**In this period of high empire, Indians and British alike participated in shaping a new understanding of Indian society.** As amateur ethnographers, British administrators collected and catalogued data about their colony that, taken together and utilized to support imperial rule, constituted a new sociology of knowledge. In the late 19th century, shaped by the pseudoscience of social Darwinism, the cataloguing of the peoples of India became a way to explain existing social hierarchies (sometimes by measuring the width of noses!) and to place the British at the top of such pyramids. For their part, Indian informants to the British Raj fulfilled their own needs as they described and explained local society and classical texts (as these began to be translated by Orientalist scholars). Many Indians profited by these early interactions with the British. Indirectly, they shaped British understanding of Indian society to fit their own perspectives and situated their caste groups in high-status positions; more directly, they gained control of land, forged lucrative trading relationships, or secured roles for themselves in government advisory groups and, later, representative councils. 1

**Profound changes in local society** underlay these interactions. Some were introduced by the British as they imposed their own notions of proper governance, founded on a land revenue–based state, sedentary society, guarantees of property rights, and the “rule of law.” But many more changes emerged from processes that had been set in motion as the Mughal Empire declined and aspects of rule passed into the hands of regional rulers and local elites (especially the benefits accruing to those who collected and forwarded the land revenue, and to those who undertook responsibility for cultural patronage). 2

Mechanisms of local self-rule—an important locus of power in a society in which constituent communities held much responsibility for self-regulation—enabled local power holders to advance visions of what Indian society should be that were very different from those held by British administrators.

These conflicting visions were fitted together by the British understanding that local communities (whether defined as caste groups, local villages, or urban neighborhoods) would work through “natural leaders,” maintaining order within their boundaries and representing their interests to colonial rulers. In this setup, local religious activity, domestic relationships, and cultural practices could generally be left alone; **only when local practices egregiously offended the colonial state's definitions of morality did the British intervene** (for instance, regarding *sati* , the immolation of a Hindu widow on her husband's funeral pyre). This understanding was a peculiar reformulation of a process under way in western Europe at much the same time, in which “public” life—composed of interactions between an emerging civil society and the state's institutions—was becoming increasingly distinguished from “private” life—in which bourgeois households conducted their domestic affairs as they saw fit. In British India, the state simultaneously created legal structures to deal with individuals *and* with groups, and a unique form of “civil society” grew up in which “representatives” interacted with the state—but no one was considered a citizen.

In British India, the first **nationalist movement** under imperialism emerged between the 1880s and the achievement of independence in 1947. At first a matter of elite petitions for increased employment and political participation, the movement quickened into a **popular campaign** with the partition of Bengal in 1905 and a series of experiments with political festivals in western India, beginning at the turn of the century. From this point on, the nationalist movement reflected an uneasy amalgam of indigenous reformulations of imagined communities and Western-influenced political campaigns targeted at imperial institutions.

At the turn of the century, British **censuses** counted about **238 million people**; these numbers remained stagnant, because of famine and disease, for three decades. From 1921 to 1941, however, the growth rate increased from 1.1 to 1.4 percent annually, setting a trajectory that made **dramatic population increase** one of the greatest problems to be faced by the postcolonial states of the subcontinent when they achieved independence.

## 1800s

Local communities in India took over more and more self-regulation and **cultural patronage** as an expression of localized political ideologies. Changing relationships between communities and the colonial state (or still independent successor states) led to heightened competition among contenders for local control.

6

### 1798–1805

**LORD MORNINGTON** (later **marquis of Wellesley**) served as governor-general. He developed the system of **subsidiary alliances** by which Britain supplied troops and protection in exchange for territory or monetary grants and was allowed control of the state's foreign affairs but pledged nonintervention in internal government and secured exclusion of every other foreign power from the state's service. The fourth **Anglo-Mysore War** (Tipu d. 1799) led to a protectorate over Mysore: various annexations extended British control over nearly all southern India. The **Maratha leaders**, angered by the **Treaty of Bassein** (1802), which made the Peshwa a subsidiary ally, opened hostilities. Costly but successful warfare (defeat of Sindhia and Bhonsle at **Assaye**, Sept. 23, 1803) led to alarm at home, Wellesley's recall, and temporary abandonment of his policy.

7

### 1805

**Lord Cornwallis** again became governor-general (d. Oct.), succeeded by **Sir George Barlow** (1805–7) and **Lord Minto** (1807–13).

8

### 1809

**Treaty of Amritsar** fixed the river **Sutlej** as northwestern boundary of the company's territories, checking the advance of a Sikh confederacy under **Ranjit Singh** (d. 1839).

9

### 1808–10

To curb French expansion in Asia, Minto made **treaties with Sind, Persia, and Afghanistan**, and captured the French islands in the Indian Ocean and Java, which was under French control (Bourbon was later restored to France and Java to the Dutch).

10

## 1810–13

**Unrest in Banaras** typified the character of change and channels of contention that developed under colonial rule. In 1810 residents of Banaras led a successful protest against the imposition of a house tax which spread to other north Indian cities. In the two years following, conflict among various Hindu communities contending for dominance under the British led to an expansion of the conflict into a Hindu-Muslim riot over processions and sacred space. Those jailed as leaders of the riot (Muslims, Brahmans, and other high-caste Hindus) paradoxically then united in the following year in a jail protest against treatment of prisoners that would force them to lose caste. 11

## 1813–23

**LORD MOIRA (later marquis of Hastings)** served as governor-general, followed by John Adam (acting) and Lord Amherst (1823–28). 12

## 1813

Parliament **renewed the company's charter** for another 20 years, but under pressure of free trade interests, **abolished its monopoly of trade with India** and extended the sovereignty of the British Crown over the East India Company's possessions. Missionaries were for the first time allowed to evangelize in the company's territories. 13

## 1814–16

**Border dispute with Nepal** provoked a hard-fought war. The British acquired the Kumaun Division and made permanent peace with Nepal, which retained its complete independence. 14

## 1816–18

The marauding **Pindari tribes**, after raiding British territory, were suppressed and broken up by Hastings; hostile Maratha leaders were also defeated, leaving only Nepal, the Sikh state, and Afghanistan independent of direct or indirect British control. 15

(However, **indirect control**—under which Indian princes retained internal control while ceding external control to the EIC—accounted for more than one-third of the land mass.) Pacification of the Pindaris followed a pattern also used to domesticate the **Thags** and large landlords: all three were deprived of their military roles, but in return were rewarded with landholdings as they became sedentarized.

In Bengal, the introduction by the British of **printing** (Wilkins, 1778) stimulated a growing volume of publishing in English, Bengali, Persian, Sanskrit, and Hindustani, and made possible the establishment of schools imparting both modern English-language and vernacular learning. In the field of **higher education**, the combined efforts of British officials and private British and Indian philanthropists led to the founding of the Hindu College (Calcutta, 1816), the Elphinstone Institution (Bombay, origins 1827), the Delhi College (1827), and the Madras University High School (1841), the nuclei of the later universities. **Newspapers** made their appearance in the 1780s in Calcutta, Madras, and Bombay (government controls imposed sporadically, and licensing required, 1823–35).

These developments, and the discoveries by British **Orientalists** active in the Asiatic Society (founded in 1784 by **William Jones**), the **College of Fort William** (founded in 1800 by Wellesley), and the **Serampore Baptist Mission** (founded in 1800 by **William Carey**) stimulated an intellectual renaissance among Bengali Hindu scholars.

**Rammohun Roy** published Vedic texts in five languages, condemned idolatry and *sat* as corrupt practices, espoused Christian ethics but ridiculed Christian theology, and established the **Brahmo Samaj** (1828–30), open to all monotheists. An opposing movement, led by **Radhakanta Deb**, organized the **Dharma Sabha** (1830), sponsoring educational change but defending social and religious customary practices. Bengali prose developed rapidly as a literary medium beginning at this time.

## **2. Southeast Asia, 1753–1914**

The conquest and subsequent political domination of Southeast Asia by Western colonial powers were the most outstanding features of this era. In the first half of the period, political entities continued to evolve according to indigenous understandings of power relationships and political centers. Between 1870 and 1910, however, the European colonial powers redrew the map of Southeast Asia, establishing boundaries that would ultimately result in the nation-states that constitute modern Southeast Asia. Even Siam, the only remaining independent Southeast Asian kingdom, was strongly influenced in its actions by the presence of British and French colonial powers in its adjoining territories. 1

As they redrew the map of the area, the colonial powers profoundly altered local underpinnings of political centers. Rather than being built on relationships among power holders in the area, the new boundaries connected particular power centers with particular European colonial states. Europeans thus created new political frameworks on which they imposed modern bureaucratic systems. Over the decades of their colonial rule they introduced, enlarged, and perfected the apparatus necessary for such systems: transportation systems, including railroads; government departments of all sorts; and modern fiscal and tax systems (including the standardization of currency systems, banking systems, insurance firms, and all-purpose service institutions, i.e., agency houses). In addition, the European colonial powers introduced changes in the education systems that were to have long-range and significant implications for future social and political developments. 2

The expansion of European political power conjoined imperial economic exploitation of the region; significant economic changes resulted from the new political economy wherein colonial powers ruled directly. After 1870, export industries increased rapidly until they came to dominate the economies of Southeast Asia. **Population steadily and rapidly increased** and was accompanied by significant migrations into and within the area. Statistics show spectacular growth: Burma's population more than doubled, Java's increased at a rate of almost 1.9 percent per annum, and Siam and parts of French 3

Indochina grew at around 2 percent per annum. A considerable proportion of the growth came from immigration, especially by Chinese and Indian trading groups. The economic changes were based on capitalist, world-market-driven forces. Creation of “national” economic structures served to forge three types of economic linkages: to the world economy in general, to the economies of the various metropolitan powers, and also among the different parts of the new colonies themselves.

Within this context, a number of indigenous reformulations sought to provide ideological and cultural stability. In Thailand, Cambodia, and Laos, Buddhist reform and non-Buddhist solutions were formulated in response to the cultural crisis posed by intrusion of the West. In Indonesia, debate between those espousing revivalist versus modernist reconstructions of Islam prompted social and intellectual changes as well as resistance movements and new political parties. Much of this ferment focused on a new emphasis regarding ethnic identity, in which definitions of community reflected the complex interaction of religious movements, immigration patterns, and the attempt to impose Western sociological assumptions. (See [Southeast Asia](#))

## a. Mainland Southeast Asia

### 1. Burma

The modern Burmese state was built upon the conquests of **Alaungpaya** (1752–60), who founded Burma's last dynasty, the Konbaung (1752–1885). His successors managed to repulse **invasions by the Chinese** (1766–69) but were unable to maintain themselves in Siam (1771).

### 1782–1819

**Bodawpaya**, king. Conquest of Arakan (1784) and further encroachments on Indian territory. **Peace with Siam** (1793).

### 1819–37

**Bagyidaw**, king. He continued the advance toward India, seizing Manipur and Assam (1822) and invading Kachar (1824). This policy of expansion soon brought him into conflict with the British East India Company because interests and perceptions were in conflict as to the standards of interstate relations.

## 1824–26

**FIRST BURMESE WAR.** Despite vigorous resistance the Burmese were unable to withstand the force of a modern army. The British, under **Sir Archibald Campbell**, took Rangoon, and then Syriam, Tavoy, Mergui, Martaban, and Pegu. An attempt by the Burmese to recapture Rangoon failed (1825). The British advanced up the Irrawaddy and at the same time overran Arakan. On Feb. 24, 1826, by the **Treaty of Yandabu** (near Ava) the British secured Assam, Arakan, and the Tenasserim coast, as well as an indemnity, the conclusion of a commercial treaty, and the right to send a resident to Ava (discontinued, 1837). Humiliation of defeat and terms of peace led to palace revolution and Bagyidaw's loss of throne to his brother, **Tharawaddi Min**, king (1837–46). 8

## 1846–52

**Pagan Min.** Under his reign the friction with the British continued. The Burmese rulers continued to treat the British with contempt and to hamper the development of British trade. Lapse of Anglo-Burmese diplomatic contacts. 9

## 1852–53

**SECOND BURMESE WAR.** Rangoon was again taken by the British. Pegu was also occupied and annexed (Jan. 20, 1853). A revolution in the capital led to the deposition of the king and the elevation of Mindon Min. 10

## 1853–78

**Mindon Min**, attempted to introduce administrative reforms, but the pressure of the looming power of British India made it difficult to introduce a program to revitalize and strengthen the state. He accepted the British gains without concluding a formal treaty and attempted, throughout his reign, to maintain friendly relations with his neighbor, British-controlled “Lower Burma,” a designation the British created after announcing this territorial annexation. They were unable to gain official Burmese recognition of this status. British Burma consisted of Arakan, Pegu, and Tenasserim. 11

## 1857

**Mandalay**, built by the king, **became the capital** of the country.

12

## 1862

Conclusion of a **commercial treaty with Great Britain**. The customs duty was fixed at 5 percent, and the British were given the right to trade throughout the country.

13

## 1878–85

**THIBAW** became king, following a bloody succession conflict. Unsuccessfully, he attempted to open diplomatic relations with the British on terms of equality as a ruler of a sovereign nation. At the same time he established contact with French interests and negotiated with them for the organization of a royal bank and for the construction of a railroad from Mandalay to the Indian frontier. The British felt threatened by the Burmese king's approaches to its European rivals. This resulted in the Third Burmese War.

## **b. Peninsular and Island Southeast Asia**

### **1. British Malaya**

**1795**

The **British took Malacca** to hold for the Dutch, who were under French domination at the time. 1

**1800**

The **British secured Province Wellesley** from the sultan of Kedah. 2

**1802**

**Malacca was restored to the Dutch** under terms of the **Treaty of Amiens**. 3

**1811**

The **British retook Malacca**, which was used as a base for the expedition against Java. 4

**1818**

The **Dutch recovered Malacca**, under terms of the **Treaty of Vienna**. 5

**1819**

**FOUNDING OF SINGAPORE by Sir Stamford Raffles.** Practically abandoned for centuries, the city was soon to become the strategic and commercial center of the region, completely overshadowing Malacca. The founding of the city of Singapore signaled a larger development: the new towns created throughout island Southeast Asia focused on export, not local consumption. In addition to trade, these new urban centers served as important communications and administrative centers for the surrounding countryside (from which they extracted goods for export). To facilitate this type of extractive trade, port cities emerged to funnel tin, rubber, rice, and other primary products into world markets. At the close of the 19th century, Singapore may have been the most polyglot city in Asia: residing there were more than 164,000 Chinese, 23,000 Malays from the peninsular states, more than 12,000 Javanese and Sumatrans, as well as at least 1,000 Arabs.

6

### 1824, March 17

The **Dutch ceded Malacca** to Britain, in return for Bengkulu in Sumatra.

7

### 1826

**British treaty with Siam.** Under terms of this agreement the sultanates of Perak and Selangor were recognized as independent, while Siamese control of Kedah was acknowledged. At the same time Perak ceded to Britain **Pangkor Island** and the **Sembilan Islands** for use as bases in the fight against piracy.

8

### 1850 Ff

**Steady influx of Chinese laborers** into the peninsula. These were employed chiefly in the tin mines, though many also turned to piracy on the coast. Their presence created disturbance in many states and ultimately provoked British interference.

9

### 1867, April 1

**End of the rule of the British East India Company.** The Straits Settlements thenceforth had the status of a Crown colony.

## **E. East Asia, 1793–1914**

### **1. China, 1796–1914**

#### **THE MANCHU (QING) DYNASTY (1796-1912)**

This period embraces China's last imperial dynasty from its initial decline to its end, when it was overthrown by a revolution made in the name of republicanism, though it never took form as such. In addition to the systemic problems of the dynastic form of government, China was subject to natural and secular changes—principally, the disastrous changing course of the Yellow River and the debilitating impact of mass opium addiction—that enervated the Qing dynasty. China's population continued to grow in these years, topping 400 million by the middle of the 19th century. The presence of the Western powers, and later of Japan, and pressing demands on the court exacerbated the Qing's problems. Traditionally, Marxist and many non-Marxist historians dated the beginning of “modern Chinese history” to the Opium War of 1839–42, because the British defeat of the Chinese and the subsequent demands on the Qing government effectively transformed the nature of the Chinese economy. That view has not been seriously defended outside of the People's Republic of China for some time. A more important event signaling the decline of the Qing, and hence of the dynastic system, would be the White Lotus Rebellion, which begins this section. 1

#### **1796–1820**

The **JIAQING REIGN** of Emperor Renzong marked the turning point from the high Qing period into decline. Jiaqing did not actually begin to run the government until the death of the retired Qianlong emperor in 1799. China was faced with threats to the social order from within and without. Little in the way of open pressure was brought to bear on 2

the court.

## 1796–1804

The **WHITE LOTUS REBELLION**, led by a millenarian Buddhist sect that believed in the return of the Buddha, erupted out of social and economic discontent in the north. It spread across the impoverished three provinces of Hubei, Shaanxi, and Sichuan, before being suppressed by Manchu forces. The fact that it took the armies of the empire eight years to put it down proved to be a harbinger of the declining effectiveness of the State's standing armies; the Qing was saved only by the use of Chinese recruits, the “green standards.” <sup>3</sup>

## c. 1800–1830s

The **Western powers** had been coming to China for some time; they were allowed to trade only through the strictly limited Canton system. Whereas customers in the West wanted ever greater quantities of tea, silk, and Chinese porcelains, the Chinese wanted nothing the West had to offer, except silver. From about 1800, though, Indian-grown opium found a hungry market in China, despite the fact that it was illegal, and it reversed the silver flow until Chinese coffers were drained. Eventually, this problem would come to a head. <sup>4</sup>

## 1805

Christian literature was proscribed, and a Catholic priest was strangled for being in China without permission (1815). <sup>5</sup>

## 1807

Robert Morrison (1782–1834), the first Protestant missionary to China, translator of the Bible into Chinese, and author of the first Chinese-English dictionary, arrived in Guangzhou. He lived there under the aegis of the British East India Company. <sup>6</sup>

## 1813

A millenarian religious group, the Tianli Sect, rose in rebellion and invaded the imperial palaces in Beijing, before being suppressed. 7

## 1816

British ambassador Lord Amherst (1773–1857) was sent away from Beijing without being received, just as British forces were fighting against Nepal, a Chinese tributary. 8

## 1820

Li Ruzhen's (c. 1763–c. 1830) satirical novel *Flowers in the Mirror* was completed (first printed in 1828). In it gender roles were reversed, with men binding their feet, applying makeup, and serving women. The novel was in part intended as a critique of the great difficulty many well-educated men were having in finding employment as officials. 9

## 1821–50

The **DAOGUANG REIGN** of Emperor Xuanzong marked a tumultuous time in Chinese history, which included a disastrous war and the early beginnings of the greatest rebellion in China's entire history. 10

## 1821

The illicit trade in opium, 5,000 chests annually (despite imperial prohibitions of 1800 and 1813), was transferred to Lintin Island near Guangzhou. 11

[NEXT](#)

(See [1785](#))

## 2. [Korea, 1800–1910](#)

The long Yi dynasty came to a spiraling end, as Korea in the 19th century fell victim to foreign pressure, domestic rebellion, and Japanese colonial aspirations. The Manchus in China were in no position themselves to assist their vassal Korean state. With the decline and fall of the Chosŏn state, *yangban* society, too, came to a crushing demise. <sup>1</sup>

### 1800

**King Chŏngjo** died and was succeeded by **Sunjo** (b. 1790, r. 1800–34), a lad of but ten years. <sup>2</sup>

### 1812

The **Hong Kyŏng-nae Rebellion** broke out, led by a disaffected “fallen” *yangban*. This was one indication of the trouble brewing in the Chosŏn social order, with the increase of popular uprisings, and local rebellions becoming major affairs. <sup>3</sup>

### 1834–49

The reign of **King Hŏnjong**. <sup>4</sup>

### 1849–63

The reign of King Ch'ŏlchong.

5

1857

**Ch'oe Han-gi** (1803–75), a *sirhak* scholar, completed his *Chigu ch'nyo* (*Descriptions of the Nations of the World*), based on Chinese works of the time. It introduced the countries of the West to Koreans and suggested Korea might want to open its doors to interchange with them. Other *sirhak* scholars—such as Pak Kyu-su (1807–76) and O Kyŏng-sŏk (1831–79)—proposed similar ideas.

6

1860

The **Tonghak** (Eastern Learning) movement began to attract followers under the leadership of **Ch'oe Che-u** (1824–64). It was a syncretic religion, combining elements from Confucianism, Buddhism, Daoism, and, inadvertently, Catholicism to oppose all Western creeds. Its social thrust was against *yangban* decadence and in favor of improving conditions for the poor masses of Korean farmers; it was also decidedly antiforeign and primarily rural. As the government continued to be unable to prevent foreign humiliation at Korea's expense, it exacerbated antipathy for the government and increased the Tonghak's popularity. Ch'oe was arrested (1863) and executed (1864).

7

1860

**Ch'oe Han-gi** finished writing his *Injŏng* (*Personnel Administration*), in which he claimed that the path back to good government was through the appointment of talented men regardless of class background, and that Korea had to abandon its seclusion policy and open up to the outside world.

8

1862

The **Chinju Uprising** erupted, led by a “fallen” *yangban*, and killed a number of particularly rapacious local officials.

9

These reigns marked the beginning of “in-law” government, a period in which control over the throne passed between certain in-law factions. It marked a low point in official

10

venality and corruption, which spread to local government as well. In the end, the peasantry suffered most harshly, and the fiscal security of the state was undermined. *Yangban*-dominated society was beginning to come apart at the seams. Many *yangban* lineages had become “fallen,” meaning they could no longer sustain their families' prerogatives. Members of the *chungin* class, a hereditary rank below *yangban* who had formerly held various technical positions, were on the rise. The number of **slaves** markedly declined, many having been freed in exchange for military service; the government freed its slaves in 1801; slavery was abolished in 1894.

Despite persecutions (in 1801, 1839, and at other times), **Catholicism** continued to attract followers. Its belief that all men and women were equal in the eyes of a supreme deity was an implicit critique of the rigid *yangban*-dominated social order. Executions accompanied the repressions; for example, the first Korean priest, **Kim Tae-gon** (1822–46), who had trained in a seminary in Macao, was caught and executed. Under Ch'olchong, the repressions were eased.

Like other religious and intellectual movements, the *sirhak* movement of the 19th century continued its social thrust from the 17th and 18th centuries (See [1785](#)), using practical scholarship as a means of trying to improve the political, economic, and social problems of the day. **Chong Yag-yong** (1762–1836) synthesized earlier *sirhak* scholarship. In the Sunjo reign, major compilations of encyclopedic proportions were published on agriculture and other economic and political institutions. Others maintained the strict evidential principles of scholarly methodology characteristic of the contemporaneous *kaozheng* movement in Qing China.

## 1864–1907

During his **reign, King Kojong** (1852–1919), who ascended the throne at age 12, scarcely ruled outright. His father, **Hungsun Taewon'gun**, or the **TAEWON'GUN** (1820–98), became regent, ruled directly until 1873, and remained a dominant figure in the political world until his death. He was hostile to foreign influence in Korea, particularly toward Christianity.

While in power, the Taewon'gun instituted a series of reforms aimed at reviving the Yi state. Corrupt officials were ousted, and others were appointed solely on the basis of merit; he eased the fiscal burdens on the peasantry, and he closed most of the private academies that owned tax-free agricultural estates.

Although it originated in the early 18th century, the *p'ansori*, literary “one-man operas,” came into their own in this period. The librettos came from vernacular Korean novels. The most important figure in this movement was Sin Chae-hyo (1812–84). In addition to

novels written in the vernacular, there was an increasing quantity of **literature** written in Chinese, by *yangban* and commoner alike. **Painting** witnessed a new development in expressionism, edging out an earlier move toward naturalism; the most famous painter of the late 19th century was Chang Sng-p.

## 1865

A group of scholars updated the Chosn state's code of administrative law with the *Taejn t'ongp'yn* (*Comprehensive National Code*).

16

## 1866

Responding to revived anti-Catholic activities, a **French expedition** under Adm. Pierre Roze occupied and sacked Kanghwa at the mouth of the Han River but was ultimately unable to continue to the capital, Seoul. After some reverses at the hands of Korean forces, it was obliged to withdraw. It became known as the “French Disturbance of 1866.”

### 3. [Japan, 1793–1914](#)

#### [JAPANESE EMPERORS \(1867-\)](#)

#### 1793

Lt. Adam Laxman (b. 1776), envoy of Catherine the Great of Russia, arrived at Hakodate but failed to establish friendly relations.

1

#### 1793–1837

The **personal rule of IENARI** as shogun was characterized by increasing extravagance, inefficiency, and signs of the breakdown of seclusion and the collapse of military rule. During this period lived **Ninomiya Sontoku** (1787–1856), a famous peasant philosopher and agrarian reformer; **Kaiho Seiryō** (1755–1817), a political economist, reformer, and itinerant teacher; **Takizawa Bakin** (1767–1848), an extremely popular author of fiction with a moral bent; **Katsushika Hokusai** (1760–1849), **And Hiroshige** (1797–1858), and **Kitagawa Utamaro** (1754–1806), three of the finest *ukiyo-e* woodblock artists.

2

#### 1795

Capt. William Broughton (1762–1821), a British explorer, visited Hokkaido, charting parts of the Japanese coast.

3

### 1797–1809

U.S. ships traded with Japan nearly every year, on behalf of the Dutch.

4

### 1798

The *Kojiki den*, a commentary on the *Kojiki* (*Record of Ancient Things*, 712), was completed after 35 years of work by **Motoori Norinaga** (1730–1801), one of the finest scholars of the National Learning, or Nativist, school. This achievement marked a significant event in the revival of Shinto and the imperial cause. An earlier figure of considerable importance in this movement was **Kamo Mabuchi** (1679–1769), who worked principally on the *Man'yōshū* (*Collection of 10,000 Leaves*, 759); a later figure of less intellectual depth but greater popular appeal was **Hirata Atsutane** (1776–1843). All relentlessly attacked Confucianism as alien to things Japanese.

5

### 1804, Oct.–1805, April

A Russian ambassador, Capt. Nikolai Rezanov (1764–1807), representing the Russian-American Company, reached Nagasaki but after six months failed to obtain a treaty. In 1806–7, his subordinates raided Sakhalin.

6

### 1814

**Kurozumi Munetada** (1780–1850) founded the **Kurozumi sect**, the first of the modern popular Shinto sects that stressed patriotism and occasionally faith healing. This and 12 similar sects founded over the course of the next century counted in excess of 17 million adherents.

7

### 1817–37

A sign of economic problems to come, the *bakufu* (shogunal government) devalued the currency on 19 separate occasions, but did not adequately contain the growing state deficit. Problems were exacerbated by a string of crop failures in the 1820s.

8

## 1825

**Aizawa Seishisai** (Yasushi, 1781–1863) of Mito domain completed his *Shinron* (*New Proposals*, not published until 1857). He suggested that greater defensive measures be adopted by the feudal domains in preparation for the coming aggressive forces from the West; he felt that even more pernicious than Western force of arms were its Christian religion, its corruptive culture, and its economic incursions. British whaling vessels had landed in Mito the previous year.

9

## 1830–44

Although the **Tenpo** reign period witnessed great reform efforts, it also saw severe famines in the mid-1830s and massive social disorders as countless peasants fled rural poverty for the cities. It was an extremely rich era culturally. Planner of the reforms (effected, 1841–43) was **Mizuno Tadakuni** (1794–1851). He abolished the guild system, domainal monopolies, and other institutions, moving toward centralizing Edo power with respect to the domains. The reforms ultimately failed.

10

## 1837

Following several years of local famine, inadequate state response, and small-scale risings, **Amakusa** witnessed a mass rebellion led by **Shimo Heihachirō** (1793–1837), a former policeman. He and his followers were angry at the corrupt officialdom and the venal merchants whom they saw as responsible for poverty. The uprising was quelled.

11

The U.S. vessel *Morrison*, with merchants and missionaries from Macao, visited Naha in the **Ryūkyū** (Chinese, Liuqiu) Islands, was bombarded at Edo and Kagoshima, and failed to open relations. This was but one of numerous efforts by Westerners to establish more extensive contact with Japan before 1854. One reason for these efforts was that since about 1820 the northern Pacific whaling industry had greatly developed, and more humane treatment of crews of whalers wrecked in Japanese waters was sought, particularly by the United States.

#### 4. [Vietnam, 1802–1902](#)

During the early 19th century, the Vietnamese ruler built a Chinese-style court; internally he was called emperor, though in tributary relations with China he was called king. Before long, though, as elsewhere in East Asia, the Western powers exerted increasing pressure to secure rights to trade and proselytize on Vietnamese soil. Vietnam was the only country in East Asia to become a colony of a Western power—France—by century's end, leading to a partition of the country. 1

##### 1802–20

The reign of **Emperor GIA-LONG** (born **Nguyễn Anh** in 1762) began after his rebellious forces took Saigon with French help, won a number of victories, and finally captured Huê (1801). He established the **Nguyễn dynasty**—with its capital at Huê—which would last, in name, until 1945. He had been supported in his struggles by the French missionary **Pierre Pigneau de Béhaine** (1741–99), bishop of Adran. He moved to build a centralized monarchy on the Chinese model, with a Confucian bureaucracy, and he instituted sanctions against Buddhist and Daoist religious practices. Two regional rulers, one in Hanoi and the mighty Lê Van Duyêt (1763–1832) in Saigon, exercised considerable local authority, but their power was withdrawn under Gia-long's successor. The population of the country was roughly 8 million. Administrative sites, aside from those that were major cities or ports, did not become centers for trade; commerce was conducted, as before, at river confluences. The all-important commerce with China tended to be dominated by Chinese émigré merchants, numbering some 40,000 at this time. Land registers were updated annually beginning in 1807 as a part of Gia-long's reforms, but there were still many poor peasants and many with no land to till. Corvée requirements also fell with a heavy burden on the peasantry. Gia-long also enacted a law code (1812) patterned closely after that of Qing China. 2

Both Gia-long and his successor sought Western technology to build their military capacity as well as to modernize other sectors of the economy. Yet, for all his efforts, the Gia-long reign witnessed roughly 100 uprisings—caused by the devastations of natural disasters and the government's inability to respond.

3

Catholic missions had been active in the country since the early 17th century (See [1624](#)) and with considerable success. The French, excluded from India by the British, focused their attention ever more on Vietnam. Gia-long, while interested in Western technology, was not open to giving either the French or the British free rein in his country.

4

## 1820–41

The **reign of Emperor MING-MANH** (b. 1791) witnessed a continuation of many of the trends set in motion by his father, Gia-long. The power of the government was further centralized, and, as if by exchange, local administrative autonomy grew stronger, especially with the emergence of the *van than* class, a middle-level local stratum of intellectuals who were charged with local administration. Unlike the seemingly similar locally resident *yangban* of Yi dynasty Korea, the *van than* never became wealthy landlords. The state's inability to address problems of the poor masses also continued to plague it. There were over 200 uprisings during Ming-manh's reign. Despite these problems, he furthered use of Chinese-style civil service examinations as the means of bureaucratic recruitment. He fashioned his court in the Confucian Chinese model, and he took measures against Christianity, proscribing it as heterodox, for he suspected that Christians supported rebellious provincial lords. There were some 300,000 Vietnamese converts to Catholicism. Following an uprising in 1833 in which Christians had been involved, he began serious repression, including the execution of missionaries and converts. He was openly derisive of Buddhism as well, and Buddhist-oriented popular religions were frequently responsible for local insurrections. He refused so much as to meet with a British envoy (1822). With the dissolution of the British East India Company's monopoly of trade with China (1834) and the Opium War (1839–1842) (See [1841–42](#)), commercial relations of the Western powers within East Asia changed.

5

## 1840

Ming-manh sent missions to London and Paris to try to reach some measure of compromise with the powers supporting Christianity, but missionary animus crushed these efforts.

6

## 1841–47

During the short **reign of Emperor THIÊU-TRI**, the sanctions against Christians continued, as did the will of the ruler not to meet with foreign missions. The party of former missionary Karl Gutzlaff (1803–51) in 1847 was a complete failure. On several occasions during these years, U.S. and particularly French naval commanders intervened militarily on behalf of Catholic missionaries. In 1847 the French bombarded Danang (Tourane).

7

## 1848–83

The **reign of Emperor TU-DUC** (b. 1830) witnessed the exacerbation of problems with the Western powers and domestic troubles as well. Despite all of these problems, the deeply Confucian Tu-duc encouraged cultural development to an unprecedented extent, making his reign a high point of literary culture in Vietnamese history. He also relentlessly suppressed Christianity, sanctioning thousands of executions primarily of Vietnamese converts and of 25 Western priests.

8

## 1858, Aug

A joint French-Spanish expedition under Adm. Rigault de Genouilly, attempting to end the Nguyễn court's intransigence, bombarded Danang on the coast. Unable to proceed by land to the capital at Huê, the expedition turned south and occupied Saigon in early 1859. Britain registered no objections.

9

## 1862, June 5

The **Treaty of Saigon** was signed, following French fighting and pressure along the Vietnamese coast. It stipulated that Vietnam would relinquish to the French control over the three southern provinces of “Cochin China,” as the French and other Westerners came to call the southern part of Vietnam, and pay an indemnity of 20 million francs over ten years. Long associated by Westerners with the whole of Vietnam, the name Annam became associated henceforth with central Vietnam; and Tonkin (or Tongking) became associated with the north (taken over by the French, 1884). Free exercise of the Catholic religion was to be allowed, and three ports in the central and northern parts of the country were to be opened to French trade. Tu-duc had little choice but to go along

10

with the French; he was fighting to suppress rebellion in the north. There was much popular resistance to the French incursions, such as the “righteous army” of peasants organized by Truong Dinh (1820–64) in the Mekong delta area. Although they and similar forces raided and irritated the French, their efforts failed to sustain an effective movement.

## 1863–68

Adm. Pierre de la Grandière served as governor of Cochin China. He organized a governmental system through “admirals,” but most of the actual governing was done through Vietnamese officials. 11

## 1863, Aug. 11

**King Norodom** (b. 1836, r. 1836–1904) of Cambodia accepted a French protectorate. 12

## 1867

The French occupied the three western provinces of Cochin China, after an insurrection. 13

## 1868

French explorations were carried out along the Mekong River as far as the Chinese province of Yunnan. It was hoped that this would prove a useful route into southwestern China, but the river was shown to be unnavigable along its upper reaches, and the French therefore began to turn their attention to the Red River of Tonkin. The Mekong delta was to become the site of massive public works projects under the French, with irrigation canals dug and large tracts of land reclaimed for rice agriculture; immense rice plantations emerged, and rice exports grew tenfold between 1860 and 1900. 14

(See [1792–93](#))

## F. [The Pacific Region, c. 800–1914](#)

### 1. [The Pacific Islands, 1794–1914](#)

By the end of the 18th century, the era of European discovery was effectively over, though some significant expeditions, such as the one led by American Charles Wilkes (1838–41), made some further contributions. The 19th century saw the beginning of trade and large trading companies in the islands, the advent of Christian missions, and, most important, the annexation of the islands by European powers. By 1900, all the Pacific islands had come under some form of European control, the sole exception being Tonga, which managed to retain its sovereignty under British supervision. New tools and ideas introduced by European traders brought about profound social and economic change in the island communities and helped destabilize traditional political structures. Large-scale indentured labor migration in the islands was an important legacy of colonial rule. Among the more tragic consequences of increasing contact with the outside world were the introduction of new diseases, depopulation, and large-scale land alienation. As the 19th century ended, the islands had become deeply enmeshed in European political and economic concerns. 1

#### 1794, Feb. 25

**Kamehameha** and other chiefs place island of Hawaii under protection of British Crown. 2

#### 1797, March 6

The **London Missionary Society**, a nondenominational body comprising Congregationalists, Calvinistic Methodists, Anglicans, and Presbyterians, reached Tahiti on the ship *Duff*. It established a major station there and subsequently sent missionaries 3

to Tonga and the Marquesas Islands. **Rev. John Williams**, who arrived in Tahiti in 1817, spearheaded the society's drive in the Pacific.

## 1801

**Pork trade began between Tahiti and the British convict colony of New South Wales**, with the active backing of the latter's Governor King. It encouraged colonial entrepreneurs to pursue commercial opportunities in the South Seas and enabled the Pomares of Tahiti to use their new connection to enhance their power.

4

## 1804

The discovery of **sandalwood** in Fiji precipitated a rush in 1807 that was over by 1810. A similar short-lived rush in Hawaii began in 1811. A longer-lasting and more significant trade began in Melanesia after the discovery of sandalwood at Eromanga (New Hebrides) in 1829. The trade introduced new tools, which altered the fabric of island society and economy.

5

## 1810

**Kamehameha I** (the Great) achieved the unification of the Hawaiian Islands. Similar efforts on the part of the Pomares of Tahiti and Cakobau of Fiji met with less success.

6

## 1814

The **Church Missionary Society** established a station in New Zealand and subsequently in the Pacific islands.

7

## 1820

The **American Board of Commissioners for Foreign Missions** sent its first missionaries abroad, to Hawaii. Also, the **Wesleyan Missionary Society** sent its representatives to New Zealand and Tonga.

8

## 1828

The Dutch annexed western New Guinea. 9

## 1840

**The British claimed sovereignty over New Zealand with the Treaty of Waitangi.** 10

## 1842

**The French, led by Dupetit-Thouars, annexed the Marquesas and declared Tahiti and the Society Islands a French protectorate.** In 1844, they took Gambier Islands in the Tuamotus, claiming a protectorate over the entire group, which was formally annexed in 1881. 11

## 2. [The Philippines, 1800–1913](#)

In the course of the 19th century, corruption in the church and bureaucracy and ethnic discrimination increased social and political discontent in the Spanish colony. A fledgling export economy developed, most notably in sugar, which strengthened ties to the outside world and weakened links with Spain. The number of Chinese in the country grew, and their economic role increased. Most significant, an elite of “Filipinos” emerged, a mixed group of mestizos, indios, and Spaniards born in the archipelago who saw themselves as representatives of a distinct Philippine nation. They spearheaded the movement for overthrow of the Spanish government. Muslim power in the south was still considerable in the first half of the 19th century. Sulu in particular enjoyed the fruits of a large regional market for slaves, which led to conflict with the Spanish and British who sought to halt the slave trade. However, by the 1880s the power of Sulu and the Muslim states of Mindanao had weakened. Partly out of fear of the encroachments of other imperial powers, Spain mounted a push into the Muslim areas and was able to establish its suzerainty over the region, even though it could not exercise real administrative control. With the Philippine revolution and the American takeover, Mindanao and Sulu were effectively incorporated into the Philippine state. <sup>1</sup>

### 1820

**Mexican independence** led to a decline in trade, and the Royal Philippine Company became bankrupt. Large numbers of Spaniards and mestizos moved to the Philippines after the independence wars in Latin America. The Spaniards took privileged positions in the bureaucracy, which grew rapidly. Ethnic inequalities intensified. <sup>2</sup>

### 1823

The Mexican mestizo **Andres Novales** led a revolt in the King's Own Regiment. The uprising, which resulted from tensions between mestizos and Spaniards in the bureaucracy and the military, deepened ethnic divisions and contributed to the development of Philippine nationalism. 3

### 1826

A royal decree stated that friars should control most Philippine parishes. Indio and mestizo priests were demoted to curate rank. 4

### 1834

Manila was opened to international commerce. 5

### 1839

Removal of residence and work restrictions on the Chinese led to an increase in the Chinese population. 6

### 1841

**Apolinario de la Cruz** led a major popular uprising against the Spanish after they refused to acknowledge a religious order he had founded. 7

### 1844

The Spanish government outlawed private trading by provincial governors. This gave the Chinese new commercial opportunities, and they became an important economic presence in the colony. 8

### 1847

The mercenary **Oyanguren** annexed Davao Gulf on Mindanao for Spain. 9

## 1851

Spain attacked Sulu, destroyed the capital at Jolo, and forced the sultan to make concessions, which the Spanish interpreted as an acceptance of Spain's control over Sulu. 10

## 1859

Establishment of **Ateneo de Manila**, a school open to all ethnic groups. Such schools contributed to the emergence of an indigenous intellectual elite known as the *ilustrados*, who were instrumental in the formation of Philippine national consciousness. 11

## 1861

The government decreed that all parishes in the archdiocese of Manila be given to friars, displacing Filipino clerics. The struggle over religious appointments intensified, adding to Filipino resentment of the friars, who occupied 817 out of 967 parishes by 1898. 12

Rivalry between Buayan and Magindanao allowed the Spanish to acquire more territory in Mindanao, including Cotabato. 13

### 3. [Australia, 1788–1914](#)

#### [AUSTRALIA AND NEW ZEALAND \(MAP\)](#)

The 19th century in Australia was characterized by European settlement and political and economic development in European terms. British settlement saw the steady dispossession of some 200 Aboriginal groups: by 1914 only a few desert people remained in control of their country. Between 1788 and 1836, the British government or government-assisted expeditions settled all the sites to become state capitals at federation in 1901, in the east with convicts, in Western and South Australia with free settlers. Despite severe depressions in the 1840s and 1890s, white expansion was confident and prosperous. Stimulated by exports, chiefly gold and wool, by 1901 white Australians enjoyed the world's highest wage levels and living standards and were proclaiming an egalitarian society and an outpost of white civilization in the Pacific. <sup>1</sup>

The later 19th century saw many patterns emerge in Australia similar to those in western Europe and the United States, such as the development of a strong working-class movement. Gender distinctions, including insistence on the domestic responsibilities of respectable women and condemnation of those who seemed to deviate from the respectability model, also followed trends similar to those in Europe. The Australian economy developed industrial centers for the national market along with the potent commercial export economy in agriculture and mining. <sup>2</sup>

The **Dutch**, who discovered and explored the western and parts of the northern and southern coasts of Australia (1613–42), called the land **New Holland**. **Capt. James Cook**, who discovered and explored the east coast during his first voyage (1768–71), called that part **New South Wales**. In 1786 the British government decided to use a site Cook had named in New South Wales, Botany Bay, to transport convicts who crowded the British prisons after it became impossible to send them to America. The plan was to set up a **convict colony** that would support itself, although probably strategic <sup>3</sup>

considerations also influenced the choice of site.

### 1788, Jan. 26

**Capt. Arthur Philip** arrived at **Port Jackson (Sydney)**, with the **FIRST CONVICT TRANSPORTS** and convoy, 11 ships with 717 convicts, of whom about 520 were men. In the following month 15 convicts and escorts were sent to organize another settlement on **Norfolk Island** (till 1814). Philip remained governor until 1792, during the most critical period of the colony and under difficult conditions: scarcity of food; uncertainty of supplies; laziness, incompetence, and quarrelsomeness of many convicts; prevalence of vice of every kind. The colony was protected by the **New South Wales Corps**, raised in England and itself an unimpressive and insubordinate body. The governor enjoyed absolute power and alone formulated policy. The convicts were supplied from government stores, but on expiration of their terms the more deserving were given 30 to 50 acres of land. Time-expired soldiers were given grants of 80 to 100 acres. The officers were more richly endowed, and some of them, like **John Macarthur**, soon became wealthy and influential.

4

### 1792–95

**Francis Grose** and then **William Paterson** acted as vice governors. As members of the **New South Wales Corps**, they provided richly for their comrades. The officers were given the service of convicts and were allowed to establish a monopoly of cargoes brought to the settlement. **Importation of rum** was permitted, and rum soon became currency, much to the detriment of the settlement.

5

### 1793, Jan. 16

**Arrival of the first free settlers** (11 in all), who received free passage, tools, convict service, and land grants.

6

### 1795–1800

**John Hunter**, governor. A mild, well-intentioned administrator, he was soon at loggerheads with the officers of the corps, through whose influence at home he was ultimately recalled.

7

## 1797, May 16

The first merino sheep were imported, leading eventually to the creation of the Australian wool industry.

8

## 1800–6

**Philip King**, governor. His main ambition was to break the power of the officers, wherefore he forbade their trading and prohibited the importation of spirits. Neither policy proved much of a success, and so King, like his predecessor, was in constant conflict with the officers, of whom Macarthur was the leader.

9

## 1803–4

**Settlement of Tasmania**, carried through by the governor for fear that the French might seize it. Settlements were established near present-day **Hobart** and near **Launceston**. In 1810–14 the convicts on Norfolk Island were transferred to Tasmania. From the outset the settlers had much trouble with Aborigines and bushrangers (escaped convicts turned bandits and freebooters).

10

## 1804

**Insurrection of the Irish convicts**, who had been sent in large numbers after the suppression of the revolution in Ireland in 1798. The rising was put down with ruthless vigor.

11

## 1806–9

**William Bligh**, governor. He was appointed in the hope that, as a well-known disciplinarian, he would be able to end the domination of the officer clique and stop the disastrous liquor traffic. But his drastic methods and fiery temperament resulted merely in rebellion.

12

## 1808, Jan. 26

**Rum Rebellion.** The officers, outraged by the arrest of Macarthur, induced the commander, **Maj. George Johnston**, to arrest Bligh as unfit for office and to hold him captive until the arrival of a new governor (1809). Though the home government condemned this action, it removed Bligh.

13

## 1821

**COL. LACHLAN MACQUARIE**, governor. His appointment marked the **end of rule by the naval commanders**. Macquarie took his Highland regiment to Australia and obliged the members of the New South Wales Corps to enlist in the regular force or return home, which about one-half of them did. The new governor devoted himself to the systematic buildup of Sydney, road construction, establishment of orphanages, and unrelenting war on the vice prevalent throughout the colony. **Civil courts** were established (1814) and a bank opened (1817). In 1816 the home government removed all restrictions on free emigration to Australia, thus preparing the way for a change in the character of the colony. But by 1810 there were already 3,000 free settlers, endowed with large blocks of land. These freemen objected violently to **Macquarie's efforts to secure social equality for the emancipists** (pardoned convicts or those who had served their time) and to discourage free immigration. As a result, Macquarie, like earlier governors, was engaged in constant struggle, though on a different basis.

[NEXT](#)

---

#### **4. New Zealand, c. 800–1913**

Archaeological evidence dates the earliest human occupation of New Zealand to around the 9th century C.E. (See [The Pacific Islands in Pre-European Times](#)). According to Maori tradition, the ancestors of the **Maori people migrated by sea to Aotearoa (New Zealand) from Hawaiki**, thought to be in the eastern Pacific. Maori artifacts and language show affinities with those of Eastern Polynesia. Many Maori genealogies trace tribal descent from **ancestral canoes**, each of which is associated with a particular area of the country. The Maori had a sophisticated Neolithic culture based on agriculture, fishing, and the hunting of birds. Maori society adapted successfully to New Zealand where the climate was much colder and vegetable food less abundant than in their area of origin. Maori people lived throughout the country but were concentrated in the North Island. Demographers estimate the Maori population was around 100,000 in 1769. <sup>1</sup>

Concepts of prestige (*mana*) and the rules of sacred propriety (*tapu*) have always been fundamental to Maori religious and political life, reflected in sophisticated **carving and oral literature**. **Land** and **ancestors** were and still remain vital elements in Maori culture. Intertribal relations were intensely competitive and, in response to warfare, **defensive engineering** was highly developed. <sup>2</sup>

#### **1642**

**The first contact between Maoris and Europeans** occurred when the Dutch explorer **Abel Tasman** (See [1642–44](#)) landed briefly in the South Island and gave the country the name Nieuw Zeeland. Tasman's stay was extremely short and had little impact beyond making the existence of the country known to Europeans. <sup>3</sup>

#### **1769, 1773, and 1777**

**CAPT. JAMES COOK** led expeditions to New Zealand (See [1768–71](#)). These <sup>4</sup>

expeditions transmitted information about the country's geography, flora, fauna, and culture back to Europe. Starting with Cook's expeditions, **European diseases, plants, and animals** entered New Zealand, bringing about important changes in the Maori population and the landscape.

In the 1790s Euro-American **whalers** and **sealers** began to establish permanent stations in New Zealand. Trade in products such as timber and flax, particularly with Australia, brought the Maori into increasing contact with the world economy.

5

## 1814–1913

In the first half of the 19th century the Maori remained the dominant culture in New Zealand. Quickly adapting imported technology to their own ends, the Maori exploited the new opportunities brought by contact with foreigners. At the same time, disease, the capitalist economy, and new ideologies transformed Maori society and politics. Relations with Europeans varied from place to place, largely in accordance with tribal political needs. A treaty between Maori leaders and Britain in 1840 established British authority over the country, initiating a rapid growth in immigration from Britain. Despite active political and military resistance by the Maori, Europeans had taken control of most of the country by 1870. Maori population and landholdings both declined, although charismatic leaders helped to maintain communal cohesion. After 1852 New Zealand became a self-governing British colony, and in the late 19th century its politics came to be characterized by a populist form of social democracy. Economic expansion, based on gold and agriculture, was stimulated by ambitious programs of government borrowing and public works in the last quarter of the 19th century. In the 1890s, New Zealand carried out a series of social reforms, including women's suffrage, social welfare measures, and government-controlled industrial arbitration.

6

## 1814

Beginning with **Samuel Marsden**, English missionaries attempted to convert the Maori population to Christianity. Marsden established the first Church of England mission in the Bay of Islands. The missionaries also gave the Maori language a written form. In 1815 the **first Maori-English dictionary** was compiled, and more standardized and accurate orthography was developed in 1820. Literacy spread quickly among the Maori.

7

## 1820s

Western technology, such as clothing, guns, and metal implements, and food plants like the potato became pervasive among the Maori. Disease and intertribal wars prosecuted by chiefs such as **Hongi** and **Te Rauparaha** disrupted Maori society. 8

### 1830s

**Maori people were significant participants in the growing commerce with the outside world**, marketing flax to Australia in the period prior to 1831 and exporting large quantities of grain and legumes to New South Wales in the 1830s. Another transformation occurring at this time was the growing number of European residents, many of whom purchased land from the Maori. However, the Maori remained the key political force in New Zealand until the middle of the 19th century. 9

### 1833

First record of the **Papahurihia millennial movement**, a Maori response to the influx of Christian ideas resulting from increased missionary activity, including the translation of Christian writings. It was the first of many prophetic movements fusing Maori belief and Christianity in the postcontact period. 10

**James Busby** became British resident, the first official representative of the British government in New Zealand. 11

### 1835

A group of Northern Maori chiefs asserted their political sovereignty by drawing up a **declaration of independence**, later recognized by the British government. 12

### 1837

Busby reported to the British Crown that New Zealand was in a state of anarchy. Although a distorted picture of the situation, this prompted the British government to intervene more deeply in the country. Opinion differed among the British in New Zealand; some wanted to safeguard Maori rights, whereas others wished to open the country for settlement. Both groups, however, called for intervention by Britain. 13

## 1838

Founding of the **New Zealand Company** in Britain, which proposed sending immigrants to set up a colonial society founded on a strong middle class. 14

## 1839

**William Hobson** was sent by the British government to negotiate with the Maori, paving the way for annexation of New Zealand. 15

## G. [Africa, 1795–1917](#)

### [THE PARTITION OF AFRICA, 1914 \(MAP\)](#)

#### 1. [Overview](#)

Given the importance of the transatlantic slave trade for African history during the period 1500–1800, it would seem logical that the abolition of the slave trade, first declared by the Danes in 1792, but enacted by Britain in 1807, would be a major watershed. Indeed it was, but such was the resiliency of African historical process that it took many decades before the abolition of the European slave trade was felt in Africa. 1

The **abolition of the European slave trade** did not mean the end of slave exports. Britain embarked on aggressive diplomacy to bring the other European nations into the accord. However, as long as there was demand for slaves in the Americas and in the emerging French Indian Ocean plantation islands, African suppliers and European and American carriers would bring slaves to the buyers. Thus, the end of the transatlantic slave trade occurred when Cuba and Brazil began to enforce the prohibition on slave imports in the 1860s. Disguised slave exports persisted well into the 20th century. 2

However, Britain's prohibition of the slave trade to its nationals in 1807 did signal an important change in the organization and nature of the international economy. 3  
Increasingly throughout the 19th century, **industrial capitalism shaped the demand and supply of goods and service on a world scale**. European industries and the mass markets they fed required massive inputs of **tropical raw materials**, including vegetable oils and cotton. Europeans now wanted Africans to remain in Africa, cultivate the tropical commodities they needed, and consume the products of their industries.

European prohibition on the slave trade confronted African political economies in which warfare and enslavement had become deeply embedded. It was not easy to retool the engines of state enterprise. The crisis African states faced was, however, eased by the gradual decline in demand for African slaves in the Americas and by the coincident **expansion of demand for slave labor in Africa** itself. Slavery was a very old institution in Africa, and it had always been a means of increasing the size of domestic groups. In the face of demand for African agricultural commodities, Africans increasingly turned to slave labor to augment the scale of production. By reducing the price of African slaves, the abolition of the transatlantic slave trade paradoxically encouraged the expansion of slavery in Africa. 4

The **African slave market** had traditionally **avored females**. Female slaves added significantly to the reproductive potential of African households, and most African farming systems relied heavily on female labor. It is not at all clear whether this gender division of labor shaped African preferences for female slaves or whether the presence of female slaves encouraged female farming. Politically ambitious men in matrilineal societies, such as the Yao of East Africa, used female slaves as a means of attracting male followers and as a means of developing junior patrilineages in order to gain control over their own offspring. **Female slaves further encouraged the development of patriarchy and polygyny**. Since most Africans at this time lived in rural settings, additional agricultural labor was always desirable. 5

Between 1800 and 1914, Africans were drawn into a rapidly changing international economy. The new international economy intersected with ongoing processes of change in Africa. The result was a **speeding up of conflict and change in Africa**, leading increasingly to conflicts between African groups and between Africans and Europeans as Europeans scrambled to claim African territories as colonies. These processes occurred unevenly throughout the continent. By 1914 most of Africa was under **European colonial control**. 6

In southern Africa, the 19th century opened as Africans pursued their own state-building activities. This was most pronounced among the Nguni-speaking Bantu of southeastern Africa. Increased international commercial activity at Delagoa Bay intersected with human and livestock population growth and led to **ecological crisis**. In the foothills of the Draksenburg Mountains, Dingiswayo of the Mthwethwa introduced significant organizational innovations that yielded a powerful military machine. Under his successor, Shaka, the Zulu kingdom became a major polity in the region. Its military campaigns unleashed **reverberating cycles of warfare, political consolidation, and political dissolution** (known as the Mfecane), which reached as far north as Tanzania. White Afrikaner pioneers, called the **Trekboers**, entered this area in the 1830s after fleeing from British-controlled areas of South Africa. The better armed Afrikaners became only one more state-building group in this region, whose history over the course of the 19th century was characterized by conflicting but fluid frontiers. 7

The **discovery of diamonds in 1867 and gold in 1887** profoundly changed both white and black southern African societies and drew them all into an economy dominated by mining enterprises and the need to secure cheap labor. Providing labor for the mines or food for miners initially offered Africans new economic opportunities and introduced a brief period of prosperity. Africans, however, increasingly sought the independence of agriculture in preference to the discipline of the mines. White South Africans and their governments sought to limit Africans' choices and to force them to provide cheap agricultural or mining labor. The South African War (1899–1902) eventually yielded a unified South Africa firmly dedicated to white political and economic superiority.

8

East Africa was drawn increasingly into a world in which the European economic system was becoming dominant. Deeper patterns of Indian Ocean commerce persisted, but demand expanded for **slaves and ivory**, both essentially predatory activities. Slaves were being drawn to supply demand in the Americas, in the Indian Ocean plantations, the trans-Saharan and Red Sea trade, and in the Swahili slave economies of the coast. Africans and Arab plantation owners began to acquire slaves as agricultural labor in order to service international demand for cloves as well as regional demand for food for the slave and ivory caravans. Long-distance caravans organized by African merchants from the interior and by Swahili merchants from the coast crisscrossed East Africa, pushing ever deeper the **frontiers of international commerce**. These trends coincided with the waves of warfare and state building flowing from the South African Mfecane, yielding increasing cycles of predation and enslavement. In the waning days of the century, rinderpest, jiggers, smallpox, and other epidemics profoundly destabilized African societies. Human and animal populations declined. Rinderpest alone contributed to the loss of up to 90 percent of all large livestock. For cattle-keeping societies, this loss was catastrophic.

9

In the interlacustrine region, the 19th century witnessed the **consolidation of larger state systems** at the expense of the smaller polities. Buganda emerged preeminent in the region of Lake Victoria, developed a centralized bureaucracy, and began a process of colonization of the outlying regions. The cattle-keeping Tutsi warrior aristocracies emerged successfully in Burundi and Rwanda, structuring the region's economies through their loans of cattle and dependents. In the Sudan, Egyptian forces were trying to impose their authority over the fluid slave-catching frontier, which funneled large numbers of slaves down the river and into the agricultural regions of Egypt. From 1881 to 1885, the Egyptian forces confronted the state-building endeavors of the Mahdi. Intra-European competition for control over the region led to a serious diplomatic crisis in Europe.

10

In West Africa the century opened as the **militant Muslim forces** were about to embark on the jihad that led to the founding of the Sokoto Caliphate. The waves of Islamic expectancy and militancy reached outward and led to the founding of the Hamdullahi Caliphate in Masina and the Usonian state farther west. Under several of these religious

11

polities, Islamic education and piety made significant advances. The Sokoto Caliphate emerged as one of the strongest states in West Africa.

State building and consolidation were not limited to the interior. In the 19th century, the Asante strengthened a powerful empire in the forest region of what is now Ghana and centralized state power through elaborate **bureaucracies** of state officials. As in the theocratic states of the interior, the forest states were also based upon warfare, conquest, tribute, and the resettlement of captured population.

Perhaps the most striking change to occur in West Africa was the rapid expansion of international commerce in bulk vegetable commodities, especially palm oil and peanuts. For example, the peanut exports from the Gambia rose from a mere 47 tons in 1835 to over 11,000 tons in 1851. Similar patterns of expansion occurred throughout the coastal zones of West Africa and demonstrated how rapidly Africans responded to economic incentives. This has been called the **West African peasant revolution**, and it introduced significant changes in the region's political economy. European merchants established mutually beneficial commercial relations with African middlemen and African producers. Until midcentury, the **barter terms of trade favored African commodity producers**, who benefited both from rising commodity prices and falling prices for manufactured goods. By midcentury, commodity prices began to fall, and by the onset of the European depression of 1867, the international commerce of West Africa was in turmoil. European and African merchants competed for diminishing shares of the market, which led to bankruptcies, fraud, and commercial conflicts. European merchants petitioned home governments for protection. The pace of European colonialism increased, and by the 1870s, the scramble was on.

Until the 1870s, Europeans had neither wanted nor were able to impose themselves on Africans. However, **medical and technological innovations**—including the discovery that quinine provided prophylaxis against malaria, and the invention of the repeating rifle—provided the means for Europeans to defeat Africans in battle and to survive afterward. This window of military superiority closed rather quickly. In 1896, the African army of Menelik II was armed with modern repeating rifles and resoundingly defeated the invading Italian army at the **Battle of Adua** (Adowa). The Battle of Adua marked the end of the “scramble phase” of European colonialism.

By then, however, Europeans had laid claim to all of Africa except for Liberia, which since 1847 had been an internationally recognized republic under the rule of returned African-American freed slaves, and Ethiopia. Europeans' actual control over the land and peoples of Africa was much more doubtful. Indeed, Europeans and their African allies fought widespread resistance movements in the decades immediately following conquest. Some of these **primary resistance movements** drew on well-established forms of organization, such as polities. Others, including the Chimurenga in Southern Rhodesia and Maji Maji in Tanganyika, forged new organizations and networks. Resistance organized by polities was more easily suppressed, since Europeans usually

maintained decisive military superiority, and there was usually someone who could surrender. Resistance by acephalous societies proved remarkably difficult to suppress, since each community had to be defeated in turn.

**Other forms of resistance**, including migration, tax evasion, disobedience, and disrespect, were much less obvious and much more difficult to control. Such forms of resistance continued throughout the colonial period. Even more difficult for colonial officials to understand and to control were the ways in which Africans turned to Christianity and to Western education as means of resisting the power of colonial rule.

16

The missionary enterprise was an intimate part of European cultural imperialism. Christianity provided Africans with a means of creating a new sense of community. Since the BaKongo prophetess Beatrice Kimpa Vita of the late 17th century, Africans had sought to Africanize European cultural institutions such as the church. Church practices could be shaped to address African concerns more directly. **Breakaway African churches**, which predated colonialism but proliferated under European colonial rule, demonstrated how Africans used Western cultural institutions to resist European domination. Africans also turned to Islam in increasing numbers during the colonial period. African Muslims joined **Sufi brotherhoods** as a means of simultaneously creating new communities and maintaining cultural and political distance from European institutions.

17

Even European-dominated mission enterprises provided Africans with new opportunities. Particularly in central, eastern, and southern Africa, mission stations formally linked to European churches became sanctuaries to which runaway slaves and oppressed women could flee. Equally important, missions became the primary medium for the **expansion of Western literacy** and thus provided the training for a generation of African nationalists. (See [Overview](#))

## **2. European Exploration, 1795–1895**

### **1795–97, 1805–6**

**MUNGO PARK** explored the **Gambia** and reached the **Niger** at Segou, finally establishing the fact that the great river flowed east. During his second voyage, Park drowned in the Niger near the Hausa state of Yauri. 1

### **1798–99**

The Portuguese **Francisco de Lacerda** traveled from Tete on the Zambezi northward to **Lake Mweru**. 2

### **1802**

**Pieter Jan Truter** and **William Somerville** explored **Bechuanaland** and penetrated the interior almost as far as **Lake Ngami**. 3

### **1802–11**

The Angolan of color **Pedro Baptista** and **A. José** **crossed the continent** from Angola to Tete on the Zambezi. 4

### **1815**

**France abolished the slave trade.** Other countries (notably Spain and Portugal) followed suit. 5

### 1818

**Gaspard Mollien** discovered the **sources of the Gambia and the Senegal rivers.** 6

### 1821–25

**Walter Oudney, Dixon Denham, and Hugh Clapperton** journeyed from Tripoli across the desert to **Lake Chad** and thence westward to the **Niger**, proving that the river had no connection with the lake. 7

### 1825–26

**Alexander G. Laing** crossed the desert from Tripoli to **Tuat** and thence to **Timbuktu**, the first 19th-century European to visit that city. Laing was killed on his return across the desert. 8

### 1825–27

Clapperton led another Niger expedition from the coast to the interior. All members of the party become ill with malaria and dysentery. Richard Lander accompanied the expedition. Clapperton died in Sokoto in 1827. 9

### 1827–28

**René Caillié** reached **Timbuktu** from Guinea and proceeded thence to Fez. 10

### 1830–34

**Richard and John Lander** explored the lower **Niger** from Bussa to the sea. Richard Lander died along the Niger River.

### 3. [Regions](#)

#### a. [Sudanic West and Central Africa](#)

##### 1804

The career of **Usuman dan Fodio** (b. 1754) began in the late 18th century, when he traveled throughout the **Hausa kingdom of Gobir** as an itinerant Muslim teacher. He attracted many followers, among whom were newly won converts as well as Hausa farmers and Fulani pastoralists who nursed **grievances against the entrenched Hausa leadership**. In 1804, dan Fodio withdrew his allegiance to the Hausa ruler and launched a major  **jihad**. **Following the model of the Prophet**, Usuman dan Fodio led his followers on a **hijra**, a flight from unbelief, to a rural outpost on the border of Gobir. At first the jihad was designed merely to protect the Islamic community that had grown up around dan Fodio, and was restricted to Gobir, Kebbi, and Zamfara. Later it developed into a **war of conquest**, spilling over into Kano, Zaria, Nupe, and Borno. Dan Fodio's success in spreading Islam constituted one of the most important **Muslim revival movements** of the 19th century. 1

##### 1808

**Sheik Muhammad b. Amin b. Muhammad al-Kanami** came to power by leading a resistance movement against Usuman dan Fodio's forces in Borno. In a series of important letters, al-Kanami **challenged the legality of the jihad against Borno**, since Borno was also a Muslim polity. Although Borno lost some of its western provinces to the Sokoto Caliphate, Sheik Muhammad al-Kanami's efforts eventually led to a rejuvenation of Borno's political institutions and a revival of Islam. After having turned back the jihad, al-Kanami gained an enormous following and ousted the ruling Borno dynasty in favor of his own. 2

## 1812

Following the success of his jihad, Usuman dan Fodio established the **Sokoto Caliphate**, a powerful Muslim empire.

3

## 1810 or 1818

**Seku Ahmadu**, also known as Ahmadu Lobbo, a former student of Usuman dan Fodio, opposed the mixture of traditional beliefs and Islam so commonly tolerated among West African leaders. In either 1810 or 1818 (the exact date is uncertain), he led a jihad against the Muslim chiefs in Masina; later the jihad expanded to include the Bambara. Seku Ahmadu established an austere Muslim empire ruled from the newly built city of **Hamdallahi**.

4

## 1817

Following dan Fodio's death, his son, Muhammad Bello, succeeded. Bello ruled from 1817 to 1837, during which time the caliphate's power was consolidated. Fulani loyalists under nominal allegiance to dan Fodio and Bello then launched successive military campaigns to expand the state's borders. The **walled city of Sokoto** became the capital of the eastern half of dan Fodio's empire. **Ribats**, fortified posts, were erected in newly conquered territory. The Sokoto Caliphate became one of the most dynamic political, religious, and economic regions in Africa. Part of its prosperity came from the **relocation of captured slaves to the core areas of Hausaland**, where they contributed to agricultural, craft, trading, and herding activities. **Indigo-dyed Hausa cloth** fed demand as far west as Senegal and deep into the Saharan desert. Under the Sokoto Caliphate, Arabic became the language of diplomacy, and the aristocracy developed distinctive vernacular poetry. Each year, the Sokoto Caliphate launched new military campaigns to expand the empire or to reclaim territory lost to rebellion.

5

## 1848

Having returned from the pilgrimage, where he was introduced into the **Tijanyyia brotherhood** and became the Tijanyyia leader of West Africa, **al-hajj Umar Tal** (b. 1794) launched a jihad. In 1848, Umar Tal, originally from Futa Toro, established an

6

Islamic state in Duinguiray. In 1852–53, he launched a jihad against the Bambara of Kaarta; by 1854, he had established control over the Bambara and Malinke societies of the upper Niger and Senegal basins. Facing increasing pressure from French colonial expansion along the Senegal River Valley, in 1860 he launched a jihad against the Segu Bambara. By 1862, Umar Tal had conquered Masina and established a large empire. At its peak, the Umarian Empire stretched from the lower Senegal in the west to Timbuktu in the east, and from Guemou in the north to Duinguiray in the south. Unlike earlier jihads, that of Umar Tal occurred during the French conquest of West Africa. The Umarian Empire was not stable and suffered from **endemic resistance** and **civil wars**.

### 1855

The **French** built a fort at Medine to fight against al-hajj Umar.

7

### 1856–58

**N'Diambour, Sinn, and Salum** submitted to the French.

8

### 1859

**French control over Senegal** was expanded.

9

### 1862

Al-hajj Umar conquered Masina and occupied Hamdallahi in 1862. During the conquest of Masina, the empire was under the leadership of the original Seku Ahmadu's grandson, who shared his grandfather's name. Umar was killed shortly thereafter during **widespread revolts against the Umarian conquest**.

10

(See [1799](#))

## b. [Forest West Africa](#)

### 1792

Although only a marginal carrier, **Denmark prohibited the slave trade to its nationals, the first European nation to do so.** <sup>1</sup>

### 1806

The **Asante** defeated the Fante at Abora, near Cape Coast. <sup>2</sup>

### 1807

By passing the Act for the Abolition of the Slave Trade in 1807, **Britain became the first major slave-trading nation to prohibit the trade.** The British government authorized its navy to begin suppressing the human trade and to pursue a diplomatic offense to force other European carriers to abolish the trade. Although the slave trade **continued into the 1880s**, the volume of slaves exported overseas declined. In its place, the **industrializing countries of Europe sought tropical commodities, such as vegetable oils and cotton, to feed their mills.** Shifting European demand from slaves to agricultural produce induced a **peasant revolution** in West Africa, as Africans increased agricultural production. <sup>3</sup>

### 1808–15

Six thousand slaves were captured at sea by the **British Anti-Slavery Squadron** and released in Sierra Leone.

4

### c. 1810

The **Yoruba kingdom** was subject to civil wars. Oyo was sacked. Illorin became an independent kingdom.

5

### 1811

An **Asante** campaign against the Fante failed.

6

### 1814

In 1814 the **Church Missionary Society (CMS)** established a school at Freetown in order to train freed slaves as teachers and missionaries. In 1827 the school was moved to Fourah Bay, east of Freetown. It eventually broadened its focus beyond missionary training and offered a general curriculum in higher education.

7

### 1815 Ff

The British used the court of admiralty in Freetown to “**liberate**” slaves captured on the high seas. Shortly after the passage of the antislave trade act, the **British Anti-Slavery Squadron** began patrolling the West African coast to intercept ships illegally carrying slaves. Intercepted ships were brought to Freetown in Sierra Leone. There a court of vice-admiralty prosecuted crews and freed slaves. Despite the British patrols, the slave trade was not eradicated.

8

### 1816

Building of **Bathurst**, Gambia, began.

9

### 1817

**A jihad was launched in Ilorin**, and a Fulani emirate linked to the Sokoto Caliphate was established. The jihad in Ilorin, formerly a dependency of the Oyo Empire, also coincided with **expansion of civil wars in Yorubaland, which led to the destruction of Oyo**. Decades of turmoil and fighting fed the slave trade. 10

## 1821

British possessions in Sierra Leone, the Gold Coast, and the Gambia were joined as the **British West Africa Settlements**. 11

### c. [Northeast Africa \(Horn\)](#)

#### 1. Ethiopia

##### 1800–55

Ethiopian “**Zamana Mesafent**” (“era of the princes”) was marked by a breakdown of central power and the **emergence of regionally based feudalism**. During this period the imperial monarchy survived in form but was without substantial authority. There was rivalry among regional feudal lords to become the most powerful in order to dominate the emperor. The Ethiopian Church was also riven by factions. The feudal lords were supported by in-kind payments and corvée labor of the peasantry, who were further undermined by the constant state of war among the regional princes. 1

##### c. 1800–20

**Galla kingdom** of Enarea was founded. 2

##### 1838

**Protestant missionaries** were expelled from Tigre. 3

##### c. 1842

**Lazarist missionaries** arrived in Tigre and Eritrea. 4

### c. 1847

**Theodore**, the future emperor, organized rebels and overran Gondar.

5

### 1855–68

The **modern period in Ethiopia** began with the reign of **Tewodros II**, who consolidated and recreated the Ethiopian Empire. Tewodros established a **national army and appointed salaried governors and judges** after defeating feudal lords. Initially he was allied with the church, but he attempted to reform it. Excess church land (beyond that needed to support essential clergy) was redistributed, and Tewodros permitted the introduction of an **Amharic Bible by Protestant missionaries**.

6

### 1866

The Gondar region rebelled against **Tewodros**, who imprisoned several British officers.

7

### 1867

A **British punitive expedition**, involving 68,000 men under Sir Robert Napier, was sent to release British prisoners held by **Tewodros**.

8

### 1868

**British forces** freed British prisoners, and Tewodros committed suicide. The British expedition demonstrated the power of **modern weaponry**.

9

### 1872, Jan

**Yohannes IV** achieved the Ethiopian throne. He was more successful than Tewodros in bringing about **unification** by following a conciliatory policy toward both the nobility and the clergy. He supported **modernization of the military with imported firearms and a British adviser**. 10

## d. [East Africa](#)

### 1. Swahili Coast and Hinterland

#### 1800

**Nyamwezi** people from the Tanganyikan interior established a **long-distance caravan trade to the Swahili coast**, trading ivory for beads and cloth. Omani authority on the Swahili coast was significant only in Mombassa, Zanzibar, and Kilwa; other towns were dominated by local rulers. 1

#### 1800–45

**Increased long-distance trade initiated change in interior societies**, with rise of wealthy traders known as “**BIG MEN**” who used their wealth to attract followers. Regional cultural practices developed, and there was intermarriage among groups. Coastal towns became bigger and more ethnically mixed. **Plantation and domestic slavery** grew at the coast. **Slave concubinage** led to a cultural mix of African and Arab. Trade led to the **spread of Islam and the Kiswahili language** in the interior. 2

#### 1806–56

**Sayyid Sa’id bin Sultan** ascended to the Omani throne. 3

#### 1814

**Adballah ben Ahmad al-Mazrui**, governor of Mombassa, declared Mombassa independent. 4

## 1814–40

**Sayyid Sa'id** moved to reestablish Omani dominance of Swahili towns, displacing the Mazruis (1822–37) in Lamu, Pemba, and Mombassa. 5

## c. 1818

**Cloves** were introduced into Zanzibar. 6

## 1822

**Hamid ben Ahmad al-Busaidi**, sent by Sayyid Sa'id, compelled Barawam Lamu, Pate, and Pemba to acknowledge Omani suzerainty. 7

## 1827

**Sayyid Sa'id** visited his domains in East Africa. 8

## 1830–80

**EXPANSION OF IVORY AND SLAVE TRADE** drew East Africa into the capitalist world economic system before the dawn of colonial rule. By the 1870s, most of the East African interior was integrated into the international trade network through Zanzibar. **Swahili-Arab traders** began to trade in the interior for ivory and slaves. Slaves were sought for foreign trade and for clove and other plantations on islands and the coast, while cloth, copper, beads, and guns were traded in the interior. Ivory trade thrived with the Nyamwezi in the central region, while wars encouraged slave trade in the southern region. Interior peoples, especially the Nyamwezi, Kamba, and Shambaa, took an active role in long-distance trade as porters to the coast. **Ivory and slave trades also stimulated interregional trade** in the interior, especially of iron and salt. **The slave trade caused great disruption** among interior peoples but brought wealth to 9

groups acting as raiders and traders. Villages became more compact for defense purposes. Swahili-Arab traders influenced styles of dress and introduced imported goods. **Guns were common by 1860.** Rectangular building styles spread inward from the coast. Trade led to a mixing of ethnic groups at the coast and at interior trading centers. Involvement in trade also led to the emergence of “big men” who amassed followers on the basis of new wealth, unconnected to traditional sources of authority such as religion. Coastal trade also influenced a shift in the interior to **societies based more on military power than on religious authority.**

## 1840

**Sayyid Sa’id moved the Omani capital to Zanzibar** and began to reorient the Swahili trading economy toward exports. <sup>10</sup>

### e. [West Central Africa](#)

#### 1800

Around this time, **Swahili-Arab** traders in **slaves and ivory** established trading posts in northeastern present-day Zambia and southeastern present-day Zaire. These posts came to take on a **military character and supplanted local chiefs in the eastern Lunda Empire**. <sup>1</sup>

#### 1800–73

Consolidation and expansion of the **Lunda Empire** under a succession of rulers: **Yavo ya Mbanyi** in the early part of the century, **Nawaji ya Ditende** (c. 1821–c. 1853), and **Muteba ya Chikombe** (c. 1857–73). The empire was ruled through a combination of traditional leaders and an appointed bureaucracy. It was knitted together by an ideology of unity and a balanced administrative structure. The empire was also strengthened by a location suited to agriculture and by the copper and salt trade. Wealth was also based on the **slave trade for export and for domestic slave labor**. <sup>2</sup>

#### 1819–21

**Cotton** cultivation was introduced into Angola. <sup>3</sup>

#### 1822

Popular **uprising and mutiny** in Luanda. 4

**1834**

Angola ignored **antislavery** prohibitions. 5

**1838**

The governor of Angola **was removed for trafficking in slaves**. 6

**1839**

**King Denis**, chief of the left bank of the Gabon River, accepted the French treaty. 7

**1840**

As part of the **new Portuguese expansion into Angola**, merchants founded the port of **Mocamedes** to tap into the ivory trade of the southern highlands. 8

**1842**

**King Louis**, chief of the right bank of the Gabon River, accepted the French treaty. 9

**1844**

**Holy Ghost Fathers** started missionary work in Gabon. **Protestants** opened a mission station at Bimbia. 10

**1845**

**Baptist** missions opened at Douala. 11

## f. [Southern Africa](#)

### 1. North of the Limpopo

#### c. 1800–50

**Exports of slaves** from Mozambique to South America rose to over 15,000 per year. In some years, 25,000 slaves were exported. <sup>1</sup>

#### 1800–40

**Lozi state**, composed of pastoralist people on the Zambezi floodplain, emerged. The Lozi king acted as the owner of cattle, which he redistributed in return for other goods, generating a kind of internal trade. <sup>2</sup>

#### 1827–29

**A Portuguese garrison** was established in Lundazi District, Zambia. <sup>3</sup>

#### 1840–64

The **Lozi** of the Zambezi floodplain (Zambia) were conquered and ruled by **Kololo** cattle-raiding migrants from Botswana, displaced by the social disruption known as **Mfecane**, who successfully adopted the Lozi canoe-based tributary system. The Kololo also entered the Angolan slave trade with captives generated by cattle raids, beginning in 1850. Soon thereafter they also entered the ivory trade, which brought about tensions <sup>4</sup>

leading to the **kingdom's disintegration** in the 1860s.

### c. 1840

**Ndebele trekked** to Matabeleland and defeated the Kalanga and the Rozwi. Kololo migrated across the Zambezi to the Tonga Plateau. **The Ngoni incursions began**, destabilizing wide swaths of the Central and East African interior. 5

### 1850–65

**Export of slaves** from Mozambique declined and then ended. 6

### 1859

**London Missionary Society mission** founded in Inyati, Southern Rhodesia. 7

### 1861–64

Failure of the **UMCA** (University Mission to Central Africa) mission to Shire Highlands, Nyasaland. 8

### 1862

**J. S. Moffat** joined the mission at Inyati. 9

### c. 1873

Four hundred white and black pupils attended **schools** in Mozambique. 10

(See [1778–1800](#))

## **g. [Madagascar](#)**

### **1800–10**

**Andrianampoinimerina** (Nampoina), having come to power in 1783, conquered neighboring kingdoms and **reunified Imerina** through strength of imported arms by 1806. Nampoina consolidated power and the authority of the king as owner of land. He inaugurated a system of corvée labor for public works. Wars generated slaves for export and internal use. 1

### **1803**

**A French** force established itself at Tamatave. 2

### **1810–28**

Rule of **Radama I**, son of Nampoina, in Imerina. 3

### **1811**

**The British** occupied Seychelles, Madagascar, and Île de France. 4

### **1817**

**Radama I** began campaigns of conquest and **reforms to modernize the army with European advisers**. The army reached a strength of 15,000 with modern arms, enabling the conquest of much of Madagascar. This conquest ended the country's isolation, leading to importation of more European goods and ideologies. Under British pressure, **Radama agreed to a treaty to prohibit the slave trade**.

5

## 1820

**The London Missionary Society (LMS)** established a mission station at **Tamatave**.

6

## 1822, Feb. 22

Radama I declared sovereignty over all Madagascar.

7

## 1826

LMS opened 30 **schools** throughout Madagascar.

8

## 1827

Having adopted phonetic Roman orthography for Malagasy, there was a **rapid spread of literacy**. Radama I also encouraged the spread of **European building and crafts** in the capital.

9

## 1828, July 27

**Radama I died**, succeeded by his wife, **Ranavalona**, with support of a consortium of chiefs and the Europeanized ruling class. Britain terminated the treaty of protection. Unsuccessful **uprising of Sakalava** against Merina.

10

## 1830–40

Reaction against Western involvement in Madagascar led to **persecution of Christians** in Imerina. 11

## **[H. North America, 1789–1914](#)**

### **[1. The United States, 1789–1877](#)**

#### **[a. Overview](#)**

The period between the new Constitution and Reconstruction is perhaps the most significant phase of American history. This period not only witnessed the gradual growth of respect for American sovereignty abroad, but also entailed dramatic economic, population, and territorial growth at home, including **early industrialization, immigration, and urbanization**. Even in rural areas, growing **commercialization** entailed new motivations and anxieties as well as increased production for the market. Commercialization even affected family roles and values, with growing emphasis in the rising middle class on the home as moral haven. In some sectors the **per family birthrate** began to drop. 1

Closely intertwined with these demographic, economic, and territorial changes were far-reaching cultural and political transformations: the rise of political parties, universal suffrage for white men, and a plethora of new religious and social movements. Although the nation deepened its economic, social, and political independence during the period, it moved only slowly toward cultural independence from the elite traditions of Europe. At the same time, the **removal of Native Americans** from western lands to make way for white settlers and the rapid **spread of slavery** into the Deep South signaled increasing fragmentation along regional, class, and racial lines. These growing socioeconomic, political, and cultural conflicts would culminate in the eruption of the brutal Civil War, followed by the equally painful period of Reconstruction. 2

Following the establishment of the new constitutional order, the U.S. population increased from **3.9 million in 1790** to **9.6 million in 1820**. The Louisiana Purchase in 1803 added the nearly 2 million people who occupied the nine new states and three territories west of the Appalachian Mountains. The nation's **urban population** increased from less than 550,000 in 1820 to 1.8 million in 1840. By 1870, when the U.S. population reached nearly 40 million, about 25 percent of the total lived in cities, as the urban population grew more rapidly than the population as a whole. 3

The U.S. population had not only expanded. It had become more ethnically diverse. The 4

Mexican-American War (1846–48) resulted in the acquisition of California and New Mexico, including present-day Utah, Nevada, and Arizona. The Mexican-American population would grow over time. Nearly 2 million Irish immigrants entered the U.S. during the two decades before the Civil War. German immigrants added another million, supplemented by 750,000 immigrants from Canada and Great Britain. Understandably, immigration played a major role in the nation's population growth. It was during the early 19th century that the U.S. became one of the first countries to undergo the **demographic transition**—a sharp decline in the number of births in both urban and rural areas. Among the many factors accounting for the falling birthrate were various methods of birth control.

The War of 1812 strengthened the nation's claim to sovereignty and expanded its role in the market economy. The financing of banks, transportation, and especially manufacturing enterprises escalated. Although the earlier outwork system (which employed manufacturing workers in their homes) persisted in some industries, American manufacturers turned increasingly toward the **factory system** as the primary mode of organizing production. By using new technology and reducing the labor requirements of production, early industrialists undermined the independence of craftworkers and opened the way for the widespread use of common waged labor. Although some master craftworkers benefited from such changes by becoming employers, by 1840 an estimated 50 percent of the nation's free workers labored for wages and found it difficult to acquire property, maintain skills, and move up in the socioeconomic system. 5

These demographic and economic changes effected a series of political and cultural transformations. As early as the presidential election of 1796, Federalists and Democratic-Republicans (known as Republicans) had adopted party labels in their quest for public office. The rise of Republicans in the election of 1800 signaled the development of a more democratic polity, which culminated in the establishment of **universal white male suffrage** during the 1820s and the triumph of the Democratic Party with the election of Andrew Jackson in 1828. New cultural and social movements both reflected and reinforced these changes. The advent of the **Second Great Awakening**, for example, transformed much of the country into fervent defenders of evangelical Protestantism. Emphasizing piety over theology and education, evangelical Baptist, Methodist, and Presbyterian denominations rapidly expanded. On the one hand, by promoting the virtues of hard work, thrift, discipline, and temperance, the Second Great Awakening reinforced the beliefs and practices of the expanding middle class. On the other hand, its stress on human will and the capacity of people to change their lives helped to stimulate a plethora of reform movements designed to alleviate inequality and democratize American society. The rise of utopian communities like Brook Farm, the Shakers, and the Oneidas; the women's suffrage movement; workingmen's parties; and the abolitionist movement all aimed to reverse diverse forms of inequality and suffering that had increased under the impact of early industrialization. 6

As the U.S. deepened its socioeconomic and political independence, it also experienced a **cultural renaissance** during the 1840s and 1850s. With the exceptions of Washington Irving (1783–1859) and James Fenimore Cooper (1789–1851), few American artists were known outside the United States before the 1830s; thereafter, however, writers increasingly responded to Ralph Waldo Emerson's (1803–82) call for a declaration of cultural independence from what he called the “courtly muse” of the old western European world. Henry David Thoreau (1817–62), Walt Whitman (1819–92), Nathaniel Hawthorne (1804–64), Herman Melville (1819–91), and others reflected the slow growth of independence in American letters. In short, the impact of republican institutions, the expansion of evangelical Protestantism, the gradual emergence of cultural independence, and rising participation in the market economy all helped to define American nationhood during the period from the establishment of the Constitution through the mid-19th century.

As in earlier periods, however, America remained divided along regional, cultural, and class lines. The westward movement of white settlers continued to remove Native Americans from the land; southerners expanded their dependence on slave labor with the rise of cotton culture in the Deep South; women remained disfranchised and subordinate to white men; growing numbers of Americans found themselves in the ranks of landless wage laborers; and, as Irish and German immigrants entered the country in growing numbers, significant ethnic and religious differences divided white Americans. Although the nation repeatedly worked out compromises (1820, 1850) and saved the nation, the increasing politicization of slavery, sectionalism, and class interests fractured the nation by the 1860s. The U.S. entered nearly five years of brutal military conflict. The Civil War and the era of Reconstruction that followed would liberate some 4 million slaves and define African Americans as part of the body politic, but it was only a partial victory. Region, class, and race would continue to undermine the democratic promise of America. Even as the North and South reunited through the medium of urban industrialization, the fall of Republican governments in the South, the rise of the coercive sharecropping system, and the emergence of white supremacist groups like the Ku Klux Klan reinforced earlier forms of inequality and opened new challenges to America's democratic institutions.

## **b. The Early National Period**

THE UNITED STATES DURING THE CONFEDERATION PERIOD (MAP)

THE EXPANSION OF THE UNITED STATES (MAP)

### **1789, March 4**

**First Congress** met at New York.

1

### **April 30**

**WASHINGTON INAUGURATED AS PRESIDENT.** Creation by Congress of three executive departments: state, war, and treasury. The **Judiciary Act** of 1789 provided for a system of federal district and circuit courts. The first ten amendments to the Constitution, the so-called **Bill of Rights**, were adopted by the Congress and sent to the states.

2

## c. [The Civil War](#)

### [THE CIVIL WAR 1860-1865 \(MAP\)](#)

#### 1861, March

The **Morrill tariff** marked the beginning of successive tariff increases, which by 1864 reached duties of 47 percent. 1

**MILITARY EVENTS.** The Confederates, having seized Federal funds and property in the South, bombarded **Fort Sumter** on April 12–13, just as a relief expedition of the Federalists approached. 2

#### March 13

Great Britain recognized the Confederate states as belligerents. 3

#### April 15

Lincoln called for 75,000 volunteers to serve for three months and summoned Congress to meet on July 4. On May 3 he appealed for 42,000 men to serve for three years or for the duration of the war. General expectancy of a short conflict. **The North had immense advantages:** 23 states with a population of almost 23 million against 11 states with a white population of 5 million; the North possessed financial strength, manufacturing facilities, and extensive railway communications. The South was largely dependent on 4

cotton growing and badly hampered by the blockade of the Confederate ports (proclaimed on April 19); from the beginning the South was on the defensive. **However, the South was not without some advantages:** Confederate soldiers were fighting on home terrain, slave labor freed a larger proportion of men to fight, and the martial tradition of the slaveholding class gave the South a military edge.

**Within the first two weeks of war, women spearheaded the establishment of nearly 20,000 organizations to help supply troops with clothing, food, medicine, and spiritual support.** Northern women eventually coordinated their efforts through a central body, the **Sanitary Commission**. Superintendent of nurses for the Union army, **Dorothea Dix** (1802–87) assured officials that she would recruit only women over age 30 and “plain in appearance.”

### May 23

**Gen. Benjamin Butler declared as contraband three slaves who escaped to his lines in Virginia and refused to return them to their master.** By Aug., 1,000 contrabands had joined Butler's camp.

### July 21

**FIRST BATTLE OF BULL RUN.** By July there were some 30,000 troops in and around Washington, under command of Gen. Winfield Scott. At Bull Run the federal army was routed. The effect of the battle was to open the eyes of the federalists and to introduce a period of more extensive and systematic preparation.

### Aug

**Lincoln signed the First Confiscation Act,** authorizing the seizure of all property, including slaves, used to support the Confederacy. Also in August, an income tax of 3 percent was levied on all income in excess of \$800.

### Nov. 1

Gen. **George B. McClellan** (1826–85) was appointed to succeed Scott in command of the federal forces. McClellan's policy was one of cautious, careful preparation and reliance on numbers. He spent the winter training some 200,000 men (the Army of the Potomac) for a march on the Confederate capital, Richmond.

## **d. [Reconstruction](#)**

### **1865, March**

Congress created the **Bureau of Refugees, Freedmen, and Abandoned Lands**. Known <sup>1</sup> as the **Freedmen's Bureau**, the agency assisted the former slaves and helped them adjust to freedom. Although helpful, the bureau often placed planters' interests above those of the freed people, such as when they coerced blacks to accept unfair labor contracts.

