Abbas, was proclaimed caliph publicly in the mosque in Kufa on Nov. 28, 749, just months before the forces of the Abbasid Revolution brought a final end to Umayyad rule. His regnal title, al-Saffah, “the Shedder of Blood,” announced his promise to avenge the Shi’ites and Abbasids killed by the Umayyads. He set up the **initial Abbasid capital at Kufa**.

2

#### 751

Abbasid forces triumphed over the **Chinese** at the **Battle of Talas** in central Asia (See [747](#)). Chinese papermakers were captured after this largely symbolic victory. **Paper manufacture** then spread westward throughout the Islamic world, and factories were founded in Baghdad (c. 800), Egypt (c. 900), Morocco (c. 1100), and Spain (c. 1150). The advent of readily available paper increased the rate of **manuscript production** throughout the Islamic world.

3

#### 754–75

**AL-MANSUR** consolidated Abbasid authority, turned the troops of Khurasan—the mainstay of his support—into a professional army, and created a highly **centralized bureaucracy** that employed many *mawali*. The opening of this new avenue of social mobility was one aspect of the general **improvement in the status of non-Arab converts** to Islam. The new policy speeded up the process of **conversion**, especially in Iran, where the estimated Muslim population increased from 8 percent in 750 to some 80 percent in 950. Some tensions remained between Arabs and Iranians, and they prompted a court-centered literary movement called the Shu'ubiyya, which championed the Persian language and Iranian cultural values above those of the Arabs. The pre-Islamic Iranian ideas promoted by the Shu'ubiyya shaped Arabic literature, Abbasid court ceremony, and notions of kingship and social hierarchy.

4

### 755

**Abu Muslim**, the former leader of the Abbasid Revolution in Khurasan, was killed by order of the caliph, who feared his power in the province.

5

### 755–56

**Revolt of Sunpadh** (Sinbad) in Khurasan. Sunpadh was a Zoroastrian who preached that Abu Muslim had not died, but would return again in the company of the Islamic Mahdi, or redeemer, to institute a reign of justice. He fomented rebellion in the cities of Nishapur, Rayy, and Qum.

6

### c. 757

Death of **Ibn al-Muqaffa**, a Zoroastrian convert to Islam who became a secretary in the Abbasid administration and translated many works from Pahlavi (Middle Persian) into Arabic, including the famous fables *Kalila wa Dimna*.

7

### 757–960

**THE MIDRARID DYNASTY.** Centered in Sijilmasa in Morocco, the dynasty was founded by **Midrar** (Sam'un ibn Yazlan), a Khariji Muslim and Zanata Berber from Meknes, after a revolt against the Abbasid governor of Qayrawan. The Midrarid state signaled that the egalitarian message of **Kharijism** continued to appeal to Berber groups

8

who resented Arab elitism and discrimination. The **capital of Sijilmasa** was founded during the reign of Abu Mansur al-Yasa (790–823), who consolidated the dynasty's territory. He married one of his sons to the neighboring Rustamid dynasty to ensure peaceful relations. Sijilmasa became a major point on the **gold trade route** with Sudan and attracted refugees from Muslim Spain (c. 818) as well as Jews interested in commercial opportunities. The Midrarids sided with the Umayyads of Spain, along with other Zanata Berber groups, but were vanquished by Fatimid forces in the 10th century.

## 758

Muslim armies destroyed parts of the Chinese city of **Canton**.

9

## 761–909

**THE RUSTAMID DYNASTY.** The second **Khariji state** in North Africa was founded by an Iranian Muslim named **Ibn Rustam**, who had come to North Africa to serve as the Abbasid governor of Qayrawan (758–61). He won Zanata Berber military backing and founded his own theocratic state, where he took the title of imam and ruled as both a spiritual and a political authority. The Rustamid state was significant as a center of Khariji scholarship and was a focus of allegiance for other Khariji communities scattered throughout North Africa. The **capital of Tahert** attracted many Khariji Muslims from Iraq and flourished as a northern point on the trans-Saharan trade route. The Rustamids failed to organize an effective army and lost Tahert to the Fatimids in 909. The survivors escaped to the southern oasis of Wargala. Kharijism has survived to the present day in the oasis of Mzab, on the island of Jerba, and in Jabal Nafusa.

10

## 762

**FOUNDATION OF BAGHDAD**, the new Abbasid capital, by al-Mansur. This first truly Islamic imperial city, situated 18 miles north of the Sassanian capital of Ctesiphon, was designed on a circular plan and was known as the City of Peace (Madinat al-Salam). Canals were dug to make the site accessible to both the Tigris and Euphrates rivers. Riverine access to Baghdad **attracted traders** from as far away as China, India, and northern Europe. By the 9th century, the city's population had reached more than 300,000.

11

Unsuccessful revolt of the Shi'ite **Muhammad ibn Abdallah**, known as the **Pure Soul** (al-Nafs al-Zakiyya), in Medina. His brother Ibrahim led an uprising in Iraq in Feb. 763 that briefly captured Basra and Wasit but was soon thereafter quashed by Abbasid troops. 12

## **2. The Muslim Middle East and North Africa, c. 945–1500**

### **a. Overview**

Between the breakup of the Abbasid Empire in the 10th century and the restoration of an imperial hegemony under the Ottomans in the 16th century, the Middle East and North Africa lost any semblance of political unity. **Dozens of dynasties** ruling over parts of the region came and went, and the boundaries of states shifted endlessly. A broad political division emerged, however, among several territorial units: Iran and Iraq, Egypt and Syria, and North Africa. To these was added the area of **Anatolia** (Asia Minor), which first came under Muslim rule during this period; after being tied initially to the political destinies of Iran and Iraq, it developed into a distinct political entity that became linked, under the expanding Ottoman state, with the newly conquered Balkan lands. <sup>1</sup>

The Muslim advance into Anatolia and Europe brought a final end to the **Byzantine Empire**, for eight centuries a neighbor and adversary of the Muslim states in the eastern Mediterranean. In the western Mediterranean, however, Muslim states were on the defensive as the Christians reconquered all of **Spain** and established military outposts on the **North African coast**. <sup>2</sup>

The end of the Abbasid imperial order reduced the **caliphate in Baghdad** to little more than a symbolic presence; real power was vested in the institution of the **sultanate** and a new type of regime characteristic of the postimperial era. The bureaucratic, landowning, and merchant elites that had dominated the region gave way to **slave soldiers and tribal warriors**. Slave armies, composed most commonly of Turks, became the mainstay of dynasties everywhere; in Mamluk Egypt and Syria (1250–1517) the Turkish and Circassian slave soldiers even became the rulers in place of a dynastic order. From the 11th century, large-scale **migration of central Asian Turkish nomads** into the region overran large territories and brought to power Turkish tribal chieftains. In North Africa, **Berber tribal warriors** defeated Arab-dominated regimes and established new dynasties. <sup>3</sup>

In the midst of this political upheaval, the Middle East endured two major non-Muslim military invasions, by the **Crusaders** and the **Mongols**. The onslaught from the east was by far the more consequential for the region and caused unparalleled devastation. The Crusader presence, on the other hand, was more in the nature of a prolonged nuisance; it <sup>4</sup>

loomed large only in European annals. In the long term, neither invasion was able to reverse the Muslim hold on the region.

The long-term **social and economic effects** of these movements of tribes and armies across the region were felt most acutely in Iran, Iraq, and Anatolia. The influx of Turkish nomads made large tracts of agricultural land the **domain of pastoralists**. It also brought into the region a **new ethnic element**, one that became a formidable presence not only within the political elites. The economic fortune of the lands farther west, especially Egypt and Syria, was generally better, although the **Black Death** (See [Interregional Exchanges](#)) and the recurrent plague epidemics that followed it caused massive dislocations everywhere. The **population** appears to have suffered an **overall decline** during the period.

Despite the unsettled conditions and political fragmentation, this was a period of remarkable **cultural achievement**. A unity built on a universal religion and civilization took the place of political unity. The mass **conversion to Islam** was completed, and the population became almost solidly Muslim. And the faith itself reached maturity as an elaborate system of belief: **Islamic law** developed into a comprehensive code, with four recognized schools of interpretation; the *madrassa* came into being as the institution of advanced religious learning; **Sufism** developed organized orders and became integrated into Islamic thought and worship (See [950–1300](#)); the **Sunni-Shi'ite sectarian divide** became clearly defined; and a large body of distinguished writing gave definitive form to Islamic tradition and learning.

Impressive creativity also marked **secular fields of study**, ranging from astronomy and algebra to philosophy and history. The period produced some of the region's most celebrated Arabic, Persian, and Turkish **literary works**, and some of its finest **architectural and artistic creations**. While religious opinion had its quarrels with **philosophy**, Islam in general did not seriously oppose or stifle work in the physical and natural sciences, which remained productive into the 15th century.

In the sphere of high culture, as in politics and economics, men were dominant. The period reinforced an inherited social order based on the **superior rights and power of men**. Islamic law, more readily enforced in the cities, did provide **women** with rights to property, inheritance, and matrimonial support, and these helped them acquire leverage within their families. But in many respects the legal norms and social practice worked in men's favor. In both the city and the countryside, needy **women worked outdoors**, in menial and lowly professions. The **female seclusion** associated with Islamic society was an ideal achieved only in the better-off classes. Women's veiling, part of a code of female modesty and sexual segregation, was commonplace, particularly in the cities.

### [SELJUK SULTANS \(1055-1194\)](#)

#### 945–1055

**THE BUYIDS (BUWAYHIDS).** The fall of Baghdad, as well as parts of Iraq and Iran, to the three conquering Buyid brothers established a new regime in the region. While maintaining the Abbasid caliphs as titular heads of state, the Buyids created a confederation of **several principalities** ruled by members of their family (based primarily in Baghdad, Shiraz, and Rayy). They revived some of the **Persian monarchical traditions**, including the Sassanian title of *shahanshah* (king of kings), held by the leading family member. Their ability to rule effectively in Baghdad was undermined in part by the poor state of the **Iraqi economy**, which could not adequately support their army (made up of Daylamites and Turkish slaves). After the death of their greatest ruler, Adud al-Dawla, in 983, the Buyids suffered from succession struggles, factionalism, and the loss of outlying territories. Rayy fell to the Ghaznavids in 1029, and the Seljuks brought an end to Buyid rule in Baghdad in 1055 and in Shiraz in 1062.

The Buyids had Shi'ite leanings, and it was during their period of rule that the **Sunni-Shi'ite divide** in Islam became fully established and Shi'ism developed its distinct sectarian character. Buyid officials intermittently patronized the Shi'ites in Baghdad and encouraged their developing into an armed political group that fought it out with Sunni groups. At the same time, Shi'ite scholars put Shi'ite *hadith*, law, and theology into written form, and new, typically **Shi'ite communal rituals** became established, notably the annual public mourning for the death of Husayn at Karbala (the *ashura*), the public cursing of the first two caliphs, and pilgrimages to the tombs of Ali's family. Largely in response to this Shi'ite sectarianism and its challenges, the **Sunnis** developed a conception of themselves as a distinct Muslim community. The Abbasid **caliph al-**

**Qadir** (991–1031) took the lead in asserting an explicitly Sunni position, one that upheld the legitimacy of all four of the first caliphs.

## 950

Death of **Abu Nasr Muhammad al-Farabi** (b. c. 870), one of the greatest Middle Eastern scholars and philosophers. He wrote extensively on logic, ethics, politics, grammar, mathematics, and music. Drawing on Aristotelian and Platonic thought, he gave primacy to **philosophy** as the path to divine truth, presenting religion as an approximation of the truth more suitable to the masses. His *Kitab al-musiqi al-kabir* (*Grand Book of Music*) remains one of the most comprehensive and systematic treatises on the **theory of Middle Eastern music**. It discusses the science of sound, intervals, tetrachords, instruments, and compositions, and outlines a lute fretting that incorporated two newly introduced neutral or microtonal intervals in addition to the basic diatonic arrangement of Pythagorean intervals.

3

## 950–1080

**Ascendancy of Kurdish dynasties.** Several Kurdish dynasties established states in the second half of the 10th century: the **Shaddadids** (c. 950) and the **Rawwadids** (later 10th century) in Azerbaijan, the **Hasanuyids** (c. 960) and **Annazids** (c. 990) in the central Zagros region, and the **Marwanids** (982) in southeastern Anatolia. Their regimes were set up in mountainous regions, relied on the military power of Kurdish tribesmen rather than slave soldiers, and worked with rudimentary administrative systems. Their rise reflected the general flourishing of **local autonomy** brought about by the breakup of the Abbasid Caliphate.

4

## 950–1100

Emergence of the Muslim religious college (*madrasa*). The *madrasa* had its origins probably in 10th-century Khurasan, from which it spread steadily throughout the region to become the standard Muslim institution of advanced religious and legal training. **Subjects** commonly taught in the *madrasas* included Islamic law, *hadith*, Qur'anic commentary, Arabic grammar, and theology. **Students** worked individually with teachers to acquire mastery of particular texts along with written certification of their authority to teach those texts to others. The colleges were set up as private **acts of charity** and were supported by endowed property (*waqf*), which paid the salaries of the

5

staff and stipends for students.

## 950–1250

**DEVELOPMENT OF ISLAMIC LAW.** The four major schools (*madhhabs*) of Islamic law—the Hanafi, Shafi’i, Maliki, and Hanbali—were established during the period as the only recognized interpretations; over time, a variety of other schools that had emerged disappeared from the scene. The differences among the four schools revolved around matters of detail rather than grand issues of principle.

6

**Legal scholarship** mushroomed as jurists codified rules and case materials, issued standardized legal manuals and collections of legal opinions (*fatawa*), and even created legal devices (*hiyal*) for getting around certain restrictive principles without violating the letter of the law. Islamic law, the *shari’a*, was regarded as immutable and, according to most jurists, no longer open to independent interpretation by scholars. In practice, however, judges and jurisconsults accommodated legal principles to custom and circumstance, and a great degree of **flexibility in the interpretation** and application of the law prevailed.

7

One of the striking developments of the period was the **fierce factional rivalry** among the schools of law. In the 11th and 12th centuries the schools evolved from scholarly groups committed to a shared legal doctrine into sectarian movements that cultivated mass followings and stirred popular passions. In Baghdad and eastern Iran there were struggles, including bloody street battles, between adherents of different schools competing for influence and patronage. This factionalism subsided after the 12th century, and affiliation with the legal schools ceased to be a source of intense contention.

8

## 950–1300

**THE DEVELOPMENT OF SUFI ORDERS AND THOUGHT.** From numerous loose associations of mystics led by independent masters, the Sufi movement matured during the period into a number of formally organized religious orders or brotherhoods (*tariqat*). Each order defined its own particular **doctrines**, modes of **worship**, and **initiation rites**, which it attributed to an originating master, after whom the order was usually named. The major orders, such as the Qadiriyya, Rifa’iyya, and Suhrawardiyya, grew beyond their local origins and became regional, establishing **chapters** whose members were all considered disciples of a common spiritual ancestor.

9

The Sufi orders varied widely in their practices and general outlook: some tended toward a **sober** pietistic and ascetic view consistent with the scripturalist conception of Islam; others promoted **ecstatic** practices, magical beliefs, and the veneration of saints. But

10

everywhere, Sufi lodges (*khanaqas*) became centers of prayer, instruction, and pilgrimage, and **worship at the tombs of saints** developed into a central feature of popular Islam.

Alongside the institutional development of Sufism came also the steady integration of its initially separate ways of thought and practice with mainstream Islamic belief and worship. Treating Sufism as a science, writers worked out a systematic body of thought that **integrated Sufism with law and theology** and helped to legitimize it as an acceptable path to Muslim spiritual fulfillment. Most noteworthy was the work of the great theologian **al-Ghazali** (d. 1111), who developed a definitive conception of Islam that brought together law and Sufism as compatible and complementary aspects of the faith. 11

## 967

The death in Baghdad of **Abu al-Faraj Ali al-Isfahani** (b. 897), the poet and socialite famous for his monumental *Kitab al-aghani* (*Book of Songs*). The work compiled an immense corpus of songs, anecdotal material, and popular lore; it forms an unequalled treasure of information on the culture, musical life, and social history of early Islamic society. 12

## 977–97

**SEBUKTIGIN, FOUNDER OF THE GHAZNAVID DYNASTY.** A Turkish slave general in the service of the Samanids, Sebuktigin established a state with its capital at **Ghazna**, south of Kabul in Afghanistan (then on the remote fringes of the Islamic world). He actually built on the base prepared by his commander, **Alptigin**, who had set up an autonomous city-state in Ghazna in 961. The Ghaznavid regime was rather decentralized, relying on the services of **slave soldiers** paid by way of grants of tax revenue from land (known as *iqta'*). The regime proclaimed its allegiance to the Abbasid Caliphate and cultivated Islamic learning and Persian literature. The dynasty lasted until 1186, and at its height (under Sebuktigin's son Mahmud, 998–1030) it ruled Afghanistan, Khurasan, Khwarazm, and northern India.990–1096. **Uqaylid rule in Mosul.** The Buyids took the region of Mosul from the Hamdanids in 979, but in 990 the Uqayli Arab tribe established itself there, after a short-lived attempt by the Hamdanids to restore their rule. The Uqaylid dynasty, which held Mosul until 1096, is usually said to have been Shi'ite, although the evidence of its religious leanings appears inconclusive. 13

## 995

Death of **Ibn al-Nadim**, a librarian whose *Fihrist (Catalogue)* was an annotated bibliography of all the works of Arabic literature available at the time, including many now lost. 14

Death of **Abu Ali al-Tanukhi**, a judge in Buyid service and author of a book of anecdotes (*Nishwar al-muhadara*) that throws light on the social life of his time. 15

## c. 998

**Ali ibn Mazyad**, leader of the Arab tribe of Banu Asad, established a virtually independent **Mazyadid state** in the **Kufa** area south of Baghdad. Backed by a powerful tribal army, the Mazyadids enjoyed great influence in the area for a century and a half. They acquired titles and subsidies from the Buyids in return for military services. Their most lasting achievement was the founding of the city of **Hilla**, which became their capital. 16

## 998–1030

**MAHMUD OF GHAZNA**. The Ghaznavid state based in Afghanistan reached the height of its power under Mahmud, who ranked among the great Middle Eastern leaders of his time. He distinguished himself with his extensive **military conquests**, his **patronage** of literary talents (including Firdawsi), and his fervent **championship of Sunnism** in an age of Shi'ite victories. He annexed **Khurasan** from the Samanids in 999, took the region of **Rayy** in western Iran from the Buyids in 1029, and occupied parts of northern India. But within ten years of his death the Ghaznavids lost his Iranian acquisitions to the Seljuks. 17

[PREVIOUS](#)

[NEXT](#)

### c. [The Mongol Empire and Its Successors](#)

#### 1258–60

Mongol forces brought territories in **Iraq and Anatolia** under Hulegu's rule, but failed to hold on to **Syria**, where they suffered defeat by the Mamluks (See [1260](#)). 1

#### c. 1260

The **principality of Karaman** in the foothills of the Taurus Mountains was founded by the Turkoman leader Karaman ibn Musa. It emerged as a formidable power in **central Anatolia** and a rival to the Ottomans until its annexation by them in 1468. 2

#### 1261

**Menteshe Bey**, a Turkoman leader, launched the conquest of Byzantine ports and lands in western Anatolia, establishing the **principality of Menteshe** in the area. It survived until its absorption by the Ottomans in 1390. 3

#### 1265–1335

**THE ILKHANID STATE AFTER HULEGU.** Hulegu succeeded in creating an extensive Middle Eastern empire that included Iran, Iraq, and much of Anatolia. His descendants, who held the title of *il Khan* (viceroy), ruled the empire as a unified state until 1335, after which it **disintegrated** into rival provincial regimes. The capital was set up initially at **Maragha** in Azerbaijan, but it was moved by Ilkhan Abaqa (1265–82) to **Tabriz**, and then by Oljeitu (1304–16) southeast to **Sultaniyya**. 4

The **Ilkhanids** relied on the existing **Iranian bureaucracy** to handle their administrative 5

and financial affairs. Iranian Muslims served commonly as their chief ministers, the most famous of whom was **Rashid al-Din** (1247–1318). At least in the first three decades after Hulegu, their main aim was to extract as much revenue as possible from the population, which suffered **enormous tax demands**. During that period the Mongols were **pagan or Buddhist** in their religious inclinations, and freed their non-Muslim subjects from their previous social restrictions and tax burdens. The rule of **Ghazan** (1295–1304), who converted to Islam, marked an important shift in Ilkhanid policies, both fiscal and religious.

The Mongol period was of cataclysmic consequences for the region. In addition to the **unparalleled massacre and destruction**—described by Muslim chroniclers as a holocaust—the Mongol invasions caused **lasting demographic and economic changes**. Large numbers of Turks settled permanently in Iran, establishing a formidable Turkish presence in the country, especially in the northwestern region of Azerbaijan. The nomadic influx also turned extensive lands from agricultural to pastoral use and brought a long-term shift in the area's economic balance.

### 1273

Death of **Jalal al-Din Rumi**, perhaps the greatest of the Persian mystical poets. Born in Balkh in 1207, he fled west from the advancing Mongol hordes and finally settled in **Konya**. His large collection of impassioned lyrical works (among them the celebrated *Mathnavi*) explores the spiritual paths to the identification of the human self with the divine being, blending mystical sentiment with amorous feelings. He became the patron saint of the **Mevlevi Sufi order**, whose ceremonies incorporated music and whirling dances in special dress (from which came their common description as “whirling dervishes”). The order spread from its headquarters in Konya to other cities, and won adherents among the Ottoman elite and the patronage of Ottoman sultans.

### 1274

Death of **Nasir al-Din Tusi**, a prominent Shi'ite theologian famous for his work in **astronomy**. He was high in the counsels of Hulegu, who built for him an **observatory in Maragha** that produced important findings. **Qutb al-Din Shirazi** (d. 1131), another distinguished astronomer, collaborated with Tusi in his scientific research.

### c. 1283

The **principality of Germiyan** was founded in western Anatolia, with its capital in Kutahya. It was one of the leading Turkoman principalities on the Byzantine frontier, and was annexed by the Ottomans in 1389–90. 9

## 1291

**Anti-Jewish riots in Iraq and Iran.** The chief minister of the state, the Jewish scholar and physician Sa'd al-Dawla, was murdered along with his Jewish associates, and a widespread purge removed numerous Jewish officials who had entered the service of the Mongol administration. This marked the end of three decades of unusual opportunity and freedom enjoyed by the Jews during the non-Muslim phase of Ilkhanid rule. 10

## 1292

Death of **Sa'di**, among the giants of Persian prose and lyric poetry. His *Gulistan*, a volume of practical wisdom and wit, ranks among the finest works of Persian classical literature. 11

## 1294

The Ilkhanids introduced **paper money** in an attempt to deal with the bankruptcy of the treasury. The paper certificates, which followed Chinese models, brought all business to a standstill and had to be withdrawn. 12

Death of **Safi al-Din al-Urmawi** (b. 1216), an accomplished Baghdadi musician and author of an important treatise on musical theory (*al-Adwar*). His detailed analysis of melodic modes and scale intervals had a profound influence on later writers and on the musical systems of Iran and Turkey. 13

## 1295–1304

**RULE OF THE ILKHAN GHAZAN.** Breaking away from the pagan or Buddhist affiliations of his predecessors, Ghazan **embraced Islam** and instituted it as the religion of the state. Buddhist temples were destroyed and the traditional restrictions on Christians and Jews restored. The conversion of the Mongols contributed to their gradual **assimilation** into local society. With the aid of his able minister Rashid al-Din, Ghazan also attempted to correct the damage caused by decades of Mongol misgovernment and 14

exploitation of the population. He instituted **reforms** to regulate taxation, improve security in the countryside, encourage recultivation, and correct disorder in the military and administration. It is not clear to what degree his program was actually implemented, although the new official orientation probably improved efficiency and the overall treatment of the population.

#### d. [The Ottoman Empire](#)

##### [EXPANSION OF THE OTTOMAN EMPIRE \(MAP\)](#)

The story of the Ottoman Empire has its beginning around the turn of the 14th century, in a corner of **northwestern Anatolia** where a group of Muslim Turkish tribesmen led by their chieftain, **Osman**, started to expand beyond their small principality on the Byzantine frontier. Their territorial base eventually grew into a great world empire that was named after Osman and was ruled by his descendants in unbroken succession throughout its nearly six and a half centuries of history. 1

When the Ottomans emerged on the scene as a political force, Anatolia was divided into a number of **principalities** (*beyliks*) ruled largely by Turkoman chieftains and families. The population was a mix of Muslims and native Christians, many of whom were converting to Islam. This situation was the outcome of a long process, beginning in the 11th century, by which Muslims, primarily western (Oghuz) Turks originating in central Asia, steadily broke through the Byzantine defenses and conquered Anatolia. New waves of Turkish and Muslim refugees fleeing from the Mongols entered Anatolia in the 13th century. 2

Information on the **early Ottomans** remains very patchy, and **legends** woven around their origins and exploits further complicate the task of reconstructing their formative years. Ottoman chroniclers portrayed them as Muslim *ghazis*, or **holy warriors**, driven to conquest and expansion by their religious zeal for the struggle against the infidel. This view, which modern scholarship has often perpetuated, appears to have been very much an **idealization** created by later writers and servants of the royal house. In reality the early Ottomans, like other Turkish nomads in the milieu of western Anatolia, conquered land and engaged in predation to meet the **economic needs** of their pastoral society rather than as part of a strictly religious campaign. They expanded at the expense of fellow Muslims, did not force conversion on the conquered Christian peoples, and maintained friendly ties with the Byzantine population, even using Christians in their 3

armies.

The early Ottomans were **nomadic pastoralists** with an elected chieftain and an armed force made up of bands of tribesmen on horseback. But as the territory under their rule expanded and the tasks of governing and fighting became more complicated, their tribal organization was transformed into a **settled state**. In the course of the 14th century, they developed a standing army and a bureaucracy, shifted from pastoral life to agriculture, and transformed their chieftains into sultans who ruled as despotic monarchs. The result was a complex imperial system fashioned from a blend of Islamic, Turko-Mongol, and Byzantine institutions.

4

## 1. From Frontier Principality to Regional Power c. 1280–c. 1324

**OSMAN I, FOUNDER OF THE OTTOMAN DYNASTY.** Although the chronology of his activities before 1302 cannot be established accurately, Osman appears to have been **elected chieftain** by his tribesmen sometime around 1280, and to have led their seasonal migrations and predatory raids from their pasture areas around Dorylaeum (Eskishehir) in **northwestern Anatolia**. He took advantage of the weakness of the Byzantines by launching attacks against their frontier settlements. His territorial base expanded steadily, especially in the fertile plains of Bithynia, and many native Christians became subject to his authority and even entered his service.

5

### 1302, July 27

**Battle of Bapheus**, outside Nicomedia, in which Osman defeated a Byzantine force and strengthened his standing as a recognized local leader. In the following years his forces were able to capture small forts in the area, although the larger cities, too heavily fortified for the light arms of the Ottomans, held out for a while.

6

### c. 1324–62

**ORHAN**, Osman's son, continued the policy of **territorial expansion**, conquering virtually all of northwestern Anatolia and establishing a **foothold in Europe**. Cities and agricultural populations came under his family's control, and the frontier principality developed more fully into a **settled state** as well as a formidable player in the region's affairs. The **title of sultan** first appeared on coins minted by Orhan.

7

### 1326, Apr. 6

**Fall of Bursa** to the Ottomans, after a lengthy siege. Orhan made the city his capital. 8

### 1327, May 13

Ottoman conquest of **Lopadion (Ulubad)**. 9

### 1329, June 10

**Battle of Pelekanon**, in which Orhan defeated a Byzantine expedition personally commanded by the emperor Andronicus III. The Byzantines abandoned further efforts to organize resistance to the Ottomans in Anatolia or to supply the remaining Byzantine cities there. 10

### 1331, Mar. 2

Ottoman conquest of **Nicaea (Iznik)**. The first Ottoman *medrese*, or Muslim religious college, was created in the city that year, using a converted church building. 11

### 1337

Ottoman conquest of **Nicomedia (Izmit)**. 12

### 1345

The Ottomans absorbed the neighboring Turkoman principality of **Karasi**, which brought them to the southern shores of the Dardanelles. They first **crossed into Europe** that year at the request of John Cantacuzenos, a claimant to the Byzantine throne who solicited their military assistance in his struggle for power. Orhan helped him take the towns along the Black Sea, and to cement the political alliance was given Cantacuzenos's daughter Theodora in marriage. From that point on, Ottoman troops 13

moved back and forth across the straits.

## 1354

Ottoman conquest of **Gallipoli**, after the establishment of a bridgehead on the peninsula (in Tzyppe) in 1352. From this European base, troops led by Orhan's sons Suleyman and Murad began to launch raids northward into **Thrace** and to expand the area of Ottoman occupation. The Ottomans lost Gallipoli in 1366, but in 1376 the Byzantine emperor ceded it to the sultan by way of tribute. 14

## e. [Egypt and Syria](#)

### 935–69

The **IKHSHIDID DYNASTY** in Egypt and southern Syria. The first of this line was **Muhammad ibn Tughj**, later known as the **Ikhshid** (r. 935–46); he arrived in Fustat in 935 as the new Abbasid governor. His outstanding accomplishments were the **defense of Egypt** against Fatimid raids and the **reorganization of the government**. Under the Ikhshidids, Egypt continued its reemergence, begun during the Tulunid period, as a political and economic center. Ties with the caliphal government in Baghdad were slowly loosening, allowing the Egyptian administration to retain more of the country's revenue, build a large army, and assume a **more independent role** in regional affairs. After the Hamdanid takeover of Aleppo in 945, the Ikhshidids retained a hold on the areas of Damascus and Palestine. <sup>1</sup>

### 945–67

Reign of **SAYF AL-DAWLA**, emir of Aleppo and founder of the Syrian branch of the **HAMDANID DYNASTY**. At the time of his ascent to power, the city had nominally been under the rule of the Ikhshidids, based in Egypt. Formerly the commander of Hamdanid forces in Iraq, he was able to seize Aleppo for himself, thanks to support from the **Banu Kilab**, a local beduin tribe. The emirate of Aleppo, which embraced most of central and northern Syria, including Homs, functioned as a **buffer state** between the Ikhshidids, the Byzantine Empire, and the Iraqi states. During the final years of Sayf al-Dawla's reign, the Byzantines put increasing pressure on his state and occupied its northern and western provinces. The **conflict with Byzantium** conferred on Sayf al-Dawla a reputation as a Muslim crusader, a noble image that court poets such as al-Mutanabbi and Abu al-Firas helped to perpetuate. <sup>2</sup>

Death of **Abu al-Tayyib AL-MUTANABBI** (b. 915), the most honored poet of medieval Arabic literature. He was most renowned for his panegyrics and masterful manipulation of language. He spent a good part of his career at the court of the Syrian ruler Sayf al-Dawla, whose exploits he immortalized in his poetry.

3

## 969–1171

The **FATIMID DYNASTY** in Egypt. The Fatimids, who had already established an empire in North Africa, moved their base of operations to Egypt, which they invaded in 969. The dynasty was the chief exponent of a radical religious movement, the **Isma'ili sect** of Shi'ite Islam. The Fatimids denied the legitimacy of the Abbasid caliphate and sought to install themselves as the spiritual and temporal leaders of the Islamic world. But their **bid to overthrow Abbasid power** ended in failure, despite the **extensive proselytizing** that their Isma'ili missionaries conducted throughout the Islamic world. Their spiritual authority remained circumscribed even in Egypt, where Shi'ite Islam was confined largely to the ruling elites.

4

At its greatest extent, the Fatimid Empire embraced Egypt, North Africa, the Hijaz, and much of Syria. But North Africa gradually slipped away, and control of the remaining provinces was always infirm. On the whole, the Fatimid period was remembered as a time of **general prosperity**. Agriculture flourished, and Fatimid commercial policy succeeded in diverting the lucrative **spice trade** from the Persian Gulf to the Red Sea.

5

During the 11th century, various **military cliques** progressively usurped the caliphs' powers and reduced them to mere figureheads. By the middle of the 12th century, the Fatimid government had become so decrepit that it functioned as little more than a pawn in the power struggle that was then taking place in Syria.

6

## 969

The **FOUNDING OF CAIRO** under orders from the Fatimid conquerors of Egypt. The new city replaced adjacent **Fustat** (three miles south of Cairo) as the capital, a rank it has held into modern times. But during most of the Fatimid era, Fustat remained the center of commerce, industry, and population.

7

## 969

**Byzantine capture of Antioch** and the coastal lands of northern Syria (See [964–68](#)), which remained in Christian hands until 1084. The **Hamdanid emirate of Aleppo** shrank to the city and its hinterland and became, in effect, a **Byzantine satellite** during the late 10th century. Riven by internal rivalries, the Hamdanids of Syria grew ever weaker until their line finally ended in 1016.

8

## 971

Opening of **AL-AZHAR** Mosque. It operated originally as a center for **Shi'ite propaganda**. After the fall of the Fatimids (1171), it was transformed into the **premier Sunni religious college** in the **Muslim world**.

9

## 978

**Fatimid victory in Palestine** over Turkish and **Qaramita** forces, which had seized control of southern Syria after the fall of the Ikhshidids. As a result the **Fatimids were able**, at least for a short time, **to gain control of southern Syria**, and the Qaramita were permanently cleared from Syria and its commercial routes. Equally significant was the **introduction of Turkish slave recruits** (mamluks or *ghilman*) into the Fatimid military and administration. The government in Egypt relied increasingly on slaves to serve as officials and troops. The Turkish presence among the elites, together with an influx of Iraqi bureaucrats and soldiers, served as a counterweight to North African contingents, which had formerly been dominant in the Fatimid state.

10

## 996–1021

Rule of the **Fatimid caliph al-Hakim**, who vanished at the end of his reign. Al-Hakim is remembered for his **eccentric** and cruel behavior, repudiation of orthodox Islam, and persecution of non-Muslim subjects. His most devoted followers declared him to be an incarnation of God. After his mysterious disappearance (he was probably murdered), his followers formed their own **sect of Islam** and became known as the **DRUZE**. One of the chief missionaries of the radical doctrines was **Hamza ibn Ahmad**, who established the Druze in Syria, where they live to this day.

11

## 1023–79

The **MIRDASID DYNASTY** in Aleppo. The Mirdasids were a prominent family from among the **Banu Kilab**, the most powerful tribe in the northern Syrian Desert. Backed by their fellow tribesmen and Fatimid allies, the Mirdasids overcame the successors of the Hamdanid dynasty (the general Lu'lu' and his Turkish troops), who had received unavailing support from the Byzantines. The state that the Mirdasids carved out for themselves occupied a territory not much larger than Aleppo and its extended hinterland. The Mirdasid regime owed its survival largely to **skillful diplomacy**, balancing Fatimid and Byzantine interests on the international scene and tribal and urban factions locally. For the people of Aleppo, the reign of the Mirdasids was remembered as a **period of general prosperity**. The Mirdasids were ousted from Aleppo only after the rise of the Seljuk Turks, who disrupted the fragile diplomatic equilibrium that had been maintained in Syria for more than half a century.

12

## 1057

Death of **Abu al-'Ala' al-Ma'arri**, one of the most famous poets of medieval Arabic literature. He was noted for his ornate imagery, mastery of rhetoric, and highly refined verse. In tone, his poetry displayed an open irreverence and contempt for orthodox religion.

## f. [North Africa](#)

### 943–47

The **great revolt of Abu Yazid**, a Khariji leader who assembled a **large tribal coalition against Fatimid rule**. The movement nearly toppled the Fatimids before it was finally suppressed. The difficulties of the Fatimids in restoring their authority revealed the shallow base of the regime in North Africa. In 972 they relocated their capital to Egypt and gradually relinquished their North African possessions to the Zirids, who originally operated as their governors. <sup>1</sup>

### 951

The **Fatimids** persuaded the **Qarmatis** (Qaramitas) to return to Mecca the **Black Stone of the Ka'ba**, which they had earlier stolen. The success of Fatimid diplomacy raised their prestige throughout the Islamic world. <sup>2</sup>

### 958–60

The **Fatimids** temporarily secured Morocco against **Umayyad** influence. Their victory on the western front allowed them later to resume their dynastic ambition of conquering Egypt. Earlier raids had been turned back (913–15, 920, and 935). <sup>3</sup>

### 972–1148

The **ZIRID DYNASTY**, which ruled Tunisia and eastern Algeria. The Zirids were originally appointed as governors of the North African provinces within the Fatimid Empire. They gradually **broke away from the Fatimids**, who adhered to Shi'ite Islam, and restored Sunni doctrine as the official religion of the state. Their public **conversion** <sup>4</sup>

**to Sunnism** occurred sometime during the 1040s (probably 1044). A simultaneous development was the growing predominance of the **Maliki school** of Islamic law and the rapid spread of **Sufism** among all sections of the population.

### 973

The **Umayyad invasion of Morocco** from Spain decisively ended the Umayyad-Fatimid struggle over the country that had begun in the first decade of the 10th century. The Umayyad forces succeeded in establishing indirect control through local allies, until they were overcome by the **Almoravids** in the late 11th century. Among local factions, the most powerful was the **Zanata** tribe, operating primarily in the northeast. 5

### 981

Death of **Ibn al-Tabban** (b. 923), a renowned scholar and polymath. Among the fields treated in his writings were Islamic law, philology, medicine, astronomy, and mathematics. 6

### 1012

Death of **al-Qabisi** (b. 935), a noted Muslim theologian and mystic who advocated a highly ascetic version of Islam. 7

### 1015–1152

The **HAMMADID DYNASTY**, which governed much of central and eastern Algeria. The dynasty was founded by a revolt of the Banu Hammad (1015) under the leadership of the Zirid governor of eastern Algeria. 8

### 1016–17

**Widespread rioting in Tunisia** by Sunni agitators demonstrating against the position of **Shi'ite Islam** as the official religion of the state. The clashes developed out of social tensions pitting the Shi'ite ruling elites against the largely Sunni urban populations. 9

## 1051–57

**Invasion of Tunisia and Algeria by the Banu Hilal and Banu Sulaym**, warlike Arab tribes that had migrated to Egypt in the 8th century. They were encouraged by the **Fatimid** rulers of Egypt to move to the dynasty's former North African provinces, which were “granted” to them. As they moved westward, the **Banu Sulaym** stopped early and settled in Cyrenaica. The **Banu Hilal** pushed on to Tunisia and eastern Algeria, where they seized most of Zirid and Hammadid territory during the 1050s. 10

For Tunisia, one of the principal consequences of the tribal invasion was the **spread of the Arabic language** to large parts of the countryside, where, unlike in the towns, Berber had formerly predominated. At the same time, the tribes' constant raids sent the region's **economic and urban life into decline**. The most notable casualty was the city of **Qayrawan**, which was sacked in 1057 and thereafter lost its cultural and commercial preeminence. 11

## 1056–1147

Reign of the **ALMORAVIDS**. The Almoravid movement (al-Murabitun) sprang up among **Saharan tribal groups** in the mid-11th century. It was inspired by the teachings of a religious *sheik* (leader), **IBN YASIN**, who introduced orthodox Islam among the tribes and strictly imposed Islamic law. Under the later rule of **Ibn Tashfin** (r. 1061–1106), this religious ideology became the justification for a campaign of conquest that subjugated Morocco, Algeria, and Spain by the end of the 11th century. The Almoravid capital was located at the Moroccan city of **Marrakesh**, founded around 1070. Among the lasting achievements of the Almoravids were the **introduction of the Maliki school of Islamic law** to the Maghrib and the importation and sponsorship of **Andalusian art and culture**. They also made possible the political unification of Morocco, which had formerly been fragmented into petty tribal domains. 12

## C. [South and Southeast Asia, 500–1500](#)

### 1. [South Asia, 500–1199](#)

Through invasions, immigration, and related changes, South Asia was increasingly drawn in this period into what would be characterized by the end date as an Islamicate world system. As representatives of Islam (soldiers as well as merchants and Sufi mystics) spread across the known world, the global community shared for the first time a set of understandings about legal premises, state structures, and the model of the ideal ruler, as well as the accepted attributes of a cultured person and the resulting criteria for poetic and artistic production. Of course the interaction of these Islamicate understandings with local cultures led to a range of variations on the Islamicate theme. 1

At the same time, regional cultures within the South Asian subcontinent were beginning to emerge (primarily around linguistic bases). At least five distinctive regional cultures eventually emerged: Punjab in the northwest, home to both settled agriculture and pastoralists; the agriculturalist Gangetic Plain; deltaic Bengal in the east; the Deccan plateau in the middle, encompassing several cultural zones; and Dravidian South India. 2

#### a. [North India](#)

The **White Huns** or Hephthalites, a branch of the Mongol Juan-juan who dominated central Asia (407–553), had occupied Bactria (425) and, after defeat by Sassanid Bahram Gor (428), Gandhara. Victory over Sassanid Peroz (484) freed them for raids from the Punjab into Hindustan. 3

#### c. [500–502](#)

**Toramana** ruled as far as Eran. 4

## 502–c. 528

**Mihirakula** from Sialkot controlled Gwalior and Kashmir. Bhanugupta probably expelled him from Eran (510). Yasodharman of Mandasor (?) boasts (533) of victory over him. Although the Huns in central Asia were crushed by Turks and Sassanians (553–67), their chiefs kept rank in the Punjab and Rajputana till the 11th century.

From the decline of the Guptas until the rise of Harsha, the area was characterized by a confused political scene and the large-scale **displacement of peoples**. The dramatic movement of populations (especially from the Punjab and Rajasthan, where the impact of the Huns was felt most acutely) and the resulting new ethnic combinations of people did much to underscore the confusion and insecurity of the period.

## 606–47

**HARSHA**, fourth king of Thanesar, north of Delhi (new era Oct. 606), succeeded his brother-in-law as king of Kanauj (royal title 612), and quickly conquered an empire across northern India, to which he left no heir. Although Harsha aspired to a closely integrated empire following the Mauryan model, all he managed to achieve was a large kingdom in the north only loosely connected through feudal ties. Decisions of policy as well as pragmatic practice were made locally. Because commercial activities did not provide as large an income to the state as they had earlier, revenue came mainly from the land (in the form of a variety of taxes). Autonomous guilds continued to serve as the major institutions organizing manufacture and trade, with textiles being the most important industry (meeting both internal and foreign demand). The Buddhist church, or *sangha*, was now rich enough to act as banker, lending money on interest and renting out land, as well as performing mercantile functions.

Harsha received an embassy (643) from Emperor T'ang T'ai-tsung. A poet and dramatist, he patronized men of letters. He is well known through **Bana's** poetic romance *Harshacharita*, and by the *Hsi yü chi (Record of Western Lands)* of his guest, the pilgrim **Hsüan-tsang**, whose exact observations in India (630–43) have given priceless guidance to modern archaeology.

**Tantrism** meanwhile sought to secure for its adepts in magic arts, through esoteric texts (tantra) and charms, rapid attainment of Buddhahood or at least supernatural powers. Partial syncretism with Saivism led to a cult of Vairochana and various new divinities, largely terrible or erotic. Spells (*dharanis*) appear early (Chinese trans. 4th century), but the *Panchakrama* is in part the work of Sakyamitra (c. 850). Tantrism seems to have flourished chiefly along the northern borderland. Buddhism, however, progressively

disappeared from India from the 9th century, lingering in Bengal and Bihar until the Muslim conquest (1202). It was largely absorbed by Hinduism.

### 647

**A second Chinese embassy**, under Wang Hsüan-tse, having been attacked by a usurper on a local throne (Tirhut, north of Patna?), secured 7,000 troops from Amsuvarman, king of Nepal, and 1,200 from his son-in-law, Srong-tsan-sgampo, king of Tibet; captured the malefactor; and haled him to Ch'ang-an (648). <sup>10</sup>

### c. 730–c. 740

**YASOVARMAN**, king of Kanauj, an author, patronized the Prakrit poet **Vakpatiraja** and **Bhavabhuti**, a Sanskrit dramatist ranked by Indian criticism next to **Kalidasa**. <sup>11</sup>

### c. 725–1197

The Pala Buddhist kings ruled Bengal (till c. 1125) and Magadha. Leading rulers: Dharmapala (c. 770–c. 883), and Devapala (c. 881–c. 883), who endowed a monastery founded at Nalanda by Balaputradeva, king of Sumatra. <sup>12</sup>

### c. 1125–c. 1225?

**Senas** from the Carnatic gradually advanced from North Orissa into Bengal. <sup>13</sup>

### c. 1169–c. 1199

Lakshmanasena patronized Jayadeva, whose *Gitagovinda*, mystic call to love of Krishna, is considered a Sanskrit masterpiece. Tightening of caste restrictions was accompanied in some areas by the origin of **kulinism**: the prohibition of marriage of any girl below her own caste, which led to female infanticide; and the rise in caste by marriage to a man of higher caste, which led to polygamy of high-caste husbands to collect dowries. <sup>14</sup>

## b. Deccan and Western India

**Western India**, thanks to the many impregnable fortresses in Rajputana, was usually divided among local dynasties from the time of the Gupta power to the advent of the Muslims. 1

### c. 490–766

A **dynasty of Maitrakas**, foreigners of the Rajput type, usually independent at Valabhi in Surashtra, created a Buddhist scholastic center that rivaled Nalanda. Their gifts reveal that Buddhist images were honored with *puja* of the kind devoted to Hindu gods. 2

### c. 550–861

The **GURJARA** horde of central Asiatic nomads established a dynasty of 12 kings at Mandor in central Rajputana. Two retired to Jain contemplation, and a third to self-starvation. 3

### 712–66

**Arab raids** from Sind (See [711–13](#)) devastated Gujarat and Broach (724–43) and finally shattered the Maitraka dynasty (766). 4

### c. 740–1036

The **GURJARA-PRATHIHARA DYNASTY**, by uniting much of northern India, excluded the Muslims till the end of the 10th century. Prominent early rulers were Nagabhata I (c. 740–60), who defeated the Arabs; Vatsaraja (c. 775–800); and Nagabhata II (c. 800–36), conqueror of Kanauj. 5

### 746–c. 974

The Chapas (or Chapotkatas), a Gurjara clan, founded Anahillapura (or Anandapura, 746), the principal city of western India until the 15th century. 6

### 831–1310

A **Dravidian dynasty of Chandellas** (in present Bundelkhand) built numerous Vaishnava temples, notably at Khajuraho, under Yasovarman (c. 930–54) and Dhanga (954–1002). 7

### c. 840–c. 890

**Mihira**, or Bhoja, devoted to Vishnu and the Sun, ruled from the Sutlej to the Narmada, but failed to subdue Kashmir. 8

### c. 950–c. 1200

The **Paramaras of Dhara**, near Indore, were known for two rulers: Munja (974–c. 994) who invaded the Deccan, and Bhoja (c. 1018–60), author of books on astronomy, poetics, and architecture, and founder of a Sanskrit college. 9

### c. 974–c. 1240

The **Chalukya** or Solanki Rajput clan, led by Mularaja (known dates 974–95), ruled from Anahillapura over Surashtra and Mt. Abu. 10

### 977–1186

The **Ghaznavid (Yamini) dynasty** ruled at Ghazni and Lahore. It was founded by **Subaktagin** (977–97), a Turkish slave converted to Islam, who extended his rule from the Oxus to the Indus and broke the power of a Deccan confederacy that included King Jaipal of Bhatinda, the Gurjara-Pratihara king of Kanauj, and the Chandella king Dhanga.

11

## 998–1030

**MAHMUD OF GHAZNI** made 17 plundering raids into the Punjab (defeat of Jaipal, 1001) to Kangra (1009), Mathura and Kanauj (1018–19), Gwalior (1022), and Somnath (1024–26). Vast destruction, pillage of immensely rich Hindu temples, and wholesale massacre resulted only in enrichment of Ghazni and annexation of the Punjab. Ghazni, heir to the rich artistic heritage of the Samanids of northeastern Persia, was now one of the most brilliant capitals of the Islamic world. **Alberuni** (973–1048) of Khiva, the leading scientist of his time, followed Mahmud to the Punjab, learned Sanskrit, and wrote the invaluable *Tahkik-i Hind (Inquiry into India)*.

### **c. [South India](#)**

In this period in the south, a series of cultural reconfigurations led to greater integration between Aryan and Dravidian cultural systems. The Pallava period, for instance, saw a greater assimilation by the elite of Aryan ideals, while popular culture reasserted Tamil ideas and values—and the tension between these developments helped to shape a distinct and new Tamil culture. Geopolitically, the conflict between the two geographical regions of the Deccan and Tamilnad (the fertile plain south of Madras) marked the early centuries of this period. The area between the Godavari and Krishna deltas often served as the focus of the political contests. Three major kingdoms were involved in the conflict: the Chalukyas of Badami, the Pallavas of Kanchipuram, and the Pandyas of Madurai. 1

The pattern of warring states, with no single polity able to establish hegemony over the others, continued through much of this period. The ascendancy, around 900, of the Cholas also marked the crystallization of Tamil culture, as expressed in social institutions, religion, and the fine arts. Chola cultural production, in fact, came to be defined as “classical” and influenced models of kingship, cultural patronage, community formation, and religious views not only throughout the south, but also in the Deccan. Chola culture also spread to Southeast Asia in this period, as South India intervened actively in the commerce with that region. 2

Despite a somewhat elaborate administrative structure connecting the king to the realm, villages had significant degrees of autonomy under the Cholas. Village sociopolitical structure distinguished sharply between those who paid land taxes and the landless laborers who worked the fields, with the latter being in positions of agrestic slavery. Wealthier members of rural society found strong motivations to invest their wealth in irrigation and land-clearing activities, or to patronize temple complexes. Until the end of this period, when Chola expansion of trade fostered the growth of cities and the need for a monetary economy to move agricultural surplus to the cities, villages had relatively little connection to the larger society. Chola political power extended well past the year 1000 (See [1001–4](#)). 3

### c. 300–800

The **Pallava warrior dynasty** ruled from its base at **Kanchi** (near Madras) and exercised hegemony over the Deccan while disputing throughout this period with the Chalukyas and others.

4

### c. 500–753

The **first Chalukya dynasty** in Maharashtra advanced from Aihole on the upper Kistna to nearby Vatapi (or Badami, c. 550) and to Banavasi (566–97) at the expense of the Kadambas. Construction of the earliest temples at Aihole was followed by that of Mahakutesvara (c. 525) and completion of the cave-temple to Vishnu at Vatapi (578).

5

### c. 575

The Pallava **Simhavishnu** seized the Chola basin of the Kaveri, which his family held until after 812.

6

### c. 600–625

The Pallava **Mahendravarman I**, converted from Jainism to Saivism, destroyed a Jain temple, but dug the first (Saivite) cave-temples in the south (at Trichinopoly, Chingleput, etc.). From his reign date **Buddhist monasteries** (in part excavated) and *stupas* on the Samkaram Hills (near Vizagapatam).

7

### 609–42

The Chalukya **Pulakesin II** placed his brother on the throne of Vengi, where he ruled as viceroy (611–32), repulsed an attack by Harsha of Kanauj (c. 620), sent an embassy to Khosroes II of Persia (625), and enthroned a son, who headed a branch dynasty in Gujarat and Surat (c. 640–740). Hsüan-tsang (641) describes the prosperity of the country just before the Pallavas pillaged the capital (642), a disaster that was avenged by pillage of the Pallava capital, Kanchi, by Vikramaditya (c. 674).

8

## 611–c. 1078

The **Eastern Chalukyas** of Vengi (independent after 629–32), were continually at war with Kalinga to the north, the Rashtrakutas to the west, and the Pandyas to the south. <sup>9</sup>

## c. 625–c. 645

The Pallava **Narasimhavarman** defeated Chalukya Pulakesin II (c. 642) and took Vatapi. He defeated also his southern neighbors and enthroned Manavalla in Ceylon (?). He improved the port of Mamallapuram, near Kanchi, and cut there the first of five *raths*, monolithic sanctuaries in the form of cars, the earliest monuments of the Dravidian style; also the cliffside relief depicting the descent of the River Ganges from Heaven. <sup>10</sup>

## c. 675–c. 705

The Pallava **Narasimhavarman II** built in stone and brick the Shore temple at Mamalla, and the central shrine of the Kailasa temple at Kanchi, completed by his son. <sup>11</sup>

## c. 700

**Conversion of King Srimaravarman** to Saivism by Tirujnana Sambandhar, the first of 63 *nayanmars*, or Tamil saints, led the king to impale 8,000 Jains at Madura in a single day, since celebrated by the Saivas. Another saint, Manikka Vasagar (9th century), wrote poems of his own religious experience which correspond to our Psalms. The Tamil Vaishnavas, too, had their saints, 12 *alvars*, who also expressed emotional religion and whose works were collected c. 1000–1050. <sup>12</sup>

## 733–46

The Chalukya **Vikramaditya II** thrice took Kanchi, and distributed presents to the temples. He imported Tamil artists, and his queen commissioned Gunda, “the best southern architect,” to build the temple of Virupaksha. The **frescoes of Ajanta caves I and II** are believed to date from this period. So too the Saiva and Vaishnava sculptures <sup>13</sup>

of the Das Avatara cave-temple at Ellora.

**c. 735–c. 800**

**Nandivarman II**, a collateral kinsman 12 years of age, accepted the Pallava throne offered him by the ministers and elders, who defended him against rival claimants.

(See [Funan](#))

## 2. [Southeast Asia, 500–900](#)

In Southeast Asia, the years 500–900 are referred to as the classical period. The Indic concept of mandalas, or circles of kings, continued to be the primary form of state organization, developing into more widespread centers of power than had existed in the region earlier. In large part because of the importance of trade, one should envision Southeast Asia as an area united by bodies of water—the sea surrounding (and, to some extent, connecting) the mainland and the archipelago, as well as the rivers flowing south from the Himalaya into mainland Southeast Asia. Government, religion, and art were closely intertwined; common aspects for both mainland and peninsular Southeast Asia related in part to Indian literary models. <sup>1</sup>

### a. [The Malay Archipelago and Peninsula](#)

Early Indian commercial settlements in **Sumatra** and **Java**, at first Brahman in religion and later influenced by Buddhism, became the center of organized states. Through trading networks, the more influential mandalas (such as **Srivijaya**) fostered Malay acculturation across a network of Malay-speaking centers dotted throughout the Riau-Lingga Archipelago to the southern part of the Malay Peninsula. Toward the end of the **7th century**, **Srivijaya** (a trade-based empire; Malay rulers exercised influence in Sumatra and the Malay Peninsula, 600–1000) became the dominant state of Sumatra and built up a commercial empire. <sup>2</sup>

(See [Burma \(Pagan\)](#))

## **b. Mainland Southeast Asia**

**Dvaravati** settlements in central Thailand (6th–11th centuries). During the early centuries C.E., the Khmer peoples of the Menam Valley came under the influence of Indian civilization, and about the 6th century there was organized, in the region of Lopburi, the kingdom of Dvaravati, which was Buddhist rather than Brahman in religion, and from which, during the **8th century**, migrants to the upper Menam Valley established the independent and predominantly Buddhist kingdom of **Haripunjaya** (See [Siam](#)), with its capital near the present Chiang Mai. 1

### 3. South Asia, 1000–1500

#### INDIA BEFORE THE MUSLIM CONQUEST (MAP)

State forms began to be elaborated in this period, both in the north and the south, under the influence of models and values imported from other parts of the Islamicate world and renegotiated in the subcontinent as they met with emerging regional cultural systems. Though scholars and commentators have used shorthand labels that identify these kingdoms as Hindu or Muslim, they became increasingly distinctive as Indian or South Asian in ways that are independent of particular religious practices or values. 1

Throughout much of this period, the dominant pattern continued to be that of smaller kingdoms vying for dominance in a region, although the **Delhi Sultanate** did manage to expand its rather loose hold over significant parts of the subcontinent before it was superseded by the Mughals. In the Deccan, particularly, a range of differing regional cultures met and interacted, including the Telugu kingly culture from the south, the Maharashtrian military culture from the west, and Muslim notions of ruler and state brought through Islamicate ties. In this politico-cultural melting pot, much influence from Islamicate states helped to shape, especially, the emerging empire of Vijayanagara. (See [India, 1500–1800](#)) 2

#### a. North India and Deccan

1093–1143

The Chalukya ruler, **Jayasimha Siddharaja**, a patron of letters, although himself a Saiva, organized disputations on philosophy and religion, and favored a Jain monk, **Hemachandra**, who converted and dominated **Kumarapala**. 3

## 1143–72

As a good Jain, **Kumarapala** decreed respect for life (*ahimsa*); prohibited alcohol, dice, and animal fights; and rescinded a law for confiscation of property of widows without sons. He also built (c. 1169) a new edifice about the Saiva temple of Somanatha, which had been reconstructed by **Bhimadeva I** (1022–62) after destruction by the Moslems.

4

## 1151–1206

The Shansabani Persian princes of Ghur (Ghor), having burned Ghazni (1151), drove the Yamini to the Punjab and deposed them there (1186).

5

## 1172–76

**Ajayapala**, a Saiva reactionary, ordered the massacre of Jains and the sacking of their temples, until he was assassinated. Jain rule was restored under a mayor of the palace whose descendants displaced the dynasty (c. 1240).

6

Two Jain temples at Mt. Abu are the work of a governor, **VimalaSaha** (1031), and a minister, **Tejpala** (1230). Built of white marble with a profusion of ornamented colonnades, brackets, and elaborately carved ceilings, they represent the most elegant version of the northern or Indo-Aryan architectural style.

7

**Kashmir**, already (c. 100) an important home of the Sarvastivadin Buddhist sect, remained a center for Buddhist studies (till the 10th century; degenerate before the Muslim conquest, 1340) and the study of Sanskrit literature (until today). Its history from c. 700 is rather fully known through the *Rajatarangini*, the only extant document by **Kalhana** (c. 1100), the sole early Indian historian, who consulted literary sources and inscriptions but accepted tradition without criticism.

8

## 1175–1206

**Muhammad of Ghur**, Mu'izz-ud-Din, undertook conquest of Hindustan by capture of Multan and Uch. He ruled from Ghazni as governor for his elder brother, **Ghiyas-ud-Din Muhammad**, whom he succeeded as ruler of Ghur (1203).

9

## 1192

A **battle at Tararori** (14 miles from Thanesar) decisively crushed a new Hindu confederacy led by the Chauhan king of Ajmer and Delhi. Cumbersome traditional tactics, disunited command, and caste restrictions handicapped the Hindu armies in conflict with the mounted archers from the northwest. Victory led to **occupation of Delhi** (1193) and to conquest of Bihar, where the organized Buddhist community was extinguished (c. 1197), Bengal (c. 1199), and the Chandella state in Bundelkhand. Muhammad appointed **Kutb-ud-din Aibak**, a slave from Turkestan, viceroy of his Indian conquests, and left him full discretion (1192, confirmed 1195).

10

## 1206–66

A **dynasty of slave kings**, the first of six to rule at Delhi (until 1526), was founded by Aibak (killed playing polo, 1210).

11

The numerically weak early Muslim rulers in India were forced to employ Indian troops and civilian agents, welcome allegiance of Indian landholders, and afford their native subjects much the same limited protection (including tacit religious toleration) and justice to which they were accustomed. This led to active efforts to create a polity regarded as legitimate both in the Islamic world and in the eyes of local elites. Rebels, both Hindu and Muslim, were slaughtered with ruthless barbarity.

12

## 1211–36

**Shams-ud-din Iltutmish**, the ablest slave and son-in-law of Aibak, succeeded to his lands in the Ganges Valley only, but recovered the upper Punjab (1217), Bengal (1225), the lower Punjab with Sind (1228), and Gwalior after a long siege (Feb.–Dec. 1232). He advanced to sack Ujjain (1234).

13

## 1229

Iltutmish was invested as sultan of India by the Abbasid caliph of Baghdad.

14

**Islamic architects** brought to India a developed tradition of a spacious, light, and airy prayer chamber covered by arch, vault, and dome, erected with aid of concrete and mortar, and ornamented solely with color and flat linear, usually conventional, decoration. This formula was applied with recognition of local structural styles and the

15

excellence of Indian ornamental design. Aibak built at Delhi (1193–96) with the spoils of 27 temples a mosque of “Hindu” appearance to which he added (1198) an Islamic screen of arches framed with Indian carving. He began (before 1206) a tower for call to prayer, which was finished (1231–32) and named Kutb Minar to honor a Muslim saint (d. 1235) by Iltutmish, who also enlarged the mosque in strictly Islamic style. In the new architectural style that emerged, the emphasis shifted from mosques to tombs of rulers and of Sufi saints. The shift underscored the importance of local rulers (rather than an internationalized Islam) and of the new force of devotionism (which expressed a value common to those called Hindus and Muslims).

Upon the death of Iltutmish, actual power passed to a group of 40 Turks who divided all offices save that of sultan and controlled the succession. 16

## 1266–90

A new dynasty at Delhi was founded by **Balban** (d. 1287), a slave purchased by Iltutmish (1233) who was made chamberlain (1242) and became father-in-law and lieutenant (1249–52 and 1255–66) of King Mahmud (1246–66). As king, aided by an effective army and corps of royal news writers, Balban repressed the 40 nobles, ended highway robbery in the south and east, and suppressed rebellion in Bengal. His son repelled the Mongols established in Ghazni (since 1221) but was killed by them (1285). 17

The **tomb of Balban** is the first structure in India built with true arches instead of Hindu corbeling. 18

## b. Bengal

From an area marked by strong adherence to Buddhism and Brahman-dominated Hinduism, Bengal began to change in this period into a culture marked by Islam-oriented devotional life. This reflected political, social, and economic changes that occurred at different rates. Monumental royal temples remain as witness to the fully elaborated style of medieval Hindu kingship that had emerged in deltaic Bengal, as do the Buddhist *stupas*. The conquest of Bengal by Muhammad of Ghazni in 1199 initiated the first political changes, as a Muslim elite was imported to serve as soldiers and administrators in the new territory. 1

Buddhism and Islam, both being institutionalized, proselytizing religions, attracted many of the same followers. This competition prompted attacks on Buddhist monasteries by the Muslim elite as it moved in, with a resulting exodus of Buddhists from eastern India into Southeast Asia. Indeed, Islam found its greatest support in areas previously dominated by Buddhism. Moreover, beginning in the 14th century, the vacuum left by the exodus of Buddhists began to be filled with a new form of popular devotionalism, *bhakti*, which also left room for Sufism as a related phenomenon. 2

Even with Persianized Turks as rulers, however, the population of the area remained Buddhist or Brahman-ordered for a very long time. Ultimately, as Sufi saints came to dominate popular religion in a world filled with saintly figures, Bengali cosmologies first used Islamicate terms interchangeably with local (Hindu) ones, and then began to prefer the Islamic concepts. But this slow, shifting form of conversion did not show concrete results (for example, in the choices of names for children) until well after the end of the period. 3

### c. [South India](#)

#### 1001–4

A successful **invasion of Ceylon** permitted assignment of Singhalese revenues to the Saiva great pagoda of Rajarajesvara, which Rajaraja I built at Tanjore, the masterpiece of baroque Dravidian architecture. He also endowed a Buddhist monastery built at Negapatam by a king of Srivijaya (Sumatra). 1

#### 1014–42

Rule of Rajendra Choladeva, who had helped his father since 1002. 2

#### 1014–17

A second invasion of Ceylon secured the regalia and treasure of the Pandya kings, so that a son of the Chola could be consecrated king of Pandya. 3

#### 1024

An **invasion of Bengal** enabled the Chola to assume a new title and establish a new capital near Trichinopoly. 4

#### c. 1030

By use of sea power, the Chola exacted tribute from Pegu, Malaiyur (Malay Peninsula), and the empire of Srivijaya. 5

## 1040–68

Chalukya **Somesvara I** founded Kalyani, the capital until c. 1156. He drowned himself in Jain rites in the Tungabhadra, a sacred river of the south. 6

## 1042–52

Rule of Chola **Rajadhiraja I**, who had aided his father since 1018. He was killed in battle at Koppam against Somesvara I of Kalyani. 7

## 1062–70

Chola **Virarajendra** defeated the Chalukyas and gave his daughter to Vikramaditya VI. He founded a vedic college and a hospital. His two sons fell into conflict and extinguished their line by assassination (1074). 8

## 1073–1327

The **Hoysalas**, at first a petty dynasty, ruled at Dvarasamudra (Halebid) in Mysore. 9

## 1074–1267

The **Chalukya-Chola dynasty**, founded by Rajendra, son and grandson of Chola princesses, king of Vengi (b. 1070), who took the vacant throne of Kanchi (1074) and thenceforth ruled Vengi through a viceroy. His authority was recognized by the Ganga king of Kalinga. 10

## 1075–1125

**Vikramaditya VI** of Kalyani began a new era in place of the Saka era, but with small success. He built temples to Vishnu, but made gifts also to two Buddhist monasteries that must have been among the last in the south to withstand Hindu reaction and 11

absorption. **Bilhana of Kashmir**, in return for hospitality, a blue parasol, and an elephant, wrote the *Vikramankacharita* in praise of his host.

#### **4. Southeast Asia, c. 900–1557**

In this period developed distinct civilizations that can be divided into three main patterns: <sup>1</sup> those based on Theravada Buddhism (See [c. 78–96+ C.E](#)) (the present-day countries of Myanmar, Thailand, Laos, and Cambodia); those shaped by Sinitic influences (Vietnam); and those influenced by mercantile connections to the Islamic world (Malaya).

Theravada Buddhism probably came not from India but from Ceylon in the 11th century. Buddhist concepts were interpolated into Hindu concepts of kingship. The Hindu concept of *devaraja*, or the divine connection between the king and god, played a crucial role in forming the notions of power and state during this period. With this delineation came a transition from what scholars have called “early kingdoms” to “imperial kingdoms” and a changing “ritual policy,” important for the functioning and distribution of temples.

Srivijaya and other kingdoms of central Java as well as the kingdoms of the mainland <sup>2</sup> relied on alliances, often via marriage, and on relationships that were mutually beneficial. Once again, the flexibility of Southeast Asian conceptualizations of polities meant that the ruler's power did not need to be based on rooted infrastructures such as landholding, bureaucracy, or highly institutionalized state organizations. Local units continued to have separate identities. A ruler's power was based on “ritual sovereignty”: the king was endowed with sacred powers, and he reinforced the aura of divine majesty through his patronage of temple complexes, patronage of monks and priests possessing the sacred Indian learning, and support for sacred monuments, elaborate rituals, and state ceremonies. The ruler's creation of ceremonial centers—centers of religion, art, and learning—was the source of his ability to attract and maintain alliances. They were demonstrations of his connections to higher gods and higher learning, and of his spiritual superiority.

Scholarly debate among historians of Southeast Asia recently has centered on the issue of <sup>3</sup> how a “state” is defined. One school of thought has emphasized the standard of a unified, bureaucratized polity that is consistent with traditional Western understanding of an “advanced civilization.” However, in view of the nature of state organization in Southeast Asia, it seems clear that an institutionally weak yet integrated society could still be considered a major civilization. This is demonstrated by the fact that the Indic concept of mandalas, or circles of kings, continued as the dominant model of state organization in

the region during this period. Each kingdom—such as Angkor, Ayudhya, Majapahit—formed concentric circles of influence radiating out from a center representing the ruler (whose authority generally became weaker the further from the center an area was located), and moving toward more distant or geographically remote territories. This model was often unstable politically and represented a form of “state” with a vaguely defined geographical area and no fixed boundaries, which could expand and contract depending on interactions with other competitive state centers. Smaller centers would switch allegiances as they looked for security. *Negeri*, a Malay-Indonesian word for state, was particularly applicable to riverine or coastal principalities in the Malayo-Muslim world; derived from the Sanskrit term for “kingdom” or “capital,” *negeri* continued to be used to define the state during this period in Southeast Asia.

Java (or Mataram) provides one example of the concentric-circles model of power relationships. *Kraton* was the word used for the sacral palace-city of the Javanese kings that formed the center of their kingdom. *Negara agung* was used to describe the second administrative circle in the kingdom of Mataram; it consisted of the core area immediately outside the palace-city. *Manca negara* was the term used for the third administrative circle of Mataram, which consisted of most of Java outside the palace city and the core administrative area. (See [Southeast Asia, 1500–1800](#))

### a. The Malay Archipelago and Peninsula

The prominence of the kingdom of **Srivijaya**, crucial to the development of Malay society and the founding of **Malacca**, continued during this period. Along with developments in wet-rice cultivation in agrarian societies in the Indic mode came the spread of Islam, especially in Java (14th–18th centuries) and initially in trading ports along the north coast. (Trading ports served as part of the great network of shipping in the archipelago, moving spices to the archipelago and rice to Malacca after 1400. This network, in turn, was connected to an international system of commerce reaching from the Moluccas to the Mediterranean, linking Southeast Asia to the expanding world of European trade and conquest. Through this period, however, the general linkage was to the larger Islamic world.)

At the end of the 7th century, **Srivijaya** became the dominant state of Sumatra and built up a commercial empire. Srivijaya, at its height (c. 1180), controlled the Straits of Malacca and of Sunda, all of Sumatra and the Malay Peninsula, and the western half of Java; its authority was recognized as far away as Ceylon and Formosa, and in many colonies throughout the East Indies. The **Sailendra dynasty**, rulers of Srivijaya, were ardent patrons of Buddhism, as is shown in the great Borobudur victory monument in central Java. The consolidation of petty Javanese states, begun after the middle of the 9th century, led to the rise of **Singosari** in eastern Java, which under Kartanagara (who ruled

1268–92) challenged and finally destroyed the power of Srivijaya.

### 1293

A Mongol expedition, sent to avenge insult offered by Kartanagara, was forced out of Java by a new kingdom, **Madjapahit**, which during the 14th century built up a commercial empire with authority extending over Borneo, Sumatra, and parts of the Philippines and of the Malay Peninsula, and profited by an extensive trade with China, Indo-China, and India.

7

### 1389

Death of Hayam Wuruk, after which the power of Madjapahit disintegrated.

8

### 1405–7

The first Chinese expedition under Zheng He (See [1405–33](#)) established tributary relations between many Malay states and the Ming Empire; the authority of Madjapahit rapidly gave way to that of the Muslim Arabs. During the 15th century Muslim commercial operations, based chiefly on Malacca, were extended to the whole archipelago, and some 20 states accepted Islam as the state religion. (See [The Malay Peninsula and Archipelago](#))

(See [By the 6th Century](#))

## **b. [Mainland Southeast Asia](#)**

This period witnessed the strengthening of administrative centralization, the augmentation of the political and coercive authority of the state, and the dissemination of a normative value system (from Theravada Buddhism) that began to supplant local custom. 1

Similarly, the movement of Tai peoples, a gradual infiltration along the rivers and streams, culminated by the 11th century in the introduction of an alternative social structure (neither Indic nor Sinitic but similar to that of the Mongols), based on territorial units. Interaction with other polities led to political dominance by the Tais, especially from the 13th century onward. 2

### **1. Angkor**

Based on limited information, the **economy** of Angkor (present-day Cambodia) seems to have been focused on wet-rice agriculture rather than on coastal trade. The king's authority appears to have been expressed through a well-developed hierarchy that included priests and religious sanctions. In addition, **temples** played a prominent role as custodians over land and peasants. 3

### **889–900**

Rule of **Yasovarman I**, first king to reside at the actual site of Angkor. He built numerous monasteries that variously worshipped the three chief deities of Angkor: **Siva**, **Vishnu**, and **Buddha**. These cults all favored royal power and all received patronage from Angkorian kings. 4

## 940s

**Rajendravarman** is remembered for his conquests and his architectural achievements. 5

## 1006

**Suryavarman I** (d. 1050) extended his authority to the north and west. 6

**Udayadityavarman II** is credited with the construction of the Baphuon, one of the great Saivite temples at Angkor, and also the Western Baray, the large artificial lake of a Vaisnavite temple.

## 1113

**Suryavarman II** (d. 1150) was famous for his military conquests. During his reign, the most famous of all Angkorian edifices, the **Angkor Wat**, was built for him as his personal funerary temple. (Angkor Wat represents the splendor of Khmer architecture and reflected the status of the god-kings of Angkor, as succeeding rulers added to its vastness.) Angkor Wat was devoted to Vishnu; this may reveal an awareness of and sensitivity to the larger Sanskritic world, since this sect was prominent at the time in India and Java. Suryavarman II also conducted diplomatic relations with China. 7

## 1177

**Cham** raid resulted in the sacking of Angkor. (The series of Cham raids probably reflected Angkor's weakness due to internal problems over succession.) 8

## 1180s

**Jayavarman VII** (reign ended c. 1220), successfully expelled the Cham and established his authority. He favored Mahayana Buddhism and built many impressive buildings, including the **Bayon**, a Mahayana Buddhist temple in the center of the Angkor Thom wall enclosure. 9

## 1190s

Jayavarman VII sent expeditions into Champa, which came under Angkorian rule for almost 20 years. 10

## 1220

Khmer lost their dominance over the Cham. 11

By the **late 14th century, Tai military pressures** made defense of Angkor difficult. In addition to this pressure, the Khmer kings were led to abandon Angkor for sites in the vicinity of modern Phnom Penh by a shift in their state's focus from wet-rice agriculture to revitalized maritime trade which, at this time, benefited from China's commercial initiatives. 12

By the 1430s, Angkor was finally abandoned. Rather than a dramatic collapse, it was more like a Khmer reorientation. It represented not only an economic shift but also a shift in religious culture, from priestly to monastic. In addition, the cult of personality of the Angkorian rulers had not led Khmers to invest in any particular cultural or political heritage. (See [Cambodia](#)) 13

## **D. Africa, 500–1500**

### **1. Historical Trends, 500–1000**

This period was a formative one, during which processes of change and adaptation originating in local and regional African conditions accelerated in response to new forces emanating from outside the subcontinental region. Change occurred unevenly in sub-Saharan Africa. On the cultural level, the most important processes include the **migration of Bantu speakers** throughout the central and southern half of the continent; the **widespread diffusion of iron technology**, which accelerated the Bantu migrations; the **domestication of new cultigens**, especially varieties of banana; and the **development of communities** that mixed agriculture and cattle raising. On the political level, this period witnessed the burgeoning of polities and the **articulation of complex political organizations**. Associated with the development of polities was social stratification based on wealth and access to political and religious power. On the religious level, **Islam expanded militarily** up the Nile, into the region between the fourth and fifth cataracts, throughout North Africa, and into the Sahara. Most of the expansion of Islam in sub-Saharan Africa, however, followed the **quietest path**, associated with Muslim merchants. Throughout the *sahel* (an Arabic term for shore) along the desert's edge and on the East African coast, Muslim communities established mutually beneficial relations with communities and political leaders practicing traditional or animist religions. These Muslim communities often developed in **diasporas**, dispersed communities settled along trade routes. **Long-distance trade** across the Sahara, up the Red Sea, and across the Indian Ocean linked Africa with the peoples of the Mediterranean, the Near East, and the Indian subcontinent. Long-distance trade was built on local and regional trade and stimulated both. Merchants imported exotic goods, which often entered **complex circuits of prestige and patronage** and contributed to social stratification and political centralization. The emergence of the East African **Swahili communities** represents a variant of this process.

Developing a **chronology** for these changes has been difficult, due in part to the paucity of archeological investigations for this period and to the absence of written documentary evidence. With very few exceptions, sub-Saharan African societies did not develop written language. As Islam spread throughout the continent, writing was widely diffused,

1

2

often taking the form of vernacular uses of Arabic script, called *ajami*. Wider diffusion of writing took place at a later time and was largely limited to clerics and bureaucracies. To be without writing was not, however, to be without history. Instead, African societies produced **oral traditions** to recount the past. Historians of Africa make extensive use of oral traditions, although these traditions cover relatively short time spans and, like all historical sources, are characterized by certain distortions, especially: bias toward political events, continuous potential for revisionism, telescoping of events to occur within particular reigns, and artificial lengthening of reigns of certain rulers. Historians have developed sophisticated methodologies to control for these potential problems, and they make use of corroborating evidence from archeology, dendochronology, genetic mapping, historical linguistics, and related disciplines. Historical linguistics, in particular, has provided a method for measuring change in language, called glottochronology. Although many historians are dubious about the assumptions of a constant rate of language change, historical linguistics has yielded important evidence for cultural change, especially for the period anterior to the historical reach of oral traditions. The net result is a general chronology that illuminates relative, sequential change.

Three historical trends during this period warrant special attention: **the spread of the Bantu, the rise of complex polities in the West African *sahel*, and the emergence of the Indian Ocean Swahili communities.**

The **Bantu languages** are part of the larger Niger-Congo language family. Numbering some 300 languages, Bantu predominates in the central and southern half of the continent. What is remarkable about Bantu languages is their **relatively close linguistic structure**, which suggests to historians a fairly recent and rapid expansion. Based on historical linguistic evidence, scholars generally agree that in the late Stone Age the early Bantu speakers developed a sophisticated food-producing and fishing complex in the forested region of what is now southern Nigeria and northern Cameroon. Armed with these skills, early Bantu speakers pursued two routes, eastward and southward. Already well dispersed, they probably acquired iron technology around 500 C.E. On their route eastward, the Bantu speakers skirted the northern forest edge toward the interlacustrine region of East Africa. Along the way, they adapted livestock keeping to their agricultural skills. As cattle-keeping farmers, they were able to sustain much higher population growth, attracting both the hunter-gatherers and the livestock nomads of the region for trade. The southward-moving group penetrated the equatorial forest. Iron implements and food-producing skills permitted them to colonize this region more effectively than the autochthonous inhabitants.

The two groups rejoined in the eastern and southern edge of the forest, where the southward-traveling Bantu groups acquired livestock. Sustained increases in human and livestock populations contributed to the **emergence of “big-men” and chiefdoms**. By 1000, Bantu-speaking communities were forming polities in the more densely populated

regions of eastern and central Africa, and they were expanding rapidly into southern Africa. Loans of cattle and livestock-based bridewealth payments were common means of building large followings and tying communities together. Cattle-keeping Bantu farmers predominated in central and southern Africa, and they shared economic, cultural, and political traditions. Many non-Bantu-speaking people adapted Bantu languages to participate in these dynamic communities; others moved to less hospitable regions and retained their hunting and gathering traditions.

Roughly contemporary with the spread of the Bantu speakers, from the middle of the first millennium B.C.E. to the middle of the first millennium of the current era, **West Africans** along the *sahel* and savanna developed an **urban tradition**. This urban tradition seems to have its roots in the fortified villages found along the desert's edge, which may have been the result of episodic periods of conflict in the ordinarily symbiotic relations between desert nomads and settled agriculturalists. Whatever its particular origin, the urban tradition spread along the West African *sahel* and savanna to Lake Chad, and supported communities as small as several hundred to some as large as several thousand. These urban communities were largely agricultural with significant occupational specialization, including artisanal castes, religious specialists, and, increasingly, military and political leaders.

By around 500 C.E., clearly identifiable but **small-scale polities had emerged**. They set the stage for the development of larger **empires** around 800, such as that of Ghana and Kanem. These empires were superimposed above the smaller polities and held together through powerful armies and tribute collecting. Despite their capacity to survive for many centuries, these West African empires were fragile polities, rarely able to transform daily life in their smaller, outlying communities. Nonetheless, the empires fostered military and political specialists and encouraged trade. Carried by merchants, **Islam** found a fertile foothold in these urban settings.

Islam, commerce, and an urban tradition were also emerging along the **East African coast** at this time. Although East Africa had been a central part of the **developing world of the Indian Ocean** since at least the 2nd century B.C.E., the emergence of a distinctive urban, cosmopolitan, and **Muslim African culture** occurred from about the 9th century. This was the beginning of the **Swahili culture**, which was to dominate the East African coast until the end of the 19th century.

East Africa's place in the Indian Ocean system was partly due to the **monsoon winds**, which blow consistently from the northeast from November to March (facilitating navigation from the Persian Gulf and the Indian subcontinent) and from the southwest from April to August (facilitating the return voyage). Ivory, gold, incense, building materials, and slaves were part of this Indian Ocean trading system, although the intensity of the maritime commerce increased as the Abbasid capital shifted from Syria to Iraq and as the Persian Gulf increased in importance. Already by the 9th century, **large numbers of slaves** were draining the swamps of southern Iraq and planting

sugarcane. These slaves, referred to as **Zenj**, the term for East Africa, were involved in the **896 slave revolt**, which lasted for 14 years before the Abbasids suppressed it.

Visiting Ibadi, Omani, and Indian merchants found good anchorage on the archipelago of offshore islands along the Kenyan and Somali coast. There they entered into relations with Bantu speakers who controlled the commodities the merchants wanted. To accommodate this commerce, permanent settlements were created on these islands, although the pace of urban development increased in the 9th century. The **process of interaction** between these foreign merchants and local Africans over the course of many centuries led to the **development of Swahili**, both as a cosmopolitan, urban culture and as the language of that culture. Swahili is a Bantu language with many Arabic loanwords. The development of Swahili demonstrates the processes of social and cultural synthesis that were also occurring in other regions of sub-Saharan Africa. (See [Historical Trends, 1000–1500](#))

## 2. [Regions, 500–1000](#)

### a. [Sudanic West and Central Africa](#)

#### c. 1st Century C.E

**Camels** were introduced into the **Sahara** from the lower Nile Valley during the late 1st and early 2nd centuries. These animals thrived in the sandy, arid conditions of the Sahara—they could carry heavy loads, travel vast distances, and go without water for prolonged periods. Their increasing use from the 2nd and 3rd centuries onward strengthened nomadic societies by facilitating travel and improving military capabilities. The use of camels significantly expanded the scale of **TRANS-SAHARAN TRADE**. <sup>1</sup>

#### 500–800

Alternating **symbiosis and conflict between nomadic and settled agricultural communities led to the consolidation of states** along the desert edge. Especially during periods of drought, nomads from the Sahara raided the sedentary societies of the *sahel*. Nomadic incursions encouraged the **Soninke** to adopt a more complex sociopolitical organization. **They formed the kingdom of GHANA between the 6th and 9th centuries**. The kingdom's rulers asserted control over key trans-Saharan trade routes. Soninke merchants traded gold and slaves for desert salt and imported goods from the north. The presence of Muslim merchants residing at Kumbi-Saleh, Ghana's capital, is attested to by evidence of two separate parts of the capital: one for the ruler and his court and the other for Muslims. <sup>2</sup>

Other West African kingdoms arising in this period included **Gao** and **Kanem**. By the mid-11th century, Ghana had become the largest and most powerful kingdom in the western Sudan. The kingdom of **Songhay**, referred to as Kawkaw (Gao) in the Muslim travelers' accounts, was contemporary with Ghana, although it emerged to a position of power only in the 14th century (See [Historical Trends, 1000–1500](#)). <sup>3</sup>

## 700–800

**Ibadi** traders from North Africa were the first to **introduce Islam** into the Sudan in this period. Their success in gaining Sudanese converts greatly stimulated trans-Saharan trading networks. Although Islam flourished along trade routes and in urban trading enclaves, the peoples of the Sudanic hinterland initially remained wedded to traditional beliefs. Many Muslim merchants also practiced **syncretic forms** of Islam. 4

**Oases** attracted settlers and became important centers of the growing trans-Saharan trade. Inhabitants of oases became experts in constructing wells. They grew such produce as dates, figs, grapes, lemons, raisins, and wheat, and engaged in trade with traveling merchants. Caravan routes passing through Saharan oases solidified **trading relations between North Africa and the Sudan** and led to the **political consolidation of nomadic groups**. The principal trans-Saharan trade routes extended north-south. Traders from the Sudan, south of the Sahara, exchanged slaves and gold for Saharan salt and North African horses. **Long-distance trade across the Sahara stimulated regional and local commerce** in a wide variety of commodities. 5

**Founding of Islamic military and commercial centers.** Berbers in the Sahara began converting to Islam during the first half of the 8th century. By the latter half of the 8th century, Muslims formed the Amal Wah state around four Libyan oases. 6

## c. 800–900

First established in the 2nd century in the **inland Niger Delta** region, the settlement at Jenne-Jeno developed into an important urban center by the 9th century. Its position as a major center of regional and long-distance trade lasted several centuries. Foodstuffs traded in Jenne-Jeno included fish, rice, and millet. 7

## 872

**Kingdom of Kanem** is mentioned in Arabic chronicles. Nomads herding sheep, cattle, camels, and horses initially founded the kingdom of Kanem in the Lake Chad region. Kanem was the first and largest state to be established between the Nile and the Niger River in this era. By the 10th century, urban centers had arisen and a royal palace had been built. 8

## 900–1100

Nomadic Berber pastoralists of the western Sahara, the **Sanhadja**, gained power and influence in the western Sahara by establishing control over many trans-Saharan caravan routes and commercial centers. Sanhadja chiefs collected dues from traders, dispatched guides on trade routes, and exerted authority over a confederation of ethnic groups.

9

The **Almoravids**, also desert nomads, conducted a series of successful holy wars in northwestern Africa. By the late 11th century they had established a powerful Islamic empire stretching from present Spain and Morocco to Mauritania. The Almoravid **conquest of West Africa** was led by **Abdallah ibn Yasin**.

10

### 1000–1100

The rulers of Kanem and Ghana converted to Islam. Consolidation of the kingdom of **Takrur** along the Senegal River Valley (See [1076](#)). According to Muslim travelers' accounts, Takrur was the most Islamized kingdom of the western Sudan. Even more than that of West African merchants, the Islam practiced by West African rulers at this time was syncretic. Few rulers were able completely to shed traditional religions, since their political positions had religious roots. Nonetheless, the conversion of West African leaders greatly hastened the spread of Islam into the entire region.

11

### 1076

The Almoravids pillaged **Kumbi-Saleh**, the capital of Ghana, which led to the gradual **disintegration of the Ghanaian Empire** (See [Historical Trends, 1000–1500](#)).

12

### c. 1179–80

King of Mali converted to Islam by an Ibadi traveler from North Africa.

13

### 1100–1200

Decline of Almoravid Empire. (See [Sudanic West and Central Africa](#))

## **b. Forest West Africa**

### **5th–1st Centuries B.C.E**

**Rise of Nok culture.** The Nok culture in southeastern Nigeria was one of the earliest and most influential of the West African Iron Age societies. Besides developing **ironworking technology**, the Nok culture possessed a unique artistic tradition that it spread widely in the West African forest region. <sup>1</sup>

The 1st century C.E. and onward saw a **transition to more extensive use of iron**. The spread of ironworking technology led to an agricultural revolution. Iron hoes and other tools enabled farmers to produce surplus crops, which supported the growth of urban centers and royal courts. **Expanded agricultural productivity** also encouraged a greater division of labor in the rural areas. Besides greatly aiding subsistence efforts, the Iron Age led to the development of new, more effective weapons. <sup>2</sup>

### **3rd Century B.C.E. Onward**

By adopting **improved agricultural techniques**, including new stone axes and hoes, residents of the West African forest region began to enhance greatly their agricultural capabilities. The new tools facilitated the clearance of vegetation and the preparation of soil for planting, especially of root crops such as yams. <sup>3</sup>

### **1st Century C.E**

Forest region of Nigeria became settled by populations practicing root crop and oil palm cultivation. <sup>4</sup>

### **600–1100**

The **Akan** region of present Ghana became an important center of ironworking. Iron tools greatly facilitated **clearing of the forest**. Inhabitants of the region became increasingly urbanized, formed states, and engaged in long-distance trade. <sup>5</sup>

### 600–1200

Gradual process of village settlement and intensification of agriculture in the Yoruba area of Nigeria. Archeological evidence suggests emergence of religious specialists. Forest clearing and population concentration led to the **formation of polities**. By the 10th century, development of distinctive, naturalistic terra-cotta sculpture of the **Ife tradition**. <sup>6</sup>

### 700–1100

Archaeological excavations in southeastern Nigeria suggest that a rich and complex civilization existed. Artifacts unearthed at shrines and burial grounds at **Igbo-Ukwe**—mostly ironware and pottery—attest to the society's **multilayered social organization**. Using Iron Age technology to harness agricultural wealth, inhabitants of Igbo-Ukwe became urbanized, participated in long-distance trade, and instituted new social and political hierarchies. Atop the society, generally characterized by the absence of rulers, were wealthy individuals. The civilization at Igbo-Ukwe marked a high point of Iron Age development in the region. <sup>7</sup>

### 900–980

Beginning of **state formation among iron-using Edo of Benin**. King lists indicate that the first Benin ruler (*ogiso*) emerged c. 950. Early use of bronze in casting suggests **complex long-distance trade routes** feeding this region. <sup>8</sup>

### 900–1100

Increasing root and tree agriculture led to increased population growth and permitted trade across the ecological frontier with the settled cereal farmers of the grasslands. **Kolanuts**, sea salt, and dried fish were traded northward for livestock, desert salt, and cloth. (See [Forest West Africa](#)) <sup>9</sup>

### **c. Northeast Africa (Horn)**

African states existed in this region considerably earlier than the beginning of this period. In **Nubia** (northern part of present **Sudan**), for instance, **Kush** became independent from Egyptian rule around 750 B.C.E.; later politics were centered further south at **Meroë**, which was situated in a more fertile region. The history of Meroë was marked by long-term stability, centralized kingship, and a distinctive (although Egyptian-derived) artistic and architectural tradition. After a period of decline, it was for a time conquered by Axum (350 C.E.). 1

#### **500 C.E**

**Nubia** was predominantly Christian, and remained so until Muslim rulers came to power in the 14th century. 2

#### **651–52**

As part of the **Arab conquest of North Africa**, Arab armies attacked **Nubia**. A nonaggression treaty (the *bakt*) was concluded in 651, resulting in five centuries of freedom from attack, with continued trade and cultural contact with Egypt. 3

#### **697**

Peaceful *bakt* conditions allowed Nubia to achieve political unity from this year, as well as religious unity (under the **Monophysite Egyptian Church**) and economic prosperity. 4

#### **800–1000**

**Nubia** flourished from the end of the 8th to the 12th century. 5

### 956

A militarily powerful **Nubia attacked Aswan** (Egypt). 6

### 962

Nubia occupied much of upper Egypt. 7

### 969

The Nubian king refused payment of the tribute required by the *bakt* and refused to convert to Islam. 8

The area of present-day **Ethiopia** also had states that long predated this period. The kingdom of **Axum** came into being in the 2nd century C.E. and enjoyed wealth based on trade in the Red Sea and Mediterranean areas. It was predominantly Christian from the 3rd century. 9

### 300–600

States in what became Ethiopia flourished with **Indian Ocean trade** from the 4th to the 6th century. 10

### 600–800

Ethiopia began to decline in the 7th century, disappearing in the 8th century. Axum came into conflict with the early Muslims in southern Ethiopia (including **Shoa** and **Ifat**) and on the Red Sea coast in this period. (See [Northeast Africa \(Horn\)](#)) 11

## d. [East Africa](#)

### 500–600

The **interior** was not yet greatly involved with the coastal commerce. The most important changes in the interior in this period concerned the introduction of the **banana** and the development of highland agriculture based on it, and the spread of **iron technology**. The dominant groups (in terms of language) were the **Cushites**, who had entered the region between 3000 and 2000 B.C.E., and the **Bantu**, who had spread through the area in the first centuries C.E. Nilotes, Khoisan, and central Sudanic groups were also present. Cushites were cattle keepers and grain cultivators, while Bantu peoples practiced forest agriculture based on the yam, and therefore were concentrated in the wetter regions. During this period they began to adopt cattle and grain agriculture from their neighbors in the eastern part of the region. By the 7th century, **Bantu dialects were diverging**, indicating an end to the great sweep of migration and expansion by separate groups within more limited areas.

### 500–1000

The **interlacustrine** region saw a buildup of population along the western and southwestern shores of Lake Victoria, leading to expansion to the northwest and north, settling the protopopulations of later communities such as the Ganda, Soga, Nkore, and Bunyoro. **Iron tools** slowly expanded in the interior, supplanting the earlier stone technology. Bantu groups made iron tools from the beginning of the Christian era. Such tools were also acquired in coastal trade by Cushites.

The processes leading to **the development of Swahili culture** on the coast accelerated in this period. Most important were the expansion of trade, the emergence of **urban centers** on the coast, and the beginnings of **Islamic influence**. The **monsoon winds** of the northern Indian Ocean region and the **equatorial current**, flowing south along the coast from Somalia, facilitated development of **maritime trade linking India, Persia, southern Arabia, and the East Africa coast** from the era of the Greek and Roman

Empires.

## 650–800

Maritime trade was greatly stimulated by the growth of the Arab Islamic Empire beginning in the 7th century. The East African coast began to export new goods, and coastal towns grew and fell on the strength of the trade. **Islam came with small numbers of immigrant merchants** from Arabia and Persia from the 8th century, most of whom settled on offshore islands. Islam was slowly adopted by coastal Africans involved in trade but did not become dominant until the 12th century. However, the influence of the immigrant traders led to the absorption of a large number of **Arabic loanwords** into the developing indigenous language, **Swahili, in the Bantu group**, and to the use of Arabic script for writing Swahili. 4

## 800–1000

Many coastal urban centers emerged during the 9th and 10th centuries, but most did not become prominent until the 11th century. 5

## 850–1000

A new type of agriculture emerged toward the end of this period, practiced on the highland slopes of the Pare Mountains by the proto-Chagga (a blend of Nilotes, Cushites, and Bantu) and based on **intensive cultivation of bananas**, probably introduced by Indonesian traders. Bananas also spread in this period from the south to the interlacustrine region and to Mt. Elgon. (See [East Africa](#)) 6

### e. [West Central Africa](#)

#### 500–1000

This was a period marked by a change from hunting and gathering to food production and a transition from Stone Age to **Iron Age technology**, as well as a rapid expansion of Bantu languages and an increase in population. Bantu speakers were present on the north margins of the **Congo forest**, from where they began to spread throughout the region. On the northern edge, Bantu speakers were raising cereals and livestock, while those in the forest practiced fishing and forest agriculture. Cereal agriculture and cattle keeping were made more efficient by the coming of Iron Age technology, which facilitated Bantu expansion into the east and southeast, displacing the hunters who preceded them by pushing them into more remote and less hospitable regions. The spread of Iron Age Bantu speakers was also associated with a **rapid expansion of population** and by the establishment of **local and regional trade links** involving salt, iron, and copper. <sup>1</sup>

#### 700–800

By the 8th century, a relatively advanced metalworking culture had developed in the **Katanga (Shaba)** region of southeastern Congo. The culture grew up as a result of important deposits of minerals in the region, especially copper and iron, and it may have been an important center of independent invention of metallurgy. In any case, the wealth developed from exploitation of **mineral resources encouraged the emergence of differentiated “big men”** among the **proto-Luba and proto-Lunda cultures**. <sup>2</sup>

#### 1000

Bantu expansion was complete. Bantu ascendancy had been established by Iron Age farmers who were adaptable to a variety of environments. Cattle-keeping farmers augmented the **economic diversity** among expanding Bantu communities. (See [West Central Africa](#))

## f. [Southern Africa](#)

### 500

By this time, several **Iron Age farming populations** had long been present in southern Africa. <sup>1</sup>

### 600–700

The **Leopard's Kopje** culture (**proto-Shona**) were farmers who also kept cattle and lived in semipermanent villages in southwestern present-day Zimbabwe and northern Transvaal. Also by this century, there is evidence of the **southern African Bantu cattle culture**, in which men, ancestors, and cattle played pivotal roles. Archaeological evidence shows the presence of central cattle byres containing storage pots and burial remains. <sup>2</sup>

### 700–1000

**Zhizo** people on the eastern fringe of the Kalahari desert practiced Bantu cattle culture. <sup>3</sup>

### 1000

Bantu speakers evolved the Zimbabwe culture at **Great Zimbabwe** and other centers. Autochthonous inhabitants were pushed into less hospitable areas. (See [Southern Africa](#)) <sup>4</sup>

## g. [Madagascar](#)

### 500

Early in the first millennium, **Austronesian seafarers** brought people, language, and culture to the island that was already part of an **inter-regional Indian Ocean trade network** for timber, gum, and aromatics. Very little is known about the early history of this region, although it was the site of important ethnic, agronomic, and cultural exchanges with Indian Ocean neighbors. 1

### 650–1000

The period saw a development of trade with the Muslim world and a conversion of some to Islam. (See [Madagascar](#)) 2

(See [Historical Trends, 500–1000](#))

### 3. [Historical Trends, 1000–1500](#)

Between 1000 and 1500, processes of political, economic, and cultural change moved along the same trajectories as in the earlier period, but at an accelerated pace. This is a period still beyond the reach of all but the most mythical of traditions. Oral traditions, especially those dealing with the origins of kingdoms, often portray the complex processes that led to the formation of larger kingdoms in terms of the heroic actions of the kingdom's founder. Rather than seeing these oral traditions as discrete historical experiences, historians interpret such “foundation traditions” as **symbolic templates** for examining the general historical processes of transforming small-scale polities into larger kingdoms. Using corroborative historical sources—including archeology, king lists, and written records, including *tarikhs*, or chronicles—historians date the founding of many African kingdoms to this period. 1

In interpreting the history of this period, Africanists have found it difficult to separate political, economic, and cultural change. Instead, they understand change as mutually reinforcing processes that led to the gradual formation of larger polities, which in turn stimulated increased commercial activities and accelerated cultural change and experimentation. Although the central historical experience on the political level during this period was the **gradual process of forming larger states out of clusters of smaller polities**, large states or empires remained inherently unstable and prone to periodic dissolution. Oral traditions dealing with this period, as well as the available written records, are biased toward the more stable and enduring polities and their political histories. In contrast, we know relatively little about **acephalous societies**, although the archaeological excavations at Igbo- Ukwé in southeastern Nigeria demonstrate that complex political organizations may have existed even in societies without rulers. These excavations also point to important patterns of cultural change and social differentiation based on wealth. 2

In the West African savanna, this period witnessed the flowering of the **medieval West African empires**. Ancient **Ghana** (See [1076](#)), to be distinguished from the modern nation of Ghana, was formed around the 9th century and reached its apogee at the beginning of the 11th century. The Morocco-based **Almoravids** sacked Kumbi-Saleh, 3

the *sahel* capital of Ghana, in 1086, which ushered in the gradual decline of the first West African Empire. The sack of Kumbi-Saleh led to a dispersion of Soninke chiefs, princes, and merchants that stimulated state formation elsewhere in the region.

**Mali**, located in the Mande zone farther south, congealed around a series of micropolities and transformed them into a larger state. The founding of Mali is told in the **epic of Sundiata**. Using armies of conquest, Mali succeeded Ghana in forming a huge territorial empire, which stretched from Senegambia in the west to the Niger Bend in the east, and from the desert's edge in the north to the forest in the south. Mali's rulers converted to Islam, and **Mansa Musa made the pilgrimage** to Mecca in 1325. He was accompanied by such a large entourage and carried so much gold that Arab and European geographers began to include Mali on their world maps.

By the beginning of the 15th century, Mali was in decline and the Niger Bend state of **Songhay** was ascendant. By the time of Sonni Ali (r. 1464–92), Songhay had transformed itself from a small riverain polity into a great empire. Due to the existence of two important *tarikhs* originally written at this time, historians know that Songhay's core military divisions consisted of tightly organized cavalry, infantry, and river-based naval units; territory was governed by appointed military leaders; and bureaucracies managed diplomacy and the massive slave plantations that supplied the court and the standing army with food and materials.

The same processes of change represented in the formation and decline of the West African empires played out on a smaller scale throughout much of sub-Saharan Africa during this period, but the details are less available to historians. In the West African forest zone, **Yoruba and Edo kingdoms** emerged out of compact village communities. In the **interlacustrine** region of East Africa, five or six larger kingdoms developed out of a cluster of some 200 micropolities. Similar patterns yielded the kingdoms of the **BaKongo, Luba, and Lunda** of the savannas to the south of the equatorial forest, and they occurred in central Africa, where the **Mwene Mutapa Empire** transformed smaller Shona chieftancies into a larger territorial unit. In all cases, political consolidation was linked with military exploits, commerce, and culture change.

Political power in precolonial Africa was often expressed in terms of **control over people and resources**. The formation of larger polities in sub-Saharan Africa invariably involved competition. Military force was one, but only one, means of achieving control over people and resources. Alternatively, emergent rulers solidified their control over followers through **patronage**, often loaning cattle or distributing women to followers. **Redistribution of wealth**, especially of exotic trade goods, also bound followers to rulers.

Military force was a prime means of maintaining control over people and resources. **Warfare became a central expression of political and economic power**, although communities without formal state organizations also engaged in raiding and warfare. Warfare yielded booty, especially livestock and slaves. **Slaves** were important elements

of most premodern societies, especially in societies where land was abundant in relation to the number of people to cultivate it. Since slaves could easily run away, they did not have much value at the point of capture; slaves' value increased the farther away they were transported. Thus **warfare was inextricably linked to long-distance trade.**

This period witnessed the development of important long-distance trade systems that linked sub-Saharan Africa with the Indian Ocean and with North Africa and the Middle East. Slaves, as a by-product of the consolidation of African polities, fed the growing demand for soldiers, for loyal government officials, for concubines, and for agricultural labor in the Muslim empires of North Africa and the Middle East. The trans-Saharan, Nile Valley, and Red Sea slave trades carried approximately 1 million slaves each century, from the 9th to the late 19th century.

Long-distance traders were also interested in **African gold**—which became the principal gold supply for the commercial world of the Mediterranean—as well as in exotic feathers, skins, and incense. Because long-distance trade deals primarily in low-weight, high-value items, it tends to cater to wealthy consumers. African consumers in the intercontinental market were interested in exotic luxuries, such as glass beads, fine ceramics, luxury textiles, paper, and books (especially copies of the Qur'an), as well as mineral salt, horses, and weapons.

Long-distance traders needed to resolve several important technical impediments to **cross-cultural trade**, including the lack of a common language, adjudication in disputes, and reliable market information. To solve these problems, traders developed a network of linked yet dispersed communities known as **diasporas**. Long-distance trade depended on—and stimulated—local and regional trade. Trade was ubiquitous throughout sub-Saharan Africa, stimulated by specialized economic activities. Economic specialization grew out of adaptation to specialized environments, such as through herding or fishing, and out of specialized knowledge, such as smelting, weaving, or ceramics. Long-distance trade was one form of specialized economic activity, which flowed from the demand for commodities not locally available. The list of imported luxuries illuminates the **close links between long-distance trade, political change, and cultural change**. Most of the goods imported by long-distance traders catered to wealthy consumers and served military or patronage needs. Control over trade was a central part of maintaining political power, and it created needs that required continued participation in long-distance trade.

The traders best able to resolve the technical impediments to cross-cultural trade were those who shared a sense of belonging to supranational communities. In sub-Saharan Africa, most long-distance traders who plied the intercontinental trade routes were Muslims. In their diaspora settlements, Muslim merchants settled with clerics and created Muslim communities. African rulers, particularly those involved in the trans-Saharan, Red Sea, and Indian Ocean trades, saw in Islam a means of participating in a different moral and political community. The **conversion of African rulers to Islam** is

indicative of the complex cultural changes that swept the continent during this period. Conversion must also be understood as part of a political calculus, in which some African rulers sought to consolidate their own power at the expense of traditional religious authorities. These were some of the reasons that, in 1492 or 1493, Muhammad Rumfa, ruler of the Hausa city-state of Kano, invited the Saharan cleric al-Maghili to instruct him in the arts of Islamic statecraft.

Although the historical evidence on social change is not very reliable for this period, some trends that became clearer over the period 1500–1800 certainly had their roots in this period. Increasing **social differentiation** by wealth and rank occurred simultaneously with increased trade and political consolidation. There were **no sumptuary laws** to distinguish noble from commoner, although such distinctions must have been fairly obvious. Nobles and the wealthy simply had more possessions than common folk: more wives, more children, more grain, more cattle, more slaves and dependents, bigger houses, and so on. **Warrior aristocracies** also emerged during this period to serve the political needs of larger polities and to provide slaves for the intercontinental trade. Increased trade between African groups and increased warfare heightened a sense of ethnic separateness, and led to the articulation of bounded ethnic identities. These trends became more pronounced in the period 1500–1800, which coincided with Africa's increased participation in the international slave trade. (See [Overview](#))

## 4. [Regions, 1000–1500](#)

### a. [Sudanic West and Central Africa](#)

1076

Almoravid destruction of the empire of Ghana and the spread of Islam in the political center of the emerging states of Takrur, Songhay, Soso, and Kanem-Borno. The empire of **Ghana** had reached its zenith by the late 11th century. In 1076 the **Almoravids** conquered Ghana and forcibly converted its people to Islam. The conquest of Ghana led to the gradual decline of Ghana's power, which encouraged the rise of regional polities and the wider diffusion of Islam. Even before the conquest of Ghana, the king of **Takrur** had converted to Islam. By the 12th century, the Takrur state controlled the Senegal River and reaped profits by controlling the trade from nearby gold and salt mines. Takrur's influence spread throughout the Senegal River basin. The rulers of **Songhay** converted to Islam around 1010. In the 12th century, the Songhay kingdom occupied the Niger Bend region. **Timbuktu** emerged as an important entrepôt on the southern edge of the desert. **Soso**, another state to emerge in Ghana's wake, arose in the late 12th and early 13th centuries. It developed a rich tradition in ironworking. The powerful **Kanem** kingdom (See [1000–1100](#)) dominated the Lake Chad region by the 12th century. The only major political entity between the Nile Valley and the Niger Bend, Kanem served as the southern terminus of a major caravan route between Lake Chad and the Mediterranean. In the 12th century, the peoples of Kanem began to migrate to **Borno**, west of Lake Chad, to a region better suited to agriculture and sitting astride important trade routes down the **Benue River Valley** toward the coast.

(See [900–1100](#))

## **b. Forest West Africa**

### **c. 1000–1100**

The first **Yoruba kingdom** to develop a highly centralized state, **Ife** achieved renown for its patronage of skilled craftsmen. Ife kings especially encouraged the production of cooper and brass ornaments. As the 11th century progressed, the hierarchy of courtly officials serving under the monarchy expanded. <sup>1</sup>

### **1200–1300**

**The city of Benin** flourished as a regional center of politics and commerce. <sup>2</sup>

### **c. 1300–1400**

The powerful kingdom of **Benin** entered a new phase of growth and consolidation, according to the oral traditions surrounding **Prince Oranyon**. <sup>3</sup>

### **1400–1500**

During the rule of **Ewuare**, the power of the Benin monarchy grew considerably, far outstripping that of Ife at its height. He ushered in **a political revolution that led to the emergence of a bureaucracy** to support the ruler's power against the hereditary chiefs. Benin city walls were built, and Benin expanded militarily and commercially throughout the Niger Delta region. At the time of the Portuguese contact, Benin was the **most** <sup>4</sup>

**powerful forest kingdom.** The artisanal caste of bronze casters was under the direct patronage of the *oba*, the ruler of Benin, and produced very impressive bronze works.

### c. 1400–1500

The Upper Guinea coast—between present-day Senegal and Sierra Leone—witnessed the development of several kingdoms prior to the arrival of the Portuguese, including the **Niumi, Badibu, Niani, and Wuli**. Part of the stimulus to state formation in the region was the expansion of Malian authority. One of **Sundiata's** generals established the **Kaabu** state there, providing the kingdom of Mali with a western outpost. <sup>5</sup>

### 1462

Seeking a local base near Africa, the Portuguese established their headquarters on **São Tiago, one of the Cape Verde Islands** close to the African mainland. Following Portuguese occupation, herding, cotton cultivation, and weaving became the mainstays of the Cape Verde economy. Slaves from Senegambia and Upper Guinea were imported soon after Europeans settled on the islands. <sup>6</sup>

### 1472

With the help of African slave labor, the Portuguese established sugarcane plantations on **São Tomé Island** in the Bight of Benin. Exclusively using African slaves to cultivate sugar, São Tomé became the **harbinger of the slave system of the Atlantic economy**. <sup>7</sup>

### 1481

Portuguese constructed the **fort of Elmina** on the Gold Coast. Elmina was the first Portuguese settlement on the African mainland. From this strategic site, the Portuguese began to engage in trade with the indigenous peoples, often acting as middlemen between two African societies. The Portuguese traded **African slaves for locally mined gold**. Slaves helped to clear the forests and provided new power to the emerging African rulers of the Gold Coast. (See [Forest West Africa](#)) <sup>8</sup>

[PREVIOUS](#)

[NEXT](#)

---

(See [600–800](#))

### c. [Northeast Africa \(Horn\)](#)

The defining characteristics of this period were the expansion of **Arab** peoples and the **growth of Islam** as a result of migration; pastoralism; and the **establishment of trade networks of Muslim merchants**. 1

#### 1000–1170

**Nubia**, dominated by the central state of **Mukurra**, reached the height of its power as a Christian kingdom during the *bakt* (in force since 651). 2

#### 1150–1270

Although Islam had also begun to expand in the Horn of Africa region in the new millennium, especially in the trading centers along the Red Sea Coast, there was a **revival of Christian central power** under the **Zagwe dynasty**, based in Ethiopia's northern highlands. 3

#### 1171–1250

Good relations between Nubia and Egypt, existing while the latter was under **Fatimid** rule and the *bakt* continued to be observed, gave way to hostility under the **Ayyubid dynasty** in Egypt. Nubia began to decline during the Egyptian dynasty of the Ayyubids. Egyptian campaigns against **rebellious Arab groups** encouraged the latter to move into Nubian territory. 4

## 1250–1500

Nubian decline intensified under the Egyptian **Mamluks** (1250–1517), a result of direct Egyptian pressure as well as the immigration of Arabic nomadic pastoralists. **Nubia eventually fell to the Mamluk Empire.** 5

## 1270–85

Succession problems in Ethiopia led to the Zagwe dynasty's overthrow at the hands of **Yekunno-Amlak** (1270–85), who established the **Solomonic dynasty**, claiming legitimate succession from ancient Ethiopian kings who had claimed descent from King Solomon of the Old Testament. 6

## 1272

When the Mamluk sultan **Baybars** (1260–77) demanded resumption of the *bakt*, Nubian king **Dawud** responded by taking the Egyptian Red Sea port of 'Aydhab. 7

## 1275–1325

The weakening of the Nubian state encouraged depredation by migrating Arab groups, which in turn resulted in further Egyptian incursions in the late 13th and early 14th centuries. 8

## 1276

**Baybars** mounted a punitive expedition (See [1276](#)) and installed Dawud's cousin Shakanda as king. As a result Nubia became a vassal state contributing slaves, state revenue, and revenue from a poll tax on non-Muslims. 9

## 1300–1500

The **fall of Christian power in Nubia** left Ethiopia the only Christian state in the region. **Arabization and Islamization** of the population—including the royal family 10

(encouraged by the indigenous matrilineal descent pattern)—continued, along with decentralization of power. Nubian decline led to a much wider dispersion of Arab groups toward southern pastures, carrying them west as far as Lake Chad.

## 1314–44

**Amda-Siyon**, grandson of the founder of the Solomonic dynasty in Ethiopia, gained the throne in 1314 and ruled until 1344. Under his rule the state established military dominance over its Muslim neighbors and conquered extensive new territories. **Ifat**, the most important Muslim neighbor, became a tributary. **Lack of Muslim unity** contributed to Amda-Siyon's successes. The new regions were not ruled directly, but by local rulers under the authority of the Christian emperor, who reigned from a mobile capital. **Tribute and control over trade** in slaves, ivory, and gold made the Solomonic state wealthy. The establishment of new monasteries in the interior spearheaded the **spread of Christianity and learning**. <sup>11</sup>

## 1315

Nubia's failure to pay tribute resulted in the naming of a Muslim nephew of King Dawud <sup>12</sup> to the Nubian throne.

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

[CONTENTS](#) · [SUBJECT INDEX](#) · [BIBLIOGRAPHIC RECORD](#)

---

[PREVIOUS](#)

[NEXT](#)

(See [850–1000](#))

#### d. [East Africa](#)

The monsoon wind patterns that facilitated the rise of East African Indian Ocean trade (See [Historical Trends, 500–1000](#)) led to the development of coastal fishing and farming communities into large African towns with trading, religious, and ultimately political ties to Arabia, Persia, and India. These contacts are exemplified by Arab geographer **al-Idrisi's** description of the known world (1154), which divided the Swahili coast into the **land of Zanj**, in the north, and the **land of Sofala**, in the south. <sup>1</sup>

#### 1000–1500

The **Swahili civilization**, which grew out of coastal communities of Bantu speakers, and augmented by peoples from the interior and immigrants from Arabia, Persia, and India, reached its height in this period. Wealth from trading activities led to the development of several important trading towns along the coast, from **Mogadishu** in the north through **Lamu** and **Zanzibar** to **Kilwa** in the south. These towns imported Arabic pottery and Chinese porcelain and, for the interior trade, Indian cloth. They exported tropical woods and ivory, shells, slaves, iron, and, from Kilwa, gold from the mines of Zimbabwe. <sup>2</sup>

In the **interlacustrine zone**, trade between specialized agriculturalists and pastoralists led to the **formation of new polities** late in the period. <sup>3</sup>

#### 1100

**Bantu-speaking** groups (who had emerged from the western forests) were still few in number and were concentrated in the areas of higher rainfall (at least 1000 mm annually). The Bantu speakers therefore continued to be root agriculturalists. The drier plains and highlands were dominated by cattle-raising and grain-growing **Nilotic** and southern **Cushitic** groups. Some hunter-gatherer groups were interspersed throughout the region. <sup>4</sup>

Bantu movements into the drier areas resulted in their adoption of cattle raising and grain cultivation. They also adopted some cultural patterns. For example, Bantu groups affected by contact with southern Cushites and southern Nilotes on the east side of Lake Victoria adopted male and female circumcision and discontinued chieftaincy. **Intensive banana and grain cultivation** grew out of a merger of Bantu and Cushitic traditions on the slopes of **Mt. Kilimanjaro**. The Bantu's adaptability, therefore, encouraged their expansion. The western interior, however, continued to be dominated by southern Nilotic groups. In **eastern Uganda**, the migration of Bantu speakers (known in tradition as the founder Kintu and his followers) from Mt. Elgon and northeastern Lake Victoria led to the **formation of several small states** from 1100.

### 1100–1200

A new dynasty identifying itself as **Shirazi** (from Shiraz, Persia) came to power in the coastal town of **Kilwa** in the 12th century. The culture of the immigrants from Persia and Arabia was important in East African religion and politics, though the immigrants were not numerous and intermarried with Africans. The ruling classes in the towns were probably of mixed Afro-Arab descent, while commoners and slaves were Africans. Recent immigrants from Arabia and Persia formed a separate group. Islam, adopted first by the merchants and then by other elites and urbanites along the coast, began to spread in the 12th century. The **Swahili language was put into written form using Arabic script** in the early part of this period. 5

### 1300–1500

The rise of the **gold trade** led to Kilwa's eclipse of Mogadishu, Lamu, and Zanzibar after the 13th century. **Cowrie shells and locally minted coins** were used as currency in this trade. New wealth led to construction in coral in the towns, in a distinctive **Swahili style of architecture**. One of the most outstanding examples is the **Great Mosque of Kilwa**, reconstructed in the first half of the 15th century. **Swahili civilization reached its peak** in the 13th through the 15th centuries, before being overshadowed by the arrival of Portuguese power in the early 16th century. Less is known about the **East African interior**, because of the absence of written sources, but important developments can be discerned from archaeology and linguistics and in some cases from oral traditions. The history that emerges is one of the movements of various populations, identified by language groups, and changes in material culture due to contact with other people and the entry into new ecological zones. 6

**Larger kingdoms, based on the interaction between pastoralists and cultivators,** 7

began to emerge in the interlacustrine region. These kingdoms succeeded smaller states organized by Bantu cultivators in the region from around 900. Thus, the **Bito dynasty** in the **Bunyoro kingdom** (southwestern Uganda), founded by **Luo or Hima** pastoralists in about 1400, succeeded the **Chwezi dynasty** of Bantu cultivators. A new larger kingdom succeeded smaller Bantu states in **Rwanda** in the same period, incorporating both pastoralist and agriculturalist elements under **Tutsi domination** from about 1400.

## R. 1344–74

Another tradition based on migrations from the west following the Chwezi collapse names **Kimera** (1344–74) as founder of a **new dynasty in Buganda**, which was to become an important state in the succeeding era. (See [East Africa](#))

### e. [West Central Africa](#)

#### 1000

Despite an expansion of population in the preceding half millennium, the region was still **sparsely populated** compared with West Africa and the interlacustrine region. **Sanga**, on the Lualaba River in the **Katanga** (Shaba) region of present-day Zaire, had by this time a **rich metalworking tradition** in an area that attracted Iron Age populations, due to a good supply of fish and game and good rainfall for agriculture. These populations worked **copper mines** on the upper Lualaba River, to the southeast. The presence of salt and minerals also **avored the development of trade**—with standardized copper ingots as currency—and towns, which facilitated **political centralization**. This area was the core region for the development of the political culture that evolved into the **Luba and Lunda Empires**. <sup>1</sup>

#### 1250

The transition to later Iron Age culture in **Lunda** led to a centralization of power by territorial chiefdoms, in competition with lineage-based authority. <sup>2</sup>

#### 1350

The **Kongo kingdom** developed out of a prosperous farming community near the mouth of the **Congo River**. This location, with access to both forest and grassland economies, stimulated growth and trade. Kings at the settlement of **Mbanza Kongo centralized power** based on a **hierarchical system of tribute and trade**. The kingdom slowly <sup>3</sup>

expanded south of the river, conquering other chiefdoms.

## 1400

**Lunda** arrived at political stability based on the alliance of a central chief of real or putative foreign origin and the old lineages. A system of “perpetual kingship” developed, in which the new officeholder “becomes” his predecessor, ensuring continuation of alliances based on kinship, marriage, and conquest. 4

## 1400–1500

In **Angola**, this period saw the **emergence of many small kingdoms or chiefdoms** among the **Ndongo** peoples of the Luanda plateau. These small kingdoms coalesced around two types of **cults**: the *malunga*, associated with rainmaking, and the *ngola*, associated with iron. The *ngola* kings began to consolidate political and spiritual authority as well as control of trade and important resources, such as salt. 5

## 1483

**Portuguese arrived in Kongo** with commercial, religious, and strategic interests. They found a distinct class of aristocrats at the urban center and slaves who performed agricultural labor to support the elite class. The king appointed provincial governors, often his relatives. The king was chosen by a group of electors, and his power was to some degree limited by a council. The capital was the focus of **regional trade networks** involving iron, pottery, salt, copper, and ivory. **Imported European trade goods, along with teachers, priests, craftsmen, and Christianity created a distinctive court culture and had far-reaching effects** on the development of Kongo. 6

## 1500

Sometime before this date, the **Luba state** emerged, fusing several clans under one chief. By this time, Kongo was becoming a conquest state and a trading empire, with a separate aristocracy and middle class. Increasing commerce linked the forest zone to the interlacustrine region in the east and the emerging state systems to the west. (See [West Central Africa](#)) 7

## f. [Southern Africa](#)

### 1. [North of the Limpopo](#)

#### 1000

By this date, the **Zambezi** and **Limpopo** basins were widely settled by Iron Age peoples, who farmed sorghum and millet and kept cattle and small livestock. Pockets of Stone Age hunter-gatherers remained in the savanna. Hunter-gatherers, ancestors of modern **San** groups, occupied the **Kalahari** to the southwest. <sup>1</sup>

#### 1000–1200

New cultures, including the **Leopard's Kopje** tradition in modern Zimbabwe, supplanted the early Iron Age cultures of this region. The new developments may have been influenced by the immigration of pastoralists in the 9th or 10th century. By the 12th century, Leopard's Kopje people were engaged in gold mining. The mining and trading economy led to the **accumulation of wealth** by a privileged class and **political centralization**. Other new farming-based societies, sparked by immigration or technological innovation, emerged in this region in the 12th century among **Shona** speakers. Later Iron Age peoples settled at what became **Great Zimbabwe** in the 10th or 11th century. Trading states linked to the trade of the East African coast appeared in coastal Mozambique. <sup>2</sup>

#### 1100–1300

From the 12th century, gold mining increased in the Leopard's Kopje area. In the 12th <sup>3</sup>

century, significant changes took place in **Great Zimbabwe**, through which Leopard's Kopje exports were traded to the coast. These changes included the building of stone walls and the import of glass beads and other luxury goods, indicating new trade and wealth. A **powerful state structure** emerged there by 1300. Its domain included much of central and southern Mashonaland. Both Zimbabwe and Leopard's Kopje developed **extensive trading networks and political centralization**. Long-distance trade led to the accumulation of considerable wealth by the rulers at Great Zimbabwe. This in turn led to **greater population densities**, which in the long run probably resulted in overgrazing and loss of fertility of the land.

### 1300–1400

**Great Zimbabwe's trade continued to flourish** through the 14th century. By this century, imports at Great Zimbabwe included glass beads as well as ceramics from Persia, Syria, and China.

4

### 1400–1500

The **gold trade** from Sofala to Kilwa, on which Great Zimbabwe's wealth depended, reached its height in this century and then went into a steep decline, influencing the rapid decline of Great Zimbabwe as a political and trading center. The site was abandoned at the end of the 15th century, perhaps as a result of environmental degradation. The decline of Great Zimbabwe coincided with the **emergence of the Rozwi Empire** under a ruler known as **Mwene Mutapa** (Master Pillager). About 1490 the southern part split off, leaving Mutapa with domain over a region south of the Zambezi stretching to the Indian Ocean. This northward shift of power was related to new gold production from 1450 on the Zambezi tributaries.

## **g. [Madagascar](#)**

### **1000**

Indonesian immigrants had been settled on the island since the previous century. 1

### **1100–1500**

**Arab Muslim** influence became important as a result of immigrants involved with trade to the Arab and Swahili worlds. 2

### **1200–1500**

A new wave of **Indonesian immigration** to the east coast or northwest brought irrigated cultivation of rice, bananas, yams, and cocoa. Immigrants encountered earlier mix of Indonesian settlers and Africans, whom they called **Vazimba**. The two groups initially cooperated but eventually come into conflict, which led to the founding of **Merina state** on the interior plateau, toward the end of the period. The new immigrants (including Muslims) brought **institutions of royalty**, which had not existed previously on the island, but the developing political institutions reflected the contributions of Asians, Africans, and Muslims. 3

### **1300**

Muslim settlers arrived in the **Comoro Islands** from the east coast of Africa, and later settled in northwestern and northeastern Madagascar.

4

## 1400–1500

By this time, **Muslim settlements comparable to the Swahili coastal towns** had been established on the northwestern and (later in the century) northeastern coasts, for trading with the Swahili and Arab worlds. The settlements exported rice and soapstone carvings in exchange for imported pearls, cloth, and Chinese ceramics. (See [Madagascar](#))

## **[E. East Asia, to 1527](#)**

### **[1. China, 589–960](#)**

#### **[a. Periodization and Events](#)**

The period from 589 to 960 covers the short Sui dynasty, the Tang—one of the longest Chinese dynasties—a period of splendid growth in every way, and a half century of disunion. Most historians of China, regardless of their subspeciality, would agree that a breaking point of great significance occurred at the end of the Tang and the beginning of the next imperial dynasty, the Song; others place it more generally over the course of the 10th century. This period has been forcefully argued as marking the beginning of Chinese modernity, the end of aristocracy and the commencement of meritocratic government, the shift from slavery to feudalism, the rise of centralized autocracy, and a host of other important transitions. Irrespective of ideological bent, though, virtually all historians recognize an all-important shift. <sup>1</sup>

#### **589**

With the Sui dynasty, efforts began immediately to link the Yellow River with the Yangzi River. A reintegration of north and south China began. <sup>2</sup>

#### **602–5**

Liu Fang suppressed a rebellion in An-nam, repelled the Cham, and sacked their capital at Indrapura. <sup>3</sup>

## 604–18

The **reign of Yangdi** (569–618) was tyrannical and egocentric; he was alleged to have killed his father. He moved the capital to Luoyang, began rebuilding the Great Wall (607–8), and completed the **Grand Canal** (605) to link Luoyang to the Yangzi River, which later was linked further to Beijing (608) and Hangzhou (610), as well as undertaking other fiscally draining public works projects. 4

## 606

The **National University** was enlarged and the **doctoral**, or *jinshi*, **degree** was first awarded. The first Japanese embassy was received from **Empress Suiko**. 5

## 607–8

Sui armies under Pei Ju attacked west into Xinjiang but were defeated. 6

## 612, 613, 614

**Three huge assaults on Koguryo** , a state on the Korean peninsula, by massive Sui armies proved economically and militarily debilitating. They destroyed the Sui economy and incurred popular ire, leading to domestic upheaval. 7

## 615

Sui forces were defeated by the Turks, prompting Yangdi to send **Gen. Li Yuan** (566–635) to combat the Turks, while he retired to the south, where he was murdered (618). 8

The recentralization policies set in motion by the Northern Zhou were continued by the Sui, and this aided the reunification of the empire and helped break the back of the great families. The Sui central government took control of all appointments to the regular bureaucracy and used extensive examinations. The Sui also adopted the Western Wei's militia system. The Sui census of 606 gave a national population of 46,019,956, a great rise from earlier. The Sui also continued the Tuoba Wei's equal-field system for land 9

distribution and taxation. Like the Qin, the Sui unified the country rapidly after centuries of disunion, but moved too quickly and too forcefully to try to secure its achievement; both were extremely short-lived.

## 618–907

The **TANG DYNASTY**, founded by **Li Yuan** (r. 618–26, as Taizu) and his son **LI SHIMIN** (600–49). The Tang was a truly brilliant age in Chinese history, and Tang institutions became models for the other countries of East Asia. **The Tang's principal capital was placed at Chang'an**, which became the largest city in the world and attracted visitors from many different lands, and an eastern capital was set up at Luoyang. The basic institutional foundation on which the Tang built—centralized authority, the civil service examination system, and the like—had been laid by the Sui. Li Shimin had pushed his father to depose Yangdi of the Sui and seize the throne. When the Tang came into existence, rebellions were still going on throughout the empire. Li Shimin fought them for seven years, and by 624 north China had been reconquered. The south was brought into line more through ameliorative, less harsh measures.

10

## 624

Li Shimin ambushed and eliminated his two elder brothers, had himself named crown prince, and two years later compelled his father to step down.

## **b. Political, Social, and Cultural Patterns**

The **Tang government** built on the Sui foundations of recentralized administrative control. In addition to the armed forces and the censorate, **the administration was split into three parts: the Department of State Affairs, the Secretariat, and the Chancellery**. At the beginning of the dynasty, the highest officials of these three agencies met daily with the emperor to hammer out decisions of state. Prior to his accession to the throne, Li Shimin headed the Department of State Affairs. Imperial edicts had to go through both the Secretariat and the Chancellery, which thus served as a check on the autocratic control of the sovereign. The Department of State Affairs had six ministries under its aegis: personnel, revenues, rites, war, justice, and public works. The entire administrative organization of state was laid out in the *Tang liudian (Six Canons of the Tang)*, which was written under Xuanzong. 1

In 711 all prefectures in the empire were placed into one of 10 circuits, later (733) expanded to 15, and later yet to 20. These circuits in the Xuanzong reign of the mid-Tang were headed by regional commanders who held both civil and military authority. After the Rebellion of An Lu-shan, they became virtual satrapies, the bases for the Five Dynasties era that followed the Tang. 2

**Personnel tapped for bureaucratic appointments came from a much wider group in the Tang than before;** far more men (only men) sat for the **civil service examinations**, and only a small percentage passed them. As the examination system became the regularized route to government service, the importance of education, necessary to pass the exams, skyrocketed. This in turn caused the spread of education. **There were two national universities in the Tang period**, one in Chang'an and one in Luoyang. The student populations were dominated by the aristocracy and sons of officials; the education offered was geared to taking the examinations at the various levels. The two most important examinations tested one's literary skills and one's knowledge of the classics of antiquity. A standard appointment lasted for three years, after which time one reapplied to the Ministry of Personnel. While on duty, all officials were evaluated annually by higher officials. There were nine bureaucratic ranks attached to the level and importance of a position, and movement up the ladder depended on receiving good reports, the availability of openings, and good family background. The Tang system 3

mixed aristocracy with meritocracy; the great families retained their prestige, but rising egalitarianism was creating more access to government for others. The Tang legal codes became the models for all of East Asia.

The **Tang militia system** also carried on from that of the Sui, but the Tang had professional career soldiers who tilled their own fields, a revered group in Tang times. There were 600 garrisons throughout the empire, mostly near Chang'an, Luoyang, and along the northern border. There was also a standing army, stationed in the capital, which served as an imperial bodyguard. It provided the base of the Tang fighting force into the 8th century. By 749 the militia system had effectively become defunct in the capital region, although it remained in force along the border areas; even it needed conscription, though, to keep troop strength up. Later in the dynasty, the state was compelled to rely on mercenaries hired in the regional commanderies, a background cause of both the Rebellion of An Lu-shan and the subsequent decentralization of power.

In **population**, the census of 753 (on the eve of the Rebellion of An Lu-shan) recorded a figure of 52,880,488. Eleven years later, the census of 764 (after the rebellion) gave a figure of 16,900,000. Although this figure is certainly too low, it does indicate a clear decline in population. Two-thirds of the population still lived in northern China until after the rebellion; from that point on, the population of the Yangzi Delta reached parity with the north. In the early 8th century, the 26 largest prefectures all had more than 500,000 people. Chang'an prefecture had 2 million, and Luoyang was in excess of 1 million. Chang'an in the mid-Tang was both the largest and the most cosmopolitan city in the world. There were 30 square miles within the city walls, divided into countless wards for specific uses, and boasting hundreds of temples.

Either in the late Tang or during the Five Dynasties period, the practice of **foot binding** began to spread. Young girls would be guided, usually by their mothers, to wrap their feet extremely tightly with pieces of cloth. These would then restrict the growth of the foot and keep it stylishly small and dainty, albeit at cost of great pain for the young women. The practice eventually spread to various social classes, although certain ethnic groups (such as the Hakka people) never practiced the custom.

The **equal-field land system** was in full force early in the Tang. Under this system, all families were allocated land by the state, and in return they paid a tripartite tax: a grain payment for land rent, a corvée labor assessment or payment in its stead, and payment of a set amount of cloth. This system held up through the middle of the Tang, despite inequities and favoritism, and helped the peasantry's state of affairs. Buddhist temples and monasteries acquired land without taxation. The tax reforms of 780 instituted by the official Yang Yan (727–81) aimed at saving the declining equal-field system. This created a new structure known as the **double-tax system** (paid in summer and fall): half was a household tax payable in cash, indicating the rise of monetary economy; and half was a land tax payable in grain. These measures brought stability to the national taxation system, although they did favor those with land. In fiscal administration, Liu Yan

(715–80) rebuilt and oversaw the state's monopoly on salt, which brought the state considerable revenue before the double-tax reforms.

The variety of **religions** present in the Tang period was remarkable. It was an era of great development, particularly for **Buddhism**. After 16 years spent in India, the famed pilgrim **XUANZANG** (c. 596–664) returned to China in 645 with a large quantity of original Indian texts. He chronicled his travels and later headed a commission that translated 75 books in 1335 volumes, creating a system of consistent transcription from Sanskrit. He introduced the scholastic doctrine of Vasubandhu, that the visual universe is only a mental image. The **Pure Land sect** of Buddhism enjoyed popular favor for the next 70 years. Based on texts translated earlier, it taught direct salvation through faith in Amitabha and the repeated invocation of his name. The **Chan sect** was developed by **Huineng** (638–713), the sixth patriarch. It continued to acquire followers, especially as disorder grew in the later years of the dynasty, offering refuge through introspective contemplation.

As early as 607, the Sui had ordered all Buddhist sects to pay homage to the throne and had tried to regulate entry into the Buddhist and Daoist clergy. These practices were continued by the Tang, and Buddhism flourished through the Tang until the persecution of 841–45. Earlier, the great poet and prose writer **Han Yu** (786–824) had vilified Buddhism as a foreign, non-Chinese religion, as part of an effort to revive Confucianism. The persecutions of the 840s destroyed 4600 monasteries and 40,000 temples and shrines; 260,500 monks and nuns and 150,000 lay servants were returned to the tax rolls; and huge amounts of land were likewise returned to the tax registers. The attacks were not so much inspired by anti-Buddhist sentiments as they were an effort to regain state control in that sector, and they reveal that even at a time when there was an allegedly weak center, the state had the capacity to carry out such a repression.

**Daoism** also prospered in the Tang. It was, in many ways, reorganized on the Buddhist model, gaining imperial patronage. It was argued that since Laozi was said to have been surnamed Li and so was the Tang imperial house, he must have been the ancestor of the Tang emperors. A large compendium of Daoist writings, the *Daozang*, was prepared along Buddhist lines.

In **historical scholarship**, **Liu Zhiji** (661–721) composed the *Shitong (Generalities on History)*, the world's first work explicitly in the field of historiography. **Du You** (735–812) devoted 36 years (766–801) to the compilation of the *Tongdian (Comprehensive Canon)*, a historical encyclopedia with 200 sections, covering a panoply of topics from high antiquity through the year 755. In literature, **fiction** began to develop, especially toward the end of the Tang, in the form of the *chuanji* (strange tales), short stories that appeared in numerous anthologies. They were composed in the literary language, and only later appeared in the colloquial. Han Yu urged a return to a simple “ancient style,” and he spawned a movement that produced much *chuanji* writing. The Tang was the golden age for Chinese poetry. The *Quan Tang shi (Complete Tang*

8

9

10

11

*Poems*) includes 48,900 poems written by 2300 authors, mostly officials or candidates (and hence intellectuals). Regulated verse, prose poems, songs, and other forms flourished. During the Xuanzong reign lived three of the greatest poets: **Wang Wei** (699–759), **Li Bo** (701–62), and **Du Fu** (712–70). In the 9th century, in addition to Han Yu, **Bo Juyi** (772–846) was a high official and a brilliant poet and essayist.

In the field of art, **Wu Daoyuan** (c. 700–60) painted murals in temples and monasteries and was also a fine figure painter. **Li Sixun** (651–716) and the poet Wang Wei created two of the first and most influential landscape styles. Tang-period pottery was resplendent with new colors in soft lead glazes, applied with new technical versatility. The first true porcelain with high-fired feldspathic glaze probably dates from about this time. 12

Yixing (c. 725), a Buddhist astronomer, invented the first known clock escapement. The Buddhists also enlarged the seal and produced wood blocks for **printing on paper**, although the oldest extant datable text is from 8th-century Korea. During the Five Dynasties era, **a complete, 130-volume set of the classics was first printed** (932–53), with commentaries, from wood blocks—a cheap substitute for stone engraving. The volumes were printed in the Later Tang capital of Luoyang by **Feng Dao** (882–954), who had seen the process in Sichuan. The text used was that of the stone inscription of 836–41. 13

## 2. [China, 960–1521](#)

### a. [Periodization and Events](#)

The period from 960 through 1521 covers two great Chinese dynasties, the Song and the first part of the Ming, and the first complete conquest of China by the Mongols. <sup>1</sup>

#### 960–1279

The **SONG DYNASTY** marked a shift away from the earlier aristocratic traditions toward a more open, meritocratic state and society. Reflections of this development can be found in scholarship, literature, thought, and art. Some have identified the Song with the advent of modernity or early modernity; others have seen it as a Chinese counterpart to the European Renaissance; still others have seen fit not to name it as such. It was an age marked by humanism and a turning inward, an age of less cosmopolitanism than in the Tang, an age that saw Confucianism eclipse Buddhism and Daoism. The Song was the only major dynasty in Chinese history not to be overthrown by rebellion from within. The first half of the dynasty is usually distinguished as the **Northern Song** (960–1127), when the capital was at Kaifeng, then called Bianjing or Bianliang. <sup>2</sup>

#### 960–76

The **reign of Zhao Kuangyin** (b. 927), or (Song) Taizu, who founded the Song dynasty, brought a measure of order and unity to the empire. Zhao had been a general in the Later Zhou state, the last of the Five Dynasties. Zhao and the Song were immediately beset by problems on the Song state's borders: from the Khitan Liao to the northeast; the Tangut kingdom of **Xixia**, a confederation of Tibetan tribes in the northwest; and separatist kingdoms in the south. Through expansion of the civil service examination system, Zhao began a process of increasing civil control over the military and of ensuring that all civil officials were beholden to the center. This also served to centralize the authority of the <sup>3</sup>

imperial institution.

### 963–75

Through continued campaigns against various regimes in the south, the Song brought those peoples under Chinese control. Exceptions were An-nam, which secured its independence, and the Nanzhao kingdom and Wuyue, which were not attacked. 4

### 976–97

The **reign of Taizong** (b. 939) completed the program of reunifying the empire (979), except for the 16 northern prefectures that were seized earlier by the Khitan and held despite several attacks against them (979, 986). 5

### 1004

An invasion by the Khitan reached the Yellow River area near Kaifeng. The invaders were appeased with an annual tribute payment in silver and silk, which was increased in 1042. 6

### 1006

Granaries for emergency relief were established in every prefecture. 7

### 1040–44

War was begun by the Xixia, but there was no discernible victor. To gain peace, the Song agreed to pay an annual tribute of silver and silk. Subsequent efforts (1069, 1081–82) by the Chinese failed to halt continued trouble from the Xixia. 8

By the year 1100, the **population** of China probably neared 100 million, having surpassed the Tang's highest figure of 60 million some time in the middle of the 11th century. The introduction of new seeds from Southeast Asia and advances in technology for both industry and agriculture helped fuel this growth. The **cities** of Song China became complex urban networks, and **commerce** flourished as it had never before. The 9

spread of printing served to bring literacy and education to a much wider segment of the populace than had earlier been the case, and the old Chinese aristocracy effectively lost all hold on Chinese politics, education, and government. The military, from the Taizu and Taizong reigns forward, was permanently placed at a social level beneath civil positions.

### 1043–44

**Fan Zhongyan** (989–1052) proposed a ten-point program of reform. Abuses through the course of the prosperous 11th century, especially in the countryside, brought rural misery and the depletion of the central treasury. Fan sought to bring better men into government and to concentrate on local government. <sup>10</sup>

### 1069–73

**WANG ANSHI** (1021–86) attempted to implement a program of radical reforms, his famous **New Laws** (Xinfa), with the full confidence of **Emperor Shenzong** (r. 1068–85) and in the face of the bitter opposition of more conservative statesmen. These reforms included the following. Through a **financial bureau** (1069), he cut the budget by 40 percent and raised salaries, in an effort to make honesty feasible for ordinary officials. To avoid excessive transport costs and to control prices, he empowered the chief transport officer to accept taxes in cash or kind, to sell from the granaries, and to buy from the cheapest markets. To protect poor farmers further against usurers and monopolists, loans of cash or grain were offered in the spring against crop estimates to be repaid in the fall with an interest of 2 percent monthly (moderate for China at the time). Ambitious officials forced these loans on merchants and others who did not want them. Objections to both the principles and the administration of these measures, which were accompanied by a considerable centralization of power and credit in state hands and by disregard for precedent, led to numerous resignations and the transfer of many of the best officials, whose help might have made them successful. **Conscript militia** were organized (1070) and trained for police purposes and national defense. The standing army of well over a million less-than-efficient men was gradually cut in half. By 1076 the militia, volunteer guards, and border bowmen numbered more than 7 million men. **Cash assessments** graded in proportion to property were substituted (1071) for compulsory public services, such as corvée. The exemption for officials, clergy, and small families was reduced by half. **State banking** and barter offices were opened (1072), first at the capital and later in every prefecture, with the object of controlling prices for popular benefit. Among those most fervently opposed to Wang were the brilliant writer **Ouyang Xiu** (1007–72), the great historian **Sima Guang** (1019–86), and <sup>11</sup>

the most famous poet of the day, **Su Shi, or Su Dongpo** (1037–1101).

## 1074–85

Wang's reform program was continued, despite claims of excessive cash levies and other abuses, until the death of Shenzong. <sup>12</sup>

## **b. Political, Social, and Cultural Patterns**

The Tang-Song transition in Chinese **government** was marked by two seemingly contradictory trends, rising absolutism in the imperial institution and growing, institutionalized meritocracy through regularization of the civil service examination system. In earlier eras, the emperor had ruled on behalf of a collegial body of aristocrats, among whom his family might not even have been the highest ranking. With the disappearance of the aristocracy, the Song needed able men to staff its bureaucracy, and it turned to the male population at large. Thus status in the civil service became a function of knowledge, acquired through long hours of rigorous study of the Confucian canon. Concomitant with the centralizing trend in imperial authority was the trend to consolidate as much power as possible in fewer and fewer hands directly answerable to the emperor. 1

In **military affairs**, the Song seems to have learned an important lesson from the experience of the Tang and earlier states. Centralization of authority in all military matters served to eliminate regional military power. Civil authority came to gain control over the military. With this trend came a sharp decline in the prestige of military careers. 2

**Local society** in the Song, below the level of centrally appointed local officials, remained largely in the hands of local leaders. All the normal functions of government—taxation, jurisprudence, social order, and the like—were the responsibility of local elites. Even as the population grew, though, the number of local political units—counties and prefectures—remained roughly the same; they were simply much more heavily populated. In addition there was rapid **commercialization** and **urbanization** as Song cities grew and new ones came into existence. After the Jurchens conquered the north, the Southern Song's population was roughly 60 million. Approximately 2 million people lived within the walls of the Southern Song capital of Hangzhou, which **Marco Polo** (1254–1324) visited and described shortly after the fall of the Song. 3

**Printing**, invented earlier, developed rapidly in the Song into a vibrant industry. The entire Buddhist canon, or *Tripitaka* (*Three Baskets*), was printed (972–83), a collection of 1521 texts on 130,000 pages, and it was reprinted many times thereafter. 4

Chinese **agriculture** from the late Tang through the Northern Song underwent a major transformation. As a larger percentage of the population moved into the south, the production of rice rapidly grew in importance. It required new kinds of irrigation techniques and intensive labor. Introduced from Champa in Southeast Asia was a strain of rice that ripened more quickly and thus enabled Chinese farmers to plant a second crop after their rice was harvested. In some areas, three crops could be grown and harvested in one season. 5

The **world of thought** in the Song period witnessed the decline of Buddhism and the rise of Neo-Confucianism. This occurred in tandem with the wide extension and regularization of the examination system, the education that was necessary to pass the exams, and the explosion in printing. Following the model of the Buddhist *Tripitaka*, the *Daozang*, a Daoist *Tripitaka*, was published (1019). The major Buddhist sects that remained vital after the Song were the Pure Land and Chan sects, the latter splitting into a number of subdivisions of its own. 6

**Neo-Confucianism**, although datable to trends in the late Tang, took off as a movement in the Northern Song. It was an attempt to go back to the original sources of Chinese tradition, before the coming of Buddhism, to create a Chinese tradition with answers to the metaphysical and cosmic questions that until then only Buddhism and Daoism had been able to answer. It reinterpreted many of the texts thought to date from the Zhou period in new ways that could present secular counterparts to a range of ideas to which Buddhism appealed. It was closely tied to state service through its great stress on education and on making officials as sagacious as possible. 7

The principal figures in what became known as the Cheng-Zhu school of Neo-Confucianism were: **Zhou Dunyi** (1017–73), who worked extensively on explicating the “Supreme Ultimate” (from the *Yijing*), describing a “diagram” of it that linked man to nature and the cosmos; **Shao Yong** (1011–77) who studied the *Yijing* as well; **Zhang Zai** (1020–77), who is often seen as an early materialist because of his belief in the omnipresence in the universe of *qi* (ether, or material stuff); and the Cheng brothers, **Cheng Hao** (1032–85), who worked further in the field of metaphysics, and **Cheng Yi** (1033–1108), who was principally responsible for identifying four texts—*Mencius*, *The Great Learning*, *The Doctrine of the Mean*, and *The Analects of Confucius*—as the most essential and which became the basis of Neo-Confucian education thereafter. The final synthesis of the Cheng-Zhu system (also known as *lixue*, or the learning of principle) was the work of **ZHU XI** (1130–1200). Zhu was a great polymath who wrote on education, philosophy, the family, and the state, and commentaries on all the classics. The **Four Books** identified by Cheng Yi were later almost always published with Zhu's interlinear commentaries. Although Zhu was not overly successful in his lifetime and his work was subject to imperial ban shortly before his death, his posthumous influence would be unmatched from his time forward. His major work, *Jinsi lu* (*Reflections on Things at Hand*), was compiled in 1175–76 and was intended as a guide to Cheng-Zhu 8

doctrines and the classics.

The principal opponent of the Cheng-Zhu school in the Song period was **Lu Jiuyuan** (1139–93), who argued that human nature was a function of one's mind or heart. Hence, the school he spawned was known as *xinxue*, or learning of the mind-and-heart. Zhu Xi had not denied the mind as much as Lu Jiuyuan did deny the importance of principle. Lu's school was developed much further by more influential and prolific scholars during the Ming dynasty.

**Historical scholarship** similarly made great advances in the Song era. The “rediscovery” of the ancient classical texts required extensive explanations and commentaries of those works. **Ouyang Xiu** (1007–72) was a prominent statesman and an advocate of composition in the ancient style of writing; he prepared the *New History of the Tang Dynasty* and was famed for his prose style. **Sima Guang** (1019–86), well known for his political opposition to Wang Anshi, spent 19 years compiling his comprehensive history of China from 404 B.C.E. into the first reign of the Song dynasty, the *Zizhi tongjian* (*Comprehensive Mirror for Aid in Government*), which was presented to the emperor in 1084. Other forms of historical writing also prospered in the Southern Song, among them local histories and gazetteers. Several major encyclopedias were also completed in the Song, including *Wenxian tongkao*, by Ma Duanlin (c. 1250–1325); *Taiping yulan* (983); *Cefu yuangui* (1013); and *Yuhai*, by Wang Yinglin (1223–96).

**Poetry** was produced in great quantity by Song writers, but not of a quality as great as that of the Tang. There were exceptions, like the poems of the great Su Shi, who was also a master **calligrapher**. Another exceptional poet was **Lu You** (1125–1209), an author of patriotic poetry.

**Painting** developed dramatically in the Song. Emperor Huizong, himself an able painter, was an active patron of the arts. He founded the Imperial Academy of Painting. The Northern Song was a golden age for **landscape painting**, with compositions of immense size and great detail rendered in monochrome and color on long rolls or broad panels of silk. **Guo Xi** (1020–90?) not only painted landscapes but also wrote on the theory of painting. **Mi Fei**, or **Mi Fu** (1051–1107), scarcely used lines in his work, building mountains and forests from graded accumulations of ink; he was also a master calligrapher, as was **Huang Tingjian** (1045–1105). All considered themselves “amateur” or “literati” painters rather than specialized artists. In the Southern Song, painters most often reproduced the misty landscapes of the Hangzhou area. **Ma Yuan** (1190–1224), **Xia Gui** (c. 1180–1230), and their school placed special emphasis on economy of line and the representation of mists and clouds. Religious painters continued to produce work as well; **Chen Rong** (c. 1235–55) ranks as China's greatest painter of dragons.

During the Song period, **ceramics** became objects of both art and everyday use in the household. Local areas became known for their pottery, usually in conjunction with state-sponsored kilns. Song ceramicists mastered the technique of high-fired glazes.

Although tea was cited as early as the 3rd century as a substitute for wine, **tea drinking** became prominent in the Northern Song. 14

Exactly when the **principle of magnetic polarity**, known to the Chinese at least from the 1st century C.E., was first employed in the invention of the mariner's compass with the floating needle has not been firmly established. However, Chinese ships were outfitted with them in the Song period. The compass is mentioned by Chinese writers in the 12th century. The volume of **maritime commerce** swelled greatly as Arabs in the 9th and 10th centuries entered into competition with Persians at Guangzhou (Canton) and Quanzhou, and later at Hangzhou as well. 15

### c. The Mongol Period

THE MONGOL EMPIRE (MAP)

THE SUCCESSORS OF CHINGGIS KHAN (1227-1336)

#### 1190s

**THE MONGOLS** in central Asia formed a new empire under **Temujin** (1167–1227),<sup>1</sup> who rapidly expanded the empire by use of strategy and his military machine, employing discipline, extraordinary mobility (especially on horseback), espionage, terror, and superior siege material.

#### 1194

The **Yellow River** shifted direction and flowed south of the Shandong Peninsula until 1853.<sup>2</sup>

#### 1206

**Temujin was proclaimed CHINGGIS KHAN** “ruler of the world”) at the Mongolian capital of Karakorum.<sup>3</sup>

## 1210

The Mongols under Chinggis Khan first attacked the northern border of the Jin, seizing Beijing in 1215 and the Xixia state two years later. The Jin were driven south to the Yellow River (1211–22).

4

## 1215

**Yelü Chucai** (1189–1243), Sinified descendant of the royal Khitan house, became an adviser to Chinggis. He allegedly convinced his lord that it might not be a wise idea to depopulate northern China and make it into a grazing land for the migrating herds; instead he taught the Mongols how to collect agricultural taxes by time-tested Chinese methods.

5

## 1219–21

Mongol armies conquered the Turkish empire of Khwarazm (See [1220–23](#)).

6

## 1227

The Xixia was finally destroyed with a massacre at Ningxia. At the end of his life, Chinggis divided his massive empire into four khanates and bequeathed them to his immediate descendants: the Kipchak khanate (Golden Horde) to **Batu** (1207–55); the Chaghadai khanate (the former Kara-Khitai empire) to Chaghadai (d. 1242); the Great Khan to Ögödei (1186–1241); and the Persian khanate (the Ilkhanids) to Tului (1192–1232).

7

## 1232

Using the same policy ill-advisedly used with the Jurchens against the Liao, the Song allied with the Mongols to defeat the Jin. Kaifeng was taken. Within two years, the Jin were overwhelmed, but in 1235 the Mongols began to attack the Song, taking Sichuan in 1236–38.

8

## 1241

After stunning Mongol military successes in Russia in the late 1230s, two Mongol armies entered central Europe and the Balkans and were poised to attack Western Christendom. Mongol horsemen were outside the walls of Vienna when news arrived that the Great Khan had died. As per Mongol custom, the armies withdrew to Karakorum so that the generals could participate in the election of a new Great Khan, Chinggis's son Ögödei.

9

## 1251–59

After discord and several short-reigning Great Khans, **Möngke** (1208–59) was elected by the Mongolian diet. His brother **Khubilai** (1214–94) led armies on attacks to the south and west, defeating Nanzhao (1252–53). Khubilai's forces laid siege to the city of Wuhan (1259), but again news of the death of the Great Khan forced the Mongols to withdraw to Karakorum.

10

## 1254

Möngke, the son of a Nestorian woman and Tului, told William of Rubruck (c. 1220–c. 1293), envoy of Louis IX of France, that religions were like the fingers of one hand.

### d. [The Early Ming](#)

The **MING DYNASTY** was founded by **ZHU YUANZHANG** (b. 1328, r. 1368–98),<sup>1</sup> who reigned as Taizu, the second time a peasant had risen all the way to emperor. Owing to poverty, Taizu had become a Buddhist monk, but later he turned to rebellion against the Mongols, leading a huge band of followers in south China to conquer the north, the first time the country was reunited through conquest from the south (the only other time was by the Chinese Communists). He first took Nanjing (1356) and set up a government there, and then he expanded to force the Mongols out of Beijing (1368), Manchuria (1387), and Xinjiang (1388), as well as through western and southwestern China. He kept Nanjing as his capital. He changed the practice of reign titles, so that there would be only one per reign, his being **Hongwu**. He furthered the two earlier trends toward the centralization of power and the opening of the avenues of access to bureaucratic advancement. The early Ming launched expansion drives on the borders and overseas, while working to minimize contacts between Chinese and foreigners; these restrictions abated by the mid-15th century.

#### 1402–24

After a short second reign, Taizu's son **Chengzu**, or **Yongle** (b. 1360), seized the throne.<sup>2</sup> He proceeded to have Beijing rebuilt and to have the Grand Canal refurbished to handle traffic in supplies and foodstuffs, and he then ordered the capital moved to Beijing (1421). He began the process of building up the Grand Secretariat. Yongle led a series of military missions into Mongolia (1410, 1414, 1422–24); he sent expeditions south against Dai Viet and annexed it (1406); and he tried to quell the coastal raiders known as “Japanese pirates,” forcing Japan to accept tributary status.

#### 1405

The death of **Timur I-Lang** (known in the West as Tamerlane, b. 1336) (See [Major Interregional Expansions](#)) brought to an end an imminent military threat to the Ming from the east. Having risen to power in 1369, Timur had taken over the Chaghadai khanate, conquered the Kipchak khanate, and, with his capital in Samarkand, was in the process of rebuilding the Mongolian Empire. 3

### 1405–33

**Zheng He** (1371–1433), the eunuch Muslim admiral, was sent on a **series of seven naval expeditions to the Indian Ocean**, going as far as the east coast of Africa and bringing a number of regimes en route into vassalage status with respect to the Ming. The expeditions were discontinued for reasons still not well understood, although they never were seen in the same light as later European explorations to other continents. The voyages were extremely expensive, and the goods obtained in trade were ultimately not that dearly desired back in China. 4

### 1449

**Emperor Yingzong** (b. 1427, r. 1435–49, 1457–64) was captured in battle by the chief of the Oirat, a new Mongol confederation of four tribes. He was released the next year and recovered the throne seven years later. 5

### 1520–21

The Portuguese, who under Albuquerque (1453–1515) had seized Malacca (1511), sent Thomé Pires to Beijing. The Portuguese established a permanent settlement at Macao (1557). 6

### 1521

Death of the Chengde emperor Wu-tsung (r. 1506–21). The Jiajing emperor (r. 1522–66) assumed the throne the following year. (See [The Remainder of the Ming Dynasty](#)) 7

(See [Geography](#))

### 3. [Korea, 540–918](#)

This period began with Korea divided into three contending kingdoms at war with one another: Silla, Paekche, and Koguryŏ. When the Sui dynasty reunified China (589), it attempted to incorporate Korea militarily into the new empire, but was unsuccessful. The Silla state eventually reunited the kingdoms into a single state on the Korean Peninsula (668), and this lasted for two and a half centuries before breaking up again. The major Sinitic schools of thought and religion continued to penetrate Korean society and culture, and many Koreans actually traveled to China to study with great teachers at the source, returning home to sponsor new schools, reform programs, doctrines, and the like. <sup>1</sup>

#### 540–76

During the **reign of King Chinhŏng**, Silla's expansion progressed. Silla launched an attack, together with Paekche (551), and took the entire Han River Basin area. The Paekche king **Sŏng** (r. 523–54) moved the capital from Ungjin to Sabi and then attacked Silla, thus ending an alliance of 121 years. Silla won, thus opening a window for sea contact with southern China across the Yellow Sea. <sup>2</sup>

#### 562

The small Kaya kingdom at the southern tip of the Korean Peninsula was finished off by Silla. <sup>3</sup>

#### 589

The Sui reunified China and confronted the Tujue from the northern steppe (See [589](#)). Kogurye allied with the Tujue against the Sui; Paekche, Kogurye's erstwhile ally, linked up with the Wa state in Japan; Silla joined forces with the Sui.

4

## 598

Kogurye attacked across the Liao River. Wendi of the Sui responded militarily but was beaten back.

5

## 612

Yangdi of the Sui sent a huge force of more than one million against Kogurye, but was defeated and suffered many casualties.

6

## 618

The Sui fell after several more attempts to conquer Kogurye, which then prepared for Tang invasions.

7

Chinese political institutions, Buddhism, Confucianism, and the Chinese writing system were imported to all three of the principal Korean kingdoms, in spite of changing conditions of war and peace with various Chinese states.

8

The **Three Kingdoms period** was an age of **strong, centralized aristocracy** in all three states. The best known was Silla's "bone-rank" system, which implied a hereditary bloodline; it had a detailed differentiation of social strata, with stratified privileges. Bureaucratic administrations were also uniformly structured around the aristocracies in all three kingdoms. The highest aristocrats controlled politics, often in collegial bodies such as Silla's Council of Nobles. Although the states were each subdivided into administrative units (districts), centralized authority remained in the capitals. The military was also organized under each state's king.

9

Gradually the idea emerged that the king owned all the **land**, even though aristocrats held immense landed estates; others were given land for meritorious deeds. The states theoretically had control over the farming populace, which paid **taxes** and performed **corvée labor**.

10

In **culture**, the Three Kingdoms witnessed a wide usage of Chinese writing, with various

11

adaptations attempting to accommodate the Korean language, which is radically different in structure from Chinese. The first **historical compilations** in, respectively, Koguryŏ, Paekche, and Silla were: *Sinjip (New Compilation)* by Yi Mun-jin (600); *Sŏnggi (Documentary Records)* by Kohŏng (mid-4th century); and *Kuksa (History of the Nation)* by Kŏch'ilbu (545). None of these is now extant, but they were said to have later been used by **Kim Pu-sik** (1075–1171) in his magnum opus, *Samguk sagi (History of the Three Kingdoms)*. All three states pushed Confucianism as a way to preserve the aristocratic orders.

Buddhism was adopted in all three states as a part of the Chinese cultural package. It was probably seen by the elite as supportive of the aristocratic state structure. High monks acquired political clout as royal advisers.

12

### 640s

Paekche attacked Silla (early 640s), and Silla sought out Chinese help. Two Tang expeditions against Koguryŏ (645–47) ended in defeat for the Chinese.

13

### 654

**King Muymul** (r. 654–61) seized the throne, commencing a trend toward a more autocratic Silla royal institution, at the expense of the aristocracy.

14

### 660

Tang armies attacked Paekche, took the capital at Sabi, forced the surrender of King **ija** (r. 641–60), and destroyed the state of Paekche.

15

### 667

Tang and Silla joined forces to attack Koguryŏ, already weakened by war and internecine dissension. Koguryŏ was defeated the following year.

16

## 668–918

**Unified Silla** reunited the Korean Peninsula. The Tang wanted to retain control over the terrain of the former Koguryŏ and set up commanderies there, some headed by Koreans. Silla became apprehensive about Tang objectives. Silla took Sabi from the Chinese (671), and with it control over Paekche. After 676 the Tang dynasty accepted Silla as master over the peninsula, though much of the Manchurian territory under former Koguryŏ control did not fall into the hands of Unified Silla. The capital was placed at Kyŏngju, where the Silla aristocracy settled. 17

## 4. [Korea, 918–1392](#)

### a. [Major Events](#)

#### 918–1392

The **KORYŬ STATE** was founded by **Wang Kŏn** (b. 877, r. 918–43), who through military and civil capacities had become king of Later Koguryŭ (Later Three Kingdoms era). He renamed it Koryŭ.

#### 934–36

Koryŭ began the process of reunification of the Later Three Kingdoms by defeating Later Paekche. Silla surrendered in 935. Wang Kŏn became **King T'aejo**. He treated the former Silla aristocrats well, and many of them became Koryŭ bureaucrats, even as he set out to dismantle the bone-rank system. He established good relations with the castle lords in the local areas.

#### 942

King T'aejo responded to peaceful overtures from the Khitans by snubbing them, as he considered them barbarians.

#### 949–75

During the **reign of King Kwangjong**, order was revived in the face of the rebellions following T'aejo's death. Kwangjong began a military push toward the Yalu River, in the Khitans' direction.

4

## 958

Kwangjong implemented a **civil service examination** to bring Confucian-minded men into civil office and to build a new bureaucratic apparatus.

5

## 981–97

During **S[!]**ngjong's reign, efforts continued to create a new aristocratic order with aristocrats drawn from many different great families, not just high-born royal clans. They came to control the politics and government under Kory[!], with its capital at Kaes[!]. Measures were adopted to guarantee that social status would be hereditary, though there were many cases of social mobility in civil and military realms.

6

## 983–1076

Kory[!] governmental administration took shape, with three principal agencies and six boards modeled after those of Tang China.

7

## 992

A **National University** was established in the capital under S[!]ngjong, who was particularly attentive to spreading education among the larger populace.

8

## 993

The Khitans crossed the Yalu and invaded Kory[!] (993), but were talked into withdrawing by an adept Kory[!] diplomat. A second invasion early in the 11th century

9

led to the occupation of Kaes<sup>!</sup>ng, but the Khitans again withdrew when their supply lines grew dangerously stretched. The third and final Khitan attack (1018) was vigorously repulsed at the great loss of Khitan life.

## 1087

Printing of the *Kory<sup>!</sup> Tripitaka*, an edition of the Buddhist canon printed from wood blocks, was completed. It was begun early in the century in supplication to forestall the Khitan attacks.

## b. Political, Social, and Cultural Patterns

In **military** matters, Koryŏ achieved power through military conquest of the other Later Three Kingdoms and was confronted with problems from the Khitans soon after taking power. However, the rise of aristocratic rule was premised on the superiority of civil to military affairs, and thus military men were given lower social and economic status in Koryŏ. Denigration of the military grew severe under King **ijong**. Military officers rebelled (1170), deposed **ijong**, placed a puppet king on the throne, and wiped out numerous civil officials. Bloody infighting ensued.

**Land** was granted by quality and allocated (998) in accordance with an official's bureaucratic rank, thus providing said official's salary. When the official died, his land reverted to the state, following the theory that all land belonged to the king. The state managed the land and collected rents. Higher officials earned special stipends of land in addition. In fact, there was private land as well. During the 13th century, large portions of land were given to the Mongols. With the reforms at the end of Koryŏ, and the reversion of all private and public lands to state control, the powerful families found their economic underpinnings demolished.

The Koryŏ **taxation system** was tripartite in structure, again much like Tang China. The peasants who worked the land paid a rent based on a percentage of crop yield, they paid a tribute tax in cloth, and all able-bodied men were obliged to serve in corvée labor annually. Below the peasantry was a slave class, some state-owned and some in private hands. To relieve the harsh lives of the farming population and prevent large-scale vacating of lands and roving bands of landless peasants, the state instituted a number of measures, such as “ever-normal granaries” (as in China).

The Koryŏ **civil service examinations** were theoretically open to all men, with several exceptions, but in fact only the elite sat for them. There were two types of examinations, one on composition and one on the Chinese classics; the latter tended to be more important. Since, unlike earlier, access to government office was opened to a wide number of elite families, the civil service examinations became the means of controlling

entrance into the bureaucracy.

**Confucianism**, in the political mold it had taken in China as working together with the Legalist state, proved desirable to Koryŏ aristocrats and thus developed rapidly in the Koryŏ era. Private academies, the primary avenue for the education of aristocrats, flourished. **Ch'oe Ch'ung** (984–1068), known as the Confucius of Korea, ran one such academy. At the same time, state schools went into decline. Under Yejong (r. 1103–22) and Injong (r. 1122–46), efforts were made to stem this tide. Confucianism stressed moral cultivation and social order. The rise of the scholar-official class in late Koryŏ went hand in glove with the rising popularity of Neo-Confucianism, especially with its stress on moral character as the foundation of the state.

**Buddhism** was not repudiated but was supplemented by Confucianism's worldly rationalism. The Ch'ont'ae (Tiantai in Chinese) sect became very popular. Tax-exempt Buddhist monasteries became exceedingly wealthy, and monks armed themselves to defend their wealth. The Chogye sect of Sŏn Buddhism, a tradition native to Korea, developed following the Ch'oe coup; it taught that sudden enlightenment must be followed by gradual cultivation of the mind.

In **painting**, little remains from the Koryŏ period, though here Chinese models seem not to have been dominant. In the late Koryŏ, a trend similar to one in Song China emerged: that of the literati (nonprofessional) painter. Calligraphy also flourished. Koryŏ **celadon** ware showed Song influence, but it is considered even better than its Chinese models.

Several major works of **historical scholarship** date from this era, including *Samguk sagi* (*History of the Three Kingdoms*) by **Kim Pu-sik** (1075–1151), a thoroughly Confucian work written in the Chinese annalistic style; and *Samguk yusa* (*Memorabilia of the Three Kingdoms*) by the Buddhist monk **Iryŏn** (1206–89), which traced Korean history back to the legendary Tan'gun. (See [Korea, 1392–1800](#))

## 5. [Japan, 552–1185](#)

552

It is traditionally believed that in this year **Buddhism** was introduced to Yamato Japan from Paekche. Although there were probably Buddhist converts already in Japan at the time, at this point Buddhism began to play a major role in Japanese history and to stimulate the continued influx of mainland culture by way of Paekche. Supported by the powerful **Soga clan** and strengthened by the recent arrival of Buddhist monks from Korea, Buddhism made headway at court, but a temporary proscription of it was enacted by the Nakatomi and Mononobe clans, political rivals of the Soga. It was soon restored and embraced by Emperor Ymei (r. 587–88) shortly before his death. 1

562

Silla drove Japan out of Kaya, ending Japan's long influence over a portion of the Korean Peninsula. 2

587

The Soga crushed their rivals in a short civil war, thereby establishing their political supremacy and the right of Buddhism to an unhampered development in Japan. 3

592

**Soga Umako** (d. 626), having decided not to occupy the throne himself and enthroning children of Soga women instead, had one of them, Emperor Suchun (r. 588–92), assassinated.

4

## 593–628

Soga Umako placed his niece **Empress Suiko** on the Yamato throne, the first officially recognized empress. Suiko was served as regent by **Crown Prince Shōtoku** (574–624), who worked vigorously to import continental civilization to Japan. Under his aegis, the foundations for a Chinese-style state and Buddhist religion were laid that would last for several centuries. During this period, such famous Buddhist temples as Shintennōji (593), Hōkōji (or Asukadera, 588–96) and Hōryūji (607?) were built.

5

## 603

A “cap ranks” (*kan'i*) system of bureaucratic rankings at court was adopted by Shōtoku that closely followed comparable systems from 6th-century Koguryō and Paekche.

6

## 604

**Prince Shōtoku** issued his **Seventeen-Article Constitution** (or Seventeen Injunctions), a list of moral injunctions imbued with the spirit of Confucian ethics and mainland theories of centralized political rule. They also bore clear Buddhist influences, indicating an awareness of Buddhism's philosophical and ethical importance. In this same year, the court adopted the Chinese-style calendar.

7

## 607

**Ono no Imoko**, the first official envoy from the Yamato government, was dispatched to the Sui court, and relations with China were thus established. Another embassy followed in 608, a third in 614, and there were many more over the course of the next three centuries, with the subsequent Tang dynasty. Since Japanese students, scholars, and

8

monks accompanied the envoys to China—during the Tang, the embassies tended to be extremely large—and sometimes remained there for prolonged periods of study, these embassies were a very important factor in the importation of Chinese civilization to Japan.

## 630

The first embassy to the Tang.

9

## 643

**Prince Yamashiro no** e, heir of Prince Shtoku, was forced to commit suicide by Soga no Iruka (d. 645), son of Emishi (d. 645), the kingmaker of the period. This was the culmination of a power struggle, following the death of Shtoku in 622, between the Soga and Nakatomi clans.

10

## 645

The **Downfall of the Soga** in a coup led by Nakatomi no Kamatari (614–69) and the future Emperor Tenchi (r. 668–71); the Nakatomi were henceforth given the surname **Fujiwara**. The coup was supported by the Sinophilic elements at court who encouraged continued reforms along mainland models and continued missions to and ties with China and Korea. There were five missions between 653 and 669 alone.

## **6. Japan, 1185–1493**

### **a. General Characteristics**

**1185–1333**

**The Kamakura period.** The outstanding feature of this era was the clear division between the now powerless civil and religious government of the imperial court at Kyoto and the military government (*bakufu*) of the Minamoto established at Kamakura, near the clan estates in eastern Japan and away from the enervating influence of the court nobility. The transition from civil to feudal military rule had begun with the Taira and was not completed until centuries later, but it was in the Kamakura period that the most significant changes occurred, and the political and economic institutions of the next several centuries began to take shape.

## b. [Major Events](#)

### 1185–99

**Minamoto no Yoritomo**, as the effective military dictator, organized the new *bakufu* with the aid of Kyoto scholars like e Hiromoto (1148–1225). He had already created, in 1180, the Samuraidokoro (Board of Retainers) to perform police duties and to control affairs of the warrior class. In 1184 he had established an administrative board, renamed the Mandokoro in 1191. In 1184 the Monchjo (Board of Inquiry) had also been established as a final court of appeal. Impartial administration of justice characterized the rule of the Kamakura *bakufu* and was one of the chief reasons for its long duration. In 1185 Yoritomo appointed military constables (*shugo*) in some provinces and placed military stewards (*jit*) in many of the large manors. A few such appointments had been made in preceding years, but now he expanded this system to strengthen his influence in regions in which he had hitherto had no direct control. The constables were special military governors in charge of the direct vassals of the Minamoto. The stewards, representing Yoritomo on estates not otherwise under his control, levied taxes on the estates for military purposes. Thus the fiscal immunity of the estates was violated, and Kamakura retainers were scattered in key posts throughout the country. The constables and stewards rapidly grew in importance in the economic and political life of the provinces, and in time developed into the feudal lords of later centuries.

### 1189

**Yoshitsune** was killed on the orders of Yoritomo, who apparently was jealous of the fame the former had won as the brilliant general responsible for the greatest victories over the Taira. Yoritomo similarly disposed of other prominent members of the family, including his cousin Yoshinaka (1184), who as a warrior ranked next only to Yoshitsune; his uncle Yukiie (1186), who was one of the prime movers in the Minamoto uprising; and his brother Noriyori (1193), who was also one of the clan's great generals.

His cruel treatment of his own relatives contributed to the early extinction of the family.

## 1189

Yoritomo crushed the powerful Fujiwara family of northern Japan on the grounds that they had killed Yoshitsune, albeit on his own orders. The northern Fujiwara in the course of the previous century had become a great military power and had made their capital, Hiraizumi, a major center of culture. Their elimination removed a serious menace to Minamoto supremacy. 4

## 1191

**Eisai** (1141–1215) propagated the Rinzai branch of the Zen sect after his return from a second study trip to China. The Zen sect enjoyed the official patronage of the Kamakura *bakufu* and the special favor of the warrior class in general. 5

## 1192

Yoritomo had himself appointed *Sei taishōgun* (“barbarian-subduing great general”), or shogun for short. Though not the first to bear this title, he was the first of the long line of military rulers called shoguns. 6

## 1199–1219

**Transition from Minamoto to Hojō rule.** Yoritomo was succeeded as the head of the Minamoto by his eldest son, Yoriie (1182–1204), who was not appointed shogun until 1202; instead his mother, Masako (1157–1225), ruled with the aid of a council headed by her father, **Hōjō Tokimasa** (1138–1215). The latter, though a member of the Taira clan, from the start had cast his lot with Yoritomo and had exercised great influence in the Kamakura councils before Yoritomo's death. The **Hōjō**, though loyal to the military government, unscrupulously did away with Yoritomo's descendants and crushed their rivals among other Minamoto vassals. 7

## 1203

Yoriie was exiled and his younger brother, Sanetomo (1192–1219), was made shogun by Tokimasa. The following year Yoriie was murdered. 8

## 1205

Tokimasa was eliminated from government by Masako. His son, Yoshitoki (1163–1224), then became regent (*shikken*) of the shogun, a post held by successive H 9  
  leaders, who were the real rulers.

## 1219

The Minamoto line came to an end when Sanetomo was assassinated, probably with H 10  
  connivance, by his nephew, who was in turn executed.

## 1219–1333

The period of **rule by the H  ** as regents for weak shoguns of Fujiwara and imperial stock was characterized by administrative efficiency. 11

## 1221

An uprising under the leadership of retired emperor **Gotoba** (r. 1184–98) was the 12  
gravest menace the H   faced, but it was quickly crushed. Two prominent H   
 leaders were left in Kyoto as joint civil and military governors of the capital region. The estates confiscated from the defeated partisans of Gotoba gave the Kamakura much needed land with which to reward its followers, and the abortive uprising gave the H   
 a chance to extend the system of constables, stewards, and military taxes to regions hitherto unaffected by it.

## 7. [Vietnam](#)

### a. [Origins to 1009](#)

Vietnam's history is intimately tied, for better or for worse, to its long relationship with China. The impact of Chinese cultural and political forms is difficult to overestimate, as is the impact of wars begun by its powerful neighbor to the north. Although the borders of what is now called Vietnam and the country's name have changed many times, a continuous history can be delineated. 1

In the early to mid-2nd millennium B.C.E., it appears that bronze implements began to be used. The **Dông-son archeological site** has unearthed particularly fine items in bronze. Legend recounts a Van Lang kingdom, supposedly a strictly hierarchical, feudal regime, that held sway from 2879 until 258 B.C.E. It was thereupon replaced by the Au Lac kingdom, which ruled in the south. In 214 B.C.E. the newly unified Qin empire of China sent a military expedition south to conquer northern Vietnam. The ruler there, fearing devastation, submitted to the Qin, and the north was divided into three commandaries, much like Korea was under the Han. With the decline of the Qin, the governor of one commandery in 208 B.C.E. conquered Au Lac and renamed the new entity under him Nam Việt. During the Han dynasty, Nam Việt became part of the Chinese tributary system. This relationship continued through the end of the 2nd century B.C.E., but in 111 B.C.E. Chinese troops attacked and captured Nam Việt on the order of Emperor Wu of the Han. The country was renamed Giao-chi (Jiaozhi in Chinese) and was incorporated into the Han empire. There it remained for more than a millennium. 2

The Han did not draw Giao-chi (Vietnam) closely into its orbit, seeing it primarily as providing access to trade routes and luxury goods from the south. Local notables were given jurisdiction in the counties and prefectures under the control of Han governors. The population census of 2 C.E. recorded more than 1 million residents in northern Vietnam. There is also evidence that farmers were already double-cropping before the Han conquest, and this too may indicate that a well-organized, centralized form of government was in place earlier. During the Wang Mang era (9–23 C.E.), a noteworthy number of elite Han families fled to Vietnam, strengthening the Chinese official stratum already there. They pushed for a more concerted program of patriarchal control of the 3

economy, rather than the bilateral kin patterns favored in Vietnam and elsewhere in Southeast Asia. In 43, the **Trung sisters** led an unsuccessful rebellion against Han rule.

From this point, Đông-sơn culture began to disappear, as Chinese-style centralized bureaucracy and tax-assessed landholdings replaced native systems. The newly emergent elite was a Han-Việt mix, due to cultural interpenetration as well as intermarriage. With the decline and collapse of the Later Han, Chinese influence in Vietnam waned. During the centuries of disunion in China, Vietnam fell under the domination of a succession of smaller states to the north. In the 540s and 550s, a number of rebellions against the Chinese erupted, and fighting continued for some time. By the end of the 6th century, Vietnam had been defeated and returned to the Chinese sphere.

When China was reunified under the Sui and Tang dynasties, Vietnam fell again under Chinese control. The Tang set up the Protectorate of An-nam (literally, the “pacified south”) in the northern part of the country in the 7th and 8th centuries, typical of Chinese regional control structures at the time. When the central control of the Tang waned in the 9th century, control in the extremities waned as well and gave rise to instability. During the Tang, the political center of what was then Vietnam became Hanoi.

## 939

After a defeat of the army of the Southern Han, **Ngô Quyền** (898–944) declared himself king, although infighting continued for the entire three decades of his and his descendants' rule.

## 968

**Dinh Bô Ling** (c. 925–79) established a stable regime, with himself as king, from Hoa-lu, near the southern rim of the Red River plain. The country was renamed Dai Việt. He sent his son (972) to China to establish contacts, and he was recognized as the king of Giao-châu, while his son became commander in chief of the An-nam Protectorate. Both were assassinated in 979.

## 980

**Lê Hoan** (950–1005) continued rule from Hoa-lu after defeating a Song expeditionary force from China, but he and his descendants, being thoroughly military men, were unable to establish the foundations of long-term political stability. What is sometimes called the Early Lê dynasty ended in 1009, when it was replaced by the **Ly dynasty**.

As Thang-long (Hanoi) became the political center of the country during Tang hegemony, Chinese-style agricultural organizations and taxation systems came to Vietnam, in part aimed at breaking up the older, entrenched great families. Thang-long was the first urban center south of the Red River, and these new systems opened up rich new farmlands that were placed in the hands of free peasants trained militarily to defend their lands against the older elites. By the end of the 8th century, the Tang's double-tax reform had fostered the emergence of a new great landlord class. Vietnam was seen by its northern master as a source of revenue and luxury items.

9

**Buddhism** probably came to Vietnam between the 4th and 5th centuries C.E., perhaps as early as the 2nd century. A number of famous Buddhist travelers passed through Vietnam en route to or from China, and by the early years of the Tang, Vietnamese monks were among those travelers. In the 7th century, **Vân-Ky** brought home Chinese-language Buddhist texts from China. The most popular and influential Chinese sect in Vietnam was the Chan (in Vietnamese, **Thiền**). An Indian traveler in China in the 6th century had proceeded to Vietnam and launched the first Thiền sect. Another took root during the Tang; by the late 10th century, the fourth patriarch of the sect was a teacher at the Lê Palace.

10

While the **status of women** in pre-China-dominated Vietnam may have been better than it became, women were never the legal or social equals of men of their same class. Nonetheless, the relatively more important roles women played throughout Vietnamese society mark a significant distinction with respect to China.

## **b. 1009–1527, Independence and Its Defense**

These five centuries mark the first vibrant era of Vietnamese independence. They include rule by three major dynasties, wars with China, and three gruesome but ultimately unsuccessful invasions by Mongol armies. Despite conflicts with the rulers of China, Sinitic culture continued to make inroads into Vietnam, just as classical Chinese remained the language of the elite throughout these years. 1

### **1009–1225**

The **Ly dynasty** came to power when **Ly Công Uan** (or Ly Thai-tô, 974–1028), commander of the palace guard, seized the throne. Raised by Buddhist monks and supported by the Buddhist establishment, he worked to create a close relationship with the clergy. He was also much influenced by traditional Chinese notions of kingship. He frequently remitted taxes in an effort to create better ruler-populace relations. The country became known as Dai Việt. 2

### **1010**

Ly moved the capital to **Thang-long** (present Hanoi). 1028–54. During the **reign of Ly Phât Ma** (or Ly Thai-tông, b. 1000), an apparently brilliant leader, Ly rule was regularized. He had six reign titles in 26 years. Through his constructive interaction with officials, they came to understand the relative importance of bureaucracy and the throne in institutional development. The Buddhist clergy entered an ever closer relationship with government, and Phât Ma became a patriarch of a Thiên sect himself. 3

### **1042**

A new legal code was enacted in an effort to make the law more fair and put it in tune with the times.

4

### 1044

A naval expedition by sea was led by Phât Ma himself to Champa. Champa was defeated, and the war booty enabled the king to remit taxes.1054–72. The **reign of Ly Nhat Ton** (or Ly Thanh-tông, b. 1023) continued the policies and institutional arrangements put in place by his father. He began to adopt many of the ritual trappings of a Chinese-style emperor, which worried the Song court to the north.

5

### 1069

Nhat Ton repeated his father's expedition to Champa, this time sparing the life of the Champa king.

6

### 1072

At the time of Nhat Ton's death and the accession of **Ly Can Duc** (1066–1127), **Wang Anshi** was in the midst of implementing his New Laws in China (See [1069–73](#)). Among them was a vigorous response to border encroachments by China's neighbors, and Ly attempts at such provoked him. Vietnamese troops attacked (1075), defeating Song naval forces and sacking several sites.

7

### 1075–77

The **first examinations** for recruitment to bureaucratic office were implemented but were abandoned soon thereafter. A national college was allegedly founded (1076) for the best scholars of the land.

8

### 1076–77

The Song sent a military force south but reached no conclusive victory; after several years of talks, borders were determined.

9

## 1127

Ly Can Duc's death without an heir left the succession problematic. Maternal clansmen of the crown placed “kings” on the throne, but they tended to be little more than nominal rulers. Civil wars wracked the country for much of the 12th century. 10

**Buddhism** became an essential component of traditional Vietnamese kingship, as the throne and the clergy developed an intricate, symbiotic relationship. Confucianism, too, made inroads into elite society. Scholars wrote commentaries on the Chinese classics, and those texts became the basis for the state examinations. Native Vietnamese “deities” also became associated with the throne. 11

## 1225–1400

The **Trần dynasty** came to power in the decay and strife at the end of the Ly. The last queen of Ly was from the Trần family. Thereafter, the Trần took queens only from its own family. Collegial rule among senior Trần men, with royal abdication on the death of a predecessor, became the rule. Trần family members were given local prerogatives in political and economic control that enabled them to gain control through hegemony over the Red River plain. As with the Ly, the royal family was made up of pious Buddhists. 12

## 1230s

The Trần inaugurated an **examination system** to recruit civil servants into government service. The curriculum was Chinese classical lore. This fostered the slow emergence of a Confucian literati among scholar-officials, much as earlier in China, in tandem with the centralizing policies of the throne. Military service became compulsory for every able-bodied man; and this had a salutary effect on the fighting prowess of the Vietnamese army. 13

(See [455–472](#)) (See [476](#), Sept. 4)

## F. [Europe, 461–1500](#)

In Europe, particularly western Europe, the postclassical period is commonly called the **Middle Ages** (Lat., *Medii Aevi*), originally a pejorative term coined by the 14th-century Florentine poet Francesco Petrarch (See [1378](#)) to describe what he considered a period of cultural stagnation (c. 400–1300) between two eras of cultural brilliance, the ancient Roman and his own. Scholars often divide the Middle Ages into three time periods: an early phase, c. 500–1000; the central or High Middle Ages c. 1000–1300; and a later period, c. 1300–1500, when medieval patterns of culture began to decline. <sup>1</sup>

### 1. [Western Europe in the Early Middle Ages, 461–1000](#)

The general characteristics that made the early Middle Ages are the **collapse of the centralized state** (the Roman Empire), which had provided much of western Europe with a government of law and social order, and the assumption of power by local strongmen. The **decay of the ancient city-state** as a physical and social unit and as a way of life meant that the isolated **rural estate** became the typical form of social and economic organization; some cities survived as ecclesiastical or political centers, but not as economic or cultural ones. The **decline of long-distance trade** forced the individual to depend for all of his or her needs on locally produced goods. **Disease**, especially periodic outbreaks of bubonic plague, chronic **domestic violence**, and **assaults from outside Europe** made for drastic **population decline**. The slow, steady, but very imperfect **conversion of peoples to Christianity** led to a **shift of basic loyalty from the state to religion**; Europeans came to define themselves and their world in religious terms, and they gave a spiritual loyalty to Rome that was slowly transformed into a supranational authority independent of any secular power. <sup>2</sup>

The ancient Roman world had been a Mediterranean-based civilization whose “center of gravity” lay in the East. The subsequent consolidation of the Byzantine Empire, the expansion of Islam through the Mediterranean, and the rise of Frankish power meant that no single culture would unite the former Roman world. When the term **Europa** was first <sup>3</sup>

used around 1500, it referred to the areas over which the Frankish ruler Charlemagne had nominally held jurisdiction, a territory far smaller than that which the word “Europe” implies today.

### a. Conditions of Life

In the 3rd, 4th, and 5th centuries, the Germanic invasions led to the decline of city-states throughout the Mediterranean world; free tenant farmers abandoned their small farms, and the land was acquired by large landowners. Large, economically self-sufficient **villas** or **manors** became the dominant form of social organization, and agriculture the major occupation. Political instability and invasions (See Invaders of the West) also reduced long-distance trade. Most commerce was local. Existence for most people was rural, isolated, and limited by the borders of the province. 4

Free farmers, weak and defenseless before barbarian invaders, brigands, and greedy officials, sought protection from powerful local landowners. In return for support and protection, small landholders surrendered their lands to, and became the dependents of, the strong. The weak became bound to the soil, working their patron's lands; they lost their freedom, could not move, and became serfs. This trend toward **serfdom** continued to the 11th century. 5

Communication was difficult; roads and harbors were unused and in disrepair until about the 8th century. Building was stagnant; the art of brick-laying appears to have been lost; few stone buildings were erected in northern Europe. Metalworking was still important, although stamping was unskilled, and hence coins were crude. Precious metals were worked with enamel decorations, while silver and bronze could be cast. Unlike the light Mediterranean soils, those of northern Europe could not be pulverized for farming purposes; these heavy soils had to be sliced, broken up. This was impossible until the introduction of the iron, wheeled plowshare, with moldboard. The basic farm tools evolved during this period: rake, spade, fork, pick, balanced sickle, scythe. Development of the horse collar was very important, for an efficient draft animal relieved the small workforce. With an effective harness and stirrup (the latter depicted in a drawing c. 900), and tandem rather than fan-hitched teams of horses or oxen, men were freed of even more work. Another important source of power was water: the Roman water mill (in use 536) spread throughout Europe. 6

## **b. The Early Church**

*For a complete list of the [Roman popes](#), see [Appendix IV](#).*

1

Christianity emerged in the cities of the eastern part of the Roman Empire. The earliest Christians, because they refused to honor the Roman pagan gods, were considered atheists, and thus were subject to civil penalties, sporadic persecutions, the contempt of the Roman social establishment. The first Christians, Jesus' followers, were Jews. An urban religion, Christianity initially spread to the Gentiles through the preachings of St. Paul (See [The Rise of Christianity](#)), and it subsequently attracted converts from all social classes: senators, knights, merchants, the poor, servants. The series of decrees issued by Constantine I (See [Christians and Pagans](#)) between 312 and 330 formally tolerated Christianity, gave Christians the right to build churches, to accommodate property, to establish courts with jurisdiction over clergy; these decrees were known as the Peace of Constantine and marked the beginning of the institutional Church. Emperor Theodosius (391–94) outlawed the pagan religions and made Christianity the **official religion** of the empire. Since a profession of faith advanced one's public career, the number of followers increased, but piety was weakened.

2

In the 2nd century, the **Church** (Gr., *ecclesia*; the Christian community) consisted of widely scattered, loosely knit groups, united by their faith in New Testament teachings and sometimes divided by doctrinal disagreements. Baptism and participation in the Eucharist became the basic signs (**sacraments**) of the Christians. **Ecumenical** (general, theoretically universal) **councils** such as **Nicaea** (325), **Constantinople I** (381), **Ephesus** (431), and **Chalcedon** (451) tried to resolve conflicts and to define doctrine. These councils were called by the emperor and presided over by him in person or by legate. Local problems were dealt with in synods.

3

Christian communities of the apostolic age made no distinction between clergy and laity, but by 100 C.E. *episkopoi* (supervisors) and *presbyteroi* (elders) sat apart at religious ceremonies from the *laikoi* (the people). *Episkopoi*, or **bishops** from the 4th century onward, often descended from the Roman senatorial aristocracy or provincial officials and were elected directly by Christians of local communities on the basis of spiritual charisma and reputation for piety. They served as overseers, responsible for distribution

4

of goods to the poor, for preaching, for maintenance of gospel standards. Each town had its bishop, and his church (cathedral) possessed his throne or chair (Lat., *cathedra*), the symbol of his authority. Christians considered bishops to be successors of the apostles: just as Jesus had consecrated his apostles by laying hands on them and sending them out to teach what he had taught them, so the apostles consecrated their successors and they, further successors. This **apostolic succession** gave the bishops organizational authority and doctrinal security. **Papa** was a title applied to all bishops until c. 425; it did not take on its present meaning until the 7th century.

**The emergence of Roman primacy.** As Christian communities developed organizations, they adopted the diocesan (territorial unit) system of the Roman Empire. Just as the eastern part of the Mediterranean world contained the population and commercial centers of the Roman Empire and, after the establishment of Constantinople, the political capital, so the East held the **patriarchal** or **metropolitan** sees of Jerusalem, Antioch, Alexandria, and Constantinople, which had provincial, not just diocesan, jurisdiction; Rome was the only western metropolitan see.

In the first four centuries C.E., authority in the Church rested in: (1) the emperor, who continued to take the title *pontifex maximus* and to exercise a prominent role in religious affairs. Thus, Constantine I considered himself the equal of the apostles and called and controlled the Council of Nicaea (See [Christians and Pagans](#)); (2) the universal or ecumenical council, whose canons (decisions) held an authority second only to Scripture; (3) the Roman papacy, whose influence grew very gradually. As the seat of the empire and the site of the martyrdoms of the apostles Peter and Paul, Rome held a primacy of respect and honor throughout the Church. Moreover, according to the gospel tradition (Matt. 16:16–18, Luke 22:31–32, John 21:16–17) Jesus had assigned Peter a position of leadership among the apostles. Peter led (as bishop) the Christian community in Rome, and, in turn, transmitted “the power of the keys of the kingdom of heaven” to his successors. Popes Innocent I (401–17) and Celestine I (422–32) used this **Petrine theory** to extend the rights of Rome. The bishops of Rome slowly acquired the rights to resolve disputes in other dioceses, to define doctrine, and to exercise administration and discipline throughout the Church. Under **Pope Leo I** (440–61) the weakness of the imperial power forced the bishop of Rome to assume defensive, financial, civil, and political responsibilities for the city, because the imperial government was unable to do so. Leo I claimed to possess the *plenitudo potestatis* (fullness of power or jurisdiction) over the entire Church. This impetus to universal Roman authority, however, could not be sustained by Leo's immediate successors.

### c. 340

**MONASTICISM** originated in Egypt and Syria as an ascetic (disciplined) reaction to

the moral corruption of the late antique city-state, and was introduced into the West by Athanasius (d. 373). Monastic individuals withdrew (Lat. *anchoreo*, to withdraw) from urban society to seek God alone, through prayer in the desert (Gr., *eremos*), hence Eastern monks were called “men of the desert.” Many women were also attracted to monasticism. Hermits led a solitary life. In his *Life of St. Anthony*, Athanasius described the first (Egyptian) monk (c. 251?–350), now considered the **father of Christian monasticism**. Although monks (and nuns) led isolated lives and the monastic movement represented the antithesis of the ancient ideal of an urbane social existence, monks were soon recognized as holy people and sought out as spiritual guides. In the first half of the 4th century **Pachomius** (c. 290–346) established **cenobitic** (communal, in contrast to eremitic) monasteries for men and for women in Upper Egypt. **Basil of Caesarea** (330–79), a leading Greek theologian, attacked the eremitic life, because of the impossibility of material self-sufficiency, the excessive concern with the self, and the lack of opportunity for the exercise of charity; he espoused cenobitism, which eventually became the common form of monasticism in the West. The Egyptian monastic experience came to the West through *The Institutes* (c. 417–18) and *The Conferences* (426–29) of the monk **Cassian** (c. 360–c. 435), based on his eyewitness accounts and conversations with the Desert Fathers. **Martin of Tours** founded (c. 362) a cenobitic community of monks near Poitiers.

**The Latin Fathers of the Church** (Lat., *Patres Ecclesiae*), was a term first used in the late 4th century by the Greek writers and Sts. Basil and Gregory of Nazianzos to refer to Sts. Ambrose, Jerome, and Augustine. **Jerome** (c. 342–420), a Dalmatian, was devoted to pagan learning despite his keen ascetic convictions. The first great Western exponent of monasticism. One of the greatest scholars of the Latin Church, his translation of the Bible into Latin (the Vulgate) is still authoritative in the Roman Church today. This excellent version exerted stylistic and theological influence throughout the Middle Ages. **Ambrose** (c. 339–97) of Trier, a Roman provincial governor, was elected (374) bishop of Milan before he was baptized. His *Duties of the Clergy* (based largely on Cicero, *de Officiis*) was for centuries the standard work on ethics, and is probably the chief single source of the Stoic tradition in early Western thought. He made Milan almost the equal of Rome in prestige, and forced the Emperor Theodosius to do penance, maintaining that in ecclesiastical matters a bishop was superior to an emperor. **Augustine** (354–430) of Hippo was the greatest of the Western Fathers. Converted to Christianity after ventures into Neo-Platonism and Manichaeism, he was founder of Western theology, the link between the classical tradition and the medieval schoolmen. Through him a great stream of Platonic and Neo-Platonic thought came into the Church. For a thousand years all thought was influenced by Augustine, and theology betrays his influence to this day. He gave wide currency to the doctrines of original sin, predestination, and salvation through divine grace, and his influence was felt by Calvin and Luther. His *City of God* presents a dualism of the heavenly city (those who live according to the spirit; those who live according to the flesh) and the earthly city (Rome), and was written to prove that the

misfortunes of Rome (e.g., the sack of 410) were not due to Christianity; all history is the account of God acting in time. The *Confessions* set the fashion in spiritual autobiography.

The Latin Fathers debated matters of **sexuality and marriage**. In the ancient world, many thinkers, both Gentile and Jewish, held that sexual relations between man and woman hindered the soul's rise to higher things, but Jesus' apostles believed marriage was no sin and that celibacy was a grace not given to all. In the 2nd century, Christian writers advanced the revolutionary ethic that husbands should be as faithful to their wives as wives were expected to be to their husbands; that marriage was a free partnership of equals, with ideals of mutual respect and affection. Early Christians condemned infant exposure, abortion, and capital punishment—all widely practiced in the ancient world. With this benign attitude, however, there gradually emerged a strong current of negativism toward the body, of hostility toward sexuality. The Fathers took for granted the superiority of celibacy (total abstinence from all sexual activity) over marriage. Thus, Jerome denigrated marriage; Augustine held marriage to be “a cure for concupiscence,” with procreation the only truly moral use of, or justification for, sexuality. As in the ancient world, marriage remained a private arrangement, not the concern of civil authorities. Recent historians have disputed the early Christian attitude toward homosexuality. Some scholars argue that early Christian thinkers had a tolerant and positive position on male love and eroticism as being natural; other modern writers claim the Fathers condemned same-sex love and activity. The debate continues.

9

### 401–17

**Innocent I** asserted that the pope was custodian of the apostolic tradition and claimed universal jurisdiction for the Roman Church.

10

### 440–61

**Leo the Great**, the first great pope, a highly cultivated Roman, a vigorous foe of the Manichaean heresy. He procured an edict from Emperor Valentinian III (445) declaring that papal decisions have the force of law. Leo was probably the first pope to enunciate the theory of the mystical unity of Peter and his successors, and to attribute all their doings and sayings to Peter. The tradition of Leo's miraculous arrest of Attila's advance and his efforts to stop Gaiseric's attack (455) won the papacy tremendous prestige in later days. (See [535–54](#)) (See [The Lombards and the Popes](#))

### c. [Invaders of the West](#)

**Origins of the invaders.** The Germanic peoples were established in Scandinavia (Denmark) and between the Elbe and Oder as early as the 2nd millennium B.C.E. Eastward lay the Balts (Letts), and the west of the Elbe were the Celts. 1

**Expansion.** The western Germans (Teutons) displaced (c. 1000 B.C.E.) the Celts, moving up the Elbe and Rhine (the Main reached c. 200 B.C.E.). South Germany was occupied (c. 100 B.C.E.); Gaul threatened (cf. Caesar's *Commentaries*). These invaders were a pastoral, agricultural folk, tending to settle down. By the time of Tacitus's (c. 55–c. 117 C.E.) *Germania* they were wholly agricultural. Later new tribal names and a new kind of federated organization appeared. The eastern Germans (Scandinavians) crossed the Baltic (c. 600–300 B.C.E.) and pushed up the Vistula to the Carpathians. The northern Germans remained in Scandinavia. 2

The Greeks and Romans invented the concept of “barbarian,” applying it to all peoples (except the Persians) living outside Greco-Roman civilization—peoples who did not share urban Mediterranean culture, who did not speak Greek or Latin. To the Romans, such peoples had no history and encountered history only when they entered the civilized Roman world. Barbarian peoples as they entered the Roman orbit had many **changing ethnic identities**; all viewed the Roman empire as the source of great wealth. 3

**GERMANIC SOCIETIES.** The basic unit was the tribe (folk), united by blood kinship and guided by unwritten customary law passed down through the generations by word of mouth. Thinking in social not political terms, the Germans had no notion of the state. Basic institutions were the kings and the war bands. The **kings, or chieftains**, were elected from male members of the strongest or physically toughest family. They led religious sacrifices to the gods. Kingship was strengthened during period of migrations; tribes that did not migrate did not develop kingships. The *comitatus*, **or war band**, the bravest young men of the tribe, was bound by loyalty to the king, fought beside him in battle, and was not supposed to leave the field without him—to do so brought social disgrace. 4

The role and status of **women** has yet to be thoroughly explored. Society was patriarchal: within each household the male head had authority over his wives (polygamy was 5

practiced by the wealthy), children, and slaves (captured in war). Women were viewed as property; marriageable daughters were sold to the highest bidder; and their subsequent status depended on their production of children, especially sons. In settled communities, women performed the heavy work of raising, grinding, preserving cereal crops; making beer and ale; weaving and spinning; caring for the children, and other domestic tasks.

**Progress of migrations.** The eastern Germans (Bastarnae, Burgundians, Gepids, Goths, Heruls, Rugians, Sciri) moved toward the Black Sea; they arrived there by 214 C.E. The division of Visigoth (West Goth) and Ostrogoth (East Goth) probably arose after their arrival at the Black Sea.

## 1. The Huns

The **Huns**, nomadic Mongols of the Ural-Altai group, probably under pressure from the Zhu-Zhu Empire in Asia, swept into Europe in the 4th century and halted for some fifty years in the valley of the Danube and Theiss.

### 445–53

Height of the Hun power under **Attila**. Honoria, sister of Valentinian III, to escape an unwelcome marriage, sent her ring to Attila and asked for aid. Attila claimed this to be an offer of marriage. About the same time, Gaiseric the Vandal was intriguing to induce Attila to attack the Visigoths. By a clever pretense of friendliness to both sides, Attila kept the Romans and Goths apart, and set out westward with a great force (451). Metz was taken and the Belgic provinces ravaged. To meet Attila, the Roman Aëtius mustered a force of Salian Franks, Ripuarians, Burgundians, Celts, and Visigoths under Theodoric I, as well as his own Gallo-Romans. Attila apparently declined battle near Orleans and turned back.

### 451

**Aëtius** overtook him at an unknown spot near Troyes, and a drawn battle was fought. Attila continued his withdrawal. Still claiming Honoria, Attila turned into Italy, razed Aquileia, ravaged the countryside (foundation of Venice), and opened the road to Rome. Pope Leo, one of a commission of three sent by the emperor, appeared before Attila. Attila retreated after plague had broken out in his force, food supplies had run low, and reinforcements arrived from the east for the Roman army. Attila's death (453) was followed by a revolt of his German vassals and the defeat of the Huns on the Nedao (in

Pannonia). The remnant of the Huns settled on the lower Danube; the Gepids set up a kingdom in Dacia; the Ostrogoths settled in Pannonia.

#### **d. [The Ostrogoths in Italy](#)**

On the breakup of the Hunnic Empire (after Nedao, 454), the Ostrogoths settled in Pannonia (their first settlement inside the Roman frontier) as federates of the empire. Under the Huns, the emergence of a single ruler had been impossible. Thiudareiks (“ruler of the people”), corrupted into Theodoric, had been educated as a hostage at Constantinople, was elected (471), and soon became leader of his people on a march into the Balkan Peninsula, where he forced the Emperor Leo to grant them lands in Macedonia. His ambition for imperial appointment was realized when he was made *magister militum praesentalis* (483), and *consul* (484). He quarreled with the emperor and marched on Constantinople. To get rid of him, the emperor commissioned him (informally) to expel Odovacar from Italy. Arriving in Italy (489) the Ostrogoths triumphed over Odovacar, but did not reduce Ravenna until 493. Theodoric killed Odovacar with his own hands and had his troops massacred. 1

#### **489–526**

**Theodoric the Great.** In general Theodoric continued Odovacar's policy, substituting Ostrogoths for Odovacar's Germans, and assigning one-third of the Roman estates (as Odovacar had probably done) to his own people. Theodoric's rule was officially recognized (497) by Constantinople. Together with the emperors he named the consuls in the west, but never named an Ostrogoth. Theodoric was the only member of his people who was a Roman citizen; constitutionally the others were alien soldiers in the service of the empire. No Roman was in military command, no Ostrogoth in the civil service. Imperial legislation and coinage continued. The so-called *Edictum Theodorici* was a codification of Theodoric's administrative decrees rather than a body of legislation, as none of Theodoric's “laws” were anything more than clarifications of imperial legislation. Theodoric's secretary was the learned Italian **Cassiodorus**, and the dual state was paralleled by a dual religious system. Theodoric was tolerant of the orthodox Catholics and a protector of the Jews. His chief aim was to civilize his people under the Roman environment and to keep peace. 2

Theodoric's cooperation with the other Germanic peoples was close, and he cemented his associations with marriage alliances (one daughter married Alaric II, the Visigoth, another Sigismund the Burgundian, and he himself married Clovis's sister). He intervened to protect the Alamanni from Clovis and tried to save the Visigoths. Provence was acquired from Burgundy and annexed to Italy. He was regent and protector of his grandson Amalaric after Alaric II's death, and virtually ruled the Visigothic Kingdom until his death (526)

3

To the Italians, Ostrogothic rule was alien and heretical, and they resented it. The end of Theodoric's reign was marked by growing ill feelings and suspicion. **Boethius**, the Roman philosopher and commentator on Aristotle, author of *De consolazione philosophiae* and an official of Theodoric's government, and his father-in-law, the brilliant and polished Roman **Symmachus**, were both executed (c. 524) on a charge of treasonable conspiracy.

4

## 535–54

**Reconquest of Italy by the Emperor. Justinian**, as part of his grandiose reconstitution of the Roman Empire, dispatched **Belisarius** and later **Narses**, who reduced the stubborn Ostrogoths and drove them over the Alps to an unknown end.

5

After the expulsion of the Ostrogoths, the **Exarchate of Ravenna** was established under Emperor Maurice (582–602). The exarch had military and civil powers and received full imperial honors. He exercised imperial control over the Church, including the bishopric of Rome. War and pestilence had completely ruined northern Italy; Rome, in ruins, had sunk from her imperial position to that of a provincial town.

6

Ravenna was the capital of the West (c. 402–76) and was the home of Theodoric's brilliant court. The architecture of the city offers a unique series of examples of Roman and Romano-Byzantine buildings begun under the emperors and continued by Theodoric. Theodoric's fame survives in the Middle High German epic *Nibelungelied* (c. 1200).

7

Ruined by invasion, its aqueducts cut, **Rome** was reduced in population from a half million to perhaps 50,000. Its aristocracy had fled, and medieval decay had replaced pagan grandeur. The city was not revived until the Renaissance.

8

**Progress of the papacy. Gelasius** (492–96) was the first pope to proclaim the independence of the papacy from both emperor and Church council in matters of faith. He asserted that two powers rule the world, the *sacerdotium* and the *imperium*. The *sacerdotium*, since it is the instrument of human salvation, was declared superior to the *imperium*.

9

The barbarian invasions had isolated Italy, accentuated the break with the empire, and

10

left the pope as the sole representative of ancient unity and Roman hegemony. At the same time, the Ostrogoths (half romanized as they were) did not destroy the culture, but encouraged the Church to transmit the Greco-Roman tradition (linguistic, social, cultural, administrative, and religious) in the West.

## 529

Having originated in the East in the 2nd century, **monasticism**, female as well as male, rapidly expanded in the West in the 5th and 6th centuries, but it had no structure, and had ascetic extremes on the one hand, laxness on the other. In 529 Benedict of Nursia, scandalized by conditions in Rome, withdrew to Monte Cassino between Rome and Naples, established a colony, and gave it a **Rule**, or constitution. The *Rule of St. Benedict* represents the accumulated spiritual wisdom of earlier centuries of monastic experience, drawing as it does on the writings of Cassian (See [c. 340](#)), the practice of monastic life in southern Europe, and (especially) *The Rule of the Master*, a long, detailed, exhortatory document. By classical standards, Benedict was not well educated: his *Rule* contains not one reference to an ancient Greek or Latin author. But it displays a deep knowledge of Scripture, the writings of the Church fathers, and the Egyptian monastic tradition. Modern scholars stress the major influence of the wisdom literature of the Old Testament—the Book of Proverbs, the Psalms, Sirach, and Wisdom. Benedict's *Rule* contains both theoretical principles for the monastic life and practical, everyday directives. He legislated for a community of laypersons governed benevolently by an abbot (father)—a community whose purpose was the glorification of God and the salvation of the individual. After a year's novitiate, or probation, the monk professed three vows: stability (in the monastery), the reformation of his life, and obedience. Benedictine life meant a routine lived in a spirit of silence, dedicated to prayer and work and characterized by moderation and flexibility in all things.

11

Benedict planned the **monastery as a self-sufficient socioeconomic unit**, “so constructed that within it all the necessities, such as water, mill, and garden are contained and the various crafts are practiced. Then there will be no need for the monks to roam outside, because that is not at all good for their souls” (ch. 66). Having stated that “idleness is the enemy of the soul; therefore, the brethren should be occupied at stated times in manual labor, and at other fixed times in sacred reading” (ch. 48), the *Rule* prescribes that all monks in good health should spend part of the day in manual labor. Anticipating the entrance of persons of all social classes, Benedict advised the abbot, “Let him make no distinction of persons...Let not the one of noble birth be put before him who was formerly a slave” (ch. 2). He expected that many recruits would be oblates, children offered to the monastery by their parents to be brought up and eventually professed (vowed) there (ch. 59), a system that lasted well into the 19th century; thus monasticism fulfilled an important social function in a world in which

12

career opportunities were severely limited. Each monastery was autonomous; strictly speaking, there was and is no Benedictine order. Gradually replacing other forms of monastic life in the West, and drawing both men and women, Benedictine monasticism served as the chief instrument for the reform of the Frankish Church and for the conversion and civilization of England and Germany. It was the sole form of corporate and organized religious life between the 6th and 11th century.

## 541–42

Probably more destructive of population than the Germanic invasions and the wars connected with Justinian's reconquest was the plague. In 541–42 the **bubonic plague** (identified only in 1894 by bacteriologists, who labeled the bacillus that causes the disease *Pasteurella pestis* after one scientist's teacher, Louis Pasteur) swept into Italy, southern France, the Rhine Valley, and the Iberian Peninsula, killing 20 percent of the population. Reappearing in cycles (558–61, 580–82, 588–91, 599–600), though each time with reduced intensity, it swept as far north as Sweden and as far west as Ireland. Scholars estimate that by 700 southern Europe and the Rhine Valley had lost between 50 and 60 percent of their populations. Consequences of the plague were a sharp rise in the price of labor, reduced trade, and an intensification of religious belief (that disease, suffering, and death are God's punishment for sin).

13

## 554

**Justinian's Pragmatic Sanction** restored the Italian lands taken by the Ostrogoths and made a pro forma restoration of government, but agricultural lands had been depopulated and had reverted into wilderness, and the rural proprietors were sinking into serfdom. Town decline was similar. The Roman Senate ceased to function after 603, and the local curiae disappeared at about the same time.

14

*Duces* were appointed, probably over each *civitas*, as part of the imperial administration, but they gradually became great landowners, and their military functions dominated their civil duties. A fusion of the ducal title and landownership ensued, and a new class of hereditary military proprietors emerged beside the clergy and the old nobles. The details of this process are, of course, hard to determine, because evidence is scant.

15

## e. The Frankish Kingdom

### THE MEROVINGIAN KINGS

The **Franks** first appeared as settlers on the lower Rhine in two divisions, the **Salians** (dwellers by the sea, *sal*) and the **Ripuarrians** (dwellers by the riverbank, *ripa*). By the end of the 4th century the Salians were established in the area between the Meuse and the Scheldt as federates of the Roman Empire; the Ripuarrians, in the tract between the Rhine and Meuse. They formed no permanent confederations, and, unlike the other Germanic peoples, did not migrate as a nation, but expanded. 1

### 431–751

**The Salian Franks under the Merovingians.** The dynasty descended from the semilegendary Merowech, first noted c. 430. **King Childeric** (d. 481) fought as a federate of the empire at Orleans when Aëtius defeated the Visigoths, and he later defeated the Saxons on the Loire. His tomb was found (1653) at Tournai, the “capital” of the Salians. 2

### 481–511

**Clovis** (Chlodovech), son of Childeric, in the service of Julius Nepos and Zeno. He defeated the Gallo-Roman general Syagrius at Soissons (486), expanding Salian power to the Loire. Friendly relations existed between Clovis and Bishop Remigius, who later baptized him. Sigebert, the Ripuarrian, defeated an Alamannic invasion at Tolbiac (496) with Salian support. Clovis, in the same year, defeated the Alamanni (Strasburg?) and 3

later, after election as king of the Ripuarians, emerged as master of the Franks on both sides of the Rhine.

## 496

The traditional date of the **conversion of Clovis** to Roman Catholicism is 496. He had previously married a Burgundian, Clotilda, who was of the Roman communion. The Burgundians in general were Arians, and Clovis's choice may have been deliberate. In any case his conversion won him papal support and opened the way to wide conquests from the heretic (i.e., Arian) German peoples. Burgundy was conquered (after 500); the Visigoths defeated at Vouillé (507); and their whole kingdom north of the Pyrenees (except Septimania and Provence) was soon subjugated. These conquests were supported by the Gallo-Roman clergy as a religious war. Clovis founded the Church of the Holy Apostles (Ste. Geneviève) at Paris, and shortly moved his “capital” from Soissons to Paris. He was made an honorary consul by Emperor Anastasius, a proceeding that brought the Franks technically into the empire.

**Frankish Administration.** The old Roman **civitas**, city and surrounding territory, served as the basis of Merovingian and (later) Carolingian administration. **Comites**, later called counts, royal officials of Gallo-Roman descent, presided over the civitas, collected taxes, heard lawsuits, enforced justice, and raised troops. Clovis and his descendants issued **capitulares**, legislative and administrative orders divided by chapters, that tried to reduce violence; these showed the strong influence of Roman law.

## 511–628

**Divisions of the Frankish lands** after the death of Clovis: (1) His four sons established four capitals—Metz, Orleans, Paris, Soissons. Expansion eastward continued along the upper Elbe; Burgundy was added, and the territory of the Ostrogoths north of the Alps. After a period of ruthless conflict, only **Lothair** (Chlothar) survived, and for a brief time (558–61) the Frankish lands were under one head again. (2) Lothair's division of his lands among his four sons led to a great feud from which three kingdoms emerged: **Austrasia** (capital Metz) lying to the east (Auster) and mostly Teutonic; **Neustria** (the “new land,” as the name implies; capital Soissons), Gallo-Roman in blood; and **Burgundy**, which had no king of its own but joined Neustria under a common ruler. The prince of Neustria exterminated the rival house in Austrasia, but the local chieftains preserved the kingdom's identity. Under **Lothair II** all three kingdoms were united again (613) under one ruler.

**Dagobert** (Lothair's son), the last strong ruler of the Merovingian house, made wide dynastic alliances and found wise advisers in **Bishop Arnulf** and **Pepin of Landen**. His firm rule led to a revolt. Under the *rois fainéants* (lazy, “do-nothing kings,” who were rulers in name only) following Dagobert, the **mayors of the palace** emerged from a menial position to take a dominant role in the government both in Austrasia and Neustria. 7

**Merovingian government** retained the Roman *civitas* as a unit of administration and set a count (*comes* or *graf*) over it. The source of law was not the king but local custom, administered by the *graf* with the aid of local landowners. Military leaders of large districts were the *duces*, who were over several counts. Land grants were made in lieu of pay to officials. 8

**Gregory, bishop of Tours** (c. 540–94), a Frank, wrote in Latin the *Historia Francorum*, the best single source on the history of the Merovingian period. 9

**Decline of royal power** under the last Merovingians and **feudal decentralization**. **Feudalism** implies a kind of politically decentralized society in which public power—to raise an army, to hold courts that administer some form of law or justice, to coin money, and to negotiate with outside powers—passes into private hands. Feudal decentralization was characterized by the breakdown of the old class and Germanic tribal organizations without an effective system to replace it, which led to the personal and economic dependence on private individuals; by the increasing concentration of land in the hands of a few (i.e., a landed “aristocracy” of which the mayors of the palace were representative; and perhaps by the increasing importance of the possession of a horse and the ability to fight on horseback. (This was due in part to the arrival of the stirrup, an Asian invention, that attached rider to horse, enabling him to use the force of his galloping animal to strike and cripple his enemy.) However, although Charles Martel used some cavalry in his wars against the Muslims, the **infantry** was **the typical and decisive** unit in all Carolingian warfare, and so the stirrup's importance has been downplayed. Warriors who attached themselves to strong “lords” were at first supported in the lord's own household; they were later rewarded, sometimes with land, sometimes with cash, with which they maintained themselves. In the lord's household, the wife frequently had responsibility for the dispersal of cash and goods. 10

**Emergence of the Carolingians** in Austrasia. The son of Arnulf married the daughter of **Count Pepin I** (of Landen, d. 640), mayor of the palace, founding the line later called Carolingian. 11

**Pepin II** (of Heristal), grandson of Pepin I, gained supremacy in Austrasia and Neustria <sup>12</sup> by his victory at Tertry. The kingdom was on the verge of dissolution (ducal separatism), and Pepin began an effort to reduce the landed aristocracy from which he himself had sprung.

### 714–41

**Charles Martel** (i.e., the Hammer), Pepin's son, an ally of the Lombards. <sup>13</sup>

### 716–54

Missionary activities of **St. Boniface** (Wynfrid, Wynfrith), Apostle of Germany. With the <sup>14</sup> support of Charles Martel and Pope Gregory II, Boniface worked to establish a centralized and episcopal church in Germany under Carolingian supervision. He founded dioceses, made Mainz a metropolitan see, established several monasteries, including Fulda, and encouraged the observance of the *Rule of St. Benedict* in all houses of men and women.

### 733

Martel's **victory at Tours** arrested the advance of the Muslims in the west, and was <sup>15</sup> followed by their final retreat over the Pyrenees (759).

Pepin's **conquest of the Frisians** was continued, five wars were waged against the <sup>16</sup> Saxons, and powerful decentralizing forces (notably in Burgundy and Alamannia) were broken down.

### 739

**Pope Gregory III**, threatened by the Lombards, sent an embassy to Martel, and offered <sup>17</sup> the title of consul in return for protection. Charles, an ally of the Lombard king, ignored the appeal. At the end of his life, Martel, like a true sovereign, divided the Merovingian lands between his sons, Austrasia and the German duchies going to Carloman, Neustria and Burgundy to Pepin. Carloman and Pepin ruled together, 741–47; Pepin ruled alone, 747–68. (See [The Empire of Charlemagne and Its Disintegration](#))

(See [440–61](#))

### f. [The Lombards and the Popes](#)

*For a complete list of the [Roman popes](#), see [Appendix IV](#).*

1

Under Emperor Augustus, the Lombards were still established on the lower Elbe (Bardengau) and were defeated (5 C.E.) by the Romans. Their history for the next 400 years is confused. They were members of the Hunnic Empire and were probably Arians. They were given land by Justinian in Noricum and Pannonia, and they aided (553) the imperial attacks on the Ostrogoths. The Lombards took part in Belisarius's conquest, and soon they began to move south toward Italy.

2

## 568

**The Lombard conquest of Italy.** Italy, worn out by the Gothic wars, famine, and disease, offered little resistance. Constantinople was indifferent, and the conquest was easy. The Lombards, always few in number, had associated other peoples (including Saxons and some Slavs) in their invasion, but even then they were not numerous enough to occupy the whole peninsula. Rome and Naples were never held, and Ravenna only briefly. The coast was not really mastered. The Lombards did not enter into a compact with the empire, and Italian feeling against them was bitter. Pavia became the capital (Italy, until 774, always had two and usually three capitals: Rome, the papal capital; Ravenna, the Byzantine capital; and Pavia, the Lombardian capital after 573), and the peninsula was a mosaic of Byzantine, papal, and Lombardian jurisdictions.

3

**Lombard occupation** (virtually military rule at first) covered inland Liguria, inland Tuscany, inland Venetia, the duchy of Spoleto and the duchy of Benevento. **Imperial Italy** comprised Venice and the land from north of Ravenna to the south of Ancona, and included the duchy of Rome and the duchy of Naples, as well as the toe and heel of Italy. *Hospitalitas* was revived, and one third of the produce of the land (not one third of the land) was given to the Lombards. Lombards also took the lands of the dead and the exiled.

4

The Lombards took Roman titles and names, and in the end accepted Roman Catholicism. Legally there was a dual system of private law, and in Lombard territories there was a dual episcopal system (i.e., Arian and Roman).

5

### 573–84

A period of anarchy and private war under a loose federation of dukes (some 36 in number). Roman Catholic opposition and papal negotiations with the Franks alarmed the Lombards, and led to the election of **King Authari** in 584.

6

### 584–90

King Authari was endowed with half the baronial lands as royal domain. The dukedoms were gradually absorbed (the marches, like Friuli, Trent, Turin, survived longest).

7

Authari's widow, Theodolinda, a devoted Roman Catholic, bidden to choose a husband who should also be king, selected a Thuringian.

8

### 590–604

**Gregory the Great.** His family was a rich senatorial house, and Gregory was prefect of Rome (573). He founded (c. 574) six monasteries in Sicily and one at Rome (St. Andrews) into which he immediately retired as a monk. Embassy to Constantinople (c. 579–86). Elected pope (590) against his will, he began a vigorous administration. Discipline within his patriarchate was rigorous (stress on celibacy, close watch on elections, insistence on exclusive clerical jurisdiction over clerical offenders). Church revenue was divided into four shares, for the bishop, the clergy, the poor, and church buildings. His administration of the wide estates of the Church was honest, and the revenue was expanded to meet the tremendous demands on Rome for charity. The pope continued the old imperial grain doles in Rome and elsewhere, aqueducts were repaired, urban administration, especially in Rome, was reformed.

9

Outside his immediate patriarchal jurisdiction, Gregory expanded the influence and prestige of the pope, maintaining that the pope was by divine designation head of all churches. Appeals to Rome were heard even against the patriarch of Constantinople, whose claim to the title of universal bishop was denied. Without secular authority, Gregory assumed the powers of a temporal prince, counterbalancing the prestige of Constantinople. Gregory was the real leader against the Lombards, appointing governors of cities, directing the generals in war, and receiving from Constantinople pay for the

10

army.

The first monk to become pope, Gregory made a close alliance between the Benedictines and the papacy (at the expense of the bishops). The monks were given charters and protected from the bishops, the Benedictine Rule was imposed, and a great missionary campaign was begun with monastic aid: the mission to Britain (596) under **Augustine of Canterbury** and the conversion of England provided a base from which the Frankish Church was later reformed and the German people converted; and campaigns were waged against paganism in Gaul, Italy, and Sicily, and against heresy in Africa and Sicily. 11

Gregory was the last of the four great Latin Fathers, and first of the medieval prelates, a link between the classical Greco-Roman tradition and the medieval Romano-German one. Not a great scholar, he was a great popularizer, and he spread the doctrines of Augustine of Hippo throughout the West. At the same time he gave wide currency through his *Dialogues* to the popular (often originally pagan) ideas of angels, demons, devils, relic worship, miracles, the doctrine of purgatory, and the use of allegory. His *Book of Pastoral Care* remained for centuries an essential in the education of the clergy. There was a school of music at Rome, but how much Gregory had to do with it, and how much with the introduction of the Gregorian chant, is uncertain. Gregory introduced the papal style, *Servus Servorum Dei*. 12

## 590–615

**Duke Agilulf** of Turin was friendly to the Roman Church and was the true founder of the Lombard state. Gregory the Great blocked an Italian conspiracy against the Lombards. **Rothari** (636–52) became a Roman Catholic. He collected Lombard customary law in Latin and began the consolidation of Lombard power. Eventually Roman law triumphed and Lombard law survived only in the schools (e.g., Pavia). 13

The Italian bishops since 476 had been the leaders of the peaceful civilians in the cities, the protectors of the oppressed, and the dispensers of charity. Under the Lombards, a system of **episcopal immunities** emerged that made the bishops virtually local temporal sovereigns and enabled them to preserve the local spirit of municipal independence and organization (e.g., consuls, guilds). The urban population was free, and the town walls (often built by the bishops) were refuges. Milan resumed her greatness and almost equaled Rome. These developments prepared the way for the assertion of Italian town independence against Roman clerical and German feudal encroachments. **Paul the Deacon** (c. 720–c. 800), the first important medieval historian, wrote the *Historia gentis Langobardorum*. **Martianus Capella** (fl. c. 600), encyclopedist, formulated the seven arts (grammar, logic, rhetoric, geometry, astronomy, arithmetic, music), which were to guide education down to the Renaissance. 14

**Continued alienation of Italy from the East.** Arrest (653), by the exarch, of Pope Martin I (649–55), who died in exile in the East. The **Council of Constantinople** (692) reasserted the equality of the patriarchates of Constantinople and Rome. 15

**Emperor Leo III the Isaurican** (717–41) attempted to bring Italy back to obedience: heavy taxation to reduce the great landowners angered Pope Gregory II (the largest landowner in Italy) and Leo's iconoclastic decree (726) aroused all Italy. Gregory III excommunicated all Iconoclasts (731). Gregory's defeat and final humiliation weakened the pope and opened the way for the final Lombard advance. 16

## 712–44

**Destruction of the Lombard Kingdom. Liutprand**, king of the Lombards (712–44), extended his rule over the duchies of Benevento and Spoleto. Ravenna was taken temporarily. During the Iconoclastic controversy, Liutprand's sincere efforts at rapprochement with the papacy met a brief success. 17

## 749–56

**Aistulf** continued Liutprand's policy of consolidation. The pope, alarmed at Lombard progress, had already (741) made overtures to Charles Martel. Martel, busy with the Muslims, remained faithful to his alliance with the Lombards, but Aistulf's continued advance brought a visit (753) from Pope Stephen II. Stephen had already begun negotiations with Pepin III, king of the Franks, and the mutual needs of the rising papacy and the upstart Carolingian dynasty drew them into alliance. 18

## 754, 756

**Pepin**, in two expeditions, forced Aistulf to abandon the Pentapolis and Ravenna (bringing the Lombards virtually to their holdings of 681). Legally the lands involved in the **Donation of Pepin** (756) belonged to the Eastern Empire. The Donation was a tacit recognition of implicit claims of the popes to be the heirs of the empire in Italy. Most important from the papal point of view was the fact that the Church had won a powerful military ally outside Italy. Henceforth the Carolingians maintained a protectorate over the papacy in Italy. 19

## 774

**Charlemagne**, heir to the traditions of Pepin, having repudiated the daughter of the Lombard king, Desiderius, appeared in Italy to protect the pope. After a nine-month siege, Pavia was taken, Spoleto and Benevento were conquered, and Charlemagne (Charles the Great) absorbed the Lombard Kingdom into the rising Frankish Empire and assumed the crown of the Lombards. On a visit to Rome (774), Charlemagne confirmed the Donation of Pepin but made it plain that he was sovereign even in the papal lands. At no time did Charlemagne allow the pope any but a primacy in honor (in this respect, following the strict Byzantine tradition). The Donation of Pepin was the **foundation of the Papal States** and the true beginning of the temporal power of the papacy.

20

Henceforth there was neither a Lombard menace nor the overlordship of the exarch to interfere with the rising papal monarchy. In this sense the fall of the Lombard Kingdom was decisive in papal history. It was equally decisive in Italian history, for the papal victory over the Lombards terminated the last effective effort to establish unity and a centralized government until the end of the 19th century. For the Carolingian monarchy, the episode was equally significant.

Under the successors of Charlemagne, the emperors continued to participate in the papal elections and did what they could to protect Italy against the attacks of the Muslims from Africa.

21

## 827–31

**The Muslims conquered Sicily.**

22

## 837

Muslims attacked Naples, pillaged Ancona (839), and captured Bari (840).

## **g. The Empire of Charlemagne and Its Disintegration**

### THE HOUSE OF PEPIN (640-814)

**747–68**

**Pepin the Short**, who attempted to conciliate the Church by granting and restoring lands to it. <sup>1</sup>

**752**

**Pepin was elected king** by the Frankish magnates. Both the house of Pepin and the papacy (in the process of securing independence from the emperor at Constantinople) needed each other's support. The immediate need of the popes was for protection against the expanding Lombard monarchy. **Aistulf**, king of the Lombards, had taken Ravenna (751), the seat of the exarch, besieged Rome, and exacted tribute. <sup>2</sup>

**754**

**Pope Stephen II** arrived in Gaul, anointed Pepin, and by conferring the title *Patricius Romanorum* (which could legally come only from Constantinople), designated him in a sense regent and protector of Italy. The result was to give some authority to Pepin's new title as king of the Franks. <sup>3</sup>

## 754

Pepin marched into Italy, defeated the Lombards, and required them to hand over the exarchate and Pentapolis to the pope. The Lombards failed to do so. 4

## 756

Pepin returned and, after defeating the Lombards again, made his famous Donation. The **Donation of Pepin** established the Franks, a distant, non-Italian power, as the allies and defenders of the papacy. 5

## 759

Pepin conquered Septimania, disciplined Aquitaine, and so brought effective Frankish rule to the Pyrenees. On his death his lands were given to his sons, Charles receiving Austrasia, Neustria, and northern Aquitaine; Carloman, southern Aquitaine, Burgundy, Provence, Septimania. The brothers ruled together, 768–71; Charles alone, 771–814. 6

## 771–814

**Charles the Great (Charlemagne)**, a reign of the first magnitude in European history. Charles was well over six feet tall, a superb swimmer, with an athletic frame, large expressive eyes, and a merry disposition. He understood Greek, spoke Latin, but did not learn to write. He preferred the Frankish dress. In general he continued the Frankish policies: (1) expansion of Frankish rule to include all the Germans was completed (omitting only Scandinavia and Britain); (2) a close understanding with the papacy; (3) support of Church reform (which settled the foundations of medieval Christian unity). 7

Already overlord of the Lombards, Charles married King Desiderius's daughter but soon repudiated her. 8

## 773–74

Charlemagne conquered Lombard Italy and became king of the Lombards, whose kingdom was absorbed into the Frankish Empire. Charlemagne also established his rule in Venetia, Istria, Dalmatia, and Corsica.

9

## 778

At **Roncesvalles** near Pamplona, on a pass in the western Pyrenees, the Basques destroyed the rear guard of Charlemagne's army as it was returning to France. The battle inspired the late 11th-century poem *The Song of Roland*, the most famous of the *chansons de geste*, or medieval epics. The poem celebrates Roland as the perfect chivalric knight and Charlemagne as the ideal Christian king. The poem was popular in French, Spanish, and Italian literature of the later Middle Ages; the values expressed are those of the 11th, not the 8th century.

10

## 787–88

Bavaria was incorporated; its duke, Tassilo, first made a vassal and then deposed.

11

## 785

Saxony, after a costly and bitter struggle of 30 years that involved 18 campaigns, was conquered, and Christianity was forcibly introduced despite stubborn pagan resistance. Foundation of the bishopric of Bremen (781).

## **h. The West Franks under the Carolingian Kings**

### **840–77**

**Charles the Bald** (emperor, 875–77). His kingdom under the **Treaty of Verdun** was roughly equivalent to modern France, with additions in the north and south and a restricted frontier on the east. Charles was effective master of Laon, but his sway over Neustria was nominal, his control sporadically maintained by war and intrigue. Charles granted three great fiefs as a buffer for his frontiers: the county of Flanders to his son-in-law, Baldwin Iron-Arm (862); Neustria to Robert the Strong as “duke between Seine and Loire”; the French duchy of Burgundy to Richard, count of Autun. Brittany (Armorica) was semi-independent under its own dukes and counts in the 9th century and continued so virtually to the end of the Middle Ages. Aquitaine, joined to Neustria for Charles (838), soon emerged as a duchy and was consistently hostile. The duchy of Gascony was joined to Aquitaine in 1052. From Neustria were carved the counties of Anjou (870) and Champagne. Septimania remained refractory. 1

### **870**

**Carloman**, Charles's son, emerged from monastic retirement and led a series of intrigues that ended when he was blinded and fled to his uncle, Louis the German. He died in 874. Charles was further weakened by his intrigues in Lorraine and Italy, and by his efforts to win the imperial crown, leaving France open to invasion, anarchy, and brigandage. 2

The crown, impotent and virtually bankrupt, commanded no respect from magnates or prelates, and the **Capitulary of Mersen** (847) shows clear evidence of the progress of essentially feudal ideas: every free man is to choose a lord; none may quit his lord; each must follow his lord in battle. It must be noted that this was purely a military measure. France was already divided into *comtés* under counts theoretically removable by the king. 3

## 875

Expedition of Charles to Italy and imperial coronation.

4

## 877

The **Capitulary of Kiersy** made honors hereditary, but lands were still granted only for life.

5

## 877–79

**Louis II** (the Stammerer), son of Charles the Bald, maintained himself with difficulty, despite the support of the Church.

6

## 884–87

**Charles the Fat**, son of Louis the German, already king of the East Franks (879) and emperor (876–87), was chosen king of the West Franks instead of Charles the Simple, the five-year-old brother of Louis and Carloman. Charles the Fat, having failed (886) to aid the gallant Odo (Eudes) against the Northmen, was deposed (887).

7

## 887–98

**Odo** (Eudes), count of Paris, marquis of Neustria (son of Count Robert the Strong), was elected king of the West Franks by one faction of magnates, to avoid a minority on the deposition (887) of Charles the Fat. Another faction chose Charles III, the Simple, son of Louis II (Carolingian).

8

## 893–923

Despite five years of civil war, **Charles III** ruled from Laon, the last Carolingian with any real authority in France. Charles, unable to expel the Northmen from the mouth of the Seine, granted (911) **Rollo** (Hrolf the Ganger, d. 931), a large part of what was later Normandy, for which Rollo did homage.

9

**Formation of Normandy.** Rollo was baptized (912) under the name **Robert**, acquired middle Normandy (the Bessin, 924) and the western part of the duchy (Cotentin and Avranché, 933). Fresh settlers from Scandinavia were recruited for the colony for the best part of a century, and it was able to retain a strong local individuality. Yet soon after 1000, the duchy was French in both speech and law. Between this period and the accession of Duke William I (the Conqueror), Norman history is fragmentary. 10

### 923–87

**The French kingship.** **Robert**, count of Paris, duke between the Seine and Loire, won the West Frankish crown with the aid of his sons-in-law, Herbert, count of Vermandois, and Rudolf, duke of Burgundy, but was killed (923), leaving a son (later Hugh the Great) too young to rule. 11

### 929–36

**Rudolf** followed Robert as the foe of Charles the Simple, and ruled with no opposition after Charles's death. **Hugh the Great**, master of Burgundy and Neustria, declined the crown, preferring to rule through the young Carolingian heir, 12

### 936–54

**Louis IV**, a son of Charles the Simple. Hugh's title, duke of the French, seems to have implied governmental functions as much as territorial sovereignty, and he held most of the northern barons under his suzerainty. 13

[NEXT](#)

## **i. Germany under the Carolingian and Saxon Emperors**

### **CAROLINGIAN DYNASTY**

### **THE SAXON AND SALIAN EMPERORS (919-1125)**

#### **843–76**

**Louis the German.** Increasing Slavic and Norse pressure (general Norse attack on Carolingian lands, 845). Louis had three sons: Carloman (d. 880), Louis (d. 882), and Charles the Fat. Carloman was assigned Bavaria and the East Mark; Louis, Saxony and Franconia; Charles, Alamannia. Contest with Charles the Bald for Lorraine. By the **Treaty of Mersen** (870) Louis added a strip of land west of the Rhine.

1

#### **876–87**

**Charles the Fat.** He blocked Charles the Bald's advance toward the Rhine. Emergence of the kingdom of Cisjuran Burgundy (i.e., Dauphiné, Provence, part of Languedoc) under Boso (879). Expedition to Italy and coronation by John VIII (881). Negotiations (882) with the Northmen, now permanently established in Flanders. While Charles was in Italy settling a papal election, a great Norse invasion burst on France. **Deposition of Charles** by the Franconian, Saxon, Bavarian, Thuringian, and Swabian magnates at Tribur (887).

2

## 887–99

**Arnulf** (illegitimate son of Carloman, grandson of Louis the German). A certain supremacy was conceded to Arnulf by the various rulers of Germany and Italy who rendered homage to him. Victory over the Norse on the Dyle (Löwen, 891); resistance to the Slavic (Moravian) advance (893), with Magyar aid. Magyar raids after 900. Arnulf went to Italy (894), was crowned king (896), and received homage from most of the magnates. On appeal from Formosus (895), he took Rome and was crowned emperor (896).

3

## 899–911

**Louis the Child** (born 893), last of the Carolingians, elected king by the magnates at Forchheim (900). Increasing Norse, Slavic, and Magyar pressure and devastation.

4

The **weakening of the royal power** as the East Frankish kingdom of the Carolingians declined, and the survival of tribal consciousness left the way open for the emergence of the stem (Ger., *Stamm*, tribe) duchies. These duchies preserved the traditions of ancient tribal culture, and their independent development under semiroyal dukes (beginning in the 9th century) contributed to the disruption of German unity. These stem duchies were: **Franconia** (the Conradiners ultimately drove the Babenbergers into the East Mark, later Austria); **Lorraine** (not strictly a stem duchy but with a tradition of unity); **Swabia** (the early ducal history is obscure); **Bavaria** (under the Arnulfings; repulse of the Magyars, acquisition of the mark of Carinthia); **Saxony** (under the Liudolfings; repulse of the Danes and Wends, addition of Thuringia); **Frisia** (no tribal duke appeared).

5

## 911

**End of the East Frankish line** of the Carolingians with the death of Louis the Child (911); the German magnates, to avoid accepting a ruler of the West Frankish (French) line, elected Conrad, duke of Franconia.

6

## 911–18

**Conrad I.** Magyar raids and ducal rebellions in Saxony, Bavaria, and Swabia met vigorous but futile resistance from Conrad. Lorraine passed (911) temporarily under the suzerainty of the West Frankish ruler, Charles the Simple. Conrad nominated his strongest foe, Henry, duke of Saxony, as his successor, and he was elected.

7

## 919–1024

**The Saxon (or Ottonian) House.**

8

## 919–36

**King Henry I** (called the Fowler, supposedly because the messengers announcing his election found him hawking). Tolerant of the dukes, he forced recognition of his authority; cool to the Church, he avoided ecclesiastical coronation.

9

## 920–21

Reduction of the duke of Bavaria; alliance with Charles the Simple.

10

## 923–25

Lorraine restored to the German Kingdom and unified into the **duchy of Lorraine**, a center of spiritual and intellectual ferment. Henry's daughter married the duke of Lorraine (928).

11

## 924–33

**Truce** (and tribute) **with the Magyars**; fortification of the Elbe and Weser Valleys (Saxony and Thuringia); palisading of towns, villas, monasteries; establishment of garrisons (which later often became towns like Naumburg, Quedlinburg).

## **[j. Spain](#)**

### **1. The Visigothic Kingdom**

*For a complete list of the [caliphs](#), see [Appendix III](#).* 1

In the time of **Euric** (466–84) the Visigothic rule extended from the Loire to Gibraltar and from the Bay of Biscay to the Rhône. The capital was Toulouse. 2

## **507**

Clovis's victory in the **Battle of Vouillé** obliged the Visigoths to withdraw over the Pyrenees, retaining only Septimania north of the mountains. The new capital was Toledo. 3

The Visigoths in Spain were a small minority and were rapidly romanized. The conversion of King Reccared (587) from Arianism to Roman orthodoxy brought an end to their religious separateness and accelerated the process of romanization. The **Synod of Toledo** (633) assumed the right of nobles and clergy to confirm elections to the crown. After 600 the Jews were forced to accept baptism, for which reason they later on welcomed the Muslim invasion. Visigothic speech gradually disappeared, and the current vernacular was of Latin origin. Roman organization and tradition survived to a marked degree. **Isidore of Seville** (c. 560–636), a bishop, theologian, historian, man of letters, and scientist, produced in his *Etymologiae* a general reference work that remained a standard manual for 500 years and was a medium for transmitting much ancient knowledge to the medieval world. 4

## k. The British Isles

### 1. England

#### THE ANGLO-SAXON KINGS OF ENGLAND (802-1066)

#### THE DANISH KINGS OF ENGLAND (1013-66)

**Prehistoric Britain.** The prehistoric inhabitants of Britain (called Celts on the basis of their language) were apparently a fusion of Mediterranean, Alpine, and Nordic strains that included a dark Iberian and a light-haired stock. Archaeological evidence points to contacts with the Iberian Peninsula (2500 B.C.E.) and Egypt (1300 B.C.E.)

1

### 1200–600 B.C.E

The true **Celts** are represented by two stocks: Goidels (Gaels), surviving in northern Ireland and high Scotland, and Cymri and Brythons (Britons), still represented in Wales. The Brythons were close kin to the Gauls, particularly the Belgi. Their religion was dominated by a powerful, organized, priestly caste, the druids of Gaul and Britain, who monopolized religion, education, and justice.

2

### 55 B.C.E.–c. 450 C.E

**Roman occupation** began with Julius Caesar's conquests in Gaul and Britain (57–50 B.C.E.); Emperor Claudius's personal expedition and conquest (43 C.E.) were decisive in

3

the romanization of Britain. Construction of the great network of Roman roads began (eventually five systems, four centering on London). Bath emerged as a center of Romano-British fashion.

## 78–142

**Roman conquests in the north** began under Agricola (See [71–84](#)); results north of the Clyde-Forth line were not decisive. Emperor Hadrian completed the conquest of Britain in person; construction of **Hadrian's Wall** (123) from Solway Firth to Tyne mouth. Firth-Clyde rampart (c. 142).

4

## 208

**Emperor Septimius Severus** arrived (208), invaded Caledonia (Scotland), restored Roman military supremacy in the north, and fixed Hadrian's Wall as the final frontier of Roman conquest.

5

## 300–350

Height of villa construction in the plain of Britain. Chief towns: Verulamium (St. Albans), Colchester, Lincoln, Gloucester, York. Sheep raising was widespread, and the skill of the artisans and clothworkers of Britain was already famous on the Continent in the 4th century. The island south of the wall was considerably romanized. Recent archaeological investigations suggest that Christianity had made progress.

6

## 410–42

**Withdrawal of the Roman legions** and the end of the Roman administration coincided with an intensification of Nordic pressure and the influx of **Jutes, Angles, and Saxons**, which permanently altered the racial base of the island. By c. 615 the Angles and Jutes had reached the Irish Channel and were masters of what is virtually modern England. A Celtic recrudescence appeared in the highlands of the west and northwest. The history of Britain for two centuries (c. 350–597) is obscure.

7

**Seven Anglo-Saxon kingdoms**, the Heptarchy, emerged after the Teutonic conquest: Essex, Wessex, Sussex (Saxon, as the names suggest); Kent (Jutes); East Anglia, Mercia, Northumbria (Angles).

8

## 560–616

The supremacy of **Ethelbert of Kent** in the Heptarchy.

9

## 597

Ethelbert's supremacy coincided with the arrival of **Augustine the Monk** (See [590–604](#))<sup>10</sup> and the conversion of Kent to Christianity. The Frankish princess Bertha, Ethelbert's wife, who was already Christian, probably exercised a strong influence on him; she was archetypical of the role of women in evangelization. The hegemony in the Heptarchy passed eventually to **Edwin of Northumbria** (who had also been converted).