### **May 29**

**Pres. Johnson issued a proclamation of amnesty, granting pardon to all ordinary <sup>2</sup> persons who had participated in the rebellion who would take an oath of allegiance.**

### **Dec**

Joint Committee of Fifteen on Reconstruction was appointed by Congress. <sup>3</sup>

### **Dec. 18**

**Ratification of the Thirteenth Amendment, abolishing slavery. <sup>4</sup>**

## **2. The United States, 1878–1914**

### **a. Overview**

Between the end of Reconstruction and the advent of World War I, America nearly completed its transition from a predominantly agrarian society to a predominantly urban industrial nation. Immigration, urban growth, and the expansion of industrial capitalism proceeded apace. The number of Americans living in cities reached nearly 50 percent, fueled by the arrival of nearly 17 million immigrants, mostly from southern, central, and eastern Europe. The Asian and Hispanic populations also increased. The **birthrate continued to drop**, falling from 39.9 live births per 1,000 people in 1880 to 32.3 by 1900. The nation witnessed the increasing decline of the agricultural sector, the emergence of a progressive movement to reform the worst abuses of industrialism, and the intensification of racism at home and abroad (as the nation expanded beyond its continental boundaries and became an imperial nation with significant overseas possessions). Despite the heightening of nationalistic fervor as the U.S. became a major world power, class, race, and regional differences continued to define the American experience. 1

The unequal impact of industrialism underlay the emergence of a variety of new social movements. In rapid succession, white workers embarked upon a series of organizing drives: the Knights of Labor in the late 1870s and 1880s, the American Federation of Labor during the 1890s, the Socialist Party of America in the early 1900s, and the Industrial Workers of the World after 1905. Native Americans continued to resist the encroachment of white settlers upon their land, as reflected in the persistence of Indian wars through the 1890s. African Americans, European immigrants, Hispanic Americans, and Asian Americans all intensified their separate institutional and community-building activities, designed to fight the impact of racial, class, and ethnic discrimination on their lives. Likewise, in an effort to arrest the deterioration of their livelihood, farmers launched an aggressive campaign to gain control over state and national economic policy. Their movement gained its greatest expression in the formation of the Populist Party in 1892. For a brief moment, it appeared that farmers would succeed in bridging not only regional differences between the South and the West, but racial and ethnic ones as well. The movement produced some of the most dramatic examples of black-white cooperation 2

in American history.

Under the impact of these diverse social movements, the political system itself underwent significant change. Whereas the period from the fall of Reconstruction through the 1890s represented what some analysts call the “**politics of equilibrium**,” characterized by little disagreement on major issues, the 1890s ushered in a new era of political conflict. <sup>3</sup>

Following the decline of the **Populist revolt** and the triumph of the Republican Party in the election of 1896, the nation experienced a resurgence of reform. Between 1900 and World War I, the **Progressive movement** sought to control the most exploitative features of industrial capitalism—especially its abuse of men, women, and children. Despite heroic efforts to right outstanding wrongs of the industrial system, failure to address the issue of racial injustice was undoubtedly the movement's greatest shortcoming.

During the late 19th and early 20th century, the system of Jim Crow was consolidated in the South, and its de facto counterpart proceeded apace in the North and the West. <sup>4</sup>

Although some whites joined blacks in the formation of the NAACP (1909) and the National Urban League (1910), racial justice represented a low priority for most white Americans. Perhaps it was inevitable that America would stop short of developing a more equitable multiracial society. It was during this period that America completed its continental expansion from the Atlantic to the Pacific. Following the Spanish-American War, the United States also took its place as a new empire with its own colonial claims over peoples of color in Hawaii, Puerto Rico, and Guam.

## b. New Political, Social, and Diplomatic Issues

### 1878, Feb

**The Bland-Allison Act.** In 1873 Congress had omitted the standard silver dollar from the list of authorized domestic coins to be minted in the future, commonly referred to as the **Crime of 1873**. The silver producers were supported by the farmers, who believed the free coinage of silver would bring an upturn in the price of farm products. In 1877, the Bland-Allison Act was passed over the veto of Hayes and authorized the secretary of the treasury to purchase from 2 million to 4 million dollars' worth of silver bullion monthly for coinage. <sup>1</sup>

### 1879

The **U.S. Geological Survey** was founded, consolidating under one office the several surveys that had been gathering valuable information on western North America for over a decade. Under the directorship of **John W. Powell** (1834–1902) after 1881, the survey grew into a powerful agency for the progress of science in the United States. <sup>2</sup>

**Frank W. Woolworth** established his **five-and-ten-cent store** at Lancaster, Pa. By 1900, the company's volume of business reached over \$5 million and continued to rise, reaching \$15 million in 1910. <sup>3</sup>

### Jan. 1

**Resumption of specie payment.** The success of the policy was greatly aided by the unusual demand abroad for American agricultural products, which brought gold into the country in large quantity. <sup>4</sup>

### **3. British North America, 1789–1914**

[CANADA, FORMED 1867 \(MAP\)](#)

#### **a. Overview**

The period between the American Revolution and the 1880s witnessed major transformations in Canadian society. The country made the transition from a political economy shaped by British mercantilism to a new system of free trade, industrialization, and urbanization. During this period, the nation also attracted large numbers of new immigrants, moved into the western territories, and gradually brought disparate provinces into a larger national union. Significant class, regional, and racial factors nonetheless shaped the nation's history, but they did not erupt into a bloody civil war (between Europeans, as in the United States) partly because they were legally defined and institutionalized from the outset. 1

Canada's European population increased from an estimated 250,000 in 1791 to over 1.6 million in 1845. By the 1870s, the nation's population had increased to nearly 4 million. Although French-speaking Canadians outnumbered other nationality groups during the early years, by the 1840s English-speaking Canadians surpassed their French-speaking counterparts in numbers. With the repeal of the British Corn Laws (See [1846, June 26](#)) during the 1840s and the rise of free trade policies thereafter, the Canadian economy experienced the beginnings of a fundamental reorientation toward industrialism. New manufacturing establishments slowly emerged, cities expanded, and improvements in transportation and communication proceeded apace. By the 1860s and 1870s, new urban industrial elites increasingly displaced an earlier commercial elite with close ties to agricultural production. Nonetheless, for most of this period the old commercial elite 2

dominated the economy, society, and politics of the nation. They controlled the provincial governments and made policies that reinforced their control of the nation's resources. White workers, women, African Canadians, and Native Americans found it difficult to reverse patterns of inequality that subordinated them within the Canadian political economy. Moreover, the cleavage between French- and English-speaking Canadians persisted.

Despite social fragmentation, Canada experienced significant strides toward independence and sovereignty. Although it was divided between Upper Canada and Lower Canada and remained closely anchored to the British Empire following the American Revolution, it gained an expanding measure of autonomy during the 19th century. In 1840, the Union Act brought the two Canadas together in one legislature, and, following the American Civil War, the British North American Act created the Dominion of Canada. Consisting of four provinces—Ontario, Quebec, Nova Scotia, and New Brunswick—the nation moved toward even greater control over its domestic and foreign affairs.

## **b. The Dominion of Canada, 1789–1877**

### **1791, June 10**

**PASSAGE OF THE CANADA ACT** through the British Parliament. It went into effect on Dec. 26. Canada was divided at the Ottawa River into **Upper Canada (chiefly English) and Lower Canada (predominantly French)**. Each part had a governor, a Legislative Council appointed by him, and an elected Assembly. Colonial laws could be disallowed by the home government within two years of passage. One-seventh of all land granted was to be reserved for the maintenance of the Protestant clergy. All rights of the Catholic Church were reaffirmed. <sup>1</sup>

**EXPLORATION OF THE WEST.** In 1789 a Spanish expedition from Mexico took possession of the northwest coast, but in 1790 Spain abandoned claims to the region (**treaty of Oct. 28**). In 1792 **Capt. George Vancouver** explored the Pacific coast and circumnavigated Vancouver Island. In 1793 **Alexander Mackenzie** reached the coast after the first overland journey from the east. Meanwhile (1785–95) **David Thompson** had traversed much of the territory along the coast of Hudson Bay north to Fort Churchill, as well as the regions about Lake Winnipeg and along the Saskatchewan and Athabasca Rivers. **Jay's Treaty** between the United States and Great Britain (Nov. 19, 1794) provided for a boundary commission to determine the frontier west of the Lake of the Woods. <sup>2</sup>

By 1810 much of the southern half of present-day Canada had been trekked by various explorers and traders. In 1811 **Lord Selkirk** bought from the **Hudson's Bay Company** 116,000 square miles for settlement in Manitoba, Minnesota, and North Dakota. Scottish settlers arrived there on the **Red River** in 1812. In 1815 an attack was launched on the colony by agents of the rival Northwest Company; colonists were driven out in 1815 and 1816. An investigation in 1817 upheld the claims of Lord Selkirk, and the colony was reestablished. <sup>3</sup>

Estimated population of Canada: French descent, 140,000; British, 110,000; 50,000 Indians in the settled sections of British North America; and a small number of African Canadians. Nearly 50 percent of the 3,000 **black loyalists in Nova Scotia** responded to their lowly position by emigrating to the **African colony of Sierra Leone**. 4

Despite the support of Indians like Joseph Brant during the American Revolution, Britain offended them by ceding large tracts of Indian land to the U.S. 5

## 1796

The arrival of **Jamaican maroons augmented** Nova Scotia's small black population. 6

## 1804

**The Alien Act** was passed, permitting banishment of anyone found guilty of disturbing the peace in Upper Canada. 7

## 1807

Napoleon closed off Baltic Sea sources of timber supplies and helped to stimulate the growth of the Canadian timber industry. 8

## 1809

An opposition political group called the **Society of Loyal Electors** was formed on **Prince Edward Island**. A similar group known as the **Parti Canadien (later Parti Patriot)** formed in **Lower Canada** at about the same time. They were considered the earliest manifestations of political parties in Canada. 9

Painter **William Berczy** (1744–1813) produced his masterpiece of early Canadian painting, *The Woolsey Family*. 10

## 1812, June 18

**UNITED STATES DECLARED WAR ON GREAT BRITAIN**. Among the causes of conflict were the continued trouble with the Indians, supposedly instigated and equipped 11

by the British in Canada, and the American desire to conquer Canada. A triple attack was planned: on Montreal; on the region opposite Niagara; and on the region opposite Detroit. On the Montreal front and at Niagara, the offensive failed to materialize. At Detroit a short advance was made, followed by retreat. The British, under Gen. Isaac Brock, secured the **surrender of Detroit** (Aug. 16, 1812). Brock then turned to Niagara and fought the successful engagement of **Queenston Heights** (Oct. 13), in which he was killed.

Canada's small **black population** was reinforced by the **arrival of 2,000 ex-slaves from the United States**. By 1860, an estimated 30,000 additional slaves entered Canada via **the Underground Railroad**. <sup>12</sup>

## 1813

The Americans captured **York** (Toronto) on April 27, but abandoned it soon afterward (May 2). In Ohio the Americans were vigorously attacked by the British, supported by the Indians (**Tecumseh**). On Sept. 10 **Lt. Oliver Hazard Perry**, with an improvised fleet, won the naval **Battle of Lake Erie** and forced the British to abandon Detroit. The Americans, under **Gen. William Henry Harrison**, crossed into Ontario and fought the successful engagement on the **Thames River** (Oct. 5), but were unable to follow up the advantage. The campaign against Montreal was begun on Oct. 17, but the Americans were defeated in the **Battle of Chrysler's Farm** on Nov. 11, and the advance was abandoned. On Dec. 10 an American force burned **Newark**; in retaliation, the British and Canadians, after taking **Fort Niagara** (Dec. 18), burned **Buffalo** (Dec. 29–31). <sup>13</sup>

## 1814, July 5

The Americans, advancing from Niagara, took **Fort Erie** and won the engagement at **Chippewa Plains**. They advanced to Queenston, but then fell back again. <sup>14</sup>

## July 25

Sixteen thousand British troops had been sent to Canada, and an invasion was begun by way of Lake Champlain. <sup>15</sup>

## Sept. 11

An American naval force under **Lt.** (later Captain) **Thomas Macdonough** won the **Battle of Plattsburg** and forced the retirement of the British.

### **c. Newfoundland, 1855–1878**

#### **1855**

**Responsible government was granted.** The bicameral legislature comprised the Legislative Council (15 members), which was appointed by the governor-in-council, and the House of Assembly (36 members), which was elective. A responsible cabinet was instituted. 1

#### **1864**

Copper was discovered in the north, and mining operations were begun. 2

#### **1873**

Direct steam communication with England and America was established. 3

### **d. [Canada, 1878–1914](#)**

As in the United States, this period represented the triumph of industrialism in Canadian society. The nation had taken significant steps toward national unification in 1867, but 1885 is considered the crucial watershed in Canadian history during this period. The year 1885 marked the completion of the Canadian Pacific Railway, the nation's first transcontinental transportation network. Like the United States, Canada was now linked by a single rail system from the Atlantic to the Pacific. Moreover, in 1885, Canadian forces defeated the Métis (a multiracial ethnic group) and its Indian allies and opened the way for the unrestricted European occupation of the Canadian west. In the wake of the Métis war, Canada also embarked upon a public debate about its national identity, which revealed deep cleavages between English-speaking (mainly Ontario) and French-speaking (mainly Quebec) Canada. At the same time, this period witnessed the growth of the labor movement, rising demands for women's suffrage, and growing animosities and restrictions against the small Chinese population. Thus, by the eve of World War I, Canada continued to wrestle with significant class, cultural, and regional divisions. <sup>1</sup>

#### **1878, Oct. 5**

**Marquess of Lorne**, governor-general (1878–83). <sup>2</sup>

#### **Oct**

General elections were held on the **tariff issue**. Conservatives were victorious in support of protection; Macdonald became premier (Oct. 17), and the protective tariff was instituted. <sup>3</sup>

## e. [Newfoundland, 1878–1914](#)

### 1880

The government loaned \$1 million to create a **railway from St. John's to Hall's Bay**; it was completed to Harbour Grace (1884); after financial difficulties, construction was taken over by Mr. R. G. Reid (1893) and built to Port-aux-Basques. <sup>1</sup>

### 1888

**The Bait Act** took effect, after considerable controversy and the protests of the French government. It prohibited capture in Newfoundland waters of bait fish for exportation or sale, except under special license. French retaliations followed until a modus vivendi was enacted (1890). The issue was finally settled in the Anglo-French convention of 1904. <sup>2</sup>

### 1894–96

**Bank failures**, insolvency, and severe financial depression. Canadian banks replaced former government institutions. A delegation was sent to Ottawa to discuss union with Canada. Canada objected to assuming all of Newfoundland's \$16 million in debt, and negotiations were broken off. <sup>3</sup>

### 1900

Resignation of **Sir James Winter**; succeeded by **Mr.** (later Sir) **Robert Bond**. <sup>4</sup>

### 1906, Oct

Modus vivendi with the United States followed difficulties with fishing rights under the Treaty of 1818. The dispute was referred to the Hague tribunal, and an award (Sept. 1910) allowed Great Britain (Newfoundland) the right to make regulations subject to the Treaty of 1818 and defined the “three-mile limit” in bays to be from a line across the bay at a point where a distance of ten miles was not exceeded. 5

## 1909

Resignation of premier **Sir Robert Bond**; succeeded by **Sir Edward P. Morris**. 6

## 1914, Aug. 4

**Declaration of war by Great Britain.** Newfoundland, like the other members of the empire, supported the mother country and sent troops. (See [Newfoundland](#)) 7

## I. [Latin America, 1806–1914](#)

### [LATIN AMERICAN STATES AFTER THE REVOLUTIONS \(MAP\)](#)

#### 1. [Periodization](#)

Latin American history in the 19th century can be divided into several general periods, despite the great diversity of the major regions and nations. **Wars of independence** dominated the decades between 1806 and 1825. The following quarter-century saw the **insecurities of new nations** and the **rise of political forms like *caudillismo*** (strongman rule) in response; manufacturing imports from British industry and political turmoil weakened local economies. Midcentury decades saw some political and economic stabilization and signs of greater cultural vitality as Latin American novelists and other intellectuals began to emerge. **The rise of the export economy and some new foreign interference**, particularly from the United States, marked the decades around 1900.

[The Encyclopedia of World History, Sixth edition.](#) Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

(See [1781](#))

## 2. [The Wars of Independence, 1806–1872](#)

### a. [Causes](#)

Political, economic, and social factors inherent in the Spanish colonial system were the fundamental causes that led to the separation of the American colonies from the mother country. The Bourbon reforms prompted widespread discontent in Spanish America. Though export-oriented areas thrived with free trade policies, Spanish American entrepreneurs were excluded from transatlantic trade and shipping, which the Spaniards controlled. The opening of colonial markets to European manufactures affected local industries in certain areas. Popular sectors throughout Spanish America viewed new fiscal exactions as endangering their living standards. Sales taxes and the enforcement of state monopolies affected many ordinary traders and consumers. Tribute and forced sales of goods angered Indian and mestizo peasants. <sup>1</sup>

The Bourbon reforms (See [Administration](#)) curtailed the ecclesiastical *fuero*, an institution that placed the clergy outside the control of civil authorities. In areas where the church had grown influential, this measure caused resentment, especially in the lower clergy. In contrast to the weakening of the church, the Bourbon reforms reinforced the military *fuero*, which placed Spaniards and creoles, and even people of color who served in the army, outside civilian jurisdiction. The army created an avenue of social recognition for creoles and nonwhite people, and allowed them to develop military skills that later proved useful in the struggle for independence. The creole aristocracy, however, felt threatened by policies that allowed nonwhites to achieve privileges previously reserved for the elite. The participation of popular sectors, most of them of nonwhite background, in the independence conflicts provoked “caste war” fears, since the elites, considering themselves white, framed any assault on their privileges as a racial attack. <sup>2</sup>

The French Revolution of 1789 influenced the **creole elite intellectuals** of the Spanish colonies, but the slaves in the French colony of St. Domingue (Haiti) made a deeper impact on the creole elite when they destroyed the slave system and achieved independence (1804) through a violent social revolution. Slaveholders of the Americas learned from this defeat of French colonialism that they should avoid those conditions <sup>3</sup>

that might aid slaves in their struggle for freedom. **To preserve slavery, creole aristocracies of Cuba and Puerto Rico** remained loyal to the colonial state. The American Revolution was also a source of ideas for creole thinkers favoring independence. Many saw **federalism** as the most appropriate system for the new American republics, where unequal regional resources and political power became an immediate source of civil strife. The United States also provided an example of the coexistence of slavery with a republican state, an attractive model, given the economic benefits that sectors of the Spanish American elites derived from slavery.

Crucial for the growth and timing of the independence movements were the political developments in the metropolis. Napoleon invaded Spain and established his brother Joseph on the throne (See [1808, March](#)). The American colonies refused to recognize him and proclaimed allegiance to the deposed **Ferdinand VII**. The **Constitution of Cádiz** (1812), issued by Spanish Liberals opposing absolutism, provided for a constitutional monarchy and the election of deputies throughout the Spanish domains. Such measures encouraged the formation of **juntas** in the American cities, which tried to govern in the name of the deposed king. The restoration of Ferdinand VII and his determination to restore the old system propelled the creole movement toward separatism.

The **Wars of Independence** passed through two phases; between 1809 and 1816, movements for separation failed everywhere except in the area of the Río de la Plata; between 1816 and 1825, independence was achieved.

## **b. The Río De La Plata**

The period of independence in the region of Río de la Plata opened with a British attempt to gain possession of a portion of the area. 1

### **1806**

A British fleet occupied Buenos Aires. The viceroy fled, and **Santiago Liniers**, at the head of the colonial militia, organized the unified war effort of Spaniards and creoles, who defeated the British. Upon his return, a *cabildo abierto* deposed the viceroy and elected Liniers, an act that the Crown approved. 2

### **1806–7**

The British government dispatched an expedition to conquer Buenos Aires. After taking Montevideo, they advanced on Buenos Aires, where the militia organized by local merchants defeated them. The British agreed to retreat from the Río de la Plata and Montevideo. Urban militia allowed the creole elite to control plebeian mobilization through military organization. Military chiefs gained wider influence in the political arena. 3

### **1809–10**

In view of the apparent success of Napoleon, a provisional junta of the provinces of the Río de la Plata was established in the name of Ferdinand VII (May 25, 1810). Direct Spanish authority was never restored. The junta included **Mariano Moreno** (1778–1811), a creole lawyer, and **Cornelio Saavedra**, a merchant from Upper Peru. 4

## 1810–11

The provisional junta rejected royal authority, suppressed Indian tribute, and sought to extend control over the **Banda Oriental** and **Paraguay**. An expedition sent to liberate Upper Peru was defeated, and Paraguay refused to adhere to the provinces of the Río de la Plata. Moreno and his followers opposed the predominance of militia chiefs. The junta forced Moreno from office, and a triumvirate was installed, with **Bernardino Rivadavia** (1780–1845), an extreme liberal, as secretary. The triumvirate dissolved the junta and reorganized the urban militia. 5

## 1812

The triumvirate prohibited slave trade and dissolved the provincial juntas, weakening its popularity in the interior and littoral provinces. Army officers formed the **Logia Lautaro**, a Masonic lodge, which removed the triumvirate and Rivadavia from power. The conflict between centralists (*unitarios*) and federalists (*federales*) intensified. **José Gervasio Artigas**, leader of the Banda Oriental, pressed for the prompt establishment of a federal system. 6

## 1812–13

An expedition to invade Upper Peru failed. An assembly abolished Indian forced labor and gave freedom to all children of slave mothers. It suppressed titles of nobility and disentailed properties, excepting those belonging to the Church. 7

## 1814

Royalist military buildup in Montevideo and new defeats in Upper Peru induced pessimism about independence among the leaders of Buenos Aires, who started to consider a reconciliation with Spain. The king, however, refused to accept any compromise with the new leaders. 8

Buenos Aires forbade foreign merchants to trade freely with the other riverine provinces, creating further enmity toward the main port. Liberal policies hurt Buenos Aires merchants unable to restrain the growing role of the British in provincial trade. Support for federalism also grew within Buenos Aires, since it would allow the province to keep the revenues from foreign trade for itself. 9

## 1815

Gen. Alvear (1789–1852) became dictator, while Artigas ruled in the Banda Oriental, and the provinces of Santa Fe and Córdoba announced their own independence. **GEN. JOSÉ DE SAN MARTÍN** (1778–1850) departed for Mendoza to organize an army to liberate Chile and later move by sea to attack royalists in Peru. He became one of the greatest military figures of the independence wars. 10

## 1816, July 9

Congress of Tucumán declared the **independence of the United Provinces** and elected **Juan Martín Pueyrredón**, a member of the Logia Lautaro, as supreme chief. In his eagerness to destroy federalism, he allowed the Portuguese invasion of the Banda Oriental (See [1811](#)). Federalists, however, prevailed in the littoral provinces. 11

### **c. [Paraguay](#)**

#### **1811**

A *cabildo abierto* summoned in Asunción by the intendant swore allegiance to Ferdinand VII. Paraguayans defeated Buenos Aires forces, which attempted to incorporate Paraguay into the United Provinces. **Fulgencio Yegros**, a military chief, led proindependence creoles to depose Spanish authorities. A congress of delegates created a governing junta, which included Yegros, as chief, and **Dr. José Gaspar Rodríguez de Francia** (1766–1840), a creole lawyer of the *cabildo*. <sup>1</sup>

#### **Aug. 14**

**PARAGUAY PROCLAIMED INDEPENDENCE FROM SPAIN.** Dr. Francia <sup>2</sup> withdrew from the junta, condemning the excessive influence of the military in government, but the junta and the *cabildo* called him back. Francia signed a treaty with Buenos Aires, which agreed to the principles of federation and free trade. Thus, Francia obtained a tacit recognition of Paraguay's independence and lower taxes for Paraguayan trade. Again, he retreated from the government to create a following for himself among small landowners, ranchers, and farmers, and a network of informers.

#### d. [The Banda Oriental \(Uruguay\)](#)

##### 1811

Montevideo creoles, eager to avoid subordination to Buenos Aires, refused to support the May revolution in that city. In the countryside, however, masses of small landowners, dissatisfied with the expansion of the great estates, rose against Spain. **José Gervasio Artigas** (1764–1850), a man from the *estanciero* (rancher) class, emerged as leader and proclaimed allegiance to the junta of Buenos Aires. He formed a coalition of ranchers and gauchos, and attracted to his army Guaraní Indians led by Andrés Guacará (**Andresito**). Royalists encouraged the Portuguese military, which invaded the Banda Oriental to incorporate it into the Portuguese Empire. Artigas withdrew his troops. Spontaneously, civilians, fleeing from royalist reprisals and Portuguese brutality, joined him en masse and marched into exile. This **exodus of the “Orientales”** (later Uruguayans) left the Banda Oriental virtually depopulated. When Portugal was forced to withdraw from the Banda Oriental, these exiles returned and, allied with Buenos Aires forces, expelled royalists from Montevideo. Buenos Aires leaders, unable to impose centralism upon the Banda Oriental, withdrew.

##### 1815

Artigas ruled the Banda Oriental. Across the Río de la Plata, the provinces of Santa Fe, Entre Ríos, Corrientes, and Córdoba recognized him as the **Protector de los Pueblos Libres** in their struggle against Buenos Aires centralism. Through the **Reglamento Provisorio**, Artigas promoted free trade and distribution of confiscated properties to poor nonwhite and white people. This measure alarmed the landlords.

##### 1816

The Portuguese invaded the Banda Oriental, with the approval of Pueyrredón, Buenos Aires's centralist leader, who sought to destroy federalism.

3

## 1817–20

Montevideo surrendered to the Portuguese army, while Artigas organized guerrilla resistance in the countryside. The Portuguese tried to ally the Banda Oriental elite with the Portuguese Empire, but limited compensation for war damages and the granting of lands to Portuguese created hostility.

4

## 1820

The defeat of Artigas and his troops at **Tacuarembó** ended the period known as the **Patria Vieja**. Artigas marched into exile in Paraguay. In later years Artigas acquired greater stature as the founding father of Uruguay and as a man of advanced political vision.

5

## 1821

A pro-Portuguese congress voted the incorporation of the Banda Oriental into the Portuguese Empire as the **Estado Cisplatino**. In 1824, the *cabildo* of Montevideo swore the allegiance of the Estado Cisplatino to the constitution of the newly proclaimed empire of Brazil.

6

## 1825

**Fructuoso Rivera** (c. 1788–1854), a *caudillo* who briefly supported Brazilian rule, recruited an army of anti-Brazilian patriots. Revolution against Brazil began in April with the landing of the expedition of **33 Orientales** headed by **Antonio Lavalleja**, a *caudillo* and Artigas's follower. Lavalleja and Rivera became allies, attracting the allegiance of hundreds of cowboys and ranchers. Lavalleja sought the support of the Buenos Aires government, proclaiming the incorporation of the Banda Oriental into the **United Provinces of the Río de la Plata**. War between Argentina and Brazil ensued.

7

## 1827

A liberation army composed of Argentine and Banda Oriental soldiers defeated the Brazilian army at **Ituzaingó**. Rivera occupied Brazilian territory in Rio Grande do Sul, forcing Brazilian forces to withdraw from the Banda Oriental in exchange for the land he had occupied. 8

## 1828

Lavalleja governed independently while negotiations with British mediation led Buenos Aires and the empire to recognize the independence of the Banda Oriental. 9

## e. [Chile](#)

### 1810

Upon the apparent triumph of Napoleon in Spain, a junta assumed authority in the name of Ferdinand VII and deposed the captain general. The junta was led by **Juan Martínez de Rozas**, a creole official, who promoted liberal reforms. A **general congress** convened at Santiago. <sup>1</sup>

### 1811–12

Measures to open commerce provoked opposition from creole merchants and most of the landed elite. **José Miguel Carrera** (1785–1821), a member of a landed military family allied to the antiroyalist deputies, led troops and urban crowds to expel conservatives from the congress. He formed an executive junta that abolished the slave trade and freed all children born from slave mothers subsequent to the decree. The creole ruling class divided into factions organized around powerful landed aristocratic families. Gen. **Bernardo O'Higgins** (1778–1842), although not pro-aristocratic, objected to Carrera's bid for popular support. <sup>2</sup>

### 1812

The junta promulgated the **Reglamento Constitucional**, which recognized Ferdinand VII while asserting that no orders or laws issued outside Chile should be enforced there. It proclaimed civil rights for all Chileans, freedom of the press, and the subordination of the executive to the congress. These measures caused deep discontent in the aristocracy. Royalist Chileans joined the army sent by the viceroy of Peru to subdue Carrera. <sup>3</sup>

### 1814

The royal government was established in Santiago. O'Higgins agreed on an armistice with Spanish chiefs, but Viceroy Abascal repudiated the treaty and sent a new expedition, which defeated the proindependence army at **Rancagua**, sealing the end of the period known as the **Patria Vieja**. <sup>4</sup>

## 1814–17

The retaliatory policy followed by the royalist government alienated creoles. O'Higgins moved to Mendoza to collaborate with Gen. San Martín (See [1815](#)) in preparing the liberation of Chile and Peru. **Manuel Rodríguez**, who had served Carrera, organized guerrillas in the countryside. <sup>5</sup>

## 1817

San Martín, at the head of the patriot army, crossed the Andes and defeated a Spanish army at **Chacabuco** (Feb. 12). O'Higgins was made supreme director. <sup>6</sup>

## 1818, Feb. 12

**THE INDEPENDENCE OF CHILE WAS PROCLAIMED.** San Martín's troops defeated a royalist army from Peru at **Maipú**, thus securing the independence of Chile. San Martín started to organize an army to liberate Peru. <sup>7</sup>

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## f. [Peru and Upper Peru \(Peru and Bolivia\)](#)

### 1809

The inhabitants of **Chuquisaca** and **La Paz**, declaring loyalty to Ferdinand VII, established juntas in their cities and deposed Spanish authorities. Royal troops soon crushed the movements. Viceroy **José de Abascal y Sousa** (1809–16), with the support of the Limeño aristocracy, made the Viceroyalty of Peru the stronghold of royalism in South America. 1

### 1810

Buenos Aires's declaration of independence gained widespread support in Upper Peru, whose population initially welcomed a Buenos Aires military expedition, led by Gen. **Juan José Castelli**. His attempts to suppress Indian tribute, however, antagonized the upper classes. His troops sacked Indian towns and behaved as an occupying force. Royalists defeated Castelli's army and retook control of Upper Peru (1811). They sought Indian support, giving weapons to the *kurakas* to distribute among Indian peasants. 2

### 1813

In Cuzco, *kuraka* **Mateo Pumacahua** mobilized a large Indian army on behalf of creole patriots imprisoned in Cuzco. The royalist army defeated and executed him (1815). 3

### 1813–15

Two Buenos Aires expeditions invaded Upper Peru but disintegrated as soldiers plundered the countryside and royalists defeated them. Disenchanted with the Buenos Aires–led independence movement, Upper Peru patriots sought to develop their own 4

independence forces, while Buenos Aires military leaders altered their strategy for liberating Peru.

## 1816–24

Royalists eradicated guerrillas from the countryside, and reestablished their dominance in Upper Peru. 5

## 1820

After completing preparations in Chile, **San Martín** transported his forces to Peru by sea. Marquis de **Torre Tagle**, who approved of San Martín's conservatism, promoted aristocratic support for him and proclaimed independence in Trujillo. The viceroy abandoned Lima, and San Martín entered the capital. 6

## 1821, July 28

San Martín proclaimed the **INDEPENDENCE OF PERU** and assumed the title of protector of Peru. Peruvian Liberals opposed San Martín's monarchical plans. 7

## 1822

After meeting Simón Bolívar (1783–1830) in Guayaquil, San Martín resigned and withdrew his troops. 8

## 1823

After struggles among the proponents of independence in Lima, a new government was established and invited **Simón Bolívar** to Peru. **Antonio José de Sucre** (1795–1830), his closest lieutenant, moved to Lima with Colombian troops, and Bolívar followed, being proclaimed dictator. 9

## 1824

Bolívar and Sucre led their troops into the highlands, where they defeated the royalist army at **Junín** (Aug. 24) and at **Ayacucho** (Dec. 9), which secured the independence of the new republics of South America. The Spanish leaders agreed to withdraw their armies from Peru. Sucre led his troops to liberate Upper Peru and convened a **congress at Chuquisaca**. 10

### 1825, Aug. 6

Anxious to preserve their autonomy from the hegemonic pretensions of Buenos Aires, Upper Peru patriots resorted to Sucre's protection to proclaim the **INDEPENDENCE of the new republic of Bolívar (BOLIVIA)**. 11

## **g. Venezuela, Nueva Granada, and Quito (Gran Colombia)**

### **1808**

In Bogotá, a junta convened to govern in the name of Ferdinand VII. Cartagena and other cities of Nueva Granada also formed juntas (1810). The captain general of Caracas blocked attempts by the *cabildo* to establish a junta. 1

### **1809**

In Quito, a revolt installed a junta in the name of Ferdinand VII, with the support of the Quiteño elite. An army, sent by the viceroy of Peru, suppressed the movement. 2

### **1810**

In Caracas, an extraordinary *cabildo* created a junta to govern in the name of Ferdinand VII and deposed the captain general. Conservatives in the junta forbade the entry of **Francisco de Miranda** (1750–1816), veteran proindependence conspirator, but the revolutionaries imposed him. The junta decreed free trade and abolition of the slave trade. 3

### **1811, July 5**

A national congress with representatives from the landed class proclaimed **VENEZUELAN INDEPENDENCE**. It promulgated a constitution restricting the franchise to landowners and included federalist measures to attract provincial support. *Pardos* revolted for full citizenship rights. Violence from the lower classes alarmed the creole landowners, many of whom withdrew from the independence movement. Miranda was given command of the revolutionary forces, and Bolívar became one of his 4

lieutenants. **SIMÓN BOLÍVAR**, born in Caracas of a creole cacao planter family, was a resolute republican. He was the greatest figure of the independence movement.

In Bogotá, the **republic of Cundinamarca** was inaugurated. The other provinces, refusing to join it, formed the **Federation of the United Provinces of Nueva Granada**. Popayán, Pasto, Santa Marta, and Panama remained loyal to Spain. Proindependence provinces favoring federalism waged war against proindependence provinces endorsing centralism.

5

## 1812

A royalist army invaded patriot territory. Miranda capitulated. Royalists sent him as a prisoner to Spain, where he died in 1816. Spaniards seized Bolívar's properties but permitted him to go to Nueva Granada.

6

## 1813

Bolívar launched the **Campaña Admirable** (Admirable Campaign). He entered Caracas in Aug. to inaugurate the **second Venezuelan republic** and assumed dictatorial powers. He proclaimed war to the death against Spaniards who did not support independence and promised amnesty to royalist creoles. Poorer Venezuelans remained aloof since they distrusted the creole landed elite and slaveholders. **José Tomás Boves**, a peninsular merchant and smuggler, organized a guerrilla war on behalf of the Crown, promising confiscated properties to the men who enlisted in his army. *Llaneros* enthusiastically followed Boves, angered by a law approved by the antiroyalist government of Caracas, which prevented *llaneros* from freely hunting on the plains. The war between patriots and royalists was waged with great violence; the killing of prisoners and the massacre of civilians became common practices on both sides.

7

## 1814

Boves's royalist army defeated the revolutionary forces at **La Puerta**, where Boves died but destroyed Bolívar's control of Venezuela. Bolívar escaped to Nueva Granada.

8

## 1815

Royalists took Cartagena. Bolívar abandoned Nueva Granada and went to Jamaica where he issued his “**Letter from Jamaica.**” In Haiti, he gained support from Pres. **Alexandre Pétion**, to whom he promised to abolish slavery in the future republic. 9

## 1816

Royalists took Bogotá, and executed many patriot leaders. Peasants were subjected to forced labor, and Nueva Granada became a supply center for royalist reconquest. 10

In Venezuela, *llaneros* remained restless under royalist control, since their major demands had not been met. **José Antonio Páez**, a *llanero* chief based in the region of Apure, started to operate against the royalists. 11

## 1817

Bolívar returned to the Orinoco region and sought popular support for the creole independence movement promoting *pardo* soldiers and promising freedom to slaves in the patriot army. He issued a decree ordering the distribution of confiscated properties among the patriot troops as payment for their services. 12

## 1819

Once **Francisco de Paula Santander** (1792–1840) had organized patriot military support in Nueva Granada, Bolívar led a patriot army across the Andes and defeated the royalist forces at **Boyacá River** (Aug. 9). Patriots occupied Bogotá (Aug. 10). In this campaign, Bolívar definitively liberated Nueva Granada. 13

## Dec. 17

The **congress of Angostura** approved the fundamental law creating **Gran Colombia**, a republic based on the union of Venezuela and Nueva Granada. Bolívar was made president and military dictator. 14

## **h. New Spain (Mexico)**

### **1808**

Following the intervention of Napoleon in Spain, creole elements sought a greater role in the government. With support of the viceroy, a general junta was convened. The *audiencia*, controlled by Spaniards, dismissed the pro-creole viceroy. Four viceroys governed between 1808 and 1813. <sup>1</sup>

### **1810**

**Miguel Hidalgo y Costilla** (1753–1811), a creole priest, initiated a separatist revolt in the town of Dolores, in the Province of Guanajuato. He had limited creole support, but his call galvanized hundreds of peasants and mineworkers who had suffered oppressive conditions in the Bajío region. Although Hidalgo tried to restrict attacks to Spaniards and Spanish properties, his followers destroyed estates indiscriminately, unleashing general rural violence. Massacres committed against wealthy Spaniards and creoles in Guanajuato deeply unsettled the upper class. The rebels threatened Mexico City, but peasants of the region refused to join them. A Spanish army defeated Hidalgo's troops. <sup>2</sup>

### **1811**

A new defeat of revolutionary forces at the **bridge of Calderón**, near Guadalajara (Jan. 17), allowed Spanish authorities to capture Hidalgo. The Inquisition tried him and delivered him to the secular courts for execution (July 31). <sup>3</sup>

### **1812**

**José María Morelos** (1765–1815), a mestizo priest, continued the revolt.

4

## 1813

A congress convened at **Chilpancingo** (Sept. 14) made Morelos executive chief and **declared independence** (Nov. 6).

5

## 1814, Oct. 22

The **constitution of Apatzingan** was promulgated, establishing male suffrage and abolishing the caste system and slavery, but preserving the prerogatives of the Church. **Agustín de Iturbide** (1783–1824), a creole in Spanish service, forced Morelos to retreat. Morelos was captured and executed (Dec. 22, 1815), and the revolutionary congress was dissolved.

6

## 1816–21

Viceroy **Juan Ruiz de Apodaca** instituted a conciliatory policy and secured the surrender of most of the revolutionary leaders. Only a few guerrilla leaders, among them **Vicente Guerrero** (1783–1831), continued resistance.

7

## 1820

The **liberal revolution in Spain** (See [1820](#)) threatened the position of the clergy and the upper classes. Conservative creoles and Spaniards decided to secede from Spain to avert reforms. **Agustín de Iturbide** became their leader and with Guerrero formulated the **Plan de Iguala**.

8

## Feb. 24

This proclaimed the **INDEPENDENCE OF MEXICO**. According to the plan, Mexico would be a constitutional monarchy under Ferdinand VII or other European prince, creoles and Peninsulars were declared equal, and the Catholic religion and church properties were to be maintained. Viceroy Apodaca was dismissed. Iturbide assumed

9

authority and created an army.

## Aug. 24

A newly arrived viceroy accepted the plan of Iguala by the **Convention of Córdoba**. A regency under Iturbide was formed, pending choice of a sovereign. A constituent congress was convened. The Spanish government refused to accept the Convention of Córdoba. 10

## **i. Guatemala and Central America**

### **1811–18**

In the **captaincy general of Guatemala** (Guatemala, San Salvador, Honduras, Nicaragua, Costa Rica, and Chiapas), liberals campaigned for free trade, a more representative government, and the dissolution of *fueros* and monopolies. The captain general repressed them and subdued other rebellions in the provinces of San Salvador, Honduras, and Nicaragua (1811–12). Central American liberals were mainly creole professionals allied to the leading creole families.

1

### **1821, Sept. 15**

Influenced by the launching of the Plan de Iguala in Mexico, a junta of liberals and moderates convened in Guatemala City to declare independence, with the captain general as leader.

2

### **1822**

Union with Mexico under Iturbide was discussed in every province. Guatemala and Chiapas decided to join independent Mexico. El Salvador rejected union either with Mexico or Guatemala. Some cities in Honduras and Nicaragua accepted union with Guatemala, but refused to submit to Mexico. Others claimed total autonomy. Costa Rica agreed to separation from Spain and sought union with Colombia. Conservatives were prone to annexation to Mexico, whereas liberals rejected it and favored an independent republican federation.

3

Iturbide, as emperor of Mexico, sent a Mexican army to advance the annexationist cause.

4

### **1823**

After military invasion, El Salvador and Costa Rica republicans capitulated.

5

## June 24

Upon learning of the abdication of Agustín I, a Central American congress decided to form the **United Provinces of Central America**, independent from Mexico and integrated by Guatemala, El Salvador, Honduras, Costa Rica, and Nicaragua.

6

## August 20

Mexico recognized the new political entity.

(See [The Portuguese Colonial System](#))

## **j. Brazil**

### **1808**

As a result of the war in Europe, the king of Portugal, John VI, transferred his court to Brazil, leaving Portugal to be governed by a British-dominated regency. He established his capital in **Rio de Janeiro** and decreed free trade for Brazilian ports. This caused discontent among Portuguese merchants, who were unable to compete with the British. <sup>1</sup>

### **1817**

In **Pernambuco**, a military revolt supported by some planters, merchants, and bureaucrats proclaimed a republic. An army was sent from Bahia, and the rebels surrendered. <sup>2</sup>

### **1820**

The **Portuguese overthrew the regency** in Lisbon and provisionally adopted the Spanish constitution of 1812. The Cortes summoned the king to return and invited Brazil to send representatives to a constituent assembly. <sup>3</sup>

### **1821**

Several military conspiracies in Brazil favored liberal measures and constitutional monarchy. A dispute erupted over the demand for the immediate return of the king to <sup>4</sup>

Portugal. A Portuguese faction formed by merchants with Portugal-based interests favored the return as a means to revive monopolies, whereas the “Brazilian” faction, which included Brazilian planters and bureaucrats as well as Brazil-based Portuguese merchants, opposed the departure of John VI. Brazilian deputies in Lisbon rejected attempts by the Cortes to reduce Brazil to colonial status. The king decided to return and leave his son, Pedro, in Brazil as prince regent. **José Bonifácio de Andrada e Silva** (1763–1838) was elected president of the São Paulo provisional junta and was named chief of the first “Brazilian” cabinet.

## 1822

Brazilian radicals and liberals gave their allegiance to Prince Pedro (1798–1834), who declared (Jan. 9) his determination to remain in Brazil (“**Fico**”—**I will stay**). He soon convoked a Brazilian constituent assembly. José Bonifácio drew support from large landholders, slaveholders, and merchants in Rio to oppose the principle of popular representation for the assembly, a condition radicals tried to reverse, proposing direct popular elections.

5

### Sept. 7

The **Grito de Ypiranga** (Cry of Ypiranga). While in São Paulo Dom Pedro received dispatches from Portugal, which, although offering concessions, returned Brazil to dependent status. He therefore **proclaimed Brazilian independence**.

6

### Oct. 12

The Senate proclaimed Dom Pedro **constitutional emperor of Brazil**. He pledged acceptance of the constitution to be formulated by the assembly and was crowned **Pedro I** (Dec. 1). Portuguese garrisons and some Brazilians in the northern provinces opposed separation, but the Brazilian navy subdued them. (See [Brazil](#))

7

### **3. Latin America, 1820–1914**

#### **a. Overview**

Spanish colonies emerged from the independence wars divided into republics that briefly cooperated to form broader political units. In Brazil the monarchy held the country together despite strong autonomist and prerepublican movements. By 1850, the countries of Spanish-speaking America had 22.5 million inhabitants, and Brazil had 7.2 million. Most of the population lived in the countryside. As a result of immigration and economic expansion, population grew rapidly in the final decades of the century. In 1900, 44 million people lived in Spanish America, and 18 million in Brazil. This period also witnessed a gradual increase in the size of urban centers, but most of the population still lived in the countryside. <sup>1</sup>

**Great Britain asserted dominance** over the new nations through its commercial agents and a powerful navy, which proved useful in obtaining better trade conditions for British merchants. **Export economies** developed in the new countries in response to the international market. The resultant expansion of the commercial economy was particularly intense after 1870. The export sector contributed to labor exploitation by encouraging regulations binding laborers to their masters, the expansion of debt peonage, and the use of Chinese indentured servants. **Slavery was in decay** in most countries by the mid-19th century, but it remained the bedrock of a vigorous export economy in Brazil and Cuba until the 1880s. **In the last decades of the 19th century, commercial growth and the first phase of industrialization** led to the expansion of cities and the formation of a working class, in some cases from immigrant backgrounds. An incipient labor movement soon confronted repressive measures against its attempts to improve the lot of workers. <sup>2</sup>

**Following independence, elites split into liberal and conservative factions, which clashed over issues such as federalism, free trade, and the status of the church.** Liberal measures expropriating church and communal Indian lands encouraged land concentration and, hence, the consolidation of a large landholding class. Territories seized from nomadic Indian tribes also favored latifundia. In some Spanish-American countries, the *caudillos* (civil or military leaders) emerged as the main power brokers. <sup>3</sup>

Popular sectors, systematically excluded from political participation, found in the *caudillos* a channel to pressure the elites. In other countries, less disruptive forms of political bossism developed to keep the masses under control. With the consolidation of national states and the emergence of the cities and urban classes, the *caudillos'* role diminished somewhat, giving way to the formation of political parties.

**Literature in the 19th century**, especially novels and essays, frequently served as a **vehicle to promote cohesive national identities**. Leading writers such as **Domingo F. Sarmiento** (Argentina), **Andrés Bello** (Chile), and **José de Alencar** (Brazil) were prominent political figures who self-consciously used their writings to outline a particular vision of the national “destiny.” Novels such as Alencar's *Iracema* (1865) and *Amalia* (1851) by Argentine writer José Mármol used the romantic genre to allow their characters to form amorous alliances across class, ethnic, and regional lines. Influenced by the romantic canon, intellectuals in the postindependence decades sometimes idealized the indigenous population as the repository of the national essence.

Social Darwinism, however, soon emerged as a major intellectual trend. Cultural elites began to portray Indians and other nonwhite groups as unfit for citizenship in civilized political entities, thus “justifying” the ongoing exclusion of the majority from the formal political system. **Among elites the dominant tendency was to imitate European styles**, including urban architecture, and to foster exclusive institutions that mimicked European high culture. Artists and intellectuals began to seek an alternative to Europeanization in rural popular culture, which some considered a more authentic source of national identity. Meanwhile, waves of immigration from Spain, Italy, and Portugal expanded the ranks of urban popular movements. New forms of association (unions, leagues, mutual-aid societies) and open cultural institutions offered alternatives to political exclusion. Labor activism introduced new ideologies such as anarchism and socialism. (See [Cultural Developments](#))

[NEXT](#)

## **b. [South America](#)**

### **1. Argentina**

After independence, the city of Buenos Aires was dominant because of its commercial role, but its place in the broader political system was disputed. Urban elites wanted to make it the national capital and form a central government with control over the provinces. Powerful rural landowners of Buenos Aires Province, in contrast, sought to subject the city to their interests and a federalist framework. 1

#### **1819**

The fragmentation of the territory controlled by Buenos Aires created a general crisis in the region. Gen. **Martín Rodríguez** installed a governing junta. 2

#### **1821–23**

Gen. Rodríguez became governor of Buenos Aires and named an extreme liberal, **Bernardino Rivadavia**, as minister. Liberal policies helped British merchants gain preeminence in the Río de la Plata trade. Native merchants shifted investments and formed a new class of big ranchers (*estancieros*). 3

Liberals enforced antivagrancy laws to compel peasants and gauchos (free horsemen) to seek fixed employment. Gen. Martínez undertook a campaign against Indians to open new lands for ranching. 4

#### **1825**

Treaty with Great Britain to suppress slave trade. Buenos Aires organized a war against Brazil for the liberation of the Banda Oriental. 5

## 1826

Rivadavia was elected president of the **United Provinces of the Río de la Plata**. He made the city of Buenos Aires the national capital, separating it from its province. Ranchers opposed this and united under the **federalist** banner against Rivadavia's **unitarian** policies. 6

## 1827

Forces from Buenos Aires and the Banda Oriental defeated Brazil at **Ituzaingó** (Feb. 20), but negotiations with Brazil ended in failure. Rivadavia was forced to resign and was exiled. The congress returned the city of Buenos to its province. **Manuel Dorrego**, federalist leader in Buenos Aires, became its governor. **JUAN MANUEL DE ROSAS** (1793–1877), a wealthy rancher, was named chief of the Buenos Aires militias. **Facundo Quiroga**, *caudillo* of La Rioja, mobilized militias from the interior provinces against the congress. The congress dissolved itself, and the **Confederación del Río de la Plata** (Argentine Confederation) was established. 7

## 1828

Brazil and Buenos Aires accepted the independence of the Banda Oriental. Unitarians led by Gen. **Juan Lavalle** protested the accord by occupying Buenos Aires and executing Dorrego, provoking antagonism toward the unitarians. 8

## 1829

Rosas, with peasant support, vanquished Lavalle at **Puente de Márquez**. Federalists seized the city of Buenos Aires; Rosas was elected governor of Buenos Aires Province. 9

## 1831

Federalists strengthened Buenos Aires's influence in the provinces. Rosas courted support from the urban black population, but he reopened the slave trade. 10

### 1833

Rosas led the “Expedition of the Desert” against various Indian cultures of the Pampas. The elite supported this campaign because big ranchers expected to grab Indian lands. 11

In the city of Buenos Aires, **Encarnación Ezcurra**, Rosas's wife, mobilized plebeian support against Rosas's opponents, patronizing a paramilitary band popularly known as the *Mazorca*. 12

An English army occupied the Falkland (Malvinas) Islands. 13

### 1835–36

The legislature of Buenos Aires, with the assent of the provinces, made Rosas dictator. The ultraconservative Rosas, despite his populist veneer, supported the big ranchers who massively increased their landholdings and secured tight control over the gauchos. The ranching economy offered women few opportunities and led to their migration to the cities to work as domestic servants. 14

## c. [Central America](#)

### 1. Overview

The **United Provinces of Central America** (1823–38) consisted of five autonomous states with their own state assemblies and executives. Guatemala City was the seat of the central government. The constitution outlawed slavery but denied full political rights to Indians and *ladinos* (mestizos). Principal exports were cochineal (a dye stuff), logwood, and indigo. <sup>1</sup>

#### 1825–26

National elections held. The Conservative Party supported the church and the preeminence of the Guatemalan elite. The Liberal Party, seeking to end church influence and merchants' monopolies, imposed its candidate, **Manuel José Arce**, on the central government. Arce deposed the Liberals and named Conservative **Mariano Aycinena** as the new governor of Guatemala, winning Conservative support. <sup>2</sup>

#### 1826–29

In El Salvador, Liberals revolted against the pro-Arce Conservative government, and a three-year **civil war** ensued, involving Honduras, Guatemala, and El Salvador. **Francisco Morazán** (1792–1842) from Honduras emerged as the victorious Liberal leader. <sup>3</sup>

#### 1830

Morazán became confederation president. He decreed confiscation of church lands and abolition of *fueros*. The federal capital was moved to El Salvador. The British consul wielded great influence.

4

### 1831–37

Poll tax for *ladino* and Indian peasants caused such opposition that it was temporarily suspended (1833). Cochineal production increased demand for land and labor in Guatemala. Colonization projects, the new judicial system, and anticlerical measures outraged rural masses.

5

### 1837–38

A peasant revolt, supported by rural priests, challenged Liberals. **Rafael Carrera** (1814–1865), a mestizo officer, led the revolt that defeated Morazán. Congress dissolved the Central American Confederation.

6

### 1842–52

Morazán tried to reconstitute the confederation but was defeated and executed. Attempts at cooperation among the Central American states failed.

7

### 1850

**Clayton-Bulwer Treaty**. U.S. fear of a British-controlled canal across the isthmus led to an accord by which both nations pledged not to occupy any part of Central America. Belize and the Bay Islands were excluded.

8

### 1862–72

Central American states formed the United Army of Central America to expel William Walker's forces from Nicaragua.

9

### 1906

After the war of Nicaragua against El Salvador and Honduras, a Central American court of justice was established to resolve regional conflicts. (See [Overview](#)) <sup>10</sup>

## d. [Mexico](#)

The wars of independence left the Mexican economy in ruins. Elites were deeply divided <sup>1</sup> between conservatives aiming to preserve the colonial order and liberals trying to reduce the power of the church. *Caudillos* emerged to claim power for themselves, creating further disturbances in the countryside, where many peasants joined irregular armies.

### 1822

Gen. **ANTONIO LÓPEZ DE SANTA ANNA** (1794–1876) rebelled against the <sup>2</sup> emperor **Agustín I** (Agustín Iturbide) and declared himself in favor of the republic.

### 1823

Iturbide was forced into exile. A junta of three generals, including liberal **Guadalupe Victoria**, <sup>3</sup> was formed. Conservative **Lucas Alamán** (1792–1853) was named foreign minister.

### 1824

A constitution maintained military and ecclesiastical *fueros*, and Catholicism remained <sup>4</sup> the official religion. Guadalupe Victoria won the presidency.

### 1828

Santa Anna imposed **Vicente Guerrero** as president. <sup>5</sup>

## 1829, Sept

A law abolished slavery, provoking protests from Texas colonizers.

6

## 1830

Vice president Gen. **Anastasio Bustamante** (1780–1853) seized power and named conservative Alamán as chief minister. He raised tariffs to protect the textile industry. Guerrero rebelled but was defeated.

7

## 1832

Santa Anna rose up against the government. Alamán and Bustamante were exiled.

8

## 1833, April 1

Santa Anna was named president. His government was dominated by the liberal federalist minister of education, **José María Luis Mora** (1794–1850). Legislation disentailed some church property; the military lost the *fuero*.

9

## 1834

Conservatives called upon Santa Anna to restore “religion and *fueros*.” Liberals were expelled from Congress.

10

## 1835

Federalist constitution was suspended, moving Yucatán to secede and Texans to revolt against the central government. Santa Anna led his troops against rebels.

11

## 1836, April 21

Texans defeated Santa Anna at **San Jacinto** (See [1836](#)), forcing him to accept Texas's independence. Centralists staged a comeback with Bustamante as president. 12

## **e. [The Caribbean](#)**

### **1. Cuba**

During the wars of independence, **Cuba** and **Puerto Rico** remained loyal to Spain. Slave labor and fertile soil allowed the sugar economy to flourish, especially after the destruction of slavery in Haiti. In 1827, Cuba had 707,400 inhabitants. The slave population in Cuba increased dramatically between 1790 and 1860. After 1860, slave trade declined, and colonial authorities actively promoted white immigration. Sugar planters, monopolizing land in western Cuba, and tobacco manufacturers formed a powerful elite. In the east, hacendados and free farmers of color predominated. <sup>1</sup>

#### **1868–78**

The **TEN YEARS' WAR**. Following the liberal revolution in Spain (1868), eastern small slave owners and farmers unleashed a war for independence with the **Grito de Yara**. Sugar planters of the west supported Spain. Massive participation of slaves in rebel ranks prompted Spain to pass the **Moret Law** of 1870 that freed children of slave mothers and slaves over age 60. The war ended with the **convention of El Zanjón** (Feb. 10, 1878), by which Spain promised amnesty and freedom to slaves and Asian indentured workers who had fought the war on both sides. <sup>2</sup>

#### **1879–86**

In the east, **Antonio Maceo** (1845–96) led slaves in a guerrilla war (**Guerra Chiquita**). Slaves resorted to legal and illegal measures to gain freedom. Spanish authorities tried to ensure a gradual process of emancipation. The **Patronato Law** of 1880 regulated emancipation by creating a transitional status for slaves. **Spanish authorities abolished slavery in 1886.** <sup>3</sup>

## 1895–98

**WAR OF INDEPENDENCE. JOSÉ MARTÍ** (1853–95) united Cubans to fight for independence. A war without quarter devastated the island. About 10 percent of the population died. The U.S. entered the conflict, alleging Spain's destruction of the *Maine*, a warship stationed in Havana Harbor, thus initiating the **Spanish-American War** (See [1898](#)). Spain was quickly defeated, and by the **Treaty of Paris** (Dec. 10) withdrew from Cuba and ceded Puerto Rico and the Philippines to the U.S. Many Cubans viewed U.S. intervention with distrust.

4

## 1899–1902

**U.S. occupation of Cuba.** U.S. entrepreneurs secured most of the repair and renovation projects in the aftermath of the war. Despite peace and economic recovery, there was extensive discontent with U.S. control of Cuba. The U.S. introduced the **Platt Amendment** (Feb. 12, 1901) by which the U.S. had the right to dictate all of Cuba's international agreements, to intervene in domestic political affairs, and to establish a military base at Guantánamo Bay. Cuba had 1,573,000 inhabitants in 1900.

5

## 1903–6

**Tomás Estrada Palma**, a pro-U.S. candidate, was elected president. U.S. forces withdrew. U.S. investors greatly augmented their ownership of land, industries, and services in Cuba. Popular unrest continued, fueled by electoral fraud. Liberals deposed Estrada Palma.

6

## 1906–8

**Second U.S. military intervention.** **Charles Magoon** became provisional governor of Cuba. He broadened the franchise and held elections.

7

## 1908–13

**José Miguel Gómez**, a liberal, assumed the presidency. U.S. forces withdrew. Power of foreign investors and local bourgeoisie increased. The **Morúa Law** prohibited political associations based on color or race. Black Cubans tried to resist, but their movement met harsh repression in the eastern provinces (1912). U.S. racism reinforced local prejudices. 8

## 1913–17

Conservative **Mario García Menocal** became president. Liberals revolted against his reelection in 1917. The U.S. intervened on behalf of García Menocal. (See [Cuba](#)) 9

## **VI. The World Wars and the Interwar Period, 1914–1945**

### **A. Global and Comparative Dimensions**

Two world wars and a worldwide economic depression of great magnitude provide the global background and foundation for developments in the first half of the 20th century. The globalization of political, economic, and cultural life intensified in a context of the continuing relative domination by the West. However, the core of the West itself spread beyond Western Europe and increasingly, Western Europe became a less central part of the modern industrialized world. By midcentury, world affairs came to be dominated by the two great superpowers of the United States and the Soviet Union. The changing dynamics of world relationships can be seen in two different areas: (1) the emergence of significant patterns of global connections in political, ideological, economic, and sociocultural structures; and (2) the further intensification of international and interstate relationships on a global scale. <sup>1</sup>

#### **1. Emerging Global Relationships**

Important changing patterns of global connections developed in three areas in the first half of the 20th century: (1) the development of global structures of interstate, economic, and sociocultural relationships; (2) the emergence of globally competing sociopolitical ideologies for shaping the nature of societies in the modern era; and (3) significant experiences with global dimensions in economic life, social transformation, and culture. <sup>2</sup>

##### **a. Developing Global Institutions and Structures**

From the beginning of World War I to the end of World War II, many different types of global relationships developed. Three important types of structures emerged: (1) political organizations and relationships among states; (2) multinational economic and <sup>3</sup>

business structures; and (3) nongovernmental organizations for cultural, religious, and humanitarian purposes. In all of these areas, foundations had been laid before 1914, but during the era of the two world wars and the “interwar period” there was a significant development of global institutions and relationships in many different areas.

## 1. 1914–1946. Interstate Institutions

At the beginning of the 20th century, relations among the major states primarily represented alliances based on treaties and agreements reflecting relatively temporary arrangements among blocks of powers rather than continuing international institutional structures. Few permanent interstate organizations existed. However, the destructiveness of World War I led to major efforts to create permanent international organizations for the regulation of interstate relations or conflict resolution, as well as for the coordination of international services. 4

**World War I negotiations.** In 1914, there was no permanent organization for assembling the prospective antagonists. The existing **International Court of Justice** in The Hague had neither jurisdiction nor power. During the war, occasional efforts at mediation were made, but the war came to an end with a series of armistice agreements that were negotiated often on a bilateral and temporary basis. The major agreements were the armistices between the **Allies** and the Ottoman Empire (at **Mudros**, Oct. 1918), Austria-Hungary (Nov. 3, 1918), and Germany (Nov. 11, 1918). The **PEACE CONFERENCE AT VERSAILLES** (See [1919, Jan. 18](#)) began in January 1919 and defined the main lines of international relations for the world war settlement. The **Treaty of Versailles** (signed June 1918) defined the conditions of the peace settlement. 5

The **LEAGUE OF NATIONS** (See [April 28](#)) was created by the Treaty of Versailles to deter war and provide an administrative structure for managing international relations and conflict resolution. The League came into being with a permanent secretariat in **Geneva** in 1920 (**Sir Eric Drummond**, first secretary-general). In the context of the operation of the League, a number of interstate organizations for coordinating important services were created, including the **International Labor Organization (ILO)**, created in 1919 as a part of the League of Nations to improve global labor conditions, and the **International Commission for Air Navigation**, created in 1919 to assist in international civil aviation. 6

The **Permanent Court of International Justice** was created in 1921 in accord with the League's Covenant and established in The Hague as a continuation of the Permanent Court of Arbitration. 7

Existing international institutions like the **Universal Postal Union**, the **International Institute of Agriculture**, and the **International Meteorological Organization** worked in collaboration with the League of Nations in the continuing process of coordinating important international services. 8

**MULTINATIONAL CONFERENCES** continued to be an important instrument for international relations. These enabled major powers to act without the constraints imposed by League of Nations procedures. One major theme for such conferences was arms control and the possible renunciation of war. Some of the most important of these were: 9

**Washington Conference** (1921–22), which defined Great Power relations in the Pacific basin and in China, as well as set limits on naval armaments. 10

**Locarno Conference and Treaties** (1925) provided for border guarantees in Europe (See [Oct. 5–16](#)). 11

**KELLOGG-BRIAND PACT**, signed in Paris in 1928, involved renunciation of war but made no provision for sanctions. 12

**London Naval Conference** (1930) (See [1930, Jan. 21–April 22](#)) dealt with submarine warfare and other naval armament agreements signed by Great Britain, the U.S., Japan, France, and Italy. 13

**Disarmament Conference in Geneva** (1932) was attended by 60 states and produced no effective agreements. By the mid-1930s, such major conferences were effectively replaced by the Great Power negotiations that were part of the buildup to World War II. 14

Other major conferences were held on a variety of subjects. Many were held in the context of European powers' working out the economic implications of the Versailles Treaty and **German war reparations**. Others defined international cooperation in many nonpolitical areas. Important examples of these are the Madrid Conference (1932) of the **International Telecommunication Union**, which merged the Telegraph Convention (1865) and the Radiotelegraph Convention (1906), and the Havana Conference (1928), creating the **Pan American Convention on Air Navigation**. 15

## **b. Globally Competing Ideologies**

The first half of the 20th century was a time when major modern comprehensive ideologies were developed as the basis for sociopolitical identities and political systems. In the social, economic, and political transformations framed by the two world wars and the Great Depression, world visions and broad programmatic perspectives were an important part of the global scene. The most comprehensive statements of the emerging ideologies were made by movements and thinkers in more industrialized societies. These helped to shape the options defining transformations taking place outside of Europe and North America. Two important lines of experience shaped the developing global competition of ideologies in the first half of the 20th century: (1) the definition and conflict of explicitly modern ideologies in the Western world, and (2) the evolution of options for guiding transformations in the emerging nationalist context of societies dominated by the major powers. 1

### **1. Western Ideological Competitions**

At the beginning of the 20th century in Europe, comprehensive ideological positions defining the basic nature of society tended to be politically marginal. The nationalist unifications of Italy and Germany had avoided becoming ideologically liberal, and Great Britain and France maintained a practical adherence to parliamentary liberalism. Democratic liberalism, in an explicitly capitalist format, as it was emerging in the U.S., was also pragmatic in orientation. World War I destroyed the stability of the politically evolutionary acceptance of change, and following the war, the alternatives were more sharply defined in ideologically programmatic terms. 2

#### **a. Democratic Liberalism**

The victorious powers in World War I were committed to differing forms of democratic 3

liberalism. The **World War I settlement** reflected this ideological position. The global terms were set by the U.S. president **WOODROW WILSON**, in an ideological liberal internationalism committed to the **self-determination** of peoples, **democratic** political systems, relatively **capitalist** market economies, and peaceful resolution of international conflicts by public negotiation. The **League of Nations** was the manifestation of this ideology. Although Great Britain and France were less committed to the international aspects, they maintained their own democratic parliamentary systems and supported efforts to create and maintain them elsewhere in Europe. Germany was reconstituted in the **Weimar Republic**, and in the other new states established in Central and Eastern Europe, parliamentary systems were established. Significant economic difficulties in all of the democracies and growing political divisions among the parties led to increasing pressures for more authoritarian leaders, and in a number of countries dictators came to power. In the continuing democracies, the Depression forced major changes involving significant government intervention in the economy. **Democratic socialism** became a major force in Britain and France, and the **New Deal** of President Franklin Roosevelt, beginning in 1933 in the U.S., was a major transformation of the economy of the U.S. The economies of the liberal democracies were increasingly **mixed economies**, combining aspects of capitalism and socialism in an emerging **democratic welfare state** system. During World War II, the **Axis powers** represented the authoritarian alternative to liberal democracy. When they were defeated, the **Allied powers** established constitutional democratic systems in **Italy, Japan**, and the parts of **Germany** under occupation by American, British, and French forces. In the Western world, after major setbacks during the interwar period, liberal democracy, in modified capitalist and socialist economic systems, emerged after World War II as the dominant sociopolitical ideology.

## 2. [Nationalist Options](#)

In the areas dominated by the major powers and empires, the first half of the 20th century was a time when nationalist movements began to be important throughout the world. In the 19th century, nationalist movements had been most effective and active in Europe. The advocacy of the right of **self-determination** which was part of the World War I settlement created a number of new nationally identified states in Europe but maintained imperial control in much of the rest of the world. 1

**MIDDLE EAST.** Movements for assertion of national identities had developed in the late 19th century in **Egypt** and **Persia** (Iran), and among **Turks** in the Ottoman Empire. In the **Arab lands** of southwest Asia and French North Africa, there was little Arab nationalism until World War I. Following World War I, major nationalist movements developed in Turkey under **Mustafa Kemal Atatürk** (See [1919, May 19](#)), in Persia under **Reza Shah Pahlevi**, and in Egypt under the **Wafd Party** of Sa'd Zaghloul. In French North Africa, the **Destour Party** and then the **Neo-Destour Party** in Tunisia and less well structured efforts elsewhere presented nationalist programs, as did intellectuals in the states that had been created as League of Nations **mandates** in the Middle East—Syria, Lebanon, Iraq, Jordan, and Palestine. All of these nationalist movements tended to express their goals in terms of **Wilsonian liberal democracy**. They sought self-determination, recognized popular sovereignty, and tried to create independent parliamentary political systems. All also advocated programs of rapid modernization following explicitly Western European models. Fascism and communism had limited appeal or support. The real conflict was between nationalist aspirations and imperialist power. Only in the new Turkish republic under **Atatürk**, and, to a lesser extent, in Persia (Iran), were nationalists able to achieve effective political independence and implement modernization programs of their own rather than an imposed definition. 2

**AFRICA.** The interwar period was from some perspectives the heyday of European imperialism in Africa. Major concepts of imperial governance like **Indirect Rule** were developed by the British, and there was little expectation that imperial rule would end before a long period of time had elapsed. The units of imperial control had been created by the processes of European imperial expansion and had little relationship to the ethnic and cultural identities of the subject peoples. In the interwar period there were, however, 3

small groups of educated Africans who began to call for independence and did so in nationalist terms, calling for the independence of the existing imperialist-created state. In the **Anglo-Egyptian Sudan** a Graduates Congress was formed in 1938 and advocated nationalist aims, presenting a list of demands to the British in 1942. In **Kenya** during the 1920s there was the Kikuyu Central Association, which sought the return of land taken by British settlers, but its leaders, like the later nationalist **Jomo Kenyatta**, were not actively nationalist in the interwar era. In general terms, educated Africans in all colonies expressed desires for self-determination and effective political participation, but effective nationalist movements did not emerge until after World War II.

**PAN-AFRICAN** movements did not have much support in Africa itself, but in the U.S., African-American organizations supported various types of Pan-Africanism and possible return to Africa. The most important advocates of these ideas were **W.E.B. DuBois** early in the century, and **Marcus Garvey** in the Universal Negro Improvement Association in the 1920s. A religious form of American black nationalism was formulated by **Elijah Muhammad** in the organization of the **Nation of Islam** in the 1930s.

**SOUTH ASIA.** In **India**, there was a well-established nationalist movement by the beginning of the 20th century. The **Indian National Congress** had been founded in 1885 with the goal of securing for Indians a greater role in their government. In the interwar period, especially under the dramatic nonviolent leadership of **Mahatma Gandhi**, the nationalist movement gained great strength. The **Muslim League**, founded in 1906, originally worked closely with Congress to secure Indian self-government. During the interwar period, Indian Muslim feelings of identity and fear of Hindu domination in an independent India led the Muslim League to advocate establishing an independent Muslim state in South Asia to be called **Pakistan**. Following World War II in 1947, when British India became independent it was partitioned into Pakistan and the Republic of India.

**EAST ASIA.** In the colonial areas of East Asia there were some beginnings of modern nationalism. In the **Philippines**, the period of rule by the U.S. began with a bloody war of Philippine resistance (1898–1901) and ended with the establishment of commonwealth status in the late 1930s and the Japanese conquest during World War II. Nationalist resistance to French rule in **Indochina**, Dutch rule in **Indonesia**, and British control in various southeast Asia lands began to be expressed in the interwar era but with only limited success until World War II, when the defeat of the imperial powers by **Japan** inspired local nationalists.

**Japan's role.** Japan had an important international role in the development of nationalist movements during the first half of the 20th century. The success of the program of rapid modernization set in motion by the **Meiji Revolution** in the 19th century inspired reformist nationalists like Atatürk in Turkey. Japan's victory in the **Russo-Japanese War of 1905** had a major impact in showing that European imperial powers could be defeated. In **World War II**, the Japanese conquest of the French, British, Dutch, and

American possessions in East and Southeast Asia opened the way for wartime puppet states to set precedents for later demands for independence. In addition, the expansion of Japan's own imperial strength aroused the fears of Japan's historic rivals, China and Korea, and provided a negative impulse for the development of nationalism in China under the **Kuomintang** led by **Jiang Jieshi**. In **Korea**, following its annexation by Japan in 1910, nationalist resistance took a number of forms, including the establishment of a Korean provisional government in exile whose president in 1919 was **Syngman Rhee**, who became the first president of South Korea in the republic created by the U.S. following World War II.

**Nationalist ideologies** in the first half of the 20th century tended to be based on the **Wilsonian liberal democratic** vision of the world. It was not until the time of the Cold War following World War II that more Communist-style perspectives became important in developing nationalist movements and visions.

8

### a. Globalization of Culture

The period between the two world wars was a time when many aspects of human life and experience became more global in style or mode of operation. The Great Depression showed the global nature of important economic aspects of life, but this was also part of many aspects of social and cultural life. These tendencies could be seen in sports, entertainment, and literature.

9

#### 1. Sports

The organizational and social context of sports became significantly globalized in the first half of the 20th century. The sports involved the establishment of significant international organizations both of athletes and of competitions. The **International Amateur Athletic Federation (IAAF)** (founded 1913) became a major global institution by mid-20th century. **THE MODERN OLYMPIC GAMES** became major global events in the interwar era. The **Berlin Olympics of 1936** were an attempt by **Hitler** to glorify the new racist Nazi state but this failed when an African-American athlete, **Jesse Owens**, won four gold medals. The Olympics were extended to include winter games in 1924. The **London Olympics of 1948** were a celebration of the Allied victory in World War II as well as an athletic event.

10

**Major individual sports** also became globalized, with the world's most widely viewed sport of **SOCCER**, or Association Football, reflecting the broader history. Following World War I, association football became a major feature of social recreational life, especially in Europe and Latin America. The first **World Cup** competition was held in

11

1930 and was won by Uruguay. International competitions were interrupted by World War II but quickly resumed following the war.

### **3. International Relations**

The era between the two world wars was a period of complex interrelations among states and involved a variety of other institutions. The major dividing point in the two decades is the beginning of the Great Depression, which can be dated from the collapse of the New York stock market in 1929. The interwar period may be divided chronologically into two phases: (1) the postwar period of adjustment and building, and (2) the era of the Great Depression. <sup>1</sup>

#### **a. The Post–World War I Era**

The main lines of development of international relations during the 1920s were to implement the Versailles Treaty, to organize international relations among the major powers in the changing global context, and to adjust to the globalization of many different types of activities. <sup>2</sup>

#### **1919**

Creation of the **International Labor Organization** and the **International Commission for Air Navigation** as a part of the development of the League of Nations organizational structures. Creation of the **International Federation of Red Cross Societies**, joining the various national societies into a single world federation. The formation of the **Third International (Comintern)** by Lenin. <sup>3</sup>

#### **1919, Nov. 19**

U.S. Senate refused to ratify the **Versailles Treaty** (See [July 10–1920, March 19](#)) and the defensive treaties among the U.S., Great Britain, and France. This significantly weakened the whole structure of the international peace structure established at Paris. 4

## 1919–24

**Conflicts over borders of peace settlement** (See [1919–22](#)). Numerous disputes in **Eastern Europe** took place, contesting control of Vilna (between Poland, Lithuania, and Russia), Teschen (Poland and Czechoslovakia), Bergenland (between Austria and Hungary), Fiume (between Italy and Yugoslavia), and Upper Silesia (between Germany and Poland). In the **Middle East**, there was a **Turco-Greek War** (1919–22) for the control of Western Anatolia, which the new Turkish nationalist movement won, driving Greek forces completely out of Anatolia. 5

## 1920

Creation of the **International Chamber of Commerce**. 6

**Olympic Games resumed**, after eight-year break, in Antwerp. Finnish distance runner Paavo Nurmi was major star. 7

## 1920, Jan. 10

Official **birth of the League of Nations**. The assembly met for the first time Nov. 15. 8

## April 19–26

The **San Remo Conference** of the Allied powers to discuss territorial arrangements and to assign League of Nations Class A Mandates. 9

## June 19–22

**Conference of Hythe and Boulogne** to discuss the Middle Eastern situation and reparations issues. 10

## **b. The Era of the Great Depression**

During the 1930s, the major themes of global history were the continuing efforts to resolve the problem of war, first in terms of continuing the effort to find ways of eliminating war, and then in terms of limiting actual prospects of the major war that was clearly looming; and the efforts to cope with the economic conditions of the global depression. <sup>1</sup>

### **1930, Jan. 21–April 22**

**LONDON NAVAL CONFERENCE.** It led to a treaty signed by Great Britain, the U.S., France, Italy, and Japan, regulating submarine warfare and limiting the tonnage and gun caliber of submarines. The limitation of aircraft carriers, provided for by the Washington Treaty, was extended. Great Britain, the U.S., and Japan agreed to scrap certain warships by 1933 and allocated tonnage in other categories. Increased tonnage was allowable under specified conditions. The agreements were to operate until 1936. <sup>2</sup>

### **Nov. 6–Dec. 9**

Final meeting of the **Preparatory Commission on Disarmament.** It adopted by a majority vote a draft convention to be discussed at a disarmament conference called by the League Council for February 1932. German and Russian representatives did not approve, and Swedish and American delegates had strong reservations. The major problems involved clauses preserving obligations from previous treaties, especially those barring German equality in armament. <sup>3</sup>

## 4. [Science](#)

Science and technology became increasingly international but major developments were concentrated in Europe and the U.S. Throughout the interwar years, physics remained the center of most scientific activity, illuminating a universe that lacked any absolute reality. In 1919 **Ernest Rutherford** (1871–1937) showed that the atom could be split. By 1944 seven subatomic particles had been identified. Although few nonscientists understood the revolution in physics, the implications of the new theories and discoveries, as presented by newspapers and popular writers, were disturbing to millions of men and women in the 1920s and 1930s. 1

The major benchmarks in scientific inquiry follow. 2

### a. [Mathematics, Physics, Astronomy](#)

#### 1915

**Einstein** announced his **general theory of relativity**, which explained the advance of Mercury's perihelion and predicted the subsequently observed bending of light rays near the sun. 3

#### 1918

**Harlow Shapley** (1885–1972), from an extensive study of the distribution of globular clusters and cepheid variable stars, increased the estimated size of our galaxy about ten times. He envisioned the galaxy as a flattened lens-shaped system of stars in which the solar system occupied a position far from the center. 4

#### 1919

**Rutherford** found that the collision of alpha particles with nitrogen atoms resulted in the disintegration of the nitrogen and the production of hydrogen nuclei (protons) and an isotope of oxygen. He was the first person to achieve artificial transmutation of an element.

5

## 1919

**Arthur S. Eddington** (1882–1944) and others, by studying data obtained during a total solar eclipse, verified Einstein's prediction of the bending of light rays by the gravitational field of large masses.

6

## 1919–29

**Edwin P. Hubble** (1889–1953) detected cepheid variable stars in the Andromeda Nebula, a discovery that allowed him to determine the distances between galaxies.

7

## 1924

**Louis-Victor de Broglie** (1892–1987) determined from theoretical considerations that the electron, which had been considered a particle, should behave as a wave under certain circumstances. Experimental confirmation was obtained in 1927 by **Clinton Davisson** (1881–1958) and **Lester H. Germer** (1896–1971).

8

## 1925

**Wolfgang Pauli** (1900–1958) announced the **exclusion principle** (in any atom no two electrons have identical sets of quantum numbers). This principle was an important aid in determining the electron structure of the heavier elements.

9

## 1925–26

**Werner Karl Heisenberg** (1901–76) and **Erwin Schrödinger** (1887–1961) independently, and in different ways, laid the theoretical foundations of the new **quantum mechanics**, which, though violating classical notions of causality, successfully predicts the behavior of atomic particles.

10

## 1927

**George Lemaître** (1894–1966), in order to explain the red shift in the spectra from distant galaxies, introduced the concept of the **expanding universe**. **Eddington** pursued research in this subject from 1930.

11

## 1928

**Paul A. Dirac** (1902–84), by combining quantum mechanics and relativity theory, devised a relativistic **theory of the electron**.

## b. [Chemistry, Biology, Geology](#)

### 1915

**Alfred Wegener** (1880–1930) gave the classic expression of the controversial theory of continental drift in *Die Entstehung der Kontinente und Ozeane*. <sup>1</sup>

### 1921

**Hans Spemann** (1869–1941) postulated an organizer principle that was responsible for the formative interaction between neighboring embryonic regions. He stimulated contemporary embryologists to search for the inductive chemical molecule. <sup>2</sup>

### 1927

**Hermann J. Muller** (1890–1967) announced that he had successfully induced mutations in fruit flies with x-rays. This provided a useful experimental tool, yet in retrospect gave warning to the generations of the 1940s and 1950s of a danger in the release of atomic energy. <sup>3</sup>

### 1929

**Alexander Fleming** (1881–1955) announced that the common mold *Penicillium* had an inhibitory effect on certain pathogenic bacteria. It was not until 1943 under the pressures of World War II, however, that the first antibiotic, penicillin, was successfully developed. <sup>4</sup>

### 1930

**Ronald A. Fisher** (1890–1962) established in *The Genetical Theory of Natural Selection* <sup>5</sup> that superior genes have a significant selective advantage, thus testifying that Darwinian evolution was compatible with genetics.

## 1941

**George W. Beadle** (1903–89) and **Edward L. Tatum** (1909–75) described an <sup>6</sup> experimental assay that evaluated the exact relationships between specific mutant genes in mold and particular stages in the metabolic process.

## 1944

**Oswald T. Avery** (1877–1955) and collaborators announced they had transmuted one <sup>7</sup> type of pneumococcus bacteria into a second type by the transfer of DNA molecules. (See [Science and Technology](#))

## 5. Technological Developments

The major achievements in technology follow. 1

### a. Energy and Materials

#### 1921

**Tetraethyl lead**, gasoline antiknock additive, produced by **Thomas Midgley** (1889–1994). 2

#### 1930–35

Development of first commercially practicable **catalytic cracking system** for petroleum by **Eugene J. Houdry** (1892–1962). 3

#### 1930–37

Development of gas turbine unit for jet propulsion in aircraft by **Frank Whittle**. 4

#### 1942

**DAWN OF THE NUCLEAR AGE.** The first self-sustaining **nuclear chain reaction** achieved at Stagg Field, Chicago, by **Enrico Fermi** (1901–54). The first full-scale use of nuclear fuel to produce electricity occurred at Calder Hall (England) in 1956. 5

## **b. Materials and Construction**

### **1928**

The first steel-frame, glass-curtain-wall building completed. By 1960 this technique was practically universal for high buildings; developed particularly by **L. Mies van der Rohe** (1886–1969). <sup>1</sup>

### **1941**

**Shell molding**, a revolutionary process producing more accurate castings cheaply, invented by **Johannes Croning**. Powder metallurgy, although known since Wollaston's work at the beginning of the 19th century, achieved extensive application in mid-20th century. <sup>2</sup>

### **1945**

Industrial development of silicones proceeded apace for a wide variety of applications, including lubricants for exceedingly high and low temperatures; binding of fiberglass; water-repellent agents; etc. <sup>3</sup>

### **c. Machines and Industrial Techniques**

#### **1914**

**Conveyer-belt mass production** employed in the U.S. most dramatically in Henry Ford's <sup>1</sup> assembly line for Model T Ford automobile, which became the symbol for American industrial technique.

#### **1915**

Development of **tank in warfare** by British (Sir Ernest Swinton). <sup>2</sup>

#### **1920**

**J. C. Shaw** developed a **sensing device**, controlled by a servomechanism, for a milling machine. Hydraulic trace of J. W. Anderson (1927) allowed the reproduction of complex shapes. Machine tools further supplemented by electrolytic and ultrasonic machines, and cutting machines guided by an electron beam. **Development of laser** (light amplification by simulated emission of radiation) by Theodore N. Maiman (1960); laser also used for precision cutting. <sup>3</sup>

#### **1920 Ff**

**Managerial techniques** improved through development of “scientific management,” <sup>4</sup> whose principles were first enunciated by **Frederick W. Taylor** (1856–1915) in the first decade of the century. Taylor concentrated on time-motion studies. Other proponents of

“rationalized” production were Frank Gilbreth and Charles Bedaux. Quality control developed 1926 ff.

## 1923

First mill for hot continuous wide strip rolling of steel, based on work of John B. Tytus. 5

## 1938

Ladislao J. and George Biro patented the **ballpoint pen**. 6

## 1941–45

Development of **rockets and missiles** during World War II. 7

## 1944

Harvard IBM Automatic Sequence Controlled Calculator, the first automatic general-purpose **digital computer**, completed, ENIAC (electronic numerical integrator and calculator), the first electronic digital computer, built in 1946. Development of special-purpose computers and data processors (1950 ff.), including programmed **teaching machines**. 8

## **d. Agricultural Production and Food Technology**

### **1917**

**Clarence Birdseye** (1886–1956) began development of method for quick **freezing of foods** in small containers; placed on market in 1929. 1

### **1939**

Paul Muller synthesized DDT for use as an insecticide. Othmar Zeidler had prepared DDT in 1874, but its insecticidal qualities had not been suspected. 2

### **1940 Ff**

Development of **artificial insemination** to improve livestock breeding. 3

### **1945 Ff**

Unit **packaging of foodstuffs** improved by development of plastic packaging films. Trend toward prepared “convenience” foods for household use. 4

## **e. Transportation and Communication**

### **1920**

**Frank Conrad** (1874–1941) of the Westinghouse Co. began broadcasting radio programs in Pittsburgh, marking the **beginning of radio** as a mass communication medium. 1

### **1922**

**Herbert T. Kalmus** developed **Technicolor**, the first commercially successful color process for motion pictures. 2

### **1926**

**Sound Motion Pictures.** Although Edison had attempted to put together his phonograph and motion picture inventions for sound movies as early as 1904, it was 1923 before de Forest successfully demonstrated his phonofilm system for recording sound on the motion picture film. The first motion picture with sound accompaniment was publicly shown in 1926, the first talking picture in 1927. 3

### **1926 Ff**

**John L. Baird** (1888–1946) successfully demonstrated **television** in England. His mechanical system of television, similar to that of C.F. Jenkins in the U.S., was based on Paul von Nipkov's rotating disk (1886) but had technical limitations; modern electronic 4

television developed from the cathode-ray tube (1897) of Ferdinand Braun and A.A. Campbell-Swinton's proposals (1911) for use of a cathode ray to scan an image. The crucial invention was the Iconoscope of the Russian American **Vladimir Zworykin** (1889–1982), the device that transmits television images quickly and effectively. Philo Farnsworth of the U.S. contributed the image dissector tube (1927). General broadcasting of television began in England in 1936, in the U.S. in 1941, but languished until after World War II. Peter C. Goldmark of Columbia Broadcasting System (CBS) demonstrated (1940) a sequential method of color television, which gave way to a compatible electronic system developed by RCA in the 1950s.

## 1932

**Edwin H. Land** (1909–91) invented the first practical synthetic light-polarizing material (**polaroid glass**), found useful in sunglasses, cameras, and scientific optical instruments. In 1947 he invented the **Polaroid Land camera**, which developed the film inside the camera and produced a photograph print within one minute; in 1962 he introduced color film for his camera. 5

## 1933

**Fluorescent lamps** introduced for floodlighting and advertising. Developments leading up to this included experiments by George Stokes (1852) and Alexandre Becquerel (1859) to excite fluorescent materials by ultraviolet rays or in a discharge tube; Peter Cooper-Hewitt's invention of the mercury vapor lamp (1901); the introduction of the **Neon lamp** by Georges Claude and the work on cathodes by D.M. Moore and Wehnelt in the 1900s; and J. Risler's application of powder to the outside of tubular discharge lamps (1923). Subsequent developments have included increased cathode life and improved fluorescent powders. 6

## 1933

**Edwin H. Armstrong** (1890–1954), pioneer radio inventor (regenerative, that is, feedback, circuit, 1912, and superheterodyne circuit, 1918), perfected **frequency modulation (FM)**, providing static-free radio reception. 7

## 1937

**Chester Carlson** patented a new dry photographic process (Xerography) based upon principles of photoconductivity and electrostatics.

8

## 1939

**Igor Sikorsky** (1889–1972) flew the first **helicopter** of his design. The first helicopter capable of flight was the work of Ellehammer of Denmark (1912), based on C. Renard's articulated rotor blade (1904) and G. A. Crocco's cyclic pitch control (1906). Juan de la Cierva invented the autogiro (1922), differing from the helicopter in that its rotor autorotated and the engine drove a normal propeller. Further development work was done (1934–36) by Louis Breguet and Heinrich Focke.

9

## 1939

First test flight of a **turbo-jet airplane** (Heinkel) with an engine designed by Hans von Ohain. Simultaneous and parallel work on jet airplanes in Britain, based on turbo-jet engine designed by Frank Whittle (1930). In 1958 **jet-powered transatlantic airline** service was inaugurated by BOAC and Pan-American Airways. In 1962 the British and French governments announced plans to cooperate on the production of a jet-propelled supersonic transport plane (the Concorde), and the U.S. government proposed American production of a supersonic commercial plane the following year. The first plane to exceed the speed of sound in level flight was the American rocket-propelled Bell X-1, which reached Mach 1.06 (approximately 750 m.p.h.) on October 14, 1947.

10

## 1940–45

**Development of radar** (“radio-detection-and-ranging”) stimulated by World War II, for detection of aircraft, blind-bombing techniques, and naval search equipment. Based on Heinrich Hertz's demonstration (1887) that radio waves are reflected similarly to light rays, the technique was first applied by Edward Appleton in Britain (1924) and G. Breit and M. A. Tuve in the U.S. (1925) for investigating ionization in the upper atmosphere. Robert A. Watson-Watt showed the possibilities of employing radio waves to detect aircraft (1935); J.T. Randall and H.A.H. Boot developed the cavity magnetron for high-power microwave transmission. Simultaneously, radar development had been going on in Germany and the U.S., including the development of equipment by Robert H. Page of the Naval Laboratory. After 1940 Britain and the U.S. cooperated in radar development,

11

much of the work being done at the Radiation Laboratory in Cambridge, Mass.

## 1. The Western Front, 1914–1915

### THE WESTERN FRONT IN WORLD WAR I (MAP)

**GERMAN STRATEGY** was based on the **Schlieffen Plan**, which provided for the concentration of the main German forces on the French front, the passage through Belgium, and a huge wheeling movement to encircle Paris. This plan required a massing of forces on the German right flank, but even before the outbreak of war the German chief of the general staff, **Gen. Helmuth von Moltke** (1906–Sept. 14, 1914), had transferred some divisions from the right to the left (Lorraine) wing in order to block an invasion of south Germany. The Germans concentrated about 1.5 million men organized in seven armies. On the eastern (Russian) frontier, German forces were relatively few in number and were intended merely to delay the invaders until a decisive victory could be won in the west. 2

The **French plan of campaign** (Plan 17) had been drawn up in 1913 by **Gen. Joseph Joffre** (chief of general staff, July 28, 1911–Dec. 12, 1916) under the influence and teaching of **Gen. Ferdinand Foch**. The plan ignored the danger of a great German advance through Belgium and depended entirely on a vigorous French offensive on the right wing and center. The French reckoned on a Russian advance in the east with about 800,000 men on the 18th day of mobilization. **Britain** was expected to contribute about 150,000 men. 3

**1914, Aug. 4**

In the night the **Germans crossed the frontier** of Belgium, forcing Belgian troops back to Brussels and Antwerp. 4

The **French offensive** (five armies) developed in the region between Mézières and Belfort, Joffre hoping for a breakthrough on either side of Metz. 5

### Aug. 14–25

**Battle of the Frontiers.** French forces met with failure in their invasion of Lorraine. 6

### Aug. 23

**Battle of Mons.** First contact between Germans and British resulted in the latter's retreat. 7

A German advance forced the French and British to fall back to the **Marne River**. The French government moved to Bordeaux (Sept. 3–Dec. 1914). Joffre hastily formed a sixth army on his left, to outflank the German fifth army. Meanwhile Moltke, believing a decision had already been reached by August 25, detailed six corps from the second and third armies to serve on the Russian front. 8

### Aug. 30

**Kluck** gave up his advance to the west of Paris in order to keep contact with Bülow's second army. By September 4 Kluck realized the danger threatening him from the sixth French army before Paris. On the same day Moltke ordered Kluck and Bülow to turn southwest to meet this danger. In the course of the operation a gap was allowed to open between the first and second German armies. 9

### Sept. 5–12

**BATTLE OF THE MARNE.** The opposing armies tried to outflank each other, resulting in a German withdrawal west of Verdun and a cautious British and French advance. 10

### Oct. 10–Nov. 10

**THE RACE FOR THE SEA.** The Germans failed to push through to the **Channel ports**. 11

By the end of 1914 the line on the western front had become fairly well fixed and the war had become a **war of position**, confined largely to **trench warfare**. All but a tip of Belgium was in the hands of the Germans. The Belgian government was established at **Le Havre**, while the occupied area was governed successively by **Gen. Colmar von der Goltz** (to Nov. 1914), **Gen. Moritz von Bissing** (to April 1917), and **Gen. Ludwig von Falkenhausen** (to the end of the war). The Germans also retained about one-tenth of the territory of France (21,000 square kilometers), including many of the most valuable coal and iron mines and several important industrial areas. The line, which in the course of the next three years did not vary by more than ten miles, left to the Allies **Verdun, Rheims**, and **Soissons** and thence turned northward between **Noyon** (Ger.), **Montdidier** (Fr.), **Peronne** (Ger.), **Albert** (Fr.), **Bapaume** (Ger.), **Arras** (Fr.), **Lens, La Bassée** (Ger.), **Armentières, Ypres** (Brit.), **Passchendaele, Dixmude** (Ger.), **Nieuport** (Brit.), **Ostend** (Ger.). 12

**The operations in France in 1915** were devoid of broader interest. The commanders on both sides persisted in the belief that a decision was to be won in this area, and consequently devoted as many men and guns as possible to renewed efforts to break through the opponents' line. None of these "offensives" had a notable effect. All were characterized by appalling loss of life. 13

### April 22–May 25

**SECOND BATTLE OF YPRES.** 14

### May 9–June 18

**SECOND BATTLE OF ARTOIS.** After an unprecedented bombardment, the French succeeded in breaking through on a six-mile front north of Arras and facing Douai. 15

The western front was unusually quiet during most of the summer, the Allies using this period for preparation of a "great offensive" for the autumn. 16

### Sept. 22–Nov. 6

**SECOND BATTLE OF CHAMPAGNE.** After many weeks of desperate fighting the French offensive revealed little gain. 17

### Sept. 25–Oct. 15

**THIRD BATTLE OF ARTOIS.** The failure of the great offensive of the French and British, which Joffre had hoped would work like a pair of pincers to force the German withdrawal from northern France, left the situation in the west substantially where it had been a year previously. (See [The Western Front, 1916–1917](#)) 18

## **2. The Eastern Front, 1914–1915**

### **THE EASTERN FRONT IN WORLD WAR I (MAP)**

The Russian plan of campaign (**Grand Duke Nicholas Nicolaievich**, commander in chief, Aug. 3, 1914–Sept. 5, 1915) was concerned primarily with Austria; large forces were therefore concentrated on the Galician frontier. The Austrians (**Archduke Frederick**, commander in chief, **Gen. Conrad von Hötzendorff**, chief of staff, 1912–17, commander in chief, 1917–July 16, 1918) on their part had drawn plans that depended on German support through an advance on the **Narev River**. Pressure elsewhere prevented the Germans from keeping this engagement, but the Austrians, unable to abandon eastern **Galicia**, with its valuable oil wells, decided to advance from **Lemberg** toward **Lublin** and **Cholm** to cut the railways to Warsaw.

<sup>1</sup>

### **1914, Aug. 26–Sept. 2**

The Austrians won a great victory over the Russians (**Battle of Zamosc-Komarov**), but at once the Russians, with much larger forces, began to drive back the Austrian right wing.

<sup>2</sup>

### **Sept. 13**

**The Russians took Lemberg**, obliging the Austrians to abandon eastern Galicia. At the same time the Russians launched an attack upon the passes of the Carpathians leading into northern Hungary (Sept. 24).

<sup>3</sup>

On the **Serbian front** the Austrians were able to concentrate fewer forces than originally intended. They bombarded **Belgrade** (July 29) and crossed the **Drina River** (Aug. 13) to begin the invasion of Serbia. After months of advances and reverses, the Austrians captured **Belgrade** (Dec. 2). 4

The decisive battles on the eastern front in 1914, however, were won by the Germans. In response to French appeals for action against the Germans, the Russians formed two armies to invade **East Prussia** from the east and the south. Russian successes led to the appointment of **Gen. Erich von Ludendorff**, who had distinguished himself at Liège and was recognized as an outstanding staff officer, as junior officer and chief of staff to **Gen.** (later Field Marshal) **Paul von Hindenburg**, a retired officer of no great distinction. 5

### Aug. 23

Hindenburg and Ludendorff arrived at Marienburg. The essence of this joint plan was to concentrate the German army against the second Russian army (**Gen. Alexander Samsonov**), which was beginning the invasion of East Prussia from the southeast. Throughout these and later operations the Germans were aided greatly by the interception of unciphered Russian messages, and by the unreadiness of Rennenkampf (leader of the first Russian army) to do much to relieve Samsonov. 6

### Aug. 26–30

**BATTLE OF TANNENBERG.** The Germans completely defeated Samsonov's army. The Germans then turned on the first Russian army (**Gen. Paul Rennenkampf**), which was obliged to fall back. 7

### Sept. 6–15

**BATTLE OF THE MASURIAN LAKES.** The Germans advanced to the lower Niemen River and occupied the *gouvernement* of Suvalki. 8

Early in October most of the German troops on this front had to be withdrawn for operations farther south, so that the Russians were able to invade **East Prussia** for the second time. 9

Meanwhile it was necessary for the Germans to do something to relieve the Austrians. **Hindenburg** was made **commander in chief of the German armies in the east** (Sept. 10

18). The plan, as worked out by the German and Austrian staffs, was for a great combined attack on Poland. The Austrians took the offensive in Galicia (Oct. 4), relieved **Przemysl**, and forced the Russians to withdraw from the Carpathians. Meanwhile the Germans (**Mackensen**), advancing on the Austrian left, pushed on toward the Vistula.

### Oct. 9–20

**BATTLES OF WARSAW AND IVANGOROD.** Russian forces pushed back Austrian advances. 11

To relieve the pressure in the south, Hindenburg and Ludendorff planned a great offensive, which, it was hoped, would knock the Russians out before the onset of winter. They appealed to the high command for the transfer of large forces from the west, but the demand was rejected by **Gen. Erich von Falkenhayn** (minister for war, 1906–Jan. 21, 1915; chief of the general staff, Sept. 14, 1914–Aug. 29, 1916), whose attention at this time was concentrated on the drive for the Channel ports. 12

### Nov. 16–25

**THE BATTLES OF LODZ AND LOWICZ.** After initial setbacks, **Lodz** fell to the Germans (Dec. 6). 13

On the **Galician front** the Austrians attempted an offensive to coincide with the German advance. 14

### Dec. 5–17

**BATTLE OF LIMANOVA.** The Austrians failed to break the Russian position before Cracow. Throughout the winter the Russians were within 30 miles of the city. 15

In **Serbia** the Austrians met with even less success as the Serbs forced them out of Serbia (Dec. 3–6). 16

During the winter months the fighting on the Russian front was inconclusive. 17

### 3. [The War at Sea, 1914–1915](#)

The **British Grand Fleet** (**Adm. Sir John Jellicoe**, commander, Aug. 4, 1914–Nov. 29, 1916) consisted of 20 dreadnoughts and a corresponding number of battle cruisers, cruisers, destroyers, and other craft. The fleet was based on **Scapa Flow**, **Cromarty**, and **Rosyth**, with **Harwich** as base for destroyers and submarines. A second fleet, consisting largely of pre-dreadnought types, guarded the Channel. The **Germans** had a **High Seas Fleet** of 13 dreadnoughts, based in the North Sea ports. The Germans remained in port, despite the efforts of **Adm. Alfred von Tirpitz** to bring about a more active policy. 1

#### 1914

The Germans devoted their attention to mine-laying and **submarine work**. After an attempted German submarine raid on **Scapa Flow** (Oct. 18), the Grand Fleet was withdrawn from that base and concentrated, for a time, on the west coast of Scotland. 2

Apart from occasional sinkings, the war in the North Sea was restricted to raids. 3

The largest naval battles occurred between German ships in foreign stations and the Allied fleets assigned to hunt them down (**Nov. 1: naval action off Coronel**; **Dec. 8: Battle of the Falkland Islands**). 4

From the very beginning of the war the question of **neutral shipping** had arisen. Both the British and French governments issued new and more rigorous **interpretations of contraband** (Aug. 20, 25, 1914), adding greatly to the list of contraband goods. To this the U.S. government replied (Oct. 22) that it would insist on the observance of the existing rules of international law. Nevertheless the British continued to revise the list of contraband and to modify the Declaration of London of 1909. On Nov. 2 they declared the North Sea a military zone, and on Jan. 30, 1915, the British admiralty ordered British merchant ships to fly neutral ensigns or none in the vicinity of the British Isles. 5

#### 1915, Feb. 4

The German government announced that a submarine **blockade of Great Britain** would begin on Feb. 18. To this the London government replied with an order in council (March 11) ordering the seizure of all goods presumably destined for the enemy. Cotton was declared contraband on March 18. 6

### May 7

**LUSITANIA SUNK** off the coast of Ireland, with a loss of 1,198 lives, including 139 Americans. 7

The sinking of the *Lusitania* brought the U.S. and Germany to the verge of war and created much greater tension than had developed between the Americans and Allied governments over questions of contraband and blockade. In a speech on May 9 **President Wilson** publicly denounced the sinking, but the note of protest to Berlin (May 13) was somewhat milder in tone, demanding reparations and abstinence from such practices in the future. 8

### June 8

**William J. Bryan** resigned as U.S. secretary of state because of unwillingness to follow the president in his policy. Bryan was succeeded by **Robert Lansing**. 9

On the very next day a much stronger note was dispatched to Berlin, without eliciting a disavowal or assurance for the future. A third note was sent on July 21. 10

### Sept. 1

The German government gave assurances that no liners would be sunk in the future without warning and without some provision for the safety of noncombatants, provided the ship made no effort to offer resistance or to escape. This resulted from a second period of acute tension after the sinking of the *Arabic* (Aug. 19), which claimed two American lives. The German ambassador at Washington, **Count Johann von Bernstorff**, had finally convinced his government of the real danger of war. These assurances were reasonably well observed during the remainder of the year, and so the first phase of the submarine crisis came to an end. (See [The War at Sea, 1916–1917](#)) 11

#### **4. The Balkan Situation, 1914–1915**

The three Balkan states, Greece, Bulgaria, and Romania, all exhausted by the Balkan Wars of 1912–13 (See [June 29–July 30](#)), proclaimed neutrality at the beginning of the European conflict. The Russians entertained high hopes of securing the aid of **Romania**, which would have been an important factor in the Galician campaign. On various occasions (July 30, Sept. 16) they attempted to bait the Bucharest government with promises of Transylvania, but so long as **King Carol** lived (d. Oct. 10, 1914) there was no hope of Romanian intervention, since the king strongly regretted Romania's failure to side with its Austrian and German allies. **King Ferdinand** felt morally less bound, but the prime minister, **Ion Bratianu** (premier and foreign minister, Jan. 14, 1914–Feb. 6, 1918) was determined to drive a hard bargain. 1

##### **1914, Dec. 6**

Bratianu rejected Allied suggestions that Romania guarantee Greece against Bulgarian attack or make concessions in the Dobrudja to secure Bulgarian support. 2

##### **1915, Jan. 25**

Bratianu refused to join Greece in support of Serbia. 3

##### **May 3**

The Romanians asked not only for **Transylvania**, but also for part of **Bukovina** and the **Banat**. 4

## July

The Russians were prepared to concede most of these demands, but Bratianu was then unwilling to act unless the Allies had 500,000 men in the Balkans and the Russians 200,000 in Bessarabia (Nov. 1915). 5

The **POSITION OF BULGARIA** became crucial after the entry of Turkey into the war in Nov. 1914. 6

## 5. The Intervention of Italy, 1915

### THE ITALIAN FRONT IN WORLD WAR I (MAP)

On the plea that the Austrian action against Serbia was an offensive action and therefore incompatible with the terms of the **Triple Alliance**, the Italian government in July 1914 refused to join the Central powers and declared neutrality (Aug. 3). But almost from the outset the Italian government maintained that under Art. VII of the Triple Alliance, Italy was entitled to some compensation to counterbalance the Austrian gains in the Balkans. These claims were advanced the more persistently when the foreign ministry was given to **Baron Sidney Sonnino** (Nov. 3), following the sudden demise of **Marquis Antonio di San Giuliano** (Oct. 16). <sup>1</sup>

The necessity of making some concession to Italy in order to keep it neutral was fully recognized in Berlin, but the Austrian foreign minister (**Baron Leopold von Berchtold**) refused to entertain suggestions of territorial cessions. <sup>2</sup>

### 1914, Dec. 20

**Prince Bernhard von Bülow**, former German chancellor, arrived in Rome on a special mission. He admitted the Italian claim to the Trentino, and the German government made every effort to persuade the Austrians to give in (mission of Count Betho von Wedel to Vienna, Jan. 16, 1915). <sup>3</sup>

### 1915, Jan. 13

**Count Stephen Burian** appointed Austro-Hungarian foreign minister to replace Berchtold. Burian finally agreed to the cession of territory (March 9) but was willing to <sup>4</sup>

cede the **Trentino** only after the conclusion of peace. This was not enough to satisfy the Italians, who were already negotiating with the Entente powers. Sonnino demanded of Austria the immediate cession of the **South Tyrol**, the district of **Gorizia** and **Gradisca**, the establishment of **Trieste** and its neighborhood as a free state, the cession to Italy of the **Curzolari Islands** off the Dalmation coast, and full sovereignty over the island of **Saseno** and over **Valona** on the Albanian coast (Italian occupation of Saseno, Oct. 30, 1914; “provisional” occupation of Valona, Dec. 26, 1914). These demands were exorbitant, from the Austrian point of view, but the Germans finally (May 10) induced their allies to agree to substantially all the Italians were holding out for. As it turned out, the Austrians yielded too late.

### April 26

Britain, France, Russia, and Italy concluded the **secret Treaty of London**. **Antonio Salandra**, the Italian prime minister, had envisaged Italian intervention on the Entente side almost since the beginning of war, but the noninterventionists, led by **Giovanni Giolitti**, were too strong to make that at first a practicable policy. During the winter, however, the interventionist movement gathered strength (**Mussolini** broke with the Socialist Party and became an active proponent of intervention). The western powers, meeting with failure on the western front, were ready to offer much. Negotiations were embarked upon in Feb. 1915 but were delayed by the opposition of the Russian foreign minister, Sazonov, to the assignment of the Dalmatian coast to Italy, in view of Serbian aspirations in that region. Under the terms of the treaty as finally concluded, a military convention was to be drawn up to protect Italy against the full force of Austrian attack. The political clauses promised Italy the **South Tyrol** and **Trentino**, **Gorizia**, **Gradisca**, **Trieste**, **Istria**, the most important **Dalmatian Islands** and the southern part of the province of **Dalmatia**, **Saseno** and **Valona**, and full sovereignty over the **Dodecanese Islands** (occupied since 1912). Moreover, in the event of the partition of Turkey, Italy was to have the province of **Adalia**; and in the event of Britain and France enlarging their empires by the addition of German colonies, Italy was to receive extensions of its territory in **Libya**, **Eritrea**, and **Somaliland**. Italy was further to receive a loan, and ultimately part of the war indemnity. The Entente powers were to support Italy in preventing the Holy See from taking diplomatic steps for the conclusion of peace. Italy was to commence hostilities within a month of the signature of the treaty.

5

### May 3

The Italian government denounced the Triple Alliance.

6

## May 10

Conclusion of a **naval convention** among Britain, France, and Italy.

7

## May 23

**Italy mobilized and declared war on Austro-Hungary.** Germany at once severed diplomatic relations (May 24), but for various financial reasons Italy did not declare war on Germany until Aug. 28, 1916.

8

## 6. [The Middle East, 1914–1918](#)

### [THE MIDDLE EASTERN THEATER OF WAR, 1914-18 \(MAP\)](#)

#### 1914, Aug. 2

Conclusion of a **secret Ottoman-German alliance** by top-ranking officials, including prime minister **Said Halim** and minister of war **Enver Pasha**. A majority within the Ottoman cabinet, however, favored neutrality and delayed the empire's entry into the war. <sup>1</sup>

#### Aug. 10–11

Arrival of the **German warships *Goeben* and *Breslau*** at the Dardanelles after a long chase through the Mediterranean by the British navy. The Ottoman government allowed the ships into Istanbul and later purchased them. <sup>2</sup>

#### Oct. 29–30

**BOMBARDMENT OF RUSSIAN PORTS** in the Black Sea by **Ottoman warships**. The **OTTOMANS** thereby **ENTERED THE WAR** on the side of the **Central powers**. <sup>3</sup>

#### Nov. 1

**Declaration of neutrality** by the Iranian government. 4

**Nov. 2**

**RUSSIA DECLARED WAR ON THE OTTOMAN EMPIRE. Great Britain and France followed** on Nov. 5. The **British** immediately **annexed Cyprus**. 5

**Nov. 7**

**Proclamation of a jihad** (holy war) against the Entente by the Ottoman sultan in his capacity as caliph. The announcement had no material effect on the course of the war. 6

**Nov. 22**

**British occupation of Basra** in Iraq. 7

**Dec. 17**

Beginning of the **Ottoman offensive in the Caucasus** against the Russians. 8

**Dec. 18**

**Imposition of a British protectorate over Egypt**, which was officially detached from the Ottoman Empire. The British also **deposed the khedive, Abbas Hilmi II**, and replaced him with his uncle, **Husayn Kamil**, who assumed the title of sultan. 9

## **8. The Eastern Front, 1916–1917**

### **1916, June 4**

The great **BRUSILOV OFFENSIVE**, initiated somewhat prematurely in order to meet the Italian appeals to distract the Austrians in the Trentino. Brusilov (appointed to the command of the Russian southern front, April 4) had planned the offensive for June 15, to coincide with Joffre's great offensive on the Somme. But the Brusilov offensive was meant to be followed by an even larger operation farther north. After heavy fighting and initial gains, the Russians failed to reach either Kovel or Lemberg. Their losses were about a million men, and the whole operation left the army demoralized and discontented. <sup>1</sup>

The situation in the east was dominated, in 1917, by the developments of the **Russian Revolution** (See [1917, March 8](#)). The provisional government (**Paul Miliukov**, foreign minister, March 15–May 16, 1917) was strongly in favor of prosecution of the war in the hope of realizing the national aspirations. The same was true of **Alexander Kerensky** (minister of war, May 16, prime minister, July 20), who hoped to combat disruptive tendencies and galvanize the country by a new military effort. <sup>2</sup>

### **1917, July 1**

Brusilov began a **great offensive on the Galician front**. <sup>3</sup>

### **Aug. 1**

**Brusilov was succeeded by Gen. Lavr Kornilov**. <sup>4</sup>

## Sept. 8–14

**Kornilov marched on Petrograd** as leader of a counterrevolutionary movement, which failed. 5

## Nov. 7 (Oct. 25 Old Style)

**BOLSHEVIK COUP D'ÉTAT IN RUSSIA.** 6

## Nov. 28

The new Bolshevik regime offered the Germans an armistice and peace. 7

## Dec. 15

**ARMISTICE CONCLUDED ON THE EASTERN FRONT.** (See [The Settlements in Eastern Europe, 1917–1918](#)) 8

(See [1915](#))

## 9. [The Italian Front, 1916](#)

The Austrian chief of staff, **Conrad von Hötzendorff**, had for some time been urging upon the German high command the desirability of massing troops in the Trentino for an attack upon the Italian rear and flank, but **Falkenhayn** had flatly refused to contribute forces that he needed for the operations at Verdun. The Austrians decided to make the try alone. As many troops as possible were withdrawn from the Russian front and prepared for an advance on the Asiago plateau. 1

### 1916, May 15–June 3

**The Austrian offensive in the Trentino.** After initial setbacks, the Italians recovered lost territory, but at a cost of 150,000 men. 2

During the first part of 1917 the Italian effort continued to center on the Isonzo (tenth battle (May 12–June 8) and eleventh, and last, battle (Aug. 17–Sept. 12)). As result of two years of operations the Italians had advanced only about ten miles, or halfway to Trieste. 3

In part the Italian failure was due to inadequate artillery and ammunition. **Gen. Luigi Cadorna** had urged Britain and France to send supplies and men in large numbers, so that a knockout blow might be delivered against war-weary Austria. Foch and Lloyd George favored this plan, but Haig had his way and proceeded to the offensive in Flanders. 4

Meanwhile **Ludendorff** decided to follow the annihilation of Serbia and Romania with a similar assault on Italy. Six divisions of German troops were sent to reinforce the nine Austrian divisions on the Isonzo front. It was decided to attack on the Upper Isonzo, near Caporetto, in the hope of breaking through and advancing as far as the Tagliamento River. 5

## Oct. 24–Dec. 26

**THE CAPORETTO CAMPAIGN.** After a complete rout of the Italians on the first day, <sup>6</sup> Italian forces, bolstered by British and French troops, held firm at the Piave River. The Italians had lost almost 300,000 men taken prisoner and even more than that in deserters.

## Nov. 7

**Cadorna was replaced by Gen. Armando Diaz,** who devoted himself to establishing a <sup>7</sup> defensive position and above all to restoring the morale of the troops.

## 10. [The Balkan Front, 1916–1917](#)

### a. [Greece](#)

Throughout the summer and autumn of 1916 the **Greek situation** continued to be most unsatisfactory from the Entente viewpoint. 1

#### 1916, May 26

A **Bulgarian-German** force occupied **Fort Rupel** in Greek Macedonia, this action enhancing the suspicion that King Constantine was secretly bound to the Central powers. 2

#### June 6–22

The “**pacific blockade**” of **Greece** by the Entente powers. France and Britain sent Greece an ultimatum (June 21) demanding demobilization of the Greek army and the institution of responsible government. The Greek government yielded. The **Skouloudis ministry resigned** and a Zaimis cabinet was organized. The army was put on a peace footing (June 27) and new elections were arranged for. 3

#### July 25

The reconstituted Serbian army, which had been shipped from Corfu to Saloniki, came into action on that front. Russian troops from France and an Italian contingent also arrived (July 30, Aug. 11). 4

## Aug. 30

A Venizelist, pro-Ally movement, fostered by Gen. Sarrail, took place at Saloniki. 5

## Sept. 29

**Venizelos** and Adm. Paul Condouriotis **established a provisional government** in Crete. 6  
Venizelos then (Oct. 9) went to Saloniki, where the **provisional government declared war on Germany and Bulgaria** (Nov. 23).

## Oct. 10

The **Entente powers**, incensed by the surrender of the Greek forces at Kavalla, 7  
**submitted an ultimatum** to Athens demanding the surrender of the Greek fleet. The Athens government (**Lambros ministry**, Oct. 10–May 3, 1917) yielded (Oct. 11), whereupon the Entente powers demanded (Nov. 19) the dismissal of the representatives of the Central powers at Athens and the surrender of war materiel. These demands were rejected (Nov. 30), and in consequence **French and British** landing parties **debarked at Piraeus**. They withdrew again on Dec. 1 after conflicts with the Greeks.

## Dec. 8

**Blockade of Greece.** The Allies demanded (Dec. 14) the complete withdrawal of Greek 8  
forces from Thessaly. The Athens government once more gave in (Dec. 15), but on Dec. 19 the British government decided to recognize the provisional government of Venizelos.  
The Macedonian front was quiet during the winter of 1916–17. 9

[PREVIOUS](#)

[NEXT](#)

## **b. [Romania](#)**

Since the spring of 1916 the Russian government had been redoubling its efforts to bring Romania into the war. The success of the Brusilov offensive and the readiness of the Russian government and its allies to recognize the Romanian claims to the Bukovina and Banat as well as to Transylvania resulted in the conclusion of a political and military agreement (Aug. 18). <sup>1</sup>

### **1916, Aug. 27**

**ROMANIA DECLARED WAR ON AUSTRIA-HUNGARY.** Germany declared war on Romania, and Italy finally declared war on Germany (Aug. 28). Turkey and Bulgaria declared war on Romania a few days later (Aug. 30, Sept. 1, respectively). <sup>2</sup>

### **Dec. 1–5**

The Romanian government was hastily moved to Jassy, and the capital, **Bucharest, fell into the hands of the enemy** (Dec. 6). <sup>3</sup>

(See [Sept. 1](#))

## 11. [The War at Sea, 1916–1917](#)

The second half of 1915 and the first half of 1916 were not marked by any striking events of naval warfare. The Germans continued their efforts to reduce British preponderance by submarine and mine destruction, and at the same time extended their operations against merchant shipping. <sup>1</sup>

### 1916, Feb. 21

The German government notified the U.S. government that thenceforth armed merchantmen would be treated as cruisers. **The “extended” submarine campaign** began March 1. <sup>2</sup>

### March 24

The *Sussex* sunk by torpedo in the English Channel with the loss of American lives. Acrimonious debate between Washington and Berlin, culminating in an American ultimatum. The Germans agreed to give up unrestricted submarine warfare for the time being (May 10). <sup>3</sup>

Meanwhile (Jan. 1916) **Adm. Reinhardt Scheer** had succeeded Adm. Hugo von Pohl in the command of the German High Seas Fleet. The famous minister of the navy, **Adm. von Tirpitz, resigned** (March 14) in protest against the emperor's unwillingness to make full use of German sea power. He was succeeded by **Adm. Eduard von Capelle**. <sup>4</sup>

### May 31–June 1

**BATTLE OF JUTLAND (SKAGERRAK).** <sup>5</sup>

The German high command reckoned confidently on winning the war through the destruction of the British food supply. The prospects were indeed excellent. Already in the last months of 1916 German submarines had destroyed 300,000 tons of shipping a month. By the beginning of 1917 the Germans had about 120 submarines, the number being increased to 134 by Oct. 1917.

## **12. The War in the Air, 1914–1918**

Although only France had done much before the war to develop the military use of the airplane, throughout the war the British and the Germans were the main antagonists. 1

### **1914, Aug. 30**

**The First German airplane raid on Paris.** 2

### **Sept. 22, Oct. 8, Nov. 21**

**British airplanes raided** the German flying-fields at **Düsseldorf, Köln,** and **Friedrichshafen.** 3

### **Dec. 21**

**The first German air raid on England** (Dover). 4

On the western front, and on other fronts to a lesser extent, the airplane was used for reconnaissance, but almost immediately (Sept. 1914) experiments were made by the British in wireless communication between airplanes and artillery, in aerial photography, and in bomb-dropping. There was not much aerial combat until the middle of 1915. 5

### **13. [The War in the Colonies, 1914–1918](#)**

Most of the German colonies were seized by the British and French during the first months of the war (See [Overview](#)). 1

#### **1914, Aug. 8**

The British opened hostilities in German East Africa by bombarding the coast towns of **Bagamoyo** and **Dar-es-Salaam**. Indian forces were then brought to East Africa for the campaign. But the German commander (**Gen. Paul von Lettow-Vorbeck**) defeated a greatly superior landing force in the **Battle of Tanga** (Nov. 2–5, 1914). The campaign remained desultory until in Nov. 1915 the British secured naval control of **Lake Tanganyika**, and landing forces took **Tanga** (July 7, 1916) and **Bagamoyo** (Aug. 15, 1916). **Gen. Jan Smuts**, with a force of Afrikaners and Portuguese, now began to push the operations. **Dar-es-Salaam** fell (Sept. 4), then **Lindi** (Sept. 16) and **Tabora** (Sept. 19). Lettow-Vorbeck and his troops were obliged to fall back to the southeast corner of the colony. The campaign was resumed in 1917, when the Germans defeated their enemies at **Mahiwa** (Oct. 15–18, 1917) and began the invasion of Portuguese East Africa. Lettow-Vorbeck advanced almost to the mouth of the Zambezi but then fell back to **Lake Nyasa**. On Nov. 2, 1918, he began the invasion of **Rhodesia**. The armistice went into effect on Nov. 14, 1918, at which time the Germans were still in the field. 2

#### **Aug. 23**

**Japan** declared war on Germany and began to land forces in Shantung for an attack on the German position at **Tsingtao**. The Japanese were joined by a British detachment. The bombardment of **Tsingtao** was begun in October, and was accompanied by an attack from the land side. On Nov. 7 the fortress was obliged to capitulate. During this same period the Japanese naval forces occupied a number of the German islands (**Marshall** 3

**Islands, Marianas, Palau, Carolines).**

### Aug. 26

**Togoland** defense force capitulated to an Anglo-French force. The colony was divided between the British and the French in agreements of Aug. 26, 1914, and Dec. 27, 1916. 4

### Aug. 30

A New Zealand expeditionary force occupied **Samoa**. 5

### Sept. 11

An Australian force landed on the **Bismarck Archipelago**. German forces in **New Guinea** surrendered to Australians (Sept. 21). 6

### Sept. 7

A British force from Nigeria invaded the **Cameroons** and took **Duala** (Sept. 27). The French invaded the colony from the south and east. The Germans were obliged to fall back and ultimately crossed into Spanish territory (Feb. 9, 1916). 7

### Sept. 19

A British force landed at **Lüderitz Bay**, German Southwest Africa. The Union of South Africa decided to prosecute the war in the German colony, and **Gen. Louis Botha** crossed the Orange River, taking **Swakopmund** (Jan. 14, 1915). He defeated the German forces at **Riet** and **Treckkopje** (April 26, 1915), took **Windhoek** (May 12, 1915), and finally forced the 3,500 German and colonial troops to capitulate at **Otawi** (July 9, 1915). 8

## **14. Peace Negotiations, 1916–1917, and the Intervention of the United States, 1917**

From the very outbreak of the war, **President Wilson** appears to have believed that ultimately the opportunity would present itself for the U.S. government to step in as mediator. 1

### **1916, Jan.–Feb**

The president's close friend and intimate adviser **Col. Edward M. House** visited Europe and consulted with leading statesmen. His conferences with Sir Edward Grey resulted in the so-called **House memorandum** of Feb. 22, which stated that the president was ready, whenever Britain and France thought the time opportune, to propose a peace conference. If the proposal were accepted by the Allies but rejected by Germany, the U.S. would *probably* enter the war on the Allied side. The terms on which the U.S. would mediate would include the restoration of Belgium and Serbia, the retrocession of Alsace-Lorraine to France, the acquisition of Constantinople by Russia, and the transfer of the Italian-speaking parts of Austria to Italy. Poland was to be independent. Germany would retain some colonies and perhaps be given more. 2

Public opinion in the U.S. was still distinctly divided, but sentiment for peace was prevalent except in the eastern states, where there was some feeling for intervention on the Allied side (influence of British propaganda, etc.). The president was re-elected (Nov. 7, 1916) very largely on a platform of peace, but he applied himself almost at once to the resumption of his mediatory efforts. 3

**Dec. 12**

The **German government** appealed to the U.S. to inform the Entente governments that the Central powers were **prepared to negotiate peace**. Failure of the Germans to mention any specific terms, and the fact that all the advantages were on their side, made it relatively easy for the Allied governments to reject the German advances (Dec. 30). 4

## Dec. 18

**President Wilson transmitted his own proposals** to the warring powers. He suggested that the belligerents state their terms for peace and for arrangements to guarantee the world against renewal of conflict. The German, Austrian, and Turkish governments replied (Dec. 26) in an appreciative way, but reiterated their opinion that the best method would be to call a meeting for exchange of views. No definite terms were mentioned. The Allied powers in their reply (Jan. 10, 1917) named specific terms. These included the restoration of Belgium, Serbia, and Montenegro; the evacuation of French, Russian, and Romanian territory, with just reparation; the reorganization of Europe on the basis of nationalities; the restoration of territory previously taken from the Allies; the liberation of Italians, Slavs, Romanians, and Czechoslovaks from foreign rule; the freeing of subject nationalities under Turkish rule; and the expulsion of the Turks from Europe. 5

The far-reaching nature of the Allied terms, at a moment when the military situation was by no means in their favor, estranged even Wilson, who still stuck by the idea of **“peace without victory”** (speech to the Senate, Jan. 22). The first step, however, was to elicit from the Germans a concrete statement of aims. These were confidentially communicated to the president on Jan. 29: restitution of the part of Alsace occupied by the German forces; acquisition of a strategic and economic zone between Germany and Poland on the one hand and Russia on the other; return of colonies and the granting to Germany of colonial territory in accord with its population and economic needs; restoration of occupied France; renunciation of economic obstacles to normal commerce; compensation for German enterprises and civilians damaged by the war; freedom of the seas, and so on. 6

Though this program was anything but hopeful, the president and the German ambassador, **Count Johann von Bernstorff**, continued to negotiate. But these discussions were cut short by the decision of the Germans to begin unrestricted submarine warfare. 7

(See [Dec. 15](#)) (See [1917, Jan](#))

## **15. The Settlements in Eastern Europe, 1917–1918**

While discussion of peace among the western powers led to an impasse, the winter of 1917–18 produced a settlement in the east. 1

### **1916, Nov. 5**

The **Germans**, in occupation of Poland, announced the formation of an **independent Polish state**. The object of this move, inspired by the military men, was to win over the Poles and induce them to enlist on the German side. This hope was sadly disappointed. 2

### **1917, March 30**

The Russian provisional government recognized the independence of Poland. 3

### **April 5**

The British government adhered to the principle of an independent and united Poland. 4

### **Sept. 12**

The Central powers granted a constitution to what was formerly Russian Poland and appointed a regency council (Oct. 15). 5

### **Nov. 7**

The **Bolshevik Revolution in Russia** (See [Nov. 7](#)). **Lenin** and his followers, who regarded the war as a capitalist and imperialist venture, were in favor of a peace without annexations or indemnities, and were determined to make peace, which the Russian people yearned for. The old Russian Empire, indeed, was already dissolving.

6

### Nov. 20

The Ukrainians proclaimed the **Ukrainian People's Republic**.

7

### Nov. 21

The Bolshevik government, having invited all belligerents (Nov. 8) to make peace on the basis of no annexations and no indemnities, and having elicited no reply, opened separate discussions with the Central powers.

8

### Nov. 28

The local Diet proclaimed the **independence of Estonia**.

9

### Dec. 3

**Opening of peace conference at Brest-Litovsk.** Germany (Kühlmann), Austria (Czernin), and their allies negotiated an armistice with Russia (represented by **Leon Trotsky**).

10

### Dec. 6

**Finland proclaimed its independence.**

11

### Dec. 23

**Proclamation of the Moldavian (Bessarabian) Republic.**

12

## 16. [The End of the Habsburg Monarchy](#)

By the summer of 1918 the **Habsburg Monarchy** was already in full process of dissolution. Disorders were common in the larger centers, parliamentary government had had to be given up, and desertions from the army had reached a large scale. In Russia, in France, and in Italy there had been formed Czech, Polish, and Yugoslav legions that were fighting for the Allies, while national councils of these subject nationalities were springing up not only in the provincial capitals but also in Paris and London. 1

### 1918, April 10

Meeting of the **Congress of Oppressed Austrian Nationalities** in Rome. Here the Czech, southern Slav (Yugoslav), Polish, and Romanian representatives proclaimed the right of self-determination, denounced the Habsburg government as an obstacle to free development of the nations, and recognized the need for fighting against it. 2

### April 21

The Italian government recognized the Czechoslovak National Council as a de facto government. 3

### May 29

Secretary **Lansing** declared the sympathy of the U.S. for the Czechoslovaks and Yugoslavs. 4

### June 3

Allied declarations were made supporting the national aspirations of Poles, Czechoslovaks, and Yugoslavs. 5

### June 15–24

**Battle of the Piave.** The Austrians crossed the river but were unable to maintain their position. They withdrew again after losing some 100,000 men. From this time on there was steady demoralization of the army. 6

### June 30

Italy and France officially recognized the **independence of Czechoslovakia**. Britain followed suit on Aug. 13, and the U.S. on Sept.3. 7

In view of the rapid disintegration of the monarchy, the Austrians made a last bid for military victory. 8

### Sept. 15

The Austrian government appealed to President Wilson to call an informal conference to discuss peace. This plea was rejected by Wilson. 9

### Oct. 4

The Austrians joined the Germans in appealing for an armistice (See [Oct. 4](#)). 10

### Oct. 16

**Emperor Charles proclaimed** the reorganization of the non-Hungarian part of **the monarchy as a federal state**, with complete self-government for the subject nationalities. This move was patently belated. 11

### Oct. 24–Nov. 4

**BATTLE OF VITTORIO VENETO.** **Diaz** attacked the Austrian front all the way from the Trentino to the Adriatic. The Austrians held out for a week on the Monte Grappa, but on the lower Piave they collapsed completely. The Italians advanced to **Vittorio Veneto** (Oct. 30), by which time the Austrian armies were in a state of dissolution, several hundred thousand men being captured and the remainder streaming back toward home. The **Italians took Trieste** (Nov. 3) and **Fiume** (Nov. 5).

12

### Oct. 27

**Count Julius Andrassy** (succeeded Burian as Austrian foreign minister, Oct. 25) notified Wilson that Austria was willing to recognize the rights of the subject nationalities and to make a separate peace.

## **17. Operations in the West, 1918**

The tremendous gains made by the Germans in the east did not serve to improve the situation with respect to the Western powers. On the contrary, it was generally felt that the terms imposed on Russia and Romania were irrefutable proof of Germany's expansionist aims. In the West the demands for peace died away and the allied governments were able to take a stronger line than ever. 1

### **1917, Nov. 27**

The **Supreme War Council** had been established, consisting of the leading statesmen, with their military advisers (first Sir Henry Wilson, Foch, Cadorna, and Bliss). Even this new board was unable to establish harmony. 2

The **Germans**, now disillusioned about the submarine campaign, fully cognizant of the war-weariness of their allies, and feeling acutely the pinch of the blockade, decided to stake everything on a decision in the west, which it was hoped could be reached before the Americans arrived in great force. **Ludendorff** planned a series of crushing blows to be delivered against the British on a 60-mile front south of Arras, by which he hoped to break through, roll up the opposing forces, and drive them westward to the sea. 3

The British expected an attack but not along the southern part of their front, so that the fifth army (Gen. Sir Hubert Gough) was left holding an extensive front with relatively few forces. 4

### **1918, Jan. 5**

**Lloyd George**, in an address to the Trades Unions Congress, **formulated the British war aims**. These included the restoration of Belgium, Serbia, Montenegro, and the occupied parts of France, Italy, and Romania. In addition, a “reconsideration” of the great 5

wrong done to France in 1871; the establishment of an independent Poland “comprising all those genuinely Polish elements who desire to form part of it”; genuine self-government of the nationalities in the Austro-Hungarian monarchy; satisfaction of the Italian national claims, and of Romanian aspirations; and “recognition of the separate national conditions” of Arabia, Armenia, Mesopotamia, Syria, and Palestine. Lloyd George envisaged further some future organization to limit armaments and prevent war.

## Jan. 8

In an address to Congress **President Wilson outlined** a peace program consisting of **Fourteen Points**, as follows: (1) Open covenants openly arrived at. (2) Absolute freedom of navigation alike in peace and war, except as the seas might be closed by international action to enforce international covenants. (3) The removal, so far as possible, of all economic barriers. (4) Adequate guaranties that armaments would be reduced to the lowest point consistent with domestic safety. (5) An impartial adjustment of all colonial claims on the principle that the interests of the population must have equal weight with the claims of the government. (6) The evacuation of Russian territory and the free determination of its own political and national policy. (7) Evacuation and restoration of Belgium. (8) Evacuation and restoration of French territory and righting of the wrong done to France in the matter of Alsace-Lorraine. (9) Readjustment of the frontiers of Italy along clearly recognizable lines of nationality. (10) Opportunity for autonomous development for the peoples of Austria-Hungary. (11) Evacuation and restoration of Romanian, Serbian, and Montenegrin territory, together with access to the sea for Serbia. (12) The Turkish parts of the Ottoman Empire to be given a secure sovereignty, but the other nationalities to be given an opportunity for autonomous development, and the Dardanelles to be permanently opened to the ships of all nations under international guaranties. (13) An independent Poland, to include territories indisputably Polish, with free and secure access to the sea. (14) A general association of nations to be formed to afford mutual guaranties of political independence and territorial integrity to great and small states alike.

The Allied war aims could be realized only through military victory, and prospects for this were not very good at a time when the Germans were able to transfer troops from the east to the west and when the American forces were not yet numerous enough to make much difference. Some efforts had been made, however, to establish greater coordination of effort among the Allies.

(See [Aug. 1](#))

## 18. [The Peace Settlements](#)

### [TERRITORIAL CHANGES FOLLOWING WORLD WAR I \(MAP\)](#)

#### a. [The Treaty of Versailles](#)

1919, Jan. 18

The peace conference was formally opened at Paris, with 70 delegates representing 27 of the victorious powers. The Germans were excluded until the terms were ready for submission. The German request for a peace on the basis of Wilson's **Fourteen Points** (See [Jan. 8](#)) had been granted by the Allied note of Nov. 5, 1918, with two reservations, but the Fourteen Points receded into the background as the conflict of views and interests developed at the conference. **President Wilson**, received with the wildest enthusiasm when he arrived in Europe in mid-December, represented the new idealism in international relations and was intent primarily on securing the adoption of a plan for a **League of Nations**, to be included in the peace treaty. **Lloyd George**, the chief representative of Great Britain and the empire, was disposed to make a moderate peace, but was deeply committed by promises made in the general election recently held, to the effect that the war criminals would be brought to justice and that Germany would be made to pay for the war. **Clemenceau**, in turn, was frankly the exponent of the old diplomacy, being intent on the interests of France, and on provisions for the security of France. Both Britain and France were bound further by their agreements with Italy, by commitments in the Near East, and so on. The Italian prime minister, **Vittorio Orlando**, played a secondary role, but the foreign minister, **Sidney Sonnino**, stood forth as an unbending champion of Italian claims against Austria and against the new Yugoslav

state.

The plenary sessions of the conference were of little significance, for the decisions rested from the start with the **Supreme Council**, the **Big Ten**, composed of President Wilson and the prime ministers and foreign ministers of the five chief powers (Wilson, Lansing, Lloyd George, Balfour, Clemenceau, Pichon, Orlando, Sonnino, Saionji, Makino). Russia was not represented, though the Russian situation was of vital import. The wars of the counterrevolution were in full swing and the fate of the new states on Russia's western frontiers depended on the outcome. Clemenceau having refused to invite delegates of the warring parties to Paris, a conference was arranged for at the Prinkipo Islands. The Bolshevik government was apparently anxious for some kind of adjustment, but **Kolchak** and **Denikin**, the two leading generals of the counterrevolution, refused to enter into discussion, and the whole project fell flat. Public opinion in both France and Britain was violently anti-Bolshevik, and it seems hardly likely that an agreement could have been reached.

2

### Jan. 25

The conference unanimously adopted a resolution for the **creation of a League of Nations**. A committee was appointed to draft a constitution, and other committees were organized to deal with reparations and various territorial questions.

3

### Feb

In the middle of the month **President Wilson returned** for a time **to the U.S.** and **Lloyd George** to London.

4

### March 25

After the return of Wilson and Lloyd George to Paris, the statesmen devoted themselves to the working out of the German treaty. The Council of Ten was replaced by the **Council of Four**, for the expedition of business.

5

### April 28

The **Covenant of the League of Nations** (See [1914–1946. Interstate Institutions](#)) (worked out by a committee consisting of Wilson, House, Cecil, Smuts, Bourgeois, and

6

Venizelos) was presented in final form. The League was to consist of the signatory states and others admitted by two-thirds vote. The members were to afford each other mutual protection against aggression, to submit disputes to arbitration or inquiry, and to abstain from war until three months after a ruling. All treaties between members which were incompatible with these obligations were declared abrogated; all subsequent treaties were to be registered with the League. The League was to devote itself to problems of disarmament, labor legislation, health, international administration, and so on.

The drafting of the peace terms was marked by violent conflict among the members of the Council of Four. Clemenceau insisted on the separation of the **left bank of the Rhine** from Germany, and desired also the annexation of the **Saar Basin** to France. These demands were opposed by Wilson and Lloyd George, and French security was finally arranged for otherwise, Wilson having ordered preparations for his return home (April 7). Other disputes arose from the demands of Britain and France that Germany be required to meet the **costs of the war**, a proposition to which Wilson objected. The **Polish claims**, supported by France, also caused friction, as did the **Japanese pretensions** in Shantung and the **Italian claims** in Dalmatia, neither of which Wilson was prepared to recognize. All these questions were finally settled by compromise in order to keep the conference together (the Italian delegates left the conference on April 23 and did not return until May 6).

### May 7

The **treaty was submitted to the German delegation**, which had arrived on April 29. The Germans (**Count Ulrich von Brockdorff-Rantzau**, chief of the delegation) protested vigorously that the terms were not in keeping with the conditions on which Germany had laid down its arms and that many of the clauses were impossible to fulfill. Nevertheless the victorious powers made only slight modifications in the draft, and the Germans, after an acute domestic crisis, decided that they were unable to resist and that their only possible course was to sign.

### June 21

The **German fleet** (ten battleships, nine armored cruisers, eight smaller cruisers, 50 torpedo boats, 102 submarines, totaling about 500,000 tons) **was scuttled** by the crews under the command of Adm. Ludwig von Reuter, **at Scapa Flow**, where the fleet had been interned. This act of defiance made the victors more determined to enforce the terms of the treaty draft.

## June 28

**SIGNATURE OF THE TREATY OF VERSAILLES** at Versailles. The treaty provided for the **League of Nations** and for the following territorial cessions by Germany (see [TERRITORIAL CHANGES FOLLOWING WORLD WAR I \(MAP\)](#)): **Alsace-Lorraine** to France; **Moresnet, Eupen, and Malmédy** to Belgium, with a plebiscite in Malmédy after cession; **the Saar** area to be under international administration for 15 years, after which a plebiscite was to be held, France exploiting the coal mines in the meanwhile; northern and central **Schleswig** to decide their allegiance by plebiscite; in the east, Germany to cede the larger part of **Posen** and **West Prussia** to Poland; a plebiscite to be held in **Upper Silesia**; **Danzig** to be a free city within the Polish customs union; plebiscites to be held in parts of **East Prussia** to decide whether they should go to Poland or remain with Germany; **Memel** ceded to the Allies; and the **German colonies** to be ceded to the Allies, to be organized as mandates under supervision of the League. Germany, in **Article 231**, accepted sole responsibility for causing the war. It was henceforth to keep an **army of not more than 100,000 men**, was to have no large guns and only a limited number of smaller ones. The **navy** was limited to six warships and a corresponding number of other craft; Germany was to have **no submarines or military aircraft**; the fortifications of **Heligoland** were to be dismantled; the Allies were to occupy the **Rhineland** for 15 years, and longer if necessary, and a belt 30 miles wide on the **right bank of the Rhine** was to be **demilitarized**. The **Kiel Canal** was opened to the warships and merchant shipping of all nations, and the **German rivers** were internationalized. The former **emperor** and other offenders were to be tried. The Germans were required to pay for all **civilian damage** caused during the war, the final bill to be presented by May 1, 1921; in the interval Germany was to pay \$5 billion, the rest to be paid in 30 years. Germany was to hand over all **merchant ships** of more than 1,600 tons, half of those between 800 and 1,600 tons, and a quarter of its **fishing fleet**. It was to build 200,000 tons of shipping for the victors annually for five years. Large quantities of **coal** were to be delivered to France, Belgium, and Italy for ten years. Germany was to bear the **cost of the armies of occupation**. It bound itself further to agree to the sale of German property in Allied countries.

10

## July 7

The **German government ratified the treaty**, as did France (Oct. 13), Great Britain (Oct. 15), Italy (Oct. 15), and Japan (Oct. 30). The U.S. government never ratified it, the Senate having first proposed amendments, which failed of the necessary votes. The U.S. government also refused to ratify the **treaty of alliance signed with Great Britain and**

11

**France** (June 28) (See [July 10–1920](#), [March 19](#)) providing for assistance in case of attack by Germany. This treaty thus also failed of effect. (See [European Diplomacy and the Depression, 1919–1939](#))

## **b. The Treaty of Saint-Germain**

**1919, Sept. 10**

**Austria signed the treaty** that had been submitted on July 20. This merely registered the breakup of the Habsburg monarchy, at the same time penalizing the new Austrian Republic as the representative of the old regime. Austria recognized **the independence of Czechoslovakia, Yugoslavia, Poland, and Hungary**, these states being obliged to give guaranties of protection of minorities. **Eastern Galicia, the Trentino, South Tyrol, Trieste, and Istria** were ceded by Austria. The **army** was limited to 30,000 men, and Austria, like Germany, was to pay **reparations** for 30 years. The **union of Austria with Germany** was forbidden, except with consent of the Council of the League. (See [Czechoslovakia](#))

### **c. The Treaty of Neuilly**

**1919, Nov. 27**

The **Bulgarians signed the treaty of peace**, which deprived them of a seaboard on the Aegean and gave them only an economic outlet. Bulgaria recognized the **independence of Yugoslavia**. It agreed to pay **reparations** of \$445 million. Its **army** was reduced to 20,000 men, and it was obliged to surrender most of its war materiel. (See [Bulgaria](#)) <sup>1</sup>

## **d. The Treaty of Trianon**

**1919, March 21**

The Hungarian government headed by **Count Károlyi** was overthrown by a **Bolshevik coup**, headed by **Alexander Garbai** and **Béla Kun**. This government became involved in war with most of Hungary's neighbors when it became known that territory was to be assigned to them. Ultimately the **Romanians invaded and took Budapest** (Aug. 4) just after the Bolsheviks had been overthrown (Aug. 1). The monarchists then regained control and appointed **Adm. Miklos Horthy as regent** (March 1, 1920). The Romanians were finally induced to withdraw (Nov. 14, 1919), under pressure from the Allies, but only after they had carried away most of what was movable. <sup>1</sup>

**1920, June 4**

The **Hungarians signed the treaty of Trianon**, by which the old Hungary was shorn of almost three-quarters of its territory and two-thirds of its inhabitants. Czechoslovakia was given **Slovakia**, Austria received **western Hungary**, Yugoslavia took **Croatia-Slavonia** and part of the **Banat of Temesvar**, and Romania received the rest of the **Banat, Transylvania**, and part of the **Hungarian plain**. Hungary agreed to pay **reparations**, to keep an **army** of only 35,000 men, to assume part of the old Austro-Hungarian debt, to hand over war criminals, and soon. (See [Hungary](#)) <sup>2</sup>

### e. [The Treaty of Sèvres](#)

In the settlement of the Turkish question the Allies were much hampered by the downfall <sup>1</sup> of the tsarist regime in Russia, the withdrawal of Russian claims to Constantinople, and the publication by the Bolsheviks of the **secret treaties** revealing the Allied plan of partition. President Wilson in particular opposed the former program, while American opinion showed little interest in assuming responsibility for either the Straits area or Armenia. The question dragged on through 1919, while in Turkey a nationalist movement under **Mustafa Kemal** (See [1919, May 19](#)) was building up a strong opposition to the Allied plans.

#### 1919, May 15

The **Greeks**, with the support of the Allies, **landed troops at Smyrna**, acting as agents <sup>2</sup> for Allied interests. The Italians also landed troops in southwestern Anatolia.

#### 1920, April 18

At a **conference** of the Allied prime ministers at **San Remo** the main lines of the Turkish <sup>3</sup> treaty were agreed upon.

#### Aug. 10

The feeble and helpless government of the sultan, protected by an international force of <sup>4</sup> occupation at Constantinople, signed the **Treaty of Sèvres**. By this treaty the sultan's government renounced all claims to non-Turkish territory. **The kingdom of the Hijaz was recognized as independent**. **Syria** became a mandate of France, and **Mesopotamia** (with Mosul), as well as **Palestine**, became British mandates. **Smyrna** and its hinterland

were to be administered by Greece for five years, after which a plebiscite was to be held. The **Dodecanese** and **Rhodes** went to Italy, while **Thrace** and the remainder of the **Turkish islands** in the Aegean were assigned to Greece. **Armenia** was recognized as independent. The **Straits** were to be internationalized and the adjoining territory demilitarized. **Istanbul** and the strip of territory to the Chatalja lines remained Turkish, as did the remainder of **Anatolia**. This treaty was not recognized by the Turkish nationalists, who, under Mustafa Kemal's leadership, continued to build up a military force in Anatolia and to organize a government in defiance of the sultan and the victorious Allied powers. As a result of nationalist successes the Treaty of Sèvres was ultimately replaced by the **Treaty of Lausanne**. (See [The Ottoman Empire and Turkey](#))

**[Military Summary](#)**  
**[The Western Front, 1914–1915](#)**

**1914**

**Aug. 4**

The Germans crossed into Belgium. Armies one and two were obliged to pass through a narrow strip between the Netherlands and the Ardennes, heavily guarded by the fortifications of Liège. The Germans got past the forts in a night attack (Aug. 5–6), which were then reduced by heavy artillery (Aug. 6–17). The Belgians fell back on Brussels and then Antwerp, destroying the bridges on the Meuse. <sup>1</sup>

**Aug. 20**

Gen. Kluck entered Brussels after the battle of Tirlement (Aug. 18–19). <sup>2</sup>

**Aug. 14–15**

**Battle of the Frontiers** (Lorraine). The French invasion was checked almost at once and the French armies driven out of Lorraine with heavy losses. The third and fourth armies were also driven back from Luxembourg. Germans captured Namur (Aug. 25), Longwy (Aug. 27), Malmédy (Aug. 30), Soissons (Sept. 1), Laon (Sept. 2), Rheims (Sept. 3), and Maubeuge (Sept. 7). <sup>3</sup>

**Aug. 23**

**Battle of Mons.** First contact between Germans and British. The latter were obliged to fall back with the French fifth army. Further delaying action fought by the British (Gen. Horace Smith-Dorrien) at Le Cateau (Aug. 26). 4

### Sept. 5–12

**Battle of the Marne.** The opposing armies tried to outflank each other (**battle of the Ourcq**). Strongly urged by **Gen. Joseph Gallieni** (military governor of Paris), Joffre (commander in chief of the French armies) decided to order a general counteroffensive (Sept. 5) in the hope of breaking in on the right and rear of Bülow's second army. Sept. 6–9, no decision. Kluck's efforts to outflank the French increased the gap between the German first and second armies, but the British and French failed to take full advantage of this. On Sept. 9, Kluck and Bülow began to fall back (oral instruction of **Col. Hentsch**, from German headquarters). The whole German line began to withdraw west of Verdun. The British and French advanced cautiously. 5

### Sept. 15–Oct. 10

All efforts to dislodge the Germans from north of the Aisne River ended in failure: battle of the Aisne (Sept. 15–18), battle of Picardy (Sept. 22–26), battle of Artois (Sept. 27–Oct. 10). 6

### Sept. 22–25

Repeated German assaults at Verdun. Germans captured St. Mihiel. 7

### Oct. 1–9

Germans forced the Belgian army and a small British force to evacuate Antwerp. 8

### Oct. 10–Nov. 10

**The Race for the Sea.** The Germans captured Ghent (Oct. 11), Bruges (Oct. 14), and Ostend (Oct. 15), but failed to reach the Channel ports as the Belgians flooded the district of the Yser (battle of the Yser, Oct. 18–Nov. 30). The Germans also captured Lille (Oct. 12), but failed to take Ypres (first battle of Ypres, Oct. 30–Nov. 24).

## **The Eastern Front, 1914–1915**

**1914**

**Aug. 17–21**

**Battle of the Tser and the Jadar.** Serbian forces repulsed an Austrian invasion. 1

**Aug. 19–20**

**Battle of Gumbinnen.** The first Russian army defeated **Gen. Friedrich von Prittwitz's** eighth German army, resulting in a German retreat to the Vistula. On learning of this, the German high command dismissed Prittwitz. 2

**Aug. 26–30**

**Battle of Tannenberg.** German forces led by **Gen. Hermann von François** surrounded **Gen. Samsonov's** Russian forces from the west and defeated them. The Germans took over 100,000 prisoners. Samsonov, in desperation, shot himself. 3

**Aug. 26–Sept. 2**

Battle of Zamosc-Komarov. Under **Gen. Moritz von Auffenberg-Komarow**, the Austrians won a great victory over the Russians (**Gen. Alexei Brusilov**). 4

**Sept. 6–15**

**Battle of the Masurian Lakes.** The Germans (**Gen.**, later Field Marshal, **August von Mackensen**) drove the enemy into the difficult lake country and succeeded in capturing 125,000 men. Completely demoralized, the Russians fell back, while the Germans advanced to the lower Niemen River and occupied the *gouvernement* of Suvalki.

5

### Sept. 8–17

**Battle of the Drina.** Austrian forces again crossed the **Drina** into Serbia as the Serbs invaded Sylvania. The Serbs captured Zemlin (Zemun) on Sept. 10, but were unable to continue the advance into Austrian territory. The two opponents fought a long series of desultory engagements on the heights along the river. The Serbs were ultimately forced to retreat and surrender Belgrade (Dec. 2).

6

### Sept. 8–12

**Battle of Lemberg.** Austria abandoned eastern Galicia. The Russians also captured **Czernowitz** in the Bukovina (Sept. 15) and **Jaroslav** (Sept. 21). At the same time the Russians invested the key fortress of **Przemysl** (Sept. 16) and launched an attack upon the passes of the Carpathians leading into northern Hungary (Sept. 24).

7

### Oct. 9–20

**Battles of Warsaw and Ivangorod.** Mackensen advanced as far as Warsaw (Oct. 12), but was obliged to fall back when the Russians counterattacked farther east. The Austrians retreated to Cracow, while the Russians commenced the second investment of Przemysl (Nov. 10) and renewed the invasion of northern Hungary (Nov. 15). Heavy fighting also continued around Cracow (Nov. 16–Dec. 2).

8

### Nov. 16–25

**Battles of Lodz and Lowicz.** For a time the Russians, having brought up reinforcements, threatened to surround the Germans, but in early December the Germans were themselves strengthened by the arrival of new divisions from the western front. Lodz fell to the Germans on Dec. 6.

9

## Dec. 3–6

**Battle of Kolubara.** The Austrians were forced to recross the Serbian frontier as Serbs 10  
recaptured Belgrade (Dec. 15), ending the second invasion of Serbia.

## [The War at Sea, 1914–1915](#)

1914

Aug. 28

British cruisers, supported by battle cruisers (**Adm. Sir David Beatty**), raided **Heligoland Bight**. The German cruisers came out and drove the British fleet off, but Beatty was able to sink three enemy ships. 1

Aug.

When the war broke out, there were eight German cruisers on foreign stations, mostly on the China station. When **Japan** declared war (See [Aug. 23](#)), the German commander, **Adm. Maximilian von Spee**, left for the South American coast with the cruisers *Scharnhorst*, *Gneisenau*, and *Nürnberg*. He bombarded **Papeete** (Sept. 22) and destroyed the British cable station at **Fanning Island**. At **Easter Island** (Oct. 12–18) Spee was joined by the cruisers *Dresden* (from the West Indies) and *Leipzig* (from the California coast). Together they proceeded to the Chilean coast. Meanwhile **Adm. Sir Christopher Cradock**, with three old ships, had been ordered to hunt down Spee. 2

Sept. 10–Nov. 9

The *Emden* (**Capt. Karl von Müller**) left the China station for the Indian Ocean, bombarding **Madras** (Sept. 22) and capturing several ships before being sunk at Cocos Island. 3

Sept. 22

The *U.9* sank three old cruisers, *Hogue*, *Cressy*, and *Aboukir*.

4

### Oct. 18

After an attempted German submarine raid on **Scapa Flow**, the Grand Fleet was withdrawn from that base and concentrated, for a time, on the west coast of Scotland.

5

### Nov. 1

**Naval action off Coronel.** **Spee** destroyed two of Cradock's ships (the *Monmouth* and the *Good Hope*; the *Glasgow* escaped). To meet the danger from the German squadron, all available Allied warships were assembled off the southeast coast of South America. Three battle cruisers were hastily dispatched from the Grand Fleet to the South Atlantic.

6

### Nov. 3

**Adm. Franz von Hipper** raided Yarmouth.

7

### Dec. 8

**Battle of the Falkland Islands.** **Spee** made the fatal decision to attack the **Falklands** on his way homeward. The British squadron (**Adm. Sir Frederick Sturdee**) came upon the Germans unexpectedly and sank four of their five ships (*Scharnhorst*, *Gneisenau*, *Leipzig*, and *Nürnberg*). A total of 1,800 men died, including **Spee** and his two sons. The *Dresden*, having escaped from the Falklands, engaged in commerce-destroying until cornered at Juan Fernandez, where the ship was blown up by its own crew (March 1, 1915).

8

### Dec. 16

German forces bombarded Scarborough and Hartlepool.

## **The Balkans, 1915–1916**

**1915**

**Oct. 6**

Beginning of the **great Austro-German campaign in Serbia**. **Belgrade** fell (Oct. 9) and **Semendria** (Oct. 11). <sup>1</sup>

**Oct. 22**

The **Bulgarians** (Gen. Jekov) took **Ūskub** (Skoplje), and then (Oct. 28) **Pirot**. **Nish** fell (Nov. 5). A British and French attempt from Saloniki to block the Bulgar advance on the Strumitsa (Nov. 3–5) and on the Cerna (Nov. 12) was brushed aside. The Allies were again repulsed on the lower Vardar (Dec. 4–10) and forced to retreat to Greek territory. <sup>2</sup>

**Nov. 16**

The Bulgarians took **Prilep**, then **Pristina** (Nov. 23), **Prizrend** (Nov. 29), and **Monastir** (i.e., Bitolje, Dec. 2). The Serbs were now in full flight into Albania, the Bulgars pursuing them and taking **Dibra** and **Okhrid** (Dec. 8), and ultimately **Elbasan** (Feb. 2, 1916). <sup>3</sup>

## **The Italian Front, 1914**

**1914–1915**

**Dec. 20**

**Durazzo** occupied by the **Italians**.

1

**1915, June 29–Dec. 10**

**The first four battles of the Isonzo.** The Austrians (commander **Archduke Eugene**) held the two important bridgeheads at **Gorizia** and **Tolmino**. The Italians (**Gen. Luigi Cadorna**, commander in chief, May 23, 1915–Nov. 7, 1917) tried to force the passage, but their total advance never exceeded 10 or 12 miles. The Isonzo battles were the first (June 29–July 7); second (July 18–Aug. 10); third (Oct. 18–Nov. 3); and fourth (Nov. 10–Dec. 10).

[CONTENTS](#) · [SUBJECT INDEX](#) · [BIBLIOGRAPHIC RECORD](#)

## **The Western Front, 1916–1917**

### **1916**

#### **Feb. 21**

**Battle of Verdun.** The Germans concentrated 1,400 guns on a short front of eight miles on the right bank of the Meuse. After a devastating bombardment they took Fort Douaumont (Feb. 25). French reinforcements were rushed to this sector, but the defense was hampered by the bottleneck of the salient. <sup>1</sup>

#### **March 6–April 10**

Renewal of the attack, this time on both sides of the salient. Gen. Robert Nivelle replaced Gen. Pétain, and the French began a series of vigorous counterattacks (May). <sup>2</sup>

#### **June 2**

The Germans finally took Fort Vaux, and before the end of the month the works of Thiaumont (June 23). Heavy attacks continued until July 11, when the Germans went over to the defensive. The French losses have been estimated at about 350,000, the German at somewhat less. <sup>3</sup>

#### **July 1–Nov. 18**

**Battle of the Somme.** After a long and intensive bombardment the British advanced on a front of 15 miles toward Bapaume, while the French objective was Péronne. Though the Germans were outnumbered at least six to one at first, the British had but little success. The heavily laden infantry was unable to move fast enough to keep up with an <sup>4</sup>

extraordinarily rigid time schedule. British losses on one day were 60,000, heavier than in this or any other war.

### Oct. 24–Dec. 18.

The French (Gen. Charles Mangin) counterattacked at Verdun and recaptured Forts Douaumont and Vaux (Nov. 2).

## **The Eastern Front, 1916–1917**

**1916**

**March 19–April 30**

The Russians fought the inconclusive **Battle of Lake Naroch**, intended only to relieve pressure at Verdun. <sup>1</sup>

**June 4**

The great **Brusilov offensive**. The objective in the south was **Kovel**, an important railway center, but the advance extended over a front of 300 miles. The Austrians, taken by surprise, fell back, leaving many prisoners in Russian hands. The **Russians took Lutsk** (June 8) and **Czernowitz** (June 18). Heavy fighting continued about Kovel, Tarnopol, and Baranovici (**battles of the Strypa**, June 11–30; **Baranovici**, July 2–9; **Kovel**, July 28–Aug. 17) until September. The Russians advanced from 25 to 125 kilometers in the region from Pinsk south to Czernowitz and took half a million prisoners, but the offensive was stopped by the arrival of 15 divisions of Germans from the western front. The Russians had failed to take either Kovel or Lemberg. <sup>2</sup>

## **The Italian Front, 1916–1917**

### **1916**

#### **Feb. 15–March 17**

The **fifth battle of the Isonzo**, which, like the previous engagements, led to no substantial change. 1

#### **May 15–June 3**

**The Austrian offensive in the Trentino.** The Italians were taken by surprise and yielded **Asiago** and **Arsiero** (May 31). But the Austrians lacked sufficient forces to break through, the more so as the Italians hastily brought up reserves from the Isonzo front. The Italian lines held, and by June 17 a counteroffensive was launched. When this came to a close (July 7), most of the territory had been recovered. 2

#### **Aug. 6–17**

**Sixth battle of the Isonzo.** The Italians finally took **Gorizia** (Aug. 9). 3

#### **Sept. 14–18**

**Seventh battle of the Isonzo.** 4

#### **Oct. 9–12**

**Eighth battle of the Isonzo.** 5

## Oct. 31–Nov. 4

### Ninth battle of the Isonzo.

## **The Balkan Front, 1916–1917**

**1916**

**Aug. 2–21**

**Battle of Doiran.** The Allies began to advance against the Bulgarians on the Saloniki front. 1

**Aug. 17–19**

**Battle of Florina.** The Bulgars and Germans counterattacked and pushed back the Saloniki forces. They took **Seres** (Aug. 19), **Drama**, and **Kavalla** (Sept. 18), where the fourth Greek army corps voluntarily surrendered. 2

**Aug. 28**

The Romanians began the **invasion of Transylvania** and took **Kronstadt** (Brasov) and **Hermannstadt** (Sibiu). 3

**Sept. 27–29**

**Austro-German forces**, hastily assembled in Transylvania and commanded by Falkenhayn, counterattacked and surrounded the Romanians at Hermannstadt (**battle of Sibiu**). 4

**Sept. 26–Nov. 23**

A Bulgarian-German force under Gen. August von Mackensen began operations in **Dobrudja. Silistria** was taken (Sept. 10), then **Constantza** (Oct. 22) and **Cernavoda** (Oct. 25). 5

### Oct. 5–Dec. 11

The Allied forces under Sarrail began a great offensive in Macedonia (**first battle of Monastir**). Monastir (Bitolje) was taken (Nov. 19), and the Allies pushed forward as far as Lake Okhrid. 6

### Oct. 7–9

**Battle of Kronstadt** (Brasov). The Austro-German forces retook the city and advanced to the Carpathian passes. 7

### Nov. 10–14

**Falkenhayn forced the Vulcan Pass** into Romania and began the invasion of Wallachia. 8

### Nov. 23

Mackensen's troops crossed the Danube at Sistova and advanced toward Bucharest, as did Falkenhayn coming from Craiova. 9

### Dec. 1–5

A Romanian counterattack on the Arges River failed (**battle of Argesul**). 10

## **The War at Sea, 1916–1918**

**1916**

**April 24–25**

A **German squadron** raided and bombarded **Yarmouth** and **Lowestoft**. Submarines also <sup>1</sup> appeared off the Scottish naval bases.

**May 31–June 1**

**Battle of Jutland.** On May 30, **Adm. Franz von Hipper** with the German battle cruiser <sup>2</sup> squadron had been sent to show himself off the Norwegian coast. On May 31, he came into contact with **Adm. Sir David Beatty** and the British battle cruisers, running southeast before the Grand Fleet. Though decidedly outnumbered, Hipper and the Germans, through superior marksmanship, sank two of Beatty's ships. Beatty, sighting the German High Seas Fleet (Scheer) in battle order, turned north to join Jellicoe and the Grand Fleet. The German Fleet, having been drawn in, met the Grand Fleet just before 6:00 P.M. **Jellicoe** tried to deploy across Scheer's line of retreat, but **Scheer** turned about suddenly and made away to the south and then to the east, coming up on the flank of the British, in pursuit. Scheer turned right, launching a torpedo attack, which obliged Jellicoe to fall back. Scheer then sent Hipper and the battle cruisers to attack while the High Seas Fleet effected its escape. Night fell, leaving the two fleets steaming southwest about six miles apart. But at 9:00 P.M. Scheer turned east and made for Horns Reef, forcing his way through the tail end of Jellicoe's forces, still steaming south. The German fleet reached Horns Reef in safety at 3:30 in the morning. Each fleet lost six ships in the Jutland engagement, but the British ships lost totaled twice the tonnage of the Germans. Scheer had to yield to the superiority of the British in capital ships, but in battle cruiser warfare the Germans were completely victorious.

**Aug. 19, Oct. 26–27**

**German raids** on the English coast. At the same time German light cruisers slipped through the blockade and ravaged commerce in the Atlantic. The German submarine *Deutschland* made a trip to the U.S. and back (July 10, 1916, at Norfolk, Va.).

## **The Western Front, 1918**

**1918**

**March 21–April 5**

**The great March offensive.** After cleverly concealed preparations, the Germans began with a bombardment of 6,000 guns and a heavy gas attack. They advanced from **St. Quentin** in a thick fog, which recurred for several days. The Germans captured **Péronne, Ham, Bapaume, Chauny, Noyon**, and even **Montdidier**, before being checked. <sup>1</sup>

**April 9–29**

**Battles of the Lys.** The second great German blow, delivered south of Ypres on a short front. The Germans opened up a wide breach in the British front, but a lack of reserves made it impossible for them to take full advantage of the situation. The Germans stormed **Messines Ridge** and took **Armentières**. <sup>2</sup>

**May 27–June 6**

**(Third) Battle of the Aisne.** Ludendorff, in order to draw the French reserves from Flanders preparatory to the main offensive there, arranged an attack upon the French between Soissons and Rheims, along the strong and therefore weakly held **Chemin des Dames**. The French were taken by surprise and driven back 13 miles on the first day. The Germans took **Soissons** (May 29) and on May 30 reached the Marne River, only 37 miles from Paris. The new salient was 40 miles deep. <sup>3</sup>

**June 4**

**American forces at Château-Thierry** (second division), collaborating with the French, managed to break the German advance. 4

### June 9–14

**Battle of the Matz.** The Germans advanced about six miles, but the move had been hastily prepared and the French were able to contain it. 5

### July 15–Aug. 7

**(Second) Battle of the Marne.** Ludendorff threw his weary troops into yet another attack. East of Rheims no progress was made, and west of the city, though the **Germans crossed the Marne**, they made but little progress against strong French and American forces. **On July 18, Foch ordered a counterattack**, in which nine American divisions took part. The Germans were forced back over the Marne to the Vesle River, while the French retook **Soissons** (Aug. 2). 6

### Aug. 8–11

**Battle of Amiens.** The British attacked with 450 tanks. They advanced about eight miles the first day, after which the German lines tightened. 7

### Aug. 21–Sept. 3

**Second battles of the Somme and of Arras.** The British and French gradually extended their attacks. They took **Roye** (Aug. 27), **Bapaume** (Aug. 28), **Noyon** (Aug. 28), and **Péronne** (Aug. 31), and obliged the Germans to fall back to the Hindenburg Line. 8

### Sept. 12–13

American forces, attacking on both sides of the **St. Mihiel** salient, pinched out that area, capturing some 15,000 of the enemy. 9

### Sept. 26–Oct. 15

**Battles of the Argonne and of Ypres** (Sept. 28–Oct. 2). Foch's plan was to execute a pincer movement with an American thrust north through the Argonne and a British thrust eastward toward Cambrai and farther north toward Lille. If successful, this would have cut the main lateral German railway and forced a general withdrawal. But at both ends the advance was much slower than expected. By mid-October, the Americans had gotten through part of the Argonne, while the British had taken **St. Quentin, Lens,** and **Armentières** (Oct. 1–2).

## C. [Europe, 1919–1945](#)

### 1. [Economic and Social Changes](#)

Three events define this period in European history: World War I, the Depression, and World War II. **The impact of the First World War** was truly revolutionary. The total number of casualties, including killed, wounded, and missing, is figured at 37.5 million. The greatest burden of war dead and wounded, about 6 million, was suffered by Germany. France's losses were 5.5 million, but with a population less than two-thirds that of Germany, France suffered proportionally more. An outbreak of **influenza** in the autumn of 1918 compounded the death toll as it swept through populations already weakened by the nutritional privations of total war. 1

Economically, Europe was in ruins. Governments had borrowed heavily to fund the war, and had responded to this debt after the war by printing more money. The result was **inflation**, felt most disastrously in Germany. Yet the victors, especially France, depended upon German reparations to revive their economies. Germany's inability to pay led first to confrontation, as in the **French and Belgian occupation of the Ruhr**, and later to peaceful settlements, like the **Dawes and Young plans**. Wartime disruption helped cause a sharp **recession** in 1920–21, and some longer-term trends toward agricultural overproduction. For most nations, prosperity returned only in the mid-1920s. Ongoing economic uncertainty prompted many families to continue trends toward **lower birth rates**. 2

The catastrophic toll of the war also resulted in **a new, looser code of morality**, especially in a growing urban environment. A new generation, decimated by war, felt betrayed by their elders and rejected the more austere standards of conduct they had been taught as children. In the age of jazz and the flapper this was most notable in **changing attitudes toward sexuality**. While in France contraception became illegal because of population concerns, women like **Marie Stopes** in England actively supported contraception and a more open attitude toward sex. In Berlin, **Mangus Hirschfeld** opened the Institute for Sexual Science in 1919, an institution designed to further the study of sexuality and promote understanding, including gay rights. Sexuality 3

became the subject of great popular interest, reflected in prescriptive literature, but this also fueled the impression among conservatives and rural populations that this was a degenerate age.

The devastation of the war also produced a strong **pacifist movement**, questioning duty to the state. Many argued that there was no suitable reason ever to reproduce the amount of bloodletting witnessed during World War I, “the war to end all wars.” Though the League of Nations was unable to develop this into a concrete system to avoid war, this sentiment helps explain the policy of appeasement Western Europe followed in the face of Nazi aggression. 4

On the political stage, the revolutionary dream of national unity first introduced by the French Revolution became reality in Eastern Europe. The creation of **new nation states** heralded the end of multinational empires, though one was to reemerge in the Soviet Union. Throughout the 1920s **democracy** also triumphed. Not only did working-class men gain suffrage, but in most nations women too acquired the vote. France and Italy were notable exceptions. 5

Government also became “**big government**” during the war and afterward. The demands of total war necessitated government involvement in all walks of life. Governments established minimum and maximum wages and prices, curtailed production in industries not deemed necessary to the war effort, and introduced rationing when necessary. Administrations grew as liberal notions of free trade gave way to **planned economies**. Since morale on the home front was as important as in the trenches, governments also attempted to influence behavior through **extensive propaganda campaigns**. With the problems of demobilization and continued economic hardships, governments did not readily decrease their activities with the war's end. Indeed, administrations continued to grow as various states instituted the early trappings of the **welfare state**, such as unemployment insurance, housing allotments, and accident insurance for workers. 6

The success of the **Communist Revolution** in Russia also entered a new element into European politics. For many in Eastern Europe it justified early shifts to right-wing governments and the end of democracy. In Western Europe the impact of the Russian Revolution was a split in the Socialist parties, as Communists formed their own parties, allied closely to the Third International, and revisionists gained control of the Socialist parties. Throughout Europe the “specter of world Communism” was also the force behind domestic policies, such as social and land reforms, designed to integrate workers and peasants into noncommunist political and economic systems. 7

The next defining event in interwar Europe was the **world depression** that followed the U.S. stock market crash of 1929. Europe did not feel the full brunt until the early thirties, but when it did, whole economies were devastated. Peasants were unable to acquire credit or obtain loans as world market prices plummeted. Unemployment reached disastrous proportions throughout Europe, making insecurity a reality for millions. 8

While factory workers suffered most, the growing **white-collar and professional** sectors also experienced massive loss of jobs. Many were now willing to support radical attempts to deal with the crisis by both democratic leaders and dictators.

The responses to the Depression differed significantly. In Britain, for example, the government followed orthodox economic theory by balancing its budget, but unemployed workers did receive enough welfare simply to survive. **In Scandinavia, however, a cooperative tradition and strong Socialist influence in government** since the end of the war generated a reformist socialism that responded to economic crisis with deficit spending and vast public works programs. In nations with weak democratic traditions, however, the response to economic crisis was dictatorship. This was a result not so much of the economic solutions proffered by various totalitarian leaders, but of the general fear that economic insecurity generated, a fear of disorder and revolution that only force could prevent. Millions surrendered civil liberties for such security.

The rise of **fascism** (See [March 23](#)), which depended on an aggressive foreign policy and the glory of conquest, led to expansionist policies that resulted first in the disappearance of countries like Albania, Austria, and Czechoslovakia, and eventually in the outbreak of **World War II** in 1939. As in World War I, the demands of modern warfare dictated total war. As men were conscripted into the armed services, **women were conscripted into the workforce**. In England, the Women's Power Committee was able to win equal insurance and benefits for women workers in 1943, but the government consistently fought demands for equal pay. Rationing once again became a fact of life as governments planned every aspect of the economy. Civil liberties were curtailed in the name of security, and governments launched more extensive propaganda campaigns to retain popular support.

Occupied nations responded differently to the Nazis. In the western portions of the Soviet Union, for example, the invading Germans were first greeted as liberators. In Western Europe, **resistance** developed quickly to Nazi occupation, growing in intensity with the influx of Communists after the Nazi invasion of the Soviet Union. The combination of various political beliefs among resistance fighters sometimes led to violence within resistance movements and set the tone for postwar political battles. In all occupied nations, industry was retooled for the German war effort, while forced labor led many into slave conditions in German factories. The Nazis also transported their racist policies into occupied areas, forcing Jews, Gypsies, and others into ghettos and later into concentration camps. (See [Economic and Social Changes](#))

(See [1912](#))

## 2. Intellectual and Religious Trends

The most important development in thought after World War I was the rejection of the rational. While a few philosophers had moved in this direction in the last years of the 19th century, the barbarism of world war convinced many that the previous century's faith in reason and progress was misplaced. This revolt went in two directions. On the Continent, **existentialism** rose to prominence. Although it truly came into its own after World War II, the interwar years witnessed its birth in the works of **Martin Heidegger** (1889–1976), **Karl Jaspers** (1883–1969), and the early works of **Jean-Paul Sartre** (1905–80). Existentialists held that human beings simply existed in an absurd world without a supreme being, left to define themselves only through their actions. Any sense of hope could come only by “engaging” in life and thereby finding meaning in it. 1

**Logical empiricism** found more supporters in England, though its main proponent was the Austrian philosopher **Ludwig Wittgenstein** (1889–1951). Wittgenstein argued in 1922 that philosophy is only the logical clarification of thoughts, and therefore its study is the study of language, which expresses thoughts. Gone were the days when primary philosophical topics were God, freedom, and morality; the new scope of philosophy was greatly reduced to only those things that could be proved. To talk of anything else was a waste of time. 2

Still others turned to **religion**. But unlike the theologians of the late 19th century, who attempted to merge religion with science by portraying Christ primarily as the greatest moral teacher, theologians of interwar Europe stressed the frailty of humankind and the “supernatural” aspects of God. Building on the works of Søren Kierkegaard (1813–55), leading scholars like **Karl Barth** (1886–1968), **Gabriel Marcel** (1887–1973), **Jacques Maritain** (1882–1973), **C. S. Lewis** (1898–1963), and **W. H. Auden** (1907–73) saw in religion and God's grace the answers to a world of terror and anxiety. 3

Others seeking security in an insecure world turned to political philosophies. The two most important in interwar Europe were **communism** and **fascism**. While communism was not new to the 20th century, the existence of a Communist society did propose changes in the philosophy as well as an example for other nations. **Joseph Stalin** 4

(1879–1953) produced the most important change with his concept of **socialism in one country**. Despite the argument that socialism was a stage of development that must occur in all of the industrial world and that Soviet Russia must await the revolution while promoting it through such organizations as Comintern, Stalin argued that socialism could be developed in a single nation, a belief built on a strong base of Russian nationalism. That philosophy was a prime component in the great pace of Russian industrialization in the thirties.

Fascism can be difficult to define because its proponents often tried to make it everything to everybody. As presented by **Adolf Hitler** (1889–1945), **Benito Mussolini** (1883–1945), and **Italo Balbo** (1896–1940), it embodied a rejection of socialism and class warfare, presenting the nation as the most important unifying element that transcended all differences. At the same time, it promoted **a corporatist notion of capitalism and a planned economy**. It drew on the threat of world communism, on the economic problems recurring throughout the period, and on the war experiences of its adherents, expounding a brotherhood akin to that found in the trenches. It fed on fear and resentment to promote a picture of social order and national grandeur.

In the realm of economics, **John Maynard Keynes** (1883–1946) published his *General Theory of Employment, Interest, and Money* in 1936. This work explained how and why an economy might fail to maintain a level activity required for full employment. Though dealing primarily with short-run phenomena, “Keynesian economics” became crucial in the development of theories of economic growth.

Other important events in the development of interwar thought included:

## 1916

**Vilfredo Pareto** (1848–1923), in his *Trattato di Soziologia Generale*, provided a comprehensive mathematical analysis of economic and sociological problems, based on the distinction between the fundamental motivations of human natures (*residues*) and their outward appearance or rationalization (*derivations*).

## 1918–22

**Oswald Spengler** (1880–1936), in *Der Untergang des Abendlandes*, produced a cyclical interpretation of history and forecast the eclipse of Western civilization as inevitable.

## 1929

**Marc Bloch** (1886–1944) and **Lucien Febvre** (1878–1956) founded the journal *Annales d'histoire économique et sociale*, which became an influential international forum for the new social history, a new form of history turning away from political narrative to focus upon economic structures, social institutions, and mentalities in a historical context. <sup>10</sup>

## 1934–54

*A Study of History* (ten volumes), by **Arnold J. Toynbee** (1889–1975), constituted an exhaustive reexamination of human development in the light of an idealist philosophy of history. (See [Religious and Philosophical Thought](#)) <sup>11</sup>

(See [Culture and Popular Culture](#))

### **3. Culture and Popular Culture**

Literature articulated **the general intellectual climate of pessimism, relativism, and alienation**. While 19th-century novelists had adopted the more general stance in their novels of all-knowing narrators, 20th-century authors tended to take on the narrower viewpoint of a single individual. This was notable in the works of **Marcel Proust** (1871–1922), **George Orwell** (1903–50), **Franz Kafka** (1883–1924), **James Joyce** (1882–1941), and **Virginia Woolf** (1882–1941). The two latter authors also became famous for a style of writing known as **stream of consciousness**, a technique that demonstrated the impact of psychology on the arts. 1

As with the postwar generation in general, interwar artists rejected the rules and forms handed down from their elders. In architecture, **Walter Gropius** (1883–1969), founder of **Bauhaus**, broke with the past in his designs of clean and light buildings of glass and iron. **Le Corbusier** (1887–1965) epitomized the new turn to functionalism in his designs. In art, modern painters rejected French impressionism, becoming more abstract and nonrepresentational. Like the early 19th-century romantics, they wanted to portray unseen, inner worlds of emotion and imagination. This can be seen in the art of **Henri Matisse** (1869–1945), **Pablo Picasso** (1881–1973), and **Wassily Kandinsky** (1866–1944). 2

As abstract painters arranged lines and color but did not draw identifiable objects, so modern composers arranged sounds without creating recognizable harmonies. Such composers were led by the Viennese composer **Arnold Schönberg** (1874–1951). 3

In popular culture, the long-declining traditional arts and amusements of people in villages and small towns almost vanished, replaced by standardized, commercial entertainment. In the cities, the prosperity of the late 1920s and the growth of leisure among the working class, resulting from the legalization of the eight-hour day, brought a growth in the leisure industry. **Cabarets and music halls** did a brisk business, centers of society's loosening sense of morality. Playing to crowded rooms, the American **Josephine Baker** (1906–75) brought an exotic African eroticism to Parisian music halls in 1925. 4

For many, leisure also found outlets in the development of **radio** and **cinema**. **Charlie Chaplin** (1889–1978) became a world icon, the king of the “silver screen.” The great appeal of cinema was its ability to offer people a temporary escape from the hard realities of everyday life. While the U.S. dominated the industry during the First World War, destroying young German studios in the early 1920s, the advent of “talkies” resuscitated national film industries in the 1930s, particularly in France.

5

Radio became possible with the transatlantic “wireless” communication of **Guglielmo Marconi** (1874–1937) in 1901 and the development of the vacuum tube in 1904, which permitted the transmission of speech and music. But only in 1920 were the first major public broadcasts of special events made in Great Britain and the U.S. On June 16, 1920, Lord Northcliffe, the Briton who had pioneered in journalism with the inexpensive, mass-circulation *Daily Mail*, sponsored a broadcast of the soprano Nellie Melba, which was heard simultaneously all over Europe. Every major country quickly established national broadcasting networks. The typical pattern was direct control of the medium by the government. By the late 1930s, more than three out of every four households in both democratic Great Britain and dictatorial Germany had at least one cheap, mass-produced radio, a powerful tool for political propaganda. (See [Culture and Popular Culture](#))

[PREVIOUS](#)

[NEXT](#)

---

(See [July 7](#))

#### 4. European Diplomacy and the Depression, 1919–1939

European diplomacy between the two world wars involved the following **major problems**: (1) the attempt to establish collective security by means of new international bodies, the League of Nations, and the World Court, without creating any form of superstate; (2) the unwillingness of the non-European powers, the U.S., Japan, and the British Dominions in particular, to assume responsibility for anything outside their respective spheres of interests; (3) the competition between French efforts to maintain the position of leadership on the continent of Europe established by the peace settlements, and German endeavors to evade or revise the terms imposed in 1919; (4) the attempts to attain security and prosperity by neomercantilist ideas imposed as emergency measures. 1

The era between the wars can be divided chronologically into three phases: (1) the period of settlement (from the peace treaties to the Dawes Plan, 1924); (2) the period of fulfillment (1924 to the evacuation of the Rhineland, 1930); (3) the period of repudiation and revision (1930–39). 2

#### 1919, June 28

Conclusion of **defensive treaties among France, Britain, and the U.S.** Britain and the U.S. were to come to France's assistance in case of aggression by Germany. The U.S. Senate refused to ratify this agreement and also rejected the Versailles treaty (Nov. 19), thus knocking out one of the keystones in the international peace structure established at Paris. 3

#### 1919–22

The **Vilna dispute**, between Poland and Lithuania. Polish forces took the town from the 4

Bolsheviks (April 4, 1919). The **Curzon line** (Dec. 8) established a boundary depriving Poland of the city, which was retaken by the Bolsheviks (June 15, 1920). The Lithuanians took it when the Russians evacuated (Aug. 24), but were driven out by Polish freebooters under **Gen. Lucien Zeligowski** (Oct. 9). By decision of the League a plebiscite was to be held to decide the fate of the city, but this was later abandoned (March 3, 1921). A **plebiscite** (Jan. 8, 1922) held by Zeligowski decided for Poland, and the Vilna Diet voted for union. On April 18 it was incorporated with Poland, though Lithuania refused to recognize this disposition of the question.

## 1919–20

The **Teschen conflict** between Poland and Czechoslovakia. The Czechs had occupied the disputed area (Jan. 1919) and serious clashes took place (May). The supreme council decided for a plebiscite (Sept. 27), but disorders continued (March, May 1920) until the conference of ambassadors divided the territory (July 28). (In these and other Eastern European disputes, France, eager for stable powers on Germany's eastern borders, took the lead in organizing ambassadorial negotiations.)

5

## 1919–20

The **Polish-Russian War**, resulting from the effort made by the Poles to push their frontier east to the frontier of 1772. The Poles, in agreement with the Ukrainian leader **Gen. Simon Petliura**, attempted to wrest Ukraine from the Bolsheviks. They quickly overran the country, taking Kiev (May 7), but the Bolsheviks launched an energetic counterattack and drove the Poles out of Kiev (June 11) and Vilna (July 15). By Aug. 14 the Russians were on the outskirts of Warsaw. But the Poles, vigorously aided by the French (**Gen. Maxime Weygand**) made a stand and were soon able to turn the tables. The Bolsheviks were forced to fall back and abandon their Polish conquests. The preliminary treaty of Riga (Oct. 12) was followed by the definitive **Treaty of Riga** (March 18, 1921), which defined the frontier between the two countries.

6

## 1919–21

The **Burgenland dispute** between Austria and Hungary. The strip of territory had been assigned to Austria by the peace treaties, it being only 15 miles from Vienna. The population, too, was predominantly German. But Hungarian irregulars were in occupation and refused to evacuate (Aug. 1921). Through Italian mediation a plebiscite

7

was arranged for. This was held (Dec. 1921) and gave Austria most of the area, though Ödenburg went to Hungary.

## 1919–22

The **Greek invasion of Anatolia** (See [1919–22](#)).

8

## 1919–24

**The Fiume question.** President Wilson had rejected the Italian claim to the town and the coast south of it (April 14, 1919), whereupon the Italians had withdrawn from the peace conference. A compromise, suggested by **André Tardieu**, which would have created a buffer state of Fiume (May 30), was rejected by Yugoslavia. **Gabriele d'Annunzio** led a filibustering expedition that occupied the town and set up a visionary government (Sept. 12). The matter was finally left to Italy and Yugoslavia to settle (March 6, 1920). The **Treaty of Rapallo** (Nov. 12) made Fiume an independent city and gave Italy Zara and a number of Dalmatian islands. But a Fascist coup (March 3, 1922) overthrew the local government, and government troops took control (March 17). By a treaty of Jan. 27, 1924, Yugoslavia abandoned claims to Fiume but received **Porto Barros** in return.