## 633

**Oswald of Northumbria** called Aidan from Iona, a monastery on an island off the west coast of Scotland. His mission began the great influence of Celtic Christianity, which for a time threatened to replace the Roman Church.<sup>11</sup>

## c. 628–89

**Benet Biscop**, a strong supporter of Benedictine monasticism. He founded the monastery of Wearmouth in Northumbria and on five trips to Italy collected books, manuscripts, and paintings that formed the intellectual milieu for the work of **Bede**.<sup>12</sup>

---

[PREVIOUS](#)

[NEXT](#)

---

## I. [Scandinavia](#)

**Origins.** References in Pytheas, Pomponius Mela, Pliny the Elder, Tacitus, Ptolemy, Procopius, Jordanes. Archaeological remains indicate Roman connections in the 3rd century after Christ, but there is no evidence for close Continental relations until the Viking period. 1

**Viking period.** Scandinavia developed in isolation during the barbarian migrations until the 2nd century C.E. The Viking expansion from Scandinavia itself prolonged the period of migrations in Europe for 400 years. The traditional participation of Scandinavia was as follows: **Norwegians** (westward): raids in Scotland, Ireland, Iceland, Greenland, east coast of North America, perhaps as far south as present-day Connecticut (Hrolf the Ganger, or “Rollo”); **Danes** (the middle passage): British Isles, France, the Low Countries; **Swedes** (eastward): across Slavdom to Byzantium (foundation of Novgorod, 862, Kiev c. 900). There never was a mass migration, and probably all shared in the various movements to some degree. **Causes:** scholars speculate that polygamy may have created population pressures for emigrations; that the practice of primogeniture forced younger sons to seek their fortunes abroad; that mercantile expansion, especially among the Frisians (people in area of modern Holland) whetted the Viking appetite for trade, and that the Viking culture encouraged the desire for adventure and plunder abroad. **Means:** shallow longboats, equipped with sails, oars, a rudder at the stern and capable of carrying 40 to 60 men, proved easily maneuverable on both rough northern waters and inland rivers, and were versatile—used for raiding and commerce. 2

**Norwegian Colonization. Ireland:** the Norwegian conquest began c. 823, and centers were established at Dublin (the kingdom endured until 1014), Waterford, and Limerick. Exodus of learned monks to Europe (**Scotus Erigena?**). Attacks by the Picts and Danes. The subsequent colonization of the Scottish Islands drew Norwegians from Ireland and accelerated the celticization of the colonists who remained there. **The Islands:** Hebrides, Man, Faroes, Orkneys, Shetlands. **Iceland:** reached by Irish monks c. 790; discovered by the Northmen (Norsemen) in 874 and colonized almost at once; establishment of a New Norway, with a high culture. **Greenland:** visited by Eric the Red of Iceland (981) and colonized at once; expeditions from Greenland to the North American continent (See [1003–6](#)). The Norse settlements in Greenland continued until the 15th century. 3

**Civilization.** Large coin hoards indicate the profits of raids and trade with the British Isles, Mediterranean, Byzantium, and Muslim Asia. Export of furs, slaves, arms (to eastern Europe), and mercenary services to rulers (e.g., bodyguards of Ethelred, Canute, Slavic princes, Byzantine emperors). Trade eastward was cut off by the Huns and Avars (5th and 6th century) but resumed after Rurik's expedition (862) reopened Russia. 4

**Runes** (from a Scandinavian root meaning to inscribe) were already ancient in the Viking period, and probably are modified Roman letters. The *Eddas*, dramatic lays (prose and verse) of the Norwegian aristocracy (especially in Iceland) dealing with gods and heroes (many in the German tradition, e.g., Sigurd and the Nibelungs), are the highest literary production of pagan Scandinavia. 5

**Scandinavian society** rested on wealth from raids and commerce and consisted of a landed aristocracy with farmer tenants who had the right and obligation to attend local courts. The only general assembly was the Allthing of Iceland (established 930), the oldest continuous parliamentary body in existence. 6

**Mythology and religion.** The Norwegians had a more complicated mythology than any other Teutonic people: giants, elves, dwarfs, serpents, succeeded by the triumph of **Odin**, his wife, **Friga**, and his son, **Thor**. 7

**Conversion to Christianity.** The first Christians (probably captives) appeared in the 6th century. The first Christian missionary was the Anglo-Saxon **Willibord** (c. 700), who accomplished little. A Carolingian mission (c. 820) was welcomed by King Bjorn of Sweden. A few years later (c. 831) the archbishopric of Hamburg was established and became at once the center for missionary work in the north. (See [Scandinavia](#)) 8

## 2. [Eastern Europe, 500–1025](#)

### a. [The Byzantine Empire](#)

#### [THE BYZANTINE EMPIRE IN THE 6TH CENTURY \(MAP\)](#)

#### [THE MACEDONIAN EMPERORS \(867-1056\)](#)

For a complete list of the [Byzantine emperors](#), see *Appendix II*.

1

The **Eastern Roman Empire**, or Byzantine Empire, was a polyglot, multiethnic, polysectarian state, at the head of which was the **emperor** (*basileus*, *autokrator*), whose autonomous monarchical power rested on Hellenistic political philosophy and Christian political theory.

2

## 527–65

**Justinian.** Justinian was a man of autocratic character and grandiose conceptions. He was strongly influenced by his wife, **Theodora** (d. 548), a woman of humble origin but of iron will and unusual political judgment. Justinian's whole policy was directed toward the revival of a universal Christian Roman Empire. The entire reign was filled with wars in the east and the west, punctuated by constant incursions of the barbarians from the north.

3

**Justinian and the Church.** Peace had been made with Rome in 519 and Pope John I had visited Constantinople in 525. Justinian made a great effort to maintain the unity of the western and eastern churches, but this led him into trouble with the **Monophysites** of Syria and Egypt. He attempted to reconcile them also, but with indifferent success. The

4

cleavage between Latin and Greek Christianity became ever more marked. Justinian suppressed all heresies and paganism (closing of the Neo-Platonic Academy at Athens, 529). Extensive missionary work was carried on among the pagans and in Ethiopia. For the rest, the emperor, with a great taste for dogma, set himself up as the master of the Church and arrogated to himself the right to make binding pronouncements in even purely theological matters.

**Administration.** The emperor abolished the sale of offices, improved salaries, united the civil and military powers of provincial authorities. To hold back invaders, he built hundreds of forts along the frontiers and established a regular system of frontier forces (*limitanei*). Financially the empire suffered greatly from the extensive military operations and from the great building activities of the court. 5

**Law reform.** To clarify the law, Justinian appointed a commission headed by the jurist **Tribonian**. This commission collected and ordered all the constitutions promulgated since the time of Hadrian and published them as the *Codex Justinianus* (529). There followed the collection of opinions of the jurists, the *Digest, or Pandects* (533), and a general textbook of the law, the *Institutes*. Justinian's own legislation was collected in the *Novellae* (565). By this great work of codification Justinian assured for the Roman Law an immense prestige and far-reaching influence, but at the same time diminished its chances of further development. 6

**Building activity.** The period was one of unexampled construction, ranging from whole towns to public baths, palaces, bridges, roads, and forts, as well as countless churches and cloisters. It was a period of much free experimentation and originality in architecture, resulting in unusual variety of types, all of them, however, marked by grandeur and splendor. The **Church of St. Sophia** (constructed between 532 and 537 by Anthemois of Tralles and Isidoros of Miletus) is the greatest of the many monuments of Justinian's reign. 7

**Literature.** An age of revival. The *Anekdotia* (Secret History) of **Procopius**; the historians **Agathias** and **John of Ephesus**. Renascence of Greek classical poetry; creation of religious poetry by **Romanos**. 8

## 527–31

The **first Persian War** of Justinian (See [527–531](#)). His commander, **Belisarius**, won a victory at Dara (530), but was then defeated at **Callinicum**. The conflict ended with the **Perpetual Peace** of 532, designed to free the imperial armies for operations in the west. 9

## 532

The **Nika Insurrection** (so called from the cry of the popular parties, *nika* meaning victory). This was the last great uprising of the circus parties. Much of Constantinople was destroyed by fire. Justinian was deterred from flight only through the arguments of Theodora. Ultimately Belisarius and the forces put down the insurrection with much cruelty (30,000 slain). Therewith autocracy was reaffirmed. People started to regard the emperor as God's regent on earth, and church and state became one. Not only land ownership but also lucrative economic activities, like the silk industry, were state monopolies (Byzantium succeeded in importing silkworms directly from China and developed a silk industry of its own). Another precedent to be followed by most Byzantine emperors until the 13th century was Justinian's ambition to restore the previous Roman Empire with the entire Mediterranean under its control.

10

### 533–34

The Vandal usurper Gelimer was defeated, and the **whole of North Africa** was reincorporated into the empire.

11

### 535–54

After a series of devastating wars against the Ostrogoths, **all of Italy** was brought under imperial rule.

12

### 540

The **Huns, Bulgars** (See [584–642](#)), and other barbarian tribes crossed the Danube and raided the Balkan area as far south as the Isthmus of Corinth.

13

### 540–62

The great **Persian War against Khusru I** (Chosroes) (See [531–579](#)). The Persians invaded Syria and took Antioch. A truce was concluded in 545, but hostilities were soon resumed in the Transcaucasus region. By the 50-year **Peace of 562**, Justinian agreed to pay tribute, but Lazistan was retained for the empire.

14

### 542–46

Constantinople and the empire were affected by the first main cycle of bubonic plague, which struck the Mediterranean world throughout the 6th century and recurred periodically perhaps for the next 200–300 years. The 542–46 epidemic possibly caused the death of as many as 300,000 people in Constantinople alone. By the end of the 6th century, Byzantium saw its manpower severely debilitated. 15

## 554

The **conquest of southeastern Spain** by the imperial armies. Cordoba became the capital of the province. 16

## 559

The **Huns and Slavs**, having advanced to the very gates of Constantinople, were driven off by Belisarius. 17

## b. The First Bulgarian Empire

### 584–642

Rule of **Kubrat**, or **Kurt**, of the Dulo tribe, approximately one century after Bulgarian settlement in the Balkans (See [673–78](#)). His dominion extended from the Don to the Caucasus. In 619 he visited Constantinople to secure aid against the Avars, at which time he became converted to Christianity, though this step seems to have had no consequences for his people. 1

### 643–701

**Isperikh** (Asperuch), the son of Kurt. The old Great Bulgaria was disrupted by the attacks of Avars and Khazars, and various tribes of Bulgars moved westward into Pannonia and even into Italy. Those under Isperikh crossed the Danube (650–70) and established a capital at Pliska. In 680 they defeated a Byzantine army and occupied the territory between the Danube and the Balkan Mountains. At the same time they still held Wallachia, Moldova, and Bessarabia. 2

### 701–18

**Tervel**, to whom Emperor Justinian II paid a subsidy or tribute, but only after the imperial forces had been defeated at Anchialus (708) and after Tervel had advanced to the very gates of Constantinople (712). 3

### 718–24

Ruler unknown. 4

## 724–39

**Sevar**, during whose reign the peace with the empire was maintained. The Dulo dynasty came to an end with Sevar, whose death was followed by an obscure intertribal struggle. 5

## 739–56

**Kormisosh**, of the Ukil tribe. Until the very end of his reign he maintained peace with the empire, until further domestic disorders gave the signal for Byzantine attacks (from 755 on). 6

## 756–61

**Vinekh**, who was killed in the course of an uprising. 7

## c. 760

208,000 Slavs fled from Bulgaria, asked Byzantium for asylum, and were allowed to settle in Asia Minor. 8

## 761–64

**Telets**, of the Ugain tribe. He was defeated at Anchialus by the Byzantines (763) and put to death by the Bulgarians. 9

## 764

**Sabin**, of the family of Kormisosh. He was deposed and fled to Constantinople. 10

## 764?

**Pagan, or Boyan**, who finally concluded peace with the emperor.

### **3. Western Europe and the Age of the Cathedrals, 1000–1300**

#### **a. Overview**

This period witnessed great **agricultural expansion**, which made possible considerable **population growth**, which in turn contributed to the **rise and growth of towns**. A general **commercial revival**, especially of long-distance trade, brought Europeans, at least indirectly, into contact with many parts of the eastern Mediterranean, East Africa, East and Southeast Asia. Agricultural and commercial revivals allowed for **upward social mobility**. The period also saw remarkable intellectual creativity, with results including the uniquely European educational institution, **the university**; stunning **architectural and artistic vitality**; **technological change**, especially in the tremendous spurt in the **use of energy**, as in water and windmills and the discovery of new iron-casting techniques; and **spiritual piety**. Perhaps the best indication of all this change is the **medieval cathedral**, a symbol of local civic pride, wealth, architectural imagination, and deep religious feeling. In this rich and creative era, the Roman papacy led the way in the development of administrative techniques; England, in the formation of political institutions, including the law; and France, in the evolution of sophisticated cultural influences.

**SOCIAL INTOLERANCE**. Xenophobia (especially against Muslims) resulted from the long crusading tradition; the general systematization of civil and ecclesiastical law stressing social and religious conformity led to increasing hostility against those perceived as social outsiders, aliens. This **new intolerance** manifested itself first in the **expulsion of the Jews** (from England in 1290, France in 1306), then in **legislation against homosexuals**, enacted in Norway (1250), Castile (1250), Siena (1262), Bologna (1265), England (1275), France (1283), Florence (c. 1340); adults convicted were sentenced to death by burning. These laws remained on the books until the 1960s.

Estimates of Population Growth, c. 1000–1300

Italy (including Sicily)	from 5 million to 10 million
British Isles	2 million to 5 million
France	7 million to 16 million
Iberia	7 million to 9 million
Germany and Scandinavia	4 million to 11.5 million

**DEVELOPMENTS IN TECHNOLOGY.** The great availability of slave labor in the ancient and early medieval worlds had retarded the development of **water mills**. The 10th and 11th centuries, however, witnessed a spectacular increase in the number of water mills; for example, the Robec River near Rouen in Normandy had 2 mills in the 10th century, 4 in the 11th century, 10 in the 13th century, and 12 in the 14th century. The *Domesday Book* (See [1086](#)) recorded 5,624 water mills in England in 1086; many manors had at least one mill for grinding grain, fulling (the process of scouring, cleaning, and thickening cloth), stone cutting, and wood cutting. The **windmill** (documented from the 12th century) was more complex than that used in the East, due to the more variable winds of Europe. Cistercian monks often took the lead in establishing **mines**: iron (Furness in Lancashire, Igny in Champagne), coal (Newbattle in Scotland, Grünhain in Bohemia), salt (Wachock near Kraków in Poland, Aussee in Austria), and silver (Grünhain, Altzelle in Saxony). **Communications** improved partly because bridge and road building was considered a social duty and partly because of the more effective use of animal power. Communication by sea was improved by the **Lateen sail**, in use in Italy in the 11th century, and by the **sternpost rudder compass** and the **astrolabe**, about which Europeans learned from the Muslims. 3

Along with the increase in the construction of stone bridges came an increase in the number of **stone buildings**; between 1180 and 1270 in France alone, 80 cathedrals, 500 abbey churches, and tens of thousands of parish churches were constructed in stone; more stone was quarried for churches in medieval France than had been extracted for the Great Pyramid in ancient Egypt, which alone had consumed 40.5 million cubic feet of stone. All these churches displayed a new architectural style, which 15th-century critics called **gothic**. Europeans' greater knowledge of architectural techniques—the distribution of weight, arches—derived from Arabic contacts and sources. 4

The **textile industry** developed, making use of wool, linen, cotton, and silk. The spinning wheel dates from the 13th century and is the first example of belt-driven power transmission. **Soap** was also invented and produced on a large scale by the 12th century. 5

The most important development was in the discovery of **iron-casting techniques**; tools and weapons could be more efficiently produced. **Gunpowder**, although known in Europe in the 13th century, did not become revolutionary until the 14th century, when it was first used to propel missiles. 6

**DEVELOPMENTS IN POPULAR CULTURE.** As in earlier centuries, **women** worked <sup>7</sup> alongside men in all agricultural work, such as grain cultivation and viticulture, and in the preparation of wool and dyes in the textile industry; they dominated the production of ale and beer; they supplemented household income with poultry farming and the manufacture of cheese. Through a practical apprenticeship, women learned **midwifery**, and, until around 1400, women attended all births; beginning in the 13th century, midwives sometimes found it necessary to deliver the child by **cesarian section**, but in the 14th century doctors' guilds and medical schools restricted the performance of cesarians to licensed surgeons, while denying women entrance to medical schools. By the late 14th century, women were engaged in every urban commercial activity as helpmates to husbands and independently; in many manufacturing trades (e.g., in the Parisian silk and woolen industries), women predominated. In the 15th century many **craft guilds** (such as at Cologne) greatly restricted or entirely excluded female members.

In the 12th century, the **cult of the saints** (persons considered outstanding in holiness) <sup>8</sup> gained great popularity: resting on the customary relationship of mutual fidelity and aid, the pious offered prayers and gifts in return for support and healing. **Initiative** in creating a saint belonged to ordinary believers, in spite of papal efforts at centralization. Social structures in different parts of Europe had **different models of holiness**: Italy and Mediterranean lands chose **popolani** (non-nobles), whereas in France, Germany, and England, primarily persons of noble status tended to be selected as saints.

At the center of the new (12th-century) **sacramental system** stood the **Eucharist** of the <sup>9</sup> Mass, which Christians believed after priestly consecration became the living body and blood of Christ and a most important channel of grace. **Beginning in the 11th century**, because of her special relationship to Christ, there was a huge outpouring of **devotion to the Virgin Mary**, as a powerful intercessor with Christ. Prayers, hymns, ceremonies were created to honor her; many churches, including all Cistercian monasteries, were dedicated to her.

(See [1066](#))

## b. [The British Isles](#)

### 1. England

#### [ENGLAND: THE NORMAN AND PLANTAGENET KINGS \(1066-1377\)](#)

#### 1066–87

**William I** (the Conqueror), a man of medium height, corpulent, choleric, but majestic in person and a great soldier, governor, centralizer, legislator, innovator. <sup>1</sup>

#### 1066–72

Speedy submission or reduction of the south and east. The Confessor's bequest, acceptance by the witan, and coronation “legalized” William's title. Reduction of the southwest (1068). Reduction of the rest of England (1067–70): a series of local risings leniently dealt with; construction by forced native labor of garrison castles (Norman mounds). Great **rising of the north** (Edwin and Morca's second) with Danish aid (1069) put down by William in person. The “harrying of the north” (1069–70), a devastation (often depopulation) of a strip from York to Durham (the consequences survived to modern times), ended Scandinavian opposition in England. <sup>2</sup>

**Norman fusion, conciliation, innovation:** (1) **Feudalization** on centralized Norman lines (on the ruins of the nascent Saxon feudalism) followed military reduction and <sup>3</sup>

confiscation of the rebel lands (1066–70). Theoretically every bit of land in England belonged to the crown; in practice only the great estates changed hands and were assigned to William's followers on Norman tenures. The king retained about one-sixth of the land; less than half of the land went to Normans on feudal tenures. Except on the border, few compact holdings survived; the earldoms, reduced in size, became chiefly honorific. Some 170 great tenants-in-chief and numerous lesser tenants emerged. A direct oath (the *Oath of Salisbury*) of primary vassalage to the crown was exacted from all vassals, making them directly responsible to the crown (1086). Construction of castles (except on the borders) subject to royal license; coinage a royal monopoly; private war prohibited. (2) The **Anglo-Saxon shires** (34) and hundreds continued for local administration and local justice (bishops no longer sat in the shire courts and the earls were reduced) under the sheriffs (usually of baronial rank), retained from Anglo-Saxon days, but subject to removal by the king. The sheriffs were an essential link between the (native) local machinery and the central (Norman) government. Communities were held responsible for local good order; sporadic visitations of royal commissioners. Anglo-Saxon laws little altered. (3) Early grant of a charter to London guaranteeing local customs. (4) **Innovations of the centralizing monarch**: a royal council, the **great council**, meeting infrequently (three stated meetings annually), replaced the Anglo-Saxon witan and was of almost the same personnel: tenants-in-chief; the chancellor (introduced from Normandy by Edward the Confessor); a new official, the justiciar (in charge of justice and finance, and William's viceroy during his absences); the heads of the royal household staff. This same body, meeting frequently and including only such tenants-in-chief as happened to be on hand, constituted the **small council**, a body that tended to absorb more and more of the actual administration.

The **Church** retained its lands (perhaps a fourth of the land in England). Pope Alexander II had blessed William's conquest, and William introduced the (much-needed) Cluniac reforms (See [1012–46](#)). Archbishop Stigand and most of the bishops and great abbots were deprived or died, and were replaced by zealous Norman reformers; **Lanfranc** (an Italian lawyer, a former prior of Bec), as archbishop of Canterbury, carried through a wide reform: celibacy enforced, chapters reorganized, new discipline in the schools, numerous new monastic foundations. By royal decree, episcopal jurisdiction was separated from lay jurisdiction, and the bishops were given their own courts, a decisive step in the evolution of the canon law of the Church and the common law as separate jurisdictions. William refused an oath of fealty to Pope Gregory VII for his English conquests and (despite the papal decree of 1075) retained control of the appointment of bishops and important abbots, from whom he drew his chief administrators (thereby making the Church, in effect, pay for the administration of the state). No papal bull or brief, no papal legate might be received without royal approval, and no tenant-in-chief or royal officer could be excommunicated without royal permission. The king retained a right of veto on all decrees of local synods. The great prelates were required to attend the great council, even to do military service.

## 1086

The great **Domesday survey**. Royal commissions on circuit collected on oath (sworn inquest) from peoples of the counties and vills full information as to size, resources, and present and past ownership of every hide of land. The results, arranged by counties in the *Domesday Book*, gave a unique record as a basis for taxation and administration. Recent research on the *Domesday Book* allows tentative and **approximate population** estimates for England in 1086: slaves, 9 percent (in some western counties, such as Cornwall, 20 percent); serfs, 85 percent; burghers and townspeople, 3.5 percent; clerics (priests, monks, nuns), .5 percent; knights and nobles, 1 percent.

5

**Royal finance:** (1) nonfeudal revenues: Danegeld, shire farms, judicial fines; (2) the usual feudal revenues: relief (inheritance tax on great fiefs), scutage (paid in lieu of performance of knight's service).

6

**Military resources** of the crown: (1) (nonfeudal) the old Anglo-Saxon *fyrð* (including *ship fyrð*) was retained (i.e., a national nonfeudal militia, loyal to the crown, was used, as against the Norman rebellion of 1075); (2) (feudal) about five thousand knights' fees owing service on the usual feudal terms. The prosperity of England under Norman rule was great, and an era of extensive building (largely churches, cathedrals, and monasteries) began under the Conqueror and continued even through the anarchy of Stephen and Matilda.

7

## 1087–1100

**William II** (Rufus), a passionate, greedy ruffian, second son of the Conqueror, designated by his father on his deathbed (Robert, the eldest, received Normandy; Henry, cash). A Norman revolt (1088) was put down, largely with English aid, and William was firmly settled on the throne. Justice was venal and expensive, the administration cruel and unpopular, taxation heavy, the Church exploited. On Lanfranc's death (1089), William kept the revenues of the see of Canterbury without appointing a successor until he thought himself dying, when he named (1093) Anselm (an Italian, abbot of Bec, a most learned man, and a devoted churchman), who clashed with William over the recognition of rival popes; Anselm maintained church law to be above civil law and went into voluntary exile (1097). William, deeply hated, was assassinated (?) in the New Forest.

8

## 1100–35

**Henry I** (Beauclerc, Lion of Justice), an educated, licentious, prudent ruler, a good judge of men, won the crown by a dash to the royal treasury at Winchester and a quick appeal to the barons by his so-called *Coronation Charter*, a promise of reform by a return to the good ways of the Conqueror (a promise often broken). Anarchy in Normandy under Robert's slack rule, an invitation from the revolting Norman barons, and the victory of **Tinchebray** (1106) gave Henry Normandy (Robert remained a prisoner until his death). **Anselm**, faithful to the reforming program of the revived papacy, on his recall from exile refused homage for the archiepiscopal estates (i.e., he refused to recognize lay investiture) and refused to consecrate the bishops who had rendered such homage. Henry temporized until firmly on the throne, then seized the fiefs and exiled Anselm. Adela, Henry's sister, suggested the **Compromise of 1107**, which terminated the struggle by establishing clerical homage for fiefs held of the king, while the king allowed clerical investiture with the spiritual symbols. The crown continued to designate candidates for the great prelaties.

9

This reign was marked by a notable expansion, specialization, and differentiation of function in the royal administration (e.g., the exchequer, influenced by accounting methods from Lorraine, or Laon). Extension of the jurisdiction of royal courts: growing use of royal writs, detailing of members of the small council as judges on circuit (hitherto a sporadic, now a regular practice), who not merely did justice but took over increasingly the business formerly done by the sheriffs (e.g., assessment and negotiation of aids and other levies), and brought the curia regis into closer contact with shire and hundred courts.

10

Prosperity was general, and trade in London attracted Norman immigrants. The **Cistercians** arrived (1128) and began an extensive program of sheep farming, mill and road building, agricultural improvement, and stock breeding. Henry began the sale of charters to towns on royal domain.

11

**Influence of the conquest on English culture.** In **architecture**: wide introduction of the Norman (Romanesque) style (St. John's Chapel in the Tower of London, end of the 11th century; Durham Cathedral, c. 1096–1133). In **literature**: Anglo-Saxon, the speech of the conquered, almost ceased to have a literary history, rapidly lost its formality of inflections and terminations, and became flexible and simple, if inelegant. Norman French, the tongue of the court, the aristocracy, the schools, the lawyers and judges, drew its inspiration from the Continent until the loss of Normandy (1204). The Normans then began to learn English, and Anglo-Saxon was enriched with a second vocabulary of Norman words, ideas, and refinements.

12

**Anglo-Norman culture.** In **historical writing**: **Geoffrey of Monmouth**, *History of the Kings of Britain* (written in Latin, before 1147), created the tale of Arthur for Europe; **Walter Map** (c. 1140–c. 1200), author of Goliardic verse, welded the Grail story into the Arthurian cycle, giving it a moral and religious slant; **Wace** (c. 1124–c. 1174),

13

*Roman de Brut* and *Roman de Rou*; **Marie de France**; all three were at the court of Henry II. In **science**: **Adelard of Bath**, a student of Arabic science, in the service of Henry II, observed and experimented (e.g., studying the comparative speed of sound and light), translated Al-Khwarizmi's astronomical tables into Latin (1126) and introduced Al-Khwarizmi's trigonometric tables to the West; **Robert of Chester** translated Al-Khwarizmi's algebra into Latin (1145); **Alexander Neckham** (1157–1217), encyclopedist, wrote on botany and on the magnet. In **philosophy**: **John of Salisbury** (d. 1180), pupil of Abelard, the best classical, humanistic scholar of his day, attached to the court of Henry II and later bishop of Chartres, wrote the *Policraticus*. **Beginnings of Oxford University** (c. 1167) on the model of Paris, a center of national culture.

## 1135–54

**Stephen**. Henry's son drowned on the *White Ship* (1120), and Henry had had his daughter **Matilda** (widow of the emperor Henry V) accepted as his heir and married to Geoffrey of Anjou, as protector. Stephen of Blois (son of Henry's sister Adela) asserted and maintained his claim to the throne at the price of a dynastic war (till 1153) with Matilda, the climax of feudal anarchy, and the ruin of English prosperity. Archbishop Theobald finally negotiated a compromise (1153) whereby Matilda's son Henry should succeed to the crown on Stephen's death. The reign was remarkable for a tremendous growth of ecclesiastical influence.

14

## 1154–1399

**The house of Plantagenet** (Angevin).

15

## 1154–89

**Henry II**. Master of a hybrid “empire” (England, Normandy, Anjou, Maine and Touraine by inheritance; Poitou, Aquitaine and Gascony by marriage with Eleanor of Aquitaine (1152); Brittany (acquired 1169), and Wales, Ireland, and Scotland (on a loose bond)) without unity save in the person of the ruler. **Dynastic marriages**: daughter Eleanor to the king of Castile, Joan to the king of Sicily, Matilda to Henry the Lion. King Henry was a man of education, exhaustless energy, experience as an administrator; a realist; violent of temper.

16

**Restoration of England** to the good order of Henry I: dismissal of mercenaries, razing of unlicensed castles (1000?), reconquest of Northumberland and Cumberland from the

17

Scots, resumption of crown lands and offices alienated under Stephen. Reconstitution of the exchequer and great council. After 1155 Henry felt free to leave England, and spent less than half his reign in the realm.

## 1155–72

**Struggle to reduce clerical encroachment on the royal courts.** Under Stephen, anarchy and the theories of Roman law had favored the expansion of clerical courts, extending to all who were literate, even accused murderers, benefit of clergy—that is, trial in the ecclesiastical court, where the penalties were far milder than in the king's court. **Thomas Becket** (a close friend of Henry's at the time of his elevation to the chancellorship, 1155) resigned as chancellor when he became archbishop of Canterbury (1162), and clashed at once with Henry over the criminous clerks. The *Constitutions of Clarendon* (1164), largely a restatement of old customs (including the Conqueror's), provided (inter alia) for the indictment of clerics in royal courts, their trial in ecclesiastical courts, and their degradation, followed by their sentencing and punishment in royal courts. Becket claimed this amounted to double jeopardy, that “not even God judges twice for the same thing.” Henry argued that too many criminals were escaping justice. The *Constitutions* also extended royal jurisdiction (at the expense of clerical), and asserted royal rights of control in episcopal elections. Becket yielded, was dispensed from his oath by the pope, violated the *Constitutions*, and fled to France. Reconciled (1170) with Henry, Becket returned, excommunicated certain bishops friendly to Henry, and was murdered in the cathedral of Canterbury by four knights of Henry's court, spurred by Henry's outbreak of fury against Becket, but not by Henry's orders. Henry escaped excommunication by promising to abide by the papal judgment, and was reconciled with the papacy (1172) after swearing an oath denying all share in the crime. Henry retained the right of presentation and virtual control over episcopal elections.

18

**Judicial reforms:** (1) Increasing concentration of judicial business in the small council. (2) Designation (1178) of five professional judges from the small council as a **permanent central court**; extension of the transfer of judicial business to royal courts by the increase and specialization of royal writs (the fees a valuable source of revenue); formalization and regularization (c. 1166) of the itinerant justices (justices *in eyre*), the great source of the **common law** (a law universal in the realm). One of the judges, **Glanvil**, wrote the *Treatise on the Laws and Customs of the Kingdom of England*, the first serious book on the common law, which revealed the formal influence of Roman law but was English in substance. The itinerant judges were charged with cases dealing with crimes like murder, robbery, forgery, and arson, and with financial business as well as judicial. (3) **Expansion of the sworn inquest** (probably of Roman origin, introduced into England by the Conqueror): statements by neighbors (freeholders) under oath in the shire courts, in the form of a **jury** (12 members) of presentment in criminal cases (Assize

19

of Clarendon, 1166) later called the accusing, indicting, or **grand jury**, but guilt in criminal cases determined by ordeal by battle or hot iron or cold water, which were appeals to the supernatural; local juries used to determine rightful possession of land in civil cases.

**Reorganization of the exchequer.** Nigel, bishop of Ely (nephew of the original organizer, Roger of Salisbury), restored the exchequer to the general form of Henry I. **Innovations in the raising of revenue:** (1) **tallage**, levied by local negotiations (i.e., by the itinerant justices) with boroughs and tenants; (2) **hidage (carucage)** replaced the Danegeld; (3) **scutage**, levied by Henry I on the clergy, now extended to knights' fees in lieu of military service (due to Henry's need of nonfeudal levies across the channel); (4) **personal property taxes** (the first, 1166), Saladin tithe (1188), assessed by neighborhood juries. *The Dialogue of the Exchequer* was written by one of the officials of the exchequer.

**Extension of trade.** German merchants were well established in London by 1157; there was a large Italian business in wool; and there was extensive development of domestic trade.

**Foreign affairs.** The **Norman penetration of Wales** since the conquest bred a sporadic national resistance; Henry, with three expeditions, reduced Wales to nominal homage to the English crown. **Ireland**, despite a brilliant native culture, was in political chaos under rival tribal kinglets and was economically exhausted. Pope Adrian IV, hoping that Henry would reform the Church in Ireland, "gave" Ireland (1154) to Henry. Richard of Clare's (Strongbow) expedition (1169–70) established a harsh rule; Henry landed (1171), temporarily reduced the rigors of the baronial administration, and reformed the Irish Church (Synod of Cashel, 1172). **John Lackland** (Henry's son) was appointed lord of Ireland (1177), arrived (1185), and was soon recalled for incompetence.

Intrigues and revolts (beginning 1173) of Henry's sons, supported by their mother, Eleanor, King Louis VII, and later Philip II of France, as well as by disgruntled local barons.

The ruling class continued to speak French during this reign, but the establishment of primogeniture as applied to land inheritance ensured that younger sons would mingle with the nonaristocratic sections of society and accelerate the fusion of Norman and native elements. Manor houses began to appear in increasing numbers as domestic peace continued. Numerous Cistercian houses spread new agricultural methods and especially improved wool raising.

## 1189–99

**Richard I** (Coeur de Lion). Neither legislator, administrator, nor statesman, but the greatest of knights errant, an absentee ruler who spent less than a year of his reign in

England, he visited his realm only twice, to raise money for Continental ventures. Taxation was heavy. The government remained in the hands of ministers largely trained by Henry II, but there appeared a tendency toward a common antipathy of barons and people toward the crown. Richard (having taken the Cross, 1188) went on the Third Crusade with Frederick Barbarossa and Philip II, his most dangerous foe. On his return trip Richard was captured by Duke Leopold of Austria and turned over to Emperor Henry VI, who held him for a staggering ransom. John and Philip bid for the prisoner, but Richard finally bought his freedom (1194) with a ransom raised partly through taxation in England. The crusade gave Englishmen their first taste of Eastern adventure, but drew few except the adventurous portion of the baronage. The domestic reflection was a series of anti-Semitic outbreaks. John Lackland (despite his known character) was given charge of several counties; his plot against Richard was put down by **Hubert Walter** with the support of London. Hubert Walter, archbishop of Canterbury and justiciar (1194–98), ruled England well, maintained the king's peace, and began a clear reliance on the support of the middle class in town and shire. Charters were granted towns (London received the right to elect its mayor)—and the knights of the shire were called on to assume a share of county business as a balance to the sheriffs. Knights (elected by the local gentry) served as coroners and chose the local juries, a departure looking to the day when local election and amateur justices of the peace would be the basis of government. The first known merchant guild established in 1193.

## **c. France**

### GROWTH OF THE KINGDOM OF FRANCE 1180-1314 (MAP)

### FRANCE: THE CAPETIAN KINGS (987-1328)

## **987–1328**

**Direct line of the Capetian house** (the dynasty continued until 1792).

1

## **987–96**

**HUGH** (called *Capet*, for the cloak he wore as abbot of St. Martin de Tours). At Hugh's accession, the kingship was at its nadir; such power as Hugh had was feudal; the royal title meant little more than hegemony over a feudal patchwork, an ill-defined area called France, and the prestige of ancient monarchical tradition sanctified by ecclesiastical consecration. Hugh's own feudal domain consisted of the Île de France (extending from Laon to Orleans, with its center at Paris) and a few scattered holdings. The great barons of the so-called royal fiefs recognized Hugh as their suzerain, but never did homage nor rendered service. Hugh's special interest was to maintain his control over his chief resources, the archbishopric of Reims and the great bishoprics (Sens, Tours, Bourges)

2

and abbeys of the Île de France, and to wean northeastern France away from the Carolingian and imperial interest. Despite clerical pressure, he avoided submission to imperial suzerainty, a policy that facilitated the demarcation between France and Germany. In defiance of pope and emperor, he forced his own candidate into the archbishopric of Reims. Hugh crowned his son shortly after his own coronation and began a practice (cooptation) that the early Capetians continued (until Philip II no longer felt it necessary), thus ensuring the succession and weakening the principle (dear to the feudality) of elective kingship.

### 996–1031

**ROBERT II** (the Pious), an active, well-educated, polished, amiable ruler, a good soldier, supported by the duke of Normandy in constant wars against his neighbors, and by the monasteries of Burgundy in attacks on the dukes of Burgundy. The duchy of Burgundy escheated to the crown and was given to Robert, a younger son. Robert the Pious, like his father, supported the Cluniac reformers. Minor territorial additions signify the revival of royal power. 3

### 1031–60

**HENRY I**, an active, brave, indefatigable ruler whose reign nevertheless marked the lowest ebb of the Capetian fortunes. The rebellion of his brother Robert, supported by Eudes, count of Chartres and Troyes, was put down with the aid of the duke of Normandy, and Robert was pacified by the grant of the duchy of Burgundy (which continued in his family until 1361). Henry supported the duke of Normandy (1047), but led a coalition against him two years later and was defeated. The *prévôts* were introduced to administer justice and taxation in the royal lands. The kingdom of Burgundy passed (1032) to the empire. 4

### 1035–66

**Rise and expansion of Normandy. William I** became duke (1035) and until 1047 faced a series of baronial revolts. With the aid of his feudal suzerain, King Henry of France, William defeated his revolting barons (1047) and razed their castles. The union of Normandy and Maine was completed (1063) against powerful opposition from the counts of Anjou. William's alliance with Henry was broken (1053), and Henry ravaged the heart of Normandy (1058). Normandy was becoming a developed feudal state under 5

firm ducal control: military service, assessed in knights' fees, was attached to specific pieces of land; no castles could be built or maintained without ducal license; private warfare and blood feud were strictly limited. Coinage was a ducal monopoly. The legal jurisdiction of the duke was wide, local government was under the duke's representatives (the *vicomtes*), who commanded the local forces, guarded the castles, did justice, collected the revenue (a large part of which was cash). The Church had been revived with the duke supreme, naming bishops, most of the abbots, and sitting in provincial synods.

Norman **relations with England** had grown closer, and this tendency culminated (1002) <sup>6</sup> in the marriage of Duke Robert's sister Emma with King Ethelred. The son of this marriage, Edward the Confessor, educated largely at the Norman court, came to the throne of England (1042) and died without heirs (1066). The witan at once elected Harold, Earl Godwin's son. **William I** of Normandy, with a volunteer force (perhaps 5,000–6,000) collected from Normandy and the Continent, defeated Harold in the **Battle of Hastings** (Oct. 14) and was crowned king of England on Christmas Day (See [1042–66](#)) (See [1066–87](#)). The Bayeux Tapestry (actually a long 230-foot-by-20-inch strip of embroidery), made in the south of England before 1082, gives a narrative in picture and text of events surrounding the Norman Conquest; it is a primary historical source for the period.

## 1060–1108

**PHILIP I**, enormously fat but active and vigorous; excommunicated and unpopular with the clergy as the result of an adulterous marriage (1092) and because of his hostility to clerical reform. He defeated (1079) Duke William of Normandy (the Conqueror) and steadily supported **Robert Curthose**, William's son, against Anglo-Norman pressure. His reign was characterized by systematic expansion of the resources of his house and regular annexations to its domains in the face of stubborn feudal resistance. <sup>7</sup>

The growth of feudalism tended to diminish anarchy and to improve the general security of life, and ultimately led to decisive economic recovery in western Europe, a trend toward urban economy, and the emergence of a bourgeoisie that was beginning to accumulate capital. This development was a determining factor in the economic, social, and monarchical evolution of the 13th century. The **Peace of God** and the **Truce of God** (See [1012–46](#)) were promoted by the Church with Capetian support but had limited effect. <sup>8</sup>

## 1108–1328

A period in which the Capetians reduced the great feudatories north of the Loire and began the transformation of the vague ecclesiastical, judicial, and military rights derived from Carolingian tradition into royal powers.

9

## 1108–37

**LOUIS VI** (the Fat). A brave soldier of tremendous physique, intelligent, affable; liked by the peasantry, commercial class, and clergy; the first popular Capetian. Consolidation of his Norman frontier (wars with Henry I of England: 1109–12; 1116–20), and steady reduction of his lesser vassals as far as the Loire. His charters to colonizers (*hôtes*) of waste lands, and frequent if inconsistent support of the communes, especially on the lands of the Church and the baronage, began the long alliance of the Capetians with bourgeois interests; Louis's **charter of Lorris**, widely copied in town charters, was a significant sign of the great **urban development** setting in all over Europe in this period. As protector of the Church, Louis gained a foothold in the lands of his vassals. Careers at court were opened to talented clergy and bourgeois. Louis's compromise with the Church over feudal patronage and investiture initiated the king of France's effective role as **eldest son of the Church**. He was the first Capetian to intervene effectively outside his own feudal lands. He defeated the alliance of Henry I of England with the Emperor Henry V, and stopped a German invasion (1124). The marriage (1137) of his son Louis to Eleanor, heiress of William X of Aquitaine (i.e., Guienne (*Aquitania Secunda*) and Gascony), marked the Capetian effort to balance the Anglo-Norman menace in the north with additions of territory south of the Loire. The Anglo-Norman danger had appeared in aggravated form when, in 1129, Geoffrey became count of Anjou, Maine, and Touraine. He had married Matilda (daughter of Henry I of England) in 1128 and proceeded (1135) to conquer Normandy.

10

**Development of royal administration** under the early Capetians. The court of the king, usually known as the *curia regis*, consisting as it did of magnates, royal vassals, and court officials (mainly chosen from the baronage), was essentially feudal in spirit and tradition. Meeting on royal summons and relatively frequently, its early duties were undifferentiated, its functions judicial, advisory, legislative. The royal administration was in control of the great officers of the crown, whose aim was to concentrate power in their own hands, a process that culminated in a virtual monopoly of such power by the **Garlande family** early in the 12th century. Louis VI, after a struggle (1128–30), terminated their dominance, and thenceforth the Capetians relied increasingly on lesser and more docile nobles, clerics, and bourgeois men of affairs. These career men were devoted to the crown rather than to feudal ambitions, and their presence in the *curia regis* began the differentiation of its functions and its subjection to royal rather than feudal influences. Most notable of these careerists was **Suger**, Louis's old tutor, a cleric of peasant origin, who became abbot of St. Denis (1122). An able statesman, his

11

influence was decisive in the reigns of Louis and his son Louis VII. Suger began (c. 1136) the new abbey church of St. Denis, the first edifice Gothic in design.

## 1100–1400

**Rise of towns.** The economic revival of western Europe was paralleled by a resumption of town life and development throughout the west, which was most notable in France, where the movement reached its apogee in the 12th century, before the consistent advance of the Capetian monarchy began to retard its progress. Types of town development were by no means uniform, but important general categories can be distinguished. (1) The **commune** proper, a collective person endowed with legal rights and powers (e.g., financial, judicial), able to hold property. As a feudal person, the commune could have vassals, render and exact homage, establish courts for its tenants, and even declare war and make treaties. Symbols of its independence were the belfry, town hall, and seal. Typical communes of northern France and Flanders were the *communes jurées* (e.g., Beauvais, St. Quentin (chartered before 1080), Rouen (chartered 1145), and Amiens (chartered in the 12th century)); in southern France the corresponding communes were called *consulates*, which enjoyed even greater rights than in the north, especially in Roussillon, Provence, Languedoc, Gascony, and Guienne. In the south the nobles took an active part in the formation of consulates and shared in their government. (2) *Villes de bourgeoisie* (or *communes surveillées*) had elements of communal powers in varying degrees, but lacked full political independence (i.e., they were privileged but unfree). They were found all over France, but especially in the center, and were the prevailing type in the royal domain. Citizens enjoyed specific privileges, but the crown retained judicial and other powers in varying degrees. (3) *Villes neuves* (characteristic of the commercial north) and *bastides* (typical of the south, and usually strongholds) were small rural creations of kings or feudal lords, given a charter from the first that established their status. (4) **Peasant associations** and village federations (influential in the north), which sought to define and guarantee the rights of their citizens. Governmentally, town development seems to have been hardly the result of conscious effort to introduce a new political dispensation. It was, rather, an attempt to establish and define the rights of nonfeudal groups, and aimed at economic prosperity and personal security. The movement constantly enjoyed royal support, but royal policy toward it was governed by immediate political or financial considerations, and the crown always strove to reduce or control town independence in the interest of its own power. Ultimately monarchy triumphed, but not before the bourgeois groups and the serfs had gained substantial advantages.

## 1137–80

**LOUIS VII** (the Young). Pious and therefore popular with the clergy. He remained under the influence of Suger until the latter's death in 1151. A papal interdict on the royal lands, resulting from Louis's insistence on his feudal rights, led to intervention by Bernard of Clairvaux.

13

## 1147

Louis inspired the **Second Crusade** (See [1147–49](#)). He induced the German king, Conrad III, and Bernard of Clairvaux to join him, and, leaving the kingdom in the hands of Suger, he set out for the east. He returned (1149) beaten, humiliated, and estranged from his wife, Eleanor, who had accompanied him. The marriage was annulled (1152), probably due to lack of a male heir. This step cost the Capetians the territories of Poitou, Guienne, and Gascony, for Eleanor at once married Henry, duke of Normandy, who in 1151 had succeeded his father as count of Anjou, Maine, and Touraine. The acquisition of Eleanor's domains made Henry master of more than half of France and put him in a position to bring pressure on the holdings of the king of France both from the north and the south. When Henry in 1154 became king of England, the so-called Angevin Empire extended roughly from the Tweed to the Pyrenees.

## d. [Germany](#)

### [THE WELF AND HOHENSTAUFEN FAMILIES](#)

#### 1024–1125

**The Franconian** (or Salian) **house**. Dawn of the great imperial age.

1

#### 1024–39

**Conrad II** (the Salian). He continued the general policy of Henry: personally interested only in the churches of Limburg and Speyer, he was firm in his dealings with the Church in general and relied on the lesser nobles to balance the clergy and magnates. The *ministeriales*, laymen of servile origin, were used to replace the clergy in many administrative posts; regalian rights were retained and exploited. Dukedoms were not regranted as they fell vacant, but were assigned to Conrad's son Henry, who, on his accession to the crown, held all but the duchies of Lorraine and Saxony. By encouraging the making of fiefs heritable, Conrad weakened the dukes and got the support of the lesser nobles but ensured the ultimate feudalization of Germany. Conrad's brilliant imperial coronation (1027), in Rome, was witnessed by two kings, Canute the Great and Rudolf III of Burgundy. Burgundy, willed to Conrad by Rudolf III and guardian of one road to Italy, was reincorporated (1033) in the empire on the death of Rudolf. Failure of an expedition (1030) against Stephen of Hungary; successful disciplinary expedition (1031) against the Poles; recovery of Lusatia; payment of homage by the Poles.

2

## 1039–56

**Henry III** (the Black). Imperial authority at its height. A period of great town prosperity, due to development of trade. His wife, Agnes of Poitou, was an ardent devotee of Cluny; Henry, an honest reformer, abandoned simony and purified the court along Cluniac lines, but retained a firm hold on the Church. Strongest of the German emperors, he asserted his mastery in parts of Poland, Bohemia, and Hungary; Saxony was the only duchy to keep a trace of its original independence; resumption of the dangerous practice of granting duchies outside the royal house made Germany a feudal volcano; use of the *ministeriales* in administration, but retention of the bishops as principal advisers and administrators. Henry's reforms alienated the bishops, the magnates, and the nobles.

3

## 1043

Henry proclaimed the **Day of Indulgence**, forgiving all his foes and exhorting his subjects to do likewise; Br[un]o of Cologne forced (1041) to do homage; pagan reaction in Hungary put down (1044); final peace in Hungary (1052), which became a fief of the German crown. Homage of Denmark, repudiated soon after.

4

## 1046

**Synods of Sutri and Rome.** Deposition, at Henry's instigation, of three rival popes, and election of his nominee, Clement II, the first of a series (Clement, Leo IX, and Nicholas II) of reforming German popes; reaffirmation of the imperial right of nomination to the papacy.

5

## 1047

**Godfrey the Bearded**, duke of Upper Lorraine, joined Baldwin of Flanders in a revolt at first supported by Henry of France (1047); he married (1054) Beatrice, widow of Boniface, marquis of Tuscany, one of the most powerful Italian supporters of the popes.

6

## 1050–1400

While France and England witnessed the slow beginnings of centralized national states through royal efforts to check or reduce powers of independent feudal barons, Germany experienced the development of **territorial lordships**. German emperors consciously supported princely territorial power and legal jurisdictions.

7

## 1056–1106

**Henry IV.** (Age six at his accession; nine-year regency of his pious mother, Agnes.) During the regency, lay and clerical magnates appropriated royal resources and sovereign rights with impunity, and dealt a serious blow to the monarchy.

8

## 1062

**Anno**, archbishop of Cologne, kidnaped the young king and, with **Adalbert**, archbishop of Hamburg-Bremen, governed in his name; they divided the monasteries (one of the chief resources of the crown) between themselves.

9

## 1066

The **Diet of Tribur**, thanks to the reaction of the clergy and nobles against Adalbert, freed Henry from Adalbert, and his personal government began.

10

Henry was a remarkable but undisciplined man, intelligent, resolute, headstrong, with the odds against him from the start; under papal pressure he was reconciled (1069) with his wife, Bertha, reformed his personal life, and began a vigorous rule. His policy was a return to the Ottonian habit of using the Church as a major source of revenue; simony was open, and the reforming party appealed to Rome against Henry. Henry began the recapture, reorganization, and consolidation of royal lands and revenues, especially in Saxony, and probably planned to consolidate the monarchy in the Capetian manner, around a compact core of royal domain in the Harz-Goslar region.

11

## 1073

A great **conspiracy of the leading princes** led to a rising of virtually all of Saxony. Henry came to terms with the pope, played one faction off against the other, won the South German baronage, and finally defeated the rebels (1075).

## e. [Scandinavia](#)

### 1. Denmark

#### c. 950–85

**Harald II** (Bluetooth), whose reign saw a steady advance of Christianity and expansion of Danish power over Schleswig, the Oder mouth, and Norway. <sup>1</sup>

#### 985–1014

The kingship was of little importance until the reign of **Sven I** (Forked Beard). He defeated the Norwegians, Swedes, and Wends and conquered England (1013). <sup>2</sup>

#### 1014–35

**Canute II, the Great** (Knut), Sven's son, was king of Denmark, Norway (1028), and England (1016–35), the first “northern empire.” Canute's conversion meant the conversion of his people. He imported priests, architects, and artisans from his English realm, and new influences spread from Denmark to Norway and Sweden. On his death, Norway broke away; England passed to Edward the Confessor. By the late 12th century, Arhurs and Copenhagen were sizable trading centers, exporting great amounts of fish, especially herring. <sup>3</sup>

#### 1157–82

Under **Waldemar I, the Great**, the founder of the **Waldemarian dynasty**, a great expansion eastward took place at the expense of the Wends; Copenhagen was established as the capital. 4

### 1182–1202

**Canute VI** made conquests in (Slavonic) Mecklenburg and Pomerania. 5

### 1202–41

**Waldemar II** (the Conqueror) led crusading expeditions into Livonia and Estonia (Reval founded), and penetrated the Gulf of Finland, making the southern Baltic a Danish lake (the second “northern empire”). This empire collapsed in 1223, and the advance was in fact more in the nature of a crusade than a permanent imperial expansion. The monarchy was now dominant, the nobles largely feudalized, the clergy (with royal grants) powerful, the bourgeoisie vigorous (fisheries and cattle raising), the yeoman class strong and independent. 6

### 1241–50

**Eric IV** (Plowpenny), whose reign was taken up with civil war against his brothers Christopher and Abel. 7

### 1250–52

**ABEL** was supported by his brother-in-law, the count of Holstein, and also by the Swedes and the city of Lübeck. 8

### 1252–59

**Christopher I.** His effort to tax the Church opened a struggle that lasted nearly a century. 9

### 1259–86

**Eric V** (Glipping). He was forced by the nobility to sign a charter, the **Danish Magna Carta** (1282), recognizing the national assembly and initiating the subordination of the king to the law. He continued the contest with the clergy, fought against dynastic rivals, planned expansion in Mecklenburg and Pomerania, and lost Scania and North Halland to Sweden. 10

(See [892–98](#))

## f. [The Papacy and Italy](#)

*For a complete list of the [Roman popes](#), see [Appendix IV](#).* 1

The papacy, frequently in immoral hands and the political football of Roman families until c. 1048, initially exercised no broad religious influence; the Italian Peninsula was without effective political leadership. 2

### 888–924

**Berengar I**, last of the phantom “emperors” (vacancy in the empire, 924–62), was the grandson of Louis the Pious. **Raids of Saracens** (c. 889) and **Magyars** (c. 898) into Lombardy; a Saracen stronghold at Freinet controlled the Alpine passes; Saracen settlements in southern Italy, and the **Muslim conquest (827) of Sicily**; Italian urban life had become almost extinct; the invasions were checked not by the shadowy monarchs, but by the rise of feudal defenders. 3

### 914–63

The **nadir of the papacy** (the “pornocracy”): the landed aristocracy of Rome, under the leadership of the senator Theophylact, his wife, Theodora, and his daughter Marozia (mistress of Pope Sergius III and mother of Sergius's son John, later Pope John XI), dominated the curia. 4

### 928

**Marozia**, having imprisoned Pope John XI, took control of Rome. 5

## 932–54

**Alberic II**, Marozia's son, assumed power. The *Patrimonium Petri* was a plaything of the **Crescentii** (Marozia's family), who maintained an intermittent supremacy in Rome during the 10th century. The papacy was without political power or spiritual prestige, and the western Church for all practical purposes became a loose organism under its bishops, who gave “national churches” such coherence as they had, and acknowledged a vague kind of allegiance to Rome. 6

## 950–61

**Berengar II**. He imprisoned his widow, Adelheid, who appealed (according to tradition) to Otto the Great. 7

## 951–52

**Otto the Great's first expedition** to Italy. 8

## 961–64

**Otto's second expedition** to Italy, in answer to the appeal of the profligate pope, John XII, for protection against Berengar. 9

## 962

Otto's coronation at Pavia as king of Italy and his coronation by the pope as Roman emperor, marked the **revival of the Roman Empire**. Otto confirmed his predecessors' grants in the *Patrimonium Petri* (probably with additions), but carefully reserved the imperial right to sanction papal elections and treated the pope like a German bishop (i.e., subject to the state). Otto also exacted a promise from the Romans not to elect a pope without imperial consent. He established a precedent by calling a synod at Rome that deposed (963) Pope John XII for various crimes, and selected a (lay) successor, Leo VIII (963–64). This synod opened a period of about a hundred years when the papacy was dominated by the German emperors and by the counts of Tusculum, vassals of the 10

emperors, who had the title of *patricius* in Rome. In the same period, the bishops in the west lost the position they had won in the 9th century and became increasingly dependent on the kings and feudal nobility, and increasingly secular in outlook. The homage of Pandolf I for Capua and Benevento (967) and his investiture with the duchy of Spoleto mark the beginning of the long imperial effort to include southern Italy in the empire.

## 964

**Pope Leo VIII** was expelled by the Romans shortly after his election, and **Benedict V** <sup>11</sup> was elected (964) by the Romans without imperial consent.

## 966–72

**Otto's third expedition to Italy.** Otto held a synod that deposed Benedict. **Pope John XIII** <sup>12</sup> (elected with imperial cooperation) was soon expelled by the Romans, and Otto, after a terrible vengeance on Rome, restored him. Imperial coronation of the future Otto II (967) by John XIII.

## 980–83

**Otto II's expedition to Italy.** Otto crushed Crescentius I, duke of the Romans, restored Pope Benedict VII (981), and was utterly defeated in his effort to expel the Saracens from southern Italy by a Greco-Muslim alliance (982). Otto dominated **Pope John XIV** <sup>13</sup> (983–84).

## **g. The Iberian Peninsula**

### **1. Muslim Spain**

**1037–86**

**The Muluk al-Tawa'if** (Party Kings). These were petty dynasties founded on the ruins of the Umayyad caliphate: the Hammudids of Malaga (from 1016 onward) and of Algeciras (1039–); the Abbadids of Sevilla (1031–); the Zayrids of Granada (1012–); the Jahwarids of Córdoba (1031–); the Dhul-Nunids of Toledo (1035–); the Amirids of Valencia (1021–); the Tojibids and Hudids of Saragossa (1019– and 1031–). Most of these dynasties were absorbed by the most distinguished of them, the **Abbadids**, who summoned the Almoravids from Africa to aid them against Alfonso VI of Castile. This lack of Muslim unity encouraged expansion of northern Christian kingdoms southward.

**1056–1147**

The **Almoravids**, a Puritanical Berber sect founded by the Berber prophet **Abdullah ibn Tashfin**. They conquered Morocco and part of Algeria and were called into Spain by the Abbadids to help in the defense against the Christians. They defeated Alfonso of Castile at **Zallaka** (1086) and proceeded to annex Moorish Spain, with the exception of Toledo and Saragossa.

**1130–1269**

The **Almohades**, a dynasty founded by the Berber prophet **Muhammad ibn Tumart**. His successor, Abdul-Mu'min, annihilated the Almoravid army (1144), after which Morocco was conquered (1146). 3

## 1145–50

The Almohades invaded and conquered Moorish Spain, after which they conquered Algeria (1152) and Tunis (1158). 4

## 1212, July 16

The Almohades were finally defeated by an alliance of the Christian kings Peter II of Aragon and Alfonso VIII of Castile, in the **Battle of Las Navas de Tolosa**, which was followed by their expulsion from Spain. Thereafter only local Muslim dynasties remained, of which the **Nasrids of Granada** (1232–1492) alone offered much resistance to the Christians. 5

The height of **Muslim learning** was reached by **Averroës** (ibn-Rushd, c. 1126–98), philosopher, physician, and commentator on Plato and Aristotle, master of the Christian schoolmen. 6

In the 10th through the 15th century, Christian kingdoms in the north, propelled by demographic pressure, land hunger, nobles' demands for estates, advances in military technology, and the appetites of transhumant sheep, pushed southward. In the 14th century, clerical propagandists labeled this movement the **Reconquista (Reconquest)**: a sacred crusading struggle to wrest the country from alien Muslim hands and to restore Christian control. This religious myth subsequently became part of Spanish political history and the Spanish “national” psychology. 7

## 1238

The Nasrid rulers began reconstructing an old fortress, **the Alhambra** in Granada, a monumental and magnificent complex of buildings combining fortress, palace, and small city. Completed in the 14th century, these buildings and gardens survive as the finest example of Muslim culture in Europe. 8

## 4. [Eastern Europe, 1000–1300](#)

### a. [The Slavs](#)

The Slavs, an eastern branch of the Indo-European family, were known to the Roman and Greek writers of the 1st and 2nd centuries C.E., under the name of **Venedi**, as inhabiting the region beyond the Vistula. The majority of modern scholars agree that the “original home” of the Slavs was the territory to the southeast of the Vistula and to the northeast of the Carpathian Mountains, in the upper basins of the Western Bug, the Pripet, and the Dniester. In the course of the early centuries of our era, the Slavs expanded in all directions, and by the 6th century, when they were known to Gothic and Byzantine writers as **Slaveni**, they were apparently already separated into three main divisions: (1) the western Slavs (the present-day Poles, Czechs, Slovaks, and Moravians); (2) the southern Slavs (the Bulgarians, Serbs, Croats, and Slovenes); (3) the eastern Slavs (the Russians, subsequently subdivided into the Great Russians, the Little Russians or the Ukrainians, and the Belorussians, Russian for “White Russians”). <sup>1</sup>

The Slavs emerged as a distinct people after mingling with the Goths and Huns. Those not affected by the invasions of the Goths and Huns constituted another branch of Indo-European people, namely the **Balts** (Lithuanians, Latvians, and the early Prussians). These peoples inhabited the southeastern coast of the Baltic Sea, between the present Klaipėda (Memel) and Estonia. <sup>2</sup>

## b. [Bohemia and Moravia](#)

### c. 623–58

The earliest recorded attempt at the construction of a Slavic kingdom was that made by **Samo**, who appears to have been a Frankish tradesman traveling in central Europe. Probably taking advantage of the defeat of the Avars by the Greeks in 626, he managed to unite the Czechs and some of the Wends, and succeeded in repulsing not only the Avars, but also the Franks under King Dagobert (631). But on the death of Samo, the union of the tribes disintegrated. 1

### 833–36

**Mojmir**, founder of the Moravian state, maintained himself against pressure from the East Franks. 2

### 846–69

**Rastislav**, prince of Moravia, made an alliance (862) with **Michael III**, the Byzantine emperor, to counteract the close relationship between the East Franks and the Bulgarians. 3

### 863

**Conversion of the Moravians by Cyril** (Constantine, 826–69) and **Methodius** (815–85), two monks from Salonika (Thessalonica) sent at Rastislav's request (See [863–85](#)). Beginning of Slavic church language and liturgy. **Glagolitic alphabet**. 4

## 869

Rastislav captured and blinded by Carloman.

5

## 870–94

**Sviatopluk**, a Moravian prince, succeeded in uniting under his authority Moravia, Bohemia, and present-day Slovakia, and managed to maintain his position as against the Germans. During his reign, the western Slavs were converted to Christianity by Cyril and Methodius, but in the last years of the century, the German clergy redoubled its efforts and won Bohemia and Moravia for the Latin Church, thus establishing the ecclesiastical dependence of the western Slavs on Rome.

6

## 906

The **kingdom of Moravia** was dissolved as the result of a great defeat by the Hungarians.

7

## c. 907–29

**St. Wenceslaus** (in Czech, Vaclav), duke of the Premysl house from c. 922. Educated by his grandmother, **St. Ludmilla**, a devout Christian. He worked for the cultural improvement of his people, and seeking broader Christian contacts, maintained friendly relations with the German king Henry I (the Fowler) (See [919–36](#)). This policy, combined with a pagan reaction against a determined Christian king, led to Wenceslaus's murder by his brother Boleslav I. Prague soon became the center of a Wenceslaus cult; by 1100 he was recognized as Bohemia's patron saint, and his crown has served as the symbol of Czech independence.

8

## 929–67

**BOLESLAV I**. He seems to have carried on constant warfare against the encroaching Germans, until forced (950) to accept German suzerainty. To the east he conquered Moravia, part of Slovakia, part of Silesia, and even Kraków. Furthermore, he appears to have established a fairly strong royal power over the old tribal chiefs.

9

## 967–99

**BOLESLAV II.** He apparently continued the policies of his father and saw to the final victory of the Christian faith (foundation of the bishopric of Prague, 973). Missionaries from Bohemia took an active part in the conversion of Hungary and Poland. 10

The entire 11th and 12th centuries were filled with chronic dynastic conflicts between members of the Premysl family and the various claimants appealing to Poland and more particularly to the German emperors for support. The result was the gradual integration of Bohemia with Germany, and the extension of feudalism to the Czech lands. 11

## 999–1000

**Boleslav the Brave** of Poland took advantage of the anarchy in Bohemia to conquer Silesia, Moravia, and Kraków. In 1003 he became duke of Bohemia, but he was driven out in the next year by a German army. 12

### c. [Poland](#)

The Polish kingdom emerged in the 10th century, the result of the unification of some six tribes under the **Polani**, who were ruled by the members of the semimythical **family of Piast**. From the outset the Poles were obliged to fight against the encroachment of the Germans from the west, the Prussians from the north, the Bohemians from the south, and the Hungarians, also from the south. <sup>1</sup>

#### c. 960–92

**MIESZKO I**, of the house of Piast, the first ruler for whom written evidence survives. He conquered the territory between the Oder and the Warthe Rivers, but was defeated by Markgraf Gero and obliged to recognize German suzerainty (973). <sup>2</sup>

#### 966

Mieszko was converted to Christianity by Bohemian missionaries, probably for political reasons, to deprive the Germans of any further excuse for aggression. The acceptance of Latin Christianity meant the connection of Poland, like Bohemia and Hungary, with Roman-European culture. <sup>3</sup>

#### 992–1025

**BOLESLAV I** (Chrobry, the Brave). He ascended the throne at 25 and was the real organizer of the Polish state. An energetic but at times treacherous and cruel ruler, he built up an efficient military machine, laid the basis for an administrative system (*comitescastellaniBurggrafen*, with civil and military powers), organized the Church (establishment of Benedictine monasteries). Politically his aim appears to have been the <sup>4</sup>

union of all western Slavs under his rule. He conquered eastern Pomerania and gained access to the Baltic (992–94), added Silesia, Moravia, and Kraków to his domain (999), and induced Otto III to erect an independent archbishopric of Gnesen (1000). On the death of Otto, he took advantage of the confusion in Germany to occupy Lusatia and Meissen, and in 1003 made himself duke of Bohemia. The new emperor, Henry II, carried on long wars against Boleslav and ultimately forced the abandonment of Bohemia and Lusatia (1005). But in the **Treaty of Bautzen** (1018), Boleslav was given Lusatia as an imperial fief, and just before his death he was able to make himself king of Poland (1025).

## 1025–34

**MIESZKO II**, whose reign marked the culmination of feudal separatism. The Poles, like the other Slavs, divided their domain among the various sons of a deceased king, thus creating endless dynastic conflict and ample opportunity for intervention by neighboring rulers. During Mieszko's reign, most of the territorial gains of Boleslav were lost: St. Stephen of Hungary conquered Slovakia (1027); B[!]<sup>o</sup>etislav of Bohemia took Moravia (1031); Yaroslav of Russia acquired Ruthenia (1031); Canute of Denmark took Pomerania (1031). In 1032 the Emperor Conrad actually divided Poland between Mieszko and two of his relatives.

5

## 1034–40

A period of violent dynastic struggle and general insurrection, including a pagan reaction (burning of monasteries, massacre of the clergy) and a peasant uprising against the landlords. Meanwhile B[!]<sup>o</sup>etislav of Bohemia seized Silesia (1038).

6

## 1038–58

**CASIMIR I** (the Restorer), who succeeded, with the aid of the Emperor Henry III, in reconquering his domain, reestablishing Christianity, and restoring order. Silesia was recovered (1054). In return Casimir was obliged to give up the royal title (becoming merely a **grand duke**) and to make numerous concessions to the nobility and clergy, thus initiating a baneful practice.

7

## 1058–79

**BOLESLAV II** (the Bold), one of the great medieval Polish rulers. In the great struggle between the emperor and the pope, he consistently supported the latter, as a counterweight to German influence. At the same time, he did his utmost to throw off the pressure of the nobility. In his countless campaigns, he reconquered upper Slovakia (1061–63) and marched as far as Kiev to put his relative on the Russian throne (1069). In 1076 he reassumed the royal crown, with the pope's approval. But his entire policy estranged the nobility, which ultimately drove him from his throne.

8

### 1079–1102

**Vladislav I** (Ladislav), an indolent and unwarlike ruler, brother of Boleslav. He resigned the royal title and attempted to secure peace by supporting the Emperor Henry IV, as well as by courting the nobility and clergy.

9

### 1102–38

**BOLESLAV III** (Wry-mouth), who acquired the throne after a violent struggle with his brother Zbigniew. He was one of the greatest Polish kings; he defeated the Pomeranians (**battle of Naklo**, 1109) and, by the incorporation of Pomerania (1119–23), reestablished access to the sea. At the same time, he defeated the Emperor Henry V (1109, **battle of Hunsfeld**, near Breslau, now Wrocław) and checked the German advance, but his campaigns in Hungary (1132–35) had no permanent results.

10

Boleslav completed the organization of the state, in which the great landlords (*nobiles*, or magnates) and gentry (*milites*, knights, or *szlachta*) had become well-defined social classes, the peasantry having steadily lost ground in the periods of confusion. The Church was reorganized under the archbishop of Gnesen, by the papal legate Walo. To avoid dispute, Boleslav fixed the royal succession by seniority. Poland was divided into **five principalities** (Silesia, Great Poland, Masovia, Sandomir, Kraków) for his sons; Kraków was established as the capital, and was to go, with the title of grand duke, to the eldest member of the house of Piast. In actual fact, this arrangement by no means eliminated the dynastic competition but introduced a long period of disruption, during which the nobility and clergy waxed ever more powerful and the ducal or royal power became insignificant. Only the weakness of the neighboring states saved Poland from destruction.

11

### 1146–73

**Boleslav IV**, an ineffectual ruler, during whose reign the Germans, under Albert the Bear and Henry the Lion, supported by Waldemar of Denmark, drove back the Poles from the entire territory along the Baltic and west of the Vistula (1147). Emperor Frederick Barbarossa intervened and forced the submission of Boleslav (1157).

12

## 1173–77

**Mieszko III**, a brutal and despotic prince who antagonized the nobility and was soon driven out by them.

#### d. [Kievan Russia](#)

##### [GRAND PRINCES OF KIEV \(862-1212\)](#)

The **eastern Slavs** settled on the territory of present-day European Russia from the 5th to the 8th century A.D. In the 8th century some of the eastern Slavs were under the protectorate of the **Khazars**, an Altaic people who established a strong and prosperous state along the lower Volga. After the end of the 8th century, the northern part of Russia began to be penetrated by the Scandinavian Vikings, called in the old Russian chronicles **Varangians** or **Rus** (hence the name of **Russia**). In the course of the 9th century, the Varangians constantly moved southward along the main waterway leading from the Baltic to the Black Sea, gradually establishing domination over the Slav communities. According to tradition, the Scandinavian chieftain **Rurik** ruled in Novgorod in the 860s. Later he was recognized as the founder of the Russian princely dynasty. <sup>1</sup>

#### 860

The first recorded appearance of the Russians (Varangians) at Constantinople. This was a raid not unlike those of the Norsemen on Britain and France in the same period. <sup>2</sup>

#### 879–912

**Prince Oleg**, who transferred his residence to Kiev on the Dnieper River. Kiev remained the capital of **Kievan Russia**, a loose federation of territories, until 1169. Oleg also united the eastern Slavs, freed them from Khazar control, and signed a commercial treaty with the Byzantine Empire. <sup>3</sup>

## 907

The Russians again appeared at Constantinople and extracted trade privileges from the Byzantine emperor. Trade became a leading occupation of the Russian princes, who, with their followers (*druzhina*), protected the merchant ships. On the other hand, private property appears to have been less developed among the eastern Slavs than in the West.

4

## 945

Further trade agreements with the Greek Empire testify to ever closer economic connections and no doubt to an increasing cultural contact.

5

## 957

The Russian princess **Olga** visited Constantinople and was converted to the Christian faith. This was, however, a personal conversion and may in fact have been Olga's second.

6

## 964–72

**SVIATOSLAV**, the son of Olga. He was the first of the great conquering princes. In 965 he defeated the Khazars on the lower Volga and proceeded to establish a Russian state in place of the Khazar Empire. Called to the Balkans to aid the Greek emperor against the powerful Bulgars, he carried on a successful campaign (967) and decided to establish himself on the lower Danube. At this time his power extended from Novgorod in the north to the Danube in the southwest and to the lower Volga in the southeast. He was forced to abandon Bulgaria in order to resist the **Patzinaks** (Pechenegs), who had entered southern Russia from the east and were threatening Kiev. Having repulsed them (968), Sviatoslav returned to Bulgaria, but he was no more welcome to the Greeks than were the Bulgars. In 971 he was defeated and driven out by the Emperor John Tzimiscēs (See [969–72](#)). Sviatoslav was defeated and killed by the Patzinaks on his way back to Kiev (972).

7

## 972–80

With Sviatoslav's death began a dynastic struggle between his sons.

8

### 980–1015

The battle ended with the victory of **Vladimir the Saint**, in whose reign (c. 990) the Russians were converted en masse to Christianity in the Orthodox (Byzantine) form. The Russian church was organized on the Greek pattern and was considered to be under the canonical authority of the patriarch of Constantinople. From this time on, the cultural relations between Constantinople and Kiev were very close.

9

### 1015–19

Dynastic conflict between the sons of Vladimir.

10

### 1019–54

**YAROSLAV** (the Wise), the greatest ruler of Russia in the Kievan period. He was successful in the struggle with his brother Sviatopolk, but was obliged to leave to another brother, Mstislav, that part of the principality that lay east of the Dnieper River, until Mstislav's death in 1036. Yaroslav was then supreme ruler of all Russia. Extensive building activity at Kiev (Cathedral of St. Sophia). Religious activity (Metropolitan Hilarion and the Monastery of the Caves). Promotion of education. Revision of the **Russian Law** (the earliest known Russian law code), under Byzantine influence. Dynastic alliances with western states (Yaroslav's daughter, Anna, married Henry I of France).

11

The period following the death of Yaroslav the Great was one of disintegration and decline. Technically the primacy of Kiev continued and the power remained concentrated in the family of Yaroslav. Actually, however, Kiev continued to decline in importance, and authority came to be divided between members of the princely family according to a system of seniority and rotation, which led of necessity to much dynastic rivalry and countless combinations, sometimes with Poles and Hungarians.

12

At the same time the Kievan state was subjected to ever greater pressure from the nomads (Patzinaks and Cumans) moving into southern Russia from the east. The period also witnessed a shifting of the older trade routes, due to the decline of the Baghdad Caliphate and the conquest of Constantinople (1204) by the Latin crusaders.

13

**Emergence of new political centers:** Galicia and Volynia in the southwest, principalities characterized by a strongly aristocratic form of government; Novgorod the Great, in the north, controlling territory to the east to the Urals. In Novgorod the assembly of freemen (**Vieche**) reached its fullest development; Suzdal-Vladimir in central Russia, the precursor of the grand duchy of Moscow. In this region the princely power was dominant, and private property was the least developed.

14

## 1113–25

**VLADIMIR MONOMAKH**, prince of Kiev. His reign marked the last period of brilliance at Kiev.

## e. [Hungary](#)

### [THE ARPAD DYNASTY OF HUNGARY \(907-1301\) AND THE PREMYSLID KINGS OF BOHEMIA \(1198-1378\)](#)

#### 896

The Hungarians, or Magyars, organized in a number of tribes, occupied the valley of the middle Danube and Theiss (Tisza). Under **Arpad** (d. 907) they had come from southern Russia by way of Moldova, driven on by the Patzinaks (Pechenegs) and other Asian peoples. The Hungarians were themselves nomads of the Finno-Ugrian family. For more than half a century after their occupation of Hungary, they continued their raids, both toward the east and toward the west. <sup>1</sup>

#### 906

The Hungarians destroyed the rising Slavic kingdom of Moravia. <sup>2</sup>

#### 955

**Battle of Lechfeld** (See [955](#)), in which Emperor Otto I decisively defeated the raiding Hungarians. From this time on, the Hungarians began to settle down and establish a frontier. <sup>3</sup>

## 972–97

**Geza**, the organizer of the princely power. He began to reduce the tribal leaders and invited Christian missionaries from Germany (Pilgrin of Passau, 974; **St. Adalbert of Prague**, 993). Christianization had already begun from the east, and was furthered by large numbers of war prisoners.

4

## 997–1038

**St. Stephen** (I), greatest ruler of the Arpad dynasty. He suppressed eastern Christianity by force and crusaded against paganism, which was still favored by the tribal chiefs. Stephen allied with the west, married a Bavarian princess, called in Roman churchmen and monks, and endowed them with huge tracts of land. With the help of the clergy, he broke the power of the tribal chieftains, took over their land as royal domain, administered through counts (*főispán*) placed over counties (*vármegyék*). The counts and high churchmen formed a royal council. Every encouragement was given to agriculture and trade, and a methodical system of frontier defense was built up (large belt of swamps and forests, wholly uninhabited and protected by regular frontier guards; as time went on this frontier was gradually extended).

5

## 1001

**Stephen was crowned** with a crown sent by the pope. He was canonized in 1083.

6

## 1002

Stephen defeated an anti-Christian insurrection in Transylvania.

7

## 1030

Attacks of the Germans under Conrad II.

8

## 1038–77

A period of dynastic struggles over the succession, every member of the Arpad family claiming a share of the power and sometimes calling in the Germans for support. 9

## 1038–46

**Peter Urseolo**, son of Stephen's sister and the doge of Venice, succeeded to the throne. 10

## 1046

Peter was overthrown in the course of a great **pagan rising** of the tribal chiefs, who massacred the Christians and destroyed the churches. This was the last serious revolt. 11

## f. [Serbia](#)

### 650

Approximate date of the completion of the Slav occupation of the Balkan area. Part of the Slav people extended as far west as Carniola and Carinthia, but these (the Slovenes) were conquered by the Franks in the early 9th century and were thenceforth part of the German Empire. 1

### 818

The **Croats**, who had also been conquered by the Franks, revolted but were again subdued. 2

### 924

**Tomislav** became king of Croatia, accepting his crown from the pope. He ruled over latter-day Croatia and over the territory as far south as Montenegro, though the coastal towns were mostly under Byzantine control. 3

### 960

**Death of Cheslav**, who had made the first effort to unite the Serbs. The Serbs, inhabiting a mountainous area, were divided into tribes and clans, under headmen or *zupans*. The grand zupan held an honorary preeminence. Technically the territory was under Byzantine suzerainty, which, when the Eastern Empire was strong, was effectively exercised. By the end of the 10th century the inhabitants of present Serbia and eastern Bosnia had for the most part accepted Eastern Christianity, while western Bosnia and Croatia leaned toward Roman Catholicism. However, both socially and culturally, the 4

Serbs seemed to be one of the most westernized Eastern Orthodox peoples.

### 1077

**Mikhail of Serbia** was crowned by a papal legate.

5

### 1081–1101

**Bodin** established a Serbian state in Zeta (i.e., Montenegro).

6

### 1102

**Croatia** was joined with Hungary in a dynastic union, after the defeat of the last ruler, Petar, by King Ladislas. This involved the definitive victory of the western orientation in Croatia and separation from the other southern Slavs.

7

### 1168–96

**STEPHEN NEMANYA**, founder of the Nemanjid dynasty in the Raska (i.e., Rascia, or Serbia proper). Though only grand zupan, Stephen appears to have made considerable progress in uniting the various clans. He definitely adopted the Eastern Orthodox faith and persecuted the **Bogomils**, who were forced across the frontier into Bosnia, which at that time was ruled by a strong prince, Kulin (d. 1204). The death of Manuel I Comnenus (1180) and the subsequent decline of the Eastern Empire gave Stephen an opportunity to establish his independence from Constantinople and to conquer extensive territories to the south. In 1196 he retired to a monastery on Mt. Athos that had been founded by his son, **St. Sava**. Stephen died in 1200.

8

### 1196–1223

**STEPHEN NEMANYA II**, the son of the preceding. The beginning of his reign was marked by a struggle with his elder brother, Vukan, to whom Montenegro had been assigned. The Hungarians, who became an ever greater menace to Serbia, supported Vukan, and Stephen was forced to flee to the Bulgarian court. He returned with an army of Cumans supplied by **Kaloyan** (see below), who appropriated for himself most of

9

eastern Serbia, including Belgrade and Nish. Stephen's brother St. Sava finally mediated between the two contestants, and Stephen became ruler of Serbia proper.

## 1217

Stephen was crowned king by a papal legate (hence Stephen the First-Crowned).

10

## 1219

St. Sava, fearful of the Roman influence, visited Nicaea and induced the Greek patriarch to recognize him as archbishop of all Serbia and as head of an autocephalous (independent) church.

(See [1016–18](#))

### **g. [The Second Bulgarian Empire](#)**

Following the collapse of the First Bulgarian Empire in 1018, Bulgaria was, for 168 years, an integral part of the Byzantine Empire. The replacement of taxation in kind with taxation in cash, and other grievances, led to a serious revolt in 1040, led by **Peter Delyan**, a son of Gabriel Radomir, that was confined to the northwest and western parts of the former empire. Delyan had himself proclaimed tsar, but the movement suffered from his rivalry with Alusian, son of John Vladislav. In 1041 Delyan was defeated and captured by the imperial troops. Another uprising, led by **George Voitech** in 1072–73, was suppressed without much difficulty. During the Byzantine period, the country was constantly exposed to raids by the Patzinaks (1048–54), many of whom settled in northeastern Bulgaria. The **Bogomil heresy** (a dualistic sect) continued to spread, despite persecution by the government (1110 ff.).

#### **1185**

**Rising of Asen and Peter**, two Bulgarian lords from the vicinity of Tirnovo. Defeated by the Emperor Isaac II Angelus (1186), they fled to the Cumans and returned with an army. After raiding into Thrace, they accepted a truce that left them in possession of Bulgaria north of the Balkan Mountains.

#### **1189**

Asen attempted to effect an alliance with Frederick Barbarossa and the leaders of the Third Crusade, against the Greeks. This came to nothing, but the Bulgarians resumed their raids into Thrace and Macedonia. An imperial army under Isaac Angelus was completely defeated in a **battle near Berrhoe**.

## 1196

Peter succeeded to leadership of the movement after the murder of Asen by boyar (i.e., noble) conspirators. 4

## 1197

Peter himself fell a victim to his boyar rivals. 5

## 1197–1207

**KALOJAN**, the younger brother of Asen and Peter. He made peace with the Greeks (1201) and then engaged (1202) in campaigns against the Serbs (taking of Nish) and the Hungarians, whom he drove back over the Danube. 6

## 1204

The **collapse of the Byzantine Empire** gave Kalojan an excellent opportunity to reaffirm his dominion. By recognizing the primacy of the pope, he succeeded in securing the appointment of a primate for Bulgaria and in getting himself crowned king by the papal legate. At the same time, he took over the whole of western Macedonia. 7

## 1205

Supported by the Cumans and the local Greeks, Kalojan completely defeated the Frankish crusaders near Adrianople and captured the Emperor Baldwin I. 8

## 1207

Kalojan was murdered while besieging Salonika (Thessalonica). 9

## 1207–18

**Boril**, the nephew of Kalojan. By this time the Bulgars had adopted the Byzantine social structures, including the **appanage system**: the tsar was considered supreme owner of the state, the land, and even the official and Church language; only members of the tsar's family had the privilege of possessing large estates as **appanage**, where the same system of ownership was reproduced on a local level. Hence, unlike in the West, separatism did not lead to the emergence of self-governing cities, but resulted only in an overall weakening of the state. Boril's position was not recognized by most of the other members of Asens family, some of whom attempted to set up independent principalities. 10

## 1208

Boril was completely defeated by the Franks and ultimately (1213) was obliged to make peace. 11

## 1217

**Ivan (John) Asen**, son of Asen, supported by Galicia, began a revolt in northern Bulgaria. He besieged and took Tirnovo. 12

## 5. [Christian States in the Eastern Mediterranean, 1000–1300](#)

### a. [The Byzantine Empire](#)

#### [THE COMNENI AND ANGELI \(1057-1204\)](#)

*For a complete list of the [Byzantine emperors](#), see [Appendix II](#).*

1

The period of the later Macedonian emperors (to 1055) and the succeeding century was marked by barbarian invasions in the Balkans, advances of the Normans on the remaining Byzantine possessions in Italy, pressure from the Seljuk Turks on the eastern frontier, popular hostility to mercantile privileges granted to Pisan and Venetian businessmen, and political disputes between the clerical bureaucratic nobility in the capital and the military baronage in the countryside.

2

#### 1025–28

**CONSTANTINE VIII**, the younger brother of Basil II.

3

#### 1027

The **Patzinaks**, who had invaded the Balkans, were finally driven back over the Danube by General Constantine Diogenes.

4

#### 1028–50

**ZOË**, empress. She was the third daughter of Constantine and, though 48 years old at her accession, married three times, associating her husbands: Romanos, Michael, and Constantine IX *seriatum* in the imperial office. 5

### 1028–34

**ROMANUS III** (Argyropolus), an official 60 years old, first husband of Zoë. He made great efforts to gain popularity by catering to the populace, the nobility, and especially the Church. The patriarchate was permitted to persecute the Monophysites of Syria, thousands of whom fled to Muslim territory. The hatred engendered by this policy helps to explain the Seljuk advance in subsequent years. 6

### 1030

Romanus suffered a severe defeat in a campaign against the Muslim emirs who attacked Syria. 7

### 1031

The situation was saved by the victories of **Georgios Maniakes**, greatest imperial general of the period. 8

### 1032

A combined Byzantine-Ragusan fleet defeated the Saracen pirates in the Adriatic. 9

### 1034–41

**MICHAEL IV** (the Paphlagonian), second husband of Zoë. He was a man of lowly origin who promptly established his brothers (mostly men of energy and ability) in high office. 10

## 1034–35

The Byzantine fleets, manned by the Norseman Harald Haardraade and Scandinavian mercenaries, repeatedly defeated the Saracen pirates off the Anatolian coast and ravaged the coasts of North Africa. 11

## 1038

Maniakes and Haardraade, with Scandinavian and Italian mercenaries and with the support of the Byzantine fleets, stormed Messina and defeated the Sicilian Saracens, first at **Rametta** (1038), then at **Dragina** (1040). 12

## b. [The Crusades](#)

### [KINGS OF JERUSALEM \(1099-1489\)](#)

**Definition.** In the 11th and 12th centuries, the Crusades were military expeditions sponsored by the papacy, charged with recovering Christian holy places in the Middle East from the Muslim Arabs and Seljuk Turks (See [1079–95](#)). In the 13th century, crusading impulses were often directed against groups within Europe perceived as being social or political enemies, such as the Albigensian heretics (See [1208–13](#)). By the 15th and 16th centuries, crusading had become an old European tradition. Thus explorers and adventurers, such as Christopher Columbus and Hernán Cortés (See [1451, between Aug. 26 and Oct. 31](#)) (See [1518–19](#)), in South and North America, Africa, and Asia, explained their goals in religious and crusading terms—they were for the conversion of the Muslims, Indians, or Asian and African peoples.

The **origins** of the medieval Crusades lie in the Christian tradition of penitential **pilgrimages** to the sites of Jesus' life and death in Palestine, dating to that of Helena, Constantine's mother (4th century); the long tradition of Christian wars of **reconquest** against the Muslims in Spain beginning in the 8th century and encouraged by the popes Alexander II and Gregory VII in the 11th century; the hostilities created by Muslim attacks on southern Europe in the 9th and 10th centuries. In 1071, Turkish soldiers, financed by Muslims, defeated a Greek army at **Manzikert** in Armenia; in 1076 the Turks captured Jerusalem, although they subsequently showed no special animosity against Christians. The Byzantine emperor appealed to the West at the Synod of Piacenza (March 1095) for help against Muslim-Turkish expansion.

**1095, Nov**

**Council of Clermont.** Pope Urban, a Cluniac and a Frenchman, speaking to Frenchmen, recited the glorious deeds of the French and tales of Muslim atrocities, made open allusions to the chances for profit and advancement, attacked feudal violence at home, and brought the audience to a state of wild enthusiasm; he himself distributed crosses. Urban's propaganda journeys and the preaching of **Peter the Hermit** and others stirred the West, but had the greatest effect in France and Lorraine, the area most under Cluniac influence. The great rulers were all at odds with the papacy or busy at home; the rest of Europe was indifferent. The Crusades began as they continued, largely under French auspices. 3

The **motives** that inspired Europeans to embark on the Crusades varied with the time, the place, and the individual, but on the first expeditions, to the religious goal of the recapture of the holy places and their restoration to Christian jurisdiction, the reunion of the Greek and Roman churches, and the spiritual advantages of the popes' crusading indulgence, the following secular or material objects should be added. **Political:** to acquire land, fiefs, power in the Middle East; for a ruler, to rid his country or territory of troublesome and rebellious knights. **Social:** to seek adventure, excitement, the novelty of travel in an exotic world; to gain the respect, prestige, and status that Crusaders earned. **Economic:** to gain the loot and booty taken by victorious armies; for European townspeople and bankers, the opportunity to profit from the sale of armor, equipment, horseshoes, fodder; for innkeepers along the crusading routes and prostitutes who accompanied or followed crusading armies, business and profit. 4

## 1096–99

**The First Crusade.** Best recorded and most successful of the Crusades. Five popular, aimless mass migrations (1096) that emptied whole villages; two (perhaps 7000 under Peter the Hermit and perhaps 5000 under Walter the Penniless) reached Asia Minor and were annihilated. The Norman-French baronage flocked to the Cross and converged in three divisions on Constantinople: the Lorrainers under **Godfrey of Bouillon** and his brother Baldwin, via Hungary; the Provençals under **Count Raymond of Toulouse** and the papal legate, Adhemar of Puy, via Illyria; the Normans under **Bohemund of Otranto** (the most effective leader) via Durazzo by sea and land. Perhaps they were 30,000 in all. 5

The **Muslim opposition:** the Seljuks had merely garrisoned Syria and were not popular with the native population. Muslim unity in Asia Minor ended with the death of Malik Shah (1092), and Syria was divided politically, racially, and theologically (Sunni(s) versus Shi'ite; the Fatimid capture of Jerusalem (1098) from the Sunnis). 6

## 1096, Spring

Violent crusader assaults on Jewish communities led to terrible massacres in Speyer, Mainz, Cologne, and other Rhineland cities.

7

## 1097

**Nicaea** (Iznik) (See [1097–98](#)), the Seljuk capital in Asia Minor, taken by the combined Greek and crusading force; defeat of the Muslim field army at Dorylaeum; excursion of Baldwin and Tancred, and rivalry in Cilicia; Bohemund established himself in the Antioch area. Siege and capture (by treachery) of Antioch (1097–98); countersiege of the Christians in Antioch by the emir of Mosul; election of Bohemund as leader. Baldwin's conquest of Edessa (1097); Christian divisions: rivalry of Norman and Provençal.

8

## 1099

**March to Jerusalem** (Genoese convoy and food supply); siege, capture, and horrors of the sack. The death of the papal legate left the organization of the government of Jerusalem to feudal laymen. **Godfrey of Bouillon**, elected king, assumed the title of Defender of the Holy Sepulcher (for pious reasons). The main body of the Crusaders soon streamed back home. The Norman effort to dominate the government through their patriarch Dagobert led to his deposition by the anti-Norman party, and Jerusalem became a feudal kingdom. The government (as revealed by the *Assizes of Jerusalem*, the most complete feudal code extant) was narrowly feudal, with the king a feudal suzerain, not a sovereign, the tenants-in-chief dominant. Besides the feudal organization there were burgher and ecclesiastical organizations, with their own courts.

9

Continued divisions among the Muslims and the weakness of the Greeks favored the progress of the Latin states: the **kingdom of Jerusalem**, in close commercial alliance with the Italian towns (Genoa, Pisa, and, later, Venice), profited by the commerce through its ports and extended south to tap the Red Sea trade. The other states: the **county of Edessa** (established by Baldwin), the **principality of Antioch** (established by Bohemund), and the **county of Tripoli** (set up by Raymond of Toulouse) were fiefs of Jerusalem (divided into four great baronies and into lesser fiefs).

10

Muslim unification in Syria was completed by the Atabegs of Mosul and signaled by the capture of Edessa (1144). Mosul soon mastered Egypt; Saladin emerged supreme in Egypt (1171), quickly reduced Damascus and Aleppo, and brought Syria and Egypt under a single efficient rule.

11

## 1147–49

**The Second Crusade.** **Bernard of Clairvaux**, persuaded by Pope Eugenius III, preached (1145) the Second Crusade. Conrad III and King Louis VII of France took the Cross. To avoid conflicts, the two monarchs went by separate routes; there never was coherent direction or unity of command. The Norman Roger of Sicily took advantage of the Second Crusade to seize the Greek islands and to attack Athens, Thebes, and Corinth. Nothing of importance was achieved by the Second Crusade, and the movement was discredited throughout Europe.

12

## 1184

Saladin's steady advance led to a great appeal to the West; King Philip II of France and Henry II of England declined the crown of Jerusalem but levied a **Saladin tithe** (1188) to finance a Crusade. Christian attack on a caravan (said to be escorting Saladin's sister) provoked Saladin's holy war (1187–89): **capture of Jerusalem** (1187) without a sack and reduction of the Latin states to the cities of Antioch, Tyre, Tripoli, and a small area around each. Crusader control of Jerusalem, without heavy European support, was doomed from the start.

13

## 1189–92

**The Third Crusade.** Precipitated by the fall of Jerusalem, the Third Crusade was a completely lay and royal affair, despite the efforts of the papacy to regain control. It was supported partly by the Saladin tithe, and was led by the three greatest monarchs of the day: (1) **Frederick Barbarossa** (a veteran of the Second Crusade) as emperor, the traditional and theoretical military leader of Christendom, headed a well-organized and disciplined German contingent starting from Regensburg (1189) that marched via Hungary, entered Asia Minor, and disintegrated after Frederick was drowned (1190); (2) **King Richard I of England**; and (3) **King Philip II of France**, who went by sea. Already political rivals, they quarreled in winter quarters in Sicily (1190–91); Richard turned aside in the spring and took Cyprus, which he sold to Guy de Lusignan. The quarrels of Philip and Richard continued in the Holy Land, and Philip returned to France after the capture of Acre (1191). Richard's negotiations with Saladin (Richard proposed a marriage of his sister Joan to Saladin's brother, who was to be invested with Jerusalem) resulted (1192) in a three-year truce allowing the Christians a coastal strip between Jaffa

14

and Acre and access to Jerusalem. Captivity of Richard (1192–94) and heavy ransom to the Emperor Henry VI. The Third Crusade ended the golden age of the Crusades.

### 1199, Aug. 15

Pope Innocent III (See [1198–1216](#)), determined to regain papal direction of the Crusades <sup>15</sup> and to reunite the Greek and Latin churches, proclaimed a new crusade, the **FOURTH CRUSADE** (1202–4).

### 1201, Lent

Crusade envoys, including Geoffroy de Villehardouin (major chronicler of the events) <sup>16</sup> and **Doge Enrico Dandolo**, reached agreement in the **Treaty of Venice**: Venice was to transport 33,500 men and 4,500 horses, in return for payment of 85,000 marks. The fleet was to sail June 29, 1202, for Egypt, thought to be a strategically better site for recovery of Holy Land.

### June

Assembly of Crusaders at Soissons elected **Boniface of Montferrat**, a famous soldier <sup>17</sup> from a distinguished Lombard family, to lead the crusade.

### c. [Latin and Greek States in the Middle East](#)

#### [LATIN EMPERORS OF CONSTANTINOPLE \(1204-1373\)](#)

**Division of the Eastern Empire** after the fall of Constantinople: A council, composed equally of Crusaders and Venetians, decided to award the imperial crown to **Count Baldwin of Flanders**, while a Venetian (Pier Morosini) was made patriarch of Constantinople. **Boniface of Montferrat** was made king of Salonika (Thessalonica) and the remaining parts of the empire were assigned to various barons as vassals of the emperor. In Anatolia the Crusaders were never able to establish themselves except in a part of Bithynia near the Bosphorus. In Europe they were constantly exposed to the attacks of the Bulgarians. The kingdom of Thessalonica at first extended over part of Thrace, Macedonia, and Thessaly, but to the west the Greek **Michael Angelus Comnenus** set himself up as despot of Epirus and soon began to expand his dominion eastward. Attica and the Peloponnesus were conquered by crusading barons in a short time, and these territories were organized on a feudal basis as the **lordship of Athens** (Otto de la Roche, 1205–25; Guy I, 1225–63; John I, 1263–80), and the **principality of Achaea** (conquered by Guillaume de Champlitte and Geoffroy de Villehardouin in 1205). Achaea was in turn divided into 12 feudal baronies, an example of the French feudal pattern. Under the Villehardouin family (Geoffroy I, 1209–18; Geoffroy II, 1218–46; Guillaume, 1246–78) it was well governed and popular with the Greco-Slavic population, which was considerately treated.

The **Venetians** took as their share of the empire most of the islands and other important strategic or commercial posts. They kept for themselves part of Constantinople, Gallipoli, Euboea, Crete, the southwestern tip of the Peloponnesus (Coron and Modon), Durazzo, and other posts on the Epiran coast, as well as the islands of the Ionian and Aegean Seas. For the most part these possessions were granted as fiefs to the leading Venetian families (e.g., triarchies of Euboea, duchy of the Archipelago).

## 1204–5

**BALDWIN I**, Latin emperor.

3

## 1204–14

**Michael Angelus Comnenus**, despot of Epirus.

4

## 1204

**Theodore Lascaris**, son-in-law of Alexius III, with some of the Byzantine leaders, established himself in Bithynia; Alexius and David Comnenus organized a state on the north coast of Anatolia, with David at Sinope and Alexius at Trebizond, thus founding the **empire of Trebizond**, which lasted until Ottoman conquest in 1461.

5

## 1204–22

**Theodore I** (Lascaris) became founder of the Nicaean Empire. In 1204 he made an alliance with the (Turkish) sultan of Rum to resist the advance of the Crusaders into Anatolia, but was defeated by the latter under Peter of Bracheuil.

6

## 1205

The **Bulgars**, under Kaloyan, defeated Emperor Baldwin and Doge Dandolo in a **battle near Adrianople**. Baldwin was captured and died in captivity. The Bulgars then overran much of Thrace and Macedonia, exterminating a large part of the Greek population.

7

## 1205–16

**HENRY I**, Latin emperor, the brother of Baldwin, and the ablest of the Latin emperors.

8

## 1207

Kaloyan and the Bulgarians besieged Thessalonica, but in vain. Kaloyan died suddenly, probably murdered. <sup>9</sup>

## 1207

Theodore Lascaris, allied with the Seljuks of Rum, defeated David Comnenus and drove him back to Sinope. Theodore then concluded a truce with Emperor Henry, in order to oppose the advance of Alexius of Trebizond, who was now allied with the Seljuks. <sup>10</sup>

## 1209

Theodore repulsed a second attempt by Peter of Bracheuil and the Crusaders to conquer Bithynia. <sup>11</sup>

## 1211

Theodore Lascaris defeated Alexius of Trebizond and the sultan of Rum, both of whom were captured. As a result, a large part of the Anatolian coast was added to the Empire of Nicaea. <sup>12</sup>

## 1212

Henry I defeated Theodore at Luparcos and began the invasion of Anatolia. Theodore made peace, abandoning to the Latin Empire part of Mysia and Bithynia. <sup>13</sup>

## 6. [Western Europe, 1300–1500](#)

### a. [Overview](#)

The period began with significant **ecological changes**: the end of the optimal hydrological and thermal conditions that had produced large harvests between c. 1000 and 1250. Bad weather led to poor harvests, while sheep murrain (disease) in England reduced the size of flocks and the volume of wool exported, severely hurting Flemish and Italian weavers. The result was **general agricultural and commercial weakness**, economic distress for which weak and **incompetent governments** had no solution. 1

**Social consequences**: Poor harvests and famine led to great increase in number of vagabonds or homeless people; the abandonment of entire villages (as in parts of the Low Countries and on the Scottish-English border); great increase in the mortgaging, subleasing, and the sale of land, which in turn contributed to a volatile land market; postponement of marriage and the reduction of population; blame thrown on creditors, the rich, and the Jews, which led to attacks and pogroms. Government remedies: the French and English crowns set price controls and forbade the export of grain. Grain exported from Castile and the Baltic seized by pirates and sold on the black market. 2

A weak, undernourished, and overcrowded population proved ill prepared for the **bubonic plague** (Black Death) that swept Europe periodically (1347–1450), causing psychological pessimism, spiritual malaise, and **huge population loss** (see below). The disease may have adjusted population to food supply; it also produced a temporary labor shortage and inflation. High death tolls from the plague broke continuity in record keeping and prevented landlords from proving servile status; those factors plus the widespread destruction of records during **peasant uprisings**, and the purchases of freedom and the continued flight from rural to urban communities accelerated the **decline of serfdom**, which had begun in the 13th century. 3

The Christian Church, centered first at Avignon, not Rome, and then divided by **schism**, provided little spiritual consolation and few strong moral examples; **papal prestige** 4

**declined.** The series of conflicts known as the **Hundred Years' War** (1337–1453), in which England and France became deadlocked, involved the **Burgundian struggle** for control of the French crown, **aristocratic resurgence**, **civil war**, peasant and urban revolts in both countries. The long wars promoted the development of **national consciousness**, as reflected in the growth of **vernacular languages**.

Meanwhile, the steady accumulation of wealth in the Italian cities made possible a great cultural efflorescence, which the 16th-century art historian Vasari (1511–74) first labeled **the Renaissance** (It., *renascita*). In the 15th century this movement spread to France, England, Germany, and Spain. 5

Estimates of population decline c. 1300–1500:

Italy fell from 10 million to 7.5 million

British Isles fell from 5 million to 3 million

France fell from 17.5 million to 12.5 million

Iberia fell from 9 million to 7 million

Germany and Scandinavia fell from 11.5 million to 7 million.

**Fourteenth-century records**, the earliest available for structural study of **marriage and the family** in medieval Europe, indicate that the **nuclear family** (father, mother, and their children) was becoming an increasingly common pattern in all parts of western Europe, as opposed to extended-family arrangements. The average age at first marriage was 16 for women, 26 for men. Because of the relatively late marriage age for men, and in an attempt to reduce the potential for male violence, municipal authorities in many sizable towns (e.g., Toulouse, Montpellier, Paris, Venice, Florence, Rome, Hamburg, London, Sandwich) established brothels for the regulation of **female prostitution**. These cities had large numbers of unmarried young men and transient merchants, and a culture resting on a cash exchange. Medieval prostitution was an urban phenomenon and a social issue. (Research on male prostitution continues.) (See [The Byzantine Empire](#)) 6

## **b. The British Isles**

### **1. England**

#### **THE HOUSES OF LANCASTER AND YORK (1377-1485)**

#### **1307–27**

**EDWARD II.** Married to Isabelle, daughter of Philip IV of France. A weak ruler and the tool of ambitious favorites, Edward was dominated first by the Gascon Piers Gaveston (d. 1312), probably his lover. The Scottish war was continued in desultory fashion. The baronage, angered by Gaveston, followed the leadership of Edward's nephew, Thomas, duke of Lancaster, an ambitious, incompetent person. They forced Edward to accept a committee of reform, the 21 **Lords Ordainers** (1310), whose reform ordinances, suggestive of the Provisions of Oxford, were confirmed by parliament (1311). The ordinances required a baronial consent to royal appointments, to a declaration of war, and to the departure of the king from the realm, this consent to be given through parliament. Gaveston was captured and slain (1312). <sup>1</sup>

#### **1313–14**

**The Scottish War.** By 1313 only the castle of Stirling remained in the hands of the English. Edward set out (1314) to relieve the castle, but at **Bannockburn** (1314) he was overwhelmingly defeated, and Scottish independence was won. <sup>2</sup>

In Gascony the French kings began a policy of egging Edward's vassals on to resistance, a process that culminated in the French conquest of Gascony and its retention by the French with the consent (1327) of the regents who ruled after Edward's abdication. 3

### 1314–22

Supremacy of Lancaster, who offered no resistance to the Scottish raids nor to the civil disorders that broke out in England. In 1322 Edward defeated him at Boroughbridge, beheaded him, and had the ordinances of 1311 repealed at the parliament of York. 4

### 1322–26

Rule of the Despensers, father and son: Scottish truce (1323); decline of the popularity of the Despensers; alienation of Queen Isabelle. Isabelle went to France (1325), arranged the marriage of her son, the future Edward III, to Philippa of Hainault, and returned (1326) with Mortimer and foreign troops. Supported by the barons, Isabelle gained London, the Despensers were hanged, and the **parliament of Westminster** (1327), dominated by Isabelle and by Edward's enemies, forced an abdication that was tantamount to deposition. Edward was brutally murdered in prison eight months later. 5  
Burgesses and knights sat in the parliaments of 1311, 1322, and 1327. 6

### 1327–77

**EDWARD III** (age 15 at his accession). Council of regency and rule (1327–30) under Mortimer, Isabelle's paramour; Bruce's invasion of England forced the acknowledgment of Scottish independence (1328). Edward led the baronial opposition to Mortimer (hanged, 1330) and opened his personal rule (1330). 7

### 1338

Outbreak of the **Hundred Years' War**. Edward did homage (1329) for his French lands and renewed the homage (1331). French support of Scottish aggression continued, and Edward, profiting by civil war in Scotland, supported Baliol; after a series of expeditions, he avenged Bannockburn at **Halidon Hill** (1333). French intrigues to alienate Aquitaine continued. The economic interdependence, due to the wool trade, of England and the Flemish cities made an English alliance with them likely. Philip 8

continued his advance into the English lands south of the Loire (1337), and open hostilities broke out (1338). Edward ravaged northern and eastern France without a decisive battle. Urged on by the Flemings, Edward proclaimed himself king of France (in right of his mother, Isabelle), and enabled the Flanders towns under Jan van Arteveldt to support him without violating their oaths.

## 1340

The **naval victory of Sluys** transferred the mastery of the Channel from France to England (until 1372). Intermittent truces (1340–45) were followed by Edward's invasion of France. 9

## 1346, Aug. 26

Great victory at **CRÉCY**, near Ponthieu in northern France, where English longbowmen, supported by dismounted horsemen, routed the undisciplined cavalry and mercenary crossbowmen of France. This tactical innovation, the result of English experiences in Wales and Scotland, began the joint participation of the yeomanry and the aristocracy in war, and gave the English a unique military power and new social orientation. 10

## 1346

The invasion of Philip's Scottish allies was halted at **Neville's Cross**, and the king of Scotland captured. 11

## 1347

**Calais was taken** after a long siege in which artillery was used, and it remained an English military and commercial outpost in France until 1558. 12

(See [1312](#))

## c. [France](#)

### 1314–16

**LOUIS X** (the Quarrelsome). The real ruler was Louis's uncle, Charles of Valois. A reaction against the monarchy forced concessions from the king. 1

### 1316

Louis was succeeded by his posthumous son, John I, who lived only a few days. Louis's daughter by his first wife, Jeanne, was also an infant. A great national council awarded the crown to Louis's brother. 2

### 1316–22

**PHILIP V** (the Tall). There were frequent meetings of assemblies that included burghers. Philip, in an enormous number of royal ordinances, gave definitive form to the Capetian government. He left no male heir. 3

### 1322–28

**CHARLES IV** (the Fair), the last Capetian of the direct line, succeeded his brother Philip, to the exclusion of Edward III of England, grandson of Philip IV. This established the principle, later called the **Salic Law**, that the throne could pass only through males. On Charles's death, an assembly of barons declared that “no woman nor 4

her son could succeed to the monarchy.”

## 1328–50

### THE FRENCH SUCCESSION (1328)

**PHILIP VI** (nephew of Philip IV, son of Charles of Valois), the nearest male heir. Jeanne, daughter of Louis X, became queen of Navarre. Brittany, Flanders, Guienne, and Burgundy remained outside the royal sway. The papacy was under French influence; rulers of the Capetian house of Anjou were seated on the thrones of Naples, Provence, and Hungary; Dauphiné, the first important imperial fief added to French territory, was purchased (1336). The king had become less accessible; the kingdom, regarded as a possession rather than an obligation, was left to the administration of the royal bureaucracy.

5

## 1338–1453

**The Hundred Years' War.** English commercial dominance in Flanders precipitated a political crisis. The communes made the count of Flanders, Louis of Nevers, prisoner (1325–26); Philip marched to his relief, massacred the burghers on the field of Cassel (1328), and established French administration in Flanders. Edward III retorted with an embargo on wool exports from England (1336); the weavers of Ghent, under the wealthy Jan van Arteveldt, became virtual masters of the country and made a commercial treaty with England (1338). On van Arteveldt's insistence, Edward declared himself king of France; the Flemings recognized him as their sovereign, and made a political alliance with him (1340).

6

## 1338

Philip declared Edward's French fiefs forfeited and invested Guienne. Edward was made vicar of the empire, and his title as king of France was recognized by the emperor. Thus began the **Hundred Years' War**, really a series of wars with continuous common objectives: the retention of their French “empire” by the English, the liberation of their soil by the French.

7

## 1340

Philip, by dismissing two squadrons of Levantine mercenary ships, lost his mastery of the Channel until 1372 and was overwhelmingly defeated by Edward at the **naval battle of Sluys** (June 24) on Scheldt estuary on (modern) Belgian border. This opened the Channel to the English and gave them free access to northern France. 8

## 1341–64

A dynastic contest in Brittany, in which both Edward and Philip intervened. 9

## 1341

First collection of the *gabelle* (salt tax) in France; increasing war levies and mounting dissatisfaction. 10

## 1346

Edward's invasion of Normandy and overwhelming **victory at Crécy**, Aug. 26 (10,000 English defeated some 20,000 French) (See [1346, Aug. 26](#)). The French military system was outmoded, the people unaccustomed to arms, and the cavalry inefficient. **Blind King John of Bohemia** was slain. **Artillery** came into use (1335–45). Continued war levies led to open refusal (1346) of a grant by the estates of Langue d'Oil, and a demand for reforms. The king attempted some reforms. 11

(See [1213–76](#))

### d. [The Iberian Peninsula](#)

**Parliamentary institutions.** As elsewhere in Western Europe (See [1360](#)), parliamentary assemblies developed in the Iberian Peninsula during the 13th to 15th centuries. In addition to the nobles and higher ecclesiastics of their courts, Spanish kings summoned representatives of those towns that were centers of trade, industry, and administration. The *cortes* (Sp. vernacular for king's court, the plural implying size and importance) emerged in Leon (1188), Aragon (1214), Catalonia (1225?), Castile-Leon (1250), and Portugal (1254). Because ordinary (feudal) revenues failed to meet the rising needs of the crown, kings had to secure consent for extraordinary levies. The initiative for summoning assemblies belonged to the king alone. As the clergy and nobles were usually exempt from taxation, the burden fell chiefly on the townspeople; the townspeople, however, often attached conditions to their grants: a royal promise of redress of grievances; a restriction to a fixed number of years; a promise that the levy would not prejudice town liberties (special privileges previously granted). Although approval of taxation was the *cortes'* most important function, they also played a role in matters of the succession (e.g., Isabella of Castile in 1474) and foreign policy. Neither Navarre nor the lands in southern Spain under Muslim control developed the *cortes*, nor did the Iberian Peninsula again experiment with one “national” assembly—because it was a collection of separate kingdoms. The disorders of the late 15th century and the trend toward absolutism in the 16th century weakened the influence of the *cortes*.<sup>1</sup>

#### 1. Castile

#### [THE HOUSE OF CASTILE \(1252-1504\)](#)

The successors of Alfonso X were not conspicuous for capacity. Frequent minorities and constant dynastic contests weakened the authority of the crown still further.<sup>2</sup>

## 1312–50

Most outstanding of the Castilian rulers in this period was **ALFONSO XI**, who decisively defeated the joint attack of the Spanish and Moroccan Muslims. His **victory at Rio Salado** (Oct. 30, 1340) ended the African menace forever and was the chief battle in the whole history of the Reconquest. 3

Throughout the **Hundred Years' War**, Castile supported France but attempted to avoid hostility with England as much as possible. 4

## 1350–69

**PETER** (Pedro, the Cruel). His reign was in fact little more than a 19-year dynastic conflict with his half-brother, the bastard **Henry of Trastamara**. Ultimately Henry defeated and killed Peter (1369). 5

## 1369–79

**Henry (Enrique) II** (Trastamara), who renewed the alliance with France. The Castilian fleet, through its victory over the English in the **Battle of La Rochelle** (1372), restored command of the Channel to the French. Peace between Castile on the one side and Portugal and Aragon on the other concluded at **Almazan** (1374). 6

## 1375

**Rapprochement of Castile and Aragon**, through the marriage of Henry's son, John, to Eleanor, daughter of Peter IV of Aragon. 7

Castilian leadership in the reconquest of Muslim Spain led to a degree of local and municipal self-government between the middle of the 12th and the middle of the 14th centuries. The *cortes* apparently originated from councils of nobles dating from Visigothic days. The Castilian rulers freely granted *fueros* (charters of self-government) to towns in the early stages of the Reconquest, and elements of local liberty appeared in municipal government in this period. 8

**Urban groups**, the *hermandades* (brotherhoods), sworn to defend the laws of the realm and the lives and property of their members, were clearly developed in the 13th century 9

(e.g., Sancho's, 1282, directed against his father, Alfonso X) and usually supported the kings in periods of crisis (minorities, succession struggles, baronial assaults). The decline of the *hermandades* is associated with the municipal decline and the appearance of the royal *corregidores* (mayors) in the towns (14th century), but it is not clear whether the crown hastened the decay of the towns and the brotherhoods or sought to stave it off.

Despite all this support, the battle of the kings with the aristocracy, firmly entrenched during the early stages of the Reconquest, was a losing one. The nobles were exempt from taxes and from many laws; in general the same was true of the clergy, and some of the great bishops were virtual sovereigns. 10

The Jewish population of medieval Spain (See [1137](#)) had generally prospered under first Muslim and then Christian rule. Christian kings welcomed Jews, because they represented capital investment, banking, and commercial expertise. 11

## 1391–1420

The nobility's attempt to reimpose serfdom, oppressive taxation, and general working-class frustration over poor socioeconomic conditions led to **widespread Christian attacks on the Jews** (e.g., in Barcelona and Sevilla), some spontaneous, others incited by churchmen, such as the Dominican **St. Vincent Ferrer**. Many wealthy Jews—courtiers, businessmen, scholars, rabbis—lost interest in traditional (Talmudic) Judaism, and perhaps 100,000 Jews **converted to Christianity** (c. 1425–50). The vast majority of these *conversos* were, within a generation or so, little different in religious practice and commitment from the rest of the population. 12

## 1469

**Marriage of Isabella**, half-sister and heiress of Henry IV, to **Ferdinand**, heir of the king of Aragon. 13

## 1474

**ISABELLA** succeeded to the Castilian throne. Isabella's succession was challenged by the daughter of Henry IV, supported by Afonso V of Portugal. But the *cortes* of Segovia (1475) recognized Isabella and Ferdinand and the latter defeated the Portuguese in 1476 (**Battle of Toro**). 14

## 1479

**FERDINAND (FERNANDO)** succeeded to the rule of Aragon, Catalonia, Valencia. A form of dyarchical government was set up for the united Castilian and Aragonese crowns. Rule of the **Catholic kings** (Ferdinand and Isabella). Restoration of the royal power in Castile: by revising the town charters, the towns were made centers of resistance to feudal aggression; formation of the **Santa Hermandad**, a union of Castilian towns in the interest of royal authority and order. The great feudal magnates were deprived of many of their possessions and rights, and a royal administration was gradually established. The *Libro de Montalvo* (1485), an early codification of Spanish law. 15

Christian resentment of the important economic and ecclesiastical positions attained by former Jews (See [1479–1516](#)) led to the spread of two ideas: that leadership in Iberian society required “**purity of blood,**” and that many new Christians were crypto-Jews (**Marranos**), secretly practicing their old religion. On Nov. 1, 1478, at the request of King Ferdinand (who himself had a Jewish grandmother), Pope Sixtus approved the establishment of the **Inquisition** in Spain. It became an instrument for centralizing royal power against the nobility, of whom the converted Jewish elite was a sizable minority (perhaps one third). Converted (from Judaism) bishops played a prominent role in the early work of the Inquisition. 16

## 1492, Jan

**Granada fell** to a Christian army, marking the end of the reconquest of Spain from the Muslims. On March 31, 1492, Ferdinand and Isabella issued an edict from Granada giving the Jews until July 31 to choose between accepting baptism or leaving the country. About 40,000, perhaps half the practicing Jews, left the country for Portugal, Venice, Rome, or Ottoman Turkey. 17

**Art and literature.** Castilian painting showed the influence of the school of Giotto (after c. 1380), and in the 15th century painting came under Flemish inspiration (visit of Jan van Eyck, 1428–29). In general, literature and learning followed the same foreign tendencies as architecture and painting: French influence came in early, followed later by Italian and English (notably Dante, Petrarch, Boccaccio, Gower). Introduction of printing at Valencia (c. 1474) and in Castile (c. 1475). 18

## e. [The Papacy and Italy](#)

### 1. The Papacy

*For a complete list of the [Roman popes](#), see [Appendix IV](#).*

1

#### 1308

Clement V (1304–14), who had been residing in France, made the decision to settle at Avignon, in southeast France on the Rhône River. Although technically not in French territory—it belonged to the Angevin princes of Naples—French influence was very strong. The actual move of the papal court occurred the following year.

2

#### 1309–78

**The Avignonese papacy.** The seven popes of Avignon, all French (as were 113 of the 134 cardinals appointed during this period), removed themselves from Rome, the spiritual center of the West, and devoted their attentions to the reform of the papal bureaucracy and to the construction of the beautiful Gothic papal palace rather than to the spiritual problems of the Church and the political difficulties of Rome and Italy. The term “Babylonian captivity,” sometimes used for the same period, represents a conflation of the ideas of the 14th-century Florentine poet Francesco Petrarch and the 16th-century German reformer Martin Luther. Petrarch's career in the service of Clement VI provoked Italian resentment of the French dominance at the papal curia and hostility toward the fiscal and moral vices of the city and court. His sense of exile led him to quote the beginning of Psalm 137: “By the rivers of Babylon we sat down and wept,” the

3

Rhône being the river of the new Babylon. Martin Luther used the term Babylonian captivity to refer to the entire period of medieval Christianity, when (he believed) the doctrine of salvation by works predominated. The term became a Protestant image implying fiscal and moral corruption and should be avoided by those who do not want to imply a Protestant continuation of medieval Christianity.

### 1310–13

**Expedition of the Emperor Henry VII** to Italy (See [1310–13](#)). Henry asserted his independence of the spiritual power and claimed control of Italy. Clement V and Philip IV (opposed to him as a rival of the Angevins) combined against him.

4

### 1316–34

**JOHN XXII**, who supported the Angevins in Naples. His attempt to decide the validity of Emperor Louis IV's title led to a long struggle (1323–47). Louis was supported by the German people, who resented the Avignonese papacy, and by the Franciscans. John was unable to return to Italy because of the continued anarchy.

5

### 1342–52

**CLEMENT VI's** pontificate was marked by a revolution.

6

### 1347

**Revolution of Cola di Rienzi** at Rome. With the support of the populace, Cola overthrew the rule of the patricians, set himself up as tribune of the people, and summoned an Italian national parliament. Expelled by his opponents (1348), he returned in 1352 and was appointed senator by the pope (1354), but was in the same year slain by his baronial opponents. The lords of the Papal States resumed control and were, for all intents and purposes, independent of papal authority. Cola is considered a forerunner of Italian nationalism.

7

### 1352–62

**INNOCENT VI.** He sent the Spanish cardinal Albornoz to Italy, and the latter succeeded in reducing the powerful barons to obedience, thus making possible an eventual return of the pope.

8

**Reform of the Curia** during the Avignon period. General work of centralization and departmentalization: (1) the *camera apostolica*; (2) the chancery; (3) justice; (4) the penitentiary (dispensations). The loss of Italian revenues forced the popes to be more exacting in the levying of their spiritual income; thus the centralization of the papal curia put many clerical appointments under direct papal control through an extension of the papal rights of provision (appointment to benefices). The new efficiency in the levying and collection of taxes, combined with the appointment of Italians to offices in northern Europe, increased resentment, especially in England and the German Empire after the outbreak of the Hundred Years' War. Significant items of the budget of John XXII: war, 63.7 percent; upkeep and entertainment, 12.7 percent; alms, 7.16 percent; stables, 0.4 percent; art, 0.33 percent; library, 0.17 percent.

9

Vying with the growing magnificence of the monarchies of Europe, the Avignonese popes and cardinals became known for their pomp and luxury, and these tendencies spread to the episcopate, despite the thundering of the Franciscans and the decrees of local synods. The insubordination of outraged reformers, like the Bohemian preachers and **Wiclif**, soon penetrated to the masses.

10

Virtually every pope (notably Clement V and John XXII) made serious and honest efforts to combat these alarming developments, but the general anarchy in Europe made success impossible. There was a notable **expansion of missions to East Asia**: China (an archbishop and ten suffragans, 1312; 50 Franciscan houses, 1314; missions to Persia). Rome, the ancient spiritual center of the West, was reduced to an anarchic, poverty-stricken, provincial city, and clamored for the return of the popes.

11

## 1376, June 18

Visit of **Catherine of Siena** (1347–80) to Avignon. Caterina Beninsara, who cultivated piety and claimed from childhood to have received visions, joined the Dominican Third Order in 1363 and, with a group of followers, traveled through Italy preaching reform and ministering in hospitals and leper houses. Her reputation as a mystic and a miracle worker propelled her into a public role: anxious to see the papacy returned to Rome, she went to Avignon to urge Gregory IX to return; public opinion credited her influence as having been decisive. Catherine later supported Urban VI against the Avignonese antipope, and she died in Urban's service. Her 350 letters and mystical compositions, dictated because of her own illiteracy, survive. Canonized (1461) by the Sienese Pope Pius II, she is revered as one of the patron saints of Italy.

12

## 1370–78

**GREGORY XI** visited Rome and died before he could leave. The conclave, under 13  
threat of personal violence from the Roman mob, yielded to demands for an Italian pope.

## 1378–89

**URBAN VI** was elected. His worthy goals of reform were soon vitiated by his tactless 14  
and ill-tempered manner.

(See [1263](#)) (See [1268](#))

## f. [The Holy Roman Empire](#)

### [THE HOUSE OF HABSBURG \(1273-1519\)](#)

#### 1273

The election fell to **Rudolf of Habsburg** (b. 1218), who ranked as a prince and wished to restore and retain in his family the duchy of Swabia. The Habsburgs or Hapsburgs (from *Habichts-Burg*, or Hawk-Castle; 10th century) of the district of Brugg (junction of the Aar and Reuss) had steadily expanded their lands in the Breisgau, Alsace, and Switzerland, emerging as one of the leading families of Swabia. <sup>1</sup>

#### 1273–91

**RUDOLF I.** Indifferent to the Roman tradition, he concentrated on the advancement of his dynasty, and founded the power of the Habsburgs on territorial expansion of the family holdings and dynastic marriages. Edicts for the abolition of private war and support of local peace compacts (*Landfrieden*). <sup>2</sup>

#### 1276–78

**Struggle with Ottokar**, king of Bohemia, over the usurped imperial fiefs of Austria, Styria, Carinthia, Carniola. Rudolf expelled Ottokar from Austria by force (1276), but allowed him to retain Bohemia and Moravia (after homage) as a buffer against Slavdom. <sup>3</sup>

Ottokar was ultimately defeated and killed (Aug. 26, 1278, **Battle of the Marchfeld**); investiture of Rudolf's sons with the imperial fiefs of Austria, Styria, and Carniola (1282) established the Habsburgs on the Danube.

Rudolf yielded the last remnants of Frederick II's great imperial fabric: confirmation of papal rights in Italy and Angevin rights in southern Italy (1275); renunciation of all imperial claims to the Papal States and Sicily (1279).

4

## 1291

Alarmed at the rapid rise of the Habsburgs to first rank, the electors passed over Rudolf's son, choosing instead **Adolf of Nassau**, in return for substantial considerations.