9

## 1919–22

**The Upper Silesian question.** The peace treaties had provided for a plebiscite in this valuable area. It was held on March 20, 1921 (See [March 20](#)), and returned 717,122 votes for Germany, as against 483,154 for Poland. But an armed rising under the Polish commissioner **Adalbert Korfanty** (May 4, 1922) was acquiesced in by the French commander acting for the League. In Aug. 1922, the council of ambassadors referred the matter to the League, and the League council accepted a **scheme of partition** by which a majority of the population and more than half of the territory were awarded to Germany, while Poland was given the principal mining and industrial districts.

10

## 1919, July 29

**Italy signed a treaty with Greece** supporting Greek claims in Thrace and Epirus, Greece to support an Italian protectorate over Albania and Italian claims in Anatolia. Italy was to keep Rhodes for 15 years, and the **Dodecanese Islands** were to be ceded to Greece. Italy denounced these treaties on Oct. 8, 1922. 11

### 1920, Jan. 23

The Dutch government refused to surrender the **former emperor William**, though it later agreed to intern him. 12

### Feb.–March

The **plebiscites in North Schleswig** gave the northernmost zone to **Denmark** and the remainder to Germany. 13

## 5. [The British Isles](#)

### a. [Great Britain](#)

**Monarchs:** George V (r. 1910–36); Edward VIII (r. 1936); George VI (r. 1936–52). 1

**Prime Ministers:** Herbert H. Asquith (1908–15, Liberal); Herbert H. Asquith (1915–16, coalition); David Lloyd George (1916–19, coalition); David Lloyd George (1919–22, coalition); Andrew Bonar Law (1922–23, Conservative); Stanley Baldwin (1923–24, Conservative); J. Ramsay MacDonald (1924, Labour); Stanley Baldwin (1924–29, Conservative); J. Ramsay MacDonald (1929–31, Labour); J. Ramsay MacDonald (1931–35, National); Stanley Baldwin (1935–37, National); Neville Chamberlain (1937–40, National); Winston Churchill (1940–45, coalition). 2

**Impact of World War I.** The most significant results of Britain's wartime experience were the **expansion of state planning** and **disillusionment**. Beginning with the **Defense of the Realm Act** (1914) and continued through the creation of the **War Committee** (1915), British leaders recognized that only central control could lead to victory. This was especially true of the economic sector, where the creation of the ministries of munitions (July 2, 1915) and blockade (Feb. 23, 1916) aided government management of shipbuilding, food production and distribution, and the supply of wool and cotton. **War socialism** placed munitions, coal, iron, steel, and railroads under state control. This also brought trade unions into government planning activities. Such control was also extended over manpower with the **compulsory military service bill** (Jan. 6, 1916) and the creation of a ministry of labour (1916). Finally, the government became increasingly involved in influencing public opinion, including the distribution of newsreels and **propaganda films** that contributed to the later popularity of commercial cinema. Gradually, the nation became accustomed to such extensive state planning, shaping the course of interwar Britain. 3

Disillusionment was evident primarily in cultural life, as in the plays of **Noel Coward** (1899–1973), the novels of **Aldous Huxley** (1894–1963), and the poetry of **T. S. Eliot** (1888–1965). Disillusionment bred a search for new styles, witnessed in the stream-of-consciousness works of **Virginia Woolf** (1882–1941) and **James Joyce** (1882–1941). 4

Another impact of the war was a loosening of moral standards, personified by the flapper, and seen in the spread of jazz, the popularity of commercialized sports and movies, and an increase in sexual freedom. **Increased wages and shorter work hours** after the war allowed a greater number of Britons to spend more time in leisure activities, in which cinemas, pubs, and dance halls came to share top billing. In the 1930s intellectual attention turned more to social concerns, as the condition of England became a theme to such authors as **J. B. Priestley** (1894–1984) and **George Orwell** (1903–50).

Popular authors throughout the interwar years included **Thomas Hardy** (1840–1928), **Joseph Conrad** (1857–1924), **Arthur Conan Doyle** (1859–1930), **James M. Barrie** (1860–1937), **Rudyard Kipling** (1865–1936), **H. G. Wells** (1866–1946), **Hugh Walpole** (1884–1941), **D. H. Lawrence** (1885–1930), and **Katherine Mansfield** (1888–1923). The greatest popular success was reserved for the authors of thrillers, especially **John Buchan** (1875–1940), and detective stories, like **Agatha Christie** (1890–1975).

Great Britain's losses in the First World War were almost 1 million killed and over 2 million wounded. The total expense exceeded £8 billion, and the burden of domestic and foreign debt was ten times what it had been in 1914. Britain was faced with the problem of returning soldiers to industry and introducing social reforms loudly demanded by the laboring classes, and confronted at the same time by increased competition in foreign trade. In Ireland, India, Egypt, and Palestine it faced almost insoluble problems. Even the self-governing dominions demonstrated enhanced national feeling and reluctance to be committed to any share in future European wars.

**Economics. As women were forced out of wartime employment** to make way for demobilized soldiers (rapid demobilization between 1919 and 1920), immediate economic disaster was averted by the economic boom of 1919–20. The government responded by returning to prewar laissez-faire policies, resulting in inflation, strikes, and wage increases. But Britain had lost its position in the world economy and could not maintain this boom, which failed in late 1921. The recession was triggered by a decrease in government expenditures, increased taxes, and the overproduction of primary products. The old specter of class war loomed on the horizon as trade unions threatened a general strike. The government responded with the Emergency Powers Act (1920), restoring its wartime emergency authority. In addition, the government subsidized the building of more than 200,000 houses, making housing another social service of the government. Such assistance was continued by subsequent governments, and by 1928 houses built with public funding made up 40 percent of the total housing construction.

Aside from the economy, Britain's other pressing problem in the immediate postwar years was a solution to the Irish question (See [1914, Aug. 8](#)). The result in domestic politics was a Unionist defection from Lloyd George's government, causing its collapse (Oct. 19, 1922), and a weak Conservative government (general election, Nov. 15, 1922),

bolstered by a split between the Liberal followers of Asquith and Lloyd George. **The Labour Party became for the first time His Majesty's Opposition.** The interwar years were dominated by the insecurity of three-party contests.

## 1918

**Reforms of 1918.** The **Representation of Peoples Act** widened suffrage by abolishing practically all property qualifications for men and **by enfranchising women over 30 who met minimum property qualifications.** The enfranchisement of this latter group was accepted as recognition of the contribution made by women defense workers. 9

An **Education Act** made elementary education compulsory between the ages of 5 and 14. Children who left school at 14 were supposed to attend continuation schools for 320 hours a year until they were 18. Those who continued their regular schooling until they were 16 were under no further obligation. Furthermore, child labor was sharply limited, halting a large number of children from leaving school at age 12 and becoming unemployed because of lack of skills. 10

The **Labour Party adopted a new constitution** designed to recruit more members, admitting local Labour parties (constituency parties), which individuals could join without first becoming affiliated with a trade union or a socialist group. 11

## Dec. 14

The **Khaki election.** The coalition government won a huge majority on a platform promising punishment of the German “war criminals,” full payment by the defeated powers of the costs of war, and the prevention of dumping of foreign goods in Great Britain. These promises greatly hampered Lloyd George's freedom of action at the Paris peace conference (See [1919, Jan. 18](#)). 12

## 1919

Parliament passed the **Arbitration Act**, calling for unions and employers to submit to court decisions. The only important application of this act occurred a year later when the Transport and General Workers Union (dockers), led by Ernest Bevin, won a favorable court settlement. 13

## Nov. 28

Lady Astor became the first woman elected to the House of Commons.

14

## **[b. Ireland](#)**

### **1914, Aug. 8**

**Press censorship** decreed, remaining in effect until 1922. 1

### **1916, April 21**

**Sir Roger Casement** landed on the Irish coast from a German submarine to start a rebellion. 2

### **April 24–29**

The **EASTER REBELLION**, led by Patrick H. Pearse and the Irish Republican Brotherhood, despite the failure of German aid. After a week of fighting the British suppressed the insurrection (May 1). Several of the leaders were tried and executed (May 3). Casement was hanged on Aug. 3. 3

(See [Aug](#))

## 6. [The Low Countries](#)

### a. [Belgium](#)

**Monarchs:** Albert I (r. 1909–34), Leopold III (r. 1934–44).

1

### 1914

The government fled the German invasion and went into exile in Le Havre (Oct. 14). Faced with the prospect of starvation, since the Germans refused to supply civilians in occupied areas, Belgians established the **Comité national de secours et d'alimentation**, which, although neutral, became a center for patriotism.

2

Hoping to win support, Germany courted the Flemings by establishing a **Flemish university at Ghent** (1916) and promising **administrative separation** of the Flemish and Walloon provinces (creation of the **Council of Flanders** in 1917). The German policy of systematic massive deportation (120,000 men and boys) roused much resistance, however, sparking riots in Antwerp that killed 200 on Nov. 30, 1916. The deportations ceased in 1917.

3

While German efforts were largely unsuccessful, Flemish separatism caused greater concerns in the Belgian army. Unrest among Flemish soldiers aroused fear of mutiny in 1917 and 1918 (formation of Flemish study circles and their abolition, an open letter to King Albert listing grievances and cautiously defending Flemish activists in the occupied territories, and a demand by some Flemish leaders for self-government after the war). But such fears proved unfounded.

4

Of all the countries involved in the First World War, **Belgium** suffered most. The total damage was estimated at over \$7 billion, but the country showed extraordinary recuperative power and soon returned to a peace basis. Politically the country was ruled by the Catholic and Socialist Parties. One of the major questions at issue was the demand of the Flemish for recognition of their language.

5

## 1918, Nov. 21

Roman Catholics, liberals, and Socialists formed a new government of national solidarity after the German evacuation. This was followed the next day by King Albert's promise of radical reforms: universal male suffrage, equal rights for language groups, the foundation of a Flemish university at Ghent, and the repeal of Belgium's obligatory neutrality.

6

## 1919

The first commissions paritaires were established by the government to quell a wave of strikes. These commissions were consultative bodies representing employers and workers on the national level. By 1923 there were 23 of them. They helped in negotiations and advised the government, but acquired legislative authority only in 1945.

7

## April 7

A total of 160,000 women signed a petition demanding suffrage.

8

## May 9

A **new electoral law** introduced **universal manhood suffrage** and gave the franchise to certain classes of women.

9

## May 30

By agreement with Great Britain, later confirmed by the League of Nations, Belgium was given the **mandate over part of German East Africa** (Ruanda and Urundi).

10

## June 28

By the Treaty of Versailles, Belgium acquired the German districts of **Eupen**, **Malmédy**, and **Moresnet**.

11

## Nov. 17

Belgian claims to Limburg and part of the Scheldt river were thwarted as **Belgium and the Netherlands reached agreement on the River Scheldt**.

## **b. [The Netherlands](#)**

**Monarchs:** Wilhelmina (1890–1948). 1

Though the Netherlands took no part in the First World War, the nation suffered considerably through interference with trade. Toward the end of the war the government was obliged to submit to stringent regulations by the Allies and to permit the requisitioning of Dutch shipping. The Dutch merchant fleet was seized by the Allies on March 20, 1918. 2

### **1917, Dec**

The revised constitution granting universal manhood suffrage and proportional representation was promulgated. Financial equality between state and private schools was also established. 3

### **1918, Sept**

The **Ministry of Labor** was created. 4

### **Oct.–Nov**

A wave of strikes led many to **fear a social revolution**, a fear the Socialists fostered. This generated massive support for the monarchy and the government, and a great loss in prestige for the Social Democratic Workers' Party (SDAP). 5

## 7. [France](#)

### [THE GERMAN ADVANCE IN FRANCE, 1940 \(MAP\)](#)

**The Third Republic: Presidents:** Raymond Poincaré (1913–20), Paul Deschanel (1920), Alexandre Millerand (1920–24), Gaston Doumergue (1924–31), Paul Doumer (1931–32), Albert Lebrun (1932–40). 1

**Leading Premiers:** Georges Clemenceau (1917–20), Raymond Poincaré (1922–24), Aristide Briand (1925–26), Raymond Poincaré (1926–29), Léon Blum (1936–37), Edouard Daladier (1938–40). 2

**The French State (Vichy): Head of State:** Marshal Philippe Pétain (1940–44). 3

**Leading Premiers:** François Darlan (1941–42), Pierre Laval (1942–44). 4

## 1914, Sept. 3

**Fearing that Paris might fall** to the advancing German armies, the **French government moved to Bordeaux**. This temporary withdrawal made it more difficult for the civilian ministers to control the army commanders, and the French general staff displayed a spirit of independence that sometimes verged on insubordination. 5

Although French political parties relaxed their feuds in a *union sacrée*, discontent and division brought down successive cabinets. 6

In the spring of 1917 the inability of both sides to win a decision on the battlefield and the victory of the revolution in Russia led to widespread defeatism and pacifism. These sentiments became more widespread after the disastrous Nivelle offensive. 7

## 1917, Nov. 16

Formation of the great **ministry of Georges Clemenceau**, in which the prime minister was also minister of war, while **Stephen Pichon** was given the foreign office. Clemenceau's policy was one of victory *sans phrase*. He set out at once to hunt down the preachers of disaffection (**Malvy, Humbert, Bolo Pasha, Caillaux**) and to organize the country for victory. 8

Under the leadership of Clemenceau (second ministry, Nov. 1917–Jan. 1920), France survived the final year of the war. Clemenceau took a leading part in shaping the peace that followed. 9

**WAR LOSSES.** The acquisition of Alsace-Lorraine and of mandates in Africa and Syria did not compensate victorious France for its losses in the war, which had been fought largely on French soil. The 1,385,000 French soldiers known to be dead; 700,000 seriously wounded; 2,344,000 other wounded; and 446,000 prisoners or missing meant a loss of manpower proportionately greater than that suffered by any other belligerent. Of Frenchmen who in 1914 were aged 20–32, more than half were killed. This heightened French concerns over **depopulation**. In 1920 a statute strictly **prohibited artificial contraception and abortion** and even punished advocacy of these practices. A growing number of **pronatalist advocates** also opposed the employment of married women. Even as the percentage of French women employed fell slowly from 1921 to 1936, however, the proportion of women in the French labor force remained among the highest in the Western world. Meanwhile, in the 1920s large firms began active campaigns to recruit **foreign labor** as France replaced the United States as a leading recipient of immigration. 10

Property damage in the war zone in the north and east of France included 300,000 houses destroyed, and as many more damaged; 6,000 public buildings and 20,000 workshops and factories destroyed or badly damaged; 1,360,000 head of livestock killed or confiscated; thousands of acres of farm land and forest ravaged by shell fire. These figures explain the intensity of the postwar demand for security and reparation. 11

Public finance became another problem in postwar France. The wartime governments had preferred to borrow to finance the war. While an **income tax** had been instituted in 1916, revenue remained low. When peace returned, financial crisis followed: the depreciation of the franc reached 50 percent one year after the victory. The crisis in public finance thus gave the postwar era the appearance of financial crisis, despite the general health of the overall economy. 12

On the whole, as one historian notes, “the war's effect on France's social and economic structure was to shake it up without producing really revolutionary or fundamental changes ... on the one hand, an increased stability approaching stagnation; on the other hand, a growth in stresses and tensions within this rigidified social and economic 13

structure.”

## 1919

The end of the war brought various social concerns to the fore as railway and other transport workers went on strike (Jan.) and the acquittal of Raoul Villain, the man who assassinated Jean Jaurès (Aug. 1914), sparked massive demonstrations (March). The government responded with the long-awaited law making the **eight-hour workday obligatory** (April 23), but worker dissatisfaction continued to manifest itself in strikes through May and June.

14

### Feb.–April

The Chamber and Senate passed two remunerative bills, one on the damages caused by the war and the other on veterans' pensions, thinking that German reparations would cover the costs.

15

### July 4

The government announced its intention to complete demobilization by Oct. 30. Over 3 million men were returned to their homes.

16

### July 12

A **new electoral law** introduced the *scrutin de liste* and a measure of proportional representation. The effect of this was to make it more difficult than ever for any one party to secure a majority.

17

### Nov. 16

**Elections.** The coalition that had governed under Clemenceau split into a Right Bloc National (Clemenceau, Millerand, Poincaré, Briand) and a Cartel des Gauches, led by Herriot. The Royalists, Socialists, and Communists were not included in either group. The elections gave a majority to the Bloc National, which was also victorious in the senatorial elections of Jan. 1920.

18

These elections registered a great victory of the Right (loosely composed of royalist reactionaries, more compromising conservatives, and radical nationalists), but on the whole they remained unable to work efficiently in the realm of mass politics. Their electoral resurgences were due often to continued splits on the Left, those times when the Radicals chose to work with conservatives rather than accept Socialist economic and social programs.

## **8. The Iberian Peninsula**

### **a. Spain**

Though Spain was spared the horrors of the First World War, the effects of the conflict made themselves felt. The demands of the combatants for iron, munitions, and other goods led to a striking **development of Spanish industry**, centering in Catalonia. The growth of industry in turn resulted in increased tension between the semifeudal upper classes, supported by the Church and the army, and the new forces of **socialism** and **anarchism**. The volatility of this mixture was exacerbated by the uneven economic and social development of Spain and subsequent strong regionalist sentiment. The movement for **autonomy for Catalonia**, which had survived the centralizing policies of the 19th century, flared up anew, and the government was throughout confronted with the additional **problem of Morocco**, where constant native risings required a great military effort and the expenditure of much money. Politically the prewar system extended through the First World War and immediate postwar periods, with repeated changes of ministry and the rotation of Liberals and Conservatives in power. 1

### **1917**

The **crisis of 1917** resulted from the waning economic benefits of the war and a rise in the cost of living. It began in May with military unrest that became more general social unrest by the end of July with strikes in Valencia, Bilbao, and Santiago. The result was a period of insecurity between 1917 and 1923. 2

### **June**

The **Junta of Defense of the Infantry** forced the government to **suspend constitutional guarantees**. 3

## July 5

The **Catalan deputies and senators** in the cortes **demand** the **convocation of a constituent assembly** to consider home rule for Catalonia. 4

## Aug. 13

A **general strike** was called to protest economic, social, and political conditions. 5

(See [1912, Jan](#))

## **b. [Portugal](#)**

### **1914, Nov. 23**

The **Portuguese national assembly voted to join Great Britain** and France in the war against Germany, but action in accord with this vote was delayed by a coup. <sup>1</sup>

### **1915, Jan. 28–May 14**

The insurrection and **dictatorship of Gen. Pimenta de Castro**, representing a pro-German faction in the army. This coup had the support of President Arriaga. He in turn was overthrown by a democratic revolt on May 14. <sup>2</sup>

### **1915–17**

**Bernardino Machado became president** on the resignation of President Arriaga. <sup>3</sup>

### **1916, March 9**

**GERMANY DECLARED WAR ON PORTUGAL** after the seizure of German ships in the harbor of Lisbon. The Portuguese organized an expeditionary force, which arrived in France on Feb. 3, 1917, and took over a small sector of the front. <sup>4</sup>

### **1917, Dec. 5**

**Gen. Sidonio P**  **es** led another pro-German uprising, arrested and deported the president, and **made himself president-dictator**.

5

### 1918, Dec. 14

**P**  **es** was assassinated by a radical, whereupon the democratic regime was reestablished. The situation in the country continued to be utterly confused. In a land that was still 65 percent illiterate the democratic system did not function well. One cabinet relieved another, the average duration of governments being about four months. Insurrections and coups were hardly less numerous. The financial condition of the country, long parlous, went from bad to worse. Multiplication of offices, widespread political corruption, and appalling inefficiency characterized the decade from 1918 to 1928.

6

### 1919, Jan. 19–Feb. 14

**A royalist uprising** in the north assumed substantial proportions but was ultimately suppressed.

7

### May 6

The Allied supreme council assigned to Portugal the **mandate for part of German East Africa**, known as the Kionga Triangle.

8

### Aug. 5

**Antonio José de Almeida became president.**

9

(See [Aug. 3](#))

## 9. [Italy and the Papacy](#)

When World War I commenced in Aug. 1914, the Italian cabinet, headed by **Antonio Salandra**, chose neutrality despite Italy's membership in the Triple Alliance. After weighing offers from both camps, the Italian government turned against the **Central Powers** and joined the **Allies** on May 23, 1915 (See [May 23](#)). 1

### 1914, Sept. 3

**BENEDICT XV** (Giacomo della Chiesa) was elected pope on the death of Pius X (Aug. 20). During the war he appealed to the belligerents for peace, submitting outline proposals on Aug. 1, 1917. 2

### 1916, Dec. 12

The **Salandra cabinet** resigned and was succeeded by a new ministry led by **Paolo Boselli**. 3

### 1917, Oct. 29

The **Boselli cabinet** fell as a result of the **Caporetto disaster** (See [Oct. 24–Dec. 26](#)). A new cabinet under **Vittorio Orlando** took office and remained in power until June 1919. 4

Italy had entered the war primarily to gain territory and wrest control of the Adriatic from Austria-Hungary. Its military achievement proved far below Allied expectations and as a result Italy was given but little say at the peace conference. President Wilson took a hostile stand toward the provisions of the **Treaty of London** (See [April 26](#)), and Italy, in return for 600,000 lives lost, received only 9,000 square miles of territory with a 5

population of 1.6 million. None of the former German colonies was assigned to Italy as a mandate. The war, then, left Italy loaded with debt, suffering from high costs of living, and generally restless and discontented. The governments enjoyed no prestige. The political situation was complicated by a rapid spread of Communism and by the emergence of an organized clerical party. Efforts of the government to meet the situation by social legislation had little success.

By the end of the war **Italian economic bifurcation** was becoming more evident as modern industry grew in the north. Industrial wealth centered in the triangle between Turin, Genoa, and Milan, where union activity was especially strong. Workers were split among a socialist union, a Catholic union (which appealed to the peasantry as well), and an anarcho-syndicalist union. As for the peasantry, still the majority of the Italian population, they were disappointed after vague promises of land redistribution during the war were ignored by the government.

### 1919, Jan. 19

Formation of the Partito Popolare, a Catholic party.

### March 23

Formation of the first Fascio di Combattimento by **Benito Mussolini** (b. 1883), former socialist and editor of *Avanti*, who had turned violently interventionist and nationalist.

### April 24

The Italian delegation left the Paris peace conference after the public appeal of President Wilson against the Italian territorial claims on the Adriatic. The Italian delegation returned on May 5.

### June 19

**The Orlando cabinet resigned.** A new ministry was formed by **Francesco Nitti**, with **Tommaso Tittoni** at the foreign office.

### Sept. 2

A **new electoral law** introduced universal suffrage and the French system of *scrutin de liste* (election by departmental lists) and proportional representation. 11

### Sept. 12

**Gabriele d'Annunzio**, eminent writer, ardent nationalist, and world war hero, **seized Fiume** with a band of volunteers (See [1919–24](#)). 12

### Oct. 5–8

**The Socialist Congress at Bologna** voted for adherence to the Third International. 13

### Nov. 11

The pope definitely lifted the prohibition against participation by Catholics in Italian political life. 14

(See [March 11](#))

## 10. [Switzerland](#)

### 1914, Aug. 1

The **Swiss Confederation mobilized** its forces in view of the international crisis and remained on a war footing throughout the conflict. On Aug. 4 the government announced its **neutrality**, and its readiness to defend it no doubt had something to do with respect for Swiss territory on both sides. The war resulted in ever-increasing authority of the federal as against the cantonal governments (the federal council was given exceptional powers on Aug. 3, 1914). Switzerland suffered much from food shortages and was obliged to establish highly **centralized control of economic activity**. The demands of the combatants and the need for food resulted in a striking **development of Swiss industry**, with a corresponding growth of industrial labor and a spread of socialist and radical thought. 1

### 1915

The all-Swiss **Metalworkers' Association merged with the Watchmakers' Association**. By 1919 membership in the Swiss Metalworkers' and Watchmakers' Association (SMUV) was over 84,000. 2

### 1918, Nov. 11

A **general strike** began in Zurich. The causes resembled those in most of Europe at this time: demobilized workers faced unemployment, food prices and rents had doubled during the war, and workers' wages had only slightly increased. The strikers capitulated after three days of demonstrations. Of the nine demands put forth by the strikers, one 3

became law by 1919: proportional voting was introduced in the election of the Nationalrat.

## Dec. 8

**Switzerland broke off relations with Soviet Russia**, which was suspected of subversive propaganda. <sup>4</sup>

(See [Jan](#)) (See [July 7](#))

## 11. [Germany](#)

**Theobald von Bethmann-Hollweg**, chancellor since 1909, remained in office until July 1917, but German policies were increasingly influenced by the military leaders. 1

### 1917, Jan. 8

The German government decided to resume **unrestricted submarine warfare**. Bethmann-Hollweg opposed but was unable to prevent this decision (See [1917, Jan. 8](#)). 2

By 1917 growing unrest led to certain important promises by the government. 3

### April 7

Emperor William II, as king of Prussia, announced in an **Easter message** the end of the famous three-class system of voting in Prussia. The introduction of a system of equal, direct, and secret suffrage was announced somewhat later (July 11). 4

### July 14

**Bethmann-Hollweg**, having lost the support of the Conservatives, National Liberals, and Center, and having long since become objectionable to the military, **was allowed to retire**. 5

### July 14–Oct. 30

**Chancellorship of George Michaelis**, an almost unknown official, who was the appointee of the high command and served chiefly as a cloak for the **power of Ludendorff**.

6

### July 19

Under the leadership of **Matthias Erzberger** and his Catholic Center Party, the **Reichstag passed a resolution in favor of a peace of understanding**, without annexations (212 Centrists, Majority Socialists, and National Liberals against 126 Conservatives, National Liberals, and Independent Socialists). The new chancellor declared that his aims were attainable within the limits of the resolution as “he understood it.”

7

### Oct. 28

**Mutiny of sailors** at Kiel, caused by orders from the admiralty to go to sea and fight the British. “Further than Heligoland we will not go.”

8

### Oct. 29

Emperor William II, alarmed at demands in the **Reichstag** for his abdication, left Berlin for army headquarters at Spa.

9

### Nov. 4, 5

The revolt at Kiel spread to other seaports. **Councils of workers and soldiers formed.**

10

### Nov. 7

**Revolt at Munich**, led by **Kurt Eisner**, an Independent Socialist, led to the proclamation of a republic in Bavaria (Nov. 8).

11

### Nov. 9

**ABDICATION OF THE EMPEROR** announced in Berlin by Prince Max (the chancellor since Oct. 4). **REPUBLIC PROCLAIMED**. Government turned over to Majority Socialists, led by **Friedrich Ebert** and **Philipp Scheidemann**. The emperor fled to Holland in his special train. His abdication was not signed until Nov. 28, by which time all other German rulers had abdicated.

12

### Nov. 10

A joint **ministry of Independent and Majority Socialists** took control in Berlin. Struggle between the extreme Left, or **Spartacist**, group, led by **Karl Liebknecht** and **Rosa Luxemburg**, who favored a Communist regime, and the Social Democrats (Majority Socialists), who wanted a gradual and not a violent abandonment of capitalism.

## 12. [Austria](#)

The strain of war intensified the divisions and weaknesses of the Habsburg Empire and prepared the way for its dissolution. 1

### 1916, Oct. 21

The Austrian prime minister, **Count Karl Stürgkh**, was assassinated. His place was taken (Oct. 28) by **Ernst von Körber**. 2

### Nov. 21

The old emperor, **Francis Joseph, died**, and was succeeded by his grandnephew, **Charles, emperor** to Nov. 11, 1918. 3

(See [1913](#)) (See [1919, Sept. 10](#))

### 13. [Czechoslovakia](#)

The new state, with a population of about 15 million, inherited the most valuable part of the old Austro-Hungarian monarchy, with most of the industrial areas. Levels of urbanization and the social structure, particularly in the Czech lands, were more similar to those of the industrialized Western European countries than to those of most other countries in the region. The literacy rate was also very high. Again, this tended to be particularly true of the Czech lands, causing some friction among regions of the country. Its political life after the war was dominated by the ethnic problem and the resulting multiplication of political parties. <sup>1</sup>

However, Czechoslovakia earned a reputation as the most democratic nation in the region. Because of the strength of Czechoslovak democracy, for example, the Czechoslovak Communist Party, which was founded in 1921, was allowed to develop fully as a mass-based party, differing significantly from those parties based on the Soviet model. <sup>2</sup>

The state of the economy also promoted stability. Since Czechoslovakia had coal and iron mines and modern brewing and textile industries, its economy was better balanced between industry and agriculture than that of any other country in this area. This too, however, varied regionally. Attempts to industrialize Slovakia failed, partly as a result of the world depression. Even with recovery in the mid-1930s, Slovakia's level of development remained far below that of Bohemia and Moravia. <sup>3</sup>

#### 1918, Oct. 14

The Czechoslovak national council in Paris organized a **provisional government**, with **Thomas Garrigue Masaryk** as president and **Eduard Beneš**  as foreign minister. <sup>4</sup>

#### Oct. 28

**DECLARATION OF INDEPENDENCE**, by the national council.

5

**Oct. 30**

**The Slovak national council voted for union with the Czechs.**

## 14. [Hungary](#)

**Hungary**, left a country of some 8 million population by the peace settlements, was predominantly agricultural, socially still organized on a semifeudal basis. Much of the political history after 1918 had to do with the successful efforts of the landholding classes to secure and retain control, and with the agitation for revision of the peace treaties and the restoration of the monarchy. Conservatives effectively cast the blame for postwar misery on Communists and Jews. The bulk of the middle class and the peasantry was favorably inclined toward conservative-nationalist rule, and there was a growing mass of disillusioned working people who isolated themselves from public life and wanted order and consolidation. Furthermore, antiquated political arrangements effectively kept the lower classes from exerting much influence. <sup>1</sup>

Hungary was economically devastated by the war. Agricultural production dropped by two-thirds, and industrial output was down to one-fifth of its prewar level. The crown was also one-third its prewar value. Of the 3.8 million men mobilized for the war, 660,000 were killed and 745,000 were wounded seriously. Like the other successor states, Hungary compounded these economic problems by following a postwar policy of economic isolation rather than attempting to rebuild the more profitable economic union that existed under the Habsburg Empire. By the 1930s Hungary was hard-hit by permanent unemployment and a marketing crisis that made fascism appealing. <sup>2</sup>

### 1918, Oct. 17

The **Hungarian Parliament**, in reply to Emperor Charles's declaration of reorganization of the monarchy, declared **complete independence from Austria**, except for the personal union. <sup>3</sup>

### Oct. 31

**REVOLUTION IN HUNGARY.** Count Mihaly Károlyi, grand seigneur of liberal, republican, and pacifist views, made prime minister in the hope of securing satisfactory peace terms and maintaining the unity of the monarchy.

4

## Nov. 16

The national council proclaimed **Hungary a republic.**

(See [Scandinavia](#))

## 15. [The Scandinavian States](#)

### a. [Overview](#)

The Scandinavian states were all able to preserve neutrality during World War I, though they were obliged to accept various Allied regulations and restrictions made necessary by the Allied blockade of Germany. After 1918 they all took an active part in the development of collective security, in which obviously they had a great interest. For the rest they all became thoroughly democratic states and leaders in social reform. In politics the situation in most cases was rather unstable, due to the relative strength of conservative, liberal, agrarian, and social democratic parties and the difficulty of establishing majority government. In foreign policy efforts were made consistently to develop a program of close cooperation and solidarity, which became all the more necessary after the resurgence of Germany as a powerful military state. <sup>1</sup>

#### 1914, Dec. 18–19

**Meeting of the kings** of the three Scandinavian states at Malmö was the first such effort at collaboration. They discussed various problems of the war, neutrality, and so on. <sup>2</sup>

#### 1926, Jan. 14, 15, 30

**Agreements** were made among Denmark, Sweden, Norway, and Finland providing for the **peaceful settlement of all disputes**. These countries began to suffer severely from the world economic crisis in 1931. <sup>3</sup>

## 1931, Sept. 6

Prime ministers of the Scandinavian states met for discussion of economic problems.

4

## 1932, Feb. 7

As a result, the **Oslo convention** came into force, by which the Scandinavian states joined with the Netherlands and Belgium in a scheme of economic cooperation, albeit on a modest scale.

5

## 1938, April 5–6

The four Scandinavian foreign ministers met for a discussion of the **defense problem**. In view of the unwillingness of Denmark to challenge Germany, the specific question of armament and defense had to be left to the individual governments.

6

## July 1

**The Oslo mutual trade agreements came to an end.** Nevertheless, relations among the so-called Oslo powers continued to be cordial and even close.

## **[b. Denmark](#)**

### **1912–47**

**CHRISTIAN X**, king. 1

### **1915, June**

A **new constitution** was adopted, instituting universal suffrage and more popular representation in the Landsting. The new electoral laws made it difficult to form governments, however, and a rapid succession of ministries followed. 2

### **1916, Aug. 4**

**Sale of the Danish West Indies** to the United States. The transaction was approved by a Danish plebiscite on Dec. 14. 3

### **1918, Feb**

Protesting the rising cost of living, the unemployed, led by the syndicalist trade unions, staged an attack on the stock exchange in Copenhagen. 4

### **April 22**

**Elections.** Under the new system the Conservatives secured 23 seats, the Left (Liberals) 45, the Radicals 33, and the Socialists 39. The government was formed by a coalition of Radicals and Socialists. 5

## **c. [Norway](#)**

### **1905–57**

**HAAKON VII**, king. Norway, much more dependent on trade and fishing than either Denmark or Sweden, alone among the Scandinavian powers revealed a tendency toward expansion overseas. <sup>1</sup>

### **1919**

The government established the **8-hour workday** and the **48-hour week**. <sup>2</sup>

### **Sept. 25**

The Allied supreme council awarded Norway sovereignty over **Spitsbergen**, which was thereupon annexed (Feb. 9, 1920). <sup>3</sup>

## **d. [Sweden](#)**

### **1907–50**

**GUSTAVUS V**, king. 1

### **1917, Dec. 29**

The **Aaland Islands**, following the Bolshevik Revolution in Russia, **voted to join Sweden**, but later (June 24, 1921) the League of Nations council assigned them to Finland, with the proviso that they should be demilitarized. 2

### **1918, Nov. 13**

Worker demonstrations in Stockholm demanded a general strike, establishment of a socialist republic, and organization of workers' and soldiers' councils. The government moved quickly to introduce sweeping suffrage reform. By 1919 tax restrictions, property restrictions, and gender restrictions were all abandoned, except for people on poor relief, and the voting age was set at 23. 3

### **1920, March 4**

**Sweden joined the League of Nations.** 4

## March 10

**Hjalmar Branting** formed the first purely Socialist cabinet. From 1920 to 1926 the Socialists formed three governments that ruled for all but approximately two and a half years. These Socialist cabinets enacted a large body of **social reform legislation** for both workers and peasants, and greatly reduced the military establishment. After the downfall of the Socialist government in June 1926, there followed a number of Liberal and Conservative governments.

## **e. Finland**

### **1917, March 21**

The Russian provisional government recognized Finland as an **independent state** within the proposed Russian federation. <sup>1</sup>

### **Dec. 6**

**FINNS PROCLAIMED THEIR COMPLETE INDEPENDENCE** of Russia, and this was recognized by the Soviet government (Jan. 2, 1918) as well as by Sweden (Jan. 4), France, and Germany (Jan. 6). <sup>2</sup>

## **f. [Iceland](#)**

**1918, Nov. 30**

By the Act of Union, **Iceland was recognized as a sovereign state**, united with Denmark <sup>1</sup> only in the person of the ruler. But until 1944 certain affairs were to be handled jointly.

**1920**

A **Supreme Court** was established. By World War II Iceland controlled most of its own <sup>2</sup> affairs: a postal system, a banking and money system, tariff laws, and a penal system. Denmark retained control over foreign relations and protected fishing rights in Icelandic waters.

**1923**

The Althing passed the **Cultivation of Soil Act**, granting subsidies for agricultural <sup>3</sup> improvements. With the aid of modern equipment, this revitalized Icelandic agriculture.

**1937**

The Althing proclaimed that it would not seek a renewal of the treaty binding Iceland <sup>4</sup> with Denmark.

**1940, May 10**

A British garrison was accepted under protest to prevent a German invasion. <sup>5</sup>

## 1941, May 17

The **Althing** announced that Iceland would separate from Denmark.

6

## July

After an agreement, American forces replaced British forces in Iceland.

## 16. [Russia \(Union of Soviet Socialist Republics\)](#)

### [THE GERMAN ATTACK ON SOVIET RUSSIA, 1941-43 \(MAP\)](#)

On Germany's declaration of war (Aug. 1, 1914), the opposition parties in Russia declared their readiness to put aside domestic quarrels and support the government. Since the government failed to respond, political discontent developed rapidly. 1

### 1915, May

The **Russian defeat in Galicia** deeply stirred public opinion (See [May 2](#)), and the government was openly accused of inefficiency in failing to supply the armies. 2

### June 25

**The tsar was obliged to dismiss Gen. Vladimir Sukhomlinov**, the minister of war (tried and convicted by the provisional government in 1917), and to admit representatives of the duma and other public bodies (the Union of Zemstvos and Municipalities, the War Industry Committee, and others) to direct participation in the work of army supply and the mobilization of industry. Tsar **Nicholas** refused, however, to comply with the demand of the progressive bloc in the duma for an entirely new ministry that would enjoy the confidence of the country and be committed to a more liberal policy. 3

### Sept. 5

The situation was aggravated when the tsar dismissed the popular commander-in-chief Grand Duke Nicholas and assumed the command himself. The tsar's absence from the capital opened the way for **domination by Empress Alexandra**, known to be bitterly hostile to the duma and under the influence of **Gregory Rasputin**.

## 17. [The Baltic States](#)

### a. [Overview](#)

The development of the three Baltic states after World War I was more or less along a common line. All were previously part of Russia; they were, during the war, occupied by the Germans, who ruled them through puppet regimes; after Germany's collapse, efforts were made by the Bolsheviks to recover these territories, which gave access to the Baltic. Through German and Allied aid, and by their own efforts, the Baltic forces drove out the Bolsheviks and established independent governments. In all three states there was a German minority of landed wealth and influence, against which **agrarian legislation**, involving the breakup of large estates, was directed. The democratic systems set up after the war gave rise to considerable confusion, with much party wrangling among Social Democrats, Agrarians, and others. **Communism** was an ever-present force, against which all the governments took vigorous measures. But after the victory of National Socialism in Germany, the Baltic states hastened to improve their relations with Soviet Russia in order to forestall German intervention on behalf of the German minorities. To present a common defense the Baltic states also signed the **TREATIES OF THE BALTIC ENTENTE** (Sept. 12, 1934). <sup>1</sup>

By 1939 all three of the Baltic states had gone over to some form of **dictatorship**, not from deference to the German system, but rather to forge a stronger regime for ultimate resistance to Germany. <sup>2</sup>

### 1940, July 21

**Incorporation of Estonia, Latvia, and Lithuania into the Soviet Union** after Moscow, with German aid, had in 1939 secured military bases in those countries (treaties of Sept. 29, Estonia; Oct. 4, Latvia; Oct. 10, Lithuania). Ultimatums of June 15, 16, 1940, charged hostile activities; Russia had occupied the Baltics militarily and had arranged for pro-Soviet administrations to request admittance to the Soviet Union. <sup>3</sup>

Most political and military leaders were deported soon after annexation. The discovery of the bodies of some of those arrested and executed was well publicized by the Germans and contributed to the level of mass support for them during the first months of their occupation, and to atrocities against the Jews, accused of backing Soviet rule. <sup>4</sup>

In all three republics, **German invasion** (June 1941) was accompanied by Baltic revolt. <sup>5</sup> Provisional governments were set up in all three states but were soon closed by the Germans. Thousands in each state were recruited into police battalions, while the Germans formed SS legions in Latvia and Estonia. The Germans fostered cooperation with vague promises about the future of the Baltics. The Jewish population was herded into ghettos and massacred. In July 1944 **Jewish resistance** in the remnant of the Vilna ghetto launched a revolt, but the ghetto was destroyed. The Balts who resisted the Germans did so as Baltic nationalists, not Soviet resisters; partisans were sometimes responsible for atrocities against Communists. In the summer of 1944 the Balts attempted to restore their national governments. By then the Red Army was pouring into the Baltic states, and these provisional governments lasted for only a few days. Hundreds of thousands of Balts fled with the Germans or across the Baltic to Sweden. Their places were taken by Russian-speaking immigrants and demobilized military personnel, securing the place of the Baltic states in the postwar Soviet Union.

## **b. [Lithuania](#)**

### **1917, Sept. 18–22**

A Lithuanian conference at Vilna led to the **establishment of a national council** and a demand for independence from Russia (Dec. 11). The movement was encouraged by the Germans. 1

### **1918, Feb. 16**

**A FORMAL DECLARATION OF INDEPENDENCE resulted.** The new state was at once invaded by the Bolsheviks. 2

### **March 3**

**The treaty of Brest-Litovsk** (See [March 3](#)), however, obliged Russia to recognize Lithuanian independence. The Germans also recognized the new state (March 23) and drew it into alliance with Germany (May 14). 3

### **June 4**

**Duke William of Urach as king** was elected by the Lithuanian government. But when German power collapsed in November, this election was rescinded. 4

### **Nov. 11**

**Augustinas Voldemaras formed a national government**, the first of many short-lived cabinets. The Germans were obliged to withdraw, whereupon the Bolsheviks again invaded the country. 5

### c. [Latvia](#)

#### 1917, Oct. 29

Formation of the **Latvian national council**, following the Soviet seizure of power in <sup>1</sup> Russia. Since German forces remained in the country, the national council was unable to assert its authority or build up an effective national army. For more than a year German efforts to organize a **Baltic duchy** continued.

#### 1918, March 3

According to the **Treaty of Brest-Litovsk** (See [March 3](#)) the Bolsheviks were obliged to <sup>2</sup> accept loss of the Baltic states.

#### Nov. 17

A **people's council** was set up by the Latvians after the defeat of Germany, with **Karlis** <sup>3</sup> **Ulmanis** as prime minister.

#### Nov. 18

The council proclaimed the independence of the **Republic of Latvia**. <sup>4</sup>

## **d. [Estonia](#)**

**1917, Nov. 28**

The **Estonians**, taking advantage of the Bolshevik revolution in Russia, **proclaimed their independence**, but the Soviet government at once undertook the reconquest of this strategically important area. To block the Russian advance, the Germans occupied the country (Dec.). 1

**1918, Feb. 24**

The independence of Estonia was again proclaimed, under German protection. A provisional government was formed by **Konstantin Päts**, who was to play a prominent role throughout the entire postwar period. 2

**March 3**

**By the Treaty of Brest-Litovsk** (See [March 3](#)), Russia was obliged to recognize Estonian independence. 3

**Nov. 11**

The Germans began the withdrawal from the country, following the end of World War I. They ceded complete power to Päts. 4

**Nov. 22**

The **Russians began a second invasion** of the country. The Estonians put up a valiant resistance and were supported by a British fleet. 5

## 18. [Poland](#)

During World War I Poland was a pawn in the conflict between Russia and the Central powers. The Russian government made appealing promises in order to hold the loyalty of the Poles. 1

### 1914, Aug. 14

Russia promised that Poland should be **restored as an autonomous kingdom**. This policy secured the support of an important faction of Polish nationalists, led by **Roman Dmowski**, who, on Nov. 25, formed the Polish National Committee at Warsaw. 2

### Aug. 16

On the other hand, **Gen. Joseph Pilsudski** (a Russian Pole by birth and several times convicted and imprisoned in Russia for radical, revolutionary activity) founded the **Supreme National Committee** at Kraków, under Austrian protection. The Austrian government permitted the formation of Polish legions to fight against Russia. In the course of 1915 most of Poland was conquered by the Germans and Austrians, who for a time divided the administration of the territory between them. Ultimately, however, the German high command took almost complete control of the country. 3

(See [1912](#)) (See [July 28](#)) (See [1914, Aug. 5](#))

## 19. [The Balkan States](#)

### a. [Yugoslavia](#)

The history of the new state, composed of Serbia, Montenegro, Croatia, Slovenia, and Dalmatia, was marked chiefly by the efforts of the Serbs to establish a centralized Serb state and by the vigorous resistance of the Croats and Slovenes (Roman Catholic and much more Westernized than the Serbs) to secure some type of autonomy. 1

#### 1917, July 20

The **PACT OF CORFU**, signed by Serbian, Croatian, Slovenian, and Montenegrin representatives, declared that the Serbs, Croats, and Slovenes formed a **single nation**, to be organized under the Serbian dynasty. 2

#### 1918, Oct. 29

The Croatian diet announced secession of Croatia and Dalmatia from the Austro-Hungarian Empire and handed over supreme authority in the new state to the **national council**. The council then proclaimed the desire for union with Serbia and Montenegro without specifying further conditions. 3

#### Nov. 26

A **national assembly in Montenegro proclaimed union** with Serbia and declared **King Nicholas**, who had resisted previous efforts at union, **deposed** (d. March 1, 1921, in exile). 4

## Dec. 1

**Prince Alexander** of Serbia accepted the **regency** of the new state and **THE KINGDOM OF THE SERBS, CROATS, AND SLOVENES FORMALLY PROCLAIMED.** 5

The new state had numerous economic and social problems resulting mainly from the union of different systems. The old manorial system was abolished and one in four peasant families obtained land, but the holdings remained small. The Serbs represented 39 percent of the population, the Croats 24 percent, the Slovenes 8.5 percent, and the rest was an amalgam of Germans, Magyars, Albanians, Macedonians, and Bosnian Muslims. Finally, Yugoslavia had to contend with border disputes with six neighboring states, including Italy (See [1919–24](#)). 6

## **b. [Albania](#)**

The major concern of Albanian patriots during World War I was to retain independence and the borders agreed upon before the war (1912 proclamation of independence and provisional government, recognized by Treaty of London, May 30, 1913). In this effort they were aided by Albanian Americans, who underwrote lobbyists in the major capitals of Europe. The newly independent Albania was invaded and overrun by most of its neighbors during the war. 1

### **1918, Dec. 25**

A national assembly elected **Turkhan Pasha president**. The government had to deal with the incursions of the Yugoslavs in the north and the Italians on the coast. 2

### **1920, Aug. 2**

**Italy agreed to evacuate Valona** while retaining the island of **Saseno**. The Italians left on Sept. 2. But Greece and Yugoslavia maintained troops in Albania until 1922. 3

### **Dec. 17**

**Albania was admitted to the League of Nations.** 4

(See [Sept. 7](#))

### c. [Greece](#)

Greece entered the war only in June 1917 after a virtual civil war between the prime minister, **Eleftherios Venizelos**, and **King Constantine I**. The latter went into exile without formally abdicating and was replaced by his son, **ALEXANDER I**. The subsequent purge of the Greek military, administration, and judiciary of Constantine's supporters set the stage for the instability of interwar Greece. 1

#### 1920, June 22

Beginning of the **Greek offensive in Anatolia** (See [1919–22](#)). 2

#### Aug. 10

The **TREATY OF SÈVRES**: Greece obtained Smyrna, the Dodecanese (except Rhodes), eastern Thrace, Imbros, and Tenedos. 3

#### Oct. 25

**Death of King Alexander**. Regency of Queen Olga. 4

#### Nov. 14

**Defeat of the Venizelists** in the election, due to dissatisfaction with the Anatolian adventure. **Venizelos resigned**. 5

## Dec. 5

A **plebiscite**, held despite Allied warnings, showed an almost unanimous vote for King Constantine. The Allies thereupon withdrew all support from Greece. 6

## d. [Bulgaria](#)

Defeated in World War I, Bulgaria not only failed to recover any of the territory lost in the Second Balkan War, but was also deprived of some further areas on the Serbian frontier and of all access to the Aegean. The country was flooded with **thousands of refugees** from Thrace and Macedonia, whom the government, loaded with debt and heavy reparations payments, was unable to settle. They formed a huge mobile element, easy converts to the revolutionary program of the **Macedonian committees** or to **Bolshevik agitators**. The drastic policy of nationalization pursued by the Yugoslav and Greek governments in Macedonia stimulated the unrest in Bulgaria, which the government was unable to control. **Raids of revolutionary bands** across the frontiers became the order of the day, creating a state of chronic tension between Bulgaria and its neighbors. 1

### 1918, Oct. 4

Abdication of **Tsar Ferdinand**. 2

### 1918–43

**BORIS III**, son of Ferdinand, tsar. 3

### 1919, Aug. 17

The **Peasant Party** won a **great victory** in the elections. 4

## Oct. 6

**Alexander Stamboliski**, leader of the Peasant Party, became premier. 5

The Communist Party, formed in 1919, not only did not join the government (despite winning 18 percent of the vote) but soon clashed with the Agrarians. Communist leaders were very active in labor agitation and in the organization of strikes, the most important of which was the **general strike** of Dec. 1919. Stamboliski opposed these actions by forming the Orange Guard, composed mainly of peasants armed with clubs, which was used to break up demonstrations. After the arrest of the leaders, the strikes collapsed. 6

## e. [Romania](#)

### 1914–27

**FERDINAND I.**

1

### 1916, Aug. 27

**Romania declared war on Austria-Hungary**, but the Romanian armies were decisively defeated before the end of the year. 2

### 1918, May 7

**Treaty of Bucharest** (See [May 7](#)).

3

### Nov. 10

**Romania** reentered the war, and Romanian forces occupied **Transylvania**.

4

### Dec. 2

A government, headed by **Julius Maniu**, Transylvanian peasant leader, was soon (Dec. 14) obliged to give way to a cabinet under **Ion Bratianu**, leader of the Liberal Party, representing the industrial, commercial, and professional classes of the old kingdom. 5

Romania's main problems after the war were economic recovery and internal consolidation of the state, primarily by the unification of legislation throughout the country. To alleviate economic problems **land reform** was partially introduced in Dec. 1918, when a decree was issued expropriating a considerable part of the great landed estates. Reform became more definite in 1921; almost 7 million acres were divided among nearly 1.5 million families, and the remainder of over 4 million acres of grassland and forest became village property to be used by the peasants on payment of a tax. As in the rest of the Balkans, reform was not enough to end rural poverty, and peasants actually cut back commercial production in favor of local subsistence. Urban conditions were also difficult, sparking frequent strikes culminating in a countrywide **general strike** in 1920.

## **D. North America, 1915–1945**

### **1. The United States**

The two world wars and the Great Depression completed the urban industrial transformation of America. The changes of this era accelerated the rise of the United States as a world power; heightened the process of democratization; and increased the role of the state in shaping the economy, culture, and society. After World War I **isolationism** defined most American foreign policy, but the nation's international economic role continued to expand; periodic intervention in Central America and the Caribbean also continued (See [1912](#)), (See [1914, June 26](#)). During this period the rise of new forms of **mass culture**—e.g., movies, radios, and automobiles—would also help to transform American attitudes and values. **New sexual attitudes**, including growing belief in the centrality of sex for marriage, accompanied rising consumerism. This development joined growing acceptance of **artificial birth control** devices for married couples (particularly middle class) and also new sexual suggestiveness in advertisements and movies. With radio and movies, more standardized cultural fare became available. Following the introduction of sound to feature-length films in 1927, for example, movie attendance increased by nearly 30 million people over the next three years. The cultural differences among Americans would appear less apparent than in previous years.

Still, by the end of World War II, the dynamics of class, race, and region continued to shape definitions of American nationality. Participation in two world wars expanded the federal bureaucracy, which gained expression in a number of wartime agencies: the National War Labor Board (World Wars I and II), the Selective Service system (World Wars I and II), and the War Industries Board (World War I), to name only a few. Under the leadership of Democratic president Franklin D. Roosevelt, a variety of New Deal social welfare programs reinforced the growing role of the state in the political economy. The Social Security Act, the National Labor Relations Act, and the Works Progress Administration were among the many measures that signaled the changing role of the state in American society. Supporting these developments was the rise of a new political coalition of urban workers, ethnic groups, blacks, and women. These constituents of the so-called **New Deal Coalition** demanded relief and security from the vagaries of

1

2

industrial capitalism. Significantly, FDR appointed the first woman to hold a cabinet-level position, Francis Perkins, secretary of labor.

The rise of the welfare state was by no means unproblematic. Corporate elites dominated the development of American society during this period. Following a brief recession during the early 1920s, the industrial sector (except for coal, textiles, and a few other so-called sick industries) soon recovered and prospered. Corporate mergers accelerated, and by the stock market crash of 1929 the number of such combinations had exceeded the record set during the late 19th century. As industry recovered during the mid-1920s, however, agriculture continued to face the destructive impact of competition with European products. New Deal programs had limited impact on the fortunes of American farmers. The Agricultural Adjustment Act, for example, encouraged the concentration of agricultural production in the hands of large landowners, hastened the demise of the small farmer, and reinforced the movement of African Americans from the Jim Crow South to the urban North and West. <sup>3</sup>

Despite the passage of New Deal labor legislation, industrial workers faced stiff resistance to their quest for equal rights. In 1936, it took a 44-day sit-down strike to produce victory for the CIO's United Automobile Workers. While large companies like General Motors and U.S. Steel negotiated contracts with their workers, others like the so-called Little Steel companies held out and refused to recognize the union until 1941. Women and ethnic and racial minorities also faced persistent patterns of inequality. Even during the acute labor shortages of World War II, for example, employers were reluctant to train women for available skilled jobs. Only when African Americans launched the March on Washington movement (1941) did they gain access to heretofore racially restricted defense industry jobs. Indeed, Native, Hispanic, African, and Asian Americans faced special problems, which culminated in the internment of Japanese Americans during World War II. Racism not only challenged America's domestic tranquility, but questioned its growing claims as leader of the free world. Along with new forms of repression unleashed by the cold war, fear of Communism, and the threat of nuclear annihilation, racism and questions of social justice would emerge as key issues of the post-World War II years. <sup>4</sup>

## 1915

*The Birth of a Nation* heralded as a modern cinematic triumph, although it inflamed racial hatreds by portraying African Americans as inferior and black men as threats to white womanhood. The **Ku Klux Klan was revived in Georgia during the same year** and flourished as a national movement during the early postwar years, as membership rose to over 2 million and covered urban as well as rural America. <sup>5</sup>

## 1915–17

**The Woman's Peace Party** formed following the international women's congress at The Hague. **At the same time women escalated their demands for suffrage**, which they received in 1920 with passage of the **Nineteenth Amendment**. 6

## 1916

**Alice Paul** spearheaded the formation of the militant **National Woman's Party** and advocated a constitutional amendment to enfranchise women in one stroke. 7

Under the leadership of the Jamaican **Marcus M. Garvey**, the **Universal Negro Improvement Association** established a Harlem chapter and spread rapidly among the African-American population. Emphasizing race pride and “Africa for Africans,” the organization struck a responsive chord among black Americans in the racial environment of wartime and especially postwar America. 8

## 1916–18

With the assistance of **Harriet Stanton Blatch**, the **Food Administration** launched an extensive consumer education program and became one of the most successful wartime regulatory agencies. 9

## 1917

**The AFL argued for a no-strike rule for the duration of the war. In exchange for its loyalty, it received federal support for its collective bargaining efforts.** 10

**Thirty-nine black men, women, and children lost their lives in an outbreak of racial violence in East St. Louis, Illinois.** 11

**April 6. WAR DECLARED ON GERMANY** (See [April 6](#)). Diplomatic relations with Austria-Hungary were terminated on April 8, but war was declared on Dec. 7. Diplomatic relations with Turkey were severed on April 20, but war was never formally declared on either Turkey or Bulgaria. 12

## May 18

**Selective Service Act** passed providing for the registration of those between 21 and 31 years of age, inclusive. On June 5 local draft boards registered 9,586,508 men. **The U.S. ended its traditional dependence on volunteer units for defense and used conscripts almost exclusively.** Seventy-two percent of the nation's armed forces were draftees: 13 percent black, 18 percent immigrant, and the remainder American-born. **Nearly 400,000 African Americans served in the war.**

## **2. The Dominion of Canada**

As in the U.S., the interwar years accelerated the urban industrial transformation of Canadian society. Mobilization of resources to address the demands of World War I, the Great Depression, and World War II all increased the role of the government in Canadian life. In 1931 Canada broke its ties to imperial Great Britain and gained an independent place in the new commonwealth. The emergence of Canada as a significant world power during these years, however, was fraught with difficulties. Before the nation could consolidate its position as an independent actor in world affairs, it came increasingly under the influence of the U.S. As early as the 1920s, American companies like Ford, Chrysler, and General Motors dominated the Canadian automobile industry, which produced the second largest number of cars during the period and became a major exporter. The depression and two world wars also revealed the persistence of deep regional, class, and cultural divisions within the nation. During both world wars, Anglo-Canadians imposed conscription policies, which French Canadians fiercely resisted. Despite the enfranchisement of women and the increasing democratization of the Canadian polity during the period, women remained subordinated to men in the political economy; workers faced hostile opposition to their efforts to organize until government recognition of their right to collective bargaining occurred in 1944; and ethnic and racial groups faced stiff patterns of antagonism, including the rise of Canadian chapters of the American-based Ku Klux Klan during the 1920s and the removal of Japanese Canadians from the west coast to designated inland areas during World War II.

### **1914**

**Nationalization of the Canadian Northern Railway** forced by fear of imminent failure and a collapse of national credit. The **Grand Trunk Railway** was nationalized in 1920. The government operated about 23,000 miles of railway representing a capital investment of \$1,652,000,000, known as **Canadian National Railways**. Gradual coordination of lines occurred. Sir Henry Thornton appointed in 1922 as the nonpolitical head of the

system.

## Aug. 4

**Entrance of Great Britain into the First World War.** Message of Canada to the mother <sup>3</sup> country: **“If unhappily war should ensue, the Canadian people will be united...to maintain the honor of the empire”** (Aug. 2). Special session of Parliament called (Aug. 18) and a war budget voted. Thirty thousand volunteers embarked for England by the end of September.

## **E. Latin America and the Caribbean, 1914–1945**

**SOUTH AMERICA IN 1930 (MAP)**

### **1. Overview**

Though most Latin American nations, at the suggestion of the U.S. government, either <sup>1</sup> declared war on Germany or broke off diplomatic relations, they played no part militarily in World War I. Nevertheless, the war period was important for the entire region because the demand for raw materials made a **phenomenal expansion of trade** possible. Except for the slump of 1920–21, this expansion continued from 1916 to 1929. It was accompanied by **large capital investments**, especially by the U.S. after the war, and by the emergence of local industries in the more developed countries. In spite of this growth, Latin America's **dependence on exports came increasingly under attack** during these years. The liberal export model of development had already led to major crises in Mexico, and by the 1920s **growing numbers of nationalists** throughout the region were questioning the social and economic costs of the export boom. Nationalists believed that too many of the benefits of economic progress had gone into foreign hands, and that it was time to reassert national control over the wealth and resources of the region.

**The population of Latin America more than doubled** from the turn of the century to <sup>2</sup> 1940, reaching a total of 126 million. The influx of European immigrants and, after 1930, the growing wave of internal migrants expanded the political and economic weight of the cities. **Emerging urban middle classes** struggled against the great landholders and oligarchic elites for control of national governments. At the same time, the efforts of the rural workers, or campesinos (on coffee, sugar, and other plantations), were reinforced by those of workers from the oil fields, mines, and factories. These groups demanded **social**

**legislation** to protect their interests, and sought to organize the lower classes (in many instances in alliance with the middle classes, at least for a time). **Left-wing political parties**, drawing their support from these dissatisfied groups, became an important political force in the region. These parties were often very nationalistic, and in some cases began to support the cause of **women's suffrage**. Between 1914 and 1945 women gained the vote in eight Latin American countries. These basic social issues fermented throughout the continent, the world depression after 1929 further stimulating unrest.

Among the Latin American states and between Latin America and the U.S. cooperation along various lines increased, interrupted by moments of profound distrust between Latin America and its neighbor to the north. Despite Nazi propaganda campaigns prior to and during World War II, most Latin American nations severed diplomatic relations with the Axis powers. With the exception of Argentina, Latin American nations contributed to the Allied war effort. (See [Overview](#))

### a. Regional Diplomacy

1915, May 24

The first **Pan-American financial conference** met in Washington.

May 25

Conclusion of an **arbitration treaty among Argentina, Brazil, and Chile** (the ABC powers).

---

(See [Overview](#))

## b. [Cultural Developments](#)

Latin American society and culture flourished in the early 20th century. Writers, poets, artists, architects, and other intellectuals regularly used their modes of expression as vehicles for critically examining their societies. Mexican poets **Enrique González Rubio** (1871–1952) and **Ramón López Velarde** are early examples of this. Peruvian essayist **Francisco García Calderón** argued that Latin American art was a key arena in which the region might find its ancient heritage and express its independence from the colonial powers. Latin American novels as well, such as **Mariano Azuela's** (1873–1952) *The Underdogs* (1916), were harshly critical of the social problems and inequities that pervaded the region. These critiques also reflected a new “**cultural**” nationalism that was growing in the region, as evidenced by the novels of Venezuelan **Rómulo Gallegos** (1884–1969). The quality of the literature and poetry from the region was shown when Chilean poet **Gabriela Mistral** (1889–1957) won the 1954 Nobel Prize in literature. <sup>1</sup>

Latin American art took on a distinctive flavor in the early 20th century. Mexican visual artists such as **José Clemente Orozco** (1883–1949), **Diego Rivera** (1886–1957), and **Frida Kahlo** (1907–54), along with Brazilian **Cândido Portinari**, received worldwide acclaim for their distinctive syntheses of European and indigenous techniques. In Brazil, novelist **Oswald de Andrade** and painter **Tarsila do Amaral** led a modernist movement beginning in the early 1920s which rejected 19th-century European doctrines and sought inspiration in Brazil's “primitive” Indian past. Along with their contemporaries in other arts, they produced work that was very critical of their societies. Composers like Mexican **Carlos Chávez** (1899–1978), Brazilian **Heitor Villa-Lobos** (1887–1959), and the Argentine-born **Alberto Williams** (1862–1952) and **Alberto Ginastera** (1916–83) likewise integrated a variety of artistic traditions to produce world-renowned music. <sup>2</sup>

This period also saw the rise, for the first time, of **urban working-class culture** in Latin America. As an emerging group, urban workers sought new forms of entertainment and expression in Latin American cities. Dances such as the **tango** and **samba**, along with the increasingly important role that **Carnaval** played in many Latin American nations, became forums for these groups to express their views and opposition to entrenched elites in a relatively nonconfrontational way. **Soccer** as well became an important arena for the <sup>3</sup>

working classes to express their loyalties and antagonisms. (See [Cultural Developments](#))

(See [1914](#))

## 2. [South America](#)

### a. [Argentina](#)

#### 1916–22

**HIPÓLITO YRIGOYEN**, leader of the Argentine Radicals, was **elected president** after an electoral reform (1912) granted the secret ballot and suffrage to all males over 18 years of age. Yrigoyen introduced **modest social reforms** (factory acts, regulation of hours, pensions, etc.), but eventually gave up efforts to win over the labor movement and turned to repression to control workers. Large landowners retained their dominance, and the patronage and corruption of earlier regimes persisted. Yrigoyen refused to give up neutrality during the First World War, although diplomatic relations with Germany were strained after the sinking of Argentine ships by German submarines (1917). Argentine supplied huge quantities of wheat and meat to the Allies. 1

#### 1918

Entrance of middle-class immigrants' children into universities fueled **La Reforma**, a movement for student participation in university governance and curricular reform. It began with student strikes in Córdoba and soon spread to campuses in Buenos Aires and La Plata. Yrigoyen supported the movement, which also inspired student political activity elsewhere in Latin America. 2

#### 1919, Jan

**SEMANA TRÁGICA** (the Tragic Week). **Police and the army opened fire first on** 3

**striking workers** and then on the funeral for those killed in the massacre. Perhaps **thousands were killed** in the worker riots that followed. In the aftermath, the “Patriotic League,” an anti-Communist, anti-Semitic nativist organization, aided in the identification and persecution of surviving strikers and supporters.

## 1920

Argentina became an original **member of the League of Nations**, but withdrew from the assembly in 1921 on rejection of an Argentine resolution that all sovereign states be admitted to the League. 4

## 1922–28

**MARCELO ALVEAR**, Radical candidate, **elected president**. His attempts at fiscal austerity caused a split in the Radical Party (1924). His presidency also witnessed a growing wave of conflicts between the federal government in Buenos Aires and anti-Radical governments in the provinces. 5

## 1928

**Yrigoyen was again elected to the presidency.** 6

## 1930, Sept. 6

**General José Uriburu forced Yrigoyen from office.** Yrigoyen's assumption of wide personal powers had aroused much criticism, while the distress created by the world depression had provoked a demand for further relief measures. With Uriburu the landowning and big business and other conservative groups returned to power. This began the period (1930–43) known alternatively as either the “**Conservative Restoration**” or the “**Infamous Decade.**” Modeling themselves on the fascistic style of Mussolini's Italy, Uriburu and his followers used fraud and severe repression to decimate the radical Left. Although the Radical Party initially boycotted elections during the Infamous Decade, in 1936 they struck a deal with the conservatives (the **Concordancia**) for some power sharing. 7

## 1932–37

**Agustín Justo was elected president.** The regime maintained a system of fraud and intimidation to ensure conservative victories in the elections. Political and social unrest continued and culminated in an unsuccessful **radical revolt** in the northeastern provinces (1933–34). 8

## 1932, Nov. 17

**Carlos Saavedra Lamas**, the foreign minister, published a proposed **South American antiwar pact**, which had already been accepted by several states. Argentina also resumed full membership in the League of Nations (1933). 9

## 1933

The government launched a program of national economic recovery, which achieved some success. Part of this was the **Roca-Runciman treaty with Great Britain**, which was designed to safeguard Argentina's export markets by guaranteeing the purchase of British goods and ensuring the profitability of British firms in Argentina. 10

(See [1916](#))

## b. [Chile](#)

**Chile remained neutral in the First World War** despite violation of its neutrality by both German and British warships. The war **demand for Chilean nitrate in large quantities generated a brief boom**, but the discovery of the **Haber process** for fixing nitrogen from the air in 1914 spelled the end for this industry. In the meantime, however, Chilean **copper was emerging** as an immensely important industry. U.S. firms dominated this extremely profitable enterprise. From an investment of merely \$15 million in 1912, American investments in Chilean copper totaled almost \$500 million by the late 1920s. 1

### 1919, Aug

Increasingly militant organized labor staged a **demonstration of 100,000 people** in Santiago, protesting inflation, declining wages, and government repression. 2

### 1920, Jan. 10

**Chile became a member of the League of Nations.** 3

### 1920–21

Chile suffered severely from the general world slump and the cessation of the demand for nitrate. The lower classes demanded a more democratic regime and extensive social legislation. 4

## 1920–24

**ARTURO ALESSANDRI** (1869–1950) elected president after a disputed election. Candidate of the **Liberal Alliance Party**, he advocated wide political and social reforms. His election represented a **victory for the middle classes, supported by labor elements**. But during his term, Alessandri, impeded by the elite-dominated parliamentary system, was unable to make much progress. At the same time many military officers, seeing the ineffectiveness of repression, began to pressure the government for social reforms. They did gain child labor laws, recognition for unions, and increases in army salaries. When in 1924 the government began to return to more traditional ways, the military forced Alessandri from office.

5

## 1925, Jan. 23

After control by a military junta under **Gen. Luis Altamirano**, in a climate of increasing labor militancy and widespread strikes, a **coup d'état** engineered by pro-reform officers and **led by Maj. Carlos Ibáñez** (1877–1960) resulted in the **recall of Alessandri**. At this point military leaders believed they needed to co-opt labor movements to maintain order.

6

## June

In a reversal of his earlier stances, **Alessandri cracked down on striking nitrate workers**. This initiated a period of severe government repression of labor movements.

7

## Sept. 18

**New constitution**, providing a stronger executive, broader suffrage, separation of Church and State, provincial autonomy, etc.

8

## Oct. 1

**Alessandri resigned**, in view of the continued disorder and uncertainty.

9

(See [1908–12](#))

### **c. [Paraguay](#)**

#### **1912–16**

The **presidency of Edward Schaerer** saw economic development and relative political stability. Industry, ranching, and agriculture expanded, transportation and communications were improved, and foreign capital was invested. **Paraguay remained neutral during the First World War**, and in 1920 it became an **original member of the League of Nations**. 1

#### **1916–19**

**Manuel Franco, president**. 2

#### **1919–20**

On Franco's death, **José Montero**, the vice president, succeeded. 3

#### **1920–21**

**Manuel Gondra, president**. He was forced to resign by a revolutionary group. 4

#### **1924–28**

After the short presidencies of **Eusebio Ayala** (1921–23), **Eligio Ayala** (1923–24), and **Luis Riart** (1924), **Eligio Ayala was elected president**. Representing the Liberal groups, he inaugurated a policy of social legislation. 5

### 1928–31

**José Gugiari, president.** 6

### 1928–30

During Gugiari's administration, the **dispute with Bolivia over the Chaco territory came to a head**. Despite earlier agreements (1913, 1915), claims on the potentially oil-rich territory were still unsettled. In Dec. 1928, the forces of the two states clashed and war seemed inevitable. Diplomatic relations were severed and Paraguay appealed to the League of Nations, but the Pan-American conference at once offered to mediate. Direct negotiations were agreed to, but skirmishes in the contested area continued until a **temporary arrangement** (return to status quo ante) was arrived at (April 2, 1930). 7

### 1932–35

**THE CHACO WAR.** The League of Nations and the Pan-American Union both called upon the two parties to desist from hostilities and accept neutral arbitration, but to no avail. **Standard Oil of New Jersey** and **Royal Dutch Shell**, supporting Bolivia and Paraguay respectively, fueled the conflict because of a belief in rich oil deposits in the region. The Paraguayans, after a series of major campaigns, occupied the larger part of the Chaco but failed in their attempts to invade Bolivian territory. During the war the **relations between Paraguay and Chile became badly strained** because of the service of Chilean officers with the Bolivian army and employment of Chilean workmen by Bolivia. 8

### 1935

At the suggestion of the League of Nations, some 20 nations lifted the embargo on arms in favor of Bolivia, while retaining it against Paraguay. Thereupon **Paraguay announced withdrawal from the League.** 9

## June 14

**Paraguay and Bolivia concluded a truce**, at the instigation of the U.S. and five South American governments. A peace conference at Buenos Aires met in July. A **definitive peace treaty** was not signed until July 21, 1938 (approved by plebiscite on Aug. 10). The treaty provided for arbitration of boundaries between American states. The territorial award assigned the **greater part of the Chaco to Paraguay**, but provided Bolivia with an outlet to the sea by way of the Paraguay River. 10

### **d. [Uruguay](#)**

In the first decades of the 20th century, Uruguay enjoyed comparative stability and affluence. Massive waves of immigration in the late 19th century and increased trade with Britain brought a great deal of prosperity. After 1910 **JOSÉ BATLLE Y ORDÓÑEZ** (1856–1929) created a two-party system to prevent factionalism. The majority party, the **Colorados** (representing the middle and working classes), fought the **Blancos** (a mainly rural party) in subsequent elections. 1

#### **1907–11**

**Claudio Williams** administration. 2

#### **1911–15**

**José Batlle y Ordóñez** administration. 3

#### **1915–19**

**Feliciano Viera** administration. 4

#### **1919–23**

During the administration of **Baltasar Brum**, as in those of his three predecessors and his successors, many **social and administrative reforms** were initiated and the internal development of the country was rapid. Immigration and urbanization continued throughout the period.

5

## 1917

On the entry of the U.S. into the First World War, Uruguay expressed solidarity and later **severed relations with Germany**.

6

## 1919, March 1

**A new constitution** curtailed the powers of the president, created the **National Council of Administration** (nine members elected by popular vote and endowed with important functions), and **disestablished the Roman Catholic Church**. The council was designed to assuage Blanco opposition to continued Colorado rule and prevent them from seeking nonelectoral means of gaining power.

7

## 1920

**Uruguay joined the League of Nations**.

8

## 1923–27

**José Serrato, president**.

9

## 1927–31

**Juan Compisteguy**, like Serrato before him, continued and accelerated the policy of social reform until Uruguay began to feel the pinch of the Great Depression.

10

## 1931–38

**GABRIEL TERRA** (1873–1942), president. He represented the more advanced wing of the Liberal Party, and soon found himself in conflict with the National Council of Administration concerning the division of executive authority. This period began Uruguay's experiment with state-subsidized import substitution industrialization, funded mainly with revenues from livestock exports. <sup>11</sup>

## 1932

National women's suffrage recognized.

<sup>12</sup>

## **e. [Bolivia](#)**

### **1913–17**

**Ismael Montes** president, for his second term in office. Increasingly, tin was outstripping silver and other products as Bolivia's main export. <sup>1</sup>

### **1917, April 13**

**Bolivia severed relations with Germany** but did not declare war. <sup>2</sup>

### **1917–20**

**José Gutiérrez Guerra, president.** <sup>3</sup>

### **1920, Jan. 10**

**Bolivia became an original member of the League of Nations.** <sup>4</sup>

### **March 16**

In the **Tacna-Arica dispute**, Bolivia took the stand that neither Chile nor Peru was entitled to the provinces. The Bolivian government appealed to the League of Nations (Nov. 1) for access to the Pacific, but the effort failed. <sup>5</sup>

## July 11

A coup d'état led to the overthrow of Gutiérrez Guerra.

6

## **g. [Ecuador](#)**

### **1916–20**

**Alfredo Baquerizo Moreno, president.**

1

### **1917, Dec. 7**

**Ecuador severed relations with Germany** because of the submarine campaign, but did not follow most other Latin American states in joining the League of Nations at the conclusion of the war. During the war and the immediate postwar period much progress was made in education, social legislation, and above all sanitation (work of the American **Col. William Gorgas** at Guayaquil, long a center of bubonic plague).

2

### **1920–24**

**José Luis Tamayo, president.**

3

### **1924–25**

**Gonzalo Córdova succeeded Tamayo.** He was driven from office by a military revolt led by **Gen. Francisco Gómez de la Torre** (July 9, 1925).

4

### **1926–31**

**ISIDRO AYORA, president.**

5

### 1929, March 28

A **new constitution** ended the military regime set up in 1925, but paved the way for endless disputes between the executive and the legislature. Ayora had elaborate social and labor laws enacted, including **female suffrage**, and adopted many financial reforms.

6

### 1931, Aug. 25

**Ayora resigned.** **Col. Luis Alba** became provisional president but was forced to flee after a coup d'état (October). There followed a period of utter confusion, marked by conflict between the executive and legislature and between the conservative and liberal groups. After the suppression of a revolt (Aug. 1932), **Martínez Mera** became president, only to be replaced in Dec. 1933 by **José M. Velasco Ibarra**.

7

### 1932–34

The **Leticia dispute** between Peru and Colombia (See [1932–34](#)) gave Ecuador an opportunity to assert claims to portions of the Amazon Basin.

8

### 1934, Sept. 28

Partly motivated by these aspirations, **Ecuador entered the League of Nations.**

9

### 1935, Aug. 20

**President Ibarra was overthrown** by a military junta after he attempted to assume dictatorial powers. He was replaced by **Antonio Pons**, who, in turn, was forced to resign.

10

### Sept. 26

**A military dictatorship under Federico Páez** was set up, to prevent the election of a Conservative (the dominant Liberal Party was split by dissensions). 11

## **[h. Colombia](#)**

### **1914–18**

**José V. Concha, president.** He represented the conservative groups (whose rule became known as the **Regeneración**) that had been in power since 1884 and continued to rule the country until 1930. Even the conservative administrations of Colombia were obliged to initiate a measure of social legislation to meet growing pressure from the lower classes. **Colombia remained neutral during the First World War**, but joined the League of Nations (Feb. 16, 1920). 1

### **1918–21**

**Marco Fidel Suárez, president.** 2

### **1919, Aug. 15**

Signature of a **contract with the Tropical Oil Company** for exploitation of the Colombian oil fields, one of the most important sources of national wealth. 3

### **1921, April 20**

The U.S. Senate finally ratified the **Thomson-Urrutia Treaty** (concluded 1914) (See [April 20](#)) with certain modifications, thus ending the long dispute with regard to Panama. The Colombian Congress ratified it on Dec. 22. 4

## 1922–26

**Pedro Nel Ospina, president.**

5

### 1922, March 24

An award by the Swiss federal council ended a long-standing **boundary dispute with Venezuela** in favor of Colombia. A boundary treaty with Peru settled the frontier on that side.

6

## 1924

**Banana workers struck against the United Fruit Company (UFCO)** in the Santa Marta region on the Caribbean coast. UFCO, which had set up plantations in Colombia beginning in 1901, employed over 30,000 Colombian workers (most under miserable conditions) at this time. Poorly organized, the workers were ignored by the company, which claimed that they were not really employees of UFCO but contracted labor.

7

## 1926–30

**Miguel Abadia Méndez, president.** During his administration the growing social tension found an outlet in a number of **major strikes**, in the course of which many were killed by the police and government forces.

8

## 1927

Colombian elites, centralizing their power around coffee, founded the **National Federation of Coffee Producers (FNC)**. This association combined the power of small producers into one group that could prioritize spending, control prices, and support certain projects.

9

### 1928, Dec

UFCO banana workers, better organized after their 1924 failure, struck again. On Dec. 6, <sup>10</sup> the military, in cooperation with UFCO, **opened fire on workers and villagers gathered in the town square at Ciénaga**. Perhaps thousands were slaughtered in the attack. After the massacre the government arrested numerous left-wing leaders and suppressed the unions. This incident would become an important symbol in the 1930s as the depression generated more and more support for labor militancy.

## 1930–34

**The election of ENRIQUE OLAYA HERRERA** (1881–1937), a moderate liberal, <sup>11</sup> brought to an end the long domination of the conservative groups. **The world depression brought with it a rapid decline in coffee prices**, and necessitated heavy borrowing.

## **i. [Venezuela](#)**

### **1909–35**

**Dictatorship of JUAN VICENTE GÓMEZ** (1857–1935), who served during this period<sup>1</sup> as either president or chief of the army. Gómez pursued a policy of nepotism and took care to have a congress entirely subservient to him. The period was marked by striking **material progress**: administrative reforms were adopted, finances stabilized (national debt liquidated, 1930), schools built, and commerce and industry encouraged. At the center of this development was the opening of the **Venezuelan oil fields** in 1918, which soon made the country a leading oil producer. Oil quickly supplanted coffee and other agricultural products as the main source of Venezuelan wealth. It also allowed new oil-based elites to challenge the old agricultural oligarchy for political power. At the same time, the oil and industrial development led to the creation of new working and middle classes. Oil workers organized the **Syndicalist Labor Federation of Venezuela** in 1928, which found support among many student groups. The latter became active opponents of the dictatorship.

### **1920, March 3**

Venezuela maintained neutrality during the First World War, but **joined the League of Nations**.<sup>2</sup>

### **1928**

The government arrested a group of **radical students**, leading to numerous worker and student demonstrations and to an abortive general strike. The incident became an important symbol for future radicals and moderates. 3

### 1929, 1931

**Revolts led by Gen. Arévalo Cedeño** were put down, as were other opposition movements directed against the Gómez regime. 4

### 1935, Dec. 18

**Death of President Gómez** ended the dictatorship. **Gen. Eleazar López Contreras** became provisional president and succeeded in suppressing the strikes and movements that broke out after the death of the strongman. 5

### 1936, April 25–1941

**Gen. Eleazar López Contreras was elected president.** 6

### 1936, July 16

A **new constitution** provided that the president's term should be limited to five years, with no eligibility for reelection. 7

### 1937, Jan

**Elections** were held for about one-third of the seats in Congress. These turned out to be a decisive victory for the Left parties, whereupon (Feb. 4) the government arrested many of the leaders of the Left (including newly elected congressmen) on the charge of Communism. Most of these leaders were exiled, and most of the leftist organizations (including the **Federation of Students**) were dissolved. The president then undertook to suppress the Left, but at the same time embarked on a far-reaching program of social reform designed to meet the needs and demands of the lower classes and to check the spread of support for leftist movements. 8

## 1940–45

The Second World War greatly increased demand for Venezuelan petroleum, causing a boom in oil-industry profits and revenues. (See [Venezuela](#)) 9

## **[j. Brazil](#)**

### **1914–18**

**Wenceslau Braz Pereira Gomes, president.** The temporary unavailability of manufactured imports during World War I expanded the demand for domestic industrial goods, mainly produced in São Paulo and Rio de Janeiro. Large textile factories, mainly employing women and children, opened in both cities, coexisting alongside smaller plants and workshops. The war also spurred a shift from Britain to the U.S. as the major source of Brazilian imports and financing. 1

### **1915, May 25**

**Agreement with Argentina and Chile (ABC treaty) providing for arbitration of disputes.** 2

### **1917, 1919**

Faced with rising prices for basic goods, **Brazilian workers, including women textile operatives, declared general strikes** in the major industrial centers. The agro-export oligarchies, which also had interests in Brazil's burgeoning manufacturing industries, generally refused to recognize the unions and called upon the military to crush the strikes. **Socialist and anarchist leaders were exiled as result of the strikes**, and the oligarchic power holders refused to give in to demands for greater representation. 3

## 1917, Oct. 26

**BRAZIL DECLARED WAR ON GERMANY.** Relations had been severed on April 11 after the sinking of Brazilian ships. During the war Brazilian warships cooperated with the Allies, and Brazil furnished large stocks of food and raw materials. 4

## 1918

**Rodrigues Alves, president.** He died (1919) before assuming office. 5

## 1919–22

**Epitácio Pessoa succeeded Alves as president.** He was the only civilian from Brazil's declining northeast to serve as president during the First Republic. 6

## 1920, Jan. 10

**Brazil joined the League of Nations** as an original member. 7

## 1922

The **Brazilian Communist Party (PCB)** was founded. 8

## 1922–26

**Artur da Silva Bernardes, president.** During this time **political and economic power was beginning to shift to the new industrialists of São Paulo and their allies.** These emerging leaders began to form economic associations to promote their interests. 9

## 1922–24

Young nationalist military officers, known as *tenentes* since many held the rank of lieutenant, revolted on several occasions against the government, calling for social reform and a stronger central state. These movements were all defeated, but left an important legacy for reformist movements in the 1930s.

10

## 1924, July

**Formidable *tenente* revolt in São Paulo and Rio Grande do Sul, led by Gen. Isidoro Lopes.** After suppression of the insurrection, which involved aerial bombing of neighborhoods in São Paulo, the government undertook certain economic reforms.

(See [1906](#))

### 3. [Central America](#)

#### a. [Overview](#)

After the declaration of war on Germany by the U.S., the states of Central America severed relations with Germany and ultimately declared war, mostly in 1918 (**Panama**, April 7, 1917; **Costa Rica**, March 23, 1918; **Nicaragua**, May 8, 1918; **Honduras**, July 19, 1918; **Guatemala**, April 23, 1918). After the war almost all of them became **members of the League of Nations** (**El Salvador** joined in 1924, the others in 1920). 1

In the political sphere most of these states continued in unstable conditions, with numerous insurrections and regime changes. Common to all of them was the growing class consciousness of the laborers on banana, coffee, and sugar plantations which came to constitute an ever more formidable challenge to the ruling groups. Despite representative machinery, the governments in many states were essentially dictatorships. 2  
During the 1920s the **U.S. government intervened frequently** (including several **prolonged occupations of Nicaragua, Cuba, and Haiti**) to protect American interests and property. This policy, among other things, aroused much hostility toward the United States throughout Latin America, and was later replaced by the **Good Neighbor Policy** (1930s), which eschewed intervention.

#### 1918, March 10

The **Central American Court was dissolved** after denunciation by Nicaragua and failure of the members to renew arrangements. 3

#### 1921–22

The **PACT OF UNION** among **Costa Rica, Guatemala, Honduras, and El Salvador**, signed at San José (Jan. 19, 1921). The agreement set up an indissoluble and perpetual union, to be called the **Federation of Central America**. A provisional federal council was organized (June 17), and **Vicente Martínez** of Guatemala became president. On Oct. 10 the federal constitution was completed, but once again the project of union was to be frustrated. On Dec. 8 a revolution broke out in Guatemala, directed against the government's policy of federation. With the success of this uprising the whole scheme fell through and the **federation was dissolved** (Jan. 29, 1922). In the ensuing years there was chronic trouble over borders between the different states, with occasional danger of war.

4

### 1922, Dec. 4–1923, Feb. 7

A **Central American conference** met in Washington at the insistence of the U.S. government, which hoped to terminate the dangerous friction between Nicaragua and Honduras. A general **treaty of neutrality** was drawn up, provision was made for the creation of a Central American Court of Justice, and measures to limit armaments and to further economic development were envisaged. The majority of the states ratified the treaties by 1926, but little was done to put them into effect. (See [Defense of the Western Hemisphere, 1939–1945](#))

## **b. [Panama](#)**

### **1914**

After more than ten years, and the deaths of over 5,000 workers, the **Panama Canal was opened**.<sup>1</sup> Construction of the canal radically altered both the ethnic makeup of Panama (introducing thousands of Caribbean immigrants into the population) and the economy of the country. Panamanian elites, backed by the presence of thousands of U.S. troops in the Canal Zone, based their newfound prosperity on the international commerce associated with the canal. On numerous occasions they invited U.S. troops into the country to put down popular protests that called for improved social and economic conditions.

### **1921**

A **boundary dispute with Costa Rica**, inherited from the period of Colombian sovereignty, threatened to provoke war when Panamanian troops occupied disputed territory and armed clashes ensued (Feb.–March). The U.S. government induced Panama to evacuate the area involved, which was then occupied by Costa Rica (Aug.)<sup>2</sup>

### **April 20**

By the **THOMSON-URRUTIA TREATY** (See [1921, April 20](#)), Colombia recognized the independence of Panama. The boundaries, hitherto disputed, were adjusted, diplomatic relations established, and various accords signed (1924–25).<sup>3</sup>

[NEXT](#)

---

(See [1898–1920](#))

### **c. [Guatemala](#)**

#### **1920, April 8**

**MANUEL ESTRADA CABRERA, president since 1898, was deposed by the assembly** because of his opposition to the scheme of Central American federation. 1

#### **1920–21**

**Carlos Herrera, president.** He was overthrown by a revolution (Dec. 5, 1921) led by **Gen. José Orellana**, who rejected the Central American federation scheme. 2

#### **1922–26**

**Orellana, president.** 3

#### **1926–30**

**Lázaro Chacón, president.** 4

#### **1930**

**Bautillo Palma, president.** He was overthrown (Dec. 16) by **Gen. Manuel Orellana**, who was not recognized by the U.S. and who soon resigned. 5

## 1930–31

**José M. Andrade, president.**

6

## 1931–44

**GEN. JORGE UBICO** (1878–1946) made himself president-dictator. He established close contact with the dictators of Honduras and El Salvador for the suppression of all opposition. Posing as a friend of the Indians, Ubico also oversaw the end of state-imposed forms of debt peonage in the country. In actual fact, however, the government then used vagrancy laws as a means of recruiting laborers for the coffee economy. This period also saw major railroad, land, and port concessions granted to a small number of foreign interests, with the United Fruit Company in the lead.

7

## 1935, June

By “plebiscite” **Ubico's term was extended** until 1943, and subsequently (1941) a constitutional convention extended it to 1949, but he was expelled in 1944.

8

## 1941, Dec. 8

**Guatemala declared war on Japan**, “thus expressing the solidarity of the Guatemalan government and people with the United States.” On Dec. 11 Guatemala also declared war on Germany and Italy.

9

## 1944, June

**Ubico was forced to resign** after a student and then general strike elicited strong support for the opposition from progressive military officers and urban middle-class groups. He was followed by a brief right-wing regime, however, pushing dissident groups to arm in preparation for revolutionary struggle.

10

## Oct

A coalition of urban middle-class groups, junior army officers, and working-class activists united to launch the **DEMOCRATIC REVOLUTION OF 1944**. **JACOBO ARBENZ GUZMAN** (1913–71), **Francisco Arana**, and **Jorge Toriello** established a military-civilian junta, which called for free elections in December.

## **d. [El Salvador](#)**

### **1914**

**Alfonso Quiñones Molina became president.** He represented the **Meléndez-Quiñones family**, which would control the presidency through several members until 1927, ruling under a state of siege after 1917. <sup>1</sup>

### **1922**

Several thousand **women marching in San Salvador** on behalf of opposition politicians were attacked and **many killed by soldiers.** <sup>2</sup>

### **1923**

Signing of a **loan agreement between U.S. banks and El Salvador.** The agreement, which gave the U.S. control of customs in the event of default on loans, accelerated the emergence of the U.S. as the dominant investor in El Salvador. <sup>3</sup>

### **1927**

**Pío Romero Bosque, president.** <sup>4</sup>

### **1929**

Founding of the **Communist Party of El Salvador** (PCES).

5

## 1931

Amid high rural unemployment and a growing rural protest movement led by the founder of El Salvador's Communist Party, **Agustín Farabundo Martí**, the populist engineer **Arturo Araujo** was elected president. 6

## Dec. 2

A **coup d'état** enabled **Maximiliano Hernández Martínez** (1883–1966) to make himself president. 7

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## e. [Nicaragua](#)

### 1912

Liberal revolts against the conservative regime of **Adolfo Díaz** were on the point of victory when U.S. troops were sent to Nicaragua to help put them down. After the entry of **American Marines**, the U.S. would essentially rule the country until 1925 through a series of puppet dictators. 1

### 1914, Aug. 5

**Conclusion of the Bryan-Chamorro treaty** with the United States by U.S. puppet Adolfo Díaz, giving the U.S. the right to construct a canal across Nicaragua and lease sites for naval bases. The treaty signified a concession for continued U.S. support of the Conservative regime. Costa Rica and El Salvador at once protested against what they claimed was an infringement of their sovereignty. 2

### 1916, April 13

The treaty was ratified by the U.S., with the inclusion of a declaration that its provisions were not intended to affect the rights of other states. 3

### 1916–21

**EMILIANO CHAMORRO** (1871–1966), president. 4

## 1917, March 2

El Salvador submitted the question of the Bryan-Chamorro treaty to the Central American Court of Justice, which declared the treaty to be a violation of the treaties of 1907. Nicaragua and the U.S. refused to abide by the ruling, and in the process helped to undermine the authority of the court.

5

## 1917–24

**An American financial commission**, in collaboration with the collector-general of customs, stabilized Nicaraguan finances, increasing U.S. control of the economy.

6

## 1921–23

**Diego Chamorro, president.**

7

## 1923–25

**Martínez Bartolo, president.**

8

## 1925, Aug. 3

**Carlos Solórzano elected president.** Like his predecessors he was a Conservative, but the new vice president, **Juan Sacasa** (1874–1946), was a Liberal. After the U.S.-supervised elections, the **Marines were withdrawn for a brief time.**

9

## Oct. 25

**A revolt, led by Emiliano Chamorro**, forced Sacasa and other Liberals out of the government.

10

## 1926, Jan. 14

Solórzano resigned and **Chamorro became president**. The **U.S. refused him recognition**.

11

## May 2

When a **Liberal insurrection** was started by **GEN. AUGUSTO CÉSAR SANDINO** (1895–1934), the U.S. government hastily landed forces. Dedicated to freeing the country of foreign domination and improving the lot of Nicaraguan peasants, **Sandino would fight a war against U.S. Marines and the National Guard for the next eight years**. A brief armistice was effected by the U.S. (Sept. 23); Chamorro then resigned.

## **g. [Honduras](#)**

### **1916, March**

**Francisco Bertrand became president** following a successful revolution.

1

### **1919, Aug**

**Insurrection of Rafael López Gutiérrez**, a Liberal. President Bertrand was obliged to flee, and U.S. Marines were landed (Sept 11). Through American mediation a civil war was avoided.

2

### **1920–23**

**Gutiérrez became president**. The elections of 1923 proved to be indecisive, however.

3

### **1924, Feb. 1**

**Gutiérrez then established a dictatorship**. The Conservatives, under **TIBURCIO CARÍAS ANDINO** (1876–1960), rose in revolt and marched on the capital. The U.S. severed relations with Gutiérrez and landed more troops. Gutiérrez was killed (March 10).

4

### **March 31**

**The insurgents occupied the capital.** Through U.S. mediation (**mission of Sumner Welles**) agreement was reached between Honduras and its neighbors, depriving insurgent bands of their bases (**pact of Amapala**, May 3). **Vicente Tosta** became provisional president, and he suppressed an attempt at further revolution by **Gregorio Ferrara** (Aug.–Oct.). A new constitution was then framed.

#### 4. [Mexico](#)

The **REVOLUTION** that convulsed Mexico, beginning with the **insurrection against Díaz in 1910**, brought the country to total civil war by 1914. During the 34-year rule of **Porfirio Díaz** the country had gone through enormous economic changes, benefiting members of the elites and a small emergent middle class, but at the same time creating massive unrest in the countryside. The development of the railways, mines, commercial agriculture, and small-scale manufacturing transformed Mexico into a modern economy, but large numbers of subsistence peasant villages and other peripheral cultures lost their autonomy to centralized powers as well as access to their lands. During the late **Porfiriato**, unrest mounted and rural rebellions increased in frequency. By 1910 a number of factors—the depression that had begun in 1907, explosive misery and instability in the countryside, the decay and corruption of the regime, a weakened military, and discontent among affluent but disenfranchised middle-class and elite groups—came together to produce a massive social revolution. <sup>1</sup>

In regions such as **Morelos**, where plantation agriculture had made great advances during the Porfiriato, campesinos under **EMILIANO ZAPATA** (1879–1919) remained rebellious for more than a decade, demanding a return of usurped land. In **Chihuahua**, where Porfirian progress had turned the frontier into a commercialized region, cross-class coalitions under leaders such as **FRANCISCO (PANCHO) VILLA** (1877–1923) also struggled for almost a decade against Porfirian and other centralizing forces. These groups represented the most radical elements of the revolution. They sought to recreate Mexican society in a way that empowered the lowest classes. By Dec. 1914, with Villa and Zapata in control of Mexico City, their victory seemed possible. <sup>2</sup>

At the same time, members of the middle classes, foreigners, and the elites that had grown rich during the Porfiriato reacted decisively against the radical revolution. In 1914, more moderate leaders, such as **VENUSTIANO CARRANZA** (1859–1920) and **ALVARO OBREGÓN** (1880–1928), organized coalitions of old Porfirian interests and middle-class and urban working-class groups to stem the tide of the revolution. With the help of an infusion of American arms, these groups took control of the revolution by 1916, and proceeded to place all reforms within a very restrictive context. <sup>3</sup>

## 1910–11

Liberal **FRANCISCO I. MADERO** (1873–1913), after being defrauded of the presidency in the 1910 election, led a broad insurrectionary movement that **overthrew Porfirio Díaz** (May 25, 1911) and installed Madero as provisional president. 4

## 1911, Nov. 6

**Madero elected president.** Scion of a wealthy landed family, Madero soon alienated his more radical supporters with his indifference to demands for land reform. At the same time, Madero's political reforms antagonized Porfirian military officers and the U.S. ambassador, **Henry Lane Wilson**. 5

## Nov. 28

**Emiliano Zapata issued the PLAN DE AYALA**, which proclaimed that all lands, waters, and woods seized by *hacendados*, political bosses, and others during the Porfiriato due to “**tyranny and venal justice**” would be returned by his revolutionary government; he then proceeded to implement that plan in the areas under his control. 6

## 5. [The West Indies](#)

### a. [Cuba](#)

#### 1917, April 7

**Cuba declared war on Germany.** The war period was one of great prosperity for the sugar industry, large quantities being shipped to the U.S. But after the war the market collapsed, with serious results for Cuba. <sup>1</sup>

#### 1920, March 8

**Cuba joined the League of Nations.** <sup>2</sup>

#### Nov. 1

**Dr. Alfredo Zayas**, candidate of the coalition National League, elected, but his opponent, <sup>3</sup> José Gómez (Liberal), launched accusations of fraud. To prevent conflict the U.S. government sent **Gen. Enoch Crowder**, who arranged for new elections (March 15, 1921), which resulted in another victory for Zayas.

(See [1901](#), [May 27](#), [Dec. 2](#))

## **b. Puerto Rico**

### **1915**

**Santiago Iglesias** founded the **Puerto Rican Socialist Party (PS)**. As part of a growing militant labor movement, based in both the urban and the rural sectors, Iglesias led strikes, helped found labor unions, and struggled against the invasion of U.S. goods and capital. <sup>1</sup>

### **1917, March 2**

**The JONES ACT**, making Puerto Rico a territory and granting U.S. citizenship to its inhabitants. Voting was made compulsory. Proportional representation was established by means of a “limited vote” for certain senators and representatives. It was further provided that U.S. internal revenue collections on the island should be paid into the Puerto Rican treasury. (Subsequently permission was accorded the island to collect U.S. income tax for the benefit of the local treasury.) With such assistance, the budget of the insular government increased from about \$2 million in 1901 to \$11 million in 1924. More than half of these funds were derived from what would normally be federal taxation. At the same time, however, the island continued to be run by appointed governors from the mainland United States with little experience or knowledge of Puerto Rico. <sup>2</sup>

### **May**

The U.S. having declared war on Germany, the **selective draft was extended to Puerto Rico** by request of the insular government. Some 18,000 men were inducted into service. <sup>3</sup>

### c. [The Virgin Islands](#)

1916, Aug. 4

**AMERICAN-DANISH TREATY**, by which Denmark agreed to cede the Danish West Indies (about 100 islands with a total area of 132 square miles) to the United States for \$25 million. The treaty was ratified on Jan. 17, 1917, and formal possession was taken on March 31 of the same year. Danish laws were allowed to remain in effect. 1

The population (c. 26,000 in 1917) suffered much from economic distress. The **sugar industry** of St. Croix had been in a process of concentration and many small sugar mills had been abandoned. Ultimately all grinding was done in three large “centrals.” Many laborers were thereby thrown out of employment. The loss of free port status, which had existed under Danish rule, reduced the trade of the islands, especially of St. Thomas. The American Prohibition law (1919) further destroyed the market for sugar products, though bay rum continued to be manufactured. The main achievement of the U.S. administration was the **development of education**. 2

1931, Feb

After a succession of governors from the U.S. Navy, the U.S. established a **civil government** for the islands, making St. Thomas the capital. **Paul M. Pearson** became the first civil governor. 3

March

The **depression** became so pronounced in the islands that President Hoover referred to them as “an effective poorhouse,” with 90 percent of the population dependent upon the bounty of the U.S. 4

(See [1899–1916](#))

#### **d. [The Dominican Republic](#)**

##### **1914, June 26**

Fearing for the safety of U.S.-owned sugar estates, **the U.S. government intervened in Dominican struggles** to restore order. 1

##### **1916, May**

Further outbreaks resulted in further intervention. 2

##### **Nov. 29**

**U.S. MARINES INVADED AND OCCUPIED THE COUNTRY.** Immediately the American occupying force took over banks and customs houses and broke up small-scale peasant holdings to protect and expand U.S.-owned enterprises. U.S. administrators devastated traditional landholders by imposing modern landownership regulations in the country. This generated opposition in the republic as well as in the U.S., and made the Americans anxious for an early withdrawal of the occupying force. 3

(See [1915, July 3](#))

### e. [Haiti](#)

#### 1914, Dec. 17

**Fearing German designs on Haiti, and wanting to protect American commercial interests there, U.S. Marines landed** at Port-au-Prince and seized \$500,000 in gold coin from the National Bank. These actions marked the beginning of a 20-year period during which American troops would occupy Haiti (permanent occupation began in July 1915). The country had been in a state of constant unrest for several years, following upon a century of economic and environmental decline due in part to the inefficiency of Haiti's peasant-based agriculture. Unrest was intensified by the tensions between Haiti's small (10 percent) mulatto population, which held most of the power and wealth, and the large black population, which lived in extreme poverty. During the occupation the U.S. controlled Haitian customs and the police. 1

#### 1915–22

**Philippe Dartiguenave, president.** 2

#### 1915, Sept. 16

Due to a fear that Haitian instability would make the nation an easy target for outside powers, the **U.S. Marines occupied Haiti** (to stay there until 1934). The U.S. also **took over the financial administration** of the country and the customs houses in order to ensure timely payment of the Haitian foreign debt. Over the next three decades the U.S. would come to control most aspects of Haitian political life, from the organization of the 3

military to the choice of political leaders.

## 1918, June 19

A **new constitution** was introduced.

4

## July 12

**Haiti declared war on Germany.**

## **F. The Middle East and North Africa, 1914–1945**

### **THE MIDDLE EAST BETWEEN THE WORLD WARS (MAP)**

#### **1. Overview**

Between the two world wars, several forces—both internal and external—combined to produce **unprecedented change** in the societies, cultures, economies, and political systems of the Middle East and North Africa. The most disruptive of these forces was **European imperialism**, which reached its zenith during these decades. **Britain and France** (together with Italy in Libya and Spain in part of Morocco) possessed extensive **colonial dominions** and wielded considerable **influence** even in countries that they did not rule directly. Only **central Arabia** escaped formal **European administration and/or occupation** for the entire length of the interwar period. But European domination did not go entirely unchallenged. In several countries, **nationalist movements** emerged for the first time and forced the Europeans to **cede a degree of power** to native elites or even to grant **nominal independence**. <sup>1</sup>

The most far-reaching consequence of European intervention was the **destruction of the Ottoman Empire** after World War I. In lands that had formerly been unified, the Europeans laid the foundation for an entirely **novel system of states** that, in spite of its artificiality, persisted into the late 20th century with few modifications. The **ruling elites** of these states were generally drawn from **great landowning families**. They modeled their regimes on the Western democracies and created **Western political institutions** such as **constitutions, parliaments, and political parties**. In reality, power was concentrated in the hands of the elites. Democratic institutions were subject to constant **manipulation**, whether from the **elites** or from the **European powers**. The abuses of the <sup>2</sup>

political system bred **disillusionment**, which expressed itself in the rise of **Fascist organizations, Muslim political movements, and pan-Arab ideologies** during the 1930s. At the same time, a **new generation** composed of young professionals, bureaucrats, and junior army officers began to appear on the political scene. These men grew increasingly disenchanted with the political establishment but were not yet prepared to challenge the ruling elites.

In economic affairs, the interwar period was marked by **economic stagnation**. The **Great Depression** <sup>3</sup> was a devastating blow to the region, but many areas partly recovered during the boom generated by World War II. Within the world economy, the Middle East and North Africa essentially maintained their roles as suppliers of raw materials to and importers of finished goods from industrialized countries. As in the 19th century, Europeans occupied **critical positions in the economy** through their **banks, commercial houses, and insurance firms**. Overall, the region's economy continued to be dominated by **agriculture**. Though several countries founded modern **industries**, development in this sector proceeded slowly (except in Turkey). Outside Turkey and Iran, no regimes engaged in economic planning. The **oil industry**, operated by foreign firms, was still moving through the developmental phase. The few oil fields in production supplied a negligible proportion of total world output.

The modes of **transportation and communication** underwent a revolution during the interwar period. **Automobiles** made their first appearance but remained the exclusive possession of the well-to-do. More important was the spread of trucking, which gradually replaced camels for the hauling of goods. **Rail networks** were still growing and received heavy investment, but generally remained inadequate except in Turkey and Egypt. **Air service**, provided mostly by foreign firms, became available for the first time for both passenger and commercial traffic. In communications, **radio and film** quickly established themselves as popular sources of news and entertainment. <sup>4</sup>

The **population** of the region was **expanding** rapidly, over 1.5 percent per year. The increases resulted from a high fertility rate coupled with improvements in hygiene, diet, and medical care. In 1914 the total number of inhabitants stood at about 66 million (54 million for the Middle East and 12 million for North Africa). These figures reached approximately 101 million by the end of World War II (81 and 20 million, respectively). Most of the population still lived in the **countryside** (over three-quarters in most places), but the proportion of urban dwellers was rising fast. **Pastoralists** were rapidly disappearing, usually settling down as farmers. <sup>5</sup>

The **educational system** steadily expanded under government supervision. Yet **illiteracy** <sup>6</sup> remained rampant, for education was largely restricted to a privileged minority. Through the educational system, as well as the various media, the elites gained exposure to **Western ideas, attitudes, and tastes**, which they eagerly adopted. They actively sought (most radically in Turkey) to **secularize** their societies, particularly in law and education. Another sign of Western influence was the emergence of a fledgling **feminist movement**,

which demanded modest reforms in the legal and educational systems.

All the new ideas and social reforms were bitterly opposed by **members of the religious establishment**.<sup>7</sup> In this respect, the men of religion expressed the views of the great majority, who professed an unshakable **devotion to religion and custom**. Traditional attitudes held out even as the forces of modernity inexorably reshaped the societies of the region. (See [Overview](#))

## 2. [The Middle East](#)

### a. [The Ottoman Empire and Turkey](#)

#### 1914

Production of the **first Turkish film**, a documentary entitled *The Demise of the Russian Monument in Ayestefanis*. 1

#### Sept. 9

**Abolition of the Capitulations** by the Ottoman government. 2

#### Oct. 29

**OTTOMAN ENTRY INTO THE FIRST WORLD WAR** as one of the Central powers. The huge military effort placed a **great strain on Ottoman society and the economy**. Large-scale **conscription** affected some 3 million men (more than half of whom may have deserted). The general population had to contend with rampant **inflation** and the shock of a 2500 percent increase in the **cost of living** between 1914 and 1918. **Trade and communications** were disrupted, and consumers faced **widespread shortages** of basic goods. Some areas of the empire experienced **disastrous famines**, such as the one that struck Syria and Lebanon in 1915–16 and claimed an estimated 100,000 victims. 3

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

(See [1914, May 20](#))

## **b. [Iran \(Persia\)](#)**

### 1919

Arrival of the **Iranian delegation** at the **Paris peace conference**. The Iranian representatives sought the termination of the Capitulations, war reparations, and the cancellation of the 1907 Agreement. In addition, they demanded that the western border of Iran be fixed at the Euphrates River in the west and that it extend to the Oxus River in the northeast. At British insistence, **the delegation was not officially recognized in Paris**. 1

### Aug. 9

**Anglo-Iranian agreement**, amounting in reality to the establishment of a British protectorate. The British promised to guarantee Iran's independence and territorial integrity, and offered material and technical aid to the government. 2

Within Iran, **opposition to the treaty quickly mounted**. The national assembly (Majlis) never approved it, and in 1921 the government officially repudiated it. 3

(See [1911](#))

### **c. [Afghanistan](#)**

#### **1919, Feb. 20**

**Murder of AMIR HABIBULLAH**, which touched off a **struggle for the succession**.<sup>1</sup> His brother, Nasrullah, was proclaimed emir by conservative factions that had opposed Habibullah's modernization program and his acquiescence to British foreign policy in the region. But the emir's third son, **AMANULLAH**, won the backing of the army and soon **emerged as the new ruler**.

#### **1919–29**

**EMIR (KING) AMANULLAH**. The emir, who assumed the title of king in June 1926,<sup>2</sup> **embarked on a modernization program** that became the central theme of his reign. He **introduced a series of reforms** that tried, often with little effect, to reshape the government, the national infrastructure, and the legal system. The reckless pace of these reforms led ultimately to his undoing.

#### **1919, May–Aug**

**The Third Afghan War**. Afghan troops invaded the Indian frontier but were soon driven<sup>3</sup> back. An armistice was signed at the end of May. In the **Treaty of Rawalpindi** (Aug. 8), the British formally recognized the sovereignty of the Afghan state, but also terminated their annual subsidies to the Afghan treasury.

## 1921

Enactment of a **new family code**, which banned child marriage and marriages between close relatives (on the grounds that they were contrary to the teachings of Islam). The new law also put a cap on wedding expenses, including the value of the dowry. 4

### Feb. 28

**Soviet-Afghan Treaty** of mutual recognition. The two countries signed a nonaggression pact on Aug. 31, 1926. To the Afghan government, the Soviets represented a counterweight to the pressure from British India. 5

### March 1

Signing of a Turkish-Afghan treaty of friendship, as Amanullah tried to cast himself as a pan-Islamic leader. A similar treaty with Iran followed on June 22. 6

### Nov. 22

**Anglo-Afghan Treaty**, by which Afghanistan secured full and formal independence. 7

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## d. [Egypt](#)

### 1917–36

**SULTAN (KING) AHMAD FU'AD.** He succeeded his father, **HUSAYN KAMIL**, who died on Oct. 9, 1917. In March 1922, Fu'ad assumed the title of king. His reign was marked by the unceasing **ambition to acquire** real as well as nominal **power**. He used his constitutional authority to manipulate the political system and undermine popularly elected governments. Nor was he averse to cooperating with the British in order to further his own political aims. His boldest move was the dismissal of the Sidqi government (1933), after which he attempted for over a year (until Nov. 1934) to rule through palace officials and cronies. <sup>1</sup>

### 1917

Death of **Shibli Shumayyil** (b. 1860), an author of Syrian Christian background. He became a vocal champion within the Arab world for **science and the scientific outlook**, and believed that societies organized on scientific principles would eventually supersede those based on religion. <sup>2</sup>

### 1918, Oct. 17

Death of **Malak Hifni Nasif** (b. 1886), the **first outspoken female writer on women's issues**. Her ideas resembled the reforms first proposed by Qasim Amin, but her thought was generally more conservative. Among her chief demands were compulsory primary education for women, the opening of higher education to women who wished to pursue <sup>3</sup>

their studies, the retention of the veil, and a ban on marriages in which members of the prospective couple had not met each other beforehand.

## Nov. 13

A **delegation (wafd)** led by **SA'D ZAGHLUL** requested permission to leave for London <sup>4</sup> to begin negotiations on the postwar status of Egypt.

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

### e. [Syria](#)

#### 1919, July 2

The **General Syrian Congress** in Damascus passed a resolution affirming its **opposition** <sup>1</sup>  
to a **French mandate in Syria**.

#### Oct. 9

Appointment of **Gen. Henri Gouraud**, an official in the French administration of <sup>2</sup>  
Morocco, as **French high commissioner for Syria**. The ideas for early French policy in  
Syria were drawn largely from French experience in Morocco, where conditions were  
quite different. This led to misunderstandings.

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company.  
Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

(See [1913–14](#))

## f. [Lebanon](#)

### 1918, Oct. 7

**French landing in Beirut** following the Ottoman evacuation of Lebanon. **British forces** <sup>1</sup> entered the city the next day and formally imposed a military administration under French supervision.

### 1919, Nov. 10

The French government under Clemenceau announced its **support for a separate** <sup>2</sup> **Lebanese state.**

### Nov. 21

Arrival in Beirut of **Gen. Henri Gouraud**, the high commissioner for the French <sup>3</sup> mandate.

(See [1913–14](#))

## **g. [Palestine](#)**

### **1917, Nov. 2**

**Publication of the BALFOUR DECLARATION by Britain.** The document later became the **foundation of British policy in Palestine** and the **basis of Zionist claims for settling in the territory**. The text stated that the British government would support “the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of that object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine.” <sup>1</sup>

### **Dec. 9**

Entry of British troops into Jerusalem. Palestine was immediately placed under a British military administration. <sup>2</sup>

[The Encyclopedia of World History, Sixth edition.](#) Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

(See [1913–14](#))

## **h. [Transjordan](#)**

### **1920**

The best available estimates have put the **population** at around a quarter of a million inhabitants, 90 percent of whom were Muslim. Nearly half the people were nomads, and there were no large towns. <sup>1</sup>

### **Nov. 11**

**Arrival of the Hashemite emir ABDALLAH** at the city of Ma'an. **ABDALLAH** had previously been promised the throne of Iraq, but it went to his brother Faysal after the latter was driven from Syria by the French. The territories that would later compose Transjordan were remnants of Faysal's Syrian kingdom which lay outside the French mandate for Syria and the British mandate for Palestine. <sup>2</sup>

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

(See [1913–14](#))

## **i. [Iraq](#)**

### **1920, May 5**

**The League of Nations mandate** for Iraq was formally accepted by Britain. The newly created country, made up of the former Ottoman provinces of Baghdad, Mosul, and Basra, had a **population of around 3 million**, about 80 percent of whom spoke Arabic as their first language (some 15 percent were primarily Kurdish speakers). About 90 percent of Iraqis were Muslims, the majority of them (60 percent) Shi'ites. Four-fifths of the population was rural, and Baghdad ranked as the largest urban center, with some 200,000 residents. 1

### **June**

**Anti-British revolt** in northern and central Iraq, which lasted most of the summer. 2

### **Oct. 1**

Arrival of **Sir Percy Cox** as **British high commissioner** in Iraq. 3

(See [1914, May](#))

## **j. States of the Arabian Peninsula**

### **1914, Nov. 3**

**Kuwaiti independence** under British protection. 1

### **1915, Dec. 26**

**Treaty between IBN SA‘UD and the colonial government of India.** The Indian government recognized Najd and several territories along the Persian Gulf as the independent possessions of Ibn Sa‘ud. 2

### **1916, Nov. 3**

British treaty with **Qatar**, making it a **veiled protectorate**. 3

### **1918, Dec**

**Surrender of the Ottoman garrison in Yemen**, which had successfully repelled all British attacks and reached within 20 miles of Aden. Several members of the former Ottoman bureaucracy agreed to stay in Yemen and work for **IMAM YAHYA**, who was maneuvering to become ruler of the northern half of Yemen. 4

## **1919**

After being rebuffed in negotiations by Imam Yahya, the British awarded the region of Tihama, including the city of al-Hudayda, to the tribal ruler of Asir. 5

## 1920

**Treaty of Sib**, mediated by Great Britain. The sultan of Oman relinquished the right to intervene in tribal affairs in the Omani interior. 6

## Aug

Saudi conquest of Asir. 7

### 3. [North Africa](#)

#### a. [Morocco](#)

#### 1914

Publication of **decree that divided all lands into alienable and inalienable property.** <sup>1</sup>  
The first category comprised private holdings and all public lands. The second consisted chiefly of collectively owned tribal lands.

In 1919 a related decree was issued by which the French sought **to reclassify a large part of the collective tribal lands.** <sup>2</sup> An office was created to determine what portion of these lands was needed by the tribes. The remainder was turned over to the state, which in practice sold large plots to European settlers. By these methods and others, the **amount of land held by the French rose** to 675,000 hectares by 1932, most of it lying in fertile plains.

#### Sept. 11

Decree by Resident-General **Lyautey** empowering **local Berber village councils to function as courts and to use their customary law as the official legal code.** <sup>3</sup> The French tried to present this policy as a defense of local traditions, but both measures were in fact innovations. In the short term, **the French sought to avert possible Berber insurrections** as French troops were being moved to fight the Germans. Looking further ahead, the French authorities hoped to foster a separate Berber identity within Morocco and thus create divisions within the local population.

## b. [Algeria](#)

### 1919, Feb. 4

Extension of **French citizenship to all Muslim veterans** of World War I in Algeria. <sup>1</sup>  
Under the previous law, French citizenship was unobtainable without conversion to Christianity. Yet this proposal affected few Algerians directly and became moot anyway when the **French government**, under heavy pressure from the colonists, **later withdrew the offer**.

### 1926

Founding in France of the **Étoile Nord-Africaine** by **Messali al-Hajj**. The purpose of <sup>2</sup>  
this organization was to coordinate the political activities of Algerian workers residing in France. It quickly assumed a nationalist character and **opposed all forms of union with France**.

### 1931

Creation of the **Association of Ulama** under the guidance of **Abd al-Hamid ibn Badis**, a <sup>3</sup>  
modernist (*salafi*) religious leader whose ideas owed much to the thought of Muhammad Abduh. The program of the organization had **two main goals: the reform of Islam**, namely the purging of Sufi doctrines, which were held to be superstitious corruptions of the pure faith; and **the cultivation of the Arabic language in schools and the general promotion of Arabic culture** throughout the country.

## 1934, Aug. 3–5

**Violent Muslim attacks on Jews in Constantine** caused widespread damage to Jewish property and the loss of 23 Jewish lives. 4

## 1936, June

An **Islamic congress** in Algiers. Following the electoral victory of Leon Blum's Popular Front in France, Algerian activists believed they could wrest key concessions from the new government. Among their demands were universal male suffrage irrespective of religion, the complete administrative absorption of Algeria into France, permission for Muslims in matters concerning personal status to live by Muslim law, and the abolition of all legal restrictions on Muslims. On the whole, the program of the congress represented **the last attempt by Muslim leaders to take seriously French promises of full assimilation and equality.** 5

## Dec

**Defeat of the Blum-Viollette Bill** in the French Chamber of Deputies. The bill would have conferred full French citizenship on a minority of Muslim Algerians, namely former officers in the French army and university graduates. **Conservative and colonial opposition** to the legislation kept the matter from ever being debated by French deputies. 6

### **c. [Tunisia](#)**

#### **1919, Sept. 12**

A Franco-Italian agreement ceded several oases in southeastern Tunisia to Libya. In addition, all Italians residing in Tunisia received the same legal status as Frenchmen. 1

#### **1920, June 4**

Creation of the **DESTOUR PARTY** (Tunisian Liberal Constitutional Party), which was dominated by the landed and religious elites. The party called not for independence but for **a reform of the colonial government** to permit greater Tunisian participation. The bey, **MUHAMMAD AL-NASIR**, threw his support behind the party's program in April 1922. 2

#### **1921, Nov. 8**

Grant of **French citizenship to all French residents of Tunisia** who had at least one parent who had been born in the country. The government simultaneously bestowed citizenship on all children of Tunisian-born Europeans. French authorities considered this ruling necessary because of the legal fiction by which the Tunisian government formally—if not actually—exercised internal sovereignty. Under the previous arrangement, Tunisian-born Europeans had been viewed only as Tunisian citizens. Following British protests, the **law was modified** (May 24, 1923) to allow the children in question to choose the European nationality they preferred. 3

## 1922, July 13

**Administrative reforms** in response to the demands of Tunisian nationalists for greater participation in the government. The French created a **network of councils** composed of both Frenchmen and Tunisians, but the jurisdiction of these bodies extended only to economic matters. 4

## 1924, Oct. 12

Organization of the **Confédération Générale des Travailleurs Tunisiens** by political activist **Muhammad Ali**, who was arrested soon afterward. 5

## 1926, Jan

Restrictions on political activity and the press. 6

## 1932, Dec

**Controversy over the burial of Muslim apostates.** The mufti of Bizerte declared that Tunisians who had obtained French citizenship—and by doing so had necessarily renounced Islam—were not allowed to be buried in Muslim cemeteries. Most prominent religious officials concurred with this ruling. As a result of the widespread furor, the colonial government had to set aside special cemeteries for the Christian converts. 7

## 1934

Death of **Abu al-Qasim al-Shabbi** (b. 1909), one of the most notable Romantic poets in the Arab world. Poetry in this style was characterized by a desire to innovate and break with classical and neoclassical expression. The Romantic poets often looked to the cultural scene in Europe for inspiration and guidance. Other leading poets of this school outside Tunisia were, to name only a few, **Ahmad Zaki Abu Shadi** (1892–1955), **Khalil Mutran** (1872–1949), **Abd al-Rahman Shukri** (1886–1958), and **Abbas Mahmud al-Aqqad** (1889–1964). Romanticism flourished in Arabic poetry throughout the interwar period. 8

## March 2

Establishment of the **NEO-DESTOUR PARTY**, of which **HABIB BOURGUIBA** <sup>9</sup> became the leader. Membership in the party appealed to those who had grown up in Tunisia but received an advanced education in France, giving them an appreciation of and ambivalence toward both cultures.

The party was outlawed only six months after its appearance. The colonial regime jailed <sup>10</sup> Bourguiba and did not release him until 1936.

## **G. South and Southeast Asia, 1914–1945**

### **1. India**

The period encompassing the two world wars marked more than the worldwide conflict between Fascism and democracy or socialism/Communism. This was also the period in which imperial powers were profoundly challenged by colonized areas demanding to become nation-states in their own right. British India, as the **first locus of a full-blown nationalist movement**, created a model—the **Indian National Congress**—soon to be followed across the colonized world, from Southeast Asia to Africa. 1

Nationalist ideology arose from a complex set of interactions in British India, producing a number of side effects that still loom large in postcolonial South Asia. The general process involved the identification of “imagined communities” and mobilization of public support around these ideological constructions. The dominant pattern involved an all-India, nationalistic definition of community—in which M. K. Gandhi played a key role—which, because of the symbolic vocabulary used, was evocatively Hindu and north Indian in nature. The Indian National Congress, while not the only actor on this nationalist stage, managed to remain the key organization in directing resistance to the British through nationalism. 2

In part prompted by these same processes, and in part as a reaction to the vocabulary invoked by congress, other definitions of community also emerged. Many Indian Muslims, for instance, regardless of the stark differences among them, were led by these developments to define a separate but overlapping identification for themselves. Similarly, in south India, a regional movement grew up around the Tamil language which collapsed into one community identity a range of cultural, religious, and linguistic markers. In most of these movements, proto-class distinctions were deliberately downplayed in favor of other shared characteristics; in the west and the south, however, the domination of the nationalist movement by Brahmans led to “non-Brahman” movements essentially focused on lower-class or caste interests. 3

It is possible to argue that these “imagined communities” emerged especially in response to government institutional changes, in which the identification and, especially, the 4

counting of people as part of one community or another became increasingly important as constitutional changes allowed for more democratic participation in governance. But equally important were movements aimed at religious reform which, for the first time, emphasized individual action as the basis for identity; the passionate activism attached to devotionalism was extended to various movements in defense of other forms of community as well.

Events in the larger world helped to shape both the demands by Indians for greater autonomy and British reactions to these demands. Indeed, the interests of the British Indian government were often at odds with those of the British government at home. Moreover, the question of Indian support for British war efforts was much more straightforward during World War I than it was by the time of World War II, when little progress seemed to have been made toward self-rule, and the impact of the world depression had underscored the disadvantages of India's links to the larger world. Rapid population growth from 1921 (1.1–1.4 percent annually) exacerbated social and economic tensions.

5

### 1914, Aug. 4

Britain at war with Germany, making India automatically a combatant. Indian leaders responded loyally, and during the first two years of the war the political situation in India was comparatively quiet. The imperial legislative council voted a gift of £100 million toward Britain's war effort. British India and the Indian states provided about 1.2 million troops (combatants and laborers), who took part in the campaigns in Europe, Mesopotamia, Palestine, Egypt, and East Africa. During the second half of the war unrest became more and more prevalent, with rising prices and heavy taxation adding to popular discontent.

6

### 1915

**Madan Malaviya, Sir Sundar Lal, and Annie Besant**, the Theosophist leader, founded the Benares Hindu University. Besant organized the Home Rule League outside the Indian National Congress. The return from imprisonment (since 1908) of **Tilak**, and the deaths of **Gokhale** and **Pherozeshah Mehta** opened the way for a reunion of the moderate and extremist groups in congress. Meanwhile the Muslim leaders **Abul Kalam Azad** and **Mohammed Ali** were interned for opposing Muslim participation in the war against the Ottoman Empire.

7

## 1916–21

**Baron Chelmsford**, viceroy. He was met at once with a demand for increased self-government made by 19 Indian elected members of the imperial legislative council. This was elaborated in the scheme, approved in December by the Indian National Congress and the All-India Muslim League meeting simultaneously at Lucknow, calling for dominion status, extension of the franchise, 80 percent of legislative councilors to be elected rather than government-appointed, and half the members of executive councils to be responsible to the legislatures. The efforts of Tilak and **M. A. Jinnah** produced the **Lucknow Pact** between the congress and the league, recognizing separate electorates for the Muslim minority, giving them more seats in the legislatures than their numbers required (“weightage”), and allowing three-fourths of the Hindu or Muslim legislators to veto any measure affecting their communal interests.

8

## 1917

Tilak and Besant carried on a vigorous agitation for home rule. To forestall serious trouble, and embarrassed by the revelation of maladministration of the Indian forces in Mesopotamia, the British government, through the new secretary of state for India, **Edwin Montagu**, made an important policy change in August.

9

## Aug. 20

The British government announced a policy of developing **self-governing institutions** in India, with a view to introducing responsible government. Montagu visited India in 1918 and together with Lord Chelmsford worked out a report (April 22, 1918) for limited self-government, presented to Parliament in July, which was denounced by the congress as “disappointing and unsatisfactory” and similarly condemned by the Muslim League. The moderate members of the congress seceded and formed the **National Liberal Federation** (Nov. 1918), pledged to cooperate with reforms.

10

(See [Southeast Asia, 1753–1914](#))

(See [1906](#))

## 2. [Southeast Asia](#)

The period between the two world wars saw significant social change, including the emergence of nationalism throughout the region. The course of events during World War II significantly heightened these changes because they strengthened the demands for independence. 1

**Peasant rebellions** punctuated the period. Seldom if ever “nationalist” in their ideology, they nevertheless responded to the increasing interference of Western colonial rule in peasant welfare and social values via administrative, economic, and social changes. Such peasant uprisings continued a historical pattern that had preceded the colonial era. 2

**Common characteristics** among peasant revolts included a rural and agrarian setting; highly localized frames of reference; a leadership characterized by emphasis on return to “traditional” values; and, often, strong religious overtones. Representing resistance to changing times and seldom espousing far-reaching aims, these movements therefore differed in character and intent from urban-based nationalism, which they often paralleled. Eventually, however, they were absorbed into the urban-based nationalist movements.

The emergence of nationalism during this period owed much to the hastened process of urbanization. Part of this process related to the establishment of new urban centers: these developed primarily in response to demands of alien trade and commerce but also as important communication and administrative centers for the surrounding countryside. Part of the process also related to the emergence of new elites: as traditional elites were displaced by colonial changes, new urban elites grew up to serve the administrative and commercial needs of the colonial powers. Because of their exposure to Western education, members of this elite had aims and ideas that owed a great deal to Western ideas and organizational forms. Social change thus resulted, as well, in new social security networks and new interest groups: the formation of “voluntary associations” proved especially significant in influencing the patterns of nationalist activities. Beginning with recreational gatherings, especially football clubs, these voluntary associations soon expanded to include cultural and intellectual societies focused on self- 3

improvement and ranged from debating clubs to literary circles, study groups, religious reform societies, and language improvement associations.

This period witnessed an increase in the importance of what had been a persistent feature of Southeast Asian society because of the needs of the colonial powers: since many of the commercial and trading functions were in the hands of foreigners, the diaspora of Chinese and Indians into Southeast Asia grew rapidly. This pattern became more pronounced because the indigenous “middle class” (the new bourgeoisie in most of Southeast Asia) concentrated on roles as bureaucrats and government servants, while commercial and trading activities remained the exclusive domain of nonindigenous immigrants. Since most Chinese lived in towns, they represented a majority of the population in most of the urban centers of Southeast Asia.

In the early decades of the 20th century the Chinese were politicized by events in mainland China which strengthened a sense of internal Chinese cohesion and distinctiveness and prevented further assimilation into the indigenous Southeast Asian cultures. This in turn prompted suspicion and hostility on the part of the indigenous Southeast Asian populations, with long-term ramifications for developments in the region in the face of nationalist demands for independence. (See [Overview](#))

## a. Mainland Southeast Asia

### 1. Burma

1918

Tentative scheme of reform by the British in the process of separating Burma from India. Local self-government was to be strengthened.

1920

The **Young Men's Buddhist Association split** reflected the generational divide between conservatism and activism. Younger members renamed the organization the **General Council of Burmese Associations**, making explicit their nationalist and political purposes. First activities focused on student strikes regarding the proposed rulers of the University of Rangoon; soon the GCBA began encouraging the organization of village-level nationalist organizations (*wunthanu athin*, “own race societies”) to boycott government officials and refuse to pay taxes and rent.

## 1923

**Dyarchy** (British system created in India to divide governance responsibilities between colonial administration and indigenous representatives) introduced. **Legislative Council** with 80 elected members (of 103 total) was created, with communal constituencies that reinforced Burma's awareness of ethnic identities (categories included Indians, Karens, Anglo-Indians, British). Working the institutions introduced under dyarchy underscored the very different interests of urban and rural participants.

8

## 1928–34

The **impact of world depression** led to a fall in rice prices by one-half, while peasants' costs (land rents, payments on indebtedness, taxes, and prices of imported necessities) remained steady or declined only slightly. Almost 20 percent of the mortgages on agricultural land were foreclosed between 1928 and 1934.

9

## 1930, May

**Anti-Indian riots** began in Rangoon as a response to world economic pressures; these spread to the countryside in the year following. General anticolonial disorder followed.

10

## Dec

**Peasant revolt, led by Hsaya San** in Tharrawaddy District. Hsaya San was a former monk practitioner of indigenous medicine and a GCBA organizer. His arguments gave voice to peasant grievances (which he had surveyed in the countryside in the late 1920s), as he asserted that colonial rule had destroyed rural life through taxation, increased crime, and led to rising rice prices, land alienation, Indian immigration, unemployment, and the denigration of Buddhism. Although this kind of insurgency had no hope of ultimate success, it provided martyrs and an example of anticolonial activism much romanticized by later resisters.

## **b. Peninsular and Island Southeast Asia**

### **1. The Malayan Archipelago**

#### **1915**

**Peasant rebellion** in Pasir Puteh district of Kelantan, although localized, panicked the British into thinking that the revolt was potentially widespread. The protest targeted the substitution by the British of a fixed land rent for an earlier tax on crop production. The uprising was led by To' Janggut (or Haji Mat Hassan), an elderly landowner and peddler who had the support of the territorial chief. <sup>1</sup>

#### **1920s and 1930s**

Despite attempts by the British to isolate Malays in a stable village society, a nascent Malay nationalism began to appear, appealing first to religious, racial, and linguistic loyalties. <sup>2</sup>

Three new elite groups fostered this nationalism. Those active in the Islamic-educated religious reform movement brought anticolonial ideas back from Egypt. They joined a Malay-educated intelligentsia (made up primarily of peasants who had been educated to become teachers, journalists, engineers, and the like) who espoused radical, secular ideals. In using a town-based vernacular press to put forward a **Greater Indonesia ideology** around **Malay language** and identity, these two elements of the new elite joined with a third group: those drawn from the traditional elite who had become English-educated in order to serve in the bureaucracy. This third group reacted <sup>3</sup>

especially to the local-born activists among the Chinese and Indian communities who were agitating for a greater share in governance and public life.

## 1927

Periodic gatherings of (traditional Malay) rulers, begun as a token of the devolution of authority from the British to the states, became by the late 1930s occasions on which local rulers would take nationalistic positions—e.g., to encourage Javanese immigration and limit Chinese influx; to strengthen Malay landowning rights, etc.

4

## 1930

**Malayan Communist Party** founded, almost wholly Chinese in composition (but with links to Indonesia and Vietnam).

5

## 1930s

Impact of economic **depression** began to undermine the concept of a plural society in Malaya, pitting economic and political interests of one group against another. (For example, Chinese and Indian workers, thrown out of mine and estate employment, sought to become agriculturalists, previously a niche occupied solely by Malays.)

6

## 1938

**Kesatuan Melayu Muda (Young Malay Union)** formed by radicals as a new political organization with pan-Indonesian aims. **Malay Associations** were also organized within each state as organizations loyal to local rulers, conservative in outlook, and even supportive of British colonial rule; these served as a bulwark against more outspoken resistance to Western imperialism, and were the only organizations that had any mass support. The growth of a genuine Malay nationalism after the war drew on the ideology, structure, and leadership of the Malay Associations movement.

7

## 1941, Dec. 7

The Japanese attacked Malaya (See [1941, Dec. 7](#)).

8

### 1942, Feb

Singapore fell to the Japanese. As the tide of war turned against them, the Japanese tried to enlist local leadership in support of their activities. They released persons like the Malay radical **Ibrahim Yacob** who had been imprisoned under the European colonial regimes.

9

### 1943, July

Four northern Malay states (Perlis, Kedah, Kelantan, and Terengganu) were handed over to Thailand as a reward for its support of the Japanese.

10

### 1945, Sept

The British resumed control. (See [Malaysia and Singapore](#))

## **H. [East Asia, 1902–1945](#)**

### **1. [Overview](#)**

During the interwar years, the population of the nations in the region continued to rise. <sup>1</sup> Always the most populous, China topped 400 million, while Japan (the second most populous) exceeded 55 million by the early 1920s. An industrial economy was emerging in China's cities, especially Shanghai with its many foreign concerns, as well as in Japan under the influence of World War I. Japan continued to penetrate the entire East Asian region, with the exception of Vietnam, prior to the 1940s. By the end of the interwar period, Japan would be at war with China and Vietnam, while continuing to maintain an increasingly brutal colonial policy over Korea.

## **2. China, 1914–1945**

### **1914, May 1**

Having convened a session of 66 men drawn from his cabinet and other provincial posts, <sup>1</sup>  
**Yuan Shikai** (1859–1916) had the provisional constitution replaced with a  
“constitutional compact,” which afforded Yuan nearly complete powers.

### **July**

**Sun Zhongshan (Sun Yat-sen, 1866–1925)** changed the name of his party, the <sup>2</sup>  
Guomindang (Nationalist Party), to Gemingdang (Revolutionary Party) in Tokyo; its first  
manifesto came out in September. In 1919 it reverted to its original name.

### **Aug. 23**

The Japanese declaration of war against Germany was followed by **violation of China's** <sup>3</sup>  
**neutrality** (Sept. 2) and the capture of the German concession area of Qingdao in  
Shandong province (Nov. 7).

By 1914, under the government of Yuan Shikai, the total investment of the foreign <sup>4</sup>  
powers in China soared to U.S.\$1.61 billion. Yuan encouraged the development of a  
strong judiciary, as China's best hope against the continuation of extraterritoriality,  
pushed for agricultural development, and tried to crush the opium trade.

### **3. Mongolian People's Republic, 1911–1926**

#### **1911**

During the Chinese Revolution of 1911, northern Mongol princes, with the support of <sup>1</sup> tsarist Russia, proclaimed an autonomous Outer Mongolia, with Bogdo Gegen, the Living Buddha, as the khan, thus ending the suzerainty of China over Outer Mongolia. But Chinese troops reoccupied Mongolia during 1919–20 after the Russian Revolution.

#### **1921**

The First Congress of the Mongolian People's Party (Communist, renamed as the <sup>2</sup> Mongolian People's Revolutionary Party in 1924) was held in Kyakhta on March 1, and the basic task of the Party program was national liberation and the establishment of an independent state. The Mongolian People's Army defeated Chinese occupying forces in March. Mongolian and Soviet troops overcame the Urgan White Guard bands, and a permanent People's Government of Mongolia was formed in July 1921. Serfdom and the institution of hereditary feudal rulers were abolished in 1922.

#### **1924**

After the death of the Living Buddha in May, the People's Revolutionary Party and the <sup>3</sup> People's Government adopted a resolution to abolish the monarchy and introduce the republican system in June. The first Grand People's *Hural* legally proclaimed the Mongolian People's Republic and approved its constitution in November.

#### **1925, Oct**

The Fourth Party Congress adopted the second Party program, which centered on the social and political consolidation of the revolution as the basic task. Beginning in 1929, large landholdings of feudal lords were confiscated and those of monasteries in 1938.

4

## 1926, Sept

## **4. Korea, 1910–1945**

### **1910, Aug. 22**

**KOREA WAS FORMALLY ANNEXED BY JAPAN**, when the Treaty of Annexation <sup>1</sup> was signed by Prime Minister Yi Wan-yong (1858–1926). Emperor Sunjong (1874–1926, r. 1907–10) proclaimed (Aug. 29) the end of the Yi dynasty. For the next 35 years, Koreans lived under often brutal Japanese colonial domination. Ultimately, the independence movement against Japan aroused Korea's national identity but at a heavy price. Over the course of the period 1910–40, Korea's population rose from 15 million to over 24 million.

### **Oct.–1916**

**The first governor-general of the Korean colony was Gen. Terauchi Masatake** <sup>2</sup> (1852–1919). The colonial regime was known as the Government-General of Chōsen (Korea), which had tight, centralized authority over every aspect of life in Korea. The governor-general effectively had complete power, civil and military. Terauchi's period as governor-general, along with that of his successor, was dubbed “the period of military rule.” The bureaucracy in 1910 employed some 10,000 officials; by 1937, it encompassed 87,552 officials (over 60 percent of them Japanese). The number of police in the employ of the governor-general rose from 6,222 in 1910 to 20,771 in 1922, and to over 60,000 by 1941; about half were Koreans. The stated policy of the regime was to assimilate the Koreans into the Japanese empire, eventually; in fact, Koreans fell victim to sharp discrimination.

Under Terauchi, a land survey bureau was set up to rationalize the land distribution and land-tax systems. The state remained the largest landowner in the colony, holding nearly <sup>3</sup>

40 percent of it in 1930. The Oriental Development Company, a semipublic corporation set up by the colonial authorities and much hated by nationalist Koreans, held 269,500 acres of land by itself. The land survey (1910–18) ultimately firmed up the existing state of affairs. Japan also constructed extensively on preexisting Korean telecommunications and rail lines.

Despite great antipathy for their new overlords, Koreans were prevented, by arrests and police intimidation, from voicing opposition. Guerrillas were active in the countryside, although already in the period between 1907 and 1910, 17,600 guerrillas had been killed. The new regime disbanded all Korean publications, political groups, and meetings of any sort.

The government-general sharply reduced the number of private schools and moved to develop a nationwide system of education to accompany assimilation to Japanese ways. In 1910 there were 110,800 Korean students in public schools; by 1941 there were 1,776,078 enrolled. Few Koreans received higher education, although some studied in Japan (3,171 by 1912) or the U.S. Japanese became the national language, and Japanese language acquisition soared, so much so that it virtually became a work of nationalism to try to preserve the Korean language. **Chu Si-gyong** (1876–1914) and his students continued their work standardizing vernacular grammar and spelling; the Korean Language Research Society was founded in 1921. Such writers as Yi In-jik (1862–1916) and Yi Hae-jo (1869–1927) began to write in new literary forms. **Yi Kwang-su's** (b. 1892) novel *Mujong* (*The Heartless*, 1917) was extremely popular.

## Dec

A conspiracy to assassinate Terauchi, implicating An Myong-gun (brother of An Chung-gun, 1879–1910, who had assassinated Itano Hirobumi, 1841–1909), was uncovered, and 600 people were arrested; 105 of them were indicted the following year, including such vital leaders of the **Sinminhoe** (New People's Association, a moderate group founded in 1907 by An Ch'ang-ho, 1878–1938) as Yun Ch'i-ho (1865–1945), Yang Ki-t'ak (1871–1938), and Yi Song-hun (1864–1930). It was known thereafter as the “**Case of the One Hundred Five.**” Despite a show trial, it was clear that the Japanese used the incident to destroy the Sinminhoe.

From 1910, the Japanese Daiichi Bank became the Bank of Korea in the colony, becoming also its central bank. Together with the Japanese Shokusan Bank, it controlled much of Korean finance.

The number of Korean expatriates living in Manchuria rose to 109,000 from some 65,000 in 1894. By 1912 this number reached 169,000. Some among them organized (1911) the

Military School of the New Rising to prepare young Koreans to fight against Japan; others later (1914) founded the Government of the Korean Restoration Army. Neither got far. Thousands of Koreans also moved to the Maritime Province in the Russian Far East.

Many also lived in the U.S. and Hawaii, where Yi S ng-man (Syngman Rhee, 1875–1965) founded the Korean National Association (1909).

The **Company Law** was enacted, by which any corporation, public or private, needed prior approval by the government-general.

## 5. [Japan, 1914–1945](#)

### 1914–18

During the years of **World War I**, the Japanese manufactured and sent to Europe large quantities of munitions (especially to Russia). At the same time, Japanese merchants took advantage of the conflict to supplant German commerce in East Asia. **Heavy industry** in particular grew in the postwar years, with considerable investment from the *zaibatsu* conglomerates, which increasingly dominated the economy. In the 1920s they set the stage through planning with greater efficiency for the rapid expansion of the 1930s, following the government's shift in financial policy. <sup>1</sup>

Domestically, the **Taishō**  **period** (1912–26) is usually considered an era of opening to liberal and Western trends in many areas of society and the arts, the so-called Taishō  democracy. This is usually to distinguish it from the political authoritarianism of the preceding Meiji era and from the militarism and the crackdown on domestic liberalism of the subsequent Shōwa  era. Western influence was felt in the **visual and literary arts**, both in theme and technique. <sup>2</sup>

### 1914, Aug

Japan declared war on Germany. Within a three-month period, German possessions in Shandong and the Pacific were in Japanese hands. <sup>3</sup>

### Nov. 7

Jiaozhou surrendered to the Japanese after a two-month siege.

(See [1897–1902](#))

## 6. [Vietnam, 1902–1945](#)

This period began with the entirety of Vietnam under French colonial control. 1  
Resistance movements led by the *van than* class in the mountains had been mollified by the French colonial administration's willingness to allow *van than* local control and village autonomy, creating a sort of feudal system. Aside from guerrilla leaders like **De Tham** (d. 1913), insurgency in the Red River delta came to an end. In Cochinchina to the south, the rice plantation economy grew rapidly and produced widespread tenancy among the farming populace. Both systems were typical of colonial regimes in the 20th century.

Following World War I, foreign investment in Vietnam mushroomed. As a result, coal 2  
mines in the north, rubber plantations in central and south Vietnam, and the rapid increase of production for rice farmers in the south spawned a working class, as well as a landlord class, rice exporters in Saigon, and a modern intelligentsia.

### 1902

Japan's conclusion of the Anglo-Japanese Alliance, together with its victories over China 3  
(1894–95) and Russia (1904–5), was extremely impressive to many Vietnamese in that an East Asian state had successfully modernized, become technologically sophisticated, and forged equal ties with Western states.

### 1903

A knowledge of French became a necessity for entrance into the traditional civil service 4  
in Annam and Tonkin.

## 1904

**Phan Boi Chau** (1867–1940), influenced by the reformist movements of late Qing China, especially that of Kang Youwei (1858–1927), founded the Việt Nam Duy Tân Hội (Vietnam Restoration Party) with the aim of building a constitutional monarchy in Vietnam. The next year he traveled to Japan, where he met Liang Qichao (1873–1929), and wrote *The History of the Demise of Vietnam*. He began the Eastern Travel movement to get Vietnamese students to come and study in Japan, there to be trained to promote reform back home.

5

## 1905

**Phan Chu Trinh** (1871–1926), having earlier passed the civil service examinations and awaiting bureaucratic appointment, became disaffected by the system and began traveling primarily in southern Vietnam, calling for the revival of the country. The next year (1906), he went to Japan and met Phan Boi Chau, but they differed on many things, tactics among them: Chau was readier to adopt revolutionary means, while Trinh's thinking was more in the enlightenment reformist vein. Also, Chau still wanted to use the monarchy as a symbol of the united anti-French movement, while Trinh was a republican much taken with aspects of French culture. Trinh then returned to Vietnam and proposed an educational system based on the vernacular, *quốc ngữ*, which was effected when the **Tonkin Free School** opened that year. The school was shut down by the colonial authorities the same year. For his participation in an antitax movement of Vietnamese farmers (1908), Trinh was transported to a penal colony on Poulo Condore Island. He was later released (1910).

6

## 1909

When Japan signed a treaty with France, **Phan Boi Chau** was expelled from Japan, and he took refuge in Thailand. From that point, he showed sympathy for the populist thought of Sun Zhongshan (Sun Yat-sen, 1866–1925).

7

## 1912

After the success of the 1911 revolution in China, **Phan Boi Chau** traveled to Guangdong (China), where he met the Chinese revolutionary leader Hu Hanmin

8

(1886–1936) and founded the **Việt Nam Quang Phục Hội** (Vietnam Restoration Society), with the intent of creating a republic in his native land. Japan was rapidly discrediting itself as a model, after seizing Taiwan (1895) and Korea (1910) as colonies. The Chinese revolution seemed the next best hope for Vietnamese radicals. With help from the Chinese Revolutionary Alliance, Chau planned for an armed revolution in Vietnam. He was arrested and imprisoned in 1914 by the governor of Guangdong, and when released in 1917 he worked out of Shanghai and Hong Kong, still planning to rise in revolt.

## 1914–18

During World War I, some 100,000 Vietnamese troops and workers were sent to France. <sup>9</sup> Through contacts with Europeans and their writings, some acquired a taste for current ideas of national autonomy, revolutionary struggle, and the like.

## 1915

By this time, all three sectors of Vietnam had daily newspapers written in the romanized *quốc ngữ* script. <sup>10</sup>

## 1918

The University of Hanoi, founded by Vietnamese, was permitted by the French. <sup>11</sup>

## 1919

The **Confucian examination system**, traditionally used as the means for entrance into the civil service, **was finally abolished** throughout the entire country. <sup>12</sup>

## 1925, June

The **Vietnamese Revolutionary Youth League** was secretly founded by **HỒ CHI MINH** (1890–1969) in Guangzhou (Canton). Through it, the basis was laid in many areas for the founding of the Indochina Communist Party (1930). The Youth League issued a propaganda organ, *Thanh niên (Youth)*, weekly for nearly two years and had a <sup>13</sup>

political training institute in Guangzhou. Hô had been in France prior to World War I and had participated in the founding of the French Communist Party (1920); in 1923 he traveled to Moscow and took part in the Fifth Congress of the Communist International (Comintern, 1924) before returning to Guangzhou in 1925.

The young **Bao Dai** (b. 1914) acceded to the Nguyễn throne. He “reigned” until 1945. 14

## I. [The Pacific Region, 1914–1945](#)

### 1. [The Pacific Islands](#)

#### [THE PACIFIC THEATER OF WAR, 1941-45 \(MAP\)](#)

Until 1939 this was a fairly quiet period in the islands, though in some of the major islands, there were protests over aspects of colonial rule. In 1914, Apolosi Nawaii formed the Viti Company to circumvent the European intermediaries and trading companies. In the 1920s, the nationalist **Mau movement** in Western Samoa reacted against New Zealand paternalism and advocated independence for the island; in 1929, the murder of **District Officer William Bell** on Malaita in the Solomons led to official campaigns of pacification. In the 1920s and 1930s, a series of laws was passed in Papua designed to “**preserve white standards**”; **industrial and political protests by Indo-Fijians** were carried out against the European-dominated colonial order in the 1920s. <sup>1</sup>

### 1914

In the early months of World War I, British ships with Australian and New Zealand forces conquered the **German island colonies** south of the equator, while in Oct. 1914 the Japanese took possession of those north of the equator (Marianas, Carolines, and Marshalls). Australia captured German New Guinea. At the war's end, Japan, Australia, and New Zealand favored outright annexation of these territories, but because of American objections, these were finally classified as class C mandates to be governed as an integral part of the administering power. <sup>2</sup>

### 1918–19

The influenza epidemic wrought havoc in several islands, killing 21 percent of the Samoan population and 6 percent of the indigenous Fijian population. Discontent at New Zealand's handling of the epidemic in Samoa increased resentment against colonial rule and helped the Mau movement.

3

### 1919, May 7

The Supreme Council of the Allied Powers assigned **German New Guinea** and the neighboring German islands (Bismarck Archipelago) to Australia; **German Samoa** (Western Samoa) became a New Zealand possession. The rich phosphate island of **Nauru** was given to the British Empire, and by agreement the administration was divided among Great Britain, Australia, and New Zealand. Japan received the **German islands north of the equator** as a mandate. These arrangements were confirmed by the League of Nations on Dec. 17, 1920.

4

### 1922, Feb. 6

The **naval treaty** (See [1921, Nov. 12–1922, Feb. 6](#)) among the five great powers included an agreement to maintain the status quo with regard to fortifications and naval bases in the Pacific (the American and Alaskan coasts excluded).

5

### April

The Japanese government established **civil administration** in the mandated islands (over 1,400 of them, with a total area of only 836 square miles, scattered over an immense area of water). The capital was set up at **Korror Island** (Palau group) with six branches in the major island groups. Indigenous people were involved in subsidiary government positions. The Japanese approached their task of colonial administration seriously and attempted a large-scale program of social and economic development. Economically, the development of the **sugar industry**, under the leadership of **Matsue Haruji**, in the Marianas was the most important. This development brought a considerable influx of Japanese immigrants. By 1935 there were **50,000 Japanese in Micronesia, 40,000 in the Marianas**.

(See [1913, Aug. 21](#))

## 2. [The Philippines](#)

In this period profound social and economic changes occurred, against a background of American control and constant agitation for independence. The Philippines became more urbanized, and the educated section of the population grew, following the promotion of English-language education by the administration. A large number of Filipinos joined the bureaucracy. National consciousness spread, crossing regional and class lines. 1

Free trade with the U.S. produced export-led economic growth, but led to dependence on the American market. At the same time, socioeconomic disparities increased, and the political and economic power of the oligarchic Filipino elite was consolidated. 2

### 1916

A **council of state** was created, consisting of the governor-general, the presidents of both houses of the legislature, and the heads of executive departments. The U.S. Senate passed the **Jones Act**, which promised independence to the Philippines once there was a stable government. It replaced the Philippine Commission with a 24-member elected senate. 3

### 1919

Quezon and other Filipino notables led an independence mission to Washington. 4

### 1921

The **Wood-Forbes mission** sent by the U.S. government opposed immediate independence for the Philippines, and advocated increased powers for the governor. The appointment of the conservative **Francis Wood** as governor-general increased tensions between nationalist Filipinos and the U.S. government.

5

## 1922

Manuel Quezon replaced Sergio Osmena as leader after a power struggle within the Nacionalista Party.

6

## 1923

Quezon attacked Wood for interference in the elected government. Filipinos on the council of state resigned in protest at Wood's behavior, and the legislature unsuccessfully called for his replacement.

7

## 1924

Filipino leaders appealed to the U.S. for independence, but this was rejected by President Coolidge. Further requests for independence were made in 1925 and 1926.

8

## 1930

Establishment of the Philippine Communist Party, which was outlawed two years later.

9

## 1931

The **Os-Rox mission** to Washington led by Sergio Osmena and **Manuel Roxas** proposed that independence be accompanied by the preservation of free trade with the U.S. for ten years and a restriction on Filipino immigration to the United States. Support for Philippine independence increased in the U.S. during the 1920s because free trade with the Philippines was considered unfavorable to American economic interests.

10

## 1933, Jan 13

The U.S. Congress passed the **Hare-Hawes-Cutting Bill**, advocating independence after 12 years of transitional government, retention of U.S. military bases, and restrictions on immigration and on Philippine sugar and coconut exports. The Philippine legislature rejected the bill because of the restrictions on exports and immigration, the ill-defined nature of the powers of the U.S. high commissioner, and the retention of U.S. military bases. <sup>11</sup>

### 1934, March 24

The U.S. government adopted the **Tydings-McDuffie Act**, which proposed gradual introduction of tariffs on Philippine exports to the U.S. in the period leading up to independence. This was reluctantly accepted by the Philippine legislature. <sup>12</sup>

### July 30

A commission of 202 members was elected to draft a constitution. Suffrage was to be given to literates over 21 (which meant that only 14 percent of the population was eligible to vote in 1940). The constitution was approved on May 14, 1935. <sup>13</sup>

### 3. [Australia](#)

The two world wars were Australia's largest national enterprises, and were fought at great <sup>1</sup> cost in lives and suffering. The interwar period (1918–39) was stagnant economically, troughing in the Great Depression of 1929–32, when perhaps a third of Australian men were out of work. Confidence in Australia's long-term prosperity was not shaken. The economy industrialized further, but depended heavily on agriculture and mining, with 35 percent of the nation's export income up to 1950 generated by sheep grazing.

The outbreak of World War I revealed all Australian parties united in loyalty to the <sup>2</sup> mother country and in readiness to contribute to its defense. During the war Australia sent 331,000 men overseas, who took a prominent part in the Dardanelles campaign, the Palestine campaign, and the fighting in France (after 1916). In May 1918 the five Australian divisions in France were organized as an **Australian army corps**, under the command of **Sir John Monash**, an Australian. The war was financed chiefly by borrowing and was accompanied, in Australia as elsewhere, by a great extension of government control, economic as well as political. Rising prices together with a decline in real wages led to much **labor unrest** and a very extensive strike in Aug.–Sept. 1917. The failure of this strike resulted in stricter organization of the trade unions and greater concentration on economic rather than political aims. In the military field the Australian government took advantage of the opportunity to seize the German island colonies south of the equator.

#### 1915

Construction of **major steel mill** by BHP, Australia's largest company for decades. <sup>3</sup>

#### April 25

Australian and New Zealand Army Corps (**ANZAC**) landed on Gallipoli Peninsula, Turkey. The place was soon called Anzac Cove, and the day Anzac Day. In the 1920s, April 25 was made a public holiday, and many Australians consider it Australia's most important national day. Anzac Cove was evacuated in Dec. 1915, and the Anzacs transferred to France or Egypt.

4

## Oct. 27

**William M. Hughes** as prime minister and leader of the Labour Party. Hughes became the embodiment of Australian and British patriotism, and, after a visit to England in the summer of 1916, he began to advocate **conscription** of men for service overseas. The suggestion roused much opposition.

5

[NEXT](#)

---

(See [1913](#))

#### 4. [New Zealand](#)

In the aftermath of World War I, government investment and tariff protection strengthened agriculture, which came to dominate the economy. An economic regime founded on the export of wool, meat, and dairy produce to Britain emerged. Partly as a result of this dependency, the global economic crisis in the 1930s affected New Zealand severely. In response to the depression, the Labour government of 1935 established one of the most comprehensive welfare programs in the non-Communist world. 1

Despite continuing alienation of land, the Maori population began to increase, and there were modest improvements in Maori health and socioeconomic position. A number of Maori leaders joined the government or were active in other areas of national politics. New Zealand's political ties to Britain remained strong, reflected in the large numbers of New Zealand troops participating in World War I. New Zealand continued to practice petty imperialism in the South Pacific through the period, violently suppressing the independence movement in Samoa in the 1920s. New Zealand sent 117,000 men overseas in World War I, most of whom were volunteers. New Zealand troops fought in Turkey, Palestine, and France, often in company with Australians. Casualties were very high. Participation in World War II was also extensive. 2

#### 1914

**New Zealand annexed Samoa** from Germany (See [1914](#)). 3

#### 1915

New Zealand and Australian troops (**ANZACs**) participated in the ill-fated **Gallipoli campaign**. This became a symbol of **emergent nationalism**. 4

## 1916

The Maori prophet **Rua Kenana** was arrested for sedition. **Formation of New Zealand Labour Party by socialists and trade unionists.** Heated political debate took place over the issue of conscription, which was opposed by the Waikato tribes and by the Labour Party. 5

## 1918

Foundation of **Ratana** church by the Maori prophet **Tahupotiki Wiremu Ratana**. This fusion of Maori and Christian beliefs appealed to many Maori in the lower socioeconomic stratum. **Samoa was given to New Zealand as a trust territory of the League of Nations.** 6

## 1919

The conservative **Reform** government won a resounding victory in the general election. The subsequent elections in the 1920s were all characterized by competition among the three parties of Reform, Liberal (later United), and Labour. Women gained the right to stand for Parliament. 7

Throughout the 1920s the government provided assistance to farmers through credit and price controls. The establishment of a dairy board (1923) helped in the marketing of dairy products. 8

## 1925

Election of a Reform Party government under **Gordon Coates**. The government engaged in a program of public works construction, and borrowed heavily overseas. 9

## 1928

The United Party, formed out of the remains of the Liberals, won the election. Its leader, **Joseph Ward**, promised extensive borrowing for public works. 10

## 1929

New Zealand troops attempted to suppress the nationalistic **Mau** movement in Samoa, killing a number of its leaders. 11

New Zealand suffered severely from **the depression**, being essentially a producer of primary materials. The unemployed were compelled to do laboring work in return for government compensation. 12

## 1931

A **coalition government** was formed from the Reform and United Parties. Prime Minister Coates reduced civil service salaries and introduced legislation to allow the arbitration court to cut wages. 13

## 1932

**Riots involving unemployed people** occurred in each of the four main cities. 14

The first Ratana member of Parliament was elected, beginning the Ratana dominance over the Maori seats. Ratana established a political alliance with the Labour Party. The government made arbitration in industrial negotiations voluntary, but kept conciliation compulsory, so that unions could be forced to accept employers' terms. This weakened union power. Tariffs on New Zealand exports to Britain worsened the economic situation. 15

## 1935, Nov. 27

**ELECTION OF THE FIRST LABOUR GOVERNMENT under Michael Joseph Savage.** Savage became one of the best-loved prime ministers in New Zealand history. 16

**Expansion of social welfare provisions** and state support for savings and loans, including mortgages for home purchases. Government controls in banking and internal transportation increased. 17

(See [Overview](#))

## **[J. Africa, 1914–1945](#)**

[AFRICA IN 1939 \(MAP\)](#)

### **[1. Overview](#)**

The 30 years between World War I and the end of World War II represented simultaneously **the high-water mark of colonialism in Africa and its dissolution**. Even though formal decolonization did not begin until 1956, the **roots of African independence** were planted during this period. 1

Looking back at the period from military conquest to 1914, European colonial officials could point to significant but limited accomplishments. Colonial regimes had defeated their African political opponents, suppressed the armed resistance movements, installed rudimentary administrations, and constructed railways and harbors. Despite the promises of tropical bounty awaiting colonial entrepreneurs, metropolitan countries could point to few clear economic advantages their colonies provided. Nor did Africans unequivocally embrace European cultural institutions, including missionary Christianity. Islam seemed to be making more progress in northeastern and West Africa than Christianity. The outbreak of World War I arrested the development of colonial administrations even as African manpower, mineral, and agricultural resources became crucial to metropolitan war economies. The war made clear just how important colonies actually were. 2

**Military campaigns** took place where Germany had colonies (See [The War in the Colonies, 1914–1918](#)): in Togo, Cameroon, Southwest Africa, and East Africa. The Germans in Togo and Cameroon were quickly defeated. The Germans in Southwest Africa surrendered to a British imperial army commanded by the South African general 3

Smuts. Fighting in East Africa was longer and bloodier, although relatively few European troops were killed in the fighting. Many more were incapacitated and slain by disease.

Few Africans actually fought. Most Africans in East Africa were recruited into the carrier corps. Without adequate roads, it fell upon Africans to carry the vast military and logistical arsenal for the troops. Officially, the British reported that 44,991 recruits in the carrier corps died, compared with 3,500 imperial troops who died from battlefield wounds and 6,500 from disease. The mortality rate for Africans in the carrier corps was roughly 2 percent per month; an additional 15 percent were incapacitated by disease and poor nutrition each month. At least one historian of East Africa estimated that **between 200,000 and 300,000 Africans died** directly or indirectly because of the military campaigns in East Africa as their crops and herds were requisitioned and as their male kinsmen were forcibly recruited. Knowing what was in store for them, it is not surprising that as European military recruiters approached their villages, Africans raced off to the bush to hide.

Fighting was limited in West Africa, but recruitment was widespread, especially by the French. All able-bodied men were liable for recruitment into the French military service. In 1915 and 1916, **recruitment revolts** broke out in many French West African colonies. The black Senegalese representative to the French National Assembly, Blaise Diagne, helped recruit Africans for the war effort, but only in exchange for symbolic gains (he rode in the same railway car as the governor-general) and legal ones (specific voting and religious rights were clarified). Although the Germans were defeated and the recruitment revolts suppressed, the experience unleashed significant social, political, and cultural changes.

For those who survived, the **experience of World War I was important and lasting**. Africans saw that Europeans were not invincible. Recruitment brought Africans from a great number of different ethnic groups and backgrounds together; they turned to English, French, Portuguese, Lingala, and Swahili as **common languages**. Africans participated in **new organizations**, which provided models for future nationalist mobilization. Moreover, the defeat of Germany and the subsequent mandating of German colonies to European victors provided **opportunities for Africans with Western literacy** to fill administrative positions left vacant. And finally, the politics surrounding the Treaty of Versailles introduced two important ideas into the language of emergent African nationalism. The first was derived from President Woodrow Wilson's Fourteen Points and spoke of **"self-determination."** Although the idea was not intended for colonized Africans, Africans and Pan-Africanists would use it as a lever against colonial rule. The second came from the League of Nations mandate terms, which provided for **"trusteeship,"** not colonial dominion. Africans would see this term as providing them with important political and economic rights, as well as underscoring the temporary nature of the colonial rule.

The role of African manpower and natural resources during the war demonstrated the importance of African colonies. During the interwar years, most European colonies embarked on **ambitious economic development programs**, which were fueled by rapidly rising commodity prices. During this period, the de facto division of African colonies into **four main economic clusters** became clear: colonies where African peasants were predominant (mostly West Africa), colonies where agricultural concession companies predominated (mostly Central Africa), colonies where mining capital dominated (mostly southern Africa), and colonies of white settlement (mostly East, Central, and southern Africa). Several colonies shared two or more of these economic orientations, but the impact of colonialism on African societies was shaped more by these broad economic orientations than by differences in colonial administrative policy.

7

The practical differences between **direct rule**, where European colonial officials ruled over administrative districts, and **indirect rule**, where “indigenous authorities” were empowered to rule with European officials gently modernizing “traditions,” have been exaggerated. Direct rule has been associated with the French and indirect rule with the British, although all colonial powers employed both methods and **all relied on African collaboration in order to administer as cheaply as possible**.

8

There were, nonetheless, important outcomes to these different styles of colonial rule. Elevated to the level of formal colonial policy by Frederick Lugard and applied vigorously to Nigeria, indirect rule **heightened ethnic differences**, since indigenous authorities were to emerge from identifiable communities. If, as in the case of the Igbo, there were no identifiable indigenous rulers, the British simply appointed willing collaborators and gave them a “warrant” to rule. Customs were invented to demonstrate the age-old practices of these indigenous authorities. Empowering indigenous authorities led to significant abuses of power, as chiefs used their positions to accumulate wealth and power. Because even those practicing direct administration needed African collaborators, the French, Belgians, and Portuguese appointed provincial chiefs to assist them. Provincial chiefs also used their positions to enhance their power to accumulate wealth. The **invention of tradition** in colonial Africa helped undergird the power of African chiefs to determine access to agricultural resources and to increase the power of older men over both women and younger men.

9

Younger men and women often resisted the power of chiefs and elderly men. Young men migrated to cities, to the mines, and to other agricultural regions. Many went in search of an independent income in order to establish their own households. If women could not escape their “arranged” first marriages, divorce and subsequent marriages, especially among Muslims, often provided women with more choice regarding their spouses. Some women also fled to the emerging urban centers and became prostitutes. Others fled to the mission communities, where marriage among Christian converts occasionally provided greater choice.

10

Some women responded collectively to what they considered the erosion of their

11

customary rights. In 1929, Igbo women in southeastern Nigeria rose up against the appointed warrant chiefs and against British colonial officials in **protest against the erosion of women's secret societies** (the British banned all secret societies, although many were indeed the “indigenous authorities”) and the proposed tax on women's property. The women of Aba (See [1929](#)) used well-established techniques to express their anger, including bawdy songs and dances. When they sang and danced before the British headquarters, officials panicked, troops were brought in, and many African women were martyred. In response to these events, the British held an inquiry and appointed anthropologists to study Nigerian societies more thoroughly.

Among the most significant social and cultural changes to occur during this period were the **development of African nationalism and Pan-Africanism, the expansion of Western education, and the growth of cities**. Pan-Africanism was a movement born in the African diaspora of the New World. As a political movement, it was a coalition of a wide variety of African-American and later African nationalist groups. They shared a vision of a great African homeland, but little else. Nonetheless, Pan-Africanist political agitation influenced a variety of nationalist groups in colonial Africa, ranging from youth associations, proto-nationalist associations (such as the South African Native Peoples Congress), labor unions, and literary self-help societies, which drew from Pan-Africanist rhetorical models for the empowerment of colonized African peoples. These groups sought gradual, political reforms within the context of colonialism. Others, such as the influential **Négritude** movement formed in Paris by French-speaking African and Afro-Caribbean intellectuals, sought cultural recognition and presented only vague political goals.

**Collective action by railway workers and dock workers**, who engaged in a series of strikes in the 1920s and 1930s, had an important impact in the continent. Influenced by the Comintern (See [1919, March 2](#)) and by metropolitan socialist parties, African workers began to understand and exercise their power. Strikes along the major rail arteries and at the harbors had the potential to strangle colonial economies. So too did the **African cocoa planters** of Ghana, whose supply holdups in 1937 caused a crisis in the Gold Coast economy and led to colonial reassessment of commodity markets. In response, the British colonies established commodity marketing boards, which acted as sole buyers of commodities, in an effort to even out the wide fluctuations in commodity prices. Although intended to serve the interests of producers, these commodity boards evolved into powerful bureaucracies controlling vast sums of money. Other Africans turned to African independent churches as a means of expressing their religious and nationalist sentiments. Cities expanded dramatically during this period; the **urban areas provided fertile ground for the establishment of new forms of community**.

The expansion of African nationalism coincided with the **consolidation of white settler domination** in South Africa, Southern Rhodesia, Kenya, Angola, and Mozambique. In the 1920s and 1930s white settlers exerted increasing control over the affairs of their

colonies through the grant of “responsible government” to British settlers. British settlers used their power to impose harsh economic and political restrictions on Africans, which in turn only fueled African nationalist sentiments. In the Portuguese colonies, changes in metropolitan politics were felt as a second colonial occupation under a much more interventionist colonial development policy.

The **Great Depression** profoundly affected world commodity markets and African social life. The continent's role as a producer of primary agricultural and mineral resources made Africans especially vulnerable to economic deceleration. Misery stalked the cities and rural villages alike. In the late 1930s, mobilization for another war stimulated African commodity markets and ushered in a sustained period of economic growth. As before, Africa continued to produce agricultural and mineral resources that were largely processed in Europe. The only exception was in South Africa, where manufacturing and secondary processing helped create a wide industrial base.

In contrast with World War I, when fighting occurred in many parts of sub-Saharan Africa, fighting during World War II was limited to the Horn of Africa. Most Africans participated in the war effort through their agricultural and mining labor. Africans were also recruited for the war overseas. In West Africa, Charles de Gaulle rewarded Africans for their support of the Free French by introducing a series of **political reforms** agreed upon at the 1944 Brazzaville meeting. In British West Africa, efforts were made to introduce constitutional changes permitting greater representation of Africans in the legislative councils. However, colonial governments controlled by white settlers imposed ever harsher laws to prevent the expression of African political grievances and to hinder African economic progress. ## 2. [Regions](#)

### a. [Sudanic West and Central Africa](#)

#### 1913–14

The **drought** in the *sahel* devastated local communities. Thousands died in the middle Niger region; those who survived saw their livestock herds largely destroyed. French colonial policies stirred up resentment during the drought, and contributed to armed unrest beginning in 1915. 1

#### 1914–16

World War I military movements in Togo and Cameroon. In Aug. 1914 the Germans administering Togo retreated northward from the coast in the face of advancing French and British troops. Shortly thereafter the **Germans surrendered**, leaving France and Britain in control of Togo. The military conflict in Cameroon was more prolonged, lasting from 1914 to 1916. The Germans finally fled Cameroon for Spanish Guinea in Feb. 1916. In March 1916 the French and British agreed to the **partition of Cameroon for administrative purposes**. 2

#### 1915–17

French efforts to **recruit Africans for service during World War I** led to rebellions in French West Africa. In order to avoid conscription, many Africans fled toward the Gambia, Portuguese Guinea, Sierra Leone, Liberia, and the Gold Coast. Elsewhere, armed rebellions broke out. In 1915 the Bambara staged an anticonscription revolt; 3

another rebellion occurred in the western Volta region. In 1916 Africans staged a popular revolt in northern Dahomey. The French suppressed the revolts by force. However, with the assistance of **Blaise Diagne, the Senegalese African member of the French National Assembly**, larger numbers of Africans joined the French armed forces.

### 1916–17

The Tuareg living in Air (in present-day Niger) retained their independence up until the First World War. In 1916 the **Tuareg chief Kawsen ag Muhammad** and his followers rebelled against the French presence in their territory, laying siege to the French fort at Agades. Bitter reprisals followed. Although the French captured and executed Kawsen in 1919, instability in the region continued into the early 1930s. 4

### 1917

**Returning African soldiers formed local sections of the League for the Rights of Man to protest colonialism.** The League for the Rights of Man was particularly active in Guinea and Gabon, where French West African ex-soldiers pressed for the establishment of a new dispensation. Demobilized African soldiers would play a leading role in anticolonial movements in the years to come. 5

### 1919

The French reorganized the West African colonies, creating the colony of **Upper Volta**. 6

### 1920

**Lycée Faidherbe**, a secondary school, founded in St.-Louis, Senegal. 7

### 1921

**Katsina Training College** founded. 8

### 1924

**Polo** introduced into Katsina, becoming the sport of the Northern elite.

9

## 1925

Africans elected members of the *conseils administratives* in the French colonies of Soudan, Guinea, Ivory Coast, and Dahomey.

(See [1914, Jan. 1](#))

## **[b. Forest West Africa](#)**

### **1901–14**

Development of indirect rule as British colonial policy. **Sir Frederick Lugard** developed indirect rule in Northern Nigeria while serving as British high commissioner there from 1901 to 1906. Lugard believed that the British could best govern Africa through indigenous authorities. Under Lugard's system, British authorities delegated to African chiefs the responsibilities of law enforcement, labor recruitment, and tax collection. In principle, British colonial officials sought to modernize “traditional” African political institutions by gradually modifying their practices. In practice, indirect rule led to conflict over traditions and favored Africans loyal to the colonial rulers. Indirect rule was continued in Northern Nigeria following Lugard's departure, and was eventually adopted in other British colonies in West Africa, such as Southern Nigeria, the Gold Coast, Sierra Leone, and the Gambia. In one form or another, indirect rule was adapted throughout British-controlled Africa. Variations of this policy were applied by all European colonial powers as a way of reducing the costs of administration.

1

### **1905–39**

**EXPORTS FROM AFRICA INCREASED BY APPROXIMATELY FIVE TIMES IN VALUE AND VOLUME.** Among the most important export crops in forest West Africa were **coffee, cocoa, and peanuts**. The Ivory Coast successfully produced and exported forest-grown coffee. The Gold Coast became one of the leading suppliers of cocoa, producing almost half the world's supply by 1925. Revenue from cocoa exports made the Gold Coast the wealthiest colony in tropical Africa.

2

## 1909

The coal discovered at Udi in eastern Nigeria in 1909 proved to be the only deposit of its kind in West Africa. The British colonial government built a railway to link the coal works to export facilities at Port Harcourt on the coast. <sup>3</sup>

## 1911–13

In 1911 both colonial officials and the British Cotton Growing Association expected the Nigeria railway to boost dramatically the profitability of **cotton cultivation in central Hausaland**. But **Hausa farmers found peanut cultivation more attractive**. Their decision to concentrate on peanuts—which were edible and easier to grow than cotton—took the British by surprise and demonstrated how quickly Africans responded to economic opportunities and how little colonial powers actually controlled Africans' economic lives. Nigerian peanut exports rose from under 2,000 tons before 1911 to almost 20,000 tons in 1913. <sup>4</sup>

## 1914, Jan

**Lugard**, who was recalled to Nigeria in 1912, managed the amalgamation of the colonies of Northern and Southern Nigeria and the Nigerian Protectorates into one colony, Nigeria. Lugard became governor-general. <sup>5</sup>

## 1918–21

Massive **outbreak of influenza** with very high mortality. <sup>6</sup>

## 1919

Following the First World War, Germany's African colonies became mandates of the **League of Nations**. In May 1919 **Togo** was declared a mandate and transferred to the French for administrative purposes. France obtained the portion of **Cameroon** that had been ceded to the Germans in 1911; the rest was transferred to Britain. <sup>7</sup>

## 1920s–1930s

Expansion of the **African Christian independent churches**. Throughout sub-Saharan Africa, Africans flocked to breakaway, often ecstatic Christian movements. Yoruba Anglicans began to form independent prayer groups as early as 1918. These prayer groups, known as *aladura*, proliferated in the 1920s and 1930s. The *aladura* groups sought to adapt Christianity to African traditional beliefs and practices. They conducted their own healing sessions and baptisms, built their own churches, and developed their own liturgies. They helped spread Christianity into areas untouched by European missionaries, who strongly disapproved of their activities. First **Church of the Lord (Aladura)** founded at Ogere, Western Nigeria, c. 1930. 8

### 1920

**National Congress of British West Africa** founded in Accra. 9

### 1921

**Gold Coast cocoa holdup**. When the price for Gold Coast cocoa dropped sharply in 1920, African farmers suddenly found themselves in debt and unable to obtain credit. They reacted by staging a “holdup” in 1921. Their refusal to deliver their produce to market led to an eventual rise in the cocoa price and an end to the boycott. The holdup strategy thus provided a way for African farmers to defend their interests in a collective manner. In the Gold Coast, withholding cocoa provided a defense against international market forces and the collusion among expatriate cocoa exporters. 10

Establishment of a **legislative council** in Nigeria with some elected members. 11

### 1922

**Achimoto College** founded near Accra. 12

(See [1900–14](#))

### **c. Northeast Africa (Horn)**

#### **1914**

The early 20th century witnessed a **boom in commodity production**, especially **coffee**,<sup>1</sup> in Ethiopia. The boom was spurred in part by the **development of railways**, reaching Addis Ababa in 1916. **Drought** in Sudan, and the failure of the Nile flood, led to famine. The famine was offset by grain imported from India.

#### **1914–22**

Partial British authority in southern Sudan led to **ethnic conflict** between those under<sup>2</sup> that authority and those not under it.

#### **1915–18**

Good rains brought about high agricultural production for export in Sudan.<sup>3</sup>

#### **1916**

**Tafari** (later Haile Selassie; 1891–1975) joined a conspiracy that put Menelik's daughter<sup>4</sup> **Zawditu** on the throne, with Tafari as regent.

#### **1919–20**

Inauguration of **Gezira Scheme** in Sudan for tenant farmer production of cotton under large-scale irrigation. Initially excellent results were followed by a rapid fall in production. 5

### 1920–30

Rise in exports, especially coffee, equal to contemporaneous rise in imports. 6

### 1921–22

**Opposition to British rule** became widespread in **southern Sudan** under **Prophet Ariandhit**, leading the British to impose more effective administration there from 1922. 7

### 1925

Completion of **Sennar Dam for the Gezira Scheme**, leading to an increase in acreage under cultivation to 700,000 by 1931. 8

### 1928–30

**Ras Tafari** took control following a coup d'état in 1928. He was crowned *negus* by Empress Zawditu and gained land and power. Zawditu and the conservative leaders resented Ras Tafari's prominence. Zawditu's husband, Ras Gugsa, led a rebellion in 1929. Following Zawditu's death, on April 3, 1930, **Haile Selassie** was crowned emperor. Thereafter he led a campaign to defeat rebels using **air power**. 9

### 1929–30

**Tafari obtained airplanes** and training for Ethiopian pilots from France, increasing central authority. A program of road building and the importation of trucks improved communication between the capital and the provinces. 10

## 1930–31

Collapse of cotton price and production in Gezira Scheme aggravated the effects of the **Great Depression** in Sudan. 11

## **d. [East Africa](#)**

### **1914–18**

**World War I led to fighting between German and British forces**, using African troops and porters, in Tanganyika (German East Africa). War proved **disastrous for East Africans**, who were forced to supply food, soldiers, and porters to the armies. Ten percent of the soldiers and 20 percent of the porters died, mostly from disease and malnutrition, totaling 100,000 deaths. **War resulted in famine and disease** throughout the region; cattle disease depleted the stored wealth of stock. <sup>1</sup>

### **1917, Oct**

**The British defeated the German commander Lettow-Vorbeck at Mahiva**; the Germans withdrew to Mozambique. <sup>2</sup>

### **1918**

**Resident Natives Ordinance** in the Kenya colony forced African tenants to work for white landlords at least six months each year. <sup>3</sup>

### **1918–19**

Just as the British occupation of Teso and Lango was completed, **serious famine and rinderpest epidemic** broke out in Uganda. <sup>4</sup>

## 1920

**Native Registration Ordinance** enacted to ensure tighter labor and tax controls over Africans, who were now required to carry a pass (*kipande*). Wages declined as the postwar boom ended. 5

### Jan

**The British mandate over German East Africa** went into effect. The name of the territory was changed to Tanganyika. 6

### July

**British East Africa was renamed Kenya** and made into a crown colony. 7

### e. [West Central Africa](#)

#### 1912

**Discovery of diamonds in Lunda** area of Angola. Mining of diamonds in Angola began in 1916, and first exports in 1920. <sup>1</sup>

#### 1914–18

Troops of the Belgian Congo assisted the French and the British in coordinating the **war against Germany**. <sup>2</sup>

#### 1916

**Holy Ghost Fathers** replaced German Pallottine Fathers in Cameroon. **Seventh Day Adventists** began work in the Belgian Congo. <sup>3</sup>

#### 1917

**Female slavery prohibited** by the French in Cameroon. <sup>4</sup>

#### 1920

Extensive reorganization of **local government** in the Belgian Congo. <sup>5</sup>

**Bwiti cult** began in Gabon; **Kiyoka cult** started in Angola.

6

## 1921

**Simon Kimbangu**, a BaKongo peasant and catechist, declared that he was an emissary of God, chosen to lead his people from under the yoke of Belgian colonialism. He was arrested that year, but his movement persisted in rural areas for more than 30 years despite concerted persecution.

7

## 1922, July

**Two hundred forty-four followers of Simon Kimbangu** were deported from the Huri district.

8

## 1923

Many **Kimbanguist churches** opened in the Belgian Congo.

9

**Slavery abolished in Cameroon.**

10

## 1925

**Kimbanguists banned in Kasai. Watchtower movement** (Kitawala) introduced by Romo Nyirenda Mnyasa into Katanga.

11

The University of Louvain established **medical and agricultural** institutes in the Belgian Congo.

12

## 1926, May 28

**A Military coup in Portugal** led to the Estado Novo, and the accession to power of **Antonio Salazar** in 1928. Estado Novo revived colonial development policies, especially with respect to cotton, forcing many peasants in Angola and Mozambique to convert to cotton production instead of food crops, at great cost to their living standards.