5

## 1291

**Revolt of the three Forest Cantons**, Uri, Schwyz, and Unterwalden, and formation of a (Swiss) confederacy (See [The Swiss Confederation](#)).

6

## 1292–98

**ADOLF**, a strong imperialist. He supported the towns and lesser nobles and entered into alliance with Edward I of England against Philip IV; the alliance came to nothing, as the German princes were indifferent. The princes, alarmed at Adolf's advance in Meissen and Thuringia, deposed him (1298), electing Rudolf's rejected son.

7

## 1298–1308

**ALBERT (ALBRECHT) I**, son of Rudolf. Firm reduction of the ecclesiastical electoral princes (aid of the French and the towns); double dynastic marriage with the Capetians; acquisition of the crown of Bohemia (on the extinction of the Premyslids, 1306); Albert supported the Angevin Carobert's acquisition of Hungary; the Rhineland was filled with Francophile clerical appointees of the pope, and the election of 1308 was dominated by French influence. Charles of Valois procured the election of Henry of Luxemburg.

8

## 1308–13

**HENRY VII** (Luxemburg), a Francophile and bent on restoring the empire. The marriage of his son John to the sister of King Wenceslas of Bohemia brought the throne of Bohemia to the house of Luxemburg (1311–1489). 9

### 1310–13

**Expedition to Italy** at the urging of Pope Clement V and the Ghibellines; order restored and Milan, Cremona, Rome reduced; imperial coronation (1312); alliance of the pope and King Philip IV of France to save Naples from Henry. 10

### 1314–47

**LOUIS IV** (Wittelsbach). A Habsburg antiking, **Frederick the Handsome**, and civil war (until 1325). Bitter papal opposition (1323–47, refusal of confirmation of Louis's title to the empire); Louis, backed by the German people, against the Avignonese pope. Violent war of propaganda: **Marsiglio of Padua** (*Defensor Pacis*, 1324) and **William of Occam**, defending the imperial position, gave wide currency to conciliar ideas; **Dante's** *De Monarchia*. 11

### 1327–30

**Louis's futile expedition to Italy** and “lay” coronation (1328); his demand for a general council welcomed by the Italian Ghibellines. 12

Effort to give the German monarchy a formal constitution. 13

[NEXT](#)

(See [1286–1319](#))

## **g. Scandinavia**

### SCANDINAVIAN RULERS (1263-1533)

#### **1. Denmark**

The active and on the whole successful reign of **Eric Menved** (1286–1319) was followed in Denmark by a period of weakness and decline, marked by the ascendancy of the nobility and the constant advance of German influence.

<sup>1</sup>

#### **1320–32**

**CHRISTOPHER II**, elected king after a capitulation, the first in Danish history, limiting the royal power in the interest of the nobility and clergy. The towns of the Hanseatic League, having acquired a monopoly of trade in Denmark, soon became dominant in Danish politics.

<sup>2</sup>

#### **1332–40**

A period of complete anarchy. Christopher was driven from the throne by Gerhard, count of Holstein, who parceled out the territories of the crown, established German nobles in all the important fortresses, and gave the German traders full rein. Gerhard was murdered in 1340.

<sup>3</sup>

## 1340–75

**WALDEMAR IV**, the youngest son of Christopher and one of the greatest Danish kings. At home he did his utmost to break the German influence and to restrict the power of the nobility and the clergy. The Church was subordinated to the royal power and the nobles and towns obliged to perform their military obligations. Abroad, Waldemar devoted himself to the reconquest of the territories lost by his father. In wars with Sweden, Holstein, and Schleswig he regained Zeeland (1346), most of Fünen and Jutland (1348), and Scandinavia (1360). His seizure of Gothland (1361) brought him into direct conflict with the powerful Hansa towns, which were supported by Sweden.

4

## 1361–63

**First war against the Hansa.** Copenhagen was sacked, but Waldemar defeated the Hansa fleets at **Helsingborg** (1362) and forced the Hansa to accept peace (1363), which greatly curtailed their privileges.

5

## 1368

A revolt against heavy taxation led to Waldemar's flight. His return (1370) was purchased by tremendous concessions.

6

## 1368–70

Meanwhile the **second war with the Hansa** had broken out. The German towns were supported by Sweden, Norway, Holstein, Mecklenburg, and even by some of the Danish nobles.

7

## 1370

Waldemar, badly defeated, was obliged to accept the **Peace of Stralsund**, renewing the privileges of the German Hansa, turning over the larger part of the revenues of four places, and accepting interference in the royal succession. This treaty marked the **ascendency of the Hansa** in the Baltic.

8

## 1376–87

**Olaf**, grandson of Waldemar, who, until his death, ruled with his mother, Margaret, as regent. 9

## 1387–1412

**MARGARET**, mother of Olaf, was queen, ruling, at the same time, Norway and Sweden and thus uniting Scandinavia. (See [Scandinavia](#)) 10

(See [1300–1305](#))

## 7. [Eastern Europe, 1300–1500](#)

### a. [Poland](#)

The history of Poland in this period is concerned chiefly with the efforts of the kings to reunite the various duchies and to establish the royal power. This policy was opposed, with success, by the nobility, which managed to extract countless privileges and to erect a type of oligarchical government. Externally the Poles were involved in a long struggle with the Teutonic Knights, designed to secure an outlet to the Baltic. <sup>1</sup>

#### 1305–33

**VLADISLAV IV** (Lokietek), under whom Poland regained its independence after a brief period of Bohemian domination. Vladislav was obliged to continue the struggle against Bohemia, and was not crowned until 1320. For protection he concluded dynastic alliances with Hungary (his daughter married Charles Robert of Anjou) and Lithuania (his son Casimir married the daughter of Gediminas). He did much to reunite the various duchies and established a new capital at Kraków. But he failed to secure Pomerania, which in 1309 passed from Brandenburg to the Teutonic Order. A papal decision in 1321 awarded the region to Poland, but the Knights ignored the order and continued their raids into Polish territory (1326–33). <sup>2</sup>

#### 1333–70

**CASIMIR III** (the Great). He introduced an improved administration, reduced the influence of the German town law (a new law code published), developed national defense, and promoted trade and industry (extensive privileges to the Jews, 1334). In 1364 he founded a school at Kraków, which became a university in 1400 and the chief intellectual center of eastern Europe. Here **Johannes Dlugosz** (1415–80) wrote the first <sup>3</sup>

critical history of the country. There was a printing press in Kraków as early as 1474.

In **foreign affairs**, Casimir abandoned claims to Silesia and Pomerania, turning his attention toward the southeast, where dynastic problems in the Ukraine called forth a rivalry between Poles, Lithuanians, and Hungarians. In an agreement with Hungary (1339), Casimir, who had no direct heir, promised that on his death the Polish crown would pass to Louis, the son of Charles Robert of Hungary. Louis was to reconquer the lost territories and to respect the privileges of the Polish nobility. This marks the beginning of the elective system, which gave the magnates an unequalled opportunity for extracting further rights (first real diet—colloquia—in 1367). In 1340 Casimir seized Halicz, Lemberg, and Volhynia. War ensued with Lithuania over Volhynia, and ultimately the Poles retained only the western part (1366).

4

### 1370–82

**LOUIS** (of Anjou). He paid but little attention to Poland, which he governed through regents. To secure the succession to his daughter Maria (married to Sigismund, son of Emperor Charles IV), he granted to the nobility the **Charter of Koszyce** (Kaschau), the basis for far-reaching privileges.

5

### 1382–84

Opposition to Sigismund led to the formation of the **confederation of Radom** and civil war between the factions of the nobility.

6

### 1384–99

**JADWIGA** (Hedwig), a daughter of Louis, was elected queen.

7

### 1386

**Marriage of Jadwiga to Jogaila (Jagiello)**, grand duke of Lithuania, who promised to become a Christian and to unite his duchy (three times the size of Poland) with the Polish crown. As a matter of fact, though the marriage prepared the way for union, he was obliged to recognize his cousin Vytautas (Witold) as grand duke of Lithuania, and the connection continued to be tenuous.

8

## 1386–1434

**JAGIELLO** (title **Vladislav V**). He had great difficulty in keeping his fractious nobility in order and in 1433 was obliged to grant the **Charter of Kraków**, reaffirming and extending their privileges. <sup>9</sup>

## 1410, July 15

**Battle of Tannenberg** (Grünwald), a great victory for the Poles, who used Bohemian mercenaries under John Ziska and were supported by the Russians and even the Tatars, against the Teutonic Knights. However, Jagiello was unable to keep his vassals in order. <sup>10</sup>

## 1411, Feb. 1

As a result, Jagiello concluded the **first Peace of Thorn**, which failed to secure for the Poles an access to the Baltic. <sup>11</sup>

## 1434–44

**VLADISLAV VI**, son of Jagiello, succeeded to the throne. Since he was only ten years old, the country was ruled by a regency. Vladislav's brother, Casimir, was offered the Bohemian throne by the Hussites (1438); Vladislav himself became **king of Hungary** (1440). Thenceforth he devoted himself to Hungarian affairs, leaving Poland in the hands of the magnates. Vladislav lost his life in 1444 at the **Battle of Varna** (See [1444, Nov. 10](#)) against the Ottomans. <sup>12</sup>

## b. Lithuania

### RULERS OF HUNGARY, POLAND, AND LITHUANIA (1205-1492)

Of the early history of Lithuania little is known. The numerous heathen tribes were first brought to some degree of unity by the threat of the Teutonic Knights (after 1230). <sup>1</sup>

### c. 1240–63

**Mindaugas**, one of the Lithuanian chieftains, to deprive the Knights of their crusading purpose, accepted Christianity and was given a crown by Pope Innocent IV. He later broke with the Teutonic Order (1260) and relapsed into paganism. He was killed by one of his competitors. <sup>2</sup>

### 1293–1316

**Vytenis** reestablished a Lithuanian state. <sup>3</sup>

### 1316–41

**Gediminas**, the real founder of Lithuania. Blocked by the Germans on the Baltic, he took advantage of the weakness of the Ukrainian, Belorussian, and Russian principalities to extend his control to the east and south (acquisition of Polotsk, Minsk, and the middle Dnieper region). **Vilna** became the capital of the new state. <sup>4</sup>

## 1341–77

**Algirdas**, the son of Gediminas, was the ablest of the dynasty. Defeated by the Knights (1360), he too turned eastward. Siding with Tver in the dynastic conflicts of Russia, he advanced several times to the very outskirts of Moscow. During his reign the domain of Lithuania was extended as far as the Black Sea, where Algirdas defeated the Tatars (1368).

5

## 1350

The **bubonic plague** (Black Death) swept through the Baltic region.

6

## 1377–1434

**JOGAILA (Jagiello)**, the son of Algirdas, married Jadwiga of Poland (1386) and established the **first union of Lithuania and Poland** under one king. As a result, Lithuania was converted to Roman Catholicism. However, the Polish and the Lithuanian aristocratic assemblies were preserved as separate bodies, while pagan traditions proved to be much stronger among the Lithuanians than among most of their neighbors. At the same time, Lithuanian society was somewhat less male-dominated: when she married, the woman did not lose all relations with her family, and she enjoyed the protection both of her own family and of her husband's; only the husband could ask for divorce but, on the other hand, one third of his property was to serve as a guarantee of his own fidelity.

7

## 1398

Jagiello was obliged to recognize his cousin, **Vytautas** (Witold) as grand duke of Lithuania. Vytautas hoped to reestablish the independence of the country from Poland, but his failure in a crusade against the Tatars greatly weakened him.

8

## 1447

**Casimir IV** of Poland, having been grand duke of Lithuania before his accession, once again united the grand duchy and the Polish kingdom. (See [Poland-Lithuania](#))

### c. [Russia](#)

[EASTERN EUROPE C. 1430 \(MAP\)](#)

[GRAND PRINCES OF MOSCOW \(1176-1505\)](#)

The period following the death of **Alexander Nevski** (1263) was marked by the continued and repeated disruption of the Russian lands, due to the complicated and unfortunate system of succession in the princely family. Russia was under the **suzerainty of the Tatars** (Mongols), who played off one candidate against another, thus increasing the confusion and perpetuating the weakness of the country. The gradual **rise of Moscow** to prominence among the Russian principalities resulted, among other things, from a skillful policy of colonization and of loyalty to the Tatars. The Tatars often responded by supporting the Muscovite rulers against their neighbors, while nobles and peasants from the other Russian principalities were attracted by the abundance of land in a sparsely populated region. The princes of Moscow provided the nobles with land and peasants in exchange for military and administrative services, but the bulk of the peasants remained on state land (land owned directly by the prince). Moreover, the peasants were organized in village communes, and they redistributed their holdings periodically among themselves, while the nobles, unlike their counterparts in western Europe, did not have alodial estates into which to consolidate their tenures. Thus the princes of Moscow were able to restrict ever more successfully the influence of the nobility, despite some violent reactions to that policy.

## 1328–40

**IVAN I KALITA** (Moneybag), grand prince of Moscow. His was the first of a series of noteworthy reigns. Extremely cautious and parsimonious, Ivan bought immunity from Tatar interference and was ultimately entrusted by the Tatars with the collection of tribute from the other princes. 2

## 1340–53

**Simeon I** continued the policy of his predecessor and was placed, by the Tatar overlord, above all the other princes. 3

## 1350

The second cycle of plague epidemics spread to Russia. 4

## 1359–89

**DMITRI DONSKOI** (of the Don), who ascended to the princely throne at the age of nine. His reign was filled with a struggle against **Michael of Tver**, his chief rival, who was supported by Algirdas of Lithuania. At the same time, he began the conflict with the Tatars, whose power was fading but who also enjoyed the support of Lithuania. 5

## 1380, Sept. 8

**The Battle of Kulikovo.** Dmitri completely defeated the Tatar armies before the Lithuanians arrived. The victory was in no sense decisive, for the Tatars on several occasions thereafter advanced to the very gates of Moscow. But Kulikovo broke the prestige of the Tatar arms. 6

## 1389–1425

**Basil I (Vasili).** He annexed Nizhni-Novgorod and continued the struggle with the Tatars and the Lithuanians, without forcing a decision. 7

## 1425–62

**Basil II**, whose reign was distinguished by a relapse into anarchy. A long civil war with his rivals, Yuri and Shemyaka, was followed by Tatar invasion (1451, the Tatars beaten back from Moscow). Nevertheless the Moscow principality managed to maintain itself. In 1439 Basil refused to accept the union of the eastern and western churches, arranged for at the council of Florence. Thenceforth the Russian metropolitan, who had moved to Moscow in the time of Ivan Kalita, became more and more the head of an independent Russian Church.

8

## 1462–1505

**IVAN III** (the Great). Through a cautious but persistent policy, he annexed most of the rival principalities and, after a series of wars, subjected Novgorod, where the patrician elements tended to side with Lithuania. In 1471 Novgorod was obliged to renounce the alliance of Lithuania and to pay tribute. After a second war, in 1478, **Novgorod's independence was ended** and the troublesome upper classes were deported to central Russia. In 1494 Ivan drove out the German merchants and closed the Hanseatic trading station. Thus he acquired the huge territory of Novgorod, extending eastward to the Urals. The **annexation of Tver** (1485) put an end to the most formidable rival of Moscow.

9

## 1472

**Marriage of Ivan with Zoë** (Sophia), niece of the last Greek emperor of Constantinople. This was arranged by the pope, in the hope of bringing the Russians into the Roman Church, but all efforts in that direction failed. It also served to introduce into Moscow the Byzantine conception of the autocrat (Ivan took the title of tsar—i.e., caesar) and the practice of Byzantine court ceremonial.

10

## 1480

Ivan threw off the Tatar yoke after a last Tatar advance on Moscow. Ivan avoided open warfare but took advantage of the Tatars' disunion. Mengli Girai, the khan of the Crimea, joined him against the Lithuanians.

11

## 1475–95

Rebuilding of the **Kremlin** (Russian for “citadel”), including the present wall, 7,200 feet <sup>12</sup> (2,195 meters) long, and the **Uspenski** (Assumption) **Cathedral**, which was the work of the Italian architect **Aristotele Fioravanti**. The Kremlin was to be the residence of Russia's monarchs until the 18th century. The **Granovitaya Palace** (Hall of Facets), also built in the 15th century, served as an audience chamber.

#### **d. [Hungary](#)**

At the beginning of the 14th century, Hungary was already an essentially feudal country, in which the great magnates and the bishops, richly endowed with land, ruled as virtually independent potentates (“little kings”), while the lower nobility, organized in the *Comitats* (provincial governments), had, to a large degree, control of the administration. The nobility, freed of taxation, was responsible for defense, but acted only as it saw fit. <sup>1</sup>

#### **1301–8**

The **extinction of the Arpad dynasty** led to a period of conflict, during which Czech, German, and Italian parties each attempted to put their candidates on the throne. <sup>2</sup>  
**Wenceslas (Vaclav)**, son of the king of Bohemia, 13 years old, was first elevated, but could not maintain himself, nor could **Otto of Bavaria**.

#### **1310–42**

**CHARLES I** (Charles Robert of Anjou), a grandson of Maria, the daughter of Stephen V, was elected and founded the brilliant and successful **Anjou line**. Charles established his capital at Visegrad and introduced Italian chivalry and Western influences. After 15 years of effort, he succeeded in subduing the “little kings,” of whom **Matthias of Csak** and **Ladislav of Transylvania** were the most powerful. Recognizing the hopelessness of suppressing the nobility entirely, he regulated its position and obliged it to furnish specified contingents to the army. Regulation of taxation (first direct tax); encouragement of towns and trade. <sup>3</sup>

#### **1342–82**

**LOUIS** (Lajos the Great), the son of Charles, a patron of learning who established a brilliant court at Buda. He attempted to solidify the position of his house in Naples and embarked on a successful expedition to Italy to avenge the murder of his brother Andrew (1347). In conjunction with Genoa, he carried on a long struggle with Venice, which ended in the **Peace of 1381**: Venice ceded Dalmatia and paid tribute. In the east the Hungarian power made itself felt throughout the Balkans: Serbia, Wallachia, and Moldova recognized the suzerainty of Louis; foundation of the border districts (*banats*) south of the Danube and the Sava, as protection against the Turkish advance.

4

### 1370

Louis became king of Poland but paid little attention to his new obligations. In Hungary he continued the work of his father: the *jus aviticum* (1351) restricted the freedom of the great magnates to dispose of their property.

5

### 1382–85

**Maria of Anjou**, queen. She was married to Sigismund of Luxemburg, who became guardian of the kingdom. His position was challenged by Charles of Durazzo and Naples, who had many adherents, especially in southern Hungary and Croatia.

6

### 1385–86

**Charles II** (of Naples). He was assassinated after a very brief reign, which led to a new revolt in Croatia.

7

### 1387–1437

**SIGISMUND** (of Luxemburg), who became German emperor in 1410 and king of Bohemia in 1436. His reign marked a great decline in the royal power, due to his constant absence from the country and his practice of selling royal domains to get money for his far-reaching schemes elsewhere. In general Sigismund relied on the towns and lesser nobility against the great magnates. Hence the grant of ever greater rights to the smaller nobles.

8

## 1396

The disastrous **battle of Nicopolis** against the Turks (See [1396](#)). Loss of Dalmatia to the Venetians. Hussite invasions of Hungary, resulting from Sigismund's attempts to gain the Bohemian throne. 9

## 1437–39

**Albert (Albrecht) of Habsburg**, son-in-law of Sigismund, also German emperor and king of Bohemia. He was obliged to sign far-reaching capitulations (nobles not obliged to fight beyond the frontiers). 10

## 1437

**First victory of John Hunyadi** over the Turks. Hunyadi was a powerful frontier lord and patriot. 11

## 1440–44

**Vladislav (Vlászló) I** (Vladislav VI of Poland), a weak ruler whose reign was distinguished chiefly by the continued victories of Hunyadi (1443). Crusade against the Ottomans (See [1438–44](#)). 12

### e. [The Serbian States](#)

By the end of the 13th century, the Serbian states, like others of eastern Europe, had evolved a strong lay and clerical aristocracy, which, to a large extent, controlled even the more outstanding rulers. In view of the general uncertainty of the law regarding succession and inheritance, the tendency toward dynastic conflict and territorial disruption was very pronounced. In the western Balkans the situation was further complicated by the rivalry of the western and eastern forms of Christianity, and by the persistence of the heretical Bogomil teaching, especially in Bosnia. <sup>1</sup>

#### 1281–1321

**Milyutin** (Stephen Urosh II), the brother of Dragutin. He was a pious and yet dissolute ruler, but above all a political and religious opportunist. Taking full advantage of the growing weakness of the Byzantine Empire, he gradually extended his possessions in Macedonia, along the Adriatic, and, in the north, toward the Danube and the Save. <sup>2</sup>

#### 1321–31

**Stephen Dechanski** (Stephen Urosh III), the illegitimate son of the preceding. His reign was marked chiefly by the great victory of the Serbs over the Greeks and Bulgarians near **Küstendil** (Velbûzhd) in 1330. The Serbs now held most of the Vardar Valley. A nephew of Milyutin was imposed on the Bulgarian throne, and from 1330 to 1331 Bulgaria was under Serbian suzerainty. <sup>3</sup>

#### 1331–55

**STEPHEN DUSHAN** (Stephen Urosh IV), the ablest of the Serbian rulers in the Middle Ages. Dushan began his career by deposing his father, who was then strangled. For most of his reign he attempted to maintain friendly relations with Hungary and Ragusa (Dubrovnik), in order to have a free hand to exploit the dynastic war in the Byzantine Empire between the Palaeologi and John Cantacuzene. By 1344 he had subjected all of Macedonia, Albania, Thessaly, and Epirus. 4

### 1346

**Dushan** set up his capital at Skopje and proclaimed himself emperor (tsar) of the Serbs, Greeks, Bulgars, and Albanians. At the same time, he set up a Serbian patriarchate at Pe  (Ipek), for which he was anathematized by the Greek patriarch. Dushan established a court wholly Byzantine in character. In the years 1349–54 he drew up a law code (Zabonnik). 5

### 1353

Dushan defeated Louis of Hungary, who had been urged by the pope to lead a Catholic crusade. The Serbs acquired Belgrade. 6

### 1355

Dushan died at the age of 46, en route to Constantinople. Thus perished his hope of succeeding to the imperial throne and consolidating the Balkans in the face of the growing power of the Ottoman Turks (See [1354](#)). 7

### 1355–71

**Stephen Urosh V**, a weak ruler who was faced from the outset by the disruptive ambitions of his uncle Simeon and other powerful magnates. He was the last of the Nemanjid house. 8

### 1358

Hungary obtained most of Dalmatia, after defeating Venice. Ragusa (Dubrovnik) became a Hungarian protectorate. 9

### 1371

**Battle of the Maritza River**, in which the Turks, having settled in Thrace, defeated a combination of Serbian lords. 10

### 1371

Zeta (Montenegro) became a separate principality under the Balsha family (until 1421). 11

### 1375

The Greek patriarch finally recognized the patriarchate of Pe . 12

## **f. [The Byzantine Empire](#)**

### **[THE PALEOLOGUS FAMILY \(1260-1453\)](#)**

After the recapture of Constantinople by the Greeks in 1261, the **empire of the Paleologi** was still a relatively small domain, consisting of the former Nicaean Empire, the city of Constantinople and its immediate surroundings, the coastal part of Thrace, Salonika (Thessalonica), and southern Macedonia with the islands of Imbros, Samothrace, Lesbos, and Rhodes. The northeastern part of Anatolia was still held by the Greek **empire of Trebizond**, which, in the course of the 13th century, had managed to hold a balance between the Seljuk Turks and the Mongols and had become the great entrepôt of the eastern trade coming to the Black Sea by way of Persia and Armenia. The city and the court reached their highest prosperity and brilliance under the Emperor **Alexius II** (1297–1330), whose reign was followed by a period of dynastic and factional struggle. The reign of **John Alexius III** (1350–90) marked a second period of splendor, but the 15th century was one of decline. The empire of Trebizond ended with the Ottoman conquest in 1461 (last ruler, **David**, 1458–61).

1

The European territories of the earlier empire were divided between the Greek despotate of Epirus and the Greek duchy of Neopatras (Thessaly, Locris), the Latin duchy of Athens, the Latin principality of Achaea, and the Venetian duchy of the Archipelago.

2

### **1259–82**

**MICHAEL VIII** (Paleologus). He was the ablest of the Paleologi, a man who devoted himself to the restoration of Byzantine authority throughout the Balkan area, persisting despite many setbacks.

3

## 1261

Michael established a foothold in the southeastern part of the Peloponnese (Morea). **Mistra** (Misithra) became the capital of a flourishing principality and one of the great centers of late-Byzantine culture.

4

## 1262

Michael II of Epirus was forced to recognize the suzerainty of the Constantinople emperor. In a series of campaigns, much of the despotate was regained for the empire (Janina taken, 1265).

5

## 1264–65

Constant raids of the Bulgars into Thrace led to a formidable campaign against them and the reconquest of part of Macedonia.

6

## 1266

**Charles of Anjou** became king of Sicily. He made an alliance with Baldwin II, the last Latin emperor, and, through the marriage of his son with the heiress of the Villehardouins, extended his authority over Achaia. He soon became the most formidable opponent of the Greeks, for by the **Treaty of Viterbo** (1267), he took over the claims of Baldwin II.

7

## 1271

**Death of Michael II of Epirus.** Charles of Anjou had already taken Corfu (1267) and now undertook the conquest of the Epiran coast, the essential base for any advance on Thessalonica and Constantinople. Durazzo was taken in 1272. **John Angelus**, driven out of Epirus, set up as lord of Neopatras (to 1295). **Nicephorus I** was the titular ruler of a much-reduced Epiran state (to 1296). Charles of Anjou proclaimed himself king of Albania and entered into alliance with the Serbs, who had begun the construction of a large state by advancing down the Vardar Valley.

8

## 1274

**The Council of Lyons.** Michael, to escape from the Angevin danger, accepted the Roman creed and the primacy of the pope, thus effecting the **reunion with Rome**. This purely political move met with vigorous resistance on the part of the Orthodox Greeks. 9

## 1274

Campaigns of Michael against the Angevins in Epirus had varying success. 10

## 1278

The death of William of Villehardouin, prince of Achaea, gave the Greeks an opportunity to expand their holding in the southeastern part. 11

## 1281

Michael VIII won a great victory over the Angevins at **Berat**. Thereupon Charles made an alliance with the papacy and with Venice, with which the Serbs and Bulgars were associated. Michael, in reply, effected a rapprochement with Peter of Aragon. 12

## 1282

**The Sicilian Vespers** (See [1268–85](#)) served to relieve the pressure on the Greek Empire. 13

## **G. The Americas, 1000–1525**

### **1. Pre-Columbian South and Central America and the Caribbean, 1200–1530**

The aborigines of America developed social organizations that ranged from stateless tribes to kingdoms and imperial states. Many groups remained simple hunters and gatherers, while others built complex agricultural systems. Iron was unknown, as was the utilitarian application of the wheel. Estimates of pre-Columbian populations are highly debatable. Especially controversial are estimates that assess population at the time of the European invasion, since they have been used politically to justify or to condemn Spanish and Portuguese conquest. 1

The **Mexica (Aztecs)** were originally a minor tribe of the greater Nahua group. After the disintegration of the Toltec domination of the valley of Mexico (about 1200 C.E.), the Acolhua confederation and the Tepaneca confederation struggled for hegemony in the region. With help from the Mexica, the Tepanecas defeated the Acolhuas in 1370. The Mexica founded **Tenochtitlán** on an island in the lake of **Texcoco** during the first half of the 14th century. They organized a monarchical system, with a prince of Toltec ancestry as king, or *tatloani*. Owing to their military prowess, the Mexica gained political importance and formed the **Triple Alliance** with the chiefs of Tacuba and Texcoco, which defeated the Tepanecas (1426–28). 2

The Mexica promoted regional innovations in astronomy, agriculture, architecture, jewelry, and picture writing. Their basic **social organization** was the *calpulli*, a kinship group with access to land and resources to be distributed among its members. Each *calpulli* had its own school, temple, and company of warriors. The *calpulli* was internally stratified: the majority of members of the *calpulli* were peasants and workers (*macehualtin*), who toiled on the land and manufactured products. Slavery developed when impoverished commoners sold themselves to wealthier persons. The slaves could buy their freedom, but as the practice of human sacrifice expanded, the enslaved condition became more precarious. An elected chief governed the *calpulli* with the help of a council of elders. Warriors received prizes, and tributes were paid directly to them 3

by defeated populations, who became serfs (*mayeque*). With the consolidation of Mexica dominance, a military aristocracy displaced the traditional hierarchy in the *calpulli*. The merchant class (*popochca*) also extended its influence. After the defeat of the Tepanecas, a council of four lords monopolized the election of the king.

Mexica religion was **polytheistic**. With the increasing role of war and warriors in society, the state promoted the cult of **Huitzilopochtli, a war god**. His worship led to the practice of human sacrifice and ritual cannibalism on an unprecedented scale for the area.

War allowed the Mexicas to capture victims for sacrifices, and to compel defeated populations to pay them tribute. As the population of Tenochtitlán grew, problems of supply and famine developed. Mexica rulers pressured conquered populations to provide more resources, and there were constant rebellions against Mexica exactions. The Tlaxcalans and the Tarascans, the inhabitants of Oaxaca and Yopitzingo (in present Guerrero), maintained their independence from the Mexica. Moctezuma II (1503–19) tried to conquer these independent peoples, to consolidate the Mexica state. He centralized power in Tenochtitlán, which alienated the support of Texcoco. His attempts to limit access to the ranks of the nobility caused dissatisfaction among upwardly mobile merchants and bureaucrats. Estimated population at the eve of the conquest was 9 million.

The **Mayas** were established in the Yucatán Peninsula, Tabasco, and Chiapas; in northern, central, and eastern Guatemala; and in western Honduras (See [Teotihuacán](#)). Between 200 and 950 C.E., **religious centers** of considerable importance developed (including Tikal, Copán, Nakum, Palenque, Uxmal). Supported by masses of agriculturalists, a class of priests and warriors developed the **arts, architecture, mathematics, engineering, and astronomy**. They formulated the conception of zero, a vigesimal numerical system, and a calendar more accurate than the Julian. Picture writing was employed in codices formed for religious and astronomical purposes. The Mayas preserved orally a body of traditions, history, and religious prophecies.

During the 9th century, many Mayan centers went into **irreversible decline**. Around 925, invaders from Mexico took control of Mayan lands and brought with them Toltec influence. They promoted the cult of their mythic ancestor **Kukulcán, or Quetzalcoatl** (the feathered serpent). **Chichén Itzá** became the most important center of power. In 1200, however, the **league of Mayapán** became hegemonic in the Yucatán, and the Quiché chief gained power in Guatemala. About 1450, extensive warfare destroyed the predominance of Mayapán and the Quiché, and small chieftainships emerged as the main political units for the Mayas. The estimated population in the Yucatán was 400,000 to 500,000 at the time of the arrival of the Spaniards.

In the **circum-Caribbean**, the **Muiscas (Chibchas)**, the **Taironas**, and the **Cenú** were the predominant chiefdoms before the European invasion. They developed a long-distance system for the exchange of sumptuary goods of religious character, such as

emeralds, gold jewelry, fine textiles, and fine seashells, as well as war slaves. The populations were mostly of agriculturalists organized into kinship groups, who paid tribute and worked their lords' lands. Estimated population of this area was 3 million. In the **Caribbean islands**, the indigenous population was about 750,000, with most of the people living on the island known as Española (Santo Domingo). There were three ethnic groups in the islands: the **Ciboney** or Guanahuatebey, the **Taino Arawak**, and the **Carib**. The Ciboney were the oldest settlers, having migrated in several waves from the mainland (1000 B.C.E.–1000 C.E.). They were hunters and gatherers, organized in independent nomadic clans. The Arawak migration (1100–1450) displaced and absorbed the Ciboney. The Arawak formed chiefdoms based on agriculture. The Caribs formed a highly mobile society, being the last migrant group to enter the Caribbean. By 1500 they dominated all of the eastern Caribbean islands. They settled in places that facilitated both agriculture and fishing. Land was communally held by the extended family. The head of the family supervised productive activities, settled internal disputes, and served in military groups of the most experienced warriors in raids against surrounding populations, to seize women for the local young men. Warfare was a central activity of Carib males, and ritual cannibalism was practiced. Caribs believed in the existence of spirits, and shamans were in charge of religious activities.

The **Incas**, with their capital in Cusco, extended their control over the area from Ecuador to central Chile along the coast and inland to the eastern slopes of the Andes, including the Bolivian Plateau (See [Chimu](#)). Expansion was particularly rapid from the 14th century onward. Inca myths claimed that, previously, Andean peoples had lived in a primitive state, but that the Inca institutions were based on those developed earlier in the area. 9

In the Andes, the fundamental **social unit** was the *ayllu*, a kinship group with a common ancestor. Women were organized matrilineally and men patrilineally, with marriage being endogamous. The chief of the *ayllu* was called the *kuraka*. The *ayllu* had access to land, and the *ayllu* families cultivated assigned plots and had reciprocal duties in community activities. Leadership in war was provided by elected chiefs, called *sinchis*. 10

Frequent skirmishes among tribes in the Cusco area helped to consolidate warrior leadership among the Incas, eventually producing a **monarchial system**. Oral tradition preserved a list of 13 kings (Incas), but imperial expansion only began with **Pachacútec**, the ninth Inca king (1438–71). In 1438, the **Chancas** put Cusco under siege, but the Incas under Pachacútec defeated them completely. After Pachacútec, Túpac Inca (1471–93) and Huayna Cápac (1493–1525) continued rapid **military expansion**. Plebeians who distinguished themselves as warriors could obtain positions in the administration and a secondary nobility. 11

The Incas subjected different ethnic groups, recognizing their original chiefs (*kurakas*) and making them responsible for the fulfillment of labor corvées on Inca lands. The royal *ayllus*, called *panacas*, inherited all the properties of the dead sovereign, to 12

preserve the cult of his mummy. To secure manpower to cultivate lands of the nobility as well as the Inca and state lands, a class of perpetual **serfs** (*yanas*) was formed. The Incas displaced original populations to establish loyal settlers (*mitmaqkuna*) who would deter rebellions and expand cultivation of maize for the state. Rebellions against state exactions were constant. **Huayna Cápac** subdued uprisings in Ecuador, and Túpac Inca Yupanqui suppressed them on the Titicaca Plateau. Inca expansion confronted insurmountable obstacles in the eastern tropical lowlands and in the southern area dominated by the Araucanians (Mapuche).

**Inca religion** included a heaven god, the cult of the ancestors (especially the deceased Inca kings), and *huacas* (objects and places considered sacred). The Inca state emphasized the solar aspect of the heaven god, as the Incas claimed to be children of the sun (**Inti**). 13

After the death of Huayna Cápac, his sons **Atahualpa** and **Huáscar** warred over the kingdom. Atahualpa, son of a secondary wife, gained the nobility's support, and a civil war began (1529–30). In 1532 the war ended with the defeat of Huáscar, but by that time the Spaniards had already destroyed the Inca domination of Peru. Population at this time was estimated at 9 million. 14

The area of the Río de la Plata was occupied by several tribes who combined hunting and gathering with agriculture. In the lower Paraná resided the **Charrúas** and the **Caingang**. The more numerous of the **Guaycuru** inhabited the Chaco, and were divided into the **Abipón**, **Mocovi**, **Toba**, **Mbayá**, and **Caduveo** tribes. The **Guaraní** expanded in the Paraná basin and practiced slash-and-burn agriculture. In Patagonia and Tierra del Fuego, the **Ona** and the **Tehuelche** lived as hunters of guanacos and rhea. In the area of the Beagle Channel and on the islands, **Alacaluf**, **Yahgan**, and **Chono** tribes were migrant fishermen. In the south of Chile, the **Mapuche**, **Araucanian**, and **Huilliche** groups subsisted on llama husbandry and agriculture that combined rotating-field and slash-and-burn methods. 15

Brazil was inhabited by groups from four linguistic families: **Tupi-Guaraní**, **Gê**, **Carib**, and **Arawak**. The Tupi-Guaraní were established along the Atlantic coast, from the mouth of the Amazon River to south of present São Paulo. They were divided into many tribes and frequently engaged in war. Tupi, Arawak, and Carib tribes populated the Amazon basin. The Gê tribes lived in central Brazil. All of Brazil's native populations were organized in seminomadic communities. Hunting and gathering were important activities, complementing slash-and-burn agriculture. The estimated population in the Amazon basin was 5 million; for the rest of Brazil, 6.8 million. 16

## **2. Pre-Columbian Explorations by Europeans, 1200–1530**

### **1000**

**Leif Ericson**, returning from Norway to Greenland, was driven onto the North American coast. Settlements near L'Anse aux Meadows, at the northern tip of Newfoundland, show evidence of Norse presence and might be the Wineland (Vinland) mentioned by Ericson. <sup>1</sup>

### **1003**

**Thorfinn Karlsefni** set out from Greenland with three ships, to settle Wineland. He and his party spent three winters on the North American continent. The localities he visited have not been determined. <sup>2</sup>

The last mentioned visit to Wineland was in 1189, although it is possible Norsemen came at least as far as southern Labrador for ship timber as late as 1347. After that date, the Greenland colonies declined, though the West Colony (in southeast Greenland) continued to exist until at least the mid-15th century. <sup>3</sup>

It is possible, though there is no evidence, that Breton, Gascon, or Basque fishermen regularly visited Labrador in this period. Many theories have been advanced to demonstrate a European presence before Columbus, but most rest on hypotheses and clever deductions. After the translation of Ptolemy's *Geography* into Latin (1410), the idea that the earth was spherical (never entirely lost during the Middle Ages) spread rapidly in scientific circles and revived the goal of reaching Asia by sailing west. <sup>4</sup>

### 3. The Voyages of Columbus, 1492–1504

#### 1451, between Aug. 26 and Oct. 31

**CRISTOFORO COLOMBO** (Christopher Columbus; in Spanish, Cristóbal Colón) was born near Genoa, the son of a weaver. Almost nothing definite is known of his youth. He seems to have gone to Portugal in 1476 and to have been in England in 1477. In 1480 he married the daughter of Bartholomew Perestrello, hereditary captain of Porto Santo, near Madeira. He was familiar with the idea then popular of seeking to reach India or China by navigating westward.

1

#### 1483 or 1484

**Columbus** appealed to King John II of Portugal to finance a voyage to the West, but experts at the court rejected his project as unfeasible.

2

#### 1486

Columbus, through the mediation of some Franciscan monks, was able to submit his project to the king and queen of Spain, **Ferdinand of Aragon and Isabella of Castile**. His religious fervor and personal magnetism impressed the queen, but experts rejected his project again. In the following years, Columbus met the three Pinzón brothers, wealthy traders and expert navigators.

3

#### 1492

Columbus, again in the court, induced Queen Isabella to finance his expedition. His objective was to find a route to the Indies, rather than to discover a new world. The queen named him admiral and governor of the territories to be discovered, and gave him letters to the Great Khan.

4

### 1492–93

**The first voyage** (Aug. 3–March 15). Columbus left Palos, Spain, with three caravels, *La Pinta*, *La Niña*, and the *Santa María*. Martín Pinzón and Juan de la Cosa commanded two of them. They left the Canaries (Sept. 6) and reached land in the Bahamas (Oct. 12), naming it **San Salvador**. Columbus then discovered Cuba, which he thought was the territory of the Great Khan, and Santo Domingo (Española). He established a post, Navidad, on Santo Domingo, and set out on the return voyage (Jan. 4, 1493), touching the Azores (Feb. 15), landing at Lisbon (March 4), and finally reaching Palos (March 15). Columbus announced that he had discovered the route to the Indies, news of which quickly spread throughout Europe and caused much excitement.

5

### 1493, May 4

**The line of demarcation.** At the insistence of the Spanish rulers, who feared counterclaims by Portugal, Pope Alexander VI granted them the exclusive right to and possession of all lands to the south and west toward India not held by Christian princes on Christmas Day 1492, beyond a line drawn 100 leagues west of the Azores and the Cape Verde Islands.

6

### 1493–95

**Second voyage of Columbus** (Sept. 25, 1493 to June 11, 1495). He left with 17 caravels and 1,500 men to establish Spanish settlements. On this voyage he discovered Dominica, Puerto Rico, Jamaica, and other islands of the Antilles; explored the southern coast of Cuba; and circumnavigated Española, where he founded the town of Isabella. There he left in charge his brother Bartholomeo, who in 1496 transferred the settlement to the southern coast (Santo Domingo).

7

### 1494, June 7

**Treaty of Tordesillas**, between Spain and Portugal. The line of demarcation was moved 270 leagues farther west, Portugal to have exclusive rights to all lands to the east of the line, and Spain to have rights to the west. 8

## 1498–1500

**Third voyage of Columbus** (May 30, 1498, to Nov. 15, 1500). Discovery of Trinidad Island (July 31, 1498) and South America (Aug. 1), near the mouth of the Orinoco. Columbus explored the coast westward as far as Margarita Island. He then went to Española, where a revolt broke out against him. The Spanish government sent a judge, **Francisco de Bobadilla**, who imprisoned Columbus and his brother and sent them to Spain. Columbus was released and treated with distinction, but the queen never restored him to his former authority and monopolistic grants. Bobadilla established direct royal control in the territories. 9

## 1502–1504

**Fourth voyage of Columbus** (May 11, 1502, to Nov. 7, 1504). He reached the coast of Honduras and passed south to Panama, returning after having suffered a shipwreck in Jamaica. 10

## 1506, May 21

**Columbus died** in relative obscurity in Spain, at Valladolid. He believed to the end of his days that he had discovered outlying parts of Asia, despite the conviction of other experts since 1493 that a new world had been discovered. 11

## 4. Post-Columbian Discoveries, 1497–1522

### 1497, May 2–Aug. 6

**Voyage of John Cabot.** Cabot was a wealthy Italian merchant who settled in England about 1495. He organized an expedition that reached land (June 24) on northern Newfoundland. Cabot was convinced he had discovered the country of the Great Khan. He intended a second voyage but failed. 1

### 1499–1500

**Voyage of Alonso de Ojeda and Amerigo Vespucci** in the service of Spain (May 1499–June 1500). They landed in what would be French Guiana, discovered the mouth of the Amazon, and proceeded as far as Cape St. Roque, after which they turned north and west along the coast as far as the Magdalena River. 2

**Voyage of Vicente Yáñez Pinzón** (Sept. 1499–Dec. 1500). He made a landfall near Cape St. Roque (Jan. 1500) and thence followed the coast northwest. At about the same time, the Spaniard **Diego de Lepe** explored the Brazilian coast from Cape St. Roque to about 10 degrees S.L. 3

### 1500, Apr. 21

The Portuguese commander **PEDRO CABRAL**, sailing to India from the Cape Verde Islands with 13 caravels, landed in **BRAZIL**. The expedition stayed only ten days, but took official possession of the country, which Cabral named **Terra da Vera Cruz**. 4

### 1500–2

**Rodrigo de Bastidas** traced the coast from Panama to Port Manzanilla.

5

## 1501–2

**Second voyage of Amerigo Vespucci** (May 1501–Sept. 1502), this time in the service of Portugal. He voyaged south along the Brazilian coast to about 32 degrees S.L. Vespucci published an account of this voyage in which he expressed the conviction that what had been found was a “New World.” On this basis, the German geographer, **Martin Waldseemüller**, proposed that this New World be called **AMERICA** (1507). The name was first applied to South America, and the use of it spread slowly until its general adoption.

6

## 1508

**Vicente Pinzón** followed the mainland from the Bay of Honduras to beyond the easternmost point of Brazil.

7

## 1512

**Juan Ponce de León**, the governor of Puerto Rico, discovered Florida.

8

## 1513, Sept. 25

**Vasco Núñez de Balboa** crossed the Isthmus of Panama and discovered the **Pacific Ocean**.

9

## 1515–16

**Juan Díaz de Solís**, chief pilot of Spain, searching for a strait to the Pacific, explored the coast of South America from the area of Rio de Janeiro to Río de la Plata, where he was slain by the indigenous inhabitants.

10

## 1517

**Francisco Hernández de Córdoba** discovered the Yucatán Peninsula.

11

## 1518

**Juan de Grijalva** followed the coast north from the Yucatán to the Panuco River.

(See [The Global Picture](#))

## **IV. The Early Modern Period, 1500–1800**

### **A. Global and Comparative Dimensions**

During the early modern period, the context of human affairs was changing dramatically. <sup>1</sup> Within the globalization of life, three major changes were of special significance. 1. **The development of new-style empires and large state systems that came to dominate global political and military affairs.** 2. The internal transformation of the major societies, but especially the transformation of society in western Europe. 3. **The emergence of networks of interaction that were global in their scope.** These developments reoriented the global balance of societal power. In 1500 there were four predominant traditions of civilization in the Eastern Hemisphere in a position of relative parity, but by 1800, one of these societies, the West, was in a position to assume political and military control over the whole world.

### **1. New-Style Empires and States, 1500–1700**

#### **a. Gunpowder Empires**

These empires established strong centralized control through employing the military <sup>2</sup> potential of gunpowder (naval and land-based siege cannon were particularly important). The major states of the Western Hemisphere were destroyed by European gunpowder empires while throughout the Eastern Hemisphere, regional empires developed on the basis of military power and new centralized administrations.

### **1453–1699**

**OTTOMAN EMPIRE.** The Ottoman conquest of Constantinople in 1453 brought an end <sup>3</sup> to the Byzantine Empire. The Ottomans emerged as one of the strongest empires in the world, employing artillery to support their cavalry and then creating the **Janissary**

**Corps**, an infantry using firearms. The new and expensive military was supported by the development of an effective bureaucracy. This centralized gunpowder empire rapidly expanded, conquering most of the Arab Middle East and the Balkan Peninsula. Ottoman forces laid siege to Vienna in 1529 and 1683 but did not capture this central European capital. However, in both eastern Europe and the Middle East the Ottomans remained essentially dominant until the war ending with the **Treaty of Karlowitz** (1699) (See [1699, Jan. 26](#)).

## 1492–1700

**THE IBERIAN EMPIRES.** Large maritime empires were created by the emerging monarchies on the Iberian Peninsula. European ship design enabled ships to carry cannons, giving them a military advantage over other ships in the 15th and 16th centuries. The **PORTUGUESE EMPIRE** expanded rapidly in the Indian Ocean basin but its largest stations in **Goa, Malacca, and Macao** were soon integrated into the local trade networks. Territories in **Brazil** and **southern Africa** were the only major territorial units within the Portuguese empire by the end of the 16th century. This overseas empire remained intact despite the problems of homeland, which included a forced union with **Spain** between 1580 and 1640. However, by the 17th century, the Portuguese empire had ceased to be a major world power. 4

The **SPANISH EMPIRE** expanded rapidly in the Western Hemisphere and gained control of all of Central and South America except Brazil (See [The Spanish Conquest](#)). Despite setbacks in Europe, Spain's overseas empire remained intact as the largest in the Western Hemisphere until the early 19th century. In the European context, Spain was joined with the Netherlands and Austria in the **HABSBURG EMPIRE** of **Charles V** (1519–58) (See [1519–56](#)) (See [1516–56](#)). This empire, though vast and powerful, lacked an effective central administration and geographic core, and soon divided. The **Spanish Habsburgs**, especially during the reign of **Philip II** (1556–98), were a major power on the European continent but were weakened by a long series of wars with France; the **Treaty of the Pyrennes** (1659) marked the end of Spanish dominance. The last Habsburg king of Spain died in 1700, and the long disintegration of the Spanish Empire was hastened by the **War of the Spanish Succession** (1701–14) (See [1701–14](#)). 5

## 1526–1707

**MUGHAL EMPIRE.** India was conquered by the Mughals, Muslim invaders from central Asia led by **Babur** (1483–30), a military adventurer. Small Mughal armies defeated huge Indian armies through effective use of firearms. Artillery enabled Mughal 6

rulers to control local notables, and after the conquest of all of India, significant administrative reorganization during the reign of **AKBAR** (1556–1605) established a major centralized gunpowder empire. Dynastic disputes and attempts to impose a standard form of Islam along with drastic limitations on the practice of **Hinduism** led to growing conflict, and, following the death of **Aurangzeb** (r. 1658–1707), Mughal power rapidly declined, though the empire technically lasted into the following century.

## 1501–1722

**SAFAVID EMPIRE.** In the instability following the disintegration of the empire of Timur-I Lang (See [Major Interregional Expansions](#)), various tribal and religious groups competed for power. The **Safavids**, under the leadership of **SHAH ISMAIL** (r. 1502–24), conquered most of present-day Iran and established a state whose official religion was **Shi'ite Islam**. The early state had a traditional military structure, but **SHAH ABBAS I** (r. 1587–1629) created a gunpowder-based military force that enabled him to further centralize control. However, internal conflicts arose between the imperial and traditional military forces, and under the weak leadership of Shah Abbas's successors, the Safavid state disintegrated by 1722 and was replaced by the rule of a warrior-adventurer, **Nadir Shah** (r. 1736–47), who was a successful conqueror but was unable to establish an effective centralized state (See [1737–38](#)). 7

## 1462–1725

**RUSSIAN EMPIRE.** In central Eurasia, the huge Russian Empire began to emerge in the 15th century under the leadership of the Grand Duke of Moscow, **Ivan III** (r. 1462–1505), who created an effective artillery and a centralized absolutism that enabled him and his successors to conquer the other Russian city-states and, by the end of the 16th century, free them from the old Mongol domination. By the early 18th century, the military power and centralized absolutism of the Russian Empire brought the superiority of nomadic cavalry to an end and the Eurasian steppes into the ecumene. The modernizing efforts of **PETER THE GREAT** (r. 1689–1725) brought Russian power to near parity with its European and Ottoman neighbors and superiority over the central Asian Muslim and Chinese states to the east. 8

## b. Other Emerging States

In addition to the great empires that were based on centralized administration and gunpowder weaponry, other types of states developed. These ranged from empires that continued more traditional approaches of ruling to new centralized national monarchies with potential for significant expansive power. All were departures from the standard postclassical systems. 1

### 1644–1722

**QING DYNASTY IN CHINA.** Manchus in areas northeast of China established an effective state, in the later years of the **Ming dynasty**, which combined nomadic war skills with Chinese administrative ideas. In 1644, the Manchus took control of Beijing and established the **Qing dynasty**, which ruled China until 1911. During the first century of Qing rule, when it gained control of Tibet, Xinjiang, and Outer Mongolia, the Chinese Empire became larger than it had ever been except in the greatest days of the T'ang dynasty. The Qing maintained the **examination system** and the structure of the **scholar-gentry bureaucracy**. The Manchu military was well organized but was not primarily a gunpowder-based force. However, the Qing use of artillery in crushing a major Mongol force led by **Galdan** in 1696 marked the end of serious nomadic military threats on the inner Asian frontiers. Similarly, the **Treaty of Nerchinsk** (1689) (See [1689](#)) between Russia and China essentially divided central Asia, reflecting the end of independent nomad power as a force in world history. The reign of **KANGXI** (1661–1722) (See [1661–1722](#)) marked the high point of Qing power. 2

### 1543–1853

**JAPANESE CENTRALIZED STATE.** Japan emerged from an era of political turmoil with the careers of three prominent military leaders who defeated local military nobles 3

and reestablished strong central control. Firearms, introduced into Japan in 1542 or 1543, played an important role in the unification process through the power that they gave to these three commanders. **Nobunaga** (1534–82), the first, gained control of central Honshu Island, and his successor, **TOYOTOMI HIDEYOSHI** (1537–98), destroyed the power of the last resisting local lords and tried to establish a mainland empire by invading Korea in 1592 and 1597. Although these efforts failed, Japanese unification was continued following Hideyoshi's death when a former vassal, **TOKUGAWA IEYASU** (1542–1616), defeated rival commanders in 1600. He established the **TOKUGAWA SHOGUNATE** (See [1600–1867](#)), which initiated a period of almost two and a half centuries of internal stability. Important keys to this era of peace were a policy of relatively rigid isolation (enforceable because of Japan's island location, strict limitations on foreign religions, and the maintenance of the old **Samurai** warrior-gentleman domination, which involved the imposition of strict controls on guns and a return to more traditional weaponry. The coming of the American ships commanded by **Matthew Perry** in 1853 brought a formal end to this long era.

### c. [European National Monarchies](#)

At the beginning of the early modern era, political leaders and systems in Europe responded in many ways. Some established strong institutions of centralized control and administration, frequently with the aid of gunpowder weaponry. This process strengthened the monarchy as the most visible central institution and opened the way for expansion. Other states were unable to establish effective central control and gradually became minor elements on the continental and global scene. The turning point in many areas was the **ending of wars of religious division and national consolidation** by the second half of the 17th century. 1

**FRANCE** emerged from the One Hundred Years' War of the 15th century with an independent monarchy and substantial territory. After a period of internal and external wars, the development of a strong centralized monarchy made France the foremost continental power in Europe and a global imperial power. By creating a highly effective gunpowder-based army and a centralized bureaucracy, France represented the culmination of the age of the gunpowder empires. During the reign of **LOUIS XIV** (r. 1643–1715), the transition to centralized national monarchy and the modern state had begun (See [1643–1715](#)). 2

**ENGLAND**, under the **TUDORS**, developed a centralized monarchy with an increasingly professional administration. After the subsequent civil war, the monarchy was restored in 1660; it was not absolute in the same sense as the emerging French monarchy, but the absolute power of the central government, combining the monarchy and parliament, was established. The Puritan **New Model Army** laid the foundations for a permanent standing army for the central government. By 1700 an administratively and militarily centralized state emerged in England. 3

**SWEDEN** emerged as a unified monarchy under the **House of Vasa** in the 16th century. A centralized administration helped the monarchs reduce the power of the aristocracy. Under **GUSTAVUS II ADOLPHUS** (1611–32), Sweden became a major power and its army was in the forefront of the development of disciplined musket warfare. Sweden unsuccessfully tried to establish a North American trading colony in **Delaware** (1638–55). A long series of wars and costly efforts to create a northern European empire 4

reduced Sweden's influence and power. By the end of the **Great Northern War** (1700–1721) (See [1700–1721](#)), aristocratic and parliamentary forces had placed limits on the powers of the monarchy internally, and the rise of Russia and Prussia effectively ended Swedish expansion. The Swedish experience showed that an efficient central administration and a strong gunpowder military could provide the basis for significant power but did not inevitably result in the creation of a large empire or long-term great-power status.

#### **d. The New Context of the 18th Century**

Outside Europe, the older pattern of the rise and decline of major states continued, with the predominant gunpowder states entering periods of reduced effectiveness. However, in Europe, the development of the centralized monarchies opened the way for growing power at the beginning of the great socioeconomic transformations of early modernization. <sup>1</sup>

### **1700–1800**

**NON-EUROPEAN EMPIRES.** The **OTTOMAN EMPIRE** continued to be a major power but lost a series of wars and considerable territory, especially to Russia and Habsburg Austria. The administrative system and the military became increasingly ineffective as corruption and internal rivalries grew. Local governors in Egypt, North Africa, and the Balkans grew more independent, and attempts at administrative and military reform had little effect. Finally, a more comprehensive reform effort strongly influenced by European models as undertaken by **SELIM III** (1789–1807), but he was overthrown by conservative opponents of reform (See [1789–1807](#)). The **MUGHAL EMPIRE** experienced succession conflicts and the growing power of provincial governors (See [1526–1761 \(1857\)](#)). Mughal authority was seriously threatened by a revival of Hindu forces under the **Marathas** and the **Rajputs** and the emergence of the **SIKHS** as a new militant religious community (See [1500](#)). However, the expansion of European powers brought the Mughal Empire to an end. Portuguese influence declined and was replaced by the growing power of the **EAST INDIA COMPANIES** (See [1761, Jan. 14](#)) of the British, French, and Dutch. In a series of conflicts, the British ultimately defeated the Dutch (1759) and the French (1763). The **English East India Company** gained full control of Bengal and Bihar by 1764 but ruled in the name of the Mughal emperor. By the early 19th century, the British controlled nearly all of India. The formal end of the Mughal Empire followed a major revolt in many areas of northern India in 1857–58. The last Mughal was deposed, and in 1858 **THE GOVERNMENT OF INDIA ACT** by the British Parliament created direct rule by the monarch of England, ending <sup>2</sup>

government by the **East India Company** and the **Mughals**. Other major non-European empires also declined during the 18th century. The collapse of the **Safavid** state in Iran brought a period of warfare and disunity to Iran. By the end of the 18th century, the **Qing dynasty** in China exhibited the characteristics of decline. The strength of the military was reduced; the bureaucracy became increasingly corrupt and inefficient. Large-scale revolts, like that of the **White Lotus Society** (1796–1804), emphasized the growing weakness of the empire (See [1796–1804](#)).

**EMERGING GREAT POWERS.** Some states in Europe made an important transition during the 18th century to new centralized systems that could draw strength from the growing commercialization of society and the beginnings of industrialization. As a result, by the end of the century, **France, Great Britain, and Prussia**, along with the **Russian Empire**, displaced **Spain, Habsburg Austria, and Portugal** as major powers in European and global affairs. The **Dutch Republic** became a preeminent commercial power with large overseas possessions but was not a significant military presence. 3

**ROYAL ABSOLUTISM** was the primary force in developing strong central governments in some of the emerging powers. **FRANCE** was earliest, with the effective absolutism of **LOUIS XIV** (r. 1643–1715), but his successors were less effective and French monarchical absolutism came to an end with the **FRENCH REVOLUTION**, beginning in 1789 (See [Overview](#)). During the reign of **Frederick II, the Great** (1740–86), Prussian royal absolutism and great-power status were confirmed. **RUSSIA** modernization, centralization, and expansion in both Europe and Asia were strengthened by **CATHERINE THE GREAT** (r. 1762–96) as Russia became a major intercontinental power, with some overseas expansion into North America and northern Pacific islands. The **AUSTRIAN HABSBURGS** gained territories at the expense of weaker neighbors like Poland and the Ottoman Empire, but were less successful than Prussia and Russia in improving the effectiveness of their royal absolutism. The reforms and policies of **Maria Theresa** (r. 1740–80) and **Joseph II** (r. 1780–90) were not sufficient to create administrative unity among the scattered Habsburg domains. In **SPAIN** and **PORTUGAL** reform efforts by leaders like the **Marquis de Pombal** in Portugal failed to revive effective state power. In **POLAND** the state simply ceased to exist as nobles limited the ability of monarchs to institute reforms and Russia, Prussia, and Austria took control of all of Poland in three partitions (1772, 1793, 1795) (See [1794, March 24](#)). 4

**PARLIAMENTARY STATES.** The centralized parliamentary state in **ENGLAND** provided the effective support for expansion. English colonial settlements in **North America** and the expansion of the **East India Company** in India created a global empire during the 18th century. After its successful revolt against Habsburg control at the beginning of the 17th century, the **DUTCH REPUBLIC** emerged as a significant commercial power. The Dutch created an overseas empire with holdings in North and South America, South Africa, and the Indian Ocean basin, especially in southeast Asia; its wealth made it an important political force in Europe. By the middle of the 18th 5

century, it had become a minor European power and its commercial preeminence was lost to Britain, although the Dutch still maintained a small but important overseas empire.

**“WORLD WARS” OF THE 18TH CENTURY.** Many of the conflicts among the European powers involved clashes beyond the European continent. They were primarily European wars fought on a global scale, with two chief lines of conflict: the struggle for continental domination in Europe and the battle for control of overseas colonies and naval access to them. In the continental struggle, **France, Prussia, and Russia** became the great powers, and in global maritime empires, **Great Britain** was the major force. The European names of the most important global wars in creating this power structure are the **War of the Spanish Succession** (1701–14) (See [1701–14](#)), which began the reduction of French power in North America; the **War of the Austrian Succession** (1740–48) (See [1740–48](#)); and the **Seven Years' War** (1756–63), which resulted in France's loss of most of its overseas empire in India and North America; finally, there were the wars of the era of the **French Revolution** and **Napoleon** (See [Overview](#)), which were fought in North America, Asia, and Africa as well as in Europe.

## 2. Transformations of Major World Societies, 1500–1800

The major world societies experienced significant social transformations in the early modern era. The most comprehensive changes took place in the **West**, where the city-centered but agricultural societies typical of premodern civilizations were transformed by 1800 into early **industrial societies**. Important changes also altered the nature of other major world societies in this era. Two important lines of internal change involved (1) the **commercialization of societies** and (2) reorientations of worldviews in what frequently took the form of **religious reformations**. 1

### a. Commercialization

Commercialization involved changing structures of regional and national economies as well as the growing globalization of commercial networks and their increasing domination by western European organizations and states. The growth of global trade in the 16th century was part of a transformation involving increasing importance of markets and specialized production of agricultural and manufactured goods. This commercialization of economic life had significant effects on all of society. 2

**EUROPEAN TRANSFORMATION.** Western Europe experienced a **Commercial Revolution** that had a major impact during the 16th century. Growing global contacts increased demand for a variety of goods in Europe. The development of new overseas colonies in the 16th and 17th centuries provided both new products and new markets. The influx of gold and silver from the Spanish possessions in the Western Hemisphere increased the monetarization of European national economies and provided the basis for growing demand and price inflation. The development of more effective methods of managing trade and investment heightened the impact and extent of commercialization. Emerging institutions like **national banks** and **chartered companies** provided the means for expanding commercial activities. What was in effect an **AGRICULTURAL REVOLUTION** took place by the 17th and 18th centuries. New products like potatoes and maize from the Western Hemisphere and new farming techniques and technologies 3

transformed old peasant agriculture, providing more food for expanding cities and growing numbers of workers who were peasants displaced by new farming methods. Processed products like refined sugar and manufactured textiles became important for the general population. Agricultural developments in this way further strengthened the commercialization of societies. The **INDUSTRIAL REVOLUTION**, especially in Great Britain and France, transformed the means, methods, and concepts of production and gave immense economic power to those societies that industrialized in this early modern era. By 1800 much of western Europe no longer comprised basically agricultural societies with growing commercialization. Instead, the profound transformation to industrial societies had begun.

**WESTERN HEMISPHERE. European colonies in the Western Hemisphere effectively eliminated the independent indigenous societies.** Local populations decreased disastrously during the 16th century, and European immigrants and African slaves became important elements in the emerging societies. In the north, **French** and **British** settlement colonies were integrated into the larger commercial networks through trade in furs, forest products, naval stores, and similar goods. In the **Spanish** Caribbean and South American colonies and in **Portuguese** Brazil, highly commercialized plantation economies producing sugar and other popular export products made these regions an important market for African slaves and a significant element in the emerging global trade networks. The Americas provided vital raw materials but the terms of trade were established by European commercial companies, which dominated shipping and provided manufactured and luxury goods. By the 18th century, many of these colonies were nearing the ability to assert independence from the imperial center. The first to succeed were 13 of the British North American colonies in the **American Revolution** (1776–83). In 1794, **Haiti** gained its independence, and most of the rest of **Central** and **South America** followed in a series of revolutions in the early 19th century. These revolutions did not, however, represent the emergence of industrial societies, except in the new United States to a degree. Instead, both colonies and independent states in the Western Hemisphere (including the U.S. South) remained commercialized agricultural societies tied to the European economies.

**ISLAMIC SOCIETIES** experienced significant changes that also represented the increasing commercialization of economic life. In the **Ottoman Empire**, a growing monetarization of the economy occurred contemporaneously with a significant movement of peoples from rural to urban areas. Development of urban manufacturing and the increased production of cash crops like cotton changed urban and rural social institutions. During the same period, the diversion of Asian trade away from Muslim intermediaries, first as Portuguese and then as Dutch and British commercial activities expanded in the Indian Ocean, proved deleterious to Ottoman merchants, as did the price inflation resulting from the influx of American silver. The Ottoman government and ruling elite tended not to be directly involved in commercial and manufacturing activities, and these areas gradually came under the control of non-Muslim Ottoman subjects and European

commercial interests. Special exemptions, or **capitulations**, for European merchants from Ottoman law began to be granted with an agreement with France in 1536; these extraterritorial rights meant that outsiders gained increasing control of Ottoman commercial life by the end of the 18th century. In the **Safavid Empire**, the changes were similar but less significant. The Safavid ruler, Shah Abbas I (r. 1587–1629), encouraged the manufacture of luxury textiles, and Safavid shahs worked first with Portuguese and Dutch and later with British commercial interests to integrate Iran into the broader patterns of world trade. However, the Iranian economy was less commercialized, and after the fall of the Safavids in the early 18th century, instability and wars led to economic disorganization and increasing control of large-scale economic activity by Europeans. The military power of the **Mughal Empire** did not deter the expansion of Portuguese and then French and British commercial interests. The great East India Companies gradually took increasing control of Indian economic life. This process involved a significant commercialization of the society, as new agricultural products were developed for world markets and a broad, controlled internal market economy emerged. All of these changes took place in the context of the military and political developments that led to British domination of India by the end of the 18th century.

**CHINA** experienced significant changes but was the most successfully conservative of the major urban-agrarian societies. The establishment of the **Qing dynasty** in 1644 provided a strong central power that could afford to pay relatively little attention to developments elsewhere. Yet the stability of the early Qing period opened the way for expanded production of important export products like tea, silk, and porcelain. China also benefited from the influx of American silver into the world markets. In addition to the commercial growth and prosperity of the merchant classes, there was a significant growth in population and in large cities as new agricultural products increased food supplies. However, this prosperity tended to occur outside the areas of state control, and by the end of the 18th century the cultural conservatism of the Qing period had laid the foundation for the loss of control of both politics and the economy to European powers.

**AFRICAN SOCIETIES** also experienced significant transformations in the early modern era. Until the age of European expansion beginning in the 15th century, the primary interaction of African societies with other parts of the world had been with the Islamic world, along a frontier across the continent that, by the 15th century, extended from the Atlantic to the Indian Oceans just south of the Sahara and along the east African coast. East Africa, in the longer span of world history, had also participated in the broad cultural and economic exchanges of the Indian Ocean basin. **European expansion changed the orientation of movement of peoples and goods from the old north-south axis to movement toward the coastal regions.** This had already been an important direction of movement in east Africa under the influence of Muslim merchants, but it represented a dramatic transformation for much of the rest of Africa.

The most important dimension of the commercialization of African economies was the

development of the large-scale **SLAVE TRADE**, especially in the Atlantic region. The growth of the colonial plantation economies created a vast market that was filled by slaves from Africa. In the process African societies, especially along the Atlantic coasts, were transformed by political reorganization and depopulation. The importation of **firearms** gave impetus to the establishment of more centralized west African states, like the kingdoms of **Ashante** and **Dahomey** (See [c. 1575](#)) (See [c. 1630–70](#)).

Commercialization of societies had profound effects in different African regions by changing the nature of political systems and the orientation of trade.

**COMPARISONS.** In the early modern era, many societies experienced important economic transformations. In western European societies these changes led to increased strength and expansion. In other parts of the world, the results were very different. Local economies in the Western Hemisphere were destroyed by European expansion, and the new commercialized colonial economies retained a dependence on Europe despite the achievement of political independence. In the major urban societies of the Eastern Hemisphere, local economies experienced a significant reorientation by the end of the 18th century, also coming under the European influence. By 1800 the leading world economies, earlier a network of interacting but autonomous urban-centered, agrarian economies, had become a vast global network of commercialized societies dominated by the economic power of western European societies. In this transformation, western Europe had emerged as an assembly of independent industrial societies while the rest of the world entered the era of industrial society in a dependent condition.

## **b. Worldview Reformations**

In the major regional civilizations in the Eastern Hemisphere, the comprehensive religious syntheses that developed in the postclassical era were challenged in a number of ways. In general terms, there were efforts to articulate the basic themes of the traditions of world religions in new ways, sometimes resulting in **reformations** and sometimes in the creation of new religions and, more dramatically, in the emergence of altogether new worldviews by the end of the 18th century in western Europe. 1

**EUROPEAN TRANSFORMATION.** In western Europe, the changes involved significant challenges to the postclassical synthesis. In the **Renaissance** of the 15th and 16th centuries, there was a rebirth of interest in and respect for classical Greek and Roman thought. The foremost challenge to the comprehensive synthesis of the **Christian scholasticism** of **Catholic Christianity** emerged with the **PROTESTANT REFORMATION** of the 16th and 17th centuries. In this, the authority of the Roman Church to define doctrine and practice was challenged in a variety of ways by Protestant leaders like **Martin Luther** and **John Calvin**. Nevertheless, all of these challenges remained within the framework of **Western Christianity** and accepted the authority of the **Bible**. By the 17th century, the beginnings of the **SCIENTIFIC REVOLUTION** marked the start of a wholly new style of cosmology and worldview that came to characterize the modern approach. This approach did not necessarily reject traditional religious beliefs but tended to see them as only indirectly relevant to understanding the natural world. In the 18th century, the beginnings of modern **secularism** sought to separate religion from other areas of life, especially the political. By the end of the 18th century, foundations were created for modern worldviews and cosmologies which transformed rather than simply reformed the religious traditions of western Europe. 2

**NON-EUROPEAN WORLDVIEWS** also experienced a variety of reformations. In the **ISLAMIC WORLD**, the establishment of **Shi'ite Islam** as the religion of the Safavid Empire brought renewed prominence to Shi'ism and a new era of Sunni-Shi'ite conflicts in the wars between the Ottoman and Safavid states. In the world of **Sunni Islam**, challenges to the postclassical synthesis assumed a number of forms by the 18th century. The tolerant missionary approaches of Sufi teachers in various regions allowed for inclusion of pre-Islamic elements in the practices of newly converted societies. By the 3

18th century, activist reform movements in a number of regions sought to bring local practices in line with stricter interpretations of the Islamic tradition. In **West Africa** a series of puritanical movements and holy wars began with the jihad of **Karamoko Alifa** (d. 1751) in the Futa Jallon region of modern Guinea and culminated with the holy war of **Usuman dan Fodio** (1754–1817) (See [1754, Dec. 15](#)) in the area of modern Nigeria. **Abd al-Ra'uf al-Sinkili** (d. after 1693) expressed a similar reforming spirit in Aceh in Sumatra. **Muhammad ibn Abd al-Wahhab** (1703–92) (See [1745](#)) established a major puritanical reform tradition in Arabia which remains the foundation for the fundamentalist Saudi state today. In India a comprehensive examination of Islamic thought and practice in light of the decline of Muslim power was undertaken by **Shah Wali Allah al-Dihlawi** (1702–62), whose ideas provide the basis for much of modern Islamic thinking in south Asia. Within the central parts of the Ottoman Empire were a variety of reformers who were more politically oriented. In general terms, important aspects of the postclassical synthesis were rearticulated in Islamic reformations, but the overall structure of faith and practice remained intact at the end of the 18th century.

**HINDUISM** developed in a number of directions as a result of internal developments and in response to the challenges of Muslim rule. One such response constituted an attempt at reformulations that could combine Islamic and Hindu elements. For instance, **Nanak** (1469–1539) (See [1500](#)) created a body of devotional literature that became the starting point for **SIKHISM**, a new religion that emerged during the 16th century. The Mughal emperor **Akbar** (1556–1605) tried unsuccessfully to establish a syncretistic court religion that could bring together the different religions of India. Within mainstream Hinduism, reform further developed in the traditions of popular devotional piety, including the special worship of **Rama** that emerged after the composition of the *Ramcaritmanas*, a retelling in the Hindi language of the story of the ancient hero Rama by the poet **Tulsi Das**, around 1575.

**NEO-CONFUCIAN SYNTHESIS** in China remained dominant throughout the later Ming and the Qing dynasties. Confucianism also gained new influence in China. The writings of Zhu Xi remained authoritative and officially sanctioned, but the thought of **Wang Yang-ming** (1472–1529) provided an idealist alternative Confucian tradition that strongly influenced reformers in the 19th and 20th centuries in both China and Japan.

**COMPARISONS.** While all of the prominent worldview traditions underwent some significant reformulation of basic positions, it was only in western Europe that, in addition to renaissance and reformation experiences, there was a major transformation of worldview. Here modern worldviews emerged as the dominant perspective by the end of the 18th century, rather than as reformed postclassical traditions.

### 3. [Global Interaction Networks](#)

In the early modern era a number of global patterns of interaction developed. These emerging networks, which created a worldwide context for human activity, involved (1) the more consciously organized commercial activities, (2) the exchange of new products, and (3) the spread of diseases. <sup>1</sup>

#### a. [The Emerging World Economy](#)

The commercialization of societies opened the way for the commercialization of global interactions. In the 16th century, local and regional networks of commercial exchange continued to be of great importance. The Mediterranean and Indian Ocean basins remained important zones of interaction, and the growth of the European-controlled oceanic trade created new regional networks in both the Atlantic Ocean and the Pacific Ocean. These large zones became increasingly interconnected and integrated with the older continental overland routes of Asia and the emerging continental systems of Russia and Europe and in the Western Hemisphere. By the end of the 18th century, maritime trade represented a European-controlled global commercial network in which products from nearly every part of the world were exchanged. <sup>2</sup>

[The Encyclopedia of World History, Sixth edition.](#) Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## **b. The Exchange of New Products**

An important part of the growing global integration of the early modern era was the exchange of many new goods and products both interregionally and globally (called the “Columbian exchange”). Agricultural goods from the Western Hemisphere had a profound impact on societies throughout the Eastern Hemisphere. The introduction of **maize** and **potatoes** aided in the rapid growth of population in China, Africa, and western Europe, and **tobacco** changed lifestyles around the globe. In the Western Hemisphere the introduction of new domesticated animals like **horses** and **cattle** transformed indigenous societies in many areas even before their conquest by Europeans. A special case of product exchange that had a major impact on global economies was the rapid increase in the available quantities of precious metals used for money, especially **SILVER** from the Spanish colonies in the Western Hemisphere. In some areas of Europe the growing money supply increased demand and encouraged productivity, thereby strengthening the economy. This was an important part of the economic growth in **England, France, and Holland** and may have played a role in the decline of **Spain**. It had a negative impact in those areas where the power of ruling elites was associated more with ownership or control of land. Outside western Europe, the influx of American silver appears to have bolstered commercial elements and to have aided the growing European economic dominance.

The Encyclopedia of World History. 2001.

### **c. The Spread of Diseases**

A tragic dimension of early modern global interactions was the exchange of diseases. Populations in the Western Hemisphere lacked established immunities to diseases that were common in the Eastern Hemisphere. As a result, epidemics of **SMALLPOX**, **measles**, and other diseases killed whole populations in some regions and more than half of the total population of the hemisphere. In global terms, the increasing levels of contact and population movements created a more uniform level of contact with diseases and immunity. Great plagues like the Black Death of postclassical times became less common, and by the end of the 18th century, pandemic diseases had less ability to destroy entire populations. (See [Global and Comparative Dimensions](#))

(See [Overview](#))

## **B. Early Modern Europe, 1479–1815**

The early modern period in Europe can be said to begin around 1648. Between 1500 and 1648 dominant trends reflected intense religious conflict and colonial expansion. After 1648 the emphasis shifted to the activities of national monarchies and their mutual wars as well as the rise of science. Popular unrest receded somewhat, but profound changes in beliefs and in economic activities took shape beneath the surface. 1

Many trends in eastern Europe differed from those in the West. Eastern Europe saw a tightening of serfdom, rather than the rise of wage labor and the growth of commercial cities. Soon after 1648, however, eastern Europe began to share in many of the intellectual and political trends of the West, and a more European-wide diplomatic framework emerged. 2

### **1. Europe, 1479–1675**

EUROPE ABOUT 1520 (MAP)

#### **a. Overview**

The **reformation** of the Christian Church, launched in 1517 by the Augustinian friar **Martin Luther** (1483–1546), had profound political, social, and economic as well as religious consequences that redounded throughout the entire period. Religious beliefs became conflated with national sentiment and political ambitions, with economic goals and perceived social injustices; and religious schism, civil and international wars, and domestic revolts ensued. The Roman Catholic Church responded to calls for reform with 3

the establishment of new religious orders (notably the Society of Jesus, or **Jesuits**); with the **Holy Office**, which investigated heresy; and with the **Council of Trent** (1545–63), which defined doctrine (notably on the issue of **marriage**) for the next four centuries.

Meantime, the centuries-old European **expansion accelerated**. Overseas expansion broadened the geographical horizons of Europeans and brought them into confrontations with ancient civilizations in the Americas, Africa, and Asia. These conflicts led first to conquest, then to exploitations, and eventually to economic changes in both Europe and overseas territories. For example, gold and silver from Mexico and Peru which began to flow into Europe in 1503 caused a continent-wide inflation between 1550 and 1565 (though the peak period of Spanish bullion imports was 1580–1620). American **potatoes, tomatoes, and maize** (Indian corn) began to revolutionize Europeans' diet. By 1575 Europe participated in the first truly **global economy**, paying for Asian silks, spices, and porcelain, Persian carpets, and Ottoman Turkish kilims with South American silver.

**Furniture and house decor** testified to rising bourgeois wealth, to economic and cultural change: chairs; cupboards, dressers, and sideboards that supported gold, silver, and pewterware and held supplies of table and bed linens, laces, and brocades; canopied four-poster beds; and mirrors and paintings. Ceramic tile floors were common by the 17th century, as were, in wealthy homes, oak parquet floors often covered by Ottoman Turkish or Persian rugs. Such luxuries were depicted in the paintings of Ghirlandaio, Jan van Eyck, Holbein, and the Venetians Carpaccio and Crivelli, reflecting the close commercial ties between Venice and the Ottoman world. In the 16th century, transparent glass **windowpanes** spread so rapidly that by the 1560s prosperous peasant homes had them, although in eastern Europe, even the grandest houses continued to cover windows with oiled paper. The indoor **water closet** (toilet), invented by the Englishman **Sir John Harrington** in 1596, was a luxury everywhere before the 18th century. By the mid-17th century, the houses of wealthy Dutch merchants displayed a conspicuous consumption.

The **expansion of the Ottoman Turks** into southeastern Europe provoked great fears and preoccupied Europeans far more than did “discoveries” and developments in Asia and the Americas.

The 17th century opened with **agricultural and commercial crises** that had serious social and political consequences. Colder, wetter weather meant shorter farming seasons, which in turn meant smaller harvests, food shortages, and widespread starvation. The output of textiles also declined. The **Thirty Years' War** (1618–48) in Germany, which at some point involved most of the states of Europe, proved the greatest economic disaster for Germany before the 20th century. The **widespread use of gunpowder** increased the costs and destructiveness of war while reducing its glamour. To finance the larger armies that warfare required, governments resorted to heavier taxation mainly on overburdened peasantry, sparking revolts. To free themselves from the restrictions of competing institutions (such as the churches) or social groups (such as the nobilities),

governments claimed to possess **sovereignty**, the right to make law for all people, a monopoly over the instruments of justice (the courts), and the use of force (police and state armies). In the process two patterns of government began to emerge in the early 17th century: **absolutism and constitutionalism**.

**Peasant and urban workers' revolts** erupted frequently between 1550 and 1650, cresting around 1648, because of bad harvests that led to widespread starvation, extraordinary royal and seigniorial taxation, and rampant pillaging by soldiers during the Thirty Years' War. A new class structure was taking shape with a growing group of **landless wage laborers** at the bottom, and this process mobilized many groups in its early phases. Radical outbursts in London, Lyons, Bordeaux, Naples, Salerno, Palermo, Granada, Cordoba (where women led the rebellion), Salzburg, parts of the Swiss cantons, Lithuania, and Moscow often had an egalitarian flavor and, in urban centers, reflected the **growth of class consciousness** among wage laborers. These revolts, in the towns in western Europe and in the countryside in eastern Europe, constituted the most widespread movements of social protest before 1848.

8

## Cultural Changes

Although **skepticism, sexism, and racism** originated in ancient times, during the age of religious wars these attitudes took on distinctively modern forms. New religious conflicts spurred **changes in popular beliefs**, while **segments of the European elite** (including Catholic as well as Protestant leaders) tried to discipline many traditional values and behaviors.

9

**Skepticism**, which is based on the doubt that certainty, especially religious certainty, is ever attainable, rejected dogmatism and increased secularism. The French essayist **Michel de Montaigne** (1533–92) is perhaps the best representative of early modern skepticism, which was ultimately linked to, though modified by, the **rise of science**.

10

**Witchcraft** was an integral part of the mental climate of the age. Educated as well as illiterate people (the French political philosopher Jean Bodin (1530–96) and the English jurist Sir Edward Coke (1552–1634) are just two examples of the former) believed in the existence of witches. They were popularly described as old women (but sometimes children and young women) who convened for sabbath (midnight assemblies), worshiped, engaged in sexual orgies, and made pacts with the devil (thus renouncing Christian baptism), in return for which they acquired powers to control natural forces such as storms, destroy crops, harm cattle, or incapacitate human genitals. Almost all witches seemed to come from the lower levels of society and were female: the poor, the aged, the senile, and those least able to defend themselves. In the period 1470–1700, 5,417 women were executed (by burning or hanging) in the Swiss Confederation; in 1559–1736, 1,000 women were executed in England; and in 1561–1670, 3,229 women

11

were executed in southeastern Germany. Some possible explanations for these persecutions: pervasive misogyny; treatment of the poor as scapegoats in times of economic and social distress, when outbursts of hysteria toward witches most often occurred; identification of these women with heresy; a desire to control, or to have the appearance of controlling, the scientifically inexplicable and uncontrollable; and a means of eliminating the social nonconformist.

**Racism.** Europeans carried to the Americas **racial stereotypes** derived from Christian theological speculation and from Muslim theories: that the color white represented light and godliness and that black stood for the hostile forces of the underworld; that sub-Saharan Africans' morals were heathen, their languages barbarous; that Blacks possessed an especially potent sexuality; and, according to the Muslim traveler Ibn Khaldun, that Blacks readily accepted slavery "owing to their low degree of humanity and their proximity to the animal stage." Such absurd hypotheses provided justification for and rationalization of slavery.

12

#### Estimates of Population Growth, 1500–1648

France:	12 to 15 million
Spain:	6.5 to 7.5 million rise (in addition to heavy emigration to the Americas)
Holy Roman Empire:	steady at 8 million (the Thirty Years' War took about 8 million lives)
Italy:	10 to 12 million
Low Countries:	2.5 to 3.5 million rise
British Isles:	5 to 7.5 million rise
Scandinavia:	2 to 2.5 million rise

(See [Europe, 1648–1814](#))

## b. [England, Scotland, and Ireland](#)

### 1485–1603

#### HOUSE OF TUDOR.

1

### 1485–1509

**HENRY VII.** Henry's first act was to imprison the **earl of Warwick**, son of the duke of Clarence. His first parliament (1485) confirmed the crown to him and his heirs. Though the traditional medieval checks on the power of the crown were maintained in theory, in practice Henry went a long way toward developing royal power—establishment of the administrative court later called the **Star Chamber** (1487), suppression of recalcitrant nobles and livery and maintenance (private armies clothed and supported by nobles and representing a resurgence of feudalism) (See [1066–72](#)), development of an efficient if arbitrary royal financial system.

2

### 1494

**STATUTE OF DROGHEDA** (Poyning's law): (1) No Irish parliament should be held without the consent of the king of England. (2) No bill could be brought forward in an Irish parliament without his consent. (3) All recent laws enacted in the English parliament should hold in Ireland.

3

### 1496

**Percy Warbeck**, a Fleming, and James IV of Scotland invaded England. In 1497 a formidable insurrection broke out in Cornwall on occasion of an imposition of a tax by parliament. It was suppressed by the defeat at **Blackheath** (June 22, 1497), and the leaders executed (Flammock). **Peace with Scotland** (Sept. 1497). Warbeck was soon taken and imprisoned in the Tower.

4

## 1496

*Intercursus magnus*, commercial treaty with Netherlands, granted mutual privileges to English and Flemings and provided fixed duties. Support of the wool trade; taxes on that trade augmented Henry's treasury and made him financially independent of parliament.

5

## 1501

Marriage of Henry's eldest son, Arthur, and Catherine of Aragon of Spain.

6

## 1502

Marriage of Henry's eldest daughter, Margaret, with James IV, king of Scotland.

7

## 1509–47

**HENRY VIII**. He was six times married: (1) **Catherine of Aragon**, widow of his brother Arthur, mother of Mary the Catholic (married on June 3, 1509, divorced on March 30, 1533). (2) **Anne Boleyn**, mother of Elizabeth I (married on Jan. 25, 1533, beheaded on May 19, 1536). (3) **Jane Seymour** (married on May 20, 1536, died after the birth of her son Edward VI, on October 24, 1537). (4) **Anne of Cleves** (married on Jan. 6, 1540, divorced on June 24, 1540). (5) **Catherine Howard** (married on Aug. 8, 1540, beheaded on Feb. 12, 1542). (6) **Catherine Parr** (married on July 10, 1543, outlived the king).

8

## 1511

Henry a member of the **Holy League** (See [1495–96](#)) (See [1511](#)), . Having laid claim to the French crown, he sent troops to Spain, which were unsuccessful (1512). In 1513 the king went to France in person and with Emperor Maximilian won on Aug. 17, the bloodless victory of **Guinegate**, the battle of the Spurs.

9

### 1513, Sept. 9

**Battle of Flodden Field.** Defeat and death of James IV of Scotland, who was allied with France.

10

### 1514, Aug

**Peace with France** and with Scotland.

11

### c. [The Netherlands](#)

The provinces of the **Low Countries** (so called because much of the land lies below sea level), originally inhabited by Batavians and other Germanic tribes, had formed a part of the empire of Charlemagne and, after the **treaty of Mersen** (870), belonged in large part to Germany, forming a dependency of the kingdom of Lotharingia. The decline of the ducal power favored the growth of powerful counties and duchies, such as Brabant, Flanders, Gelders, Holland, Zeeland, Hainault, and the bishopric of Utrecht. After 1384 the provinces were brought under the control of the dukes of Burgundy in the following manner: **Philip II** (the Bold), fourth son of **John II** of France, became the duke of Burgundy in 1363. He acquired Flanders and Artois (1384) through marriage with Margaret, heiress of Count Louis II. Their son was **John the Fearless**, duke of Burgundy (1404–19), who was succeeded by his son, **Philip the Good** (1419–67). Philip acquired Namur by purchase (1425). Brabant and Limburg came to him by bequest (Joanna, daughter of John III, duke of Brabant, left them to her great-nephew, Antoine, brother of John the Fearless). In 1433 he acquired Holland, Hainault, and Zeeland by cession from Jacqueline, countess of Holland; and in 1443, Luxemburg, by cession from Elizabeth of Luxemburg. He also added Antwerp and Mechlin. His son, **Charles the Bold** (duke of Burgundy 1467–77), acquired Gelderland and Zutphen by bequest from Duke Arnold (1472). 1

**Mary**, the daughter and heiress of Charles the Bold, married **Maximilian**, archduke of Austria and later emperor (See [1486](#)). Their son, **Philip the Handsome** (duke of Burgundy), married **Joanna**, the daughter of Ferdinand of Aragon and Isabella of Castile, and thus the Netherland provinces passed ultimately into the hands of Philip's son, **Charles I** (Charles V as emperor). 2

Charles annexed the 17 provinces (Brabant, Limburg, Luxemburg, Gelderland, Flanders, Artois, Hainault, Holland, Zeeland, Namur, Zutphen, East Friesland, West Friesland, Mechlin, Utrecht, Overijssel, Groningen) to the Burgundian circle of the empire. 3

## 1556

**Abdication of Charles.** The Netherlands, like Spain, passed to his son. 4

## 1556–98

**PHILIP II.** 5

## 1567–1648

**REVOLT OF THE NETHERLANDS.** The provinces had long enjoyed ancient and important privileges. The estates (*staaten, états*) granted taxes and troops. The Spanish garrison, the penal edicts against heretics, the dread of the introduction of the Spanish Inquisition, all these factors led (during the rule (1559–67) of **Margaret of Parma**, the natural sister of Philip II, and her adviser, **Cardinal Granvelle**) to the formation of a **league of nobles** (Compromise of Breda), headed by Philip Marnix of St. Aldegonde. 6

**Religious background:** the 13th-century tradition of the **Beguines**, communities of women who led lives of prayer and meditation; the 14th-century **Brethren of the Common Life**, groups of pious laypeople who living in stark simplicity provided relief to the poor, taught the young, and emphasized the centrality of scripture in the Christian life—these groups found in most large cities of the Low Countries; great mobility of merchants who traveled widely and brought back **Lutheran and Calvinist ideas**; the high level of literacy in an urban commercial society with many able to read Luther's and Calvin's writings. **Calvinism took firm root in the northern provinces**, commonly called Holland (the southern provinces, now Belgium, remained Catholic). 7

To finance the government, Margaret raised taxes, thus uniting opposition to the government's fiscal policies with its official repression of Calvinism. 8

## 1566, Aug

A year of high grain prices. Fanatical Calvinists of the poorest classes incited by popular 9

preaching embarked on a wave of iconoclastic destruction of artwork, libraries, and churches in Antwerp; disorders spread to Ghent and Brussels. These disturbances initially opposed by Lamoral, Count of **Egmont** (1522–68), and **William of Nassau**, prince of Orange (1533–84), later called **William the Silent** because of his reputation for diplomatic tact, and other members of the great nobility who, however, lost control of the movement. Revolt, sparked by religious and economic protests and by sectional discontents, won support by uniting the elite classes' appeal to constitutionalism (royal attacks on aristocratic liberties) with the general population's antipathy to Spanish outsiders.

## 1567

Philip sent to the Netherlands the duke of Alva (1508–82) with an army of 20,000. Creation of a tribunal at Brussels to investigate rebellion and heresy, subsequently called the Council of Blood because 18,000 executed, including the Catholic Egmont, Hoorn, and other prominent figures. Estates of those who failed to appear before the tribunal, including those of William of Orange, confiscated; additional arbitrary taxes levied. These measures led (1568) to open rebellion against Spanish rule.

10

## 1572–76

The northern provinces under leadership of William of Orange expelled the Spanish garrisons, but in 1576 the Spanish capture of Antwerp, Maastricht, and Ghent led to the **PACIFICATION OF GHENT**, a treaty among all the provinces by which they united, without regard to national or religious differences, to drive out the Spaniards. The new governor, **Don John of Austria**, was unable to quiet the country, despite disputes between the various parties.

11

## 1578–92

Don John died in 1578 and was succeeded by **Alexander Farnese (duke of Parma)**, a shrewd statesman and an excellent general. Parma ultimately subdued the southern provinces, on the promise that their old political freedom should be restored. The seven northern provinces (Holland, Zeeland, Utrecht, Gelderland, Groningen, Friesland, Overijssel) thereupon concluded the **UNION OF UTRECHT** (1579), followed by a proclamation of **independence from Spain** (1581). The office of **stadholder**, chief executive officer of a Dutch province that later formed union, the United Provinces, and

12

usually a member of the House of Orange, was settled on William of Orange. After his murder at Delft (July 10, 1584), he was succeeded by his son.

## 1584

**Maurice of Nassau**, son of William of Orange, was only 17 years old when he assumed stadholdership. Parma continued his victorious campaigns and managed to capture Antwerp. Thereupon the English came to the aid of the insurgents. <sup>13</sup>

## 1588

**Philip II**, hoping to put an end to the Anglo-Dutch combination, organized the **Armada**, which was defeated by the English and destroyed in a terrible storm (See [1642, Jan. 3](#)). <sup>14</sup>

## 1609

The **Twelve Years' Truce** put an end to sporadic and inconclusive fighting and essentially established the independence of the northern provinces. After its expiration the war was resumed by the Spaniards. The Hollanders, who had grown rich and powerful at sea in the course of the struggle, were well able to hold their own, and finally <sup>15</sup>

## **d. France**

### [LAST VALOIS KINGS \(1498-1589\)](#)

#### **1483–98**

**CHARLES VIII.** Death of the duke of Brittany (1488) called forth a coalition of the empire, Spain and England to preserve the independence of the duchy, but this proved futile. Charles married Anne, the heiress, in 1491 and concluded the **Treaties of Senlis** (with the emperor) and **Étaples** (with England). Spain was bought off by the cession of Roussillon and Cerdagne. <sup>1</sup>

#### **1495–96**

**Charles's expedition to Italy** to claim the inheritance of Naples (through his father from Charles, duke of Maine and Provence; see genealogical table). Charles marched victoriously through Italy and conquered Naples (bringing the venereal disease **syphilis**, which rapidly spread across Europe), but he was soon obliged to withdraw in the face of the **Holy League** (Emperor Maximilian, Pope Alexander VI, Spain, Venice, Milan, and England), formed to protect Italy from foreign domination. Expedition led to the introduction of Renaissance culture into France and marked beginning of Habsburg (Spanish)–Valois (French) conflict (1494–1559) over Italy. <sup>2</sup>

#### **1498–1589**

**HOUSES OF ORLÉANS AND ANGOULÊME.** Branch lines of the house of Valois (since 1328), whose relation to the main line is shown on page [LAST VALOIS KINGS \(1498-1589\)](#). 3

## 1498–1515

**LOUIS XII** obtained a divorce from Jeanne, daughter of Louis XI, and married **Anne of Brittany**, widow of Charles VIII, in order to keep this duchy for the crown; as grandson of Valentina Visconti he laid claim to Milan and drove out Ludovico Moro, who was imprisoned when he tried to return (1500). 4

## 1501

**Louis**, in alliance with Ferdinand the Catholic, king of Aragon, conquered the kingdom of Naples. The Spaniards and French soon falling out, the latter were defeated by the Spanish general Gonzalvo de Córdoba on the Garigliano (1503). Louis XII gave up his claims to Naples. 5

## 1508

**League of Cambrai** (See [1508](#)). In 1511 the pope, Ferdinand the Catholic, and Venice renewed the **Holy League**, with the object of driving the French out of Italy. The latter, under the young **Gaston de Foix**, duke of Nemours, nephew of Louis XII, were at first successful in the war, taking Brescia (1512) by storm and defeating the united Spanish and papal armies at **Ravenna**, with the aid of 5,000 German mercenaries, in the same year; they were, however, compelled by the Swiss to evacuate Milan. In 1513 the French formed a new alliance with Venice but were defeated by the Swiss at **Novara** and withdrew from Italy. **Henry VIII of England**, who had joined the Holy League in 1512, and the **Emperor Maximilian**, who had joined in 1513, invaded France. 6

## 1513, Aug. 17

They defeated the French at **Guinegate**, called the Battle of the Spurs from the hasty flight of the French. 7

France concluded peace with the pope, with Spain (1511), with the emperor, and with Henry VIII (1514). Anne of Brittany having died, Louis took as his third wife Mary, the sister of Henry VIII. He died soon after the marriage (1515).

8

## 1515–47

Louis was succeeded by his cousin and son-in-law, the count of Angoulême, **FRANCIS I.**

9

## 1515, Sept. 13–14

Francis reconquered Milan by the brilliant **victory of Marignano** over the Swiss. Peace and alliance between France and Switzerland. **Treaty of Geneva** (Nov. 7, 1515); **Treaty of Fribourg** (Nov. 29, 1516). The latter (*la paix perpétuelle*) endured until the French Revolution.

10

## 1516

Increase of the royal power by the **concordat of Bologna** with the pope, which rescinded the Pragmatic Sanction of 1438 and placed the choice of bishops and abbots in the hands of the king; the pope on the other hand received the annates, or the first year's revenue of every ecclesiastical domain where the king's right of presentation was exercised. Francis in return abandoned the principle of the council of Basel that the pope was subordinate to an ecumenical council.

11

Francis invited the Florentine artists Leonardo da Vinci, Andrea del Sarto, and Benvenuto Cellini and the architect Rosso to grace and decorate his court; established lectureships that formed the basis of the Collège de France; and supported the navigator **Jacques Cartier** (1491–1557), who established French interests in North America.

12

## 1536

The humanist and theologian **John Calvin** (1509–64) published the *Institutes of the Christian Religion* (definitive edition 1559), a systematic theology for Protestantism; because of its social and economic implications and Calvin's remarkable facility with language (French) the work won a wide readership and many converts, especially in urban centers such as Paris, Lyons, and Grenoble. Members of the **Reformed Church,**

13

as Calvinists were called, became the dynamic force in international Protestantism.

## e. [The Iberian Peninsula](#)

### 1. Spain

#### 1479–1516

**REIGN OF FERDINAND** of Aragon and his wife, **ISABELLA**, queen of Castile (1474–1504). During this period much progress was made, notably in Castile, toward the suppression of the fractious aristocracy and the regulation of the Church. Aragon, on the other hand, retained most of its privileges. Ferdinand devoted his efforts to the conclusion of profitable marriage alliances and to the furtherance of his designs in Italy, which brought him into conflict with France and other Italian powers. 1

In the 14th century, economic dislocation, the search for scapegoats during visits of the Black Death, and anti-Jewish preaching contributed to growing anti-semitism in Spain. In 1331, a mob attacked the Jewish community of Gerona in Catalonia; in 1335, royal troops massacred Jews in Toledo; in 1391, mobs sacked and burned the Jewish community in Seville, and from Seville, anti-semitic pogroms swept Valencia, Majorica, Barcelona, Burgos, Madrid, and Segovia. Those forced to convert were called “New Christians.” 2

In the 15th century, New Christians held high positions in the administration of Castile, including the royal secretaryship; controlled the royal treasury; composed one-third of the royal council; were arch-bishops, bishops, and abbots; included some of the leading merchants; intermarried with the nobility; and held prominent positions in law and medicine. They numbered perhaps 200,000 in a total population of 7.5 million. New Christians, also called *conversos*, insisted their faith was identical to that of other Christians. Detractors stressed not belief, but blood, developing the racial theory that New Christians were the same as their ancestors, Jews. This theory emerged at the same time as Spanish nationalism. Courting public opinion, on Sept. 28, 1480, Ferdinand and Isabella (with papal permission) established the Inquisition, ecclesiastical tribunals to 3

judge “heretical depravity ... to search out and punish converts from Judaism who had transgressed against Christianity by secretly adhering to Jewish beliefs and performing Jewish rites.” The inquisition became an important instrument of Spanish royal policy. The Most Catholic kings, as they were called, had the able assistance of **Francisco Jiménez de Cisneros** (1436–1517), an austere Franciscan and (1507) cardinal: he directed the **forcible conversion** of the **Muslims of Granada**; pressed **monastic reform** and education of the clergy; served as **regent of Castile** (1506–7); and financed and led an **expedition to Africa** (1510–11), resulting in the capture of Oran.

The centuries-long *reconquista* (reconquest), the term given the Crusades led by the northern kingdoms to expel the Muslims from the Iberian peninsula by 14th-century clerical propagandists, ended Jan. 2, 1492 with the **conquest of Granada**.

4

### 1492, March 11

Ferdinand and Isabella **expelled the Jews** from Spain, giving them four months to leave. Many went to Istanbul and other parts of the Ottoman Turkish empire.

5

### 1494

**Foundation of the Consulado** for foreign trade at Burgos. This chamber and the Casa de Contratación at Seville (1503) undertook to regulate Spanish trade and had much to do with the commercial expansion of the 16th century.

6

### 1500

By the **Treaty of Granada**, France and Spain again engaged to cooperate in Italian affairs, but friction over Naples soon led to hostilities. Victories of the great Spanish commander **Gonzalvo de Córdoba** (especially at **Garigliano**, 1503). Aragon retained Naples.

7

### 1503

The first gold from Mexico arrived at the Port of San Lucar at Seville. Beginning of Spanish emigration to the Americas.

8

## 1504

The **death of Isabella** made **Joanna** (wife of Philip, archduke of Austria) legal heiress to Castile. Ferdinand, who had long planned the union of Castile and Aragon, in Joanna's absence secured from the Cortes authority to carry on the government in his daughter's behalf. In 1506 Philip and Joanna came to claim their inheritance. **Treaty of Villafavila** between Philip and Ferdinand, the former securing the regency. Philip's death in the same year and the **insanity of Joanna** (kept in confinement for 49 years, d. 1555) allowed Ferdinand to resume control. 9

## 1509–11

**African campaigns**, organized, financed, and led by **Cardinal Jiménez de Cisneros** (1436–1517), aided by **Pedro Navarro**. Cisneros was one of the ablest statesmen of his time who, having reformed the Spanish church, now devoted himself to the crusade. The Spanish forces took Oran, Bougie, and Tripoli and forced the Muslim rulers to pay tribute. 10

## 1511

The **Holy League** (the pope, Ferdinand, and Venice) against France and the Empire. **Victory of the league at Novara** (1513). At the same time (1512) the Spaniards conquered **Navarre**, which was annexed to the Castilian crown, though it retained its own government (1515). 11

## 1516

The death of Ferdinand led to the **regency of Cardinal Cisneros**, who vigorously repressed incipient disturbances by the nobles. The crowns now passed to the son of Philip and Joanna, Charles of Ghent, who became 12

## 1516–56

**CHARLES I** of Spain, founder of the Spanish **Habsburg dynasty**. Charles, who had been educated in Flanders, arrived (1517) with a large Flemish following, which 13

regarded the Spaniards with disdain. Dissatisfaction of the Spaniards with Charles's election to the imperial throne (1519) led to widespread opposition to his leaving the country and using Spanish money and men for imperial purposes.

## f. [Italy](#)

### 1. The Italian Wars

The period from about 1450 to 1550 marked not only the apogee of the Renaissance but also the intellectual and artistic primacy of Italy. In the field of history and political science, **Francesco Guicciardini** (1483–1540; *Istoria d' Italia* published only in 1561) and **Niccolò Machiavelli** (1469–1527; *Il Principe*, 1513) were outstanding. In art history, *Lives of the most excellent painters, sculptors, and architects* (1550, rev. ed. 1568), by **Giorgio Vasari** (1511–74), stands as the first and most influential of all critical histories of art. The satirist **Pietro Aretino** (1492–1556) used the shock of sex in **pornography** as a vehicle to criticize: his *Sonnetti lussuriosi* (1527) and *Ragionamenti* (1534–36), sonnets accompanying 16 engravings of as many sexual positions, attacked princely court life, humanist education, and false clerical piety, while **Baldassare Castiglione** (*Il Cortegiano*, 1528) produced a famous handbook of the courtier. **Ludovico Ariosto** (1474–1533; *Orlando Furioso*, 1516) was one of the greatest epic poets of all time. In the field of music **Giovanni da Palestrina** (1525–94; at St. Peter's after 1551) and **Orlando di Lasso** were men of the first rank. Architects and painters of eminence are too numerous to be listed, and it will suffice to recall names like **Leonardo da Vinci** (1452–1519); **Raffael Santi** (1483–1520; *Sistine Madonna*, 1516); **Michelangelo Buonarroti** (1475–1564; Sistine Chapel paintings, 1508–12, 1534–41; dome of St. Peter's, 1547); **Andrea del Sarto** (1486–1531); **Giorgione da Castelfranco** (1477–1510); **Titian** (Tiziano Vecelli, 1477–1576); **Gentile Bellini** (1429–1507); **Tintoretto** (Jacopo Robusti, 1518–94); **Paolo Veronese** (1528–88); **Sofonisba Anguissola** (c. 1530–1625) of Cremona, who produced superb family portraits and was the first woman artist to achieve international renown; **Andrea Mantegna**, **Allegri da Correggio**, **Benvenuto Cellini**, and the extraordinary and formidable woman artist **Artemisa Gentileschi** (1593–c. 1652), whose *Judith and Holofernes* reflects her bloodthirsty themes. <sup>1</sup>

**Politically**, however, Italy was divided and soon became the “cockpit” of Europe, the victim of the rivalries of the rising monarchies, which coveted the wealth of the peninsula. There were, at the time, five major Italian states: **Venice**, the strongest of all, deriving its wealth and influence from the extensive eastern trade, from its possessions in the Adriatic, Ionian, and Aegean Seas, and from domination of the neighboring mainland; **Milan**, ruled by Ludovico Sforza and commanding the rich valley of the Po; **Florence**, long one of the most progressive of Italian communities, having attained to great splendor under Lorenzo the Magnificent; the **Papal States**, carved from the central part of the peninsula and in process of expansion under the political popes of the late 15th century; the **kingdom of Naples**, deeply involved in the Middle East, ruled by a branch of the Aragonese house. These states maintained a precarious balance among themselves but were almost all so imperialistic that they were constantly endeavoring to victimize one another and ultimately reached the point of calling in the foreigner, with the result that Italy became the prey of French, German, and Spanish ambitions.

2

### 1492

Formation of a secret alliance between Florence and Naples for the spoliation of Milan. This led to Ludovico Sforza's appeal to Charles VIII of France to make good the Anjou claims on Naples.

3

### 1494–95

**THE FRENCH INVASION OF ITALY.** Charles arrived in September and met with no real resistance. Florence submitted but then drove out **Piero de' Medici** (Nov.) and abandoned the French connection. Thereupon Charles attacked and took Florence, which was obliged to give up Pisa and other towns. Charles advanced on Rome (Jan. 1495) and thence into Naples. Alfonso fled to Sicily, leaving Naples to his son Ferrante, who was driven out by a revolt. The French entered Naples (Feb. 22, 1495), but their very success led to the formation of a coalition directed against them: Milan, Venice, Emperor Maximilian, Pope Alexander VI, and Ferdinand of Aragon leagued together against Charles, forcing his retreat to the north. The Spaniards (Gonzalvo de Córdoba) soon reconquered Naples.

4

### 1499, Feb

**Venice** agreed to support the claims of Louis XII of France to Milan in return for a

5

promise of Cremona. The French thereupon invaded Italy a second time (Aug.) and forced **Ludovico Sforza** to flee from Milan to Germany. Milan surrendered (Sept. 14). The next year Sforza returned with an army of German mercenaries and obliged the French to evacuate. Before long the German forces began to disintegrate and the French returned to Milan. Sforza was captured and died (1508) in a French prison. Milan thus became French.

### 1500, Nov. 11

By the **Treaty of Granada**, Ferdinand of Aragon agreed to support Louis's claim to Naples, which was to be divided between France and Spain. In 1501 (June) the French army, marching south, entered Rome, whereupon the pope declared Federigo of Naples deposed and invested Louis and Ferdinand with the kingdom. The French took Capua (July), while the Spanish fleet seized Taranto (March 1502). So much having been gained, the two allies fell to quarreling over the division of the spoils, and war resulted (July). The Spaniards at first suffered reverses but in 1503 defeated a French fleet and won a decisive victory at **Cerignola** (April 28). They took Naples (May 13), and after another victory at **Garigliano** (Dec. 28), forced the French to surrender at **Gaeta** (Jan. 1, 1504). This completed the Spanish conquest of Naples, which, with Sicily, gave them control of southern Italy, as the French had control of Milan in the north.

6

### 1508, Dec. 10

The **LEAGUE OF CAMBRAI**, organized to despoil Venice of its possessions on the mainland and in Apulia. Emperor Maximilian promised Louis XII the investiture of Milan in return for support. Ferdinand of Aragon and Pope Julius II joined the coalition. The French attacked and defeated the Venetians at **Agnadello** (May 14, 1509). Surrender of Verona, Vicenza, and Padua, which were handed over to Maximilian. But the Venetians soon rallied and retook Padua (July 17), which was besieged in vain by Maximilian. Vicenza too rose against the emperor and recalled the Venetians. After a French victory at **Ravenna** (Easter, 1512), even the emperor and the Swiss cantons joined the coalition against the French, who were driven out of Milan (May). In a **congress of the league at Mantua** (Aug.), the Spaniards forced the Florentines to take back the Medici and join the league. Milan was given to Maximilian Sforza (son of Ludovico). The war continued until the French were badly defeated at **Novara** (June 6, 1513), after which the pope, Ferdinand, and Henry of England all made peace.

7

### 1515

The new French king, **Francis I**, as deeply interested in Italy as his two predecessors and quite as adventurous, concluded an alliance with Henry VIII and Venice against the emperor Maximilian, the pope, Ferdinand, Milan, Florence, and the Swiss. The French won a great victory at **Marignano** (Sept. 13), by which they recovered Milan. Thereupon the pope came to terms, surrendered Parma and Piacenza, and in return secured the **Concordat of Bologna** (See [1515, Sept. 13–14](#)). After the death of Ferdinand (Jan. 1516), his successor, Charles I (later Emperor Charles V), confronted with problems in Spain and Germany and eager to secure European cooperation against the advance of the Ottoman Turks, concluded with Francis the **Treaty of Noyon** (Aug. 13, 1516), by which the French retained Milan but gave up their claims to Naples. Maximilian returned Brescia and Verona to Venice in consideration of a money payment.

8

### 1522–23

First of the **Habsburg-Valois Wars**, (See [1521–29](#)) for many of which Italy became a battlefield. The pope and England supported Charles V against Francis. Having been driven out of Milan, Parma, and Piacenza, the French were defeated at **Bicocca** (April 27, 1522) and retained only the citadel of Milan. In May they were even driven from Genoa, their all-important sea base. But in Oct. 1524 the French invaded Italy with a large army and retook Milan (Oct. 29). The pope changed sides and joined the French.

9

### 1525, Feb. 24

The **BATTLE OF PAVIA**, the most important engagement of the long Italian wars. The Spanish commanders, **Constable de Bourbon** (prominent French noble and opponent of Francis) and **Marquís de Pescara**, completely defeated the French. Francis himself was captured and sent to Madrid. There he concluded the **Treaty of Madrid** (Jan. 14, 1526) (See [1521–29](#)).

10

### 1526, May 22

The **LEAGUE OF COGNAC**, a coalition of Francis I, the pope, Sforza, Venice, and Florence against Charles and the Spaniards. The league was the natural result of the too great success of the Spaniards in Italy, and the objective was to restore the status quo of 1522. But the Spaniards forced Sforza out of Milan (July 24) and before long attacked

11

Rome (Sept. 21).

## 1527, May 6

The pope was helpless and could not prevent the **SACK OF ROME** by the Spanish and German mercenaries of Charles. The sack was horrible even when judged by the customs of the day. 12

## May 17

**Florence rose against the Medici**, who were again driven out and replaced by a republic (under **Niccolò Capponi**). **Genoa also revolted**, under **Andrea Doria**. The French were expelled and a republican constitution established. The French, however, having overrun Lombardy (Oct.), began to march south. Meanwhile the pope, who had fled to Orvieto (Dec.), made his peace with Charles (**Treaty of Barcelona**, June 29, 1529—the Papal States to be restored and the Medici returned to Florence). 13

## **g. The German Empire**

### **1. Overview, to 1618**

#### **THE HOUSE OF HABSBURG (1493-1780)**

### **1493–1519**

**MAXIMILIAN I**, who first took the title Roman Emperor elect.

1

### **1495**

**Diet of Worms.** Constitutional reform. Attempted modernization of the medieval empire. Perpetual public peace. Imperial chamber (*Reichskammergericht*), first at Frankfurt, then at Speier, finally at Wetzlar (1689). At the **Diet of Köln** (1512) the reorganization of the empire was carried further: establishment of ten circles for the better maintenance of public peace (*Landfriedenskreise*): (1) Austria; (2) Bavaria; (3) Swabia; (4) Franconia; (5) Upper Rhine; (6) Lower Rhine; (7) Burgundy (ceded to the Spanish line of the Habsburgs, 1556); (8) Westphalia; (9) Lower Saxony; (10) Upper Saxony. In all there were 240 states in the empire, exclusive of the imperial knights. Bohemia and the neighboring states (Moravia, Silesia, Lusatia) with Prussia and Switzerland (which was already completely independent) were not included in the circles. Establishment of the **Aulic Council**, a court more under the control of the

2

emperor than the imperial chamber, and to which a large part of the work of the latter was gradually diverted.

## 1508

The **League of Cambrai**, among Maximilian, Louis XII, Pope Julius II, and Ferdinand the Catholic (See [1508, Dec. 10](#)). 3

## 1511

Pope Julius II, Venice, and Ferdinand of Spain formed the **Holy League** aimed at France; in 1513 Maximilian joined. 4

The genealogical table shows the **claim of the Habsburgs to Spain** and division of the house into Spanish and German lines. Through these marriages the central European lands of the Habsburgs, the Burgundian lands in what are now France and Belgium, and the united lands of the crowns of Castile and Aragon (Spain, Naples, and the Americas) all came by birth to **Charles I of Spain** (eldest son of Philip and Joanna). He acquired the empire and his better known title **Charles V** by election in 1519. 5

## 1517

**BEGINNING OF THE PROTESTANT REFORMATION. Background:** Wiclifite, Hussite, and other preceding rebellions against the Roman church; Babylonian Captivity and the Great Schism, which weakened the prestige of Rome; corruption and worldliness of Church officials during the Renaissance; development of critical scholarship, as represented by **Desiderius Erasmus** of Rotterdam, whose editions of the Church Fathers and whose Greek text of the New Testament (1516) revealed the scriptural weakness of ecclesiastical writings; rise of national feeling and dislike of foreigners, especially in Germany and England; growth of a middle class and a capitalist economy, which felt Roman Catholicism as a restraint (economic interpretation of the Reformation in modern writings of Max Weber and R. H. Tawney); resentment by civic authorities, as at Zurich, of clerical privileges and exemption from taxation; establishment of endowed preacherships by pious townspeople (such as Stuttgart, Eisenach, Jena) to raise intellectual level of sermons; great landed wealth of the Church available for confiscation by ambitious and unscrupulous princes. 6

**Martin Luther** (1483–1546), born at Eisleben, the son of a miner; friar in the Augustine convent at Erfurt; priest (1507); professor at Wittenberg (1508); visit to Rome (1511). 7

## 1517, Oct. 31

**Luther** nailed on the door of the castle church at Wittenberg his **95 theses** (in Latin) against the misuse of absolution or indulgences (especially by the Dominican friar **Johann Tetzel**); translated into German, the theses soon circulated widely. 8

## 1518

Summoned to Augsburg by Cardinal de Vio of Gaëta (Cajetan), Luther refused to abjure but appealed to the pope. Mediation of the papal chamberlain, Karl von Miltitz. 9

## 1519

**Discussion at Leipzig** between **Andreas Bodenstein** (called Karlstadt) and **Johann Eck**. The latter secured a papal bull against 41 articles in Luther's writings. Luther burned the papal bull and the canon law (1520). Thereupon he was excommunicated. 10

The German electors chose as emperor the grandson of Maximilian, King Charles I of Spain, who as emperor became 11

## 1519–56

**CHARLES V**. He came to Germany for the first time in 1520 to preside at the **Diet of Worms** (1521). There Luther defended his doctrines, coming under a safe conduct. The ban of the empire having been pronounced against him, he was taken under the protection of Frederick the Wise, elector of Saxony. The **Edict of Worms** prohibited all new doctrines. Luther's **translation of the Bible**. 12

## 1521

Hieronimus, envoy of the king of Hungary, pled for Western support against the advancing Ottoman Turks (See [1521](#)). Charles preoccupied with imperial matters and the Lutheran revolt. 13

Aug. 28

The Ottoman Turkish sultan Suleyman the Magnificent conquered Belgrade, gateway to Hungary and Habsburg lands along the Danube. <sup>14</sup>

## **h. Scandinavia**

### **1. Denmark and Norway**

During this period the union of the three Scandinavian kingdoms became dissolved. <sup>1</sup>

#### **1513–23**

The attempt of the Danish king, **CHRISTIAN II**, to assert Danish supremacy in Sweden <sup>2</sup> by invading it and executing the leaders of the national Swedish party (the **massacre of Stockholm**, 1520) led to a national revolt (1520) headed by **Gustavus Ericksson Vasa**, a young Swedish nobleman.

#### **1523**

The Danes were defeated, and Gustavus Vasa became first administrator of the kingdom, <sup>3</sup> then king (see below, Sweden).

In his domestic policy Christian II, in alliance with the middle classes, tried to <sup>4</sup> strengthen royal authority at the expense of the nobility and the Church. This caused a rebellion, led by the nobles and the bishops.

#### **1523–33**

They invited the duke of Holstein to rule over Denmark as **FREDERICK I**. A civil war followed in which the middle classes sided with Christian II. Christian was defeated and deposed in 1532. After the death of Frederick in 1533, civil war broke out anew (the **Counts' War**).

5

### 1534–59

Order was restored with the accession of Frederick's son **CHRISTIAN III**. During his reign, Protestantism triumphed in Denmark. Church property was secularized and a national (Lutheran) church was established. Simultaneously there was a great strengthening of royal power. Christian III intervened in the religious struggle in Germany, siding with the Protestant princes against the emperor.

6

### 1559–88

**Frederick II.**

7

### 1588–1648

**CHRISTIAN IV.** At the same time, rivalry with Sweden in the Baltic caused the **War of Kalmar** (1611–13), with indecisive results, and Denmark's participation in the **Thirty Years' War** (1625–29) (See [The Danish Period, 1625–29](#)).

8

### 1643–45

A **second war**, in which the Swedes were victorious. Denmark lost some territory on the farther side of the Sound. Upon the death of Christian IV, an aristocratic reaction brought about a temporary weakening of the royal power.

9

**Norway** during this period remained under Danish domination: all the important posts in the administration were occupied by the Danes, and the Danish language was predominant. However, Norway benefited from the activity of some of the Danish kings. Christian IV improved administration, developed national resources, founded **Christiania** (Oslo). Under the influence of Denmark, Norway also became Protestant (Lutheran). (See [Denmark, Norway, and Iceland](#))

## **[i. Russia](#)**

### GROWTH OF RUSSIA IN EUROPE TO 1796 (MAP)

In Russia, the early 16th to the mid-17th century was a time of conflict between the crown and the powerful landed nobility, which was eventually destroyed. This was accompanied by a decline in the influence of the townsmen and a gradual relapsing of the peasantry into **serfdom**. The latter problem was closely connected with defense and territorial expansion. Since 1454 the grand dukes of Moscow had granted nonhereditary military fiefs (*pomestye*) to secure a supply of fighting men for use in the struggle against the Tatars. The corollary was a steady debasement in the position of the peasants, who consequently tended to run off to newly conquered territories in the southeast. Depopulation in the center resulted in ever more drastic measures to hold the cultivator on the land. At the same time there grew up on the borders the Cossack colonies, independent communities of peasant soldiers that were to play a great role in this period.

1

### **1505–33**

**BASIL III**, the son of Ivan the Great and Sophia. The reign was a fairly quiet one, during which the work of consolidation was continued by the reduction of Pskov (1510), Smolensk (1514), and Riazan (1517).

2

### **1533–84**

**IVAN IV** (the Terrible), the son of Basil. He ascended the throne at the age of three. The regency was in the hands of his mother, **Helen Glinski** (of Lithuanian family), until 1538, and then fell into the hands of powerful noble (boyar) families, notably the **Shuiskys** and **Belskys**. 3

### 1547

**Ivan assumed power** and had himself crowned tsar, the first Russian ruler to assume the title formally. At the same time he established a “chosen council,” composed of personally selected advisers, which he hoped to make a counterweight to the power of the **council of boyars** (duma). This was followed in 1549 with the convocation of the first national assembly, or *zemski sobor*, including merchants and lesser nobles and meant to broaden the support of the crown. In these early years Ivan made considerable progress in breaking down the power of the provincial governors and establishing a measure of local government. 4

### 1552–56

The **conquest of Kazan and Astrakhan** from the Tatars gave Russia control of the entire course of the Volga and opened the way for expansion to the east and southeast. Already in the last years of Ivan's reign (1581–83), Russian traders (the Stroganov family) established themselves east of the Urals, and Cossack pioneers, under **Yermak**, began the conquest of Siberia. 5

### 1553

The British, under Richard Chancellor, reached Moscow by way of the White Sea and Archangel. They were given trade rights in 1555 and formed an important link in Russian communications with the west. 6

### 1557–82

The **LIVONIAN WAR**, arising from the disputed succession to the Baltic territories ruled by the Teutonic Knights. Ivan appreciated to the full the importance of an outlet to the Baltic, and seized Narva and Dorpat. In 1563 he conquered part of Livonia, which had been taken over by the Poles. 7

## 1564

Conflict of Ivan with the powerful boyars, led by **Prince Andrei Kurbski**. Ivan eventually withdrew from Moscow and issued an appeal to the people, who, through the metropolitan, urged him to return. He took a terrible revenge on his opponents and began a reign of terror marked by the execution or exile of many boyars, as well as violent rages, in one of which he killed his son and heir, alternating with deep repentance. At the same time Ivan set aside about half of the realm as his personal domain (*oprichnina*), in which he established a new administration and a separate royal army. Printing introduced into Russia during Ivan's reign. 8

## 1570

**Ivan ravaged Novgorod** and massacred many of the inhabitants, whom he suspected of sympathy for the Poles. 9

## 1571

The **Crimean Tatars** attacked and sacked Moscow. 10

## 1578

**Defeat of the Russians by the Swedes** at Wenden, in the course of the struggle for the Baltic lands. Polotsk was lost in the following year. 11

## 1581

**Stephen Bathory**, king of Poland, invaded Russia and advanced victoriously to Pskov. 12

(See [1447](#)) (See [1612](#)) (See [1650](#))

## **j. [Poland-Lithuania](#)**

The history of Poland in this period was marked by a constant growth of power by the lesser nobility, so that Poland became transformed into a republic of the gentry (*szlachta*) (*Rzeczpospolita*) with an elected king as the titular head. The *Rzeczpospolita* had to fight constantly against the expansion of two powers, Muscovite Russia and Ottoman Turkey, but all efforts of the kings to establish a modern standing army failed. 1

### **1492–1501**

**JOHN ALBERT**, the son of Casimir IV, relied upon the gentry to reduce the power of the great magnates. 2

### **1496**

The result was the **Statute of Piotrkow** (the Magna Carta of Poland), which gave the gentry extensive privileges at the expense of the burghers and peasants. The burghers were restricted from buying land and the peasants were practically deprived of freedom of movement. 3

### **1497–98**

A futile **invasion of Moldova**, which was intended to secure a throne for the king's brother, led to a devastating invasion by the Ottoman Turks. 4

### **1501–6**

**ALEXANDER I**, brother of John Albert and, since 1492, grand duke of Lithuania. His reign was important only for the **war with Ivan the Great** of Russia (See [1462–1505](#)), which resulted in the loss of the left bank of the Dnieper by Poland (1503), and for the **Constitution of Radom** (1505), which made the national diet, elected by the nobles at their provincial assemblies (the *dietines*), the supreme legislative organ. Henceforth no new laws were to be passed without the diet's consent.

5

### 1506–48

**SIGISMUND I**, brother of John Albert and Alexander, during whose reign the diet (1511) passed laws finally establishing **serfdom** in Poland and Lithuania. The **serfs** were attached to the soil and could be sold by one lord to another, but only together with the land. In times of war each lord had to provide a fixed number of fully equipped soldiers, recruited from among his serfs.

6

### 1512–22

**War with Russia** over the White Russian region (Belarus). The Russians made considerable gains and in 1514 took Smolensk, but most of Belarus remained under Polish-Lithuanian rule.

7

### 1525

**Secularization of Prussia** and end of the rule of the Teutonic Knights. Prussia remained a fief of Poland.

8

### 1534–36

Another war with Russia brought no success to the Poles.

9

### 1548–72

**SIGISMUND II** (Aug.). His reign was distinguished by the wide spread of the

10

**Protestant Reformation**, which had taken root in 1518 and had gained ground, especially in the Baltic lands and in the towns, despite many edicts penalizing the adherents, who were known as **Dissidents**. Demands for a national church, marriage of the clergy, communion in both kinds, Slavonic liturgy, and so on. **Calvinism** and **Antitrinitarianism** also established themselves. After the **Council of Trent** (See [1523–34](#)) the crown, backed by the recently formed Polish-Lithuanian chapter of the Jesuit Order (1565), succeeded in checking the movement and in restoring the supremacy of Roman Catholicism.

## 1557–71

The **Livonian War**, arising from a disputed succession and from the conflicting claims of Poland, Russia, Sweden, and Denmark. The Russians invaded the country (1557) and the Swedes took Estonia, while the Danes acquired part of Courland. In 1561 the Poles took over Livonia, but Ivan the Terrible of Russia conquered part of it in 1563. 11

## 1569, July 1

The **UNION OF LUBLIN**, which, despite opposition on the part of Lithuania, merged that country with the Polish kingdom. The two nations were to have a common sovereign and a common diet, though Lithuania was to retain a separate administration and army. 12

With the death of Sigismund II the **Jagellon dynasty** came to an end and the Polish crown, already elective in theory, became so in fact. 13

[PREVIOUS](#)

[NEXT](#)

(See [1462](#))

## **k. [Bohemia](#)**

### **1471–1516**

**LADISLAS II**, son of the king of Poland, first ruler of the **Jagiello family**, a boy of 16 at his accession. Ladislav continued the persecution of the Bohemian Brotherhood but made no progress toward unifying the country. As king of Hungary also, he spent most of his time at Pressburg (today Bratislava, the capital of Slovakia), leaving open the way for the domination of Bohemia by powerful nobles. During the entire later 15th century the aristocracy extended its possessions and power at the expense of the crown and Church. The towns declined in power and the peasantry sank back into serfdom or a status close to it. Great influx of German peasants in the west and north and in the towns. <sup>1</sup>

### **1516–26**

**LOUIS**, son of Ladislav, who ascended the throne of Bohemia and Hungary at the age of ten. Conditions continued as under Ladislav, further complicated by the spread and persecution of Lutheranism. <sup>2</sup>

### **1526**

**Louis was defeated and killed** by the Ottoman Turks at the **Battle of Mohács**. <sup>3</sup>  
**Ferdinand**, brother of Emperor Charles V and brother-in-law of Louis, was elected king, beginning a long period of Habsburg rule.

## 1547

The Bohemian crown was proclaimed hereditary in the house of Habsburg. Constant growth of the royal prerogative at the expense of the diet and town government. 4

## 1618

**Defenestration of Prague** and beginning of the Thirty Years' War (See [1618, May 23](#)). Ferdinand II was declared deposed and the Protestant Frederick of the Palatinate was elected king (the Winter King). 5

## 1620, Nov. 8

**BATTLE OF THE WHITE MOUNTAIN**; defeat of Frederick and the Bohemians. Bohemia was virtually deprived of independence, and a wholesale confiscation of the lands of the native nobility took place. 6

## 1627

A **new constitution** confirmed the hereditary rule of the Habsburgs and strengthened royal power. The incorporation of Bohemia with the Habsburg empire was completed in the 18th century with the extension of the imperial administration under Joseph I (1705–11) and with the **Pragmatic Sanction of 1720** (See [1712–23](#)). (See [Poland](#)) 7

[PREVIOUS](#)

[NEXT](#)

---

(See [1458–90](#))

## I. [Hungary](#)

### 1490–1516

**LADISLAS II**, king of Bohemia, was elected king of Hungary by the nobles. To secure recognition from the Habsburgs, he gave up the conquests of Matthias and arranged dynastic marriages with the Habsburgs (his infant son Louis was married to Mary, granddaughter of Maximilian; his own daughter, Anne, was married to Maximilian's grandson Ferdinand). This policy led to the formation of a national party among the Hungarian nobility, headed by Stephen Zápolya (Szapolyai), the *vajdu* (prince) of Transylvania. The nobles refused Ladislas all effective financial support, so he was unable to maintain an army and was soon at the mercy of the nobles. <sup>1</sup>

### 1514

A great **revolt of the peasants**, led by George Dózsa, was directed against the ruthless exploitation by the aristocrats. It was suppressed in a sea of blood by John Zápolya, leader of the nobility. <sup>2</sup>

### 1514

The **Tripartitum**, a constitution worked out by Stephen Verböczy, was passed by the diet. It established the equality of all nobles and at the same time fixed the system of serfdom on the peasantry. <sup>3</sup>

## 1516–26

**LOUIS II**, the son of Ladislas, succeeded his father at the age of ten. His reign was marked chiefly by the spread of **Protestantism**. The movement first took root in the German areas and in the towns and was vigorously opposed by the nobles. In 1523 it was declared punishable by death and confiscation of property, but despite all edicts it took firm hold of the country.

4

## 1521

The Ottomans took Belgrade, beginning their victorious advance into Hungary.

5

## 1526, Aug. 29–30

**BATTLE OF MOHÁCS**. Defeat and death of Louis when the Ottomans completely overwhelmed his disorganized army of 20,000.

6

## 1526–28

The death of Louis was followed by a hot contest over the succession. Part of the nobility, hoping for German aid against the Ottomans, elected **Ferdinand of Habsburg**, brother of Emperor Charles V. The national party, on the other hand, elected **John Zápolya** king. After a civil war lasting two years, Zápolya was defeated. He appealed to the Ottomans, who supported him vigorously. By the **Peace of Nagyvarad** the two kings recognized each other, each ruling part of the territory. Zápolya became a vassal of the Ottomans but Ferdinand continued the war against them, which was interrupted only by occasional truces (See [1526](#)).

7

## 1540

**Death of John Zápolya**. The Ottomans recognized his infant son, **John II** (Sigismund) **Zápolya** (1540–71). This led to a new clash with Ferdinand, who began the invasion of eastern Hungary. The Ottomans again invaded and took Buda. They now took over the entire central part of Hungary (the great plain), which was organized in four *pashaliks* (border districts). There was no settlement by the Ottoman Turks, but the territory was

8

granted in military fiefs and subjected to heavy taxation. Religious tolerance of the Ottoman Turks. Transylvania, under Zápolya, was a vassal state of the Ottoman Turks but was left almost entirely free. Under **Cardinal Martinuzzi** it was organized as a state (three nations: Magyars, Szeklers, and Germans, meeting in a Landtag, elected the king and passed laws). The Transylvanians (even the nobility) soon accepted **Calvinism**, so that during the later 16th century the larger part of Hungary was either Lutheran or Calvinist. In 1560 religious toleration was established in Transylvania. The **Habsburgs**, on the other hand, held only a narrow strip of western and northern Hungary, and even for this they long paid tribute to the Ottoman Turks. The Habsburgs employed Italian and Spanish mercenaries to defend their possessions, and these ravaged the country as much as Ottoman territory. Ferdinand and his successors governed from Vienna or Prague and with little reference to the traditional rights of the Hungarian nobility. This led to growing friction and later to serious conflict.

### 1581–1602

**Sigismund Bathory**, prince of Transylvania. His efforts to unite with the Habsburgs for a grand assault on the weakening Ottoman power met with vigorous opposition on the part of the Transylvanian nobility. <sup>9</sup>

### 1604

**Beginning of the Counter-Reformation**, under Habsburg auspices. This resulted in a revolt of the Hungarians, supported by the Transylvanians. <sup>10</sup>

### 1604–6

**STEPHEN BOCSKAY** became prince of Transylvania and, after defeating the Habsburgs, secured the **Treaty of Vienna**, by which Protestantism was given equal status with Catholicism. Nevertheless, the Counter-Reformation made great strides, especially among the nobility, owing to the efforts of Cardinal Pazmany and the Jesuits. <sup>11</sup>

## **2. Science and Learning, 1450–1700**

### **a. Science**

**1469**

Publication of Pliny's *Historia naturalis*, the first scientific book to be printed. 1

**1500**

**Hieronymus Brunschwig** (1450–c. 1512) published *Das Buch der rechten kunst zu distillieren*; its bold woodcuts were the first illustrations to depict chemical apparatus and operations. 2

**1527–41**

**Philippus Paracelsus** (Theophrastus von Hohenheim) (1493–1541) crusaded for the use of chemicals in the treatment of disease. He introduced the system of salt, sulphur, and mercury as the three prime “elements,” from which all things are made. 3

**1537**

**Niccolò Tartaglia** (?1500–1557), in *Nova scientia*, discussed the motion of heavy bodies and the shape of the trajectory of projectiles. 4

**1540**

Posthumous publication of *De la pirotechnica*, a handbook of metallurgy containing information about smelting and ore reduction compiled by **Vannoccio Biringuccio** (1480–1539).

5

## 1542

**Leonhart Fuchs** (1501–66) used the botanical work of his contemporaries, **Otto Brunfels** (1488–1534), **Jerome Bock** (1498–1554), and **Conrad Gesner** (1516–65), to prepare a great herbal, describing some 400 plants, illustrated by realistic woodcuts.

6

## 1543

The Polish astronomer **NICOLAUS COPERNICUS** (Niklas Kopernik) (1473–1543) published *De revolutionibus orbium coelestium*, which asserted that the planets, including the earth, circle around a stationary sun. Modern astronomy rests on his work.

7

## 1543

**ANDREAS VESALIUS** (1514–64) produced *De fabrica corporis humani*, an illustrated, systematic study of the human body. This work is a union of Renaissance artistic endeavor and a revived interest in the empirical study of **human anatomy**.

8

## 1545

**Geronimo Cardano** (1501–76) published the solution of the **cubic equation** in *Ars Magna*; this first major advance in mathematics in the European Renaissance provoked a bitter dispute with Niccolò Tartaglia, who claimed to have discovered it. Cardano described a tactile system similar to Braille for teaching the blind and believed the deaf could be taught by signs.

9

## 1545–73

**Ambroise Paré** (1510–90) encouraged a **pragmatic approach to surgery**. He promoted the dressing of gunshot wounds rather than the traditional practice of cauterizing them with boiling oil.

## b. Inventions and Technology

### c. 1455

**Printing with movable type**, perhaps based on the Chinese method of block printing that reached Europe c. 1250, introduced through the combined efforts of Johann Guttenberg, Johann Fust, and Peter Schoffer, all experimenting at Mainz. Consequences: Though felt only gradually over the next 200 years, printing transformed the public and private lives of Europeans. Governments used it to announce wars, battles, peace, to persuade; propaganda made possible, showing differences between opposing groups, such as crown and nobility, Protestants and Catholics, church and state; the literacy of laypeople stimulated. Although most early books and pamphlets dealt with religious subjects, printers also responded with medical, practical, household, travel manuals; pornography as well as piety assumed new forms. Since printed materials were read aloud to the illiterate, the bridge between written and oral cultures grew. The development of printing with movable type accompanied an increased use of wood-block illustrations. <sup>1</sup>

### 1485

Publication of **Leon Battista Alberti's** (1404–72) *De re aedificora* exemplified the extended interests of Renaissance architects and artists in the realm of applied science. A more famous example is **Leonardo da Vinci** (1452–1519), who studied human and animal anatomy and speculated on hydraulics, mechanics, air travel, and on military and engineering devices. Structural theory did not advance until the work of **Galileo Galilei** (*Dialogues Concerning Two New Sciences*, 1638), **Christopher Wren**, and **Robert Hooke**. The revival of interest in classical architecture, sparked by the rediscovery of the works of Vitruvius, led architects to develop new techniques, flat ceiling, and the dome. Some architects of the period were **Filippo Brunelleschi** (?1377–1446), **François Mansard** (1598–1666), **Claude Perrault** (1613–88), **François Blondel** (1617–86), **Inigo Jones** (1573–1652), and **Christopher Wren** (1632–1723). <sup>2</sup>

## c. 1500

The Portuguese developed the **caravel**, a small, light three-masted (square, lateen, or both) ship that when fitted with cannon could dominate larger vessels and carry more cargo; caravels enabled the Portuguese to take the lead in exploration and expansion. By 1700 the four-masted galleon had evolved.

3

## c. 1510

First of the handbooks on metallurgy appeared, *Proberbergbüchlein* on assaying, *Bergbüchlein* on mining. In 1540 **Vannocio Biringuccio's** (1480–1539) *Pyrotechnica* published, the first practical, comprehensive metallurgy text by a professional metallurgist. Included were descriptions of alloying and cannon-molding processes. In 1556 *De re metallica* of Agricola (Georg Bauer), a physician in the mining area of Saxony, appeared. It covered all aspects of mining from the survey of the site through the equipment and methods of mining to assaying, descriptions of glass-making and blast furnaces, and the treatment of iron, copper, and glass. Agricola was concerned with miners' health and described the diseases to which they are prone.

4

## 1520

**Wheel lock** invented, probably in Italy, one of the steps to a single-handed pistol. By 1525 **rifling** of the gun barrel was a known technique; by 1650 lead shot was molded by means of a split mold; and by 1697 iron cannon were cast directly from the blast furnace. The widespread use of cannon and gunpowder, especially during the Thirty Years' War, increased the costs and destructiveness of war and reduced its glamour. (See [Science and Technology](#))

### **3. Europe, 1648–1814**

#### **a. Economic and Social Changes**

**THE LEGACY OF THE THIRTY YEARS' WAR:** This war left two legacies—massive **destruction of land and population** and the **end of Catholic supremacy** in Europe. Armies moved back and forth across Europe, destroying crops and routing people from their homes. Estimates indicate that European population declined by as much as 30 percent in some areas. The war also resulted in major dislocation and migration throughout Europe. Even countries largely untouched by armies suffered loss of trade. **The Baltic grain trade was devastated.** The **Peace of Westphalia** not only ended the war and established territorial boundaries, it codified the principle that the prince would choose the religion (Calvinism, Lutheranism, or Catholicism) of his territory. This principle weakened the Holy Roman Empire because it recognized princely sovereignty. It also furthered **the gradual decline of the Catholic Church** in the 17th and 18th centuries. 1

**THE GENERAL CRISIS OF THE 17TH CENTURY** has sparked intense debate among historians. The term “crisis,” originally used in the medical sense, refers to an economic and political turning point. Historians cite the **shift of economic growth in Europe** from the Mediterranean (especially Spain and Italy) toward western Europe (particularly England and France) in demonstrating this turning point. They also recognize the **repeated challenges to political authority**. The 17th century witnessed numerous revolutions (England, the Fronde, the Dutch Republic, etc.) and revolts. **Peasant revolts** regarding taxes spread throughout the 17th century. These revolts focused either on new taxes or on extensions of old ones but were characterized by a desire to return to the status quo. 2

**DEMOGRAPHY** (see also individual countries): Population grew very slowly or remained stagnant before 1730. It was hampered by **high infant mortality**. Among infants, girls fared better than boys, and adult males characteristically had higher mortality rates than adult females. However, women had higher mortality rates during their childbearing years because childbirth was often deadly. **Relatively low birth rates** also contributed to a lack of population growth. European men and women typically 3

married quite late and had only small families. They generally lived in a nuclear family, often leaving older family members without any recourse but charity and poor assistance from the state. The lack of support for the elderly may have been a byproduct of the **European marriage pattern**; families suffered greater poverty when they had several children too small to contribute to the family economy in the household. This arrangement also decreased the mother's economic contribution. As a result of late ages at marriage, families often experienced such **life-cycle poverty** at the same time as their elderly parents needed assistance. Problems of life-cycle poverty were exacerbated by the problems of disease that persisted between 1650 and 1730. **Several waves of plague** spread through Europe along trading routes and via armies. Europe also suffered from famine, typhus, and smallpox. After 1730, these problems decreased and population began to grow rapidly, encouraged by the development of proto-industrialization, which led to earlier marriages. However, growth rates varied dramatically from country to country.

The decline of mortality and rise in fertility were partially the result of the **AGRICULTURAL REVOLUTION**. Characterized less by major technological breakthroughs than by **changes in farming technique**, the Agricultural Revolution increased productivity without a corresponding increase in the labor needed to produce food beginning in the late 17th century. This increase came from the **introduction of the nitrogen-fixing crops, which reduced fallow lands, enclosure, and drainage of wetlands**. In the process, some western European landholders consolidated their property, removing tenants and peasants. These peasants eventually worked as day laborers or went to the cities in search of work. Their availability also encouraged the development of protoindustrialization.

**PROTOINDUSTRIALIZATION:** Partially in an effort to bypass the regulations of guilds, merchants extending the **putting-out system**, in which they supplied cottiers and other poor families in the countryside with the necessary tools and supplies, such as a loom and thread, to complete a given step in a production process. The merchant then deducted charges for those supplies from the overall piece rate and paid the family the difference. This process enabled families living on marginal land to supplement their produce not only with work on neighboring farms but also with nonagricultural work. **The process fit into the family economy** but furthered the creation of a family wage rather than a subsistence economy. It also helped lead to a **decline in the age at first marriage** because it gave couples another means of income. These couples no longer had to secure sufficient land for their livelihood. Likewise, it encouraged **increased family size**, as more children meant more hands available for cottage production. However, unlike the artisan who owned his means of production, these families worked for a middleman who owned both the materials and the equipment. This distinction led many historians to argue that the putting-out system was **a precursor to the factory system**. The process had **three consequences** for industrialization. It increased the size of the labor force by increasing population growth. It created a group of families dependent on

cash payment for their labor rather than the sale of their goods. It enabled merchants to amass capital in a system that had greater elasticity than the factory system—protoindustrialization required smaller outlays, and fluctuations in demand could be met by depressing the piece rates. However, protoindustrialization could also lead to **deindustrialization** after 1800. In areas where the putting-out process was not followed by industrial development, emigration drew workers into industrialized areas, resulting in a decline in population and productivity in nonindustrialized areas.

**COMMERCIAL SHIFTS:** The crisis of the 17th century shifted economic prospects throughout Europe. The **countries bordering the Mediterranean, especially Italy and Spain, declined economically and their position within Europe was taken by Holland and, subsequently, England.** This change was partially owing to **shifts from trade** exclusively with the east to trade with both the east and the Americas. Such trade favored England because of its position on the Atlantic. These shifts also resulted from **changes in investment and the necessity for capital expansion.** Northwest Europeans created banks and other institutions capable of financing expanding trade networks and the putting-out system. Southern Europeans continued to invest in property and land, seldom having a large amount of ready capital available for new ventures. Northwestern Europe also benefited from the **eastern European grain trade.** Eastern European lords **increased serfdom** in an effort to provide the necessary labor for grain production. This enabled eastern Europe to provide large quantities of cheap grain to the west, fueling western population growth and urbanization. Population growth was also affected by the **introduction of products from the Americas,** notably the **potato and sugar.** The potato gradually spread throughout western Europe and, because it grew well in poor soil, became one of the major foodstuffs for many poorer Europeans. The increases in trade, development of cheap sources of grain and foodstuffs, and population growth ultimately led to the **Industrial Revolution** of the late 18th and the 19th centuries (See [Economic and Social Changes](#)).

(See [1697](#))

### **b. [Intellectual Developments](#)**

The **18th-Century Enlightenment** dominated western thought, a product of the **Scientific Revolution** with its emphasis on inductive reasoning and rationality. Though most intense in France, enlightenment thought affected most parts of Europe to some degree. Enlightenment thinkers **critiqued existing government, society, and economic development**. In all aspects, they emphasized reason and frequently embraced notions of the **perfectability of people and progress**. Some, notably **Malthus** (See [1798](#)) and **Burke**, rejected some notions, while in Germany some reaction against Enlightenment universality occurred in the form of cultural nationalism. In political thought, Enlightenment thinkers built upon **John Locke** (See [1690](#)), arguing for a **government that rested on a contract among individuals**, in some cases including women, and those established laws which were reasonable. These ideas threatened the basis for absolutism but also encouraged notions of enlightened absolutism in which the monarch claimed to rule for the good of all based on reason. They also gave rise to a **radical enlightenment** whose thinkers demanded equality for men, and sometimes women, in political and economic terms. The Enlightenment thinkers were particularly influential in shaping economic policies. Many monarchs followed the dictates of **mercantilism** in the late 17th and early 18th centuries. Mercantilists argued that the world contained a fixed-size market and that each country had to secure as large a portion of this market as possible, through tariffs and colonization. Mercantilism was gradually replaced by laissez faire capitalism. The **Physiocrats** stressed agricultural bases for wealth but also discouraged government intervention as counter to natural economic law. However, **Adam Smith** provided the most advanced formulation of this law. He argued that division of labor in an unregulated market would secure high profits and maximum prosperity for all concerned because it would be controlled by the invisible hand of commerce, that is, regulated by supply and demand. The Enlightenment interest in science and human society set the basis for formal study not only in economics, but also in political science and psychology. Among the **major thinkers of the Enlightenment** were (see also individual countries):

**Political:** **Montesquieu**, *L'Esprit des lois* (1748); William **Blackstone**, *Commentaries on* <sup>2</sup>

*the Laws of England* (1765–69); Johann Gottfried Herder, *Ideen zur Philosophie der Geschichte der Menschheit* (1784–91); Jeremy **Bentham**, *Introduction to the Principles of Morals and Legislation* (1789); Edmund **Burke**, *Reflections on the Revolution in France* (1790); Thomas **Paine**, *The Rights of Man*; Mary **Wollstonecraft**, *Vindication of the Rights of Women* (1792); William **Godwin**, *Enquiry concerning Political Justice* (1793).

**Social and Religious:** Bishop George **Berkeley**, *Treatise Concerning the Principles of Human Knowledge* (1710); David **Hume**, *Treatise on Human Nature and Philosophical Essays* (1739); Emanuel **Swedenborg**, *De Nova Hierosolyma* (basis for the Church of the New Jerusalem—1758); Johann P. **Süssmilch**, *Die göttliche Ordnung in den Veränderungen des menschlichen Geschlechts aus der Geburt, dem Tode, und der Fortpflanzung desselben erwiesen*, pioneering statistical and demographic work (1761); Cesare **Beccaria**, *Tratto dei delitti e delle pene* (1764); Thomas **Malthus**, *Essay on the Principle of Population* (1798); Friedrich **Schleiermacher**, *Reden über die Religion* (1799). <sup>3</sup>

**General Philosophical and Historical:** Pierre **Bayle**, *Dictionnaire historique et critique* (1697); Giambattista **Vico**, *Principi di una scienza nuova intorno alla commune natura delle nazione* (1725); **Voltaire**, *Lettres anglaises ou philosophiques* (1734); Denis **Diderot** and Jean **d'Alembert**, ed. *L'Encyclopédie* (1751–72); Jean Jacques **Rousseau**, *Le contrat social* and *Émile* (1762); Edward **Gibbon**, *The History of the Decline and Fall of the Roman Empire* (1776–88); Immanuel **Kant**, *Die Kritik der reinen Vernunft* (1781); Marie-Jean **Condorcet**, *Tableau historique des progrès de l'esprit humain* (1795). <sup>4</sup>

**Economic:** Richard **Cantillon**, *Essai sur la nature du commerce en général* (1755); François **Quesnay**, *Tableau économique* (1758); Pierre Dupont **de Nemours**, *La physiocratie* (1768); A. R. J. **Turgot**, *Réflexions sur la formation des richesses* (1766); Adam **Smith**, *An Inquiry into the Nature and Causes of the Wealth of Nations* (1776). <sup>5</sup>

### c. [Culture and Popular Culture](#)

Recurrent interest in classical styles of art and architecture characterized much European culture in the later 17th and through the 18th century. The 17th century saw the perfecting of the **Baroque style** (characterized by freedom of form, motion, and feeling combined with ornamentation) and its use in the great palaces, statuary, and gardens of the absolute monarchs. In literature and drama, **French classicism** held considerable sway. The Enlightenment also encouraged a new interest in the essay. 1

In the 18th century, a countercurrent of **sentimental literature** began to gain ground, as the novel was introduced. This would lead to more formal **Romanticism** by the 1790s, as in the emotionally charged work of German writers like Johann Wolfgang **Goethe** (1749–1832). 2

Significant changes in popular culture also occurred from the 17th century onward in western Europe. Protestant and then Catholic writers encouraged **new attention to family relationships**. An emphasis on the importance of **love in marriage** developed in various social groups, resulting in growing tolerance by the 1730s for young people who sought to avoid marriages arranged against their will. New interest in children, encouraged by Enlightenment interest in education, led to a **reduction in the swaddling of infants** in western Europe and, in the wealthier classes, a growing interest in providing educational toys and books. From about 1780 onward, particularly in the lower classes, sexual habits began to change, involving an **increase in non-marital sexual activity**, which did not lead to marriage between partners and, thus, produced a rise in illegitimate births. 3

Spurred by shifts in government policy, popular beliefs in magic and witchcraft either declined or found less opportunity for public expression. **Popularization of science** and the Enlightenment encouraged interest in new forms of thought, particularly among urban groups. Literacy increased. New institutions, like insurance companies, fire houses, and lost-and-found departments, signaled a growing belief that planning could reduce risks. Traditional practitioners like cunning men, previously used to seek lost items, declined, though in medicine popular healers continued to be valued. 4

With commercial expansion, a **new consumer spirit** spread. Popular use of purchased goods like sugar, coffee, and tea expanded. Interest in manufactured, stylish clothing increased. 5

Popular culture was also colored by new, enthusiastic religious beliefs, like **Pietism** in Germany (See [The Hohenzollern Dynasty](#)) and **Methodism** in England (See [1738, May 24](#)). (See [Culture and Popular Culture](#)) 6

### **d. Science and Technology**

**SCIENCE:** The Enlightenment continued the scientific methods used during the Scientific Revolution, emphasizing inductive reasoning and careful analysis. Efforts to catalogue and study plants and animals closely, including dissections, continued, and many of today's scientific principles emanated from this period. **Leading scientific thinkers of the period included** (see also individual countries): Gottfried Wilhelm **Leibniz** (1646–1716); Isaac **Newton** (1642–1727); Edmund **Halley** (1656–1742); Gabriel D. **Fahrenheit** (1686–1736); Etienne F. **Geoffroy** (1672–1731); Leonhard **Euler** (*Mechanica sive motus analytice exposita*, 1736); Johann **Lehmann** (d. 1767); Carl **Linnaeus** (1707–78); Albrecht **von Haller** (1708–77); Giovanni **Morgagni** (1682–1771); John **Hunter** (1728–93); Joseph **Priestley** (1733–1804); Antoine **Lavoisier** (1743–94); Edward **Jenner** (1749–1823); Joseph Louis **Proust** (1754–1826). (See [Science and Learning](#)) 1

**TECHNOLOGY AND NEW TECHNIQUES:** Technology during this period concentrated on the development of steam engines, machinery, and improved techniques in engineering, construction, and farming. These were designed as part of the process of protoindustrialization but ultimately contributed to the Industrial Revolution (See [Economic and Social Changes](#)) because they provided means of producing goods more quickly and efficiently and offered alternatives to animal and human power, especially coal and water power. **Leading figures in such development** were: 2

Thomas **Newcomen**, whose steam engine pumped water from mines (1712); roadmakers P. M. J. Trésaguet (1716–94) and John L. **McAdam** (invented macadamized roads, 1756–1836); Jethro **Tull**, *New Horse Hoeing Husbandry* (1732). John **Kay** invented the flying shuttle (1733); Robert **Bakewell** introduced selective breeding (1725–95); Arthur **Young** publicized new advances in agriculture; Benjamin **Huntsman's** (1704–76) steel processing and Henry **Cort's** (1740–1800) puddling process; Josiah **Wedgwood**, who established his Etruria bone china works (1769); James **Hargreaves** invented the spinning jenny (1764); James **Watt's** steam engine, a great improvement over Newcomen's (1776). 3

(See [1648, Oct. 24](#))

#### 4. [European Diplomacy and Wars, 1648–1795](#)

**Overview** After the **Treaties of Westphalia** (See [1648, Oct. 24](#)), European warfare and foreign policy shifted from a concentration on religious differences to focus on issues of trade and territorial acquisition. Declining powers, such as Spain, Poland, and Sweden, attempted to maintain at least regional independence from rising powers such as Prussia, France, and Russia. The struggle to maintain a balance of power as dynastic lines died out or were removed—notably in Spain and Poland—also caused tension. The scale of war and diplomacy increased. <sup>1</sup>

##### 1652–54

**First Anglo-Dutch War** resulting from the Navigation Acts (See [1652](#)). <sup>2</sup>

##### 1655–60

**The First Northern War**, with Sweden against Poland (See [1655–60](#)), concluded by the **Treaty of Oliva** and **Treaty of Copenhagen**. Russia, Denmark, and the empire had joined against Sweden after initial Polish defeat. The **Treaty of Kardis** (1661) between Sweden and Russia reestablished the status quo ante bellum. <sup>3</sup>

##### 1656–59

**War between England and Spain**. War began after the English captured Jamaica (May). Spanish treasure ships captured off **Cádiz** (Sept. 9, 1656) and Blake victorious (**Santa Cruz**, April 20, 1657). **Dunkirk** (1658) besieged by the English and French. The Spanish were beaten (**Battle of Dunes**, June 14, 1658). Dunkirk surrendered and the <sup>4</sup>

English retained it in Peace of the Pyrenees.

## 1659

**Treaty of the Pyrenees** settled the War between France and Spain begun during the Thirty Years' War: (1) **France** received part of Roussillon, Conflans, Cerdagne, and several towns in Artios and Flanders, Hainault, and Luxemburg; (2) the **Duke of Lorraine**, the ally of Spain, was partially reinstated (France received Bar, Clermont, etc., and right of passage for troops); the Prince of Condé entirely reinstated; (3) marriage between **Louis XIV and the infanta Maria Teresa**, Philip IV of Spain's eldest daughter. Maria Teresa renounced her claim to that throne if Spain paid the entirety of her 500,000-crown dowry. Because such a payment seemed unlikely, Louis XIV entertained notions of controlling the Spanish throne.

5

## 1661, June 23

**Treaty between England and Portugal.** Charles II and the infanta Catherine of Braganza to wed. England received Tangier, Bombay, and 2 million crowns.

6

## 1665–67

**Second Anglo-Dutch War.** England defeated the Dutch fleet off **Lowestoft** (June) but the Dutch blocked the **Thames** (Oct.).

7

## 1666, Jan

Following foiled efforts to mediate between England and Holland, France allied itself with Holland. English navy defeated at **the Four Days Fight** but successful at **North Foreland**. Robert Holmes set 250 Dutch merchant ships ablaze (**Holmes' Bonfire**, Aug.).

8

## 1667

England and Holland began peace talks (May). **Medway Disaster** (June) and English defeat of French off **Martinique** (June 20). 9

## July 31

**Peace of Breda.** England agreed to the Dutch interpretation of the Navigation Acts and confirmed control of “the New Netherlands” (See [1664](#)). 10

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

[NEXT](#)

---

(See [1649, Jan. 20](#))

## **5. National Patterns, 1648–1815**

EUROPE IN THE 17TH CENTURY (MAP)

### **a. England, Scotland, and Ireland**

#### **1. England and Scotland**

HOUSE OF HANOVER (1714-1837)

**Monarchs:** The Commonwealth (1649–60). Charles II (1660–85). James II (1685–88).<sup>1</sup>  
William and Mary (1689–95). William (1695–1702). Anne (1702–14). George I  
(1714–27). George II (1727–60). George III (1760–1820).

**DEMOGRAPHY:** Population remained largely unchanged between 1650 and 1730 but<sup>2</sup>  
doubled in the latter half of the 18th century, mostly because of increased birth rates, as  
infant mortality did not begin to decline until the early 19th century.

### **1648**

**Typhus epidemic** struck Britain.

## 1649–60

**THE COMMONWEALTH.** Power in the new model army and Oliver Cromwell. 4  
Legislative power theoretically in the Rump, executive power in a council of state of 41.  
House of Lords and title and office of the king abolished.

**Economy:** Bad harvests (1647–50) and civil war led to an increase in food prices and in 5  
rents. Lands seized during the civil war were redistributed, which facilitated improvement  
of lands after 1668.

**Society:** Non-Anglican congregations and radical movements flourished in the 1650s. 6  
Some congregations gave increased roles to women, who were allowed to teach, preach,  
and prophesy. As a result of these increased roles and women's growing independence  
during the civil wars, women's status improved after 1648.

## 1648, Sept. 11

**Levellers' petition** repudiated the notion of economic equality through redistribution of 7  
property. This notion was espoused by the **Diggers, or True Levellers**, who combined  
the Levellers' demands for democracy presented in the **Putney Debates** with the Leveller  
definition of a free Englishman as someone who could freely dispose of his labor,  
property, or person.

## 1649

**Diggers began cultivating St. George's Hill.** Led by Gerrard Winstanley, they called for 8  
wasteland to be given to the poor for cultivation.

## Feb. 5

Scots proclaimed Charles II in Edinburgh. Cromwell suppressed rebellion in Ireland, 9  
which raised the Irish question to a new height.

(See [Cultural Developments](#)) (See [1648](#))

## **b. [The Dutch Republic](#)**

### **1647–50**

**WILLIAM II** succeeded his father, Frederick Henry, in the stadholdership. Able, ambitious, and restless, William disapproved of the **Treaty of Münster** (1648), which recognized the independence of the provinces, and would have preferred to continue the war. He soon became involved in conflict with the states-general and, by arresting some of the leaders of Holland and attacking Amsterdam itself (1650), forced the submission of the state-rights group. 1

### **1650, Nov. 6**

**William died.** His son was born posthumously. 2

### **1651**

**The Estates held a constituent assembly** but only agreed to stop the possibility of recreating the office of captain-general. 3

### **1652–54**

The **FIRST ANGLO-DUTCH WAR**, the direct outgrowth of the English Navigation Act (1651) (See [1652–54](#)). 4

## 1652

**Dutch South Africa** founded (See [1652](#)). 5

## 1653

**John De Witt became pensionary of Holland** and thereby controlled the general policy. An able statesman and adroit diplomat, he easily maintained Dutch prestige and greatness. 6

## 1657–60

**The Dutch prevented the entrance of the Baltic** from falling into exclusively Swedish control by supporting the Danish in the Swedish-Danish War (See [1655–60](#)). 7

## 1657–61

**War with Portugal**, over conflicting interests in Brazil. 8

## 1660

**Dutch states-general rescinded the exclusion of the House of Orange from the stadholdership** following the restoration in England. 9

## 1662

**The Dutch allied themselves with the French** to provide against the danger of attack by the British. 10

## 1664

**The British seized New Amsterdam** (New York) and appropriated various Dutch stations on the African coast.

### **c. [France](#)**

#### **[FRENCH BOURBONS \(1589-1883\)](#)**

**Monarchs:** Louis XIV (1643–1715), Louis XV (1715–74), Louis XVI (1774–92). 1

**Demography:** Between 1700 and 1789, French population increased from approximately 19 million to 25 million. Population growth was more rapid in the latter half of the 18th century than in the first half but lagged behind British population growth. 2

**Economics:** Colbert subscribed to **mercantilism**, arguing that France could improve its economic position only at the cost of another country. Colbert pursued protectionist policies and introduced considerable regulation of urban trades. The sale of offices and the way in which the French national debt was financed discouraged venturesome investment by the *rentier* class of established capitalists. Despite such constraints, reassessments of French industrial development demonstrate the French economic growth per capita matched that of Britain after 1750. 3

**Women:** Women were very influential in shaping ideas at court and among the philosophes. The **Enlightenment thinkers** in France often gathered in **salons** run by wealthy women (e.g., Mme. Geoffrin, Mlle. de Lespinasse, Mme. de Tencin, Mme. du Deffand), which gave upper-class women increasing access to philosophical and political ideas. The court society created by Louis XIV at Versailles also provided women with the opportunity to participate in political discussions. Individual women gained influence over Louis XV. 4

### **1643–1715**

**LOUIS XIV** ascended the throne at age five. His mother, **Anne of Austria** (daughter of Philip III of Spain), acted as guardian. The government, even after Louis reached his majority, was conducted by **Cardinal Mazarin**. 5

## 1648

**Treaty of Westphalia** gave Metz, Toul, Verdun, Dreisach, and Pinerolo to France (See 1648, Oct. 24). 6

## 1648–49

Unrest in provinces, especially regarding tax increases. Mazarin responded by lowering taxes. 7

## 1648–53

**THE FRONDE**, revolt against the regency named after the catapult children used to hurl clods at passing coaches. This was the last attempt of the nobility to oppose the court by armed resistance. It had two phases: a parliamentary revolt and a revolt of the princes. 8

## Jan. 15

*A lit de justice*—a sitting of representatives to enforce an edict—created new offices and raised taxes. Contrary to French traditions, the Parlement examined the edict before passing it under pressure from Anne. 9

## April 7

**Parlement presented oral remonstrances** to the edict and called upon the queen to relieve the people of heavy taxes. 10

## April 29

**Droit annuel** granted provided that three of the four courts (the Parlement excepted) refused wages for four years. These courts appealed to the Parlement for assistance. **Parlement passed an act of union and called all four courts to an assembly** (May 13) despite Anne's objections. Anne arrested deputies and judges responsible for continued deputations between courts. 11

### June 8

**Queen's attorneys forbade the meeting of the assembly** but capitulated when Parlement refused to disband. Anne asked that the meeting be immediate and quick. 12

### July 4

**Parlement assumed legislative powers** in the struggle, contravening tradition, and amended a government declaration that future taxes would be cleared by Parlement before enacting. Parlement declared all taxes not cleared null and all back taxes uncollectable. 13

### Oct. 24

**Parlement registered a declaration of government which was a product of compromise at a convention.** Wages were restored but some offices removed and tax farming regulated. However, the government began to negotiate further amendments to this declaration. 14

## **d. [The Iberian Peninsula](#)**

### **1. Spain**

**Demography:** Subsistence crises and high infant mortality led to very slow population growth in Spain in the last half of the 17th century. Spain experienced rapid growth in the first half of the 18th century, then slower growth again after 1750. 1

**Economy and Society:** The Spanish economy was characterized by diversity in agriculture but dominated by textiles in manufacturing. In most of Spain, **land was owned by nobles and clergy** who continued to use traditional farming methods. In some areas, dominated by sheep and pasturage, enclosure came late. In other areas, such as Andalusia, landowners controlled huge estates—*latifundia*—creating a large rural proletariat of day laborers. In most cases, Spanish agriculture lagged behind that of much of western Europe. **Industry also developed slowly**, hampered by lack of investment, strong guilds, and poor transport. Spain characteristically concentrated on foreign trade, which suffered with decline of Spanish colonies. In this setting, society remained split into peasants and nobles throughout much of the countryside, while guilds dominated the cities. 2

**Culture:** The French Enlightenment had only limited impact in Spain because the Spanish Inquisition tried to suppress it. Nonetheless, some Spanish intellectuals did try to spread Enlightenment ideas. They were led by **Benito Jerónimo Feijóo**, whose *Teatro Crítico Universal* (1726–39) began the compilation of information on a wide variety of works, which he continued with other, later works. **Luis Canˆuelo's *El Censor*** provided Spain with an organ of social criticism, while **Pedro Rodríguez** theorized on government. 3

**Monarchs:** Charles II (1665–1700), Philip V (1700–1746), Ferdinand VI (1746–59), Charles III (1759–88), Charles IV (1788–1808). 4

**The Peace of Westphalia** marked the beginning of decline for the Spanish Empire. Spain continued at war with France. 5

### 1652, Oct

**The Catalan revolt** begun in 1640 finally ended when the citizen army in Barcelona surrendered to **Don Juan** of Austria, the king's illegitimate son. 6

### 1658

**The French besieged Dunkirk**; the Spanish were unable to relieve it. 7

### 1656–59

**War with England** (See [1656–59](#)). 8

### 1659

**The Treaty of the Pyrenees** (1659) ended the war with France. 9

### 1660

In an effort to stop inflation, the **government introduced a new copper coinage** but prices continued to rise. 10

### 1660

**Crown took control of municipalities, destroying their autonomy.** 11

### 1665–1700

**CHARLES II**, the four-year-old son of Philip IV and the last of the Spanish Habsburgs. <sup>12</sup>  
Until 1676 his mother, **Mariana of Austria**, headed the council of regency. She appointed her personal confessor, **John Everard Nithard**, inquisitor general, but he was uniformly disliked.

## 1665

**The Cortes lost its right to approve grants for the crown** but retained its right to recognize a new monarch. <sup>13</sup>

## 1667–68

**The War of Devolution** (See [1667–68](#)). <sup>14</sup>

## e. [Italy and the Papacy](#)

### 1. Overview

**Economy and Society:** The **general crisis of the 17th century** weakened the basis of Italian economic development. **Population growth** stagnated as a result of plague and famine. Trade with the east suffered from the war with the Ottoman empire and the decline of the **Mediterranean spice trade**. Holland and England, situated on the western European coast, developed seaborne trade routes that took advantage of both eastern and western trade opportunities and contributed to the decline of the Italian economy. **Italian production** also declined dramatically. Investment in Italy had been concentrated in luxury goods and buildings rather than trade and capital development. In some parts of Italy, **investment in land** led to **agricultural changes**, increased the number of acres in production, and encouraged a shift from crops such as millet to rye or wheat. <sup>1</sup>

In the **18th century, Italy experienced a gradual recovery**. It switched crops and lifted trade barriers. **Population increased**, especially in the countryside. Reforms in education, gradual decline of the power of the papacy, and introduction of some manufacturing innovations all spurred this recovery. <sup>2</sup>

**Italian towns** continued to be controlled by small, often hereditary oligarchies while the countryside remained dominated by large landowners. The Italian nobility sometimes proved capable of significant innovation. **Peasants protested taxation and overbearing policies**, which led to an 18th-century age of reform fueled by Enlightenment thinking. <sup>3</sup>

**CULTURE:** In music Italy was outstanding. **Niccolò Amati** (1596–1684) and **Antonio Stradivari** (1644–1737); in opera, **Claudio Monteverdi** (1567–1643) and **Giovanni Pergolesi** (1710–36), **Domenico Cimarosa** (1749–1801), and **Giovanni Paisiello** (1741–1816). **Girolamo Frescobaldi** (1583–1643), composer of organ music; **Arcangelo Corelli** (1653–1713), eminent violinist and composer of sonatas and concerti grossi; **Alessandro Scarlatti** (1659–1725), of operas; and **Antonio Vivaldi** (c. 1678–1741), of <sup>4</sup>

chamber music. Two great schools of music at Venice and Naples.

**Lorenzo Bernini** (1598–1680), architect and sculptor, was one of the leading artists of the Baroque period, which preceded the Rococco of the 18th century and the classical revival represented by **Antonio Canova** (1757–1822). Bernini designed and built the **Vatican Palace** and **St. Peter's Square**, while **Francesco Borromini** (1599–1667) reconstructed St. John Lateran and built other Roman churches. 5

In painting, **Giambattista Tiepolo** (1696–1770) for a time brought Venice a final burst of glory. 6

**The Academy of Arcadia** (1692) started a widespread vogue of the conventional and artificial in literature, which was counterbalanced by the comedies of **Carlo Goldoni** (1707–93) and the serious patriotic dramas of **Vittorio Alfieri** (1749–1803). A return to classicism was apparent in the dramas of Goldoni and in the work of Alfieri and poetry of **Gaico** **Leopardi** (1798–1837). 7

Italy was preeminent also in the fields of social and physical science. **Pietro Giannone** (1676–1748) created a profound stir with his anticlerical *Historia civile del regno di Napoli* (1723); **Antonio Genovesi** (1713–69) was an outstanding physiocrat; **Giambattista Vico** (1668–1744), with his *Scienza nuova* (1725), laid the basis of the modern philosophy of history; while **Cesare Beccaria** (1738–94) in his *Dei delitti e delle pene* (1764) founded the modern science of penology. In the natural sciences **Lazzaro Spallanzani** (1729–99) made fundamental contributions to the study of digestion, while **Luigi Galvani** (1737–98) and **Alessandro Volta** (1745–1827) were in the front rank among the pioneers of electricity. 8

**Politics:** Italy remained divided between 1648 and 1815, different regions coming under the control of various monarchies in Europe. However, regions dominated by the Bourbons and the Habsburgs experienced an **age of reform fueled by Enlightenment thinking** during the 18th century. (See [The Italian States](#)) 9

[PREVIOUS](#)

[NEXT](#)

(See [1648](#))

## **f. [The Swiss Confederation](#)**

**The Legacy of the Thirty Years' War:** Despite the involvement of Swiss mercenaries, Swiss **neutrality** during the Thirty Years' War made Switzerland a center for refugees who, along with soldiers, brought the **bubonic plague** and other diseases into the country. Swiss neutrality also demanded a strong Swiss army, which the Swiss paid for partly through **the Defensionale of Wyl** (1647). This defensionale strengthened bonds among cantons. The Peace of Westphalia recognized Swiss independence. 1

**DEMOGRAPHY:** Population remained static during the latter half of the 17th century but grew in the 18th century, climbing from about 1.2 million to 1.7 million. 2

**ECONOMICS:** As with most of western Europe, **mercantilist thought** heavily influenced Swiss industry and agriculture (See [France](#)). Switzerland sought foreign markets for its products and increased independence from foreign imports. It developed two leading sectors of industry, in the east and west respectively, between 1648 and 1815. **Textiles** developed largely free from guild regulation and under the influence of French immigrants. **Clock making** remained regulated by guilds but advanced because of the reputation of Swiss clock makers. **Trade** also benefited from knowledge of foreign trade gained by Swiss mercenaries. **Agriculture** made slow progress during much of this period, but the latter half of the 18th century saw a **back-to-the-land movement** encouraging the foundation of agricultural societies and some improvements in agricultural techniques. Animal husbandry was encouraged by **mercantilism**, which sought to decrease Swiss wool imports. However, Swiss terrain made farming difficult and Switzerland continued to import agricultural products. 3

**SOCIETY:** Swiss society reflected the diversity of Swiss cantons—divided by religion and geography. **Protestants** generally occupied the plain and **Catholics** the mountainous regions. **Peasant** life reflected long-standing methods of farming; small family holdings, commons, and continued emphasis on milk production. **Cities**, on the other hand, generally had strong **guilds** regulating production and often dependent on the surrounding countryside for agricultural products. While never legally abolished, trials and persecutions for **witchcraft** came to an end between 1648 and 1815 (Vaud, 1680; 4

Zürich, 1714; Glarus, 1782).

**GOVERNMENT:** The Swiss cantons established a **loose federalist government**, assuring each canton a large measure of independence. Each canton chose its form of government—ranging from old styles of open-air meetings in forest cantons to elaborate patriarchies and even absolutism. The **Swiss diet** had 13 seats; the Protestants held 6 of these but demanded recognition because of their economic and military strength.

5

### 1653

**Lucerne.** Peasants, led by Nicholas Leuenberg, revolted (Jan.) and demanded relief from taxes and more recognition of tenant rights. **Leuenberg amassed an army of 16,000** but was defeated by federal forces at **Wohlenschwil** and surrendered on June 8; the terms of their surrender were renounced.

6

### 1655

**Proposals for the establishment of a more centralized state**, put forward by Zürich, were defeated by the Catholic cantons.

7

### 1655

**The Catholic canton of Schwyz** threatened the **Protestants** within its borders with suppression. Some fled to Zürich but the remainder were **persecuted** and, in three cases, turned over to the Inquisition in Milan. **Zürich** demanded that Schwyz restore Protestant land and possessions. Schwyz refused and demanded the return of Protestant refugees.

8

### 1656

This conflict escalated into the **FIRST VILLMERGEN WAR**. Bern and Zürich declared war against five Catholic cantons. The Protestants were defeated at **Villmergen** (Jan. 24), reaffirming each canton's right to determine religious activity. However, Protestant and Catholic conflicts continued.

9

### 1663

**Renewal of the alliance with France**, enabling Louis XIV to draw mercenaries from the cantons despite opposition from Zürich and some of the Protestant cantons. 10

## 1663–1776

During more than a century there was no meeting of the federal diet, indicating the almost complete collapse of the federal connection. 11

## 1678

**Franche-Comté** (Treaty of Nimwegen) (See [1678–79](#)), hitherto under federal protection, was annexed to France. 12

## 1693

**The Protestant cantons agreed to supply soldiers** to the Dutch and later to the English. The Catholic cantons responded, agreeing to supply men to the Spaniards. 13

## 1707

**Efforts to extend the franchise** in Geneva to include more men were put down. 14

## 1707

**A popular insurrection in Geneva**, led by Peter Fatio, was suppressed with the aid of the Bern and Zürich oligarchies. 15

## 1708

**The house of Hohenzollern succeeded to the principality of Neuchâtel**. Louis XIV was prevented by the war (See [1701–14](#)) from pressing the claims of the prince of Conti. 16

(See [1648, Oct. 24](#))

## **g. [The Holy Roman Empire](#)**

**HOLY ROMAN EMPERORS:** Ferdinand III (1637–57), Leopold I (1657–1705),  
Joseph I (1705–11), Charles VI (1711–40), Charles VII (of Bavaria, 1742–45), Francis I  
(1745–65), Joseph II (1765–90), Leopold II (1790–92). 1

The territorial states of the Holy Roman Empire gained strength and independence  
during the 17th and 18th centuries. While each state determined its internal policies, the  
empire was dominated by two powers, Austria-Hungary in the east and Prussia in the  
west. The Imperial Diet continued to meet and make decisions regarding trade and  
foreign policy. 2

**Economy and Society:** After the Thirty Years' War, Germany suffered agricultural  
upheaval. There was a shortage of agricultural labor, and agricultural prices declined  
because urban populations had been decimated by the war. This decline encouraged the  
continued transformation of *Grundherrschaft* to *Gutsherrschaft*, eliminating the free  
peasantry east of the Elbe. The Junkers' continued strength encouraged this policy. The  
guild recess of 1731 marked the decline of guilds in Germany and the development of  
the **Verlagssystem** (contract or wage labor) west of the Elbe. The Verlagssystem was  
fueled by population increases in the 18th century. 3

### **1650ff**

**Development of *Ritterakademien*** to teach manners and other niceties to sons of the  
nobility. 4

### **1661**

Münster and Erfurt lost their status as **free imperial cities**. Magdeburg came under the control of the great elector (1666) and admitted a garrison. Surrounding territories eliminated the autonomy of many free imperial cities. Imperial control declined. 5

## 1655–60

**First Northern War** (See [1655–60](#)). 6

## 1659

**Grimmelshausen's *Simplicissimus***. 7

## 1661–64

**War against the Ottoman Empire** (See [1663–64](#)). 8

## 1667

**Samuel Pufendorf's** (1632–94) *De statute imperii Germanici* appeared and would become a standard text in Germany and Sweden. In it and *De jure Naturae et Gentium*, Pufendorf argued for a strong German state, but unlike Hobbes in England, he believed that the ruler had an obligation to assure the well-being of his subjects. 9

## 1667–68

**War of Devolution** against France (See [1667–68](#)). 10

## 1674

**The Dutch War**. Holy Roman Empire sided with Dutch against Louis XIV aggression. 11

## 1681

**The Reichskriegsverfassung**  *beta* **ung** (imperial military declaration) passed in the Imperial Diet. This established military organization on the basis of the circles of empire. It established a peacetime force of 40,000 men. 12

## 1688–97

**War of the League of Augsburg**, against Louis XIV (See [Oct. 30](#)). 13

## 1692–1701

**German princes elevated in rank:** Hanover an electorate; Augustus II, Elector of Saxony, became king of Poland and adopted the Catholic faith. 14

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

---

[PREVIOUS](#)

[NEXT](#)

---

(See [1632–54](#))

(See [1632–54](#))

## **h. [Scandinavia](#)**

**DEMOGRAPHY:** With the exception of Iceland, Scandinavian population grew in the 17th and 18th centuries, particularly after 1721 (end of the Great Northern War). Icelandic population remained steady, punctuated by the oscillations of natural disaster and famine. **Denmark's population** increased most rapidly in the 18th century; population in 1600 was about 700,000, in 1700 about 800,000, and in 1800, one million. **Finland's population** did not increase substantially until after the Great Northern War (See [1700–1721](#)), but then growth seemed to be closely tied to the availability of land (by 1750 about 420,000 and by 1800 about 833,000). Norway also experienced slow growth before 1750 and more rapid growth after 1750, spurred by declining death rates and increasing birth rates. 1

**Culture:** Scandinavian cultural development included scientific, political, and literary advances during the 17th and 18th centuries. **Linnaeus** (1707–78), a Swedish botanist, published his *Systemae Naturae* (1735). **Anders Celsius** (1701–44) invented the centigrade thermometer, although his version set the boiling point at zero degrees and freezing at 100 degrees. Two Swedish political theorists followed Lockean notions of politics: **Johan Henrik Kellgren** and **Nils von Rosenstern**. Scandinavian satirists included **Olof Dalin** and **Holberg**. **Hedvig Charlotta Nordenflycht** and **Gustaf Philip Cruetz** were writers and leading members of the **Tankebyggarorden**, a literary society in Stockholm modeled after similar French societies. 2

### **1. Sweden and Finland**

**Monarchs:** Christiana (1632–54), Charles X (1654–60), Charles XI (1660–97), Charles XII (1697–1718), Ulrika Eleanora (1718–20; she turned the throne over to her husband), Frederick I (1720–51), Adolphus Frederick (1751–71), Gustavus III (1771–92), Gustavus IV Adolphus (1792–1809). 3

**Sweden controlled Finland** but was challenged by Russia in the 18th century, finally relinquishing control in 1809. 4

**Legacy of the Thirty Years' War:** Sweden emerged as the dominant power in the Baltic region, but its power gradually declined over the next century and a half. Sweden gained control of **Pomerania (Treaty of Westphalia)** and sought control of **Poland**. Its territorial aggressions resulted in several wars and required huge military expenditures. 5

**Agriculture** remained unchanged during the 17th century. Peasants still used the strip system; barley was the primary crop, and crops frequently failed. Finnish settlers in northern and western Sweden still used the slash-and-burn technique; land was burned, cultivated, exhausted, and abandoned. 6

**Economy:** Swedes pursued mercantilistic policies and exported iron, copper, and timber. They encouraged **immigration** to provide the necessary labor force for such production, especially in mining regions and the Umeå Lappmark in the north, and created several colonial interests, including an **African Company** (1649-1717) and West India companies. 7

**Society: Lutheran pastors** had great sway within Swedish society and spread Lutheran teachings everywhere Swedish armies conquered. At the end of the century, the Swedish church received a new hymnal and began a new translation of the Bible. **Towns** became more important in the 17th century; their guilds maintained strict control of their crafts. The government tried to keep its Swedish workforce and encourage foreign workers to immigrate, regulating when and where workers might go within the country. 8

## 1648ff

Sweden expanded its colonial influence by establishing several colonial **tar companies**. 9

## 1650

**The riksdag's protests regarding noble control** of former crown lands stifled. These protests demonstrated growing impatience with state debts incurred in the wake of such benevolence. 10

## 1654

**Queen Christina**, the daughter of Gustavus Adolphus, abdicated the throne in favor of her cousin, **Charles Gustavus of Pfalz-Zweibrücken**. 11

## 1654–60

He became **CHARLES X GUSTAVUS**. His reign concentrated on military developments because of his attack on Poland. 12

## 1655–60

This attempt to gain new Baltic territory, the **First Northern War**, was concluded by the **Treaty of Oliva** and the **Treaty of Copenhagen** (1660; (See [1655–60](#))). 13

## 1655

Riksdag began the process of “**reduction**,” eliminating noble control of and benefits from crown lands, by ordering reductions on mines, forts, and other property. 14

## 1658, Feb. 26

**Treaty of Roskilde between Sweden and Denmark**. Sweden received the provinces of Skåne, Halland, Blekinge, Bohuslän, Trondheim (Norway), and the island of Bornholm. 15

**Charles XI** began to develop an **absolutist monarchy**. 16

## 1660s

**Education emphasized** by the establishment of several schools, especially a medical school (1663) and Lund University (1668). 17

## 1668

**National Bank of Sweden** founded after an abortive attempt earlier in the century. 18

## 1680

Under the pressure of the king, the estates passed a law by the terms of which all earldoms, baronies, and other large fiefs should revert to the crown. The riksdag also affirmed the king's right to reclaim grants to the nobles without the riksdag's intervention. This weakened the nobility and forced many to sell their lands, which increased the percentages of land held by free farmers and office-holding nobility.

## i. [Poland](#)

### [THE PARTITIONS OF POLAND, 1772-1795 \(MAP\)](#)

**Monarchs:** John Casimir (1648–68), Michael Wisnowiecki (1669–73), John Sobieski (1674–96), Augustus II (1696–1704), Stanislas Leszczynski (1704–9), Augustus II (1709–33), Augustus III (1734–1763), Stanislas Poniatowski (1764–1795). 1

**The Legacy of the Thirty Years' War:** Poland had not suffered as greatly from the war as other central European powers. It remained neutral after the **Treaty of Stummdorf** (1635). Poland still had a weak government, owing to a lack of bureaucracy and a relatively weak army without a stable financial base. It also had few merchants, traders, or other members of a middle class. 2

**ECONOMY AND SOCIETY:** The Polish economy underwent steady decline between 1648 and 1795. The **Vistula grain trade** collapsed as a result of warfare. The Polish economy rested on this trade, exporting more than it imported. It had **few large cities** and these remained organized by burghers and guilds. Some of these cities made limited progress in the 18th century. However, the wars that ravaged Poland took a heavy toll on its cities, which were frequently captured or sieged. The **nobility** dominated Polish society but, unlike the nobility of many Western countries, did not necessarily secure economic wealth. Nobles with little or no land retained their position long into the 18th century because nobility rested largely on political and social obligations. Each noble held an **absolute veto** over any actions in the **Sejm** (parliament) and a **vote in electing the monarch**. Nobility also continued the tradition of dividing their land among all their children, male and female, which split many larger estates into increasingly smaller pieces. **Peasants** constituted the largest part of the population, especially if the many “peasants” with the rights of burghers are taken into account. Polish society was divided by **nationality**; Ukrainians initiated an uprising in 1647 and 1648. It was also divided by **religion**—Catholics, Orthodox, and Lutherans as well as Jews and Muslims. 3

## 1647–48

**Bogdan Khmelnytsky launched his Cossack uprising** against Poland. Initially he sought only to address his grievances to the king in person. John Casimir's ascension changed the situation, as did the killings of rebelling Ukrainian peasants by government officials.

4

## 1651, June 28–30

**Khmelnytsky defeated by King John at Berestczko.**

5

## 1652

**The Liberum Veto** (absolute veto of any member of the Polish Sejm) used by Jan Sicínski in a motion to prolong the Sejm. This use stopped the proceedings and paralyzed the Sejm.

6

## 1654

**The Treaty of Peryslavl** with Russia. Khmelnytsky swore an oath of allegiance to the tsar in exchange for assurances that the Ukraine would receive a large amount of autonomy, a promise the tsar ignored. The Ukrainian situation thus became incorporated into wider struggles for Polish territory.

7

## 1655–60

**War between Sweden and Poland** (See [1655–60](#)). Invasion of the Swedes. Poland lost its remaining Baltic territories (**Treaty of Oliva**, May 3, 1660).

8

## 1655

**Swedes took Warsaw.** They then demanded Kraków surrender. The king fled to the Silesian borders; the Polish paid homage to Charles Gustavus. 9

## Dec. 26

**Siege lifted at monastery of Czestochowa,** where the prior had organized a small force of soldiers to protect the **Black Madonna.** King John swore that the Virgin would be venerated (the Cult of Our Lady) and that he would free the serfs following restoration of Poland. 10

## **j. [Russia](#)**

### **[RUSSIAN TSARS \(1645-1917\)](#)**

**Rulers:** Alexis (1645–76), Theodore (1676–82), Peter the Great (1682–1725), Catherine I (1725–27), Peter II (1727–30), Anne (1730–40), Ivan VI (1740–41), Elizabeth (1741–61), Peter III (1762), Catherine the Great (1762–96), Paul (1796–1801). 1

**Economy:** The Russian economy rested on agriculture, particularly upon grain production. Estates relied on increasingly intense serfdom to provide the necessary labor and trade with Europe. The number of artisans and merchants expanded during the 17th and 18th centuries, and **the government encouraged some development through a new commercial code**. However, the Russian economy remained primarily agricultural. 2

**Society:** The 17th century was dominated by efforts to restructure Russian society and religion. Russia also expanded its territories in the 17th century, notably into the Ukraine and Poland, which added diversity within Russian lands. 3

Alexis tried to overcome financial difficulties by increasing the salt tax and legalizing and taxing tobacco. However, his administration was troubled by corruption, and increased taxes led to rebellion. 4

### **1648, May**

**Moscow revolted against taxes and corruption.** Alexis responded by arresting and executing some of the corrupt officials, but rebellion spread to many other cities. 5

### **1648–49**

**Education: Theodore Rtishchev** established a monastery in Moscow to encourage Kievan monks to come and teach languages and rhetoric there. Other schools were established during the latter half of the 17th century. They generally deemphasized science and followed a medieval arts-and-letters curriculum.

6

## 1649

**Ulozhenie, a new legal code** (See [1649](#)), improved government administration and solidified serfdom by eliminating the distinction between old settlers and new peasants, considering both as serfs.

7

## 1652

Russia experienced an **influx of foreigners** in the 16th and 17th centuries. Alexis provided them with a foreign settlement, **Nemetskaia Slobada**, northeast of Moscow. Foreigners later influenced Peter the Great's efforts to reform Russian society and culture.

8

## 1653

**Russian church council** accepted the verification of religious texts, the first in a series of church reforms. The verification project gained momentum under the **patriarch Nikon**. Nikon had the support of the tsar until a break in 1658. He expanded his reforms to include certain rituals (crossing oneself with three rather than two fingers, changing the spelling of Jesus, etc.).

9

## 1654–67

**War with Poland for the possession of the Ukraine** (See [1654](#)) after the cossack Hetman, **Bogdan Khmel'nitsky**, had placed himself under Russian protection. By the Treaty of Andrusovo (Jan. 20, 1667), Russia obtained the Smolensk region and the eastern Ukraine, with Kiev. The outcome of the war was of great importance, because the Russian gains first brought the Russians in contact with the Ottomans in southeastern Europe.

10

## 1656

**Russian government began debasing the currency** by adding copper to silver coins. 11  
Such debasement reflected Russian financial collapse in the 17th century and led to inflation.

## 1656–60

**War with Sweden** (See [1655–60](#)). 12

## 1662

**Copper coin riot.** 13

## 1664

**Russian post office established.** 14

## 1666–67

**Church council** considered the changes made by Nikon. They defrocked Nikon for his 15  
efforts to gain political power but supported his religious reforms. This acceptance led to  
a **SPLIT IN THE RUSSIAN ORTHODOX CHURCH**; the **OLD BELIEVERS**  
refused to accept the reforms although they included no changes in belief. In later  
decades Old Believers colonized various territories acquired in Russian expansion.

## **C. The Middle East and North Africa, 1500–1800**

### **1. Overview**

In the 16th century, **a simpler political map** took shape in the region with the integration <sup>1</sup> of the Middle Eastern and North African lands into **three states**: the Ottoman Empire, Safavid Iran, and Morocco. **The Ottomans**, based until then in Anatolia and southeastern Europe, absorbed nearly all of the Arabic-speaking lands with the exception of Morocco and parts of the Arabian peninsula. Theirs became the dominant regional power, although **Iran** emerged as a formidable foe and bloody conflicts between the two countries erupted periodically.

Several major developments altered the political scene in the 17th and 18th centuries: **the Ottoman Empire became decentralized** as Istanbul's hold on the provinces weakened <sup>2</sup> and autonomous authorities sprang up almost everywhere; **the Safavid regime collapsed**, giving way to several decades of internal fragmentation and turmoil; and two new Middle Eastern countries were born: **Afghanistan and the Saudi state** in Arabia.

Alongside the shifts in the internal power relations came changes in the **region's position vis-à-vis Europe**. <sup>3</sup> While Middle Easterners remained virtually untouched by European culture, they now fought and traded with Europeans on a more extensive basis than before and on increasingly unfavorable terms. **Military conflict** with European countries raged along a wide front extending from the Black Sea area and the Balkans to the western Mediterranean. The region's armies were able to hold their own until the second half of the 18th century, when disastrous defeats by Russia and the easy fall of Egypt to Napoleon brought home to the Ottoman leaders the recognition that **global power had shifted definitely in favor of Europe**. This alarming sense prompted their 19th-century drive to modernize.

The region's **place in global trade** also weakened. <sup>4</sup> European merchants and governments grew increasingly strong in the Indian Ocean and the Mediterranean through the use of new trade routes, the control of shipping, and the acquisition of colonies with cheap

labor. With these assets they were able to **circumvent the Middle East** in their import of Eastern pepper and spices, **to compete successfully** with Middle Eastern products such as coffee and sugar, and to sell in the region some finished goods such as textiles in return largely for local raw materials. A **colonial pattern of exchange** (raw materials for finished goods) was beginning to develop in the early modern period, although it remained of limited economic importance for the Middle East before the 19th century because the bulk of the region's trade was still internal or directed toward Asia and Africa rather than Europe.

Like Europe, the Middle East experienced **a marked demographic expansion** during the 16th century. But population levels did not continue to rise in the following two centuries, when **plague epidemics** hit the region with greater frequency and added to the already high mortality rates. With about 28 million people in 1800, the society was still **primarily rural**, some 80 to 85 percent living in village or tribal communities and the rest in towns.

**Economic conditions** in this diverse region varied from place to place and fluctuated over time. But throughout, **agriculture** remained the predominant sector and **industry** continued to be based on small-scale artisanal production. Between them they supplied the population with its needs in food, raw materials, and manufactured goods at a level that maintained the **region's self-sufficiency**. Among the important institutional developments of the period were the emergence of **the guild system** in its full-fledged form and its leading role in regulating the urban economies.

**Religion** remained a central focus of identity as well as the ideological underpinning for a variety of social and political movements. The period saw the establishment of **Shi'ism as the state religion of Iran**, with the forced conversion of its largely Sunni population under Safavid pressure. **New Sufi orders** emerged throughout the region and often became vehicles of protest against the establishment. In Arabia, the Muslim puritanical movement of the **Wahhabis** rose to challenge Sufi practices and Ottoman authority and succeeded in establishing its own brand of Islamic state under the Saudi dynasty. Among the Christian minorities, **Catholicism spread** as a result of European missionary work, causing bitter schisms and a lasting **split of the Greek, Armenian, and other Eastern churches** into rival Orthodox and Catholic branches.

Religion also remained the core of **formal education and higher learning** throughout the period. Both continued to be the preserve of a relative few, especially as an Islamic **ban on printing** set limits on the diffusion of knowledge and literacy. But the largely **oral culture** that thrived at the mass level produced a rich corpus of skills, stories, plays, music, pastimes, and popular wisdom. Among the remarkable innovations of this oral culture was the **introduction of the coffeehouse** and its rapid emergence as the region's central institution of public socializing and entertainment. ## **2. The Middle East, 1501–1808**

### **a. The Ottoman Empire**

#### **OTTOMAN SULTANS (1451-1648)**

### **1. The Rise to World Empire**

#### **1512–20**

**SULTAN SELIM I.** In his first year as ruler Selim faced down a challenge to his throne by his brothers and nephews; he extinguished their **rebellion in Anatolia** and had them eliminated. His ruthlessness and harsh temper made him known as “the Grim” (*Yavuz*). His **conquest of Syria and Egypt** began the empire's absorption of the Arab lands of the Middle East and North Africa, which established the **Ottomans as heirs to the great Islamic imperial states**. <sup>1</sup>

#### **1514**

**First war with Safavid Iran.** Ottoman expansion and Sunni-Shi'ite religious antagonism brought the Ottomans and Safavids into rivalry for control of eastern Anatolia. Selim led a large army against Iran, and in the decisive **Battle of Chaldiran** in Azerbaijan (Aug. 23), his forces defeated Shah Isma'il's army and temporarily occupied the Safavid capital of Tabriz. The victory opened the way for **Ottoman expansion in eastern Anatolia and northern Iraq**. <sup>2</sup>

## 1515–16

**Annexation of Diyarbakr**, the principality of **Dulkadir**, and the greater part of **northern Iraq**, including Mosul.

3

## 1516

**THE CONQUEST OF SYRIA**, following the defeat of the Mamluk army in Marj Dabiq near Aleppo (Aug. 24). The Syrian lands as far as the frontier town of Gaza fell to the Ottomans. **Aleppo and Damascus** became the administrative capitals of two newly constituted provinces.

4

## 1517

**THE CONQUEST OF EGYPT**, following the decisive defeat of the Mamluk army at al-Raydaniyya (Jan. 22) and at Giza (April 2). Egypt was organized as a single province with its capital in Cairo. **The Holy Cities of Mecca and Medina** were also absorbed into the empire after the Hashemite emir of Mecca pledged submission to the sultan (July). The Mamluk state thus ceased to exist, but many of the defeated **Mamluk officers and administrators entered Ottoman service**. They continued to purchase new slaves, mostly Circassians, and gradually regained control of the government machinery of Egypt.

5

## 1520–66

**SULTAN SULEYMAN I (THE MAGNIFICENT)**. With the death of Selim I (Sept. 1520), his only son, Suleyman, inherited a powerful empire, which rose under him to the peak of its grandeur. Suleyman **added new territories in Europe, Asia, and Africa**, leading his army in person on numerous campaigns. He **systematized the institutions of law and administration**, for which he came to be known by his own people as the Lawgiver (*Kanuni*). In his reign began the rise to **power of the imperial harem**, as high-ranking women of the dynasty (especially the mother of the reigning sultan and his favorite concubines) acquired an unusual degree of political influence and public prominence. This power, which continued until the mid-17th century, has led to references to the period as **“the sultanate of the women.”**

6

Although Suleyman is the most celebrated of Ottoman sultans, various **problems associated with Ottoman decline** began to emerge during his reign: rural overpopulation, unemployment, inflation, and heavy taxation. These fueled discontent and popular revolts.

7

## 1520–21

**Anti-Ottoman revolt in Damascus**, led by **Janbardi al-Ghazali**, the Mamluk notable appointed by the Ottomans in 1516 to govern the newly conquered province. An Ottoman force defeated his troops in Damascus and killed him (Feb. 1521), ending his bid for independent rule. The governorship of Damascus was henceforth given to Ottoman officials.

8

## 1521

The Ottomans captured **Belgrade** (Aug.) and completed the **conquest of Serbia**.

9

## 1522, Dec. 20

The **conquest of Rhodes**, after some five months of siege. With the elimination of this center of Christian piracy, the Ottomans secured the maritime routes in the eastern Mediterranean.

## b. [Iran](#)

### [SAFAVID DYNASTY](#)

#### 1501–24

**SHAH ISMA‘IL, FOUNDER OF THE SAFAVID DYNASTY.** In 1501 Isma‘il occupied Tabriz and proclaimed himself shah. Within a decade he conquered the territories constituting present-day Iran as well as Iraq and parts of eastern Anatolia. His ascension to power culminated a long struggle by the **Safavid movement**, which had built a mass following in northwestern Iran and eastern Anatolia, especially among the Turkoman tribesmen. These followers of the Safavids, known as the **Qizilbash** (“**Redheads**”) because of their distinctive red headgear, felt a devotion to Isma‘il both as a temporal leader and as head of the Safavid religious order. Isma‘il, who claimed descent from the founder of the movement, the Sufi leader Sheik Safi al-Din (1252–1334), **embraced Shi’ism**, although some of his beliefs—in his own divine qualities, messianic mission, and infallibility—reflected the **religious syncretisms** of the contemporary Safavid milieu. 1

Isma‘il's advent to power signaled the **end of Sunni Islam in Iran**. He imposed Shi’ism as the state religion, forcing conversion upon the largely Sunni population of the country. Initially he had to import Shi’ite religious authorities from Lebanon, Iraq, and Bahrain, so few were their numbers in Iran. By the 18th century, the great majority of the population had become Shi’ites, and Shi’ite theologians dominated the religious establishment. 2

The Safavid dynasty founded by Isma‘il held effective power in Iran until 1722, 3

although nominal Safavid rulers remained on the scene as political pawns for many years after. The regime rested in good part on the **support of the Qizilbash**, who helped bring it to power. Tribal chiefs were granted **governorships** of provinces and high positions in the central government. The Qizilbash also controlled **military forces** that helped them maintain their influence. A second element in the ruling elite was the **Persian bureaucracy**, which was essential to the machinery of government. Although there were rivalries between the two elements, in the course of time they formed marital and political alliances that cut across group lines.

## 1501

**Muhammad Baha' al-Dawla**, an Iranian physician and scholar, published *The Quintessence of Experience*, a work based on his clinical medical experience, which contained the first known description of whooping cough as well as accounts of chicken pox and German measles. His manuscript also detailed the earliest description of syphilis in the East.

4

## 1504

Death of **Sayfi of Bukhara**, an artisan and poet who wrote more than a hundred odes, each dedicated to practitioners of different crafts. This form of poetry, called *shahr-ashub* (“city disturbing”), combined Sufi mystical terminology with details about specific crafts. The verses reveal technical, religious, and social aspects of the many **guilds** (*asnaf*) that flourished throughout Iran. Often these poems were written in a jargon understood only by guild members.

5

## 1505

Death of **Mulla Husayn Kashefi**, the author of *Rawzat al-shuhada'* (*The Garden of Martyrs*), the earliest text for the public recitation and remembrance of the martyrdom of the third Shi'ite imam Husayn (d. 680). The **commemoration of Husayn's death** during the Muslim month of Muharram became part of an annual public mourning ritual that reached its full dramatic potential in the later Safavid period in the form of the *ta'ziyeh*, or **passion play**, a distinctly Iranian Shi'ite form of popular religious remembrance.

6

## 1507

**The Portuguese capture of the island of Hormuz** in the Persian Gulf. It became a naval base and trade outpost. The shah, who had no navy, reluctantly accepted this European presence, which lasted until 1622, when the Portuguese were **evicted with British help**.

7

**1507**

The Safavids extended their control into the region of **Diyarbakr** in eastern Anatolia.

8

**1508**

The Safavids took **Baghdad and Iraq**.

9

**1510**

**Capture of Khurasan**. Shah Isma‘il absorbed the large province into his state after defeating the Uzbeks and killing their leader, Muhammad Shaybani, in a battle near Merv. The **Uzbeks** remained a formidable adversary of the Safavids throughout the century.

10

**1514, Aug. 23**

**Battle of Chaldiran**, in which Shah Isma‘il's army suffered a crushing defeat by the Ottomans, who acted in retaliation for Safavid support of Turkoman revolts in Anatolia. The **Ottoman victory** resulted from superior numbers as well as the use of field artillery and guns, not employed by the Safavid army on this occasion. The battle opened the way for the Ottoman conquest of Diyarbakr, Erzinjan, and other parts of eastern Anatolia as well as northern Iraq.

11

**1522**

Shah Isma‘il brought the famous **Timurid painter Bihzad** from Herat to Tabriz and appointed him director of the royal library. Bihzad's successors formed a **brilliant artistic school** that produced some of the finest Persian manuscript illustrations.

12

## 1524–76

**SHAH TAHMASP I.** The eldest son of Isma‘il ascended the throne at the age of ten, and for the first ten years of his reign, real power was held by a number of leaders of competing Qizilbash factions, whose feuding caused much political instability. In 1533 Tahmasp asserted his authority. One of his legacies was the **introduction of converted slaves into court and the military**. They were drawn from thousands of Georgian, Circassian, and Armenian prisoners captured in campaigns fought in the Caucasus in the 1540s and 1550s. **Female slaves** entered the royal harem, becoming mothers of princes and a force in court politics and dynastic quarrels. Some of the male slaves began to acquire positions of influence, reaching, under Shah Abbas, high offices that challenged the supremacy of the Qizilbash.

(See [1490](#))

### **c. [Afghanistan](#)**

In the 16th and 17th centuries, the Mughal Empire of India and the Safavid Empire of Iran held between them the area that would emerge in the 18th century as Afghanistan. The **province of Herat** remained with Iran, while **Kabul** was administered by the Mughals. The contested **province of Qandahar** moved between the two empires during this period but by 1700 became part of the Iranian sphere. Unlike Shi'ite Iran, the populace of Afghanistan remained Sunni Muslim. 1

#### **c. 1700**

**The Afghan tribes of Ghilzay situated in Qandahar** became essentially independent of Safavid rule, as did their enemies, **the Abdali tribe located in Herat**. 2

#### **1709–22**

**Consolidation of Ghilzay control of Qandahar.** **Mir Vays**, leader of the Ghilzay Afghans, fell out with the Safavids and defeated their attempts to assert control over Qandahar, which he held until his death in 1715. His son Mahmud, who succeeded him, consolidated his command of the area. 3

#### **1722**

**THE AFGHAN INVASION OF IRAN.** Led by Mahmud, **the Ghilzays defeated the Safavid army** and entered Isfahan after a six-month siege (Oct. 1722). The Safavid shah Sultan Husayn abdicated after declaring the Afghan victor Mahmud his successor. **The Ghilzay Afghan dynasty ruled much of Iran and Afghanistan** under Mahmud 4

(1722–25) and his successor Ashraf (1725–30). But **Nadir Shah**, the Safavid general, mounted a campaign that **expelled the Afghans from Iran** and made him master of the country.

### 1737–38

**OCCUPATION OF AFGHANISTAN BY NADIR SHAH.** The ruler of Iran captured Herat, Qandahar, Ghazna, and Kabul. **The power of the Ghilzay was broken** in this campaign. Nadir favored the Abdalis and enlisted large numbers in his army for his invasion of India in 1739. His army comprised largely Sunni Afghan troops, since his own Sunni beliefs had alienated his Shi'ite Iranian soldiers. **His reign consolidated all of Afghanistan**, a situation that ended with his death in 1747. 5

### 1747–73

**AHMAD SHAH DURRANI, FOUNDER OF THE SADOZAY DYNASTY.** Following the death of Nadir Shah, Ahmad Shah, the Afghan commander of his bodyguard and a member of the Abdali tribe, proclaimed himself the ruler in Qandahar. He adopted the title *Durr-i Duran* (“Pearl of Pearls”), and after that the Abdalis were known as **the Durranis**. **He invaded India several times** and extended Afghan control from the eastern borders of Iran to Lahore, Kashmir, and Delhi. 6

### 1773–93

**TIMUR SHAH.** The son of Ahmad Shah inherited an extensive empire. He faced many revolts in his Indian possessions as well as internal difficulties in controlling the Durranis. In 1776 he **moved the capital from Qandahar to Kabul**. 7

### 1793–1800

**ZAMAN SHAH.** The fifth son of Timur ruled the Durrani Empire with the help of the chief of the Afghan tribe of Barakzay. His attempt to invade India alarmed the British, who induced the Iranian Qajar ruler Fath Ali Shah to support Zaman Shah's brother Mahmud in his struggle for power. With British help Mahmud advanced on Kabul, captured and blinded his brother, and assumed power. (See [Afghanistan](#)) 8

(See [945, Dec](#))

#### **d. [Arabia](#)**

The Arabian peninsula, the birthplace of Muhammad and Islam, became of marginal importance in Middle Eastern history not long after the Arabs began their conquests in the 7th century. Various Middle Eastern states extended their formal authority to the coastal region of the Hijaz, site of Mecca and Medina, and intermittently to Yemen, but seldom to the interior of the peninsula. The Ottomans established a hold in Yemen and eastern Arabia in the 16th century, but by the 18th century their authority was confined to **the Hijaz, where the Hashemite emirs enjoyed autonomy** while acknowledging Ottoman suzerainty. Throughout the peninsula powerful family and tribal elites ruled over **essentially sovereign emirates**. Several of the dynastic regimes established in the 18th century—in Saudi Arabia, Kuwait, Oman, and Bahrain—have survived to this day.

1

#### **1745**

**BIRTH OF THE FIRST SAUDI-WAHHABI STATE.** Muhammad ibn Sa‘ud (d. 1765), chief of a tribal emirate based in Dar‘iyya in the central Arabian region of Najd, forged an alliance with **MUHAMMAD IBN ABD AL-WAHHAB** (1703–92), a theologian preaching a message of **puritanical reform of Islam**. Ibn Abd al-Wahhab criticized the laxities of Muslim observance. He sought to do away with all misguided innovations in Islam, such as the veneration of saints and Sufi rituals, and to return the faith to its fundamental scriptural principles. In the next 60 years Ibn Sa‘ud and his successors **extended their domination and the Wahhabi ideas over most of Arabia**. The first Saudi state was finally destroyed in 1818.

2

#### **1748–75**

Abbas al-Mahdi ruled as imam of Yemen.

3

**1749**

Ahmad ibn Sa‘id became ruler of Oman, beginning the rule of the **BU SA‘ID DYNASTY**, which remains in power today. 4

**1752**

Sabah ibn Jabir of the Banu Utub Arabs became ruler of Kuwait, beginning the rule of the **SABAH DYNASTY**, which still holds power today. 5

**1762–1812**

Abdallah ibn Sabah ruled as sheik of Kuwait. 6

**1765–1803**

**Abd al-Aziz** ruled as Saudi emir after the death of his father Muhammad ibn Sa‘ud, who had unified most of Najd under his rule. He continued the **expansion of Saudi control** in the peninsula. 7

**1773**

**The Wahhabis annexed Riyadh.** 8

**1775–1809**

Ali al-Mansur ruled as imam of Yemen. 9

**1782**

Ahmad ibn Khalifa of the Banu Utub Arabs became the ruler of Bahrain, establishing the rule of the **AL-KHALIFA DYNASTY**, which still holds power today. <sup>10</sup>

## 1783

Death of Ahmad, ruler of Oman; he was succeeded by his son Sa'id. <sup>11</sup>

## 1787

**The Wahhabis took Hail** and gained control of the region of **Jabal Shammar** in central Arabia. <sup>12</sup>

(See [1504](#))

### **3. North Africa, 1504–1799**

#### **a. Morocco**

##### **1505–24**

**MUHAMMAD AL-BURTUGHALI.** The sultan of the Banu Wattas (Wattasids) <sup>1</sup>  
**reigned at Fez** but retained no authority over the rest of the country. The remainder of Morocco was ruled by local tribal authorities and Sufi orders.

##### **1505**

**Portuguese occupation of Tangier and Agadir.** A series of Portuguese garrison forts <sup>2</sup>  
on the Atlantic coast called presidios was established during this period, while in the Mediterranean, Spanish forces threatened the Moroccan littoral. These **Christian invasions** prompted a renewed religious and martial vigor among the Muslim inhabitants of Morocco. Local tribesmen who claimed descent from the prophet Muhammad combined with Sufi leaders to eject both Europeans and the reigning Wattasid dynasty during the 16th century.

##### **1508**

Death of **Ahmad al-Wansharisi** of Fez, one of the best-known jurists in North Africa. <sup>3</sup>  
His multivolume work *al-Mi‘yar* compiled a large corpus of his *fatawa* (legal opinions), which shed light on social conditions as well as legal thought.

## 1509–17

**MUHAMMAD AL-QA'IM, FOUNDER OF THE SA'DI DYNASTY.** Originally from Sus, the **Sa'di family** took a strong position in support of jihad (holy war) against the Portuguese, a position that put them in immediate **opposition to the Wattasid policy** of appeasement and collaboration. The Sa'dis claimed descent from Muhammad and were called **sharifs**. The founder of their dynasty identified with the Sufi **al-Jazuli** (d. 1465), whose order had militantly opposed the European presence in Morocco. He began to build a territorial base in southern Morocco, which his sons **Ahmad al-A'raj** and **Muhammad al-Sheik** expanded after his death. By 1530 they held between them the **southern half of Morocco**. 4

## 1513

Death of **Ibn Abi Abdallah Ghazi**, a theologian and jurist from Meknes. He served as the official preacher of Meknes and wrote a three-volume history of the city. 5

## 1526

**Hasan ibn Muhammad al-Wazzani**, known in the West as **Leo Africanus**, translated from the Arabic his description of Africa, which furnished the Christian world with most of its geographical knowledge about North and West Africa. Born in Granada before its capture by the Spanish, al-Wazzani relocated to Fez. He was captured by European privateers off the North African coast and **converted to Christianity**. His learning and travel experience brought him to the attention of the pope, who became his patron. 6

## 1536

The Wattasids of Fez, alarmed at the Sa'di control of southern Morocco, declared war. In a truce negotiated by the religious leaders, they accepted **the autonomy of Sa'di Marrakesh**. 7

## 1541

Muhammad al-Sheik, Sa‘di ruler of southern Morocco, captured the Portuguese fortress of **Santa Cruz (Agadir)**. The victory strengthened Muhammad's political position over his brother Ahmad al-A‘raj, the heir-designate of the Sa‘di dynasty. 8

## 1545–57

**MUHAMMAD AL-SHEIK (AL-MAHDI)**. The Sa‘di ruler was proclaimed sultan in Marrakesh in 1545. In Jan. 1549 he **occupied Fez**, ejected the Wattasids, and became sultan of Morocco. The Sa‘dis defended their territory from both Christian and Muslim incursions, most notably by the Portuguese and by the Ottomans based in Algeria. Under them Morocco remained the only North African state to evade Ottoman occupation. 9

## c. 1550

The Portuguese evacuated their remaining forts on the Moroccan coast. 10

### **[b. Algeria, Tunisia, and Libya](#)**

In the 16th century the North African countries, with the exception of Morocco, were **absorbed into the Ottoman Empire**. The provincial administrations set up in Algiers, Tripoli, and Tunis soon developed an **autonomous character**, with local regimes run largely by the military. They were not, however, entirely independent of Ottoman authority: they continued to acknowledge **Ottoman suzerainty**, to draw on **Turkish recruits** for their armies, and to seek Ottoman diplomatic support and mediation in local disputes. 1

#### **1504**

The corsairs Aruj and **Khayr al-Din Barbarossa** accepted the patronage of the Hafsid ruler of Tunisia. They made the island of Jerba their base of Mediterranean operations for their jihad, or holy war, against Christian ships. The **corsairs**, as pirate captains, belonged to a highly valued and organized profession in Muslim North Africa. They banded together into guilds, or *ta'ifas*, for their mutual benefit. Most of them were Europeans who had converted to Islam. They played a **prominent role in the governments of Algiers, Tunis, and Tripoli**, the three ports that came under Ottoman control in the 16th century. 2

#### **1509**

The Algerian port of **Oran** taken by the Spanish. 3

#### **1510**

**Tripoli and Bougie** captured by the Spanish. Spanish victories prompted the inhabitants of Algiers to call upon Muslim corsairs to assist with their defense. The Spanish controlled all of the Algerian littoral through a series of coastal garrisons (presidios). They did not occupy Algiers but constructed a fort called the Peñon on an islet overlooking the harbor. They remained isolated in their coastal enclaves, dependent on naval support. 4

## 1515–16

Aruj and Khayr al-Din Barbarossa installed at Algiers at the request of the city's inhabitants. 5

## 1518

**ESTABLISHMENT OF OTTOMAN RULE IN ALGIERS.** Besieged by the Spanish, Khayr al-Din Barbarossa placed himself under the direct authority of the Ottoman sultan Selim I, who appointed him *beylerbey* (provincial governor) and sent him as military reinforcement a unit of Janissary musket-bearing infantry. In 1529, after a protracted struggle with the Spanish, he won full control of Algiers and began conquering the interior of Algeria. Garrisons brought the countryside into the sphere of Ottoman control, and provincial taxes were collected in yearly military expeditions (*mahallas*). But already by the late 16th century, real power rested with local Janissary commanders, not the Ottoman governor. 6

ALGIERS became the prosperous center of an economy based primarily on **privateering**, or state-sponsored piracy. Corsair wealth funded the development of an imposing city, with tall protective walls, a citadel (completed in 1590), gracious homes, fine public buildings, and various urban amenities. The **population** grew from some 20,000 to about 100,000 by the 17th century and included a mix of Turks, corsairs, native Algerians (*baldis*), Berbers, and Jews. Thousands of **Christian captives** taken on raids were held in prisons called *bagnios*. They were sold, ransomed, or used as slaves. 7

## 1528

The Knights of St. John, an order founded by the Habsburg emperor Charles V, established a garrison at Tripoli. 8

## 1533

**Khayr al-Din Barbarossa** was appointed admiral of the Ottoman fleet and took direction of Ottoman naval operations in the western Mediterranean. 9

## 1534

First Ottoman conquest of **Tunis** by Khayr al-Din Barbarossa. He was pushed out by Spanish forces, which established a garrison in the port. Al-Hasan, the Hafsid ruler of Tunis, became a vassal of Emperor Charles V. 10

## 1543

**Tlemcen** captured by the Habsburgs. 11

## 1551

**ESTABLISHMENT OF OTTOMAN RULE IN TRIPOLI.** The Ottoman fleet dislodged the Hospitallers of St. John from Tripoli. The corsair captain **Draghut (Turghut)** was appointed Ottoman governor of the province of Tripoli and began bringing the interior under Ottoman rule. The province remained under direct Ottoman control, through governors appointed by Istanbul, until 1629. 12

## 1569

Second Ottoman conquest of **Tunis**. The city was recaptured by the Europeans after their naval victory at Lepanto in 1571. 13

## **D. South and Southeast Asia, 1500–1800**

### **1. India, 1500–1800**

#### **GROWTH OF BRITISH POWER IN INDIA (MAP)**

#### **MUGHAL EMPERORS (1526-1858)**

Early modern India continued to be marked by the pattern of alternation between larger, inclusive (imperial) states and smaller states or kingdoms based on regional power bases and linguistic/cultural formations. New in this period was a **dramatic increase in urbanization** and a greater **commercialization of agriculture and trade**—results of the expanded imperial system, which fostered integration of localities into larger economic networks both within the subcontinent and between South Asia and other imperial centers. Very little speculation has been put forward regarding demographic changes before the 19th century; the regions of greatest population density when censuses began to be taken are presumed to be the same as those during this earlier period as well (with the rice-growing areas of the eastern Gangetic Basin and the east coast having the highest population). The increasing size and number of urban centers established in the early modern period have been presumed to foster as well as absorb the population increases in the subcontinent. <sup>1</sup>

Initially in the north and ultimately over much of the South Asian subcontinent, the **Mughal Empire** emerged in this period to tie India to the larger Islamic world. Beyond economic integration with this larger system, the Mughals encouraged further integration through the opportunities offered to military and administrative elite <sup>2</sup>

migrating from Persia and the Arabic areas of the Middle East. Still, faced with the necessity of creating a shared political culture that would tie the immigrant ruling class to indigenous power structures, the Mughals fashioned a new **Indo-Persian cultural system** that created a shared elite culture focused on the emperor. Particular values—including Indian notions of good rule, Indian aesthetics, and hierarchical conceptualizations of the relationship between community and state—became incorporated within the ruling ethos.

At the same time in the south, the **Vijayanagara Empire** consolidated around a state ideology fashioned from Hindu theories of kingship and new claims to power by soldier-merchant groups. The elaboration of this state made clear the similarities of economic and political processes faced by both the empires. Key to success were the administrative and ideological ties established between the state and its constituent communities; the nature of these ties indicated that while one empire is called Islamic and the other Hindu, the Mughal and Vijayanagara rulers built their respective politico-cultural systems on the basis of many similar cultural assumptions that may be seen as typically South Asian in nature.

Toward the end of this period, the imperial systems in both the north and the south began to break apart. Across the subcontinent **successor states** arose, solidifying political and cultural coherence around regional identities expressed in local vernacular languages and literary works. The political and economic opportunities presented to local elite claimants enabled them to direct **cultural patronage** to solidify these regional cultures and identities. The ferment provided by the new political formations, and the contestations that naturally accompanied new claims to power, provided a period of great flux and creative reinvention of political forms and legitimations.

Into this flux moved a **variety of European actors**, brought to the subcontinent by their interest in trade and their new organization at home as commercial monopolies (the **East India Companies** of the English, the Dutch, and the French). These monopolistic enterprises facilitated the financing of ambitious pursuit of trade overseas. Still “bit” players in the unfolding drama, Europeans tried to ally themselves with different Indian princes absorbed by their internecine warfare, hoping to capitalize on the victories won by their allies.

## By 1500

**THE VIJAYANAGARA EMPIRE** developed, in its second half, into what is known as the **nayaka** state-system, in which administrative and political relations differed significantly from what had gone before. While the Vijayanagara rulers continued to hold ultimate power over a broad belt of territory, they shared authority locally with a number of military chiefs, or nayakas. Originally part of the great Telugu migrations

southward into the Tamil country in the 15th and 16th centuries, **Baliya merchant-warriors** who claimed these nayaka positions rose to political and cultural power and supported an ethos that emphasized nonascriptive, heroic criteria in legitimizing political power. The Baliyas were proud of their Sudra status, in a world previously dominated by a classical Sanskrit varna scheme that insisted that kings had to be Kshatriya (two castes higher than Sudras). The new egalitarian ethos made it easier for claimants from a variety of communities to succeed to political control.

### 1500s

**Kaikkolas** (weavers) and **kanmalas** (smiths) increased in power during the 15th and 16th centuries: set privileges were granted to them by nayakas and their subordinate local magnates. Indeed, the diversity of artisan and merchant communities in this period shows the increased importance of these professions in the emerging socioeconomic structure.

7

### 1500

Spread of the **Sikh** faith in Bengal. Founded by N  nak (1469–1538), who merged Hinduism with Muslim egalitarianism. Later turned militant under persecution by the Mughals.

8

### 1504

**Yusuf Adil Shah** of Bijapur, having annexed Gulbarga, established the Shi'ite form of Islam under state patronage, despite protest from many Sunnis.

9

### 1509

The Portuguese, under **Francisco de Almeida**, at Diu destroyed an Egyptian-Indian fleet that had, in the previous year, defeated a Portuguese squadron at Chaul.

10

### 1510

The **Portuguese acquired Goa** as headquarters, in place of Cochin.

11

## 1512

Golconda became independent (till 1687).

12

## 1526–37

**Bahadur**, the last active sultan of the “sultanate state” period, with the aid of Khandesh captured Mandu and annexed Malwa (1531), after which he captured Chitor (1534).

13

## To 1550s

In the heyday of the Vijayanagara Empire, the center retained full control of the nayaka chiefs, receiving a third of the revenues collected in the territories assigned to the chiefs. The nayakas had only limited lordship over territory and had to maintain from their income armed forces for the king.

14

## 1526–1761 (1857)

The **MUGHAL EMPIRE** in India was founded by **Babar** (1483–1530), descendant of Timur-I Lang in the fifth generation, who had seized Kabul (1504) and Lahore (1524) as compensation for loss of Ferghana and Samarkand. Decisive victory at **Panipat** over Ibrahim Shah Lodi gave him Delhi and Agra, which he defended in the **Battle of Khanua** (1527) against Rana Sanga of Chitor, chief of a Rajput confederacy.

(See [Southeast Asia, c. 900–1557](#))

## **2. Southeast Asia, 1500–1800**

Southeast Asia played a pivotal role in the changes that mark the early modern world. It was a maritime region, already to a large extent **organized around long-distance trade** and located in the midst of crucial trade routes. It encountered and interpreted in distinctive local ways the consolidation of the **Islamicate world** accomplished during the previous, postclassical period, and the following shift from that world system to one shaped by European expansion through trade and technology. Consequently, this part of Asia suffered most quickly and directly the impact of European intrusion; by 1650 Europeans had gained control of most of the vital ports and products through which the region had been connected to an expanding world economy. <sup>1</sup>

Four major kinds of change marked these three centuries in Southeast Asia. The first was the **rise of a number of new states**, fostered in part by external factors—new military techniques, the presence of Islamic models of state organization, and the expansion of commerce, which helped dynamic new leaders to emerge. Internal factors also facilitated these new state configurations, particularly the capacity of origin myths and political theories to be reinterpreted in defining commonalities and identities that fit new circumstances. The second change also related to ideology: between about 1400 and 1700, **three universalist faiths** based on sacred scripture became firmly entrenched in the region. An Islamic arc in the south; a Confucian orthodoxy in Vietnam and a Theravada Buddhist region in the rest of mainland Southeast Asia; and a Christian presence in the Philippines (See [1571](#)) were consolidated in the early modern period and are still the important configurations today. In the midst of the commercial and political changes altering the region, a preference emerged for textually based belief systems with sources of authority beyond the localities. <sup>2</sup>

The third major change related to a **dramatic expansion of commercial activity** in the region. This activity predated the appearance of Europeans, relating instead to the linkages forged as the Islamicate world system emerged. In the 15th century, significant activity by Chinese and Indian merchants had increased the circulation of silver and other metals in the area and initiated a demand for Indian cloth in exchange for spices <sup>3</sup>

grown for export. Before 1650, tons of pepper, cloves, and nutmegs were carried by Muslim traders (of various nationalities) across the Indian Ocean to markets in Egypt and Beirut. There Italian merchants bought and shipped them back to Europe. At the peak of early-17th-century commercial activity, the Chinese, Japanese, Spanish, Portuguese, and Indians all competed for the region's produce. During the second half of the century, however, many of these players withdrew and a small number came to dominate international markets in the region, most particularly the Dutch East India Company. These external changes around the dividing line of 1650 may also be seen as the point at which promising capitalist economic developments atrophied in the face of massive European domination.

Accompanying important economic changes were technological and scientific **innovations**, particularly in **military techniques**—the fourth major change. The increasing presence of firearms marked the opening of this period and influenced other military practices, including naval technologies and land-based fortifications for establishing permanent, defensible enclaves. Foreign traders proved especially adept in this new technology and, over the 16th century, were often impressed into the service of the most ambitious claimants to royal power in the region. In areas now known as Burma and Thailand, **new states were established** with the capacity to exercise unprecedented power. Relatively centralized powers also emerged in Java and Aceh, and in Makassar and Ayutthaya (Siam) in the early 17th century. Similarly, new naval techniques proved crucial for Aceh and Maluku.

Before 1750, the region had a low population density except in concentrated areas of Java (the northern coastal plain and the Mataram area), south Sulawesi, and Bali. Periods of strong rule and security would foster dramatic population growth in, for example, Aceh in 1550–1640, Makassar in 1600–1660, and areas of Java after 1650. By contrast, devastating contractions of numbers may be attributed to the practice, during warfare, of large-scale forced relocation of captured populations. For example, the Malayan population was dramatically depopulated by the conquests of Sultan Iskander Muda of Aceh from 1618 to 1624. (See [Southeast Asia, 1753–1914](#))

### a. The Malay Peninsula and Archipelago

#### 1511–1722

**JOHOR Sultanate (Malay).** The power structure in Johor reflected many features that originated in the Malacca kingdom. Johor continued the Malacca tradition of a maritime state dependent upon the rivers and the sea; Johor built, as well, on Malaccan

perceptions of a state, perceiving in the presence of a ruler with an illustrious and impeccable lineage the distinction between a “state” such as the Kingdom of Johor and any number of the small, individual **kampung** under the leadership of a minor chieftain which existed along the rivers, estuaries, and coasts of the Malay world. Court literature, such as the **Sejarah Melayu** (a work begun in the 15th century in Malacca containing later interpolations, including the early history of Johor) expounded the ideal of the ruler responsible solely to God.

The importance of the ministers' role, in efficiently handling mundane affairs of state, is shown by rivalries between **Bendahara** and **Laksamana** families in the 16th and early 17th centuries. The **Orang Kaya, or Council of Nobles**, consisted of these most powerful families, who formed individual centers of power within the kingdom. They performed services for the ruler, including assembling their men and leading them as a group in battle when the kingdom was at war, and acted as an intermediary between their people and ruler. They also played an essential role in international trade under a system of patronage to traders (offering protection and providing capital to traders in return for commission and share of profits).

**Orang Laut**, a broad term referring to **seafaring peoples in the Malay world**, in reality referred to numerous tribes and status groups inhabiting the islands and estuaries in the **Riau-Lingga Archipelagos, the Pulau Tujuh Islands, the Batam Archipelago, and the coasts and offshore islands of eastern Sumatra and southern Malay Peninsula**. They gathered sea products for the China trade; performed special services for the ruler at weddings, funerals, or on a hunt; provided transport for envoys and royal missives; and manned ships to act as ruler's naval fleet and to patrol the waters.

### Early 1530s

**Sultan Alauddin Riayat Syah**, successor to the last ruler of Malacca (Sultan Mahmud Syah, who died between November 1527 and July 1528), moved his residence to the Johor River and became the first ruler of the Malacca dynasty to establish a permanent settlement in Johor.

### 1564 and 1613

**Ruler of Johor** was **taken prisoner** during the repeated destruction of Johor capitals in 16th and 17th centuries by Portuguese and Acehnese. Both times the conquerors made a point of setting on the throne another ruler from the same royal family in order to fulfill expectations about how a kingdom could be perpetuated.

## 1641

**Capture of Malacca by the Dutch**, who thenceforth dominated the East Indies. The Dutch extended free passes to all Johor Orang Kaya to trade in areas restricted to other kingdoms; this enabled these traders to fly the flag of their patrons while conducting a lucrative trade under Dutch protection. 11

Johor had lost some of the areas that traditionally had been dependencies of Malacca, but it still controlled extensive areas, including Johor; Selangor; areas on the Kelang, Linggi, Siak, Kampar, Muar, and Batu Pahat Rivers; and the islands of Ungaran, Karimum, the Riau-Lingga Archipelagos, and Singapore. 12

## 1673

Resilience of kingdom shown when Dutch takeover of Johor Lama counterattacked by Johor's Orang Laut–manned fleet. 13

## 1691

Having successfully challenged power of **Laksamana** family by gaining control of young ruler and through the ruler using the royal drums and reedpipes (*nobat* and *nafiri*) as symbols to legitimize authority, **Bendahara Tun Habib Abdul Majid** nevertheless refused to sign any written agreements with Dutch until ruler reached his majority. 14

## 1699

**Assassination of Sultan Mahmud Syah**, last male ruler of Malacca dynasty in Johor, significantly undermined traditional values, especially the sacredness of the ruler; the depth and extent of loyalty accorded to him; and the special nature of his position within society. Many **Orang Kaya**, including **Bendahara** family, implicated in assassination, which served to undermine subjects' loyalty to succeeding Bendahara dynasty. **Orang Laut** had a strong reaction against assassination, refusing to recognize the new Bendahara dynasty, which subsequently was forced to rely on apparent and visible manifestations of power and on close, personal ties with powerful individuals within kingdom, a significant change from the traditional concept of power. 15

## 1709

Bendahara ruler **moved capital to Riau** to meet an invading Siamese force; about a quarter of entire population moved to assist Siamese against Bendahara ruler because of questionable legitimacy of new ruler. 16

## 1718

**Raja Kecil, Minangkabau** adventurer, claimed to be son of the last male heir of the Malacca dynasty, gaining mass support among Malay subjects and among almost all Orang Laut in Johor. 17

## 1722

**Sultan Sulaiman Syah**, new Bendahara ruler of Johor, regained throne with help of **Buginese**, warriors and seamen from southwest Sulawesi. Buginese regained control of coronation regalia, possession of which was key to ruler's legitimization. 18

**Raja Kecil**, accompanied by some of his loyal Orang Laut groups, such as the Orang Suku Bentan and the Orang Suku Bulang, established a **new kingdom in Siak** following his expulsion from Johor. 19

Major shift in power relationships in Johor resulted when the Buginese became an effective power bloc: replaced the Orang Laut role (in trading, patrolling, and military functions) and the Orang Kaya role (in the principal decision-making functions). 20

The ongoing tensions between Bugis and Malay ministers and officials is described in the **Tuhfat al-Nafis**, a Malay history primarily of the kingdom of Johor-Riau-Lingga (but also in other areas, e.g., West-Kalimanta, Siak, Kedah, and Terengganu) covering the early 18th century until 1864. 21

[CONTENTS](#) · [SUBJECT INDEX](#) · [BIBLIOGRAPHIC RECORD](#)

[PREVIOUS](#)

[NEXT](#)

## b. [Kedah](#)

Like Perak, Kedah was a Muslim state with a political structure and culture based on the model of the Malacca Empire, having a Muslim sultan at the center of power who was assisted by ministers drawn from powerful local families. 1

Unlike other Malay states such as **Perak, Salalngor, Pahang, and Negeri Sembilan**, which by 1896 had surrendered most control to the British, Kedah **maintained internal independence** and strong cohesion within the ruling class. Relatively limited economic resources precluded the formation of a large body of aristocrats; consequently, members of the ruling family were appointed to most political posts. Dependent more on rice crop than on trade, Kedah was also spared the disruption of the large-scale Chinese immigration that occurred in southern Malay states. 2

### 1713, 1722, and 1770

**Civil wars** in these years involved jostling within the Kedah royal family for control; Bugis served as mercenaries for various factions. 3

### c. 1741–1778

Muhammed Jiwa Abidin Syah (d. 1778). Provided stability and increased trade and rice crops. 4

### c. [Aceh](#)

Rise of Aceh clearly demonstrates impact of Islam and trade in contestation with Europeans. Portuguese efforts to intervene in Pasai and Pidie, and takeover of Melaka across the straits, drove elements interested in Islam, commerce, or local patriotism to unite in support of **Sultan Ali Mughayat Syah**. 1

#### 1520s

Sultan worked to unite the north Sumatran coast into a new and explicitly anti-Portuguese kingdom; ideological identity and authority of Aceh competed directly with Portuguese Melaka as center of Islamic spice route. (Similarly, **Banten** in western Java emerged as an Islamic kingdom in competition with the Hindu port of Sunda Kelapa, ruled by a Portuguese ally.) 2

#### 1534–38

Ottoman expansion (first to Egypt, Syria, and the Hejaz in 1516–17, then to Iraq in 1534–35) provided new military defense of Muslim spice-trading route in the Indian Ocean. First Ottoman fleet to combat the Portuguese in the Indian Ocean was launched by the governor of Egypt in 1537–38; this failed. 3

#### 1560s

Establishment of **direct commercial and diplomatic** relations between Ottomans and Aceh; this led to concept of pan-Islamic counter-crusade against the Portuguese in Southeast Asia (e.g., 1566 petition for assistance, sent from sultan of Aceh to Ottoman sultan). 4

## 1560–1580s

High point for Islamic military success in Southeast Asia and for Muslim-Christian polarization in the region.

5

## Early 1600s

Evidence that **Shari'a courts** in use in Aceh, to apply Islamic law in enforcing precepts relating to prayer, fasting, and religious orthodoxy and to deal with civil matters of debt, marriage, divorce, and inheritance as well as criminal matters of theft, drunkenness, and so on. Introduction of the **kadi** (law officer, an important figure in urban governance) dates from the 1580s. A number of Islamic leaders, from various parts of the archipelago, centered in Aceh during the 17th century, writing voluminously on religious topics both in Arabic and Malay. The last great mystic was 'Abd al-Ra'uf of Singkel, born around 1615. After studying in the Middle East, he returned to Aceh, served the sultan as secretary, and wrote widely on law and religion. His fame as a religious reformer spread widely, before and after his death sometime following 1693. (See [The Malayan Archipelago, 1798–1908](#))

### **d. Malaysia, 1509–1790**

Sultanate of Melaka served as a model for the Malay world but was not original. Funan, Champa, and Srivijaya in earlier periods had created a similar economic structure based on trade rather than agriculture. The Islamicate nature of the cultural system and the cosmopolitan character of society also had precedents in the area, but taken together these characteristics came to be perceived as the proper aspects of a Malay state. Cosmopolitanism of the state was legendary; the state served as the meeting place of two kinds of solidarities: one based on the traders' mother country identity (including religious solidarity), the other on identification with the local ruler and local law. <sup>1</sup>

#### **1500s**

**Nature of trade** in this mercantile state involved the whole ruling class as well as the sultan himself. Networks for long-distance trade intersected at Melaka, connecting Indian Ocean, Red Sea, and Persian Gulf tradeways. But in Melaka this trade connected to a **market economy** (where merchants conducted trade on their own behalf), not just the administered trade that characterized earlier empires (where trade was conducted on behalf of the sovereign); prices were fixed by supply and demand; and one could choose to become a merchant without having to secure a royal appointment to do so. Results included a vigorous monetary economy based on mass trade (rather than trade in luxury goods). <sup>2</sup>

The territorial base for the sultanate's realm composed three concentric circles. At the center were territories ruled directly by the sultan; in the middle were territories administered by appointees of the sultan; at the periphery were tributary, vassal, and allied kingdoms (some ruled by the sultan's kinsmen). Especially where the sultan's hold was weakest, the ruler would offer shares in commercial profits—a practice that provided the sultans with almost a third of the capital required to finance trading expeditions, and this reinforced the economic solidarity between the sultanate and its dependencies. <sup>3</sup>

## 1509–10

**Competing alliances of merchants** in Melaka took different stances toward the Portuguese: one group (including Chinese, some Tamils, and a few Javanese) inclined to accept them, anticipating new markets and an increase in demand for the commodities they conveyed. The other party (led by Gujaratis and supported by the local elite) saw them as competition and a threat to the moral solidarity between the sultanate and its dependency seaports. The second group prevailed in the short run and seized all the Portuguese they could in 1509, thus delaying advent of the European influence for two years.

4

## 1511

The Portuguese, under **Albuquerque**, captured **Malacca**, center of the spice trade. By this time, the crown was more interested in spice trade than establishing a land-bound empire. The Portuguese then sent envoys to open trade relations with native states and set up fortified posts to protect the trade.

5

## 1515

Portuguese governor ordered **cadastral survey**, which counted not land for taxation but irregular occupation of plots abandoned during 1511 uprising; this shows that the sultanate's economic basis depended on sea, not land.

6

## 1560s

First **Malay mosque** built under Sultan Muzaffar (d. 1564).

7

## 1580s

**Dutch** began to work in secret with Jambi to corner the pepper production in Sumatra.

8

## 1594

The Lisbon spice market was closed to Dutch and English traders, thus providing an incentive for direct trade with the Far East. The English and Dutch **East India Companies** (1600, 1602) presently destroyed the Portuguese forts in Malaysia. 9

## 1596

The Dutch set up a factory at **Palembang** (Sumatra). 10

## 1602

The English established themselves at **Bantam** (northwest Java). 11

## 1605

The Dutch seized Amboina, then settled in western Timor (1613). 12

## 1615

**British and Dutch** gained access to the **pepper trade** in Jambi (Sumatra). Competition 13 included Chinese, Malays, Makassarese, and Javanese as well as the three European trading monopolies.

[NEXT](#)

---

### **e. Maluku (Eastern Indonesia), 1500–17th Century**

In this period, emphasis on an origin myth underscored unities that were island-wide, area-wide, and region-wide. Ceremonies recognizing the origin myth connected five kingdoms, with Ternate depicted as the center. 1

#### **1500s**

**Islam** had been introduced over the turn of the century, but conversion touched only sultans and their own kin-based settlements. 2

#### **1550s**

**Ternate** and **Tidore** became the two most important centers in North Maluku, incorporating nearby areas. Expansion due to rapid increase in demand for cloves, which provided rulers with Indian cloth and iron implements, items that were highly valued. 3

#### **1535–70**

Under **Sultan Hairun** in North Maluku, rulers of area began to become much more identifiable by European concepts of kings; Sultan Hairun took on imagery of European rulers; consequently Portuguese treated him as the leader of the Malukan world, which reinforced the authority and power exercised by this kingdom over the other polities of eastern Indonesia. 4

#### **1570**

**Portuguese killed Sultan Hairun;** the Ternaten court mobilized resources of sufficient power to oust the Portuguese from Ternate; avenging his father's death gave the new sultan grounds for a campaign to make Ternate the single center in the Malukan world. He subdued Bacan and Tidore, then sent a conquering fleet to Banggai, Tobunku, Butung, and Salayar. Though some parts remained restive, the origin myth helped to underscore shared culture and the political claims of Ternate. 5

### 1570–83

Rule of **Sultan Babullah** witnessed the culmination of a centralizing process that reinforced the power of this ruler in North Maluku. Before this period the sultan was still a kin-based leader; afterward, he could act without the consensus of the elders of many settlements. 6

### By 1600s

**Islam had spread** to fellow rulers of Ternate and gradually to the rest of population. Since Muslim traders preferred to work in ports where they could find a mosque and where they could assume the protection of a Muslim ruler, the spread of Islam also brought important economic benefits to the sultan. (See [The Malayan Archipelago, 1798–1908](#)) 7

### **3. Mainland Southeast Asia, 1500–1800**

#### **a. Burma**

Heritage of ethnic fragmentation complicated rivalry between developing religious and political centers. While the prestige of **Mon** capital at **Pegu** was on the rise following the revival of Mon strength in the 15th century (including a renewed patronage of Buddhism), the center of Burman power, Ava, steadily declined as it found itself the target of repeated raids by various Shan tribal groups. The early 16th century witnessed downward **Shan** pressure, reflecting the development of a greater cohesiveness and a hierarchical society among the Shan tribal groups leading to a process of expansion into more desirable lowland areas. <sup>1</sup>

Result was an **increasing cultural homogeneity** achieved in this period, beginning with policies of first Toungoo kings in the 16th century and continued in 17th and 18th, especially through integration of Shans and Mons into a Burman-dominated polity. **Maritime trade** played a reduced role when the capital was moved inland, but monetization of the economy continued throughout the 18th century. <sup>2</sup>

#### **1519**

Following the arrival during the 15th century of a few European travelers (Nicolo di Conti, c. 1435), the Portuguese by treaty secured trading privileges at Martaban, and an increasing portion of the foreign trade was conducted by Europeans. <sup>3</sup>

#### **By 1527**

**Ava** was under **Shan** control, with the killing of the Burmese king and the installation of a Shan prince on the throne. This led to the flight of Burman refugees southward to Toungoo, which was situated on the Sittang River. <sup>4</sup>

## R. 1531–50

**Tabinshwehti** founded new Burman dynasty originating at Toungoo. His goal was to establish a centralized state in the Irrawaddy basin. 5

### Late 1530s

He made successful attacks on the Mon capital of Pegu. 6

### By 1539

He captured Pegu. 7

### 1542

**Tabinshwehti crowned king** of Lower Burma. 8

### 1546

He extended his power northward to Pagan and assumed the title King of All Burma. With Portuguese mercenaries he attacked unsuccessfully both Arakan to the west and Siam to the east. (The Portuguese had secured trading privileges in Martaban in 1519, and Europeans were increasing their involvement in foreign trade.) 9

### Late 1540s

Tabinshwehti launched attacks on Martaban. 10

## R. 1551–81

**Bayinnaung**, successor to Tabinshwehti. Acted as a **model Buddhist king**: building and 11

repairing pagodas and monasteries, ordaining and feeding monks, and distributing copies of the **Tipitaka** (the Buddhist scriptures). By bringing **Mon** princesses into the palace and taking Mon chiefs as brothers, Bayinnaung sought to resolve the longstanding Burman-Mon rivalry. In the tradition of great Burmese kings, he exchanged missions with China, Bengal, Sri Lanka, and Portuguese Goa, reflecting his vision of a Burmese role in a wide diplomatic world. Bayinnaung himself launched ships on commercial voyages. He promoted commerce by appointing officials to supervise merchant shipping, by standardizing weights and measures, and by collecting and collating laws and judicial decisions. His was an exceptional rule because he was able to extend his overlordship over such a great distance from Pegu, his capital, into areas like Lan Sang, which had never before been under Burmese control.

### By Late 1550s

**Bayinnaung's** overlordship accepted by most Shan states.

### b. [Siam \(Ayutthaya\)](#)

**Administrative centralization** of Siam attributed to efforts of **King Trailokanat** (r. 1448–88); but most of institutionalized form of government probably resulted from reign of King Naresuen the Great (r. 1590–1605). Under this king, Siam regained its independence from Burma and emerged as most powerful kingdom in mainland Southeast Asia. 1

Development of **overseas trade** can be dated as early as 1368. By the early modern period, Siam was a major source for sappanwood and pepper in the Chinese trading network. 2

Siamese **adopted Hinduism** along with **Theravada Buddhism**. Hindu concept of divine kingship, and accompanying rituals, provided important sources of legitimation. But in Siamese society, the claim to divinity operated without the internal checks characteristic of India, for Brahmans had little influence at the court. This may explain the pronounced aspect of absolutism in Siam. Yet Buddhism was dominant in the cultural system that emerged in the early modern period, particularly in providing signs of legitimation (and delegitimation in the face of popular unrest) for rulers. **Royal interaction with sangha** (groups of monks) provided especially important occasions for public statements of rulers' support of Buddhist precepts; nevertheless, Thai rulers closely controlled the sangha through cultural patronage (their support ranged from sponsorship of architecture and sculpture to public processions). 3

### 1538

As a measure of impact of military technology, King **Phrachai** (r. 1534–46) retained 120 Portuguese to instruct Siamese soldiers in musketry. 4

### 1550

**New fortification style** was introduced around the Siamese capital. **King Maha Thammarcha** (r. 1569–90) also purchased large supplies of foreign cannon. Consequently, by the time Naresuen the Great launched campaign to consolidate Siam, the Siamese royal army was well equipped and trained in the use of firearms. 5

### 1569

First **fall of Ayutthaya** to invading Burmese army. 6

### By 1579

China created the **Siamese Language Department** at the Official Translation Office, perhaps a measure of the importance of Siam as a trading partner. 7

### 1590

**King Naresuen the Great** regained independence and utilized political, economic, and military forces to transform fragmented kingdom into relatively centralized state. 8

Portuguese trading stations were established in the 16th century, and around the beginning of the 17th century large numbers of Japanese were active in Siam in war and trade. 9

### 1602

A Dutch trading post was established at Patani, where the English soon followed, until their withdrawal from Siam in 1623. 10

### R. 1656–88

King Narai most energetic in pursuit of trade with foreigners. His curiosity about Persian and French cultures made his court known for its openness. 11

## 1664

By a commercial treaty, the Dutch gained a monopoly of Siamese foreign trade, which was, however, thwarted by French intrigue; a French embassy and military expedition (1685) in turn failed to secure the acceptance of Christianity and French influence and led to 12

## 1688

A popular revolt that began a period of prolonged civil war. Prompted in part by reaction against Narai's openness, it became anti-European. European trade languished, but Chinese and Muslim trade continued at a high level to take up the slack. 13

## 1690s

By this time a dramatic **decline in trade** with Muslims and Europeans could be measured, although the Chinese trade helped to fill the gap. 14

## 1767

A **Burmese invasion** destroyed Ayuthia and compelled temporary acceptance of Burmese rule until 15

### **c. [Cambodia](#)**

**Endemic instability characterized this period in Cambodia.** By **mid-15th century**, the Thai-oriented administration of **Angkor** region was overthrown by forces loyal to **Phnom Penh**, but by end of the 15th century, conflict developed among the new rulers. 1

A **Khmer** revival in early 17th century was followed by a Thai overlordship of Cambodia in the 18th century. From the 17th century, the traditional regions of dissidence could rely on Vietnamese support, setting in motion a whipsaw between Vietnam and Siam, with Cambodia in between. As the importance of foreign powers in Cambodian internal affairs increased, the pattern of increasing intrusion of the Vietnamese into Cambodian life was symbolized by Vietnamese activities that resulted in the sealing off of Cambodia from maritime access to the outside world. This occurred at the time that other Southeast Asian countries, especially Siam, were becoming more involved in the outside world. 2

Significant social changes occurred during this period: the decline in the importance of a brahmanical priestly class (which had effectively linked landholdings, control of slaves, religious practices, education, and the throne) and the increasingly widespread influence of the Thai on Cambodian life (including the transformation of the Khmer language, i.e., the replacement of Angkorean syntax with Thai syntax). The shift of the capital from the rice-growing hinterlands of northwestern Cambodia to the trade-oriented riverbanks in the vicinity of **Phnom Penh** took place during this period. Another important element at this time was the inability of the king to deliver protection and stability, which undermined his position in the eyes of his subjects. 3

### **1560–90**

Cambodian troops took advantage of Thai weakness (exacerbated by 1569 Burmese sacking of **Ayudhya**) to raid Thai territories. 4

## 1594

Defeat of **Lovek (Khmer)** by **Ayudhya**.