13

## 1929

**Electric lighting** introduced into Douala.

14

## **f. [Southern Africa](#)**

### **1. North of the Limpopo**

#### **1915, Jan**

**John Chilembwe**, an American-trained pastor, led a brief **uprising** against colonial rule in Nyasaland (Malawi), sparked by forced conscription into World War I and by complaints of labor tenants. 1

#### **1917–19**

**Widespread rebellion in Zambezi region of Mozambique**, over wartime labor demands; not finally pacified in **Barwe** area until 1919. 2

#### **1920–30**

Growth of **religious and cultural movements in Southern Rhodesian mining compounds**, including Watchtower movement, called Kitawala, and **Beni dance associations**. Beni dance associations were a syncretic mix of African dance and European marching bands. 3

#### **1923**

**White settlers in Southern Rhodesia** (Zimbabwe) gained self-governing status. 4

## 1925, April

**White women in Southern Rhodesia** granted suffrage. 5

## 1927

**African workers called a strike** in Southern Rhodesia. 6

## 1930

**Land Apportionment Act** in Southern Rhodesia reserved half of the land, and most of the good farming land, for whites, and confirmed the status of African reserves, while requiring African tenants to work for white landlords. 7

**Makape “cleansing” cult** emerged in Nyasaland. 8

## c. 1930

**Welfare societies** or self-help groups established amongst Africans in Northern Rhodesian mines. 9

## 1933

**Tshekedi Khama**, regent of Bamangwato, deposed by the British for exceeding his powers. Tshekedi subsequently reinstated. 10

**Native authorities** in Nyasaland instructed on model of indirect rule. 11

## 1935, May

**Strike by African mineworkers** on Copperbelt of Northern Rhodesia (Zambia), sparked by changes in poll tax administration which worked to the detriment of urban areas. 12

(See [Sept. 3](#)) (See [Sept. 3](#))

## **K. World War II, 1939–1945**

### **1. The Campaigns in Poland and Finland, 1939–1940**

#### **1939, Sept. 1**

**POLAND WAS INVADED** by German forces estimated at 1 million men. Headed by mechanized divisions and supported by overwhelming air power, the German thrusts disorganized and defeated the poorly equipped Polish armies. Though the latter had a numerical strength of 600,000 men, they were unable to mobilize effectively or concert their resistance. <sup>1</sup>

#### **Sept. 17**

In accordance with the secret protocol of the Soviet-Nazi nonaggression pact (See [Aug. 23](#)), **Russian troops invaded Poland** from the east, meeting the advancing Germans near Brest-Litovsk two days later. <sup>2</sup>

#### **Sept. 27**

After heroic resistance and destructive bombing, **Warsaw surrendered** and Polish organized opposition came to an end. The Blitzkrieg had lasted less than four weeks and the outcome had been determined in the first ten days. <sup>3</sup>

#### **Sept. 29**

**The German and Russian governments divided Poland.** Germany annexed outright the Free City of Danzig (population 415,000) and 32,000 square miles between East Prussia and Silesia. In addition an area of 39,000 square miles, known as the Gouvernement Général, remained under German protection. The total German gains were estimated at 72,866 square miles, with a population of 22,140,000. The Russians occupied 77,620 square miles of eastern Poland, with a population of 13,199,000. Lithuania and Slovakia received small cessions of Polish territory. <sup>4</sup>

### Nov. 30–1940, March 12

**RUSSO-FINNISH WAR.** Russian armies attacked on three fronts: below Petsamo on the Arctic Sea, in central Finland, and on the Karelian Isthmus. <sup>5</sup>

### Dec. 14

**Russia was expelled from the League of Nations** (See [Nov. 30](#)) for acts of aggression against Finland. <sup>6</sup>

## **2. The Invasion of Denmark and Norway, 1940**

**1940, Feb. 16**

**British naval forces entered Norwegian waters** to rescue 299 prisoners of war from the German ship *Altmark*. The Norwegian government protested (See [1940, Feb. 16](#)). <sup>1</sup>

**April 8**

The French and British governments announced that Norwegian waters had been mined to prevent the passage of German ships. <sup>2</sup>

**April 9**

**German sea and airborne forces descended on Norway**. Oslo, Bergen, Trondheim, Stavanger, and Narvik were rapidly invaded. At the same time German forces entered and occupied Denmark without more than pro forma resistance. <sup>3</sup>

**April 9**

A German destroyer squadron landed at Narvik and held the town even after destruction of the German ships by the British (April 13). On May 28 a British force recovered the town but was withdrawn on June 10 in view of the German attack in the west. <sup>4</sup>

**April 11**

Rallying from the surprise attack, Norwegian forces offered growing resistance. Three German cruisers and four troopships were lost in the invasion. 5

### April 16–19

**Anglo-French expeditionary forces** landed in southern Norway, but were compelled to withdraw after two weeks (May 3). 6

### April 30

The Germans, reinforced steadily, captured Dombas, a key rail center, and **Norwegian resistance was broken**, though military operations were carried on until June 10. 7

### Sept. 25

The German reich-commissar for Norway set aside the legal administration, dissolved all political parties except the Nasjonal-Samling, and entrusted the government to 13 commissars. 8

### **3. The Conquest of the Low Countries and the Fall of France, 1940**

#### **1940, May 10**

**German armies**, without warning, **invaded the Netherlands, Belgium, and Luxembourg**. 1

The French and British governments dispatched expeditionary forces into Belgium to cooperate with the Belgian army in its resistance. The Germans captured Fort Eben Emael, a key Belgian defense position. 2

#### **May 12**

The **Germans crossed the Meuse** at Sedan. 3

#### **May 13**

**Rotterdam surrendered** to the Germans after part of the city had been blasted by an exterminating air attack. The **Netherlands army capitulated** on May 14. 4

#### **May 17–21**

**German mechanized divisions drove deep into northern France**, racing down the Somme Valley to the English Channel at **Abbeville**. The British and Belgian forces in Flanders were thus separated from the main French armies. **Gen. Maxime Weygand** replaced Gen. Gustave Gamelin as French commander in chief, but he was unable to arrest the French collapse. The **fall of Brussels** and Namur forced the British and Belgian armies back upon Ostend and Dunkirk. 5

## May 26

**Boulogne fell** to the Germans. The Belgian armies, disorganized and short of supplies after 16 days of fighting, could not sustain further attacks, and Leopold III ordered them to capitulate. 6

## May 28

Exposed by the capitulation of the Belgians, the British expeditionary force of some 250,000 had to be withdrawn, chiefly from the beaches of **Dunkirk**. 7

## June 4

By heroic efforts some 200,000 British and 140,000 French troops were rescued, but were forced to abandon almost all equipment. British losses including prisoners totaled 30,000. 8

## June 5

Having secured their right wing, the German invaders launched a wide attack against the French on an arc from Sedan to Abbeville. 9

## June 10

**ITALY DECLARED WAR AGAINST FRANCE AND GREAT BRITAIN.** Italian forces invaded southern France. 10

## June 13

**Paris was evacuated** before the continued German advance. 11

## June 15

The French fortress of **Verdun** was captured.

## **4. The Battle of Britain, 1940**

### **1940, June**

The **fall of France** and the loss of war materiel in the evacuation from Dunkirk led the British prime minister, Winston Churchill, to appeal to the U.S. government for military supplies. These were released by the War Department (June 3), and three weeks later a first shipment, including 500,000 rifles, 80,000 machine guns, 900 75-mm field guns, and 130 million rounds of ammunition, reached Britain. 1

### **July**

On the fall of France the Germans occupied islands in the English Channel and intensified their air attacks on British cities, communications, and shipping. 2

### **Aug. 8**

German bombers opened an **offensive designed to destroy British air strength** by blasting the airfields and vital industries. 3

### **Aug. 15**

**One thousand German planes** ranged as far north as Scotland. Croydon airfield was bombed. The British retaliated with heavy raids on Berlin, Düsseldorf, Essen, and other German cities. 4

### **Aug. 17**

The German government proclaimed a **total blockade** of the waters around Great Britain. 5

### Sept. 2

An important **defense agreement** was concluded **between Great Britain and the United States**. Fifty American destroyers were transferred to Britain to combat the air and submarine menace. In exchange the U.S. received a 99-year **lease of naval and air bases** in Newfoundland, Bermuda, the Bahamas, Jamaica, Antigua, St. Lucia, Trinidad, and British Guiana. 6

### Sept. 11

The **British bombed Continental ports**, including Antwerp, Ostend, Calais, and Dunkirk, to frustrate German invasion preparations. 7

### Sept. 16

Improved British defense measures inflicted heavy losses on German air raiders, 185 invading planes crashing in one day. 8

### Sept. 27

A **GERMAN-ITALIAN-JAPANESE PACT** was concluded at Berlin providing for a ten-year military and economic alliance. The three contracting powers further promised each other mutual assistance in the event that any one of them became involved in war with a power not then a belligerent. 9

### Oct. 10

Resuming the **air assault** with full intensity, the German Luftwaffe raided London heavily. Some Italian air squadrons joined in the attack. But shorter days, stormy weather, and improved defenses diminished the effectiveness of the air arm. 10

## Nov. 10

In a supreme effort at crushing British industrial resources and demoralizing the population, the Germans blasted the industrial city of **Coventry** with destructive effect. Thereafter the air attacks became more sporadic. The British had survived the worst of the aerial Blitzkrieg, and after November the winter weather made any attempt at invasion less likely. German losses in aircraft had been heavy: an official estimate placed them at 2,375 German to 800 British planes destroyed in the period Aug. 8–Oct. 31. But many British cities had been severely shattered and burned, and 14,000 civilians had been killed in London alone. British losses at sea had also been heavy. On Nov. 5 Churchill declared that the **submarine boat** had become a greater menace than the bombing plane.

## **5. The Balkan Campaigns, 1940–1941**

### **1940, June**

The **fall of France** and the desperate position of Great Britain in the summer of 1940 <sup>1</sup> caused a shift in the European balance. In the Balkans Romania, which had won territory from all its neighbors in the 20th century, was particularly menaced. By September the Romanian government had ceded territory to the Soviet Union, Hungary, and Bulgaria, yielding to threats and Axis pressure. In all, Romania lost about 40,000 square miles and a population of 5 million (See [1940, June 26](#)).

### **Oct. 4**

**Hitler and Mussolini conferred** at the Brenner Pass. The failure to break British <sup>2</sup> resistance and increasing activity in the Balkan and Mediterranean areas forecast a shift in Axis strategy. Hitler also conferred with the French vice premier, **Pierre Laval** (Oct. 22), with **Gen. Francisco Franco** of Spain (Oct. 23), with **Marshal Henri-Philippe Pétain**, head of the Vichy French government (Oct. 24), and again with Mussolini, in Florence (Oct. 28).

### **Oct. 8**

**German troops entered Romania** to “protect” the oil fields. <sup>3</sup>

### **Oct. 28**

**Greece rejected a demand of the Italian government** for the use of Greek bases. <sup>4</sup> Thereupon the Italians invaded Greece from Albania.

### Oct. 30

**British reinforcements** were landed on Crete and other Greek islands. The Russian government delivered 134 fighter planes to Greece in accord with existing agreements.

5

### Nov. 12

**Vyacheslav Molotov**, Soviet commissar for foreign affairs, **conferred with Hitler** in Berlin. Soviet troops were massed on the Romanian border.

6

### Nov. 13

British bombing planes destroyed or damaged half of the Italian fleet anchored in the inner harbor at **Taranto**. At the same time Churchill announced the addition of five 35,000-ton battleships to the British navy.

7

### Nov. 20

**Hungary joined the Berlin-Rome-Tokyo pact.**

8

### Nov. 23

**Romania joined the Berlin-Rome-Tokyo pact.**

9

### Dec. 3

The **Greeks broke through the Italian defenses** in Albania, captured Porto Edda, and claimed a total of 28,000 prisoners. Agyrokastron was likewise captured five days later, and the Greeks overran one-fourth of Albania. The Germans dispatched 50,000 troops to reinforce the Italian armies. Combined with temporary successes of the British against the Italians in Africa, the Greek victories marked a blow to Axis prestige.

## **6. The Campaigns in the Soviet Union, 1941–1944**

### **1941, June 22**

**GERMAN ARMIES INVADED THE SOVIET UNION**, opening hostilities on a front of 2,000 miles, from the White to the Black Sea. The German invaders, with their allies, the Italians, Romanians, Hungarians, and Finns, were estimated at over 3 million men. The Russians were credited with 2 million men under arms, and an indefinite reserve. Churchill promised that Great Britain would extend all possible aid to the Russians. The German invasion of the Soviet Union, combined with conquests in Poland, Hungary, Czechoslovakia, and the Balkans, brought millions more Jews under Germany's influence. The Nazis already practiced extermination against “Bolsheviks,” and special “intervention squads” (*Einsatzgruppen*) accompanied German attack forces with orders to liquidate Communist Party officials and Jews. 1

### **June 29**

The Germans reached Grodno, Brest-Litovsk, and Vilna. 2

### **July 1–2**

**Riga**, capital of Latvia, **was occupied by German troops**, and the Russian retreat continued with heavy losses, especially around Bialystok. 3

### **July 13**

**A pact promising mutual aid was concluded between Great Britain and Russia.** 4

## July 16

The Germans captured Smolensk. 5

## Aug. 1

**Britain severed relations with Finland**, which the Germans were using as a base for their invasion of Russia. 6

## Aug. 19

The **Germans claimed all Ukrainian territory** west of the Dnieper except Odessa. 7

## Aug. 25–29

**British and Soviet forces invaded Iran** (See [1941, Aug. 25](#)). 8

## Sept. 4

The Germans commenced the **investment of Leningrad**, a state of partial siege that was not ended until Jan. 1943. 9

## Sept. 19

**Kiev and Poltava were stormed** by the Axis forces, which continued their victorious advance to Orel (Oct. 8), Bryansk (Oct. 12), Viazma (Oct. 13), Odessa (Oct. 16), Tanganrog (Oct. 19), and Kharkov (Oct. 24). By the end of October the Germans had **entered the Crimea** on the southern end of the vast front and had commenced the **siege of Moscow** in the north. The Soviet government transferred its headquarters to Kuibyshev. 10

## Oct. 1

The **FIRST SOVIET PROTOCOL**, signed at Moscow, provided that Great Britain and the U.S. would supply materials essential to the Russian war effort for nine months. Purchase of American supplies was speeded by extending the Soviet government a credit of \$1 billion (Oct. 30). This was supplemented (June 11, 1942) by a **master lend-lease agreement** whereby the U.S. promised to supply the Soviet Union with such materials and services as the president might authorize. In return the Soviet government pledged that such articles or information would not be transferred to a third party without the consent of the president. The arrangement was to continue until a date agreed upon by the two governments and materials unconsumed were to be returned to the U.S. at the end of the emergency. 11

## **7. Defense of the Western Hemisphere, 1939–1945**

**1939, Oct. 2**

A **Pan-American conference at Panama** declared that the waters surrounding the Western Hemisphere for a distance of 300 miles from shore and as far north as Canada constituted “sea safety zones” and must be kept free from hostile acts by non-American belligerent nations. The conference also issued a **general declaration of neutrality** of the American republics. 1

**Nov. 4**

President Roosevelt signed an **amendment to the Neutrality Act** which repealed the embargo on the sale of arms and placed exports to belligerent nations on a **cash-and-carry** basis. 2

**Dec. 13**

Three British cruisers attacked the German battleship *Graf Spee* and drove it into the harbor of Montevideo. When forced to leave harbor, it was scuttled by the German crew (Dec. 17). In the name of the American republics the president of Panama protested to Great Britain, France, and Germany at this and other belligerent acts committed in American waters. 3

## 8. Naval Warfare and Blockade, 1939–1944

The gross tonnage of the merchant fleets of the leading nations in 1939 reflected the overwhelming advantage that Great Britain and its subsequent allies enjoyed on the sea. The ships of Norway, the Netherlands, and Belgium, most of which escaped when these countries were overrun by the Germans in 1940, took service with the British and helped to build up the pool of **United Nations** shipping. <sup>1</sup>

### *Merchant tonnage, 1939*

Great Britain	21,001,925	Japan	5,629,845
United States	11,470,177	Germany	4,482,662
Norway	4,833,813	Italy	3,424,804
Netherlands	2,969,578		
France	2,933,933		
Belgium	408,418		
Total	43,617,844		13,537,311

In 1939 the **world tonnage** for merchant ships of 100 tons or over was 68,509,432. More than half of this was destroyed, largely by submarine or air attack, in the course of the next five years. Yet, so energetic was the shipbuilding program, carried out largely in American yards immune to air attack, that by May 1945, Britain and the U.S., through the **war shipping administration**, disposed of over 4,000 ships with a deadweight tonnage of 43 million. The Germans, Italians, and Japanese, on the other hand, found it increasingly difficult to make good their losses, and by 1945 their fleets, merchant and naval, had been almost completely eliminated.

**1939, Sept. 3**

The British government proclaimed a **naval blockade of Germany**.

2

### Nov. 21

The British tightened the blockade on German imports and announced that German exports likewise would be halted.

3

### Dec. 1

From this date neutral shippers were advised to obtain a “navicert” or certificate from British consular officials. These navicerts enabled a cargo to be passed through the patrols established by the British government in concert with its allies. Italy, the Netherlands, Belgium, and Japan protested against the British blockade measures.

4

### Dec. 8

The U.S. Department of State questioned the British practice of seizing German goods on neutral vessels, and challenged (Dec. 14) the diversion of U.S. ships to British and French control bases. The State Department also protested (Dec. 27) against the British **examination of neutral mail** in the search for contraband.

5

### Dec. 17

The German battleship *Graf Spee* was blown up by order of the commander.

## **9. The Campaigns in the Middle East and Africa, 1939–1943**

### **1939, Sept. 3**

Egypt severed diplomatic relations with Germany, but remained neutral.

1

### **Oct. 19**

**Turkey** signed a **treaty of alliance with Britain and France**. The Turkish government promised to enter the war when Italy did, but **remained neutral** even after the Italian declaration of war. Turkish diplomats spent much of the war struggling to keep Turkey out of the fighting.

2

## **10. The Invasion of Italy, 1943–1944**

### **1943, July 10**

U.S., British, and Canadian forces invaded Sicily under the command of Gen. Dwight D. Eisenhower. Over 2,000 vessels were employed to convoy 160,000 men, and landings were effected along the southern coast. The Americans seized Gela; the British Eighth Army and Canadian troops, disembarking at Cape Passaro, drove along the east shore. 1

### **July 14**

**Port Augusta was captured.** 2

### **July 19**

Allied **bombing planes wrecked Naples**, and, after repeated warnings, attacked railway terminals and military objectives in Rome (July 20). 3

### **July 22**

**Half of Sicily was occupied**, the Allied front stretching from Catania to Mazzara. Palermo fell on July 24. 4

### **July 25**

**BENITO MUSSOLINI WAS FORCED TO RESIGN** with his cabinet, and his place was taken by **Marshal Pietro Badoglio**, who opened negotiations for an armistice. 5

## Aug. 18

**Resistance in Sicily collapsed** with the fall of Messina. The campaign had cost the Allied armies an estimated 22,000 casualties, the Axis forces 167,000. At a loss of 274 planes, the Allied airmen accounted for 1,691 enemy aircraft.

6

## Sept. 3

**British and American forces crossed the Straits of Messina and landed in southern Italy.**

7

## Sept. 3

An **armistice was signed** at Algiers, ending hostilities between the Anglo-American forces and those of the Badoglio regime. It was announced (Sept. 8) that the Italian surrender was unconditional. The actual terms were not disclosed.

8

## Sept. 15

Ex-premier Mussolini, who had been held prisoner near Rome, was rescued by German troops (Sept. 12), who seized the leading cities, including Rome.

9

## Oct. 1

After **landing near Salerno** (Sept. 9), American troops entered Naples. Thereafter, however, winter weather, the mountainous countryside, and stubborn German resistance stopped the Allied advance on a line south of Cassino.

10

## **11. The Liberation of France and Belgium, 1944**

### **1944, June 6**

**INVASION OF NORMANDY.** For many months careful and elaborate plans had been matured by the Supreme Headquarters of the Allied Expeditionary Force (SHAEF) for invading France. Command of this greatest amphibious operation in history was entrusted to **Gen. Dwight D. Eisenhower**. The British Isles provided the chief base for the concentration of men and war materiel, and the plan of campaign to follow the invasion date (D-Day) was rehearsed in exhaustive detail. **Air control** was to be maintained by the U.S. Eighth and Ninth Air Forces and the British Royal Air Force, with a combined strength of over 10,000 planes. An American naval task force and a British naval task force were assembled to support the assault, and the invasion was planned to proceed under cover of an intense and accurately directed bombardment by 800 guns on 80 warships. To convey the troops and supplies across the channel, 4,000 other ships were used, and the lack of port facilities for disembarkation was overcome by a dramatic improvisation in engineering. **Artificial harbors** were to be constructed on an exposed coast by sinking lines of blockships and concrete caissons to form breakwaters, with floating pierheads and pontoon causeways to serve as wharves and docks. <sup>1</sup>

### **June 6**

U.S. and British forces succeeded in **landing on the Normandy coast** between St. Marcouf and the Orne River. Within a week a strip of beach 60 miles long had been occupied and the artificial harbors constructed. <sup>2</sup>

### **June 18**

An unusually **severe gale** with high waves delayed landing operations for three days and wrecked the major causeways of one artificial harbor. It was abandoned and traffic diverted to a British-built harbor that was less exposed and had suffered less severely. <sup>3</sup>

### June 27

The **capture of Cherbourg** placed a major port in Allied control. During the first hundred days following D-Day 2.2 million men, 450,000 vehicles, and 4 million tons of stores were landed. This extraordinary achievement was rendered possible by perfecting the services of supply, on the basis of experience gained in the First World War and in the amphibious landings in Africa and Italy. The enormous output of Allied factories and shipyards, which made it possible to duplicate all wrecked or damaged equipment, was also an important factor. <sup>4</sup>

### July 9

**British and Canadian troops captured Caen.** Allied tanks broke through German defenses near **St. Lô** and fanned out, disorganizing enemy resistance. Persistent bombing of all bridges and railways severely crippled the German attempts to bring up adequate forces to halt Allied drives. <sup>5</sup>

### Aug. 15

In another amphibious operation the Allies effected successful **landings on the French Mediterranean coast** between Marseilles and Nice. <sup>6</sup>

### Aug. 24

The citizens of **Paris** rioted against German forces of occupation as Allied armed divisions crossed the Seine and approached the capital. **French Forces of the Interior (FFI)**, which had been organized for underground resistance and supplied with arms, rose against the retreating Germans. <sup>7</sup>

### Aug. 25

**Paris liberated.**

8

### Sept. 2

**Allied forces**, which had penetrated into Belgium, **liberated Brussels.**

9

### Sept. 12

The **American First Army crossed the German frontier** near Eupen, and American armored forces entered Germany north of Trier. The Germans, however, manning their **Westwall** defenses, offered firm resistance, and the Allied advance was halted. An Allied attempt to outflank the Westwall through the flat Dutch territory to the north (Sept. 17–26) failed, and survivors of an Allied airborne division that was dropped at **Arnhem** had to be withdrawn.

10

### Sept. 15

The American Seventh and the French First Armies, sweeping up the Rhone Valley from beachheads won (Aug. 15) on the Riviera, joined the American Third Army at Dijon. The American, British, and French forces were then reorganized in liberated France for a projected assault on Germany.

## 12. [The Battle of Germany, 1945](#)

**THE ROLE OF AIR POWER.** In 20th-century warfare the assembly line became as important as the battle line and consequently an equally vital target for attack. The strategy of blockade adopted by the Allied governments was designed primarily to starve not the German population but German industrial and military machines, chiefly by cutting off fuel and essential raw materials. This aim could best be achieved by supplementing the naval blockade with a systematic **bombing of German factories, power plants, and transportation centers.** <sup>1</sup>

At the commencement of the Second World War, in 1939, the Germans possessed the strongest air force in the world. By the close of 1943, however, their bombing squadrons were depleted, though they still had a peak force of 3,000 first-line fighters. In 1944 the Allied air offensive was sharply intensified and German air strength declined decisively. Over 1,000 Luftwaffe planes were destroyed in January and February, and vital machine plants in **Essen** and **Schweinfurt** were crippled. **Gen. Henry H. Arnold**, commanding general of the U.S. Army air forces, later characterized the week of Feb. 20–26, 1944, as “probably the most decisive of the war” because of the shattering damage inflicted upon German installations in six days of favorable flying weather. By the end of hostilities the Germans had received 315 tons of explosive in retaliation for every ton of aerial bombs they had launched against Britain. Their loss in planes, by Jan. 1, 1945, had passed 50,000, in comparison with a total loss of 17,790 suffered by the U.S. air forces on all fronts. During the last four months of fighting, Allied air squadrons roamed Germany almost at will, destroying communications, obliterating plants and stores, and wrecking many of the remaining German aircraft on the ground, where they lay helpless for lack of fuel and repairs. <sup>2</sup>

The **military collapse of Germany** was consummated in four months by simultaneous drives launched by Soviet armies in the east and south and by American, French, and British imperial forces in the west. Concentration camps were liberated during the Allied invasion. 3

### Jan. 12

Opening a powerful **drive into Poland**, the Russians took **Warsaw** (Jan. 17), swept into **Tarnow, Cracow, and Lodz** two days later (Jan. 19), and forced the Germans to abandon the whole **Vistula defense line**. By Feb. 20 Russian mechanized units, spearheads of the encroaching Soviet host that numbered 215 divisions, were within 30 miles of Berlin. 4

### Feb. 4–12

**Yalta Conference.** While President Roosevelt, Prime Minister Churchill, and Marshal Stalin met at Yalta in the Crimea to plan the final defeat and occupation of Germany, the U.S. Third Army crossed the German frontier at ten points. British and Canadian divisions opened an offensive southeast of **Nijmegen** (Feb. 8). 5

### Feb. 22

The Third Army continued its progress, crossing the **Roer River**. American advance forces drove toward the **Ruhr Valley** (Feb. 23) and entered **Trier** (March 2) and Köln (March 5). Supreme Headquarters announced that 954,377 German prisoners had been taken since D-Day (June 6, 1944). 6

### March 7

The U.S. First Army **crossed the Rhine at Remagen**, and the German defense system on the east bank collapsed. By April 11 the U.S. Ninth Army had reached the **Elbe River**; eight days later the Russians fought their way into **Berlin** (April 20); and advance units of the **American and Soviet armies met on the Elbe at Torgau** (April 25). 7

## April 28

**German resistance in northern Italy broke** as American and British forces swept into the Po Valley (See [Aug. 12](#)). 8

## May 1

**BATTLE OF BERLIN.** Soviet forces continued to shell Berlin and fight their way into the capital. A German radio announcement from Hamburg declared that **Adolf Hitler had died** defending the Reichschancellery, and that **Adm. Karl Doenitz** had succeeded him. 9

One million German and Italian soldiers in Italy and Austria laid down their arms. 10

## May 4

The **dissolution of the German National Socialist regime** continued, with local military commanders making their own offers of capitulation. German divisions in northwestern Germany, the Netherlands, and Denmark surrendered. 11

## May 7

A group of **German army leaders** sent envoys to Reims, where they **signed terms of surrender**. 12

## May 8

President Truman for the United States and Prime Minister Churchill for Great Britain proclaimed the **end of the war in Europe (V-E Day)**. 13

## May 9

**Marshal Stalin** announced the end of the war to the Russian people. German army chiefs completed the formula of surrender in Berlin. 14

## **13. The War in Asia, 1939–1941**

### **1939**

**Economic penetration** and **military intervention** enabled the Japanese to bring a widening area of China under their control after 1931, and especially after 1937. They forced the Chinese Nationalists to establish a new capital at **Chongqing** (See [Nov. 20](#)). At the same time, the outbreak of war in Europe compelled the British, French, and Soviet governments to concentrate their forces in that quarter, and left the United States the only great power in a position to oppose Japanese expansion. <sup>1</sup>

### **Dec. 31**

**Russia and Japan reached an accord** concerning the renewal of fishing rights and the settlement of debt claims between Russia and Manchukuo. <sup>2</sup>

## **14. The War in the Pacific, 1941–1945**

**1941, Dec. 7**

The **JAPANESE SEA AND AIR FORCES LAUNCHED A SURPRISE ATTACK ON THE UNITED STATES BASE AT PEARL HARBOR, HAWAII, ON THE PHILIPPINES**, and against British forces in **Hong Kong** and **Malaya**. The U.S. forces were caught unprepared. At Hawaii five battleships and three cruisers were sunk or seriously damaged, three battleships less severely damaged, many smaller vessels sunk or crippled, and 177 aircraft destroyed. The casualties included 2,343 dead, 876 missing, and 1,272 injured. 1

**Dec. 8**

**THE UNITED STATES DECLARED WAR ON JAPAN**. Japanese air and naval forces attacked **Guam** and **Wake Island**. Resistance on Guam ended on Dec. 13 and on Wake Island on Dec. 20. **Great Britain declared war on Japan**. 2

**Dec. 10**

The British battleship *Prince of Wales* and the battle cruiser *Repulse*, which had been dispatched to Singapore, were sunk by Japanese aircraft off the Malay coast. 3

**Dec. 11**

**GERMANY AND ITALY DECLARED WAR ON THE UNITED STATES**. 4

**Dec. 21**

A **ten-year treaty of alliance** was signed at Bangkok **between Japan and Thailand**. 5  
The Thai government agreed to aid Japan and declared war (Jan. 25, 1942) against Great Britain and the U.S.

## Dec. 25

British forces at **Hong Kong surrendered** to the Japanese. 6

## 15. [The Organization of Peace](#)

The **League of Nations**, formed at Versailles in 1919, failed to curb powerful aggressors or to protect its weaker members from attack. It was never a well-balanced, truly supranational league, and proved itself unfit to deal with economic problems or to enforce its decisions. When the Second World War opened in 1939, the League of Nations had lost almost all its prestige and influence. 1

The **international anarchy**, repudiation of treaties, acts of aggression, and final outbreak of a general war that marked the 1930s brought home to peaceful nations the need for an organization better adapted to adjust international tensions and disputes. 2

Three **projects for international federation** took form in the war years 1939–45. In Europe, Germany, Italy, and their satellite states forged an anti-Comintern, antidemocratic bloc that Adolf Hitler called his “**New Order.**” In Asia and the East Indies the Japanese extended their power over a widening area, which they termed a “**Coprosperity Sphere**” and in which they promulgated the doctrine of Asia for the Asians. Both the German and the Japanese hegemony had contracted and finally collapsed in defeat by the summer of 1945. 3

The third international federation formed in the war years came to be known as the **United Nations Organization**. It was based ideologically upon the foundations of the **Atlantic Charter** (See [Aug. 14](#)); structurally upon the wartime solidarity of the “Big Three,” Britain, the Soviet Union, and the United States; and financially upon the credits (\$43 billion) made available by the lend-lease policy of the U.S. government to nations that opposed the Axis. The victory of the United Nations, achieved in large measure through the effective mobilization of world resources, left their leaders in a position to write the peace treaties. 4

**1942, Jan. 1**

Declaration by the United Nations at Washington to cooperate, on the basis of the Atlantic Charter, in employing their full forces against Germany, Italy, and Japan. The declaration was signed by the U.S., Great Britain, Soviet Russia, and 23 other nations at war. Subsequently 19 other nations adhered.

5

### 1943, Oct. 19–Nov. 1

Moscow conference of British, U.S., and Soviet foreign ministers, who agreed (China adhering) to establish an international organization for peace and security, to set up a European advisory commission on terms of German surrender, to separate Austria from Germany, and to destroy the Italian Fascist regime.

6

### Nov. 9

The **United Nations Relief and Rehabilitation Administration (UNRRA)** was established at Washington. This international body was to aid countries subjugated by the Axis powers.

7

### Nov. 22–26

**Cairo conferences** (Roosevelt, Churchill, Jiang Jieshi (Chiang Kai-shek) and **Cairo Declaration** on postwar treatment of Japan (Manchuria to be returned to China; Korea to be independent).

8

### Nov. 28–Dec. 1

**Tehran Conference** (Roosevelt, Churchill, Stalin): discussion of landing in France and of cooperation in the peace settlements. Agreement to set up a **European Advisory Commission** to study European problems.

9

### Dec. 4–6

**Second Cairo Conference:** futile efforts of Roosevelt and Churchill to induce Turkey (President İnönü) to enter the war.

## **VII. The Contemporary Period, 1945–2000**

### **A. General and Comparative Dimensions**

In the second half of the 20th century, the rivalry of two superpowers, the **United States** and the **Soviet Union**, dominated world political affairs. Within this political framework, **the globalization of virtually all aspects of human life continued**. Yet the intensification of global interactions resulted in neither a peaceful “one world” society nor a world filled with identical technological dictatorships. Instead, local anarchies and assertions of special identities coexisted with global communications and economic networks and new transnational and regional structures. The major global dynamics of the second half of the 20th century can be seen in two broad dimensions: the evolution of global relationships in political, economic, social, and cultural structures, and in scientific and environmental interactions; and the intensification and diversification of concrete international relationships of institutions and movements. <sup>1</sup>

#### **1. Changing Global Patterns**

Global relationships evolved in a number of important ways in the second half of the 20th century. The developments were reflected in three important areas: the changing nature of global power structures and conflicts; the impact of globalization on economics, science, and technology, and responses to the environment; and the emerging complex relationships among global, regional, and local aspects of culture and society. By the 1990s, there was considerable awareness of many different possibilities for the formation of “new world orders.” <sup>2</sup>

##### **a. Changing Structures of Global Power**

The basic nature of global power structures, and even the nature of the most important <sup>3</sup>

conflicts, changed significantly during the second half of the 20th century. Such changes were clearly visible in 1) the transformation of **imperialisms** and the development of **nationalisms**; 2) the evolution of the **cold war** and the basic framework for world politics; 3) the development of **international institutions** for conflict management and resolution.

## 1. Imperialisms and Nationalisms

At the end of World War II, a number of major European states still controlled significant overseas empires. In the postwar years, the main transformation was the **decline of the older empires** and the **emergence of two superpowers** that replaced them as the major world powers. During the war, **Allied** promises and **Axis** conquests had raised hopes of national independence in many areas. After the war, growing nationalism and European weakness, sometimes furthered by cold war rivalries for Asian and African allegiances, led to **decolonization**.

### 1945–54

**Reestablished empires and new states.** In the immediate postwar era, the major empires attempted to reestablish control in many areas but also granted independence to particular states. The empires faced movements of armed opposition and growing political nationalism.

**Armed opposition to empires.** In many of the areas that had been conquered by the **Axis powers** during World War II, there was armed nationalist opposition to attempts to reestablish European imperial control. In **INDOCHINA**, the **Viet Minh**, originally a movement of resistance to Japanese control, declared **Vietnamese independence** in 1945 (See [1945, Sept. 2](#)). However, the **French** attempted the reconquest of its Indochinese colonies; in the long **first Indochina war**, the French ultimately lost and withdrew after their defeat at **Dien Bien Phu** in 1954. In **INDONESIA**, the **Dutch** attempted to reestablish control after the Japanese defeat, in opposition to the independence declared in 1945 by nationalists led by **Sukarno** (See [1945, Aug. 17](#)). After a costly war, **Indonesian independence** was recognized in 1949. In **SYRIA** and **LEBANON**, French attempts in 1945 to reverse wartime agreements giving independence to the two countries were met with nationalist opposition. Under pressure from the United States, Great Britain, and the United Nations, French troops were withdrawn in 1946.

**Negotiated independence in the immediate postwar era.** The imperial powers and local leaders in a number of countries were able to negotiate arrangements for

independence. In **SOUTH ASIA** negotiations led to independence for **Ceylon** (now Sri Lanka) from the **British** in 1947, and for **Burma** in 1948. **INDIA** was partitioned and, in 1947, became the independent states of **Pakistan** and **India**. Britain also withdrew from **PALESTINE**, where a United Nations–defined partition resulted in the establishment of **Israel** in 1948 and in the emergence of a **Palestinian** nationalist movement seeking to create an Arab Palestinian state. Both partitions resulted in bloody conflicts, but Great Britain was not involved directly in either postindependence war. However, **Jewish guerrilla** warfare during and immediately after World War II had put added pressure on the British to withdraw from Palestine. **JORDAN** received formal independence from its mandate status in 1946, although it maintained a special treaty relationship with Britain until the 1950s. **The Philippines** were proclaimed independent in 1946, shortly after their reconquest by the **United States** from Japan. **Former Italian colonies** were special cases. After considerable disagreement among the major powers, the United Nations established the independent Kingdom of **LIBYA** in 1951, and voted in 1950 to affirm the independence of **SOMALIA** under the trusteeship of Great Britain and Italy. **Eritrea** was included in the newly liberated **Ethiopia** with some autonomy, which was later lost in the 1950s.

## 1954–69

**Victory of nationalism.** In the 1950s and 1960s, the classic struggles between nationalism and imperialism reached a climax. By the end of the 1960s virtually every major colony in the large European overseas empires had gained its independence, and only smaller dependencies remained. This was achieved both through costly wars of **nationalist revolution** and **continuing negotiations**. The end of the European empires was often overshadowed by the tensions of the cold war, which threatened nuclear global destruction rather than costly local conflicts. Nevertheless, the end of the old empires marked a major transition, and the newly independent states became important members of the emerging **THIRD WORLD**, between the communist world and the West.

**Wars of nationalist liberation.** In a number of countries, independence came only after a fierce fight. In contrast to the nationalist wars of the late 1940s, these later wars did not build on structures developed as a result of World War II so much as they were the products of distinctive local developments involving imperial policies and nationalism. In **ALGERIA**, there was a large French settler community, and the French claimed that Algeria was part of France, not a colony. The Algerian war for independence (See [1954–62](#)) began in 1954, under the leadership of the **Front de libération nationale (FLN)**. The war involved counterrevolutions by conservative French Algerians and a transformation of the French political system itself. Finally, in 1962, after perhaps more than one million war deaths, Algeria became independent under an FLN government.

8

9

The **British** faced three major colonial conflicts in the 1950s. In **CYPRUS**, Greek Cypriot nationalists sought union with **Greece** and engaged in sometimes violent opposition to both the British and Turkish Cypriots. After negotiations that included Greece and Turkey, Cyprus became independent in 1960. In **KENYA**, local Kenyan resistance, especially to British settlers, led to the violent **Mau Mau uprising**, which was suppressed in 1955 (See [1952–59](#)). However, the uprising increased pressures for negotiations, and Kenya achieved independence in 1963. In **MALAYA**, the British reestablished control at the end of the war, but a **communist revolt** began in 1948 among some Chinese Malaysians. This conflict was costly, but it encouraged the British and the Malayan nationalists to move toward agreement on independence. The suppression of the revolt by 1955 was followed by Malayan independence in 1957 (See [Aug. 31](#)) and the formation in 1963 of the **Federation of Malasia** which included Singapore, Sarawak, and North Borneo, as well as Malaya.

10

The achievement of independence in the **PORTUGUESE COLONIES** involved wars of national independence following the **revolution of 1974** in Portugal itself. In **ANGOLA**, a number of nationalist groups with essentially regional identities emerged by the 1960s. In 1961 a multisided conflict began in which three major groups fought against the Portuguese and each other. Negotiations after the 1974 revolution resulted in the proclamation of Angolan independence in 1975. Agreement among the liberation movements was brief, and the **Movimento Popular de Libertação de Angola (MPLA)** formed a regime that received much international recognition. A postindependence civil war followed, which continued into the 1990s. In **MOZAMBIQUE**, the **Frente de Libertação de Mozambique (FRELIMO)** began a revolution in 1964 against the Portuguese that resulted in independence in 1975. In the small Portuguese colony of **Guinea-Bissau**, a remarkable, ideologically radical movement led by **AMALCAR CABRAL**, who was murdered in 1973, began a guerrilla war in 1963. By 1973, the movement controlled much of the territory and declared independence, which was recognized by the Portuguese after the 1974 revolution.

11

In **SOUTHWEST AFRICA (NAMIBIA)** a long war of national liberation was begun by the **South-West African Peoples' Organization (SWAPO)** in 1966. The **Republic of South Africa** received a League of Nations mandate granting control over the former German colony at the end of World War I, and it continued to control the area in defiance of the United Nations after World War II. **SWAPO** received considerable international support, but **Namibia** became independent only in 1990, after almost 24 years of nationalist guerrilla warfare.

12

**Negotiated independence.** During the 1950s and 1960s an extraordinary transformation took place, especially in Africa. In the 1950s, a few countries were the harbingers of a flood of new countries to come. **Sudan** (1956); **Ghana**, the former Gold Coast (1957); and **Malaysia** (1957) received independence from Great Britain. France agreed to the independence of **Morocco** and **Tunisia** in 1956. In 1958, **GUINEA**, under the

13

leadership of **Sékou Touré**, voted to become independent rather than to be a member of the French Community. Then, 1960 was a **year of independence** in Africa. Thirteen former French colonies became independent members of the French Community; **Nigeria, Togo, and Somalia** received independence from Great Britain, and the Belgian Congo (**Zaire**) became independent and almost immediately was plunged into civil war. By 1969, another 15 African states had become independent, including **Southern Rhodesia**, whose white regime made a unilateral declaration of independence that received little international recognition. In the **Caribbean region**, four dependencies had become independent by 1969; elsewhere there were also the new island states of **Malta** (1964), the **Maldives** (1965), and **Mauritius** (1968).

**Newly independent states** became a significant feature in global affairs. In 1945, 51 states had signed the **Charter of the United Nations**. Then, between 1954 and 1969, 53 newly independent states also became members of the United Nations. This reflected the **triumph of nationalism** and the end of the age of the European overseas empires.

14

## 1970–90s

**Changing nature of new states.** In the final decades of the 20th century, the status of the remnants of the European overseas empires was defined, with a number of newly independent **ministates** being established. However, additional new states emerged as nationalist movements developed in response to other types of multinational and multiethnic structures, such as the Soviet Union. By the 1990s, a new process of national state formation had replaced decolonization as the major source of new state structures.

15

**The remnants of overseas empires.** In the 1970s and 1980s, most of the last small colonial holdings of European powers gained independence. Island groups in the **PACIFIC BASIN** that had come under imperial control in the 19th century had their political status defined. Some had been colonies; the former German colonies had been League of Nations **mandates** and United Nations **trusteeships** placed under the control of various powers. Among the first to gain permanent status were **Hawaii**, which became the fiftieth state of the United States, and **Western New Guinea**, which became a part of Indonesia in 1963. Independence was gained by **Western Samoa**, a New Zealand trusteeship, in 1962, and by **Nauru**, an Australian trusteeship, in 1968. Between 1970 and 1990, eight additional independent Pacific basin states were established. **East Timor** was annexed by Indonesia in 1976, following the Portuguese withdrawal, but a guerrilla movement fighting for independence emerged. In the 1990s, some island groups remained under the control of the United States, France, Australia, and New Zealand. In the **PERSIAN GULF** region, **Kuwait** had already become independent in 1961, and Britain formally withdrew from **Bahrain, Qatar**, and the small states that joined together in the **United Arab Emirates** in 1971. In the **CARIBBEAN**, nine new

16

independent states emerged from British and Dutch control, though some islands, like the Caymans, opted for continued colonial status qualified by local autonomy. Between 1970 and 1990, 34 more new states joined the United Nations.

**Postcolonial new states.** In the final decades of the 20th century, **SEPARATIST MOVEMENTS** had little success in many areas, but the establishment of independent **Bangladesh** in the former East Pakistan, as a result of a civil war in 1971, was an important exception. Before the late 1980s, there had been a number of civil wars in newly independent states in which regions attempted to secede. In **AFRICA**, the newly independent nations maintained their imperially defined boundaries, despite their often arbitrary nature. As a result, there were regional factions that wished to break away from countries they did not feel themselves to be a part of. Regions that attempted to secede in unsuccessful wars included **Katanga in Congo** (1960–63), **Biafra in Nigeria** (1967–70), and southern **Sudan** (1955–72, 1981–90s). The only successful African secessionist movement was in **ERITREA**, where the Eritrean liberation movement fought against a series of different Ethiopian regimes and finally succeeded when a dictatorial Marxist regime collapsed in 1991; a referendum confirmed its independence in 1993. Elsewhere, **KURDS** failed to create an independent state from the Kurdish areas of **Iraq, Turkey,** and **Iran**, although a short-lived Kurdish republic was created by the Soviet Union in northern Iran (1945–46) and an autonomous Kurdish region in northern Iraq received international protection after the Persian Gulf War of 1990–91. **TAMIL** separatists in **Sri Lanka** began a revolt in 1983 that continued into the 1990s, and **Philippine Muslims** fought for autonomy or independence in some southern islands throughout much of the second half of the 20th century.

**REDEFINED STATES.** In the early 1990s, there was another burst of new states. Most of this activity was the result of a redefining of the political status of ethnic and national groups in the wake of the **collapse of the Soviet Union** and its Eastern European empire, and of the new ways in which existing political identities were recognized. From 1990 to the end of 1993, 28 states were admitted to the United Nations. Eighteen new members were former republics of the **Soviet Union**, four had been part of **Yugoslavia**, and two new states emerged out of the former **Czechoslovakia**. The other new members were two **Pacific island groups, North and South Korea**, and the two African states whose wars of liberation were finally successful, **Namibia** and **Eritrea**. In addition, four old European ministates that had been dependent on larger neighbors for representation (**Andorra, Liechtenstein, Monaco, and San Marino**) became independent members of the United Nations. The new states reflected the **end of centralized, multinational empires** of the old style, even the continental empire of Russia, and the emergence of a new era of **smaller ethnic states** and **larger unions of states** of a Common Market or confederation type. At the same time, larger structures of international coordination were being built. Not only the European Common Market but also the Confederation of Independent States, loosely linking most former states in the Soviet Union, and the North American Free Trade Association (1993), suggested new regional coordination.

The domination of global affairs by European empires or by the two great superpowers had come to an end by the 1990s.

## b. [Globalization of Material Life](#)

During the second half of the century, many important aspects of individual and societal life developed patterns of global interaction. This was visible in a number of important areas: in the evolution of state and private economic structures; in developments in science and technology; and in response to the changing physical environment. <sup>1</sup>

### 1. Evolution of International Economic Structures

Major changes took place in the international structures of economic life. These were visible in the institutions regulating international finance and international trade and in the further development of nongovernmental multinational economic institutions. <sup>2</sup>

**International finance:** The **Bretton Woods system** (1945–71). A conference of the Allied powers was held near the end of World War II in Bretton Woods, New Hampshire. At that meeting, the major institutions for the management of the international monetary and financial order were agreed on, and the result was the creation of the **International Monetary Fund (IMF)** in 1945 and the **International Bank for Reconstruction and Development** (the World Bank), which began operation in 1946. The Bretton Woods system involved the easy convertibility of the major currencies, with the foundation being the **U.S. DOLLAR** and the guarantee by the U.S. government that dollars could be exchanged for **gold** at a rate of \$35 per ounce. The U.S. dollar became the major medium of international financial exchange. A large U.S. **balance-of-payments deficit** resulting from transfers of funds to support reconstruction and development in programs like the **Marshall Plan** (1947) and direct U.S. investment overseas provided the **liquidity** necessary for rapid global economic development and growth. However, by the 1960s this system began to have difficulties: dollar holdings outside of the United States began to exceed the total value of U.S. gold reserves, creating a destabilizing **dollar overhang**; in 1971, for the first time in the century, the value of U.S. imports exceeded that of its nonmonetary exports; while the U.S. economy was still clearly the world's largest, other major economies had developed as powerful <sup>3</sup>

rivals or partners. In an effort to supplement the role of the dollar, a new reserve asset called **special drawing rights (SDR)** was developed in 1969, but a major change in the international system was required.

**International finance: Post–Bretton Woods.** A series of measures significantly changed the international monetary system. The United States ended its commitment to exchange gold for dollars in 1971, and the **Smithsonian Agreement** (1971) began the process of international monetary reform. In 1973, the United States ended fixed exchange rates between the dollar and other major currencies; the most important feature of the post–Bretton Woods system was **flexible exchange rates** among all major currencies. Instability of currency values was lessened by the efforts of major governments to coordinate their economic policies. This was aided by the meetings of financial policy leaders from the **GROUP OF SEVEN (G-7)**, the seven largest Western economies (the United States, Japan, Germany, France, Britain, Italy, and Canada). These meetings began in 1976 and became annual events that ranged over a host of international issues, including currency. In this new system gold had a less important role, and **SDRs**, defined as a weighted mixture of major currency values, became by the 1980s an important unit of accounting; the system as a whole was more volatile and more openly related to politics as well as economics. By the 1990s, **JAPAN** emerged as a major international financial center, with nine of the world's ten largest banks in terms of assets; in 1987 it had surpassed the United States as the world's major creditor. The post–Bretton Woods system was not as centralized as the earlier system, but global interactions were of increasing importance to all levels of economic life throughout the world.

Both the IMF and the World Bank also played recurrent roles in providing **investment aid** to developing (not yet fully industrial) nations. In return for investment capital, both organizations typically tried to require more stringent national fiscal policies, including less government expenditure, which posed potential political problems for the nations involved—as in parts of Latin America and Africa in the 1980s and 1990s (See [1970s–The Present](#)).

**International trade regulation, 1945–93.** At the end of World War II, the Allied powers were anxious to avoid the trade wars and protectionism that had been an important part of the Great Depression of the 1930s. Following the war, the UN Economic and Social Council convened a committee to draft a charter for a proposed International Trade Organization. That organization was not created, however; instead, the preliminary **GENERAL AGREEMENT ON TARIFFS AND TRADE (GATT)** was adopted by 23 states and became the basic instrument for regulating international trade in the second half of the 20th century. With a secretariat in Geneva, the **GATT** supervised **eight “rounds”** of multilateral trade negotiations to reduce tariffs and encourage international trade. The first were held in Geneva (1947); Annency, France (1949), Torquay, England (1951–52); and Geneva (1955–56). The Dillon Round

(1961–62) was named for U.S. secretary of the treasury Douglas Dillon, and the Kennedy Round (1963–67) for President John F. Kennedy. The **Kennedy Round** involved across-the-board industrial tariff reductions, and in 1965 the signatories added a new section to the agreement addressing positive encouragements for the international trade of **less-developed countries**. The **TOKYO ROUND** (1973–79) dealt with a major restructuring of trade in response to the transformation of the international monetary system with the end of the **Bretton Woods arrangements** in 1971, and a comprehensive set of agreements was approved. The eighth round, the **URUGUAY ROUND**, began in 1986 and dealt with many new areas. Negotiations were suspended in 1990 as a result of disagreements relating to agricultural subsidies in the European Community. Discussions were resumed in 1991, and a major new pact was completed in 1993 that was signed by officials from 125 states at a meeting in Morocco in 1994. The agreement represented a significant further liberalization of global trade regulations. It also established the **WORLD TRADE ORGANIZATION** as the successor to GATT, with increased powers to mediate trade disputes and enforce adherence to existing agreements.

**GATT** began in 1947 with 23 members, and by 1994 its membership had grown to 117. At that time, reflecting the end of the cold war, Russia was seeking formal membership along with China, whose membership had been suspended in 1950. GATT negotiations had transformed the conditions of international trade. They had succeeded, for example, in reducing average tariffs on industrial goods from about 40 percent in the years following World War II to about 5 percent of their market value in the 1990s. The globalization of trade regulation helped the world economies to avoid a repeat of the economic crises of the era between the two world wars. This was accomplished in the context of a profound expansion of international trade and of its importance in the life of every society.

**Multinational corporations.** In the second half of the 20th century, private corporations became an increasingly important part of global economic life. Following the lead of older commercial trading companies and the relatively small number of large internationally active companies in the first part of the century, companies of all sizes began to participate in international investments and enterprises after World War II.

## 1945–71

**Era of American predominance.** Following the war, multinational corporations based in the United States tended to dominate global international business. This reflected the importance of the U.S. dollar and the strength of the U.S. economy in the era of the **Bretton Woods system** in international finance. American corporations were a major mechanism for the circulation of dollars in the global economy, and they made

significant investments in many different countries, especially in Europe. The book value of direct foreign investments by U.S. companies rose from \$7.2 billion in 1946 to almost \$71 billion in 1969. Much of the U.S. international investment in this period was made by large, already internationally established corporations like **Ford**, **General Motors**, and **Standard Oil (New Jersey)**, and in such industries as the **auto industry**, **oil**, and **chemicals**, where a few large companies dominated the market. The international nature of much of the corporate activity was in **finance** and **management** rather than in actual production. Multinational corporations would buy or establish **subsidiaries** or establish **production facilities** in other countries, and these organizations would then operate as they might have in the “home country” of the corporation.

By the late 1960s, this situation was changing. Growing numbers of smaller U.S. companies were establishing overseas facilities, and investment by European companies in the United States increased. In 1969, the merger of **British Petroleum (BP)** with **Standard Oil (Ohio)** and the takeover of **Wyandotte Chemicals** by the German chemical giant **BASF** signaled the beginning of an era of major foreign corporate involvement in the U.S. economy. As the Bretton Woods system came to an end in the early 1970s, the world of multinational corporations was also changing significantly, with many new participants becoming involved in the global economy.

**Transformation of the petroleum industry.** The evolution of the petroleum industry in the second half of the 20th century illustrates the changing nature of the global world of business. In the first half of the century, the industry was dominated by a **cartel** of seven large oil companies that set global prices and production levels while competing actively among themselves. These companies were among the largest multinational corporations, and direct foreign investment in petroleum industries was a major part of global business. Following World War II, this domination continued. When one member of the cartel, the **Anglo-Iranian Oil Company (AIOC)**, half owned by the British government, was nationalized by the **Iranian government** in 1951, the cartel was able to respond successfully through sanctions and a boycott. It reestablished control over Iranian oil through a consortium arrangement in 1953, and AIOC was reorganized as **British Petroleum**. The real challenge came with the creation of the **ORGANIZATION OF PETROLEUM EXPORTING COUNTRIES (OPEC)** in 1960, whose initial goal was to limit the ability of the major companies to reduce oil prices. By 1970, OPEC members began to work together to coordinate production and thus control supply and, ultimately, prices. For a short period (1971–73), prices were set by consultation between OPEC and the oil companies. The **Arab-Israeli War of 1973** and changing market conditions were the occasion for an **Arab oil embargo** on sales to allies of Israel and a significant increase in oil prices. By the end of the crisis, basic prices were no longer set by the companies. In terms of investment, in 1960 more than 40 percent of U.S. direct foreign investment was in petroleum industries, but this was reduced to 14 percent by 1990. These changes coincided with a significant restructuring

10

11

of the international oil industry. In the first half of the century, oil companies had been granted **concessions** by governments to explore for and produce petroleum. Governments were paid **royalties** on a per-barrel basis. After World War II, there was a change to **profit-sharing** arrangements in the 1950s and then to the gradual assumption of ownership of production facilities by the governments of the producing countries. In **SAUDI ARABIA**, the original exploration and production concession was granted to **Standard Oil of California (SOCAL)** in 1933. SOCAL's concession became the basis for Arabian American Oil Company (**ARAMCO**), a consortium of four major American oil companies, which developed the Saudi oil industry. In 1950, ARAMCO agreed to the shift from per-barrel royalties to profit sharing. In the early 1970s, participation was accepted by ARAMCO; the Saudi government acquired 25 percent of ARAMCO in 1973, 60 percent in 1974, and became the full owner in the early 1980s. The major oil companies maintained close relations with the Saudi-owned company and became global distributors for its products. This evolution of control occurred in most other oil-exporting countries as well. It reflected the broader trends of the final decades of the century, with a clear globalization of activity but a decentralization of control. The old cartel of oil companies was replaced by an organization of governments that had less control over the dynamics of the world markets but was operating in a more globalized economic situation.

## 1971–93

**New world of multinational corporations.** In the final decades of the century, the nature of multinational business operations changed in significant ways.

12

**INTERNATIONAL INTEGRATION OF PRODUCTION** reflected the globalization of economic enterprise. Increasingly, multinational corporations developed diversified production facilities in which parts were made in many different places and then assembled, rather than setting up comprehensive production facilities in different countries. In the multinational automobile industry, for example, by 1980 cars like General Motors' J-car were built of parts produced in many different countries, and by the 1990s virtually no automobile could be said to have been completely produced within one country. This integration was seen in many different types of multinational operations; as major **fast-food companies** like McDonald's became global in operation by the 1980s, French-fried potatoes were prepared and frozen in one country and shipped to another for consumption. The **GLOBAL SPREAD OF MULTINATIONAL OWNERSHIP** was another important feature of the changing nature of multinational business operations. The business world went from being dominated by a few large companies in the United States and Western Europe involved in a small number of industries to a global distribution of companies large and small in virtually every industry. By the 1980s there were more than 10,000 significantly

multinational corporations, including important firms from developing countries, such as India, South Korea, Taiwan, Singapore, and Brazil, as well as the older industrial states. This is reflected in the **automobile industry**, where U.S. companies produced more than two-thirds of the world's motor vehicles in 1950 but barely one-fifth in 1980. In the 1950s, Britain was the second largest producer; it was displaced by West Germany in the 1960s; and **Japan** became the second largest producer in the 1970s and passed the United States in production in the 1980s. Other countries—such as South Korea, Brazil, and Mexico—became important producers in the 1980s. By the 1990s, ownership of production was also more diversified, as was seen in many different countries. More than 10 percent of the production capacity in North America was owned by non-U.S. corporations, and an important factor in the revitalization of the British auto industry was the establishment of production facilities in Britain by Japanese companies like **Toyota, Nissan, and Honda**. In **Iran**, an auto industry was developing around Iran Khodro, a joint venture with the French company Peugeot, and a second joint venture was established with Daewoo, the third largest automaker in South Korea.

The **NORMALIZATION OF GLOBALIZED ECONOMIC ENTERPRISE** was firmly established by the 1990s. Significant foreign participation in or ownership of local enterprises around the world became an accepted fact. Complex interconnections on both very large and very small scales created global economic networks that became a normal part of local and multinational business enterprise. In a typical situation, Kirin Brewery, a Japanese corporation, became the parent company of a Coca-Cola Bottling Group in a small northeastern state in the United States. Multinational corporations had a growing impact on daily life, as can be seen in the expansion of consumer food companies. Soft drink firms became highly visible participants in the expansion of multinational business enterprise in the second half of the century. **COCA-COLA** was an early multinational corporation, and its soft drink products could be found in many countries even before World War II. By 1994, with the establishment of a bottling plant in Albania, Coca-Cola was made in 197 countries. By the 1990s, the rivalry between **Pepsi-Cola** and **Coca-Cola** was strong in Russia and Vietnam as well as in most of the rest of the world. **Fast-food chains** had a significant impact on world eating habits by standardizing products and expectations and providing new concepts of service. **McDonald's** became an economic power, encouraging some countries to reorganize agricultural production to provide potatoes and meat for the chain. By 1994, McDonald's had more than 4,700 overseas stores in 71 countries (having doubled its total in about five years). The **Kellogg Company**, a U.S. producer of breakfast cereals, opened a plant in Latvia in 1994 and began an effort to transform the concept of breakfast in the former communist world.

The diversity of multinational economic affairs was reflected in the changing topics of debate in the **GATT rounds**. Important debates in the final Uruguay Round involved not only the usual discussions of tariffs on industrial and agricultural products, but also talks on opening domestic markets to foreign legal services, accounting, and computer

13

14

**software** concerns. U.S. officials were disappointed that there was no agreement on opening **audiovisual** markets, especially in television programming and videocassettes, since **entertainment** had become the second largest U.S. export industry in terms of dollar value. The world of multinational business was global in nature and had become an important factor in the daily life of every society, reflecting the complex, interconnected nature of human life at the end of the 20th century.

### c. Globalization and Special Identities

During the second half of the 20th century, a complex relationship developed between two major historical dynamics. One was the intensification of the globalization of all aspects of human life and the other was the continuing affirmation of special human identities. By the 1990s, globalization had not resulted in the emergence of either a single, global society or a network of fundamentally similar societies. Instead, special identities coexisted with global communications and economic networks and new transnational and regional structures. These developments are clearly visible in two major areas: 1) the development of ethnic and national identities, and 2) the evolution of identities based on particular ideologies and religions. <sup>1</sup>

**ETHNIC AND NATIONAL IDENTITIES.** The emergence of nationalist opposition to the old empires in the period following World War II was an important factor in the nature of nationalist identities. Old ethnic and special cultural identities were associated with particular languages or historical traditions. However, the state boundaries that had been created by the imperial powers often did not match the regional boundaries of those old identities. When **NATIONALISM** developed, it did so within the framework of the imperially created political units, and it was those states that became nationally independent; **existing state identities** were the basis for the most effective nationalist movements. Movements for broader unity had only limited success. **ARAB NATIONALISM** developed in the first half of the 20th century as a broad regional sentiment, but nationalist movements in the Arab world were identified with the individual imperially created states, such as Algeria, Syria, and Palestine. The formation of the **Arab League** in 1945 was an important manifestation of Arab unity, but it was a coordinating organization of sovereign states. During the 1950s, enthusiasm for substantive Arab unity was encouraged by Egyptian president **Gamal Abdel Nasser** and resulted in the creation of the **United Arab Republic (UAR)**, joining Egypt and Syria. However, the UAR only lasted for three years (1958–61), and other projects for Arab political unity remained unimplemented. **PAN-AFRICAN NATIONALISM** had roots in movements in the first half of the 20th century, and as many African states became independent, there was a hope of greater African unity. When the British colony of the Gold Coast became independent as **Ghana**, under the leadership of **KWAME** <sup>2</sup>

**NKRUMAH** in 1957, it assumed a leading role in African unity. Nkrumah was host to two pan-African congresses in 1958, but when the **Organization of African Unity** (OAU) was formally created in 1963, its charter affirmed the independence and territorial integrity of the individual member states. The OAU was effective in mediating disputes between African nations, and it coordinated expression of African views in international bodies, but the **pan-African vision** of a unified Africa was not realized. In the period from 1945 until the early 1970s, **state-based identities** remained the most effective, even when the states had been arbitrarily created by imperial and political settlements. Along with broader unification efforts, separatist movements also generally failed, as was the case in **Congo (Kinshasa)** (1960–64), **Nigeria** (1967–70), and among the **Kurds** in the Middle East. States created by partitions that were assumed to be temporary following World War II were still in existence at the beginning of the 1970s: the **two Germanies**, the **two Koreas**, and the two states in **Vietnam**.

### 1970–93

**Ethnic revival and nationalism.** In the early 1970s, increasing attention began to be given to cultural-linguistic sources of identity, and ethnic groups in new forms emerged as important elements in individual societies and on the global scene in general. The development of groups like the **Black Panthers** in the United States during the 1960s was an early signal of the change. Movements affirming black identity in the U.S. were not necessarily separatist or nationalist, but they strongly affirmed a distinctive ethno-cultural identity in the face of pressures for uniformity in modern society. In countries where there was a strongly established “national” identity, there was a rise in the importance of local ethnic traditions. In Great Britain, **Welsh nationalism** succeeded in achieving parity for Welsh with English in governmental matters in Wales in 1967. The **Scottish National Party** had been organized in the interwar period but remained unimportant until the 1960s. By the 1990s, the party had become a small but important part of the British political scene, regularly electing members to Parliament. In **Canada**, there was a major revival of **French-Canadian separatism** in Quebec. In many countries, activist—and sometimes violent—movements of ethnic identity gained strength after the early 1970s. A number of cultural-linguistic groups began to have more success asserting their identity in political ways. In 1971 the Bengali eastern part of Pakistan seceded and formed the new state of **Bangladesh**, and **Vietnam** was reunited by the communist victory in 1975. In the late 1980s a major political reorganization of countries based on historic cultural identity began as the **Soviet Union** and **Yugoslavia** broke up into their constituent republics, and the **reunification of Germany** also took place. By the 1990s, throughout the world there were active movements affirming their cultural and linguistic identity in many different ways. These included continuing separatist movements among the **Tamils** in Sri Lanka, the **Basques** in Spain, on **Timor** in

Indonesia, and among many groups in the former Soviet Union, such as the **Abkhazians** in Georgia. Tensions between Hutu and Tutsi peoples in **Rwanda** resulted in 1994 in one of the bloodiest of these conflicts. Other groups affirmed their special identity in other ways—by reviving older customs or seeking cultural autonomy—as was seen among some **Native Americans** in the Western Hemisphere, the Swedish-speaking minority in **Finland**, and in the continuing definition of the relationship between the **Flanders** and **Wallonia** in Belgium. By the 1990s it was clear that the social and technological globalization of the second half of the 20th century had not dissolved cultural-linguistic boundaries between peoples. Instead, through new media for communication and interaction, the conditions of the new, globalized world societies seemed to encourage affirmations of special identity and made such affirmations more effective.

**IDEOLOGICAL AND RELIGIOUS IDENTITIES.** Some of the major global conflicts <sup>4</sup> in the 20th century were drawn along lines of ideology and worldview. The competition between the world visions of Wilson and Lenin and the rise of fascism in the interwar era are part of this. In the era of the **cold war**, the conflict had a major ideological dimension as a conflict between communism and democratic capitalism. The main ideologies of the 20th century were global in their scope and vision. As nationalism developed, it reflected the different ideological frameworks; nationalism emerged in democratic, liberal forms or in Marxist, radical forms in the era following World War II.

### 1945–70s

**Global political ideologies.** In the era of the active cold war, the framework for <sup>5</sup> ideological competition was the conflict between Marxist radicalism and Western liberalism. Movements asserting distinctive national identities expressed their nationalism in terms of these conflicts. As the **Third World** emerged by the 1960s, the **Nonaligned movement** developed, at the core of which was a group of nationalists strongly influenced by Marxist political radicalism. The new and most visible Third World leaders of the 1960s were **Nasser** in Egypt, **Sekou Touré** of Guinea, **Nkrumah** of Ghana, **Fidel Castro** of Cuba, and **Sukarno** of Indonesia, all of whom developed and advocated an ideologically radical nationalism. Their more conservative rivals, like **Muhammad Reza Pahlavi** in Iran, **Ferdinand Marcos** in the Philippines, and **Houphouët-Boigny** in the Ivory Coast, also expressed their visions in terms of politically ideological nationalisms. Leninism, Wilsonianism, Maoism, radical nationalism, and conservative nationalism all shared the character of being **political ideologies of modernization**. They were not clearly identified with existing religious traditions and accepted many of the modern assumptions about progress, modern science, and rationalism that were the basic characteristics of Western European thought as it emerged from the 18th century. By the early 1970s, the cold war entered the full **détente stage**, making the Soviet-U.S. rivalry less acute in the Third World, and important new ideological changes took place in many

areas. The student demonstrations in **Paris** in 1968 (See [May–June](#)), the **antiwar movement** in the U. S., and other demonstrations in the late 1960s reflected the growing disillusionment with all of the major ideologies. The **New Left** rejected much of Soviet-defined Marxism; radical nationalisms in the Third World had created repressive states; modernization and economic “progress” was beginning to be recognized as disastrous for the environment; leaders like the Shah of Iran and Marcos of the Philippines, who received support from democratic liberalism, were creating oppressive dictatorships. There was a gradual shift in worldview to a less ideological pragmatism and also to activist approaches more explicitly tied to the major religious traditions.

## 1970s–93

**Global religious revival.** In many areas of the world, changing conditions and attitudes supported a revival of religions. Some of this took the simple form of increased adherence to existing rules and greater sensitivity to the message of religion in the modern context. The **ROMAN CATHOLIC CHURCH** was an early leader in this revival of religious activism. The great Ecumenical Council, **VATICAN II** (1962–65) (See [1962, Oct. 11](#)), issued many important documents defining the Roman Catholic Church and its role in the modern world. Vatican II had a worldwide impact and was especially important in the development of political ideology in Latin America. A 1967 papal encyclical, *Populorum progressio*, and a major conference of the Latin American bishops in 1968 in Medellin, Colombia, clearly defined a position of opposition to social injustice and oppression. Building on this foundation, a movement of **LIBERATION THEOLOGY** developed that presented a clearly defined theological position in the writings of people like **Gustavo Gutierrez** and advocated and worked for significant social change. This brought some Catholic leaders into open conflict with social and political conservatives, and in the civil war in El Salvador, **Archbishop Oscar Romero** was murdered in 1980. Priests like **Ernesto Cardenal** in Nicaragua were active in developing new structures, such as “base communities,” and participated in the **Sandinista** revolutionary movement. 6

Movements of religious activism and revival developed in virtually all major religious traditions. Many of these took a form that is frequently referred to as **fundamentalism**, calling for a return to traditional beliefs and moral codes. Fundamentalists were not always literally traditional—for example, many were less tolerant than their religions had previously been—and they often used new methods of propaganda. **Protestant fundamentalism** became more assertive in the United States in the 1980s, and also spread rapidly in Latin America; after 1989 there was also growing missionary activity in Russia. In the **ISLAMIC WORLD**, many revival movements developed. Some, like the **Muslim Brotherhood** (See [1928](#)) in Egypt and the **Jamaat-i Islami** in South Asia, already had a long history. Others emerged as important forces in the 1970s, and by the 7

1990s, explicitly Islamic organizations were either the largest opposition group or an important part of the government in virtually every country where the majority of the population was Muslim. The **ISLAMIC REVOLUTION IN IRAN** (See [1978–79](#)) in 1978–79 overthrew the Shah and established a republic that became the most visible Islamic government in the world. An Islamic movement also came to power in **Sudan** through a military coup in 1989. In **Algeria** the Islamic party was about to win the parliamentary elections of 1991–92 when a military coup prevented the completion of the elections. A **HINDU** religious revival became an important part of Indian history by the 1980s. In the early 1990s, the **Bharatiya Janata Party**, which supported an actively Hindu program, emerged as the largest opposition group in the Parliament. In 1992, Hindu extremists destroyed a mosque in **Ayodhya**, and hundreds of people were killed in the subsequent Hindu-Muslim rioting. Also in India, the **SIKHS** experienced a revival. In its militant form, the revival involved the demand for an independent Sikh state in the Punjab. The formation of **Akali dal** in 1980, an organization advocating Sikh independence, began an era of conflict. **BUDDHISM** experienced revivals in a number of areas as well. In the conflicts in Southeast Asia, Buddhist priests were sometimes involved, and with the disintegration of the communist world, some areas, such as **Mongolia** and **Laos**, experienced a revival of interest in Buddhism. In Japan, **Soka Gakkai**, a major Buddhist organization, grew significantly as did Buddhist groups in North America.

At the same time that some aspects of the religious revival emphasized distinctive identities, globalization of religious organizations also occurred. The **Roman Catholic Church** had long been a global organization, but its most rapid expansion has been outside of the West. In 1974, less than 15 percent of the world's Roman Catholics were in Asia and Africa, but by 1994, more than 25 percent of the estimated membership in the Church was on those two continents. Among the other Christian churches, the formation of the **World Council of Churches** in 1948 created a global organization that continued to be a voice throughout the rest of the century. The global nature of religious life, as well as the continuing importance of the distinctive traditions, was emphasized by the convening of the **Parliament of the World's Religions** in Chicago in 1993. This was held on the centennial of a similar parliament convened during the Chicago World's Fair in 1893, emphasizing that the processes of globalization were long-standing in religion. The parliament was basically a gathering of representatives of different traditions rather than a convention of believers sharing a common creed, reflecting the complex interactions between the processes of globalization and maintenance of distinctive identities in the 20th century.

8

(See [1947, Feb. 10](#))

## **2. International Relations**

International relations in the 50 years following World War II were dominated by the **cold war** between the two superpowers, the **Soviet Union** and the **United States**. The half century was a time of increasing globalization in all areas of life, so international relations also reflected those transformations in social and religious life, changes in the networks of economic relations, the rise of nationalism and decline of the old empires, and many other developments. The period can be **divided into two eras, with the beginning of the 1970s marking a time of transition** in the cold war, a change in the global economic system, and a shift from the old empires to newly transformed nationalisms. <sup>1</sup>

### **a. Rise of the Cold War and End of Empires**

The main lines of development in the period following World War II involved the organization of international institutions to manage global affairs, the U.S.-Soviet rivalry, the rise of nationalism, and the growing globalization of human life. <sup>2</sup>

#### **1945, April 25–June 26**

**SAN FRANCISCO CONFERENCE.** Drafted the Charter for the **United Nations Organization**, an international body that would be the successor to the **League of Nations** as the main organization for international relations on a global scale. <sup>3</sup>

#### **July 17–Aug. 2**

**POTSDAM CONFERENCE.** The leaders of the United States, Great Britain, and the Soviet Union, **Harry S. Truman, Winston Churchill, and Joseph Stalin**, met to discuss postwar arrangements in Europe. These involved the disarmament and occupation of Germany and trials of war criminals. 4

### Sept. 2

**FORMAL SURRENDER OF JAPAN** with the signing of terms on the U.S.S. *Missouri* in Tokyo Bay. The Japanese home islands were placed under U.S. military occupation, but the emperor remained as the head of state. **Korea** was placed under Soviet and U.S. occupation, pending the establishment of a democratic government. The **Kurile Islands** and the southern part of **Sakhalin Island** were ceded to the Soviet Union. 5

### Oct. 24

**United Nations** formally came into existence when the twenty-ninth member government ratified the Charter. New York City was chosen as the site for the permanent seat of the organization. 6

### Dec. 27

The **International Monetary Fund** was established (See [Evolution of International Economic Structures](#)). 7

## b. New Global Relationships

By the 1970s, the continuing processes of globalization had taken many complex forms. At the same time that the networks of relationships in all areas of life were increasingly determined by global contexts, several older international structures were breaking down. The clearly structured world of the **Bretton Woods system** was replaced by a more global but anarchic international monetary system (See [Evolution of International Economic Structures](#)); the old **bipolar world** of the early **cold war** was rapidly being replaced by a **polycentric world order**. These trends were visible in culture and society as well. 1

### 1971

**Bangladesh** became an independent state in place of East Pakistan after postelection fighting brought the Pakistan army into conflict first with Bengali followers of **Mujibur Rahman** (May) and then with invading Indian armed forces (Dec.). 2

**U.S.-Chinese relations** transformed. Informal contacts like the visit of the U.S. table tennis team to China (“Ping-Pong diplomacy”) were combined with the U.S. announcement that it was lifting the embargo on trade with China (June). In October, the United States supported the admission of the **People's Republic of China** to the United Nations, and in November it was announced that U.S. president **Richard Nixon** would visit China. 3

**Petroleum industry changes.** Representatives of the **Organization of Petroleum Exporting Countries** (OPEC) met with major oil companies to discuss oil prices (Jan.–Feb.). **Algeria** took control of 51 percent of French oil companies' operations in **Algeria**. 4

West German chancellor **Willy Brandt** received the **Nobel Peace Prize** for his work in lessening East-West tension. 5

## June

**International Court of Justice** declared that South Africa's administration of **Namibia** was illegal and should be surrendered to the UN. 6

## Oct

The changing context of global politics was revealed in the state visits of the Ethiopian emperor **Haile Selassie** to China, where he was welcomed by **Mao Zedong**, and of Soviet premier **Kosygin** to Morocco, where he was welcomed by King **Hasan II**. 7

(See [Economic and Social Changes](#))

## **B. Europe, 1945–2000**

### **1. Economic and Social Changes**

As in 1918, Europe after the Second World War was in ruins. **Estimates of the dead range as high as 50 million**, although national tolls varied greatly, from 20 million Russians to 460,000 British and Commonwealth subjects. Overall, the losses in Central and Eastern Europe far outnumbered those in Western Europe. As for the survivors, roads and major cities were clogged with displaced persons, resulting in great migrational flows. Throughout the Continent material costs were also staggering: cities had been reduced to rubble, transportation networks had been destroyed, and farms and coal mines were wastelands. Finally, the war left a divided Europe in its wake. The course of reconstruction and the features of the postwar economy and society thus differed between Western and Eastern Europe. 1

Despite such destruction, Western Europe experienced virtually unprecedented prosperity within 15 years; by 1963 it was producing more than two and a half times as much as it had before the war. Economic growth rates soared for almost two decades, particularly in Germany, France, and Italy, and standards of living reached unprecedented levels. France, for example, attained an 8 percent annual growth rate by the end of the 1950s, continued at a somewhat slower rate during the 1960s, and rose again, to 7 percent, in the early 1970s. Meanwhile real wages in France experienced a sixfold increase between 1950 and 1980. The base of this growth was consumer goods—cars, radios, televisions, and the like—prompting many to label this period in European history the **consumer society**. Much of this economic growth developed out of the European Recovery Program, or the **Marshall Plan**. The plan, announced by the United States in June 1947, provided billions of dollars to European nations to help them rebuild their economies. By 1959, the United States had spent more than \$74 billion in aid. This represented both a desire to avoid the errors of post–World War I Europe and an acceptance of **Keynesian economics** (See [Intellectual and Religious Trends](#)). Governments became more active in economic planning, and a number of key industries were **nationalized**. Moreover, as a precondition to receiving U.S. aid, Western European nations began to coordinate their economic activities for maximum effectiveness. This 2

led to the establishment of the **Organization of European Economic Cooperation**, the first step toward European unity.

Not all of Europe benefited from the Marshall Plan, however. The nations of Eastern Europe, those under Soviet domination, followed Stalin's lead and refused U.S. aid. Instead the Soviet Union and its allies founded **COMECON** (Council for Mutual Economic Assistance) in 1949 (See [1949, Jan. 25](#)). Designed to align socialist economies, in reality the satellite economies of Eastern Europe were all geared to the reconstruction of the Soviet Union first, and then of their own country. In keeping with socialist thought, Eastern Europe witnessed mass nationalizations of private industry. Agriculture was also collectivized, with the exception of Poland. While a measure of prosperity did rise in Eastern Europe, unlike in Western Europe, it was not built on consumer goods. The economies of the Soviet Union and its allies remained predominantly geared for heavy industry and defense.

The devastation of two world wars within 30 years brought forth new ideas about the state, especially about its relations with other states and with its citizenry. The end of the war ushered in a new **push toward European unity**, especially in Western Europe. The first steps were taken with the OEEC and the **Council of Europe**, but such attempts at attaining European federalism via a direct political approach foundered. The economic approach was more successful. Under the auspices of the French politicians Jean Monnet (1888–1979) and Robert Schuman (1886–1963), six European nations (France, West Germany, Italy, Belgium, the Netherlands, and Luxembourg) began to integrate their economies through the **European Coal and Steel Community**, founded in 1951, and, with the Treaties of Rome signed in 1957, through the **European Economic Community** (See [March 25](#)). The goal of the Common Market, as it became known, was just that, the creation of a single free-trade area, with free movement of goods, capital, and workers. This goal was attained in 1992, after the Common Market had grown to 12 member states.

The rise of European unity brought with it a decline in the power of individual states to control the hearts and minds of their citizens. **Nationalism**, seen as a major cause of destruction in European history, began to wane. Indeed, most Europeans gave up their old dreams of glory and empire as a wave of **decolonization** swept through Asia and Africa. Instead, what bound citizens to their state was the vast array of services the new **welfare states** provided for their citizens in need. These services ranged from old-age pensions and unemployment insurance to free health services and low-income housing. In demanding such services, citizens came to accept not only larger government bureaucracies, which also provided many white-collar jobs, but also the fact that government was a much larger presence in their lives. In a short time, Europeans came to expect the government to provide services deemed necessary to daily living, making it difficult in the 1980s for those governments forced to implement austerity plans and for the citizens of Eastern Europe, who had come to expect a greater range of social services

from their now-defunct communist states.

In all of Europe these economic and political changes accompanied social change. In Western Europe the class structure changed significantly as the **importance of the nobility declined** due to high taxes, and the **peasantry virtually disappeared** with further urban migration and new, commercial practices among the remaining farmers. The middle classes grew more diversified, open, and democratic as bureaucracies developed, and education, rather than property, became the basis of social and economic position. Thus, while businesses and governments became more complex, allowing middle-class managers to rise to positions of importance, the middle class lost the ability to pass these positions on to their children like capital. Meanwhile the **traditional manufacturing working classes ceased to expand**, due to technological change. Instead, the number of workers in service and white-collar positions grew rapidly, creating a large segment of the working class that had many similarities to members of the middle classes. Overall, Western European society became more mobile and more democratic as rigid social divisions softened.

There were limits on mobility, however. Education, the key to mobility, fell short of the egalitarian ideal. Although the number of **university students** had risen sharply to 24 percent of the 20 to 24 age group in Western Europe in 1978, up from less than 4 percent in 1950, children from the lower strata continued to be underrepresented in higher education. In France the proportion of university students from working-class families actually fell from 13 percent in 1974 to 9 percent in 1979. A similar division could be found in secondary education. Despite increasing enrollments, in most countries secondary education remained sharply divided into vocational and academic tracks. **Immigrants** were another group for whom mobility was difficult. In the 1950s and 1960s, at the height of economic prosperity, Western European nations welcomed immigrants (from Turkey, North Africa, Pakistan, the West Indies), but this came to an end in the 1970s. The children of these immigrants, not immigrants themselves, often faced the prospect of poverty, underemployment, discrimination, police harassment, and inadequate housing and schooling. They also became the object of a renewed xenophobic, anti-immigrant movement on the far Right.

In Eastern Europe, the social structure was altered by communist policy. The nobility lost its influence and property, as did all property owners, while most peasants became either collectivized agricultural workers or industrial workers. Officially, the middle class ceased to exist. Yet even in the presumably classless society, social distinctions developed. Instead of property, the distinguishing factor became relation to the party. Party members became the new elite, while government bureaucrats became a quasi-middle class.

Europeans also experienced alterations in their family life. From 1945 to the early 1960s Europe experienced a **baby boom**, with populations growing by 1 percent to 1.5 percent per year in many countries. These rates dropped sharply in the 1960s, however, and most

countries experienced zero population growth. On the other side of the aging spectrum, Europeans were urged to think of their later years as a “third age,” in which they expected to be healthy and to engage in a host of activities they had been too busy to enjoy during their working years. This became possible as life expectancies rose and the old-age pensions provided a measure of security. But rising numbers of elderly citizens burdened the welfare state.

**Women became more central to the economy**, as both consumers and workers. 10

Whereas it used to be that working-class women left the workforce after childbirth, taking only work they could do at home, women in postwar Europe remained in the workforce. This was due mainly to the fact that women were marrying and having all their children earlier than their mothers and grandmothers had. By the late 1960s the age at marriage for European women had dropped to 23. At the same time, women were having 80 percent of their children before they were 30. This helps to account for growing feminist dissatisfaction by the late 1960s and 1970s; women found that their traditional role as mother no longer absorbed the energy of a lifetime, yet new roles in the male-dominated world outside the family were slow to open. Nevertheless, even for middle-class wives, work outside the home became more common.

These economic and social developments in Western and Eastern Europe brought, for the most part, a period of stability and prosperity that lasted throughout much of the 1950s and 1960s. By the late 1960s new forms of protest began to emerge, however. Older protest movements, such as trade unionism, had periodically mounted large (and usually short) strikes to win concessions from business and government, and left-wing parties led demonstrations, but none of these forms of protest did much to disturb a Western Europe remarkable for its political stability and rapid economic recovery. Class divisions ceased to be a major source of protest. **Disaffection grew, however, in the late 1960s, blossoming into student protests, feminist demonstrations, and, in the 1970s, terrorism.** Student movements called into question the structure of authority and the materialism of advanced industrial societies. **Feminism** rejected conventional assumptions about gender. By the 1970s an **environmentalist movement** had gathered considerable strength in several countries, as had a surprising **new wave of regional and ethnic activism**, which disputed the authority of central governments and in some cases even long-standing assumptions about the immutability of existing nation-states. Racial and ethnic conflict also gave rise to riots, racial attacks, antiracist demonstrations, and divisive debate over citizenship rights and immigration, especially in the 1980s. 11

While none of these developments led to the kind of general political crisis that toppled regimes in the interwar years, they signaled the end of a period of postwar complacency. This was followed shortly by **economic crises** in 1973 and 1979 caused by European dependence on foreign, especially Arab, oil. Most Western European nations suffered from a combination of economic stagnation and rapid inflation dubbed “stagflation.” Unemployment rose while productivity and living standards declined. Governments 12

responded at first by borrowing, to maintain the vast systems of social services implemented after the war, but in the 1980s they turned increasingly to austerity measures. It is important to note, however, that the welfare measures implemented after the war were effective, by and large, in preventing the mass suffering that might have occurred earlier in similar circumstances. After a brief economic upswing in the mid-1980s, Europe continued to deal with sluggish national economies and their social implications.

In Eastern Europe, protest came earlier, and while it had economic and social undercurrents, it remained primarily political in nature. The overriding focus of discontent was Soviet domination. To be sure, not all nations experienced Soviet-brand communism similarly. After its 1956 uprising, Hungary, for example, experimented with an economy based more on consumer goods. Poland, too, took a separate path, with little collectivized agriculture and a strong Roman Catholic presence. Yet discontent emerged regularly. In Poland, the Soviet-supported government faced popular demonstrations in the 1950s and, more seriously, in the 1980s. Troops were called on to quell protests in Hungary in 1956 and in Czechoslovakia in 1968. Despite such protest, real change came only after the rise of **Mikhail Gorbachev** in the Soviet Union in 1985 (See [1985, March 10](#)). His policies of glasnost and perestroika led to far-reaching economic, social, and political reforms. By 1989 these policies had given the satellite nations of Eastern Europe enough security to break their bonds with the Soviet Union. One by one, they toppled their communist-led governments and instituted democratic reforms. Most of these revolutionary transformations were peaceful; Romania was the notable exception. This period of “revolution” came to an end in 1992 with the collapse of the Soviet Union.

13

Europe clearly entered a new and uncertain period in 1989. East and West Germany were unified, but many former East Germans lost their jobs. The other nations of Eastern Europe sought economic aid in building market economies. Meanwhile, old national and ethnic rivalries long suppressed by the communists resurfaced; these caused the most damage in the former Yugoslavia. In Western Europe, economic problems muted the promise of 1992, when the 12 member nations of the Common Market became one free-trade zone and curtailed their ability to help the struggling states in the East. Finally, immigration became a problem as unemployment spurred discontent among European nationals who competed for jobs with the descendents of immigrants who had first arrived in Europe in the 1950s, when governments had eagerly accepted this needed influx of labor.

14

(See [1934–54](#))

## 2. [Religious and Philosophical Thought](#)

In the realm of religious thought, **secularism** continued to make great strides as divorce and contraception, for example, became more commonplace. But the churches did not stand still in this period. Pope John XXIII (1881–1963) convened **Vatican II** (1962–65), the world Catholic council that updated the Church. Later popes, while remaining traditionalists in matters like priestly celibacy, the ordination of women, and birth control, continued to campaign for social justice. In the Protestant churches, two theological movements emerged. Under the leadership of the Swiss theologian **Karl Barth** (1886–1968), some Protestants dismissed the notion that reason could save the soul, arguing instead for the primacy of revelation and the powerlessness of humans without God's grace. Others, following the British theologian **John Robinson**, built on 19th-century liberalism to argue that the Bible must be interpreted in a modern context. Robinson believed modern Christians had to extract the inner meanings from the old biblical myths and apply them to each situation of modern life, a stark difference from Barth's fundamentalism. <sup>1</sup>

For many, however, the notion that God was dead was as true after World War II as it had been after World War I. Indeed, philosophical thought in postwar Europe continued along trends established in the interwar period that highlighted the absurdity and meaninglessness of life. The philosophical school that best expressed this view was **existentialism**, led by French philosophers **Jean-Paul Sartre** (1905–80), **Simone de Beauvoir** (1908–86), and **Albert Camus** (1913–60). These theorists argued that there were no absolutes or eternal truths for humankind. In the 1960s a new school of thought, known as **structuralism**, rose to challenge this view (See [Nov. 3](#)). Major figures, including anthropologist **Claude Levi-Strauss** (b. 1908) and literary critic **Roland Barthes** (1915–80), grounded their theories on structural linguistics and the science of signs to assert that human consciousness was the helpless victim of objective structures implied in the laws of language syntax. In the late 1960s and early 1970s other intellectuals, such as **Jacques Derrida** (b. 1930) and **Michel Foucault** (1926–84) challenged the linguistic stability and systematic function of structuralism. Their emphasis on textual analysis and relativist positions was instrumental in the formation of <sup>2</sup>

**poststructuralism** and **deconstruction** in the post-1968 intellectual community.

(See [Culture and Popular Culture](#))

### 3. [Culture and Popular Culture](#)

In the fine arts, it was difficult to discern any great changes from trends established in the interwar period. Private expression continued to underpin the work of most artists; artists were freed from learned convention to explore all avenues of self-expression. In painting, as in architecture, the postwar period witnessed the continued development of the main ideas of the interwar period. In the 1960s some artists created **pop art**, using bits of comic strips and commercial art to bridge the gap between commercial mass culture and fine art. In literature, while the traditional novel continued to thrive, the “**new novel**” of French writers like Alain Robbe-Grillet (b. 1922) and Natalie Sarraute challenged this form by concentrating on concrete details without plot or character development. Film also became an important medium as directors like Jean-Luc Godard (b. 1930), François Truffaut (1932–84), Michelangelo Antonioni (b. 1912), and Bernardo Bertolucci (b. 1940) made Paris and Rome centers of experimental filmmaking. The works of Ingmar Bergman (b. 1918) and Rainer Werner Fassbinder (1946–82) also provided dark commentary on modern life. In music, the application of computers and electronic instruments like the Moog synthesizer aided composers in their search for new sounds. And in architecture, major figures like Ludwig Mies van der Rohe (1886–1969), a Bauhaus disciple, carried on functionalism, while Paris and Barcelona remained at the forefront of modern architecture with a variety of new buildings in the “international style,” plus a new interest in Barcelona's earlier Modernista movement. <sup>1</sup>

In the realm of popular culture, the most striking feature was the spread of a worldwide culture, influenced heavily by the Americans. This was made possible by the availability of cheap transistor radios, television, films, and recordings, and by inexpensive travel opportunities. Popular culture was thus the product of a society where such technologies were commonplace, a society based on prosperity and consumption. The new culture glorified youth, and film stars like Marilyn Monroe (1926–62) and James Dean (1931–55) became international symbols. Perhaps the most famous purveyor of this culture was the **Beatles**, a popular British rock and roll band. The band members clearly represented the new international, youthful culture of carefree, good-humored hedonism. This youth culture flourished easily in Western Europe, but even Soviet youth clamored <sup>2</sup>

for blue jeans and Western music.

Popular culture changed in certain other respects. The new hedonism among young people; greater freedom from adult supervision, including more public opportunities for young women; and the development of the birth control pill in 1960 produced **new sexual behavior and a more open sexual culture**. Representations of sexuality in European films and television, the advent of stores that sold sexual items, and new behaviors, including increased premarital intercourse, signaled this growing change. While rates of illegitimate births increased for a time, public acceptance of birth control for young people stabilized that trend by the 1970s.

**Leisure time increased greatly in Europe**, with many groups gaining as much as five weeks in annual vacation time. Those in the north made massive annual migrations to Italy, Spain, and southern France. New vacation organizations developed, and many Europeans bought summer homes. Club Med was founded in 1950 by Gerard Blitz, and its resorts ultimately spread around the world, providing a European atmosphere for vacationers. At the same time, **television watching** became the most common leisure pastime. Consumeristic values led to a heightened interest in material possessions, such as household appliances, motor scooters, and automobiles. Shopping patterns changed, away from community-based stores and toward supermarkets and other glossy settings. Most Western European countries permitted **television advertising** by the 1970s, another consumeristic change.

European manners became less stiff. Parent-child relations became less formal. Divorce rates varied, rising in Britain to approximately one in every three marriages and generally increasing. With growing numbers of women working, use of **daycare centers for children**, usually government-sponsored, grew rapidly. While a minority maintained important religious attachments, church attendance overall continued to decline in Europe. Only in Eastern Europe, particularly after the fall of communism, were there signs of new interest in Christianity.

(See [Science and Technology](#))

#### 4. [Science and Technology](#)

The most important development in these two arenas was their continuing merger after World War II. During the war, scientific research and technical expertise were both directed at solving practical military problems. After the war, this cooperation between pure science and applied technology continued, giving rise to what many called “**big science.**” The war had demonstrated the effectiveness of directed research, a trend continued after the war. This required a great deal of organization, however, and became very expensive. Indeed, scientific research became the province of large, well-defined bureaucratic organizations, and funding could be maintained only by governments and corporations. By 1960, for example, when governments in Western Europe created the European Council for Nuclear Research to build an accelerator outside of Geneva, the cost was \$30 million. The cost of research resulted in a “brain drain” in Europe, as many scientists emigrated to the United States, where both the government and large corporations spent vast sums of money. European nations responded to this challenge, however, by pooling their energies, as in the Franco-British collaboration on the Concorde, the supersonic passenger airliner, and Airbus, the airline manufacturing consortium created by Great Britain, France, West Germany, and Spain among others.

Much of what was accomplished in technology built on what had existed before World War II; jets, radar, and electronic computers were all developed before the war and were adapted to more consumer-centered uses afterward. Microwave technology, for example, was perfected for military purposes during the war, but generated endless applications afterward in the telecommunications industry. This continued after the cold war as well, as technology developed for the space race between the United States and the Soviet Union gave rise to the use of French Ariane rockets to launch commercial satellites.

At the same time, the vigorous environmental movement began to question the results of rapid technological change. In 1969, for example, millions of fish died in the Rhine River two years after the disappearance of two 50-pound canisters containing the insecticide Thiodan. Concerns over such environmental tragedies developed into political movements, especially in Germany, where the **Green Party** gained enough power to win a considerable number of votes in elections in the early 1990s. Disasters

like the 1986 meltdown at the Chernobyl nuclear power plant in the Ukraine tempered society's belief in the potential benefits of modern technology.

Some of the major scientific and technological developments that have occurred since 1945 follow.

4

### 1947

The word *automation* was coined by John Deibold and D. S. Harder, to define “a self-powered, self-guiding and correcting mechanism,” and it was later extended to include all elements of production—“automated factory”—and office and clerical procedures.

5

### 1950s

The basic-oxygen process for the manufacture of steel was developed in Austria.

6

### 1953

**Francis H. C. Crick** (b. 1916) and **James D. Watson** (b. 1928) offered a model for the structure of DNA that accounted for gene replication and posited a biochemical code that could transmit a great variety of genetic information. **Electronic computers** with feedback mechanisms (servomechanisms) made possible the new field of **cybernetics**, defined by **Norbert Wiener** (1953) as “the study of control and communication in the animal and the machine.”

7

### 1961

The first manned spaceship circled the earth April 12 in 89.1 minutes, at an altitude of 187.7 miles. Soviet astronaut **Yuri Gagarin** (1934–68), made the orbit in the space vehicle *Vostok I*, and astronaut (cosmonaut) Gherman Titov orbited the earth 17 times less than four months later.

8

### 1962

**Neil Bartlett** (b. 1932) announced that he had combined xenon with platinum and fluorine to form xenon-platinum hexafluoride; other compounds of xenon and radon were found, thus destroying the notion that the noble gases are all nonreacting.

9

## July 10

*Telstar I* was launched. The new satellite was used to transmit the first live transatlantic telecasts between the United States and Great Britain.

## **5. Diplomatic Relations and European Pacts**

### **1946, Sept. 6**

U.S. Secretary of State **James F. Byrnes**, in a speech in Stuttgart, announced a more lenient American policy toward Germany and called for a unified German economy. 1

### **1947, March 4**

An **Anglo-French treaty of alliance** was signed at Dunkirk. 2

### **March 10–April 24**

The **council of foreign ministers**, meeting in Moscow, failed in its effort to draft peace treaties for Germany and Austria. 3

### **July 12–15**

The **MARSHALL PLAN** (See [June 5](#)), a program for European recovery proposed by U.S. secretary of state George Marshall, was discussed by delegates of 16 European nations meeting in Paris. A committee was set up to draft a **European Recovery Program**. The Soviet Union and its satellites refused to participate in a program of European reconstruction. 4

## Oct. 5

The **COMMUNIST INFORMATION BUREAU (Cominform)** was established by the Communist parties of the Soviet Union, Yugoslavia, Bulgaria, Romania, Hungary, Poland, France, Italy, and Czechoslovakia. With headquarters in Belgrade, the bureau was to coordinate the activities of European Communist parties. 5

## Oct. 29

Ratification of the **customs union among Belgium, the Netherlands, and Luxembourg.** 6

## Nov. 25–Dec. 16

A conference of the Big Four foreign ministers in London again failed to agree on solution of the German problem. 7

## 6. Western Europe, 1945–2000

EUROPE, 2000 (MAP)

### a. Britain

**Monarchs:** George VI (r. 1936–52); Elizabeth II (r. 1952– ).

1

**Prime ministers:** Clement Atlee (1945–51, Labour); Winston Churchill (1951–55, Conservative); Anthony Eden (1955–57, Conservative); Harold Macmillan (1957–63, Conservative); Sir Alec Douglas-Home (1963–64, Conservative); Harold Wilson (1964–70, Labour); Edward Heath (1970–74, Conservative); Harold Wilson (1974–76, Labour); James Callaghan (1976–79, Labour); Margaret Thatcher (1979–90, Conservative); John Major (1990–97, Conservative); Tony Blair (1997– , Labour).

2

### 1945, May 7

**Germans surrendered unconditionally** to representatives of the U.S., USSR, France, and Great Britain in **Reims**, France. Britain lost a total of **398,000 military personnel** over the course of **World War II**.

3

### May 23

**Prime Minister Winston Churchill** resigned in the face of the collapse of the wartime coalition, established in 1940, of the **Conservative** and **Labour Parties**.

4

## July 5

In an unexpected victory in the first general parliamentary elections in ten years, the **British Labour Party** won 388 seats out of 640. 5

## July 26

A new **Labour cabinet**, with **Clement R. Atlee** as prime minister, was formed. **Atlee replaced Churchill** for the later sessions of the **Potsdam Conference** (See [July 17–Aug. 2](#)). The new government immediately embarked on an ambitious **program of socialization**. A brief period of postwar optimism was followed by an extended regime of **economic austerity**, due chiefly to the profound disruption of Britain's economy caused by the war. To facilitate the reconversion to peacetime production, demobilization of manpower and industry was carried out only gradually. 6

## Oct. 15

The House of Commons voted to extend the government's **wartime emergency powers** for five years, to make up for the **cessation of lend-lease**, which came as a deep shock to Britain's economy. 7

## Dec. 6

The **United States** granted a **loan** of \$3.75 billion to Great Britain. **Canada** subsequently provided a loan of \$1.25 billion. However, both these loans were exhausted by the end of 1947 due to high prices on the American market. 8

(See [1944, Sept. 2](#))

## c. [The Low Countries](#)

### 1. [Belgium](#)

#### [1944, Sept. 2](#)

**Brussels was liberated** from German occupation by the 2nd British Army. 1

Belgium, after its liberation, was governed by coalitions of the main political parties, with **Prince Charles** as regent. Its major domestic issue was the return of **King Leopold** (deposed in 1945), which the Catholics favored and the Socialists opposed. On July 17, 1945, parliament passed a bill making Leopold's return dependent on parliamentary approval. 2

#### [1946, Feb. 17](#)

A **general election** gave the Catholic **Christian Socialists** the largest number of votes, but continued disagreement over the future of the monarchy prevented the formation of a coalition cabinet. 3

#### [1947, March 19](#)

**Paul-Henri Spaak** was able to form a coalition government of Catholics and Socialists, thus assuring greater stability in the handling of pressing economic problems. 4

#### [Nov. 1](#)

A **customs union** with Holland and Luxembourg (**Benelux**) became effective.

5

## d. [France](#)

**Postwar provisional government:** Gen. C. de Gaulle (1945–46), F. Gouin (1946), G. Bidault (1946–47). 1

**Fourth Republic presidents:** V. Auriol (1947–53), R. Coty (1953–58). 2

**Fifth Republic presidents:** Gen. C. de Gaulle (1958–69), G. Pompidou (1969–74), A. Poher (1974, April–May, interim), V. Giscard d'Estaing (1974–81), F. Mitterrand (1981–95), J. Chirac (1995– ). 3

### 1944, Aug. 23–24

**German forces in Paris were compelled to capitulate** as Allied armies approached and armed citizens liberated the city. The administration was turned over to **Charles de Gaulle** with the approval of the Allied commanders. 4

Through the 1940s and beyond, the **issue of collaboration** remained a central question in French political life. French society was divided on the degree to which those who had collaborated with the Nazis should be punished. Communists favored harsh sentences; Catholic groups advocated forgiveness in the name of national reconstruction; prominent existentialists and socialists took a more moderate approach. 5

The *épuration*, or **purge**, of persons known or suspected to have collaborated with the Germans began during the war itself but intensified in the immediate postwar period. Some nine thousand summary executions were carried out by the population, three-quarters of them before the Allied landing or during the fighting, the remainder occurring as a result of popular impatience with the slowness of the court system. An additional 767 executions were carried out in the years following the war by state authorities, after prosecution and conviction of the accused. 6

### Sept. 27

The first phase of **nationalizations** designed to restore prewar levels of production in the transport, fuel, and heavy-machinery sectors of the economy began when de Gaulle's government took over the coal fields of the Nord and Pas-de-Calais departments. 7

#### Oct. 4

The French state seized control of Renault automobile factories. 8

#### Nov. 7

A **consultative National Assembly**, summoned by **de Gaulle**, held its first session. Municipal and departmental elections for the 89 *départements* were set for February 1945, and the franchise was extended to all citizens, male or female, older than 21. 9

#### Dec. 10

A **Franco-Soviet treaty of alliance and mutual security** was negotiated. It was to run for 20 years. 10

#### Dec. 18

Nationalization of the French merchant fleet. 11

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## e. [The Iberian Peninsula](#)

### 1. Spain

**Heads of state:** Gen. Francisco Franco (1939–75), King Juan Carlos de Borbon (1975– ). 1

**Prime ministers (post-Franco):** Carlos Arias Navarro (1975–76), Adolfo Suarez (1976–81), Leopoldo Calvo Sotelo (1981), Felipe Gonzalez (1981– ), José Maria Aznar (1996– ). 2

After the defeat of the Axis powers in World War II, **Gen. Francisco Franco** began moving away from the fascist ideology that had underpinned his regime during its first years in power. Still, policies of economic autarchy were not abandoned until the later 1950s, the political system remained strictly authoritarian, and civil liberties were not fully restored until after the *caudillo's* death in 1975. The **transition to democracy** in Spain that took place thereafter was distinct from that of other European nations in that it was a gradual process, with figures from the former regime remaining in positions of military and civilian authority through the 1980s. 3

### 1945, March 22

Don Juan, the Bourbon claimant to the Spanish throne, called for the resignation of Gen. Franco and the restoration of the monarchy. 4

### May 8

Spain broke off diplomatic relations with Germany. 5

## May 12

Falangist officials attended a requiem mass for Adolf Hitler. Spain continued to give refuge to large numbers of Germans, despite Allied demands for their repatriation.

6

## June 20

The San Francisco (Calif.) Conference on the United Nations Charter excluded Spain from membership in the UN. A similar exclusion was contained in the report on the Potsdam Conference (Aug. 2).

7

## July 20

Gen. Franco made changes in his cabinet, filling several government posts with reputedly royalist sympathizers, and stated that the **monarchy would be restored at a future date.**

8

## **f. [The Italian Region](#)**

### **1. Italy**

**Presidents:** Enrico de Nicola (1946–48); Luigi Einaudi (1948–55); Giovanni Gronchi (1955–62); Antonio Segni (1962–64); Guiseppe Saragat (1964–71); Giovanni Leone (1971–78); Alessandro Pertini (1978–85); Francesco Cossiga (1985–92); Oscar Luigi Scalfaro (1992–). 1

#### **1945, Nov. 30**

The leader of the Christian Democrats, **Alcide de Gasperi**, formed a new government supported by all major parties. 2

#### **1946, Jan. 1**

With the **transfer of Bolzano** province by the Allies, the whole country, except for Venezia Giulia (claimed by both Italy and Yugoslavia), was under Italian sovereignty. 3

#### **May 9**

**KING VICTOR EMMANUEL III ABDICATED.** His son proclaimed himself **King Umberto II**. 4

#### **June 2**

**Elections** to the **Constituent Assembly** gave 207 seats (out of 556) to the Christian Democrats, 115 to the Socialists, and 104 to the Communists. At the same time, a referendum rejected the monarchy, 12,717,923 votes to 10,719,284, thus making **ITALY A REPUBLIC**.

5

### June 11

The prime minister, **Alcide de Gasperi**, was made temporary head of state.

6

### June 13

**King Umberto**, while refusing to accept the popular verdict against the monarchy, **left the country** to prevent the outbreak of violence.

7

## **g. [Switzerland](#)**

### **1946, April 2**

Switzerland announced its decision to stay outside the **United Nations**, so as not to endanger its traditional neutrality. 1

### **1947, Oct. 28**

**General elections** brought no important changes in the lineup of parties. The Progressive Democrats received 51 seats, the Social Democrats 48, the Catholic Conservatives 44, and the Labor Party (Communist) 7 of the total 194 seats in the Parliament (Federal Assembly). 2

### **1950s**

Spread of **self-service stores**, displacing older shops; growing consumerism. 3

### **1950, Feb**

Switzerland embarked on a **five-year plan of military preparedness** and announced that it would fight to defend its neutrality. 4

### **Sept**

The executive **Federal Council (Bundesrat)** expelled all Communists from **government service**.

## **h. [Germany](#)**

**Chancellors (Federal Republic):** Konrad Adenauer (1949–63, Christian Democrat);<sup>1</sup> Ludwig Erhard (1963–66, Christian Democrat); Kurt Kiesinger (1966–69, Christian Democrat–Christian Social Union); Willy Brandt (1969–74, Social Democrat); Helmut Schmidt (1974–82, Social Democrat); Helmut Kohl (1984–98, Christian Democrat); Gerhard Schroeder (1998–, Social Democrat). The end of World War II brought profound changes to Germany. The fighting itself left the country in ruins, the outbreak of cold war hostilities led to **partitioning** in 1949, and in East and West Germany the dismantling of traditional structures of power by occupation forces produced very different cultural shifts as well as contrasting economic trajectories. After four decades of development along separate paths under divided statehood, Germany unified in 1989. One country again, Germany began to face a series of new challenges that tested not only its economic strength, but also the nation's cultural integrity and social cohesiveness.

### **1945, April 30**

**ADOLF HITLER COMMITTED SUICIDE IN BERLIN** as Soviet forces captured the<sup>2</sup> city.

### **May 8**

Terms of **unconditional surrender, signed at Reims** on the previous day, became<sup>3</sup> effective and **ended the Second World War in Europe**. Surrender terms were also signed in Berlin between German and Soviet commanders.

With the total defeat of the Hitler regime, no German government remained.<sup>4</sup> Instead, supreme authority was vested in an **Allied Control Council of Great Britain, France, the United States, and the Soviet Union**. Each of these powers administered its own

occupation zone, with the Soviet Union holding the region east of the Elbe. The former capital, **Berlin**, was likewise divided into four sectors. Future policy toward Germany had been outlined at the **Potsdam Conference**, though its implementation varied in the different occupation zones. The victors' most immediate measures were concerned with the liquidation of the Nazi system, the transformation of Germany's economy to peacetime production, and the transfer of administrative functions into German hands. On Nov. 20 **the trial of major Nazi leaders** opened at **Nuremberg** before an inter-Allied tribunal. In addition, thousands of lesser Nazis were removed from office and held for trial. Also on Nov. 20, the Control Council approved the **transfer of 6,500,000 Germans** from Austria, Hungary, Czechoslovakia, Poland, and the German region beyond the **Oder-Neisse line**, which had been handed to Poland at the Potsdam Conference, pending a peace settlement. In the months that followed, Germany's industrial power was drastically reduced by the **dismantling of the war plants** and the removal of equipment for reparations purposes. At the same time, large stores of food were imported to maintain a minimum ration. In all occupation zones, **political parties** were authorized by the end of 1945. In the Soviet zone administrative authority was vested in the provincial councils, which immediately initiated far-reaching land reforms. In the three Western zones, **German self-government** was initiated on local and provincial levels.

## **i. [Austria](#)**

### **1945, April 25**

A **provisional government** was set up with **Karl Renner** of the Socialist Party as **chancellor**. 1

### **May 14**

**THE DEMOCRATIC REPUBLIC OF AUSTRIA** was **reestablished**. 2

### **Aug. 8**

The division of Austria and Vienna into **four occupation zones** was completed. The **Allied Council for Austria** assumed authority over matters affecting the whole of Austria. 3

### **Nov. 25**

The first **general election** since 1930 gave the **People's Party** a majority over the Socialists and Communists. 4

### **Dec. 18**

**Leopold Figl** (People's Party) formed a coalition cabinet with the Socialists.

5

**Dec. 20**

**KARL RENNER** was unanimously elected **PRESIDENT OF THE REPUBLIC** by the National Assembly. 6

## **j. [The Scandinavian States](#)**

A chief concern of the Scandinavian countries during the postwar period was with military security. Negotiations among Denmark, Norway, and Sweden in 1948–49 on a joint defense pact broke down when Denmark and Norway (together with Iceland) decided to join the North Atlantic Treaty, while Sweden was determined to do nothing that might impair its traditional neutrality. Finland likewise tried to maintain a middle course, constrained by Soviet overtures for more cordial relations. 1

In economic and cultural matters, however, the Scandinavian states drew ever closer together. On Feb. 12, 1953, all of them except Finland organized the **Nordic Council**, which Finland joined two years later. The council consisted of members of the various parliaments, meeting annually for discussion of common problems and general consultation; committees were set up to deal with economic, social, financial, and cultural matters. In 1967 the council set up the **Nordic Cultural Foundation**, and in 1969 it endorsed plans for a **Nordic Economic Union**. Various foundations were established for scientific and other purposes. 2

### **1. Denmark**

**1945, May 5**

**Vilhelm Buhl**, a Social Democrat, formed the first postwar cabinet. 3

**Oct. 30**

**General elections** for the first time gave 18 of the 148 seats in the lower house to the Communist Party. The Social Democrats lost an equal number but still emerged as the strongest party. Since no coalition was possible, **Knud Kristensen** formed a Liberal Party minority government.

## **7. Eastern Europe, 1945–2000**

### **a. Poland**

**1945, April 21**

The **Soviet government** and a **Polish provisional government** set up in Moscow agreed on a **20-year treaty** of mutual aid. <sup>1</sup>

**June 12**

The British and French, who favored the Polish government in exile in London, persuaded the USSR to agree to a **tripartite commission** that would aid in the **organization of a Polish government**. <sup>2</sup>

At the Yalta Conference, Poland's eastern territories were reduced approximately to the “Curzon line” of 1919, while its western border, pending a final peace settlement, was extended to the **Oder-Neisse line** in eastern Germany. The leadership of postwar Poland was claimed by two rival groups, the Soviet-sponsored **provisional government at Lublin**, and the **Polish government in exile in London**. <sup>3</sup>

**June 28**

After lengthy negotiations, a **government of national unity** was formed, under Socialist **premier Eduard Osobka-Morawski** of the Lublin administration. It was recognized by the Western powers, though its leanings turned out to be decidedly pro-Soviet. For this reason, many Polish citizens who, as displaced persons or members of Poland's armed forces, were still in Western Europe refused to be repatriated. <sup>4</sup>

## **b. Czech Republic and Slovakia (Czechoslovakia)**

### **1945, April 5**

**Klement Gottwald**, vice prime minister of Czechoslovakia and a leader of the **Czechoslovak Communist Party**, declared that the new Czechoslovak state would be based on the **equality of Czechs and Slovaks**. 1

### **May 10**

The new **government moved to Prague**. In a sweeping political purge, many collaborators were tried and executed. **Former president Emil Hácha** died in prison; **Konrad Henlein** committed suicide. 2

### **June 6**

**Edvard Beneš** , president of Czechoslovakia, declared that the **German and Hungarian minorities had to be expelled** from his country. 3

### **June 29**

**Czechoslovakia ceded Ruthenia to the Soviet Union**. 4

### **Aug. 3**

All **Germans and Hungarians** in Czechoslovakia were **deprived of their citizenship** and subsequently **expelled from the country**. 5

### Oct. 14

A **provisional National Assembly** was elected by indirect suffrage. 6

### Oct. 18

The government embarked on a far-reaching program of **industrial nationalization and agricultural reform**. 7

### c. [Hungary](#)

#### 1945, Nov. 3

The first **general election** gave an absolute majority to the anticommunist **Smallholders' Party**, whose leader, **Zoltan Tildy**, formed a coalition cabinet. The Communists gained the Interior and Justice Ministries and thus controlled the secret police. 1

The economic situation of the country was desperate as a result of the war, with serious food shortages and an unprecedented currency inflation. Large-scale Soviet requisitions further aggravated the situation. 2

#### 1946

About 150,000 ethnic Germans were expelled; another 100,000 were expelled in 1947. 3

#### Feb. 1

**A republic was proclaimed with Zoltan Tildy as president. Ferenc Nagy** of the Smallholders' Party became **premier** on Feb. 4. 4

(See [1944, Oct. 20](#))

#### **d. Yugoslavia and Successor States**

##### **1945, May**

As the war ended, Yugoslavia was still theoretically a monarchy. The actual power, however, was wielded by **Marshal Tito** and his **National Liberation Movement**. 1

##### **Nov. 11**

**Elections for a constituent assembly gave a substantial majority to Tito's Communist-dominated National Front.** 2

##### **Nov. 29**

The assembly proclaimed a **FEDERAL PEOPLE'S REPUBLIC OF YUGOSLAVIA.** 3

[The Encyclopedia of World History, Sixth edition.](#) Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

(See [Oct](#))

## e. [Albania](#)

### 1945, Nov. 10

The Communist-dominated government of **Premier Enver Hoxha** was recognized by the Soviet Union and the Western powers. It was upheld in **general elections**, which returned the **single list of official candidates** (Dec. 2). <sup>1</sup>

### 1946, Jan. 11

The **constituent assembly** proclaimed the **PEOPLE'S REPUBLIC OF ALBANIA**. Its domestic and foreign policy followed closely the communist, pro-Soviet line taken by other Russian satellites. Relations with the West, and notably Great Britain, rapidly deteriorated. <sup>2</sup>

### May–Oct

**Two naval incidents in the Corfu Channel**, caused by Albanian coastal batteries and mines and resulting in the loss of British lives, further **increased British-Albanian tension**. <sup>3</sup>

(See [1943](#))

## **f. [Greece](#)**

### **1944, Dec. 25**

British prime minister **Winston Churchill** and his foreign secretary, **Anthony Eden**,<sup>1</sup> arrived in Athens to arrange a **settlement in the civil war** that had developed between Greek factions. A **regency government** was proclaimed, and **Archbishop Damaskinos** sworn in as regent after his appointment (Dec. 30) by the Greek king, **George II**.

### **1945, Jan. 11**

The **Greek civil war** ended with a truce between the British forces and the leftist factions<sup>2</sup> opposing British intervention.

The war left Greece a legacy of economic ruin, starvation, and domestic strife. The end of<sup>3</sup> the **civil war** did not bring political stability. The regent, **Archbishop Damaskinos**, supported by British occupation authorities, appointed six different ministries during 1945, none of which was able to bridge the gap between moderates and left-wing resistance groups.

### **1946, March 31**

The first **general election** won an **overwhelming majority** for the royalist **Popular Party**.<sup>4</sup> The National Liberation Front (Ethniko Apeleftherotiko Metopo, EAM) and other leftist groups refused to participate in the voting.

## April 18

Populist leader **Panyoti Tsaldaris** formed a cabinet.

5

## May–1949, Oct

Several thousand communists, supported by Greece's communist neighbors, engaged in extensive guerrilla activities that soon developed into a regular **civil war**.

6

## Sept. 1

A **plebiscite decided** 69 percent **in favor of the monarchy**, and **King George II returned to Athens** (Sept. 28).

## **g. [Bulgaria](#)**

### **1945, Nov. 18**

The first **general election gave overwhelming support** to the single list of the **Fatherland Front**, a wartime coalition of major parties, by this time under Communist control. 1

### **1946**

In a sweeping purge, more than 1,500 high-ranking men and ten times as many minor figures in the old regime were killed. 2

### **March 31**

**Premier Kimon Gueorguiev formed a Communist-dominated government.** 3

### **Sept. 8**

**A referendum decided against the monarchy.** 4

### **Sept. 15**

**Bulgaria was proclaimed a PEOPLE'S REPUBLIC.** Young **Tsar Simeon II** went into exile. 5

**Oct. 27**

**General elections** for a **constituent assembly**, carried on with considerable governmental interference, **resulted in a Communist majority.** 6

**Nov. 21**

Veteran Communist **Georgi Dimitrov** returned from **Moscow** to become **premier.** 7

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## **i. Russia (Union of Soviet Socialist Republics and Successor States)**

THE RUSSIAN FEDERATION, 2000 (MAP)

### **1. Soviet Union**

**1944, Feb. 1**

An **amendment to the constitution** of the Union of Soviet Socialist Republics granted **separate commissariats for defense and for foreign affairs** to each of the constituent republics. Each could thus maintain its own army (which would form, however, a component element in the army of the USSR) and conduct its own negotiations with foreign countries, and conclude treaties with them. <sup>1</sup>

**1946, Feb. 10**

The first **general elections** since 1937 for the **Supreme Soviet** returned the official list of approved candidates. <sup>2</sup>

**March 15**

The fourth **five-year plan**, designed to increase industrial output by more than 50 percent over prewar levels, was adopted by the Supreme Soviet. Much of the necessary industrial equipment was collected from Soviet-occupied regions in Eastern and Central Europe. <sup>3</sup>

## March 19

In a series of governmental changes, **President Michael Kalinin** resigned because of ill health and was **succeeded by** the former trade union leader **Nikolai Shvernik**. **A Council of Ministers** (with **Joseph Stalin** as chairman and Foreign Minister **V. M. Molotov** as deputy chairman) **replaced** the former **Council of People's Commissars**. 4

## June 28

The **Ministry of State Control** announced widespread dismissals in industry for incompetence and dishonesty. This was followed in August by a similar purge of agricultural offenders. 5

## Nov. 18

**Marshal Koniev** replaced **Marshal G. K. Zhukov** as **commander-in-chief** of the Soviet armed forces. 6

## **C. North America, 1946–2000**

### **1. The United States, 1946–2000**

The post–World War II era brought a plethora of changes to American life. The country claimed leadership of the “free world” and entered a sustained period of cold war with the Soviet Union and its allies. In order to combat the spread of communism, the government embarked upon an unprecedented period of peacetime military expansion. Federal support for the development of advanced military technology played a role in research development that undermined the old blue-collar sector of the economy. The increasing application of computer technology helped to transform the nation from a predominantly goods-producing society to a mainly service-producing one. The postwar **baby boom** (See [1943](#)), **increasing suburbanization**, and the continuing spread of American consumer culture all reflected as well as reinforced these trends. Following the end of the Vietnam War, the economy deteriorated, unemployment increased, and Republicans returned to power with a firm determination to end the New Deal social welfare order. By the early 1990s, with the collapse of communism in Eastern Europe, the nation sought to craft new policies for a post–cold war world. 1

The cold war not only influenced American foreign policy and the economy, but also helped to transform domestic social and political relations as well. The nation's aggressive posture toward communism abroad was accompanied by equally vigorous attacks on suspected Communists at home. Sen. Joseph R. McCarthy's investigations, the Korean and Vietnam Wars, and wiretaps on the phones of civil rights leaders such as Martin Luther King, Jr., all reflected the destructive impact of the cold war at home and abroad. 2

Beginning with the Montgomery bus boycott in 1955 and culminating in the March on Washington for “freedom and jobs” in 1963, civil rights emerged as the most pressing domestic issue facing the nation. By the late 1960s, the U.S. had moved to dismantle the system of Jim Crow, to enfranchise African Americans, and to address the “unfinished revolution” of full citizenship rights for African Americans. Women, Hispanics, Native Americans, and eventually gay rights and environmental activists accelerated their 3

assault against various forms of injustice and inequality, including racial, ethnic, gender, and sexual-preference barriers. Until the late 1960s, the Democratic Party remained committed to the New Deal welfare state and helped push provisions for social services beyond the limits established during the 1930s. During the 1970s and 1980s, however, the U.S. undertook a dramatic reordering of its national priorities.

Following the election of 1968 and the nation's defeat in and retreat from Vietnam, the U.S. entered a prolonged crisis of economic and political restructuring. This period also signaled the end of American dominance in the world economy. The U.S. experienced the painful transition from a creditor to a debtor nation, with the world's largest foreign debt and a rising foreign trade deficit that peaked at \$171 billion in 1987. The nation's increasing dependence on Middle Eastern oil played a major role in the eruption of the Persian Gulf War in 1990. Beginning with Republican president Richard M. Nixon in 1968, and accelerating with the election of Ronald Reagan in 1980, the nation turned away from its commitment to social welfare spending and undercut measures for translating civil rights laws into social practice. Dubbed "Reaganomics," this movement caused the federal government to disband the Office of Economic Opportunity (1971), weakened support for affirmative action in *Bakke v. University of California–Davis* (1978), and enacted a vigorous policy of tax cuts with the Economic Recovery Tax Act of 1981 and the Tax Reform Act of 1986. Under the Republican administrations, numerous groups—labor unions, women, racial and ethnic minorities, and environmentalists—experienced the impact of increasingly conservative policies.

Despite strong reactions against social programs and grassroots social movements, however, the U.S. continued to witness vigorous forms of activism during the period. The environmental movement and the gay rights movement (with intensified motivation after the outbreak of AIDS) represented important centers of activism. At the same time, African Americans increasingly channeled their efforts into the electoral arena. Civil rights activist Jesse Jackson mounted important challenges to the established Democratic Party with his "Rainbow Coalition" in the elections of 1984 and 1988. With the presidential election of Democrat William "Bill" Clinton in 1992, the nation seemed prepared to reassess the desirability of Reaganomics. Yet Clinton's first year in office revealed the nation's deep resistance to social change, including the lifting of bans on gays in the military. The conservative tide of the Reagan years would turn only slowly.

**The postwar economy.** Both founded in 1944, two institutions—the **International Bank of Reconstruction and Development, or World Bank, and the International Monetary Fund**—fueled the nation's postwar economic growth. Along with the **General Agreement on Tariffs and Trades (GATT)**, a multinational trade agreement, these economic arrangements represented what became known as the **Bretton Woods system** of postwar economic development.

1946–60

**The baby boom generation.** During these years the nation's **birth rate soared**. The 20 percent population growth rate in the 1950s resulted particularly from an increase in middle-class birth rates. **The boom peaked in 1957.** Because of their numbers, the children, called “baby boomers,” greatly influenced U.S. public, private, and cultural behaviors. Dr. Benjamin Spock published his best-selling *Baby and Child Care* (1946) and influenced a generation of baby boom mothers. **Technological changes** continued to transform American life and promote the expansion of consumerism. Consumer credit rose from \$8.4 billion in 1946 to \$45 billion in 1958. At the same time, the emergence of the first **McDonald's restaurant** in San Bernardino, Calif. (1954) and the **Holiday Inn** motel chain in Memphis, Tenn. (1952), signaled the rise of the fast food, vacation, and recreation industries. Although fewer than 7,000 **television sets** existed in the entire nation in 1947, by 1955, 66 percent of American families owned one. 7

### 1946, March

**Winston Churchill delivered his “iron curtain” speech** in Fulton, Mo., which helped set the tone for the cold war. 8

### April–May

**The U.S. labor movement could** claim a greater membership than at any other time in its history; **nearly 40 percent of the labor force was unionized.** **A second wave of strikes** hit the soft-coal mines and the railroads. Before the strikes were settled, the government had taken control of the railroads (May 17) and the coal mines (May 20). **Pres. Harry Truman angered labor leaders by threatening to draft striking workers into the armed forces.** Congress passed the **Employment Act** to initiate federal fiscal planning on a permanent basis, to ensure economic growth as well as to curb inflation. 9

### June 25

The Senate passed a measure extending **Selective Service** until March 31, 1947. Prior to this, public pressure had brought about the **hasty demobilization** of close to 9 million men. 10

## July 1–25

Scientists at Bikini in the Pacific demonstrated the effect of an atomic explosion in experiments detonated on warships and under water. 11

## July 15

Pres. Truman signed a bill extending a **credit of \$3.75 billion to Great Britain.** 12

## Sept. 20

Secretary of Commerce **Henry A. Wallace was asked to resign** following his criticism of the government's increasingly firm policy toward the Soviet Union. 13

## Nov. 9

Following a futile battle with Congress to maintain price and wage controls, **Pres. Truman removed virtually all controls** except those on rent and some foods. 14

## **2. Canada, 1946–2000**

The cold war shaped Canadian history no less than it did U.S. history. Located between two superpowers, both with nuclear capabilities, Canada supported the U.S. and became a major architect of the North Atlantic Treaty Organization. Through its treaty agreements as well as through trade arrangements, the nation became increasingly linked to the political economy of the U.S. Most of its trade went to the U.S., while American businesses expanded their investments in the Canadian economy. Foreign corporations (mostly U.S. companies) owned most of the nation's petroleum and discouraged Canadian-controlled research and development projects; this ensured Canada's exclusion from the microchip computer revolution that transformed American technology and industries during the period. Although some Canadian policy makers soon complained of the growing dependence of the Canadian economy on foreign companies, the pattern persisted and placed Canada in an increasingly precarious position in the world market. When the Middle Eastern oil crisis struck Western countries in the 1970s and 1980s, the Canadian economy was particularly hard hit. <sup>1</sup>

Despite heavy dependence on the U.S. for economic development and defense, Canada experienced unprecedented economic growth and prosperity until the early 1970s. Production and consumption rose, as the nation's population not only increased but continued to urbanize, and then suburbanize, in growing numbers. A variety of forces fueled the development of Canadian cities, suburbs, and consumer culture: the baby boom, relatively low rates of unemployment, and an overall rise in the standard of living. Yet, as in earlier eras, the country's prosperity was unequally distributed. Inequality persisted between the troubled agricultural sector (and the maritime provinces) and the vibrant urban economies of Montreal, Toronto, and Vancouver. French-speaking Quebec only slowly gained parity with English-speaking Canada. And the problems of Native Americans, African Canadians, women, and homosexuals received little attention until these groups organized and exerted increasing pressure on the Canadian government. By the late 1980s and early 1990s, Canada was also attracting increasing numbers of new immigrants from Europe (especially Italy), Africa, Asia, and the Americas. Although French-speaking Quebec voted to remain in the Dominion in 1980, the new wave of <sup>2</sup>

immigrants challenged the nation's ability to maintain an increasingly multiracial as well as multicultural nation.

### 1946, April 12

**Field Marshal Sir Harold Alexander** succeeded the earl of Athlone as **governor-general**. 3

### July 1

The proclamation of **the Canadian Citizenship Act** clarified the definition of Canadian citizenship but retained the status of British subjects for Canadians. It went into effect on Jan. 1, 1947. 4

### July 15

A royal commission investigating the activities of a **Soviet spy ring** in Canada reported the disclosure of important secret information by Canadian officials and the existence of a Communist fifth column in Canada, directed by Soviet agents. Among the Canadians involved was the one parliamentary delegate of the Labour-Progressive (Communist) Party. 5

### Aug. 3

**An Anglo-Canadian wheat agreement** provided for British purchases of large amounts of Canadian wheat at prices considerably below the world market. 6

## **D. Latin America, 1945–2000**

### **1. Overview**

In the years since World War II, Latin America has undergone major cultural, economic, and political changes. **Industrialization and urbanization** have transformed the region. Long-standing **conflicts over land use and control** were supplemented by the struggle for industrial development, the desire for **regional self-sufficiency and integration**, and the fight against imperial domination. New political movements, ranging from the extreme Right to the extreme Left, reflected Latin America's changing international and internal situation. 1

Beginning in the 1950s, **hyperurbanization** produced megalopolises in cities such as São Paulo, Rio de Janeiro, and Mexico City. **Declining economic opportunities** and land scarcity in the countryside have driven ever larger numbers of *campesinos* into urban areas, looking for work. By the 1980s these cities, surrounded by countless **squatter settlements**, were among the largest in the world. Rapid population growth was simultaneously felt in rural areas, where inhabitants continued to struggle against the onslaught of commercial agriculture and **environmental destruction**. 2

In some regions the urban middle and working classes have also expanded rapidly. **Import substitution industrialization** and public employment supported the expansion of these classes in the years after 1945. As these groups grew, so did demands for social welfare and health programs, expanded educational opportunities, and growth in the role that the state played in regulating the economy and society. Before the crises and privatizations of the late 1980s, the state in nations such as Brazil, Mexico, and Argentina was heavily involved in commerce and society, and often **the state owned important national industries**. In other less-developed countries, where a small number of people were able to maintain control of the political apparatus, **right-wing repressive tactics** were often maintained. 3

The nationalist and populist politics that dominated the 1940s and 1950s gave way to a more socialist-oriented politics in some areas by the 1960s and 1970s. This trend produced the **socialist revolutions** in Cuba (1959) and Nicaragua (1979), and the 4

election of a socialist president in Chile (1970). However, harsh **authoritarian regimes** and extremely reactionary governments dominated much of the region. Many movements identified with the Left were ruthlessly suppressed. During this time, Latin American **militaries, often with U.S. support, played a growing role in politics**, occasionally as social reformers (as in Peru in 1968), but most often as representatives of the Right.

By the late 1980s both **military interventions in politics and the power of the Left were in steep decline**. Years of brutal dictatorships and the horrors of Argentina's "dirty war" and Augusto Pinochet's Chile had helped to bring Latin America's militaries into deep disregard, while the obvious failures of Fidel Castro's Cuba and the decline of socialism abroad forced the region's leaders to look elsewhere for solutions to their problems. The new, mostly civilian governments of the region are currently resorting to **neoliberalism** and considering the policies of the newly industrializing nations of the Far East for answers to their problems with staggering debt and economic stagnation.

Larger political movements have also reflected certain profound changes in the internal power relationships in Latin American society. The **role of women** has changed radically in Latin America over the past 50 years. From simply receiving the vote to demanding (and finding) expanded roles in politics, business, and other fields, **feminist movements** have had some startling successes in the region. **Native, mestizo, and black movements** have also made great strides in their **demands for representation and for ethnic and racial equality**. The Catholic Church in the region has recently taken up the cause of the poor and dispossessed, highlighted by conferences in 1968 and 1979 wherein **the church abandoned its traditional noninterventionist stance** and openly advocated action to empower the poor and change the plight of the dispossessed. Religious life, meanwhile, has become more diverse, with evangelical Protestant sects attracting numerous converts from poor urban neighborhoods. African-influenced religions, such as Santería (Cuba), Vodun (Haiti), and Candomblê (Brazil) have also thrived in the rapidly expanding cities.

### a. Cultural Developments

In the years since World War II, Latin American art, literature, and film have assumed a prominent international status. Many Latin American **artists of the postwar era have used their work to engage in social and political struggles**. Poets such as Nobel Prize-winner **Pablo Neruda** (1904–73), whose most famous work, *Canto General* (1950), explores the history of Latin America from the point of view of the workers and peasants, examined issues and social groups that had been all but ignored. Cuban poet **Nicolás Guillen**, too, used traditions drawn from **Afro-Cuban folk culture** to attack imperial domination in Latin America.

Over the past 50 years, the novel and short story have emerged as the two dominant art forms of the region. In the 1940s, the Argentine **Jorge Luis Borges** (1899–1986) rose to international prominence with works such as *Ficciones* (1944), which used magic and fantasy as its primary vehicle. The Mexican Nobel laureate (1990) **Octavio Paz** published his major work, *The Labyrinth of Solitude* (1950), in the immediate postwar period. During the same years, writers such as **Miguel A. Asturias**, who wrote *Men of Maize* (1949), were developing the school of magical realism in Latin America. These authors blended myth, fantasy, and native imagery to produce works that might be understood from the perspective of Indian cultures or as rejections of the “logic” of Western literary narratives.

8

**The boom in Latin American fiction** began in the 1960s. During this decade, the Mexican **Carlos Fuentes** (*The Death of Artemio Cruz*, 1962), the Peruvian **Mario Vargas Llosa** (*Conversations in the Cathedral*, 1970), and the Colombian **Gabriel García Márquez** (*One Hundred Years of Solitude*, 1967) gained international prominence. García Márquez (b. 1928), perhaps the most prominent Latin American author, used **magical realism** to retell some of the most tragic events in Colombian history, mixing fantasy with reality, making the two part of everyday life. García Márquez was awarded the Nobel Prize for literature in 1982.

9

In the postwar period, the Latin American film industry also grew significantly, but it was not until the 1960s that Latin American filmmakers emerged as major artists. **Cinema Novo** in Brazil produced a wealth of films exploring poverty in the region, focusing particularly on the *favelas* (urban slums) of Brazil's cities. During the 1960s the Cuban film industry, led by figures such as **Tomás Gutiérrez Alea** (*Memories of Underdevelopment*, 1968) launched a concerted assault against the dominance of Hollywood in the region. Elsewhere in Latin America, efforts at independent filmmaking have been frustrated by the lack of public and private funding.

## **b. [Regional Diplomacy](#)**

**1945, Feb**

Latin American and American leaders met in Mexico City for **the Chapultepec Conference** to discuss postwar cooperation. The U.S. indicated that European recovery had top priority and that, although it intended to protect its own producers, it wanted an open door for investment and trade in the region. The Latin Americans opposed the U.S. position. 1

**1947, Sept. 2**

**The Inter-American Mutual Assistance Treaty** was adopted by the Inter-American conference meeting at Rio. It provided for mutual assistance against aggression. 2

**1948, April 30**

**The Ninth Pan-American Conference**, at Bogotá, established the **Organization of American States (OAS)** as a regional grouping under the UN. The Inter-American Conference became the supreme authority of the OAS, and the Pan-American Union its secretariat. 3

**Dec. 13**

**The OAS charter went into effect** upon ratification by Colombia, the 14th state. 4

## **2. South America, 1945–2000**

### **a. Argentina**

**1945, Oct. 9**

With the country polarized over Juan Perón's labor concessions and advocacy of the poor, <sup>1</sup> the military (supported by big business, the landed elites, as well as Socialists and Radicals) mounted a coup. **Perón was jailed.**

**Oct. 17**

**A rally** of more than a quarter of a million workers in Buenos Aires, supported by **the** <sup>2</sup> **General Confederation of Labor (CGT)**, forced the release of Perón. He then formed the **Labor Party** and vowed to run for president. During this time **EVA DUARTE DE PERÓN** (1919–52), Perón's wife, grew to national prominence for her activism and advocacy for the lower classes.

(See [1938–41](#))

## b. [Chile](#)

### 1946, Sept. 4

**Gabriel González Videla** was elected president by a leftist bloc to succeed **Don Juan A. Ríos** (1942–46). His cabinet included Socialists and Communists, who later dropped out as the regime moved to the Right. <sup>1</sup>

### 1947, Oct

**Communist-led strikes** brought the arrest of 200 Communists and a **break in diplomatic relations with the Soviet Union**. <sup>2</sup>

### 1948, Sept 2

**The Communist Party was outlawed**, but strikes and disorders continued. <sup>3</sup>

### 1949

Women were granted the vote. <sup>4</sup>

### March

**Parliamentary elections** gave the government coalition a majority. <sup>5</sup>

### c. [Paraguay](#)

#### 1946, July 26

**Gen. Higenio Morinigo** formed a two-party cabinet, thus ending a six-year dictatorship. <sup>1</sup>

#### 1947, March–Aug

**Civil war** between the government and left-wing forces under former president Rafael Franco ended with the latter's defeat. <sup>2</sup>

#### 1948–49

**The retirement of Pres. Morinigo** ushered in a procession of presidents: **Manuel Frutos** (June 6, 1948), **Natalicio González** (Aug. 5, 1948), **Raimundo Rolón** (Jan. 30, 1949), **Molás López** (Feb. 27, 1949), and **Federico Chávez** (Sept. 12, 1949). <sup>3</sup>

#### 1954, May 4

**A revolution led to the installation of a government junta headed by ALFREDO STROESSNER** (b. 1912). <sup>4</sup>

#### 1956

Stroessner introduced an **austerity program** in the style of the International Monetary Fund (IMF), driving down wages and provoking unrest. All opposition and the strikes that followed were repressed. 5

## 1961

Paraguayan women were granted the vote. 6

## 1963, Feb. 10

**Gen. Alfredo Stroessner**, president since 1955, met only token opposition in his bid for **reelection**. Stroessner, a champion of foreign interests, organized the political life of the nation around his **Colorado Party**; opposition meant possible torture, exile, and murder. 7

## Aug. 15

Stroessner was sworn in for a third term as president. 8

### **d. [Uruguay](#)**

#### **1946, Nov. 24**

**Tomás Barreta** was elected president. He died on Aug. 2, 1947 and was succeeded by **V.P. Luiz B. Berres**, fellow Liberal Colorado. Pres. Berres promoted import substitution industrialization (with the help of U.S. loans), expanding the industrial workforce from about 50,000 to over 140,000. 1

#### **1950, Nov. 26**

**Andres Martínez Trueba** was elected president to succeed Berres. 2

#### **1952, March 1**

A **nine-man federal council** replaced the presidency, from which Trueba had resigned. The new system called for elections every four years. The two-party system, based largely on political clubs and patronage networks, continued to dominate politics. 3

#### **1955**

Beginning of an **economic downturn**. Landowners and business leaders criticized the inflated bureaucracy and economic controls; organized workers increasingly supported the Left. 4

## 1959, March 1

The defeated Colorados, after 93 uninterrupted years in office, handed over the executive to the **Nationalist (Blanco) Party**. The Blancos moved to support large landholders and the private sector in an IMF-approved plan. 5

## 1963, March 1

Blanco **Daniel Fernández Crespo** became president of the nine-man national council. The economy continued having serious problems, leading to massive capital flight. 6

## 1964

**Founding of the National Labor Convention (CNT)**, drawn from various trade union groups. 7

## 1966, Nov. 27

The election of **Gen. Oscar Diego Gestido** as president signified the resurgence of the conservative wing of the Colorado Party. Diego Gestido was inaugurated on March 1, 1967, at which time a constitutional amendment marked the abandonment of the council system and the return to the presidency. 8

## 1967, Nov

Devaluation of the currency. 9

## Dec. 6

Death of Pres. Gestido, who was succeeded by **V.P. Jorge Pacheco Areco**. The new administration took a hard line in the face of economic crisis. 10

## e. [Bolivia](#)

### 1946, July 21

Amid economic crisis caused by falling tin prices, **Pres. Gualberto Villarroel was killed<sup>1</sup> and his regime overthrown** by rebellious workers, soldiers, and students. The provisional government was recognized by Argentina and the U.S.

### Nov

Delegates to the fourth annual meeting of the **Union Federation of Mine Workers of Bolivia (FSTMB)** signed a Trotskyist declaration that proclaimed their desire for revolution through an alliance with the National Revolutionary Movement (MNR) and the peasants.<sup>2</sup>

(See [1942, Jan. 24](#))

## f. [Peru](#)

### 1945, June 10

**José Luis Bustamente was elected president**, supported by Liberals and Apristas. 1

### 1948, Oct. 29

Pres. Bustamente's government was overthrown and replaced by a military junta under **Gen. Manuel Odría** (1897–1974). The APRA (American Popular Revolutionary Alliance) and the Communist Party were outlawed. 2

### 1950, July 2

Using a populist style reminiscent of Juan Perón of Argentina and running unopposed, **Gen. Odría was elected president**. 3

### 1951, Aug. 13

Peru asked the U.S., Argentina, Brazil, and Chile to investigate border incidents with Ecuador. Fighting had begun on Aug. 11 over the long-standing issue of access to certain Amazon tributaries. 4

## 1955

Peruvian women were granted the vote.

5

### 1956, June 17

**Manuel Prado Ugarteche was elected president** for a second term.

6

### 1958–62

As the land problem became more acute, members of Indian sierra communities organized and initiated land invasions on highland haciendas. In the region of **La Convención** valley, the seizures developed into a full-scale insurrection under **Hugo Blanco** before being brutally repressed.

7

### 1962, July 18

A military junta overthrew and imprisoned Pres. Prado. It also closed Congress and suspended constitutional guarantees. The U.S. suspended diplomatic relations and on July 19–20 halted all aid.

8

### Aug. 17

The U.S. resumed diplomatic relations with Peru.

## **g. [Ecuador](#)**

### **1946, Aug. 11**

**PRES. JOSÉ VELASCO IBARRA** (1893–1979) was reelected by the assembly. <sup>1</sup>

### **1947, Aug. 23**

Col. Mancheno, in a successful revolt, ousted Pres. Velasco Ibarra, only to be overthrown <sup>2</sup> himself on Sept. 3 by a Conservative counterrevolution. **Carlos Arosemena** became acting president.

### **1948, June 6**

In the first popular elections since 1940, **Galo Plaza Lasso** was elected president. <sup>3</sup>

### **1949, Aug. 5**

**An earthquake** in central Ecuador killed more than 4,000 people. <sup>4</sup>

### **1952, June 1**

Voters gave the Liberal candidate, **Velasco Ibarra**, an upset victory over the Conservative candidate in the presidential vote. <sup>5</sup>

### 1961, Nov. 6–9

The government resigned as a result of riots and military unrest. **Carlos Arosemena** was installed as president. 6

### 1963, July 11–12

A military junta, headed by **Capt. Ramón Castro Jijón**, overthrew the government, outlawed the Communist Party, and promised to wipe out pro-Castro guerrilla bands. 7

### 1966, March 29

The military junta was overthrown and a civilian government established under **Clemente Yerovi Indaburu**. 8

### Oct. 16

A constituent assembly named **Otto Arosemena Gómez** as president pro tem. 9

## **[h. Colombia](#)**

### **1946, May 4**

Conservative leader **Mariano Ospina Pérez** became president. He organized the new **political police**, used by the Conservatives to terrorize and murder Liberals. <sup>1</sup>

### **1948, April 9**

**The assassination of left-wing Liberal JORGE ELIÉCER GAITÁN** (1903–48), who was expected to win the 1950 presidential elections, touched off a **major upheaval (known as the Bogatazo), interrupting the Ninth Pan-American Conference in Bogotá**. Thousands died in the insurrection, which saw widespread rioting in the cities, occupation of foreign-owned oil installations, and hacienda takeovers by peasants in the highlands. Elite Liberals and Conservatives, frightened by the violence, initially decided to join together in a group called the **National Union** to protect their interests. This alliance soon broke down, and in the ensuing months a reign of terror that would last until the 1960s (known as **LA VIOLENCIA**) was instituted against the Liberals and all other opposition groups. As many as 300,000 died in the violence. Terrorist actions by the political police were widespread. Clashes between peasants and landlords increased in frequency, and well-organized guerrilla movements emerged in the countryside in support of oppressed groups. As shown in the writings of **Gabriel García Márquez** (*One Hundred Years of Solitude*, 1967), La Violencia profoundly affected the tenor of Colombian political and social life. <sup>2</sup>

### **1949, June 5**

**Congressional elections** gave the Liberals a reduced majority.

3

**Nov. 27**

Following a violent campaign costing over 1,000 lives, the Conservative **Laureano Gómez** was elected president. The Liberals boycotted the election.

## **i. [Venezuela](#)**

### **1945**

Venezuela ranked third among the nations of the world in **petroleum production** when World War II commenced, but wealth remained concentrated in too few hands. A majority of the people remained impoverished, while a high birthrate caused a rapid rise in population. <sup>1</sup>

### **Oct. 18**

**Pres. Isaias Medina was overthrown** by a revolt of army officers, and **RÓMULO BETANCOURT** was made provisional president on Oct. 22. <sup>2</sup>

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

(See [1943](#))

## j. [Brazil](#)

### 1945, Oct. 29

The general demand for a more liberal government led to the forced resignation of **Pres. <sup>1</sup> Getúlio Vargas** after almost 15 years of dictatorship. He was succeeded by **Chief Justice José Linhares**. Despite his resignation, Vargas retained a large popular following and easily won election as a senator.

### Dec. 2

With the endorsement of ex-president Vargas, conservative **Gen. Eurico Dutra** of the **Social Democratic Party (PSD)** was elected president. The new government pledged cooperation with the U.S. abroad and the elimination of “extremist ideologies” at home. <sup>2</sup>

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

## **k. [Surinam](#)**

### **1975, May**

Riots by Hindustanis protested the impending independence from the Netherlands. 1  
Hindustanis, then the largest ethnic group in a population of 348,000, feared political dominance by proindependence black creoles. After the riots, a majority of the Hindustanis emigrated from Surinam.

### **Nov. 8**

**Surinam, under the leadership of Prime Minister Henk Arron, was granted independence.** 2  
Creole groups achieved a majority in Parliament, but the **constitution** (Nov. 21) guaranteed ethnic representation in the army. The Surinamese economy depended heavily on **bauxite exports**, which accounted for 92 percent of foreign exchange earnings.

(See [1941, Oct. 9](#))

### **3. Central America, 1945–2000**

#### **a. Panama**

**1945**

Panamanian women received the vote.

1

**1948, Feb. 15**

In response to widespread protests in Panama, **the U.S. announced the final withdrawal of troops from its wartime bases.**

2

**May 9**

Presidential elections produced a close and contested decision between former president **Arnulfo Arias** and the Liberal **Domingo Díaz Arosemena**. The latter finally won and on Oct. 1 succeeded Enrique Jiménez as president of Panama.

3

(See [Dec. 17–19](#))

## b. [Guatemala](#)

### 1945

**Guatemalan women gained the vote.** 1

### 1950, Nov. 10–12

**COL. JACOBO ARBENZ GUZMÁN** (1913–71), a consistent supporter of Arévalo's liberal program, **was elected president.** 2

### 1952, June 17

Pres. Arbenz signed a **land reform bill**. Arbenz reiterated his commitment to capitalism, but the reform was **supported by a variety of labor and left-wing organizations** active in the subsequently formed peasant leagues. Under the reform, **holdings of over 223 acres were to be expropriated** and given to the landless, paid for with 25-year bonds. 3

### 1953, Feb. 25

The United Fruit Company (UFCO) was told of a plan to expropriate 225,000 of its 550,000 acres in holdings, only 15 percent of which were under cultivation. **The UFCO immediately began a public relations campaign in the U.S. to portray Arbenz as a Communist.** 4

Oct. 14

The U.S. State Department declared that Guatemala, “**openly playing the Communist game,**” could expect no U.S. help or cooperation. **UFCO executives requested CIA help in overthrowing the Arbenz regime.** 5

### c. [El Salvador](#)

#### 1948, Dec. 14

**Pres. Salvador Castañeda was forced to resign.** A provisional government restored full constitutional liberties and called for free elections. <sup>1</sup>

#### 1950, March 26–28

In the first free elections since 1931, **Maj. Oscar Osorio was elected president.** Osorio introduced a constitution that allowed urban unions but banned rural organizing. <sup>2</sup>

#### 1956, Sept. 14

**Gen. José María Lemus became president.** <sup>3</sup>

#### 1961, Jan. 26

After a three-month junta was overthrown on Jan. 25, the new five-member **Military-Civilian Directorate** took control amid a rash of urban violence that left 96 dead. <sup>4</sup>

#### Feb. 15

U.S. president John F. Kennedy recognized the junta, which could then receive aid from <sup>5</sup>

the **Alliance for Progress**. Aid seemed crucial to dealing with the explosive social problems stemming from El Salvador's massive population growth and booming coffee industry. The population was 2.5 million by 1961. Along with the “**fifty families**” (the country's economic elite), the government sought to promote **foreign-sponsored light industry**. With the creation of the **Central American Common Market (CACM)**, Salvadoran officials saw a solution to social problems, but these enterprises **did little to alleviate population and unemployment pressures**. Meanwhile, mechanization increased in cotton, cattle, and coffee, driving peasants off the land.

## d. [Nicaragua](#)

### 1947, Feb 2

**Leonardo Argüello** was elected president to succeed **Anastasio Somoza**. The new president was removed (May 27) when he showed signs of independence; in September, Somoza made **Victor Román Reyes** president. Under Reyes the new labor code went unenforced, and strikes were completely forbidden. 1

### 1950, March 25

Gen. Somoza resumed the presidency. During subsequent years the Somoza “**kleptocracy**” dominated the economy. The Somozas appeased elites by splitting profits from economic ventures and foreign aid with a small number of families. 2

### 1955

Nicaraguan women were given the vote. 3

### 1956, Sept. 29

**Pres. Somoza** died of gunshot wounds inflicted on Sept. 22. He was succeeded by his son **Luis**, elected to serve until May 1957, and then reelected for a six-year term. Luis, with the help of his brother **ANASTASIO SOMOZA DEBAYLE** (1925–80), known as Tachito, who controlled the National Guard, continued the graft and terror initiated by his 4

father. The cotton boom drew large capital investments, driving peasants off their land. Among the only sources of opposition allowed was the mildly critical paper *La Prensa*, published by conservative **Pedro Joaquín Chamorro**.

## 1961

**Carlos Fonseca, Silvio Mayorga, and Tomás Borge founded the FRENTE SANDINISTA DE LIBERACIÓN NACIONAL (FSLN)**, composed largely of students, which sought to overthrow the Somozas through guerrilla warfare. The **Sandinistas** were almost wiped out by the late 1960s. 5

## 1963, Feb. 3

**René Schick Gutiérrez**, the candidate selected by retiring president Somoza, defeated Diego Chamorro in the presidential election. 6

## 1966, Aug. 3

**Lorenzo Guerrero** was elected president. 7

## 1967, April 13

**Luis Somoza died**. His massive holdings reflected the **expansion of cattle ranches**, which bred cattle for U.S. markets. Peasants who had lost their land to cotton were now driven off by large-scale cattle ranching. Deforestation occurred, **60 percent of the peasants were left landless, and urban slums swelled**. 8

## Feb

Gen. Anastasio Somoza Debayle was elected president, prolonging the Somoza dynasty. 9

## e. [Costa Rica](#)

### 1944–48

**A National Republican-Vanguardia Alliance under Pres. Teodoro Picado ruled Costa Rica.** The “Calderonista” coalition government introduced social security, high income taxes, an eight-hour workday, and a social welfare system. <sup>1</sup>

### 1948, Feb. 8

**Otilio Ulate Blanco** of the National Union Party was elected president. When the government declared the election invalid because of irregularities, **JOSÉ (PEPE) FERRER FIGUERES's** (1906–90) anti-Communist **Army of National Liberation** openly revolted, with U.S. military and economic assistance. <sup>2</sup>

### April 17

The U.S. put its military forces in the Panama Canal zone on alert, allegedly prepared to rid Costa Rica of Communist influence in the government. In the aftermath, **the overpowered populist government negotiated a surrender** with Figueres's forces. <sup>3</sup>

### May 8

**Figueres headed a military junta** that embarked on a program of political and economic reforms. Although he had promoted rightist ideology during his opposition, much of Figueres's programs were clearly populist. **He dismantled the army, introduced new taxes, nationalized the banking system, and called a constituent assembly.** <sup>4</sup>

## Dec. 10

**Costa Rica was invaded from Nicaragua** by Costa Rican exiles. Charges of Nicaraguan complicity were examined by a commission of the Organization of American States and dismissed. <sup>5</sup>

## f. [Honduras](#)

### 1948, Oct. 10

**Pres. Tiburcio Carías**, after 15 years of dictatorship, supported the election of Nationalist candidate **Juan Manuel Gálvez**. 1

### 1954, April 30

In response to United Fruit's refusal to pay dock workers for overtime, **50,000 laborers under the leadership of banana workers launched a 69-day strike that paralyzed the nation**. They gained the right to unionize and wage concessions. However, strike leaders were arrested, and the banana companies began to mechanize, thereby laying off workers. 2

In the aftermath of the strike, the Honduran government signed a treaty with the U.S. that allowed for **U.S. military exercises on Honduran soil**. 3

### Dec. 5

Control of the country was taken over by **acting president Julio Lozano Díaz**. 4

(See [1942, May 22](#))

#### 4. [Mexico, 1946–2000](#)

##### 1946, July 7

**MIGUEL ALEMÁN** (1900–83) **WAS ELECTED PRESIDENT**. Even more conservative than Avila Camacho, he embarked on an extensive program to develop industry and infrastructure. **Foreign capital was welcomed, though under government control**. Alemán's presidency initiated a period of **rapid economic growth**. He used all government resources, including the military, to promote the economy and to suppress dissent. Relations with the U.S. were cordial, and the first exchange of presidential visits took place in 1947. 1

##### 1946–52

Using the power of the Mexican state, Alemán solidified the **monopolization of the political process by the PRI (Party of the Institutionalized Revolution)**. Amid rampant corruption, Alemán continued the tradition of lip service to the Revolution of 1910 while **supporting capital projects and working against labor and peasant groups**. Workers' movements were co-opted or crushed. Leftist union leaders were replaced with corrupt party loyalists, known as *charros*. The *ejido* (agrarian cooperative) program and rural education were ignored in favor of middle-class and upper-class interests. 2

##### 1947, Sept. 30

**A final settlement** was made by the Mexican government for the **1938 expropriation of U.S. oil properties**. 3

## 1952, July 6

The PRI candidate, **Adolfo Ruiz Cortines, was elected president.** Distancing himself from the Alemán regime's corruption, Ruiz Cortines **ordered all public officials to publicize their finances** and fired a number of notoriously corrupt officials. Otherwise, he continued Alemán's policy of encouraging foreign investment and capital-driven growth. 4

## 1953

Thirty-six years after the constitution declared universal male suffrage, **Mexican women received the vote.** 5

**Rubén Jaramillo**, veteran Zapatista, member of the Communist Party, and ordained minister, **rose in armed revolt** against the government. His combination of Marxism and Christianity eventually became a powerful social force. 6

## 1958

The national population reached 32 million, having doubled in the previous 25 years. Mexico's cities were also growing at 5 to 10 percent per year, with the population of Mexico City reaching 4.5 million. 7

## July 6

**Adolfo López Mateos**, candidate for the PRI and minister of labor and social security, **was elected president.** 8

### a. [Cuba](#)

#### 1948, June 1

In an economy prospering from high sugar prices, **Carlos Prío Socorras** was elected president. Prío was a member of Grau San Martín's Auténtico Party and an anti-Communist. <sup>1</sup>

#### 1952, March 10

With elections approaching and victory for the opposition likely, **Gen. Fulgencio Batista** overthrew **Prío Socorras** and assumed power. During the next seven years, Batista allowed U.S. influence to pervade the entire Cuban economy, including public utilities, petroleum, sugar, and tourism. Famous for its African-Cuban music and freewheeling nightlife, Havana became the tourism capital of the Americas. <sup>2</sup>

#### 1953, July 26

**FIDEL CASTRO RUZ** (b. 1926), a student activist, led an abortive **attack on the Moncada garrison in Santiago**. Castro's eloquent defense of his actions at his trial brought him national prestige. He was imprisoned but allowed to go into exile in Mexico in 1955. <sup>3</sup>

#### 1954, Oct. 30

On the eve of presidential elections, Gen. Batista's only rival for the presidency, Ramón Grau San Martín, withdrew, charging that the election was rigged. 4

### 1956, Nov. 24

Castro and 81 followers, including his brother **Raúl** and **ERNESTO “CHE” GUEVARA**, sailed for Cuba from Mexico to renew the struggle. After a difficult landing, Castro and a handful of survivors barely made it to the Sierra Maestra in Oriente. 5

### 1957, May 20

**Castro appealed to the U.S. to stop sending arms to Batista.** He led many raids in Oriente Province, gaining sympathy from peasants. Guerrilla actions and strikes had paralyzed the region's economy by the end of 1957. Repression only generated more support for his **26th of July Movement**. 6

### 1958, March 17

**Castro issued a manifesto calling for “total war”** against the Batista regime. 7

### April

Castro's call for a general strike failed, largely because of the lukewarm support of the Communist Popular Socialist Party (PSP) for Castro. After the strike, Communist leader **Carlos Rafael Rodríguez** went to Oriente to try to repair relations with Castro. 8

## **[b. Puerto Rico](#)**

### **1948, Nov. 2**

Popular Party candidate **Luis Muñoz Marín** (1898–1980) became the first elected governor of Puerto Rico. He would win repeated elections until he left power in 1964. Muñoz Marín oversaw **OPERATION BOOTSTRAP**, begun in 1948, which was designed to industrialize and urbanize the island by utilizing low wages and tax concessions to promote investment. For the next 20 years, the economy boomed. Operation Bootstrap promoted out-migration to the mainland (particularly New York) to provide labor for U.S. industry. After 1945, over a million Puerto Ricans, including many women, immigrated to the U.S. 1

### **1950, July 3**

An act of the U.S. Congress permitted Puerto Rico to draft its own constitution. 2

### **Nov. 1**

**The attempt on U.S. president Harry Truman's life** by two Puerto Ricans led to the arrest of large numbers of Communists and nationalists on the island. Support for the nationalists dwindled. 3

### c. [The Dominican Republic](#)

#### 1947, May 16

**Rafael Leonidas Trujillo**, who had controlled the country since 1930, was reelected as president. His reign of corruption and terror, which included seven different intelligence agencies and required all citizens to carry passes, continued unabated. <sup>1</sup>

#### 1947–50

The Dominican Republic **accused its neighbors, notably Cuba and Guatemala, of abetting subversive activities** directed against Trujillo. The OAS council considered the matter and condemned the Dominican Republic, as well as Cuba and Guatemala, for engaging in conspiracies and attempted invasions. <sup>2</sup>

#### 1952

**A bilateral agreement with Haiti** was signed, providing 20,000 Haitian laborers per year for work on state-owned Dominican sugar estates. Because of the U.S. market, **Dominican sugar was booming** at this time, but workers were forced to live in slavelike conditions. <sup>3</sup>

#### 1960, Feb

Weary of the brutal Trujillo regime and preparing for the Bay of Pigs invasion, **U.S. president Dwight D. Eisenhower approved Central Intelligence Agency (CIA) plans to start aiding opponents of the regime.**

4

### Aug. 3

Trujillo supporter **V.P. Joaquín Balaguer** (b. 1907) was sworn in as president, succeeding Hector Trujillo Molina, who resigned on Aug. 2. **Popular unrest continued,** and the OAS maintained sanctions in August and September.

5

### **d. [Haiti](#)**

#### **1946, Jan. 11**

A military group under **Col. Paul Magliore** ousted Pres. Elie Lescot, took over the government, and installed **Dumarsais Estimé as president**. Estimé replaced mulatto civil servants with blacks and initiated reforms for urban and rural workers.

*1*

#### **1948, Feb. 11**

Pres. Estimé was overthrown by a military junta under Col. Paul Magliore.

*2*

#### **1950**

Electoral suffrage was extended to women.

*3*

#### **1956, Dec. 12**

His regime weakened by a general strike, Magliore gave up the presidency.

*4*

#### **1957, Feb. 7**

The legislature elected **Franck Sylvain** as provisional president.

*5*

## April 2

Accused of trying to fix upcoming elections, provisional president Sylvain resigned, and a provisional executive council took over. 6

## May 26

Following a flare-up of civil war between the executive council and the forces of army Chief of Staff León Cantave, **Daniel Fignolé** took over as provisional president. 7

## June 14

The army, led by Brig. Gen. Antonio Kebreau, ousted provisional president Fignolé and proclaimed a **state of emergency**. 8

## Sept. 22

The presidential election resulted in victory for **FRANÇOIS DUVALIER** (1907–71). 9

## Oct. 22

Amid a crisis with the U.S. over the fatal beating of an American by police, **Duvalier became president**, and the military junta resigned. Duvalier, known as “**Papa Doc**,” would rule the country until his death in 1971. He mixed mystic populist symbols, such as vodun (voodoo), with brutal repression. Duvalier expelled all mulattos from the civil service and made the army and police responsible only to him. To secure control he created the **Tonton Macoutes**, the most feared repressive arm of his regime. His “**kleptocracy**” enriched a small number of favorites while it impoverished the rest of the nation. Human rights were ignored, but at the same time Duvalier tried to maintain relations with the U.S. in order to ensure continued aid. 10

e. **British Caribbean Territories and Guyana (British Guiana)**

**1953, Oct. 6**

Britain dispatched troops and warships to Guiana to handle a suspected attempt to set up a Communist regime there. <sup>1</sup>

**1956, Feb. 23**

Delegates from **Jamaica, Trinidad, Tobago, Barbados, the Windward Islands, and the Leeward Islands** came to a preliminary agreement for a Caribbean federation. <sup>2</sup>

**1957, Aug. 12**

**Cheddi Jagan's** (b. 1918) left-wing party won 9 of the 14 elective seats in the Guiana legislative council. On Aug. 16, Gov. Patrick Renison invited Jagan to participate in, but not to form, a new cabinet. <sup>3</sup>

**1958, Jan. 3**

**The Federation of the West Indies came into being.** The 77,000-square-mile federation, with a population of 3 million, was composed of ten units: Trinidad, Tobago, Jamaica, Barbados, St. Lucia, St. Vincent, Grenada, Montserrat, St. Kitts-Nevis-Anguilla, Dominica, and Antigua. <sup>4</sup>

**1960, March 31**

The British colonial office announced that if a new constitution was accepted for British Guiana, it would go into effect in Aug. 1961. Two years after the general election, full independence would be considered. 5

### Aug. 21

The People's Progressive Party in Guiana, headed by Cheddi Jagan, won 20 of the 35 seats in the legislative council. 6

### Sept. 19

Jamaica voted to withdraw from the West Indies Federation. 7

(See [Overview](#))

## **E. The Middle East and North Africa, 1945–2000**

### **1. Overview**

The postwar period saw the **end of foreign rule and the achievement of independence** <sup>1</sup> by all countries in the region. The old colonial masters, Britain and France, lost their position of dominance, to be replaced by **the U.S. and the USSR**, whose competition for allies and resources embroiled the area in the **cold war**. From the 1970s, and especially after the dissolution of the Soviet Union, the **U.S. emerged as the supreme foreign power**.

Much **domestic turbulence** accompanied independence. Military coups in the Arab world during the 1950s and 1960s **brought down the old ruling elites** based on great landowners and installed **new regimes** in which military officers and senior bureaucrats predominated. The new political order embraced **radical ideologies**, notably **pan-Arabism and socialism**, and implemented populist programs such as **land reform**. By the 1970s these ideologies had lost their appeal, giving way to a certain **economic liberalization** as well as pragmatism in foreign policy. There was, however, **no democratization of the region's regimes**, most of which developed into **highly authoritarian structures** intolerant of opposition. <sup>2</sup>

A number of **major wars**, both within and between states, shook the region, causing immense loss of life and treasure. The **Arab-Israeli conflict** emerged as a seemingly permanent condition after 1948, when the Arab states and the Palestinians vowed to destroy the newly created state of Israel and put an **Arab Palestinian state** in its place. After four bloody wars failed to dislodge the Israelis (who actually gained territory), fatigue and realism prompted **three historic breakthroughs: the Egyptian-Israeli peace treaty (1979), the Israeli-Palestinian Declaration of Principles (1993), and the Jordanian-Israeli peace treaty (1994)**. <sup>3</sup>

Several other major conflicts convulsed the region during this period: **the Algerian War for independence (1954–62), the civil war in North Yemen (1962–70), the Turkish invasion of Cyprus (1974), the civil war in Lebanon (beginning in 1975), Morocco's long war in the Western Sahara (beginning in 1976), the Soviet invasion of** <sup>4</sup>

**Afghanistan** (1979), the long **Iran-Iraq War** (1980–88), and **the Iraqi invasion of Kuwait** (1990). Other conflicts involved **separatists**, the most notable of whom were **Kurdish nationalists**, who staged revolts throughout the postwar period against regimes in Iraq, Iran, and Turkey.

Alongside this turmoil, the Middle East experienced **rapid demographic and economic growth**. The region's population grew at an astonishing rate, accelerating from about 2 percent per year (1945–60) to almost 3 percent per year (1960–93). The total population rose from about 101 million in 1945 (61 million in the Middle East and 20 million in North Africa) to about 314 million (255 million and 59 million, respectively). The proportion of urban people climbed from one-quarter to about one-half, the product of **massive rural-urban migration**, primarily to the capital cities. This **population explosion** undermined development plans and prompted the first family-planning programs. 5

From the 1950s onward, the region was swept up in an **economic boom**. The standard of living improved everywhere. The economy was becoming **more diversified and less dependent on agriculture**. Though agricultural production expanded, it represented a diminishing share of total output. **Industry made considerable advances despite only a modest level of development** by world standards. Most states took an active (sometimes exclusive) role in directing their national economies. Their **bureaucracies and public sectors swelled** to unprecedented dimensions, especially as a high proportion of their budgets went into the military and internal security forces, which expanded tremendously. 6

The region's **oil industry** gained world importance, and especially when oil prices soared in the 1970s, **an immense amount of wealth flowed into the oil states** from the West. **The oil boom** set in motion several regional trends: large-scale **investment** in development schemes; a **massive migration** of workers to the oil states; a growing gap between rich and poor countries; increasing dependence of the oil states on the West for goods, expertise, and investment opportunities; and economic liberalization in the poorer states as a way of sharing in the boom. 7

**The position of women** changed with the great socioeconomic transformations of the period. Women entered the educational system and the workforce in unprecedented numbers. Several countries passed laws to reduce social inequalities and to provide women with a greater measure of security within the family. The feminist cause gained some ground, although conservative elements insisted on keeping women in more traditional social roles. 8

The cultural scene was also transformed, especially by **the expansion of education and the spread of the mass media**. The number of schools and students increased dramatically at all levels, and **illiteracy rates declined** (from about 75 percent to 40 percent). **Radio and then television** became commonplace and, together with the cinema, formed the prime sources of popular entertainment as well as exposure to the 9

wider world. The output of novels and poetry increased, and two regional writers, S. Y. Agnon of Israel and Najib Mahfuz of Egypt, won Nobel Prizes for their literary accomplishments.

A remarkable phenomenon amid these changes was the **emergence of militant Islamic opposition movements** throughout the region. The programs of the various **“fundamentalist”** groups differed in methods and demands, but all shared a **rejection of secular government and the desire to impose an Islamic identity** on state and society. Although only in Iran was a government overthrown by Muslim opposition, movements everywhere **won wide appeal among the disaffected**. Their clashes with the authorities, often violent, intensified a long-standing, **bitter debate** over the nature and future of Muslim societies. The rise of fundamentalism also triggered bitter **cultural disputes** among intellectuals in countries such as Egypt between the fundamentalists and the defenders of more pluralist traditions and secular outlooks. 10

## 2. Military, Diplomatic, and Social Developments

### 1945–90

**Steep rise in average life expectancy** throughout the region, from about 35 years to nearly 60 years. Most of these gains came from a **reduction in mortality rates**, which declined as people improved their diets, acquired better medical care, raised their standard of living, and became more educated. <sup>1</sup>

### 1945–70

**Emigration** of approximately **1 million North Africans** (almost entirely from Morocco, Algeria, and Tunisia) to France. Most worked in semiskilled or unskilled occupations such as construction, mining, and the service sector. <sup>2</sup>

### 1945, March 22

Proclamation of the covenant of the **ARAB LEAGUE** (Egypt, Iraq, Jordan, Lebanon, Saudi Arabia, Syria, and Yemen). The league soon founded committees to oppose Israel and to support North African independence movements. It added North African states, including Sudan, in the 1950s and 1960s. <sup>3</sup>

### 1947–49

**The uprooting of 700,000 Palestinians** (of a prewar population of 1.3 million) from the territory that became the state of Israel. All Arabs who fled during the war of 1948 were later **barred by Israeli authorities from returning to their homes**. The refugees eventually settled in Jordan (400,000, mainly in the West Bank), the Gaza Strip (150,000), and Syria and Lebanon (150,000). The other 600,000 Palestinians who did <sup>4</sup>

not relocate were distributed among Israel (150,000), the Gaza Strip (50,000), and the West Bank (400,000).

### 1947, March 12

Announcement of **the Truman Doctrine** by the U.S., which pledged to provide **economic and military assistance** to Greece and Turkey to help these countries resist Soviet pressures and encroachments. The **U.S. thereby replaced Britain**, which was facing financial difficulties, as the chief source of foreign aid to these countries. 5

### 1948, May 15

**ARAB ATTACK ON ISRAEL**, which had proclaimed its independence on the previous day. **Five Arab armies** engaged Israeli forces: Egyptian troops (about 10,000) from the south moved into the Negev desert, the Arab Legion of Transjordan (about 4,500) into the West Bank, Iraqis (about 3,000) alongside the Arab Legion, and token forces from Syria and Lebanon into the north. The **Israelis had an estimated strength of 62,500**: the Hagana at 55,000, the Palmach (regular troops) at 3,000, and the Irgun at around 4,000. 6

Of the Arab armies, only the **Arab Legion**, which **captured the West Bank and eastern Jerusalem**, achieved any significant successes. The Syrians turned away after inconsequential border skirmishes. The Egyptians performed badly and held on to only the Gaza Strip. **Israeli troops overall were more disciplined and better supplied** and, unlike the Arabs, had the additional advantage of fighting under a unified command. The combat was fierce, and casualty rates were high. Israeli forces suffered over 6,000 dead. The Arabs lost over 2,000 men from the regular armies, together with an unknown number of Palestinian irregulars. 7

By the end of the war, **Israel held 80 percent of the territory from the original Palestine mandate**. In contrast to international wishes expressed in the UN plan of 1947, no Arab Palestinian state had come into existence. All land not held by Israel was either in the possession of Jordan (the West Bank) or under Egyptian administration (the Gaza Strip). Hostilities came to an end through a **series of armistices**, which disengaged the combatants without terminating the technical state of war between them. Israel first concluded a **cease-fire with Egypt** (Feb. 24, 1949), then with **Lebanon** (March 23, 1949), **Jordan** (April 3, 1949), and **Syria** (July 20, 1949). Yet the peace was fragile. Incidents along the borders were frequent, mainly caused by the activities of **Palestinian guerrillas**, who received encouragement from the Arab countries that hosted them. Even the most explicit terms of the armistices were not always observed. The most flagrant 8

case was the **Jordanian refusal to admit Israelis into east Jerusalem** for visits to the Jewish holy places.

## Sept

Creation by the Arab League of the **Government of All Palestine, based in Gaza**. It was set up ostensibly to govern the Palestinian territory still under Arab control. In reality, its chief purpose was to thwart the Jordanian absorption of the West Bank, occupied by the Arab Legion. 9

## Sept. 17

**Assassination of UN mediator Count Folke Bernadotte** by Zionist terrorists. 10

### **3. The Middle East and Egypt, 1943–2000**

#### **a. Turkey**

**1945, May 19**

**Pres. Ismet İnönü** announced the switch to a **multiparty state** and relaxed the restrictions on party formation. Between 1946 and 1950, 27 new political parties came into being. Only two of them had any real significance: **the Democratic Party** (1946) and **the Nation Party** (1948). 1

**June 11**

**Land reform** measures. The state began to parcel out unowned land and unused state and community land to peasants. In addition, the new laws called for the **expropriation** of all private holdings over 500 donums (123.5 hectares), though the **ceiling** was raised to 5,000 donums in 1950. By 1960, the program had dispensed some 1.7 million hectares of arable land and 1.5 million of pasture land to 360,000 families. Despite the effort to redistribute land, the position of the **great landowners** remained strong. Even in 1960, only 15 percent of all landowners still owned about half the land. **Great estates** were most common in **eastern Anatolia**. 2

## **b. [Cyprus](#)**

### **1945**

Agitation among Greek Cypriots for **Enosis**, union with Greece. The ethnic Turks on the island, who constituted about 20 percent of the population, adamantly opposed it. 1

### **1946, Aug**

Cyprus began to play an important role as a way station for Jews immigrating to Palestine. 2

### **1948, May**

British submission of the **Winster Constitution**, which granted greater autonomy to Cyprus. It was **rejected** outright by the Greek Cypriot community under the leadership of the Greek Orthodox Church. 3

### **1950, Jan. 15**

Greek Orthodox officials conducted a **referendum** on Cyprus's future in which 95.7 percent of the Greek Cypriot electorate **voted for Enosis**. The Greek government made the absorption of Cyprus an official national policy (Feb. 11, 1951). 4

### **Oct. 18**

Election of Michael Mouskos, bishop of Citium, as **Archbishop MAKARIOS III**. He 5

quickly became the central figure in the struggle for Cypriot independence. After his election as **the first president of Cyprus** (1961), he pursued pragmatic policies that aimed to preserve the binational character of the Cypriot state and peaceful relations among the island's communities.

(See [1942, Jan 29](#))

### c. [Iran](#)

#### 1945

**Founding of the Fada'iyān-i Islam by Navvab Safavi.** It became the first religious organization to advocate the creation of an **Islamic state**. The movement involved itself in **political violence**, including the assassinations of writer **Ahmad Kasravi** (1946) and the shah's minister of court, **Abd al-Husayn Hazhir** (1949). It gradually faded from the scene in the 1950s, especially after the arrest and execution of Safavi (1956). <sup>1</sup>

#### Oct

Outbreak of a **revolt in Azerbaijan**. The insurrection was organized by the **Democratic Party of Azerbaijan**, founded in Sept. 1945 and led by **Ja`far Pishavari**, who became prime minister in Dec. <sup>2</sup>

The Azeri government proposed **radical reforms**, including land and labor reforms, and made **Azeri** the official language of government and education. The young regime rapidly collapsed after the return of Iranian troops to Azerbaijan (Dec. 1946). <sup>3</sup>

(See [1933, Nov. 8](#))

## d. [Afghanistan](#)

### 1946

Official opening of the **University of Kabul**. The various schools associated with it were not grouped into a single campus until 1964. <sup>1</sup>

### May

**Resignation of Prime Minister Hashim Khan**, who was succeeded by his brother, **Mahmud Shah Khan**. <sup>2</sup>

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

(See [1945, Feb](#))

## e. [Syria](#)

### 1945, May

**Fighting between French and Syrian forces.** The French demanded a treaty giving them autonomy within Syria and guaranteeing their economic and military interests. They further announced that they would not withdraw their troops until the Syrians agreed to these terms. **Anti-French demonstrations** immediately broke out, and Syrian police skirmished with French units. The French backed down and dropped their demands after the diplomatic intercession of Britain. <sup>1</sup>

### 1946

**Death of Shakib Arslan**, one of the most prominent Syrian political activists during the Mandate. Permanently at odds with French authorities, he spent most of his political career as an exile in Europe. He was the ultimate **representative of the older generation** of Syrian politicians who received their education in Ottoman schools and remained nostalgic for the Ottoman Empire. Apart from his anti-French activities, he was best known as an ardent spokesman for the pan-Islamic political movement. <sup>2</sup>

Official formation of the **BA`TH PARTY**, whose program espoused **Arab unity and socialism**. The leading figures in the early years were **Michel Aflaq and Salah al-Din al-Bitar**. By the mid-1950s the party had become a major contender on the political scene. <sup>3</sup>

### Aug

**SYRIAN INDEPENDENCE** and the withdrawal of all Allied troops.

## f. [Lebanon](#)

### 1943–64

**MINISTERIAL INSTABILITY.** Thirty-five cabinets held power during this span of only 21 years. 1

### 1946, March 10

**INDEPENDENCE** was proclaimed, and the last French troops departed from Lebanese soil. 2

### 1948, May 27

Reelection of **Bishara al-Khuri** as president. 3

### 1949

Execution of **Antun al-Sa'ada**, the Greek Orthodox radical, for fomenting a rebellion to overthrow the Lebanese state. 4

**Formation of the Progressive Socialist Party** by **KAMAL JANBULAT**, a Druze chieftain. The party espoused leftist ideology, but functioned essentially as a **Druze organization**. 5

## 1952, Sept. 23

Election of **KAMIL SHAM'UN (Camille Chamoun)** as president. He replaced outgoing president **Khuri**, who resigned (Sept. 18) in the face of a general strike.

6

## 1953

**Women won the right to vote.** Lebanon became the first Arab country to grant women this privilege.

7

## 1958, July 15–19

**LANDING OF U.S. MARINES.** The **National Front**, a broad antigovernment coalition that wished to unseat Pres. Sham'un, fared badly in earlier **parliamentary elections**. Frustrated at the polls, they resorted to **street violence and strikes**. The **Lebanese Army**, under the command of **FU'AD SHIHAB**, refused to intercede. Sham'un thereupon turned to the U.S. for help. The **American government** immediately dispatched 10,000 marines as an application of the so-called **Eisenhower Doctrine**. The crisis was defused by the selection (July 31) of **Shihab** as the new president. **Rashid Karami**, a Sunni Muslim leader of the National Front, was installed as prime minister. No changes were made in the sectarian structure of the national political system.

8

## 1964, Aug. 18

Election of **Charles Hilu** as president.

9

## 1969, Nov

**THE CAIRO AGREEMENT.** After meeting with **PLO officials** in Cairo, the **Lebanese government** pledged not to harass Palestinian guerrillas operating out of southern Lebanon. In return, the Palestinians were to keep out of Lebanese affairs. The settlement was an **uneasy compromise** between Christian politicians, who wanted strict controls on the Palestinians, and Muslim representatives, who fully backed the guerrilla activities. The problem became even more acute with the influx of additional **Palestinian refugees** after the Jordanian expulsion of the PLO (Sept. 1970). The number

10

of Palestinians living in Lebanon at this time stood roughly at 300,000.

### 1970, Aug. 17

Election of **Sulayman Faranjiyya** as president.

11

### 1972, July 8

Assassination in Beirut of **Ghassan Kanafani**, renowned Palestinian author and journalist, and leader of the Popular Front for the Liberation of Palestine.

12

## **g. Palestine and Israel**

### **1946, May 1**

Report of the **Anglo-American Commission**. The committee called for the admission of 100,000 Jewish refugees and the creation of a single Arab-Jewish state under the trusteeship of the UN. <sup>1</sup>

### **July 22**

**Zionist terrorists blew up the King David Hotel** in Jerusalem, which housed British headquarters. <sup>2</sup>

### **Oct. 4**

U.S. president Harry S. Truman announced **American support for the partition of Palestine**. The American position doomed all attempts to construct a binational state. <sup>3</sup>

(See [1931–32](#))

## **[h. Jordan](#)**

### **1946, March 22**

**A treaty between Britain and Transjordan** ensured the continued dependence of Transjordan on Britain. The terms of the pact guaranteed **British command of the Arab Legion** and the maintenance of **bases for British forces**. In return, the British agreed to pay **financial subsidies** to the Transjordanian government. <sup>1</sup>

### **May 25**

Proclamation of the kingdom of Transjordan. It was renamed **THE HASHEMITE KINGDOM OF JORDAN** on June 2, 1949. <sup>2</sup>

(See [June 1–2](#))

## **i. [Iraq](#)**

### **1945–46**

An attempt at **political liberalization**. The government tolerated the **formation of opposition parties**, the most notable of which were **the Istiqlal Party and the National Democratic Party**. Both parties were left-wing organizations whose constituencies, confined to urban and educated classes, left them with a narrow base of support. Labor unrest and, above all, the wariness and insecurity of the political establishment led ultimately to the **failure of the liberalization policy**. <sup>1</sup>

### **1948, Jan**

**Widespread popular demonstrations**, known as the *wathba* (uprising). The protests were sparked by the announcement of **the Portsmouth Treaty** with Britain (Jan. 15), a renegotiated version of the 1930 treaty. **The British agreed to remove their troops** from Iraq and **gave up** sovereignty over their **two air bases** in Iraq, but they still retained a voice in Iraqi military planning and remained as the sole supplier of training and equipment to the Iraqi army. Together with Britain's role in the escalating Palestine crisis, **the treaty roused nationalist opposition** in Iraq and failed to win popular approval. The political crisis was compounded by **economic difficulties** in the wake of a bad harvest, bread shortages, and accelerating inflation. In the end, the cabinet fell, and **the treaty was never ratified**. <sup>2</sup>

### **1949**

Failure of negotiations to unify Iraq and Syria. The attempt was largely inspired by the ambitions of the regent, Abd al-Ilah. An attempt to revive the project in 1953 came to nothing. 3

## 1950

Establishment of the **Development Board**, made possible by the recent increase in oil revenues. Most projects were devoted to **agricultural improvements**. Communications and transportation were of secondary priority, and industry received the least amount of funding. 4

## 1950–52

New agreements with the **Iraq Petroleum Company**. The first (1950) substantially raised Iraqi royalties, and the second (1952) gave Iraq half the profits. 5

## 1951

**Flight of nearly the entire Jewish community** (over 130,000) **to Israel**. The emigrés were forced to leave their assets behind (estimated at over \$150 million). 6

## 1952

**Formation of THE BA`TH PARTY**, which was committed to the cause of **pan-Arabism**. Before 1958 the party attracted only a handful of political activists. 7

## Nov. 23

Appointment of a **military government** and the outlawing of all political parties. A series of strikes and riots earlier in the year had led to the breakdown of order. The military regime organized **new elections** and stepped down on Jan. 22, 1953. 8

The Encyclopedia of World History, Sixth edition. Peter N. Stearns, general editor. Copyright © 2001 by Houghton Mifflin Company. Maps by Mary Reilly, copyright © 2001 by Houghton Mifflin Company. Published by Houghton Mifflin Company. All rights reserved.