5

## 1620s

Territorial expansionist activities by the **Nguyen** overlords of Vietnam cut off Cambodia from maritime access to the outside world and resulted in the loss of thousands of ethnic **Khmer** to Vietnamese rather than Cambodian control.

6

## 1750s and Early 1760s

Relative calm with respect to invasions from Siam and Vietnam, but internal chaos from a series of coups and countercoups by rivals in the royal family.

7

## 1767

A Thai prince and supporters fled to Cambodia when **Ayudhya** fell to Burmese army.

8

## 1768

**Taksin**, new ruler in Siam, invaded Cambodia to defeat potential Thai rival who was trying to set up a competing Thai kingdom.

9

## 1770s

Continued Thai pressure on Cambodia while Vietnamese powers were distracted by internal threats (the **Nguyen** dealing with a populist rebellion led by the **Tay Son** brothers).

10

## 1772

Thai burned down **Phnom Penh**. 11

## 1778

Thai invasion of Cambodia. 12

## 1779

Thai placed their own protegé, seven-year-old Cambodian prince **Eng**, on throne under Thai guardianship. 13

## 1790

Boy prince **Eng** was taken to Bangkok to be anointed; returned to Cambodia in 1794. 14

## **[E. East Asia, c. 1500–c. 1800](#)**

### **[1. Overview](#)**

The early modern period in East Asia involved deliberate **isolation** from many larger world patterns, though Vietnam was open to significant contact with other civilizations. **Consolidation of many established patterns in China and Korea contrasted with important new political and cultural developments in Japan.** <sup>1</sup>

## 2. [China, 1522–1796](#)

### a. [The Remainder of the Ming Dynasty](#)

#### 1522–67

The period began with the completion of Ming political forms, sketched earlier (see (See [The Early Ming](#))). During the later Ming, **cultural developments and population growth** seized center stage. During the **Jiajing reign** of Shizong (b. 1507), Ming armies fought off the attacks of Altan Khan, prince of the Ordos, and “Japanese pirates,” many of them not originally from Japan, but so designated in contemporary sources. <sup>1</sup>

#### 1572–1629

The **Wanli reign** of Shenzong (b. 1563) was famed for its cultural achievements as well as for corruption, in-fighting, and the power of eunuchs at court. <sup>2</sup>

#### 1592, 1597–98

**Japanese invasions** of Korea, sent by Hideyoshi (1536–98), necessitated Chinese military assistance and were eventually repelled, though not without considerable loss of life and great expense. <sup>3</sup>

In **government**, Ming continued the trend begun in Song, and exacerbated in Yuan, of centralizing autocratic power. Taizu abolished the position of prime minister (1380), eliminating the last impediment to complete autocracy; he also began the practice of flogging ministers at court. The rise of a new administrative body, the Grand Secretariat, dated from the early 15th century. The tradition of remonstrating officials remained <sup>4</sup>

alive; especially famous in this regard was Hai Rui (1514–87), who risked life and limb in confronting his master. The Ming **military** built on the Yuan garrison model and the native militia system.

In **local government**, Ming instituted the *lijia* system for local tax collection and surveillance. Ming effectively created provincial-level government, and it would subsequently remain as such. Local governance became increasingly difficult, for as population grew steadily, the number of counties and prefectures did not keep pace, thus allowing the number of residents within a given magistrate's jurisdiction to mushroom. China's **population** returned to 100 million probably in the early 15th century and soared to perhaps as high as 200 million a century later. China's major cities of Song and Yuan did not continue to grow, but middle-level market towns sprouted around the country.

From the start of the Ming, efforts were made to repopulate northern China, sparsely populated under the Yuan, with migrant farmers so as to develop the **economy** there. Land taxes were graduated according to the arable quality of the land, and thus the far richer south paid an overwhelming percentage of the state's tax revenues. Under Grand Secretary **Zhang Juzheng** (1525–82), the rationalizing “**single whip**” laws simplified tax collection nationwide. The only major state monopoly was on salt, though by late Ming the government empowered a group of salt merchants with distribution responsibilities; they later became fabulously wealthy.

In addition, new crops from the Americas were introduced to China via the Philippines, effectively contributing to the capacity of agriculture to support a larger population.

In **education**, Taizu ordered the creation of a nationwide system, with schools in every county and prefecture, as a means of nurturing future officials for the state. He reinstated civil service examinations at the provincial and national levels (1370–71). Private academies, which prospered especially in the 16th century, also provided talented men for recruitment to state service. By the end of Ming, there were far more men who had passed the examinations than positions for them, a cause of social disorder. Stipends were kept purposefully low. The continued spread of **printing** resulted in greater access to the state bureaucracy and a seeping down of Chinese cultural traditions to local society.

Ming **intellectual life** was initially dominated by followers of the Cheng-Zhu school of Neo-Confucianism, such as Xue Xuan (1392–1464). The *Xingli daquan* (*Great Collection on Nature and Principle*), a digest of moral philosophy from the writings of 120 scholars of the Cheng-Zhu school, was published under imperial authority in 1416. Signs of a divergence from orthodox Cheng-Zhu teachings were evident in the naturalism and quiescence of Chen Baisha (1428–1500), a popular teacher from southern China. **WANG YANGMING** (**Wang Shouren**, 1472–1529) was the greatest thinker of his age and an eminent official as well. Although perceived as attacking the Cheng-Zhu school, he saw himself as developing from it a style of Neo-Confucianism that asserted

the importance of extending the individual's "intuitive knowledge." Influenced by Buddhist practice, he stressed meditation as the nurturing praxis for the mind to come to moral judgment, the "unity of knowledge and action," and the innate capacity of every man to attain sagehood. Wang's disciples, however, went their own ways. Irreverent iconoclasm eventually cost one of them, **Li Zhi** (1527–1602), his life. Wang's teachings were popular elsewhere in East Asia, especially in Japan.

Less vital than they had been earlier, Buddhism and Daoism remained eclipsed through the Ming. A number of thinkers, such as **Lin Zhao'en** (1517–98), taught the "unity of the three teachings" (namely, Confucianism, Buddhism, and Daoism). 10

In **scholarship** there was a growing trend toward compiling massive encyclopedias and compendia. One such project was supervised by the Hanlin Academy in Beijing: *Yongle dadian* (*The Yongle Encyclopedia*), into which entire works were transcribed—an imposing work of 12,000 manuscript volumes, completed in 1407. Following Tang, Song, and Yuan precedents, numerous dynastic legal and administrative codes were compiled. 11

Contacts between Chinese elites (and the late Ming court) and the **Jesuits** produced a short-lived but curious bond. **Matteo Ricci** (1552–1610) won toleration for the Jesuits by adopting Chinese ways; he lived in Beijing and served the court by, among other things, preparing a map of the world. **Adam Schall von Bell** (1591–1666) went to Beijing (1662), where he was charged (1630) with reforming the dynastic calendar; he cast astronomic instruments based on the latest Western technology, which was much appreciated by the Ming court. In addition to works of religious content, the Jesuits published works on mathematics and other sciences, providing an important conduit for Western knowledge to penetrate China. The first major Western work on Chinese history was by the Augustinian monk Juan Gonzalez de Mendoza, *Historia de las cosas mas notables, ritos y costumbres del gran reyno de la China* (1585). 12

The Ming is considered the literary apex for **vernacular fiction**. Such long novels, often lifeworks, included *Xiyou ji* (*Journey to the West*, also known as *Monkey*), by Wu Cheng'en (1506?–82?); *Shuihu zhuan* (*Water Margin*, also known as *All Men Are Brothers*), traditionally attributed to Luo Guanzhong (1330?–1400?); *Sanguo zhi yanyi* (*Romance of the Three Kingdoms*), also attributed to Luo Guanzhong; and *Jin ping mei* (*Golden Lotus*), a 16th-century novel whose author is unknown. During the Ming, **vernacular drama** continued to be popular. **Tang Xianzu** (1550–1616) wrote what is considered the greatest drama of the era, *Peony Pavilion*. 13

In **art**, Ming painting styles generally followed those of the Song. Emperor **Xuanzong** (b. 1399, r. 1425–35) was a fine painter in the southern Song fashion. **Dong Qichang** (1555–1636) was one of the great calligraphers and painters of the late Ming; he was an art critic as well. **Pottery** in the early Ming achieved bold effects by application of "three color" glazes. The **Jingdezhen** imperial kiln gained renown for its production of such pottery. In the late Ming, decoration in overglaze enamels, often in combination 14

with underglaze blue, was used to startling effect, especially in urban areas.

By 1500 a rotary disc cutter was being used to cut jade, highly valued in China since the 13th century B.C.E. By 1593 a **modern form of the abacus** was in use. <sup>15</sup>

## b. [The Qing Dynasty](#)

### [MANCHU \(QING\) DYNASTY \(1644-1796\)](#)

**Peasant rebellion and ethnic strife erupted at the end of the Ming dynasty**, and an impoverished central government was no longer able to meet these challenges. A rebel band under the command of **Li Zicheng** (1605?–1645) finally captured the capital at Beijing, and the last Ming emperor committed suicide. Several decades earlier, in eastern Manchuria, **NURHACHI** (1559–1626, **Taizu**) had organized militarily (1615) under eight banners a group of Tungusic tribes. Later, Mongol and Han Chinese living in northeastern China were incorporated into each of their own eight banners. In 1616 Nurhachi, who had had considerable contact with the Ming, took the title of emperor of the Hou Jin (or Later Jin) dynasty, following on the ethnic descent of his own people from the Jurchens of the 12th and 13th centuries, and took the clan name of Aisin Gioro. Only later (1634) did his people adopt the name **MANCHUS** (probably from the bodhisattva of learning, Manjusri). In 1618 his armies defeated the Ming and seized part of Liaodong, where he began to set up a government with local Han Chinese assistance. In the year before his death (1625), Nurhachi moved the capital to Shenyang (Manchu name, Mukden) and began to build a civil administration patterned closely on the Chinese model. There in 1636 the Manchus, under Nurhachi's son **Abahai** (1592–1643), proclaimed the **Qing Dynasty**, having already quelled the other northeastern peoples and attacked south of the Great Wall on several occasions. When Li Zicheng's forces took Beijing in 1644, a Ming general, **Wu Sangui** (1612–78), in collaboration with Manchu prince regent **Dorgon** (1612–50), allowed the Manchus to cross the Shanhai Pass into China unhindered rather than surrender to the rebels.

1644–1911

The **Qing dynasty** commenced when Manchu forces entered Beijing, attacked the rebel forces of Li Zicheng, and defeated them. 2

Whereas earlier conquerers had discriminated against the subject Han populace, the Manchus worked to establish good relations with the Chinese under their rule. The Qing carried over the Ming **governmental structure** in large part, save the addition of the Grand Council. There was Manchu-Chinese parity in the leadership of each of the six ministries. Local self-governance was handled through the *lijia* system taken over from Ming, with tax-collecting duties added to its functions in Qing. Through a community compact system, the laws and Confucian values were directly imparted to local people in periodic lectures. 3

The **population** surged to more than 300 million by 1750, as high as 400 million by 1850; changes in local administration did not keep pace. Sparsely populated areas such as Yunnan and Guizhou began to receive larger numbers of Han Chinese. 4

The **recruitment system into government service**—the civil service examination system—was carried over from Ming. These were highly competitive exams, held at three stages (local, provincial, and national or metropolitan). Once a person was appointed to a post, he usually held it for three years. With the rapid population increase of the 18th century and the lack of concomitant expansion of government, many graduates, unable to find employment, became professional scholars and teachers. 5

**Military** garrisons of the eight Manchu banners were distributed among strategic provincial cities, though Han Chinese were appointed in the provinces to the command of Chinese auxiliary troops. Four Chinese were sent as governors to hold the south and southwest during the Shunzhi reign at the beginning of the dynasty. 6

In **agriculture**, the development of faster-ripening strains of rice—30-day growing cycles were achieved in Qing times—made possible larger yields, which in turn meant more crops and the ability to sustain more people from the same amount of land. 7

## 1644–61

During the **Shunzhi reign** of Emperor Shizong (nephew of Dorgon), the Manchus, together with Han Chinese armies, consolidated Qing control, defeating various itinerant Ming pretenders and loyalist bands in the south by 1659. Conquest was accompanied by the imposition of the Manchu-style shaven head with the queue for men. Foot-binding, at first forbidden (1638, 1645, 1662), was ultimately permitted to Chinese only (1668). 8

## 1645–83

A Taiwan-based pirate band, claiming continued allegiance to the Ming, was begun by Zheng Zhilong (1604–61, executed in Beijing), and he was succeeded by his son, **Zheng Chenggong** (1624–62), known to Westerners as Koxinga from a rendering of his Chinese title, Lord of the Imperial Surname. They raided the southeast China coast, seizing Xiamen (Amoy, 1653) and Chongming Island (1656), attacking as far as Nanjing (1657), and finally expelling the Dutch from Taiwan after a prolonged battle (1661–62). In 1663–64, Balthasar Bort with a Dutch fleet helped a Qing army drive Koxinga's son, **Zheng Jing** (1642–81), from the Fujian coast back to Taiwan. Ultimately, the Qing sent an armada to put an end to the Zhengs' attacks on its coast, when Zheng Keshuang (1670–1707), Zheng Jing's son and the last of the Zhengs to control Taiwan, surrendered to the Qing. Taiwan was then brought under Chinese imperial administration as an appendage of Fujian province.

9

### 1673–81

**The Rebellion of the Three Feudatories** erupted when Wu Sangui and two other former Han collaborators with the Manchus, having been awarded healthy satrapies in the south for their efforts in bringing Manchu rule to China, revolted against the Qing. After eight years of fighting, the rebels were quelled with the help of other Han generals.

10

### 1661–1722

The **KANGXI REIGN** of Emperor Shengzu (b. 1654, personal rule began in form 1667, in fact 1669) opened an extraordinary period of cultural achievement, possibly surpassing the best of earlier dynasties. His was the longest reign in Chinese history. Kangxi acquired many of the habits and capacities of the well-educated Han elite. He was initially tolerant of Jesuit missionaries and very interested in the technology they introduced from the West, but later grew weary of their doctrinal squabbles. He was a patron of the arts and of learning, sponsoring major scholarly enterprises. He also made six personal tours of his empire to observe local conditions firsthand.

11

### 1670

A Portuguese embassy under Manoel de Saldanha, like that of Bento Pereyra de Faria (1678–79), won only confirmation of the status of Macao. The subsequent missions of A. M. de Souza y Menezas (1726) and F.-X. Assis Pacheco y Sampayo (1742) achieved no more.

12

## 1675

A revolt in Chahar was quickly suppressed.

13

## 1688

**Galdan** (1632?–97), chief of the Olöt (Eleuth, western Mongol) Dzungars, attacked Mongolia from Central Asia. Kangxi personally led the defense of the Khalka states of central Mongolia (1690). After several assaults, Galdan's forces were finally crushed (1696) near Urga, and Galdan took poison the following year. Qing military colonies were established in the region.

14

## 1689

The **Treaty of Nerchinsk** with Russia was China's first treaty with a European nation. Earlier, the Russian Poyarkhov explored the Amur River region (1643–46), and Khabarov built a fort at Albazin (See [1689](#)). Qing forces attacked Fort Albazin (1685–86), territory the Manchus considered their own. The treaty stipulated Russian abandonment of Albazin and of military pressure for commercial contacts and continued peace. L. V. Izmailov established a trading agent and Russian Orthodox church in Beijing (1720–21).

15

## 1717

The Olöt **seizure of Lhasa** under the direction of Galdan's nephew, Tsewang Rabdan (1697–1727), was learned of too late in Beijing to save a relief column from annihilation (1718). Well-prepared armies from Gansu and Sichuan drove the Mongols out of Tibet (1720), enthroned a popular Dalai Lama, and established imperial garrisons there.

16

## 1721

A revolt in Taiwan led by Zhu Yigui was suppressed.

### 3. [Korea, 1392–1800](#)

#### 1392–1910

The **YI DYNASTY** (or **CHOSŬN**) lasted longer than any other in Korean history. **YI SŬNGGYE (KING T'AEJO**, r. 1392–98) built the dynasty through a combination of military might and the backing of the literati. The rising sociopolitical importance of this literati class marked the entire period. Yi Sŭnggye began with a policy of deference toward the Ming dynasty in China, both to keep the peace with China and to prop up his legitimacy at home. Embassies were sent to Beijing at regular intervals each year. “Japanese pirates” continued to harass the Korean coast from the island of Tsushima.

The hereditary literati class was known as the *yangban*, or “two orders,” because its members combined the civil and military functions of state control. During the Yi period, far more families acquired *yangban* status than under the Koryŭ aristocracy. The increased number of potential officials meant that the examination system loomed ever more important as a means of selecting the best. Likewise, *yangban* monopolized the civil service exams and hence access to office. There was a National Confucian Academy in the capital at Seoul. Examinations were held every three years, but they also could be taken at many irregular times. In the latter half of the 15th century, Neo-Confucian literati began to gain attention in the central government. These were *yangban* scholars of a moralistic bent, unlike the primarily scholar-official group of *yangban* who had been influential until then. The conflict between the two groups led to a series of four “literati purges” from 1498 to 1545.

The highest Yi **governmental body** was originally the State Council. Under it were the Six Ministries, which, as government became increasingly bureaucratized, grew in importance. In addition, the Royal Secretariat was responsible for handling documents of state that passed to and from the throne.

**Land** allocations in the Yi period followed guidelines established by T'aejo. Current and former officials received lands commensurate with their rank. **King Sejo** (b. 1417, r. 1455–68) revised this law (1466) to eliminate former officials from allocations. This system was later changed (1556) to a straight salary system. Improvements in agricultural techniques led to greater productivity for the peasantry. As early as 1430, a farmer's manual for Korea was published, *Straight Talk on Agricultural Matters*. Peasants were legally forbidden from abandoning the land they worked. Most were self-sufficient tenant farmers. They were responsible for a **land tax**, a tribute tax, and military and corvee duties, much like the system in Tang China. There was also a slave population. Over time, the landed estates of *yangban* families grew larger, especially after the state ceased allocating lands to them. This reduced the tax revenues coming into the central government and brought further misery to the peasantry. Changes were effected in the various taxes and duties, and Ever Normal Granaries were established throughout the country. By the middle of the 16th century, these dislocations had caused many peasants to leave their land and led to the rise of rebel forces. The Japanese invasions not only decimated the land, they also destroyed many land registers. Taxable lands in the early 17th century were reduced to a third of the figure prior to the invasions.

A monetary **economy** developed rather late in Korea. Paper (1401) and coin (1423, 1464) currency were issued but did not circulate widely at the time. Cloth was still the mainstay of transactions. During the 17th and 18th centuries, rural markets cropped up in ever larger numbers, with more than 1,000 by the end of this period. Commercial growth spurred the development of merchant organizations.

### 1400–1418

During the **reign of King T'aejong** (1367–1422), efforts to reconstitute an aristocracy were severely crushed as a Chinese bureaucratic structure was regularized. He had already abolished all private armies, a holdover from the late Koryŏ era, in an effort to centralize military control of the state.

### 1418–50

The **reign of King Sejong** continued this trend with the establishment of the Hall of Worthies, at which the finest scholars studied ancient Chinese texts and institutions.

### 1442

A gauge for measuring rainfall was invented, roughly two centuries before a similar invention emerged in the West. 8

### 1446

On orders of the king, a group of scholars devised an ingenious alphabet for the Korean language, *han'g*l. This invention was not received happily by many *yangban*, because it made learning to read much easier and broke their control over learning solely in the more difficult literary Chinese language. Sejong persevered, founding an Office for Publication in Han'g<sup>l</sup>. **King Sejo** later set up a similar office to translate Buddhist sutras into Korean. 9

### 1451

The state-sponsored *Kory*sa (*History of Kory*) was finished. 10

### 1457

The military structure was completely reorganized. 11

### 1469–94

During the **reign of King S**ngjong, rural-based Neo-Confucian scholars began to rise to center stage, rather than remaining influential as a group locally. They were principally influenced by the works of Zhu Xi (1130–1200) from Song-period China. 12

### 1471

After a number of earlier efforts, a national code of laws was promulgated. It effectively standardized the new *yangban* governing structure. 13

## 1495

*Tongguk t'onggam* (*Comprehensive Mirror of the Eastern Kingdom* (Korea)) was issued, <sup>14</sup>  
the first full history of Korea, covering from Tan'gun through the fall of Koryŏ .

## 1498

The first **literati purge**, during the reign of King Yŏnsan'gun (r. 1494–1506, b. 1476), <sup>15</sup>  
in which the older *yangban* elite sought to get rid of many of the Neo-Confucians. A  
second purge occurred in 1504.

(See [1493](#))

#### 4. [Japan, 1542–1793](#)

##### [TOKUGAWA SHOGUNS \(1603-1867\)](#)

### 1542 or 1543

**Portuguese** aboard a Chinese vessel landed near the island of Tanegashima, off the southern coast of Kyushu. They introduced the musket, which soon modified Japanese warfare. Other Portuguese ships followed and entered into trading relations with the lords of western Japan.

<sup>1</sup>

### 1549–51

**Francis Xavier** (1506–52), the famous Jesuit missionary, introduced Christianity into Japan, proselytizing among the feudal domains of the west and also in Kyoto, but with little success. On the whole he was well received, and in some cases the feudal lords even encouraged conversions in the hope of attracting Portuguese trade. But the doctrinal intolerance of the missionaries soon earned them the bitter enmity of the Buddhist clergy and led to proscriptions of the new religion in certain fiefs. Xavier left behind two Jesuits and the Japanese converts who formed the nucleus of the new church.

<sup>2</sup>

### 1568

**ODA NOBUNAGA** (1534–82) seized Kyoto and set up a puppet shogun, Ashikaga Yoshiaki (1537–97, r. 1568–73). Lord of the provinces of Owari, Mino, and Mikawa east of Kyoto, Nobunaga had acted in response to a secret appeal from the emperor. This daring blow gave him all but total control of central Japan.

3

## 1568–1600

The process of political disintegration had already run its course by the **period of national unification**, or **Azuchi-Momoyama period**, and in these few decades, through the efforts of three great leaders, the nation was again united as the periphery was gradually subjugated by the military hegemony of the capital region. This was unquestionably one of the most dynamic epochs of Japanese history. “Japanese pirates” were at their height and were active even in Thai and Philippine waters. Korea was invaded on two separate occasions. **Closer contacts with the Asian mainland and with Europeans resulted in an influx of new intellectual and artistic currents.** Buddhism was in decline and its monasteries were being deprived of their military power, but militant Christianity was at its peak in Japan, and lay learning was revived after the years of warfare. New skills and new products from the West profoundly affected the economy of the land, and in those years of relative peace Japan's wealth and productivity expanded rapidly. The private-customs barriers that had hampered trade were abolished, and the old monopolistic guilds (*za*) for the most part came to end.

4

The artistic and intellectual spirit of the period contrasted sharply with what it had been in the Ashikaga era. It was a more exuberant, expansive age. Earlier Zen-inspired stress on refinement and simplicity gave way to shows of great pomp and to ostentatiousness. Architecture, for example, demonstrated a love of gorgeous design and majestic size. Castles and palaces rather than monasteries were the typical structures of the day.

5

## 1570

**Nagasaki** was opened to foreign trade by the local lord, mura (sometimes dated 1567 or 1568). This small fishing village soon became Japan's greatest port for foreign commerce.

6

## 1571

**Nobunaga** destroyed the Enryakuji on Mount Hiei, thus eliminating the most powerful

7

of all the monasteries as a military force. In these same years he also waged usually successful wars against other Buddhist groups, especially the militant cliques of the True Pure Land sect (Ikko sect), as in the siege of their central monastery, Ishiyama hongani, in Osaka (1570–80). Nobunaga's violent opposition to Buddhism as an organized political force finally broke the temporal power of the monasteries.

## 1576

Nobunaga set to work on the **Azuchi castle** on the shores of Lake Biwa. This was the first great castle of Japan and heralded the beginning of several decades of widespread castle building. Azuchi was destroyed at the time of Nobunaga's death.

8

## 1577–82

**TOYOTOMI HIDEYOSHI** (1536–98), Nobunaga's brilliant, lowborn general, conquered much of western Japan from the Mori family in the name of Nobunaga.

9

## 1578

The death of **Uesugi Kenshin** (1530–78), together with the earlier demise of his great enemy, **Takeda Shingen** (1521–73), removed two formidable rivals of Nobunaga in eastern Japan.

10

## 1578

The conversion of **Fukushima Tomo Satoru** (Yoshishige, 1530–87), a powerful lord of Kyushu, to Christianity gave the foreign religion a greater foothold on that island, where it had become quite strong since the conversion of some lesser lords of the western littoral, such as **Mura** (1562) and **Arima** (1576). The Christians, who were for the most part confined to the fiefs with Christian lords, were estimated at 150,000 in 1582.

11

## 1582

**Nobunaga was killed** by a discontented general, Akechi Mitsuhide (1526–82). Hideyoshi returned from his western campaigns and destroyed Mitsuhide. A contest for power with the remaining members of the Oda family, supported by **TOKUGAWA IEYASU** (1542–1616), one of Nobunaga's vassal lords in eastern Japan, brought about the elimination of the Oda, and an understanding was reached with Ieyasu.

(See [1460–97](#))

## 5. [Vietnam, 1527–1802](#)

The **Lê dynasty** ceased controlling the country in 1527, though the Lê nominally continued to reign until 1787. Several smaller states and contending Vietnamese parties arose, and the country was divided in half for much of the period under consideration. The 17th and 18th centuries also witnessed the arrival of ever larger numbers of missionaries and travelers from the newly expanding West. The period ended in a great rebellion and eventually the founding of an apparently secure regime, only to fall victim later to foreign powers. 1

### 1527

After eight kings were successively placed on the Lê throne (1505–27), and six of them assassinated, **Mac Dang Dung**, the head of one powerful family (the Mac), seized the throne and established the **Mac dynasty**. Other powerful families were unhappy, and all turned to China to act as mediator. China proposed a division of the land, with Mac ruling in the north and Lê, with its supporters, ruling in the south. During these years, the **Nguyên**, one of the most powerful families, was establishing a firm base in south central Vietnam, with a capital at **Huê**. This compromise lasted only a short time. In the civil wars that followed, the **Trinh**, another powerful house, actively supported the Lê in name, with a base at the capital in **Thang-long**. Throughout the period the population of Thang-long exceeded 100,000. Both Nguyên and Trinh cloaked their effort in the mantle of the Lê and sought to destroy the Mac. 2

### 1592

The Mac were effectively eliminated as a force. Trinh and Nguyễn continued their standoff, with the former still installing puppet Lê kings and running all affairs of government. From 1599 Trinh family leaders took over the title of prince, which was then passed on hereditarily. The Nguyễn were not amused.

3

The Trinh in the north tried to run an efficient government by periodically examining officials, though with limited results. The legal codes were made less stringent and tax laws were made fairer. The examination system was rebuilt, with public schools preparing students for them at various levels of the society. In the south, the Nguyễn ran an administration similar to that of the north, though after war later broke out with the Trinh, Nguyễn began to fashion a regime more appropriate to the south. Its examination system was geared to train men in three areas—administration, taxation matters, and ceremonial issues—a more practically oriented variant of the traditional Chinese model. Both used Confucianism to strengthen state control, as both sought control over all of Vietnam; the more Confucian a state one built, the more worthy of control over the entire land it appeared. Vietnamese Confucian scholars participated in reform efforts in the hope of stabilizing a bureaucracy that could control the military.

4

## 1624

With the arrival of **Alexandre de Rhodes** (1591–1660) and several other Jesuits, Catholic missionary work began in earnest, although Catholics had been in the country in the 16th century. In 1627, Alexandre was sent north into Trinh territory to found a mission. When it closed down (1630), there were nearly 7,000 Vietnamese converts; ten years later there were said to be 39,000 Christians in Nguyễn territory and 82,000 in Trinh lands. Alexandre lived in Vietnam for many years and learned the language extremely well; he compiled an early Latin-Vietnamese-Portuguese dictionary and is considered the pioneer in romanizing the Vietnamese language. This romanization system, *quốc ngữ*, enabled missionaries to acquire Vietnamese more rapidly. By 1700 there were 45 Vietnamese Catholic priests.

5

## 1627

Nguyễn-Trinh warfare erupted, lasting for several decades and involving huge campaigns (1648, 1661, 1672) by Trinh forces before a tentative peace agreement was reached in the late 1670s. The Nguyễn continued to gain control over the Mekong Delta region.

6

Domestic troubles were complicated by the arrival of European trading vessels in significant numbers from the early 17th century, first from Portugal and soon thereafter

7

from Holland. Relations with the West were initially less problematic than elsewhere in East Asia. From the early 17th century, though, Chinese traders outnumbered other foreigners in Vietnam; many Chinese families stayed for generations and established extensive trading networks throughout the region. English and French ships had arrived by mid-century. At first, the Trinh favored the Dutch while the Nguyen favored the Portuguese, but this changed over time. By century's end, the French were the most active in Vietnam. Catholic missionaries (Dominicans) had arrived in Vietnam by the middle of the 16th century, and Jesuits followed by the early 17th. Both Nguyễn and Trinh tried to use Catholic monks, especially the Jesuits, to acquire Western scientific information, although the clear success of the missionizing effort also made both regimes rather apprehensive.

### 1711

Despite efforts to centralize control over its villages, the Trinh had no choice but to allow village leaders to allot public lands within their ken. Eventually, local elites were avoiding taxation, adding to the onus on the poorer or less resourceful. By 1713, only a third of the populace was being taxed.

8

### 1730

The Trinh appointed officials to get peasants who had left their lands to return home; by 1740, it was estimated that a third of all villages under Trinh control had been deserted. Decline of social and public order meant that less land was under proper cultivation and less food was being produced. Famines ensued and rebellions brewed. Similar corruption and decay of the economic infrastructure characterized Nguyễn lands. This striking decline of social norms led to serious rethinking of traditional Vietnamese identity, including sharp words from women writers, such as Hồ Xuân Hương. Local rebellions became endemic, often coalescing around Buddhist temples, with monks arming their followers. Confucianism, closely associated with the discredited state, was openly abused. A crisis ensued.

9

### 1771–1802

The **Tây-son Rebellion**, led by three brothers surnamed Nguyễn from the village of Tây-son in south central Vietnam, erupted and quickly gained wide popular support. It first toppled the Nguyễn regime in the south in 1778 and then moved on the Trinh in the

10

north. The country was reunited. At first, an effort was made to prop up the Lê house, but that was eventually abandoned in 1787. Chinese armies invaded in 1788 in an attempt to seize Hanoi for the Trinh but were defeated by the brilliant general **Nguyễn Huệ** (1752–92), who proceeded to place himself on the throne.

## 1788–92

The **reign of Quang-trung** saw an effort to rebuild the economy through agrarian reforms and the establishment of communal population registers to return the wandering populace to the land. Tribute relations with China began again. The civil service examinations were reinstated, but in addition to competence in literary Chinese, successful candidates also had to demonstrate competence in works written in the demotic *nôm*. 11

In an effort to stimulate commerce and trade, a unified currency was instituted during the 31 years of Tây-son rule. Industry was also encouraged. Initial results were positive but proved short-lived. There were no strong rulers after the death of Quang-trung. As in other Southeast Asian societies and unlike elsewhere in East Asia, **Vietnamese women played a considerable role in commerce and trade**, including traveling aboard trading vessels internationally. 12

## 1788

Rebellious forces under **Nguyễn Anh** (1762–1820) took Saigon with French help. Successive victories ended with the capture of Huệ (1801). He took the throne as **Gia-long** (r. 1802–20) of the **Nguyễn dynasty**. 13

One of the great works of Vietnamese literature, *The Tale of Kiều*, was written by Nguyễn Du (1765–1820) at the end of the 18th century. A long poem or novel written in verse form, it combined Chinese characters and Vietnamese *nôm* ideographs. (See [Vietnam, 1802–1902](#)) 14

[NEXT](#)

## **F. The Pacific Region, 1513–1798**

The term “Pacific” is used here to refer to the “island Pacific,” not the Pacific Rim or the Pacific Basin. The latter two terms are generally used to describe the larger continental masses and nations that surround the Pacific Ocean, the Americas in the east and Asia and Australia in the west. <sup>1</sup>

### **1. The Pacific Islands in Pre-European Times**

The **Pacific Ocean** is the largest single feature of the globe, covering a third of the earth's surface. It contains some 25,000 islands totaling 1.6 million square kilometers scattered across about 88 million square kilometers of water. The region, which exhibits considerable physical and cultural diversity, is conveniently divided into **Melanesia** (islands of Solomons, Vanuatu, New Caledonia, Papua New Guinea, and parts of Fiji), **Micronesia** (small islands north of the equator), and **Polynesia** (many islands in the triangle stretching from Hawaii through New Zealand to Easter Island). The region contains several distinct types of island formations. Many of the Melanesian islands in the east are large continental masses with tall, densely forested mountains, deep valleys, large rivers, and swampy coastal areas. Many of the Polynesian islands are volcanic, with corrugated mountain ranges divided by deep valleys. The central and northern parts of the Pacific have low-lying coral islands surrounded by reef and sometimes just a meter or two above water. The physical geography of the islands helps shape their climate. Thus, the larger continental islands have warm temperatures, high humidity, and heavy rainfall. The atolls, with much smaller land masses, are more vulnerable to the elements. <sup>2</sup>

The Pacific was the last major habitable area to be settled by humans (See [Southeast Asia](#)). There was once much disagreement among scholars about how and by what route the Pacific Islands were settled, but recent archaeological, linguistic, and botanical research has resolved the controversy. It is now accepted that the ancestral homeland of Pacific Island peoples was in Southeast Asia, which was settled some 2 million years ago. From there, small numbers of people, probably in several waves, settled the then joint landmass of Australia and Papua New Guinea, perhaps 35,000 to 40,000 years ago. <sup>3</sup>

About 4,000 years ago, they branched out from the New Guinea mainland and reached island Melanesia, settling New Caledonia and New Hebrides (Vanuatu). By about 3,500 years ago, Fiji was settled. Five hundred years later, Tonga and Samoa were settled. In Samoa, from where no further migration seems to have taken place for the next 2,000 years, the basic institutions of Polynesian culture took shape. The Marquesas Islands were settled around 300 C.E., Hawaii and Tahiti around 600 C.E., and New Zealand 750 C.E.

The manner in which the islands were settled once aroused much debate. Andrew Sharp, a New Zealand scholar, argued that the Polynesians lacked the navigational technology and skill to embark on purposeful voyages of settlement across vast expanses of empty seas. Some of the islands were undoubtedly settled accidentally. However, combining oral and documentary evidence with practical seamanship, David Lewis has shown that ancient Polynesians had the knowledge and the skill to make a three-way voyage, to discover an island, return home, and then return to the new island to settle it. For the Polynesians, Lewis argued, the empty ocean was full of telltale signs (cloud formations, swell patterns, drift objects, patterns of bird flights), and they read these just as Western navigators read their charts. Purposeful voyages thus probably served as a major vehicle for the initial colonization of the islands.

Cultural diversity characterized the traditional Pacific, though most Polynesian islands exhibit linguistic and cultural similarities that are due, in part, to frequent trading and social contacts. The greatest diversity is found in the larger continental islands of Melanesia, where over a thousand languages are known to exist, most spoken by just a few thousand people. Ancestor worship, initiation ceremonies, warfare, and other such practices were an integral part of the traditional Melanesian world, as was subsistence agriculture. Melanesian societies were generally small in scale and egalitarian in ethos. Leadership was exercised by “big men” who achieved positions of power and authority through personal ability, ambition, adept manipulation of kinship and social networks, and the accumulation and strategic distribution of wealth. The position of big men was generally not heritable, though sons of big men, if they were able, had an advantage over other competitors.

Polynesian societies, on the other hand, were larger in scale and more hierarchically organized. Lineage defined and structured the social system. The lineage that could trace its roots back through several generations to a common founding ancestor, real or fictitious, claimed, and was accorded, a higher social standing and seniority. Its head was often the leading or paramount chief of the entire clan. Chiefs, variously known throughout Polynesia as ariki or *ali'i*, were thought to possess mana—moral power and authority—and had well-defined rights and obligations in relation to their people. They commanded respect and deference, exercised control over the production and distribution of the primary resources, and often received the first fruits of the land as symbolic tribute.

The chiefs exercised greater power in some Polynesian societies than in others. In Tonga,

Tahiti, and Hawaii, for example, their rule extended over large areas and thousands of people. Here, chiefs formed an exclusive and powerful class and married within that group. In Marquesas and New Zealand, the system of stratification was less developed. Micronesian societies exhibited traits found both in Melanesia and Polynesia. The smaller atolls in the Carolines, for example, were basically egalitarian in character, while high islands such as Pohnpei and the Marshall Islands had a highly developed system of chieftainships.

The population of the Pacific Islands at the time of European contact cannot be estimated with any accuracy. Some estimates place the population of Melanesia at 3.5 million, of which 3 million were found in New Guinea and 500,000 in the smaller islands of Melanesia. In Polynesia, the population numbered around half a million, though recent work suggests a much higher figure. In Hawaii, according to most conventional figures, the population at contact was around 250,000, but some recent researchers have put the figure at 700,000 to 800,000. The Micronesian islands probably had 100,000 to 150,000 people. People in the larger islands practiced some form of subsistence agriculture, while those in the smaller islands and atolls of the central and northern Pacific depended on the exploitation of marine resources. <sup>8</sup>

## **2. European Exploration, 1600–1800**

The first Europeans entered the Pacific Ocean in 1520. Between then and 1779, when Captain Cook died in Hawaii, hundreds of European explorers traversed the Pacific. In the 16th and 17th centuries, the main reason for the exploration was the search for the **Terra Australis Incognita**, which was believed to contain fabulous wealth. Later, scientific discovery and the search for alternative trade routes were important factors. The 16th century of European exploration was dominated by the Spanish and the Portuguese, the 17th century by the Dutch, and the 18th century by the English and the French. By the time of Cook's death, the islands had been charted and added to the world's rapidly growing corpus of geographical knowledge. The romance of the islands had entered European folklore, and the stage was set for more intensive European movement into the islands. Some of the main dates of European discovery are listed below.

1

### **1513, Sept. 25**

**Vasco Núñez de Balboa** became the first European to sight the Pacific Ocean, from the isthmus of Panama, and named it the Great South Sea.

2

### **1520, Nov. 28**

**Ferdinand Magellan** (Fernaο de Magalhaes) entered the Pacific and reached the Philippine Islands in 98 days, making no major discoveries en route. He was killed on Cebu.

3

### **1564–65**

**First Spanish colony on Philippines.** Good route discovered, Philippines to Mexico.

4

### 1567

**Alvaro de Mendana** (Spanish) set sail from Callao and early in 1568 sighted one of the islands of Tuvalu and Ontong Java before reaching the Solomon Archipelago.

5

### 1577–80

**Francis Drake** became the first English circumnavigator when he crossed the Pacific to the East Indies.

6

### 1595

**Mendana** left Callao in April on his second voyage to colonize the Solomon Islands. In May, he discovered a group he named **Las Marquesas de Mendoza** (Marquesas). He died in the Santa Cruz group in the Solomons on October 18, 1595.

7

### 1605–6

**Pedro Fernández de Quirós**, one of Mendana's captains, set sail again from Callao in December 1605 in search of new lands and unknown southern continents (**Terra Australis Incognita**). In April 1606, he sighted **La Australia del Espiritu Santo** (now Espiritu Santo) in the New Hebrides.

8

### 1642–44

**Abel Jansoon Tasman** (Dutch) sighted Tasmania, which he named **Anthony Van Dieman's Land**. He also explored **New Zealand** and parts of Tonga, Fiji, New Ireland, and New Britain. He proved that Australia was not part of a great Antarctic continent.

9

### 1722

**Jacob Roggeveen** (Dutch), sailing east to west, entered the Pacific in March, discovered Easter Island and Samoa. <sup>10</sup>

## 1766–67

**Captains Wallis** and **Carteret** entered the Pacific in search of the southern continent and discovered **Tahiti** and the Pitcairn Islands, respectively. <sup>11</sup>

## 1768

**Louis Antoine de Bougainville** entered the Pacific in January and visited **Tahiti**; subsequently, he went to **Samoa** and **Espiritu Santo**. His journal contributed greatly to the cult of the **noble savage** in France and Europe generally. <sup>12</sup>

### 3. [The Philippines, 1500–1800](#)

The earliest historical sources on the Philippines show that the archipelago had trade and diplomatic relations with East and Southeast Asia from at least the 11th century C.E. Medieval Chinese accounts of the Philippines show a **plurality of ethnic groups** living in **decentralized societies** and trading in forest and ocean products. Ethnolinguistic diversity in the archipelago was considerable, and modes of living ranged from swidden agriculture to fishing and wet rice cultivation. <sup>1</sup>

Spanish sources from the 16th century depict societies made up of local communities (*barangay*) under the leadership of hereditary chieftains (*datu*) who sprang from a noble class. Philippine society at this time can be broadly divided into those who had the right to bring lawsuits and change their political allegiance and those who did not. Within each stratum there was considerable variation in status. Leadership in warfare, particularly marine raiding, was a key constituent of political authority. *Datus* acted as judges in lawsuits, exercised control over communal property, and received a portion of the harvest as tribute as well as military support from the nobles who owed them fealty. The unfree classes included people who had fallen into bondage through debt, those who inherited the status of bondage, and chattel slaves. Movement between the free and unfree classes was possible in some areas of the archipelago, but in others social status was fixed and unchallengeable. Most parts of the archipelago had oral cultures, although an indigenous script apparently based on Indian models was used for Tagalog in the 16th century. By the 15th century, entrepôt ports were present in Cebu, Butuan, and Manila. Internal trading networks were highly developed within the archipelago, especially in the Visayas, with rice, raw materials, manufactured goods, and slaves exchanged over a wide area. Commerce and raiding tended to be combined in a distinctive political and economic matrix, which was based on the seafaring expertise of the region's inhabitants. <sup>2</sup>

In the 1400s, **Muslim trading states** were established in the southern Philippines and in parts of Luzon, a development connected with the spread of Islam throughout island Southeast Asia at this time (See [The Malay Archipelago and Peninsula](#)). These states were often alliances of *datus*, who cooperated for military and economic advantage under the authority of a sultan. The rights and powers of sultans varied from state to state, depending in large measure on the charisma of individual leaders and their ability <sup>3</sup>

to inspire loyalty, although the more commercially developed polities had relatively stable ruling classes. *Sharif* status (claimed descent from the family of the prophet Muhammad) was a component in political leadership.

Strategic position and naval strength, together with commerce, made the sultanate of **Sulu** an important economic and political power. The other major Islamic kingdoms were **Buayan** and **Magindanao** on Mindanao, which rose to prominence in the 16th century.

4

## 1521

Ferdinand Magellan became the first European to reach the Philippines. He was killed in a conflict with local people under the leadership of **Lapulapu** on April 27.

5

## 1543

The expedition of **Ruy de Villalobos**, sent by Charles I of Spain, was driven off by local resistance. The name **Felipinas** was given to the areas around Leyte and was later applied to the whole of the archipelago.

6

## 1565

Establishment of a permanent Spanish presence in the archipelago under the command of **Miguel de Legazpi**.

7

## 1571

**Manila** became the center of Spanish power. Much of the area of the modern Philippines was nominally under Spanish control by 1576, although their actual authority was severely restricted in many areas, and Mindanao and Sulu remained completely independent. Spanish expansion was fueled by a desire to take control of the trade routes from Malacca and Eastern Indonesia and those to China, all of which had their terminus in Manila.

8

Socially, the Spanish colony was a mix of indigenous people (**indios**), Spaniards, a small but influential population of Chinese, and **mestizos** (those of mixed descent). In later times mestizos and creoles from the Spanish colonies in Latin America also came to the

9

Philippines. Ethnic segregation was practiced, causing political tension. **Socioeconomic inequalities** were considerable. At village level, the Spanish sought to co-opt local leaders by increasing their privileges, in return for which the leaders took responsibility for collecting taxes and organizing labor service.

A **governor-general** was the supreme political authority in the colony. He was officially subordinate to the **Council of the Indies** in Spain. The **Royal Audencia** (est. 1584) acted as the supreme court and was intended to check abuses of power by the colonial government. Provincial governors were virtually independent of Manila. 10

Under the **Galleon trade** system set up in the late 16th century, only China and Mexico could trade in Manila, isolating the Spanish Philippines from commercial contacts with the rest of the Pacific region. 11

**Augustinian friars** accompanied Legazpi (1565) and were followed later by the Franciscans, Jesuits, Dominicans, and Recollects. The friars became a powerful political and economic force, exercising considerable influence on the colonial government. Following a decision in the 1580s, the church did all its proselytizing in vernacular languages, making priests vital intermediaries between the colonial government and the people. In the first few centuries of Spanish rule, there was close cooperation between the church and the colonial administration, partly because the papacy gave the Spanish crown complete authority over the missionary enterprise in the Philippines. Printing and education were by-products of the friars' missionary work. A Spanish-Tagalog Christian tract was the first book printed in the Philippines (1596), and in 1611 the Dominicans founded the University of Santo Thomas. 12

**Revolts** among the indigenous people broke out sporadically after the establishment of Spanish rule, ranging from indio attempts to regain sovereignty, such as the abortive revolt of **Magat Salamat** and **Augustin de Legazpi** in 1587, to expressions of economic discontent (e.g., the rebellion of **Magalat** in 1596) to religious movements, like the revolt in the **Kagayan Valley** in the 1620s. 13

From the late 16th century, Sulu, Magindanao, Buayan, and the Spanish competed for dominance of the southern Philippine region. Under the powerful sultan **Quadarat**, Magindanao had become the most important commercial, military, and political force in the region by the mid-17th century. 14

## 1635

The Spaniards established a fort at **Zamboanga** on Mindanao to provide a base for expansion in the southern Philippines. Magindanao and Sulu subsequently fought a number of wars with Spain, punctuated by peace treaties and trade agreements. 15

## 1663

Zamboanga fort abandoned. Spain played no part in the southern Philippines for the rest of the 17th century. In this period the **Muslim states** consolidated their internal power and traded with the Dutch. 16

## 1717

Attempts by Governor **Fernando Manuel de Bustamente** to reform government finances. 17

## 1718

The Spanish reestablished the Zamboanga fort, reopening hostilities with the Muslims. 18

## 1719

Clerical opposition to Bustamente's reforms led to his murder by friars. 19

## 1734

Volume of galleon trade increased through pressure from the Manila business community. 20

## 1744

Outbreak of the rebellion of **Dagohoy** the result of religious and political discontents. The rebellion lasted for several decades. 21

Political competition in the southern Philippines continued in the mid-18th century. The sultanate of **Cotabato** dominated Mindanao. In 1751 a major war broke out between Spain and Sulu. Sulu forces carried out extensive raids in the Visayas and Luzon, which caused serious problems for the Spanish, whose financial resources were strained by the unremitting warfare. 22

## **G. [Africa, 1500–1800](#)**

### **1. [Overview](#)**

The arrival of Europeans and Africa's consequent participation in the new South Atlantic system were the primary events in African history during this period. The supply of slaves entering the South Atlantic system first affected West Africa, oscillated between West and West Central Africa in the 17th through the 19th century, and drew slaves from Central and East Africa in the 18th and 19th centuries. Historians have **vigorously debated the impact of European contact on Africa and the impact of the transatlantic slave trade on African development.** The debate focuses on whether the transatlantic slave trade built on long-established patterns or involved profoundly different political and economic forces leading to new patterns of economic dependence. 1

The **volume of slave exports** from Africa is also highly contested, although most historians agree on some broad estimates and on the fact that the trans-Saharan and Red Sea slave trades predated and then continued alongside the transatlantic slave trade. The exact numbers of slave exports will never be known for certain, but historians generally agree that **roughly 9.5 million slaves were exported along the trans-Saharan and Red Sea trade routes over 11 centuries, and roughly 9.5 million slaves were imported into the Americas over four centuries.** The similarity of these two figures masks considerable differences, however. The transatlantic slave trade estimates imports. When **mortality of the Middle Passage** is factored in (approximately 25 percent, although it was higher earlier in the trade and lower later), the exports from Africa rise to around 12 million slaves. More important, the volume of slave exports across the Sahara and up the Red Sea was relatively stable over 11 centuries, while **more than 70 percent of slave exports across the Atlantic occurred during the 150 years** from 1700 to 1850, when the trade was most active. The magnitude of the transatlantic slave trade, therefore, was much higher and its impact more concentrated than the longer-lasting trans-Saharan and Red Sea trades. 2

The acquisition of slaves was not foremost in the mind of the first Portuguese navigator as he sailed in 1434 to Cape Bojador, in present-day Mauritania—and successfully 3

returned. **Portuguese overseas exploration** of sub-Saharan Africa was motivated by a series of linked objectives. It grew out of the political and economic transformation in Europe, particularly the consolidation of royal power in Portugal and the realignment of economic forces favoring trade over agriculture there. It was linked to the developing sense of European cultural, religious, and political superiority over non-Europeans, fueled by the Christian-Muslim wars and the Reconquista of the Iberian Peninsula. It was part of a general geopolitical strategy to outflank what the Portuguese understood as a monolithic Muslim world: to assist the besieged Christian monarch of the East, Prester John (there was indeed a besieged Christian ruler of Abyssinia) and to bypass Muslim and Jewish merchants' control over the **trans-Saharan gold trade**, which supplied 70 percent of the Mediterranean demand for gold before the discovery of the New World. The Portuguese were also interested in the commerce of exotic spices, textiles, and luxury goods and found themselves excluded from the established trade routes of the Mediterranean. The trade in slaves dominates the history of this period, but it is important to bear in mind that the Portuguese and other European merchants were interested in trade in a wide variety of goods as well as in forming political alliances.

It is also important to remember that **Europeans were not yet able to impose their will on Africans**. Indeed, Europeans did not have significant military superiority over Africans until the widespread use of the repeating rifle in Africa in the 1870s. Moreover, when Europeans actually sought to impose their will on Africans—as the Portuguese did in Angola and in Mozambique—they quickly found that they had to **adopt African political and military tactics in order to survive**. And finally, Europeans suffered extremely high mortality in tropical Africa, which undercut any sustained effort to colonize and control African territory directly, except for the more temperate regions of South Africa and isolated offshore islands of West Africa, the Bight of Benin, and the East African coast.

Because force did not work, the success of European commerce in Africa depended upon **Africans' willingness to participate**. This raises two important questions, which lie at the heart of historians' efforts to interpret the impact of the slave trade on Africa: Why did Africans willingly exchange such vast numbers of young men and women of the most productive and reproductive ages? Why did Africans become the laborers of choice in the New World plantation economies?

The second question must be answered first. Since the 12th century, there had been a renaissance in the Mediterranean Basin of large-scale agricultural units associated with **sugar production**. Sugar was a demanding crop, requiring strict, regimented labor. Slaves were widely used on these new sugar estates, and they were drawn from a variety of sources, including religious wars, the slave trade from the Black Sea, and sub-Saharan Africa. With the fall of Constantinople in 1452, the Black Sea sources of slaves for the expanding sugar frontier of the Mediterranean dried up, leaving the African slave trade the largest single source. Moreover, **Africans had the misfortune of being part of two**

**great disease environments:** the Old World temperate and the Old World tropical. Africans therefore had childhood immunities to a host of nasty illnesses, which provided them with a statistically lower rate of mortality than European bonded labor or Amerindians and which made them simply a better investment—particularly when sugar plantations spread to the New World in the late 16th century.

The question of why Africans sold so many slaves also points to the intersection of a variety of processes. Captives had long been a byproduct of conflicts between groups in Africa. The volume of slaves increased as smaller polities fused into larger ones. The transatlantic slave trade favored the participation of larger enterprises, like states, as opposed to individual raiders or kidnappers. When states organized large military campaigns, these wars yielded more slaves. The demand for slaves unquestionably **encouraged the military expression of political power** and led to the development of **warrior aristocracies** throughout the regions of the continent engaged in the slave trade. While rulers might go to war for political reasons, warriors did so for the booty. Increased warfare and the pace of political consolidation sharpened perceived differences between groups, helped to crystallize **ethnic identities**, and heightened political instability, which in turn fueled more wars. Warfare and enslavement directed the investment of capital into horses and firearms (the means of destruction), into defensive walls, and into consumer goods at the expense of investment in the means of production, like agriculture, crafts, and mining.

Slaves were exchanged for an assortment of European and reexported goods from the Orient, especially Indian cloth. Cheap baubles and shoddy manufactures were included in this assortment, but so were firearms, metal utensils, hardware, fine cloth, iron bars, and cowrie shells, which served as a currency in much of West Africa. Moreover, the **barter terms of trade** (the composition of the assortment of goods exchanged for a slave “unit”) consistently moved in favor of African sellers, who demanded and received a larger volume and greater variety of goods over the course of the slave trade. Especially where kings controlled the slave trade (in Benin, the kingdom of the Kongo, and Dahomey, for example) many of these goods flowed outward from the political center through patronage systems. Rulers' efforts to control the slave trade were also expressed in the development of bureaucracies designed to regulate external commerce.

Rulers were not always successful in regulating the slave trade or in controlling its potentially dangerous consequences. The kingdom of the Kongo was a well-established polity in the interior, south of the Zaire River, when the Portuguese first arrived there in 1481. It was held together by military power, kinship, and the judicious redistribution of scarce goods. The BaKongo king, Alfonso I, initially welcomed the Portuguese, who came as traders and as missionaries. Alfonso sought to monopolize the new traders and to insert their new goods into the system of redistribution that tied outlying governors to the political center. He encouraged his son to convert to Catholicism and to be consecrated as bishop. He encouraged the court nobility to convert and invited the

Portuguese missionaries and craftsmen to settle in the capital. As Portuguese demand for slaves increased, outlying governors became more interested in dealing directly with the newcomers. Eventually, the redistributive system collapsed and the Kongo kingdom plunged into civil war. In this period of chaos, a noblewoman, **Beatrice Kimpa Vita**, who was a Catholic, led a millenarian movement that married Christianity and local BaKongo beliefs in an effort to create a new sense of community, to Africanize Church teachings, and to expel Portuguese missionaries. The Portuguese and their BaKongo allies executed her as a heretic in 1706. The Kongo kingdom never regained its former prominence.

African participation in the slave trade had contradictory consequences for Africa. On the one hand, it led to **political consolidation**. On the other, because it fostered warfare, it created conditions for **political dissolution**. Similarly, the slave trade favored commerce, since many imported goods found their way into internal circuits of trade. Yet the export of millions of human beings reduced the size of the domestic African market. Warfare also discouraged long-term investment in agriculture, mining, and industry. Three aspects of the many contradictory consequences merit further discussion.

First, Africa's participation in the South Atlantic system clearly led to the **export of many millions of young, productive men and women**. However, it also led to the importation into Africa of **New World cultigens**, including maize, sweet potato, and cassava, which have become staples throughout much of tropical Africa. These New World crops yielded higher caloric returns than indigenous crops per unit of labor, and, according to some historical demographers, arrested population decline during the slave trade era. On a continent where land-to-labor ratios have historically been high, economic development might have been quite different if these cultigens had been imported and people not exported.

Second, although the proportion of male to female slaves exported from Africa to the New World changed over time and by region, historians estimate that **60 to 70 percent of those entering the transatlantic slave trade were males**. Since warfare, kidnapping, and other forms of enslavement netted more females than males (because more males were likely to have been killed while resisting or defending or because they were more intransigent), what happened to those female slaves not exported overseas? The answer is that female slaves were retained in Africa because they were more valued than male slaves. The retention of female slaves in Africa hints at subtle changes in gender roles and contributed to both **polygyny** (many wives) and **patriarchy** (male power).

Finally, just as in the case of Beatrice Kimpa Vita, the slave trade contributed to new forms of resistance against established political rule. In West Africa, many ordinary Africans increasingly turned to Islam as a means of providing a model for a **new and different community**. Beginning around 1660 with Nasir al-Din, a more **militant Islam** emerged as a reaction against the old, established political order. Although the early jihads, or holy wars, actually contributed to the slave trade by producing captives, by the

late 18th century Hausa peasants and Fulani herders swelled the forces of Usman dan Fodio's militant Islamic movement. Many joined to protest the enslavement of Muslims by nominally Muslim Hausa aristocracy. Paradoxically, the success of this jihad led to the creation of the Sokoto Caliphate, one of the most powerful and dynamic polities in West Africa, which maintained itself through annual military campaigns. These campaigns yielded a steady supply of slaves to feed the demand for agricultural labor in the caliphate. (See [Overview](#))

(See [1455](#))

## 2. [Regions](#)

### a. [Sudanic West and Central Africa](#)

#### 17th Century

The nomadic **Moors** of the western Sahara dominated the region. Two main groups constituted Moorish society in this era, the **Hassani** and the **Zawaya**. The Hassani, the military clans, ruled the Sahara north of Senegal and achieved political dominance over rival Moors, thanks to their military strength. The Zawaya, essentially clerical and commercial clans, occupied the southwestern Sahara and contributed the bulk of Islamic scholars and clerics. Most of the region's commerce was in the hands of the Zawaya. 1

#### 1591

A **Moroccan army under Djудар Pasha defeated the Songhay army**. Djудар Pasha's invasion of Songhay was triggered by the Moroccan desire to spread Islam and to gain direct access to Sudanese gold and slaves. Equipped with firearms, Djудар Pasha's invading force of 3,000 to 4,000 troops scored an easy victory over a Songhay cavalry equipped with lances and an infantry equipped with lances and bows and arrows. This was the **first recorded use of muskets in sub-Saharan Africa**. Songhay's defeat signaled the end of the last great Sudanese Empire. The decline of Songhay ushered in a period of intense but **localized political consolidation and economic development**. 2

#### 1599

In an effort to revive the Mali Empire's power, **Mansa Mahmud** attacked Jenne but was repulsed by Moroccan forces dispatched from Timbuktu. Mansa Mahmud's defeat marked the end of Mali's influence in the Middle Niger region; henceforth the kingdom disintegrated.

3

## 1618 Onward

The bulk of the Moroccan army returned, leaving garrisons in the important towns of the Middle Niger region and in Timbuktu. Decades after the Moroccan occupation of Timbuktu, descendants of the conquering troops began to assert their autonomy. These descendants, known as the **Arma**, exerted influence only in the regions neighboring their garrisons. The Arma became the overlords of Timbuktu, a position they would hold until the early 19th century. The Arma, however, faced **constant revolts from Timbuktu's inhabitants and from the nomadic tribes of the western desert**. Arma authorities regularly suppressed uprisings led by local Muslim scholars.

4

## c. 1537

The formation of the kingdom of **Kaabu**, which arose as a consequence of Mali's westward expansion. Malinke traders had migrated west to obtain gold and salt, paving the way for Kaabu to become the western seat of the Mali government. By the 16th century, Kaabu was the dominant power in the Senegambian region.

5

## c. 1500–1620

Hausa city-states gained strength in this era, largely because of their strong armies. Ruling aristocracies controlled these states' political, administrative, and military personnel. Underpinning the Hausa city-states' economies were productive peasants and lucrative trade routes. One major route linked Hausaland with the Volta Basin; another led to the Sahara. In the trans-Saharan trade, the Hausa exchanged slaves, cloth, gold dust, and kola nuts for horses, camels, and salt. From the 16th to the early 18th century, **Hausa states fought among themselves for supremacy**. As Hausa states gained strength, bitter rivalries developed. Military conflicts between Kano and Katsina erupted throughout the 16th century, as both states struggled for control over eastern Hausaland. In the 18th century, the city-state of Gobir clashed with Kebbi, Kano, and Katsina.

6

## 17th Century

The Mossi were one of several kingdoms to emerge in the political vacuum created by the fall of Songhay. Its development was hastened by the 17th-century expansion of **Yatenga**, a Mossi state that gained new territory by conquest. Mossi officials superimposed their own political structures throughout much of the Volta Basin, incorporating many non-Mossi peoples into their empire.

7

### c. 1730

The **Kano aristocracy** had developed formidable military capabilities and become the most powerful state in Hausaland. In the 17th and 18th centuries, new forms of **political and military offices** emerged in Hausaland. City-state bureaucracies greatly expanded, and officials established specialized government departments to oversee protocol, internal and external affairs, regional governments, and the treasury. Military rulers played an especially important role in city-states. In order to maintain security vis-à-vis their neighbors, these rulers made their forces more efficient and tightened their chains of command. Significant **expansion of central Sudan's economy, by means of slave labor**, occurred during the 17th and 18th centuries. Slavery and the slave trade underpinned the central Sudanese economy in this era. Besides contributing to land cultivation and pastoralism, slaves helped maintain the region's system of transport, trade, craft production, and communications. Their labor as caravan workers was particularly crucial to the trans-Saharan trade. Slaves also worked as soldiers and civil servants.

8

## 18th Century

Height of kingdom of **Salum**, western Senegal, and development of a military aristocracy. The kingdom of Salum's strategic location on the Salum River near the Senegambian coast enabled it to profit from the nearby salt deposits and the European slave trade. The Salum kingdom's **ruling warrior aristocracy** came to power through its control of the coastal slave trade. The kingdom eventually expanded toward the Gambia.

9

### c. 1710

**Biton Kulubali** and his largely slave army restructured Bambara society through force and founded the **Segu Bambara kingdom**, with its capital at Segu. The Bambara state of Segu expanded in the delta region of the Middle Niger, near trade routes and commercial centers. Biton Kulubali steadily gained young followers, who swelled the ranks of his slave army. Following Biton's death in about 1755, the state was racked by civil war. It was rebuilt by Ngolo Jara in about 1767 and remained an important regional center until 1860. 10

(See [1481](#))

## **b. [Forest West Africa](#)**

### **15th Century Onward**

The first state to provide Europeans with a significant supply of slaves from the forests of eastern Nigeria, **Benin** owed its rapid development to its centralized kingship and its location along major West African trade routes. Benin's rulers extended their authority through military force and consequently maintained a monarchy that lasted through the 19th century. By the beginning of the 16th century, Benin had two hierarchies of power, centered on palace chiefs and town chiefs. The state earned revenue from its monopoly over certain commodities, taxation, and judicial fines. Benin was the most important African state the Portuguese came in contact with up to 1486. 1

#### **1562**

John Hawkins initiated the **British slave trade** by taking a load of 300 slaves from Sierra Leone. 2

#### **c. 1575**

The **Fon kingdom of Dahomey** arose amid the unstable conditions and rivalries spawned by the Atlantic slave trade. Located in the southern portion of present-day Benin, Dahomey developed into a highly centralized state. By absorbing other polities in its midst, it became a major power by 1700. 3

#### **1598**

**Dutch** established trading stations along the Guinea coast. 4

### c. 1606

**Dutch, Flemish, and Portuguese** traders active in Sierra Leone. 5

### 1612

**French** effort to operate a factory on the Gambia River failed. 6

### 1618

**British** established post at Bathurst, mouth of the Gambia River. 7

### 1621

**Dutch** founded trading stations on Gorée Island and at Arguin. 8

### 1626

The **French** established themselves at Saint-Louis at the mouth of the Senegal River. 9

### c. 1630–70

The first **Asante towns** began attracting immigrants in the early 17th century. Each developed its own political structure but shared certain common traits, including matrilineal descent. **State building progressed steadily**, spurred by the abundant human and natural resources of the region, aided by the **use of slave labor**. The Akan occupied and colonized the densely populated region between the eastern Ivory Coast and the Volta River, also noted for having the most productive gold deposits in the region. In addition to the trade in gold northward to the grasslands and to the Mediterranean via the trans-Saharan trade, the arrival of Europeans stimulated increased production of gold for 10

trade along the coast. Africans purchased as slaves or captured in wars of conquest were used within Akan society as farm laborers, miners, and porters.

In the late 17th century, Asante began to battle neighboring states for supremacy; by the early 18th century, Asante had become the strongest of the Akan centralized states. Its empire was based on military exploits and conquest. <sup>11</sup>

## 17th Century

Small states along the Gold Coast emerged, stimulated by the state building of the Asante to the north and by the commercial opportunities offered by the Europeans. The growth of this trade led to the formation of several small states along the Gold Coast, including **Adansi, Denkyira, Assin, and Akwamu**. <sup>12</sup>

### c. [Northeast Africa \(Horn\)](#)

#### 1500

**Christian empire in Ethiopia reached its peak**, having no significant rivals in the region. Emperor granted land or tributary or service rights to deserving individuals in **feudal system** based on grants of territory in exchange for loyalty, but feudal aristocratic class did not develop at this stage. **Galla** peoples, Cushitic-speaking pastoralists, began migration into Ethiopia from the south. 1

#### 1500–1650

**Growth in trade** in Horn of Africa. 2

#### 1504

**Funj**, cattle-keeping nomads moving north along the Blue Nile, established sultanate after defeating Nubians. Abdallabi emerged as ruling clan and **Sennar** became their seat of government around 1616. The **Funj-Abdallabi sultanate** encouraged spread of Islam by scholars who introduced **Sufi mysticism**. 3

#### 1520–26

Portuguese mission under **Rodrigo de Lima** to Ethiopia. **Francesco Alvares** acted as chaplain, with objectives to establish **Christian alliance with Ethiopia** (following earlier mission in 1487). Alvares provided first detailed reports on the strength of the Ethiopian empire and church.

4

### 1529–43

**Ahmad ibn Ibrahim al-Ghazi led jihad** in Ethiopia growing out of wars between Ethiopia and the neighboring Islamic trading states. Ethiopia came to the brink of defeat, but the jihad lost momentum after the death of Ahmad in 1543.

5

### 1541–43

Soldiers from the **Portuguese fleet in Massawa fought with Ethiopian army against Muslim forces**. Muslim forces were decisively defeated and Ethiopia began to regain some lost territory, but empire remained weak until Restoration.

6

### 1555–1633

**Portuguese Jesuit missions** to Ethiopia. Conversion of two successive rulers. Remarkable influence and work of **Pedro Paez** (d. 1622). Conversion, however, led to repeated intrigues and wars against the Portuguese.

7

### 1640

**Portuguese expelled** from Ethiopia and Catholic missions prohibited.

8

### 1559

**Galla, adopting horses**, made renewed push toward Ethiopian plateau in wake of Muslim invasion.

9

### 1572–75

Ethiopian **emperor Serse-Dingil** (d. 1597) took over feudal armies under direct royal control and **defeated Ottoman attempt to conquer Ethiopia.** 10

## 1607–32

**Emperor Susenyos** of Ethiopia **incorporated Galla** into Ethiopian army and settled loyal Galla in strategic provinces. In 1622 he sided with the pro-Jesuit factions at the court and **proclaimed himself Catholic**, but he was unable to carry the court or country against the tradition of the Ethiopian church. 11

## **d. [East Africa](#)**

### **1. Swahili Coast**

#### **1500**

Most of **Swahili coast at an economic and cultural peak**, though Kilwa was in decline on eve of Portuguese arrival. All the towns by this stage were Muslim, speaking an early form of Swahili, while hinterland peoples remained animist. <sup>1</sup>

#### **1591**

**Mombassa fell to Portuguese** in alliance with Malindi. **Sheik Ahmad of Malindi** was made sheik of Mombassa. <sup>2</sup>

#### **1592–96**

**Portuguese built a factory on Zanzibar and established Fort Jesus** and put in place a garrison of 100 men at Mombassa to secure a foothold on the Swahili coast. Elsewhere, their presence was minimal, involving only the collection of tribute. <sup>3</sup>

#### **1652–1729**

**Omani Arabs struggled with Portuguese** for control of the Swahili coast. Omani raid led ruling dynasty in Zanzibar to proclaim its independence from Portuguese. <sup>4</sup>

## 1696–98

**Omani Arabs besieged Fort Jesus**, leading to surrender by the Portuguese in 1698. 5

## 1729

**Portuguese were finally driven out of Mombassa and other Swahili towns** by local forces. 6

## 1741

**Rise of Bas'idi dynasty** in Oman set stage for rise of Zanzibar under Omani rule in 19th century. 7

### e. [West Central Africa](#)

#### 1500–1600

Kongo kingdom dominated subregion south of lower Congo (Zaire) River as far as Luanda (modern-day Angola). From 1500 **Kongo was becoming a conquest state and trading empire and was sharply influenced by the arrival of the Portuguese.** It was ruled from a central capital by a monarchy and a class of urban nobles who presided over villagers and slaves. The political structure was centralized; officeholders, including provincial governors, were appointed by the king. 1

#### 1500–1700

**Social and cultural change in Kongo.** Trade in north African cloth and European goods, along with the presence of Portuguese teachers and priests, helped to create a **distinct court culture and enhanced royal power. Diminishing importance of matrilineality and of the village.** Increasing exploitation of villagers led to rebellion and to **Kimpassi cult, aimed at the elimination of suffering. Decline in the status of rural free women.** Among nobles, growth in patrilineal descent patterns. **Rapid expansion of the slave trade led to increased militarization of society and presence of two classes of slaves, those who were considered exportable and those who could not be sold.** 2

**Rund state, which was to become the wider Lunda Empire,** emerged between Kasai and Bushimai Rivers in southern present-day Zaire. **Luba Empire** had come into existence somewhat earlier in Shaba between Bushimai and Lualaba Rivers. Luba had a royal ideology based on **sacred kingship and rule by a secret association, the Bambudye,** who promoted state ideology and control. Population clusters in subregion of poor soils and a long dry season were linked by trade in raffia cloth, palm oil, fish, 3

copper, and salt. Copper crosses were used as standardized currency by 1500 but declined in size by 1600 and disappeared after 1700.

### 1506–43

Reign of **Alfonso I**, who became king after succession dispute. He was a **convert to Christianity under the influence of Portuguese missionaries**, and his rule was pivotal in opening up to Portuguese influence. Increased Portuguese influence **engendered internal crisis**. Alfonso made the Catholic Church the official religion and his **son Henrique was consecrated as a bishop in Rome** and directed the Christianization of the country in 1518–36. Revenue from the trade in slaves, ivory, and raffia cloth was used to attract Portuguese craftsmen, traders, and missionaries. The **growing wealth and Christianization of the nobility widened the gap between nobles and commoners** during Alfonso's rule. The nobility became literate Christians, and the royalty was strengthened by a slave guard. The Portuguese played an important role in the capital and in succession disputes in the kingdom. **The social structure changed from three strata (nobles, villagers, and slaves) to two (nobles and laborers/peasants). A tension emerged and grew between the nobility of Mbanza Kongo, the capital, and governors of outlying regions.** In Angola, the Portuguese placed themselves above the other strata and there emerged a group of **Afro-Portuguese mulatto traders** of mixed culture and language.

4

### 1514

**Slave trade** developed in Kongo from this date, under a **royal monopoly**. Increased demand for slaves encouraged outlying governors to deal directly with Portuguese traders, leading to political and military conflicts.

5

### 1526

**Kongo king Alfonso made a failed effort to abolish the slave trade.**

6

### 1548–83

**Introduction of maize cultivation** in Kongo. Other **NEW WORLD PLANTS**, including tobacco and manioc, along with pigs, were introduced in Kongo at about this time.

7

### 1560

**Smallpox epidemic in Kongo.** Along with the slave trade, new **DISEASES** had a significant effect on population.

8

### 1567

**Kongo routed by nomadic Jaga warriors** from the east during disarray following war with **Tio kingdom**.

9

### 1571–73

**Kongo kingdom regained with help of Portuguese troops**, but Kongo's regional dominance was lost as **Portuguese traders shifted focus to Loango**, north of the Congo River.

10

### 1575

**Portuguese established colony of Angola** as a slaving territory.

11

### 1576

**Paulo Dias** founded **Luanda** in Angola colony and began to trade in slaves.

12

(See [1497](#))

## f. [Southern Africa](#)

### 1. North of the Limpopo

1500–1700

Expansion of **Maravi state system in Chewa-speaking area of the Shire Valley**. The state was centered at Manthimba on the southwest side of Lake Malawi. It integrated pre-Maravi inhabitants through ritual and appointments, and expanded, around 1575, by settlement of lineage heads in adjacent territories. <sup>1</sup>

1514

By this date, **Swahili traders had established bazaars** for regional trade in the **Mutapa Empire**. <sup>2</sup>

1531

**Swahili traders** were ousted from Sena and Tete but remained in Zambezi region as agents for Portuguese. <sup>3</sup>

1550

**Portuguese began trading along the Zambezi River**. <sup>4</sup>

## 1575–1684

Portuguese transformed Swahili bazaars in lower Zambezi into *feiras*, central areas for Afro-Portuguese commerce, on land granted by local chiefs. The most celebrated *feira* was **Dambarane**. 5

## 1500–1800

**NEW CROPS** from Europe and Asia and the Americas entered southern Zambezi, including rice, yams, various fruit trees, groundnuts, cowpeas, and maize. New crops contributed to population increase. 6

## 1600–1700

**Chewa-Maravi** peoples became most important group in subregion north of Zambezi River; the **Portuguese were forced to cooperate with them** in the Zambezi Valley. 7

## 1624

**Jesuit missions** established along the Zambezi River. 8

## 1645

**Portuguese began to export slaves** from Mozambique to Brazil. 9

## 1677

**Two thousand Portuguese colonialists** arrived in Mozambique. 10

(See [1400–1500](#))

## **g. [Madagascar](#)**

### **1500**

Four **Swahili-speaking trading communities** had been established in the north, exporting **rice and slaves** to East Africa and Arabia. 1

### **1550**

End of immigration of main components of Malagasy population. **Aristocratic Zafikasimambo** emerged among the **Antemoro**, recent immigrants, in the east at Matitana. This **priestly caste** monopolized the privilege of slaughtering domestic animals, reduced freedoms accorded common people, and centralized power to create the first strong **Antemoro kingdom**. The **Portuguese** became the most active **slave buyers** in the northwest trading communities. They also traded for cattle, ambergris, and raffia cloth. 2

### **1600**

Many small independent chiefdoms were scattered across the island. 3

### **1600–1700**

There was **increasing contact with Europeans**; the focus of the slave trade shifted from East Africa and Arabia to the Cape of Good Hope and the New World. However, the 4

Portuguese took fewer slaves than the Africans and Arabs did. The **Comoro Islands** became the collection point for Madagascar's trade to East Africa and Arabia. The **Dutch and English** also began trading in Madagascar.

### 1600–1800

**English** were the most active traders of slaves to the New World from the island. 5

### 1643–74

**French** established fort in the southeast. 6

### 1645

**English Puritans** established short-lived colony at St. Augustine Bay. 7

### 1647–74

**Carmelite mission** started in Madagascar. **Lazerites and Capuchins** also participated. 8

### 1690

**Tsimanatona** established **Iboina state** with **Sakalava warriors**. 9

### 1700

By this time much of the west was under the **Sakalava Empire** and there were kingdoms in the highlands and in the south. 10

### 1721

**French annexed Mauritius**, renaming it Île de France. 11

## H. [Latin America, 1500–1800](#)

### [COLONIAL LATIN AMERICA, 1500-1750 \(MAP\)](#)

#### 1. [The Spanish Conquest](#)

**The conquest and colonization of Spanish America progressed outward from the earliest colony in Santo Domingo.** By 1600, the territory from New Mexico and Florida in the north to Chile and the Río de la Plata in the south was, with the exception of Brazil, under the rule of the Crown of Castile. 1

At the time that Spaniards engaged in the exploration, conquest, and colonization of America, Spain was a multiethnic society in the process of centralization and unification under the Crown of Castile (See [1479–1516](#)). The crucial element for unity was the imposition of the Christian faith on the entire population. The Catholic kings consequently expelled Jews and Muslims unwilling to become Christians. In the expansion of Christian control, the kings distributed land and people taken from the Muslim rulers. Using the same method in America, **the crown took advantage of the conquerors' individual initiatives while remaining the source of political legitimacy and organization in the New World settlements.** 2

The triumph of the Spaniards over incredible numerical odds was due to their ability to exploit the fissures of local societies and to adapt their military training to new conditions. Spaniards allied with discontented native lords and learned to use native weaponry. Interpreters and translators provided them with better knowledge of the societies they intended to dominate. **Through warfare and slavery, the Spanish conquest took a heavy toll on native lives.** The cruelty of the conquerors gave rise to the 3

**Black Legend**, popularized by Protestant European states in their wars against Spain. Besides the horrors intentionally provoked, contact with the conquerors caused **native inhabitants to suffer epidemics of diseases to which they had not developed immunological defenses**. Also, the introduction of European cattle destroyed the ecological system on which Indian agriculture was based. The conquerors quickly subdued those societies where centralized states had been established; in other areas, their advance was slower and suffered repeated setbacks.

The crown acted swiftly to prevent conquerors from becoming a new feudal aristocracy. <sup>4</sup> It reserved for itself the power to issue authorizations (*capitulaciones*) for the exploration, conquest, and settlement of new territories. It issued laws prohibiting Indian slavery. Christianizing campaigns also strengthened royal control over conquered territories, since the Church was directly subordinated to the crown. In their eagerness to convert natives to Christianity, members of religious orders carefully studied native societies to improve their methods of uprooting native religions. The crown prohibited non-Castilians from immigrating to the New World, but many foreigners could obtain legal permission to travel and settle there. Soon, the original conquerors gave way to a colonial bureaucracy.

## 2. [The Caribbean and the Isthmus, 1499–1531](#)

**Santo Domingo**, called **Española**, became the first seat of Spanish government in the Indies. The Indian population rapidly diminished as a result of warfare, overwork, enslavement, and disease. 1

### 1499

Discovery of gold mines in Santo Domingo. 2

### 1501

The crown authorized the African **slave trade** under its monopoly, giving permission to Flemish, German, Dutch, Genoan, and Portuguese merchants to engage in it. 3

### 1502

**Nicolás de Ovando** assumed governorship of Santo Domingo. He brought 1,500 families to populate the island. 4

### 1503

Ovando carried out a ruthless campaign to control the Indian population. He distributed Indians in *encomiendas* (See [Administration](#)), to work essentially as slaves in gold mines for the Spaniards. The conquerors founded 15 towns on the island. 5

## 1508–11

**Juan Ponce de León** conquered **Puerto Rico**, founded **San Juan**, and discovered gold. **Juan de Esquivel** settled **Jamaica**. Conquerors organized enslavement expeditions to the nearby islands. First sugar mills established on Española. 6

## 1511

Establishment of the *audiencia* of Santo Domingo (royal tribunal and government), the first in America. 7

## 1511–15

**Diego Velázquez** conquered **Cuba**. Colonizers founded **Baracoa** (1512), **Bayamo** (1513), **Trinidad** (1514), **Puerto Príncipe** (1514), **Havana** (1514), and **Santiago de Cuba** (1515). They quickly defeated Indians and subjected them to such exploitation that it led to their extermination within a few years. Havana was relocated to the north coast (1519). 8

## 1509–13

**Alonso de Ojeda**, with royal authorization, founded a colony on the east coast of the Isthmus of Panama. **Diego de Nicuesa** founded **Nombre de Dios** on the Isthmus. Ojeda's settlers later united with those of Nicuesa, under the governorship of **Vasco Núñez de Balboa** (1474–1519). Balboa claimed discovery of the **Pacific Ocean** (South Sea) and declared it a possession of the Crown of Castile (1513). 9

## 1513–14

A jurisdiction independent of Española, **Castilla del Oro** (Darien), was created in the region of the Isthmus. **Pedro Arias de Ávila** (1442–1531) was named royal governor and brought some 1,500 colonists from Spain. 10

## 1514–19

Ávila dispatched expeditions by land and sea to adjacent areas. He founded **Panama** as the seat of government, refounded Nombre de Dios, and cleared a route across the Isthmus. Balboa continued explorations on the Pacific coast. He clashed with Governor Ávila, who ordered his execution. 11

## 1522–23

Under independent authority, **Gil González Dávila** and **Andrés Niño** led a combined land and sea expedition westward from the Isthmus. Dávila conquered the area around the Gulf of Nicoya and Lake Nicaragua, and Niño sailed to Fonseca Bay. Governor Ávila then dispatched **Francisco Hernández de Córdoba** to conquer **Nicaragua**. 12

### **3. Venezuela and Nueva Granada, 1521–1549**

#### **1521**

**Bartolomé de las Casas** (1474–1566), who fought against exploitative excesses by conquerors, failed in his attempt to found a peaceful settlement for Indians at Cumaná. 1

#### **1531–35**

**Diego de Ordaz** explored the region of the Orinoco but left no permanent settlement. In the western areas, ongoing colonization was established at an early date. 2

#### **1527**

**Juan de Ampíes** (or **Ampúes**), commissioned by the *audiencia* de Santo Domingo, founded Santa Ana de Coro. Emperor Charles V granted this territory to the **Welsers**, a great Augsburg banking family to which he was heavily indebted. 3

#### **1529**

The Welsers sent out colonists and established an administration. **Ambrosio Alfinger** became the first governor of **Venezuela**. Dreams of **El Dorado** prompted explorations through the valley of the Orinoco and into the Andes. The rule of the Welsers was extremely harsh for the Indians. This brutality, along with protests in Spain against granting land to foreigners, moved the crown to revoke their concession (1546–56). Spanish leaders undertook the conquest of Venezuela. An Indian confederation opposed their advance for ten years, but smallpox epidemics greatly diminished the natives' resistance. **Diego de Losada** founded **Caracas** in 1567. 4

## 1525

**Rodrigo de Bastidas** founded **Santa Marta**, the first permanent settlement in what was to become **Nueva Granada**. **Pedro de Heredia**, acting directly under royal authority, founded **Cartagena** in 1533. 5

## 1535–36

**Sebastián de Belalcázar**, Pizarro's lieutenant, coming from Quito, founded **Cali** and **Popayán**. 6

## 1536–38

**Gonzalo Jiménez de Quesada** (1495–1576), under commission from the government of Santa Marta, moved up the Magdalena River, reached the plateau of Bogotá, defeated and sacked Chibcha chiefdoms, and founded **Santa Fe de Bogotá** (1538). 7

## 1539

Advancing toward the Bogotá plateau, Belalcázar met **Nikolaus Federmann**, an agent of the Welsers. Federmann, Belalcázar, and Jiménez de Quesada disputed over jurisdiction. The crown resolved the controversy, confirming Belalcázar in the governorship of Popayán. 8

## 1549

The *audiencia of Nueva Granada* was created. It included Santa Marta, Cartagena, Popayán, and Santa Fe de Bogotá, the latter town becoming the seat of government for this large area. 9

## **4. Peru and the West Coast, 1522–1581**

### **1522**

Continuing exploration southward from Panama, **Pascual de Andagoya** (c. 1495–1548) <sup>1</sup> advanced into **Biru (Peru)**, where he learned of the rich and powerful **Inca Empire**. His ill health forced him to abandon plans of conquest.

### **1524–28**

**Francisco Pizarro** (1470–1541), under Ávila's authority and in association with **Diego de Almagro** (1475–1538) and **Hernando de Luque**, a priest, undertook the conquest of Peru. An initial expedition reached the San Juan River and a second the Gulf of Guayaquil and Tumbes, where they encountered more evidence of the Inca Empire. <sup>2</sup>

### **1528–29**

Pizarro went to Spain and concluded a capitulation with the crown by which he obtained <sup>3</sup> the right of discovery and conquest of Peru for a distance of 200 leagues south of the Gulf of Guayaquil and the office of adelantado, governor and captain-general. Almagro was assigned command of the fortress of Tumbes, and Luque was named its bishop.

### **1531**

Returning to Panama, accompanied by his brothers Gonzalo (c. 1505–48) and Hernando <sup>4</sup> and a small group of recruits, Pizarro organized a military expedition and sailed for the conquest. He consolidated his position at Tumbes and founded **San Miguel de Piura**, then gathered more recruits and moved into the interior. He reached **Cajamarca**, where the Inca **Atahualpa** had camped with his retinue.

## 1532, Nov. 16

Pizarro seized Atahualpa by surprise. While prisoner, Atahualpa ordered the assassination of his rival, his half-brother Huáscar.

5

## 1533

Despite Atahualpa's having paid an enormous ransom in gold and silver, Pizarro ordered his execution. Pizarro, with the help of Almagro, advanced toward **Cusco**, the Inca capital. **Manco**, brother of Huáscar, viewed the Spaniards as allies and they installed him as Inca. Pizarro distributed lands and *encomiendas* among his troops.

6

## 1534

**Sebastián de Belalcázar** (1495–1550) defeated Atahualpa's lieutenants and established control in the region of Quito. **Pedro de Alvarado**, governor of Guatemala, came with an expedition of 500 men to seize Quito. He abandoned his claims in exchange for monetary compensation.

7

## 1535, Jan. 18

Pizarro, having left Cusco, founded **Lima**, which became the capital of the later viceroyalty of Peru. Almagro led Spanish troops and Inca warriors to conquer Chile. In Cusco, Pizarro's brothers attacked Manco to obtain more riches. Manco rebelled and conducted a lengthy but unsuccessful siege of Cusco (1535–36). The Inca leader retreated to **Vilcabamba**, a region that became his kingdom.

8

## 1537–41

**Civil war between Pizarro and Almagro.** Having failed in his attempt to conquer Chile, Almagro clashed with Pizarro regarding jurisdiction over the city of Cusco. Almagro occupied the city but was defeated and executed. Spaniards gained control over the region surrounding Lake Titicaca (1538) and founded the city of **La Plata** (today's Sucre) in 1539. Settlements at **Chachapoyas** (1538) and **León de Huánuco** (1539) were

9

built on the northeastern frontier.

## 1541

Partisans of Almagro assassinated Pizarro and set up **Diego de Almagro the Younger**,<sup>10</sup> Almagro's mestizo son, as governor. **Cristóbal Vaca de Castro**, the royal judge, deposed him. Almagro died in battle in **Chupas** (1542).

## 1539

**Gonzalo Pizarro**, as governor of Quito, led an expedition across the Andes and reached<sup>11</sup> the upper Amazon.

## 5. [The Río De La Plata](#)

### 1526–32

**Sebastián Cabot**, in the service of a group of merchants of Sevilla, set out with an expedition to reach the Moluccas but was diverted into the **Río de la Plata** while searching for a passage to the east. The expedition passed up the Paraná and Paraguay Rivers and founded a short-lived settlement, which Indians, having suffered punitive expeditions, destroyed. 1

### 1535

**Pedro de Mendoza** established permanent colonization of the area. 2

### 1536

Mendoza founded **Buenos Aires** (Santa María de Buenos Aires) on the estuary of the Río de la Plata. The Indian population became increasingly hostile. **Juan de Ayola** and **Domingo de Irala** led explorations up the Paraná and Paraguay. 3

### 1537

Abandoning Buenos Aires, **Juan Salazar de Espinoza** led colonists up to the Paraná and Paraguay and founded **Asunción**. Spaniards established strong ties with Guaraní Indians, adopting many of their customs. Mendoza died on his way to Spain, and colonists elected Irala as governor. 4

### 1542–44

The crown named **Alvar Núñez Cabeza de Vaca** to replace Mendoza. He reached Asunción with more colonists and encountered opposition from Irala, who again became governor and was confirmed by the crown. 5

## 1563

Establishment of governorship of **Tucumán**, under jurisdiction of the *audiencia* of Charcas. 6

## 1573

**Juan de Garay**, with colonists from Asunción, founded Santa Fe. Spaniards from the northwest settled at Córdoba. 7

## 1580

Garay led an expedition from Asunción and **refounded Buenos Aires**. 8

## 6. [New Spain, 1518–1574](#)

### a. [The Conquest of Mexico](#)

#### 1518–19

Continuing the explorations of Hernández de Córdova and Grijalva, Diego Velázquez and **HERNÁN CORTÉS** (1485–1547) organized a military expedition. Cortés assumed the leadership, and despite the orders of Velázquez followed the coast of Yucatán, subjugated Tabasco, and reached San Juan de Ulúa. As a token of goodwill, Tabasco natives gave Cortés several women, among them **Malitzin (Doña Marina or Malinche)**, a Mexica woman living in servitude, who became his common-law wife. She had a crucial role as interpreter and Spanish representative in the conquest. Cortés renounced the authority of Velázquez and, acting as a direct agent of the crown, founded **Villa Rica de la Vera Cruz**, where he left a garrison. The soldiers elected Cortés as chief magistrate and sent representatives to the crown for confirmation. <sup>1</sup>

Cortés gained support from the **Totonac**, who were subjects of the Mexica. He sent envoys to **Moctezuma**, ruler of the Mexica (Aztecs), who, uneasy about prophecies indicating the end of his rule, avoided confrontation with the Spaniards. Cortés defeated **Tlaxcala** armies and, knowing their enmity toward the Mexicas, formed an alliance with them. Cortés entered **Tenochtitlán** (Nov. 8, 1519) after defeating resistance at Cholula. Moctezuma received him cordially. Cortés, upon learning of a Mexica attack against Spaniards at Vera Cruz, imprisoned Moctezuma and forced him to accept the sovereignty of Charles V. <sup>2</sup>

#### 1520

Meanwhile Velázquez, named *adelantado*, sent an expedition under **Pánfilo de Narváez** <sup>3</sup>

to reduce Cortés to obedience. Cortés placed **Pedro de Alvarado** (1485–1541) in command at Tenochtitlán, went to the coast, and won most of Narváez's forces to his side, whereupon he returned to the city. Alvarado's ruthless attack against Mexica warriors during religious celebrations prompted them to revolt against the Spaniards and Moctezuma. Cortés was forced to evacuate Tenochtitlán with heavy losses (June 30). Moctezuma died or was killed during the evacuation. **Cuauhtémóc**, his nephew, assumed command of the Mexica and organized war against the invaders. At **Otumba**, Cortés defeated the Mexica army (July 7) and reached Tlaxcala, where he had allies and reorganized his forces. Having received reinforcements, Cortés established his base at Texcoco and undertook the invasion of Tenochtitlán by land and water.

### 1521, May 26–Aug. 13

With the help of native allies, enemies of the Mexica, Cortés captured Tenochtitlán and imprisoned Cuauhtémóc. Spaniards razed the Mexica capital and established **Mexico City**, which became the seat of government of the future viceroyalty of New Spain. The crown named Cortés governor and captain general of New Spain (Oct. 15, 1522). He distributed Indians in *encomiendas* to the conquerors.

4

### 1524

Cortés received 12 Franciscan missionaries, known as the **Twelve Apostles**, who organized massive Christianization of native peoples.

## **b. [Expansion to the South](#)**

### **1522–24**

**Cristóbal de Olid** subdued Colima and part of Jalisco. Spaniards settled in Michoacán, territory of the Tarascans, who allied with Cortés. Alvarado subdued Tehuantepec. 1

### **1523–25**

Alvarado conquered the Quiché and Cakchiquel and founded **Guatemala City** (1524). He extended the conquest into **Salvador** and became governor of the general district of Guatemala. Expeditions from New Spain subdued Chiapas (1523–28). 2

### **1524–26**

Cortés sent Olid to conquer and settle **Honduras**. Olid rejected Cortés's authority but failed, and Cortés's lieutenant killed him. Cortés led an expedition to Honduras to establish his authority and founded **Trujillo** (1524), thereupon returning to Mexico. 3

### **1526–36**

Internecine strife in Honduras prevailed. Alvarado as governor founded **San Pedro** and dispatched an expedition to found Gracias a Dios, but he departed for Spain without definitively gaining control of the area (1536). 4

### **1527–35**

*Adelantado* **Francisco Montejo** failed in his attempt to conquer **Yucatán**. After eight years of effort, he was appointed governor of Honduras. He subdued Tabasco (1529–40). 5

### 1537–44

Governor Montejo conclusively subjugated Higuera, in Honduras, and founded **Comayagua** (1537). Alvarado returned and again became governor. 6

### 1542–44

Establishment of the *audiencia of Confines*, with jurisdiction over Chiapas, Yucatán (from 1549 to 1560), and Guatemala. 7

### 1544

**Gaspar and Melchor Pacheco** finally conquered and colonized the area. Founding of **Valladolid** and **Salamanca de Bacalar**. The area of Petén remained unconquered until the close of the 17th century. 8

### 1546

Led by their native priests, Maya revolted against *encomiendas* in eastern Yucatán. 9

[NEXT](#)

### **c. Expansion to the North and the Pacific Coast**

#### **1522–27**

Cortés subdued the region of the Pánuco River and founded a town. Indian revolt suppressed by Cortés's lieutenant (1523). The Pánuco district became subject to the crown, with **Nuño de Guzmán** as governor (1527). 1

#### **1529–31**

Guzmán, as first president of the *audiencia* of New Spain, conquered Chichimeca areas to the north and west of Mexico City, including Jalisco and Sinaloa. **Guadalajara** founded (c. 1530). This area was called **Nueva Galicia**, of which **Compostela** became the capital (1531). 2

#### **1531–50**

In the interior, Spanish expansion was slower. Spanish subdued **Querétaro** in 1531. **Francisco de Urdiñola** founded San Luis de Potosí in 1550. 3

#### **1532–33**

In search of a strait and of new lands, Cortés dispatched an expedition that reached northern Sinaloa and Baja California. 4

#### **1535**

Cortés attempted to found a colony in Baja California but failed. **Francisco de Ulloa** reached the head of the **Gulf of California** (1539). Alarcón, cooperating by sea with Coronado's expedition to New Mexico, reached the same district and traveled up the **Colorado River** (1540). 5

### 1539

Viceroy Mendoza sent the Franciscan **Fray Marcos de Niza** northward to investigate reports by Cabeza de Vaca about the legendary Seven Cities of Cíbola. He reached the Zuñi pueblos of New Mexico and returned with exaggerated reports. 6

### 1540–42

**Francisco Vázquez de Coronado**, governor of Nueva Galicia, led an expedition overland to the new lands, while **Hernando de Alarcón** went on by sea along the Pacific coast. Coronado reached the Zuñis, and his lieutenants reached the Moqui pueblos and the **Grand Canyon** of the Colorado. Coronado traversed northern Texas, Oklahoma, and eastern Kansas before his return. 7

### 1541

Natives of Nueva Galicia rose in revolt against abuses committed by Nuño de Guzmán. Viceroy Antonio de Mendoza subdued them. 8

### 1542–43

As part of his project for South Sea discovery, Viceroy Mendoza sent **Juan Rodríguez de Cabrillo** to search for a northern strait. Cabrillo and, after his death, the pilot **Bartolomé Ferrelo** explored the Pacific coast as far as **Oregon**. 9

### 1546

Discovery of rich silver mines in **Zacatecas**. 10

An *audiencia* was created to govern Nueva Galicia, Guadalajara becoming the political and ecclesiastical capital. 11

## **d. The Gulf Coast, Florida, and the Carolinas**

### **1521**

**Juan Ponce de León**, under royal patent, failed to colonize Florida. 1

### **1526**

**Lucas Vázquez de Ayllón** established the colony **San Miguel de Guadalupe** in the Carolinas, but it was abandoned on his death. 2

### **1528**

**Pánfilo de Narváez** landed in Florida with colonists from Spain. After exploration he tried to reach the Pánuco River, but his expedition was shipwrecked on the coast of Texas. Most of the colonists died of hunger, disease, or at the hands of the Indians. 3

### **1536**

**Alvar Núñez Cabeza de Vaca** and three companions, after six years of captivity, escaped and traversed Texas and northern Mexico, reaching Culiacán. 4

### **1539–43**

**Hernando de Soto** (1499–1542) obtained a patent for the colonization of the Gulf coast. His expedition landed in Florida, traversed Arkansas and Oklahoma, and discovered the **Mississippi River** (1541). De Soto died (1542) and his companions continued to the area of the Pánuco. 5

### 1559–61

Viceroy Velasco dispatched an expedition under **Tristán de Luna** to colonize the region of the Carolinas (Santa Elena). Luna established a garrison at Pensacola, moved inland, and founded a settlement, whose inhabitants later moved to Pensacola. **Ángel Villafañe** replaced Luna as governor and tried to colonize the Carolinas but failed. The garrison at Pensacola was abandoned. 6

### 1562

**Jean Ribaut** failed to establish a French Huguenot settlement at Port Royal in South Carolina. **Laudonnière** founded Fort Caroline, on the St. John River (1564). As a result of these activities, Philip II ordered the expulsion of the French from Florida. 7

### 1565

**Pedro Menéndez de Avilés**, as *adelantado* of Florida, founded **St. Augustine**, captured Fort Caroline, and slew the garrison, securing Spanish control of the peninsula of Florida. 8

### 1565–74

Menéndez de Avilés built presidios and posts across a wide area. He supported the establishment of missions by **Jesuits** and later by **Franciscans**, as far north as Virginia. 9

## **7. Foreign Encroachments and Territorial Changes, 1580–1800**

England, France, and the Netherlands engaged in war against Spain and sought to dispute Spain's preeminence in the New World by attacking shipping and setting up colonies in territories controlled by Spain and Portugal (See [Portuguese America, 1500–1815](#)).

1

### **16th Century**

French corsairs early on attacked the Spanish fleet off the coast of Europe and at the Azores and Canaries and soon extended their activities into the Caribbean, attacking towns and trade. Portuguese repelled French attempts to establish themselves in Brazil. English privateers, with tacit approval of the British crown, became active in the Atlantic, Caribbean, and Pacific. **Francis Drake** raided the Pacific coast during his voyage around the world (1577–80). After the outbreak of war between Spain and England, the English made privateering an official activity. Many towns were held for ransom or sacked, among them Nombre de Dios, Cartagena, Santo Domingo, and Valparaíso. Coincident with the struggle for independence in the Netherlands, Dutch freebooters became active.

2

### **17th Century**

England, France, and the Netherlands started settlements in the Guianas. England colonized Bermuda and the Bahamas. A Dutch armada captured a treasure convoy from New Spain (1628). An English expedition captured Jamaica and established a colony (1655). Slaves and their Spanish masters fled to the bush. Slaves formed runaway (Maroon) communities and attacked English settlements. In the 18th century, the British and Maroons engaged in wars. English, French, and Dutch buccaneering in the Caribbean played an important role in disrupting Spanish-American commerce.

3

## 18th Century

Constant wars in Europe and control of the sea by Great Britain made it difficult for the Spanish crown to maintain a trade monopoly. British, French, and Dutch merchants developed extensive illicit commerce. Wars against Spain had as one objective the obtaining of trade concessions, in which the slave trade was a very important element. 4

### 1701–13

After the **War of the Spanish Succession** (See [1701–14](#)), Great Britain obtained the *asiento*, or monopoly of slave trade with the Spanish possessions, by the **Treaty of Utrecht** (1713) (See [1713, April 11](#)). 5

### 1728

**Montevideo** was founded to counter Portuguese **Colonia** (founded in 1680), where British and Portuguese carried on illicit trade with the province of the Río de la Plata. 6

### 1741

A British expedition failed to capture Cartagena, which had been heavily fortified as a bulwark of colonial defense. 7

### 1750

The **Treaty of Madrid** stipulated that Portugal give Colonia to Spain in return for seven Jesuit reductions (settlements for Christianized Indians) on the east bank of the Uruguay. 8  
The Guaraní of the reductions rebelled against the transfer, unleashing the **War of the Seven Reductions** (1752–56), which ended with Portuguese repression. Portuguese retained Colonia and the treaty was void.

### 1762

When Spain entered the **Seven Years' War** (See [1756–63](#)) as an ally of France, British expeditions captured Havana and Manila (1762). Spanish forces captured Colonia and occupied Rio Grande do Sul in Brazil. By the **Treaty of Paris** (1763) (See [1763, Feb. 10](#)), Spain ceded Florida to Great Britain in exchange for Havana and Manila, and returned Colonia and Rio Grande do Sul to Portugal. France ceded Louisiana to Spain, although French colonists opposed establishment of Spanish authority. 9

### 1771

Dispute between Spain and Great Britain over possession of the **Falkland-Malvinas Islands**. 10

### 1774

Spain established a garrison in the Falklands to defend the Strait of Magellan. 11

### 1776–77

Spain invaded Colonia and other Portuguese territories. Creation of the **Viceroyalty of Río de la Plata** helped to solidify Spanish control in that area. 12

## 8. The Spanish Colonial System, 1550–1800

### a. Population Development

The **native population** of the Americas declined drastically owing to the effects of war and epidemics. Unchecked proliferation of European livestock at the expense of Indian agriculture destroyed ecological equilibrium. In the **Caribbean**, depopulation was aggravated by the enslavement of natives to work in gold placers. Devastating epidemics spread throughout the islands (1519, 1530), reducing the population from an estimated 500,000 at the eve of the conquest to 22,000 in 1570. Yellow fever became endemic in the tropical lowlands and coasts of the Caribbean and circum-Caribbean. <sup>1</sup>

On the eve of the conquest, Indian population in **central Mexico** was estimated at 11 million. Severely affected by recurrent epidemics of European diseases (1519–24, 1529, 1545–46, 1558, 1576–79, 1588), the Indian population had no opportunity to recover, and by 1597 had plunged to 2.5 million. In **Peru**, the Indian population was an estimated 6 million at the beginning of the conquest. Affected by military mobilization, by the resettlement policy in new towns, and by deadly epidemics (1545–46, 1558, 1576, 1588), Indians were reduced to 1.3 million by 1590. Their decline was especially dramatic in the coastal areas. <sup>2</sup>

By 1650 the Indian population had reached its nadir in New Spain (Mexico) with 1.5 million. **Recovery began at the end of the 17th century**, when Indians numbered about 2 million. By the end of the 18th century, the Indian population had increased to 3.7 million. In Peru, the native population dropped to 1.5 million in 1570. Its recovery, at the beginning of the 18th century, did not follow a uniform trend. The portion of the population identified as Indian continually declined throughout the Spanish domains. Many Indians sought to be counted as **mestizos** to avoid tribute payment. <sup>3</sup>

Early on, **African slaves** were brought to the New World. The rapid decline of the Indian population in the Caribbean led to increased slave trade. By 1570 the Caribbean had 56,000 inhabitants of African origin, easily surpassing the Indian and white population. Most of the slaves were captured in Senegambia, Guinea, and the mouth of the Congo River. During the 16th century, 75,000 slaves were introduced in Spanish-American domains. Between 1600 and 1650, slave traders sold 125,000 slaves in the region. The <sup>4</sup>

uneven distribution of the sexes and the harsh conditions of slavery made reproduction and the formation of slave families difficult. Nevertheless, slaves formed unions with native women, which increased the size of the mixed population. Children of these unions were born free, since the child's status derived from the mother. Between 1651 and 1760, slave traders shipped some 344,000 slaves to Spanish dominions. Between 1761 and 1810, in response to the booming plantation economy, 300,000 slaves were imported, mainly into Cuba and Puerto Rico. However, by that time most of the black population in Spanish domains was free.

Much of the **Spanish population** was concentrated in urban settlements. The crown created the Casa de Contratación to control emigration to the Indies. Heretics, Moors, Jews, and their descendants were excluded from traveling to Spanish domains. **Most Spanish emigrants came from the territories subject to the Castilian crown, especially Andalusia and Castile**, although a few non-Spanish subjects of the Spanish king also migrated. Women were scarce at the beginning, but as the crown promoted family emigration, their numbers increased to a quarter of the total emigration. Some 240,000 Europeans came to America during the 16th century. Between 1601 and 1650, European emigrants totaled about 194,000. For the 18th century, estimates of Spanish emigration indicate a minimum of 53,000 individuals, coming mainly from northern areas of Spain—the Basque country and Catalonia.

Predominantly male migration at the beginning of colonization promoted unions between Spanish men and native women, which led to the growth of the **mestizo population**. Some were incorporated into the Spanish group, but illegitimate births were common among the mixed population. The mestizo rate of growth quickly surpassed that of the Indian population.

Mortality rates began to fall around the end of the 18th century. In 1803, **Francisco Javier de Balmis** (1753–1819), a Spanish physician, carried out a general campaign of vaccination against smallpox, helping to improve health conditions in the colonies. At the close of the colonial period, the estimated population of the Spanish colonies was 3,276,000 whites, 5,328,000 mestizos, 7,530,000 Indians, and 776,000 blacks. (New Spain, 1,230,000 whites, 1,860,000 mestizos, 3,700,000 Indians; Guatemala, 280,000 whites, 420,000 mestizos, 880,000 Indians; Peru and Chile, 465,000 whites, 853,000 mestizos, 1,030,000 Indians; Colombia and Venezuela, 642,000 whites, 1,256,000 mestizos, 720,000 Indians; Río de la Plata, 320,000 whites, 742,000 mestizos, 1,200,000 Indians; Cuba and Puerto Rico, 339,000 whites, 197,000 mixed, 389,000 blacks). The black population in all colonies, excluding Cuba and Puerto Rico, numbered 387,000.

## b. Administration

The Crown of Castile incorporated the new territories into its domains. Early on, Queen Isabella withdrew the authority granted Columbus and the first conquerors and established direct royal control. The structure of colonial government was fully formed by the third quarter of the 16th century. 1

After appointment to supervise preparations for the second voyage of Columbus (1493), **Juan Rodríguez de Fonseca** effectively became minister of the Indies and laid the foundations for the expansion of the colonial bureaucracy. The development of trade between the new lands and the metropolis led to the establishment of the Casa de la Contratación at Sevilla to control colonial commerce, emigration, and maritime enterprise (1503). Rodríguez de Fonseca presided over the newly founded **Council of the Indies** (Consejo de Indias), which was designed to administer the colonies and which exercised supreme authority over the Indies and the Casa de Contratación. The legislation for the Indies promulgated by the crown and the Council of the Indies was codified in the *Recopilación de Leyes ... de las Indias* (1680). At the beginning of the 17th century, the crown created a Junta de Guerra y Armadas de las Indias to administer the armed forces and the dispatch of fleets to the Indies, and a Cámara de Indias to control ecclesiastical affairs and appointments, as adjuncts to the Council of Indies. With the advent of the Bourbon dynasty (1700), the Council of the Indies declined in importance. In 1714, the office of Minister of the Indies was created with the establishment of a Secretaría de Guerra, Marina e Indias (1714). This secretariat underwent numerous changes, and before the close of the century, a separate **Secretariat of the Indies** was formed. 2

Direct royal government in the Indies was instituted with the appointment of **Francisco de Bobadilla** as judge and governor of Española and the removal of Columbus (1499–1500). A tribunal of three royal judges was created in Santo Domingo as a check on the governor (1511), and this body evolved into the *audiencia* (governance tribunal) of Santo Domingo, with authority over the Caribbean (1526). 3

On the mainland, during the first years, conquerors ruled with the titles of *adelantado*, governor or captain-general. The institution of adelantado was important during the 4

conquest. By agreement with the crown, the adelantado undertook the conquest of a specified area at his own expense, and in return the crown assigned him governmental authority and hereditary privileges. The institution helped to bring new lands under Spanish dominion, but the crown revoked individual privileges, since they threatened royal authority. Some conquerors rebelled against royal control, and this contributed to the decision to fortify the royal bureaucracy in the Indies.

The **Viceroyalty of New Spain** was created in 1535, with its capital at Mexico City, and included the Caribbean, Venezuela, the Philippine Islands, and all territories north of Panama. The New Laws created the **Viceroyalty of Peru** in 1542, with an *audiencia* at Lima, and included all Spanish territories in South America except Venezuela.

*Audiencias*, each with its specific area, were created in Guatemala (1542); Nueva Galicia (1548); Nueva Granada (1549); Charcas, or Upper Peru (1556); Quito (1563); and the Philippine Islands (1583–93). American-born Spaniards (**creoles**) gained access to government through direct royal appointment and through purchase of public offices.

The viceroys as direct representatives of the sovereign possessed wide civil and military authority. They were presidents of the *audiencias* of their capitals. The *audiencias*, comprising a president, *oidores* (judges), a *fiscal* (crown prosecutor), and lesser officials, exercised supreme authority within their districts, and the *audiencias* not directly under viceroys exercised governmental authority. The viceregal *audiencia* acted as an advisory council to the viceroy and in this function exercised legislative power. The *audiencias* dealt with judicial affairs and appeals going directly before the Council of the Indies, and they had authority to correspond directly with the crown. The status of *audiencias* varied according to the rank of the presiding officer, that is, viceroy, president and captain-general, or president. The presidents of the *audiencias* of Santo Domingo, Guatemala, and Nueva Granada had military authority and became presidents and captains-general. As such they were practically independent from the viceroys. Guadalajara, Quito, and Charcas remained as presidencies. In the absence of the viceroy or president and captain-general, the *audiencia* assumed the powers of government. Major administrative areas were divided into *gobiernos*, *corregimientos*, and *alcaldías mayores*, with the *gobiernos*, in general, the most important and frequently consisting of more than one province.

In accord with medieval Castilian traditions, the municipalities at first enjoyed a large measure of self-government under their *cabildos* (town councils), composed of *regidores* (councilmen) and *alcaldes* (mayors), the former elected by the householders and the latter by the councilmen. Before the close of the 16th century, the election of councilmen gave way to royal appointment, hereditary tenure, and purchase of positions. *Cabildos abiertos* (open town meetings) of all householders were at times held to discuss important matters. The municipal government exercised executive, legislative, and judicial authority within its district, although frequently under the control of royal officials.

The Spanish organized the Indian population in towns, called *reducciones* in Peru and *congregaciones* in Mexico, with municipal governments following the Castilian model. In many cases, traditional chiefs (*kurakas* or *caciques*) managed to preserve their authority in the new structure, occupying positions as mayors and councilmen. Indian mayors were responsible for the allocation of services and labor required from Indians by local entrepreneurs and public projects. Local Spanish officials had jurisdiction over the native towns in their districts. They supervised the fulfillment of compulsory labor for mining and public works. Protectors of the Indians were created for general and local districts to guard the interests of the native population. The *repartimiento-encomienda*, which developed early on, was an institution of great political, social, and economic importance. In the earlier period this institution involved the assignment of specified towns to conquerors and colonists. Indians from the *encomienda* gave tribute, labor, and service to the *encomendero*, who was obligated to provide them with protection and indoctrination in Christianity. The *encomenderos'* increasing control over the Indian population moved the crown to regulate the system. Fixed quotas of tribute were established, and royal officials (*corregidores*) took charge of the distribution of Indian labor and services. With the publication of the **New Laws** (1542–43), the crown assumed control of the many towns and *encomiendas*. Before the end of the century, the *encomienda* was essentially reduced to the right to enjoy the revenues from specified towns. It was abolished formally at the end of the 18th century.

8

**Fiscal administration** was directly under the crown through the Casa de Contratación and accountants called *contadores*, *factores*, *tesoreros*, and *veedores* in the New World jurisdictions. With the establishment of the intendants, those officials assumed administration of fiscal affairs. The Castilian institutions of the *residencia*, *visita*, and *pesquisa*, set up to assess the performance of officials and the situation of the regions, were implemented in the colonies. The principal sources of **crown revenues** were the *quinto*, or one-fifth of the products of the subsoil (gold, silver, precious stones); the *almojarifazgo* (customs imposts); the *alcabala* (sales tax); the tributes of the natives; the *media anata* (emoluments) of civil and ecclesiastical offices; and the sale of the *Cruzada* (papal bulls sold by the crown to subsidize ecclesiastical expenses).

9

The **Bourbon kings** implemented sweeping administrative **reforms** (See [1713, April 11](#)) to improve the economic efficiency of their dominions. Thus they elevated Nueva Granada, Panama, Venezuela, and Quito into the **Viceroyalty of Nueva Granada** (1717–39). They ordered inspections to obtain data to undertake further reform in Cuba and Louisiana (1763), New Spain (1765), and Peru (1777). From 1713 on, the Bourbon kings began to name mostly Spaniards to the *audiencias*, which caused creoles to protest. **José de Gálvez**, who acted as **minister of the Indies**, was the main architect of the change. The **Viceroyalty of Río de la Plata** (1776) and the captaincies-general of Venezuela (1773), Cuba (1777), and Chile (1778) were created. *Audiencias* were established in Buenos Aires (1783), Caracas (1786), and Cusco (1789). Under Philip VI, a system of intendants was established throughout the Indies (1769–90), which reduced

10

the viceroys' powers. At the end of the colonial era, the crown established tribute obligations for mestizos and other people of color previously exempted.

### c. [The Church and the Missions](#)

Pope Alexander VI in the bull *Inter caetera* (May 4, 1493) assigned dominion over the Indies and exclusive authority to convert the natives to the Spanish crown. His bull *Eximiae devotionis* (Nov. 16, 1501) granted the kings the titles and the first fruits of the Church in the Indies. Julius II in the bull *Universalis ecclesiae* (July 28, 1508) conceded them universal patronage. The crown exercised the patronage of the Indies (*real patronato de Indias*) through the Council of the Indies and later through that body and the Cámara de Indias. <sup>1</sup>

The **religious orders** early obtained broad powers in the colonies. Mainly the **Franciscans**—but also the **Dominicans** and the **Augustinians**—carried out a massive campaign to Christianize the natives, especially in New Spain. The organization of the Church with bishops from the secular clergy diminished the influence of these orders and enhanced the power of the crown. The orders, however, remained important in extending Spanish control in outlying areas. Dominicans and Franciscans were active in Guatemala. **Capuchins** established themselves in the area of the lower Orinoco. Toward the end of the 17th century, **Jesuits** undertook the establishment of missions in Pimería Alta (Arizona) and in Lower California. In the south, they expanded into the territory of Araucanía (Chile) and developed an important **mission system** in Paraguay. Jesuits obtained complete authority to convert and organize the Guaraní east of Asunción. Portuguese slave raids forced the Jesuits to move their missions to the south. The Jesuits established a complete governmental organization under the rule of a father superior, and Indians received some military training to defend themselves from enslavement. Commercial agriculture of yerba mate helped to support the missions. The expulsion of the Jesuits (1767) led to the decline of the missions. <sup>2</sup>

**The Church enjoyed the ecclesiastical exemption (*fuero*), operating its own courts with jurisdiction over all cases involving the clergy and spiritual affairs.** The Church also had extensive wealth. By the close of the colonial period, the **Church probably controlled half of the productive real estate of the Indies.** During the Habsburg dynasty (1516–1700), the power of archbishops could rival that of high civil authorities, and quarrels over jurisdiction were frequent. At the end of the colonial period there were seven archbishoprics and some 35 dioceses. <sup>3</sup>

The **Spanish Inquisition**, operating under the Council of the Inquisition, was introduced and tribunals were established in Mexico City (1569), Lima (1571), and Cartagena (1610). These tribunals were in charge of repressing people who practiced religions other than Catholicism (Protestants, Jews, Moors) as well as those who used sorcery and witchcraft, uttered blasphemies, lived in bigamy, or practiced sodomy. In the 17th century the Inquisition brought to trial New Christians accused of practicing the Jewish religion. It condemned a few to execution and many to exile and prison. Indians were exempted from the Inquisition, but the bishops judged their religious infractions, generally understood as regression to idolatry. Campaigns against idolatrous practices were especially important in Peru (1610–60), where Jesuits encouraged the formation of a special tribunal to deal with such cases. Slaves were subjected to the Inquisition, generally accused of witchcraft against their masters and of blasphemy.

### d. Economic Conditions

**The crown fostered gold and silver mining in its colonies.** Rich silver deposits were first discovered in Peru, where POTOSÍ became the most important mining center from 1540 to 1585. During the early years of silver extraction, wage labor predominated, but with the organization of the **mita** (forced labor) in 1574 by **Viceroy Toledo**, workers were recruited on a compulsory basis. Indian communities also had to provide a fixed allocation of workers to **Huancavelica** to extract mercury, an essential element for silver amalgamation. Forced recruitment mainly affected provinces in the southern highlands. After 1590, Peruvian silver production decreased, partly owing to irregular mercury production. Only at the beginning of the 18th century did Peruvian silver mining show signs of recovery, encouraged by improvements in mercury production in Huancavelica. From the 1770s on, the steady supply of mercury propelled a silver boom in Peru.

Between 1590 and 1630, Mexico's mines became the most productive, with important mines in the districts of **Zacatecas**, **Guanajuato**, **Pachuca**, **Taxco**, and **San Luis de Potosí**. Mestizo and Indian workers went to the mines as free laborers attracted by higher wages, though eventually many became trapped in their place of employment by debts, and a system of debt peonage developed. From 1640 to 1680, mining production contracted, recovering in the last decades of the 17th century with the return to smelting techniques to offset mercury shortages. In the 18th century, silver production increased decisively, owing to the steady influx of mercury from the Almadén and Idrija mines in Spain.

Agricultural and pastoral landholdings developed. In New Spain, Spanish-creole sectors and religious corporations increased their **estates** (haciendas) during the second half of the 16th century in vast areas, especially in the Bajío region. As a result, white landowners controlled Indian crops such as maize and *pulque* (alcoholic drink made from *maguey*), which led to profiteering and price speculation highly beneficial to the elite. In Peru, great landowners made more limited advances, and middle-size haciendas predominated. Throughout the Spanish domains—especially in the Caribbean and coastal areas—sugar plantations and mills evolved on the basis of **slave labor**, while haciendas used forced Indian labor (*mita* in Peru and *repartimiento* in New Spain) and resorted to debt peonage to retain workers. Between 1590 and 1620, the crown ordered legalization

of illegal occupation of land through a procedure called *composiciones de tierras*, which allowed the consolidation of haciendas.

Mestizo and Indian peasants also participated in the commercial economy, producing foodstuffs for the market and working in haciendas, mines, and transport as wage laborers. **Indian villages** were the main source of temporary and low-cost labor for all Spanish-creole enterprises.

During the 16th century, silk production developed in Mexico, Puebla, and Oaxaca for the internal market and export to Peru, but it was soon replaced by Chinese silk in the Peruvian market. Cochineal and indigo were important export commodities in Yucatán and Guatemala. In Peru, New Spain, and Nueva Granada, **textile factories** (*obrajes*) produced cheap textiles for the internal market. Muleteers' convoys provided **transport** connecting the diverse economic areas of the viceroyalties.

**Overseas trade** was under direct crown control, and Seville, seat of the Casa de Contratación, had the monopoly of the American trade during the 16th century. An influential merchant class developed in Sevilla with connections to the designated trading ports in the colonies: **Vera Cruz, Cartagena, and Porto Bello**, which alone were allowed to trade directly with Spain. They imposed restrictions on intercolonial trade and limited trade with the **Philippines** for the colonies. Naval warfare and attacks by corsairs led to the creation of a system of **convoyed fleets** for the protection of gold and silver shipments, one each year for New Spain and one for Peru (1543–61). For the return trip, the fleets united at Havana and sailed together for Spain. **Market fairs** were held annually at Porto Bello and Jalapa (Mexico). Peru had the greatest trade volume and value between 1540 and 1585, but New Spain surpassed them between 1590 and 1620. After 1620, transatlantic trade suffered a contraction owing to the decline of mineral production. Recovery began about 1660 in Mexico. In the 1670s, because of peace treaties, privateering subsided. A new **contraband trade** developed that was mutually advantageous to Spanish merchants and to British, Dutch, Portuguese, and French smugglers trading manufactures and slaves.