(See [1944](#))

## **j. [Saudi Arabia](#)**

### **1953, Nov. 9**

**Death of ABD AL-AZIZ IBN SA`UD.** His oldest son, **Sa`ud**, ascended the throne. 1

Creation of a full-fledged **cabinet**. Before World War II, there had been only two 2  
government ministers, one for foreign affairs and the other for finance. Posts for defense  
(1944) and the interior (1952) later appeared, and in 1953 the number of ministers was  
expanded to ten. Princes from the **royal family** assumed nearly all the positions,  
confirming **Saudi dominance** over the central government.

### **1958–64**

**STRUGGLE FOR POWER between KING SA`UD and his brother, FAYSAL.** The 3  
latter held effective power for most of this period (1958–60 and 1962–64) as the prime  
minister. The rivalry centered on the **future direction of the Saudi government**. Sa`ud  
believed that a loose confederation of tribes, as in the past, was the best system. Faysal,  
on the other hand, argued that the Saudi government had to be radically reorganized into  
a modern state, which would be better able to manage the economy and society in an era  
of abundant oil wealth.

### **1964–86**

**Expansion of the armed forces.** The army grew from 12,000 to 40,000 and was complemented by the National Guard, primarily recruited from among tribesmen and standing at around 23,000 in 1982. The government also built a highly trained **air force** whose membership reached 14,000.

4

## 1964–89

**Expansion of the educational system.** The total number of students increased from a little over 200,000 to about 2.2 million.

5

## 1964, Nov

**ABDICATION OF SA`UD.** After a palace revolution, his brother, **FAYSAL**, became the new Saudi king. Faysal embarked on policies that transformed the Saudi government into a **modern state**. One of the peculiar features of the Saudi state was the overwhelming presence of the **Saudi royal family**, which numbered some 20,000 individuals by the 1980s. Saudi princes and their relatives filled the central and provincial governments, the upper echelons of the bureaucracy, and the armed forces.

6

## 1975, March 25

**ASSASSINATION OF KING FAYSAL** by his nephew. He was succeeded by his half brother **KHALID IBN ABD AL-AZIZ**.

7

## 1979, Nov. 20

**Occupation of the Great Mosque in Mecca** by religious militants and Utayba tribesmen. The protesters wanted an Islamic state on the Iranian model and objected to the loose and ostentatious lifestyle of the royal family. **Rioting** broke out concurrently in the Province of **Hasa**, which held a large portion of Saudi oil reserves and a substantial population of Shi'ites. These disturbances were quelled with little violence. In Mecca, **security forces** besieged the Great Mosque for over two weeks before the surviving insurgents finally surrendered (Dec. 5).

8

## 1982

Death of King Khalid, who was succeeded by his half brother **FAHD**.

9

### 1987, July 30

Death in Mecca of over 400 Muslim pilgrims, most of them Iranian. The pilgrims lost their lives in political demonstrations that degenerated into violent clashes with Saudi security forces.

10

### 1989, Dec. 23

**An agreement between Saudi Arabia and Oman** formally fixed the border between the two countries. The settlement followed armed clashes along the border in October.

11

### 1993, Aug. 20

A royal decree established a **consultative council**, the first legislative institution in the history of the Saudi kingdom. The 60-seat council, whose members were appointed by the king, was granted no real power and could not pass legislation.

## k. [North and South Yemen](#)

### 1948

**ASSASSINATION OF THE IMAM YAHYA** in North Yemen, as part of an attempted <sup>1</sup> coup. The insurgents failed to seize power after about a month of fighting. Afterward, the shaken government, led by Yahya's son **AHMAD**, promulgated a **constitution**.

### 1950

Founding of the **Aden Association**. The leaders of this movement called for a transition <sup>2</sup> to self-government within the **Aden Colony**. The leadership was drawn mainly from the prosperous merchant class of the port of Aden, which was flourishing because of greatly increased commercial traffic.

### 1952

Founding of the **South Arabian League**, consisting of notables from South Yemen who <sup>3</sup> desired a greater measure of autonomy from the British.

### 1955

**Attempted coup** in North Yemen. A **coalition of opposition factions** drawn from sections of the military, the sayyids (descendants of the prophet Muhammad), and radical dissidents tried to take power. Their defeat was largely a result of a **military alliance** between the tribes and the imam. 4

## 1956

Creation of the **Aden Trades Union Congress**. This organization had its roots among the middle and working classes of the colony of Aden. Its program demanded the independence of South Yemen and its unification with North Yemen. 5

## 1959

Introduction of a **legislative council** in Aden. Membership was dominated by the great merchant families. 6

Creation of an **11-state federation of local tribal rulers** in the western portion of South Yemen. Aden itself joined the union (1962), which was named the Protectorate of Southern Arabia. 7

## 1959–60

**Suppression of tribal rebellion** among northern tribes in North Yemen. Several leaders were executed, permanently antagonizing the vanquished tribes. 8

## 1962

Appearance in South Yemen of the **People's Socialist Party**, which drew its strength from trade union activism. In 1965, this party lost its leading role among workers to the **Organization for the Liberation of the Occupied South**. 9

## Sept

**CIVIL WAR and the end of the Imamate.** Imam Ahmad died (Sept. 18), and several days later (Sept. 26) a **MILITARY COUP** took place. The leaders, who had belonged to the **Free Officers' Association**, overthrew Ahmad's successor, **Imam Muhammad al-Badr**, and announced the establishment of a republic. 10

**The civil war** was fought by **two main factions**, both of which received outside assistance. The **republican side** consisted primarily of army officers, intellectuals, townsmen, and the majority of the Shafi'i population. Arrayed against them were the **royalists**: the Hamid al-Din family under Imam Muhammad al-Badr, a large number of sayyids, and most of the Zaydi tribes. Royalist forces were able to rely on large amounts of **Saudi financial assistance** and the expertise of **military advisers sent from Jordan**. The republicans countered with **Egyptian troops**, which first arrived in Nov. 1964 (later peaking at 60,000). The war lasted over six years during which the royalists held the advantage, particularly after the **Egyptian withdrawal** (completed in Dec. 1967). But the tide turned at the very end when San'a, the capital, survived a protracted siege (1968) from royalist tribes. The republican government then negotiated a **settlement** with tribal leaders (1970). 11

## 1. [The Gulf States](#)

### 1946

Beginning of **oil exports from Kuwait**. **Qatar** followed in 1949, **Abu Dhabi** in 1962, and **Dubayy** in 1969. 1

### 1950

Death of **Sheik Ahmad**, ruler of Kuwait. His cousin, **Sheik Abdallah**, succeeded him as emir. 2

### 1955

Establishment of the **Muscat and Oman Field Force**, an expanded version (approximately 400 men) of the existing military unit in Oman. 3

### 1959

**The sultan of Oman suppressed a tribal uprising** in Jabal al-Akhdar and for the first time enjoyed direct rule over the district. 4

### 1960

**Ahmad ibn Ali** became ruler of Qatar. His government began a broad **program of modernization** under the direction of Prime Minister **Khalifa ibn Ahmad**. 5

## 1961–85

**Growth in the Kuwaiti population** from 250,000 to about 1.7 million. In 1985, **native Kuwaitis** made up approximately 43 percent of the population (but only one-seventh of them qualified for full political rights as male descendants of Kuwaitis who resided in the country prior to 1920). The next largest group was the **Palestinians**, at about 25 percent of the total. 6

## 1961, June 19

**INDEPENDENCE OF KUWAIT.** The government published a **constitution** in 1962 providing for a **national legislature and a council of ministers**, but the effective functioning of this system soon broke down due to persistent conflicts between the legislature and the council. 7

## June 25

**Iraq asserted that Kuwait** was historically part of the Ottoman province of Basra and that it therefore **ought to be ceded to Iraq**. In accordance with a Kuwaiti-British defense pact, **British troops** arrived in Kuwait to deter a possible Iraqi attack. The Iraqi government finally relinquished its claims and recognized Kuwaiti independence on Oct. 4, 1963. 8

## **m. [Egypt](#)**

### **1946**

**Reform of religious endowments (*waqfs*).** Though charitable (*khayri*) endowments dedicated to public causes could still be funded in perpetuity, private (*ahli*) endowments that served as family trusts had to be designated for a specific period. After the revolution of 1952, private endowments were abolished altogether. In 1957, **all *waqfs* came under state administration.** 1

### **Jan**

**Failure of negotiations between Britain and Egypt** to revise the Treaty of 1936. In response, violent street demonstrations organized by students shook Cairo over the next two months. 2

(See [1940, Nov. 9](#))

#### **4. North Africa, 1945–2000**

##### **a. Morocco**

### **1946**

**Erik Labonne** became French resident-general, replacing **Gen. Gabriel Puaux**.<sup>1</sup>  
Labonne's conciliatory policies attracted little support from the Moroccan leadership.  
Consequently, Labonne lost his position to **Gen. Alphonse Juin** the next year.

### **1951**

Formation of the **National Front**, combining the Maghrib Unity and Islah Parties in Spanish Morocco, and the Istiqlal and Democratic Parties in the French zone.<sup>2</sup>

### **1952, Dec. 7–8**

**Rioting in Casablanca** (38 dead) in protest over the murder of Tunisian labor activist **Ferhat Hached**.<sup>3</sup>

### **1953, Aug**

**French authorities deposed King Muhammad Ben Yusuf and installed Muhammad Ben Arafa** as the new monarch. The former king was exiled to Madagascar. Over the next two years, French authorities had to contend with a campaign of **urban guerrilla warfare**. In Casablanca alone, attacks took the lives of 406 Moroccans and Europeans up<sup>4</sup>

to the autumn of 1955.

## 1955

Founding of the **Union Marocaine du Travail**, the first Moroccan trade union, by the labor activists **Tayyib Bouazza** and **Mahjoub Ben Seddiq**. 5

## Aug

At the **conference of Aix-les-Bains**, French officials and Moroccan representatives concluded an agreement that paved the way for Moroccan independence. The French promised to remove Ben Arafa as king before withdrawing. **Muhammad Ben Yusuf (Muhammad V) officially returned** to the throne on Oct. 29, 1955. 6

## **b. [Algeria](#)**

### **1945, Aug**

**Muslim Algerians received the right to elect 13 members to the French constituent assembly** (the same number of seats granted to the colonists). <sup>1</sup>

### **1946, June**

Formation of the **Mouvement pour le Triomphe des Libertés Democratiques (MTLD)** <sup>2</sup> under the leadership of **Messali al-Hajj**. Before the war for independence, Hajj's party had been the most extreme Muslim party that the colonial regime tolerated. It split up in 1955 over the question of violent resistance, which Messali originally denounced. He then formed a new party, the **Mouvement National Algérien (MNA)**.

### **1947, Sept. 20**

**The Algerian Statute**, passed in France by the first National Assembly of the Fourth Republic. The act provided for an **Algerian assembly in which power was unequally distributed between the colonists** (60 seats for 60,000 electors) **and Muslims** (60 seats for 1.3 million electors). The Algerian administration remained under the control of the governor-general, who was responsible to the French ministry of the interior and not to the Algerian assembly. <sup>3</sup>

Unhappiness with the Algerian Statute, combined with the rigging of elections for the Algerian assembly, once and for all turned the Muslim political parties away from compromise and toward a policy of armed struggle. <sup>4</sup>

## 1954, Oct

Formation of the **FRONT DE LIBÉRATION NATIONALE (FLN)**, which became the leading party in the armed struggle against the French authorities. 5

## 1954–62

**THE ALGERIAN WAR FOR INDEPENDENCE** (See [1954–69](#)) started (Oct. 31, 1954) with a series of raids organized by the FLN. The war exacted a **heavy toll in casualties**. The Algerian government later estimated that over 1 million Algerians perished during the conflict. French authorities listed their own casualties at 26,000. **The Algerian countryside was particularly scarred** by the war. The French uprooted about one-third of the rural population (2.3 million peasants) and transferred them to “regroupment villages” where they lived under close supervision. 6

## 1956, June 13

**Rejection by Ferhat Abbas of a French offer for a cease-fire** unless France conceded Algerian sovereignty and independence beforehand. 7

## Oct. 22

**French operatives kidnapped Ben Bella, Ait Ahmad, Muhammad Khidar, and Muhammad Boudiaf**, four of the most important leaders in the FLN. They had boarded a plane in Rabat that, in midflight, was forced to land in Algiers, where they were arrested. 8

## c. [Tunisia](#)

### 1946, Jan

Founding of the **Union Générale des Travailleurs Tunisiens (UGTT)**, under the direction of **FERHAT HACHED**. It was the first major trade union in Tunisian history. Membership soon reached over 150,000 workers. <sup>1</sup>

### 1951, Oct

Tunisian prime minister **Muhammad Shanniq** traveled to Paris to demand independence tempered by close economic, cultural, and military ties with France. **The French officially rejected his proposal** on Dec. 15. <sup>2</sup>

### 1952

Formation of **Tunisian guerrilla bands** in the mountains. In response, the settlers organized **the Red Hand**, their own terrorist organization, which attacked Tunisian political leaders. The most famous victim of the settlers was **Ferhat Hached** (assassinated on Dec. 12, 1954), leader of the UGTT. <sup>3</sup>

### Jan. 18

**Arrest of neo-Destour leaders, including Habib Bourguiba**, after extensive rioting (Jan. 15). The French resident-general had provoked demonstrations by ordering **al-Amin Bey** to dismiss the Tunisian government. When the bey refused, **French authorities arrested Prime Minister Shanniq** (March 25).

## **d. [Libya](#)**

### **1947, March**

Formation of the **Libyan Liberation Committee** in Cairo under the leadership of **Bashir al-Sa`dawi**. The organization proposed a union between Tripolitania and Cyrenaica under Sanusi rule. 1

### **1949, May 17**

**Defeat of the Bevin-Sforza Plan** in the UN. The British-Italian scheme would have split 2  
Libya into three trusteeships: Cyrenaica for the British, Tripolitania for the Italians, and Fezzan for the French. **The UN** instead adopted a **resolution calling for Libyan independence** by 1952 (Nov. 21, 1949).

### **1950, Dec. 2**

The Libyan National Assembly recognized **IDRIS** as king of Libya. 3

### **1952, Jan. 1**

Official **INDEPENDENCE OF LIBYA**. The country emerged as a federal monarchy 4  
dominated by a clique of conservative notables. It essentially retained the administrative divisions (Tripolitania, Cyrenaica, and Fezzan) inherited from the colonial period.

## 1953, Feb

Libya became a member of **the Arab League**.

5

## 1955, Nov

Granting of the **first oil concessions**. The first strike was at Bir Zelten in 1959. **The oil industry** was primarily developed during 1961–69 as foreign firms, especially independent companies, moved into the country to conduct intensive exploration.

6

## 1962, June

Libyan entry into **OPEC**.

7

## 1967, June 15

The government requested that the U.S. and Britain withdraw their remaining forces at the earliest possible date.

8

## 1969, Sept 1

**MILITARY COUP** against the monarchy. The plot was organized by a group of army officers directed by **MU`AMMAR AL-QADHAFI**. One of the first acts of the new regime was to **abolish the monarchy**. In its place emerged **the Libyan Arab Republic**. Effective authority was vested in a **Revolutionary Command Council** headed by Qadhafi, who officially became prime minister on Jan. 16, 1970.

9

## 1970, March 28

**Completion of the British military withdrawal**, as demanded by the Libyan government. **The U.S. pulled out** the last of its troops less than three months later (June 11).

10

## July 21

Confiscation of all Italian and Jewish property.

11

## **F. South and Southeast Asia, 1945–2000**

[INDIA AND PAKISTAN, 1970 \(MAP\)](#)

[INDIA, PAKISTAN, AND BANGLADESH, 2000 \(MAP\)](#)

### **1. South Asia, 1945–2000**

#### **a. Overview**

This period witnessed the **independence of South Asia from direct imperial control** and the struggle by the resulting nation-states of the subcontinent to create viable civil societies and to find appropriate places in a world becoming increasingly interdependent economically, geopolitically, and culturally. Britain's withdrawal marked not only independence but also **partition**, as it handed over power in 1947 to the new, separate nation-states of **India and Pakistan**. (Sri Lanka and Maldives achieved independence later.) This decision to divide the subcontinent conceded the impossibility of devising a federal system sufficiently loose in nature to reassure Muslim activists who felt their voices and interests would be brushed aside by the nationalist Congress Party, which was often incapable of recognizing the extent to which it conflated the terms *Hindu* and *nationalist* in its rhetoric and policies. The new states' boundary lines did not bode well for the future, however, as they demarcated a “moth-eaten” Pakistan (as Mohammed Ali Jinnah put it) carved out of two distinct pieces of territory in the east and west, with India

in between. (Significantly, the dividing line in the east followed virtually the identical line drawn during the partition of Bengal in 1905 ( (See [Southeast Asia, 1753–1914](#)))—a boundary protested at the time as “unnatural.”)

Although at first the two nations mainly strove to find appropriate roles in a world sharply bifurcated by the cold war, more recent events have underscored their continuing struggle to resolve a much larger conundrum that has long affected the region: how to create shared understandings on which to build a civil society and how to determine the role of the state within it, in a way that makes room for the diverse groups that make up pluralistic societies. In part, this conundrum resulted from the legacy of imperialism, particularly the British Indian state's predilection to deal with groups rather than individuals. (The tension between the nation's need to deal directly with individuals, a basic foundation stone of national integration, and the state's desire to prove to different groups its ability to protect group interests, is the most pronounced characteristic of contemporary society in South Asia.) The conundrum also reflected a fundamental challenge faced by all modern nation-states: the need to create viable political systems that do not depend on cultural and ethnic homogeneity to succeed. Dealing with this problem has been exacerbated in postcolonial states by the accompanying need to create economic development strategies that minimize dependence on the industrialized world while achieving as much financial self-sufficiency as possible. These issues influenced the debate concerning the formation of an independent, postcolonial society and the role the state should play in directing it.

Certainly the implications of **demographic growth** have complicated these attempts to gain self-sufficiency; from a population base in 1941 of 389 million, numbers had increased by 1961 to 439.2 million in India and an additional 93.8 million in Pakistan. But the **population growth rate** for the region, after peaking in 1971–81 (at a decade rate of 26.4 percent) **seems to be slowly decreasing** now; for the decade 1981–91, the rate of growth has been 25.2 percent.

The position of **women** in independent India, if measured by standards such as **literacy** rates, has improved. The female workforce in the independent sector, for instance, has also been organized to exercise some political clout (through **SEWA, the Self-Employed Women's Association**). But issues such as the spate of **dowry deaths** (the murder of young wives for their dowries) in urban areas—especially in Delhi in the late 1980s and early 1990s—serve as symbols for the continuing disadvantages experienced by women in middle-class and extended family contexts.

## b. British India, to Independence and Partition

From independence into the 1970s, Pandit Nehru's vision of a secular Indian state with strong central planning processes still left room for the influence of business leaders who dominated and shaped the relationship among the state, communities, and individuals. But the increasing acrimony among those making demands on the state (especially communities invoking regional, religious, or ethnic identities, such as the Kashmiris or the Sikhs); Congress's growing reliance on ethnic, religious, and class-defined communities of “vote banks”; and the shift toward **economic liberalization policies** (which downplayed central planning and opened up new opportunities for Indian entrepreneurs as well as multinational corporations) have created in the 1980s and 1990s an increasingly unstable and doubt-riven civil society. For instance, the number of deaths in **communal (religious) riots** in the 1980s quadrupled those of the 1970s. Although supporters of partition had asserted that a shared Islamic identity would unite Pakistan, from its earliest days the state has been unable to resolve the tension between the attempt to use Islam to integrate very different regional cultures and the need to accede countering identities constructed around regional and ethnic identities. The fact that Pakistan began with a truncated institutional infrastructure (since most of the integrative institutions, such as the civil service and communication networks, went to India) has exacerbated the problem, at times leading the military to intervene in governance in order to maintain stability and efficiency. <sup>1</sup>

### 1945, June 29

**The All-India Congress** failed to agree on a common list of ministers for the new government, and the **deadlock between Muslim leaders and Congress leaders** continued. <sup>2</sup>

### Sept. 19

The new British Labour government proposed to discuss with Indian representatives the offer for Indian autonomy made in 1942. 3

### Sept. 20–23

**The All-India Congress**, meeting in Bombay, declared this plan to be unsatisfactory and called on Great Britain to “quit India.” 4

### Dec. 27

Elections to the **central legislative assembly** gave the largest number of seats to the **Congress Party and the Muslim League.** 5

### c. [The Republic of India](#)

1947, Aug. 15

**The Dominion of India** was inaugurated in Delhi, with **Pandit Jawaharlal Nehru** as prime minister and **Lord Mountbatten** as governor-general. Most of the **Indian states** (princely and chiefly), notably excepting Hyderabad, Kashmir, and Junagadh, acceded to the new dominion for defense, external affairs, and communications, while retaining their internal sovereignties. 1

Oct. 26

The government of India admitted **Kashmir** into the Indian Union, thus precipitating a crisis with Pakistan, since Kashmir contained a majority of Muslims. 2

Nov. 9

The Indian government assumed control over the administration of the state of **Junagadh**. 3

Dec. 30

After vain attempts to solve the conflict over **Kashmir**, the dispute was referred to the **UN**. Sporadic fighting continued in Kashmir between Indian and Muslim forces. 4

## d. [Pakistan](#)

Many of the issues facing independent India loomed large for the new state of Pakistan as well. The legacy of a state that often preferred to deal with groups rather than individuals became exacerbated in Pakistan, where the need to explain the **place of Islam** in the state tempted policy makers to talk about the *'umma* (community) rather than citizenry. This tension further confused the newly forged relationship of the five separate regional cultures (ranging from the Balochi and Sindhi-based communities in the west to that of the Bengalis in the east) that existed just beneath the surface of this new nation. In addition, Pakistan inherited considerably less of the infrastructure of a working state than did India; it therefore faced much larger problems in terms of communication networks and national integration, intensified by the fact that its two very distinct wings were separated by an often-hostile India. <sup>1</sup>

The continuing power of large landlords also made the formation of economic policy and central planning much more problematic in Pakistan. No significant shift in the distribution of resources was achieved in Pakistan, nor did an overarching vision of socioeconomic change guide the use of development aid. Stagnant economic policies and irresolute ideological vision made the state vulnerable to control by the military, which aimed simply for efficient government and political stability. This, in turn, made the development of an independent civil society much more difficult to achieve. <sup>2</sup>

### 1947, Aug. 15

**The Dominion of Pakistan was inaugurated**, with **Liaqat Ali Khan** as prime minister and **Mohammed Ali Jinnah** as governor-general. Pakistan, the Islamic provinces of India, consisted of West Pakistan (formerly the western part of Punjab with Sind, the Northwest Frontier Province (NWFP), and other muslim-majority areas) on the northwest side of India, and East Pakistan (formerly the eastern part of Bengal). The East wing had only 15 percent of the territory, but 55 percent of the population. <sup>3</sup>

## 1948, Sept. 11

Mohammed Ali Jinnah died and was succeeded by **Khwaja Nazimuddin** as governor-general. 4

## 1949, June 4

**The Awami League** was formed in Dhaka. 5

## 1950, April 8

**The Delhi Pact** between India and Pakistan substantially reduced friction between the two dominions. 6

## June–Dec

Pakistan supported the UN cause in the **Korean War**, profiting economically from the sudden demand for its raw materials brought on by the war. 7

## e. [Bangladesh](#)

Bangladesh, literally meaning “land of the Bangla (Bengali) speakers,” was born out of the civil war in Pakistan in 1971–72 (See [1971, March 1](#)). Pakistan's very creation had been rooted in its claim to serve as a homeland for Muslim South Asians, but it proved unable to incorporate Muslim Bengalis into the polity. The major sources of conflict included language—Bangla bore little resemblance to the ideological, conceptual frameworks created for Urdu and Punjabi, the main languages used in the West wing—and rather different cultural understandings of the practice of Islam. Muslim reformists had acquired significant influence in the West wing, whereas the East still revolved around certain shared Bengali assumptions about devotionism and related emphases on saints and goddesses. As the Muslim League of Pakistan and the state itself (dominated especially by Urdu-speaking, reformist Muhajirs) pushed the Urdu language and strove for a purist definition of Islam as the basis of the Pakistani state, Bengali speakers turned to their own language and regional identity as the foundation for a separate nation. 1

These cultural and linguistic conflicts were aggravated by severe economic inequality between East and West Pakistan. Development policies, framed by leaders in the West wing, generally favored the West. Moreover, although significant support for the state of Pakistan resulted from exports cultivated in the East, almost none of these remittances were devoted to economic development of that wing. 2

As a result of the civil war, in which India intervened decisively on the side of Bangladesh, the new state faced overwhelming needs in rebuilding itself and creating a new infrastructure to support an independent nation-state. 3

**1971, March 26**

**Declaration of Bangladeshi independence**, in direct response to a fierce army crackdown on the previous day. Large numbers of Bengalis were massacred. Mujibur Rahman was arrested and taken to West Pakistan. Many of his colleagues fled to India and established a government in exile. Millions of refugees flooded into India.

4

## Dec. 4

**India invaded** in support of the **Mukti Bahini** (“freedom fighters”) and other irregular Bengali groups operating inside East Pakistan (See [March 31](#)). The successful campaign led Pakistan's military and civilian authorities to surrender on Dec. 16.

## f. [Sri Lanka \(Ceylon\)](#)

After gaining **independence from Great Britain in 1948**, Sri Lanka experienced escalating ethnic conflict between the majority Sinhalese and the Tamil minority. The antagonism dated to the struggle to choose a national language. Two propositions were considered: “Sinhala only” or “parity of status for Sinhala and Tamil.” As the majority language (nearly 70 percent of Sri Lankans speak Sinhala), Sinhala could also be used to stand in for a range of related identities that emphasize the uniqueness of Sinhalese Buddhist culture—particularly to differentiate it from Tamil Hindu culture with its uncomfortably close connections to South India, which loomed large above the island.

Language thus became interpreted as a test of national loyalty. Nevertheless, Tamils rejected the victory of the “Sinhala only” proposition in the general election of 1956; they feared that that policy would place them in a disadvantageous position with respect to employment and higher education. Although the extent of protections for the use of Tamil has varied from 1956 to the present, the contentiousness of the debate has only escalated.

By 1975, the language question had evolved to include the complex issue of national and territorial rights; a powerful Tamil secessionist movement had emerged. Both sides in the developing civil war have grown increasingly intransigent, and the conflict has drawn in Sri Lanka's large neighbor to the north (it is likely that Rajiv Gandhi's assassination ( (See [1991, May 21](#))) was directly connected to this conflict).

### 1946, May 15

**Ceylon** was granted a **new constitution**, which gave it almost complete self-government in domestic affairs.

### 1947, Sept. 26

The first cabinet under the new constitution took office, with **Stephen Senanayaki** as prime minister. The new Parliament opened on Nov. 24. A series of agreements with the U.K. (Nov. 11) further reduced British influence in Ceylon.

5

**1948, Feb. 4**

**CEYLON BECAME A SELF-GOVERNING DOMINION** in the British Commonwealth, the first non-European colony to achieve this status.

6

**1950, Nov. 7**

Ceylon was the second to sign **an agreement with the U.S.**, providing assistance under the Point Four Program.

7

**1952, May 24**

Despite vigorous Marxist efforts to win control, the Conservative government won a majority in parliamentary elections.

8

**1956, April 12**

After the neutralist **People's United Front** was victorious in parliamentary elections, **Sirimavo Bandaranaike** was appointed to head a leftist coalition cabinet made up of Democratic Socialists, Trotsky-Marxists, and orthodox Buddhists.

9

**June 15**

Parliament approved the **Sinhalese Language Bill** to make Sinhalese the sole official language of Ceylon, despite rioting by the Tamil-speaking minority. The Senate, on July 6, approved the language bill. Language became the basis of nationalism; Sinhala nationalism became equated with Sri Lankan nationalism, which Tamils rejected.

## **2. Southeast Asia, 1941–2000**

[SOUTHEAST ASIA, 1970 \(MAP\)](#)

[SOUTHEAST ASIA, 2000 \(MAP\)](#)

### **a. Overview**

In Southeast Asia, the **struggle for independence** from the European colonial powers held center stage during the period immediately following World War II. Most of these struggles were completed by 1954, except for those of Malaysia (1957), Singapore (1965), and Brunei (which did not occur until 1984, largely because of the lack of strong internal pressure for independence). During the period 1954–67, the Western powers and many Southeast Asians experienced fears of Communism that were directly related to the worldwide implications of the cold war. These concerns led to **fresh intrusions by the West into Southeast Asian life and politics**. During 1965–75, American involvement in the Vietnam War (Second Indochina War) dramatically affected mainland Southeast Asia. After the Americans withdrew, the Communists triumphed in Vietnam, Cambodia, and Laos. **The Association of Southeast Asian Nations (ASEAN)** was formed (Aug. 6, 1967) by the non-Communist Southeast Asian countries (Malaysia, the Philippines, Indonesia, Thailand, and Singapore) to deal with the threat of further Communist encroachments, especially in the face of China's increasing power. Informal neocolonial influences, in the form of multinational involvement in local economies, continued in this period. One of the most significant ongoing tensions during this recent phase of Southeast

Asian history concerns the place of immigrant groups, primarily Chinese, who dominate economic activities in many Southeast Asian countries.

In the 1950s and 1960s, all the governments in the region, excepting that of Laos, launched **ambitious industrialization programs** to lessen their dependencies on the export of primary commodities and the import of manufactured goods. **By the 1970s, the initial focus on import substitution industries shifted to export-oriented industrialization in the ASEAN countries, with Singapore leading the way.**

In Thailand, economic growth has been consistently high. In Malaysia, the economy has prospered, in large measure because of the abundance of natural resources and the ability to take advantage of foreign investments to advance industrialization. In Indonesia, oil export earnings and political stability have provided for stable, unprecedented, and, by world standards, remarkable economic growth; but the benefits have not been equally shared. The lower classes' exclusion from these economic advances and the uneven levels of development on Java and the outer islands have led to labor unrest.

Burma (Myanmar) experienced a slower rate of economic expansion than the ASEAN states. The structure of its economy has changed little because, after 1962, the government followed a strict policy of autarky in order to maintain economic independence and increase equality among all classes. Laos remained one of the world's poorest countries, but in the early 1990s it instituted reforms to establish a more market-driven economy in an effort to attract potential foreign investors. Cambodia's economic development was devastated by the chaos the nation experienced until a new political structure was introduced in 1993.

Demographically, at the end of World War II, the **population** in Southeast Asia just surpassed **150 million**. By 1990, well over **400 million** people lived in the region. From 1950 to the 1980s, the population doubled in the urban centers, and one out of four people resided in a city.

The reactions of leaders to the population explosion varied. Indonesia's Sukarno initially boasted that his country would welcome a population of 250 million. After 1970, resultant economic problems changed this attitude; although Indonesia's family-planning program gained much international acclaim, by 1992 some 2.5 million new job seekers every year joined a labor force that already suffered from serious rates of unemployment and underemployment. In the early 1980s, the Malaysian leader Mahatir announced an ultimate target population of 70 million people in the hope of expanding the internal economic market and also for political reasons—as he wanted to capitalize on the fact that the Malays were reproducing faster than other Malaysian ethnic groups. At the time, the Malaysian population had reached 15 million, and by 1992 it stood at about 18.5 million. Although the Burman (Myanmar) government introduced population control programs, they floundered because of the government's contradictory and confusing policies. Because of its unique situation, Singapore adopted the most draconian state intervention in family planning, and in the 1980s fertility actually fell below replacement

levels. After 1970, Thailand was unambiguously committed to population control, which did reduce birthrates by the late 1980s. Throughout Southeast Asia, fertility fell substantially after 1960; but because of declining mortality rates, Southeast Asia still faced the problems of rising population rates in the 1990s.

On Dec. 15, 1995 the Association of Southeast Asian Nations signed a **nuclear-free-zone pact** for their region, including Brunei, Indonesia, Malaysia, the Philippines, Singapore, Thailand, and Vietnam. <sup>7</sup>

### 1996, Nov. 25

The Asian-Pacific Economic Cooperation (APEC) leaders endorsed a declaration to eliminate tariffs on computers and other high-technology products by the year 2000. <sup>8</sup>

### 1997, Nov. 24–25

APEC convened in Vancouver, Canada, to discuss the economic turmoil brewing in Southeast Asia. <sup>9</sup>

(See [1942, March 8](#))

## **b. Mainland Southeast Asia**

### **1. Myanmar (Burma)**

**1946, Dec. 20**

The British government invited a Burmese delegation to meet in **London** and discuss the early achievement of **self-government** for Burma. <sup>1</sup>

**1947, Jan. 28**

An agreement between British and Burmese leaders called for a constituent assembly. <sup>2</sup>

**April 9**

**Election of constituent assembly. The Anti-Fascist People's Freedom League (AFPFL)**, founded in World War II in opposition to cooperation with the Japanese, was headed by **U Aung San** and received an overwhelming majority. <sup>3</sup>

**June 17**

The constituent assembly unanimously adopted a resolution calling for an “**independent sovereign republic to be known as the Union of Burma.**” <sup>4</sup>

**July 19**

**U Aung San** and several members of his provisional government **were assassinated** by political opponents under the direction of former premier **U Saw**. 5

U Aung San had been the single political figure capable of bridging differences between the various warring political factions: he had the allegiance of the army, the trust of the Communists, and the support of the various ethnolinguistic communities, who in the preindependence “excluded areas” had remained relatively unaffected by colonial Burma's nationalist politics and modern economy. The assassins were tried and executed (May 8, 1948). 6

### July, 20

**Thakin Nu**, vice president of the AFPFL, formed a new government. 7

### Sept. 24–25

**The new constitution was adopted by the constituent assembly, and Sao Shwe Thaik**, the sawbwa (ruler) of **Yawnghwe** (one of the largest of the Shan states), was elected provisional president. 8

## c. [The Malay Archipelago and Peninsular Malaysia](#)

### 1. Malaysia and Singapore

**The Malay States** had come under British rule or control in the 19th and early 20th centuries (See [1914, May 12](#)). **Singapore**, founded in 1819, was a British crown colony and one of Britain's most important naval bases. As elsewhere in the region, the development of a nationalist movement was greatly accelerated by World War II (See [1954–69](#)). In order to gain independence, an alliance was formed between the leaders of two groups: the **Western-educated Malay leadership**, drawn from the traditional elite and its fringes, and the leaders of a small group of **Western-educated Chinese**, who were primarily wealthy, Malaya-born businesspeople. An agreement was made between these two factions that, until the late 1960s, seemed to serve both of their interests: in exchange for the initial acceptance of Malay domination of political and administrative authority after independence, there would be noninterference in Chinese domination of economic activities. <sup>1</sup>

**By the late 1960s, racial riots** erupted, stemming from tensions created by the Malays' lack of access to economic power; the Chinese had in fact accrued political power over time and now dominated both spheres. <sup>2</sup>

#### 1955, July 27

The first **national elections in Malaya** resulted in victory for the **Alliance Party**. <sup>3</sup>

#### 1956, Feb. 8

**A British-Malayan agreement** was signed in London, transferring to Malaya control of internal security and defense. 4

### 1957, Aug. 3

In preparation for Malayan independence, a conference of rulers elected **Sir Abdul Rahman**, ruler of the Negri Sembilan state, to be the first supreme head of the federation for a five-year term. 5

### Aug. 15

The federal legislative council ratified the constitution of the **federation of Malaya**. 6

### Aug. 31

The British protectorate ended, and **Malaya became an independent member of the Commonwealth**. 7

### Oct. 7

Malaya became **a member of the Colombo Plan** (See [Nov. 28](#)). 8

### Oct. 12

**A British-Malayan treaty** of mutual assistance and external defense was signed. 9

## **G. [East Asia, 1945–2000](#)**

### **1. [China, 1945–2000](#)**

#### **a. [The Civil War](#)**

The immediate postwar years witnessed various efforts to keep the Guomindang (GMD) and the Chinese Communist Party (CCP) from returning to the bloody civil war that had preceded the anti-Japanese united front. Within a year, however, those efforts had gone for naught, and the second civil war broke out. The Communists' victory came with stunning rapidity, and by 1949 there were two Chinas. <sup>1</sup>

#### **1945, Aug. 26–Oct. 10**

Negotiations between **JIANG JIESHI** (Chiang Kai-shek) (1888–1975) and **MAO ZEDONG** (Mao Tse-tung) (1893–1976) failed to settle their differences, and before the end of October, heavy fighting was in progress between Nationalists and Communists in northern China. Each side aimed at the control of Manchuria, which was being evacuated by Soviet forces. <sup>2</sup>

#### **Nov**

Jiang sent a large force north of the Great Wall against the Communist forces in Manchuria. Late in the month, Patrick Hurley, U.S. ambassador to China, resigned. <sup>3</sup>

#### **Dec. 14**

The U.S. sent **Gen. George Marshall** (1880–1959) as mediator.

## **b. The People's Republic of China (PRC)**

### **1950**

The unification of the country, together with a program of reconstruction and deflation, brought considerable **economic improvement** to the PRC. Although some changes were introduced in agriculture as land reform went into effect, no radical innovations were set in motion, other than overall state planning in industry. Landlords were publicly condemned in mass denunciations; many perished. Land was redistributed to those who had had the least; private property in land disappeared. A new **marriage law** accorded women equal rights in marriage and divorce, and enabled women of any marital status to hold land in their own names. **The People's Liberation Army (PLA)** carried on continued warfare against anti-Communist guerrillas. Party membership topped 5 million. <sup>1</sup>

### **Feb. 14**

Mao Zedong traveled to Moscow, his first trip beyond China's borders, and signed the 30-year **Treaty of Friendship, Alliance, and Mutual Assistance with the Soviet Union**. It was followed by a series of economic agreements for joint exploitation of Chinese resources. <sup>2</sup>

### **May 2**

Communist forces completed the occupation of Hainan Island. <sup>3</sup>

### **Oct**

**Chinese Communist “volunteers” intervened in the Korean War** (See [Nov. 1](#)) on the North Korean side. Ultimately, over 700,000 Chinese troops would be involved. Over the course of the war, China suffered between 700,000 and 900,000 casualties. 4

## Nov. 10

Following a **Chinese invasion**, **Tibet** appealed to the UN to bring about a peaceful settlement of Chinese-Tibetan relations. 5

(See [Dec. 8](#))

### c. [The Republic of China \(Taiwan, Nationalist China\)](#)

#### 1950

**The Nationalist government** in Taiwan at last began to introduce some of the **reforms** it had promised while still in control of the mainland. It had wiped out a major sector of the local elite in the repressions of 1947. Some 2 million GMD leaders, their families, and their supporters had flocked to Taiwan in 1948–49 and soon dominated politics completely. <sup>1</sup>

#### March 1

**Jiang Jieshi (Chiang Kai-shek) resumed the presidency.**

2

(See [1925, Oct](#))

## **2. The Republic of Mongolia (The Mongolian People's Republic), 1945–2000**

**Alliance with the Soviet Union.** The Mongolian People's Republic entered into formal alliance with the Soviet Union with the signing of a ten-year assistance treaty in 1936 and its renewal in 1946. It supported the Soviet Union in its ideological conflict with China in the 1960s. A 20-year treaty of friendship, cooperation, and mutual assistance was signed in 1964, and an agreement eliciting Soviet economic aid was completed in 1970. <sup>1</sup>

### **1945**

**Independence of Mongolia.** A national plebiscite on Oct. 20 voted for independence, and China thereafter recognized the Mongolian People's Republic (MPR) as an independent state. On Feb. 14, 1950, China and the Soviet Union signed a treaty that guaranteed the MPR's independence. A new boundary agreement with China was signed in 1987. <sup>2</sup>

### **1960**

A new constitution stated that the construction of socialism was the country's basic task. <sup>3</sup>

### **1961, Oct. 27**

Admission to UN membership. <sup>4</sup>

### **1980s–1990s**

Some reforms were initiated to parallel glasnost and perestroika in the Soviet Union in the late 1980s. In July 1990, the first multiparty elections were held, in which the Mongolian People's Revolutionary Party (MPRP) won 85 percent of the vote. Economic reforms moved toward privatization and market economy in the 1990s. Trade with China increased by over 40 percent in the early 1990s. 5

### 1991, Nov

The Grand People's Hural voted to change the country's name from the Mongolian People's Republic to the **Republic of Mongolia**. It has been a multiparty democracy since July 1990. 6

### 1998, April 23

Discord over proposed market reforms spread within Mongolia's ruling coalition. As a result, Tsakhiagiyn Elbegdorj was suddenly given the position of prime minister. However, further parliamentary disagreement led to his resignation on July 24. 7

### Oct. 2

A political crisis spread following the murder of cabinet member and potential prime minister Sanjaasuregiyn Zorig. 8

### 3. [Korea \(North and South\), 1945–2000](#)

#### 1945

Japan's defeat in World War II led to the dismantling of its colonial regime in Korea. Koreans quickly began imagining what their new liberty would entail, and the issue of earlier collaboration with the Japanese loomed large. In the last days of the war, the Japanese turned to **Song Chin-u** (1890–1945) to form a transition regime and keep order until the Allies arrived; he turned them down. On Aug. 15, the Japanese asked **Yun** **Un-hyung** (1886–1947), and he accepted with the proviso that all political prisoners be freed, that food be provided for the next three months, and that there be no Japanese interference of any kind. **Yun** next set up the **Committee for the Preparation of Korean Independence**, and soon numerous “**people's committees**” emerged nationwide, 145 of them by late August. By the end of the year, every village throughout the country had one. A representative council met (Sept. 6) in Seoul to create the **Korean People's Republic (KPR)**, which was leftist-controlled but not necessarily a Communist front. **SYNGMAN RHEE (YI SUNG-MAN)** (1875–1965) became chairman. Famed for his fidelity to the cause of Korean independence, Rhee, upon his return to Korea in the fall of 1945, attacked both the Soviets and the KPR for willingness to cooperate with Korean Communists. <sup>1</sup>

#### Sept. 14

A platform of the KPR called for confiscation of all lands owned by the Japanese and collaborators for redistribution and the nationalization of major industries. All Koreans were to get the vote. <sup>2</sup>

Having arrived on Sept. 8, the U.S. forces under the command of Gen. John Hodge refused to recognize the KPR and soon banned it. In its stead, they established the **U.S. Army Military Government in Korea (USAMGIK)**, using the much-hated colonial bureaucratic structure.

3

### Sept. 16

The **Korean Democratic Party** was founded by **Kim Song-su** (1891–1955) and **Song Chin-u**; it was a moderate-to-conservative group that sharply criticized the KPR.

4

### Dec. 27

The **Moscow Conference**, held by Great Britain, the U.S., and the Soviet Union, called for a **provisional Korean democratic government** under a five-year trusteeship of the three powers and of China. A joint Soviet-U.S. commission subsequently attempted to put this agreement into force but failed because of basic differences between the two parties concerning the definition of democracy. **Korea thus remained divided** into a largely agricultural south and a largely industrial north, with disastrous consequences to its economy.

#### 4. [Japan, 1946–2000](#)

With the formal surrender of Japan at the end of World War II, supreme authority passed <sup>1</sup> into the hands of **Gen. Douglas MacArthur** as supreme commander for the Allied powers (**SCAP**). Though aided by an Allied control council and subject to the general directions of the 11-nation Far Eastern Commission with headquarters in Washington, D.C., MacArthur pursued an independent policy. To facilitate his task, Japan's governmental structure was left intact and put under the direction of **Prime Minister**

**Shidehara Kijūrō**   (1872–1951) and a nonpartisan cabinet. The most immediate task of the occupation authorities was to rid Japan of its imperialist customs, institutions, and mind-set. In a series of decrees, Gen. MacArthur restored civil liberties, liberated political prisoners, liberalized the educational curriculum, granted the franchise to all adults, encouraged the formation of labor unions and the abolition of older land tenure systems, and ended the compulsory adherence to state Shinto. The climax of these moves to break with the past came on Jan. 1, 1946, when **Emperor Hirohito**, in a New Year's message, disclaimed the divinity that was traditionally accredited to him by the Japanese people.

Among the most important initiatives of the occupation was land reform. <sup>2</sup> Absentee landlordism was eliminated, as were large landholdings. The amount of land worked by tenants dropped from 46 percent to 10 percent; rents were regulated. Japan thus rapidly changed to a country of small farmers who owned their own land.

#### 1946, April 10

The first general election favored the moderate parties. Communist returns were <sup>3</sup> negligible. A new government under **Yoshida Shigeru** (1878–1967) took office on May 16.

A series of **purges**, initiated by SCAP, was directed against all “active exponents” of <sup>4</sup> aggressive nationalism, including intellectuals and businessmen, and ultimately involved more than 1.5 million people. In addition, an **international military tribunal** in Tokyo

began the trials of major war criminals, while separate British and Australian tribunals were set up in Southeast Asia and the South Pacific, respectively.

### Nov. 3

**A new constitution** provided for an elected upper house, transferred sovereignty from the emperor to the people, **safeguarded individual rights and equal rights for women**, and introduced a broad measure of local self-government. It also renounced war for all time and became effective on May 3, 1947. <sup>5</sup>

## 5. [Vietnam, 1945–2000](#)

### 1945, Sept. 2

With U.S. support, **HÔ CHI MINH** (1890–1969) **proclaimed an independent Democratic Republic of Vietnam** in Hanoi. 1

The surrender of Japanese forces was taken north of the 16th parallel by the Chinese and south of it by the British. In the north the Việt Minh, under Nationalist Chinese auspices, continued to operate with Chinese support, in spite of usually tacit French desires to the contrary. The British in the south supported the Free French, with some 20,000 French civilians still in Saigon concerned that French imperial glory not be completely undone. With British help, **the French militarily recaptured Saigon** (Sept. 23) and by Jan. 1946 had retaken much of Cochin China. The British withdrew in Jan. 1946, the Chinese in the spring. 2

### Nov

To gain wider support domestically from the educated elite and also internationally (especially from the Nationalists in China), the Việt Minh claimed to disband the Indochinese Communist Party. Elections were held, and many non-Communist nationalists were brought into the government under the banner of the **Lien Việt** popular front group. 3

(See [1944, Feb. 2](#))

## **H. The Pacific Region, 1944–2000**

### **1. The Islands, 1946–2000**

The postwar years brought a period of significant change to the islands. They saw the dismantling of colonial rule through peaceful negotiation, except in Vanuatu; by the 1990s, only France and the U.S. remained “colonial powers” in the Pacific. They saw generally successful attempts at regional cooperation among independent island states, but they also witnessed the steadily growing dependence of the small, resource-poor, isolated islands on metropolitan countries. At the close of the 20th century, real political or economic independence appears to be a vanishing dream for most island communities. 1

#### **1946, July 1, 25**

The U.S., under **Operation Crossroads**, carried out the first of its atomic tests at **Bikini Atoll** in the Marshall Islands. 2

#### **1947**

Former (Japanese) mandated territories of the Marianas and the Marshall and Caroline Islands were given by the UN to the U.S. as the **Trust Territory of the Pacific Islands (TTPI)**. The TTPI was designated a **strategic trusteeship**, which meant (1) that its political status could not be altered without the agreement of the governing power; (2) its affairs were to be supervised by the UN Security Council, where the U.S. (not the Trusteeship Council) had veto powers; and (3) the U.S. could close off any part of it for strategic purposes. Initially under the U.S. Navy, the administration of the TTPI was assumed by the Department of the Interior in 1951. 3

The creation of the **South Pacific Commission (SPC)** resulted at the signing of the Canberra Agreement by six colonial powers: Australia, France, the Netherlands, New Zealand, the U.K., and the U.S. The first regional body of its kind, the SPC was intended primarily to secure Western political and military interests in the postwar Pacific. 4

### 1949

The territories of **Papua and New Guinea** were merged into one administrative unit by Australia. 5

### 1954, March 1

The U.S. exploded its first **hydrogen bomb**, code-named **Bravo**, at Bikini Atoll, with long-term environmental and political consequences. 6

### 1958

An independence referendum in the French territories was ordered by **Pres. Charles de Gaulle**. It returned majority support for the continuing presence of France in the islands. 7

### 1959

**The Hawaiian Islands**, a territory of the U.S. since the turn of the century, became the 50th state of the U.S.A. 8

### 1962, Nov. 4

The U.S. carried out its last **nuclear test (Tightrope)** in the Pacific. 9

**Western Samoa** became the first Pacific island to gain independence. 10

### 1963

**The first South Pacific Games** were held at Backhurst Park in Suva. 11

**Dutch New Guinea (Iriyan Jaya)** became a part of Indonesia. 12

**Anthony Solomon**, a Harvard economics professor appointed by Pres. John F. Kennedy to carry out a survey of political, social, and economic problems in Micronesia, recommended an “integrated plan of action” to increase the islands' dependence on the U.S. 13

## 1964

**The Cook Islands** gained self-government from New Zealand; a constitutional conference in London moved **Fiji** further along the path of internal self-government. 14

## 1966, March

**The University of Papua New Guinea opened** and rapidly became the center for debating national issues by an emerging Papua New Guinean elite. 15

## **2. The Philippines, 1945–2000**

The history of the postindependence Philippines has been characterized by complex social, economic, and political problems. Population increases led to internal migration, most notably to Manila and to Mindanao, creating serious urban problems in the former and exacerbating tensions between Muslims and non-Muslims in the latter. In addition, many Filipinos left the country to work overseas during this period. 1

Initial economic growth gave way to stagnation in the 1980s. Rural poverty has been a persistent problem; all attempts at land reform have proved ineffective. Bureaucratic inefficiency, political corruption, and the dominance of the elite in almost all areas of national life contributed to popular discontent. Guerrilla insurgencies, involving leftist groups and also Muslim separatists, have continued with varying intensity from the time of independence to the 1990s. Political life has been volatile, marked by a long period of dictatorship under Ferdinand Marcos in the 1970s and 1980s. Military interference in politics has been a further complicating factor. Relations with the U.S. have also been problematic, especially over the question of military bases: nationalistic Filipinos often categorized the relationship as neocolonial. 2

### **1945**

The commonwealth government was officially restored under Osmena. Manila was liberated in March. The war had seriously damaged the Philippine economy, and disillusionment with the elites who had collaborated with the Japanese was prevalent. Antagonism between landlords and tenants also increased during the war. 3

### **1946, April 23**

**Manuel Roxas** became president, against the background of the **Hukbalahap (Huk) insurrection**, a Marxist guerrilla movement that had been active during the war and sought redress of social inequalities. 4

**The Bell Trade Relations Act** gave the Philippines free trade access to U.S. markets until 1954. This measure was designed to help economic recovery after the war. 5

## July 4

**The Philippines was formally declared an independent republic.** 6

### 3. [Australia, 1944–2000](#)

Large-scale immigration—until the 1970s chiefly from Europe, thereafter increasingly from Asia—transformed British Australia. New and old migrants shared expectations of material prosperity, but after the very prosperous 1950s and 1960s, living standards declined. In the 1990s, the challenges of multiculturalism, unemployment, environmental degradation, and an aging population have raised for Australians new questions about their future. U.S. investments in Australia have increased and, during the cold war alliance with the U.S., reduced traditional ties with Britain. Agricultural and mineral exports to Japan increasingly defined Australia as a major supplier of the Pacific Rim. 1

#### 1944, Dec

The Liberal Party was formed, with R.G. Menzies as leader. 2

#### 1945, July 5

**Prime Minister John Curtin died**, after holding office since Oct. 1941. **Joseph B. Chifley** was elected leader of the Federal Labour Party and became **prime minister on July 12**. 3

#### Sept. 23–Dec. 12

**A strike of coal workers in New South Wales** seriously crippled Australian industry before it was settled by arbitration. To counteract absenteeism and strikes, and to improve coal production in general, Parliament, in Aug. 1946, adopted the **Coal Industry Act**, setting up a coal board with wide powers of control over every aspect of the coal 4

industry.

#### **4. New Zealand, 1945–2000**

New Zealand enjoyed relative prosperity and security in the decades following World War II, bolstered by high prices for its agricultural exports and shielded by economic protectionism. The political landscape was dominated by the National Party (See [1937, May 12](#)). Socially, the country tended to be conservative, with the nuclear family being the main unit of social identification for most Pakeha people. A fondness for sport and other outdoor activities was a distinctive feature of the country's culture. In the 1970s the economy began to falter, as the world market for agricultural products declined and Britain consumed less of New Zealand's exports. Social and political movements, in particular feminism, questioned the existing order. Immigration, from the Pacific islands and later from East Asia, contributed to social diversification. Maori, whose population had grown considerably since the 1950s and had become urbanized, displayed greater cultural and political assertiveness. From the middle 1980s, economic problems led governments to dismantle the earlier protectionist and interventionist economic structure in a bid to make the country more internationally competitive. Social welfare programs and the civil service also underwent radical changes. Maori social and economic problems, in particular the question of redressing historical injustices in the alienation of land and other resources, were also major issues in national politics during the 1980s and 1990s. In foreign policy, New Zealand's ties to Britain weakened after World War II, leading at first to closer links with the U.S. and later to an attempt to strengthen New Zealand's identification with the South Pacific. New Zealand's opposition to nuclear weapons led to conflict with the U.S. and France.

### **1945**

**The Maori Social and Economic Advancement Act** established tribal executives and committees.

The Bank of New Zealand was nationalized, along with other enterprises. Self-government was granted to Samoa. 3

## 1946

The government began to provide universal child subsidies. 4

## Nov. 26

Labour was reelected under Fraser. 5

(See [Overview](#))

## I. [Africa, 1941–2000](#)

[AFRICA, 2000 \(MAP\)](#)

### 1. [Overview](#)

World War II reinforced the importance of colonies to metropolitan economies. Even more than during the previous world war, **Africa's reserves of essential minerals**—including uranium, magnesium, cobalt, gold, and copper—as well as its agricultural resources, made the colonies crucial to the war effort. **The war raised world commodity prices**, and Africans actively participated in the expanding colonial economies. After the war, metropolitan governments coveted the huge cash reserves controlled by the colonial commodity marketing boards, which were drawn on for postwar reconstruction in Europe. 1

World War II also spawned the new **geopolitical realities of the cold war**. Both the U.S. and the Soviet Union employed anticolonial rhetoric even as they sought to create informal empires of their own. The Atlantic Charter of 1941 underscored the Allies' commitment to national self-determination. Like Woodrow Wilson's Fourteen Points following World War I, the Atlantic Charter was not intended for colonial Africans. However, the Chinese revolution, the Malaysian peasant rebellion, and the independence of India provided Africans with important examples of **anticolonial and liberation movements**. 2

After the war, the British and the French, if not yet the Belgians and the Portuguese, began to think of the **eventual decolonization of Africa**. Their time horizon was long. Few officials thought of independence for any but the most “advanced” colonies in less 3

than 50 years. As a result, European governments made some important concessions to Africans in terms of representation in the advisory legislative councils, but planning for decolonization was lackadaisical. Central to the European timetable for decolonization was the recognition that colonial powers had not nurtured a managerial middle class prepared to run a modern nation-state. Until the 1940s and 1950s, only a tiny handful of institutions of higher education existed on the African continent. Up to the end of World War II, most primary education and nearly all secondary education was in the hands of missionaries. Whenever they could afford it, Africans sent their children to universities in Europe and the U.S. Thus, the first tangible step on the route of gradual independence was to **establish universities in Africa and expand primary education.**

Planned decolonization hinged on the assumption that European colonial powers would determine the pace of change in Africa; it took no account of the actions of Africans. <sup>4</sup> Instead, **the Africans determined the pace of decolonization in Africa.** By 1948, **waves of strikes** by dockworkers, railway workers, and miners swept through Africa. Protests by African veterans and soldiers, who had served the mother country faithfully during the war, shocked colonial administrations. Kwame Nkrumah, a student activist and later an organizer for the Pan-African Congress who had spent half of his life in the U.S. and England, returned home as a political organizer for the United Gold Coast Convention, a moderate nationalist party. In 1949, he led his followers to form a mass political party, Convention People's Party, which agitated for immediate self-government (although not yet for independence). **Mass political parties** had also emerged in the postwar period in French West Africa, following the Brazzaville reforms, and in Nigeria, following the Richards Constitution. Mass political parties were slower to emerge in East and Central Africa.

Not all African protest and resistance to colonial rule took the form of strikes and mobilization through political parties. <sup>5</sup> The Mau Mau rebellion in Kenya, which broke out in 1952 and persisted until 1956, reflected the specific outcomes of the economic and political deprivation of Africans within a white settler colony. With economic and political avenues barred to them, Kikuyu took to the forests and launched a **peasant revolution** informed by ethnic nationalism. The British responded ambivalently at first, then with crushing force. More than 50,000 British troops were needed to contain the small bands of African freedom fighters. The scale of British military involvement worried British strategic planners, who began to understand the high costs of protecting the interests of a handful of white settlers.

White settlers were not quiescent during this time of emergent African nationalism. <sup>6</sup> In 1948, **the whites of South Africa staged a counterrevolution** by electing to power the Afrikaner-dominated Nationalist Party, with a mandate to establish **apartheid** as a political and economic strategy. The Nationalist victory in South Africa stood in sharp contrast to the postwar imperial policy of gradual implementation of majority rule. The Nationalist victory, however, strengthened the resolve of white settlers in East and

Central Africa, in the Belgian Congo, and in Portuguese Africa. Indeed, white immigration to settler colonies actually increased during the years immediately following the war.

Black South Africans responded to the Nationalist victory by **reviving the African National Congress (ANC)**. Already in 1944, a number of young intellectuals, including Nelson Mandela, Oliver Tambo, Walter Sisulu, and Anton Lemebede formed the youth wing of the ANC in an effort to promote more direct action. In 1949, this group had seized control of the ANC and launched it firmly in the direction of civil disobedience, noncooperation, and strikes. The ANC's main tactic was nonviolent direct action, and by 1952 its campaigns had resulted in over 8,000 arrests. By 1955, the leaders were either under arrest and facing a long treason trial, or in exile.

In 1956, Sudan, which had been increasing the numbers of Sudanese in the colonial administration, became independent. In 1957, Nkrumah led Ghana to independence (See [1957, March 6](#)). Precisely because Ghana's independence was based on mass political mobilization, it became a **model for nationalists across the continent**.

The 25 years from 1955 to 1980 witnessed the rapid end of European empires in Africa. Only Namibia remained a “trust territory” of South Africa and would become independent only in 1990. Angola, Guinea-Bissau, and Mozambique became independent in 1975, following 20-year guerrilla wars. Zimbabwe became independent in 1980 in the face of guerrilla advances, the crumbling of white regimes in neighboring colonies, and the economic collapse of Ian Smith's white settler regime, which had unilaterally declared itself independent of Britain in 1965 in an attempt to implement a South African model.

**Most African nations became independent in the 1960s.** Despite the persistence of the recalcitrant white settler colonies still remaining, this was a **decade of great enthusiasm and promise**. Africans were freed from the shackles of nearly a century of colonialism. They believed that their economies and their cultures would blossom. World commodity prices continued to favor African producers of primary products in the early 1960s. But by the end of the decade, world demand was slowing, and by the 1970s, commodity prices began a gradual descent. The rapid escalation of oil prices drained the little cash reserves remaining in African economies.

Independence also ushered in a **flourishing of arts and culture**. Most dramatic were changes in **African music**. Of all the arts, music was the most “democratic,” since it was the cheapest and most easily available. **The revolution in consumer electronics** largely coincided with the independence decades of the 1960s and 1970s and provided African musicians with unique opportunities. Since World War II, West Africa had been the site of important **musical innovations involving syntheses of traditional African instruments and idioms with Western ensemble structures and beats**. **West African Highlife** originated in the Gold Coast out of a marriage between local African music and American and British big band sounds. Highlife spread rapidly through the

**mushrooming cities** of the continent. In the 1950s, **Nigerian juju music** emerged out of a local response to rock 'n' roll. Wide varieties of traditional, history-telling (the art of the West African griot), neotraditional, and modern African music can be heard from the windows or courtyards of houses everywhere.

Besides cassette recordings, **national radio broadcasting** has contributed to the diffusion of both traditional and new forms of African music. Many countries also have **annual cultural festivals**, which promote both neotraditional and innovative music and dance. Nightlife is often lively in urban Africa, with nightclubs providing opportunities for aspiring musicians.

In the nearly complete absence of public transportation in most of Africa, privately owned taxis and vans are the premier form of urban transportation. **Elaborate decorations of these taxis** are an important popular art form. The exterior walls of shops and kiosks became the canvases of popular representational art, also providing inexpensive commercial advertising. Urban and rural Africans are also consumers of **neotraditional African arts**. Craftworkers produce objects using traditional tools and techniques, but such art is often used in new ways. Instead of functioning primarily within religious ceremonies, this neotraditional African sculpture is used more widely as decoration. Larger even than the market for neotraditional sculpture is the demand for cloth and clothing. African tailors use locally produced or imported textiles to meet a nearly **inexhaustible demand for fashion**. Often based on local traditions, these tailors produce couture for the rapidly changing fashion worlds of urban Africa. Weavers, using traditional looms and machine-made yarns, produce cloth for ordinary use and festive occasions. Particularly when incomes are low, cloth provides an inexpensive luxury.

The period after World War II also witnessed the **flowering of African literature**. Most African literature is written in **European languages**, and the literature in these languages has become widely known throughout Africa and abroad. Written in French, Camara Laye's *The Dark Child* (1953) fit within the wider **négritude** traditions celebrating traditional Africa. Some years later, Ousmane Sembene's *The Black Docker* (1956) and his more widely acclaimed *God's Bits of Wood* (1960) challenged the romanticism of négritude by depicting the gritty world of urban work. *God's Bits of Wood* is a historical novel set against the 1947–48 railway strike along the Dakar-Bamako rail line. Sembene also turned to filmmaking as a means of capturing the bitter satires of modern urban life. His early film, *Barom Sarett*, won a prize at the Tours Film Festival in 1961. Filmmaking in former French West Africa remains a vital form of artistic creativity, and Burkinabe (Burkina Faso) filmmakers are among the avant-garde.

A somewhat analogous pattern is discernible among **West African anglophone writers**. Written on the eve of independence, **Chinua Achebe's** *Things Fall Apart* (1957) reflected on colonialism's rupture of traditional Igbo society. Very quickly, however, the glow of independence faded in the face of the very real difficulties of the 1960s and 1970s. Achebe's satirical *A Man of the People* (1967) showed politics to be a means of

accumulation of personal wealth and a tool for personal vendettas. The Ghanaian Ayi Kwei Armah's hero in *The Beautiful Ones Are Not Yet Born* (1968) represented the impotent rage of independent Africans thrust into a world of sudden, deep decay.

South African writers, particularly black writers, could not escape the realities of **apartheid**. The poet Dennis Brutus wrote lyrical verse juxtaposed with themes of apartheid's oppressiveness. Peter Abrahams and Alex La Guma reflect the thematic shifts over the late 1940s to the 1960s as apartheid more deeply penetrated daily life. Abrahams's *Mine Boy* (1946) dramatized the harsh world of the South African mines, but closed with an optimistic expectation of nonracial worker solidarity. In the mid-1950s, Abrahams's *A Wreath for Udomo* (1956) extolled revolutionary struggles. By the time of Alex La Guma's *A Walk in the Night* (1962), a deep despair had set in. La Guma's South Africa was an urban world of vagabonds, beggars, prostitutes, and delinquents. Even white South Africans could not escape the negative realities of apartheid. Nadine Gordimer's *July's People* (1981) captured the very real dependency of privileged white society upon impoverished black South Africa.

In this world of Europhone literature, the Kenyan writer Ngugi wa Thiong'o, who had produced major novels in English in the 1970s, made a **dramatic anti-neocolonial gesture** in the 1980s by writing in Kikuyu, his native language. Claiming that writing in Kikuyu reached a wider audience in Kenya than writing in English, Ngugi wrote both a play and a novel in Kikuyu. Literature in Swahili and in Hausa, for example, have deep precolonial roots. Particularly after independence, significant efforts have been made to produce phonetic alphabets for many African languages. A **considerable literature in African languages**—including newspapers, magazines, poetry, and school primers—now exists. Plays and local television shows are often produced in local languages as well as in the national European language. Aspiring novelists, however, will continue to grapple with the choice about the language in which they write and the audience they wish to address. In independent Africa, language has a politics of its own.

Independent Africans emerged into a world where **managed political economies** were favored and most initiated ambitious economic development programs designed to modernize their economies as rapidly as possible. Declining world commodity prices played havoc with these plans. Economic mismanagement and ill-advised international loans led to profound balance-of-payments problems. Even for oil-rich Nigeria, mismanagement, corruption, and overly ambitious and poorly designed economic and social development led to the squandering of national wealth. Through much of the West African Sahel, ecological crises in the late 1960s and early 1970s yielded a massive refugee problem, devastated the livestock economies, and added to the general economic woes of the new states.

Newly independent African states also proved remarkably prone to **political instability**. Between 1966 and 1970, waves of **military coups** and the emergence of one-party political systems firmly ended the early experiments in political democracy. Political

instability in Africa owed much to the legacy of the colonial period. Under colonial rule, Africans had few opportunities for training in democratic political processes; they had limited opportunities to pursue higher education; and few had well-developed commitments to the idea of a “nation.”

Other factors contributed to Africa's political and economic troubles. Many African politicians saw state institutions as a means for accumulation of personal wealth, which had been closed to most of them under colonial rule. It is not surprising, then, that the military emerged as the most stable “national” institution during this period. Military regimes are rarely noted for their commitment to democratic processes. 20

**The Nigerian Civil War** of 1967–70 (See [1967–70](#)) represented the **prominence of the military** in the independence period, the legacy of the ethnic politics of the colonial era, and the remarkable efforts to forge a new federal community in the aftermath of the war. 21  
Nigeria, the most populous country of sub-Saharan Africa, came to independence in 1960, administered by an awkward system of federal and regional governments. The three regional governments reflected the most important ethnic groups: the **Hausa** in the north, the **Yoruba** in the west, and the **Igbo** in the southeast. The system was unstable, and federal leadership weak and corrupt. In 1966, a coup instituted a military regime, which appeared to be dominated by Igbo officers. Another coup sought to balance the ethnic composition of the military regime and to divide the three regions into 12 states. These actions infuriated the Igbo of the eastern region, who began a movement for secession. The region's leader, Col. Chukwuemeka Odumegwu-Ojukwu, was motivated to secede by the presence of offshore oil reserves in the eastern region. The secessionists called their new state Biafra. When war broke out in May 1967, it pitted two factions of the best-trained military in Africa against each other.

The war lasted for two and a half years, perhaps longer than militarily justified because of the role of various competing international groups, including international aid charities, supporting one or the other side. 22  
By 1970, about 1 million Biafrans had died, and the Biafran secession was over. The reintegration of the Igbo back into the federal fold of Nigeria was the one shining success of this story. Although Nigeria survived this secession intact, its future as a unified country remains doubtful in the context of growing religious intolerance, persistent economic decline, and the military's refusal to yield to popular democratic sentiments.

**Civil wars and attendant ecological crises** stalked the continent in the decade of the 1980s and continue into the 1990s. 23  
Old enmities, fostered by colonial policies, were fueled by mendacious African rulers of independent states. Regional aspirations of neighboring countries and rival superpowers seeking narrowly conceived geopolitical advantages fed civil wars in Ethiopia, Uganda, Sudan, Somalia, Angola, Mozambique, Chad, Liberia, and the Western Sahara. Civil wars yielded both refugees and declining agricultural and livestock production, thus creating a huge need for international humanitarian assistance and contributing to the crisis of state power.

The 1980s and 1990s witnessed the sustained crisis of inadequate state institutions in Africa, most of which were inherited from the colonial era. Africans voraciously sought higher education, but universities in Africa were badly overcrowded and underfunded. Yet investment in human capital remains crucial for Africa's future.

24

Despite significant advances in public health since independence, **poverty and inequality** have been on the rise. Increased **public health** has contributed to long-term decline in African infant mortality rates. Contrary to widely accepted assumptions, African birthrates have not declined as rapidly as expected, thus contributing to severe food shortages and poverty. As African populations have increased, **inequalities between classes and between sexes have grown**. The gaps in income between urban and rural areas and between high-level government employees and successful entrepreneurs, and the mass of poorly educated, underemployed urban dwellers has increased over the past two decades. Especially in rural areas of Central and southern Africa where male migration is prevalent, women, children, and the elderly have borne the brunt of increased labor and declining standards of living. Women, who have had fewer educational and employment options than men, have been doubly burdened by having to support larger surviving families and increased labor obligations. In regions where **clitoridectomy** (female circumcision) is practiced, women have significantly increased medical problems.

25

To further complicate the current situation of poverty and inequality, an **epidemic of AIDS** swept through East and Central Africa. There was intense speculation concerning the origins of the virus, and much more research will be required before any definite conclusion can emerge. AIDS was identified in Africa only in the early 1980s, where it was commonly referred to as "slim" because of the general wasting away of the infected person. Spread largely by heterosexual intercourse, **AIDS has spread unevenly throughout the continent**, even in the most seriously affected regions. HIV-1 was concentrated in Central, eastern, and southern Africa; HIV-2 was limited to West Africa. It was largely an urban disease. In Lusaka, Zambia, one in four male and female adults had been infected by the 1990s. However, in certain rural areas, including the Rakai District of southwestern Uganda, even higher rates of infection have been documented. Unlike most other diseases on the continent, which affect mostly the very young or the very old, AIDS struck sexually active young and middle-aged adults. There is no doubt that AIDS will have a significant impact on the human capital of the continent. In the Rakai District, the epidemic left a large pool of orphaned children to the care of aged grandparents and eventually to the state. Although AIDS has been found in all socioeconomic groups, the AIDS infection rate among the Rwandan elite and middle class has been disproportionately high. Most African nations have mounted **energetic public health campaigns** to combat the spread of the infection. Nonetheless, the impact of AIDS on Africa will be felt for generations to come.

26

Despite this bleak situation, Africans have engaged in **exciting experiments in political**

27

**and economic liberalization.** The end of white minority rule in Namibia in 1990 and the transition to majority rule in South Africa held out great promise for equity and opportunity for all Africans. The end of the civil wars in Ethiopia (leading to the creation of the new state of Eritrea) and the promised end of civil wars in Mozambique and in Angola were hopeful signs that Africans might turn to political processes to resolve their grievances and that new investment might flow not to the military, but to economic and social development.

Despite the anemic world economy of the early 1990s, Africans engaged in shedding state-managed policies, and expensive state enterprises embarked on economic liberalization programs. The World Bank and the International Monetary Fund devised programs called “**structural adjustment**,” which promised long-term benefits but called for devastating cuts in social spending in the short term. A poor economic performer for the past two decades, Ghana emerged as an example of the economic benefits of such programs. On the other hand, studies of Africa's **informal economies** showed them to be robust, dynamic sectors. Urban areas, which had grown dramatically since independence, have been crucibles for new, informal, smaller-scale enterprises catering to local and regional demand. **These informal economies were often many times larger than the formal sectors.** Despite the problems caused by lack of services, urban areas also have been sites for experimentation in new forms of community, providing opportunities for changing economic, social, and political processes.

The final years of the 20th century saw additional gains for democracy in several regions, but also a proliferation of civil wars in a number of nations. Concerns about poverty and disease continued, particularly in the regions of the AIDS epidemic. United Nations efforts, often in combination with the **Organization for African Unity (OAU)**, persisted, with mixed results.

## 2. [Regions](#)

The following entries are organized by broad region until around 1960. After 1960, entries are organized country by country for each region. <sup>1</sup>

### a. [West Africa](#)

#### 1944

Toward the end of World War II, the Free French administration under Charles de Gaulle <sup>2</sup> agreed to implement a series of major reforms in its West African colonies. These reforms, announced at the **1944 conference at Brazzaville**, were largely designed to recognize African support for the Free French during World War II. **The accords granted Africans representation in the French National Assembly and outlined a program of economic, social, and legal reforms.** The French never intended the Brazzaville Accords to lead to colonial self-government; rather, the reforms were designed to strengthen the relationship between France and its West African colonies and to reward Africans for siding with the Free French.

#### 1945

**The Richards Constitution for Nigeria led to the development of political parties.** <sup>3</sup> Named after the current governor, the new constitution brought northern Nigeria into the central government, extended Nigerian representation in the legislative and executive councils, and established three subregions with their own representative bodies. African nationalists criticized the constitution because it had been imposed without their consultation and provided for only indirect elections. New African political groups began

to coalesce in the late 1940s, including the National Council of Nigeria and Cameroon, and the Northern People's Congress.

## 1946

**Election of African representation at the French constituent assembly** resulted from the Brazzaville Accords. The most important political reform resulting from the Brazzaville conference was the agreement that the colonies should be represented in the constituent assembly charged with drawing up the constitution of the French Fourth Republic. The first constituent assembly was held in April 1946, but the liberal reforms it proposed for the colonies went down to defeat. The second constituent assembly framed a new French constitution and placed the colonies within the framework of a unitary republic. Africans participated in both constituent assemblies. <sup>4</sup>

The enactment of the *première loi Lamine Gueye*, named after the first Senegalese deputy to the French National Assembly, offered French citizenship to all African subjects within the context of the Fourth Republic. In 1946, forced labor and the hated *indigénat*, a summary code of administrative justice exercised arbitrarily by colonial officials, were abolished. <sup>5</sup>

## March

**New constitution for the Gold Coast, which became the first British colony to have an African majority in its legislature.** <sup>6</sup>

## b. [Northeast Africa \(Horn\)](#)

### 1941–52

**Restoration** and rebuilding of central powers of the Ethiopian Empire under **Haile Selassie**. The emperor continued to hold most power, but some bureaucratic reform occurred. Britain remained in control of the Horn outside Ethiopia. 1

### 1945

Senior civil servants in Sudan formed a moderate nationalist group, the **Umma Party**. 2

### 1946

Formation of the **nationalist, modernist Somali Youth League**. 3

### 1948

Umma dominated the national legislature established by British in Sudan; most members of this legislature came from **northern areas**. 4

### 1949, Nov

The UN placed **Somalia** in a ten-year trusteeship under Italy. 5

## 1950

**University College** was founded in Addis Ababa. In **British Somaliland**, clan leaders were made into “local authorities.” 6

## Dec

The UN placed **Eritrea** in federation with Ethiopia, with limited autonomy, under the Ethiopian Empire. 7

### c. [East Africa](#)

#### 1944–49

**Britain created multiracial legislative councils** in Kenya (1944), Tanganyika and Uganda (1945), Northern Rhodesia (1948), and Nyasaland (1949). They had the opposite of their intended effect, spurring African nationalism as **Africans rejected the colonial concept of multiracialism**. 1

#### 1945–56

**Waves of strikes and urban protest** in East and Central Africa, including Mombassa, Dar, Zanzibar, Southern Rhodesia, and Copperbelt (1956). 2

#### 1946

**Jomo Kenyatta** returned to Kenya after an absence of 15 years. 3

#### 1947

**The Groundnut Scheme**, a colonial development project designed to introduce large-scale mechanized agriculture, began at Kingwa, Tanganyika. 4

**The Zanzibar Legislative Council** was reformed and included two Africans, two Indians, three Arabs, and one European. 5

## 1949–60

**Beginning of university education** in region. The pace of university construction was still too slow. **Makerere University** was founded in 1949. By 1960, many more Africans from the region were seeking higher education abroad. 6

## 1949

**The Groundnut Scheme** harvest proved to be very disappointing. Similar big development projects were being funded throughout the continent, but results were rarely positive. 7

**The Zanzibar Legislative Council** demanded elections as a step toward self-government. 8

## 1951

**The Matthew Commission** reported on constitutional developments in Tanganyika. A legislative council was proposed, to include seven African, seven Asian, and seven European members. 9

## 1952–59

**The Mau Mau rebellion** broke out on Sept. 11, 1952, and a state of emergency in Kenya was declared in 1953. Rebellion was sparked by discontent among the Kikuyu over land lost to Europeans and was heightened by general discontent over government regulation of peasant farming and urban nationalist aspirations. In 1953, **Jomo Kenyatta** and five others were convicted of “managing” the Mau Mau, but the conviction was overturned by the Kenya Supreme Court. Then the East African Court of Appeals upheld the conviction. Political associations were prohibited during the state of emergency. Thousands of Africans died in the rebellion and the British military campaign to crush it. 10

## 1953

**Julius Nyrere** was elected president of the **Tanganyika African Association**. 11

## 1954

**The Tanganyika African National Union (TANU)** was established and became a mass party representing urban and rural grievances. 12

**A state of emergency** was declared in Buganda. 13

## 1955

**The kabaka** (traditional ruler) of Buganda returned from abroad. 14

#### d. West Central Africa

##### 1945–57

**Rapid economic growth** in Congo was especially stimulated by the mining of copper and other minerals. 1

##### 1948

**Colonato**, a form of state encouragement for “progressive” African farmers, was introduced in Angola. 2

##### 1949

**The University of Louvanium** was established by decree. The first students were admitted to only a preuniversity course in 1954. 3

##### 1949–50

Beginning of the Movement of Young Intellectuals in Angola, founded by Viriato da Cruz. This group proclaimed the importance of Angolan culture. 4

##### 1949–57

Belgium began to plan for gradual **decolonization** of Congo through ten-year plans for economic development, aided by the commodity boom. The first plan was introduced in 1949. The pace of reform, however, remained very slow, and was **overtaken by emerging nationalist movements**. 5

## 1950

**The Nationalist Alliance de Bakongo (ABAKO)** was founded. 6

Sixty percent of the doctors in the Cameroon were Africans. The Portuguese program of assimilating “Westernized” Africans into Portuguese citizenship proved a failure. Out of a population of 3 million, only 30,000 fit the Portuguese category of *assimilado*, which entitled them to escape the harsh labor and legal regime for Africans. 7

## 1951, Dec

**Municipal elections** were held in the Belgian Congo; **Joseph Kasavubu's ABAKO** won in Kinshasa. 8

## 1953

**The Kitawala Movement**, originally based on an Africanized version of the apocalyptic doctrine of the American Watch Tower movement, spread in the lower Congo. 9

## 1954

**A university was established** at Elisabethville. 10

## 1954–55

A wave of **strikes** broke out in Cameroon. 11

## 1955

## Oil was discovered near Luanda.

## e. [Southern Africa](#)

### 1. North of the Limpopo

#### 1945–60

Economic development led to **large-scale urbanization and wage labor** in Zambia and Rhodesia, leading to the development of a stable urban population of workers and families, accompanied by the rise of bureaucratic and professional elites. 1

#### 1947

**African trade unions** were first formed in Northern Rhodesia. 2

#### 1948

**Seretse Khama** married Ruth Williams in London, but the Ngwato people refused to accept him as their chief because of his marriage to an Englishwoman. 3

**Constitutional reforms** in Northern Rhodesia extended appointments on the legislative council to five years. 4

#### 1950

Out of a population of about 5 million, only **4,353** assimilados lived in Mozambique. 5

## 1950–56

Successful organization by Copperbelt miners in Northern Rhodesia (Zambia) led to a **wave of strikes** in 1956. 6

## 1951

**Six white members of the Southwest Africa House of Assembly** took seats in the South African Parliament. 7

## 1953

**Increased political activity in opposition** to the proposed federation of Central Africa between Nyasaland and the two Rhodesias. Rev. Michael Scott preached nonviolent opposition to the federation. 8

## 1954

**Rhodesian University College** was founded. 9

## 1955

**Africans were admitted to the legislative council** in Nyasaland. 10

## 1956

**A state of emergency** was declared in Northern Rhodesia, following miners' strikes. 11

**Pres. Craveiro Lopes of Portugal** visited Mozambique. Its administrative districts were reorganized. 12

## f. [Madagascar](#)

### 1943–45

Wartime impositions, including conscription and forced labor, and the 1944 forced sale of the rice crop, led to **widespread discontent** with French rule. 1

### 1956

Several political parties emerged to campaign for independence. 2

### 1958, Aug

**Madagascar voted in favor of the de Gaulle proposal for autonomy within the French sphere.** 3

### 1960, June 26

**Full independence was gained under the leadership of Philibert Tsiranana and his Parti Social Démocrat (PSD).** 4

### 1971–74

A **revolt of Antandroy peasants** led to strikes and demonstrations, followed by the installation of a **military government under Gen. Gabriel Ramanatsoa**, who was initially popular with the Left. 5

### 1975, Feb

Ramanatsoa was forced from power after violent **anti-Merina riots against the political and ethnic elite and spreading popular revolt**; he was replaced by the Conseil Suprême Révolutionnaire (CSR) led by **Capt. Didier Ratsiraka**. The CSR pursued a radical Socialist line, including widespread nationalization of industry. These policies led to economic stagnation, loss of foreign investment, and food shortages. 6

### 1982

By this time Madagascar was heavily reliant on **aid from the Soviet bloc and China**, and was importing 350,000 metric tons of rice per year, which consumed 20 percent of the country's foreign exchange. **Pres. Ratsiraka** was returned to office in fraudulent elections, and the government signed a **structural adjustment** agreement with the International Monetary Fund (IMF). 7

### 1983–89

**Austerity measures** introduced by the IMF agreement led to a resumption of foreign aid and the return of market policies for agriculture. Incomes fell sharply. Poverty and banditry in the countryside led to rapid urbanization. 8

### 1987

**Drought** in the south resulted in **famine**, killing 47,500 and resulting in 200,000 refugees. 9

### 1993, Feb. 10

**Albert Zafy led the opposition to electoral victory** over Pres. Didier Ratsiraka in multiparty elections.

10

### 1999, April 19–23

An interisland conference was held in Madagascar with the Comoros and other surrounding islands in attendance.

## I. Roman Emperors

- 27 B.C.–14 C.E. Augustus (Gaius Julius Caesar Octavianus)
- 14–37 Tiberius (Tiberius Claudius Nero Caesar)
- 37–41 Caligula (Gaius Claudius Nero Caesar Germanicus)
- 41–54 Claudius (Tiberius Claudius Nero Caesar Drusus)
- 54–68 Nero (Lucius Domitius Ahenobarbus Claudius Drusus)
- 68–69 Galba (Servius Sulpicius Galba)
- 69 Otho (Marcus Salvius Otho)
- 69 Vitellius (Aulus Vitellius Germanicus)
- 69–79 Vespasian (Titus Flavius Vespasianus)
- 79–81 Titus (Titus Flavius Vespasianus)
- 81–96 Domitian (Titus Flavius Domitianus)
- 96–98 Nerva (Marcus Cocceius Nerva)
- 98–117 Trajan (Marcus Ulpius Nerva Traianus)
- 117–38 Hadrian (Publius Aelius Traianus Hadrianus)
- 138–61 Antoninus Pius (Titus Aurelius Fulvius Boionius Arrius Antoninus Pius)
- 161 (146)–80 Marcus Aurelius (Marcus Annius Aurelius Verus)
- 161–69 Lucius Aurelius Verus (Lucius Ceionius Commodus Verus)
- 180 (177)–92 Commodus (Lucius Aelius Marcus Aurelius Antoninus Commodus)
- 193 Pertinax (Publius Helvius Pertinax)
- 193 Didius Julian (Marcus Didius Salvius Julianus Severus)
- 193–211 Septimius Severus (Lucius Septimius Severus)
- 211 (198)–17 Caracalla (Marcus Aurelius Antoninus Bassianus Caracallus)
- 209–11 Geta (Publius Septimius Geta)

- 217–18 Macrinus (Marcus Opellius Severus Macrinus)
- 218–22 Elagabalus (Marcus Varius Avitus Bassianus Aurelius Antoninus Heliogabalus)
- 222–35 Alexander Severus (Marcus Alexianus Bassianus Aurelius Severus Alexander)
- 235–38 Maximin (Gaius Julius Verus Maximinus “Thrax”)
  - 238 Gordian I (Marcus Antonius Gordianus)
  - 238 Gordian II
  - 238 Pupienus (Marcus Clodius Pupienus Maximus)
  - 238 Balbinus (Decimus Caelius Balbinus)
- 238–44 Gordian III (Marcus Antonius Gordianus)
- 244–49 Philipp “Arabs” (Marcus Julius Philippus “Arabs”)
- 249–51 Decius (Gaius Messius Quintus Traianus Decius)
  - 251 Hostilian (Gaius Valens Hostilianus Messius Quintus)
- 251–53 Gallus (Gaius Vibius Trebonianus Gallus)
  - 253 Aemilian (Marcus Julius Aemilius Aemilianus)
- 253–59 Valerian (Gaius Publius Licinius Valerianus)
- 259 (253)–68 Gallienus (Publius Licinius Egnatius Gallienus)
  - 268–70 Claudius II (Marcus Aurelius Claudius Gothicus)
  - 270 Quintillus (Marcus Aurelius Claudius Quintillus)
- 270–75 Aurelian (Lucius Domitius Aurelianus)
- 275–76 Tacitus (Marcus Claudius Tacitus)
  - 276 Florian (Marcus Annus Florianus)
- 276–82 Probus (Marcus Aurelius Probus)
- 282–83 Carus (Marcus Aurelius Carus)
- 283–84 Numerian (Marcus Aurelius Numerius Numerianus)
- 283–85 Carinus (Marcus Aurelius Carinus)
- 284–305 Diocletian (Gaius Aurelius Valerius Diocles Jovius)
- 286–305 Maximian (Marcus Aurelius Valerius Maximianus Herculus)
  - 305 Constantius I (Flavius Valerius Constantius Chlorus)
- (293)–306

- 305  
(293)–311 Galerius (Gaius Galerius Valerius Maximianus)
- 306–7 Severus (Flavius Valerius Severus)
- 306–8 Maximian (second reign)
- 306–12 Maxentius (Marcus Aurelius Valerius Maxentius)
- 308–13 Maximinus Daia (Galerius Valerius Maximinus Daia)
- 311 (307)–24 Licinius (Gaius Flavius Valerius Licinianus Licinius)
- 311 (306)–37 Constantine I, the Great (Flavius Valerius Constantinus)
- 337–40 Constantine II (Flavius Valerius Claudius Constantinus)
- 337–61 Constantius II (Flavius Valerius Julius Constantius)
- 337–50 Constans (Flavius Valerius Julius Constans)
- 361–63 Julian, the Apostate (Flavius Claudius Julianus)
- 363–64 Jovian (Flavius Jovianus)
- 364–75 Valentinian I (Flavius Valentinianus, in the West)
- 364–78 Valens (in the East)
- 375 (367)–83 Gratian (Flavius Graatianus Augustus, in the West)
- 375–92 Valentinian II (Flavius Valentinianus, in the West)
- 379–95 Theodosius, the Great (Flavius Theodosius, in the East, and, after 392, in the West)
- 383–88 Maximus (Magnus Clemens Maximus)
- 392–94 Eugenius
- 395  
(383)–408 Arcadius (in the East)
- 395  
(393)–423 Honorius (Flavius Honorius, in the West)
- 421 Constantius III
- 423–25 Johannes
- 408 (402)–50 Theodosius II (in the East)
- 425–55 Valentinian III (Flavius Placidius Valentinianus, in the West)
- 450–57 Marcian (Marcianus, in the East)
- 455 Petronius (Flavius Ancius Petronius Maximus, in the West)
- 455–56 Avitus (Flavius Maecilius Eparchus Avitus, in the West)

- 457–61 Majorian (Julius Valerius Maiorianus, in the West)
- 457–74 Leo I (Leo Thrax, Magnus, in the East)
- 461–65 Severus (Libius Severianus Severus, in the West)
- 467–72 Anthemius (Procopius Anthemius, in the West)
  - 472 Olybrius (Anicius Olybrius, in the West)
  - 473 Glycerius (in the West)
- 473–75 Julius Nepos (in the West)
- 473–74 Leo II (in the East)
- 474–91 Zeno (in the East)
- 475–76 Romulus Augustulus (Flavius Momyllus Romulus Augustus, in the West)

## II. Byzantine Emperors

474–91 Zeno

475–76 Basiliscus

491–518 Anastasius I

518–27 Justin I (Flavius Justinus)

527 (518)–65 Justinian the Great (Flavius Justinianus)

565–78 Justin II (Flavius Justinus)

578 (574)–82 Tiberius II (Flavius Constantinus Tiberius)

582–602 Maurice (Maurikios)

602–10 Phocas I

610–41 Heraclius I

641 Constantine III (Constantinus)

641 Heracleon (Heracleonas)

641–68 Constans II

668–85 Constantine IV (Pogonatus)

685–95 Justinian II (Rhinotmetus)

695–98 Leontius

698–705 Tiberius II (Apsimar)

705–11 Justinian II (restored)

711–13 Philippicus

713–15 Anastasius II

715–17 Theodosius III

717–41 Leo III (the Isaurican)

741–75 Constantine V (Kopronymos)

775–80 Leo IV

780–97 Constantine VI (Porphyrogenetos)  
797–802 Irene (empress)  
802–11 Nicephorus I  
    811 Stauracius (Staurakios)  
811–13 Michael I (Rhangabé)  
813–20 Leo V (the Armenian)  
820–29 Michael II (Balbus)

186.	Palau	15 Dec. 1994
187.	Kiribati	14 Sep. 1999
188.	Nauru	14 Sep. 1999
189.	Tonga	14 Sep. 1999
190.	Tuvalu	5 Sep. 2000
191.	Yugoslavia**	1 Nov. 2000

\* Egypt and Syria were original members of the United Nations. In 1958, a union of the two countries established the United Arab Republic. On October 3, 1961, Syria resumed its status as an independent state. On September 2, 1971, the United Arab Republic became the Arab Republic of Egypt.

Democratic Yemen and Yemen merged on May 22, 1990.

Zanzibar's seat was given up on May 13, 1964, following the union of Zanzibar with Tanzania.

\*\* The Socialist Federal Republic of Yugoslavia was admitted to the United Nations on October 19, 1945. Between 1991 and 1992, the republic split into the following countries, which were admitted to the United Nations as new members: Bosnia, Herzegovina, the Republic of Croatia, the Republic of Slovenia, the Former Yugoslav Republic of Macedonia, and the Federal Republic of Yugoslavia.

§ Czechoslovakia was admitted to the United Nations on October 24, 1945. In 1992, Czechoslovakia split into the Czech Republic and the Slovak Republic.