Wholesalers dominated merchant guilds (**Tribunal del Consulado**) organized in the main capitals of the Spanish colonies (Mexico, 1592; Lima, 1613). Big merchants based in the colonies carried out a vigorous intercolonial trade despite restrictions. Chinese textiles reached **Acapulco** via the Philippines and were reexported to Peru in exchange for silver, mercury, and wines. In Central America, **Santiago de Guatemala** became a significant commercial entrepôt, exporting cacao, cochineal, indigo, and livestock to New Spain in exchange for silver, Mexican textiles, Chinese silk, and mules. **Venezuela** and **Guayaquil** exported cacao to New Spain in return for silver. Havana and Guayaquil became the most important shipbuilding centers, followed by Realejo, Maracaibo, and Cartagena. After 1640, trade with Asia decreased and interregional commerce lost vigor.

**Under the Bourbon dynasty new policies**, known as the **Bourbon Reforms** (See [Administration](#)), were introduced. The Treaty of Utrecht (1713) > (See [1713, April 11](#))

granted Great Britain the monopoly of the slave trade with the colonies and the right to send one vessel each year to Porto Bello to trade. The Casa de la Contratación was transferred to Cádiz in 1717. Monopolistic **chartered companies** were established in Honduras (1714), Caracas (1728), Havana (1740), and Santo Domingo (1757). In 1763, Charles III abolished the system of fleets and authorized eight other Spanish ports, besides Seville and Cádiz, to trade with the Indies. He also permitted intercolonial trade between New Spain and Peru and between Guatemala and Nueva Granada (1764–82), but internal custom houses were established and state monopolies of certain goods reinforced. The Casa de Contratación was abolished in 1790. Under the Bourbons, areas previously marginal in the colonial system were transformed into dynamic economies (Buenos Aires, Venezuela, Chile), while Peru and Upper Peru declined.

### e. Social and Cultural Evolution

The upper crust of society was composed of the high colonial officers, both civil and ecclesiastical, and wealthy Spanish and creole merchants. Mine owners, despite their economic importance, rarely achieved a high social standing. **Creoles**, descendants of Spaniards but born in American domains, resented the preference for Peninsulars in appointments to higher and lesser office, but both groups belonged to the **República de Españoles** (Commonwealth of the Spanish) and were connected through kinship, marriage, and business. **Several universities were open to colonial male students:** the **Royal University of Mexico** (1551), **San Marcos de Lima** (1551), **St. Thomas de Aquinas** in Santo Domingo (1558). Women could follow religious careers, but professing required a costly dowry only the wealthy could afford. Nuns belonged to the elite and were far more highly regarded than married women. Very few Indian or mestizo women reached the status of nun. Lower-class women worked as retailers, street vendors, servants. Marriage was under the jurisdiction of the Church. Divorce was allowed, but wives had to show proof of continuous mistreatment and cruelty to qualify. Authorities created special houses (*casas de recogidas*) to shelter fallen women and virtuous women without means of support. 1

The population of the viceregal capitals and other cities included a high level of slaves, who worked as domestic servants and in artisanal trades to support their masters. Urban Indians lived in segregated neighborhoods near the downtown areas of Lima and Mexico City. 2

Several individuals attained distinction through their religious piety and cultural pursuits. The first Spanish-American saints belong to this era: **St. Rosa de Lima** (1586–1617), **St. Mariana de Jesús** (1618–45), **St. Felipe de Jesús** (1572–97), martyr of the conversion of Japan, **St. Martín de Porres** (1579–1639), a mulatto. The Church became the main patron of the arts and architecture. The famous Gothic cathedral of Santo Domingo (1514–40) was planned by **Alonso Rodríguez**. **Francisco Becerra**, a Spanish architect working in Lima, Quito, and Cusco, planned the cathedral of Puebla (1576–1626), which was inaugurated in 1649 by Bishop **Juan de Palafox**. Becerra also began to build the cathedral of Lima in 1569. The cathedral of Mexico was initiated in 1573, according to **Claudio de Arciniega's** design. Although consecrated in 1667, it was completed only in 3

1813 by Valencian sculptor **Manuel Tolsá**. The cathedral of Cusco was consecrated in 1654. **Local schools of painting** developed in Mexico, Quito, Cusco, and Lima. Many Spanish-American authors gained widespread recognition, among them **Inca Garcilaso de la Vega** (1539–1616), **Juan Ruiz de Alarcón** (1580–1639), **Sor Juana Inés de la Cruz** (1651–95), and **Pedro de Peralta y Barnuevo** (1663–1700).

Despite the importance of cities as political and cultural centers, rural areas were predominant. Indians constituted the **República de Indios** (Commonwealth of Indians) and were supposed to live separated from Spaniards to avoid abuse. The Indian *kurakas*, or *caciques*, formed the upper crust of the population. Many Indians chose to dissociate themselves from Indian communities to avoid forced labor and tribute and migrated to other rural or urban areas, becoming *forasteros*. **The Mestizo population, distributed in urban and rural areas, became peasants, squatters, wage laborers, servants, and artisans and were exempted from tribute.** Spanish authorities and rural parish priests frequently owned haciendas and textile mills in Indian towns, compelling Indians to labor for them. Clerics often denounced Indian religious practices as pagan or idolatrous. Despite campaigns of repression, native beliefs survived and mixed with Christian beliefs.

In plantation areas, slaves frequently rebelled against their bondage, fleeing to liberated zones where they created free settlements. Colonial authorities tried to prevent the spread of **marronage**, sending raids against maroon villages or making treaties with them. Some slaves managed to obtain freedom by manumission or by self-purchase, becoming free people of color. Free and slave blacks re-created their African religious beliefs and influenced popular culture, especially in the Caribbean, circum-Caribbean, and coastal areas of Mexico and the Pacific.

The Bourbon campaign to reform colonial government by prohibiting office purchases adversely affected the position of upper-class creoles, who saw themselves displaced in favor of Peninsular bureaucrats. The institution of intendant diminished the power of the viceroys but did not increase the influence of elite creoles.

## f. [Insurrections](#)

During the 18th century, social groups and regions affected by the redefinition of colonial exactions on their labor force and resources, and by centralization under the Bourbon reforms, organized insurrectionary movements to resist or modify the terms of colonial control. In most cases these movements legitimized themselves as defending the traditional colonial system against the reforms; elsewhere, as in Paraguay, the renewal of old grievances fueled rebellion against Spanish authorities. Total confrontation with the colonial system, as in the cases of Chiapas and central Peru, was a rare occurrence. Class alliances were fragile, and this contributed to the failure of these movements to break the hold of the colonial state. <sup>1</sup>

### 1712, June–Nov. Maya Rebellion in Chiapas

Maya villagers faced increased fiscal and labor demands and forced sales, and their authorities lost ground to Spanish officials and curates in the struggle over control of villages and religious brotherhoods. In the village of Cancuc, **María de la Candelaria**, a young Maya woman, claimed to have seen the Virgin Mary, prompting a circle of notable Maya to organize a shrine to worship the Virgin. Maya pilgrims converged on the new sacred place, but curates disputed the authenticity of the miracle and labeled it idolatrous. Confrontation escalated and Maya from 21 towns gathered at Cancuc to pay allegiance to the Virgin Mary, openly renounced God and the king, and took up arms. They captured the village church, killed friars, plundered mestizo and Spanish estates, and massacred white and mestizo children in Ocosingo. Rebel leader **Sebastián Gómez de la Gloria** ordained priests and organized an independent religion of the Virgin Mary. Ethnic solidarity crumbled when Maya allies disputed concentration of power in the Cancuc leadership. Spanish authorities sent an army from Guatemala City and subdued the rebels. Almost 100 rebels were sentenced to death and many suffered physical punishment, forced labor, and exile. In the aftermath of the rebellion, measures limiting the labor draft and Indian services were adopted. <sup>2</sup>

## 1721–35

**The *Comuneros* of Paraguay.** Colonists in Paraguay resented the Jesuit missions where Indians could avoid the colonists' labor demands. Dissatisfied with Governor Diego de los Reyes y Balmaceda's pro-Jesuit policy, the local elite sought his dismissal. The Audiencia of Charcas sent **José de Antequera y Castro** to make inquiries in Asunción. Antequera made himself governor of Paraguay and, with the support of the colonists, expelled Governor Reyes and later the Jesuits. The viceroy of Peru, Marqués de Castelfuerte, ordered military action against the colonists, forcing them to readmit the Jesuits. Antequera left for Lima, where he tried to defend himself against charges of treason. In Asunción, **Fernando Mompó de Zayas** proclaimed the right of the people to elect their own representatives. His propaganda attracted poor colonists, traditionally excluded from political life in the city, who called themselves *comuneros* and elected a **Junta Gubernativa** to run the province. Antequera was executed in Lima. A new governor, Manuel Agustín Ruyloba, arrived and tried to eject *comuneros* from the city and its institutions, but he was assassinated when *comuneros* marched on Asunción to expel the Jesuits once again. *Comuneros* dominated the countryside, occupying estates and confiscating wealthy landowners' properties. As a result, the upper classes felt increasingly alienated from the movement. The viceroy of Peru ordered the governor of Buenos Aires to invade Paraguay and squelch the insurrection. Asunción landowners joined the occupying forces and defeated the rebels. Three *comunero* leaders were executed, while others suffered exile, physical punishment, and prison.

## 1742

**Juan Santos Atahualpa**, who proclaimed himself descendant of the Incas, led tropical lowland communities opposed to the presence of Franciscan missions as well as some Indian and mestizo peasants from the highlands in a campaign to oust colonists and friars from the eastern lowlands of central Peru. Several viceroys sent military expeditions in 1742, 1743, 1746, and 1759, and all failed against the guerrilla force organized by the rebels. The Spaniards established a system of forts to prevent an expansion of the movement into the highlands, which could have jeopardized mining production. In the neighboring districts, Indians were exempted from the *mita* (forced labor) in order to remove a grievance that could generate support for the jungle rebels. The rebels attempted to set up a permanent base in the highlands in 1752 but failed on account of weak local backing. Juan Santos Atahualpa kept control of the lowland area, however, and was never captured.

## 1780–82

**The Great Rebellion of Túpac Amaru and the Kataris.** New fiscal and commercial policies created broad sources of tension in the viceroyalty of Peru. Peasants felt particularly aggrieved by forced sales of goods (*repartimiento de mercancías*). **José Gabriel Condorcanqui**, *kuraka* of Tinta, Surinama, and Tungasuca, took the name **Túpac Amaru II** and led a rebellion against the abusive administration of certain local authorities. He ordered the execution of Corregidor Antonio de Arriaga in Nov. 1780. The revolt initially earned some support from the creole upper class in Cusco, who resented the recent policies, but the rank and file of the rebel army were Indian peasants who attacked landed property without regard to the owners' birthplaces. Creole sympathy, already limited, quickly evaporated. Túpac Amaru attempted to march against Cusco, whose defense was organized by local militias and Indian regiments led by *kurakas* loyal to the crown. A civil war broke out in the Indian ranks between loyalists and rebels. Túpac Amaru, his wife, Micaela Bastidas, and his family were imprisoned after his defeat at the hands of loyalist *kuraka* **Mateo Pumacahua**. Diego Cristóbal and Mariano Túpac Amaru took over as leaders of the rebellion, while Túpac Amaru and his family were executed in Cusco. In **Chayanta**, *kuraka* **Tomás Katari** denounced those who usurped his position and led a movement to reduce tributes. Local Spanish authorities imprisoned him, and when an Indian multitude attempted his rescue, his captors killed him, unleashing a full-scale rebellion. During the same period, a nonnoble Aymara Indian, **Julián Apaza**, taking the name **Túpac Katari**, gathered an Indian army to lay siege to La Paz, which was temporarily broken by royal troops. Andrés Túpac Amaru joined Túpac Katari in a renewed siege of La Paz, but promises of amnesty and internal dissension gradually dispersed their followers. Local elites, wary of the rebels' anti-creole sentiment, supported the repressive forces. The joint efforts of the colonial army, loyal *kurakas*, and creoles managed to crush the uprising. Rebel leaders were imprisoned and executed, and the properties of rebel *kurakas* were confiscated. These measures ruined the Indian nobility and severely reduced their hold on the Indian population, favoring Indian authorities directly named by the colonial state.

5

## 1781

**Comuneros of Nueva Granada.** The reorganization of state monopolies for rum, anisette, and tobacco to increase royal revenues adversely affected farmers in Socorro, a town of predominantly white and mestizo cultivators. Under the leadership of two creoles, **Juan Francisco de Berbeo** and **José Antonio Galán**, they refused to pay taxes and expelled the Spanish authorities. The rebels marched to Bogotá and negotiated a

6

treaty that rescinded the new fiscal program and gave creoles greater access to office. However, former rebel allies split after the agreement, which redressed the grievances of only one faction. Indians and landless workers wanted either to protect their holdings or to secure access to land, and slaves expected to gain their freedom. José Antonio Galán emerged as a leader of this more radical group, while the creole *comunero* leadership collaborated with the colonial authorities to capture him and defeat his followers. Galán was executed and many of his followers imprisoned. (See [Latin America, 1806–1914](#))

## 9. [Portuguese America, 1500–1815](#)

In the era of colonial expansion, Portugal's main orientation was to maintain and exploit trade posts in Africa and India, where slave trade and commerce in exotic goods produced high profits. Attention shifted to Brazil only because of French and Dutch attempts to gain territories there. 1

Although no **Black Legend** has been popularized about Portuguese colonization, the extermination and enslavement of the native population equaled the exploits of Spanish conquerors. Native peoples in Brazil were organized mainly in tribes with no centralized structures and were engaged in constant warfare. The Portuguese intervened in these conflicts to escalate them as a means of obtaining Indian slaves. Indian enslavement continued practically unchecked throughout the colonial period, and a demographic catastrophe of unknown dimensions occurred, aggravated by warfare and disease. 2

### 1500–1521

Under **Manuel the Fortunate** (1495–1521), Portuguese merchants established some trading posts, bartering tools and metal artifacts for Brazil wood gathered by natives. 3

### 1521–30

**John III** (1521–57) undertook systematic colonization to counter French activities in Portuguese possessions. The king promoted private investment in colonization. 4

### 1530–32

**Martin Affonso de Souza** as captain-major of a colonizing expedition founded São Vicente and introduced sugarcane cultivation. 5

## 1532–36

The crown established the *donatários*, a system of feudal hereditary captaincies with nearly sovereign authority, but they did little to advance colonization. A more centralized administration with a governor-general at its head was established. Sugarcane cultivation expanded and Indian enslavement assumed wider proportions. Although African slaves were also used, their price was high in comparison to that of Indian slaves.

6

## 1549

**Thomé de Souza**, the first governor-general, founded **São Salvador** (Bahia) as seat of the government and established a colony. **São Paulo** was founded shortly after midcentury.

7

Jesuits undertook the conversion of the natives and established mission villages in Bahia.

8

## 1551

The bishopric of Bahia, subordinate to the archbishop of Lisbon, was erected.

9

## 1555

With the intention of creating an “Antarctic France,” **Nicolás Durand de Villegagnon** founded a colony on the Bay of Rio de Janeiro.

10

## 1565–67

**Mem de Sá** (1558–72) led Portuguese to destroy the French colony and founded the city of **Rio de Janeiro**. He promoted enslavement of unfriendly Indians.

11

## 1570

The crown issued decrees against enslavement of Indians, which colonists disregarded. 12  
Expansion of sugar mills led to an increase in the African slave trade and to further  
Indian enslavement, affecting even Indian cultures allied with the Portuguese.

## 1587

Dutch privateers attacked Recife. Attacks repeated in 1595, 1604, 1616, and 1623. 13

## 1594

French attacked Paraíba. Portuguese built a fort, which became the city of **Natal**. 14

## 10. [The Portuguese Colonial System](#)

**Population.** At the beginning of Portuguese colonization, a large group of mestiços emerged as a result of intermixture between Portuguese men and Indian women. The heavy influx of African slaves from the mid-16th century on resulted in new racially mixed groups, children of African and Indian parents and of African and white parents. In 1583 the population was estimated at 25,000 whites and mestiços, 18,000 subjugated Indians, and 14,000 slaves. In the mid-17th century, considerable immigration occurred. Population was estimated at 150,000 to 200,000, three-quarters of whom were Indians, blacks, and mestiços or mulattos. In 1818 the population was estimated at 843,000 whites, 1,887,000 blacks, 628,000 mestiços, and 259,400 Indians. The bulk of the population was concentrated in São Paulo, Minas Gerais, Pernambuco, and Bahia. Originally the crown permitted any person of Catholic faith to enter Brazil, but after 1591 aliens were excluded. <sup>1</sup>

Portuguese **colonial administration** was not clearly differentiated from that of the metropolis prior to the union of the crowns of Portugal and Spain. The Mesa da Conciência e Ordens, with ecclesiastical and financial powers, was created in 1532. Upon the establishment of a more centralized government in Brazil, a commissioner of finances and a chief justice were appointed for the colony (1548). Corregidores, with judicial and military functions, were in charge of local administration. Municipal organization was patterned on that of Portugal. The fundamental code was the Ordenanças Manuelinas (1521). <sup>2</sup>

During the period of the union of the thrones of Spain and Portugal (1581–1640), Spanish administrative forms were introduced. The Casa da Índia was established (1591). The inspector of finance was created (1604), a supreme court was established in Bahia (1609), and the title of viceroy was introduced (1640). Under Philip III (1598–1621), the Ordenanças Philipinas, which permitted greater local autonomy, superseded the Ordenanças Manuelinas. <sup>3</sup>

By the close of the 18th century, the structure of royal government was fully formed. The **Overseas Council** (Conselho de Ultramar), created in 1642, exercised general religious and military authority over Brazil. Pará, Maranhão, Pernambuco, Bahia, São Paulo, <sup>4</sup>

Minas Gerais, Goiás, Mato Grosso, and Rio de Janeiro were captaincies-general, provinces of the first rank, under captains-general usually appointed by the crown. The viceroy, who was also captain-general of Rio de Janeiro, possessed legal authority over the captains-general in certain matters, but the latter frequently received instructions from the crown, with which they could correspond directly. A tendency toward local autonomy existed. Two superior judicial districts existed, with high courts at Bahia and Rio de Janeiro (founded in 1757), respectively. Appeals from these courts went directly to Lisbon. The municipalities, with their councils (*senados de câmara*), enjoyed a certain degree of self-government.

**Economy.** Restrictions were placed upon industry and agriculture that competed with Portuguese enterprises, and a government monopoly, which produced important crown revenues, existed for the exploitation of Brazil wood, mining of diamonds, and other activities. Customs duties were levied and a royal fifth (*quinto*) was collected on all gold mined. The mining of gold and diamonds and the production of sugar, cotton, and hides were the chief industries. Slavery, first Indian, then predominantly African, was the main form of labor in Brazil. Portugal controlled Angola and Portuguese traders supplied slaves to the Brazilian planters.

Commerce was a Portuguese monopoly until 1808 and trade was restricted to Lisbon and Oporto and carried out through convoyed fleets. In 1649 a monopolistic **Commercial Company of Brazil** was organized. In 1682, the also monopolistic **Maranhão Company** was formed. Both companies aroused opposition and were abolished in the first decades of the 18th century. During the Pombaline period, two more monopolistic companies were formed, but both were abolished after his fall. Pombal abolished the system of convoyed fleets.

**The Church.** The papal bull of Julius III conceded to the crown the right to nominate bishops, collect tithes, dispense church revenues, and receive appeals from ecclesiastical tribunals. The bishopric of Bahia was erected in 1551. In 1676 Innocent XI created the **archbishopric of Brazil**, with Bahia as the metropolitan seat, at the same time erecting the bishoprics of Rio de Janeiro and Pernambuco. The **Jesuits**, until their expulsion by the crown (1759), played an important role through conversion of the natives, extension of the Portuguese influence, and establishment of schools and colleges (1554). They had frequent clashes with the colonists, who abhorred the Jesuit campaign against Indian slavery. Jesuits, however, did not oppose African slavery and owned many slave plantations in Brazil. The **Inquisition of Lisbon** was in charge of religious infractions, but no tribunal was established in Brazil, all the cases being reviewed by *visitadores* (inspectors).

**Society and culture.** Sugar mill owners (**senhores de engenho**) and sugarcane growers occupied the highest social and economic positions, along with high royal officers and Portuguese merchants. Marriage and kinship ties solidified their social position. This elite minority sent its children to Portugal for higher education since, in Brazil, there was no

university-level instruction during the colonial period. Jesuits controlled most of the institutions of secondary education, with ten colleges and four seminaries. The most distinguished Brazilian-born scholar was the Jesuit **Antônio Vieira** (1608–97), a constant defender of the Indians, whose sermons achieved fame throughout the Iberian dominions. There was a significant population of New Christians (Jews recently converted to Christianity or their children) engaged in commerce, artisanal trades, and sugarcane growing, but Jewish collaboration with Dutch invaders weakened the New Christians' position and inquisitorial inspections frequently harassed them. Wealth from the gold rush and sugar commerce allowed the development of highly elaborate religious architecture and arts in the main cities. The most distinguished artist of this era was the mulatto architect and sculptor **Antônio Francisco Lisboa** (c. 1730–1814), called **Aleijadinho**.

The rural sector of society was predominant. Indians and African slaves occupied the lowest social position. Often, slaves fled to remote areas to form maroon communities. Slaveholders hired professional slave-catchers (*capitães de mato*) to recapture their slaves. Slaves could also obtain freedom by self-purchase or by manumission. People of mixed background (called mulatos, mamelucos, caboclos), although free, were subjected to discriminatory laws and customs. They lived as squatters, sharecroppers, artisans, wage laborers. Black slaves introduced customs and beliefs from different African societies, which played a major role in the formation of popular religiosity and culture in Brazil. (See [Latin America, 1806–1914](#))

## **[I. North America, 1500–1789](#)**

### **[1. Overview](#)**

For nearly 300 years before the founding of the American republic, North America had experienced a series of socioeconomic, cultural, and political transformations. In relatively rapid succession, European exploration, settlement, and colonial expansion culminated in an era of reform, revolution, and the birth of the United States and, later, the Dominion of Canada. The exploration and settlement of North America had roots in the transformation of European society from a relatively stable world of feudal agriculture to the dynamic world of commercial capitalism. During the early 16th century, European monarchs gave trading rights to commercial capitalists, encouraged their involvement in international trade, and facilitated European expansion overseas. Although Spain “discovered” the New World and soon controlled vast stretches of land in the Caribbean and South America, the Netherlands, France, and England later gained increasing access to North America. 1

European expansion and settlement in North America ushered in a new set of social and cultural interactions among diverse peoples from Africa, America, and Europe. While these interactions were salutary for Europeans, especially elite white men, they were quite destructive, even devastating, for the indigenous peoples (See [North American Chiefdoms](#)) and for Africans. Under the onslaught of European weaponry, diseases, and declining access to arable land, the Native American population in New England, for example, declined from nearly 120,000 in 1570 to about 12,000 in 1670 and continued to drop in subsequent decades. For their part, although the first Africans to arrive in North America occupied a status much like that of European indentured servants, they soon experienced treatment that foreshadowed their transition to a status of slaves for life. Thus, when the new nation embarked upon its political career with the Declaration of Independence in 1776, it did so with huge gaps between its democratic promise and its reality as an elite, slaveholding, white male republic. Progress toward government by, for, and of the people would take years to achieve in North America. While Canada would remain within the British colonial empire, its future was profoundly shaped by developments in the new republic south of the border. 2

## **2. Exploration and Settlement, 1500–1719**

### **EARLY SETTLEMENTS ON THE CONTINENT OF NORTH AMERICA (MAP)**

#### **a. The French in North America**

**1508**

Fishing expedition of Thomas Aubert of Dieppe resulted in first recorded case of Amerindian taken to France for official display. 1

**1524**

**Giovanni de Verrazano**, sent out by Francis I, probably explored the coast from Cape Fear to Newfoundland. 2

**1534–41**

Voyages of **Jacques Cartier**. On the first voyage he sighted the Labrador coast, passed through the Straits of Belle Isle, and explored the Gulf of St. Lawrence. He returned to France with **Taignoagny** and **Domagaya**, the sons of **Donnacona**, the chief or “lord of Canada.” With Taignoagny and Domagaya serving as guides, on his second trip (1535–36) Cartier sailed up the St. Lawrence, stopped at the site of Quebec, and proceeded to the La Chine Rapids and the site of Montreal. Several members of this 3

voyage contracted scurvy and died, but others recovered when they took an Indian cure for the disease. On the third trip (1541), unsuccessful attempts were made to establish a settlement at Quebec, and therewith the French efforts to colonize the St. Lawrence Valley came to an end until the 17th century.

In the southeast and the southwest, the presence of the Spaniards hampered the activities of the French. 4

## 1542

Cartier departed for France and left Roberval in charge. Most of the 200 members of his party were released convicts, primarily men, from the French jail. 5

## 1562

Admiral Coligny, as part of his plan to attack Spain, sent **Jean Ribaut** to establish a colony in Florida. A colony on Port Royal Sound failed, but in 1564 Ribaut and **Rene de Laudonniere** established **Fort Caroline** on St. John's River. 6

## 1598

**Marquis de La Roche** attempted to found a colony on Sable Island. The survivors were rescued five years later. 7

## 1600

**Pontgrave, Chauvin, and De Monts**, with a grant of the fur-trade monopoly, made another unsuccessful attempt to colonize, this time at **Tadoussac** on the lower St. Lawrence. 8

## 1603

Pontgrave, accompanied by **Samuel de Champlain**, explored the St. Lawrence as far as La Chine Rapids. Champlain also explored the Acadian coast. Champlain followed the New England coast as far as Cape Cod and returned to France in 1607. 9

## 1608, July 3

Champlain, acting as lieutenant for De Monts, founded the settlement of **Quebec**. In the following year, accompanied by a party of **Algonquin and Huron Indians**, he ascended the Richelieu River to the lake that now bears his name. 10

## 1610

Poutrincourt reestablished Port Royal. 11

## **b. The English in North America**

### **1. Exploration**

Following the voyages of the **Cabots** (See [1497, May 2–Aug. 6](#)), the English showed little interest in the New World until the second half of the 16th century. 1

#### **1562**

**John Hawkins**, having taken a cargo of slaves in Africa, disposed of them in **Espanola**. 2  
The Spaniards made efforts to stop a second slave-trading voyage (1564–65), and on his third voyage (1567–68) Hawkins was driven by a storm into the harbor of Vera Cruz, where his fleet was largely destroyed.

#### **1572–80**

**Francis Drake**, nephew of Hawkins, carried out reprisals on Spanish commerce. Sailing 3  
in 1577, he became **the first Englishman to circumnavigate the globe**.

#### **1576–78**

After unsuccessful efforts by explorers of the **Muscovy Company** to find a northeast 4  
passage to China, English efforts were concentrated on the search for a northwest passage. **Martin Frobisher** sailed from England in June 1576, explored the Labrador coast, crossed Hudson Strait, coasted along Baffin Land, and entered the inlet known as **Frobisher Bay**. In 1577–78 he made a second voyage (See [1576](#)).

#### **1568**

**Sir Humphrey Gilbert** took possession of Newfoundland in the name of Elizabeth but lost his life on the return voyage. 5

### c. [Dutch and Swedish Settlements](#)

#### 1602

The **United East India Company** was chartered by the states-general of Holland. 1

#### 1609

The company employed **Henry Hudson**, an Englishman, to search for the northwest passage. He sighted land at Newfoundland, explored the New England coast, rounded Cape Cod, proceeded south to Virginia, probably entered Chesapeake Bay, entered Delaware Bay, and exploree the **Hudson River** to Albany. Friendly relations with Iroquois Indians. 2

#### 1612

Dutch merchants sent **Christianson and Block** to Manhattan Island to engage in fur trade. A post was established in 1613. 3

#### 1614

**Fort Nassau**, later Fort Orange, built near present Albany. Exploration by Adrian Block of Long Island Sound, Connecticut coast, Narragansett Bay, and Cape Cod. As a result the **New Netherland Company** was formed and given monopoly of trade between the 40th and 45th parallels. Fur trade carried on and the coast explored. 4

#### 1621

The **Dutch West India Company** was chartered and given a monopoly of trade in Africa and America. <sup>5</sup>

## 1626

**Peter Minuit** became director-general of the company. He purchased **Manhattan Island** from the Indians for \$24 and founded the settlement of New Amsterdam. Meanwhile the attention of **Gustavus Adolphus** of Sweden was called to the Delaware country. In 1637, the **New Sweden Company** was organized, chiefly as a result of the encouragement of two Dutchmen, Samuel Blommaert and Minuit. <sup>6</sup>

## 1629

Under the urging of **Killiaen Van Rensslaer**, a wealthy Amsterdam jeweler, the Dutch government established the patroon system, which provided huge estates to wealthy Dutchmen in exchange for settling 50 tenants on the land within a four-year period. <sup>7</sup>

## 1638

Two Swedish vessels arrived on the Delaware and **Fort Christina** was established. This intrusion of the Swedes angered **Peter Stuyvesant** of New Netherland, who urged the West India Company to occupy New Sweden, which was done in 1655. <sup>8</sup>

### **3. Colonial History, 1641–1737**

#### **a. New England**

##### **1641**

The **Body of Liberties**, a code of 100 laws, was established by the general court of the Massachusetts Bay Colony. 1

##### **1643, May 19**

The **New England Confederation** was formed by Connecticut (Hartford, Windsor, and Wethersfield), New Haven, Plymouth, and Massachusetts Bay for purposes of defense. 2

##### **1646**

In Massachusetts, **John Eliot** began his missionary work among the Indians, translating the Bible into Massachusetts dialect, 1661–63. 3

##### **1647**

Christian and civil authorities intensified attacks on persons claiming to possess supernatural powers as healers and prophets. Over the next decade and a half, **Massachusetts and Connecticut officials hanged 14 people, mainly women, for witchcraft.** 4

##### **1662**

**Charter of Rhode Island and Providence Plantations**, kept throughout the colonial period and the constitution of the state until 1842.

5

## 1662

Puritan ministers initiated the “**halfway covenant.**” This policy allowed children of all baptized Puritans to become active members of the church and helped to concentrate power in the hands of certain established families.

6

## 1664

**Union of Connecticut and New Haven**, because of the latter's fear of annexation to New York.

7

## 1675–76

**KING PHILIP'S WAR** in New England. Displaced by European settlements and ravaged by disease, the population of New England's Native Americans dropped drastically, from 120,000 in 1570 to 12,000 in 1670. **Metacom** (called **Philip** by the Europeans), son of **Massasoit**, chief of the **Wampanoags**, believed only armed resistance could stop the European advance. In 1675, Metacom formed a military league comprising most of the Indians from Maine to Connecticut. Full-scale war ensued. Bitter fighting continued into 1676. **Chief Canonchet of the Narragansetts** was shot (April 1676).

8

## 1680

**New Hampshire** was separated from Massachusetts by royal charter.

9

## 1684

**ANNULMENT OF THE MASSACHUSETTS CHARTER.** The independent course of Massachusetts had long irritated the crown. In 1679 **Edward Randolph** arrived in Boston as collector of the customs, bearing instructions for the colony to relinquish

10

jurisdiction over New Hampshire, which authorities transformed into a royal colony. Friction continued, as did Randolph's complaints against the colony, until legal action in 1684 annulled the charter.

## b. [New York, New Jersey, and Pennsylvania](#)

### 1664

**Grant of New Netherland**, from the Connecticut to the Delaware, to the king's brother, **James, duke of York**. The grant included the eastern part of Maine and islands south and west of Cape Cod. The region between the Hudson and the Delaware was granted by the duke of York to **Lord Berkeley** and **Sir George Carteret**. <sup>1</sup>

### 1664, Aug. 27

**SURRENDER OF NEW AMSTERDAM** to the English. Name of the colony changed to **New York**. On Sept. 24 surrender of Fort Orange, whose name was changed to **Albany**. <sup>2</sup>

### 1676

Line of demarcation between East and West New Jersey. **Settlement of Quakers** in West New Jersey (1677–81). <sup>3</sup>

### 1681, March 4

**CHARTER OF PENNSYLVANIA** signed, granting to **William Penn** the region between the 40th and 43rd parallels, extending 5° west from the Delaware River. These limits brought the colony into conflict with New York on the north and Maryland on the south. The dispute with Maryland was finally adjusted when in 1767 two surveyors, **Mason and Dixon**, ran the present boundary between the two states. The form of government of the colony was to be determined by the proprietor. The first body of colonists, primarily Quakers, arrived in 1681 and a frame of government was provided <sup>4</sup>

for the governance of the colony. The government guaranteed political liberty and religious freedom.

### 1682–83

Penn arrived in the colony and **Philadelphia** was laid out (1682). Penn entered into a treaty with the Indians (1783) which had the effect of keeping the colony free from Indian wars.

5

### 1688

**A group of Germantown Quakers issued the first notable antislavery document in British America.**

6

### 1702

**New Jersey reunited** as a royal province.

7

### 1715–50

**SETTLEMENT OF THE PIEDMONT**, partly by newcomers and old settlers, who crossed the fall line into the areas, and partly by German, Swiss, and Scotch-Irish entering at the port of Philadelphia and pushing southward through the valleys, especially the Shenandoah. **German immigration**, which began with the founding of **Germantown, Pennsylvania** (1683), increased greatly after 1710.

8

### 1720–26

**William Burnet**, governor of New York, began efforts to counteract French attempts to hem in the English colonies in the west. He prohibited trade between the Iroquois and the French. In 1722 he established a trading post at Oswego and carried on negotiations at Albany with the Six Nations. **A treaty with the Senecas, Cayugas, and Onondagas** (1726) added their lands to those of the Mohawks and Oneidas, which were already under English protection. The intensification of the fur trade heightened **intra-Indian rivalry**, enabling Europeans to extend their control farther west and deeper into the

9

interior of Indian lands.

## 1732

**Benjamin Franklin** (1706–90), journalist as well as statesman, published *Poor Richard's Almanac*. 10

## 1735

Trial in New York of **John Peter Zenger**, printer of a paper, for libel. The court contended that it should decide the libelous nature of the statements made and that the jury should determine the fact of publication. **Zenger's lawyer, Andrew Hamilton, argued that the jury must decide whether or not the publication was libelous.** He won his suit, thereby materially safeguarding the freedom of the press. 11

### c. [Virginia, Delaware, and Maryland](#)

#### 1640–1710

Lure of America and dreams of becoming landholders drew settlers, many as indentured servants, to the colonies. During the 17th century, 75 to 85 percent of the people who came to the Chesapeake area came as **indentured servants**. Since life expectancy remained precarious until the 1640s, **landowners often willed property to their wife rather than to their oldest son.** 1

#### 1647

**Margaret Brent**, a single woman and large landholder, **acted as attorney for Lord Baltimore**; she saved the colony from mutinous soldiers and from a Protestant revolt against the Catholic government. 2

#### 1652

Parliament assumed control of Maryland and suspended the governor. 3

#### 1659

Virginia proclaimed Charles II king of England, Scotland, and Ireland and restored the royal governor, **Sir William Berkeley**. 4

#### 1660

**Virginia sanctioned slavery in colonial law.** Laws on slavery soon proliferated. Among other things such laws stipulated that the **child's status as free or slave followed the condition of the mother and declared that baptism did not make a person free.** After **Bacon's Rebellion** (1676), such laws became more restrictive. Slave statutes banned interracial marriage, punished white women who bore black children, and **seized the property of free blacks and stripped them of their rights.** Courts later declared that a master could not be charged for murder if a slave died of injuries received during punishment for insubordination.

5

## 1661

Charles Calvert became governor of Maryland. In 1675, upon the death of his father, Cecilius Calvert, the second Lord Baltimore, Charles succeeded as proprietor and third Lord Baltimore.

6

## 1676

**Bacon's Rebellion** in Virginia. Led by **Nathaniel Bacon**, this revolt set discontented freemen against the colony's elite. Those in rebellion believed **Governor Berkeley's** policy toward the Indians was too lax. **The rebels wanted the Indians killed or removed and an end to rule by the wealthy.** Bacon led his followers on an unauthorized attack of a village of friendly Indians. **Soon middling and poor farmers, indentured servants, and even slaves joined the rebel army.** Jamestown was burned, but the rebellion collapsed with the death of Bacon. After the rebellion, the elite tried to ensure that the **interracial alliance** found in Bacon's rebellion would not recur. In particular, elites made a conscious decision to enact laws that would create a free white society and an enslaved black one.

7

## 1693

**College of William and Mary** founded in Virginia.

8

## 1750

By midcentury, **as life expectancy increased** and stable families emerged, landholders increasingly left their property to older sons instead of wives.

9

## 1756

**Blacks** made up about 40 percent of Virginia's population of over 293,400 and about 30 <sup>10</sup> percent of Maryland's 140,000.

#### **d. [The Southern Colonies](#)**

##### **1663**

**Grant of Carolina** by the king to eight proprietors, including the earl of Clarendon. The grant included land between 31° and 36° north latitude. 1

##### **1667**

**Grant of the Bahamas** to the Carolina proprietors. 2

##### **1669**

**Adoption of the Fundamental Constitutions**, drawn up for Carolina by **John Locke**, which provided for an archaic feudal regime totally unsuited to the needs of a frontier colony. 3

##### **1708**

In Carolina, for the first time in any colony, blacks outnumbered whites. 4

##### **1715**

**Defeat of the Yamassees** and allied Indian tribes in Carolina. They were driven into Spanish Florida. 5

## 1719–29

**REORGANIZATION OF THE CAROLINAS.** Popular discontent and disputes over the disposition of **Yamassee land** led the Board of Trade to replace the proprietors and establish royal governments in both North and South Carolina. <sup>6</sup>

## 1722

**Slaves** had increased to nearly 65 percent of South Carolina's population of 18,350. African slaves made the cultivation of rice in the colony profitable by introducing the “mortar and pestle” technique for removing rice grains from husks. In the **Stono Rebellion** (1739), some 20 miles west of Charleston, slaves launched a full-scale effort to gain their freedom. Before the uprising was put down, 30 whites and 44 blacks had lost their lives. <sup>7</sup>

## 1733

**FOUNDING OF GEORGIA**, the last of the 13 English colonies on the continent. <sup>8</sup>  
**James Oglethorpe** became interested in the settlement of the region. An advocate of a strong policy against the Spanish and a humanitarian interested in improving the condition of imprisoned debtors, he conceived the idea of a **buffer colony between the English and the rival French and Spanish settlements**. In 1732 he secured a charter granting to him and his associates the region between the Savannah and the Altamaha Rivers from sea to sea.

## 1735

Slavery in Georgia was banned. However, in 1749, after rice culture spread to the colony, the ban was rescinded. <sup>9</sup>

## 1750

The population of **Charles Town**, the region's major urban center, rose to nearly 10,000, <sup>10</sup> representing an increase of more than 500 percent between 1700 and 1740.

## **4. Wars of England with France and Spain, 1651–1763**

### **1651–73**

**The British Navigation Laws.** These applied mercantilist doctrine to colonial trade. <sup>1</sup>  
The **Act of 1651**, designed to strike a blow at Dutch shipping, required that colonial products be shipped to England in ships of Great Britain or the plantations. This law was reenacted in 1660, with the additional provision that certain enumerated articles of colonial production could be shipped only to England. The **Staple Act** of 1663 required that articles of European production destined for the colonies must be shipped first to England. The **Act of 1673** imposed intercolonial duties on sugar, tobacco, and other products.

### **1670**

The **Hudson's Bay Company** incorporated and given a monopoly of the trade in <sup>2</sup>  
Hudson's Bay Basin.

### **1689–97**

**KING WILLIAM'S WAR**, with France. This was the American phase of the general <sup>3</sup>  
war against Louis XIV known as the **War of the League of Augsburg** (see (See [1688–97](#))). The French were aided by the Indians of Canada and Maine, while the Iroquois supported the English.

### **1696–98**

A **Board of Commissioners for Trade and Plantations** was organized (1696) and a <sup>4</sup>  
navigation act of the same year was designed to prevent further evasion of earlier

regulations. Since the war with France had interrupted the usual trade, the New Englanders had taken up manufacturing. The **Woolens Act** (1698) forbade the colonists to ship wool or woolen products from one colony to another.

### 1702–13

**QUEEN ANNE'S WAR**, the American phase of the War of the Spanish Succession (See [1701–14](#)). In 1702 the English plundered and burned **St. Augustine in Florida**, while in 1704 the French and Indians surprised Deerfield in the Connecticut Valley. In 1707 the English organized an **expedition against Acadia**. Acadia became the British province of **Nova Scotia** (1710) and the name of **Port Royal** was changed to **Annapolis Royal**. By the **Treaty of Utrecht** (1713), Great Britain secured recognition of its claims in the Hudson's Bay country and the possession of **Newfoundland and Acadia**. The claim of the British to the Iroquois country was also admitted, and **St. Christopher** was ceded to Britain. The French were excluded from fishing on the Acadian coast but were allowed to retain **Cape Breton Island**. The *asiento* (**license**) gave the English the exclusive right for 30 years of bringing African slaves into the Spanish possessions.

5

### 1733

**The Molasses Act**. In response to pleas from the West Indian planters, Parliament enacted the Molasses Act, which placed prohibitive duties on sugar and molasses imported into the colonies from other than British possessions. In 1732 Parliament had stopped the importation of hats from the colonies and had restricted their manufacture.

6

### 1739

**WAR BETWEEN SPAIN AND ENGLAND (War of Jenkins' Ear)**, (See [1739–48](#)). Dissatisfied with the provisions of the Treaty of Utrecht with respect to trade with Spanish possessions, British merchants had resorted to extensive smuggling, which, in turn, had led to the seizure of British ships and the rough treatment of British sailors by the Spaniards. The loss of Jenkins' ear was merely one of many similar episodes.

7

### 1743–48

**KING GEORGE'S WAR**, the American phase of the **War of the Austrian Succession**

8

in Europe (See [1740–48](#)). The outstanding event in the war in America was the **capture of Louisburg** (1745). In the interior, an abortive attempt of the northern colonies to conquer Canada spurred the French and Indians to attack the frontier as far south as New York (1746–48).

## 1748

The **Treaty of Aix-la-Chapelle** (See [1748, Oct. 18](#)), based upon European rather than colonial considerations, restored all the conquests of the war. In America the treaty was merely a truce, for Nova Scotia, the Ohio Valley, and the Cherokee country continued to be areas of conflict. In order to strengthen the British hold on Nova Scotia, Lord Halifax sent out 2,500 settlers in 1749 and founded the town of **Halifax**. In the Ohio Valley, traders from Virginia and Pennsylvania pushed westward as far as the Indian villages on the Mississippi. Virginia frontiersmen made a settlement at **Draper's Meadow** on the Greenbrier River in 1748. 9

## 1749

The **Ohio Company**, organized by a group of Virginians and a number of prominent Englishmen. The company obtained a grant of 500,000 acres on the upper Ohio and sent out **Christopher Gist** (1750) to explore the region as far as the falls of the Ohio. 10

## 1753

**Marquis Duquesne** sent an expedition of 1,500 men to occupy the Ohio country. In the same year Governor Robert Dinwiddie of Virginia sent out **George Washington**, a young surveyor, to demand the withdrawal of the French. He proceeded to Fort Le Boeuf but was told that Dinwiddie's letter would be forwarded to Duquesne. It was quite clear that the French would not leave peacefully. 11

[PREVIOUS](#)

[NEXT](#)

## 5. [Reform, Resistance, and Revolution, 1763–1789](#)

### [UNITED STATES DURING THE REVOLUTION \(MAP\)](#)

#### 1763–75

Expansion beyond the mountains. About 200,000 Indians lived in the region west of the Appalachian Mountains and stood as a barrier to the swift occupation by European settlers. Nonetheless, European settlers increasingly moved into the region. The **Watauga settlement** in eastern Tennessee was made in 1769 and was augmented by the arrival of Virginians and North Carolinians under **James Robertson** and **John Sevier** (1770–71). **Richard Henderson**, of North Carolina, together with his associates organized the **Transylvania Company**, purchased land from the Cherokees, and established the Transylvania settlement in Kentucky in 1775. **Daniel Boone** was Henderson's agent and cleared the wilderness road to Kentucky. The **settlement of Kentucky** (1775–77) was facilitated by the peace forced on the Indians as a result of **Lord Dunmore's War** (1774). <sup>1</sup>

#### 1763–75

**The Preliminaries of the American Revolution.** By 1761 the British government was thoroughly aroused by the systematic evasion of the **Molasses Act** of 1733 through colonial smuggling and by the illicit trade that the colonies had carried on with the enemy during the War of the Austrian Succession and the Seven Years' War. British officials felt that the trade prolonged French resistance. To prevent smuggling, the <sup>2</sup>

British resorted to **writs of assistance**, general search warrants that made possible the search of all premises where smuggled goods might be found. This aroused the opposition of merchants, who alleged that the writs were illegal. In 1761, when Boston customs officers applied for the writs, the merchants contested their use. **James Otis** argued cogently against their legality before the Massachusetts Supreme Court. Although the court decided they were legal, the argument of Otis did much to shape public opinion.

## 1763–65

**George Grenville** in power in England. The acquisition of the vast territory from France in America necessitated increased revenues for defense and Indian administration. The ministry decided to enforce the navigation laws, tax the colonies directly, and use that revenue to maintain an army in North America. Powers of the admiralty courts were enlarged, and colonial governors were instructed to enforce the trade law. The decision to station a peacetime army of about 10,000 soldiers in North America generated resentment from above and below. Colonial elites feared the army would undermine their “liberty,” while workers feared competition from soldiers for low-wage work in the port cities. 3

## 1764

Decreeing of the **Sugar Act**, with the avowed purpose of raising revenue in the colonies and reforming the old colonial system, both economically and administratively. 4

The **Colonial Currency Act** prevented colonies from paying their debts in England in depreciated currency and forbade issues of unsound money. This edict created a shortage of money in the colonies at a time when the Sugar Act injured the West Indian trade of the colonies, which had previously supplied the necessary specie. 5

## 1765

Disregarding colonial protests against the two previous measures, Grenville pushed through Parliament the **Stamp Act**, providing for stamps on commercial and legal documents, pamphlets, newspapers, almanacs, playing cards, and dice. 6

The **Quartering Act** was passed, providing that in the event of insufficiency of barracks in the colonies, British troops might be quartered in public hostelrys. 7

## May 29

**Patrick Henry** introduced into the Virginia House of Burgesses a series of resolutions boldly challenging the position of the British government. 8

## June

The Massachusetts general court sent an invitation to colonial assemblies to send delegates to meet in New York and consider the Stamp Act. Meanwhile **the arrival of the stamp officers led to riots in various cities**, including Boston, where the house of Lieutenant Governor Thomas Hutchinson was sacked. 9

## Oct. 7

**Stamp Act Congress** at New York. Twenty-eight delegates from nine colonies drew up memorials to the king and Parliament and adopted a **Declaration of Rights and Liberties** (Oct. 19). Americans rallied to the cry “Liberty, Property, and No Stamps” and forced most stamp distributors to resign by November. A multiclass alliance of merchants, intellectuals, and workers also organized the Sons of Liberty to coordinate resistance to the measure. 10

(See [The Spread of Diseases](#))

## **V. The Modern Period, 1789–1914**

### **A. Global and Comparative Dimensions**

Global relationships changed significantly during the 19th century. Western European states and world-views came to dominate and frequently to control directly most of the rest of the world. In this way, the transformation of western European societies in the previous centuries extended to much of the rest of the world. The new patterns of global relationships can be seen in two very broad areas: (1) the West's power over the rest of the world in military, economic, and political spheres, and to some extent the cultural spheres as well, and (2) the intensification of international and interstate relationships in diplomatic and political terms by the beginning of the 20th century. <sup>1</sup>

#### **1. European Global Domination, 1800–1914**

The changing relationships involved in the growing global dominance of Western societies can be seen in three important developments: (1) Western imperialist expansion, (2) the spread of industrialism, and (3) the development of modern state systems in all of the major regions of the globe. <sup>2</sup>

##### **a. Developments in Major Empires**

During the 19th century, major European empires expanded (especially the British, French, and Russian empires, along with the new United States) while older empires, both European and non-European, experienced significant losses. <sup>3</sup>

**1800–70**

**BRITISH EMPIRE.** Following the conflicts of the Napoleonic era, the British Empire emerged as the strongest global imperial force, with different manifestations. <sup>4</sup>  
**SETTLEMENT COLONIES** were consolidated in **Canada, Australia, and New Zealand**, and they received increasing rights of self-rule within the British imperial system. These rights were defined for Canada following a major rebellion in 1837 by the **Union Act** (1840) and the **British North America Act** (1867), for Australia by the **Australia Colonies Government Act** (1850), and for New Zealand by the Constitution of 1852. As they emerged as virtually independent commonwealths in the 20th century, they, along with the United States, were basically parts of the extended European world. **INDIRECT CONTROL** through commercial and naval domination was the basis for British imperial authority in many parts of the world. The **Ottoman Empire** was protected by British policies from Russian, Austrian, and French expansion as well as from internal challengers like **Muhammad Ali** in Egypt (See [1831–41](#)) (who had revolted and invaded Syria in 1831), and British commercial interests expanded in the region. Britain similarly became the dominant force within **Iran**, ruled in the 19th century by the **Qajar dynasty**. British domination of foreign trade in **China** was confirmed by British victory in the **First British War** of 1841–42 (often called the **Opium War**) (See [1841–42](#)) and the **Treaty of Nanking** (1842). British naval power similarly ensured British domination in coastal regions of the Indian Ocean and **Africa**. **DIRECT IMPERIAL RULE** emerged as an important style of domination in **INDIA** by the middle of the 19th century, when control by the **East India Company** was formally replaced by making India a Crown colony. Direct imperial rule was, however, only one of many different forms of British world power in the 19th century.

## 1800–70

**FRENCH EMPIRE.** France had lost much of its global empire in the world wars of the 18th century and the final defeats in the Napoleonic era. In the first half of the 19th century, France reemerged as a major global force, both through its growing economic power and its military forces. It was Britain's major rival for influence in the <sup>5</sup>  
**Mediterranean** region and had expanding commercial and cultural influences in the Middle East. France also developed settlements, trade stations, and military posts in **Senegal** and elsewhere along the coasts of West Africa and Central Africa. In the **Indian Ocean** basin and Asia, France gradually expanded in control in Madagascar and other island areas and, by 1874, gained full control of **Indochina**. Direct French rule in North Africa began in 1830 with the French invasion of **Algeria**, where European settlement was encouraged.

## 1800–70

**OTHER OVERSEAS EMPIRES.** The other major European overseas empires remained relatively stable or declined. The **DUTCH** consolidated their control in the islands of Southeast Asia, where they developed a system of direct colonial rule by the end of the century. The **Portuguese Empire in Africa** expanded inland from coastal trading settlements, especially after the formal suppression of the slave trade in 1836 transformed the nature of commerce in Angola and Mozambique. The commercial ports of Goa in India and Macao in China remained under Portuguese control, but **Brazil** was lost in the Latin American wars of independence. These wars also brought an end to most of the **SPANISH EMPIRE** in the Americas, and Spain was only a minor global force by the middle of the century.

## b. Intensified Imperial Competition

Late in the 19th century, the expanding empires engaged in major competitions for influence and control throughout the world. This global struggle was part of the partition and disintegration of some older major empires, like those of the Ottomans and the Chinese. In **AFRICA** the competition resulted in the direct European military occupation and control of virtually the entire continent by 1914. In North Africa, **Egypt** was occupied by Great Britain (1882), French protectorates were proclaimed in **Tunisia** (1881) and **Morocco** (1912), and Italy claimed control of **Libya** (1911) (See [1911–12](#)). In Africa by 1914, older European empires maintained small but expanded enclaves, the **Spanish** in Morocco, **Río de Oro**, and Río Muni, and the **Portuguese** in Guinea, **Angola**, and **Mozambique**. The **BRITISH** and the **FRENCH** empires gained the largest share, with a number of French colonies established in West Africa and Equatorial Africa as well as Madagascar, and British control established in **Nigeria**, southern and eastern Africa, and, through a nominally joint control with Egypt, in **Sudan**. By the end of the 19th century, **new Western imperial powers** also had important colonies in Africa. The **German Empire** won control of Togo and Cameroons in West Africa and established colonial control in **Tanganyika** and **Southwest Africa**. Italy gained control over Eritrea and much of **Somaliland** in East Africa, and **King Leopold of Belgium** took control of the Congo River basin with the creation of the **CONGO FREE STATE** in 1885 (See [1885, April](#)). In addition, **Liberia** was created in 1822 as a colony for freed slaves returning from the United States, and although it was nominally independent, it remained an economic colony of the United States. By 1914, Ethiopia was the only noncolonial area, and it would be conquered and briefly controlled by Italy in the 1930s.

### 1800–1914

**EMERGING AMERICAN EMPIRE.** In the Western Hemisphere, the new United States began major continental expansion. Vast territories were gained by treaty and purchase arrangements with European powers and subsequent military conquest of indigenous peoples in those areas. This was the method of acquisition of the **Louisiana**

1

2

**territories** from France (1803), **Florida** from Spain (1810–19), **Oregon** from Great Britain (1846), and **Alaska** from Russia (1867), whereas **Texas, California,** and the rest of the southwestern region were gained as a result of the U.S. victory in a war with **Mexico** (1846–48). This expansion was temporarily interrupted by the **American Civil War** (1861–65), but in the second half of the 19th century, the United States began important overseas expansion. Some of this involved extension of the American economic and political sphere of influence, as in the beginning of relations with **Japan** initiated by **Matthew Perry** in 1854, and growing American interests in China. The growing domination by the United States of many independent states in **Latin America** led to temporary military occupations in support of U.S. economic interests in many places, like **Nicaragua** (1912). The U.S. also gained direct control of overseas territories, including **Hawaii** (1898) and the Virgin Islands (1917), and, as a result of the **SPANISH-AMERICAN WAR** (1898), the U.S. established control in the **Philippines, Puerto Rico,** and Guam. By the end of World War I, the United States had emerged as one of the major global empires as well as a powerful economic force.

### c. [Major Land-Based Empires](#)

During the 19th century, several European land-based empires emerged as great powers, while large empires in Asia lost territories and influence. However, all of these empires came to an end during **World War I**, either emerging in significantly different forms or disappearing as political entities. <sup>1</sup>

**RUSSIAN EMPIRE.** In the final years of the Napoleonic era, Russia began a major era of expansion, winning control of areas in the **Caucasus** in a war with **Persia** (1804–13) and of **Finland** in a war with Sweden (1808–9), as well as building forts in **Alaska** in North America. Expansion in Europe was limited, but the establishment of independent states in former Ottoman territories, especially **Serbia** (1817) (See [1815–17](#)) and **Bulgaria** (1878) represented expansion of Russian influence. Complete control in the Caucasus was gained with the conquests of **Daghistan** (1859), **Circassia** (1864), and **Kars** (1878) (See [1875–78](#)). The largest expansions were in the east (See [1848–49](#)), with the conquests and annexations of **Kazakhstan** by 1854, **Uzbekistan** (1856–76), and **Turkmenistan** (1868–85). Expansion in the Pacific northeastern territories was completed with the ceding by **China** of territories north of the Amur River in the **Treaties of Aigun** (1858) and **Peking** (1860) (See [1858–60](#)). By World War I, the Russian Empire was the largest in the world, but during that war the tsarist system of rule was overthrown in the **Russian Revolution of 1917**. Baltic and eastern European areas were lost, but imperial control of all of the Asian territories was maintained, although in a form called the Union of Soviet Socialist Republics (USSR). <sup>2</sup>

**PRUSSIAN EMPIRE.** The steady expansion of Prussia during the 19th century is a major dynamic of European history, but Prussia did not emerge as a major global power until after the **UNIFICATION OF GERMANY** under Prussia led by **Otto von Bismarck** and the **Hohenzollern** dynasty and the formal establishment of the **German Empire** under **William I** in 1871. The new empire actively sought territorial expansion and spheres of influence. By 1914, Germany had gained control in Africa of **Togo** and **Cameroons**(1884), Tanganyika (1885), and Southwest Africa (1890); had won concessions in China and economic influence in the Middle East; and was one of the major global naval powers. Its defeat in World War I brought an end to this empire, and it was replaced by a purely European state of considerably reduced size. <sup>3</sup>

**AUSTRO-HUNGARIAN EMPIRE.** During the 19th century, the Habsburg Empire did not expand significantly, although its influence grew in southeastern Europe as **Ottoman** power declined, and it gained control of **Bosnia** in 1878. The Habsburg rulers faced serious internal challenges in their multinational empire, and the imperial system was reorganized as a **dual monarchy** of Austria and Hungary. Although this did not resolve the challenges posed by growing nationalist movements, it allowed the empire to survive major defeats by France and Prussia, and revolutionary threats, especially in 1848. It was not until the defeat in World War I that the empire disappeared and was replaced by a cluster of small, nationally defined states. 4

**DECLINING ASIAN EMPIRES.** The older major land-based Asian empires experienced serious losses during the 19th century. The **Mughal Empire** in India came to a formal end with the establishment of direct British colonial rule in 1858. 5

The **OTTOMAN EMPIRE** undertook major modernizing structural reforms throughout the century, beginning with the attempt to establish a “New System” by **Selim III** at the end of the 18th century, and reaching a culmination in the regime established by the **Young Turk Revolution** in 1908 (See [1908, July](#)). Despite significant changes, the Ottoman Empire experienced a steady loss of territories to major European states and to nationalist movements supported by various European powers. Nationalist revolts led to the establishment of independent **Serbia** (1817) and **Greece** (1830), and international agreements in 1878, 1908, and 1913 resulted in the loss of all of the rest of the Ottoman territories in the Balkans except for a small area along the Sea of Marmara. European conquests between 1830 and 1912 took all Ottoman territories in North Africa, along with Cyprus (Britain, 1878). The Ottomans joined the losing alliance in World War I, and the empire formally came to an end with the peace settlement, which split the new Republic of Turkey from the Arab territories (See [Nov. 1](#)). 6

The **CHINESE EMPIRE** experienced a steady loss of control within its domain as the European powers and the United States established spheres of influence. The empire lost control of **Taiwan** (1874) and **Korea** (1885) to Japan and territories in the Pacific northeast to Russia in 1858–60. The Chinese defeat in the **SINO-JAPANESE WAR** (1894–95) showed the weakness of the empire in the face of foreign power. The empire also experienced a series of major revolts, which weakened its internal power as well. The **Boxer Revolt** (1899–1901) showed strong opposition to foreign influence and reform efforts, but it was crushed by a combined military force of foreign troops. The empire came to a formal end with the **CHINESE REVOLUTION** (1911–13), which forced the abdication of the emperor and the establishment of the **Chinese Republic**. 7

#### d. Spread of Modern Industrialism

The transformation of societies as a result of the **INDUSTRIAL REVOLUTION** began <sup>1</sup> in **England** in the 18th century. The industrialization of society spread from Great Britain to most of western Europe in the first half of the 19th century and then to the rest of Europe and, in differing ways, to much of the rest of the world by 1914. Industrialization developed along with increasing **urbanization**, growing commercial ties, and improvements in means of transportation and communication.

The **IRON AND STEEL INDUSTRY** was a key to the process of industrialization and <sup>2</sup> reflects its spread and development in the 19th century. Although ironworking originated in ancient times, 18th century improvements in production processes of cast iron and wrought iron made iron a more important product for growing modern industries, and it became a key to modern industrialization. In 1820, world output of **pig iron** was about 1 million tons, whereas in 1910, it was almost 65 million tons. The industry was transformed by new production processes that created steel for many different uses. The **BESSEMER PROCESS** (1856) for steel production, developed by Henry Bessemer, was a key step in this process, followed by the development of **open hearth furnaces** by William and Frederick Siemens (1864–68) in Britain and the construction of the first furnaces for continuous steel production by Benjamin Talbot in Pennsylvania (1899). The modern iron and steel industry primarily developed in **Great Britain**, and the British industry dominated the world markets for many years, with British output of pig iron exceeding all of the rest of the world's until 1871. However, as global industrialization occurred, British production of pig iron was surpassed by the **United States** in 1890, **Germany** in 1904, and the **Soviet Union** in 1931. The greatcoal and iron ore resources of the **United States** allowed the American iron and steel industry to become the world's largest by the early 20th century. However, important steel industries had also begun to emerge by that time in **Japan** and **China**, and in India under the leadership of the **TATA FAMILY**.

**TRANSPORTATION** and **COMMUNICATION** developments were important aspects <sup>3</sup> of the global processes of industrialization. **RAILROADS** made bulk transportation cheaper and easier, and railroad construction played an important role in industrialization. The first railroads were built in **Great Britain** in the first quarter of the 19th century, and

the first railroad was built in **France** in 1828. By 1850, rail networks had been established across western Europe and in the eastern United States. The first railroads were built in **India** in the 1850s, and in **China** and **Japan** in the 1870s. Great transcontinental projects were developed late in the 19th century, beginning with the completion in 1869 of the **Union Pacific–Central Pacific line** crossing the United States, and in 1885 with the **Canadian Pacific Line** extending across the Rocky Mountains to the Pacific in Canada. Construction of the **TRANS-SIBERIAN RAILROAD** began in 1891, and the line from Moscow to Vladivostok was completed in 1916, making it the longest rail line in the world. Other major continental rail schemes were planned but only partially completed. The **Berlin–Baghdad Railroad** was an important scheme for the expansion of German economic influence in the Ottoman Empire, and much of it had been constructed by 1914. British imperial aspirations in Africa were expressed in the 1889 slogan “**Cape-to-Cairo**,” which suggested that a band of colonial possessions be linked by a great railroad system.

**CANALS** were also important in the transportation systems of emerging industrial societies; in fact, the construction of two major canals transformed the patterns of global maritime movements. The **SUEZ CANAL**, linking the Mediterranean Sea and the Red Sea (and ultimately the Indian Ocean) was completed in 1869 and reduced the need for west-east shipping to go around the African continent. It changed military and commercial shipping patterns and made Egypt a major global strategic location. The **PANAMA CANAL** was opened in 1914 and transformed strategic and commercial shipping in the Western Hemisphere. It joined the Atlantic and Pacific shipping routes in Central America, eliminating the need to go around South America (or through the Arctic regions).

**URBANIZATION** accompanied the industrialization of societies, and the proportion of populations living in cities grew as societies were transformed. At the end of the 18th century, throughout the world the overwhelming majority of all populations lived outside of cities. In **Great Britain**, the proportion of the population living in urban areas was 25 percent in 1831, became more than 50 percent in 1851, and had reached 77 percent by 1901. In **Prussia**, and then **Germany**, the transition period was longer, beginning with 26 percent in 1816 and becoming more than 50 percent in 1900, whereas **France's** population was still slightly below 50 percent urban at the end of the 19th century. In the later industrial powers, populations of both **Japan** and **the United States** became more than half urban around 1920, whereas **Russia's** population remained more rural, only 13 percent urban in 1900.

### e. [Development of Modern Political Systems](#)

During the 19th century, outside Europe's colonies, states and political systems were increasingly organized along the lines of nation-states with constitutions rather than as dynastic sovereign monarchies. The limitation of monarchical power through instituting **constitutional monarchies** was an important part of this process. Another important development was the establishment of **republics**, with recognition of the need for consent or participation by the people, as an alternative to monarchies. The development of **nationalist consciousness**, the demand for and writing of **constitutions** as definitions of new state systems, and the creation of **republics** were interacting parts of the transformation of the political context in the Western world, and the spread of these ideals throughout the world in the 19th century represented important aspects of the expansion of the West. <sup>1</sup>

#### 1789–1917

**REVOLUTIONARY TRANSFORMATIONS.** The 19th century was marked by major efforts to transform political systems and societies. **THE FRENCH REVOLUTION** (See [1792, Sept. 21–1795, Aug. 22](#)), beginning in 1789, was a major starting point, bringing an end to the old dynastic political system in France and inspiring revolutions elsewhere. Throughout the century, major episodes of revolution, often beginning in France, influenced the development of political systems, inducing even conservative forces to establish constitutional regimes that either established republics or set limits on the powers of monarchs. **REVOLUTIONS OF 1830 AND 1848** (See [Revolutions in Europe, 1848–1852](#)) were especially important times of political change. Major system-defining revolutions and constitutional reforms transformed the nature of the **Austro-Hungarian Empire** in 1848–49 and 1867 and the **Russian Empire** in 1864, 1905–6, and finally in 1917. Outside of Europe, such changes took place in the **Ottoman Empire** in 1839, 1876, and 1908; in **Japan** in 1868 and 1889; and in **China** in 1911. <sup>2</sup>

## 1776–1914

**NATIONAL INDEPENDENCE MOVEMENTS.** Many of the states of the modern world were created as a result of revolutions and movements of national liberation opposing control by large multinational states. These movements exhibited an awareness of identity as a **nation** rather than simply being revolts against rule by foreigners. The **AMERICAN REVOLUTION** (1776–83) (See [1775–83](#)) ended British control in thirteen North American colonies and resulted in the creation of the **United States**. The new nation consciously identified its political system as a **republic**, in contrast to the British monarchy, and defined its political system after achieving independence in a **constitution** written by a representative constituent assembly. The American experience was an important beginning for the combination of nationalism and constitutionalism, and it contrasted with other late-18th-century revolts against foreign rule, which reflected essential premodern styles. The revolt of **Tupac Amarú** in Peru (1780–82) (See [1780–82](#)) was a revolt (by Native American forces, in contrast to later revolts in South America) against forced labor and Spanish rule. Similarly, the independence of **Egypt** from **Ottoman** rule proclaimed by **Ali Bey al-Kabir** (r. 1768–73) was an act of a military commander rather than a nationalist. However, by the early 19th century, a growing proportion of major revolts represented combinations of nationalism and constitutionalism.

**LATIN AMERICAN WARS OF INDEPENDENCE** (See [Causes](#)) combined efforts to define independent political life in republican constitutions with growing nationalist sensitivities. In **MEXICO**, a peasant revolt led by **Miguel Hidalgo y Costilla** and, after his death in 1811, by **José Maria Morelos**, led to a declaration of independence in 1813 and promulgation of a constitution in 1814. Attempts to establish an imperial or constitutional monarchy in 1822–23 under **Agustin de Iturbide and Archduke Maximilian of Austria**, with the aid of French troops in 1863–67, were unsuccessful. Mexico was ruled by a series of presidents who sometimes assumed dictatorial powers under a succession of republican constitutions. The war with the United States in the 1840s and French intervention in the 1860s helped to strengthen Mexican nationalist sentiments. The climax of these developments was the **Mexican Revolution**, which began in 1911 and overthrew a presidential dictator. The revolutionary **constitution of 1917** provided a nationalist and socially radical foundation for 20th-century Mexican politics. Similar combinations of nationalism, constitutionalism, and republicanism provided the basis for the rest of the countries in Latin America that gained their independence from Spain and Portugal in the 19th century. By World War I, all independent countries in the Western Hemisphere were constitutional republics with varying degrees of nationalist identity.

**EUROPEAN NATIONAL LIBERATION MOVEMENTS.** In the multinational states of Europe, many movements of national liberation developed. Some were successful in

creating independent states, and most of these state systems were defined by modern constitutions, but they were more frequently constructed as constitutional monarchies than as republics. A major factor in the break with the earlier dynastic state systems was the disruption caused by the **French Revolution** and **NAPOLEON's** conquests. In the conquered territories, Napoleon created new political systems, which, even if they did not last, overturned political institutions and traditions. In addition, local responses to the French conquerors gave strong impetus to the development of nationalist sentiments. Resistance to the French invasion of **SPAIN** strengthened a sense of national identity. Leaders of the resistance convened a **Cortes**, or assembly, in 1810 in Cádiz, and promulgated the **Constitution of 1812**, which affirmed the right of the people to determine the laws within a constitutionally limited monarchy. Although it was never fully implemented, its radical idealism meant that constitutionalism would be a major issue throughout modern Spanish history, and it influenced the drafting of constitutions elsewhere, especially in Latin America. During the 19th century, a sequence of constitutions and conflicts defined the evolution of the Spanish political system, which remained basically a constitutional monarchy, with a brief republican period (1873–74) (See [1873–74](#)). Napoleon's conquests in **ITALY** resulted in the establishment of short-lived republics in a number of areas. After the defeat of Napoleon, the **kingdom of Sardinia** played a leading role in developing the constitutional political system of the emerging unified Italy. The **unification of Italy** was completed as a constitutional monarchy in 1870. **PRUSSIA** provided a similar basis for the unification of Germany in 1871, with the important development of a constitutional monarchy with strong powers reserved for the emperor. The conservative German constitution provided a model for conservative constitutionalists elsewhere and had some influence in the articulation of the **Meiji Constitution of 1889** in Japan. **BELGIUM** provided another important nationalist, constitutional experience. In the Napoleonic peace settlement, Belgium was included in the kingdom of the Netherlands, but a nationalist revolt in 1830 led to Belgium's independence and the establishment of a constitutional monarchy whose structure influenced constitutionalists in the Middle East later in the century. **OTTOMAN** territories in the Balkans also experienced nationalist revolts. **Serbia** began a successful revolt in 1804 and gradually expanded its territories and independence throughout the century, becoming an internationally recognized constitutional monarchy in 1882. **Greece** had a successful war for independence (1821–29) and emerged as a constitutional monarchy as well.

**GLOBAL CONSTITUTIONAL MOVEMENTS.** In major states outside of Europe, there were significant efforts to create constitutional regimes. In the **OTTOMAN EMPIRE**, constitutionalists succeeded in getting the promulgation of a constitution in 1876, although it was quickly suspended by the sultan, **Abdul Hamid II**, and was not fully put into force until the **Young Turk Revolution 1908**. In **PERSIA**, nationalists and liberals combined to force the shah to promulgate a constitution in 1906. In **JAPAN**, the Meiji Constitution of 1889 defined the political framework for the modernization efforts

of the Japanese Empire. In **CHINA**, reform efforts were weak, and it was only with the revolution of 1911 and the establishment of the Chinese Republic that China promulgated a constitution.

**Constitutions, revolutions, and republics** throughout the globe by the time of World War I showed the spread of European political models in the 19th century. 7

## **f. [Cultural Patterns](#)**

European cultural influence spread less rapidly than its diplomatic, economic, and political influence. **Christian missions** fanned out to Asia and Africa in the late 19th century, from both western Europe and the United States. Only small minorities of Asians converted, but in some Pacific islands the impact was greater. A larger minority of Africans began to be attracted to Christianity by 1900. 1

The **influence of European secular culture** was in many ways greater. **European nationalism** helped shape nationalist movements in Latin America, in the Arab lands and Turkey, and in India. **European sports**, like English soccer football, began to spread widely around 1900, as did new cultural technologies such as filmmaking. **European science** gained attention from intellectuals in various parts of Asia and Latin America, although Europe and the United States essentially shared innovation in science and technology (See [Technological Developments, 1800–1914](#)). **Contacts with other parts of the world also affected European culture**; visual artists, particularly, gained inspiration from African and East Asian artistic traditions. 2

## 2. Intensifications of Global International and Economic Relations, 1860–1914

The period was characterized by the domination of global international relations by European powers. By the same token, **world diplomacy took on new meaning**, as clashes in various parts of the world led to negotiations and alliances, sometimes including non-European powers as well. **International conferences**, dominated by the European great powers, periodically tried to resolve disputes in the Balkans, Africa, the Middle East, and elsewhere; **conference diplomacy** on a world scale was another important diplomatic innovation. European negotiations also formulated some new **international agreements** concerning the conduct of war, international law, and global facilities such as postal service. Finally, the intensification of global relations also included **growing international commerce**, dominated by Europe and the United States but with growing impact on local economies almost everywhere. 1

### a. International Agreements

During the second half of the 19th century, not only governments but also private organizations formed a growing number of international arrangements. Most of these centered on pacts among European countries, but North America and to some extent other areas were drawn in. 2

#### 1851

International commercial exhibit at London's new Crystal Palace, the first of a regular series of international exhibitions stretching into the 20th century. Major subsequent world's fairs, to 1914: Paris, 1855; Philadelphia, 1876; Sydney, 1879–80; New Orleans, 1884; Antwerp, 1885; Paris, 1889; Chicago, 1893; Budapest, 1896; Brussels, 1897; Paris, 1900; St. Louis, 1904. 3

The International Statistical Congress began meeting to standardize statistical practices of the European governments. 4

### 1863

An informal committee met to prepare rights for neutral parties to aid the wounded during wars. The **RED CROSS** was created as a voluntary, noncombatant organization to assist the wounded. The International Committee of the Red Cross was established in Geneva. The 1864 **GENEVA CONVENTION** was drafted to establish rules for the treatment of prisoners of war. 5

### 1864

Karl Marx organized the **International Workingman's Association** in London. It collapsed amid internal divisions in 1876. 6

### 1865

International Telegraphic Union. 7

### 1873

International Meteorological Organization. 8

### 1874

**Universal Postal Union** set up regulations for international postal delivery. 9

### 1889

The **Second International**, a loose federation of unions and socialist parties from Europe and North America, was formed in Paris. 10

## 1896

The first modern **Olympic Games** were held in Athens, reviving the classical Greek Olympic tradition on a potentially worldwide basis. It was held every four years until World War I, with participation from Europe, North America, and British Dominions. 11

## 1899 and 1907

Hague Conferences set up Permanent Court of Arbitration (See [1899, May 18–July 29](#)). 12

## 1904

Fédération Internationale de Football Associations—an international body to coordinate soccer (association) football. 13

## b. The Redefinition of the World Economy

Throughout most of the 19th century, the **amount and importance of international trade** increased steadily. The lead of Great Britain and then other parts of western Europe and the United States in industrialization heightened the **economic imbalance** in international trade. Western nations dominated complex manufacturing, shipping, and the great commercial companies; many other areas traded at considerable disadvantage. Western insistence on opening all regions to their trade led to the Opium War with China and the intimidation of Japan. 1

During the first half of the 19th century, British industrial (particularly textile) exports flooded markets in parts of Europe, Latin America, and India. The result was **massive deindustrialization of traditional textile producers**. Tens of thousands of women weavers and spinners were displaced in Latin America. Hundreds of thousands lost work in India. 2

Western entrepreneurs and skilled workers set up some **pilot factories** in different parts of the world. In 1843 British textile machinery was imported to Russia. Westerners also set up steamship services on rivers (1820, Volga River) and railroads (1838, Cuba, Havana to Guines; 1851, Russia, St. Petersburg to Moscow) in Russia, Latin America, and elsewhere. These developments did not lead to more general industrialization. 3

Western industrialization also spurred the **production of commercial crops** and products in other parts of the world. Brazil expanded sugar and coffee production, importing steam engines for processing (1815, first steam-driven sugar mill in Brazil). Nomadic herders in eastern Turkey were pressed by British and French agents to increase production of raw wool. Economic reforms in Egypt included rapid expansion of cotton production, encouraged by Britain. The spread of cotton plantations and ginning in the American South was part of this process. 4

**New shipping technology** developed around the mid-19th century. The first transatlantic steamer (the *Savannah*, 1818) sailed from Liverpool to Boston but ran out of coal, finishing by sail; the first full Atlantic steam crossing was achieved by the British-built Dutch *Curaçao*, 1827. In 1840, regular transatlantic steamship service began with the **Cunard line** (founded by Samuel Cunard, 1787–1865) and its four steamships. In 1848, 5

10 million tons of goods were handled by oceanic sailing ships, and only 750,000 tons in steamships. Expansion from 1850 was rapid, with many Western nations establishing steamship lines. The Suez Canal, and later, the Panama Canal, furthered this trend.

**Underwater telegraph cables** connected England and Europe, 1851; England and the United States, 1866; England and India, 1870; England and Australia, 1871.

Communication time was cut from several weeks to literally minutes. In 1891, the first underwater long-distance telephone cable linked England and France.

Growing international economic links triggered the first **modern economic depression**, in 1856–57. Induced by several bank failures in the United States, rather than by bad harvests (the traditional cause), the brief but sharp slump spread throughout western Europe. Depressions in the mid-1870s and thereafter had international ramifications, particularly among the industrial nations.

After 1870 the global impact of the industrial West increased. A growing number of areas and a growing portion of the economies of these areas were pressed to provide low-cost exports, while importing from Europe and the United States more advanced equipment (including rail lines and rolling stock) and certain luxury goods (such as French fashions). In Latin America, the expansion of coffee production, cultivation of hemp and manufacture of rope in the Yucatán (Mexico), the growth of Peruvian guano output for fertilizer, the spread of foreign-owned copper mines in Chile, and the development (often foreign owned) of tropical fruit production in Central America are all examples of this expansion. Established sectors like sugar and tobacco also grew. More land and more workers were involved in this commercial export sector. On the other side of this equation, by 1910, 57 percent of Mexican imports involved Western-made equipment. Western appetites for Middle Eastern rugs caused the expansion of this traditional industry in the Ottoman Empire, involving thousands of new workers. By the 1890s some factories were established to make cheap carpets, with a mixture of Western and Ottoman ownership. The expansion of Japanese silk production, with low-paid women workers, fit Japan into the export economy while providing earnings to purchase equipment. By the 1890s Africa was beginning to be drawn into the network, with expansion of mines in South Africa and the Belgian Congo. But the main impact on African agriculture came after 1914.

**Western companies also began to set up manufacturing branches in various parts of the world.** Some French textile firms had branch operations in Rhode Island and Latin America by the 1830s. Again, the pattern expanded after 1870. **Singer sewing machine company**, of the United States, set up factories in many countries, including Russia. German electrical and chemical producers, American agricultural equipment producers, and other companies did the same. Operations of this sort, going beyond trade to actual manufacture, constituted the **origins of the modern multinational corporation.**

### c. [International Diplomacy](#)

European conflicts over spheres of influence in Asia, Africa, and the Middle East and efforts by non-European states to maintain at least some degree of independence were the central ingredients in international relations between 1870 and 1914. 1

#### 1869

**OPENING OF THE SUEZ CANAL** reoriented imperial strategic thinking and gave added importance to the Ottoman Empire in international diplomacy. 2

#### 1871

**Conference of London** redefined Russian rights in the Black Sea. 3

#### 1875–78

Insurrections in Bosnia and Bulgaria (See [July–1876, May](#)) led to Ottoman intervention and diplomatic tensions involving Russia and Austria. Negotiations between these two powers were supplemented by international conferences. In Dec. 1876, the **Constantinople Conference** featured British efforts to negotiate a Balkan settlement, but the Ottoman leaders rejected all proposals. Russia declared war on the Ottomans in 1877, which roused British opposition (eager to protect the region from any great-power dominance that might threaten its route to India) and German attempts to prevent a more general conflagration. This led to Bismarck's arranging of the **Berlin Congress** (June 13–July 13, 1878) (See [July 13](#)), the **first great international settlement conference in the new imperialist age**. The conference rearranged control of the Balkans, granted Russia territory in Central Asia, gave France the green light to take over Tunisia, and 4

granted Cyprus to Britain. Most European powers gained, in sum, at the expense of the Ottoman Empire.

## 1882, July 11

**Bombardment of Alexandria, Egypt, by the British fleet.**

5

## Sept. 13

Defeat of the **Egyptians** by the British in the **Battle of Tel-el-Kebir**. **British occupation of Egypt** (See [1882, Sept](#)). 6

(See [Science and Technology](#))

### **3. Technological Developments, 1800–1914**

Major technological innovations originated in Europe and North America. Although industrialization owed much to new inventions, the early stages (to the 1840s) were fueled more by the **tinkerings of inventors and craftspeople** than by scientists. The late 19th century witnessed the marriage of science and industry that continues to this day. The development of technology, no longer strictly the realm of independent inventors, was guided and financed by companies searching for new products, resulting in the burgeoning chemical and petrochemical industries. At the same time, technology became a part of everyday life, made the world a smaller place, and became a more important force in shaping European and world events. 1

The major achievements in technology included: 2

#### **a. Energy and Power Sources**

##### **1800**

The **galvanic cell**, or Voltaic pile, of **Alessandro Volta** (1745–1827) was the first electric battery (converting chemical energy into electrical energy). 3

##### **1802**

**Richard Trevithick** (1771–1833) built the first **high-pressure steam engine**, although the American **Oliver Evans** (1755–1819) had patented one in the United States in 1797. Other advances in steam engine technology included the compound engine (adding a high-pressure cylinder to the original Watt engine) by **William McNaught** (1813–81) in 1845. 4

## 1806

First gas lighting of cotton mills. Improvements made in production and distribution of gas as heat source (**Bunsen burner**, 1855) and for illumination (**Welsbach gas mantle**, 1885). 5

## 1827

**Benoit Fourneyron** (1802–67) developed the **water turbine**. 6

## 1832

The first mechanical generation of electricity by **Hippolyte Pixii**. Major improvements in **electric generators** followed: the improved armature (1856) designed by **Werner von Siemens** (1816–92); and the ring armature (1870) of **Zénobe T. Gramme** (1826–1901), which represented the first practical dynamo. 7

## 1854

**Abraham Gesner** (1797–1864) manufactured kerosene. 8

## 1859

**William M. J. Rankine** (1820–72) published the first comprehensive manual of the steam engine. The steam engine stimulated theoretical studies in thermodynamics by Clapeyron, Clausius, Joule, Lord Kelvin, and Gibbs. 9

## 1859

**Edwin L. Drake** (1819–80) drilled the **first oil well** in Titusville, Pa., opening up the Pennsylvania oil field and starting the large-scale commercial exploitation of petroleum. **First oil pipeline** (two-inch diameter, six miles long) constructed 1865 in Pennsylvania. 10

## 1876

**Nicholas August Otto** (1832–91) built the first practical gas engine, working upon the so-called **Otto cycle**, which is now almost universally employed for all internal combustion engines. Otto's work was based upon previous engines of **Étienne Lenoir** (1822–1900) and **Alphonse Beau de Rochas** (1815–91). The Otto cycle was employed in the gasoline engine patented (1885) by **Gottlieb Daimler** (1834–1900). 11

## 1882

The Pearl Street (New York City) electric generating station, a pioneer central power station designed by **Thomas A. Edison** (1847–1931), commenced operations a few months after Edison dynamos had been installed at Holborn Viaduct Station in England. 12

## b. Materials and Construction

### 1800

Pioneer **suspension bridge**, hung by iron chains, built by **James Finley** (c. 1762–1828) in Pennsylvania; wire suspension employed by **Marc Seguin** (1786–1875) in bridge near Lyons (1825). An American, **Ithiel Town** (1784–1844), patented his truss bridge (1820). 1

### 1817–25

Building of the **Erie Canal**, the first great American civil engineering work. 2

### 1818

The **Institute of Civil Engineers** (London), the first professional engineering society, founded. 3

**Marc Isambard Brunel** (1769–1849) patented the cast iron **tunnel shield**; **Thomas Cochrane** (1830) used this shield to construct foundations on marshy ground. 4

### 1824

**Joseph Aspdin** (1779–1855) patented **Portland cement**, a hydraulic cement (impervious to water) as durable as that employed by the Romans. 5

### 1827

**Gay-Lussac tower** introduced in manufacture of sulfuric acid, largely replacing John Roebuck's lead-chamber process (1746). **Herman Frasch** (1851–1914) developed process (1891) for mining sulfur (by superheated water and pumping to the surface). 6

## 1836

**Galvanized iron** introduced by Sorel in France. Galvanized fencing and barbed wire (c. 1880) helped to fence off large tracts of cattle land in the American West during the latter part of the 19th century. 7

## 1839

**Charles Goodyear** (1800–60) **vulcanized rubber**. Although introduced into Europe in 1615, rubber had not been commercially successful until a solvent for the latex was found (1765); bonding of rubber to cloth to produce raincoats (macintoshes) had been developed (1824) by **Charles Macintosh** (1766–1843). 8

## 1855

**John A. Roebling** (1806–69) completed **wire cable bridge** at Niagara, N.Y.; Roebling utilized this same method for the **Brooklyn Bridge** (completed by his son, W. A. Roebling, in 1883), and it became standard construction technique for all great suspension bridges. 9

## 1856

**Henry Bessemer** (1813–98) perfected the technique (Bessemer process) for converting pig iron into steel by directing an air blast upon the molten metal. 10

## 1856

*Mauve*, first of the **aniline** (coal-tar) **dyes**, discovered by **William H. Perkin** (1838–1907). Beginning of the synthetic dye industry, which was to develop greatly in Germany. 11

## 1861

**Ernest Solvay** (1838–1922) patented the Solvay ammonia process for the manufacture of soda. 12

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

### c. Machines and Industrial Techniques

#### 1800

**Eli Whitney** (1765–1825) was credited with the introduction of **interchangeable parts** for manufacturing muskets. The work of Simeon North (1765–1852) on uniform parts was, in fact, more decisive. Although it had European precedents, the system of interchangeable parts became known as “the American system” because it was most fully exploited in the United States and became the foundation of the mass production characteristic of American industry at a later date. <sup>1</sup>

#### 1801

**Joseph M. Jacquard** (1752–1834) invented a loom for figured silk fabrics, later introduced into the making of worsteds. **William Horrocks** (1776–1849) developed the power loom (1813), improved (1822) by **Richard Roberts** (1789–1864). Machine combing of wool (1845) and ring spinning frame (1830) developed; the Brussels power loom invented by Erastus B. Bigelow (1814–79) of Massachusetts for the weaving of carpets (1845); and the loom invented by J. H. Northrop of Massachusetts (1892), which was almost completely automatic. <sup>2</sup>

#### 1810

**Friedrich Koenig's** (1774–1833) **power-driven press** in use, followed by the flatbed press (1811). Other developments leading to mass production of printed matter, especially newspapers, were the rotary press of Robert Hoe (1846) and the web printing press, allowing for printing on a continuous roll (web) of paper by a rotary press, invented (1865) by William A. Bullock. In 1885 the Linotype of **Ottmar Mergenthaler** (1854–99) replaced Monotype. <sup>3</sup>

## 1823–43

**Charles Babbage** (1792–1871) attempted to build calculating machines (following the lead of Thomas de Colmar, who built the first practical calculating machine in 1820); Babbage's machines were never completed, being too advanced for the technology of the time, but his theories formed a basis for later work in this field. 4

## 1830

**Joseph Whitworth** (1803–87) developed the **standard screw gauge** and a machine to measure one-millionth of an inch, for standards. Made possible more precise machine tools for planing, gear cutting, and milling. 5

## 1837 Ff

Rapid **development of armament**, keeping pace with improvements in metallurgy, machines, and explosives: **Henri J. Paixhans's** (1783–1854) shell-gun, adopted by France, 1837; rifled, breech-loading artillery used by Piedmont, 1845; the French '75, the first quick-firing artillery piece, firing both shrapnel and high explosive, 1898; the cast steel breech-loading Prussian artillery manufactured by the Krupps beginning in 1849. Small arms included the Colt revolver (1835), the Dreyse needle-gun (1841), the Minié bullet (1849), the Winchester repeating rifle (1860), the Gatling machine gun (1861), the French chassepot (1866), and the Maxim gun (1884). The self-propelled torpedo was invented by Robert Whitehead (1823–1905) in 1864; smokeless powder appeared in 1884. 6

## 1839

**Steam hammer** invented by **James Nasmyth** (1808–90). Also developments in drop-forging and die stamping at this time. 7

## 1846

**Elias Howe** (1819–67) invented the lockstitch **sewing machine**; in 1851 **Isaac M. Singer** (1811–75) invented the first practical domestic sewing machine. This became the first major consumer appliance, soon followed by the **carpet sweeper** of M. R. Bissell (1876), and the **vacuum cleaner** (I. W. McGaffey, 1869; J. Thurman, 1899).

8

## 1849–54

Exploiting the increasing accuracy of machine tools, **Samuel Colt** (1814–62) and **Elisha Root** (1808–65) developed a practical system for manufacturing interchangeable parts, especially in connection with Colt's revolver.

9

## 1855

Development of **turret lathe** by American machine tool makers. First true **universal milling machine** designed (1862) by **Joseph R. Brown** (1810–76). Other machine tool improvements included Mushet's tool steel, increasing the cutting speed (high-speed tool steel, 1898, by Taylor and White), gearbox mechanisms for better control, multiple-spindle lathes (1890), and tungsten carbide tools (1926).

10

## 1873

First **use of electricity to drive machinery**, Vienna. Quickly adopted, usually with the motor incorporated into the machine rather than separate.

## **d. Agricultural Production and Food Technology**

### **1801**

**Franz K. Achard** (1753–1821) built the first **sugar-beet factory** (Silesia). Sugar-beet cultivation and beet-sugar industry developed primarily in France and Germany. 1

### **1810**

**Nicolas Appert** (c. 1750–1840) described system for food preservation by canning, using glass jars. Tin cans introduced 1811. 2

### **1834**

**Cyrus H. McCormick** (1809–84) patented his **reaper** and began commercial manufacture c. 1840. Obed Hussey (1792–1860) invented a similar reaper simultaneously and independently. 3

### **1837**

**John Deere** (1804–86) introduced the **steel plow**. In 1819 Jethro Wood (1774–1834) had developed a cast iron plow; and John Lane had introduced a steel-blade plowshare in 1833. James Oliver's (1823–1908) chilled plow of 1855 was improved by the Marsh brothers (1857). Mechanical power was applied to plowing with the introduction of **cable plowing** (1850); by 1858 John Fowler had introduced the **steam plow**. 4

### **1850–80**

**Improvements in farm implements** included the revolving disc harrow (1847), binder (1850), corn planter (1853), two-horse straddle-row cultivator (1856), combine harvester (1860), combine seed drill (1867), and sheaf-binding harvester (1878). 5

## 1860

**Gail Borden** (1801–74) opened the first factory for the production of **evaporated milk**. 6

## 1861

After Louis Pasteur's work on microorganisms, **pasteurization** was introduced as a means of preserving beer, wine, and milk. 7

## 1865 Ff

Development of **mechanical refrigeration** for preservation of food products, especially Thaddeus Lowe's (1832–1913) compression ice machine (1865) and Linde's ammonia compression refrigerator (1873). 8

## 1869 Ff

Transcontinental railway aided development of **meat-packing industry** in Chicago. 9

## 1877

**Gustav de Laval** (1845–1913) invented the centrifugal **cream separator**. 10

## 1880 Ff

Application of **chemical fertilizers** increased food production. J. B. Lawes manufactured superphosphates (1842); Chilean sodium nitrate beds exploited from c. 1870 until methods of fixing atmospheric nitrogen were developed after 1900 by Fritz Haber (1868–1934); use of potash as an inorganic fertilizer from Strassfurt deposits.

## e. [Transportation and Communication](#)

### 1802

**Richard Trevithick** (1771–1833) patented a **steam carriage**; earlier attempts to use steam power for transport purposes had been made by Nicolas Cugnot in France (1769), William Murdock in England (1785), and Oliver Evans in the United States. In 1804 Trevithick designed and built a locomotive to run on rails. <sup>1</sup>

### 1807

**Robert Fulton** (1765–1815) sailed the *Clermont* from New York to Albany. This was by no means the first steamboat: the Marquis Claude de Jouffroy d'Abbans (1751–1832) had built a paddle-wheel steamer in France (1783); John Fitch (1743–98) had launched a steamboat on the Delaware (1787), and James Rumsey (1743–92) one on the Potomac (1787); John Stevens (1749–1838) had designed a successful screw-propeller steamboat (1802). However, Fulton's boat was the first steamboat to represent a commercial success. By 1819 steam augmented sail on the first transatlantic steamship crossing, achieved by the *Savannah*. <sup>2</sup>

### 1814

**George Stephenson** (1781–1848) built his **first locomotive**, and in 1829 his *Rocket*, designed with the aid of his son Robert (1803–59), won a competition with locomotives of other design and thereby set the pattern for future locomotive developments. <sup>3</sup>

### 1825

Opening of the **Stockton-Darlington Railway**, the first successful railroad system, <sup>4</sup>

using a steam engine built by Stephenson. In 1829 the first railroads were opened in the United States (Pennsylvania) and France (Lyons–St. Étienne), both employing English-built locomotives. The first American locomotive was built (1830) by Peter Cooper (1791–1883).

### 1837

**Charles Wheatstone** (1802–75) and **William F. Cooke** (1806–79) patented the **telegraph**, which was also independently invented by the American **Samuel F. B. Morse** (1791–1872), whose **telegraphic code** was universally adopted. By 1866, **Cyrus W. Field** (1819–92) succeeded in laying a **transatlantic cable**, after two previous failures and after overcoming tremendous financial and technical difficulties.

5

### 1839

**Louis J. M. Daguerre** (1787–1851) evolved the **daguerreotype photographic process**, based on the work of Joseph Nicéphore Niepce (1765–1833). Although **William H. F. Talbot** (1800–77) produced paper positives (1841), the first fully practical medium for photography was the wet collodion plate process (1851) of Frederick S. Archer (1813–57).

6

### 1860

Construction began on the **London underground railway** system, which was electrified in 1905. Construction began on the Paris *métro* in 1898, and on the New York City subway in 1900.

7

### 1864

**George M. Pullman** (1831–97) built the first **sleeping car**, specially constructed for that purpose.

8

### 1867

**Ernest Michaux** invented the **velocipede**, the first bicycle to put cranks and pedals directly on the front wheel; the “safety” bicycle with geared chain drive to the rear wheel was introduced in 1885.

9

## 1869

Union Pacific and Central Pacific Railroads met to complete the **first transcontinental line** in America. The **Trans-Siberian Railway** was begun in 1891.

10

## 1869

Opening of the Suez Canal, the work of the French engineer **Ferdinand de Lesseps** (1805–94).

## **b. Early Modern European Expeditions**

### **1553–54**

**Sir Hugh Willoughby** and **Richard Chancellor** travel to Kola Peninsula. 1

### **1576**

**Sir Martin Frobisher** sought the Northwest Passage in northern Canada. 2

### **1585–87**

**John Davis** sought the Northwest Passage in northern Canada. 3

### **1594–97**

Three voyages of **Willem Barents** and **Cornelis Nay** in northern Russia, exploring islands and routes in region of Barents Sea. 4

### **1607–11**

Voyages of **HENRY HUDSON**, searching for Northwest Passage and exploring northern Canada. 5

### **1610–48**

**Russian Cossacks** conquered Siberia and explored north coasts and major Arctic rivers. 6

### 1670

**Hudson's Bay Company** was granted royal charter for trade in North America and began explorations of Arctic areas. 7

### 1728–41

Voyages of **VITRUS BERING** to explore north Pacific basin and Bering Strait regions. 8

### 1732–43

Russian government survey of the whole **Siberian coast**. 9

### 1738–39

**Pierre Bouvet** sighted land south of Capetown in an expedition to prove or disprove the existence of an Antarctic continent. 10

### 1772–75

**CAPT. JAMES COOK's second voyage** of Pacific exploration circumnavigated Antarctica for the first time, farthest southern penetration to that time. 11

### **c. 19th-Century Explorations**

#### **1806**

**William Scoresby** reached a record north and wrote the influential *Account of the Arctic Regions*. 1

#### **1818**

Twin expedition of **John Ross** and **Edward Parry** to Baffin Bay. 2

#### **1819–26**

**John Franklin's** land explorations of northern Canada. 3

#### **1820–23**

**Baron Wrangel's** explorations of Siberia. 4

#### **1821–23**

**Edward Parry's second expedition.** 5

#### **1824**

**Parry's third expedition,** seeking a northern sea passage around North America. 6

## 1827

**Parry** set record north, departing from Spitsbergen. 7

## 1829–33

**John Ross** and his nephew, **James Clark Ross**, explored northern Canada, and James Ross located **north magnetic pole** in 1831. 8

## 1841–43

**JAMES CLARK ROSS** explored Antarctic coasts and islands, claiming large areas for Great Britain, and set a record south that lasted for 60 years. 9

## 1845–48

The expedition of **SIR JOHN FRANKLIN** completed the **discovery of the full Northwest Passage**, but all members of the expedition perished. 10

## 1848–59

**Franklin Relief Expeditions** finally discovered the fate of the Franklin group and also discovered and mapped significant portions of regions in North America. 11

## **d. 20th-Century Explorations**

### **1902–4**

**ROBERT F. SCOTT** led a major Antarctic expedition, accomplishing significant discoveries and a record south. 1

### **1903–6**

**Roald Amundsen** first sailed the complete Northwest Passage. 2

### **1907–9**

Expeditions by **F. A. Cook** and **Robert E. Peary** each claimed to have reached the **NORTH POLE**, although it is possible that neither actually accomplished this. 3

### **1907–9**

**Ernest Shackleton** led an Antarctic expedition that surpassed Scott's records and reached the **south magnetic pole**. 4

### **1910–12**

**ROALD AMUNDSEN** discovered the **South Pole**, on which he placed the Norwegian flag in 1911. 5

## 1910–13

**Scott's last expedition** reached the South Pole in 1912, but the whole party died in a blizzard. 6

## 1917

**Danish–U.S. treaty** strengthened Danish claims to **Greenland** by ceding Virgin Islands to the United States in settlement of U.S. claims resulting from Peary's expeditions. 7

## 1918–25

**Amundsen** and **H. Sverdrup** navigated the Northeast Passage and spent an extended period in planned drift over the North Pole. 8

## 1924

**Greenland** became a Danish crown colony following Danish agreements with Norway and Great Britain. 9

## 1925

**Spitsbergen** came under the sovereignty of **Norway**. 10

## 1926

**Richard Byrd** and **Floyd Bennett** were the first to fly over the **North Pole**. 11

## **B. The French Revolution and Europe, 1789–1914**

### **1. Overview**

**Periodization.** Basic trends in Europe's modern history began in the 1780s with the first phase of the **Industrial Revolution** in Britain and with the **political and social revolution of 1789** in France. The advent of **World War I in 1914** drew this tumultuous modern period to a close. <sup>1</sup>

During the years 1789–1815, Europe was dominated by the French Revolution and related reform movements elsewhere, culminating in several revolutionary wars and the Napoleonic Wars. During the next period, 1815–48, efforts to return to more conservative politics were progressively undermined by the political movements and doctrines tossed up by the French Revolution (**liberalism, radicalism, nationalism, and early socialism**) and by social unrest provoked by increasing commercialization and the **beginning phases of industrialization**. This period culminated in the widespread **revolutions of 1848–49**. These revolutions produced important changes, but their failures also altered European politics, as both conservatives and liberals began to develop new tactics. Between 1850 and 1914, **European industrialization advanced**, with a growing array of social and cultural, as well as economic, effects. Debates about constitutional structure began to be resolved, but pressures for **new government policies to address social issues** increased. **Diplomacy and war** assumed more importance than they had during 1815–48, as governments put their new industrially produced weaponry to use and sought in diplomacy a reduction of political disputes. <sup>2</sup>

**Regional as well as purely national differences** marked Europe during the 19th century. <sup>3</sup> **Russia and eastern Europe** participated widely in cultural trends and diplomatic engagements, but their political forms and above all their social and economic structures differed markedly from those of western Europe. By 1850, Russia had experienced little significant liberal pressure, while its social structure, predominantly rural, featured divisions between aristocrats and serfs. Russia's early industrialization and growing political turmoil from the 1880s onward thus resembled patterns in western Europe almost a century before, rather than contemporaneous developments. **The Balkans** formed another region with distinct economic and political issues, while in western

Europe, **Spain, southern Italy, and Ireland** participated only partially in many general trends.

## **2. The French Revolution, 1789–1799**

The period of the French Revolution and French Empire can be divided into several subperiods based on political regime and relationship to the rest of Europe. (1) **Estates General** and **Constituent Assembly**, May 1789–Sept. 1791. Formative period, leading toward constitutional monarchy. (2) **Legislative Assembly**, Oct. 1791–Sept. 1792. New lower-class unrest; beginnings of foreign wars. (3) **National Convention**, Sept. 1792–Oct. 1795. Most radical phase of revolution: end of monarchy, new constitutional measures, and growing impact outside France. (4) **Directory**, Oct. 1795–Nov. 1799. Undid the most radical measures; consolidation efforts. (5) **Consulate**, Dec. 1799–May 1804. Napoleon's coup led to one-man rule though nominally republican forms. New wars. (6) **Empire**, May 1804–June 1815. Napoleon installed new regime, consolidated some revolutionary gains, concentrated on wars. Major period of change in other parts of Europe. 1

### **a. Causes of the Revolution**

(1) Intellectual currents of the Enlightenment proposed governments based on contracts or constitutions rather than divine authority. Such ideas were discussed in the salons organized by women in Paris and by the *philosophes* (reform-minded intellectuals) surrounding Diderot's encyclopedia. (2) Economic developments expanded a middle class that, although often involved in the royal bureaucracy, had little access to formal politics. This middle class was concerned with obstructions to economic development and commerce, such as the guild system, internal tariffs, and the lack of common weights and measures and adequate roles for professionals. (3) A social contest had developed between the emerging middle class (especially the bureaucracy) and the old aristocracy. The aristocracy had many privileges, including exemption from many of the taxes levied against the middle classes. After 1750 the aristocracy discouraged middle-class entry and increased its own monopoly over upper church offices (the **aristocratic resurgence**, probably a response to population growth, which angered the middle class). At the same 2

time, these aristocratic landowners attempted to collect their full manorial rights from a peasantry already heavily burdened by taxes. Although most peasants were free, many had little land, and surviving manorial dues were galling. (4) A financial crisis within the government resulted from an increasing deficit. This deficit was the result of costly wars of territorial aggression in the 17th and 18th centuries and was worsened by the policy of selling offices, with tax-exempt status, to raise additional revenues. When the king and his advisers tried to levy new taxes through parlement, they were forced to call the Estates General. (5) Revolution was triggered by efforts by the aristocracy to wring concessions from the king (Assembly of Notables, 1787), and bad harvests and unemployment (1787–88) helped stir urban and rural rioters.

## **b. The National Assembly**

**1789, May 5**

**Estates General met** at Versailles with double representation of the third estate (representing the middle class): nobles 300, clergy 300, commons 600. Necker, the king's financial adviser, announced that voting would be by order, not by head, thus eliminating the third estate's advantage. Acting on a motion by **Abbé Sieyès** (author of *What Is the Third Estate?*), the third estate assumed the title of the **National Assembly** (June 17) and invited other orders to join them. 1

**June 20**

**Tennis Court Oath.** The king suspended meetings of the Estates General for three days and closed the hall. Members met at a neighboring tennis court and took an oath not to separate until they had given the realm a constitution. 2

**June 23**

The king ordered each estate to meet separately, but deputies refused. Most of the clergy and many of the nobles joined the assembly—prompting the king to order the rumps of the first and second estates to join the assembly (June 27). He dismissed **Necker** (July 11) and concentrated troops near Paris, which led to the attack on the Bastille. 3

**July 14**

**STORMING OF THE BASTILLE.** A mob in Paris attacked the prison although most prisoners had already been removed. Aided by deserters from the French Royal Guard (incorporated into the Parisian National Guard in Aug.), they captured and killed the 4

governor, Jordan de Launay. Louis ordered troops out of Paris, and the Parisian electors formed a commune, with **Lafayette** commanding the National Guard and Bailly elected mayor. **Adoption of tricolor:** blue and red for Paris, and white for France. Necker was recalled (July 17). Beginning of emigration of nobles (*émigrés*).

**Rising of the peasants** against the manorial lords in Dauphiné, Provence, Burgundy, and throughout France. This *grande peur* (great fear) was not systematically spread from Paris but occurred sporadically as a series of mass movements with numerous centers. Riots, provisional governments, guards in the provincial cities.

### Aug. 4

**Surrender of feudal rights** by representatives of the nobility. The radical nature of this act was undermined by provisions for the gradual elimination of these rights and compensation for the owners (in most cases it was never paid): abolition of titles, prohibition of the sale of offices, dissolution of the guilds, and so on.

### Aug. 27

**DECLARATION OF THE RIGHTS OF MAN AND CITIZEN**, based on English and American precedents, guaranteed to citizens the rights of liberty, equality, security, and property. This provision limited explicit protection to males in every phase of the Revolution and resulted in Marie-Olympe de Gouges's publishing of her **Declaration of the Rights of Women** (1791). These declarations stated that the aim of society was public happiness.

### Oct. 5–6

**MARCH TO VERSAILLES.** Popular riots in Paris, caused by hunger and rumors of an intended reaction against the Revolution, resulted in a march of a band, consisting mostly of women, to Versailles. Lafayette rescued the royal family, but the band forced the king's return to Paris.

**The political clubs** had existed since early 1789 but were growing in power. The **Jacobins**, enjoying a wide democratic base and led by **Maximilien Robespierre**, became a growing power in the state. The **Cordeliers**, more radical than the Jacobins, were led by **Georges Jacques Danton**, **Jean Paul Marat**, **Camille Desmoulins**, and **Jacques Hébert**. The **Feuillants**, moderate monarchists including **Lafayette and Bailly**, had separated from the Jacobins.

As the assembly debated a new constitution for a liberal monarchy (adopted in 1791), it tried to address the fiscal crisis by declaring church lands public property and issuing *assignats* (government notes) on their value. Because *assignats* were frequently overissued, recurrent inflation resulted. On July 12, 1790, **Civil Constitution of the Clergy** placed bishops and priests as well as church income under government control. Fewer than half of all priests declared loyalty to the government, and in 1791 the pope denounced it, setting up a long battle between revolutionaries and much of the Catholic Church. 10

### **c. The Legislative Assembly**

#### **1791, Oct. 1–1792, Sept. 21**

**The legislative assembly**, with 745 members, represented primarily the middle class. <sup>1</sup>

**Parties:** (1) The Right became weaker almost daily; (2) the Left comprised the majority and consisted of (a) the **Plain**, an unorganized group of moderate republicans and monarchists, which was swayed by (b) the **Girondists**, who advocated the establishment of a form of a federal republic and included the brilliant orators Guadet, Vergniaud, and Brissot; and (c) the **Mountain**, which drew its strength from the Jacobin and Cordelier clubs. Although the divisions between the last two did not attain their clearest form until the Convention, their beginnings were evident in the assembly.

**The poor harvest of 1791 and rising grain prices**, worsened by distribution problems and increased demands as the result of the war, caused growing unrest and riots in Paris. <sup>2</sup>  
Abolition of religious orders and elimination of the tithe also led to problems in administering poor relief.

#### **1792, March 20–25**

**Guillotine accepted** as form of execution. First used on April 25, the guillotine symbolized the leveling between classes during the Revolution by eliminating the previous distinction between the execution of elites (beheading) and commoners (hanging). The guillotine was often portrayed as a “feminine” form of execution, and bourgeois males were expected to demonstrate superiority by embracing death without displaying emotion at their executions. <sup>3</sup>

#### **1792–97**

**WAR OF THE FIRST COALITION.** The French interpreted the Declaration of Pillnitz <sup>4</sup> as a bald threat of interference and issued ultimatums against Leopold II and Francis II.

## 1792, April 20

France declared war against Austria. The French suffered reverses, and allied armies captured Verdun (Sept. 1). The Prussians were finally defeated at the **Battle of Valmy** (Sept. 20), which gave heart to the revolutionary armies. 5

## Aug. 10

Popular demonstrations and the **storming of the Tuileries** led to the **suspension of functions of the monarchy**. The assembly voted to enact all legislation vetoed by the king, who was confined to the Temple (old house of the Knights Templar). The assembly also voted to call a convention elected by universal male suffrage to enact a new constitution. In the meantime, the government was controlled by the Provisional Executive Council (headed by Danton) and the Paris Commune. 6

## Sept. 2–7

**September Massacres** occurred at Paris as the result of news of the siege of Verdun. Suspects were taken from the prisons and executed by the mob after being tried by hastily improvised tribunals. Similar scenes were enacted at Versailles, Lyons, Rheims, Meaux, and Orléans. 7

## Sept. 9–16

Suspension of **free trade** on grain. Provisions provided for requisitioning for the army and civil authorities. Amnesty was given to individuals arrested for agitation over grain. 8

## Sept. 20

**Divorce** was legalized, and the state assumed responsibility for recording marriages, births, and deaths, which was formerly done by the church. The **Battle of Valmy** gave a first victory to revolutionary armies over the Prussians. 9

## **d. The National Convention: The Revolution's Most Radical Phase**

**1792, Sept. 21–1795, Aug. 22**

**THE NATIONAL CONVENTION**, longest lived of the revolutionary assemblies. It was elected by male suffrage and composed entirely of republicans (749 members, of whom 486 were new men). **Parties:** The **Plain** had a majority but was dominated by the **Girondists** and then by the **Mountain**. The Girondists now formed the Right, and the Mountain, under Robespierre, Danton, and others, formed the Left. 1

### **Sept. 21**

**Monarchy abolished.** 2

### **Sept. 22**

**Republic proclaimed.** (First day of Year I of Republican calendar.) On Sept. 25 the Republic was declared “one and indivisible.” 3

### **Oct. 2**

**Committee of General Security** was formed, with undefined police powers. 4

### **Nov. 6**

Allies in retreat following a French victory by Gen. Dumouriez at **Jemappes.** 5

## Nov. 19

**The Decree of Fraternity** offered French assistance to people who wished to overthrow their governments. Other countries, including England, feared risings. Irish nationalists sought French aid as a result of this declaration. 6

## Dec. 4

Convention declared the death penalty for anyone advocating monarchy. 7

## Dec. 8

Convention repealed suspension on free trade in grain but outlawed grain exports. Nov. and Dec. also saw instances of price fixing and demonstrations among peasants in the Beauce region. 8

## Dec. 10

**Louis XVI tried** before the Convention. Girondists suggested a referendum to the people (Dec. 27), but on Jan. 14, 1793, the Convention decided there would be no referendum and found Louis guilty. Louis sentenced to death by a slim majority (Jan. 20) and executed on Jan. 21. 9

## Dec. 16

The death penalty to be administered for threatening the unity and integrity of the Republic. 10

As a result of a struggle between the Girondists and the Mountain, **all power in the Convention centered in three institutions**: (1) the Committee of General Security; (2) the Paris Commune, reorganized on basis of male suffrage and acting through its committee led by Chaumette and Hébert; and (3) the Committee of Public Safety. The latter was composed of 9 (later 12) members (including Robespierre, Danton, and St. Just) with dictatorial power. 11

## e. [The Directory](#)

### 1795, Aug. 22

**The Directory** was established by the **Constitution of Year III**. Citizenship was extended to all males of at least 21 years of age who were on the civic lists of a canton and either paid direct taxes or had served in the army. All citizens could vote (no distinction between active and passive citizens). The constitution provided for a bicameral legislature (Council of Five Hundred and Council of the Ancients), with deputies each serving a three-year term, and a five-member executive branch (the Directory) chosen by the legislature. **Freedom of the Press** was confirmed by the constitution, but it could be restricted by the Directory for a year. **Political clubs**, collective petitioning, and popular societies were suppressed (Aug. 23). 1

The 1795 **harvest was poor**; it was preceded and followed by bad winters. Famine conditions existed in many parts of France. Nov. and Dec. saw strikes among Parisian workers, especially in the printing trades. The Directory followed a repressive policy toward workers. 2

### 1796, March 18

*Assignats* replaced with *mandats territoriaux* in an effort to stabilize the currency. The *mandats* depreciated almost immediately. The government withdrew them and returned to metallic currency in Feb. 1797, but only after decreeing a forced loan on the rich (poorly implemented). 3

**THE WAR OF THE FIRST COALITION** proceeded on two fronts. 4

French armies under Jourdan and Moreau separately invaded S. Germany, forcing Baden, Württemberg, and Bavaria to conclude truces (Aug.). Archduke Charles, leading Austrian forces, defeated Jourdan at **Amberg** (Aug.) and **Würzburg** (Sept. 3). In doing so, Charles successfully stopped the attempt to unite the two French armies on German soil and forced Moreau to retreat across the Rhine. The German campaigns were 5

inconclusive.

## 1796–97

**BONAPARTE'S ITALIAN CAMPAIGN.** Napoleon Bonaparte split the Austrian and Piedmontese armies—defeating the Austrians at **Millesimo** (April 13) and the Piedmontese at **Mondovi** (April 21). Victor Amadeus was compelled to conclude a separate peace with France. Napoleon then defeated the Austrians at the Battle of Lodi. 6

### 1796, May 10

**Battle of Lodi.** Napoleon entered Milan and conquered all of Lombardy as far as Mantua. Mantua surrendered after being besieged by the French, following Lodi. 7

### 1797, Feb. 2

**Napoleon advanced toward Rome,** but the pope concluded the **Treaty of Tolentino** with him (Feb. 19). Napoleon then crossed the Alps to meet Archduke Charles, but uprisings in Venetia and Tyrol forced him to open negotiations leading to the preliminary peace of Leoben. 8

### April 18

**Preliminary peace of Leoben:** Austria took over Venetia, and France organized the Cisalpine Republic in northwestern Italy. 9

### Sept. 4

**The Fructidor Coup** was established by emergency legislation forced through the councils with the support of the military. Paris occupied as the Triumvirs (directors Barras, La-Révellière-Lépeaux, and Reubell) instigated the Directorial Terror, pushing the Revolution left again. Deported members of the opposition included Carnot and Barthélemy. 10

## Sept

**The press freedoms** were suspended according to the constitution. Right-wing newspapers were closed, and a stamp tax on the press was introduced (Sept. 30 and Oct. 4). 11

## Sept. 30

**Bankruptcy of the Two-Thirds** repudiated two-thirds of the national debt. 12

## Oct. 17

**Treaty of Campo Formio** between Austria and France concluded Austria's involvement in the War of the First Coalition. It allowed Austria to annex Venetian territories and secured French support for Austria's efforts to gain control of Salzburg and Bavarian territory around it. Austria ceded Belgium to France and secretly agreed to support French annexation of the left bank of the Rhine from Basel to Andernach. 13

### 3. The Napoleonic Period, 1799–1815

#### THE HOUSE OF BONAPARTE

#### NAPOLEON'S EMPIRE 1812 (MAP)

##### a. The Consulate

1799, Nov. 9 (18 Brumaire)

**The Coup d'État of Brumaire.** Sieyès and Roger-Ducos resigned from the Directory, and Barras then resigned under duress. The Directory could not function with only two members and was disbanded. Sieyès and Roger-Ducos, supported by Napoleon and his brother Lucien Bonaparte (president of the Council of 500), convinced the councils to name Sieyès, Roger-Ducos, and Napoleon as provisional consuls and establish a commission to draft a new constitution.

## **b. The First Empire**

**1804, May 18**

**Napoleon I** was proclaimed emperor of the French by the Senate and Tribunate; his rule<sup>1</sup> was consecrated at Paris by Pope Pius VII on Dec. 2 and ratified by plebiscite (3,572,329 in favor, 2,569 opposed). The imperial office was made hereditary by male line, with the emperor having the right to adopt the children of his brothers; if without heir, the crown would pass to his brothers. Napoleon immediately established a court and began the development of a new nobility, with many of the privileges of the old, but based on achievement instead of birth. Napoleon really revived the absolute monarchy but made it more modern and efficient. However, Napoleon concentrated his efforts on expanding and consolidating his empire through warfare and foreign policy.

## 4. Western and Central Europe, 1815–1848

EUROPE IN 1815 (MAP)

### a. Social, Cultural, and Economic Trends

#### **1. Economic and Social Changes**

**THE INDUSTRIAL REVOLUTION.** This was one of the most important changes in the history of humanity, altering patterns of life and thought. It meant a shift from an agrarian, handicraft, labor-intensive economy to one dominated by machine manufacture, the factory system, division of labor, a freer flow of capital, and the growth of cities. Yet industrialization did not affect all of Europe at the same time. This process began in the **mid-18th century in England** and gradually spread to the Continent. Significant industrialization could be found in Belgium and France by the 1820s, and in Germany and Catalonia by the 1830s. <sup>1</sup>

The long-term origins of industrialization had been building for centuries (See [Economic and Social Changes](#)). Chief among newer factors was a **population explosion** during the 18th century. This was due especially to a decline in mortality, the result of a cyclical decline in epidemic diseases, and, above all, the **introduction of new foodstuffs from the Americas**—particularly the **potato**. At the same time, partly due to new foods, **sexual activity** increased; rapid growth occurred in **illegitimate births**. From c. 1780 onward, **premarital sexual intercourse** increased particularly in the growing propertyless classes, both rural and urban, where traditional family and community constraints declined in force. **Sexual expression** became more important, though probably more for men than for women. In all, the nations of western Europe witnessed a population increase from 50 to 100 percent between 1730 and 1800. English population, for example, rose from approximately 5 million in 1700 to over 9 million at the end of the <sup>2</sup>

century. The resulting population pressure forced many people off the land and created a labor force for the new cities and factories. Population growth began to decrease slowly in the early 19th century as birth rates began to decline, especially among the middle classes.

The short-term causes of industrialization also included a **number of inventions in key industries, accompanied by changes in finance, which spurred further change**. The first series of inventions resulted mainly from the tinkering of craftworkers and inventors and required very little capital. **John Kay's** flying shuttle (1733), **James Hargreave's** spinning jenny (1768), **Richard Arkwright's** water frame spinning machine (1769), and **Eli Whitney's** cotton gin (1793) all revolutionized the cotton industry by allowing for increased production and profits, while decreasing the costs of production. Finally, with the substitution of water power and later steam power (developed by **James Watt** in the 1770s) for human energy, these inventions made it more economical to group workers together around large machines than to send out work to individual workers. This spelled the end of the putting-out system and the rise of the **factory system**. This series of changes, especially the invention of the steam engine, spurred similar developments in the iron industry (the production of quality wrought iron by the 1780s) and in transportation (growth of the railroad) and communication (See [Technological Developments, 1800–1914](#)).

As industrialization developed, investment became more important. In Britain, wealthy merchants and landlords provided most of the investment capital, but banking remained a risky venture. This changed with the laws of **incorporation** and **limited liability** (passed in 1844 in Britain, and in France, Germany, and the United States in the 1860s). Incorporation allowed companies to be treated as individuals before the law, giving them a juridical existence long after the founders had either died or sold their shares. Limited liability protected investors and thereby promoted investment, establishing a system whereby investors were liable for the corporation's debts only in proportion to the number of shares they owned.

Because this first phase of industrialization was gradual, the **social transformation** that accompanied it developed alongside an older social structure. Thus, those who felt the **most severe hardships** from industrialization, at least psychologically, were the **artisans, craftworkers, and rural laborers** who saw the value of their work decline. It was these groups that took the fore in the social and political revolutions that swept Europe in 1848 (See [Revolutions in Europe, 1848–1852](#)).

Industrialization created two new social groups: the **middle classes** (or bourgeoisie) and the **working classes** (or proletariat). Similarly, each developed in a new setting: the city. Both groups were diverse. The middle classes ranged from shopkeepers to bankers and factory owners, but they shared common beliefs in the virtue of work, thrift, ambition, and caution. The working classes of the first half of the 19th century can be broken down into three categories: **artisans, factory workers, and female domestic servants** (the

latter grew in proportion as they became a status symbol in middle-class households). **Industrial cities**, most unplanned, dirty, and unsafe, made conditions difficult for workers, but many devised strategies that made survival possible. For example, in factories, wives and children became economic assets so many factory workers married, or entered conjugal relationships, at a younger age than artisans, and had more children on average. Workers also developed a popular culture that suited their new conditions. At the same time, middle-class leaders began holding their children apart from work and moved their wives from shops to household domesticity. Adult women's economic roles began to decline as their cultural prestige, as mothers and moralizing agents, increased. Overall, however, poor living and working conditions remained the rule, exacerbated in the 1840s (the **hungry forties**), and they contributed to discontent.

Although these developments signified major changes in European life, it is important to remember that up to 1848 Europe remained overwhelmingly rural, and artisans retained an important position in the working classes. Change was more dramatic after 1850, when aspects of the new industrial society that had developed alongside the older agricultural society became more widespread. (See [Economic and Social Changes](#))

## b. [European Diplomacy](#)

**THE CONGRESS SYSTEM**, masterminded by Prince Metternich, rested on the Peace of Paris, the Holy Alliance, and a renewal of the **Quadruple Alliance** (Nov. 20, 1815) between Great Britain, Austria, Prussia, and Russia. Each member agreed to supply 60,000 men should a violation of the Treaty of Paris be attempted. This alliance, signed for a 20-year term, was renewed in 1834. The Quadruple Alliance also established the main tenet of the Congress System—**government by conference**. <sup>1</sup>

### 1818, Sept

The first congress under this system, **Aix-la-Chapelle**, settled the question of the French indemnity payments and the withdrawal of the allied troops in France. The **Quintuple Alliance**, including the four powers of the Quadruple Alliance and France, was established, and questions of slave trade and the status of Jews were raised. This congress was followed by two more: <sup>2</sup>

### 1820–21

Congresses at **Troppau and Laibach** were called to consider the revolutions in Spain and Italy (See [1820](#)) (See [1820, July 2](#)). Metternich induced the three eastern powers to accept the **Troppau Protocol**, which directed against revolutions that might upset the peace. England refused to sign the protocol, marking the growing distinction between British laissez-faire liberalism and the German conservatism. This division was stressed further at the Congress of Verona. <sup>3</sup>

### 1822, Oct

**The Congress of Verona** considered the Spanish and Greek situations. Canning, who replaced Castlereagh after the latter's suicide on the eve of the meeting, refused to cooperate with the conservative powers.

4

### 1831, Nov. 15

Treaty ratified the London Protocol of Jan. 21, which recognized Belgian independence and placed Leopold I on the throne (See [1831, June 4](#)). It also recognized an independent Greek state, as stipulated in an earlier conference protocol (1829–30) (See [1831, June 4](#)). Belgium was also declared neutral in 1831.

5

### 1834–39

**The Carlist War in Spain** (See [1834–39](#)) threatened to depose Queen Isabella and the constitutionalists. A **Quadruple Alliance** of Britain, France, Spain, and Portugal defeated the Carlists in 1839.

6

### 1841, July 13

**Convention of the Straits.** This convention closed the Straits (the link between the Black Sea and the Mediterranean) to warships, provided that the Ottoman Empire remained at peace. It thus benefited British naval power at the expense of Russian power because the latter lacked access to the Mediterranean from the south. (See [European Diplomacy, 1848–1914](#))

[PREVIOUS](#)

[NEXT](#)

---

(See [1811, Feb. 5](#))

### **c. The British Isles**

#### **THE HOUSE OF SAXE-COBURG-WINDSOR (1837-)**

**Monarchs:** George III (r. 1760–1820); George IV (r. 1820–30), who served as prince regent from Feb. 5, 1811; William IV (r. 1830–37); and Victoria (r. 1837–1901). 1

**Prime ministers:** Tories: Lord Liverpool (1812–27), Canning (1827), Lord Goderich (1827–28), and the duke of Wellington (1828–30); Whigs: Earl Grey (1830–34), Lord Melbourne (1834); Tories: Sir Robert Peel, a liberal Tory, laid out a liberal Tory course in the Tamworth Manifesto (1834–35); Melbourne (1835–41); and Peel (1841–46). 2

### **1. England, Scotland, and Wales**

**Romanticism** developed in England during and after the French Revolution and included authors such as Wordsworth (1770–1850), Coleridge (1772–1834), Percy Bysshe (1792–1822) and Mary (1797–1851) Shelley; and painters such as Joseph Turner (1778–1851) and John Constable (1776–1837). Leading novelists included Walter Scott (1771–1832) and Jane Austen (1775–1817). 3

**Economic depression** followed the Napoleonic Wars. Government demands for merchandise fell without a compensatory expansion of continental markets. Prices fell and unemployment rose. Military demobilization and industrialization aggravated the latter. 4

**Corn Laws** outlawed the import of grain until domestic grain reached the “famine price” of 80 shillings per quarter. This law resulted in higher food prices for the working classes. 5

## 1816, March

**Abolition of the 10 percent income tax** was countered by raising duties on many articles and thus raising prices. **Deflation of currency** (May 1821) may have helped counter these increases to a limited extent. 6

## 1817

**David Ricardo** published his *Principles of Political Economy and Taxation*. Drawing on **Malthus's *Essay on the Principle of Population*** (1789), which argued that population would increase geometrically while food would only increase arithmetically, Ricardo argued that such population growth could only result in a large supply of labor and keep wages at a subsistence level. 7

## 1812–20

**Luddism**. Northern England was wracked by numerous incidents of machine breakings perpetrated by the apparently fictional **Captain Ludd** and the **Luddites** (1812–20). The Luddites drew their strength from traditional crafts, particularly cropping and framework knitting. Participants disguised themselves and called one another by code names to avoid identification. The government mobilized troops and planted spies within the movement. 8

The unsatisfactory nature of economic reforms and continuing economic hardship led to **radical activity** on two fronts. Master artisans such as **Francis Place** and reformers such as the factory owner **Robert Owen** sought parliamentary reform and advanced their ideas in radical journals and tracts such as his *New View of Society* (1817), which called upon factory owners to provide for the well-being of workers through moral and practical education in regulated factory towns. **Radicals** also appealed to workers in mass meetings, with speakers such as **Henry Hunt and William Cobbett**. 9

## 1816, Dec. 2

At **Spa Fields** one such mass meeting turned into a riot.

10

## 1819, Aug. 16

**Peterloo Massacre.** Local magistrates ordered the cavalry to arrest Hunt as he addressed a crowd at St. Peter's Fields. The cavalry charged the crowd, killing 11. The Tories, under **Lord Liverpool**, extended the act of 1798 against seditious meetings and temporarily suspended the *writ of habeas corpus*. <sup>11</sup>

## Dec

**The Six Acts** following Peterloo ensured speedy trials for misdemeanors, imposed a newspaper stamp tax (and thus required all newspapers to be registered with the government), extended the right of search and seizure, forbade training in the use of arms, and curtailed the right of public meeting. These acts gained passing acceptance after the discovery of the Cato Street conspiracy. <sup>12</sup>

## **d. [The Low Countries](#)**

### **1. The Kingdom of the Netherlands, 1814–1830**

#### **1814, June 21**

**Protocol of the Eight Articles**, concluded between William, prince of Orange, and the allied powers, created a unified kingdom of the Netherlands, which incorporated Belgium and Holland. This kingdom was to serve as a buffer against France. The prince of Orange became King **WILLIAM I** (r. 1815–40) on March 16, 1815. 1

#### **1815, April**

A Dutch-Belgian commission began to work on a **constitution** that would appeal to the Dutch tradition of republicanism and the Belgian desire for a constitutional monarchy. The result was a bicameral legislature consisting of a Chamber of Notables, appointed by the monarch, and a States General, indirectly elected by urban administrations and electoral colleges. 2

**Problems of providing unity:** (1) Different languages, French and Flemish in the south and Dutch in the north, split the country; (2) religious differences caused division between the Calvinist Dutch (William I was a Calvinist) and the Catholic Belgians; (3) economic and social problems differed in their origins. The Dutch economy was based on a declining trading network, which resulted in pauperization in urban areas. The Belgians were beginning to industrialize and thus experienced pauperization in the countryside. Domestic manufacturing in textiles declined. But mines and metallurgical factories had developed around Liège. A British industrialist, **William Cockerill**, employed 2,000 workers in machine building as early as 1812. 3

## 1819, Sept. 15

The government decreed that, after a transitional period, Dutch would be the only language used in the law courts. 4

**Economic policies**, sometimes considered mercantilist, sought to combine the interests of trade and industry. Belgian goods were to be sent on Dutch ships to the colonies, where they would be traded for products to be sold by Dutch merchants in Europe. 5

## 1822

A **compromise tariff** set the average import duty at 10 percent, and the establishment of the **Société Générale**, a bank for industrial and government credit, furthered heavy industry by providing necessary financing (1822). 6

**Schools** were thought to be the ideal place from which to unify the nation. The government concentrated on establishing and controlling primary schools. The primary system succeeded in lowering illiteracy and, because instruction was in Dutch, reinforcing the national language. The rapidly developing bourgeoisie in the south resisted change within the secondary school system because of the emerging humanist and anticlerical attitudes of the government. 7

## 1825

A **royal decree closed all “Latin schools,”** including the *petits séminaires* and other church schools. Bishops were also required to admit to the *grands séminaires* only students who had completed their secondary education at a public school. Facing opposition from the south and declining enrollments, the government repealed all legislation regulating secondary education but maintained the primary system in May 1830. 8

## 1828, July

The two Belgian parties (the Clericals and Liberals) united after a concordat with the pope gave the king the right to veto elections of bishops and the government introduced a restrictive press law. The two parties called for freedom of press, instruction, and worship, and for ministerial responsibility. 9

## 1829–30

A **hard winter** worsened an economic situation in the south already difficult because overproduction had resulted in rising unemployment and bankruptcies. 10

## 1830, Aug. 25

**THE BELGIAN REVOLUTION** began when workers, spurred on by revolution in France, rioted and attacked the homes of government officials in Belgium. The liberal bourgeoisie, following violent **fighting between workers and troops** (Sept. 23–26), established a provisional government. 11

## Oct. 4

**Belgium declared independence.** 12

## Oct. 27

**The Dutch bombarded Antwerp**, which led to a conference of powers in London. These powers ordered an armistice. 13

### [THE HOUSE OF BOURBON-ORLEANS \(1700-\)](#)

#### 1. [The Restoration Monarchy](#)

**Monarchs:** Louis XVIII (r. 1814–24) and Charles X (r. 1824–30).

1

#### [1814, June 4](#)

**The Charter** recognized the principles of liberty, equality, property, and freedom of religion, although Catholicism was declared the state religion. The government consisted of a hereditary monarch, a Chamber of Notables nominated by the king, and an elected Chamber of Deputies. Suffrage was extended to men at least 30 years old who paid 300 francs in taxes. These qualifications gave substantial voting power to the upper middle classes and large landowners.

2

#### [1815, Aug 14, 21](#)

**Parliamentary elections** yielded a large majority of ultraroyalists, who passed a series of reactionary legislation.

3

#### [Oct. 29](#)

**Law of public security** permitted the government to arrest individuals suspected of plotting against the state's security. 4

## Nov. 9

**A law against seditious speeches and writings** strengthened the gag on the press established on Aug. 8. **An amnesty law** exiled individuals arrested for their involvement in Napoleon's One Hundred Days. 5

## f. [The Iberian Peninsula](#)

### 1. Spain

#### [THE SPANISH BOURBONS \(1814-\)](#)

**Monarchs:** Ferdinand VII (r. 1814–33) and Isabella II (r. 1833–68).

1

### 1814–33

**Ferdinand VII** was restored to the throne following the Peninsular War. He had guaranteed the liberals that he would govern on the basis of the constitution of 1812, but, encouraged by conservative deputies known as the Persians, he repudiated the constitution (May 4) and arrested the liberal leaders (May 10).

2

**Economic hardship** occurred as a result of the loss of the American colonies, and postwar depression plagued the government. The government also suffered from a very unstable fiscal base, which left it skirting bankruptcy.

3

**Liberal suppression** and the arbitrary nature of the king's rule led to growing dissatisfaction evidenced in the development of secret societies, such as the Masons, and clubs. Popular radicalism also began to develop in response to unemployment, a yellow fever epidemic, and flooding, which increased the hardships of the poor.

4

### 1820

The army, confident of support from the liberal and radical camps, began the **revolution** with a mutiny of the troops under **Col. Rafael Riego**. The liberals seized control of the

5

government while the army held the king. The liberals adopted a policy of broad economic and political reforms begun by the Cortes, a bicameral legislature. **They reinstated the constitution of 1812**, decreed the conversion of uncultivated and Crown lands into private property, and incorporated into the state the assets of the monasteries and convents dissolved by the Cortes. They also banned emigration, believing that economic progress could be achieved only by keeping people in the country. Dissension between liberals and radicals, as well as within the liberal party, weakened the government, which proved unable to withstand the French military intervention after the Congress of Verona (See [1822, Oct](#)).

### 1823, Aug. 31

**The Battle of Cádiz** ended the revolution and reinstalled Ferdinand as king. Ferdinand revoked the constitution and all legislation enacted under the short-lived liberal government. 6

### 1823–33

**Financial and economic policies** provided for some cautious economic advances. The government introduced tariffs to protect Spanish agriculture and industry in 1825 and established a primitive version of a stock exchange in Madrid. It also staged an industrial exhibition in 1828 and sought to provide enlightened education for its subjects. 7

### 1833, June 30

**Ferdinand set aside the Salic Law** to assure the succession of his infant daughter Isabella. The king died on Sept. 29. 8

### 1833–68

**Isabella II**, represented by her mother, Maria Christina, who turned to the liberals for support and granted the Estatuto Real. 9

### 1834, April 10

The **Estatuto Real** divided Spain into 49 administrative provinces and provided the Cortes with financial power, but retained for the government the right of dissolution and control of the ministry. The constitution split the liberals into the Moderados, liberals who had been amnestied and helped to design the constitution, and the Progresistas, liberals whose amnesty occurred after the constitution and demanded a restoration of the charter of 1812.

10

## 1834–39

**The Carlist War.** Don Carlos, Ferdinand's brother, claimed the throne and, supported by the conservatives, the church, and the north, led a revolt. The Carlists were defeated with the help of the **Quadruple Alliance** of Britain, France, Spain, and Portugal (See [1834–39](#)).

11

## 1840, Oct

**The Revolt of Gen. Baldomero Espartero** forced Maria Christina to abdicate and flee. Espartero controlled the government until he was defeated by a coalition of Moderados and Progresistas (June 1843). **Isabella declared of age at age 13.**

12

**Economic and political liberalism** dictated government policy during the war. The government created a ministry of development (Ministerio de Fomento) and sold the uncultivated and Crown lands as had been planned during the Revolution of 1820. The government also declared labor free and abolished the guilds.

13

**Working-class and urban unrest** were stimulated by liberal policies in Catalonia and the destruction of guilds. In Barcelona, working-class radicalism centered on a group of journalists and artisans who met in Soler's clock shop. Their frustration was worsened by the textiles mechanization in the 1830s and 1840s, which resulted in periodic layoffs and piecework disputes.

14

**The Barcelona Commission of Factories**, which had previously adopted a radical stance, began to demand state protection for their industries but resisted efforts to provide protection for the workers.

15

**Industrial and agricultural development** proceeded throughout the 1830s and 1840s. Spain increased its production of foodstuffs, especially wheat and wine. It also provided the industrializing nations of France and Britain with metal ores such as copper, mercury, lead, and iron. As a result, the mining industry expanded, especially after the mining law of 1839. The government helped encourage industry in its ports by prohibiting the importation of ships in 1837. Industry remained hampered by transport

16

difficulties, although railway development did begin with a special government dispensation in 1829.

## 1845, May 25

**A new constitution** virtually reestablished the statute of 1834.

17

---

[PREVIOUS](#)

[NEXT](#)

---

(See [1814, April 20](#))

### **g. [The Italian States](#)**

After 1814, the Congress of Vienna placed Italy under effective Austrian control in exchange for the latter's loss of Belgian territory to Holland. Lombardy and Venetia were annexed to Austria, and nine new or revived states were created: kingdom of Sardinia (Piedmont), Modena, Parma, Lucca, Tuscany, Papal States, kingdom of Naples, republic of San Marino, and Monaco. 1

**Restoration in Italian government.** (1) **Habsburg Italy** (Lombardy and Venetia): Francis I appointed his brother, Archduke Rainier, as viceroy and established two congregations as consultive bodies to the absolute control of the viceroy. In many ways, the government followed the Napoleonic legacy. It confirmed the sale of church lands and the imperial nomination of bishops. It also retained the majority of the civil servants in place during the Napoleonic period. (2) **The kingdom of the Two Sicilies** (as of Dec. 8, 1816): Ferdinand united the kingdom of Naples and Sicily into the kingdom of Two Sicilies, and he became Ferdinand I of the Two Sicilies. He maintained an absolutist government under the direction of his leading minister, Luigi de' Medici. Medici attempted to combine absolute government with fair taxes and good administration. His policies were hampered by pressure applied by France and Great Britain, which resulted in a decrease in tariffs by 10 percent for goods carried on French, British, and Spanish ships. (3) **Papal States**: Pope Pius VII returned after a long exile and restored the Company of Jesus. Under his secretary, Cardinal Consalvi, he managed to recreate a strong administration and establish a bureaucracy on the French model. Pius was assisted by general Catholic revival and **ultramontanism** but also met with resistance from laymen who were excluded from the government. (4) **Modena**: Francis IV of Modena, under Austrian suasion, abolished Napoleon's legislation and purged the civil service. (5) **Piedmont**: Victor Emmanuel I of Piedmont restored, as much as possible, the previous Piedmontese regime, including religious intolerance, return of the Jesuits, customs barriers, and the restoration of guilds. (6) **Parma**: Maria Louisa of Parma and the infanta Maria Louisa of Bourbon-Parma owed their thrones to Austria and heeded the wishes of Metternich. 2

## 1816–18

**Famine.** This famine was worsened by the restoration of guilds in Piedmont and the establishment of interior and exterior tariffs. Italy also suffered because its people, especially in the south, depended heavily on subsistence agriculture, and so, when crops failed, had little money to purchase from abroad or supplement their harvest. An outbreak of typhus swept through Italy during the famine. 3

**Agricultural development.** Traditional agriculture dominated the Italian economy. The rising rural population forced families onto marginally productive land, and these families turned to cottage industry to supplement their incomes. Nonetheless, certain crops and regions, particularly the Po Valley, did experience growth. The development of raw silk farms helped fuel the silk industry in France. 4

**Industry.** Little industrialization occurred in Italy until after 1848, although the numerous fast-moving streams provided sites for some factories, and cottage industry expanded. Since the government did not encourage the development of the railroads, Italy did not generate capital-intensive industries. 5

**Urban development.** Little urban growth took place. Urban society was characterized by a sharp economic disparity between a small number of wealthy families and a large number of petty traders, artisans, and the poor. Living conditions within cities were bad for the majority. 6

**Secret societies. The Carbonari** (charcoal burners), who supported a republican form of government, grew rapidly in the early 19th century. They were the first post-1815 group to channel the liberal and nationalist sentiment that had grown during Napoleon's conquests and the reorganization of Italy. The Carbonari borrowed Masonic rituals. The growing concern over pauperization and falling prices combined with the rising tide of nationalism to result in a number of Italian revolutions. 7

## 1818–26

**Fall in prices.** Prices on agricultural produce fell after the famine as a result of an influx of wheat from Russia, more advanced agricultural techniques abroad, and the freedom of trade created as a result of the end of the Continental System. This fall in agricultural prices led to a rise in pauperism and forced marginal peasants either to emigrate or to supplement their incomes through cottage industry. 8

## 1820, July 2

**The Neapolitan Revolution.** Encouraged by the news from Spain, the Carbonari in the army led a revolt under **Gen. Guglielmo Pepe**. This revolt involved moderate landlords and members of a middle class concerned, among other things, with the lot of the poor. Ferdinand promised a constitution (July 15) but was restored to his former position as a result of Austrian intervention under the Troppau Protocol (See [1820–21](#)).

9

## July 15–16

**Sicilian Revolution.** Spurred by the Neapolitan Revolution, economic crisis, and resentment toward conscription and administrative reforms, craftsmen and workers rose in Palermo and demonstrated a violence toward the army not experienced in Naples. The moderates in Naples as well as the newly restored government united in a harsh repression of the Sicilian Revolution.

(See [1813](#))

## **h. Switzerland**

### **1815, March 20, 29**

The **Congress of Vienna** laid down the principle of the perpetual neutrality of Switzerland. A constitutional convention drew up a new federal pact, which established a Diet with restricted powers and required the vote of two-thirds of the cantons to ratify any act. Thus, the Swiss cantons maintained their autonomy within the new Swiss government. 1

**The Political Institute**, established as a law school in 1806, became a major rallying point for liberals within Zürich. These liberals criticized the government and gained support from newspapers within the city. They advocated a constitutional form of government and drew support from a number of newspapers. 2

### **1816–17**

**Economic hardship** hurt Swiss industry because it could not compete, initially, with England. The Swiss, however, benefited from their general policy of free trade, which enabled them to purchase relatively cheap grain from Italy and the Ukraine. 3

**Industry.** The Swiss had a long tradition of cottage industry in textiles, which had flourished under the continental blockade. Unable to compete with England, they worked to obtain the necessary technology to mechanize their industry. They were also able to muster the necessary capital because of the strength of their other industry, watchmaking, which provided abundant capital and low interest rates by the early 19th century. 4

## 1823

**Swiss cantons restricted the press** under pressure from the foreign powers. 5

## 1828–48

The “Era of Regeneration” was marked by liberal revisions in the constitutions of several cantons. 6

## 1830, Nov. 22

**Snell's Küsnacht Memorial** was accepted at a public meeting in Zürich by acclamation. 7  
It reiterated basic liberal freedoms and established an electoral system that gave the countryside two-thirds of the votes and the city one-third. This meeting led the leaders in Zürich to establish the **Constitution of 1831** based on Snell's principles. Zürich also began construction designed to make traffic through the city much easier and to destroy the visual distinction between city and countryside. This new construction helped to fuel a growth in the building industry.

## 1832, March 17

**The Siebener Concordat.** The liberal cantons joined together to guarantee their new constitutions. This act was followed by an effort to revise the federal pact in the direction of a stronger central government. The conservative cantons responded by concluding an alliance (League of Sarnen) to maintain the Pact of 1815. 8

## 1834, Jan. 20

The struggle over the federal pact became a religious quarrel when the liberal cantons adopted the Articles of Baden, which supported freedom of worship and secular education. 9

**Social change.** The development of industry in Switzerland corresponded to a renewed development in agriculture. Textile mills were located not in huge cities, but in smaller communities where abundant labor could be obtained from the surrounding countryside. 10

## 1839

**Economic hardships** developed as the result of the failure of harvests and a crisis within <sup>11</sup> the cotton trade. These hardships seem to have provided the spark for escalation of the clashes between conservatives and liberals and, in Zürich, led to a bloody battle in the streets between peasants supporting the conservatives and the Zürich military and liberals. The conflict brought down the Zürich liberal government.

## 1845, Dec. 11

**THE SONDERBUND.** The seven Catholic cantons—Lucerne, Uri, Schwyz, <sup>12</sup> Unterwalden, Zug, Freiburg, and Valais—replied to organized armed bands of the liberal cantons by concluding a league (the Sonderbund) for the purpose of protecting their interests. This league would clash with the liberals in the ensuing struggle for a new constitution in 1847 and 1848. (See [Switzerland](#))

## i. [Central Europe](#)

[CENTRAL EUROPE, 1815-1866 \(MAP\)](#)

### 1. Germany

#### 1815

**The “Metternich System”** dominated Germany and Austria during the first half of the century. Metternich and Austria were challenged for control in Germany by Prussia, though this challenge would become especially apparent in the second half of the century. The **Germanic Confederation** created by the Congress of Vienna had as its object the continued internal and external peace of Germany and the independence of the 38 member states. A Diet sat at Frankfurt-on-the-Main, organized into two assemblies and presided over by Austrian representatives. It was a diplomatic Diet, and as such the representatives were instructed by their respective countries. <sup>1</sup>

Prussia, the major hope for liberals and potential counter to conservative Austrian control of central Europe, suffered from financial difficulties and the continued strength of the Junkers (Prussian landowners who controlled large amounts of the eastern territories). <sup>2</sup>

**Land reforms.** The gradual emancipation of the serfs, which began in Prussia during the Napoleonic era, continued, but it benefited the large landholders (Junkers) far more than it did the serfs. <sup>3</sup>

**Agricultural change.** The development of a number of societies devoted to agricultural <sup>4</sup>

progress and the expansion of the amount of land under cultivation resulted in the production of a larger number of vegetables and other products to balance out grain production. Unlike grain, which required heavy cultivation in the spring and fall but little work during the summer, the vegetables demanded constant attention. As a result, women became engaged in farming year round.

**Bourgeois and working women.** Bourgeois women's lives focused on their homes and social causes often associated with church. These women employed servants, many of whom were single women, from farm laborers' or poor artisans' families. These poorer women had few choices; although they could attend mandatory schools in Prussia, they had no formalized instruction preparing them for a trade. They worked as servants, farm laborers, and occasionally as factory help, until they married; then they might work in home industries such as clothing production and cigar making.

**Economic development** began to accelerate in the 1830s and 1840s with the creation of railroads. Major firms in heavy industry and machine building were established by innovative manufacturers like **Alfred Krupp** (factory built in Essen, 1826). The demand for metals transformed the metal-making and coal industries and encouraged their concentration in a few especially rich fields. Despite such development, urbanization and industrialization moved at a slow pace before midcentury.

**Artisans** continued to maintain some guild practices such as insurance and burial benefits despite the gradual elimination of guilds in much of Germany. Since guild membership was no longer required to produce crafts, many journeymen set up their own shops. Artisans and other members of the working class remained unorganized for the most part because of repressive legislation.

## 1815–19

**The *Burschenschaften*.** Universities became the centers of the liberal movements as students organized in liberal societies. One such society, the Blacks, followed the lead of **Karl Follen** and advocated a unified Germany and liberal government but supported violence, if necessary, to reach these ends.

## 1816

An **edict** qualified the right of ownership of land. All those eligible to own land had to have the resources to support a team of animals to work the land. The gradual outcome of land reforms and demographic growth was the continued fragmentation of peasant landholdings and the impoverishment of German agricultural workers who then became involved in cottage industry.

## 1817, Oct. 18

**Wartburg Festival.** Students burned papers listing reactionary leaders. Growing concern among conservatives mounted when Karl Sand, an unstable follower of Karl Follen, stabbed to death August von Kotzebue, a reactionary journalist and lecturer. Some liberals supported Sand's actions, but Metternich and Frederick William of Prussia agreed to the Carlsbad Decrees. 10

## 1818

**Tariff reforms** by Prussia abolished internal tariffs but maintained external tariffs. They were followed by the introduction of a class tax (1820), which established different rates of taxes for four classes of individuals. These two acts helped restore the finances of the Prussian government. 11

## 1819

**Carlsbad Decrees**, sanctioned by the Diet of the Germanic Confederation on Sept. 20, established strict censorship, demanded sovereign control of the universities, and organized an inquisition into secret societies. 12

Prussia also reinforced the legal position of the **Junkers** through a number of governmental reforms in the 1820s, which secured the Junkers' control of local and Prussian elections. 13

## 1830

**The July Revolution in Paris** (See [1830](#)) led to several outbreaks in Germany directed largely against the bureaucracy. Rulers were forced to abdicate in Brunswick, Saxony, and Hesse-Cassel, and new constitutions were adopted in all of these states and in Hanover. In 1832, 25,000 attended the **Hambach Festival** and toasted Lafayette. They demanded a republic and German unity and resolved to adopt both peaceful methods and armed revolt. 14

## 1831

A **cholera epidemic**, spreading west from Russia, struck Germany.

15

## 1832

**Amalie Sieveking** founded the **Women's Association for the Care of the Poor and the Sick**. This organization sent bourgeois women into the homes of workers and lower-middle-class families to instill their own values of cleanliness and virtue on the lower classes. Bourgeois women became especially concerned about the conditions of the poor through such associations and through church organizations such as the Rhenish-Westphalian Association of Deaconesses, which, in 1836, began training Protestant nurses.

16

## June 28

Metternich, disturbed by renewed liberal and radical activity, orchestrated the Germanic Confederation's adoption of the **Six Articles**, which reasserted absolute sovereign authority and the sovereign's obligation to defend that right. In July the Diet also enacted additional repressive measures, including the prohibition of all public meetings and surveillance of suspicious political characters.

(See [1814, Jan. 14](#)) (See [1814, Jan](#))

## **j. [Scandinavia](#)**

**Regions.** Scandinavia consists of the five geographical regions of **Denmark, Norway, Sweden, Finland, and Iceland**. Following the Napoleonic Wars, these five regions were controlled by three different governments. **Sweden controlled Norway**, but it had relinquished **Finland to the Russians** (1809). **Denmark controlled Iceland**. Denmark also controlled **Schleswig-Holstein** despite continued efforts within the latter to gain independence and join the Germanic Confederation. <sup>1</sup>

**Economics.** All five of the Scandinavian countries remained **largely agricultural** during the first half of the 19th century; however, their products and their means of produce varied. **Finland** concentrated on the production of grains for the European market. **Norway** continued to face difficulties with backward farming methods. At the turn of the century, much of Norwegian land was farmed without crop rotation, and Norway did not represent a major exporter of foodstuffs. However, following the repeal of the British Navigation Acts in 1840, Norway became a major exporter of timber for British industry. **Denmark** managed to maintain steady growth in agriculture. Industry, however, remained limited because it produced primarily for a home market. **Sweden** experienced growth both in agriculture, which it encouraged through government reforms, and in its only major industry, iron production. The latter suffered from a lack of coal and poor transportation. <sup>2</sup>

**Scandinavianism.** The early part of the 19th century saw both the growth of nationalism and the development of a sense of collective nationalism among the Scandinavian countries. Scandinavianism, or an interest in cooperation among Scandinavian countries, first developed in academia. **Students** from the various universities began to participate in steamship trips together. Whereas the Finnish students suffered suspensions as the result of their activities, Denmark and Sweden were marked by growing cooperation. In 1828, a **Danish steamboat** first entered the Swedish harbor of Malmö and, in 1839, **scientists** from throughout Scandinavia met in Gothenburg. (See [Scandinavia](#)) <sup>3</sup>

### **1. Sweden and Norway**

## THE HOUSE OF BERNADOTTE (1818-)

**Swedish Monarchs:** Charles XIII (r. 1809–18), Charles XIV John (Bernadotte, (See 1810) (r. 1818–44), and Oscar I (r. 1844–59).

4

### 1814, Jan. 14

**Treaty of Kiel.** Denmark ceded Norway to Sweden. Sweden sold the island of Guadeloupe to France and thus eliminated its national debt. However, an unfavorable balance of trade resulted in inflation, followed by a reaction and deflation. As a result, agricultural prices first rose and then fell sharply, hurting farmers.

5

### May 17

**Norwegian constitution adopted.** The constitution established a Storting, or legislative assembly, which met as a body in the Lagting. The Lagting then elected one-third of its members to the Oedlsting, thus dividing the Storting into two houses. The Lagting was elected by men who owned a house or farm, had 300 dollars, or rented a farm for at least five years. The constitution also guaranteed certain rights.

## 5. [Revolutions in Europe, 1848–1852](#)

**Causes.** Between 1848 and 1852, revolutions rocked most of western and central Europe with exceptions such as the Netherlands, Belgium, and Britain. The immediate cause was the economic hardship of 1846 and 1847. This hardship stemmed from the failure of the potato and wheat crops throughout much of Europe. The consequent rise in food prices drove demand for other products down and thus hurt the emerging industrial sectors as well. In addition, cholera spread through Europe in 1848 and 1849. Early industrialization strengthened the middle classes, who embraced liberalism and nationalism. Industrial developments also threatened the livelihoods of the many craftworkers who became instrumental in the early phases of the revolutions. Industrialization and economic hardships were not sufficient causes, however. Britain and Belgium, the most advanced industrial nations, avoided revolution by adopting liberal forms of government in the years preceding 1848 and expanding the franchise to include many of the industrialists and other members of the middle classes. The third factor, therefore, was a state that continued to resist liberal and nationalist reforms. <sup>1</sup>

**Chronology.** Unrest actually began in Italy and Switzerland, but historians usually consider the Parisian revolution first, because it sent the widest signals. The revolutions then moved to Austria-Hungary, Italy, and finally north through Germany. <sup>2</sup>

### a. [France](#)

#### 1847–48

**The banquets.** A series of political banquets (See [1847–48](#)) planned by Liberals and Republicans throughout France aimed at gaining support for opposition parties. The government let these banquets proceed until Feb. 22, 1848, when it stopped one <sup>3</sup>

scheduled in Paris that was to be preceded by a public procession. Students and workers gathered to march despite the prohibition. The police dispersed the marchers, but the workers and students began erecting barricades throughout Paris. The National Guard joined the cause, and the revolutionaries controlled Paris by Feb. 24. They chose a red banner as their flag—a banner that came to represent the left wing of the Second Republic.

### 1848, Feb. 23

The king appeased the middle class by replacing conservative prime minister Guizot with Molé, but revolutionaries in Paris continued to mount the barricades.

4

### Feb. 24

Faced with continued activity in Paris, Louis-Philippe replaced Molé with Thiers, abdicated in favor of his grandson the comte de Paris, and fled Paris. The comte's mother, Hélène Louis of Mecklenburg-Shwerin, was dissuaded from showing herself and her children to the people and instead went before the Chamber of Deputies. Many of the rioters had entered the chamber and called for the comte to be dethroned. As a result, a provisional government was chosen and a republic proclaimed. The romantic poet **Alphonse-Louis-Marie de Lamartine** dominated the right wing of the government, and **Louis Blanc**, a socialist, dominated the left wing.

5

**Workers' demands.** The economic hardships of the 1840s had left many people without employment. Workers and the socialists demanded that workers be guaranteed the right to work, the right to a minimum wage, and the right to be provided for in the case of illness and old age.

6

### Feb. 25

The government recognized the **right to work**, the right to a living wage, and the right of workers to organize.

7

### Feb. 26

**National Workshops** were decreed to provide work or relief to all the unemployed.

8

## Feb. 27

Following abortive attempts to overthrow the provisional government and place a Paris commune in its stead, the government attempted to appease demands that they adopt the red flag as an indicator of their commitment to democracy by declaring the **tricolor** of the Revolution of 1789 the national flag and ascribing to the belief in liberty, equality, and fraternity.

9

## Feb. 28

**The Luxembourg Commission** was established by the provisional government under the direction of Albert (a worker) and Blanc to develop a permanent plan for the organization of labor. The Luxembourg Commission had little authority and suffered from a lack of staffing and funding. It managed to produce a “General Survey of Works,” which never received a first reading within the government. The failure of the commission to gain any real attention from the government resulted in the resignation of Albert and Blanc (May 8), who had represented the workers' concerns in the provisional government.

10

**Women.** The year 1848 saw the proliferation of women's political newspapers. These newspapers generally connected women's rights with workers' rights by focusing on the many women in France who worked. Both women and workers failed to gain their objectives in a revolution dominated not by democrats and socialists but by liberals.

11

## April 23

The **elections to the national (or constituent) assembly**, which was to give France a new constitution, were a victory for the moderate Republicans (**Lamartine**) with some 500 seats; the left wing (**Louis Blanc**) had fewer than 100; the Legitimists (seeking the return of the Bourbon line) had about 100; the Orléanists (supporters of the fallen dynasty of Louis-Philippe), about 200.

12

**Social legislation.** The provisional government had abolished sweated labor (March 2) and reduced workers' hours to 10 per day in Paris and 11 per day in the provinces. It also set up free labor exchanges in town halls and stopped work projects in prisons and barracks because the latter were considered to be in competition with workers.

13

Perhaps the biggest piece of social legislation was also the most flawed—the **National Workshops** were inundated with the unemployed, who were attracted by the promise of

14

2 francs per day when they worked and 1½ francs when they did not. They were organized along military lines and put to work two days per week. The strict discipline and hard, often pointless labor, inflicted in the workshops led to worker demonstrations, including a riot on May 15. Not only artisans but also some factory workers participated, marking a change in the social base for urban political protest in France.

## June 21

The government abolished the workshops. As a result, many workers in Paris participated in the June Days Rebellion. 15

## June 23–26

**THE JUNE DAYS REBELLION.** The workers set up barricades while Gen. Louis Cavaignac, in charge of the army, became dictator pro tempore. Cavaignac waited until he had mustered all of his troops in Paris, including reinforcements from the National Guard from outside Paris, to march on the barricades rather than take each barricade down as it was being erected. Cavaignac's strategy inflicted heavy casualties but also cleared the streets of Paris. 16

**Reaction followed the June Days.** The government repealed the limitations on working hours, adopted legislation regulating the press, suppressed secret societies, and dictated rigid control for clubs and political associations. 17

## **b. [Hungary](#)**

### **1848, Feb. 29**

The news of the French revolution reached Pressburg and instilled a **financial panic** among merchants, who recalled the failure of the Bank of Vienna in 1789 and 1830. *Pesti Hirlap* reported that shops were refusing to accept bank notes, and on March 5, a crowd tried to exchange their bank notes for silver at the state bank in Buda. <sup>1</sup>

### **March 3**

**Kossuth**, in a speech in the Diet, **denounced the Vienna system** and called for a constitution for Hungary that would establish authority in the representatives of the people. <sup>2</sup>

### **March 15**

The youth of Budapest met in Pest to demonstrate in support of **the twelve points** drafted by radicals. The points included a responsible government, freedom of the press, and equality before the law as well as national claims for a Hungarian national bank, a national army, and the formation of a national guard. The twelve points were accepted by the municipal council, which established the Committee of Public Order. Separately, Croats organized a national committee demanding a government autonomous from Hungary. <sup>3</sup>

## March

**The Pressburg Diet** responded to the Hungarian revolutionaries at Pest with moderate reforms. The Diet abolished forced labor but maintained many other manorial rights. Count Batthyány established a government that included both Kossuth and Széchenyi. 4

**Austrian challenge.** Austria notified Batthyány that it wanted to maintain control of Hungary's finances. The Committee of Public Order called a meeting and demanded that, if Vienna refused to ratify the March Laws, it would form a provisional government in Pest. Vienna recognized the Hungarian government at once. 5

**The Committee of Public Order** mirrored the feelings of the middle classes and peasants. The middle classes had armed themselves in preparation for the continuation of the revolution, and the peasants had freed themselves of manorial obligations without waiting for resolution from Vienna. Vienna, having been defeated in Italy and struggling to maintain control in Bohemia, conceded to Hungarian demands. 6

## Sept

Vienna attempted to regain control of Hungary. The emperor revoked his acceptance of the March Laws. The Vienna government attempted to establish a puppet government under Baron Nicholas Vay. Gen. Count Lamberg, at Pressburg, was given full powers to dissolve the Hungarian Assembly, but he was killed by a popular uprising (Sept. 28) before he could read the act of dissolution. 7

**War** between Hungarian nationalists and portions of the Hungarian army under Kossuth, and the Viennese army, started with the escalation of Austrian troops crossing the Drave on Sept. 1. 8

(See [1842–44](#))

### **c. Austria and Bohemia**

#### **1848, March 11**

Prague meeting drew up **Twelve Articles of St. Wenceslas**, demanding Czech-German equality in education and government service. 1

#### **March 13–14**

Students in Vienna marched to the Landhaus to present a petition after hearing Kossuth's speech read aloud. The crowd reached the Hofburg where the Diet sat and, when the guards would allow only the delegates in, began to spread throughout the streets and squares surrounding the Hofburg. Alarmed by their large numbers, the authorities fired on the crowd in an effort to clear the area. Meanwhile, workers had been prevented from entering the city. They burned several factories and looted shops in protest. 2

#### **March 15**

**the emperor summoned the Diet** to begin consideration of a constitution. 3

#### **April 8**

Czechs obliged Vienna to promise a Bohemian constitutional assembly. Revolutionary movements also took place in Galicia, Moravia, and elsewhere. 4

## April 25

The new government, under Pillersdorf, published a **new constitution**. The new constitution provided for a bicameral legislature with a Senate composed of both life members and members elected by the great landowners and a Chamber of Deputies elected by voters who met a high property qualification, thus limiting the vote so that workers would not be directly represented. Women could not vote.

5

## May 9

A **new electoral law**, passed in response to demonstrations, enabled the lower middle class and the peasants to vote but excluded workmen who were paid by the day or the week, domestic servants, those receiving public assistance, and all women.

6

## May 14

The government dissolved the Central Committee, formed by students and members of the National Guard during March.

7

## May 15

**The Storm Petition** (Sturmpetition). Students, workers, and the members of the National Guard marched to the Hofburg and demanded that the government establish universal adult male suffrage, that the army be called up only at the request of the National Guard, and that parliament consist of a single chamber. The government promised to revise the constitution. **The emperor and his family fled to Innsbruck.**

8

## May 26

The government retrenched and ordered the **dissolution of the University Legion**, and the troops ordered the National Guard to stand down. As a result, barricades went up throughout Vienna, and the workers and National Guard came to the students' aid. A committee of safety controlled Vienna during the following months.

9

## June

The **first Pan-Slav Congress** (composed, however, almost entirely of Czech delegates) <sup>10</sup> met at Prague under the presidency of **Francis Palácky**, the eminent Bohemian historian and national leader. It proclaimed the solidarity of the Slavic peoples (as against the Germans), but stressed also the equality of all peoples, and proposed a European congress to deal with outstanding international problems.

## June 12

The Princess Windischgrätz, wife of the commander of the forces at Prague, was <sup>11</sup> accidentally shot and killed during a student demonstration. **Prince Alfred Windischgrätz**, who favored strong repressive measures, seized this opportunity to bring up reinforcements.

### **d. [Italy](#)**

Italy's revolutions, which began to take shape before the Paris rising, proceeded against two interrelated problems: (1) Austrian dominance in northern Italy, and (2) the demand for liberal, political reform. Because Italians viewed the conservative government as linked to Austrian influence, the middle classes found support for the revolution among nobles as well as among the working class. The latter suffered from the devastating harvests of 1846–47 and the increases in prices that accompanied them. 1

#### **1846, June 15**

**THE ELECTION OF PIUS IX** increased liberal activity because of his liberalism. Liberals organized banquets and demonstrations and demanded the organization of a civic guard, which they saw as the first step toward armed resistance against the Austrians. 2

**Piedmont. Charles Albert**, influenced by liberal nobles such as Camillo di Cavour, eased press censorship and revised the police system (1847). He then expanded his army (Jan. 1848) and, on Feb. 13, 1848, yielded to liberal demands—he promised to create a civic guard, gave the government a two-chamber parliament, and lowered the price of salt. 3

#### **March 4**

**Constitution (Statute)** promulgated, the basis for the later constitution of the kingdom of Italy. The king also appointed Cesare Balbo as prime minister, and Balbo began preparing for war against Austria. 4

### e. [Switzerland](#)

**RADICALISM** had spread in Switzerland on the heels of the conservative limitations of the press. Radical exiles who fled their own countries often set up print shops in Switzerland and even imported radical literature. The Swiss cantons were divided by the Sonderbund (See [1845, Dec. 11](#)), which reinforced the religious distinctions between the Catholics and the Protestants and proved to be the catalyst for the revolution. <sup>1</sup>

#### 1846, Oct. 7

**Revolutionaries in Geneva** installed a new government. They had gained control following a bloody revolution within the city under the leadership of **James Fazy**. The revolutionaries established barricades and, with the assistance of Catholics from the countryside, overthrew the government. The revolutionary government gave the canton a **new constitution** (1847), which included liberal demands such as freedom of education and election of members to the State Council. <sup>2</sup>

#### 1847, Jan

Diplomats from the conservative powers of Austria, Russia, and Prussia left Berne. <sup>3</sup>

#### July 20

The Federal Diet **dissolved the Sonderbund** after a radical victory in St. Gall gave the Diet the necessary majority. This move resulted in a protracted struggle between Catholic and radical cantons. <sup>4</sup>

## Nov. 4

**The Diet declared war on the Sonderbund**, with Gen. Dufour in command of the army. <sup>5</sup>  
In less than a month, the Catholic forces had been defeated, and the Swiss Diet could establish a government on the basis of liberal and radical ideas.

## f. [Germany](#)

Germany faced many of the same problems that Austria and France did. Economic hardship and rising prices had hurt the urban poor and working classes while manorial dues continued to hamper economic growth in the east. Political disunity came under repeated attack with the growing wave of German nationalism, which focused on the German-speaking peoples and sought to unify them in a single country. 1

**Industrial and agrarian unrest.** In March and April 1848, artisans and workers employed on the railroads and waterways began to resort to violence in an effort to gain their demands. Workers and crowds in cities broke machines, refused to allow steamships to take on cargo once carried by local boatmen, and attacked and destroyed the Taunus Railroad (April 5). Artisans such as printers organized strikes and demanded higher pay. Especially in the south, the peasantry rose against manorial dues by looting and burning, which especially targeted ownership records. 2

**Southern Germany.** Spurred by the rising in Paris, demonstrations and assemblies in Baden, from late February onward, drew up liberal demands, to which the duke conceded. In Bavaria, the liberals forced the king to abdicate in favor of **Maximilian II.** Baden, Württemberg, and Saxony all included liberal ministers in their governments in an effort to appease the rising tide of revolution. The southern constitutional governments met in Heidelberg and decided to call a national meeting of liberal notables. This decision laid the groundwork for the Frankfurt Parliament. 3

### 1848, [March 6](#)

In an effort to avoid revolution, Frederick William IV promised to call the Prussian Landtag at intervals and revised the press law (March 8). 4

### [March 10](#)

**Street demonstrations began in Berlin**, which led to a skirmish between the demonstrators and the army in an effort to drive the crowd from the palace square. The artisans and students who made up the crowd erected barricades. Following the street fighting, the king decided to grant concessions.

5

### March 17–21

**Frederick William declared in favor of a federal *Reich***. The army, patrolling the palace gardens in anticipation of the announcement, fired on the crowd, which forced Frederick William to withdraw the troops. On **March 19**, the Civic Guard, instead of the army, began policing Berlin, and the government made an effort to restore order in Prussia. Prussian municipalities were authorized to substitute direct taxation, from which the workers were exempt, for duties on cereals, and the city governments established work projects. Censorship was abolished and a **United Landtag** called (**Vorparlament**).

6

### March 31

**A preliminary parliament** opened at Frankfurt-on-the-Main. This parliament, faced with the difficulty of deciding between the radical and liberal programs, chose the latter by refusing to place the radical program on the agenda. The parliament then laid the groundwork for the election of a national assembly. Although the preliminary parliament claimed to support universal male suffrage, the final resolution gave the vote to every “independent” male over age 30. The inclusion of the criterion of independence gave the states a means of excluding the working class.

7

### April 7

**The Diet of the Confederation** sanctioned the resolutions of the preliminary parliament.

8

### April 15

Prussia, in an effort to encourage economic recovery, passed a **bank law**, which created issuing banks backed by the public treasury.

9

## May 18

**Frankfurt Parliament convened.** Its delegates, selected under limited suffrage, largely represented the German middle classes. <sup>10</sup>

## May 22

**Prussian National Assembly convened.** The assembly was supposed to cooperate with the government in creating a constitution, but the majority of the delegates took their task to be that of a constituent assembly. The Prussian National Assembly had a stronger left than did the Frankfurt Parliament. The government under Rudolf Camphausen fashioned its own draft of the constitution along the Belgian model. The assembly countered with its own draft, with democratic leanings. <sup>11</sup>

## June 2–4

**The Assembly of Delegates of the North German Handicraft and Industrial Class** meeting in Hamburg called for an artisans' conference to meet in Frankfurt. A committee met to prepare the address that declared the workers' disagreement with industrial freedom and their ability to attempt to solve the social problems. <sup>12</sup>

## June 11–14

Printers convened in Mainz and drafted a petition for presentation to the Frankfurt Parliament. The petition demanded regulations of economic concerns such as wages, use of machinery, and employment. <sup>13</sup>

## June 28

Archduke John of Austria was appointed provisional executive head, but no real government was set up. Long debates ensued over a rising against Denmark in Schleswig (March 24). <sup>14</sup>

## **6. European Diplomacy, 1848–1914**

The period was marked by the unification of Italy and Germany, constant friction over the Balkans, and a policy of alliances that ultimately involved most of the European powers in one group or another. The effect of technical and industrial advance on warfare resulted in growing anxiety for security on all sides, and consequently to alignments for the event of war, which, in fact, tended to make war more likely. At the same time the expansion of European powers in Africa and Asia greatly extended the field of possible friction. 1

### **1849, June 17**

Russian troops entered Hungary and ended revolutionary action by Aug. 13. Minor conflict resulted from Constantinople's refusal to extradite the leader, Lajos Kossuth. 2

### **1850**

**The Don Pacifico affair.** Don Pacifico was a Moorish Jew, but a British subject. He held large claims against the Greek government, which he pressed with vigor until an anti-Semitic mob burned his house in Athens (Dec. 1849). The British responded with an **embargo on all Greek vessels** in the Piraeus and finally seized them (Jan. 1850). After abortive mediation by the French, the Greeks were eventually forced to comply (April 26). 3

### **April 19**

Britain and the United States signed the Clayton-Bulwer Treaty regulating their relations with regard to Central America. 4

## **7. Western and Central Europe, 1848–1914**

EUROPE IN 1871 (MAP)

### **a. Social, Cultural, and Economic Trends**

#### **1. Economic and Social Changes**

**THE CONTINUED IMPACT OF INDUSTRIALIZATION.** As the problems of industrialization grew, Europe witnessed a concerted effort at **state building**. In nations like Germany, state building meant actual unification and the attempt at centralization in order to enhance economic productivity. In Britain, however, state building was geared more toward solving the social problems resulting from industrialization and urbanization. In all cases, governments became more involved in the daily lives of their citizens through obligatory primary education, military conscription, broad taxation, and social legislation. The result was an increase in state power (despite varying forms of government) and the further erosion of traditional ties to locality and region. 1

The mid-19th century also witnessed the **rise of consumerism**. Besides being emotional centers, families became centers of consumption. Furthermore, as industry began to look for wider markets, advertising developed. Industry no longer simply catered to a demand, it helped create that demand. This was most visible in the development of **department stores** designed to promote consumption. From the 1870s onward the rise of **kleptomania** reflected the growing psychological importance of consumerism. Society became more involved in the purchasing of goods than in the actual manufacturing of them. 2

With the increase in state administrations and the development of a service sector, the 3

European social structure grew to include new **white collar workers**. These workers held an ambiguous position in society; they balked at inclusion with the working classes and had educations that made them similar to the middle classes, yet they could not easily afford the lifestyle of the middle classes. In politics, as part of the **lower middle class**, they frequently played the role of wild card, opting for socialism in some instances, liberalism in others, and nationalism in still other cases. As such, they increased the ambiguities of class conflict.

The latter half of the 19th century also witnessed slower population increases than those of the beginning of the century. In France, where birthrates had begun to fall in the 18th century, depopulation was a major concern, especially after France's defeat in the Franco-Prussian War. By 1870, partly due to the increased availability of **birth control devices** (condoms, diaphragms), birthrates began to drop more widely in Europe among the working classes, as they had earlier among the middle classes. This, along with fewer restrictions on marriage, also contributed to a drop in the rate of illegitimacy, which had exploded between 1750 and 1850.

**Emigration** continued to reflect population growth, but now it issued more from southern and eastern Europe than from western Europe. The slowing of population growth and the radical decline in birthrates was matched, from 1880 onward, with a **rapid decline of infant mortality**. This **DEMOGRAPHIC TRANSITION** produced the modern demographic regime, with low birth and child death rates, larger families among the poor than among the middle classes, and a pronounced growth of the percentage of the elderly in the population as a whole.

Victorian attitudes toward sexuality loosened gradually from the 1870s onward. Sexual respectability was still vitally important for middle-class women, but some men became more open in their **use of prostitutes** and **indulgence of the sexual double standard**. Quietly, many middle-class married couples increased their **use of artificial birth control devices and accepted sexuality as pleasure**, not merely the basis for procreation. At the same time **definitions of homosexuality** became more rigorous from the 1870s onward. Medical and legal writings called new attention to homosexuality as a problem, prompting an unusual belief that people were either homosexual or “normal,” with no intermediate behavior; many homosexuals came to share this belief, which heightened their group identity. Famous trials and imprisonments, like those of the Irish writer Oscar Wilde between 1895 and 1898, reflected and furthered anxieties, particularly about male homosexuality.

Finally, by the end of the century, western Europe had become firmly industrial. Only southern and parts of eastern Europe lagged behind. **Urbanization** proceeded at an amazing pace; Paris's population increased from 2 million to 3 million between 1850 and 1914. For Berlin, the increase was from half a million to 2 million in a similar time period. Also, conditions began slowly to improve in the cities. Various reforms reduced the unsanitary conditions.

**THE SECOND INDUSTRIAL REVOLUTION.** More than the first, this new spurt of industrialization, falling roughly into two periods (1850–70 and 1890–1914), centered on new technology. No longer content to rely on the tinkering of inventors, industry began hiring engineers and chemists. Scientific research was applied to production, transportation, and communication. Technological advances (See [Science and Learning](#)) included new forms of energy (the internal combustion engine, the development of the electrical industry) and the creation of the chemical and petrochemical industries (the invention of synthetic dyes and chemical fertilizers). 8

One of the results of the second industrial revolution was the accelerated decline of artisans and the increase in the number of semiskilled factory workers. The latter became the majority of the working classes. Additionally, as machines made even more inroads into production, **women and children lost their places in the factories.** This, more than middle-class reforms, explains the increasing disappearance of women and children in industry. 9

With the **depressions of 1873 and the 1890s,** European industry also sought new ways to survive economic cycles of boom and bust. The depressions differed from previous cycles: they resulted from **speculative investment** and **overproduction** rather than harvest failures. The second industrial revolution thus saw the creation of **big business** (like the Krupps works in Germany). Using the techniques of vertical organization and horizontal integration, European industrialists formed **cartels** designed to control pricing and production. Industrialists also attempted new methods of **scientific management,** designed to streamline the production process and maximize profits. Boards of directors and professional managers and financiers replaced factory owners. In many nations this contributed to the development of a **new upper class,** consisting of industrialists, financiers, and aristocrats. 10

Besides cartels, industrialists tried to protect themselves by turning away from laissez-faire economics. They supported **government regulation** as a means of protecting industry. Thus, they sought government aid in the forms of tariffs, labor controls, and imperialism (which secured raw materials and new markets). 11

Government regulation did not always work in their favor, however. As suffrage was extended to include workers, governments became more responsive to their concerns. This was especially true with the advent of large **industrial unions** and the rise of **socialist parties.** Whereas early unions were organized around crafts and controlled by artisans, the persistent decline of artisans and the rise of big industrial complexes convinced working-class activists that only unions organized to include all the workers in one industry could counter the power of the industrialists. Such unions gradually acquired official recognition and had won important victories by the 1890s. 12

Feeling endangered by working-class radicalism, the middle classes, which had slowly acquired more power as the century wore on, began to address what they labeled **the social question** in earnest after 1870. Some of this concern was also generated by real 13

fears of national degeneration; many English men and boys were rejected for service in the Boer War, for example, because **malnutrition** had caused them to be physically unfit for military service. The result was a series of **social insurance laws**, although not all of Europe embraced this solution.

By 1914, then, Europe was an industrial society wherein big businessmen shared power with the aristocracy in a **new upper class**, while the working classes, having become more militant, were still viewed as a very real threat to the existing social order. The question remained of how to integrate workers in a manner that did not significantly alter middle-class comforts. (See [Economic and Social Changes](#)) <sup>14</sup>

## b. [Britain](#)

### [DESCENDANTS OF QUEEN VICTORIA](#)

**Monarchs:** Queen Victoria (r. 1837–1901), Edward VII (r. 1901–10), and George V (r. 1910–36). <sup>1</sup>

**Prime ministers:** Lord John Russell (1846–52, Whig), Lord Derby (1852, Conservative-Peelite), Aberdeen coalition government (1852–55), Palmerston (1855–58), Derby-Disraeli coalition (1858–59), Palmerston until his death (1859–65), Lord Russell (1865–66), Derby (1866–68), Disraeli (1868), Gladstone (1868–74), Disraeli (1874–80), Gladstone (1880–85), Salisbury (1885–86), Gladstone (1886), Salisbury (1886–92), Gladstone (1892–94), Lord Rosebery (1894–95), and Conservatives, Lord Salisbury (1895–1902), Arthur J. Balfour (1902–5), Henry Campbell-Bannerman (1905–8, Liberal), and Herbert H. Asquith (1908–16, Liberal). <sup>2</sup>

## 1. [England, Scotland, and Wales](#)

**Economics.** British textile, coal, and iron industries continued to grow but not as rapidly as those of Germany and the U.S. Britain's role as the **leading industrial nation** became superseded by its role as **shipper and financier** in the latter part of the 19th century. Britain also allowed agriculture to decline rapidly, especially after the **Great Depression between 1873 and 1879**, in which agricultural prices plummeted under increasing competition from abroad and good harvests. <sup>3</sup>

**The Public Health Act** stipulated an annual death rate of 23 per 1,000 was unacceptable, but, despite improvements, Britain's death rate remained close to that figure in many cities.

4

## 1850

**The Factory Act**, along with another act in 1853, established a 64-hour workweek for all steam-powered factories and mandated that these factories close at 2:00 P.M. on Saturdays.

5

## 1850s

**Henry Mayhew** (1812–87), a journalist for *The Morning Chronicle*, wrote a series of articles entitled “Labour and the Poor” (1849–50), which appeared in the *Chronicle* and later under the title *London Labour and the London Poor*.

6

## 1851

**The Great Exhibition in London.** The exhibition displayed the most modern machinery and inventions in the glass and iron **Crystal Palace**. Conceived of by **Prince Albert and Henry Cole** (a civil servant), the exhibition spotlighted British superiority and ingenuity. The instigation of **shilling days** helped to calm middle-class fears about the participation of the working class, who, much to the former's surprise, behaved in an orderly fashion.

7

**Formation of the Amalgamated Society of Engineers (ASE).** The ASE is perhaps the earliest example of the **new model unionism** of the 1850s and 1860s. The new unions of skilled workers, including organizations for typographers, compositors, boilermakers, spinners, and weavers, were **well organized, national or amalgamated, and funded by dues collected and managed locally**. The unions practiced a policy of cautious bargaining and struck only as a last resort. Many workers began to accept **labor as a commodity**, exchanging less control over their skills in return for shorter hours and higher pay (**instrumentalism**).

8

## 1852

**The ASE strike** was followed by a **three-month lockout**. The engineers returned to work on the employers' terms but demonstrated both strength and persistence. 9

### 1853–54

**Cholera epidemic** in Britain. John Snow, a British doctor, demonstrated that the outbreak could be linked to the water supply. 10

### 1853

**Vaccination of infants made compulsory**. The law bolstered the 1840 Vaccination Act, and further acts in 1858, 1867, and 1871 stipulated various fines and terms of imprisonment for parents who failed to immunize their children. 11

### 1854–61

**The temperance movement**. An act of 1854 forbade the opening of public houses between 2:00 P.M. and 6:00 P.M. on Sundays except to travelers. An act in 1864 closed the London public houses between 1:00 P.M. and 4:00 P.M. These acts indicated the growing strength of temperance organizations. In 1861, the **Temperance Lifeboat movement**, dedicated to saving people from the ruin of drunkenness, began in Staffordshire. 12

### 1855

**The Nuisances Removal and Disease Prevention Act** allowed local authorities to obtain court orders for the removal of public health dangers at the expense of the property owners involved, if those owners refused to cooperate. 13

### 1854–55

**THE CRIMEAN WAR** (See [1853–56](#)) caused great hardship for British troops because of inadequate hospital care and lack of supplies due to poor preparation. **Florence Nightingale** and a group of other women became nurses at the front but were unable to 14

make up for the poor planning on the part of the military. As a result, more men died of illness than died in battle.

## c. [The Low Countries](#)

### 1. Belgium

**Monarchs:** Leopold I (r. 1831–65), Leopold II (r. 1865–1909), and Albert I (r. 1909–34). 1

#### 1850 Ff

**Doctrinaire liberalism** gained control in the government under **Charles Rogier**. **François Laurent** became the major theorist and argued that progress toward individualism was directed by God. *L'Économiste belge* served as the major periodical for the movement. 2

#### 1850

**An education bill** increased the number of state grammar and secondary schools, but allowed priests to offer religious instruction in these schools. Nonetheless, the bill met increasing opposition from the Catholics, and priests generally refused to offer such instruction. 3

**National Bank founded.** 4

#### 1852

**Walther Frère-Orban** adopted a strategy of free trade implemented through a series of bilateral trade treaties and by reducing duties on a number of items. 5

**The Rogier cabinet resigned** as a result of domestic crisis and the growing hostility of Napoleon III. Leopold I proved unable to establish a stable conservative government. The doctrinaire Liberals returned in 1857. 6

### 1854

**L'Affranchissement established.** Along with **Les Solidaires** (1857), it combined atheism with socialist ideas. Atheist organizations provided groundwork for socialism in Belgium throughout the 19th century. 7

### 1860, July 21

**Frère-Orban abolished cities' rights** to impose duties on wares brought into towns and established the **Crédit communal**, which provided state loans to municipalities on favorable terms. 8

### 1870, Aug. 9, 11

Treaties concluded among Britain, Prussia, and France guaranteed Belgian neutrality during the Franco-Prussian War. 9

### 1879, July 1

**An education act** secularized primary education. No public support was to be given to “free” or Catholic schools. The measure passed with Liberal support but estranged the Clericals. 10

### 1880, June

Clericals won a majority in the elections and replaced the Liberals in power until World War I. 11

### 1884, Sept. 10

**A new education law** gave public support for church schools in Catholic districts.

12

## 1885

**The Workers' Party founded.** It soon replaced the Liberals as the primary opposition to the Clericals.

## **d. [France](#)**

### **1. The Second Empire**

**1852, Jan 1**

**Louis-Napoleon (Napoleon III) became emperor** by decree of the Senate and by plebiscite. 1

**Jan. 14–15**

**The constitution of 1852** was signed. It concentrated power in Louis-Napoleon's hands. 2  
Louis-Napoleon steered France through moderate economic reforms. He sought mass support by providing for universal male suffrage and confiscating Orleanist estates. He utilized some of the money from these estates for charitable causes. However, his reign was plagued by rumors of assassination plans and attempts on his life.

(See [1846, Oct. 10](#))

## e. [The Iberian Peninsula](#)

### 1. Spain

#### 1851, March 16

A **concordat** with the papacy recognized the Catholic religion as the sole authorized faith and gave the church sweeping control of education and censorship. The papacy recognized the abolition of ecclesiastical jurisdictions and the sale of confiscated church lands. 1

#### 1852

A constitutional reform virtually eliminated the powers of the Cortes, established the dictatorship in law, and gave a camarilla financial oligarchy, or complete power. 2

#### 1854

**Revolution** began in the wake of the introduction of the self-acting mule (spinning machine) and of widespread unrest because of economic hardship culminating in a general strike (1854) among textile workers. Hostility toward workers' organizations increased, and they were suppressed after the revolution. Wheat prices rose due to the loss of supplies from Russia during the Crimean War and a famine in Galicia. **Gen. Leopoldo O'Donnell** overthrew the government, and the Cortes adopted a number of liberal reforms including a law confiscating church lands. Isabella threatened to abdicate, and **Gen. Baldomero Espartero resigned** (July 15, 1856) in favor of O'Donnell, who reestablished the constitution of 1845. **O'Donnell was dismissed**, and 3

two years of reaction followed. The revolution failed in some respects but did lay the groundwork for economic reforms such as railway expansion.

### 1856–63

**O'Donnell returned to power** and governed with the support of the Liberal Union, a party organized by him during the revolution. 4

### 1856

*The Economist*, a liberal periodical stressing laissez-faire economics, began publication. 5

### 1857

**Father Claret** came to Madrid to serve as the queen's confessor. He became the center of the political Catholic movement, seeking to counter rising anticlericalism. 6

### 1859

**A budget** created a base for financing public works by extending the disentailing laws. 7

### 1859–66

**Foreign policy** concentrated on maintaining and extending the empire. Spanish troops captured Tetuán in their successful **campaign against the Moors in Morocco** (1860). **Santo Domingo** was annexed but was relinquished after an insurrection on the island (1865). Spain joined France and Britain in **intervention in Mexico** (1861) and engaged in a dispute over the **Chincha Islands with Peru** (1864–65). **War with Chile** (1865–66) (See [1866](#)). 8

### 1863, Sept. 8

**Progressives boycotted politics** (the *retramiento*) as the government failed to incorporate them.

9

## 1868, June 22

In the **mutiny of San Gil**, artillery sergeants shot their officers in protest against exclusiveness of the officer corps and in response to democratic propaganda. O'Donnell ordered the death of 60 sergeants in the aftermath. The mutiny marked the disintegration of the government, which, after the death of O'Donnell, collapsed in revolution.

10

## Sept. 18

**Revolution** was declared by Adm. Juan Topete, followed by a manifesto by the liberal generals.

## **f. [Italy and the Papacy](#)**

### **1. [The Unification of Italy](#)**

#### **[THE UNIFICATION OF ITALY 1860-70 \(MAP\)](#)**

### **1848, March 4**

**King Victor Emmanuel** published the new **Piedmontese constitution**, which provided <sup>1</sup> for a Senate of life members appointed by the king, a Chamber of Deputies elected by limited, direct male suffrage (leaving power in the hands of the nobility and middle class), and a responsible ministry.

### **1850, March**

On the advice of Count Camillo Benso di Cavour, a leading liberal and founder with <sup>2</sup> Cesare Balbo of the periodical *Il Risorgimento*, Piedmontese premier Massimo d'Azeglio appointed Giuseppe Siccardi as keeper of the seals. Under Siccardi, laws abolished ecclesiastical courts, eliminated the right of asylum, limited the number of holidays, and restricted religious bodies' right to acquire real property.

### **April 12**

**Pope Pius IX** returned to Rome after his exile during the revolutions of 1848. Pius chose <sup>3</sup> to strengthen both the Catholic Church and papal control of it rather than accept opportunities for nationalist leadership.

## **g. [Switzerland](#)**

**Economic development.** The Swiss federal government sought to standardize currencies and weights and measures, expand and regulate postal and telegraph systems, and encourage technological development. While attempting to assure greater federal control, the government continued to face difficulties because the federal system in Switzerland allowed each canton significant independence, including the creation of its own constitution. <sup>1</sup>

### **1848**

The canton of Glarus restricted men to a 13-hour workday, or 10-hour night shifts, and tried but failed to establish an intercantonal regulatory agreement. <sup>2</sup>

### **1849**

The role of the Swiss as mercenary soldiers in Europe ended as the **Federal Assembly forbade recruiting** in Switzerland on behalf of foreign powers and military capitulations in accordance with the new constitution. <sup>3</sup>

### **1852**

Following a review by English engineers, the Bund lost most of its authority over railway building. The railways became privately owned, and the miles of track grew substantially. <sup>4</sup>

### **May**

**The state took control of secondary education** in the canton of Ticino. The state abolished several religious institutions responsible for teaching and expelled the monks.

## **h. Central Europe**

### **1. Germany 1849–50**

After the failed 1848 revolution, **Frederick William of Prussia** and adviser **Radowitz** pushed for more German unity with loose ties to the Habsburg monarchy. A **Prussian Union** scheme (May 26, 1849) won agreement from several North German states, and a **National Assembly at Erfurt** (Oct. 19) was confirmed. Austrian opposition grew, however, and war threatened. <sup>1</sup>

### **1850, Nov. 29**

**Olmütz Proclamation.** The Prussian president, Manteuffel, and the Austrian prime minister, Schwarzenberg, agreed to joint action in Hesse and Schleswig (dispute between Elector and Parliament) and called for a conference to determine future action among German states. Liberals considered the proclamation a humiliating surrender of Prussian power, but most conservatives, including **Otto von Bismarck**, accepted it. It set the stage for the growing animosity between Austrians and Prussians over the *großdeutsch* and *kleindeutsch* question. The Prussian Union was abandoned and the old Germanic Confederation restored at a conference in Dresden. <sup>2</sup>

### **Dec.–1851, March**

A **Dresden conference** on German affairs. Revival of conservatism around the newspaper **Kreuzzeitung** (founded in 1848).

3

[CONTENTS](#) · [SUBJECT INDEX](#) · [BIBLIOGRAPHIC RECORD](#)

---

[PREVIOUS](#)

[NEXT](#)

---

(See [Scandinavia](#))

(See [1845](#))

## **i. Scandinavia**

**Relations among Scandinavian countries** played a major role in this period. A **declaration of neutrality** by Denmark, Sweden, and Norway (1853) opened all but seven ports to the warships of any belligerent. This act helped to secure the countries' positions within Europe by gaining French and British support against German claims on territories. 1

**Economics.** **Sweden** was perhaps the most advanced of the countries; its enclosure movement had created a large number of medium-size farms and encouraged more modern agricultural techniques. In **Denmark**, land reclamation in Jutland boosted the agricultural economy. Danish industry also was encouraged by such reclamation as well as trade outside Europe through organizations such as the East Asiatic Company. **Norway** also adopted modern agriculture as more and more land was turned into pasture for dairy cattle. The milk industry was supported not only by the increase in pasturage but also by the development of railways, which made transport of such products much easier. Norway also increased its exports of fish, wood, and metals as well as introducing some processing for these products prior to shipping. **Iceland** was constrained by Danish control, which Icelanders felt drained them of their profits. However, they increased exports of fish and other products from the sea, which in turn helped to boost their economy. **Finland** suffered the greatest hardships during this period as it continued to depend primarily on grain production and timber. Free trade with Russia between 1859 and 1885 did help to stimulate iron and cotton industries, but the reintroduction of tariffs made sustained growth in this area difficult. 2

**Society.** With the exception of Finland, all these countries suffered from a labor shortage due to emigration. (Between 1870 and 1914, 1.5 million Swedes emigrated.) This emigration helped to remove excess labor, which in turn meant that wages were high and rising. The scarcity of labor also helped Scandinavia to avoid the problems of urban centers such as London and Paris because the demand for housing did not increase dramatically and the agricultural nature of the countries meant that urban growth was not as rapid. Finland, although it remained primarily agricultural, suffered from rural 3

overpopulation, which depressed wages and led to hardship. (See [The Scandinavian States](#))

## 1. Sweden and Norway

**Revolutions of 1848** elsewhere resulted in King Oscar refusing to continue his support of liberal causes. Franchise reform was delayed until the 1860s. 4

### 1848

**Norwegian road building**, under the direction of Christian Vilhelm Bergh, began. Bergh managed to create roads in the mountainous terrain that maintained a constant grade. 5

### 1848–50

**THRANE MOVEMENT.** Joseph Thrane edited *Drammens Adresse*, a newspaper in which he demanded universal male suffrage and social reforms. 6

### 1849, May 5

*Arbeiderforeningens Blad* was founded by Thrane. This newspaper helped establish numerous labor associations, which gathered 30,000 signatures on a petition to the king. The government imprisoned Thrane until 1858. 7

### 1850

**Johan Sverdrup** was returned to the Storting by the Thrane movement. Sverdrup became a leading reformer in his “battle of the fifties.” He backed an amendment that helped **eliminate class favoritism** in the army draft system and stopped plans to **combine the Norwegian and Swedish regiments** in a union army. He supported an **amendment that increased the ratio of rural to urban representatives** from three out of four to four out of five. Sverdrup failed to pass legislation for a jury system because he lost the support of Søren Jaabaek, who was leading the farmer group in the Storting. 8

**Women's emancipation.** In 1854, a law gave women equal rights to inheritance. It was followed by an 1863 law that eliminated all vestiges of unmarried women's status as minors. The new realist school in the novel, committed to depicting life devoid of any embellishment, was anticipated by the Norwegian Camilla Collett's *The County Governor's Daughters*. This novel depicted the problems that middle-class women faced because of the pressure placed on them to make good marriages. 9

## 1859

**Karl XV ascended to the throne. Complete religious freedom established.** 10

## 1860

**Stadholder controversy.** Karl XV had promised to abolish the position of stadholder in Norway. However, the Swedes denied this demand and argued that the Norwegians were bound to the Swedes under the Act of Union (See [Nov. 4](#)). As a result, the Swedes claimed the right to amend the Norwegian constitution and act in Norway's best interest. Karl XV supported the Committee on Revision for the Norwegian constitution. **Norwegian nationalism** grew in this period; musical and historical collections were gathered, the **Young Norway Party** was formed by **Henrik Wergeland**. 11

## 1865–66

**Riksdag reform.** Engineered by **Louis De Geer**, prime minister, the reforms replaced the Four Estates with an annual two-chamber legislature elected by a common vote. The **Second Chamber** represented the common people, and thus suffrage was extended to all males at least 25 years of age who owned at least 1,000 riksdalers in real estate, rented farmland valued at 6,000 riksdalers, or had taxable income of at least 800 riksdalers per year. Each eligible voter could serve in the chamber, if elected, and had only one vote. The **First Chamber** had a more elaborate voting structure, which included all men who could vote for town and provincial councils but also had a system of plural voting for numerous enterprises. Women involved in those enterprises could vote. **Karl XV supported these reforms** because he recognized the great impetus for change within Sweden and because De Geer threatened to resign otherwise. 12

## 1870s

**Wave of strikes.** Trade unions had continued to organize in Sweden after the abolition of guilds in 1846. These organizations engaged in a number of strikes during the 1870s but to little avail. The paternalism of the employers resulted in scant progress for workers.

13

## 1872

**Oscar II ascended to the throne.**

14

## 1879

The problems of trade unions were emphasized by the **strike at Sundsvall**. Employers in Sundsvall planned to reduce wages in the sawmills. The workers demanded a restoration of their wages, and, when employers refused, they gathered in a nearby field to protest. The governor ordered them to return to work, but they refused. At this point, Oscar II deployed cannon and the military and telegraphed the governor. The workers returned without bloodshed, but their leaders were imprisoned as a result of the strike.

15

**Taxation and tariff reform.** Under Oscar II, Sweden reorganized its tax system. Taxes on land became less onerous under a compromise between conservatives and large landowners (1873), and numerous obsolete or cumbersome duties were removed between 1878 and 1911. Sweden enjoyed most-favored-nation status with France (1865), but it began to favor protectionism during the late 19th century. The Farmer's Party split, with the new party demanding protection and the old party continuing to support free trade. After a protracted struggle in the Riksdag, the government provided protection for grain and manufacturing interests in the last decade of the 19th century.

(See [1801, March 24](#))

## 8. [Eastern Europe and the Balkans, 1762–1914](#)

### a. [Russia](#)

**Population.** With a population of 36 million in 1796, Russia experienced enormous growth during the 19th century, reaching 125 million by 1897. The vast majority of these people were peasants, but urban areas also grew, especially with industrialization. 1

**Society and economics.** As Russia's market economy grew in the first half of the century, with rapid expansion of **grain exports** to western Europe, the gentry found its indebtedness increasing. This fact made many hostile to economic and social reforms, creating a situation in which reforms were often limited or highly qualified. Industrialization did nothing to ease these tensions. 2

**Culture.** The period 1820–80 is considered the golden age of Russian literature, producing artists such as Dostoyevsky, Chekhov, and Pushkin. As in politics, however, Russian culture retained a tension between Western art forms and ideas and a desire to establish distinctive Russian themes. For many this debate meant little—approximately 45 percent of Russians were illiterate in 1917, despite big literacy gains. 3

**Tsars:** Alexander I (r. 1801–25), Nicholas I (r. 1825–55), Alexander II (r. 1855–81), Alexander III (r. 1881–94), and Nicholas II (r. 1894–1917). 4

### 1801

Alexander I began his reign by granting an amnesty to political prisoners and exiles, abolishing torture, repealing the prohibition of foreign books, and so on. With a group of intimate friends (the *Informal Committee*: **Czartoryski, Kochubei, Novosiltsov, Stroganov**), Alexander discussed various reforms and the project of a constitution for Russia. Though the constitution was not introduced, the central government was reorganized, and **modern ministries** replaced the old “colleges.” 5

The right to own estates was extended from the gentry to all free Russians. 6

## 1803

A law was passed regulating the **liberation of the peasant serfs** of owners who desired to make the change. This was the first move of the government toward the abolition of serfdom. Further reforms were postponed because of the many wars in which Alexander became involved.

7

## 1804

Kharkov and Kazan Universities were founded.

8

## 1804–13

**War with Persia** (See [1804–13](#)) resulted from Russian annexation of the **kingdom of Georgia**. The Russians were victorious, and Persia recognized the annexation, besides ceding to Russia **Deghastan** and **Shemakha**.

9

## 1805–12

**Russian expansion in North America**. Forts were built in Alaska (occupied by Russian pioneers in the late 18th century) and even in northern California.

10

## 1805–7

**WAR OF THE THIRD COALITION** (See [1805](#)) against France. This ended in Russia's defeat and the conclusion of the **Treaty of Tilsit**, by which Alexander and Napoleon became allies.

11

## 1806–12

**War with the Ottoman Empire** (See [1806–12](#)). This was hurriedly concluded in 1812 by the **Treaty of Bucharest**, which gave Russia not only **Bessarabia**, but rather extensive rights in the Danubian Principalities. 12

## 1808–9

**War with Sweden**, through which Russia acquired **Finland**. Finland was organized as an autonomous grand duchy, with the Russian tsar as grand duke. Constitutional government was guaranteed to the Finns by a special act. 13

After these wars, Alexander resumed his reform schemes, with **Michael Speransky** as his chief counselor. 14

## 1809

An attempt to introduce civil service examinations failed. 15

## 1810

A **council of state** was established to draft new laws and watch over the legality of administration. The ministries were also reorganized, and a regular system of state budgets was introduced. Speransky presented a **plan for a constitution**, but it too remained unrealized. Opposition of the conservatives and personal disagreement with the tsar led to Speransky's downfall and temporary exile (1812). 16

## **b. [Poland](#)**

Poland in the 19th century is difficult to characterize, since it was split among three countries that developed differently. For the most important general social and economic trends, refer to the sections on Austria, Prussia, and Russia. Culturally, the overriding theme during this century remained, however, the reestablishment of an independent Poland and the best means of attaining that end. 1

### **1800**

Foundation of the Warsaw Society of the Friends of Science, which mixed national preservation with Enlightenment thought. Its most important work was the *Dictionary of the Polish Language*, published in 1806. 2

### **1807**

Napoleon and Alexander I of Russia created the **DUCHY OF WARSAW**, a constitutional state based on the French model, including the introduction of the Napoleonic Code. The Saxon prince, Frederick Augustus, became the duke. 3

### **1809**

**Polish-Austrian War.** The duchy of Warsaw gained new territory in the **Treaty of Schönbrunn**. 4

### **1815**

The Congress of Vienna (See [Sept. 15–1815, June 9](#)) accepted limited Polish autonomy through the creation of the **grand duchy of Posen (Poznan)**, under Prussian leadership; the **Congress Kingdom of Poland**, in permanent union with the Russian Empire; and the **Free State of Cracow**. Nationalist hopes remained pinned on the kingdom of Poland, where a **constitution** provided for a Sejm (parliament), a separate administration and army, and official use of the Polish language. Gen. Josef Zajoncdek (Zajaczek) was made viceroy, and Grand Duke Constantine became commander of the Polish army.

5

## 1816

University of Warsaw established.

6

## 1817

The first secret society, **Panta Kojna** (Everything in Common), was founded at the University of Warsaw. It was followed in 1820 by the more active Union of Free Poles. Students also founded secret societies at Wilno University, but, as in Warsaw, they did not last long.

7

Independent of student activity, military officers also formed secret patriotic societies such as the National Freemasonry Society in 1819, and the Patriotic Society in 1821.

8

## 1819

Russian tsar Alexander introduced censorship into the Congress Kingdom as his rule became more autocratic in Poland. He refused to call the Sejm between 1820 and 1825.

9

## 1822

The publication of **Adam Mickiewicz's** (1798–1855) first volume of poems marked the dawn of Polish romanticism. Mickiewicz's epics *Konrad Wallenrod* (1828) and *Pan Tadeusz* (1834) made him the movement's leader. Other romantic poets and dramatists included **Count Alexander Fredro** (1793–1876, comedies), **Juljusz Slowacki** (1809–49), and **Zygmunt Krasinski** (1812–59). After the November Insurrection, many of the brightest stars of Polish romanticism acquired fame in France, especially the

10

musician **Frédéric Chopin**.

## 1823

The **Prussian Settlement Decree**, abolishing serfdom (See [1815](#)), was extended to Poles in the grand duchy of Posen. In 1836, however, a royal decree restricted the earlier terms of the settlement to favor the landlords of Posen, retaining a system of large estates as elsewhere in Prussia. 11

## 1824

Polish and Russian revolutionaries reached a general agreement, but the Decembrist Revolt (See [Dec. 26](#)) of the following year was conducted without Polish support. Nevertheless, the Russian investigation unearthed this connection. The Polish government insisted that the suspects be tried by the Sejm, according to Polish law. In a mark of independence, all conspirators were acquitted of conspiracy and given short prison terms for membership in secret societies in 1828. 12

## 1828

**Ksawery Lubecki**, minister of finance, established the **Bank of Poland**, part of a state effort to increase industrial development (textiles, mining, ironworks). 13

### c. [The Balkans](#)

[THE BALKANS, 1878-1914 \(MAP\)](#)

#### 1. [The Balkan States](#)

The 19th century saw the **creation of most Balkan states**. The first national revolutions were not the product of European ideology, the revival of national consciousness among intellectuals, or the rise of an Orthodox merchant class, however, these all played an important role. The immediate cause was the breakdown of Ottoman central authority. In the face of increased brigandage, local governments organized and armed themselves, shifting loyalties and military balances. Moreover, despite general warfare in Europe, Balkan leaders always believed in the possibility of foreign intervention. After independence or autonomy was achieved, these states had to establish the trappings of the modern state. In most cases, divisions arose between advocates of Western-style parliament and partisans of autocratic rule. <sup>1</sup>

The Balkans remained overwhelmingly rural; **industrial development was slow**. Faced with the cost of administration, many Balkan states ran high foreign debts. They were not alone, for as capitalism grew, so did peasant indebtedness. This contributed to a growing chasm between town and country, which would color future developments. <sup>2</sup>

Each of the Balkan nations experienced **cultural revival**; nationalist goals were often tied to linguistic and cultural development. Governments fostered this through the creation of educational systems, yet the bulk of the Balkan population remained illiterate throughout the 19th century. <sup>3</sup>

By the end of the century, the map of the Balkan Peninsula showed a number of new nations. The result was not simply national development, however. The creation of <sup>4</sup>

national identities directly countered the Ottoman millet system, which had allowed various ethnic communities to rely on their own local leaders. The creation of new nations alongside areas of mixed ethnicity like Macedonia resulted in increased antagonisms and instability.

(See [Overview](#))

## C. The Middle East and North Africa, 1792–1914

### 1. Overview

The start of the 19th century marks the conventional beginning of modern Middle Eastern and North African history. The region entered a **new course of development** under the **overpowering shadow of Europe**, which increasingly shaped its domestic and international affairs. <sup>1</sup>

By 1914 large parts of the region, including Egypt, Cyprus, Aden, and all of North Africa, had been **occupied by European imperial powers**, primarily Britain and France; the states of the Persian Gulf had accepted one form or another of **British protection**; and Iran and Afghanistan were subject to extensive Russian and British **interference in their internal affairs**. European powers had also helped the Balkan lands shake off Ottoman rule, which was virtually terminated in Europe after a presence of some 500 years. <sup>2</sup>

The looming European threat spurred a dramatic **process of modernization** initiated by regional rulers (primarily in Istanbul and Cairo) in the beginning of the 19th century. Modeling their efforts on Western methods and institutions, they proceeded to **reorganize their armies and centralize their administrations**, and then expanded into new spheres of **social and economic reform** that created European-inspired legal codes, land tenure systems, municipal institutions, secular schools, and public health measures. With the aid of European capital they also promoted **improvements in infrastructure** (irrigation works, roads, railways, telegraph lines, and steam navigation). Governments grew bigger and assumed new social functions, although the ambitious rush to develop led, by the mid-1870s, to the **bankruptcy** of the treasuries of the Ottoman Empire, Egypt, and Tunisia, all of which had defaulted on large loans taken from European bankers. **European financial and political controls** established in the aftermath restricted both the expenditures and sovereignty of regional governments. <sup>3</sup>

Government efforts to modernize were part of a broader **opening up of the region to** <sup>4</sup>

**Western influences.** Newspapers, modern schools (most of them private and communal), translated works, and direct contact with Europeans introduced segments of the public to **new modes of thought**. European dress and architecture spread, especially in the cities. Slavery was abolished, a feminist movement began to emerge, ideas of nationalism and constitutional government took root, and Islamic religious institutions came under attack.

By 1914 the encounter with Western civilization had provoked **serious soul-searching** and questions about the future direction of society. Thinkers tried to explain why a once-flourishing Islamic civilization had become inferior to Europe and how the region could rejuvenate itself. Between those who advocated opposition to Western ways and supporters of wholesale imitation of them, a group of thinkers emerged who sought ways for the region to modernize without being untrue to its own traditions. Many of them were associated with the **movement of Islamic reform**, which supported modernization in the framework of a reformed Islam more suited to the needs of society.

Dramatic transformations occurred also in the demographic and economic spheres. The region's **population increased** during the period between two and three times, from roughly 28 million to about 66 million (in the Middle East from 21 to 54 million, in North Africa from 7 to 12 million). **Improvements in public health and the disappearance of the plague** brought the beginnings of sustained population growth in both city and countryside (the rural population remained at 75–80 percent).

This demographic revolution was accompanied by **economic expansion**. The region's **foreign trade** grew several times as Europeans purchased larger quantities of its agricultural products and found in it ready markets for their mass-produced finished goods. The Middle East and North Africa became **incorporated into the European-dominated world economy**, with a number of mixed results: the colonial pattern of exchange undermined the region's self-sufficiency; there was a large-scale **shift to cash crops** in some areas (such as cotton in Egypt and silk in Lebanon); many local textile workers unable to compete with **cheap European imports** were thrown out of business; **coastal cities** like Beirut and Alexandria, the new contact points with Europe, grew rapidly while the interior cities declined in economic importance; and local **non-Muslim merchants** backed by European favors benefited from the new opportunities at the expense of Muslim traders.

**Agriculture**, which remained the main sector of the economy, also experienced marked growth. Improved security and irrigation, investments by landowners, and increased demand all helped to expand the cultivated area and agricultural output. Through new laws, large tracts of state land were converted into freehold and came mostly into the possession of **a class of wealthy urban landowners**. Much capital went into land but not into **modern industry**, which was still barely existent in 1914. Manufacturing remained organized around artisanal workshops even as the traditional **guild system was disappearing**, its functions taken over by government and the market. Overall, income and wealth increased, but **the benefits were very unevenly distributed**. (See [The Middle](#)

## East and North Africa, 1914–1945)

(See [1807–8](#))

## **2. The Middle East and Egypt, 1796–1914**

### **a. The Ottoman Empire**

#### **1. Beginnings of Modernizing Reform**

**1808–39**

**SULTAN MAHMUD II.** In Nov. 1808, just months after his accession, Mahmud faced a **revolt by the Janissaries**, who forced him to abandon plans to create a new army, and in addition killed his reform-minded grand vezir, Mustafa Bayrakdar Pasha. This experience, and the unhappy fate of his predecessor Selim III, prompted the sultan to prepare cautiously for the eventual **destruction of the Janissaries**. A set of decisive actions he took marked the **true beginnings of modernization in the empire**. In addition to creating a **new army** and **restoring central control** in many provinces, he began the **reorganization of the state based on European ideas** of the rule of law, conciliar bureaucracy, and equality of the subjects. <sup>1</sup>

**1812–20**

**Reassertion of Istanbul's control in the Balkans and Anatolia.** Mahmud used political pressures and military expeditions to remove rebellious governors and local notables from their hold over large parts of Anatolia and the Balkans, which were brought under his direct rule. In western Anatolia the central government **eliminated several of the rural notables known as valley lords** (*derebeys*) who ruled over autonomous hereditary principalities, including the Janikli family in the area of Trabzon (1812–13), the Chapano lu family around Ankara and Amasya (1814), and the Karaosmano lu family in the area of Aydin (1816). The last of the valley lords was subjugated in 1866 when a military <sup>2</sup>

expedition removed the Kuchuk Alio lu chiefs in the area of Adana.

## 1813

**Reassertion of Istanbul's control over the province of Aleppo**, after a crackdown on the local Janissary corps and the execution of many of its leaders. 3

## 1815–17

**The Serbian revolt.** In April 1815, two years after the Ottomans suppressed the uprising of Karageorge, a second revolt broke out under the leadership of Milosh Obrenovich. In 1817, Sultan Mahmud conceded a **degree of autonomy to the Serbs** (See [1817](#)), recognizing Milosh as the prince of Serbia and allowing the Serbs to have their own national assembly and army. The Ottomans continued to maintain their governor in Belgrade as well as their garrisons. 4

## 1821

**First appearance of cholera in the empire.** Numerous subsequent epidemics hit the region well into the 20th century (7 between 1821 and 1850). The **estimated mortality** in various cities was 1–4 percent, with higher rates of 6–10 percent among the poor segments of the population. Mecca suffered the highest recorded mortality rates, with cholera epidemics wiping out as many as 10–15 percent of the Muslim pilgrims (the city had 23 epidemics between 1831 and 1912). The **bubonic plague disappeared** in most parts of the region by the 1840s, and cholera took its place as the leading scourge. 5

## 1821–23

**War with Iran**, provoked by border incidents. The Iranians pushed successfully into Anatolia, but agreed to peace after an epidemic ravaged their troops. The **Treaty of Erzurum** (July 28, 1823) reaffirmed the Treaty of 1746 with minor boundary changes in favor of Iran. Provisions were made for the release of the confiscated property of Iranian merchants in Istanbul and for the entry of Iranian traders and pilgrims into Ottoman lands. 6

## 1821–30

**THE GREEK WAR OF INDEPENDENCE** (See [1821–31](#)). A **revolt against Ottoman rule** in the Morea in March 1821 spread quickly to the Greek mainland and islands, and a Greek assembly declared independence. The Ottomans solicited the **assistance of Muhammad Ali of Egypt**, whose disciplined troops subdued Crete before moving into the Morea in 1825 and defeating the rebels there. When the Ottomans resisted European demands for an armistice, a combined British and French squadron **destroyed the Ottoman and Egyptian fleets at Navarino** (Oct. 20, 1827) in a naval battle that turned the tide in favor of the Greek rebels. The Ottomans refused to settle on European terms, and **war ensued with Russia** (April 1828) in which the Ottomans were soundly defeated. They agreed to a European scheme to establish Greece as an autonomous tributary state ruled by a hereditary prince invested by the sultan (1829), but in 1830 they were forced to accept **full Greek independence**. <sup>7</sup>

## 1822, Jan. 24

**Death of Ali Pasha of Janina**, the powerful ruler of Albania and parts of Greece for over three decades, after Ottoman forces occupied his lands and put him to death. <sup>8</sup>

## Aug. 13

A major **earthquake** in northern Syria caused extensive damage and loss of life, especially in Aleppo. In 1872 another severe earthquake in that region devastated Antioch (Antakya). <sup>9</sup>

## b. [Iran](#)

### [THE QAJAR DYNASTY IN IRAN \(1796-1925\)](#)

#### 1796–97

**AGHA MUHAMMAD SHAH, FOUNDER OF THE QAJAR DYNASTY.** The Qajars, originally **Turkish tribal chiefs** in Safavid service, consolidated their rule in Iran in the last two decades of the 18th century. The able and brutal Qajar leader Agha Muhammad took advantage of the political chaos to expand his control of the country. In 1796, after crushing the Zand dynasty and taking Khurasan from its Afshar ruler, he was crowned shah in his **capital of Tehran**. 1

The Qajars, who ruled Iran until 1924, headed a **weakly centralized regime** in which strong provincial tribes and an increasingly independent religious establishment set limits on the power of the state. Growing **European intrusion** also debilitated the government. In the 19th century Iran did not experience the level of modernizing reform of the Ottoman Empire or Egypt. The **population grew** from about 6 million in 1800 to around 12 million in 1920, but close to 90 percent of it remained rural, with a strong nomadic and tribal element (estimated at over a quarter of the population). 2

#### 1797–1834

**FATH ALI SHAH.** The shah **deferred to the Shi'ite clergy** in order to enlist their support for the Qajar regime. He contributed state money to them and established many mosques and *madrasas*. At the beginning of Fath Ali's reign, the Qajar bureaucracy was only rudimentary. He created many **additional administrative positions**, such as 3

controller general. Fath Ali Shah had five prime ministers during his reign. Their duties varied according to their abilities and the trust they elicited from the ruler. Always threatened by court intrigue and potentially fatal royal disfavor, no high-level governmental appointee ever felt safe. Fath Ali's many **sons were appointed as governors** of major provinces. Abbas Mirza (d. 1833), the heir apparent, maintained his own provincial army as the governor of Azerbaijan and later Khurasan.

Fath Ali Shah organized the army into two sections, one of which was **based on a European military model** and was directed by French, British, and Russian officers. By 1813 the *nizam-i jadid* (**new army**) included 12,000 regular cavalry and 12,000 regular infantry. Despite this addition, the Qajar army remained dependent on **tribal levies** and the *ghulams* (military slaves), usually of Christian origin, who formed the shah's personal guard.

## 1799

**Mirza Baba**, *naqqash-bashi* (head painter) at the Qajar court, painted one of many life-size portraits of Fath Ali Shah. Mirza Baba mastered oils, miniature illumination, and lacquer, and many of his paintings were designed as presents for European rulers.

## 1804–13

**War with Russia** (See [1804–13](#)). Following its annexation of Georgia in 1801, Russia pushed outward to extend its control in the Caucasus to the Aras River. After nine years of hostilities the **Treaty of Gulistan** (Oct. 12, 1813) confirmed Iran's **loss of Georgia** and districts of **Azerbaijan**, including Baku and Qarabagh. Russia remained dissatisfied, and war resumed in 1826.

## 1809–11

Appointment of Hajji Mirza Abu al-Hasan Khan as the first Qajar ambassador to Great Britain. He became the object of the satirical work *Adventures of Hajji Baba in England* by James Morier.

## 1812

Opening of a **printing press**. The press in Iran remained much less developed than that of the Ottoman Empire or Egypt. 8

### c. 1813

Completion of the **Masjid-i Shah** in Tehran. Situated in the heart of the city, the royal mosque is a notable example of the Qajar royal building program, in which members of guilds (*asnaf*) provided the skilled labor for the construction of major architectural projects. In the building trade, as in other crafts, a **system of guilds** with their inner hierarchy of apprentices and masters was in place. 9

### 1826

Death of **Sheik Ahmad ibn Zayn al-Din al-Ahsa'i**, founder of the **Shaykhi School of Shi'ism**. The doctrines of the Shaykhi school were regarded as heterodox by the majority of the Shi'ite religious learned. They attempted to **reconcile reason and religion** in order to explain difficult aspects of Shi'ite beliefs. They posited that the hidden twelfth imam, whose return is awaited by all Shi'ite Muslims, was not literally hidden on earth, but existed in an intermediary world of archetypes called Hurqalya. Later members of the Shaykhi School argued that one perfect Shi'ite Muslim might act as an intercessor between this world and the hidden twelfth imam. The Shaykhis retained a **minority following** in Iran and Iraq, but influenced the later Babi movement. 10

### 1826–28

**Second war with Russia** (See [1804–13](#)). The Russians succeeded in gaining the coveted frontier along the Aras River. Under the **Treaty of Turkmanchay** (Feb. 22, 1828) Iran lost the areas of **Erivan** and **Nakhchevan**, and provided for a Russian diplomatic and commercial presence in Iran. 11

### 1829

Death of **Mirza Abd al-Vahhab Isfahani**. A bureaucrat with a flair for poetry and calligraphy, Mirza rose through the administrative ranks. In 1809 he was appointed *munshi al-mamalik* (head of the royal chancery). By 1821, he had control of Iran's foreign affairs. Although never named prime minister, in practice he had a similar 12

influence over Fath Ali Shah in Qajar state affairs until his death.

## 1834–48

**MUHAMMAD SHAH.** After two previous humiliating Qajar losses to the Russian army, Muhammad Shah sought to **modernize his military forces**. To this end, he utilized European officers as commanders of special brigades, set up a foundry for casting brass cannon, and produced gunpowder. 13

Under the influence of his prime minister, Hajji Mirza Aghasi, the shah displayed **Sufi mystical tendencies** and thus jeopardized the traditional role of the Qajar rulers as patrons of the Shi'ite clergy. The situation strained relations between the government and the clergy, some of whom articulated the idea that the Qajars were not legitimate political authorities. 14

[NEXT](#)

---

(See [1793–1800](#))

### c. [Afghanistan](#)

#### [THE BARAKZAY DYNASTY IN AFGHANISTAN \(1747-1929\)](#)

##### 1800–3

**MAHMUD SHAH (FIRST REIGN)**. He assumed power during a **period of instability**, when the Afghan territories were fragmented among various family members supported by tribal factions. Affairs of state were directed by the powerful prime minister **Fath Khan** of the Afghan Barakzay clan. 1

##### 1803–9

**SHOJA SHAH (FIRST REIGN)**. He came to power after he ousted his brother Mahmud. 2

##### 1809, June 17

A treaty of friendship between the Afghans and the British was signed. Shoja Shah met at Peshawar with the British representative, Mountstuart Elphinstone, to negotiate a joint defense against the **threat of a combined invasion** of India by Napoleon and Alexander I of Russia. 3

## 1809–18

**MAHMUD SHAH (SECOND REIGN).** He was returned to power with the help of Fath Khan, who became immensely powerful. Their efforts to consolidate the state collapsed in 1818 with the **assassination of Fath Khan** by the ruler's jealous son Kamran. This precipitated a *badal* (vendetta) between Afghan clan factions in which the brother of the murdered prime minister, Dost Muhammad, drove Mahmud Shah out of Kabul. Mahmud withdrew to Herat, which he ruled until his death in 1829. His son Kamran continued to rule there until 1842, when the area fell to Iran.

4

## 1819

The Sikhs captured Kashmir.

5

## 1826–39

**DOST MUHAMMAD, FOUNDER OF THE BARAKZAY (OR MUHAMMADZAY) DYNASTY.** The collapse of the ruling Sadozay family brought to power the Barakzay clan of the Durrani, whose power had increased since the late 18th century and was to remain dominant into the 20th century.

6

The chief aim of Dost Muhammad was the **reunification of the country**, a task for which he needed both a stronger Afghan economy and an army reformed according to European example. He turned formerly tax-exempt land grants held by local Durrani clans into prime sources of state revenue through **violent confiscation** and the appointment of special tax agents. Tax collection in the provinces was overseen by his sons. Dost Muhammad was determined to increase the size of his **standing army** to lessen his dependence on unruly clan support.

7

## 1834

Capture of Peshawar by the Sikh ruler Ranjit Singh. The **loss of Peshawar** and the fertile land near the Indus River weakened the economy of Afghanistan by severing a lucrative source of revenue. With the loss of its Indian territories, the Afghan kingdom became a **more compact territory** whose difficult mountainous terrain and plateaus made it **easier to defend** against military threats from Iran, Russia, and Britain.

8

## 1836

Dost Muhammad took the title *emir al-mu'minin* (commander of the faithful) in preparation for his holy war against the Sikhs. His attempt to recapture Peshawar failed. 9

## 1837

Official mission of the Russian diplomat Ivan Vitkevich to Kabul, part of the Russian competition with Britain over influence in Afghanistan. 10

## 1839–42

**FIRST BRITISH-AFGHAN WAR** (See [1839–42](#)). With the aim of overthrowing Dost Muhammad and reinstalling the Sadozay ruler Shah Shoja, the British launched an **ill-fated invasion** of Afghanistan. A British-Indian army took Qandahar and Kabul, **installed Shah Shoja** as a British puppet (Aug. 1839), and deported Dost Muhammad (1840). But Afghan resistance culminated in an uprising in Kabul in Jan. 1842 and a **retreat of the British troops** that ended in their virtual destruction. Shah Shoja was assassinated, and **Dost Muhammad returned to power** in Kabul. 11

## 1843–63

**DOST MUHAMMAD (SECOND REIGN)**. The restored Barakzay ruler **reconsolidated the Afghan state** by recapturing Qandahar and then taking Herat from Iran (1863). 12

(See [1799–1800](#))

## **d. [Arabia](#)**

### **[SAUDI ARABIA: THE WAHHABI DYNASTY \(1735-\)](#)**

#### **1801**

**The Wahhabis sacked** the Shi'ite holy city of **Karbala** in Iraq, burial place of Imam Husayn, the Prophet's grandson. Their plunder of the shrine and massacre of the population created **outrage among Muslims** everywhere. 1

#### **1803**

The **WAHHABIS CAPTURED MECCA**, challenging directly the Ottoman sultan's claim to the guardianship of the holy cities. The emir of Mecca fled. 2

#### **1803–14**

**Sa'ud ibn Abd al-Aziz** ruled as Saudi emir after the assassination of his father (Oct. 1803). He continued his father's militant policies of expansion. 3

#### **1804**

**The Wahhabis captured Medina.** They destroyed the mausolea and monumental tombs in the cemeteries, which they considered to be polytheistic, and desecrated the Prophet's tomb. 4

### 1806–56

Sa'id ibn Sultan ruled Oman and Muscat. 5

### 1809–16

Ahmad al-Mutawakkil ruled as imam of Yemen after seizing power from his father, Ali al-Mansur. 6

### 1810

The Wahhabis established control over Qatar and Bahrain. 7

### 1812–59

Jabir ibn Abdallah ruled as sheik of Kuwait. 8

### 1816–35

Abdallah al-Mahdi ruled as imam of Yemen. 9

### 1818

**END OF THE FIRST WAHHABI STATE.** An **Egyptian expedition** ordered by the Ottoman sultan recaptured Medina (1812) and Mecca (1813), reinstated the annual pilgrimage halted by the Wahhabis, returned Hashimite control to the Hijaz, and **destroyed the Saudi capital** of Dar'iyya (1818). The Saudi emir Abdallah was beheaded. Egypt continued to hold the Hijaz and the coastlands of Yemen until 1840. 10

## 1820

Treaty between Britain and the Arab tribal peoples of the Persian Gulf, in which the latter **pledged to cease all piracy and slave traffic**. The agreement marked the formal beginning of British-Indian responsibility for policing the Persian Gulf.

## e. [Egypt](#)

### [RULERS OF EGYPT \(1811-1953\)](#)

Egypt remained nominally a province of the Ottoman Empire until Britain declared it a protectorate in 1914, but from 1805 it followed an **increasingly independent** course of development as a separate country. Muhammad Ali and the succeeding rulers detached themselves steadily from Ottoman control, which was reduced to a mere formality after the British occupation in 1882. During the period Egypt underwent **profound changes**, the result of local initiatives and European penetration. Its **population** remained predominantly rural, but **expanded** from about 3.5 million to 12 million. <sup>1</sup>

### 1805–48

**MUHAMMAD ALI PASHA.** An officer of Albanian origin from the Macedonian port of Kavalla (b. c. 1770), Muhammad Ali (Mehmet Ali) arrived in Egypt in March 1801 as the second in command of a regiment of Albanian troops sent by the Ottoman government to fight the French. In 1803 he became commander of the unit, which he then employed to undermine the governors sent from Istanbul and the Mamluks who sought to regain their control. He won this **contest for power** and in July 1805 the Ottoman government recognized his authority by granting him a one-year **appointment as governor**, although its hope of replacing him after that with its own appointees was frustrated by the **autonomous power base** he built for himself and his family. He **established a dynasty** that lasted until 1953. Driven primarily by a ruthless desire to consolidate his hold on his adopted country, Muhammad Ali introduced many innovative reforms that **laid the foundation for the modern Egyptian state.** <sup>2</sup>

### 1807, March–Sept

The **British occupation of Alexandria** was an abortive effort to restore Mamluk rule and thus forestall a second French invasion. Muhammad Ali made a provisional truce with the Mamluks, resuming his expeditions against them once the external danger was over.

3

### 1811, March 1

**MASSACRE OF MAMLUK LEADERS** in the Cairo citadel. Invited to an official ceremony by Muhammad Ali, 24 beys and 40 of their subordinates were treacherously killed. This act, and the destruction of the last body of Mamluks in Upper Egypt in the following months, put a **final end to Mamluk power** and established Muhammad Ali as the undisputed ruler of Egypt.

4

### 1811–18

**The Arabian campaigns.** At the request of the Ottoman sultan, Muhammad Ali sent a large expedition **against the Saudi-Wahhabi state**, which was in control of the Hijaz as well as much of central and eastern Arabia. The Egyptian force captured Medina (1812) and Mecca (1813), restored the rule of the Hashimite family in the Hijaz, and after a truce advanced into central Arabia and destroyed the Saudi state (1818). **The campaign was very costly** in treasure and human life, but gave Muhammad Ali a hold on the Hijaz until 1840, along with control over the Red Sea and Arabian trade.

5

### 1811–16

**Establishment of state agricultural monopolies** over grain, rice, sugar, and cash crops. The government purchased the products at a fixed price well below free market level and sold them at its own price while prohibiting private transactions. The system allowed Muhammad Ali to appropriate a larger share of the rural surplus.

6

### 1812–14

**CONFISCATION OF THE TAX FARMS** (*iltizams*) by the state, which thereby reasserted its control over a great part of the cultivated land and the tax income from it at the expense of the powerful tax farmers. Muhammad Ali followed a similar policy with **endowed** (*waqf*) **agricultural land**, much of which he **confiscated**.

7

### 1813

**The first student mission was sent to Europe**, as part of a government program for the training of Egyptians in technical and professional skills. The **European-trained Egyptians** (a total of some 900 by 1919) provided a cadre of teachers and administrators who **promoted the development of modern institutions** in the country.

8

### 1816

**The first textile factory** was established in Cairo, with machines and skilled workers imported from Europe. It was part of Muhammad Ali's **ambitious policy of import substitution** and was followed by a string of plants for the manufacture of textiles and military equipment as well as the processing of agricultural produce. The factories employed some 30,000 workers. From the late 1830s **many factories were abandoned** because of the financial burdens of reequipping them, and Egypt actually grew more dependent than ever on foreign imports.

9

### 1818–73

**Improvement of the port of Alexandria.** The construction of the **Mahmudiyya Canal** linking Alexandria with the Nile (beginning in 1818) greatly facilitated communications between the port and the interior. The port itself, which was in a bad state of neglect, was deepened and provided with facilities that made it by far **the best port in the eastern Mediterranean**. Alexandria grew from a small fishing town of about 15,000 people to the second largest city in Egypt (over 200,000).

10

### 1820

**DISCOVERY OF LONG-STAPLE COTTON** in a Cairo garden. The new type of cotton (known as Jumel or Mako) was soon introduced by the authorities on an extensive scale, primarily in Lower Egypt, becoming a **major cash crop** that found ready markets

11

in European industrial centers. By 1914 cotton occupied some 23 percent of the cropped area and accounted for about **half of agricultural production** and 90 percent of Egypt's exports. Its cultivation, however, required considerably more labor than did cereal crops and initially involved large-scale coercion of the Egyptian peasantry.

## 1820–22

**Conquests in the Sudan** (See [1821](#)). Egyptian military expeditions captured most of northern and central Sudan (the Sennar and Kordofan regions), with the aim of using them as sources of gold as well as slaves for a new army. The thousands of **slaves brought to Egypt** for military training could not adjust and died, and the gold deposits proved a disappointment. However, Egypt gained **control of the trade** with the Sudan. The capital of the Egyptian administration was **Khartum**, founded in 1823.

(See [1790–92](#))

### **3. North Africa, 1792–1914**

#### **a. Morocco**

##### **1792–1822**

**MAWLAY SULAYMAN.** The Moroccan ruler inherited a decentralized state with a population of 3 million to 4 million inhabitants. Four years of **civil war** with his brothers and a number of **local rebellions** weakened his control, as did the shortage of government funds. During the last decade of his rule he became openly hostile to maraboutism, or **Muslim saint worship**, arguing that the practice deviated from the true faith. By his attack on popular religious practices he sought to curb the growing power of Sufi orders in the country. <sup>1</sup>

##### **1801, June 14**

**Treaty of peace and commerce with Britain.** It built on the progressive development of relations between the two countries during the 18th century, when Britain came to rely on Morocco for food supplies for its troops in Gibraltar in exchange for British arms. The British obtained capitulatory rights, immunity from all taxes, and full jurisdiction for their consuls in legal cases involving their nationals. <sup>2</sup>

##### **1802–4**

**Berber revolts** in various regions. The government launched campaigns to assert its authority over the largely **autonomous tribal territories**. A major revolt of Berber tribes broke out in the Middle Atlas in 1811, continuing until 1820. <sup>3</sup>

## 1815

Death of **Ahmad al-Tijani**, founder of the **Tijaniyya** Sufi order. He arrived from Algeria in 1789 and was welcomed by Mawlay Sulayman. He lived in luxury and promised his followers both wealth in this world and salvation in the next. His order won many adherents and spread throughout North Africa.

4

## 1818

European pressure contributed to the definite **ending of Moroccan piracy**.

5

## 1820–22

**REBELLION IN FEZ**. Various groups, including the ulama, called for an end to Mawlay Sulayman's rule and were joined by the Wazzani Berbers. Sulayman died before completely crushing the uprising.

6

## 1822–59

**MAWLAY ABD AL-RAHMAN**. At the time of his accession the state was an unstable, fragmented collection of cities and tribes. The **army**, badly provisioned and organized, consisted of a few slave contingents and tribal troops who were paid only when they fought. The **administrative machinery** was minimal, and the ruler's income was limited to what he could collect in the lands subject to government authority. The Middle and High Atlas, the Rif, and the southern oases remained largely under **local tribal control**.

7

## 1823

Death of **al-Arabi al-Darqawi** (b. 1760), founder of the **Darqawiyya** Sufi order. The movement, which became one of the leading orders in Morocco, exalted poverty and stressed asceticism. It **won widespread support** among the rural inhabitants and the urban lower classes; its popularity was increased by its use of musical instruments in its rituals. In both Algeria and Morocco the Darqawiyya became **involved in political activities** and protest movements.

8

## c. 1830

Beginning of **penetration of European goods** into the Moroccan market. Cheaper European cloth as well as leather products, pottery, candles, tea, and sugar were imported in growing amounts during the 19th century. Some local craftsmen were put out of business, and the country became increasingly dependent on foreign goods.

9

## 1830–32

Moroccan troops entered western **Algeria** in the wake of the French invasion (See [1830, July 5](#)), looting Tlemcen before returning in 1832 under French military threat. Morocco also gave aid to the Algerian rebel leader Abd al-Qadir, a policy that strained French-Moroccan relations.

[NEXT](#)

---

(See [1799, March 26](#))

## **b. [Algeria](#)**

### **1803–8**

**Rebellion against the Ottomans** in Oran and Kabylia was led by Abd al-Qadir ibn al-Sharif, head (*muqaddam*) of the **Darqawiyya Sufi order**. The founder of the order, al-Arabi al-Darqawi (d. 1823), condemned the uprising. He had stressed asceticism, but the Darqawiyya continued to be linked with religious political movements and became one of the most important Sufi groups in Algeria. The revolt was crushed by the Ottomans, and its leader fled to Morocco. <sup>1</sup>

### **1807–12**

**Conflict between Algeria and Tunisia.** The Tunisian ruler Hamuda Bey (1782–1814) besieged the Algerian city of **Constantine**, but was unsuccessful. Tunisia ceased to pay tribute to Algeria, and peace was finally agreed upon, with Ottoman mediation, in 1821. <sup>2</sup>

### **1810–15**

**Kabyle Berber tribal uprising in Oran** was prompted by the taxation demanded by the Turks. The revolt was renewed for similar reasons in 1824. <sup>3</sup>

### **1811**

**Decline of privateering.** No slaves, potential sources of ransom and labor, were <sup>4</sup>

captured in 1811. Only four European ships had been captured in 1801 and one in 1803. After the 1818 Aix-la-Chapelle Congress on the suppression of piracy, the pressure on Algiers had its effects, bringing an end to corsair threats. The loss of revenue meant **increased taxes** for the local population and resulted in a series of uprisings throughout the country, many of which were organized by Sufi brotherhoods.

## 1812–15

**Conflict with the United States.** Dey Hajji Ali Pasha (r. 1809–15) declared war on the United States when, in July 1812, the country could not pay its annual tribute. On March 3, 1815, the United States authorized naval operations against Algiers and captured two of its ships at sea. The Americans dictated the terms of the treaty when they arrived at Algiers and found the city without its fleet (June 30, 1815). On Dec. 22, 1816, the United States signed a **treaty of peace** that confirmed that of the previous year, but added two additional provisions for the immediate release of American prisoners and the end of all tribute previously paid to Algiers. The agreement put an **end to the Barbary Wars**, the assault on U.S. shipping in the Mediterranean that had begun in 1801. 5

## 1816, Aug. 27

The British and Dutch naval **bombardment of Algiers** destroyed 33 ships in the harbor and resulted in negotiations for a treaty, signed on Sept. 24, 1816, which released all Christian prisoners and temporarily abolished the slavery of pirate captives. 6

## 1818–30

**Husayn Dey.** The last ruler of Algiers managed to maintain calm in his capital but ruled during a time of relentless rural unrest. He had a series of catastrophic **conflicts with European representatives**, and his expulsion of the British consul led to the **bombardment of Algiers** in 1824. 7

## 1820

**Tijaniyya Sufi uprising** in Oran against the Turkish bey. Opposition, prompted by increased taxation and government encroachment on local autonomy, continued sporadically until 1828. The order had been founded in Algeria in 1782 by Ahmad al-Tijani (d. 1815).

8

### 1827, April 29

**The fly-whisk incident.** Negotiations dragged on over the French grain debt to Algeria incurred by Napoleon (1793–8). In heated discussion, the French consul was struck by Husayn Dey with a fly swatter. The French began a **naval blockade** in June and utilized the incident as provocation for the eventual occupation of Algiers.

9

### 1830, July 5

**FRENCH OCCUPATION OF ALGIERS.** Algiers was captured by a French force of 37,000 troops, and the last dey capitulated. The invasion put an **end to the rule of the deys** of Algeria who had reigned as virtually autonomous representatives of the Ottoman Empire since 1711. The French established a **governor-general** as head of their administration in July 1834. Subjugation of the interior continued until 1890. The French occupation lasted until 1962.

10

### c. 1830

Three *madrasas* (Islamic religious colleges) existed at the time of the French invasion. They were located in the cities of Algiers, Constantine, and Tlemcen. Under colonial rule they continued to train students but were carefully controlled by French authorities.

## c. [Tunisia](#)

### 1800

At the turn of the century Tunisia was ruled by the **Husaynid dynasty**, supported by a Turkish military caste. The estimated population of the country was no more than 1 million, two-thirds of whom were sedentary and the rest tribal nomads. The economy, although largely agrarian, still derived two-fifths of its **income from corsair raiding** activity. <sup>1</sup>

### 1807–12

**War with Algeria.** In an effort to end his country's payment of tribute to Algeria, the Tunisian ruler Hamuda Bey (r.1782–1814) besieged Constantine in 1807, but was driven out. After several unsuccessful Algerian counterattacks (1807–12) a peace treaty brokered by the Ottomans was signed in 1821. <sup>2</sup>

### 1811, Sept

**Revolt of the Turkish army contingent (*jund*).** Hamuda Bey used this opportunity to lessen his military dependence on Anatolian recruits and began to draw on members of the Zwawa Berber tribe. The Turkish troops revolted again in 1816 and 1829, forcing rulers to continue attempts to reorganize the composition of the military. <sup>3</sup>

### 1814–24

**MAHMUD BEY.** He came to power after assassinating his cousin Uthman Bey and ending his short and ineffective rule (Sept.–Nov. 1814). Together with the chief minister Muhammad ibn Zarruq (d. 1822), Mahmud Bey launched a policy of **increased taxation** that had a negative effect on agricultural production.

4

## 1818–20

**Bubonic plague**, which reduced the population by an estimated one-quarter. Short outbreaks of the disease were almost yearly occurrences throughout North Africa before 1818, but the 1818–20 epidemic was especially severe. There were no further serious instances of the plague after 1822.

5

## 1819

Mahmud Bey designated **olive oil a taxable state monopoly**. It was sold to the government at fixed prices and then resold for profit to European exporters.

6

## Sept. 21

**Anglo-French naval demonstration.** A squadron was sent to notify Mahmud Bey of the European protocol adopted at Aix-la-Chapelle in 1818 demanding the **end of piracy**. Mahmud Bey was forced to agree in writing that he would cease to support corsair activity.

(See [1799, March 26](#))

## d. [Libya](#)

### 1795–1832

**YUSUF PASHA QARAMANLI.** Coming to power in the wake of a disruptive civil war, Yusuf Pasha restored order and **revived the economy** of his country, whose population was estimated at about half a million people. For the first 20 years or so of his reign he drew **large revenues from piracy**, a state monopoly on the exportation of agricultural produce and livestock, and the **trans-Saharan trade**, especially in slaves. He reorganized and **expanded the army**, and built an impressive fleet. But the sharp **decline of piracy** by the 1820s caused severe financial hardships that led to an erosion of his authority and a rebellion that forced his downfall. <sup>1</sup>

### 1795–1805

**Expansion of Tripoli's naval power.** Yusuf Pasha built a fleet that by 1805 included 24 warships in addition to other vessels. Most of the ships were European and American merchant vessels captured by the pirates and converted to military uses. With this maritime power the pasha's **piratical activities** drew in large revenues in the form of captured property, protection money, and ransom payments for captives. <sup>2</sup>

### 1801–5

**War with the United States** (See [1805](#)). The conflict began in May 1801 when Yusuf Pasha Qaramanli, in an attempt to extort more tribute, permitted his corsairs to **attack American merchant vessels**. In 1803 the American frigate *Philadelphia* was captured <sup>3</sup>

and its crew imprisoned. President Jefferson permitted the organization of a naval expedition that, together with mercenary troops, captured the city of Darna in April 1805. The **peace treaty** signed on June 10, 1805, allowed the United States to ransom 200 prisoners, but avoided the payment of increased tribute.

## 1806–11

Yusuf Pasha mounted **expeditions against tribes in Cyrenaica and the Fezzan**, bringing the two areas under his direct control.

4

## 1825

Yusuf Pasha began **borrowing** large sums from European merchants to help cover his deficits due to the decline of piracy. The mounting **financial crisis** in the following years led him also to debase the currency several times, to confiscate property, and to impose new taxes. **European pressures** on him to repay his debts combined with a **rebellion** by discontented groups at home led to his **abdication** in 1832 in favor of his son Ali.

5

## 1832–35

**ALI PASHA QARAMANLI.** The last ruler of the dynasty faced a continuing **civil war** at home, with the British and French supporting the two rival parties and the Tunisian government scheming to annex Tripoli. The Ottoman government, which wanted to maintain Qaramanli rule, decided finally to forestall possible outside intervention by taking control of the country.

6

## 1835, May 28

**RESTORATION OF DIRECT OTTOMAN CONTROL OVER LIBYA.** An Ottoman force landed in Tripoli and put an end to the long rule (since 1711) of the Qaramanli family. The move was designed to contain the French penetration of North Africa as well as Tunisian designs on Libya. **Tripolitania** was organized into a province (*vilayet*) under a governor appointed by the Ottomans, while **Cyrenaica** formed a separate subprovince responsible directly to Istanbul. Ottoman sovereignty over Libya lasted until the Italian occupation, but effective Ottoman control was strongest in the coastal areas and major towns, with the **Fezzan** and the **interior of Cyrenaica** enjoying

7

a great measure of autonomy under **tribal and Sanusi authorities**. The Ottomans introduced their program of **Tanzimat reforms** into Libya, setting the foundations for the modernization of the country.

## 1837

**CREATION OF THE SANUSIYYA SUFI ORDER**, by **Muhammad ibn Ali al-Sanusi** (1787–1859), an Algerian educated in North Africa and Mecca. He advocated a return to the lifestyle of the Prophet Muhammad and emphasized asceticism and austerity in worship. His movement had the most **appeal for the bedouin in Cyrenaica** where the main lodge was established in 1843. Under al-Sanusi and his son **Muhammad al-Mahdi** (1845–1902) the order established **a network of over 140 lodges** scattered throughout the Libyan desert oases and beyond. These became centers of religious missionary activity and teaching as well as of agricultural settlement and trade. The order acquired **political authority** among the tribesmen by providing services and mediating disputes. The Ottoman government cultivated the support of the order, granting it in 1856 exemption from taxes on its property and recognizing the right of its leaders to tax members.

8

## 1842–47

Implementation of the **Ottoman urbanization policy**. Forts were constructed at al-Marj (1842), Bu Nujaym (1844–46), and Gharyan and Murzuq (1847). Each outpost fostered **settlement** and the growth of village populations, particularly in the northern provinces. **Trade** was encouraged by the foundation of numerous trading posts and by the establishment of a route for commerce between the Jabal al-Gharb and Tripoli.

9

## 1857

**Abolition of slavery**. The slave trade had traditionally formed the most lucrative part of Libya's export economy. Slaves were brought to Tripoli from sub-Saharan Africa by caravan routes. The **trade increased** with the abolition of slavery in Algeria and Tunisia a decade earlier. Despite the official ban, **slaves continued to be covertly sold** to markets in Istanbul and Egypt until the 1890s, when the slave trade in the Middle East was finally suppressed.

10

## 1857–1900

**Ottoman educational reform.** In Tripoli a **modern secondary school** was established, and by 1868 Turkish and French were the languages of instruction. Six of these modern secondary schools (*rushdiyya*) were eventually established. A separate **secondary school for girls** was founded in Tripoli by 1900, along with a training school for village primary-level schoolteachers. A **military academy** in Tripoli was established during the governorship of Ahmed Resim Pasha (1881–96); it prepared students in history, engineering, mathematics, and French for further study at the Military College in Istanbul. 11
